Pre-requisites/Exposure					
Co-requisites					

### Catalogue Description

This lab course discusses about various data collection methods of traffic volume and speed studies. The travel behavior of individual and the need for new route is also part of the course.

### Course Objectives

The objective of this course is to

1. Overview of different methods of data collection of fundamental variables of traffic.
2. Conduct various tests to collect field data of traffic.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Explain and collect field traffic data using various methods.

CO2: Analyse the turning movements of vehicles at intersection and measure traffic noise and road lighting.

CO3: Identify travel behaviour of individuals by conducting roadside and household interviews.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Traffic Volume &amp; Speed Studies</b>  a) Determine Parking volume, load and index. b) Determine the delay using moving observer method. c) Determine the spot speed and traffic volume.	L1, L2, L3	10
<b>Module II: Intersection Studies</b> a) Determine conflicting points at intersection.	L1, L2, L3, L4	6

b) Determine the availability & intensity of road lighting as per codal provisions.		
<b>Module III: Traffic Survey</b> a) Determine desire lines using Origin Destination Studies. b) Identify the travel behavior of household\individual using household interviews and user perception survey.	L1, L2, L3	8

*\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation*

### Examination Scheme:

<b>EVE4302</b>	<b>INDUSTRIAL WASTEWATER TREATMENT AND DESIGN</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

### **Catalogue Description:**

Industrial Waste Engineering curriculum will provide the principles of industrial wastewater treatment, disposal and reuse in order to minimize pollution in a sustainable manner. The subject focuses on the principles and mechanisms of pollutant removal, the processes and design of conventional (primary, secondary and tertiary) and advanced (post-treatment) technologies applied in the treatment of industrial effluents.

### **Course Objectives:**

The objective of the course is to,

1. Provide the knowledge on the wastewater characteristics from industries.
2. Define the principles of pollution prevention and mechanism of industrial processes, and suggest the suitable technologies for the treatment of wastewater from various industries.

### **Course Outcomes:**

On completion of this course, the students will be able to

CO1: Describe various industrial wastewater treatment unit operations.

CO2: Explain the working principle and design of industrial wastewater treatment units.

CO3: Comprehend the importance of guidelines based on Indian Standard code of practice for the design of wastewater treatment units for different industries.

CO4: Apply the waste management process used in various industries.

CO5: Analyze unit operations and estimation of environmental impact assessment due to industrial pollutions in sustainable manner.

<b>Modules</b>	<b>Blooms</b>	<b>Number</b>
----------------	---------------	---------------

	level*	of hours
<b>Module I INTRODUCTION</b>  Industrial activity and Environment – Sources and types of industrial wastewater – Industrial wastewater and environmental impacts – Industrial waste survey – Industrial wastewater generation rates, characterization and variables – Population equivalent – Toxicity of industrial effluents and Bioassay tests.	L1, L2 and L3	9
<b>Module II INDUSTRIAL POLLUTION PREVENTION</b>  Prevention vs Control of Industrial Pollution – Benefits and Barriers – Source reduction techniques – Waste Audit – Evaluation of Pollution prevention options – Environmental statement as a tool for pollution prevention – Waste minimization.	L2 and L3	10
<b>Module III INDUSTRIAL WASTEWATER TREATMENT</b>  Equalization - Neutralization – Oil separation – Flotation – Precipitation – Aerobic and anaerobic biological treatment – Wet Air Oxidation – Evaporation – Ion Exchange – Membrane Technologies.	L2, L3 and L4	10
<b>Module IV WASTEWATER REUSE AND RESIDUAL MANAGEMENT</b> Individual and Common Effluent Treatment Plants – Joint treatment of industrial wastewater - Quality requirements for Wastewater reuse – Industrial reuse – Disposal on water and land – Residuals of industrial wastewater treatment – Quantification and characteristics of Sludge – management.	L2, L3 and L4	10
<b>Module V CASE STUDIES</b>  Industrial manufacturing process description, wastewater characteristics, source reduction options and waste treatment flow sheet for Textiles – Tanneries – Pulp and paper – metal finishing – Oil Refining–Pharmaceuticals–Sugar and Distilleries.	L2, L3 and L4	9

<b>EVE4303</b>	<b>WATER RESOURCE PLANNING AND MANAGEMENT</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

### Catalogue Description

This course covers the reservoir planning; dams designs; draught analysis; linear programming, etc. The overall aim of the course is to develop the skills of the students to know how to plan, develop and manage water resources

### Objective:

The objective of the course is to,

1. Comprehend how to develop suitable plans for water resource development and management.
2. Develop how to estimate sustainable yield of the water resources and how to determine the needed storage of water reservoirs.
3. Understand the principles of integrated water resources management.
4. Learn the optimization techniques in water resources planning and management

### Course Outcomes

On completion of this course, the students will be able to:

CO1. Able to start developing master and strategic water resources planning.

CO2. Understanding the basic principles of dam design

CO3. Determining the direct and indirect losses of water resources

CO4. Understand the Monte Carlo simulation.

### Course Contents

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Reservoir planning</b> Reservoir planning, Management, Multi reservoir systems, Real time operation, River basin planning, water logging, soil salinity, salinity control	L1, L2, L3	<b>12</b>
<b>Module II: Dams Design</b> Design of Dams, Non gravity dams, Weirs and Barrages, Conjunctive use of Irrigation water, Quality of Irrigation water, Contaminants and their effects on various crops Rainwater Harvesting and Management – Different Types and Methods of	L1, L2, L3	<b>12</b>

Harvesting in urban and agricultural areas.		
<b>Module III : Draught analysis</b> Draught analysis, NCA classification, Direct and Indirect losses, Drought severity assessment, Drought Monitoring, Drought Management	L1, L3, L4, L5	<b>12</b>
<b>Module IV: Programming</b> Introduction to systems approach, Linear programming, Problem formulation, Solution by simplex method, Application to design and operation of reservoir, Non Linear Programming, Sensitivity analysis, Monte Carlo simulation.	L1, L3, L4, L5	<b>12</b>

\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5:Synthesis, L6:Evaluation

<b>EVE4309</b>	<b>BIOLOGICAL PROCESS OF WASTE WATER TREATMENT</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

### Catalog Description:

This course introduces the students to the principles of biochemical processes in wastewater treatment and pollution control, with particular emphasis on municipal wastewater treatment. At the end of the course, students should have a thorough understanding of wastewater treatment processes as well as biosolids handling, treatment and disposal. They would be able to design various facilities for biological treatment of wastewater.

### Course Objectives:

The objective of the course is to,

1. Provide the knowledge on the advances wastewater treatment.
2. Define the principles and design criteria of wastewater pollution and mechanism of industrial processes, and suggest the suitable technologies for the treatment of wastewater from various industries.

### Course Outcomes:

On completion of this course, the students will be able to

CO1: Describe various wastewater treatment unit operations.

CO2: Explain the working principle and design of wastewater treatment units.

CO3: Comprehend the importance of guidelines based on Indian Standard code of practice for the design of wastewater treatment units for different industries.

CO4: Apply the waste management process used in various industries.

### Course Contents

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I INTRODUCTION</b> Objectives of biological treatment – Role of microorganisms in waste water treatment – Types of biological processes for waste	L1, L2 and L3	12

water treatment – Different microbial metabolisms – Bacterial growth patterns – Microbiological treatment kinetics and flow regimes – Michaelis-Menten and Monod models – Rate of biomass growth with soluble substrates – Kinetic coefficients – Effect of temperature – Oxygen requirements – Biomass yield – Observed yield – Kinetic constants evaluation of biological treatment.		
<b>Module II WASTEWATER PROCESS DESIGN</b> Aerobic biological treatment – Attached growth and suspended growth treatment systems – Modeling suspended growth treatment process – Activated sludge process – Description – Various types – Methods of aeration – Microbiology – Process analysis – Process design considerations – Operational difficulties – Modifications. Sequencing Batch Reactor – Process description and operation. Trickling filter – Filter classifications – Microbiology – Process design considerations – Design of physical facilities – Recirculation – NRC Equation – Operational difficulties.	L2 and L3	12
<b>Module III DESIGN OF TREATMENT SYSTEM</b> Aerated lagoons – Types – Process design considerations. Stabilisation ponds – Classification – Design considerations. Sludge treatment and disposal – Characteristics of sludge – Sludge processing – Preliminary operations – Thickening – Stabilization – Aerobic digestion – Anaerobic digestion – Composting – Conditioning – Dewatering – Heat drying – Incineration – Wet air oxidation – Land application	L2, L3 and L4	12
<b>Module IV CASE STUDIES</b> Advanced biological treatment processes – Nitrogen removal – Nitrification and Denitrification – Stoichiometry – Process analysis – Operational and environmental variables. Economics of biological treatment – Constructional cost, capital cost, operational cost – Total cost.	L2, L3 and L4	12

### **Catalogue Description:**

This course introduces the students to the principles of transport processes in wastewater treatment and pollution control, with particular emphasis on municipal wastewater treatment. At the end of the course, students should have a thorough understanding of wastewater treatment processes as well as treatment and disposal. They would be able to design various facilities for biological treatment of wastewater.

### **Course Objectives:**

The objective of the course is to,

1. To educate the students in detailed design concepts related to water transmission mains, water distribution system, sewer networks and storm water drain and computer application on design.

### **Course Outcomes:**

On completion of this course, the students will be able to

CO1: Be able to select various pipe materials for water supply main, distribution network and sewer.

CO2: Be able to design water supply main, distribution network and sewer for various field conditions.

CO3: Troubleshooting in water and sewage transmission be able to use various computer software for the design of water and sewage network.

CO4: Comprehend the importance of guidelines based on Indian Standard code of practice for the design of wastewater treatment units for different industries.

CO5: Apply the waste management process used in various industries.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I GENERAL HYDRAULICS AND FLOW MEASUREMENT</b> Fluid properties; fluid flow – continuity principle, energy principle and momentum principle; frictional head loss in free and pressure flow, minor heads losses, Carrying Capacity–Flow measurement.	L1, L2 and L3	8
<b>Module II WATER TRANSMISSION AND DISTRIBUTION</b> Need for Transport of water and wastewater-Planning of Water System – Selection of pipe materials, Water transmission main design- gravity and pumping main; Selection of Pumps- characteristics- economics; Specials, Jointing, laying and maintenance, water hammer analysis; water distribution pipe networks Design, analysis and optimization – appurtenances – corrosion prevention – minimization of water losses – leak detection Storage reservoirs.	L2 and L3	12
<b>Module III WASTEWATER COLLECTION AND CONVEYANCE</b> Planning factors – Design of sanitary sewer; partial flow in sewers, economics of sewer design; Wastewater pumps and pumping stations- sewer appurtenances; material, construction, inspection and maintenance of sewers; Design of sewer outfalls-mixing conditions; conveyance of corrosive wastewaters.	L2, L3 and L4	10
<b>Module IV STORM WATER DRAINAGE</b> Necessity- - combined and separate system; Estimation of storm water run-off Formulation of rainfall intensity duration and frequency relationships- Rational methods.	L2, L3 and L4	8
<b>Module V CASE STUDIES AND SOFTWARE APPLICATIONS</b> Use of computer software in water transmission, water distribution and sewer design – EPANET 2.0, LOOP version 4.0, SEWER, BRANCH, Canal ++ and GIS based software's.	L2, L3 and L4	7

Co-requisites	Nil				

### **Catalogue Description**

This course has emphasized on the use of treated wastewater for beneficial purposes including irrigation, industrial uses, and drinking water augmentation could significantly increase the nation's total available water resources.

### **Course Objective:**

The objective of the course is to,

1. Impart knowledge about the potential reuse applications and sources of water for reuse.
2. Determining the feasibility and planning of water reuse systems as well as the management structure of reuse projects.

### **Course Outcomes:**

On completion of this course, the students will be able to:

CO1: Explain the concept and principles of water reclamation

CO2: Describe various factors affecting water reclamation

CO3: Determining the feasibility and planning of water reuse systems as well as the Management structure of reuse projects

CO4: Understand the various techniques for water reclamation

### **Course Contents**

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Water reclamation</b> Introduction: definitions of terms related to water reclamation and reuse; potential uses of reclaimed water; benefits of water reuse; reasons for the growing use of reclaimed water; examples of water reuse in different parts of the world.	L1, L2, L3	<b>12</b>
<b>Module II: Reuse Criteria</b> Water Reclamation and Reuse Criteria: factors affecting the development of water reclamation and reuse criteria; elements/components of water reclamation and reuse criteria /	L1, L2, L3	<b>12</b>

guidelines; water reclamation and reuse criteria in different countries and assessment.		
<b>Module III : Irrigation</b> Agricultural and Landscape Irrigation, Industrial Water Reuse, Groundwater Recharge with Reclaimed Water, Recreational/Environmental Enhancement, Water Reclamation Inside Buildings.	L1, L3, L4, L5	<b>12</b>
<b>Module IV: Treatment</b> Treatment Requirements for Water Reuse: constituents of municipal and industrial wastewater; health assessment of water reuse; treatment and reclamation technologies, Reuse and Disposal of Wastewater Sludges and Biosolids: characteristics and composition of wastewater sludge/biosolids; sludge/biosolids processing; reuse and disposal of sludge/biosolids; land application of biosolids; regulations and methods of application, Planning and Managing Water Reuse Projects: planning procedures; management and operation procedures.	L1, L3, L4, L5	<b>12</b>

<b>EVE4312</b>	<b>AIR AND WATER QUALITY MODELLING</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2020.1	Date of Approval: 3rd June, 2020	4	0	2	5
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

### Catalogue Description:

This course designed to improve the understanding of the different pollution control strategies and the skills of application of remediation techniques to combat pollution in three environmental compartments i.e. air, water and soil.

### Course Objectives:

The objective of the course is to,

1. Impart knowledge on the principles and design of control of particulate and gaseous air pollutant and its emerging trends.
2. Introduce the fundamentals of mathematical models for water and air quality prediction and the importance of model building.

### Course Outcomes:

On completion of this course, the students will be able to

CO1: Define general air pollution problems, meteorological definitions, air transport equations and pollution control matters and devices.

CO2: Explain the regulations pertinent to air pollutions (both indoor and outdoor environment).

CO3: Describe major problems in indoor air pollution control and regulations.

CO4: Analyze the results of pollution data as a report and its observations.

### Course contents

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I INTRODUCTION TO AIR POLLUTION</b>		
Structure and composition of Atmosphere – Sources and classification of air pollutants - Effects of air pollutants on human health, vegetation & animals, Materials & Structures – Effects of air Pollutants on the atmosphere, Soil & Water bodies – Long- term effects on the planet – Global Climate Change, Ozone Holes –	L1, L2 and L3	12

Ambient Air Quality and Emission Standards – Air Pollution Indices – Emission Inventories.		
<b>Module II AIR QUALITY MONITORING AND MODELLING</b>  Ambient and Stack Sampling and Analysis of Particulate and Gaseous Pollutants -Effects of meteorology on Air Pollution - Fundamentals, Atmospheric stability, Inversion, Wind profiles and stack plume patterns- Transport & Dispersion of Air Pollutants -Air Quality Modeling. Necessity, application and limitation of air quality modelling. Dispersion Modeling, Photochemical Modeling and Receptor Modeling. Different air quality Dispersion models and their limitations.	L2 and L3	12
<b>Module III CONTROL OF AIR POLLUTANTS</b>  Primary considerations in designing effective control strategy: Environmental, Engineering and Economic Factor - Factors to be considered while selecting control equipment's - Various mechanisms to control gaseous pollutants and particulate matter. Control Equipment design for particulate matter: Gravity chamber, Cyclone separator, Electrostatic precipitator, fabric filter, bag filter, Wet scrubber, Venturi-scrubber and absorption towers. Control Equipment design for gaseous pollutants: Absorption, Adsorption, Condensation and Incineration.	L2, L3 and L4	12
<b>Module IV SURFACE AND SUB-SURFACE WATER QUALITY MODELLING</b>  Water quality modeling of Streams, Lakes and impoundments and Estuaries – Water quality– model sensitivity – assessing model performance; Models for dissolved oxygen, pathogens and BOD- Streeter Phelps model for point and distributed sources - Modified Streeter Phelps equations -Toxicant modeling in flowing water - Groundwater flow and mass transport of solutes, Degradation of organic compounds, application of concepts to predict groundwater contaminant movement, seawater intrusion – basic concepts and modeling.	L2 and L3	12

<b>EVE4313</b>	<b>AIR POLLUTION LABORATORY</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2020.1	Date of Approval: 3rd June, 2020	1	0	2	1
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

### **Catalogue Description:**

Application of basic air pollution problems, meteorological definitions, air transport equations and pollution control matters and devices. Laboratory methods and interpretation of results with regard to air quality engineering applications such as design and operation of air pollution treatment processes, and to the control of the quality of air both in indoor and outdoor environments.

### **Course Objectives:**

1.This course will help students know which tests are appropriate for given air pollution problems, statistically interpret laboratorial results and write technical reports, and apply the laboratorial results to problem identification, quantification, and basic air pollution design and technical solutions to real-world.

### **Course Outcomes:**

On completion of this course, the students will be able to

CO1: Describe general air pollution problems, meteorological definitions, air transport equations and pollution control matters and devices

CO2: Design and conduct experiments, interpret and analyze data, and report results.

CO3: Able to familiar with regulations pertinent to air pollutions

CO4: Explain the ability to function on engineering and science laboratory teams, as well as on multidisciplinary design teams.

CO5: Explain to identify, formulate and solve air pollution problems.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
1. Introduction to Air Pollution laboratory	L1	1
2. High Volume Sampler	L1, L3 and L4	2
3. Determination of respirable suspended particulate matter and weather monitoring	L1, L3 and L4	1
4. Indoor Air Quality monitoring	L1, L3 and L4	1
5. Sound level monitoring	L1, L3 and L4	1
6. Stack sampling	L1, L3 and L4	1
7. Flue gas analyzer	L1, L3 and L4	1
8. Determination of TVOC in indoor environments	L1, L3 and L4	1
9. Determination of thermal comfort parameters in indoor environments	L1, L3 and L4	1
10. Determination of bioaerosols	L1, L3 and L4	1
11. Demonstration of personal exposure	L1, L3 and L4	1

### **Catalogue Description:**

This course introduces the students to the principles of biochemical processes in wastewater treatment and pollution control, with particular emphasis on municipal wastewater treatment. At the end of the course, students should have a thorough understanding of wastewater treatment processes as well as biosolids handling, treatment and disposal. They would be able to design various facilities for biological treatment of wastewater.

### **Course Objectives:**

The objective of the course is to,

1. Provide the knowledge on the wastewater characteristics.
2. Define the principles and design criteria of wastewater pollution and mechanism of industrial processes, and suggest the suitable technologies for the treatment of wastewater from various industries.

### **Course Outcomes:**

On completion of this course, the students will be able to

CO1: Describe various wastewater treatment unit operations.

CO2: Explain the working principle and design of wastewater treatment units.

CO3: Comprehend the importance of guidelines based on Indian Standard code of practice for the design of wastewater treatment units for different industries.

CO4: Apply the waste management process used in various industries.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I INTRODUCTION</b> Anaerobic treatment- Fundamental concepts, Applications	L1, L2 and L3	10
<b>Module II WASTEWATER PROCESS DESIGN</b> Process Monitoring and Control, Anaerobic treatment of wastewaters in suspended growth and fixed film processes, Process design.	L2 and L3	12
<b>Module III DESIGN OF TREATMENT SYSTEM</b> UASB Process design for various types of wastewaters	L2, L3 and L4	14
<b>Module IV CASE STUDIES</b> Anaerobic sludge digestion, Selected case studies	L2, L3 and L4	12

### **Catalogue Description:**

Application of basic chemistry and chemical evaluations to measure physical, chemical, and bacteriological parameters of wastewater. Laboratory methods and interpretation of results with regard to environmental engineering applications such as design and operation of wastewater treatment processes, and to the control of the quality of natural water.

### **Course Objectives:**

1. Understand the common environmental problems and its determination principles relating to water and wastewater quality are performed.
2. This course will help students know which tests are appropriate for given environmental problems, statistically interpret laboratorial results and write technical reports, and apply the laboratorial results to problem identification, quantification, and basic environmental design and technical solutions to real-world.

### **Course Outcomes:**

On completion of this course, the students will be able to

CO1: Describe the knowledge in mathematics, science and engineering.

CO2: Design and conduct experiments, interpret and analyze data, and report results.

CO3: Analyze the ability to design of Civil Engineering systems or a process that meets desired specifications and requirements related to all fields of Civil Engineering.

CO4: Explain the ability to function on engineering and science laboratory teams, as well as on multidisciplinary design teams.

CO5: Explain to identify, formulate and solve environmental engineering problems.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>

# Syllabus - First Semester

## RENEWABLE ENERGY CONVERSION SYSTEMS

**Course Code: RWE4101**

**Credit Units: 03**

### **Course Objective:**

Course provides an introduction to different renewable energy sources. It analyses the full range of renewable energy supplies needed for modern economies. The course includes power from sun, wind, bio, tidal, ocean, geo and hydro.

### **Course Contents:**

#### **Module I: Introduction to Renewable Energy**

Renewable and Non-Renewable Energy, World energy scenario; Fossil fuel resources - estimates and duration; India's energy scenario; Synergy between energy and environment, global environment issues, greenhouse gas emission, global warming, green energy solutions, technical and social implications of renewable energy

#### **Module II: Solar Concepts**

Introduction, Sun as the source of radiation, Earth and Solar constant, Extra-terrestrial solar radiation, components of radiation, effects of earth's atmosphere, Introduction to solar PV, Introduction to solar Thermal.

#### **Module III: Biofuels, Wind Energy**

Biofuels- Definition, generations and types

Wind-Characteristics, Sources of wind, components of wind turbines, advantages and environmental aspects of wind energy

#### **Module IV: Hydro Energy, Tidal Energy**

Hydro- Principles, hydro-turbines, social and environmental aspects

Tidal- The nature of the resource, physics, power generation, technical factors, environmental factors, tidal energy potential, tidal barrage, tidal stream, tidal current turbines.

#### **Module V: Geothermal, OTEC**

Geothermal- Principles, suitable sites and criteria, Advantages and disadvantages,

OTEC- Principles, Open and closed systems.

### **Examination Scheme:**

Components	CT	Assignment	V/Q	Attendance	EE
Weightage (%)	15	5	5	5	70

# INTRODUCTION TO SOLAR PHOTOVOLTAICS

**Course Code: RWE4102**

**Credit Units: 04**

## **Course Objective:**

This course covers the basic principles, aspects and concepts of solar photovoltaic systems.

## **Course Contents:**

### **Module I: Fundamentals of Semiconductors**

Semiconductors as solar cell materials, arrangement of atoms in space, formation of energy bands, charge carries in semiconductors, carrier motion in semiconductors, PN junction as solar cell, PN junction- equilibrium condition, PN junction- non equilibrium condition, PN junction- under illumination: Solar cell.

### **Module II: Solar cell design**

Short circuit current, open circuit voltage, fill factor, losses in solar cell, design of high short circuit current, design of high open circuit voltage, high fill factor, solar simulator, quantum efficiency measurement.

Production of Si, production of Si wafers, Si sheets, Si feedstock for solar cell industry, Solar Grade Silicon

### **Module III: Si wafer based solar cell technology**

Development of commercial Si solar cells, process flow of commercial Si cell technology, processes used in solar cell technologies, high efficiency Si solar cells

### **Module IV: Advances in c-Si Cell processes suitable for near future commercialization**

Areas of improvement, potential efficiency gain, advances in alternative emitters, advances in alternative ARC, advances in alternative bulk material, advances in alternative front and rear passivation.

## **Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>Assignment</b>	<b>V/Q</b>	<b>Attendance</b>	<b>EE</b>
<b>Weightage (%)</b>	15	5	5	5	70

# INTRODUCTION TO SOLAR THERMAL TECHNOLOGY

**Course Code: RWE4103**

**Credit Units: 04**

## **Course Objective:**

The course covers areas related to the fundamentals of solar energy, solar water heaters, concentrating collectors and its applications for domestic and industrial usage..

## **Course Contents:**

### **Module 1: Introduction**

Solar spectrum, Sun-Earth angles, Solar time, measurement of solar radiations (pyrheliometers, pyranometers), solar radiation on horizontal surface (estimation of average solar radiation, estimation of clear sky radiation).

### **Module 2: Flat plate collector**

Liquid flat plate collectors, Materials (glazing material, collector plates), classification (evacuated tubular collectors, Types of FPCs), Performance Analysis, efficiency of collectors and Testing of FPC, Effects of various parameters on performance, Analysis of Unconventional FPCs, air heating collectors.

### **Module 3: Solar Concentrator**

Characteristic parameters, classification of concentrators, tracking concentrator and non-tracking concentrators, cylindrical parabolic collector, compound parabolic collector, paraboloid dish collector, central receiver collector

### **Module 4: Solar Water Heating**

Introduction, Swimming pool heating, types (built-in-storage type, separate storage type), Performance predictions.

## **Examination Scheme:**

Components	CT	Assignment	V/Q	Attendance	EE
Weightage (%)	15	5	5	5	70

## **Text & References:**

# BIOMASS

**Course Code: RWE4104**

**Credit Units: 04**

**Course Objective:** To provide a thorough understanding of various renewable feedstocks, their availability and attributes for biofuels production.

## **Course Content:**

### **Module 1: Introduction**

Introduction, Properties of biomass, sources of biomass, broad classification of biomass, agro and forestry residues; Techniques of biomass assessment, biomass estimation, Biodegradation and biodegradability of substrate

### **Module 2: Biochemistry of biomass**

Introduction of bio-molecules: carbohydrates, proteins, Amino acids, lipids and Nucleic acid. Enzymes: Definition with examples of holoenzyme, apoenzyme, coenzymes, cofactors, activators, inhibitors, active site, units of enzyme activity, specific enzymes, Enzyme Kinetics, Factors affecting enzyme activity: enzyme concentration, substrate concentration, pH and temperature.

### **Module 3: Biofuel**

Definition and types of Biofuel: Biogas, Biodiesel, Algal biofuel, Ethanol, Methanol etc.; Photosynthesis, fermentation, anaerobic digestion  
Biodiesel production from oil seeds (edible and non-edible), waste oils and algae, Quality standards for biodiesel, Environmental impacts of biofuel production

### **Module 4: Bioreactors**

Introduction, Microbial growth curve, Types of bioreactors: Batch, plug flow reactor (PFR), continuous stirred tank reactors (CSTR), fluidized bed reactor bubble column, fixed film reactors, air lift fermentor, Photobioreactor etc.

### **Module 5: Government Policies**

Biofuel policy, Supporting programs and policies on biogas, bio-hydrogen, biodiesel and bioethanol, biogas purification technology and waste to energy program.

## **Examination Scheme:**

Components	CT	HA	S/V/Q	Attendance	EE
Weightage%	10	8	7	5	70

CT – Class Test, S/V/Q – Seminar/Viva/Quiz, HA – Home Assignment, EE – End Semester Examination

## **FIELD WORK-I/ MINOR PROJECT-I/SEMINAR-I**

**Course Code: RWE4106**

**Credit Units: 01**

### **Course Objective:**

To give an in-depth understanding of the research problem and to generate experimental expertise. The students will conduct field work in order to implement the concepts taught in class rooms.

### **Course Contents:**

#### **To carry out field work/ project on specific problem**

The students will work on a project under the guidance of a faculty of AUH. The work after completion will be submitted to Head of Department, Renewable Energy Department for assessment which is a part of their M.Sc (Renewable Energy) degree programme of Amity University Haryana.

### **Examination Scheme:**

<b>Project/ Field work</b>	<b>: 60%</b>
<b>Presentation/Seminar</b>	<b>: 20%</b>
<b>Viva</b>	<b>: 20%</b>
<b>Total</b>	<b>: 100%</b>

# SOLAR RADIATION MEASUREMENT AND ANALYSIS LAB

Course Code: RWE4107

Credit Units: 02

<b>RWE 4107</b>	<b>SOLAR RADIATION MEASUREMENT AND ANALYSIS LAB</b>  <b>(Modified)</b>	L	T	P	C
Version 1.1	Date of Approval: 14 July 2016	0	0	4	2
Pre-requisites/ Exposure	Solar PV lab				
Co-requisites	Solar thermal lab				

## Catalog Description

In today's competitive environment an understanding is required which will facilitate the implementation of basic principles, tools and techniques used in the field of solar photovoltaic engineering. This course is designed for the students who want to understand the basics of solar PV and thermal energy conversion engineering. A student is supposed to have a basic knowledge of mathematical modeling and tools. The subject will further enhance the knowledge regarding the various methods and techniques used for solving various problems related to practical designing of solar power systems.

