Comparison of LCAO-MO and VB treatments of  $H_2$  and their limitations. Refinements of the two approaches (Configuration Interaction for MO, ionic terms in VB). Qualitative description of LCAO-MO treatment of homonuclear and heteronuclear diatomic molecules ( $HF$ ,  $LiH$ ). Localised and non-localised molecular orbitals treatment of triatomic ( $BeH_2$ ,  $H_2O$ ) molecules. Qualitative MO theory and its application to  $AH_2$  type molecules. Simple Huckel Molecular Orbital (HMO) theory and its application to simple polyenes (ethene, butadiene).

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# TECHNICAL WRITING IN SCIENCE-I

**Course Code:** CHY2509

**Credit Units:** 02

**Course Objective:**

Students will be introduced to learning the written and oral communication of technical information. Assignments include writing and presenting proposals, reports, and documentation. Emphasis on use of rhetorical analysis, computer applications, collaborative writing, and usability testing to complete technical communication tasks in the workplace.

**Module I:**

Writing Skills; Selection of topic, thesis statement, developing the thesis; introductory, developmental, transitional and concluding paragraphs, linguistic unity, coherence and cohesion, descriptive, narrative, expository and argumentative writing.

**Module II:**

Technical Writing: Scientific and technical subjects; formal and informal writings; formal writings/reports, handbooks, manuals, letters, memorandum, notices, agenda, minutes; common errors to be avoided.

**Module III: Documentation Process**

Understanding Audience/Readers, Collecting and Organizing information, Drafting information verbally and visually, Producing Information.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# TERM PAPER

**Course Code: CHY2531**

**Credit Units: 02**

## Objectives

The objective of this course is to judge the understanding as well as application of the knowledge gained by the students. The aim of the term paper is to provide the students with an opportunity to further enhance their knowledge in a sector of their choice by undertaking a significant practical unit of examining and analyzing various aspects of chemistry and applied chemistry at a level commensurate with the learning outcomes of the various courses taken up them in the ongoing semester.

A term paper is primarily a record of intelligent reading in several sources on a particular subject. The students will choose the topic at the beginning of the session in consultation with the faculty assigned. At least one middle level or senior level person of a company from the chosen sector may be interviewed face to face

## Guidelines:

1. The term paper will be related to the contemporary business issue and the topic will be given by the department.
2. The presentation of the term paper is scheduled to be held before the commencement of Semester examinations.
3. The paper will carry 100 marks that will be marked on the basis of understanding and organization of content based on the literature review. The Bibliography shall form an important part of the paper.
4. Examples of a few broad areas for Term Paper (List is indicative, not exhaustive)
  - Inorganic chemistry
  - Organic chemistry
  - Physical chemistry
  - Green chemistry
  - Agriculture chemistry
  - Food and Nutrition Chemistry
  - Quantum Chemistry

## Evaluation Scheme

Organisation and relevance of content	Literature Review	Bibliography	Presentation	Total
30	30	20	20	100

# WORKSHOP

**Course Code: CHY2533**

**Credit Units: 01**

## Objectives

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two way. The trainer has to make sure that the aspect covered are practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

## Major Themes for Workshop

The workshop may be conducted on any of the following major themes:

- Nuclear Chemistry
- Modern trend in Inorganic Chemistry
- Modern trend in Organic Chemistry
- Modern trend in Physical Chemistry
- Nanotechnology and its application
- Polymer Chemistry
- Pharmaceuticals
- Food Technology
- Agriculture Chemistry
- Computational Chemistry
- Green Chemistry
- Environmental Chemistry

These themes are merely indicative and other recent and relevant topics of study may be included.

## Guidelines for Workshop

The procedure for earning credits from workshop consists of the following steps:

7. Relevant study material and references will be provided by the trainer in advance.
8. The participants are expected to explore the topic in advance and take active part in the discussions held
9. Attending and Participating in all activities of the workshop
10. Group Activities have to be undertaken by students as guided by the trainer.
11. Evaluation of workshop activities would be done through test and quiz at the end of the workshop.
12. Submitting a write up of at least 500 words about the learning outcome from the workshop.

## Methodology

The methodology followed at the workshop could be based on any one or more of the following methods:

- Case Study
- Simulation
- Quiz
- Quality analysis & characterization
- Identification and preparation of materials

## Evaluation Scheme:

Attendance	Active Participation	Multiple Choice Questions/ Quiz	Solving the case/ Assignment/ Write up	Total
10	30	30	30	100

# Syllabus- Sixth Semester

## INORGANIC CHEMISTRY-V

**Course Code:** CHY2601

**Credit Units:** 03

**Course Objective:** Objective of the course is to make students well aware of chemistry of coordination complexes, theories of Metal ligand bonding in coordination complexes, Spectral and magnetic properties of complexes.

**Course Contents:**

### Module I : Coordination Chemistry

IUPAC nomenclature of coordination compounds, isomerism in coordination compounds. Stereochemistry of complexes with 4 and 6 coordination numbers. Chelate effect, polynuclear complexes, Labile and inert complexes. Werner's theory, valence bond theory (inner and outer orbital complexes), electroneutrality principle and back bonding. Crystal field theory, measurement of  $10 Dq$ , CFSE in weak and strong fields, pairing energies, factors effecting the magnitude of  $10 Dq$ . Octahedral vs. tetrahedral coordination, tetragonal distortions from octahedral geometry Jahn-Teller theorem, square planar geometry. Qualitative aspect of Ligand field and MO Theory.

### Module II : Metal ligand bonding in transition metal complexes

Limitations of valence bond theory, an elementary idea of crystal field theory, Crystal field splitting in octahedral, tetrahedral and squareplanar complexes, factors affecting the Crystal field parameters.

### Module III : Thermodynamics and kinetic aspects of metal complexes

A brief out line of thermodynamic stability of metal complexes and factors affecting the stability, substitution reactions of square planar complexes.

### Module IV : Magnetic properties of transition metal complexes

Types of magnetic behaviour, Methods of determining magnetic susceptibility, spin (only formula) LS coupling, correlation of  $\mu_s$  (spin only) and  $\mu_{\text{effective}}$  values. Orbital contribution to magnetic moments, application of magnetic moment data for 3d metal complexes.

### Module V: Electron spectra of transition metal complexes

Types of electronic transitions, selection rules for d-d transition, spectroscopic ground states, spectrochemical series, Orgel energy level diagram for d1-d9 states, discussion of the electronic spectrum of  $[\text{Ti}(\text{H}_2\text{O})_6]^{3+}$ .

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;

Att: Attendance

# ORGANIC CHEMISTRY-V

**Course Code:** CHY2602

**Credit Units:** 03

**Course Objective:** The main objective of the course is to make students aware of important class of organic compounds having applications in day to day life such as alkaloids, terpenes, dyes and synthetic polymers.

**Course Contents:**

## **Module I: Alkaloids**

Natural occurrence, General structural features, Isolation and their physiological action, Hoffmann's exhaustive methylation, Emde's modification, Structure elucidation and synthesis of Hygrine and Nicotine. Medicinal importance of Nicotine, Hygrine, Quinine, Morphine, Cocaine, and Reserpine.

## **Module II: Terpenes**

Occurrence, classification, isoprene rule; Elucidation of structure and synthesis of Citral, Neral and  $\alpha$ -terpineol

## **Module III: Dyes**

Classification, Colour and constitution; Mordant and Vat Dyes; Chemistry of dyeing; Synthesis and applications of: Azo dyes – Methyl Orange and Congo Red (mechanism of Diazo Coupling); Triphenyl Methane Dyes - Malachite Green, Rosaniline and Crystal Violet; Phthalin Dyes – Phenolphthalein and Fluorescein; Natural dyes – structure elucidation and synthesis of Alizarin and Indigotin; Edible Dyes with examples.

## **Module IV: Synthetic Polymers**

Addition or chain-growth polymerization, Free radical vinyl polymerization, ionic vinyl polymerization, Ziegler-Natta polymerization and vinyl polymers, Condensation or step growth polymerization. Polyesters, polyamides, phenol formaldehyde resins, urea formaldehyde resins, epoxy resins and polyurethanes. Natural and synthetic rubbers.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

## **Recommended Texts:**

3. Finar, I. L. *Organic Chemistry (Volume 2: Stereochemistry and the Chemistry of Natural Products)*, Dorling Kindersley (India) Pvt. Ltd. (Pearson Education).

## PHYSICAL CHEMISTRY-V

**Course Code:** CHY2603

**Credit Units:** 03

**Course Objective:** Course gives students indepth knowledge of electrochemistry dealing with faraday's law of electrolysis, concept of electrochemical cells and redox potential, feasibility of a reaction. The course also provides knowledge about topics such as conductance, surface chemistry and photochemistry.

**Course Contents:**

### Module I: Electrochemistry

Quantitative aspects of Faraday's laws of electrolysis, rules of oxidation/reduction of ions based on half-cell potentials, applications of electrolysis in metallurgy and industry. Chemical cells, reversible and irreversible cells with examples. Electromotive force of a cell and its measurement, Nernst equation; Standard electrode (reduction) potential and its application to different kinds of half-cells. Application of EMF measurements in determining (i) free energy, enthalpy and entropy of a cell reaction, (ii) equilibrium constants, and (iii) pH values, using hydrogen, quinone-hydroquinone, liquid junction potential; determination of activity coefficients and transport numbers. Qualitative discussion of potentiometric titrations (acid-base, redox, precipitation).

### Module II : Conductance

Arrhenius theory of electrolytic dissociation, Conductivity, equivalent and molar conductivity and their variation with dilution for weak and strong electrolytes. Molar conductivity at infinite dilution. Kohlrausch law of independent migration of ions. Debye-Huckel-Onsager equation, Debye-Falkenhagen effect, Walden's rules, Ionic velocities, mobilities and their determinations, transport numbers and their relation to ionic mobilities, determination of transport numbers using Hittorf and Moving Boundary methods. Applications of conductance measurement: (i) degree of dissociation of weak electrolytes, (ii) ionic product of water (iii) solubility and solubility product of sparingly soluble salts, (iv) conductometric titrations, and (v) hydrolysis constants of salts.

**Module III: Surface chemistry and catalysis:** Physical adsorption, chemisorption, adsorption isotherms. nature of adsorbed state. Types of catalyst, specificity and selectivity, mechanisms of catalyzed reactions at solid surfaces; effect of particle size and efficiency of nanoparticles as catalysts. Enzyme catalysis, Michaelis-Menten mechanism, acid-base catalysis.

### Module IV: Photochemistry

Laws, of photochemistry, quantum yield, examples of low and high quantum yields, photochemical equilibrium and the differential rate of photochemical reactions, photosensitized reactions, quenching.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# SPECTROSCOPY

**Course Code:** CHY2604

**Credit Units:** 03

**Course Objective:** To impart knowledge about different spectroscopic techniques

**Course Contents:**

**Module I:**

Definition of spectrum - Electromagnetic radiation - quantization of different forms of energies in molecules (translational, rotational, vibrational and electronic).

Microwave Spectroscopy - theory of microwave spectroscopy - selection rule - Calculation of moment of inertia and bond length of diatomic molecules.

**Module II: UV - Visible Spectroscopy**

Absorption laws. Calculations involving Beer Lambert's law - instrumentation - photo colorimeter and spectrophotometer- block diagrams with description of components - theory - types of electronic transitions - chromophore and auxochromes - Absorption bands and intensity -factors governing absorption maximum and intensity.

**Module III: I.R. Spectroscopy**

Principle - modes of vibration of diatomic, triatomic linear ( $\text{CO}_2$ ) and nonlinear triatomic molecules ( $\text{H}_2\text{O}$ ) - stretching and bending vibrations - selection rules. Expression for vibrational frequency (derivation not needed), instrumentation - sampling techniques. Applications of IR Spectroscopy – interpretation of the spectra of alcohols, aldehydes, ketones and esters – aliphatic and aromatic. Hydrogen bonding.

**Module IV: Raman Spectroscopy**

Rayleigh and Raman scattering, Stokes and anti-Stokes lines. Differences between Raman and I.R. Spectroscopy. Rotational Raman spectra of Noncentrosymmetric molecules ( $\text{HCl}$ ). Mutual exclusion principle ( $\text{CO}_2$  and  $\text{N}_2\text{O}$ )

**Module IV: NMR Spectroscopy**

Basic principles of Proton Magnetic Resonance, chemical shift and factors influencing it, equivalent and non equivalent protons.; Spin – Spin coupling and coupling constant; Anisotropic effects in alkene, alkyne, aldehydes and aromatics, Interpretation of NMR spectra of simple compounds. Applications of IR, UV and NMR for identification of simple organic molecules.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# BASICS OF COMPUTER PROGRAMMING IN C AND ITS APPLICATIONS IN CHEMISTRY

**Course Code:** CHY2605

**Credit Units:** 02

**Course Objective:** To introduce the basics of computers and to learn C language and its applications in solving problems in Chemistry.

## **Course Contents:**

### **Module I:**

Basic computer organization, processor and memory – main memory, secondary storage devices and storage hierarchy. Software – relationship between hardware and software – types of software. Planning the computer program – algorithm and flowcharts. Basics of operating systems.

### **Module II:**

Computer languages – machine language, assembly language, assembler, compiler, interpreter and programming languages - C language – introduction, C compiler, operating systems and preprocessor directives - variables, constants, operators, input and output functions.

### **Module III:**

Applications in Chemistry – calculation of the radius of the first Bohr orbit for an electron, calculation of half-life time for an integral order reaction, calculation of molarity, molality and normality of a solution, calculation of pressure of ideal or Vanderwaal's gas, Calculation of electronegativity of an element using Pauling's relation.

### **Module IV:**

Applications in Chemistry - Calculation of empirical formulae of hydro carbon, calculation of reduced mass of a few diatomic molecules, determination of the wave numbers of spectral lines of hydrogen atom, calculation of work of expansion in adiabatic process, calculation of pH, solubility product and bond energy using Born - Lande equation, calculation of standard deviation and correlation coefficient.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# INORGANIC CHEMISTRY LAB-V

**Course Code:** CHY2606

**Credit Units:** 01

**Course Objective:** To provide students an experience in qualitative analysis of various cations and anions in a given mixture.

**Course Contents:**

**Qualitative analysis:**

Using H<sub>2</sub>S /PTC/ Thioacetamide or any other reagent. Identification of cations and simple anions in a mixture of salts containing not more than six ions (Three cations and three anions) interfering anions using semimicro scheme of analysis. If combination of cations or anions is given in the mixture, insoluble should be avoided. Spot tests should be carried out for final identifications wherever feasible.

Cation : Pb<sup>2+</sup>, Bi<sup>3+</sup>, Cu<sup>2+</sup>, Cd<sup>2+</sup>, As<sup>3+</sup>, Sb<sup>3+</sup>, Sn<sup>2+</sup> or Sn<sup>4+</sup>, Fe<sup>2+</sup> OR Fe<sup>3+</sup>, Al<sup>3+</sup>, Cr<sup>3+</sup>, Co<sup>2+</sup>, Ni<sup>2+</sup>, Zn<sup>2+</sup>, Mn<sup>2+</sup>, Ba<sup>2+</sup>, Sr<sup>2+</sup>, Ca<sup>2+</sup>, Mg<sup>2+</sup>, NH<sup>4+</sup>, K<sup>+</sup>

Anion : CO<sub>3</sub><sup>2-</sup>, SO<sub>3</sub><sup>2-</sup>, CO<sub>3</sub><sup>2-</sup>, SO<sub>3</sub><sup>2-</sup>, S<sup>2-</sup>, NO<sub>2</sub><sup>-</sup>, CH<sub>3</sub>COO<sup>-</sup>, NO<sub>3</sub><sup>-</sup>, Cl<sup>-</sup>, Br<sup>-</sup>, I<sup>-</sup>, SO<sub>4</sub><sup>2-</sup>, PO<sub>4</sub><sup>3-</sup>, BO<sub>3</sub><sup>3-</sup>, F<sup>-</sup>, C<sub>2</sub>O<sub>4</sub><sup>2-</sup>

**\*MSDS – Compilation of MSDS of chemicals used by students in each experiments is compulsory.**

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

**Recommended Texts:**

1. Vogel, A.I. A text book of Quantitative Analysis, ELBS 1986.

## ORGANIC CHEMISTRY LAB-V

**Course Code:** CHY2607

**Credit Units:** 01

**Course Objective:**

To provide experience in practical aspects of qualitative analysis of given organic mixture and detection of functional groups present.

**Course Contents:**

Qualitative analysis of organic mixture containing two solid component using water, NaOH, NaHCO<sub>3</sub> for separation, prepare suitable derivative.

Identification of the functional groups, C-C and C-N triple bonds, sp<sup>3</sup>, sp<sup>2</sup> and sp hybridized C-H bonds by IR spectroscopy, NMR spectroscopy (IR & NMR spectra to be provided).

**\*MSDS – Compilation of MSDS of chemicals used by students in each experiments is compulsory.**

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# PHYSICAL CHEMISTRY LAB-V

**Course Code: CHY2608**

**Credit Units: 01**

**Course Objective:**

To provide training in practical aspects of **physical chemistry** including determination of transition temperature of given compound, verification of Lambert- Beer law, Onsagar equation, Kaulraush law.

**Course Contents:**

(I) Transition Temperature

- Determination of the transition temperature of the given substance by thermometric method(e.g.  $\text{MnCl}_2 \cdot 4\text{H}_2\text{O}$  /  $\text{SrBr}_2 \cdot \text{H}_2\text{O}$ ).

(II) Spectroscopy

- Verification of Lambert-Beer's Law
- Determination of pK (indicator) for phenolphthalein or methyl red
- Study the formation of a complex between ferric and thiocyanate (or salicylate) ions.
- Study the kinetics of interaction of crystal violet with sodium hydroxide colourimetrically.
- Record the UV spectrum of p-nitrophenol (in 1:4 ethanol:water mixture). Repeat after adding a small crystal of NaOH. Comment on the difference, if any.
- Record the U.V. spectrum of a given compound (acetone) in cyclohexane
- (a) Plot transmittance *versus* wavelength.
- (b) Plot absorbance *versus* wavelength.

(III) Potentiometric titration

- Find out base strength by titrating against with strong acid potentiometrically.

(IV) Electrochemistry

- Prove Debye Huckel Onsagar Equations
- Prove Kaulraush law, Calculate equivalent conductance of acetic acid at infinite dilution

*Any other experiment carried out in the class can be included.*

**\*MSDS – Compilation of MSDS of chemicals used by students in each experiments is compulsory.**

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## PROGRAMMING IN C LAB

**Course Code: CHY2609**

**Credit Units: 01**

**Course Contents:**

- DOS commands
- Creation of batch files
- C program involving problems like finding the nth value of cosine series, Fibonacci series. Etc.
- C programs including user defined function calls
- C programs involving pointers, and solving various problems with the help of those.
- File handling

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# MATERIAL CHEMISTRY

**Course Code:** CHY2610

**Credit Units:** 03

**Course Objective:** To introduce and give an insight into the fascinating area of solid state chemistry and material science. This will enable the students in pursuing higher studies.

## Course Contents:

### Module I: Structures of solids

Introduction to solids – crystalline and amorphous. Unit cell, Bravais lattices and X-ray structure determination (NaCl and KCl only) – powder and single crystal- methods and applications-identification of the cubic lattice and indexing of the X-ray diffraction lines.

Radius ratio rules – coordination number. Packing arrangement -different structure types in solids – rock salt, zinc blende, wurtzite, fluorite and anti-fluorite, spinel and inverse-spinel and perovskite structures.

### Module II: Preparative methods and characterization

Solid state reactions – ceramic method, sol-gel, hydrothermal, high pressure, zone refining, CVD, Czochralski and Bridgman and Stockbarger methods.

Physical methods – thermogravimetric and differential thermal analysis and scanning electron microscopy (only introduction and application).

### Module III: Electrical and optical properties

Defects in solid state – point defects – Frenkel and Schottky defects and non-stoichiometric defects.

Conductors – variation of conductivity with temperature – semiconductors – p and n types, pn- junction, photoconduction, photo voltaic cell and photogalvanic cell – solar energy conversion, organic semiconductors.

Piezoelectric, pyro-electric and ferroelectrics (introduction and application).Photoluminescence.

### Module IV: Magnetic properties

Magnetic properties – classification - diamagnetic, paramagnetic, antiferromagnetic, ferro and ferri magnetic — magnetic susceptibility.Variation with temperature – Curie-Wiess law, Curie temperature and Neel temperature.Permanent and temporary magnets.

### Module V: Special materials

Superconductivity – introduction, Meissner effect – mention of Bardeen, Cooper and Schrieffer theory and Cooper pairs – examples of superconducting oxides, Chevrel phases– applications of superconducting materials.

Ionic conductors – sodium- $\beta$  alumina, sodium-sulphur battery. Intercalation – layered compounds – graphitic compounds. Special applications of solid state materials.High energy battery, lithium cells.

Liquid crystals: nematic, cholesteric and smectic types and applications.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;

Att: Attendance

# NANOCHEMISTRY

**Course Code:** CHY2611

**Credit Units:** 03

**Course Objective:**

To introduce the basics of nanotechnology and to learn the instrumental techniques used in characterization of nano materials.

**Course Contents:**

**Module I: Basics of Nanochemistry**

Introduction – definition – length scales – importance of nanoscale and its technology – self assembly of materials – nanowires, nanorods and quantum dots.

**Module II: Nano Particles**

Techniques to synthesize nanoparticles – top down and bottom up approaches – common growth methods – characterization of nanoparticles – applications and toxic effects of nanomaterials.

**Module III: Synthetic Techniques**

Introduction – types of nanoparticles – preparation, properties and uses of gold, silicon, silver, zinc oxide, iron oxide, alumina and titania nanoparticles.

**Module IV: Nano Materials**

Preparation, properties and applications of carbon nanotubes, nanorods, nano fibre and nanoclay.

**Module V: Instrumental Techniques**

Basic principles of electron microscopes – scanning electron microscopes (SEM) – transmission electron microscopes (TEM) – scanning probe microscopy – atomic force microscopy (AFM) – scanning tunneling electron microscope (STEM), DLS, TGA, DSC.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE

## TECHNICAL WRITING IN SCIENCE-II

**Course Code:** CHY2612

**Credit Units:** 02

**Course Objective:**

Students will be introduced to learning the written and oral communication of technical information. Assignments include writing and presenting proposals, reports, and documentation. Emphasis on use of rhetorical analysis, computer applications, collaborative writing, and usability testing to complete technical communication tasks in the workplace.

**Course Contents:**

**Module I: Technical Writing Process**

Document development process, Estimating Technical Documentation, Documentation Planning, Selection of Tools, Information Architecture, Templates and Page design, Audience Profiling.

**Module II:**

Journal paper writing: Abstract for paper and poster, different kind of journal for chemistry, impact factors of journals, ISBN number, Citation, H-index.

**Module III:**

Analytical report, Project Management in Technical Communication, Project writing, project proposal writing.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE

# TERM PAPER

**Course Code: CHY2631**

**Credit Units: 02**

## Objectives

The objective of this course is to judge the understanding as well as application of the knowledge gained by the students. The aim of the term paper is to provide the students with an opportunity to further enhance their knowledge in a sector of their choice by undertaking a significant practical unit of examining and analyzing various aspects of chemistry and its application at a level commensurate with the learning outcomes of the various courses taken up them in the ongoing semester.

A term paper is primarily a record of intelligent reading in several sources on a particular subject. The students will choose the topic at the beginning of the session in consultation with the faculty assigned. At least one middle level or senior level person of a company from the chosen sector may be interviewed face to face

## Guidelines:

1. The term paper will be related to the contemporary issue and the topic will be given by the department.
2. The presentation of the term paper is scheduled to be held before the commencement of Semester examinations.
3. The paper will carry 100 marks that will be marked on the basis of understanding and organization of content based on the literature review. The Bibliography shall form an important part of the paper.
4. Examples of a few broad areas for Term Paper (List is indicative, not exhaustive)
  - Inorganic chemistry
  - Organic chemistry
  - Physical chemistry
  - Green chemistry
  - Agriculture chemistry
  - Nanochemistry

## Evaluation Scheme

Organisation and relevance of content	Literature Review	Bibliography	Presentation	Total
30	30	20	20	100

# PROJECT

**Course Code: CHY2632**

**Credit Units: 03**

## **Objectives:**

The aim of the project is to provide the students with an opportunity to further their intellectual and personal development in the chosen field by undertaking a significant practical unit of activity. The project can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

## **Chapter Scheme and distribution of marks:**

**Chapter 1:** Introduction – 10 marks

**Chapter 2:** Conceptual Framework/ National/International Scenario – 25 marks

**Chapter 3:** Presentation, Analysis & Findings -- 25 marks

**Chapter 4:** Conclusion & Recommendations -- 10 marks

**Chapter 5:** Bibliography -- 05 marks

## **Components of a Project Report**

The outcome of Project Work is the Project Report. A project report should have the following components:

**1) Cover Page:** This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.

**2) Acknowledgement:** Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.

**3) Table of Content:** Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.

**4)Body of the Report:** The body of the report should have these four logical divisions

**a)Introduction:** This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, and method of analysis), Limitations of the Study, and Chapter Planning.

**b)Conceptual Framework / National and International Scenario:** (relating to the topic of the Project).

**c) Presentation of Data, Analysis and Findings:** (using the tools and techniques mentioned in the methodology).

**d)Conclusion and Recommendations:** In this section, the concluding observations based on the main findings and suggestions are to be provided.

**5) Bibliography or References:** This section will include the list of books and articles which have been used in the project work, and in writing a project report.

**6) Annexures:** Questionnaires (if any), relevant reports, etc.

(The main text of the Project should normally be in the range of 5000 words. However, there may be annexure in addition to the main text)

## **The Steps of a Project Report**

**STEP I :** Selection of the topic for the project by taking following points into consideration:

- Suitability of the topic.
- Relevance of the topic
- Time available at the disposal.
- Feasibility of data collection within the given time limit.
- Challenges involved in the data collection (time & cost involved in the data collection, possibility of getting responses, etc.)

**STEP II :** Finalisation of the Topic and preparation of Project Proposal in consultation with the Supervisor.

**STEP III :** Collection of information and data relating to the topic and analysis of the same.

**STEP IV :** Writing the report dividing it into suitable chapters, viz.,

**Chapter 1:** Introduction,

**Chapter 2:** Conceptual Framework / National & International Scenario,

**Chapter 3:** Analysis & Findings

**Chapter 4:** Conclusion and Recommendations.

**Chapter 5:** Bibliography

**STEP V :** The following documents are to be attached with the Final Project Report.

- Approval letter from the supervisor (Annexure-IA)
- Student's declaration (Annexure-IB)
- Certificate from the Competent Authority of the Organisation / Institution, if the student undertakes the Project Work in any Organisation / Institution.

**Guidelines for evaluation:**

- Each of the students has to undertake a Project individually under the supervision of a teacher and to submit the same following the guidelines stated below.
- Language of Project Report and Viva-Voce Examination may be English. The Project Report must be typed and hard bound.
- Failure to submit the Project Report or failure to appear at the Viva-voce Examination will be treated as "Absent" in the Examination. He /she has to submit the Project Report and appear at the Viva-Voce Examination in the subsequent years (within the time period as per University Rules).
- No marks will be allotted on the Project Report unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her Project Report.
- Evaluation of the Project Work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate. The evaluation scheme shall be as follows:

<b>Project Report</b>	<b>Power Point Presentation &amp; Viva</b>
75 marks	25 marks

## **Annexure-IB**

### **Student's Declaration**

I .....hereby declare that the Project Work with the title (in block letters).....

submitted by me for the partial fulfilment of the degree of B.Sc. Honours in Chemistry is my original work and has not been submitted earlier to any other University /Institution for the fulfilment of the requirement for any course of study.

I also declare that no chapter of this manuscript in whole or in part has been incorporated in this report from any earlier work done by others or by me. However, extracts of any literature which has been used for this report has been duly acknowledged providing details of such literature in the references.

# WORKSHOP

**Course Code: CHY2633**

**Credit Units: 01**

## Objectives

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two way. The trainer has to make sure that the aspects covered are practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

## Major Themes for Workshop

The workshop may be conducted on any of the following major themes:

- Nuclear Chemistry• Modern trend in Inorganic Chemistry
- Modern trend in Physical Chemistry• Modern trend in Organic Chemistry
- Nanotechnology and its applications• Green Chemistry
- Polymer Chemistry• Environmental Chemistry
- Pharmaceuticals
- Food Technology
- Agriculture Chemistry
- Computational Chemistry

These themes are merely indicative and other recent and relevant topics of study may be included.

## Guidelines for Workshop

The procedure for earning credits from workshop consists of the following steps:

1. Relevant study material and references will be provided by the trainer in advance.
2. The participants are expected to explore the topic in advance and take active part in the discussions held
3. Attending and Participating in all activities of the workshop
4. Group Activities have to be undertaken by students as guided by the trainer.
5. Evaluation of workshop activities would be done through test and quiz at the end of the workshop.
6. Submitting a write up of at least 500 words about the learning outcome from the workshop.

## Methodology

The methodology followed at the workshop could be based on any one or more of the following methods:

- Case Study
- Simulation
- Business Planning
- Quiz
- Quality analysis & characterization
- Identification and preparation of materials

## Evaluation Scheme:

Attendance	Active Participation	Multiple Choice Questions/ Quiz	Solving the case/ Assignment/ Write up	Total
10	30	30	30	100

## **Bachelor of Science (Forensic Science) (Honors)**

**FLEXILEARN**  
-Freedom to design your degree

**Curriculum & Scheme of Examination**

**2020**

**AMITY UNIVERSITY HARYANA**

**GURUGRAM**

## **Programme Overview**

### **Duration: 3 years**

Bachelor of Science (B.Sc.) degree program is designed to introduce the students to modern methods and principles. The students are exposed to applied laboratory techniques, critical thinking, independent and team learning and are provided with research opportunities. Related educational materials are used to support teachers in the classroom and promote hands-on learning experiences for students.

**Students of all the undergraduate degree Programmes at the time of graduation will be able to:**

- PO1 **Scientific knowledge:** Acquire the knowledge with facts and figures related to various subjects in such as Physics, Chemistry, Mathematics, Forensic Science etc.
- PO2 **Modern tool usage:** Acquire the skills in handling scientific instruments, planning and performing in laboratory experiments.
- PO3 **Problem analysis:** Identify, formulate, review research literature, and analyze complex problems reaching substantiated conclusions using fundamental principles, and the scientific theories.
- PO4 **Effective communication:** Develop various communication skills such as reading, listening, speaking, etc., which we will help in expressing ideas and views clearly and effectively.
- PO5 **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms
- PO6 **Individual and Team work:** Demonstrate the capability to work both independently and in cooperation with others

**Learning Outcomes: After completing the program the student will be able to:**

- PSO1 Develop an understanding and appreciation for the scope of Forensic Sciences.
- PSO2 Develop knowledge of the functions and services provided by the Forensic Laboratories and utilization of basic sciences for forensic investigations
- PSO3 Develop comprehensive knowledge on Crime scene reconstruction and significance of various biological, physical and chemical evidences for forensic investigations.
- PSO4 Provide knowledge on Procedures and scopes of Fingerprints Examination, serology, anthropology, DNA Fingerprinting, toxicology and cyber forensic etc.
- PSO5 Introduce students about the Sociological and Psychological aspects of crime and Criminal behavior and presentation of evidences in court of law.

# Syllabus - First Semester

## INTRODUCTION TO FORENSIC SCIENCE

Course Code: FCH2102

Credit Units: 02

**Course Objective:** The course focuses on the following objectives-

1. Developing an understanding and appreciation for the scope of Forensic Sciences.
2. Develop an understanding on historical development, Mobile Forensic Units and Expert's testimony.
3. Develop brief knowledge of the functions and services provided by the Forensic Laboratories

Course Contents:
<b>Module I: Brief Description of Forensic Science</b> Definition, Description, Principles, Concept, Needs and scope. History of Forensic Science and Forensic Science Labs; Progressive development and transformation of Forensic Science Labs.
<b>Module II: Forensic Science Laboratories</b> Main Authority, Organizational structure of Forensic Science Laboratory – Roles and responsibilities, Sections/ Divisions, Services provided, Process of report writing and submission to court. Mobile Forensic Science Laboratory – their distribution in India, functions, need and utility. Calibration of testing laboratories (ISO).
<b>Module III: Evidence Applicability in Court</b> Definition, Various types of evidences, Laws of evidence, Expert's testimony and admissibility of scientific evidence in Court of Law.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

## FUNDAMENTALS OF CRIME SCENE INVESTIGATION

Course Code: FCH2103

Credit Units: 02

**Course Objective:** The course focuses on the following objectives-

1. Developing an understanding and application of Crime scene Investigation.
2. Develop an understanding on concepts of crime scene and its types.
3. Give a brief description on various techniques used for recording of the crime scene.
4. Develop comprehensive knowledge on Crime scene reconstruction and significance of physical evidences.

<b>Course Contents:</b>
<b>Module I: Crime Scene and its Management</b> Defining a crime and crime scene, Importance of crime scene, Problems associated with crime scenes (indoor and outdoor), Location and processing of Crime Scene. Introduction to Crime Scene Management, Handling clues and evidences.
<b>Module II: Types of Crime Scenes</b> Types of Crime Scenes, Primary, Secondary crime scene, Mobile, Indoor and Outdoor crime scenes; Searching techniques used for locating physical evidences at scene of crime.
<b>Module III: Recording and Documentation of Crime Scene</b> Crime Scene Documentation, Barrication of Crime Scene, Crime Scene Photography, Videography, Sketching, Notes Making.
<b>Module IV: Crime Scene Reconstruction</b> Procedure and requirement for Crime Scene Reconstruction, Modus operandi, Expert team constitution for different crime scenes, Roles of Investigating Officer.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

## BIOLOGY

Course Code: FCH2104

Credit Units: 02

### Course Objective:

The given course is designed to:

1. Provide the knowledge about the fundamentals of biology.
2. To provide understanding of cell biology.
3. To develop the comprehensive understanding of study of the human anatomy and physiology, biochemistry and aspect of Genetics.

<b>Course Contents:</b>
<b>Module I: The Cell</b> Structural unit of life, History of cell, Organization of Prokaryotic and eukaryotic Cell. Cell cycle, mitosis and meiosis.
<b>Module II: Molecules of Life</b> Proteins - structure, properties and functions. Carbohydrates - structure, properties and functions. Lipids – structure, properties and functions. Types of micronutrients and macronutrients in the body.
<b>Module III: Basic Genetics and Nucleic Acids</b> Mendel's Laws, Exceptions to Mendel's Laws, DNA – Structure, Watson and Crick Model, RNA– Structure, Functions (in brief).
<b>Module IV: Chromosome and Mutation</b> Discovery, morphology and structural organization. Types of chromosomes; Supernumerary chromosomes. Mutations: Definition, Types: spontaneous and induced, Mutagens.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

## APPLIED MATHEMATICS

Course Code: FCH2105

Credit Units: 02

### Course Objective:

The objective of this course is to provide an introduction to the fundamentals and concepts of basic mathematics vectors and matrices, differentiation, and integration. This course aims to assist the students to develop confidence in handling mathematical concepts and techniques and to understand the principles and Concept of differential Calculus and integral calculus.

Course Contents:
<b>Module I: Matrices and Determinants</b> Definition of Matrix, Sub matrix, types of Matrices such as Symmetric and Asymmetric, Square, Diagonal Matrices, Singular and Non-singular matrices, Addition, Subtraction, Multiplication of Matrices, Determinant of Square Matrix, Rank of a matrix -Consistency of equations - Eigen roots and Eigen vectors - Cayley-Hamilton theorem (without proof)- Verification and computation of inverse matrix.
<b>Module II: Differentiation</b> Differentiation of standard functions: Polynomial, Rational, Exponential, Logarithmic and Trigonometric functions, Product rule, Quotient rule, Successive Differentiation (up to Second order).
<b>Module III: Integration</b> Integration of functions, Method of change of variables and Method of substitution for Integrals, Definite Integrals and their properties. Practical applications of integrals.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

## CRIME SCENE INVESTIGATION LAB

**Course Code: FCH2106**

**Credit Units: 02**

**Course Objective: -** The students will understand and perform experiments related to:

1. Investigation of crime scene.
2. Sketching of outdoor/ indoor scene of crime
3. Packaging and forwarding of Evidences

<b>Course Contents:</b>
<ol style="list-style-type: none"><li>1. Investigation and sketching of indoor scene of crime.</li><li>2. Investigation and sketching of outdoor scene of crime.</li><li>3. Crime Scene Photography: indoor, outdoor.</li><li>4. Notes making.</li><li>5. Searching of crime scene.</li><li>6. Parts of camera.</li><li>7. Packaging and forwarding.</li><li>8. Envelop making and Druggist fold method.</li><li>9. Sealing procedure.</li></ol>

**Examination Scheme:**

IA				EE	
A	PR	LR	V/Quiz	PR	V
5	10	05	5+5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## HUMAN ANATOMY AND PHYSIOLOGY

**Course Code: FCH2107**

**Credit Units: 03**

**Course Objective:** To Explore the Fundamental Concepts of Human anatomy and Physiology.

<b>Course Contents:</b>
<b>Module I:</b> <b>Tissue</b> Epithelial Tissue, Connective Tissue, Muscle Tissue (Skeleton, Smooth and Cardiac muscles: Anatomy and Physiology), Nervous tissue (Neuroglia, Neuron, Membrane potential, Synapse, Neurotransmitters and Receptors), Skeleton tissue (Bones and Cartilages, Ligament, Tendon, Joints), Covering and Lining Membranes <b>Respiratory System</b> Anatomy; Nose and Paranasal Sinuses, Pharynx, Larynx, Trachea, Bronchi and Subdivisions, Lungs and Pleurae: Mechanics of Breathing; Pressure Relationships in the Thoracic Cavity, Pulmonary Ventilation, Physical Factors Influencing Pulmonary Ventilation, Respiratory Volumes and Pulmonary Function: Gas Exchanges Between the Blood, Lungs, and Tissues; Basic Properties of Gases, Composition of Alveolar Gas, External Respiration, Internal Respiration: Transport of Respiratory Gases by Blood Oxygen Transport, Carbon Dioxide, Bohr effect, Haldane Effect, Chloride shift, Control of Respiration
<b>Module II:</b> <b>Cardio Vascular System</b> Heart Anatomy; Coverings of the Heart, Auricles, Ventricles, Heart Valves; Pathway of Blood Through the Heart, Blood Pressure, Blood vessels and structure( Arterial System, Capillaries, Venous System), Systemic Arteries and Veins <b>Excretory System</b> Kidney Anatomy, Cortical nephrons, Juxtaglomerular, Juxtaglomerular Complex (JGC) Kidney Physiology: Mechanisms of Urine Formation (Glomerular Filtration, Tubular Reabsorption, Tubular Secretion, Countercurrent mechanism, Urine Transport, Storage, and Elimination
<b>Module III:</b> <b>Nervous System</b> <b>Central Nervous System;</b> The Brain, Ventricles, Cerebral Hemispheres, Diencephalon Brain Stem, Cerebellum, Meninges, Cerebrospinal Fluid (CSF), Blood Brain Barrier The Spinal Cord <b>Peripheral Nervous System and Reflex Activity;</b> Sensory receptor and activity, transmission lines: Nerves and associated ganglia, Cranial nerves, Spinal nerves, Motor endings and activity <b>Autonomic Nervous System;</b> Parasympathetic, Sympathetic, Neurotransmitters and Receptor, The Effects of Drugs.
<b>Module IV:</b> <b>Digestive System</b> Overview of the Digestive System, Peritoneum, Histology of the Alimentary Canal (Mucosa, Submucosa, Muscularis externa, Serosa), Enteric Nervous System of the Alimentary Canal: Mouth, Tongue, Salivary Glands, Teeth, Pharynx, Esophagus, Stomach, Small Intestine, Liver and Gallbladder, Pancreas, Regulation of Bile and Pancreatic Secretion and Entry into the Small Intestine, Large Intestine, Bacterial Flora: Physiology of digestion and absorption
<b>Module V:</b> <b>Endocrine System</b> Chemistry and Mechanism of Hormone, The Pituitary Gland and Hypothalamus and associated hormones, The Thyroid Gland and Parathyroid gland; Thyroid Hormone (TH), Calcitonin, Parathyroid hormone (PTH), The Adrenal Gland and associated hormones, Pineal

gland, Pancreas

**Fluid, Electrolyte and Acid-Base Balance**

Body Fluids, Water Balance and ECF osmolality, Electrolyte Balance, Acid-Base Balance.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

## CHEMISTRY-I (BASIC)

Course Code: FCH2109

Credit Units: 03

**Course Objective:** - The objectives of the course are:

1. To focus on building a conceptual understanding of fundamental chemical principles
2. Including properties of atoms, molecules, states of matter, and chemical reactions.

### Course Contents:

#### Module I: Atomic Structure

Dalton's atomic theory: concept of elements, atoms and molecules. Atomic and molecular masses. Mole concept and molar mass: molarity, normality, molality, percentage composition, empirical and molecular formula, de Broglie matter waves, Heisenberg uncertainty principle, atomic orbitals, quantum numbers, shapes of s, p, d orbitals. Aufbau and Pauli exclusion principles, Hund's multiplicity rule. Electronic configurations of the elements, effective nuclear charge, Slater's rules.

#### Module II: Periodic Properties

Periodic law and the present form of periodic table, Atomic and ionic radii, ionization energy, electron affinity and electronegativity – definition, trends in periodic table (in s, p, d and f block elements). Comparative study of the elements including, diagonal relationships.

#### Concept of Acids and Bases

Arrhenius, Bronsted – Lowry and Lewis concepts of acids and bases, relative strength of acids and bases, Concept of Hard and Soft Acids and Bases.

#### Module III: Organic Chemistry

General introduction, Classification of hydrocarbons: Alkanes, Alkenes, Alkynes, Aromatic hydrocarbons. IUPAC nomenclature of branched and unbranched alkanes, the alkyl group, classification of carbon atoms in alkanes.

Curved arrow notation, drawing electron movements with arrows, half-headed and double-headed arrows, homolytic and heterolytic bond breaking. Types of reagents – electrophiles and nucleophiles. Types of organic reactions.

Reactive intermediates: carbocations, carbanions, free radicals. Localized and delocalized chemical bond, resonance effect and its applications.

#### Arenes and Aromaticity

Nomenclature of benzene derivatives. Aromatic nucleus and side chain.

Aromaticity: the Huckel rule, aromatic ions, aromatic, anti - aromatic and non - aromatic compounds.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

3. Odian George, 1990 General, Organic And Biological Chemistry.

# Syllabus- Second Semester

## PHYSICAL EVIDENCES IN FORENSIC SCIENCE

Course Code: FCH2201

Credit Units: 02

**Course Objective:** The course focuses on following objectives-

1. Developing an understanding and application of Forensic Science and significance of various physical evidences.
2. Develop an understanding on Expert's testimony.
3. Develop comprehensive knowledge on Procedure and examination in the Court of Law.

### Course Contents:

#### Module I: Introduction and Handling of Physical Evidences

Definition, Types and significance of Physical Evidences, Collection, Packaging, Preservation and Forwarding of evidences: Biological (urine, blood, semen, saliva, hair), Chemicals, poisons, firearms, fingerprints and tool marks.

#### Module II: Crime and Suspect

Linking a Crime Scene with the suspect through field notes, witnesses and interrogation, Reconstruction of crime scene and associative/ corroborative evidences.

#### Module III: Analysis of Physical evidences

Examinations, report making, chain of custody, report closing. Search and seizure, privilege against self – incrimination, Subpoenas deposition, Miranda rights, Condemned of court, FIR, Types of cognizable and non-cognizable offences.

#### Module IV: Examination in the Court

Direct examination, cross – examination and re-examination of Prosecution lawyer and Defence lawyer and Court presentation, Law of evidence: testimonial and real evidence.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

## FINGERPRINT SCIENCE

Course Code: FCH2202

Credit Units: 03

**Course Objective:** The course focuses on following objectives-

1. Developing an understanding and appreciation for the scope of Fingerprints Examination.
2. Develop an understanding on various methods of development of Fingerprints.
3. Develop comprehensive knowledge on fingerprint patterns, fingerprint classification, the various methods of fingerprint development- physical and chemical.

<b>Course Contents:</b>
<b>Module I: History and Development of Fingerprinting</b> Origin and History of fingerprints, Principles of Fingerprint identification, Searching, location and significance of fingerprints in criminal investigation.
<b>Module II: Introduction of Fingerprint and its characteristics</b> Biological significance of skin pattern, Types of fingerprints, Fingerprint characteristics: class and individual, Collection, lifting and preservation of fingerprints, Photography of latent fingerprints and presentation of fingerprint evidence in court.
<b>Module III: Classification of Fingerprints</b> Henry's system of classification, Batley's Single Digit classification, Extension of Henry's system of classification. Primary, secondary, sub-secondary, major, Second sub-secondary, key and final classifications
<b>Module IV: Fingerprint Developmental techniques</b> Methods of lifting and developing latent fingerprints – Physical methods - Powder method (Black, silver, florescent, red, yellow), Iodine fuming etc. Chemical methods - Ninhydrin, Silver nitrate method.
<b>Module V: Automated Fingerprint Identification System</b> Introduction, history, instrumentation, processing and applications, need and scopes of AFIS.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE

## METRIC SYSTEM AND PHYSICAL PROPERTIES OF EVIDENCES

Course Code: FCH2203

Credit Units: 03

**Course Objective:** The Objective of this course is to introduce the students to the characteristics and properties of different evidences like glass, soil, paint, hair and fibre, which are normally encountered at the scene of crime.

<b>Course Contents:</b>
<b>Module I: Metric System</b> Introduction to metric system, Introduction to prevalent physical evidences (soil, glass, fibre, hair and liquids).
<b>Module II: Glass Examination</b> Glass: Composition (organic and inorganic elements), Analytical and chemical examination, Comparing glass fragments, glass fractures.
<b>Module III: Forensic Paint Examination</b> Introduction to paint chemistry, types of paints and their composition, forensic examination of paints (household and automobile).
<b>Module IV: Soil Examination</b> Composition of soil (organic and inorganic), Properties (Colour, density, size distribution of soil particles), Collection and preservations of soil, Mineral and chemical analysis of soil, Density gradient techniques. Definition, composition, types, physical and chemical analysis of concrete and cement.
<b>Module V: Introduction to Various Marks</b> Definition, nature, types, significance and examination of tool marks, tyre marks, skid marks, tread marks. Definition, nature, types, significance and examination of foot and shoeprints, gait pattern and footprint casting.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

## CHEMISTRY-II (INORGANIC)

Course Code: FCH2209

Credit Units: 03

### Course Objective: - The objectives of the course:

1. To focus on building a conceptual understanding of fundamental chemical principles
2. Including properties of atoms, molecules, states of matter, and chemical reactions.

### Course Contents:

#### Module I: Chemistry of s-block Elements

Ionic bond, Covalent bond, Coordinate bond. Valence shell electron pair repulsion (VSEPR) theory to  $\text{NH}_3$ ,  $\text{H}_3\text{O}^+$ ,  $\text{SF}_4$ ,  $\text{ClF}_3$ ,  $\text{ICl}_2^-$  and  $\text{H}_2\text{O}$ . Valence bond theory and its limitations, directional characteristics of covalent bond, various types of hybridization and shapes of simple inorganic molecules and ions ( $\text{BeF}_2$ ,  $\text{BF}_3$ ,  $\text{CH}_4$ ,  $\text{PF}_5$ ,  $\text{SF}_6$ ,  $\text{IF}_7$ ,  $\text{SO}_4^{2-}$ ,  $\text{ClO}_4^-$ ). MO theory of heteronuclear (CO and NO) diatomic molecules, bond strength and bond energy, percentage ionic character from dipole moment and electronegativity difference.

#### Module II: Chemistry of p-block Elements

**Boron family (13<sup>th</sup> group):** Diborane – properties and structure (as an example of electron – deficient compound and multicentre bonding), Borazine – chemical properties and structure.

**Carbon Family (14<sup>th</sup> group):** Allotropy of carbon, Catenation,  $p\pi-d\pi$  bonding (an idea), carbides, fluorocarbons– general methods of preparations, properties and uses.

**Nitrogen Family (15<sup>th</sup> group):** Oxides – structures of oxides of N, P. oxyacids – structure and relative acid strengths of oxyacids of Nitrogen and phosphorus.

**Oxygen Family (16<sup>th</sup> group):** Oxyacids of sulphur – structures and acidic strength.

**Halogen Family (17<sup>th</sup> group):** Basic properties of halogen, hydro and oxyacids of chlorine – structure and comparison of acid strength.

**Noble Gases (18<sup>th</sup> group):** Basic properties of noble gases, physical properties and structure of important compounds of Xenon.

#### Module III: Chemistry of d-block Elements

Definition of transition elements, position in the periodic table, General characteristics and properties of d-block elements, Comparison of properties of 3d elements with 4d and 5d elements with reference only to ionic radii, oxidation state, magnetic and spectral properties.

#### Coordination Compounds

Werner's coordination theory, effective atomic number concept, chelates, nomenclature of coordination compounds, isomerism in coordination compounds, valence bond theory of transition metal complexes. Limitations of valence bond theory, an elementary idea of crystal-field theory, crystal field splitting in octahedral and tetrahedral complexes, factors affecting the crystal-field parameters.

#### Module IV: Chemistry of f-block Elements

**Lanthanides:** General features and Electronic structure, oxidation states and ionic radii and lanthanide contraction.

**Actinides:** General features and chemistry of actinides, actinide contraction. Comparison of properties of Lanthanides and Actinides and with transition elements. Elementary idea about the transuranic elements.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

## FINGERPRINTING LAB

**Course Code: FCH2207**

**Credit Units: 01**

**Course Objective: -** The students will understand and perform experiments related to:

1. Packaging and forwarding of physical evidences.
2. Identifying fingerprints, their patterns, footprints and preparing fingerprint chart.

<b>Course Contents:</b>
1. Prepare fingerprint card and identify the patterns. 2. Tape lifting of fingerprint. 3. Casting of foot prints/ fingerprint. 4. Ninhydrin method for fingerprint development. 5. Iodine fuming method for fingerprint development. 6. Silver nitrate method for fingerprint development.

### Examination Scheme:

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## METRIC SYSTEM LAB

**Course Code : FCH2208**

**Credit Units :01**

**Course Objective: -** The students will understand and perform experiments relating to:

1. Analysis of physical evidences
2. Identifying different Physical evidences on the basis of their physical properties.
3. Determine pH, density and refractive index of various physical evidences

<b>Course Contents:</b>
1. Analysis of Glass.
2. Examination of Paint chips.
3. Examination of Glass fragments (Density Gradient, Refractive Index method).
4. Examination of Soil (pH, Size distribution and Density Gradient method)
5. Examination of Fibers.
6. Examination of Cement and Concrete.

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## PHYSICS-I

Course Code: FCH2210

Credit Units: 02

### Course Objective: - The objectives of the course:

1. To focus on building a conceptual understanding of fundamental principles of physics.
2. To understand basics of physics and their applications in Forensic Science.

Course Contents:
<b>Module I: Force and Motion</b> Definition of motion, position and displacement, average velocity, instantaneous velocity, average speed, acceleration, acceleration of freely falling body, projectile motion, Newton's laws, force, mass, friction, properties of friction, drag force and terminal speed, linear and circular motion.
<b>Module II: Kinetic energy and work</b> Energy, kinetic energy, work, work done by gravitational force, work done by spring force, power, work and potential energy, conservation of energy, work energy theorem.
<b>Module III: Atomic Physics</b> Bohr atomic model, quantum numbers, Pauli's exclusion principle, hydrogen spectrum, series (Lyman, Balmer, Paschen, Brackett and pfund), vector atom model.
<b>Module IV: Waves</b> Types of waves, transverse and longitudinal waves, electromagnetic waves and electromagnetic spectrum, wavelength and frequency, speed of travelling wave, wave equation, sound waves, speed of sound, intensity and sound level, Doppler effect, shock waves, X Rays (continuous and characteristic), Spectra- Absorption and emission. Bragg's Law and X-ray diffraction.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester, A: Attendance

# Syllabus - Third Semester

## FORENSIC SEROLOGY

Course Code: FCH2302

Credit Units: 03

**Course Objective:** This course will cover:

1. Complete and thorough knowledge regarding the various aspects of forensic serology
2. Blood and its detailed study for identification
3. Importance of body fluids and their forensic significance

### Course Contents:

#### Module 1: Blood and its Properties

Nature of blood, collection, preservation and packing of blood evidence, procedures and precautions. ABO system, Rh system and MN system; Techniques for the determination of blood groups.

#### Module 2: Chemical and microscopic Tests used in Blood Analysis

Identification of bloodstains by Microscopic methods, Catalytic tests, Crystal tests.

#### Module 3: Species of Origin and Grouping of Bloodstains

Application of Spectrophotometric method, Chromatographic and Immunological methods (Ring, Precipitin, Ouchterlony, reverse agglutination, normal/mixed agglutination).

#### Module 4: Introduction and analysis of Body Fluids

Introduction to various body fluids, their nature and characteristics and Forensic analysis of Semen, Saliva, Urine, Sweat etc.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

## QUESTIONED DOCUMENTS-I

**Course Code: FCH2312**

**Credit Units: 3**

**Course Objective:** The course focuses on the following objectives-

1. Developing an understanding and appreciation for the scope of Handwriting Identification and Examination.
2. Develop an understanding of handwriting and their characteristics, principles of identification.
3. Give a brief description on various methods of their detection and examination.
4. Develop comprehensive knowledge on typewritten documents, common styles and their examination.

<b>Course Contents:</b>
<b>Module I: Introduction to Questioned Documents</b> Definition: Documents, questioned documents and the type of cases encountered. Importance, nature and problems of documents, location, collection, handling and presentation of documents, adequacy of exemplars and standards.
<b>Module II: General Equipment for Examination</b> Hand lens, Camera, Compound Microscope, Stereo microscope, TLC, Transmitted light source, UV-IR radiation chamber and Oblique Light source, ESDA, VSC.
<b>Module III: Handwriting Characteristics</b> Identification – principle, individual handwriting characteristics, external, internal and physical factors affecting handwriting or signature of a person.
<b>Module IV: Signatures</b> Authentic signatures, forged signatures, disguised signatures, traced signatures, and their characteristics
<b>Module V: Typewritten and Computer Generated Documents</b> Comparison of typewritten documents, common types of styles, detection of altered typewritten documents. Working of photocopiers and printers, scanners, examination of photocopies/ Xerox, printouts and scanned documents.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester, A: Attendance

## RESEARCH METHODOLOGY AND STATISTICS

Course Code: FCH2313

Credit Units: 03

**Course Objective:** This course objective is to introduce the student with the:

1. The research process: conceiving, designing, conducting and analyzing.
2. Methods of statistical description and analysis.
3. Ethical issues about research.
4. Graphical presentation of data.

<b>Course Contents:</b>
<b>Module I: Introduction</b> Definition, concept and research in science and forensic science.
<b>Module II: Methods of Research</b> Introduction to Research Methodology; Experimental research and non – experimental research design. Observation, questionnaires, interview, schedules, case study methods, types of data, graphical representation of data, parts of statistical table.
<b>Module III: Introduction to Statistics</b> Introduction to statistics; one tailed test, two tailed test, parametric (f-test, z-test, t- test, chi square test) and non-parametric statistics (sign test, rank test).
<b>Module IV: Descriptive Statistics</b> Measures of central tendency: Mean, Mode, Median. Measures of dispersion: Range, Variance, Skewness Kurtosis, Quartile. Simple correlation methods (Karl Pearson method) and regression on two lines.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

### CHEMISTRY-III (PHYSICAL)

Course Code: FCH2314

Credit Units: 03

**Course Objective:** - The objectives of the course:

- 1) To focus on building a conceptual understanding of fundamental chemical principles.
- 2) Including properties of atoms, molecules, states of matter, and chemical reactions.

<b>Course Contents:</b>
<b>Module I: States of Matter</b> <b>Solid:</b> Crystal, types of crystals, Crystal defects, Braggs Law. Metallic bond and its characteristics. Liquid crystals: Difference between solids, liquids and liquid crystals, types of liquid crystals. Applications of liquid crystals. <b>Liquid:</b> Properties of liquids – surface tension, viscosity and their determination. <b>Gaseous States:</b> Deviation of Real gases from ideal behaviour. Derivation of Vander Waal's Equation of State, Explanation of behaviour of real gases using Vander Waal's equation. <b>Critical Phenomenon:</b> Critical temperature, Critical pressure, critical volume and their determination. PV isotherms of real gases, continuity of states, the isotherms of Vander Waal's equation, relationship between critical constants and Vander Waal's constants. Liquifaction of gases.
<b>Module II: Kinetics and Chemical Equilibrium</b> Rate of reaction, rate equation, factors effecting the rate of reaction, Order of reaction, integrated rate expression for zero order, first order, Half life of reaction, Methods of determination of order of reaction, Arrhenius equation. <b>Chemical Equilibrium:</b> Equilibrium constant and free energy, concept of chemical potential, Thermodynamic derivation of law of chemical equilibrium.
<b>Module III: Electrochemistry</b> Electrolytic conduction, factors affecting electrolytic conduction, specific conductance, molar conductance, equivalent conductance and relation among them, their variation with concentration. Kohlrausch's Law, calculation of molar ionic conductance and effect of viscosity temperature and pressure on it. Application of Kohlrausch's Law in calculation of conductance of weak electrolytes at infinite dilution. Applications of conductivity measurements: determination of degree of dissociation, determination of $K_a$ of acids, determination of solubility product of sparingly soluble salts, conductometric titrations. Definition of pH and p $K_a$ , Buffer solution, Buffer action.
<b>Module IV: Thermodynamics</b> Definition of thermodynamic terms: system, surrounding etc. Types of systems, intensive and extensive properties. State and path functions and their differentials. Thermodynamic process. Concept of heat and work. Law of thermodynamics: Zeroth, First, Second and Third law of thermodynamics. Nernst heat theorem. Criteria for thermodynamic equilibrium and spontaneity of a process in terms of thermodynamic functions.

Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

## FORENSIC SEROLOGY LAB

**Course Code: FCH2311**

**Credit Units: 01**

**Course Objective:** The students will understand and perform experiments relating to:

1. Analysis of blood, biological fluids and alcohol.
2. Thin layer chromatography for poisons.

<b>Course Contents:</b>
<ol style="list-style-type: none"><li>1. Analyse different blood groups from the blood found at crime scene.</li><li>2. Perform catalytic test for blood</li><li>3. Perform crystal tests for blood.</li><li>4. Analyse biological fluid (saliva).</li><li>5. Analyse biological fluid (urine).</li><li>6. Analyse alcohol, acetone, chloroform</li><li>7. Separate metallic poison by thin layer chromatography (Arsenic, mercury, bismuth, Antimony).</li></ol>

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## CRIME SCENARIO IN INDIA

Course Code: FCH2308

Credit Units: 03

**Course Objective:** The main objective of the course is to introduce students about the Sociological aspects of crime and Criminal behavior.

<b>Course Contents:</b>
<b>Module I: Introduction to Criminology</b> Introduction to Criminology – nature, need and function, Basics of Criminology, Historical development and scope of criminology in India.
<b>Module II: Crime and Sociology</b> Sociological aspects of crime and criminals in society; Theories- Environmental, Sociological, Geographical, Biological.
<b>Module III: Types of Crime</b> Types of crime, Causes of crime – property crimes, public order crimes, violent crimes, professional crime, cybercrimes, juvenile delinquency. Categories of crime: cognizable non cognizable crime, bailable and non bailable crime.
<b>Module IV: India- Crime Scenario</b> Society-Criminal interaction and various types of crimes in India.
<b>Module V: Criminal Behavior</b> Theories (classical and non-classical) and literature studies, criminal inheritance and factors responsible for crime (personal, environmental, peer group, neighbourhood).

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester, A: Attendance

5. Compute Crime and Computer Forensic by Dr. R.K. Tiwari.

## CYBER FORENSICS

**Course Code: FCH2315**

**Credit Units: 03**

**Course Objective:** The main objective of the course is to introduce students about the basic fundamentals of digital forensics and the examination of digital evidences.

### Course Contents:

#### Module I: Basics of Digital Forensic

Basics of digital forensic, computer forensic, introduction to cyber forensic, Computer organization, Components of computers – Input and Output devices, CPU  
Memory Hierarchy and types of Memory (RAM and ROM and their types) external storage devices  
Application Software and System Software, Introduction to IT act, Ethical hacking

#### Module II: Data Representations

Integers, real, binary, octal, hexadecimal and their conversions  
Logic gates – Negation, OR, AND, XOR etc. and their combinations

#### Module III: Introduction to Operating System

Basics of Operating System, memory structure, concurrency, scheduling, synchronization and memory management, process description and control  
Introduction to Operating System (Batch Operating System, Distributed Operating System, etc.)  
Introduction to Windows and Linux operating System

#### Module IV: Introduction to Digital Evidences

Collection, preservation of evidences, forensic imaging, data retrieval, mobile forensic, techniques in digital forensic.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

# Syllabus - Fourth Semester

## QUESTIONED DOCUMENTS-II

**Course Code: FCH2412**

**Credit Units: 3**

**Course Objective:** The course focuses on following objectives-

1. Developing an understanding and appreciation for the scope of Questioned Documents.
2. Develop an understanding on different types of questioned documents, the types of forgeries and disguise generally encountered.
3. Brief description on general equipment used in examination of Questioned Documents

<b>Course Contents:</b>
<b>Module I: Types of Questioned Documents</b> Forgery and its characteristics, erasures, obliteration, alteration and addition.
<b>Module II: Detection of Alterations</b> Detection and deciphering of indented writing, charred documents, invisible and secret writings
<b>Module III: Ink Examination and Paper Comparison</b> Composition of major classes of inks (carbon ink, fountain ink etc.), analysis of writing inks and ink dating, pencil lead examination and age of documents, Physical characteristics of paper, watermark examination, fibre analysis, chemical and trace elements analysis.
<b>Module IV: Report Writing and Case Presentation</b> Comparison with standards: admitted and specimen samples, report writing, Presentation of report in questioned document examination cases in Court of Law.
<b>Module V: Security Documents and Their Examinations</b> Introduction of security documents, Types of security documents, Examination of Passports and fake currency notes, Latest introduced security features for identification of genuine bank notes (new series) of 50, 100, 200, 500, 2000 rupees.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester, A: Attendance

## FUNDAMENTALS OF FORENSIC PHOTOGRAPHY

Course Code: FCH2402

Credit Units: 03

**Course Objective:** This course is designed to:

1. Provide foundation knowledge of photography
2. Develop an understanding and application of Photography in Forensic Science and CSI

### Course Contents:

#### Module I: Introduction

Introduction to forensic photography, required equipments for photography, Importance of Forensic photography in a crime scene investigation, indoor and outdoor crime scenes photography.

#### Module II: Types of Photography

Surveillance photography – Cameras, Type and accessories for surveillance photography, Aerial photography, Underwater photography, Videography.

#### Module III: Photo Prints

Various methods for developing photographs, chemical processing, negative development, Films-introduction and types.

#### Module IV: Photography and Crime Scene

Photographic aspects of physical injuries, Use of photography in reconstruction the scene of crime (Indoor and outdoor) and its presentation in the Court of Law.

#### Module V: Guidance Documentation and High-tech Photography for Crime Scene

Image magnification, UV and IR illumination in Photography, Photography of Art factual evidences (Bloodstain, fingerprint, imprints, and micro evidence), High-speed photography, legal aspects of visual evidence.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester, A: Attendance

## FORENSIC ANTHROPOLOGY

Course Code: FCH2403

Credit Units: 03

### Course Objective:

The given course is designed to:

1. Provide the knowledge about the basics about physical anthropology
2. Develop comprehensive understanding of different techniques of determining the identity of unknown remains.
3. Provide the understanding of process of forensic facial reconstruction and its utilization in personal identification

<b>Course Contents:</b>
<b>Module I: Introduction to Forensic Anthropology</b> Definition, scope and application of Forensic Anthropology and related sciences, importance and need, issues related to personal identification.
<b>Module II: Identification from Bones</b> Attribution of Sex, Estimation of Age (humerus, radius, ulna, fibula, tibia, femur, pelvic bone, foot and hand).
<b>Module III: Height and Race Determination</b> Race and height determination from long bones and their medico legal implication. Establishment of Partial and Complete identity of skeletal material and dead bodies.
<b>Module IV: Identification from Human Skull</b> Morphology of human skull, determining the age, race and sex of the skull and its medicolegal implications.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

## CHEMISTRY-IV (ORGANIC)

Course Code: FCH2413

Credit Units: 03

**Course Objective: - The objectives of the course:**

- 1) To focus on building a conceptual understanding of fundamental chemical principles.
- 2) Including properties of atoms, molecules, states of matter, and chemical reactions.

**Course Contents:**

**Module I: Stereochemistry of Organic Compounds**

Concept and classification of isomerism. Optical isomerism, elements of symmetry, molecular chirality, enantiomers, optical activity, chiral and achiral molecules with two stereogenic centres, diastereomers. Newmann and Fischer projection. Relative and absolute configuration, sequence rules, R and S systems of nomenclature. Geometric isomerism, determination of configuration of geometric isomers. E and Z system of nomenclature.

**Module II:**

**Alkyl and Aryl Halides:** Nomenclature and classes of alkyl halides, Mechanisms and stereochemistry of nucleophilic substitution reactions of alkyl halides,  $S_N2$  and  $S_N1$  reactions. Addition-elimination and elimination-addition mechanisms of nucleophilic aromatic substitution reactions of aryl halides.

**Alcohols:** Nomenclature, methods of preparation. Hydrogen bonding and acidic nature.

**Dihydric alcohols:** Nomenclature, methods of preparation and its chemical reactions.

**Phenols:** Nomenclature, structure and bonding. Preparation of phenols, Comparative acidic strengths of alcohols and phenols.

**Module III:**

**Aldehydes and Ketones:** Nomenclature, methods of preparation of aldehydes and ketones. Mechanism of nucleophilic additions to carbonyl group with particular emphasis on benzoin and aldol, condensations. Wittig reaction and Mannich reaction.

**Carboxylic Acids and Acid Derivatives:** Nomenclature, structure and bonding, acidity of carboxylic acids, effects of substituents on acid strength. HVZ reaction. Mechanism of decarboxylation. Relative stability of acyl derivatives. Interconversion of acid derivatives by nucleophilic acyl substitution. Mechanisms of esterification and hydrolysis (acidic and basic).

**Module IV:**

**Amines:** Structure and nomenclature of amines. Separation of a mixture of different amines. Structural features affecting basicity of amines. Gabriel-phthalimide reaction, Hofmann bromamide reaction. Electrophilic aromatic substitution in aryl amines, reactions of amines with nitrous acid.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE

## FORENSIC ANTHROPOLOGY LAB

**Course Code: FCH2410**

**Credit Units: 01**

**Course Objective: -** The students will understand and perform experiments related to:

1. Determination of age, sex and stature from skull
2. Determination of age, sex and stature from long bones of human body

<b>Course Contents:</b>
<ol style="list-style-type: none"><li>1. Identification of human skeleton system.</li><li>2. Identification of various bones (Pelvic and Skull bones).</li><li>3. Estimation of height using long bones.</li><li>4. Determination of sex from skull, pelvis and mandibular bone.</li><li>5. Determination of age using skull.</li></ol>

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## QUESTIONED DOCUMENTS LAB

**Course Code: FCH2414**

**Credit Units: 01**

**Course Objective: -** The students will understand and perform experiments related to:

1. Examination of handwriting
2. Examination of security documents
3. Comparison of bite marks and will visit mortuary

<b>Course Contents:</b>
<ol style="list-style-type: none"><li>1. Handwriting analysis based on class and individual characteristics.</li><li>2. Examination of documents under different light sources- transmitted, oblique, UV.</li><li>3. Identification of genuine and fake currencies</li><li>4. Identification features of security documents</li><li>5. Visit for autopsy</li><li>6. Identification of Bite marks.</li></ol>

**Examination Scheme:**

IA				EE

## WILDLIFE FORENSICS

**Course Code: FCH2415**

**Credit Units: 03**

**Course Objective:** During the course the students will be able to

1. Learn the fundamentals of wildlife forensics
2. Explain the diversity and utility of variety of animal evidences
3. Explain the benefits of risk management and the structure of ISO 31000:2009 standard

<b>Course Contents:</b>
<b>Module I: Introduction to Wildlife Forensics</b> Introduction to Wildlife Forensics, basic elements of wildlife forensics, application of forensics in wildlife crimes, basic analytical techniques in wildlife forensics.
<b>Module II: Evidence Examination</b> Identification of some endangered species of plants and animals, Wildlife life protection Act, examination of pug marks, horn, skin, fur and hair, nail and teeth, wood etc. Important case studies, ethical issues in wildlife forensics.
<b>Module III: Introduction to Risk Management and its benefits</b> Introduction Risk Management, Risk Management in organizations and risk ownership, Risk Management standards – Benefits of Risk Management.
<b>Module IV: ISO 31000 - Elements of Risk Management</b> ISO 31000 overview, PDCA cycle - Elements and Purpose, Principles of Risk Management, Relationship between Principles, Framework and Process, Understanding the components of the Risk framework, Designing the Framework with Mandate and Commitment.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

## PHYSICS-II

**Course Code: FCH2416**

**Credit Units: 03**

**Course Objective:** During the course the students will be able to

1. Learn the fundamentals of physics
2. Apply the phenomena of physics to forensic investigations in cases of accident, reconstruction, firearm ballistics

<b>Course Contents:</b>
<b>Module I: Newton's Laws of Motion</b> Interpretation and applications of Newton's laws of motion (I, II, III), Linear and circular motion, Newtonian mechanics, Friction, properties of friction, Pseudo forces.
<b>Module II: Elasticity and Fluid Dynamics</b> Elastic properties of matter, elastic constants and their interrelations. Fluid dynamics, equation of continuity, Bernoulli's equation, stream line and turbulent flow, lines of flow in air foil, Poiseuille's equation.
<b>Module III: Study of Sound</b> Velocity of sound, noise and sound intensity measurement, echo, reverberation, Sabine's Formula, absorption coefficient, acoustics of buildings and factors affecting acoustics of buildings. Sound distribution in an auditorium, introduction to ultrasonic, production of ultrasonic waves, applications of ultrasonics.
<b>Module IV: Study of Light</b> Refraction through thin layers, thick lens, thin lens and lens combinations, aberrations, interference in thin films, fringes in wedge shaped films, Newton's rings, total internal reflection, Diffraction and polarization, simple table spectrophotometer.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE

## TERM PAPER

**Course Code: FCH2431**

**Credit Units: 03**

### Objectives

The objective of this course is to examine the understanding as well as application of the knowledge gained by the students. The aim of the term paper is to provide the students with an opportunity to further enhance their knowledge in a sector of their choice in Forensic science. The study will be related to learning outcomes of the various courses taken up them in the ongoing semester.

A term paper is primarily a record of intelligent reading in several sources on a particular subject. The students will choose the topic at the beginning of the session in consultation with the faculty assigned.

### Guidelines:

1. The term paper will be related to the forensic science and the topic will be given by the faculty of department.
2. The presentation of the term paper is scheduled to be held before the commencement of semester examinations.
3. The paper will carry 100 marks that will be marked on the basis of understanding and organization of content based on the literature review. The Bibliography shall form an important part of the paper.
4. Examples of a few broad areas for Term Paper (List is indicative, not exhaustive)
  - a. Forensic Toxicology
  - b. Forensic Anthropology
  - c. Physical chemistry
  - d. Handwriting and Typewriting Analysis
  - e. Crime Scene Investigation
  - f. Criminology, Criminal Law and Police Administration

### Evaluation Scheme:

Organisation and relevance of content	Literature Review	Bibliography	Presentation	Total
30	30	20	20	100

## PROJECT

Course Code: FCH2432

Credit Units: 03

### Objectives:

The aim of the project is to provide the students with an opportunity to further enhance their intellectual and personal development in the chosen field by undertaking a significant practical experience. The project can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

### Chapter Scheme:

**Chapter 1:** Introduction

**Chapter 2:** Conceptual Framework/ National/International Scenario

**Chapter 3:** Presentation, Analysis and Findings

**Chapter 4:** Conclusion and Recommendations

**Chapter 5:** Bibliography

### Components of a Project Report

The outcome of Project Work is the Project Report. A project report should have the following components:

- 1) Cover Page:** This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.
- 2) Acknowledgements:** Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.
- 3) Table of Content:** Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.
- 4) Body of the Report:** The body of the report should have these four logical divisions
  - a) Introduction:** This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, and method of analysis), Limitations of the Study, and Chapter Planning.
  - b) Conceptual Framework / National and International Scenario:** (relating to the topic of the Project).
  - c) Presentation of Data, Analysis and Findings :**( using the tools and techniques mentioned in the methodology).
  - d) Conclusion and Recommendations:** In this section, the concluding observations based on the main findings and suggestions are to be provided.
- 5) Bibliography or References:** This section will include the list of books and articles which have been used in the project work, and in writing a project report.
- 6) Annexures:** Questionnaires (if any), relevant reports, etc.  
(The main text of the Project should normally be in the range of 5000 words. However, there may be annexure in addition to the main text)

### The Steps of a Project Report

**STEP I:** Selection of the topic for the project by taking following points into consideration:

- I. Suitability of the topic.
- II. Relevance of the topic
- III. Time available at the disposal.
- IV. Feasibility of data collection within the given time limit.

V.Challenges involved in the data collection (time and cost involved in the data collection, possibility of getting responses, etc.)

**STEP II:** Finalisation of the Topic and preparation of Project Proposal in consultation with the Supervisor.

**STEP III:** Collection of information and data relating to the topic and analysis of the same.

**STEP IV:** Writing the report dividing it into suitable chapters, viz.

**Chapter 1:** Introduction,

**Chapter 2:** Conceptual Framework / National and International Scenario,

**Chapter 3:** Analysis and Findings

**Chapter 4:** Conclusion and Recommendations.

**Chapter 5:** Bibliography

**STEP V:** The following documents are to be attached with the Final Project Report.

- I. Approval letter from the supervisor (Annexure-IA)
- II. Student's declaration (Annexure-IB)
- III. Certificate from the Competent Authority of the Organisation / Institution, if the student undertakes the Project Work in any Organisation / Institution.

**Guidelines for evaluation:**

1. Each of the students has to undertake a Project individually under the supervision of a teacher and to submit the same following the guidelines stated below.
2. Language of Project Report and Viva-Voce Examination may be English. The Project Report must be typed and hard bound.
3. Failure to submit the Project Report or failure to appear at the Viva-voce Examination will be treated as "Absent" in the Examination. He /she has to submit the Project Report and appear at the Viva-Voce Examination in the subsequent years (within the time period as per University Rules).
4. No marks will be allotted on the Project Report unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her Project Report.
5. Evaluation of the Project Work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate. The evaluation scheme shall be as follows:

<b>Project Report</b>	<b>Power Point Presentation and Viva</b>
75 marks	25 marks

## **Annexure-I B**

### **Student's Declaration**

I .....hereby declare that the Project Work with the title (in block letters)..... Submitted by me for the partial fulfilment of the degree of B.Sc. in Forensic science is my original work and has not been submitted earlier to any other University /Institution for the fulfilment of the requirement for any course of study.

I also declare that no chapter of this manuscript in whole or in part has been incorporated in this report from any earlier work done by others or by me. However, extracts of any literature which has been used for this report has been duly acknowledged providing details of such literature in the references.

## WORKSHOP/CERTIFICATION

Course Code: FCH2433

Credit Units: 01

### Objectives

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two ways. The trainer has to make sure that the aspect covered is practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

### Major Themes for Workshop

The workshop may be conducted on any of the following major themes:

1. Crime Scene Investigation
2. Forensic Toxicology
3. Forensic Anthropology
4. Handwriting and Typewriting Analysis
5. Crime Scene Investigation
6. Criminology, Criminal Law and Police Administration
7. Fingerprint Science
8. Forensic Serology
9. DNA Fingerprinting
10. Wounds and its Medico-Legal Aspects

These themes are merely indicative and other recent and relevant topics of study may be included.

### Guidelines for Workshop

The procedure for earning credits from workshop consists of the following steps:

1. Relevant study material and references will be provided by the trainer in advance.
2. The participants are expected to explore the topic in advance and take active part in the discussions held
3. Attending and Participating in all activities of the workshop
4. Group Activities have to be undertaken by students as guided by the trainer.
5. Evaluation of workshop activities would be done through test and quiz at the end of the workshop.
6. Submitting a write up of at least 500 words about the learning outcome from the workshop.

### Methodology

The methodology followed at the workshop could be based on any one or more of the following methods:

1. Case Study
2. Simulation
3. Quiz
4. Quality analysis and characterization
5. Identification and preparation of materials

### Evaluation Scheme:

Attendance	Active Participation	Multiple Choice Questions/ Quiz	Solving the case/ Assignment/ Write up	Total
10	30	30	30	100

# Syllabus- Fifth Semester

## DNA FINGERPRINTING

Course Code: FCH2502

Credit Units: 03

**Course Objective:** The objectives of the course are to:

1. Provide basic understanding of genetics in forensic science
2. Provide students with technical skills and competencies in DNA fingerprinting techniques

<b>Course Contents:</b>
<b>Module I: Introduction to DNA Fingerprinting</b> Definition, Importance of DNA Fingerprinting in Forensic Science, Structure of DNA, RNA, Chromosome, Nuclear DNA and Mitochondria DNA.
<b>Module II: DNA Isolation Techniques</b> Collection and types of evidences for DNA fingerprinting. Different types of DNA Isolation techniques (Organic, Inorganic and Mechanical, FTA cards), DNA isolation from different evidences (tissue, hair, bone, blood and seminal stains).
<b>Module III: Techniques for DNA Fingerprinting</b> Electrophoresis, Northern and Southern blotting. Polymerase Chain Reaction (Denaturation, annealing and extension, detection of PCR products), Limitations of PCR.
<b>Module IV: Types of DNA Fingerprinting Techniques</b> Mini-satellites and Micro-satellites, VNTR and RFLP, AFLP, STRs, SNP and Genotyping.
<b>Module V: Practical Application of DNA Fingerprinting</b> Paternity testing and Personal identification. DNA databank, Limitations of DNA Fingerprinting. Legality of DNA Fingerprinting in India. Next generation sequencing.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

## INSTRUMENTATION – BIOLOGICAL

Course Code: FCH2505

Credit Units: 01

**Course Objective:** The objectives of the course are to:

1. Provide student with practical understanding of the various instrumentation and their utility in analysis of samples.
2. Provide skills about control systems, instrumentation equipment and troubleshooting of equipments used in the forensic science laboratory.

### Course Contents:

#### Module I: Centrifugation Techniques

Basic principles of sedimentation, various types of centrifuges, Density gradient centrifugation, Preparative centrifugation, Analysis of sub-cellular fractions, Ultracentrifuge-Refrigerated Centrifuges

#### Module II: Electrophoretic Techniques

General principles, Factors affecting electrophoresis, Types of electrophoresis, Low voltage electrophoresis, High voltage electrophoresis, Agarose, Polyacrylamide gel electrophoresis, Isoelectric focusing (IEF), Isoelectrophoresis, Preparative electrophoresis, Horizontal and Vertical Electrophoresis

#### Module III: Immuno-Chemical Technique

Gel immuno-diffusion, Immuno-electrophoresis, Radio Immuno Assay (RIA), ELISA, Fluorescence Immuno assay

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

## MICROSCOPY

**Course Code: FCH2513**

**Credit Units: 02**

**Course Objective:** The objectives of the course are to:

1. Provide the basic knowledge about working of microscopy
2. Develop comprehensive understanding of different microscopes and their uses in examination of forensic exhibits.

<b>Course Contents:</b>
<b>Module I: Introduction</b> Definition of microscopy, brief historical development of microscopes, Scope of microscopy in Forensic Science.
<b>Module II: Optics</b> Elementary theory of light, interaction of light with matter, its properties, electromagnetic spectrum, various types of lenses, image formation, magnification, resolution, abbreviations.
<b>Module III: Optical Microscopes</b> Basic working principle, components and forensic applications of Simple microscope, Compound microscope, Comparison microscope and Stereomicroscope.
<b>Module IV: Electron Microscopes</b> Basic working principle, instrumentation and forensic applications of Scanning Electron Microscope and Transmission Electron Microscope.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

## CHEMISTRY-V (TOXICOLOGY)

Course Code: FCH2514

Credit Units: 03

**Course Objective:** - The objectives of the course are:

1. The students understand the various types of drugs and toxic substances encountered in an investigation.
2. The varied toxicological signs and symptoms of different toxins on the body when administered.
3. To ensure that the students understand the nature of the toxicological investigations undertaken in forensic laboratories.

<b>Course Contents:</b>
<b>Module I: Toxicology</b> Introduction, History of toxicology and poisons, Definition, dosage, administration of poisons, Classification of poisons on analytical basis and medical basis.
<b>Module II: Drugs of Abuse</b> Introduction, definition, drugs, abuse, classification of drugs, Sedatives, Narcotics, Drug Addiction and their signs and symptoms, Drugs related Crime. Analysis hierarchy of seized drugs, examination, Clandestine laboratories, Stimulants and Hallucinogens, their symptoms, mode of action, dosage, examination.
<b>Module III: Toxicology of Alcohol</b> Ethyl Alcohol, Methyl alcohol: Nature, administration, symptoms, post-mortem findings, isolation, detection and estimation, medico-legal findings. The fate of ethyl alcohol in the body, alcohol in the circulatory system, breath test instruments, field sobriety testing, analysis of blood for alcohol.
<b>Module IV: Corrosives and Insecticides</b> Introduction, classifications of acids and bases. Nature, administration, symptoms, post-mortem findings, isolation, detection and estimation, medico-legal findings. Organophosphorus compounds, Organochloro Compounds and Carbamates- Nature, administration, symptoms, post-mortem findings, isolation, detection, estimation and medico-legal findings.
<b>Module V: Instrumentation for Drug analysis</b> Functions and roles of toxicologists in a forensic science lab; Introduction to different techniques used in toxicology; Basic principle of chromatography and forensic applications (Thin Layer Chromatography (TLC), Gas Chromatography (GC) and High pressure liquid chromatography (HPLC)) (in brief).

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester A: Attendance

## DNA FINGERPRINTING LAB

**Course Code: FCH2511**

**Credit Units: 01**

**Course Objective:** The students will understand and perform experiments relating to:

1. DNA properties, extraction and quantification
2. DNA Isolation techniques

<b>Course Contents:</b>					
1. DNA extraction (plants/ blood)					
2. Centrifugation technique					
3. Agrose gel electrophoresis					
4. Immunodiffusion					
5. Spectrophotometry					

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

## FORENSIC TOXICOLOGY LAB

**Course Code: FCH2515**

**Credit Units: 01**

**Course Objective:** The students will understand and perform experiments relating to:

1. Analysis of various metallic, vegetable, volatile and non-volatile poisons.
2. Perform TLC of poisons, drugs, and inks.

Course Contents:
<ol style="list-style-type: none"><li>1. Analysis of metallic poisons.</li><li>2. Analysis of volatile poisons.</li><li>3. Analysis of corrosive poisons.</li><li>4. TLC of common drugs.</li><li>5. Spot test for insecticides and pesticides.</li></ol>

### Examination Scheme:

IA				EE

## ARSON AND EXPLOSIVE

**Course Code: FCH2516**

**Credit Units: 03**

**Course Objective:** The objectives of the course are to:

1. Provide the scientific knowledge and understanding needed in Fire and Explosion
2. Provide illustrations of fire investigation through a wide range of fire and explosion investigation case studies.

### **Course Contents:**

#### **Module I: Arson**

Introduction, laws related to arson, Definition, Forensic importance and prerequisites for the cause of Arson cases; Arson investigation - collecting arson evidence.

#### **Module II: Laboratory Examination of Arson Evidence**

Identification of flammable liquids, Identification of solid chemical incendiary, Reconstruction of incendiary devices.

#### **Module III: Explosives**

Introduction to explosives, definition, High explosives and low explosives, difference and classification.

#### **Module IV: Laboratory Examination of Bomb and Explosive Evidence**

Identifying the explosives, Black and smokeless powder identification, dynamite identification, identifying other explosives, reconstructing the destructive devices.

#### **Module V: Identification of RDX and PETN**

Systematic approach to analysis of post-blast residues, Microscopic examination of the explosives and use of TLC, HPLC and MS to detect RDX and PETN.

### **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

## QUALITY MANAGEMENT AND ETHICS

Course Code: FCH2517

Credit Units: 03

**Course Objective: The objectives of the course:**

1. To focus on building a conceptual understanding of quality management in forensic science laboratories.
2. To understand the concept and value of ethics in forensic science.

<b>Course Contents:</b>
<b>Module I: Quality Management System</b> Quality, Total Quality, Quality assurance, Quality control, Quality Planning, Quality Audit: Internal and External Audit, Accreditation, NABL, ISO, IEC, BIS. <b>Quality Management of Laboratories:</b> General requirements for the competence of testing and calibration laboratories – Introduction, Scope, Management requirements: Organization, Quality System, Document Control.
<b>Module II: Quality Control Process</b> <b>Management Requirements:</b> Organizational, document control, subcontracting of tests and calibrations control of Non conforming testing / calibration work, corrective and preventive actions, Management Review. <b>Technical Requirements:</b> Test and calibration methods and their validation, measurements, standards and reference material, traceability, sampling. <b>Good Laboratory Practices (GLP):</b> Fundamental principles of GLP, Organizational Setup, Resources, Raw data and data collection, SOPs, Archives.
<b>Module III: Ethics</b> <b>Ethics:</b> Definition, concept of ethics, Ethics in science, Development of a Code of Ethics for Forensic Science. <b>Ethics in Forensic Science:</b> Duties of Forensic Scientist, Qualification of Forensic Scientist. Ethical duties of attorney and experts. Ethics in testimony. Criminal investigation ethics. Ethics in laboratory and in crime scene investigation.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

**Text and References:**

## TECHNICAL WRITING IN SCIENCE-I

Course Code: FCH2509

Credit Units: 02

### Course Objective:

Students will be introduced to learning the written and oral communication of technical information. Assignments include writing and presenting proposals, reports, and documentation. Emphasis on use of rhetorical analysis, computer applications, collaborative writing, and usability testing to complete technical communication tasks in the workplace.

### Contents:

#### Module I: Writing Skills

Writing Skills; Selection of topic, thesis statement, developing the thesis; introductory, developmental, transitional and concluding paragraphs, linguistic unity, coherence and cohesion, descriptive, narrative, expository and argumentative writing.

#### Module II: Technical Writing

Technical Writing: Scientific and technical subjects; formal and informal writings; formal writings/reports, handbooks, manuals, letters, memorandum, notices, agenda, minutes; common errors to be avoided.

#### Module III: Documentation Process

Understanding Audience/Readers, Collecting and Organizing information, drafting information verbally and visually, Producing Information.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;

Att: Attendance

## TERM PAPER

Course Code: FCH2531

Credit Units: 02

### Objectives

The objective of this course is to judge the understanding as well as application of the knowledge gained by the students. The aim of the term paper is to provide the students with an opportunity to further enhance their knowledge in a sector of their choice by undertaking a significant practical unit of examining and analyzing various aspects of chemistry and applied chemistry at a level commensurate with the learning outcomes of the various courses taken up by them in the ongoing semester.

A term paper is primarily a record of intelligent reading in several sources on a particular subject. The students will choose the topic at the beginning of the session in consultation with the faculty assigned. At least one middle level or senior level person of a company from the chosen sector may be interviewed face to face.

### Guidelines:

1. The term paper will be related to the contemporary business issue and the topic will be given by the department.
2. The presentation of the term paper is scheduled to be held before the commencement of Semester examinations.
3. The paper will carry 100 marks that will be marked on the basis of understanding and organization of content based on the literature review. The Bibliography shall form an important part of the paper.
4. Examples of a few broad areas for Term Paper (List is indicative, not exhaustive)
  1. Crime Scene Investigation
  2. Forensic Toxicology
  3. Forensic Anthropology
  4. Handwriting and Typewriting Analysis
  5. Crime Scene Investigation
  6. Criminology, Criminal Law and Police Administration
  7. Fingerprint Science
  8. Forensic Serology
  9. DNA Fingerprinting
  10. Wounds and its Medico-Legal Aspects

### Evaluation Scheme:

Organisation and relevance of content	Literature Review	Bibliography	Presentation	Total
30	30	20	20	100

## WORKSHOP

**Course Code: FCH2533**

**Credit Units: 01**

### Objectives

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two ways. The trainer has to make sure that the aspects covered are practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

### Major Themes for Workshop

The workshop may be conducted on any of the following major themes:

1. Forensic Science
2. Crime Scene Investigation
3. Microscopy
4. Forensic Toxicology
5. Forensic Anthropology
6. Handwriting and Typewriting Analysis
7. Crime Scene Investigation
8. Criminology, Criminal Law and Police Administration
9. Fingerprint Science
10. Forensic Photography
11. Forensic Serology
12. DNA Fingerprinting
13. Wounds and its Medico-Legal Aspects

These themes are merely indicative and other recent and relevant topics of study may be included.

### Guidelines for Workshop

The procedure for earning credits from workshop consists of the following steps:

1. Relevant study material and references will be provided by the trainer in advance.
2. The participants are expected to explore the topic in advance and take active part in the discussions held
3. Attending and Participating in all activities of the workshop
4. Group Activities have to be undertaken by students as guided by the trainer.
5. Evaluation of workshop activities would be done through test and quiz at the end of the workshop.
6. Submitting a write up of at least 500 words about the learning outcome from the workshop.

### Methodology

The methodology followed at the workshop could be based on any one or more of the following methods:

1. Case Study
2. Simulation
3. Quiz
4. Quality analysis and characterization
5. Identification and preparation of materials

### Evaluation Scheme:

Attendance	Active Participation	Multiple Choice Questions/ Quiz	Solving the case/ Assignment/ Write up	Total
10	30	30	30	100

# Syllabus- Sixth Semester

## FORENSIC MEDICINE

**Course Code: FCH2616**

**Credit Units: 03**

**Course Objectives:** The student will understand

1. About the scope of different types of injuries, causes and manner of death and their medico legal significance
2. About the utility of the injury assessment in medico legal cases

### Course Contents:

#### Module I: Autopsy

Ante and Post-mortem examinations; external examination; internal examination; collection, preservation and packaging of viscera  
Assessing and determining the time and cause of Death, Study of burned bones and bone fragments.

#### Module II: Introduction to Wounds

Introduction to wounds; definition, Mechanism of wound production and healing, Determining the age of the injury, and its medico - legal aspects.

#### Module III: Injuries due to Blunt and Sharp Forces

Abrasions, Bruises, Lacerations; causes, dimensions, ante – mortem and post – mortem injuries and its medico - legal aspects, Incised, Stab, Punctured wounds - causes, dimensions, ante – mortem and post – mortem injuries ante – mortem and post – mortem injuries.

#### Module IV: Miscellaneous Injuries

Injuries due to heat, cold, chemicals and radiation and their medicolegal significance.

#### Module V: Bite Marks

Types of bite marks; collection and preservation of DNA samples, forensic importance of bite marks; identification.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;

A: Attendance

## BALLISTICS

Course Code: FCH2617

Credit Units: 03

### Course Objective: The objectives of the course:

1. To understand the role of ballistics in Forensic Science
2. Classification of firearms, determination of the range of firing, methods of laboratory examination of fired cartridges and fire arms.
3. The students will also learn to reconstruct the sequence of events in cases involving firearms.

<b>Course Contents:</b>
<b>Module I: Ballistics</b> Definition, Indian Arms Act, Forensic Importance; Nature of firearms, parts of firearms, classification of firearms.
<b>Module II: Ammunition</b> Types, bullet comparisons, cartridge case examination, class and individual characteristics of identification.
<b>Module III: Range of Fire</b> Muzzle pattern, scorching, blackening, tattooing, wad distribution, pellet patterns, GSR analysis, and primer residues.
<b>Module IV: Analysis and Reconstruction</b> Reconstruction of the sequence of events in a shooting case, accidental firing. Presentation of evidence in the court.
<b>Module V: Firearm Injuries</b> Entrance wound, exit wound and internal wound, evaluation of firearm injuries.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

## CRIMINOLOGY, CRIMINAL LAW AND POLICE ADMINISTRATION

**Course Code: FCH2613**

**Credit Units: 03**

**Course Objective:** The course focuses on following objectives-

1. Developing an understanding and appreciation for the scope of Criminology and criminal laws.
2. Develop an understanding on concepts of crime, types of crime and criminal behavior.
3. Brief description on Juvenile delinquency, types, classification and factors responsible.
4. Develop comprehensive knowledge on Role of Police with regard to criminals, society and custodial crimes.

<b>Course Contents:</b>
<b>Module I: Criminology and Criminal Behavior</b> Definition: Crime, Criminal and Criminology; Criminology: Scope, Methods and Techniques, Classification of criminals, Crimes: Organized, White-Collar crimes/Occupational crimes, Murders, Sexual offences, Terrorism, Serial Crimes, Crime against women and children.
<b>Module II: Types of Offences</b> Bailable and non-bailable offences, cognizable and non-cognizable offences, warrant and summon, custodial circumstances, victim offender relationship.
<b>Module III: Juvenile Delinquency</b> Definition, Types of Juvenile Delinquents, Classification of Juvenile Delinquents, Factors in Juvenile Delinquency, Custody of juvenile delinquents, Juvenile courts procedure, Rehabilitation Preventive Programmes.
<b>Module IV: Punishment</b> Concept of punishment, Kinds of punishments, Humanitarian approach to concept of punishment, capital punishment in India, Introduction to criminal Laws: IEA, IPC and CrPC.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

## CHEMISTRY-VI (PHYSICAL AND CHEMICAL)

Course Code: FCH2618

Credit Units: 03

**Course Objective:** The objectives of the course is to provide student with practical understanding of the various instrumentation and control systems, instrumentation equipment and troubleshooting skills used in the forensic science laboratory.

### Course Contents:

#### Module I : Introduction

Concept of molarity, molality, normality, formality and mole fraction.

#### Module II: Spectrophotometry

Electromagnetic spectrum, Sources of Radiation, their utility and limitations, difference between Atomic spectrum and Molecular spectrum.

#### Module III: UV-Visible spectrophotometry and AAS

Types of sources and stability, wavelength selection, filters-cells and sampling devices, detectors, resolution, qualitative and quantitative methods for detection.

Atomic absorption spectrometry: Principle, Instrumentation and techniques, interference in AAS, background correction methods, quantitative analysis.

#### Module IV: Chromatographic Techniques I

Definition and Concept of Chromatography, Classification of Chromatography.

Basic principle, theory, Instrumentation and Forensic Applications of Paper chromatography, Thin layer chromatography and HPTLC.

#### Module V: Chromatography Techniques II

Basic principle, theory, Instrumentation and Forensic Applications of Gas chromatography and HPLC.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

## BALLISTICS LAB

**Course Code: FCH2619**

**Credit Units: 01**

**Course Objective: -** The students will understand and perform experiments related to:

1. Analysis of GSR
2. Identifying parts of firearm, explosives

<b>Course Contents:</b>
1. Spot test for 2. Identification of parts of firearms 3. Filter test for petroleum products 4. TLC for flammable liquids

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## FORENSIC PSYCHOLOGY

**Course Code: FCH2610**

**Credit Units: 03**

**Course Objective:** The objective is to introduce students to fundamental principles involved in research and practice within Forensic Psychology. Students are introduced to the structure of the criminal justice system.

### Course Contents:

#### Module I: The Science of Psychology

Concepts of psychology - Definition of psychology, goals of psychology  
Different perspectives in Psychology - Modern perspectives, Humanistic, Behaviouristic, Cognitive, Psychodynamic.

#### Module II: Consciousness

Consciousness - Definition of consciousness, states of consciousness  
Altered state of consciousness - Dreams, awake states including day dreaming  
Rhythms of consciousness (Circadian rhythms) Sleep – stages of sleep, Dreams – Content, REM sleep and non-REM sleep.

#### Module III: Theories of Personality and Perception

Understanding personality: Definition, stressing uniqueness, enduring characteristics, temperament.  
Approaches – Psychodynamic (Freud, Jung and Adler), Humanistic (Rogers and Maslow)  
Dispositional approaches – Type (Jung. Type A and B, Rotter and Big – 5 and Trait (Catelli)  
Behavioural Approaches - Locus of control and Social learning theory.  
Assessment of personality – Questionnaires, Rating scales and Projective tests, biological model  
assessment of personality Basic concepts in perception, Gestalt Principles, assessment attention and perception.

#### Module IV: Psychological Disorders

Psychological disorders (Alcohol/Substance Abuse, Anxiety Disorders, adult Attention Deficit, Bipolar Disorder, and Depression). Altered states – Hypnosis, Meaning, Hypnotic Phenomena, Hypnotic stages Attention and awareness - Attention: Definition, characteristics, selective attention and divided attention.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;

A: Attendance

### Text and References:

2. Guilford, Statistics in Psychology and Education, McGraw hill, New York, 1986.

### PHYSICS-III

**Course Code: FCH2620**

**Credit Units: 3**

**Course Objective:** It provide students the skill necessary to enter the profession with an eye towards accident, reconstruction, firearm ballistic and related investigative tasks.

#### **Course Contents:**

##### **Module I: Laser and Fiber Optics**

Production of LASER, Types of LASER, Properties and applications of LASER, Optical fibres, Propagation of light through optical fibre, Angle of acceptance and numerical aperture, losses, Solar cells.

##### **Module II: Radio Activity**

Review of nuclear composition, nuclear properties and half-life, Radioactive decay schemes Applications of Radio Isotopes, Radiometric dating.

##### **Module III: Electronics Circuits and Digital Electronics**

Basics of LR, CR, LCR circuits, Rectifier circuits, Timer circuits, Transistor and its characteristics, Introduction to OPAM, remote sensing and controlling, Photo-sensors, Logic gates and their applications, Flip- flops and counters.

#### **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

## TECHNICAL WRITING IN SCIENCE-II

Course Code: FCH2612

Credit Units: 02

### Course Objective:

Students will be introduced to learning the written and oral communication of technical information. Assignments include writing and presenting proposals, reports, and documentation. Emphasis on use of rhetorical analysis, computer applications, collaborative writing, and usability testing to complete technical communication tasks in the workplace.

### Course Contents:

#### Module I: Technical Writing Process

Document development process, Estimating Technical Documentation, Documentation Planning, Selection of Tools, Information Architecture, Templates and Page design, Audience Profiling.

#### Module II: Article Writing

Journal paper writing: Abstract for paper and poster, different kind of journal for chemistry, impact factors of journals, ISBN number, Citation, H-index.

#### Module III: Project Writing

Analytical report, Project Management in Technical Communication, Project writing, project proposal writing.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

## TERM PAPER

Course Code: FCH2631

Credit Units: 02

### Objectives

The objective of this course is to judge the understanding as well as application of the knowledge gained by the students. The aim of the term paper is to provide the students with an opportunity to further enhance their knowledge in a sector of their choice by undertaking a significant practical unit of examining and analyzing various aspects of chemistry and its application at a level commensurate with the learning outcomes of the various courses taken up by them in the ongoing semester.

A term paper is primarily a record of intelligent reading in several sources on a particular subject. The students will choose the topic at the beginning of the session in consultation with the faculty assigned. At least one middle level or senior level person of a company from the chosen sector may be interviewed face to face.

### Guidelines:

1. The term paper will be related to the contemporary issue and the topic will be given by the department.
2. The presentation of the term paper is scheduled to be held before the commencement of Semester examinations.
3. The paper will carry 100 marks that will be marked on the basis of understanding and organization of content based on the literature review. The Bibliography shall form an important part of the paper.
4. Examples of a few broad areas for Term Paper (List is indicative, not exhaustive)
  1. Forensic Toxicology
  2. Forensic Anthropology
  3. Handwriting and Typewriting Analysis
  4. Forensic Taphonomy
  5. Crime Scene Investigation
  6. Criminology, Criminal Law and Police Administration
  7. Fingerprint Science
  8. Forensic Serology
  9. DNA Fingerprinting
  10. Wounds and its Medico-Legal Aspects

### Evaluation Scheme:

Organisation and relevance of content	Literature Review	Bibliography	Presentation	Total
30	30	20	20	100

## MINOR PROJECT

Course Code: FCH2632

Credit Units: 03

### Objectives:

The aim of the project is to provide the students with an opportunity to further their intellectual and personal development in the chosen field by undertaking a significant practical unit of activity. The project can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

### Chapter Scheme and distribution of marks:

**Chapter 1:** Introduction – 10 marks

**Chapter 2:** Conceptual Framework/ National/International Scenario – 25 marks

**Chapter 3:** Presentation, Analysis and Findings -- 25 marks

**Chapter 4:** Conclusion and Recommendations -- 10 marks

**Chapter 5:** Bibliography -- 05 marks

### Components of a Project Report

The outcome of Project Work is the Project Report. A project report should have the following components:

- 1) Cover Page:** This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.
- 2) Acknowledgement:** Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.
- 3) Table of Content:** Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.
- 4) Body of the Report:** The body of the report should have these four logical divisions
  - a) Introduction:** This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, and method of analysis), Limitations of the Study, and Chapter Planning.
  - b) Conceptual Framework / National and International Scenario:** (relating to the topic of the Project).
  - c) Presentation of Data, Analysis and Findings :**( using the tools and techniques mentioned in the methodology).
  - d) Conclusion and Recommendations:** In this section, the concluding observations based on the main findings and suggestions are to be provided.
- 5) Bibliography or References:** This section will include the list of books and articles which have been used in the project work, and in writing a project report.
- 6) Annexures:** Questionnaires (if any), relevant reports, etc.  
(The main text of the Project should normally be in the range of 5000 words. However, there may be annexure in addition to the main text)

### The Steps of a Project Report

**STEP I:** Selection of the topic for the project by taking following points into consideration:

1. Suitability of the topic.
2. Relevance of the topic
3. Time available at the disposal.
4. Feasibility of data collection within the given time limit.

Challenges involved in the data collection (time and cost involved in the data collection, possibility of getting responses, etc.)

**STEP II:** Finalisation of the Topic and preparation of Project Proposal in consultation with the Supervisor.

**STEP III:** Collection of information and data relating to the topic and analysis of the same.

**STEP IV:** Writing the report dividing it into suitable chapters, viz.

**Chapter 1:** Introduction,

**Chapter 2:** Conceptual Framework / National and International Scenario,

**Chapter 3:** Analysis and Findings

**Chapter 4:** Conclusion and Recommendations.

**Chapter 5:** Bibliography

**STEP V:** The following documents are to be attached with the Final Project Report.

Approval letter from the supervisor (Annexure-IA)

Student's declaration (Annexure-IB)

Certificate from the Competent Authority of the Organisation / Institution, if the student undertakes the Project Work in any Organisation / Institution.

#### **Guidelines for evaluation:**

1. Each of the students has to undertake a Project individually under the supervision of a teacher and to submit the same following the guidelines stated below.
2. Language of Project Report and Viva-Voce Examination may be English. The Project Report must be typed and hard bound.
3. Failure to submit the Project Report or failure to appear at the Viva-voce Examination will be treated as "Absent" in the Examination. He /she has to submit the Project Report and appear at the Viva-Voce Examination in the subsequent years (within the time period as per University Rules).
4. No marks will be allotted on the Project Report unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her Project Report.
5. Evaluation of the Project Work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate. The evaluation scheme shall be as follows:

<b>Project Report</b>	<b>Power Point Presentation and Viva</b>
75 marks	25 marks

## **Annexure-IB**

### **Student's Declaration**

I .....hereby declare that the Project Work with the title (in block letters)..... submitted by me for the partial fulfilment of the degree of B.Sc. Honours in Forensic science is my original work and has not been submitted earlier to any other University /Institution for the fulfilment of the requirement for any course of study.

I also declare that no chapter of this manuscript in whole or in part has been incorporated in this report from any earlier work done by others or by me. However, extracts of any literature which has been used for this report has been duly acknowledged providing details of such literature in the references.

## WORKSHOP

**Course Code: FCH2633**

**Credit Units: 01**

### Objectives

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two ways. The trainer has to make sure that the aspects covered are practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

### Major Themes for Workshop

The workshop may be conducted on any of the following major themes:

1. Forensic Toxicology
2. Forensic Anthropology
3. Handwriting and Typewriting Analysis
4. Forensic Taphonomy
5. Crime Scene Investigation
6. Criminology, Criminal Law and Police Administration
7. Fingerprint Science
8. Forensic Serology
9. DNA Fingerprinting
10. Wounds and its Medico-Legal Aspects
11. Forensic science and judicial process
12. Polygraph and Lie Detector
13. Cybercrimes and their Tracking

These themes are merely indicative and other recent and relevant topics of study may be included.

### Guidelines for Workshop

The procedure for earning credits from workshop consists of the following steps:

1. Relevant study material and references will be provided by the trainer in advance.
2. The participants are expected to explore the topic in advance and take active part in the discussions held
3. Attending and Participating in all activities of the workshop
4. Group Activities have to be undertaken by students as guided by the trainer.
5. Evaluation of workshop activities would be done through test and quiz at the end of the workshop.
6. Submitting a write up of at least 500 words about the learning outcome from the workshop.

### Methodology

The methodology followed at the workshop could be based on any one or more of the following methods:

1. Case Study
2. Simulation
3. Business Planning
4. Quiz
5. Quality analysis and characterization
6. Identification and preparation of materials

### Evaluation Scheme:

Attendance	Active Participation	Multiple Choice Questions/ Quiz	Solving the case/ Assignment/ Write up	Total
10	30	30	30	100

**GURUGRAM**

# Programme Overview

## Duration: 3 years

B.Sc. Mathematics (Honours) is a 3 year full time program which includes a curriculum which is one of the best curriculums followed in this stream. Here are some of the important subjects present in B.Sc. Mathematics course - Calculus, probability, Statistics, Algebra, Real Analysis, Linear Differential Equation, Group Theory, Matrices, Geometry, Fourier Analysis, Metric Space, Ring Theory, Computer Application, Complex Analysis, Linear Algebra, Numerical Methods, Communication skills.

For a B.Sc (Hons) Mathematics degree a student has to earn 150 Credits. These credits can be earned through the following categories of courses:

**1. Compulsory courses-** Every semester a student compulsorily takes these courses. All together these account for 95 credits. These also include one compulsory Summer workshop/SAP

**2. Concentration Electives-** These are courses in related areas like Statistics which a student takes to get a deeper understanding. A student can choose his subjects from a list of subjects available to him/her. However a *minimum cohort of 10 students* in a subject is mandatory to run a course. A student earns 9 credits through the concentration electives.

**3. Open Electives-** These are courses being offered across the university by any of the schools. The following open electives are compulsory for all students of B.Sc.

- i) Foreign Language (Total 12 Credits)
- ii) Courses in Behavioural Science (1 Credit per semester)
- iii) Courses in Communication Skill (1 Credit per semester)
- iv) Environmental Studies (2 Credits in the first and second semester each)

In addition to the above courses the student can choose from a list of courses being offered by other schools/ centres of excellence. A student has to earn 3 credits per semester from these courses. These courses have been grouped into various tracks and if a student earns 15-18 credits from courses in a particular track then the student is eligible to get a minor in that track area. For example if a student follows the Animation track and chooses one course each semester for 5 semesters from that track at the end of the program, the student will get a B.Sc. degree with a minor in animation.

**Students of all the undergraduate degree Programmes at the time of graduation will be able to:**

**PO1 Scientific knowledge:** Acquire the knowledge with facts and figures related to various subjects in such as Physics, Chemistry, Mathematics, etc.

**PO2 Modern tool usage:** Acquire the skills in handling scientific language, planning and performing in lab experiments.

**PO3 Problem analysis:** Identify, formulate, review research literature, and analyze complex problems reaching substantiated conclusions using fundamental principles, and the scientific theories.

**PO4 Effective communication:** Develop various communication skills such as reading, listening, speaking, etc., which we will help in expressing ideas and views clearly and effectively.

**PO5 Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms

**PO6 Individual and Team work:** Demonstrate the capability to work both independently and in cooperation with others

**Program Learning Outcomes: After completing the program the student will be able to:**

**PSO1:** Identify basic manipulative skills in algebra, geometry, trigonometry, and beginning calculus.

**PSO2:** Apply the underlying unifying structures of mathematics (i.e. sets, relations and functions, logical structure) and the relationships among them

**PSO3:** Develop proficiency in writing proofs.

**PSO4:** Communicate mathematical ideas both orally and in writing.

**PSO5:** Investigate and apply mathematical problems and solutions in a variety of contexts related to science, technology, business and industry, and illustrate these solutions using symbolic, numeric, or graphical methods.

## Syllabus- First Semester

### DIFFERENTIAL CALCULUS

Course Code: MTH2101

Credit Units: 04

**Course Objective:**

The objective of this course is to introduce the concepts of successive differentiation, higher order differentiation, partial differentiation and their applications; fundamentals of curve tracing.

**Course Contents:**

**Module-I: Review,**

Successive Differentiation, Expansions of functions, Functions of one variable, Inverse function, Limit ( $\epsilon$  -  $\delta$  Definition), Continuity and Differentiability of a function, Successive Differentiation,  $n$ th Differential coefficient of functions, Leibnitz Theorem; Taylor's and Maclaurin's series expansions for one variable.

**Module-II: Curvature and Asymptotes:** Curvature, Radius of curvature; Cartesian, Polar and pedal formula for radius of curvature. Asymptotes of algebraic curves, Methods of finding asymptotes, Parallel asymptotes to axes.

**Module-III: Singular Points and Curve Tracing:**

Regular points and Singular Points of a curve, Point of inflection, Double Points, Cusp, Node and conjugate points, Curve tracing for Cartesian and polar coordinates.

**Module-IV: Partial Differentiation:**

Partial differentiation and problems, Euler's theorem and its proof, Few corollaries on Euler's theorem for higher order derivatives, Taylor's expansion of a function in two variables, Jacobian and its properties, Maxima and minima of a function in two variables, Method of Lagrange's multipliers.

### Examination Scheme

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE:End Semester Exam, A: Attendance

5. Gorakh Prasad: Differential Calculus, Pothishala Publication, Allahabad, 2015.

# CLASSICAL ALGEBRA

Course Code: MTH2107

Credit Units: 04

## Course Objective:

The classical algebra course contains a treatment of the Euclidean Algorithm in its classical forms for integers and for polynomial rings over a field. The objective of this course is to develop a sound knowledge of the real number system and to provide the necessary understanding and competency in basic algebra concepts and skills.

## Course Contents:

**Module-I:** Algebraic system of real number, complex number introduced as a system of ordered pairs of real numbers, De-Moivre's theorem and its applications.

**Module-II:** Statements of well ordering principle, first principle of mathematical induction, second principle of mathematical induction. Proofs of some simple mathematical results by induction. Divisibility of integers. The division algorithm ( $a = gb + r$ ,  $b \neq 0$ ,  $0 \leq r < b$ ). The greatest common divisor (g.c.d.) of two integers  $a$  and  $b$ . Existence and uniqueness of  $(a, b)$ . Relatively prime integers. The equation  $ax + by = c$  has integral solution if  $(a, b)$  divides  $c$ . ( $a, b, c$  are integers). Prime integers. Euclid's first theorem: Euclid's second theorem, Unique factorization theorem. Congruences, Linear Congruences, Statement of Chinese Remainder Theorem and simple problems. Theorem of Fermat, Multiplicative function  $\phi(n)$ .

**Module-III:** Polynomials with real coefficients: Fundamental theorem of Classical Algebra (statement only). The  $n$ -th degree polynomial equation has exactly  $n$  roots. Nature of roots of an equation (surd or complex roots occur in pairs). Statements of Descartes rule of signs and of Sturm's Theorem and their applications. Multiple roots. Relation between roots and coefficients, Transformation of equations.

**Module-IV:** Symmetrical Function, Newton's Method, Cardan's method of solving a cubic equation. Ferrari's method of solving a bi-quadratic equation. Descarte's Method for solution of biquadratic equation.

## Examination Scheme:

# INTEGRAL CALCULUS

**Course Code: MTH2108**

**Credit Units: 04**

**Course Objective:**

The objective is to introduce fundamentals of integration and their application to calculate area or curves, volume and surfaces of solids of revolution; how to use Beta and Gamma functions to deal with multiple integrals.

**Course Contents:**

**Module-I: Review and Definite Integrals:** Elementary integration (standard forms and integration by parts), Integration of rational and Irrational algebraic functions, Integration of trigonometric functions.

Definite integrals: Integral as a limit of sum, Properties of Definite integrals; Summation of series by integration.

**Module-II: Application of Definite Integrals:** Area of curves (quadrature) (includes both cartesian and polar representation), Length of Curves (rectification) (includes cartesian, polar, and parametric representation), Volume and surfaces of solids of revolution.

**Module-III: Multiple Integrals:** Evaluation of Double integrals, Double integral in polar coordinates, Change of variables, Change of order of integration in Double integrals, Evaluation of Triple integrals.

**Module-IV: Functions Defined by Infinite Integrals:** Beta function, Properties and various forms, Gamma function, Recurrence formula and other relations, Relation between Beta and Gamma function. Evaluation of integrals using Beta and Gamma functions. Dirichlets theorem and its Liovelles extension.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

# PHYSICS

**Course Code: MTH2110**

**Credit Units: 04**

**Course Objective:** An important objective of the course is to develop an understanding of 'core physics' at successively deeper levels, each stage revealing new phenomena and greater insight into the properties of matter. Heat, electricity and magnetism, Sound waves and optics

## **Course Contents:**

### **Module I: Properties of matter**

Elasticity: Hooke's Law – Elastic Constants – bending of beam – Bending moment – Cantilever Depression at the loaded end of a cantilever – determination of Young's modulus by non-uniform bending.

Torsion: Torsion couple – Potential energy in a twisted wire – Torsional pendulum – Time period – Rigidity Modulus – Determination of rigidity modulus by Torsional oscillation (without masses).

### **Module II: Heat**

Heat: Specific heat – Properties of heat, Newton's law of cooling – determination of specific heat of a liquid using Newton's law of cooling – Emissivity and Emissive Power

Low Temperature: J.K. Effect – Positive Effect – Negative Effect – Temperature of Inversion – Liquification of gases

### **Module III:**

#### **Electric Charges, Fields**

Basics of vector calculus (Gradient, divergence, curl and their physical significance; Gauss and Stokes theorem); Electric Charge, Principle of Superposition, Electric Flux, Gauss's law, Electric Field for Spherical, Plane and Cylindrical Distribution of Charges (applications of Gauss law), Differential form of Gauss's Law.

#### **Electric current**

Electric Currents: Charge Transport and Current Density, Equation of Continuity, Ohm's Law in vector form.

### **Module IV:**

Introduction to S.H.M. Damped Oscillations: Differential Equation and its solution, Different conditions of damping of harmonic oscillations. Forced harmonic oscillations, Resonance, Impedance LC circuit, LCR circuit.

Wave motion in one dimension, Transverse and longitudinal waves, progressive harmonic waves and their energy, Transverse waves on a string, longitudinal waves on a rod, Stationary waves.

#### **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

## Syllabus- Second Semester

### ORDINARY DIFFERENTIAL EQUATIONS

Course Code: MTH2205

Credit Units: 04

#### Course Objective:

Study of differential equations is essential for understanding many physical and natural phenomena. After completing the course, students will be able to solve various type of ordinary differential equations. arising from changes in physical world.

#### Course Contents:

##### Module-I: Review & Equations of First order and First degree differential equations:

Formation of Differential equations, Order and Degree of Differential Equations, Complete primitive (general solution, particular solution and singular solutions). Differential equations of first order and first degree, Separation of variables, Homogeneous Equations, Equations of the form  $dy/dx = ax+by+c$ , Linear Equations, Equation reducible to the linear form, Exact differential equations, Equations reducible to exact form by using integrating factors.

**Module-II: Equation of First order but not of first degree & Trajectories:** Equation of First order but not of first degree, Various cases and various methods of solution, Clairauts form, Singular solutions, Trajectory, Orthogonal Trajectory, Self-Orthogonal family of Curves.

**Module-III: Linear Differential Equations with constant coefficients:** Linear equations with constant coefficients, Complementary function, Particular integral, Working rule for finding solution for various cases, Homogeneous linear differential equations, Equations reducible to homogeneous form.

**Module-IV: Simultaneous Differential Equations & Linear Equations of Second Order with variable coefficients:** Simultaneous differential equations, Differential equations of the form  $dx/P = dy/Q = dz/R$  where P, Q, R are functions of x, y, z. Linear Equations of second order with variable coefficients, following methods: (a) the complete solution in terms of a known integral, (b) finding one integral in C.F. by inspection, (c) removal of first derivative, (d) method of variation of parameters.

#### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

A-Attendance; CT-Class Test; S/V/Q-Seminar/Quiz/Viva; HA-Home Assignment; EE-End Semester Examination

# GROUPS AND RING THEORY

**Course Code: MTH2209**

**Credit Units: 04**

## **Course Objective:**

The objective of the course is to introduce fundamental theorems and applications relevant to the study of

Group, rings and fields, and analyze rigorous mathematical proofs of statements related to groups, rings and fields.

## **Course Contents:**

**Module-I: Basics and Review:** Sets, Subsets, Operations on sets, Index set and family of sets, Relations, Equivalence relations and partitions, Mappings. Infinite sets and cardinality, Congruence modulo- $n$ , Laws of composition.

**Module-II: Groups:** Binary operation and Algebraic structure, Groups, Subgroups, Generators of a group, Permutation groups, Cyclic groups, Coset decomposition, Lagrange theorem and its consequences, Homomorphism and Isomorphism, Normal subgroups, Quotient group, Cayley's theorem.

**Module-III: Groups Contd.:** Fundamental theorems on homomorphism and isomorphism, Automorphism and inner automorphism, Automorphism groups and their computation, Normaliser and center of group, Group actions, Stabilizers and orbits, Finite groups, Commutator subgroups.

**Module-IV: Rings & Ideals:** Rings, Various types of rings, Rings with Module, Rings without zero divisors, Properties of rings, Sub rings, Characteristic of a ring. Ideals, Quotient rings, Principal ideals, Maximal ideals, Prime ideals, Principal ideal domains.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE

# VECTOR CALCULUS

Course Code: MTH2212

Credit Units: 03

## Course Objective:

The course is designed to introduce fundamentals of vector calculus. A student learns how to appreciate the concepts of calculus being implemented on vector fields.

## Course Contents:

**Module-I:** Scalar and vector product of three vectors, product of four vectors. Reciprocal vectors. Vector differentiation. Scalar Valued point functions, vector valued point functions, derivative along a curve, directional derivatives.

**Module-II:** Gradient of a scalar point function, geometrical interpretation of  $\text{grad}\phi$ , character of gradient as a point function. Divergence and curl of vector point function, characters of  $\text{Div } f$  and  $\text{curl } f$  as point function, examples. Gradient, divergence and curl of sums and product and their related vector identities.

Laplacian operator.

**Module-III:** Orthogonal curvilinear coordinates Conditions for orthogonality fundamental triad of mutually orthogonal Module vectors. Gradient, Divergence, Curl and Laplacian operators in terms of orthogonal curvilinear coordinates, Cylindrical co-ordinates and Spherical coordinates.

**Module-IV:** Vector integration; Line integral, Surface integral, Volume integral. Theorems of Gauss, Green & Stokes and problems based on these theorems.

## Examination Scheme:

## COMPUTER FUNDAMENTALS

**Course Code: MTH2214**

**L-T-P: 0-0-2**

**Credit Units: 02**

### **Course Objective:**

This course is aimed to provide a fundamental understanding of computer science for the students in their early stages of academic career. The syllabus includes the basic concepts of memory, processing units, input and output devices, primary arithmetic and number conversions. At the end of the program the students will be able to understand the fundamentals of WORD, Power Point and Excel.

### **Course Contents:**

#### **Module I**

Introduction to computer, history, Characteristics of computers, Basic Computer Organization, Computer Hardware Components Input, Output, Storage units, Central Processing Unit and memory, Input Devices ( Keyboard, Mouse, Joystick), Output devices (Monitors, Printers, Multimedia projectors). Number System-Binary, Hexadecimal, Octal, and Decimal. Conversion from one number system to another.

#### **Module II**

Introduction to WORD Processor: Typing text, Closing and saving the text, Text editing, Spell Check, Common formatting functions-Working with Alignment, Working with Indentation, Working with Highlight, Working with Font. FIND & REPLACE, formatting the paragraph, special symbols, Bullets & Numbering, Tables, INSERTING CLIPART & WORDART, Picture & Drawing Tool Bar, HEADER & FOOTER

#### **Module III**

Introduction-Opening new presentation, Parts of PowerPoint window, Opening saving and closing presentations, Features of PowerPoint, Background design, Word art, Clip art, Drawings, 3D settings. Inserting and deleting slides, arranging slides, slides show, Animations, Sound, Views, types of views. Creating custom presentations

#### **Module IV**

Introduction to Excel: parts of EXCEL window, opening closing of workbooks, editing data, Copying the Data, Moving the Data, Formatting the Data, Formatting Tool bar, Drawing in Excel, Drawing Tool bar, Formatting and editing the Worksheet., Format cells window, Inserting Row and Column, Deleting Row and Column, Inserting Worksheet, Deleting Worksheet, Renaming Worksheet, Formulas in Excel, Creating simple formulas, Functions, Date Arithmetic, Working with Charts, Types of Charts, Inserting Charts, Formatting the Charts.

### **List of Practical:**

- 1) Type a Leave Letter in Word Using format/style/ modify format/text, set text to reasonably large such as 18-pt.
- 2) Set up one table, with shading and a minimum of 3 rows and 3 columns. List your at least 10 favorite holiday destinations in the table.
- 3) Create a Small advertisement by inserting some pictures
- 4) Create a document with header and footer. Insert your institute name as header.
- 5) Create a document having two columns with page number.
- 6) Create a Power point presentation of your college (Minimum 10 Slides)
- 7) Insert college pictures in the slides (Minimum 5 slides)
- 8) Apply different transitions to all slides
- 9) Create a Power point presentation with animation and audio sounds
- 10) A demo presentation either on WORD or Power Point
- 11) Formatting the Date cell
- 12) Create an Excel sheet for students mark sheet of 5 subjects. Calculate the average, total, pass/ fail using functions and formulas

13) Create a bar chart in Excel for year wise students enroll in your course.

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# CHEMISTRY-I

**Course Code: MTH2213**

**Credit Units: 03**

## Course Objective:

To develop the ability to predict the structures and certain properties and reactivities of the elements and of many of their simpler ionic and covalent compounds. To achieve this predictive capability will require the student to enhance their understanding of atomic structure and periodicity. These concepts are directly applicable to organic and physical chemistry.

## Course Contents:

### Module I: Atomic Structure

Dalton's atomic theory: concept of elements, atoms and molecules. Atomic and molecular masses. Mole concept and molar mass: molarity, normality, molality, percentage composition, empirical and molecular formula. Structure of atom, isotopes and isobars. Different Atomic models and their limitations.

### Module II: Periodicity of Elements

Significance of periodic table, periodic law and the present form of periodic table, periodic trends in properties of elements. *s*, *p*, *d*, *f* block elements, the long form of periodic table. Detailed discussion of the following properties of the elements, with reference to *s* & *p*-block:

- (a) Effective nuclear charge, shielding or screening effect, variation of effective nuclear charge in periodic table.
- (b) Atomic radii (van der Waals)
- (c) Ionic and crystal radii
- (d) Covalent radii (octahedral and tetrahedral)
- (e) Ionization enthalpy, Electron gain enthalpy and Electronegativity .

### Module III: Organic Mechanism

Electron Displacement Effects: Inductive Effect; Mesomeric Effect; Electromeric Effects; Fission of covalent bonds; Intermediates of Organic reactions; Carbonium , Carbanion, Free Radical and Carbene; Types of organic reactions; Substitution , Elimination, Addition.

### Module IV: Chemical Equilibrium

Introduction ; Le Chatelier's Principle; Equilibrium constant from Thermodynamic Constants; Acid-Base Concept; HSAB Principle, Weak acid and Weak base and their salts; Solubility Product; pH and pOH, Buffer Solution, Buffer Action

### Module V: Introduction of Analytical Techniques

Introduction of Gravimetric analysis and Volumetric analysis, introduction to chromatography and purification of sample

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

5. Finar, I. L. *Organic Chemistry (Volume 1)*, Dorling Kindersley (India) Pvt. Ltd. (Pearson Education).

## Syllabus- Third Semester

### PARTIAL DIFFERENTIAL EQUATIONS

Course Code: MTH2303

Credit Units: 04

#### Course Objective:

Student will be introduced to fundamentals of partial differential equations; the major classification of PDEs, and solving linear PDEs using classical methods.

#### Course Contents:

**Module-I:** Definition of Partial differential equation, order of partial differential equation, Formation of partial differential equations (a) by elimination of arbitrary constants (b) by elimination of arbitrary function, Linear and Quasilinear first-order PDEs. Complete solution, particular solution, singular solution, general solution. Lagrange's method to solve linear PDEs.

**Module-II: Linear homogeneous & non-homogeneous PDE with constant coefficient:**

Homogeneous Equations: Rules for finding complementary function, few shortcut methods to find particular integral for standard form of functions, and few general methods for specific forms.

Non-Homogeneous Equations: Rules for finding complementary function, few shortcut methods to find

particular integral for standard form of functions, and few general methods for specific forms; equations

reducible to PDEs with constant coefficients.

**Module-III: Linear Differential equations with variable coefficients:** Partial differential equations reducible to equations with constant coefficients, Reducible linear PDEs with variable coefficients, Solution of reducible Linear PDEs with variable coefficients, Monge's method, Monge's method for solving  $Rr + Ss + Tt = V$ , Monge's Method for solving  $Rr + Ss + Tt + U(rt - s^2) = V$ .

**Module-IV: Classification of second order PDEs and representative equations:**

Classification of PDEs of second order, Boundary value problems, the principle of superposition, method

of separation of variables, its application to solve wave equation, D'Alembert's solution of wave equation

in various cases. Solution of heat equation in one dimension in various cases, and solution of Laplace

equation in Cartesian coordinates and its conversion into polar coordinates

#### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

# STATISTICS

Course Code: MTH2321

Credit Units: 04

## Course Objective:

To introduce the fundamentals of probability theory and random processes. The main objective of this course is to acquaint students with some basic concepts in Statistics. They will be introduced to some elementary statistical methods of analysis of data.

## Course Contents:

**Module-I:** Measures of Central Tendency Arithmetic Mean (A.M.) Definition, Mode, Median, Partition Values: Quartiles, Deciles and Percentiles, Box Plot, Percentile ranks. Means of transformed data, Geometric Mean (G.M.) Definition, merits and demerits, Harmonic Mean (H.M.), Weighted Mean: Weighted A.M., G.M. and H.M. Measures of Dispersion, Range, Mean deviation Mean square deviation, Variance and standard Deviation, Combined variance (derivation for 2 groups), Combined standard deviation, generalization for n groups. Moments.

**Module-II:** Skewness and Kurtosis, Bowley's coefficient of skewness, Karl Pearson's coefficient of skewness, Measures of skewness based on moments, Concepts of kurtosis, leptokurtic, mesokurtic and platykurtic frequency distributions. Measures of kurtosis based on moments, Correlation Covariance between two variables, Karl Pearson's coefficient of correlation (r), Spearman's rank correlation coefficient, Spearman's rank correlation coefficient (derivation of formula in case of without ties). Regression, fitting of lines of regression by the least squares method.

**Module-III:** Probability Theory: Random experiments, sample point and sample space, event, algebra of events. Definition of Probability classical and relative frequency approach to probability; probability axioms, real random variables (discrete and continuous), cumulative distribution function, probability mass/density functions, mathematical expectation, moments, moment generating function, characteristic function.

**Module-IV:** Special Discrete and Continuous Distributions: Introduction Binomial, Poisson distributions Normal distribution.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE

# INTRODUCTION TO C PROGRAMMING

**Course Code: MTH2318**

**Credit Units – 02(2-0-0)**

## **Course Objective:**

The objective of this course is to acquaint the students with the basics of computers system, its components, data representation inside computer and to get them familiar with various important features of C programming.

## **Course Contents:**

**Module-I:** Computers fundamentals:- definition, block diagram, diagram with components and characteristics, classification of computers History of C: Introduction of C, Basic structure of C program, Concept of problem solving, program design, debugging, Types of errors in programming, Number systems, Binary, octal, hexadecimal and their inter conversions.

**Module-II:** Element used in C, Header file, key words, identifiers, concept of variables, constants and data types in C, Input/output function, arithmetic, relational and bitwise operator, increment and decrement operator, unary operator, type casting, operator hierarchy, Conditional operator

**Module-III:** Decision making with if statement, else statement, if-else statement, nesting if, switch and break, go to statement. Decision making statement concepts of loops like while loop, do while loop, for loop, nested for loops, jumps in loop.

**Module-IV:** Functions: - use of inbuilt function, user defined functions, arrays:- one dimensional and n dimensional array, initialization of array, iterative programs using arrays, uses of array with combination of decision making operator, Function prototype, Return values and their types, function argument, recursion, Strings, array of strings.

# INTRODUCTION TO C PROGRAMMING LAB

**Course Code: MTH2319**

**Credit Units: 02(0-0-4)**

**Software Required: Turbo C**

**Course Contents:**

- 1 Basic programming to understand the working of C
- 2 Programs using if, else if statements
- 3 Programs using nested if-else statements
- 4 Programs using switch case
- 5 Programs using loops like while and do while
- 6 Pattern programs using loops and multiple loops
- 7 Simple programs with the help of function
- 8 Simple programs involving array and strings

**Examination Scheme:**

**Internal Assessment**

Components	Attendance	Performance	Lab Record	Viva
Weightage (%)	5	10	10	5

# ANALYTICAL GEOMETRY

**Course Code: MTH2320**

**Credit Units: 04**

**Course Objective:**

The analytical geometry basically deals with objects like a polygonal line, a polygon, a polyhedron. Some curvilinear forms are also considered: a circle, a cylinder, a cone, a sphere, a ball. The objective of this course is to provide a numeric description of these geometric objects and their properties.

**Course Contents:**

**Module-I: Vectors:** Three dimensional vectors: direction cosines, resolution of vectors, section formula, dot and cross products, triple products, geometrical and physical applications. Planes: Equation of a plane, normal to a plane, distance from a point to a plane, parallel planes, planes through the intersection of two planes, planes bisecting the angle between two planes, planes through three given non-collinear points, geometrical applications.

**Module-II: Lines:** equation of a straight line in different forms; condition for a line to lie on a plane; condition for two lines to intersect; skew lines; equation and magnitude of the shortest distance between two skew lines.

**Module-III: Sphere, Cone, Cylinder:** Equation of a sphere, tangent plane and normal at a point of the sphere, orthogonal spheres, equation of a cone with guiding curve a circle, ellipse etc., equation of a right circular cylinder.

**Module-IV: Quadric surfaces:** Ellipsoid, hyperboloid of one sheet and two sheets, Elliptic paraboloid. Surface of revolution, ellipsoid of revolution, paraboloid of revolution

Components	A	CT	S/V/Q	HA	EE

# REAL ANALYSIS-I

Course Code: MTH2322

Credit Units: 04

## Course Objective:

To introduce students to the fundamentals of mathematical analysis. At the end of this course, students should: understand the axiomatic foundation of the real number system, understand the concepts of limits, continuity, compactness, differentiability, and integrability.

## Course Contents:

**Module-I:** Boundedness of the set of real numbers; least upper bound, greatest lower bound of a set, neighborhoods, interior points, isolated points, limit points, open sets, closed set, interior of a set, closure of a set in real numbers and their properties. Bolzano-Weierstrass theorem, Open covers, Compact sets and Heine-Borel Theorem.

**Module-II:** Sequence: Real Sequences and their convergence, Theorem on limits of sequence, Bounded and monotonic sequences, Cauchy's sequence, Cauchy general principle of convergence, Subsequences, Subsequential limits. Infinite series: Convergence and divergence of Infinite Series, Comparison Tests of positive terms Infinite series, Cauchy's general principle of Convergence of series, Convergence and divergence of geometric series.

**Module-III:** Infinite series: D'Alembert's ratio test, Raabe's test, Logarithmic test, de Morgan and Bertrand's test, Cauchy's Nth root test, Gauss Test, Cauchy's integral test, Cauchy's condensation test.

**Module-IV:** Alternating series, Leibnitz's test, absolute and conditional convergence, Arbitrary series: Abel's lemma, Abel's test, Dirichlet's test, Insertion and removal of parenthesis, rearrangement of terms in a series, Dirichlet's theorem, Riemann's Rearrangement theorem, Pringsheim's theorem (statement only), Multiplication of series, Cauchy product of series, (definitions and examples only) Convergence and absolute convergence of infinite products.

# Syllabus- Fourth Semester

## NUMERICAL METHODS

Course Code: MTH2413

Credit Units: 03

### Course Objective:

This course aims to introduce various techniques for finding approximate numerical solutions to mathematical problems for which exact or analytical solutions are either unavailable or practically inappropriate to use.

### Course Contents:

#### Module-I: Solution of system of linear equations:

**Direct methods:** Cramer's rule, Matrix inverse method, Gauss elimination and Gauss-Jordan method.

**Iterative methods:** Jacobi's method, Gauss-Seidal method

**Module-II: Solution of Transcendental equations:** Initial approximation of the roots, Bisection method, Method of false position, secant method, iteration method, Newton-Raphson method and its convergence.

**Module-III: Finite differences and interpolation:** finite difference operators, their properties and their interrelations, finite difference tables, Newton's forward and Newton's backward interpolation formula, various central difference formulae including Stirling's formula, Bessel's formula. Divided differences: Operators and difference table, Newton's divided difference formula, Lagrange's interpolation formula.

**Module-IV: Numerical differentiation and integration:** Differentiation using Newton's forward and backward formula, Newton-Cotes quadrature formula - derivations & comparison of Trapezoidal rule, Simpsons 1/3 and 3/8 rules. Numerical solution of first order differential equations: Euler's method, modified Euler's method, Runge-Kutta II<sup>nd</sup> order and IV<sup>th</sup> order methods.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

## NUMERICAL METHODS LAB

**Course Code: MTH2414**

**Credit Units: 01**

### **Course Objective:**

To understand the implementation of methods learnt in the course Numerical Methods using C programming.

### **Course Contents:**

1. Write a program to solve the system of equations  $Ax = b$  using Gauss elimination method.
2. Write a program to solve the system of equations  $Ax = b$  using Jacobi Iteration method.
3. Write a program to solve the system of equations  $Ax = b$  using Gauss-Seidel method.
4. Write a program to find an initial approximation to solve transcendental equation of the form  $f(x) = 0$ .
5. Write a program to find the roots of an equation  $f(x) = 0$  using Bisection method.
6. Write a program to find the roots of an equation  $f(x) = 0$  using Iteration method.
7. Write a program to find the roots of  $f(x) = 0$  using Newton Raphson method.
8. Write a program to find the roots of  $f(x) = 0$  using Secant method.
9. Write a program to find the integral of a function using Trapezoidal rule.
10. Write a program to find the integral of a function using Simpson's 1/3rd and 3/8th rule

### **Examination Scheme:**

#### **Internal Assessment**

Components	Attendance	Performance	Lab Record
Weightage (%)	5	10	10

# LINEAR ALGEBRA

Course Code: MTH2415

Credit Units: 04

## Course Objective:

Linear algebra is the study of vector spaces and certain operators on vector spaces called linear transformations. The course aims to introduce the fundamentals of linear algebra, and matrix theory.

## Course Contents:

**Module-I: System of Linear Equations** Row Reduction and Echelon forms. Using elementary row operations to solve  $Ax = b$  system, solution sets of linear system, Application of linear system. linear independence. Introduction to linear transformation. matrix of linear transformation. Cramer's Rule for solving system of Linear equations.

**Module-II: Matrix Theory:** Inverse of a matrix using row operations, Characterizations of Invertible matrix, Gaussian Elimination Method and Matrix Formulation. Polynomial of Matrices, Cayley -Hamilton Theorem, Diagonalization, Eigenvalues and Eigenvectors, their geometrical interpretation, characteristic and minimal polynomials of Matrices.

**Module-III: Vector Spaces:** Vector spaces over a field, subspaces. Sum and direct sum of subspaces. Linear span. Linear dependence and independence. Basis and dimension, Existence theorem for bases in the finite dimensional case. Invariance of the number of vectors in a basis, Existence of complementary subspace of any subspace of a finite-dimensional vector space. Dimensions of sums of subspaces. Quotient space and its dimension.

**Module-IV: Linear transformations:** Algebra of linear transformations. change of basis and similarity. Kernel and image of a linear transformation. The rank-nullity theorem. Change of basis, isomorphism. Matrices and Linear Mapping.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE

# COMPLEX ANALYSIS

Course Code: MTH2420

Credit Units: 04

## Course Objective:

The main objective of Complex Analysis is to study the development of functions of one complex variable. Students will be introduced to the Cauchy-Riemann Equations, Cauchy's Theorem, Cauchy's Integral Formula, the Maximum Modulus Principle, Liouville's Theorem, the Residue Theorem, Rouché's Theorem, Riemann Mapping Theorem. They will also learn few applications of these concepts.

## Course Contents:

**Module-I: Complex Numbers:** De-Moivre's Theorem and its applications, Exponential, Sine, Cosine and Logarithm of a complex number. Definition of  $a^z$  ( $a \neq 0$ ), Inverse circular and hyperbolic functions.

**Module-II:** Review of complex plane, sequences and series, analytic polynomials, analytic functions, Cauchy-Riemann equations, analyticity in an arbitrary open set, functions  $e^z$ ,  $\sin z$  and  $\cos z$ .

**Module-III:** Power series, Line integrals and their properties, closed curve theorem for entire functions, Cauchy integral formula and Taylor expansions for entire functions, Liouville's theorem, types of singularities, poles, residues and application of residues to evaluate real integrals.

**Module-IV:** Uniqueness theorem, definitions and examples of conformal mappings, bilinear transformations, Fourier series, Fourier expansion for complex functions.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE

## REAL ANALYSIS-II

**Course Code: MTH2421**

**Credit Units: 04**

**Course Objective:**

At the end of this course, students: understand the axiomatic foundation of limit, continuity, differentiation, integration of real valued function and convergence of improper integrals.

**Course Contents:**

**Module –I**

Limits of functions, sequential criterion for limits, Limit theorems, Infinite limits & limits at infinity. Continuous functions, sequential criterion for continuity & discontinuity. Algebra of continuous functions. Continuous functions on closed intervals, intermediate value theorem, Uniform continuity.

**Module –II**

Differentiability of a function at a point & in an interval, algebra of differentiable functions. Increasing and decreasing functions, Rolle's theorem, Mean value theorem, Cauchy's mean value theorem, Darboux's theorem. Applications of mean value theorem to inequalities.

**Module-III:** Riemann integral, Integrability of continuous and monotonic functions, The Fundamental theorem of integral calculus. Mean value theorems of integral calculus.

**Module-IV:** Improper integrals and their convergence, Comparison tests, Abel's and Dirichlet's tests, Frullani's integral, Integral as a function of a parameter. Continuity, Differentiability and integrability of an integral of a function of a parameter.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

# Syllabus- Fifth Semester

## MECHANICS

Course Code: MTH2503

Credit Units: 04

### Course Objective:

Mechanics is the study of forces that act on bodies and the resultant motion that those bodies experience. The course is devoted to introduce physical principles and techniques to solve mechanics problems through the integrated application of mathematical, scientific tools.

### Course Contents:

**Module-I:** Basic Concept of Mechanics: Fundamental laws of Newtonian mechanics, Motion of particle, Components of velocity and acceleration (cartesian, radial and transverse, tangential and normal). Projectile motion, Conservative and non conservative forces, Work and Energy, Conservative field and potential energy, Principle of conservation of linear momentum, Angular momentum and energy for a particle. D' Alembert's principle.

**Module-II:** Moments, Moment of a force about a point and a line, Parallel forces, Couple, theorem of Varignon, Necessary conditions for equilibrium (moment), Coplanar forces, Reduction of a general plane force system, Parallel force system in two and three dimensions, Forces acting at a point, Triangle law of forces and Polygon law of forces, Lami's theorem.

**Module-III:** Motion under the inverse square law, Newton's law of gravitation and planetary orbits. Kepler's laws of motion deduced from Newton's laws of gravitation and vice-versa. Motion of the mass centre and motion relative to mass centre. Classification of orbits, Motion of artificial satellites, Orbits and their eccentricity.

**Module IV:** Simple Harmonic motion, Differential equation of S.H.M. Phase relationship between velocity, displacement, acceleration & energy. Derivation of differential equation of motion for SHM starting from Hooke's law; Damped oscillations. Derivation of decaying amplitude: over damping, Critical damping and under damping, Forced and coupled oscillations.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

A-Attendance; CT-Class Test; S/V/Q-Seminar/Quiz/Viva; HA-Home Assignment; EE-End Semester Examination

# OPERATIONS RESEARCH

**Course Code: MTH2504**

**Credit Units: 04**

## **Course Objective:**

Operations research has many applications in science, engineering, economics, and industry. The goal of the course is to teach how to formulate, analyze, and solve mathematical models using appropriate optimization tools.

## **Course Contents:**

**Module-I:** Basic Definition, Nature and Significance of OR, feature of OR Approach Application and Scope of OR, Linear Programming problems, mathematical formulation of LPP, case studies, Advantages and Limitations of Linear Programming, Application Areas of Linear Programming, definition of feasible, Infeasible Solution, Basic feasible solution. Solution of LPP by Graphical methods, unbounded, alternative and no feasible solution, convex set, convex hull, examples on convex sets, fundamental theorem of LPP.

**Module-II:** Standard form of LPP, slack & surplus variable, Simplex methods, Big M Method, Two phase method, solved problems on unbounded, alternative and no feasible solution, degeneracy. Duality in Linear Programming Problem, importance of duality, formulation of dual problems, theorems on Duality, Sensitivity Analysis.

**Module-III:** Assignment Problems, Hungarian method for optimal solution, solving unbalance problems, travelling salesman problems. Transportation Problem, formulation, finding basic feasible solution by- Northwest Corner Method, Least Cost Method and by Voge's Approximation Method, Optimality test: MODI method, Unbalanced Supply and Demand, Degeneracy Problem, Alternative Optimal Solution, Maximization Transportation Problem.

**Module-IV** Sequencing problem, solution of sequencing problems, processing n jobs through 2 machines, processing n-jobs through 3 machines, processing 2-jobs through m-machine, Game theory: Competitive game, rectangular game, saddle points, minimax (maximin) method of optimal solution, value of game, Solution of game with saddle point. Rectangular games without saddle point, mixed strategy for 2 x 2 games.

# SCIENTIFIC COMPUTING

Course Code: MTH2520

Credit Units: 2(0-0-4)

## Course Objective:

MATLAB is a scientific computing tool which covers almost all area of science and engineering. Students will be using MATLAB environment to solve various types of mathematical problems.

## Course Contents:

Fundamentals of Linear Algebra, Numerical Analysis, Differential Equations and their application using MATLAB

1. Generating arrays and matrices and their manipulations
2. Introduction on few builtin functions
3. 2D and 3D plots, multiple plots using figure and subplot commands
4. Annotation of plots
5. Simple script files and editing them
6. Introduction of function files
7. Introducing notion of sub-functions and nested functions
8. Solving IVPs using ode45 and other solvers
9. Solving system of linear equations using builtin functions

## Internal Assessment

Components	A	Performance	Lab Record	Viva
Weightage (%)	5	10	10	5

## Endterm Exam

# Summer Workshop

**Course Code: MTH2535**

**Credit Units: 06**

Workshop will be conducted for Two-week (six hours per day). The course will be intended to provide appropriate exposure aimed at developing key skills for enhancing employability and preparedness for higher education. The focus will be on the following:

- Technical softwares/tools related to scientific computing and statistics. (first week).
- Report writing, Presentation etc. (first week).
- Reinforce fundamental concepts of core subjects like algebra/analysis/differential equations through intensive sessions. (second week)

## **Evaluation scheme:**

1. The students will have to appear for class-test(s) during the workshop.
2. During summer break, students have to work on the assignment(s) given to them.
3. The assignment(s) will have to be submitted within two weeks of commencement of new semester followed by viva-voce.
4. The evaluation will be done by the committee comprising of faculty members who served as resource persons in the workshop.

<b>Components</b>	Attendance	Assignment(s)	Class test(s)	Viva-voce
<b>Weightage (%)</b>	5	35	30	30

\*Evaluation scheme for SAP will be provided by office of International Affairs of the University.

# FUZZY SETS & FUZZY LOGIC

**Course Code: MTH2518**

**Credits: 3**

## Course Objective:

The course covers the study of fuzzy description logics as formalism for representing and reasoning with–vague or imprecise knowledge. We will study several variants of fuzzy DLs that differentiate from each other by their expressivity and their fuzzy semantics.

## Course Contents:

**Module I** Background of Fuzzy sets, Crisp sets - operations on crisp sets to functions, Fuzzy sets, fuzzy set operations, Properties of fuzzy sets, Expansion of Fuzzy set; Interval value Fuzzy set, Type-2 Fuzzy set, L-Fuzzy set, Level-2 Fuzzy set. Membership functions, Features of the membership function.

**Module II** alpha cut set, additional properties of alpha cut, Support, Core and height of alpha cut set, Cardinality of fuzzy set, First and second decomposition theorem, Functions of fuzzy sets-extension principle, Cartesian product, Extension principle on Cartesian product.

**Module III** Crisp relations-cardinality of crisp relations, Operations on crisp relations, Properties of crisp relations, Compositions, Fuzzy relations-cardinality of fuzzy relations, Operations on fuzzy relations, Properties of fuzzy relations, max-min composition, fuzzy equivalence relations, transitive max-min closure, Projections and Cylindrical Extensions, Fuzzy Relation Equations.

**Module IV** Classical Logic and fuzzy logic: Classical predicate logic-tautologies, Contradictions, Equivalence, Exclusive or an exclusive nor, Logical proofs, Deductive Inferences, Fuzzy logic, Fuzzy proposition and its types, Fuzzy quantifiers, Equivalence and logical proofs, Modifiers, inference from conditional and qualified fuzzy proposition.

# MATHEMATICAL MODELLING

**Course Code :MTH2515**

**Credits: 4**

## Course Objective:

Mathematical modeling is a process of formulating a real world problem into mathematical terms and analyze them. The course is designed to learn mathematical tools such as difference equations, differential equations, concepts from probability theory to formulate and analyze real world problems.

## Course Contents:

**Module I** Linear Growth and Decay Models Non-Linear Growth and Decay Models Compartment Models Dynamic problems Geometrical problems.

**Module II** Population Dynamics Epidemics “Compartment Models Economics Medicine, Arms Race, Battles and International Trade” Dynamics.

**Module III** Planetary Motions “Circular Motion and Motion of Satellites “Mathematical Modelling through Linear Differential Equations of Second Order “Miscellaneous Mathematical Models.

**Module IV** Simple Models “ Basic Theory of Linear Difference Equations with Constant Coefficients Economics and Finance “Population Dynamics and Genetics - Probability Theory.

# R PROGRAMMING AND SAS

**Course Code: MTH2519**

**Credits: 4**

## Course Objective:

To introduce programming concepts of R-programming, and how to use R for effective data analysis. Students will also get an exposure to SAS, a software commonly used by statisticians.

## Course Contents:

**Module I** Overview of R, R data types and objects, reading and writing data, accessing R packages, writing R functions, debugging, profiling R code, and commenting R code.

**Module II** Control structures, functions, scoping rules, dates and times, Loop functions, organizing R code.

**Module II** SAS: Introduction to SAS System & Architecture, import and export raw data files, manipulate and transform data, combine SAS data sets, create basic detail and summary reports using SAS procedures identify and correct data.

**Module IV** Leave and Continue Statements, Where Statement, If “ Then Else statement; Goto, Stop and Error statements; Output statement, Put statement; Do Loops; modifying and combining data sets; updating master data set; display manager commands; SAS functions; an introduction to arrays and array processing; overview of methods for combining SAS data sets.

# DIGITAL ELECTRONICS

**Course Code: MTH2521**

**Credit Units: 03**

## **Course Objective:**

This course is an introduction to the basic principles of digital electronics. At the conclusion of this course, the student will be able to quantitatively identify the fundamentals of Digital signals and circuits, including number systems, logic gates, logic and arithmetic subsystems, and integrated circuits. The student will construct, analyze combinational logic circuits & sequential circuits; create a truth table for standard digital logic gates. Student will also be able to understand about digital to analog conversion with logic gates, adders- sub tractors etc. The student will be able to analyze and design simple logic circuits using tools such as Karnaugh Mapping minimization, and will be able to draw logic diagrams.

## **Course Contents:**

### **Module I: Number System and Logic gates**

Representation of Numbers: Decimal, Binary, Octal, Hexadecimal Number Systems and Conversion of the bases. Logical Operators: NOT, AND, OR, NAND, NOR, EX-OR, EX-NOR, Truth tables of Logical Operations, Duality Principle, De Morgan's theorems Simplification of logical Function using laws.

### **Module II: Circuits and Expressions**

Standard forms for Logical Expressions - Sum of Products, Product of Sums, Standard SOPs, Standard POSs, Conversion SOPs to POSs, and POSs to SOPs. Combinational Circuits: Series Combination, Parallel Combination, Logical Circuits, Applications: Combinational Circuits, and Switching Circuits.

### **Module III: Digital Circuits**

Analog & Digital Signals, Logical Functions: Min-terms and Max-terms, Algebraic Methods and Laws, Karnaugh Maps. Simplification of Arithmetic Circuits Expressions; Half- Adders and Full -Adders, Half –Subtractor and Full- Subtractor.

## **Examination Scheme:**

Components	CT1	A/C/Q	Attd	EE
Weightage (%)	15	10	5	70

## Syllabus- Sixth Semester

### METRIC SPACE

Course Code: MTH2621

Credits: 4

#### Course Objective:

Upon successful completion of this course, the student will be able to identify the three properties of a metric or distance, define the basic terms and concepts in metric space topology, classify and explain open and closed sets, adherent points, convergent and Cauchy convergent sequences, complete spaces, compactness and connectedness etc.; and prove logically theorems in metric space topology using the definitions of basic terms and properties of metric spaces.

#### Course Contents:

**Module I** Metric spaces: definition and examples. Sequences in metric spaces, Cauchy sequences. Complete Metric Spaces. Open and closed balls, neighbourhood, open set, interior of a set, Limit point of a set, closed set, diameter of a set, Cantor's Theorem, Subspaces, dense sets, separable spaces.

**Module 2** Continuous mappings, sequential criterion and other characterizations of continuity, Uniform continuity, Homeomorphism, Contraction mappings, Banach Fixed point Theorem

**Module 3** Connectedness, connected subsets of  $\mathbb{R}$ , connectedness and continuous mappings.

**Module 4.** Compactness, compactness and boundedness, continuous functions on compact spaces.

#### Examination Scheme

Components	A	CT	S/V/Q	HA	EE

# SPECIAL FUNCTIONS AND INTEGRAL TRANSFORMS

**Course Code: MTH2615**

**Credits: 4**

## Course Objective:

The main objective of this course is to familiarize students with a range of mathematical methods which includes series solution and transforms to solve various types of ordinary differential equations.

## Course Contents:

**Module I** Series solution of differential equations – Power series method, Definitions of Beta and Gamma functions. Bessel equation and its solution: Bessel functions and their properties- Convergence, recurrence, Relations and generating functions, Orthogonality of Bessel functions.

**Module II** Legendre and Hermite differentials equations and their solutions: Legendre and Hermite functions and their properties-Recurrence Relations and generating functions. Orthogonality of Legendre and Hermite polynomials. Rodrigues' Formula for Legendre & Hermite Polynomials, Laplace Integral Representation of Legendre polynomial.

**Module III** Laplace Transforms – Existence theorem for Laplace transforms, Linearity of the Laplace transforms, Shifting theorems, Laplace transforms of derivatives and integrals, Differentiation and integration of Laplace transforms, Convolution theorem, Inverse Laplace transforms, convolution theorem, Inverse Laplace transforms of derivatives and integrals, solution of ordinary differential equations using Laplace transform.

**Module IV** Fourier transforms: Linearity property, Shifting, Modulation, Convolution Theorem, Fourier Transform of Derivatives, Relations between Fourier transform and Laplace transform, Parseval's identity for Fourier transforms, solution of differential Equations using Fourier Transforms.

# DISCRETE MATHEMATICS

**Course Code: MTH2620**

**Credits: 3**

## Course Objective:

The objective of the course is to introduce the fundamentals of Discrete Mathematics which includes Mathematical Logic, Boolean algebra and its Applications, Switching circuit & Logic Gates, Graphs and Trees. The students shall also be introduced to computational and algorithmic aspects of Mathematical Logic, Boolean Algebra, Graphs and Trees in the field of Computer sciences and its applications.

## Course Contents:

**Module I Propositional Logic** Proposition, Propositional Calculus- Propositional Variables and Compound Propositions, Basic Logical Operations: -Conjunction, Disjunction, Negation, Conditional, Bi-conditional. Compound Statements, Equivalence, Duality, Algebra of Statements, Valid and Invalid Arguments, Tautologies, Contradiction, Contingency.

**Module II Boolean Algebra:** Boolean Algebra, Various Boolean Identities, Boolean Function, Boolean forms and their Equivalence. Min-term Boolean forms, Sum of product Canonical forms. Minimization of Boolean functions, Algebraic Method, The Karnaugh Map method.

**Module III Graphs:** Graph, Finite graph, Infinite graph, connected graph, disconnected graph, Null graph, Sub-graph, Incidence edge, Adjacency of vertex, Degree, Directed Graph, Walk, Path, Circuit, Wheel, complete graphs, bipartite graphs, Matrix Representation of graphs. Hand-shaking Lemma.

**Module IV Trees:** Trees, Properties of trees, Rooted tree, Binary tree, Cut-sets, Spanning Trees, Minimum Spanning Trees, Kruskal's algorithm.

# FINANCIAL MATHEMATICS

**Course Code: MTH2603**

**Credits: 3**

## Course Objective:

The course introduces fundamental concepts of Financial Mathematics such as cash flows, present value, future value, yield and probability that form the basis for further advanced learning.

## Course Contents:

**Module I** Random Variable Discrete and Continuous, Probability Distributions Binomial, Poisson and Normal, Basics of Stochastic Process, Markov Process, Martingales.

**Module II** Derivative Securities, time value of money, Cash flow, money market, coupon bonds, Money market account.

**Module III** Forward and futures contracts Forward price formula, value of a forward contract,. Futures contract, Futures pricing. Swaps, value of commodity swaps.

**Module IV** Theory of option pricing Put-Call parity, behaviour of option prices with respect to variables, Pay-off curves, Single period and multi period binomial lattice model for option pricing, existence of risk neutral probability measure, pricing American options: A binomial lattice model, notion of complete markets, the CRR model, Black- Scholes formula for dividend paying stock, the Greeks. Portfolio optimization “Risk and return of an asset, two assets portfolio optimization, multi asset portfolio optimization, Capital Asset Pricing Model (CAPM)” as a pricing formula, as a factor model.

# FUNCTIONAL ANALYSIS

Subject Code-MTH2618

Credits: 3

## Course Objective:

The course introduces basic concepts of functional analysis and the concepts associated with the dual of a linear space. Student will learn the basic properties of norm (Banach) and inner product (Hilbert) spaces as well as fundamentals of linear operator theory.

## Course Contents:

**Module I Review:** Metric Space Further Examples of Metric Spaces Open Set, Closed Set, Neighborhood Convergence, Cauchy Sequence, Completeness Examples. Completeness Proofs Completion of Metric Spaces. Vector Space. Further Properties of Vector spaces

**Module II** Normed linear spaces, Banach spaces Further Properties of Normed Spaces. Finite Dimensional Normed Spaces and Subspaces. Compactness and Finite Dimension continuous linear transformations, equivalent norms Bounded and Continuous Linear Operators. Linear Functionals. Linear Operators and Functionals on Finite Dimensional Spaces, Normed Spaces, the Hahn-Banach theorem and its consequences. Normed Spaces of Operators. Dual S.

**Module III** Conjugate space and second conjugate space. The open mapping Theorem, The closed graph theorem, The conjugate of an operator, The uniform boundedness principle. Inner product Space. Further properties of inner product space. Definition and examples and simple properties of Hilbert spaces.

**Module IV** Orthogonal complements, The projection theorem, orthogonal sets Orthonormal sets and Sequence. The Bessels inequality, Fourier expansion and Parseval's equation, separable Hilbert spaces, Riesz's theorem. Strong and weak convergence. convergence of sequence of operators and functional. Application of Summability of sequence. Numerical integration and weak convergence.

# NUMBER THEORY

Subject Code- MTH2611

Credits: 03

## Course Objective:

Elementary Number Theory is the study of the basic structure and properties of integers. Learning Number Theory helps improving one's ability of mathematical thinking. The course is designed to introduce the fundamentals of number theory.

## Course Contents:

**Module I** Divisibility, Euclidean algorithm, Linear Diophantine equations, Prime numbers, Fundamental theorem of arithmetic, Prime number theorem (statement only).

**Module II** Congruences, solutions of linear congruences, Chinese Remainder Theorem, Euler totient function, Euler-Fermat theorem, Wilson's theorem, non-linear congruences, Hensel's lemma, primitive roots and power residues.

**Module III** Quadratic residues, quadratic reciprocity, the Jacobi symbols. The greatest integer function, Arithmetic functions, Mobius function and Mobius inversion formula.

**Module IV** Finite continued fractions, infinite continued fractions, approximation to irrational numbers. Introduction to cryptography, public key cryptography, RSA.

# INTRODUCTION TO STATISTICAL INFERENCE

Subject Code-MTH2619

Credits: 4

## Course Objective:

The course aims at providing an introduction to statistical inference and its application to predictive statistical models.

## Course Contents:

**Module I** Parameter and statistic, sampling distribution and standard error of estimate. Point and interval estimation, Unbiasedness, Efficiency, Consistency and Sufficiency.

**Module II** Null and alternative hypotheses, Simple and composite hypotheses, Critical region, Level of significance, One tailed and two tailed tests, Types of errors, Neyman-Pearson Lemma.

**Module III** Testing and interval estimation of a single mean, single proportion, difference between two means and two proportions. Fisher's Z-transformation.

**Module IV** Definition of Chi-square statistic, Chi-square tests for goodness of fit and independence of attributes. Definition of Student's 't' and Snedcor's F-statistics. Testing for the mean and variance of univariate normal distributions, Testing of equality of means and variances of two univariate normal distributions. Related confidence intervals. Analysis of variance (ANOVA) for one-way and two-way classified data.

## MECHANICS

**Course Code: PHY2101**

**Credit Units:03**

### Course Objective:

This course has been so framed that the students are exposed to the topics of conservation laws, dynamics of rigid bodies and inverse-square law of forces in the framework of Newtonian Mechanics. Special theory of relativity is also included here.

### Course Contents:

#### Module I: Conservation Laws

Conservation of Energy, Conservative forces, Internal forces and conservation of linear momentum, Centre of mass, systems with variable mass, Space-Vehicle Problem. Conservation of Angular Momentum, Internal torques, Angular Momentum about the Centre of mass, Rotational invariance.

#### Module II: Elastic and Inelastic Scattering

Types of scattering and conservation laws, Laboratory and centre of mass systems, collision of particles which stick together, General elastic collision of particles of different masses.

#### Module III: Inverse-Square-Law of Forces

Force between a Point Mass and Spherical shell. Force between a Point Mass and Solid Sphere, Gravitational and Electrostatic self-energy. Gravitational energy of the Galaxy and of uniform sphere; Orbits and their eccentricity, Two-body problem – reduced mass.

#### Module IV: Galilean transformations and Einstein's special theory of relativity

Frames of reference, Inertial and non-inertial frames, Galilean transformation and Galilean relativity. Basic postulates of special relativity, Lorentz transformations, Simultaneity and causality in relativity. Length contraction, Time dilation, Twin paradox, Velocity Transformation. Relativistic momentum, Relativistic Energy, Transformation of Momentum and Energy, Equivalence of Mass and Energy.

### Examination Scheme:

## WAVES & OSCILLATIONS

**Course Code: PHY2102**

**Credit Units:03**

### Course Objective:

This course aims at exposing the students to Harmonics Oscillations and applications in our everyday life.

### Course Contents:

#### Module I: Simple Harmonic Free Vibrations

Simple harmonic motion, energy of a SHO, Compound pendulum, Electrical Oscillations, Plasma Vibrations, Lattice Vibrations, Transverse Vibrations of a mass on a string, composition of two perpendicular SHMs of same period and of periods in ratio 1:2, Anharmonic Oscillations.

#### Module II: Damped Simple Harmonic Vibrations

Decay of free Vibrations due to damping, types of damping, Determination of damping coefficients – Logarithmic decrement, relaxation time and Q-factor. Electromagnetic damping, collision damping – Ionosphere and metals.

