About the Conference:

The invaluable data which the researcher across different domains generates through their research efforts has great interdependence to deduce meaningful hypothesis which germinate new discoveries and creates innovative results. Computational models are often coupled with high performance computing to solve complex physical problems arising in Engineering analysis and design. There were many topics which were deeply deliberated and which brewed new ideas. Thus, giving rise to new avenues for researcher. We aim to take those concepts further to derive fresh hypothesis and arrive at the logical deductions. We are expecting huge participation of scientist from across the globe which will be very encouraging and this time we are anticipating even larger congregation from more diverse domains as we are reaching out too many eminent philosophers, thinkers and academicians from scientist fraternity.