## Course Objectives

The objective of this course is to

- To understand the various aspects of various instruments viz. Lux meter, AC/DC clamp meter, multimeter, Anemometer, potentiometer etc. by carrying out the experiment on latest technological equipments in the area of interest of the students.
- To describe the basics of operation of solar radiation measurement, wind speed and solar energy absorption and collecting devices.
- To understand and describe the applications of various experimental studies in practical life to analyze the various parameters in the field of solar photovoltaic energy conversion.

## Course Outcomes

On completion of this course, the students will be able to

- CO1. To describe the basics of operation of solar radiation measurement, wind speed and solar energy absorption and collecting devices.
- CO2. To examine different areas viz. variation of various pollutants and contaminants present in the atmosphere and the effect of solar radiations falling on various solar photovoltaic energy conversion systems.

- CO3. To understand the component of solar radiation responsible for the working of solar PV technology and investigate the efficiency/performance parameters of all equipments.

### Course Content

Modules	Blooms level*	Number of hours
<b>Module 1: Solar radiation measurement</b> 1.To measure solar radiation on horizontal surface and estimation 2.To measure solar radiation on tilted surface and estimation 3.To measure earth's albedo. 4.To investigate how different surfaces of the Earth reflect and absorb heat.	L1, L2	7
<b>Module 2: Sun Earth Angles</b> 5.Find the declination angle for all the days of the year. Find the variation of declination angle over the year. 6.Find solar altitude angle and zenith angle for a location at a given time. 7.Find sunset hour angle and number of daylight hours for a given location. Study the variation of length of daylight on summer and winter solstices and equinoxes for different latitudes.	L1, L2	8
<b>Module 3: Extraterrestrial Radiation Estimation</b> 8.Find the extraterrestrial radiation on a plane normal to the direction of radiation on nth day of the year. 9. Find the yearly variation of extraterrestrial radiation.	L2, L3	7

\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation

## Syllabus - Second Semester

### SOLAR THERMAL SYSTEMS

**Course Code: RWE4201**

**Credit Units: 04**

**Course Objective:** To learn about the solar thermal systems for water purification, drying, heating processes. The students will learn about hybrid solar systems for industrial process heating, power generation and hybrid cars.

**Course Contents:**

**Module I: Solar Cookers**

Introduction, Types of solar cookers, Performance of box type solar cooker, Testing of a solar cooker.

**Module II: Solar Desalination**

Introduction, Simple solar still, basics of solar stills, Material problems, Performance prediction of basin type still, Experiments on solar stills: wick type, Regenerative type; Solar disinfection.

**Module III: Solar drying of food**

Introduction, Basics of solar drying, Types of solar dryers: Natural convection, Mixed mode, Fixed circulation type; Simulation models of drying: thin layer drying. Deep bed drying, continuous flow dryers.

**Module IV: Solar Furnaces**

Introduction, Types of solar furnaces, Components: Concentrator, Heliostat, Sun tracking; Typical designs: Single concentrator, Single Heliostat, Multiple heliostats; Measuring instruments in solar furnace.

**Module V: Hybrid Solar systems**

Case studies of Power systems: Solar PV, Solar Thermal, Wind, Biomass; Industrial process heating-cooking and space heating; Hybrid car.

**Examination Scheme:**

Components	CT	Assignment	V	Attendance	EE
Weightage (%)	15	05	05	05	70

**Text & References:**

# FABRICATION OF SOLAR CELLS: MATERIAL AND DESIGNING ASPECTS

**Course Code: RWE4202**

**Credit Units: 04**

## **Course Objective:**

This course covers the basic operating principles, fabrication, and design of solar cells. Provides an in-depth knowledge on efficiency and lifetime measurements of the solar cells.

## **Course Contents:**

### **Module I: Thin film solar cell technologies**

Generic advantages of thin film technologies, material in thin film technologies, thin film deposition techniques, Amorphous Si solar cell technology, CdTe solar cell technology, CIGS solar cell technology, thin film epitaxial Si solar cell technology.

### **Module II: Concentrating PV Cells and systems**

Light concentration, concentration ratio, series resistance optimization, optics for concentrator PV, tracking requirement of CPV, cooling requirements, high concentration solar cells

### **Module III: Emerging Solar Cells technologies and concepts**

Organic solar cells, Dye-sensitized solar cells, GaAs solar cells, Thermo-photovoltaic, approaches to overcome single junction efficiency limits, Solar photovoltaic modules, spectrum modification approaches, hot carrier solar cells.

### **Module IV: Solar PV Modules**

Solar PV modules from solar cells, mismatch in series connection, mismatch in parallel connections, design and structure of PV modules, PV module power output and factors affecting its performance.

### **Module V: Balance of Solar PV systems**

Battery for energy storage in solar PV system, factors affecting battery performance, DC-DC converters, charge controllers, Dc-AC converters, Maximum Power Point Tracking, stand alone SPV system, design methodology of PV systems, wire sizing , hybrid PV, grid connected PV, life cycle costing.

## **Examination Scheme:**

# INSTRUMENTAL ANALYSIS

**Course Code: RWE4203**

**Credit Units: 04**

## **Course Objective:**

Understanding of various sophisticated analytical techniques and their applications to characterize various measuring instruments.

## **Course Contents:**

### **Module I**

Basic Measurement Concepts, Error analysis, Transducer classification, Static and dynamic characteristics of transducers, Real time Monitoring and data processing.

### **Module II**

Energy audit instruments, measuring temperature, humidity, radiation, flow, pressure, thermal conductivity, Specific Heat, measurement of electrical quantities i.e. current, voltage; Power, power factor

### **Module III: Vacuum and thin film coating techniques**

Vacuum ranges (low, high and ultrahigh vacuum) and their application, vacuum pumps (rotary, diffusion, ion, turbomolecular pumps)

### **Module IV: Spectroscopic Characterization Technique**

UV-VIS-IR Spectrophotometer, Principle of operation and application for band gap measurements. Photoelectron spectroscopy, Raman spectroscopy

### **Module V: Structural Analysis Techniques**

Scanning and Transmission electron microscopy, AFM, XRD (Single Crystal), XRF, - detailed principle, operation and applications.

## **Examination Scheme:**

Components	CT	Assignment	V/Q	Attendance	EE
Weightage (%)	15	5	5	5	70

# ENERGY STORAGE

**Course Code: RWE4204**

**Credit Units: 03**

## **Course Objective:**

This course covers the various energy storage systems available and different aspects of energy storage

## **Course Content:**

### **Module 1: Energy Storage**

Need of energy storage; Different modes of Energy Storage. Potential energy: Pumped hydro storage; KE and Compressed gas system: Flywheel storage, compressed air energy storage; Electrical and magnetic energy storage: Capacitors, electromagnets

### **Module 2: Electrochemical Energy Storage Systems**

Batteries: Primary, Secondary, Lithium, Solid-state and molten solvent batteries; Lead acid batteries; Nickel Cadmium Batteries; Advanced Batteries

### **Module 3: Magnetic and Electric Energy Storage Systems**

Superconducting Magnet Energy Storage (SMES) systems; Capacitor and Batteries: Comparison and application; Super capacitor: Electrochemical Double Layer Capacitor (EDLC), principle of working, structure

### **Module 4: Sensible Heat Storage**

SHS mediums; Stratified storage systems; Rock-bed storage systems; Thermal storage in buildings; Earth storage; Energy storage in aquifers.

### **Module 5: Hydrogen Energy storage and Fuel cells**

Modes of hydrogen storage, safety aspects of hydrogen energy storage, fuel cells and types of fuel cells, Basic Fuel cell design and its characterization, Nano materials engineering for electrode preparation in biobatteries

## **Examination Scheme:**

Components	CT(2)	Assignment	V(1)	Attendance	EE
Weightage (%)	15	5	5	5	70

# SOLAR PHOTOVOLTAIC AND THERMAL LAB

Course Code: RWE4206

Credit Units: 02

RWE 4206	SOLAR PHOTOVOLTAIC AND THERMAL LAB	L	T	P	C
Version 1.1	Date of Approval: 14 July 2013	0	0	4	2
Pre-requisites/ Exposure	Solar PV lab				
Co-requisites	Solar thermal lab				

## Catalog Description

In today's competitive environment an understanding is required which will facilitate the implementation of basic principles, tools and techniques used in the field of solar photovoltaic engineering. This course is designed for the students who want to understand the basics of solar PV and thermal energy conversion engineering. A student is supposed to have a basic knowledge of mathematical modeling and tools. The subject will further enhance the knowledge regarding the various methods and techniques used for solving various problems related to practical designing of solar power systems.

## Course Objectives

The objective of this course is to

- To understand the various aspects of various instruments viz. Lux meter, AC/DC clamp meter, multimeter, Anemometer, potentiometer etc. by carrying out the experiment on latest technological equipments in the area of interest of the students.
- To describe the basics of operation of solar radiation measurement, wind speed and solar energy absorption and collecting devices.
- To understand and describe the applications of various experimental studies in practical life to analyze the various parameters in the field of solar photovoltaic energy conversion.

## Course Outcomes

On completion of this course, the students will be able to

CO1. To describe the basics of operation of solar radiation measurement, wind speed and solar energy absorption and collecting devices.

CO2. To examine different areas viz. variation of various pollutants and contaminants present in the atmosphere and the effect of solar radiations falling on various solar photovoltaic energy conversion systems.

CO3. To understand the component of solar radiation responsible for the working of solar PV technology and investigate the efficiency/performance parameters of all equipments.

## Course Content

1.

Modules	Blooms level*	Number of hours
<b>Module 1 : Inverters</b> <ol style="list-style-type: none"> <li>1. Observe the output voltage waveform of inverter in auto mode.</li> <li>2. Observe the output voltage with manual control.</li> <li>3. 180 degree control</li> <li>4. 120 degree control.</li> <li>5. Observe the RMS value and waveform of output voltage with both 180 and 120 degree control.</li> </ol>	L1, L2	7
<b>Module 2 : Solar Thermal Systems</b> <ol style="list-style-type: none"> <li>6. To study the performance analysis of an Evacuated Tube Collector</li> <li>7. To find the overall loss coefficient of a liquid storage tank</li> <li>8. To determine the Performance (UL, FR, <math>\eta</math>) of the Parabolic Trough collector with varying Solar Radiation with water as heat removal medium (Forced mode )</li> </ol>	L2, L3	8
<b>Module 3: Solar thermal Systems</b> <ol style="list-style-type: none"> <li>9. To determine the Performance (UL, FR, <math>\eta</math>) of the Parabolic Trough collector with water as heat removal medium (Forced mode ) with</li> <li>10. fixed input parameters</li> <li>11. different flow rates</li> <li>12. To determine the Performance (UL, FR, <math>\eta</math>) of the Parabolic Trough collector for different flow rates and Solar Radiation.</li> <li>13. To determine the Performance (UL, FR, <math>\eta</math>) of the Parabolic Trough collector with different inlet water temperature (Forced mode )</li> </ol>	L3, L4	7
<ol style="list-style-type: none"> <li>14. To demonstrate the I-V characteristics of PV module with varying radiation and temperature level.</li> <li>15. To demonstrate the I-V characteristics of series and parallel combination of PV module.</li> <li>16. To demonstrate the effect of varying tilt angles or solar angle of incidences on solar PV module output in PVSYS software.</li> </ol>	L3, L4	4
17. Estimate hourly beam, diffuse and global radiation on a horizontal surface.	L1, L4, L6	1
18. Estimate solar radiation on a tilted surface	L1, L4, L6	1
19. Determine thermal efficiency, $F_R U_L$ and $F_R \tau \alpha$ for a given flat plate collector.	L1, L4, L6	2

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation*

## FINANCIAL EVALUATION OF RENEWABLE ENERGY SYSTEMS

**Course Code: RWE4205**

**Credit Units: 04**

#### Course Objective:

This course covers the basic principles of financial evaluation of renewable energy technologies

#### Course Contents:

**Module I:** Introduction, Economic efficiency, time value of money, interest, inflation,

**Module II:** Basic formulae of financial Mathematics- cash flow diagrams, interest formula relating present & future worth of single amount, uniform series compound amount factor, uniform series sinking fund factor, uniform series present worth factor, uniform series capital recovery factor, interest formulae with continuous compounding.

Interest formulae for uniform or arithmetic gradient of cash flows

**Module III:** Indicators of Financial Performance- Simple & discounted payback periods, net present value (NPV), equivalent uniform annual worth, benefit cost ratio method, interest rate of return (IRR), computation of IRR, multiple values of IRR.

**Module IV:** Incremental Analysis of Investment Projects- incremental analysis, incremental analysis in Net Present Value Method, incremental analysis in Equivalent Uniform Annual Worth method, incremental analysis in Benefit Cost Ratio method, incremental analysis in Internal Rate of return method

**Module V:** Depreciation & Depreciation Accounting- Definitions, Depreciation methods, straight line Depreciation, declining balance method, sum of the year digits method of Depreciation

**Module VI:** Case studies of financial evaluation of renewable energy technologies- solar distillation, domestic solar water heating, solar PV lanterns

**Examination Scheme:**

Components	CT(2)	Assignment	V(1)	Attendance	EE(1)
Weightage (%)	15	5	5	5	70

# ENERGY ACCESS AND PLANNING

**Course Code: RWE4207**

**Credit Units: 04**

## **Course Objective:**

Energy access planning is aimed at developing a socially inclusive energy supply system that gives both the poor and the rich sustainable access to at least the minimum amount of energy for their basic needs. This type of planning is also done to identify environmentally sound and climate-friendly technologies and resource options for providing energy access, and the associated investment opportunities.

## **Course Contents:**

### **Module I: Sustainable Energy Access Planning Framework**

Background, Objectives of this Study, Elements of Sustainable Energy Access Planning, Key Steps in Sustainable Energy Access Planning and Linkages between Assessments

### **Module II: Energy Poverty Assessment**

Introduction, Energy Poverty Defined, Approaches to Energy Poverty Assessment , Energy Poverty Assessment Approaches for Use in Sustainable Energy Access Planning , Data Requirements

### **Module III: Demand & Resource Assessment**

Introduction, Approaches to Assessing Energy Demand, Demand Assessment Methodology for Sustainable Energy Access Planning, Dimensions of Resource Assessment , Approaches to Resource Assessment, Data Requirements

### **Module IV: Cost & Benefit Assessment**

Introduction, Review of Cost Assessment Models, Proposed Sustainable Energy Access Planning Methodology, Incremental Cost of Energy Access, Applications of the Incremental Energy Access Cost, with Case Studies, Potential Benefits of an Energy Access Program, Approaches to Benefit Assessment, Data Requirements

### **Module V: Sustainability & Affordability Assessment**

Introduction, Approaches to Sustainability Assessment, Methodologies for Sustainability Assessment, Different Forms of the Affordability Problem, Approaches to Affordability Assessment, Assessment of Support Programs to Make Energy Services Affordable, Data Requirements

## **Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>Assignment</b>	<b>V/Q</b>	<b>Attendance</b>	<b>EE</b>
<b>Weightage (%)</b>	15	5	5	5	70

# WIND ENERGY

**Course Code: RWE4208**

**Credit Units: 04**

**Course Objective:** Introduction to wind energy engineering and its application

**Course Contents:**

## **Module 1: Wind basics**

Causes of wind, wind characteristics: speed, direction, flow; nature of atmospheric winds, wind classification, sitting in flat terrain and non-flat terrain; ecological indicators of site suitability, site resource assessment: anemometer, met towers, wind map, wind rose.

## **Module 2: Wind energy system**

Bernoulli's equation and significance; energy and power in wind, different types of rotors: horizontal and vertical; wind turbine components, electric power generation, Fixed and variable speed; and storage.

## **Module 3: Applied aerodynamics**

Aerofoil structure, aerodynamics of aerofoil: lift, drag and stall; lift based wind turbines, drag machines, pitch concept, yaw concept, Betz law, axial momentum theory, tip speed ratio, forces and moments due to vertical wind gradient.

## **Module 4: Towers and systems installation**

Specific types of towers, tower height, tower and system raising, wiring, lightening protection, installation, operation and maintenance.

## **Module 5: Wind energy conversion systems**

Types, specification and characteristics of commercial water-pumping wind mills; wind energy conversion systems, controls and sensors, wind hybrid power systems, selection of system case study, Environment aspects.

## **Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>Assignment</b>	<b>V</b>	<b>Attendance</b>	<b>EE(1)</b>
<b>Weightage (%)</b>	15	05	05	05	70

# RISK MANAGEMENT IN RENEWABLE ENERGY PROJECTS

**Course Code: RWE4209**

**Credit Units: 04**

**Course Objective:** This module will help participants to understand the risks involved in the project and the loan application evaluation process to be followed.

## **Course Contents:**

### **Module I: Conventional energy projects and related uncertainties**

Introduction, the study, challenges in RE projects, risk associated with conventional energy projects, risk management approach in energy policies

### **Module II: Uncertainties in RES projects**

RES project characteristics, Risk associated with specific RES technologies. Risk: Definition and types, Risk analysis, Risk Identification, Risk impact assessment, Risk prioritization, Risk tracking, Risk mitigation planning, implementation and progress monitoring, tools for risk mitigation, Case study for managing risks in industries.

### **Module III: Recommended Risk Management methodology**

Project definition & requirement, risk identification, risk evaluation, risk control, risk follow up, risk feedback, risk management implementation in RES investment lifecycle

### **Module IV: Support measures**

Measures to address political risk, Measures to address economic risks, Measures to address technical risks, Measures to address social risks, generic interventions, Conclusions & recommendation

## **Examination Scheme:**

<b>Components</b>	<b>CT(2)</b>	<b>Assignment</b>	<b>V(1)</b>	<b>Attendance</b>	<b>EE(1)</b>
<b>Weightage (%)</b>	15	5	5	5	70

## Syllabus - Third Semester

### MODELLING AND SIMULATION OF SOLAR THERMAL SYSTEMS

Course Code: RWE4301

Credit Units: 04

**Course Objective:** This course covers the design and engineering of solar thermal systems.

**Course Contents:**

**Module I: Thermodynamics**

The Second Law of thermodynamics, thermal energy reservoirs, heat engines, refrigerators and heat pumps, reversible and irreversible processes, The Carnot cycle, The Carnot principles, The Carnot heat engine, The Carnot refrigerator and heat pump

**Module II: Solar Refrigeration and Air Conditioning**

Solar cooling systems, Application of solar energy in Refrigeration and air conditioning, Solar air heaters, description, design, application

**Module III: Solar Thermo-Mechanical Power**

Solar Thermo- Mechanical Power: Principles of solar engines, solar heat engines, steam engines, turbines, Stirling engines, Brayton Engines, Solar thermal power generation, central receiver power plant, parabolic trough power plants.

**Module IV: Modelling & simulation**

Modelling & simulation of solar thermal systems, f chart method, f chart for liquid systems, f chart for air systems, design of active systems by utilizability methods, hourly utilizability, daily utilizability, the  $\phi$ , f chart method

**Examination Scheme:**

Components	CT(2)	A	V(1)	Attendance	EE(1)
Weightage (%)	15	5	5	5	70

**Text & References:**

- Solar Engineering of Thermal processes – Duffie & Beckman

# DESIGNING OF SOLAR ROOFTOP GRID /OFF GRID PV SYSTEM

**Course Code: RWE4302**

**Credit Units: 04**

## **Course Objective:**

This course covers the complete designing aspects of solar photovoltaic power plants and their actual installations.

## **Course Contents:**

### **Module I: Site Survey for Solar PV Installation**

Factors for identifying shadow free areas for installation, seasonal shadow influence by buildings - ideal locations for array, battery and inverter -cable routing options -Suitability of roof condition; Suitability of soil -risks for human safety -system inter connectivity with existing building wiring - distance from nearest load dispatch center/LT panel, SLD for different types of systems, system behavior in different load.

### **Module II: Designing of SPV Power Plants**

The Components of a Rooftop Solar Photovoltaic System, On- or Off-Grid Option, Site Characterization and Assessment, Solar Resource Assessment, Shading Analysis, Array Configuration, Solar Photovoltaic Module Selection, Mounting System Design, Inverter Selection, Wiring Design, Battery sizing, System Performance Assessment, Due Diligence. Use of PVSOL/PVsyst software for energy yield assessment and 3D modeling; Flowchart and sequence diagram for installation activities along with site preparation, material handling

### **Module III: Net Metering & Maintenance**

Concept of net metering; comparison of smart meter with the existing meter and its specifications, connection diagram; Regulations and standards for interconnection; Types of Earthing, its installation; significance and types of earth faults according to standards; Testing and commissioning activities and its interpretation -visual inspection; continuity of wiring, Earthing, polarity check, insulation

### **Module IV: Implementation**

Equipment Acquisition, Obtaining Permits, Ensuring Safety, System Installation, Testing and Commissioning, Dos and don'ts- securing the installation area, mechanical and civil installation, list of specific tools required, sequence of activities to be done; dos and don'ts of DC wiring and installation of other. Occupational Health and Safety standards for solar installations;

## **Examination Scheme:**

Components	CT	Assignment	V/Q	Attendance	EE(1)
Weightage (%)	15	5	5	5	70

# SOLAR AND WIND ENERGY METEOROLOGY

Course Code: RWE4304

Credit Units: 03

**Course Objective:** Course provides introduction to different renewable energy sources. Analyze the full spectrum of range of renewable energy supplies needed for modern economies. Course will include power from sunshine, wind, and biomass

## Course Contents:

### Module I: An Overview

Importance of meteorology, various branches of meteorology and their applications

Earth Sun relationship, Ecliptic and equatorial plane, Rotation and revolution of the earth Equinoxes, Solstices, Perihelion and Aphelion, Causes of seasons, Seasonal and latitudinal variation of insolation. Weather, climate, Elements of weather, climate controls, weather phenomena, Semi-diurnal variation of pressure, Diurnal variation of temperature, Pressure and wind belts, Distribution of pressure and temperature over the surface of the earth.

**Module II: Surface Energy Balance** (longwave/thermal): Stefan's law, emissivity. Greenhouse effect. Surface energy balance: net radiation, ground heat flux, sensible and latent heat flux. Sensors and instrumentation. Other applications: Building heating, ventilation, and air conditioning (HVAC). Evapotranspiration and irrigation,

**Module III: Atmospheric boundary layer:** Mean Boundary Layer characteristics (*Definition, depth and structure, turbulent transport, Taylor's hypothesis*); Mathematical and Conceptual tools (*Turbulence spectrum, spectral gap, kinematic flux, eddy flux, basic governing equations to turbulent flow*); Turbulence Kinetic Energy, Stability and Scaling (*TKE budget, stability concepts, Richardson number, Obukhov length*)

**Module IV: Measuring Climate Data & Estimation:** Introduction (History, scales, units, climate change); Measuring climate data (climate stations, measurement accuracy, measuring temperature, humidity, wind, rainfall, irradiance, evaporation, archiving, analyzing climate data); Climate Resources (Solar radiation – nature, attenuation, measurement, linkage to climate change; wind – causes, profiles, frequency, spatial variation, wind power); Precipitation – processes, spatial and temporal variation of rainfall, dew, snow, linkage to climate change)

### Module V: Wind power meteorology:

Wind Energy Meteorology: Introduction, turbines types and terms, linear momentum and basic theory, dynamic matching, stream tube theory, characteristics of wind, Atmospheric flow and boundary layer, Mean velocity profile. Wind resource assessment. Flow over hills. Low-level jet. Sensors and instrumentation, Indian wind atlas.

## Examination Scheme

## SOLAR POWER GENERATION LAB

Course Code: RWE4305

Credit Units: 02

<b>RWE 4305</b>	<b>SOLAR POWER GENERATION LAB (Modified)</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 1.1	Date of Approval: 14 July 2016	0	0	4	2
Pre-requisites/ Exposure	Solar PV lab				
Co-requisites	Solar thermal lab				

### Catalog Description

In today's competitive environment an understanding is required which will facilitate the implementation of basic principles, tools and techniques used in the field of solar photovoltaic engineering. This course is designed for the students who want to understand the basics of solar PV and thermal energy conversion engineering. A student is supposed to have a basic knowledge of mathematical modeling and tools. The subject will further enhance the knowledge regarding the various methods and techniques used for solving various problems related to practical designing of solar power systems.

### Course Objectives

The objective of this course is to

- To understand the various aspects of various instruments viz. Lux meter, AC/DC clamp meter, multimeter, Anemometer, potentiometer etc. by carrying out the experiment on latest technological equipments in the area of interest of the students.
- To describe the basics of operation of solar radiation measurement, wind speed and solar energy absorption and collecting devices.
- To understand and describe the applications of various experimental studies in practical life to analyze the various parameters in the field of solar photovoltaic energy conversion.

### Course Outcomes

On completion of this course, the students will be able to

- CO1. To describe the basics of operation of solar radiation measurement, wind speed and solar energy absorption and collecting devices.
- CO2. To examine different areas viz. variation of various pollutants and contaminants present in the atmosphere and the effect of solar radiations falling on various solar photovoltaic energy conversion systems.
- CO3. To understand the component of solar radiation responsible for the working of solar PV technology and investigate the efficiency/performance parameters of all equipments.

### Course Content

Modules	Blooms level*	Number of hours
---------	---------------	-----------------

<b>Module 1 : Maximum Power Point Tracking</b> 1. Finding MPP by varying the resistive load across the PV panel. 2. Finding MPP by varying the duty cycle of DC-DC converter. 3. Using MPPT algorithm find the $V_{max}$ , $I_{max}$ and $P_{max}$ and duty cycle at which MPP occurs. 4. Perform the experiment (3) with different values of perturbation ( $\Delta$ ). 5. Observe the response of $P_{max}$ with the $P_{max}$ observed in exp -3. 6. Perform the experiment no 1 to no 4, with battery in the circuit.	L1, L2	10
<b>Module II:</b> 6. To study performance analysis of off grid Solar PV Power Plant To study performance of a solar thermal power plant	L2, L3	12
<b>Module III</b> 1. To demonstrate and generate the I-V and P-V Characteristics of PV Module with varying solar radiation level in MATLAB software. 2. To demonstrate and generate the I-V and P-V Characteristics of PV Module with varying temperature level in MATLAB software. 3. To demonstrate and generate the I-V and P-V Characteristics of PV Module with varying tilt angles or solar angle of incidences in PVSYST software. 4. To realize the model of a solar module in MATLAB software and generate its I-V characteristics using single diode model. 5. To realize the model of a solar module in MATLAB software and generate its P-V characteristics using single diode model.	L2, L3	5

## LARGE SCALE GRID INTEGRATION OF RENEWABLE ENERGY SOURCES

**Course Code: RWE4309**

**Credit Units: 04**

### Course Objective:

This course covers the challenges, technology and application of large scale grid integration of renewable energy sources.

### Module-I: RE generation: The present, the future and the integration challenges

Introduction, Drivers of RE development, Present status of RE generation and future projections, Demand side management: peak clipping, valley filling, load shifting, RE grid integration challenges, RE generation Technology, Transmission technology, Operational technologies and practices

### Module-II: Future technical solutions for integrating more large-capacity RE

Introduction to fundamentals of Grid interaction, Grid-Friendly RE generation, improved flexibility in conventional generation, Transmission expansion, Operational enhancement, Demand response

### Module-III: Application of Large Capacity Electrical Energy Storage to support RE integration

Introduction to Promising large –capacity Electrical Energy Storage (EES) technologies, Roles of RE integration, Technology needs of large –Capacity EES applications, General, Present situation, Future needs

### Module-IV:-Smart Grids

Concept of smart grid, smart grid control, Communications and Sensing in a Smart Grid, Advance metering Infrastructure and smart meters, Hardware Architecture, Software architecture, Protocol detail, Discrete control and Analog control, application & benefits, PMU communication interface, Future trends.