#### Module III: Forced Vibrations and Resonance

A forced oscillator, Transient and Steady State Oscillations, velocity versus driving force frequency, Resonance, power supplied to forced oscillator by the driving force. Q-factor of a forced oscillator, Electrical, nuclear and nuclear-magnetic resonances.

#### Module IV: Coupled Oscillations

Stiffness coupled oscillators, Normal coordinates and modes of vibrations. Normal frequencies, Forced vibrations and resonance for coupled oscillators, Masses on string-coupled oscillators.

#### Module V: Waves in Physical Media

Wave motion in one dimension, Transverse and longitudinal waves, progressive harmonic waves and their energy, Transverse waves on a string, longitudinal waves on a rod, Electrical transmission lines, characteristic impedance of a string and a transmission line, waves in an absorbing medium, spherical waves.

## APPLIED MATHEMATICS-I

**Course Code: PHY2105**

**Credit Units:03**

### Course Objective:

Calculus was first invented to meet the mathematical needs of scientists of the sixteenth and seventeenth centuries, needs that mainly mechanical in nature. Nowadays it is a tool used almost everywhere in the modern world to describe change and motion. Its use is widespread in science, engineering, medicine, business, industry, and many other fields. Calculus also provides important tools in understanding functions and has led to the development of new areas of mathematics including real and complex analysis, topology, and non-euclidean geometry. The objective of this course is to introduce the fundamental ideas of the differential and integral calculus of functions of one or more variable.

### Course Contents:

**Module I:** Derivative and its application Differentiation, Successive differentiation, nth derivative, Leibnitz rule of differentiation, Taylor's theorem with remainder, Maclaurin theorem, Taylor and Maclaurin series, asymptotes, curvature, radius of curvature, curve tracing for Cartesian curves.

### Module II: Partial derivative and its applications

Partial derivative, first order partial derivative, higher order partial derivative, Homogeneous functions, Euler's theorem for homogeneous function and its corollaries, total derivative, partial derivative of composite function, Jacobian, Taylor & Maclaurin series for two variables, Maxima and Minima for two variables, Method of Lagrange's multipliers and problems.

**Module III:** Double and triple integrals, Change of order of integration, Change of variables, Application of integration to lengths, Surface, areas and Volumes Cartesian and Polar coordinates. Beta and Gamma functions, Dirichlet's integral and its applications.

**Module IV:** Order, degree of ODE and some basic concepts such as linearity and nonlinearity, general solution and particular solution, formation of ODEs, First order differential equation: variable separable method, homogeneous method, and its variants, Linear, first order differential Equation, Linear differential equation of second order with constant coefficients: Complementary function and particular integral for some standard functions.

### Examination Scheme:

## APPLIED CHEMISTRY-I

**CourseCode:PHY2106**

**Credit Units:02**

### Course Objective:

To develop the ability to predict the structures and certain properties and reactivities of the elements and of many of their simpler ionic and covalent compounds. To achieve this predictive capability will require the student to enhance their understanding of atomic structure and periodicity. These concepts are directly applicable to organic and biochemistry, and also to many aspects of biology, materials science, and environmental science.

### Course Contents:

#### Module I: Atomic Structure

Bohr's theory, its limitations and atomic spectrum of hydrogen atom. Wave mechanics: de Broglie equation, Heisenberg's uncertainty principle and its significance, Schrodinger's wave equation, significance of  $\psi$  and  $\psi^2$ . Quantum numbers and their significance. Normal and orthogonal wave functions. Sign of wave functions. Radial and angular wave functions. Radial and angular distribution curves. Shapes of *s*, *p*, *d* and *f* orbitals. Contour boundary and probability diagrams. Pauli's exclusion principle, Hund's rule of maximum multiplicity, Aufbau's principle and its limitations, Variation of orbital energy with atomic number.

#### Module II: Periodicity of Elements

*s*, *p*, *d*, *f* block elements, the long form of periodic table. Detailed discussion of the following properties of the elements, with reference to *s* & *p*- block:

- (a) Effective nuclear charge, shielding or screening effect, variation of effective nuclear charge in periodictable.
- (b) Atomic radii (van der Waals)
- (c) Ionic and crystal radii
- (d) Covalent radii (octahedral and tetrahedral)
- (e) Ionization enthalpy, Successive ionization enthalpies and factors affecting ionization energy. Applications of ionization enthalpy.
- (f) Electron gain enthalpy, trends of electron gain enthalpy.
- (g) Electronegativity, Pauling's/ Mulliken's and Mulliken-Jaffe's electronegativity scales. Variation of electronegativity with bond order, partial charge, hybridization, group electronegativity. Sanderson's electron density ratio.

#### Module III: Acids and Bases

Arrhenius concept, Bronsted- Lowry concept of acid-base reaction, solvated proton, relative strength of acids, types of acid-base reactions, levelling solvents, Lewis acid-base concept, Classification of Lewis acids, Hard and Soft Acids and Bases (HSAB), Application of HSAB principle.

## PROPERTIES OF MATTER

**CourseCode:PHY2108**

**Credit Units:03**

### Course Objective:

This course has been designed in such a way that it gives an insight to the student about the general properties of Matter and enables them to apply this knowledge to practical life where each and every thing in surrounding is made up of matter only. Therefore this course is an essential part of Physics Study. The course contains information about all types of modulus of Elasticity and also deals with peculiar properties of fluids viz. surface tension and viscosity and their applications.

### Module I: Elasticity:

Hooke's Law Stress - Strain Diagram - Elastic moduli - Relation between elastic constants - Poisson's Ratio - Expressions for Poisson's ratio in terms of elastic constants - Work done in stretching and twisting a wire - Twisting couple on a cylinder- Rigidity modulus by static torsion - Torsional pendulum - Rigidity modulus and moment of inertia.

### Module II: Bending of beams:

Cantilever - Expression for bending moment - Expression for depression - Cantilever oscillations - Expression for time period - Experiment to find Young's modulus - Non uniform bending - Experiment to determine Young's modulus by Koenig's method - Uniform bending - Expression for elevation - Experiment to determine Young's modulus using microscope.

### Module III: Fluids:

Surface Tension: Definition and dimensions of surface tension - Excess of pressure over curved surfaces - Application to spherical and cylindrical drops and bubbles - Variation of Surface tension with temperature - Jaegar's method.

Viscosity: Co-efficient of viscosity and its dimensions - Rate of flow of liquid in a capillary tube - Poiseuille's formula - Experiment to determine co-efficient of viscosity of a liquid - Variation of viscosity of a liquid with temperature - Applications of viscosity.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE

## APPLIED CHEMISTRY LAB-I

CourseCode:PHY2107

Credit Units:01

### Course Contents:

#### [I] Titrimetric Analysis

- (i) Calibration and use of apparatus
- (ii) Preparation of solutions of different Molarity/Normality of titrants

#### [II] Acid- Base Titrations

- (i) Estimation of carbonate and hydroxide present together in mixture.
- (ii) Estimation of carbonate and bicarbonate present together in a mixture.
- (iii) Estimation of free alkali present in different soaps/detergents

#### [III] Oxidation- Reduction Titrimetry

- (i) Estimation of Fe(II) and oxalic acid using standardized  $\text{KMnO}_4$  solution.
- (ii) Estimation of oxalic acid and sodium oxalate in a given mixture.
- (iii) Estimation of Fe (II) with  $\text{K}_2\text{Cr}_2\text{O}_7$  using internal (diphenylamine, anthranilic acid) and external indicator.

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## PHYSICS LAB-I

Course Code: PHY2104

Credit Units:02

### Course Contents:

- To determine the Moment of Inertia of a Flywheel.
- To determine the Modulus of Rigidity of a Wire by Maxwell's needle.
- To determine the Coefficient of Viscosity of water by Capillary Flow Method (Poiseuille's method).
- Determination of moment of inertia of metallic cylinder / rectangular bar about an axis passing through its C.G. and to determine the rigidity modulus of the material of the suspension wire.
- To determine the wavelength of a monochromatic light by Newton's ring method.
- Measurement of the slit width and the separation between the slits of a double slit by observing the diffraction and interference fringes.
- To calibrate a polarimeter and hence to determine the concentration of sugar solution.
- To determine the refractive index of material of Prism using Spectrometer.
- To determine the wavelength of spectral lines of Mercury lamp using diffraction grating.

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA – Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## Syllabus - Second Semester

### THERMODYNAMICS

**Course Code: PHY2201**

**Credit Units: 03**

**Course Objective:**

This course aims at exposing the students to basic laws of thermodynamics and its applications in everyday life.

**Course Contents:**

**Module I: Kinetic Theory**

Postulates of Kinetic theory, Mean free path and Pressure of an ideal gas, Boyle's law and Charles law of ideal gases. Maxwell's speed distribution, Mean free path, Elementary treatment of transport phenomena, Brownian motion.

**Module II: Transmission of Heat**

Modes of heat transmission, Conduction in solids: Lee's disc method, Convection of heat. Radiation: Black body, Black body radiation, Stefan-Boltzmann law, Stefan's constant, Newton's law of cooling, Kirchhoff's law of thermal radiation, solar constant, temperature of the Sun, solar spectrum, distribution of energy in the spectrum of a black body, Planck's quantum theory of radiation (qualitative)

**Module III: Laws of Thermodynamics**

Zero<sup>th</sup> law of thermodynamics, concept of temperature, Absolute temperature. Thermodynamic processes (isothermal, adiabatic and isobaric), P-V diagram and Work done in a thermodynamic process. I<sup>st</sup> law of thermodynamics, Reversible and irreversible processes, Examples irreversibility, Carnot's cycle and Carnot's theorem. Second law of thermodynamics, various statements of second law, Concept of Entropy, Entropy change in reversible and irreversible processes. Entropy and disorder, Principle of increase of entropy, Entropy and unavailable energy, Entropy of ideal gases, Entropy as a thermodynamic variable, S-T diagram, Maxwell's relations.

**Module IV: Low Temperature**

Third law of thermodynamics, Nernst heat theorem. Cooling produced by adiabatic stretching, adiabatic compression, Liquefaction of gases by Joule-Thomson expansion: thermodynamic analysis, Production of low temperature by adiabatic demagnetization, First order phase transitions: Clausius-Clapeyron equation, Phase transition, Coexistence of phases, Triple point.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Exam; A: Atten

# OPTICS

**Course Code: PHY2202**

**Credit Units:03**

**Course Objective:** This course aims at exposing the students to basic laws of optics and its applications in real world.

## **Course Contents:**

### **Module I: Geometric Optics and its applications:**

Ray optics, Plane and spherical Mirrors, Lens, image formation, Lens formula. Microscope and Telescope.

### **Module II: Interference**

Young's experiment, coherent sources, phase and path differences, Theory of interference fringes, Fresnel's biprism, sheet thickness determination, interference in thin films due to reflected and transmitted lights, Maxima and minima in intensities, Colours of thin films, Newton's rings and its various aspects, Non-reflecting films.

### **Module III: Diffraction**

Introduction, rectilinear propagation, Fresnel and Fraunhofer diffraction, Diffraction at circular aperture and straight edge and their discussion. Fraunhofer diffraction at a single slit and a double slit. Fraunhofer diffraction at N slits and its discussion. Plane diffraction grating and its theory, Dispersive power of grating, Resolving power of optical instruments, Rayleigh criterion, Resolving power telescope, microscope, prism and diffraction grating. Phase contrast microscope.

### **Module IV: Polarization:**

Introduction, Polarization by reflection, Brewster's law, Polarization by refraction, Malus's law, Double refraction, Nicol Prism and its use, elliptically and Circularly polarized light, quarter and half-wave plates, production and detection of plane, circularly and elliptically polarized light, optical activity, specific rotation, Half-shade polarimeter.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

## MATHEMATICAL PHYSICS-I

CourseCode:PHY2203

Credit Units:03

### Course Objective:

This course aims at exposing the students to basic Mathematics which will be useful for them to solve the problems of Physics.

### Course Contents:

#### Module I: Vector Calculus

Dot and cross product of vectors, Gradient, divergence and curl, their physical significance, Laplacian, vector identities, Line integral, surface integral and volume integral, Gauss divergence theorem, Stokestheorem.

#### Module II: Fourier Series:

**Fourier Series:** Periodic functions, Fourier series, Euler's formulae, Even functions, Half range series, Change of interval and functions having arbitrary period, practical harmonics analysis.

#### Module III: Differential Equations

Differential equations with examples from Physics, their degree and order, Linear Differential equations, solution of 1<sup>st</sup> and 2<sup>nd</sup> order differential equations. Standard integrals and their applications in Physics.

#### Module IV: Curvilinear coordinates:

Orthogonal curvilinear coordinates, line element, gradient, divergence and curl in curvilinear coordinates, Cartesian coordinate system, Polar coordinates, Cylindrical coordinate system, Spherical polar coordinate system.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
A: Attendance

## APPLIED MATHEMATICS-II

CourseCode:PHY2205

Credit Units:03

### Course Objective:

Linear algebra is the study of vector spaces and certain operators on vector spaces (called linear transformations). This is an important branch of mathematics which provides the tools and methods essential for studying many mathematical structures that arise within mathematics and sciences (such as the solution spaces of problems in mathematics, engineering, the natural sciences, and social sciences). The purpose of this course is to help students learn these tools and methods in a rigorous manner; develop mathematical skills needed to apply these to the problems arising within their field of study; gain increased understanding of how the concepts they learned in this and the previous mathematics courses apply to various real world problems.

### Course Contents:

#### Module-I: Matrices and its Applications

Matrix, Inverse of matrix by Gauss Jordan method, Rank of matrix, Row echelon form, Normal form, Matrix representations of linear system (homogeneous and non-homogeneous), Consistency of linear system, Solution of linear system (homogeneous and non-homogeneous). Eigen values, Eigen vectors, Cayley Hamilton theorem and its application, Diagonal form.

#### Module-II: Vector Spaces

Vector space and its examples, Subspaces, Linear combination, Span, Basis and Dimensions of vector space, Linear independence, Linear dependence, Sum and intersection of subspaces; Direct sum of subspaces

#### Module-III: Linear Transformations

Linear transformation and its examples, Properties of linear transformations. Matrix representation of linear transformation, Kernel and range of linear transformation. Non slandered basis general vector space, transition matrix and similarity, Application of linear transformation.

#### Module-IV: Group Theory

Monoid, semi group, group, Abelian group, finite group, order of subgroup, subgroup, cyclic group, generator of group, permutation group, simple group, sylow's theorems, general linear group  $GL(2, R)$ ,  $SL(2, R)$  group.

### Examination Scheme:

Components	A	CT	C	H	EE
Weightage (%)	5	15	5	5	70

## APPLIED CHEMISTRY-II

**Course Code: PHY2206**

**Credit Units:02**

### **Course Objective:**

To prepare students for the study of some fundamentals of the organic chemistry like reaction mechanism, Concept of nucleophile, electrophile, types of reagent used in synthesis of organic compounds, stereochemistry and the structure of various hydrocarbons and their derivatives.

### **Course Contents:**

#### **Module I: Structure and Bonding**

Hybridizations, bond lengths and bond angles, bond energy, localized and delocalized chemical bond, van-der Waals interactions, inclusion compounds, resonance, hyperconjugation, aromaticity, inductive and field effects, hydrogen bonding.

#### **Module II: Types of Reagents**

Electrophiles and nucleophiles, Reactive intermediates: carbocations, carbanions, free radicals and carbenes, Curved arrow notations, drawing electron movement with arrows, half headed and double headed arrow, homolytic and heterolytic bond cleavage, Types of organic reactions, Mechanism of Organic reactions, Energy consideration, Methods of determination of reaction mechanism.

#### **Module III: Stereochemistry**

Concept of isomerism, types of isomerism, elements of symmetry, molecular chirality, chiral and achiral molecules with two stereogenic centres, optical isomerism, enantiomers, diastereoisomers, meso compounds, resolution, retention, inversion and racemization. Relative and absolute configurations, sequence rules, D & L, R & S systems of nomenclature. Newman projection and Saw horse formulae, Fischer and Flying wedge formulae.

#### **Module IV: Alkanes, alkenes and alkynes**

IUPAC nomenclature, classification, isomerism in alkanes, alkenes and alkynes: sources and methods of preparation. Saytzeff and Hofmann eliminations. Electrophilic additions and Nucleophilic additions with their mechanisms (Markownikoff/ Anti Markownikoff addition).

#### **Module V: Cycloalkanes & their conformational analysis**

Types of cycloalkanes nomenclature, methods of preparations and relative stability, Baeyer strain theory and its limitations, ring strain in cyclopropane and cyclobutanes. Theory of saturated rings chemical reactions, Energy diagrams of cyclohexane: Chair, Boat and Twist boat forms.

### **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
A: Attendance

## APPLIED CHEMISTRY LAB-II

CourseCode:PHY2207

Credit Units:01

### Course Contents:

1. Checking the calibration of the thermometer.
2. Purification of organic compounds by crystallization using the following solvents: Water, Alcohol, Alcohol-Water & Charcoal
3. Purification by Distillation, Decolouration and Sublimation.
4. Determination of the melting points of above compounds and unknown organic compounds (Kjeldahl method and electrically heated melting point apparatus)
5. Effect of impurities on the melting point – mixed melting point of two unknown organic compounds.
6. Chromatography
  - a. Separation of a mixture of two amino acids by ascending and horizontal paper chromatography.
  - b. Separation of a mixture of two sugars by ascending paper chromatography.
  - c. Separation of a mixture of o- and p-nitrophenol or o- and p-aminophenol by thin layer chromatography (TLC)

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## PHYSICS LAB-II

Course Code: PHY2204

Credit Units:02

### Course Contents:

1. To determine the Coefficient of Thermal Conductivity of Copper by Searle's apparatus.
2. To determine the Coefficient of Thermal Conductivity of Copper by Angstrom's Method.
3. To determine the Coefficient of Thermal Conductivity of a bad conductor by Lee and Charlton's disc method.
4. To investigate the Motion of Coupled Oscillators.
5. To determine the Frequency of an Electrically Maintained Tuning Fork by Melde's Experiment.
6. To verify  $\lambda^2 - T$  Law by Melde's Experiment.
7. To study the variation of Thermo-Emf of a Thermocouple with Difference of temperature of its Two Junctions.
8. To determine the value of acceleration (g) due to gravity.
9. To determine the frequency of tuning fork using sonometer.

*Any other experiment carried out in the class.*

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## **Syllabus – Third Semester**

### **ELECTRICITY & MAGNETISM**

**CourseCode: PHY2301**

**Credit Units:03**

#### **Course Objective:**

The aim of this course is to teach the students basics of electronics and electric current after making them comfortable with the mathematical tools involved in the study of electricity and magnetism.

#### **Course Contents:**

##### **Module-I: Electric Charges, Fields and Potential**

Basics of vector calculus (Gradient, divergence, curl and their physical significance; Gauss and Stokes theorem); Electric Charge, Quantization and Conservation of Electric Charge, Coulomb's Law, Electric Field, Principle of Superposition, Electric Flux, Gauss's law, Electric Field for Spherical, Plane and Cylindrical Distribution of Charges (applications of Gauss law), Differential form of Gauss's Law; Electric Potential; Line Integral of the Electric Field, Potential Difference and Potential Function, Electric Field from the Potential, Electric Field and Potential of Dipole; Potential for Charge Distributions: Equipotential Surfaces, Potential due to Charged Wire and Charged Disc, Energy Associated with Electric Field; Conservative Nature of Electric Force.

##### **Module-II: Electric Fields in Materials:**

Review of capacitors, Dielectric Material in an Electric Field, Polarisation, Gauss's Law in Dielectric Medium, Displacement Vector, Boundary Conditions on **D** and **E**; Dielectric Material between Capacitor Plates, Energy stored in a capacitor having dielectric medium.

##### **Module-III: Electric current and its magnetic effects:**

Electric Currents: Charge Transport and Current Density, Equation of Continuity, Ohm's Law in vector form.

Magnetic Field: Definition, Divergence of Magnetic Field, Ampere's Law and its Applications to Straight Wire, Solenoid and Toroid; Force on a Charged Particle Moving in Electric and Magnetic Fields, Current Loop and Magnetic Dipoles, Magnetic Dipole Moment.

##### **Module-IV: Electromagnetic induction:**

Electromagnetic Induction: Faraday's Laws of Electromagnetic Induction, Lenz's Law, Motional E.M.F., Self and Mutual Inductance, Self Inductance for Solenoid, Mutual Inductance of Coupled Solenoids, Energy Stored in the Magnetic Field; Transformer as an application of EMI.

#### **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

#### **Text & References:**

## CLASSICAL MECHANICS

**Course Code: PHY2309**

**Credit Units: 03**

### Course Objective:

This course aims at exposing the students to let them understand the basics of Classical and Quantum Mechanics

### Course Contents:

#### Module I: Lagrangian formulation of classical mechanics

Mechanics of a system of particles; constraints; Generalised coordinates, constraints and degrees of freedom; D'Alembert's principle; Lagrange's equation for conservative systems (from D'Alembert's principle; variational principle not required) and its application to simple cases; Generalised momentum.

#### Module II: Mechanics problems using Lagrangian formulation

**Central force problem:** Two body problem; reduced mass; motion under central force; constants of motion; Virial theorem; Kepler's laws of planetary motion.

**Rigid body dynamics:** Angular momentum and kinetic energy of motion about a point; Tensors; Momentum of inertia tensor.

#### Module III: Hamiltonian formulation of classical mechanics and old quantum theory

Legendre transformation and Hamilton's equations of motion; Idea of cyclic coordinates, its relation with conservation principles, Variational principle and least action; canonical equations; poisson bracket; Hamilton Jacoby theory.

#### Module IV: Limitations of Classical Mechanics

Blackbody radiation, the photoelectric effect, the Franck-Hertz experiment, the correspondence principle, the Bohr Atom, Compton effect, reduced mass correction, De Broglie hypothesis, Wave particle duality, Group and Particle velocity, Wave packets, Experiments supporting wave particle duality.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

## ANALOG ELECTRONICS

**Course Code: PHY2303**

**Credit Units:03**

### **Course Objective:**

This course aims at exposing the students to Semiconductors, Circuits and Transistors and its applications.

### **Course Contents:**

#### **Module I: Junction Diodes and their Applications**

Formation of PN junction, Depletion region, Junction capacitance (Transition and diffusion capacitance, Energy level diagrams and built in potential, diffusion and drift velocity of carriers, Diode equation, V-I characteristics, temperature dependence, Applications Half-wave Rectifiers & Full-wave Rectifiers, Calculation of Ripple Factor and Rectification Efficiency. Low pass filter and High pass filter, Qualitative idea of C, L and  $\pi$  - Filters. Zener Diode and Voltage Regulation. Photo Diode, Tunnel Diode, LED, Varactor Diode, Tunnel diodes  
AC and DC Power Supplies

#### **Module II: Circuit Analysis**

Kirchhoff's Laws (KCL and KVL), Mesh and Node analysis of dc and ac Circuits, Superposition theorem, Thevenin's and Norton's theorem, reciprocity theorem, Linear resistive 2- ports and interconnections, Z, Y, L, S, T, H' and H'' representations/Parameters, Wheatstone Bridge and its Applications to Wein Bridge and Anderson Bridge

#### **Module III: Transistors**

PNP and NPN junction transistors, transistor current components, CB, CC and CE Configurations, transfer characteristics, Transistor as switch and applications, Transistor biasing, fixed bias, emitter- stabilised biasing, Voltage-divider biasing, FET and BJT Junction Field Effect Transistor (JFET), JFET V-I Characteristics, Application of FET as voltage variable resistor. Advantages of FET over BJT. MOSFET: construction, working & Application

### **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

## MATHEMATICAL PHYSICS-II

CourseCode:PHY2308

Credit Units:03

### Course Objective:

This course aims at exposing the students to some part of Mathematics useful for them to solve typical problems of Physics.

### Course Contents:

#### Module I: Complex analysis

**Complex numbers:** Complex numbers, Argand diagram, Modulus and argument, addition and multiplication, Exponential and circular functions of complex variables, De Moivre's theorem, Real and imaginary parts of circular and hyperbolic functions, Logarithmic function of a complex variable.

#### Module II: Complex analysis

**Functions of complex variables:** function of complex variables, limit, continuity and differentiability of a complex function, complex integration, simply connected region, Cauchy integral theorem, Cauchy integral formula, Taylor's theorem, Laurent's theorem, Residues, Poles, singularity, method of finding residues, residue theorem.

#### Module III: Fourier and Laplace Transform:

Fourier series; Partial sums; Fourier integral and transforms; Fast Fourier Transforms, Laplace transform (LT); First and second shifting theorems; Inverse LT by partial fractions; LT of derivative and integral of a function.

#### Module IV: Partial Differential Equations

Generating solution of wave equation in 1 dimension, transverse vibration of stretched string, Oscillation of hanging chain, wave equation in 2 and 3 dimensions, vibrations of rectangular and circular membrane derivation of the equation of heat conduction, heat flow in 1, 2 and 3 dimensional rectangular systems of finite boundaries, temperature inside circular plate.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester

Examination; A: Attendance

### PHYSICS LAB-III

Course Code: PHY2304

Credit Units:02

#### Course Contents:

1. To determine a Low Resistance by Carey Foster's Bridge.
2. To determine a Low Resistance by a Potentiometer.
3. To determine High Resistance by Leakage of a Capacitor.
4. To investigate the Motion of Coupled Oscillators.
4. To study the response curve of a Series LCR circuit and determine its (a) Resonant Frequency, (b) Impedance at Resonance and (c) Quality Factor Q, and (d) Band Width.
5. To study the response curve of a Parallel LCR circuit and determine its (a) Anti-Resonant Frequency and (b) Quality Factor Q.
6. To study (a) Half-wave Rectifier and (b) Full-wave Bridge Rectifier.
7. To study the Forward and Reverse characteristics of a Zener Diode and to study its use as a Voltage Regulator.
8. To study the CE Characteristics of a PNP Transistor.
9. To study the characteristics curves of PN junction diode in forward and reverse bias.
10. To study the Frequency Response of Voltage Gain of a RC-Coupled Amplifier.
- 11.
- 12.

*Any other experiment carried out in the class.*

#### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva

## COMPUTER PROGRAMMING IN C

**CourseCode:PHY2306**

**Credit Units:03**

### **Course Objective:**

The objective of this course module is to acquaint the students with the basics of computers system, its components, data representation inside computer and to get them familiar with various important features of procedure oriented programming language i.e.C.

### **Course Contents:**

#### **Module I: Introduction**

Introduction to computer, history, von-Neumann architecture, memory system (hierarchy, characteristics and types), H/W concepts (I/O Devices), S/W concepts (System S/W & Application S/W, utilities). Data Representation: Number systems, character representation codes, Binary, octal, hexadecimal and their interconversions. Binary arithmetic, floating point arithmetic, signed and unsigned numbers, Memory storage unit.

#### **Module II: Programming in C**

History of C, Introduction of C, Basic structure of C program, Concept of variables, constants and data types in C, Operators and expressions: Introduction, arithmetic, relational, Logical, Assignment, Increment and decrement operator, Conditional, bitwise operators, Expressions, Operator precedence and associativity. Managing Input and output Operation, formatting I/O.

#### **Module III: Fundamental Features in C**

C Statements, conditional executing using if, else, nesting of if, switch and break Concepts of loops, example of loops in C using for, while and do-while, continue and break. Storage types (automatic, register etc.), predefined processor, Command Line Argument.

#### **Module IV: Arrays and Functions**

One dimensional arrays and example of iterative programs using arrays, 2-D arrays Use in matrix computations .Concept of Sub-programming, functions Example of user defined functions. Function prototype, Return values and their types, calling function, function argument, function with variable number of argument, recursion.

#### **Module V: Advanced features in C**

Pointers, relationship between arrays and pointers Argument passing using pointers, Array of pointers. Passing arrays as arguments. Strings and C string library. Structure and Union. Defining C structures, Giving values to members, Array of structure, Nested structure, passing strings as arguments. File Handling.

### **Examination Scheme:**

Components	A	CT	C	H	EE
Weightage (%)	5	15	5	5	70

## TERM PAPER & WORKSHOP

**Course Code: PHY2331**

**Credit Units: 03**

**This course will comprise of two components viz Term Paper Workshop.**

### **Component I: Term Paper**

A term (or research) paper is primarily a record of intelligent reading in several sources on a particular subject.

The students will choose the topic at the beginning of the session in consultation with the faculty assigned. The progress of the paper will be monitored regularly by the faculty. At the end of the semester the detailed paper on the topic will be submitted to the faculty assigned. The evaluation will be done by Board of examiners comprising of the faculties.

### **GUIDELINES FOR TERM PAPER**

The procedure for writing a term paper may consist of the following steps:

- Choosing a subject
- Finding sources of materials
- Collecting the notes
- Outlining the paper
- Writing the first draft
- Editing & preparing the final paper

#### **1. Choosing a Subject**

The subject chosen should not be too general.

#### **2. Finding Sources of materials**

- d) The material sources should be not more than 10 years old unless the nature of the paper is such that it involves examining older writings from a historical point of view.
- e) Begin by making a list of subject-headings under which you might expect the subject to be listed.
- f) The sources could be books and magazines articles, news stories, periodicals, scientific journals etc.

#### **3. Collecting the notes**

Skim through sources, locating the useful material, then make good notes of it, including quotes and information for footnotes.

- d) Get facts, not just opinions. Compare the facts with author's conclusion.
- e) In research studies, notice the methods and procedures, results & conclusions.
- f) Check cross references.

#### **4. Outlining the paper**

- c) Review notes to find main sub-divisions of the subject.
- d) Sort the collected material again under each main division to find sub-sections for outline so that it begins to look more coherent and takes on a definite structure. If it does not, try going back and sorting again for main divisions, to see if another general pattern is possible.

#### **5. Writing the first draft**

Write the paper around the outline, being sure that you indicate in the first part of the paper what its purpose is. You may follow the following:

- a) statement of purpose
- b) main body of the paper
- c) statement of summary and conclusion

Avoid short, bumpy sentences and long straggling sentences with more than one main ideas.

#### **6. Editing & Preparing the final Paper**

- j) Before writing a term paper, you should ensure you have a question which you attempt to answer in your paper. This question should be kept in mind throughout the paper. Include only information/ details/ analyses of relevance to the question at hand. Sometimes, the relevance of a particular section may be clear to you but not to your readers. To avoid this, ensure you briefly explain the relevance of every section.
- k) Read the paper to ensure that the language is not awkward, and that it "flows" properly.
- l) Check for proper spelling, phrasing and sentence construction.

- m) Check for proper form on footnotes, quotes, and punctuation.
- n) Check to see that quotations serve one of the following purposes:
- o) Show evidence of what an author has said.
- p) Avoid misrepresentation through restatement.
- q) Save unnecessary writing when ideas have been well expressed by the original author.
- r) Check for proper form on tables and graphs. Be certain that any table or graph is self-explanatory.

Term papers should be composed of the following sections:

- Title page
- Table of contents
- Introduction
- Review
- Discussion & Conclusion
- References
- Appendix

Generally, the introduction, discussion, conclusion and bibliography part should account for a third of the paper and the review part should be two thirds of the paper.

### **Discussion**

The discussion section either follows the results or may alternatively be integrated in the results section. The section should consist of a discussion of the results of the study focusing on the question posed in the research paper.

### **Conclusion**

The conclusion is often thought of as the easiest part of the paper but should by no means be disregarded. There are a number of key components which should not be omitted. These include:

- summary of question posed
- summary of findings
- summary of main limitations of the study at hand
- details of possibilities for related future research

### **References**

From the very beginning of a research project, you should be careful to note all details of articles gathered.

The bibliography should contain ALL references included in the paper. References not included in the text in any form should NOT be included in the bibliography.

The key to a good bibliography is consistency. Choose a particular convention and stick to this.

### **Conventions**

Monographs

Crystal, D. (2001), *Language and the internet*. Cambridge: Cambridge University Press.

### **Edited Volumes**

Gass, S./Neu, J. (eds.) (1996), *Speech acts across cultures. Challenges to communication in a second language*. Berlin/ NY: Mouton de Gruyter.

[(eds.) is used when there is more than one editor; and (ed.) where there is only one editor. In German the abbreviation used is (Hrsg.) for Herausgeber].

### **Edited Articles**

### **Unpublished Theses/ Dissertations**

Möhl, S. (1996), Alltagssituationen im interkulturellen Vergleich: Realisierung von Kritik und Ablehnung im Deutschen und Englischen. Unpublished MA thesis, University of Hamburg.  
Walsh, R. (1995), Language development and the year abroad: A study of oral grammatical accuracy amongst adult learners of German as a foreign language. Unpublished PhD dissertation, University College Dublin.

### **Appendix**

The appendix should be used for data collected (e.g. questionnaires, transcripts) and for tables and graphs not included in the main text due to their subsidiary nature or to space constraints in the main text.

## **Component II: Workshop**

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two ways. The trainer has to make sure that the aspect covered is practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

### **Major Themes for Workshop**

The workshop may be conducted on any of the following major themes:

- Nanotechnology
- Renewable Energy
- Data Analytics
- Spintronics
- Superconductivity
- Bio-fuels
- Biophysics
- Quantum Computation
- Plasma Physics
- Cryogenics

- CleanEnergy

These themes are merely indicative and other recent and relevant topics of study may be included.

#### **Guidelines for Workshop**

- The procedure for earning credits from workshop consists of the following steps:
- Relevant study material and references will be provided by the trainer in advance.
- The participants are expected to explore the topic in advance and take active part in the discussions held
- Attending and Participating in all activities of the workshop
- Group Activities have to be undertaken by students as guided by the trainer.
- Evaluation of workshop activities would be done through test and quiz at the end of the workshop.
- Submitting a write up of at least 500 words about the learning outcome from the workshop.

#### **Examination Scheme:**

## Syllabus – Fourth Semester

### QUANTUM MECHANICS

**CourseCode: PHY2410**

**Credit Units:03**

**Course Objective:**

This course aims at exposing the students to Quantum Mechanics and its applications in Physics.

**Course Contents:**

**Module I: Origin of Quantum Mechanics**

Limitations of Classical Physics, Particle properties of waves: Black Body Radiation and Planck's Quantum hypothesis, Photoelectric effect, Compton Effect, Wave properties of particles: De-Broglie waves, physically acceptable wave functions, Probabilistic interpretation, Wave equation, phase and group velocity, Particle diffraction, Davisson and Germer experiment, Heisenberg uncertainty principle, Applications of uncertainty principle.

**Module II: Schrodinger equation and general formalism of Quantum Mechanics**

Schrodinger's time dependent equation, Linearity and superposition, Expectation values, Schrodinger's time independent equation, Stationary states, Hilbert space, normalization and orthonormality, Eigen functions and eigen values, quantum mechanical Operators, Hermitian Operators, Angular momentum operators and their commutation relations, eigenvalues and eigenfunctions of  $L^2$  and  $L_z$ , Introduction to Bra and ket notation

**Module III: Simple applications of Quantum Mechanics**

Free particle, Particle in one dimensional and three dimensional box, Potential step, boundary conditions, bound and unbound states, Reflection and transmission coefficients for a rectangular barrier in one dimension, Tunnel effect, alpha decay, Linear harmonic oscillator (qualitative), The hydrogen atom problem (qualitative).

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
A: Attendance

**Text & References:**

# ELECTRODYNAMICS

Course Code: PHY2407

Credit Units:03

## Course Objective:

This aim of this course is to broaden your view and deepen your understanding of time dependent electromagnetic phenomena. Students will develop a fairly complete picture of electromagnetism waves and radiations and their interaction with matter.

## Course Contents:

### Module I: Electric Field in Matter (Electrostatic and Potentials)

Divergence and Curl of Electrostatic Field, Scalar Potential, Poisson's and Laplace equation in Cartesian Coordinates, Boundary conditions on E, Uniqueness of solution, Classical image problem (Point Charge in front of a plane)

### Module II: Magnetic Field in Matter

The Divergence and Curl of a magnetic field; Magnetic Vector Potential; Magnetization; Diamagnetic, Paramagnetic and Ferromagnetic materials; Field of a magnetized Object; bound current; Ampere's law in Magnetized materials.

### Module III: Electromagnetic Field

Revisit of Basic Electromagnetic Laws and Maxwell equations; Displacement current, Continuity Equation, Revision of Vector and scalar potentials, Gauge transformations, Lorentz and Coulomb gauge; Potential and Field of a moving charge.

### Module IV: Electrodynamics and Relativity

Magnetism as a relativistic phenomenon; Lorentz Transformation; Transformation of electric and magnetic field

Poynting's Theorem and Poynting vector; Energy density; Electromagnetic Wave equations in free space (one dimension)

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
A: Attendance

## Text & References:

- Electromagnetic by B. B.Laud.

- Electrodynamics by Gupta S. L., Singh S. P. andKumar.

# STATISTICAL MECHANICS

**Course Code: PHY2408**

**Credit Units: 03**

**Course Objective:**

This course introduces assumptions, principles and practice of statistical mechanics and its firm understanding in an absolute prerequisite for successfully applying the techniques to real problems.

**Course Contents:**

**Module I: Thermodynamics in connection to statistical mechanics**

Contact between statistics and thermodynamics, Thermodynamic equilibrium, Thermodynamic potentials. Entropy and thermodynamic probability, Maxwell-Boltzmann distribution law, , Thermodynamic functions of an ideal gas, Classical entropy expression, Gibbs paradox, entropy of mixing, correct Boltzmann's counting, law of equipartition of energy, applications to specific heat and its limitations.

**Module II: Classical and Quantum Theory of Radiation:**

Elements of ensemble theory, micro-canonical, canonical and grand canonical ensemble, partition function, fluctuations, Planck's law of black body radiation, deduction of Wien's radiation formula, Rayleigh-Jeans law, Stefan-Boltzmann law and Wien's displacement law from Planck's law,

**Module III: Bose-Einstein Statistics**

B-E distribution law, B-E condensate, difference between B-E condensation and normal condensation, thermodynamic functions of an ideal weakly degenerate gas, strongly degenerate Bose gas, Bose-Einstein condensation properties of liquid He (qualitative description), Fields of sound waves, Einstein and Debye theory of specific heat

**Module IV: Fermi-Dirac Statistics**

Fermi-Dirac distribution law, Fermi energy, Fermi Temperature, thermodynamic functions of an ideal weakly degenerate Fermi gas, strongly degenerate Fermi gas, electron gas in a metal, specific heat of metals, white dwarf stars, Chandrasekhar mass limit.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

**Text & References:**

- Statistical Physics, Thermodynamics and Kinetic Theory: V.S. Bhatia (Vishal Publ., Jalandhar, 2003)
- Statistical Mechanics by K. Huang
- Statistical Mechanics by R. K. Patharia
- Statistical Mechanics by B. K. Aggarwal and M. Eisner
- Statistical Physics by Landaou and Lifshitz.

# DIGITAL ELECTRONICS

**Course Code: PHY2411**

**Credit Units:03**

## **Course Objective:**

This course aims at exposing the students to Digital Electronics and Communication.

## **Course Contents:**

### **Module I: Digital Circuits & Combinational Logic**

Difference Between Analog and Digital Circuits. Binary Numbers. Octal and Hexadecimal Numbers, Conversion of Decimal to Binary and other numbers and Vice Versa,

Logic systems, Circuits for OR, AND, NOT gates, transistor switching times, Exclusive OR gate, Verification and design of AND, OR, NOT and XOR gates using NAND gates & NOR gates, Boolean algebra: De Morgan's Theorems. Simplification of Logic Circuit using Boolean Algebra. Conversion of a Truth Table into an Equivalent Logic Circuit by (1) Sum of Products Method and (2) Karnaugh Map.

Arithmetic Circuits: Binary Addition. Binary Subtraction using 2's Complement Method, Half Adders, Full Adders and Subtractors

### **Module II:**

### **Flip-Flops, Counters, Shift Registers and Converters:**

TTL ICs (binary decoder, 7segment decoder, Schmitt trigger), 7-segment display driver.

Memories: RAM and ROM

Sequential Circuits: RS, D, and JK Flip-Flops. Level Clocked and Edge Triggered Flip-Flops. Preset and Clear Operations. Race-around Conditions in JK Flip-Flops. Master-Slave JK Flip-Flop

Shift registers: Serial and parallel shifting of data, A/D converter, D/A converter.

### **Module III: Analog Circuits**

Integrated Circuits (Qualitative Treatment only) Active and Passive components. Advantages and Drawbacks of ICs. Scale of integration: SSI, MSI, LSI and VLSI (Basic Idea and Definitions Only). Examples of Linear and Digital ICs.

Operational Amplifiers (Use Black Box approach): Revision of basic characteristics of Op-Amps. Characteristics of an Ideal Op-Amp. Feedback in Amplifiers. Open-loop and Closed-loop Gain. Frequency Response. CMRR. Virtual ground and its Application

### **Module IV: Communication**

Modulation: Need for modulation- Types of modulation- Amplitude, Frequency, Phase and Pulse code modulation. Radio wave propagation, Ionosphere, Effect of Ionosphere on Radio waves, Skip distance and Maximum Usable Frequency, Radio transmitter and receiver, TV receiver, Satellite communication, Modem, Demodulation. Introduction to Microprocessor.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

## **Text & References:**

- Pulse, Digital and Switching Waveforms : J. Millman and H. Taub ( Tata McgrawHill)
- Electronic Devices and Circuits: A. Mottershead (PrenticeHall).
- Digital principles and applications By Donald P. Leach & Albert Paul Malvino, (Glencoe)

- Digital Fundamentals, 3rd Edition by Thomas L. Floyd (Universal Book Stall, India).
- Op-Amps and Linear Integrated Circuits by R. A. Gayakwad (Pearson Education Asia)
- Electronics Fundamental and Application: D. Chattopadhyay and P.C.Rakshit.

## PHYSICS LAB-IV

**Course Code: PHY2404**

**Credit Units:02**

### **Course Contents:**

1. To investigate the use of an op-amp as an Integrator.
2. To investigate the use of an op-amp as a Differentiator.
3. To study Amplitude Modulation using Transistor.
4. To study Pulse Width / Pulse Position and Pulse Amplitude Modulation using ICs.
5. To verify the basic logic gates using logic gate trainer kit.
6. To design and verify the following digital circuits using basic gates:  
i) S-R flip-flops, ii) J-K flip-flops.
7. To execute half adders and full adders with basic gates and hence to verify addition of binary numbers.
8. To determine the value of  $e/m$  by Thomson's method.

*Any other experiment carried out in the class.*

### **Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA – Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# LASER PHYSICS

**Course Code: PHY2406**

**Credit Units:03**

## **Course Objective:**

This course aims at students to give them basic understanding of Laser and its applications.

## **Course Contents: Module**

### **I: Introduction**

Introduction, mono chromaticity, temporal and spatial coherence, Einstein's coefficients, momentum transfer, possibility of light amplification, kinetics of optical absorption, shape and width of spectral lines, line broadening mechanism, natural, collision and Doppler broadening.

### **Module II: Laser Pumping and Resonators**

Resonators, modes of a resonator, number of modes per unit volume, open resonators, confocal resonator (qualitative), quality factor, losses inside the cavity, threshold condition, Quantum yield.

### **Module III: Dynamics of the Laser Processes**

Rate equations for two, three and four level systems, production of a giant pulse – Q switching, giant pulse dynamics, laser amplifiers, mode-locking, hole burning, distributed feedback lasers.

### **Module IV: Types of Lasers**

He-Ne laser, Nitrogen Laser, CO<sub>2</sub> laser, Ruby laser, features of semiconductor lasers, intrinsic semiconductor lasers, doped semiconductors, condition for laser action, Advances in semiconductor lasers, injection lasers, dye lasers.

### **Module V: Applications**

Holography, non-linear optics: harmonic generation, second harmonic generation, phase matching and optical mixing, brief qualitative description of some experiments of fundamental importance.

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
A: Attendance

## **Text & References:**

- Laser Theory and Applications :Thyagarajan and A. Ghatak(MacMillan)

## SPECIAL THEORY OF RELATIVITY

**Course Code: PHY2412**

**Credit Units: 03**

**Course Objective:**

This course aims at exposing the students to Newton's law of motion, the Galilean transformations and Einstein's special theory of relativity in proper perspective so that they can use its formulation in later courses.

**Course Contents:**

**Module I: Galilean relativity**

Newton's laws of motion, Frames of reference, Inertial and non-inertial frames, Galilean transformation and Galilean relativity.

**Module II: Lorentz Transformations**

Michelson-Morley Experiment, Basic postulates of special relativity, Lorentz transformations, Simultaneity and causality in relativity. Length contraction, Time dilation, Twin paradox, Velocity Transformation, Space-like and time-like intervals, Aberration of light, Doppler effect.

**Module III: Relativistic Dynamics**

Conservation of Momentum, Relativistic momentum, Relativistic energy, Transformation of Momentum and Energy, Equivalence of Mass and Energy. Particles with zero Rest-mass, Transformation of force, Four vectors.

**Module IV: Problems in Relativistic Dynamics**

Acceleration of Charged Particle in a constant longitudinal electric field, Acceleration by a Transverse Electric field, charged particle in a magnetic field, centre of mass system. Energy available from Moving charge,  
Principle of Equivalence: Inertial and Gravitational Mass, Gravitational Mass of photons, Gravitational Red-Shift, Equivalence.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

**Text & References:**

- Theory of Relativity :W.Pauli
- Introduction to Special Theory of Relativity :SomnathDatta
- Introduction to Special Theory of Relativity - R. Resnick (Wiley Eastern).
- The Feynman Lectures on Physics, Vol I (Addison – Wesley).

## TERM PAPER & WORKSHOP

**Course Code: PHY2431**

**Credit Units:03**

**This course will comprise of two components viz Term Paper Workshop.**

### **Component I: Term Paper**

A term (or research) paper is primarily a record of intelligent reading in several sources on a particular subject.

The students will choose the topic at the beginning of the session in consultation with the faculty assigned. The progress of the paper will be monitored regularly by the faculty. At the end of the semester the detailed paper on the topic will be submitted to the faculty assigned. The evaluation will be done by Board of examiners comprising of the faculties.

### **GUIDELINES FOR TERM PAPER**

The procedure for writing a term paper may consists of the following steps:

- Choosing a subject
- Finding sources of materials
- Collecting the notes
- Outlining the paper
- Writing the first draft
- Editing & preparing the final paper

#### **7. Choosing a Subject**

The subject chosen should not be too general.

#### **8. Finding Sources of materials**

- g) The material sources should be not more than 10 years old unless the nature of the paper is such that it involves examining older writings from a historical point of view.
- h) Begin by making a list of subject-headings under which you might expect the subject to be listed.
- i) The sources could be books and magazines articles, news stories, periodicals, scientific journals etc.

#### **9. Collecting the notes**

Skim through sources, locating the useful material, then make good notes of it, including quotes and information for footnotes.

- g) Get facts, not just opinions. Compare the facts with author's conclusion.
- h) In research studies, notice the methods and procedures, results & conclusions.
- i) Check cross references.

#### **10. Outlining the paper**

- e) Review notes to find main sub-divisions of the subject.
- f) Sort the collected material again under each main division to find sub-sections for outline so that it begins to look more coherent and takes on a definite structure. If it does not, try going back and sorting again for main divisions, to see if another general pattern is possible.

#### **11. Writing the first draft**

Write the paper around the outline, being sure that you indicate in the first part of the paper what its purpose is. You may follow the following:

- d) statement of purpose
- e) main body of the paper
- f) statement of summary and conclusion

Avoid short, bumpy sentences and long straggling sentences with more than one main ideas.

#### **12. Editing & Preparing the final Paper**

- s) Before writing a term paper, you should ensure you have a question which you attempt to answer in your paper. This question should be kept in mind throughout the paper. Include only information/ details/ analyses of relevance to the question at hand. Sometimes, the relevance of a particular section may be clear to you but not to your readers. To avoid this, ensure you briefly explain the relevance of every section.
- t) Read the paper to ensure that the language is not awkward, and that it "flows" properly.
- u) Check for proper spelling, phrasing and sentence construction.

- v) Check for proper form on footnotes, quotes, and punctuation.
- w) Check to see that quotations serve one of the following purposes:
- x) Show evidence of what an author has said.
- y) Avoid misrepresentation through restatement.
- z) Save unnecessary writing when ideas have been well expressed by the original author.
- aa) Check for proper form on tables and graphs. Be certain that any table or graph is self-explanatory.

Term papers should be composed of the following sections:

- Title page
- Table of contents
- Introduction
- Review
- Discussion & Conclusion
- References
- Appendix

Generally, the introduction, discussion, conclusion and bibliography part should account for a third of the paper and the review part should be two thirds of the paper.

### **Discussion**

The discussion section either follows the results or may alternatively be integrated in the results section. The section should consist of a discussion of the results of the study focusing on the question posed in the research paper.

### **Conclusion**

The conclusion is often thought of as the easiest part of the paper but should by no means be disregarded. There are a number of key components which should not be omitted. These include:

- summary of question posed
- summary of findings
- summary of main limitations of the study at hand
- details of possibilities for related future research

### **References**

From the very beginning of a research project, you should be careful to note all details of articles gathered.

The bibliography should contain ALL references included in the paper. References not included in the text in any form should NOT be included in the bibliography.

The key to a good bibliography is consistency. Choose a particular convention and stick to this.

### **Conventions**

Monographs

Crystal, D. (2001), *Language and the internet*. Cambridge: Cambridge University Press.

### **Edited Volumes**

Gass, S./Neu, J. (eds.) (1996), *Speech acts across cultures. Challenges to communication in a second language*. Berlin/ NY: Mouton de Gruyter.

[(eds.) is used when there is more than one editor; and (ed.) where there is only one editor. In German the abbreviation used is (Hrsg.) for Herausgeber].

### **Edited Articles**

Schmidt, R./Shimura, A./Wang, Z./Jeong, H. (1996), *Suggestions to buy: Television commercials from the U.S., Japan, China, and Korea*. In: Gass, S./Neu, J. (eds.) (1996), *Speech acts across cultures. Challenges to communication in a second language*. Berlin/ NY: Mouton de Gruyter: 285-316.

### **Journal Articles**

**NUCLEAR & PARTICLE PHYSICS****Course Code: PHY2503****Credit Units:03**

**Course Objective:** The course aims to introduce students to the fundamental concepts of nuclear and sub-nuclear physics and introduction to the physics behind particle detectors.

**Course Contents:****Module I: Nuclear Properties**

Constituents of nucleus, Non-existence of electrons in nucleus, Nuclear mass and binding energy, features of binding energy versus mass number curve, nuclear radius, angular momentum and parity, qualitative discussion of two-body nuclear forces, nuclear moments, magnetic dipole moment and electric quadrupole moment,

**Module II: Radioactive Decays**

Modes of decay of radioactive nuclides and decay Laws, Beta decays:  $\beta^-$ ,  $\beta^+$  and electron capture decays, , Parity violation in  $\beta$ decay. Alpha decay: Stability of heavy nuclei against break up, Geiger-Nuttall law, barrier penetration as applied to alpha decay, Gamma transitions: Excited levels, Radio carbon dating, Nuclear Power generation ( Fission& Fusion Process ) & Nuclear Reactor ( if time permits)

**Module III Nuclear Reactions and Nuclear Models**

Types of nuclear reactions, reactions cross section, conservation laws, Kinematics of nuclear reaction, Q-value and its physical significance, compound nucleus. Liquid drop model, semi-empirical mass formula, condition of stability, evidence for nuclear magic numbers, Shell model, energy level scheme (Introductory).

**Module IV: Elementary Particles, their Properties and reactions**

Historical introduction, Cosmology, fermions and bosons, particles and antiparticles, Classification of elementary particles, types of interactions, electromagnetic, weak, strong interactions, gravitational interactions, Quantum numbers and conservation laws, isospin, charge conjugation, Yukawa theory, Introduction to quarks and qualitative discussion of the quark model and 3 generation of Quarks qualitatively).

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE

## SOLID STATE PHYSICS

**Course Code: PHY2506**

**Credit Units:03**

### **Course Objective:**

This aim of this course is to increase understanding of Physics principles as applied to solid state materials and to enhance problem solving and critical thinking skills.

### **Course Contents:**

#### **Module I: Crystal Structure**

Crystalline and amorphous solids, Translational symmetry. Elementary ideas about crystal structure, lattice and bases, unit cell, Reciprocal lattice, fundamental types of lattices, Miller indices, lattice planes, simple cubic, f.c.c. and b.c.c. lattices. Laue and Bragg equations. Determination of crystal structure with X-rays. Bragg diffraction. Crystal Structures: sc, fcc, bcc, hcp, diamond, NaCl, CsCl & ZnS.

#### **Module II: Bonding of solids**

Different types of bonding- ionic, covalent, metallic, Van der Waals and hydrogen bond, their properties.

#### **Module III: Band theory of solids**

Elementary Band theory of solids, Periodic potential and Bloch theorem, Kronig-Penny model, energy band structure. Band structure in conductors, direct and indirect semiconductors and insulators (qualitative discussions), Free electron theory of metals, effective mass, drift current, mobility and conductivity, Weidman-Franz law, Heavy fermions, Hall Effect in metals and Semiconductors: Phenomenology and implication (Qualitative Discussion Only)

#### **Module IV: Dielectric properties of materials and Lattice Vibrations**

Polarization. Local Electric Field at an Atom. Depolarization Field. Dielectric Constant. Electric Susceptibility. Polarizability. Classical Theory of Electric Polarizability. Clausius-Mosotti Equation. Normal and Anomalous Dispersion.

**Lattice Vibrations and Phonons:** Linear Monoatomic and Diatomic Chains. Acoustical and Optical Phonons. Qualitative Description of the Phonon Spectrum in Solids. Einstein and Debye Theories of Specific Heat of Solids.  $T^3$  Law.

#### **Module V: Magnetic properties of materials**

Dia, para and ferro-magnetic properties of solids. Langevin's theory of diamagnetism and paramagnetism. Quantum theory of paramagnetism, Curie's law. Ferromagnetism, Spontaneous magnetization and domain structure; temperature dependence of spontaneous magnetization; Curie-Weiss law, Explanation of hysteresis.

### **Examination Scheme:**

## ATOMIC & MOLECULAR PHYSICS

**Course Code: PHY2510**

**Credit Units:03**

### Course Objective:

The aim of the course is to provide theoretical and practical knowledge on the many powerful methods provided by modern atomic- and molecular spectroscopy regarding basic studies as well as practical applications.

### Course Contents:

#### Module I: Atomic Spectrum

Atomic structure, Hydrogen spectra, Bohr's model of one electron atom, Bohr-Sommerfeld model, Good quantum numbers, Stern-Gerlach experiment and spin as an intrinsic quantum number. Incompatibility of spin with classical ideas. Fine structure. Study of fine structure by Michelson interferometer.

#### Module II: Vector atom model and many electron atoms

Magnetic moment of the electron, Landau's g factor. Vector model – space quantization. L-S and j-j coupling scheme, Spectroscopic terms of many electron atoms in the ground state, Zeeman effect and its explanation using vector atom model. Stark effect, selection rules for Zeeman and Stark effect. L-S and j-j coupling- Interaction with electromagnetic radiation and with static fields.

#### Module III: Molecular Structure and Spectroscopy

Types of molecular spectra (Basic ideas), experimental study, Theory of pure rotational spectra, theory of rotational vibrational spectra, the Born-Oppenheimer approximation, Molecular rotations and vibrations, Molecular electronic transitions, Diatomic molecules – rotational and vibrational energy levels. Raman effect and its application to molecular spectroscopy (qualitative discussion). Molecular orbital theory.

#### Module IV: X-rays:

Production of X-rays, characteristic and continuous spectrum of X-rays, Mosley's law and its applications, difference between optical and X-ray spectra.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
A: Attendance

## APPLIED MATHEMATICS-III

Course Code: PHY2508

Credit Units:03

### Course Objective:

This course is aimed to provide a fundamental understanding of Computer Oriented Numerical Analysis for the students in their early stages of academic career. Several concepts such as Solution of Linear Algebraic Equations, Solution of Algebraic and Transcendental equations, Interpolation, Curve fitting, etc. will be introduced to students. After this course, you will be able to understand fundamental concepts of Numerical Analysis, which will prove highly beneficial to them in understanding more complicated topics of computer science.

### Course Contents:

#### Module I: Introduction & Numerical Solution to ODE

Introduction to Numerical Analysis, Application Area of N.A., Basic Definition, Taylor Series Method, Euler's Method, Modified Euler's Method, Runge Kutta Method

#### Module II: Solution of Algebraic and Transcendental Equations

Introduction, Bisection Method, regular False Method, Iteration Method, Newton Raphson Method, Generalized Secant Raphson Method.

#### Module III: Interpolation and Curve Fitting

Basic Definition, Forward Differences, backward Differences, Central Differences, Newton Forward Differences Formula, Newton's Divided Difference Formula, Lagrange's Method. Curve Fitting Techniques

#### Module IV: Numerical Differentiation & Integration

Numerical Differentiation based on Interpolation Formula, Numerical Integration, Trapezoidal Rules, Simpson's 1/3 rule, Simpson's 3/8 Rule

#### Module V: Statistical Computation

Frequency chart, Curve fitting by method of least squares, fitting of straight lines, polynomials, exponential curves etc, Data fitting with Cubic splines.

### Examination Scheme:

Components	CT1	A/C/Q	Attd	EE
Weightage (%)	10	15	5	70

## APPLIED MATHEMATICS-III LAB

Course Code: PHY2509

Credit Unit:01

Software Required: Turbo C++

1. Write a program to find the roots of an equation  $f(x) = 0$  using Bisection method.
2. Write a program to find the simple/multiple roots of  $f(x) = 0$  using Newton – Raphson method.
3. Write a program to find the roots of  $f(x) = 0$  using Secant method.
4. Write a program to find the integral of a function using Trapezoidal rule.
5. Write a program to find the integral of a function using Simpson's 1/3rd and 3/8th rule using switch case.
6. Write a program to find the integral of a function using adaptive Simpson method
7. Write a program to solve the system of equations  $Ax = b$  in tridiagonal form using Thomas Algorithm.
8. Write a program to solve the system of equations  $Ax = b$  using Gauss elimination method.
9. Write a program to solve the system of equations  $Ax = b$  using Jacobi Iteration method.
10. Write a program to solve the system of equations  $Ax = b$  using Gauss-Seidel method
11. Write a program to find the largest (or smallest) Eigen value and corresponding Eigen vector of a square matrix using power (or inverse power) method.
12. Write a program to solve first and second order ordinary differential equations (initial value problem) using Runge-Kutta fourth order method.
13. Write a program to solve first order ordinary differential equations (initial value problem) using adaptive Runge-Kutta method.
14. Write a program to solve second order ordinary differential equations (boundary value problem) using shooting method based on adaptive Runge-Kutta method and Newton-Raphson method.

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## PHYSICS LAB-V

CourseCode:PHY2504

Credit Units:02

### Course Contents:

1. To measure the Resistivity of a Ge Crystal with Temperature by Four-Probe Method (from room temperature to  $200^{\circ}\text{C}$ ) and to determine the Band Gap  $E_g$  for it.
2. To determine the Hall Coefficient of a Semiconductor.
3. To study the Hysteresis loop (B-H) of ferromagnetic material.
4. To measure the Magnetic susceptibility of Solids and Liquids.
5. To determine the band gap energy of a given semiconductor by four-probe method.
6. To study the characteristics of Photovoltaic cell.
7. To measure the dielectric constant of a ferroelectric material as a function of temperature.
8. To measure magnetic susceptibility of a solution of a paramagnetic salt in water for 3 different concentrations by using Quincke's method.

*Any other experiment carried out in the class.*

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## SUMMER PROJECT EVALUATION

CourseCode:PHY2535

Credit Units:03

### Objectives:

Practical training is based on the theoretical subjects studied by subjects. It can be arranged within the college or any in any related industrial unit. The students are to learn various industrial, technical and administrative processes followed in the industry. In case of on campus training the students will be given specific tasks of synthesizing / testing / analysis / characterization. On completion of the practical training the students are to present a report covering various aspects learnt by them and give a presentation of the same.

### Chapter Scheme and distribution of marks Report (Probable):

Chapter 1: Introduction –5 marks

Chapter 2: Conceptual Framework/ National/International Scenario – 10 marks

Chapter 3: Presentation, Analysis & Findings -- 15 marks

Chapter 4: Conclusion & Recommendations -- 5 marks

Chapter 5: Bibliography -- 05 marks

### Evaluation Scheme:

Continuous Evaluation (Feedback from Industry/ Faculty in charge)	Report	Presentation and Viva	Total
25	40	35	100

### Components of a Project Report

The outcome of Project Work is the Project Report. A project report should have the following components:

**1) Cover Page:** This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.

**2) Acknowledgement:** Various organizations and individuals whom might have provided assistance / co-operation during the process of carrying out the study.

**3) Table of Content:** Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.

**4) Body of the Report:** The body of the report should have these four logical divisions

a) **Introduction:** This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, and method of analysis), Limitations of the Study, and Chapter Planning.

b) **Conceptual Framework / National and International Scenario:** (relating to the topic of the Project).

c) **Presentation of Data, Analysis and Findings:** (using the tools and techniques mentioned in the methodology).

d) **Conclusion and Recommendations:** In this section, the concluding observations based on the main findings and suggestions are to be provided.

**5) Bibliography or References:** This section will include the list of books and articles which have been used in the project work, and in writing a project report.

**6) Annexures:** Questionnaires (if any), relevant reports, etc.

(The main text of the Project should normally be in the range of 5000 words. However, there may be annexure in addition to the main text)

### **The Steps of a Project Report**

**Step I :** Selection of the topic for the project by taking following points into consideration:

- Suitability of the topic.
- Relevance of the topic
- Time available at the disposal.
- Feasibility of data collection within the given time limit.
- Challenges involved in the data collection (time & cost involved in the data collection, possibility of getting responses, etc.)

**Step II :** Finalisation of the Topic and preparation of Project Proposal in consultation with the Supervisor.

**Step III :** Collection of information and data relating to the topic and analysis of the same.

**Step IV :** Writing the report dividing it into suitable chapters, viz.,

Chapter 1: Introduction,

Chapter 2: Conceptual Framework / National & International Scenario,

Chapter 3: Analysis & Findings

Chapter 4: Conclusion and Recommendations.

**Step V:** The following documents are to be attached with the Final Project Report.

1) Approval letter from the supervisor (Annexure-IA)

2) Student's declaration (Annexure-IB)

3) Certificate from the Competent Authority of the Organisation / Institution, if the student undertakes the Project Work in any Organisation / Institution.

### **Guidelines for Evaluation:**

- Each of the students has to undertake a Project individually under the supervision of a teacher and to submit the same following the guidelines stated below.
- Language of Project Report and Viva-Voce Examination may be English. The Project Report must be typed and hardbound.
- Failure to submit the Project Report or failure to appear at the Viva-voce Examination will be treated as "Absent" in the Examination. He /she has to submit the Project Report and appear at the Viva-Voce Examination in the subsequent years (within the time period as per University Rules).
- No marks will be allotted on the Project Report unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her Project Report.
- Evaluation of the Project Work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate.

## INTRODUCTION TO MATLAB

**CourseCode: PHY2512**

**Credit Units:03**

**Course Objective:** MATLAB is a scientific computing tool which can be used to solve many real life problems coming from various areas of science and engineering. The course introduces the basics of MATLAB; how to effectively use few commonly used builtin functions; hands on experience on MATLAB programming and its applications to various practical problems.

### Course Contents:

**Module-I:** Introduction to MATLAB: vector and matrix generation, subscripting and the colon notation, matrix and array operations and their manipulations, introduction to some inbuilt functions. m-files: scripts and functions, editing, saving m-files.

**Module-II:** Two & three-dimensional graphics: basic plots, change in axes and annotation in a figure, multiple plots in a figure, saving and printing figures, mesh plots, surface plots and their variants.

**Module-III:** Relational and logical operators: flow control using various statements and loops including If-End statement, If-Else-End statement, nested If-Else-End statement, For-End and While-End loops with Break commands.

**Module-IV:** Applications of MATLAB: Solving a linear system of equations, calculus of polynomials using inbuilt functions, solving equations in one variable, solving ordinary differential equations using inbuilt functions.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	10	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

### Reference Books:

- MATLAB: An introduction with applications: Amos Gilat, 5th Edition, Wiley India, 2014
- Getting Started with MATLAB: A Quick Introduction for Scientists and Engineers by RudraPratap, Oxford University Press, 2016.

## SEMICONDUCTOR PHYSICS

**Course Code: PHY2513**

**Credit Units:03**

### **Course Objective:**

**Course Description:** This course illustrates the basics of semiconductor theory with emphasis on the formation of energy bands in semiconductors. Applications in terms of studying the device structure and working principle of LEDs, photodiodes and tunnel diodes. Also, the basic structure and working principle of MOS devices is given in addition to the energy band diagram in a metal-semiconductor contact.

### **Course Content:**

#### **Module I: Formation of Energy bands**

Formation of Energy bands, Electron effective mass, concept of holes, Density of states function, Fermi-Dirac probability function and distribution, Equilibrium distribution of electrons and holes in intrinsic semiconductors, the  $n_0$  and  $p_0$  equations, intrinsic Fermi level position, dopant energy levels, Equilibrium distribution of electrons and holes in extrinsic semiconductors, Degenerated/Non-degenerated semiconductors.

#### **Module II: Semiconductor Physics**

Drift current density, Mobility Effect, Conductivity, Diffusion Current Density, Total Current Density, the Einstein relation, The Hall Effect, Carrier Generation and Recombination, Continuity Equations, time dependent diffusion equation, Basics of ambipolar effect and its transport equation, Haynes-Shockley Experiment.

#### **Module III: Diodes**

Visible and Infrared LEDs (Device structure and Working principle), photoconductor and photodiode (device structure and working principle), PN junction solar cells, Tunnel diodes, Impatt diodes and its static and dynamic characteristics, negative differential resistance, Transferred Electron devices (TED): TED device operation; Quantum effect devices (QED): Resonance tunnel diode.

#### **Module IV: Metal-semiconductor contact**

MOSFET structure and principle of operation, current-voltage characteristics, MOS structure and its energy band diagram, Depletion layer thickness, work function differences, Flat band voltage - charge distribution, capacitance-voltage characteristics and frequency effects,.

### **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
A: Attendance

### **Reference Books:**

1. Semiconductor Physics and Devices (Third Edition) by Donald A. Neamen (the McGraw-Hill companies)
2. Semiconductor devices Physics and Technology (2nd Edition) by S. M. Sze (Wiley Student Edition)
3. Integrated Electronics: Analog and Digital Circuits and Systems, Jacob Millman and Christos C. Halkias, Tata McGraw-Hill.
4. Hand Book of Electronics, Gupta & Kumar, PragatiPrakashan.

## TERM PAPER & WORKSHOP

Course Code: PHY2531

Credit Units:03

**This course will comprise of two components viz Term Paper Workshop.**

### **Component I: Term Paper**

A term (or research) paper is primarily a record of intelligent reading in several sources on a particular subject.

The students will choose the topic at the beginning of the session in consultation with the faculty assigned. The progress of the paper will be monitored regularly by the faculty. At the end of the semester the detailed paper on the topic will be submitted to the faculty assigned. The evaluation will be done by Board of examiners comprising of the faculties.

### **GUIDELINES FOR TERM PAPER**

The procedure for writing a term paper may consists of the following steps:

- Choosing a subject
- Finding sources of materials
- Collecting the notes
- Outlining the paper
- Writing the first draft
- Editing & preparing the final paper

#### **13. Choosing a Subject**

The subject chosen should not be too general.

#### **14. Finding Sources of materials**

- j) The material sources should be not more than 10 years old unless the nature of the paper is such that it involves examining older writings from a historical point of view.
- k) Begin by making a list of subject-headings under which you might expect the subject to be listed.
- l) The sources could be books and magazines articles, news stories, periodicals, scientific journals etc.

#### **15. Collecting the notes**

Skim through sources, locating the useful material, then make good notes of it, including quotes and information for footnotes.

- j) Get facts, not just opinions. Compare the facts with author's conclusion.
- k) In research studies, notice the methods and procedures, results & conclusions.
- l) Check cross references.

#### **16. Outlining the paper**

- g) Review notes to find main sub-divisions of the subject.
- h) Sort the collected material again under each main division to find sub-sections for outline so that it begins to look more coherent and takes on a definite structure. If it does not, try going back and sorting again for main divisions, to see if another general pattern is possible.

#### **17. Writing the first draft**

Write the paper around the outline, being sure that you indicate in the first part of the paper what its purpose is. You may follow the following:

- g) statement of purpose
- h) main body of the paper
- i) statement of summary and conclusion

Avoid short, bumpy sentences and long straggling sentences with more than one main ideas.

#### **18. Editing & Preparing the final Paper**

- bb) Before writing a term paper, you should ensure you have a question which you attempt to answer in your paper. This question should be kept in mind throughout the paper. Include only information/ details/ analyses of relevance to the question at hand. Sometimes, the relevance of a particular section may be clear to you but not to your readers. To avoid this, ensure you briefly explain the relevance of every section.
- cc) Read the paper to ensure that the language is not awkward, and that it "flows" properly.

- dd) Check for proper spelling, phrasing and sentence construction.
- ee) Check for proper form on footnotes, quotes, and punctuation.
- ff) Check to see that quotations serve one of the following purposes:
- gg) Show evidence of what an author has said.
- hh) Avoid misrepresentation through restatement.
- ii) Save unnecessary writing when ideas have been well expressed by the original author.
- jj) Check for proper form on tables and graphs. Be certain that any table or graph is self-explanatory.

Term papers should be composed of the following sections:

- Title page
- Table of contents
- Introduction
- Review
- Discussion & Conclusion
- References
- Appendix

Generally, the introduction, discussion, conclusion and bibliography part should account for a third of the paper and the review part should be two thirds of the paper.

### **Discussion**

The discussion section either follows the results or may alternatively be integrated in the results section. The section should consist of a discussion of the results of the study focusing on the question posed in the research paper.

### **Conclusion**

The conclusion is often thought of as the easiest part of the paper but should by no means be disregarded. There are a number of key components which should not be omitted. These include:

- summary of question posed
- summary of findings
- summary of main limitations of the study and
- details of possibilities for related future research

### **References**

From the very beginning of a research project, you should be careful to note all details of articles gathered.

The bibliography should contain ALL references included in the paper. References not included in the text in any form should NOT be included in the bibliography.

The key to a good bibliography is consistency. Choose a particular convention and stick to this.

### **Conventions**

Monographs

Crystal, D. (2001), *Language and the internet*. Cambridge: Cambridge University Press.

### **Edited Volumes**

Gass, S./Neu, J. (eds.) (1996), *Speech acts across cultures. Challenges to communication in a second language*. Berlin/ NY: Mouton de Gruyter.

[(eds.) is used when there is more than one editor; and (ed.) where there is only one editor. In German the abbreviation used is (Hrsg.) for Herausgeber].

### **Edited Articles**

Schmidt, R./Shimura, A./Wang, Z./Jeong, H. (1996), *Suggestions to buy: Television commercials from the U.S., Japan, China, and Korea*. In: Gass, S./Neu, J. (eds.) (1996), *Speech acts across cultures. Challenges to communication in a second language*. Berlin/ NY: Mouton de Gruyter: 285-316.

### **Journal Articles**

McQuarrie, E.F./Mick, D.G. (1992), On resonance: A critical pluralistic inquiry into advertising rhetoric. *Journal of consumer research* 19, 180-197.

### **Electronic Book**

Chandler, D. (1994), *Semiotics for beginners* [HTML document]. Retrieved [5.10.'01] from the World Wide Web, <http://www.aber.ac.uk/media/Documents/S4B/>.

### **Electronic Journal Articles**

Watts, S. (2000) Teaching talk: Should students learn 'real German'? [HTML document]. *German as a Foreign Language Journal* [online] 1. Retrieved [12.09.'00] from the World Wide Web, <http://www.gfl-journal.com/>.

### **Other Websites**

Verterhus, S.A. (n.y.), Anglicisms in German car advertising. The problem of gender assignment [HTML document]. Retrieved [13.10.'01] from the World Wide Web, <http://olaf.hiof.no/~sverrev/eng.html>.

### **Unpublished Papers**

Takahashi, S./DuFon, M.A. (1989), Cross-linguistic influence in indirectness: The case of English directives performed by native Japanese speakers. Unpublished paper, Department of English as a Second Language, University of Hawai'i at Manoa, Honolulu.

### **Unpublished Theses/ Dissertations**

Möhl, S. (1996), Alltagssituationen im interkulturellen Vergleich: Realisierung von Kritik und Ablehnung im Deutschen und Englischen. Unpublished MA thesis, University of Hamburg.  
Walsh, R. (1995), Language development and the year abroad: A study of oral grammatical accuracy amongst adult learners of German as a foreign language. Unpublished PhD dissertation, University College Dublin.

### **Appendix**

The appendix should be used for data collected (e.g. questionnaires, transcripts) and for tables and graphs not included in the main text due to their subsidiary nature or to space constraints in the main text.

## **Component II: Workshop**

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two ways. The trainer has to make sure that the aspect covered is practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

### **Major Themes for Workshop**

The workshop may be conducted on any of the following major themes:

- Nanotechnology
- Renewable Energy
- Data Analytics
- Spintronics
- Superconductivity
- Bio-fuels
- Biophysics

- QuantumComputation
- PlasmaPhysics
- Cryogenics
- CleanEnergy

These themes are merely indicative and other recent and relevant topics of study may be included.

#### **Guidelines for Workshop**

- The procedure for earning credits from workshop consists of the following steps:
- Relevant study material and references will be provided by the trainer in advance.
- The participants are expected to explore the topic in advance and take active part in the discussions held
- Attending and Participating in all activities of the workshop
- Group Activities have to be undertaken by students as guided by the trainer.
- Evaluation of workshop activities would be done through test and quiz at the end of the workshop.
- Submitting a write up of at least 500 words about the learning outcome from the workshop.

#### **Examination Scheme:**

<b>Term Paper (70)</b>			<b>Workshop (30)</b>		
<b>Organization &amp; Relevance</b>	<b>Literature Review &amp; Bibliography</b>	<b>Comprehensive Viva</b>	<b>Attendance</b>	<b>Active Participation</b>	<b>Seminar / Quiz</b>
<b>25</b>	<b>25</b>	<b>20</b>	<b>5</b>	<b>10</b>	<b>15</b>

## Syllabus – Sixth Semester

### INTRODUCTION TO NANOTECHNOLOGY

**Course Code: PHY2606**

**Credit Units:03**

**Course Objective:**

This course aims at students to get acquainted with introductory knowledge of Nanotechnology.

**Course Contents:**

**Module I: Introduction**

Nanoscience and Nanotechnology, Classification of nanostructured materials, Nanoparticles, Quantum wire, Quantum well, Quantum dots, Carbon nanotubes, Graphene, Nanowires, Ultra thin films-multilayered materials, Length scales involved and effect on properties: Mechanical, Electronic, Optical, Magnetic and Thermal properties. Technological advantages of Nanomaterials

**Module II: Preparation Methods**

Bottom-up synthesis, Top-down approach: Mechanical milling, Sputtering, Evaporation. Material processing by Sol – Gel method, Chemical Vapour deposition and Physical Vapour deposition, Microwave Synthesis of materials, Principles of SEM, TEM and AFM.

**Module III: Characterization Techniques**

X-ray diffraction technique, Scanning Electron Microscopy, Tunneling Electron Microscopy, Surface Analysis Techniques- AFM, SPM STM, ESCA.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
A: Attendance

## ACCELERATORS AND DETECTORS

CourseCode:PHY2607

Credit Units:03

### Course Objective:

#### Module I: Interaction of radiation and charged particles with matter

Introduction to radiations, Ionizing and nonionizing radiation, Energy loss of electrons and positrons, Positron annihilation in condensed media, Stopping power and range of heavier charged particles, derivation of Bethe-Bloch formula, interaction of gamma rays with matter, neutron classifications, sources of neutrons, neutron detectors.

#### Module II: Nuclear radiation detection

Gas-filled detectors, proportional and Geiger-Muller counters, Scintillation detectors, solid-state detectors, Cherenkov effect, specialized detectors, solid state nuclear track detectors, Wilson Cloud Chamber, bubble chambers, nuclear emulsions,

#### Module III: Accelerators

Van de Graaff Accelerator, Linear accelerators, cyclic accelerators, Cyclotron, Betatron, Synchrocyclotron, ion sources, CERN Super Proton Synchrotron (SPS). Large Hadron Collider (LHC)

Applications in Research (material physics research, medical applications (Synchrotron radiation sources and neutron spallation sources) and radiation protection

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
A: Attendance

## MATHEMATICAL PHYSICS-III

Course Code: PHY2609

Credit Units:03

### Module I: Special Functions

Series solution of linear second order ordinary differential equations singular points of second order differential equations and their importance, series, Methods (Frobenius), Legendre, Bessel, Hermite and Laguerre differential Equations, Legendre, Hermite and Laguerre polynomials, Rodrigues formula generating functions, recurrence relations, orthogonality, Series expansion of a function in terms of a complete set of Legendre functions, Bessel functions: first and second kind, generating function, recurrence formulae, zeros of Bessel functions and orthogonality, Fraunhofer diffraction integral for circular aperture.

### Module II: Infinite series

Fundamental concepts, convergence tests, alternating series, algebra of series, power series, Taylor series.

### Module III: Probability

Introduction to probability, Sample space, Probability Axioms, Random variables, probability distribution of Random variables, Discrete and continuous random variables, Functions of a Random variables

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# INSTRUMENTATION TECHNIQUES

**Course Code: PHY2610**

**Credit Units: 03**

## **Course Objective:**

This course aims at exposing the students to the instrumentation of the some of the main experimental techniques used in Physics

## **Course Contents:**

### **Module I: Error analysis and Vacuum technology**

Description of error analysis, reporting and usage of uncertainties, Propagation of uncertainties, Error analysis: Instrumental and statistical uncertainties, propagation of errors, Estimation of Mean and Errors, Least Square Fitting, Calibration.

Introduction to Vacuum Systems, Kinetic Theory of Gases, Production of Vacuums, Vacuum Pumps – Rotary, Diffusion, Terbomolecular, Pressure Measurement, Leak Detection, Specimen handling.

### **Module II: Instrumentation of Diffraction and Microscopic Techniques**

X-ray Sources – Crookes Tubes, Coolidge Tubes, Filters, mono-chromator crystals, Multi-layered monochromators and mirrors, Detectors-Photographic film, Gas detectors, Solid detectors, Diffractometers-The Debye-Scherrer and Hull diffractometer, Bragg-Brentano diffractometers, An introduction to surface diffractometry.

Scanning Electron Microscope Instrumentation- Electron Beam Parameters, Electron. Optical Parameters- Beam Energy, Beam Diameter, Beam Current, Beam Solid Angle. SEM Imaging Modes- High Current Mode, Resolution Mode, Low Voltage Modes.

### **Module III: Instrumentation of Spectroscopic Techniques**

Gas Discharge Lamps, Spectral Lamps and Shapes of Spectral Lines-Low Pressure Spectral Lamps, Shape of Spectral Lines.

Optical Filters, Polarizers and Phase Plates.Monochromators – Prism Monochromator, Grating Monochromators

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>

## LOW TEMPERATURE PHYSICS AND SUPERCONDUCTIVITY

**Course Code: PHY2605**

**Credit Units:03**

### **Course Objective:**

The aim of this course is to get acquainted the students with physics of ultra low temperatures, physics of materials at zero resistance and their applications in our realworld.

### **Course Contents:**

#### **Module I: Superconductivity**

Basic properties of superconductors, thermodynamics, superconductors in magnetic fields The London equations, electromagnetic properties, penetration depth, Ginzburg-Landau theory, coherence length, type I and type II superconductors, BCS theory, second quantization, Cooper- pairing, energy gap Tunneling, Josephson effects and SIS tunneling, High Tc superconductors, structure, d-wave symmetry, phase diagrams, Coexistence of superconductivity and Magnetism Overview of applications, squids, microwave devices, powerapplications.

#### **Module II: Superfluidity**

Two – Fluid Model, Bose – Einstein Condensation, Macroscopic Quantum State, Properties of liquid helium-4, Phenomena near The Lambda Point, phase diagrams, Superfluidity, Superfluid phenomena, rollin film, fountain effect, second sound Exitations and vortices in superfluids, Properties of liquid helium-3, the phase diagram, Symmetry properties of superfluid helium-3, Macroscopic Quantum Interference – Josephson Effect, Normal Fluid Density – Quasiparticle Scattering , Collective Excitations, Sound Propagation.

#### **Module III: Cryogenics**

Thermal and electrical properties for different materials at low temperature, Thermodynamic Properties, Liquefaction of gases. Regenerative principle Cooling methods above 1K, Joule-Thompson, Gifford-McMahon, evaporation cooling, Cooling methods below 1K, dilution & refrigeration, Methods of liquefaction of gases (Laser Cooling, Cascade process, Linde's process, and adiabatic demagnetization process) – Measurement of cryogenic temperatures.

### **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
A: Attendance

## INTRODUCTION TO ASTRONOMY

**Course Code: PHY2611**

**Credit Units:03**

**Course Objective:** This course aims at students to get acquainted with big bang picture, dark energy and cosmology.

**Course Contents:**

### **Module I: Distance measurement and overview:**

Spectrum of EM radiation, Atmospheric absorption, various types of telescopes, Overview of Astronomy, magnitude, distances, various methods to measure distances.

### **Module II: Sun and the Stars**

Sun as a star, Structure of the Sun, types of stars, Color magnitude diagram, main sequence stars, evolution of stars. White dwarf, neutron star and black holes.

### **Module III: Galaxies and Extragalactic Astronomy**

Milky way galaxy, dynamics of stars, types of galaxies, Hubble classification, the local group, clusters of galaxies.

### **Module IV: Cosmology**

The big bang picture, cosmic microwave background, early universe, basic ideas and observations behind dark matter and dark energy, Structure formation in the universe.

### **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

- Astrophysics for Physicists by ArnabRaiChoudhuri

## TERM PAPER & WORKSHOP

**Course Code: PHY2631**

**Credit Units:03**

**This course will comprise of two components viz Term Paper Workshop.**

### **Component I: Term Paper**

A term (or research) paper is primarily a record of intelligent reading in several sources on a particular subject.

The students will choose the topic at the beginning of the session in consultation with the faculty assigned. The progress of the paper will be monitored regularly by the faculty. At the end of the semester the detailed paper on the topic will be submitted to the faculty assigned. The evaluation will be done by Board of examiners comprising of the faculties.

### **GUIDELINES FOR TERM PAPER**

The procedure for writing a term paper may consists of the following steps:

- Choosing a subject
- Finding sources of materials
- Collecting the notes
- Outlining the paper
- Writing the first draft
- Editing & preparing the final paper

#### **19. Choosing a Subject**

The subject chosen should not be too general.

#### **20. Finding Sources of materials**

- m) The material sources should be not more than 10 years old unless the nature of the paper is such that it involves examining older writings from a historical point of view.
- n) Begin by making a list of subject-headings under which you might expect the subject to be listed.
- o) The sources could be books and magazines articles, news stories, periodicals, scientific journals etc.

#### **21. Collecting the notes**

Skim through sources, locating the useful material, then make good notes of it, including quotes and information for footnotes.

- m) Get facts, not just opinions. Compare the facts with author's conclusion.
- n) In research studies, notice the methods and procedures, results & conclusions.
- o) Check cross references.

#### **22. Outlining the paper**

- i) Review notes to find main sub-divisions of the subject.
- j) Sort the collected material again under each main division to find sub-sections for outline so that it begins to look more coherent and takes on a definite structure. If it does not, try going back and sorting again for main divisions, to see if another general pattern is possible.

#### **23. Writing the first draft**

Write the paper around the outline, being sure that you indicate in the first part of the paper what its purpose is. You may follow the following:

- j) statement of purpose
- k) main body of the paper
- l) statement of summary and conclusion

Avoid short, bumpy sentences and long straggling sentences with more than one main ideas.

#### **24. Editing & Preparing the final Paper**

- kk) Before writing a term paper, you should ensure you have a question which you attempt to answer in your paper. This question should be kept in mind throughout the paper. Include only information/ details/ analyses of relevance to the question at hand. Sometimes, the relevance of a particular section may be clear to you but not to your readers. To avoid this, ensure you briefly explain the relevance of every section.
- ll) Read the paper to ensure that the language is not awkward, and that it "flows" properly.
- mm) Check for proper spelling, phrasing and sentence construction.
- nn) Check for proper form on footnotes, quotes, and punctuation.
- oo) Check to see that quotations serve one of the following purposes:
- pp) Show evidence of what an author has said.
- qq) Avoid misrepresentation through restatement.
- rr) Save unnecessary writing when ideas have been well expressed by the original author.
- ss) Check for proper form on tables and graphs. Be certain that any table or graph is self-explanatory.

Term papers should be composed of the following sections:

- Title page
- Table of contents
- Introduction
- Review
- Discussion & Conclusion
- References
- Appendix

Generally, the introduction, discussion, conclusion and bibliography part should account for a third of the paper and the review part should be two thirds of the paper.

### **Discussion**

The discussion section either follows the results or may alternatively be integrated in the results section. The section should consist of a discussion of the results of the study focusing on the question posed in the research paper.

### **Conclusion**

The conclusion is often thought of as the easiest part of the paper but should by no means be disregarded. There are a number of key components which should not be omitted. These include:

- summary of question posed
- summary of findings
- summary of main limitations of the study at hand
- details of possibilities for related future research

### **References**

From the very beginning of a research project, you should be careful to note all details of articles gathered.

The bibliography should contain ALL references included in the paper. References not included in the text in any form should NOT be included in the bibliography.

The key to a good bibliography is consistency. Choose a particular convention and stick to this.

### **Conventions**

Monographs

Crystal, D. (2001), *Language and the internet*. Cambridge: Cambridge University Press.

### **Edited Volumes**

Gass, S./Neu, J. (eds.) (1996), *Speech acts across cultures. Challenges to communication in a second language*. Berlin/ NY: Mouton de Gruyter.

[(eds.) is used when there is more than one editor; and (ed.) where there is only one editor. In German the abbreviation used is (Hrsg.) for Herausgeber].

### **Edited Articles**

Schmidt, R./Shimura, A./Wang, Z./Jeong, H. (1996), *Suggestions to buy: Television commercials from the U.S., Japan, China, and Korea*. In: Gass, S./Neu, J. (eds.) (1996), *Speech acts across cultures. Challenges to communication in a second language*. Berlin/ NY: Mouton de Gruyter: 285-316.

### **Journal Articles**

McQuarrie, E.F./Mick, D.G. (1992), *On resonance: A critical pluralistic inquiry into advertising rhetoric*. *Journal of consumer research* 19, 180-197.

### **Electronic Book**

Chandler, D. (1994), *Semiotics for beginners* [HTML document]. Retrieved [5.10.'01] from the World Wide Web, <http://www.aber.ac.uk/media/Documents/S4B/>.

### **Electronic Journal Articles**

Watts, S. (2000) *Teaching talk: Should students learn 'real German'?* [HTML document]. *German as a Foreign Language Journal* [online] 1. Retrieved [12.09.'00] from the World Wide Web, <http://www.gfl-journal.com/>.

### **Other Websites**

Verterhus, S.A. (n.y.), *Anglicisms in German car advertising. The problem of gender assignment* [HTML document]. Retrieved [13.10.'01] from the World Wide Web, <http://olaf.hiof.no/~sverrev/eng.html>.

### **Unpublished Papers**

Takahashi, S./DuFon, M.A. (1989), *Cross-linguistic influence in indirectness: The case of English directives performed by native Japanese speakers*. Unpublished paper, Department of English as a Second Language, University of Hawai'i at Manoa, Honolulu.

### **Unpublished Theses/ Dissertations**

Möhl, S. (1996), *Alltagssituationen im interkulturellen Vergleich: Realisierung von Kritik und Ablehnung im Deutschen und Englischen*. Unpublished MA thesis, University of Hamburg.

Walsh, R. (1995), *Language development and the year abroad: A study of oral grammatical accuracy amongst adult learners of German as a foreign language*. Unpublished PhD dissertation, University College Dublin.

### **Appendix**

The appendix should be used for data collected (e.g. questionnaires, transcripts) and for tables and graphs not included in the main text due to their subsidiary nature or to space constraints in the main text.

## Component II: Workshop

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two ways. The trainer has to make sure that the aspect covered is practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

### Major Themes for Workshop

The workshop may be conducted on any of the following major themes:

- Nanotechnology
- Renewable Energy
- Data Analytics
- Spintronics
- Superconductivity
- Bio-fuels
- Biophysics
- Quantum Computation
- Plasma Physics
- Cryogenics
- Clean Energy

These themes are merely indicative and other recent and relevant topics of study may be included.

### Guidelines for Workshop

- The procedure for earning credits from workshop consists of the following steps:
- Relevant study material and references will be provided by the trainer in advance.
- The participants are expected to explore the topic in advance and take active part in the discussions held
- Attending and Participating in all activities of the workshop
- Group Activities have to be undertaken by students as guided by the trainer.
- Evaluation of workshop activities would be done through test and quiz at the end of the workshop.
- Submitting a write up of at least 500 words about the learning outcome from the workshop.

### Examination Scheme:

Term Paper (70)			Workshop (30)

## MATHEMATICAL PHYSICS

**Course Code: PHY4101**

**Credit Units: 04**

**Course Objective:**

Aim is to introduce the concept of mathematical methods and techniques which form the basis to study the post graduate level Physics Courses.

**Course Contents:**

**Module I: Complex Analysis**

Functions of complex variable, derivative and Cauchy-Riemann differential equations, Cauchy's integral theorem and integral formula, Taylor's and Laurent's series, Singularities of an analytic function, Residues and their evaluation, Cauchy's residue theorem.

**Module II: Linear Differential Equations**

Introduction, First order differential equations, examples and solution, Second order linear Ordinary Differential Equations with variable coefficients; Solution by series expansion; Legendre Polynomial, Bessel's Function, Hermite and Laguerre Polynomials and their solutions; Physical applications; Generating functions; recursion relations.

**Module III: Laplace Transforms**

Laplace transform (LT); First and second shifting theorems; Inverse LT by partial fractions; LT of derivative and integral of a function; Solution of differential equation using LT, Some simple applications of Laplace Transforms: Electric Circuit, Solution of Simultaneous differential equation by LT, Solution of Partial Differential Equation by LT, Laplace Transform of delta function and their uses.

**Module IV: Fourier Transforms**

Fourier series; Partial sums; Fourier integral and transforms; Fast Fourier Transforms, Fourier Transform of delta function and their uses., Physical Application of Fourier series Analysis :Forced Vibration, Reimann Zeta Function and Half wave rectifier

**Examination Scheme:**

# CLASSICAL MECHANICS

**Course Code: PHY4102**

**Credit Units: 04**

## **Course Objective:**

A detailed exposition of classical mechanics for the students, opting for physics is vitally important for a clear understanding of recent intricate theories of quantum mechanics, Modern Physics and research to build a well developed and conceptualized foundation.

## **Course Contents:**

### **Module I: Symmetries and Conservation Laws**

Mechanics of a system of particles, constraints, D'Alembert's principle, Variational calculus and its applications, Hamilton's variational Principle, Lagrangian equations, applications of Lagrangian formulation, conservation theorems and symmetry properties.

### **Module II: Hamiltonian Formulation**

Hamiltonian equation of motion, applications of hamiltonian formulation, Principle of least action, the equations of canonical transformations, cyclic coordinates, phase space and Liouville's theorem, Poisson bracket, Jacobi's Identity .

### **Module III: Central Force Problem**

Reduction to one body problem, equation of motion and first integral, one dimensional problem and classification of orbits, Differential equation for the orbit, Kepler problem and planetary motion, Rutherford formula, scattering in central force field, transformation to laboratory frames.

### **Module IV: Rigid Body and Vibrating System**

Euler angles, tensor of inertia, kinetic energy of a rotating body, symmetric top and applications. Vibrating string, solution wave equation, normal vibrations, dispersion, coupled vibrating system.

## **Examination Scheme:**

# ELECTRONICS

**Course Code: PHY4103**

**Credit Units: 04**

**Course Objective:** This course gives a comprehensive view of the Integrated Circuit Fabrication and Technology, operational amplifiers, modulation and demodulation techniques. Practical Transmitting and Receiving Antennas- the antenna action and their types will also be studied in detail.

## **Course Contents:**

### **Module I: Integrated Circuit Fabrication**

Integrated-Circuit Technology, Advantages and limitations of Integrated Circuits, Basic Monolithic Integrated Circuits, Epitaxial Growth, Masking and Etching, Diffusion of Impurities, Integrated Capacitors and Inductors, Large-Scale and Medium-Scale Integration, Metal-Semiconductor Contact.

### **Module II: Operational Amplifiers**

The ideal Op-Amp-inverting, non-inverting and differential amplifiers-CMRR; Op-Amp IC building blocks-emitter coupled differential amplifier, active load, level shifting and output stage; Op-Amp characteristics-open-loop input output characteristics, frequency response and slew rate; Op-Amp applications-adder, subtractor, integrator, differentiator, comparator, voltage-to-current converter, current-to-voltage converter and logarithmic amplifier.

### **Module III: Modulation and Demodulation**

Definition, Amplitude modulation, Methods of Amplitude Modulation, Frequency Modulation, Phase Modulation, Pulse Modulation Systems- PAM, PWM, PPM, PCM, Delta Modulation, Principle of AM Detection, Frequency Demodulation. Digital modulation schemes: amplitude, phase and frequency shift keying schemes (ASK, PSK, FSK). Multiplexing - time division and frequency division. Applications of Modulation Techniques.

### **Module IV: Antennas**

Antenna Action, Short Electric Doublet, Radiation from a Current Element, Thin Linear Antenna, Effect of Ground: Image Antenna, Short Vertical Grounded Antenna, Total Effective resistance and Efficiency of an Antenna, Yagi Antenna, Loop Antenna, Parabolic Reflectors, Antenna measurements, Broadband antenna principles, Practical Transmitting Antennas, Receiving Antennas, Difference in Receiving and Transmitting Antennas.

# QUANTUM MECHANICS-I

Course Code: PHY4109

Credit Units: 04

## Course Objective:

## Course Contents:

### Module I: Introductory concepts

A quick review of failure of classical Physics, Wave particle duality, Wave-packet, Uncertainty principle and its applications

Schrodinger's time dependent equation; Statistical interpretation of wave function, normalization, probability current density, expectation values, Ehrenfest's theorem, Time independent Schrodinger equation, stationary states, orthogonality, Energy, linear momentum and angular momentum operators.

### Module II: General Formalism

Linear vector space, linear operators, eigenfunction and eigenvalues, Hermitian operator, Postulates of Quantum Mechanics, Simultaneous measurability of observables, General Uncertainty relation, Dirac's notation (bra & ket), Schrodinger and Heisenberg representation.

### Module III: Applications

Quick review of particle in 1D and its extension to 3D box, degeneracy of energy states. Square potential barrier, quantum tunneling and alpha emission. Harmonic Oscillator using operator method, creation and annihilation operators.

### Module IV: Hydrogen atom and angular momentum

Schrodinger equation in three dimension (spherical coordinates), separation of variables, radial equation, angular equation, spherical harmonics, angular momentum and their commutation relation,  $L^2$  and  $L_z$  operators, Ladder operator.

# COMPUTATIONAL PHYSICS

**Course Code: PHY4110**

**Credit Units: 04**

## **Course Objective:**

This course aims at exposing the students to basic Computational Physics which will be useful for them to solve the problems of Physics.

## **Course Contents:**

**Module I** Introduction to MATLAB and Plotting: vector and matrix generation, subscripting and the colon notation, matrix and array operations and their manipulations, introduction to some inbuilt functions. Two & three-dimensional graphics: basic plots, change in axes and annotation in a figure, multiple plots in a figure, saving and printing figures, mesh plots, surface plots and their variants.

**Module II** m-files: scripts and user defined functions, calling functions into a script file, subfunctions, and nested functions, concept of local and global variable, few examples of in-built functions, editing, saving m-files.

**Module III** Loops and Conditional statements: Flow control using various statements and loops including For-End and While-End loops with Break commands. Conditional Statements: If-End statement, If-Else-End statement, nested If-Else-End statements.

**Module IV** Applications of MATLAB: Introduction to builtin functions: related to matrix inversion, eigenvalues, eigenvectors, condition number; for data representation: bar charts, histograms, pie chart, stem plots etc; for solving various type of differential equations; for specialized plotting e.g., contour plots, sphere, and animations.

# INTEGRATED PHYSICS LAB-I

Course Code: PHY4111

Credit Units: 03

## List of Experiment (Any Eight)

1. Data and error analysis.
2. Plotting and curve fitting software
3. Use of the instruments CRO, multimeter.
4. To design and study various aspects of frequency modulation and demodulation. PAM, PWM and PPM Modulation and demodulation.
5. To study the frequency response of an operational amplifier & to use operational amplifier for different mathematical operations.
6. To design and study the characteristics of a regulated power supply and voltage multiplier circuits.
7. To design a rectangular/triangular waveform generator using Comparators and IC8038.
8. To design (i) Low pass filter (ii) High pass filter; (iii) All-pass filter; (iv) Band pass filter (v) Band-reject passive filter.
9. To design and study logic gates and flip flop circuits.
10. Use of timer IC 555 in astable and monostable modes and applications involving relays, LDR.
11. The Torsional Pendulum and Moment of Inertia
12. Study of the Coriolis effect.
13. Determination of Lande's factor using ESR spectrometer.
14. To plot the polar curve of a filament lamp and to determine its mean spherical intensity.
15. Raman effect in liquids.
16. Rydberg's constant using constant deviation prism.

## STATISTICAL MECHANICS

Course Code: PHY4202

Credit Units: 04

### Course Objective:

The aim of the course is to introduce the concept of statistical mechanics and applications to various problems in applied Physics.

### Course Contents:

#### Module-I:

The Statistical Basis of Thermodynamics, The macroscopic and the microscopic states, Contact between statistics and thermodynamics, Entropy on microscopic scale, physical significance of the number  $\Omega(N,V,E)$ , Thermodynamic equilibrium, Mechanical equilibrium, Chemical equilibrium, Review of phase space, Liouville's theorem, basic postulates of statistical mechanics, The classical ideal gas, The entropy of mixing and Gibb's paradox, Sackur tetrode equation of entropy, Correct Boltzmann counting

#### Module II

Elements of ensemble theory, microcanonical, canonical, grand canonical ensemble, quantum states and the phase space, equilibrium between system and a heat reservoir, partition function, physical significance of the various statistical quantities in the canonical ensemble, The classical systems, energy fluctuations in the canonical ensemble, statistics of paramagnetism, Boltzmann's equation, Maxwell & Boltzmann statistics, Equipartition theorem and its Simple applications, Virial theorem, Maxwell velocity distribution, related distributions and mean values.

#### Module III

Equilibrium between a system and a particle- energy reservoir, density and energy fluctuations in Grand canonical ensemble, formulation of quantum statistics, Fermi-Dirac and Bose-Einstein statistics. Applications of the formalism to: (a) Ideal Bose gas, The field of sound waves, Einstein and Debye theory of specific heat, properties of black-body radiation, Bose- Einstein condensation, experiments on atomic BEC, (b) Ideal Fermi gas, properties of simple metals, Pauli paramagnetism, electronic specific heat, Compressibility of Fermi gas, A relativistic degenerate electron gas.

#### Module IV

Kinetic theory of a gas, black body radiation, Rayleigh Jeans' formula, Wien's law, Planck radiation law, non-equilibrium statistical mechanics, Ising model, master equation and irreversibility, Langevin equation, fluctuation-dissipation theorem, Thermodynamics of the early universe, white dwarf stars and Chandrasekhar mass limit.

### Examination Scheme:

# QUANTUM MECHANICS-II

Course Code: PHY4208

Credit Units: 04

## Course Objective:

The course is intended to introduce the concept of quantum mechanics to students at the advanced level so that they can solve problem of various branches of Physical Sciences.

## Course Contents:

### Module I: Spin & Identical Particles

Spin, Stern-Gerlach experiment, Pauli spin matrices, eigenvalues of  $J^2$  and  $J_z$ , addition of angular momenta, Clebsch-Gordan coefficients.

Identical particles, particle exchange operator, symmetric and anti-symmetric wave functions, Pauli principle and Slater determinant, spin functions for system with more than one electron.

### Module II: Perturbation theory

Time-independent perturbation theory: Basic concepts, Non-degenerate energy levels, degenerate perturbation theory, fine structure of Hydrogen, Spin-orbit coupling, Zeeman effect.

Time-dependent perturbation theory: 1<sup>st</sup> order perturbation, Fermi's Golden rule, absorption and emission of radiation, Einstein A and B coefficient.

### Module III: Variational principle and WKB approximation

Theory of Variational principle; Ground state energy for 1D harmonic oscillator, Delta function potential, and He.

WKB approximation, classical region, tunneling, Gamow's theory of alpha decay, connection formula.

### Module IV: Scattering theory and relativistic wave equation:

Scattering cross section, scattering amplitude, Centre of Mass frame, Laboratory frame, partial wave, scattering by a central potential (partial wave analysis), phase shift, Born approximation, Validity of Born Approx.

Klein-Gordon equation and its interpretation, Dirac equation for a free particle.

# CONDENSED MATTER PHYSICS-I

Course Code: PHY4209

Credit Units: 04

## Course Objectives:

This course will be an introduction to condensed matter physics, the modern reincarnation of solid state physics. Condensed matter systems encompass solids, liquids, liquid crystals and more; all these systems are composed of many interacting microscopic constituents (*e.g.* atoms, molecules, electrons). This course will (mostly, not exclusively) focus on the atomic and electronic structure of solids.

## Course Contents:

### Module I: Crystal structure and diffraction

Structural description of liquids and solids, Crystalline and amorphous solids. The crystal lattice: Basis vectors, Bravais lattices, Unit cell. Symmetry operations, point groups, space groups and typical structures, Quasi crystals, Miller indices. Crystal systems, Directions and planes in crystals. Inter-planar spacing's Reciprocal Lattice.

X-ray diffraction from crystals, Laue's equation, Bragg's law in direct and reciprocal lattice, Atomic and crystal structure factors; Ewald construction,

### Module II: Bonding and Imperfection

The Van-der-Waals bond. Cohesive energy of inert gas, solids, Ionic bond. Cohesive energy and bulk modulus of ionic crystals, Madelung constant. The covalent bond and Metallic bond, characteristic features and examples

Mechanism of plastic deformation in solids, Stress and strain fields of screw and edge dislocations, stacking fault, Elastic energy of dislocations, Forces between dislocations, Frenkel and Schottky defects, elastic constants, elastic waves in crystals,

### Module III: Lattice Vibrations & Thermal properties

Interatomic forces and lattice dynamics of crystals, Quantization of elastic waves. Classical theory of lattice vibration under harmonic approximation; Vibrations of linear monoatomic and diatomic lattices, Dispersion curves, acoustic and optical modes, long wavelength limits; Phonon frequencies and density of states, Adiabatic approximation (qualitative discussion); Normal modes and phonons

Lattice heat capacity, models of Debye and Einstein, Drude model of electrical and thermal conductivity comparison with electronic heat capacity; Anharmonic effects in crystals, thermal expansion and thermal conductivity.

### Module IV: Energy Band Theory

Electrons in a periodic potential: Bloch theorem, Nearly free electron approximation, Kronig-Penny model- wave equation of electrons in a periodic potential of a crystal, Formation of energy bands, metals, insulators and semiconductors, Effective mass, concept of holes, Fermi surface, Free electron theory of metals, Tight binding approximation. Semiconductors: Carrier statistics in intrinsic and extrinsic crystals.

## Examination Scheme:

Components	CT	HA	S/V/Q	Attendance	EE
Weightage (%)	10	8	7	5	70

CT – Class Test, S/V/Q – Seminar/Viva/Quiz, HA – Home Assignment, EE – End Semester Examination

# ELECTRODYNAMICS

Course Code: PHY4215

Credit Units: 04

**Course Objective:** The main aim of the course is to give concept of Electromagnetic field theory which is useful for research and industrial applications.

## Course Contents:

### Module I:

Electromagnetic (EM) Fields and Potentials Vector calculus: Various important vector identities, Gauss and Stokes theorem, Dirac-delta function. Electrostatics: Laplace and Poisson equations; Dirichlet and Neumann boundary conditions; Method of images (point charge near a conducting plane and a sphere); Separation of variables in Cartesian and spherical coordinates. Magnetostatics: Curl and divergence of magnetic field; vector potential; Boundary conditions on field vectors  $D$ ,  $E$ ,  $B$  and  $H$ ; Gauge transformations: Lorentz and Coulomb gauges.

### Module II:

Maxwell's Equations & Electromagnetic Waves Maxwell's Eq.: Correction in the Ampere's law and Maxwell's equations; Energy density of Fields and Poynting's theorem; conservation of momentum and Maxwell's stress tensor. EM waves in vacuum: Wave equation of  $E$  &  $B$ ; energy & momentum of EM waves; Propagation of EM waves in matter: propagation in linear media, reflection and transmission, Fresnel equation; EM waves in conducting media, skin depth, reflection and transmission in conducting media; Dispersion of EM waves and Cauchy's formula

**Module III:**  
Guided Waves and Radiation Guided Waves: Wave guides; TE, TM and TEM modes; Rectangular wave guide; coaxial transmission line; resonant cavity Radiation: Lienard-Wiechert potentials; fields of a moving point charge; electric dipole radiation magnetic dipole radiation

### Module III:

Relativistic Electrodynamics Four vector formalism: Four vectors; Covariant and contravariant vectors; Transformation of Four vectors; Velocity, Current, Momentum and Potentials as four vectors. Lorentz transformation in four vector notation Covariance of Electrodynamics: Magnetism as a relativistic phenomenon; Electromagnetic field tensor; Lorentz Transformation of Fields

# ATOMIC AND MOLECULAR PHYSICS

Course Code: PHY4216

Credit Units: 04

**Course Objective:** The aim of this course is to give the basic ideas about the structure of atoms and molecules, electronic structure, interaction of radiation and external fields with atoms and molecules.

## Course Contents:

### Module I

Quantum states of one electron atoms, Hydrogen spectrum, Larmor's theorem, Magnetic moment and Bohr magneton, Spin orbit interaction, hydrogen fine structure, Vector atom model, two electron systems, LS and jj Coupling schemes, spectroscopic terms, equivalent and non equivalent atoms, Helium atom spectrum, spectra of alkali atoms, Nuclear spin, magnetic moment, isotopic effect and Hyperfine structure, Normal and anomalous Zeeman effect, Paschen Back effect, Stark effect.

### Module II

Rotational spectra of diatomic molecules as a rigid rotor and non rigid rotor, intensity of rotational lines, Diatomic molecule as a simple harmonic oscillator, vibrational energy of diatomic molecule, Anharmonicity, Vibrational-rotational spectra, Raman effect, quantum theory of Raman effect, rotational Raman spectra, vibrational Raman spectra .

### Module III

Electronic band spectra, electronic energy and total energy, vibrational structure of electronic transitions, rotational structure of electronic bands, The branches(P,Q,R) of band, Band head formation. Intensities in electronic bands, Frank-Condon principle, Fortrat diagram.

### Module IV

Interaction of atoms in the formation of molecules, covalent, ionic bonding and vander Waal's interactions, concept of molecular potential, Born-oppenheimer approximation, Electronic states of diatomic molecules, Electronic angular momenta, The LCAO approach, states for hydrogen molecular ion, Coulomb, exchange, overlap integral, symmetries of electronic wave functions. Term symbols for simple molecules.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	E

## INTEGRATED PHYSICS LAB-II

Course Code: PHY4212

Credit Units: 03

### List of Experiment (Any Eight)

1. Measurement of vacuum using the Pirani/thermocouple gauge.
2. Measurement of lattice parameters and indexing of powder patterns.
3. Determination grain size of the alloy by optical microscope.
4. Calculation of the optical band gap of the semiconductor by absorption spectroscopy.
5. Calculation of the grain size and strain in the samples from the XRD pattern data.
6. Production and measurement of high pressure.
7. To study temperature-dependence of conductivity of a given semiconductor crystal using four probe method.
8. To determine the Hall coefficient for a given semi-conductor.
9. To determine dipole moment of an organic molecule.
10. To study the lattice dynamics using LC analog kit.
11. To study the characteristic of J-H curve using ferromagnetic standards.
12. To determine the velocity of ultrasonic waves using interferometer as a function of temperature.
13. Temperature dependence of a ceramic capacitor - Verification of Curie-Weiss law for the electrical susceptibility of a ferroelectric material.
14. Tracking of the Ferromagnetic-paramagnetic transition in Nickel through electrical resistivity.
15. To study the characteristics of a PN junction with varying temperature & the capacitance of the junction.
16. (i) Study of the characteristics of klystron tube and to determine its electronic tuning range;(ii) To determine the standing wave ratio and reflection coefficient; (iii) To determine the frequency & wavelength in a rectangular waveguide working on TE<sub>10</sub> mode; (iv) To study the square law behavior of a microwave crystal detector.
17. To determine the specific charge (e/m) of an electron.
18. To determine the charge of an electron using Millikan oil drop experiment.
19. To determine the emission spectra of hydrogen atom.
20. To study the Kerr effect using Nitrobenzene

# Syllabus - Third Semester

## CONDENSED MATTER PHYSICS-II

Course Code: PHY4315

Credit Units: 04

### Course Contents:

#### Module I: Transport Theory

Electronic transport from classical kinetic theory; Introduction to Boltzmann transport equation; electrical and thermal conductivity of metals, thermoelectric effects and thermoelectric power. Hall Effect, Elementary ideas of Quantum Hall effect, Magneto resistance.

#### Module II: Optical Properties

Interaction of electrons and phonons with photons, Direct and indirect transitions, Optical absorption: Absorption in insulators, Polaritons, one phonon absorption, interband transitions optical properties of metals, skin effect and anomalous skin effect, Color Centres, Trap, recombination, excitons, Photoconductivity, luminescence.

#### Module III Dielectric Properties

Electronic and ionic polarization of molecules, orientation polarization, static dielectric constant of gases and solids; Lorentz internal field, Complex dielectric constant and dielectric losses, relaxation time, Classical theory of electronic polarization and optical absorption, Clausius-Mosotti relation, Ferroelectricity,; piezo, pyro- and ferro-electricity, 1<sup>st</sup> order, 2<sup>nd</sup> order phase transitions, Curie-Weiss Behavior.

#### Module IV Magnetic properties

Origin of magnetism, Langevin's theory of diamagnetism, Classical and quantum theory of paramagnetism, quenching of orbital angular momentum; Ferromagnetism: Curie-Weiss law, Spontaneous magnetization, temperature dependence of magnetization, Heisenberg's exchange interaction, Mean field theory, ferromagnetic domains and Bloch-wall energy, Hysteresis loop, Ferrimagnetism and anti-ferromagnetism, Superparamagnetism, spin waves and Magnons (Introductory).

#### Module V Superconductivity

Phenomenological description of superconductivity, occurrence of superconductivity, Meissner effect; Type-I and type-II superconductors; Vortex state (qualitative discussions), Thermal properties of superconductors, Superconducting energy gap ( $\Delta$ ), isotope effect, Quasi crystals, Outlines of the BCS theory, Mechanism responsible for Cooper pair formation, Ginzburg-Landau theory, London equation; Flux quantization A.C. and D.C. Josephson effect, SQUID, High Temperature ( $T_c$ ) superconductors (information only), Applications of Superconductivity.

# NUCLEAR AND PARTICLE PHYSICS

Course Code: PHY4321

Credit Units: 04

**Course Objective:** The aim of the course is to introduce the concept of nuclear structure, nuclear forces and nuclear reactions for a clear understanding of recent intricate theories of nuclear physics. Course Contents:

## Course Contents:

### Module-I:

Nuclear Properties and Radioactivity Nuclear radii and measurements, nuclear binding energy (review), Radioactive decays : Review of barrier penetration of alpha decay & Geiger-Nuttall law. Beta decays, Fermi theory, Kurie plots and comparative half-lives, Allowed and forbidden transitions, Experimental evidence for Parity-violation in beta decay, Electron capture probabilities, Double beta decay, Neutrino, detection of neutrinos, measurement of the neutrino helicity. Multipolarity of gamma transitions, internal conversion process, transition rates, Production of nuclear orientation, angular distribution of gamma rays from oriented nuclei.

### Module-II:

Two-Body Problems and Nuclear Forces Properties of deuteron, Schrödinger equation for the deuteron and the ground state; rms radius, spin dependence of nuclear forces, electromagnetic moment of deuteron and the necessity of tensor forces. Nucleon-nucleon scattering, experimental n-p scattering data, partial wave analysis of n-p scattering, phase shifts, singlet and triplet potentials, effective range theory, low energy p-p scattering, meson theory of nuclear forces, Charge independence and charge symmetry; spin dependence, S-wave effective range theory; central and tensor forces, dipole and quadruple moments of deuteron.

### Module-III:

Nuclear Reactions Compound nucleus and Direct reactions (elastic, inelastic, transfer, break-up), Nuclear fusion, Laser induced fusion, Quantum mechanical theory, Resonance scattering and reactions, Dispersion relation, Nuclear fission: experimental features, spontaneous fission, barrier penetration, statistical model.

**Module-IV:** Nuclear Structure and Elementary Particle Physics 15 Liquid drop model, Shell model (extreme single particle), magnetic moment, quadruple moment; Collective models; concept of unified model Elementary particles, Various quantum numbers and their conservation, Gellmann Nishijima formula, C, P and T invariance, applications of symmetry arguments to particle reactions.

## Examination Scheme:

# LASER PHYSICS

**Course Code: PHY4322**

**Credit Units: 04**

**Course Objective:** The aim of the present course is to acknowledge the students with different types of lasers and its applications.

## **Course Contents:**

### **Module I**

Stimulated Absorption, Stimulated Emission and spontaneous Emission :Absorption and Gain Coefficient. Radiative Lifetime and Spontaneous Transition Probabilities. Saturation: Saturation of Absorption. Gain Saturation. Widths and Profiles of Spectral Lines: Homogeneous and Inhomogeneous Broadening. Natural Linewidth. Doppler Width. Collision Broadening of Spectral Lines.

### **Module II**

Basic principles of LASERS Laser Amplification. Laser Oscillation. Optical and Electrical Pumping. Optical Resonators. Optimization of Favourable Losses in Resonators. Resonance Frequencies of Optical Resonators. Laser Modes. Rate Equations for Three-Level and Four-Level Lasers. Steady State Output. CW and Transient Laser Behaviour. Single-Mode Operation. Q-Switching. Mode Locking.

### **Module III**

Types of Lasers. Solid State lasers (Ruby laser, Semiconductor laser, Nd: YAG laser), Gas lasers (HeNe laser, Excimer laser), Liquid (organic dye) lasers.

### **Module IV**

Doppler limited Absorption and Fluorescence Spectroscopy with lasers, Fluorescence Excitation Spectroscopy and LIF. Non- linear Spectroscopy. Doppler- Free Techniques in Spectroscopy. Laser Raman Spectroscopy, Time-Resolved Laser Spectroscopy. Properties of Lasers, Applications of Lasers.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	10	5	70

## INTEGRATED PHYSICS LAB-III

Course Code: PHY4316

Credit Units: 03

### Course Contents:

1. Fabrication of thermocouple and calibration of the same for the temperature measurement.
2. Production and characterization of plasma.
3. Determination of the transition temperature of the materials undergoing phase transition and calculation of the transition enthalpy.
4. Determination of Young's modulus of steel by flexural vibrations of a bar.
5. To measure numerical aperture and propagation loss and bending losses for optical fibre as function of bending angle and at various wavelengths.
6. To determine wavelength of a given laser source.
7. To determine the Diameter, Divergence and Focus Spot Size of a Laser Beam.
8. To measure the degree of polarization using laser.
9. To study Propagation loss & bending loss using Optical Fiber
10. To study the characteristics of LED & Detector using Fiber Optic.
11. To determine the numerical aperture of a given optical fiber.
12. To study the frequency modulation & demodulation by using Fiber Optic Link.
13. To determine the Planck's constant using photocell
14. To determine the mean wavelength of sodium light and to measure the wavelength difference ( $\text{\AA}$ ) using Michelson interferometer
15. To study the spectral characteristics of the incident beam using Fabry Perot Interferometer
16. To find the intensity distribution of single, double and multiple slit by using Fraunhofer diffraction pattern
17. To measure the grating element of grating by Fraunhofer diffraction pattern.
18. To determine the thickness of a thin transparent sheet using Michelson Interferometer.
19. To verify the Fresnel's formula for reflection and refraction by using a plane refracting surface using Spectrometer.
20. To determine the effect of magnetic field on the polarization state in dispersive medium (Faraday Experiment).

## SUMMER INTERNSHIP EVALUATION

**Course Code: PHY4335**

**Credit Units: 03**

### **Methodology:**

Practical training is based on the theoretical subjects studied by students. It can be arranged within the college or any in any related industrial unit or in any research lab. The students are to learn various industrial, technical and administrative processes followed in the industry/research. In case of on campus training the students will be given specific tasks of synthesizing /testing/analysis/characterization. On completion of the practical training the students are to present a report covering various aspects learnt by them and give a presentation of the same.

### **Examination Scheme**

Feedback from Industry:	20
Training Report:	40
Viva:	15
Presentation:	25
<b>Total</b>	<b>100</b>

# DIGITAL ELECTRONICS AND MICROPROCESSORS

Course Code: PHY4306

Credit Units: 03

## Course Objective:

The main aim of the course is to give concept of Digital Electronics and Microprocessor which is useful for research and industrial application.

## Course Contents:

### Module I: Boolean Algebra

Truth tables Logic gates: OR, AND, Inverter gates, The Universal NOR and NAND gates, XOR and XNOR gates, De-Morgan's Theorem, Reduction Technique Karnaugh map simplification. Parity check. The half adder, the Full adder, Parallel binary adder, half and full subtractors.

**Sequential Logic:** Latches, R.S. Flip/Flop, The D.Flip/Flop, T.Flip/Flop, J.K. Flip/flop, Master/slave flip/flop, Race Problem, Binary Ripple counter, modified counters using Negative feedback.

### Module II: Shift Registers and Counters

Universal Shift Register, shift counter, Ring Counter, D/A converter and A/D converter. Simultaneous and Counter method of A/D converter, Successive Approximation method, Seven segment LED display, BCD to seven segment decoder.

**Logic Families:** Transistor as a Switch, TTL integrated circuits, CMOS integrated circuit. Logic families and their characteristics, comparing Logic families, Interfacing. Introduction to VHDL and Programming techniques.

### Module III: Introduction to Microprocessor

Microprocessor 8085: PIN Out and Signals, Internal architecture, Flags, Program counter. Introduction to 8085 Instruction Set: Data Transfer, Arithmetic & Logical Instruction, Branch and machine Code, OP-Code Format, Addressing Mode Timing Diagram. M (10)achine Cycle.

### Module IV: Microprocessor: - Programming and Interfacing

Subroutine and Sub programming, CALL and RETURN, STACK, PUSH & POP, 8085 Interrupts, RST Code; SID, SOD, RIM and SIM; Delay Program Calculation, Memory Organization. (RAM, EPROM, ROM, PROM, DRAM.) Introduction to 8086 and registers. Addressing and Interfacing, Basic Interfacing Concept, Introduction to I/O and Memory Mapped Techniques, Handshaking, Interfacing I/O devices, Display, Keyboard, Generating Control Signals, De Multiplexing of address Bus, Programming Technique, Interfacing 8155, Programmable I/O Ports and Timer IC, Programmable Peripheral Interface 8255 with 8085. Interfacing of A/D and D/A converters, Study of 8279, 8253.

# MATERIAL SCIENCE

**Course Code: PHY4307**

**Credit Units: 03**

## **Course Objective:**

The aim of the present course is to acknowledge the students with Basics of the materials science and various types of material fabrication and their characterization techniques.

## **Course Contents:**

### **Module I: Introduction to materials**

Metals, Alloys (ferrous and non-ferrous), Ceramics and their properties, polymers and their Properties, composites, Types of Composites and their Properties, superalloys, shape memory alloys, Nanomaterials.

### **Module II: Diffusion and dislocation defects**

Crystal defects, Laws of Diffusion, Diffusion Coefficient: Temperature dependence, Factors that influence diffusion, Kirkendall Effect. Dislocation and Strengthening Mechanism: Dislocations and Slip Systems, Slip in single crystals, plastic deformation in polycrystalline materials, strengthening by grain size reduction, solid solution strengthening, strain hardening, recovery recrystallization and grain growth.

**Module III: Phase diagrams and Phase Transformations:** Phase Diagram: Phases, Eutectic Point, Gibb's Phase rule, Hume-Rothery's conditions, lever rule, Binary Phase diagrams and types, Interpretation of the phase diagrams. The liquid Phase, Nucleation, Nucleation kinetics, Homogeneous and Heterogeneous nucleation, Growth and over all transformation kinetics, Development of microstructure, Martensitic Phase Transformation, Continuous cooling transformation diagrams, Applications

**Module IV: Material Failure:** Elastic and Plastic Deformation, Mechanism of Plastic Deformation, ductile to brittle transition, Fracture and its types, fracture toughness, methods of protection against fracture. Fatigue: cyclic stresses, S-N curve, crack initiation and propagation, factors that affect fatigue life. Creep: Generalized creep behavior, stress and temperature effects, Mechanism of creep, creep resistant materials.

## **Examination Scheme:**

Components	CT	HA	S/V/Q	Attendance	EE
Weightage (%)	10	8	7	5	70

# RENEWABLE ENERGY RESOURCES

Course Code: PHY4317

Credit Units: 03

## Course Objective:

This is an introductory course to renewable energy technologies and potentials to the Science students aiming to explain basic concepts of Renewable Energy resources.

## Course Contents:

### Module I: Energy & Thermodynamics & Environmental impact

Heat Transfer in Renewable Energy Systems - conduction, convection and radiation, thermal aspects of energy generation Work, heat, and the first law of thermodynamics. Heat engines and the second law of thermodynamics. The Carnot cycle. Applications of the second law to various energy transformation processes: heat pumps and refrigerators; different engine cycles. Use of fossil fuel, Energy crisis, Global Warming, Carbon emission and climate change. Need for sustainable development and Renewable Energy

### Module II: Solar Energy ( Thermal and Photovoltaic)

Solar energy option, Environmental impact of solar power, physics of the sun, Thermonuclear reactions , Black body radiation, Spectral distribution, the solar constant, radiation on tilted surface / earth, Solar thermal Energy, Application of solar energy in Solar thermal and solar photovoltaic system, Brief introduction to 3 generation of Solar cells,

### Module III: Ocean, tidal , wave energy

Principle of ocean thermal energy conversion (OTEC), setting of OTEC plants, thermodynamic cycles. Tidal and wave energy: Fundamentals of tidal power, Potential and conversion techniques, mini-hydel power plants. Use of tidal energy, Limitations of tidal energy conversion systems.

### Module IV: Geothermal and Wind Energy

Structure of earth's interior, earthquakes & volcanoes, Geothermal resources, Hot springs, Steam ejection, Principal of working, Types of geothermal station with schematic representation, Applications.

Properties of wind, Availability of wind energy in India, wind velocity, Wind machine fundamentals; types of wind machines and their characteristics, Horizontal and Vertical axis wind mills, Elementary design principles, Coefficient of performance of a wind mill rotor, Aerodynamic considerations in wind mill design, Recent development and applications

### Module V: Hydrogen Energy and Bio-Gas

Properties of hydrogen in respect of it's use as source of renewable energy, Sources of hydrogen, Production of hydrogen; electrolysis of water, thermal decomposition of water, thermo chemical production bio-chemical production. Storage Issues of Hydrogen, Applications of hydrogen energy.

**Biomass:** Raw materials, Properties/ characteristics of bio gas, Principles of Bio-Conversion; Photosynthesis, Anaerobic/aerobic digestion, types of Bio-gas digesters, gas yield, combustion, Transportation of bio gas, bio gas plant technology & status, Biomass cogeneration Energy recovery from urban waste, Power generation from liquid waste, Bio gas applications.

## Examination Scheme:

Components	CT	HA	S/V/Q	Attendance	EE
Weightage (%)	15	5	5	5	70

CT – Class Test, S/V/Q – Seminar/Viva/Quiz, HA – Home Assignment, EE – End

Semester Examination

# INTRODUCTION TO ASTROPHYSICS

**Course Code: PHY4318**

**Credit Units: 03**

**Course Objective:** To develop an understanding and appreciation of the laws of the Universe. A survey of modern astronomy covering topics about the solar system, galaxies, evolution of stars and methods used to explore the Universe.

## **Course Contents:**

**Module-I:** Spectrum of EM radiation, and observation in different wavelength bands, atmospheric window. Different types of telescope, Limit of Resolution and resolving power.

Overview of major contents of universe, Black body radiation, specific intensity, flux density, luminosity, Apparent and absolute magnitudes, Bolometric magnitude, Basics of radiative transfer (Emission/absorption coefficients, source functions).

**Module-II:** Sun as a star: Basic parameters e.g. Solar constant, luminosity, effective temperature, mass, density etc.; Hydrostatic equilibrium, central temperature and pressure at centre of the Sun. Source of energy in the stars: Kelvin-Helmholtz timescale; possibility of thermonuclear reactions.

**Module-III:** Solar System: Various components of the solar system, Planets, their satellites, atmosphere at different planets, formation of the solar system.

The Galaxy: Size and shape of the Milky Way; interstellar extinction and reddening (qualitative); different types of Nebulae; orbits of stars and epicycle theory; stellar populations.

**Module-IV:** Morphological classification of galaxies; rotation curve and idea of dark matter; Active galaxies (basic understanding); clusters of galaxies and large scale distribution

Expansion of the universe; Hubble law and Hubble constant; Big-bang picture and Cosmic microwave background radiation (qualitative discussion).

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

# NONLINEAR DYNAMICS

**Course Code: PHY4319**

**Credit Units: 03**

**Course Objective:** To introduce the concepts required for understanding 'real world' nonlinear phenomena using a variety of mathematical and laboratory models. This course provides an introduction to nonlinear dynamics theory and its applications to mechanical, chemical, electromagnetic or biological oscillators; stability, phase space analysis, limit cycles, bifurcations, perturbation methods, chaos, fractals, strange attractors, and other advanced topics.

**Learning Outcomes:** On completion successful students will be able to:

- Explore the basic concepts of nonlinear dynamics using the 'simple' pendulum.
- Analyze simple one and two-dimensional nonlinear systems.
- Identify attractors of those nonlinear systems, and to characterise their stability.
- Understand and apply the basic numerical methods relevant for nonlinear systems.
- Demonstrate an understanding of what constitutes chaotic behaviour and explain why this imposes limits on predictability. Survey applications of the ideas in several areas of physics, and in other disciplines
- Describe the concept of a fractal and explain the idea of a non-integer dimension.

**Prerequisites:** A course in differential equations. Some knowledge of computer programming.

## Course Contents:

**Module I: Introduction** - Overview of the course introducing some of the basic ideas.

General introduction and motivation; examples of linearity and nonlinearity in physics and the other sciences; modelling systems using iterated maps or differential equations.

**Module II: General features of dynamical systems** - The structures that may arise in the analysis of ordinary differential equations. Systems of differential equations with examples; control parameters; fixed points and their stability; phase space; linear stability analysis; numerical methods for nonlinear systems; properties of limit cycles; Periodic orbits, limit cycles, Poincare maps, Floquet theory, nonlinear oscillators and their applications; the impossibility of chaos in the phase plane; Bifurcations: their classification and physical examples (Local and global bifurcations); spatial systems, pattern formation and the Turing mechanism; strange attractors and chaotic behaviour.

**Module III: The logistic map** - period doubling and chaos in a simple iterated map.

Linear and quadratic maps; graphical analysis of the logistic map; linear stability analysis and the existence of 2-cycles; numerical analysis of the logistic map; universality and the Feigenbaum numbers; chaotic behaviour and the determination of the Lyapunov exponent; other examples of iterated maps.

**Module IV: Fractals** - complex geometrical objects of which strange attractors are examples. How long is the coastline of Britain? Artificial fractals: the Cantor set and von Koch curve; fractal dimensions; iterations of the complex plane and the Mandelbrot set; how fractals arise in the description of dynamical systems. Multifractals

**Module V: Further aspects of chaotic dynamics** - exploring the basic ingredients of chaos. Fractal structures in simple maps; how strange attractors come about; the evolution of phase space volumes in chaotic and non-chaotic systems; mixing and information entropy. Controlling chaos NB: Of course

many topics will be skipped due to time limits. This course plan may be modified during the semester.

**Examination Scheme:**

Components	CT	HA	S/V/Q	Attendance	EE
Weightage (%)	10	8	7	5	70

CT – Class Test, S/V/Q – Seminar/Viva/Quiz, HA – Home Assignment, EE –  
End Semester Examination

**Recommended texts**

- S.H. Strogatz, "Nonlinear Dynamics and Chaos with Applications to Physics, Biology, Chemistry, and Engineering, (Addison Wesley 1994). ISBN 0-7382-0453
- K.T. Alligood, T.D. Sauer, and J.A. Yorke, *CHAOS — An Introduction to Dynamical Systems*, Springer, 1996 [A book similar in level and content to Strogatz but goes more deeply and carefully into mathematical definitions and the derivation of results. ]

**Useful references**

- I.Stewart, *Does God play Dice? The Mathematics of Chaos*, (Penguin 1990)
- James Gleick (Penguin, New York, 1987) *Chaos* [A popular, entertaining and non-mathematical survey of key advances in nonlinear dynamics and about the people who made these advances. Best book for beginners ]
- Edward Ott *Chaos in Dynamical Systems, 2nd Edition* (Cambridge University Press, 1993).
- [This is an advanced graduate-level discussion of chaos theory, with many explicit mathematical examples worked out with impressive insight.]
- Pierre Berge, Yves Pomeau, Christian Vidal *Order within Chaos* (John Wiley & Sons, New York, 1984).[An especially good introductory book for scientists (as opposed to mathematicians)with many comparisons of ideas with experimental data, but unfortunately somewhat out of date and lacks exercises. The chapters about the Fourier analysis of time series, intermittency, and the synchronization of oscillators are particularly good.]
- Michael Cross Introduction to Chaos [ an online graduate-level course. Many good insights here, strongly recommended].
- Holger Kantz and Thomas Schreiber *Nonlinear time series analysis* (Cambridge University Press, 1997). [A good summary of concepts and techniques for deducing information about a dynamical system from empirical time series.]
- T. S. Parker and L. O. Chua *Practical Numerical Algorithms for Chaotic Systems* (Springer-Verlag, 1989). [This book discusses numerical methods for analyzing nonlinear dynamical systems, although primarily lower-dimensional ones].

# PLASMA PHYSICS-I

**Course Code: PHY4323**

**Credit Units: 03**

**Course Objective:** This course aims at exposing the students to the basic knowledge of plasma physics, plasma parameters, to distinguish plasma from a gas, the motion of charged particles under different electric and magnetic field conditions. To study this course, the students will be able to understand the collective behavior of plasma, the techniques of plasma production and diagnostics.

## **Course Contents:**

### **Module–I: Introduction to Plasma Physics**

Plasma state, Natural Plasma, fundamental concepts, concept of temperature, Quasineutrality in plasma, density of plasma, electron and ion temperatures, mobility of charged particles, Debye shielding, criteria for ionized gas to be a plasma, dielectric constant of plasma, optical properties of plasma.

### **Module–II: Orbit Theory of Plasma**

Effect of magnetic field on mobility of electrons, Particle motion in a static uniform magnetic field, in uniform force, uniform electric fields, motion in gravitational fields, Grad- B drift, curvature drift, polarization drift, particle in non-uniform magnetic and electric fields, particle in time varying electric and magnetic fields.

### **Module–III: Fluid description of plasma**

Relation of plasma physics and electromagnetic, equation of motion for fluid, equation of continuity, single fluid equations, fluid-drifts perpendicular and parallel to magnetic field, magnetic pressure, magnetic tension, plasma approximation.

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

**A: Attendance, CT:** Class test, **HA:** Home assignment, **S/V/Q:** Seminar/Viva/Quiz, **EE:** End Semester Examination

## **Text & Reference Books:**

- Introduction to Plasma Physics and Controlled Fusion, Francis F. Chen, Springer.
- Fundamentals of Plasma Physics, J. A. Bittencourt, Elsevier.
- Fundamentals of Plasma Physics, Paul Murray Bellan, Cambridge.
- Textbook of Plasma Physics, Suresh Chandra, CBS Pvt Ltd.

## Syllabus - Fourth Semester

### EXPERIMENTAL TECHNIQUES

**Course Code: PHY4410**

**Credit Units: 04**

**Course Objective:** The objective of the present course is to introduce some advanced measurement, characterization and analytical methods commonly used in experimental physics research to the post graduate students.

#### **Course Contents:**

##### **Module I: Vacuum Techniques:**

Basics: Introduction to vacuum technique, units, ranges, review of Kinetic theory of gases, Physical parameters at low pressures, Throughput, different vacuum pumps for production of low, medium, high and ultra- high vacuum. Vacuum gauges (McLeod, Knudsen, Pirani, Penning and Ionization gauges), Leak detection, Industrial & Scientific applications.

##### **Module II: Diffraction and Microscopic Techniques:**

X-Ray diffraction, Electron diffraction, neutron diffraction, Transmission electron microscope (TEM), Scanning electron microscope (SEM), Energy dispersive X-ray analysis techniques (EDX). Atomic Force microscope (AFM), Surface Tunneling microscopy (STM).

##### **Module III: Spectroscopy & Thermal Techniques:**

UV-VIS spectroscopy, photoluminescence, Infra-red spectroscopy, Raman spectroscopy, Photoelectron spectroscopy (XPS, UPS, AES). Thermal Techniques: TG, DTA, DSC. Scanning Thermal Microscopy (SThM)

##### **Module IV: Accelerators & Detectors:**

Van deGraff Accelerator, Tandem Accelerator, Linear Accelerator (LINAC), Cyclotron, Betatron, Synchrocyclotron, Synchrotron. Detailed study of Ionization chamber; Proportional counter, GM counter, Scintillation detector, photomultiplier tubes, photodiode, semiconductor diode detector.

#### **Examination Scheme:**

Components	CT	HA	S/V/Q	Attendance	EE
Weightage(%)	10	8	7	5	70

CT – Class Test, S/V/Q – Seminar/Viva/Quiz, HA – Home Assignment, EE – End Semester Examination

# MAJOR PROJECT

Course Code: PHY4437

Credit Units: 09

## GUIDELINES FOR PROJECT FILE AND PROJECT REPORT

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critically analyzed by the faculty guide and corrected by the student at each stage.

## PROJECT FILE

The Project File may be a very useful tool for undertaking an assignment along-with a normal semester, an exploratory study, sponsored projects, a project undertaken during summer period or any other period as per curriculae where the researcher is working with a company/organization. The project/ assignment may also be a part of the bigger research agenda being pursued by a faculty/ institution/ department

The Project File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation. This file may be considered in continuous assessment.

### In general, the File should be comprehensive and include:

- A short account of the activities that were undertaken as part of the project;
- A statement about the extent to which the project has achieved its stated objectives;
- A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project
- Any activities planned but not yet completed as part of the project, or as a future initiative directly resulting from the project
- Any problems that have arisen and may be useful to document for future reference.

## PROJECT REPORT

The Project Report is the final research report that the student prepares on the project assigned to him. In case of sponsored project the layout of the project could be as prescribed by the sponsoring organization. However, in other cases the following components should be included in the project report:

### Title or Cover Page

The title page should contain Project Title; Student's Name; Programme; Year and Semester and Name of the Faculty Guide.

### Acknowledgement(s)

Acknowledgment to any advisory or financial assistance received in the course of work may be given.

It is incomplete without student's signature.

### Abstract

A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not

have to be an entire summary of the project, but rather a concise summary of the scope and results of the project. It should not exceed more than 1000 words.

### **Table of Contents**

Titles and subtitles are to correspond exactly with those in the text.

### **Introduction**

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

### **Materials and Methods**

This section should aim at experimental designs, materials used (wherever applicable). Methodology should be mentioned in details including modifications undertaken, if any. It includes organization site(s), sample, instruments used with its validation, procedures followed and precautions.

### **Results and Discussion**

Present results, discuss and compare these with those from other workers, etc. In writing this section, emphasis should be laid on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary, do not write in  $\frac{1}{2}$  point form.

While presenting the results, write at length about the various statistical tools used in the data interpretation. The result interpretation should be simple but full of data and statistical analysis. This data interpretation should be in congruence with the written objectives and the inferences should be drawn on data and not on impression. Avoid writing straight forward conclusion rather, it should lead to generalization of data on the chosen sample.

Results and its discussion should be supporting/contradicting with the previous research work in the given area. Usually one should not use more than two researches in either case of supporting or contradicting the present case of research.

### **Conclusion(s) & Recommendations**

A conclusion should be the final section in which the outcome of the work is mentioned briefly. Check that your work answers the following questions:

- Did the research project meet its aims (check back to introduction for stated aims)? What are the main findings of the research?
- Are there any recommendations?
- Do you have any conclusion on the research process itself?

### **Implications for Future Research**

This should bring out further prospects for the study either thrown open by the present work or with the purpose of making it more comprehensive.

### **Appendices**

The Appendices contain material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

## References

References should include papers, books etc. referred to in the body of the report. These should be written in the alphabetical order of the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

### Examples:

For research article:

Voravuthikunchai SP, Lortheeranuwat A, Ninrprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichia coli* O157: H7. *Clin Microbiol Infect* , **8** (suppl 1): 116–117.

For book:

Kowalski,M.(1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), **7**: 63-67

### The Layout Guidelines for the Project File & Project Report:

- A4 size Paper
- Font: Arial (10 points) or Times New Roman (12 points)
- Line spacing: 1.5
- Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

## ASSESSMENT OF THE PROJECT FILE AND THE PROJECT REPORT

Essentially, the assessment will be based on the quality of the report, the technical merit of the project and the project execution. Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project. Project execution is concerned with assessing how much work has been put in.

The Project should fulfill the following *assessment objectives*:

- Range of Research Methods used to obtain information
- Execution of Research
- Data Analysis (Analyze Quantitative/ Qualitative information)
- Quality Control
- Conclusions

### Assessment Scheme:

**Continuous Evaluation:** 40% (Based on punctuality, regularity of work, adherence to plan and methodology, refinements/ mid-course corrections etc. as reflected in the Project File.)

**Final Evaluation:** 60% (Based on the Documentation in the file, Final report layout, analysis and results, achievement of objectives, presentation/ viva)

**It is recommended that the Final evaluation should be carried out by a panel of evaluators.**

# NANO-SCIENCE AND TECHNOLOGY

**Course Code: PHY4404**

**Credit Units: 03**

## **Course Objective:**

The objective of the present course is to introduce Nanoscience and nanotechnology. The course also provides the fundamentals of Nanoscience & nanotechnology and some of its applications. The course further provides the introduction of some of the Synthesis and characterization techniques.

## **Course Contents:**

### **Module-I: Physics of Low-dimensional Materials -**

Nano-materials and their types, Top down and bottom up approach. 1D, 2D and 0D confinement and Concept of quantum dots, quantum wires and quantum wells; Density of states for bulk materials, quantum wells, wires and dots; Importance of size distribution control, size measurement and size selection .

### **Module-II: Synthesis of Nanomaterials**

Chemical methods: Sol-gel/Combustion method, Solvothermal, Chemical bath deposition Chemical vapour deposition, Homo- and hetero-nucleation growth methods, Co-precipitation method, Citrate precursor method. Sputtering and types: RF sputtering, DC sputtering and Magnetron sputtering. Thermal Evaporation, e-beam evaporation, Pulse Laser Ablation (PLD)

**Module-III: Properties and Applications of Nanomaterials** Physical and Mechanical properties of nanomaterials, Optical Properties, Electronic properties, Magnetic Properties, Electro-magnetic properties

### **Module-IV: Applications of Nanomaterials**

Applications of carbon based nanostructured materials: CNT, Graphene and Fullerenes, Defense application, Medical Application, Mechanical Applications. Applications in communication, Water purification and Agriculture applications.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

A-Attendance; CT-Class Test; S/V/Q-Seminar/Quiz/Viva; HA-Home Assignment; EE-End Semester Examination

# ATMOSPHERIC PHYSICS

**Course Code: PHY4405**

**Credit Units: 03**

## **Course Objectives:**

Several fundamental aspects related to Physics, Thermodynamics and Chemistry of the Atmosphere and Oceans will be introduced to the students in order to make them understand, and apply the knowledge to the physico-chemical processes that influence the weather and climate.

## **Course Contents:**

### **Module-I: Thermodynamics**

Thermodynamics of dry and moist air, atmospheric stability and dry adiabatic lapse rate, moist processes in the atmosphere, saturated and unsaturated ascent, moist adiabatic and saturated adiabatic processes in the atmosphere, saturated adiabatic lapse rate, pseudo adiabatic processes and equivalent potential temperature, conditional instability second kind, moist convection, aerosols, condensation processes, formation of cloud droplets, precipitation.

### **Module-II: Ocean Morphology**

Ocean physics, thermodynamics of sea water, observed temperature, salinity, and density in the ocean, density stratification, water mass distribution, coastal currents and upwelling, thermohaline circulation. Oceans currents, coupling of surface and deep ocean waters, basic foundation of turbulence, turbulent flows, turbulent vorticity, turbulence pressure, eddy diffusivity, coherent structures, surface fluxes, air-sea interaction, mixing processes in the ocean.

### **Module-III: Earth-Atmosphere Radiation Balance**

Radiative transfer in atmosphere and ocean: Sun and climate, Planck function, black-body radiation, local thermodynamic equilibrium, radiometric quantities, absorption and emission, Schwarzschild's equation, radiative equilibrium in a grey atmosphere, balance between incoming solar and outgoing

thermal radiation, role of aerosols, absorption by atmospheric gases, heating rates, net radiative heating, Radiative transfer in atmosphere-ocean system.

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	15	5	5	70

A-Attendance; CT-Class Test; S/V/Q-Seminar/Quiz/Viva; HA-Home Assignment; EE-End Semester Examination

# GENERAL RELATIVITY & COSMOLOGY

**Course Code: PHY4406**

**Credit Units: 03**

## **Course Objective:**

This subject aims to provide an introduction to cosmology, including the physics of the early Universe, dark matter and dark energy, and the evolution of the observed large-scale structure.

## **Course Contents:**

### **Module-I**

Newtonian Cosmology, Einstein's universe, Cosmological Principle, Olbers' paradox, Hubble's observations and Expansion of the Universe, Cosmological redshift, Einstein equation for cosmology, Friedman models.

### **Module-II**

Angular diameter distance and luminosity distance as cosmological tools, cosmological models with  $\ddot{E}$  term, Radiation dominated and matter dominated solutions. Thermal history of the Universe, radiation dominated universe, Big-bang nucleosynthesis, recombination, decoupling of matter and radiation, Horizon problem, flatness problem, introduction to inflation.

### **Module-III**

Formation of large scale structures: Density fluctuations, Jeans mass in expanding universe, evidence of dark matter, growth of fluctuations, Dark matter candidates. Alternative to Friedman cosmology, Mach's principle, introduction to Brans-Dicke theory

### **Module-IV**

Measurement of Hubble constant, various methods (e.g. Cepheid stars, Tully-Fisher relation, SNIa, Surface brightness fluctuations, Fundamental Plane relation) and recent results. Cosmic microwave background, spectrum and anisotropy, power spectrum of fluctuations, Sunyaev-Zel'dovich effect in galaxy clusters. Latest observations of SNe Ia and evidence of dark energy, Matter-energy of the Universe.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

# OPTICAL FIBERS AND COMMUNICATION

Course Code: PHY4407

Credit Units: 03

## Course Objective:

The objective of the present course is to introduce fundamentals of optical fibers, detectors and amplifiers and their applications in Physics.

## Course Contents:

### Module-I: Optical Fiber Fundamentals

Light propagation in optical fiber, Acceptance angle and numerical aperture, Losses in optical fiber: absorption loss scattering loss, bending loss, and splice loss. Pulse propagation in dispersive medium, pulse broadening, Intermodal and intramodal dispersion, group velocity dispersion (material and waveguide).

### Module-II: Modal Analysis of step index multimode and graded index fiber

Characteristics equation of step index multimode fiber, Transverse Electric (TE), Transverse magnetic (TM) and Hybrid modes, linearly polarized modes, V parameter, mode cutoff, Mode field diameter, Modal analysis of graded index fiber.

### Module-III: Optical Sources, Detectors and Amplifiers

Types of Optical Sources, Light emitting diodes (LED), Edge emitting LEDs, Coupling of LEDs with fibers, Semiconductor Lasers; Detectors: Photoconductors, Photodiodes, Avalanche Photodiodes and Phototransistors, Amplifiers: Semiconductor Laser Amplifiers, characteristics, advantages and drawback, Erbium Doped Fiber Amplifier (EDFA), gain and noise in EDFA and noise figure.

### Module-IV: Fiber Optical Communication Components and System

Coupling Components- couplers, connectors and splices, Modulators and Modulation methods, Transmitters, Receivers, Repeaters and switches; Transmitter, Receiver and link design, Line codes for optical fiber links, wavelength division multiplexing (WDM) and Optical Division Multiplexing.

## Examination Scheme:

Components	CT	HA	S/V/Q	Attendance	EE
Weightage (%)	10	8	7	5	70

# PHYSICS OF SOLAR PHOTOVOLTAICS

**Course Code: PHY4408**

**Credit Units: 03**

## **Course Objective:**

In this course, one would learn about the fundamentals of photoelectric conversion: charge excitation, conduction, separation, and collection. You will become familiar with commercial and emerging photovoltaic (PV) technologies and various cross-cutting themes in PV: conversion efficiencies, loss mechanisms, characterization, manufacturing, systems, reliability, life-cycle analysis, and risk analysis

## **Course Contents:**

### **Module I: Solar Cells and Sunlight**

Outline of solar cell development, physical source of sunlight, review of solar intensity at the Earth's surface, solar insolation data

### **Module II: Review of Semiconductor Properties**

Crystal structures and orientations, forbidden energy gaps, dynamics of electrons and holes, carrier density, carrier transport, generation and recombination of carriers due to light, direct and indirect band gap semiconductors, basic device physics, p-n junction diode,

### **Module III: Standard Silicon Solar Cell Technology (1<sup>st</sup> generation solar cells)**

Photovoltaic effect, solar cell output parameters, characteristic lifetime, diffusion length, diffusion coefficient, absorption coefficient, efficiency limits, losses, and measurements. Review of fabrication technology, polysilicon and single crystal silicon cell technologies. Design of Solar Cells, Solar cells to solar module

### **Module IV: Thin Film Solar cells (2<sup>nd</sup> – Generation)**

Polysilicon silicon, amorphous silicon, gallium arsenide solar cells, copper sulfide and cadmium sulfide solar cells, potential & drawbacks of currently manufactured technologies (single- and multicrystalline silicon, CdTe, CIGS, CPV)

### **Module V: Emerging Solar Cells technologies and concepts (3<sup>rd</sup> –Generation)**

Organic solar cells, Dye-sensitized solar cells, Perovskite solar cells, GaAs solar cells, Thermo-photovoltaic approaches to overcome single junction efficiency limits, spectrum modification approaches, hot carrier solar cells, Quantum Dot solar cells

# BIOPHYSICS

**Course Code: PHY4409**

**Credit Units: 03**

## **Course Objective:**

This course aims at exposing the students to basic Biophysics concepts which will be useful for them to solve the integrated problems of Biology and Physics.

## **Course Contents:**

### **Module I: General Biophysics and Techniques in Biophysics**

Fundamentals of Biophysics, Surface tension, Adsorption, Osmosis, Osmotic pressure, Dialysis, Colloids, Colloidal systems of life, Buffer, Buffer capacity, Buffers in life system, pH, its importance, Basics of spectroscopy, X-ray crystallography, NMR, UV etc

### **Module II: Molecular Biophysics**

Different levels of protein structure, Primary, secondary, tertiary and quaternary structure. Main chain and side chain torsion angles, Alpha helix, beta sheet, turns. Ramachandran plot, Allowed conformations for a pair of linked peptide units, Motifs and domains.

### **Module III: Thermodynamics**

Laws of thermodynamics, concept of free energy, unavailable energy and entropy, heat content of food, bomb calorimetry, chemical kinetics – rate, order, molecularity of reactions and energy of activation

### **Module IV: Simulations, Data Analysis and Visualization**

Advantages and challenges in simulations of Biophysics, Basics of simulation software such as NAMD and/or GROMACS, Data Analysis of simulation generated data, Visualization software such as PyMol and VMD

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE

# RADIATION PHYSICS

Course Code: PHY4411

Credit Units: 03

## Course Objective:

The objective of the course on Radiation Physics is to expose the students to the concepts of different kinds of radiations, their interaction with matter, radiation detection and radiation dosimetry. The course will enable students to understand that interaction of matter with different kinds of radiations such as charged particles, electrons, neutrons, EM waves etc. and further their technological applications primarily as radiological applications.

## Course Contents:

### Module I: Radiation Sources

Basic units and definitions, Fast electron sources: beta decay, internal conversion & Auger electrons; Heavy charged particle sources: Alpha decay & spontaneous fission; Sources of electromagnetic radiation: Gamma rays following beta decay, Annihilation radiation, Bremsstrahlung, Characteristic X-rays & Synchrotron radiations; Neutron sources: Radioisotope sources & photoneutron sources

### Module II: Radiation Interaction

Interaction of heavy charged particles: Nature of interaction, stopping power, energy loss characteristics, The Bragg curve, Energy straggling, Range & Range straggling, Energy loss in thin absorbers; Interaction of fast electrons: Specific energy loss, Electron range and transmission curves, Interaction of gamma rays: Photoelectric absorption, Compton scattering, Pair production; Interaction of neutrons: Slow neutron & fast neutron interaction; Radiation exposure and dose: Gamma ray exposures, Absorbed Dose, Dose equivalent,

### Module III: Radiation Detectors and Spectroscopy:

General characteristics of detectors: Detector model, Modes of detector operation, Energy resolution, Detector efficiency; Gas filled detectors, Organic and inorganic scintillation detectors, Semiconductor detectors [Si(Li), Ge(Li) HPGe]. Photomultiplier tubes, Gamma ray spectrometers, Gamma ray spectrometry with NaI(Tl) scintillation and semiconductor detectors; Background and detector shielding.

### Module IV: Radiation Dosimetry

Radiation dosimetry, its types and applications: Environmental, space, personal and medical dosimetry; General properties of dosimeter; Thermoluminescence (TL) and its mechanism; TL dosimetry: TL glow curve and TL spectra; Concept of trapping parameters: activation energy, order of kinetics & frequency factor; TLD protocols, optically stimulated luminescence (OSL) based dosimetry

## Examination Scheme:

Components	A	CT	S/V/Q	H	E
Weightage (%)	5	10	10	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

## Text Books

## PLASMA PHYSICS-II

Course Code: PHY4412

Credit Units: 03

### Course Objective:

This course has been so framed to give the students a solid grounding of plasma physics, waves in plasma, fluid theory and kinetic theory of plasma. Also the students will be able to understand the applications of natural plasma in industry and nature.

### Course Contents:

#### Module-I: Waves in a fluid plasma

Representation of waves, plasma oscillations, electron plasma waves, ion plasma waves, Sound waves, Ion waves, plasma approximation, electrostatic electron waves perpendicular to magnetic, electrostatic ion waves perpendicular to B, Lower frequency waves, Electromagnetic waves, Magnetosonic and Hydromagnetic waves.

#### Module-II: Kinetic theory of plasma

Difference between fluid theory and kinetic theory, distribution function and microscopic variables, Boltzmann equation, fluid equations, Vlasov equations, Landau damping, physical mechanism of Landau damping, Energy equations, moment equations, cold plasma limit.

#### Module-III: Transport processes in plasma

Collision parameters, Diffusion parameters, Ambipolar diffusion, Recombination, diffusion across a magnetic field, ambipolar diffusion across the magnetic field, collision in a fully ionized plasma, plasma resistivity, single fluid MHD equations, Diffusion in fully ionized plasma.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	10	5	70

A: Attendance, CT: Class test, HA: Home assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination

# HIGH ENERGY PHYSICS

**Course Code: PHY4413**

**Credit Units: 03**

## **Course Objective:**

The aim of the course is to introduce the basic concepts of elementary particle physics and quantum field theory for a clear understanding of the universe at very fundamental level. Further, the students will be able to gain knowledge of the important concepts which are used in modern day particle physics experiments.

## **Course Contents:**

### **Module I: Basic Concepts**

Natural units, Cosmological origin of universe, Fundamental building blocks and interactions, Historical introduction to particle zoo, Cross section, Decay rate, Pseudo-rapidity, Discrete and Continuous Symmetries, Isospin, Strangeness, Hypercharge, Parity, Meson and Baryon Octet, Baryon Decuplet, Eight-fold way, Charge Conjugation, Time Reversal, CP symmetry, CPT theorem, Feynman diagrams, Collider physics, Integrated Luminosity, Hybrid detectors.

### **Module II: Standard Model of Particle Physics**

Gauge theory, Local and global symmetry, Spontaneous breaking of symmetry, Abelian and Non-Abelian gauge fields, Goldstone theorem, Higgs mechanism, Higgs field and coupling to three generations of matter, Gauge boson and fermion mass generation via spontaneous symmetry breaking, Elementary idea of CKM matrix, Basic introduction of Glashow-Weinberg-Salam theory.

### **Module III: QCD and Quark Model**

Deep inelastic scattering, Quark model, Asymptotic freedom, Color confinement, Hadron formation, Flavor symmetry.

### **Module IV: Basic Idea of Beyond Standard Model Physics**

Neutrino – types, oscillation and mass, Elementary idea of Supersymmetry & String theory, Dark matter & Dark Energy, New Physics.

## **Examination Scheme:**

Components	CT	HA	S/V/Q	Attendance	EE
Weightage (%)	10	8	7	5	70

CT – Class Test, S/V/Q – Seminar/Viva/Quiz, HA – Home Assignment, EE – End Semester Examination

# Syllabus - First Semester

## BASIC BIOCHEMISTRY

**Course Code: BCH4101**

**Credit Units: 03**

**Course Objective:** The main objective is to prepare students with the basic concepts of biochemistry. This course will provide students with knowledge of the fundamentals of biochemistry like thermodynamic processes, metabolic pathways, carbohydrates, lipids.

### Course Contents:

#### Module-I: Fundamentals of Biochemistry, Carbohydrates and Lipids

Macromolecules and their monomeric subunits. Properties of Water: with interactions in aqueous systems. Ionization of water, weak acids and weak base. Preparations of solutions of different strength and scales (molarity, molality, normality, formality, w/w, v/v ratio calculation exercises). The pH scale, measurement of pH, pH metry, acid base titration curves. Buffers, biological buffer systems.

**Carbohydrates:** Classification, basic chemical structure, monosaccharides, aldoses, and ketoses, cyclic structure of monosaccharides, isomerism; keto aldo, D-and L- isomerism, optical isomerism, anomers and epimers, mutarotation, chemical properties of monosaccharides, action of strong acids, alkalis, oxidation, reduction, osazone formation glycoside formation; Derivatives of monosaccharides, phosphoric acid ester, amino sugar, deoxy sugar, sugar acids, sugar alcohols, Formation of disaccharides, reducing and non-reducing disaccharides; disaccharides maltose, lactose, sucrose. homo polysaccharides - starch, glycogen, cellulose, dextrin; hetero polysaccharides - types of glycosaminoglycans and functions of glycoproteins structural and storage polysaccharides; Structure and role of glycoconjugates - proteoglycans, glycoproteins and glycolipids (gangliosides and lipopolysaccharides); General reaction and properties. Carbohydrates as informational molecules.

**Lipids:** Building blocks of lipids - fatty acids, glycerol, ceramide; Storage lipids - triacyl glycerol and waxes; Structural lipids in membranes – glycerophospholipids; Galactolipids and sulpholipids, etherlipids, sphingolipids and sterols, structure, distribution and role of membrane lipids. Plant steroids; Lipids as signals, cofactors and pigments. Separation techniques Lipoproteins, Chylomicrons, LDL, HDL, and VLDL. Pathological changes in lipid levels. Formation of micelles, monolayers, bilayer, Liposomes, Vitamins and Co-enzymes: Classification, water-soluble and fat-soluble vitamins. Structure, dietary requirements, deficiency conditions, coenzyme form

#### Module-II: Fundamental of Thermodynamics & Metabolism of Carbohydrates

Laws of thermodynamics. Concept of state functions, enthalpy, entropy, free energy, standard free energy, change, equilibrium constant, coupled reactions, energy charge, ATP cycle, phosphorylation potential, and phosphoryl group transfers. Chemical basis of high standard energy of hydrolysis of ATP, PEP, 1,3 BPG and thioesters. Redox reactions, standard redox potentials and Nernst equation. Universal electron carriers. Autotrophs, Heterotrophs, catabolism, anabolism, metabolic pathways, ATP as energy currency, experimental approaches to study metabolism, High energy compounds. **Glycolysis:** overview, reactions, regulations including hormones, fates of pyruvate, feeder pathways for glycolysis, galactosemia. Lactose intolerance. **Cori and Cori cycle.** **Pentose phosphate pathway** and its importance, Relationship between glycolysis and pentose phosphate pathway. Anaerobic ATP production, fermentation. Cyanide resistant respiration, Pasteur Effect. Glycogen synthesis, glycogen breakdown, regulation of glycogen metabolism, gluconeogenesis. Overview of **citric acid cycle**, synthesis of acetyl Coenzyme A, enzymes of citric acid cycle, regulation of citric acid cycle, use of isotope for the study of citric acid cycle, anaplerotic reactions, amphibolic nature, Malate aspartate shuttle, Glyceraldehyde-3-phosphate dehydrogenase shuttle,

Glyoxylate cycle in plants. Signaling pathways, regulation of carbohydrate metabolism by hormones, diseases associated with metabolic irregularities. **Oxidative phosphorylation;** The electron transport chain - its organization and function. Peter Mitchell's chemiosmotic hypothesis and Proton motive force. FoF1 ATP synthase, structure and mechanism of ATP synthesis. Metabolite transporters in mitochondria. Regulation of oxidative phosphorylation. ROS production and antioxidant mechanisms. Thermogenesis. Alternative respiratory pathways in plants.

### Module-III Metabolism of lipids and Amino acids

**Degradation of lipids;** Lipid digestion, absorption and transport. Fatty acid oxidation: transport to mitochondria, activation of fatty acids,  $\beta$  oxidation of saturated, unsaturated, odd and even numbered and branched chain fatty acids, regulation of fatty acid oxidation, peroxisomal  $\beta$  oxidation,  $\omega$  oxidation and  $\alpha$  oxidation. Ketone-body metabolism. **Synthesis of lipids;** Transport of mitochondrial Acetyl Co A to cytosol, Fatty acid synthase complex enzyme. Synthesis of saturated, unsaturated, odd and even chain fatty acids, regulation of fatty acid metabolism. Synthesis of glycerophospholipids and sphingolipids. Cholesterol metabolism, diseases associated Metabolic fates of amino groups. Transamination, role of pyridoxal phosphate, glucose-alanine cycle, Krebs's bicycle, urea cycle, its regulation and inherited defects of urea cycle. Gamaglutamyl cycle. Catabolic pathways of individual amino acids. Glucogenic and ketogenic amino acids. Metabolism of one carbon units.

# BIOCHEMISTRY OF PROTEINS AND ENZYMES

**Course Code: BCH4109**

**Credit Units: 03**

**Course Objective:** The main objective is to prepare students with the basic concepts of Protein and enzyme biochemistry. This course will provide students with knowledge of the fundamentals of enzyme kinetics and conceptual understanding of proteins.

## **Module-I: Introduction to amino acids, peptides and proteins**

Amino acids and their properties - hydrophobic, polar and charged. Physical properties, optical properties (Stereoisomerism); Chemical properties (acid base properties, titration curve) of amino acids; Uncommon amino acids and their functions. Multimeric proteins, Conjugated proteins and Metallo-proteins. Diversity of peptide and protein function and their applications. Solid phase peptide synthesis. Organization of protein structure into primary, secondary, tertiary and quaternary structures.  $\alpha$ -helix  $\beta$ - structure,  $\beta$ -helix, super secondary structure. Tertiary Structure: Forces stabilizing, unfolding/ refolding expt. Prediction of tertiary Structure. Quaternary structure – hemoglobin. Ramachandran plot. Helix coil transitions, Vander Walls, electrostatic, Hydrogen bonding, and hydrophobic interactions. Protein motif; zinc finger, leucine zipper, Solid phase peptide synthesis. N-terminal and C-terminal amino acid analysis. Sequencing techniques - Edman degradation. Generation of overlap peptides using different enzymes and chemical reagents. Disulfide bonds and their location. Forces stabilizing the protein structure - covalent and non-covalent. Importance of primary structure in protein folding. The peptide bond, dihedral angles  $\psi$  and  $\phi$ , helices, sheets and turns, Ramachandran map. Motifs and domains. Structures of myoglobin and hemoglobin,  $\alpha$ -keratin, silk fibroin, collagen.

