Theme of the Special Session

Decision support system has large applications in almost all the discipline of engineering, science and technology. With use of data analytics in areas of psychology, education and medical sciences. DSS has extended applications in these fields and hereby motivating the researchers and scientists to come on one platform for providing backend support to the industries in the development of tools and techniques through the investigation and philosophy.

The efforts had been to do empirical studies to highlight problems and devise efficient solution strategies to improve decision support system for societal cause

The aim of this special session is oriented and extends the knowledge about recent innovation in decision support system.

Topics of Interest: We invite original (un-published) research contributions based on the above mentioned theme including following topics **but not limited to**:

- Empirical Studies on decision support system for social cause.
- Data analytics for educational data mining
- Data sciences as application medical engineering
- Big-data tools and techniques for social system
- Big-data analytics for student learning analytics
- Big-data analytics for patient care systems