### Examination Scheme

## **FIELD WORK-II/ MINOR PROJECT-II/SEMINAR-II**

**Course Code: RWE4306**

**Credit Units: 01**

### **Course Objective:**

To give an in-depth understanding of the research problem and to generate experimental expertise. The students will conduct field work in order to implement the concepts taught in class rooms.

### **Course Contents:**

#### **To carry out field work/ project on specific problem**

The students will work on a project under the guidance of a faculty of AUH. The work after completion will be submitted to Head of Department, Renewable Energy Department for assessment which is a part of their M.Sc (Renewable Energy) degree programme of Amity University Haryana.

### **Examination Scheme:**

<b>Project/ Field work</b>	<b>: 60%</b>
<b>Presentation/Seminar</b>	<b>: 20%</b>
<b>Viva</b>	<b>: 20%</b>
<b>Total</b>	<b>: 100%</b>

## **SUMMER INTERNSHIP EVALUATION**

**Course Code: RWE4335**

**Credit Units: 06**

**Course Objective:**

To evaluate the project carried out in the industry/R&D institution during the summer internship.

**Summer Training Programme**

During the summer training, each student will be given an opportunity to interact with R&D institutions/Industries, where she/he will work on a project and get training of handling Renewable Energy Systems, its fabrication / processing units for a short duration of 45-60 days. Students will submit the work to course coordinator after being examined by a guide/supervisor of the institute under whom she/he will work.

**Examination Scheme:**

<b>Project</b>	<b>: 60%</b>
<b>Presentation/Seminar</b>	<b>: 20%</b>
<b>Viva</b>	<b>: 20%</b>
<b>Total</b>	<b>: 100%</b>

# BIOFUELS & BIOMETHANATION

**Course Code: RWE4303**

**Credit Units: 04**

**Course Objective:** To introduce the concepts essential to the understanding of Biofuel, biomethanation and their production technologies.

## **Course Content:**

### **Module 1: Bio conversion mechanism**

Bioconversion mechanism, source of waste undergoing bio-treatment, energetic and rate processes of major biological significance, Bioconversion of substrates into biogas, alcohols, organic acids, solvents, amino acids, antibiotics etc.

### **Module 2: Thermo chemical Conversion**

Thermochemical conversion of biomass, energy balance, conversion to solid, liquid and gaseous fuels, pyrolysis, biodiesel, gasification and their economics

### **Module 3: Chemical Conversion**

Chemical conversion process, hydrolysis, pretreatments and hydrogenation, solvent, extraction of hydrocarbons

### **Module 4: Biomethanation**

Biogas composition, Biochemistry and process parameters of biomethanation; Biogas digester types; Digester design and biogas utilization; gas yield, combustion characteristics of bio-gas, Economics of biogas plant with their environmental and social impacts

### **Module 5- Separation technologies and process control for a biofuel production plant**

Biorefinery, Distillation, cryogenic, adsorption and absorption, PSA and membrane separation process, sensors for monitoring bioprocess parameters, Bioprocess control and computer coupled bioreactors.

## **Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>Assignment</b>	<b>V</b>	<b>Attendance</b>	<b>EE(1)</b>
<b>Weightage (%)</b>	15	05	05	05	70

# DESIGNING OF SOLAR PROJECTS

**Course Code: RWE4307**

**Credit Units: 04**

## **Course Objective:**

This course covers the designing criteria for solar projects and its implementation through case studies.

## **Course Contents:**

### **Module I: Applications of Solar Energy**

Solar Photovoltaic applications -Solar home lighting systems, Solar water pumping systems, Solar power plants; Solar Thermal applications-Solar water heating systems. Factors to be considered in Solar System Design: Solar Radiation, Atmospheric effect on Solar Radiation, Daily and Seasonal Temperature Variations, Physical parameters, Availability of Land foundation needs, Orientation and Obstructions, Proximity of power Evacuation, Water availability, Any industries of pollution nearby, Power supply for construction. Typical Site Evaluation Methodology

### **Module II: System Design of Solar Photovoltaic Systems**

Load Analysis- Accurate sizing, Peak current loads, Worst case scenarios, Plan for future, Compatibility issues, Determining design margins. Solar Array Design- Collector size, Selection of most appropriate module, Dust and Other contaminating effects, Orientation and Tilt issues, Design of Balance of Systems (BOS). Battery Design- Physical and Performance Requirement, Reserve Capacity, temperature and Ageing duration, Regulation and Charge control.

### **Module III: Designing Solar Home Lighting Systems (Case study)**

Case description, Assessment of load profile, Typical System Design, Assumptions in System Design, Battery Design, PV Array Design, Inverter Capacity, Charge Controller, Overall System Design, Request for Quotation, Evaluation of Quotations, Negotiation with the Parties, Finalization of Order, Inspection of goods Received, Parameters to be checked during Installation

### **Module IV: Designing Solar PV Water pumping system (Case study)**

System Design Methodology, Typical System Design, Case Description, Assumptions in System Design, Insolation Availability, Pumping Flow Requirement, Pumping Head Requirement (Static), Pumping Head Requirement (Dynamic), Pumping Energy Requirement, Pump Selection PV Array Design, Request for Quotation, Evaluation of Quotations, Negotiation with the Parties Finalization of Order, Inspection of goods Received, Parameters to be checked during Installation

### **Module V: Designing Solar Thermal Water Heating System (Case study)**

Case Description Typical System Design, Assumptions in System Design, Energy required for heating water, Collector Area Required, Request for Quotation, Evaluation of Quotations, Negotiation with the Parties, Finalization of Order, inspection of goods Received, Parameters to be checked during Installation

### **Module VI: Designing of various applications using MATLAB and PVSYST software**

Introduction to MATLAB, arithmetic operations on MATLAB, designing of solar photovoltaic power system on MATLAB, load estimation, Introduction to PVSYST, locational aspects of solar PV power point installation, designing of SPV power plant using PVSYST.

**Examination Scheme:**

Components	CT(2)	Assignment	V(1)	Attendance	EE(1)
Weightage (%)	15	5	5	5	70

**Text & References:**

- Solar Energy Resource Assessment Handbook- Dr. P Jayakumar, APCTT

# THERMOELECTRIC SYSTEMS AND DEVICES

**Course Code: RWE4308**

**Credit Units: 04**

## **Course Objective:**

To understand the fundamentals of thermoelectric generators and coolers; to apply to the optimum design problems; to experience state-of-the-art technologies in the fields.

## **Course Contents:**

### **Module I: Introduction to Thermoelectric systems**

History of thermoelectricity, thermoelectric generator, thermoelectric cooler, thermoelectric heat pump, applications of thermoelectric devices

### **Module II: Performance evaluation of thermoelectric systems**

Figure of merit, Formulation of basic equations, Performance parameters of thermoelectric modules, Maximum parameters, Normalized charts, Commercial modules

### **Module III: Optimal design with dimensional analysis**

Modeling of TEG, TEC and TEHP devices, applications in various areas e.g. STEG, automotive waste recovery through thermoelectric devices.

### **Module IV: Designing aspects of heat sink**

Designing aspects of fins in heat sink, different type of fins, material for fins, thermocouples for thermoelectric generator, thermoelectric cooler and heat pump, materials for thermoelectric devices, characteristics of fins.

## **Examination Scheme:**

<b>Components</b>	<b>CT(2)</b>	<b>Assignment</b>	<b>V(1)</b>	<b>Attendance</b>	<b>EE(1)</b>
<b>Weightage (%)</b>	15	5	5	5	70

## **Text & References:**

## SMART GRIDS AND RENEWABLES

**Course Code: RWE4310**

**Credit Units: 04**

### **Course Objective:**

Course provides an introduction to how in developed countries, smart grid technologies can be used to upgrade, modernize or extend old grid systems, while at the same time providing opportunities for new, innovative solutions to be implemented.

### **Course Contents:**

#### **Module I: Introduction: Smart Grids and Renewables**

Making the Transition to a Smarter Grid, Start with Pilot and Demonstration, Projects, Specific Technology Recommendations, Costs and Benefits: Making the Business Case for Smart Grid Technologies, Recognise and Respond to Technological conservatism, Leverage the Need for Private Sector, Investment, Recognise the Continual Nature of Technological Change, Regulation

#### **Module II: How Smart Grids Enable Renewables**

Smart Grids and Variability, Smart Grids and Distributed Generation, Smart Grids and Capital Intensity, Improved Consumer Information, Control, and Choice, Improved Transmission and Distribution System Monitoring and Control, Integration of New Resources,

#### **Module III: Nontechnical Barriers to Smart Grids**

Data Ownership and Privacy, Grid Security, Control of Distributed Resources, The Role of New Private Sector Grid Players, The Need for Standards

#### **Module IV: Smart Grid Technologies**

Advanced Metering Infrastructure, Advanced Electricity Pricing, Demand Response, Distribution Automation, Renewable Resource Forecasting, Smart Inverters, Distributed Storage, Microgrids and Virtual Power Plants, Bulk Power Technologies

### **Examination Scheme:**

Components	CT	Assignment	V/Q	Attendance	EE
Weightage (%)	15	5	5	5	70

### **Text & References:**

# Syllabus - Fourth Semester

## ENERGY MANAGEMENT

**Course Code: RWE4401**

**Credit Units: 03**

**Course Objective:**

This course covers the basic principles of energy management, economics of solar energy, project management and entrepreneurship skills.

**Course Contents:**

**Module I: Renewable Energy and Energy Management**

Environmental policies, Energy policies, economics of energy infrastructure;  
Energy management: objectives, necessary steps and general principles of energy management,  
Energy Manager: functions, qualities, duties and guidelines.

**Module II: Energy Audit**

Energy Auditing: Surveying, Audit: Purpose, Definition and Objectives, types of energy audit- preliminary and detailed; questionnaire, energy audit instruments, energy audit report writing. Energy conservation schemes, energy index, cost index, pie charts, Sankey diagrams, load profiles (histograms)

**Module III: Economic Benefits of Solar Energy**

Solar energy cost and economic impact, economics of installing solar panel, solar cooling economic benefits, Solar parks, integration of solar with different industrial process and their economics, integration of solar with grid and costing, storage of energy economics, economics of using inverters, storage of energy economics.

**Module IV: Project Management and Entrepreneurship Skills**

Project management principles, their application in construction management of a Solar PV power plant; Contract Management principles, PPA terms & condition and its interpretation; Resource Utilization in terms of Activities, time required and manpower required by preparing a project management schedule; Entrepreneurship skills

**Examination Scheme:**

Components	CT(2)	Assignment	V(1)	Attendance	EE(1)
Weightage (%)	15	5	5	5	70

**Text & References:**

- Renewable Energy: Power For A Sustainable Future, Second Ed. Edited By Godfrey Boyle

- Handbook of Energy Audits, by Albert Thumann, William J. Younger

# ENERGY POLICIES

**Course Code: RWE4402**

**Credit Units: 03**

**Course Objective:** This course aims at imparting knowledge about the different national policies, regulations and guidelines given by the government for installing a PV system. It provides the knowledge of the approval requirements and safety regulations given by the State.

## **Course Content:**

### **Module-I : Renewables In The Global Energy Economy: Today And Tomorrow**

Introduction, Leading Renewable Energy Resources and its growth, RE global market, Resources and Technology Summaries, Energy Policy-Purpose, Perspective, Contents and Formulation: Contents of energy policy, Features of good policy making, Drivers of energy policy, Policy instruments, Environmental, Social and Economic Considerations, Energy-Environment Linkage, pollutants from energy uses and control measures, Greenhouse Gases, Greenhouse Effect, Global Warming, Climate Change

### **Module-II: Energy and Welfare Economics**

Evaluation of policy instruments, Energy return on investment, Concept of welfare economics, Energy goods and energy services, Renewable Energy in Developing Countries, World Energy Council Action Plan.

### **Module-III: Renewable Energy Policy Frame work**

Importance of renewable energy policies, advantages and interaction with other policies ; Designing a regulatory/support mechanism: approaches and types ; regulatory policies, country specific case study.

Renewable energy (RE) market, RE targets, RE support policies comparison, RE and Energy Efficiency action plans, national RE action plan, national EE action plan, case studies.

### **Module-IV: Regulations and Guidelines**

Identification of relevant statutory regulations of India and other countries- Electricity Act, National Electricity Policy, Tariff Policy, National Mission for Enhanced Energy Efficiency; Inter Governmental Panel on Climate Change (IPCC), Montreal Protocol, Kyoto Protocol, Emission Trading, Clean Development Mechanism, National Action Plan on Climate Change (NAPCC), National Solar Mission (NSM), National Mission on Enhanced Energy Efficiency (NMEEE), National Mission on Sustainable Habitat (NMSH), Paris Agreement

## **Examination Scheme:**

Components	CT	Assignment	V	Attendance	EE
Weightage (%)	15	5	5	5	70

CT- Class Test, V- Viva, EE- End Term Exam

## **Text & References:**

- India Energy Policy, Laws and Regulations Handbook, By IBP, Inc

# GREEN BUILDINGS

**Course Code: RWE4403**

**Credit Units: 03**

## **Course Objective:**

To cover areas related with the fundamentals and designing aspects of green and buildings.

## **Course Contents:**

### **Module-I: Climate**

Introduction, Climate & its Component, Factor Affecting Climate, Climatic Zones and their characteristics, Urban Climate, Microclimate.

### **Module-II: Green Building- Concepts, Design and Performance.**

Building, Implications of climate on building design, Green Buildings, Objective & Essential Characteristics of Green Buildings (i.e. Building Envelope, Passive Heating, Passive Cooling, Day lighting, Building Materials, Heat Transfer, Solar Radiation, Simplified Method for Performance Estimation), solar rooftop, solar water heating

### **Module-III: Green Building Rating System**

Various green building rating National and International stage, USGBC, IGBC, GRIHA, BREAM, STAR RATING.

### **Module-IV: Policies & Examples**

Different policies (National & International), Energy Conservation Act 2005, ECBC, BEE  
Different example at National and International stage.

## **Examination Scheme:**

Components	CT	Assignment	V	Attendance	EE
Weightage (%)	15	5	5	5	70

CT- Class Test, V- Viva, EE- End Term Exam

## **Text & References:**

## **DISSERTATION/SEMINAR & PROGRESS REPORT/COMPREHENSIVE VIVA**

**Course Code: RWE4437**

**Credit Units: 10**

**Course Objective:**

To give an in-depth understanding of the research problem and to generate experimental expertise. The students will work in a R & D institutions / industries.

**Course Contents:**

**To carry out research project on specific problem for dissertation**

Dissertation of six months in a R&D institution or industry.

The students will work on a project either under the joint guidance of a Professor/Scientist in that organization. The work after completion will be submitted to HoD, Renewable Energy Department, which is a part of their M. Sc (Renewable Energy) degree programme of Amity University Haryana.

**Examination Scheme:**

<b>Project</b>	<b>: 60%</b>
<b>Presentation/Seminar</b>	<b>: 20%</b>
<b>Viva</b>	<b>: 20%</b>
<b>Total</b>	<b>: 100%</b>

## **Master of Technology - Network & Cyber Security**

## Syllabus - First Semester

### ADVANCED DATA STRUCTURES & ALGORITHMS

Course Code: NCE4101

Credit Units: 03

#### Course Objective:

The objective to this course is to equip students with advanced concepts of data structures like Huffman trees, Self organizing trees, different types of heaps and their time complexity. Advanced topics and graphs and graph algorithms, geometric algorithms and parallel algorithms.

#### Course Contents:

**Module-I: ADVANCED TREES:** Definitions Operations on Weight Balanced Trees (Huffman Trees), 2-3 Trees and Red- Black Trees, Splay Tree. Augmenting Red-Black Trees to Dynamic Order Statistics and Interval Tree Applications. Operations on Disjoint sets and its union-find problem Implementing Sets. Dictionaries, Priority Queues and Concatenable Queues using 2-3 Trees.

**Module-II: MERGEABLE HEAPS:** Mergeable Heap Operations, Binomial Trees Implementing Binomial Heaps and its Operations, 2-3-4. Trees and 2-3-4 Heaps. Amortization analysis and Potential Function of Fibonacci Heap Implementing Fibonacci Heap. **SORTING NETWORK:** Comparison network, zero-one principle, bitonic sorting and merging network sorter.

**Module-III: GRAPH THEORY DEFINITIONS:** Definitions of Isomorphic Components. Circuits, Fundamental Circuits, Cut-sets. Cut-Vertices Planer and Dual graphs, Spanning Trees, Kuratowski's two Graphs.

**Module-IV: GRAPH THEORY ALGORITHMS:** Algorithms for Connectedness, Finding all Spanning Trees in a Weighted Graph and Planarity Testing, Breadth First and Depth First Search, Topological Sort, Strongly Connected Components and Articulation Point. Single Min-Cut Max-Flow theorem of Network Flows. Ford-Fulkerson Max Flow Algorithms

**Module-V:** Geometric algorithms: Point location, convex hulls and Voronoi diagrams, Arrangements. Parallel algorithms: Basic techniques for sorting, searching, merging

#### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# ADVANCED DATABASE MANAGEMENT SYSTEMS

**Course Code: NCE4102**

**Credit Units: 03**

## **Course Objective:**

The objective of this course is to expose the students to the implementation techniques of database system. This course explains techniques for query processing and optimization with transaction and concurrency control techniques

## **Course Contents:**

### **Module I: Relational Databases**

Integrity Constraints revisited, Extended ER diagram, Relational Algebra & Calculus, Functional, Multivalued and Join Dependency, Normal Forms, Rules about functional dependencies.

### **Module II: Query Processing and Optimization**

Valuation of Relational Operations, Transformation of Relational Expressions, Indexing and Query Optimization, Limitations of Relational Data Model, Null Values and Partial Information.

### **Object Oriented and Object Relational Databases**

Modeling Complex Data Semantics, Specialization, Generalization, Aggregation and Association, Objects, Object Identity, Equality and Object Reference, Architecture of Object Oriented and Object Relational Databases

### **Module III: Parallel and Distributed Databases**

Distributed Data Storage – Fragmentation & Replication, Location and Fragment  
Transparency Distributed Query Processing and Optimization, Distributed Transaction Modeling and concurrency Control, Distributed Deadlock, Commit Protocols, Design of Parallel Databases, Parallel Query Evaluation.

### **Advanced Transaction Processing**

Nested and Multilevel Transactions, Compensating Transactions and Saga, Long Duration Transactions, Weak Levels of Consistency, Transaction Work Flows, Transaction Processing Monitors.

### **Module IV**

Multimedia databases, Databases on the Web and Semi-Structured Data

Case Study: Oracle Xi

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# DIGITAL COMPUTER ORGANIZATION

Course Code: NCE4103

Credit Units: 03

## Course Objective:

The Objective of this course is to expose the students to the fundamentals and the concepts of Digital & Computer Organization and Representation of Information and Basic Building Blocks, Basic Organization, Memory Organization, Input-Output Organization, Processor Organization etc. This course is designed to understand the concepts of Computer Organization for Research & Development as well as for application.

## Course Contents:

### Module I: Representation of Information and Basic Building Blocks

Overview of Computer hardware generation, Number Systems, Binary, Octal, Hexadecimal, Character Codes (BCD, ASCII, EBCDIC), Logic gates, Boolean algebra, K-map Simplification, Half adder, Full adder, Decoders, Multiplexes, Binary Counters, Flip/Flops, Registers, Counters (Synchronous & Asynchronous), ALU, Micro-Operation, ALU-chip, Faster Algorithm and Implementation (multiplication & Division).

### Module II: Basic Organization

Von Neumann Machine (IAS Computer), Operational flow chart (Fetch, Execute), Instruction Cycle, Organization of Central Processing Unit, Hardwired and Micro programmed control unit, Single Organization, General Register Organization, Stack Organization, Addressing Modes, Instruction Formats, Data transfer & Manipulation, I/O organization, Bus Architecture, Programming Registers.

### Module III: Memory Organization

Memory hierarchy, Main Memory (RAM/ROM chips), Auxiliary memory, Associative memory, Virtual memory, Cache memory, Memory management hardware, hit/miss ratio, Magnetic disk and its performance, Magnetic Tapes etc.

### Module IV: Input-Output organization

Peripheral devices, I/O interface, Direct memory access, Modes of transfer, Priority Interrupt, I/O Processors, Serial Communication, Asynchronous data transfer, Strobe Control, Handshaking, I/O Controllers.

### Module V: Processor Organization

Basic Concept of 8/16-bit microprocessor (8085/8086), Assembly Instruction Set, Assembly Language Program of 8085/8086: Addition of two numbers, Subtraction, Block Transfer, Find greatest number, Table search, Numeric manipulation, Introductory Concept of pipeline, Flynn's Classification, Parallel Architectural classification.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# ADVANCED COMPUTER NETWORKS

**Course Code: NCE4104**

**Credit Units: 03**

## **Course Objective:**

The objective of the course is to provide thorough understanding & in-depth knowledge of concepts in computer networks Such as Internet protocols and routing, local area networks, wireless communications and networking, performance analysis, congestion control, TCP, network address translation, multimedia over IP, switching and routing, mobile IP, multicasting, IPv6. Peer-to-peer networking, network security, and other current research topics. A focus will be placed on wireless networking, reflecting rapid advances in this area. This course motivates the students to explore current research areas in the same field.

## **Course Contents:**

### **Module I**

Uses computer networks, Reference Models, TCP/IP suite of protocols, MAC protocols for high-speed LANS, MANs, and wireless LANs. (For example, FDDI, DQDB, HIPPI, Gigabit Ethernet, Wireless Ethernet, etc.)Fast access technologies. (For example, ADSL, Cable Modem, etc.)

### **Module II:**

Network Layer Design Issues, Routing Algorithms, Congestion Control Algorithms, Quality of Service, Internet Working, Network Layer in Internet.

IPv6 basic protocol, extensions and options, support for QoS, security, etc., Changes to other protocols, Application Programming Interface for IPv6.

### **Module III**

Mobile IP, IP Multicasting. Multicast routing protocols, address assignments, session discovery, etc.

### **Module IV**

The Transport Protocol: The Transport Service, Elements of transport protocol, a simple Transport Protocol, Internet Transport Protocols UDP, Internet Transport Protocols TCP, TCP extensions for high-speed networks, transaction-oriented applications Performance Issues.

The Application Layer: DNS-(Domain Name System), Electronic Mail, World Wide Web Multimedia.

### **Module V**

Overview of network security, Secure-HTTP, SSL, ESP, Key distribution protocols. Digital signatures, digital certificates-mail Security, Web security, Social Issues.

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>H</b>	<b>V/S/Q</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	7	8	70

## **Text & References:**

## ADVANCE DATA STRUCTURE & ALGORITHMS LAB

**Course Code: NCE4105**

**Credit Units: 01**

Programs based on Implementation of Graphs using Adjacency Matrix, Linked List , implementation of graph algorithms like BFS,DFS, Minimum Spanning Tree, Binary Search Tree, Knapsack Problem using Greedy Algorithm, Dynamic Programming, Shortest Path Algo (Dijkstra's), Implementing B-Tree,AVL Tree ,Red Black Tree. Implementing Sets, Dictionaries, Priority Queue using Heap.

Recommended Software: Java/C++/C/Python

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# MATLAB

**Course Code: NCE4108**

**Credit Units: 02**

Understanding The MATLAB Environment, Using the Help System in MATLAB, MATLAB Basics, Linear Algebra; Vectors and Matrices and various operations on them, M files; Scripts and User-defined functions, Plotting, Flow Control and Loops; For and While Loops, If and Case statements, structures, writing basic programs using the above, study of various toolboxes available in matlab and case study of any one tool box.

Recommended Software: MATLAB/Octave

## Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## PYTHON PROGRAMMING LAB

**Course Code: NCE4109**

**Credit Units: 01**

1. Setting up python on Windows/Linux/Mac
2. First program in python
3. Programs related to basic input/output.
4. Programs related to variables, strings, numbers
5. Programs related to Lists and Tuples
6. Programs related to Functions
7. Programs related to If Statements
8. Programs related to While Loops and Input
9. Programs related to Basic Terminal Apps
10. Programs related to Dictionaries
11. Programs related to Classes
12. Programs related to Exceptions
13. Programs related to GUI programming
14. Using Word, Excel, PDF files in python.
15. Web programming in python,
16. Case study of application areas of python.

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## ADVANCE DATABASE MANAGEMENT SYSTEMS LAB

**Course Code: NCE4106**

**Credit Units: 01**

Programs should be based on following topics:

**Quick Review** of Simple SQL Statements, SQL Built-in Functions ,Primary Key, Foreign Key, Normalization,Joins View, Union. **Emphasis** on PL/SQL ,Cursors 8. Exception handling , Procedure, Functions ,Trigger, concurrency control, transaction processing. Introduction to SQLite.

Recommended Software: PostGreSQL,MySQL, Oracle.

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## ADVANCED COMPUTER NETWORK LAB

Course Code: NCE4107

Credit Units: 01

1. Study of different types of networking cables, and implement cross and straight cable using clamping tool
2. Implementation of Stop and Wait Protocol and Sliding Window Protocol.
3. Study of Socket Programming and Client
4. Write a code simulating ARP /RARP protocols.
5. Write a code simulating PING and TRACEROUTE commands
6. Create a socket for HTTP for web page upload and download.
7. Write a program to implement RPC (Remote Procedure Call)
8. Implementation of Subnetting
9. Applications using TCP Sockets like Echo client and echo server, Chat Server, File Transfer, Applications using TCP and UDP Sockets ,DNS,SNMP
10. Study of Network simulator (NS).and Simulation of Congestion Control Algorithms using NS.
11. Perform a case study about the different routing algorithms to select the network path with its optimum and economical during data transfer Link State routing, Flooding, Distance vector.

Recommend Software: C/C++ on Linux/Unix, NS, Packet Tracer

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# Syllabus - Second Semester

## MATHEMATICAL FOUNDATIONS FOR CYBER SECURITY

**Course Code: NCE4201**

**Credit Units: 03**

### Course Contents:

**Module-I:** Integer arithmetic, modular arithmetic, matrices, Linear Congruence: Definition – Basic properties of congruence, Divisibility - Greatest common divisor, equivalence classes, residue classes.

**Module-II:** Primes, primality testing, factorization, Chinese remainder theorem, quadratic congruence, exponentiation and logarithm.

**Module-III:** Algebraic structures: groups, fields, rings, Modulo groups - Primitive roots - Discrete logarithms. Finite fields –  $GF(p)$ ,  $GF(2^n)$  – polynomial arithmetic

**Module-IV:** SHANNON'S THEORY: Introduction, Elementary Probability Theory, Perfect Secrecy, Entropy, Properties of Entropy, Spurious Keys & Unicity distance, Product Cryptosystems

**Module-V:** PSEUDORANDOM NUMBER GENERATION: Introduction and examples Indistinguishability of Probability Distributions - Next Bit Predictors - The Blum-Blum-Shub Generator – Security of the BBS Generator.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

### Text & References:

# NETWORK AND WIRELESS SECURITY

**Course Code: NCE4202**

**Credit Units: 03**

## **Course Contents:**

**Module-I: INTRODUCTION:** Network concepts – Threats in networks – Network security controls – Importance of security – Threat models – Security concepts – Common mitigation methods

**Why is Wireless Different?** Introduction ,Protecting the Means Of Communication Protecting Privacy, Promoting Safety ,The Personal and the Public ,Shaking Up the Status Quo ,Understanding Wireless Forecasts ,Reasonable Degrees of Security, Regulatory Environments and Issues ,Security-Related Regulations ,Security Related Market Factors, Guidelines for Security Measures, Cellular Networks and Bearer Technologies ,First-Generation Wireless (1G), Second-Generation Wireless (2G), Spread Spectrum ,Code Division Multiple Access (CDMA) ,Time Division Multiple Sccess (TDMA) ,Global System for Mobile Communications (GSM) ,Third-Generation Wireless (3G) ,Short Message Service (SMS) ,Fourth-Generation Wireless (4G)

**Module-II: The Wireless Local Area Network (WLAN) :** Wireless Transmission Media ,Infrared Systems ,Narrowband Radio Systems ,Wideband Radio Systems: SpreadSpectrum ,Frequency-Hopping Spread Spectrum (FHSS) ,Direct-Sequence Spread Spectrum (DSSS) ,WLAN Products and Standards—Today's Leaders? ,802.11 Security? ,IEEE 802.11b ,Securing WLANs ,Eavesdropping ,Unauthorized Access ,Interference and Jamming ,Physical Threats ,Countermeasures ,Frequency-Hopping Spread Spectrum (FHSS), Direct-Sequence Spread Spectrum (DSSS) ,Infrared (IR) ,Narrowband ,The Infamous WEP ,Encryption ,Authentication ,Wired Equivalency Protocol Flaws Too Public ,Other Authentication Techniques ,Physical Security.