## **Module II: Protein folding, Conformational Diseases and Specialized proteins**

Denaturation and renaturation of Ribonuclease A – discovery of protein folding. Introduction to thermodynamics of folding and molten globule. Assisted folding by molecular chaperones, chaperonins and PDI. Defects in protein folding. Diseases associated with misfolding – Alzheimer's and Prion based. Transport protein: Hemoglobin - Oxygen binding curves, influence of 2,3-BPG, CO<sub>2</sub> and H<sup>+</sup>, Hill plot, Cooperativity between subunits and models to explain the phenomena - concerted and sequential models. Hemoglobin disorders-sickle cell anemia, thalassemia's. Motor proteins- Actin and myosin. Defense proteins- Antibodies, Membrane proteins Integral and membrane associated proteins. Hydropathy plots to predict transmembrane domains.

## **Module-III: Extraction, purification and characterization of proteins**

Solubilization of proteins from their cellular and extracellular locations. Use of mechanical and chemical methods, homogenization, ultrasonication, French press and centrifugation. Ammonium sulphate fractionation, solvent fractionation, dialysis and lyophilization Ion exchange chromatography, molecular sieve chromatography, hydrophobic interaction/reverse phase chromatography, affinity chromatography, HPLC and FPLC. Determination of purity, molecular weight, extinction coefficient and sedimentation coefficient. IEF, SDS-PAGE and 2-D electrophoresis.

## **Module-IV: Enzyme Kinetics**

Nature of enzymes - protein and non-protein (ribozyme, abzymes). Cofactor and prosthetic group, apo- and holo-enzymes. Features of enzyme catalysis. Classification of enzymes and nomenclature. Fischer's lock & key and Koshland's induced fit hypothesis. Enzyme specificity. Enzyme kinetics- Michaelis-Menten equation, Lineweaver-Burk plot. Determination of  $K_m$ ,  $V_{max}$ ,  $K_{cat}$ . Factors affecting enzyme activity.

Enzyme inhibition-Reversible (competitive, uncompetitive, non-competitive) and irreversible inhibition. Mechanism based inhibitors.

### Module-V Mechanism of enzyme action, enzyme regulation and Bioluminescence

General mechanisms of action. Acid-base and covalent catalysis (chymotrypsin, lysozyme). Metal activated enzymes and metalloenzymes. Allosteric regulation and feedback inhibition (ATCase). Reversible covalent modification (glycogen phosphorylase). Proteolytic cleavage zymogen. Multienzyme complex. Coenzymes. Isoenzymes. Applications of enzymes in research. Application of enzymes in diagnostics (SGPT, SGOT, creatine kinase), Enzyme immunoassay (HRP), Enzyme therapy (Streptokinase). Pancreatic enzymes; Trypsin, Chymotrypsin, Elastase, Protease and Protease inhibitors. Multienzyme complex: Pyruvate Dehydrogenase system, (*E. coli* and mammalian), Tryptophan synthetase, fatty acid synthetase. Clogged gutter mechanism of enzyme inhibition. **Bioluminescence**; History, Source of Bioluminescence material, examples of bioluminescence organism Mechanism of Bio- luminescence in specific organisms, Evolution and Bioluminescence. Use and applications of bioluminescence Unusual Bio-molecules; Prions, Fullerenes, Small Nuclear Riboproteins (SNURPNs), Lectins, Antifreeze proteins, Stress Proteins, Chaperons, Ionophores (Crown ethers, Cryptans) Biomimetic Chemistry- Mimicking of Ion Channels, Enzyme receptor carriers, antibodies, Vesicles and Sensors, Enzyme mimicking-Cram's Protease Model, Rebok's allosteric Model and Flavino-phores for NAD Host-guest Chem

# BIOSTATISTICS

**Course Code: BCH4102**

**Credit Units: 02**

**Course Objective:** An important objective of the course is to develop an understanding of the basics of biostatistics. The course will familiarize students with the application of biostatistics that will be highly beneficial during their experimental analysis and research.

## **Course Contents:**

### **Module-I: Biostatistics I**

Principles and practice of statistical methods in biological research, samples and populations, measures of central tendency; mean, median mode; standard deviations and standard error, measures of dispersion: correlation and regression, sampling theory, Coefficient of variation, standard deviation; Range and interquartile range; Grouped mean and grouped variance; Frequency distributions; One way ANOVA; Two-way ANOVA; AMOVA; student's t test, Q Test, F Test

### **Module-II: Biostatistics II**

Pearsonian chi square Basic idea of probability, probability distributions, binomial, Poisson, normal Statistical quality control, Chi Square Test – Observed and expected frequencies, Calculating p values, assumptions of a chi square goodness of fit; Correlation –Two-way scatter plot, Pearson's correlation coefficient; Regression – regression concepts, simple linear regression; Calculation of  $R^2$  and  $p$ .

## **Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>HA</b>	<b>S/V/Q</b>	<b>ATTD</b>	<b>EE</b>
<b>Weightage (%)</b>	15	5	5	5	70

## **References/Texts**

# CELL BIOLOGY AND SIGNALING

**Course Code: BCH4110**

**Credit Units: 04**

**Course Objective:** This will cover the concepts of cell biology and signaling at the post graduate level. The main objective is to prepare students with a clear concept of cellular and signaling processes to help them understand the upcoming topics clearly.

## **Course Contents:**

### **Module-I: Fundamentals of Cell & Membrane Biology**

Cell Theory: Historical background, Molecular logic of cells (Prokaryotes and Eukaryotes), Subcellular organelles: Organization, ultrastructure & Gross functions. , Cell and subcellular membrane (structure, composition & function), Role of cholesterol and fatty acid composition in membrane fluidity . Transport across cell membranes: Passive, active and facilitated transport. Symport, uniport and antiport. Unicellular, homocellular and transcellular transport processes. Transport of glucose and aminoacids into cells, Molecular and patch clamp approaches to the structure function relationship of voltage gated channels. Artificial Membranes (Liposomes) in Drug Delivery, Enveloped viruses: Structure, function and entry mechanism, importance as a probe in cell biology. Use of fluorescence probes in membrane fusion. Detail studies on influenza virus hemagglutinin (HA) and Sendai virus fusion protein as a model. Kinetics of viral-envelope protein-induced cell fusion and applications in targeted drug/gene delivery. Role of membrane proteins in normal and abnormal cell physiology.

### **Module-II: Cell Cycle & Cytoskeleton**

Cell cycle: Phases of cell cycle, Restriction points and quiescent cells, length of each phase. Cell cycle control mechanisms in yeast and mammalian cells: Role of various cyclin-Cdk complexes in transition of various check points. Role of ubiquitin-protein ligase- SCF and APC/C in the control of cell cycle. Microtubule organization center and control. Mitosis and meiosis: Different stages and their characteristic features. Cell cycle in relation to cancer and apoptosis. Concept of extracellular matrix and cell adhesion molecules. Cell junctions and their functions. Cytoskeleton: Microfilaments, intermediate filaments and microtubules, Cytoskeletal proteins in mitosis. Details of the mechanism of muscle contraction.

### **Module III: Protein Sorting & Modification**

Signal for Protein Sorting: Roadmap of biosynthetic protein traffic, Dynamics of protein trafficking, experimental evidences of protein translocation across ER-membrane. Signal Recognition Particles: Characterization and function, signal peptide and signal peptidase, Mechanism of movement of polypeptide through ER membrane into the ER lumen. Protein Modification in ER: GRP, PERK, Unfolded response pathway, eiF2a, PDI roles in survival and death. Role of PDI and Bip in protein maturation in ER. Biosynthesis of O-linked and N-linked sugars, Golgi antiport. Role of Dolicolphosphate in the biosynthesis of precursor N-linked oligosaccharides. Sorting of protein in Golgi: Evidences for three compartments for Golgi stack, sorting of resident ER-protein from other proteins, targeting of lysosomal enzymes and specificity of lysosomal enzymes phosphorylation. Golgi vesicular Transport: Coated and uncoated vesicle, Composition of coated vesicles, Role of ARF and coatomer in the formation of coated bud and vesicles. Mechanisms of targeting and fusion of Golgi-derived transport vesicles to the correct target site. Role of NSF, SNAPs and SNAREs. Protein Import in Mitochondria: Characteristics of signal sequences, nature of receptors, accessories proteins, co-receptors for import of mitochondrial proteins, mechanism. Protein Import in Peroxisomes: Characteristics of signal sequences, nature of receptors, accessories proteins, co-receptors. Mechanism of entry of proteins into the peroxisomal matrix and insertion into peroxisomal membranes. Signal for Import and Export of Macromolecules from Nucleus: Characteristics of signal sequences, nature of importins and exportins. Mechanism of entry and exit of macromolecules

from nucleus. Mechanism of entry of large and small molecules into nucleus via Nuclear-Pore-Complex.

#### **Module IV: Cell Signaling & Tissue Culture**

Signaling: General principles, endocrine, paracrine and autocrine signaling, components of intracellular signal transduction pathways. Signaling by G-protein coupled receptors, signaling of growth factors (EGF and insulin) via activation of receptor tyrosine kinases, Signaling of TGFB by direct activating Smad proteins. Cytokine signaling via JAK/STAT pathway. Cell Survival and death signals: Programmed cell death and role of caspases in extrinsic and intrinsic pathways.

**Plant tissue culture**-General techniques, nutrient media, callus, cloning and regeneration. Anther, meristem, ovary and embryo culture. Animal Tissue culture: Techniques, hybridoma technology, monoclonal antibodies.

#### **Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>HA</b>	<b>S/V/Q</b>	<b>ATTD</b>	<b>EE</b>
<b>Weightage (%)</b>	15	5	5	5	70

#### **References/Texts:**

- Molecular Biology of the Cell, Fifth Edition by Bruce Alberts.
- Molecular Cell Biology, Seventh Edition by Harvey L. Lodish and W.H. Freeman.

- Lehninger Principles of Biochemistry, Fourth Edition by David L. Nelson (Author), Michael M. Cox (Author).

# BIOCHEMICAL ENGINEERING

**Course Code: BCH4104**

**Credit Units: 02**

**Course Objective:** The course aims to promote progress in the crucial chemical engineering aspects of the development of biological processes associated with everything from raw materials preparation to product recovery, relevant to industries as diverse as medical / healthcare, food and environmental protection. Its applications are used in the food, feed, and pharmaceutical, biotechnology, and water treatment industries.

## **Course Contents:**

### **Module-I: Kinetics**

Kinetics and Statistics; Stoichiometry: mass balances; Stoichiometry: energy balances; Growth kinetics; Measurement of growth; Inhibition; Effect of pH and temperature; Factors affecting microbial growth; Immobilized enzymes: methods, mass transfer considerations.

### **Module-II: Bio-separations**

Biomass removal and disruption: Centrifugation; Sedimentation; Flocculation; Microfiltration; Sonication; Bead mills; Homogenizers; Chemical lysis; Enzymatic lysis. Membrane-based techniques: 1) Ultrafiltration, 2) Reverse osmosis, 3) Dialysis, 4) Diafiltration, 5) Pervaporation, 6) Perstraction

### **Module-III: Bioreactors**

Introduction to bioreactors; Batch and Fed-batch bioreactors, Continuous bioreactors; Immobilized cells; Bioreactor operation; Sterilization; Aeration; Sensors; Instrumentation; Culture-specific design aspects: plant/mammalian cell culture reactors.

### **Module-IV: Downstream processes**

Industrial enzymes; Fermentation: antibiotic, Process configurations (packed bed, expanded bed, simulated moving beds) Description of industrial processes; case study

## **Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>HA</b>	<b>S/V/Q</b>	<b>ATTD</b>	<b>EE</b>
<b>Weightage (%)</b>	15	5	5	5	70

## **Texts/References**

# INSTRUMENTATION TECHNIQUES

**Course Code: BCH4106**

**Credit Units: 03**

**Course Objective:** The main objective of the course is to provide students with an insight into the basic instrumentation techniques used in biochemical research.

## **Course Contents:**

### **MODULE-I: Microscopy**

Principle of light microscopy, phase contrast microscopy, fluorescence microscopy, scanning electron microscopy, transmission electron microscopy, Confocal microscopy, Cryo-electron microscopy Chromatographic techniques

### **MODULE-II: Chromatography and Centrifugation**

Preparation of sample, different methods of cell lysis, salting out, dialysis. Introduction to chromatography. Different modes of chromatography: paper, thin layer and column. Preparative and analytical applications. Principles and applications of: Paper Chromatography, Thin Layer Chromatography, Ion Exchange Chromatography, Hydrophobic interaction chromatography Molecular Sieve Chromatography, Affinity Chromatography, reverse phase chromatography. Principle of **centrifugation**, basic rules of sedimentation, sedimentation coefficient. Various types of centrifuges, low speed centrifuge, high speed centrifuge and ultracentrifuge, types of rotors. Application of centrifugation, differential centrifugation, density gradient centrifugation- zonal and isopycnic.

### **MODULE-III: Spectroscopy**

Electromagnetic radiation, interaction of radiation with biomolecules, principle of UV-visible absorption spectrophotometry, Lambert's Law, Beer's Law, working of a spectrophotometer. Applications of UV-visible absorption spectrophotometry in biochemistry. Fluorescence spectrophotometry: Phenomena of fluorescence, intrinsic and extrinsic fluorescence, applications of fluorescence in biochemistry. Circular Dichroism, FTIR, ITC, TGA, DSC.

### **MODULE-IV: Mass spectrometry & advanced florescence techniques**

Mass spectrometry; m/z ratio, McLafferty rearrangement, characteristic spectra of some simple organic molecules, Time of Flight (TOF), MS-MS, ESI-MS, MALDI, GCMS and LCMS. Fluorescence correlation spectroscopy (FCS), FRAP, FACS, FRET Techniques.

## **Examination Scheme:**

# BIOCHEMISTRY LAB

Course Code: BCH4105

Credit Units: 02

**Course Objective:** To help students learn bioorganic preparations and analysis.

## Bioorganic Preparations and Analytical Biochemistry

1. Safety measures in laboratories.
2. Preparation of normal and molar solutions.
3. Preparation of buffers, phosphate and acetate buffers.
4. Titration of a weak acid using a pH meter
5. Qualitative test for lipids.
6. Qualitative test for nucleic acids.
7. Determination of pKa and titration of Amino acids using pH meter
8. Separation of amino acids/ sugars/ bases by thin layer chromatography/paper chromatography.
9. Organic Preparations -Dinitrophenyl hydrazone of ascorbic acid or any other ketone
10. Qualitative and Quantitative Analysis of –
  - a. Carbohydrates
  - b. Free and bound phosphate
  - c. Vitamin C
11. Fats: Acid number, saponification, and iodine values
12. Fractionation of egg proteins and its quantification
13. Isolation of lipids from egg yolk and separation by TLC
14. Cholesterol estimation.

## Examination Scheme:

Components	CT	HA	S/V/Q	ATTD	EE
Weightage(%)	15	5	5	5	70

## Suggested Readings

- I.K. Interational Pvt. Ltd. (N. Delhi, Mumbai, Bangalore) 2005.
- Textbook of Biochemistry with Clinical Correlations (2011) 7th ed., Devlin, T.M., John Wiley & Sons, Inc. (New York), ISBN:978-0-470-28173-4

## BIOCHEMICAL ENGINEERING LAB

**Course Code: BCH4107**

**Credit Units: 02**

**Course Objective:** To help students learn the laboratory techniques used in the food, feed, and pharmaceutical, biotechnology, and water treatment industries.

**Course Content:**

Expt. 1: Cheese Production from Milk  
Expt. 2: Digestion of Protein into Amino Acid  
Expt. 3: Cellulose Degradation-Glucose Assay by Dinitrosalicylic Colorimetric Method  
Expt. 4: Starch Hydrolysis by Amylase  
Expt. 5: Enzyme Immobilization by Gel Entrapment- Entrapment in Polyacrylamide Gel, Entrapment In Alginate Gel, Enzyme Entrapment In Gelatin Gel  
Expt. 6: Aseptic Culture Techniques --- Use of a Steam Autoclave and Petri Dish Preparation.  
Expt. 7: Batch Submerged Fermentation of Baker Yeast in a Shaker Flask,  
Expt. 8: Wine Fermentation

**Examination Scheme:**

Components	CT	HA	S/V/Q	ATTD	EE
Weightage (%)	15	5	5	5	70

**Suggested Readings**

- Experimental Biochemistry- R.W. Switzer & L.F. Garrity (W.H.Freeman & Co.)
- Modern Experimental Biochemistry - R. Boyer (Pearson Education)
- Practical Biochemistry - K. Wilson & J. Walker (Cambridge Univ. Press)
- Laboratory Manual in Biochemistry - J. Jayaraman (Narosa Publishing House)
- Practical Biochemistry - D.T. Plummer (TATA McGraw-Hill)
- Practical Biochemistry - R.C.Gupta & S. Bhargava
- Experimental Physiology and Biochemistry - P.V.Chadha
- Experiments in Microbiology - Gilstrap-Kleyn-Nester
- Experimental Biochemistry – A Student Companion - B.S. Rao & V. Deshpande,

I.K. Interational Pvt. Ltd. (N. Delhi, Mumbai, Bangalore) 2005

## BIOINFORMATICS LAB

Course Code: BCH4111

Credit Units: 01

**Course Objective:** To help students learn applications of Bioinformatics.

1. Sequence retrieval (protein and gene) from NCBI and Molecular file formats - FASTA, GenBank/Genpept/DDBJ/PDB/SwissProt.
2. Structure download (protein and DNA) from PDB and Molecular viewer by visualization software (Pymol / Rasmol/Jmol/Chimera/Discovery Studio)
3. BLAST suite of tools for pairwise alignment
4. Multiple sequence alignment (CLUSTALW/TCoffee) and construction of guide trees
5. Domain Analysis (pfam/CDART/ CDD/ SMART/ProDom)
6. Gene prediction using GENSCAN/GLIMMER
7. Primary sequence analyses (Protparam) and Secondary structure prediction (GOR, nnPredict).
8. Homology Modeling: Tertiary structure prediction (SWISSMODEL) and Protein structure evaluation - Ramachandran map (PROCHECK)
9. Abintio modeling
10. Molecular docking and simulation
11. Phylogenetic analysis
12. Drug discovery projects and introduction of Schrodinger
13. Structural alignment and introduction of Structure databases (CATH, SCOP, and PDBsum).

### Examination Scheme:

Components	CT	HA	S/V/Q	ATTD	EE
Weightage (%)	15	5	5	5	70

### Suggested Readings

- Bioinformatics – Principles and Applications (2008), 1st ed. Ghosh, Z. and Mallick, B., Oxford University Press (India), ISBN: 9780195692303.
- M. Michael Gromiha, Protein Bioinformatics: From Sequence to Function, Academic Press (2010)
- Bioinformatics: Sequence and Genome Analysis (2001), 1st ed., Mount, D.W. Cold Spring Harbor Laborator Press (New York), ISBN: 0-87969-608-7.  
137
- Bioinformatics: A Practical Guide to the Analysis of Genes and Proteins (2005), 3rd ed., Baxevanis, A.D. and Ouellette, B.F., John Wiley & Sons, Inc. (New Jersey), ISBN: 0-47147878-4.
- D.E. Krane and M.L. Raymer, Fundamental concepts of bioinformatics, Pearson Education Inc. 2006

## Syllabus - Second Semester

### ADVANCED BIOCHEMISTRY

Course Code: BCH4201

Credit Units: 04

**Course Objective:** The objective of the course is to provide students with an insight in advanced biochemistry. The students will be provided with an in-depth knowledge about plant metabolic pathways, Biochemistry of human hormone and tissue biochemistry and fundamentals of Neurobiochemistry.

#### Course Contents:

##### Module-I: Plant Biochemistry-I

Chlorophylls and accessory pigments, Photosynthesis and Carbon assimilation. historical background and Hill's reaction. Structure of PSI and PSII complexes, Light reaction, The Z-scheme of photosynthetic electron flow, Cyclic and non-cyclic photophosphorylation, Calvin cycle and regulation; C<sub>4</sub> cycle and Crassulacean acid metabolism (CAM), Photorespiration, Photo inhibition of photosynthesis, Photosynthetic carbon reduction cycle, Synthesis of polysaccharides in plants. Photosynthesis in Microbes, Bacteria, Fungi, Algae and Yeast Plant. growth hormones- Auxins, Gibberellins, Cytokines, *Abscisic* Acid and Ethylene. Biological nitrogen fixation by free living and in symbiotic association; Structure and function of the enzyme nitrogenase. Nitrate assimilation: Nitrate and Nitrite reductase. Primary and secondary ammonia assimilation in plants; ammonia assimilation by glutamine synthetase-glutamine oxoglutarate amino transferase (GS-GOGAT) pathway. Seed storage proteins in legumes and cereals. Sulphur Assimilation in Plants.

##### Module-II: Biochemistry of Human Hormones

Functions of hormones and their regulation. Chemical signaling - endocrine, paracrine, autocrine, intracrine and neuroendocrine mechanisms. Chemical classification of hormones, Classification of Hormones Biosynthesis, Storage, Secretion, Transport and Metabolic effects (including hypo and hyper conditions) of Hormones of Pituitary, Hypothalamus, Thyroid, Parathyroid, Pancreas, Adrenal Medulla, Adrenal Cortex, Gonads, Kidneys and G I Tract and their half-lives. Hormone therapy. General introduction to Endocrine methodology. Hormone receptors - extracellular and intracellular. Receptor - hormone binding, Scatchard analysis. G protein coupled receptors, G proteins, second messengers - cAMP, cGMP, IP<sub>3</sub>, DAG, Ca<sup>2+</sup>, Effector systems - adenylyl cyclase, guanylyl cyclase, PDE, PLC. Protein kinases (PKA, PKB, PKC, PKG). Receptor tyrosine kinases - EGF, insulin and Ras - MAP kinase cascade. **Non-receptor** tyrosine kinase erythropoietin receptor JAK - STAT pathway. Steroid hormone Receptor. Receptor regulation and cross talk.

##### Module-III: Biochemistry of Tissues

**Muscles:** Structure of Skeletal, smooth and cardiac muscle, Molecular mechanisms of skeletal muscle contraction: role of troponin, tropomyosin, and calcium in contraction, excitation-contraction coupling. Smooth muscle contraction and its control. Excitation-contraction coupling in cardiac muscle. Twitch, myosin ATPase activities, The motor unit, Role of calmodulin, muscular dystrophies. **Bones:** Composition, formulation, Structure and functions, factors affecting bone metabolism, bone remodelling, osteoporosis, osteomalacia. **Connective Tissue:** Biosynthesis, composition, structure and metabolism of Collagen and its Disorders-Ehler's Syndrome (Type I to VII), Osteogenesis Imperfecta (Type I to IV).

##### Module-IV: Neurobiochemistry

Central Nervous system. Peripheral Nervous system. Blood brain barrier and CSF. Structure and maintenance of neurons. Functional classes of neurons. Membrane potentials: Resting Membrane Potential, Graded potentials, Action potential. Synapse: excitatory and inhibitory.

Temporal and spatial summation. Neurotransmitters (GABA, Acetylcholine, Dopamine) and neuromodulators (definition with examples). Somatic sensation: definition and cellular pathways of pain transmission and modulation. Biochemistry of memory mechanisms, Sensory Receptors of Taste, Vision, Odour, Hearing, Touch. Physiology of EEG, sleep.

**Examination Scheme:**

Components	CT	HA	S/V/Q	ATTD	EE
Weightage (%)	15	5	5	5	70

**Suggested Readings:**

- Lehninger Principles of Biochemistry, Fourth Edition by David L. Nelson (Author), Michael M. Cox (Author)
- Biochemistry, Fourth Edition by Donald Voet, Judith G. Voet.
- Plant biochemistry, Second Edition by Goodwin, Mercer.
- Neuroscience Exploring the Brain, Fourth Edition by M. F. Bear, B.W. Connors, M.A. Paradiso

# STRUCTURAL BIOLOGY

**Course Code: BCH4202**

**Credit Units: 03**

**Course Objective:** This course will provide students with a detailed knowledge about protein structure, allowed and disallowed conformations, protein folding and functions. An insight into protein crystallography will be given which will familiarize students with the theoretical knowledge of solving protein structures.

## **Course Contents:**

### **MODULE-I: MACROMOLECULAR STRUCTURE**

Structure of proteins. nucleic acids; membranes, action of other biologically important molecules and molecular assemblies like ribosomes, nucleosomes; functional significance of structure. Van der Waals radii of atoms (equilibrium separation (between non covalently bonded atoms) –contact distance criteria; Noncovalent forces determining biopolymer structure; dispersion; forces; electrostatic interactions; van der Waals interactions; hydrogen bonds; hydrophobic interactions; distortional energies; description of various interactions by potential functions; principles of minimization of conformational energy.

### **MODULE-II: PRINCIPLES OF PROTEIN STRUCTURE**

Structural implications of the peptide bond; rigid planar peptide unit; cis and trans configuration; conformations of a pair of linked peptide units; 8 torsion angles phi and psi -steric hindrance; hard sphere approximation; allowed and disallowed conformations; Ramachandran Diagram; conformational maps for glycine and other natural amino acids; conformationally constrained amino acids and their importance., Intrinsically disordered protein

### **MODULE-III: MACROMOLECULAR CRYSTALLOGRAPHY**

DNA External features and symmetry – unit cell and Miller indices – seven crystal systems – Bravais lattices – point groups and space groups – X-ray diffraction – Bragg's law Generation, detection and properties of X-rays-choice of radiation, Patterson function synchrotron radiation Powder photographs – interpretation of powder photograph – ASTM index. Theory of diffraction by helical structures and application to alpha-helix and. Steps and Procedures of structure solution: MR, MIR, MWAD, SWAD. Dynamic nature of proteins, protein folding problem, Levinthal's paradox, energy landscape theory, introduction to small angle x-ray scattering (SAXS).

### **MODULE-IV: DLS, NMR and EPR**

Theory of Dynamic Light Scattering, Hydrodynamic Diameter, Number average diameter, volume average diameter, Intensity average diameter. NMR spectroscopy, relaxation methods, CW and FT NMR, chemical shift, spectra of aldehyde, ketone, alcohol and steroids, magic angle, 2D NMR, TOCSY, NOSEY, COSEY. Fundamentals of EPR.

## **Examination Scheme:**

Components	CT	HA	S/V/Q	ATTD	EE
Weightage (%)	15	5	5	5	70

## **Suggested Readings:**

- Lehninger Principles of Biochemistry, Fourth Edition by David L. Nelson (Author), Michael M. Cox (Author)
- Crystallography Made Crystal Clear: A Guide for Users of Macromolecular Models.

# GENETICS

**Course Code: BCH4203**

**Credit Units: 04**

**Course Objective:** To provide students with an overview of the principles of plant and animal genetics including Mendelian and modern concepts of heredity. Developments in molecular genetics will be addressed through the chemistry and physiology of the gene and the nature of gene action in prokaryotic and eukaryotic cells. This course will also provide students with knowledge of the diseases arising out of genetic disorders.

## **Course Contents:**

### **MODULE-I: PRINCIPLES OF GENETICS**

Model systems in genetic analysis: *E.coli*, *Neurospora crassa*, yeast, *Drosophila*, *Arabidopsis*, Maize, *C. elegans*, Zebra fish. Mendelian Genetics- Concept of allele, Mendel's Laws of Inheritance, Mendelian Genetics in Eukaryotic life cycles with specific examples from plants, *Drosophila* and human. Chromosome theory of inheritance, chromosome segregation in meiosis, formation and function of synaptonemal complex, crossing over and chiasmata formation, genes affecting mitosis & meiosis, cytological basis of crossing over. Extensions to Mendelism: Codominance, incomplete dominance, gene interactions, multiple alleles with specific example of ABO blood group in humans, pleiotropy, penetrance and expressivity. Genes and environment: norm of reaction, phenocopies sex limited and sex influenced characters. - pseudo alleles- Rh blood group incompatibility; complex loci ; complementation test in Genetics, Extra chromosomal inheritance: Inheritance of mitochondrial and chloroplast genes, maternal inheritance. Role of genetics in Agriculture, Industry and medicine.

### **MODULE-II: LINKAGE & MAPPING TECHNIQUES**

Linkage: Discovery, coupling versus repulsion of syntenic alleles Genetic mapping: Recombination frequency and map construction, genetic mapping in a three-point test cross, examples of linkage maps, coincidence and interference. Haploid mapping-tetrad analysis in fungi; unordered (yeast) and ordered (*Neurospora*) spores; chi-square test for linkage, LOD score for linkage testing. Physical mapping: Somatic cell hybridization for positioning genes on chromosomes and physical maps using molecular markers, DNA polymorphism in mapping. Polygenic inheritance, QTL mapping and development of mapping population in plants.

### **MODULE-III: HUMAN GENETICS I**

History and development of Human genetics- hereditary traits, genetics and disease; organization of the Human genome; Unique & Repetitive DNA ;; Methods of genetic study in humans (Pedigree analysis, Chromosomal, Biochemical and Somatic cell genetics analysis ); Sex –linked, sex-limited and sex-influenced traits. Human Genome Project Chromosomal Basis of genetic disorders: Karyotyping and identification of chromosome variation, Metabolic disorders, inter-allelic and intra-allelic heterogeneity; defects in membrane transport (cystic fibrosis), defects in structural proteins (DMD and BMD), collagen disorders (Osteogenesis imperfecta), Genetical factors in common diseases- congenital defects, coronary heart disease, diabetes, cancers, mental diseases, genetic counselling,

### **MODULE IV: HUMAN GENETICS II**

Pharmacogenomics: Pharmacogenetics, genetics of globin triplet repeat disorders, Effects of drugs in individual and susceptibility: Acetylation polymorphisms, Succinyl choline sensitivity and G6PD deficiency. Cancer genetics and immunogenetics

**Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>HA</b>	<b>S/V/Q</b>	<b>ATTD</b>	<b>EE</b>
<b>Weightage (%)</b>	15	5	5	5	70

**Suggested Readings:**

- Genetics, Fourth Edition by P.K. Gupta.
- Principles of Genetics, 8<sup>th</sup> edition by Gardener, Simmons, Snustad.
- Genetics, Third edition by Strickberger, Monroe W.
- Principles of Genetics, 7<sup>th</sup> edition by Robert H. Tamarin

# CLINICAL BIOCHEMISTRY

**Course Code: BCH4204**

**Credit Units: 03**

**Course Objective:** The objective of the course is to provide students with a knowledge of the various diseases arising due to disorders in the biochemical processes of cells, involving the hepatobiliary, myocardial and endocrinal systems. It also provides preliminary knowledge of cancer biology. This course also provides in-depth knowledge of amino acid and Nucleic acid metabolism and disorders

## **Course Contents:**

### **MODULE-I: Introduction to Clinical Biochemistry**

Definition and scope of Clinical Biochemistry in diagnosis, collection and preservation of biological fluids (Blood, Urine, CSF), normal value of important constituents of blood, CSF and urine. Blood Clotting – Disturbances in blood clotting mechanisms – haemorrhagic disorders – haemophilia, von Willebrand's disease, purpura, Rendu-Osler-Werber disease, thrombotic thrombocytopenic purpura, disseminated intravascular coagulation, acquired prothrombin complex disorders, circulating anticoagulants.

### **MODULE-II: Disorders of Carbohydrate, Lipid and Amino acids Metabolism**

**Disorders of Carbohydrate Metabolism** – Diabetes mellitus, glucose and galactose tolerance tests, sugar levels in blood, renal threshold for glucose, factors influencing blood glucose level, glycogen storage diseases, G6PD, pentosuria, galactosemia. **Disorders of Lipids** – Plasma lipoproteins, cholesterol, triglycerides & phospholipids in health and disease, hyperlipidemia, hyperlipoproteinemia, Gaucher's disease, Tay-Sach's and Niemann-Pick disease, ketone bodies, Abetalipoproteinemia. **Catabolism, Biosynthesis and disorders of Amino Acid metabolism;** Catabolic pathways of individual amino acids. Glucogenic and ketogenic amino acids. Metabolism of one carbon units. Disorders of amino acid metabolism, phenylketonuria, alkaptonuria, maple syrup urine disease, methyl malonic acidemia (MMA), homocystinuria and Hartnup's disease. Overview of amino acid synthesis. Biosynthesis of non-essential amino acids and its regulation. *De novo* synthesis of purine and pyrimidine nucleotides, regulation and salvage pathways. Digestion of nucleic acids, degradation of purine and pyrimidine nucleotides. Inhibitors of nucleotide metabolism. **Metabolic disorder of nucleotides:** gout, Lesch-Nyhan Syndrome, SCID, adenosine deaminase deficiency. Artherosclerosis and its risk factor.

### **MODULE-III: Diseases caused due to misfolded proteins and Autoimmune diseases**

Alzheimer's, Huntington's diseases, Kuru, Creutzfeldt-Jakob disease, Sickle Cell anaemia, Thalassemia. Concepts in immune recognition-self and non-self-discrimination, organ specific autoimmune diseases-Hashimoto's thyroiditis, Graves' disease, Myasthenia Gravis, Diabetes Melitus-I, Systemic diseases: Systemic lupus erythematosus (SLE), Rheumatoid arthritis.

### **MODULE-IV: Infectious diseases and Hormonal imbalances**

Viral infection: Polio, Measles, Mumps, influenza, HIV. Bacterial infections: Tetanus, Diphtheria, Tuberculosis, Typhoid, Cholera. Protozoan: Malaria and Trypanosomiasis. Parasitic infections: Leishmania. Hormonal imbalances leading to disease: Diabetes Insipidus, Acromegaly, Gigantism, Dwarfism, Goitre, Cretinism, Cushing and Conn's syndrome, Addison's disease.

### **Module-V: Organ Functional test and Diagnostic Enzymes**

Enzymes in health and diseases. Biochemical diagnosis of diseases by enzyme assays – SGOT, SGPT, CPK, cholinesterase, LDH. Kidney and liver functional test, Jaundice, Hepatitis, pancreatic, gastric and

intestinal functional test, myocardial infarction test.

**Module-VI: Cancer Biology and *In vitro* fertilization**

Cancer Biology: Phenotypic characters of cancer cells; Genetic basis of cancers: Protooncogene, Oncogene, Tumor suppressor genes, Hodgkin's and Non- Metastasis, anti-cancer drugs & chemotherapy. Fundamentals of IVF.

**Examination Scheme:**

Components	CT	HA	S/V/Q	ATTD	EE
Weightage (%)	15	5	5	5	70

**Books recommended:**

- Notes on clinical chemistry- Whitby-Smith-Beckett-Walker. Balackwell Sci, Inc.
- Principle of internal Medicine- Harison T. R. McGrow Hill, NY.
- Textbook of Biochemistry with Clinical Correlations (2011) Devlin, T.M. John Wiley & Sons, Inc. (New York), ISBN: 978-0-4710-28173-4
- Immunology: A Short Course (2009) 6th ed., Coico, R and Sunshine, G., John Wiley & Sons, Inc (New Jersey), ISBN; 978-0-470-08158-7
- Biochemistry (2012) 7th ed., Berg, J.M., Tymoczko, J. L. and Stryer, L., W.H Freeman and Company (New York)
- Genetics (2012) 6th ed., Snustad, D.P. and Simmons, M.J., John Wiley & Sons. (Singapore) ISBN: 978-1-118-09242-2
- Klein's Microbiology, (2008) 7 ed., Prescott, Harley, Wiley, J.M. Sherwood, L.M. Woolverton, C.J. Mc Graw Hill International Edition (New York) ISBN: 978-007-126727

# IMMUNOLOGY

**Course Code: BCH4209**

**Credit Units: 03**

**Course Objective:** The objective of this course is to familiarize students about the structural features of the components of the immune system as well as their functions. An overview of clinical immunology will help students understand the utmost importance of this particular branch of science.

## **Course Contents:**

### **MODULE-I: Cellular basis of Immunity**

Historical Perspective, Innate and Adaptive Immunity, Hematopoiesis, cells of the immune system, primary and secondary lymphoid organs and tissues. Anatomical barriers, cell types of innate immunity, soluble molecules and membrane associated receptors (PRR), connections between innate and adaptive immunity, localized and systemic response. Complement activation by classical, alternate and MB lectin pathway, biological consequences of complement activation, regulation and complement deficiencies

### **MODULE-II: Antigens and Antibody**

Antigens, carriers, adjuvants and haptens, factors responsible for immunogenicity, B and T cell epitopes. Structure, classes and subclasses of immunoglobulins, effector functions of antibody, antigenic determinants on Ig, Ig super family. Clonal selection theory of antibody production, monoclonal and polyclonal antibodies, poly reactive antibodies, catalytic antibodies, abzymes. Monoclonal antibodies production and applications

### **MODULE-III: Biology of the B Lymphocyte & T Lymphocyte**

Dreyer-Bennett hypothesis, Clonal selection theory of antibody production, multigene organization of Ig locus, mechanism of V region DNA rearrangement, mechanisms of antibody diversity. Antigen independent phase of B cell maturation and selection, humoral response – T-dependent and T-independent response, anatomical distribution of B cell populations. General organization and inheritance of MHC, structure, distribution and role of MHC class I and class II proteins, pathways of antigen processing and presentation. Structure and role of T cell receptor (TCR) and co-receptor, T cell development, generation of receptor diversity, selection and differentiation. General properties of effector T cells, cytotoxic T cells (Tc), natural killer cells; NK - T cells and antibody dependent cellular cytotoxicity (ADCC).

### **MODULE-IV: Autoimmunity and Hypersensitivity**

Self-tolerance and autoimmunity, Organ specific and systemic autoimmune diseases, Gell and Coombs classification, IgE mediated (Type I) hypersensitivity, antibody mediated cytotoxic (Type II) hypersensitivity, immune complex mediated (type III) hypersensitivity and delayed type (Type IV) hypersensitivity

### **MODULE-V: Transplantation Immunology and Vaccines**

Immunological basis of graft rejection, clinical manifestations, immunosuppressive therapy and privileged sites. Vaccines - active and passive immunization, types of vaccines

**Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>HA</b>	<b>S/V/Q</b>	<b>ATTD</b>	<b>EE</b>
<b>Weightage (%)</b>	15	5	5	5	70

**Suggested Readings:**

- Kuby Immunology (2007) 6th ed., Kindt, T.L., Goldsby, R.A. and Osborne, B.A., W.H Freeman and Company (New York), ISBN:13: 978-0-7167-8590-3 / ISBN: 10:0-7617-8590- 0
- Immunology: A Short Course (2009) 6th ed., Coico, R and Sunshine, G., John Wiley& sons, Inc (New Jersey), ISBN: 978-0-470-08158-7.
- Janeway's Immunobiology 2012 8th ed., Murphy, K., Mowat, A., and Weaver, C.T., Garland Science (London & New York), ISBN: 978-0-8153-4243-4

## TERM PAPER

**Course Code: BCH4231**

**Credit Units: 01**

### Objectives

The objective of this course is to judge the understanding as well as application of the knowledge gained by the students. The aim of the term paper is to provide the students with an opportunity to further enhance their knowledge in a sector of their choice by undertaking a significant practical unit of examining and analyzing various aspects of Biochemistry & its application at a level commensurate with the learning outcomes of the various courses taken up them in the ongoing semester.

A term paper is primarily a record of intelligent reading in several sources on a particular subject. The students will choose the topic at the beginning of the session in consultation with the faculty assigned.

### Guidelines:

1. The term paper will be related to the contemporary research issue and the topic will be given by the department.
2. The presentation of the term paper is scheduled to be held before the commencement of Semester examinations.
3. The paper will carry 100 marks that will be marked on the basis of understanding and organization of content based on the literature review. The Bibliography shall form an important part of the paper.
4. Examples of a few broad areas for term paper (List is indicative, not exhaustive)
  - Molecular Biology
  - Protein Biochemistry
  - Immunology
  - Biophysics
  - Cell Biology
  - Structural Biology
  - Genetics

### Evaluation Scheme

Organisation and relevance of content	Literature Review	Bibliography	Presentation	Total
30	30	20	20	100

## ADVANCED BIOCHEMISTRY LAB

**Course Code: BCH4206**

**Credit Units: 02**

**Course Objective:** To provide students hands-on training in the major instrumentation techniques common to biochemistry.

### Course Contents:

1. Verification of Beer-Lambert's law and determination of absorption coefficients
2. Paper chromatography – Separation of amino acids and carbohydrates in a mixture
3. Thin layer chromatography of fatty acids
4. DNA Gel Electrophoresis
5. Isoelectric pH of casein
6. Amino Acid Assay by Ninhydrin Colorimetric Method
7. Determination of pKa of acetic acid and glycine.
8. Digestion of Protein into Amino Acid
9. Isolation of chloroplast from spinach leaves and estimation of chlorophyll content.
10. Separation of photosynthetic pigments by TLC
11. Isolation of mitochondria from liver and assay of marker enzyme SDH.
12. Determination of CMC of detergents.
13. Preparation of RBC ghost cell.
14. Study the photosynthetic O<sub>2</sub> evolution in hydrilla plant.
15. Isolation of Cytochrome C from Goat heart

### Examination Scheme:

Components	CT	HA	S/V/Q	ATTD	EE
Weightage (%)	15	5	5	5	70

### Suggested Readings

- Experimental Biochemistry- R.W. Switzer & L.F. Garritty (W.H.Freeman & Co.)
- Modern Experimental Biochemistry - R. Boyer (Pearson Education)
- Practical Biochemistry - K. Wilson & J. Walker (Cambridge Univ. Press)
- Laboratory Manual in Biochemistry - J. Jayaraman (Narosa Publishing House)
- Practical Biochemistry - D.T. Plummer (TATA McGraw-Hill)
- Practical Biochemistry - R.C.Gupta & S. Bhargava
- Experimental Physiology and Biochemistry - P.V.Chadha
- Experimental Biochemistry – A Student Companion - B.S. Rao & V. Deshpande,
- I.K. Interational Pvt. Ltd. (N. Delhi, Mumbai, Bangalore) 2005.

# CELL BIOLOGY AND GENETICS LAB

**Course Code: BCH4207**

**Credit Units: 02**

**Course Objective:** To make the students visualize cellular proteins and genetic material, observe the basic cell division processes and learn to perform karyotyping studies so that they can have a clear understanding of the structural details and functions of chromosomes.

## **Practical's:**

### **A) Cell Biology**

1. Isolation & visualization of cellular proteins.
2. Quantification of cells by Trypan blue exclusion dye.
3. Calculation of nucleolar frequency following haematoxyline staining
4. Understanding principles of cell culture and aseptic techniques.
5. Preparation of adhesion and suspension cell cultures.
6. Assessment of proliferation in cultured cells by MTT assay.
7. Observation of DNA fragmentation in apoptotic cells

### **B) Genetics**

#### **Plant/Animal/Human Cytogenetics:**

1. Squash preparation from root tips of *Allium cepa*, analyzing metaphase chromosomes and preparation of karyotype.
2. Squash preparation from root tips of *Allium sativum*, analyzing metaphase chromosomes and preparation of karyotype.
3. Squash preparation from root tips/shoot tips of *Nigella sativa*/ *Aloe vera*, analyzing metaphase chromosomes and preparation of karyotype.
4. Squash preparation of salivary glands of Dipteran larva to observe polytene chromosomes.
5. Induction of polyploidy in onion roots.
6. Estimation of mitotic index from root tips of *Allium cepa*
7. Estimation of mitotic index from root tips of *Allium sativum*.
8. Karyotype identification (from photographs) and explaining aspects of chromosome structure / behaviour crucial for interpreting results of chromosome analysis.
9. Study of different human pedigrees (from photographs)
10. Study different stages of meiosis by temporary preparation in flower buds (*Sagittaria* sp./ *Rhoeo* sp./ *Setcreasea* sp./ *Allium cepa*) / grasshopper testes .
11. Identification of mitotic and meiotic chromosomes of humans from permanent slides.
12. Smear technique to demonstrate sex chromatin in buccal epithelial cells.
13. Banding techniques in the production of various cytogenetic preparations.

#### **Molecular Genetics:**

1. Demonstrate familiarity with databases of information pertaining to genes, markers, maps and diseases such as Online Mendelian Inheritance in Man (OMIM) and Medline;
2. Understanding the principles of designing oligonucleotide primers for PCR and utilization of relevant software;
3. PCR applications in assigning genotypes to RFLP / VNTR sequences; screening samples for identified mutations.

#### **Biochemical /Pharmacogenetics:**

Electrophoretic screening for enzyme polymorphisms; estimation of enzyme deficiency / drug sensitivity.

**Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>HA</b>	<b>S/V/Q</b>	<b>ATTD</b>	<b>EE</b>
<b>Weightage (%)</b>	15	5	5	5	70

**Suggested Readings**

- Experimental Biochemistry- R.W. Switzer & L.F. Garrity (W.H.Freeman & Co.)
- Modern Experimental Biochemistry - R. Boyer (Pearson Education)
- Practical Biochemistry - K. Wilson & J. Walker (Cambridge Univ. Press)
- Laboratory Manual in Biochemistry - J. Jayaraman (Narosa Publishing House)
- Practical Biochemistry - D.T. Plummer (TATA McGraw-Hill)
- Practical Biochemistry - R.C.Gupta & S. Bhargava
- Experimental Physiology and Biochemistry - P.V.Chadha
- Experiments in Microbiology - Gilstrap-Kleyn-Nester
- Experimental Biochemistry – A Student Companion - B.S. Rao & V. Deshpande,
- I.K. Interational Pvt. Ltd. (N. Delhi, Mumbai, Bangalore) 2005.

# CLINICAL AND PROTEIN BIOCHEMISTRY LAB

**Course Code: BCH4208**

**Credit Units: 02**

**Course Objective:** To provide students with hands-on-training in various estimation using urine and blood. This course also provides intensive lab training of various proteins and enzyme parameters.

## **Clinical Biochemistry Lab**

- Absorption spectrum of hemoglobin isolated from whole blood.
- **Qualitative and quantitative analysis of:**  
Urine (urea, uric acid, glucose, proteins, Bence-Jones proteins, Cl<sup>-</sup>, PO<sub>3</sub><sup>-3</sup>, Ca<sup>+2</sup> Estimation of creatinine)
- Experiments on blood:
  - A. Identification and count of blood corpuscles
  - B. Estimation of haemoglobin
  - C. Determination of A/G ratio in serum
- Blood pressure measurement
- Glucose tolerance test
- Estimation of serum T4
- HCG based pregnancy test
- Estimation of serum electrolytes
- Isolation and estimation of serum cholesterol
- Lipid Profile: Triglyceride, Cholesterol
- Blood grouping
- Anthropometric measurements: BMI, Waist/Hip Ratio, Mid Arm Muscle Area (MAMA), Mid Arm Area (MAA).
- Case studies: Renal clearance, ECG, LFT, EEG
- Separation of isoenzymes of LDH by electrophoresis.
- Assay of serum transaminases – SGOT and SGPT.
- Estimation of serum urea.
- Estimation of serum uric acid.
- Estimation of serum creatinine.
- Estimation of bilirubin
- Assay of glutamate dehydrogenase

## **Protein Lab**

- Estimation of proteins by Biuret / Lowry / Bradford method and UV absorbance measurements.
- Ammonium sulphate fractionation of crude homogenate from germinated mung beans
- Enzyme activity assay
- Assay to determine enzyme activity and specific activity
- Progress curve plot for an enzyme
- Effect of pH/temperature on enzyme activity
- Determination of Km and Vmax using Lineweaver-Burk plot.
- Calculation of inhibitory constant (Ki) for an enzyme
- SDS-PAGE analysis of proteins
- Desalting Chromatography

**Examination Scheme:**

Components	CT	HA	S/V/Q	ATTD	EE
Weightage (%)	15	5	5	5	70

**Suggested Readings**

- Experimental Biochemistry- R.W. Switzer & L.F. Garrity (W.H.Freeman & Co.)
- Modern Experimental Biochemistry - R. Boyer (Pearson Education)
- Practical Biochemistry - K. Wilson & J. Walker (Cambridge Univ. Press)
- Laboratory Manual in Biochemistry - J. Jayaraman (Narosa Publishing House)
- Practical Biochemistry - D.T. Plummer (TATA McGraw-Hill)
- Practical Biochemistry - R.C.Gupta & S. Bhargava
- Experimental Physiology and Biochemistry - P.V.Chadha
- Experiments in Microbiology - Gilstrap-Kleyn-Nester

## Syllabus - Third Semester

### RECOMBINANT DNA TECHNOLOGY

**Course Code: BCH4301**

**Credit Units: 03**

**Course Objective:** Recombinant DNA technology deals with genetic manipulation of Bacteria/Virus/plants/animals by incorporating DNA sequences from different sources into a and finds its application in plant/animal genomics, Cell Biology, Signaling and clinical research. This course will help students in understanding the tools used in gene exploration, creation of genomic library, cloning and expression of proteins,

#### **Course Contents:**

##### **MODULE-I: Fundamentals of Gene Cloning**

Restriction and modification systems, restriction endonucleases and other enzymes used in manipulating DNA molecules. sticky ends, blunt ends, linkers and adapters, homopolymer tailing, Synthetic oligonucleotides. Ligation of DNA molecules.

##### **MODULE-II: Cloning Vectors**

Plasmids and bacteriophages as vectors for gene cloning. Cloning vectors based on *E. coli* plasmids, pBR322, pUC8, pGEM3Z. Cloning vectors based on M13 and  $\lambda$  bacteriophage, and in vitro packaging. Vectors for yeast, Ti-plasmid, and retroviral vectors, high capacity vectors BAC and YAC.

##### **MODULE-III: Transformation, Transfection and Gene Libraries**

Uptake of DNA by cells. Selection and identification for transformed cells, insertional inactivation, blue-white selection. Transfection. Chemical and physical methods of DNA introduction into cells. The problem of selection, direct selection, marker rescue. Identification of recombinant phages, cDNA and Genomic libraries, identification of a clone from gene library, colony and plaque hybridization probing, Southern and Northern hybridization, methods based on detection of the translation product of the cloned gene.

##### **Module-IV: PCR, DNA Sequencing and**

Fundamentals of polymerase chain reaction, Types of PCR; hot start, multiplex, two step, reverse transcriptase PCR and Nested PCR, quantitative PCR, Primer designing for PCR. Cloning PCR products. DNA sequencing by Sanger's method including Automated Sanger's DNA sequencing. Introduction to Next Generation Sequencing.

##### **Module-V: Expression of Cloned Genes Applications of Genetic Engineering**

Vectors for expression of foreign genes in *E. coli*, cassettes and gene fusions. Hybrid promoters trc, tac,  $\lambda$ pL and T7 promoter-based expression vectors, IPTG induction. Challenges in producing recombinant protein in *E. coli*. Production of recombinant protein by eukaryotic cells. Fusion tags such as, poly histidine, glutathione, maltose binding protein and their role in purification of recombinant proteins. Site-directed mutagenesis, Protein engineering (T4-lysozyme), yeast two hybrid systems, Production of recombinant pharmaceuticals such as insulin, human growth hormone, factor VIII. Recombinant vaccines. Gene therapy (SCID), Applications in agriculture – *Bt* cotton, glyphosate herbicide resistant crops, ethical concerns.

**Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>HA</b>	<b>S/V/Q</b>	<b>ATTD</b>	<b>EE</b>
<b>Weightage (%)</b>	15	5	5	5	70

# ADVANCED GENETICS

**Course Code: BCH4302**

**Credit Units: 03**

**Course Objective:** This course will provide students with a knowledge of advanced genetics involving organization of nuclear and organelle genomes, structural details of chromosomes, gene mutation, repair, genetic toxicology and microbial genetics.

**Course Contents:**

## **MODULE-I: DNA Structure and Genome Organization**

Building blocks of DNA structure, Watson and Crick model, features of the double helix, various forms of DNA, denaturation and renaturation of DNA,  $C_0t$  curve, hyperchromicity, melting temperature, factors affecting  $T_m$  of DNA molecules. Eukaryotic genome organization: Nucleosome structure and packaging of DNA into higher order structures. Linking number. Genome organization in viruses and prokaryotes. c-value paradox. Epigenetics: Histone code, Monoallelic expressions & Genomic imprinting.

## **MODULE-II: Cytogenetics, Transposition & Recombination**

Techniques in the study of mitotic and meiotic chromosomes: Banding, karyotyping, chromosome labeling/painting, *in situ* hybridization. Satellite DNAs, premature chromosome condensation. Special types of chromosomes: B-chromosome, polytene and lambrush chromosomes; Numerical and structural changes in chromosome, genetic implications of ploidy. Dosage compensation and mechanism of sex determination in plants and animals. Mechanism of transposition in prokaryotes and eukaryotes: Transposable Elements, LINES, SINES, Alu family, mechanisms of DNA amplification. Controlling elements in maize, *Drosophila* P element. Recombination: Homologous and non-homologous recombination. Role of Spo 11 and MRX protein in Meiotic recombination, Gene Conversion. Genome evolution.

## **MODULE-III: DNA Mutation, Repair & Genetic Toxicology**

DNA Mutation and Repair: Gene mutation types and its mechanism, spontaneous vs induced, Point mutations; Missense; Nonsense mutations Forward; Reverse; Intragenic and Extragenic suppressor; Somatic versus germinal mutation. Mutant types-lethal, conditional, biochemical., Inborn errors of metabolism, Mutation detection systems, Mutation induction, Gain of function and loss of function mutations in cancer Mutagens in genetic dissection. Radiation genetics. Molecular basis of gene mutations. DNA Repair mechanisms: Damage Reversal, Excision repair, double-strand break repair & post replicative repair. Repair defects and human diseases. Systems that safeguard DNA. Importance with reference to carcinogenesis,

Genetic Toxicology: Genotoxicity-classification of genotoxic agents, genotoxic test systems. Teratogenicity, DNA damage and genome instability, Endogenous metabolism and DNA damage, Exogenous factors (irradiation and carcinogens),

## **MODULE IV: Microbial Genetics**

Methods of genetic transfers- Transformation, conjugation, transduction and sex-duction, mapping genes by interrupted mating. Fine structure of genes: Principles of gene regulation, concept of operons, negative and positive regulation, regulatory proteins, activators, repressors, regulation of lac, trp, ara and his operons. **Concept of split genes, pseudogenes, overlapping genes and multigene families.**

**Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>HA</b>	<b>S/V/Q</b>	<b>ATTD</b>	<b>EE</b>
<b>Weightage (%)</b>	15	5	5	5	70

**References/Texts:**

1. Genetics, Fourth Edition by P.K. Gupta.
2. Principles of Genetics, 8<sup>th</sup> edition by Gardener, Simmons, Snustad.
3. Genetics, Third edition by Strickberger, Monroe W.
4. Principles of Genetics, 7<sup>th</sup> edition by Robert H. Tamarin
5. Prescott's Microbiology, 10<sup>th</sup> edition by Wiley J.M.

# MOLECULAR BIOLOGY

**Course Code: BCH4303**

**Credit Units: 03**

**Course Objective:** The objective of the course is to introduce to the students the basic concepts of DNA replication, how genes are transcribed and how translation takes place in prokaryotes and eukaryotes and how these processes are regulated, so that students can apply this knowledge in enhancing their analytical and problem-solving skills.

## **Course Contents:**

### **Module-I: Replication**

General features of replication, the chemistry of DNA synthesis, DNA polymerase, the replication fork, enzymes and proteins in DNA replication, E coli DNA polymerases, topoisomerases and their classification. Linking numbers, Topoisomerase inhibitors and their clinical importance. Stages of replication-initiation, elongation and termination, origin of replication, relationship between replication and cell division, replication in eukaryotes, end replication problem, telomerase, various modes of replication. Comparison of replication in prokaryotes and eukaryotes. Inhibitors of DNA replication and applications in medicine.

### **Module-II: Transcription and RNA Splicing**

**Transcription in prokaryotes;** Comparison between transcription and DNA replication, RNA polymerases, transcription cycle in bacteria, sigma factor, bacterial promoters, various stages of RNA synthesis, initiation, elongation and termination, rho-dependent and rho-independent termination. Inhibitors of transcription and applications as antimicrobial drugs. Comparison between prokaryotic and eukaryotic transcription. **Transcription in eukaryotes;** The three classes of eukaryotic RNA polymerases, transcription by RNA polymerase II, RNA polymerase II core promoters, general transcription factors, transcription by RNA polymerase I and III. Transcription control. Inhibitors of eukaryotic transcription and their applications. **RNA Processing;** Various types of RNA processing-polyadenylation and capping, processing of rRNA and tRNA. Chemistry of RNA splicing, the spliceosome machinery, splicing pathways, group I and group II introns, alternative splicing, exon shuffling and RNA editing.

### **Module III: Translation**

Salient features of the genetic code, triplet nature, degenerate, wobble in the anticodon. Experimental approaches used to decipher the genetic code. Suppressor tRNAs. Exceptions to the nearly universal genetic code. Messenger RNA, transfer RNA, charging of tRNA. The structure of ribosome. Three stages of translation-initiation, elongation and termination. Translation in eukaryotes. Regulation of translation. Comparison of prokaryotic and eukaryotic protein synthesis. Inhibitors of translation and their clinical importance.

### **MODULE- IV: Eukaryotic Gene expression & Molecular Virology**

Gene Expression: Regulating expression of eukaryotic genes. Role of chromatin in gene expression and silencing, enhancers and insulators, activators and repressors, Regulatory RNAs in eukaryotes: synthesis and mechanism of siRNA and miRNA. **Molecular Virology:** Nature and classification: The viral particles: capsid, envelope, other Virion components, Prion, complex viruses. Isolation and cultivation of viruses.

Virus purification, Assay of animal, bacterial and plant viruses. Multiplication of bacteriophages from infection to maturation and release. Abortive infection. Viral interference and interferon. Viral diseases. General outline with specific examples of common plant pathogenic viruses.

<b>Components</b>	<b>CT</b>	<b>HA</b>	<b>S/V/Q</b>	<b>ATTD</b>	<b>EE</b>
<b>Weightage (%)</b>	15	5	5	5	70

**Suggested Readings:**

- Biochemistry (3rd /4th/5th edition) L. Stryer, WH Freeman and Co.
- Molecular biology of the gene, Vol I and II (4TH ed) J D Watson, Benjamin/Cummings publ. Co Inc.
- Molecular cell biology (1988) J Darnell and D. Baltimore, W, H Freeman and Co.
- Molecular biology of the Cell, B. Alberts, Garland Pub. In., NY
- Genes (2nd ed), B. Lewin, John Wiley and sons, NY.

# MOLECULAR BIOLOGY AND MICROBIOLOGY LAB

**Course Code: BCH4306**

**Credit Units: 02**

**Course Objective:** To provide training and experience in some important microbiological and molecular biology techniques.

## MICROBIOLOGY PRACTICALS:

1. Preparation of glassware for microbiological work, cotton plugs, medium and their sterilization
2. Sterilization of heat sensitive material by filtration.
3. Preparation and sterilization of medium, preparation of slants and stabs, pouring of medium into plates.
4. Serial dilution, plating for counting colonies.
5. To perform various culture transfer techniques: Streaking, Spreading, Pouring, sub culturing.
6. Isolation of microorganisms from soil and water collected from different places.
7. Single colony isolation techniques and its preservation.
8. Examination of microorganisms: Simple staining, Gram staining, Acid Fast Staining
9. To prepare temporary mount of algae (spirogyra)
10. To prepare temporary mount of fungi (Penicillium)
11. Endospore staining
12. Staining of flagella
13. Staining of capsule
14. localization of root nodule bacteria by staining.
15. Study of different shapes of bacteria, fungi, algae, protozoa using permanent slides/pictographs
16. Study the morphological structures of viruses (DNA and RNA) and their important characters using electron micrographs.
17. Bacterial growth studies: Bacterial number counting by haemocytometer, colony counting, bacterial growth curve, determination of generation time.
18. Antibiotic sensitivity tests, antibiotic assay by paper disc / cup method, MIC determination.
19. Purification of  $\alpha$ -amylase from *Bacillus aminolucifecius*.

## MOLECULAR BIOLOGY PRACTICALS:

1. Isolation of chromosomal DNA from *E coli* cells
2. To hydrolyze DNA and separate nucleotide bases by paper chromatography
3. To plot ultraviolet absorption spectrum of DNA
4. Determination of DNA concentration by A260nm
5. Determination of the melting temperature
6. Estimation of DNA by diphenylamine
7. Separation, identification and estimation of free amino acids.
8. Study of Immuno-electrophoresis
9. Estimation of RNA by Orcinol Method
10. Extraction of total nucleic acids from plant tissue
11. To study growth curve and diauxic growth curve effect in *E. coli*
12. Isolation of total RNA from bacteria/yeast

**Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>HA</b>	<b>S/V/Q</b>	<b>ATTD</b>	<b>EE</b>
<b>Weightage (%)</b>	15	5	5	5	70

**Suggested Readings:**

- Experiments in Microbiology - Gilstrap-Kleyn-Nester.
- Experiments in Molecular Biology, Biochemical Applications by Zachary F. Burton and Jon M. Kaguni.
- Practical Protocols in Molecular Biology by Yongming Li, Yugi Zhao.
- Essential Molecular Biology: A practical Approach, Vol II by Terence Austen Brown.

## INSTRUMENTATION AND GENETIC ENGINEERING LAB

**Course Code: BCH4307**

**Credit Units: 02**

**Course Objective:** To provide training to students in handling of some important instruments in laboratory for performing some biological experiments. This also provide immense knowledge of practical aspects of recombinant DNA technology and the various techniques for DNA manipulation in prokaryotes and eukaryotes.

**Course Contents:**

1. Conductometry: Estimation of Cl<sup>-</sup> or SO<sub>4</sub> by conductometric precipitation titration.
2. Viscometric study of DNA and protein denaturation
3. Size exclusion chromatography for separation of a mixture proteins
4. Separation of amino acid acids by TLC/paper chromatography
5. To perform agarose gel electrophoresis
6. Separation of protein by ion-exchange chromatography
7. Separation of protein by SDS-PAGE
8. EMSA (virtual lab)
9. Virtual lab on Microarray profiling or 2D-DIGE
10. Virtual Lab of Primer designing
11. Virtual lab on extraction of sequence from genomic and cDNA libraries.
12. Virtual lab of PCR, Restriction digestion and Cloning and Vector analysis.
13. DNA estimation by UV spectrophotometry.
14. Transformation, Competent cell preparation and Isolation of plasmid DNA from *E. coli*
15. Amplification of a DNA fragment by PCR.

**Examination Scheme:**

Components	CT	HA	S/V/Q	ATTD	EE
Weightage (%)	15	5	5	5	70

**Suggested Readings:**

- Experimental Biochemistry- R.W. Switzer• & L.F. Garrity (W.H.Freeman & Co.)
- Modern Experimental Biochemistry - R. Boyer (Pearson Education)
- Practical Biochemistry - K. Wilson & J. Walker (Cambridge Univ. Press) Laboratory Manual in Biochemistry - J. Jayaraman (Narosa Publishing House)
- Practical Biochemistry - D.T. Plummer (TATA McGraw-Hill)• Practical Biochemistry - R.C.Gupta & S. Bhargava Experimental Physiology and Biochemistry - P.V.Chadha
- Experiments in Microbiology - Gilstrap-Kleyn-Nester
- Experimental Biochemistry – A Student Companion - B.S. Rao & V. Deshpande, I.K. Interational Pvt. Ltd. (N. Delhi, Mumbai, Bangalore) 2005.

## SUMMER INTERNSHIP / STUDY ABROAD PROGRAM

**Course Code: BCH4335**

**Credit Units: 06**

### **Methodology:**

Practical training is based on the theoretical subjects studied by students. It can be arranged within the college or any in any related industrial unit or in any research lab. The students are to learn various industrial, technical and administrative processes followed in the industry/research. In case of on campus training the students will be given specific tasks of synthesizing /testing/analysis/characterization. On completion of the practical training the students are to present a report covering various aspects learnt by them and give a presentation of the same.

### **Examination Scheme**

Feedback from Industry:	20
Training Report:	40
Viva:	15
Presentation:	25
<b>Total</b>	<b>100</b>

# MICROBIOLOGY

**Course code: BCH4308**

**Credit Units: 03**

**Course objective:** The objective of the course is to trace the history of development of the discipline of Microbiology and to emphasize the existence of the immense diversity in the microbial world and maintenance of microbes under laboratory conditions.

## **Module I: History of Microbiology, Diversity of Microbial world and Microbial Cell organization**

History of development of microbiology as a discipline, Spontaneous generation versus biogenesis, contributions of Anton von Leeuwenhoek, Joseph Lister, Paul Ehrlich, Richard Petri, Charles Chamberland, Edward Jenner, Louis Pasteur, Robert Koch, Martinus W. Beijerinck, Sergei Winogradsky, Alexander Fleming, Elie Metchnikoff and Emil von Behring. Difference between prokaryotic and eukaryotic microorganisms. General characteristics of different groups: Acellular microorganisms (Viruses, Viroids, Prions) and Cellular microorganisms (Bacteria, Archaea, Algae, Fungi and Protozoa) with emphasis on distribution, occurrence and morphology. Cell-wall: Composition and detailed structure of Gram positive and Gram-negative cell walls, mechanism of Gram's staining. Cell Membrane: Structure, function and chemical composition of bacterial and archaeal cell membranes.

## **Module-II: Microbial Nutrition, Growth Pathogenicity of Microorganisms and Antimicrobial Chemotherapy**

Nutritional types of microorganisms, growth factors, culture media- synthetic and complex, types of media; isolation of pure cultures, growth curves, mean growth rate constant, generation time; influence of environmental factors on growth of microbes: effect of pH, temperature, solute, oxygen concentration, pressure and radiations. Sterilization, disinfection and antiseptics. Use of physical methods (heat, low temperature, filtration, radiation) and chemical agents (phenolics, halogens, heavy metals, sterilizing gases) in microbial control. Introduction to pathogenic microbes; Bacteria, Viruses, Algae, protozoa and fungi. General Characteristics of antimicrobial drugs, determining the level of microbial activity: dilution susceptibility test and disc diffusion test. Range of activity and mechanism of action of penicillin, vancomycin and tetracycline.

## **Module III: Food and Industrial Microbiology**

Importance of microbiology in food and industries; Basic design of fermenter, continuous and discontinuous culture. Preparation of fermented food products such as yoghurt, curd and cheese. Preparation of alcoholic beverages like wine and beer. Single cell proteins. Treatment of waste water (Municipal treatment plant) and sewage. Bioremediation and biodegradation.

### **Examination Scheme:**

Components	CT	HA	S/V/Q	ATTD	EE
Weightage (%)	15	5	5	5	70

**Suggested Readings:**

- “Brock Biology of Micro-organisms 10e” Michael M. Madigan, John Martinko, Jack Parker
- **Principles of Genetics**, by Eldon J. Gardner (Author), D.Peter Snustad (Editor), Michael Simmons (Editor).
- General Microbiology, 7<sup>th</sup> edition by Hans G. Shlegel
- Prescott’s Microbiology by Joanne Willey, Linda Sherwood and Chris Woolverton.
- Microbiology by Pelczar.

# ECOLOGY AND EVOLUTION

**Course Code: BCH4310**

**Credit Units: 03**

**Course objective:** The objective of the course is to make students have knowledge about the structure and functions of the ecosystem and evolution. This course will help students understand the inter-relationship between organisms in population and communities and the various types of pollution responsible for destroying the ecosystem, evolution prokaryotes and eukaryotes.

## **Course Contents:**

### **Module-I: Ecology -I**

The Environment: Physical environment; biotic environment; biotic and abiotic interactions. Habitat and Niche: Concept of habitat and niche; niche width and overlap; fundamental and realized niche; resource partitioning; character displacement. Population Ecology: Characteristics of a population; population growth curves; population regulation; life history strategies (r and K selection); concept of metapopulation – demes and dispersal, interdemec extinctions, age structured populations. Species Interactions: Types of interactions, interspecific competition, herbivory, carnivory, pollination, symbiosis. Community Ecology: Nature of communities; community structure and attributes; levels of species diversity and its measurement; edges and ecotones. Ecological Succession: Types; mechanisms; changes involved in succession; concept of climax. Ecosystem Ecology: Ecosystem structure; ecosystem function; energy flow and mineral cycling (C,N,P); primary production and decomposition; structure and function of some Indian ecosystems: terrestrial (forest, grassland) and aquatic (fresh water, marine, estuarine).

### **Module-II: Ecology-II**

Biogeography: Major terrestrial biomes; theory of island biogeography; biogeographical zones of India. Applied Ecology: Environmental pollution; global environmental change; biodiversity: status, monitoring and documentation; major drivers of biodiversity change; biodiversity management approaches. Conservation Biology: Principles of conservation, major approaches to management, Indian case studies on conservation/management strategy (Project Tiger, Biosphere reserves)

### **Module-III: Evolution and Behavior-I**

Emergence of evolutionary thoughts Lamarck; Darwin–concepts of variation, adaptation, struggle, fitness and natural selection; Mendelism; Spontaneity of mutations; The evolutionary synthesis. Origin of cells and unicellular evolution: Origin of basic biological molecules; Abiotic synthesis of organic monomers and polymers; Concept of Oparin and Haldane; Experiment of Miller (1953); The first cell; Evolution of prokaryotes; Origin of eukaryotic cells; Evolution of unicellular eukaryotes; Anaerobic metabolism, photosynthesis and aerobic metabolism. C. Paleontology and Evolutionary History: The evolutionary time scale; Eras, periods and epoch; Major events in the evolutionary time scale; Origins of unicellular and multi cellular organisms; Major groups of plants and animals; Stages in primate evolution including Homo.

### **Module-IV: Evolution and Behavior-II**

Molecular Evolution: Concepts of neutral evolution, molecular divergence and molecular clocks; Molecular tools in phylogeny, classification and identification; Protein and nucleotide sequence analysis; origin of new genes and proteins; Gene duplication and divergence. The Mechanisms: Population genetics – Populations, Gene pool, Gene frequency; Hardy-Weinberg Law; concepts and rate of change in gene frequency through natural selection, migration and random genetic drift; Adaptive radiation; Isolating mechanisms; Speciation; Allopatricity and Sympatricity; Convergent evolution; Sexual selection; Co-evolution. Brain, Behavior and Evolution: Approaches and methods in study of behavior; Proximate and ultimate causation; Altruism and evolution-Group selection, Kin selection, Reciprocal altruism; Neural basis of learning, memory, cognition,

sleep and arousal; Biological clocks; Development of behavior; Social communication; Social dominance; Use of space and territoriality; Mating systems, Parental investment and Reproductive success; Parental care; Aggressive behavior; Habitat selection and optimality in foraging; Migration, orientation and navigation; Domestication and behavioral changes.

**Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>HA</b>	<b>S/V/Q</b>	<b>ATTD</b>	<b>EE</b>
<b>Weightage (%)</b>	15	5	5	5	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

**Suggested Readings:**

- Ecology and Environment, 12<sup>th</sup> Edition by P.D.sharma.
- Fundamentals of ecology, 5<sup>th</sup> edition by Eugene P. Odum and Gary W. Barrett.
- The End of History and the Last Man, Francis Fukuyama
- Animal Behavior: An Evolutionary Approach, John Alcock

# MICROBIOLOGY LAB

**Course Code: BCH4311**

**Credit Units: 02**

**Course objective:** To student learn fundamental experiments of Microbiology

**Course Contents:**

1. Observation of microorganisms using bright field microscope - Bacteria, Protozoa, Moulds and Yeasts, Algae – from natural habitat
2. Observation of microorganisms using staining techniques:
  - a. Monochrome staining
  - b. Negative /Relief staining (Capsule staining)
  - c. Gram staining of bacteria
  - d. Spore staining
3. Observation of motility in bacteria using:
  - a. Hanging drop method and Cragie's tube method
  - b. Swarming growth methods
4. Enumeration of yeast cells using a counting chamber
5. Cultivation of microorganisms:
  - a. Preparation of simple laboratory nutrient media (solid and liquid) and using them to cultivate bacteria.
  - b. Observation of the growth of cultures and reporting of colony and cultural characteristics (Nutrient and Mac Conkey's agar)
6. Isolation of bacteria by streak plate technique
7. Enumeration of bacteria from fermented food / soil / water by:
  - a. Spread plate method
  - b. Pour plate method
8. Aseptic transfer techniques (slant to slant, broth to broth, broth to agar and Agar to Agar)
9. Preservation of cultures on slants, soil and on grain surfaces; revival of these cultures and lyophilized cultures.
10. Checking sterilization efficiency of autoclave using a biological indicator (*B.stearothermophilus*)
11. Demonstration of checking of efficacy of chemical disinfectant: Phenol Coefficient Rideal Walker method)
12. Preparation of Winogradsky column and observation of different types of microorganisms using bright filed microscope.
13. Study of normal flora of skin:
  - a. Cultivating and observing different morphoforms of bacteria from skin
  - b. Study of effect of washing skin with soap and disinfectant on it's microflora
14. a. To study the effect of different parameters on growth of E. coli: pH, temperature, sodium chloride concentration  
b. Study of Oligodynamic action of heavy metal

**Suggested Readings:**

- Experiments in Microbiology - Gilstrap-Kleyn-Nester
- Wilson K. and Walker J.M. (2005) Principles and Techniques of Biochemistry and
- Molecular Biology. 6th Edition. Cambridge University Press.
- David T. Plummer (1993) An Introduction To Practical Biochemistry, 3rd Edition, Tata
- McGraw-Hill Publishing Company Limited, New Delhi

## ECOLOGY AND EVOLUTION LAB

**Course Code: BCH4313**

**Credit Units: 02**

**Course objective:** To student learn basic experiments of Ecology and Evolution.

### **Ecology Lab:**

1. Assessment of density, frequency and abundance of plants/animal in a community using various techniques i.e. transect, quadrat etc.
2. Determination of physical and chemical characteristics of soil.
3. Assessing influence of light, temperature and moisture on plant germination and growth.
4. Assessing influence of soil nutrient status on plant germination and growth.
5. Spatial variations of dissolved oxygen concentration in water and percentage saturation.
6. Dissolved free carbon dioxide dynamics in relation to pH and alkalinity of water.
7. Estimation of total hardness, total alkalinity and Salinity of water.
8. Estimation of Primary productivity and assessment of nutrient status of water bodies.
9. Microbial analysis of soil and water.
10. Study of insect diversity in soil.
11. Productivity determination of different ecosystems - Lindeman's efficiency.
12. Microbial analysis of soil and water.
13. Evolutionary studies on adaptive characters
14. Phylogenetic analysis

### **Suggested Readings:**

- Field Sampling: Principles and Practices in Environmental Analysis, Conklin, A.R. Jr., (2004), CRC Press.
- Practical Methods in Ecology, P.A. Henderson (2003).
- Principles and Standards for Measuring Primary Production, Fahey, T.J. and Knapp, A.K., (2007), Oxford University Press, UK
- Ecological Modeling, Grant, W.E. and Swannack, T.M., (2008), Blackwell.
- Fundamental Processes in Ecology: An Earth system Approach, Wilkinson, D.M., (2007), Oxford University Press, UK

## Syllabus - Fourth Semester

### DEVELOPMENTAL BIOLOGY AND NEUROLOGICAL DISORDERS

**Course Code: BCH4408**

**Credit Units: 03**

**Course Objective:** The objective of the course is to provide students with a detailed in-sight into the developmental biology and to develop fundamental understanding of Biochemistry behind neurological disorders.

#### **Course Contents:**

##### **Module-I: Fundamentals of Developmental Biology**

**Basic concepts of development:** Potency, commitment, specification, induction, competence, determination and differentiation; morphogenetic gradients; cell fate and cell lineages; stem cells; genomic equivalence and the cytoplasmic determinants; imprinting; mutants and transgenics in analysis of development. **Gametogenesis, fertilization and early development:** Production of gametes, cell surface molecules in sperm-egg recognition in animals; embryo sac development and double fertilization in plants; zygote formation, cleavage, blastula formation, embryonic fields, gastrulation and formation of germ layers in animals; embryogenesis, establishment of symmetry in plants; seed formation and germination.

##### **Module-II: Morphogenesis, Organogenesis & Programmed Cell Death**

**Morphogenesis and organogenesis in animals:** Cell aggregation and differentiation in *Dictyostelium*; axes and pattern formation in *Drosophila*, amphibia and chick; organogenesis – vulva formation in *Caenorhabditis elegans*, eye lens induction, limb development and regeneration in vertebrates; differentiation of neurons, post embryonic development- larval formation, metamorphosis; environmental regulation of normal development; sex determination. **Morphogenesis and organogenesis in plants:** Organization of shoot and root apical meristem; shoot and root development; leaf development and phyllotaxy; transition to flowering, floral meristems and floral development in *Arabidopsis* and *Antirrhinum*. **Programmed cell death, aging and senescence**

##### **Module-III: Neurological disorders & Neurodrugs**

Headache, facial pain, migraine, epilepsy, stroke, selected neurocutaneous diseases, movement disorder, Benign essential (familiar) tremor, Parkinsonism, Huntington's disease, multiple sclerosis, motor neuron disease, Myasthenia Gravis. Sedative-Hypnotic Drugs Ethyl alcohol and Inhalants CNS Depressants (Barbiturates, Anesthetics and Antiepileptics Anxiolytics Psychostimulants Cocaine & Amphetamines, Caffeine & Nicotine Opiates, Opioids, and Nonopioid Analgesics Opioid Analgesics Non-narcotic, Anti-inflammatory Analgesics Drugs Used to Treat Psychological Disorders Depression Bipolar Disorder Schizophrenia Parkinsonism Integration of Drugs and Psychological Therapy

**Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>HA</b>	<b>S/V/Q</b>	<b>ATTD</b>	<b>EE</b>
<b>Weightage (%)</b>	15	5	5	5	70

**Suggested Readings:**

- “Molecular biology of the Cell” by Albert et.al
- “Developmental biology” by Scott Gilbert.

# METHODOLOGIES OF BIOCHEMISTRY

Course Code: BCH4409

Credit Units: 03

**Course Objective:** The objective of the course is to provide students with a sound background of latest techniques used in biochemistry research and to provide them with an understanding of the principles underlying these techniques. The course is designed to impart laboratory skills in the form of practical exercises so that students can apply this knowledge to augment their research acumen and improve their understanding of the subject.

## Module-I: Electrophoresis Methods for analysis of proteins

Basic Principle of electrophoresis, Paper electrophoresis, Gel electrophoresis, discontinuous gel electrophoresis, PAGE, SDS-PAGE, Native gels, denaturing gels, agarose gel electrophoresis, buffer systems in electrophoresis, electrophoresis of proteins and nucleic acids, protein and nucleic acid blotting, detection and identification (staining procedures), molecular weight determination, Isoelectric focusing, 2D protein gel electrophoresis, 2D-DIGE, Pulse field Electrophoresis, Zymograms. Immunochemical methods - immunodiffusion, rocket immunoelectrophoresis Protein-Protein Interaction: Immunoprecipitation, Co-Immunoprecipitation (Co-IP), Pull down assays, Yeast two hybrid, Protein fragment complementation assay, Western blotting, Far western blotting, Protein microarrays, ELISA.

## Module-II: Microbiological/Cell culture techniques

Types of media, selective and enrichment media, sterilization methods, bacterial culturing, CFU determination, growth curves, Generation/doubling times, cell counting, viable and nonviable. Growth and maintenance of cultures, biosafety cabinets, CO<sub>2</sub> incubator. Staining procedures, plating and microtony.

## Module-III: Methods for analysis of nucleic acids and proteins

DNA and RNA isolation; Hybridization methods: Southern blotting, Northern blotting, Western Blotting, *In situ* hybridization, Colony hybridization. Binding of nucleic acids with protein: DNA pull down assays, In vitro transcription assay; In vitro translation assay; Electrophoretic Mobility Shift Assay (EMSA), DNA foot printing assay, Electrophoretic Mobility Shift Assay; RNase protection assay; Primer Extension, Chromatin immunoprecipitation (ChIP), ChIP on ChIP. Gene expression analysis: Reporter assays - example luciferase assay, DNA Microarrays.

## Module IV: Cell Biology techniques and Labeling methods

Cell culture and transfection, Immortalization of cells; Overexpression and Silencing of genes; Generation of transient and stable lines; Cell synchronization techniques; Immunohistochemistry, Immunofluorescence, Preparation of mouse embryonic fibroblasts; Cytotoxicity assay; Cell viability assays; Cell staining techniques; Cell proliferation assay; Migration assay; Invasion assay; Soft agar assay; Apoptosis assays; Kinase assay; Ubiquitination assay; Protein and mRNA turnover assays; Subcellular fractionation and identification of various fractions. Cell Flow cytometry, FACS, TUNEL assay, Non-invasive scanning of soft tissue, Radioactive and Non-radioactive labeling: DNA, Proteins, Whole cells, Fluorescent labeling. DNA, Proteins, bacteria, living cells; Metabolic labeling, Pulse chase analysis.

### Examination Scheme:

Components	CT	HA	S/V/Q	ATTD	EE
Weightage(%)	15	5	5	5	70

## GOOD LABORATORY PRACTICES SEMINAR

**Course Code: BCH4407**

**Credit Units: 1**

### Objectives

The objective of this course is to judge the understanding as well as application of the knowledge gained by the students. The aim of the term paper is to provide the students with an opportunity to further enhance their knowledge in a sector of their choice by undertaking a significant practical unit of examining and analyzing various aspects of Biochemistry & its application at a level commensurate with the learning outcomes of the various courses taken up them in the ongoing semester.

A research paper is primarily a record of intelligent reading in several sources on a particular subject. The students will choose the topic at the beginning of the session in consultation with the faculty assigned.

### Guidelines:

1. The research paper will be related to the contemporary research issue and the topic will be given by the supervisors of the department.
2. The research paper has to prepared/communicated before the commencement of Semester examinations.
3. The paper will carry 100 marks that will be marked on the basis of understanding and organization of content based on the literature review. The Bibliography shall form an important part of the paper.
4. Examples of a few broad areas for research paper (List is indicative, not exhaustive)
  - Molecular Biology
  - Proteomics
  - Structural Biology
  - Genetics

### Evaluation Scheme

Organisation and relevance of content	Literature Review	Bibliography	Publication	Total
30	30	20	20	100

# MAJOR PROJECT

Course Code: BCH4437

Credit Units: 8

## GUIDELINES FOR PROJECT FILE AND PROJECT REPORT

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critically analyzed by the faculty guide and corrected by the student at each stage.

## PROJECT FILE

The Project File may be a very useful tool for undertaking an assignment along-with a normal semester, an exploratory study, sponsored projects, a project undertaken during summer period or any other period as per curriculae where the researcher is working with a company/organization. The project/ assignment may also be a part of the bigger research agenda being pursued by a faculty/ institution/ department. The Project File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation. This file may be considered in continuous assessment.

### In general, the File should be comprehensive and include:

- A short account of the activities that were undertaken as part of the project;
- A statement about the extent to which the project has achieved its stated objectives;
- A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;
- Any activities planned but not yet completed as part of the project, or as a future initiative directly resulting from the project;
- Any problems that have arisen and may be useful to document for future reference.

## PROJECT REPORT

The Project Report is the final research report that the student prepares on the project assigned to him. In case of sponsored project, the lay out of the project could be as prescribed by the sponsoring organization. However, in other cases the following components should be included in the project report:

- ☐ **Title or Cover Page**  
The title page should contain Project Title; Student's Name; Programme; Year and Semester and Name of the Faculty Guide.
- ☐ **Acknowledgement(s)**  
Acknowledgment to any advisory or financial assistance received in the course of work may be given. It is incomplete without student's signature.
- ☐ **Abstract**  
A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project. It should not exceed more than 1000 words.
- ☐ **Table of Contents**  
Titles and subtitles are to correspond exactly with those in the text.

□ **Introduction**

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

□ **Materials and Methods**

This section should aim at experimental designs, materials used (wherever applicable). Methodology should be mentioned in detail including modifications undertaken, if any. It includes organization site(s), sample, instruments used with its validation, procedures followed and precautions.

□ **Results and Discussion**

Present results, discuss and compare these with those from other workers, etc. In writing this section, emphasis should be laid on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary, do not write in “point” form.

While presenting the results, write at length about the various statistical tools used in the data interpretation. The result interpretation should be simple but full of data and statistical analysis. This data interpretation should be in congruence with the written objectives and the inferences should be drawn on data and not on impression. Avoid writing straight forward conclusion rather, it should lead to generalization of data on the chosen sample.

Results and its discussion should be supporting/contradicting with the previous research work in the given area. Usually one should not use more than two researches in either case of supporting or contradicting the present case of research.

□ **Conclusion(s) & Recommendations**

A conclusion should be the final section in which the outcome of the work is mentioned briefly.

Check that your work answers the following questions:

- Did the research project meet its aims (check back to introduction for stated aims)?
- What are the main findings of the research?
- Are there any recommendations?
- Do you have any conclusion on the research process itself?

□ **Implications for Future Research**

This should bring out further prospects for the study either thrown open by the present work or with the purpose of making it more comprehensive.

□ **Appendices**

The Appendices contain material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

□ **References**

References should include papers, books etc. referred to in the body of the report. These should be written in the alphabetical order of the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognized system.

**Examples:**

For research article:

Voravuthikunchai SP, Lortheeranuwat A, Ninrprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichia coli* O157:H7. *Clin Microbiol Infect*, **8** (suppl 1): 116–117.

For book:

Kowalski,M.(1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), **7**: 63-67

**The Layout Guidelines for the Project File & Project Report:**

- A4 size Paper
- Font: Arial (10 points) or Times New Roman (12 points)
- Line spacing: 1.5
- Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

**ASSESSMENT OF THE PROJECT FILE AND THE PROJECT REPORT**

Essentially, the assessment will be based on the quality of the report, the technical merit of the project and the project execution. Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project. Project execution is concerned with assessing how much work has been put in.

The Project should fulfill the following *assessment objectives*:

- Range of Research Methods used to obtain information
- Execution of Research
- Data Analysis (Analyze Quantitative/ Qualitative information)
- Quality Control
- Conclusions

**Assessment Scheme:****Continuous Evaluation:**

40% (Based on punctuality, regularity of work, adherence to plan and methodology, refinements/mid-course corrections etc. as reflected in the Project File.)

**Final Evaluation:**

60% (Based on the Documentation in the file, Final report layout, analysis and results, achievement of objectives, presentation/ viva)

**It is recommended that the Final evaluation should be carried out by a panel of evaluators.**

# Syllabus - First Semester

## BASIC BIOCHEMISTRY

**Course Code: BCH4101**

**Credit Units: 03**

**Course Objective:** The main objective is to prepare students with the basic concepts of biochemistry. This course will provide students with knowledge of the fundamentals of biochemistry like thermodynamic processes, metabolic pathways, carbohydrates, lipids.

### Course Contents:

#### Module-I: Fundamentals of Biochemistry, Carbohydrates and Lipids

Macromolecules and their monomeric subunits. Properties of Water: with interactions in aqueous systems. Ionization of water, weak acids and weak base. Preparations of solutions of different strength and scales (molarity, molality, normality, formality, w/w, v/v ratio calculation exercises). The pH scale, measurement of pH, pH metry, acid base titration curves. Buffers, biological buffer systems.

**Carbohydrates:** Classification, basic chemical structure, monosaccharides, aldoses, and ketoses, cyclic structure of monosaccharides, isomerism; keto aldo, D-and L- isomerism, optical isomerism, anomers and epimers, mutarotation, chemical properties of monosaccharides, action of strong acids, alkalis, oxidation, reduction, osazone formation glycoside formation; Derivatives of monosaccharides, phosphoric acid ester, amino sugar, deoxy sugar, sugar acids, sugar alcohols, Formation of disaccharides, reducing and non-reducing disaccharides; disaccharides maltose, lactose, sucrose. homo polysaccharides - starch, glycogen, cellulose, dextrin; hetero polysaccharides - types of glycosaminoglycans and functions of glycoproteins structural and storage polysaccharides; Structure and role of glycoconjugates - proteoglycans, glycoproteins and glycolipids (gangliosides and lipopolysaccharides); General reaction and properties. Carbohydrates as informational molecules.

**Lipids:** Building blocks of lipids - fatty acids, glycerol, ceramide; Storage lipids - triacyl glycerol and waxes; Structural lipids in membranes – glycerophospholipids; Galactolipids and sulpholipids, etherlipids, sphingolipids and sterols, structure, distribution and role of membrane lipids. Plant steroids; Lipids as signals, cofactors and pigments. Separation techniques Lipoproteins, Chylomicrons, LDL, HDL, and VLDL. Pathological changes in lipid levels. Formation of micelles, monolayers, bilayer, Liposomes, Vitamins and Co-enzymes: Classification, water-soluble and fat-soluble vitamins. Structure, dietary requirements, deficiency conditions, coenzyme form

#### Module-II: Fundamental of Thermodynamics & Metabolism of Carbohydrates

Laws of thermodynamics. Concept of state functions, enthalpy, entropy, free energy, standard free energy, change, equilibrium constant, coupled reactions, energy charge, ATP cycle, phosphorylation potential, and phosphoryl group transfers. Chemical basis of high standard energy of hydrolysis of ATP, PEP, 1,3 BPG and thioesters. Redox reactions, standard redox potentials and Nernst equation. Universal electron carriers. Autotrophs, Heterotrophs, catabolism, anabolism, metabolic pathways, ATP as energy currency, experimental approaches to study metabolism, High energy compounds. **Glycolysis:** overview, reactions, regulations including hormones, fates of pyruvate, feeder pathways for glycolysis, galactosemia. Lactose intolerance. **Cori and Cori cycle.** **Pentose phosphate pathway** and its importance, Relationship between glycolysis and pentose phosphate pathway. Anaerobic ATP production, fermentation. Cyanide resistant respiration, Pasteur Effect. Glycogen synthesis, glycogen breakdown, regulation of glycogen metabolism, gluconeogenesis. Overview of **citric acid cycle**, synthesis of acetyl Coenzyme A, enzymes of citric acid cycle, regulation of citric acid cycle, use of isotope for the study of citric acid cycle, anaplerotic reactions, amphibolic nature, Malate aspartate shuttle, Glyceraldehyde-3-phosphate dehydrogenase shuttle,

Glyoxylate cycle in plants. Signaling pathways, regulation of carbohydrate metabolism by hormones, diseases associated with metabolic irregularities. **Oxidative phosphorylation;** The electron transport chain - its organization and function. Peter Mitchell's chemiosmotic hypothesis and Proton motive force. FoF1 ATP synthase, structure and mechanism of ATP synthesis. Metabolite transporters in mitochondria. Regulation of oxidative phosphorylation. ROS production and antioxidant mechanisms. Thermogenesis. Alternative respiratory pathways in plants.

### Module-III Metabolism of lipids and Amino acids

**Degradation of lipids;** Lipid digestion, absorption and transport. Fatty acid oxidation: transport to mitochondria, activation of fatty acids,  $\beta$  oxidation of saturated, unsaturated, odd and even numbered and branched chain fatty acids, regulation of fatty acid oxidation, peroxisomal  $\beta$  oxidation,  $\omega$  oxidation and  $\alpha$  oxidation. Ketone-body metabolism. **Synthesis of lipids;** Transport of mitochondrial Acetyl Co A to cytosol, Fatty acid synthase complex enzyme. Synthesis of saturated, unsaturated, odd and even chain fatty acids, regulation of fatty acid metabolism. Synthesis of glycerophospholipids and sphingolipids. Cholesterol metabolism, diseases associated Metabolic fates of amino groups. Transamination, role of pyridoxal phosphate, glucose-alanine cycle, Krebs's bicycle, urea cycle, its regulation and inherited defects of urea cycle. Gamaglutamyl cycle. Catabolic pathways of individual amino acids. Glucogenic and ketogenic amino acids. Metabolism of one carbon units.

# BIOCHEMISTRY OF PROTEINS AND ENZYMES

**Course Code: BCH4109**

**Credit Units: 03**

**Course Objective:** The main objective is to prepare students with the basic concepts of Protein and enzyme biochemistry. This course will provide students with knowledge of the fundamentals of enzyme kinetics and conceptual understanding of proteins.

## **Module-I: Introduction to amino acids, peptides and proteins**

Amino acids and their properties - hydrophobic, polar and charged. Physical properties, optical properties (Stereoisomerism); Chemical properties (acid base properties, titration curve) of amino acids; Uncommon amino acids and their functions. Multimeric proteins, Conjugated proteins and Metallo-proteins. Diversity of peptide and protein function and their applications. Solid phase peptide synthesis. Organization of protein structure into primary, secondary, tertiary and quaternary structures.  $\alpha$ -helix  $\beta$ - structure,  $\beta$ -helix, super secondary structure. Tertiary Structure: Forces stabilizing, unfolding/ refolding expt. Prediction of tertiary Structure. Quaternary structure – hemoglobin. Ramachandran plot. Helix coil transitions, Vander Walls, electrostatic, Hydrogen bonding, and hydrophobic interactions. Protein motif; zinc finger, leucine zipper, Solid phase peptide synthesis. N-terminal and C-terminal amino acid analysis. Sequencing techniques - Edman degradation. Generation of overlap peptides using different enzymes and chemical reagents. Disulfide bonds and their location. Forces stabilizing the protein structure - covalent and non-covalent. Importance of primary structure in protein folding. The peptide bond, dihedral angles  $\psi$  and  $\phi$ , helices, sheets and turns, Ramachandran map. Motifs and domains. Structures of myoglobin and hemoglobin,  $\alpha$ -keratin, silk fibroin, collagen.

## **Module II: Protein folding, Conformational Diseases and Specialized proteins**

Denaturation and renaturation of Ribonuclease A – discovery of protein folding. Introduction to thermodynamics of folding and molten globule. Assisted folding by molecular chaperones, chaperonins and PDI. Defects in protein folding. Diseases associated with misfolding – Alzheimer's and Prion based. Transport protein: Hemoglobin - Oxygen binding curves, influence of 2,3-BPG, CO<sub>2</sub> and H<sup>+</sup>, Hill plot, Cooperativity between subunits and models to explain the phenomena - concerted and sequential models. Hemoglobin disorders-sickle cell anemia, thalassemia's. Motor proteins- Actin and myosin. Defense proteins- Antibodies, Membrane proteins Integral and membrane associated proteins. Hydropathy plots to predict transmembrane domains.

## **Module-III: Extraction, purification and characterization of proteins**

Solubilization of proteins from their cellular and extracellular locations. Use of mechanical and chemical methods, homogenization, ultrasonication, French press and centrifugation. Ammonium sulphate fractionation, solvent fractionation, dialysis and lyophilization Ion exchange chromatography, molecular sieve chromatography, hydrophobic interaction/reverse phase chromatography, affinity chromatography, HPLC and FPLC. Determination of purity, molecular weight, extinction coefficient and sedimentation coefficient. IEF, SDS-PAGE and 2-D electrophoresis.

## **Module-IV: Enzyme Kinetics**

Nature of enzymes - protein and non-protein (ribozyme, abzymes). Cofactor and prosthetic group, apo- and holo-enzymes. Features of enzyme catalysis. Classification of enzymes and nomenclature. Fischer's lock & key and Koshland's induced fit hypothesis. Enzyme specificity. Enzyme kinetics- Michaelis-Menten equation, Lineweaver-Burk plot. Determination of  $K_m$ ,  $V_{max}$ ,  $K_{cat}$ . Factors affecting enzyme activity.

Enzyme inhibition-Reversible (competitive, uncompetitive, non-competitive) and irreversible inhibition. Mechanism based inhibitors.

### Module-V Mechanism of enzyme action, enzyme regulation and Bioluminescence

General mechanisms of action. Acid-base and covalent catalysis (chymotrypsin, lysozyme). Metal activated enzymes and metalloenzymes. Allosteric regulation and feedback inhibition (ATCase). Reversible covalent modification (glycogen phosphorylase). Proteolytic cleavage zymogen. Multienzyme complex. Coenzymes. Isoenzymes. Applications of enzymes in research. Application of enzymes in diagnostics (SGPT, SGOT, creatine kinase), Enzyme immunoassay (HRP), Enzyme therapy (Streptokinase). Pancreatic enzymes; Trypsin, Chymotrypsin, Elastase, Protease and Protease inhibitors. Multienzyme complex: Pyruvate Dehydrogenase system, (*E. coli* and mammalian), Tryptophan synthetase, fatty acid synthetase. Clogged gutter mechanism of enzyme inhibition. **Bioluminescence**; History, Source of Bioluminescence material, examples of bioluminescence organism Mechanism of Bio- luminescence in specific organisms, Evolution and Bioluminescence. Use and applications of bioluminescence Unusual Bio-molecules; Prions, Fullerenes, Small Nuclear Riboproteins (SNURPNs), Lectins, Antifreeze proteins, Stress Proteins, Chaperons, Ionophores (Crown ethers, Cryptans) Biomimetic Chemistry- Mimicking of Ion Channels, Enzyme receptor carriers, antibodies, Vesicles and Sensors, Enzyme mimicking-Cram's Protease Model, Rebok's allosteric Model and Flavino-phores for NAD Host-guest Chem

# BIOSTATISTICS

**Course Code: BCH4102**

**Credit Units: 02**

**Course Objective:** An important objective of the course is to develop an understanding of the basics of biostatistics. The course will familiarize students with the application of biostatistics that will be highly beneficial during their experimental analysis and research.

## **Course Contents:**

### **Module-I: Biostatistics I**

Principles and practice of statistical methods in biological research, samples and populations, measures of central tendency; mean, median mode; standard deviations and standard error, measures of dispersion: correlation and regression, sampling theory, Coefficient of variation, standard deviation; Range and interquartile range; Grouped mean and grouped variance; Frequency distributions; One way ANOVA; Two-way ANOVA; AMOVA; student's t test, Q Test, F Test

### **Module-II: Biostatistics II**

Pearsonian chi square Basic idea of probability, probability distributions, binomial, Poisson, normal Statistical quality control, Chi Square Test – Observed and expected frequencies, Calculating p values, assumptions of a chi square goodness of fit; Correlation –Two-way scatter plot, Pearson's correlation coefficient; Regression – regression concepts, simple linear regression; Calculation of  $R^2$  and  $p$ .

## **Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>HA</b>	<b>S/V/Q</b>	<b>ATTD</b>	<b>EE</b>
<b>Weightage (%)</b>	15	5	5	5	70

## **References/Texts**

# CELL BIOLOGY AND SIGNALING

**Course Code: BCH4110**

**Credit Units: 04**

**Course Objective:** This will cover the concepts of cell biology and signaling at the post graduate level. The main objective is to prepare students with a clear concept of cellular and signaling processes to help them understand the upcoming topics clearly.

## **Course Contents:**

### **Module-I: Fundamentals of Cell & Membrane Biology**

Cell Theory: Historical background, Molecular logic of cells (Prokaryotes and Eukaryotes), Subcellular organelles: Organization, ultrastructure & Gross functions. , Cell and subcellular membrane (structure, composition & function), Role of cholesterol and fatty acid composition in membrane fluidity . Transport across cell membranes: Passive, active and facilitated transport. Symport, uniport and antiport. Unicellular, homocellular and transcellular transport processes. Transport of glucose and aminoacids into cells, Molecular and patch clamp approaches to the structure function relationship of voltage gated channels. Artificial Membranes (Liposomes) in Drug Delivery, Enveloped viruses: Structure, function and entry mechanism, importance as a probe in cell biology. Use of fluorescence probes in membrane fusion. Detail studies on influenza virus hemagglutinin (HA) and Sendai virus fusion protein as a model. Kinetics of viral-envelope protein-induced cell fusion and applications in targeted drug/gene delivery. Role of membrane proteins in normal and abnormal cell physiology.

### **Module-II: Cell Cycle & Cytoskeleton**

Cell cycle: Phases of cell cycle, Restriction points and quiescent cells, length of each phase. Cell cycle control mechanisms in yeast and mammalian cells: Role of various cyclin-Cdk complexes in transition of various check points. Role of ubiquitin-protein ligase- SCF and APC/C in the control of cell cycle. Microtubule organization center and control. Mitosis and meiosis: Different stages and their characteristic features. Cell cycle in relation to cancer and apoptosis. Concept of extracellular matrix and cell adhesion molecules. Cell junctions and their functions. Cytoskeleton: Microfilaments, intermediate filaments and microtubules, Cytoskeletal proteins in mitosis. Details of the mechanism of muscle contraction.

### **Module III: Protein Sorting & Modification**

Signal for Protein Sorting: Roadmap of biosynthetic protein traffic, Dynamics of protein trafficking, experimental evidences of protein translocation across ER-membrane. Signal Recognition Particles: Characterization and function, signal peptide and signal peptidase, Mechanism of movement of polypeptide through ER membrane into the ER lumen. Protein Modification in ER: GRP, PERK, Unfolded response pathway, eiF2a, PDI roles in survival and death. Role of PDI and Bip in protein maturation in ER. Biosynthesis of O-linked and N-linked sugars, Golgi antiport. Role of Dolicolphosphate in the biosynthesis of precursor N-linked oligosaccharides. Sorting of protein in Golgi: Evidences for three compartments for Golgi stack, sorting of resident ER-protein from other proteins, targeting of lysosomal enzymes and specificity of lysosomal enzymes phosphorylation. Golgi vesicular Transport: Coated and uncoated vesicle, Composition of coated vesicles, Role of ARF and coatomer in the formation of coated bud and vesicles. Mechanisms of targeting and fusion of Golgi-derived transport vesicles to the correct target site. Role of NSF, SNAPs and SNAREs. Protein Import in Mitochondria: Characteristics of signal sequences, nature of receptors, accessories proteins, co-receptors for import of mitochondrial proteins, mechanism. Protein Import in Peroxisomes: Characteristics of signal sequences, nature of receptors, accessories proteins, co-receptors. Mechanism of entry of proteins into the peroxisomal matrix and insertion into peroxisomal membranes. Signal for Import and Export of Macromolecules from Nucleus: Characteristics of signal sequences, nature of importins and exportins. Mechanism of entry and exit of macromolecules

from nucleus. Mechanism of entry of large and small molecules into nucleus via Nuclear-Pore-Complex.

#### **Module IV: Cell Signaling & Tissue Culture**

Signaling: General principles, endocrine, paracrine and autocrine signaling, components of intracellular signal transduction pathways. Signaling by G-protein coupled receptors, signaling of growth factors (EGF and insulin) via activation of receptor tyrosine kinases, Signaling of TGFB by direct activating Smad proteins. Cytokine signaling via JAK/STAT pathway. Cell Survival and death signals: Programmed cell death and role of caspases in extrinsic and intrinsic pathways.

**Plant tissue culture**-General techniques, nutrient media, callus, cloning and regeneration. Anther, meristem, ovary and embryo culture. Animal Tissue culture: Techniques, hybridoma technology, monoclonal antibodies.

#### **Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>HA</b>	<b>S/V/Q</b>	<b>ATTD</b>	<b>EE</b>
<b>Weightage (%)</b>	15	5	5	5	70

#### **References/Texts:**

- Molecular Cell Biology, Seventh Edition by Harvey L. Lodish and W.H. Freeman.
- The Cell: A Molecular Approach, Fifth Edition by Geoffery M. Cooper, Robert E. Hausman.
- Lehninger Principles of Biochemistry, Fourth Edition by David L. Nelson (Author), Michael M. Cox (Author).

# BIOCHEMICAL ENGINEERING

**Course Code: BCH4104**

**Credit Units: 02**

**Course Objective:** The course aims to promote progress in the crucial chemical engineering aspects of the development of biological processes associated with everything from raw materials preparation to product recovery, relevant to industries as diverse as medical / healthcare, food and environmental protection. Its applications are used in the food, feed, and pharmaceutical, biotechnology, and water treatment industries.

## **Course Contents:**

### **Module-I: Kinetics**

Kinetics and Statistics; Stoichiometry: mass balances; Stoichiometry: energy balances; Growth kinetics; Measurement of growth; Inhibition; Effect of pH and temperature; Factors affecting microbial growth; Immobilized enzymes: methods, mass transfer considerations.

### **Module-II: Bio-separations**

Biomass removal and disruption: Centrifugation; Sedimentation; Flocculation; Microfiltration; Sonication; Bead mills; Homogenizers; Chemical lysis; Enzymatic lysis. Membrane-based techniques: 1) Ultrafiltration, 2) Reverse osmosis, 3) Dialysis, 4) Diafiltration, 5) Pervaporation, 6) Perstraction

### **Module-III: Bioreactors**

Introduction to bioreactors; Batch and Fed-batch bioreactors, Continuous bioreactors; Immobilized cells; Bioreactor operation; Sterilization; Aeration; Sensors; Instrumentation; Culture-specific design aspects: plant/mammalian cell culture reactors.

### **Module-IV: Downstream processes**

Industrial enzymes; Fermentation: antibiotic, Process configurations (packed bed, expanded bed, simulated moving beds) Description of industrial processes; case study

## **Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>HA</b>	<b>S/V/Q</b>	<b>ATTD</b>	<b>EE</b>
<b>Weightage (%)</b>	15	5	5	5	70

## **Texts/References**

# INSTRUMENTATION TECHNIQUES

**Course Code: BCH4106**

**Credit Units: 03**

**Course Objective:** The main objective of the course is to provide students with an insight into the basic instrumentation techniques used in biochemical research.

## **Course Contents:**

### **MODULE-I: Microscopy**

Principle of light microscopy, phase contrast microscopy, fluorescence microscopy, scanning electron microscopy, transmission electron microscopy, Confocal microscopy, Cryo-electron microscopy Chromatographic techniques

### **MODULE-II: Chromatography and Centrifugation**

Preparation of sample, different methods of cell lysis, salting out, dialysis. Introduction to chromatography. Different modes of chromatography: paper, thin layer and column. Preparative and analytical applications. Principles and applications of: Paper Chromatography, Thin Layer Chromatography, Ion Exchange Chromatography, Hydrophobic interaction chromatography Molecular Sieve Chromatography, Affinity Chromatography, reverse phase chromatography. Principle of **centrifugation**, basic rules of sedimentation, sedimentation coefficient. Various types of centrifuges, low speed centrifuge, high speed centrifuge and ultracentrifuge, types of rotors. Application of centrifugation, differential centrifugation, density gradient centrifugation- zonal and isopycnic.

### **MODULE-III: Spectroscopy**

Electromagnetic radiation, interaction of radiation with biomolecules, principle of UV-visible absorption spectrophotometry, Lambert's Law, Beer's Law, working of a spectrophotometer. Applications of UV-visible absorption spectrophotometry in biochemistry. Fluorescence spectrophotometry: Phenomena of fluorescence, intrinsic and extrinsic fluorescence, applications of fluorescence in biochemistry. Circular Dichroism, FTIR, ITC, TGA, DSC.

### **MODULE-IV: Mass spectrometry & advanced florescence techniques**

Mass spectrometry; m/z ratio, McLafferty rearrangement, characteristic spectra of some simple organic molecules, Time of Flight (TOF), MS-MS, ESI-MS, MALDI, GCMS and LCMS. Fluorescence correlation spectroscopy (FCS), FRAP, FACS, FRET Techniques.

## **Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>HA</b>	<b>S/V/Q</b>	<b>ATTD</b>	<b>EE</b>
<b>Weightage (%)</b>	15	5	5	5	70

# BIOCHEMISTRY LAB

Course Code: BCH4105

Credit Units: 02

**Course Objective:** To help students learn bioorganic preparations and analysis.

## Bioorganic Preparations and Analytical Biochemistry

1. Safety measures in laboratories.
2. Preparation of normal and molar solutions.
3. Preparation of buffers, phosphate and acetate buffers.
4. Titration of a weak acid using a pH meter
5. Qualitative test for lipids.
6. Qualitative test for nucleic acids.
7. Determination of pKa and titration of Amino acids using pH meter
8. Separation of amino acids/ sugars/ bases by thin layer chromatography/paper chromatography.
9. Organic Preparations -Dinitrophenyl hydrazone of ascorbic acid or any other ketone
10. Qualitative and Quantitative Analysis of –
  - a. Carbohydrates
  - b. Free and bound phosphate
  - c. Vitamin C
11. Fats: Acid number, saponification, and iodine values
12. Fractionation of egg proteins and its quantification
13. Isolation of lipids from egg yolk and separation by TLC
14. Cholesterol estimation.

## Examination Scheme:

Components	CT	HA	S/V/Q	ATTD	EE
Weightage(%)	15	5	5	5	70

## Suggested Readings

- Experimental Biochemistry- R.W. Switzer & L.F. Garrity (W.H.Freeman & Co.)
- Modern Experimental Biochemistry - R. Boyer (Pearson Education)
- Practical Biochemistry - K. Wilson & J. Walker (Cambridge Univ. Press)
- Laboratory Manual in Biochemistry - J. Jayaraman (Narosa Publishing House)
- Practical Biochemistry - D.T. Plummer (TATA McGraw-Hill)
- Practical Biochemistry - R.C.Gupta & S. Bhargava

## BIOCHEMICAL ENGINEERING LAB

**Course Code: BCH4107**

**Credit Units: 02**

**Course Objective:** To help students learn the laboratory techniques used in the food, feed, and pharmaceutical, biotechnology, and water treatment industries.

**Course Content:**

Expt. 1: Cheese Production from Milk  
Expt. 2: Digestion of Protein into Amino Acid  
Expt. 3: Cellulose Degradation-Glucose Assay by Dinitrosalicylic Colorimetric Method  
Expt. 4: Starch Hydrolysis by Amylase  
Expt. 5: Enzyme Immobilization by Gel Entrapment- Entrapment in Polyacrylamide Gel, Entrapment In Alginate Gel, Enzyme Entrapment In Gelatin Gel  
Expt. 6: Aseptic Culture Techniques --- Use of a Steam Autoclave and Petri Dish Preparation.  
Expt. 7: Batch Submerged Fermentation of Baker Yeast in a Shaker Flask,  
Expt. 8: Wine Fermentation

**Examination Scheme:**

Components	CT	HA	S/V/Q	ATTD	EE
Weightage (%)	15	5	5	5	70

**Suggested Readings**

- Experimental Biochemistry- R.W. Switzer & L.F. Garrity (W.H.Freeman & Co.)
- Modern Experimental Biochemistry - R. Boyer (Pearson Education)
- Practical Biochemistry - K. Wilson & J. Walker (Cambridge Univ. Press)
- Laboratory Manual in Biochemistry - J. Jayaraman (Narosa Publishing House)
- Practical Biochemistry - D.T. Plummer (TATA McGraw-Hill)
- Practical Biochemistry - R.C.Gupta & S. Bhargava

- Experiments in Microbiology - Gilstrap-Kleyn-Nester
- Experimental Biochemistry – A Student Companion - B.S. Rao & V. Deshpande,

I.K. Interational Pvt. Ltd. (N. Delhi, Mumbai, Bangalore) 2005

## BIOINFORMATICS LAB

Course Code: BCH4111

Credit Units: 01

**Course Objective:** To help students learn applications of Bioinformatics.

1. Sequence retrieval (protein and gene) from NCBI and Molecular file formats - FASTA, GenBank/Genpept/DDBJ/PDB/SwissProt.
2. Structure download (protein and DNA) from PDB and Molecular viewer by visualization software (Pymol / Rasmol/Jmol/Chimera/Discovery Studio)
3. BLAST suite of tools for pairwise alignment
4. Multiple sequence alignment (CLUSTALW/TCoffee) and construction of guide trees
5. Domain Analysis (pfam/CDART/ CDD/ SMART/ProDom)
6. Gene prediction using GENSCAN/GLIMMER
7. Primary sequence analyses (Protparam) and Secondary structure prediction (GOR, nnPredict).
8. Homology Modeling: Tertiary structure prediction (SWISSMODEL) and Protein structure evaluation - Ramachandran map (PROCHECK)
9. Abintio modeling
10. Molecular docking and simulation
11. Phylogenetic analysis
12. Drug discovery projects and introduction of Schrodinger
13. Structural alignment and introduction of Structure databases (CATH, SCOP, and PDBsum).

### Examination Scheme:

Components	CT	HA	S/V/Q	ATTD	EE
Weightage (%)	15	5	5	5	70

## Syllabus - Second Semester

### ADVANCED BIOCHEMISTRY

Course Code: BCH4201

Credit Units: 04

**Course Objective:** The objective of the course is to provide students with an insight in advanced biochemistry. The students will be provided with an in-depth knowledge about plant metabolic pathways, Biochemistry of human hormone and tissue biochemistry and fundamentals of Neurobiochemistry.

#### Course Contents:

##### Module-I: Plant Biochemistry-I

Chlorophylls and accessory pigments, Photosynthesis and Carbon assimilation. historical background and Hill's reaction. Structure of PSI and PSII complexes, Light reaction, The Z-scheme of photosynthetic electron flow, Cyclic and non-cyclic photophosphorylation, Calvin cycle and regulation; C<sub>4</sub> cycle and Crassulacean acid metabolism (CAM), Photorespiration, Photo inhibition of photosynthesis, Photosynthetic carbon reduction cycle, Synthesis of polysaccharides in plants. Photosynthesis in Microbes, Bacteria, Fungi, Algae and Yeast Plant. growth hormones- Auxins, Gibberellins, Cytokines, *Abscisic* Acid and Ethylene. Biological nitrogen fixation by free living and in symbiotic association; Structure and function of the enzyme nitrogenase. Nitrate assimilation: Nitrate and Nitrite reductase. Primary and secondary ammonia assimilation in plants; ammonia assimilation by glutamine synthetase-glutamine oxoglutarate amino transferase (GS-GOGAT) pathway. Seed storage proteins in legumes and cereals. Sulphur Assimilation in Plants.

##### Module-II: Biochemistry of Human Hormones

Functions of hormones and their regulation. Chemical signaling - endocrine, paracrine, autocrine, intracrine and neuroendocrine mechanisms. Chemical classification of hormones, Classification of Hormones Biosynthesis, Storage, Secretion, Transport and Metabolic effects (including hypo and hyper conditions) of Hormones of Pituitary, Hypothalamus, Thyroid, Parathyroid, Pancreas, Adrenal Medulla, Adrenal Cortex, Gonads, Kidneys and G I Tract and their half-lives. Hormone therapy. General introduction to Endocrine methodology. Hormone receptors - extracellular and intracellular. Receptor - hormone binding, Scatchard analysis. G protein coupled receptors, G proteins, second messengers - cAMP, cGMP, IP<sub>3</sub>, DAG, Ca<sup>2+</sup>, Effector systems - adenylyl cyclase, guanylyl cyclase, PDE, PLC. Protein kinases (PKA, PKB, PKC, PKG). Receptor tyrosine kinases - EGF, insulin and Ras - MAP kinase cascade. **Non-receptor** tyrosine kinase erythropoietin receptor JAK - STAT pathway. Steroid hormone Receptor. Receptor regulation and cross talk.

##### Module-III: Biochemistry of Tissues

**Muscles:** Structure of Skeletal, smooth and cardiac muscle, Molecular mechanisms of skeletal muscle contraction: role of troponin, tropomyosin, and calcium in contraction, excitation-contraction coupling. Smooth muscle contraction and its control. Excitation-contraction coupling in cardiac muscle. Twitch, myosin ATPase activities, The motor unit, Role of calmodulin, muscular dystrophies. **Bones:** Composition, formulation, Structure and functions, factors affecting bone metabolism, bone remodelling, osteoporosis, osteomalacia. **Connective Tissue:** Biosynthesis, composition, structure and metabolism of Collagen and its Disorders-Ehler's Syndrome (Type I to VII), Osteogenesis Imperfecta (Type I to IV).

##### Module-IV: Neurobiochemistry

Central Nervous system. Peripheral Nervous system. Blood brain barrier and CSF. Structure and maintenance of neurons. Functional classes of neurons. Membrane potentials: Resting Membrane Potential, Graded potentials, Action potential. Synapse: excitatory and inhibitory.

Temporal and spatial summation. Neurotransmitters (GABA, Acetylcholine, Dopamine) and neuromodulators (definition with examples). Somatic sensation: definition and cellular pathways of pain transmission and modulation. Biochemistry of memory mechanisms, Sensory Receptors of Taste, Vision, Odour, Hearing, Touch. Physiology of EEG, sleep.

**Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>HA</b>	<b>S/V/Q</b>	<b>ATTD</b>	<b>EE</b>
<b>Weightage (%)</b>	15	5	5	5	70

**Suggested Readings:**

- Lehninger Principles of Biochemistry, Fourth Edition by David L. Nelson (Author), Michael M. Cox (Author)
- Biochemistry, Fourth Edition by Donald Voet, Judith G. Voet.
- Plant biochemistry, Second Edition by Goodwin, Mercer.
- Neuroscience Exploring the Brain, Fourth Edition by M. F. Bear, B.W. Connors, M.A. Paradiso

# STRUCTURAL BIOLOGY

**Course Code: BCH4202**

**Credit Units: 03**

**Course Objective:** This course will provide students with a detailed knowledge about protein structure, allowed and disallowed conformations, protein folding and functions. An insight into protein crystallography will be given which will familiarize students with the theoretical knowledge of solving protein structures.

## **Course Contents:**

### **MODULE-I: MACROMOLECULAR STRUCTURE**

Structure of proteins. nucleic acids; membranes, action of other biologically important molecules and molecular assemblies like ribosomes, nucleosomes; functional significance of structure. Van der Waals radii of atoms (equilibrium separation (between non covalently bonded atoms) –contact distance criteria; Noncovalent forces determining biopolymer structure; dispersion; forces; electrostatic interactions; van der Waals interactions; hydrogen bonds; hydrophobic interactions; distortional energies; description of various interactions by potential functions; principles of minimization of conformational energy.

### **MODULE-II: PRINCIPLES OF PROTEIN STRUCTURE**

Structural implications of the peptide bond; rigid planar peptide unit; cis and trans configuration; conformations of a pair of linked peptide units; 8 torsion angles phi and psi -steric hindrance; hard sphere approximation; allowed and disallowed conformations; Ramachandran Diagram; conformational maps for glycine and other natural amino acids; conformationally constrained amino acids and their importance., Intrinsically disordered protein

### **MODULE-III: MACROMOLECULAR CRYSTALLOGRAPHY**

DNA External features and symmetry – unit cell and Miller indices – seven crystal systems – Bravais lattices – point groups and space groups – X-ray diffraction – Bragg's law Generation, detection and properties of X-rays-choice of radiation, Patterson function synchrotron radiation Powder photographs – interpretation of powder photograph – ASTM index. Theory of diffraction by helical structures and application to alpha-helix and. Steps and Procedures of structure solution: MR, MIR, MWAD, SWAD. Dynamic nature of proteins, protein folding problem, Levinthal's paradox, energy landscape theory, introduction to small angle x-ray scattering (SAXS).

### **MODULE-IV: DLS, NMR and EPR**

Theory of Dynamic Light Scattering, Hydrodynamic Diameter, Number average diameter, volume average diameter, Intensity average diameter. NMR spectroscopy, relaxation methods, CW and FT NMR, chemical shift, spectra of aldehyde, ketone, alcohol and steroids, magic angle, 2D NMR, TOCSY, NOSEY, COSEY. Fundamentals of EPR.

## **Examination Scheme:**

Components	CT	HA	S/V/Q	ATTD	EE
Weightage (%)	15	5	5	5	70

## **Suggested Readings:**

- Lehninger Principles of Biochemistry, Fourth Edition by David L. Nelson (Author), Michael M. Cox (Author)
- Crystallography Made Crystal Clear: A Guide for Users of Macromolecular Models.

# GENETICS

**Course Code: BCH4203**

**Credit Units: 04**

**Course Objective:** To provide students with an overview of the principles of plant and animal genetics including Mendelian and modern concepts of heredity. Developments in molecular genetics will be addressed through the chemistry and physiology of the gene and the nature of gene action in prokaryotic and eukaryotic cells. This course will also provide students with knowledge of the diseases arising out of genetic disorders.

## **Course Contents:**

### **MODULE-I: PRINCIPLES OF GENETICS**

Model systems in genetic analysis: *E.coli*, *Neurospora crassa*, yeast, *Drosophila*, *Arabidopsis*, Maize, *C. elegans*, Zebra fish. Mendelian Genetics- Concept of allele, Mendel's Laws of Inheritance, Mendelian Genetics in Eukaryotic life cycles with specific examples from plants, *Drosophila* and human. Chromosome theory of inheritance, chromosome segregation in meiosis, formation and function of synaptonemal complex, crossing over and chiasmata formation, genes affecting mitosis & meiosis, cytological basis of crossing over. Extensions to Mendelism: Codominance, incomplete dominance, gene interactions, multiple alleles with specific example of ABO blood group in humans, pleiotropy, penetrance and expressivity. Genes and environment: norm of reaction, phenocopies sex limited and sex influenced characters. - pseudo alleles- Rh blood group incompatibility; complex loci ; complementation test in Genetics, Extra chromosomal inheritance: Inheritance of mitochondrial and chloroplast genes, maternal inheritance. Role of genetics in Agriculture, Industry and medicine.

### **MODULE-II: LINKAGE & MAPPING TECHNIQUES**

Linkage: Discovery, coupling versus repulsion of syntenic alleles Genetic mapping: Recombination frequency and map construction, genetic mapping in a three-point test cross, examples of linkage maps, coincidence and interference. Haploid mapping-tetrad analysis in fungi; unordered (yeast) and ordered (*Neurospora*) spores; chi-square test for linkage, LOD score for linkage testing. Physical mapping: Somatic cell hybridization for positioning genes on chromosomes and physical maps using molecular markers, DNA polymorphism in mapping. Polygenic inheritance, QTL mapping and development of mapping population in plants.

### **MODULE-III: HUMAN GENETICS I**

History and development of Human genetics- hereditary traits, genetics and disease; organization of the Human genome; Unique & Repetitive DNA ;; Methods of genetic study in humans (Pedigree analysis, Chromosomal, Biochemical and Somatic cell genetics analysis ); Sex –linked, sex-limited and sex-influenced traits. Human Genome Project Chromosomal Basis of genetic disorders: Karyotyping and identification of chromosome variation, Metabolic disorders, inter-allelic and intra-allelic heterogeneity; defects in membrane transport (cystic fibrosis), defects in structural proteins (DMD and BMD), collagen disorders (Osteogenesis imperfecta), Genetical factors in common diseases- congenital defects, coronary heart disease, diabetes, cancers, mental diseases, genetic counselling,

### **MODULE IV: HUMAN GENETICS II**

Pharmacogenomics: Pharmacogenetics, genetics of globin triplet repeat disorders, Effects of drugs in individual and susceptibility: Acetylation polymorphisms, Succinyl choline sensitivity and G6PD deficiency. Cancer genetics and immunogenetics

**Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>HA</b>	<b>S/V/Q</b>	<b>ATTD</b>	<b>EE</b>
<b>Weightage (%)</b>	15	5	5	5	70

**Suggested Readings:**

- Genetics, Fourth Edition by P.K. Gupta.
- Principles of Genetics, 8<sup>th</sup> edition by Gardener, Simmons, Snustad.
- Genetics, Third edition by Strickberger, Monroe W.
- Principles of Genetics, 7<sup>th</sup> edition by Robert H. Tamarin

# CLINICAL BIOCHEMISTRY

**Course Code: BCH4204**

**Credit Units: 03**

**Course Objective:** The objective of the course is to provide students with a knowledge of the various diseases arising due to disorders in the biochemical processes of cells, involving the hepatobiliary, myocardial and endocrinal systems. It also provides preliminary knowledge of cancer biology. This course also provides in-depth knowledge of amino acid and Nucleic acid metabolism and disorders

## **Course Contents:**

### **MODULE-I: Introduction to Clinical Biochemistry**

Definition and scope of Clinical Biochemistry in diagnosis, collection and preservation of biological fluids (Blood, Urine, CSF), normal value of important constituents of blood, CSF and urine. Blood Clotting – Disturbances in blood clotting mechanisms – haemorrhagic disorders – haemophilia, von Willebrand's disease, purpura, Rendu-Osler-Werber disease, thrombotic thrombocytopenic purpura, disseminated intravascular coagulation, acquired prothrombin complex disorders, circulating anticoagulants.

### **MODULE-II: Disorders of Carbohydrate, Lipid and Amino acids Metabolism**

**Disorders of Carbohydrate Metabolism** – Diabetes mellitus, glucose and galactose tolerance tests, sugar levels in blood, renal threshold for glucose, factors influencing blood glucose level, glycogen storage diseases, G6PD, pentosuria, galactosemia. **Disorders of Lipids** – Plasma lipoproteins, cholesterol, triglycerides & phospholipids in health and disease, hyperlipidemia, hyperlipoproteinemia, Gaucher's disease, Tay-Sach's and Niemann-Pick disease, ketone bodies, Abetalipoproteinemia. **Catabolism, Biosynthesis and disorders of Amino Acid metabolism;** Catabolic pathways of individual amino acids. Glucogenic and ketogenic amino acids. Metabolism of one carbon units. Disorders of amino acid metabolism, phenylketonuria, alkaptonuria, maple syrup urine disease, methyl malonic acidemia (MMA), homocystinuria and Hartnup's disease. Overview of amino acid synthesis. Biosynthesis of non-essential amino acids and its regulation. *De novo* synthesis of purine and pyrimidine nucleotides, regulation and salvage pathways. Digestion of nucleic acids, degradation of purine and pyrimidine nucleotides. Inhibitors of nucleotide metabolism. **Metabolic disorder of nucleotides:** gout, Lesch-Nyhan Syndrome, SCID, adenosine deaminase deficiency. Artherosclerosis and its risk factor.

### **MODULE-III: Diseases caused due to misfolded proteins and Autoimmune diseases**

Alzheimer's, Huntington's diseases, Kuru, Creutzfeldt-Jakob disease, Sickle Cell anaemia, Thalassemia. Concepts in immune recognition-self and non-self-discrimination, organ specific autoimmune diseases-Hashimoto's thyroiditis, Graves' disease, Myasthenia Gravis, Diabetes Melitus-I, Systemic diseases: Systemic lupus erythematosus (SLE), Rheumatoid arthritis.

### **MODULE-IV: Infectious diseases and Hormonal imbalances**

Viral infection: Polio, Measles, Mumps, influenza, HIV. Bacterial infections: Tetanus, Diphtheria, Tuberculosis, Typhoid, Cholera. Protozoan: Malaria and Trypanosomiasis. Parasitic infections: Leishmania. Hormonal imbalances leading to disease: Diabetes Insipidus, Acromegaly, Gigantism, Dwarfism, Goitre, Cretinism, Cushing and Conn's syndrome, Addison's disease.

### **Module-V: Organ Functional test and Diagnostic Enzymes**

Enzymes in health and diseases. Biochemical diagnosis of diseases by enzyme assays – SGOT, SGPT, CPK, cholinesterase, LDH. Kidney and liver functional test, Jaundice, Hepatitis, pancreatic, gastric and

intestinal functional test, myocardial infarction test.

**Module-VI: Cancer Biology and *In vitro* fertilization**

Cancer Biology: Phenotypic characters of cancer cells; Genetic basis of cancers: Protooncogene, Oncogene, Tumor suppressor genes, Hodgkin's and Non- Metastasis, anti-cancer drugs & chemotherapy. Fundamentals of IVF.

**Examination Scheme:**

Components	CT	HA	S/V/Q	ATTD	EE
Weightage (%)	15	5	5	5	70

**Books recommended:**

- Notes on clinical chemistry- Whitby-Smith-Beekett-Walker. Balackwell Sci, Inc.
- Principle of internal Medicine- Harison T. R. McGrow Hill, NY.
- Textbook of Biochemistry with Clinical Correlations (2011) Devlin, T.M. John Wiley & Sons, Inc. (New York), ISBN: 978-0-4710-28173-4
- Immunology: A Short Course (2009) 6th ed., Coico, R and Sunshine, G., John Wiley & Sons, Inc (New Jersey), ISBN; 978-0-470-08158-7
- Biochemistry (2012) 7th ed., Berg, J.M., Tymoczko, J. L. and Stryer, L., W.H Freeman and Company (New York)
- Genetics (2012) 6th ed., Snustad, D.P. and Simmons, M.J., John Wiley & Sons. (Singapore) ISBN: 978-1-118-09242-2
- Klein's Microbiology, (2008) 7 ed., Prescott, Harley, Wiley, J.M. Sherwood, L.M. Woolverton, C.J. Mc Graw Hill International Edition (New York) ISBN: 978-007-126727

# IMMUNOLOGY

**Course Code: BCH4209**

**Credit Units: 03**

**Course Objective:** The objective of this course is to familiarize students about the structural features of the components of the immune system as well as their functions. An overview of clinical immunology will help students understand the utmost importance of this particular branch of science.

## **Course Contents:**

### **MODULE-I: Cellular basis of Immunity**

Historical Perspective, Innate and Adaptive Immunity, Hematopoiesis, cells of the immune system, primary and secondary lymphoid organs and tissues. Anatomical barriers, cell types of innate immunity, soluble molecules and membrane associated receptors (PRR), connections between innate and adaptive immunity, localized and systemic response. Complement activation by classical, alternate and MB lectin pathway, biological consequences of complement activation, regulation and complement deficiencies

### **MODULE-II: Antigens and Antibody**

Antigens, carriers, adjuvants and haptens, factors responsible for immunogenicity, B and T cell epitopes. Structure, classes and subclasses of immunoglobulins, effector functions of antibody, antigenic determinants on Ig, Ig super family. Clonal selection theory of antibody production, monoclonal and polyclonal antibodies, poly reactive antibodies, catalytic antibodies, abzymes. Monoclonal antibodies production and applications

### **MODULE-III: Biology of the B Lymphocyte & T Lymphocyte**

Dreyer-Bennett hypothesis, Clonal selection theory of antibody production, multigene organization of Ig locus, mechanism of V region DNA rearrangement, mechanisms of antibody diversity. Antigen independent phase of B cell maturation and selection, humoral response – T-dependent and T-independent response, anatomical distribution of B cell populations. General organization and inheritance of MHC, structure, distribution and role of MHC class I and class II proteins, pathways of antigen processing and presentation. Structure and role of T cell receptor (TCR) and co-receptor, T cell development, generation of receptor diversity, selection and differentiation. General properties of effector T cells, cytotoxic T cells (Tc), natural killer cells; NK - T cells and antibody dependent cellular cytotoxicity (ADCC).

### **MODULE-IV: Autoimmunity and Hypersensitivity**

Self-tolerance and autoimmunity, Organ specific and systemic autoimmune diseases, Gell and Coombs classification, IgE mediated (Type I) hypersensitivity, antibody mediated cytotoxic (Type II) hypersensitivity, immune complex mediated (type III) hypersensitivity and delayed type (Type IV) hypersensitivity

### **MODULE-V: Transplantation Immunology and Vaccines**

Immunological basis of graft rejection, clinical manifestations, immunosuppressive therapy and privileged sites. Vaccines - active and passive immunization, types of vaccines

**Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>HA</b>	<b>S/V/Q</b>	<b>ATTD</b>	<b>EE</b>
<b>Weightage (%)</b>	15	5	5	5	70

**Suggested Readings:**

- Kuby Immunology (2007) 6th ed., Kindt, T.L., Goldsby, R.A. and Osborne, B.A., W.H Freeman and Company (New York), ISBN:13: 978-0-7167-8590-3 / ISBN: 10:0-7617-8590- 0
- Immunology: A Short Course (2009) 6th ed., Coico, R and Sunshine, G., John Wiley& sons, Inc (New Jersey), ISBN: 978-0-470-08158-7.
- Janeway's Immunobiology 2012 8th ed., Murphy, K., Mowat, A., and Weaver, C.T., Garland Science (London & New York), ISBN: 978-0-8153-4243-4

## TERM PAPER

**Course Code: BCH4231**

**Credit Units: 01**

### Objectives

The objective of this course is to judge the understanding as well as application of the knowledge gained by the students. The aim of the term paper is to provide the students with an opportunity to further enhance their knowledge in a sector of their choice by undertaking a significant practical unit of examining and analyzing various aspects of Biochemistry & its application at a level commensurate with the learning outcomes of the various courses taken up them in the ongoing semester.

A term paper is primarily a record of intelligent reading in several sources on a particular subject. The students will choose the topic at the beginning of the session in consultation with the faculty assigned.

### Guidelines:

1. The term paper will be related to the contemporary research issue and the topic will be given by the department.
2. The presentation of the term paper is scheduled to be held before the commencement of Semester examinations.
3. The paper will carry 100 marks that will be marked on the basis of understanding and organization of content based on the literature review. The Bibliography shall form an important part of the paper.
4. Examples of a few broad areas for term paper (List is indicative, not exhaustive)
  - Molecular Biology
  - Protein Biochemistry
  - Immunology
  - Biophysics
  - Cell Biology
  - Structural Biology
  - Genetics

### Evaluation Scheme

Organisation and relevance of content	Literature Review	Bibliography	Presentation	Total
30	30	20	20	100

## ADVANCED BIOCHEMISTRY LAB

**Course Code: BCH4206**

**Credit Units: 02**

**Course Objective:** To provide students hands-on training in the major instrumentation techniques common to biochemistry.

### Course Contents:

1. Verification of Beer-Lambert's law and determination of absorption coefficients
2. Paper chromatography – Separation of amino acids and carbohydrates in a mixture
3. Thin layer chromatography of fatty acids
4. DNA Gel Electrophoresis
5. Isoelectric pH of casein
6. Amino Acid Assay by Ninhydrin Colorimetric Method
7. Determination of pKa of acetic acid and glycine.
8. Digestion of Protein into Amino Acid
9. Isolation of chloroplast from spinach leaves and estimation of chlorophyll content.
10. Separation of photosynthetic pigments by TLC
11. Isolation of mitochondria from liver and assay of marker enzyme SDH.
12. Determination of CMC of detergents.
13. Preparation of RBC ghost cell.
14. Study the photosynthetic O<sub>2</sub> evolution in hydrilla plant.
15. Isolation of Cytochrome C from Goat heart

### Examination Scheme:

Components	CT	HA	S/V/Q	ATTD	EE
Weightage (%)	15	5	5	5	70

### Suggested Readings

- Experimental Biochemistry- R.W. Switzer & L.F. Garritty (W.H.Freeman & Co.)
- Modern Experimental Biochemistry - R. Boyer (Pearson Education)
- Practical Biochemistry - K. Wilson & J. Walker (Cambridge Univ. Press)
- Laboratory Manual in Biochemistry - J. Jayaraman (Narosa Publishing House)
- Practical Biochemistry - D.T. Plummer (TATA McGraw-Hill)
- Practical Biochemistry - R.C.Gupta & S. Bhargava
- Experimental Physiology and Biochemistry - P.V.Chadha
- Experimental Biochemistry – A Student Companion - B.S. Rao & V. Deshpande,
- I.K. Interational Pvt. Ltd. (N. Delhi, Mumbai, Bangalore) 2005.

# CELL BIOLOGY AND GENETICS LAB

**Course Code: BCH4207**

**Credit Units: 02**

**Course Objective:** To make the students visualize cellular proteins and genetic material, observe the basic cell division processes and learn to perform karyotyping studies so that they can have a clear understanding of the structural details and functions of chromosomes.

## **Practical's:**

### **A) Cell Biology**

1. Isolation & visualization of cellular proteins.
2. Quantification of cells by Trypan blue exclusion dye.
3. Calculation of nucleolar frequency following haematoxyline staining
4. Understanding principles of cell culture and aseptic techniques.
5. Preparation of adhesion and suspension cell cultures.
6. Assessment of proliferation in cultured cells by MTT assay.
7. Observation of DNA fragmentation in apoptotic cells

### **B) Genetics**

#### **Plant/Animal/Human Cytogenetics:**

1. Squash preparation from root tips of *Allium cepa*, analyzing metaphase chromosomes and preparation of karyotype.
2. Squash preparation from root tips of *Allium sativum*, analyzing metaphase chromosomes and preparation of karyotype.
3. Squash preparation from root tips/shoot tips of *Nigella sativa*/ *Aloe vera*, analyzing metaphase chromosomes and preparation of karyotype.
4. Squash preparation of salivary glands of Dipteran larva to observe polytene chromosomes.
5. Induction of polyploidy in onion roots.
6. Estimation of mitotic index from root tips of *Allium cepa*
7. Estimation of mitotic index from root tips of *Allium sativum*.
8. Karyotype identification (from photographs) and explaining aspects of chromosome structure / behaviour crucial for interpreting results of chromosome analysis.
9. Study of different human pedigrees (from photographs)
10. Study different stages of meiosis by temporary preparation in flower buds (*Sagittaria* sp./ *Rhoeo* sp./ *Setcreasea* sp./ *Allium cepa*) / grasshopper testes .
11. Identification of mitotic and meiotic chromosomes of humans from permanent slides.
12. Smear technique to demonstrate sex chromatin in buccal epithelial cells.
13. Banding techniques in the production of various cytogenetic preparations.

#### **Molecular Genetics:**

1. Demonstrate familiarity with databases of information pertaining to genes, markers, maps and diseases such as Online Mendelian Inheritance in Man (OMIM) and Medline;
2. Understanding the principles of designing oligonucleotide primers for PCR and utilization of relevant software;
3. PCR applications in assigning genotypes to RFLP / VNTR sequences; screening samples for identified mutations.

#### **Biochemical /Pharmacogenetics:**

Electrophoretic screening for enzyme polymorphisms; estimation of enzyme deficiency / drug sensitivity.

**Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>HA</b>	<b>S/V/Q</b>	<b>ATTD</b>	<b>EE</b>
<b>Weightage (%)</b>	15	5	5	5	70

**Suggested Readings**

- Experimental Biochemistry- R.W. Switzer & L.F. Garrity (W.H.Freeman & Co.)
- Modern Experimental Biochemistry - R. Boyer (Pearson Education)
- Practical Biochemistry - K. Wilson & J. Walker (Cambridge Univ. Press)
- Laboratory Manual in Biochemistry - J. Jayaraman (Narosa Publishing House)
- Practical Biochemistry - D.T. Plummer (TATA McGraw-Hill)
- Practical Biochemistry - R.C.Gupta & S. Bhargava
- Experimental Physiology and Biochemistry - P.V.Chadha
- Experiments in Microbiology - Gilstrap-Kleyn-Nester
- Experimental Biochemistry – A Student Companion - B.S. Rao & V. Deshpande,
- I.K. Interational Pvt. Ltd. (N. Delhi, Mumbai, Bangalore) 2005.

# CLINICAL AND PROTEIN BIOCHEMISTRY LAB

**Course Code: BCH4208**

**Credit Units: 02**

**Course Objective:** To provide students with hands-on-training in various estimation using urine and blood. This course also provides intensive lab training of various proteins and enzyme parameters.

## **Clinical Biochemistry Lab**

- Absorption spectrum of hemoglobin isolated from whole blood.
- **Qualitative and quantitative analysis of:**  
Urine (urea, uric acid, glucose, proteins, Bence-Jones proteins, Cl<sup>-</sup>, PO<sub>3</sub><sup>-3</sup>, Ca<sup>+2</sup> Estimation of creatinine)
- Experiments on blood:
  - A. Identification and count of blood corpuscles
  - B. Estimation of haemoglobin
  - C. Determination of A/G ratio in serum
- Blood pressure measurement
- Glucose tolerance test
- Estimation of serum T4
- HCG based pregnancy test
- Estimation of serum electrolytes
- Isolation and estimation of serum cholesterol
- Lipid Profile: Triglyceride, Cholesterol
- Blood grouping
- Anthropometric measurements: BMI, Waist/Hip Ratio, Mid Arm Muscle Area (MAMA), Mid Arm Area (MAA).
- Case studies: Renal clearance, ECG, LFT, EEG
- Separation of isoenzymes of LDH by electrophoresis.
- Assay of serum transaminases – SGOT and SGPT.
- Estimation of serum urea.
- Estimation of serum uric acid.
- Estimation of serum creatinine.
- Estimation of bilirubin
- Assay of glutamate dehydrogenase

## **Protein Lab**

- Estimation of proteins by Biuret / Lowry / Bradford method and UV absorbance measurements.
- Ammonium sulphate fractionation of crude homogenate from germinated mung beans
- Enzyme activity assay
- Assay to determine enzyme activity and specific activity
- Progress curve plot for an enzyme
- Effect of pH/temperature on enzyme activity
- Determination of Km and Vmax using Lineweaver-Burk plot.
- Calculation of inhibitory constant (Ki) for an enzyme
- SDS-PAGE analysis of proteins
- Desalting Chromatography

**Examination Scheme:**

Components	CT	HA	S/V/Q	ATTD	EE
Weightage (%)	15	5	5	5	70

**Suggested Readings**

- Experimental Biochemistry- R.W. Switzer & L.F. Garrity (W.H.Freeman & Co.)
- Modern Experimental Biochemistry - R. Boyer (Pearson Education)
- Practical Biochemistry - K. Wilson & J. Walker (Cambridge Univ. Press)

## Syllabus - Third Semester

### RECOMBINANT DNA TECHNOLOGY

**Course Code: BCH4301**

**Credit Units: 03**

**Course Objective:** Recombinant DNA technology deals with genetic manipulation of Bacteria/Virus/plants/animals by incorporating DNA sequences from different sources into a and finds its application in plant/animal genomics, Cell Biology, Signaling and clinical research. This course will help students in understanding the tools used in gene exploration, creation of genomic library, cloning and expression of proteins,

#### **Course Contents:**

##### **MODULE-I: Fundamentals of Gene Cloning**

Restriction and modification systems, restriction endonucleases and other enzymes used in manipulating DNA molecules. sticky ends, blunt ends, linkers and adapters, homopolymer tailing, Synthetic oligonucleotides. Ligation of DNA molecules.

##### **MODULE-II: Cloning Vectors**

Plasmids and bacteriophages as vectors for gene cloning. Cloning vectors based on *E. coli* plasmids, pBR322, pUC8, pGEM3Z. Cloning vectors based on M13 and  $\lambda$  bacteriophage, and in vitro packaging. Vectors for yeast, Ti-plasmid, and retroviral vectors, high capacity vectors BAC and YAC.

##### **MODULE-III: Transformation, Transfection and Gene Libraries**

Uptake of DNA by cells. Selection and identification for transformed cells, insertional inactivation, blue-white selection. Transfection. Chemical and physical methods of DNA introduction into cells. The problem of selection, direct selection, marker rescue. Identification of recombinant phages, cDNA and Genomic libraries, identification of a clone from gene library, colony and plaque hybridization probing, Southern and Northern hybridization, methods based on detection of the translation product of the cloned gene.

##### **Module-IV: PCR, DNA Sequencing and**

Fundamentals of polymerase chain reaction, Types of PCR; hot start, multiplex, two step, reverse transcriptase PCR and Nested PCR, quantitative PCR, Primer designing for PCR. Cloning PCR products. DNA sequencing by Sanger's method including Automated Sanger's DNA sequencing. Introduction to Next Generation Sequencing.

##### **Module-V: Expression of Cloned Genes Applications of Genetic Engineering**

Vectors for expression of foreign genes in *E. coli*, cassettes and gene fusions. Hybrid promoters trc, tac,  $\lambda$ pL and T7 promoter-based expression vectors, IPTG induction. Challenges in producing recombinant protein in *E. coli*. Production of recombinant protein by eukaryotic cells. Fusion tags such as, poly histidine, glutathione, maltose binding protein and their role in purification of recombinant proteins. Site-directed mutagenesis, Protein engineering (T4-lysozyme), yeast two hybrid systems, Production of recombinant pharmaceuticals such as insulin, human growth hormone, factor VIII. Recombinant vaccines. Gene therapy (SCID), Applications in agriculture – *Bt* cotton, glyphosate herbicide resistant crops, ethical concerns.

**Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>HA</b>	<b>S/V/Q</b>	<b>ATTD</b>	<b>EE</b>
<b>Weightage (%)</b>	15	5	5	5	70

# ADVANCED GENETICS

**Course Code: BCH4302**

**Credit Units: 03**

**Course Objective:** This course will provide students with a knowledge of advanced genetics involving organization of nuclear and organelle genomes, structural details of chromosomes, gene mutation, repair, genetic toxicology and microbial genetics.

**Course Contents:**

## **MODULE-I: DNA Structure and Genome Organization**

Building blocks of DNA structure, Watson and Crick model, features of the double helix, various forms of DNA, denaturation and renaturation of DNA,  $C_0t$  curve, hyperchromicity, melting temperature, factors affecting  $T_m$  of DNA molecules. Eukaryotic genome organization: Nucleosome structure and packaging of DNA into higher order structures. Linking number. Genome organization in viruses and prokaryotes. c-value paradox. Epigenetics: Histone code, Monoallelic expressions & Genomic imprinting.

## **MODULE-II: Cytogenetics, Transposition & Recombination**

Techniques in the study of mitotic and meiotic chromosomes: Banding, karyotyping, chromosome labeling/painting, *in situ* hybridization. Satellite DNAs, premature chromosome condensation. Special types of chromosomes: B-chromosome, polytene and lambrush chromosomes; Numerical and structural changes in chromosome, genetic implications of ploidy. Dosage compensation and mechanism of sex determination in plants and animals. Mechanism of transposition in prokaryotes and eukaryotes: Transposable Elements, LINES, SINES, Alu family, mechanisms of DNA amplification. Controlling elements in maize, *Drosophila* P element. Recombination: Homologous and non-homologous recombination. Role of Spo 11 and MRX protein in Meiotic recombination, Gene Conversion. Genome evolution.

## **MODULE-III: DNA Mutation, Repair & Genetic Toxicology**

DNA Mutation and Repair: Gene mutation types and its mechanism, spontaneous vs induced, Point mutations; Missense; Nonsense mutations Forward; Reverse; Intragenic and Extragenic suppressor; Somatic versus germinal mutation. Mutant types-lethal, conditional, biochemical., Inborn errors of metabolism, Mutation detection systems, Mutation induction, Gain of function and loss of function mutations in cancer Mutagens in genetic dissection. Radiation genetics. Molecular basis of gene mutations. DNA Repair mechanisms: Damage Reversal, Excision repair, double-strand break repair & post replicative repair. Repair defects and human diseases. Systems that safeguard DNA. Importance with reference to carcinogenesis,

Genetic Toxicology: Genotoxicity-classification of genotoxic agents, genotoxic test systems. Teratogenicity, DNA damage and genome instability, Endogenous metabolism and DNA damage, Exogenous factors (irradiation and carcinogens),

## **MODULE IV: Microbial Genetics**

Methods of genetic transfers- Transformation, conjugation, transduction and sex-duction, mapping genes by interrupted mating. Fine structure of genes: Principles of gene regulation, concept of operons, negative and positive regulation, regulatory proteins, activators, repressors, regulation of lac, trp, ara and his operons. **Concept of split genes, pseudogenes, overlapping genes and multigene families.**

**Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>HA</b>	<b>S/V/Q</b>	<b>ATTD</b>	<b>EE</b>
<b>Weightage (%)</b>	15	5	5	5	70

**References/Texts:**

1. Genetics, Fourth Edition by P.K. Gupta.
2. Principles of Genetics, 8<sup>th</sup> edition by Gardener, Simmons, Snustad.
3. Genetics, Third edition by Strickberger, Monroe W.
4. Principles of Genetics, 7<sup>th</sup> edition by Robert H. Tamarin
5. Prescott's Microbiology, 10<sup>th</sup> edition by Wiley J.M.

# MOLECULAR BIOLOGY

**Course Code: BCH4303**

**Credit Units: 03**

**Course Objective:** The objective of the course is to introduce to the students the basic concepts of DNA replication, how genes are transcribed and how translation takes place in prokaryotes and eukaryotes and how these processes are regulated, so that students can apply this knowledge in enhancing their analytical and problem-solving skills.

## **Course Contents:**

### **Module-I: Replication**

General features of replication, the chemistry of DNA synthesis, DNA polymerase, the replication fork, enzymes and proteins in DNA replication, E coli DNA polymerases, topoisomerases and their classification. Linking numbers, Topoisomerase inhibitors and their clinical importance. Stages of replication-initiation, elongation and termination, origin of replication, relationship between replication and cell division, replication in eukaryotes, end replication problem, telomerase, various modes of replication. Comparison of replication in prokaryotes and eukaryotes. Inhibitors of DNA replication and applications in medicine.

### **Module-II: Transcription and RNA Splicing**

**Transcription in prokaryotes;** Comparison between transcription and DNA replication, RNA polymerases, transcription cycle in bacteria, sigma factor, bacterial promoters, various stages of RNA synthesis, initiation, elongation and termination, rho-dependent and rho-independent termination. Inhibitors of transcription and applications as antimicrobial drugs. Comparison between prokaryotic and eukaryotic transcription. **Transcription in eukaryotes;** The three classes of eukaryotic RNA polymerases, transcription by RNA polymerase II, RNA polymerase II core promoters, general transcription factors, transcription by RNA polymerase I and III. Transcription control. Inhibitors of eukaryotic transcription and their applications. **RNA Processing;** Various types of RNA processing-polyadenylation and capping, processing of rRNA and tRNA. Chemistry of RNA splicing, the spliceosome machinery, splicing pathways, group I and group II introns, alternative splicing, exon shuffling and RNA editing.

### **Module III: Translation**

Salient features of the genetic code, triplet nature, degenerate, wobble in the anticodon. Experimental approaches used to decipher the genetic code. Suppressor tRNAs. Exceptions to the nearly universal genetic code. Messenger RNA, transfer RNA, charging of tRNA. The structure of ribosome. Three stages of translation-initiation, elongation and termination. Translation in eukaryotes. Regulation of translation. Comparison of prokaryotic and eukaryotic protein synthesis. Inhibitors of translation and their clinical importance.

### **MODULE- IV: Eukaryotic Gene expression & Molecular Virology**

Gene Expression: Regulating expression of eukaryotic genes. Role of chromatin in gene expression and silencing, enhancers and insulators, activators and repressors, Regulatory RNAs in eukaryotes: synthesis and mechanism of siRNA and miRNA. **Molecular Virology:** Nature and classification: The viral particles: capsid, envelope, other Virion components, Prion, complex viruses. Isolation and cultivation of viruses.

Virus purification, Assay of animal, bacterial and plant viruses. Multiplication of bacteriophages from infection to maturation and release. Abortive infection. Viral interference and interferon. Viral diseases. General outline with specific examples of common plant pathogenic viruses.

<b>Components</b>	<b>CT</b>	<b>HA</b>	<b>S/V/Q</b>	<b>ATTD</b>	<b>EE</b>
<b>Weightage (%)</b>	15	5	5	5	70

**Suggested Readings:**

- Biochemistry (3rd /4th/5th edition) L. Stryer, WH Freeman and Co.
- Molecular biology of the gene, Vol I and II (4TH ed) J D Watson, Benjamin/Cummings publ. Co Inc.
- Molecular cell biology (1988) J Darnell and D. Baltimore, W, H Freeman and Co.
- Molecular biology of the Cell, B. Alberts, Garland Pub. In., NY
- Genes (2nd ed), B. Lewin, John Wiley and sons, NY.

# MOLECULAR BIOLOGY AND MICROBIOLOGY LAB

**Course Code: BCH4306**

**Credit Units: 02**

**Course Objective:** To provide training and experience in some important microbiological and molecular biology techniques.

## MICROBIOLOGY PRACTICALS:

1. Preparation of glassware for microbiological work, cotton plugs, medium and their sterilization
2. Sterilization of heat sensitive material by filtration.
3. Preparation and sterilization of medium, preparation of slants and stabs, pouring of medium into plates.
4. Serial dilution, plating for counting colonies.
5. To perform various culture transfer techniques: Streaking, Spreading, Pouring, sub culturing.
6. Isolation of microorganisms from soil and water collected from different places.
7. Single colony isolation techniques and its preservation.
8. Examination of microorganisms: Simple staining, Gram staining, Acid Fast Staining
9. To prepare temporary mount of algae (spirogyra)
10. To prepare temporary mount of fungi (Penicillium)
11. Endospore staining
12. Staining of flagella
13. Staining of capsule
14. localization of root nodule bacteria by staining.
15. Study of different shapes of bacteria, fungi, algae, protozoa using permanent slides/pictographs
16. Study the morphological structures of viruses (DNA and RNA) and their important characters using electron micrographs.
17. Bacterial growth studies: Bacterial number counting by haemocytometer, colony counting, bacterial growth curve, determination of generation time.
18. Antibiotic sensitivity tests, antibiotic assay by paper disc / cup method, MIC determination.
19. Purification of  $\alpha$ -amylase from *Bacillus aminolucifecius*.

## MOLECULAR BIOLOGY PRACTICALS:

1. Isolation of chromosomal DNA from *E coli* cells
2. To hydrolyze DNA and separate nucleotide bases by paper chromatography
3. To plot ultraviolet absorption spectrum of DNA
4. Determination of DNA concentration by A260nm
5. Determination of the melting temperature
6. Estimation of DNA by diphenylamine
7. Separation, identification and estimation of free amino acids.
8. Study of Immuno-electrophoresis
9. Estimation of RNA by Orcinol Method
10. Extraction of total nucleic acids from plant tissue
11. To study growth curve and diauxic growth curve effect in *E. coli*
12. Isolation of total RNA from bacteria/yeast

**Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>HA</b>	<b>S/V/Q</b>	<b>ATTD</b>	<b>EE</b>
<b>Weightage (%)</b>	15	5	5	5	70

**Suggested Readings:**

- Experiments in Microbiology - Gilstrap-Kleyn-Nester.
- Experiments in Molecular Biology, Biochemical Applications by Zachary F. Burton and Jon M. Kaguni.
- Practical Protocols in Molecular Biology by Yongming Li, Yugi Zhao.
- Essential Molecular Biology: A practical Approach, Vol II by Terence Austen Brown.

## INSTRUMENTATION AND GENETIC ENGINEERING LAB

**Course Code: BCH4307**

**Credit Units: 02**

**Course Objective:** To provide training to students in handling of some important instruments in laboratory for performing some biological experiments. This also provide immense knowledge of practical aspects of recombinant DNA technology and the various techniques for DNA manipulation in prokaryotes and eukaryotes.

**Course Contents:**

1. Conductometry: Estimation of Cl<sup>-</sup> or SO<sub>4</sub> by conductometric precipitation titration.
2. Viscometric study of DNA and protein denaturation
3. Size exclusion chromatography for separation of a mixture proteins
4. Separation of amino acid acids by TLC/paper chromatography
5. To perform agarose gel electrophoresis
6. Separation of protein by ion-exchange chromatography
7. Separation of protein by SDS-PAGE
8. EMSA (virtual lab)
9. Virtual lab on Microarray profiling or 2D-DIGE
10. Virtual Lab of Primer designing
11. Virtual lab on extraction of sequence from genomic and cDNA libraries.
12. Virtual lab of PCR, Restriction digestion and Cloning and Vector analysis.
13. DNA estimation by UV spectrophotometry.
14. Transformation, Competent cell preparation and Isolation of plasmid DNA from *E. coli*
15. Amplification of a DNA fragment by PCR.

**Examination Scheme:**

Components	CT	HA	S/V/Q	ATTD	EE
Weightage (%)	15	5	5	5	70

**Suggested Readings:**

- Experimental Biochemistry- R.W. Switzer• & L.F. Garrity (W.H.Freeman & Co.)
- Modern Experimental Biochemistry - R. Boyer (Pearson Education)
- Practical Biochemistry - K. Wilson & J. Walker (Cambridge Univ. Press) Laboratory Manual in Biochemistry - J. Jayaraman (Narosa Publishing House)
- Practical Biochemistry - D.T. Plummer (TATA McGraw-Hill)• Practical Biochemistry - R.C.Gupta & S. Bhargava Experimental Physiology and Biochemistry - P.V.Chadha
- Experiments in Microbiology - Gilstrap-Kleyn-Nester
- Experimental Biochemistry – A Student Companion - B.S. Rao & V. Deshpande, I.K. Interational Pvt. Ltd. (N. Delhi, Mumbai, Bangalore) 2005.

## SUMMER INTERNSHIP / STUDY ABROAD PROGRAM

**Course Code: BCH4335**

**Credit Units: 06**

### **Methodology:**

Practical training is based on the theoretical subjects studied by students. It can be arranged within the college or any in any related industrial unit or in any research lab. The students are to learn various industrial, technical and administrative processes followed in the industry/research. In case of on campus training the students will be given specific tasks of synthesizing /testing/analysis/characterization. On completion of the practical training the students are to present a report covering various aspects learnt by them and give a presentation of the same.

### **Examination Scheme**

Feedback from Industry:	20
Training Report:	40
Viva:	15
Presentation:	25
<b>Total</b>	<b>100</b>

# MICROBIOLOGY

**Course code: BCH4308**

**Credit Units: 03**

**Course objective:** The objective of the course is to trace the history of development of the discipline of Microbiology and to emphasize the existence of the immense diversity in the microbial world and maintenance of microbes under laboratory conditions.

## **Module I: History of Microbiology, Diversity of Microbial world and Microbial Cell organization**

History of development of microbiology as a discipline, Spontaneous generation versus biogenesis, contributions of Anton von Leeuwenhoek, Joseph Lister, Paul Ehrlich, Richard Petri, Charles Chamberland, Edward Jenner, Louis Pasteur, Robert Koch, Martinus W. Beijerinck, Sergei Winogradsky, Alexander Fleming, Elie Metchnikoff and Emil von Behring. Difference between prokaryotic and eukaryotic microorganisms. General characteristics of different groups: Acellular microorganisms (Viruses, Viroids, Prions) and Cellular microorganisms (Bacteria, Archaea, Algae, Fungi and Protozoa) with emphasis on distribution, occurrence and morphology. Cell-wall: Composition and detailed structure of Gram positive and Gram-negative cell walls, mechanism of Gram's staining. Cell Membrane: Structure, function and chemical composition of bacterial and archaeal cell membranes.

## **Module-II: Microbial Nutrition, Growth Pathogenicity of Microorganisms and Antimicrobial Chemotherapy**

Nutritional types of microorganisms, growth factors, culture media- synthetic and complex, types of media; isolation of pure cultures, growth curves, mean growth rate constant, generation time; influence of environmental factors on growth of microbes: effect of pH, temperature, solute, oxygen concentration, pressure and radiations. Sterilization, disinfection and antiseptics. Use of physical methods (heat, low temperature, filtration, radiation) and chemical agents (phenolics, halogens, heavy metals, sterilizing gases) in microbial control. Introduction to pathogenic microbes; Bacteria, Viruses, Algae, protozoa and fungi. General Characteristics of antimicrobial drugs, determining the level of microbial activity: dilution susceptibility test and disc diffusion test. Range of activity and mechanism of action of penicillin, vancomycin and tetracycline.

## **Module III: Food and Industrial Microbiology**

Importance of microbiology in food and industries; Basic design of fermenter, continuous and discontinuous culture. Preparation of fermented food products such as yoghurt, curd and cheese. Preparation of alcoholic beverages like wine and beer. Single cell proteins. Treatment of waste water (Municipal treatment plant) and sewage. Bioremediation and biodegradation.

### **Examination Scheme:**

Components	CT	HA	S/V/Q	ATTD	EE
Weightage (%)	15	5	5	5	70

**Suggested Readings:**

- “Brock Biology of Micro-organisms 10e” Michael M. Madigan, John Martinko, Jack Parker
- **Principles of Genetics**, by Eldon J. Gardner (Author), D.Peter Snustad (Editor), Michael Simmons (Editor).
- General Microbiology, 7<sup>th</sup> edition by Hans G. Shlegel
- Prescott’s Microbiology by Joanne Willey, Linda Sherwood and Chris Woolverton.
- Microbiology by Pelczar.

# ECOLOGY AND EVOLUTION

**Course Code: BCH4310**

**Credit Units: 03**

**Course objective:** The objective of the course is to make students have knowledge about the structure and functions of the ecosystem and evolution. This course will help students understand the inter-relationship between organisms in population and communities and the various types of pollution responsible for destroying the ecosystem, evolution prokaryotes and eukaryotes.

## **Course Contents:**

### **Module-I: Ecology -I**

The Environment: Physical environment; biotic environment; biotic and abiotic interactions. Habitat and Niche: Concept of habitat and niche; niche width and overlap; fundamental and realized niche; resource partitioning; character displacement. Population Ecology: Characteristics of a population; population growth curves; population regulation; life history strategies (r and K selection); concept of metapopulation – demes and dispersal, interdemec extinctions, age structured populations. Species Interactions: Types of interactions, interspecific competition, herbivory, carnivory, pollination, symbiosis. Community Ecology: Nature of communities; community structure and attributes; levels of species diversity and its measurement; edges and ecotones. Ecological Succession: Types; mechanisms; changes involved in succession; concept of climax. Ecosystem Ecology: Ecosystem structure; ecosystem function; energy flow and mineral cycling (C,N,P); primary production and decomposition; structure and function of some Indian ecosystems: terrestrial (forest, grassland) and aquatic (fresh water, marine, estuarine).

### **Module-II: Ecology-II**

Biogeography: Major terrestrial biomes; theory of island biogeography; biogeographical zones of India. Applied Ecology: Environmental pollution; global environmental change; biodiversity: status, monitoring and documentation; major drivers of biodiversity change; biodiversity management approaches. Conservation Biology: Principles of conservation, major approaches to management, Indian case studies on conservation/management strategy (Project Tiger, Biosphere reserves)

### **Module-III: Evolution and Behavior-I**

Emergence of evolutionary thoughts Lamarck; Darwin–concepts of variation, adaptation, struggle, fitness and natural selection; Mendelism; Spontaneity of mutations; The evolutionary synthesis. Origin of cells and unicellular evolution: Origin of basic biological molecules; Abiotic synthesis of organic monomers and polymers; Concept of Oparin and Haldane; Experiment of Miller (1953); The first cell; Evolution of prokaryotes; Origin of eukaryotic cells; Evolution of unicellular eukaryotes; Anaerobic metabolism, photosynthesis and aerobic metabolism. C. Paleontology and Evolutionary History: The evolutionary time scale; Eras, periods and epoch; Major events in the evolutionary time scale; Origins of unicellular and multi cellular organisms; Major groups of plants and animals; Stages in primate evolution including Homo.

