

## **WRITE-UP EXPLAINING HOW THE POLLUTION IS PREVENTED FROM WATER SYSTEMS INCLUDING POLLUTION CAUSED BY INCIDENTS/ACCIDENTS**

ETPs (7 Nos.) are in operation in the Campus for treating RO laboratory / Laundry / Cafeteria wastewater. STPs (4 Nos.) are treating sewage waste in the campus & Authority Sewer Connection.

- Separate underground storage tanks for drinking & filtered water received from STP/ETP. Both the storage tanks have separate pipelines and overhead tanks.
- These tanks & pipelines are laid/located away from each other to avoid any chance of contamination.