**Module-III: Wireless Application Protocol(WAP):** Comparison of the TCP/IP, OSI, and WAP Models, How WAP Works ,The Security Status of WAP ,Viruses ,Authorization ,Non-repudiation ,Authentication ,Secure Sessions ,Security Products ,Securant Technologies ClearTrust Control ,WAP Security Architecture ,Marginal Security ,Wireless Access to the Internet ,Wireless Middleware

**Module-IV: Wireless Transport Layer Security (WTLS):** Secure Socket Layer, Record Protocol, SSL Handshake Protocol ,Transport Layer Security, Advantages and Disadvantages of SSL/TLS ,Netscape ,Microsoft ,Entrust ,EAP-TLS ,Alternatives to SSL/TLS , IP Security (IPSec) ,Authentication Header Protocol (AH) ,Encapsulating Security Payload (ESP) ,Transport and Tunnel Modes, Secure Shell (SSH) ,SSH Transport Layer Protocol ,SSH Versus TLS Implementations ,Light Extensible Authentication Protocol (LEAP) ,Wireless Transport Layer Security and WAP ,Understanding Wireless Transport Layer Security ,WTLS Handshake Protocol ,WTLS Alert Protocol ,WTLS Change Cipher Protocol ,Pros and Cons of WTLS ,WTLS Vulnerabilities ,Implementations of WTLS

**Module-V: Bluetooth Security:** Bluetooth Basic Specifications ,Bluetooth Technology, Bluetooth Specification Development ,Design Decisions ,Piconets ,Bluetooth Security Architecture ,Scatternets ,The Bluetooth stack ,Security Functions at the Baseband Layer ,Security Functions of the Service Discovery Protocol ,Security Functions at the Link Layer ,Frequency-Hopping , Channel Establishment ,Security Manager ,Authentication,Authentication with the SAFER1 Block Cipher ,Encryption ,Encryption Modes ,Key Length Negotiation ,Encryption With the E0 Stream Cipher ,Threats to Bluetooth Security ,Jamming ,Bluetooth holes

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# **CYBER CRIME AND IT LAW**

**Course Code: NCE4203**

**Credit Units: 03**

## **Course Contents:**

### **Module-I: Power of Arrest Without Warrant Under the IT Act, 2000: A Critique**

Crimes of this Millennium, Section 80 of the IT Act, 2000 – A Weapon or a Farce, Forgetting the Line Between Cognizable and Non-Cognizable Offences, Necessity of Arrest without Warrant from Any Place, Public or Otherwise, Checks and Balances Against Arbitrary Arrests, Arrest for “About to Commit” an Offence Under the IT Act: A Tribute to Draco, Arrest, But No Punishment!

### **Module-II: Unit 2: Cyber Crime and Criminal Justice: Penalties, Adjudication and Appeals Under the IT Act, 2000**

Concept of ‘Cyber Crime’ and the IT Act, 2000, Hacking, Teenage Web vandals, Cyber Fraud and Cyber cheating, Virus on the Internet, Defamation, Harassment and E-mail Abuse, Cyber Pornography, Other IT Act Offences, Monetary Penalties, Adjudication and Appeals Under IT Act, 2000, Network Service Providers, Jurisdiction and cyber Crimes, Nature of Cyber Criminality, Strategies to Tackle Cyber Crime and Trends, Criminal Justice in India and Implications on Cyber Crime.

### **Module-III: Jurisdiction in the Cyber World**

Questioning the Jurisdiction and Validity of the Present Law of Jurisdiction, Civil Law of Jurisdiction in India, Cause of Action, Jurisdiction and the Information Technology Act, 2000, Foreign Judgments in India, Place of Cause of Action in Contractual and IPR Disputes, Exclusion Clauses in Contracts, Abuse of Exclusion Clauses, Objection of Lack of Jurisdiction, Misuse of the Law of Jurisdiction, Legal Principles on Jurisdiction in the United States of America, Jurisdictional Disputes W.R.T. the Internet in the United States of America.

### **Module-IV: Battling Cyber Squatters and copyright Protection in the Cyber World**

Concept of Domain Name and Reply to Cyber Squatters, Meta-Tagging, Legislative and Other Innovative Moves Against Cyber Squatting, The Battle Between Freedom and Control on the Internet, Works in Which Copyright Subsists and Meaning of Copyright, Copyright Ownership and Assignment, Licence of Copyright, Copyright Term and Respect for Foreign Works, Copyright Infringement, Remedies and Offences, Copyright Protection of Content on the Internet; Copyright Notice, Disclaimer and Acknowledgement, Downloading for Viewing Content on the Internet, Hyper-linking and Framing, Liability of ISPs for Copyright violations in the Cyber World: Legal Developments in the US, Napster and its Cousins: A Revolution on the Internet but a Crisis for Copyright Owners, Computer Software Piracy.

### **Module-V: Protection of Cyber Consumers in India**

Are Cyber consumers Covered Under the Consumer Protection Act, Goods and Services, Consumer Complaint, Defect in Goods and Deficiency in Services, Restrictive and Unfair Trade Practices, Instances of Unfair Trade Practices, Reliefs Under CPA, Beware Consumers, Consumer Foras, Jurisdiction and Implications on Cyber Consumers in India, Applicability of CPA to Manufacturers, Distributors, Retailers and Service Providers Based in Foreign Lands Whose Goods are Sold or Services Provided to a consumer in India.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# CYBER CRIME INVESTIGATION & FORENSICS

Course Code: NCE4204

Credit Units: 03

## Course Contents:

**Module-I: Computer Forensics and Investigations as a Profession, Understanding :** Computer Forensics ,Computer Forensics Versus Other Related Disciplines ,A Brief History of Computer Forensics, Understanding Case Law ,Developing Computer Forensics Resources ,Preparing for Computer Investigations, Understanding Law Enforcement Agency Investigations, Following the Legal Processes, Understanding Corporate Investigations, Establishing Company Policies, Displaying Warning Banners ,Designating an Authorized Requester, Conducting Security Investigations, Distinguishing Personal and Company Property ,Maintaining Professional Conduct.

**Module-II: Understanding Computer Investigations:** Preparing a Computer Investigation, An Overview of a Computer Crime ,An Overview of aCompanyPolicy Violation ,Taking a Systematic Approach ,Assessing the Case ,Planning Your Investigation ,Securing Your Evidence ,Procedures for Corporate High-Tech Investigations, Employee Termination Cases,InternetAbuse Investigations-mail Abuse Investigations, Attorney-Client Privilege Investigations, Media Leak Investigations, Industrial Espionage Investigations, Interviews and Interrogations in High-Tech Investigations ,Understanding Data Recovery Workstations and Software, Setting Up Your Workstation for Computer Forensics ,Conducting an Investigation, Gathering the Evidence ,Understanding Bit-stream Copies ,Acquiring an Image of EvidenceMedia,UsingProDiscoverBasic to Acquire a USB Drive ,Analyzing Your Digital Evidence, Completing the Case, Critiquing the Case

**Module-III: Data Acquisition:** Understanding Storage Formats for Digital Evidence, Raw Format, Proprietary Formats, Advanced Forensic Format ,Determining the Best Acquisition Method, Contingency Planning for Image Acquisitions ,Using Acquisition Tools ,Windows XP Write-Protection with USB Devices, Acquiring Data with a Linux Boot CD,Capturing an Image with ProDiscover Basic ,Capturing an Image with Access Data FTK Imager ,Validating Data Acquisitions ,Linux Validation Methods, Windows Validation Methods ,Performing RAID Data Acquisitions ,Understanding RAID ,Acquiring RAID Disks ,Using Remote Network Acquisition Tools ,Remote Acquisition with ProDiscover,Remote Acquisition with EnCase Enterprise , Remote Acquisition with R-Tools R-Studio ,Remote Acquisition with WetStone Livewire, Remote Acquisition with F-Response ,Remote Acquisition with Runtime Software ,Using Other Forensics Acquisition Tools,SnapBackDatArrest ,NTI SafeBack,DIBS USA RAID ,Look Investigator I imager ,ASRData SMART ,Australian Department of DefencePyFlag,

**Module-IV: Processing Crime and Incident Scenes :** Identifying Digital Evidence, Understanding Rules of Evidence ,Collecting Evidence in Private-Sector Incident Scenes, Processing Law Enforcement Crime Scenes ,Understanding Concepts and Terms Used in Warrants ,Preparing for a Search ,Identifying the Nature of the Case, Identifying the Type of Computing System, Determining Whether You Can Seize a Computer, Obtaining a Detailed Description of theLocation,Determining Who Is in Charge, Using Additional Technical Expertise ,Determining the Tools You Need ,Preparing the Investigation Team, Securing a Computer Incident or Crime Scene ,Seizing Digital Evidence at the Scene ,Preparing to Acquire Digital Evidence, Processing an IncidentorCrime Scene ,Processing Data Centers with RAID Systems ,Using a Technical Advisor, Documenting Evidence in the Lab,Processing and Handling Digital Evidence ,Storing Digital Evidence, Evidence Retention and Media Storage Needs, Documenting Evidence ,Obtaining a Digital Hash, Reviewing a Case ,Sample Civil Investigation ,Sample Criminal Investigation ,Reviewing Background Information for a Case ,Identifying the Case Requirements, Planning the Investigation ,Conducting the Investigation: Acquiring Evidence withAccessData FTK

**Module-V: Current Computer Forensics Tools:** Evaluating Computer Forensics Tool Needs ,Types of Computer Forensics Tools ,Tasks Performed by Computer Forensics Tools, Tool Comparisons ,Other Considerations for Tools ,Computer Forensics Software Tools, Command-Line Forensics Tools, UNIX/Linux Forensics Tools ,Other GUI Forensics Tools, Computer Forensics Hardware Tools, Forensic Workstations, Using a Write-Blocker, Recommendations for a Forensic Workstation,Validating and Testing Forensics Software ,Using National Institute of Standards and Technology (NIST) Tools ,Using Validation Protocols

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

**Recommended Books:**

# INTRUSION DETECTION AND PREVENTION SYSTEM

Course Code: NCE4205

Credit Units: 03

## Course Contents:

**Module-I: Network Attacks:** Attack Taxonomies, Probes: IPSweep and PortSweep, NMap, MScan, SAINT, Satan Privilege Escalation Attacks: Buffer Overflow Attacks, Misconfiguration Attacks, Race-condition Attacks, Man-in-the-Middle Attacks. Social Engineering Attacks. Denial of Service (DoS) and Distributed Denial of Service (DDoS) Attacks: Detection Approaches for DoS and DDoS Attacks, Prevention and Response for DoS and DDoS Attacks, Examples of DoS and DDoS Attacks. Worms Attacks: Modeling and Analysis of Worm Behaviors, Detection and Monitoring of Worm Attacks, Worms Containment, Examples of Well Known Worm Attacks. Routing Attacks: OSPF Attacks, BGP Attacks.

**Module-II: Detection Approaches:** Misuse Detection: Pattern Matching, Rule-based Techniques, State-based Techniques, Techniques based on Data Mining Anomaly Detection: Advanced Statistical Models, Rule based Techniques, Biological Models, Learning Models Specification-based Detection, Hybrid Detection

**Module-III: Theoretical Foundation of Detection:** Taxonomy of Anomaly Detection Systems, Fuzzy Logic, Bayes Theory, Artificial Neural Networks, Support Vector Machine (SVM), Evolutionary Computation, Association Rules, Clustering, Signal Processing Techniques Based Models, Comparative Study of Anomaly Detection Techniques.

**Module-IV: Architecture and Implementation:** Centralized, Distributed, Cooperative Intrusion Detection, Alert Management and Correlation: Data Fusion, Alert Correlation, Cooperative Intrusion Detection

**Module-V: Evaluation Criteria & Intrusion Response:** Accuracy, Performance, Completeness, Timely Response, Adaptation and Cost-Sensitivity, Intrusion Tolerance and Attack Resistance, Test, Evaluation and Data Sets. Response Type, Response Approach, Survivability and Intrusion Tolerance, case study of any commercial IDS.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

## Recommended Books:

# RESEARCH METHODOLOGY AND TECHNICAL REPORT WRITING

**Course Code: NCE4206**

**Credit Units : 02**

## **Course Objectives:**

The course will enhance scientific , technical and research writing skills and impart knowledge about various stages of research process, statistical analysis, statistical tests and their applications in statistical decision making.

## **Course Contents:**

**Module I:** Introduction to research: Definition, motivation, need, objectives, significance and characteristics of research; types of research; steps in research process; planning a research proposal; literature review, web searching.

**Module II:** Population and sample, parameter and statistic, sampling and data collection, sampling design: steps, types, sample size, sampling methods, large and small samples, primary and secondary data, data processing and analysis. Sample surveys and questionnaire designing, scaling techniques.

**Module III:** Dependent and independent variables, univariate, bivariate and multivariate analysis, means-arithmetic, geometric and harmonic; measure of dispersion of data, standard deviation, variance, coefficient of variation and degree of freedom. Hypothesis testing: null hypothesis and alternate hypothesis, errors in hypothesis testing, significance and confidence levels, parametric tests and non-parametric tests, one-tailed and two-tailed tests, analysis of variance. Regression analysis and curve fitting, method of least-squares, explained and unexplained variations, coefficient of correlation, coefficient of determination.

**Module IV:** Technical/scientific/research report writing: structure and components of scientific reports, formats of dissertations, research report, report writing skills, report preparation, referencing , bibliography and footnotes. Making presentation-use of visual aids and PPTs. Publication of research papers, citations,. Intellectual property rights and copy rights, plagiarism, patents and patent laws, commercialization and ethical issues.

## **Examination Scheme:**

Attendance	Assignment/Library consultation / Thesis writing	Class test	Final Exam	Total
5	15	10	70	100

## **Text Books:**

- Blake, G. and Bly, R.W. 1993, The Elements of Technical Writing. MacMillan, New York
- Booth, V. 1981. Writing a Scientific Paper and Speaking at Scientific Meetings. The Biochemical Society, London

# BIG DATA SYSTEMS

Course Code: NCE4210

Credit Units: 03

## Course Contents:

**Module-I: A NEW PARADIGM FOR BIG DATA :** Scaling with a traditional database NoSQL is not a panacea, First principles, Desired properties of a Big Data system , The problems with fully incremental architectures, Lambda Architecture, Recent trends in technologyExample application: SuperWebAnalytics.com, data model for big data: , data model for big data: illustration

**Module-II: Hadoop & MapReduce:** Data! ,Data Storage and Analysis ,Comparison with Other Systems ,RDBMS ,Grid Computing ,Volunteer Computing ,A Brief History of Hadoop ,Apache Hadoop and the Hadoop Ecosystem , Hadoop Releases ,A Weather Dataset, Data Format ,Analyzing the Data with Unix Tools , Analyzing the Data with Hadoop ,Map and Reduce ,Java MapReduce ,Scaling Out ,Data Flow , Combiner Functions ,Running a Distributed MapReduce Job , Hadoop Streaming ,Ruby ,Python, Hadoop Pipes ,Compiling and Running.

**Module-III: The Hadoop Distributed Filesystem:** The Design of HDFS ,HDFS Concepts ,Blocks ,Namenodes and Datanodes ,HDFS Federation ,HDFS High-Availability ,The Command-Line Interface ,Basic Filesystem Operations ,HadoopFilesystems , Interfaces ,The Java Interface ,Reading Data from a Hadoop URL ,Reading Data Using the FileSystem API ,Writing Data ,Directories ,Querying the Filesystem ,Deleting Data ,Data Flow ,Anatomy of a File Read ,Anatomy of a File Write ,Coherency Model ,Parallel Copying with distcp ,Keeping an HDFS Cluster Balanced ,Hadoop Archives ,Using Hadoop Archives ,Limitations ,

**Module-IV: Hadoop I/O:** Data Integrity ,Data Integrity in HDFS ,LocalFileSystem ,ChecksumFileSystem ,Compression ,Codecs , Compression and Input Splits ,Using Compression in MapReduce ,Serialization ,The Writable Interface , Writable Classes ,Implementing a Custom Writable ,Serialization Frameworks ,Avro ,File-Based Data Structures ,SequenceFile ,MapFile.

**Module-V: Developing a MapReduce Application:** The Configuration API ,Combining Resources ,Variable Expansion ,Configuring the Development Environment ,Managing Configuration ,GenericOptionsParser, Tool, and ToolRunner ,Writing a Unit Test ,Mapper ,Reducer ,Running Locally on Test Data ,Running a Job in a Local Job Runner , Testing the Driver ,Running on a Cluster ,Packaging ,Launching a Job ,The MapReduce Web UI ,Retrieving the Results ,Debugging a Job ,Hadoop Logs ,Remote Debugging ,Tuning a Job ,Profiling Tasks ,MapReduce Workflows ,Decomposing a Problem into MapReduce Jobs ,JobControl ,Apache Oozie.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

## Recommended books:

- “Big Data: Principles and best practices of scalable realtime data systems”,NathanMatz, Manning Publications, 2015
- “Hadoop: The Definitive Guide: Storage and Analysis at Internet Scale” Tom White, Oreilly.
- “High-Performance Big-Data Analytics, Computing Systems and Approaches” Raj, P., Raman, A., Nagaraj, D., Duggirala, S.,Springer

# DISTRIBUTED SYSTEMS SECURITY

Course Code: NCE4211

Credit Units: 03

## Course Contents:

### Module-I:

Introduction – Distributed Systems, Distributed Systems Security. Security in Engineering: Secure Development Lifecycle Processes - A Typical Security Engineering Process – Security Engineering Guidelines and Resources. Common Security Issues and Technologies: Security Issues, Common Security Techniques.

### Module-II:

Host-level Threats and Vulnerabilities: Transient code Vulnerabilities - Resident Code Vulnerabilities - Malware: Trojan Horse – Spyware - Worms/Viruses – Eavesdropping – Job Faults. Infrastructure-Level Threats and Vulnerabilities: Network-Level Threats and Vulnerabilities - Grid Computing Threats and Vulnerabilities – Storage Threats and Vulnerabilities – Overview of Infrastructure Threats and Vulnerabilities.

### Module-III:

Application-Level Threats and Vulnerabilities: Application-Layer Vulnerabilities –Injection Vulnerabilities - Cross-Site Scripting (XSS) - Improper Session Management - Improper Error Handling - Improper Use of Cryptography - Insecure Configuration Issues - Denial of Service - Canonical Representation Flaws - Overflow Issues. Service-Level Threats and Vulnerabilities: SOA and Role of Standards - Service-Level Security Requirements - Service-Level Threats and Vulnerabilities - Service-Level Attacks – Services Threat Profile.

### Module-IV:

Host-Level Solutions: Sandboxing – Virtualization - Resource Management - Proof-Carrying Code - Memory Firewall – Antimalware. Infrastructure-Level Solutions: Network-Level Solutions - Grid-Level Solutions - Storage-Level Solutions. Application-Level Solutions: Application-Level Security Solutions.

### Module-V:

Service-Level Solutions: Services Security Policy - SOA Security Standards Stack – Standards in Dept - Deployment Architectures for SOA Security - Managing Service-Level Threats - Compliance in Financial Services - SOX Compliance - SOX Security Solutions – Multilevel Policy-Driven Solution Architecture - Case Study: Grid - The Financial Application – Security Requirements Analysis. Future Directions – Cloud Computing Security – Security Appliances - Usercentric Identity Management - Identity-Based Encryption (IBE) - Virtualization in Host Security.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

**Recommended Books:**

- AbhijitBelapurkar, AnirbanChakrabarti and et al., “Distributed Systems Security: Issues. Processes and solutions”, Wiley, Ltd., Publication, 2009.
- AbhijitBelapurkar, AnirbanChakrabarti, HarigopalPonnapalli, NiranjanaVaradarajan, Srinivas
- Padmanabhuni and SrikanthSundarrajan, “Distributed Systems Security: Issues, Processes and Solutions”, Wiley publications, 2009.
- RachidGuerraoui and Franck Petit, “Stabilization, Safety, and Security of Distributed Systems”, Springer, 2010.

# CRYPTOGRAPHY FOUNDATION LAB

Course Code: NCE4207

Credit Units: 01

## Course Contents:

- Program to implement division theorem
- checking number is prime or composite using simple logic
- Implement Miller Rabin Primality Algorithm
- Implement Euclid and Extended Algorithm.
- Implement Chinese Remainder Theorem
- Implement Baby Step Giant Step Algorithm.
- Implement at least 2 algorithms for random number generation. One is Blum BlumShub.
- Implement Modular Exponentiation Algorithm
- Implement algorithm for modular linear equation solver.
- Implement Fermat's and Euler's theorem.
- Implement Fermat's Factorization method.
- Few programs based on Probability Theory and theorems

## Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## WEB SECURITY LAB

**Course Code: NCE4208**

**Credit Units: 01**

### **Course Contents:**

Exercises related to SQL injection attacks, XSS attacks, writing java script files for launching and preventing XSS attacks, Stored and Reflected XSS Attacks, URL interpretation attack, input validation attack, buffer overflow attacks, impersonation attacks, password-based attacks, denial of service attacks, session hijacking

Use Apache Web Server or Xamp Server and create a temporary site for performing attacks.

### **Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# NETWORK SECURITY LAB

**Course Code: NCE4209**

**Credit Units: 01**

## Course Contents:

- Learn to install wine / virtual box/vmware or any other equivalent software on the host os.
- Perform an experiment to grab a banner with telnet and perform the task using netcat utility.
- Banner grabbing is a technique to determine which application or service is running on the specified port by attempting to make a connection to this host.
- Perform an experiment for port scanning with nmap, superscan or any other software.
- Using nmap 1)find open ports on a system 2) find the machines which are active 3)find the version of remote os on other systems 4)find the version of s/w installed on other system
- Perform an experiment on active and passive fingerprinting using xprobe2 and nmap.
- Perform an experiment to demonstrate how to sniff for router traffic by using the tool wireshark
- Perform an experiment how to use dumpsec.
- Perform an wireless audit of an access point / router and decrypt wep and wpa.
- Perform an experiment to sniff traffic using arp poisoning.
- Generating password hashes with openssl

## Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## Syllabus - Third Semester

### BIOMETRIC SYSTEMS AND BIOMETRIC IMAGE PROCESSING

Course Code: NCE4301

Credit Units: 03

#### Course Contents:

**Module-I: Introduction:** Biometric fundamentals – Biometric technologies – Biometrics Vs traditional techniques – Characteristics of a good biometric system – Benefits of biometrics – Key biometric processes: verification, identification and biometric matching – Performance measures in biometric systems, FAR, FRR, FTE rate, EER and ATV rate, Applications of Biometric Systems, Security and Privacy Issues.

**Physiological Biometrics :** Leading technologies : Finger-scan – Facial-scan – Iris-scan – Voice-scan – components, working principles, competing technologies, strengths and weaknesses – Other physiological biometrics : Hand-scan, Retina-scan – components, working principles, competing technologies, strengths and weaknesses – Automated fingerprint identification systems.

**Module-II: Behavioral Biometrics:** Leading technologies: Signature-scan – Keystroke scan – components, working principles, strengths and weaknesses.

**Privacy and Standards in Biometrics:** Assessing the Privacy Risks of Biometrics – Designing Privacy-Sympathetic Biometric Systems – Need for standards – different biometric standards.

**Module-III: Fundamentals of Image Processing:** Digital Image representation - Fundamental steps in Image Processing Image Enhancement: The Spatial Domain Methods, The Frequency Domain Methods – Image Segmentation: Pixel Classification by Thresholding, Histogram Techniques, Smoothing and Thresholding- Gradient Based Segmentation: Gradient Image, Boundary Tracking, Laplacian Edge Detection.

**Module-IV: Fingerprint Biometrics:** Fingerprint Patterns, Fingerprint Features, Fingerprint Image, width between two ridges - Fingerprint Image Processing - Minutiae Determination - Fingerprint Matching: Fingerprint Classification, Matching policies.

**Module-V: Iris Biometrics:** Iris System Architecture, Definitions and Notations - Iris Recognition: Iris location, Doubly Dimensionless Projection, Iris code, Comparison - Coordinate System: Head Tilting Problem, Basic Eye Model, Searching Algorithm, Texture Energy Feature.

#### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

#### Recommended Books:

- Anil K Jain, Patrick Flynn, Arun A Ross, “Handbook of Biometrics”, Springer, 2008
- Anil K Jain, Arun A Ross, Karthik Nandakumar, “Introduction to Biometrics”, Springer, 2011
- Rafael C. Gonzalez, Richard E. Woods, Steven L. Eddins, “Digital Image Processing”, Pearson Education, New Delhi, 2009

# SOFTWARE VULNERABILITY ANALYSIS

Course Code: NCE4302

Credit Units: 04

## Course Contents:

**Module-I: Introduction to Software Security:** It's All about the Software, Dealing with Widespread Security Failures, Bugtraq, CERT Advisories, RISKS Digest, Technical Trends Affecting Software Security, The ilities, What is Security?, Isn't That Just Reliability?, Penetrate and Patch Is Bad, On Art and Engineering, Security Goals, Prevention, Traceability and Auditing, Monitoring, Privacy and Confidentiality, Multilevel Security, Anonymity, Authentication, Integrity, Know Your Enemy: Common Software Security Pitfalls, Software Project Goals, Conclusion. **Managing Software Security Risk:** An Overview of Software Risk Management for Security, The Role of Security Personnel, Software Security Personnel in the Life Cycle, Deriving Requirements, Risk Assessment, Design for Security, Implementation, Security Testing, A dose of Reality, Getting People to Think about Security, Software Risk management in Practice, When Development Goes Astray, When Security Analysis Goes Astray, The Common Criteria.

**Module-II: On Open Source and Closed Source:** Security by Obscurity, Reverse Engineering, Code Obfuscation, Security for Shrink-Wrapped Software, Security by Obscurity Is No Panacea, The Flip Side: Open- Source Software, Is the "Many-Eyeballs Phenomenon" Real?. Why Vulnerability Detection Is Hard, Other Worries, On Publishing Cryptographic Algorithms, Two More Open-Source Fallacies, The Microsoft Fallacy, The Java Fallacy, An Example: GNU Mailman Security, More Evidence: Trojan Horses, To Open Source or Not to Open Source, Another Security Lesson from Buffer Overflows, Beating the Drum.

**Guiding Principles for Software Security:** Principle 1: Secure the Weakest Link, Principle 2: Practice Defense in Depth, Principle 3: Fail Securely, Principle 4: Follow the Principle of Least Privilege, Principle 5: Compartmentalize, Principle 6: Keep It Simple, Principle 7: Promote Privacy, Principle 8: Remember That Hiding Secrets is Hard, Principle 9: Be Reluctant to Trust, Principle 10: Use Your Community Resources Conclusion.

**Module-III: Buffer Overflows & Access Control:** What Is a Buffer Overflow?, Why Are Buffer Overflows a Security Problem?, Defending against Buffer Overflow, Major Gotchas, Internal Buffer Overflows, More Input Overflows, Other Risks, Tools That Can Help, Smashing Heaps and Stacks, Heap Overflows, Stack Overflows, Decoding the Stack, To Infinity ... and Beyond!, Attack Code, A UNIX Exploit, What About Windows?The UNIX Access Control Model, How UNIX Permissions Work, Modifying File Attributes, Modifying Ownership, The unask, The Programmatic Interface, Setuid Programming, Access Control in Windows NT, Compartmentalization, Fine-Grained Privileges.