### **Module-IV: Evolution and Behavior-II**

Molecular Evolution: Concepts of neutral evolution, molecular divergence and molecular clocks; Molecular tools in phylogeny, classification and identification; Protein and nucleotide sequence analysis; origin of new genes and proteins; Gene duplication and divergence. The Mechanisms: Population genetics – Populations, Gene pool, Gene frequency; Hardy-Weinberg Law; concepts and rate of change in gene frequency through natural selection, migration and random genetic drift; Adaptive radiation; Isolating mechanisms; Speciation; Allopatricity and Sympatricity; Convergent evolution; Sexual selection; Co-evolution. Brain, Behavior and Evolution: Approaches and methods in study of behavior; Proximate and ultimate causation; Altruism and evolution-Group selection, Kin selection, Reciprocal altruism; Neural basis of learning, memory, cognition,

sleep and arousal; Biological clocks; Development of behavior; Social communication; Social dominance; Use of space and territoriality; Mating systems, Parental investment and Reproductive success; Parental care; Aggressive behavior; Habitat selection and optimality in foraging; Migration, orientation and navigation; Domestication and behavioral changes.

**Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>HA</b>	<b>S/V/Q</b>	<b>ATTD</b>	<b>EE</b>
<b>Weightage (%)</b>	15	5	5	5	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

**Suggested Readings:**

- Ecology and Environment, 12<sup>th</sup> Edition by P.D.sharma.
- Fundamentals of ecology, 5<sup>th</sup> edition by Eugene P. Odum and Gary W. Barrett.
- The End of History and the Last Man, Francis Fukuyama
- Animal Behavior: An Evolutionary Approach, John Alcock

# MICROBIOLOGY LAB

**Course Code: BCH4311**

**Credit Units: 02**

**Course objective:** To student learn fundamental experiments of Microbiology

**Course Contents:**

1. Observation of microorganisms using bright field microscope - Bacteria, Protozoa, Moulds and Yeasts, Algae – from natural habitat
2. Observation of microorganisms using staining techniques:
  - a. Monochrome staining
  - b. Negative /Relief staining (Capsule staining)
  - c. Gram staining of bacteria
  - d. Spore staining
3. Observation of motility in bacteria using:
  - a. Hanging drop method and Cragie's tube method
  - b. Swarming growth methods
4. Enumeration of yeast cells using a counting chamber
5. Cultivation of microorganisms:
  - a. Preparation of simple laboratory nutrient media (solid and liquid) and using them to cultivate bacteria.
  - b. Observation of the growth of cultures and reporting of colony and cultural characteristics (Nutrient and Mac Conkey's agar)
6. Isolation of bacteria by streak plate technique
7. Enumeration of bacteria from fermented food / soil / water by:
  - a. Spread plate method
  - b. Pour plate method
8. Aseptic transfer techniques (slant to slant, broth to broth, broth to agar and Agar to Agar)
9. Preservation of cultures on slants, soil and on grain surfaces; revival of these cultures and lyophilized cultures.
10. Checking sterilization efficiency of autoclave using a biological indicator (*B.stearothermophilus*)
11. Demonstration of checking of efficacy of chemical disinfectant: Phenol Coefficient Rideal Walker method)
12. Preparation of Winogradsky column and observation of different types of microorganisms using bright filed microscope.
13. Study of normal flora of skin:
  - a. Cultivating and observing different morphoforms of bacteria from skin
  - b. Study of effect of washing skin with soap and disinfectant on it's microflora
14. a. To study the effect of different parameters on growth of E. coli: pH, temperature, sodium chloride concentration  
b. Study of Oligodynamic action of heavy metal

**Suggested Readings:**

- Experiments in Microbiology - Gilstrap-Kleyn-Nester
- Wilson K. and Walker J.M. (2005) Principles and Techniques of Biochemistry and
- Molecular Biology. 6th Edition. Cambridge University Press.
- David T. Plummer (1993) An Introduction To Practical Biochemistry, 3rd Edition, Tata
- McGraw-Hill Publishing Company Limited, New Delhi

## ECOLOGY AND EVOLUTION LAB

**Course Code: BCH4313**

**Credit Units: 02**

**Course objective:** To student learn basic experiments of Ecology and Evolution.

### **Ecology Lab:**

1. Assessment of density, frequency and abundance of plants/animal in a community using various techniques i.e. transect, quadrat etc.
2. Determination of physical and chemical characteristics of soil.
3. Assessing influence of light, temperature and moisture on plant germination and growth.
4. Assessing influence of soil nutrient status on plant germination and growth.
5. Spatial variations of dissolved oxygen concentration in water and percentage saturation.
6. Dissolved free carbon dioxide dynamics in relation to pH and alkalinity of water.
7. Estimation of total hardness, total alkalinity and Salinity of water.
8. Estimation of Primary productivity and assessment of nutrient status of water bodies.
9. Microbial analysis of soil and water.
10. Study of insect diversity in soil.
11. Productivity determination of different ecosystems - Lindeman's efficiency.
12. Microbial analysis of soil and water.
13. Evolutionary studies on adaptive characters
14. Phylogenetic analysis

### **Suggested Readings:**

- Field Sampling: Principles and Practices in Environmental Analysis, Conklin, A.R. Jr., (2004), CRC Press.
- Practical Methods in Ecology, P.A. Henderson (2003).
- Principles and Standards for Measuring Primary Production, Fahey, T.J. and Knapp, A.K., (2007), Oxford University Press, UK
- Ecological Modeling, Grant, W.E. and Swannack, T.M., (2008), Blackwell.
- Fundamental Processes in Ecology: An Earth system Approach, Wilkinson, D.M., (2007), Oxford University Press, UK

## Syllabus - Fourth Semester

### DEVELOPMENTAL BIOLOGY AND NEUROLOGICAL DISORDERS

Course Code: BCH4408

Credit Units: 03

**Course Objective:** The objective of the course is to provide students with a detailed in-sight into the developmental biology and to develop fundamental understanding of Biochemistry behind neurological disorders.

#### Course Contents:

##### Module-I: Fundamentals of Developmental Biology

**Basic concepts of development:** Potency, commitment, specification, induction, competence, determination and differentiation; morphogenetic gradients; cell fate and cell lineages; stem cells; genomic equivalence and the cytoplasmic determinants; imprinting; mutants and transgenics in analysis of development. **Gametogenesis, fertilization and early development:** Production of gametes, cell surface molecules in sperm-egg recognition in animals; embryo sac development and double fertilization in plants; zygote formation, cleavage, blastula formation, embryonic fields, gastrulation and formation of germ layers in animals; embryogenesis, establishment of symmetry in plants; seed formation and germination.

##### Module-II: Morphogenesis, Organogenesis & Programmed Cell Death

**Morphogenesis and organogenesis in animals:** Cell aggregation and differentiation in *Dictyostelium*; axes and pattern formation in *Drosophila*, amphibia and chick; organogenesis – vulva formation in *Caenorhabditis elegans*, eye lens induction, limb development and regeneration in vertebrates; differentiation of neurons, post embryonic development- larval formation, metamorphosis; environmental regulation of normal development; sex determination. **Morphogenesis and organogenesis in plants:** Organization of shoot and root apical meristem; shoot and root development; leaf development and phyllotaxy; transition to flowering, floral meristems and floral development in *Arabidopsis* and *Antirrhinum*. **Programmed cell death, aging and senescence**

##### Module-III: Neurological disorders & Neurodrugs

Headache, facial pain, migraine, epilepsy, stroke, selected neurocutaneous diseases, movement disorder, Benign essential (familiar) tremor, Parkinsonism, Huntington's disease, multiple sclerosis, motor neuron disease, Myasthenia Gravis. Sedative-Hypnotic Drugs Ethyl alcohol and Inhalants CNS Depressants (Barbiturates, Anesthetics and Antiepileptics Anxiolytics Psychostimulants Cocaine & Amphetamines, Caffeine & Nicotine Opiates, Opioids, and Nonopioid Analgesics Opioid Analgesics Non-narcotic, Anti-inflammatory Analgesics Drugs Used to Treat Psychological Disorders Depression Bipolar Disorder Schizophrenia Parkinsonism Integration of Drugs and Psychological Therapy

**Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>HA</b>	<b>S/V/Q</b>	<b>ATTD</b>	<b>EE</b>
<b>Weightage (%)</b>	15	5	5	5	70

**Suggested Readings:**

- “Molecular biology of the Cell” by Albert et.al
- “Developmental biology” by Scott Gilbert.
- Lehninger Principles of Biochemistry, Fourth Edition by David L. Nelson (Author), Michael M. Cox (Author)
- Biochemistry, Fourth Edition by Donald Voet, Judith G. Voet
- Medical Neurobiology 1st Edition by Peggy Mason PhD (Author)
- Genetics, Third edition by Strickberger, Monroe W.

# METHODOLOGIES OF BIOCHEMISTRY

Course Code: BCH4409

Credit Units: 03

**Course Objective:** The objective of the course is to provide students with a sound background of latest techniques used in biochemistry research and to provide them with an understanding of the principles underlying these techniques. The course is designed to impart laboratory skills in the form of practical exercises so that students can apply this knowledge to augment their research acumen and improve their understanding of the subject.

## Module-I: Electrophoresis Methods for analysis of proteins

Basic Principle of electrophoresis, Paper electrophoresis, Gel electrophoresis, discontinuous gel electrophoresis, PAGE, SDS-PAGE, Native gels, denaturing gels, agarose gel electrophoresis, buffer systems in electrophoresis, electrophoresis of proteins and nucleic acids, protein and nucleic acid blotting, detection and identification (staining procedures), molecular weight determination, Isoelectric focusing, 2D protein gel electrophoresis, 2D-DIGE, Pulse field Electrophoresis, Zymograms. Immunochemical methods - immunodiffusion, rocket immunoelectrophoresis Protein-Protein Interaction: Immunoprecipitation, Co-Immunoprecipitation (Co-IP), Pull down assays, Yeast two hybrid, Protein fragment complementation assay, Western blotting, Far western blotting, Protein microarrays, ELISA.

## Module-II: Microbiological/Cell culture techniques

Types of media, selective and enrichment media, sterilization methods, bacterial culturing, CFU determination, growth curves, Generation/doubling times, cell counting, viable and nonviable. Growth and maintenance of cultures, biosafety cabinets, CO<sub>2</sub> incubator. Staining procedures, plating and microtony.

## Module-III: Methods for analysis of nucleic acids and proteins

DNA and RNA isolation; Hybridization methods: Southern blotting, Northern blotting, Western Blotting, *In situ* hybridization, Colony hybridization. Binding of nucleic acids with protein: DNA pull down assays, In vitro transcription assay; In vitro translation assay; Electrophoretic Mobility Shift Assay (EMSA), DNA foot printing assay, Electrophoretic Mobility Shift Assay; RNase protection assay; Primer Extension, Chromatin immunoprecipitation (ChIP), ChIP on ChIP. Gene expression analysis: Reporter assays - example luciferase assay, DNA Microarrays.

## Module IV: Cell Biology techniques and Labeling methods

Cell culture and transfection, Immortalization of cells; Overexpression and Silencing of genes; Generation of transient and stable lines; Cell synchronization techniques; Immunohistochemistry, Immunofluorescence, Preparation of mouse embryonic fibroblasts; Cytotoxicity assay; Cell viability assays; Cell staining techniques; Cell proliferation assay; Migration assay; Invasion assay; Soft agar assay; Apoptosis assays; Kinase assay; Ubiquitination assay; Protein and mRNA turnover assays; Subcellular fractionation and identification of various fractions. Cell Flow cytometry, FACS, TUNEL assay, Non-invasive scanning of soft tissue, Radioactive and Non-radioactive labeling: DNA, Proteins, Whole cells, Fluorescent labeling. DNA, Proteins, bacteria, living cells; Metabolic labeling, Pulse chase analysis.

### Examination Scheme:

Components	CT	HA	S/V/Q	ATTD	EE
Weightage(%)	15	5	5	5	70

## GOOD LABORATORY PRACTICES SEMINAR

**Course Code: BCH4407**

**Credit Units: 1**

### Objectives

The objective of this course is to judge the understanding as well as application of the knowledge gained by the students. The aim of the term paper is to provide the students with an opportunity to further enhance their knowledge in a sector of their choice by undertaking a significant practical unit of examining and analyzing various aspects of Biochemistry & its application at a level commensurate with the learning outcomes of the various courses taken up them in the ongoing semester.

A research paper is primarily a record of intelligent reading in several sources on a particular subject. The students will choose the topic at the beginning of the session in consultation with the faculty assigned.

### Guidelines:

1. The research paper will be related to the contemporary research issue and the topic will be given by the supervisors of the department.
2. The research paper has to prepared/communicated before the commencement of Semester examinations.
3. The paper will carry 100 marks that will be marked on the basis of understanding and organization of content based on the literature review. The Bibliography shall form an important part of the paper.
4. Examples of a few broad areas for research paper (List is indicative, not exhaustive)
  - Molecular Biology
  - Proteomics
  - Structural Biology
  - Genetics

### Evaluation Scheme

Organisation and relevance of content	Literature Review	Bibliography	Publication	Total

# MAJOR PROJECT

Course Code: BCH4437

Credit Units: 8

## GUIDELINES FOR PROJECT FILE AND PROJECT REPORT

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critically analyzed by the faculty guide and corrected by the student at each stage.

## PROJECT FILE

The Project File may be a very useful tool for undertaking an assignment along-with a normal semester, an exploratory study, sponsored projects, a project undertaken during summer period or any other period as per curriculae where the researcher is working with a company/organization. The project/ assignment may also be a part of the bigger research agenda being pursued by a faculty/ institution/ department. The Project File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation. This file may be considered in continuous assessment.

### In general, the File should be comprehensive and include:

- A short account of the activities that were undertaken as part of the project;
- A statement about the extent to which the project has achieved its stated objectives;
- A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;
- Any activities planned but not yet completed as part of the project, or as a future initiative directly resulting from the project;
- Any problems that have arisen and may be useful to document for future reference.

## PROJECT REPORT

The Project Report is the final research report that the student prepares on the project assigned to him. In case of sponsored project, the lay out of the project could be as prescribed by the sponsoring organization. However, in other cases the following components should be included in the project report:

### ☐ Title or Cover Page

The title page should contain Project Title; Student's Name; Programme; Year and Semester and Name of the Faculty Guide.

### ☐ Acknowledgement(s)

Acknowledgment to any advisory or financial assistance received in the course of work may be given. It is incomplete without student's signature.

### ☐ Abstract

A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project. It should not exceed more than 1000 words.

### ☐ Table of Contents

Titles and subtitles are to correspond exactly with those in the text.

□ **Introduction**

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

□ **Materials and Methods**

This section should aim at experimental designs, materials used (wherever applicable). Methodology should be mentioned in detail including modifications undertaken, if any. It includes organization site(s), sample, instruments used with its validation, procedures followed and precautions.

□ **Results and Discussion**

Present results, discuss and compare these with those from other workers, etc. In writing this section, emphasis should be laid on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary, do not write in “point” form.

While presenting the results, write at length about the various statistical tools used in the data interpretation. The result interpretation should be simple but full of data and statistical analysis. This data interpretation should be in congruence with the written objectives and the inferences should be drawn on data and not on impression. Avoid writing straight forward conclusion rather, it should lead to generalization of data on the chosen sample.

Results and its discussion should be supporting/contradicting with the previous research work in the given area. Usually one should not use more than two researches in either case of supporting or contradicting the present case of research.

□ **Conclusion(s) & Recommendations**

A conclusion should be the final section in which the outcome of the work is mentioned briefly. Check that your work answers the following questions:

- Did the research project meet its aims (check back to introduction for stated aims)?
- What are the main findings of the research?
- Are there any recommendations?
- Do you have any conclusion on the research process itself?

□ **Implications for Future Research**

This should bring out further prospects for the study either thrown open by the present work or with the purpose of making it more comprehensive.

□ **Appendices**

The Appendices contain material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

□ **References**

References should include papers, books etc. referred to in the body of the report. These should be written in the alphabetical order of the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognized system.

**Examples:**

For research article:

Voravuthikunchai SP, Lortheeranuwat A, Ninrprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichia coli* O157:H7. *Clin Microbiol Infect*, **8** (suppl 1): 116–117.

For book:

Kowalski, M. (1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), **7**: 63-67

**The Layout Guidelines for the Project File & Project Report:**

- A4 size Paper
- Font: Arial (10 points) or Times New Roman (12 points)
- Line spacing: 1.5
- Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

**ASSESSMENT OF THE PROJECT FILE AND THE PROJECT REPORT**

Essentially, the assessment will be based on the quality of the report, the technical merit of the project and the project execution. Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project. Project execution is concerned with assessing how much work has been put in.

The Project should fulfill the following *assessment objectives*:

- Range of Research Methods used to obtain information
- Execution of Research
- Data Analysis (Analyze Quantitative/ Qualitative information)
- Quality Control
- Conclusions

**Assessment Scheme:****Continuous Evaluation:**

40% (Based on punctuality, regularity of work, adherence to plan and methodology, refinements/mid-course corrections etc. as reflected in the Project File.)

**Final Evaluation:**

60% (Based on the Documentation in the file, Final report layout, analysis and results, achievement of objectives, presentation/ viva)

**It is recommended that the Final evaluation should be carried out by a panel of evaluators.**

# Syllabus - First Semester

## PHYSICAL CHEMISTRY

**Course Code: CHY4101**

**Credit Units: 04**

### **Course Objectives**

This course is intended to give the students the requisite knowledge of fundamentals of physical chemistry with the focus on enhancing their problem-solving ability. A knowledge of graduation level thermodynamics, electrochemistry, solid state chemistry and quantum mechanics is necessary. This course will give the students a better understanding of the various aspects and application of physical chemistry.

### **MODULE I: CHEMICAL THERMODYNAMICS**

Laws of thermodynamics (work function, free energy, enthalpy, entropy, Maxwell's relations etc.), partial molar properties, chemical potential, Vant Hoff's equation, Gibbs-Duhem equation, Concept and determination of fugacity, Non ideal systems: excess functions for non-ideal solutions, activity, activity coefficient, Debye-Huckel theory for activity coefficient of electrolytic solutions, ionic strength.

### **MODULE-II: APPLIED ELECTROCHEMISTRY**

Electrochemical cells, Nernst equation, electrical double layer, kinetics of electrode processes – Corrosion: Introduction, forms, monitoring & prevention methods.

### **MODULE III: QUANTUM CHEMISTRY**

Schrodinger Equation and the postulates of Quantum Mechanics. Discussion of solutions of the Schrodinger Equation to some model systems viz. particle in a box, the harmonic oscillator, The rigid rotor, the hydrogen atom, Perturbation Theory, Huckels Theory of conjugated system.

### **MODULE IV: SURFACE CHEMISTRY**

Adsorption: Gibbs adsorption isotherm, BET equation and estimation of surface area  
Micelles: Surface active agents, classification of surface agents, micellization, critical micellar concentration (CMC), factors affecting the CMC of surfactants, thermodynamics of micellization.

### **MODULE V: SOLID STATE CHEMISTRY**

General Principles, Crystal Defects including thermodynamics of Schottky and Frenkel defects, colour centres, nonstoichiometric defects. Electronic Properties- band theory, insulators, intrinsic, extrinsic and doping semiconductors, p-n junction, super conductors. Magnetic properties- Classification of materials, quantum theory of paramagnetics, cooperative phenomena, magnetic domains, hysteresis

**Examination Scheme:**

Components	CT	HA	S/V/Q	A	EE
Weightage(%)	15	5	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

**Suggested Readings:**

1. J. P. Lowe and K. Peterson, Quantum Chemistry Academic Press.
2. D. A. McQuarrie, Quantum Chemistry Viva Books Pvt. Ltd.: New Delhi.
3. R. G. Mortimer, Mathematics for Physical Chemistry Elsevier.
4. F. L. Pilar, Elementary Quantum Chemistry, Dover Publication Inc.: New York.
5. P. W. Atkins and J. de Paula, Atkin's Physical Chemistry, Oxford University Press.
6. I. L. Levine, Quantum Chemistry, Prentice-Hall Inc., New Jersey.
7. T. Engel and P. Reid, Physical Chemistry, Benjamin-Cummings.
8. D. A. McQuarrie and J. D. Simon, Physical Chemistry: A Molecular Approach, Univ. Science Books.
9. R. J. Silbey, R. A. Alberty and M. G. Bawendi, Physical Chemistry, Wiley.

## ORGANIC CHEMISTRY

**Course Code: CHY4102**

**Credit Units: 04**

### **Course Objective :**

This course is intended to give the students the requisite knowledge of fundamentals of organic chemistry with the focus on enhancing their problem-solving ability. A student will learn the how stereochemistry effects the reaction products and mechanism. This course will give the students a better understanding of the various aspects and application of pericyclic and photo-chemistry. The crux of the course is to give the student the knowledge of reaction mechanism and its effect on final product formation.

### **MODULE I: STEREOCHEMISTRY**

Conformational analysis of cycloalkanes, decalines, effect of conformation on reactivity, conformation of sugars, steric strain due to unavoidable crowding. Elements of symmetry, chirality, threo and erythro isomers, R,S-nomenclature, E,Z-nomenclature, methods of resolution, optical purity, stereospecific, regioselective, stereoselective and regiospecific synthesis, asymmetric synthesis-Cram's rule-Prelog's rule. Optical activity in the absence of chiral carbon (biphenyls, allenes and spiranes), Chemoselectivity orientation and reactivity (Elimination reaction).

### **MODULE II: REACTION MECHANISM**

Types of mechanism, types of reactions, thermodynamic and kinetic requirements, kinetic and thermodynamic control. Hammond's postulate, Curtin-Hammett principle. Potential energy diagrams, transitions states and intermediates, methods of determining mechanism, isotope effects.

### **MODULE III: PERICYCLIC REACTIONS**

Parameters of symmetry, Conservation of molecular orbital symmetry, classification of pericyclic reactions – electrocyclic reactions, cyclo addition and sigmatropic rearrangements, ene reactions, woodward – Hoffmann correlation diagram.

### **MODULE IV: NAMED REACTIONS**

Clemmensen, Wolff Kishner, Meerwein – Ponndorff- Verley, Claisen, Dieckmann, Benzoin, Michael addition, Mannich reaction, Wittig reaction, Chichibabin reactions, Hundsdiecker reactions, Robinson reaction, Reformatsky reaction, Gattermann Koch reaction, Wagner – Meerwein rearrangement, Benzil – benzylic reaction, Favorskii reaction, Pinacol- pinacolone rearrangement, Suzuki, Negishi, Stille, Sonogashira, Heck, Sharpless epoxidation and Grubbs catalytic reaction.

### **MODULE V**

#### **Organic Photochemistry**

Basic principles, Jablonsky diagram, exciplex, photochemistry of alkenes-intramolecular reactions of olefinic bond- geometrical isomerism, cyclization reactions, rearrangements of 1,4 and 1,5 dienes. Photochemistry of carbonyl compounds intramolecular reactions of saturated-, cyclic- and acyclic-,  $\alpha,\beta$ -unsaturated- and unsaturated carbonyl compounds, cyclohexadienones. Intramolecular cycloaddition reaction-dimerization and oxetane formation. Norrish type I and type II reactions, di-pi-methane rearrangements, Paterno-Burchi reaction

**Examination Scheme:**

Components	CT	HA	S/V/Q	A	EE
Weightage(%)	15	5	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
A: Attendance

**Suggested Readings:**

1. A guidebook to mechanism in Organic chemistry (Orient-Longmans)- Peter Sykes
2. Organic reaction mechanism (Benjamin) R. Breslow
3. Mechanism and structure in Organic chemistry (Holt Reinh.) B. S. Gould.
4. Organic chemistry (McGraw-Hill) Hendrikson, Cram and Hammond.
5. Basic principles of Organic chemistry (Benjamin) J. D. Roberts and M. C. Caserio.
6. Reactive Intermediates in Organic chemistry (John Wiley) N. S. Issacs.
7. Stereochemistry of Carbon compounds. (McGraw-Hill) E. L. Eliel
8. Organic Stereochemistry (McGraw-Hill) by Hallas.
9. Organic reaction mechanism (McGraw-Hill) R. K. Bansal.
10. Organic chemistry- R. T. Morrison and R. N. Boyd (Prentice Hall.)
11. Modern organic reactions (Benjamin) H. O. House.
12. Principle of organic synthesis- R.O.C. Norman and J. M. Coxon. (ELBS)
13. Reaction mechanism in organic chemistry- S. M. Mukharji and S. P. Singh.
14. Stereochemistry of organic compoundsc) D. Nasipuri.
15. Advanced organic chemistry (McGraw-Hill) J. March.
16. Introduction to stereochemistry (Benjamin) K. Mislow.
17. Stereochemistry by P. S. Kalsi (New Age International)

## INORGANIC CHEMISTRY

**Course Code: CHY4109**

**Credit Units: 04**

**Course Objective:**

This course is intended to give the students knowledge of advances in inorganic reaction mechanism and bonding with focus on VBT and CF theory. This course will help the student draw the structure of complexes of various geometry and based on their and IUPAC names. A knowledge of graduation level bonding and coordination chemistry is required.

**MODULE-I: METAL-LIGAND EQUILIBRIUM IN SOLUTION**

Stepwise and overall formation constants and their relation and trends, factors affecting the stability of metal complexes with reference to the nature of metal ion and ligand. Chelate effect and its thermodynamic origin, determination of binary formation constants by potentiometry and spectrophotometry.

**MODULE-II: REACTION MECHANISM OF TRANSITION METAL COMPLEXES**

Energy profile of a reaction, reactivity of metal complex, inert and labile complexes, substitution reaction of octahedral substitution, acid hydrolysis, factors affecting acid hydrolysis, base hydrolysis, conjugate base mechanism, direct and indirect evidences in favour of conjugate mechanism, anation reactions, reactions without metal ligand bond cleavage. Substitution reactions in square planar complexes, the trans effect, mechanism of the substitution reaction. Redox reaction, electron transfer reactions, mechanism of one electron transfer reactions, outer sphere type reactions, cross reactions and Marcus-Hush theory, inner sphere type reactions.

**MODULE-III: METAL-LIGAND BONDING**

VBT, CFT, Limitation of VBT and crystal field theory, molecular orbital theory, octahedral, tetrahedral and square planar complexes, p-bonding and molecular orbital theory.

**MODULE-IV: ELECTRONIC SPECTRA AND MAGNETIC PROPERTIES OF TRANSITION METAL COMPLEXES**

Spectroscopic ground states, correlation. Orgel and Tanabe-Sugano diagrams for transition metal complexes (d1-d9 states), calculations of  $10Dq$ ,  $B$  and  $\beta$  parameters, charge transfer spectra, anomalous magnetic moments, Orbital contribution to magnetic moment, magnetic exchange coupling and spin crossover.

**Module-V: ENZYMES**

Catalytic power of enzymes, turnover number, specificity and regulation. Nomenclature and classification, extraction (large scale production) and purification of enzymes. Immobilization of enzymes, enzyme therapy.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

**Suggested Readings:**

1. Advanced Inorganic Chemistry, F.A. Cotton and Wilkinson, John Wiley.
2. Inorganic Chemistry, J.E. Huhey, Harpes & Row.
3. Chemistry of the Elements. N.N. Greenwood and A. Earnshaw, Pergamon.
4. Inorganic Electronic Spectroscopy, A.B.P. Lever, Elsevier.
5. Magnetio chemistry, R.1. Carlin, Springer Verlag.
6. Comprehensive Coordiantion Chemistry eds., G. Wilkinson, R.D. Gillars and J.A. Mc Cleverty, Pergamon.
7. Advanced Inorganic Chemistry, Malik, Tuli, Madan, S. Chand & Company

## CHEMINFORMATICS & BIOINFORMATICS

**Course Code: CHY4110**

**Credit units: 02**

### **Course Objective:**

Chemoinformatics is a rather new discipline in science. It has been described as the application of informatics methods to solve chemical problems. Chemoinformatics focuses primarily on chemical information related to or derived from structural information. Thus, chemoinformatics covers areas such as design, organisation, management, retrieval, analysis and visualisation of chemical information. The course objectives are to introduce participants to different chemoinformatics methods, provide examples on the use of chemoinformatics in modern drug research, and allow the participants to gain practical experience through exercises with representative methods used in chemoinformatics.

### **MODULE I: Differential & Integral Calculus**

Definition of limit, continuity & Derivative of a real valued function of real variable at a point, Rolle's Theorem, Mean Value Theorem, Taylor's Theorem, Maxima and Minima of one Variable, Indefinite and definite integral, properties of definite integral.

### **Module II: Cheminformatics and Molecular Modeling**

Cheminformatics tools for drug discovery. Chemical Structure Representation (SMILE & SMART). Chemical databases: CSD, ACD, WDI, ChemBank, hazardous chemical database, PUBCHEM. High Throughput and Virtual Screening, Molecular Docking of Protein, Small molecule and Nucleotide, Concepts of Force Field, Introductory Molecular Dynamics simulation.

### **Module III: Introductory Bioinformatics**

General Introduction of Biological Databases; Nucleic acid databases (NCBI, DDBJ, and EMBL). File Format (Genbank, DDBJ, FASTA, PDB, SwissProt). Protein Structure: Primary, Secondary, Super Secondary, Domains, Tertiary, Quaternary, Ramachandran plot. Protein databases (Primary, Composite, and Secondary). Homology Modeling, Fold Recognition, Abinitio Method. Protein folding, Motif and Domain: Motif databases and analysis tools. Domain databases (CDD, SMART, ProDom) and Analysis tools, Specialized Genome databases: (SGD, TIGR, and ACeDB). Structure databases (CATH, SCOP, and PDBsum), Introduction to Sequences, alignments and Dynamic Programming; Local alignment and Global alignment (algorithm and example), Pairwise alignment (BLAST and FASTA) and multiple sequence alignment (Clustal W).

### **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

### **Suggested Readings:**

1. Introducing Cheminformatics, David Wild.

2. Bioinformatics: Sequence and Genome Analysis, David W. Mount.
3. Cheminformatics a text book, Johann Gasteiger and Thomas Engel
4. Computational Approaches in cheminformatics and bioinformatics, Rajarshi Guha
5. Mathematical Calculus by Thomson & Finley

# FOUNDATIONS OF BIOCHEMISTRY

**Course Code: CHY4111**

**Credit Units: 02**

## **Course Objectives:**

The objective of this course is to provide the students basic understanding of biochemical processes. To provide the students elementary idea about important biochemical molecules.

### **ModuleI: The Living System**

Molecular logic of cells (Prokaryotes and Eukaryotes), Molecular architecture of cell: Cell, subcellular organelles & membrane (structure, organization and composition), Gross functions, Biogenesis of mitochondria and chloroplast, Transport and cellular recognition processes (introduction only).

### **ModuleII: Introduction to Basic Biomolecules and Energy Processes**

Amino acids, polypeptides, proteins, nucleotides, purines and pyrimidines, concept of genes, DNA and RNA, biological roles of carbohydrates and amino sugars; glycolysis, TCA cycle, neoglucogenesis, ATP transport, siderophores and catalytic antibodies/abzymes.

### **ModuleIII: Basic Biochemical Mechanism**

DNA replication; Meselson & Stahl's experiment and semi conservative model, central dogma of molecular biology, role of DNA polymerase, RNA polymerase and other enzymes, introductory concepts of transcription and translation, starting idea of protein folding.

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	15	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

## **Suggested Readings:**

1. Biochemistry (3rd /4th/5th edition) L. Stryer, WH Freeman and Co.
2. Lehninger Principles of Biochemistry, Fourth Edition by David L. Nelson (Author), Michael M. Cox(Author)
3. Biochemistry, Fourth Edition by Donald Voet, Judith G.Voet

# PHYSICAL CHEMISTRY LAB

Course code: CHY4105

Credit units 02

(Minimum 10 Experiments to be performed)

## Phase Equilibria:

1. Determination of mutual solubility curve of phenol and water and find consolute point.
2. To determine the distribution coefficient of  $I_2$  between two immiscible solvents( $CCl_4$  and  $H_2O$ ).

## Chemical Kinetics:

3. To study kinetically the alkaline hydrolysis of ethyl acetate.
4. To study the kinetics of reaction between  $K_2S_2O_8$  and  $KI$ :
  - a. Determination of the rate constant and order of reaction.
  - b. To study the influence of ionic strength on the rate constant.
5. Determination of the effects of change of temperature, concentration of reactant and ionic strength of the media on the velocity constant of hydrolysis of an ester

## Electrochemistry:

6. Determination of the velocity constant, order of the reaction and energy of activation for saponification of ethyl acetate by sodium hydroxide conductometrically.
7. Determine the equivalent conductance of weak electrolyte at infinite dilution by Kohlrausch law.
8. Determination of solubility and solubility product of sparingly soluble salts (e.g.,  $PbSO_4$ ,  $BaSO_4$ ) conductometrically.
9. Determination of the strength of strong and weak acids in a given mixture conductometrically.

## Potentiometry:

10. Measurement of pH of buffer solution
11. Determination of the strength of strong and weak acids in a given mixture using a potentiometer/pH meter.
12. Acid base titration in a non-aqueous media using a pH meter.

## Colligative Properties

13. Determination of depression in Freezing point of solutions.

## Adsorption

14. Determine the adsorption isotherms of acetic acid from aqueous solutions by charcoal and verify Freundlich adsorption isotherm.

**\*MSDS -Compilation of MSDS of chemicals used by students in each experiment is compulsory**

**Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva, A: Attendance.

**Suggested Readings:**

1. A.Finlay and J.A.Kitchener, “Practical Physical Chemistry, Longman
2. F.Daniels and J.H.Mathews, “Experimental Physical Chemistry”, Longman
3. H.H.Willard, L.L.Merritt and J.A.Dean, “Instrumental Methods of Analysis”, Affiliated East-West Press
4. D.P.Shoemaker and C.W.Garland, “Experimental Physical Chemistry”, McGraw-Hill
5. A.I.Vogel, “A Textbook of Quantitative Inorganic Chemistry”, Longman
6. J.B.Yadav, “Advanced Practical Chemistry”, Goel Publishing House
7. J.J.Lingane, “Electroanalytical Chemistry”, Interscience
8. L.Meites, H.C.Thomas and R.P.Bauman, “Advanced Analytical Chemistry McGraw Hill.

## ORGANIC CHEMISTRY LAB

Course Code: CHY4106

Credit Units: 02

(Minimum 10 Experiments to be performed)

### Qualitative Analysis:

1. Separation, purification and identification of compounds of binary mixture, derivative preparation and confirmatory tests.

### Organic Synthesis:

2. Any oxidation reaction
3. Reduction: Transfer hydrogenation reaction
4. Aldol condensation: Dibenzal acetone from benzaldehyde.
5. Friedel Craft's reaction
6. Preparation of p-amino azobenzene from aniline via diazoaminobenzene.
7. Preparation of m-phenylene diamine from Nitrobenzene via m-dinitrobenzene and m-nitroaniline.
8. Preparation of benzidine from benzene involving benzidine rearrangement.

### Quantitative Analysis:

9. Determination of the percentage of sulphur in the given organic compounds by Messenger's method.
10. Estimation of Glucose using Fehling's solution.
11. Determination of equivalent weight of the given carboxylic acid using Silver-salt method.
12. Determine percentage purity of the given carbonyl compound using hydroxylamine hydrochloride.
13. Determination of strength of known aniline solution by bromination using KBr-KBrO<sub>3</sub> mixture.

**\*MSDS -Compilation of MSDS of chemicals used by students in each experiment is compulsory**

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, A: Attendance, V – Viva.

### **Suggested Readings:**

1. A.I.Vogel, "A Textbook of Practical Organic Chemistry", Longman
2. A.I.Vogel, "Elementary Practical Organic Chemistry – Part 3: Quantitative Organic Analysis",  
Longman
3. F.G.Mann and B.C.Saunders, "Practical Organic Chemistry", Longman
4. B.B.Dey and M.V.Sitaraman, "Laboratory Manual of Organic Chemistry",
5. B.L.Oser (Ed), "Hawk's Physiological Chemistry", Tata McGraw-Hill
6. British Pharmacopoeia and Indian Pharmacopoeia,
7. A.C.Agarwala and R.M.Sharma (Eds), "A Laboratory Manual of Milk Inspection", Asia Publishing House

## CHEMINFORMATICS & BIOCHEMISTRY LAB

**Course Code: CHY4112**

**Credit Units: 01**

1. Representation of chemical structures through various tools
2. Homology modeling
3. *Abinitio* modeling
4. Validation of structures
5. Visualization of PDB file
6. Protein Sequence alignment
7. Genome database retrieval
8. Molecular docking and Simulation

### Examination Scheme:

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, A- Attendance, V – Viva.

### Suggested Readings:

1. Practical Cheminformatics, Muthukumaraswamy Karthikeyan.

## RESEARCH SEMINAR

**Course Code: CHY4108**

**Credit Units: 01**

### Objectives

A seminar is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning for research based activity. Prereq., graduate standing in chemistry/ biochemistry/ Forensic Sciences on consent of instructor. Seminar to acquaint new graduate students with departmental research (This one will be running through out first semesters on every Monday any Lecture, where normally Ph.D students /internal Faculties /external speakers will give talk on their research or other topic of their specialization).

The trainer has to make sure that the aspect covered is practically practiced by the participants. The evaluation will be done by Board of examiners comprising of the faculties.

### Major Themes for Seminar

The seminar may be conducted on any of the following major themes:

- Nuclear Chemistry
- Modern trend in Inorganic Chemistry
- Modern trend in Organic Chemistry
- Modern trend in Physical Chemistry
- Nanotechnology and its application
- Polymer Chemistry
- Pharmaceuticals
- Food Technology
- Agriculture Chemistry
- Computational Chemistry
- Green Chemistry
- Any other relevant topics

These themes are merely indicative and other recent and relevant topics of study may be included.

### Evaluation Scheme:

Attendance	Active Participation	Multiple Choice Questions/ Quiz	Solving the case/ Assignment/ Write up	Total
10	30	30	30	100

# Syllabus- Second Semester

## ANALYTICAL CHEMISTRY

Course Code: CHY4201

Credit Units:03

### MODULE I: WET CHEMICAL METHODS OF ANALYSIS

Volumetric analysis –neutralization, precipitation, complexometric and redox titrations-theoretical titrations curves - theory of indicators; Gravimetric analysis, volatilization and precipitation methods- homogeneous precipitation; Colorimetric analysis - principles and applications- estimation of iron and nickel.

### MODULE II: ELECTROANALYTICAL TECHNIQUES

Conductometry, and high frequency titrations; Potentiometry, pH-metry, Ion selective electrodes; Electrogravimetry and coulometry; Voltammetry –polarography, amperometric titrations and anodic stripping voltammetry; principles, practice and applications.

### MODULE III: SEPARATION TECHNIQUES

Solvent extraction and Ion exchange techniques – principles and applications; Chromatographic techniques – adsorption chromatography, thin layer chromatography, gas chromatography, high performance chromatography, size exclusion chromatography; Supercritical fluid chromatography.

### MODULE IV: RESEARCH BASED ANALYTICAL TECHNIQUE

Preparations of solutions of different strength and scales (molarity, molality, normality, formality, w/w, v/v ratio calculation exercises) buffers, gel apparatuses, native and SDS -PAGE gels, Isoelectric point

#### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

#### Suggested Readings:

1. D.A.Skoog, D.M.West, F.J. Holler and S.R.Crouch, “ Fundamentals of Analytical Chemistry”, 8th Edn., - Thomson Brooks/Cole Pub. (2005).
2. J.Mendham, R.C.Denney, J.D. Barnes and M.J.K.Thomas, “ Vogel’s Text book of quantitative chemical analysis”, 6th Edn., Pearson Education (2008).
3. F.W. Fifield and D.Kealey, “ Principles and Practice of Analytical Chemistry, 1<sup>st</sup> Indian Reprint, Blackwell Pub. (2004).
4. H.H Willard, L.L Merritt, J.A Dean, and F.A Settle, “ Instrumental Methods of Analysis”, 7th Edn., -CBS Pub (2004).
5. G. D.Christian, “Analytical Chemistry”, 6th Edn., John Wiley Press (2006).
6. K.A. Rubison and J.F. Rubison, “ Contemporary Instrumental Analysis, Printice Hall, Inc. (2000).

- 7.A.K.Srivastva& P.C. Jain,” Instrument approach to chemical analysis” 4<sup>th</sup> edition,S.Chand & Company(2012)
- 8.C.L.Wilson and D.W.Wilson, “Comprehensive Analytical Chemistry”, Dan van Nostrand 9.
- J.G.Dick, “Analytical Chemistry, McGraw Hill

## INDUSTRIAL CHEMISTRY

**Course Code: CHY4202**

**Credit Units: 03**

### **Course Objective:**

This course is intended to give the students the knowledge of various aspects of industrial chemistry with the focus on preparation of different types of glass, cement, soaps and detergent. A student taking up this course should be able to understand the logic and chemistry behind the different types of catalytic process and catalyst.

### **MODULE I: GLASS INDUSTRY**

Introduction, classification of glass, basic raw materials of glass, manufacturing processes including chemical reactions, some special glasses: optical glass, coloured glass, fibre glass, laminate glass, safety glass, photosensitive glass, photochromatic glass, lead glass, borosilicate glass and glass wool.

### **MODULE II: CEMENT INDUSTRY**

Types of cement, manufacture of Portland cement, composition, setting and hardening of cement, Mortars and concrete, gypsum, plaster of paris, estimation of silica, alumina, calcium oxide and sulphates in Portland cement.

### **MODULE III: SOAPS AND SYNTHETIC DETERGENTS**

Manufacture of detergent, types of detergents, anionic, cationic, nonionic and amphoteric detergents, manufacture of soap, Liquid soap.

### **MODULE IV: HOMOGENEOUS AND HETEROGENEOUS CATALYSIS and CATALYTIC PROCESSES**

Conversion, selectivity, contact time, time on stream, Kinetics of heterogeneous catalysis, adsorption, phase transfer catalysis, super acid catalysis, intramolecular catalysis, enzyme catalysis, semi-conductor catalysis and photocatalysis. Promoters, stabilizers, catalyst deactivation by poisoning, fouling and sintering, Cracking, reforming, alkylation, isomerization, hydrogenation/dehydrogenation, dehydrocyclisation, dehydrosulphurization, hydrocracking, oxidation, metathesis, carbonylation, polymerization, synthetic fuels, hydrogen generation.

### **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

### **Suggested Readings:**

1. Jens Hagen, Industrial catalysis, 2nd Edition, Wiley-VCH Verlag GmbH & Co., (2006).
2. Herman Pines, The chemistry of catalytic hydrocarbon conversions, Academic Press, New York (1981).
3. R. Pearce and W.R. Patterson, Catalysis and chemical processes, Leonard Hill, London (1981).
4. Charles, N. Satterfield, Heterogeneous catalysis in industrial practice, 2nd Edn. McGraw Hill, International Edition, Singapore (1993).

5. Catalytic Chemistry, Bruce-gates, John Wiley & Sons
6. Organic Chemistry Vol.2 IL Finar 5th Edn. Longmans 1975
7. Dryden's outlines of Chemical Technolgy 2nd Edn., edited and revised by M.Gopala Rao, Marshel sitting – EastWest Press, 1973.
8. Chemical Process Industries 3 Edn., R Norries Shreve, Mc Graw Hill 1967.
9. Chemistry of Engg Materials by CV Agarwal.
10. Applied Chemsitry for Engineer's by Diamont
11. Industrial Chemistry by BK Sharma, Goel Publishing house Meerut.

## ORGANOMETALLIC CHEMISTRY

Course Code: CHY4211

Credit Units:04

### Course Objective:

The main idea of this course is to give students a brief idea about Bioinorganic chemistry that examines the role of metals in biology. It includes the study of both natural phenomena such as the behaviour of metalloproteins as well as artificially introduced metals, including those that are non-essential, in medicine and toxicology. Many biological processes such as respiration depend upon molecules that fall within the realm of inorganic chemistry. The discipline also includes the study of inorganic models or mimics that imitate the behaviour of metalloproteins. It also covers organometallic chemistry which is the study of chemical compounds containing bonds between carbon and a metal. Since many compounds without such bonds are chemically similar, an alternative may be compounds containing metal-element bonds of a largely covalent character. Organometallic chemistry combines aspects of inorganic chemistry and organic chemistry.

### Course Content:

#### MODULE I: ROLE OF METAL IONS IN BIOLOGICAL SYSTEM

Elements of life: essential major, trace and ultratrace elements. Basic chemical reactions in the biological systems and the role of metal ions (specially  $\text{Na}^+$ ,  $\text{K}^+$ ,  $\text{Mg}^{2+}$ ,  $\text{Ca}^{2+}$ ,  $\text{Fe}^{3+}/2+$ ,  $\text{Cu}^{2+}/+$ , and  $\text{Zn}^{2+}$ ). Metal ion transport across biological membrane  $\text{Na}^+/\text{K}^+$  ion pump, ionophores. Toxic metal ions and their effects, chelation therapy (examples only), Pt and Au complexes as drugs (examples only), metal dependent diseases.

**Module II:** Biological functions of haemoglobin, myoglobin and hemocyanin, cytochromes and ferredoxins, carbonate bicarbonate buffering system and carbonic anhydrase. Biological nitrogen fixation, Photosynthesis: (Photosystem-I and Photosystem-II), chlorophyll and related elementary ideas

#### MODULE III: METALLOCENE

Metallocenes, Structure and synthesis of cyclopentadienyl complexes, Covalent vs Ionic bonding in metallocenes, Arene complexes

#### MODULE IV: REACTIONS IN ORGANOMETALLIC CHEMISTRY

Substitution reactions in carbonyl complexes, Oxidative addition and reductive elimination, Insertion and elimination, Nucleophilic and electrophilic attack of coordinated ligands, Synthesis of ferrocenes derivatives, carbonylate anion as nucleophile. Introduction to carbenes, types of carbenes (Fischer type and Schrock type carbene complexes, synthesis, structure, bonding and reactions of carbenes).

#### MODULE V: APPLICATIONS OF ORGANOMETALLICS IN CATALYSIS

(b) In Catalysis: Asymmetric hydrogenation; synthesis of acetic acid (Monsanto) Cativa process; Arylation/vinylation of olefins (Heck reaction); Wacker process (olefin oxidation); Asymmetric epoxidation.

## MODULE- VI: METAL $\pi$ -COMPLEXES

Metal carbonyl, structure and bonding, 18 electron rule, vibrational spectra of metal carbonyls for bonding and structural elucidation, important reactions of metal carbonyls; preparation, bonding structure and important reaction of transition metal nitrosyl, dinitrogen and dioxygen complexes; tertiary phosphine as ligand.

### Examination Scheme:

Components	CT	HA	S/V/Q	A	EE

2. C. Elschenbroich & A. Salzer. Organometallics – A Concise Introduction (2nd edn.), VCH Publication (1992).
3. F. Mathey & A. Sevin. Molecular Chemistry of the Transition Elements, John Wiley (1996).
4. F. A. Cotton & G. Wilkinson. Advanced Inorganic Chemistry (5th edn.), John Wiley (1988).
5. R. C. Mehrotra & A. Singh. Organometallic Chemistry: A Unified Approach (2nd edn.), New Age International (2000).
6. Yamamoto, Organo Transition Metal Chemistry,

## **INTRODUCTION TO LABORATORY SAFETY**

**Course Code: CHY4212**

**Credit Units: 01**

### **Course Objective :**

The basic goal of this course is to make sure students know about potential work hazards, how to recognize them, and how to protect themselves. This course is designed to help reduce possible accidents arising out of negligence. This introductory course in laboratory chemical safety is required for all entering chemistry graduate students. Topics to be covered include laboratory emergencies, chemical hazards, lab inspections and compliance, managing and working with chemicals, waste handling, case studies of university accidents.

### **MODULE I: INTRODUCTION TO LABORATORY SAFETY**

Risks in a Research Laboratory, Health Effects Due to “Hazardous” Chemical Exposure (How Does One Determine the Hazards Associated with Specific Chemicals, Exposure Routes, Toxicity Risk Assessment), Personal Protective Equipment (PPE) Proper Attire (Eye/Face Protection, Lab Coats, Gloves, Respirators, Disposal/Removal of PPE), Emergency Equipment Safety Showers/Eye Washes, Key Campus and Department Chemical Safety Contacts, Case Study: Dartmouth Chemical Poisoning (Key Lessons learnt).

### **MODULE II: LABORATORY EMERGENCIES: SPILLS AND FIRES**

Handling the Accidental Release of Hazardous Materials, Notifications, Spill Containment and Clean-up, Leaking Gas Cylinders, Fires Classification, Fire Extinguishers (how they work, types), Risk Assessment, Flammable Hazards, Flammability Characteristics, Flammability Classes, Causes of Ignition, Reactive Hazards, Explosives, Case Study: University of Texas Austin Sodium Fire (Key Lessons learnt).

### **MODULE III: CHEMICAL HAZARDS**

Chemical Hygiene Plan, The New Safety Data Sheets (SDS) versus the Old Material Safety Data Sheets (MSDS), Assessment of Chemical Toxicity, Toxic Hazards (Dose, Risk Assessment, Types of Toxins, Working with Highly Toxic Compounds (General Considerations, Planning, Precautions for Minimizing Exposure – Handling, In the Event of a Spill), General Considerations (Chemical Segregation, Transfer and Transport, Chemical Fume Hoods (Safety, Types, Operation), Other Types of Ventilation) Case Study: University of Wisconsin –  $\text{LiAlH}_4$  Explosion (Key Lessons learnt).

### **MODULE IV: MANAGING AND WORKING WITH CHEMICALS**

Working with Flammable Substances (Standard Operating Procedures), Working with Highly Reactive or Explosive Substances, Working with Compressed Gases (Parts of the Cylinder, Cylinder Pressure Regulator, Storage Guidelines, Transporting Cylinders, Handling Compressed Gas Cylinders) Working with Cryogenics (Health Hazards, Liquid  $\text{N}_2$ ), Waste Handling. Characterization of Waste. Collection and Storage (Lids, Leaks, Labels, Location, Containers), Consequences of Mixing Incompatibles, Solid Wastes (Chemicals, Broken Glass, Sharps, Cylinders). Waste Handling, Characterization of Waste, Collection and Storage (Lids, Leaks, Labels, Location, Containers), Consequences of Mixing Incompatibles

Solid Wastes (Chemicals, Broken Glass, Sharps, Cylinders, Pick-up), Special Cases, Hazardous Waste Minimization, Case Study: the “UCLA Incident”.

## **MODULE V: WORKING ON LABORATORY EQUIPMENTS**

Working with Water (liquid)-dependent Equipment (Hazards, Proper Use, Heating Baths), Working with High Pressure Vacuum Pumps, Working with Stirring and Mixing Devices, Working with Heating Devices (Variacs, Oil, Salt, Sand Baths, Microwave Ovens), Ultrasonicators, Centrifuges and HPLCs. Laser classifications, Effects of lasers on skin and eyes, Protective eyewear, Enclosing laser beams, Examples of common mistakes and ways to avoid them, Non-beam hazards, Risk Assessment: when is it okay to violate specific safety rules? The importance of understanding, how things work, Case Study: Laboratory Equipment.

## **MODULE VI: BIOSAFETY, RADIATION, AND ANIMALS**

Chemicals such as acrylamide & ethidium bromide, Pathogens, Biological waste handling, Recombinant DNA, Mammalian cell culture, Case Study.

### **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

### **Suggested Readings:**

1. CRC Handbook of lab safety, 4<sup>th</sup> Edition, A. K. Furr
2. Laboratory Safety for Chemistry Students, 2<sup>nd</sup> Edition, David C. Finster and Robert H. Hill, Jr.
3. Complete Guide to Laboratory Safety, 4<sup>th</sup> Edition, Dan Scungio and Terry Jo Gile

# SPECTROSCOPY

**Course Code: CHY4213**

**Credit Units:03**

**Course Objective:**

The course is designed to give students the basis of organic compound characterization. The student will be able to analyse and interpret spectroscopic data collected by the methods discussed in the course. They will be able to solve problems related to the structure, purity and concentration of chemicals and to study molecular interactions by choosing suitable spectroscopic methods and interpreting corresponding data.

**MODULE I: UltraViolet and Visible Spectroscopy:**

Principles of electronic spectroscopy, Absorption Law's, Type of electronic transitions, Effect of solvent on electronic transitions, Chromophores & Auxochromes, Ultraviolet bands of carbonyl compounds, unsaturated carbonyl compounds, dienes, conjugated polyenes. Fieser-Woodward rules for conjugated dienes and carbonyl compounds. Qualitative applications of UV-Vis spectroscopy.

**MODULE II: INFRARED SPECTROSCOPY**

Principle of IR spectroscopy, Modes of vibrations, Hook's law and calculation of frequency for different bonds. Fundamental vibrations and selection rule. Characteristic vibrational frequencies of common organic compounds. Effect of hydrogen bonding and solvent effect on vibrational frequencies, overtones, combination bands and Fermi resonance. Fingerprint region. Introduction to Raman spectroscopy. Applications of IR and Raman Spectroscopy in organic chemistry.

**MODULE III: Nuclear Magnetic Resonance (NMR) Spectroscopy:**

General introduction, chemical shift and factors effecting it, spin-spin interaction, shielding – deshielding mechanism, chemical shift values and correlation of protons present in different groups in organic compounds. Proton exchange (proton on N, O and S atom), Karplus-relationship of coupling constant with dihedral angle. Simplification of complex spectra-by double resonance, contact shift reagents, D<sub>2</sub>O shake. Nuclear Overhauser Effect (NOE). Principle and introduction to C-13 NMR, F-19, P-31, DEPT and 2-D NMR, Applications of NMR in organic chemistry.

**MODULE IV: MASS SPECTROMETRY**

Introduction, ion production—Electron ionization (EI), Chemical Ionization (CI), Fast atom bombardment (FAB) and Matrix Assisted Laser Desorption Ionization (MALDI), factors affecting fragmentation, ion analysis, and ion abundance. Mass spectral fragmentation of organic compounds, common functional groups, Molecular ion peak, Base peak, Isotopic peaks, Meta-stable peak, McLafferty rearrangement. Determination of molecular weight and molecular formula: Nitrogen Rule, hydrogen deficiency index. Introduction to GCMS, LCMS and HRMS. Combined structural elucidation problems based on IR, UV, NMR and mass spectral data.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

**Suggested Readings:**

1. Spectrometric Identification of Organic Compounds, R. M. Silverstein, G.C.Bassler and T.C.Morrill, John Wiley.
2. Spectroscopy of Organic Compounds by P. S. Kalsi.
3. Application of Spectroscopy of Organic Compounds, J.R. Dyer, Prentice Hall.
4. Spectroscopic Methods in Organic Chemistry, D.H. Williams,I. Fleming, Tata McGraw-Hill.
5. Organic spectroscopy by Jagmohan
6. Organic spectroscopy by W. Kemp
7. Elementary Organic Spectroscopy by Y. R. Sharma.

## ANALYTICAL CHEMISTRY LAB

Course Code: CHY4206

Credit Units:02

### Minimum 10 Experiments to be performed

#### Chromatography

1. Estimation of zinc and magnesium in the given mixture solution against EDTA(Disodium salt) solution
2. Thin-layer chromatography-separation of nickel, manganese, cobalt and zinc.
3. Separation and identification of the sugars present in the given mixture of glucose, fructose and sucrose by paper chromatography and determination of R<sub>f</sub> values.
4. Separation of artificial colorants in confectionary using TLC.
5. Extraction and Determination of caffeine by tea leaves

#### Colorimetry

6. To verify Beer-Lambert's Law for potassium permanganate solution and hence to determine the molar extinction coefficient and unknown concentration of given sample colorimetrically
7. To verify the Beer-Lambert's Law and determine the concentration of given dye solution colorimetrically.
8. To estimate the amount of D-glucose in given solution colorimetrically.

#### Quantitative Analysis

9. Estimation of amines/phenols using bromate bromide solution/or acetylation method.
10. Determination of Iodine and Saponification values of an oil sample.
11. To determine the acid value of given oil
12. Determination of protein content of wheat flour.

**\*MSDS -Compilation of MSDS of chemicals used by students in each experiment is compulsory**

#### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, A: Attendance, V – Viva.

#### Suggested Readings:

1. L.Wilson and D.W.Wilson, "Comprehensive Analytical Chemistry", Dan van Nostrand
2. J.G.Dick, "Analytical Chemistry, McGraw Hill
3. D.A.Skoog and D.M.West, "Analytical Chemistry – An Introduction", Reinholdt.
4. I.M.Kolthoff, V.J.Elving and Sandell, "Treatise on Analytical Chemistry", Interscience

## INDUSTRIAL CHEMISTRY LAB

Course Code: CHY4207

Credit Units: 01

### Minimum 10 Experiments to be performed

#### Analysis of Cement

1. Determination of silica content from given sample

#### Analysis of polymers

2. Determination of Acid Values of plastic material.
3. Determination of Saponification value of plastic material.
4. Determination Iodine value of a plastic material.
5. Determination of hydroxyl Value of plastic material.
6. Determination of Carbonyl Value of plastic material.
7. Determination of Molecular Weight of a polymer.
8. Determination of Capacity of cation exchange resin.
9. Determination Capacity of an anion exchange resin.
10. Determination of glass transition temperature of plastic.

#### Preparation of polymers

11. Preparation of Urea Formaldehyde resin and Phenol Formaldehyde resin.
12. To synthesize and hydrolyse Nylon 6:6/polyacrylic acid/polyamidine

#### Water Analysis

13. Determination of Total dissolved solids
14. Determination of Carbonate and non-carbonate hardness by EDTA
15. Determination of Dissolved oxygen, BOD, COD
16. Determination of Turbidity

#### Preparation of Dyes (methyl orange, bismark brown)

#### Preparation of Cosmetics (shampoo, lipstick, detergent)

#### Preparation of Drugs (Paracetamol and Aspirin)

**\*MSDS -Compilation of MSDS of chemicals used by students in each experiment is compulsory**

#### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, A: Attendance, V – Viva.

**Suggested Readings:**

1. A Textbook of quantitative chemical analysis, Vith Edition Vogel, Pearson Education Limited.
2. Practical Organic Chemistry, Mann and Saunders, IV Edition, ELBS and Longman Publication
3. Comprehensive Experimental Chemistry, V. K. Ahluwalia, New Age Publication, Delhi
4. Practical Manual of Organic Chemistry, R. K. Bansal
5. A Textbook of quantitative inorganic analysis including elementary instrumental analysis, IVth Edition Vogel, ELBS and Longman Publication
6. Advanced Practical Inorganic Chemistry, Gurdeep Raj, Goel Publishing House, Meeru

## TERM PAPER

**Course Code: CHY4231**

**Credit Units: 01**

### Objectives

The objective of this course is to judge the understanding as well as application of the knowledge gained by the students. The aim of the term paper is to provide the students with an opportunity to further enhance their knowledge in a sector of their choice by undertaking a significant practical unit of examining and analyzing various aspects of Chemistry & its application at a level commensurate with the learning outcomes of the various courses taken up them in the ongoing semester.

A term paper is primarily a record of intelligent reading in several sources on a particular subject. The students will choose the topic at the beginning of the session in consultation with the faculty assigned.

### Guidelines:

1. The term paper will be related to the contemporary research issue and the topic will be given by the department.
2. The presentation of the term paper is scheduled to be held before the commencement of Semester examinations.
3. The paper will carry 100 marks that will be marked on the basis of understanding and organization of content based on the literature review. The Bibliography shall form an important part of the paper.
4. Examples of a few broad areas for term paper (List is indicative, not exhaustive)
  - Inorganic chemistry
  - Organic chemistry
  - Physical chemistry
  - Green chemistry
  - Agriculture chemistry

### Evaluation Scheme

Organisation and of relevance content	Literature Review	Bibliography	Presentation	Total
30	30	20	20	100

# Syllabus- Third Semester

## INSTRUMENTAL METHODS OF ANALYSIS

**Course Code: CHY4301**

**Credit Units: 04**

**Course Objective:** The curriculum is developed to help the students to understand the basic theory & applications of various sophisticated instruments. The instrumental analysis course aims to provide students with an understanding of the functioning and applications of these instruments in our day to day life. It covers the basic principles of theory, its operation and their applications in chemistry, physics, biology, nanotechnology, material science and materials chemistry. Recent advances in the characterization of nanomaterials will also include in the course. The course is further enhanced with invited lectures on recent developments and applications in characterization of nanomaterials.

### **Course Contents:**

#### **MODULE I: MICROSCOPIC TECHNIQUES**

Microscopic techniques, Transmission electron microscopy, Scanning electron microscopy, high resolution scanning electron microscopy, high resolution transmission electron microscopy, Selected Area Electron Diffraction Pattern, Chromatographic techniques in combination with Mass Spectrometer (GC-MS, LC-MS etc) and their applications in various fields such as chemistry, biology, medicine, nanotechnology etc.

#### **MODULE II: ANALYTICAL TECHNIQUES**

Thermal Analysis (DSC, TGA, DTA etc). Applications of XRD measurements, Calculation of particle size from XRD measurements using Debye Scherer formula. Applications of spectroscopic techniques in chemistry, biology, nanotechnology, nanomedicine etc.

#### **MODULE III: MOSSBAUER SPECTROSCOPY**

Doppler shift and recoil energy, isomer shift and its interpretation, quadrupole interactions, effect of magnetic field on Mossbauer spectra, applications to metal complexes, metal carbonyls, Fe-S cluster and tin compounds.

#### **MODULE IV: DYNAMIC LIGHT SCATTERING**

Theory of Dynamic Light Scattering (DLS). Hydrodynamic Diameter, Number average diameter, volume average diameter, Intensity average diameter. Applications of dynamic light scattering in synthesis of nanomaterials, chemistry, biology and nanomedicine.

### **Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>HA</b>	<b>S/V/Q</b>	<b>A</b>	<b>EE</b>
<b>Weightage(%)</b>	15	5	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance.

**Suggested Readings:**

1. Fundamentals of Analytical Chemistry (with CD-ROM and InfoTrac) by Douglas A. Skoog, Donald M. West, F. James Holler, Stanley R. Crouch, Hardcover: 992 pages, Publisher: Brooks Cole
2. Dean's Analytical Chemistry Handbook by Pradyot Patnaik, Hardcover: 1280 pages, Publisher: McGraw-Hill Professional
3. Quantitative Chemical Analysis, Sixth Edition by Daniel C. Harris, Hardcover: 928 pages, Publisher: W. H. Freeman
4. Analytical Chemistry by Gary D. Christian, Hardcover: 848 pages Publisher: Wiley; 6th edition
5. Comprehensive Medicinal Chemistry by Hansh C, Vol IV, Elsevier Pergamon.
6. Medicinal Chemistry-A Biochemical Approach by Nogrady T, Oxford University Press New York, Oxford.
7. Drago, R. S. Physical Methods in Chemistry W. B. Saunders Co. U. K. 1977
8. Ebsworth, E. A. V. Structural Methods in Inorganic Chemistry Blackwell Scientific Publications 1991.

## ADVANCED PHYSICAL CHEMISTRY

**Course Code: CHY4319**

**CreditUnits: 04**

### **Course Objective:**

This course is intended to give the students the requisite knowledge of advances in physical chemistry with the focus on enhancing their problem-solving ability. A knowledge of photochemistry, electrochemistry and quantum mechanics is necessary. This course will give the students a better understanding of the various aspects and application of physical chemistry.

### **Module I: CLASSICAL AND STATISTICAL MECHANICS**

- (i) *Classical and Classical Statistical mechanics*: equation of motion in Newton, Lagrange and Hamilton forms. Poisson bracket notation. Concept of ensembles – micro-canonical, canonical and grand-canonical. Fluctuations
- (ii) Quantum Statistical Mechanics: Maxwell-Boltzmann statistics, Bose-Einstein (BE) and Fermi-Dirac (FD) distribution.

### **Module II: Photochemistry**

Interaction of radiation with matter. Spontaneous and stimulated emission, Einstein A and B coefficients. Principle of the LASER. Different types of lasers. Uses of lasers.

The salient features of Raman spectroscopy, 'Resonance Raman' spectroscopy, second harmonic generation, 'Surface Enhanced Raman' spectroscopy. Photoelectron spectroscopy (XPES, UPES).

### **Module III: CHEMICAL DYNAMICS AND EMULSIONS:**

Collision theory of reaction rates, steric factors, activated complex theory and RRKM, collisional dynamics. Arrhenius equation, reactions in solution ion, Kinetic salt effects, steady state kinetics, kinetic and thermodynamic control of reactions, treatment of unimolecular reactions, homogeneous catalysis and kinetics of enzyme catalysis

Emulsions: macro- and micro-emulsions; aging and stabilization of emulsions; Phase behaviour of micro emulsions. Colloids, vesicles, lipid bilayer membrane: structure and properties, monolayers, liquid crystals, foams and aerosols.

### **Module IV: ION-ION INTERACTIONS:**

Ion Transport in solutions: Ionic movement under the influence of an electric field, mobility of ions, ionic drift velocity and its relation with current density, Einstein relation between the absolute mobility and diffusion coefficient, the Stokes-Einstein relation, the Nernst-Einstein equation, Waldens rule, the Rate-Process approach to ionic migration, the Rate process equation for equivalent conductivity, total driving force for ionic transport, Nernst-Planck Flux equation, ionic drift and diffusion potential, the Onsager phenomenological equations. The basic equation for the diffusion, Planck-Henderson equation for the diffusion potential.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

**Suggested Readings:**

1. Atkins, P. W. & Paula, J. de *Atkin's Physical Chemistry* 8th Ed., Oxford University Press (2006).
2. Ball, D. W. *Physical Chemistry* Thomson Press, India (2007).
3. Castellan, G. W. *Physical Chemistry* 4th Ed. Narosa (2004).
4. Mortimer, R. G. *Physical Chemistry* 3rd Ed. Elsevier: NOIDA, UP (2009).
5. Huang K.S. *Statistical Mechanics* 3<sup>rd</sup> ED. Wiley
6. Huang K.S. *Statistical Mechanics* 3<sup>rd</sup> ED. Wiley

## ADVANCED ORGANIC CHEMISTRY

**Course Code: CHY4318**

**Credit Units:04**

**Course Objective:** The main objective of this organic chemistry course is to give a good idea of different important chemical reactions. Synthetic organic chemistry plays an important role in our daily life due to the importance of synthesis of various organic compounds for the prevention of various diseases. It course includes the disconnection approach, synthons and umpolung reactions and applications of complex metal hydrides. This course also covers the various important reagent such as LDA, PPA, diazomethane, ozone phase transfer catalyst etc. It also includes invited lectures on the recent development of synthetic organic chemistry reactions.

### **Course Content:**

#### **MODULE I : DISCONNECTION APPROACH**

Introduction to disconnection approach, functional group interconversions. Introduction to Retro-synthesis of aromatic Heterocycles and 3, 4, 5 and 6 membered carbocyclic and heterocyclic rings. One group C-X and two group disconnections in 1,2,1,3 -, 1,4- & 1,5- difunctional compounds, Retro- synthesis of Alkene, acetylenes and aliphatic nitro Alcohols and carbonyl compounds, amines.

#### **MODULE II: SYNTHONS AND UMPOLUNG**

An introduction to Synthons and synthetic equivalents, importance of the order of events in organic synthesis, chemoselectivity, regioselectivity, Diels Alder reaction, Michael addition and Robinson annulations, Reversal of polarity (Umpolung).

#### **MODULE III : INTRODUCTION TO PROTECTING GROUPS AND APPLICATIONS**

**a) Protecting Groups:** Principle of protection of alcohol, amine, carbonyl and carboxyl groups

**b) Application of the following in synthesis** Merrifield resin, polymeric reagents. Solid phase synthesis of polypeptide & oligonucleotides, electro organic synthesis, enzyme catalyzed reaction in synthesis & resolution of racemic mixtures.

#### **MODULE IV: APPLICATION OF FOLLOWING REAGENTS & REACTION IN SYNTHESIS**

Complex metal hydrides, lithium dialkyl cuprate, lithium diisopropylamide (LDA) Dicyclohexylcarbodiimide (DCC), Trimethyl silyl iodide, tributyltin hydride, peracids, lead tetra acetate, PPA, Diazomethane, ozone phase transfer catalyst, Woodward-Preston hydroxylation, Barton and Shapiro reaction Hoffmann – Löffler-Freytag, Peterson synthesis.

Selenium dioxide, crown ethers, DDQ, Dess-Martin periodinane, periodic acid & Iodoisobenzyl diacetate. Application of following metal in organic synthesis Pd, Hg, and Rh, Ir and Sn

#### **MODULE V: Supramolecular Chemistry**

Factors leading to strong binding (noncovalent interactions). New molecular receptors: crown ethers, cryptands, cyclophanes, siderophores, cyclodextrin, and their application in specific recognition processes. Supramolecular reactivity and catalysis, switching devices. Self-assembly of supramolecular aggregates, principles of gene synthesis, catalytic antibodies, molecular channels, transport processes and carrier design. Supramolecular devices and nanotechnology. Supramolecular photochemistry

**Examination Scheme:**

Components	CT	HA	S/V/Q	A	EE
Weightage(%)	15	5	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, A: Attendance EE: End Semester Examination

**Suggested Readings:**

1. S.Warren: Designing of organic synthesis
2. J. Fuhrhop & G. Penzlin. : Organic synthesis (2nd ed.)
3. Carruthers: some modern methods of organic synthesis.
4. Fieser & Fieser : Reagent in organic synthesis
5. R.O.C.Norman: principle of organic synthesis
6. CAREY & sundberg: Advanced organic Chemistry
7. Bartan and Ollis : comprehensive organic Chemistry
8. R.Admas: - organic reactions
9. Stone & west: Advances in organometallic Chemistry
10. C.W.Bird: Transition metal intermediate in organic synthesis
11. Swan & black :organometallic in organic synthesis.
12. A. Mitra : synthesis of prostaglandins
13. John Apsimon: Total synthesis of natural products
14. M. K. Mathur, C. K. Narang & R.E.Williams: polymers as aid in organic Synthesis
15. P. HODGE & D.C.SHERRINGTON: Polymer supported reaction in organic synthesis.
16. C.J.Gray: Enzyme catalysed reactions
17. T.W. Green & P.G.M.Wats : Protecting groups in organic Chemistry
18. Weber & Gokel : phase transfer catalyst in organic synthesis.
19. Protecting group chemistry J. Roberton (OX)

## ADVANCED INORGANIC CHEMISTRY

**Course Code: CHY4323**

**Credit Units: 04**

### **Course Objective :**

This course is intended to give the students the knowledge of various aspects of advance inorganic chemistry with the focus on boron chemistry, ligand synthesis and their complexation studies with transition and non-transition metals. Pre-requisite knowledge of basic inorganic chemistry is must. A student taking up this course should be able to assess and suggest a suitable symmetry elements and operators for wide range of compounds.

### **Module I: GROUP THEORY**

Symmetry in nature, symmetry elements and symmetry operations. Symmetry properties of atomic orbitals. Elements of group theory. Elements of group theory: groups, sub-groups, classes and characters, classes of symmetry operations, symmetry point groups; representation of groups by matrices. Representation of symmetry operator transformation of basis vector, Symmetry transformation of operators The Great Orthogonality Theorem (without proof) and its consequences; construction and applications of character tables, representation of cyclic groups. direct product and projection operator and their applications; symmetry adapted linear combination (SALC)sThe Great Orthogonality Theorem: statement and interpretation, proof of important corollaries; construction of character tables, cyclic groups and construction of their character tables. Mulliken Symbols, Use of the character table.

### **ModuleII: INORGANIC RINGS, CAGES AND CLUSTERS**

Introduction, clusters in elemental states, cluster classification, Low nuclearity (M3 – M4) and high nuclearity cluster (M5 – M10), Metal metal bonding (MO), Carbonyl clusters, skeletal electron (Elm) counting, Wade-Mingos-Luber rule, application of isolobal and isoelectronic analogy, capping rules, carbide, nitride, chalcogenide and halide containing cluster, important examples like Nb, Ta, Mo, W clusters, Metal Clusters, Chains and Fullerenes, Compounds with metal-metal multiple bonds

### **Module III: CHEMISTRY OF BORONS**

Higher boron hydrides-structures and reactions, equation of balance, Lipscomb topological diagrams, polyhedral skeletal electron pair theory (PSEPT), carboranes, metalloboranes and heteroboranes, metallocarboranes, zintl ions, chevreton compounds, infinite metal chains, cluster-surface analogy, cluster compounds in catalysis.

### **Module IV: INTRODUCTION TO SYNTHETIC METHODOLOGIES FOR TRANSITION AND NON-TRANSITION METAL COMPOUNDS**

Ligand design and ligand synthesis: polypyridine, Schiff base, oxime, macrocycle, tripod, podand, coronand, cryptand, octopus, tailoring and appending of pendant arm, electron reservoir, ligand topology and molecular mechanics, coordination compound design and synthesis: self-assembly, structure-directed synthesis, building block, metalloligand, polymeric ensembles (chain, sheet, network), supramolecular framework, molecular machine, biomodelling, molecular/crystal engineering.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

**Suggested Readings:**

1. Inorganic Chemistry: Principles of Structure and Reactivity (4th Edition) by James E. Huheey, Ellen A. Keiter, Richard L. Keiter, Hardcover: 964 pages, Publisher: Benjamin Cummings
2. Advanced Inorganic Chemistry 6th Edition F. Albert Cotton, Geoffrey Wilkinson, Carlos A. Murillo, Manfred Bochmann
3. Chemical Applications of Group Theory, 3rd Edition F. Albert Cotton

## NATURAL PRODUCTS AND HETEROCYCLIC CHEMISTRY

**Course Code: CHY4325**

**Credit Units: 03**

**Course objective:** The course provides an understanding of important natural products. Using selected examples, this course describes the process of identification and isolation of natural products from natural sources, their chemical synthesis and structure elucidation. The course gives a broad introduction to heterocyclic chemistry. Emphasis is given on the most important heterocyclic systems, such as coumarines, indoles, pyrimidines, imidazoles, aziridines and oxiranes etc. For each group, ring synthesis, chemical properties and characteristic reactions will be discussed.

### **Course Contents:**

#### **MODULE I: TERPENOIDS AND CAROTENOIDS**

Classification, nomenclature, occurrence, isolation, general methods of structure determination, isoprene rule. Structure determination, stereochemistry and synthesis of the following representative molecules: Citral,  $\alpha$ -Terpeneol and  $\beta$ -Carotene

#### **MODULE II: ALKALOIDS**

Definition, nomenclature and physiological action, occurrence, isolation, general methods of structure elucidation, degradation, classification based on nitrogen heterocyclic ring, role of alkaloids in plants. Structure, stereochemistry and synthesis of the following: Coniine, Nicotine, Atropine, and Quinine.

#### **MODULE III: HETEROCYCLIC - I**

Introduction, classification, nomenclature of three, four, five and six-membered rings. Methods of synthesis and chemical reactions of aziridines, oxiranes, thiiranes, azetidines, oxetanes. Methods of Synthesis and chemical reactions with emphasis on the mechanism of electrophilic substitution of pyrrol, thiophene and furan. Synthesis and reactions of pyridine with emphasis on nucleophilic substitution reactions.

#### **MODULE IV: HETEROCYCLIC – II**

Introduction to condensed five and six membered heterocycles; preparation and reactions of indole, quinoline and isoquinoline with special reference to Fischer-indole synthesis, Skraup synthesis and Bischler-Napieralski synthesis. Synthesis and chemical reactions of five membered ring with two heteroatoms; pyrazole, imidazole, oxazole, thiazole, isothiazole, and benzofused analogue like coumarins, thiocoumarins, phenazine, phenothiazines, 1,4 and 1,5-benzodiazepines.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

**Suggested Readings:**

1. Heterocyclic Chemistry, Vol 1-3, A. A. Gupta. M. Kumar and V. Gupta, 35 Springer Verlag
2. The Chemistry of Heterocycles, T. Eicher and S. Hauptmann, Thieme
3. Heterocyclic Chemistry, J. A. Joule, K. Mills and G.F. Smith, Chapman and Hall
4. Heterocyclic Chemistry, T.L Gilchrist, Longman Scientific Technical
5. Contemporary Heterocyclic Chemistry, G. A. Newkome and W. W. Paudler, Wiley-Inter Science
6. Organic Chemistry, Vol 2, I. L. Finar, ELBS
7. Natural Products- Chemistry and Biological Significance, J. Mann, R.S. Davidson, J. B. Hobbs, D.V. Banthorpe and J. B. Harborne, Longman, Essex.

## DRUGS AND DYES

**Course Code: CHY4304**

**Credit Units: 04**

**Course Objective:** At the end of this course students must acquire a good knowledge about the various drugs their active constituents, their pharmacological actions and therapeutic uses. Beside drugs they will learn about various dyes used in day to day life, their properties and applications.

### **Course Content:**

#### **MODULE I: INTRODUCTION TO DRUGS**

Definition of drug (WHO), classification of drugs, nomenclature of drugs, stereochemical aspects of drugs, definitions of terms commonly used in the chemistry of drugs, routes of drug administration and different dosage forms and applications

#### **MODULE II: MECHANISM OF ACTION, STRUCTURE AND SYNTHESIS OF DRUGS**

Sulphonamides	: Sulphathiazole, Sulphadiazine(any two)
Antiseptics	: Iodoform, Dettol
Antileprotic drugs	: Dapsone (DDS), Acedapsone (DADDS)
Anticancer agents	: Alkylating agents
CardiovascularDrugs	: Amyl nitrate, Methyldopa
Antipyretics&Analgesics:	Novalgin, Paracetamol
Antimalarials	:Chloroquine ,Primaquine,Mepacrine
Anti diabetic	: Tolbutamide
Antitubercular	: p-amino salicylic acid, Ethambutol

#### **MODULE III: INTRODUCTION TO DYES**

Historical development of synthetic Dyes - Introduction, Nomenclature, classification based on structure & mode of applications of fibres.Structural features of a dye (chromophores and auxochromes), bathochromic and hypsochromic effects, diazotisation and coupling, colour and chemical constitution (Witt's theory, Armstrong theory and Modern theory). Dye intermediates-unit, batch & continuous process in the preparation of dye intermediates,

#### **MODULE IV: STRUCTURE AND PREPARATION OF DYES**

Nitro Dyes	:	Picric acid, Martius yellow, Naphthol yellow S
Nitroso Dyes	:	Fast green O, Naphthol green Y
Azo Dyes	:	Methyl orange, Methyl red, Congo Red
Phthaleins	:	Phenolphthalein
Phthalocyanines:		Copper phthalocyanine
Xanthenes	:	Fluorescein, Eosin, Mercurochrome
Rhodamines	:	Rhodamine B
Thiazine Dyes:		Methylene blue
Cyanine Dyes :		Quinoline blue
Antraquinone Dyes:		Alizarin
Indigoids	:	Indigo (Indigotin)

Thioindigos : Thioindigo  
 Azine Dyes : Safranin T

Action of light on dyes and dyed fibres, Factors affecting fastness of dyed fibres General consideration, fluorescence, phototropy, mechanism of fading.

#### Examination Scheme:

Components	CT	HA	S/V/Q	A	EE
Weightage(%)	15	5	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, A: Attendance EE: End Semester Examination

#### Books Suggested:

1. The Organic Chemistry of Drug Synthesis, Vol. 1,2,3,4 by Lednicer Daniel, 1st edition, John Wiley & Sons INC.
2. Exploring QSAR Vol; I Fundamentals and Applications in Chemistry and Biology by CHansh and A Leo Vol. II: hydrophobic, Electronic and Steric Constants by C Hansh, A Leo and D Hockman ACS Book Catalog.
3. Foye's Principles of Medicinal Chemistry by Foye, 6th edition, Lippincott William Wilkins.
4. Comprehensive Medicinal Chemistry by Hansh C, Vol IV, Elsevier Pergamon.
5. Quantitative Drug Design- A Critical Introduction by Martin YC, Marcel Dekker Inc. New York.
6. Medicinal Chemistry-A Biochemical Approach by Nogady T, Oxford University Press New York, Oxford.
7. Computer Aided Drug Design, by Pops and Perruns, Academic Press, NY
8. Burger's Medicinal Chemistry by Wolff ME, John Wiley & Sons, New York.
9. Introduction to Medicinal Chemistry' – How Drugs Act and Why by Alex Gringauz, Willey-VCH Publication 1997.
10. Drug Design by Bothara KG & Kulkarni VM, 3rd edition, NiraliPrakashan.
11. An Introduction to Drug Design by SN Pandeya & IR Dimmock, 1st edition, New Age International Publishers.
12. Structure based Drug Design by Veerapandian, 1st edition, Taylor & Francis New York, London.
13. Holtje. Sippl., Rognan and Folkers, Molecular Modeling.
14. P.K. Larsen, Tommy and U. Madsen, textbook of Drug Design and Discovery.

## ADVANCED NATURAL PRODUCTS CHEMISTRY

**Course Code: CHY4305**

**Credit Units:03**

**Course Objective:** The main idea of this course is to give the students details of natural product chemistry, which includes the study of Vitamins, alkaloids, terpenes and steroids etc. These play a key role in our day to day life. The course covers the importance of these naturally occurring materials and their applications in chemistry, biology and medicine. The course will also include the invited lectures on recent advances in natural product chemistry and it gives a reasonable good overview of the naturally occurring chemicals and their important reactions, their applications etc.

**Course Content:**

**MODULE I: NATURAL PRODUCTS AND THEIR BIOSYNTHETIC PATHWAYS**

General classification of natural products, their isolation and characterisation and biosynthesis of common plant products; Biosynthesis pathways for natural products using co-enzymes and enzymes; Synthesis of selected natural products based on genetic classification – fatty acid derivatives and related compounds, general biogenesis and synthesis of cis jasmone, methyl jasmonate, prostaglandins, exaltone and muscone.

**MODULE II: VITAMINS**

Vitamins: Classification, occurrence, chemistry of Vitamins A, C and E, structure elucidation and synthesis, deficiency syndromes,

**MODULE III :ALKALOIDS**

Alkaloids, definition, Isolation, Classification (define different categories of alkaloids with specific examples, their medicinal uses, synthesis). Drugs (cocaine, opiates, quinine, vincristine, curare, mescaline, etc.) and toxins (nicotine, lupinines, strychnine, tetrodotoxin, etc.). Introduction, 2. Simple Alkaloids I: Pyrrole Derivatives 3. Simple Alkaloids II: Piperidine Derivatives 4. Aromatic Alkaloids I: Simple Derivatives 5. Aromatic Alkaloids II: More Complex Derivatives 6. The Indole Alkaloids 7. Miscellaneous Alkaloids with Interesting Bioactivities.

**MODULE IV: TERPENES AND STEROIDS**

Classification and biosynthesis of mono- sesqui-, di- and triterpenoids and steroids. Acetyl CoA, Mevalonic acid, acetoacetyl CoA, squalene to lanosterol, Cholesterol to estradiol, diosgenin and its utility in hormone synthesis.

**MODULE V: GENERAL CHEMISTRY OF THE FOLLOWING COMPOUNDS**

Cholesterol, Artemisinin, Gibberellin A<sub>3</sub>, Azadirachtin.

**Examination Scheme:**

Components	CT	HA	S/V/Q	A	EE
Weightage(%)	15	5	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, A: Attendance EE: End Semester Examination

**Suggested Readings:**

1. K. Nakanashi. Natural Products Chemistry, Vols. I and II, Academic Press, New York and London (1974).
2. M. Harmata. Strategies and Tactics in Organic Synthesis 4 & 5, Academic Press (2004)
3. T. L. Gilchrist. Heterocyclic Chemistry (2nd edn.), Longman Scientific & Technical Publicns.(1992).
4. R. K. Bansal. Heterocyclic Chemistry: Synthesis, Reactions and Mechanisms, Wiley Eastern (1991).

## INDUSTRIAL MANAGEMENT AND SAFETY PROCESSES

**Course Code: CHY4307**

**Credit Units:03**

**Course Objective:** The curriculum is developed to help the students understand the basic functions & responsibilities of a manager, provide him tools and techniques of managing different activities of the business concerned and to understand & interpret the provisions of some of the important provisions related to patent, trademark etc. It also aims at minimizing the chances of risks, injuries and accidents by implementing risk management techniques and safety management operations, monitoring the operating systems and bolstering the safety measures of an industry in general. With the rise of natural disasters in and around our world, the importance of the safety of human capital, protection of the environment and conservation of existing assets of an industry is increasing, leading to growing relevance of these skills.

### **Course Contents:**

#### **MODULE I: BASIC CONCEPTS OF MANAGEMENT FUNCTION OF MANAGEMENT**

Planning, Organizing, Directing, Control, Decision-making, Budgeting, Inventory Management (IM) & Quality Control (QC), Meaning & Importance of Inventory management, Inventory models, Cost consideration, Economic order quantity model.

#### **MODULE II:QUALITY MANAGEMENT**

Meaning & definition of Quality-Quality control systems-quality assurance-planning for quality-total quality management (TQM) philosophy-implementation of TQM in service and manufacturing industries-national & international standards.

#### **MODULE III: MANUFACTURING MANAGEMENT**

Production planning & control, dynamics of material flow-inventory-bottlenecks and process variability, planning levels and time scales, forecasting-aggregate planning, synchronized manufacturing and theory of constraints-just in time production-shop floor performance monitoring.

#### **MODULE IV:SAFETY IN CHEMICAL PROCESS INDUSTRIES**

Safety in industries; need for development; importance safety consciousness in Indian chemical industry; safety programmes, elements of safety programme; effective realization, economic and social benefits.Industrial safety- Chemical process industries; potential hazard; chemical and physical job safety analysis; high pressure; high temperature operation; dangerous and toxic chemicals; highly radioactive materials; safe handling and operation of materials and machineries; planning and layout.

### **Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>HA</b>	<b>S/V/Q</b>	<b>A</b>	<b>EE</b>
<b>Weightage(%)</b>	15	5	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, A: Attendance EE: End Semester Examination

**Suggested Readings:**

1. William Handley, "Industrial Safety ", Hand Book McGraw-Hill Book Company 2nd Edition, 1969.
2. Fawatt, H.H. and Wood, W.S., "Safety and Accident Prevention in Chemical Operation", Interscience, 1965.
3. Heinrich, H.W. Dan Peterson, P.E. and Nester Rood, "Industrial Accident Prevention ", McGraw-Hill Book Co., 1980.
4. Blake, R.P., "Industrial Safety ", Prentice Hall Inc., New Jersey - III Edition, 1963.
5. Subbaram N.R. "Handbook of Indian Patent Law and Practice", S. Viswanathan (Printers and Publishers) Pvt. Ltd., 1998.
6. Eli Whitney, Moduleed States Patent Number: 72X, Cotton Gin, March 14, 1794.
7. Intellectual Property Today: Volume 8, No. 5, May 2001, [[www.iptoday.com](http://www.iptoday.com)].

## ADVANCED NANOCHEMISTRY

**Course Code: CHY4308**

**Credit Units:03**

**Course Objective:** This course is intended to give the students' knowledge of advances in nanochemistry and introduction to ionic liquids. This course will help the student understand superplasticity and its industrial Applications. A knowledge of introductory level nanochemistry is required.

### **Course Content:**

#### **MODULE I: SIZE EFFECTS ON STRUCTURE AND MORPHOLOGY OF NANOPARTICLES**

Fundamental Properties - Size Effects on Structure and Morphology of Free or Supported Nanoparticles - Size and Confinement Effects - Fraction of Surface Atoms - Specific Surface Energy and Surface Stress - Effect on the Lattice Parameter - Effect on the Phonon Density of States - Nanoparticle Morphology - Equilibrium Shape of a Macroscopic Crystal - Equilibrium Shape of Nanometric Crystals - Morphology of Supported Particles.

#### **MODULE II: SUPERPLASTICITY AND REACTIVITY OF METAL NANOPARTICLE**

Superplasticity – Introduction – Mechanism - Superplastic Nanostructured Materials - Industrial Applications. Reactivity of Metal Nanoparticles - Size Effects-Structural Properties - Electronic Properties - Reactivity in Chemisorption and Catalysis of Monometallic Nanoparticles - Support Effects - Alloying Effects - Effect of Surface Segregation - Geometric Effects -Electronic Effects - Preparation and Implementation in the Laboratory and in Industry.

#### **MODULE III: SUPERCRITICAL FLUIDS**

Supercritical Fluids –Introduction – Physicochemical Properties - Solubility - Viscosity - Diffusion -Thermal Conductivity - Applications - Purification and Extraction - Synthesis.

#### **MODULE IV: FEATURES OF NANOSCALE GROWTH**

Specific Features of Nanoscale Growth – Introduction - Thermodynamics of Phase Transitions - Dynamics of Phase Transitions - Thermodynamics of Spinodal Decomposition - Thermodynamics of Nucleation – Growth - Size Control - Triggering the Phase Transition- Application to Solid Nanoparticles - Controlling Nucleation - Controlling Growth - Controlling Aggregation. Stability of Colloidal Dispersions - Breaking Matter into Pieces.

### **Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>HA</b>	<b>S/V/Q</b>	<b>A</b>	<b>EE</b>
<b>Weightage(%)</b>	15	5	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, A: Attendance EE: End Semester Examination

**Suggested Readings:**

1. C. Brechignac, P. Houdy, M. Lahmani, —*Nanomaterials and Nanochemistry*®, Springer publication (2007).
2. Kenneth J. Klabunde, —*Nanscale materials in chemistry*®, Wiley Interscience Publications (2001).
3. C. N. Rao, A. Muller, A. K. Cheetham ,—*Nanomaterials chemistry*®, Wiley-VCH (2007).

## CHEMISTRY OF COSMETICS

**Course Code: CHY4309**

**Credit Units:03**

**Course Objective:** This course is intended to provide a comprehensive survey of ingredients fundamental to the cosmetic industry. The course will emphasize current trends in the selection of cosmetic ingredients. The chemistry and technology of cosmetic raw materials will be related to their behavioral properties as utilized in the construction of stable functional systems. In this way, it is intended to generate a better understanding of the contributions of ingredients to the performance of finished product formulations. Emphasis will be placed on recognizing and dealing with problem areas associated with the use of various ingredients. Safety considerations and other pertinent matters which can influence ingredient selection will be included in these discussions.

### **Course Content:**

#### **MODULE I: INTRODUCTION**

Classification of raw materials and raw materials used in the cosmetic industry for the manufacture of finished products. Method of sampling, Indian Standard specification laid down for sampling and testing of various cosmetics in finished form by the bureau of Indian standards. Factors affecting stability of a formulation, ICH guidelines, Methods of stabilizations and Methods of stability testing. Concept of development of stability indicating analytical methods.

#### **MODULE II: PHYSICAL AND CHEMICAL PROPERTIES OF COSMETICS**

Determination of Physical and chemical constants such as extractive values, moisture content, alcohol content, volatile oil content, ash values, bitterness values, foreign matters, and physical constants applicable to the lipid containing drugs. Microbial counts, bioburden and Pharmacopoeial microbial assays.

#### **MODULE III: PREPARATION OF COSMETICS**

Brief introduction of the following cosmetic preparation and a detailed study on their quality control: Shampoo, Tooth paste, skin powder, skin creams, hair creams, nail polish, after shave lotion, bath and toiletries, lipstick and hair dyes, perfumes, depilatories.

#### **MODULE IV: PACKAGING OF COSMETICS**

Packaging of cosmetics –Filling of solids, semisolids & liquids. Materials used for cosmetic packaging Rules & regulations and legal provisions for packaging & labeling.

### **Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>HA</b>	<b>S/V/Q</b>	<b>A</b>	<b>EE</b>
<b>Weightage(%)</b>	15	5	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, A: Attendance EE: End Semester Examination

**Suggested Readings:**

1. Comprehensive Pharmacy Review 5th Edition by Leon Shargel, Alan H. Mutnick, Paul F. Souney, Larry N. Sawnsen – 2004.
2. Applied Biopharmaceutics and Pharmacokinetics, 4th Edition by Leon Shargel / Andrew B.C., Yu – 1999.
3. A. H. Beckett and J. B. Stenlake Practical Pharmaceutical Chemistry, Part I and Part II, 4th Edition.
4. G. H. Jeffery, J. Basset, J. Mendham, R. C. Denny (Rev. by) Vogels Text Book of Quantitative Chemical Analysis, 5th Edition 1989, ELBS.
5. The Controller of Publications; New Delhi, Govt. of India, Indian Pharmacopoeia, Vol. I and Vol. II - 1996.
6. J. B. Wilkinson and R. J. Moore :Herry'sCosmeticology; Longman Scientific and Technical Publishers, Singapore.
7. P.D. Sethi; Quantitative Analysis of Drugs in Pharmaceutical Formulations, 3rd Edition - 1997,
8. ICH guideline for impurity determination and stability studies.
9. Practical HPLC method development by Lloyd R. Snyder, Joseph J. Kirkland, Joseph I. Glajch, John Wiley and Sons 2nd Edition – 1997

## MEDICINAL CHEMISTRY

Course Code: CHY4310

Credit Units:03

**Course objective:** This course is intended to provide students with chemical principles that are required to understand the action and behavior of drug compounds and hence the relationship between the structure and stereochemistry of a compound and its chemical and therapeutic properties, and thus the chemical considerations in drug design: size, physico-chemical properties and ADME (absorption, distribution, metabolism, and excretion).

### Course Contents:

#### MODULE I: DRUG DEVELOPMENT

Drug development: Lead modification. (a) Identification of active part -Pharmacophore (b) Fundamental group modification (c) Structure-activity relationship (d) Structure modification to increase potency and therapeutic index (i) Homologation ii) Chain branching (iii) Ring chain transformations (iv) Bioisosterism. Drug development process: (a) Pre-formulation, product development (b) Preclinical studies; Acute toxicity, sub acute toxicity, chronic toxicity, LD<sub>50</sub>, ED<sub>50</sub>, pharmacodynamics, mutagenicity and reproductive studies.

#### MODULE II: PHARMACOKINETICS

Basic principles of pharmacokinetics including absorption, distribution, metabolism and excretion of drugs and metabolites in the human body, important pharmacokinetic parameters in defining drug therapeutics, mathematical approach to pharmacokinetic modeling.

#### MODULE III: PHARMACODYNAMICS

Introduction, elementary treatment of enzyme stimulation, enzyme inhibition, sulphonamides, membrane active drugs, drug metabolism, biotransformation, significance of drug metabolism in medicinal chemistry. Therapeutic index, explanation of quantal dose, graded dose, dose-effect curves, efficacy, potency, margin of safety

#### MODULE V: ANTIBIOTICS

Definition, characteristics, classification, synthesis and therapeutic uses of Penicillin, Ampicillin, Amoxicillin, Chloramphenicol, Cephalosporin, Tetracycline and Streptomycin

#### Examination Scheme:

Components	CT	HA	S/V/Q	A	EE
Weightage(%)	15	5	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, A: Attendance EE: End Semester Examination

#### Suggested Readings:

1. Principles of Medicinal Chemistry, W. C. Foye, Philadelphia, USA
2. An introduction to Medicinal chemistry, G. L. Patrick, Oxford University Press
3. Burger's Medicinal Chemistry and Drug Discovery, Vol. 1-5, John Wiley
4. The Organic Chemistry of Drug Design and Drug Action, Richard B. Silvermann, Academic Press

5. Medicinal Chemistry, Ashutosh kar, New Age International Ltd
6. Essentials of Medical Pharmacology, K. D. Tripathi, Jaypee Brothers
7. A textbook of medicinal chemistry, P. Primo, CBS Publishers & Distributors
8. Text book of pharmaceutical organic chemistry, Md. Ali, CBS Publishers

## ENVIRONMENTAL CHEMISTRY

**Course Code:**CHY4321

**Credit Units:** 03

**Course Objective:** This course is intended to provide students with knowledge of key themes, theories and problems and describe important chemical reactions in the atmosphere and in water, including important chemistry in connection with air pollution, water pollution, and case studies of many environmental disasters.

### MODULE I: CHEMISTRY AND THE ENVIRONMENT

Chemistry and the environment - environmental pollution - causes - pollutants – air pollution - effects of air pollution: Environmental fate of pollutants – transformation process - bioconcentration - fate of air, water and soil pollutants

### MODULE II: WATER POLLUTION

Water pollution - water quality parameters - turbidity, colour, pH, acidity, alkalinity, solids, hardness, chlorides, residual chlorine, sulphates, fluorides, phosphates, iron and manganese, DO, BOD, COD, nitrogen, grease, volatile acids, gas analysis.

### MODULE III: INDUSTRIAL POLLUTION

Cement, sugar, distillery, drug, paper and pulp, thermal power plants, nuclear power plants, metallurgy. Polymers, drugs etc.

Environmental disasters – Chernobyl, Three Mile Island, Seveso and minamata disasters, Japan tsunami

### MODULE IV: BIOLOGICAL ACTIVITY

Biological activity - biodegradation of carbohydrates, proteins, fats and oil, detergents, pesticides; Metabolic fate of pollutants - adsorption – distribution - metabolism - excretion.

### MODULE V: ENVIRONMENTAL TOXICOLOGY

Toxic heavy metals: Mercury, lead, arsenic and cadmium, Causes of toxicity. Bioaccumulation, sources of heavy metals, Chemical speciation of Hg, Pb, As, and Cd. Biochemical and damaging effects. Toxic Organic Compound: Pesticides, classification, properties and uses of organochlorine and ionospheres pesticides detection and damaging effects.

#### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

#### Suggested Readings:

1. Environmental Chemistry, S.E. Mahan, Lewis Publishers.
2. Environmental Chemistry, Sharma & Kaur, Krishna Publishers.
3. Environmental Chemistry, A.K. De, Wiley Eastern
4. Environmental Pollution Analysis, S.M. Khopkar, Wiley Eastern

5. Standard Method of Chemical Analysis, F.J. Welcher Vol. III, Van Nostrand Reinhold Co.
6. Environmental Toxicology, Ed. S. Landsberger and M. Creatchman, Gordon and Breach Science Publication.
7. Environmental Chemistry, C. Baird, W.H. Freeman.

## POLYMER TECHNOLOGY

**Course Code: CHY4311**

**Credit Units:03**

**Course objective:** This course is designed to familiarize students with the various polymer characterization and manufacturing techniques for converting polymer feed stocks into plastic end products. It involves a study of various plastics processing techniques. Students will become familiar with specialty polymers and their industrial uses, and design factors to create materials with desirable end-use properties

### **Course Contents:**

#### **MODULE I: POLYMER PROCESSING**

Plastic Technology: Extrusion, injection molding, blow molding, compression molding, thermoforming, rotational molding, casting. Fiber Technology- Textile and fabric properties, spinning, fiber after- treatments. Elastomer Technology- Vulcanization, reinforcement, elastomer properties and compounding. Recycling of polymers Classification of polymer recycling processes. Waste polymer recovery, sortation, microsortation, polymer reprocessing and Polymer incineration

#### **MODULE II: POLYMER BLENDS AND ALLOYS**

Definition, Polymer Blends, compatibilisation, Polymer Blends, Industrial applications of polymer blends.

#### **MODULE III: SPECIALTY POLYMERS**

Liquid Crystal Polymers (LCP): Smectic, nematic, cholestric crystals, thermotropic main chain LCP, side chain LCP, chiral nematic LCP, properties of commercial LCP's. Electroactive polymers: Filled polymers, conducting polymers- doping, conducting mechanism, EMI shielding, applications- rechargeable batteries, sensors, photoconductive polymers. Ionic Polymers: Ionic crosslinking, ion exchange, hydrophilicity, ionomers, polyelectrolytes, applications, Synthetic Polymeric membranes- membrane preparation, membrane modules, applications, High temperature and fire resistant polymers, Hydrogels, smart polymers, Dendritic polymers- their applications. Biomedical polymers: Contact Lens, Dental Polymers, Artificial heart, Kidney and skin cells Biobased polymers: PLA, PCL

#### **Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>HA</b>	<b>S/V/Q</b>	<b>A</b>	<b>EE</b>
<b>Weightage(%)</b>	15	5	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, A: Attendance EE: End Semester Examination

#### **Suggested Readings:**

1. Principles of Polymerization by G. Odian, (Wiley Interscience, New Delhi)
2. Polymer Science by Gowarikar

3. Thermal Characterization of Polymeric Materials- E. Turi (Academic Press)
4. Polymer Characterization- Physical Techniques by D. Campbell and J.R.White (Chapman and Hall)
5. Text Book of Polymer Science, F.W.Billmeyer (Willey Eastern)
6. Applied Rheology in Polymer Processing by B. R. Gupta, (Asian Books, Pvt. Ltd. New Delhi)
7. Polymer Blends and Alloys by R.P. Singh, C.K. Das and S. K. Mustafi, (Asian Books Pvt. Ltd.)
8. Principles of Polymer Science by Bahadur and Shastry
9. Plastics Technology Handbook by Manas Chanda and S.K.Roy (4<sup>th</sup> Edition, CRC Press, New York)
10. Analysis of polymers- an introduction, by Crompton T.R., pergaman press 1989.
11. Thermal characterization of polymeric materials, by Turi E.A., Academic press Inc.

## NON-CONVENTIONAL ENERGY SOURCES

**Course Code: CHY4312**

**Credit Units:03**

**Course Objective:** A detailed exposition of the course for the student, opting for Applied Chemistry is so vitally important for a clear understanding of recent intricate theories of non-conventional sources of energy.

### **Course Contents:**

#### **MODULE I: SOLAR ENERGY**

Heat Transfer in Renewable Energy Systems - conduction, convection and radiation, Heat transfer and engineering concepts to the renewable energy systems, Role and potential of new and renewable source, the solar energy option, Environmental impact of solar power, physics of the sun, Spectral distribution, the solar constant, radiation on tilted surface/earth, instruments for measuring solar radiation. Application of solar energy and solar photovoltaic system

#### **MODULE II: BIO-GAS**

Raw materials, Properties/characteristics of bio gas, Principles of Bio-Conversion; Photosynthesis, Anaerobic/aerobic digestion, types of Bio-gas digesters, gas yield, combustion, Transportation of bio gas, bio gas plant technology & status, Biomass cogeneration Energy recovery from urban waste, Power generation from liquid waste, Bio gas applications.

#### **MODULE III: GEOTHERMAL AND WIND ENERGY**

Structure of earth's interior, earthquakes & volcanoes, Geothermal resources, Hot springs, Steam ejection, Principal of working, Types of geothermal station with schematic representation, Applications. Properties of wind, Availability of wind energy in India, wind velocity, Wind machine fundamentals; types of wind machines and their characteristics, Horizontal and Vertical axis wind mills, Elementary design principles, Coefficient of performance of a wind mill rotor, Aerodynamic considerations in wind mill design, Recent development and applications.

#### **MODULE IV: OCEAN AND HYDROGEN ENERGY**

Principle of ocean thermal energy conversion (OTEC), setting of OTEC plants, thermodynamic cycles. Tidal and wave energy: Fundamentals of tidal power, Potential and conversion techniques, mini-hydel power plants. Use of tidal energy, Limitations of tidal energy conversion systems. Properties of hydrogen in respect of it's use as source of renewable energy, Sources of hydrogen, Production of hydrogen; electrolysis of water, thermal decomposition of water, thermo chemical production bio-chemical production. Applications of hydrogen energy.

### **Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>HA</b>	<b>S/V/Q</b>	<b>A</b>	<b>EE</b>
<b>Weightage(%)</b>	15	5	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, A: Attendance EE: End Semester Examination

**Suggested Readings:**

1. Bansal Keemann, Meliss," Renewable energy sources and conversion technology", Tata Mc Graw Hill.
2. Kothari D.P., "Renewable energy resources and emerging technologies", Prentice Hall of India Pvt. Ltd.
3. Rai G.D, "Non-Conventional energy Sources", Khanna Publishers.
4. Ashok V. Desai, "Nonconventional Energy", New Age International Publishers Ltd.
5. Tiwari and Ghosal, "Renewable energy resources" Narosa Publication.
6. Twidell & Weir, "Renewable Energy Sources"
7. K Mittal "Non-Conventional Energy Systems" , Wheeler Publication
8. Ramesh & Kumar, "Renewable Energy Technologies", Narosa Publications.

## INDUSTRIAL WASTE AND WATER TREATMENT

**Course Code: CHY4313**

**Credit Units:03**

**Course Objectives:** This course will give the basic understanding of the chemical principles involved in water and wastewater treatment. It presents the basic chemistry and treatment methodologies used in drinking water and wastewater operations. The students would be able to characteristics and treatment of industrial waste, advanced methods of treatment waste and disposal, reuse and recovery of waster from various industries. A brief introduction to environmental Impact assessment has also been added to create general awareness.

### **Course Contents:**

#### **MODULE I: AN INTRODUCTION TO SOURCE, CHARACTERISTICS AND TREATMENT OF INDUSTRIAL WASTE**

Undesirable waste characteristics, sources and characteristics of waste water, industrial waste survey, waste characteristics - estimation of organic content, water reuse and in-plant waste control, idea of different technologies for the treatment of industrial waste water and the basis for the selection of treatment technology.

#### **MODULE II: TREATMENT OF INDUSTRIAL WASTES**

Different steps in the treatment of industrial waste (equalization, neutralization, sedimentation, oil separation, flotation, coagulation), sources and removal of heavy metals e.g. As, Ba, Cd, Cu, F, Fe, Rb, Mn, Hg, Ni, Se, Ag & Zn)

#### **MODULE III: ADVANCE WATER TREATMENT OF INDUSTRIAL WASTE**

Aeration, air stripping of volatile organics (VOC), biological oxidation - removal of organics (sorption, stripping, biodegradation), nitrification and de-nitrification. Lagoons and stabilization basins, membrane processes, trickling filtration, adsorption, ion exchange, chemical oxidation, sludge dewatering and disposal.

#### **MODULE IV:WASTE WATER REUSE AND RECOVERY**

Treatment, disposal, reuse and recovery of trade waste from (1) Textile Manufacture (2) Distilleries (3) Sugar (4) Paper and Pulp mills (4) Tanneries (5) Food Processing industries (6) Fertilizer Industry.

#### **MODULE V: ENVIRONMENTAL IMPACT ASSESSMENT**

Introduction to EIA, impact assessment methodologies, environmental inventory, environmental impact assessment (planning and management), environmental indices and indicators for describing the affected environment, EIA guidelines, introduction to environmental impact statement.

### **Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>HA</b>	<b>S/V/Q</b>	<b>A</b>	<b>EE</b>
<b>Weightage(%)</b>	15	5	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, A: Attendance EE: End Semester Examination

**Suggested Readings:**

1. Thomous S. Spiro and William M. Stiglicini, Chemistry of The Environment, Prentice Hall of India Pvt. Ltd. (2002)
2. Nicholas P. Cherimisinoff, Biotechnology for Waste and Waste Water Treatment, Prentice Hall of India Pvt. Ltd. (2001).
3. Jarry A. Nathanson, Basic Environmental Technology, 4th ed ,Prentice Hall of India Pvt. Ltd. (2003).
4. W.Wesley Eckenfelder, Indusrtial Water Pollution Control, 2nd ed., Tata Mc-Graw Hill Book Company (1989).
5. Larry W. Canter. , Environmental Impact Assessment, 2nd ed, Tata Mc Graw Hill (1996).

## NUCLEAR CHEMISTRY

**Course Code: CHY4314**

**Credit Units:03**

**Course objective:** This course is designed to provide basic information of Radiation and Nuclear chemistry; requirements, methods of preparation, uses of Radioelements. This should improve a student's knowledge of types of radioactive decay, natural decay series, nuclear models, nuclear properties, instrumentation and Introduction to health

### **Course Contents:**

#### **MODULE I: INTRODUCTION TO RADIOACTIVITY**

Discovery of radioactivity,  $\alpha$ ,  $\beta$  and  $\gamma$  radiations, the radioactive series, radioactive decay, modes of decay, the n/p ratio, odd even rule, artificial radioactivity, transmutation of elements, the G.M counter

#### **MODULE II: CHEMISTRY OF RADIOACTIVE ELEMENTS**

Positions of radioactive elements in periodic table, trans-uranides and trans-actinides, super heavy elements; nomenclature & predicted chemistry, the Seaborg model, radiation dosimetry, radiolysis of aqueous solutions

#### **MODULE III: USES OF NUCLEAR ISOTOPES**

Introduction to nuclear medicine, positron emission tomography (PET) , radiocarbon dating and its uses, nuclear reactors, uses of heavy water in nuclear reactors, Trace analysis of elements and compounds - neutron activation analysis, isotope dilution analysis. Nuclear waste and its environmental effect

#### **MODULE IV: NUCLEAR MODELS**

Liquid-drop model, electron shell model, nuclear reactions, fission and fusion, cold fusion, idea about nuclear spin and its application in NMR, nuclear splitting, Zeeman effect and stark effect (only definition and qualitative explanation)

#### **Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>HA</b>	<b>S/V/Q</b>	<b>A</b>	<b>EE</b>
<b>Weightage(%)</b>	15	5	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, A: Attendance EE: End Semester Examination

### **Suggested Readings:**

1. Essentials of Nuclear Chemistry, H. J. Arnikar, 4th Edition Wiley Eastern (1987).
2. Chemical Applications of Radioisotopes, H. J. M. Bowen. Buttler and Tanner (1969).
3. Introduction of Nuclear and Radiochemistry, G Friedlander, T. W. Kennedy, E. S. Macias and J. M. Miller, 3rd Edition, John Wiley (1981).

## **FOOD TECHNOLOGY**

**Course Code: CHY4315**

**Credit Units:03**

**Course objective:** The contents have been drawn-up to accommodate the widening horizons of the discipline of Food Technology. They reflect the current changing needs of the students. This will create awareness among the students about the fundamentals of food and nutrition science involved in our everyday life

### **Course Contents:**

#### **MODULE I: INTRODUCTION TO FOOD**

Carbohydrates: Structure and functional properties of mono- oligo-polysaccharides including starch, cellulose, pectic substances and dietary fibre; Proteins: Classification and structure of proteins in food; Lipids: Classification and structure of lipids, Rancidity of fats, Polymerization and polymorphism; Pigments: Carotenoids, chlorophylls, anthocyanins, tannins and myoglobin; Food flavours: Terpenes, esters, ketones and quinones; Enzymes: Specificity, Kinetics and inhibition, Coenzymes, Enzymatic and non-enzymatic browning; Nutrition: Balanced diet, Essential amino acids and fatty acids, PER, Water soluble and fat soluble vitamins, Role of minerals in nutrition, Antinutrients, Nutrition deficiency diseases.

#### **MODULE II: FOOD MICROBIOLOGY**

Characteristics of microorganisms; Microbial growth in food: Intrinsic and extrinsic factors, Growth and death kinetics, serial dilution method for quantification; Food spoilage: Contributing factors, Microbial spoilage of milk and milk products, meat and meat products; Foodborne disease: Toxins; Fermented food: Buttermilk, yoghurt, cheese, sausage, alcoholic beverage, vinegar, sauerkraut and soya sauce.

#### **MODULE III: FOOD PRODUCTS TECHNOLOGY**

Processing principles: Canning, chilling, freezing, dehydration, control of water activity, CA and MA storage, fermentation, hurdle technology, addition of preservatives and food additives, Food packaging, cleaning in place and food laws; Grain products processing: Milling of rice, wheat, and maize, production of bread, biscuits and breakfast cereals, Solvent extraction, refining and hydrogenation of oil; Milk and milk products processing: pasteurized and sterilized milk, cream, butter, ghee, ice-cream, cheese and milk powder; Animal products processing

#### **MODULE IV: FOOD CHEMICAL ENGINEERING**

Mass and energy balance; Momentum transfer: Flow rate and pressure drop relationships for Newtonian fluids flowing through pipe, Characteristics of non Newtonian fluids - generalized viscosity coefficient and Reynolds number, Flow of compressible fluid, Flow measurement, Pumps and compressors; Heat transfer: Heat transfer by conduction, convection, radiation, boiling and condensation, heat exchangers; Mass transfer: Molecular diffusion and Fick's Law, Steady state mass transfer, Convective mass transfer;

## MODULE V: FOOD MECHANICAL ENGINEERING

Mechanical operations: size reduction of solids, high pressure homogenization, filtration, centrifugation, settling, sieving, flow through porous bed, agitation of liquid, solid-solid mixing, and single screw extrusion; Thermal operations: Energy requirement and rate of operations involved in process time evaluation in batch and continuous sterilization, evaporation of liquid foods, hot air drying of solids, spray and freeze-drying, freezing and crystallization.

### Examination Scheme:

Components	CT	HA	S/V/Q	A	EE
Weightage(%)	15	5	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, A: Attendance EE: End Semester Examination

### Suggested Readings:

1. Handbook of Food Rheology and Technology by Bernhard Senge (Editor), Joachim Kaldasch (Editor)
2. Formulation Engineering of Foods by Ian T. Norton, Peter Fryer, J. Norton
3. Guide to Foodborne Pathogens, 2nd Edition by Ronald G. Labbé, Santos García
4. The Molecular Biology and Biochemistry of Fruit Ripening by Graham Seymour, Gregory A. Tucker, Mervin Poole, James Giovannoni

## RENEWABLE ENERGY CONVERSION SYSTEMS

**Course Code: CHY4322**

**Credit Units: 03**

### **Course Objective:**

Course provides an introduction to different renewable energy sources. It analyses the full range of renewable energy supplies needed for modern economies. The course includes power from sun, wind, bio, tidal, ocean, geo and hydro.

### **Course Contents:**

#### **Module I: Introduction to Renewable Energy**

Renewable and Non-Renewable Energy, World energy scenario; Fossil fuel resources - estimates and duration; India's energy scenario; Synergy between energy and environment, global environment issues, greenhouse gas emission, global warming, green energy solutions, technical and social implications of renewable energy

#### **Module II: Solar Concepts**

Introduction, Sun as the source of radiation, Earth and Solar constant, Extra-terrestrial solar radiation, components of radiation, effects of earth's atmosphere, Introduction to solar PV, Introduction to solar Thermal.

#### **Module III: Biofuels, Wind Energy**

Biofuels- Definition, generations and types

Wind-Characteristics, Sources of wind, components of wind turbines, advantages and environmental aspects of wind energy

#### **Module IV: Hydro Energy, Tidal Energy**

Hydro- Principles, hydro-turbines, social and environmental aspects

Tidal- The nature of the resource, physics, power generation, technical factors, environmental factors, tidal energy potential, tidal barrage, tidal stream, tidal current turbines.

#### **Module V: Geothermal, OTEC**

Geothermal- Principles, suitable sites and criteria, Advantages and disadvantages,

OTEC- Principles, Open and closed systems.

### **Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>Assignment</b>	<b>V/Q</b>	<b>Attendance</b>	<b>EE</b>
<b>Weightage (%)</b>	15	5	5	5	70

### **Suggested Readings:**

1. Renewable energy resources – J. W. Twidell
2. Renewable energy engineering and technology-edited by V. V.N. Kishore
3. Wind Energy Comes of Age, Paul Gipe, John Wiley & Sons Inc.
4. Directory, Indian Windpower 2004, CECL, Bhopal.
5. Solar Energy: Fundamentals, design, modeling and applications, Authored by G. N. Tiwari

## INORGANIC CHEMISTRY LAB

Course Code: CHY4324

Credit Units:02

(Minimum 10 experiments to be performed)

### Quantitative and Qualitative Analysis of following:

1. Ores analysis (oxides and carbonate ores)
2. Nickel/Copper

### Estimation of following:

3. Active CaO in lime
4. Chlorine in bleaching powder
5. Lead content in red lead

### Preparation and Characterizations/study by spectral methods

6. Trialkoxyboanes.
7. Tin (IV) chloride
8. Sodium tetrathionate
9. Cr (III) complexes.  $[\text{Cr}(\text{H}_2\text{O})_6]\text{NO}_3 \cdot 3\text{H}_2\text{O}$ ,  $[\text{Cr}(\text{H}_2\text{O})_4\text{Cl}_2]\text{Cl} \cdot 2\text{H}_2\text{O}$ ,  $[\text{Cr}(\text{en})_3]\text{Cl}_3$ ,  $[\text{Cr}(\text{acac})_3]$ .
10. Fe(II) chloride and its application as catalyst in Friedel-Craft reaction
11. Ferrocene
12. Kinetic study of Cr(III) with a multidentate ligand (EDTA)

### Qualitative Inorganic Semi-micro Analysis

13. Detection of atleast four cations and anion in a mixture of salts.

**\*MSDS -Compilation of MSDS of chemicals used by students in each experiment is compulsory**

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, A- Attendance, V – Viva.

### Suggested Readings:

1. G.H.Jeffery, J.Bassett, J.Mendham and R.C.Denney Vogel's Text book of quantitative chemical analysis, ELBS 5th Edn. Longman, Singapore Publishers, Singapore, 1996.
2. R. Mukhopadhyay, P.Chatterjee, "Advanced practical Chemistry"
3. Dinesh Sharma, "A hand book of Analytical Inorganic chemistry", First Published(2004)
4. I.M.Kolthoff, E.B.Sandell et.al. Quantitative chemical analysis, CHYmillan, Madras 1980.
5. A Text book of quantitative Inorganic Analysis – A. I. Vogel
6. Standardsmethodsof ChemicalAnalysiF.J.Welcher
7. Experimental Inorganic Chemistry – W. G. Palmer.

8. Manual on Water and Waste Water Analysis, NEERI- Nagpur D.S. Ramteke and C. A. Moghe
9. Inorganic synthesis- King.
10. Synthetic Inorganic Chemistry-W .L. Jolly
11. EDTA Titrations –F Laschka

## **INSTRUMENTATION WORKSHOP**

**Course Code: CHY4320**

**Credit Units: 01**

### **Objectives**

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two way. The trainer has to make sure that the aspect covered are practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

### **Major Themes for Workshop**

The workshop may be conducted on any of the following major themes:

- Nuclear Chemistry
- Modern trend in Inorganic Chemistry
- Modern trend in Organic Chemistry
- Modern trend in Physical Chemistry
- Nanotechnology and its application
- Polymer Chemistry
- Pharmaceuticals
- Food Technology
- Agriculture Chemistry
- Computational Chemistry
- Green Chemistry
- Any other relevant topics

These themes are merely indicative and other recent and relevant topics of study may be included.

### **Guidelines for Workshop**

The procedure for earning credits from workshop consists of the following steps:

12. Relevant study material and Suggested Readings: will be provided by the trainer in advance.
13. The participants are expected to explore the topic in advance and take active part in the discussions held
14. Attending and Participating in all activities of the workshop
15. Group Activities have to be undertaken by students as guided by the trainer.
16. Evaluation of workshop activities would be done through test and quiz at the end of the workshop.
17. Submitting a write up of at least 500 words about the learning outcome from the workshop.

### **Methodology**

The methodology followed at the workshop could be based on any one or more of the following methods:

- Case Study
- Simulation
- Quiz
- Quality analysis& characterization
- Identification and preparation of materials

**Evaluation Scheme:**

<b>Attendance</b>	<b>Active Participation</b>	<b>Multiple Choice Questions/ Quiz</b>	<b>Solving the case/ Assignment/ Write up</b>	<b>Total</b>
<b>10</b>	<b>30</b>	<b>30</b>	<b>30</b>	<b>100</b>

## SUMMER INTERNSHIP / STUDY ABROAD PROGRAMME

**Course Code:** CHY4335

**Credit Units:** 6

### Objectives

The objective of this course is to judge the understanding as well as application of the knowledge gained by the students. The aim of the internship is to provide the students with an opportunity to further enhance their knowledge in a sector of their choice by undertaking a significant practical unit of examining and analyzing various aspects of Chemistry & its application at a level commensurate with the learning outcomes of the various courses taken up them in the ongoing semester.

A summer internship is primarily a record of intelligent reading and research on a particular subject. The students will choose the topic at the beginning of the session in consultation with the faculty assigned.

### Guidelines:

1. The internship will be related to the contemporary research issue and the topic will be given by the department.
2. The presentation of the term paper is scheduled to be held before the commencement of Semester examinations.
3. The paper will carry 100 marks that will be marked on the basis of understanding and organization of content based on the literature review. The Bibliography shall form an important part of the paper.
4. Examples of a few broad areas for term paper (List is indicative, not exhaustive)
  - Inorganic chemistry
  - Organic chemistry
  - Physical chemistry
  - Green chemistry
  - Agriculture chemistry

### Marking Scheme:

Committee (50)			Supervisor's Assessment: Regularity and Quality of Work (50)	Total (100)
Presentation: Contents + Delivery (20)	Viva: (Q & A) (20)	Dissertation: Content + Formatting (10)		

**Evaluation component of the Supervisor is 50% and the remaining 50% by committee**

# Syllabus- Fourth Semester

## MAJOR PROJECT

Course Code: CHY4437

CreditUnits: 10

### GUIDELINES FOR PROJECT FILE AND PROJECT REPORT

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critically analyzed by the faculty guide and corrected by the student at each stage.

#### PROJECT FILE

The Project File may be a very useful tool for undertaking an assignment along-with a normal semester, an exploratory study, sponsored projects, a project undertaken during summer period or any other period as per curriculae where the researcher is working with a company/organization. The project/ assignment may also be a part of the bigger research agenda being pursued by a faculty/ institution/ department

The Project File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation. This file may be considered in continuous assessment.

**In general, the File should be comprehensive and include:**

- A short account of the activities that were undertaken as part of the project;
- A statement about the extent to which the project has achieved its stated objectives;
- A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;
- Any activities planned but not yet completed as part of the project, or as a future initiative directly resulting from the project;
- Any problems that have arisen and may be useful to document for future reference.

#### PROJECT REPORT

The Project Report is the final research report that the student prepares on the project assigned to him. In case of sponsored project the lay out of the project could be as prescribed by the sponsoring organization. However, in other cases the following components should be included in the project report:

##### ➤ Title or Cover Page

The title page should contain Project Title; Student's Name; Programme; Year and Semester and Name of the Faculty Guide.

➤ **Acknowledgement(s)**

Acknowledgment to any advisory or financial assistance received in the course of work may be given. It is incomplete without student's signature.

➤ **Abstract**

A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project. It should not exceed more than 1000 words.

➤ **Table of Contents**

Titles and subtitles are to correspond exactly with those in the text.

➤ **Introduction**

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

➤ **Materials and Methods**

This section should aim at experimental designs, materials used (wherever applicable). Methodology should be mentioned in details including modifications undertaken, if any. It includes organization site(s), sample, instruments used with its validation, procedures followed and precautions.

➤ **Results and Discussion**

Present results, discuss and compare these with those from other workers, etc. In writing this section, emphasis should be laid on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary, do not write in "point" form.

While presenting the results, write at length about the the various statistical tools used in the data interpretation. The result interpretation should be simple but full of data and statistical analysis. This data interpretation should be in congruence with the written objectives and the inferences should be drawn on data and not on impression. Avoid writing straight forward conclusion rather, it should lead to generalization of data on the chosen sample.

Results and its discussion should be supporting/contradicting with the previous research work in the given area. Usually one should not use more than two researches in either case of supporting or contradicting the present case of research.

➤ **Conclusion(s) & Recommendations**

A conclusion should be the final section in which the outcome of the work is mentioned briefly.

Check that your work answers the following questions:

- Did the research project meet its aims (check back to introduction for stated aims)?
- What are the main findings of the research?
- Are there any recommendations?
- Do you have any conclusion on the research process itself?

➤ **Implications for Future Research**

This should bring out further prospects for the study either thrown open by the present work or with the purpose of making it more comprehensive.

➤ **Appendices**

The Appendices contain material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

➤ **Suggested Readings:**

Suggested Readings: should include papers, books etc. referred to in the body of the report. These should be written in the alphabetical order of the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

**Examples:**

For research article:

Voravuthikunchai SP, Lortheeranuwat A, Ninrprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichia coli* O157: H7. *Clin Microbiol Infect*, **8** (suppl 1): 116–117.

For book:

Kowalski, M. (1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), **7**: 63-67

**The Layout Guidelines for the Project File & Project Report:**

- A4 size Paper
- Font: Arial (10 points) or Times New Roman (12 points)
- Line spacing: 1.5
- Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

**ASSESSMENT OF THE PROJECT FILE AND THE PROJECT REPORT**

Essentially, the assessment will be based on the quality of the report, the technical merit of the project and the project execution. Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project. Project execution is concerned with assessing how much work has been put in.

The Project should fulfill the following *assessment objectives*:

- Range of Research Methods used to obtain information
- Execution of Research
- Data Analysis (Analyze Quantitative/ Qualitative information)
- Quality Control
- Conclusions

**Assessment Scheme:**

**Continuous Evaluation:**

40% (Based on punctuality, regularity of work, adherence to plan and methodology, refinements/mid-course corrections etc. as reflected in the Project File.)

**Final Evaluation:**

60% (Based on the Documentation in the file, Final report layout, analysis and results, achievement of objectives, presentation/ viva)

**It is recommended that the Final evaluation should be carried out by a panel of evaluators.**

## GOOD LABORATORY PRACTICES SEMINAR

**Course Code: CHY4408**

**Credit Units: 01**

### **Objectives**

The aim of the term paper is to provide the students with an opportunity to further enhance their knowledge of good laboratory practices. Undertaking this very significant practical unit of examining and analyzing various aspects of Chemistry. Good laboratory practice or GLP is a set of principles intended to assure the quality and integrity of non-clinical laboratory studies that are intended to support research or marketing permits for products regulated by government agencies. The term GLP is most commonly associated with the pharmaceutical industry and the required non-clinical animal testing that must be performed prior to approval of new drug products. However, GLP applies to many other non-pharmaceutical agents such as color additives, food additives, food contamination limits, food packaging, and medical devices.

GLP is a quality management system, not a scientific management system. Or, in other words, GLP defines a set of quality standards for study conduct, data collection, and results reporting. GLP does not define scientific standards. If a study follows GLP, then you can be reasonably sure that the reported results were collected as outlined in the study protocol; however, you cannot be sure that the study actually addresses the scientific hypothesis. In the world of cooking, GLP would ensure that someone follows the recipe exactly as written; however, it does not assure you that the recipe was good or that the resulting item will be tasty!

The student is expected to attend the Good Laboratory Practices Seminar's diligently. The student will be tested on the basis of understanding and organization of content based on the seminar.

### **Evaluation Scheme**

<b>Attendance</b>	<b>Active Participation/ Write up</b>	<b>Multiple Choice Questions/ Quiz</b>	<b>Solving the case/ Assignment</b>	<b>Total</b>
<b>10</b>	<b>30</b>	<b>35</b>	<b>25</b>	<b>100</b>

## CHEMISTRY OF NANOMATERIALS

**Course Code: CHY4407**

**Credit Units: 02**

**Course objective:** Material science plays a vital role in this modern age of science and technology. The rapid development in the field of nanomaterials and composite science has opened vast opportunities for better understanding and utilization of various materials. The course curriculum is designed to give students an idea of the detailed aspects of important topics of material science like composites, nanomaterials, their synthesis, characterization, and application.

### **Course Contents:**

#### **MODULE I: INTRODUCTION TO CHEMISTRY OF MATERIALS & NANOMATERIALS**

Materials & their classification; Classifications of nanostructured materials; Fundamental differences between bulk materials and nanomaterials; Role of chemistry in material design, Nanoscale Science and Technology-Implications for Physics, Chemistry, Biology and Engineering; Length Scales involved and effect on properties: Mechanical, Electronic, Optical, Magnetic, and Thermal properties.

#### **MODULE II: SYNTHESIS TECHNIQUES FOR NANOMATERIALS AND THEIR CHARACTERIZATION**

Bottom-UP Approach: Self-Assembly, Sol-Gel Synthesis, Hydrothermal growth, Thin Film Growth – Physical Vapour Deposition, Chemical Vapour Deposition

Top-Down Approach: Emulsification-Diffusion Solvent Diffusion/Evaporation Method, Ball Milling, Microfabrication, Lithography

Characterization techniques: X-ray diffraction technique, Scanning Electron Microscopy, Transmission Electron Microscopy, Atomic Force Microscopy, particle size analyzer.

#### **MODULE III: APPLICATION OF MATERIAL CHEMISTRY & NANO CHEMISTRY**

Application of organic and inorganic nanoparticles; biomedical applications: design of nanoparticles for oral delivery of peptide drugs, development of nanoscaffolds for tissue engineering and regenerative medicine, bioimaging with quantum dots.

Industrial applications: Nanotechnology in packaging industries, textiles, solar cells, space exploration, computing and information technology; electrical conductive carbon nanotube (CNT) dispersed  $\text{Si}_3\text{N}_4$  ceramics.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance.

**Suggested Readings:**

1. Introduction to Nanoscience by Gabor L. Hornyak, Joydeep Dutta, Harry F. Tibbals, Anil K. Rao. CRC Press, 2008.
2. Nanotechnology: Importance and Application by M.H. Fulekar, IK International, 2010.
3. Environanotechnology by Mao Hong fan, Chin-pao Huang, Alan E Bland, Z Honglin Wang, Rachid Sliman, Ian Wright. Elsevier, 2010.
4. Nanotechnologies, Hazards and Resource efficiency by M. Steinfeldt, Avon Gleich, U. Petschow, R. Haum. Springer, 2007.
5. Nanotechnology: Health and Environmental risk by Jo Anne Shatkin. CRC press, 2008.
6. Nanotechnology in Biology and Medicine: Methods, Devices and Application by Tuan Vo-Dinh. CRC press, 2007.
7. Nanomaterials for Biosensors by Challa Kumar. Wiley-VCH, 2007.
8. Nanosystem characterization tools in the life sciences by Challa Kumar. Wiley-VCH, 2006.

## INTRODUCTION TO POLYMERIC MATERIALS

**Course Code: CHY4405**

**Credit Units:03**

**Course Objective:** The curriculum is developed to help the students to understand the importance of polymeric materials and their usefulness in day to day life. The Polymeric materials course aims to provide students with an understanding of the different kinds of polymers, their preparation, polymerization and chemical bonding between them. It also covers the applications of these polymeric materials in plastics, elastomers

**Course Content:**

### **MODULE I: INTRODUCTION TO POLYMER**

History and Concept of macromolecules, monomers with specific example viz. acrylonitrile, vinyl, chloride, methyl methacrylate, isobutylene, isoprene, styrene, hexamethylene diamine and adipic acid, caprolactum, ethylene oxide and sebacic acid, ethylene glycol and terephthalic acid, functionality, Degree of polymerization, Classification of polymers depending on – (a) The origin (natural, Semisynthetic, synthetic etc. (b) The structure (linear, branched, network, hyperbranched, dendrimer (c) The formation (condensation, addition)(d) Homopolymers, copolymers(e) The behaviour on application of heat and pressure (thermoplastic and Thermosetting)(f) The form and application (plastics, fiber. elastomers and resin(g) Stereoisomers: Isotactic, Syndiotactic, Atactic, Organic and Inorganic polymers. Concept of molecular mass, polydispersity, number average and weight average, molecular weight distribution in linear polymers.

### **MODULE II- CHEMISTRY OF POLYMERIZATION (MECHANISM)**

chain polymerization- Free radical, Ionic and coordination mechanism, Common features of two types of Mechanism of cationic polymerization and anionic polymerization, Mechanism of coordination polymerization – Ziegler-Natta catalysts, Ring opening polymerization-mechanism of polymerization of cyclic ethers, cyclic amides and cyclosiloxanes.

### **MODULE III- METHODS OF POLYMERISATION**

Methods of polymerization. Bulk polymerization, Solution polymerization, Emulsion polymerization, Suspension polymerization, Melt polycondensation. Controlled polymerization methods, viz, Nitroxide mediated polymerization (NMP), Atom Transfer Radical Polymerization (ATRP), Reversible Addition Fragmentation Termination (RAFT).

### **MODULE IV-SPECIAL POLYMERS AND THEIR APPLICATIONS**

Polyethylene (LLDP, HDP, LLDPE and HDPE), PVC, polyvinyl alcohol, polyvinylacetate, polybutadiene, polychloroperene, polystyrene, polyacrylare, PMMA, and acrylonitrile copolymers.

polyamides (Nylon 6, Nylon 6,6, Nylon 6,10), polyesters (poly ethylene terephthalate (PET), polybutylene, terphthalate (PBT), aromatic polyesters), polycarbonate, polyurethanes – Flexible and rigid polyurethane, polyurethane elastomers, coatings, adhesives, sulphur, containing polymers, polimdes, polyethersulphones, polyetherketones. Thermosetting resins – phenolic resins, amino resins, epoxy resins, silicone polymers, and cyanate ester resins.

## MODULE V- POLYMER DEGRADATION

Introduction, Types of degradation-Thermal, mechanical, Photodegradation, oxidative degradation, Hydrolytic degradation, Degradation by ultrasonic waves and high energy radiation.

### Examination Scheme:

Components	CT	HA	S/V/Q	A	EE
Weightage(%)	15	5	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, A: Attendance EE: End Semester Examination

### Suggested Readings:

- 1) F.W. Billmeyer, Jr. Textbook of polymer science, Wiley- Interscience, N.Y.(1971)
- 2) Introduction to polymer chemistry, R. Seymour, Wiley –Interscience (1981)
- 3) Physical chemistry of CHYromolecules, by D.D. Deshpande, Vishal publications, (1985)
- 4) principles of polymerization, G.Odian, Wiley – Interscience (1981)
- 5) Organic polymer chemistry, K. J. Saunders, Chapman and Hall, London (1973).
- 6) Principles of polymer chemistry by P.J. Flory.
- 7) Polymer Science –V R Gowarikar.

## **Master of Science (Forensic Science)**

**FLEXILEARN**

-Freedom to design your degree

**Curriculum & Scheme of Examination**

**2020**

**AMITY UNIVERSITY HARYANA**

**GURUGRAM**

## **Programme Overview**

### **Duration: 2 years**

Master of Science (M.Sc.) degree program prepares its graduates for a career change, advancement or entry into the challenging and rewarding field of research and development. The program offers a challenging, student centered curriculum that is research-based and provides a foundation for life-long learning.

### **Students of all the degree Programmes at the time of graduation will be able to:**

**PO1 Scientific knowledge:** Develop specialized field knowledge and integrate disciplinary or interdisciplinary knowledge across content areas.

**PO2 Problem analysis:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

**PO3 Effective communication:** Communicate effectively in presenting ideas orally and in writing.

**PO4 Critical thinking:** Engage in critical inquiry through principle approaches or methods and through effective evaluation strategies.

**PO5 Environment and sustainability:** Understand the impact of the professional solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

**PO6 Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms

**PO7 Individual and Team work:** Demonstrate the capability to work both independently and in cooperation with others

**PO8 Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

### **Learning Outcomes: After completing the program the student will be able to:**

**PSO1** Develop knowledge of the functions and services provided by the Forensic Laboratories and utilization of basic sciences for forensic investigations

**PSO2** Develop research aptitude in the students by the dissertation project and help them to choose their area of expertise for further studies and career.

- PSO3 Gain an advanced knowledge of analytical techniques, this will provide them enough confidence to start their career in research as well as in industry with ease.
- PSO4 Develop comprehensive knowledge on Crime scene reconstruction and significance of various biological, physical and chemical evidences for forensic investigations.
- PSO5 Understand and gain knowledge on procedures and scopes of fingerprints examination, serology, anthropology, DNA fingerprinting, toxicology and cyber forensic etc.
- PSO6 Analyze the Sociological and Psychological aspects of crime and Criminal behavior and presentation of evidences in court of law.

## **Syllabus - First Semester**

### **CRIMINOLOGY, CRIMINAL LAW AND POLICE ADMINISTERATION**

**Course Code: FCH4101**

**Credits :03**

#### **Course Description**

This course provides basic knowledge and understanding of Criminology and criminal laws. Knowledge and understanding of basic concepts of crime and criminal behavior and factor of crime and criminology theory, Criminal Justice System in India structural and functional process. This course focuses on educating the students about criminal laws of IPC and Cr. P.C. This course serves as a prerequisite for better understanding of Police Administration of India development and history and responsibilities

#### **Course Objectives**

The objective of this course is to:

- Provide an overall understanding about Criminology and criminal laws and there applications.
- Introduce a comprehensive knowledge of Police Administration, Criminal Laws of IPC and Cr. PC. and criminal behaviour

#### **Course Contents:**

##### **Module I: Introduction and Theories of Criminology**

Criminology: Definition, Nature and Scope. Criminal Action and Criminal Behavior, Introduction of Victimology, Causes of crime (Social, Economic, Psychological, Political, Culture, and Geographical) and their prevention, Juvenile Delinquency, Role of the Correctional Institutions. Theory of Criminology - Differential Association Theory, Self Concept and Containment theory, Labeling theory, Barrier Theory

##### **Module II: Examination in the Court**

Expert Testimony: The role of the expert-witness; acceptance of evidence in the court; Direct examination, re-examination and cross – examination of prosecution lawyer and defense lawyer.

##### **Module III: Type of Offenses and Indian Court's structure**

Criminal offenses, Nature and types, Framing of Charges, Terrorism, Sexual Offenses, White collar crime, Courts: Structure and types- criminal courts, Juvenile Courts.

##### **Module IV: Criminal Law**

Criminal Law: Definition, Scope and development, Sections of I.P.C, Cr.PC related to Crime, Law of Evidences and Criminal Justice System in India: structural and functional process.

**Module V: Police Administration system**

Police duties and responsibilities, Structure of Police in India, role of Police in society, Police Investigation, Interrogation and Interviewing of criminals, maintenance of Law and order, Custodial crimes and death, Police and human rights.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

**Text & References:**

1. Ahmad Siddique: Criminology Problems & perspectives.
2. Rama Ahuja: Social Problems in India.
3. Batuk Lal: Law of Evidence
4. Rao, S. Venugopal: Police Administration.
5. Nath, Trilok: Indian Police.
6. Mishra. S.C. : Police Administration in India
7. Government of India, Ministry of Home Affairs: Reports of National Police Commission
8. Sutherland and Cassey: Criminology

# FORENSIC PHYSICS

**Course Code: FCH4103**

**Credit Units: 03**

**Course Objective:** This course will cover:

1. Important physical evidences found at crime scene.
2. Understanding of general characteristics and identification of physical evidences.
3. Examination and evidential value of important physical evidences.

Course Contents
<b>Module I: Soil</b> Formation and types of soil, composition of soil, particle size distribution, composition and analysis of concrete, cement and its types.
<b>Module II: Glass</b> Types of glass and their composition, Forensic examination of glass fractures, determination of direction of impact: cone fracture, rib marks, hackle marks, concentric and radial fractures.
<b>Module III: Paint</b> Types of paint and their composition, macroscopic and microscopic studies, pigment distribution, micro-chemical analysis.
<b>Module IV: Tool Marks &amp; Restoration of Erased / Obliterated Marks</b> Types of tool marks: compression marks, striated marks, combination of compression and striated marks, repeated marks, class characteristics and individual characteristics, tracing and lifting of marks.
<b>Module V: Analysis Techniques</b> <b>Soil:</b> microscopic examination, density gradient analysis, interpretation of soil evidence <b>Glass:</b> colour and fluorescence, physical matching, refractive index, and interpretation of glass evidence. <b>Paint:</b> Pyrolysis Chromatographic techniques, IR spectroscopy and Raman spectroscopy, interpretation of paint evidence, solubility test, Thin layer chromatography <b>Tool Marks:</b> Photographic examination of tool marks. Method of making-cast, punch, engrave; methods of obliteration, method of restoration.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

**Text References**

# FORENSIC BALLISTICS

**Course Code: FCH4106**

**Credit Units: 02**

**Course Objective: - The objectives of the course:**

1. To understand the basics of the projectile motion, ballistics and role of ballistics in Forensic Science
2. Classification of different types of firearms and explosives.

Course Contents
<b>Module I: Introduction to Ballistics:</b> Definition and scope, Firearms, Indian Arms Act, Types of evidences associated, History and mechanism of Muzzleloaders (Match lock, Wheel lock, Flint lock firearms), Briefs of Pinfire, Rimfire and Centrefire systems of cartridge, Characteristic features of the firearms, various types of modern firearms, classification of firearms on different basis, bore characteristics Different parameters of classification of firearms, Introduction to Shotgun, Revolver, Pistol, Rifle and Country Made/ Improvised Firearms. Proof Marks of Weapons.
<b>Module II: Firearm Ammunition:</b> Ammunition Components of Shotgun and Rifled firearm cartridges, Headstamp Markings on Ammunition. Various types of bullets and their compositional aspects, latest trends in their manufacturing and design, smooth bore and improvised ammunition.
<b>Module III: Internal and external Ballistics:</b> Internal Ballistics: Definition, shapes and manner of Propellant burning, Muzzle velocity and Factors affecting muzzle velocity, ballistic coefficient, phenomenon of ricochet External Ballistics: Definition- Bullet Trajectory and factors affecting bullet flight. Wound Ballistics: Definition of wound ballistics, Ballistic aspect of firearm injuries, significance of studying cavitations in body, Bullet Entry/Exit Hole Identification, Evaluation of Accident, Suicide, Homicide firearm injuries.
<b>Module IV: Bullet linkage:</b> Different types of marks produced during firing process on bullet-number/direction of lands and grooves, width of lands and depth of grooves, angle and pitch of rifling, striation marks on lands and grooves, techniques for obtaining test material from various types of weapons and their linkage with fired ammunition, class and individual characteristics.
<b>Module V: Range of Firing determination:</b> Introduction and methods of estimation. Gunshot Residue: Introduction and methods of analysis. Bullet and Cartridges matching: Ejecta, burning, scorching, blackening, tattooing and metal fouling, shots dispersion and GSR distribution, time of firing – different methods employed, and their limitations, stereo & comparison microscopy, automatic bullet and cartridge comparison.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

8. Burrad, 1951: The Identification of Firearms and Forensic Ballistics.

## FORENSIC PHYSICS - LAB

**Course Code: FCH4107**

**Credit Units: 02**

**Course Objective:** The students will understand & perform experiments relating to:  
Examination of physical properties of physical evidences commonly encountered at the crime scene.

<b>Course Contents: Lab/Practical</b>	
1. Examination of physical properties of Soil by microscopy	
2. Examination of physical properties of Glass by microscopy	
3. Comparative analysis of paints by TLC	
4. Solubility test for paints and soil	
5. Comparative analysis of Glass fragments/ examination of glass fractures	
6. Size distribution analysis of soil particles.	
7. Mineral test for soil	
8. Casting of tyre marks	
9. Casting of shoeprints	
10. Comparison of bangles	
11. Examination of fibres	

### Examination Scheme:

<b>A</b>	<b>IA</b>			<b>EE</b>	
	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

IA –Internal Assessment, EE- External Exam, A: Attendance, PR- Performance, LR – Lab Record, V – Viva.

### Text and references:

1. A Glencoe Program Physics principles and problems: Forensic Laboratory Manual Student edition
2. Thomas Kubic, Nicholas Petraco Forensic Science Laboratory Manual and Workbook, Third Edition 2009
3. Kathy Mirakovits, Gina Londino, The Basics of Investigating Forensic Science: A Laboratory Manual 2015
4. Washington state patrol Forensic Laboratory services: Crime Laboratory: Technical & Training Manuals.
5. G.H. Stout & L.H. Jensten, X-ray Structure Determination – A practical Guide; 2<sup>nd</sup> Edn. Wiley, New York, 1989

## CRIME SCENE INVESTIGATION (CSI) – LAB

**Course Code: FCH4108**

**Credit Units: 02**

**Course Objective:** The course focuses on following objectives-

1. Developing an understanding and application of Crime Scene Investigation.
2. Develop an understanding on processing of crime scene (searching, sketching and photography of Crime scene (Indoor and Outdoor).
3. Brief description on procedure adopted for collection, preservation and packaging of Physical evidences.

### Course Contents: Lab/Practical

1. Camera and its parts
2. Sketching of the Indoor Crime scene
3. Sketching of the outdoor Crime scene
4. Photography of the Indoor crime scene
5. Photography of the outdoor crime scene
6. Collection, packaging and forwarding of trace evidences by Druggist Fold method.
7. Collection and preservation of various physical evidences (Fingerprint, blood, saliva, fibre, hair etc.)
8. Forwarding of physical evidences

### Examination Scheme:

	IA			EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

IA –Internal Assessment, EE- External Exam, A: Attendance, PR- Performance, LR – Lab Record, V – Viva.

### Text and references:

1. A Glencoe Program Physics principles and problems: Forensic Laboratory Manual Student edition
2. Thomas Kubic, Nicholas Petraco Forensic Science Laboratory Manual and Workbook, Third Edition 2009
3. Kathy Mirakovits, Gina Londino, The Basics of Investigating Forensic Science: A Laboratory Manual 2015
4. Virginia Department of Forensic Science, Practical and Manuals

## FORENSIC AND CRIMINAL INVESTIGATIONS

**Course Code: FCH4111**

**Credit Units: 03**

**Course Objective:** The course focuses on following objectives-

1. Developing an understanding and appreciation of the scope of Crime Scene Investigation and Management.
2. Develop an understanding on handling of different physical evidences found at the crime scene
3. Develop comprehensive knowledge on various investigative techniques used in processing the crime scene.

<b>Course Contents:</b>
<b>Module I: Introduction to Forensic Science</b> Introduction and History of Forensic Science, Basic principles and significance, Utilization of Forensic Science, Forensic Scientist at the scene of crime, Structure of Forensic Labs, ethics in forensic science
<b>Module II: Crime Scene Management</b> Definition and causation of crime, Types of crime scene, Crime scene survey, protection of crime scene, searching of physical evidences, Recording, documentation and presentation in the court, processing and reconstruction of the crime scene.
<b>Module III: Physical Evidences</b> Physical evidences and its types (fingerprints, glass, fibre, blood, saliva, weapon of crime etc.), Blood spatter analysis, Characteristic blood patterns, testimonial and real evidence, admissibility of scientific evidence and importance of physical evidences, Collection, preservation, packing and forwarding of different types of evidences to the laboratories.
<b>Module IV: Investigation and Interrogation techniques</b> Interviewing of the criminals; methods used by the police in getting information from the criminal; the ethical issues related to the same. Criminal profiling, Portrait Parley, Polygraphy, Narcoanalysis, Brain Fingerprinting, Modus operandi, Speech signal processing and pattern recognition – basic factors of sound in speech, acoustic characteristics of speech signal

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

## INSTRUMENTATION – CHEMICAL

**Course Code: FCH4112**

**Credit Units: 03**

**Course Objective** The objective of the course is to provide student with practical understanding of working and applications of various instrumentation techniques used in the forensic science laboratory for the chemical analysis of evidences.

<b>Course Contents:</b>
<b>Module I: Chromatographic Techniques - I</b> General principles, Paper chromatography, Column chromatography, TLC, Adsorption chromatography, Partition chromatography
<b>Module II: Chromatographic Techniques - II</b> Gas chromatography, Gas-liquid chromatography, Ion-exchange chromatography, Exclusion (permeation) chromatography, Affinity chromatography, HPLC, HPTLC, Capillary Chromatography, Interfacing GC with IR spectrometry
<b>Module III: Mass Spectrometry</b> Sample flow, Ionization methods, Mass analyzers, Vacuum systems, Data handling, Correlation of mass spectra and molecular structure, Fourier transform mass spectrometry, Tandem mass spectrometry, Electrospray ionization mass spectrometry, GC-MS, LC-MS .
<b>Module IV: Measurements, Signals and Data</b> Introduction, Noise, Signal-to-noise ratio, Sensitivity and detection limit, Sources of noise, Signal-to-noise enhancement, Evaluation and measurement, precision, Accuracy and instrument calibration, Data representation, The Automated Laboratory, Molarity, Molality, Mole fraction, Normality and Formality

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

## RESEARCH SEMINAR

**Course Code: FCH4110**

**Credit Units: 01**

### **Objectives**

A seminar is primarily an academic event that is organized to provide the students a one to one hands on experience on any aspect of their learning for research based activity. Prerequisite, graduate studying in Chemistry/ Biochemistry/ Forensic Sciences on consent of instructor. Seminar to acquaint new graduate students with departmental research (This one will be running through out first semesters on every Monday any Lecture, where normally Ph.D. students /internal Faculties /external speakers will give talk on their research or other topic of their specialization).

The trainer has to make sure that the aspects covered are practically practiced by the participants. The evaluation will be done by Board of Examiners comprising of the faculties.

### **Major Themes for Seminar**

The seminar may be conducted on any of the following major themes:

- Forensic Science & its related laws
- Criminal Investigations & its proceedings
- Forensic Chemistry
- Forensic Physics
- Forensic Ballistics
- Forensic Fraud Investigations
- Forensic Document Examinations
- Investigative Techniques
- Forensic Analytical Techniques
- Forensic Medicine & Odontology
- Forensic Anthropology Examinations
- Cyber & Digital Forensics
- Any other relevant topics

These themes are merely indicative and other recent and relevant topics of study may be included.

### **Evaluation Scheme:**

<b>Attendance</b>	<b>Active Participation</b>	<b>Multiple Choice Questions/ Quiz</b>	<b>Solving the case/ Assignment/ Write up</b>	<b>Total</b>
<b>10</b>	<b>30</b>	<b>30</b>	<b>30</b>	<b>100</b>

# Syllabus - Second Semester

## FORENSIC PHOTOGRAPHY

**Course Code: FCH4201**

**Credit Units: 02**

**Course Objective:** This course is designed to:

1. Provide foundation knowledge of photography
2. Develop an understanding and application of Photography in Forensic Science and CSI

Course Contents
<b>Module I: Introduction</b> Introduction to forensic photography; required equipments for photography – Camera, lens, shutter, depth of field, film; Importance of Forensic photography in a crime scene investigation
<b>Module II: Types of Photography and Photo Prints</b> History and Development of Photography. Basic principles and techniques of Black & White and colour photography. Developing techniques and methods of photography, Different kinds of developers and fixers, modern developments in photography, linkage of cameras and film negatives.
<b>Module III: Photography of various crime scenes</b> Photography in indoor and outdoor scene of crime. Aerial photography. Surveillance photography – Cameras and accessories for surveillance photography, moving surveillance on foot, 2-person foot surveillance, surveillance with vehicles, fixed surveillance. Use of photography in reconstructing the scene of crime and its presentation in the court of law.
<b>Module IV: Guidance Documentation</b> Image magnification, U. V. and I. R. illumination in Photography. Photography of Artefactual evidences (Bloodstain, fingerprint, imprints, and micro evidence).
<b>Module V: High-tech Photography for Crime Scene</b> Digital photography, working principle of digital camera works and basics of digital imaging. videography/ high speed videography, High-speed photography, legal aspects of visual evidence.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

**Text & References:**

## ELEMENTS OF FORENSIC MEDICINE AND ODONTOLOGY

**Course Code: FCH4202**

**Credit Units: 03**

### **Course Objectives:**

During the course the student will

1. Understand and appreciate the scope of forensic medicine.
2. Know about different types of injuries, causes and manner of death and their medico legal significance
3. Learn about the utility of the odontological studies in identification and other medico legal purposes like age, sex and population Determinations.

<b>Course Contents</b>
<b>Module I: Introduction to Forensic Medicine</b> Definition of forensic medicine, cause, manner and characteristics of death. Autopsy, Post-mortem changes.
<b>Module I: Wounds and its medico legal significance</b> Basic injury production and healing mechanisms, Mechanical injuries (Abrasions, Bruises, Lacerations, Incised and stab wounds) and their medico legal significance.
<b>Module III: Causes and manner of death</b> Deaths due to Asphyxia, Fire, Electrocution. Various Sexual offences
<b>Module IV: Forensic Odontology - I</b> Introduction to Forensic Odontology, Types of dentition, Basic structure of human teeth, types of teeth & their morphology, Determination of age from teeth using various methods, Dental anomalies and their role in Personal Identification.
<b>Module V: Forensic Odontology - II</b> Bite marks: Types & forensic importance, Collection, preservation and examination of Bite marks, Admissibility of bite mark evidences in Court of Law. Role of Forensic Odontology in mass disaster victim identification.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

**References:**

## QUESTIONED DOCUMENTS

**Course Code: FCH4205**

**Credit Units: 03**

**Course Objective:** The course focuses on following objectives-

1. Developing an understanding and appreciation for the scope of Questioned Documents.
2. Develop an understanding on different types of questioned documents, the types of forgeries and disguise generally encountered.
3. Give brief description on various methods of their detection and examination.

<b>Course Contents:</b>
<b>Module I: Questioned Documents</b>  Definition, Importance, Classification and Preliminary Examination of questioned documents. Handwriting: Definition, Scripts, Development, Instruments and Appliances of handwriting expert. Handwriting Characteristics: General Characteristics, Individual Characteristics, Development of Individuality in Handwriting Comparison of Handwriting: Natural Variations, Fundamental Divergences.
<b>Module II: Forgeries</b>  Forgery and its types and characteristics, identification and examination of forgeries. Decipherment of secret indented and charred documents, Preservation of documents, Examination of seal and other mechanical impressions, examination of sequence of intersecting of strokes, Standards for Comparison and Disguise etc.
<b>Module III: Age of Document &amp; Alterations</b>  Determination of Age of Document- Absolute/relative age, Indented and Invisible Writings, Alterations in the document: erasures, additions, overwriting and obliterations. Comparison of type written/printed matter: Working of typewriter, Printing and machine defects, alterations in typed text, various type of typewriting devices- check writing machines, electronic typewriter and proportional spacing typewriter. Comparison of Printed matter- Various Printing Processes.
<b>Module IV : Instrumentation and Photography of Documents</b>  Basic Principles and Techniques Visible and Florescence (UV and IR), Photomicrography & Microphotography, Stereo-zoom Microscopy, Video Spectral Comparator (VSC) and Electrostatic Detection Apparatus (ESDA), Projectina, Docucentre.
<b>Module V: Security Documents</b>  Brief description of security documents, security and verification features of passports, credit

cards, cheques etc. Types of security documents, Salient features for identifications, Instrumentation used for their examination.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

## FORENSIC MEDICINE AND ODONTOLOGY -LAB

**Course Code: - FCH4206**

**Credit Units: 02**

**Course Objective:**

- Identification of individual teeth, dental charting.
- To identify individual by using dentition.
- Age estimation by dental evidences.

**Course Contents: - Lab/Practical**

1. Types of Dentition
  - a. Temporary
  - b. Mixed
  - c. Permanent
2. Identification of individual teeth based on the morphological features.
3. Estimation of age from the teeth.
  - a. Living subject
  - b. Maxilla & mandible
  - c. From X-Rays
4. Comparison and Identification of Individuals from bite marks
  - a. Direct comparison
  - b. By casting
  - c. By photography
5. Autopsy observation through visits and recording the files.

**Examination Scheme:**

	IA			EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

IA –Internal Assessment, EE- External Exam, A: Attendance, PR- Performance, LR – Lab Record, V – Viva.

## QUESTIONED DOCUMENTS AND FINGERPRINTS – LAB

**Course Code: FCH4208**

**Credit Units: 02**

**Course Objective:** - The course focuses on following objectives-

1. Developing an understanding and application on practical aspects of Questioned Documents and Fingerprints.
2. Develop an understanding on procedure adopted for examination of different types of questioned documents, the types of forgeries, disguise and their examination along with giving appropriate conclusion on the basis of findings.
3. Brief description on identification, analysis and examinations of various kinds of fingerprints and other impressions that are encountered on crime scenes.

### Course Contents: - Lab/Practical

1. Examination and comparison of security documents, fake currency and stamp papers.
2. Development of latent finger prints by chemical methods and photography.
3. Development of latent finger prints by physical methods and photography.
4. Comparison of fingerprints, palm prints along on the basis of ridge characteristics and ridge details.
5. Comparison of forged (disputed) signature with the specimen signatures.
6. Comparison of disguised (disputed) signature with specimen signatures.
7. Examination and comparison of disputed anonymous letter with specimen of suspect/suspects.
8. Identification of altered/added/obliterated/erased/handwriting on cheques and deeds.
9. Ridge counting and ridge tracing.
10. Recording of prints on fingerprint chart.
11. Examination of other impressions and photography.

### Examination Scheme:

	IA			EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, A: Attendance, PR- Performance, LR – Lab Record, V – Viva.

## INSTRUMENTAL ANALYSIS – BIOLOGICAL

**Course Code: FCH4209**

**Credit Units: 04**

**Course Objective:** The objective of the course is to provide student with practical understanding of working and applications of various instrumentation techniques used in the forensic science laboratory for the analysis of biological evidences.

### Course Contents:

#### Module I: General Principles of Biological/ Bio-chemical Analysis

pH and buffers, Physiological solution, Cell fractionation.  
Outline of Genetic Manipulations, Enzymes used in genetic manipulation, Cloning procedures, Isolation of specific nucleic acid sequences – complementary DNA, Gene libraries, Colony hybridisation, Expression of genes

#### Module II: Centrifugation Techniques

Basic principles of sedimentation, Various types of centrifuges, Density gradient centrifugation, Preparative centrifugation, Analysis of sub-cellular fractions, Ultra-centrifuge- Refrigerated Centrifuges

#### Module III: Electrophoretic Technique

General principles, Factors affecting electrophoresis, Types of Electrophoresis- Agarose gel electrophoresis, Polyacrylamide gel electrophoresis, its types, Isoelectric focusing (IEF), Isoelectrophoresis.

#### Module IV: Immuno-chemical Techniques

General principles, Production of antibodies, Precipitin reaction, Gel immuno-diffusion, Immuno-electrophoresis, Radio Immuno Assay (RIA), ELISA, Fluorescence Immuno Assay.

#### Module V: Microscopy

Basic principles, Simple and Compound Microscope, Comparison Microscope, Phase Contrast Microscope, Stereoscopic Microscope, Polarizing Microscope, Fluorescent Microscopy, Scanning Electron Microscope (SEM) and Transmission Electron Microscope (TEM).

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

# FINGERPRINT SCIENCE

**Course Code: FCH4210**

**Credit Units: 03**

**Course objective:**

1. Developing an understanding and appreciation for the scope of Fingerprints.
2. Develop comprehensive knowledge on fingerprint patterns, fingerprint classification, the various methods of fingerprint development.

<b>Course content:</b>
<b>Module I: Introduction to Fingerprints</b> Dactylography, Dermatoglyphics and Dactyloscopy, Basis concepts of Fingerprint Science, Friction Ridge Skin, Morphogenesis of Friction Ridge Skin, Primary Dermal Ridge Development, Definition of fingerprint, History of Fingerprint Identification, Fingerprint as forensic Evidence, Visible Fingermarks, Latent Fingermarks.
<b>Module II: Classification of Fingerprints for Comparison purposes</b> Pattern area, Core, Delta, Type lines, ridge characteristics, Fingerprint Pattern Types: Essentials and its types of Loop, Arch, Whorl, Composites, Accidental patterns etc., Ten Digit and Single Digit fingerprint classification.
<b>Module III: Methods of Taking Fingerprints</b> From living and dead persons, preserving and lifting of fingerprints. Comparison Protocols: Class and individual characteristics (Galton's details), different ridge characteristics, Standards of proof, Automatic Fingerprint Identification System (AFIS), Poroscopy and Edgeoscopy.
<b>Module IV: Fingerprint Developing Methods</b> Chemistry of latent fingerprint residue, factor contributing to latent fingerprints, Methods of Development of latent fingerprints using conventional methods–Powder (Black and grey, fluorescent and magnetic), Fuming method, Vacuum Metal Deposition (VMD) method, Chemical method, Reagent chemistry and formulations, Photography of fingerprints.
<b>Module V: Report Writing and Court Room Testimony</b> Evidence and testimony in court, Information required by the Forensic expert, Components of Forensic Reports, Preparation of Report, Presenting findings in a Report, Expert and the rules of evidences, Daubert's challenges to fingerprints.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

## ARSON AND EXPLOSIVES

**Course Code: FCH4211**

**Credit Units: 02**

**Course objective:**

1. To understand the basics of ballistics and role of ballistics in Forensic Science
2. Classification of different types, composition and analysis of explosives.