**Module-IV: NETWORKING:** OSI Model, Sockets, Socket Functions, Socket Addresses, Network Byte Order, Internet Address Conversion, A Simple Server Example, A Web Client Example, A Tinyweb Server, Peeling Back the Lower Layers, Data-Link Layer, Network Layer, Transport Layer, Network Sniffing, Raw Socket Sniffer, libpcap Sniffer, Decoding the Layers, Active Sniffing, Denial of Service, SYN Flooding, The Ping of Death, Teardrop, Ping Flooding, Amplification Attacks, Distributed DoS Flooding, TCP/IP Hijacking, RST Hijacking, Continued Hijacking, Port Scanning, Stealth SYN Scan, FIN, X-mas, and Null Scans, Spoofing Decoys, Idle Scanning, Proactive Defense (shroud), Reach Out and Hack Someone, Analysis with GDB, Almost Only Counts with Hand Grenades, Port-Binding Shellcode.

**Module-V: SHELLCODE:** Assembly vs. C, Linux System Calls in Assembly, The Path to Shellcode, Assembly Instructions Using the Stack, Investigating with GDB, Removing Null Bytes, Shell-Spawning Shellcode, A Matter of Privilege, And Smaller Still, Port-Binding Shellcode, Duplicating Standard File Descriptors, Branching Control Structures, Connect-Back Shellcode.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

**Recommended Books:**

- “Building Secure Software: How to Avoid Security Problems the Right Way” John Viega, Gary R. Tata McGraw Hill
- Michael Howard, David LeBlanc, John Viega: 19 Deadly Sins of Software Security: Programming Flaws and How to Fix Them (Security One-off) (Addison-Wesley Professional Computing Series)
- Richard Sinn “ Software Security , Theory Programming and Practice” Cengage Learning

# APPLIED CRYPTOGRAPHY

Course Code: NCE4303

Credit Units: 03

## Course Contents:

### Module-I:

Introduction to security attacks, services and mechanism, Classical encryption techniques: substitution ciphers and transposition ciphers, cryptanalysis, steganography, Stream and block ciphers. Modern Block Ciphers: Block ciphers principles, Shannon's theory of confusion and diffusion, fiestal structure, Data encryption standard (DES), Strength of DES, Idea of differential cryptanalysis, block cipher modes of operations, Triple DES

### Module-II:

Advanced Encryption Standard (AES) encryption and decryption, Analysis, Principals of public key crypto systems, RSA algorithm, security of RSA. Rabin cryptosystem, Elgamal cryptosystem, Elliptical Curve cryptography,

### Module-III:

Message Authentication Codes: Authentication requirements, authentication functions, message authentication code, Random Oracle Model , hash functions, birthday attacks, security of hash functions, Secure hash algorithm (SHA),SHA-512, Whirlpool, Digital Signatures: Digital Signatures, Elgamal Digital Signature Techniques, Digital signature standards (DSS).

### Module-IV:

Key Management and distribution: Symmetric key distribution, Diffie-Hellman Key Exchange, Public key distribution, X.509 Certificates, Public key Infrastructure. Entity authentication, Authentication Applications: Kerberos,

### Module-V:

IP Security: Architecture, Authentication header, Encapsulating security payloads, combining security associations, key management. Introduction to Secure Socket Layer, Secure electronic transaction (SET).

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

## Recommended books:

- "Cryptography & Network Security", William Stallings, PHI
- "Cryptography & Network Security", Behrouz A. Forouzan, TMH
- "Cryptography & Network Security", AtukKahate, PHI

# WEB APPLICATION & PENETRATION TESTING

Course Code: NCE4306

Credit Units: 03

## Course Contents:

**Module-I: Introduction to Web Applications and Security:** The Web Application Architecture ,A Brief Word about HTML ,Transport: HTTP ,The Web Client ,The Web Server,The Web Application ,The Database ,Complications and Intermediaries ,The New Model: Web Services ,Potential Weak Spots ,The Methodology of Web Hacking ,Profile the Infrastructure ,Attack Web Servers ,Survey the Application,Attack the Authentication Mechanism ,Attack the Authorization Schemes , Perform a Functional Analysis,Exploit the Data Connectivity,Attack the Management Interfaces,Attack the Client,Launch a Denial-of-Service Attack Profiling: Server Discovery,Intuition ,Internet Footprinting, DNS Interrogation Ping,Discovery Using Port Scanning , Dealing with Virtual Servers, Service Discovery , Server Identification,Dealing with SSL.

**Module-II: Hacking Web Servers:** Common Vulnerabilities by Platform ,Apache,Microsoft Internet Information Server (IIS), Attacks Against IIS Components, Attacks Against IIS, Escalating Privileges on IIS, Netscape Enterprise Server , Other Web Server Vulnerabilities , Miscellaneous Web Server Hacking Techniques , Automated Vulnerability Scanning Software ,Whisker, Nikto , twwwscan/arirang , Stealth HTTP Scanner, Typhon , WebInspect , AppScan, FoundScan Web Module , Denial of Service Against Web Servers,

**Module-III: Surveying the Application:** Documenting Application Structure , Manually Inspecting the Application , Statically and Dynamically Generated Pages, Directory Structure , Helper Files , Java Classes and Applets , HTML Comments and Content ,Forms, Query Strings , Back-End Connectivity , Tools to Automate the Survey, lynx , Wget,Teleport Pro,Black Widow, WebSleuth, Common Countermeasures , A Cautionary Note, Protecting Directories,Protecting Include Files, Miscellaneous Tips. Authentication: Authentication Mechanisms, HTTP Authentication: Basic and Digest, Forms-Based Authentication, Microsoft Passport, Attacking Web Authentication,Password Guessing, Session ID Prediction and Brute Forcing, Subverting Cookies,Bypassing SQL-Backed Login Forms,Bypassing Authentication.

**Module-IV: Authorization:** The Attacks, Role Matrix, The Methodology , Query String, POST Data , Hidden Tags, URI,HTTP Headers,Cookies, Final Notes,Case Study: Using Curl to Map Permissions, Apache Authorization, IIS AuthorizationAttacking Session State Management:Client-Side Techniques, Hidden Fields, The URL,HTTP Headers and Cookies, Server-Side Techniques, Server-Generated Session IDs, Session Database, SessionID Analysis, Content Analysis, Time Windows.

**Module-V: Input Validation Attacks:** Expecting the Unexpected, Input Validation EndGame, Where to Find Potential Targets,Bypassing Client-Side Validation Routines , Common Input Validation Attacks , Buffer Overflow, Canonicalization (dot-dot-slash),Script Attacks , Boundary Checking, Manipulating the Application , SQL Injection and DatastoreAttacks,Command Execution, Common Side Effects,Common Countermeasures. Attacking Web Datastores: A SQL Primer,SQL Injection, Common Countermeasures. Web Client Hacking :The Problem of Client-Side Security,Attack Methodologies ,Active Content Attacks ,Java and JavaScript ,ActiveX,Cross-Site Scripting,Cookie Hijacking ,Case Study #: From the URL to the Command Line and Back,Case Study #: The Cross-Site Scripting Calendar

**Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

**Recommended Books:**

- “Hacking Exposed Web Applications”, 3rd edition, JOEL SCAMBRAY, VINCENT LIU, CALEB SIMA.
- “The Web Application Hacker's Handbook Discovering and Exploiting Security Flaws” Dafydd Stuttard, Marcus Pinto
- Rich Bowen, Ken Coar, “Apache Cookbook”, O'Reilly

# MALWARE ANALYSIS IN NETWORK SECURITY

Course Code: NCE4307

Credit Units: 03

## Course Contents:

**Module-I: BASIC STATIC TECHNIQUES :** Antivirus Scanning: A Useful First Step, Hashing: A Fingerprint for Malware, Finding Strings, Packed and Obfuscated Malware, Packing Files, Detecting Packers with PEiD, Portable Executable File Format, Linked Libraries and Functions, Static, Runtime, and Dynamic Linking, Exploring Dynamically Linked Functions with Dependency Walker, Imported Functions, Exported Functions, Static Analysis in Practice, PotentialKeylogger.exe: An Unpacked Executable, PackedProgram.exe: A Dead End, The PE File Headers and Sections, Examining PE Files with PView, Viewing the Resource Section with Resource Hacker, Using Other PE File Tools, PE Header Summary

**Module-II: VIRTUAL MACHINES & DYNAMIC ANALYSIS:** The Structure of a Virtual Machine, Creating Your Malware Analysis Machine, Configuring VMware, Using Your Malware Analysis Machine, Connecting Malware to the Internet, Connecting and Disconnecting Peripheral Devices, Taking Snapshots, Transferring Files from a Virtual Machine, The Risks of Using VMware for Malware Analysis, Record/Replay: Running Your Computer in Reverse, Sandboxes: The Quick-and-Dirty Approach Using a Malware Sandbox, Sandbox Drawbacks, Running Malware, Monitoring with Process Monitor, The Procmon Display, Filtering in Procmon, Viewing Processes with Process Explorer, The Process Explorer Display, Using the Verify Option, Comparing Strings, Using Dependency Walker, Analyzing Malicious Documents, Comparing Registry Snapshots with Regshot, Faking a Network, Using ApateDNS, Monitoring with Netcat, Packet Sniffing with Wireshark, Using INetSim, Basic Dynamic Tools in Practice,

**Module-III: RECOGNIZING C CODE CONSTRUCTS IN ASSEMBLY :** Overview of working with IDA Pro, Global vs Local Variables, Disassembling Arithmetic Operations, Recognizing if Statements, Analyzing Functions Graphically with IDA Pro, Recognizing Nested if Statements, Recognizing Loops, Finding for Loops, Finding while Loops, Understanding Function Call Conventions, cdecl, Stdcall, fastcall, Push vs Move, Analyzing switch Statements, If Style, Jump Table, Disassembling Arrays, Identifying Structs, Analyzing Linked List Traversal,

**Module-IV: ANALYZING MALICIOUS WINDOWS PROGRAMS :** The Windows API, Types and Hungarian Notation, Handles, File System Functions, Special Files, The Windows Registry, Registry Root Keys, Regedit, Programs that Run Automatically, Common Registry Functions, Analyzing Registry Code in Practice, Registry Scripting with reg Files, Networking APIs, Berkeley Compatible Sockets, The Server and Client Sides of Networking, The WinINet API, Following Running Malware, DLLs, Processes, Threads, Interprocess Coordination with Mutexes, Services, The Component Object Model, Exceptions: When Things Go Wrong, Kernel vs User Mode, The Native API,

**Module-V: MALWARE BEHAVIOR & COVERT MALWARE LAUNCHING :** Downloaders and Launchers, Backdoors, Reverse Shell, RATs, Botnets, RATs and Botnets Compared, Credential Stealers, GINA Interception, Hash Dumping, Keystroke Logging, Persistence Mechanisms, The Windows Registry, Trojanized System Binaries, DLL Load-Order Hijacking, Privilege Escalation, Using SeDebugPrivilege, Covering Its Tracks—User-Mode Rootkits, IAT Hooking, Inline Hooking, Launchers, Process Injection, DLL Injection, Direct Injection, Process Replacement, Hook Injection, Local and Remote Hooks, Keyloggers Using Hooks, Using SetWindowsHookEx, Thread Targeting, Detours, APC Injection, APC Injection from User Space, APC Injection from Kernel Space.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

**Recommended Books:**

- “Practical Malware Analysis” by Michael Sikorski and Andrew Honig
- “The Rootkit Arsenal: Escape and Evasion in the Dark Corners of the System” Second Edition by Reverend Bill Blunden
- “Rootkits: Subverting the Windows Kernel” by Jamie Butler and Greg Hoglund
- “Practical Reverse Engineering” by Dang, Gazet, Bachaalany

# WEB SECURITY

**Course Code: NCE4308**

**Credit Units: 03**

## **Course Contents:**

**Module-I: The E-Commerce Playground:** Web Languages: The Babylon of the 21st Century, Languages of the Web, HTML, Dynamic HTML (DHTML), XML, XHTML, Perl, PHP, ColdFusion, Active Server Pages, CGI, Java. Web and Database Servers: Web Servers, Apache, Microsoft's Internet Information Server (IIS), Database Servers, Microsoft SQL Server, Oracle.

**Module-II: Shopping Carts and Payment Gateways:** Evolution of the Storefront, Electronic Shopping, Shopping Cart Systems, Scope and Lifetime of an Electronic Shopping Cart, Collecting, Analyzing, and Comparing Selected Components, Keeping Track of the Total Cost, Change of Mind, Processing the Purchase, Implementation of a Shopping Cart Application, Product Catalog, Session Management, Database Interfacing, Integration with the Payment Gateway, Examples of Poorly Implemented Shopping Carts, Carello Shopping Cart, DCShop Shopping Cart, Hassan Consulting's Shopping Cart, Cart32 and Several Other Shopping Carts, Processing Payments, Finalizing the Order, Method of Payment, Verification and Fraud Protection, Order Fulfillment and Receipt Generation, Overview of the Payment Processing System, Innovative Ways to Combat Credit Card Fraud, Order Confirmation Page, Payment Gateway Interface, Transaction Database Interface, Interfacing with a Payment Gateway—An Example, Payment System Implementation Issues, Integration, Temporary Information, SSL, Storing User Profiles, Vulnerabilities Caused by Poor Integration of Shopping Cart and Payment Gateway, PayPal—Enabling Individuals to Accept Electronic Payments,

**Module-III: HTTP and HTTPS: The Hacking Protocols, Protocols of the Web, HTTP, HTTPS (HTTP over SSL).**

URL: The Web Hacker's Sword: URL Structure, Web Hacker Psychology, URLs and Parameter Passing. URL Encoding, Meta-Characters, Specifying Special Characters on the URL String, Meta-Characters and Input Validation, Unicode Encoding, The Acme Art, Inc. Hack, Abusing URL Encoding, Unicode Encoding and Code Red's Shell Code, Unicode Vulnerability, The Double-Decode or Superfluous Decode Vulnerability, HTML Forms, Anatomy of an HTML Form, Input Elements, Parameter Passing Via GET and POST, Case Study: Reconnaissance Leaks Corporate Assets.

**Module-IV: Web: Under (the) Cover:** The Components of a Web Application, The Front-End Web Server, The Web Application Execution Environment. The Database Server, Wiring the Components, The Native Application Processing Environment, Web Server APIs and Plug-Ins, URL Mapping and Internal Proxying, Proxying with a Back-End Application Server. Examples. Connecting with the Database, The Craftiest Hack of Them All, Using Native Database APIs. Examples.

Using ODBC, Using JDBC, Specialized Web Application Servers, Identifying Web Application Components from URLs, The Basics of Technology Identification, Examples, More Examples, Advanced Techniques for Technology Identification, Examples, Identifying Database Servers, Countermeasures, Rule 1: Minimize Information Leaked from the HTTP Header, Rule 2: Prevent Error Information from Being Sent to the Browser.

**Module-V: Reading Between the Lines:** Information Leakage Through HTML, What the Browsers Don't Show You, Netscape Navigator—View | Page Source, Internet Explorer—View | Source, Clues to Look For, HTML Comments, Revision History, Developer or Author Details, Cross-References to Other Areas of the Web Application, Reminders and Placeholders, Comments Inserted by Web Application

Servers, Old “Commented-Out” Code, Internal and External Hyperlinks, E-mail Addresses and Usernames, UBE, UCE, Junk Mail, and Spam, Keywords and Meta Tags, Hidden Fields, Client-Side Scripts, Automated Source Sifting Techniques, Using wget, Using grep, Sam Spade, Black Widow, and Teleport Pro.

**Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

**Recommended Books:**

- McClure, Stuart, Saumil Shah, and Shreeraj Shah. Web Hacking: attacks and defense. Addison Wesley. 2003.
- Garms, Jess and Daniel Somerfield. Professional Java Security. Wrox. 2001.

# DIGITAL WATERMARKING & STAGENOGRAPHY

Course Code: NCE4309

Credit Units: 03

## Course Contents:

### Module-I: Introduction Applications and Properties

Information Hiding, Steganography, and Watermarking , History of Watermarking , History of Steganography , Importance of Digital Watermarking , Importance of Steganography , Applications of Watermarking , Applications of Steganography Steganography for Dissidents, Steganography for Criminals, Properties of Watermarking Systems, Evaluating Watermarking Systems, Properties of Steganographic and Steganalysis Systems , Evaluating and Testing Steganographic Systems

**Module-II: Models of Watermarking:** Notation , Communications , Communication-Based Models of Watermarking , Geometric Models of Watermarking , Modeling Watermark Detection by Correlation Watermarking with side information: Informed Embedding, Watermarking Using Side Information, Dirty-Paper Codes

**Module-III: Practical Dirty-Paper Codes:** Practical Considerations for Dirty-Paper Codes , Broad Approaches to Dirty-Paper Code Design, Implementing DM with a Simple Lattice Code , Typical Tricks in Implementing Lattice Codes Coding with Better Lattices , Making Lattice Codes Survive Valumetric Scaling Dirty-Paper Trellis Codes

**Watermark Security:** Security Requirements, Watermark Security and Cryptography Some Significant Known Attacks

**Module-IV: Steganography:** Steganographic Communication , The Channel , The Building Blocks , Notation and Terminology, Information-Theoretic Foundations of Steganography , Cachin's Definition of Steganographic Security , Practical Steganographic Methods , Statistics Preserving Steganography , Model-Based Steganography , Masking Embedding as Natural Processing , Minimizing the Embedding Impact, Matrix Embedding , Nonshared Selection Rule,

**Module-V: Steganalysis:** Steganalysis Scenarios , Detection , Forensic Steganalysis , The Influence of the Cover Work on Steganalysis , Some Significant Steganalysis Algorithms , LSB Embedding and the Histogram Attack , Sample Pairs Analysis , Blind Steganalysis of JPEG Images Using Calibration, Blind Steganalysis in the Spatial Domain.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

## Recommended Books:

- “Digital Watermarking and Steganography” Ingemar J. Cox, Matthew L. Miller, Jeffrey A. Bloom, Jessica Fridrich, Ton Kalker, , Margan Kaufmann Publishers, New York, 2008.
- “Digital Watermarking”, Ingemar J. Cox, Matthew L. Miller, Jeffrey A. Bloom, MarganKaufmannPublishers, New York, 2003.
- “Techniques and Applications of Digital Watermarking and Contest Protection”, Michael Arnold, Martin Schmucker, Stephen D. Wolthusen, Artech House, London, 2003.

## BIOMETRIC IMAGE PROCESSING LAB

Course Code: NCE4304

Credit Units: 01

### List of Exercises

Basic exercises on image loading, manipulation, edge finding, features extraction, face recognition, segmentation, fingerprint, iris, signature recognition.

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## APPLIED CRYPTOGRAPHY LAB

Course Code: NCE4305

Credit Units: 02

### Course Contents:

- Program to implement Ceaser Cipher.
- Program to implement Ceaser Cipher for any value of shift parameter.
- Programs to implement Playfair cipher, affine cipher, vegnere cipher.
- Program to implement Vernam Cipher.
- Program to implement Hill Cipher.
- Program to implement Rail fence and Columnar transposition cipher.
- Program to implement DES/AES/IDEA algorithm
- Program to implement RSA algorithm
- Program to implement Rabin Cryptosystem and ElgamalCryptsystem.
- Program to implement Digital Signature using RSA/Elgamal.
- Implementation study of MD5/SHA-1.
- Programs to implement ECB/CBC/OFB modes of operation.

Software: C/C++/Python/Java

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# SUMMER INTERNSHIP EVALUATION

**Course Code: NCE4335**

**Credit Units: 06**

## **GUIDELINES FOR PROJECT FILE AND PROJECT REPORT**

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critically analyzed by the faculty guide and corrected by the student at each stage.

## **PROJECT FILE**

The Project File may be a very useful tool for undertaking an assignment along-with a normal semester, an exploratory study, sponsored projects, a project undertaken during summer period or any other period where the researcher is not working with a company/organization. The project/ assignment may also be a part of the bigger research agenda being pursued by a faculty/ institution/ department

The Project File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation. This file may be considered in continuous assessment.

### **In general, the File should be comprehensive and include:**

A short account of the activities that were undertaken as part of the project;

A statement about the extent to which the project has achieved its stated objectives;

A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;

Any activities planned but not yet completed as part of the project, or as a future initiative directly resulting from the project;

Any problems that have arisen and may be useful to document for future reference.

## **Project Report**

The Project Report is the final research report that the student prepares on the project assigned to him. In case of sponsored project the lay out of the project could be as prescribed by the sponsoring organization. However, in other cases the following components should be included in the project report:

### **Title or Cover Page**

The title page should contain Project Title; Student's Name; Programme; Year and Semester and Name of the Faculty Guide.

### **Acknowledgement(s)**

Acknowledgment to any advisory or financial assistance received in the course of work may be given. It is incomplete without student's signature.

### **Abstract**

A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an

entire summary of the project, but rather a concise summary of the scope and results of the project. It should not exceed more than 1000 words.

### **Table of Contents**

Titles and subtitles are to correspond exactly with those in the text.

### **Introduction**

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

### **Materials and Methods**

This section should aim at experimental designs, materials used (wherever applicable). Methodology should be mentioned in details including modifications undertaken, if any. It includes organization site(s), sample, instruments used with its validation, procedures followed and precautions.

### **Results and Discussion**

Present results, discuss and compare these with those from other workers, etc. In writing this section, emphasis should be laid on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary, do not write in “point” form.

While presenting the results, write at length about the the various statistical tools used in the data interpretation. The result interpretation should be simple but full of data and statistical analysis. This data interpretation should be in congruence with the written objectives and the inferences should be drawn on data and not on impression. Avoid writing straight forward conclusion rather, it should lead to generalization of data on the chosen sample.

Results and its discussion should be supporting/contradicting with the previous research work in the given area. Usually one should not use more than two researches in either case of supporting or contradicting the present case of research.

### **Conclusion(s) & Recommendations**

A conclusion should be the final section in which the outcome of the work is mentioned briefly.

Check that your work answers the following questions:

- Did the research project meet its aims (check back to introduction for stated aims)?
- What are the main findings of the research?
- Are there any recommendations?
- Do you have any conclusion on the research process itself?

### **Implications for Future Research**

This should bring out further prospects for the study either thrown open by the present work or with the purpose of making it more comprehensive.

## Appendices

The Appendices contain material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

## References

References should include papers, books etc. referred to in the body of the report. These should be written in the alphabetical order of the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

## Examples

### For research article

Voravuthikunchai SP, Lortheeranuwat A, Ninrprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichia coli* O157: H7. *Clin Microbiol Infect*, 8 (suppl 1): 116–117.

### For book

Kowalski, M. (1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), 7: 63-67

## The Layout Guidelines for the Project File & Project Report

- A4 size Paper
- Font: Arial (10 points) or Times New Roman (12 points)
- Line spacing: 1.5
- Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

## ASSESSMENT OF THE PROJECT FILE AND THE PROJECT REPORT

Essentially, the assessment will be based on the quality of the report, the technical merit of the project and the project execution. Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project. Project execution is concerned with assessing how much work has been put in.

The Project should fulfill the following *assessment objectives*

- Range of Research Methods used to obtain information
- Execution of Research
- Data Analysis (Analyze Quantitative/ Qualitative information)
- Quality Control
- Conclusions

### Assessment Scheme:

**Continuous Evaluation:** 40% (Based on punctuality, regularity of work, adherence to plan and methodology, refinements/ mid-course corrections etc. as reflected in the Project File.)

**Final Evaluation:** 60% (Based on the Documentation in the file, Final report layout, analysis and results, achievement of objectives, presentation/ viva)

# PROJECT-DISSERTATION-I

Course Code: NCE4337

Credit Units: 05

## GUIDELINES FOR DISSERTATION

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critiqued by the faculty guide and corrected by the student at each stage.

The File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation.

### **In general, the File should be comprehensive and include**

A short account of the activities that were undertaken as part of the project;

A statement about the extent to which the project has achieved its stated goals.

A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;

Any activities planned but not yet completed as part of the DISSERTATION, or as a future initiative directly resulting from the project;

Any problems that have arisen that may be useful to document for future reference.

### ➤ **Report Layout**

The report should contain the following components:

### ➤ **Title or Cover Page**

The title page should contain the following information: Project Title; Student's Name; Course; Year; Supervisor's Name.

### ➤ **Acknowledgements** (optional)

Acknowledgment to any advisory or financial assistance received in the course of work may be given.

### ➤ **Abstract**

A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project

### ➤ **Table of Contents**

Titles and subtitles are to correspond exactly with those in the text.

### ➤ **Introduction**

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

### ➤ **Materials and Methods**

This section should aim at experimental designs, materials used. Methodology should be mentioned in details including modifications if any.

### ➤ **Results and Discussion**

Present results, discuss and compare these with those from other workers, etc. In writing these section, emphasis should be given on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary never write in “point” form.

### ➤ **Conclusion**

A conclusion should be the final section in which the outcome of the work is mentioned briefly.

### ➤ **Future prospects**

### ➤ **Appendices**

The Appendix contains material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

### ➤ **References / Bibliography**

This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

## **Examples**

### **For research article**

Voravuthikunchai SP, Lortheeranuwat A, Ninrprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichia coli* O157: H7. *Clin Microbiol Infect*, **8** (suppl 1): 116–117.

### **For book**

Kowalski, M. (1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), **7**: 63–67

## **ASSESSMENT OF THE DISSERTATION FILE**

Essentially, marking will be based on the following criteria: the quality of the report, the technical merit of the project and the project execution.

Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project.

Project execution is concerned with assessing how much work has been put in.

The File should fulfill the following *assessment objectives*:

### **Range of Research Methods used to obtain information**

### **Execution of Research**

**Data Analysis**

Analyse Quantitative/ Qualitative information  
Control Quality

**Draw Conclusions****Examination Scheme:**

Dissertation	50
Viva Voce	50
<b>Total</b>	<b>100</b>

ata, leading to production of a structured report.

**Selecting the Dissertation Topic**

It is usual to give you some discretion in the choice of topic for the dissertation and the approach to be adopted. You will need to ensure that your dissertation is related to your field of specialization.

Deciding this is often the most difficult part of the dissertation process, and perhaps, you have been thinking of a topic for some time.

It is important to distinguish here between ‘dissertation topic’ and ‘dissertation title’. The topic is the specific area that you wish to investigate. The title may not be decided until the dissertation has been written so as to reflect its content properly.

Few restrictions are placed on the choice of the topic. Normally we would expect it to be:

- relevant to business, defined broadly;
- related to one or more of the subjects or areas of study within the core program and specialisation stream;
- clearly focused so as to facilitate an in-depth approach, subject to the availability of adequate sources of information and to your own knowledge;
- of value and interest to you and your personal and professional development.

**Planning the Dissertation**

This will entail following:

- Selecting a topic for investigation.
- Establishing the precise focus of your study by deciding on the aims and objectives of the dissertation, or formulating questions to be investigated. Consider very carefully what is worth investigating and its feasibility.
- Drawing up initial dissertation outlines considering the aims and objectives of the dissertation. Workout various stages of dissertation
- Devising a timetable to ensure that all stages of dissertation are completed in time. The timetable should include writing of the dissertation and regular meetings with your dissertation guide.

**The Dissertation plan or outline**

It is recommended that you should have a dissertation plan to guide you right from the outset. Essentially, the dissertation plan is an outline of what you intend to do, chapter wise and therefore should reflect the aims and objectives of your dissertation.

There are several reasons for having a dissertation plan

- It provides a focus to your thoughts.
- It provides your faculty-guide with an opportunity, at an early stage of your work, to make constructive comments and help guide the direction of your research.
- The writing of a plan is the first formal stage of the writing process, and therefore helps build up your confidence.
- In many ways, the plan encourages you to come to terms with the reading, thinking and writing in a systematic and integrated way, with plenty of time left for changes.
- Finally, the dissertation plan generally provides a revision point in the development of your dissertation report in order to allow appropriate changes in the scope and even direction of your work as it progresses.

### **Keeping records**

This includes the following:

- Making a note of everything you read; including those discarded.
- Ensuring that when recording sources, author's name and initials, date of publication, title, place of publication and publisher are included. (You may consider starting a card index or database from the outset). Making an accurate note of all quotations at the time you read them.
- Make clear what is a direct quotation and what is your paraphrase.

### **Dissertation format**

All students must follow the following rules in submitting their dissertation.