Course content
<b>Module I: Fire Chemistry</b> Light and Flame, Chemistry of Fire, Combustion reaction, Fire Triangle, Fire Tetrahedron; Backdraft, Thermo-chemistry of Fire, Heat Capacity and Phase changes, Accelerants and types of accelerants, Combustible and Flammable liquids, Flash point, Fire point, Ignition point, Auto Ignition point, Vapour Density, Vapour Pressure, Fire extinguisher.
<b>Module II: Arson</b> Legal Definition, Arson motives, Degrees of Arson, Determining origin and cause; Fire patterns, Collection/Preservation of Arson Evidences, Flashover, Backdraught, Live or dead at time of arson; Documenting the fire or crime scene; Scheme of analysis: Extraction of samples from debris (Direct and solvent extraction methods, Head Space method, SPME, Distillation), Clean-up (Filtration & Acid stripping), Analysis (GC, GC-MS, FTIR & SEM etc.), Interpretation of GC-MS spectra.
<b>Module III: Petroleum Products</b> Introduction to Petroleum Products, Properties and Testing of Petroleum and Petroleum Products, Adulteration of petroleum products as per Prevention of Malpractices in Supply and Distribution, Analysis of common petroleum products including, Petrol, Kerosene, Diesel as per BIS specifications. Analysis of Dyes used in petroleum products, Chemical fingerprinting of petroleum products.
<b>Module IV: Explosives and Analysis of Explosive</b> Definition of Explosives, Definition as per Indian Explosive Acts. History of Explosives, Chemistry of explosives, Deflagration and Detonation phenomenon (Redox Chemistry, Kinetics-Molecular Theory of gases & Gas Laws), Characteristics of high and low explosives, Dust explosion, Gas/vapour explosion, BLEVE, Effect of blast wave on structures & human and Pyrotechnics. Pre-blast and Post blast residue collection, Systematic examination of explosives and explosion residues in the laboratory using chemical and instrumental techniques and interpretation of results. Definition of IED, Components of IED, Explosives Initiation (Explosive Trains); Types (Molotov cocktail, Letter bomb, Pipe bomb, VBIED and CBRN), Detection of Hidden Explosives. Bomb Scene: Specific approach to scene of explosion, Reconstruction of sequence of events.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

**Suggested Readings**

2. Saferstein, R (1982) Forensic Science Hand Book, Vol I, II and III, Pretince Hall, NI.
3. Saferstein, R (2000) Criminalistics.
4. Curry (1986) Analytical Methods in Human Toxicology, Part II.
5. Curry, A.S. (1976) Poison Detection in Human Organs.
6. Mathew E. Johll (2009) Investigating Chemistry: A Forensic Science Perspective
7. Suzanne Bell (2009) Drugs, Poisons, and Chemistry
8. DFS Manuals of Forensic Chemistry and Narcotics.
9. A Naquest (1984) legal chemistry. A guide to the detection of poisons, examination of tea, stains, etc.
10. DFS -Working Procedure Manual- Chemistry, Explosives
11. E. Stahl (1969) Thin Layer Chromatography: A Laboratory Handbook.
12. Jehuda Yinon; Forensic and Environmental Detection of Explosives
13. Saferstein (1976) Criminalistics.
14. Saferstein: Forensic Science, Handbook, Vol. I, II & III, Prentice Hall Inc. USA
15. Yinon Jitrin (1993) Modern Methods & Application in Analysis of Explosives, John Wiley & Sons, England
16. J A Siegel, P.J Saukko (2000) Encyclopaedia of Forensic Sciences Vol. I, II and III, Acad. Press.

## TERM PAPER

**Course Code: FCH4231**

**Credit Units: 01**

### Objectives

A seminar is primarily an activity based academic event that is organized to provide the students a one to one hands on experience on any aspect of their learning for research based activity. Prerequisite, graduate studying in Chemistry/ Biochemistry/ Forensic Sciences on consent of instructor. Seminar to acquaint new graduate students with departmental research (This one was for second semester students to attained and fourth semester students had to present on one selected topic of their choice or Ph.D. students/ internal faculties /external speaker will give talk).

The trainer has to make sure that the aspects covered are practically practiced by the participants. The evaluation will be done by Board of examiners comprising of the faculties. This one will be one time event in one semester.

### Major Themes for Seminar

The seminar may be conducted on any of the following major themes:

- Forensic Science & its related laws
- Criminal Investigations & its proceedings
- Forensic Chemistry
- Forensic Physics
- Forensic Ballistics
- Forensic Fraud Investigations
- Forensic Document Examinations
- Investigative Techniques
- Forensic Analytical Techniques
- Forensic Medicine & Odontology
- Forensic Anthropology Examinations
- Cyber & Digital Forensics

Any other relevant topics

These themes are merely indicative and other recent and relevant topics of study may be included.

### Evaluation Scheme:

Attendance	Active Participation	Multiple Choice Questions/ Quiz	Solving the case/ Assignment/ Write up	Total
10	30	30	30	100

**THIRD SEMESTER**  
**FORENSIC CHEMISTRY, TOXICOLOGY AND**  
**PHARMACOLOGY**

**Course Code: FCH4301**

**Credit Units: 03**

**Course Objectives:**

During the course the student will:

1. Understand the scope of forensic chemistry, toxicology and pharmacology
2. Understand and appreciate the scope, diversity and utility of a variety of chemical analysis
3. Learn the principles of primary techniques used for forensic identification of various chemicals, drugs and poisons

<b>Course Contents</b>
<b>Module I: Introduction to Forensic Chemistry</b> Forensic Chemistry: Introduction, types of cases/exhibits, preliminary screening, presumptive test (colour and spot test), inorganic analysis, micro – chemical methods of analysis, Analysis of petroleum products.
<b>Module II: Toxicology of alcohol and Examination of Alcoholic Beverages</b> Fate of alcohol in body, alcohol in the circulatory system, Breath test instruments, Field Sobriety testing, Examination of alcoholic beverages; Country made liquor, Illicit liquor. Analysis of blood for alcohol.
<b>Module III: Drugs of Abuse</b> Introduction, classification of drugs of abuse, drugs of abuse in sports and doping, narcotics drugs and psychotropic substances, designers drugs and their forensic examination, Drugs and Cosmetic Act, Excise Act, NDPS Act.
<b>Module IV: Introduction to Toxicology</b> Definition, Law relating to poison, Classification of poisons. Action of poisons and factors modifying its action, routes of administration of poisons, Role of Toxicologist
<b>Module V: Forensic Pharmacology</b> Pharmacology and Toxicology of Psychotropic Drugs: Sedatives, Stimulants, Opiates. Extraction, Isolation of drugs from viscera, tissues and body fluids.

**Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	15	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

5. Cravey, R.H., Baselt, R.C., Introduction to Forensic Toxicology, Biochemical publications, Davis C A, 1981.
6. Gleason, M.N. et.al, Clinical Toxicology of Commercial products, Williams and Williams, Baltimore

# FORENSIC BIOLOGY AND SEROLOGY

**Course Code: FCH4302**

**Credit Units: 03**

**Course Objective:** This course will cover:

1. The important biological evidences commonly found at crime scene
2. Significance of forensic anthropology, and forensic botany.
3. Importance of serology and DNA analysis in interpretation of crime.

## Course Contents

### Module I: Hair and Fibre

Structure of hair and its biochemical properties, Phases of hair growth, types of hair. Differences between animal and human hair, Forensic examination of different types of hair. Different types of fibres and their identification.

### Module II: Botanical Evidences and Diatoms

Different botanical evidences of forensic significance: seeds, pollens etc. Diatoms: Classification, basic structure and morphology, forensic significance of diatoms, extraction methods.

### Module III: Forensic Anthropology

Definition and scope of forensic anthropology, Human skeletal system and types of bones. Estimation of age from skull and long bones, site and side determination. Estimation of Stature from skeletal remains. Determination of sex from skull, mandible and pelvis.

### Module IV: Forensic Serology

Definition and scope of forensic serology. Nature, composition and functions of blood and other fluids. Collection, preservation and packing of biological fluids. Introduction to ABO, Rh, MN systems, Lectins – their forensic significance, Determination of secretor/non secretor status.

### Module V: DNA Profiling

DNA Profiling: Introduction, molecular biology of DNA, polymorphism, DNA Extraction methods (Organic and Inorganic extraction, FTA cards), DNA typing systems- RFLP analysis, sequence polymorphism.

Evaluation of results, analysis of STR, SNP and Mitochondrial DNA markers, Y-STRs, PCR amplifications, Forensic applications of DNA profiling, limitations of DNA profiling

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

## FORENSIC BIOLOGY AND SEROLOGY-LAB

**Course Code: FCH4304**

**Credit Units: 02**

**Course Objective:** This course will cover:

1. The practical aspects of forensic biology, anthropology, and serology
2. To collect, pack and analyse biological, anthropological, & serological evidences
3. To document chain of custody, write laboratory reports pertaining to the examinations conduct presumptive and confirmatory tests for evidence

### Course Contents: Lab/Practical

1. Determination of species of origin from blood and other biological evidences using precipitin test
2. Presumptive and Confirmatory tests for blood
3. Examination and Identification body fluids
4. Microscopic Examination of Hair for the determination of different types of medulla and scale
5. Microscopic Examination of Hair for the determination of species
6. Gel Immuno Diffusion tests for species origin
7. Blood grouping from dried stains by Absorption Inhibition or Absorption Elution
8. Extraction /Isolation of Diatoms from water/soil and tissues
9. Identification of bones based on its morphology and anatomical planes
10. Sex Determination from Skull, Mandible, Pelvis and long bones
11. Age Estimation from Skull and Long bones
12. Sexing from Barr Bodies

### Examination Scheme:

	IA			EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, A: Attendance, PR- Performance, LR – Lab Record, V – Viva.

## FORENSIC CHEMISTRY AND TOXICOLOGY - LAB

Course Code: FCH4305

Credit Units: 02

### Course Objective:

The students will understand & perform experiments related to:-

1. Isolation techniques for different poisons
2. Analysis of different poisons
3. Spot tests for different cations and Anions

Course Contents: - Lab/Practical	
1.	Isolation techniques of different toxic substances
2.	TLC of insecticides, Barbiturates and other drugs
3.	Analysis of volatile and non-volatile poisons
4.	Analysis of vegetable poisons
5.	Spot test of nitrates, nitrites, carbonates, sulphates, sulphites, chlorates
6.	Spot test of mercury, iron, copper, aluminium, cadmium, zinc and other metallic poisons

### Examination Scheme:

	IA			EE	
A	PR	V	LR	PR	V
5	10	5	10	35	35

Note: IA –Internal Assessment, EE- External Exam, A: Attendance, PR- Performance, LR – Lab Record, V – Viva.

## STATISTICS AND RESEARCH METHODOLOGY

**Course Code: FCH4315**

**Credit Units: 03**

**Course Objective:** This course is designed to:

1. Provide foundation knowledge of quantitative and qualitative research methods used in Forensic Sciences.
2. Provide understanding of the use of survey, field, and qualitative research techniques to develop practice knowledge;
3. Describe distributions in terms of shape, centre, and spread including the ability to construct visual displays of data (charting, graphing);
4. Provide an understanding of and ability to use the basic principles of statistical inference.

### **Course Contents:**

#### **Module I: Introduction to Research**

Research its definition and objectives, Types of Research, Research process, Defining the research problem, Research design.

#### **Module II: Sampling**

Principles, methods: census and sample survey, sample design. Types of sampling, rationale for using a particular sampling procedure.

#### **Module III: Tools of Data Collection**

Observation, interview schedule, questionnaire, survey, case study methods

#### **Module IV: Statistics**

Introduction, Descriptive Statistics: Frequency distribution, class intervals, graphical presentation: bar diagram, histogram, pie chart; Measures of Central Tendency: mean, median, mode; measures of dispersion: variance and standard deviation.

#### **Module V: Parametric and Non-parametric Statistics**

Methods of Correlation, Skewness and Kurtosis Variance, Types of Correlation (Pearson and Rho); Tests of Significance. Level of Significance, one sample, two samples and k-samples, Kruskal-Wallis, ANOVA.

### **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

## INSTRUMENTATION - PHYSICAL

Course Code: FCH4316

Credit Units: 03

**Course Objective:** The objective of the course is to provide student with practical understanding of working and applications of various instrumentation techniques used in the forensic science laboratory for the analysis of evidences.

<b>Course Contents:</b>
<b>Module I : Basic Concepts - Atomic &amp; Molecular Spectroscopy</b> Introduction to Atomic orbitals, spectra, Bohr Model. Quantum Theory, molecular orbital, types of molecular energies, vibrational and electronic spectra. Classification of spectroscopic methods.
<b>Module II: Molecular Spectroscopy</b> <b>Ultra-violet and visible spectrophotometry:</b> Types of sources and stability, wavelength selection, filters, reference cells and sampling devices, detectors, resolution, qualitative and quantitative methods for detection (Single beam and double beam). <b>Infrared spectrophotometry:</b> Basic principle, Dispersive and non-dispersive instruments, FTIR, instrumentation, Forensic applications, correlation of infra-red spectra with molecular structure. <b>Raman spectrophotometry:</b> Basic principle, theory, instrumentation, forensic applications. <b>Fluorescence spectrophotometry:</b> Types of sources, structural factors, instrumentation, comparison of luminescence and UV-visible absorption methods.
<b>Module III: Atomic Spectroscopy</b> <b>Atomic absorption spectrometry:</b> Instrumentation and techniques, interference in AAS, background correction methods, quantitative analysis, Applications in Forensic Science. <b>Atomic emission spectrometry:</b> Instrumentation and techniques, arc/spark emission, comparison of ICP vs AAS methods, quantitative analysis, applications in forensic science. <b>X-ray spectroscopy:</b> X-ray absorption and fluorescence methods, X-ray diffraction, Applications in Forensic Science. <b>Neutron Activation Analysis:</b> Introduction, principle, theory, instrumentation and forensic applications.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE

## **INSTRUMENTATION WORKSHOP**

**Course Code: FCH4318**

**Credit Units: 1**

### **Objectives**

A workshop/seminar is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two ways. The trainer has to make sure that the aspect covered is practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

### **Major Themes for Workshop**

The workshop may be conducted on any of the following major themes:

- Crime Scene Investigation
- Forensic Toxicology
- Forensic Anthropology
- Handwriting & Typewriting Analysis
- Crime Scene Investigation
- Criminology, Criminal Law & Police Administration
- Fingerprint Science
- Forensic Serology
- DNA Fingerprinting
- Wounds & its Medico-Legal Aspects

These themes are merely indicative and other recent and relevant topics of study may be included.

### **Guidelines for Workshop**

The procedure for earning credits from workshop consists of the following steps:

- i. Relevant study material and references will be provided by the trainer in advance.
- ii. The participants are expected to explore the topic in advance and take active part in the discussions held
- iii. Attending and Participating in all activities of the workshop
- iv. Group Activities have to be undertaken by students as guided by the trainer.
- v. Evaluation of workshop activities would be done through test and quiz at the end of the workshop.
- vi. Submitting a write up of at least 500 words about the learning outcome from the workshop.

## Methodology

The methodology followed at the workshop could be based on any one or more of the following methods:

- i. Case Study
- ii. Simulation
- iii. Quiz
- iv. Quality analysis & characterization
- v. Identification and preparation of materials

## Evaluation Scheme:

<b>Attendance</b>	<b>Active Participation</b>	<b>Multiple Choice Questions/ Quiz</b>	<b>Solving the case/ Assignment/ Write up</b>	<b>Total</b>
<b>10</b>	<b>30</b>	<b>30</b>	<b>30</b>	<b>100</b>

## ADVANCED FORENSIC BIOLOGY AND ANTHROPOLOGY

Course Code: FCH4306

Credit Units: 03

### Course Objectives:

During the course the student will

1. Understand and appreciate the scope of forensic biology and Forensic Anthropology
2. Understand and appreciate the scope, diversity and utility of a variety of Human, Animal and plant evidences and their examination
3. Learn the primary technique used for identification of various biological evidences
4. Acquire the knowledge on techniques presently being used in the forensic examination of biological evidences and skeletal remains

### Course Contents

#### Module I: Introduction to Wild Life Forensics

Introduction to wildlife forensics, Examination of pug marks, horn, skin, fur, hair, nail and teeth. Identification of some endangered species of plants and animals. Wildlife life protection Act.

#### Module II: Forensic Entomology and Forensic Microbiology

Collection of insects, Shipment of collected insects, Identification of insect and its stage of growth. Determination of the post-mortem interval or "time since death" in homicide investigations, Forensic Entomotoxicology. Introduction to Forensic Microbiology

#### Module III: Forensic Anthropology

Somatometry, Osteometry and Craniometry. Identification of individuals from skeletal remains, Collection, Handling, preservation of skeletal remains of forensic science and report writing.

#### Module IV: Forensic Taphonomy and Radiology

Forensic Taphonomy. Fire modification of bones, Assessment of ante mortem and post-mortem skeletal trauma. Artefacts in the skeletal remains. Application of radiology in forensic anthropology

#### Module V: Superimposition and Facial Reconstruction

Superimposition techniques. Facial reconstruction; three dimensional and computer assisted facial reconstruction

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

# FORENSIC GENETICS

**Course Code: FCH4319**

**Credit Units: 03**

**Course Objective:** This course is designed to:

1. Provide foundation knowledge of genetics
2. Provide understanding of the inheritance laws and gene interactions
3. Provide understanding of mutation and genetic diseases

## **Course Contents:**

### **Module I: Introduction to Genetics**

Mendel's work and Laws of heredity, Test cross, Back Cross, Incomplete dominance and simple problems, Structure of DNA and RNA, Structural Organization of Chromosome, Special types of chromosomes (Salivary gland and Lamp-brush chromosomes)

### **Module II: Cell Division and Linkage**

Cell cycle, Mitosis and Meiosis, Coupling and repulsion hypothesis, Mechanism of linkage and its importance, Linkage in Maize and Drosophila, Mechanism of crossing over and its importance

### **Module III: Interaction of Genes**

Supplementary genes, Complementary genes, Pleiotrophy, Lethal genes, Epistasis, Multiple Allelism

### **Module IV: Mutations**

Mutagens and their types (Physical, chemical, biological), Mutation: Definition and types, Spontaneous and induced mutation, Chromosomal and Gene Mutation, Mutations in plants, animals and microbes for economic benefit of man

### **Module V: Inherited Diseases**

Karyotype, Inherited disorders, Allosomal (Klinefelter syndrome and Turner's syndrome), Autosomal (Down's syndrome and Cri-Du-Chat syndrome)

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>		<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	15		5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

5. Gustavo Maroni, Molecular and Genetic Analysis of Human Traits, 1st Edition, Wiley-Blackwell, 2001.

## CYBER FORENSIC AND COMPUTER APPLICATIONS

**Course Code: FCH4317**

**Credit Units: 03**

**Course Objective:** The objectives of the course are to:

1. Provide students with a technical skills and competencies in the field of forensic computing thus producing competent and confident graduates.
2. Produce students who will have a hands-on knowledge and able to perform technical role in forensic computing field.
3. Equip students with the right skills thus enabling them to adapt real working environment, while contributing positively to the society at large.

### **Course Contents:**

#### **Module I: Computer Fundamentals - I**

Computer characteristics and classifications, Concept of Computer Hardware, Concept of Computer Software

#### **Module II: Computer Fundamentals - II**

Fundamentals of programming languages, Concept of Algorithm and Flow Chart, Networking and Internet Concepts

#### **Module III: Data Storage Fundamentals**

Data Storage Devices, Storage Fundamentals (Sector, Cluster, FAT etc.), File System Concepts, Data Storage and Recovery, Basics of Operating System Software

#### **Module IV: Pattern Recognition and Biometrics**

Pattern Recognition and Biometrics – Face, Iris and retinal imaging, Speech recognition, finger and palm print, gait pattern, signatures, Pattern comparison, Image processing – Proactive Forensic science

#### **Module V: Cyber Crimes, Search and Seizures of Evidence**

Cyber Crimes – definition, IT laws – Introduction, internet, hacking, virus, obscenity, pornography, programme manipulation, software piracy, intellectual property and computer security etc., Encryption and Decryption methods, Investigation of cyber-crimes and tools for analysis

### **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	15	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

**Text & References:**

## ADVANCED QUESTIONED DOCUMENTS AND FINGERPRINTS EXAMINATION

**Course Code: FCH4310**

**Credit Units: 03**

**Course Objective:** The course focuses on following objectives-

1. Developing an understanding and appreciation for the scope of Questioned Documents Examination.
2. Develop an understanding on different types of cases in questioned documents and different writing conditions.
3. Brief description on case presentation and report writing.
4. Develop comprehensive knowledge on advanced Instrumentation techniques used for examination.

<b>Course Contents:</b>
<b>Module I: Introduction to Poroscopy and Edgeoscopy</b> Introduction: Poroscopy and edgeoscopy, Fingerprints Examination on the basis of poroscopy and its significance, evaluation of fingerprints on the basis of edgeoscopy and its significance in fingerprint field.
<b>Module II: Advanced Methods of Development of Latent Fingerprints</b> Automatic fingerprint identification system, application of radiations to examine latent fingerprints on various surfaces including skin, SPR, Phase transfer catalyst, DFO, Indanedione, Oil Red O, Factors affecting fingerprints
<b>Module III: Personality assessment and Different Writing Condition</b> Evaluation of personality and psychological traits from handwriting, Evolutionary phases in handwriting, effect of age factor in handwriting and variations in handwriting characteristics, effect of alcohol and drugs on handwriting characteristics/ signatures.
<b>Module IV: Report Writing and Case Representation</b> Expert's opinion, Examination in chief, Cross examination, Re-examination, Oath taking, Summons for evidences, Report writing and Case representation in Court of Law as Moot court.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

## ADVANCED FORENSIC CHEMISTRY AND TOXICOLOGY

**Course Code: FCH4320**

**Credit Units: 03**

**Course Objective:** - The objectives of the course:

1. that the student understands the basic pharmacodynamics, pharmacokinetic and toxicological principles underlying the actions of the various poisons encountered in forensic toxicology.
2. To ensure that the student understand nature of the toxicological investigations undertaken in forensic laboratories.

### Course Contents:

#### Module I: Pharmacology-I

Sites and mechanisms of action of drugs, Dose-effect relationships; agonists, partial agonists and antagonists. Factor modifying drug actions; side effects, overdose, idiosyncratic and allergic reactions; teratogenesis and foetal toxicity. Drug interactions.

#### Module II: Pharmacology-II

Movement of drug molecules across cell membranes, Blood-brain barrier and Placental filter. Routes of administration and drug adsorption. Binding to plasma proteins. Drug distribution, metabolism and elimination. Drug bioavailability and half-life.

#### Module III: Toxicology and Isolation techniques of toxins

Definition of Toxicology, Principle of Toxicology, Isolation of Toxic substances from viscera and other relevant materials. Role of drug recognition expert.

#### Module IV: Different Toxins-I

Nature, administration, sign and symptoms, Fatal dose, postmortem findings, Detection and medicolegal aspects of-

**a) Metallic poisons** Arsenic, Mercury

**b) Vegetable poisons** Abrus Precatorius, Calotropis Gigantia, Castor, Oleander, Aconite.

#### Module V: Different Toxins-II

**a) Insecticides** Organophosphorous compounds, Organochloro Compounds and Carbamates

**b) Volatile Poisons** Methyl alcohol, Chloroform,

**c) Asphyxiants** Cyanide, Carbon monoxide

**d) Animal Poisons** Snake venom, Cantharide, Insect bite.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

**Text & References:**

1. Text book of pharmacology, Lawrence
2. A. Stolemen, Progress in Chemical Toxicology: Acad. Press, New York, 1963.

5. Gleason, M.N. et.al, Clinical Toxicology of Commercial products, Williams and Williams, Baltimore, USA, 1969.
6. Modi, Jaishing P, Textbook of Medical Jurisprudence & Toxicology, M.M. Tripathi Pub.2001.
7. Working Procedure Manual – Toxicology, BPR&D Publication, 2000.

# FORENSIC WILDLIFE AND ENTOMOLOGY

Course Code: FCH4321

Credits: 03

**Course Objective:** During the course the students will be able to

1. Understand the scope of wildlife forensics
2. Understand and appreciate the diversity and utility of variety of animal evidences
3. Elaborate concepts of entomology
4. Estimate the time since death by life cycle of different insects

## Course Contents

### Module I: Forensic Entomology

History, significance, determination of time since death- Dipterans larval development- life cycle of blowfly, housefly. Succession colonization of body, determining whether the body has been moved, body disturbance, presence and position wounds, linking suspect to the scene, collection and preservation of entomological evidence.

### Module II: Entomotoxicology

Insects as toxicological indicators, Impact of drugs & toxins on insect development and Identification of drugs and toxins from the insects and larvae feeding on the body, entomology as an evidentiary tool in abuse cases.

### Module III: Botanical evidences

Introduction, types, location, collection evaluation and forensic significance.

**Wood:** Type of wood and their identification and comparison.

**Leaves:** Identification of various types of leaves and their anatomy, methods of comparison.

**Pollens:** Structure, function, methods of identification and comparison.

### Module IV: Diatoms and Microbes

**Diatoms:** Nature, location, structure, extraction from various body tissues, including bone marrow, preparation of slides, methods of identification and comparison, forensic significance. **Microbes:** Types and identification of microbial organisms of forensic significance.

### Module V: Wildlife Forensics

Introduction, importance, protected and endangered species of Animals and Plants. Identification of wild life materials such as skin, fur, bones, nails, horn, teeth, flowers and plants, by conventional and modern methods, Identification of Pug marks of various animals. Different methods of poaching of wildlife animals. Types of wildlife crimes. Wildlife (Protection) Act, 1972.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

## GOOD LABORATORY PRACTICES SEMINAR

**Course Code: FCH4409**

**Credit Units: 01**

### **Course Objective:**

Students will be introduced to learning the written and oral communication of technical information. Assignments include writing and presenting proposals, reports, and documentation. Emphasis on use of rhetorical analysis, computer applications, collaborative writing, and usability testing to complete technical communication tasks in the workplace.

### **Course Contents:**

#### **Module I: Technical Writing Process**

Technical Writing: Scientific and technical subjects; formal and informal writings; formal writings/reports, handbooks, manuals, letters, memorandum, notices, agenda, minutes; common errors to be avoided.

#### **Module II: Journal Paper Writing**

Journal paper writing: Abstract for paper and poster, different kind of journal for forensic Sciences, impact factors of journals, ISBN number, Citation, H-index.

#### **Module III: Documentation Process**

Writing Skills, Selection of topic, thesis statement, developing the thesis; introductory, developmental, transitional and concluding paragraphs, linguistic unity, coherence and cohesion, descriptive, narrative, expository and argumentative writing.

Analytical report, Project management in technical communication, Project writing, project proposal writing.

### **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

## QUALITY MANAGEMENT AND ACCREDITATION IN FORENSIC SCIENCE LABORATORIES

**Course Code: FCH4405**

**Credit Units: 02**

**Course Objective:** The objective of this course is to introduce the students with the Quality management system and requirements for the competence of testing and calibration, the technical requirements needed in a laboratory.

<b>Course Contents:</b>
<b>Module I: Management requirements I</b> General requirements for the competence of testing and calibration laboratories – Introduction, scope, management requirements: Organization, Quality system, Document control, Review of requests
<b>Module II: Management requirements II</b> Internal Audits; Control of records, Corrective and preventive actions, Tenders and contracts, Subcontracting of tests and calibration, Purchasing services and supplies, Service to the clients, Complaints
<b>Module III: Technical requirements I</b> Technical requirements: General, Personnel, Accommodation and Environmental conditions, Test and Calibration methods
<b>Module IV: Technical requirements II</b> Equipment, measurement traceability, sampling, handling of test and calibration items, assuring the quality of test and calibration results and reporting the results
<b>Module V: Laboratory Management</b> Laboratory information management system, Validation and safety equipments

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;

A: Attendance

## FORENSIC PSYCHOLOGY

**Course Code: FCH4408**

**Credit Units: 03**

### **Course Objectives:**

1. To facilitate the learning of traditional and emergent fields of cognitive neuropsychology.
2. To understand-brain-behaviour relationship in day to day life
3. To explore the practical implications of cognitive processes in human performance.

### **Course Contents:**

#### **Module-I: Cognitive Neuroscience**

Introduction, Philosophical antecedents, Emergence of Cognitive psychology, Approaches and key issues, Organization of Nervous system: Cognition in the Brain, Sensation to representation, Theoretical approaches to perception, Deficits in perception. Attention and consciousness

#### **Module-II: Memory**

Models, Processes, Practical Applications of Cognitive Psychology in improving memory processes, Representations and manipulation of knowledge in: Images and Propositions, Spatial cognition and Cognitive map

#### **Module-III: Language**

Nature and Acquisition: Bilingualism and Multilingualism Reading, Bottom-up and Top-down processes, Comprehension, Neuropsychology of Language. Problem-solving and Creativity, Practical applications of cognitive psychology. Decision-making and reasoning: Deductive reasoning and inductive reasoning

#### **Module-IV: Intelligence**

Information possessing and intelligence, alternative approaches to intelligence. Computer simulation, improving intelligence

### **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

## **MAJOR PROJECT**

**Course Code: FCH4437**

**Credit Units: 10**

### **GUIDELINES FOR PROJECT FILE AND PROJECT REPORT**

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critically analyzed by the faculty guide and corrected by the student at each stage.

### **PROJECT FILE**

The Project File may be a very useful tool for undertaking an assignment along-with a normal semester, an exploratory study, sponsored projects, a project undertaken during summer period or any other period as per curricula where the researcher is working with a company/organization. The project/ assignment may also be a part of the bigger research agenda being pursued by a faculty/ institution/ department

The Project File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation. This file may be considered in continuous assessment.

#### **In general, the File should be comprehensive and include:**

1. A short account of the activities that were undertaken as part of the project;
2. A statement about the extent to which the project has achieved its stated objectives;
3. A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;
4. Any activities planned but not yet completed as part of the project, or as a future initiative directly resulting from the project;
5. Any problems that have arisen and may be useful to document for future reference.

## **PROJECT REPORT**

The Project Report is the final research report that the student prepares on the project assigned to him. In case of sponsored project the lay out of the project could be as prescribed by the sponsoring organization. However, in other cases the following components should be included in the project report:

### **Title or Cover Page**

The title page should contain Project Title; Student's Name; Programme; Year and Semester

and Name of the Faculty Guide.

### **Acknowledgement(s)**

Acknowledgment to any advisory or financial assistance received in the course of work may

be given. It is incomplete without student's signature.

### **Abstract**

A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project. It should not exceed more than 1000 words.

### **Table of Contents**

Titles and subtitles are to correspond exactly with those in the text.

### **Introduction**

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

### **Materials and Methods**

This section should aim at experimental designs, materials used (wherever applicable). Methodology should be mentioned in details including modifications undertaken, if any. It includes organization site(s), sample, instruments used with its validation, procedures followed and precautions.

### **Results and Discussion**

Present results, discuss and compare these with those from other workers, etc. In writing this section, emphasis should be laid on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and

maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary, do not write in “point” form.

While presenting the results, write at length about the various statistical tools used in the data interpretation. The result interpretation should be simple but full of data and statistical analysis. This data interpretation should be in congruence with the written objectives and the inferences should be drawn on data and not on impression. Avoid writing straight forward conclusion rather; it should lead to generalization of data on the chosen sample.

Results and its discussion should be supporting/contradicting with the previous research work in the given area. Usually one should not use more than two researches in either case of supporting or contradicting the present case of research.

### **Conclusion(s) & Recommendations**

A conclusion should be the final section in which the outcome of the work is mentioned briefly.

Check that your work answers the following questions:

1. Did the research project meet its aims (check back to introduction for stated aims)?
2. What are the main findings of the research?
3. Are there any recommendations?
4. Do you have any conclusion on the research process itself?

### **Implications for Future Research**

This should bring out further prospects for the study either thrown open by the present work or with the purpose of making it more comprehensive.

### **Appendices**

The Appendices contain material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

### **References**

References should include papers, books etc. referred to in the body of the report. These should be written in the alphabetical order of the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

### **Examples:**

For research article:

Voravuthikunchai SP, Lortheeranuwat A, Ninrprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichiacoli* O157: H7. *Clin Microbiol Infect* ,8(suppl 1): 116–117.

For book:

Kowalski, M. (1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), 7: 63-67

### **The Layout Guidelines for the Project File & Project Report:**

1. A4 size Paper
2. Font: Arial (10 points) or Times New Roman (12 points)
3. Line spacing: 1.5
4. Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

### **ASSESSMENT OF THE PROJECT FILE AND THE PROJECT REPORT**

Essentially, the assessment will be based on the quality of the report, the technical merit of the project and the project execution. Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project. Project execution is concerned with assessing how much work has been put in.

The Project should fulfill the following *assessment objectives*:

1. Range of Research Methods used to obtain information
2. Execution of Research
3. Data Analysis (Analyze Quantitative/ Qualitative information)
4. Quality Control
5. Conclusions

#### **Assessment Scheme:**

##### **Continuous Evaluation:**

40% (Based on punctuality, regularity of work, adherence to plan and methodology, refinements/ mid-course corrections etc. as reflected in the Project File.)

##### **Final Evaluation:**

60% (Based on the Documentation in the file, Final report layout, analysis and results, achievement of objectives, presentation/ viva)

**It is recommended that the Final evaluation should be carried out by a panel of evaluators.**

# MATERIALS SCIENCE & TECHNOLOGY

## Syllabus - Semester First

### FUNDAMENTALS OF MATERIALS SCIENCE

**Course Code: PHY2151**

**Credit Units: 03**

**Course Objective:**

The objective of this course is to introduce the students with the basics of the materials science and physical phenomenon.

**Course Contents:**

**Module-I: Basics of Crystal Structure**

Space lattice and unit cells, Crystal system, Symmetry operation, Structures of common metallic and ceramic materials, Packing fraction, coordination number, Crystallographic points, directions and planes, Linear and planar densities, Structure determination using X-ray diffraction and Braggs law, single crystal and polycrystalline materials, non-crystalline materials and glass transition temperature,

**Module-II: Bonding in Solids and Imperfections**

Forces between Atoms: Mechanism of Bond Formation and Bond Energy, Primary bonding in solids viz. ionic, covalent and metallic bonds, Secondary bonding, Perfect and imperfect crystal, Point defects in metals and ceramics, Frenkel and Schottky defects, Color centres, Dislocations: edge and screw dislocation, Interfacial defects, Volume defects,

**Module-III: Diffusion and Alloy Systems**

Diffusion and its types, Diffusion mechanisms, Diffusion Coefficient: Fick's Laws of Diffusion, Factors affecting diffusion, Applications of diffusion, Alloy systems, Solid solutions: Substitutional and Interstitial, The families of engineering alloys, Hume-Rothery's Rules, Intermediate solid solutions.

**Module-IV: Phase diagrams and phase transformation**

Phase, Phase equilibrium, Phase rule, Unary and binary phase diagrams, Interpretation of phase diagrams, Phase diagrams of some important metals and ceramics, microstructure changes during cooling, lever rule, invariant reactions, iron-iron carbide phase diagram. Phase transformation, Nucleation and growth of phases, Introduction to TTT curves, heat treatment processes

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Exam; A: Attendance

**Text and references:**

## Syllabus - Semester Second

### CLASSIFICATION & SELECTION OF MATERIALS

**Course Code: PHY2251**

**Credit Units: 03**

**Course Objective:**

The objective of the course is to introduce and familiarize the students with the different classes of engineering and advanced materials to the students.

**Course Contents:**

**Module-I: Metals and Alloys**

Metals, Alloys (ferrous and non-ferrous), types of steel, cast iron, High temperature steels, properties and applications.

Aluminum and its alloys- physical, chemical and mechanical properties, magnesium, titanium alloys - microstructural features, properties and applications.

Copper and its alloys: classification, physical, chemical and mechanical properties; lead, tin, zinc, silver, gold alloys - microstructural features - properties and applications.

**Module-II: Ceramics and glasses**

Ceramics: bonding, crystal structure and defects; structure of silicates; polymorphic transformations.

Non crystalline materials - structure, requirement for glass formation, Zachariasen rules, viscosity based transition points, devitrification; glass forming methods; Unary; binary and ternary systems.

**Module-III: Composites and Polymers**

Composites: Introduction, classification, bonding and failure criteria. Reinforcing materials, different processing methods, novel applications.

Polymers: Introduction, comparison with metals and ceramics - classification, Polymerization, molecular weight determination, Properties, processing and applications.

**Module-IV: Advanced materials**

Biomaterials: Introduction, need for biomaterials; Property requirements; Metallic, ceramic and polymeric implants, composites as biomaterials; applications.

Superalloys, Iron, nickel and cobalt based superalloys, Shape memory alloys, low temperature materials.

Nano materials – Concept, scale /dimensional aspects, materials and coatings for wear resistance.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Exam; A: Attendance

## Syllabus - Semester Third

### PROPERTIES OF MATERIALS

**Course Code: PHY2351**

**Credit Units: 03**

**Course Objective:**

The objective of the course is to study the properties of the materials to be used in the different applications and to introduce the students to the basics of the structure property correlation in the materials

**Course Contents:**

**Module-I: Mechanical behavior**

Concept of stress and strain, tensile strength, compressive strength, yield point phenomenon, Elastic behavior of materials, elastic modulus, Anelastic and Viscoelastic behaviour, strengthening mechanism, work hardening, solid solution hardening, precipitation hardening, hardness, Failure mechanisms: fracture, creep and fatigue.

**Module-II: Electrical and dielectric properties**

Electricity conductivity, density of states, Fermi energy, Band theory of solids, metals, Semiconductors, Insulators, Semiconductors: Intrinsic and Extrinsic semiconductors, Factors affecting carrier mobility, hall-effect, carrier concentration of semiconductors

Dielectric Behavior: Capacitance, Types of Polarization, Frequency Dependence of the Dielectric Constant, Dielectric Strength, Ferroelectricity, Piezoelectricity, pyro-electricity Applications

**Module-III: Magnetic and Optical properties**

Introduction, Dia, Para Ferro, Antiferro and Ferrimagnetic materials. Effect of temperature on magnetic behavior, Domains and hysteresis, Soft and Hard magnetic materials. Application.

Optical properties: Light Interactions with Solids, Atomic and Electronic, Interactions, Optical properties of nonmetals, Opacity and translucency in insulators, Luminescence, LEDs, lasers, Light propagation in optical fibers

**Module-IV: Thermal Properties and corrosion resistance**

Introduction, Heat capacity, thermal expansion, Materials of Importance: Invar and Other Low-Expansion Alloys, Thermal Conductivity, Thermal Stresses

Introduction, Corrosion rates, Passivity, Environmental effects, Cause and Types of corrosion, Corrosion of ceramics and polymers, Corrosion Prevention.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Exam; A: attendance

# Syllabus - Semester Fourth

## MANUFACTURING PROCESSES FOR MATERIALS

**Course Code: PHY2451**

**Credit Units: 03**

**Course Objective:**

The different industrial processes used for the fabrication and preparation of the materials is introduced in this course.

**Course Contents:**

**Module-I: Introduction to manufacturing processes**

different approaches – technical and economic considerations – significance of material properties with respect to selection of manufacturing process

**Module-II: Processing techniques**

Conventional casting processes – advantages and limitations – melting practices – design of castings – special casting processes

Powder processing: pre-consolidation-shape forming processes; Fundamental Sintering mechanisms, various advanced sintering techniques.

**Module-III: Fabrication of materials**

Fabrication of materials by Rolling; forging; extrusion; drawing - sheet metal forming. Classification of rolling, extrusion, drawing, advantages and limitations of different fabrication processes.

**Module-IV: Conventional material joining processes**

Conventional material joining processes – concept of weldability – need for dissimilar joints- machining processes – concept of machinability – material examples – developments in machining processes

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Exam; A: Attendance

## Syllabus - Semester Fifth

### MATERIALS TESTING & CHARACTERIZATION

**Course Code: PHY2551**

**Credit Units: 03**

**Course Objective:**

The objective of the course is to introduce different materials testing and characterization techniques to the students.

**Course Contents:**

**Module-I: Introduction and Spectroscopic methods**

Introduction: Comparison of major techniques, Advantages and disadvantages; Spectroscopic methods: Atomic absorption spectrometry, Atomic fluorescence spectrometry, UV-Visible spectroscopy; Raman spectroscopy, Fourier transform infrared spectroscopy, XPS, UPS, Auger electron spectroscopy.

**Module-II: X-ray techniques and Optical Microscopy**

X-ray techniques: XRD, X-ray fluorescence spectroscopy, Wavelength dispersive spectroscopy (WDS); Energy dispersive spectroscopy (EDS),  
Optical Microscopy: Image formation, Resolution, Aberrations, Imaging modes, Specimen preparation, Confocal microscopy

**Module-III: Electron microscopy and Thermal analysis**

Electron microscopy: Scanning electron microscopy; Transmission electron microscopy, Electron diffraction, Scanning tunneling microscope, Atomic force microscope  
Thermal analysis: Thermo gravimetric analysis, Differential thermal analysis, Differential scanning calorimetry, Dynamic mechanical analysis, Thermo-mechanical analysis

**Module-IV: Electrical, magnetic and non-destructive testing**

Electrical and magnetic properties: Two probe and four probe methods for electrical characterization, Vibrating sample magnetometer (VSM),  
Non-destructive testing: Radiography, Ultrasonic, Acoustic emission, Thermography, Holography, Basic principles, Applications in airframe and rock.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Exam; A: Attendance.

# Syllabus - Semester Sixth

## MATERIALS AT NANOSCALE

**Course Code: PHY2651**

**Credit Units: 03**

### **Course Objective:**

The main objective of the course is familiarize the students to the exciting area of the nanotechnology and preparation, characterization of change in the materials properties at the nanoscale.

### **Course Contents:**

#### **Module-I: Introduction to Nano world:**

Introduction to Nanostructures: Carbon Nanotubes (CNT), Graphenes, Fullerenes, Nano Peapods, Quantum Dots and Semiconductor Nanoparticles Metal-based Nanostructures (Iron Oxide Nanoparticles) Nanowires, Polymer based nanostructures including dendrimers, Introduction to metal based nanostructures, Protein-based Nanostructures: Nanomotors etc.

#### **Module-II: Structure, properties and Bonding in Nanomaterials:**

Chemical Bonds (types and strength) Intermolecular Forces Molecular and Crystalline Structures, Hierarchical Structures, Bulk to Surface transition, surface reconstruction, Mechanical, Electronic, Optical, Magnetic and Thermal properties.

#### **Module-III: Synthesis & Methods of preparation of nanomaterials:**

Bottom -up Synthesis, Top-down Approach: Precipitation, Mechanical Milling, Colloidal routes, Self-assembly, Vapour phase deposition, MOCVD Sputtering, Evaporation, Bio-inspired synthesis, Nanocomposite fabrication, Nanolithography, Molecular Beam Epitaxy, Atomic Layer Epitaxy, MOMBE etc.

#### **Module-IV: Applications**

Nano-electronics, Nano optics, Nanoscale chemical-and bio-sensing Biological/biomedical applications, Photovoltaic, fuel cells, batteries and energy-related applications, High strength nanocomposites, Nanoenergetic materials

### **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Exam; A: Attendance

# PHARMACEUTICALS & COSMETIC SCIENCE

## Syllabus

### COSMETIC FORMULATION

**Course Code: CHY2351**

**Credit Units: 03**

**Course Objective:**

This course is intended to provide a comprehensive survey of ingredients fundamental to the cosmetic industry. The course will emphasize current trends in the selection of cosmetic ingredients. The chemistry and technology of cosmetic raw materials will be related to their behavioral properties as utilized in the construction of stable functional systems. In this way, it is intended to generate a better understanding of the contributions of ingredients to the performance of finished product formulations. Emphasis will be placed on recognizing and dealing with problem areas associated with the use of various ingredients. Safety considerations and other pertinent matters which can influence ingredient selection will be included in these discussions.

**Course Content:**

**Module I:**

Classification of raw materials and raw materials used in the cosmetic industry for the manufacture of finished products. Method of sampling, Indian Standard specification laid down for sampling and testing of various cosmetics in finished form by the bureau of Indian standards. Factors affecting stability of a formulation, ICH guidelines, Methods of stabilizations and Methods of stability testing. Concept of development of stability indicating analytical methods.

**Module II:**

Determination of Physical and chemical constants such as extractive values, moisture content, alcohol content, volatile oil content, ash values, bitterness values, foreign matters, and physical constants applicable to the lipid containing drugs. Microbial counts, bioburden and Pharmacopoeial microbial assays.

**Module III:**

Brief introduction of the following cosmetic preparation and a detailed study on their quality control: Shampoo, Tooth paste, skin powder, skin creams, hair creams, nail polish, after shave lotion, bath and toiletries, lipstick and hair dyes, perfumes, depilatories.

**Module IV:**

Packaging of cosmetics –Filling of solids, semisolids & liquids. Materials used for cosmetic packaging Rules & regulations and legal provisions for packaging & labeling.

**Examination Scheme:**

Components	CT	HA	S/V/Q	ATTD	EE
Weightage(%)	10	7	8	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, ATTD: Attendance EE: End Semester Examination

# INDUSTRIAL MANAGEMENT AND SAFETY PROCESSES

**Course Code: CHY2451**

**Credit Units: 03**

## **Course Objective:**

The curriculum is developed to help the students understand the basic functions & responsibilities of a manager, provide him tools and techniques of managing different activities of the business concerned and to understand & interpret the provisions of some of the important provisions related to patent, trademark etc. It also aims at minimizing the chances of risks, injuries and accidents by implementing risk management techniques and safety management operations, monitoring the operating systems and bolstering the safety measures of an industry in general. With the rise of natural disasters in and around our world, the importance of the safety of human capital, protection of the environment and conservation of existing assets of an industry is increasing, leading to growing relevance of these skills.

## **Course Contents:**

### **Module I:**

#### **Basic Concepts of Management Function of Management**

Planning, Organizing, Directing, Control, Decision-making, Budgeting, Inventory Management (IM) & Quality Control (QC), Meaning & Importance of Inventory management, Inventory models, Cost consideration, Economic order quantity model.

#### **Quality Management**

Meaning & definition of Quality-Quality control systems-quality assurance-planning for quality- total quality management (TQM) philosophy-implementation of TQM in service and manufacturing industries-national & international standards.

### **Module II:**

#### **Manufacturing Management**

Production planning & control, dynamics of material flow-inventory-bottlenecks and process variability, planning levels and time scales, forecasting-aggregate planning, synchronized manufacturing and theory of constraints-just in time production-shop floor performance monitoring.

### **Module III:**

#### **Safety in Chemical Process Industries**

Safety in industries; need for development; importance safety consciousness in Indian chemical industry; safety programmes, elements of safety programme; effective realization, economic and social benefits.Industrial safety- Chemical process industries; potential hazard; chemical and physical job safety analysis; high pressure; high temperature operation; dangerous and toxic chemicals; highly radioactive materials; safe handling and operation of materials and machineries; planning and layout.

## **Examination Scheme:**

# DRUG DESIGN

**Course Code: CHY2551**

**Credit Units: 03**

## **Course Objective**

The Principles of Drug Design course aims to provide students with an understanding of the process of drug discovery and development from the identification of novel drug targets to the introduction of new drugs into clinical practice. It covers the basic principles of how new drugs are discovered with emphasis on lead identification, lead optimization, classification and kinetics of molecules targeting enzymes and receptors, prodrug design and applications, as well as structure-based drug design methods. Recent advances in the use of computational and combinatorial chemistry in drug design will also be presented. The course is further enhanced with invited lectures on recent developments and applications of drug design principles in the pharmaceutical industry.

## **Course Content:**

### **Module I:**

**Introduction-** Definition of drug (WHO), classification of drugs, nomenclature of drugs, stereochemical aspects of drugs, definitions of terms commonly used in the chemistry of drugs, routes of drug administration and different dosage forms and applications

### **Module II:**

**Structure Activity Relationships in drug design-**Structure based drug design, ligand based drug design. Some case studies e.g. development of penicillin and ciprofloxacin. Target selection and lead identification, Natural product sources, Fermentation / Microbial sources, Synthetic, Introduction to Pharmacogenomics. Methods of conformational search used in pharmacophore mapping; catalyst/HipHop, DiscoTech, GASP, etc. with practical examples, ADME databases

### **Module III:**

**Molecular Modeling-** Energy minimization, geometry optimization, conformational analysis, Approaches and problems; Bioactive vs. global minimum conformations; Mechanism based Drug Design including SEX, MM, Molecular graphics.

### **Module IV:**

**QSAR-**Electronic effects; Hammett equation, Lipophilicity effects; Hansch equation, Steric Effects; Taft Equation; Experimental and theoretical approaches for the determination of physico-chemical parameters, parameter inter-dependence; Regression analysis, extrapolation versus interpolation, linearity versus non-linearity of different examples Free Wilson Analysis; The importance of biological data in the correct form; 2D – QSAR; 3D-QSAR-examples CoMFA and CoMSIA (any one).

### **Module V:**

**Molecular docking and dynamics-**Rigid docking, flexible docking, manual docking; Advantages and disadvantages of flex-X, flex-S, autodock and dock softwares with successful examples; Monte Carlo simulations and molecular dynamics in performing conformational search, docking etc. De novo drug design techniques.

**Examination Scheme:**

# APPLICATION OF NANOTECHNOLOGY IN MEDICINE

**Course Code: CHY2651**

**Credit Units: 03**

## **Course Objective:**

This course will focus on developing students' understanding of the fundamental properties, as well as synthesis and characterization of nanomaterials, coupled with their applications in nanomedicine. This course also provides a realistic approach and covers the basic concepts of chemistry, physics and biology in the behavior of molecules and molecular interaction. It also includes various experimental techniques used to characterize bio-nano systems, the nano scientific principle involved in the processing, fabrication and manipulation of nanostructures and nanoparticles .

## **Course Content:**

### **Module I:**

Introduction to nanomedicine-Overview of nanotechnology from medical perspective, different types of nanobiomaterials and their biomedical applications, and cell nanostructure interactions, Synthesis, characterization, and properties of smart nanomaterials, Surface modification/bio functionalization of nanomaterials

### **Module II:**

Nanocarriers (e.g. liposomes, polymer capsules, polymer nanoparticles, porous materials, nanogels, dendrimers, microemulsions, inorganic nanoparticles, carbon nanotubes, lipoproteins, solid lipid nanoparticles) for drug delivery applications, Stimuli-responsive smart nanomaterials, Nanomaterials in different imaging (e.g.fluorescence and MRI) applications

### **Module III:**

BioMEMS, Lab-on-a-Chip, nano/microfluidics, biosensors, Regenerative medicine, including tissue engineering, cell and gene therapy, DNA-based nanostructures, Cellular nanomachines, Toxicology of nanomaterials

## **Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>HA</b>	<b>S/V/Q</b>	<b>ATTD</b>	<b>EE</b>
<b>Weightage(%)</b>	10	7	8	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, ATTD: Attendance EE: End Semester Examination

# INTELLECTUAL PROPERTY RIGHTS AND QUALITY ASSURANCE

**Course Code: CHY2751**

**Credit Units: 03**

## **Course Objective:**

This course will focus on intellectual property rights and patenting & Indian patent law for pharmaceutical industry.

## **Course Content:**

### **Module I:**

Requirements of GMP, cGMP, GLP, USFDA, WHO Guidelines and ISO 9000 Series, Drugs and Cosmetics Acts and rules, Drug Regulatory Affairs, Documentation- Protocols, Forms and Maintenance of records in Pharmaceutical industry, Preparation of documents for New Drug Approval and Export Registration, Processing and its application, Intellectual Property Rights (Patent, Copyright and Trademarks), Standard Operating Procedure (SOP) for different dosage forms.

### **Module II:**

Concepts in Validation, Validation of manufacturing, Analytical and Process Validation and its Application, Basic concepts of Quality Control and Quality Assurance Systems, Source and Control of Quality Variation of Raw Materials: Containers, Closures, Personnel, Environmental, Etc., In-process quality tests, IPQC problems in Pharmaceutical industries. ICH Guidelines, Sampling Plans, Sampling and Characteristic Curves, Master Formula generation and Maintenance.

### **Module III:**

#### **Patenting, Indian patent law and pharmaceutical industry**

Introduction of (IPR) Intellectual Property Rights, Patents, Design, Trademarks, Copyrights, Geographical Indications etc

Patent System: Definition of Patent, Criteria for obtaining patent (Novel, Non-obvious Applications) Filing and Processing of Patents: General procedure for securing patents in India. Case studies Opposition to Grant of Patent, Patent infringement: Silent features of Indian Patents Act 1970 with latest amendments with special reference to- Product & Process Patents, Provision of compulsory license, Exclusive Marketing Right, The Term of Patent, Patent offices in India; International convention relating to Intellectual Property - Establishment of WIPO - Mission and Activities -History - General Agreement on Trade and Tariff (GATT).

Case Studies on - Patents (Basmati rice, turmeric, neem, etc.) - Copyright and related rights - Trade Marks.

# PHARMACEUTICAL & COSMETICS SCIENCES LAB

Course Code: CHY2851

Credit Units: 03

List of Experiments (Any 15 Experiments are to be performed)

## Polymers

- Caprolactum from cyclohexanone .
- Synthesis of Nylon-6,10
- Preparation of Polystyrene.
- Study the morphology of polymers through optical microscopy.
- Preparation of Epoxy resin using Bisphenol-A and Epichlorohydrin.
- Determination of molecular weight of high polymer using viscosity method.
- Determination of melt flow index of polymers and Compare their Melt Flow Characteristics

## Dyes

- Preparation of Methyl Orange- An azodye.
- Preparation of Indigo

## Food Industry

- Separation of artificial colorants in confectionary using TLC.
- Determination of protein content of wheat flour.

## Cosmetic Products

- Shampoo
- Detergent
- Talc
- Lipstick
- Perfumes

## Drugs Analysis

- Preparation of Paracetamol and Aspirin
- Analysis of Drugs:
  - Novalgin
  - Sulfa-drugs
  - Paracetamol

## Examination Scheme:

Components	TA	LR	V	ATTD	EE
Weightage(%)	8	7	10	5	70

Note: TA-Teacher's Assessment, LR-Lab Record, V-Viva

# **POLYMER TECHNOLOGY**

## **OBJECTIVES OF PROGRAM**

The term polymer refers to two different classes of materials – Plastic and Rubber. Polymer engineering uses the theory and knowledge of chemistry in order to handle production and use of polymers. The primary aim of this program is to train students to fulfill the constantly growing requirements of the polymer- based industry. The course provides an in-depth understanding of traditional commodities, such as plastics and specialty polymers, which have wide applications in the biomedical research and pharmaceutical fields. In India, the demand for polymer engineers has increased. After successful completion of the course, one can take up a career in sectors such as automotive, aerospace, packaging, power transmission, and other related manufacturing sectors. Industries based on manufacturing, processing and design of generic polymer (plastics, rubber, composites) also employ such students.

# POLYMER TECHNOLOGY

## Syllabus - Semester First

### POLYMERIZATION

**Course Code: PTE2151**

**Credit Units: 03**

**Course Objective:**

This course provide principles, mechanism and techniques of polymerization. They will also learn about kinetic of polymerization and copolymerization.

**Course Contents:**

**Module-I:** General Characteristics of Chain Growth Polymerization, Alkene Polymerization by Free radical, anionic and cationic initiators. Kinetics of Vinyl radical polymerization

**Module-II:** General Characteristics of Step Growth Polymerization. Chemistry of Step Growth. Polymerization, Kinetics and Statistics of Linear Stepwise Polymerization, Absolute reaction rates.

**Module-III:** Chemistry of Non-radical chain Polymerization, Anionic and Cationic Polymerization Co-ordination Polymerization, Ring Opening Polymerization

**Module-IV:** Copolymers, Types of copolymers, copolymerization, Kinetics of Copolymerization, Block and Graft Copolymerization, Cyclopolymerization.

**Module-V:** Polymerizations in homogenous & heterogenous systems, Diene and divinyl Polymerization Bulk, suspension, solution and emulsion polymerization

**Examination Scheme:**

Components	IA				EE	
	CT	Assignment	LR	Attendance	Theory	Practical
Weightage (%)	10	5	10	5	40	30

Note: IA –Internal Assessment, EE- External Exam, CT- Class Test, LR – Lab Record.

**Suggested Readings:**

- Textbook of Polymer Science, F. W. Billmeyer, John Wiley & Sons
- Polymer Science & Technology, J. R. Fried, Prentice Hall
- Polymer Science, V. R. Gowariker, New Age International
- Polymer Science & Technology, P. Ghosh, Tata McGrawHill
- Principles of Polymerization, Odian, Wiley India

# Syllabus - Semester Second

## WASTE PLASTIC RECYCLING

**Course Code: PTE2251**

**Credit Units: 03**

### Course Objective:

This course is beneficial to deal with different types of plastics waste, identification of plastics, segregation of plastic wastes, different types of recycling techniques, recycling of commingled plastic waste as well as various rules and regulation regarding plastic manufacturing, disposal and recycling.

### Course Contents:

**Module I:** Introduction, Thermoplastics & thermo sets, Terminology used in recycling, coding & labeling of plastic products for sorting and identification.

**Module-II:** Organizations involved in plastic recycling. Types of recycling- Primary recycling, secondary recycling, tertiary recycling and quaternary recycling, recycling of mixed waste, recycling of nonwoven sacks

**Module-III:** Residential recycling: collection containers, education and production, recovery of resins, collection vehicles, role of material recovery facilities (MRF), role of MRF.

**Module-IV:** Plastic separation, working MRF, case studies, collection and separation systems.

**Module-V:** Recycling of PET, polyethylene, polystyrene, Polyvinyl chloride, Engineering Thermoplastics, Acrylics, Thermo sets.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

### Suggested Readings:

- Plastics Recycling; Ehrig, Hanser.
- Rubber Recycling: De, IsayevKhait, CRC Press.
- Feedstock Recycling & Pyrolysis of waste plastics, Scheirs&Kaminskey,, Wiley Interscience,
- Handbook of Plastic Technology, Vol, 2, Allen &Baker, CBS Publishers.
- Plastic Fabrication & Recycling, Chanda& Roy, CRC Press,

# Syllabus - Semester Third

## POLYMER TECHNOLOGY

**Course Code: PTE2351**

**Credit Units: 03**

### Course Objective:

In this course students will learn about preparation, properties and applications of different types of plastics, especially thermoplastics and thermosetting plastics.

### Course Contents:

**Module-I:** Preparation, properties and applications of Polyolefins- Polyethylene, Polypropylene, Polyisobutylene, Vinyl Polymers: Polystyrene, Polyvinylchloride, Polyvinylacetate, Poly(methylmethacrylate), Polyacrylonitrile, Poly(acrylic acid)

**Module-II:** Preparation, properties and applications of Diene Polymers- Polybutadiene, Styrene-Butadiene Rubber, Nitrile Rubber, Polyisoprene, Polychloroprene.

**Module-III:** Preparation, properties and applications of Polyesters -Poly(ethylene terephthalate), Polycarbonates, Polyester resins.

**Module-IV:** Preparation, properties and applications of Polyamides- Nylons, Polyimides, Polyurethanes, Raw Materials, PU elastomers, PU Foams, PU coatings, adhesives and sealants.

**Module-V:** Preparation, properties and applications of Epoxy Polymers - Types of epoxies, Taffy Process, Hardness, Phenolics - Novolacs & Resoles.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

### Readings:

- Polymer Synthesis: Theory & Practice, Braun, Springer International
- An Introduction to Plastics, Elias, Wiley Interscience
- Principles of Polymerization, G. Odion, Wiley Interscience
- Synthetic Polymers, Feldman & Barbalate, Chapman & Hall
- Synthesis of Polymers, D. Schluter, Wiley VCH

# Syllabus - Semester Fourth

## RUBBER & TYRE TECHNOLOGY

**Course Code: PTE2451**

**Credit Units: 03**

**Course Objective:**

At the end of the course students should be able to understand different types of rubbers, different additives used in rubber industries, compounding of rubber, manufacturing of tyres and design of tyres

**Course Contents:**

**Module-I:** Rubber Technology: Introduction, natural and synthetic rubbers, filler systems, stabilizer systems, vulcanization system, compounding ingredients, environmental requirements in 4 compounding.

**Module-II:** Manufacture of nitrilerubber ,chloroprene rubber, diene rubber, SBR rubbers.

**Module-III:** Tyre Technology- Introduction, development of tyres, classification and types of tyres, tyre components, pneumatic tyres.

**Module-IV:** Tyre& tread design, tread pattern, carcass design, bead design, Unit V: Tyre testing techniques, tubeless tyres, colouredtyres.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

**Suggested Readings:**

- Handbook of Plastics Testing & Failure Analysis, Vishu Shah, Wiley Interscience
- Polymer Testing & Evaluation of Plastics, Mathur&Bhardwaj, Allied Publishers
- Encyclopedia of Polymer Science & Technology, Herman F. Mark, Wiley Interscience
- Fatigue, Testing & Analysis, Lee, Elsevier
- Introduction to Plastics & Composites, E. Miller, Marcel Dekker

## Syllabus - Semester Fifth

### POLYMERIC NANO COMPOSITES

**Course Code: PTE2551**

**Credit Units: 03**

**Course Objective:**

This module deals with introduction, classification, preparation, properties, characterization and applications of polymer nanocomposites.

**Course Contents:**

**Module-I: PREPARATION OF SYNTHESIS:** Polymer Nanocomposites, Nanocomposites Preparation and Synthesis, Polymer Matrices: Thermoplastics, Thermosets, Elastomers, Natural and Biodegradable Polymers

**Module-II: RHEOLOGY OF NANOCOMPOSITES :** Rheology of Multiphase Systems, Rheology of Polymer / clay nanocomposite, Recent studies on Rheology, Measure Techniques, Steady shear Rheology, Dynamic Rheology, Non Linear Viscoelastic properties, Extensional Rheology, Rheological modeling of Nanocomposites.

**Module-III: PROCESSING OF NANOCOMPOSITES :** Extrusion, Injection Moulding, Blow Moulding, Foaming, Rotational Moulding

**Module-IV: STRUCTURE AND PROPERTIES CHARACTERIZATION:** Scattering Techniques, Microscopic Techniques, Spectroscopic Techniques, Spectroscopic Techniques, Chromatography, Solid-state characterization: Mechanical Testing, Thermal Characterization

**Module-V: APPLICATION OF POLYMER NANOCOMPOSITES:** Different applications of Thermoplastics, Thermosets, Biodegradable Polymers nanocomposites.

**Examination Scheme:**

	IA				EE	
Components	CT	Assignment	LR	Attendance	Theory	Practical
Weightage (%)	10	5	10	5	40	30

Note: IA –Internal Assessment, EE- External Exam, CT- Class Test, LR – Lab Record.

**Suggested Readings:**

- Luigi Nicolis& Gianfranco Carotenuto “Metal -Polymers Nanocompsites” A John Wiley & Sons, Inc Publication 2005
- Y.C. Ke& P. Stroeve“ Polymer-Layered Silicate and Silica Nanocomposites- Elsevier, 2005 3. L.A. Utracki“ Clay-Containing Polymeric Nanocomposites” Rapra Technology Limited, 2004

# Syllabus - Semester Sixth

## BIO-MEDICAL PLASTICS

**Course Code: PTE2651**

**Credit Units: 03**

**Course Objective:**

In this module student will learn about introduction, properties, processing and applications of different polymeric materials used in biomedical and tissue engineering.

**Course Contents:**

**Module-I:**

Synthetic and Natural biomaterials used in Biomedical applications

- i) Polyolefin's, Polyamides, Acrylic Polymers, Fluorocarbons, Polyesters, Engg. Plastics.
- ii) Collagen, Polysaccharides, Proteins etc.

**Module-II:**

Human applications of Plastics : Cardiovascular iMTPLants, Dental IMTPLants, Role of plastics in Ophthalmology, Hydro gels, Drug Delivery Systems, Sutures, Burn Dressings and Artificial Skin. Hernia Mesh, adhesives and Sealants, Artificial organs and devices, Blood bags, Condoms etc.

**Module-III:**

Blood – polymer interactions and blood compatibility, Chemical and biochemical degradation of polymers, Tissue engineering and polymers.

**Module-IV:**

Testing and evaluation: in-vitro-/vivo; Standards in product development and regulations; Ethical and sociological issues.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

**Suggested Readings:**

# COMPUTER FORENSICS & CYBER SECURITY

## Programme Structure

Course Code	Course Title	Lectures (L) Hours per week	Tutorial (T) Hours per week	Practical (P) Hours per week	Total Credits
FCH2151	Computer Forensics	2	-	2	3
FCH2251	Ethics, Policies and the IT Act	2	1	-	3
FCH2351	Behavioral Biometrics	2	1	-	3
FCH2451	Implementation Practical on MATLAB	-	-	6	3
FCH2551	Cyber Security	2	-	2	3
FCH2651	Incident Response Management	2	1	-	3
	<b>TOTAL</b>				<b>18</b>

# Syllabus - Semester First

## COMPUTER FORENSICS

**Course Code: FCH2151**

**Credit Units: 3**

### Course Objective:

- To correctly define and cite appropriate instances for the application of computer forensics Correctly collect and analyze computer forensic evidence
- Identify the essential and up-to-date concepts, algorithms, protocols, tools, and methodology of Computer Forensics

### Course Content:

#### Module-I: Cyber Crime and computer crime

Introduction to Digital Forensics, Definition and types of cybercrimes, electronic evidence and handling, electronic media, collection, searching and storage of electronic media, introduction to internet crimes, hacking and cracking, credit card and ATM frauds, web technology, cryptography, emerging digital crimes and modules.

#### Module-II: Basics of Computer

Computer organisation, components of computer- input and output devices, CPU, Memory hierarchy, types of memory, storage devices, system softwares, application softwares, basics of computer languages.

#### Module-III: Computer Forensics

Definition and Cardinal Rules, Data Acquisition and Authentication Process, Windows Systems-FAT12, FAT16, FAT32 and NTFS, UNIX file Systems, mac file systems, computer artifacts, Internet Artifacts, OS Artifacts and their forensic applications

#### Module-IV: Forensic Tools and Processing of Electronic Evidence

Introduction to Forensic Tools, Usage of Slack space, tools for Disk Imaging, Data Recovery, Vulnerability Assessment Tools, Encase and FTK tools, Anti Forensics and probable counters, retrieving information, process of computer forensics and digital investigations, processing of digital evidence, digital images, damaged SIM and data recovery, multimedia evidence, retrieving deleted data: desktops, laptops and mobiles, retrieving data from slack space, renamed file, ghosting, compressed files.

### Examination Scheme:

Components	CT	HA	S/V/Q	ATTD	EE
Weightage(%)	10	7	8	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, ATTD: Attendance EE: End Semester Examination

### Text & References:

- Selected readings from various sources as assigned
- Online Course management System: <https://esu.desire2learn.com/>

## **COMPUTER FORENSIC PRACTICAL**

### List of Exercises

- Live Case Studies
- Open Source Forensic Tools
- Disk Forensics and Data Recovery
- Steganography
- Key loggers
- Network monitors
- Flowchart management
- UML diagrams
- eCommerce on websites

# Syllabus - Semester Second

## ETHICS, POLICIES AND THE IT ACT

**Course Code: FCH2251**

**Credit Units: 3**

**Course Objective:**

To understand the ethics and laws by which cyberspace is governed in our country and worldwide.

**Course Contents:**

**Module-I:**

Basics of Law and Technology, Introduction to Indian Laws, Scope and Jurisprudence, Digital Signatures, E Commerce-an Introduction, possible crime scenarios, law coverage, data interchange, mobile communication development, smart card and expert systems

**Module-II:**

Indian Laws, Information Technology Act 2000, Indian Evidence Act, India Technology Amendment Act 2008, Indian Penal Code , Computer Security Act 1987, National Information Infrastructure Protection Act 1996, Fraud Act 1997, Children Online Protection Act 1998, Computer Fraud and Abuse Act 2001

**Module-III:**

Intellectual Property, IP Theft, Copyright, Trademark, Privacy and Censorship, Introduction to Cyber Ethics, rights over intellectual property

**Module-IV:**

Introduction to International Laws, International Cyber Laws, Policy and Compliance, Corporate IT Policy Formulations, Compliance Auditing

**Examination Scheme:**

Components	CT	HA	S/V/Q	ATTD	EE
Weightage(%)	10	7	8	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, ATTD: Attendance EE: End Semester Examination

**Text & References:**

- Doctrine of IT Act of India, Government of India Publication (2000)

# Syllabus - Semester Third

## BEHAVIORAL BIOMETRICS

**Course Code: FCH2351**

**Credit Units: 3**

### Course Objective

- To understand techniques used for building speech recognition systems
- To understand the components, issues and approaches for constructing spoken dialogue systems
- To learn the syntax and semantics of speech recognition.
- To have an awareness on the current state-of-the-art in speech recognition
- Know the basic parameters of human gait
- Characterize normal human gait
- Identify type of gait disorder and pathologies
- Know the methods of gait analysis and stability and postural control assessment used in clinical practice

### Course Content:

#### Module-I: BIOMETRICS FUNDAMENTALS

Introduction – Benefits of biometric security – Verification and identification Basic working of biometric matching – Accuracy – False match rate – False non-match rate – Failure to enroll rate – Derived metrics – Layered biometric solutions.

#### Module-II: SPEECH RECOGNITION

Introduction-Regular Expressions and automata-Words and transducers-N-grams Part of speech tagging-Hidden Markov and Entropy models, Speech-Phonetics-Speech synthesis-Automatic speech recognition-Speech Recognition advanced topics-Computational Phonology

#### Module-III: SPEECH PARSING&SEMANTICS OF SPEECH RECOGNITION

Formal grammar of English-Syntactic parsing-Statistical parsing-Features and Unification-Language and complexity, Semantics and Pragmatics-The representation of meaning-Computational Semantics-Lexical semantics- Computational lexical semantics-Computational discourse

#### Module-IV: GAIT PATTERN ANALYSIS

Fundamentals of Gait Analysis , Fundamentals of Gait Analysis, Gait Analysis: Considerations and Terminology , Motion Analysis Systems , Ground Reaction Forces , Introduction to EMG ,Motion Analysis , Normal Gait: Ankle & Foot Complex , Normal Gait: Knee Joint , Normal Gait: Hip Joint ,Normal Gait: Control of the whole body center of mass, Pathological Gait Voice Scan - Features – Components Operation (Steps) – Competing voice Scan (facial) technologies – Strength and weakness.

### Examination Scheme:

Components	CT	HA	S/V/Q	ATTD	EE
Weightage(%)	10	7	8	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, ATTD: Attendance EE: End Semester Examination

# Syllabus - Semester Fourth

## IMPLEMENTATION PRACTICAL ON MATLAB

**Course Code: FCH2451**

**Credit Units: 3**

### List of Exercises

- Speech Sample Collection
- Speech sample Registration
- Speech Sample Analysis: Forensic Freeware
- Biometric Sample Collection: Face, Fingerprint, Iris, Signature
- Biometric Sample Registration
- Motion Analysis: Capture
- Motion Analysis: Examination

### Examination Scheme:

Components	TA	LR	V	ATTD	EE
Weightage(%)	10	7	8	5	70

Note: TA-Teacher's Assessment, LR-Lab Record, V-Viva

# Syllabus - Semester Fifth

## CYBER SECURITY

**Course Code: FCH2551**

**Credit Units: 3**

### Course Objective:

- Understand the threats in networks and security concepts.
- Apply authentication applications in different networks.
- Understand security services for email.
- Awareness of firewall and its applications.

### Course Content:

#### Module-I:

Ethical hacking, Attack Vectors, Cyberspace and Criminal Behaviour, Clarification of Terms, Traditional Problems associated with Computer Crimes, Realms of Cyber world, brief history of the internet, contaminants and destruction of data, unauthorized access, computer intrusions, white-collar crimes, viruses and malicious code, virus attacks, pornography, software piracy, mail bombs, exploitation, stalking and obscenity in internet, Cyber psychology, Social Engineering.

#### Module-II:

Introduction to Digital forensics, Forensic software and handling, forensic hardware and handling, analysis and advanced tools, forensic technology and practices, Biometrics: face, iris and fingerprint recognition, Audio-video evidence collection, Preservation and Forensic Analysis.

#### Module-III:

Investigation Tools, e-discovery, EDRM Models, digital evidence collection and preservation, email investigation, email tracking, IP tracking, email recovery, search and seizure of computer systems, password cracking

#### Module-IV:

Forensic Analysis of OS artifact, Internet Artifacts, File System Artifacts, Registry Artifacts, Application Artifacts, Report Writing, Mobile Forensic- identification, collection and preservation of mobile evidences, social media analysis, data retrieval, Email analysis from mobile phones.

### Examination Scheme:

Components	CT	HA	S/V/Q	ATTD	EE
Weightage(%)	10	7	8	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, ATTD: Attendance EE: End Semester Examination

## **CYBER SECURITY PRACTICAL**

### **List of Exercises**

- File System Analysis
- Log Analysis
- Network Devices: Modem, Router, Switch, Hub, Repeater
- SQL Injection
- Cross Site Scripting
- Click Jacking
- TCP/IP Attacks
- Botnet analysis
- Malware Analysis
- IR Objectives and Team Building
- Email Tracking
- IP Tracking
- Cyber psychology and Social Engineering Test Profiling

# Syllabus - Semester Sixth

## INCIDENT RESPONSE MANAGEMENT

**Course Code: FCH2651**

**Credit Units: 3**

**Course Objective:**

- Defining an incident relating to cyber security.
- Recognizing an Incident
- Protocols for first on crime scene investigations.
- Government approved handling of computer crime scenarios.

**Course Content:**

**Module-I:**

Cyber Incident Statistics, Computer Security Incident, Information as Business Asset, Data Classification, Information Warfare, Key Concepts of Information Security, Vulnerability, Threat and Attacks, Types of Computer Security Incidents, Examples of Incidents, Incidents Categorization, Low Level Incident, Mid Level Incident, High Level Incident

**Module-II:**

Incident Prioritization, Incident Response, Incident Handling, Disaster Recovery, Technologies and Impacts, Virtualization and Impacts, Estimated Cost of an Incident, Incident Reporting Organizations, Vulnerability Reports, Incident Identification, Need for Incidents Response, Goals for Incident Response,

**Module-III:**

Incident Response and Handling Process; Step 1: Identification; Step 2: Incident Recording; Step 3: Initial Response; Step 4: Communicating the Incident; Step 5: Containment; Step 6: Formulating a Response Strategy; Step 7: Incident Classification; Step 8: Incident Investigation; Step 9: Data Collection; Step 10: Forensic Analysis, Step 11: Evidence Protection; Step 12: Notify External Agencies; Step 13: Eradication; Step 14: System Recovery; Step 15: Incident Documentation; Step 16: Incident Damage and Cause assessment; Step 17: Review and Update the Response Policies

**Module-IV:**

Incident Response Team development, Security Awareness and Training Checklist, Incident Management, Purpose of Incident management, Incident management process, Incident management team, Incident Response Team and Members, Member Goals and Responsibilities, Developing Skills in Incident Response Personnel, Incident Response Team Structure, Team Dependencies and Services.

**Examination Scheme:**

Components	CT	HA	S/V/Q	ATTD	EE
Weightage(%)	10	7	8	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, ATTD: Attendance EE: End Semester Examination

# DATA ANALYTICS

## Syllabus - Semester First

### OPTIMIZATION TECHNIQUES

Course Code: MTH2151

Credit Units: 03

#### Course Objective:

The problems in optimization are the most common applications of mathematics. The main aim of this course is to present different methods of solving optimization problems in the areas of linear programming.

#### Course Contents:

##### Module I: Introduction to OR

Historical Development of OR, OR models and Advantages, Methodology of OR, Advantages of OR, Features of OR solution, Applications and Scope of OR

##### Module II: Linear Programming Problems (LPP)

Definition of LPP, General Structure of Linear Programming, Formulation of LPP, Advantages and Limitations of Linear Programming, Graphical Solutions of Linear Programming Problems. Simplex Method, Degeneracy, Duality.

##### Module III: Transportation Problems

Introduction to Transportation Model, Degeneracy in TP, Solution Techniques of TP, Different Methods for Obtaining Initial Basic Feasible Solutions viz. Matrix Minima Method, Row Minima Method, Column Minima Methods, Vogel's Approximation Method, Techniques for Obtaining Optimal Basic Feasible Solution – Stepping Stone and MODI Method. **Assignment Problems:** Definition, Types of Assignment Problems, Hungarian Method for AP.

##### Module IV: Game Theory

Concept of Game problem. Rectangular games. Pure strategy and Mixed strategy. Saddle point and its existence. Optimal strategy and value of the game. Algebraic method, Graphical method and Dominance method of solving Rectangular games. Inter-relation between the theory of Games and L.P.P

#### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# Syllabus - Semester Second

## STATISTICS

Course Code: MTH2251

Credit Units: 03

### Course Objective:

Statistics plays an important role in data analytics. The main aim of this course is to help the students to read, classify and then interpret the data given to them and draw conclusions.

### Module I: Data and Representation

Introduction to Statistics, Collection of data, classification and tabulation of data, Types of data: Primary data, Secondary data, Presentation of data Diagrammatic and Graphical Representation: Histogram, frequency curve, frequency polygon, Ogive curves, stem and leaf chart.

### Module II: Measures of Central Tendency and Dispersion

Arithmetic Mean (A.M.) Definition, Mode, Median, Partition Values : Quartiles, Deciles and Percentiles, Box Plot, Percentile ranks. Means of transformed data, Geometric Mean (G.M.) Definition, Harmonic Mean (H.M.), Weighted Mean : Weighted A.M., G.M. and H.M.  
Range, Mean deviation Mean square deviation, Variance and Standard Deviation, Combined variance (derivation for 2 groups), Combined standard deviation.

### Module III: Correlation and Regression

Bivariate normal distribution, types, importance, methods of measuring correlation-scatter diagram, Karl Pearson's Coefficient of Correlation and Spearman's rank Correlation. Regression lines, Difference between regression and correlation, uses of Regression.

### Module IV : Sampling theory and tests of significance

Methods of sampling (Description only): Simple random sampling with and without replacement (SRSWR and SRWOR) stratified random sampling, systematic sampling.  
Tests of significance – z, t, chi-square and F.

### Examination Scheme:

Components	CD	CT1	SA	A	EE
Weightage	5	10	10	5	70

CD= Class Discussion, CT 1= Class Test, SA= Short Assignments, A= Attendance. EE= External Examination

# Syllabus - Semester Third

## DATA MINING

**Course Code: MTH2351**

**Credit Units: 03**

### **Module 1: DATA WAREHOUSING**

Data warehousing Components –Building a Data warehouse — Mapping the Data Warehouse to a Multiprocessor Architecture – DBMS Schemas for Decision Support – Data Extraction, Cleanup, and Transformation Tools –Metadata.

### **Module 2: BUSINESS ANALYSIS**

Reporting and Query tools and Applications – Tool Categories – The Need for Applications – Cognos Impromptu – Online Analytical Processing (OLAP) – Need – Multidimensional Data Model – OLAP Guidelines – Multidimensional versus Multirelational OLAP – Categories of Tools – OLAP Tools and the Internet.

### **Module 3 : DATA MINING , CLUSTERING AND APPLICATIONS AND TRENDS IN DATA MINING**

Introduction – Data – Types of Data – Data Mining Functionalities – Interestingness of Patterns – Classification of Data Mining Systems – Data Mining Task Primitives – Integration of a Data Mining System with a Data Warehouse – Issues –Data Preprocessing, Cluster Analysis - Types of Data – Categorization of Major Clustering Methods – Kmeans – Partitioning Methods – Hierarchical Methods - Density-Based Methods –Grid Based Methods – Model-Based Clustering Methods – Clustering High Dimensional Data - Constraint – Based Cluster Analysis – Outlier Analysis – Data Mining Applications.

### **Module 4 : ASSOCIATION RULE MINING AND CLASSIFICATION**

Mining Frequent Patterns, Associations and Correlations – Mining Methods – Mining Various Kinds of Association Rules – Correlation Analysis – Constraint Based Association Mining – Classification and Prediction - Basic Concepts - Decision Tree Induction - Bayesian Classification – Rule Based Classification – Classification by Backpropagation – Support Vector Machines – Associative Classification – Lazy Learners – Other Classification Methods – Prediction

### **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# Syllabus - Semester Fourth

## DATABASE MANAGEMENT SYSTEM

Course Code: MTH2451

Credit Units: 03

### Module-I

**INTRODUCTION:** Introduction; An example; Characteristics of Database approach; Actors on the screen; Workers behind the scene; Advantages of using DBMS approach; A brief history of database applications; when not to use a DBMS. Data models, schemas and instances; Three-schema architecture and data independence; Database languages and interfaces; The database system environment; Centralized and client-server architectures; Classification of Database Management systems.

### Module-II

**ENTITY-RELATIONSHIP MODEL:** Using High-Level Conceptual Data Models for Database Design; An Example Database Application; Entity Types, Entity Sets, Attributes and Keys; Relationship types, Relationship Sets, Roles and Structural Constraints; Weak Entity Types; Refining the ER Design; ER Diagrams, Naming Conventions and Design Issues; Relationship types of degree higher than two.

### Module-III

**RELATIONAL MODEL AND RELATIONAL ALGEBRA:** Relational Model Concepts; Relational Model Constraints and Relational Database Schemas; Update Operations, Transactions and dealing with constraint violations; Unary Relational Operations: SELECT and PROJECT; Relational Algebra Operations from Set Theory; Binary Relational Operations : JOIN and DIVISION; Additional Relational Operations; Examples of Queries in Relational Algebra; Relational Database Design Using ER- to-Relational Mapping.

### Module-IV

**TRANSACTION MANAGEMENT:** The ACID Properties; Transactions and Schedules; Concurrent Execution of Transactions; Lock - Based Concurrency Control; Performance of locking; Transaction support in SQL; Introduction to crash recovery; 2PL, Serializability and Recoverability; Lock Management; Introduction to ARIES; The log; Other recovery-related structures; The write-ahead log protocol; Checkpointing; Recovering from a System Crash; Media Recovery; Other approaches and interaction with concurrency control.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

### TEXT BOOKS:

1. **Fundamentals of Database Systems** – Elmasri and Navathe, 5<sup>th</sup> Edition, Addison-Wesley, 2007
2. **Database Management Systems** – Raghu Ramakrishnan and Johannes Gehrke – 3<sup>rd</sup> Edition, McGraw-Hill, 2003.

### REFERENCE BOOKS:

2. **An Introduction to Database Systems** – C.J. Date, A. Kannan, S. Swamynatham, 8<sup>th</sup> Edition, Pearson Education, 2006.

# Syllabus - Semester Fifth

## INTRODUCTION TO FINANCIAL MODELLING

**Course Code: MTH2551**

**Credit Units: 03**

Prerequisites: Introduction to Probability Theory

Basic notions %G-% @ Cash flow, present value of a cash flow, securities, fixed income securities, types of markets.

Forward and futures contracts, options, properties of stock option prices, trading strategies involving options, option pricing using Binomial trees, Black %G-% @ Scholes model, Black %G-% @ Scholes formula, Risk-Neutral measure, Delta %G-% @ hedging, options on stock indices, currency options.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# Syllabus - Semester Sixth

## STATISTICAL QUALITY CONTROL

**Course Code: MTH2651**

**Credit Units: 03**

Total quality control in an industry. Quality planning, quality conformance, quality ad-herence. Quality assurance and quality management functions.

Control charts and allied techniques. Concept of quality and meaning of control. Concept of inevitability of variation-chance and assign-able causes. Pattern of variation. Principles of rational sub-grouping.

Different types of control charts. Concept of process capability and its comparison with design specifications, CUSUM charts.

Acceptance sampling. Sampling inspection versus 100 percent inspection. Basic concepts of attributes and variables inspection. OC curve, Single, double, multiple and sequential sampling plans, Management and organisation of quality control.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

**FLEXILEARN**

-Freedom to design your degree

**Curriculum & Scheme of Examination**

**2020**

**AMITY UNIVERSITY HARYANA**

**GURUGRAM**

# Bachelor of Science - Earth Science (Honors)

## Syllabus - First Semester

**Course:** Basics of Earth System Sciences

**Credit** : 3

**Semester:** I

**Course code** :ESC2101

**Course objective:** The purpose of the course is to develop a holistic understanding of the earth as a system. It attempts to illustrate the reasons for why things happen in nature the way they happen and how much humans have adapted and influenced the natural processes. It will give holistic understanding of linkages in system with a perspective of space and time in earth system.

### Module I:

The Universe: Concepts and origin; The Solar System and origin of planets; Terrestrial and Jovian planets; Meteorites and Asteroids; Earth in the Solar system: Origin, Size, Shape, Mass, Density, Rotational and Revolution Parameters; Age and history of the earth's surface and Geological time scale.

### Module II:

Distribution of elements in the solar system and in the Earth; Chemical differentiation and composition of the Earth; Earth's magnetic field; Structure and Composition of Earth's interior and surface; General concepts about geochemical cycles; Processes of soil formation, Types of soils, Soil degradation and changing land use pattern.

### Module III:

Concept of Plate Tectonics; Sea-floor spreading and Continental Drift; Geodynamic elements of Earth: Mid Oceanic Ridges, trenches, transform faults and island arcs; Origin of oceans, continents, mountains and rift valleys; Plate tectonics & seismicity; Volcanoes: types, products and distribution.

### Examination Scheme:

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

### **Suggested Readings**

1. Holme's Principles of Physical Geology. 1992. Chapman & Hall.
2. Emiliani, C, 1992. Planet Earth, Cosmology, Geology and the Evolution of Life and Environment. Cambridge University Press.

**Course: Earth Surface Features & Processes**

**Credit : 3**

**Semester: I**

**Course code :ESC2102**

**Course objective:** The objective of the course is to make the students acquainted with the various processes operating on the earth and how the interactions leads to the evolution of different geomorphological features and landscape. This course gives an idea of natural process in line with human approach of growth and development and how a mutual balance caters the human need in best possible ways.

**Module I:**

Introduction to earth surface processes; Basic concepts of geomorphology and its historical development; Terrestrial relief and scales in geomorphology; nature and scope;; Normal cycle of Erosion; Overview of landscape evolution models.

**Module II:**

Weathering and erosional processes; Geological work by Geological Agents; Fluvial, Glacial, Aeolian, Coastal and Karst landforms with special reference to Indian context

Hill Slope Stability and Mass movements; Classification, causes and prevention; Tectonics, climate and drainage network development.

**Module III:**

Overview of Indian geomorphology; Aeolian, Coastal, River valley etc. and their significance.

Extraterrestrial landforms and their formational processes.

**Examination Scheme:**

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

**Suggested Readings**

1. Bloom, A.L. 1998. Geomorphology: A systematic Analysis of Late Cenozoic Landforms (3rd Edition), Pearson Education, Inc.
2. Singh, S. 1998. Geomorphology. PrayagPustakBhavan, Allahabad.
3. Kale, VS. and Gupta, A. 2001. Introduction to Geomorphology. Orient Longman Ltd.
4. Easterbrook, D.J. 1992. Surface processes and landforms. McMillan Publ.
5. Thornbury

**Course: Physics I**

**Credit : 2**

**Semester: I**

**Course code : ESC2109**

**Course objective:** The course is designed to develop an understanding of basics of physics which is intricately related to various sub-branches of earth sciences. This course will provide theoretical foundations of different geological processes including structural geology, stratigraphy, geo-tectonics, mass wasting, petrology, crystallography and mineralogy.

### **Module I:**

Elasticity: Hooke's Law, elastic constants, bending of beam, bending moment, Cantilever depression at the loaded end of a cantilever, determination of Young's modulus by non-uniform bending; Viscosity: viscosity of a liquid, viscous force, co-efficient of viscosity of a liquid, Poiseuille's formula, comparison of viscosities of two liquids by graduated burette method; Surface Tension: surface tension, excess of pressure inside a curved surface, Synclastic system, Surface Tension and interfacial surface tension by the method of drops.

Heat: Specific heat, Newton's law of cooling, determination of specific heat of a liquid using Newton's law of cooling; Emissivity and Emissive Power; J.K. Effect, Positive & Negative Effect, Temperature of Inversion; Super conductors, Type I and II, Meisner Effect, Helium I & II

### **Module II:**

Electricity and magnetism: Potentiometer, Principle, Calibration of low range voltmeter, Measurement of internal resistance of cell, measurement of an unknown resistance.

Magnetism: Moment and pole strength of a magnet, Deflection magnetometer, Tan C position, Vibration magnetometer, Theory, Period of Oscillation, Determination of M and BH using the deflection magnetometer in Tan C position and the vibration magnetometer.

### **Module III:**

Physical optics: Interference; Air Wedge, Description Test for optical flatness of glass plate, determination of diameter of a thin wire by air wedge; Diffraction; Theory of transmission grating, Normal Incidence, Determination of Wavelength of monochromatic source and Wavelength of mercury line using a grating by normal Incidence; Polarisation; Optical activity, Specific rotatory power; Polarimeter.

### **Examination Scheme:**

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

### **Suggested Readings**

1. Allied Physics – R. Murugesan S. Chand & Co. First Edition (2005).
2. Allied Physics – Dr. K. Thangaraj, Dr. D. Jayaraman Popular Book Department, Chennai.
3. Allied Physics – Prof. Dhanalakshmi and others.
4. Elements of Properties of Matter – D.S. Mathur, S. Chand & Co. (1999).
5. Heat and Thermodynamics – N. Brijlal and Subramaniam S. Chand & Co.

**Course: Chemistry I**

**Credit : 2**

**Semester: I**

**Course code :ESC 2110**

**Course objective:** To develop the ability to predict the structures, certain properties and reactivity of the elements and their simpler ionic and covalent compounds. The students would also enhance their understanding of atomic structure and periodicity which would be beneficial in various branches of earth sciences.

### **Module I:**

Atomic Structure: Bohr's theory, wave mechanics: de Broglie equation; Heisenberg's uncertainty principle; Basic idea of Quantum Mechanics Schrodinger's wave equation, quantum numbers and their significance; Pauli's exclusion principle; Hund's rule of maximum multiplicity; Aufbau's principle and its limitations; variation of orbital energy with atomic number.

### **Module II**

Structure and Bonding: Hybridization Ionic Bonding : lattice energy and solvation energy, stability and solubility of ionic compounds, Derivation of Born-Landé equation, Born-Haber cycle and its applications, polarizing power and polarizability, Fajan's rules, ionic character in covalent compounds, bond moment, dipole moment, percentage ionic character. Van-der Waals interactions, hydrogen bonding.

### **Module III**

Chemical Thermodynamics: Objectives and limitations, state and types of system, thermodynamic properties and equilibrium; Laws of Thermodynamics: Concepts of internal energy and enthalpy; entropy, Gibbs free energy and Helmholtz free energy; Concepts in Thermochemistry. Ionic Equilibria: Strong, moderate and weak electrolytes, ionization constant and ionic product of water, pH, ionization of weak acids and bases.

### **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

### **Suggested Readings**

1. Lee, J.D. *Concise Inorganic Chemistry*, ELBS, 1991.
2. Douglas, B.E. and Mc Daniel, D.H., *Concepts & Models of Inorganic Chemistry*, Oxford, 1970
3. Atkins, P.W. & Paula, J. *Physical Chemistry*, Oxford Press, 2006.
4. Day, M.C. and Selbin, J. *Theoretical Inorganic Chemistry*, ACS Publications 1962.

**Course: Mathematics I**

**Credit : 2**

**Semester: I**

**Course code :ESC2105**

**Course objective:** To make the students well versed with the fundamental concepts in mathematics, which will be essential to understand different physical, mechanical process of earth process with respect to space and time

### **Module I**

Algebra: Partial Fractions; Binomial, Exponential and logarithmic Series (without Proof); Summation; Simple problems.

Theory of equations: Polynomial Equations with real Coefficients; Irrational roots and Complex roots; Transformation of equation by increasing or decreasing roots by a constant; Reciprocal equations; Newton's method to find a root approximately; Simple problems.

### **Module II**

Matrices: Symmetric; Skew-Symmetric; Orthogonal and Moduleary matrices; Rank of a matrix; Consistency of equations; Eigen roots and eigen vectors; Cayley-Hamilton theorem (without proof); Verification and computation of inverse matrix.

Trigonometry: Expansions of  $\sin \theta$ ,  $\cos \theta$ ,  $\sin \theta \cos \theta$ ,  $\tan \theta$ ; Expansions of  $\sin \theta$ ,  $\cos \theta$ ,  $\tan \theta$  in terms of  $\theta$ ; Hyperbolic and inverse hyperbolic functions; Logarithms of complex numbers.

### **Module III**

Differential calculus: n-th derivatives; Leibnitz theorem (without proof) and applications; Jacobians; Concepts of polar co-ordinates; Curvature and radius of curvature in Cartesian co-ordinates.

### **Examination Scheme:**

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

### **Suggested Readings**

1. P. Duraipandian and S. Udayabaskaran, (1997) Allied Mathematics, Vol. I & II. Muhil Publishers, Chennai.
2. P. Balasubramanian and K. G. Subramanian, (1997) Ancillary Mathematics. Vol. I & II. Tata McGraw Hill,
3. S. P. Rajagopalan and R. Sattanathan, (2005) Allied Mathematics. Vol. I & II. Vikas Publications, New Delhi.
4. P. R. Vittal (2003) Allied Mathematics. Marghan Publications, Chennai
5. P. Kandasamy, K. Thilagavathy (2003) Allied Mathematics Vol-I, II S. Chand & company Ltd., New Delhi-55.

**Course: Biology**

**Credit : 2**

**Semester: I**

**Course code :ESC2111**

**Course objective:** Biology is essential to understand geological processes as it provides several vital clues about tracking process in past. This course is meant to provide basic understanding of different forms of life and their organization which is pre-requisite for paleontology. The major thrust will be on the taxonomical classification of the plant and animal kingdom.

**Module I:**

Introduction: Origin of life and their adaptation to various kinds of environments; Theories of evolution: Darwinism, Neo-Darwinism, Lamarckism and Neo-Lamarckism; Mode of speciation; Fossils and their significance; Zoogeographical and Phyto-geographical outline only.

**Module II:**

Taxonomic Hierarchy: Taxonomic category and groups; Concepts of species, genus and family; Nomenclature: Principles and rules, Ranks and names; Type method; Principle of priority and its limitations; Biological classification: Five Kingdom system; Basics of Plant & Animal Kingdom

**Module III:**

Structural Organization in Plants and Animals: Structural organization in animals; Salient features and classification of Non-chordates, Classification of Mammal outline; Salient features and classification of plants.

**Examination Scheme:**

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

**Suggested Readings**

1. Ganguly, H. and Kar, A.K.: *College Botany*, Vol. II, (New Central Book Agency)
2. Mayr and Ashlock: *Principles of Systematic Zoology*
3. Minkoff: *Evolutionary Biology*
4. Ayala: *Population and Evolutionary Genetics*
5. Jones, S.B. & Luchsinger, A.B.: *Plant Systematics*, (McGrawHill)
6. Datta, S.C.: *Systematic Botany*, (Wiley Eastern)

**Course: Chemistry Laboratory**

**Credit : 1**

**Semester: I**

**Course code :ESC2107**

**Course Content:**

**1.Titrimetric Analysis**

- (i) Calibration and use of apparatus
- (ii) Preparation of solutions of different Molarity/Normality of titrants

**2. Acid- Base Titrations**

- (i) Estimation of carbonate and hydroxide present together in mixture.
- (ii) Estimation of carbonate and bicarbonate present together in a mixture.
- (iii) Estimation of free alkali present in different soaps/detergents

**3. Oxidation- Reduction Titrimetry**

- (i) Estimation of Fe(II) and oxalic acid using standardized  $\text{KMnO}_4$  solution.
- (ii) Estimation of oxalic acid and sodium oxalate in a given mixture.
- (iii) Estimation of Fe (II) with  $\text{K}_2\text{Cr}_2\text{O}_7$  using internal (diphenylamine, anthranilic acid) and external indicator.

## SEMESTER-II

**Course: Crystallography & Mineralogy**

**Credit :3**

**Semester: II**

**Course code : ESC2201**

**Course objective:** The course will develop an understanding of the science behind the fundamental chemical, geometrical and physical relationship of matter. This course highlights the chemical and optical fundamentals to decipher structural symmetry of minerals and their optical properties.

### **Module I:**

**Crystallography:** Brief idea of space lattice; Definition and morphology of crystal and crystal notation; Symmetry elements; Parameter, indices and symbols, Laws of Crystallography; Stereographic Projection; Derivation of 32 classes of crystal; Study of following crystal systems: Isometric System, Tetragonal System, Hexagonal System, Orthogonal System, Monoclinic System, Triclinic System.

### **Module II:**

**Mineralogy:** Definition and physical properties of Minerals; ions, bonds and their types, coordination number, Isomorphism, Polymorphism and Pseudomorphism; Structure of silicates; A detailed study of important rock forming mineral groups with reference to their composition, structure, physical and optical properties.

### **Module III:**

**Optical Mineralogy:** Elementary concepts of light; Propagation of light through minerals, Principles of optical mineralogy; Introduction to Nicol Prism, Petrological Microscope and its functions; Crystal habits and twinning, laws of twinning, polarization, double refraction; Isotropism and Anisotropism; Important optical properties: Relief, Pleochroism, Pleochroic, Haloes, Extinction and Extinction angle, Birefringence, Interference colours; Behaviour of convergent polarized light in Uniaxial and Biaxial Minerals.

### **Examination Scheme:**

Components	A	CT	HA	EE
------------	---	----	----	----

<b>Weightage (%)</b>	5	15	10	70
----------------------	---	----	----	----

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

### **Suggested Readings**

1. W. D. Nesse, (2000), Introduction to Mineralogy, Oxford University Press, ISBN 0-19-510691-1
2. Cornelis Klein and Barbara Dutrow, The manual of Mineral Science, Wiley Publication 2007.
3. P. F. Kerr Optical Mineralogy, 1959
4. Rutley
5. Nesse W.D. , Introduction to Optical mineralogy, 2008
6. Deer, W. A. , Howie, R. A. and Zussman, J., An introduction to the rock forming minerals, ELBS publication, 1962-1963.
7. Dana

**Course: Physics II**

**Credit : 2**

**Semester: II**

**Course code : ESC2211**

**Course objective:** This course is designed to develop an understanding of physics at successively deeper levels with a greater insight into the topics such as wave mechanics, nuclear and energy physics alongwith crystallography and fibre optics.

**Module I: Wave mechanics**

Wave Mechanics – De Broglie Waves – Dual Nature – Experimental Study of Matter Waves – Davission and Germer’s Experiment – G.P. Thomson’s Experiment \_ Heisenberg’s uncertainty Principle – The position and moment of a particle.

**Module II: Nuclear and Energy physics**

Rutherford’s Experiment – Stability of nucleus. The Q value equation for nuclear reaction – Threshold energy – Nuclear Reactions. Artificial Transmutation

Conservation Laws: Conservation of Charge – Conservation of Nucleons – Conservation of Mass – Energy – Biological effects of radiation – control of radiation hazards.

Sources of conventional energy – Need for non-conventional energy resources – solar energy utilization – solar water heater – solar drier – conversion of light into electrical energy – solar cell – merits and demerits of solar energy – wind energy – its conversion systems – energy from Bio mass – Bio gas generation – Industrial and space application.

**Module III: Mechanics and Fluid Mechanics**

Galilean invariance and Newton’s Laws of motion; Conservation of momentum and energy; work energy theorem; Conservation of angular momentum, torque, Motion of a particle in central force field; Kepler’s Laws

Fluid Flow, Archimedes’ Principle; Ideal fluid in motion, Equation of continuity, Darcy’s Law, Bernoulli’s Theorem, The flow of real fluids; Waves and Oscillations; Wave equation; Doppler effect, physics of hearing.

**Examination Scheme:**

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

### **Suggested Readings**

1. Allied Physics – R. Murugesan S. Chand & Co. First Edition (2005).
2. Allied Physics – Dr. K. Thangaraj, Dr. D. Jayaraman Popular Book Department, Chennai.
3. Allied Physics – Prof. Dhanalakshmi and others.
7. Modern Physics – R. Murugesan S. Chand & Co. (2004).

**Course: Chemistry II**

**Credit : 2**

**Semester: II**

**Course code : ESC2212**

**Course objective:**

To develop the ability to predict the structures, certain properties and reactivity of the elements with emphasis on inorganic compounds and complexes which would be beneficial in various branches of earth sciences.

**Module I**

Complexes of s- and p- block elements; Hydrides and their classification (ionic, covalent and interstitial); Structure and variations in properties with respect to stability; Bio-Inorganic Chemistry: A brief introduction to bio-inorganic chemistry; Role of metal ions present in biological systems with special reference to  $\text{Na}^+$ ,  $\text{K}^+$ ,  $\text{Mg}^{2+}$  ions: Na/K pump; role of  $\text{Mg}^{2+}$  ions in energy production transmission of impulses along nerve fibers and chlorophyll; Role of  $\text{Ca}^{2+}$  ions in blood clotting, muscle contraction, stabilization of protein structures and structural role.

**Module II**

Kinetic Theory of Gases: Collision and mean free path of molecules; Effects of temperature and pressure; Viscosity, relation between mean free path and coefficient of viscosity; Temperature and pressure dependence of coefficient of viscosity; Degrees of freedom of motion, Principle of equipartition of energy.

Chemical Toxicity: Toxicity of As, Cd, Pb, Hg, CO, NO<sub>x</sub>, SO<sub>x</sub>, H<sub>2</sub>S; Sources of contamination; Causes of toxicity.

**Module III**

Liquids: Surface tension and Viscosity and their determination; Effect of temperature on surface tension and coefficient of viscosity of a liquid (qualitative treatment only); Systems of Variable Composition and Solutions Partial molar quantities and their physical significance; Chemical potential, Free Energy and entropy of mixing of ideal gases; Thermodynamics of Ideal Solutions.

**Examination Scheme:**

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

### **Suggested Readings**

1. Atkins, P.W. & Paula, J. *Physical Chemistry*, Oxford Press, 2006.
2. Day, M.C. and Selbin, J. *Theoretical Inorganic Chemistry*, ACS Publications 1962.

**Course: Mathematics II**

**Credit : 2**

**Semester: II**

**Course code : ESC2206**

**Course objective:** To make the students explore the basic concepts of mathematics and statistics which are relevant for branches of earth sciences.

### **Module I**

**Integral Calculus:** Bernoulli's formula for integration by parts; Reduction formulae for:  $\int x^m e^{ax} dx$ ,  $\int \sin^n x dx$ ,  $\int \cos^n x dx$  (with proof & problems),  $\int_0^{\pi/2} \sin^m x \cos^n x dx$  (no proof, problems only); properties of definite integrals and simple problems.

**Application of Integration:** Evaluation of double, triple integrals; Simple applications to area, volume; Fourier series for functions in  $(0, 2\pi)$  and  $(-\pi, \pi)$ .

### **Module II**

**Statistics:** Frequency and distribution; Arithmetic mean, Median, Partition values, Mode, Variance and standard deviation; Curve fitting; Principle of least square; Linear regression.

### **Module III**

**Probability:** Introduction to Probability; Addition and multiplication theorem of Probability; Random variables and Probability distribution; Expected values; Binomial distribution; Poisson distribution & Normal distribution and their application.

### **Examination Scheme:**

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

### **Suggested Readings**

1. P. Duraipandian and S.Udayabaskaran,(1997) *Allied Mathematics*, Vol. I &II.Muhil Publishers, Chennai
2. Shaum's Series "outlines of Statistics:

**Course: Structural Geology**

**Credit : 3**

**Semester: II**

**Course code : ESC2210**

**Course objective:** This course deals with the study of the three dimensional distribution of rock Modules with respect to their deformational history. The study will make the students understand the structural evolution of a particular region and the important events which occurred in the regional geological past.

### **Module I:**

Definition and objectives; Effects of topography on structural features; Topographic and structural maps; Scale of the map; Survey methods; Contouring and Plotting, Measurement of slope heights, aspects and gradients; Global Position System. Exercise of localization of points, estimation of slope and real distance in the map, Isolines, elevation points; Landform identification and construction of elevation profiles from maps

### **Module II:**

Stresses in rocks, factors controlling rock deformations; Stratification and bedding; Attitude of beds; Outcrops and outcrop patterns, Outliers and inliers; Dip & strike: Significance of top-bottom criteria in structural geology;

### **Module III:**

Definition, Classification, Causes, Recognition, Economic importance and Geologic significance of Folds and Faults; Unconformities, Joints; Lineation, Foliation, Rock cleavage: Definition and types.

### **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

2. Weijermars, R. 1997. Structural Geology and Map Interpretation, Alboran Science Publishing.

3. Billings, M.P. 1987. Structural Geology, 4th edition, Prentice-Hall.
4. Hatcher, Jr., R.D. 1995. Structural Geology - Principles, Concepts and Problems, Merrill Publishing Company.
5. Ghosh, SK. 1993. Structural geology: fundamentals and modern developments, Pergamon Press, London

**Course: Earth Sciences Laboratory I**

**Credit : 2**

**Semester: II**

**Course code :ESC2208**

**Course Content:**

**Crystallography:**

1. Study of elements of symmetry of normal classes of six crystal systems.
2. Study of Clinographic Projection
3. Stereographic projection of face poles of crystals.

**Mineralogy:**

4. Study of physical properties of various common and important minerals in hand specimen – i.e. Silicates, Sulfides, Oxides, Hydroxides, Halides, Carbonates, Phosphates etc.

**Optical Mineralogy:**

5. Optical identification of common rock forming minerals - Quartz, Plagioclase, Microcline, Muscovite, Biotite, Fluorite, Olivine, Garnet. Tourmaline, Staurolite, Kyanite, Sillimanite, Hypersthene, Augite, Diopside, Hornblende, Tremolite-Actinolite. Corundum, Beryl, Calcite, Barite.

**Structural Geology**

6. Drawing profile sections and interpretation of geological maps of different complexities.
7. Exercises of stereographic projections of mesoscopic structural data (planar, linear, folded etc.).

**Examination Scheme:**

### SEMESTER- III

**Course: Igneous Petrology**

**Credit : 3**

**Semester: III**

**Course code : ESC2301**

**Course objective:** A basic course in earth sciences which deals with the origin, composition, distribution and structure of the rocks that have an origin from magma. The study of igneous rocks is important because they make up the bulk of the earth's crust in the geological time period.

#### Module I

Introduction to petrology; its significance, distinguishing features of three types of rocks; concept of intrusion and extrusion; Magma: Definition, generation and crystallization and diversification of magma, Tectonic setting and igneous activities; Bowen's reaction principle and its petrological significance.

#### Module II

Structure, textures and classification of igneous rocks; Concept of mode and norm; Phase rule and phase diagrams – binary and ternary systems.

#### Module III

Petrogenesis of granite, alkaline rocks; Basalt, Anorthosite and Ultramafic rocks; Petrographic description of the following rock types: Granite, Rhyolite, Syenite, Nepheline-syenite, Monzonite, Granodiorite, Diorite, Pegmatite, Anorthosite, Gabbro, Dolerite, Basalt, Peridotite, Pyroxenite, Norite, Dunite, Trachyte and Andesite.

#### Examination Scheme:

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

**Suggested Readings:**

1. John D. Winter 2001. An Introduction to Igneous and Metamorphic Petrology. Prentice Hall Inc
2. Loren A. Raymond 2002. Petrology: The study of Igneous, Sedimentary and Metamorphic rocks. McGraw Hill .New York
3. Bose M.K. 1997. Igneous Petrology. World Press
4. Cox, K.G. Bel, J.D. and Pankthrust, R.J. 2002. The interpretation of Igneous rocks. Allen and Unwin, London
5. Pankthrust, 2000. Igneous and Metamorphic rocks. Prentice Hall.
6. Phillpots, A.R., and Ague, S.J., 2009. Principles of igneous and metamorphic petrology (2<sup>nd</sup>Edn.) Cambridge.

**Course: Sedimentology**

**Credit : 2**

**Semester: III**

**Course code : ESC2302**

**Course objective:** This course is a branch of petrology, dealing with the study of modern sediments and the processes resulting in their deposition. Sedimentary rocks are particularly significant because of the vast extent on the earth's surface and their close linkages to the geological past.

### **Module I**

Basic concepts of Sedimentary Petrology and Sedimentology; Description and classification of Sedimentary rocks, Sedimentary Environments and facies, Weathering and sedimentary flux; Fluid flow and its types, Sediment transport and deposition; Submarine weathering, soils and paleosols; Application of Sedimentary Petrology.

### **Module II**

Textures of clastic and non-clastic sedimentary rocks; Structures of sedimentary rocks; Lithification and Diagenesis; Provenance; Texture, composition, classification, origin and occurrence of Siliciclastic rocks: Conglomerates, Sandstones, Mudrocks; Introduction to coal and petroleum.

### **Module III**

Non-siliciclastic rocks: Carbonate rocks, controls of carbonate deposition, limestone, dolomite and Dolomitisation; Chert and siliceous sediments; Phosphorites, carbonaceous sediments, iron rich sediments and evaporates; Petrographic description of the major rock types: Conglomerate, Breccia, Sandstones, Arkose, Greywacke, Limestone, Dolomite, Shale.

### **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

**Suggested Readings:**

1. Prothoreo and Schwab, 2004, Sedimentary Geology, Freeman and Co. New York, 557p
2. Sam Boggs, 1995, Principles of Sedimentology and Stratigraphy, Printice Hall, New Jersey, 765p .
3. Maurice E. Tucker, 2006, Sedimentary Petrology, Blackwell Publishing, 262p.
4. Collinson, J.D. and Thompson, D.B. 1988, Sedimentary structures, Unwin-Hyman, London, 207p.
5. Lindholm, R.C., 1987, A practical approach to sedimentology, Allen and Unwin, London
6. Pettijohn, F.J. 1975, Sedimentary rocks, Harper and Row Publ. New Delhi

**Course: Metamorphic Petrology**

**Credit : 2**

**Semester: III**

**Course code : ESC2303**

**Course objective:** This course would highlight the relationship of rocks with the field relations and local tectonic environment, especially how the impact of heat and pressure causes profound physical and chemical change in a rock to change their form.

### **Module I**

Introduction to Metamorphic Petrology; Factors controlling metamorphism; Types of metamorphism: contact, regional, fault zone metamorphism, impact metamorphism; Limitations of metamorphism; Diagenesis, Anataxis, Palingenesis

### **Module II**

Concept of Zones, Facies, Grades and Isograds; Metamorphic differentiation, prograde, retrograde, and poly-metamorphism; Metamorphic fluids and Metasomatism; Paired metamorphic belts, Index minerals; Thermal and Regional metamorphism of argillaceous, calcareous and basic igneous rocks.

### **Module III**

Origin of Migmatites; Petrographic notes on the following metamorphic rocks: Slate, Phyllite, Schists, Gneisses, Amphibolites, Marble, Quartzites, Hornfels, Charnockite, Khondalite, Eclogite, Kodurite and Skarns.

### **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

### **Suggested Readings:**

1. Yardley, B W D. 1990. An introduction to metamorphic petrology. ELBS publication.
2. Bucher K. and Martin F. 2002. Petrogenesis of Metamorphic rocks. Springer-Verlag Publication.
3. Best, M.G. 2002. Igneous and metamorphic petrology. Wiley publication.

4. Vernon R. H. and Clarke G. L. 2008. Principles of metamorphic Petrology. Cambridge publication.
5. Spears F. 1993. Metamorphic Phase Equilibria and Pressure-Temperature-Time Paths. AGU publication
6. John D. Winter 2001. An Introduction to Igneous and Metamorphic Petrology. Prentice Hall Inc

**Course: Atmospheric Sciences**

**Credit : 2**

**Semester: III**

**Course code : ESC2304**

**Course objective:** The purpose of the course is to give a holistic understanding of the various processes and effects of the atmosphere on the other systems and vice versa. This will make the students aware with the fundamental concepts of the climate system and the changes taking place therein.

### **Module I**

Atmosphere: Structure and composition, vertical profile of temperature and pressure, microphysical processes in the atmosphere; Atmospheric physics: Earth's heat budget and radiative forcing; Fundamental forces: Pressure gradient force, centrifugal force, gravity force, Coriolis force; Buys Ballot law; Aurora Borealis and Aurora Australis.

### **Module II**

Introduction to components of climate science; Feedback mechanisms; Atmospheric thermodynamics, greenhouse gases and climate forcing; Heat transfer in ocean.

### **Module III**

Paleoclimatology: Introduction and Measurement techniques; Aerosol in atmosphere, properties; carbonaceous aerosols; radioactive effects of Atmospheric aerosols; Direct and Indirect effects of aerosol particles. Indian monsoon and its variability, western disturbances, Indian Ocean Dipole; El Niño-Southern Oscillation.

### **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

### **Suggested Readings:**

2. Marshall J. and Plumb R.A. (2001) Atmosphere, Ocean and Climate, *Elsevier*, Amsterdam.
3. Oliver J.E. and HidoreJ.J. (2008) *Climatology: An Atmospheric Science*, Prentice Hall.
4. Seinfeld J.H. and PandisS.N. (2006) Atmospheric Chemistry and Physics-from Air Pollution to Climate Change, John Wiley and Sons, INC.
5. Barry, R. G., 2003. Atmosphere, weather and climate. Routledge Press, UK

**Course: Marine Sciences**

**Credit : 2**

**Semester: II**

**Course code : ESC2309**

**Course objective:** The aim of this course is to make the students aware of the various factors that play an important role in determining the physical and chemical characteristics of the marine water and the associated marine biota.

### **Module I**

Introduction to Hydrological cycle; Origin and chemical composition of sea water; geomorphology and Relief of ocean floor; Vertical and horizontal distribution of temperature and salinity

### **Module II**

Concepts of Eustasy; Ekman rule; Land-Air-Sea interactions; Oceanic current system and effect of Coriolis forces; waves and tides; Ocean currents, Global distribution of major ocean currents; Climate change and ocean; Sea level changes and its impact on coastal areas

### **Module III**

Coastal erosion and stabilization; Delta and estuaries; Coastal zone regulation and management; Concept of Ocean Ecosystem.

### **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

### **Suggested Readings:**

1. Gross, M.G., 1977. *Oceanography: A view of the Earth*, Prentice Hall.
2. Haq and Boersma, 1978. *Introduction to Marine Micropaleontology*, Elsevier.
3. Tolmazin, D., 1985. *Elements of Dynamic Oceanography*, Allen and Unwin.

**Course: Earth Sciences Laboratory II**

**Credit : 2**

**Semester: III**

**Course code :ESC2307**

**Course Content:**

**Igneous Petrology:**

1. Megascopic and microscopic (textural and mineralogical) study of major Extrusive and Intrusive igneous rocks.

**Metamorphic Petrology:**

1. Megascopic and microscopic study (textural and mineralogical) of low and medium to high grade metamorphic rocks:

**Sedimentology:**

1. Exercises on sedimentary structures and their palaeo-environmental significance,
2. Petrography of clastic and non-clastic rocks through handspecimens and thin sections.

**1. Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

**Course: Field Survey III**

**Credit : 3**

**Semester: III**

**Course code :ESC2308**

**Course Content:**

1. To identify rocks and mineral assemblages in an outcrop through rock hammer, pocket knife, a hand lens or a magnifying glass or dropper bottle of hydrochloric acid.
2. To acquaint the students with the geomorphological features.
3. Mapping and identification of structural features in the field.

**Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>FV</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
20	10	10	10	25	25

V – Viva.

## SEMESTER IV

**Course: Economic Geology**

**Credit : 2**

**Semester: IV**

**Course code : ESC2405**

**Course objective:** This course will emphasize on the earth materials primarily used for economic and/or industrial purposes. This branch of earth sciences is extremely significant as it used in geochemistry, mineralogy, geophysics, petrology, structural geology etc. Economic geology is of utmost concern for environmentalists, engineers and conservationists

### Module I

Definition and types of ore and minerals and their origin; Bateman's classification; Principles and processes of ore genesis; Endogenous processes: magmatic concentration, contact metasomatic, hydrothermal, skarns, greisens and pegmatites deposits; Exogenous processes: sedimentary ore deposits, Chemical and bacterial precipitation, Colloidal deposition.

### Module II

Weathering products and Residual Deposits: Oxidation and Supergene Enrichment; Evaporite deposits, Metamorphism as ore forming processes; Metallic ores: origin, geological occurrences, geographical distribution and uses of the mineral deposits of –Fe, Cr, W, Sn, Zn Pb, Au, Al, Mg and Co and atomic minerals; Nonmetallic and industrial rocks and minerals, their nature and distribution in space and time in India: refractory, chemical, fertilizer, cement and gemstone industry including building stones.

### Module III

Economic importance of the following geological formations of India: Precambrians of Dharwars and Singhbhum, Cuddapah, Vindhyan, Gondwana, Jurassic of Kutch, Cretaceous of South India, Siwaliks and Tertiary of Assam.

### Examination Scheme:

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

**Suggested Reading:**

1. Jensen and Bateman: Economic Mineral Deposits.
2. Sen and Guha: A Handbook of Economic Geology.
3. Banerjee: Mineral Resources of India.
4. Sharma and Ram: Introduction to India's Economic Minerals.
5. Deb: Industrial Minerals and Rocks of India.

**Course: Geochemistry**

**Credit : 3**

**Semester: IV**

**Course code : ESC2406**

**Course objective:** This course would provide various aspects of chemistry, with major thrust on the relative abundance, distribution and cycling of earth's chemical elements and their isotopes. This will also lay a foundation for analytical and conceptual concepts which would further be helpful for research in specialized areas much significant of earth sciences.

### **Module I**

**States of matter and atomic environment of elements:** Geochemical classification of elements, the composition of different earth reservoirs; **Radioactivity:** conservation of mass, isotopic and elemental fractionation, concept of radiogenic isotopes in geochronology and isotopic tracers, dating by radioactive nuclides: Carbon 14, Beryllium 10, K-Ar method.

### **Module II**

**Introduction to properties of elements:** Element transport: advection, diffusion; Chromatography; Aqueous geochemistry: Basic concepts of Carbonate chemistry, speciation in solutions, toxicity of heavy metals, precipitation and dissolution of minerals, solubility of minerals: clays, hydroxides, carbonates, sulfides.

### **Module III**

**Mineral reactions:** Diagenesis and hydrothermal reactions; Geochemical characteristics of Earth solar system; Meteors, meteorites and meteoroids: occurrence and significance; Geochemical behavior of selected elements like Si, Al, K, Na.

### **Examination Scheme:**

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

### **Suggested Readings:**

1. Mason, B (1986). Principles of Geochemistry. 3<sup>rd</sup> Edition, Wiley New York.
2. Walther John, v., 2009 Essentials of geochemistry, student edition. Jones and Bartlett Publishers
3. Albarede, F, 2003. An introduction to geochemistry. Cambridge University Press

**Course: Remote Sensing and GIS**

**Credit : 3**

**Semester: IV**

**Course code :ESC2410**

**Course objective:** This course will develop the skills of students in the field of GIS and remote sensing. It will also give the basic concepts of remote sensing and principles associated with image acquisition and image processing. The role of GIS as a tool in environmental management and knowledge of GPS will be facilitated. This course will also look into the application of remote sensing/GIS in database generation and environmental management.

### **Module I**

Remote sensing: Introduction, scope and components; Electromagnetic spectrum, its characteristics and interaction with environment; Platforms & Sensors, Albedo, Atmospheric Windows; Aerial photography, Elements of Visual Image Interpretation, Spectral Signature, Digital image processing; Optical remote sensing, microwave remote sensing; Photogrammetry: Introduction, stereoscopic vision; Concept of Digital Elevation Model.

### **Module II**

Map: definition, types, scale and projection; coordinate systems, survey of India (SOI) topographical maps; Geographic Information System: Introduction, definition and terminologies; Components and fundamental operations of GIS; Data structure, raster and vector data structures; Data input methods; Accuracy, precision and resolution, Global positioning systems (GPS):Basics, satellite generation, positioning services, GPS details and integration, GIS and image processing software.

### **Module III**

Techniques and applications of remote sensing in water resource management, Land Use land cover mapping, forest cover/ type mapping, habitat analysis, biodiversity characterization; Use of GIS and remote sensing in environmental monitoring and early warning system.

### **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

### **Suggested Readings:**

1. Lillisand, Thomas, Ralph W. Kiefer and Jonathan Chipman. 2007. Remote Sensing and Image Interpretation. Wiley India.
2. Jensen, John R. 2004. Introductory Digital Image Processing: A Remote Sensing Perspective. Prentice Hall.
3. Burrough, P.A. and McDonnell, R.A. (1998) Principles of geographical information systems. Oxford University Press, Oxford, 327 pp.
4. Jensen J.R. (2000) Remote Sensing of the Environment: An Earth Resource Perspective, Prentice Hall, ISBN 0-13-489733-1.

**Course: Geophysics**

**Credit : 2**

**Semester: IV**

**Course code :ESC2412**

**Course objective:** The course is developed to give an insight about the physics of earth and the study of earth using quantitative physical methods.

### **Module I**

Interrelationship between geology and geophysics; General and Exploration geophysics; Basic principles of geophysical exploration; Different types of geophysical methods. Role of geological and geophysical data in explaining geodynamical features of the earth.:

### **Module II**

Geophysical Methods: Gravity, magnetic, Electrical, Seismic- their principles and applications; Concepts and Usage of corrections in geophysical data; Geophysical field operations - Different types of surveys, grid and route surveys, profiling and sounding techniques, scales of survey, presentation of geophysical data.

### **Module III**

Application of Geophysical methods - Regional geophysics, oil and gas geophysics, ore geophysics, groundwater geophysics, engineering geophysics; Geophysical anomalies: correction to measured quantities, geophysical, anomaly, regional and residual (local) anomalies, factors controlling anomaly, depth of exploration; Integrated geophysical methods - Ambiguities in geophysical interpretation; Planning and execution of geophysical surveys.

### **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

### **Suggested Readings:**

1. The Solid Earth: An Introduction to Global Geophysics (2<sup>nd</sup> ed. 2005) by CMR Fowler, Cambridge University Press.

2. Applied Geophysics by Telford W.M., Geldart L.P. and Sheriff R.E., Cambridge University Press.
3. Milton B. Dobrin (1988): Introduction to Geophysical Prospecting 3rd Ed. McGraw Hill, 630p. ISBN: 0070171955.
4. William Lowrie (1997): Fundamentals of Geophysics. Cambridge University Press, 354p. ISBN-0 521 63454 7.
5. Edwin S. Robinson (1988): Basic Exploration Geophysics. John Wiley & Sons, 562p. ISBN-0-471-87941-x.

**Course: Palaeontology**

**Credit : 2**

**Semester: V**

**Course code : ESC2413**

**Course objective:** The students would develop an understanding of the origin and evolution of the past life which is a vital in giving information about Earth's organic and inorganic past.

### **Module I**

Introduction to Fossils and Index Fossils, Fossilization Processes (Taphonomy) and Modes of Preservation; Concept of Species, Species problem in palaeontology, Fossil nomenclature and methods of description, code of systematic nomenclature; Theory of organic evolution and the fossil record; Palaeoecology: Principles and methods; Palaeobiogeography and palaeoclimate.

### **Module II**

Invertebrate Palaeontology: Morphology, classification and geological history of the following groups: Gastropoda, Lamellibranchia, Brachiopoda, Cephalopoda, Trilobita and Echinoidea; Classification of trace fossils and their utility in palaeo-environmental reconstructions; Vertebrate Palaeontology: Origin of vertebrates; Vertebrate fossil record from Gondwana formations, Deccan volcanic province, Palaeogene and Neogene sequences of India and their evolutionary and palaeobiogeographic significance.

### **Module III**

Palaeobotany: Early plant life; Colonization of land; Carboniferous coal forests; Gondwana flora and role of climate in its evolution; Micropaleontology: Microfossils and their importance.

### **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

### **Suggested Readings:**

1. Clarkson, E.N.K. 1998. Invertebrate Palaeontology and Evolution, George Allen & Unwin.

2. Raup, D.M. and Stanley, S. M. 1971. Principles of Palaeontology, W.H. Freeman and Company.
3. Benton, M. 1997. Basic Palaeontology: An introductory text, D.Harker, Addison Wesley Longman.
4. Prothero, D.R. 1998. Bringing fossils to life – An introduction to Palaeobiology, McGraw Hill.
5. Willis, K.J. & McElwain, J.C. 2002. The evolution of plants, Oxford University Press.
6. Brenchley, P. J., and Harper, D. A. T. 1998. Palaeoecology: Ecosystems, Environments and Evolution. By Chapman and Hall.

**Course: Earth Science Laboratory III**

**Credit : 2**

**Semester: IV**

**Course code :ESC2408**

**Course Content:**

1. Study of Topographic Sheets, map sheets, thematic maps,
2. Study of aerial photographs delineating geomorphic features, rock types and structural features
3. Processing of satellite data and delineation of rock types and mapping of soil, vegetation, water and geologic structure.
4. Element of Image Interpretation, Image enhancement, Image registration and Geo-referencing.
5. Image classifications for land use/ land cover using ERDAS, PCI Geomatica and ENVI.
6. GIS Software, introduction to open source GIS
7. Preparation and interpretation of water table contour maps and depth to water level contour maps.
8. Study, preparation and analysis of hydrographs for differing groundwater conditions.
9. Water potential zones of India (map study) including saline water zones.

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

**Course: Field Survey IV**

**Credit : 3**

**Semester: IV**

**Course code :ESC2409**

**Course Content:**

1. Detailed hand on exposure with GPS (Global Positioning System) and its working.
2. Correlation of satellite image with toposheet and ground verification in a terrain and preparation of a geological map.
3. Geological reporting of field including all major parameters and their important significance.

**Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>FV</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
20	10	10	10	25	25

## **SEMESTER- V**

**Course: Exploration Geology**

**Credit : 2**

**Semester: V**

**Course code :ESC2503**

**Course objective:** Basic knowledge of the occurrence of the resources along with the techniques and statistical analysis associated with for mineral exploration.

### **Module I:**

Resource reserve definitions and classification; Mineral resources in industries: Historical and present perspective; A brief overview of classification of mineral deposits with respect to processes of formation in relation to exploration strategies.

### **Module II:**

Principles of mineral exploration; Prospecting and exploration- conceptualization; Methodology and stages; Sampling, subsurface sampling including pitting, trenching and drilling, core and non-core drilling, planning of bore holes and location of boreholes on ground; Core-logging; Geochemical exploration: Principles; Nature of samples; Anomaly, strength of anomaly and controlling factors; primary and secondary dispersion; Coefficient of aqueous migration.

Geobotanical survey: Indicators and survey techniques.

### **Module III:**

Introduction to geophysical methods of exploration: Principles of reserve estimation, density and bulk density, factors affecting reliability of reserve estimation, reserve estimation based on geometrical models (square, rectangular, triangular and polygon blocks); Regular and irregular grid patterns; Stage of mineral exploration; Statistics and error estimation.

**Suggested Readings:**

1. McKinstry, H.E. 1962. Mining Geology (2nd Ed.) Asia Publishing House.
2. Clark, G.B. 1967. Elements of Mining. 3rd Ed. John Wiley & Sons.
3. Arogyaswami, R.P.N. 1996 Courses in Mining Geology. 4th Ed. Oxford-IBH.

**Course: Hydrogeology**

**Credit : 2**

**Semester: IV**

**Course code :ESC2511**

**Course objective:** The course is designed to make the students aware about the peculiarities of the availability and movement of sub-surface and surface water. The various geological characteristics of ground water and surface water will be dealt with.

**Module I:**

Scope and significance of hydrogeology Hydrological cycle (Precipitation, Evapo-transpiration, Runoff, and infiltration); Sub-surface movement of water, flow in saturated and unsaturated zones; Vertical distribution of sub-surface water; Origin and age of groundwater.

**Module II:**

Sub surface hydrogeology: Types, characteristics, classification of aquifers, Porous and Fractured aquifers; Groundwater occurrence in igneous, metamorphic and sedimentary rocks; Darcy's law and its application; Theory and dynamics of groundwater flow, Phreatic and Piezometric level, Analysis of Piezometric surface, Groundwater level fluctuations; Aquifer's hydraulic parameters; Groundwater provinces of India.

**Module III:**

Elementary well hydraulics, surface and sub-surface exploration of groundwater, drilling and construction of wells, pumping tests and analysis of test data for evaluation of aquifer parameters; Physical and chemical properties of water and water quality; Water balance studies: basic concept, development and management of groundwater resources; Surface and subsurface water interaction; Sea water intrusion in coastal aquifers.

**Examination Scheme:**

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

### **Suggested Readings**

1. Todd, D.K. 2006. Groundwater hydrology, 2nd Ed., John Wiley & Sons, N.Y.
2. Davis, S.N. and De Weist, R.J.M. 1966. Hydrogeology, John Wiley & Sons Inc., N.Y.
3. KaranthK.R., 1987, Groundwater: Assessment, Development and management, Tata McGraw-Hill Pub. Co. Ltd.
4. Fetter, C.W. 2001. Applied Hydrogeology, Prentice Hall Inc., N.J

**Course: Stratigraphy of India**

**Credit : 3**

**Semester: V**

**Course code :ESC2509**

**Course objective:** The students would explore study of strata (rock layers) and stratification (layering) in sedimentary and layered igneous rocks. This course further gives an elementary idea about the diverse arrangement and deposition of rocks and formations in Indian sub-continent with respect to the geological past. It would also elaborate regional geology and tectonic evolution of India.

### **Module I:**

Basic Concepts and Historical developments in Stratigraphy; Stratigraphic principles and correlation; Stratigraphic nomenclature; Facies concept and Walther's Law; Principles and methods of lithostratigraphy, Biostratigraphy and Chronostratigraphy; Magnetostratigraphy and Chemostratigraphy; Sequence Stratigraphy.

### **Module II**

Physiographic and tectonic subdivisions of India; regional geology and tectonic evolution of cratons; Geology of Proterozoic, Cuddapah and Vindhyan sedimentary basins; Precambrian/Cambrian boundary.

### **Module III**

Palaeozoic succession of Kashmir and its correlatives from Spiti and Zaskar; Stratigraphy and structure of Gondwana basins; Himalayan region; Marine Mesozoic formations with reference to the Triassic deposits; Jurassic rocks of Kutch and Jaisalmer basins; Distribution and age of Mesozoic volcanic provinces of India; Deccan Traps, Panjal Traps, Rajmahal Traps, Sylhet Traps; Stratigraphic boundary problems with special reference to P / T and K / T boundaries in India.

### **Examination Scheme:**

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

**Suggested Readings:**

1. Krishnan, M.S. 1982. Geology of India and Burma, CBS Publishers, Delhi
2. Pascoe, E.H. 1968. A manual of the Geology of India and Burma (Vol.I-IV), Govt. Of India Press, Delhi.
3. Doyle, P. & Bennett, M.R. 1996. Unlocking the Stratigraphic Record. John Wiley
4. Ramakrishnan, M. &Vaidyanadhan, R. 2008. Geology of India Volumes 1 & 2, Geological society of India, Bangalore.
5. Valdiya, K.S. 2010. The making of India, Macmillan India Pvt. Ltd.

**Course: Engineering Geology**

**Credit : 2**

**Semester: V**

**Course code :ESC2510**

**Course objective:** The course deals with the study of geological structures and their role in engineering structures and projects. Students are expected to develop an insight about the role of a geologist in such engineering projects.

### **Module I**

Introduction to the concept of geology vis-à-vis engineering; Role of geology in planning, design and construction of major man-made structural features; Elementary concepts of rock and soil mechanics.

### **Module II**

Site selection and investigation; Types of structures, classification and their effect on civil engineering projects and Geological mapping; Geological and geotechnical investigations for dams, reservoirs and spillways, tunnels, underground caverns, bridges, highways, shorelines.

### **Module III**

Environmental considerations related to civil engineering projects; Construction materials; Geological hazards (landslides and earthquakes), their significance, causes and preventive/remedial measures; Recent trends in engineering geology.

### **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

### **Suggested Readings:**

1. Krynin, D.P. and Judd W.R. 1957. Principles of Engineering Geology and Geotechnique, McGrawHill (CBS Publ).
2. Johnson, R.B. and DeGraf, J.V. 1988. Principles of Engineering Geology, John Wiley & Sons, N.Y.
3. Goodman, R.E., 1993. Engineering Geology: Rock in Engineering constructions. John Wiley & Sons, N.Y.
4. Waltham, T., 2009. Foundations of Engineering Geology (3<sup>rd</sup>Edn.) Taylor & Francis.

**Course: Earth Sciences Laboratory IV**

**Credit : 2**

**Semester: IV**

**Course code :ESC2507**

**Course Content:**

1. Selection of sites using topographic maps for dams, tunnels, bridges, highways and similar civil structures.
2. Index Tests for soil, rocks and debris.
3. Evaluation of shear strength parameters.
4. Study of fossils showing various modes of fossilization.
5. Thin section study of fossils to understand important parameters.
6. Study of diagnostic morphological characters through hand specimens of fossils.
7. Study of distribution important metallic, non-metallic deposits in India.

**Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>

## **SEMESTER- VI**

**Course: Coal and Petroleum Geology**

**Credit : 3**

**Semester: VI**

**Course code :ESC2603**

**Course objective:** This course will deal with the geological aspects related to coal and petroleum. This is of utmost significance keeping in view the high employability opportunities associated with this branch of earth science.

### **Module I:**

Coal; Origin, types, ranks and uses; Coalification process; Coal Petrology: Lithotypes, Microlithotypes and macerals; Physical, chemical and optical properties; Maceral analysis: Mineral and organic matter in coal;; Coal exploration and estimation of coal reserves; Applications of coal geology in hydrocarbon exploration; coal petrography of different coalfields of India.

Coalbed methane: Elementary idea about generation of methane in coal bedsand exploration

### **Module II:**

Natural occurrence, Chemical composition and physical properties of crudes in nature; Origin of petroleum, maturation of kerogen; Biogenic and thermal effect; Reservoir rocks: General attributes and petrophysical properties; Migration of oil and gas: Geologic framework and factors controlling hydrocarbon migration; migration routes and barriers.

### **Module III:**

Hydrocarbon traps: Definition, theory and classification of hydrocarbon traps - structural, stratigraphic and combination; Time of trap formation and hydrocarbon accumulation; Cap rocks: Definition and general properties; Formation water characteristics as oil exploration leads; Plate tectonics and global distribution of hydrocarbon reserves; Classification of Indian basins and petroleum geology of oilfields of India: Assam, Bengal, Cauvery, Krishna-Godavari, Cambay and Bombay offshore basins.

**Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

**Suggested Readings:**

1. Coal Geology: Larry Thomas, 2002, Wiley and Sons.
2. Coal: it's composition, analysis, utilisation and valuation.: E.E.Somermier 2008, McGrawHill
3. Petroleum Geology: F.K.North, 1986, Allen and Unwin
4. Petroleum Formation and Occurrence: B.P.Tissot and D.H.Welte 1978, Publisher: Springer-Verlag
5. Elements of petroleum Geology: R.C.Shelley 1998, Academic press.

**Course: Hazard Assessment and Risk Management**

**Credit : 2**

**Semester: VI**

**Course code :ESC2604**

**Course objective:** This paper introduces the students to various environmental hazards, their causes, nature, preparedness and assessment of loss. It teaches them to model hazards and familiarizes them with methods of management of disasters and consequently risk zonation.

### **Module I**

Hazards and Disasters: Geological, Hydro-meteorological, Biological, Technological and human induced hazards/disaster: Types, causes, factors, consequences; Climate change and disaster; hazard, risk, vulnerability; Impacts of disasters: health, physical and socio-economic; Natural hazard profile of India.

### **Module II**

Hazard assessment: A brief review of the hazard identification and assessment models.

Disaster preparedness: Preventive measures, Early warning system; Mitigation: Disaster Risk Reduction (DRR), Emergency Operation plan (EOP); Response and recovery.

### **Module III**

Applications of science, technology and engineering in disaster management including geo-informatics; Role of government (local, state and national), non-government and multilateral agencies; Recent advancements in disaster management practices. Case studies related to the seismic, industrial and meteorological hazards.

### **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

### **Suggested Readings**

1. Bell, F.G., 1999. Geological Hazards, Routledge, London.
2. Bryant, E., 1985. Natural Hazards, Cambridge University Press.
3. Patwardhan, A.M., 1999. The Dynamic Earth System. Prentice Hall.
4. Smith, K., 1992. Environmental Hazards. Routledge, London.
5. Subramaniam, v., 2001. Textbook in Environmental Science, Narosa International.

## **WORKSHOP/ CONFERENCE/ TRAINING PROGRAMME**

**Course: Workshop/Conference/Training**

**Credit : 01**

**Semester: VI**

**Course Code :ESC2633**

### **Objectives**

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two ways. The trainer has to make sure that the aspects covered are practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

### **Guidelines for Workshop**

The procedure for earning credits from workshop consists of the following steps:

1. Relevant study material and references will be provided by the trainer in advance.
2. The participants are expected to explore the topic in advance and take active part in the discussions held
3. Attending and participating in all activities of the workshop
4. Group Activities have to be undertaken by students as guided by the trainer.
5. Evaluation of workshop activities would be done through test and quiz at the end of the workshop.
6. Submitting a write up of at least 500 words about the learning outcome from the workshop.

### **Evaluation Scheme:**

<b>Attendance</b>	<b>Active Participation</b>	<b>Multiple Choice Questions/ Quiz</b>	<b>Solving the case/ Assignment/ Write up</b>	<b>Total</b>
<b>10</b>	<b>30</b>	<b>30</b>	<b>30</b>	<b>100</b>

## DISSERTATION

Course: Dissertation  
Semester: VI

Credit : 09  
Course Code : ESC2637

### GUIDELINES FOR PROJECT FILE AND PROJECT REPORT

Research experience is a professional problem-solving activity and is equally significant as any other aspect of the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critically analyzed by the faculty guide and corrected by the student at each stage.

### PROJECT FILE

The Project File may be a very useful tool for undertaking an assignment along-with a normal semester, an exploratory study, sponsored projects, a project undertaken during summer period or any other period as per curricula where the researcher is working with a company/organization. The project/ assignment may also be a part of the bigger research agenda being pursued by a faculty/ institution/ department.

The Project File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation. This file may be considered in continuous assessment

#### The Layout Guidelines for the Project File & Project Report:

- A4 size Paper
- Font: Arial (10 points) or Times New Roman (12 points)
- Line spacing: 1.5
- Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

#### Assessment Scheme:

##### Continuous Evaluation:

40% (Based on punctuality, regularity of work, adherence to plan and methodology, refinements/mid-course corrections etc. as reflected in the Project File.)

##### Final Evaluation:

60% (Based on the Documentation in the file, Final report layout, analysis and results, achievement of objectives, presentation/ viva)

**It is recommended that the Final evaluation should be carried out by a panel of evaluators.**

## Syllabus - First Semester

**Course: Ecology and Ecosystem Dynamics**

**Credit : 3**

**Semester: I**

**Course code : ENV4101**

**Course objective:** The course will lead the students through different levels of the living world starting from ecological principles, parameters and analytics to organisms, continuing through populations and introducing finally communities and ecological succession. Structure, function, and process of ecological sciences are main components of this course.

**Module I: Ecosystem:** Earth as a life support system, components and organization, limiting factors, Laws of limiting factors – Liebig’s law of minimum, Shelford’s law of tolerance, adaptation, habitat and niche, Keystone species; population parameters - structure, growth regulation, interactions between populations, life history strategies (r and k species), concept of carrying capacity; Growth Model (Prey-Predator, Lotka- Volterra, Leslie’s matrix model); Soil: types, composition, and formation, soil origin, texture, horizons and profile, soils of the world and India.

**Module II: Ecosystem analysis:** Synecology, species area relations, methods of sampling, community coefficients, association analysis, ecological succession, succession models and concept of climax; Human population dynamics, Human ecology.

**Module III: Framework of ecosystem:** Structure and function of ecosystems, productivity, decomposition, energy flow, ecological efficiency, global pattern of productivity, biogeochemical cycling (pool, fluxes, and residence time), major biomes of India and the world, ecosystem services: scope, application, model, and case studies.

### Examination Scheme:

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

### Books Suggested:

1. Odum, Eugene P., and Gary W. Barrett. 2007. Fundamentals of Ecology, 5th edition, Thomson Brooks /Cole
2. Primack, Richard B. 2010. Essentials of Conservation Biology, 5th edition. Sinauer Associates, Sunderland, Ma, USA
3. Ecology and field biology - R.L. Smith
4. Begon, M., Townsend, C. R., and Harper, J. L. *Ecology from Individuals to Ecosystems*. Wiley-Blackwell, USA. 2005.

**Course: Earth System Sciences**  
**Semester: I**

**Credit : 3**  
**Course code : ENV4102**

**Course objective:** The purpose of the course is to develop a holistic understanding of earth as a system. It attempts to illustrate the reasons for why things happen in nature, the way they happen and how humans have adapted and influenced the natural processes. The course will have application in ecosystem management, conservation and understanding of environmental hazards through in-depth understanding of earth processes. It provides vital inputs to grasp the concept of sustainable development in context of global and regional level.

**Module I:** The Universe: concepts and origin of solar system and planets, shape and size of the Earth - structure and composition of Earth's interior and surface, plate-tectonic processes, weathering and erosional processes, Earth processes, geological cycle, tectonic cycle, and rock cycle.

**Module II: Marine environment:** Coastal environment, coastal erosion, and stabilization, relief of the ocean floor, origin, and chemical composition of sea water, vertical and horizontal distribution of temp and salinity, waves and tides, ocean currents, Global distribution of major ocean currents, sea level change and its impact on coastal areas.

**Module III: Physiography of India:** Environmental setting of India: Structure and relief, drainage system, and watersheds, Rainfall patterns, floods and droughts. India's agriculture (Types, cropping pattern, green revolution and food security), land use planning in India.

**Examination Scheme:**

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination

**Books Suggested:**

1. Carla Montgomery (2011) Environmental Geology, McGraw Hill, Ryerson
2. Edward A.Keller (9<sup>th</sup> edition) Environmental Geology, Prentice Hall, USA9th
3. Tom Garrison (2011) Essential of Oceanography, Brooks/Cole CENGAGE learning.
4. Press F. &Siever R. Understanding Earth 9<sup>th</sup> edition, W. H. Freeman; 4 edition (July 17,2003)

**Course: Environmental Biology**  
**Semester: I**

**Credit : 2**  
**Course code : ENV4103**

**Course objective:** The purpose of the course is to focus on the contribution of microbial ecology in the management, restoration, and sustainability of the biosphere. The role of microbial communities in ecosystem both in natural and managed ecosystems, and their influence on environmental quality and sustainability will be discussed in detail. The objective of the course would be to review the role of microbial communities and their processes in order to conserve and restore the ecosystem

**Module I: Environmental Biochemistry:** Proteins - biologically important proteins, biological functions of proteins, Nucleic acids – DNA, RNA, biological functions of nucleic acids, biochemical degradation of pollutants, bioconversion of pollutants.

**Module II: Environmental Microbiology:** Microbes in agriculture - biological nitrogen fixation, bio-fertilizers, mycorrhiza; Food microbiology - micro-organisms in food production, food poisoning and its prevention; Classification, characteristics, occurrence and ecological significance of microorganisms, photoautotrophs, chemoautotrophs, chemolithotrophs, organotrophs; Soil microorganisms and their interactions, microbial toxins, Microbial diseases of plants and their effects on the ecosystem.

**Module III: Microbial Process & Applications:** Microflora of atmosphere - sampling techniques, identification of aeroallergens, airborne diseases, and allergies, microbes, and pollution abatement, Environmental biotechnology: introduction, genetic engineering, and its applications, Gene-Bank, Tissue culture, Fermentation, Enzyme technology.

**Examination Scheme:**

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

**Books Suggested:**

1. Fundamentals of Ecology: E. P. Odum
2. Botany: A. C. Dutta; Oxford University Press, Calcutta
3. Aquatic Ecosystems: Kumar, APH Publications
4. Microbiology 6th Ed: Purohit, Agrobios
5. Global environmental Biotechnology: D. L. Wise
6. Methods in Biotechnology: Hans Peter Schmauder

**Course: Chemistry of Environment**  
**Semester: I**

**Credit : 3**  
**Course code : ENV4109**

**Course objective:** The course is designed to make the student understand various aspects of chemistry which are significant to environmental science and get knowledge of various analytical techniques required for research. An understanding about various types of pollution, their control measures and emerging trends will also be achieved. The course will also give an idea about impact of pollution on the environment and health.

**Module I: Environmental Chemistry:** Concept and scope, Gibb's free energy, chemical potential, phase equilibrium, stoichiometry, acid base reactions, Solubility and solubility product, The carbonate system, solutions: normality, molality, and molarity.

**Module II: Air and Water Chemistry:** Properties of water, water quality parameters: Physical, Chemical & Biological parameters, composition of seawater and physico-chemical speciation in oceans, pesticides in water; Chemical composition of atmosphere; Photochemistry of atmosphere; Chemistry of particulate matter, ozone, aerosols, photochemical smog, and acid rain.

**Module III: Soil and Toxic Chemicals Chemistry:** Chemical composition of Soil; Cation exchange capacity of soil, acid-base, and ion-exchange reactions in soil; Acidity, Salinity and Alkalinity in Soil; Biochemical aspects of arsenic, cadmium, lead, mercury, carbon monoxide, O<sub>3</sub>, PAN, pesticides, insecticides, and MIC, carcinogens in the air, PAH's, PCB's, dioxins, and dibenzo furans; Chemistry of hydrocarbon decay and green chemistry.

**Examination Scheme:**

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

**Books Suggested:**

1. Masters G.M. (2004) Introduction to Environmental Engineering and Science, 2<sup>nd</sup> Edition, Pearson Education.
2. Buell P. and Girard J. (2002) Chemistry Fundamentals: An Environmental Perspective (2<sup>nd</sup> edition), Jones & Bartlett Publishers.
3. Cunningham W.P. and Cunningham M.A. (2007) Principles of Environmental Science: Inquiry and Applications, TataMcGraw-Hill.
4. Miller G.T. (2001) Environmental Science, (eighth edition), Brooks/Cole.
5. Pepper I.L., Gerba C.P. and Brusseau M.L. (2006) Environmental and Pollution Science, (2<sup>nd</sup> edition) Academic Press.
6. Fundamentals of Environmental Chemistry:- Stanley E. Manahan.

**Course: Environmental Physics & Energy**  
**Semester: I**

**Credit : 3**  
**Course code : ENV4110**

**Course objective:** The aim of this course is to facilitate the students with the concepts of energy and various renewable and non-renewable resources. A general idea of the production and utilization scenario with respect to energy resources and its impact on environment will be dealt with. The significance of energy in Indian scenario and possible alternatives would be overviewed with a brief study of policy prospective of energy sectors.

**Module I: Environmental Physics:** Thermodynamics: Energy, Entropy laws, Heat Transfer, Thermal conductivity, diffusivity; Fourier's equation for heat conduction - its solution for rectilinear and radial (spherical and cylindrical) flow of heat, Matter and Energy Exchange, Basic assumptions of kinetic theory, Ideal gas approximation, deduction of perfect gas laws, Black- Body Radiation, Energy Budget of Earth and associated processes.

**Module II: Non Renewable Energy Sources:** Fossil fuels (coal, oil and natural gases): Classification, reserve and geographical distribution; Environmental impact of production and consumption of fossil fuels; Hydrocarbons: formation, reserves, production, refining, and transport of petroleum products.

**Module III: New/ renewable Energy Sources:** Production, consumption, and potential, Solar Spectrum, solar thermal energy, solar photovoltaic, hydroelectricity, tidal power, wind energy, geothermal energy, OTEC, fuel cell (hydrogen fuel cell, metal hydrate fuel cell, and microbial fuel cell), Biomass and Bio fuels; Nuclear energy: chemistry, feasible material, nuclear reactors, nuclear fuel cycle, and environmental issues, current potential, achievements, and future prospects of renewable energy, Energy conservation policies.

**Examination Scheme:**

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

**Books Suggested:**

1. Tiwari, G.N. and M. K. Ghosal. 2005. Renewable Energy Resources: Basic Principles and Application, Narosa Publishing.
2. Ginley, David S., and David Cahen. 2011. Fundamentals of Materials for Energy and Environmental Sustainability. Cambridge.
3. Master, Gilbert M. 2004. Renewables and Efficient Electric Power Systems. John Wiley and Sons.
4. Boyle, Godfrey. 2004. Renewable Energy, 2nd Edition. Oxford University Press.
5. Twidell, I. John and Tony Weir. 2007. Renewable Energy Resources. Taylor and Francis Group.

**Course: Basic Mathematics**  
**Semester: I**

**Credit : 2**  
**Course code : ENV4111**

**Course objective:** The basic purpose of the course is to teach basic mathematics for its application in a broad range of environmental science subfields. Derivatives and integrals, ordinary and partial differential equations, and linear and non-linear algebraic equations are the various topics to be taught.

**Module I: Algebra:** Partial Fractions - Binomial, Exponential and logarithmic Series (without Proof) - Summation - Simple problems; Theory of equations: Polynomial Equations with real Coefficients - Irrational roots, Complex roots, Transformation of equation by increasing or decreasing roots by a constant, Reciprocal equations, Newton's method to find a root approximately, Simple problems.

**Module II: Matrices:** Symmetric, Skew-Symmetric, Orthogonal, and Unitary matrices, Rank of a matrix, Consistency of equations, Eigen roots and eigen vectors, Cayley-Hamilton theorem (without proof), Verification and computation of inverse matrix; Trigonometry: Expansions of  $\sin \theta$ ,  $\cos \theta$ ,  $\tan \theta$  in terms of  $\theta$ , Hyperbolic and inverse hyperbolic functions, Logarithms of complex numbers.

**Module III: Differential Calculus:** n-th derivatives: Leibnitz theorem (without proof) and applications, Jacobians, Concepts of polar co-ordinates, Curvature, and radius of curvature in Cartesian co-ordinates.

**Examination Scheme:**

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

**Books Suggested:**

1. Mackenzie A. (2005) Mathematics and Statistics for Life Scientists, Taylor & Francis, New York.
2. Parkhurst D.F. (2006) Introduction to Applied Mathematics for Environmental Science, Springer, New York.

**Course: Analytical Laboratory I**  
**Semester: I**

**Credit : 3**  
**Course code : ENV4107**

1. Determination of minimum size of quadrat for community study.
2. Determination of density, frequency, abundance, and dominance of plant species using quadrat method.
3. Calculation of the Importance Value Index (IVI) of species.
4. Study of ecological adaptation of Hydrophytes and Xerophytes
5. Determination of hardness (Ca, Mg, and total) and alkalinity of water.
6. Determination of total dissolved solids (TDS) in waste water
7. Determination of residual chlorine in water sample.
8. Determination of Dissolved Oxygen (DO) of wastewater.
9. Determination of Biological Oxygen Demand (BOD) of waste water.
10. Determination of Chemical Oxygen Demand (COD) of waste water.
11. Visit of wastewater treatment plant to understand various unit operations.

**Books Suggested:**

1. Misra, R. (1968) Ecology Workbook, Oxford & IBH Publications Co., New Delhi.
2. American Public Health Association (2012) Standard Methods for Examination of Water and Wastewater, APHA, AWWA, WPCF, American Public Health Association Inc., Springfield, New York.
3. Maiti, S.K. (2003) Hand Book of Methods in Environmental Studies, Vol. I & II, ABD Publishers, Jaipur.

**Course: Term Paper/ Seminar**  
**Semester: I**

**Credit : 1**  
**Course code : ENV4131**

**Objectives:**

The objective of this course is to judge the understanding as well as application of the knowledge gained by the students. The aim of the term paper/ seminar is to provide the students with an opportunity to further enhance their knowledge in a sector of their choice by undertaking examination and analysis of various aspects of environmental issues at a level commensurate with the learning outcomes of the various courses taken up by them in the ongoing semester.

A term paper/ seminar is primarily a record of intelligent reading in several sources on a particular subject. The students will choose the topic at the beginning of the session in consultation with the faculty assigned.

**Guidelines:**

- a) Choosing the topic: contemporary issue and will be given by the department
- b) Finding relevant materials
- c) Presentation: before the commencement of Semester examinations
- d) Response to queries
- e) Submission of the write-up

Presentation of the seminar will be of 30 min maximum (25 min presentation and rest question answer session)

**Examination Scheme:**

Organisation and Relevance of Content	Literature Review	Bibliography	Presentation	Response to the Queries	Total
30	10	10	40	10	100

**Course: Pollution Control and Management**  
**Semester: II**

**Credit : 3**  
**Course code : ENV4201**

**Course objective:** The course aims at giving detailed knowledge about different pollution control and management strategies. The course will also deals with the sources of pollution in air, soil, water, soil, and also noise and their impact on the environment and health.

**Module I: Air Pollution and Control:** Air pollution: types of pollutants, sources and effects, ambient air quality standards, wind rose; control methods and devices: particulate matter control: wall collection devices, gravity settlers, centrifugal separators, electrostatic precipitators, dividing collection devices: surface filters, depth filters, scrubbers; gaseous contaminants control: absorption, adsorption, combustion, and condensation; Basic air pollution modeling i.e. Gaussian Plume Model and Box Model.

**Module II: Waste Water Treatment:** Water pollution: types of pollutants, sources, and effects, water quality parameters and standards, segregation, neutralization; Physical methods: sedimentation, coagulation and flocculation, filtration, and sludge dewatering; Chemical methods: disinfection, removal of hardness, fluoride, arsenic, chromium, iron, and manganese, removal of nitrogen and phosphorus; biochemical methods: aerobic and anaerobic treatment, septic tank, Imhoff tank, oxidation ponds, and aerobic lagoons; Water reuse and recycle.

**Module III: Soil and Noise Pollution Control:** Soil contaminants, organic and inorganic (including heavy metals): sources and fate, control and abatement of contamination, bioremediation by microorganisms, phytoremediation, and factors affecting uptake of contaminants, Noise pollution: sources and effects, SEL, LAeq, T, L90, L10, SIL, noise control: source reduction, control along the source-receiver pathway, receiver protection, assessing, and predicting noise.

**Examination Scheme:**

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

**Books Suggested:**

1. Manahan S.E. (2000) Fundamentals of Environmental Chemistry, CRC Press.
2. Brady N.C. (2007) The Nature and Properties of Soil, Thirteenth edition, Prentice-Hall India.
3. Eckenfelder W. (1990) Industrial Pollution Control, McGraw Hill Int. Ed.
4. Pepper I.L., Gerba C.P. and Brusseau M.L. (2006) Environmental and Pollution Science, Academic Press.
5. Harrison R.M. (2001) Pollution: Causes, Effects and Control, Fourth Edition, Royal Society of Chemistry.
6. Nevers N.D. (2000) Air Pollution Control Engineering, McGraw Hill Int.

**Course: Environmental Analysis: Tools and Techniques**  
**Semester: II**

**Credit : 3**  
**Course code : ENV4204**

**Course objective:** The purpose of the course is to develop analytical skills required for environmental monitoring. The students will become familiar with various physical, chemical and biological parameters involved in water, air and soil research. They would also be able to follow various standard protocols used in environmental analysis. With the theoretical knowledge they would also be able to develop their skills to use contemporary tools and techniques required for environmental impact assessment.

**Module I: Introduction:** Sampling techniques, basic concept of quantitative analysis (Titrimetry, Gravimetry, and Colourimetry); Measurement of Concentration: Principles of Spectrophotometry, Lambert-Beer relationship, atomic spectroscopy; Microscopy; simple, compound, and electron microscope; Electrophoresis and Chromatography.

**Module II: Air Pollution Analysis:** Ambient air sampling and monitoring: aerosols (SPM and RSPM) and gaseous pollutants, hydrocarbons (HCs), Polycyclic Aromatic Hydrocarbon (PAHs) and Volatile Organic Compounds (VOCs).

**Module III: Instrumental Methods of Analysis:** Gas chromatography (GC), Atomic absorption/emission spectrophotometry, Gas liquid chromatography (GLC), High performance liquid chromatography (HPLC), X-ray fluorescence, X-ray diffraction, and flame photometry, Fourier Transform Infrared Spectroscopy (FTIR).

**Examination Scheme:**

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

**Books Suggested:**

1. APHA (1980), Standard Methods for the Examination of Water and Wastewater Published by American Public Health Association, 15th ed.
2. Laboratory Analytical Techniques Series (LATS), published by CPCB.

**Course: Atmospheric Science and Climate Change**  
**Semester: II**

**Credit : 3**  
**Course code : ENV4209**

**Course objective:** This course would make the students familiar with the dynamics of earth and the factors governing the climate-weather system. Knowledge of various components of climatic system and their interaction with atmosphere/ hydrosphere/ lithosphere would further create curiosity among the students about the climate system modeling and climatic vulnerability. Focus will be given on mitigation and adaptive measures at international and national platform.

**Module I: Climatology and Global Climate System:** Atmosphere: structure and composition, vertical profile of temperature and pressure; Components of climate system and their interactions; Radiation budget, solar constant, lapse rate, and stability, Fundamental forces (pressure gradient, centrifugal, gravity, and coriolis), surface wind and upper air circulation: jet stream, planetary circulations; western disturbances, Indian ocean dipole, El Niño-Southern Oscillation, madden-julian oscillation and Indian monsoon.

**Module II: Climate Change:** Natural variability vs. anthropogenic forcing to climate system, climate sensitivity, paleoclimatology and measurement techniques (tree rings and ice core analysis), climate system modeling (circulation models), green house gases and global warming, concept of vulnerability, sectoral vulnerabilities, impacts, and adaptation.

**Module III: Contemporary Issues:** International efforts and India's national policy framework for climate change CDM project cycle and modalities, procedures and global carbon market (carbon trade); CO<sub>2</sub> sequestration; Linking climate change mitigation and adaptation.

**Examination Scheme:**

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

**Books Suggested:**

1. James R.H. An Introduction to Dynamic Meteorology, International Geophysics Series.
2. IPCC (2001 & 2007) Working Group I Report "The Physical Basis of Climate change"
3. Atmospheric Thermodynamics by Bohren and Albrecht.
4. Marshall J. and Plumb R.A. (2001) Atmosphere, Ocean and Climate, Elsevier, Amsterdam.
5. Oliver J.E. and Hurrell J.J. (2008) Climatology: An Atmospheric Science, Prentice Hall.
6. Peake S. and Smith J. (2009) Climate Change from Science to Sustainability, Oxford Publications.
7. Cole B., 7th Ed. (2002) Meteorology Today: An Introduction to Weather, Climate, and the Environment—Ahrens, CD.

**Course: Geoinformatics for Environmental Management**  
**Semester: II**

**Credit : 3**  
**Course code : ENV4210**

**Course objective:** This course will develop the skills of students in the field of GIS and remote sensing. It will also give the basic concepts of remote sensing and principles associated with image acquisition and image processing. The role of GIS as a tool in environmental management and knowledge of GPS will be facilitated. This course will also look into the application of remote sensing/GIS in database generation and environmental management.

**Module I: Fundamentals of Remote Sensing:** Introduction, scope and components of remote sensing; Electromagnetic spectrum, its characteristics and interaction with atmosphere and earth's surface, Platforms and Sensors, Spectral Signature, Albedo, Atmospheric Window, Aerial photography, Multispectral remote sensing, Elements of visual image interpretation, Digital Image Processing: Rectification, enhancements, Classification: unsupervised, supervised, hybrid, and accuracy assessment; Concept of Digital Elevation Model; microwave remote sensing.

**Module II: Geographic Information System (GIS):** Map: definition, types, scale, and projections; Introduction, definition and components of Geographic information system; Functional elements: Data in GIS, Raster and Vector data structure, Data input methods: keyboard entry, manual digitizing, scanning and automatic digitizing, accuracy, precision, and resolution, consistency, completeness. Basics, satellite generation, positioning services, GPS details, integration, and coordinate systems.

**Module III: Remote Sensing and GIS - application in environmental management:** Techniques and applications of remote sensing in Water resource management, Land use land cover mapping, Forest cover/ type mapping, Habitat analysis, Biodiversity characterization, Environmental monitoring, Geo-hazard assessment), National initiatives (NNRMS/NRDMS and ISRO-DOS).

**Examination Scheme:**

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

**Books Suggested:**

1. Dutta A (2001) Biodiversity and Ecosystem Conservation. Kalyani Publisher, Kolkata.
2. JhaLK (1997) Natural Resource Management. APH Publishing Corporation, New Delhi.
3. Nalini KS (1993) Environmental Resources and Management, Anmol Publishers. Owen OS & Chiras DD (1995) Natural Resources Conservation. Prentice Hall India.

**Course: Statistical Tools and Research Methodology**  
**Semester: II**

**Credit : 2**  
**Course code : ENV4211**

**Course objective:** The course aims to address the issues related to acquisition and analysis of environmental data and use of statistics in solving them. The students will have an insight into extracting information and analysis of data through various statistical tools and techniques. A preliminary introduction to fundamental concepts of research would make them understand the intricacies of writing and proposing research ideas and hypotheses.

**Module I: Introduction:** Basic elements and tools of statistical analysis, measurement of central tendency, measures of dispersion: absolute and relative measures, range, standard deviation, variance, quartile deviation, coefficient of variability, skewness, kurtosis, probability: probability distribution functions and their applications, data sampling, sampling locations, times, distributions and types, sampling theory.

**Module II: Statistical Methods:** Hypothesis testing, significance and correlation, correlation coefficients, linear models and regressions: multiple regressions, distribution- normal, t and chi square test, test of hypothesis and significance, analysis of variance, computer-based modeling: linear, regression, validation and forecasting, difference among means: F-test: 1 way ANOVA, F-test: 2 ways ANOVA.

**Module III: System Analysis & Research Methodology:** Introduction to research ethics and plagiarism; Mathematical models-deterministic and stochastic, generation of environmental data, stochastic processes in environment, approaches to development of model, validation and forecasting, Perspective of research, sample proposals, framing a statement of the problem (objective), literature survey, methodology of research.

#### **Examination Scheme:**

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

#### **Books Suggested:**

1. John J. Schiller, Seymour Lipschutz, Schaum's Outline of Probability and Statistics, 4th Edition, Tata McGraw-Hill Education.
2. Manly (2001) Statistics for environmental science and management, Chapman and Hall /CRC.
3. Wayne, R. Ott (1995). Environmental Statistics and Data Analysis, CRC Press.
4. Shaefer S.J. and Theodore L. (2007) Probability and Statistics Applications for Environmental Science, CRC Press, Boca Raton, FL.
5. Csuros M. (1997) Environmental Sampling and Analysis, Lab Manual, Lewis Publishers, Boca Raton, FL.
6. Strunk W. and White E.B. (1999). The Elements of Style, Longman; 4th Edition.

**Course: Analytical Laboratory II**  
**Semester: II**

**Credit : 3**  
**Course code : ENV4212**

1. Study of toposheet for geographic information and spatial data types.
2. Description of base map with attributes and image data.
3. Data entry and preparations (input, editing and attributing)
4. Element of Image Interpretation, Image enhancement, Image registration and Georeferencing.
5. Image classifications for land use/ land cover using ERDAS, PCI Geomatica and ENVI.
6. GIS Software, introduction to open source GIS
7. Thin layer paper chromatography analysis of organic compounds.
8. Determination of SPM and RSPM in ambient air by high volume sampler.
9. Monitoring of Air Quality Parameters using Sun Photometer.
10. Sampling and measurement of black carbon in the ambient air.
11. Soil analysis: pH, organic carbon, moisture, water holding capacity, and nutrients.

**Book Suggested:**

1. Shryock, H.S. (1976) *The methods and Materials of Demography*, Academic Press, New York.
2. Gurumani, N. (2006) *Research Methodology for Biological Sciences*, MJP Publishers, Chennai.

**Course: Term Paper/ Seminar**  
**Semester: II**

**Credit : 1**  
**Course code : ENV4231**

**Objectives:**

The objective of this course is to judge the understanding as well as application of the knowledge gained by the students. The aim of the term paper/ seminar is to provide the students with an opportunity to further enhance their knowledge in a sector of their choice by undertaking examination and analysis of various aspects of environmental issues at a level commensurate with the learning outcomes of the various courses taken up by them in the ongoing semester.

A term paper/ seminar is primarily a record of intelligent reading in several sources on a particular subject. The students will choose the topic at the beginning of the session in consultation with the faculty assigned.

**Guidelines:**

- a) Choosing the topic: contemporary issue and will be given by the department
- b) Finding relevant materials
- c) Presentation: before the commencement of Semester examinations
- d) Response to queries
- e) Submission of the write-up

Presentation of the seminar will be of 30 min maximum (25 min presentation and rest question answer session)

**Examination Scheme:**

<b>Organisation and Relevance of Content</b>	<b>Literature Review</b>	<b>Bibliography</b>	<b>Presentation</b>	<b>Response to the Queries</b>	<b>Total</b>
30	10	10	40	10	100

**Course: Project (Field Survey)**  
**Semester: II**

**Credit : 2**  
**Course code : ENV4232**

**Objectives:**

The aim of the project is to provide the students with an opportunity to explore the natural environment for enhancing their knowledge and understanding about various components of environment, human interaction and impact. The project may involve field visits to various places i.e. forested area, natural landscape, pond, lake, river, dam, wastewater treatment plant etc. The project can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report. The student will need to submit a report in the end.

**Guidelines for Report:**

- a) Title: It will be given by student
- b) Introduction: about the particular site/habitat.
- c) Observations and significance
- d) Presentation and queries
- e) Submission of the report

Presentation of the report will be of 15 min maximum (10 min presentation and rest question answer session)

**Examination Scheme:**

Organisation and relevance of content	Introduction	Bibliography	Presentation	Response to the queries	Total
30	10	10	40	10	100

**Course: Environmental Conservation & Sustainable Development      Credit      : 3**  
**Semester: III      Course code : ENV4301**

**Course objective:** The paper aims at providing insight into human dimension of development and management of natural resources. It will develop an understanding of biodiversity in the context of ecosystem dynamics, ecosystem functioning and provision of ecosystem services alongwith an introduction to basic conservation methodologies. An approach towards the challenges encountered for sustainability would also be looked at to enable the students' focus on complex relationships between social, economic and environmental processes.

**Module I: Resource conservation :** Natural resources: classification, concept, global vs regional issues and challenges of Forest, Grasslands & Mangroves, Water resources, Mineral and Energy resources, Food resources, Land & Soil resources: Coastal zone management, coral reefs. Natural Resource Management: concept, approaches and challenges, Traditional knowledge and Natural resource conservation.

**Module II: Biodiversity:** Biodiversity: Definition, levels, gradients, distribution; global & regional, ecosystem services, Indicators, Measurements & Hotspots of Biodiversity, Biodiversity loss: global and regional scenario, threats, Biodiversity conservation & restoration: historical prospects, Red data book and IUCN categorization, methods and tools, national and global efforts.

**Module III: Sustainable development** : Sustainable Development: definition, historical prospects, principals, measurements and Millennium Development Goal (MDGs), Sustainable Development Goal (SDGs), Challenges and responses to sustainable development: global and regional issues and efforts.

### Examination Scheme:

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

### **Books Suggested:**

1. World Commission on Environment and Development (1987) Our Common Future, Oxford, OUP.
2. An Introduction to Sustainable Development (2008) by Peter P. Rogers, Kazi F. Jalal, John A. Boyd., Glen Education Foundation. Inc. USA
3. Primack R.B. (2006) Essentials of Conservation Biology (4th ed.), Sinauer Associates, Sunderland.
4. Ecological Diversity and Measurement by Magurran, A.E. Princeton University Press. New Jersey.
5. Millennium Ecosystem Assessment Report, 2005.
6. The Living planet index.
7. UN Millennium Project (2005) Innovation: Applying Knowledge in Development, Science, Technology and Innovation Task Force Report.
8. Contemporary research publication on relevant area of subject for greater understanding updated time to time.

**Course: Water Resources Management**  
**Semester: III**

**Credit : 3**  
**Course code : ENV4313**

**Course objective:** The course is designed to make the students aware about the availability and assessment of water resources along with various terminologies associated. An understanding about the need to conserve water has to be made. An approach to watershed development and various principles, common guidelines and policies will be overviewed.

**Module I:** Water in ecosystem World water inventory, hydrologic cycle, precipitation and runoff: global water balance and Indian scenario, , aquifers (confined and unconfined), quality and quantity of ground water and its usefulness in water supply; Rainwater harvesting; Agriculture and environmental impacts of Irrigation System; crop water management; agro-climatic zonation and crop planning (reference to India).

**Module II:** Watershed management: Wetlands: Management and Conservation; Ramsar convention, objectives and strategy. Concepts and principles of Watershed Management, water budgeting, land-use and land-cover classification, resource appraisal, water and soil conservation measures: (a) drain-line treatment; (b) area treatment, watershed as unit of sustainable development, selection of plant species for plantation, organic farming and organic fertilizers, watershed development in India.

**Module III: Water conservation, conflicts and challenges:** Water crisis, water footprint, atmosphere continuum (SPAC), water use efficiency (WUE), water auditing, water treatment, recycling and reuse, water sharing and conflicts, current water issues in India: Narmada Dam, Tehri, Almetti Dam, Sardar Sarovar, Interlinking of rivers and river basin management.

#### **Examination Scheme:**

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

1. Patra K.C. (2011) Hydrology and Water Resources Engineering, Narosa Publishing House.
2. Subramanya K. (2004) Engineering Hydrology, Tata McGraw-Hill, New Delhi.
3. Sharda V.N., Sikka A.K. and Juyal G.P. (2006) Participatory Integrated Watershed Management: A Field Manual, Central Soil and Water Conservation Research and Training Institute, 218, Kaulagarh Road, Dehradun.
4. Tideman E.M. (1999) Watershed Management–Guidelines for Indian Conditions, Omega Scientific Publishers, New Delhi.
5. Black P.E. (1996) Watershed Hydrology, Lewis Publishers.
6. Developing the Environment Problems and Management – C.J. Barrow.
7. Jain S.K., Agarwal P.K. and Singh V.P. (2007) Hydrology and Water Resources of India, Springer, The Netherlands.
8. Common Guidelines for Watershed Development Projects (2008) Government of India.

**Course: Eco-toxicology, Health and Safety**  
**Semester: III**

**Credit : 3**  
**Course code : ENV4314**

**Course objective:** Development of knowledge and skills to reinforce the attitudes and behaviors required for safe and environmentally sound work habits. Another aspect of eco-toxicology would deal with effects of various toxic materials posing adverse environmental health. A brief overview of industrial hazards and safety management will keep the students updated about occupational health.

**Module I: Overview of Environmental Health:** Public exposure from industrial sources, hazards by industry, major chemical contaminants at workplace, industrial environmental accidents, Hospital Waste Management.

**Module II: Eco-toxicology:** Toxicity: case studies (F, As, Hg etc.), entry, movement and fate (biotransformation, bioaccumulation and biomagnifications) of pollutants in ecosystems, natural toxins: animal toxins, snake venoms, plant toxins, metals, pesticides, POPs: portals of entry and toxic effects, chromosome damage, gene mutation, factors influencing toxicity, environmental carcinogenesis: chemical carcinogenesis, organic carcinogens, metal carcinogens, occupational cancer, toxicity testing, test organisms used in bioassays, coliform bacteria count and MPN method, dose response curves, LC50, LD50.

**Module III: Industrial Safety:** Public health, personal hygiene, food adulterants, diseases (deficiency, infection, pollution, occupational and communicable) prevention and control, management of hygiene in public places, occupational health and safety, hazards - physical, chemical and biological, industrial safety standards and regulations, accidents - prevention and control, good manufacturing practices (GMP) and good laboratory management practices (GLP), OSHA & NIOSHA.

**Examination Scheme:**

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

**Books Suggested:**

1. Handbook of Environmental Health and Safety – principle and practices (Vol. II):H.Koren; Lewis Publishers
2. Basic Environmental Health (2001): AnnaleeYassi, TordKjellstr"om, Theo de Kok, TeeGuidotti.
3. Environmental Health: Monroe T.Morgan.
4. Newman, M.C, Lawrence, C.A., and Unger. M.A., 2002. Ecotoxicology: Fundamentals of Ecotoxicology, 2<sup>nd</sup>Ed., CRC Press, Boca Raton,Florida.

7. Stanely E. Manahan.1992.Toxicological chemistry. LewisPublishers

**Course: Waste Management & Valorization**  
**Semester: III**

**Credit : 2**  
**Course code : ENV4315**

**Course objective:** The course would comprise of general introduction and various components of solid waste. It would cover the characterization, collection, treatment and disposal techniques and related environmental issues. Students would be conceptualized with the onsite vs. offsite waste management as well as integrated waste management.

**Module I: Introduction:** Sources and characterization of solid and hazardous wastes, hazard identification, risk characterization, and exposure assessment. health and environmental impacts of solid and hazardous waste management, integrated waste management strategy: reduce, recover/ reuse and recycling.

**Module II: Waste Management:** Methods of waste collection, storage and transportation, treatment and disposal techniques for solid waste - landfill operation and maintenance, Leachate collection and treatment , composting, (advantages and limitation), vermin-composting, incineration, Pyrolysis, biogas plant, , Techniques of hazardous waste treatment and safe disposal, Nuclear and e-waste management.

**Module III: Waste Valorization from Residues: Biomass & Bio-fuels:** Environmental & economic aspects; Bio-fuels from agro residues, Clean technologies concepts for the biological conversion of wastes- aerobic and anaerobic;

**Examination Scheme:**

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

**Books Suggested:**

1. Batstone R., Smith J.E. (Jr.) and Wilson D. (1989), The Safe Disposal of Hazardous Wastes-the Special Needs and Problems of Developing Countries, The World Bank Technical Paper No. 93, Vol. I, II and III, Washington, DC, TheWorldBank.

**Course: Analytical Laboratory III**  
**Semester: III**

**Credit : 3**  
**Course code : ENV4316**

1. Use of microscope: bacterial morphology and staining methods.
2. Biological examination of water: algae and bacteria
3. Isolation of fungi from environmental samples
4. Standard plate count
5. Bacterial water quality: Measuring quality of water by using coli form organisms (MPN method and membranefilter).
6. Estimation of sugars, proteins, lipids.
7. Water analysis: Maximum Probable Number (of Bacteria), E.coli
8. Experiments related to Microbiological analysis of waste water MPN, Total and Faecal coliforms [in potable water], and other organisms.
9. Process and analysis of biological composting and vermicomposting.

**Course: Environmental Economics**  
**Semester: III**

**Credit : 2**  
**Course code : ENV4317**

**Course objective:** Economics and environment must be completely integrated in decision making and law making processes and there should be an effort to increase understanding of intriguing policy problems. Environmental and resource economics makes use of ideas and tools developed in other branches of economics to make significant contribution to valuation techniques, design of policy instruments for pollution control and management of commons.

**Module I: Introduction:** Integration of environment and economics, basics of welfare economics: producer and consumer surplus, stock pollutants, market failure, pareto optimality, cost-benefit analysis and valuation: discounting, principles and estimation of cost-benefit, methods of valuation: physical linkage, hypothetical behavioral and stated preferences methods, observed behavioral or revealed preferences methods, selected concepts in econometrics.

**Module II: Resource Economics:** Renewable and non-renewable resources, the resource allocation problem and management. Hotelling's rule, exhaustible energy resources, risk and uncertainty; Economics of forestry, fisheries, minerals and climate economics.

**Module III: Economics & Environmental Policy:** Command and control versus incentives and subsidies - available policy options, regulating pollution through standards: pigouvian fees and marketable permits, porter's hypothesis, economic growth and the environment: environmental kuznets' curve.

**Examination Scheme:**

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

**Books Suggested:**

1. Bhattacharya, R.N. (Ed.), 2001, Environmental Economics: An Indian Perspective, O.U.P.
  2. Kadekodi, G.K., (Ed.), 2004, Environmental Economics & Practice, O.U.P.

**Course: Term Paper/ Seminar (Research Article)**  
**Semester: III**

**Credit : 1**  
**Course code : ENV4331**

### **Objectives:**

The objective of this course is to judge the understanding as well as application of the knowledge gained by the students.

The aim of the term paper/seminar is to provide the students with an opportunity to further enhance their knowledge in a sector of their choice by undertaking examination and analysis of various aspects of environmental issues at a level commensurate with the learning outcomes of the various courses taken up by them in the ongoing semester.

A term paper/ seminar is primarily a record of intelligent reading in several sources on a particular subject. The students will choose the topic at the beginning of the session in consultation with the faculty assigned.

A workshop is primarily an activity based academic event where the students practically obtain hands on experience on any aspect of their learning. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

### **Major Themes**

- Waste to energy
- Green building
- Disaster management
- Renewable energy
- Climate change and adaptation
- Remote sensing and GIS
- Wild life management
- Sustainable practices

These themes are merely indicative and other recent and relevant topics of study may be included.

### **Guidelines for term paper/ seminar:**

- Choosing the topic: contemporary issue/ relevant study material will be given by the department
- The participants are expected to explore the topic in advance and take active part in the discussions
- Presentation: before the commencement of Semester examinations
- Group Activities have to be undertaken by students as guided by the trainer in a workshop.
- Response to queries
- Submitting a write up of at least 500 words about the learning outcome from the workshop/term paper.

Presentation of the seminar will be of 30 min maximum (25 min presentation and rest question answer session)

### **Methodology**

The methodology followed at the workshop could be based on any one or more of the following methods:

- Case Study
- Simulation
- Business Planning
- Quiz
- Quality analysis & characterization
- Identification and preparation of materials

**Examination Scheme:**

Organisation and relevance of content	Literature Review	Bibliography	Presentation	Response to the queries	Total
30	10	10	40	10	100

**Course: Summer Internship Evaluation +Project Formulation Credit : 6**  
**Semester: III Course code : ENV4335**

**Methodology:**

Practical training is based on the theoretical subjects studied by the students. It can be arranged within the college or in any related industrial unit/ research organization. The students shall get a chance for practical exposure to various industrial processes, technical and experimental research skills. In case of on campus training the students will be given specific tasks which may be experimental or observation and analysis based i.e. analysis of water, air and soil, biodiversity analysis, short term project, data generation and analysis etc. On completion of the practical training the students are to present a report covering various aspects learnt by them and give a presentation of the same. The summer internship may further lead to Major project formulation for lastsemester.

**Examination Scheme**

<b>Feedback from</b>	<b>Training Report</b>	<b>Viva</b>	<b>Presentation</b>	<b>Total</b>
<b>10</b>	<b>30</b>	<b>30</b>	<b>30</b>	<b>100</b>

**Course: Environmental Biotechnology**  
**Semester: III**

**Credit : 3**  
**Course code : ENV4309**

**Course objective:** Environmental biotechnology utilizes microorganisms to exploit biotic resources for environmental management practices. This management includes treatment of contaminated water and wastewater, clean up of industrial waste streams, and remediation of soils contaminated with hazardous and toxic chemicals and application of biotechnology in improvement of environment quality. Environmental biotechnology is essential to society and truly important as a technical discipline.

**Module I: Bioremediation and metagenomics:** Bioremediation: concept and types (natural and engineered): bio- attenuation, ex-situ and in-situ, bio-augmentation and bio-stimulation, advantages and disadvantages, bioremediation to control pollution e.g. solid waste, sewage, industrial effluents, heavy metals, radioactive substances and oil spill, Metagenomics: environmental and community genomics, the study of genetic material recovered directly from environmental samples and future applications in bioremediation, Genetically modified organisms (GMO's) and bio- safety.

**Module II: Industrial biotechnology:** Maintenance of stock cultures, culture collection centers/microbial gene banks, inoculum build-up, industrial substrates, design of a bioreactor, batch and continuous fermentation and solid-substrate fermentations, immobilization technologies, microbial production of food (SCP), essential prerequisites for organisms to be used as SCP and as food and feed supplements, microbial transformation, accumulation and concentration of metals, metal leaching, extraction and future prospects, biosensors.

**Module III: Applied biotechnology:** Practical aspects of genetic engineering with microorganisms from extreme environment: use of extremophilic microorganisms in waste treatment and methane production from agro industrial wastes, enzyme production: cellulase, proteases, amylases, alcohol and acetic acid production, biocomposting and biomining, alternate fuels: biofuels, sources and production.

**Examination Scheme:**

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

**Books Suggested:**

1. M.H. Fulekar (2005) Environmental Biotechnology Oxford IBH Publishing cooperation.
2. Industrial Microbiology - Casida, Wiley Eastern publishers, 1994.
3. Biodegradation and Bioremediation- Martin Alexander.
4. Biotechnology-A new industrial revolution Prentis S. Orbis Publishing Ltd., London.
5. Microbiology Davis, B>D., Dulbecco, R., Eisen, H.N and Ginsberg, H.S. Harper and Row Publishers, Singapore.
6. Environmental Microbiology, 2000, Maier, R.M. Pepper, I.L and Gerba, C.P. Academic Press.

**Course: Environmental Geology**  
**Semester: III**

**Credit : 3**  
**Course code : ENV4310**

**Course objective:** The course is designed to provide a clear knowledge of Earth as a system and the basic concepts influencing the processes and dynamics of Earth. It will also give an understanding of geological processes vis-à-vis the human influences and its implications.

**Module I: Earth Processes and Dynamics:** Distribution of elements in the solar system and the Earth, chemical differentiation and composition of the Earth, Structure and composition of earth's interior and surface, rocks and minerals and associated processes, Geological time scale.

**Module II: Earth Tectonics and Dynamics:** Concept of plate tectonics, sea-floor spreading and continental drift, geodynamic elements of Earth: Mid Oceanic Ridges, trenches, transform faults and island arcs, origin of oceans, continents, mountains and rift valleys, earthquake and earthquake belts, volcanoes: types, products and distribution.

**Module III: Processes of Soil Formation:** Types of soil, soil degradation and changing land use pattern, concepts of natural ecosystems on the Earth and their mutual inter-relations and interactions (atmosphere, hydrosphere, lithosphere and biosphere), Impact assessment of water availability, quality and contamination of surface water and groundwater, atmosphere and air pollution, soil contamination due to urbanization, industrialization and mining, basic tenets of environmental laws.

**Examination Scheme:**

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

**Books Suggested:**

2. Kellar, E. A. 2000. Environmental Geology. Prentice Hall, N. Jersey.
3. Merritts, D., de Wet, A. and Menking, K. 1998. Environmental Geology: an earth system science approach. W.H. Freeman & Co., N.Y.
4. Strahler, A.N. and Strahler, A.H. 1973. (Revised Ed.) Environmental Geoscience: interaction between natural systems and man. Hamilton Pub, USA.

**Course: Green Energy**  
**Semester: III**

**Credit : 3**  
**Course code : ENV4311**

**Course objective:** The purpose of this course is to provide a survey of the most important renewable energy resources, and the technologies for harnessing these within the framework of a broad range of simple to state-of the art advanced energy systems. After completion of the course, students will be able to describe the fundamentals and main characteristics of renewable energy sources and their differences compared to fossil fuels.

**Module I: Green Energy and Sustainable Development:** Clean/ green energy technologies, sustainable development, international agreements/conventions on energy and sustainability: UNFCCC, nuclear energy: fission reactors, fission power and environment, fuel cells: hydrogen fuel cell, metal hydrate fuel cell, microbial fuel cell, renewable energy sources: solar, geothermal, tidal and wind energy, hydropower, ocean thermal energy conversion (OTEC), energy use pattern: India and global, renewable energy management in India.

**Module II: Solar Energy:** Solar radiation: measurement and prediction, solar collectors: flat plate and concentrating collectors, solar heating of buildings, solar still, solar water heaters, solar driers, conversion of heat to mechanical energy, solar thermal power generation systems, solar photovoltaic: principle, types of solar cells and fabrication, photovoltaic applications: battery charger, domestic lighting, street lighting, water pumping and power generation.

**Module III: Energy From Waste – bio-chemical conversion:** Anaerobic digestion of sewage and municipal wastes, direct combustion of MSW-refuse derived solid fuel, industrial waste, agro residues, anaerobic digestion, biogas production, land fill gas generation and utilization, present status of technologies for conversion of waste into energy, design of waste to energy plants for cities, small townships and villages.

**Examination Scheme:**

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

**Books Suggested:**

1. Municipal Solid Waste to Energy Conversion Processes: Economic, Technical, and Renewable Comparisons, by Gary C. Young, ISBN: 9780470539675, Publisher: John Wiley & Sons, Publication Date: June 2010.
2. Recovering Energy from Waste Various Aspects Editors: Velma I. Grover and Vaneeta Grover, ISBN 978-1- 57808-200-1; 2002
3. G. Evans, Biowaste and Biological Waste Treatment, 2005
4. Biogas from waste and renewable resources, by Dieter D. And Angelika S. Wiley-Vch Publication 2010.

**Course: Waste Water Treatment**  
**Semester: III**

**Credit : 3**  
**Course code : ENV4312**

**Course objective:**

**Module I: Water Pollutants:** Types and sources, generation and collection of wastewater, sewerage systems, quantities of sanitary wastes and storm water, carrying capacity of rivers.

**Module II: Wastewater Characteristics:** Waste quality parameters: physical, chemical and biological, water borne diseases, primary, secondary and tertiary treatment, physical unit processes: screening, commutation, grit removal, equalization, coagulation-flocculation, sedimentation, and disinfection.

**Module III: Biological Wastewater Treatment Systems:** Aerobic processes - activated sludge process and its modifications, trickling filter, RBC, anaerobic processes: suspended growth, attached growth, fluidized bed and sludge blanket systems, natural wastewater treatment systems: ponds and lagoons, phytoremediation, wetlands and root-zone systems, operation and design aspects.

**Module IV: Advanced Wastewater Treatment:** Iron and manganese removal, colour and odour removal, activated carbon treatment, ion exchange, electro-dialysis, reverse osmosis and fluoride management, nitrogen and phosphorus removal, heavy metals removal, oil and refractory organics removal, micro-screening, ultra-filtration, centrifugation, wastewater disposal standards, sludge digestion and handling, disposal of effluent and sludge.

**Examination Scheme:**

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

**Books Suggested:**

1. Waste water engineering, treatment and reuse by Metcalf and eddy, fifth edition, Tata McGraw Hill.
2. Garg, S.K., Environmental Engineering, Vol. I, Khanna Publications, 2001, New Delhi.
3. Garg, S.K., Environmental Engineering, Vol. II, Khanna Publications, 2001, New Delhi.
4. Mark J. Hammer and Mark J. Hammer Jr., Water and Waste Water Technology, Prentice Hall of India Pvt. Ltd., 1998, New Delhi.

**Course code : ENV4401**

**Course objective:** The students will have an overview of Environment Impact Assessment and newer approaches related to it. This course aims to acquaint the students with an in-depth knowledge of laws and policies concerned with environmental protection. A brief outline of the efforts being done through global summits and laws implemented at national level would make the students familiar with basic knowledge of environmental law issues.

**Module I: Environmental Protection & International Efforts:** National Environmental Policy, provisions for environment protection in constitution of India; Ecomark; major environmental movements in India and role of NGOs. United Nations Bodies for environmental protection; Introduction to Stockholm Conference on Human Environment (1972), Nairobi Declaration, Montreal Protocol(1987), Basel Convention (1989 and 1992), Earth summit at Rio de Janeiro (1992), Kyoto Protocol (1997), Earth summit at Johannesburg (2002), CBD, Paris Agreement

**Module II: Environmental Laws:** Air Pollution Act (1981), Water Pollution Act(1974), Environmental (Protection) Act (1986), Hazardous Wastes Management and Handling Rules(1989), Municipal Solid Waste (Management and Handling Rules) (2000), Public Liability Insurance Act (1991) and Rules(1991), Coastal Regulation Zones (CRZ) Rules (2011),Wildlife (Protection) Act(1972),Forest (Conservation) Act(1980), Biological Diversity Act(2002).

**Module III: Environmental impact assessment (EIA):** Introduction & Significance of EIA; Environmental impact statement (EIS), environmental management: (EMP& EMS), ISO standards; scope and types of environmental audit, environmental management plan (EMP), eco-management and audit scheme (EMAS); safety management system; Life Cycle Analysis (LCA) and its components.

### Examination Scheme:

7. Sahasranaman P B, 2008 Handbook of Environmental Law in India, Oxford University Press (India).

**Course: Urban Ecosystem and Industrial Ecology**  
**Semester: IV**

**Credit : 2**  
**Course code : ENV4402**

**Course objective:** The purpose of this course is to have an understanding of concepts and processes governing urbanization and its impact on natural resources. Students will also be given an exposure about urban space as well as industrial systems and the strategies to emulate ecological systems for minimizing the waste production in urban and industrial processes. The course would also discuss key issues involved with eco-industrial development and some cases from India.

**Module I: Urbanization:** Global and regional scenario of urbanization: factors and impact, population dynamics and push-pull factors, vegetative distributions in cities (green spaces), land use and GIS, urban green habitat, ecosystem services for cities. Hydrological effects of urbanization (water demand/wet land/ water conservation/waste water); climate resilient cities for sustainable urban habitat, integrating urban and environmental planning framework

**Module II: Concepts of Industrial Ecology:** origin, definition, environment and the anthrosphere, industrial systems, material resources, societal factors and environmental equity, Systems analysis, industrial metabolism, biological analogies; perspective on industrial ecology from India and other developing countries such as China and Brazil, with case studies.

**Module III: Issues of Eco-industrial Development:** Components of an industrial ecosystem (Kalundborg example), industrial symbiosis, role of government, community, developers, management, evaluating the success of eco-industrial development, life cycle analysis and assessment: life cycle of products, processes and facilities.

**Examination Scheme:**

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

**Books Suggested:**

1. Bourg D. and Erkman S., (edited) Perspectives on Industrial Ecology, 46(2) (hardback).
2. Jari N., Jürgen H.B., Guntenspergen G., Nancy E.M., Elmqvist T. and James P. (ed) (2011) Urban Ecology: Patterns, Processes and Applications, Oxford University Press, New York, US.
3. Allen A. and You N. (2002) Sustainable Urbanization: Bridging the Green and Brown Agendas, University College London, UK.
4. Erkman S. and Rama swamy R. (2003) Applied Industrial Ecology – A New Platform for Planning Sustainable Societies, AICRA Publishers, Bangalore, India.

**Course: Natural Hazards and Disaster Management**  
**Semester: IV**

**Credit : 2**  
**Course code : ENV4403**

**Course objective:** This paper introduces the students to various environmental hazards, their causes, nature, preparedness and assessment of loss. It teaches them to model hazards and familiarizes with methods of management of disasters and consequently risk zonation.

**Module I: Introduction:** Disaster: nature and causes, climate change and disaster, hazard, risk, vulnerability, impacts of disasters: health, physical and socio-economic.; Natural hazard profile of India.

**Module II: Natural and Human Induced Hazards:** Hazards: classification, causes, impact and prediction; floods and droughts; drought and its management-causes and impacts, water conservation practices for deserts, mass wasting/ landslides; avalanche; nature and causes of volcanoes. Human induced hazards: hazards due to dams/ reservoirs, nuclear power plants, industrial and occupational hazards, tropical cyclones and tsunami, sea level change and its impact on coastal areas.

**Module III: Disaster Management Cycle:** disaster preparedness: preventive measures, early warning system; Mitigation: disaster risk reduction (DRR), the emergency operation plan (EOP); Response and recovery; Applications of science, technology and engineering in disaster management.

**Examination Scheme:**

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

**Course: Term Paper/ Seminar (Research Article)**  
**Semester: IV**

**Credit : 1**  
**Course code : ENV4431**

**Objectives:**

The objective of this course is to judge the understanding as well as application of the knowledge gained by the students. The aim of the term paper/ seminar is to provide the students with an opportunity to further enhance their knowledge in a sector of their choice by undertaking examination and analysis of various aspects of environmental issues at a level commensurate with the learning outcomes of the various courses taken up by them in the ongoing semester.

A term paper/ seminar is primarily a record of intelligent reading in several sources on a particular subject. The students will choose the topic at the beginning of the session in consultation with the faculty assigned.

**Guidelines:**

- a) Choosing the topic: contemporary issue and will be given by the department
- b) Finding relevant materials
- c) Presentation: before the commencement of Semester examinations
- d) Response to queries
- e) Submission of the write-up

Presentation of the seminar will be of 30 min maximum (25 min presentation and rest question answer session)

**Examination Scheme:**

Organisation and Relevance of Content	Literature Review	Bibliography	Presentation	Response to the Queries	Total
30	10	10	40	10	100

**Course : Research based Project Work**  
**Semester: IV**

**Credit: 12**  
**Course code: ENV4437**

### **GUIDELINES FOR PROJECT FILE AND PROJECT REPORT**

Research experience is a professional problem-solving activity and is equally significant as any other aspect of the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critically analyzed by the faculty guide and corrected by the student at each stage.

### **PROJECT FILE**

The Project File may be a very useful tool for undertaking an assignment along-with a normal semester, an exploratory study, sponsored projects, a project undertaken during summer period or any other period as per curricula where the researcher is working with a company/organization. The project/ assignment may also be a part of the bigger research agenda being pursued by a faculty/ institution/ department.

The Project File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation. This file may be considered in continuous assessment.

**In general, the File should be comprehensive and include:**

- A short account of the activities that were undertaken as part of the project;
- A statement about the extent to which the project has achieved its stated objectives;
- A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;
- Any activities planned but not yet completed as part of the project, or as a future initiative directly resulting from the project;

- Any problems that have arisen and may be useful to document for future reference.

## **PROJECT REPORT**

The Project Report is the final research report that the student prepares on the project assigned to him. In case of sponsored project the layout of the project could be as prescribed by the sponsoring organization. However, in other cases the following components should be included in the project report:

### ➤ **Title or Cover Page**

The title page should contain Project Title; Student's Name; Programme; Year and Semester and Name of the Faculty Guide.

### ➤ **Acknowledgement(s)**

Acknowledgment to any advisory or financial assistance received in the course of work may be given. It is incomplete without student's signature.

### ➤ **Abstract**

A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project. It should not exceed more than 1000 words.

### ➤ **Table of Contents**

Titles and subtitles are to correspond exactly with those in the text.

### ➤ **Introduction**

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

### ➤ **Materials and Methods**

This section should aim at experimental designs, materials used (wherever applicable). Methodology should be mentioned in detail including modifications undertaken, if any. It includes organization site(s), sample, instruments used with its validation, procedures followed and precautions.

### ➤ **Results and Discussion**

Present results, discuss and compare these with those from other workers, etc. In writing this section, emphasis should be laid on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes

in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary, do not write in “point” form.

While presenting the results, write at length about the various statistical tools used in the data interpretation. The result interpretation should be simple but full of data and statistical analysis. This data interpretation should be in congruence with the written objectives and the inferences should be drawn on data and not on impression. Avoid writing straight forward conclusion rather; it should lead to generalization of data on the chosen sample.

Results and its discussion should be supporting/ contradicting with the previous research work in the given area. Usually one should not use more than two researches in either case of supporting or contradicting the present case of research.

➤ **Conclusion(s) &Recommendations**

A conclusion should be the final section in which the outcome of the work is mentioned briefly. Check that your work answers the following questions:

- Did the research project meet its aims (check back to introduction for state daims)?
- What are the main findings of the research?
- Are there any recommendations?
- Do you have any conclusion on the research process itself?

➤ **Implications for Future Research**

This should bring out further prospects for the study either thrown open by the present work or with the purpose of making it more comprehensive.

➤ **Appendices**

The Appendices contain material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

➤ **References**

References should include papers, books etc. referred to in the body of the report. These should be written in the alphabetical order of the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

**Examples:**

**For research article:**

Voravuthikunchai, S.P., Lortheeranuwat, A., Ninrprom, T., Popaya, W., Pongpaichit, S., Supawita, T., Photocatalytic treatment of tannery wastewater for the removal of toxic compounds, Journal of Environmental Science and Technology, 8 (1): 116-117 (2002).

**For book:**

Kowalski, M., Biological wastewater treatment for pulp and paper industry, Wastewater Treatment (Eds. P.S. Nutman IBP), 7: 63-67 (1976).

**The Layout Guidelines for the Project File & Project Report:**

- A4 size Paper
- Font: Arial (10 points) or Times New Roman (12points)
- Line spacing: 1.5
- Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3cm

**ASSESSMENT OF THE PROJECT FILE AND THE PROJECT REPORT**

Essentially, the assessment will be based on the quality of the report, the technical merit of the project and the project execution. Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project. Project execution is concerned with assessing how much work has been put in.

The Project should fulfill the following *assessment objectives*:

- Range of Research Methods used to obtain information
- Execution of Research
- Data Analysis (Analyze Quantitative/ Qualitative information)
- Quality Control
- Conclusions

**Assessment****Scheme:****Continuous****Evaluation:**

40% (Based on punctuality, regularity of work, adherence to plan and methodology, refinements/mid-course corrections etc. as reflected in the Project File.)

**Final Evaluation:**

60% (Based on the Documentation in the file, Final report layout, analysis and results, achievement of objectives, presentation/ viva)

**It is recommended that the Final evaluation should be carried out by a panel of evaluators.**

## Syllabus - Semester First

### BASICS OF CLIMATE SCIENCE

**Course Code:** AST2151

**Credit Units:** 03

**Course Objectives:**

The aim of this course is to provide the students a basic understanding about the climate system: its attributes, underlying processes, and the drivers of climate change. Knowledge of various components of climatic system, and their interactions with atmosphere/hydrosphere/lithosphere would further create interest amongst the students about the climate system modelling and climatic vulnerability. This course emphasizes the scientific basis for anthropogenic climate change. Students will learn the physics behind the climate system, how climate has changed in the past and reasons why contemporary climate change is different, the scientific basis for anthropogenic climate change theory and how scientists use models to predict future climate. The course will also provide an overview of the physical, ecological, biological, social and economic impacts of climate change. Finally, students will examine various mitigation and adaptation strategies which society can employ in a warmer world.

**Course Contents:**

**Module I: Introduction to Climate Science and its Components**

Fundamentals of meteorology; Vertical profiles of temperature, wind, pressure, water vapor, and microphysical processes in the atmosphere; Climate system and interaction among components (atmosphere, oceans, sea, ice and land surface) of climate system and feedback mechanisms; Atmospheric thermodynamics, radiation in the atmosphere, Greenhouse gases and climate forcing; Overview of weather systems: Extreme weather events and Western disturbance.

**Module II: Remote Sensing Techniques**

Types of remote sensing; Different remote sensing platforms; Principles of Remote Sensing; Radiometer, Lidar, Radar, Sodar, Sonar, Land-atmosphere-ocean satellites; Calibration and validation methods.

**Module III: Climatology and Meteorology**

Radiation budget and balance; Solar constant; Lapse rate and stability; Water cycle and role in weather; Mechanism of wind development; Fundamental forces (pressure gradient, centrifugal, gravity, Coriolis); Surface winds and upper air circulations; Jet streams; Planetary circulations.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

A-Attendance; CT-Class Test; S/V/Q-Seminar/Quiz/Viva; HA-Home Assignment; EE-End Semester Examination

# Syllabus - Semester Second

## INTRODUCTION TO EARTH SYSTEM SCIENCE

**Course Code:** AST2251

**Credit Units:** 03

### Course Objectives:

This course embraces chemistry, biology, mathematics and applied sciences in transcending disciplinary boundaries to treat the Earth as an integrated system. Thus, it imparts knowledge to the students with basic understanding of the physico-chemical, biological and human interactions that determine the past, current and future states of the Earth. Earth system science seeks to integrate various fields of academic study to understand the Earth as a system. It considers interaction between the atmosphere, hydrosphere, lithosphere, biosphere and heliosphere.

Further, the Earth System Science program provides students with a fundamental understanding of the oceanographic, atmospheric, and terrestrial sciences. This program of study prepares students for careers in science, research, or technical fields. Students learn to apply basic sciences (physics, chemistry, mathematics, and biology) to understand the major processes and systems governing the Earth's climate, biogeochemical cycles, and global change. Central to the B.S. program is an understanding of relevant scientific literature, methods to collect/analyze data, and interpret results in the context of scientific theory. Students will learn to work collaboratively to understand and address complex problems and communicate scientific knowledge. Through the core course work, students will learn to explain the current and projected future state of the Earth system in the context of past climate change and current human activities.

### Course Contents:

#### Module I: Fundamental Processes in Earth and Environmental Studies

An introduction to the physical environment, biological systems, and human-environmental interactions, Physical principles such as fluid transport and reaction rates using environmental examples as well as principles of populations, ecosystems, carrying capacity, and sustainable use of resources.

#### Module II: Hurricanes, Tsunamis and other Catastrophes

Introduction to the basic science and state of predictability of various natural catastrophic events such as hurricanes, tsunamis and volcanoes, future climate catastrophes including severe droughts, abrupt climate change, thermohaline circulation collapse and sea level rise.

#### Module III: Remote Sensing and Geographic Information System (GIS) for Earth System Science

Principles behind remote sensing, and the types of satellite data available for study of the oceans, land, and atmosphere, GIS Brief History, Techniques and Technology, Uncertainties, Spatial Analysis.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

A-Attendance; CT-Class Test; S/V/Q-Seminar/Quiz/Viva; HA-Home Assignment; EE-End Semester Examination

# Syllabus - Semester Third

## CLOUD MICROPHYSICS AND CHEMISTRY

**Course Code:** AST2351

**Credit Units:** 03

### Course Objectives:

This course focuses on understanding how transformation of aerosol particles to droplets or ice crystals, heterogeneous chemistry and acid rain, physics of aerosol and cloud element motion, the interaction of particles with water vapor, chemical composition of particles and the effect on cloud formation processes, and the effect of cloud processing on aerosol chemistry, geo-engineering, weather modification and volcanic effects. Thus, it provides the students an insight into one of the important complex drivers of the local/regional/continental/hemispheric/global climate system.

### Course Contents

#### Module I: Basic Cloud Physics

Water vapour and its thermodynamic effects, mixing and convection, formation of cloud droplets, formation and growth of ice crystals, aerosol sources and sizes, condensation and growth of cloud droplets: curvature, Kelvin, solute effects, cloud growth and precipitation, rain, snow and hail processes.

#### Module II: Microphysical Processes in warm and cold clouds

Cloud condensation nuclei, microstructures of warm clouds, growth of cloud droplets in warm clouds, growth by condensation and collision-coalescence, microphysics of cold clouds, growth by collection, modification of warm and cold clouds, lightning and thunder.

#### Module III: Cloud and Precipitation Chemistry

Transport of particles and gases, nucleation scavenging, dissolution of gases in clouds droplets, precipitation scavenging, chemical composition of rain, production of aerosols by clouds.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

A-Attendance; CT-Class Test; S/V/Q-Seminar/Quiz/Viva; HA-Home Assignment; EE-End Semester Examination

## Syllabus - Semester Fourth

### CLIMATE CHANGE: IMPACT, VULNERABILITY AND ADAPTATION

Course Code: AST2451

Credit Units: 03

#### Course Objectives:

This course provides the students with an introduction to the vulnerability of climate change and potential adaptation options of natural as well as social systems. A critical view will be laid on the 'attribution problem', the prioritization of adaptation means, mal-adaptations, the implementation problem, ethical views and conflicts with development goals. Win-win-situations and trade-offs between the latter and climate change adaptation is part of this course too.

#### Course Contents

##### Module I: Introduction to the Impacts of Climate Change

Fundamentals of climate system and climate change, brief summary of Inter-Governmental Panel of Climate and Climate Change (IPCC) reports, future directions for mitigation processes.

##### Module II: Vulnerability

Introduction to the concept, ecological and social systems, coastal vulnerability, methods of evaluation of vulnerability and impacts.

##### Module III: Adaptation

Introduction to the concept, indicators of adaptation, options and limits of adaptation, food and energy security, autonomous versus planned adaptation, adaptation capacity.

#### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

A-Attendance; CT-Class Test; S/V/Q-Seminar/Quiz/Viva; HA-Home Assignment; EE-End Semester Examination

# Syllabus - Semester Fifth

## PRIMER OF OCEANOGRAPHY

**Course Code: AST2551**

**Credit Units: 03**

### Course Objectives:

Ocean-related science is relevant to many contemporary environmental issues and problems and central to understanding earth-system evolution, dynamics, climate and sustainability. This course offers a very flexible curriculum that serves students with a broad range of educational and career interests including environmental management and regulation, environmental law. The topics selected for this course, are expected to provide the students with a broad conception of the world's oceans; evaluation of its potential contributions to solution of problems presently confronting mankind.

### Course Contents

#### Module I: Ocean Properties

Introduction to Oceans, physical and chemical properties of ocean water, composition of sea water, salinity and density.

#### Module II: Physical Oceanography

Thermal expansion of sea water, viscosity, surface tension, heat conduction, adiabatic temperature changes, optical properties, temperature-salinity relationship,

#### Module III: Bathymetry, Eco Systems and Pollution

Basic definition, oceanic life and ecosystems, measurement techniques, bathymetric chart, fish-zone detection, marine pollution.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

A-Attendance; CT-Class Test; S/V/Q-Seminar/Quiz/Viva; HA-Home Assignment; EE-End Semester Examination

# Syllabus - Semester Sixth

## FUNDAMENTALS OF CLIMATE VARIABILITY AND MODELLING

**Course Code:** AST2651

**Credit Units:** 03

### Course Objectives:

This course essentially deals with fundamentals of climate variability and its modelling. This knowledge to the students makes them familiar with different types of climate models available not only for prediction purposes but also to undertake sensitivity tests and to simulate the future climate scenarios both regionally and globally.

### Course Details

#### Module I: Climate Variability

Natural variability versus anthropogenic forcing to climate system, climate sensitivity, Greenhouse gases and global warming,

#### Module II: Climate Drivers

Climate Global distributions of temperature, precipitation, precipitation, climate classification, Natural and external forcings to climate variability,

#### Module III: Basics of Climate Modelling

Simple energy balance climate models, introduction to coupled ocean-atmosphere models, simple models for predicting climate change and impact assessment.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

A-Attendance; CT-Class Test; S/V/Q-Seminar/Quiz/Viva; HA-Home Assignment; EE-End Semester Examination

# ENVIRONMENTAL MANAGEMENT

## Syllabus - Semester First

### ENVIRONMENTAL STUDIES-I

**Course Code: ENV2151**

**Credit Units: 02**

**Course Objective:**

The term environment is used to describe, in the aggregate, all the external forces, influences and conditions, which affect the life, nature, behaviour, growth, development, and maturity of living organisms. At present a great number of environmental issues, have grown in size and complexity day by day, threatening the survival of mankind on earth. A study of environmental studies is quite essential for handling environmental disasters and industrial management. The objective of environmental studies is to enlighten the masses about the importance of the protection and conservation of our environment and control of human activities which has an adverse effect on the environment.

**Course Contents:**

**Module I: The multidisciplinary nature of environmental studies**

Definition, scope and importance, Need for public awareness

**Module II: Natural Resources - Renewable and non-renewable resources**

Natural resources and associated problems

Forest resources: Use and over-exploitation, deforestation, case studies, timber extraction, mining, dams and their effects on forests and tribal people.

Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems.

Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies.

Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies.

Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources, case studies.

Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification.

- Role of an individual in conservation of natural resources.
- Equitable use of resources for sustainable lifestyles.

**Module III: Ecosystems**

Concept of an ecosystem: Structure and function of an ecosystem, producers, consumers and decomposers, energy flow in the ecosystem, ecological succession, food chains, food webs and ecological pyramids, introduction, types, characteristic features, structure and function of the following ecosystems:

- a. Forest ecosystem
- b. Grassland ecosystem
- c. Desert ecosystem
- d. Aquatic ecosystems (ponds, streams, lakes, rivers, ocean estuaries)

#### Module IV: Biodiversity and its conservation

Introduction – Definition: genetic, species and ecosystem diversity, biogeographical classification of India, value of biodiversity: consumptive use, productive use, social, ethical aesthetic and option values, biodiversity at global, national and local levels, India as a mega-diversity nation, hot-spots of biodiversity, threats to biodiversity: habitat loss, poaching of wildlife, man wildlife conflicts, endangered and endemic species of India, conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

#### Examination Scheme:

Components	CT	HA	S/V/Q	A	EE
Weightage (%)	15	5	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, A: Attendance, EE: End Semester Examination

# Syllabus - Semester Second

## ENVIRONMENTAL STUDIES-II

**Course Code: ENV2251**

**Credit Units: 02**

### **Course Objective:**

The term environment is used to describe, in the aggregate, all the external forces, influences and conditions, which affect the life, nature, behaviour, growth, development, and maturity of living organisms. At present a great number of environmental issues, have grown in size and complexity day by day, threatening the survival of mankind on earth. A study of environmental studies is quite essential for handling environmental disasters and industrial management. The objective of environmental studies is to enlighten the masses about the importance of the protection and conservation of our environment and control of human activities which has an adverse effect on the environment.

### **Course Contents:**

#### **Module I: Environmental Pollution**

Definition, causes, effects, and control measures of: air pollution, water pollution, soil pollution, marine pollution, noise pollution, thermal pollution, and nuclear pollution.

Solid waste management: causes, effects and control measures of urban and industrial wastes, role of an individual in prevention of pollution, pollution case studies, disaster management: floods, earthquake, cyclone, and landslides.

#### **Module II: Social Issues and the Environment**

From unsustainable to sustainable development, Urban problems related to energy

Water conservation, rain water harvesting, and watershed management

Resettlement and rehabilitation of people, its problems and concerns, case studies

Environmental ethics: issues and possible solutions

Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust, case studies

Wasteland reclamation

Consumerism and waste products

Environmental Protection Act, Air (Prevention and Control of Pollution) Act, Water (Prevention and control of Pollution) Act, Wildlife Protection Act, Forest Conservation Act, Issues involved in enforcement of environmental legislation, Public awareness

#### **Module III: Human Population and the Environment**

Population growth, variation among nations

Population explosion – Family Welfare Programmes, Environment and human health

Human Rights, Value education, HIV/ AIDS, Women and child welfare

Role of information technology in environment and human health, Case studies

#### **Module IV: Field Work**

Visit to a local area to document environmental assets-river/ forest/ grassland/ hill/ mountain

Visit to a local polluted site – urban / rural / industrial / agricultural

Study of common plants, insects, and birds

Study of simple ecosystems-pond, river, hill slopes, etc (Field work equal to 5 lecture hours)

**Examination Scheme:**

Components	CT	HA	S/V/Q	A	EE
Weightage (%)	15	5	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, A: Attendance, EE: End Semester Examination

# Syllabus - Semester First / Second

## ENVIRONMENTAL STUDIES

**Course Code:** ENV2152 / ENV2252

**Credit Units:** 04

### **Course Objective:**

The term environment is used to describe, in the aggregate, all the external forces, influences and conditions, which affect the life, nature, behaviour, growth, development, and maturity of living organisms. At present a great number of environmental issues, have grown in size and complexity day by day, threatening the survival of mankind on earth. A study of environmental studies is quite essential for handling environmental disasters and industrial management. The objective of environmental studies is to enlighten the masses about the importance of the protection and conservation of our environment and control of human activities which has an adverse effect on the environment.

### **Course Contents:**

#### **Module I: The multidisciplinary nature of environmental studies**

Definition, scope and importance, Need for public awareness

#### **Module II: Natural Resources - Renewable and non-renewable resources**

Natural resources and associated problems

Forest resources: Use and over-exploitation, deforestation, case studies, timber extraction, mining, dams and their effects on forests and tribal people.

Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems.

Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies.

Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies.

Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources, case studies.

Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification.

- Role of an individual in conservation of natural resources.
- Equitable use of resources for sustainable lifestyles.

#### **Module III: Ecosystems**

Concept of an ecosystem: Structure and function of an ecosystem, producers, consumers and decomposers, energy flow in the ecosystem, ecological succession, food chains, food webs and ecological pyramids, introduction, types, characteristic features, structure and function of the following ecosystems:

- a. Forest ecosystem
- b. Grassland ecosystem
- c. Desert ecosystem
- d. Aquatic ecosystems (ponds, streams, lakes, rivers, ocean estuaries)

#### **Module IV: Biodiversity and its conservation**

Introduction – Definition: genetic, species and ecosystem diversity, biogeographical classification of India, value of biodiversity: consumptive use, productive use, social, ethical aesthetic and option values, biodiversity at global, national and local levels, India as a mega-diversity nation, hot-spots of

biodiversity, threats to biodiversity: habitat loss, poaching of wildlife, man wildlife conflicts, endangered and endemic species of India, conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

### **Module V: Environmental Pollution**

Definition, causes, effects, and control measures of: air pollution, water pollution, soil pollution, marine pollution, noise pollution, thermal pollution, and nuclear pollution.

Solid waste management: causes, effects and control measures of urban and industrial wastes, role of an individual in prevention of pollution, pollution case studies, disaster management: floods, earthquake, cyclone, and landslides.

### **Module VI: Social Issues and the Environment**

From unsustainable to sustainable development, Urban problems related to energy

Water conservation, rain water harvesting, and watershed management

Resettlement and rehabilitation of people, its problems and concerns, case studies

Environmental ethics: issues and possible solutions

Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust, case studies

Wasteland reclamation

Consumerism and waste products

Environmental Protection Act, Air (Prevention and Control of Pollution) Act, Water (Prevention and control of Pollution) Act, Wildlife Protection Act, Forest Conservation Act, Issues involved in enforcement of environmental legislation, Public awareness

### **Module VII: Human Population and the Environment**

Population growth, variation among nations

Population explosion – Family Welfare Programmes, Environment and human health

Human Rights, Value education, HIV/ AIDS, Women and child welfare

Role of information technology in environment and human health, Case studies

### **Module VIII: Field Work**

Visit to a local area to document environmental assets-river/ forest/ grassland/ hill/ mountain

Visit to a local polluted site – urban / rural / industrial / agricultural

Study of common plants, insects, and birds

Study of simple ecosystems-pond, river, hill slopes, etc (Field work equal to 5 lecture hours)

### **Examination Scheme:**

Components	CT	HA	S/V/Q	A	EE
Weightage (%)	15	5	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, A: Attendance, EE: End Semester Examination

## Syllabus - Semester Third

### ENVIRONMENTAL POLLUTION AND WASTE MANAGEMENT

Course Code: ENV2351

Credit Units: 3

**Course Objective:**

The growing pressure on natural resources and the progressive increase in the production of waste poses serious challenges for our society. Waste production and management play a central role in environmental policy. The production of industrial and urban waste has exploded during the last ten years. From a modern viewpoint, waste is to be considered a lost resource and, hence, it is a manufacturing cost variable that must be optimized with both direct costs and the cost to society in mind. Since it is not possible to avoid the production of waste, the main objective in order of importance is to try to reduce it to a minimum.

**Course Contents:**

**Module I: Water pollution** – sources, types, and effect of water pollutants, water quality standards, algal bloom, eutrophication, biomagnification/ bioaccumulation, water pollution control - primary, secondary and tertiary wastewater treatment; **Soil Pollution** – soil pollutants – types, sources, effects, and control.

**Module II: Air pollution** – structure and composition of atmosphere, classification, sources and effects of air pollutants, air pollution control - particulate and gaseous emission control methods; acid rain, green house effect, global warming, ozone depletion, smog, climate change, **Noise Pollution** – sources, effects, and control.

**Module III: Waste management:** Methods of waste collection, storage, and transportation, treatment and disposal techniques for solid waste: landfill operation and maintenance, composting: advantages and limitations, vermin-composting, autoclaving, incineration, biogas plant, techniques for hazardous waste treatment and safe disposal, nuclear and e-waste management, Government agencies and programs: NCEPC, MoEFCC, CPCB and SPCB's.

**Examination Scheme:**

Components	CT	HA	S/V/Q	A	EE
Weightage (%)	5	10	10	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, A: Attendance EE: End Semester Examination.

## Syllabus - Semester Fourth

### ENVIRONMENTAL MANAGEMENT AND INDUSTRIAL SAFETY

Course Code: ENV2451

Credit Units: 03

**Course Objective:**

The course will give an overview of the safety and environmental issues in the industry. It will provide detailed understanding of the methods and techniques to resolve these key issues for making production and processing cleaner and safer. This course would educate students to identify and assess hazards in any stage of operation, to quantify and manage them as well. This course will also highlight lessons learnt from the past accidents. The aims of this course are: to create awareness for quality of life protection, health and environmental safety, occupational hazards.

**Course Contents:**

**Module I: Public health:** definition, need for good health, factors affecting health, communicable diseases, mode of transmission (epidemic and endemic diseases), management of hygiene in public places, occupational health hazards and safety (physical, chemical and biological), health protection measures for workers- health education, first aid, management of medical emergencies.

**Module II: Industrial safety and management techniques:** industrial safety standards and regulations, accidents – definition, prevention and control, risk analysis and assessment, safety cost and expenses.

**Module III: Safety management system** - environmental management systems (EMS) ISO 14000 and 14001, OSHA and NIOSH, compensation act, public liability insurance act, mining act, good manufacturing practices (GMP) and good laboratory management practices (GLP).

**Examination Scheme:**

Components	CT	HA	S/V/Q	A	EE
Weightage (%)	5	10	10	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, A: Attendance EE: End Semester Examination

# Syllabus - Semester Fifth

## ENVIRONMENTAL ECONOMICS AND GLOBALIZATION

**Course Code: ENV2551**

**Credit Units: 03**

**Course Objective:**

Environmental issues such as pollution, climate change and the conservation of biodiversity are currently in the headlines of economic debate. Economic analysis of the environment is challenging precisely because environmental value is not always conveniently revealed in a market, and thus is subject to inappropriate use. The major topics addressed in this field of study are: the causes of environmental degradation, the need to re-establish the disciplinary ties between ecology and economics, the difficulties associated with assigning ownership right to environmental resources, the trade-off between environmental degradation and economic goods and services, assessing the monetary value of environmental damage etc.

**Course Content:**

**Module I: Introduction:** definition and scope of environmental economics, economics and environment, environment inter-linkages, market failure and externality, accounting for the environment.

**Module II: Resource economics:** natural resources: types and classification, economics of natural resources exploitation, market structure and the exploitation of non-renewable resources, methods of valuation of environmental costs and benefits.

**Module III: Economics & Environmental Management:** WTO and international trade, environmental trade barriers, natural resource accounting, environmental communication, GRI reports, green marketing, eco-labeling, pollution control: basic approach to environmental policy and management, pollution tax: effluent charges and subsidies.

**Examination Scheme:**

Components	CT	HA	S/V/Q	A	EE
Weightage (%)	5	10	10	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, A: Attendance EE: End Semester Examination

## Syllabus - Semester Sixth

### SUSTAINABLE DEVELOPMENT PRACTICES

**Course Code: ENV2651**

**Credit Units: 03**

#### **Course Objective**

Finding approaches to development that balance economic and social progress, address cultural differences, and respect ecological values and limits is the key to sustainable development. Moving towards this goal requires fundamental changes in human attitudes and behavior in our personal lives, in our community activities, and in our places of work. The success in this regard is critically dependent on education and training. This course will imbue students with respect for the conservation and sustainable use of resources, social equity, and appropriate development along with competencies to practice sustainable tasks at the workplace of today and tomorrow.

#### **Course Content:**

**Module I: Introduction:** Environment, sustainable development and globalization, millennium development goals, regional perspectives, challenges and environmental issues in India, sustainable development and Indian development policies, local environmental management and legislation.

**Module II: Climate change and sustainable development:** Climate change and sustainable development, climate change and forest management, sustainable consumption, strategies and issues, international environmental agreements and climate change, international environmental agreements and climate change.

**Module III: Writing on environment:** Environmentalism, environmental journalism and activism, media for environment, conventions and science article styles, fact-checking with sources, research and publication, green peace movement, UNEP, UNCED, WBCSD, WWF, WRI, GRI, and World Bank.

#### **Examination Scheme:**

<b>Components</b>	<b>D</b>	<b>P</b>	<b>A</b>	<b>EE</b>
<b>Weightage(%)</b>	15	10	5	70

D: Dissertation, P: Publication, A: Attendance EE: End Semester Examination

## Syllabus - Semester First

### ENVIRONMENTAL STUDIES-I

**Course Code: ENV2151**

**Credit Units: 02**

**Course Objective:**

The term environment is used to describe, in the aggregate, all the external forces, influences and conditions, which affect the life, nature, behaviour, growth, development, and maturity of living organisms. At present a great number of environmental issues, have grown in size and complexity day by day, threatening the survival of mankind on earth. A study of environmental studies is quite essential for handling environmental disasters and industrial management. The objective of environmental studies is to enlighten the masses about the importance of the protection and conservation of our environment and control of human activities which has an adverse effect on the environment.

**Course Contents:**

**Module I: The multidisciplinary nature of environmental studies**

Definition, scope and importance, Need for public awareness

**Module II: Natural Resources - Renewable and non-renewable resources**

Natural resources and associated problems

Forest resources: Use and over-exploitation, deforestation, case studies, timber extraction, mining, dams and their effects on forests and tribal people.

Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems.

Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies.

Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies.

Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources, case studies.

Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification.

- Role of an individual in conservation of natural resources.
- Equitable use of resources for sustainable lifestyles.

**Module III: Ecosystems**

Concept of an ecosystem: Structure and function of an ecosystem, producers, consumers and decomposers, energy flow in the ecosystem, ecological succession, food chains, food webs and ecological pyramids, introduction, types, characteristic features, structure and function of the following ecosystems:

- a. Forest ecosystem
- b. Grassland ecosystem
- c. Desert ecosystem
- d. Aquatic ecosystems (ponds, streams, lakes, rivers, ocean estuaries)

#### Module IV: Biodiversity and its conservation

Introduction – Definition: genetic, species and ecosystem diversity, biogeographical classification of India, value of biodiversity: consumptive use, productive use, social, ethical aesthetic and option values, biodiversity at global, national and local levels, India as a mega-diversity nation, hot-spots of biodiversity, threats to biodiversity: habitat loss, poaching of wildlife, man wildlife conflicts, endangered and endemic species of India, conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

## ENVIRONMENTAL STUDIES-II

**Course Code: ENV2251**

**Credit Units: 02**

### **Course Objective:**

The term environment is used to describe, in the aggregate, all the external forces, influences and conditions, which affect the life, nature, behaviour, growth, development, and maturity of living organisms. At present a great number of environmental issues, have grown in size and complexity day by day, threatening the survival of mankind on earth. A study of environmental studies is quite essential for handling environmental disasters and industrial management. The objective of environmental studies is to enlighten the masses about the importance of the protection and conservation of our environment and control of human activities which has an adverse effect on the environment.

### **Course Contents:**

#### **Module I: Environmental Pollution**

Definition, causes, effects, and control measures of: air pollution, water pollution, soil pollution, marine pollution, noise pollution, thermal pollution, and nuclear pollution.

Solid waste management: causes, effects and control measures of urban and industrial wastes, role of an individual in prevention of pollution, pollution case studies, disaster management: floods, earthquake, cyclone, and landslides.

#### **Module II: Social Issues and the Environment**

From unsustainable to sustainable development, Urban problems related to energy

Water conservation, rain water harvesting, and watershed management

Resettlement and rehabilitation of people, its problems and concerns, case studies

Environmental ethics: issues and possible solutions

Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust, case studies

Wasteland reclamation

Consumerism and waste products

Environmental Protection Act, Air (Prevention and Control of Pollution) Act, Water (Prevention and control of Pollution) Act, Wildlife Protection Act, Forest Conservation Act, Issues involved in enforcement of environmental legislation, Public awareness

#### **Module III: Human Population and the Environment**

Population growth, variation among nations

Population explosion – Family Welfare Programmes, Environment and human health

Human Rights, Value education, HIV/ AIDS, Women and child welfare

Role of information technology in environment and human health, Case studies

#### **Module IV: Field Work**

Visit to a local area to document environmental assets-river/ forest/ grassland/ hill/ mountain

Visit to a local polluted site – urban / rural / industrial / agricultural

Study of common plants, insects, and birds

Study of simple ecosystems-pond, river, hill slopes, etc (Field work equal to 5 lecture hours)

# RENEWABLE ENERGY

## Syllabus

### RENEWABLE ENERGY CONVERSION SYSTEMS

**Course Code: SAE2151**

**Credit Units: 03**

**Course Objective:**

Course provides introduction to different renewable energy sources.

Analyze the full range of renewable energy supplies needed for modern economies. Course will include power from sunshine, wind, and biomass.

**Course Content**

**Module I**

Current Energy Scenario, Principles of renewable energy, fundamentals, scientific principles of renewable energy, technical implications, social implications.

**Module II**

Solar radiation: Extraterrestrial solar radiation, components of radiation, geometry of earth and sun, geometry of collector and solar beam, measurements of solar radiation  
Solar water heating system, solar air heaters, solar concentrators

**Module III**

Photovoltaic generation: Introduction, silicon p-n junction, photon absorption, solar radiation input, photovoltaic circuit properties and loads, limits to cell efficiency

**Module IV**

Principles of Ocean thermal energy conversion, Principles of Geothermal energy conversion, suitable sites and criteria, Advantages and disadvantages

**Examination Scheme:**

Components	CT	Assignment	V/Q	Attendance	EE(1)
Weightage (%)	15	5	5	5	70

**Text & References:**

# INTRODUCTION TO SOLAR THERMAL ENGINEERING

**Course Code: SAE2251**

**Credit Units: 03**

## **Course Objective:**

To cover areas related with the fundamentals of solar energy, various solar collectors, and Applications.

## **Course Contents:**

### **Module I: Introduction**

Solar spectrum, solar radiation, instruments (pyrheliometers, pyranometers), solar radiation on horizontal surface (estimation of average solar radiation, estimation of clear sky radiation), solar thermal energy conversion.

### **Module II: Flat plate collector**

Flat plate collector (FPC) (glazing material, collector plates), classification (evacuated tubular collectors, Types of FPCs), testing of collectors,

### **Module III: Solar Concentrator**

Characteristic parameters, classification, types of concentrators (tracking concentrator, non-tracking concentrators), geometrical optics in concentrators, working principle of concentrating collectors.

### **Module IV: Applications**

Solar air heater, solar crop drying, solar cooker, solar water heating systems, heating of swimming pool by solar energy.

## **Solar Thermal Lab Experiments**

1. Study a flat plate collector to know its components & function.
2. Determine the thermal efficiency of a with flat plate collector
3. Determine the thermal efficiency of an evacuated tube collector
4. Study the components of Concentrating Parabolic Collector and its function.
5. Determine thermal performance of a box type solar cooker with load

## **Examination Scheme:**

	<b>IA</b>				<b>EE</b>	
<b>Components</b>	<b>CT</b>	<b>Assignment</b>	<b>LR</b>	<b>Attendance</b>	<b>Theory</b>	<b>Practical</b>
<b>Weightage (%)</b>	10	5	10	5	40	30

Note: IA –Internal Assessment, EE- External Exam, CT- Class Test, LR – Lab Record.

# INTRODUCTION TO SOLAR PHOTOVOLTAIC

**Course Code: SAE2351**

**Credit Units: 03**

## **Course Objective:**

This course covers the basic principles of Solar Photovoltaic energy systems, Grid and Off-grid connected PV systems and PV economics

## **Course Contents:**

### **Module I: Basics of Solar Photovoltaics**

Principle of photovoltaic conversion Photovoltaic generation: Introduction, silicon p-n junction, photon absorption, solar radiation input, photovoltaic circuit properties and loads

### **Module II: Review of Semiconductor Properties of Solar PV systems**

Crystal structures and orientations, forbidden energy gaps, dynamics of electrons and holes, carrier density, carrier transport, generation and recombination of carriers due to light, direct and in-direct band gap semiconductors, basic device physics, p-n junction diode, solar cell output parameters.

### **Module III: Solar Photovoltaic energy conversion and utilization**

Photovoltaic power generation systems, Off-grid systems, Grid connected systems, Organic solar cells, Electrochemical energy storage: Batteries

### **Module IV: Economic Benefits of Solar PV systems**

Solar energy benefits, environmental benefits, solar energy cost and economic impact, understanding the cost of solar energy, economics of installing solar panel

### **Solar Photovoltaic Lab Experiments**

1. Measure the V-I characteristics of a Photovoltaic cell
2. To study the illumination characteristics, power load characteristics, areal characteristics of a solar cell.
3. Measure the V-I characteristics of a Photovoltaic Panel subjected to variable load
4. To study the effect of angle of the panel on V-I characteristic of a Photovoltaic Panel
5. Measure the V-I characteristics of a Photovoltaic Panels connected in series and parallel without load.
6. Measure the V-I characteristics of a Photovoltaic Panels connected in series and parallel with load.

### **Examination Scheme:**

	IA				EE	
Components	CT	Assignment	LR	Attendance	Theory	Practical
Weightage (%)	10	5	10	5	40	30

Note: IA –Internal Assessment, EE- External Exam, CT- Class Test, LR – Lab Rec

# ENERGY FROM WASTES

**Course Code: SAE2451**

**Credit Units: 03**

**Course Objective:** The objectives of this course are as follows:

- a) To provide a thorough understanding of various renewable feedstocks, their availability and attributes for biofuels production.
- b) To provide a thorough understanding of the broad concept of second and third generation biofuel production from biomass and other low-cost agri-residues and biowastes.
- c) To provide students with tools and knowledge necessary for biofuel facility operations.
- d) To teach our students to analyze and design processes for biofuel production.

## Course Content

### Module-I: Biomass

Properties of biomass, sources of biomass, photosynthesis, broad classification, agro and forestry residues utilization through conversion routes: biological, chemical and thermochemical

### Module-II: Bio conversion mechanism

Bioconversion mechanism, source of waste undergoing bio-treatment, energetic and rate processes of major biological significance

### Module-III: Thermochemical Conversion

Thermochemical conversion of biomass, energy balance, conversion to solid, liquid and gaseous fuels

### Module-IV: Chemical Conversion

Chemical conversion process, hydrolysis, pretreatments and hydrogenation, solvent, extraction of hydrocarbons

## Examination Scheme:

Components	CT	HA	S/V/Q	Attendance	EE
Weightage%	10	8	7	5	70

CT – Class Test, S/V/Q – Seminar/Viva/Quiz, HA – Home Assignment, EE – End Semester Examination

# RENEWABLE ENERGY FOR HEAT APPLICATIONS

**Course Code: SAE2551**

**Credits Units: 03**

## **Course Objective:**

At the end of the course the students should be able to: Understand the factors that influence the use of solar radiation as an energy source; know the various active and passive technologies that are available for collecting solar energy; have the ability to apply design principles to selection of an appropriate solar energy installation to meet requirements.

## **Course Contents:**

### **Module I: Passive Solar Heating Systems**

Choosing the Type of Passive System, Advantages and Disadvantages of Passive Solar Systems, Direct Gain Systems, Thermal storage, Sizing Thermal Storage.

### **Module II: Active Solar Heating Systems**

Space Heating- Liquid and Air Systems, System Design Principles, Sizing of Collectors and Thermal Storage. Domestic Hot Water Heating- Thermo-siphoned and Pumped Circulation Systems, Domestic Hot Water Heating Loads,

### **Module III: Green Buildings**

Introduction, factors affecting climate, Climatic zones and their characteristics, Implications of climate on building design, Principles of energy conscious buildings, Building Envelope, Passive Heating, Passive Cooling, Daylighting, Building Materials

## **Examination Scheme:**

<b>Components</b>	<b>CT(2)</b>	<b>Assignme nt</b>	<b>V(1)</b>	<b>Attendance</b>	<b>EE(1)</b>
<b>Weightage (%)</b>	15	5	5	5	70

# ENERGY AUDIT AND ENERGY MANAGEMENT

**Course Code: SAE2651**

**Credit Units: 03**

## **Course Objective:**

This course covers the basic principles of energy management, energy auditing ,economics of Renewable energy systems.

## **Course Contents:**

### **Module I: Renewable Energy Economics**

Energy scenario, environmental policies, energy policies, economics of energy infrastructure, rural renewable energy economics.

### **Module II: Energy Audit**

Energy Audit concepts, Elements, Measurements, Mass and energy balances, Evaluation of energy conserving opportunities, case study.

### **Module III: Economic Benefits of Solar Energy**

Solar energy benefits, environmental benefits, solar energy cost and economic impact, understanding the cost of solar energy, economics of installing solar panel

### **Module IV: Solar Industrial Economics**

Solar power plants, integration with industrial process, integration with grid, storage of energy, economics.

## **ExaminationScheme:**

# NANOTECHNOLOGY

## Syllabus - Semester First

### BASICS OF NANOSCIENCE

**Course Code:** NAT2152

**Credit Units:** 03

**Course Objective:**

To enable the students to understand the science of nanomaterials.

**Module I: Introduction to Quantum Mechanics & Crystal structure**

De-Broglie hypothesis, Uncertainty Principle, Schrödinger Equation, Operator, Particle in a 1D box, Particle in a 3D box (qualitative), Crystal structure, Crystal orientation, Crystal planes, Bravais lattice, Miller Indices, Atomic Packing Density, crystal symmetry, ZnS, Diamond and NaCl crystal structure, Melting point, Coordination number, Atomic Bonding.

**Module II: Introduction to Nanoscience**

Emergence of Nanoscience with special reference to Feynman and Drexler, Role of particle size, Spatial and temporal scale, Exciton, Concept of confinement, strong and weak confinement with suitable examples, Development of quantum structures, Basic concept of quantum well, quantum wire and quantum dot. Density of states of 1D, 2D & 3D structure, surface effect

**Module III: Types of Nanomaterials**

Nanoclusters, Solid solutions, Thin film, Nanocomposites (Metal Oxide and Polymer based), Core Shell Nanostructure, Buckyballs, Carbon nano tubes and, Zeolites minerals, Dendrimers, Micelles, Liposomes, Block Copolymers, Porous Materials, Metal Nanocrystals, Semiconductor nanomaterials.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

# Syllabus - Semester Second

## PROPERTIES OF NANOMATERIALS

**Course Code: NAT2251**

**Credit Units: 03**

**Course Objective:**

To enable students to understand properties of bulk and nanomaterials

**Course Contents:**

**Module I: Electronic & Magnetic**

Classification of materials: Metal, Semiconductor, Insulator, Band structures, Brillouin zones, Mobility, resistivity, relaxation time, and recombination centers, Hall effect Quantum Hall effect. Quantum Tunneling , Coulomb Blockade, single electron transistor .

Origin of magnetic Moment in materials, Revisit to Different kind of magnetism in nature: Dia, para, ferro magnetic, Domain structure, antiferro, feri & superparamagnetism, nanomagnetic materials: Fe, Fe<sub>3</sub>O<sub>4</sub>, Ferrites, Ferro-fluids

**Module II: Optical & Thermal**

Photo-conductivity, Photovoltaic effect, optical absorption & transmission, photoluminescence, fluorescence, phosphorescence, electroluminescence, LED, Concept of phonon, thermal conductivity, specific heat, exothermic & endothermic heat, Thermoelectric effect, Thermoelectric material(TEM) properties .

**Module III: Mechanical**

Stress- Strain curve, True Stress True strain, Hardness, compressive & tensile strengths, Fracture toughness Fatigue, Creep and other elastic properties of materials, Deformation behavior of Nanomaterials

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

## Syllabus - Semester Third

### VACUUM SCIENCE AND CLEAN ROOM TECHNOLOGY

**Course Code: NAT2352**

**Credit Units: 03**

**Course Objective:**

To enable students to understand vacuum science, their production, measurement, about clean room technology

**Course Contents:**

**Module I: Vacuum Science and Technology**

Vacuum and its different units, Kinetic Theory of Gases, Gas flow in vacuum systems, Physical Parameters at low pressure, classification of vacuum ranges, Application of Vacuum technology, Throughput & pumping speed, flow rate & conductance in vacuum system

**Module II: Production & Measurement of Vacuum**

Types of Vacuum Pumps (Rotary, diffusion, Turbo, Cryo & Ion) - Basic Principles and applications, Production of low, medium high and ultra high vacuum, Vacuum gauges, Leak detection techniques

**Module III: Clean Room Technology**

Clean rooms: Introduction, needs and Types, Basics of clean room standards, design of clean room & clean air devices, High efficiency air filtration, Clean room disciplines, Cleaning of clean room, Quality control, Industrial and Scientific application of clean room

**Examination Scheme:**

Components	CT	HA	A	S/V/Q	EE
Weightage (%)	15	5	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

## Syllabus - Semester Fourth

### SYNTHESIS OF NANOMATERIALS

**Course Code : NAT2452**

**Credit Units: 03**

**Course Objective:**

To enable students to understand the different methods of synthesis of nonmaterial.

**Course Contents:**

**Module I: Physical Methods:**

Physical Vapour Deposition (PVD), Inert gas condensation, Arc discharge, DC sputtering, Ion sputtering, RF & Magnetron sputtering ,Pulse Laser Deposition (PLD), Ball Milling, Molecular beam epitaxy, Electro-deposition,

**Module II: Chemical Methods:**

Metal nanocrystals by reduction, Sol- gel, Solvothermal synthesis, Photochemical synthesis, Electrochemical synthesis, Nanocrystals of semiconductors and other materials by arrested precipitation, Thermolysis routes, Liquid-liquid interface.

**Module III: Self assembly and Lithography**

Self assembly, Process of self assembly, colloids, Introduction to Lithography, E-beam Lithography.

**Examination Scheme:**

Components	CT	HA	A	S/V/Q	EE
Weightage (%)	15	5	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

# Syllabus - Semester Fifth

## CHARACTERIZATION TECHNIQUES

**Course Code: NAT2552**

**Credit Units: 03**

**Course Objective:**

To enable students to understand the instrumental techniques for characterization of nanomaterials

**Course Contents:**

**Module I: Structural characterization techniques**

X-ray diffraction (XRD) technique, particle size determination using XRD, Applications of XRD, Electron diffraction and its application, neutron diffraction and its applications

**Module II: Optical and Electron Microscopy**

Introduction to Optical microscopy, Scanning Electron Microscopy, Transmission Electron Microscopy, Scanning Tunneling Microscopy

**Module III: Spectroscopic Techniques**

UV visible spectroscopy, Infrared Spectroscopy and Fourier Transform Infrared Spectroscopy, Raman Spectroscopy, Photoluminescence (PL), Photoelectron Spectroscopy (X-Ray Photoelectron Spectroscopy, Auger Electron Spectroscopy & Ultra Violet Photoelectron Spectroscopy)

**Examination Scheme:**

Components	CT	HA	A	S/V/Q	EE
Weightage (%)	15	5	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

# Syllabus - Semester Sixth

## INDUSRIAL APPLICATION OF NANOMATERIALS

**Course Code: NAT2652**

**Credit Units: 03**

**Course Objective:**

To enable students to understand the applications of nano materials and associated technology in industrial sector.

**Course Contents:**

**Module I: Nano-Electronic Technologies**

Nano capacitors, Quantum tunneling, Single electron transistors, Coulomb blockade, Nano lithography, Data storage, Nano-photonics, Nano electronic and Magnetic devices, Spintronic, Carbon based materials: Carbon Nano-tube (CNC), Graphene. Sensors & Nano-sensors.

**Module II: Accelerator Technologies**

Introduction to Accelerators, Accelerating cavities and RF measurement, Superconducting materials, Niobium, Niobium-copper and other advance composite materials, NbN, NbAlGa, Mg<sub>3</sub>B.

**Module III: Sustainable energy technologies**

Solar energy, Hydrogen energy and Nano-materials, Carbon nanotube fuel cells, Hydrogen storage, Thermoelectricity, Re-chargeable batteries, Energy savings, Nano-lubricants, Nano-composites and Nano-catalysts.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	15	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

## Syllabus

### THERMODYNAMICS

**Course Code:** MAE2352

**Credit Units:** 03

**Course Objective:**

Objective of this course is to impart in depth understanding of the principles of thermodynamics and heat transfer. This course also helps students understand the application of basic fluid mechanics, thermodynamic, and heat transfer principles and techniques, including the use of empirical data, to the analysis of representative fluid and thermal energy components and systems encountered in the practice of electrical, electronic, industrial, and related disciplines of engineering.

**Course Contents:**

**Module I: Basic concepts**

Thermodynamic system, intensive and extensive properties, cyclic process, Zeroth Law of Thermodynamics, Work and heat, Flow work

**Module II: First Law of Thermodynamics**

Mechanical equivalent of heat, internal energy, Analysis of non-flow system, flow process and control volume, steady flow, energy equation, flow processes

**Module III: Second Law of Thermodynamics and Entropy**

Heat Engine, heat pump, Kelvin Planck and Clausius statement of Second Law of Thermodynamics, Perpetual motion machine, Reversible cycle- Carnot Cycle, Clausius inequality, entropy, Principle of entropy increase, concepts of availability, irreversibility.

**Module IV: Air-Cycles**

Carnot cycle, Otto cycle, Diesel cycle, Dual cycle, Stirling cycle, Ericsson cycle, Brayton cycle; Reversed Carnot cycle.

**Module V: Properties of Steam**

Use of steam tables, wet steam, superheat steam, different processes of vapour, Mollier Diagram.

**Module VI: Reciprocating Air compressors**

Single stage compressor, Isothermal efficiency, adiabatic efficiency, clearance volume, volumetric efficiency, and multi-stage compression with intercooling.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;

# FLUID POWER SYSTEMS

**Course Code: MAE2452**

**Credit Units: 03**

## **Course Objective:**

Fluid power systems cover generation, transmission, and control applications of power by using pressurized fluids. This course imparts the knowledge of different fluid power systems (pneumatic and hydraulic) which are used in industries and hydropower plants.

## **Course Contents:**

### **Module I: Introduction**

Euler's equations for turbo machines; impulse and reaction forces due to fluid systems on stationary and moving system of vanes; jet propulsion.

### **Module II: Water Turbines**

Classification: Pelton, Francis, Propeller and Kaplan turbines; velocity triangles; efficiency; draft tubes, governing.

### **Module III: Pumps**

Centrifugal pumps, velocity triangles, efficiency, turbine pumps, axial and mixed flow pumps.

### **Module IV: Performance of Fluid Machines**

Similarity laws applied to rotodynamic machines; specific speed, unit quantities; characteristic curves; use of models; cavitations and attendant problems in turbo machines; selection of turbines hydroelectric plants.

### **Module V: Hydraulic Power Transmission**

Transmission of hydraulic power through pipe lines; water hammer; precautions against water hammer in turbine and pump installations: hydraulic ram.

### **Module VI: Power Hydraulics**

Positive pumps: gear, vane, screw, pump, variable delivery valves: flow control, pressure control, direction control, solenoid operated valve, hydraulic circuits, fluid coupling and torque converter. Pneumatic Power: Basic principles, comparison of pneumatic and hydraulic Systems.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# BASICS OF KINEMATICS OF MACHINE

Course Code: MAE2552

Credit Units: 04

## Module-I

### Introduction

Links-types, Kinematics pairs-classification, Constraints-types, Degrees of freedom of planar mechanism, Grubler's equation, linkage mechanisms, inversions of four bar chain, slider crank chain and double slider crank chain

### Velocity in Mechanisms

Velocity of point in mechanism, relative velocity method, Velocities in four bar mechanism, slider crank mechanism and quick return motion mechanism, Rubbing velocity at a pin joint, Instantaneous center method, Types & location of instantaneous centers, Kennedy's theorem, Velocities in four bar mechanism & slider crank mechanism

## Module-II

### Acceleration in Mechanisms

Acceleration of a point on a link, Acceleration diagram, Coriolis component of acceleration, Crank and slotted lever mechanism, Klein's construction for Slider Crank mechanism and Four Bar mechanism, Analytical method for slider crank mechanism

### Mechanisms with Lower Pairs

Pantograph, Exact straight line motion mechanisms-Peaucellier's, Hart and Scott Russell mechanisms, Approximate straight line motion mechanisms-Grass-Hopper, Watt and Tchebicheff mechanisms, Analysis of Hooke's joint, Davis and Ackermann steering gear mechanisms.

## Module-III

### FRICTION

Laws of friction, Friction on inclined plane, Efficiency on inclined plane, Friction in journal bearing-friction circle, Pivots and collar friction-uniform pressure and uniform wear, Belt and pulley drive, Length of open and cross belt drive, Ratio of driving tensions for flat belt drive, centrifugal tension, condition for maximum power transmission, V belt drive

### Brakes & Dynamometers

Shoe brake, Band brake, Band and Block brake, Absorption and transmission type dynamometers

## Module-IV

### CAMS

Cams and Followers - Classification & terminology, Cam profile by graphical methods with knife edge and radial roller follower for uniform velocity, simple harmonic and parabolic motion of followers, Analytical methods of cam design – tangent cam with roller follower and circular cams with flat faced follower

## Module-V

### Gears & Gear Trains

Classification & terminology, law of gearing, tooth forms & comparisons, Systems of gear teeth, Length of path of contact, contact ratio, interference & under cutting in involute gear teeth, minimum number of teeth on gear and pinion to avoid interference, simple, compound, reverted and planetary gear trains, Sun and planet gear.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE

Credit Units: 04

## Module 1.

**Static Force Analysis:** Static force analysis of planer mechanisms, Free body diagrams, dynamic force analysis including inertia and frictional forces of planer mechanisms

**Inertia forces:** D'Alembert's Principle, Velocity and acceleration of piston, Torque exerted on the crank shaft when friction and inertia of moving parts are neglected, Forces on the reciprocating parts of an engine considering friction and inertia of moving parts, Turning moment on crank shaft, Dynamically equivalent system, Torque exerted on the crank shaft, considering the weight of the connecting rod.

## Module 2.

**Balancing of rotating masses:** Balancing of single rotating mass, Balancing of several masses rotating in the same plane, Balancing of several masses rotating in different planes.

**Balancing of reciprocating masses:** Balancing of reciprocating engine, Partial balancing of primary force, Partial balancing of locomotives, Variation of tractive force, swaying couple, hammer blow, coupled locomotive, primary balance of multi-cylinder inline engine, Secondary balance of multi-cylinder in line engines, Method of direct and reverse cranks, V-engines balancing.

## Module 3.

**Governors:** Types of Governor, Watt Governor, Porter governor, Proell Governor, Hartnell Governor, Wilson-Hartnell governor, Sensitivity, Stability, Isochronism, Hunting, Governor Effort and Power, controlling force

## Module 4.

**Gyroscopic effect and Gyroscope:** Spinning and precession, gyroscopic couple, Effect of gyroscopic couple on the stability of automotive vehicles: Stability of four wheelers, Stability of two wheelers, Gyroscopic effects on ships and aero planes.

## Module 5.

**Vibration:** Vibration analysis of SDOF systems, natural, damped, forced vibrations, base-excited vibrations, transmissibility ratio

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# METEOROLOGY

Course Code: MAE2752

Credit Units: 03

## Course Objective:

The main objective of this course is to give the student: a basic understanding of the physical loss governing metrology and tolerance design. Gain and appreciation for the capabilities and applications of metrology through hands own experiences.

## Course Contents:

### Module I: Principles of measurement

Definition of Metrology, difference between precision and accuracy. Sources of errors: Controllable and Random Errors, Effects of Environment and Temperature, Effects of support, alignment errors.

**Length Standards:** Line standards, end standards and wavelength standards, transfer from line standards to end standards. Numerical based on line standards. Slip gauges – its use and care, methods of building different heights using different sets of slip gauges.

**Limits, fits and tolerances:** Various definitions, different types of fits and methods to provide these fits. Numerical to calculate the limits, fits and tolerances, ISO system of limits and fits; Gauges and its types, limit gauges – plug and ring gauges. Gauge Design – Taylor's Principle, wear allowance on gauges.

### Module II: Comparators

Principles and working of Mechanical, Electrical, Optical and Pneumatic Comparators.

**Angular Measurement:** Sine Bar – different types of sine bars, use of sine bars in conjunction with slip gauges, Use of angle gauges, spirit level, errors in use of sine bars. Numericals. Principle and working of autocollimator.

### Module III: Straightness and flatness

Definition of Straightness and Flatness error. Numericals based on determination of straightness error of straight edge with the help of spirit level and auto collimator

**Screw Thread Measurement:** Errors in threads, Measurement of elements of screw threads –major diameter, minor diameter, pitch, flank angle and effective diameter (Two and three wire methods). Effect of errors in pitch and flank angles

**Gear Measurement:** Measurement of tooth thickness – Gear tooth vernier caliper, Constant chord method, base tangent method and derivation of mathematical formulae for each method. Parkinson Gear Tester.

### Module IV

**Machine Tool Alignment:** Machine tool tests and alignment tests on lathe. Alignment tests on milling machine. Alignment tests on a radial drilling machine, Interferometry.

**Surface texture:** Introduction, types of irregularities, Elements of surface Texture, Measurement of surface finish, Examination of surface Roughness.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

**2020**

**AMITY UNIVERSITY HARYANA**

**GURUGRAM**

## Overview

Master of Computer Applications (MCA) is a two-year (four semesters) professional Master's Degree in Computer Applications. The programme is designed to meet the growing demand for qualified professionals in the field of Computer Applications. It is a postgraduate course that can be taken up after obtaining a Bachelor's Degree in any stream. The MCA programme is focused more toward Application Development and thus has more emphasis on latest programming language and tools to develop better and faster applications.

The curriculum is designed in such a way that it covers theoretical as well as practical courses of relevant areas. As the IT and the software industry are dynamic and fast growing, all the courses are designed keeping in view the requirements of industry.

During the summer break, after 2nd semester student has to undergo the industrial internship. The last semester includes major project.

The major part of the curriculum includes Design & Analysis of Algorithms, Application Software Development, Software Engineering, Software Project Management, Computer Communication & Networks, Mobile Computing, Cloud Computing, Soft Computing, Computer Graphics & Multimedia Systems Web Development, Data Mining and Warehousing, Artificial Intelligence, Machine Learning etc.

MCA students are often in demand for the famous multinational companies like TCS, Cognizant Technology Solutions, Infosys, Wipro, Google, IBM, Yahoo, Aricent etc.

After successful completion of MCA degree one can work as a Software Developer/Programmer, System Analysts, Systems Designers, Software Consultant, Technical Writer, Web Designer and Developer in any field related to IT in Private as well as Govt. sectors. One can also start his/her own venture.

## Programme Objectives (PO's)

The graduates will

- **PO1. Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
  - **PO2. Problem analysis:** Identify, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
-

- **PO3. Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- **PO4. Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- **PO5. Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- **PO6. The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- **PO7. Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- **PO8. Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- **PO9. Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- **PO10. Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- **PO11. Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

- **PO12. Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change.

### **Programme Specific Objectives (PSO's)**

PSO-1: Able to use fundamentals concept of software, hardware and networking to learn and apply advanced technologies.

PSO-2: Apply formal and practical methods of Software Development using the concepts of programming languages, database and design principles.

PSO-3: Able to use current technologies, skills and models of computing practices to solve industrial problems.

PSO-4: Exhibit team work with the ability of leadership, analytical reasoning for solving time critical problems and strong human values for responsible professional.

	<b>Computer Fundamentals and Programming in C</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version: 2020.1	Date of Approval: 19, July 2020	3	-	-	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

### **Catalog Description**

The objective of this course module is to acquaint the students with the basics of computers system, its components, data representation inside computer and to get them familiar with various important features of procedure-oriented programming language i.e. C.

### **Course Objectives**

The objective of this course is to

1. Equip the students with basic concepts of computer
2. Equip the students with concepts of Programming through C Language
3. Provide an overview of advanced programming concepts like Structure, Union and File Handling

### **Course Outcomes**

On completion of this course, the students will be able to

After the completion of course, the students will be able to,

CO1: Understand the basic architecture of computer and software concepts.

CO2: Define the purpose and structure of C Program for programming; identify and distinguish various datatypes and operators; conditional and control statement; Apply if-else, Switch and loops to rewrite basic C program for problem solving.

CO3: Compare and contrast various Array types, its declaration and implementation; differentiate between Call by Value and Reference if Functions; apply the concepts to rewrite C Programs

CO4: Differentiate between various String Handling Functions; describe the concept of Pointers in C Language

CO5: Explain the concept of Structure and Union; apply the concept of File Handling to provide data storage support to the programs.

Modules	Blooms level*	Number of hours
<b>Module I: Introduction</b> Introduction to computer, history, von-Neumann architecture, memory system (hierarchy, characteristics and types), H/W concepts (I/O Devices), S/W concepts (System S/W & Application S/W, utilities). Data Representation: Number systems, character representation codes, Binary, octal, hexadecimal and their inter conversions. Binary arithmetic, floating point arithmetic, signed and unsigned numbers, Memory storage unit, logic gates.	L1, L2 and L3	7
<b>Module II: Programming in C</b> History of C, Introduction of C, Basic structure of C program, Concept of variables, constants and data types in C, Operators and expressions: Introduction, arithmetic, relational, Logical, Assignment, Increment and decrement operator, Conditional, bitwise operators, Expressions, Operator precedence and associativity. Managing Input and output Operation, formatting I/O.	L2, L3 and L4	7
<b>Module III: Fundamental Features in C</b> C Statements, conditional executing using if, else, nesting of if, switch and break Concepts of loops, example of loops in C using for, while and do-while, continue and break. Storage types (automatic, register etc.), predefined processor, Command Line Argument.	L2, L3 and L4	7
<b>Module IV: Arrays and Functions</b> One dimensional arrays and example of iterative programs using arrays, 2-D arrays Use in matrix computations. Concept of Sub-programming, functions Example of user defined functions. Function prototype, Return values and their types, calling function, function argument, function with variable number of argument, recursion.	L2 and L3	7
<b>Module V: Advanced features in C</b> Pointers, relationship between arrays and pointers Argument passing using pointers, Array of pointers. Passing arrays as arguments. Strings and C string library. Structure and Union. Defining C structures, Giving values to members, Array of structure, Nested structure, passing strings as arguments. File Handling.	L2, L3 and L4	8

\*Bloom's Level:

### Catalog Description

The primary objective of this course is to understand all the components of C, including the C language, the C Preprocessor, and the C Standard Library. An understanding of some advanced practical issues, including memory management, testing and debugging, complex declarations and expression evaluation, building and using libraries, and evaluating tradeoffs, such as size vs. speed and speed vs. complexity. The ability to write C code and create and manipulate logical programs.

### Course Objectives

The objective of this course is to

1. Equip the students with concepts of Programming through C Language
2. Provide an overview of advanced programming concepts like Structure, Union and File Handling.

### Course Outcomes

After the completion of course, the students will be able to,

CO 1: Demonstrate the use of various data types and operators in C programs; Solve various problems using conditional control statements (if-else, Switch case).

CO 2: Construct C programs related to problems involving the usage of loops, arrays and functions.

CO 3: Apply the concept of Pointers for efficient memory management and construct C programs using string handling functions.

CO 4: Demonstrate the use of Structure, Union and concept of File Handling to provide data storage support to the programs.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
LABORATORY SESSSION 1 OPERATORS, EXPRESSIONS and DECISION MAKING	L3	5

<ol style="list-style-type: none"> <li>1. Write a program to calculate simple interest and amount.</li> <li>2. Write a program to swap two numbers using third variable.</li> <li>3. ## Catalog Description

This course is an introduction to the use, design, and analysis of data structures in computer programs. The very commonly used data structures like arrays, stacks, queues, lists, trees, graphs, hashing and file structure will be discussed in detail. Sorting and hashing are important topics in the study of algorithms. They are also closely related to the design of data structures. Several algorithms to implement these techniques are included in the syllabus.

## Course Objectives

The objective of this course is to

1. Equip the students with the basic concepts of data structures and algorithms
2. Provide the overview about searching and sorting techniques
3. Equip the students with basic concepts about stacks, queues, lists, trees, graphs and hashing

## Course Outcomes

On completion of this course, the students will be able to

CO1: Explain basic concepts of C language and various dynamic memory allocation techniques; Time and space complexities of algorithms.

CO2: Explain fundamental data structures and algorithms and summarize their typical uses, strengths, and weaknesses; Applications and various operations applied on arrays; Explain Stack and Queue data structure, various types of Queues; Applications of stack and queue. Compare and contrast link list with other linear data structure; Advantage, disadvantages, types and application link list.

CO3: Explain Binary search tree and its types; Applying in-order, pre-order and post order traversal to create the tree; application of tree in searching and storing huge amount of data; Explain different types of graphs and their representation in memory. Applying BFS and DFS graph traversal scheme to find shortest path; Determine minimum spanning tree using Kruskal's and Prim's method.

CO4: Compare and contrast hashing technique with other traditional searching techniques; differentiate among various file access methods.

CO5: Analyze and compare the complexity different searching and sorting algorithms. Evaluate algorithms and data structures in terms of time and memory complexity of basic operations.

Modules	Blooms level*	Number of hours
MODULE 1:  <b>BASIC CONCEPTS</b> Dynamic Memory Allocation & Deallocation (new & delete). Performance Analysis and Measurement (Time and space analysis of algorithms-Average, best and worst case analysis), Types of Data Structures- Linear & Non Linear Data Structures.	L1, L2 and L3	5
MODULE 2:  <b>LINEAR DATA STRUCTURE</b> Arrays :Basic Concepts, Operations on Arrays. Stack-Definitions & Concepts, Operations On Stacks, Applications of Stacks, Polish Expression, Reverse Polish Expression And Their Compilation, Recursion, Tower of Hanoi Queue Definition & Concepts. Representation Of Queue, Operations On Queue, Circular Queue, Priority Queue, Array representation of Priority	L2, L3 and L4	7

Queue, Double Ended Queue, Applications of Queue Linked List: Singly Linked List, Doubly Linked list, Circular linked list, Operations on different types of Linked List: Insertion & deletion. Linked implementation of Stack & Queue using C++.		
<b>MODULE 3:</b>  <b>NONLINEAR DATA STRUCTURE</b> Tree-Definitions and Concepts, Representation of binary tree, Binary tree traversal (In-order, post-order, preorder), Threaded binary tree, Binary search trees: Insertion & deletion. Conversion of General Trees to Binary Trees, Applications of Trees.. AVL trees Graph-Basic Concepts. Matrix & Linked List Representation Of Graphs, Elementary Graph operations,(Breadth First Search, Depth First Search, Spanning Trees, Shortest path, Constructing A Spanning Tree(Prim Algorithm, Kruskal's Algorithm)	L2, L3 and L4	7
<b>MODULE 4:</b>  <b>HASHING AND FILE STRUCTURES</b> Hashing: The symbol table, Hashing Functions, Collision Resolution Techniques, File Structure: Concepts of fields, records and files, Sequential, Indexed and Relative/Random File Organization, Indexing structure for index files, hashing for direct files, Multi-Key file organization and access methods	L2, L3, L4and L5	6
<b>MODULE 5:</b>  <b>SORTING &amp; SEARCHING</b> Sorting – Bubble Sort, Selection Sort, Quick Sort, Merge Sort Searching – Sequential Search and Binary Search. Finding Complexities of Sorting and Searching Algorithms.	L2, L3 and L4	5

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

Co-requisites	Basic concepts of C Programming				

### **Catalog Description**

The course is designed to develop skills to design and analyze simple linear and non linear data structures like arrays, stacks, queues, lists, trees, and graphs. It strengthen the ability of the students to identify and apply the suitable data structure for the given real world problem. It enables them to gain knowledge in practical applications of data structures

### **Course Objectives**

The objective of this course is to

1. Equip the students to apply knowledge of basic concepts of data structures in solving complex problems.
2. Provide demonstration of the data structure concepts like stacks, queues, lists, trees, graphs and various searching and sorting techniques

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: Apply the knowledge of basic fundamentals of data structures in order to analyze the time and space efficiency of the data structure

CO2: Demonstrate the use and applications of Stack and Queue data structure along with various types of Queues.

CO3: Demonstrate and compare link list with other linear data structure; Advantage, disadvantages, types and application of link list.

CO4: Apply the knowledge of trees and heaps and demonstrate the application of tree in searching and storing huge amount of data. Demonstrate the usage of graphs and their applications of BFS and DFS to find shortest path

CO5: Apply algorithm for solving problems like sorting, searching,hasing, insertion and deletion of data.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
1. Sample programs of 1D and 2-D arrays (a) Write a program to insert an element at any position in an array (b) Write a program to perform addition of matrix for order 3*3 (c) Write a program to perform multiplication of matrix of any order	L1, L2 and L3	4
2. Sample Programs of stack and queues.  (a) Write a program that perform the following function i) Create stack of integers. ii) PUSH operation on stack iii) POP operation on stack  (b) Write a program that perform the following function i) Create Queue of integers. ii) Insert operation on Queue iii) Delete operation on Queue  (c) Write a program that perform the following function i) Create Circular Queue of integers. ii) Insert operation on Circular Queue iii) Delete operation on Circular Queue	L2, L3	4
3. Sample Programs of Linked List  (a) Write a C program that perform the following: i) Create a singly linked list of integers. ii) Delete a given integer from the above linked list. iii) Display the contents of the above list after deletion  (b) Write a C program that performs the following: a) Create a doubly linked list of integers. b) Delete a given integer from the above doubly linked list. c) Display the contents of the above list after deletion .	L2, L3 and L4	6
4. Sample Programs of trees  (a) Write a C program that uses functions to perform the following: i) Create a binary search tree of characters. ii) Traverse the above Binary search tree recursively in Postorder.	L2, L3, L4 and L5	2
5. Sample programs on sorting and searching (a) Write C programs for implementing the Bubble Sort	L2, L3	6

(b) Write C programs for implementing the Selection Sort (c) Write C programs for implementing the Insertion Sort (d) Write a program to perform linear Search (e) Write a program to perform binary Search	and L4	
6. Sample programs on graphs  (a) Write C programs for implementing the graph traversal algorithms: Depth first traversal (b) Write C programs for implementing the graph traversal algorithms: Breadth first traversal	L3, L4 and L6	6

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

### **Catalog Description**

This course is aimed at providing the basic knowledge of the concepts involved in designing and working of an operating system, how it acts as a resource manager of the system as a whole, how various issues such as Memory conflicts, resource conflicts are resolved by an operating system and a study of various types of operating systems.

### **Course Objectives**

The objective of this course is to

1. Equip the students with the knowledge about categories of operating systems and their functions.
2. Provide detailed knowledge about functions of operating system like process, memory and device management along with file system security and protection.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: Define and explain operating systems and their evolution also differentiate among its various types.

CO2: Explain concepts of process and inter-process communication and synchronization. Identify solutions to detect, prevent and handle deadlocks occurring in the operating systems. Solve synchronization and CPU scheduling problems related to processes.

CO3: Define and explain concepts of memory management like fragmentation, paging and segmentation. Solve problems related to memory management using page replacement algorithms.

CO4: Describe the concepts of device management and list various disk allocation methods. Determine solutions for disk scheduling problems using available disk scheduling algorithms.

CO5: State the concept of file and file system security, also distinguish among various file allocation methods.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>MODULE 1:</b>  <b>INTRODUCTION</b> What is an Operating System, Types of Operating Systems, Simple Batch Systems, Multiprogramming Systems, Time-Sharing Systems, Parallel Systems, Distributed Systems, Real-time Systems, Operating System Structures: System Components, System Calls, Types of System Calls, System Programs, System Structure, Virtual Machines, Operating System debugging and Generation, System Boot	L1, L2 and L4	4
<b>MODULE 2:</b>  <b>PROCESS MANAGEMENT</b> Process Concept, Process Scheduling, Operation on processes, Cooperating Processes, Interprocess Communication with Examples, Client-Server Systems, Background process, Overview of Multithreaded Programming, Multithreading Models, Process Scheduling: Basic Concepts, Scheduling Criteria, Scheduling Algorithms, Multi-Processor Scheduling, Thread Scheduling, Multi-Processor Scheduling	L1, L2 and L3	4
<b>MODULE 3:</b>  <b>PROCESS COORDINATION</b> Synchronization: Critical section Problem, classic problems of synchronization, semaphores, monitors & its implementation. Deadlocks: System Model, Deadlock Characterization, Methods for Handling Deadlocks, Deadlock Prevention, Deadlock Avoidance, Deadlock Detection, Deadlock Recovery	L1, L2 and L3	4
<b>MODULE 4:</b>  <b>MEMORY MANAGEMENT</b> Background of Memory Management, Swapping, Contiguous Memory Allocation, Segmentation, Virtual Memory management concepts: Demand Paging, Page Replacement, Allocation of Frames, Thrashing	L1, L2 and L3	4
<b>MODULE 5:</b>  <b>STORAGE MANAGEMENT</b> File System: File Concept, Access Methods, Directory and Disk Structure, File Sharing, Protection, File System Structure, Allocation Methods, Free Space Management, Secondary Storage Structure: Disk Scheduling, Swap Space Management, RAID Structure, I/O Systems: Overview and I/O	L1 and L2	4

Hardware		
<b>MODULE 6:</b>  <b>PROTECTION AND SECURITY</b>  System Protection: Goals ,Principles and Domain of Protection, Access Matrix, System Security: The security problem, Program Threats, System and Network Threats, Overview of Cryptography, User Authentication, Firewalls	L1 and L2	4

### Catalog Description

This course introduces the UNIX operating system commands, shell programming. Explores the use of operating system utilities such as vi text editors, filters, process handling etc.

### Course Objectives

The objective of this course is to

1. Provide knowledge of working on Unix OS.
2. Provide sound foundation of writing Shell scripts.
3. Implement features like piping, filters and redirection.

### Course Outcomes

On completion of this course, the students will be able to

CO1: To implement various UNIX commands.

CO2: To demonstrate the use of Vi Editor and other editors of UNIX.

CO3: To write simple Shell scripts.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>1. UNIX structure, history, basic commands.</b>	L1,L3	4
<b>2. Working of Vi Editor and its commands.</b>	L1,L3	4
<b>Shell Script</b> 1. Write a Shell Script that takes a search string and filename from the terminal & displays the results. 2. Write a Shell Script that takes pattern and filename as command line arguments and displays the results appropriately i.e. pattern found/pattern not found. 3. Write a Shell Script that accepts only three arguments from the	L1,L3	16

<p>command line. The first argument is the pattern string, the second argument is the filename in which the pattern is to be searched and the third argument is the filename in which the result is to be stored.</p> <p>4. Write a Shell Script which creates the following menu and prompts for choice from user and runs the chosen command.</p> <p style="padding-left: 40px;">Today's date Process of user List of files Quit to UNIX</p> <p>5. Write a Shell Script that computes the factorial of a given number</p> <p>6. Write a Shell Script that changes the extension of a group of files from txt to doc</p> <p>7. Write a Shell Script that accepts both filename and a set of patterns as positional parameters to a script.</p> <p>8. Write a Shell Script which will redirect the output of the date command without the time into a file.</p> <p>9. Write a Shell Script (using while loop) to execute endlessly (until terminated by user) a loop which displays contents of current directory, disk space status, sleep for 30 seconds and display the users currently logged in on the screen.</p> <p>10. Write a Shell Script that receives two filenames as arguments. It should check whether content of the two files is same or not. If they are same, second file should be deleted.</p> <p>11. If a number is input through the keyboard, write a script to calculate sum of its digits.</p> <p>12. Write a Shell Script which takes a command line argument of Kms and by default converts that number into meters. Also provide options to convert km to dm and km to cm.</p> <p>13. Write a Shell Script using for loop, which displays the message "Welcome to the UNIX System"</p> <p>14. Write a Shell Script to change the filename of all files in a directory from lower-case to upper-case.</p> <p>15. Write a Shell Script that examines each file in the current directory. Files whose names end in <b>old</b> are moved to a directory named <b>old files</b> and files whose names end in <b>.c</b> are moved to directory named <b>cprograms</b>.</p> <p>16. Write a Shell Script which searches all files in the given directory (to be taken as command line argument) for the file having the title (to be taken as command line argument), as the first line in the file.</p> <p style="padding-left: 40px;">a) Display the contents of the searched file. b) In the end, print the file is ###, where ### is small-sized if total no. of lines is &lt;50 ### is medium-sized if total no. of lines between 50&amp;100 ### is large-sized.</p> <p>17. Write a shell script which reports names and sizes of all files in a</p>		
--	--	--

directory (directory would be supplied as an argument to the shell script) whose size is exceeding 1000 bytes. The filenames should be printed in descending order of their sizes. The total number of such files should also be reported. 18. Write a shell script to calculate and print the first <i>m</i> Fibonacci numbers. 19. Write a shell script to compute the <b>GCD</b> and <b>LCM</b> of two numbers. 20. Write a shell script to generate all combinations of 1, 2 and 3 using for loop.

Co-requisites	Nil				

### Catalog Description

This course is design to get students familiar with the fundamentals & basic concepts in Data Base Management Systems and their use. The primary aim of the subject is to provide the students a deeper understanding of the relational database model by exposing the students to a variety of important issues of data base management, e.g., database design, physical storage, query optimization, database recovery, concurrency control, security and data integrity.

### Course Objectives

The objective of this course is

- To make students familiar with the fundamental concepts of DBMS.
- Provide an overview of Normalization, concurrency techniques and database recovery with examples.

## Course Outcomes

On completion of this course, the students will be able to

CO1. Differentiate between traditional data processing system and database management system and understand characteristics and applications of DBMS in real world.

CO2. Explain and use different data models such as Entity Relationship Model and Relational Model.

CO3. Solve queries using relational algebra, relational calculus and SQL.

CO4. Illustrate normalization concepts and apply them in real database applications.

CO5. Explain database concurrency techniques and recovery mechanisms.

Modules	Blooms level*	Number of hours
<b>Module I: Introduction to DBMS</b> Introduction to DBMS, Architecture of DBMS, Components of DBMS, Traditional data Models (Network, Hierarchical and Relational), Database Users, Database Languages, Schemas and Instances, Data Independence	L1, L2 and L6	6
<b>Module II: Data Modeling</b> Entity sets attributes and keys, Relationships (ER), Database modeling using entity, Weak and Strong entity types, Enhanced entity-relationship (EER), Entity Relationship Diagram Design of an E-R Database schema, Object modeling, Specialization and generalization	L1 and L2	2
<b>Module III: Relational Database Model</b> Basic Definitions, Properties of Relational Model, Keys, Constraints, Integrity rules, Relational Algebra, Relational Calculus.	L1 and L3	4
<b>Module IV: Relational Database Design</b> Functional Dependencies, Normalization, Normal forms (1 <sup>st</sup> , 2 <sup>nd</sup> , 3 <sup>rd</sup> , BCNF), Lossless decomposition, Join dependencies, 4 <sup>th</sup> & 5 <sup>th</sup> Normal form, Database Design and Implementation Process, Physical database design and Tuning.	L2, L3 and L4	5
<b>Module V: Transaction Management and Concurrency Control Techniques</b> Transaction concept, ACID properties, Schedules and recoverability, Serial and Non-serial schedules, Serializability, Concurrency Techniques: Locking Protocols, Timestamping Protocol, Multiversion Technique, Deadlock Concept - detection and resolution, 2 – Phase Locking.	L2, L3 and L4	4

<b>Module VI: Backup and Recovery</b> Database recovery techniques based on immediate and deferred update, Shadow pages and Write-ahead Logging.	L1 and L2	3
---	-----------	---

### **Catalog Description**

This course is design to get students familiar with the basic concepts of SQL including DDL, DML and DCL statements. The course also explains the basic concepts of PL/SQL. Students will learn practical on Oracle software and hence can work on any RDBMS software.

### **Course Objectives**

The objective of this course is

- To make students familiar with the concepts and working of SQL.
- Provide an overview of PL/SQL.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1. Illustrate SQL basic concepts like languages DDL, DML etc., data types and working.

CO2.Explain concepts of database creation, manipulation of data and data retrieval and apply them in real database applications.

CO3.Design and implement various data constraints on a database for a given problem.

CO4. Solve queries using concepts like joins, sub queries, aggregate functions, triggers etc.

CO5.Prepare PL/SQL blocks.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Lab Session 1</b> Introduction of RDBMS, Oracle, SQL and data types.	L1 and L2	2
<b>Lab Session 2</b> Basic concept of database creation and manipulation of data.	L1 and L3	2
<b>Lab Session 3</b> Working with SELECT query.	L1 and L3	2
<b>Lab Session 4</b> To apply data constraints on a table-Primary Key, Not Null, Unique.	L1 and L3	2
<b>Lab Session 5</b> Working with Foreign Key and Check Constraint.	L1 and L3	2
<b>Lab Session 6</b> To implement the basic concept of Aggregate and Grouping Functions.	L1 and L3	2
<b>Lab Session 7</b> To apply various set operators on data.	L1 and L3	2
<b>Lab Session 8</b> Concept of Nested queries in database and its application in database.	L1 and L3	2
<b>Lab Session 9</b> Implementation different types of JOINS in database.	L1 and L3	2
<b>Lab Session 10</b> Basic concepts of Triggers and Procedures and related queries.	L1 and L3	2
<b>Lab Session 11</b> Introduction to PL/SQL and basic syntax.	L1 and L3	2
<b>Lab Session 12</b> Write programs in PL/SQL Using Control Structures.	L3	2

Version: 2020.1	Date of Approval: 19, July 2020	3	0	0	3
Pre-requisites/Exposure	Basics of Computer Network				
Co-requisites	Nil				

### **Catalog Description**

In this course the concepts of basic data communication and networking concepts are discussed in details. The concepts related to routing/switching hardware, security, distributed client/server applications and architecture, intranets and intranet servers and browsers, networks and network servers, LANs/WANs, internetworking technologies will be introduced. The studies will be made on impact of the OSI reference model for networking protocols, CSMA/CD, TCP/IP implementation, frame relay, FDDI, X-25, ISDN services This course will assist in developing the skills in basics of computer networks. The outcome of this course implicitly and explicitly affects the abilities to understand and analyze the networking concepts

### **Course Objectives**

The objective of this course is to

- Equip the students with concepts of data communication and computer network.
- Provide an overview of networking OSI, TCP/IP models, devices, media, protocols and layer concepts.

### **Course Outcomes**

On completion of this course, the students will be able to

- CO1: Explain OSI model, Layers in OSI model and TCP/IP protocol suit. Describe topologies with their advantages and disadvantages and transmission media.
- CO2: Describe data transmission and data encoding schemes. Elaborate multiplexing and types of spread spectrum.
- CO3: Demonstrate various switching techniques. Also explain Frame Relay, ATM, Error Detection Correction techniques, Flow Control- Stop and Wait mechanisms..

CO4: Describe the meaning of routers and issues in designing Routing Algorithms; Discuss logical addressing, Ipv4 and IPv6.

CO5: Describe Transport Services, TCP, UDP, SCTP. Explain Congestion control and Quality of Service.

Modules	Blooms level*	Number of hours
<p>MODULE 1:</p> <p><b>Introduction</b></p> <p>Computer Network, Advantages and Disadvantages of Computer Network, Communication system, Classification of networks, Network models- OSI model, Layers in OSI model, TCP/IP protocol suite, Transmission mode, LAN Architecture, LAN topologies-Bus, Tree, Ring, Star, Mesh, Wireless LAN, Transmission Media- Twisted pair cable, Coaxial cable, Optical Fiber, Wireless transmission media.</p>	L1 and L2	6

	<b>Data Communication and Computer Networks Lab</b>	L	T	P	C
Version: 2020.1	Date of Approval : 19, July 2020	0	0	2	1
Pre-requisites/Exposure	Basics of CISCO router				
Co-requisites	NIL				

### **Catalog Description**

The course familiarizes with the equipment applications and protocols installed in enterprise networks, with a focus on switched networks, IP Telephony requirements, and security. It also introduces advanced routing protocols such as Enhanced Interior Gateway Routing Protocol (EIGRP) and Open Shortest Path First (OSPF) Protocol. Hands-on exercises include configuration, installation, and troubleshooting.

### **Course Objectives**

The objective of this course is to

1. Make the students understand configuration of routing protocols.
2. Provide a demonstration of troubleshooting of different protocols.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1. Apply the knowledge of CISCO router to understand its basic configuration, Enterprise network and implement inter-VLAN routing.

CO2. Demonstrate the configuration of OSPF and RIP protocol.

CO3. Demonstrate the configuration of EIGRP and BGP protocol.

CO4. Apply the knowledge of basic WAN connections using HDLC and PPP protocol.

CO5. Demonstrate the standard and extended ACL on router.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
1. Drawing an Enterprise Network for Amity University showing its different campuses across the country. 2. Configuring all the devices (PCs, Servers, Switches) to create a LAN within campuses of the Enterprise Network. 3. Configuring Virtual LANs (VLANs) in an Enterprise Network. 4. Configuring Trunking and Inter-VLAN Routing in an Enterprise Network.	L3, L5	4
5. Implementing RIP (Routing Information Protocol) to enable communication between different LANs. 6. Implementing OSPF (Open Shortest Path First) to enable communication between different LANs.	L3, L5	2
7. Implement EIGRP (Interior Routing Protocol) to establish connectivity within domestic campuses of the Enterprise Network. 8. Implement BGP (Border Gateway Protocol) and Redistribution to establish connectivity between different campuses of the Enterprise Network.	L3, L5	2
9. Configuring WAN connectivity using protocols-HDLC and PPP. 10. Implementing Frame-Relay to configure WAN service provider cloud.	L3, L5	2
11. Configuring Standard and Extended ACLs on a Router. 12. Troubleshooting Switching, Routing and ACL issues.	L3, L5	2

Pre-requisites/Exposure	Basic knowledge of Data Structure				
Co-requisites	Nil				

### **Catalog Description**

The designing of algorithm is an important component of computer science. The objective of this course is to make students aware of various techniques used to evaluate the efficiency of a particular algorithm. Students eventually should learn to design efficient algorithm for a particular problem.

### **Course Objectives**

The objective of this course is to

1. Analyze the asymptotic performance of algorithms.
2. Introduce with major algorithms strategies and data structures.
3. Apply important algorithmic design paradigms and methods of analysis.
4. Provide efficient algorithms in technical design situations.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: Explain use of asymptotic notations and analysis of various sorting techniques.

CO2: Explain the basic concepts of advanced data structures like Red Black Trees, Heapetc.

CO3: Describe principles of Greedy Algorithms and Dynamic Programming and apply the strategy to solve various problems to analyze the complexity of algorithm.

CO4: Explain basic concepts of graphs and apply various design strategies to solve graph related problems to analyze the complexity of algorithm.

CO5: Apply the various algorithms indifferent areas of Computer Science.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I : Introduction</b> Algorithms, Analysis of Algorithms, Design of Algorithms, Complexity of Algorithms, Asymptotic Notations, Growth of function, Recurrences and their solution methods. Sorting in polynomial Time: Insertion sort, Merge sort, Heap sort, and Quick sort Sorting in Linear Time: Counting sort, Radix Sort, Bucket Sort, Medians and order statistics	L1, L2 and L3	6
<b>Module II : Advanced Data Structures</b> Red Black Trees, Augmenting Data Structure, Binomial Heap, B-Tree, Fibonacci Heap, and Data Structure for Disjoint Sets, All kinds of Algorithms on these data structures, Dictionaries and priority Queues, mergeable heaps, concatenable queues	L2, L3 and L4	8
<b>Module III : Advanced Design and Analysis Techniques</b> Dynamic programming, Greedy Algorithm, Backtracking, Branch-and-Bound, Amortized Analysis	L2, L3 and L4	8
<b>Module IV : Graph Algorithms</b> Elementary Graph Algorithms, Breadth First Search, Depth First Search, Minimum Spanning Tree, Kruskal's Algorithms, Prim's Algorithms, Single Source Shortest Path, All pair Shortest Path, Maximum flow and Traveling Salesman Problem	L1, L3	8
<b>Module V: Advanced Topics</b> Randomized Algorithms, String Matching, NP-Hard and NP-Completeness, Approximation Algorithms, Sorting Network, Matrix Operations, Polynomials and FFT, Number Theoretic Algorithms	L1,L2	6

*\*Bloom's Level:*

### **Catalog Description**

This course is intended to implement the various algorithm strategies for solving the problems using programming language.

### **Course Objectives**

The objective of this course is to

- Equip the students with implementation of various algorithms.
- Provide sound foundation of design strategies for problem solving.
- Measure and compare the performance of different algorithms.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: Implement the concept of Divide and Conquer algorithms to solve various problems.

CO2: Demonstrate the use of Greedy Algorithms to solve various problems.

CO3: Apply the principle of Dynamic Programming to solve various problems.

CO4: Apply various design strategies to solve graph related problems.

### **Catalog Description**

In this course the concepts of Software development are discussed in detail. Various models of SDLC are introduced along with its application. Students will be able to apply these concepts in real time software project development.

### **Course Objectives**

The objective of this course is to

- Gain the knowledge of how Analysis, Design, Implementation, Testing and Maintenance processes are conducted in a software project.
- Apply their foundations in software engineering to adapt to readily changing environments using the appropriate theory, principles and processes

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: Apply current theories, models, and techniques that provide a basis for the software Lifecycle.

CO2: Enable the students to apply a systematic application of scientific knowledge in creating and building cost effective software solutions to business and other types of problems.

CO3: Be able to elicit, analyze and specify software requirements through a productive Working relationship with various stakeholders of a software development

CO4: Be able to evaluate the impact of potential solutions to software engineering problems in a global society, using the knowledge of contemporary issues and emerging software engineering trends, models, tools, and techniques.

CO5: Work as an individual and as part of a multidisciplinary team to design, develop and deliver quality software

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>MODULE 1:</b> Introduction Software life cycle models: Waterfall, Prototype, Evolutionary and Spiral models, Overview of Quality Standards like ISO 9001, SEI-CMM	L1, L2 and L4	5
<b>MODULE 2:</b> Software Metrics and Project PlanningSize Metrics like LOC, Token Count, Function Count, Design Metrics, Data Structure Metrics, Information Flow Metrics. Cost estimation, static, Single and multivariate models, COCOMO model, Putnam Resource Allocation Model, Risk management	L2, L3 and L6	7
<b>MODULE 3:</b> Software Requirement Analysis, design and coding Problem Analysis, Software Requirement and Specifications, Behavioural and non-behavioural requirements, Software Prototyping Cohesion & Coupling, Classification of Cohesiveness & Coupling, Function Oriented Design, Object Oriented Design, User Interface Design Top-down and bottom-up Structured programming, Information hiding	L2, L3 and ,L5	8
<b>MODULE 4:</b> Software Reliability, Testing and Maintenance Failure and Faults, Reliability Models: Basic Model, Logarithmic Poisson Model, Software process, Functional testing: Boundary value analysis, Equivalence class testing,Structural testing: path testing, Data flow and mutation testing, unit testing, integration and system testing, Debugging, Testing Tools, & Standards.Management of maintenance, Maintenance Process, Maintenance Models, Reverse Engineering, Software RE-engineering	L2, L3 and L4,L6	10
<b>MODULE 5:</b> UML Introduction to UML,Use Case Diagrams, Class Diagram: State Diagram in UMLActivity Diagram in UMLSequence Diagram in UMLCollaboration Diagram in UML, Domain, Component Diagram and Deployment Diagram	L3,L4,L5	6

### **Catalog Description**

This course presents basic principles for the design, use and understanding of computer graphics systems. This course includes various algorithms and their complexity to draw graphics objects. This course also teaches the students about different algorithms for 2D /3D transformation, clipping operations on objects, hidden surface removal and detection. This course is intended to describe technical characteristics and performance of multimedia system and terminals.

### **Course Objectives**

The objective of this course is to

- Equip the students with mathematical concepts of graphics algorithm and their implementation to draw objects using C language.
- Provide an overview of various color filling algorithms, 2D & 3D transformation, clipping operations, algorithms related to hidden surface detection and elimination and their implementation.
- Provide an overview of different multimedia technologies like audio and video including multimedia devices. The course also includes some practical sessions on these technologies.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: Define various standards and components in development of computer graphics.

CO2: Explain generation of graphics primitives and analyse their problems and solutions.

CO3: Demonstrate solid filling using polygon fill algorithm with interior region testing methods.

CO4: Apply 2D geometric transformations on 2D graphics objects with their practical implementation.

CO5: Illustrate use of coordinate mapping and their transformation and analyse use of line and polygon clipping algorithms.

CO6: Apply 3D geometric transformations on 3D objects with their practical implementation and assess logic behind visible surface detection algorithms with practical implementation of 3D transformations.

CO7: Describe basic principles of multimedia systems, animation and graphics library functions used in animation design.

<b>Modules/Topics Covered**</b>	<b>Blooms level*</b>	<b>Number of hours</b>
Module I: Overview of Graphics System Application of computer graphics, Video Display Devices, Raster Scan Display, Random Scan Display, Input Devices, Graphic Software and graphics standards, Numerical based on Raster and Random scan display, Frame buffer, Display processor, picture construction technique in interactive computer graphics.	L1, L2 and L3	5
Module II: Output Primitives Scan conversion, Points and Lines, Line-Drawing Algorithm, Circle Generation Algorithms, Ellipse Generation Algorithm, Area fill algorithms for various graphics primitives: Scan line fill algorithm, boundary fill algorithm, flood fill algorithm, Polygon representation, various method of Polygon Inside test: Even-Odd method, winding number method, Various techniques for character generation.	L1, L2 and L3	5
Module III: Two Dimensional Geometric Transformations Basic Transformations, Composite Transformation, Translation, Rotation, Scaling, General Pivot-Point Rotation, General Fixed Point Scaling, General Scaling Directions, Reflection, Shear, Raster Methods for Transformations.	L2, L3 and L4	5
Module IV: Two-Dimensional Viewing Window to view Port Co-ordinate Transformation, Anti aliasing and filtering techniques, Clipping Operations, Cohen Sutherland Line Clipping algorithm, Sutherland Hodgeman Polygon Clipping algorithm, fractal geometry methods, fractal dimensions, Geometric construction of deterministic self-similar fractals, Iterated function system to generate fractals.	L2, L3 and L4	6
Module V: Three Dimensional Geometric and Modeling Transformations 3D viewing: 3 dimensional viewing parameters, Homogeneous coordinate	L2, L3	6

representation, Advantages and disadvantages of homogeneous coordinate system, Translation, Rotation, Scaling, Other 3D Transformations, Composite Transformation, and Projections: Parallel projections, perspective projections, and oblique projection.	and L4	
Module VI: Visible- Surface Detection Methods Bezier curves and Bezier surfaces, B-spline curves and surfaces, Overview of Visible Surface Detection Algorithm, Concept of light source, specular and diffuse reflection, Illumination through light source, Shadow and its types, Depth-Buffer Method, A Buffer Method, Scan-Line Method, Binary search partition method, painter's algorithm or depth sorting method.	L2, L3 and L4	6
Module VII: Introduction to multimedia Elementary image processing techniques, Introduction to Animation, software used in animation, Design of animation sequence, graphics library functions used in animation design.	L1, L2 and L3	3

## Catalog Description

The objective of this consortium is to shape and expand a full-scale and sound mobile computing system market. To achieve this, cooperation is required of interests related to communication (network), computer hardware/software, system integrators (including service providers), and the media.

## Course Objectives

The objective of this course is to

- Give a general overview of the cellular technology and the associated terms and discuss the generations of the mobile technologies starting from 1G to 3G techniques.

- Illustrate the GPRS and WAP model for 2G internet connectivity in detail.
- Elaborate the third-generation mobile services
- Describe the Global Mobile Satellite Systems in detail and basic architecture of Bluetooth technology and advanced topics in mobile computing.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Explain the basic concepts mobile technology, computing and basic architecture of PCS and GSM.

CO2: Describe the mobile networking Infrastructure through 2G technologies (GSM, GPRS, WAP).

CO3: Explain the basic concepts of 3G technologies (WCDMA, CDMA 2000) and WLL.

CO4: Discuss the working of mobile satellite systems like IRIDIUM and GLOBALSTAR.

CO5: Explain the concepts of Bluetooth technology, its working and protocols, virtual networks and enterprise networks.

Modules	Blooms level*	Number of hours
<b>Module I: Introduction to Personal Communications Services (PCS)</b> PCS Architecture, Mobility management, Networks signaling. Global System for Mobile Communication (GSM) system overview: GSM Architecture, Mobility management, Network signaling.	L1, L2 and L3	8
<b>Module II: General Packet Radio Services (GPRS) &amp; Wireless Application Protocol (WAP)</b> GPRS Architecture, GPRS Network Nodes. Mobile Data Communication: WLANs (Wireless LANs) IEEE 802.11 standard, Mobile IP. Wireless Application Protocol (WAP): The Mobile Internet standard, WAP Gateway and Protocols, wireless mark up Languages (WML).	L1 and L2	10
<b>Module III: Third Generation (3G) Mobile Services</b> Introduction to International Mobile Telecommunications 2000 (IMT 2000) vision, Wideband Code Division Multiple Access (W-CDMA), and CDMA 2000, Quality of services in 3G. Wireless Local Loop(WLL): Introduction to WLL Architecture, wireless Local Loop Technologies.	L1 and L2	7
<b>Module IV: Global Mobile Satellite Systems</b> Global Mobile Satellite Systems; case studies of the IRIDIUM and GLOBALSTAR systems.	L1 and L2	7
<b>Module V: Enterprise Networks</b> Introduction to Virtual Networks, Blue tooth technology, Blue tooth	L1 and	4

Protocols. Advanced techniques in mobile computing.	L2

	<b>Programming With Java</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version: 2020.1	Date of Approval: 19, July 2020	3	0	-	3
Pre-requisites/Exposure	Hands on Knowledge of C Programming				
Co-requisites	Basic concepts of C Programming				

### **Catalog Description**

The objective is to impart programming skills used in this object oriented language java. The course explores all the basic concepts of core java programming like object, classes, data types, features, operators, control structures, interfaces, packages, applets, awt, swings and socket programming. The students are expected to learn it enough so that they can develop the basic applications as well as web solutions like creating applets etc.

### **Course Objectives**

The objective of this course is to

1. Equip the students with the basic feature of contemporary java required in solving complex problems.
2. Provide a practical knowhow and implementation of java programming concepts like classes, objects, packages, swings.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: Define and explain concept of byte code and platform independence, demonstrate basic java based application development using operators, if-else, loops and arrays. Distinguish between various types of inheritances, polymorphisms and other concepts and able to solve complex programming problems involving class objects, inheritances, and packages.

CO2: Explain event delegation model and describe AWT class hierarchy; Apply knowledge of event handling and AWT controls create some new dynamic graphical applications.

CO3: Describe hierarchy of exception classes and thread life cycle along with demonstrate and design solutions for some simple and complex applications using exception and multithreading concepts.

CO4: Explain the JDBC architecture, ODBC and JDBC Drivers, Connecting to Database with the java.sql Package, Using JDBC Terminology.

CO5: Explain the steps of user defined packages ; Explain the concept of swings, swing package. Demonstrate applications based on java applets and swings. Describe Servlets, Servlet Life Cycle, Servlet based Applications, jdbc with servlets.

<b>Modules/Topics Covered**</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Overview of Java</b> Introduction to Java, Java features, An Overview of Java, Data Types, Variables, Arrays, Operators, and Control Statements, Introducing Classes, A Closer look at Methods and Classes, Inheritance, Packages and Interfaces, Exception Handling, Multithreaded Programming, I/O, and Applets, Creating threads, implementing threads, threads priorities, suspending, stopping & resuming threads, String Handling.	L1, L2 and L3	7
<b>Module II: Java AWT and Swings</b> Introducing the AWT: AWT Controls, Working with Windows, Layout Managers, and working with Swing, Event Handling Mechanism, Events, classes, sources of events, Networking, and Event Handling.	L1, L2 and L3	7
<b>Module III: Collections and Generics</b> What are Generics? A Generic Class with Two Type Parameters, The General Form of a Generic Class, Bounded Types, Creating a Generic Method, Generic Constructors, Generic Interfaces, Generic Class Hierarchies, Collections Overview, The Collection Interfaces, The Collection Classes, Accessing a Collection via an Iterator, The Random access Interface.	L2, L3 and L4	8
<b>Module IV: JDBC</b> Overview of JDBC architecture, ODBC and JDBC Drivers, Connecting to Database with the java.sql Package, Using JDBC Terminology.	L2, L3 and L4	7
<b>Module V: JSP and servlets</b> Introduction to Servlets, Servlet Life Cycle, Servlet based Applications, jdbc with servlets, session Management techniques in detail, JSP: Introduction to JSP, JSP implicit objects, JSP based Applications, Java. Net. Login & Logout Example, jdbc with jsp.	L2, L3 and L4	7

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

**\*\* Sample Programs provided are not limited to these only, can include others as desired.**

### **Catalog Description**

The objective is to impart programming skills used in this object oriented language java. The course explores all the basic concepts of core java programming like object, classes, data types, features, operators, control structures, interfaces, packages, applets, awt, swings and socket programming. The students are expected to learn it enough so that they can develop the basic applications as well as web solutions like creating applets etc.

### **Course Objectives**

The objective of this course is to

- Equip the students with the basic feature of contemporary java required in solving complex problems.
- Provide a practical knowledge of implementation/demonstration of java programming concepts like classes, objects, packages, swings.

### **Course Outcomes**

On completion of this course, the students will be able to

- CO1: Demonstrate the basic java based application development using operators, if-else, loops and arrays.
- CO2: Demonstrate the concept of inheritances, polymorphisms and other concepts and able to solve complex programming problems involving class objects.
- CO3: Apply knowledge of event handling and AWT controls create some new dynamic graphical applications.
- CO4: Demonstrate and design solutions for some simple and complex applications using exception and multithreading concepts, Database connectivity.
- CO 5: Apply the knowledge of swing, io packages to implement various application programs. Demonstrate applications based on java applets and swings.

Modules	Blooms level*	Number of hours
<p>1. Sample programs of basic java</p> <p>a) Write a program &amp; execute to display “hello java” in java.</p> <p>b) Write a program &amp; execute to demonstrate command line arguments in java.</p> <p>c) Write a program &amp; execute to find maximum of command line arguments in java.</p> <p>d) Write a program &amp; execute to find sum of two numbers in java, take input from user.</p>	L1, L2 and L3	4
<p>2. Sample programs of Inheritance, String classes, abstract function and interface</p> <p>a) Write a program &amp; execute in java to perform area and volume calculations in java using concept of inheritance.</p> <p>b) Write a program &amp; execute in java to demonstrate abstract class in java</p> <p>c) Write a program &amp; execute in java to perform complex number arithmetic using class and object.</p> <p>d) Write a program &amp; execute to make use of interface in java</p> <p>Write a program &amp; execute in java to sort an array of strings using string class functions.</p>	L2, L3 and L4	4
<p>3. Sample programs of AWT and event handling</p> <p>a) Write your first applet in java</p> <p>b) Write a program &amp; execute to find maximum of two numbers in java using applet.</p> <p>c) Write a program &amp; execute to draw basic shapes in java using graphics</p> <p>d) Write a program &amp; execute to handle various mouse events</p>	L2, L3, L4 and L5	4
<p>4. Sample programs of exception handling, multithreading and JDBC Connectivity</p>	L2, L3	6

a) Write a program & execute to demonstrate threads in java b) Write a program & execute to demonstrate synchronization in threads in java. c) Write a program & execute to create your own exception and use it in java d) WAP to connecting a database using user-id and password. c) WAP to insert data into the database using the prepared statement	and L4	
5. Sample programs on java packages and Servlets a) Create your own package to create two simple functions in different/same classes and access them in and outside the package. b) Write a program to create servlets based applications. c) WAP for authentication, which validate the login-id and password by the servlet code d) WAP to include a HTML page into a JSP page,WAP to handle the JSPEException	L2, L3 and L4	6

	Software Project Management	L	T	P	C
Version: 2020.1	Date of Approval: 19, July 2020	3	0	0	3
Pre-requisites/Exposure	Software Engineering Concepts				
Co-requisites	Nil				

## Catalog Description

This course introduces the concepts to understand the fundamental principles of Software Project management & provides a good knowledge of responsibilities of project manager and how to handle these. It also discusses the different methods and techniques/tools used for project management.

## Course Objectives

The objective of this course is to

- To understand the working and functioning of the process of the software development so that the project can be managed accordingly.
- To understand the engineering activities in the project life cycle
- To implement the management tools and quality standards

## Course Outcomes

On completion of this course, the students will be able to

CO1: Describe fundamental principles of Software project management

CO2: Identify the key activities in managing a software project

CO3: evaluate and relate different software processes, system models

CO4: Plan software projects, including risk and quality management

CO5: Utilize technology tools for communication, collaboration, information management, and decision support.

CO6: Apply software quality practices in software project.

Modules	Blooms level*	Number of hours
MODULE 1:  INTRODUCTION TO SOFTWARE PROJECT MANAGEMENT Definition of a Software Project (SP), SP Vs. other types of projects activities covered by SPM, categorizing SPs, project as a system, management control, requirement specification, information and control in organization.	L1, L2	6
MODULE 2:  STEPWISE PROJECT PLANNING Introduction, selecting a project, identifying project scope and objectives, identifying project infrastructure, analyzing project characteristics, identifying project products and activities, estimate efforts each activity, identifying activity risk, allocate resources, review/ publicize plan. .	L1, L2 and L3	8
MODULE 3:  PROJECT EVALUATION & ESTIMATION Cost benefit analysis, cash flow forecasting, cost benefit evaluation techniques, risk evaluation. Selection of an appropriate project report; Choosing technologies, choice of process model, structured methods,	L3, L4, and L6	9

rapid application development, water fall-, V-process-, spiral- models, Prototyping, delivery. Albrecht function point analysis.		
<b>MODULE 4:</b>  <b>ACTIVITY PLANNING &amp; RISK MANAGEMENT</b> Objectives of activity planning, project schedule, projects and activities, sequencing and scheduling activities, network planning model, representation of lagged activities, adding the time dimension, backward and forward pass, identifying critical path, activity throat, shortening project , precedence networks. Risk Management: Introduction, the nature of risk, managing risk, risk identification, risk analysis, reducing the risks, evaluating risks to the schedule, calculating the z values.	L2, L3 and L5	10
<b>MODULE 5:</b>  <b>RESOURCE ALLOCATION &amp; MONITORING THE CONTROL</b> Introduction, the nature of resources, identifying resource requirements, scheduling resources creating critical paths, counting the cost, being specific, publishing the resource schedule, cost schedules, the scheduling sequence. Monitoring the control: Introduction, creating the frame work, collecting the data, visualizing progress, cost monitoring, earned value, prioritizing monitoring, getting the project back to target, and change control.	L2, L3 and L5	10
<b>MODULE 6:</b>  <b>SOFTWARE QUALITY</b>  Introduction, the place of software quality in project planning, the importance of software quality, defining software quality, ISO 9126, Practical software quality measures, product versus process quality management, external standards, techniques to help enhance software quality.	L2,L3 and L6	5

*\*Bloom's Level:*

Pre-requisites/Exposure	Software Engineering Concepts				
Co-requisites	NIL				

### **Catalog Description**

Study practical approaches for managing, planning, organizing and implementing Information Systems projects using modern management techniques. Complete hands-on projects requiring management of project resources, scope, time-line, cost, scheduling, human and other resources. Use Microsoft Project and other project monitoring tools. In this Lab course MS Project tool is used

### **Course Objectives**

The objective of this course is to

- Demonstrate students to Manage the phases and infrastructure of IT projects
- Use project management software to control the design, implementation, closure, and evaluation of IT projects
- Estimate, plan, calculate, and adjust project variables

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: Create plans at the level of detail that is appropriate for software project

CO2: Create and manage tasks, costs, work, and resources in a software project

CO3: Track and monitor project performance throughout its life-cycle

CO4: Explain quality management and process improvement in the context of software development projects.

<b>Modules/Topics Covered**</b>	<b>Blooms level*</b>	<b>Number of hours</b>
1. Introduction of tool including creating project (a) Set file properties and calendar settings (b) Create Gantt Chart for SDLC process. (c) Create Pert chart for SDLC process .	L3, L4	8
2. Key activities of software Project Management (a) Create a Gantt chart of wedding planning event management which includes minimum of 12 activities.. (b) In the same Gantt chart split the tasks,copy ,move and paste tasks.	L3, L4	4
3. Checkpoints , milestones and Critical path concepts (a) Create Gantt Chart of all testing activities which includes checkpoints and milestones (b) In the same project review critical path.	L3, L4,L5	4
4. Work Breakdown Structure (a) Create Gantt chart of Agile approaches, also create work breakdown structure of same (b) Add different type of resources in same project (c) Perform the time estimations of tasks and set task dependencies.	L3, L5,L6	8

Version: 2020.1	Date of Approval: 19, July 2020	3	0	0	3
Pre-requisites/Exposure	Basic Knowledge of Searching Techniques				
Co-requisites	Nil				

### **Catalog Description**

In this course the concepts of basic principles, techniques, and applications of Artificial Intelligence are discussed in detail. As a precursor to the study of the course it provide an in depth understanding of basic areas of artificial intelligence, search techniques, knowledge representation, learning and their applications in design and implementation of intelligent agents for a variety of task. The concepts further enhances the understanding of key components of intelligent agents of moderate complexity in Prolog and evaluate their performance.

### **Course Objectives**

The objective of this course is to

1. Equip the students with concepts of Artificial Intelligence, its application, importance and characteristics.
2. It Provide an overview of different concepts such as searching, knowledge, Learning, Robotics, Expert System and Prolog

### **1. Course Outcomes**

On completion of this course, the students will be able to

CO1: Explain the concept of Artificial Intelligence, its application, importance of Artificial Intelligence.

CO2: Analyze the different searching technique and understanding their applications.

CO 3: Explain the concept of knowledge representation, the different techniques, handling uncertainty in knowledge and making different types of decisions.

CO4: Explain the concept of Expert System and its application areas.

CO5: Explain the concept of NLP and the functionality of Robots

Modules	Blooms level*	Number of hours
<b>MODULE 1:</b>  <b>Problem solving and Scope of AI:</b> Introduction to Artificial Intelligence. AI-Applications- Games, theorem proving, natural language processing (NLP), vision and speech processing, robotics, expert systems. Solving Problems by Searching, beyond classical search, adversarial Search, constraint satisfaction problems	L1 and L2	8
<b>MODULE 2:</b>  <b>Knowledge and Representation:</b> Logical Agents, First-Order Logic, Inference in First-Order Logic, Classical Planning, Planning and Acting in the Real World, Knowledge Representation. <b>Uncertain Knowledge and Reasoning-</b> Quantifying Uncertainty, Probabilistic Reasoning , Probabilistic Reasoning over Time , Making Simple Decisions, Making Complex Decisions.	L2, L3 and L4	14
<b>MODULE 3:</b>  <b>Expert System:</b> Need and justification for expert systems, knowledge acquisition, Case studies: MYCIN, RI. <b>Learning:-</b> Learning from Examples, Knowledge in Learning, Learning Probabilistic Models, Reinforcement Learning.	L2, L3 and L4	10
<b>MODULE 4:</b>  <b>Module IV: Communicating, Perceiving, and Acting</b>  NLP-Natural Language Processing, Natural Language for Communication, Perception. <b>Robotics:-</b> Fundamentals of Robotics, Sensors and vision system, Robot Programming languages & systems	L3,L4 and L5	10

Co-requisites	NIL				

### **Catalog Description**

In this Lab course Prolog programs are implemented and demonstrated. The Concepts that are covered would enable them to achieve the desired goal by creating facts and rules. Programs will be related to concepts of creating facts, facts with argument, backtracking, arithmetic operations in prolog, nesting condition, looping condition and List handling.

### **Course Objectives**

The objective of this course is to

1. Make the students apply knowledge of Prolog to attain goal by creating and matching rules and facts developed in the knowledge base.
2. Provide a demonstration of Prolog programming concepts like facts with arguments, Backtracking

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: Apply the knowledge of Prolog programming to provide solution to the given AI problem.

CO2: Demonstrate the use of List handling in Prolog by performing various functions which are based on finding the element, replacing an element and appending the two lists.

CO3: Apply the knowledge of Facts and Rules in Prolog to reach a particular goal by implementing different concepts such as facts with arguments, backtracking, and looping conditions.

<b>Modules/Topics Covered**</b>	<b>Blooms level*</b>	<b>Number of hours</b>
5. Sample Programs using Basic of Prolog Programming  (d) Write a program to understand the basic structure of Prolog programming. (e) Write a program to create simple facts using prolog. (f) Demonstrate an application of facts with arguments by showcasing the use of facts to reach a particular goal.	L1,L3, L5	4
6. Sample Programs using Rules based Programming in Prolog  (c) Create an rule based programs in Prolog  (d) Write a program to implement the concept of backtracking which matches each rules with a query	L3, L5	4
7. Sample Programs to implement the concept of input/output operation in Prolog  (c) Create a Prolog program which accept a user input and display back the result.  (d) Design an application to fetch data in the form of numeric data and display the given result  (e) Demonstrate the process of arithmetic operations in Prolog Programming.  (f) Demonstrate the working of menu driven calculator to perform different arithmetic operations.	L3, L5	6
8. Sample Programs to implement the concept of nesting and looping condition in Prolog  (d) Write a prolog program to demonstrate the looping condition by implementing the concept of finding out the factorial of a given number.  (e) Write a prolog program to demonstrate the conditional statement in Prolog by implementing the concept of finding out the maximum of three numbers, to calculate the area of a cube.	L3, L5	6
9. Sample Programs using List Handling in Prolog	L3, L5	4

(a) Demonstrate the use of List handling in Prolog which include finding an element, replacing an element		
(b) Write a program to append two givsen list created in Prolog Programming.		

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

**\*\* Sample Programs provided are not limited to these only, can include others as desired.**

### Catalog Description

The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal classroom situations. These attributes are intellectual ability, professional judgment and decision-making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility etc. In this course the concepts of different new ideas will be explored by the seminar presentation.

### Course Objectives

The objective of this course is to

1. Equip the students with concepts of new technologies.
2. Equip students with Report writing and Presentation skills.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Make a report on relevant topic by the study of literatures.

CO2: Demonstrate the topic of seminar by use of power presentation.

CO3: Demonstrate the challenges and applications of the topic of the seminar.

### **Text Books**

As per topic of seminar.

### **Reference Books**

As per topic of seminar.

Modes of Evaluation: Quiz/Assignment/ Seminar/Written Examination

### **Examination Scheme:**

<b>Components</b>	<b>V</b>	<b>PPT</b>	<b>R</b>	<b>IM</b>

	<b>Data Warehousing and Data Mining</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version: 2020.1	Date of Approval: 19, July 2020	3	0	0	3
Pre-requisites/Exposure	Basic Knowledge on Database				
Co-requisites	Nil				

### **Catalog Description**

In this course the concepts of Data warehouse and Data Mining are discussed in detail. The different data mining techniques such as clustering, classification, association are introduced. As a precursor to the study of data warehouse its architecture, types of OLAP Servers, and usage of OLAP are studied in detail. The concepts further enhances the concept of different attributes supported by data mining process, application of data mining in marketing, banking, retail sector and other areas are analyzed. .

### **Course Objectives**

The objective of this course is to

- Equip the students with concepts of data mining techniques namely classification, clustering and association.
- Provide an overview of data warehouse which include the usage of OLAP, its characteristics, OLAP architecture.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: Explain the concept of Datawarehouse, its characteristics, Metadata concepts and its importance, The schemas of Data warehouse with their application areas.

CO2: Explain the architectural components of data warehouse and the challenges the data warehousing is facing.

CO3: Explain the indexing of OLAP, the different OLAP operations performed on the data cube.

CO4: Explain the concept of different data mining techniques like association, clustering and classification and analyze these techniques on the different data sets.

CO5: Explain the concept of Web Mining and understanding the features of different types of database.

Modules	Blooms level*	Number of hours
<b>MODULE 1:</b>  <b>Data Warehousing:</b> Data Warehouse definition & Characteristics, The need for data ware housing, Operational and Informational Data Stores, Difference between Data warehouse and DBMS, Benefits of Data warehousing, Data mart, Meta Data, Conceptual Modeling of Data Warehouses: star schemas, Snowflake, Fact Constellations with example each.	L1, L2 and L3	8
<b>MODULE 2:</b>  <b>On Line Analytical Processing (OLAP)</b> Definition: OLAP, Difference between OLTP and OLAP, OLAP Server Architecture, OLAP Operations, Multi Relational & Multi Dimensional: MOLAP, ROLAP, OLAP Tools, Metadata Repository, Data Warehouse Back-End Tools and Utilities.	L2, L3 and L4	10
<b>MODULE 3:</b>  <b>Data Mining</b>  Introduction to Data Mining, Applications, Limitations, Techniques, Association Rules: Priori Algorithm, Direct Hashing and Pruning (DHP), Classification: Decision Tree, Split Algorithm based on Information Theory, Bayes Method.	L2, L3 and L4	10
<b>Module 4:</b> <b>Cluster Analysis: Concepts and Methods</b> Cluster Analysis: Features, Types of Cluster Analysis Methods: Partitional, Hierarchical, Density Based, Grid based Methods, , Web Data Mining, Search Engine, Case Study, Limitations.		8
<b>Module 5:</b>  <b>Web Mining</b> Introduction, Classifying Web pages, extracting knowledge from the web.		6

CO1	1	2	--	--	--	--	--	--	--	--	--	--	1	--	--	--

### Catalog Description

In this Lab course Data Mining programs are implemented and demonstrated using a Weka Tool. The Concepts that are covered would enable them to analyze the working of different data mining techniques namely clustering, association, regression. Programs will be related to concepts of understanding the architecture of data warehouse ,creating a knowledge base in Weka and apply preprocessing on the dataset, developing programs to specify the different types of attributes supported by Weka tool, Performing the implementation of clustering, association techniques.

### Course Objectives

The objective of this course is to

- Make the students apply knowledge of Data Mining by analyzing the different data mining techniques.
- Provide a demonstration of Preprocessing technique on the data set by removing noisy data

### Course Outcomes

On completion of this course, the students will be able to

CO1: Apply the knowledge of Data Mining to gain analysis on different data sets and their related attributes.

CO2: Demonstrate the use of Data preprocessing technique by handling the data efficiently by removing noise and outliers from the given data sets.

CO3: To implement the different data mining concepts namely binning, histogram analysis, numeric transform and discretization.

CO4: Demonstrate the working of different data mining techniques namely clustering, association analysis, regression, classification techniques.

<b>Modules/Topics Covered**</b>	<b>Blooms level*</b>	<b>Number of hours</b>
1. To understand the basic feature of Data warehouse and Introduction to Weka Tool  a) Understanding the concept of importance of data warehouse and its characteristics b) Applications of Data warehouse and 3-tier Architecture of Data warehouse c) Weka tool installation and basic introduction	L1,L2	4
2.Sample Programs to apply Pre-Processing technique on the data set  a) Apply a pre-processing technique on the weather.arff dataset b) Create a student data set into arff format and then apply pre-processing on the data set.	L3, L4,L5	4
3. Sample Programs to implement the concept of Numeric transform and Discretization  (a) Create a Weka program to apply a numeric transform on Iris dataset. (b) Design an application program to apply a feature selection method for game playing. arff dataset. (c) Write a program to implement the concept of Equal frequency and Equal width binning for the given dataset.	L3, L4,L5	6
4. Sample Programs to implement the concept of Training and Validating the dataset  (a) Write a prolog program to demonstrate the concept of validation in Weka dataset.	L3,L4, L5	6

(b) Design an CSV dataset using Weka.		
5. Sample Programs to analyze the different data mining techniques a) Write a program to implement the concept of clustering in Weka. b) Write a program to apply Apriori technique on the dataset and to generate association rules. c) Write a program to apply classification technique on the given dataset.	L3, L4,L5	4

*\*Bloom's Level:*

### Catalog Description

.NET framework is most commonly used framework for developing various applications and it supports many languages. C#.NET is one of the most commonly used languages in the software industries. Students in this course will study to develop; Console and GUI based applications using C#.NET. The course also provides knowledge regarding Creating Dynamic Web Pages with the help of ASP.NET framework. Various topics included in this course impart the knowledge of ASP.NET framework concepts at implementation level. The major topic covered includes theme, state management, web controls, AJAX, database connectivity using ADO.NET, web services and deploying web applications.

### Course Objectives

The objective of this course is to

### Course Objectives

The objective of this course is to

- Equip the students with .NET framework and its programming constructs.
- Provide knowledge to develop console based and GUI based applications using C#.NET language.
- Equip the students with concepts of ASP.NET web applications including State management, Web Controls and ADO.NET.
- Provide knowledge to develop, configure and deploy secure ASP.NET web applications using C#.NET programming language.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Understand the components of .NET framework.

CO2: Use object-oriented concepts to write programs using C#.NET programming language.

CO3: Develop GUI based applications.

CO4: Use various standard and advance web controls for developing ASP.NET dynamic web pages and also create custom controls.

CO5: Establish database connectivity and perform various operations on database through ASP.NET web pages.

Modules	Blooms level*	Number of hours
<b>MODULE I:</b>  <b>NET FRAMEWORK:</b> Overview of .NET and .NET Framework, .NET Compliant Languages, Common Language Specification (CLS), Common Type System (CTS), Framework Class Library (FCL), Base Class Library (BCL), Common Language Runtime (CLR) Visual Studio IDE, Microsoft Intermediate Language (MSIL), Understanding CLR and Execution of .NET Application, Components of CLR. <b>C#.NET BASICS</b>	L1, L2	4

C# Programming Language Features, Hello World Program, General Structure of a C# Program, Conceptual Overview of C#.Net, Data Types, Modifiers (Access Modifiers), Casting and Type Conversion, Boxing and Unboxing Modifiers, Selection Statements, Looping Statement, Array-Single Dimensional and Multi-Dimensional, Declaring Arrays, Initializing Arrays, Accessing Array Members, Arrays are Objects, Using for each with Arrays, Jagged Arrays		
<b>MODULE II:</b>  <b>OOP:</b> Class, Interfaces: Defining and Implementing Single & Multiple Interfaces, Abstract Class, Delegates, Exception Handling, Reflection, Assembly, Types of Assemblies, Components of Assemblies.  <b>COLLECTIONS:</b> Non-Generic Collection: Array List, Stack, Queue, Hash Table. Generic Collection: List, Dictionary, Queue, Stack.	L2 and L3	14
<b>Module III:</b>  <b>WINDOWS FORMS</b> Create and populate Windows Forms, controls in a Windows Forms application, Menus in a Windows Forms application, Multiple Document Interface (MDI) applications, User input validation in a Windows Forms application <b>ASP.NET FRAMEWORK &amp; WEB FORMS</b> Introduction to Microsoft ASP.NET, ASP.NET execution model, Themes, Creating an ASP.NET Web application user interface, Implementing event handlers by using code-behind files, Client-side and Server-side controls, events, Using Controls, Validating Data, Navigating Between Forms, Custom and User Controls, Implementing Master Pages	L2 and L3	7
<b>MODULE IV:</b>  <b>AJAX:</b> Introduction to AJAX, AJAX Toolkit, Partial page update using AJAX, Extending an ASP.NET Web Forms Application by Using the Ajax Control Toolkit. <b>STATE MANAGEMENT:</b> The Various Means to Manage State, Request object, Application object, Cache object, Session object, Server-side state management, using session for server-side and client-side state management. <b>XML WEB SERVICES:</b> Need of XML Web services, Understanding the Web Service Model, Creating an ASP.NET Web Service, Creating & Consuming Web Services with Visual Studio .NET.	L2 and L3	2

<b>MODULE V:</b>  <b>ADO.NET</b> Architecture of ADO.NET: Connected, Disconnected, Sql Connection class, SqlCommand class, Data Reader class, Sql Data Adapter class, Data Set class, Data grid view with DML Operations like sorting, paging etc.	L2, L3 and L4	5
---	---------------	---

Modules/Topics Covered**	Blooms level*	Number of hours
<b>Module-I:</b> I/O, Selection and Looping Statements Sample Programs a) Program to get a number and display the number with its reverse b) Program to check inputted no. is prime or composite. 1. Array, Jagged Array, String & Command Line Arguments Sample Programs	L2, L3 and L4	4

<ul style="list-style-type: none"> <li>a) Write a program to sort an array of n strings in ascending order.</li> <li>b) Program to find out sum of numbers passed through command line arguments.</li> <li>c) Program to Demonstrate Jagged Arrays</li> <li>d) Program to Search an element from an Array.</li> <li>e) Program to find the frequency of alphabet in a string.</li> </ul>		
<p><b>Module-II:</b></p> <p>Class &amp; Properties, Overloading Sample Programs</p> <ul style="list-style-type: none"> <li>a) Define a class student with MarksofCS, MarksofJava, MarksofDBMS, name as its data member. Enter the marks, find average and percentage for that. Use appropriate properties.</li> <li>b) Define a class 'Number' and define overloaded method add () with one, two and three arguments to implement method overloading.</li> <li>c) Define a class with two datamembers: num1 as constant and num2 as readonly. Display the values of both on the console and state the difference between them.</li> </ul> <p>Constructor, Garbage Collector, Static Members Sample Programs</p> <ul style="list-style-type: none"> <li>a) Create a class distance have km and m as its data members and create various constructors to initialize the data members.</li> <li>b) Program to demonstrate static data members.</li> </ul> <p>Operator Overloading , Delegates Sample Programs</p> <ul style="list-style-type: none"> <li>a) Create a class ComplexNumber with two data members real and imaginary. Overload +,-,&gt;,&lt;, &gt;=,&lt;= and == operators for it.</li> <li>b) Program to implement delegate.</li> </ul> <p>Inheritance, Interface, Abstract class Dynamic Polymorphism Sample Programs</p> <ul style="list-style-type: none"> <li>a) Create a class Student and inherit two classes UgStudent and Pgstudent from it to illustrate the concept of inheritance. Use appropriate data members, constructors, methods and properties.</li> <li>b) Write a program to implement the concept of dynamic binding using appropriate classes.</li> </ul> <p>Exception Handling, Custom Exceptions Sample Programs</p> <ul style="list-style-type: none"> <li>a) Write a program to find out square root of number. Handel all exceptions that may occur in this program.</li> <li>b) Create a 'NegativeValueException' that should be raised when a function received negative value in parameter.</li> </ul> <p>Generic Class, Collections (Non Generic &amp; Generic) Sample Programs</p> <ul style="list-style-type: none"> <li>a) Create a generic class with an array of n elements. Write the method to find out greatest and average of elements of array.</li> <li>b) Write a program to store the City name and its temperature. Access the temperature using city name. Use appropriate collection.</li> </ul> <p>Assembly, Reflection Sample Programs</p>	L2, L3 and L4	6

a) Program to create and use private and shared assembly. b) Program to display methods of a class at runtime.		
<b>Module-III:</b> Developing GUI Applications & Controls Sample Programs a) Design a calculator and implement its operations. b) Program to move the contents of a list box to another list box. Also write code to add and delete elements from any list box. c) To display message box for confirmation while closing a form. ASP.NET Forms Sample Programs a) Design a Login Page, which displays a Welcome Page on successful Login and an error message in case of invalid Id/Password. b) Design a form and apply themes (design time and dynamically). c) Design any web form and apply various validation controls. d) Create a web form which can work in Hindi and English language both. e) Design a web form to upload an image to server. f) Design a custom control, Numeric Textbox, which should accept only integer value for a particular range. The range should be customizable.	L2, L3 and L4	6
<b>Module-IV:</b> a) Implement state management for Login page which move to welcome page when credentials are correct. The welcome page displays a welcome message along with the user Id. b) Implement various state management methods using a suitable web form. c) Create a web service and demonstrate its use in any web application. d) Design a Web form and implement partial refreshing using AJAX.	L2, L3 and L4	4
<b>Module-V:</b> a) Create a database table and design appropriate form for it. Implement basic operations like insert, delete and update using ADO.NET. b) Implement various methods of execution of SQL command. c) Display data in a Grid and perform basic database operations. d) Develop any web application to illustrate SQL Injection attack and redesign it to prevent the attack. e) Develop a web application to illustrate XSS attack and redesign it to prevent the attack	L2, L3 and L4	4

### **Catalog Description**

In this course the concepts of cryptography and network security are discussed in detail. Substitution and transposition techniques, symmetric and asymmetric cryptographic algorithms, their applications, differences will be introduced. As a precursor to the study of cryptography studies will be made on impact of various network and web security protocols. The concepts learnt in the studies of cryptography & network security will be applied in the studies and analysis of authentication, integrity and security related protocols.

### **Course Objectives**

The objective of this course is to

- Equip the students with concepts of cryptography & network security through problem solving and analytical approach.
- Provide an overview of various network attacks and related security mechanism , various algorithms for modular arithmetic, symmetric and asymmetric cryptography and web and network security

### Course Outcomes

On completion of this course, the students will be able to

CO1: Explain, describe and distinguish various security attacks; Describe and solve block and stream ciphers and its applications in cryptography; Solve problems based on substitution and transposition ciphers.

.

CO2: Explain the basic mathematics of cryptography; Solve problems of groups, modular arithmetic ,gcd and inverse algorithm, chinese remainder theorem and its application in cryptography; Applying algorithms for solving problems in cryptography

CO3: Describing the concept of public key cryptosystems and its related algorithm; Explain and solve problems related to hash functions, digital signature and its applications in cryptography; Compare symmetric and asymmetric key cryptography.

CO4: Explain management, distribution ,secure exchange of keys and authentication certificate and its applications in real life. Explain , compare various authentication protocols used in cryptography and network security, also solve problems based on these protocols.

CO5: Explain various security protocols : IPSec, SSL,TLS,SET; Describing malicious softwares and illustrating various design approaches to Firewall

Modules	Blooms level*	Number of hours
<p>MODULE 1:</p> <p>Introduction to security attacks, services and mechanism, Classical encryption techniques: substitution ciphers and transposition ciphers, cryptanalysis, steganography, Stream and block ciphers. Modern Block Ciphers: Block ciphers principles, Shannon's theory of confusion and diffusion, fiestal structure, Data encryption standard (DES), Strength of DES, Idea of differential cryptanalysis, block cipher modes of operations,</p>	L1, L2 and L3	9

Triple DES		
<p>MODULE 2:</p> <p>Introduction to group, field, finite field of the form <math>GF(p)</math>, modular arithmetic, prime and relativeprime numbers, Extended Euclidean Algorithm,Advanced Encryption Standard (AES) encryption and decryption, Fermat's and Euler's theorem, Primality testing, Chinese Remainder theorem, DiscreteLogarithmicProblem,Principals of public key crypto systems, RSA algorithm, security of RSA,ECC</p>	L1,L2, L3	9
<p>MODULE 3:</p> <p>Message Authentication Codes: Authentication requirements, authentication functions, messageauthentication code, hash functions, birthday attacks, security of hash functions, Secure hashalgorithm (SHA)Digital Signatures: Digital Signatures, Elgamal Digital Signature Techniques, Digital signaturestandards (DSS).</p>	L1,L2, L3 and L5	9
<p>MODULE 4:</p> <p>Key Management and distribution: Symmetric key distribution, Diffie-Hellman Key Exchange, Public key distribution, X.509 Certificates, Public key Infrastructure. Authentication Applications: Kerberos,Needham Schroeder protocol</p>	L1, L2 and L3	9
<p>MODULE 5:</p> <p>IP Security: Architecture, Authentication header, Encapsulating security payloads, SSL, HTTPS,SET,3-D Secure , Viruses, Worms, Malware, Botnets, Firewall and its types.</p>	L1, L2	12

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

### Catalog Description

To develop semantic-based and context-aware systems to acquire, organize process, share and use the knowledge embedded in multimedia content. Research will aim to maximize automation of the complete knowledge lifecycle and achieve semantic interoperability between Web resources and services. The field of Robotics is a multi disciplinary as robots are amazingly complex system comprising mechanical, electrical, electronic H/W and S/W and issues germane to all these

### Course Objectives

The objective of this course is to

1. To provide an overview of problem solving skills methods using Soft Computing.
2. To serve as a foundation for the study of programming languages that is used to develop an Intelligence System

### Course Outcomes

On completion of this course, the students will be able to

CO1. Understand the concept of artificial intelligence.