- Front page should provide title, author, Name of degree/diploma and the date of submission.
- Second page should be the table of contents giving page references for each chapter and section.
- The next page should be the table of appendices, graphs and tables giving titles and page references.
- Next to follow should be a synopsis or abstract of the dissertation (approximately 500 words)
- Next is the 'acknowledgements'.
- Chapter I should be a general introduction, giving the background to the dissertation, the objectives of the dissertation, the rationale for the dissertation, the plan, methodological issues and problems. The limitations of the dissertation should also be hinted in this chapter.
- Other chapters will constitute the body of the dissertation. The number of chapters and their sequence will usually vary depending on, among others, on a critical review of the previous relevant work relating to your major findings, a discussion of their implications, and conclusions, possibly with a suggestion of the direction of future research on the area.
- After this concluding chapter, you should give a list of all the references you have used. These should be cross - references with your text. For articles from journals, the following details are required e.g.

Draper P and Pandyal K. 1991, The Investment Trust Discount Revisited, Journal of Business Finance and Accounting, Vol18, No6, Nov, pp 791-832.

For books, the following details are required:

Levi, M. 1996, International Financial Management, Prentice Hall, New York, 3rd Ed, 1996

- Finally, you should give any appendices. These should only include relevant statistical data or material that cannot be fitted into the above categories.

### **The Layout Guidelines for the Dissertation**

- A4 size Paper
- Font: Arial (10 points) or Times New Roman (12 points)

- Line spacing: 1.5
- Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

### **Guidelines for the assessment of the Dissertation**

While evaluating the dissertation, faculty guide will consider the following aspects:

1. Has the student made a clear statement of the objective or objective(s).
2. If there is more than one objective, do these constitute parts of a whole?
3. Has the student developed an appropriate analytical framework for addressing the problem at hand.
4. Is this based on up-to-date developments in the topic area?
5. Has the student collected information / data suitable to the frameworks?
6. Are the techniques employed by the student to analyse the data / information appropriate and relevant?
7. Has the student succeeded in drawing conclusion form the analysis?
8. Do the conclusions relate well to the objectives of the project?
9. Has the student been regular in his work?
10. Layout of the written report.

### **Assessment Scheme:**

<b>Continuous Evaluation:</b>	40%
(Based on Abstract, Regularity, Adherence to initial plan, Records etc.)	

<b>Final Evaluation:</b> Based on,	60%
Contents & Layout of the Report,	20
Conceptual Framework,	05
Objectives & Methodology and	05
Implications & Conclusions	10
Viva & Presentation	20

## Syllabus - Fourth Semester

### PROJECT-DISSERTATION-II

Course Code: NCE4437

Credit Units: 15

#### GUIDELINES FOR DISSERTATION

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critiqued by the faculty guide and corrected by the student at each stage.

The File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation.

#### In general, the File should be comprehensive and include

A short account of the activities that were undertaken as part of the project;

A statement about the extent to which the project has achieved its stated goals.

A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;

Any activities planned but not yet completed as part of the DISSERTATION, or as a future initiative directly resulting from the project;

Any problems that have arisen that may be useful to document for future reference.

#### ➤ Report Layout

The report should contain the following components:

#### ➤ Title or Cover Page

The title page should contain the following information: Project Title; Student's Name; Course; Year; Supervisor's Name.

#### ➤ Acknowledgements (optional)

Acknowledgment to any advisory or financial assistance received in the course of work may be given.

#### ➤ Abstract

A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project

#### ➤ Table of Contents

Titles and subtitles are to correspond exactly with those in the text.

#### ➤ Introduction

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

➤ **Materials and Methods**

This section should aim at experimental designs, materials used. Methodology should be mentioned in details including modifications if any.

➤ **Results and Discussion**

Present results, discuss and compare these with those from other workers, etc. In writing these section, emphasis should be given on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary never write in “point” form.

➤ **Conclusion**

A conclusion should be the final section in which the outcome of the work is mentioned briefly.

➤ **Future prospects**

➤ **Appendices**

The Appendix contains material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

➤ **References / Bibliography**

This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

## **Examples**

### **For research article**

Voravuthikunchai SP, Lortheeranuwat A, Ninrprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichia coli* O157: H7. *ClinMicrobiol Infect*, **8** (suppl 1): 116–117.

### **For book**

Kowalski,M.(1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), **7**: 63-67

## **ASSESSMENT OF THE DISSERTATION FILE**

Essentially, marking will be based on the following criteria: the quality of the report, the technical merit of the project and the project execution.

Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project.

Project execution is concerned with assessing how much work has been put in.

The File should fulfill the following *assessment objectives*:

## **Range of Research Methods used to obtain information**

### **Execution of Research**

#### **Data Analysis**

Analyse Quantitative/ Qualitative information

Control Quality

### **Draw Conclusions**

#### Examination Scheme:

Dissertation	50
Viva Voce	50
<b>Total</b>	<b>100</b>

ata, leading to production of a structured report.

### **Selecting the Dissertation Topic**

It is usual to give you some discretion in the choice of topic for the dissertation and the approach to be adopted. You will need to ensure that your dissertation is related to your field of specialization.

Deciding this is often the most difficult part of the dissertation process, and perhaps, you have been thinking of a topic for some time.

It is important to distinguish here between 'dissertation topic' and 'dissertation title'. The topic is the specific area that you wish to investigate. The title may not be decided until the dissertation has been written so as to reflect its content properly.

Few restrictions are placed on the choice of the topic. Normally we would expect it to be:

- relevant to business, defined broadly;
- related to one or more of the subjects or areas of study within the core program and specialisation stream;
- clearly focused so as to facilitate an in-depth approach, subject to the availability of adequate sources of information and to your own knowledge;
- of value and interest to you and your personal and professional development.

### **Planning the Dissertation**

This will entail following:

- Selecting a topic for investigation.
- Establishing the precise focus of your study by deciding on the aims and objectives of the dissertation, or formulating questions to be investigated. Consider very carefully what is worth investigating and its feasibility.
- Drawing up initial dissertation outlines considering the aims and objectives of the dissertation. Workout various stages of dissertation
- Devising a timetable to ensure that all stages of dissertation are completed in time. The timetable should include writing of the dissertation and regular meetings with your dissertation guide.

### **The Dissertation plan or outline**

It is recommended that you should have a dissertation plan to guide you right from the outset. Essentially, the dissertation plan is an outline of what you intend to do, chapter wise and therefore should reflect the aims and objectives of your dissertation.

There are several reasons for having a dissertation plan

- It provides a focus to your thoughts.
- It provides your faculty-guide with an opportunity, at an early stage of your work, to make constructive comments and help guide the direction of your research.
- The writing of a plan is the first formal stage of the writing process, and therefore helps build up your confidence.
- In many ways, the plan encourages you to come to terms with the reading, thinking and writing in a systematic and integrated way, with plenty of time left for changes.
- Finally, the dissertation plan generally provides a revision point in the development of your dissertation report in order to allow appropriate changes in the scope and even direction of your work as it progresses.

### **Keeping records**

This includes the following:

- Making a note of everything you read; including those discarded.
- Ensuring that when recording sources, author's name and initials, date of publication, title, place of publication and publisher are included. (You may consider starting a card index or database from the outset). Making an accurate note of all quotations at the time you read them.
- Make clear what is a direct quotation and what is your paraphrase.

### **Dissertation format**

All students must follow the following rules in submitting their dissertation.

- Front page should provide title, author, Name of degree/diploma and the date of submission.
- Second page should be the table of contents giving page references for each chapter and section.
- The next page should be the table of appendices, graphs and tables giving titles and page references.
- Next to follow should be a synopsis or abstract of the dissertation (approximately 500 words)
- Next is the 'acknowledgements'.
- Chapter I should be a general introduction, giving the background to the dissertation, the objectives of the dissertation, the rationale for the dissertation, the plan, methodological issues and problems. The limitations of the dissertation should also be hinted in this chapter.
- Other chapters will constitute the body of the dissertation. The number of chapters and their sequence will usually vary depending on, among others, on a critical review of the previous relevant work relating to your major findings, a discussion of their implications, and conclusions, possibly with a suggestion of the direction of future research on the area.
- After this concluding chapter, you should give a list of all the references you have used. These should be cross - references with your text. For articles from journals, the following details are required e.g.

Draper P and Pandyal K. 1991, The Investment Trust Discount Revisited, Journal of Business Finance and Accounting, Vol18, No6, Nov, pp 791-832.

For books, the following details are required:

Levi, M. 1996, International Financial Management, Prentice Hall, New York, 3rd Ed, 1996

- Finally, you should give any appendices. These should only include relevant statistical data or material that cannot be fitted into the above categories.

### **The Layout Guidelines for the Dissertation**

- A4 size Paper
- Font: Arial (10 points) or Times New Roman (12 points)
- Line spacing: 1.5
- Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

### **Guidelines for the assessment of the Dissertation**

While evaluating the dissertation, faculty guide will consider the following aspects:

- 11.Has the student made a clear statement of the objective or objective(s).
- 12.If there is more than one objective, do these constitute parts of a whole?
- 13.Has the student developed an appropriate analytical framework for addressing the problem at hand.
- 14.Is this based on up-to-date developments in the topic area?
- 15.Has the student collected information / data suitable to the frameworks?
- 16.Are the techniques employed by the student to analyse the data / information appropriate and relevant?
- 17.Has the student succeeded in drawing conclusion form the analysis?
- 18.Do the conclusions relate well to the objectives of the project?
- 19.Has the student been regular in his work?
- 20.Layout of the written report.

### **Assessment Scheme:**

#### **Continuous Evaluation:**

40%

(Based on Abstract, Regularity,  
Adherence to initial plan, Records etc.)

#### **Final Evaluation:** Based on,

# Syllabus - First Semester

## ADVANCED DATA STRUCTURE & ALGORITHMS

**Course Code: DSE4101**

**Credit Units: 03**

### Course Objective:

The objective to this course is to equip students with advanced concepts of data structures like Huffman trees, Self-organizing trees, different types of heaps and their time complexity. Advanced topics and graphs and graph algorithms, geometric algorithms and parallel algorithms.

### Course Contents:

#### Module-I

ADVANCED TREES: Definitions Operations on Weight Balanced Trees (Huffman Trees), 2-3 Trees and Red- Black Trees, Splay Tree. Augmenting Red-Black Trees to Dynamic Order Statistics and Interval Tree Applications. Operations on Disjoint sets and its union-find problem Implementing Sets. Dictionaries, Priority Queues and Concatenable Queues using 2-3 Trees.

#### Module-II

MERGEABLE HEAPS: Mergeable Heap Operations, Binomial Trees Implementing Binomial Heaps and its Operations, 2-3-4. Trees and 2-3-4 Heaps. Amortization analysis and Potential Function of Fibonacci Heap Implementing Fibonacci Heap. SORTING NETWORK: Comparison network, zero-one principle, bitonic sorting and merging network sorter.

#### Module-III

GRAPH THEORY DEFINITIONS: Definitions of Isomorphic Components. Circuits, Fundamental Circuits, Cut-sets. Cut-Vertices Planer and Dual graphs, Spanning Trees, Kuratowski's two Graphs.

#### Module-IV

GRAPH THEORY ALGORITHMS: Algorithms for Connectedness, Finding all Spanning Trees in a Weighted Graph and Planarity Testing, Breadth First and Depth First Search, Topological Sort, Strongly Connected Components and Articulation Point. Single Min-Cut Max-Flow theorem of Network Flows. Ford-Fulkerson Max Flow Algorithms.

#### Module-V

Geometric algorithms: Point location, convex hulls and Voronoi diagrams, Arrangements. Parallel algorithms: Basic techniques for sorting, searching, merging

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE

# ADVANCED DATABASE MANAGEMENT SYSTEMS

**Course Code: DSE4102**

**Credit Units: 03**

## **Course Objective:**

The objective of this course is to expose the students to the implementation techniques of database system. This course explains techniques for query processing and optimization with transaction and concurrency control techniques

## **Course Contents:**

### **Module I: Relational Databases**

Integrity Constraints revisited, Extended ER diagram, Relational Algebra & Calculus, Functional, Multivalued and Join Dependency, Normal Forms, Rules about functional dependencies.

### **Module II: Query Processing and Optimization**

Valuation of Relational Operations, Transformation of Relational Expressions, Indexing and Query Optimization, Limitations of Relational Data Model, Null Values and Partial Information.

### **Object Oriented and Object Relational Databases**

Modeling Complex Data Semantics, Specialization, Generalization, Aggregation and Association, Objects, Object Identity, Equality and Object Reference, Architecture of Object Oriented and Object Relational Databases

### **Module III: Parallel and Distributed Databases**

Distributed Data Storage – Fragmentation & Replication, Location and Fragment

Transparency Distributed Query Processing and Optimization, Distributed Transaction Modeling and concurrency Control, Distributed Deadlock, Commit Protocols, Design of Parallel Databases, Parallel Query Evaluation.

### **Advanced Transaction Processing**

Nested and Multilevel Transactions, Compensating Transactions and Saga, Long Duration Transactions, Weak Levels of Consistency, Transaction Work Flows, Transaction Processing Monitors.

### **Module IV**

Multimedia databases, Databases on the Web and Semi-Structured Data. Case Study: Oracle Xi

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# ADVANCED COMPUTER NETWORKS

**Course Code: DSE4104**

**Credit Units: 03**

## **Course Objective:**

The objective of the course is to provide thorough understanding & in-depth knowledge of concepts in computer networks Such as Internet protocols and routing, local area networks, wireless communications and networking, performance analysis, congestion control, TCP, network address translation, multimedia over IP, switching and routing, mobile IP, multicasting, IPv6. Peer-to-peer networking, network security, and other current research topics. A focus will be placed on wireless networking, reflecting rapid advances in this area. This course motivates the students to explore current research areas in the same field.

## **Course Contents:**

### **Module I**

Uses computer networks, Reference Models, TCP/IP suite of protocols, MAC protocols for high-speed LANS, MANs, and wireless LANs. (For example, FDDI, DQDB, HIPPI, Gigabit Ethernet, Wireless Ethernet, etc.)Fast access technologies. (For example, ADSL, Cable Modem, etc.)

### **Module II**

Network Layer Design Issues, Routing Algorithms, Congestion Control Algorithms, Quality of Service, Internet Working, Network Layer in Internet.

IPv6 basic protocol, extensions and options, support for QoS, security, etc., Changes to other protocols, Application Programming Interface for IPv6.

### **Module III**

Mobile IP, IP Multicasting. Multicast routing protocols, address assignments, session discovery, etc.

### **Module IV**

The Transport Protocol: The Transport Service, Elements of transport protocol, a simple Transport Protocol, Internet Transport Protocols UDP, Internet Transport Protocols TCP, TCP extensions for high-speed networks, transaction-oriented applications Performance Issues.

The Application Layer: DNS-(Domain Name System), Electronic Mail, World Wide Web Multimedia.

### **Module V**

Overview of network security, Secure-HTTP, SSL, ESP, Key distribution protocols. Digital signatures, digital certificates-mail Security, Web security, Social Issues.

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>H</b>	<b>V/S/O</b>	<b>EE</b>

# DIGITAL COMPUTER ORGANIZATION

Course Code: DSE4103

Credit Units: 03

## Course Objective:

With increase in availability of system resources, concept of parallel architecture has obtained immense popularity. This course provides a comprehensive study of scalable and parallel computer architectures for achieving a proportional increase in performance with increasing system resources. In this course we have discussed the theory, technology, architecture (hardware) and software aspects of parallel computer and Vector computers.

## Course Contents:

### Module I: Parallel computer models

The state of computing, Multiprocessors and multicomputers, Multivector and SIMD computers, Architectural development tracks

Program and network properties: Conditions of parallelism, Data and resource dependences, Hardware and software parallelism, Program partitioning and scheduling, Grain size and latency, Program flow mechanisms, Control flow versus data flow, Data flow architecture, Demand driven mechanisms, Comparisons of flow mechanisms

### Module II: System Interconnect Architectures

Network properties and routing, Static interconnection networks, Dynamic interconnection Networks, Multiprocessor system interconnects, Hierarchical bus systems, Crossbar switch and multiport memory, Multistage and combining network.

### Module III: Processors and Memory Hierarchy

Advanced processor technology, Instruction-set Architectures, CISC Scalar Processors, RISC Scalar Processors, Superscalar Processors, VLIW Architectures, Vector and Symbolic processors

Memory Technology: Hierarchical memory technology, Inclusion, Coherence and Locality, Memory capacity planning, Virtual Memory Technology

### Module IV: Backplane Bus System

Backplane bus specification, Addressing and timing protocols, Arbitration transaction and interrupt, Pipelining: Linear pipeline processor, Nonlinear pipeline processor, Instruction pipeline design, Mechanisms for instruction pipelining, Dynamic instruction scheduling, Branch handling techniques, Arithmetic Pipeline Design, Computer arithmetic principles.

### Module V: Vector Processing Principles

Vector instruction types, Vector-access memory schemes.

Synchronous Parallel Processing: SIMD Architecture and Programming Principles, SIMD Parallel Algorithms

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

## ADVANCED DATABASE MANAGEMENT SYSTEM LAB

**Course Code: DSE4106**

**Credit Units: 01**

**Programs should be based on following topics:**

**Quick Review** of Simple SQL Statements, SQL Built-in Functions, Primary Key, Foreign Key, Normalization, Joins View, Union. **Emphasis** on PL/SQL, Cursors 8. Exception handling, Procedure, Functions, Trigger, concurrency control, transaction processing. Introduction to SQLite.

**Recommended Software:** PostgreSQL, MySQL, Oracle.

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# ADVANCED COMPUTER NETWORK LAB

**Course Code: DSE4107**

**Credit Units: 01**

## Course Contents:

1. Study of different types of networking cables, and implement cross and straight cable using clamping tool
2. Implementation of Stop and Wait Protocol and Sliding Window Protocol.
3. Study of Socket Programming and Client
4. Write a code simulating ARP /RARP protocols.
5. Write a code simulating PING and TRACEROUTE commands
6. Create a socket for HTTP for web page upload and download.
7. Write a program to implement RPC (Remote Procedure Call)
8. Implementation of Subnetting
9. Applications using TCP Sockets like Echo client and echo server, Chat Server, File Transfer, Applications using TCP and UDP Sockets ,DNS,SNMP
10. Study of Network simulator (NS).and Simulation of Congestion Control Algorithms using NS.
11. Perform a case study about the different routing algorithms to select the network path with its optimum and economical during data transfer Link State routing, Flooding, Distance vector.

**Recommend Software:**C/C++ on Linux/Unix, NS, Packet Tracer

## Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## ADVANCED DATA STRUCTURE & ALGORITHMS LAB

**Course Code: DSE4105**

**Credit Units: 01**

Programs based on Implementation of Graphs using Adjacency Matrix, Linked List , implementation of graph algorithms like BFS,DFS, Minimum Spanning Tree, Binary Search Tree, Knapsack Problem using Greedy Algorithm, Dynamic Programming, Shortest Path Algo (Dijkstra's), Implementing B-Tree,AVL Tree ,Red Black Tree. Implementing Sets, Dictionaries, Priority Queue using Heap.

**Recommended Software:** Java/C++/C/Python

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# MATLAB

**Course Code: DSE4108**

**Credit Units: 02**

Understanding The MATLAB Environment, Using the Help System in MATLAB, MATLAB Basics, Linear Algebra; Vectors and Matrices and various operations on them, M files; Scripts and User-defined functions, Plotting, Flow Control and Loops; For and While Loops, If and Case statements, structures, writing basic programs using the above, study of various toolboxes available in matlab and case study of any one tool box.

Recommended Software: MATLAB/Octave

## Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## PYTHON PROGRAMMING LAB

**Course Code: DSE4109**

**Credit Units: 01**

### Course Contents:

1. Setting up python on Windows/Linux/Mac
2. First program in python
3. Programs related to basic input/output.
4. Programs related to variables, strings, numbers
5. Programs related to Lists and Tuples
6. Programs related to Functions
7. Programs related to If Statements
8. Programs related to While Loops and Input
9. Programs related to Basic Terminal Apps
10. Programs related to Dictionaries
11. Programs related to Classes
12. Programs related to Exceptions
13. Programs related to GUI programming
14. Using Word, Excel, PDF files in python.
15. Web programming in python,
16. Case study of application areas of python.

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# Syllabus - Second Semester

## APPLIED STATISTICAL ANALYSIS

**Course Code: DSE4201**

**Credit Units: 03**

**Course Objective:** This course is an introduction to statistics, the science of collecting, organizing, and interpreting numerical data. Emphasis will be placed on statistical reasoning and data analysis. The main topics are study design, descriptive statistics, probability theory, and statistical inference. Hands-on data analysis projects will be assigned. Students will be required to use a computer software package to solve various statistical problems.

### Course Contents:

#### Module-I: Introduction to Statistical Analysis

Introduction to Statics, Population Versus Sample, Population and Sample, Basic Terms, Types Of Variables, Quantitative Variables, Qualitative or Categorical Variables, Measurement Scales, Identifying The Scale of Measurement, Normal Variables, Ordinal Variables, Continuous Variables, Cross-Section Data, Time –Series Data, Sources of Data, Types of Statics, Measures of Central Tendency, Mean, Examples, Mode, Mode Scenarios, Symmetry, Skewness, Measures of Spread, Range, Variance and Standard Deviation, Examples, Solution, Population Parameters and Sample Statistics, Measures of Position–Quartiles and Interquartile Range, Quartiles, Example, Solution, Percentiles and Percentile Rank, Example, Solution, Box and Whisker Plot, Solution.

#### Module-II: Describing Data

Raw Data, Graphical Presentation of Qualitative Data, Graphical Presentation of Qualitative Data, Graphing Quantitative Data, Frequency Distributions, Relative Frequency and Percentage Distributions, Graphing Grouped Data, Cumulative Frequency Distributions, Probability Concepts, Simple and Compound Events, Two Properties of Probability, Classical Probability, Probability Concepts, Complementary Events, Example, Discrete Random Variables, The Binomial Experiment, The Poisson Probability Distribution, Continuous Random Variables, Normal Distribution, Standard Normal Distribution.

#### Module-III: Testing Hypothesis

Population Distribution, Sampling and Non Sampling Errors, A Point Estimate, Interval Estimation, The t Distribution Hypothesis Testing, The Chi-Square Distribution.

#### Module-IV: Examining Relationship

Covariance, Pearson Correction Coefficient, Computational Formulas- Covariance, Computing A Correlation, Correlation Analysis, Scatter Plots, Relationships Between Continuous Variables, Correlation, Pearson Correlation Coefficient, Hypothesis Test For A Correlation, Extreme Data Values, Correlation Matrix, Anova Overview, Anova Hypothesis, Anova, Error Sum of Squares, Model Sum of Squares, Anova-Example, Simple Regression, Relationship Between Food Expenditure And Income: (A) Linear Relationship (B) Nonlinear Relationship, Plotting A Linear Equation, Y-Intercept And Slope Of A Line, Simple Linear Regression Analysis, Scatter Diagram, Least Squares Line, Error Sum Of Squares, The Least Squares Line, Example, Solution, Error Of Prediction, Positive And Negative Linear Relationship Between X And Y, Assumptions of Regression Model, Coefficient Of Determination, Regression Analysis.

#### Module-V: Advanced Techniques

Non Parametric Tests, Chi-Squared Goodness- of-Fit Test, Chi-Square Test of Independence, The Sign Test, Example, Mann-Whitney U Test, The Kruskal-Wallis Test, No Title, Structural Equation Modelling, Cluster Analysis, Factor Analysis, Centroid Method, Principal Components Method.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# DATA MINING AND PREDICTIVE ANALYTICS

**Course Code: DSE4202**

**Credit Units: 03**

**Course Objective:** This course introduces the topics of Data Mining, and Data Analytics by providing a basic, practical foundation that allows the students to participate in Data Analytics projects. The course incorporates an introduction to the Data Analytics lifecycle, Machine Learning (ML), Data Mining algorithms and computational paradigms that allow computers to find patterns and regularities in databases, perform prediction and forecasting, and generally improve their performance through interaction with data.

## **Course Contents:**

### **Module-I: Data Preparation**

An introduction to data mining and predictive analytics, Data Pre-processing Exploratory Data Analysis, Dimension- Reduction Methods.

### **Module-II: Classification**

k- Nearest Neighbour Algorithm, Decision Trees, Model Evaluation Technique, Cost –Benefit Analysis Using Data Driven Cost.

### **Module-III: Clustering**

Hierarchical and k- Means Clustering, Kohonen Networks, Birch Clustering, Measuring Cluster Goodness.

### **Module-IV: Association Rules**

Affinity Analysis and Market Basket Analysis, Data Representation for Market Basket Analysis, Support, Confidence, Frequent Item sets, and the a Priori Property, How Does a Priori Algorithm Work ? Generating Frequent Item sets, Generating Association Rules, Extension from Flag Data to General Categorical Data, Information-Theoretic Approach: Generalized Rule Induction Method, *J*-Measure, Association Rules are Easy to do Badly, How can we Measure the Usefulness of Association Rules? Do Association Rules Represent Supervised or Unsupervised Learning?

### **Module-V: Case Study: Predicting Response to Direct Mail Marketing**

Business Understanding, Data Preparation, and Eda, Clustering and Principal Components Analysis, Modelling and Evaluation for Performance and Interpretability, Modelling and Evaluation for High Performance.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# DATA WAREHOUSING AND MULTIDIMENSIONS MODELLING

**Course Code: DSE4203**

**Credit Units: 03**

**Course Objective:** This course focuses on the fundamentals of data warehousing and multidimensional Modelling. Data warehouse development life cycle, Data warehouse analysis, CUBE, ROLL UP and STAR queries, Data Warehouse Design - Massive de-normalisation, STAR schema design, Data ware house Architecture, OLAP, ROLAP and MOLAP, concepts of Fact and dimension table are the major areas of coverage of this course. This course also deals with the issues while implementing the multidimensional models

## **Course Contents:**

### **Module I Introduction**

Multidimensional Data Management, Multidimensional History, Related Terminology,

### **Module II Fundamental Concepts**

Cubes ,Dimensions, Facts, Measures, Relational Representations, Star Schemas, Snowflake Schemas, Data Warehouses And Data Marts, Multidimensional Modelling Process, Analysis And Querying ,Roll Up, Drill Down, Drill Out, Slicing And Dicing, Drill Across, Pivot Tables, Ranking, Multi-Dimensional Querying in MDX and SQL, Graphical Querying and Visualizations .

### **Module III Advance Concepts**

Slowly Changing Dimensions, The Problem, Solutions, Other Special Kinds Of Dimensions, Mini dimensions, Outriggers, Degenerate Dimensions, Junk Dimensions, Time Dimensions, Data Quality Dimensions, Advanced Hierarchies, Parent-Child Hierarchies, Unbalanced Hierarchies, Non Covering Hierarchies , Non –Strict Hierarchies, Multiple Hierarchies And Parallel Hierarchies.

### **Module IV Implementation Issues**

Materialized Views, Indexing, Indexing Overview, Bitmap Indices, Join Indices, Query Processing, OLAP Implementations, Extract-Transform-Load.

### **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# DATABASE AND KNOWLEDGE BASE SYSTEMS

**Course Code: DSE4204**

**Credit Units: 03**

**Course Objective:** This course discusses design methodology for databases to verify their structural correctness and implements databases. It also provides applications software primarily in the relational model using querying languages, primarily SQL, and other database supporting software applying the theory behind various database models and query languages implementing security and integrity policies relating to databases and preparation for data analytics working in group settings to design and implementing database projects.

## **Course Contents:**

### **Module-I: Introduction**

Database Languages, Object-Base Systems, Knowledge-base Systems, History and Perspective, Data Models for Database Systems: Data Models, The Entity-relationship Model, The Relational Data Model, Operations in the Relational Data Model, The Network Data Model, The Hierarchical Data Model, An Object-Oriented Model, Logic as a Data Model: The Datalog Data Model, Evaluating Non- recursive Rules, Computing the Meaning of Recursive Rules, Incremental Evaluation of Least Fixed Points, Negations in Rule Bodies, Relational Algebra and Logic, Relational Calculus, Tuple Relational Calculus.

### **Module-II: Relational Query and Object-Oriented Database Language**

ISBL: A “Pure” Relational Algebra Language, QUEL: A Tuple Relational Calculus Language, Query-by-Example: A DRC Language, Data Definition in QBE, The Query Language SQL, Data Definition in SQL, The DBTG Data Definition language, The DBTG Query Language, The DBTG Database Modification Commands, Data Definition in IMS, A Hierarchical Data Manipulation Language, Data Definition in OPAL, Data Manipulation in OPAL

### **Module-III: Physical Data Organization and Design of Relational Databases**

The Physical Data Model, The Heap Organization, Hashed Files, Indexed Files, B-trees, Files with a Dense Index, Secondary Indices, Data Structures in DBTG Databases, Data Structures for Hierarchies, Data Structures for Relations, A Search Tree Structure, Functional Dependencies, Lossless-Join Decomposition, Normalization, Generalized Dependencies.

### **Module-IV: Transaction Management**

Basic Concepts, A Simple Transaction Model, The Two-phase Locking Protocol, a Model with Read and write-Locks, Lock Modes, A Read-Only, Write-Only Model, Concurrency for Hierarchically Structured Items, Handling Transaction Failures, Aggressive and Conservative Protocols, Recovery From Crashes, Timestamp-based Concurrency Control.

### **Module-V: Distributed Database Management**

Distributed Databases, Distributed Locking, Distributed Two-phase Locking, Distributed Commitment, A Nonblocking Commit Protocol, Timestamp-based, Distributed Concurrency, Recovery of Nodes, Distributed Deadlocks.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# BIG DATA TECHNOLOGIES

**Course Code: DSE4205**

**Credit Units: 03**

## **Course Objective:**

This course brings together several key big data technologies used for storage, analysis and manipulation of data. It also introduces the students the key concepts of Hadoop framework, MapReduce, Pig, Hive, and No-SQL. Students will prepare a sample project in Hadoop.

## **Course Contents:**

### **Module I: Introduction to Big Data**

Big Data and its Importance – Four V's of Big Data – Drivers for Big Data – Introduction to Big Data Analytics – Big Data Analytics applications.

### **Module II: Big Data Technologies**

Hadoop's Parallel World – Data discovery – Open source technology for Big Data Analytics – cloud and Big Data – Predictive Analytics – Mobile Business Intelligence and Big Data – Crowd Sourcing Analytics – Inter- and Trans-Firewall Analytics - Information Management.

### **Module III: Processing Big Data**

Integrating disparate data stores - Mapping data to the programming framework - Connecting and extracting data from storage - Transforming data for processing - Subdividing data in preparation for Hadoop Map Reduce.

### **Module IV: Hadoop Map Reduce**

Employing Hadoop Map Reduce - Creating the components of Hadoop Map Reduce jobs - Distributing data processing across server farms –Executing Hadoop Map Reduce jobs - Monitoring the progress of job flows - The Building Blocks of Hadoop Map Reduce - Distinguishing Hadoop daemons - Investigating the Hadoop Distributed File System Selecting appropriate execution modes: local, pseudo-distributed, fully distributed.

### **Module V: Big Data Tools and Techniques**

Installing and Running Pig – Comparison with Databases – Pig Latin – User- Define Functions – Data Processing Operators – Installing and Running Hive – Hive QL – Tables – Querying Data – User-Defined Functions – Oracle Big Data.

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# RESEARCH METHODOLOGY AND TECHNICAL REPORT WRITING

**Course Code: DSE4206**

**Credit Units: 02**

**Course Objectives:** The course will enhance scientific , technical and research writing skills and impart knowledge about various stages of research process, statistical analysis, statistical tests and their applications in statistical decision making.

## **Course Contents:**

**Module I:** Introduction to research: Definition, motivation, need, objectives, significance and characteristics of research; types of research; steps in research process; planning a research proposal; literature review, web searching.

**Module II:** Population and sample, parameter and statistic, sampling and data collection, sampling design: steps, types, sample size, sampling methods, large and small samples, primary and secondary data, data processing and analysis. Sample surveys and questionnaire designing, scaling techniques.

**Module III:** Dependent and independent variables, univariate, bivariate and multivariate analysis, means-arithmetic, geometric and harmonic; measure of dispersion of data, standard deviation, variance, coefficient of variation and degree of freedom. Hypothesis testing: null hypothesis and alternate hypothesis, errors in hypothesis testing, significance and confidence levels, parametric tests and non-parametric tests, one-tailed and two-tailed tests, analysis of variance. Regression analysis and curve fitting, method of least-squares, explained and unexplained variations, coefficient of correlation, coefficient of determination.

**Module IV:** Technical/scientific/research report writing: structure and components of scientific reports, formats of dissertations, research report, report writing skills, report preparation, referencing , bibliography and footnotes. Making presentation-use of visual aids and PPTs. Publication of research papers, citations,. Intellectual property rights and copy rights, plagiarism, patents and patent laws, commercialization and ethical issues.

## **Examination Scheme:**

Attendance	Assignment/Library consultation / Thesis writing	Class test	Final Exam	Total
5	15	10	70	100

## **Text Books:**

## APPLIED STATISTICAL ANALYSIS LAB

**Course Code: DSE4207**

**Credit Units: 01**

Programs should be based on following topics:

**Quick Review** of interpretation of mathematical models such as formulas, graphs, tables, and schematics, and draw inferences from them;

Representation of mathematical information symbolically, visually, numerically, and verbally;

Use of arithmetic, algebraic, geometric, and statistical methods to solve problems;

Estimation and check answers to mathematical problems in order to determine reasonableness,

Identification of alternatives, and select optimal results; and recognize the limitations of mathematical and statistical models.

**Recommended Software:** SPSS (IBM).

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# DATA MINING AND PREDICTIVE ANALYTICS LAB

**Course Code: DSE4208**

**Credit Units: 01**

## **Course Objective:**

- To analyse the data using statistical methods.
- To understand and demonstrate data mining using any open source data mining tool.

**Recommended Software:** ORANGE, Rapid Miner

## **List of Experiments**

1. Data Analysis- Getting to know the Data (Using ORANGE, Rapid Miner)
  - Parametric - Means, T-Test, Correlation
  - Prediction for numerical outcomes - Linear regression
  - Correlation analysis
  - Preparing data for analysis
  - Pre-processing techniques
2. Data Mining (Using ORANGE, Rapid Miner or any open source data mining tool)
  - Implement clustering algorithm
  - Implement classification using
  - Decision tree
  - Back propagation
  - Visualization methods.

## **Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# DATA WAREHOUSING AND MULTIDIMENSIONAL MODELLING LAB

**Course Code: DSE4209**

**Credit Units: 01**

Programs should be based on following topics:

**Quick Review** SQL Statements, SQL Built-in Functions, **Emphasis** on PL/SQL, Cursors 8. Exception handling, Procedure, Functions, Trigger, concurrency control, transaction processing. Introduction to ETL Tools: Talend Open Source Data Integrator, Scriptella, KETL  
Pentaho Data Integrator - Kettle, Jaspersoft ETL, GeoKettle, CloverETL, HPCC Systems

**Recommended Software:** SQL Server, ETL Tools (Open Source)

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# INFORMATION MANAGEMENT SYSTEM

**Course Code: DSE4210**

**Credit Units: 03**

## **Course Objective:**

This course exposes students with the basics of managing the information and explores the various aspects of database design and modelling. It examines the basic issues in information governance and information integration and also helps to understand the information architecture

## **Course Contents:**

### **Module-I: Database Modelling, Management and Development**

Database design and modelling – Business Rules and Relationship; Java database Connectivity (JDBC), Database connection Manager, Stored Procedures. Trends in Big Data systems including NoSQL – Hadoop HDFS, MapReduce, Hive, and enhancements.

### **Module-II: Data Security and Privacy**

Program Security, Malicious code and controls against threats; OS level protection; Security – Firewalls, Network Security Intrusion detection systems. Data Privacy principles. Data Privacy Laws and compliance.

### **Module-III: Information Governance**

Master Data Management (MDM) – Overview, Need for MDM, Privacy, regulatory requirements and compliance. Data Governance – Synchronization and data quality management.

### **Module-IV: Information Architecture**

Principles of Information architecture and framework, Organizing information, Navigation systems and Labelling systems, Conceptual design, Granularity of Content.

### **Module-V: Information Lifecycle Management**

Data retention policies; Confidential and Sensitive data handling, lifecycle management costs. Archive data using Hadoop; Testing and delivering big data applications for performance and functionality; Challenges with data administration;

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# INFORMATION SYSTEM SECURITY

**Course Code: DSE4211**

**Credit Units: 03**

## **Course Objective:**

This course provides a deep and comprehensive study of the security principles and practices of information systems. Topics include basic information security concepts, common attacking techniques, common security policies, basic cryptographic tools, authentication, access control, software security, operating system security, and legal and ethical issues in information systems security

## **Course Contents:**

### **Module-I: Introduction**

Computer Security Concepts, Threats, Attacks, and Assets Security Functional Requirements A Security Architecture for Open Systems Computer Security Trends.

### **Module-II: COMPUTER SECURITY TECHNOLOGY AND PRINCIPLES**

Cryptographic Tools, User Authentication, Access Control, Database Security, Malicious Software, Denial-of-Service Attacks.

### **Module-III: SOFTWARE SECURITY**

Buffer Overflow: Stack Overflows, Defending Against Buffer Overflows, Other Forms of Overflow Attacks, Software Security: Software Security Issues, Handling Program Input, Writing Safe Program Code, Interacting with the Operating System and Other Programs, Handling Program Output

### **Module-IV: TRUSTED SYSTEMS SECURITY**

Operating System Security: Introduction to Operating System Security, System Security Planning, Operating Systems Hardening, Application Security, Security Maintenance, Linux/Unix Security, Windows Security, Virtualization Security. Trusted Computing and Multilevel Security: Bell-LaPadula Model for Computer Security, Other Formal Models for Computer Security, Concept of Trusted Systems, Application of Multilevel Security, Trusted Computing and the Trusted Platform Module, Common Criteria for Information Technology Security Evaluation, Assurance and Evaluation

### **Module-V: MANAGEMENT ISSUES**

IT Security Management and Risk Assessment, IT Security Controls, Plans, and Procedures, Physical and Infrastructure Security, Human Resources Security, Security Auditing, Legal and Ethical Aspects

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# Syllabus - Third Semester

## DESCRIPTIVE ANALYSIS

**Course Code: DSE4301**

**Credit Units: 03**

### **Course Objective:**

This course introduces some elementary statistical methods of analysis of data and compute various measurements of central tendency, dispersion, skewness and kurtosis. Also discusses computation of the correlation coefficient from ungrouped bivariate data and interpret them and analyse data pertaining to attributes and to interpret results.

### **Course Contents:**

#### **Module-I: Introduction to Statistics**

Definitions: Webster's and Secrist's definition of Statistics, Importance of Statistics, Scope of Statistics: In the field of Industry, Biological Sciences, Medical Sciences, Economics Sciences, Social, Sciences, Management Sciences, Agriculture, Insurance, Actuarial Science, Education and Psychology.

#### **Module-II: Population and Sample**

Types of characteristics: Attributes: Nominal scale, ordinal scale. Variables: Interval scale, ratio scale, discrete and continuous variables, Types of data: Primary data, Secondary data, Notion of a statistical population: Finite population, infinite population, homogeneous population and heterogeneous population. Notion of sample, random sample and non-random sample, Methods of sampling: Simple random sampling with and without replacement (SRSWR and SRWOR) stratified random sampling, systematic sampling, cluster sampling and two-stage sampling.

#### **Module-III: Presentation of Data**

Classification: Raw data and its classification, Discrete frequency distribution, Sturge's rule, continuous frequency distribution, inclusive and exclusive methods of classification, Open end classes, cumulative frequency distribution and relative frequency distribution, Graphical Presentation of Data: Histogram, frequency curve, frequency polygon, ogive curves, stem and leaf chart, Check sheet, Parato diagram, Examples and Problems.

#### **Module-IV: Measures of Central Tendency**

Concept of central tendency of statistical data, Arithmetic Mean (A.M.), combined mean of a number of groups, merits and demerits, Geometric Mean (G.M.), Harmonic Mean (H.M.), Weighted Mean, Weighted A.M., G.M. and H.M. , Mode, Median, Empirical relation between mean, median and mode, Order relation between arithmetic mean, geometric mean, harmonic mean.

#### **Module-V: Measures of Dispersion**

Concept of dispersion, characteristics of good measure of dispersion, Range, Mean deviation, Mean square definition, Variance and standard deviation, Combined variance, Combined standard deviation, generalization for n groups, Measures of dispersion for comparison: coefficient of range, coefficient of quartile deviation and coefficient of mean deviation, coefficient of variation.

#### **Module-VI: Skewness and Kurtosis**

Concept of skewness of frequency distribution, positive skewness, negative skewness, symmetric frequency distribution, Bowley's coefficient of skewness, interpretation using Box plot, Karl Pearson's coefficient of skewness, Measures of skewness based on moments ( $\beta_1$ ,  $\gamma_1$ ), Concepts of kurtosis, leptokurtic, mesokurtic and platykurtic frequency distributions, Measures of kurtosis based on moments, ( $\beta_2$ ,  $\gamma_2$ ).

### Module-VII: Correlation & Regression

Bivariate data, bivariate frequency distribution, Concept of correlation between two variables, positive correlation, negative correlation, Scatter diagram, conclusion about the type of correlation from scatter diagram, Covariance between two variables, Karl Pearson's coefficient of correlation, Spearman's rank correlation coefficient, In case of ties, compute Karl Pearson's correlation coefficient between ranks. Regression: lines of regression, fitting of lines of regression by the least squares method, interpretation of slope and intercept. 9.2 Regression coefficient ( $b_{yx}$ ,  $b_{xy}$ ), Effect of change of origin and scale, Angle between the two lines of regression, Mean residual sum of squares, Residual plot and its interpretation.

#### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# LEARNING AND REASONING WITH BAYESIAN NETWORKS

**Course Code: DSE4302**

**Credit Units: 04**

## **Course Objective:**

This course provides an in-depth exposition of knowledge representation, reasoning, and machine learning under uncertainty using the framework of Bayesian networks. Both theoretical underpinnings and practical considerations will be covered, with a special emphasis on constructing and learning graphical models, and on various exact and approximate inference algorithms.

## **Course Contents:**

### **Module-I: Introduction**

Reasoning about beliefs using Logic and Probability Propositional Logic, Probability Calculus and Bayesian Reasoning, Bayesian Networks, Syntax and Semantics, Building Bayesian Networks.

### **Module-II: Bayesian Networks Inference**

Inference by variable elimination, Inference by Factor Elimination (Jointree), Compiling Bayesian Networks, Complexity of probabilistic inference, compiling bayesian networks.

### **Module-III: Approximate Inference**

Inference by Belief Propagation: Algorithm, Iterative belief propagation, semantics of IBP, Join graphs, edge-detection semantics, Approximate Inference by Stochastic Sampling: Simulating a Bayesian network, direct sampling, expectations, estimating a conditional probability, Markov chain simulation.

### **Module-IV: Learning: The Maximum Likelihood Approach**

Introduction, estimating parameters from complete data, estimating parameters from incomplete data, learning network structure, searching for network structure.

### **Module-V: Learning: The Bayesian Approach**

Introduction, Meta Networks, Learning with Discrete Parameter Sets, Learning with Continuous Parameter Sets, Learning Network Structure

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# SOCIAL NETWORK DATA ANALYTICS

**Course Code: DSE4303**

**Credit Units: 03**

## **Course Objective:**

This course gives an introduction to social network analysis, with a focus on modelling. It provides an overview of research questions connected to social networks, and of descriptive measures, models, and methods of analysis that can be used to analyse empirical social network data. It helps to understand the online interactive demonstrations and hands-on analysis of real-world data sets

## **Course Contents:**

### **Module-I: Introduction**

Overview: Social network data-Formal methods- Paths and Connectivity-Graphs to represent social relations-Working with network data- Network Datasets-Strong and weak ties - Closure, Structural Holes, and Social Capital.

### **Module-II: Community Discovery in Social Networks: Applications, Methods and Engineering Trends**

Introduction, Communities In Context, Core Methods, Quality Functions, The Kernighan-Lin (KL) Algorithm, Agglomerative/Divisive Algorithms, Spectral Algorithms, Multi-Level Graph Portioning, Markov Clustering. Other Approaches, Emerging Fields and Problems, Community Discovery in Dynamic Networks, Community Discovery in Heterogeneous Networks, Community Discovery in Directed Networks, Coupling Content and Relationship Information for Community Discovery,

### **Module-III: Information Networks and the World Wide Web**

The Structure of the Web- World Wide Web- Information Networks, Hypertext, and Associative Memory- Web as a Directed Graph, Bow-Tie Structure of the Web- Link Analysis and Web Search, Searching the Web: Ranking, Link Analysis using Hubs and Authorities- Page Rank- Link Analysis in Modern Web Search, Applications, Spectral Analysis, Random Walks, and Web Search. Module IV

### **Module-IV: Node Classifications in Social Networks**

Introduction, Problem Formulation, Representing Data As A Graph, The Node Classification Problem, Methods Using Local Classifiers, Iterative Classification Method, Random Walk Based Methods, Label Propagation, Graph Regularization, Adsorption, Applying Node Classification To Large Social Networks, Basic Approaches, Second-Order Methods, Implementation Within Map-Reduce, Inference Using Graphical Models, Metric Labelling, Spectral Partitioning, Graph Clustering, Variations on Node Classification.

### **Module-V: Data and Text Mining In Social Media**

Data Mining In Nutshell, Social Media, Motivations For Data Mining In Social Media, Data Mining Methods For Social Media, Data Representation, Data Mining- A Process, Social Networking Sites: Illustrative Examples, Related Efforts, Ethnography And Netnography, Event Maps, Text Mining: Keyword Search, Query Semantics And Answer Ranking, Keyword Search over Xml and Relational Data, Keyword Search Over Graph Data, Classification Algorithms, Clustering Algorithms, Transfer Learning in Heterogeneous Networks.

### **Module-VI: Overview of Social Tagging**

Introduction, Problems With Metadata Generation and Fixed Taxonomies, Tags: Why And What?, Different User Tagging Motivations, Kinds Of Tags, Linguistic Classifications Of Tags, Game-Based Tagging, Tag Generation Models, Tagging System Design, Tag Analysis, Tagging Distributions, Identifying Tag Semantics, Tags Versus Keywords, Visualization Of Tags, Tag Clouds For Browsing/Search, Tag Selection For Tag Clouds, Tag Hierarchy Generation, Tag Cloud Display Formats, Tag Evolution Visualization.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# R PROGRAMMING LAB

Course Code: DSE4304

Credit Units: 01

## Course Objective:

This lab will provide a basic introduction to the R programming Language and the use of R to perform basic statistics and programming tasks. The main objectives of this lab is to impart the students with the knowledge of R Programming, Machine Learning using R Mining from streaming Data, Mining from Distributed Data.

## R Programming Objective

- Master the use of the R interactive environment
- Expand R by installing R packages
- Explore and understand how to use the R documentation
- Read Structured Data into R from various sources
- Understand the different data types in R
- Understand the different data structures in R
- Understand how to use dates in R
- Use R for mathematical operations
- Use of vectorised calculations
- Write user-defined R functions
- Use control statements
- Write Loop constructs in R
- Use Apply to iterate functions across data
- Reshape data to support different analyses
- Understand split-apply-combine (group-wise operations) in R
- Deal with missing data
- Manipulate strings in R
- Understand basic regular expressions in R
- Understand base R graphics
- Focus on GGplot2 graphics for R
- Be familiar with trellis (lattice) graphics
- Use R for descriptive statistics
- Use R for inferential statistics
- Write multivariate models in R
- Understand confounding and adjustment in multivariate models
- Understand interaction in multivariate models
- Predict/Score new data using models
- Understand basic non-linear functions in models
- Understand how to link data, statistical methods, and actionable questions

## Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# HADOOP LAB

**Course Code: DSE4305**

**Credit Units: 02**

## **Course Objective:**

- To provide an overview of several key technologies used in manipulating, storing, and analysing big data.
- To understand the fundamentals of Hadoop.
- To apply the learning specific problems in various domains.

## **Recommended Tools**

Big Data Tools and Technology [Learning and Demonstration of Big Data Ecosystem]

- Hadoop
- HBase
- NoSQL
- Hive
- Pig

## **Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# SUMMER INTERNSHIP EVALUATION

Course Code: DSE4335

Credit Units: 06

## Guidelines:

There are certain phases of every Intern's professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship program can best be described as an attempt to institutionalize efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal classroom situations. These attributes are intellectual ability, professional judgment and decision-making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility etc.

In order to achieve these objectives:

- **Each student will be allotted a supervisor** for proper guidance.
- **Student will first submit synopsis in the format given by coordinator/supervisor.**
- Student will maintain a file (**Internship File/Project Report**). **Further, coordinator will provide NTCC project guidelines and sample to help in preparation of file.** The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development. The File will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

The **layout guidelines** for the Project Report

### 1. File should be in the following specification

- A4 size paper
- **Font**

For normal text Font Type and Size must be- Times New Roman, 12 pt. The minimum font size of materials within a table or a figure can be 10 point.

- **Margins**

A margin of 3.75 cm (1½ inch) is to be given on the binding edge while on the other sides it is to be 2.5 cm (1 inch). The text of the report, including headings, figures, tables, and notes, but excluding page numbers, must be accommodated within the page area.

- **Line Spacing**

The line spacing in the main text must be between one-and-a-half (1.5). Single line spacing should be given for figure captions, table titles, figure legends, and footnotes. Equations, tables, figures, and quotations should be set off from the main text with adequate space (not less than the normal line spacing adopted for the main text). Two consecutive paragraphs should be separated by a spacing which must be larger than the line spacing adopted for the text.

- **Tables and Figures**

Each sketch, drawing, graph and photograph should have a figure number and title below the figure etc. Numbering should be sequential, chapter wise. For instance, if there are 24 figures chapter 3 spread over all of its sections the figure numbers run from Figure 3.1 through Figure 3.24. In figures experimental data should typically be represented by centered symbols, and theoretical data by continuous curves.

Each table should have a table number and caption above the table. Numbering should be sequential, chapter wise, as in the case of Figure numbers. For instance, if there are 18 tables in chapter 3 the table numbers run from Figure 3.1 through Figure 3.18.

Make sure that figures and tables are complete in other respects such as legends, references (if any) and coordinate labels with units. Each figure and table must be explicitly referred to in the text and located where its first reference occurs, preferably after the reference.

- **Drawings**

All engineering drawings must conform to relevant Standards and should include a title block. If drawings are large they should be included at the back of the report in a separate pocket. In case drawings are made using CAD packages, a CD ROM should be included which contains all the files and details of the packages used.

- **Equations**

The numbering of equations should be sequential, chapter wise. Numbered equations must be explicitly referred to in the text.

**2. Report Size:** The maximum number of pages of the Report should be preferably between 50-80 pages.

**3. Report Layout:** The report should contain the following components

Front Page

Table of Content

Acknowledgement

Student Certificate

Company Profile (optional)

Introduction

Main Body

References / Bibliography

The File will include *five sections* in the order described below. The content and comprehensiveness of the main body and appendices of the report should include the following:

1. **The Title Page**--Title - An Internship Experience Report For (Your Name), name of internship organization, name of the Supervisor/Guide and his/her designation, date started and completed, and number of credits for which the report is submitted.

2. **Declaration by the Students**--This is page number (i), the beginning of the small case Roman numeral page numbers. The student has to give a declaration to the effect that the data used for the work, the work depicted in the report, and the written material contained in the report are not copied from others and that due permission has been taken from, and due credit has been given to, the sources whenever they are used.

3. **Certificate**--This is page number (ii). The certificate will be signed by the Faculty Supervisor(s) before the viva-voce after verifying the format and by the Head of the Department after review with the Supervisor(s).

4. **Acknowledgements**--This is page number (iii). Keep this brief and avoid using informal language. This page must be signed by the candidate.

5. **Abstract and Keywords**--This is page number (iv). The abstract (preferably one page) should contain the context/relevance of the problem at hand, a description of what was done and a gist of the significant observations/results.

The keywords (maximum 6) are a hint that what is contained in the report.

7. **Contents**--This is page number (v). The table of Contents should be titled just *Contents* (not Table of Contents). Try to fit it into one or two pages.

8. **Introduction**--short, but should include how and why you obtained the internship experience position and the relationship it has to your professional and career goals.

9. **Main Body**--should include but not be limited to daily tasks performed. Major projects contributed to, dates, hours on task, observations and feelings, meetings attended and their purposes, listing of tools and materials and their suppliers, and photographs if possible of projects, buildings and co-workers.

10. **References / Bibliography** --This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

## **ASSESSMENT OF THE INTERNSHIP FILE**

### **Continuous Internal Assessment**

40 Marks

### **Final Assessment**

60 Marks

Continuous Internal Assessment consists of topic relevance, progress report and synopsis marks. Final Assessment includes viva, presentation and report marks.

#### **Examination Scheme:**

<b>Components</b>	<b>V</b>	<b>S</b>	<b>R</b>	<b>PR</b>	<b>FP</b>
<b>Weightage (%)</b>	20	20	20	20	20

V – Viva, S – Synopsis, FP – Final Presentation, R – Report, PR-Progress Report

# PROJECT-DISSERTATION-I

Course Code: DSE4337

Credit Units: 05

## GUIDELINES FOR DISSERTATION

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critiqued by the faculty guide and corrected by the student at each stage.

The File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation.

### **In general, the File should be comprehensive and include**

A short account of the activities that were undertaken as part of the project;

A statement about the extent to which the project has achieved its stated goals.

A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;

Any activities planned but not yet completed as part of the DISSERTATION, or as a future initiative directly resulting from the project;

Any problems that have arisen that may be useful to document for future reference.

### ➤ **Report Layout**

The report should contain the following components:

### ➤ **Title or Cover Page**

The title page should contain the following information: Project Title; Student's Name; Course; Year; Supervisor's Name.

### ➤ **Acknowledgements** (optional)

Acknowledgment to any advisory or financial assistance received in the course of work may be given.

### ➤ **Abstract**

A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project

### ➤ **Table of Contents**

Titles and subtitles are to correspond exactly with those in the text.

### ➤ **Introduction**

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

### ➤ **Materials and Methods**

This section should aim at experimental designs, materials used. Methodology should be mentioned in details including modifications if any.

### ➤ **Results and Discussion**

Present results, discuss and compare these with those from other workers, etc. In writing these section, emphasis should be given on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary never write in “point” form.

➤ **Conclusion**

A conclusion should be the final section in which the outcome of the work is mentioned briefly.

➤ **Future prospects**

➤ **Appendices**

The Appendix contains material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

➤ **References / Bibliography**

This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

## **Examples**

### **For research article**

Voravuthikunchai SP, Lortheeranuwat A, Ninrprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichia coli* O157: H7. *Clin Microbiol Infect*, **8** (suppl 1): 116–117.

### **For book**

Kowalski, M. (1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), **7**: 63-67

## **ASSESSMENT OF THE DISSERTATION FILE**

Essentially, marking will be based on the following criteria: the quality of the report, the technical merit of the project and the project execution.

Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project.

Project execution is concerned with assessing how much work has been put in.

The File should fulfill the following *assessment objectives*:

### **Range of Research Methods used to obtain information**

#### **Execution of Research**

##### **Data Analysis**

Analyse Quantitative/ Qualitative information

Control Quality

##### **Draw Conclusions**

##### **Examination Scheme:**

Dissertation                      50

Viva Voce                         50

**Total                                100**

ata, leading to production of a structured report.

### **Selecting the Dissertation Topic**

It is usual to give you some discretion in the choice of topic for the dissertation and the approach to be adopted. You will need to ensure that your dissertation is related to your field of specialization.

Deciding this is often the most difficult part of the dissertation process, and perhaps, you have been thinking of a topic for some time.

It is important to distinguish here between ‘dissertation topic’ and ‘dissertation title’. The topic is the specific area that you wish to investigate. The title may not be decided until the dissertation has been written so as to reflect its content properly.

Few restrictions are placed on the choice of the topic. Normally we would expect it to be:

- relevant to business, defined broadly;
- related to one or more of the subjects or areas of study within the core program and specialisation stream;
- clearly focused so as to facilitate an in-depth approach, subject to the availability of adequate sources of information and to your own knowledge;
- of value and interest to you and your personal and professional development.