CO2. Differentiate between linear and non-linear problems and Learn various problem solving techniques using neural networks

CO3. Understand the concept of fuzzy logic and apply to various problems

CO4. Illustrate concepts of genetic algorithm

Modules	Blooms level*	Number of hours
<b>Module I: Soft Computing</b> Introduction of soft computing, soft computing vs. hard computing, various types of soft computing techniques, applications of soft computing. Artificial Intelligence : Introduction, Various types of production systems, characteristics of production systems, breadth first search, depth first search techniques, other Search Techniques like hill Climbing, Best first Search, A* algorithm, AO* Algorithms and various types of control strategies. Knowledge representation issues, Propositional and predicate logic, monotonic and non monotonic reasoning, forward Reasoning, backward reasoning, Weak & Strong Slot & filler structures,	L1, L2	12

NLP.		
<b>Module II: Neural Network</b> Structure and Function of a single neuron: Biological neuron, artificial neuron, definition of ANN, Taxonomy of neural net, Difference between ANN and human brain, characteristics and applications of ANN, single layer network, Perceptron training algorithm, Linear separability, Widrow & Hebb's learning rule/Delta rule, ADALINE, MADALINE, AI v/s ANN. Introduction of MLP, different activation functions, Error back propagation algorithm, derivation of BBPA, momentum, limitation, characteristics and application of EBPA	L2, L3 and L4	10
<b>Module III</b> Counter propagation network, architecture, functioning & characteristics of counter Propagation network, Hopfield/ Recurrent network, configuration, stability constraints, associative memory, and characteristics, limitations and applications. Hopfield v/s Boltzman machine. Adaptive Resonance Theory: Architecture, classifications, Implementation and training. Associative Memory.	L2, L3 and L4	8
<b>Module IV: Fuzzy Logic</b> Fuzzy set theory, Fuzzy set versus crisp set, Crisp relation & fuzzy relations, Fuzzy systems: crisp logic, fuzzy logic, introduction & features of membership functions, Fuzzy rule base system : fuzzy propositions, formation, decomposition & aggregation of fuzzy rules, fuzzy reasoning, fuzzy inference systems, fuzzy decision making & Applications of fuzzy logic.	L2, L3 and L4	7
<b>Module V: Genetic algorithm</b> Fundamentals, basic concepts, working principle, encoding, fitness function, reproduction, Genetic modeling: Inheritance operator, cross over, inversion & deletion, mutation operator, Bitwise operator, Generational Cycle, Convergence of GA, Applications & advances in GA, Differences & similarities between GA & other traditional methods.	L2, L4	3

Co-requisites	Nil				

**Catalog Description**

This lab course covers development and designing of implementing basic neural networks, fuzzy systems, and optimization algorithms concepts and their relations. It aims to develop the

concepts and techniques and foster the students' abilities in designing and implementing soft computing based solutions for real-world and engineering problems.

### Course Objectives

The objective of this course is to

- Equip the students with concepts of Soft Computing which includes Neural networks, Fuzzy logic and genetic algorithms.
- Provide knowledge to develop Soft computing programs in Matlab.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Explain and apply concepts of MATLAB.

CO2: Implement various neural networks using MATLAB.

CO3: Illustrate use of fuzzy in real applications.

CO4: Apply genetic algorithm to basic problems.

Modules	Blooms level*	Number of hours
<b>Fuzzy Logic</b> a) Write a program in MATLAB to perform Union, Intersection and Complement operations. b) Write a program in MATLAB to implement De-Morgan's Law. c) Write a program in MATLAB to plot various membership functions. d) Generate XOR function using McCulloch-Pitts neural net by MATLAB program.	L1, L2, L3	4
<b>Neural Network</b> a) Write a MATLAB program for Hebb Net to classify two dimensional input patterns in bipolar with targets. b) Generate ANDNOT function using McCulloch-Pitts neural net by MATLAB program. c) Write a MATLAB program for Perceptron net for an AND function with bipolar inputs and targets. d) Write a M-file to calculate the weights for the following patterns using hetero-associative neural net for mapping e) Write an M-file to store the vector, find the weight matrix with no self-connection. Test this using a discrete Hopfield net.	L2, L3 and L4	2

<b>Genetic Algorithm</b> a) Solve travelling salesman problem using Genetic algorithm. b) Solve clustering problem using GA. c) Solve classification using GA.	L2, L3 and L4	6

Co-requisites	Nil				

### **Catalog Description**

There are certain phases of every Intern's professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship program can best be described as an attempt to institutionalize efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal classroom situations. These attributes are intellectual ability, professional judgment and decision-making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility etc. In order to achieve these objectives, each student will maintain a file (**Internship File**). The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development. The report will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

### **Course Objectives**

The objective of this course is to

1. Equip the students with concepts of new technologies.
2. Provide project management and presentation skills.

## Course Outcomes

On completion of this course, the students will be able to

CO1: Make a report on relevant topic by the study of literatures.

CO2: Demonstrate the topic of summer project topic by use of power presentation.

CO3: Demonstrate the aim, challenges, applications, literatures, result and analysis of the topic of project report

CO4: Explain the meaning of references/Bibliography.

## Text Books

As per topic of summer internship project.

## Reference Books

As per topic of summer internship project.

	Android Programming	L	T	P	C
Version: 2020.1	Date of Approval: 19, July 2020	3	0	0	3
Pre-requisites/Exposure	Java Programming				
Co-requisites	Database concepts				

## Catalog Description

This course introduces mobile application development for the Android platform. Android is a software stack for mobile devices that includes an operating system, middleware and key applications. The Android SDK provides the tools and APIs necessary to begin developing applications on the Android platform using the Java programming language. Students will learn skills for creating and deploying Android applications.

## Course Objectives

The objective of this course is to

1. To introduce Android platform and its architecture.
2. Provide the knowledge of mobile apps development.

## Course Outcomes

On completion of this course, the students will be able to

CO1: Describe Android platform, Architecture and features.

CO2: Design User Interface and develop activity for Android App.

CO3: Design and implement Database Application and Content providers.

CO4: Use Intent, Broadcast receivers and Internet services in Android App.

CO5: Use Internet, multimedia, camera and Location based, SMS services etc, in Android App.

CO6: Manage, Develop and Implement Mobile app project.

Modules	Blooms Level	Number of hours
<p><b><u>MODULE 1: Introduction to Android</u></b></p> <p>Introduction to Android Platform, Android Stack Android Versions and Installing Android SDK and updating SDK components, Eclipse, IDEs and ADT plug-in Using the Emulator, Android vs. Other mobile platforms <b>Your First Android Application:</b> Application Life Cycle, Application Components, Activity life cycle, Manifest File, Layout XML Code Strings, The R File, Java Source Code, Java based layout vs. xml based layout Eclipse Visual Layout Editor, Logging.</p>	L1 and L2	4
<p><b><u>MODULE 2: UI Design for Android</u></b></p> <p>Using different layouts – LinearLayout, TableLayout and others, Drawable Resources</p> <p>Resolution and density independence, Working with common widgets, Working with ListView and Adapters, Creating and using option menu, Working with preferences</p> <p>Working with Dialogs and Toasts, Working with Graphics and Animation, Intents ,Intent filters, Invoking activities by class name and URI, Sharing data using Extras Bundle and URI parameters,Working with Tabs and Fragments,</p>	L1,L2and L3	8
<p><b><u>MODULE 3: Files, Database &amp; Working in Background</u></b></p> <p>Using File System, Introducing SQLite on Android, Database Connectivity, Cursors and content values, Using ContentProvider to share data,Understanding Security model, Introducing Service and its life cycle,Creating and starting a service, Types of services, Working with multi-threading and AsyncTask,Broadcast receivers,Triggering receivers with intents,Responding to system events using Broadcast receivers,Using Alarm.</p>	L1, L2 and L3	8
<p><b><u>MODULE 4: Using System Services and Web Services</u></b></p> <p>Using Location based Services,Telephony and SMS services,Bluetooth, Network and WiFi,</p> <p>Multimedia and Camera,Accessing Internet and Web Services from Android Applications.</p>	L1, L2 and L3	6

<b>MODULE 5: Project</b>		
Understanding the requirement, Designing the interface and architecture, Best practices regarding application design and development, Writing code and testing it, Preparing application for Publishing, Publishing to Play Store and Physical device.	L3, L4 and L5	6

*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

### **Catalog Description**

This course gives students an insight into the basics of Image Processing along with visualization of real concept of Image processing. Concepts covered would enable students to define and differentiate among various types of image refinement. Further they would be able to gain insights about various Image restoration and modification technique.

### **Course Objectives**

The objective of this course is to

Give provide knowledge of powerful collection of fundamental and advanced image processing tools on the desktop by taking advantage of the computational technology of Mathematics.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: Define and explain Digital Image Processing.

CO2: Apply Image Enhancement techniques in the Spatial Domain.

CO3: Use the concepts of Image Enhancement in the Frequency Domain.

CO4: Understand the architecture Image Compression.

CO5: Apply algorithms of Image Representation and Description and Object Recognition.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>MODULE 1:</b>  <b>Introduction and Digital Image Fundamentals</b>  The origins of Digital Image Processing, Examples of Fields that Use Digital Image Processing, Fundamentals Steps in Image Processing, Elements of Digital Image Processing Systems, Image Sampling and Quantization, Some basic relationships like Neighbors, Connectivity, Distance Measures between pixels, Linear and Non Linear Operations.	L1 and L2	4
<b>MODULE 2:</b>  <b>Image Enhancement in the Spatial Domain</b>  Some basic Gray Level Transformations, Histogram Processing, Enhancement Using Arithmetic and Logic operations, Basics of Spatial Filters, Smoothing and Sharpening Spatial Filters, Combining Spatial Enhancement Methods.	L2 and L3	6
<b>MODULE 3:</b>  <b>Image Enhancement in the Frequency Domain</b>  Introduction to Fourier Transform and the frequency Domain, Smoothing and Sharpening Frequency Domain Filters, Homomorphism Filtering.	L1 and L2	8
<b>MODULE 4:</b>  <b>Image Compression</b> Coding, Interpixel and Psychovisual Redundancy, Image Compression models, Elements of Information Theory, Error free comparison, Lossy compression, Image compression standards. <b>Image Segmentation</b> Detection of Discontinuities, Edge linking and boundary detection, Threshold, Region Oriented Segmentation, Motion based segmentation.	L2 and L3	10
<b>MODULE 5:</b>  <b>Representation and Description</b>  Representation, Boundary Descriptors, Regional Descriptors, Use of Principal Components for Description, Introduction to Morphology, Some	L2 and L3	8

basic Morphological Algorithms. <b>Object Recognition</b> Patterns and Pattern Classes, Decision-Theoretic Methods, Structural Methods.

Pre-requisites/Exposure	Basics of DBMS				
Co-requisites	SQL				

### **Catalog Description**

This course brings together several key big data technologies used for storage, analysis and manipulation of data. It also introduces the students the key concepts of Hadoop framework, MapReduce, Pig, Hive, and No-SQL. Students will learn to work on Hadoop platform. The concepts learnt will make students capable of working on big data projects easier.

### **Course Objectives**

The objective of this course is

- To make students familiar with big data technologies.
- Provide an overview of Hadoop architecture and its working with other open source technologies.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1. Explain importance, applications and challenges of Big Data Analytics.

CO2. Differentiate among various analytics technologies.

CO3. Demonstrate architecture of Hadoop and Mapreduce framework.

CO4. Illustrate Hadoop commands.

CO5. Introduce concepts of Hive, HBase and Pig.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Introduction to Big Data</b> Big Data : Definition, Sources, Importance & Applications, 5 V's of Big Data, Complexity of Big Data, Big data processing architecture, Big Data Analytics, Big data problems & challenges.	L1 and L2	5
<b>Module II: Working with Hadoop</b> Hadoop concepts : History, comparison with other systems : RDBMS, Grid computing, Cluster Computing, Cloud Computing, Hadoop Architecture, Hadoop Distributed file system : Data node, Name node, job tracker, task tracker, Moving data in and out of Hadoop, Common Hadoop shell commands.	L2and L5	4
<b>Module III: Working with Map Reduce</b> Map Reduce framework, Working of MapReduce: Job Scheduling, Shuffle and Sort, Task Execution, MapReduce Types, Formats and Features.	L1 and L3	8
<b>Module IV: Working with Hive, HBase, PIG</b> Working with Pig: Pig Latin, User Defined Functions and Operators Hive: Architecture, Comparison with traditional database, Hive QL- querying data, sorting & aggregation, joins & subqueries HBase : Fundamentals of HBase, HBase Versus RDBMS, Schema design	L2and L3	9

Pre-requisites/Exposure	Basic Concepts of DBMS				
Co-requisites	Relational Algebra and Relational Calculus				

### **Catalog Description**

This course brings together several key big data technologies used for storage, analysis and manipulation of data. It also introduces the students the key concepts of Hadoop framework, MapReduce, Pig, Hive, and No-SQL. Students will learn to work on Hadoop platform. The concepts learnt will make students capable of working on big data projects easier.

### **Course Objectives**

The objective of this course is

- To make students familiar with big data technologies.
- Provide an overview of Hadoop architecture and its working with other open source technologies.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1. Install and configure Hadoop and various tools like Pig, Hive etc.

CO2.Explain concepts of files and directories in HDFS and apply them in real database applications.

CO3. Design and implement mapreduce programs for a given problem.

CO4. Solve queries using concepts of Hive and Pig.

CO5. Perform operations using HBase.

Modules	Blooms level*	Number of hours
<b>Lab Session 1</b> 1. Installation & Configuration steps of Hadoop	L1 and L2	2
<b>Lab Session 2-3</b> 1. Working with HDFS commands :mkdir, rmdir, rm, mv, ls, du, put, rm-r, cat, tail etc 2. Working with vi editor	L1and L3	4
<b>Lab Session 4-5</b> 1. Working with Java Map Reduce : Map Class, Reduce Class, Drier Class, map side joins, reduce side joins	L1 and L3	4
<b>Lab Session 6-8</b> Working with Hive : Queries for Hive : Create table, describe database, describe table, describe extended table, describe formatted table, drop table, drop database, display table, where clause 1. Commands : Load Files on table : Load from HDFS, load from local 2. Command :CTAS Create table as select 3. Queries to create external tables 4. Working with commands like : Order by, group by, like, upper, lower, max, min	L1 and L3	4
<b>Lab Session 9-10</b> 1. Working with PIG : Order by, group by, co group, like, upper, lower,Joins, Union, Cartesian, Product, Pig Scripts	L1 and L3	6
<b>Lab Session 11-12</b> Working with HBase : Start the hbase, data insert, modify, multiple version insertion, describe, delete truncate, drop etc. Working with Foreign Key and Check Constraint.	L1 and L3	4

	<b>TERM PAPER</b>	L	T	P	C
Version: 2020.1	Date of Approval: 19, July 2020	0	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

### Catalog Description

Term paper evaluation course requires the students to study about the current technology topic in detail. The students have to read research papers, books and other study sources and finalize the topics for their presentation, Student has to prepare it in detail research paper mentioning all the content related to the topic. The evaluation is later done and a presentation is also to be prepared.

### Course Objectives

The objective of this course is to

1. To increase the knowledge and the understanding of a particular phenomenon/topic.
2. To introduce student about how to write technical papers/research papers.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: Study the literature and identify the current technical topic

CO2: Study the identified topic in detail

CO3: Prepare a detailed report including the introduction, architecture, advantages, disadvantages etc

CO4: Prepare a brief presentation of the concerned topic

### **Text Books**

As per topic of summer internship project is chosen and discussion with guide.

### **Reference Books**

	<b>Machine Learning using Python</b>	L	T	P	C
Version: 2020.1	Date of Approval: 19, July 2020	3	-	-	3
Pre-requisites/Exposure	Basic Knowledge of Programming				
Co-requisites	Nil				

### Catalog Description

Python is a general-purpose high level programming language that is being increasingly used in data science and in designing machine learning algorithms. This course provides an introduction to Python and its libraries like numpy, pandas, matplotlib and explains how it can be applied to develop machine learning algorithms that solve real world problems.

This course starts with Python language followed by machine learning and covers concepts of python and all important concepts such as exploratory data analysis, data preprocessing, data visualization and clustering, classification, regression and model performance evaluation etc. This course covers all three types of machine learning algorithms including Supervise, Unsupervised and Reinforcement learning.

### Course Objectives

The objective of this course is to

- Equip the students with concepts of programming and problem solving and develop proficiency in creating applications using the Python Programming Language.
- Provide knowledge of various types of machine learning models, its algorithms and development of the models using Python programming language.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Develop programs in Python to develop algorithmic solutions to computational problems.

CO2: Manage data in python using available data structures such as string, list, and dictionary and file handling operations.

CO3: Apply functions to decompose python program and develop modules and packages.

CO4: Preprocess and analyze data before applying suitable machine learning models.

CO5: Understand basic concepts and techniques of Machine Learning and apply machine learning algorithms to develop machine learning models for solving real word problems.

Modules	Blooms level*	Number of hours
<b>Module-I</b> <b>Python basis:</b> Installing Python; basic syntax, interactive shell, editing, saving, and running a script. The concept of data types; variables, assignments; immutable variables; numerical types; arithmetic operators and expressions; comments in the program; understanding error messages Conditions, boolean logic, logical operators; ranges; Control statements: if-else, loops (for, while); short-circuit (lazy) evaluation <b>Data handling:</b> String, Lists, tuples, and dictionaries; basic list operators, replacing, inserting, removing an element; searching and sorting lists; dictionary literals, adding and removing keys, accessing and replacing values; traversing dictionaries.	L1, L2 and L3	6
<b>Module-II</b> <b>Files Handling:</b> manipulating files and directories, os and sys modules; text files: reading/writing text and numbers from/to a file; creating and reading a formatted file (csv or tab-separated). <b>Design with functions:</b> hiding redundancy, complexity; arguments and return values; formal vs actual arguments, named arguments. Program structure and design. Recursive functions. <b>Python Modules and Packages:</b> designing modules and package, Different ways to import Packages.	L1, L2 and L3	7

<b>OOP:</b> classes, objects, attributes and methods, persistent storage of objects , constructor, inheritance, polymorphism, operator overloading ( <code>_eq_</code> , <code>_str_</code> , etc); abstract classes, exception handling		
<b>Module-III</b> <b>Arrays and Matrices:</b> The NumPy Module, Creating Arrays and Matrices, Copying, Arithmetic Operations, Cross product & Dot product , Saving and Restoring, Matrix inversion, Vectorized Functions <b>Data Visualization:</b> The Matplotlib Module, Histograms, Bar charts Density Plots, Box Plots, Scatter Plots, Heat Maps etc. <b>DataFrames:</b> Pandas , Loading data from different sources, Concept of DataFrames, Working with Dataframes such as selecting, filtering, grouping, joining etc. Dealing with missing values	L2, L3 and L4	6
<b>Module-IV</b> <b>Introduction to Machine Learning:</b> Introduction, Applications, Framework for developing machine learning models <b>Supervised Learning:</b> Linear regression, Multiple linear regression, logistic regression, classification and regression trees, Support Vector Machines, K-nearest neighbors Preprocessing and Scaling , Different Kinds of Preprocessing ,Applying Data Transformations Overfitting, underfitting, bias-variance tradeoff.	L2, L3 and L4	7
<b>Module-V</b> <b>Unsupervised Learning:</b> Introduction to Clustering, k-means clustering Hierarchical clustering, Dimensionality Reduction, Feature Selection, PCA, factor analysis, manifold learning. <b>Reinforcement Learning:</b> Value iteration; policy iteration; TD learning; Q learning; actor-critic	L2, L3 and L4	6

### **Catalog Description**

Python is a language with a simple syntax, and a powerful set of libraries. It is an interpreted language, with a rich programming environment, including a robust debugger and profiler. While it is easy for beginners to learn, it is widely used in many scientific areas for data exploration. This course is an introduction to the Python programming language for students without prior programming experience. We cover data types, control flow, object-oriented programming, and graphical user interface-driven applications. The examples and problems used in this course are drawn from diverse areas such as text processing, simple graphics creation and image manipulation, HTML and web programming.

### **Course Objectives**

The objective of this course is to

- Equip the students with concepts of programming and problem solving and develop proficiency in creating applications using the Python Programming Language.
- Provide an overview of various control statements, data structures, object oriented programming, packages related to image processing, graphics, event driven programming, socket applications.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: Explain various operators and control structures in python and their uses to develop algorithmic solutions to simple computational problems.

CO2: Describe string, python packages and related functions for various file handling operations.

CO3: Apply functions to decompose python program and represent compound data using Python lists, tuples, and dictionaries.

CO4: Analyze graphics, image processing and object oriented programming concept to create applications and analyze exceptions during program execution.

CO5: Create GUI based applications using python packages and network client/server programming.

Modules	Blooms level*	Number of hours												
<b>Module-I</b>  1. Write a program to read and store the name of three different cities in three different variables and print all the contents of variables on the console. 2. Write a program to read the radius of a circle and print the area of circle. 3. Write a program to calculate the distance between two points using distance formula. 4. Write a program to reverse a four digit number using % and // operators. 5. Apply control statements of python to create following pattern. 1 1 2 1 2 3 1 2 3 4 1 2 3 4 5 6. Apply control statement in python to construct a program to prompt a user to read the marks of five different subjects. Calculate the total marks and percentage of the marks and display the message according to the range of percentage given table. <table><tr><th>Percentage</th><th>Message</th></tr><tr><td>Per&gt;=90</td><td>Distinction</td></tr><tr><td>Per&gt;=80 &amp;&amp; per&lt;90</td><td>First Class</td></tr><tr><td>Per&gt;=70 &amp;&amp; per&lt;80</td><td>Second Class</td></tr><tr><td>Per&gt;=60 &amp;&amp; per&lt;70</td><td>Third Class</td></tr><tr><td>Per&lt;60</td><td>Fail</td></tr></table>	Percentage	Message	Per>=90	Distinction	Per>=80 && per<90	First Class	Per>=70 && per<80	Second Class	Per>=60 && per<70	Third Class	Per<60	Fail	L3,L5	4

Per>=80 && per<90	First Class													
Per>=70 && per<80	Second Class													
Per>=60 && per<70	Third Class													
Per<60	Fail													

## Module-II

1. Write the function `replacevowels(word)` which removes all the vowels ('a','e','i','o','u') in a word and returns the remaining letters in the word.
2. Write a function `Eliminate_Letter (Word, Letter)` which takes a word and a letter as arguments and removes all the occurrence of that particular letter from the word. The function will return the remaining letters in the word.
3. Write a program to count number of characters from a file.
4. Generate 50 random numbers within a range 500 to 1000 and write them to file using function.
5. Write a program to insert a string like "1, 2, 3, 4" and print sum of all the numbers of the list using `split` function.
6. Write a program to write in excel file in following format using python.

	A	B	C	D	E	F
1	A7	ISBT DEHRADUN	SHASTRADHARA	CLEMEN TOWN	RAJPUR ROAD	CLOCK TOWER

## Module-III

1. Creating 1-D, 2-D , 3-D numpy arrays and performing arithmetic on them.
2. Program on Boolean arrays and conditional selecting items from array.
3. Stacking and reshaping array
4. Selecting common items between two arrays
5. Plotting simple plots in matplotlib: line, scatter, boxplot, bar,
6. Working with various parameters available in plot function
7. Using magic commands in jupyter notebook
8. Working with series and data frames in pandas
9. Reading and writing CSV and excel files
10. Conditional selection and indexing in DataFrame
11. Adding and removing columns in DataFrame
12. Cleaning data columns using regular expressions

L3,L5

### Catalog Description

This course gives students an insight into the basics of cloud computing along with virtualization. Concepts covered would enable students to define and differentiate among various distributed computing platforms. Further they would be able to gain insights about various cloud simulators like CloudSim, GreenCloud and VMWare for simulating cloud and virtualization based environments.

### Course Objectives

The objective of this course is to

- Equip the students with the features and concepts of Virtualization and Cloud Computing.
- Provide basic knowhow about cloud implementation, deployment models or layers and about cloud simulators like CloudSim, GreenCloud and VMWare.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Define and explain Cloud Computing with its characteristics, benefits and limitations.

CO2: List and distinguish among various cloud deployment models along with service delivery layers.

CO3: Explain concepts of Virtualization with its need and limitations, distinguish between types of hardware virtualization and list types of desktop virtualization.

CO4: Describe the architecture and demonstrate working mechanism for CloudSim and Green Cloud simulators.

CO5: Explain the basics of VMWare Simulator and demonstrate implementation of Virtual machines.

Modules	Blooms level*	Number of hours
---------	---------------	-----------------

<p>MODULE 1:</p> <p><b>CLOUD COMPUTING OVERVIEW</b>  Origins of Cloud computing – Cloud components - Essential characteristics – On-demand self-service, Broad network access, Location independent resource pooling, Rapid elasticity, measured service, Roots of cloud computing, Architectural influences – High-performance computing, Utility and Enterprise grid computing, Cloud scenarios – Benefits: scalability, simplicity, vendors, security, Limitations</p>	L1 and L2	8
<p>MODULE 2:</p> <p><b>CLOUD ARCHITECTURE- LAYERS AND MODELS</b>  The cloud reference model: Architecture, Software as a Service (SaaS), features of SaaS and benefits, Platform as a Service (PaaS), features of PaaS and benefits, Infrastructure as a Service (IaaS), features and benefits of IaaS, Service providers, challenges and risks in cloud adoption, Cloud deployment model: Public clouds – Private clouds – Community clouds - Hybrid clouds - Advantages of Cloud computing .</p>	L1 and L2	8
<p>MODULE 3:</p> <p><b>VIRTUALIZATION</b>  Virtualization and cloud computing - Need of virtualization – cost, administration, fast deployment, reduce infrastructure cost – limitations, Characteristics of virtualized environments  Types of hardware virtualization: Full virtualization - partial virtualization - para virtualization.  Desktop virtualization: Software virtualization – Memory virtualization – Storage virtualization – Data virtualization – Network virtualization</p>	L1 and L2	10
<p>MODULE 4:</p> <p><b>CLOUD SIMULATORS- CLOUDSIM AND GREENCLOUD</b>  Introduction to Simulator, understanding CloudSim simulator, CloudSim Architecture(User code, CloudSim, GridSim, SimJava) Understanding Working platform for CloudSim, Introduction to GreenCloud.</p>	L2 and L3	12
<p>MODULE 5:</p> <p><b>INTRODUCTION TO VMWARE SIMULATOR</b>  Basics of VMWare, advantages of VMware virtualization, using Vmware workstation, creating virtualmachines-understanding virtual machines, create a new virtual machine on local host, cloning virtual machines, virtualize a physical machine, starting and stopping a virtual machine.</p>	L2 and L3	10

### **Catalog Description**

There are certain phases of every Intern's professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship program can best be described as an attempt to institutionalize efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal classroom situations. These attributes are intellectual ability, professional judgment and decision-making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility etc. In order to achieve these objectives, each student will maintain a file . The Report aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development. The report will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

### **Course Objectives**

The objective of this course is to

1. Equip the students with new technologies and industrial requirements.
2. Equip students with Project Management, Documentation and Presentation skills.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Demonstrate skill and knowledge of current information and technological tools and techniques specific to the field of study.

CO2: Identify, analyze, and solve problems creatively through sustained critical investigation.

CO3: Use effectively oral, written and visual communication.

CO4: Understand Project management and team work skills.

## **Master of Technology – Mechanical Engineering**

**FLEXILEARN**

-Freedom to design your degree

## **Curriculum & Scheme of Examination**

**2020**

**AMITY UNIVERSITY HARYANA**

**GURUGRAM**

**Master of Technology**  
**Mechanical Engineering Specialization in Thermal Engineering**

**Programme Overview**

**Duration: 2 years**

The programme for M.Tech in Thermal Engineering provides detailed knowledge about thermodynamic analysis, energy management of a wide variety of thermal energy conversion systems and their sub-systems. Hands-on experience i.e., experiments conducted by them, will help in analysing the real-world problems. It will help in applying basic and technical knowledge of thermal science and engineering in practical use through observation, assessments, analysis, henceforth, achieving a desired result. At the same time, the students will be able to use their knowledge in different thermal engineering domains meeting the realistic constraints such as economic, environmental, social, health, safety and sustainability issues.

**Programme Outcomes (POs)**

On completion of the M.Tech in Thermal Engineering Programme, the students will be able to:

PO1: Establish sound domain knowledge on wider perspective to become professionally successful and applying the basic concepts of thermal engineering by studying inter-disciplinary subjects.

PO2: Identify, formulate and resolve real time thermal engineering problems in context with understanding various key aspects of analytics.

PO3: Recapitulate and demonstrate capability for conceptualising design aspects of thermal systems or components and their investigation to present optimum feasible solutions undertaking safety, environmental and other real time constraints.

PO4: Represents skilful research capabilities in order to work out problems from their initial development stage to literature review, pedagogies and conducting experimental data collection and interpretation.

PO5: Establish research perspective to judgmentally investigate thermal engineering problems for creating novel and prevalent information for their outcomes.

PO6: Exhibit and demonstrate skills to employ current engineering tools, software and equipment to analyse and resolve complex thermal engineering problems.

PO7: Effectively communicate to comprehend and express effectual reports following engineering standards. This will provide sustainability of various systems by an interaction with core industry professionals.

PO8: Skilful demonstration of presenting their work unambiguously before research community, and give and take clear commands.

PO9: Demonstrate characters of manager in conducting engineering ventures and concerned finance, and organize work force towards accomplishing their targets.

PO10:Exhibitthequalitiesofgoodacademicianandengagingtheminindependentandphilosophicallifelonglearningsandtoworkonlaboratoryandmultidisciplinaryresponsibilities.

PO11:Providesanabilitytoacquireprofessionalandintellectualintegrity,professionalcodeofconduct,ethicsofresearchandscholarship,considerationoftheimpactofrespectiveoutcomesonprofessionalpracticesandanunderstandingofresponsibilitytocontributetothecommunityforsustainabledevelopment.

## **Master of Technology Mechanical Engineering Specialization in Machine Design**

### **Programme Overview**

#### **Duration: 2 years**

The programme for M. Tech in Mechanical Engineering (Machine Design) provides detailed knowledge about Theory of Elasticity and Plasticity, Advanced Vibrations, Tribology and Bearing Design, Fracture Mechanics, Experimental Stress Analysis, Composite Materials & Technology, and Finite Element Analysis of a wide variety of mechanical components, systems and their sub-systems. It will help in applying basic and technical knowledge of mathematics, science and engineering. With the help of experiments that will be conducted, will help them in analysing the real world problems by using their theoretical knowledge and putting it in practical use through observation, assessments, analysis, henceforth, achieving a desired result. At the same time, the student will be able to use his/her knowledge in different domains meeting the realistic constraints such as economic, environmental, social, health, safety and sustainability issues. After successful completion of the degree, the candidates become capable of nurturing their career in different fields like academics, research units, entrepreneurship, manufacturing plants and various other industries.

### **Programme Outcomes (POs)**

On completion of the M. Tech. in Machine Design Engineering programme, the student will be able to:

PO1: Knowledge and understanding of mathematical, statistical methods, scientific principles and equation is applied to engineering discipline for find out the solution of problems and to support their understanding of relevant historical, current and future developments and technologies.

PO2: Understanding of various engineering process, engineering principle and able to identify and classify them on the basis of components and materials used. To solve the problems with the help of analytical methods, current available software, modelling techniques, computational methods, operation research techniques, tool manufacturing processes, sensor application etc.

PO3: Design at this level is the creation and development of an economically viable product, process. Design solution for problems including production, operation, maintenance, energy systems keeping in view the effect that it will have on its strength, environment, sustainability, aesthetics, ethical, health, safety, security and risk issues following the codes of practice and standards. Applying advanced problem solving skills, technical knowledge that is fit to evaluate the outcomes like failure test, drop test and further helping the user needs.

PO4: A framework is to help you *plan* your strategy for *monitoring and evaluation of design process*. An effective communication is to be able to convey technical information orally, by writing or in terms of design on paper or using certain software and presentation.

PO5: Knowledge and understanding of management techniques, including project management, the need for a high level of professional and ethical conduct in engineering that may be used to achieve engineering objectives.

PO6: Understanding of risk issues on engineering practice, including health & safety, environmental and commercial risk, and of risk assessment and risk management techniques. Applying the knowledge in commercial, economic and social context of engineering processes.

PLO7: Demonstrating the engineering solutions for development and sustainability of various systems by an interaction with core industry professionals.

PO8: Application of engineering practical knowledge, technical literature to operations, manufacturing, energy systems, automobiles which will further help in understanding the various characteristics of various materials, equipment and processes used for its successful running.

PO9: Ability to work with any technical uncertainty if raised by using knowledge of multidisciplinary sections with the aim of continuous improvement in the technology and techniques adopted.

PO10: Understanding the code of conduct, ethical issue and legal scenario to carry on engineering practices in any industry.

PO11: Apply the knowledge of design engineering solution for the development of new products and entrepreneurship.

PO12: Engage the students in lifelong learning in the broadest context of technological change.

## **Master of Technology**

### **Mechanical Engineering Specialization in Industrial and Production Engineering**

#### **Program Outcomes (POs)**

**PO1:**

Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

**PO2:**

Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

**PO3:**

Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

**PO4:**

Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

**PO5:**

Ability to independently carry out research/investigation and development work to solve practical problems related to Production and Industrial Engineering.

**PO6:**

Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

**PO7:**

Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for, sustainable development.

**PO8:**

Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

**PO9:**

Ability to apply knowledge, techniques, skills and modern tools of manufacturing technology to the solution of manufacturing and industrial engineering problems.

**PO10:**

Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

**PO11:** Ability to apply creativity in designing manufacturing systems, components and processes.

**PO12:** Ability to apply Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

**Program Specific Outcomes (PSOs)**  
**M.Tech., Mechanical Engineering**  
**Specialization in**  
**Thermal/Design/Industrial and Production Engineering**

**PSO1:** Apply the knowledge of basic sciences and engineering fundamentals to formulate, analyse and provide solution to the problems related to mechanical engineering and communicate the effectively to the concerned.

**PSO2:** Design mechanical systems in various fields such as machine elements, thermal and interdisciplinary fields by using various engineering/technological tools to meet the volatile needs of the industry and society at large.

**PSO3:** Apply knowledge of CAD/CAM, artificial intelligence & robotics in the fields of manufacturing and material management.

**PSO4:** Apply the principles of soft computing skills, problem solving, creative thinking, group dynamics, team building, leadership skills, decision making skills, self-development and interpersonal skills, contributing to overall personality and career development.

PSO1		PSO2			PSO3		PSO4	
Apply the knowledge of basic sciences and engineering fundamentals to formulate, analyse and provide solutions to the problem related to mechanical engineering and communicate them effectively to the concerned. <b>MAE 4101</b>	<b>Advanced Solid Mechanics</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2017.1	Date of Approval: 26 June,2020	3	1	0	4
Pre-requisites/Exposure	Simple stress, strain, beam, column, bending				
Co-requisites	Perform advanced analysis of solid components and understanding of the behavior of solids under two or three dimensional stress fields				

### Catalog Description

In this course the concepts of stress and strain, Mohr's circle for 3-D state of stress, Mohr's stress plane of maximum shear, rectangular strain component are discussed in detail. The Advanced Solid Mechanics deals with unsymmetrical bending, shear center, torsion of circular, elliptical, equilateral triangular, rectangular bar, contact stresses and beams.

### Course Objectives

The objective of this course is to

1. Equip the student with fundamental knowledge of transformation of stresses and strains in 3D.
2. Acquaint with the solution of advanced bending problems.
3. Develop understanding of torsion in bars of different cross-sectional areas.
4. Solve for stresses and deflections of beams under unsymmetrical loading and to locate the shear center of thin wall beams;

### Course Outcomes

On completion of this course, the students will be able to

- CO1. State Mohr's circle for 3-D state of stress.  
CO2. Determination of principle axis and deflection of beams due to unsymmetrical bending  
CO3. Explain torsion in bars of different area of cross-section  
CO4. Explain contact stresses in spherical, cylindrical and curved surfaces in contact  
CO5. Explain Beams and columns under various loading conditions

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
MODULE 1: Analysis of stress and strain  Principal stresses, stress invariant, Mohr's circle for 3-D state of stress, Mohr's stress plane of maximum shear, rectangular strain component, principle axis of strain and principle strain, theory of failure.	L1, L2, L3, L4	10
MODULE 2: Unsymmetrical Bending and Shear centre  Principle axis, parallel axis theorem for product of inertia, determination of principle axis, shear due to unsymmetrical bending, deflection of beams due to unsymmetrical bending, calculation of shear centre.	L1, L2, L3 and L4	10
MODULE 3: Torsion  Torsion of general prismatic bar solid section, torsion of circular and elliptical bar, torsion of equilateral triangular bar, torsion of rectangular	L1, L2, L3 and L4	10

bar, torsion of thin walled tube, torsion of bar with thin rectangular section.		
<b>MODULE 4: Contact Stresses</b> Contact stresses due to spherical surfaces in contact, due to two parallel cylindrical rollers in contact, due to two curved surfaces of different radius.	L1, L3 and L4	8
<b>MODULE 5: Beams and Columns</b> Euler buckling load, beam column equations, beam column with a concentrated load, beam column with several concentrated load, continuous lateral load, beam couple with end couple.	L1, L3 and L4	10

Pre-requisites/ Exposure	Basics of Physics, Basics of Mathematics				
Co-requisites					

## Catalog Description

The purpose of this course is to provide students with the skill, knowledge and attitude required to determine approximate numerical solutions to mathematical problems, which cannot always be solved by conventional analytical technique. The course contents demonstrate the importance of selecting the right numerical technique for a particular application, analysis and interpretation the results.

## Course Objectives

The objective of this course is to:

1. Demonstrate understanding of common numerical methods and how they are used to obtain approximate solutions to otherwise intractable mathematical problems.
2. Apply numerical methods to obtain approximate solutions to mathematical problems.
3. Derive numerical methods for various mathematical operations and tasks, such as interpolation, differentiation, integration, the solution of linear and nonlinear equations, and the solution of differential equations.

## Course Outcomes

On completion of this course, the students will be able to

CO1: Define and describe the Algebraic and Transcendental Equation and solve the problems using appropriate Numerical methods.

CO2: Describing the interpolation methods to find intermediate values in given graphical or tabulated data.

CO3: Describe and define the sets of linear simultaneous equations and solve the problems using Cholesky's (Crout's) method, Gauss-Seidel iteration and relaxation methods.

CO4: Describe and apply Trapezoidal and Simpson's Rule to solve given integration problems.

CO5: Define and describe Runge-Kutta method and Euler's Method to solve differential equations.

Modules	Blooms level*	Number of hours
Module 1: Solution Of Algebraic And Transcendental Equation  Newton-Raphson method including method of complex roots, Graeffe's root square method (Computer based algorithm and program for these methods)	L1, L2 and L3	7
Module 2: Interpolation And Approximation  Lagrange's and Newton-divided difference formula, Newton interpolation formula for finite differences, Gauss's forward and backward interpolation formulae, Bessel's and Laplace-Everett's formulae, Cubic spline, least squares approximation using Chebyshev polynomial. Solution of partial differential equations of linear and non-linear nature with finite difference scheme and iteration techniques	L1, L2, L3	7
Module 3: Solution Of Linear Simultaneous Equation  Cholesky's (Crout's) method, Gauss-Seidel iteration and relaxation methods, Solution of Eigen Value problems; Smallest, largest and	L1, L2, L3	8

intermediate Eigen values (Computer based algorithm and Programme for these methods)		
Module 4: Numerical Differentiation And Integraton  Numerical differentiation using difference operators, Simpson's 1/3 and 3/8 rules, Boole's rule, Weddle's rule.	L1, L2, L3	6
Module 5: Solution Of Differential Equation  Modified Euler's method, Runge-Kutta method of 2nd, 3rd and 4th orders, Predictor- Corrector method, Stability of Ordinary differential equation, Solution of Laplace's and Poisson's equations by Liebmann's method, Relaxation method.	L1, L2, L3	8

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

Version 1.1	Date of Approval: 26 June,2020	3	1	0	4
Pre-requisites/Exposure	Basics of Fluids				
Co-requisites	-				

### Catalog Description

This course introduces the principles required to solve advanced fluid mechanics problems. It addresses the modelling and analysis of viscous and inviscid fluids problems with an emphasis on real-world engineering applications and problem solving. To master this course, students should have a background in basic mathematical calculus and physics covering fluid mechanics.

### Course Objectives

The objective of this course is to

1. Equip the students with concepts of viscous and inviscid fluids.

2. Provide an overview of estimation of flow with large Reynold's number.

### Course Outcomes

After completing the course, the students will be able to

- CO1. Explain the concept of kinematics; apply various governing equations to solve fluid flow problems.
- CO2. Define various viscous and in viscid fluids and apply Bernoulli equation to solve practical problems.
- CO3. Describe various flows with respect to large Reynolds number.
- CO4. Analyse and setting up the problems involving the concept of Navier stokes equations.

Modules	Blooms level*	Number of hours
<b>Module 1</b> <b>Review of Kinematics:</b> Lagrangian, Eulerian Representation, Veracity, Special Motions, Review of Governing Equations, Integral Equations for a system, Local Equations in Lagrangian Formulation, Local Equations in Eulerian Formulation, Integral Equations for a Control Volume.	L1, L2 and L3	10
<b>Module 2</b> <b>In viscid Fluids:</b> Control volume, application of continuity equation and momentum equation, Incompressible flow, Euler's Equation, Bernoulli's Equation, Crocco's Equation, Vortices/Stream Function Formulation, Some Exact Solutions, Kelvin's Theorem, Helmholtz Theorem, D'Alembert's Paradox, Fluid Mechanics Film Discussion	L1, L2, and L3	10
<b>Module 3</b> <b>Viscous flow:</b> Review of Constitutive Equations, Linearly Viscous Compressible, and Linearly Viscous Incompressible. Exact solution, plane Poiseuille and Couette flows; Hagen Poiseuille flow through pipes.	L2 and L3	10
<b>Module 4</b> <b>flows with large Reynolds number:</b> Flows with very large Reynolds number, elements of two-dimensional boundary layer theory; displacement thickness and momentum thickness, skin friction, Blasius solution for boundary layer on a flat plate without pressure gradient; the Karman-Pohlhausen integral method for obtaining approximate solutions. Drag on bodies; form drag and skin friction drag profile drag and its measurement. Taylor Vortices	L2, L3 and L4	10
<b>Module 5</b> <b>Approximations to Navies-Stokes Equations,</b> Non-dimensionalization, Stokes Flow Uniform Flow Past a Sphere, Exact Solution, Uniform Flow Past A Circular Cylinder, Stokes Paradox, Extensions of Stokes theory, Thin Films, Lubrication Theory, Squeeze Films, Thin Films with Free Surfaces, Hele-Shaw Flow, Boundary Layer Theory. Stability of Fluid Motions, Compressible Fluid Flow, Derivation of basic equations, Fanno flow, Rayleigh flow, non-degenerate viscosities cases for global weak-solutions à la Leray, intermediate solutions à la Hoff and strong solutions in critical spaces à la Fujita-Kato.	L2, L3 and L4	8

ME4104	ADVANCED MACHINING PROCESSES	L	T	P	C
Version 1.1	Date of Approval: 26 June,2020	3	1	0	4
Pre-requisites/Exposure	Basics of manufacturing Engineering				
Co-requisites	-				

### **Catalog Description**

In this course the concepts of advanced machining processes are discussed in detail. The main objective of this course is to learn about various unconventional machining processes, the various process parameters and their influence on performance and their applications. It also aims to learn the various non destructive testing (NDT) techniques and working procedures of various Non Destructive Testing (NDT) techniques.

### **Course Objectives**

The objective of this course is

1. To familiarize the students with unconventional modern machine tools and manufacturing processes.

2. To prepare the students understand various non-conventional machining processes.
3. To prepare the students understand nondestructive testing (NDT) techniques and learn working procedures of various Non Destructive Testing (NDT) techniques.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Illustrate the fundamentals of various non-conventional machining processes, capabilities with their application areas.

CO2: Demonstrate the knowledge of mechanical metal removal processes.

CO3: Illustrate the concepts of various advances thermal machining processes.

CO4: Demonstrate the basic knowledge of chemical and electro-chemical metal removal processes

CO5: Demonstrate the basic knowledge of non-destructive testing with their applications.

Modules	Blooms level*	Number of hours
Module 1: Introduction Concept of advanced machining processes, Sources of metal removal Classification on the basis of energy sources -Parameters influencing selection of process, Limitations of Conventional machining processes, Comparison of conventional and non-conventional machining, Need of advanced machining processes.	L1, L2 and L3	10
Module 2: Mechanical Type Metal Removal Processes Ultrasonic machining; Elements of the process, Tool design and economic considerations, Applications and limitations, Abrasive jet and Abrasive water jet machining principles; Mechanics of metal removal; Design of nozzles, applications, Abrasive finishing process, Magnetic abrasive finishing process	L1, L2 and L3	10
Module 3: Advanced Thermal Machining Processes Classification, General principles and applications of Electro discharge, Plasma arc, Ion beam, Laser beam, Electron beam machining, Mechanics of metal	L1, L2 and L3	10

removal in EDM, selection of EDM pulse generator, machining accuracy, surface finish and surface damage in EDM, Generation and control of electron beam for machining applications, advantages and limitations		
<b>Module 4: Electro Chemical Metal Removal Processes</b> Working principle, advantages, disadvantages and applications of Electrochemical, Chemical machining, Economy aspects of ECM, Electro-chemical deburring and honing, Hybrid Unconventional Machining Processes: Introduction to ECDM, ECAM and abrasive EDM etc.	L1, L2 and L3	9
<b>Module 5: Non Destructive Testing</b> Overview of the Non Destructive Testing Methods for the detection of manufacturing defects as well as material characterization. Relative merits and limitations, Liquid Penetrate Testing – Principles, types and properties of liquid penetrates, developers, advantages and limitations of various methods, Testing Procedure. Magnetic Particle Testing- Theory of magnetism, inspection materials Magnetization methods, Ultrasonic Testing and radiography.	L1, L2 and L3	9

*\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation*

### Catalog Description:

In this course the concepts of computer aided design, computer aided manufacturing and computer integrated manufacturing are discussed in detail. The concepts of computer aided process planning (CAPP), inventory control, manufacturing resource planning-II (MRP-II) & enterprise resource planning (ERP), group technology (GT), cellular manufacturing, automated guided vehicle system, flexible manufacturing system (FMS) and industrial robotics are also discussed in detail.

### Course Objectives:

The overall objective of this course is

1. To equip the students with basic and essential concepts of computer aided design, computer aided manufacturing and computer integrated manufacturing.
2. To provide high caliber engineering students with an in-depth understanding of cellular manufacturing, flexible manufacturing system (FMS) and industrial robotics.

### Course Outcomes (COs):

At the end of the course, the student shall be able to:

CO1 - Define and describe the basic fundamentals of computer aided designing, computer aided manufacturing and computer integrated manufacturing.

CO2 – State, explain and demonstrate computer aided process planning, manufacturing resource planning and enterprise resource planning.

CO3 – Outline, interpret and apply concepts of group technology and cellular manufacturing.

CO4 – Define, explain and apply knowledge of flexible manufacturing systems and industrial robotics in industries.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I</b> <b>Introduction</b> Brief introduction to CAD and CAM, Manufacturing	L1 and	9

Planning, Manufacturing control, Concurrent Engineering, CIM concepts, elements of CIM system, Basic Elements of an Automated system , Levels of Automation, Lean Production and Just-In Time Production.	L2	
<b>Module II</b> <b>Computer Aided Process Planning:</b> Process planning, Computer Aided Process Planning (CAPP), Logical steps in Computer Aided Process Planning, Aggregate Production Planning and the Master Production Schedule, Material Requirement planning, Capacity Planning, Control Systems, Shop Floor Control, Inventory Control, Brief on Manufacturing Resource Planning-II (MRP-II) & Enterprise Resource Planning (ERP).	L1, L2, and L3	8
<b>Module III</b> <b>Cellular Manufacturing:</b> Group Technology (GT), Part Families, Parts Classification and coding, Simple Problems in Part Coding system, Production flow Analysis, Cellular Manufacturing, Composite part concept, Machine cell design and layout, Quantitative analysis in Cellular Manufacturing, Rank Order Clustering Method, Arranging of Machines in a GT cell , Hollier Method.	L1, L2 and L3	10
<b>Module IV</b> <b>Flexible manufacturing system (FMS):</b> Types of Flexibility, FMS, FMS Components, FMS Application & Benefits, FMS Planning and Control, Quantitative analysis in FMS, Automated Guided Vehicle System (AGVS), AGVS Application, Vehicle Guidance technology, Vehicle Management & Safety.	L1, L2 and L3	12
<b>Module V</b> <b>Industrial Robotics:</b> Robot Anatomy and Related Attributes, Classification of Robots, Robot Control systems, End Effectors, Sensors in Robotics, Robot Accuracy and Repeatability, Industrial Robot Applications.	L1, L2 and L3	9

Pre-requisites/Exposure	Basics of Fluids				
Co-requisites	-				

### Catalog Description

This course introduces the principles required to solve advanced fluid mechanics problems. It addresses the modelling and analysis of viscous and inviscid fluids problems with an emphasis on real-world engineering applications and problem solving. To master this course, students should have a background in basic mathematical calculus and physics covering fluid mechanics.

### Course Objectives

The objective of this course is to

1. Equip the students with concepts of viscous and inviscid fluids.
2. Provide an overview of estimation of flow with large Reynold's number.

### Course Outcomes

After completing the course, the students will be able to

- CO1. Explain the concept of kinematics; apply various governing equations to solve fluid flow problems.
- CO2. Define various viscous and Inviscid fluids and apply Bernoulli equation to solve practical problems.
- CO3. Describe various flows with respect to large Reynolds number.
- CO4. Analyse and setting up the problems involving the concept of Navier stoke equations.

<b>List of Experiments</b>	<b>Blooms level*</b>	<b>Number of hours</b>
Boundary layer flow over a flat plate.	L2 and L3	2
Shock boundary layer interaction studies using computational fluid dynamics	L2 and L3	2

Pressure distribution around a circular cylinder in high Reynolds number flow	L2 and L3	2
Measurement of fluid viscosity.	L2 and L3	2
Studying laminar-turbulent transition for flow in a tube	L2 and L3	2
Energy loss measurements in subcritical and supercritical open channel flow.	L2 and L3	2
Measurement of drag on a circular cylinder in high Reynolds number flow	L2 and L3	2
Determination of friction factor as a function of Reynolds number in pipe flow.	L2 and L3	2
Study Impact of Jet on vertical stationary and moving plate.	L2 and L3	2
Study impact of jet on flat and curved surfaces.	L2 and L3	2
To study the constructional details and draw the characteristic curves of Centrifugal and reciprocating pumps.	L2 and L3	2

Version 2017.1	Date of Approval: 26 June,2020	0	0	2	1
Pre-requisites/Exposure					
Co-requisites					

### Catalog Description:

The main objective of the advanced machining processes lab is to demonstrate the basic principles in the area of advance manufacturing to the postgraduate students through a series of experiments. The students will learn about the laboratory methods and interpretation of results with regard to metal removal processes such as USM, WJM, EDM etc. and to give final shape and size to components. Students also learn about the various non destructive evaluation and testing methods.

### Course Objectives:

- To understand the working of advanced machining processes and various non-destructive evaluation and testing methods.
- To make the students understand the different types of non-conventional manufacturing processes. This course will help students know which operations are appropriate for given specimen.

### Course Outcomes:

On completion of this course, the students will be able to

CO1: Apply the knowledge to calculate parameters involved in various non destructive testing methods.

CO2: Measure the cutting forces in turning, drilling and grinding operations.

CO3: Demonstrate the principle of various non destructive evaluation and testing methods.

CO4: Perform magnetic particle inspection test and liquid (dye) penetrate test on a given specimen.

CO5: Demonstrate the various ultrasonic machining processes.

CO6: Demonstrate the working of advanced manufacturing system.

Modules	Blooms level*	Number of hours
1. To study the working of EDM.	L1, L2	1

	and L3	
2. To determine the effects of process variables of EDM on surface finish of parts.	L1, L2 and L3	2
3. To determine the effects of process variables on dimensional accuracy of parts in EDM process.	L1, L2 and L3	2
4. To measure the cutting forces in turning operation on lathe machine tool.	L1, L2 and L3	2
5. To measure the cutting forces in drilling operation on radial drilling machine tool.	L1, L2 and L3	2
6. To measure the cutting forces in grinding operation on surface grinding machine tool.	L1, L2 and L3	3
7. To study the working of Ultrasonic machining process.	L1, L2 and L3	1
8. To study the working of Advanced Manufacturing System.	L1, L2 and L3	1
9. To study and understand the various Non Destructive Evaluation and Testing methods.	L1, L2 and L3	2
10. To perform Magnetic Particle Inspection test on a given specimen.	L1, L2 and L3	2
11. To perform Liquid (Dye) Penetrate test on a given specimen.	L1, L2 and L3	2
12. To study Ultrasonic Inspection test on a given specimen.	L1, L2 and L3	2

### Catalog Description

In this course the concepts of numerical control machines, computer numerical control machines axis designation, kinematic diagrams and automatic tool changers are discussed in detail. The concepts of machine control unit, G&M codes, manual part programming, interpolation cycles, simulation and machining operations on CNC's are also discussed in detail.

### Course Objectives

The overall objective of this course is

1. To equip the students with basic and essential concepts of computer aided manufacturing (CAM) and computer numerical control (CNC) machines.
2. To provide high caliber engineering students with an in-depth understanding of G&M codes to write CNC programs, simulate and machining on CNC machines.

### Course Outcomes:

At the end of course the students will be able to:

- CO1 - Define and describe the CNC lathe kinematic diagram, major assemblies, sub assemblies, machine control system and axes designation.
- CO2 - Define and describe the CNC milling machine kinematic diagram, major assemblies, sub assemblies, machine control system and axes designation.
- CO3 - State and explain work holding and tool holding devices for the CNC lathe and CNC milling machine.
- CO4 - Describe and apply G&M codes in manual part programming on CNC lathe.
- CO5 - Describe and apply G&M codes in manual part programming on CNC milling machine.

Modules	Blooms level*	Number of hours	
1. Make a sketch of CNC lathe showing major assemblies and indicate the CNC axes with designations. Make a sketch of the conventional lathe and if it is considered as a CNC lathe, show the axes with designations.	L1 and L2	2	
2. Make a Kinematics diagram of CNC Lathe showing all machine sub-assemblies. Indicate bearing arrangements, ball screw arrangements with sizes, wherever available.	L1 and L2	2	
3. Make a sketch of CNC machining centre showing major assemblies and indicate the CNC axes with designations. Make a sketch of the conventional machining centre and, if it is considered as a CNC machining centre, show the axes with designations.	L1 and L2	2	
4. Make a Kinematics diagram of CNC machining centre showing all machine sub-assemblies. Indicate bearing	L1 and	2	

arrangements, ball screw arrangements with sizes wherever available.	L2		
5. Study the CNC lathe. Prepare a block diagram of controls. Identify location and type of transducers and indicate on an outline of the machine. Describe how they function.	L1 and L2	2	
6. Study the CNC machining centre. Prepare a block diagram of controls. Identify location and type of transducers and indicate on an outline of the machine. Describe how they function.	L1 and L2	2	
7. Study the work holding and tool holding devices in the CNC lathe and draw up their specifications and capacities.	L1 and L2	2	
8. Study the work holding and tool holding devices in the CNC machining centre and draw up their specifications and capacities.	L1 and L2	2	
9. Prepare part programs for two specified components for CNC lathe by manual part programming. First write the machining technology in full; then prepare part program and then enter in the machine. Test the program in dry run and by tool path graphic simulation. Machine the component.	L2 and L3	2	
10. Prepare part programs for two specified components for CNC machining centre by manual part programming. First write the machining technology in full; then prepare part program and then enter in the machine. Test the program in dry run and by tool path graphic simulation. Machine the component.	L2 and L3	2	
11. To study 3D printing machine tool and its application in modern manufacturing industries	L1 and L2	1

## Catalog Description

In this course the concepts of optimization techniques are discussed in detail. The main objective of this course is to provide the basic concepts of optimization techniques and to educate them on the advancements in optimization techniques. It also provides knowledge of multi-Objective Programming and Genetic algorithms.

## Course Objectives

The objective of this course is

1. To familiarize the students with various tools of optimization for management of various resources.
2. To acquaint the students with various advance techniques of optimization like multi-Objective Programming and Genetic algorithms etc.

## Course Outcomes

On completion of this course, the students will be able to

CO1: Define optimization technique and explain its various techniques.

CO2: Apply the concept of classical optimization techniques for solving problems on single-variable and multi-variable optimization.

CO3: Apply non-linear programming and solve problems on one-dimensional optimization methods, unconstrained and constrained optimization techniques.

CO4: demonstrate the concept of other optimization techniques like geometric programming, dynamic programming, integer programming, stochastic programming, and solving problems.

CO5: Illustrate different types of advance topics in optimization

Modules	Blooms level*	Number of hours
Module 1: Introduction Need of Optimization and Historical Development, Engineering Applications, Classification and Formulation of Optimization Problem	L1, L2 and L3	6
Module 2: Classical Optimization Techniques Single-Variable and Multi-Variable Optimization, With and Without Constraints, Kuhn-Tucker Conditions.	L1, L2 and L3	10

Module 3: Non-Linear Programming Introduction, One-Dimensional Optimization Methods, Unconstrained and Constrained Optimization Techniques; Elimination Methods, Exhaustive Search, Interval Halving, Fibonacci, Golden Section Methods; Random Search Methods, Hooke and Jeeves Method, Powell's Method; Indirect Search Methods: Steepest Descent, Fletcher-Reeves, Newton's Method, DFP, BFGS Method; Internal and External Penalty Approach.	L1, L2 and L3	12
Module 4: Other Optimization Techniques Introduction and Basic Concepts of Geometric Programming, Dynamic Programming, Integer Programming, Stochastic Programming, Their Applications	L1, L2 and L3	10
Module 5: Advance Topics in Optimization Multi-Objective Programming, Introduction to Genetic Algorithms, Simulated Annealing and ANN Based Optimization.	L1, L2 and L3	10

*\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation*

Pre-requisites/Exposure	Probability, Engineering statics, data analysis, hypothesis testing and ANOVA				
Co-requisites	Apply basic principles in the design of simple experiments.				

### Catalog Description

In this course the concepts of experimental design, steps of experimental design, types of experimental design and six sigma are discussed in details. The design of experiments includes

completely randomized design, latin square design, factorial design, full factorial design, fractional factorial design, robust design and Taguchi's approach for experimental design.

### Course Objectives

The objective of this course is to

1. Explain the issues and principles of Design of Experiments (DOE),
2. Providing an understanding of interactions among causative factors
3. Determining the levels at which to set the controllable factors.
4. Minimizing experimental error (noise) and improving the robustness of the design or process to variation.

### Course Outcomes

On completion of this course, the students will be able to

- CO1. Learn how to plan, design and conduct experiments efficiently and effectively, and analyze the resulting data to obtain objective conclusions..
- CO2. Given a description of an experiment, determine whether it is a factorial experiment, a fractional factorial experiment, or neither
- CO3. Determine whether the design appropriately deals with extraneous variables via controlling, blocking, randomization or replication.
- CO4. Explain robust design and taguchi's approach for design of experiments.

Modules	Blooms level*	Number of hours
<b>MODULE 1: Introduction</b>  A brief history of statistical design, Objectives for experimental designs. Basic design concepts. Steps and guidelines for the design of experiments, Some typical applications of experimental design, Types of experimental designs, Analysis of means, Experimental designs and six sigma, Problems	L1, L2 and L3	10
<b>MODULE 2: Completely Randomized Design</b>  Model for a completely randomized design with a single factor. ANOM for a completely randomized design, ANOM with unequal variances, randomized block design, incomplete block designs, latin square design, Graeco – Latin square design.	L1, L2, L3 and L4	12

<b>MODULE 3: Full Factorial and Fractional Factorial Designs with Two Levels</b> Nature of factorial designs, deleterious effects of interactions, effect estimates the $2^3$ Design, built-in –replication, role of expected mean squares in experimental design, <b>2k-1</b> Designs. Effect estimates and regression coefficients, <b>2k-2</b> Designs. basic concepts; design efficiency, John's $3/4$ designs	L1, L2, L3 and L4	14
<b>MODULE 4: Robust Design</b> DOE and Taguchi approach; experimental design using orthogonal arrays; experimental design with two-level factors only; experimental designs with three and four level factors; ANOVA ; analysis using signal- to- noise ratios.	L1, L3 and L4	12

ME 4203	<b>RESEARCH METHODOLOGY AND TECHNICAL REPORT WRITING</b>	L	T	P	C
Version 2019.1	Date of Approval: 26 June,2020	2	0	0	2
Pre-requisites/Exposure	NIL				
Co-requisites	NIL				

### Catalogue Description

This course deals with types of research, significance and characteristics and planning a research proposal, population and sample, parameter and statistic, sampling and data collection, sampling design: steps, types, sample size, sampling methods. It deals with univariate, bivariate and multivariate analysis, measure of dispersion of data, standard deviation, variance, coefficient of variation and degree of freedom. Hypothesis testing: parametric tests and non-parametric tests,

regression analysis and curve fitting, method of least-squares, explained and unexplained variations, coefficient of correlation of determination. The course also deals with technical/scientific/research report writing: referencing and bibliography and footnotes. Publication of research papers, citations, intellectual property rights and copy rights, plagiarism, patent and patent laws, commercialization and ethical issues.

### Course Objectives

The objective of this course is to:

1. Deals with types of research, significance and characteristics and planning a research proposal and to enhance scientific and technical writing and research skills.
2. Impart knowledge about various stages of research process, statistical analysis and tools & their applications in decision making by hypothesis testing and regression analysis.
3. It also deals with intellectual property rights and copy rights, plagiarism, patent and patent laws, commercialization and ethical issues.

### Course Outcomes

On completion of this course, the students will be able to:

- CO1: Classify different research types; explain steps in research process and planning research proposal.
- CO2: Describe sampling methods, sampling steps and design, carry out data processing and analysis.
- CO3: Explain hypothesis testing, parametric and non-parametric tests, carry out regression analysis, curve fitting.
- CO4: Demonstrate technical and scientific report writing skills; describe plagiarism, patent laws and intellectual property rights.

Modules	Blooms level*	Number of hours
Module I: Introduction and Research Planning Introduction to research: Definition, motivation, need, objectives, significance and characteristics of research; types of research; steps in research process; planning a research proposal; literature review, web searching.	L1, L2	4
Module II: Sampling Methods Measurement scales, population and sample, parameter and statistic, sampling and data collection, sampling design: steps, types, sample size, sampling methods, data processing and analysis. Sampling surveys and questionnaire designing, primary and secondary data.	L1, L2, L3	5
Module III: Hypothesis Testing and Regression Analysis Univariate, bivariate and multivariate analysis, means-arithmetic, geometric and harmonic; measure of dispersion of data, standard deviation, variance, coefficient of variation and degree of freedom. Hypothesis testing: kinds errors in hypothesis testing, significance and confidence levels, parametric tests and non-parametric tests, one-tailed and two-tailed tests, analysis of variance. Regression	L1, L3, L4	10

analysis and curve fitting, method of least-squares, explained and unexplained variations, coefficient of correlation of determination.		
Module IV: Technical Report Writing and Plagiarism Technical/scientific/research report writing: structure and components of scientific reports, formats of dissertations, research report, report writing skills, report preparation, referencing and bibliography and footnotes. Publication of research papers, citations, making presentation-use of visual aids and PPTs. Intellectual property rights and copy rights, plagiarism, patent and patent laws, commercialization and ethical issues.	L1, L3, L4	5

<b>THE 4203</b>	<b>Advanced Heat and Mass Transfer</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 1.1	Date of Approval: 26 June,2020	3	0	0	3
Pre-requisites/Exposure	Basics of Thermodynamics, Heat Transfer				
Co-requisites	-				

### **Catalog Description**

This course introduces the principles required to solve heat transfer problems. It addresses the modelling and analysis of heat exchanger problems with an emphasis on real-world engineering applications and problem solving. To master this course, students should have a background in basic mathematical calculus, thermodynamics and heat transfer. These basic concepts of thermodynamics and heat transfer will be applied to formulate problems on conduction, convection, radiation, heat exchanger and mass transfer.

### **Course Objectives**

The objective of this course is to

1. Equip the students with concepts of conduction, convection, radiation and heat exchangers.
2. Provide an overview of various modes of mass transfer.

## Course Outcomes

After completing the course, the students will be able to

CO1 Explain the basic concept of conduction, convection and radiation heat transfer, formulate and solve one dimensional conduction problems.

CO2 Apply empirical correlations for both forced and free convection for determine the value of convection heat transfer coefficient.

CO3 Explain and apply basic concepts of the radiation heat transfer for black and grey body.

CO4 Analyze the thermal analysis and sizing of Heat exchangers.

CO5 Explain various modes of mass transfer.

Modules	Blooms level*	Number of hours
<b>Module1 CONDUCTION:</b> <b>Introduction:</b> Conduction Rate Equation, Thermal Properties of Matter, Heat Diffusion Equation. <b>1-D Steady State Conduction:</b> The Plane Wall (Temperature Distribution, Thermal Resistance, The Composite Wall, Contact resistance), Alternative Conduction Analysis, Radial Systems, Conduction with Thermal energy Generation (Plane Wall, Radial Systems, Applications of Resistance Concepts), Heat Transfer from Extended Surfaces. Introduction to 2-D and 3-D Steady State Conduction	L1, L2 and L3	7
<b>Module 2 CONVECTION:</b> Governing Equations, Similarity Considerations, Laminar Free Convection on a Vertical Surface, Effect of Turbulence, Empirical Correlations: External Free Convection Flows (Vertical Plate, Inclined and Horizontal Plate, Long Horizontal Cylinder, Sphere), Free Convection within Parallel Plate Channels, Empirical Correlations, Combined Free and Forced Convection, Free Convection to Fluids in the Near-Critical region, Convection Mass Transfer	L1, L2, and L3	7
<b>Module 3 Boiling and Condensation:</b> Boiling Modes, Pool Boiling and Its Correlations, Forced Convection Boiling; <u>Condensation</u> : Physical Mechanisms, Laminar and Turbulent Film Condensation, Film Condensation on Radial systems and Horizontal Tubes, Drop-wise Condensation.	L2 and L3	8
<b>Module 4 HEAT EXCHANGERS:</b> Heat Exchanger Types, Overall Heat Transfer Coefficient, Heat Exchanger Analysis: Parallel Flow Heat Exchanger, Counterflow Heat exchanger, Special operating conditions; Effectiveness NTU Method	L2, L3 and L4	8

(Definitions, Effectiveness NTU Relations), Heat Exchanger Design and Performance Calculations using the Effectiveness NTU Method, Compact HeatExchangers, Finite Element Method for Heat exchangers.		
<b>Module 5 RADIATION: PROCESSES AND PROPERTIES:</b> <u>Radiation</u> - Processes and Properties: Fundamental Concepts, Emission from Real surfaces, Absorption, Reflection and Transmission by Real Surfaces (Absorptive, Reflectivity, Transmissivity, Special Considerations), Gray surface, Environmental Radiation. <b>Diffusion Mass Transfer:</b> Physical Origins and rate equations, Distillation, Absorption (and stripping), Humidification, Liquid liquid extraction, Adsorption, Diffusion and Drying	L2, L3 and L4	6

*\*Bloom's Level:*

THE 4206	<b>ADVANCED HEAT &amp; MASS TRANSFER LAB</b>				L	T	P	C
Version 1.1	Date of Approval: 26 June,2020				0	0	2	1
Pre-requisites/Exposure	Thermodynamics							
Co-requisites	Nil							

## Catalog Description

In this course study will be made on the practical aspects of conduction, convection and radiation. Experiments will be performed in the laboratory to find the thermal conductivity, convection heat transfer coefficient in case of natural and forced convection. This course is intended to provide an overview of practical aspects of heat exchanger analysis. The LMTD and effectiveness will be measured practically for parallel flow as well as counter flow heat exchanger.

## Course Objectives

The objective of this course is to

1. Equip the students with practical concepts of conduction, convection and radiation.
2. To provide students with the necessary skills to conduct experiments on conduction and convection of heat; collect data, perform analysis and interpret results to draw valid conclusions through standard test procedures.
3. Demonstrate the concepts discussed in the Heat & Mass Transfer course.
4. Experimentally determine thermal conductivity and heat transfer.
5. Experimentally measure LMTD and effectiveness in case of parallel and counter flow heat exchanger.

## Course Outcomes

On completion of this course, the students will be able to

CO1: Practically relate to concepts discussed in the Heat & Mass Transfer course; determine and Compare the thermal conductivity insulating material and temperature drop of a composite wall for different heat input values.

CO2: Calculate the mean emissivity and Stefan-Boltzmann's constant.

CO3: Differentiate between the heat transfer coefficients during natural and forced convection.

CO4: Outline and determine the temperature profiles of a pin fin heated at its bottom in natural convection and forced convection

CO5: Determine and compare LMTD and effectiveness of the heat exchanger during parallel and Counter current flow configuration.

Modules	Blooms level*	Number of hours
<b>Module 1</b> Determination of Overall Heat Transfer Coefficient of a Composite wall. To demonstrate the super thermal conductivity of heat pipe.	L1, L2, L3	5
<b>Module 2</b> To Study the variation of temperature of test plate with time to find the value of Stefan Boltzmann's constant. To study the importance and validity of engineering assumptions through the lumped heat capacity method.	L1, L2, L3 and L4	5
<b>Module 3</b> To determine the heat transfer coefficient in natural / free convection from the given empirical equation and compare it with the experimental value obtained. To determine the heat transfer coefficient in forced convection from the given empirical equation and compare it with the experimental value obtained. To measure solar radiations using lux meter	L1, L2, L3 and L4	5
<b>Module 4:</b> To plot the temperature v/s time response of the three pipes (test pipe, copper pipe, and stainless pipe). To plot the temperature distribution along the length of test pipe, copper pipe, stainless pipe.	L1, L2 and L3	5
<b>Module 5</b> Determination of LMDT and Effectiveness in a Parallel Flow and Counter Flow Heat Exchanger. To determine the overall heat transfer coefficient of the heat exchanger during parallel and counter current flow configuration.	L1, L2, L3	4

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4- Analysis; L5- Synthesis, L6- Evaluation*

THE4211	<b>Concepts of Combustion</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
VERSION	Date of Approval: 26 June,2020	3	1	0	4
Pre-requisites/ Exposure	Internal combustion engines				
Co-requisites					

### Catalog Description

In this course the concept of combustion, its physical and chemical kinetics will be discussed in detail. The pre-mixed and diffusion flames will be studied in detail with the effects of emissions in the environment.

### Course Objectives

The objective of this course is to:

1. Equip the students with physical and chemical kinetics of the combustion and its pre-mixed and diffused flame.
2. Provide an outline for the techniques to be used for controlling the harmful emissions from the combustion of fuel and its harmful effects.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Define and describe the basic laws of physics, chemistry and thermodynamics and derive the various equations to support the combustion processes.

CO2: Define and describe the principles of pre-mixed flame and outline their characteristics. Applying the effects of physics and chemistry on the variables of flame.

CO3: Define and describe the principles of diffusional flame and outline their characteristics. Describe the combustion of carbon sphere.

CO4: Outline the harmful emissions from the combustion of fuel and its harmful effects.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
MODULE 1: Physics and Chemistry of Combustion Combustion, modes of combustion, Laws of thermodynamics, stoichiometry, Hess's law, adiabatic flame temperature, laws of transport phenomena, conservation, energy transport equation; Basic reaction kinetics: collision theory; elementary reactions: first, second, third and reverse order reactions, QSSA and PEA method.	L1, L2 and L3	14

MODULE 2: Premixed flame One-Dimensional combustion wave, laminar premixed flame, propagation method, stationary flame method, effects of chemistry and physics variables on burning velocity, flame quenching, flammability limits, flame stabilization, turbulent pre-mixed flame.	L1, L2, L3	13
MODULE 3: Diffusion flame Gaseous jet flame, liquid fuel combustion: droplet burning time, spray combustion model; Solid fuel combustion: diffusional theory for a single coal particle combustion, combustion of carbon sphere with CO burning gas phase.	L1, L2	12
MODULE 4: Combustion and Environment Atmosphere, chemicals from combustion: emissions of CO, CO <sub>2</sub> , O <sub>2</sub> , H <sub>2</sub> O, NO <sub>x</sub> , N <sub>2</sub> O, H-C, volatile organic, SO <sub>2</sub> , sulphate aerosols, soot particles, emission control methods.	L1, L2	9

THE4212	<b>Energy Management &amp; Auditing</b>	L	T	P	C
VERSION	Date of Approval: 26 June,2020	3	1	0	4
Pre-requisites/ Exposure					
Co-requisites					

### Catalog Description:

In this course the current energy scenario, energy conservation, audit and management is discussed. To calculate the energy efficiency and identify the areas deserving strict control to save energy.

### Course Objectives:

The objective of this course is to

1. Equip the students with the in-depth knowledge of the functioning of energy management techniques and processes.
2. To provide basic calculations and methods for harnessing energy and also to identify the energy auditing methods adopted in many industries.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Describe, define and identify the energy management and energy conservation terminologies like supply, demand, economic analysis terminologies.

CO2: Define; describe the energy performance, energy acts and duties of auditors.

CO3: Explain, prepare and apply energy balance diagrams and energy action plans in an organization.

CO4: Identify and describe the ways in which energy is conserved in electrical and thermal equipment.

Modules	Blooms level*	Number of hours
MODULE 1: Energy Management Concept of energy management, energy demand and supply, economic analysis; Duties and responsibilities of energy managers. Energy Conservation: Basic concept, energy conservation in	L1, L2	8

Household, Transportation, Agricultural, service and Industrial sectors, Lighting, HAVC.		
<b>MODULE 2: Energy Audit</b>  Definition, need and types of energy audit; Energy management (Audit) approach: energy cost, bench marking, energy performance, matching energy use to requirement, maximizing system efficiencies, optimizing the input energy requirement; Fuel & energy substitution; Energy audit instruments; Energy conservation Act; Duties and responsibilities of energy manager and auditors	L1, L2	10
<b>MODULE 3: Material energy balance</b> Facility as an energy system; Method for preparing process flow; material and energy balance diagrams. Energy Action Planning: Key elements, force field analysis; Energy policy purpose, perspective, content, formulation, rectification.	L2, L3, L4	10
<b>MODULE 4: Monitoring and Targeting</b> Definition monitoring & targeting; Data and information analysis. Electrical Energy Management: energy conservation in motors, pumps and fan systems; energy efficient motors.	L1, L2	9
<b>MODULE 5: Thermal energy management</b> Energy conservation in boilers, steam turbine and industrial heating system; Application of FBC; Cogeneration and waste heat recovery; Thermal insulation; Heat exchangers and heat pump; Power plant's Renovation and modernization– Reactive power management and energy management, Building Energy Management and its ISO standards.	L1, L2	11

THE4213	<b>REFRIGERATION AND AIR CONDITIONING</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 1.1	Date of Approval: July 14, 2017	3	0	0	3
Pre-requisites/Exposure	Basics of Thermodynamics				
Co-requisites	-				

### Catalog Description

The aim of this course is to provide the students with the understanding of the basic principles of Refrigeration and Air Conditioning such that they could build simple mathematical models representing the conditioned space and its components used to control environmental conditions. The application of thermodynamics, heat transfer, and fluid mechanics includes an understanding of refrigerants and refrigeration systems, psychometrics, human comfort and air quality, calculation of heating and cooling loads, and heat and mass transfer processes and associated R&AC components and systems.

### Course Objectives

The objective of this course is to

Equip the students with concepts of air refrigeration, vapour compression refrigeration, different types of refrigerants, vapour absorption and steam jet refrigeration system.

Provide an overview of Psychrometry, HVAC systems and different expansion and control devices.

### Course Outcomes

After completing the course, the students will be able to

CO1. Explain air refrigeration, vapour compression refrigeration, different types of refrigerants, vapour absorption and steam jet refrigeration system.

CO2. Describe the working of Refrigerant in multistage, cascade refrigeration.

CO3. Apply the knowledge of psychrometry to various psychrometric processes.

CO4. Evaluate cooling and heating load and design of HVAC system.

CO5. Develop and design RAC system and evaluate different expansion and control devices.

Modules	Blo om se vel *	Nu mb er of hou rs
<b>MODULE-1: Analysis of refrigeration cycles</b>  Analysis of vapour compression refrigeration cycle Subcooled liquid and superheated vapour refrigeration cycles, their effect on performance. Compound compression Multi vapour- Cascade system, Vapour Absorption System: Simple vapour Absorption system- Actual vapour absorption cycle representation on enthalpy concentration h-c diagram, Enthalpy Concentration Diagram, Aircraft Refrigeration: Thermodynamic Cycle – Different systems – Analysis – Comparison Un Conventional Refrigeration, Industrial Refrigeration: Chemical and process industries, Dairy plants, Petroleum Refineries.	L1, L2 and L3	8
<b>MODULE-2: Refrigerants</b> Primary and secondary refrigerants. Designation of refrigerants, Desirable properties of refrigerant such as solubility in water and lubricating oil. Material compatibility, Toxicity, Flammability, Thermodynamic properties of refrigerants, Inorganic, Halocarbon refrigerants. Secondary refrigerants. Refrigerant mixtures, Need for Alternate refrigerants – Retrofitting aspects.	L1, L2, and L3	8
<b>MODULE-3: Applied Psychrometry</b>  Psychrometric processes in air conditioning equipment, Mixing, Bypass factor, Heating and dehumidifying coils, Air washers. Cooling by dry and wet coils, Use of hygroscopic solution in air washers, Adiabatic dehumidifiers. Humidifiers, Water injection. Steam injection.	L2 and L3	7
<b>MODULE 4: Comfort Air Conditioning and Cooling Load Calculations:</b>  Sensible and Latent Heat Loads – sensible heat factor. Use of Effective and grand sensible heat factor, Relationship between ESHF, ADP and BF. Representation of All Fresh Air, Recirculated air, Bypassed Air and High Latent Heat Load system on Psychrometric Chart, Air Conditioning Systems: Summer, winter, Hot and dry outdoor conditions.	L2, L3 and L4	7

<b>MODULE5:Selectionofoutsideandinsidedesignconditions:</b> Thermodynamics of human body. Body regulation process against the heat and cold. Comfort & Comfort chart, Effective temperature, Factors governing optimum effective temperature, Design considerations. Air conditioning control systems: Basic elements of the control system, Temperature, Humidity & Pressure controls, Refrigeration, Room thermostat.	L2, L3 and L4	6

### Catalog Description

In this course the concepts of quality improvement in manufacturing are discussed in detail. Various quality management tools, improvement cycles, quality circles and audit procedures will be introduced. The concepts learnt will be applied to improve quality in manufacturing.

### Course Objectives

The objective of this course is to

1. Equip the students with concepts of quality improvement in manufacturing.
2. Provide an overview of quality management tools, improvement cycles, quality circles and audit procedures.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Define components of quality, innovation, design and explain Product quality characteristics and dimensions.

CO2: Explain various key aspects of the quality system standards.

CO3: Describe total quality management tools, improvement cycle and quality organization.

CO4: Define quality assurance, inspection, quality circles and explain quality audits.

Modules	Blooms level*	Number of hours
<b>MODULE 1:The Foundations of Total Quality Management:</b> Components of quality, The total quality management approach, Innovation, design and improvement, Product quality characteristics and service quality characteristics, Quality parameters and specific dimensions of quality.	L1and L2	8
<b>MODULE 2:Key Aspects of the Quality System:</b> Planning for quality, Flowcharting, Detailed flow process charts and flow diagrams, planning for just-in-time (JIT) management, System design and contents, System documentation, implementation and assessment.	L1 and L2	8
<b>MODULE 3:TQM Tools and the Improvement Cycle:</b> Measurement of quality, Costs of quality, Tools and techniques for quality improvement, Statistical process control, Quality improvement techniques in service industries, Specific techniques for design,	L1 and L2	10

reliability, maintenance and process improvement.		
<b>MODULE 4:The Quality Organization Within an Organization:</b> People and the organizational structure, Responsibilities and performance management, The relationship between the quality organization and top management, Culture change through teamwork for quality improvement, Implementing teamwork for quality improvement: the DRIVE model.	L1 and L2	10
<b>MODULE 5:Internal Quality Audits:</b> Scope of requirements and audit procedures, the audit programme and planning of quality audits, Verifying compliance with planned arrangements, determining the effectiveness of the system, reporting the results of quality audits, Follow-up audits  Quality and Business Process Re-engineering: Beyond tools to total quality management, Stages in the development of quality and related activities: inspection, quality assurance, company-wide quality control, total quality management, Quality circles.	L1 and L2	12

Version 1.1	Date of Approval: 26 June,2020	3	0	0	3
Pre-requisites/Exposure	Fluid Mechanics				
Co-requisites	Nil				

### Catalog Description

Computational Fluid Dynamics (CFD) is a branch of fluid mechanics that uses algorithms to analyze and solve problems that involves fluid flow. This design tool has been developed over the years. The software simplifies complex simulations and can be applied in a varied range of transonic or turbulent flows, for biological, physical, chemical and medical applications. CFD is being increasingly employed by many industries either to reduce manufacturing design cycles or to provide an insight into existing technologies so that they may be analyzed and improved. Examples of such industries include power generation, aerospace, process industries, automotive, chemical engineering and construction.

### Course Objectives

The objective of this course is to

1. Equip the students with concepts of computational fluid dynamics and models of flow.
2. Provide an overview of continuity, momentum and energy equations and basic aspects of Discretization.

### Course Outcomes

On completion of this course, the students will be able

CO1: To define and explain the concept of CFD and its applications; finite control volume; infinitesimal fluid element, substantial derivative, divergence of velocity.

CO2: To state and describe continuity, momentum and energy equations of fluid Dynamics.

CO3: To explain the classification of quasi linear partial differential equations and general behavior of the different classes of partial differential equations

CO4: To define and distinguish different aspects of Discretization and computational fluid Dynamics techniques.

CO5: To explain the concept of Pressure correction Technique & Incompressible Couette Flow

Modules	Blooms	Number
---------	--------	--------

	level*	of hours
<b>Module 1 Introduction</b> Introduction to CFD, CFD as a research tool, CFD as a design tool, applications of CFD: automobile and engine applications; industrial manufacturing applications; civil engineering applications; environmental engineering applications, models of flow: finite control volume; infinitesimal fluid element, substantial derivative, divergence of velocity: its physical meaning.	L1, L2	7
<b>Module 2 Governing Equations of Fluid Dynamics</b> The continuity equation: model of finite control volume fixed in space; model of finite control volume moving with the fluid; model of infinitesimally small element fixed in space, model of infinitesimally moving with the flow, momentum equation, energy equation, summary of the governing equations for fluid dynamics with comments: equations for viscous and non viscous flow, physical boundary conditions	L1, L2	7
<b>Module 3 Mathematical Behavior of partial differential equations</b> Introduction, classification of quasi linear partial differential equations, a general method of determining the classification of partial differential equations: Eigen value method, general behavior of the different classes of partial differential equations: hyperbolic equations; steady in viscid supersonic flow; unsteady in viscid flow, parabolic equations: steady boundary layer flow, elliptic equations.	L1, L2	7
<b>Module 4 Discretization&amp; CFD Techniques</b> Introduction, Introduction to finite differences, difference equations, Explicit and implicit approaches, errors and stability analysis, some simple CFD Techniques: Introduction, Lax Wendroff technique and Maccormack's technique, some comments: viscous flows, conservative form, space marching, Relaxation technique, Alternating Direction implicit technique.	L1, L2	7

<b>Module 5 Pressure correction Technique &amp; Incompressible Couette Flow</b> Introduction, some comments on the incompressible Navier – Stokes equations, need for a staggered grid, philosophy of pressure correction method, pressure correction formula, boundary conditions, some computer graphic techniques used in CFD: xy plots, contour plots, vector and streamline plots, scatter plots, mesh plots, composite plots, Incompressible Couette Flow: introduction, physical problem and its exact analytical solution, numerical approach. Introduction to Finite element method in Computational fluid Dynamics	L1, L2	8

### Catalog Description

In this course study will be made on the Numerical solution of laminar and turbulent pipe flow problem in ANSYS Fluent. This course is intended to carry out numerical simulation for Plate Boundary Layer and Flow in a nozzle problem in ANSYS Fluent. Numerical simulation will be carried out for conduction as well as Steady flow past a cylinder and sphere problems.

### Course Objectives

The objective of this course is to

1. Provide students with the necessary skills to carry out numerical simulation.
2. Equip the students with basic concepts of Ansys to develop numerical simulation for different types of problems.

### Course Outcomes

On completion of this course, the students will be able

CO1: To develop the numerical solution to a laminar and turbulent pipe flow problem in ANSYS Fluent.

CO2: To develop the numerical solution to a Flat Plate Boundary Layer and Flow in a nozzle problem.

CO3: To develop numerical simulation of the Steady flow past a cylinder and sphere in ANSYS Fluent.

CO4: To develop numerical simulation of the flow over an airfoil and heat conduction problem in ANSYS Fluent.

CO5: To develop numerical simulation of the heat conduction through a composite wall and cylinder in ANSYS Fluent.

Modules	Blooms level*	Number of hours
<b>Module 1</b> To develop the numerical solution to a laminar pipe flow problem in ANSYS Fluent. To develop the numerical solution to a turbulent pipe flow problem in ANSYS Fluent.	L1, L2 and L6	5

THE4311	MICRO FLUIDICS & NANO FLUIDIC				L	T	P	C
Version 1.1	Date of Approval: 26 June,2020				3	1	0	4
Pre-requisites/Exposure	Fluid Mechanics							
Co-requisites	Nil							

### Catalog Description

In this course studies will be made on General properties of micro and nano scale flows, fluid statistics, kinematics of a fluid velocity fluid. This course is intended to provide an overview of BasicPrinciples of Micro fluidics and Governing Equations. This course will be helpful in understanding the concepts of unidirectional flow, hydraulic circuit analysis. Also the studies will be made on the basic concepts of nano fluidics.

### Course Objectives

The objective of this course is to

1. Equip the students with concepts of micro Fluidics and nano fluidics.
2. Provide an overview of governing equations, unidirectional flow and hydraulic circuit analysis.

## Course Outcomes

On completion of this course, the students will be able

CO1: To define and explain the basic concepts of micro and nano scale flows and micro fluidics.

CO2: To describe basic principles of micro fluidics and governing equations.

CO3: To explain unidirectional flow and hydraulic circuit analysis

CO4: To summarize the basic concepts of nano fluidics.

CO5: To define and distinguish micro fluidics and nano fluidics.

Modules	Blooms level*	Number of hours
<b>Module 1 Introduction and Micro fluidics</b> <b>Introduction:</b> General properties of micro and nano scale flows, fluid statistics, kinematics of a fluid velocity field, important geometric definitions: streamline, streak line, path line, and material line, strain rate and rotation rate tensors. <b>Micro fluidics:</b> Definition, objectives of micro fluidic systems, components of micro fluidic device: micro scale fuel handling system, sample loading and injection device, Electro osmotic pumping system, small volume transport, variable pressure delivery chamber, applications.	L1, L2	13
<b>Module 2 Basic Principles of Micro fluidics and Governing Equations</b> <b>Basic Principles:</b> Introduction, basic principles: laminar flow, Peclet number, pressure driven flow, electro osmotic flow, micro pumps: mechanical, non mechanical micro pumps, electro kinetic pump, MHD pump, Micro mixers: active and passive micro mixers, applications. <b>Governing Equations for incompressible flow :</b> Conservation of mass and momentum equations, constitutive relations, non Newtonian fluids, interfacial energy, contact angle, velocity and stress boundary conditions at interfaces, kinematic boundary conditions for continuity of normal velocity, dynamic boundary conditions for continuity of tangential velocity, flow regimes, Navier slip boundary condition.	L1, L2	13
<b>Module 3 Unidirectional Flow and Hydraulic circuit Analysis</b> <b>Unidirectional Flow:</b> Introduction, steady pressure and boundary driven	L1, L2	13

flow through long channels, coquette flow, physical interpretation, Reynolds number, Poiseuille flow, physical interpretation, startup and development of unidirectional flow <b>Hydraulic circuit Analysis:</b> Introduction, hydraulic circuit analysis, hydraulic circuit equivalent for micro channels, introduction to potential fluid flow, introduction to stokes flow		
<b>Module 4 Nano fluidics</b> Introduction to nano fluidics, advantages of nano fluidics, comparison of micro fluidics and nano fluidics, nano scale forces, phenomena in nano fluidics, applications of nano fluidics, lab on chip, gene expression studies	L1, L2	9

### Course Objectives

Illustrate the fundamental principles and applications of deep refrigeration system

Present the properties, applications and environmental issues of different refrigerants

### Course Outcomes

On completion of this course, the students will be able to

CO1. To explain and describe the effect of Neon, hydrogen and helium component efficiencies on system performance.

CO2. To describe and analyse the gas separation and purification principles and plant calculation

CO3. Describe the ideal and practical systems of Cryogenic refrigeration systems

CO4. Describe the introduction to vacuum technology, low temperature properties of materials and application of cryogenic systems.

CO5. Describe the space technology, Cryogenic industry, Biology and application of Medicine.

<b>THE4312</b>	<b>Turbomachines</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
VERSION	Date of Approval: 26 June,2020	3	1	0	4
Pre-requisites/ Exposure	Internal combustion engines				
Co-requisites					

### **Catalog Description**

In this course the concept of Thermo-fluid dynamics aspects of fluid flow, Kinematic relations and efficiencies of turbomachines, axial Turbines Centrifugal, Compressors and Fans, Radial Flow Turbines, and preliminary design fundamentals of turbo machines will be discussed in detail. It will focus on applications in power generation, transport, refrigeration and the built environment.

### **Course Objectives**

The objective of this course is to:

1. Equip the students with different types of turbomachines and their applications.
2. Provide an outline for the derivations to be used for finding out work done and efficiencies of various turbomachines.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: Define; describe turbo machines and its components. Categorize them on the basis of their working and outcome.

CO2: Derive turbine equations, construct velocity triangles and list the effect of blade discharge angle of performance parameters of turbo machines.

CO3: Define and describe and categorize the impulse and reaction turbines. Derive conditions for maximum utilization factor.

CO4: Classify the hydraulic turbines, derive and analyze its design parameters for maximum efficiency.

CO4: Categorize different types of pumps and compressors. Derive an expression for pressure ratio, work done and efficiency.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>MODULE 1: INTRODUCTION</b>  Introduction: Definition of turbo machine, parts of turbo machines, Comparison with positive displacement machines, Classification, Application of first and second law of thermodynamics to turbo machines, Efficiencies of turbo machines, Static and Stagnation states, overall isentropic efficiency, stage efficiency, Reheat factor for expansion process	L1, L2 and L4	8
<b>MODULE 2: ENERGY EXCHANGE IN TURBO MACHINES</b>  Euler's turbine equation, Alternate form of Euler's turbine equation, Velocity triangles for different values of degree of reaction, Components of energy transfer, Degree of Reaction, utilization factor, Relation between degree of reaction and Utilization factor, Problems.  Radial flow compressors and pumps – general analysis, Expression for degree of reaction, velocity triangles, Effect of blade discharge angle on energy transfer and degree of reaction, Effect of blade discharge angle on performance, degree of reaction, velocity triangles, Problems.	L1 and L3	10
<b>MODULE 3: STEAM TURBINES AND REACTION TURBINES</b>  Classification, Single stage impulse turbine, condition for maximum blade efficiency, stage efficiency, Need and methods of compounding, Multi-stage impulse turbine, expression for maximum utilization factor.  Reaction turbine – Parsons's turbine, condition for maximum utilization factor, reaction staging. Problems.	L1, L2, L3 and L4	10
<b>MODULE 4: HYDRAULIC TURBINES</b>  Classification, various efficiencies. Pelton turbine – velocity triangles, design parameters, Maximum efficiency. Francis turbine - velocity triangles, design parameters, Kaplan and Propeller turbines – velocity triangles, design parameters. Problems. Ansys TurboGrid.	L2, L3 and L4	12
<b>MODULE 5: PUMPS AND COMPRESSORS</b>  Classification and parts of centrifugal pump, different heads and efficiencies of centrifugal pump, Minimum speed for starting the	L2 and L3	8

flow, Cavitation, Need for priming. Problems		
Centrifugal Compressors: Stage velocity triangles, slip factor, power input factor, Stage work, Pressure developed, efficiency and problems.		
Axial flow Compressors: Expression for pressure ratio developed in a stage, work done factor, efficiencies. Problems.		

*\*Bloom's Level:*

### **Catalog Description**

In this course the concepts of optimization techniques are discussed in detail. The main objective of this course is to provide the basic concepts of optimization techniques and to educate them on the advancements in optimization techniques. It also provides knowledge of multi-Objective Programming and Genetic algorithms.

### **Course Objectives**

The objective of this course is

1. To familiarize the students with various tools of optimization for management of various resources.
2. To acquaint the students with various advance techniques of optimization like multi-Objective Programming and Genetic algorithms etc.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: Define optimization technique and explain its various techniques.

CO2: Apply the concept of classical optimization techniques for solving problems on single-variable and multi-variable optimization.

CO3: Apply non-linear programming and solve problems on one-dimensional optimization methods, unconstrained and constrained optimization techniques.

CO4: demonstrate the concept of other optimization techniques like geometric programming, dynamic programming, integer programming, stochastic programming, and solving problems.

CO5: Illustrate different types of advance topics in optimization.

Modules	Blooms level*	Number of hours
Module 1: Introduction Need of Optimization and Historical Development, Engineering Applications, Classification and Formulation of Optimization Problem	L1, L2 and L3	6
Module 2: Classical Optimization Techniques Single-Variable and Multi-Variable Optimization, With and Without Constraints, Kuhn-Tucker Conditions.	L1, L2 and L3	10
Module 3: Non-Linear Programming Introduction, One-Dimensional Optimization Methods, Unconstrained and Constrained Optimization Techniques; Elimination Methods, Exhaustive Search, Interval Halving, Fibonacci, Golden Section Methods; Random Search Methods, Hooke and Jeeves Method, Powell's Method; Indirect Search Methods: Steepest Descent, Fletcher-Reeves, Newton's Method, DFP, BFGS Method; Internal and External Penalty Approach.	L1, L2 and L3	12
Module 4: Other Optimization Techniques Introduction and Basic Concepts of Geometric Programming, Dynamic Programming, Integer Programming, Stochastic Programming, Their Applications	L1, L2 and L3	10
Module 5: Advance Topics in Optimization Multi-Objective Programming, Introduction to Genetic Algorithms, Simulated Annealing and ANN Based Optimization.	L1, L2 and L3	10

*\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation*

Version 2017.1	Date of Approval: 26 June,2020	3	1	0	4
Pre-requisites/Exposure	Probability, Engineering statics, data analysis, hypothesis testing and ANOVA				
Co-requisites	Apply basic principles in the design of simple experiments.				

### **Catalog Description**

In this course the concepts of experimental design, steps of experimental design, types of experimental design and six sigma are discussed in details. The design of experiments includes completely randomized design, latin square design, factorial design, full factorial design, fractional factorial design, robust design and Taguchi's approach for experimental design.

### **Course Objectives**

The objective of this course is to

1. Explain the issues and principles of Design of Experiments (DOE),
2. Providing an understanding of interactions among causative factors
3. Determining the levels at which to set the controllable factors.
4. Minimizing experimental error (noise) and improving the robustness of the design or process to variation.

### **Course Outcomes**

On completion of this course, the students will be able to

- CO1. Learn how to plan, design and conduct experiments efficiently and effectively, and analyze the resulting data to obtain objective conclusions..
- CO2. Given a description of an experiment, determine whether it is a factorial experiment, a fractional factorial experiment, or neither
- CO3. Determine whether the design appropriately deals with extraneous variables via controlling, blocking, randomization or replication.
- CO4. Explain robust design and taguchi's approach for design of experiments.

Modules	Blooms level*	Number of hours
<b>MODULE 1: Introduction</b>  A brief history of statistical design, Objectives for experimental designs. Basic design concepts. Steps and guidelines for the design of experiments, Some typical applications of experimental design, Types of experimental designs, Analysis of means, Experimental designs and six sigma, Problems	L1, L2 and L3	10
<b>MODULE 2: Completely Randomized Design</b>  Model for a completely randomized design with a single factor. ANOM for a completely randomized design, ANOM with unequal variances, randomized block design, incomplete block designs, latin square design, Graeco – Latin square design.	L1, L2, L3 and L4	12
<b>MODULE 3: Full Factorial and Fractional Factorial Designs with Two Levels</b> Nature of factorial designs, deleterious effects of interactions, effect estimates the $2^3$ Design, built-in –replication, role of expected mean squares in experimental design, <b>2k-1</b> Designs. Effect estimates and regression coefficients, <b>2k-2</b> Designs. basic concepts; design efficiency, John's $3/4$ designs	L1, L2, L3 and L4	14
<b>MODULE 4: Robust Design</b>  DOE and Taguchi approach; experimental design using orthogonal arrays; experimental design with two-level factors only; experimental designs with three and four level factors; ANOVA ; analysis using signal- to- noise ratios.	L1, L3 and L4	12

### Catalogue Description

This course deals with types of research, significance and characteristics and planning a research proposal, population and sample, parameter and statistic, sampling and data collection, sampling design: steps, types, sample size, sampling methods. It deals with univariate, bivariate and multivariate analysis, measure of dispersion of data, standard deviation, variance, coefficient of variation and degree of freedom. Hypothesis testing: parametric tests and non-parametric tests, regression analysis and curve fitting, method of least-squares, explained and unexplained variations, coefficient of correlation of determination. The course also deals with technical/scientific/research report writing: referencing and bibliography and footnotes. Publication of research papers, citations, intellectual property rights and copy rights, plagiarism, patent and patent laws, commercialization and ethical issues.

### Course Objectives

The objective of this course is to:

1. Deals with types of research, significance and characteristics and planning a research proposal and to enhance scientific and technical writing and research skills.
2. Impart knowledge about various stages of research process, statistical analysis and tools & their applications in decision making by hypothesis testing and regression analysis.
3. It also deals with intellectual property rights and copy rights, plagiarism, patent and patent laws, commercialization and ethical issues.

### Course Outcomes

On completion of this course, the students will be able to:

- CO1: Classify different research types; explain steps in research process and planning research proposal.
- CO2: Describe sampling methods, sampling steps and design, carry out data processing and analysis.
- CO3: Explain hypothesis testing, parametric and non-parametric tests, carry out regression analysis, curve fitting.
- CO4: Demonstrate technical and scientific report writing skills; describe plagiarism, patent laws and intellectual property rights.

Modules	Blooms level*	Number of hours
Module I: Introduction and Research Planning Introduction to research: Definition, motivation, need, objectives, significance and characteristics of research; types of research; steps in research process; planning a research proposal; literature review,	L1, L2	4

web searching.		
<b>Module II: Sampling Methods</b> Measurement scales, population and sample, parameter and statistic, sampling and data collection, sampling design: steps, types, sample size, sampling methods, data processing and analysis. Sampling surveys and questionnaire designing, primary and secondary data.	L1, L2, L3	5
<b>Module III: Hypothesis Testing and Regression Analysis</b> Univariate, bivariate and multivariate analysis, means-arithmetic, geometric and harmonic; measure of dispersion of data, standard deviation, variance, coefficient of variation and degree of freedom. Hypothesis testing: kinds errors in hypothesis testing, significance and confidence levels, parametric tests and non-parametric tests, one-tailed and two-tailed tests, analysis of variance. Regression analysis and curve fitting, method of least-squares, explained and unexplained variations, coefficient of correlation of determination.	L1, L3, L4	10
<b>Module IV: Technical Report Writing and Plagiarism</b> Technical/scientific/research report writing: structure and components of scientific reports, formats of dissertations, research report, report writing skills, report preparation, referencing and bibliography and footnotes. Publication of research papers, citations, making presentation-use of visual aids and PPTs. Intellectual property rights and copy rights, plagiarism, patent and patent laws, commercialization and ethical issues.	L1, L3, L4	5

### Catalog Description

In this course the concepts of solid modeling in computer aided design are discussed in detail. This course includes transformation of point, line and projection of an object. Introduction to the principles of curve, surface and solid representations; mathematical representations of curves, surfaces, solids and application to mechanical design problems are discussed in details.

## Course Objectives

The objective of this course is to

1. Learn about the geometric issues concerned solid modeling, geometric transformation and projection of object.
2. Impart the parametric fundamentals to create and manipulate geometric models using curves, surfaces and solids.

## Course Outcomes

On completion of this course, the students will be able to

CO 1: Describe the concept of solid modeling and explain the parametric equation in CAD

CO 2: Solve the problem on 2 D transformation and 3 D in CAD and explain the orthographic, axonometric, oblique and perspective projections

CO 3: Explain the topology of geometry and determine the equation of Hermit curve, Bezier curves and B-spline curves.

CO 4: Explain the geometric form of surface, blending function and determine the equation of bi-cubic surface, bezier surface and B-spline surfaces

CO 5: Describe the solid representation scheme and demonstrate the constructive solid geometry, sweep representation and cell decomposition in solids.

CO 6: Summaries the analytical properties of curve and surface.

Modules	Blooms level*	Number of hours
MODULE 1:INTRODUCTION Introduction, Review of vectors & Matrices, Basics of geometric and solid modeling, explicit, implicit, intrinsic and parametric equations, coordinate systems	L1, L2 and L3	4
MODULE 2:TRANSFORMATIONS Introduction, transformation of points and line, 2-D translation, shearing, rotation, reflection, scaling and combined transformation, homogeneous coordinates, 3-D scaling, shearing, rotation, reflection and translation, combined transformations, orthographic, axonometric, oblique and perspective projections.	L1, L2 and L3	6
MODULE 3:CURVES	L1, L2	8

Geometry and topology, algebraic and geometric forms of straight lines, circles, conics, cubic splines, Ferguson curve, Hermit curve, Bezier curves and B-spline curves, NURBS, composite curves, tangents and normal, blending functions, reparametrization.	and L3	
<b>MODULE 4:SURFACES</b>  Algebraic and geometric forms, tangents and twist vectors, normal, blending functions, reparametrization. Plane surface, sixteen point form, four curve form, ruled surface, surface of revolution, tabulated cylinder, lofted surface, bi-cubic surface, bezier surface, B-spline surfaces, Coons' patch, blending surface, offset surface, rational surface.	L1, L2 and L3	8
<b>MODULE 5:SOLIDS</b>  Solid models and representation schemes, their properties, boundary representation, constructive solid geometry, sweep representation, cell decomposition, octree encoding, spatial occupancy enumeration.	L1, L2 and L3	7
<b>MODULE 6:ANALYTICAL PROPERTIES</b>  Analytical properties (Intersection & development) of curves and surfaces	L1,L2 and L3	5

### Catalog Description

In this course the concepts of solid modeling in computer aided design are discussed in detail. This course includes the different types of features in part modeling, assembly of parts and projection of an object. Moreover the syllabus also covers the principles of curve, surface and solid representations; surfaces, solids and application to mechanical design

problems.

### Course Objectives

The objective of this course is to

1. Learn about the geometric issues concerned solid modeling and projection of object.
2. Impart the parametric fundamentals to create and manipulate geometric models using curves, surfaces and solids.

### Course Outcomes

On completion of this course, the students will be able to

CO 1: Demonstrate the fundamentals of modeling software features and capabilities. Prepare the sketch of simple mechanical components. Explain different types of features in part modeling & assembly of parts.

CO 2: Identify the mass properties & sectional properties of part & assembly and validate the assembly with interference detection.

CO 3: Construct machine elements in sketcher, part and assembly mode such as crankshaft, connecting rod, piston etc.

CO 4: Develop codes for analytical and synthetic curves.

CO 5: Construct the model using surface modeling tool.

List of Experiment	Blooms level*	Number of hours
1) Drawing sketches in the sketcher workbench, Constraints sketches and creating base features, Reference elements and sketch-based features.	L1, L2	2
2) Creating dress-up, hole features and Editing features.	L1, L2	2
3) To draw the detail view of the flange coupling and assemble the parts by using the CAD software and obtain its respective views.	L1, L2	2
4) To draw the detail view of the – crankshaft and assemble the parts by using the CAD software and obtain its respective views.	L1, L2 and L3	2
5) To draw the detail view of the connecting rod and assemble the parts by using the CAD software and obtain its respective views.	L1, L2	2

	and L3	
6) To draw the detail view of the piston and assemble the parts by using the CAD software and obtain its respective views.	L1,L2 and L3	2
7) Develop the computer program to generate the Bezier curve	L1,L2 and L3	2
8) Develop the computer program to generate the B-spline curve	L1,L2 and L3	2
9) Working with wireframe and surface design workbench.	L1,L2	2

### Catalog Description

Advanced Tribology is a cross-disciplinary course based on the basic principles of the science and engineering. The course focuses on theories of friction, wear, lubrication, basic model approaches of tribological elements/systems, and methods to simulate tribological processes.

### Course Objectives

The objective of this course is to:

1. Introduce students with the field of Tribology i.e. friction, wear and lubrication.
2. Enhance students' awareness of Tribological issues in the design of machine components, such as rolling element bearing, journal bearing, thrust bearings, seals and braking system.

### Course Outcomes

On completion of this course, the students will be able to

CO1: State and explain different types of engineering surfaces, their properties and measurement methods.

CO2: Describe and explain different contact between surfaces, Hertzian and Non-Hertzian contact. Explain different methods of measurement.

CO3: Define wear, lubrication and their type and will be able to explain different wear mechanism and lubrication regime.

CO4: Define, describe and analyze Hydrodynamic Journal Bearing, thrust bearing and air lubricated journal bearing.

CO5: Explain and describe the Nanotribology and its measurement methods.

<b>Modules</b>	<b>Bloom s level*</b>	<b>Numbe r of hours</b>
<b>MODULE 1: INTRODUCTION</b>  Introduction to Tribology and its historical background Industrial importance, Factors Influencing Tribological phenomena <b>ENGINEERING SURFACES, PROPERTIES AND MEASUREMENT</b> Engineering surfaces -surface characterization computation of surface parameters. Surface measurement techniques. Apparent and real area of contact, Contact of engineering surfaces.	L1, L2 and L3	8
<b>MODULE 2: SURFACE CONTACT</b> Hertzian and Non-Hertzian contact. Contact pressure and deformation in non-conformal contacts. <b>SURFACE CONTACT</b> Genesis of friction, friction in contacting rough surfaces, sliding and rolling friction, Various laws and theory of friction. Stick slip friction behavior, frictional heating and temperature rise. Friction Measurement techniques.	L1, L2, L3	8
<b>MODULE 3: WEAR</b> Wear and Wear types. Mechanisms of wear -Adhesive, abrasive, corrosive, erosion, fatigue, fretting, etc., wear of metals and non-metals. Wear models – asperity contact, constant and variable wear rate, geometrical influence in wear models, wear damage. Wear in various mechanical components, wear controlling techniques.	L1, L2, L3	8
<b>MODULE 4: LUBRICATION</b> Introduction to Lubrication, Lubrication regimes, Lubricants and their properties. Solid Lubricants.	L1, L2, L3	7
<b>MODULE 5: HYDRODYNAMIC BEARING</b>  Mechanism of pressure development, Classification, Idealized Journal Bearing, Pressure Distribution.  <b>ANTIFRICTION BEARING</b>  Ball and Roller Bearing, Geometry of ball bearing, Stresses and Deformation,	L1, L2, L3, L4	10

Lubrication of ball bearing. GAS LUBRICATED BEARING Introduction, Governing Equation, Finite Journal Bearings. .		
MODULE 6: NANOTRIBOLOGY  Introduction to micro and NanoTribology. Measurement tools used in Nanotribology: SFA, STM, AFM Micro scale and Nanoscale Wear Nanofabrication/NanomachiningNanohydrodynamicsNanolubricationTribological issues in MEMS. .	L1, L2, L3	7

### **Catalog Description**

This subject covers the fundamental concept of Robotics used in industrial application including motors, controllers, and sensors etc. This course includes Robot anatomy, coordinate frames, manipulator control, Robot sensors, language, applications, kinematics and dynamic modeling etc.

### **Course Objectives**

The objective of this course is to

1. Equip the students with concepts of Robotics, coordinate frames, mapping, Robot language sensors and applications.
2. Provide an overview of manipulator control, kinematic and dynamic modeling of different types of robot.

### **Course Outcomes**

On completion of this course, the students will be able to

- CO1. Describe evolution, history and progressive advancement in Robotics and explain fundamental of coordinate frame, mapping and transforms.
- CO2. Explain the kinematic model and inverse kinematics of robot arm configuration.
- CO3. Describe the manipulator differential motion and explain dynamic behavior of manipulator.
- CO4. Explain the manipulators control and various sensors used in robot.
- CO5. Explain various robot applications and methods of robot programming.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>MODULE 1:INTRODUCTION TO ROBOTICS</b>  Evolution of Robots and Robotics, Laws of Robotics, Progressive advancement in Robots Robot anatomy, Human Arm Characteristics, Design and Control issue, Manipulation and Control, Programming Robots.  <b>COORDINATE FRAMES, MAPPING AND TRANSFORMS</b> Coordinate Frames, Description of objects in space, Transformation of Vectors, Inverting a Homogeneous Transform, Fundamental Rotation matrix.	L1, L2 and L3	8
<b>MODULE 2:DIRECT KINEMATIC MODEL</b>  Mechanical structure and notations Kinematic modeling of the manipulate or Denavit Hardenberg Notation Manipulator Transformation Matrix  <b>THE INVERSE KINEMATIES</b> Manipulator workspace, solvability of Inverse kinematics model, solution techniques, closed form solution.	L2 and L3	10
<b>MODULE 3:MANIPULATOR DIFFERENTIAL MOTION AND STATICS</b>  Linear and angular velocity of a rigid body, relationship between transformation matrix and angular velocity, manipulator Jacobian, Jacobian Inverse, Jacobian Singularities, Static Analysis.  <b>DYNAMIC MODELING</b> LargrangianMechanics, Two Degree of Freedom manipulator-Dynamic Model, Lagrange-Euler formulation Newton-Euler formulation, Inverse	L1, L2 and L3	10

Dynamics.		
<b>MODULE 4:CONTROL OF MANIPULATORS</b>  Open and Close loop control, linear control schemes, linear second order SISO model of a manipulator joint. Joint Actuators, Computed Torque Control, force control of Robotics, Manipulators, Hybrid position/force control, Impedance Force/Torque Control.  <b>ROBOTIC SENSORS</b> Sensors in Robotics, classification of Robotic sensors, kinds of sensors used in robotics-Acoustic sensors optic, Pneumatic, force/Torque sensors.	L2 and L3	10
<b>MODULE 5: ROBOT APPLICATIONS</b>  Industrial Applications-Material Handling, Processing Applications, Assembly applications, inspection application, Principles for Robot application and application planning, Robot safety, Non-Industrial Application.  <b>ROBOT LANGUAGES AND PROGRAMMING</b> The Textual Robot Languages, Generations of Robot Programming Languages, Methods of Robot Programming.	L1, L2 and L3	8

### Catalog Description

The course introduces the physical principle used by various experimental techniques and also provides a guideline to select an experimental technique for a given application. The role of analytical, numerical, experimental methods in solving a problem in solid mechanics and different types of non-destructive methods are discussed.

### Course Objectives

The objective of this course is to:

1. Recognize the various techniques available to measure the stress and Strains using different sources.
2. Realize the working of recording instruments and data logging methods
3. Distinguish the principles of photo elasticity in two dimensional stress analyses.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Define, describe and analyze the measurements techniques, accuracy of measurement and error analysis.

CO2: Explain and describe the theory Mechanical Strain Gauges, Optical Strain Gauges, Electrical Strain Gauge and Acoustical Strain Gauge.

CO3: Acquire the knowledge on Brittle and Bi-Refrigerant coatings and analyze the working of strain gauges.

CO4: Describe and explain the overall concepts of stress/strain analysis by experimental means.

CO5: Explain and analyze the theory and practice of common experimental stress analysis Methods including Moir methods, non destructive testing.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>MODULE 1: MEASUREMENTS</b> Principles of measurements, Range and Accuracy of measurements, Sensitivity of Measurements, Error Analysis	L1, L2 and L4	9
<b>MODULE 2: EXTENSOMETERS</b> Mechanical Strain Gauges, Optical Strain Gauges, Electrical Strain Gauge, Acoustical Strain Gauge.	L1, L2, L3	10
<b>MODULE 3: ELECTRICAL RESISTANCE STRAIN GAUGES</b> Principle of Operation and Requirements, Types and their uses, Materials for strain gage, Calibration and Temperature Compensation, Cross Sensitivity, Circuits for Static and Dynamic Strain Measurements, Strain Indicators , Rosette Analysis	L1, L2, L3, L4	11
<b>MODULE 4: PHOTOELASTICITY</b> Concepts of light, Photoelastic effects, stress optic law, Interpretation of fringe pattern, Compensation and Separation Techniques, Photoelastic materials	L1, L2, L3	8
<b>MODULE 5: NON-DESTRUCTIVE TESTING</b> Fundamental of NDT, Radiography, Magnetic Particle Inspection, Ultrasonic Testing, Fluorescent Penetrate Technique, Eddy Current Testing, Acoustic Emission Technique, Thermography , Fundamentals of brittle coating methods, Introduction to Moir Techniques, Holography.	L1, L2, L3, L4	10

### Catalog Description

In this course the concepts of quality improvement in manufacturing are discussed in detail. Various quality management tools, improvement cycles, quality circles and audit procedures will be introduced. The concepts learnt will be applied to improve quality in manufacturing.

### Course Objectives

The objective of this course is to

- Equip the students with concepts of quality improvement in manufacturing.
- Provide an overview of quality management tools, improvement cycles, quality circles and audit procedures.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Define components of quality, innovation, design and explain Product quality characteristics and dimensions.

CO2: Explain various key aspects of the quality system standards.

CO3: Describe total quality management tools, improvement cycle and quality organization.

CO4: Define quality assurance, inspection, quality circles and explain quality audits.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>MODULE 1:The Foundations of Total Quality Management:</b> Components of quality, The total quality management approach, Innovation, design and improvement, Product quality characteristics and service quality characteristics, Quality parameters and specific	L1 and L2	8

dimensions of quality.		
<b>MODULE 2:Key Aspects of the Quality System:</b> Planning for quality, Flowcharting, Detailed flow process charts and flow diagrams, planning for just-in-time (JIT) management, System design and contents, System documentation, implementation and assessment.	L1 and L2	8
<b>MODULE 3:TQM Tools and the Improvement Cycle:</b> Measurement of quality, Costs of quality, Tools and techniques for quality improvement, Statistical process control, Quality improvement techniques in service industries, Specific techniques for design, reliability, maintenance and process improvement.	L1 and L2	10
<b>MODULE 4: The Quality Organization Within an Organization:</b> People and the organizational structure, Responsibilities and performance management, The relationship between the quality organization and top management, Culture change through teamwork for quality improvement, Implementing teamwork for quality improvement: the DRIVE model.	L1 and L2	10
<b>MODULE 5:Internal Quality Audits:</b> Scope of requirements and audit procedures, the audit programme and planning of quality audits, Verifying compliance with planned arrangements, determining the effectiveness of the system, reporting the results of quality audits, Follow-up audits  Quality and Business Process Re-engineering:Beyond tools to total quality management, Stages in the development of quality and related activities: inspection, quality assurance, company-wide quality control, total quality management, Quality circles. Version 1.1	Date of Approval: 26 June,2020	3	0	0	3
Pre-requisites/Exposure	Physics, Engineering Mathematics				
Co-requisites					

### Catalog Description

This subject will cover the fundamental concepts on the vibration of mechanical systems one degree of freedom, Lagrange's equations of motion and multiple degree of freedom systems. This course includes introduction to matrix methods, influence coefficient, forced vibration, principle mode of vibration, Rayleigh method, measuring instruments, isolation, torsional systems and balancing of machines.

### Course Objectives

The objective of this course is to

1. Provide adequate knowledge to analyse one-degree and multi-degree of freedom systems of vibrations using different methods.
2. Find out natural frequencies and amplitude responses of different systems.

### Course Outcomes

On completion of this course, the students will be able to

CO 1: Explain and determine the equation of motion for free vibration and forced vibration for damped and undamped conditions

CO 2: Explain and determine the equation of motion continuous system i.e. rod, cable and beam.

CO3: Determine the equation of motion in reciprocating and rotary balancing of machine and explain the vibration isolation.

CO4: Explain vibration measuring instruments and its application and determine the equation of motion for vibration exciter.

CO 5: Describe and determine the equation of motion for non linear vibration by exact and approximate method.

Modules	Blooms level*	Number of hours
<b>MODULE 1:Introduction to vibrations</b>  Brief introduction to vibrations, its causes, advantages and disadvantages, classification: un-damped and damped vibrations, single and two degree of freedom models. Introduction to lateral, torsional and bending vibrations. Harmonic and harmonic analysis. Free and harmonically excited vibrations. Vibrations under general forcing conditions.	L1, L2 and L3	7
<b>MODULE 2:Vibrations of continuous system</b>  Transverse vibrations of a cable, longitudinal and torsional vibrations of a rod, lateral vibrations of a beam, vibrations of membranes. Rayleigh's method, Rayleigh-Ritz method.	L1, L2 and L3	7
<b>MODULE 3:Vibration Control</b>  Introduction, vibration nomograph and vibration criteria, reduction of vibration at the source, balancing of rotating machines, whirling of rotating shafts, balancing of reciprocating engines, control of vibrations, control of natural frequencies, vibration isolation, vibration absorbers.	L1, L2 and L3	8
<b>MODULE 4:Vibration measurement and applications</b>  Introduction, transducers, vibration pickups, frequency measuring instruments, vibration exciters, signal analysis, dynamic test of machines and structures, experimental modal analysis, machine condition monitoring and diagnosis.	L1, L2 and L3	7
<b>MODULE 5:Non linear vibration</b>  Introduction, examples of non-linear vibration problems, exact methods, approximate analysis methods, subharmonic and superharmonic oscillations, systems with time-dependent coefficients (Mathieu equations), graphical methods, stability of equilibrium states, limit cycles, chaos.	L1, L2 and L3	7

### **Catalog Description**

The vibration engineering lab will cover the fundamental concepts on the vibration of mechanical systems of free vibration for simple, compound pendulum and torsional vibration of rotor. An Interpretation of results is to find out the natural frequency of different mechanical systems.

### **Course Objectives**

The objective of this course is to

1. Provide adequate knowledge to analyze one-degree and multi-degree of freedom systems of vibrations using different methods.
2. Find out natural frequencies and amplitude responses of different systems.

### **Course outcomes**

On completion of this course, the students will be able to

CO 1: Explain and determine the natural frequency of torsional vibration and damping coefficient of free vibration.

CO 2: Explain the equation of motion of longitudinal vibration and determine the natural frequency of spring mass system.

CO3: Explain the Dunkerley,s rule and determine the natural frequency of beam.

CO4: Explain and determine the natural frequency of forced vibration of the system with its magnification factor

CO 5: Describe the beat motion analysis and determine the harmonic component of compressor and also measure the characteristics of coupled drive apparatus.

<b>Experiment</b>	<b>Blooms level*</b>	<b>Number of hours</b>
1. To study the Torsional vibration (undamped) of single rotor shaft system	L2,L3	1
2. To study the damped Torsional oscillations and determine the damping coefficient	L2,L3	1
3. To study the longitudinal vibration of spring and to determine the frequency theoretically and actually by experiment	L2,L3	1
4. To study the undamped free vibration of equivalent spring mass system.	L2,L3	1
5. To verify the Dunkerley,s rule on simply supported beam and compare it with actually by experiment .	L2,L3	1
6. To study the free vibrations of the system for different damper settings. Draw the decay Curve and determine the log decrement and damping factor. For also the natural frequency.	L2,L3	1
7. To determine analytically the natural frequency of the main system (fixed- fixed beam with motor fixed at its centre) and verity it by observation.	L2,L3	1
8. To study the forced vibrations of the system with damping. Plot magnification factor us frequency and phase angle us. Frequency curves. Also determine the damping factor.	L2,L3	1
9. Find the natural frequencies and modes of vibration of three-rotor system analytically and compare the same experimentally.	L2,L3	1
10. Investigation of the node and anti-node position for the cantilever beam.	L2,L3	1
11. To find the natural frequencies of the box supported on four experimentally and verify the same and analytically.	L2,L3	1
12. Find the period of beat motion analytically and check the same observation.	L2,L3	1
13. To determine harmonic components of Vibrations of a compressor bed.	L2,L3	1
14. Measurement of system characteristics of coupled drive apparatus in open loop-mode.	L2,L3	1

**Examination Scheme:**

### Catalog Description

In this course, the concepts of finite element method and solutions to structural, heat transfer and fluid flow problems are discussed in details. To master this course, students should have a background in basic knowledge of applied numerical methods.

### Course Objectives

The objective of this course is to

1. Equip the students with the concepts of theory and characteristics of finite elements methods.
2. Provide an overview to learn and apply finite element solutions to structural, heat transfer and fluid flow problems.

### Course Outcomes

On completion of this course, the students will be able to

CO1. Describe history, applications and comparison of FEM with other methods.

CO2. List and explain the methods to solve the boundary value problems and partial differential equations.

CO3. State and explain various finite element techniques to carry out finite element solution.

CO4. Explain and apply application of FEM to solid and structural mechanics problems.

CO5. Demonstrate and analyze application of FEM to heat transfer and fluid flow problems.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
----------------	----------------------	------------------------

<b>MODULE 1:Introduction to Finite Element Method:</b>  Basic Concept, Historical background, Engineering applications, general description Comparison with other methods	L2	6
<b>MODULE 2:Integral Formulations And Variation Methods:</b>  Need for weighted-integral forms, relevant mathematical concepts and formulae, weak formulation of boundary value problems, variation methods, Rayleigh-Ritz method, and weighted residual approach.	L1 and L2	6
<b>MODULE 3:Finite Elément Techniques:</b>  Model boundary value problem, finite element discretization, element shapes, sizes and node locations, interpolation functions, derivation of element equations, connectivity, boundary conditions, FEM solution, post-processing, compatibility and completeness requirements, convergence criteria, higher order and isoparametric elements, natural coordinates, Langrange and Hermit polynomials.	L1 and L2	8
<b>MODULE 4:Applications To Solid and Structural Mechanics Problems:</b>  External and internal equilibrium equations, one-dimensional stress-strain relations, plane stress and strain problems, axis-symmetric and three dimensional stress-strain problems, strain displacement relations, boundary conditions, compatibility equations, Analysis of trusses and frames	L2 and L3	8
<b>MODULE 5: Applications To Heat Transfer and Fluid flow Problems:</b>  Applications in heat transfer: Finite element solution of one-dimensional, two-dimensional and three-dimensional steady state heat conduction problems by using Galerkin approach.  Applications in fluid mechanics: Finite element solution of incompressible and compressible fluid film lubrication problems by using Galerkin approach.	L3 and L4	8

Co-requisites	Nil

### **Catalog Description**

Product Design and Development is a project-based course that covers modern tools and methods for product design and development. Topics include identifying customer needs, concept generation, product architecture, industrial design, and design-for-manufacturing.

### **Course Objectives:**

**The objective of this course is to:**

1. Equip the students with the basic concepts of product design and development process.
2. Provide an overview of applicability of product design and development in industrial applications

### **Course Outcomes:**

On completion of this course, the students will be able to

CO1: Define and describe appropriate product lifecycle, product design, modern product development process and Morphology of design.

CO2: Describe and explain conceptual design and the design of manufacturing assemble.

CO3: Define and explain Value engineering and Value analysis.

CO4: Describe the application of ergonomics and explain the concurrent engineering and rapid prototyping.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>MODULE 1:</b> Introduction: Classification/Specifications of Products, Product lifecycle, Product mix, Introduction to product design, Modern product development process, Innovative thinking Morphology of design	L1, L2 and L3	6
<b>MODULE 2:</b> Conceptual Design: Generation, selection& embodiment of concept, Product architecture, Industrial design: process, need, Robust Design: Taguchi Designs & DOE Design Optimization.	L1, L2, L3 and L4	6
<b>MODULE 3:</b> Design for Manufacturing Assembly: Methods of designing for Manufacturing and assembly, Designs for Maintainability, Designs for Environment, Product costing, legal factors and social issues, Engineering ethics and issues of society related to design of products.	L2 and L3	6
<b>MODULE 4:</b>	L1, L2	6

Value Engineering and Value Analysis. : Definition. Methodology, Case studies, Economic analysis: Qualitative & Quantitative.	and L3	
<b>MODULE 5:</b>  Ergonomics/ Aesthetics: Gross human autonomy, Anthropometry, Man-Machine interaction. Concepts of size and texture color, Comfort criteria, Psychological and Physiological considerations Creativity Techniques: Creative thinking, conceptualization, brainstorming, primary design, drawing, simulation, detail design.	L1, L2 and L3	6
<b>MODULE 6:</b>  Concurrent Engineering, Rapid prototyping, Tools for product design– Drafting/ Modeling software. CAM Interface, Patents and IP Acts. Overview, Disclosure preparation.	L2 and L3	6

Version 1.1	Date of Approval: 26 June,2020	3	1	0	4
Pre-requisites/Exposure	Machine Design				
Co-requisites					

### Catalog Description

This subject will cover the fundamental concepts of the design of mechanical systems and different types of failures present in the mechanical component. This course includes material selection, fundamental concepts, fracture, fatigue, creep and design for failure prevention required for the design of mechanical system.

### Course Objectives

The objective of this course is to

- 1) Equip the students with concepts of mechanical design and behavior of mechanical components under fatigue and creep
- 2) Provide an overview of various failures present in mechanical system caused by different loading conditions

### Course Outcomes

On completion of this course, the students will be able to

CO 1: Design the mechanical components by selecting a suitable material

CO 2: Describe the concept of static, impact and cyclic loading on mechanical system.

CO 3: Evaluate the fatigue life of mechanical components for ductile and brittle materials

CO4: Analyze and predict the fracture strength of mechanical components under different Fracture modes.

CO5: Design the mechanical components involving contacts avoiding the surface failures.

Modules	Blooms level*	Number of hours
<b>Module 1</b> <b>Material selection for design:</b> Engineering Design process and the role of materials; materials classification and their properties; Materials Selection, Examples of material selection for typical applications, Elasticity, Plasticity, Bauschinger effect.	L1, L2 and L3	9
<b>Module 2</b> <b>Review of fundamental concepts:</b> Overview of mechanical design, Free body diagram, Load analysis - 2D and 3D static load analysis, Case studies of static load analysis – Bicycle hand brake lever, Bicycle with pedal arm, Plier-wrench, Cyclic loading, Impact loading, Beam loading, Understanding of static failure for ductile and brittle materials, Comparison of experimental data with failure theories, Significance of the theories of failure, importance of factor of safety in design, Design case studies - Bracket, Bicycle hand brake lever, Bicycle with pedal arm, Plier-wrench.	L1, L2 and L3	9
<b>Module 3</b> <b>Fatigue Failure theories:</b> Introduction to fatigue, Fatigue failure models,	L1, L2	11

Fatigue life, Estimation of theoretical fatigue strength, Correction factors to the theoretical fatigue strength, stress concentration, Cumulative damage and life exhaustion, effect of mean stress, Designing for fully reversed uniaxial stresses, Designing for fluctuating uniaxial stresses, Designing for multi-axial stresses in fatigue.	and L3	
<b>Module 4</b> <b>Introduction to Fracture and Creep:</b> Fundamentals of Fracture mechanics, Mechanism of fracture - Cleavage fracture, Ductile fracture and Inter-granular fracture, Griffiths theory, Orowan theory, theoretical fracture strength, Irwin's fracture analysis, Linear Elastic Fracture Mechanics (LEFM) - Crack propagation with plasticity, Fracture toughness, hypothesis of LEFM, stress field in an isotropic material in the vicinity of crack tip, Elasto Plastic Fracture Mechanics (EPFM) - Crack opening displacement, J-Integral, Creep mechanisms, temperature dependence of creep.	L1, L2 and L3	10
<b>Module 5</b> <b>Design for failure prevention:</b> Fracture mechanics in Design, Design case studies – Bicycle with pedal arm, Plier-wrench. Surface failures - Adhesive wear, Abrasive wear, Corrosion wear, Surface fatigue wear, Contacts - Spherical contact, Cylindrical contact and General contact, Failure modes and effects analysis (FMEA).	L1, L2 and L3	9

### Catalog Description

In this course the concepts of optimization techniques are discussed in detail. The main objective of this course is to provide the basic concepts of optimization techniques and to educate them on the advancements in optimization techniques. It also provides knowledge of multi-Objective Programming and Genetic algorithms.

## Course Objectives

The objective of this course is

1. To familiarize the students with various tools of optimization for management of various resources.
2. To acquaint the students with various advance techniques of optimization like multi-Objective Programming and Genetic algorithms etc.

## Course Outcomes

On completion of this course, the students will be able to

CO1: Define optimization technique and explain its various techniques.

CO2: Apply the concept of classical optimization techniques for solving problems on single-variable and multi-variable optimization.

CO3: Apply non-linear programming and solve problems on one-dimensional optimization methods, unconstrained and constrained optimization techniques.

CO4: demonstrate the concept of other optimization techniques like geometric programming, dynamic programming, integer programming, stochastic programming, and solving problems.

CO5: Illustrate different types of advance topics in optimization.

Modules	Blooms level*	Number of hours
Module 1: Introduction Need of Optimization and Historical Development, Engineering Applications, Classification and Formulation of Optimization Problem	L1, L2 and L3	6
Module 2: Classical Optimization Techniques Single-Variable and Multi-Variable Optimization, With and Without Constraints, Kuhn-Tucker Conditions.	L1, L2 and L3	10
Module 3: Non-Linear Programming Introduction, One-Dimensional Optimization Methods, Unconstrained and	L1, L2 and L3	12

Constrained Optimization Techniques; Elimination Methods, Exhaustive Search, Interval Halving, Fibonacci, Golden Section Methods; Random Search Methods, Hooke and Jeeves Method, Powell's Method; Indirect Search Methods: Steepest Descent, Fletcher-Reeves, Newton's Method, DFP, BFGS Method; Internal and External Penalty Approach.		
Module 4: Other Optimization Techniques Introduction and Basic Concepts of Geometric Programming, Dynamic Programming, Integer Programming, Stochastic Programming, Their Applications	L1, L2 and L3	10
Module 5: Advance Topics in Optimization Multi-Objective Programming, Introduction to Genetic Algorithms, Simulated Annealing and ANN Based Optimization.	L1, L2 and L3	10

*\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation*

Version 2017.1	Date of Approval: 26 June,2020	3	1	0	4
Pre-requisites/Exposure	Probability, Engineering statics, data analysis, hypothesis testing and ANOVA				
Co-requisites	Apply basic principles in the design of simple experiments.				

### Catalog Description

In this course the concepts of experimental design, steps of experimental design, types of experimental design and six sigma are discussed in details. The design of experiments includes completely randomized design, latin square design, factorial design, full factorial design, fractional factorial design, robust design and Taguchi's approach for experimental design.

## Course Objectives

The objective of this course is to

1. Explain the issues and principles of Design of Experiments (DOE),
2. Providing an understanding of interactions among causative factors
3. Determining the levels at which to set the controllable factors.
4. Minimizing experimental error (noise) and improving the robustness of the design or process to variation.

## Course Outcomes

On completion of this course, the students will be able to

- CO1. Learn how to plan, design and conduct experiments efficiently and effectively, and analyze the resulting data to obtain objective conclusions..
- CO2. Given a description of an experiment, determine whether it is a factorial experiment, a fractional factorial experiment, or neither
- CO3. Determine whether the design appropriately deals with extraneous variables via controlling, blocking, randomization or replication.
- CO4. Explain robust design and taguchi's approach for design of experiments.

Modules	Blooms level*	Number of hours
<b>MODULE 1: Introduction</b> A brief history of statistical design, Objectives for experimental designs. Basic design concepts. Steps and guidelines for the design of experiments, Some typical applications of experimental design, Types of experimental designs, Analysis of means, Experimental designs and six sigma, Problems	L1, L2 and L3	10
<b>MODULE 2: Completely Randomized Design</b> Model for a completely randomized design with a single factor. ANOM for a completely randomized design, ANOM with unequal variances, randomized block design, incomplete block designs, latin square design, Graeco – Latin square design.	L1, L2, L3 and L4	12
<b>MODULE 3: Full Factorial and Fractional Factorial Designs with Two Levels</b> Nature of factorial designs, deleterious effects of interactions, effect estimates the $2^3$ Design, built-in –replication, role of expected mean squares in experimental design, <b>2k-1</b> Designs. Effect estimates and regression coefficients, <b>2k-2</b> Designs. basic concepts; design efficiency, John's $3/4$ designs	L1, L2, L3 and L4	14

<b>MODULE 4: Robust Design</b>  DOE and Taguchi approach; experimental design using orthogonal arrays; experimental design with two-level factors only; experimental designs with three and four level factors; ANOVA ; analysis using signal- to- noise ratios.	<b>L1, L3 and L4</b>	<b>12</b>

ME4203	<b>RESEARCH METHODOLOGY AND TECHNICAL REPORT WRITING</b>	L	T	P	C
Version 2019.1	Date of Approval: 08 May, 2019	2	0	0	2
Pre-requisites/Exposure	NIL				
Co-requisites	NIL				

### **Catalogue Description**

This course deals with types of research, significance and characteristics and planning a research proposal, population and sample, parameter and statistic, sampling and data collection, sampling design: steps, types, sample size, sampling methods. It deals with univariate, bivariate and multivariate analysis, measure of dispersion of data, standard deviation, variance, coefficient of variation and degree of freedom. Hypothesis testing: parametric tests and non-parametric tests, regression analysis and curve fitting, method of least-squares, explained and unexplained variations, coefficient of correlation of determination. The course also deals with technical/scientific/research report writing: referencing and bibliography and footnotes. Publication of research papers, citations, intellectual property rights and copy rights, plagiarism, patent and patent laws, commercialization and ethical issues.

### **Course Objectives**

The objective of this course is to:

1. Deals with types of research, significance and characteristics and planning a research proposal And to enhance scientific and technical writing and research skills.
2. Impart knowledge about various stages of research process, statistical analysis and tools & their applications in decision making by hypothesis testing and regression analysis.
3. It also deals with intellectual property rights and copy rights, plagiarism, patent and patent laws, commercialization and ethical issues.

### Course Outcomes

On completion of this course, the students will be able to:

- CO1: Classify different research types; explain steps in research process and planning research proposal.
- CO2: Describe sampling methods, sampling steps and design, carry out data processing and analysis.
- CO3: Explain hypothesis testing, parametric and non-parametric tests, carry out regression analysis, curve fitting.
- CO4: Demonstrate technical and scientific report writing skills; describe plagiarism, patent laws and intellectual property rights.

Modules	Blooms level*	Number of hours
Module I: Introduction and Research Planning Introduction to research: Definition, motivation, need, objectives, significance and characteristics of research; types of research; steps in research process; planning a research proposal; literature review, web searching.	L1, L2	4
Module II: Sampling Methods Measurement scales, population and sample, parameter and statistic, sampling and data collection, sampling design: steps, types, sample size, sampling methods, data processing and analysis. Sampling surveys and questionnaire designing, primary and secondary data.	L1, L2, L3	5
Module III: Hypothesis Testing and Regression Analysis Univariate, bivariate and multivariate analysis, means-arithmetic, geometric and harmonic; measure of dispersion of data, standard deviation, variance, coefficient of variation and degree of freedom. Hypothesis testing: kinds errors in hypothesis testing, significance and confidence levels, parametric tests and non-parametric tests, one-tailed and two-tailed tests, analysis of variance. Regression analysis and curve fitting, method of least-squares, explained and unexplained variations, coefficient of correlation of determination.	L1, L3, L4	10
Module IV: Technical Report Writing and Plagiarism Technical/scientific/research report writing: structure and components of scientific reports, formats of dissertations, research report, report writing skills, report preparation, referencing and bibliography and footnotes. Publication of research papers, citations, making presentation-use of visual aids and PPTs.	L1, L3, L4	5

Intellectual property rights and copy rights, plagiarism, patent and patent laws, commercialization and ethical issues.

Version	Date of Approval: 26 <sup>th</sup> June 2020	3	0	0	3
Pre-requisites/Exposure	Industrial Engineering, CAD				
Co-requisites					

### Catalog Description:

In this course the concepts of numerical control machines, programmed automation, axis designation and automatic tool changers are discussed in detail. The concepts of machine control unit, G&M codes, manual part programming, processes planning, interpolation cycles, computer aided part programming, computer aided process planning, computer integrated manufacturing and artificial intelligence in manufacturing are also discussed in detail.

### Course Objectives

The overall objective of this course is

- 1) To equip with various concepts and practices of computer aided manufacturing (CAM) and computer numerical control (CNC) machines.
- 2) To provide high calibre engineering students with an in-depth understanding of manual part programming and simulation on CNC machines.

### Course Outcomes (COs):

At the end of the course, the student shall be able to:

CO1 - Define and describe the basic concepts of numerical control machines and systems.

CO2 – Explain and demonstrate about the computer numerical control, direct numerical control and adaptive control systems

CO3 – Outline, interpret and apply the manual part programming of various operations on CNC's.

CO4 – State and explain the manual process planning versus computer aided process planning.

CO5 –Outline and describe the computer integrated manufacturing and artificial intelligence in manufacturing.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I Introduction:</b> Introduction to Automation, Need and future of NC Systems and CAM,	L1and	5

Advantages and Disadvantages, Open and Closed loop systems, Historical developments and future trends. Future of NC Machines, Difference between ordinary and NC Machine tools, Methods for improving accuracy and productivity.	L2	
<b>Module II Control of NC Systems:</b> Types of CNC Machine Tools systems devices, e.g. encoders and interpolators, Features of CNC Systems, Direct Numerical Control (DNC), Standard Controllers and General Programming features available in CNC Systems, Computer Process monitoring and Control. Adaptive control systems.	L2 and L3	6
<b>Module III NC Part Programming:</b> Manual Programming for simple parts, e.g., turning, milling, drilling, etc., Computer aided NC Programming in APT language, use of canned cycles, Generation of NC Programmer through CAD/CAM systems, Design and implementation of post processors.	L1, L2 and L3	7
<b>Module IV Computer Aided Process Planning:</b> Introduction, Manual process planning vs. Computer aided process planning; Basics of variant and generative process are planning methods, Examples of automated process planning systems.	L1 and L2	7
<b>Module V Computer Integrated Manufacturing:</b> Introduction, features and applications of CIM, key elements, advantages and disadvantages of CIM.	L1 and L2	6
<b>Module VI Artificial Intelligence in Manufacturing:</b> Introduction, Elements of Expert Systems, Introduction to Neural Networks, Expert Systems application in manufacturing, Case studies.	L1 and L2	5

### Catalog Description:

In this course the concepts of numerical control machines, computer numerical control machines, automatic tool changers, axis designation and CAM software are discussed in detail. The concepts of machine control unit, G&M codes, manual part programming, interpolation cycles, computeraided part programming using CAM software, simulation, dry run and machining operations on CNC's are also discussed in detail.

### Course Objectives:

The overall objective of this course is

1. To equip the students with basic and essential concepts of computer aided manufacturing (CAM) and computer numerical control (CNC) machines.
2. To provide high caliber engineering students with an in-depth understanding of G&M codes to write CNC programs, part programming using CAM software, simulation and machining on CNC machines.

### Course Outcomes:

At the end of course the students will be able to:

- CO1 – State and explain the CNC lathe and CNC milling machine with their major assemblies, sub assemblies, machine control system and axes designation.
- CO2 - Describe and apply G&M codes in manual part programming on CNC lathe and CNC milling machine.
- CO3- Explain and apply computer aided programming for different turning operations with the help of CAM software on CNC lathe machine.
- CO4 – Explain and apply computer aided programming for milling and drilling operations with the help of CAM software on CNC milling machine.

Modules	Blooms level*	Number of hours
1. Practice programming on manual part programming.	L1, L2 and L3	2
2. To write the CNC programme for the given operation.	L2 and L3	2

3. To perform step-turning operation using CAM software on CNC lathe.	L2 and L3	2
4. To perform plain turning operation using CAM software on CNC lathe.	L2 and L3	2
5. To perform the side milling, face milling operation using CAM software on CNC milling machine.	L2 and L3	2
6. Simulation of manufacturing system using CAM Software	L2 and L3	2
7. Practice in APT based NC programming.	L2 and L3	2
8. To perform the drilling operation using CAM software on CNC milling machine.	L2 and L3	2

#### Catalog Description:

In this course the concepts of measurement systems, control systems, microprocessor, micro controller and mechatronics system are discussed in detail. The concepts of sensors and transducers, signal conditioning, multiplexers, pneumatic actuation systems, hydraulic actuation systems, mechanical actuation systems and electrical actuation systems are also discussed in detail.

#### Course Objectives:

The overall objective of this course is

1. To equip the students with mix skills of mechanical engineering, electronics engineering and computer engineering.
2. To provide high caliber engineering students with an in-depth understanding of pneumatic actuation systems, hydraulic actuation systems, mechanical actuation systems and electrical actuation systems.

#### Course Outcome (COs)

At the end of the course, the student shall be able to:

CO1 - Define and describe key elements of mechatronics systems and measurement systems.

CO2 – State, explain and apply sensors, sensors terminology and transducers.

CO3 –Outline, interpret and apply the concept of signal processing and interfacing systems.

CO4 –Define, describe and demonstrate pneumatic actuation systems and hydraulic actuation systems.

CO5 -Define, describe and demonstrate mechanical actuation systems and electrical actuation systems.

<b>Modules</b>	<b>Blooms</b>	<b>Number</b>
----------------	---------------	---------------

	level*	of hours
<b>Module I</b> <b>Introduction:</b> Definitions, mechatronics system, measurement systems, control systems, microprocessor / micro controller based controllers, response of systems, mechatronics approach, applications: robot, CNC machine.	L1 and L2	6
<b>Module II</b> <b>Sensor Technology:</b> Sensor and transducers, terminology, displacement, position, proximity – encoders, velocity sensors – tachogenerators, force - strain gauges, pressure gauge, temperature – thermocouples, RTDs, thermistors, light sensors – photoelectric sensors, IR sensors, sensors selection.	L1, L2, and L3	6
<b>Module III</b> <b>Signal Conditioning:</b> Introduction, operational amplifier, protection, filtering, Wheatstone bridge, digital signals, multiplexers, data acquisition, digital signal processing, pulse – modulation, problems.	L1, L2 and L3	6

### **Catalog Description**

In this course the concepts of sensors and transducers, signal conditioning, pneumatic actuation systems, hydraulic actuation systems, mechanical actuation systems and electrical actuation systems are also discussed in detail. The aim of this course is to make the students familiar with the basic of mechatronics.

### **Course Objectives:**

1. Equip the students with practical concepts of pneumatic actuation systems and hydraulic actuation systems.
2. Understand the application of PLC by working models and experiments.

**Course Outcomes (COs):** After studying this course the students will be able to:

**CO 1-** Define the key elements of mechatronics system and measurement systems.

**CO 2-** Explain and demonstrate the pneumatic actuation systems.

**CO 3-** Explain and demonstrate the hydraulic actuation systems.

**CO 4 –** Show the uses of PLC.

List of Experiments	<b>Blooms level*</b>	<b>Number of hours</b>
1. To extend and retract a double acting cylinder using 5/3 hand lever valve or 5/2 Two way Solenoid valve.	L1, L2 and L3	2
2. To study the sequencing of two double acting cylinders (Pneumatic).	L1, L2	2

	and L3	
3. To study the movement of double acting cylinder using the hand lever valve or solenoid operated valve.	L1, L2 and L3	2
4. To study the sequencing of two double acting cylinders (Hydraulic).	L1, L2 and L3	2
5. To study the movement of piston of cylinder using solenoid operated valve or programmable logic controller.	L1, L2 and L3	2
6. Mini Project	L2, L3 and L4	14

IPE4205	<b>Welding and Aided Processes</b>	L	T	P	C
Version 1.1	Date of Approval: 26 June,2020	3	1	0	4
Pre-requisites/Exposure					
Co-requisites					

### Catalog Description

To study essential concepts for welding parameters and welding processes. To study various types of defect, advance welding processes. To study the various techniques of welding automation and Non destructive testing of welds.

### Course Objectives:

The objective of this course is to

1. Equip the students with concept of welding processes, types of defect, advance welding processes and welding automation.
2. Provide an overview of Non destructive testing of welds.

### Course Outcomes:

At the end of the course, students will demonstrate their ability to:

1. Define the welding processes, weld ability and welding defects.
2. Analyze methods of advanced welding processes like Ultrasonic welding.
3. Develop concept and techniques of welding automation.
4. Analyze the soldering and brazing process.
5. Define the Non destructive testing of welds.

Modules	Blooms level*	Number of hours
MODULE 1: <b>Welding Metallurgy</b> Introduction: Classification of welding processes, Review of welding	L1, L2, and L3	08

processes like gas, arc and resistance welding. Weld bead geometry and shape factors, Weld dilution. Heat affected zone and its characteristics; Effects of alloying elements on weld ability, Weld ability of steels, stainless steel, cast iron, and aluminium.		
<b>MODULE 2:</b> <b>Weld Design &amp; Quality Control:</b> Principles of sound weld design, Welding joint design, Welding defects; Testing of weldment, Material joining characteristics, Welding positions, Allowable strength of welds under steady loads, Weld throat thickness; Weld quality, Discontinuities in welds, their causes and remedies and quality conflicts. Numerical.	L1, L2, and L3	10
<b>MODULE 3:</b> <b>Advanced welding processes:</b> Introduction, main features and applications of Microwave welding, Friction welding, Electron beam welding, Plasma arc welding, Laser welding and Explosive welding.	L1, L2, and L3	08
<b>MODULE 4:</b> <b>Automation in Welding:</b> Introduction, Manual Welding, Semi-Automatic Welding, Automatic Welding, Welding Mechanization, Flexible Automated Welding, Robotic Welding, Types of Welding Robots, Robot Selection Mechanics, Joint tracking system,	L1, L2, and L3	08
<b>MODULE 5:</b> <b>Soldering:</b> Techniques of soldering, solders, phase diagram, composition, applications. <b>Brazing:</b> Wetting and spreading characteristics, surface tension and contact angle concepts, brazing fillers, role of flux and characteristics, atmospheres for brazing, adhesive bonding.	L1, L2, and L3	06
<b>MODULE 6:</b> <b>Non Destructive Testing of Welds:</b> Non Destructive Tests: their Advantages and Limitations, Comparison with Destructive Tests, Visual Examination, Dye Penetrate Inspection, Magnetic Particle Inspection, X-Rays and Gamma Rays Inspection and Ultrasonic Inspection of Welds. ASME Standards/ codes for welding.	L1, L2, and L3	08

IPE4214	<b>QUALITY AND RELIABILITY MANAGEMENT</b>	L	T	P	C
Version	Date of Approval: 26 <sup>th</sup> June 2020	3	1	0	4
Pre-requisites/Exposure	Quality Control				
Co-requisites	-				

### Catalog Description

In this course approaches and techniques to assess and improve process and product quality, Reliability are discussed in detail. The basic concepts and techniques of modern reliability Engineering tools will be introduced. The concepts learnt will be applied to design methods Failure analysis and system safety.

### Course Objectives

The objective of this course is to

1. Equip the students with problem oriented in depth knowledge of Quality and Reliability Engineering
2. Provide an overview of concepts, methods and application of Quality and Reliability Engineering.

### Course Outcomes

On completion of this course, the students will be able to

- CO1: Describe Quality Control, Quality Assurance and Quality Management.  
CO2: Explain Tools and Techniques of quality management.  
CO3: Explain reliability function and conditional reliability.  
CO4: Describe system structure functions and reliability specification and system measurements.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>MODULE 1:</b>  Quality – Concept, Different Definitions and Dimensions, Inspection, Quality Control, Quality Assurance and Quality Management, Quality as Wining Strategy, Views of different Quality Gurus.	L1and L2	6
<b>MODULE 2:</b>  Introduction, Definitions and Principles of Operation, Tools and Techniques, such as, Quality Circles, 5 S Practice, Total Quality Control (TQC), Total Employee Involvement (TEI), Problem Solving Process, Quality Function Deployment (QFD), Failure Mode and Effect analysis (FMEA), Fault Tree Analysis (FTA), Kizen, Poka-Yoke, QC Tools, PDCA Cycle, Quality Improvement Tools, TQM Implementation and Limitations.	L1and L2	8
<b>MODULE 3:</b>  Definition of reliability – reliability vs. quality, the failure distribution, the reliability function, mean time to failure, Hazard rate function, bathtub curve, conditional reliability - constant failure rate model - time-dependent failure models - exponential and normal distribution.	L1 and L2	10
<b>MODULE 4:</b>  Serial configuration, parallel configuration, combined series parallel systems, system structure function, minimal cuts and minimal paths – load sharing systems – standby systems – degraded systems, three state devices – physical reliability models - covariate models, static models , dynamic models, physics of failure models.	L1and L2	14
<b>MODULE 5:</b>  Reliability specification and system measurements - reliability allocation - design methods failure analysis – system safety and fault tree analysis – analysis of down time – the repair time distribution, reliability under preventive maintenance, maintenance requirements.	L1and L2	10

### Catalog Description

In this course the concepts of quality improvement in manufacturing are discussed in detail. Various quality management tools, improvement cycles, quality circles and audit procedures will be introduced. The concepts learnt will be applied to improve quality in manufacturing.

### Course Objectives

The objective of this course is to

1. Equip the students with concepts of quality improvement in manufacturing.
2. Provide an overview of quality management tools, improvement cycles, quality circles and audit procedures.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Define components of quality, innovation, design and explain Product quality characteristics and dimensions.

CO2: Explain various key aspects of the quality system standards.

CO3: Describe total quality management tools, improvement cycle and quality organization.

CO4: Define quality assurance, inspection, quality circles and explain quality audits.

Modules	Blooms level*	Number of hours
<b>MODULE 1:</b>  <b>The Foundations of Total Quality Management:</b> Components of quality, The total quality management approach, Innovation, design and improvement, Product quality characteristics and service quality characteristics, Quality parameters and specific dimensions of quality.	L1 and L2	8
<b>MODULE 2:</b>  <b>Key Aspects of the Quality System:</b> Planning for quality, Flowcharting, Detailed flow process charts and flow diagrams, planning for just-in-time (JIT) management, System design and contents, System documentation, implementation and assessment.	L1 and L2	8
<b>MODULE 3:</b>  <b>TQM Tools and the Improvement Cycle:</b> Measurement of quality, Costs of quality, Tools and techniques for quality improvement, Statistical process control, Quality improvement techniques in service industries, Specific techniques for design, reliability, maintenance and process improvement.	L1 and L2	10
<b>MODULE 4:</b>  <b>The Quality Organization Within an Organization:</b> People and the organizational structure, Responsibilities and performance	L1 and L2	10

management, The relationship between the quality organization and top management, Culture change through teamwork for quality improvement, Implementing teamwork for quality improvement: the DRIVE model.		
<b>MODULE 5:</b>  <b>Internal Quality Audits:</b> Scope of requirements and audit procedures, the audit programme and planning of quality audits, Verifying compliance with planned arrangements, determining the effectiveness of the system, reporting the results of quality audits, Follow-up audits  Quality and Business Process Re-engineering: Beyond tools to total quality management, Stages in the development of quality and related activities: inspection, quality assurance, company-wide quality control, total quality management, Quality circles.	L1 and L2	12

Version 1.1	Date of Approval: 26 June,2020	3	0	0	3
Pre-requisites/Exposure	Mechanical Measurements				
Co-requisites	-				

### Catalog Description

In this course the concepts of errors in measurement, surface characteristics, measurement standards and gauging assembly are discussed in detail. Comparators, soft metrology and image processing techniques will be introduced. The concepts learnt will be applied to make mechanical measurements.

### Course Objectives

The objective of this course is to

1. Equip the students with concepts of metrology, comparators and measurement standards.
2. Provide an overview of tools and techniques used for measurement and coordinate measuring machine.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Define concept of metrology and explain methods of improving accuracy in measurements.

CO2: Explain various standards of measurements and gauges.

CO3: Explain working of comparators.

CO4: Describe computer aided metrology and coordinate measuring machine.

Modules	Blooms level*	Number of hours
<b>MODULE 1:</b> <b>Principles of measurement</b> <b>Metrological concepts</b> -Definition, objectives and concept of metrology, Concept of accuracy and precision, Inaccuracy due to thermal aspects, Detailed surface roughness concept, Surface and form metrology , flatness, roughness, waviness, Methods of improving accuracy & surface finish, Influence of vibrations on accuracy.	L1and L2	6
<b>MODULE 2:</b> <b>Standards for Measurement</b> - Line standards, End standards, wavelength standards, Subdivision of standards, Errors in measurement, Linear and angular measurement, Use of sine bar and bevel protractor for angular measurements, System of Limits, Fits and Tolerance, Principle of interchangeability, Gauging assembly, Classification of gauges, brief concept of design of gauges (Taylor's principles), Wear allowance on gauges, Types of gauges-plain plug gauge, ring gauge, snap gauge, limit gauge.	L1 and L2	7
<b>MODULE 3:</b> <b>Comparators</b> -Definition, Functions of Comparator, Classification of comparator, working of various mechanical comparators- Dial Indicator, Reed type Mechanical Comparator, Sigma Comparator, Advantages and	L1 and L2	8

disadvantages of mechanical comparators, Optical comparator.		
<b>MODULE 4:</b> <b>Computer Aided Metrology</b> Computer Aided Metrology - Principles and interfacing, soft metrology - Application of lasers in Precision measurements- laser interface, laser scanners, Image processing. Acoustical measurements, Digital techniques in mechanical measurements.	L1 and L2	7
<b>MODULE 5:</b> <b>Coordinate measurement machine (CMM)</b> Type of CMM & applications, non-contact CMM, contact CMM, Electro optical sensors for dimension, surface finish measurements. Tool maker's microscope- working and its applications. Profile projector- working and its applications.	L1 and L2	8

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation*

Version 2017.1	Date of Approval: 26 June,2020	0	0	2	1
Pre-requisites/Exposure					
Co-requisites					

### **Catalog Description:**

The main objective of computer aided metrology and inspection lab is to demonstrate the basic concepts in the area of measurement to the postgraduate students through a series of experiments. Students learn about laboratory methods and interpretation of results with regard to errors in measurement, surface characteristics, measurement standards and gauging assembly.

The concepts learnt will be applied to make mechanical measurements.

### **Course Objectives:**

1. Equip the students with concepts of metrology, comparators and measurement standards.
2. Provide an overview of tools and techniques used for measurement and coordinate measuring machine.

**Course Outcomes:**

On completion of this course, the students will be able to

CO1: Apply the knowledge of mathematics and manufacturing science to calculate angle of inclination and roundness using sine bar and dial gauge.

CO2: Determine surface irregularities and inclination angle of given specimen.

CO3: Describe and measure the geometry of a screw and roughness characteristics.

CO4: Measure inner diameter of hole by using bore indicator and explain use of contact sensors for surface finish measurements

CO5: Demonstrate the coordinate measurement machine and screw thread parameters.

CO6: Determine the screw thread parameters of a given specimen using Profile projector and diameter of the holes drilled in a plate.

Modules	Blooms level*	Number of hours
1. To check the roundness of a circular bar with the help of dial gauge.	L1, L2 and L3	1
2. To check angle of inclined surface by using sine bar in combination with slip gauges.	L1, L2 and L3	1
3. To measure the surface irregularities of lathe guide ways by using dial indicator.	L1, L2 and L3	1
4. To measure the inclination angle by using different set of slip gauges and height gauges.	L1, L2 and L3	1
5. To study and measure the geometry of a screw using profile projector.	L1, L2 and L3	1
6. To machine a given surface on milling machine tool and study its roughness characteristics.	L1, L2 and L3	1
7. To measure inner diameter of hole by using bore indicator.	L1, L2 and L3	1
8. To study the contact sensors for surface finish measurements.	L1, L2 and L3	1
9. To study the coordinate measurement machine.	L1, L2 and L3	1
10. To measure the screw thread parameters of a given specimen using Tool Maker's Microscope.	L1, L2 and L3	1
11. To measure the screw thread parameters of a given specimen using	L1, L2	1

Profile projector.	and L3	
12. To determine the diameter of the holes drilled in a plate and to measure the center distance between them.	L1, L2 and L3	1

<b>Course Code: IPE- 4303</b>	<b>METAL CUTTING AND TOOL DESIGN</b>	L	T	P	C
Version 1.1	Date of Approval: 26 June,2020	3	0	0	3
Pre-requisites/Exposure					
Co-requisites	-				

### **Catalog Description**

In this course to study the essential concepts of metal cutting and tool design. To study concept and applications of modern machining processes. To study jig fixtures and economic analysis of Jigs and fixtures. To provide knowledge to the students on the principles that guides production of cutting tool materials and processes.

### **Course Objectives**

The objective of this course is

1. To familiarize the students with shapes of machining tools and chip formation.
2. To prepare the students understand various machine tool design.
3. To prepare the students understand the concept of jig and fixture.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Illustrate the fundamentals of basic shapes of machining tools and explain different types of chip formation.

CO2: Explain the design of single point and multi point cutting tools, analyze economics of metal machining.

CO3: Analyze parameters of grinding wheel

CO4: Explain and describe the design of press tools.

**CO5:** Develop the applications of jig and fixture for enhancing productivity.

Modules	Blooms level*	Number of hours
Module 1: Basic shapes of machining tools: Wedge action, function of different angles of cutting tools, tool geometry and Nomenclatures-ASA, ORS, NRS systems. Geometry of twist drill & slab milling cutter, Mechanism of chip formation, modes of failure under stress, fracture & yielding mechanism, types of chips, factors involved in chip formation, shear plane, effect of cutting variables on chip reduction coefficient, chip formation in drilling and milling	L1, L2 and L3	5
Module 2: Design of single point and multi point cutting tools: Design of flat and circular form tools and tool holding devices. Design of multi point cutting tools: Milling cutter; Major types, design and manufacturing of	L1, L2 and L3	8

peripheral, end and face milling cutters. Forces and power estimation. Grinding of milling cutters. Broaches: Pull and Push types. Internal and External broaches, geometry and design and manufacturing of Pull type and push type broaches.		
<p>Module 3:</p> <p>Parameters of Grinding wheel:</p> <p>Types of Grinding, Shapes and Size of a Grinding Wheel, Various Elements of a Grinding Wheel, Parameters of Grinding Operation, Grinding Fluids, Defects and Remedies in Grinding, Balancing of Grinding Wheel, Grinding of single point cutting tool, Tool materials, Vibration &amp; chatter in machining. Economics of metal machining.</p>	L1, L2 and L3	8
<p>Module 4:</p> <p><b>Design of Press tools:</b></p> <p>Die set elements. Design of Die Set for simple components in blanking, Piercing, bending, drawing, forging and spinning. Plastic Toots: Plastic Dies for simple components.</p>	L1, L2 and L3	7
<p>Module 5:</p> <p><b>Jigs &amp; Fixtures:</b></p> <p>Design principles and construction features. Type of locating pins. Requirements and choice of locating systems, Setting blocks, types of clamping devices and their basic elements. Quick action clamps and nuts, Hydraulic, magnetic, electrical and vacuum clamping. Types of drill jigs and their classification. Types of jig bushes, jig feet, Design of Fixtures for Turning, grinding, welding and milling. Economic analysis of Jigs and Fixtures.</p>	L1, L2 and L3	8

*\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation*

### **Catalog Description:**

The main objective of the metal cutting and tool design Laboratory is to demonstrate the basic principles in the area of metal cutting and tool design to the post graduate students through a series of experiments. The student will learn about the laboratory methods and interpretation of results with regard to metal removal processes and to give final shape and size to components students also learn about the jig & fixture and their applications.

### **Course Objectives:**

1. To understand the working of metal cutting and tool design.
2. To prepare the students understand the concept of jig and fixture.
3. To provide knowledge to the students on the principles that guides production of cutting tool materials and processes.

### **Course Outcomes:**

On completion of this course, the students will be able to

CO1: Explain and define various cutting tool materials and their applications

CO2: Demonstrate on angles and parameters of various single point and multipoint cutting tools.

CO3: Analyze the formation of chip under different cutting conditions.

CO4: Demonstrate on the nomenclature of single point tool and twist drill geometry.

CO5: Demonstrate on resultant force act on the tool during turning operation.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
1. To study various cutting tool materials and their applications	L1, L2 and L3	1
2. To identify various angles and parameters of various single point cutting tools.	L1, L2 and L3	2
3. To identify various angles and parameters of various multipoint cutting tools.	L1, L2 and L3	2
4. Measurement of cutting forces in oblique cutting	L1, L2 and L3	1
5. To analyse the formation of chip under different cutting conditions.	L1, L2, L3 and L4	2
6. To perform blanking, Piercing, bending, and drawing operation on a given sheet metal specimen.	L1, L2 and L3	2
7. To study twist drill geometry.	L1, L2 and L3	1
8. To determine the resultant force act on the tool during turning operation and also estimate the force and thrust required to perform drilling operation.	L1, L2 and L3	1
9. Study of surface conditions during grinding process	L1, L2 and L3	1
10. Calculation of tool life during machining process	L1, L2 and L3	1
11. To study single point tool nomenclature using tool maker's microscope	L1, L2 and L3	1

### **Catalog Description**

In this course the concepts of production planning and control are discussed in detail. The main objective of this course is to understand the various components and functions of production planning and control such as, product planning, process planning, production scheduling, Inventory Control. To know the recent techniques of Production Planning Techniques like JIT, Kaizen, Kanban and pull system Kaizen and Six Sigma etc.

### **Course Objectives**

The objective of this course is

1. To understanding the role of production and operations management in the overall business strategy of the firm.
2. To get familiarize the students with the application of production planning and control tools and techniques to the service sector as well as manufacturing firms.

## Course Outcomes

On completion of this course, the students will be able to

CO1: Define production planning and control, explain objectives and functions of production planning and control.

CO2: Explain various production related activities.

CO3: Illustrate various inventory management procedures with the tools employed there in.

CO4: Explain the new techniques for evaluation of material and processes and various production related activities.

CO5: Demonstrate the role of routing, loading and scheduling in manufacturing and service.

CO6: Demonstrate role of JIT, Kaizen, and PDCA with their contribution towards production and planning and control.

Modules	Blooms level*	Number of hours
Module 1: Introduction Objectives and benefits of planning and control, Functions of production planning and control, preplanning, Steps in production planning and control, plant layout, Types of production-job- batch and continuous-Product development.	L1, L2 and L3	4
Module 2: Product Development and Design Effect of competition on design, Long-range Planning, Company policy, product analysis, marketing aspects, the product characteristics, functional aspect, operational aspect, durability and dependability, Economic analysis, Profit and competitiveness, The three S's:- Standardization, Simplification and Specialization. Break Even Analysis.	L1, L2 and L3	7
Module 3: Inventory Control Definition, classification, objectives of inventory control, functions, economic order quantity various inventory models. Numerical on inventory control. Inventory carrying costs, factors affecting inventory costs. V.E.D. analysis, S-D-E	L1, L2 and L3	7

analysis, F-S-N analysis H-M-L analysis and ABC analysis. Safety stocks, their objectives safety stocks and service levels.		
<p>Module 4:</p> <p>Evaluation of Material and Processes</p> <p>Introduction, value analysis, consideration of new techniques and materials, value analysis tests, material utilization of a product or assembly. Numerical problems on material utilization of a product. Value engineering job plan and various phases of job plan in systematic value engineering approach</p> <p>.</p>	L1, L2 and L3	6
<p>Module 5:</p> <p>Routing, Loading and Scheduling</p> <p>Introduction, Scheduling Procedure, Master Schedule, its objectives, Order scheduling, Loading by scheduled period, Dispatching, Job card, Job order. Commercial Loading &amp; Scheduling Devices.</p>	L1, L2 and L3	6
<p>Module 6:</p> <p>Advance Production Planning Techniques</p> <p>Just in time in production system, Pull system vs Push system, Kanban and pull system, Benefits of JIT, Requirements for implementing JIT, Evaluation of JIT production. Introduction to Kaizen, Main Aspects of Kaizen, Kaizen and Six Sigma, Element and Factors of Kaizen, Hierarchy of Kaizen, The Plan-Do-Check-Act (PDCA) Cycle, Kaizen Implementation, Kaizen Tools and Standards – 7 Quality Control Tools.</p>	L1, L2 and L3	6

*\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation*

Version	Date of Approval: 26 <sup>th</sup> June 2020	3	1	0	4
Pre-requisites/Exposure					
Co-requisites					

### Catalog Description

In this course basic concept of materials management like productivity, techniques of materials management, purchasing in production process and cost reduction techniques. Illustrate the material requirement planning process like JIT, production planning, economic analysis and break even analysis.

### Course Objectives:

The objective of this course is to

1. Equip the students with concept of material management, material planning, purchasing, and cost reduction.
2. Provide an overview of order quantities.

**Course Outcomes:** At the end of the course, students will demonstrate their ability to:

1. Identify materials management techniques for productivity improvement.
2. Apply the concept of materials planning with the theoretical concepts like break even analysis, JIT etc.
3. Apply different concepts of Purchasing while purchasing a material for the company.
4. Demonstrate mathematical model the cost reduction techniques for reducing the cost & enhancing the profits of an organization.

5. Apply inventory management techniques like EOQ for the efficient Inventory management of production plant.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>MODULE 1:</b> Introduction: Introduction to material management and productivity, functions of material management, organization structures in material management, role of material management techniques in improved material productivity.	L1, L2 and L3	7
<b>MODULE 2:</b> Material planning: objectives, material requirement planning, manufacturing resource planning, JIT production planning, strategic material planning, material control: acceptance, sampling, inspection, make or buy decision, simple cost analysis, economic analysis, break even analysis, break-even point theory, whether to add or drop a product line store management and warehousing, product explosion.	L1, L2 and L3	7
<b>MODULE 3:</b> Purchasing: Importance of good purchasing system, organization of purchasing functions, purchase policy and procedures, responsibility and limitations, purchasing decisions, purchasing role in new product development, role of purchasing in cost reduction, negotiations and purchase, purchasing research: identification of right sources of supply, vendor rating, standardization, vendor certification plans, vendor and supply reliability, developing new source of supply.	L1, L2 and L3	7
<b>MODULE 4:</b>	L1, L2	7

Cost reduction: cost control v/s cost reduction, price analysis, material cost reduction techniques, variety reduction, cost reduction and value improvement, techniques of cost control, standard costing, cost effectiveness, cost analysis for material management, material flow cost control.	and L3	
<p>MODULE 5:</p> <p>Order Quantities: Introduction, types of inventory, inventory control, inventory build –up, EOQ, various inventory models, inventory models with quantity discount, exchange curve concept, coverage analysis, optimal stocking and issuing policies, inventory management of perishable commodities, ABC – VED analysis, design of inventory distribution systems, surplus management, information system for inventory management, case studies.</p>	L1, L2 and L3	8

## **Master of Technology – Civil Engineering**

**FLEXILEARN**

-Freedom to design your degree

## **Curriculum & Scheme of Examination**

**2020**

**AMITY UNIVERSITY HARYANA  
GURUGRAM**

## **OVERVIEW**

M.Tech. in Civil Engineering with the specialization in (Structural Engineering/Construction Technology and Management/ Transportation engineering/Environmental Engineering) is one of the programmes as a centre of excellence for the development of science, engineering and technology, research, etc. that comes under the Civil Engineering Department. Solely this programme is focusing to provide a broad domain of knowledge with a view to produce quality engineer and researchers. This programme provides detailed knowledge about Building Physics, Concrete Technology, and Construction Management, Transportation, Environmental aspects. It will help in applying basic and technical knowledge of mathematics, science, engineering, technology and management in various application areas in the field of construction. The programme will give the students an insight into scientific principles involved in construction, understanding about the behaviour of construction materials and the fundamentals of structural mechanics and environmental aspects. Construction students will be imbued with good knowledge about different types of materials used for construction, along with testing procedures to assure quality control which will help them in analysing the real-world problems by using their theoretical knowledge and putting it in practical use. At the same time, the student will be able to use his/her knowledge in different domains meeting the realistic constraints such as economic, environmental, social, health, safety, management and sustainability issues.

## PROGRAMME OBJECTIVES (POs)

The post-graduates will

**PO 1: Application of Mathematics and sciences:** Apply the knowledge of mathematics, science, engineering fundamentals, technological advancements, management and an engineering specialization to the solution of complex problems.

**PO 2: Identify and Research to Solve:** Identify, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

**PO 3: Design and Development of Solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

**PO 4: Conducting Investigations and Research:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

**PO5: Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

**PO6: The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practices.

**PO7: Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

**PO8: Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

**PO9: Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

**PO10: Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions

**PO11: Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

**PO12: Life-long learning:** Recognize the need for and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change.

### **PROGRAMME SPECIFIC OUTCOMES (PSOs)**

On completion of the M. Tech in Civil Engineering with the specialization in (Structural Engineering/ Construction Technology and Management/ Transportation Engineering/ Environmental Engineering), the student will be able to:

**PSO1:** Apply knowledge and understanding of the scientific principles, mathematics and statistics to quantify and optimize relevant current technologies, and applications of the key engineering principles and practices related to Structural Engineering/Construction Technology and Management/Transportation Engineering /Environmental Engineering.

**PSO2:** Design, utilize principle, methods, software and code of practice to excel in areas of structural engineering/construction technology and management/Transportation Engineering /Environmental Engineering to meet desired needs within realistic constraints and conduct experiments of different civil engineering materials and interpret data.

**PSO3:** Understand and evaluate user needs, including considerations such as code requirement, aesthetics etc. and Design The Building/Structural And The Transportation System Keeping Consideration Of Environmental, Social, Safety And Sustainability.

**PSO4:** Apply the principle of soft computing skills, problem solving, creative thinking, group dynamics, team building, Leadership Skills, Decision Making Skills, self-development and interpersonal skills, contributing to overall personality and career development.

<b>PSO1</b>	<b>PSO2</b>			<b>PSO3</b>		<b>PSO4</b>	
Apply knowledge and understanding of the scientific principles, mathematics and statistics to quantify and optimize relevant current technologies, and applications of the key engineering principles and practices related to structural engineering/construction technology and management/Transportation Engineering /Environmental Engineering.	Ability to design, utilize principle, methods, software and code of practice to excel in areas of structural engineering/construction technology and management/Transportation Engineering /Environmental Engineering to meet desired needs within realistic constraints and conduct experiments of different civil engineering materials and interpret data.			Ability to understand and evaluate user needs, including considerations such as code requirement, Aesthetics Etc. And Design the Building/Structural And The Transportation System Keeping Consideration Of Environmental, Social, Safety And sustainability.		Apply the principle of soft computing skills, problem solving, creative thinking, group dynamics, team building, Leadership Skills, Decision Making Skills, Self-Development and Interpersonal Skills, Contributing to overall personality and career development.

### **Catalogue Description**

The purpose of this course is to provide students with the skill, knowledge and attitude required to determine approximate numerical solutions to mathematical problems which cannot always be solved by conventional analytical technique, and to demonstrate the importance of selecting the right numerical technique for a particular application, and carefully analyzing and interpreting the results obtained.

### **Course Objectives**

The objective of this course is to:

1. Demonstrate understanding of common numerical methods and how they are used to obtain approximate solutions to otherwise intractable mathematical problems.
2. Apply numerical methods to obtain approximate solutions to mathematical problems.
3. Derive numerical methods for various mathematical operations and tasks, such as interpolation, differentiation, integration, the solution of linear and nonlinear equations, and the solution of differential equations.

### **Course Outcomes**

On completion of this course, the students will be able to

- CO1. Define and describe the Algebraic and Transcendental Equation and solve the problems using appropriate Numerical methods.
- CO2. Describe the interpolation methods to find intermediate values in given graphical or tabulated data.
- CO3. Describe and Define the sets of linear simultaneous equations and solve the problems using Cholesky's (Crout's) method, Gauss-Seidel iteration and relaxation methods.
- CO4. Describe and apply Trapezoidal and Simpson's Rule to solve given integration problems.
- CO5. Define and describe Runge-Kutta method and Euler's Method to solve differential equations

## Course Content

Modules	Blooms level*	Number of hours
<b>Module I: Solution of Algebraic &amp; Transcendental Equations</b>  Newton-Raphson method including method of complex roots, Graeffe's root square method (Computer based algorithm and program for these methods)	L1, L2, L3	10
<b>Module II: Interpolation &amp; Approximation</b>  Lagrange's and Newton-divided difference formula, Newton interpolation formula for finite differences, Gauss's forward and backward interpolation formulae, Bessel's and Laplace-Everett's formulae, Cubic spline, least squares approximation using Chebyshev polynomial. Solution of partial differential equations of linear and non-linear nature with finite difference scheme and iteration techniques	L1, L2, L3	10
<b>Module III: Solution of Linear Simultaneous Equations</b>  Cholesky's (Crout's) method, Gauss-Seidel iteration and relaxation methods, Solution of Eigen Value problems; Smallest, largest and intermediate Eigen values (Computer based algorithm and Programme for these methods)	L1, L2, L3	10
<b>Module IV: Numerical Differentiation &amp; Integration</b>  Numerical differentiation using difference operators, Simpson's 1/3 and 3/8 rules, Boole's rule, Weddle's rule.	L1, L2, L3	8
<b>Module V: Solution of Differential Equations</b>	L1, L2,	10

Modified Euler's method, Runge-Kutta method of 2nd, 3rd and 4th orders, Predictor- Corrector method, Stability of Ordinary differential equation, Solution of Laplace's and Poisson's equations by Liebman's method, Relaxation method.	L3	
---	----	--

### **Catalogue Description**

This course includes the concept of Sustainability, Sustainable construction materials and methodologies related to commercial construction, including LEED/Green certifications. It also includes the life cycle assessment with case studies.

### **Course Objectives:**

The objective of this course is to:

1. Demonstrate an ability to evaluate and design whole or parts of projects, taking into account not only the financial and economic issues but also the social and environmental impacts affecting the sustainability of infrastructure.
2. Future challenges in sustainable development based on possible scenarios considering the level of success of current mitigation and adaptation measures.
3. Learn social sustainability in construction and development of built assets, and the roles of construction processes, outputs and outcomes on people and society.

### **Course Outcomes**

On completion of this course, the students will be able to

- CO1. Describe the basic concepts of sustainability, sustainable development and sustainable construction, understand rating systems and compares key features such as cost, ease of use, and building Performance.
- CO2. Define and Differentiate rating systems in detail, including its evolution, objectives, criteria, levels of certification benefits, and shortcomings.
- CO3. Demonstrate a functional knowledge of formulating and specifying practical measures for environmental sustainability that can be implemented in design and construction.
- CO4. Explain the quality control monitoring in the project, project safety management and construction project information.

### **Catalogue Description:**

This course is intended to provide fundamental understanding of different aspects of Disaster Management. It will expose the students to the concept and functions of Disaster Management and to build competencies of Disaster Management professionals and development practitioners for effective supporting environment as put by the government in legislative manner. It would also provide basic knowledge, skills pertaining to Planning, Organizing and Decision-making process for Disaster Risk Reduction.

### **Course Objectives:**

The objective of this course is to:

1. Ensure that students begin to understand the relationship between vulnerability, disasters, disaster prevention, risk reduction and the basic understanding of the research methodology for risk reduction measures.
2. Equipped with knowledge, concepts, and principles, skills pertaining to Planning, Organizing, Decision-making and problem solving methods for Disaster Management.
3. Develop rudimentary ability to respond to their surroundings with potential disaster response in areas where they live, with due sensitivity.

### **Course Outcomes:**

On completion of this course, the students will be able to

CO1: Increase the knowledge and understanding of the disaster phenomenon and, its factors.

CO2: Understand the relationship of hazard, risk and vulnerability

CO3: Obtain the skills in role of education and training in disaster prevention.

CO4: Ensure skills in post disaster management activities

CO5: Get the knowledge in understanding various prone zones in India

### **Course Content**

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I UNDERSTANDING DISASTER</b>		
Introduction – Types of Disaster (Rapid disaster – Natural, manmade disaster and slow disaster – Natural, manmade disaster) – Factors of Disaster, Geology and topography, Weather and climate, Ecosystems, Human factors, Earthquake: epicentres and scale of earthquake.	L1, L2 and L3	8

<b>Module II HAZARD, RISK AND VULNERABILITY</b>  Hazard classification and assessment - Hazard evaluation and hazard control - Concept And Elements of disaster risk - Techniques of Risk Assessment - Vulnerability Concept and Parameters, Risk and Vulnerability Relationship, Observation and Perception Of Vulnerability, Vulnerability Identification, Socio-Economic Factors of Vulnerability, Vulnerability Analysis.	L2 and L3	9
<b>Module III PRE-DISASTER MANAGEMENT ACTIVITIES</b>  Introduction - Institutional arrangements - Vulnerability and capacity assessment - Prevention and mitigation - Structural Mitigation And Non-Structural Mitigation - Preparedness and planning - Institutional learning and memory - Warning indicators - Public Awareness, Role Of Education And Training In Disaster Prevention.	L2, L3 and L4	7
<b>Module IV POST-DISASTER MANAGEMENT ACTIVATES</b>  Critical stress debriefing – Debriefing Checklist – Claims and follow-up of disaster - Insurance companies – Sale of debris – The relative risk of communicable disease after disaster – Persistence of many serious communicable disease	L2, L3 and L4	6
<b>Module V DISASTER MANAGEMENT IN INDIA</b>  Study Of Seismic Zones; Areas Prone To Floods And Droughts, Landslides And Avalanches; Areas Prone To Cyclonic And Coastal Hazards With Special Reference To Tsunami - Rescue, Relief And Rehabilitation - National Disaster Policy Of India (Salient Features) - News Media In Disaster Management - Impact Of Media On Policy.	L2 and L3	6

Co-requisites	Nil				

### **Catalogue Description:**

This course introduces the methodology of environmental impact assessment (EIA) as a vital tool for sound environmental management and decision-making. The course provides an overview of the concepts, methods, issues and various forms and stages of the EIA process.

### **Course Objectives:**

The objective of this course is to:

1. Explain the major principles of environmental impact assessment.
2. Understand the different steps within environmental impact assessment.
3. Different levels and systems of EIA are examined to highlight the diversity of approach and impact of the EIA process.

### **Course Outcomes:**

On completion of this course, the students will be able to

CO1: Carry out scoping and screening of developmental projects for environmental and social assessments.

CO2: Explain different methodologies for environmental impact prediction and assessment.

CO3: Plan environmental impact assessments and environmental management plans.

CO4: Evaluate environmental impact assessment reports.

CO5: Able to access different case studies/examples of EIA in practice

### **Course Content**

<b>Modules</b>	<b>Blooms</b>	<b>Number of hours</b>
----------------	---------------	------------------------

	level*	
<b>Module I INTRODUCTION</b>  Impact of development projects under Civil Engineering on environment – Environmental Impact Assessment (EIA) - Environmental Impact Statement (EIS) – EIA capability and limitations – Legal provisions on EIA.	L1, L2 and L3	10
<b>Module II METHODOLOGIES</b>  Methods of EIA –Check lists – Matrices – Networks – Cost-benefit analysis – Analysis of alternatives – Case studies.	L2 and L3	10
<b>Module III PREDICTION AND ASSESSMENT</b>  Assessment of Impact on land, water and air, noise, social, cultural flora and fauna; Mathematical models; public participation – Rapid EIA.	L2, L3 and L4	10
<b>Module IV ENVIRONMENTAL MANAGEMENT PLAN</b>  Plan for mitigation of adverse impact on environment – options for mitigation of impact on water, air and land, flora and fauna; Addressing the issues related to the Project Affected People – ISO 14000	L2, L3 and L4	10
<b>Module V CASE STUDIES</b>  EIA for infrastructure projects – Bridges – Stadium – Highways – Dams – Multi-storey Buildings – Water Supply and Drainage Projects	L2 and L3	8

### Catalogue Description

This course discusses about the basics of optimization, formulation of design problem and classification of optimization problems. It deals with various optimization techniques i.e. penalty function, Lagrange multipliers unconstrained minimization etc. and their applications in civil engineering. The different linear and Non-Linear programming techniques and their applications in civil engineering are also discussed.

### Course Objectives

The objective of this course is to

1. Deal with different optimization methods Optimization to minimize the effort required or to maximize the desired benefit in design, construction and maintenance in civil engineering system.
2. Impart knowledge of Linear Programming, Non-Linear Programming and Dynamic Programming techniques with number of applications in civil engineering.

### Course Outcomes

On completion of this course, the students will be able to

- CO1. Explain the concept of optimization and formulation of design problem.
- CO2. Describe various optimization techniques and their application in civil engineering.
- CO3. Analyze the problems related to Linear Programming and Algorithms.
- CO4. Apply different Linear Programming applications in transportation, water resources, and structural and other optimization problems.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
----------------	----------------------	------------------------

<b>Module I: Introduction</b> Introduction: Engineering application of Optimization, Formulation of design problems as mathematical programming problems, classification of optimization problems	L1, L2	10
<b>Module II: Optimization Techniques</b> Classical optimization, multivariable with no constraints, unconstrained minimization techniques, penalty function techniques, Lagrange multipliers and feasibility techniques. Linear Programming: Graphical method, Simplex method, Duality in linear programming (LP), Sensitivity analysis Applications in civil engineering;	L1, L2, L3	14
<b>Module III: Non-Linear Programming Techniques/Method</b> Unconstrained optimization, one dimensional minimization, golden section, elimination, quadratic and cubic, Fibonacci, interpolation, Direct search, Descent, Constrained optimization, Direct and indirect, Optimization with calculus, Khun- Tucker conditions.	L1, L2, L3, L4	14
<b>Module IV: Applications</b> Application of optimization techniques in Civil Engineering:	L1, L2, L3	10

### Catalogue Description

In this lab course the various tests are conducted on different types of basic construction materials such as aggregate, sand, cement, admixtures. It also includes the tests on concrete design mix, different tests related to fresh and hardened state concrete with both destructive and non-destructive tests.

### Course Objective

The objective of the course is to

1. Assure the quality and properties of materials that are to be used for the construction such as; sand, aggregates, cements, admixtures.
2. Strengthen the knowledge on construction materials, their utilization and related tests for concrete structure quality improvement, evaluation and its maintenance.

### Course Outcomes

On the completion of this course, the student will be able to:

- CO1. Perform the tests on various construction materials such as cement, aggregates, etc. to apply the results in the practical life.
- CO2. Perform different tests on soil for knowing its properties & application construction for the quality assurance.
- CO3. Convince on different tests required from environmental point of view.
- CO4. Perform the various tests on which are non- destructive in nature.

<b>CIV4201</b>	<b>RESEARCH METHODOLOGY AND TECHNICAL REPORT WRITING</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2020.1	Date of Approval: 3rd June, 2020	2	0	0	2
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

### **Catalogue Description**

This course deals with types of research, significance and characteristics and planning a research proposal, population and sample, parameter and statistic, sampling and data collection, sampling design: steps, types, sample size, sampling methods. It deals with univariate, bivariate and multivariate analysis, measure of dispersion of data, standard deviation, variance, coefficient of variation and degree of freedom. Hypothesis testing: parametric tests and non-parametric tests, regression analysis and curve fitting, method of least-squares, explained and unexplained variations, coefficient of correlation of determination. The course also deals with technical/scientific/research report writing referencing and bibliography and footnotes. Publication of research papers, citations, intellectual property rights and copy rights, plagiarism, patent and patent laws, commercialization and ethical issues.

### **Course Objectives**

The objective of this course is to:

1. Deals with types of research, significance and characteristics and planning a research proposal and to enhance scientific and technical writing and research skills.
2. Impart knowledge about various stages of research process, statistical analysis and tools & their applications in decision making by hypothesis testing and regression analysis.
3. Deals with intellectual property rights and copy rights, plagiarism, patent and patent laws, commercialization and ethical issues.

### **Course Outcomes**

On completion of this course, the students will be able to:

CO1: Classify different research types; explain steps in research process and planning research proposal.

CO2: Describe sampling methods, sampling steps and design, carry out data processing and analysis.

CO3: Explain hypothesis testing, parametric and non-parametric tests, carry out regression analysis, curve fitting.

CO4: Demonstrate technical and scientific report writing skills, describe, plagiarism, patent laws and intellectual property rights.

### Course Content

Modules	Blooms level*	Number of hours
<b>Module I: Introduction and Research Planning</b> Introduction to research: Definition, motivation, need, objectives, significance and characteristics of research; types of research; steps in research process; planning a research proposal; literature review, web searching.	L1, L2	4
<b>Module II: Sampling Methods</b> Measurement scales, population and sample, parameter and statistic, sampling and data collection, sampling design: steps, types, sample size, sampling methods, data processing and analysis. Sampling surveys and questionnaire designing, primary and secondary data.	L1, L2, L3	5
<b>Module III: Hypothesis Testing and Regression Analysis</b> Univariate, bivariate and multivariate analysis, means-arithmetic, geometric and harmonic; measure of dispersion of data, standard deviation, variance, coefficient of variation and degree of freedom. Hypothesis testing: kinds errors in hypothesis testing, significance and confidence levels, parametric tests and non-parametric tests, one-tailed and two-tailed tests, analysis of variance. Regression analysis and curve fitting, method of least-squares, explained and unexplained variations, coefficient of correlation of determination.	L1, L3, L4	10
<b>Module IV: Technical Report Writing and Plagiarism</b> Technical/scientific/research report writing: structure and components of scientific reports, formats of dissertations, research report, report writing skills, report preparation, referencing and bibliography and footnotes. Publication of research papers, citations, making presentation-use of visual aids and PPTs. Intellectual property rights and copy rights, plagiarism, patent and patent laws, commercialization and ethical issues.	L1, L3, L4	5

### **Catalogue Description**

Earthquake disaster is increasingly becoming global concern as it threatens the world's population, economy, and sustainable development. It is the responsibility of civil engineers to design and build earthquake resistant structures in order to minimize the risk due to earthquake. By reducing the losses of lives and properties, socio-economical sustainability can be easily achieved. This course offers the fundamental knowledge of the basic science of earthquakes and its effects on the natural and built environment. Concept and techniques of seismic analysis with respect to the various elements of the building would be discussed in detail along with the design principles and concept. The Indian code provisions will be kept in mind while considering the design aspects. To take all the above into consideration, the structural dynamics plays a very important role. Without understanding the dynamics of a structure, one cannot move further in designing for earthquake resistant structures.

### **Course Objectives**

The objective of this course is to:

1. Analysis of structural members and systems subject to dynamic loads
2. Introduce the students with the deeper understanding of the dynamics of structures taking into consideration the single and multi-degree freedoms.
3. Understand and apply the knowledge of analysis on the basis of earthquake forces, wind forces and blast loading.

### **Course Outcomes**

After completing the course, the students will be able to:

- CO1. Acquire the ability to analyze single and multi-degrees of freedom system of structures.
- CO2. Demonstrate in-depth knowledge of the discipline and build capability to apply that knowledge to structural dynamics
- CO3. Orient the students to high value research on structural dynamics and earthquake engineering so that they get impetus to pursue lifelong learning.
- CO4. Analyze earthquake generated forced on structures and evaluate their dynamical responses to earthquake.

- CO5. Comprehend and apply technical knowledge and leadership skills to structural dynamics related to building dynamics, wind loads, blast loads research and consultancy problems

### Course Content

Modules	Blooms level*	Number of hours
<b>Module I: Single Degree of Freedom Systems</b> Differential equation of motion - D' Alembert's principle - Free vibration and forced vibration response - damped and undamped - evaluation of damping constants - vibration of machine foundation - vibration isolation- vibration measuring instruments. Response to general loading - pulse excitation - Duhamel Integral - Numerical methods - Newmark method.	L1, L2, L3, L4, L5	15
<b>Module II: Multi-Degree of Freedom and Continuous Systems</b> Two- and three-degree systems - solution of eigen value problem – Stodola's method - orthogonality conditions - Modal superposition method. Vibration analysis of continuous systems - simply supported beams - Effect of shear and rotary inertia - Timoshenko beam - Effect of axial loads.	L1, L2, L3, L4, L5	9
<b>Module III: Analysis for Seismic Forces</b> Concept of response spectrum - estimation of design forces of multistory buildings using Bureau of Indian Standards (BIS) codes - earthquake analysis of base isolated buildings.	L1, L2, L3, L4, L5	9
<b>Module IV: Analysis for Wind Forces</b> Wind effects on structures - static and dynamic - analysis for wind loads using BIS codes - quasi static method and gust factor method.	L1, L3, L4, L5	8
<b>Module V: Blast Loading</b> Blast loading - over ground and underground structures - design parameters - relevant BIS codes, case study.	L1, L2, L3	7

*\*Bloom's Level:*

<b>STE4202</b>	<b>ADVANCED STEEL DESIGN</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2020.1	Date of Approval: 3rd June, 2020	4	0	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

### Catalog Description

Advanced Steel Design includes the design of steel members and their connections. Different methods of design will be briefly described before introducing the limit states of collapse and serviceability. It also includes the fundamentals of the integrated systems of steel bridges, bunkers, silos. The design will be done as per IS 800:2007.

### Course Objectives

The objectives of the course are

1. Provide design concept for steel as a structural member using Limit state Design.
2. Impart knowledge about connections of the steel members.

### Course Outcomes

After completing the course, the students will be able to:

- CO1: Explain the various types of connections and calculate the strength of connections.  
CO2: Describe the different types of connections (shear and moment).  
CO3: Explain different types of loads on roof trusses and design the roof supporting members.  
CO4: Design for various components of truss bridges.  
CO5: Explain the design of bunkers and silos.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Connections</b> Riveted connections, Bolted Connections, Load Transfer Mechanism, Failure of Bolted Joints, Specifications for Bolted Joints, Bearing ,Type Connections, Tensile Strength of Plate ,Strength and Efficiency of the Joint, Combined Shear and Tension, Slip ,Critical Connections, Praying Action, Design of Groove welds, Design of Fillet Welds, Design of Intermittent fillet welds, Failure of Welds.	L1, L2, L3	10
<b>Module II: Beam-Column Connections</b> Introduction, Beams-Column Connections, Connections Subjected	L1, L2,	10

to Eccentric Shear, Bolted Framed Connections, Bolted Seat Connections, Bolted Bracket Connections. Bolted Moment Connections, Welded Framed Connections, Welded Bracket Connections, Moment Resistant Connections.	L3	
<b>Module III: Loads on Roof Structure.</b> Dead loads, live loads and wind loads on roofs. Design wind speed and pressure, wind pressure on roofs; wind effect on cladding and louvers; Design of angular roof truss, tubular truss, truss for a railway platform. Design of purlins for roofs, design of built up purlins, Design of bracings.	L1, L2, L3	10
<b>Module IV: Design of Truss Bridge</b> Types of truss bridges, component parts of a truss bridge, economic proportions of trusses, self-weight of truss girders, design of bridge compression members, tension members; wind load on truss girder bridges; wind effect on top lateral bracing; bottom lateral bracing; portal Bracing; sway bracing.	L1, L2	10
<b>Module V: Bunkers and Silos</b> Design of Steel Bunkers and Silos: Introduction, Jaisan's Theory Airy's Theory, Design of Parameters, Design Criteria, Analysis of Bins, Hopper Bottom, Design of Bins.	L1, L2, L3	08

*\*Bloom's Level:*

<b>STE4204</b>	<b>DESIGN OF INDUSTRIAL STRUCTURES</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

### Catalog Description

The course includes the analysis & design industrial structures. The special types of designs such as silos, bunkers, cooling towers, large span roofs, etc. are also part of this course.

### Course Objectives

The objectives of this course to:

1. Provide concept for planning of industrial structures and types of loads acting on the industrial structures.
2. Impart knowledge of the design concepts applied for industrial building design.

### Course Outcomes

After completing the course, the students will be able to:

- CO1: Explain the planning of industrial structures & carry out plastic design of structural elements.
- CO2: Explain the analysis and design concepts of industrial buildings and storage structures.
- CO3: Analyze and design of space structures
- CO4: Analyse earthquake and wind generated forces on Aluminium Structures and evaluate their responses.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Planning of Industrial Structures</b> Review of Plastic Design: Concept of minimum weight design. Design of Industrial Building Planning of industrial structures. Crane girders & columns, Analysis of trussed bents, Design of industrial frame.	L1, L2, L3	12
<b>Module II: Design of Storage Structures</b> Bunkers and silos. Pressure vessels and chimneys.	L1, L2 L3	10

<b>Module III: Design of Space Structures</b>  Transmission towers, Steel domes, Pre-cast building components. Design using Light Gauge Sections: Structural use of pressed sections and light gauge sections, Aluminum as a material of construction for industrial structures and design of such structures, Tubular structures and Sandwich plate construction.	L1, L2, L3	13
<b>Module IV: Aluminum Structures</b>  Introduction, Permissible stresses, Tension members, Compression members, Design of beams, Local buckling of compression elements, Riveted and bolted construction, Design of chimneys, Load analysis, Design of steel supporting chimney, Chimney foundation. Construction Practices: Shop practice in steel construction, Fabrication erection and production, Case study based. Structural aspects of machine foundations.	L1, L2, L3	13

Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

### **Catalog Description**

Course extends the basic stiffness method of analysis developed in the pre-requisite courses. Fundamental principles of the stiffness method of analysis, with automatic assembly of the stiffness matrix for rigid jointed plane frames and space structures, are presented in some detail. Elastic instability of frames and the design of continuous steel beams and portal frames using plastic methods will be undertaken.

### **Course Objectives**

The objective of this course is to:

1. Equip students with fundamental principles of the stiffness method of analysis
2. Impart knowledge of matrix methods to analysis grids, trusses and frames.

### **Course Outcomes**

After completing the course, the students will be able to:

- CO1. Explain the basic concepts of matrix methods
- CO2. Describe the concept of stiffness matrix and their application to beams.
- CO3. Explain the analytical procedure for rigid frames using matrix methods.
- CO4. Determine the displacements in the grids using matrix methods.
- CO5. Explain the application of matrix approach on trusses.

### **Course Content**

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>

<b>Module I: Introduction to Matrix Method</b> Introduction: Matrix Methods of Analysis of Structures, Degrees of freedom, Analysis of indeterminate structures: Force methods and Displacement Methods. Matrix concepts and Matrix analysis of structures: matrix, vectors, displacement and force transformation matrices, Element and structure flexibility matrices; equivalent joint loads; stiffness and flexibility approaches.	L1, L2, L3,	12
<b>Module II: Stiffness Matrix</b> The Matrix Displacement Approach: Beams- Introduction. Stiffness Matrix of a Bar Element subjected to Axial Force. Co-ordinate Transformations. Global Stiffness Matrix. Application to Pin-Jointed Frames. Stiffness Matrix of a Beam Element. Beam element stiffness. Application to Continuous Beams.	L1, L2, L3	10
<b>Module III: Rigid Frames</b> Matrix Analysis of Rigid Frames: Matrix displacement method vs slope deflection method, analysis of rigid frames with and without side sway, analysis of rigid framed for yielding of supports.	L1, L2, L3	8
<b>Module IV: Grids</b> Matrix Analysis of grillage or grid: Introduction, torsional stiffness of grid element and advantage of torsion release, Matrix Displacement Analysis of Grillage or Grid. Co-ordinate Transformations. Element Stiffness Matrix & its Application	L1, L2,	10
<b>Module V: Trusses</b> Matrix Analysis of Space Trusses & Frames: Co-ordinate Transformations. Application to Space Trusses & Space Frames, Analysis by conventional stiffness method (four degree of freedom per element) and reduced element stiffness method (single degree of freedom), Analysis by flexibility method	L1, L2, L3	8

### Catalogue Description

Bridges are a very important part of a nation's transportation infrastructure. Proper planning, design and construction, as well maintenance, are of utmost importance. In general, engineers will benefit from exposure to sophisticated bridge typologies and construction practices, as well as the assessment of the existing bridges. This course will extend the concepts and methodologies given in bridge engineering courses to cover the design of medium- and long-span road bridges, which can be optimized in terms of load-carrying capacity, durability, and ease of construction and maintenance.

### Course Objectives

The objective of this course is to:

1. Acquire knowledge about the purpose and design of the various kinds of bridges which are used in day-to-day life.
2. Study the loads, forces on bridges and design of several types of bridges.
3. Develop an understanding of and appreciation for basic concepts in proportioning and design of bridges in terms of aesthetics, geographical location and functionality, sizing of bridge elements, i.e. develop a clear understanding of conceptual design.
4. Exposure to the state-of-the-art practices in the international level expected to challenge the students to think beyond conventional design and implement optimized solutions that can compare with the best bridges in the world.

### Course Outcomes

After completing the course, the students will be able to:

- CO1: Apply knowledge of mathematics, science and engineering to understand the various types of bridges and its loadings and forces.
- CO2: Design the bridges to meet desired needs such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability.
- CO3: Design different types of RCC bridges, steel bridges, riveted and welded plate girder bridges and pre-stressed concrete bridges with the bearings and substructures.

CO4: Design and analysis of slab culverts, T-beam and slab bridges

CO5: Design and analysis of continuous, box girder and cantilever bridges

### Course Content

Modules	Blooms level*	Number of hours
<b>Module I: Concrete Bridges</b> Introduction-types of Bridges-economic span length-Types of loading-Dead load live load-Impact Effect-Centrifugal force-wind loads-Lateral Loads-Longitudinal Forces-Seismic loads- Frictional resistance of expansion bearings-Secondary Stresses-Temperature Effect-Erection Forces and effects-Width of roadway and footway-General Design Requirements.	L1, L2, L3	10
<b>Module II: Analysis and Design of Bridges</b> Load distribution theories, analysis and design of slab culverts, tee beam and slab bridges.	L2, L3, L4, L5	9
<b>Module III: Design of Continuous, Box Girder and Cantilever bridges</b> Design principles of continuous bridges, box girder bridges, balanced cantilever bridges.	L2, L3, L4, L5, L6	9
<b>Module IV: Design of Pre-Stressed Bridges:</b> Flexural and torsional parameters – Courbon’s theory – Distribution co-efficient by exact analysis – Design of girder section – maximum and minimum pre-stressing forces – Eccentricity – Live load and dead load shear forces – Cable Zone in girder – check for stresses at various sections – check for diagonal tension – Diaphragms – End block – short term and long term deflections.	L1, L2, L3, L4	10
<b>Module V: Design and Analysis of Plate Girder Bridges and Their Foundation</b> Design of riveted and welded plate girder bridges for highway and railway loading – wind effects – main section, splicing, curtailment, stiffeners – Different types of bearings – Design of bearings – Design of masonry and concrete piers and abutments – Types of bridge foundations – Design of foundations.	L1, L2, L3, L4, L5, L6	10

### Catalogue Description

The course advanced concrete design is to introduce engineering students to the advanced methods used for concrete structural design in designing the large complex structural elements. With this the students will be able to design and analyse the various components/ members of the reinforced concrete structure. The principle is based on the development of student's ability to analyse and design involve in the construction of reinforced concrete structural members. This course involves the fundamentals of mathematics, physics, engineering mechanics and strengthen the basics of RCC structure design course also, so that to help in experiencing complex structural elements in the real construction field.

### Course Objectives

The objective of this course is to:

1. Comprehend the knowledge in advanced concept of reinforced concrete structural design of different complex RCC structure.
2. Develop analytical and design skill in the field of design large RCC members construction projects.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Analyse and design the high-grade moment resisting complex structural RCC elements.

CO2: Apply various principal criteria, assumptions and design procedure followed in the concrete complex flat slab structural elements, their effect due to shear and moment distribution with columns.

CO3: Comprehend, Apply and Inculcate in dimensioning and designing of different types of load carrying sub-structure, their designing criteria and principles related to structural stability.

CO4: Develop the idea regarding the analysis and design of compression carrying member in different types of loading conditions which are mostly encountered in natural real scale construction.

CO5: Define the concept of yield-line theory of shear and moment carrying structural element which are mostly encountered in natural real situation regarding the behavior after yielding using different post-failure theories.

### Course content

Modules	Blooms level*	Number of hours
<b>Module I: Design of Deep Beams and Corbels</b> Steps of Designing Deep Beams, Design by IS 456, Checking for Local Failures, Detailing of Deep Beams, Analysis of Forces in a Corbels, Design of Procedure of Corbels	L1, L2, L3, L4, L5, L6	9
<b>Module II: Design of Flat Slabs</b> Flat slabs: Direct design method – Distribution of moments in column strips and middle strip-moment and shear transfer from slabs to columns – Shear in Flat Slabs-Check for one way and two-way shears - Introduction to Equivalent frame method. Limitations of Direct design method, Distribution of moments in column strips and middle strip	L1, L2, L3, L4, L5, L6	10
<b>Module III: Design of Foundations</b> Basic philosophy of foundation design, raft foundations, pile foundations & well foundation, combined footings.	L1, L2, L3, L4, L5, L6	9
<b>Module IV: Design of Compression Members and Shear Walls</b> Estimation of effective length of a column-Code requirement on Slenderness Limits, Design of Short Columns under Axial Compression, Design of Short Columns with Uniaxial Bending, Design of Short Columns under Biaxial Bending, Design of Slender Columns. Design of shear walls and reinforcement in walls.	L1, L2, L3, L4, L5, L6	10
<b>Module V: Yield Line Theory</b> Introduction, assumptions, location of yield lines, method of analysis, analysis of one way and two-way slabs, effect of top corner steel in a square slab, examples.	L1, L2, L3, L4, L5, L6	10

### Catalogue Description

The Finite Element Method (FEM) is widely used in industry for analyzing and modelling structures and continua, whose physical behaviour is described by ordinary and partial differential equations. The FEM is particularly useful for engineering problems that are too complicated to be solved by classical analytical methods. The main objective of this course is to introduce the mathematical concepts of the FEM for obtaining an approximate solution of ordinary and partial differential equations.

### Course Objectives

The objective of this course is to:

1. Deal real world problem and try to describe it with partial differential equations which might not have an exact solution.
2. Comprehend a complex problem to break down the problem into smaller elements (discretization) and apply over these smaller finite domains.
3. Formulated into matrix form, collected together and solved for unknown values using boundary conditions. The unknown values are then further used to approximate other quantities.

### Course Outcomes

On completion of this course, the students will be able to

- CO1. Define the various complex areas of complex engineering problems and different constitutive relation.
- CO2. Comprehend the energy relationship and finding numerical techniques by dividing the continuum in to elements to find the stress-strain relationship in elemental stiffness matrix. Realize the concept of nodes and elements.
- CO3. Comprehend and the problems of two dimensional isoperimetric elements four noded quadrilateral elements. Enlighten the fundamental ideas of FEM for such elements.

CO4. Develop the finite element model concept for structures in assemblage of elements through direct stiffness method and special characteristics of stiffness matrix.

CO5. Comprehend and define the concept for the analysis of framed structures, 2D truss element, 2D beam element, plate bending elements.

## Course Contents

Modules	Blooms level*	Number of hours
<b>Module I: Introduction to FEM</b> Basic idea of FEM. Applications and importance of FEM. Differential equilibrium equations - strain displacement relation - linear constitutive relation - special cases- Principle of stationary potential energy - application to finite element methods. Some numerical techniques in finite element analysis	L1, L2	9
<b>Module II: Displacement Models</b> Displacement models - convergence requirements. Natural coordinate systems – Shape function. Interpolation function- Linear and quadratic elements - Lagrange & Serendipity elements- Strain displacement matrix - element stiffness matrix and nodal load vector	L1, L2, L4	9
<b>Module III: 2-D analysis and modeling</b> Two dimensional isoparametric elements - Four noded quadrilateral elements – triangular elements- Computation of stiffness matrix for isoparametric elements - numerical integration (Gauss quadrature) - Convergence criteria for isoparametric elements.	L1, L2, L4	10
<b>Module IV: Different methods in FEM</b> Assemblage of elements –Direct stiffness method - Special characteristics of stiffness matrix - Boundary condition & reaction - Gauss elimination and LDLT decomposition- Basic steps in finite element analysis.	L1, L2, L3, L4, L5	10
<b>Module V: Analysis of framed structures</b> Analysis of framed Structures- 2D truss element - 2D beam element. Analysis of plate bending: Basic theory of plate bending - displacement functions - plate bending Elements. Plane stress and plane strain analysis: Triangular elements - Rectangular elements	L1, L2, L3, L4, L5, L6	10

### Catalogue Description

The course covers selection of equipment, factors affecting selection of equipment and methods technical and economic; Construction engineering fundamentals; Methods and equipment for Earthmoving, Pile driving and dewatering. This course would help to use new and improved technology in construction and therefore be economically benefiting the builders and contractors.

### Course Objectives

The objective of this course is to:

1. Comprehend the proper selection of construction equipment used in the field of Civil engineering construction sectors.
2. Development of ideas regarding construction methods and equipment used in Civil engineering.

### Course Outcomes

On completion of this course, the students will be able to:

- CO1: Develop the knowledge based on selection of appropriate construction equipment as per their construction activity.
- CO2: Describe the process of manufacturing of basic construction equipment.
- CO3: Explain the concept of pile driving and dewatering system.
- CO4: Comprehend the selection of construction equipment for the tunnel.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1: Selection of Equipment</b> Selection of equipment-factors affecting- relative advantages and disadvantages-technical and economic aspects.	L1, L2, L3	12
<b>Module II: Construction Engineering Fundamentals</b> Analysis of production outputs and costs. Characteristics and performance of various equipment used in construction practices. Uses, advantages and disadvantages of various construction equipment	L1, L2, L3	12
<b>Module III:Erection and Material Transport Equipment</b>	L1, L2,	12

Erection and material transport equipment's- their performance advantages-pile driving-dewatering.Low Strain Dynamic Pile Testing/ Pile Integrity Testing (PIT),High Strain Dynamic Pile Testing (HSDT) / Pile Driving Monitoring	L3	
<b>Module IV: Performance of Equipment</b> Study of performance of equipment used for concrete construction including batching and mixing units-equipment used for tunneling.	L1, L2, L3	12

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation*

<b>CME4203</b>	<b>BUILDING SERVICES &amp; MAINTENANCE MANAGEMENT</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

### Catalogue Description

This course discusses about components of urban forms and their planning, Functional planning of buildings, optimization of space: Spatial Synthesis graphical techniques. Engineering services in a building as a system are also the part of this course.

### Course Objectives

The objective of this course is to:

1. Impart knowledge about the various components of the urban planning, the services related to the buildings such as MEP.
2. Provide the understanding of the building maintenance and its management.

### Course Outcomes

After completing the course, the students will be able to:

- CO1: Explain the various steps for planning of residential building.  
CO2: Describe the applications of engineering services.  
CO3: Explain the concept members of prefabrication systems in buildings.  
CO4: Describe the maintenance processes for residential buildings economically.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Planning of Residential Building</b> Components of urban forms and their planning. Concepts of neighborhood unit. Street system and layout in a neighborhood. Functional planning of buildings, optimization of space: Spatial Synthesis graphical techniques, heuristic procedures, formulation of linear and non-linear optimization problem. Space requirements and relationships for typical buildings, like residential offices, hospitals, etc.	L1, L2, L3	10

<b>Module II: Engineering Services</b> Standard fire, fire list, fire resistance, classification of buildings, means of escape, alarms, etc. Lightning protection of buildings, Engineering services in a building as a system. Lifts, escalators, cold and hot water systems, wastewater systems, and electrical systems	L1, L2	10
<b>Module II: Prefabrication</b> Prefabrication systems in residential buildings: Planning and modules and sizes of components in prefabrication, Earthquake resistant structures - Air-conditioning and heating - Acoustics and Sound insulation.	L1, L2, L3	8
<b>Module IV: Maintenance</b> Building Maintenance: Scheduled and contingency maintenance planning. M.I.S. for building maintenance. Maintenance standards. Economic maintenance decisions.	L1, L2	8

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation*

<b>CME4204</b>	<b>SYSTEMS DESIGN AND VALUE ANALYSIS</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

### Catalog Description

This course introduces the students to the concepts and skills of system analysis and design. It includes expanded coverage of data flow diagrams, data dictionary, and process specifications.

### Course Objectives

The objective of this course is to:

1. To impart the knowledge about the system design procedure and the value savings during the construction.
2. Provide a solid foundation of systems principles and an understanding of how business function, while heightening students to the issue's analysts face daily.
3. Help the students in management of various resources.

### Course Outcomes

After completing the course, the students will be able to:

- CO1: Explain the principles and tools of systems analysis and design.
- CO2: Solve a wide range of problems related to the analysis, design and construction of information systems, value analysis and job plans.
- CO3: Explain the professional and ethical responsibilities of practicing the value management and valuation by understanding the need for quality.
- CO4: Plan and undertake a major individual project, prepare and deliver coherent and structured verbal and written technical valuation reports.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Analysis and Appraisal</b> Analysis synthesis, Appraisal, System design procedure, objectives and constraints, application to buildings.	L1, L2, L3	12

<b>Module II: Introduction to Value Analysis</b> 10 Commandments of value analysis; value analysis team; principles of value analysis, elements of a job plan viz. orientation, Information, presentation. Implementation follow up action, benefits of value analysis, various applications; assessing effectiveness of value analysis, function analysis, Life cycle costing: Life cycle costing – Forecasting of capital as well as operating & maintenance costs, time value, present worth analysis, DCF methods, ROR analysis, sensitivity analysis. Different methods of performing value engineering.	L1, L2, L3, L4, L5	12
<b>Module III: Value Management and Valuation</b> Job plan. Value savings during construction. Value management. Valuation: Types of value, purposes of valuation factors affecting value. Different methods of valuation for different types of assets such as land and building, horticulture, historical places.	L1, L2, L3, L4	12
<b>Module IV: Valuation Report</b> Valuation Report, contents, standard formats, Case study of any one Report.	L1, L2, L5, L6	12

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation*

<b>CME4211</b>	<b>PROCESS ANALYSIS &amp; THEORY OF CONSTRAINTS</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

### Catalogue Description

This course is to familiarize students to the fundamentals of operational process analyses with a view to improving productivity and performance towards fulfilling the overall business goals. It is also to further enable them to learn the concepts, principles, and application of the theory of constraints approach in this regard.

### Course Objectives

The objective of this course is to:

1. Ability to understand and gain knowledge about the process, its functions and objectives of analysis.
2. Acquire knowledge about the cycle, performance, productivity and benchmarking.

### Course Outcomes

After completing the course, the students will be able to:

- CO1: Identify the various processes and their functions as well as the constraints in organizational process.
- CO2: Estimate and express the constraints.
- CO3: Evaluate the performance after elevation of constraints.
- CO4: Relate theory of constraints to project management and critical chain project management

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
----------------	----------------------	------------------------

<b>Module I: Process Structure and Selection</b> Process Management Orientation in Operations; Processes and their functions, importance, objectives of analysis, methods; Interface with other disciplines; Product-process matrix, Production Process structures, Service Process structures.	L1, L2, L3, L4	12
<b>Module II: Examination of Processes &amp; Benchmarking</b> Examination of processes; Parameters of Examination, Lead-time, Set-up time, Throughput Cycle, Cycle time; Performance Measurement System, Cost, Quality, Flexibility, Capability; Productivity and Profitability Improvement; Benchmarking.	L1, L2, L3, L4	12
<b>Module III: Understanding Theory of Constraints (TOC)</b> TOC thinking process; Current Reality Tree, The Evaporating Cloud, Future Reality Tree, Prerequisite Tree, Transition Tree: Application of thinking process tools; TOC and economic decisions, throughout accounting measures for decision making.	L1, L2, L3, L4	12
<b>Module IV: Operations Improvements with Theory of Constraints</b> TOC applications in operations improvement; Relating TOC to Project Management, Critical Chain project management; Production Scheduling with Drum-Buffer-Rope method; TOC in supply chain management, Drum-Buffer-Rope distribution solution.	L3, L4, L5, L6	12

<b>CME4207</b>	<b>RELIABILITY ANALYSIS IN CONSTRUCTION MANAGEMENT</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

### Catalogue Description

This course is mainly focused to explain the theories and applications of reliability analysis of structural systems having uncertainty and/or exposed to random environment. The course introduces basic concepts of probability theory at the beginning which is followed by the Level-2 reliability methods. With these knowledges of reliability analysis in hand, the course then aims to explain the applications of these methods for code calibrations and reliability analysis under multiple failure modes (i.e. system reliability). Even the reliability-based design and structural detailing is discussed in this course.

### Course Objectives

The objective of this course is to:

1. Ability to understand and learn the probability theories, the resistance distribution parameters and the reliability methods which can be put to use in construction engineering and management.
2. Explain the applications of various reliability methods for code calibrations and reliability analysis under multiple failure modes (i.e. system reliability).
3. Develop the skills of the students to take this subject for further research.
4. Help the practicing engineers to use the advanced design concepts in their profession, as major emphasis is given to the applications in this course.

### Course Outcomes

After completing the course, the students will be able to:

CO1: Apply the statistical methods in construction and technology field.

CO2: Acquire knowledge about the concept of reliability, its methods and reliability-based design.

CO3: Use the mathematical models based on probabilistic and statistical methods, simulation in risk identification, analysis and mitigation of project risks.

CO4: Imbibe the knowledge and understanding of the system reliability, modeling of structural systems as well as the application of reliability analysis for R.C.C. and steel frames.

## Course Content

Modules	Blooms level*	Number of hours
<b>Module I: Probability Theory</b> Mutually exclusive events, set theory, sample points and sample space, laws of probability, total probability theorem, Baye's rule, random variables-discrete and continuous, jointly distributed discrete variables, marginal distribution, conditional distribution, jointly distribution continuous variables, functions of random variables, moments and expectations, common probability distribution normal. Lognormal, Gamma and Beta distribution, external distribution	L1.L2, L3, L4	12
<b>Module II: Resistance Distribution and Parameters</b> Statistics of properties of concrete and steel, Statistics of strength of bricks and mortar, Characterization of variables, allowable stresses based on specified reliability. Monte Carlo Study of Reliability: Monte Carlo Method Inverse transformation technique. Application to columns beams and frames.	L2, L3, L4, L5	12
<b>Module III: Reliability Methods</b> Basic variables and failure surface, first order second moment methods, Hasofer and Lind's method, Non-normal distributions; determination of reliability index B of structural elements.	L2, L3, L4	12
<b>Module IV: Reliability Based Design of Structural Systems</b> Determination of partial safety checking formats. Development of reliability-based criteria, optimal safety factors, and calibration of IS 456 and IS 800. System reliability, modeling of structural systems, bounds on system reliability, automatic generation of a mechanism, generation of dominant mechanism, reliability analysis of R.C.C. and steel frames.	L2, L3, L4, L5, L6	12

<b>CME4212</b>	<b>PRE -ENGINEERED CONSTRUCTION TECHNOLOGY</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

### Catalogue Description

This course discusses about basics of pre-engineered building, their necessity and applications. The design of Pre-Engineered Buildings (PEB), design cycle are also part of this course. The course also includes design software and its uses in design of pre-engineered buildings.

### Course Objectives

The objective of this course is to:

1. Impart knowledge about modular construction and design of the prefabricated elements
2. Provide the understanding of dimensioning and detailing of Pre-engineered construction.

### Course Outcomes

After completing the course, the students will be able to:

CO1: Define pre-engineered buildings & differentiate it with conventional building.

CO2: Describe the design process of pre-engineered buildings.

CO3: Explain the concept of dimensioning and detailing in buildings.

CO4: Describe the maintenance processes for pre-engineered buildings economically.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Introduction</b> Introduction, definition of pre-engineered builds, need of prefabrication and pre engineering, advantages, applications, Concept of prefabrication, Pre-Engineered Buildings Vs Conventional Steel Buildings.	L1, L2, L3	12
<b>Module II: PEB</b> Introduction, advantages, Pre Engineered Buildings Vs. Conventional Steel Buildings, Design considerations, Design of Pre-Engineered Buildings (PEB), design cycle, frame geometry, frame	L1, L2	12

loading, design codes.		
<b>Module II: Design</b> Design criterion, dimensioning and detailing, design process, production, Case study based design.	L1, L2, L3	12
<b>Module IV: Maintenance</b> Planning and control (PPC), maintenance. Design software and its uses in design of pre-engineered buildings, Case study	L1, L2,	12

Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

### Catalogue Description

The course revolves around the various activities encountered during the life cycle of a civil engineering project. It introduces the basic learning requirements for the civil engineer project manager and makes the appreciation for the qualitative nature of the construction project management. The philosophy of the course is more on system approach contrary to majority of mechanics-based subjects. Also, the need for the construction industry has been emphasized. Construction today is an all-embracing term, covering all the activities from conception to physical realization of a project. For the project to be completed on time and with correct measures, it is important to use various planning and management techniques in the construction industry. This course will help the students understand the CPM/PERT, construction methods and other estimations required in a construction project. Apart from this the students will also learn about the contracts. Now-a-day building information modeling (BIM), plays a very important role in integration of the information for various stakeholders at the same platform, reducing the time and cost of completion of a project and increasing the efficiency and productivity of the project. Building Information Modeling (BIM) proposes a relatively new approach of designing, documenting, constructing and even maintaining buildings. It has a significant impact on most business processes taking place in building firms. This course will introduce the students with the BIM concepts and theory behind the same.

### Course Objectives

The objective of this course is to

1. Study and understand the concept of planning, scheduling, cost and quality control, safety during construction, organization and use of project information necessary for construction projects.
2. Comprehend and apply the various tools of project planning and management software.
3. Train the students with the latest and the best in the rapidly changing fields of Construction Engineering, Technology and Management.
4. Continually work with industry to enhance the program's effectiveness and the opportunities for innovation in the construction industry.
5. Introduce and familiarize the students with the upcoming technology in the construction industry i.e. building information modeling or management (BIM)

## Course Outcomes

After completing the course, the students will be able to:

- CO1: Analyze and apply theoretical and practical aspects of project management techniques, contracts as well as estimation and costing to achieve project goals.
- CO2: Comprehend and apply organizational and leadership capabilities for effective management of construction projects.
- CO3: Apply knowledge and skills of modern construction practices and techniques.
- CO4: Apply relevant software packages for planning, scheduling, executing and controlling of construction projects.
- CO5: Comprehend, define and understand the building information modeling (BIM) or management concept.

## Course Content

Modules	Blooms level*	Number of hours
<b>Module I: Introduction to Construction Planning</b> Introduction Construction as industry and its challenges, Role of construction management, Methods of construction managements, Basic requirements of construction management: Learning structures. Construction planning-Processes of project planning, Construction facilities, Schedules, Layout of Plant utilities, Examples of real projects and its learning requirements.	L1, L2, L3, L4	10
<b>Module II: Project Scheduling and Monitoring</b> Project Scheduling: Processes of project scheduling, Network Scheduling Techniques, CPM/PERT, Introduction to network based project management techniques: Defining activities and their interdependence, drawing of network, time and resource estimations, use of network as scheduling techniques, use of network as control techniques i.e. project monitoring, Use of computer based models, progress control – project planning and scheduling techniques.	L1, L2, L3, L4	10
<b>Module III: Resource Management, Disputes and Claims Management</b> Principles of Project management, Resource Management and Inventory, Implementation of Project Planning Management, Analysis and design of planning and control system, Dispute and claims management.	L1, L2, L4, L5	10
<b>Module IV: Contracts and Estimation &amp; Costing</b> Stages of awarding contract, types of contract, contract documents, arbitration and settlement of disputes, contract laws and handling	L1, L2, L3, L4	10

of contracts, commissioning of projects. Principles of estimation and analysis of rate.		
<b>Module V: Introduction to Building Information Modeling</b> Introduction to BIM, Components of BIM, brief history, BIM software platforms and interfaces, Challenges of Building Industry and the necessity of BIM utilization, BIM Standards and BIM Implementation plans, BIM Capability Maturity Model, Different dimensions in BIM. BIM Compatible software- Revit.	L1, L2, L3, L4	8

Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure					
Co-requisites					

### Catalogue Description

The course contains basic principle approach towards analysis of travel behavior of household\individual. It deals with planning the future transportation need and expansion of existing services. It also contains different land use transportation models.

### Course Objectives

The objective of this course is to

2. Explain terminologies of transportation planning and analyse the practical problems related to traffic.
3. Develop the methodology of travel demand behaviour for transportation system.

### Course Outcomes

On completion of this course, the students will be able to

- CO1: Describe the relation between travel demand and urbanization.
- CO2: Comprehend and apply the different methods for deciding mode choices in different regions.
- CO3: Explain and apply various methods to solve traffic problems.
- CO4: Interpret different land use transportation models and apply solutions for transport problems.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Urban morphology</b> Urbanization and travel demand – Urban activity systems and travel patterns – Systems approach – Trip based, and Activity based approach	L1, L2	10
<b>Module II: Urban Transportation Planning</b> Goals, Objectives and Constraints - Inventory, Model building,	L1, L2,	15

Forecasting and Evaluation - Study area delineation – Zoning - UTP survey Trip generation models – Trip classification - productions and attractions – Trip rate analysis - Multiple regression models - Category analysis - Trip distribution models – Growth factor models, Gravity model and Opportunity modes. Modal split models – Mode choice behavior – Trip end and trip interchange models - Probabilistic models - Utility functions - Logit models - Two stage model	L3	
<b>Module III: Traffic assignment</b> Transportation networks – Minimum Path Algorithms - Assignment methods – All or Nothing assignment, Capacity restrained assignment and Multi path assignment - Route-choice behavior.	L1, L2, L3	10
<b>Module IV: Landuse transportation models</b> Urban forms and structures - Location models - Accessibility – Landuse models - Lowry derivative models - Quick response techniques - Non-Transport solutions for transport problems. Preparation of alternative plans - Evaluation techniques - Plan implementation - Monitoring - Financing of Project – urban development planning policy - Case studies.	L1, L2, L3	13

TRE4214	ACCIDENT ANALYSIS & PREVENTION	L	T	P	C
---------	--------------------------------	---	---	---	---

Version 2020.1	Date of Approval: 3rd June, 2020	4	0	0	4
Pre-requisites/Exposure					
Co-requisites					

## Catalogue Description

This course discusses about the basics of road safety, factors affecting and causes of accidents involving drivers & pedestrians. It deals with the 4 E's of prevention of accidents and basic concepts of vehicle safety, risk evaluation and human error control. Importance of guard rail and barrier along with the crashworthiness is also discussed.

## Course Objectives

The objective of this course is to

1. Acquire knowledge and understanding of the road environment.
2. Identify the reasons for road accidents and scientific investigation.

## Course Outcomes

On completion of this course, the students will be able to

- CO1: Explain the factors improving road safety and different motor vehicle acts.  
CO2: Describe the relation between speed & fuel conservation and driver training program.  
CO3: Explain the parameters affecting road and vehicle safety.  
CO4: Define TREM & warning symbols and design the tanker Lorries.

## Course Content

Modules	Blooms level*	Number of hours
<b>Module I: Introduction</b> Road Transport: factors for improving safety on roads – causes of accidents due to drivers and pedestrians-design, selection, operation and maintenance of motor trucks-preventive maintenance-check lists-motor vehicles act – motor vehicle insurance and surveys.	L1, L2	10
<b>Module II: Driver and Safety</b> Driver safety programme – selection of drivers – driver training tacho-graph-driving test driver's responsibility-accident reporting and investigation procedures-fleet accident frequency-safe driving incentives-slogans in driver cabin motor vehicle transport workers	L1, L2	12

act-road transport act and rules – driver relaxation and rest pauses – speed and fuel conservation – emergency planning.		
<b>Module III: Road &amp; Vehicle Safety</b> Traffic control lines and guide posts-guard rails and barriers – street lighting and illumination-overloading-concentration of driver. E's of Accidents Prevention: 1. Engineering – by altering the environment 2. Enforcement - by imposing laws 3. Encouragement - by the use of publicity campaigns 4. Education - by gaining and using knowledge. Introduction to vehicle safety, Basic concepts of vehicle safety, Risk evaluation, Human error control, Risk communication, Universal design, Crash testing, Crashworthiness, Design of Vehicle Structures for Crash Energy Management, Accident Reconstruction, Future vehicle safety.	L1, L2, L3	14
<b>Module IV: Transportation of Hazardous Goods:</b> Transport emergency card (TREM) – driver training-parking of tankers on the highways speed of the vehicle – warning symbols – design of the tanker lorries – earth chains-static electricity-responsibilities of driver – inspection and maintenance of vehicles-check list – decanting procedures – communication. Transport precautions-safety on manual mechanical handling equipment operations-safe driving-movement of cranes conveyors etc.	L1, L2, L3	12

### Catalogue Description

The course deals with the origin, classification, requirements, properties and tests on fine aggregates, coarse aggregates and bitumen. It includes weathering and durability of bituminous materials & mixes and its mix design. It also includes joint filler and sealer materials used in the requirement for CC pavement construction and design mix for CC pavement.

### Course Objectives

The objective of this course is to

1. Explain the characteristics, properties and testing procedures of highway materials such as soil, aggregate and bitumen.
2. Design the bituminous mix and the mix for cement concrete pavement.

### Course Outcomes

On completion of this course, the students will be able to

- CO1.Explain the classification, requirements, properties and tests on fine and coarse aggregates used in road construction.
- CO2.Define properties, preparation, uses and tests on bituminous binders and figure out the dynamic modulus and fatigue behaviour of bituminous mixes.
- CO3.Explain weathering and durability of bituminous mixes and design the bituminous mix for flexible pavement & rigid pavement.
- CO4.Explain different construction methods of roads & identify different failures.

### Course Content

Modules	Blooms level*	Number of hours
<b>Module I: Subgrade Soil</b> Soil composition and structure - Soil classification for engineering purposes - Origin, Classification, requirements, properties and tests on road aggregates.	L1, L2	8
<b>Module II:Bitumen</b> Origin, preparation, properties and tests, constitution of bituminous road binders, requirements - Bituminous Emulsions and Cutbacks Preparation, characteristics, uses and tests Bituminous Mixes Mechanical properties - Resilient modulus, dynamic modulus and	L1, L2, L4	10

fatigue characteristics of bituminous mixes.		
<b>Module III: Design Mix of Bitumen &amp; Cement Concrete</b> Weathering and Durability of Bituminous Materials and Mixes - Performance based Bitumen Specifications - Superpave mix design method. Cement Concrete for Pavement Construction Requirements, design of mix for CC pavement, joint filler and sealer materials.	L1, L2, L3	10
<b>Module IV: Pavement Construction and Maintenance</b> Construction of earth roads, WBM roads, stabilized roads, bituminous pavements, cement concrete roads and joints in cement concrete roads - Types and causes of failures in flexible & rigid pavements.	L1, L2	8

Pre-requisites/Exposure	Pavement Materials & Construction				
Co-requisites					

### Catalogue description

In this Lab course the various tests are there for different types of pavement materials such as Soil, Aggregate and Bitumen. It also includes the tests which are conducted for the pavement evaluation and their maintenance.

### Course Objective

The objective of the course is to

1. Assure the quality of the materials that are to be used for the construction of pavements such as Soil, aggregates and Bitumen.
2. Strengthen the pavement by conducting different tests for pavement evaluation and its maintenance.

### Course Outcomes

On the completion of this course, the student will be able to:

- CO1: Perform the tests on various type soils and apply the results in the practical life.
- CO2: Perform different tests on Aggregates that are to be used in the construction of highways and assure the quality of aggregates.
- CO3: Perform different tests on Bitumen that are to be used in the construction of highways and assure the quality of Bitumen.

### Course Content

<b>TRE4218</b>	<b>GEOMETRIC DESIGN OF HIGHWAYS</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2020.1	Date of Approval: 3rd June, 2020	3	0	0	3
Pre-requisites/Exposure					
Co-requisites					

## Catalogue Description

The course discusses about the geometric design of highways along with their elements. It deals with the design of vertical and horizontal alignment of the highways. It includes various interchanges and intersections along with their design features. The case studies on hill roads & snow bound roads are also discussed.

## Course Objectives

The objective of this course is to

1. Explain the basic principles and techniques of geometric design of highways.
2. Design the alignment & intersections and evaluate earthwork requirements & safety considerations.

## Course Outcomes

On completion of this course, the students will be able to

- CO1: Explain and design various elements of geometric design of the highways.  
CO2: Explain the factors affecting route layout and calculate the different sight distances.  
CO3: Design summit & valley curve along with cross sectional elements.  
CO4: Explain the design principles of interchanges & intersections along with case studies on hill & snow bound roads.

## Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Introduction</b> Importance of geometric design and roadway function, Design controls: vehicles and drivers, speed, volume and access, carriage way, traffic separators, kerb, road margin.	L1, L2, L3,	8
<b>Module II: Route &amp; Sight Distance</b> Route layout, environmental considerations, and context sensitive solutions; Sight distance, horizontal alignment, sight distance at	L1, L2, L3	9

intersection.		
<b>Module III: Alignment</b> Vertical alignment- – grades, crest and sag curves. Highway cross – sectional elements and their design for rural highways, Urban streets and hill roads	L1, L2, L3	8
<b>Module IV: Intersection</b> At grade intersections – principles of design, Channelization, mini round – about, layout of round – about, inter – Changes – major and minor interchanges, entrance and exit ramps, acceleration and deceleration lanes Earthwork, Safety assessment tools Case studies on hill roads and snow bound roads. ### Catalogue Description

The course deals with various methods to evaluate economic analysis of transportation projects like benefit cost ratio method, net present value method, internal rate of return method and their comparison. It includes various costs that are contributing to the economic evaluation of transportation projects like vehicle operating cost (VOC), accident cost, time travel cost & congestion cost. It also deals with the process of highway financing in India.

### Course Objectives

The objective of this course is to

1. Evaluate economic analysis and analyse the finance & taxation for transportation projects.
2. Calculate and analyse different vehicle operating costs (VOC) involve in different highway projects.

### Course Outcomes

On completion of this course, the students will be able to

- CO1: Explain the need of economic evaluation and use different methods to evaluate the economic analysis of the highway.
- CO2: Define the VOC involve in transportation project and interpret the various factors affecting the VOC.
- CO3: Illustrate the value of travel time saving and evaluate the travel time for the passengers.
- CO4: Determine the accident costs, congestion costs and explain the process of highway financing in India.

### Course Content

Modules	Blooms	Number
---------	--------	--------

	level*	of hours
<b>Module I: Economic Evaluation of Transport Plans</b> Need for economic evaluation, cost and benefits of transport projects, time horizon in economic assessment, basic principles of economic evaluation, interest rate, method of economic evaluation, benefit cost ratio method, first year rate of return, net present value method, internal rate of return method, comparison of various methods of economic evaluation.	L1, L2, L3	12
<b>Module II: Vehicle Operating Costs</b> Introduction, road user cost study in India, components of VOC, factors affecting VOC, fuel consumption relationship, spare parts consumption, maintenance and repairs, labour cost, tyre life, lubricants, utilization, and fixed costs.	L1, L2	12
<b>Module III: Value of Travel Time Savings</b> Introduction, classes of transport users enjoying travel time savings, methodology for monetary evaluation of passengers' travel time, review of work in India on passengers' travel time.	L1, L2	12
<b>Module IV: Accident Costs</b> Introduction, relevance of accident costing for a developing country, review of alternative methodologies for accident costing, Indian studies. <b>Traffic Congestion, Traffic Restraints and Road Pricing</b> Congestion as a factor in road traffic, traffic restraint, road pricing. <b>Highway Finance</b> Basic principles, distribution of highway cost, sources of revenue, highway financing in India.	L1, L2, L3	12

<b>TRE4211</b>	<b>PAVEMENT ANALYSIS AND DESIGN</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure					
Co-requisites					

### Catalogue Description

The course is focused on design of different pavement types along with the pavement management. It contains components of pavements, factors affecting design and performance. It includes empirical, semi-empirical and theoretical approaches for design and comparison between IRC & AASHTO method.

### Course Objectives

The objective of this course is to

1. Explain various pavement types, factors affecting design, components and their failure.
2. Design the pavement for highway & Runway using different approaches and softwares.

### Course Outcomes

On completion of this course, the students will be able to

- CO1: Define factors affecting the design of highway pavements and runway.
- CO2: Explain different components of pavement and design both the surface and sub surface drainage systems for a highway.
- CO3: Design flexible pavement for a highway by different methods like empirical, IRC and AASHTO methods.
- CO4: Design rigid pavement for a highway by different methods like IRC and AASHTO methods.
- CO5: Evaluate the condition of pavement both structurally and functionally.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Introduction</b> Types and component parts of pavements, Factors affecting design and performance of pavements. Highway and airport pavements, functions of pavement components	L1, L2	7

<b>Module II: Pavement Design Factors</b> Design wheel load, strength characteristics of pavement materials, climatic variations, traffic - load equivalence factors and equivalent wheel loads, aircraft loading, gear configuration and tyre pressure. Drainage – Estimation of flow, surface drainage, sub-surface drainage systems, design of sub-surface drainage structures	L1, L2, L3	10
<b>Module III: Flexible Pavement Design</b> Empirical, semi-empirical and theoretical approaches, design of highway and airport pavements by IRC, AASHTO Methods, applications of pavement design software	L1, L2, L3 and L4	12
<b>Module IV: Rigid Pavement Design:</b> Types of joints and their functions, joint spacing; design of CC pavement for roads, highways and airports as per IRC, AASHTO, design of joints. Design of continuously reinforced concrete pavements. Reliability; Use of software for rigid pavement design	L1, L2, L3, L4	12
<b>Module V: Pavement Management &amp; Maintenance</b> Pavement failures, maintenance of highways, structural and functional condition evaluation of pavements: Characteristic Deflection by Benkelman Beam method, Unevenness by Bump Integrator method, pavement management system.	L1, L2, L6	7

*\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation*

<b>TRE4215</b>	<b>ROAD SAFETY AUDIT</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure					
Co-requisites					

### Catalogue Description

The course deals with the safety environment of the roads. Traffic accidents statistics of India and rest of the world is discussed along with the significance of road safety. It deals with the accident data collection and identification of black spots. The preparation of road safety audit report for urban roads and multi lane highways is also the part of the course.

### Course Objectives

The objective of this course is to

1. Discuss measures for improving road safety education levels among the public.
2. Impart knowledge and understanding of the causes and consequences of accidents.

### Course Outcomes

At the end of the course, the student will be able to:

CO1: Explain the significance road safety and traffic rules.

CO2: Identify the black spot from the accident data and explain the significance of site investigation.

CO3: Explain different stages of road safety audit and economic returns with safety audit.

CO4: Prepare a road safety audit report in the prescribed format for urban road and multi-lane highways.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Introduction to Road Safety</b> Road traffic accidents scenario in India and in world. Road Safety and its importance. Traffic Rules and Driving Behavior. Characteristics of accidents, accidents vs. crash. E's of Accidents Prevention: 1. Engineering – by altering the environment 2. Enforcement - by imposing laws 3.	L1, L2	12

Encouragement - by the use of publicity campaigns 4. Education - by gaining and using knowledge. 5 P's of Road safety education: 1. Pre-school road safety education 2. Practical rather than theory education 3. Principles of own development as regards to road safety education 4. Presentations on road safety education 5. Place for road safety education in syllabus		
<b>Module II: Accident Investigation &amp; Monitoring</b> Crash prevention approach, accident data selection, black spot analysis and improvement. Significance of site investigation, problem diagnosis: Before & After study, Carry out corridor analysis for identification of black spot.	L1, L2, L3	10
<b>Module III: Introduction to Road Safety Audit</b> Stages of road safety audit, audit of land use development, audit process, checklist for safety audit, format of audit reporting, relevance of audit in design and implementations stages, economic returns with safety audit, road safety tool kit, risk assessment and ranking audit recommendations, speed management, roadside hazard treatment, road signs and pavement markings.	L1, L2	12
<b>Module IV: Advanced Road Safety Audit</b> Traffic management during construction and pre-opening audit, principles of traffic management plans at work zones, temporary traffic control zones, traffic control devices, traffic management practices, pre-opening audit. Prepare a road safety audit report in the prescribed format for urban roads. Prepare a road safety audit report in the prescribed format for multi lane highway.	L1, L2, L3	14

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation*

<b>EVE4201</b>	<b>ENVIRONMENTAL POLICIES AND LEGISLATION</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2020.1	Month, Year of approval:	3	1	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

### **Catalogue Description**

This course is designed to acquaint the student with numerous ethical issues and perspectives confronting society and environmental scientists and their influence on the development of environmental policy and regulation. Existing and proposed policies and regulations are examined as to their ethical background.

### **Course Objective:**

The objective of this course is to

- 1.Acquaint the students with the environmental issues, pollution and control and the measures taken for its protection along with the norms prevailing at international and national level.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: Deal with the legal provisions of the water pollution act

CO2: Deal with the legal provisions of the air pollution act

CO3: Impart knowledge on of environment, pollution and various principles

CO4: Explain the concept of Hazardous Wastes act

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I : Water Pollution Act</b>	<b>L1, L2, L3</b>	<b>12</b>

The water ( prevention and control of pollution) Act-Definitions, Constitution of central and state boards, Constitution and composition of joint boards, functions, prevention and control of water pollution, Penalties, Central and state water laboratory, power of supersession, power to make rules. The water (P&CP) rules - power and duties of the chairman and member- secretary, Temporary association of persons with central board, Consulting engineer, Annual report, Report of central board analyst, central water lab,		
<b>Module II: Air Pollution Act</b> The Air (prevention and control of pollution) Act- Definition, powers and functions of boards, prevention and control of pollution, Penalties and procedure, Miscellaneous. The Air (P&CP) Rules- procedure of transaction of business of the board and its committees, Temporary Association of the board and its committees, Temporary association of the persons with the Central board, Annual Report of Central Board, persons with central boards.	<b>L1, L2 L3</b>	<b>12</b>
<b>Module III: Environmental Act</b> The Environmental (Protection) Act- Definition, General powers of the Central Govt., Prevention, Control and abatement of environmental pollution, miscellaneous. The E(P) Rules- recipient system, standards for emission or discharge of environmental pollutants, Prohibition and restriction on location of industries, Procedure for taking samples, notice and submission for analysis, functions of Env. Lab., furnishing information to authorities and agencies, prohibition and restriction on handling hazardous substances.	<b>L2 and L3</b>	<b>12</b>
<b>Module IV: Hazardous Wastes</b> Hazardous Wastes (Management and handling) Rules-Definition, esp, hazardous wastes, hazardous waste site. Transboundary movement, Responsibility of the occupier, grant of authorization, power to respond or cancel, packaging, labeling, transport, disposal or import, Accident reporting, appeal. Manufacture, storage and important of hazardous chemicals rules- Definitions- Mitigation of the major accident, safety reports.	<b>L2, L3 and L4</b>	<b>12</b>

<b>EVE4208</b>	<b>SOLID AND HAZARDOUS WASTE MANAGEMENT</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2020.1	Month, Year of approval:	3	1	0	4
Pre-requisites/Exposure	NIL				
Co-requisites	NIL				

### **Catalogue Description**

This course is designed to provide students with an understanding of technical issues and the management of solid wastes. This module includes solid waste policy, both domestic and international, and then examines appropriate methods of storage, collection, transfer, treatment and disposal appropriate for industrialized and developing countries. The module also provides the opportunity to visit recycling facilities and disposal sites to better understand links between theory and practice.

### **Course Objectives**

The objective of this course is to:

1. To impart knowledge and skills in the collection, storage, transport, treatment, disposal and recycling options for solid wastes including the related engineering principles, design criteria, methods and equipment's.

### **Course Outcomes**

On completion of this course, the students will be able to:

CO1: Understand the characteristics of different types of solid and hazardous wastes and the factors affecting variation

CO2: Define and explain important concepts in the field of solid waste management and suggest suitable technical solutions for treatment of municipal and industrial waste

CO3: Understand the role legislation and policy drivers play in stakeholders' response to the waste and apply the basic scientific principles for solving practical waste management challenges.

CO4: Design the different elements of waste management systems.

### **Course Contents**

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
----------------	--------------------------	----------------------------

<b>Module I: Waste Management Scenario</b>  Legal and Organizational foundation: Definition of solid waste-waste generation in a technological society- major legislation, monitoring responsibilities, sources and types of solid waste-sampling and characterization- Determination of composition of MSW- storage and handling of solid waste- Future changes in waste composition. Collection and transport of solid waste: Collection of Solid waste: type of waste collection systems, analysis of collection system- alternative techniques for collection system.	<b>L1, L2, L3</b>	<b>12</b>
<b>Module II: Collection &amp; Transportation of wastes</b>  Separation and Processing and Transformation of Solid Waste: unit operations used for separation and processing, Materials Recovery facilities, Waste transformation through combustion and anaerobic composting, anaerobic methods for materials recovery and treatment- Recycling of plastic materials and metals. Energy recovery – Incinerators. Transfer and Transport: need for transfer operation, transport means and methods, transfer station types and design requirements. Landfills: Site selection, design and operation, drainage and leachate collection systems – requirements and technical solutions, designated waste landfill remediation – Integrated waste management facilities.	<b>L1, L2 L3</b>	<b>12</b>
<b>Module III: Hazardous waste management</b>  Hazardous waste management: Definition and identification of hazardous wastes- sources and characteristics- hazardous wastes in Municipal Waste- Hazardous waste regulations – minimization of Hazardous Waste – compatibility, handling and storage of hazardous waste- collection and transport.	<b>L1, L2, L3</b>	<b>12</b>
<b>Module IV: Hazardous waste treatment</b>  Hazardous waste treatment and design: Hazardous waste treatment technologies – Design and operation of facilities for physical, chemical and thermal treatment of hazardous waste – Biomedical waste disposal. Solidification, chemical fixation and encapsulation, incineration. Hazardous waste landfills: Site selection, design and operation – remediation of hazardous waste disposal sites.	<b>L1, L2, L3</b>	<b>12</b>

<b>EVE4211</b>	<b>WATER TREATMENT PLANT DESIGN AND OPERATION</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure					
Co-requisites					

### **Catalog Description:**

This course introduces the students to know about the various water treatment processes, the design for their plants and how do they operate so that there is more availability of clean water which can be put to various uses. At the end of the course, students should have a thorough wastewater treatment processes treatment and disposal. They would be able to design various facilities for physical and chemical treatment of wastewater treatment system.

### **Course Objectives:**

The objective of the course is to,

1. Become familiar with conventional and advanced physical and chemical processes used to purify water, wastewater and air emissions.
2. Understand the basic principles of design and operation of a variety of treatment processes;
3. Able to calculate basic process parameters such as needed disinfection contact times, sizing of sedimentation basins, filter flow rates, number of membrane modules needed for treatment of a given feed flow rate, etc.

### **Course Outcomes:**

On completion of this course, the students will be able to

CO1: Describe various wastewater treatment unit operations.

CO2: Explain the working principle and design of wastewater treatment units.

CO3: Comprehend the importance of guidelines based on Indian Standard code of practice for the design of wastewater treatment units for different industries.

CO4: Apply the waste management process used in various industries.

CO5: Apply the waste disposal and management process in treatment system.

## Course Contents

Modules	Blooms level*	Number of hours
<b>Module I INTRODUCTION</b> Pollutants in water and wastewater – characteristics, Standards for performance. Significance of physico-chemical treatment – Selection criteria-types of reactor- reactor selection-batch-continuous type-kinetics	L1, L2 and L3	8
<b>Module II UNIT OPERATIONS</b> Principles of Screening – Mixing, Equalization – Sedimentation – Filtration – Modeling back washing – Evaporation – Incineration – gas transfer – mass transfer coefficient. Adsorption – Isotherms – Principles, kinetics, regeneration membrane separation, Reverse Osmosis, nano filtration, ultra-filtration and hyper filtration electrodialysis, distillation – stripping and crystallization – Recent Advances.	L2 and L3	10
<b>Module III TREATMENT SYSTEM</b> Principles of Chemical treatment – Coagulation flocculation – Precipitation – flotation solidification and stabilization – Disinfection, Ion exchange, Electrolytic methods, Solvent extraction – advanced oxidation /reduction – Recent Trends	L2, L3 and L4	10
<b>Module IV DESIGN OF TREATMENT SYSTEM</b> Selection of Treatment – Design of municipal water treatment plant units – Aerators – chemical feeding – Flocculation – clarifies – tube settling – filters – Rapid sand filters slow sand filter, pressure filter, Dual media inlets Displacement and gaseous type. Design of Industrial Water Treatment Units- Selection of process – Design of softeners – Demineralisers –Reverse osmosis plants –flow charts – Layouts –Hydraulic Profile PID, construction and O&M aspects – case studies, Residue and rejects management – Upgradation of existing plants – Recent Trends – Software application.	L2, L3 and L4	10
<b>Module V ADVANCED TREATMENT SYSTEM</b> Design of municipal wastewater treatment units-screens-detritors-grit chamber-settling tanks-sludge thickening-sludge dewatering systems-sludge drying beds - Design of Industrial Wastewater Treatment Units-Equalization- Neutralization-Chemical Feeding Devices-mixers-floatation units-oil skimmer- flow charts – Layouts –Hydraulic Profile PID construction and O&M aspects – case studies, Residue management – Upgradation of existing plants – Recent Trends – Software application.	L2, L3 and L4	10

<b>EVE4212</b>	<b>AIR POLLUTION AND CONTROL</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure					
Co-requisites					

### Catalog Description:

This course designed to improve the understanding of the different air pollution: monitoring, modelling and control strategies and the skills of application of remediation techniques to combat pollution in three environmental compartments.

### Course Objectives:

The objective of the course is to,

1. Impart knowledge on the principles and design of control of particulate and gaseous air pollutant and its emerging trends.
2. Introduce the fundamentals of mathematical models for water and air quality prediction and the importance of model building.

### Course Outcomes:

On completion of this course, the students will be able to

CO1: Define general air pollution problems, meteorological definitions, air transport equations and pollution control matters and devices.

CO2: Explain the regulations pertinent to air pollutions (both indoor and outdoor environment).

CO3: Describe major problems in indoor air pollution control and regulations.

CO4: Apply the ability to learn from the mistakes ethically and increase the quality of design.

### Course Contents

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I INTRODUCTION TO AIR POLLUTION</b>  Structure and composition of Atmosphere – Sources and classification of air pollutants - Effects of air pollutants on human health, vegetation & animals, Materials & Structures – Effects of air	L1, L2 and L3	12

Pollutants on the atmosphere, Soil & Water bodies – Long- term effects on the planet – Global Climate Change, Ozone Holes – Ambient Air Quality and Emission Standards – Air Pollution Indices – Emission Inventories.		
<b>Module II AIR QUALITY MONITORING</b>  Ambient and Stack Sampling and Analysis of Particulate and Gaseous Pollutants -Effects of meteorology on Air Pollution - Fundamentals, Atmospheric stability, Inversion, Wind profiles and stack plume patterns- Transport & Dispersion of Air Pollutants	L2 and L3	12
<b>Module III MODELLING</b>  Air Quality Modeling. Necessity, application and limitation of air quality modelling. Dispersion Modeling, Photochemical Modeling and Receptor Modeling. Different air quality Dispersion models and their limitations.	L2, L3 and L4	12
<b>Module IV CONTROL OF AIR POLLUTANTS</b>  Primary considerations in designing effective control strategy: Environmental, Engineering and Economic Factor - Factors to be considered while selecting control equipment's - Various mechanisms to control gaseous pollutants and particulate matter. Control Equipment design for particulate matter: Gravity chamber, Cyclone separator, Electrostatic precipitator, fabric filter, bag filter, Wet scrubber, Venturi-scrubber and absorption towers. Control Equipment design for gaseous pollutants: Absorption, Adsorption, Condensation and Incineration.	L2, L3 and L4	12

<b>EVE4205</b>	<b>OPTIMIZATION OF WATER RESOURCES SYSTEM</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

### **Catalogue Description:**

The course aims to introduce fundamentals and need for optimization techniques in engineering problems. Various techniques such as Linear Programming, Geometric Programming, Dynamic Programming and Non-Linear Programming are taught to students to solve various environmental engineering problems for optimal solutions.

### **Course Objectives:**

The objective of the course is to,

1. Become familiar with conventional and advanced physical and chemical processes used to purify water, wastewater and air emissions.
2. Understand the basic principles of design and operation of a variety of treatment processes;
3. Able to calculate basic process parameters such as needed disinfection contact times, sizing of sedimentation basins, filter flow rates, number of membrane modules needed for treatment of a given feed flow rate, etc.

### **Course Outcomes:**

On completion of this course, the students will be able to

CO1. Define the distribution system.

CO2. Able to design simple water treatment units.

CO3. Get thorough idea about functions of water supply systems.

CO4. Get complete understanding of water quality standards.

### **Course Contents**

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I INTRODUCTION</b>  Engineering Applications of Optimization, Statement of an Optimization Problem, Design Constraints, Constraint Surface, Objective Function, Optimization Techniques, Single-Variable Optimization, Multivariable Optimization with no Constraints, Multivariable Optimization with Equality Constraints, Multivariable Optimization with Inequality Constraints, Convex Programming Problem.	L1, L2 and L3	12
<b>Module II OPTIMIZATION OF WATER RESOURCE SYSTEM</b>  Principles of Screening – Mixing, Equalization – Sedimentation – Filtration – Modeling back washing – Evaporation – Incineration – gas transfer – mass transfer coefficient. Adsorption – Isotherms – Principles, kinetics, regeneration membrane separation, Reverse Osmosis, nano filtration, ultra-filtration and hyper filtration electrodialysis, distillation – stripping and crystallization – Recent Advances.	L2 and L3	12
<b>Module III DESIGNING OF WATER RESOURCE SYSTEM</b>  Numerical methods for nonlinear unconstrained and constrained problems, sensitivity analysis, Linear post optimal analysis, sensitivity analysis of discrete and distributed systems. Introduction to variational methods of sensitivity analysis, shape sensitivity.	L2, L3 and L4	12
<b>Module IV PROGRAMMING OF TREATMENT SYSTEM</b>  Introduction to integer programming, dynamic programming, stochastic programming and geometric programming, Introduction to genetic algorithm and simulated annealing.	L2, L3 and L4	12

### Catalogue Description:

This course emphasizes the method of protection of groundwater which is polluted by soil, dust, and the waste particles. It is useful for the protection of surface water from the contaminants through the process of sedimentation, bacteriological, and radiation.

### Course Objectives:

The objective of the course is to,

1. Bring into focus those aspects of chemistry that are particularly valuable for solving environmental problems like water and wastewater analysis.

### Course Outcomes:

On completion of this course, the students will be able to

CO1: Gain a broad theoretical understanding of Environmental Chemistry and microbiology.

CO2: Get accustomed with the measurement and analysis of various water characteristics.

CO3: To knowledge about the biological characteristics of drinking water and determination of the same.

CO4: Contemporary issues and developments.

CO5: Gain a broad theoretical understanding of atmospheric chemistry and analytical principles.

### Course Contents

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I PRINCIPLES OF PHYSICAL CHEMISTRY</b>	L1, L2	10

Reversible reactions, equilibrium constant, Le-Chatelier principle. Reaction rate Order and molecularity, kinetic equations of different orders, reversible and consecutive reactions. Catalysis-type, characteristics, activation energy, mechanism of catalyst action, acid base catalysts. Photo catalysis. Adsorption-classification, adsorption of gases on solids, adsorption from solutions, ion exchange adsorption, applications, Longmuir theory	and L3	
<b>Module II PRINCIPLES OF AQUATIC CHEMISTRY AND BIOCHEMISTRY</b>  Water resources, sea water- composition, Ph of sea water. Humic substances. Aquatic chemical reactions- microbial redox reaction, iron and manganese bacteria, nitrogen transformation bacteria. Enzymes-mechanism and factors influencing enzyme action. Biodegradation- biodegradation of carbohydrates, proteins, fats and oils and detergents. Colloidal state- stability, kinetic, optical and electrical properties	L2 and L3	10
<b>Module III ENVIRONMENTAL CHEMICALS</b>  Chemical speciation – speciation of lead, mercury, arsenic and chromium. Structure and property- activity relationship, fate of organics in the environment – transformation reactions hydrolysis, elimination, oxidation, reduction and photochemical transformation. Risk evaluation of environmental chemicals, Toxic chemicals in the environment, impact on enzymes. Biochemical effects of arsenic, lead, mercury and pesticides	L2, L3 and L4	10
<b>Module IV ATMOSPHERIC CHEMISTRY</b>  Structure of atmosphere, chemical and photochemical reactions in the atmosphere. Ozone chemistry- formation and depletion of ozone layer, oxides of nitrogen and sulphur. Acid rain mechanism of formation and effects. Photochemical smog, and sulfurous smog. Greenhouse effect/global warming, greenhouse gases, effects	L2 and L3	10
<b>MODULE V FUNDAMENTALS OF ANALYTICAL PRINCIPLES</b> Analysis of water and water quality parameters -concept of pH, measurement of acidity, alkalinity, hardness, residual chlorine, chlorides, DO, BOD, COD, fluoride and nitrogen. Introduction to spectral analysis, colorimetry, fluorimetry, nephelometry, turbidimetry, absorption and emission spectral methods.		8

### **Catalogue Description:**

Application of basic chemistry and chemical evaluations to measure physical, chemical, and bacteriological parameters of water and wastewater. Laboratory methods and interpretation of results with regard to environmental engineering applications such as design and operation of water and wastewater treatment processes, and to the control of the quality of natural water.

### **Course Objectives:**

1. Understand the common environmental problems and its determination principles relating to water and wastewater quality are performed.
2. This course will help students know which tests are appropriate for given environmental problems, statistically interpret laboratorial results and write technical reports, and apply the laboratorial results to problem identification, quantification, and basic environmental design and technical solutions to real-world.

### **Course Outcomes:**

On completion of this course, the students will be able to

CO1: Describe the knowledge in mathematics, science and engineering.

CO2: Design and conduct experiments, interpret and analyze data, and report results.

CO3: Analyze the ability to design of Civil Engineering systems or a process that meets desired specifications and requirements related to all fields of Civil Engineering.

CO4: Explain the ability to function on engineering and science laboratory teams, as well as on multidisciplinary design teams.

CO5: Explain to identify, formulate and solve environmental engineering problems.

### Course Contents

Modules	Blooms level*	Number of hours
1. Introduction to Environmental Engineering laboratory	L1	1
2. Determination of pH of water	L1, L3 and L4	2
3. Determination of alkalinity	L1, L3 and L4	1
4. Determination of turbidity and the optimum coagulant dose	L1, L3 and L4	1
5. Determination of the optimum coagulant dose	L1, L3 and L4	1
6. Determination of hardness in water	L1, L3 and L4	1
7. Determination of chlorides in water	L1, L3 and L4	1
8. Determination of solids (total, dissolved, organic, inorganic and settleable) in water	L1, L3 and L4	1
9. Determination of available chlorine in bleaching powder and the chlorine dose required to treat the given water sample	L1, L3 and L4	1
10. Determination of coliforms in water	L1, L3 and L4	1
11. Demonstration of Instrumental methods of pollutant analysis	L1, L3 and L4	1

<b>EVE4215</b>	<b>GIS AND REMOTE SENSING FOR LAND AND WATER MANAGEMENT</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

### Catalogue Description

This course covers the remote sensing; Electromagnetic spectrum; Physics of remote sensing; Effects of atmosphere; Atmospheric windows, etc. Develop skills to use remote sensing for land cover classification, estimating evapotranspiration, water productivity, irrigation performance assessment & irrigation water accounting.

#### Objective:

The objective of the course is to,

1. Make the students understand the basics of emerging fields -remote sensing principles and Geographic Information System- so that they can utilize it for environmental system modeling

### Course Outcomes

On completion of this course, the students will be able to:

CO1. Explain RS theory, technology, and typical applications of earth observation data

CO2. Understanding the basic principles of digital image processing & filtering

CO3. Determining the Geographic Information system

CO4. Understand the various techniques used for Data input and data editing-Input methods of GPS

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I:</b> Introduction to remote sensing – Electromagnetic spectrum – Physics of remote sensing – Effects of atmosphere – Atmospheric	L1, L2, L3	<b>12</b>

windows – Interaction of earth surface features with EMR – Spectral characteristics of vegetation, water, soil, etc. – Various types of platforms– Airborne and space-based platforms - Different types of aircraft – Manned and unmanned spacecraft used for data acquisition – Characteristics of different types of platforms – Characteristics of Remote Sensors –Multi spectral sensors – Multi Spectral Scanners – Microwave remote sensing- Factors affecting Microwave Measurement-Radar wave bands- SLAR and SAR.		
<b>Module II:</b> Sensors- Satellite system parameters- sensor parameters-spatial, spectral and radiometric resolution – False colour composite (FCC) – Multi spectral photographs – Thermal and microwave imaging system-Earth Resources satellite and Meteorological satellites Different types of data products and their characteristics – Image Interpretation - Basic principles of visual interpretation – Elements of image interpretation - Equipment for visual interpretation – Activities of image interpretation – Ground truth - Basic principles of digital image processing – filtering	L1, L2, L3	12
<b>Module III :</b> Geographic Information system – History and development of GIS – GIS definitions and Terminology -Architecture– System concepts – Coordinate systems – Standard GIS packages. Type of data – Spatial and non- spatial data – Data structure – Points – Lines – Polygon – Vector and raster – Files and data formats – Spatial data modeling – Raster GIS model and Vector GIS models. -GIS data file management and Database models	L1, L3, L4, L5	12
<b>Module IV:</b> Data input and data editing-Input methods –GPS as data capture-data editing. Spatial analysis – Data retrieval – Query – Simple analysis – Record – Buffering and Overlay – Vector data analysis – Raster data analysis – Modelling in GIS – Digital elevation model – DTM – Modelling Networks. Integration of RS and GIS – Need and Facilities for integration. Application of these to water resources and environmental engg-Cadastral records and LIS	L1, L3, L4, L5	12

### Catalogue Description

The main aim is to learn and develop *design* criteria and guidance for the seismic *design* and review of tall buildings. The design philosophies and the factors affecting the height and structural form of tall buildings is discussed elaborately in this course.

### Course Objectives

The objective of this course is to:

1. Impart knowledge about the tall structures and the elements associated with the same.
2. Gain knowledge about the different loading conditions, loads applied and techniques involved in the design of tall structures.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Define and describe the design philosophies, loadings and performance of various types of concretes used in tall buildings.

CO2: Define and describe the factors affecting the growth, height and structural form in high rise construction along with the various systems involved.

CO3: Model the various structural elements related to the tall structures.

CO4: Define and analyse the various movement of tall buildings and the effect on the same related to creep, shrinkage, prestressing, etc.

CO5: Evaluate different methods of analysis of frames in tall buildings.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I:</b> Design philosophy, Loading, sequential loading, materials - high performance, concrete - Fibre reinforced Concrete - Light	L1, L2, L3, L4	9

weight concrete - design mixes. Gravity loading Wind loading Earthquake loading .		
<b>Module II:</b> Factors affecting growth, Height and Structural form. High rise behaviour, Rigid frames, braced frames, Infilled frames, shear walls, coupled shear walls, wall-frames, tubulars, cores, futrigger - braced and hybrid mega systems.	L1, L2, L3, L4	9
<b>Module III:</b> Modelling for approximate analysis, Accurate analysis and reduction techniques, Analysis of buildings as total structural system considering overall integrity and major subsystem interaction, Analysis for member forces, drift and twist, computerized general three dimensional analysis.	L1, L2, L3, L4, L5, L6	10
<b>Module IV:</b> Sectional shapes, properties and resisting capacity, design, deflection, cracking, prestressing, shear flow, Design for differential movement, creep and shrinkage effects, temperature effects and fire resistance, durability aspect of structures	L1, L2, L3, L4, L5, L6	10
<b>Module V:</b> Overall buckling analysis of frames, wall-frames, Approximate methods, second order effects of gravity of loading, P-Delta analysis, simultaneous first-order and PDelta analysis, Translational, Torsional instability, out of plumb effects, stiffness of member in stability, effect of foundation rotation.	L1, L2, L3, L4	10

### Catalogue Description

The Recent development and technological Advancement are moving into Offshore Structure. Unlike Ground Conditions, the Offshore Construction is Extreme. The course will give the introduction to the Offshore Structure and its components with major Loads acting on the Platform. How the Installation Process is carried out. The Introduction to Floating Structures gives the Idea about the construction in offshore industry.

### Course Objectives

The objective of this course is to:

1. Define and comprehend offshore Structures, dedicated to the design, installation, management and maintenance of offshore and maritime structures
2. Evaluate the systems for the exploitation of fabrication techniques, structures assembling, conventional and renewable energies. In addition to the assessment and management of environmental.

### Course Outcomes

On completion of this course, the students will be able to

- CO1. Define the concept on Simple Deck configurations for Lift and float-over installations.
- CO2. Comprehend importance of fixed and floating structures;
- CO3. Discuss different loads on offshore structure and their effect in environment
- CO4. Evaluate and estimate the hydrostatic Stability-Elastic plate theory; plated structures; stiffened plates-Buckling of plates.

### Course content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I</b> Jacket concepts, redundant framing arrangement; Launch and Lift jackets; Simple Deck configurations for Lift and float-over installations; In-service and Pre-service Loads and analysis Jackup Rigs: Configuration and operation of jackups; Simplified analysis; Spud can penetration and extraction; Spud can – pile interaction.	L1, L2, L4	10
<b>Module II</b>	L1, L2,	14

Fixed and floating structures; Spars and TLP's; Modular topsides and integrated topsides; deck levels and jacket configurations; Spar and TLP hull arrangements; Load out: Fabrication yard, grillage and foundation conditions; Fabrication sequence of Launch jacket, lift jackets, topsides and modules; Weighing and weight control; Skidded, Trailer and lifted Load out methods Lifting and launch schemes for jackets, upending and setting, on bottom stability; Float-over installations; Dynamics of barge – cargo system.	L3, L4	
<b>Module III</b> Loads on offshore Structure, Environmental Loads, Marine Growth, Force On Large Dia. members. Accidental Loads, durability aspect of offshore structures and design life of structures	L1, L2, L5, L6	12
<b>Module IV</b> Semi-submersible, TLPs, FPSOs, Spars and others-General concepts on estimation of loads and Hydrostatic Stability-Elastic plate theory; plated structures; stiffened plates-Buckling of plates; Semi-submersible; column.	L1, L2, L4, L5, L6	12

<b>STE4314</b>	<b>PRESTRESSED CONCRETE DESIGN</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

### Catalogue Description

The course prestress concrete provides the knowledge of advanced concrete structure design in the Civil Engineering constructions. This subject pave the path in developing advanced science, mathematics, engineering solutions and technological advancement in a broader perspective leading to produce quality engineers and researchers in various ways. This programme based on concepts, analysis and design of prestressed concrete structural members and their behavior in the application of loadings. This unique combination paves the path to embroil students in modern high-grade structural engineering advancement in long term infrastructural growth in a sustainable manner in different Civil engineering project.

### Course Objectives

The objective of this course is to:

1. Apply the advanced concept of structural concrete design that has come over the time to overcome the possibility of excessive cracks and deformation compare to normal RCC Structure.
2. Explain in skill gaining in the design of field of pre-stressed concrete members, behavior in adverse loading and their utility in large construction projects.

### Course Outcomes

On completion of this course, the students will be able to

- CO1. Explain the basic requirements of pre-stressed structural design by understanding its principles and methods adopted in structural elements to overcome the weakness of concrete behavior.
- CO2. Develop the idea of pre-stressing to analysis of pre-stressed concrete sections, its behavior in case of external loadings and also to understand the pre-stressing loading effects in members with time and different losses associated to this.
- CO3. Describe the important behavior of pre-stressing structural units towards external loading and its effect on shear and torsion.
- CO4. Analyze and design of pre-stressed structural members to estimate its execution in large span structural systems.

## Course Content

Modules	Blooms level*	Number of hours
<b>Module 1: Materials for Pre-stressed Concrete and Pre-stressing Systems</b> High strength concrete and high tensile steel – tensioning devices – pre-tensioning systems – post tensioning systems	L1, L2	12
<b>Module II: Analysis of Pre-stress and Bending Stresses</b> Analysis of pre-stress – resultant stresses at a sector – pressure line or thrust line and internal resisting couple – concept of load balancing – losses of pre-stress – deflection of beams.	L1, L2, L3, L4	12
<b>Module III: Strength of Pre-stressed Concrete Sections in Flexure, Shear and Torsion</b> Types of flexural failure – strain compatibility method – IS code procedure – design for limit state of shear and torsion, Design problems.	L1, L3, L4, L6	12
<b>Module IV: Design of Pre-stressed Concrete Beams and Slabs</b> Transfer of pre-stress in pre tensioned and post tensioned members – design of anchorage zone reinforcement – design of simple beams – cable profiles – design of slabs, design problems.	L1, L3, L4, L5	12

### Catalogue Description

The course will define the concrete making material materials, their significance, uses, and their properties in different situations and design based on standard specifications. This will also enable the students to understand the manufacturing process of concrete and the precautions, various properties of concrete and different types of concrete and their application. This course illustrates about the use of different industrial wastes for the production of sustainable concrete also gives the description for the high strength concrete production.

### Course Objectives

The objective of this course is to

1. Comprehend the proper selection of construction materials used in the field of Civil engineering construction sectors by knowing the material's properties, availability, strength and durability.
2. Research development in the field of advancement construction materials and their proper selection as per need and performance requirements on different situations.

### Course Outcomes

On completion of this course, the students will be able to

- CO1: Judge the appropriate construction materials as per the construction activities concerned, knowing its performance, properties and criteria through different standardized tests.
- CO2: Quantifying, processing and Performance of concrete works for its quality assurance as per the standard guidelines.
- CO3: Describe the concrete behavior in fresh state and its behavior in different environmental condition and towards external loading agencies.
- CO4: Comprehend the selection of advanced concrete material for sustainable constructional applications and incorporating repair and rehabilitation process of concrete material.
- CO5: Selection and requirement of Form Work their importance in the field of construction.

## Course Content

Modules	Blooms level*	Number of hours
<b>Module 1: Materials</b> Concrete Making Materials: Cement- Bogue's compounds – Hydration Process– Types of cement – Aggregates – Gradation Charts – Combined Aggregate-Alkali Silica Reaction -Admixtures – Chemical and Mineral admixtures.	L1, L2	10
<b>Module II: Fresh and Hardened Concrete</b> Fresh Concrete - workability tests on Concrete Setting times of Fresh Concrete - Segregation and bleeding. Hardened Concrete: Abram's law- Gel space ratios, Maturity Concept – Stress Behaviour – Creep and Shrinkage – Durability tests on concrete – Non-destructive testing of concrete.	L1, L2	10
<b>Module III: High Strength and High Performance Concrete</b> High Strength Concrete – Micro structure – Manufacturing and Properties- Design of HSC Using Ertzoy Shakhlov Method- Ultra High Strength Concrete. High Performance Concrete- Requirements and properties of High-Performance Concrete- Design Considerations.	L1, L2, L3, L4	9
<b>Module IV: Special Concrete</b> Self Compacting concrete- Introduction, Advantages, disadvantages, materials, mix design procedure, tests, and standards, Rheology and workability of SCC, strength properties, applications – Polymer concrete – Fiber reinforced concrete –Reactive Powder concrete – Requirements and Guidelines – Advantages and Applications. Light weight concrete. Concrete mix design, Quality Control - Quality assurance - Quality audit- Mix Design method – BIS method, ACI method, DOE method.	L1, L2, L3, L4	10
<b>Module V: Form Work</b> Form work – materials – structural requirements – form work systems – connections – specifications – design of form work – shores – removal of forms – reshoring – failure of form work.	L1, L2, L3, L6	9

*\*Bloom's Level:*

<b>STE4307</b>	<b>SOIL STRUCTURE INTERACTION</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure					
Co-requisites					

### Catalogue Description

To impart knowledge about the critical study of the foundation design , its nature in accordance with the soil structure interaction and applying the techniques to analyze it.

### Course Objectives

The objective of this course is to:

1. Impart knowledge about the importance and usage of soil structure interaction.
2. Understand the various methods and parameters involved in SSI.
3. Impart knowledge about the behavior of soil under various circumstances related to the changes in structural behavior.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Define and describe soil structure interaction, understand its importance and evaluate soil structure interaction problems.

CO2: Define, describe and evaluate the various parameters and methods related to soil structure interaction.

CO3: Analyse the responses and behavior of soil in different conditions.

CO4: Evaluate and analyse the soil structure interaction in retaining structures.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Introduction, Importance and Applications of Soil Structure Interaction (SSI)</b> Introduction to SSI, Importance of SSI, Applications and examples of SSI for structural engineer, Effects of structure roughness/smoothness on soil behaviour. General soil-structure interaction problems – Shallow Foundations, Sheet piles, Mat/Raft foundations etc., Contact pressures and soil-structure interaction for shallow Foundations, Fixed/Flexible Base.	L1, L2, L3, L4	12

<b>Module II: Soil Structure Interaction Parameters</b> Concept of sub grade modulus, effects/parameters influencing sub grade modulus, Flexible and Rigid Foundations – Rigidity calculations, Static and Dynamic Spring Constants – Winkler Model, Estimation of soil spring constants/stiffness for foundations design. SSI Models - Elastic Continuum, Winkler Model, Multi-Parameter Models, Hybrid Model. Structure Contact Interface.	L1, L2, L3, L4, L5, L6	12
<b>Module III: Soil Behavior</b> Arching in soils. Elastic and plastic analysis of stress distribution on yielding bases. Analysis of conduits/pipes in soils. Beams on elastic foundation concept, introduction to the solution of beam problems. Seismic Soil-Structure Interaction - Dynamic response of soil, strain-compatibility, and damping characteristics of soil-structure. Shake-table tests.	L1, L2, L3, L4	12
<b>Module IV: SSI in Retaining Structures</b> Curved failure surfaces, their utility and analytical/graphical predictions from Mohr-Coulomb envelope and circle of stresses. Earth pressure computations by friction circle method. Earth pressure distribution on walls with limited/restrained deformations, Dubravo's analysis. Earth pressures on sheet piles, braced excavations. Design of supporting system for excavations. Soil-Pile Behaviour: Introduction, axial and laterally loaded piles, load-displacement behaviour, Modified Ramberg Osgood Model, pile group, interaction effect in pile group, soil-pile modelling in FEM, Elastic continuum and elasto-plastic analysis of piles and pile groups. Non-linear load-deflection response.	L1, L2, L3, L4	12

<b>STE4315</b>	<b>THEORY OF PLATES &amp; SHELLS</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

### Catalogue Description

This course deals with the theory and design of thin shell structures, using the membrane and bending theories for plates of revolution and translation, and their applications. The course also introduces the finite element method for plate bending.

### Course Objectives

The objective of this course is to:

1. Introduce the students to the classical structural mechanics approximations of plates discussing the various theories involved in the same which has as an effect on the elastic foundations as well.
2. Analysis and study the behavior and analysis of thin plates and the behavior of anisotropic and thick plates.
3. Formulate finite element equations for solution of the structural response of plate bending problems.
4. Study the behaviour of the plates with different geometry under various types of loads.

### Course Outcomes

After completing the course, the students will be able to:

CO1: Achieve knowledge of design and development of problem-solving skills.

CO2: Understand the principles of analysis and design of plates.

CO3: Formulate finite element equations for solution of the structural response of plate bending problems.

CO4: Ability to use different theories to plate and use of different methods for stability analysis

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Cylindrical and pure Bending</b> Cylindrical Bending: Different kind of plates – Assumptions - Derivation of differential equation for cylindrical bending of long rectangular plates - Analysis of uniformly loaded rectangular plates with edges simply supported and fixed subjected to uniform load.	L1, L2, L3, L4	9

Pure Bending of Plates: Slope and curvature of slightly bent plates – Relations between moments and curvature - Particular cases of pure bending - Strain energy in pure bending –Energy methods like Ritz and Galerkin Methods to rectangular plates subjected to simple loadings.		
<b>Module II: Thin Plates</b> Small Deflection Theory of Thin Rectangular Plates: Assumptions – Derivation of governing differential equation for thin plates – Boundary conditions – simply supported plate under sinusoidal load – Navier’s solution – Application to different cases – Levy’s solution for various boundary conditions subjected to different loadings like uniform and hydrostatic pressure.	L1, L2, L3	12
<b>Module III: Circular and Orthotropic Plates</b> Circular Plates: Symmetrical loading – Relations between slope, deflection, moments and curvature– Governing differential equation – Uniformly loaded plates with clamped and simply supported edges– Central hole – bending by moments and shearing forces uniformly distributed. Orthotropic Plates: Introduction – Bending of anisotropic plates - Derivation of governing differential equation – Determination of Rigidities in various cases like R.C. slabs, corrugated sheet.	L1, L2, L3, L4	12
<b>Module IV: Plates on Elastic Foundations and Buckling of Plates</b> Governing differential equation – deflection of uniformly loaded - simply supported rectangular plate – Navier and Levy type solutions - Large plate loaded at equidistant points by concentrated forces P. Governing equation for Bending of plate under the combined action of in-plane loading and lateral loads – Buckling of rectangular plates by compressive forces acting in one and two directions in the middle plane of plate.	L1, L2, L3, L4	15

### Catalogue Description

The course will define the concrete making material materials, their significance, uses, and their properties in different situations and design based on standard specifications. This will also enable the students to understand the manufacturing process of concrete and the precautions, various properties of concrete and different types of concrete and their application. This course illustrates the use of different industrial wastes for the production of sustainable concrete also gives the description for the high strength concrete production. The course will also give an insight into forensic civil engineering and its importance.

### Course Objectives

The objective of the course is to

1. Impart knowledge about the various construction materials that can be used in construction work ranging from the cement, aggregates, admixtures and other waste materials that can be put to use in construction.
2. Impart knowledge about the Forensic Structural Engineering

### Course outcomes

After completing the course, the students will be able to:

CO1: Define, describe and evaluate the fresh concrete properties and other tests on concrete along with the analysis of mix design of concrete.

CO2: Comprehend the various industrial waste materials in concrete, their influence on the properties of concrete along with the understanding of the high strength concrete in detail.

CO3: Define, describe and evaluate the various foams, fibres and light-weight materials used in concrete making. Also, describe the properties and usage of fibre reinforced concrete and geopolymer concrete.

CO4: Defining and comprehending various materials such as bearings, adhesives, sealants, polymer concrete composites, etc.

CO5: Comprehend, describe and evaluate the importance and use of forensic engineering in the construction industry.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Properties of Concrete</b> Fresh concrete and its rheology. Mechanical, deformational behavior and microstructure of hardened concrete. Creep and shrinkage. Testing of concrete. mix design and properties of concrete; High strength concrete; High density and lightweight	L1, L2, L3, L4	10

concretes; admixtures.		
<b>Module II: Industrial Waste Materials</b> Industrial waste materials in concrete, their influence on physical and mechanical properties and durability of concrete, Concreting under extreme weather conditions, High strength concrete. Changes in concrete with time, Corrosion of concrete in various environments. Corrosion of reinforcing steel. Ferro-cement, material and properties.	L1, L2, L3, L4	9
<b>Module III: Various types of Concrete</b> Foams and lightweight materials, fibre reinforced concrete. Types of fibres, workability, mechanical and physical properties of fibre reinforced concrete. Polymers in Civil Engineering, Polymers, geopolymer concrete, fibres and composites, Polymer concrete composites.	L1, L2, L3, L4	9
<b>Module IV: Miscellaneous materials</b> Fibre reinforced plastic in sandwich panels, modeling. Architectural use and aesthetics of composites. Adhesives and sealants. Structural elastomeric bearings and resilient seating. Moisture barriers, Polymer foams and polymers in Building	L1, L2, L3, L4	9
<b>Module IV: Forensic Civil Engineering</b> Introduction to forensic engineering, Importance of forensic engineering, Forensic investigations-tools and techniques, Failures types, causes and mechanisms, Structural failures, various structural failure mechanisms, causes of distress in structural members, removal of failures, retrofitting, rehabilitation, seismic failures, Diagnosis and Assessment of Distress: Visual inspection, non-destructive tests, ultrasonic pulse velocity method, rebound hammer technique, pull-out tests, Windsor probe test, crack detection techniques.	L1, L2, L3, L4	11

Version 2020.1	Date of Approval: 3rd June, 2020	0	0	2	1
Pre-requisites/Exposure					
Co-requisites					

### Catalog Description

In this lab course the various tests are conducted on different types of basic construction materials such as aggregate, sand, cement, admixtures. It also includes the tests on concrete design mix, different tests related to fresh and hardened state concrete with both destructive and non-destructive tests.

### Course Objective

The objective of the course is to

1. Assure the quality and properties of materials that are to be used for the construction such as; sand, aggregates, cements, admixtures.
2. Strengthen the knowledge on construction materials, their utilization and related tests for concrete structure quality improvement, evaluation and its maintenance.

### Course Outcomes

On the completion of this course, the student will be able to:

- CO1. Perform the tests on various construction materials such as cement, aggregates, etc. to apply the results in the practical life.
- CO2. Perform different tests such as workability and hardened concrete tests used in the construction for the quality assurance.
- CO3. Convince on different tests required on concrete, its non-destructive test in its hardened states.
- CO4. Perform the various tests on lightweight materials used in concrete.

### Course Content

List of Experiments	Blooms level*	Number of hours
<b>Module I:</b> Tests on cement - Consistency, Setting times, Soundness, Compressive Strength; Tests on aggregates: Gradation Charts of Aggregates, Bulking of fine Aggregate, Aggregate Crushing and Impact value	L1, L2, L3, L5, L6	6
<b>Module II:</b> Workability Tests on Fresh self compacting concrete; Test the compressive strength of concrete cubes by adding the	L1, L2, L3, L5,	8

industrial waste products in replacement of cement/ aggregates, permeability and durability tests on concrete	L6

<b>STE4309</b>	<b>ADVANCED STEEL AND CONCRETE COMPOSITE STRUCTURES</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure					
Co-requisites					

### Catalogue Description

To impart knowledge and carry out the analysis and design of steel and concrete composite structural components. Steel and concrete composite structures are a structurally efficient, fast-to-erect and economically competitive solution for buildings. In this course, the general modelling principles and design criteria for these structures are discussed.

### Course Objectives

The objective of this course is to:

1. Design composite beams, columns, trusses and box-girder bridges including the related connections.
2. Expose the students on case studies related to steel-concrete constructions of buildings

### Course Outcomes

On completion of this course, the students will be able to

CO1: Define and describe the fibre reinforced composites and their allied materials.

CO2: Evaluate the behaviour of unidirectional lamina and transformation of stress strain and other parameters.

CO3: Evaluate and analyze the elastic behaviour of multidirectional laminates.

CO4: Evaluate and analyze the bending of laminated composite plates

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I:</b> Introduction: definition and characteristics, fibres, matrices, fibre reinforced composites, advantages and limitations, basic concepts and characteristics: isotropy, orthotropy, classification, lamina and laminate, micromechanics and macromechanics, constituent materials and properties.	L1, L2, L3, L5	12
<b>Module II:</b> Elastic behaviour of unidirectional lamina: specially orthotropic and transversely isotropic material, relation between mathematical and engineering constants, stress strain relations for thin lamina, transformation of stress and strain,	L1, L2, L3	12

transformation of elastic parameters, transformation of stress-strain relations in terms of engineering constants.		
<b>Module III:</b> Elastic behaviour of multidirectional laminates, symmetric and balanced laminates, design considerations, computational procedure for finding engineering elastic properties, stress and failure analysis of multidirectional laminates.	L1, L2, L3,	12
<b>Module IV:</b> Bending of laminated composite plates, thin laminated plate theory, deflection of all edges simply supported rectangular symmetric cross-ply laminate, two opposite edges simply supported.	L1, L2, L3, L4	12

*\*Bloom's Level:*

### **Catalog Description**

This course contains the basic and advanced testing procedures for the different materials in construction such as sand, aggregates, cement, concrete, etc. and analysis of building using software. The tests which are practically used at site in the construction field will be discussed in details in this course.

### **Course Objectives**

The objective of the course is to

1. Assure the quality and properties of materials that are to be used for the construction such as; sand, aggregates, cements, admixtures.
2. Strengthen the knowledge on construction materials, their utilization and related tests for concrete structure quality improvement, evaluation and its maintenance & Analysis of Buildings.

### **Course Outcomes**

On the completion of this course, the student will be able to:

- CO1. Perform different tests on cement, sand, aggregates used in the construction for the quality assurance.
- CO2. Carry out the mix design for high strength concrete and evaluate the use of admixtures in concrete.
- CO3. Convince on different tests required on concrete, its destructive and non-destructive test in its harden states.
- CO4. Analyse and Design a building using Software.

## Course Content

Modules	Blooms level*	Number of hours
Module I: Basic tests for materials: cement, aggregates, flyash, GGBS etc.	L1, L2, L3, L5	6
Module II: Mix design for high strength concrete, use of admixture, Marsh Cone Test	L1, L2, L3	6
Module III: Non-destructive evaluation of strength of concrete/steel specimens Testing of beams for compressive strength, Testing of beams for flexural strength	L1, L2, L3,	6
Module IV: Analyse and Design a building using STAAD Pro/Etabs. Design of Industrial Roof Truss	L1, L2, L3, L4	6

### Catalogue Description

For any construction project to be successful, it must be technically sound and the resulting benefits must exceed the cost associated with the project. This course basically aims at describing various aspects of engineering economics. The field of construction economics and finance deals with the systematic evaluation of cost and benefit associated with different projects. The topics in this course cover principles of engineering economy followed by basic methods for carrying out economic studies considering the time value of money. The other topics include the demonstration of different methods namely present, future and annual worth method, rate of return, break-even comparison, capitalized-cost and cost-benefit analysis for the comparison of alternatives. In addition, other topics those will be covered are different methods of depreciation, taxes, and cost analysis of construction equipment followed by cost estimating. Further, topics on financial management namely construction accounting, financial statements, financial ratios and working capital management are also included in this course.

### Course Objectives

The objectives of this course are to:

1. Study the concepts of construction economic and finance such as comparing alternatives proposals, evaluating alternative investments, management of funds, and management of accounting.
2. Understanding the knowledge about the risks and uncertainties in capital budgeting to be applied in the practical aspects.
3. Study the elements of construction economics and few accounting methods.
4. Study the need for financial management and means of achieving the same.

### Course outcomes

After completing the course, the students will be able to:

CO1: Comprehend and analyse the underlying principles and concepts in construction economics and finance.

CO2: Comprehend and acquire the management skills, techniques and abilities required for management of construction finances.

CO3: comprehend and evaluate by generating the management solutions for construction problems related to risks and finances.

CO4: Carry out appropriate project appraisals using appropriate methods available as well as design and implement appropriate project cost control systems

CO5: Use applied economics to make informed decisions on strategy both for developers and for construction firms/organizations.

### Course Content

Modules	Blooms level*	Number of hours
<b>Module I: Introduction to Construction Economics and Depreciation</b> Construction accounting, Income statement. Depreciation and amortization.	L1,L2,L3, L4	9
<b>Module II: Time value of money and discounted cash flow</b> Engineering economics, Time value of money, discounted cash flow, NPV, ROR, PI, Bases of comparison, Incremental rate of return, Benefit-cost analysis, Replacement analysis, Break even analysis.	L1,L2,L3, L4	10
<b>Module III: Risk and Uncertainty management</b> Risks and uncertainties and management decision in capital budgeting.	L1, L2, L3, L4	9
<b>Module IV: Taxation and Inflation</b> Taxation and inflation. Work pricing, cost elements of contract, bidding and award, revision due to unforeseen causes, escalation.	L1,L2,L3, L4	10
<b>Module V: Project Appraisal and International finance</b> Turnkey activities, Project appraisal and project yield. Working capital management, financial plan and multiple source of finance. International finance, Budgeting and budgetary control, Performance budgeting. appraisal through financial statements, Practical problems and case studies.	L1,L2,L3, L4, L5, L6	10

<b>CME4307</b>	<b>GIS APPLICATIONS IN CONSTRUCTION ENGINEERING</b>	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

### Catalogue Description

This course will help the students to understand and introduce the elements of GIS as applied to construction management and achieve an awareness on application techniques.

### Course Objectives

The objective of the course is to

1. Comprehend the various types of data, data analysis methods and data quality requirements.
2. Develop the means of getting suitable data output and to use the data output for construction management using GIS tools.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Define and describe the basic concepts of GIS, its components and types of maps.

CO2: Evaluate the different data in the GIS software.

CO3: Study and comprehend the topology related factors, modelling and other data interpretation.

CO4: Apply the knowledge of GIS into the field application.

### Course Content

Modules	Blooms level*	Number of hours
<b>Module I:</b> GIS Basic Concepts Definition - Components of GIS -Maps - Definition - Types of Maps - Characteristics of Maps -Map	L1, L2, L3	12

Projections -- Hardware, Software and Organizational Context.		
<b>Module II:</b> GIS software. Data Types - Spatial and Non-Spatial - Spatial Data - Points, Lines and areas- Non-spatial data - Nominal, Ordinal, Interval and Ratio - Digitizer - Scanner - Editing and Cleaning - Geo reference data. Raster and Vector Data Structure - Raster data storage - Run length, Chain and Block Coding - Vector Data Storage	L1, L2, L3	12
<b>Module III:</b> Topology – Topological Models - Arc Node Structure - Surface Data - DEM - Grid DEM and TIN structure- Applications of DEM. Reclassification - Measurement - Buffering - Overlaying - SQL for Queries - Neighborhood and zonal operations - Data Quality - Components of data quality - Sources of errors in GIS - Meta data. Output - Maps, Graphs, Charts, Plots, Reports - Printers – Plotters.	L1, L2, L3	12
<b>Module IV:</b> Fields of application - Natural Resource Management, construction management-Parcel based, AM/FM applications examples	L1, L2, L3, L4	12

### Catalogue Description

The course covers the construction quality management aspect related to Total quality management (TOC), various concepts of quality, etc. This course will help the students to understand the importance of quality in construction industry and the aspects of completing the projects on time. This will also impart knowledge about the safety measures required during construction work and the management of the same.

### Course Objectives

The objective of this course is to:

1. Comprehend the importance of quality in construction industry related to various aspects of quality.
2. Development of idea related to specification, standardization, bid, environmental safety and management.

### Course Outcomes

On completion of this course, the students will be able to:

CO1: Define and describe the quality policy in Indian construction industry and their effect on economy.

CO2: Evaluate and comprehend the concept of quality and apply the procedure in the practical use.

CO3: Comprehend the quality assurance and control programmes to be utilized in practical applications.

CO4: Define and describe the various aspects of quality and various modes of analysis of the same.

CO5: Comprehend the ideas related to specification, standardization, bid, environmental safety and management.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>

<b>Module I:</b> Quality policy in construction industry-Consumer satisfaction- Ergonomics-Time of completion, Statistical tolerance.	L1, L2 and L3	10

### **Catalogue Description**

In this course the concepts of planning, strategizing the management tools and techniques are discussed. A clear understanding of various practical aspects of operations strategy, selection of process and infrastructure development will be explained. The aim of this course is to make the students familiar with the changes required in the operational strategy with rapidly changing environment in workplace and to adapt oneself according the changes.

### **Course Objectives**

The objective of this course is to:

1. Equip the students with concepts of developing and implementing the operation strategy.
2. Provide an outline for implementing the operation strategy and to calculate the various financial and accounting perspectives in restructuring any organization.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: Define, describe the role and importance of operation strategy, its dynamics and its implications on manufacturing industry.

CO2: Identify the principles and concepts of developing the operation strategy and its implications in infrastructure development.

CO3: Identifying the principles and concepts of Focused Manufacturing demonstrating the importance of human aspects and categorizing the advantages and disadvantages of technology in use.

CO4: Calculating and describing the various financial and accounting perspectives in improving, redefining and restructuring any organization.

<b>CME4314</b>	<b>CONTRACT LAWS &amp; REGULATIONS</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2020.1	Date of Approval: 3 <sup>rd</sup> June 2020	3	1	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

### **Catalogue Description**

This programme is based on the contract laws, acts of laws, Types of contracts, Tenders, Types of tenders, tendering process, framing of documents, Arbitration, Law Enforcements, Laws related to land and revenue and Labour laws, etc. This course also delivers the requirements of overall insurance planning, financial safety of different civil engineering projects.

### **Course Objectives**

The objective of this course is to:

1. Cover the different aspects of contract laws, norms based on Indian standard, International norms and it includes bidding, accepting – Evaluation of Tender from Technical, Contractual and Commercial Points
2. Emphasis on the fundamentals of Laws of taxation, land and properties dealing before the execution of any engineering projects.

### **Course Outcomes**

On completion of this course, the students will able to:

- CO1: Explain regarding Indian contract accts, International Contract Document – Standard Contract Document, etc.
- CO2: Define the process of tendering, types of tendering, project estimation and implementation.
- CO3: Derive the different act of laws and violation in the planning and implementation of projects.
- CO4: Discuss about the tax system. Different types of tax plans, construction method related to land acquisition, property dealing etc.
- CO5: Describe the insurance and security of employee in addition to labour laws as per Indian Standards.

### **Course Content**

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
----------------	----------------------	------------------------

<b>Module 1: Contract Acts</b> Indian Contracts Act – Elements of Contracts – Types of Contracts – Features – Suitability–Design of Contract Documents – International Contract Document – Standard Contract Document – Law of Torts	L1, L2	12
<b>Module II: Tendering Process</b> Prequalification – Bidding – Accepting – Evaluation of Tender from Technical, Contractual and Commercial Points of View – Contract Formation and Interpretation – Potential Contractual Problems – World Bank Procedures and Guidelines – Tamil Nadu Transparency in Tenders Act	L1, L2	8
<b>Module III: Laws and Norms</b> Comparison of Actions and Laws – Agreements – Subject Matter – Violations – Appointment of Arbitrators – Conditions of Arbitration – Powers and Duties of Arbitrator – Rules of Evidence – Enforcement of Award – Costs	L1, L2, L3	12
<b>Module IV: Tax and Planning</b> Insurance and Bonding – Laws Governing Sale, Purchase and Use of Urban and Rural Land –Land Revenue Codes – Tax Laws – Income Tax, Sales Tax, Excise and Custom Duties and their Influence on Construction Costs – Legal Requirements for Planning – Property Law –Agency Law – Local Government Laws for Approval – Statutory Regulations	L1, L2, L3	8
<b>Module V: Insurance and Security</b> Social Security – Welfare Legislation – Laws relating to Wages, Bonus and Industrial Disputes, Labour Administration – Insurance and Safety Regulations – Workmen's Compensation Act – Indian Factory Act – Tamil Nadu Factory Act – Child Labour Act – Other Labour Laws	L1, L2, L3, L5	8

*\*Bloom's Level:*

*L1: Knowledge; L2: Comprehension; L3: Application; L4: Analysis; L5: Synthesis, L6: Evaluation*

Co-requisites	Nil				

### Catalogue Description

The course will define the concrete making material materials, their significance, uses, and their properties in different situations and design based on standard specifications. This will also enable the students to understand the manufacturing process of concrete and the precautions, various properties of concrete and different types of concrete and their application. This course illustrates about the use of different industrial wastes for the production of sustainable concrete also gives the description for the high strength concrete production.

### Course Objectives

The objective of this course is to

1. Comprehend the proper selection of construction materials used in the field of Civil engineering construction sectors by knowing the material's properties, availability, strength and durability.
2. Research development in the field of advancement construction materials and their proper selection as per need and performance requirements on different situations.

### Course Outcomes

On completion of this course, the students will be able to

CO1 Judge the appropriate construction materials as per the construction activities concerned, knowing its performance, properties and criteria through different standardized tests.

CO2 Quantifying, processing and Performance of concrete works for its quality assurance as per the standard guidelines.

CO3. Describe the concrete behavior in fresh state and its behavior in different environmental condition and towards external loading agencies.

CO4. Comprehend the selection of advanced concrete material for sustainable constructional applications and incorporating repair and rehabilitation process of concrete material.

CO5 Selection and requirement of Form Work their importance in the field of construction.

## Course Content

Modules	Blooms level*	Number of hours
<b>Module 1: Materials</b> Concrete Making Materials: Cement- Bogues compounds – Hydration Process– Types of cement – Aggregates – Gradation Charts – Combined Aggregate-Alkali Silica Reaction -Admixtures – Chemical and Mineral admixtures.	L1, L2	10
<b>Module II: Fresh and Hardened Concrete</b> Fresh Concrete - workability tests on Concrete Setting times of Fresh Concrete - Segregation and bleeding. Hardened Concrete: Abram's law- Gel space ratios, Maturity Concept – Stress Behaviour – Creep and Shrinkage – Durability tests on concrete – Non-destructive testing of concrete.	L1, L2	10
<b>Module III: High Strength and High Performance Concrete</b> High Strength Concrete – Micro structure – Manufacturing and Properties- Design of HSC Using Eirintroy Shaklok Method- Ultra High Strength Concrete. High Performance Concrete- Requirements and properties of High-Performance Concrete- Design Considerations.	L1, L2, L3, L4	9
<b>Module IV: Special Concrete</b> Special Concrete: Self Compacting concrete – Polymer concrete – Fiber reinforced concrete –Reactive Powder concrete – Requirements and Guidelines – Advantages and Applications. Light weight concrete. Concrete mix design, Quality Control - Quality assurance - Quality audit- Mix Design method – BIS method, ACI method, DOE method.	L1, L2, L3, L4	10
<b>Module V: Form Work</b> Form work – materials – structural requirements – form work systems – connections – specifications – design of form work – shores – removal for forms – reshoring – failure of form work.	L1, L2, L3, L6	9

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation*

<b>CME4302</b>	<b>HIGHWAY CONSTRUCTION AND MAINTENANCE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure					
Co-requisites					

### **Catalog Description**

This course deals with the advanced knowledge of the transportation engineering. The aspects related to highway construction such as embankment construction, bituminous construction, rigid pavement construction (concrete road), hill road construction, etc. are dealt with in this course. The maintenance management related to highways have also been discussed elaborately in this course.

### **Course Objectives**

The objectives of this course are:

1. Impart knowledge about the highway construction techniques related to embankment, flexible and rigid pavements as well as hill roads.
2. Understanding the maintenance management related to road construction.

### **Course outcomes**

After completing the course, the students will be able to:

CO1: Define, describe and evaluate the construction of embankments along with their maintenance management.

CO2: Describe and analyze the bituminous construction techniques along with their maintenance management.

CO3: Describe and analyze the concrete road construction techniques along with their maintenance management.

CO4: Describe and analyze the hill road construction techniques along with their maintenance management.

## Course Content

Modules	Blooms level*	Number of hours
<b>Module I:</b> Embankment Construction: Formation cutting in Soil and hard rock, Preparation of Subgrade, Ground improvement, Retaining and Breast walls on hill roads, Granular and Stabilized, Sub – bases / bases, Water Bound Macadam (WBM), Wet Mix Macadam (WMM), Cement treated bases, Dry Lean Concrete (DLC). Maintenance of each of the Bituminous construction.	L1, L2, L3, L4	12
<b>Module II:</b> Bituminous Constructions: Types of Bituminous Constructions, Interface Treatments, Bituminous Surfacing and wearing Courses for roads and bridge deck slabs and their maintenance , Selection of wearing Course under different Climatic and Traffic conditions, IRC specifications, Construction techniques and Quality Control.	L1, L2, L3, L4	12
<b>Module III:</b> Concrete road construction: Test on Concrete mixes, Construction equipment, Method of construction of joints in concrete pavements, Quality Control in Construction of Concrete pavements, Construction of Continuously reinforced, Prestressed, Steel Fibre Reinforced (SFRC) Pavements, IRC, MORT&H, ACI Specifications, AASHTO Specifications, Recycled pavements, Non – Conventional Pavements, Overlay Construction. Maintenance of paved and unpaved roads.	L1, L2, L3, L4	12
<b>Module IV:</b> Hill Roads Construction: Stability of Slopes, Landslides – Causes and Control measures, Construction of Bituminous and Cement Concrete roads at high altitudes, Hill road drainage, Construction and maintenance problems and remedial measures.	L1, L2, L3, L4	12

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

### **Catalog description**

In this lab course the various tests are conducted on different types of basic construction materials such as aggregate, sand, cement, admixtures. It also includes the tests on bituminous design mix, different tests related to fresh and hardened state concrete with both destructive and non-destructive tests.

### **Course Objective:**

The objective of the course is to

1. Assure the quality and properties of materials that are to be used for the construction such as; sand, aggregates, cements, admixtures.
2. Strengthen the knowledge on construction materials especially used in construction of roads and pavements, their utilization and related tests for concrete structure quality improvement, evaluation and its maintenance.

### **Course Outcomes:**

On the completion of this course, the student will be able to:

- CO1. Perform the tests on various construction materials to apply the results in the practical life.
- CO2. Perform different tests on cement, sand, aggregates, bitumen and bituminous mixes used in the construction for the quality assurance.
- CO3. Carry out the bituminous mix design
- CO4. Evaluate and maintain the quality of materials based constructions and perform the tests to evaluate the pavements.

### **Course Content**

List of Experiments	Blooms level*	Number of hours
<b>Module I: Laboratory tests on soils</b> 1. Moisture Content Test 2. Proctor Test 3. CBR Test	L1, L2, L3, L5, L6	6

### **Catalogue Description**

This course deals with the advanced knowledge of the geotechnical engineering. The aspects related to the various constructions required in geotechnical engineering ranging from the foundations to various grouting processes and earth reinforcement.

### **Course Objectives**

The objectives of this course are:

1. Impart knowledge about the geotechnical construction techniques.
2. Impart knowledge about the various constructions required in geotechnical engineering ranging from the foundations to various grouting processes and earth reinforcement.

### **Course outcomes**

After completing the course, the students will be able to:

CO1: Define and describe the shallow foundation and the analysis of the same for practical use.

CO2: Evaluate and analyze the deep foundation especially the pile and pile cap design.

CO3: Define earth reinforcement techniques and comprehend the principals behind it for practical applications.

CO4: Apply the knowledge of grouting and other stabilizing techniques for practical applications.

### **Course Content**

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I:</b> Shallow Foundation: need of foundation engineering, shallow foundation, construction methods in shallow foundation , analysis of foundation, Foundation design in relation to ground movements - Foundation on recent refuse fills - Design of Foundation for seismic forces – Codal recommendations - Introduction to theory of vibration - Design of Block foundation – Codal Recommendations.	L1, L2, L3, L4	12
<b>Module II:</b> Deep foundation: design of pile foundation, pile cap analysis, pile – raft system basic interactive analysis – pile and pile groups subjected to vibrations – fundamental solutions. design of caissons.	L1, L2, L3, L4	12
<b>Module III:</b> Earth reinforcement – Principles and basis mechanism of reinforced earth-reinforced soil retaining structures-simple design, Synthetic and natural fibre based Geotextiles and their applications. Filtration, drainage, separation, erosion control – case studies.	L1, L2, L3, L4	12
<b>Module IV:</b> Grouting techniques – Types of grout – Suspension and solution grouts – Basic requirements of grout. Grouting equipment – principle of injection-injection methods – properties of treated ground-application of jet grouting-grout monitoring – Electro – chemical stabilization – Stabilization with cement, lime etc. – Stabilization of expansive clays.	L1, L2, L3, L4	12

### Catalogue Description

Soft computing is the foundation of conceptual intelligence in machines. Unlike hard computing, soft computing is tolerant of imprecision, uncertainty, partial truth, and approximation. Soft computing algorithms are becoming important classes of efficient tools for developing intelligent systems and providing solutions to complicated civil engineering problems. Domains of applications include structural engineering, design, diagnostics, and health monitoring, hydraulic engineering, geotechnical engineering, transportation engineering, environmental engineering, coastal and ocean engineering and construction management. The course gives basic knowledge about the key algorithms and theory that form the foundation of machine learning and computational intelligence and a practical knowledge of machine learning algorithms and methods in civil engineering.

### Course Objectives

The objective of this course is to:

1. Introduce the concept of soft computing in Civil Engineering.
2. Identify and select a suitable soft computing technique to solve the problem, construct a solution and implement a soft computing solution.

### Course Outcomes

On completion of this course, the students will be able to

- CO1: Comprehend the soft computing techniques and their application in civil engineering
- CO2: Analyse various neural networks architectures and their practical applications.
- CO3: Define the fuzzy logic modelling technique and its application.
- CO4: Comprehend and Understand the genetic algorithm concepts and their applications in civil engineering.
- CO5: Identify and select a suitable soft computing technique to solve the problem, construct a solution and implement a soft computing solution.

## Course Content

Modules	Blooms level*	Number of hours
<b>Module 1: Introduction to Soft Computing</b> Introduction, soft computing vs hard computing, requirement of soft computing, major areas of soft computing, applications of soft computing	L1, L2	4
<b>Module II: Artificial Neural Networks(ANN)</b> Biological neurons, basic models of ANN, learning, activation function, perceptron, learning rule, training and testing, back propagation, research paper study related to civil engineering.	L1, L2, L3, L4	11
<b>Module III: Fuzzy Logic(FL)</b> Fuzzy sets, properties, operations on Fuzzy sets, fuzzy relations, fuzzy membership functions, inference, methods of member value assignment, rank ordering, defuzzification, fuzzy inference systems, research paper study related to civil engineering.	L1, L2, L3, L4	11
<b>Module IV: Genetic Algorithm (GA)</b> Introduction to GA, operators in GA, coding, selection, cross over, mutation, stopping condition, Convergence of GA, Bit wise operation in GA, Multi-level Optimization, research paper study related to civil engineering.	L1, L2, L3, L4	11
<b>Module V: Application of the techniques in Civil Engineering</b> Collection of data, input of data, Weka software for ANN technique – basics theory related to software use and techniques.	L1, L2, L3, L4	11

### Catalogue description

Soft computing is the foundation of conceptual intelligence in machines. Unlike hard computing, soft computing is tolerant of imprecision, uncertainty, partial truth, and approximation. Soft computing algorithms are becoming important classes of efficient tools for developing intelligent systems and providing solutions to complicated civil engineering problems. Domains of applications include structural engineering, design, diagnostics, and health monitoring, hydraulic engineering, geotechnical engineering, transportation engineering, environmental engineering, coastal and ocean engineering and construction management. The course gives basic knowledge about the key algorithms and theory that form the foundation of machine learning and computational intelligence and a practical knowledge of machine learning algorithms and methods in civil engineering.

### Course Objectives

The objective of this course is to:

1. Introduce the concept of soft computing in Civil Engineering by learning the softwares Weka and MATLAB.
2. Identify and select a suitable soft computing technique to solve the problem, construct a solution and implement a soft computing solution.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Comprehend ANN technique and creating a programme for the same related with the applications in civil engineering

CO2: Apply the ANN technique and analyse a model using the software.

CO3: Apply a suitable problem statement and solve the problem, construct a solution and implement a fuzzy logic toolbox.

CO4: Evaluate the utilization of MATLAB software for fuzzy logic analysis.

## Course Content

List of Experiments	Blooms level*	Number of hours
<b>Module I:</b> Create a perceptron with appropriate no. of inputs and outputs. Train it using fixed increment learning algorithm until no change in weights is required. Output the final weights.	L1, L2, L3, L4, L5, L6	6
<b>Module II:</b> Create a model using back propagation method using Weka	L1, L2, L3, L4, L5, L6	6
<b>Module III:</b> Creating a small programme using MATLAB Fuzzy logic toolbox.	L1, L2, L3, L4, L5, L6	6
<b>Module IV:</b> Implementing MATLAB Fuzzy logic toolbox for a problem related to the application in the area of civil engineering	L1, L2, L3, L4, L5, L6	6

Co-requisites					

### Catalogue Description

The course deals with the geometric design provisions for various transportation facilities as per IRC guidelines. It includes design of different intersections and interchanges of expressways and high-speed corridors. It also includes the design of runways and taxiways as per the airport design standards along with design of surface and sub surface drainage facilities.

### Course Objectives

The objective of this course is to

1. Explain the principles of geometric design for various transportation facilities.
2. Design the At-Grade and Grade separated intersections along with the design of drainage facilities.

### Course Outcomes

On completion of this course, the students will be able to

- CO1: Design the expressway/high speed corridors along with their alignment.  
CO2: Explain the principles of traffic operations along with the design of intersections.  
CO3: Explain the different interchanges and geometric design for non-motorized traffic.  
CO4: Design runways and taxiways along with the design of drainage facilities.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I</b> <b>Introduction :</b> Geometric design provision for various transportation facilities as per IRC guidelines,geometric design of horizontal and vertical alignment, design of expressways/ high speedcorridors	L1, L2,L3	10
<b>Module II</b> <b>Design of at grade intersections :</b> Principles of design, channelization, roundabouts, staggered intersections	L1, L2, L3	10

<b>Module III</b> <b>Design of interchanges:</b> Major and minor interchanges, entrance and exit ramps, acceleration and deceleration lanes <b>Geometric design of facilities for non motorized traffic:</b> Bicycles and pedestrian facility design, slow carriageways	L1, L2, L3	14
<b>Module IV</b> <b>Introduction to Geometric design of air fields:</b> Airport design standards, runways, taxiways <b>Design of drainage facilities:</b> Importance, Principles, drainage of various geometric elements, surface and subsurfac drainage	L1, L2, L3	14

### Catalogue Description

The course deals with the airport planning and geometric design for runways and taxiways. It includes airport visibility such as day time markings and lightings for night time. It also includes mathematical models for airside capacity and delay and the importance of air traffic control. It includes the design of runways and taxiways as per the airport design standards along with design of surface and sub surface drainage facilities.

### Course Objectives

The objective of this course is to

1. Familiarize various techniques related to airport planning and design.
2. Design run off, surface and sub surface drainage facilities.

### Course Outcomes

On completion of this course, the students will be able to

- CO1: Analyze the air traffic demand and design the geometrical features of runways, taxiways and exit taxiways.
- CO2: Design the airport pavements and analyze different markings and lightings for the terminal areas.
- CO3: Design the mathematical models for airside capacity & delay and understands the concept of air traffic control.
- CO4: Design runways along with the design of drainage facilities.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I</b> Airport Planning: Airport master plan, aircraft characteristics related to airport planning, air traffic demand analysis, planning surveys, airport zoning. Geometric Design: Airport classification, runway and	L1, L2,L3	15

taxiway geometric standards, exit taxiways, separation and clearances.		
<b>Module II</b> Terminal Areas: Facilities, space requirement, number and size of gate positions, aircraft parking system. Visual Aids : Airport day time markings, airport lighting, visibility, visual aids Structural design of airport pavements: Design Factors, Design of flexible and rigid Pavements	L1, L2, L3	14
<b>Module III</b> Airside capacity and delay: mathematical models for capacity and delay, space time concept, models for mixed traffic. Air Traffic Control: Importance of flight rules, navigational aids, air traffic controls, obstruction and clearance requirements	L1, L2, L3	11
<b>Module IV</b> Airport Drainage : Design run-off, inlet size and location design, surface and subsurface design	L1, L2, L3	8

Version 2020.1	Date of Approval: 3rd June, 2020	4	0	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

### **Catalogue Description**

Bridges are a very important part of a nation's transportation infrastructure. Proper planning, design and construction, as well maintenance, are of utmost importance. In general, engineers will benefit from exposure to sophisticated bridge typologies and construction practices, as well as the assessment of the existing bridges. The competency needed in this field has to be enhanced significantly and rapidly to respond to the requirements in large infrastructure projects being undertaken and planned in India. This course will extend the concepts and methodologies given in bridge engineering courses to cover the design of medium- and long-span road bridges, which can be optimized in terms of load-carrying capacity, durability, and ease of construction and maintenance. Good construction practices, site-specific issues and guidelines for drafting and enforcing specifications will also be covered.

### **Course Objectives**

The objective of this course is to:

1. Analyze and design various types of bridges using various methods and also understand the various loads and forces combinations on the bridges.
2. Analyze and design the substructure of the bridges and also apply the various construction & maintenance methods in the field.

### **Course Outcomes**

After completing the course, the students will be able to:

- CO1: Apply knowledge of mathematics, science and engineering to understand the various types of bridges and its loadings and forces.
- CO2: Design and analyze the bridge decks using different methods.
- CO3: Analyze and design continuous and long span bridges using different methods.
- CO4: Design and analyze substructure of the bridges which includes piers, abutments and its foundations.
- CO5: Design different connections and bearing and understand various practical methods of construction & maintenance of bridges.

### **Course Content**

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Introduction</b> General: Bridge System, Considerations in alignment, Planning, Economic consideration, Aesthetics and selection of type of bridge (Review) Introduction-types of Bridges-economic span length-Types of loading-Dead load live load-Impact, Loading Standards: Standards followed in U.K., U.S.A. and Europe	L1, L2, L3	9
<b>Module II: Analysis and Design of Bridges (Superstructure)</b> Bridge deck analysis using different methods, Load distribution theories – Courbon specifications for loading, Geometrical proportioning etc. of road, rail-cum-road bridges, Indian Road Congress (IRC) and Indian Railway Loading standards and their comparison with loading, Hendry-Jaegar, Morris-Little (Orthotropic plate theories) methods, Stiffness method, Finite difference method, Folded Plate method, Finite strip method and Finite Element method (General treatment), Limit analysis, Design of bridge decks.	L2, L3, L4, L5	11
<b>Module III: Design of Continuous &amp; Long Span Bridges</b> Introduction to IRC 112: Provisions of Earthquake Resistant Design of Bridges, Design principles of continuous bridges Long Span Bridges: General discussion of suspension and cable stayed bridges	L2, L3, L4, L5, L6	9
<b>Module IV: Substructure Analysis and Design &amp; Foundations:</b> Piers, Abutments, Wing walls and other appurtenant structures, Well foundations and pile foundation, Design and construction and field problems	L1, L2, L3, L4	10
<b>Module V: Connections &amp; Construction &amp; Maintenance</b> Design of different connections, Bearings and joints Erection of bridge super structure, Maintenance, Rating and Strengthening of existing bridges	L1, L2, L3, L4, L5, L6	9

---------	-------------------------------	---	---	---	---

Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure					
Co-requisites					

## Catalogue Description

The course discuss the evolution and role of urban public transportation modes, systems and services, focusing on bus and rail. It includes various topics including current practice and new methods for data collection and analysis, performance monitoring, road design, frequency determination, effect of pricing policy and service quality on ridership.

## Course Objectives

The objective of this course is to

1. Provide knowledge regarding public transportation systems, their operation, planning and economics.
2. Familiarize with the problems of transit routing, scheduling, infrastructure facilities, fare structures and management.

## Course Outcomes

On completion of this course, the students will be able to

CO1: Describes the important concepts about public transportation systems.

CO2: Collect data about travel behaviour and analyzing the data for use in transport planning.

CO3: Explain and describes the various parameters of rapid transit systems.

CO4: Apply optimization technique for transport planning and pricing.

## Course Content

Modules	Blooms level*	Number of hours
<b>Module I:</b> Modes of public transportation and application of each to urban travel needs.	L1, L2, L3	7
<b>Module II:</b> Transit system operations, para-transit systems, street transit systems, rapid transit systems, estimation of transit demand. Route development, properties of a good route set, determination of a good route set, stop location and stopping policy, schedule development, properties of a good schedule, determination of a good schedule.	L1, L2	16

<b>Module III:</b> Capacity of rapid transit systems, line capacity of RTS, capacity of street transit systems. Transit corridor, identification and planning, mass transport management measures, integration of public transportation modes. Public transport infrastructure, case studies, multi mode transportation system.	L1, L2	16
<b>Module IV:</b> Planning for public transport, fares and subsidies. Intermediate public transport in Indian cities, types of IPT vehicles. Characteristics of IPT modes.	L1, L2, L3	9

Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure					
Co-requisites					

## Catalogue Description

Intelligent transportation systems represent the major transition in transportation in many dimensions. This course considers ITS as a lens through which one can view many transportation and societal issues. This course is intended to improve the effectiveness and efficiency of surface transportation systems through advanced technology in information system, communications and sensors.

## Course Objectives

The objective of this course is to

1. Familiarize ITS conceptually as a macro traffic management systems.
2. Explain the enabling role of technology i.e. vehicular technology, infrastructure, information and communication technology and data processing.

## Course Outcomes

On completion of this course, the students will be able to

- CO1: Discuss the fundamentals of traffic flow theory in the management and operations of road traffic.
- CO2: Describe the range of technology involved in the delivery of traveller information system.
- CO3: Assess the range of options available for the management of freeway and arterial traffic.
- CO4: Investigate and analyze current application and trend in developed and developing countries.
- CO5: Investigate the contemporary issues in the application of advanced technology in transport.

## Course Content

Modules	Blooms level*	Number of hours
<b>Module I</b> Introduction to ITS: History of ITS, ITS Legislation and Financing, User Services, Roles and Responsibilities ITS Components : Advanced Traveler Information Systems (ATIS), Advanced Transportation Management Systems (ATMS), including network operations, incident detection; congestion pricing, tolling, Fleet-oriented ITS services,	L1, L2, L3	15

<b>Module II</b> AdvancedPublic Transportation Systems (APTS); BRT; Commercial Vehicle Operations(CVO); Intermodal Freight, including International Operations and Supply Chains;Automated Highway Systems (AHS), Sensors, Electronic Toll Collection (ETC),Dedicated Short Range Communication; Standards.	L1, L2, L3	14
<b>Module III</b> Communication and Related Techniques: Radio Propagation and Antennas forWireless Communications; Technologies and Applications of CommunicationPrinciples for Transportation. Information & Related Technologies : Intelligent Control Theory, TransportationInformation; Vehicle Monitoring & Dispatching System; Advanced Web PagesProgramming, Transportation Safety	L1, L2, L3	11
<b>Module IV</b> Traffic Control & Chip Design : Traffic Control; Traffic Control System Design onChip. Regionally –scaled ITS deployment, including regional architecture; organizationland institutional issues; standards; developed vs. developing countries; ITS andstrategic regional transportation planning; integrating infrastructure and operationsplanning.	L1, L2,L3	8
<b>MODULE V</b> Critical ITS issues, including (as time permits) ITS and security; safety; humanfactors; privacy; sustainability; funding (as contrasted with conventional infrastructure); technology deployment/R&D/policy; other institutional issues Conclusion, including regional ITS planning and architecture presentation; the futureof ITS

TRE4308	RAILWAY INFRASTRUCTURE, PLANNING AND DESIGN				L	T	P	C
---------	--	--	--	--	---	---	---	---

Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure					
Co-requisites					

### **Catalogue Description**

The course deals with the geometric design provisions for railway engineering which includes horizontal & vertical alignment, track elements and turnouts & crossing. It includes track management system, and planning of railway activities and project management for railways. It also includes the computation of various costs related to railways and disaster management for the accidents in the railways.

### **Course Objectives**

The objective of this course is to

1. Enhance the knowledge of Railway Engineering in the context of regional mass transportation systems.
2. Familiarize the techniques of planning, modelling and designing the transportation systems along with infrastructures required for Railways.

### **Course Outcomes**

On completion of this course, the students will be able to

- CO1: Design the geometrics of railway and explain the different rail operations along with their management.
- CO2: Explain the track maintenance management and social and economic effect on environment.
- CO3: Understand the concept of high speed & magnetic levitation and different track characteristics.
- CO4: Compute the different costs associated with the rail transport services such as construction & maintenance cost, fixed & variable cost etc..
- CO5: Analyse the railway accidents & disaster management and understands the parameters affecting the rail demand.

### **Course Content**

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I</b> Railway Geometric Design: Alignment and Surveys, Geometry of Track, Horizontal & Vertical curves, Track elements, Turnouts & Crossings. Rail Operations Management: Crowd control Passenger Flow management; Timetabling & Inter-running, Managing a Heavy Capacity Light Rail system, Productivity Management, Outsourcing & contractor Management.	L1, L2, L3	10
<b>Module II</b> Track Maintenance Management: Items of track maintenance, Packing & Overhauling of racks, Maintenance Planning, Mechanical Track Maintenance, directed maintenance of track, Modern Track Management System. Planning, Financial Management & Investment : Railways Social & Economic environment, competition & Impact on Railway Management, Feasibility Studies & method of Financing, Planning the railway activity, Project Management for Railways, Human Resources & their revalorization, Privatization of Railways.	L1, L2	12
<b>Module III</b> High Speed & Magnetic Levitation: High Speed trains: Application of high-speed, Impact of high-speed on reduction of rail travel time, Track Characteristics, Rollingstock for high speeds, Power supply at high-speeds, Tilting trains, Aero trains, Magnetic Levitation.	L1, L2, L3	8
<b>Module IV</b> Costing and Pricing of Rail Transport Services: Construction & Maintenance Cost, Fixed & Variable cost, Marginal Cost, Generalized cost, Cost of Operation of Railway company, Ratifications of infrastructure: Principles, Objectives, Financial consequences, commercial applications, of infrastructure Pricing, Infrastructure pricing models in some countries.	L1, L2, L3	8
<b>Module V</b> Railway Accidents and Disaster Management Suburban Railways Dedicated Freight Corridor – Construction parameters & Track Structure Forecast of Rail demand: Purposes, Needs, Methods for forecasting, Parameter affecting, Various categories of rail demand, Qualitative methods, Statistical Projections, Econometric models, Gravity models, Fuzzy models, Time-Series models.	L1, L2, L3	10

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation*

Co-requisites					

### Catalogue Description

The course contains basic geographic perspectives on accessibility and transportation, topics covered in the course includes is GIS based visualization of transport network and flow, network data set construction and different methods for network analysis for transportation planning.

### Course Objectives

The objective of this course is to

1. Discuss the elementary concept of GIS such as definitions, benefits and urban application of GIS.
2. Familiarize the practical application of GIS in transportation field through case studies.

### Course Outcomes

On completion of this course, the students will be able to

- CO1: Define and describe the basic concepts and terminologies of GIS.
- CO2: Acquire, manipulate and save the data IN GIS.
- CO3: Demonstrate the concept of transport geography into practice by means of network analysis in GIS.
- CO4: Identify an appropriate GIS work flow for analyzing transport flows between demand point locations and supply facilities.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I:</b> Introduction: Definition and components of GIS, Types of data, Mapping process, Coordinate systems, Transformations, Map projections, Geo-referencing, Standard GIS packages.	L1, L2, L3	10
<b>Module II:</b> Data Acquisition: Scanners, Digitizers, Digital representation of data,	L1, L2	12

Data structure-Raster and vector data, Data storage. Data Processing: Format conversion, Data Compression and reduction techniques run length coding, block coding, quadtree, Spatial and non- spatial data, Topology creation.		
<b>ModuleIII:</b> Data Management: Database Structure-Hierarchical, Network, Relational, Database Management Systems. Data Manipulation & Analysis: Reclassification and Aggregation, Analysis of spatial and non spatial data, Modelling in GIS.	L1, L2	10
<b>Module IV:</b> Implementing in Transportation: Database in terms of link, nodes, point of interest; GIS database design for transport planning, Traffic Analysis Zone (TAZ), Integration of field data with GIS data. GIS Applications (A) Transportation Systems: Accidents and safety analysis, Traffic & Transport analysis, Traffic monitoring systems, Transport infrastructures, environmental impact assessment, congestion management, In-vehicle navigation. (B) Transport Planning: Travel Demand Analysis, Network alignment, Dynamic vehicle routing and scheduling, interchange analysis, Multimodal network planning, Decision Support System for transport planning. Case Studies	L1, L2, L3	16

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation*

## Catalogue Description

The course contains basic principles of traffic parameters and interrelationship between them. It also focuses on different techniques for collecting traffic volume, speed, parking and accident data. It includes the relationship between capacity & Level of service, traffic signal designing methods and transportation system management.

## Course Objectives

The objective of this course is to

1. Impart knowledge about basic elements of traffic and their characteristics, interactions, impacts
2. Describe know-how of fundamental variables of traffic, techniques of measurements and analysis

## Course Outcomes

On completion of this course, the students will be able to

- CO1. Define the basic parameters of traffic and collect data using different methods.
- CO2. Analyse parking and accident survey data.
- CO3. Explain the relation between capacity, level of service and speed.
- CO4. Explain and Design traffic signals and their operation.
- CO5. Describe various methods of improving vehicular flow.

## Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Traffic Studies (Part- I)</b> Basic principles of Traffic, Volume, Speed and Density; Definitions and their interrelationships; Traffic Volume studies - Objectives, Methods of Volume counts, Presentation of Volume Data; Speed studies- Types of Speeds, Objectives, Methods of speed studies, Statistical Methods for speed data Analysis, Presentation of speed	L1, L2, L3	10

data. Delay Studies; Head ways and Gap Studies - Headway and Gap acceptance, Origin and Destination Studies		
<b>Module II: Traffic Studies (Part-II)</b> Parking Studies: parameters of parking, definitions, Parking inventory study, Parking survey by Patrolling method; Analysis of Parking Survey data; Accident studies- Causative factors of Road accidents, Accident data collection: Accident analysis and modeling; Road Safety Auditing, Measures to increase Road safety.	L1, L2, L3, L4	9
<b>Module III: Capacity and LOS Analysis</b> Introduction to Traffic capacity, Analysis concepts, Level of Service, Basic definitions, Factors affecting Capacity and LOS, Capacity of Urban/Rural Highway, With or without access control, Basic freeway segments - Service flow rate of LOS, Lane width or Lateral clearance adjustment; Heavy vehicle adjustment; Driver population adjustment.	L1, L2, L3	11
<b>Module IV: Signal Designing</b> Fixed Time signals, Determination of Optimum Cycle length and Signal setting for Fixed Time signals, Warrants for Signals, Time Plan Design for Pre-Timed Control- Lane group analysis, Saturation flow rate, and Adjustment factors, Uniform and Incremental Delay, Vehicle Actuated Signals, Signal Coordination	L1, L2, L3	11
<b>Module V: Transportation System Management</b> Measures for Improving vehicular flow – one-way Streets, Signal Improvement, Transit Stop Relocation, Parking Management, Reversible lanes- Reducing Peak Period Traffic - Strategies for working hours, Congestion Pricing, Differential Toll Policies.	L1, L2	7

*\*Bloom's Level:*