### **Planning the Dissertation**

This will entail following:

- Selecting a topic for investigation.
- Establishing the precise focus of your study by deciding on the aims and objectives of the dissertation, or formulating questions to be investigated. Consider very carefully what is worth investigating and its feasibility.
- Drawing up initial dissertation outlines considering the aims and objectives of the dissertation. Workout various stages of dissertation
- Devising a timetable to ensure that all stages of dissertation are completed in time. The timetable should include writing of the dissertation and regular meetings with your dissertation guide.

### **The Dissertation plan or outline**

It is recommended that you should have a dissertation plan to guide you right from the outset. Essentially, the dissertation plan is an outline of what you intend to do, chapter wise and therefore should reflect the aims and objectives of your dissertation.

There are several reasons for having a dissertation plan

- It provides a focus to your thoughts.
- It provides your faculty-guide with an opportunity, at an early stage of your work, to make constructive comments and help guide the direction of your research.
- The writing of a plan is the first formal stage of the writing process, and therefore helps build up your confidence.
- In many ways, the plan encourages you to come to terms with the reading, thinking and writing in a systematic and integrated way, with plenty of time left for changes.
- Finally, the dissertation plan generally provides a revision point in the development of your dissertation report in order to allow appropriate changes in the scope and even direction of your work as it progresses.

### **Keeping records**

This includes the following:

- Making a note of everything you read; including those discarded.
- Ensuring that when recording sources, author’s name and initials, date of publication, title, place of publication and publisher are included. (You may consider starting a card index or database from the outset). Making an accurate note of all quotations at the time you read them.
- Make clear what is a direct a direct quotation and what is your paraphrase.

### **Dissertation format**

All students must follow the following rules in submitting their dissertation.

- Front page should provide title, author, Name of degree/diploma and the date of submission.
- Second page should be the table of contents giving page references for each chapter and section.
- The next page should be the table of appendices, graphs and tables giving titles and page references.
- Next to follow should be a synopsis or abstract of the dissertation (approximately 500 words)
- Next is the ‘acknowledgements’.

- Chapter I should be a general introduction, giving the background to the dissertation, the objectives of the dissertation, the rationale for the dissertation, the plan, methodological issues and problems. The limitations of the dissertation should also be hinted in this chapter.
- Other chapters will constitute the body of the dissertation. The number of chapters and their sequence will usually vary depending on, among others, on a critical review of the previous relevant work relating to your major findings, a discussion of their implications, and conclusions, possibly with a suggestion of the direction of future research on the area.
- After this concluding chapter, you should give a list of all the references you have used. These should be cross - references with your text. For articles from journals, the following details are required e.g.

Draper P and Pandyal K. 1991, The Investment Trust Discount Revisited, Journal of Business Finance and Accounting, Vol18, No6, Nov, pp 791-832.

For books, the following details are required:

Levi, M. 1996, International Financial Management, Prentice Hall, New York, 3rd Ed, 1996

- Finally, you should give any appendices. These should only include relevant statistical data or material that cannot be fitted into the above categories.

### **The Layout Guidelines for the Dissertation**

- A4 size Paper
- Font: Arial (10 points) or Times New Roman (12 points)
- Line spacing: 1.5
- Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

### **Guidelines for the assessment of the Dissertation**

While evaluating the dissertation, faculty guide will consider the following aspects:

1. Has the student made a clear statement of the objective or objective(s).
2. If there is more than one objective, do these constitute parts of a whole?
3. Has the student developed an appropriate analytical framework for addressing the problem at hand.
4. Is this based on up-to-date developments in the topic area?
5. Has the student collected information / data suitable to the frameworks?
6. Are the techniques employed by the student to analyse the data / information appropriate and relevant?
7. Has the student succeeded in drawing conclusion form the analysis?
8. Do the conclusions relate well to the objectives of the project?
9. Has the student been regular in his work?
10. Layout of the written report.

### **Assessment Scheme:**

#### **Continuous Evaluation:**

40%

(Based on Abstract, Regularity,  
Adherence to initial plan, Records etc.)

#### **Final Evaluation:** Based on,

60%

Contents & Layout of the Report,	20
Conceptual Framework,	05
Objectives & Methodology and	05
Implications & Conclusions	10
Viva & Presentation	20

# WEB TECHNOLOGY

**Course Code: DSE4306**

**Credit Units: 03**

## **Course Objectives:**

This course provides knowledge on Core technologies that are needed for the web like HTML and XML and facilitate how to build XML applications with DTD and style sheets that span multiple domains ranging from finance to vector graphics to genealogy for use with legacy browsers.

## **Course Contents:**

### **MODULE-I: Introduction**

HTML Common tags, Cascading Style sheets - Introduction to Java Scripts - Objects in Java Script - Dynamic HTML with Java Script.

### **MODULE-II: Vbscript Language Elements**

Constants - Variables and Data Types - Mathematical Operations – Logical Operators - Looping and Decision Structures - VBScript Functions and Objects: Data Conversion Functions - Mathematical Functions - Data Formatting Functions - Text Manipulation Functions - Data and Time Functions - Built-in Objects.

### **MODULE-III: ASP Fundamentals**

Using Server – Side Includes- Learning the SSI Directives – Creating Modular ASP Code -Using the Request Object: Using Form Information - Using QueryString Information – Using Server Variables - Using the Response Object: Create Output – Managing Output – Managing the Connection.

### **MODULE-IV: Using Cookies**

Introduction to Cookies: Cookies and Your Browser – Creating a Cookie – Modifying and removing Cookies – Tracking Preferences with Cookies Using the Application, Session and Server Objects: The application Object – The Session Object – The Server Object – Using the global .asa file - Active Data Objects Essentials: Microsoft's Universal Data Access Strategy – The Connection Object – The Record set and Field Objects – The Command and Parameter Objects – Using the Errors Collection.

### **MODULE-V: Introducing XML**

XML: The Life of an XML documents - Related technologies- First XML Document: Hello XML – Exploring the Simple XML Document – Assigning Meaning to XML Tags – Writing a Style Sheet for an XML Document – Attaching a Style Sheet to an XML Document – Style Languages: CSS Style Sheets, CSS Layouts, CSS Text Styles.

### **MODULE-VI: Attributes, Empty Tags & XSL**

Attributes – Attributes versus Elements – Empty Elements and Empty Element Tags – XSL-DTDs and Validity: Document Type Definitions – Element Declarations – DTD Files – Document Type Declarations – Validating Against a DTD-Element Declaration - Entity Declarations: What Is an Entity – Internal General Entities – External General Entities – Internal Parameter Entities – External Parameter Entities – Building a Document from Places-Attribute Declaration: What is an Attribute – Declaring Attributes in DTDs – Declaring Multiple Attributes – Specifying Default Values for Attributes – Attribute Types – Predefined Attributes – A DTD for Attribute- Based Baseball Statistics.

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# SERVICE ORIENTED ARCHITECTURE

**Course Code: DSE4307**

**Credit Units: 03**

## **Course Objective:**

The subject gives an introduction to the fundamentals and issues relating to Service Oriented Architecture and bring out the importance of service orientation and web services. It also teaches appropriate tools as technique on how to build the Service Oriented Architecture with web services.

## **Course Contents:**

### **Module I: Introduction**

Basic definition - Fundamentals of SOA - Characteristics and misperceptions about SOA-Benefits and pitfalls of SOA.

### **Module II: Evolution of SOA**

The evolution of SOA - Web service and primitive SOA - The extension of SOA - Web service extension.

### **Module III: Web Service and Contemporary SOA**

Message Exchange Pattern- Service Activity- Coordination- Atomic Transaction- Business Activity- Orchestration – Choreography- Addressing- Reliable Messaging- Correlation and Policies- Meta data Exchange- Security- Notification and Eventing.

### **Module IV: Principles of Service Orientation**

Principles of service orientation -Building SOA-Planning and Analysis- SOA delivery strategies - Service Oriented Analysis Introduction -Service Modelling of Service Oriented Analysis.

### **Module V: Service Oriented Design**

Introduction to service oriented design - WSDL related XML Schema language Basics - WSDL Language Basics - SOAP Language Basics - Service interface design tools - Steps to composing SOA - Consideration for choosing service layers, positioning core SOA standards and choosing SOA extension – Service design and business process design.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

## **Text & References:**

# NATURAL LANGUAGE PROCESSING

Course Code: DSE4308

Credit Units: 03

## Course Objective:

This course provides a general introduction including the use of state automata for language processing and syntax including a basic parse. It explains advanced feature like feature structures and realistic parsing methodologies. It also gives concepts of remotes processing and detail information about a typical natural language processing applications.

## Course Contents:

### Module-I: Introduction

Introduction: Knowledge in speech and language processing - Ambiguity - Models and Algorithms - Language, Thought and Understanding- Regular Expressions and automata: Regular expressions - Finite-State automata. Morphology and Finite-State Transducers: Survey of English morphology - Finite-State Morphological parsing - Combining FST lexicon and rules - Lexicon- Free FSTs: The porter stammer - Human morphological processing.

### Module-II: Syntax Analysis

Word classes and part-of-speech tagging: English word classes - Tagsets for English - Part-of-speech tagging - Rule-based part-of-speech tagging - Stochastic part-of-speech tagging - Transformation-based tagging – Other issues - Context-Free Grammars for English: Constituency - Context-Free rules and trees - Sentence-level constructions - The noun phrase - Coordination - Agreement - The verb phrase and sub categorization – Auxiliaries - Spoken language syntax - Grammars equivalence and normal form - Finite- State and Context-Free grammars - Grammars and human processing. Parsing with Context-Free Grammars: Parsing as search - A Basic Top-Down parser - Problems with the basic Top-Down parser - The early algorithm - Finite-State parsing methods.

### MODULE-III: Advanced Features and Syntax

Features and Unification: Feature structures - Unification of feature structures  
- Features structures in the grammar - Implementing unification - Parsing with unification constraints  
- Types and Inheritance. Lexicalized and Probabilistic  
Parsing: Probabilistic context-free grammar - Problems with PCFGs -  
Probabilistic lexicalized CFGs - Dependency Grammars - Human parsing.

### MODULE-IV: Semantic

Representing Meaning: Computational desiderata for representations – Meaning structure of language  
- First order predicate calculus - Some linguistically relevant concepts - Related representational approaches – Alternative approaches to meaning. Semantic Analysis: Syntax-Driven semantic analysis - Attachments for a fragment of English - Integrating semantic analysis into the early parser - Idioms and compositionality - Robust semantic analysis. Lexical semantics: relational among lexemes and their senses - WordNet: A database of lexical relations - The Internal structure of words - Creativity and the lexicon.

### MODULE-V: Natural Language Generation

Introduction to language generation - Architecture for generation – Surface realization - Discourse planning - Other issues- Machine Translation: Language similarities and differences - The transfer metaphor - The interlingua idea: Using meaning - Direct translation - Using statistical techniques – Usability and system development.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# AGENT BASED INTELLIGENT SYSTEMS

**Course Code: DSE4309**

**Credit Units: 03**

## **Course Objective:**

This course provides students basic knowledge of employing intelligent agents in solving complex problems and gives the awareness of the building blocks of agents and working of different types of agents. It also analyses the reasons for uncertainty and ability to design agents to handle them.

## **Course Contents:**

### **Module-I: Introduction**

Definitions – History – Hybrid Intelligent Agents – Agents vs Multi Agent Systems– Structure – Environment – Basic Problem Solving Agents – Complex Problem Solving Agents – Formulating Search Strategies – Intelligent Search.

### **Module-II: Concepts for Building Agents**

Situated Agents: Actions and Percepts - Proactive and Reactive Agents: Goals and Events- Challenging Agent Environments: Plans and Beliefs - Social Agents - Agent Execution Cycle.

### **Module-III: Knowledge Based Agents**

Knowledge Representation – Logic – First Order Logic – Reflex Agent – Building a Knowledge Base – General Ontology – Inference – Logical Recovery.

### **Module-IV: Planning Agents**

Situational Calculus – Representation of Planning – Partial Order Planning – Practical Planners– Conditional Planning - Preplanning Agents.

### **Module-V: Agents and Uncertainty**

Acting under uncertainty – Probability – Baye's Rule – Belief Networks – Utility Theory - Decision Network- Value of Information – Decision Theoretic Agent Design.

### **Module-VI: Higher Level Agents**

Learning Agents – General Model – Inductive Learning – Learning Decision Tree – Reinforcement Learning – Knowledge in Learning – Communicative Agents – Types of Communicative Agents – Future of AI.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# Syllabus - Fourth Semester

## PROJECT-DISSERTATION-II

Course Code: DSE4437

Credit Units: 15

### GUIDELINES FOR DISSERTATION

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critiqued by the faculty guide and corrected by the student at each stage.

The File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation.

### In general, the File should be comprehensive and include

A short account of the activities that were undertaken as part of the project;

A statement about the extent to which the project has achieved its stated goals.

A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;

Any activities planned but not yet completed as part of the DISSERTATION, or as a future initiative directly resulting from the project;

Any problems that have arisen that may be useful to document for future reference.

### ➤ Report Layout

The report should contain the following components:

### ➤ Title or Cover Page

The title page should contain the following information: Project Title; Student's Name; Course; Year; Supervisor's Name.

### ➤ Acknowledgements (optional)

Acknowledgment to any advisory or financial assistance received in the course of work may be given.

### ➤ Abstract

A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project

### ➤ Table of Contents

Titles and subtitles are to correspond exactly with those in the text.

### ➤ Introduction

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

### ➤ Materials and Methods

This section should aim at experimental designs, materials used. Methodology should be mentioned in details including modifications if any.

### ➤ Results and Discussion

Present results, discuss and compare these with those from other workers, etc. In writing these section, emphasis should be given on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary never write in “point” form.

➤ **Conclusion**

A conclusion should be the final section in which the outcome of the work is mentioned briefly.

➤ **Future prospects**

➤ **Appendices**

The Appendix contains material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

➤ **References / Bibliography**

This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

## **Examples**

### **For research article**

Voravuthikunchai SP, Lortheeranuwat A, Ninrprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichia coli* O157: H7. *Clin Microbiol Infect*, **8** (suppl 1): 116–117.

### **For book**

Kowalski, M. (1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), **7**: 63-67

## **ASSESSMENT OF THE DISSERTATION FILE**

Essentially, marking will be based on the following criteria: the quality of the report, the technical merit of the project and the project execution.

Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project.

Project execution is concerned with assessing how much work has been put in.

The File should fulfill the following *assessment objectives*:

### **Range of Research Methods used to obtain information**

### **Execution of Research**

### **Data Analysis**

Analyse Quantitative/ Qualitative information

Control Quality

### **Draw Conclusions**

### **Examination Scheme:**

Dissertation	50
Viva Voce	50

ata, leading to production of a structured report.

### **Selecting the Dissertation Topic**

It is usual to give you some discretion in the choice of topic for the dissertation and the approach to be adopted. You will need to ensure that your dissertation is related to your field of specialization.

Deciding this is often the most difficult part of the dissertation process, and perhaps, you have been thinking of a topic for some time.

It is important to distinguish here between ‘dissertation topic’ and ‘dissertation title’. The topic is the specific area that you wish to investigate. The title may not be decided until the dissertation has been written so as to reflect its content properly.

Few restrictions are placed on the choice of the topic. Normally we would expect it to be:

- relevant to business, defined broadly;
- related to one or more of the subjects or areas of study within the core program and specialisation stream;
- clearly focused so as to facilitate an in-depth approach, subject to the availability of adequate sources of information and to your own knowledge;
- of value and interest to you and your personal and professional development.

### **Planning the Dissertation**

This will entail following:

- Selecting a topic for investigation.
- Establishing the precise focus of your study by deciding on the aims and objectives of the dissertation, or formulating questions to be investigated. Consider very carefully what is worth investigating and its feasibility.
- Drawing up initial dissertation outlines considering the aims and objectives of the dissertation. Workout various stages of dissertation
- Devising a timetable to ensure that all stages of dissertation are completed in time. The timetable should include writing of the dissertation and regular meetings with your dissertation guide.

### **The Dissertation plan or outline**

It is recommended that you should have a dissertation plan to guide you right from the outset. Essentially, the dissertation plan is an outline of what you intend to do, chapter wise and therefore should reflect the aims and objectives of your dissertation.

There are several reasons for having a dissertation plan

- It provides a focus to your thoughts.
- It provides your faculty-guide with an opportunity, at an early stage of your work, to make constructive comments and help guide the direction of your research.
- The writing of a plan is the first formal stage of the writing process, and therefore helps build up your confidence.
- In many ways, the plan encourages you to come to terms with the reading, thinking and writing in a systematic and integrated way, with plenty of time left for changes.
- Finally, the dissertation plan generally provides a revision point in the development of your dissertation report in order to allow appropriate changes in the scope and even direction of your work as it progresses.

### **Keeping records**

This includes the following:

- Making a note of everything you read; including those discarded.

- Ensuring that when recording sources, author's name and initials, date of publication, title, place of publication and publisher are included. (You may consider starting a card index or database from the outset). Making an accurate note of all quotations at the time you read them.
- Make clear what is a direct quotation and what is your paraphrase.

### **Dissertation format**

All students must follow the following rules in submitting their dissertation.

- Front page should provide title, author, Name of degree/diploma and the date of submission.
- Second page should be the table of contents giving page references for each chapter and section.
- The next page should be the table of appendices, graphs and tables giving titles and page references.
- Next to follow should be a synopsis or abstract of the dissertation (approximately 500 words)
- Next is the 'acknowledgements'.
- Chapter I should be a general introduction, giving the background to the dissertation, the objectives of the dissertation, the rationale for the dissertation, the plan, methodological issues and problems. The limitations of the dissertation should also be hinted in this chapter.
- Other chapters will constitute the body of the dissertation. The number of chapters and their sequence will usually vary depending on, among others, on a critical review of the previous relevant work relating to your major findings, a discussion of their implications, and conclusions, possibly with a suggestion of the direction of future research on the area.
- After this concluding chapter, you should give a list of all the references you have used. These should be cross - references with your text. For articles from journals, the following details are required e.g.

Draper P and Pandyal K. 1991, The Investment Trust Discount Revisited, Journal of Business Finance and Accounting, Vol18, No6, Nov, pp 791-832.

For books, the following details are required:

Levi, M. 1996, International Financial Management, Prentice Hall, New York, 3rd Ed, 1996

- Finally, you should give any appendices. These should only include relevant statistical data or material that cannot be fitted into the above categories.

### **The Layout Guidelines for the Dissertation**

- A4 size Paper
- Font: Arial (10 points) or Times New Roman (12 points)
- Line spacing: 1.5
- Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

### **Guidelines for the assessment of the Dissertation**

While evaluating the dissertation, faculty guide will consider the following aspects:

- Has the student made a clear statement of the objective or objective(s).
- If there is more than one objective, do these constitute parts of a whole?
- Has the student developed an appropriate analytical framework for addressing the problem at hand.
- Is this based on up-to-date developments in the topic area?
- Has the student collected information / data suitable to the frameworks?
- Are the techniques employed by the student to analyse the data / information appropriate and relevant?
- Has the student succeeded in drawing conclusion from the analysis?
- Do the conclusions relate well to the objectives of the project?
- Has the student been regular in his work?
- Layout of the written report.

**Assessment Scheme:****Continuous Evaluation:**

40%

(Based on Abstract, Regularity,  
Adherence to initial plan, Records etc.)

**Final Evaluation:** Based on,  
Contents & Layout of the Report,  
Conceptual Framework,  
Objectives & Methodology and  
Implications & Conclusions  
Viva & Presentation

60%

20

## ADVANCED DATA STRUCTURE AND ALGORITHMS

**Course Code: AIE4101**

**Credit Units: 03**

### Course Objective:

The objective of this course is to expose the students to the Fundamentals and advance concepts in Data Structure Using C. This course discusses about Problem solving approaches, Structured Programming Concepts, Guidelines for good Program Structure, Arrays, Stacks, Trees, Graphs, Searching & Sorting and File Structure.

### Course Contents:

#### Module I

Overview of data structures, Review of Arrays, sparse matrices, Stacks, Queues, linked lists , doubly linked lists, Applications, dynamic storage management

#### Module II

Algorithm analysis, Efficiency of algorithms, Asymptotic Notations, Time complexity of an algorithm, Analyzing Recursive Programs using various strategies

#### Module III

Divide and Conquer Paradigm: Divide and conquer recurrence equations and their solutions, Review of various sorting techniques using divide and conquer approach, Strassen's matrix multiplication.

#### Module IV

Trees: Basic terminology, Binary Trees and its representations, Binary Search Trees, Binary Search Tree traversals, Red-Black Trees, AVL Trees and B Trees, applications of trees, Graphs: Terminology, representations, traversals, spanning trees, shortest paths, Basic Graph Algorithms, Depth first search and Breadth first Search and its analysis, single source shortest path problem, Dijkstra's algorithm

#### Module V

Greedy Paradigm: Basic greedy strategy, Algorithms of Kruskal's and Prim's, greedy strategy in algorithms for the knapsack problem and Huffman trees.

Dynamic Programming paradigm, all pairs shortest path problem, longest common subsequence problems.

#### Module VI

Back Tracking: general method, 4 Queen's Problem, Branch and Bound: general method, Bounding, 0 / 1 Knapsack Problem. NP – Complete and NP hard problem, SAT problems

# ADVANCED DATABASE MANAGEMENT SYSTEM

**Course Code: AIE4102**

**Credit Units: 03**

## **Course Objective:**

The objective of this course is to expose the students to the implementation techniques of database system. This course explains techniques for query processing and optimization with transaction and concurrency control techniques

## **Course Contents:**

### **Module I: Relational Databases**

Integrity Constraints revisited, Extended ER diagram, Relational Algebra & Calculus, Functional, Multivalued and Join Dependency, Normal Forms, Rules about functional dependencies.

### **Module II: Query Processing and Optimization**

Valuation of Relational Operations, Transformation of Relational Expressions, Indexing and Query Optimization, Limitations of Relational Data Model, Null Values and Partial Information.

### **Objected Oriented and Object Relational Databases**

Modeling Complex Data Semantics, Specialization, Generalization, Aggregation and Association, Objects, Object Identity, Equality and Object Reference, Architecture of Object Oriented and Object Relational Databases

### **Module III: Parallel and Distributed Databases**

Distributed Data Storage – Fragmentation & Replication, Location and Fragment Transparency Distributed Query Processing and Optimization, Distributed Transaction Modeling and concurrency Control, Distributed Deadlock, Commit Protocols, Design of Parallel Databases, Parallel Query Evaluation.

### **Advanced Transaction Processing**

Nested and Multilevel Transactions, Compensating Transactions and Saga, Long Duration Transactions, Weak Levels of Consistency, Transaction Work Flows, Transaction Processing Monitors.

### **Module IV**

Multimedia databases, Databases on the Web and Semi-Structured Data  
Case Study: Oracle Xi

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# DIGITAL COMPUTER ORGANISATION

Course Code: AIE4103

Credit Units: 03

## Course Objective:

With increase in availability of system resources, concept of parallel architecture has obtained immense popularity. This course provides a comprehensive study of scalable and parallel computer architectures for achieving a proportional increase in performance with increasing system resources. In this course we have discussed the theory, technology, architecture (hardware) and software aspects of parallel computer and Vector computers.

## Course Contents:

### Module I: Parallel computer models

The state of computing, Multiprocessors and multicomputers, Multivector and SIMD computers, Architectural development tracks

Program and network properties: Conditions of parallelism, Data and resource dependences, Hardware and software parallelism, Program partitioning and scheduling, Grain size and latency, Program flow mechanisms, Control flow versus data flow, Data flow architecture, Demand driven mechanisms, Comparisons of flow mechanisms

### Module II: System Interconnect Architectures

Network properties and routing, Static interconnection networks, Dynamic interconnection Networks, Multiprocessor system interconnects, Hierarchical bus systems, Crossbar switch and multiport memory, Multistage and combining network.

### Module III: Processors and Memory Hierarchy

Advanced processor technology, Instruction-set Architectures, CISC Scalar Processors, RISC Scalar Processors, Superscalar Processors, VLIW Architectures, Vector and Symbolic processors

Memory Technology: Hierarchical memory technology, Inclusion, Coherence and Locality, Memory capacity planning, Virtual Memory Technology

### Module IV: Backplane Bus System

Backplane bus specification, Addressing and timing protocols, Arbitration transaction and interrupt, Cache addressing models, Direct mapping and associative caches.

Pipelining: Linear pipeline processor, Nonlinear pipeline processor, Instruction pipeline design, Mechanisms for instruction pipelining, Dynamic instruction scheduling, Branch handling techniques, Arithmetic Pipeline Design, Computer arithmetic principles, Static arithmetic pipeline, Multifunctional arithmetic pipelines

### Module V: Vector Processing Principles

Vector instruction types, Vector-access memory schemes.

Synchronous Parallel Processing: SIMD Architecture and Programming Principles, SIMD Parallel Algorithms, SIMD Computers and Performance Enhancement

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# ADVANCED COMPUTER NETWORKS

Course Code: AIE4104

Credit Units: 03

## Course Objective:

The objective of the course is to provide thorough understanding & in-depth knowledge of concepts in computer networks Such as Internet protocols and routing, local area networks, wireless communications and networking, performance analysis, congestion control, TCP, network address translation, switching and routing, mobile IP, multicasting, IPv6. Peer-to-peer networking, network security, and other current research topics. This course motivates the students to explore current research areas in the same field.

## Course Contents:

### Module I : Introduction to Networks

Networking introduction, Reference Models, TCP/IP, OSI, Addressing, Protocol Layering, Transmission impairment, performance, Switching, Transmission Media, Introduction to MAC, Channel allocation, MAC protocol classification for LAN's, MAN's, MAC protocols for Adhoc N/ws, MAC Protocol for WLAN's(adhoc and sensor n/ws), Introduction to Ethernet protocol ( Fast, Gigabit and standard Ethernet).

### Module II: Network Layer

Network Layer Design Issues, Routing Algorithms, Congestion Control Algorithms, Quality of Service, Internet Working, Network Layer in Internet.

IPv6 basic protocol, extensions and options, support for QoS, security, etc., Changes to other protocols, Application Programming Interface for IPv6.

### Module III : Mobile IP

Mobile IP, IP Multicasting. Multicast routing protocols, address assignments, session discovery, etc.

### Module IV : Transport Layer and Application Layer

The Transport Protocol: The Transport Service, Elements of transport protocol, a simple Transport Protocol, Internet Transport Protocols UDP, Internet Transport Protocols TCP, TCP extensions for high-speed networks, transaction-oriented applications Performance Issues.

The Application Layer: DNS-(Domain Name System), Electronic Mail, World Wide Web Multimedia.

### Module V : Network Security

Overview of network security, Secure-HTTP, SSL, ESP, Key distribution protocols. Digital signatures, digital certificates-mail Security, Web security, Social Issues.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# ADVANCED DATA STRUCTURE AND ALGORITHMS LAB

**Course Code: AIE4105**

**Credit Units: 01**

**Software Required: Turbo C++**

## Course Contents:

- 1 Write a program to implement the following using an array
  - a) Stack ADT
  - b) Queue ADT
- 2 Write a program to implement the following using a singly linked list
  - a. Stack ADT
  - b. Queue ADT
- 3 Write Program to implement the deque (double ended queue) ADT using a doubly linked list.
- 4 Write a program to perform the following operations:
  - a) Insert an element into a binary search tree.
  - b) Delete an element from a binary search tree.
  - c) Search for a key element in a binary search tree.
- 5 Write a program to implement circular queue ADT using an array.
- 6 Write a program that use non –recursive functions to traverse the given binary tree in
  - a) Preorder
  - b) inorder and
  - c) post order
- 7 Write programs for the implementation of BFS and DFS for a given graph
- 8 Write programs for implementing the following sorting methods:
  - a) Quick sort
  - b) Merge Sort
  - c) Heap Sort.
- 9 Write a program to perform the following operations.
  - a) Insertion into a B-tree
  - b) Deletion from a B-tree
- 10 Write a program to perform the following operations.
  - a) Insertion into a AVL-tree
  - b) Deletion from a AVL-tree
- 11 Write a program to implement Kruskal’s algorithm to generate a minimum spanning tree
12. Write a program to implement Dijkstra’s algorithm using priority queues
13. Write a program to Implement Prim’s and Kruskal’s algorithms
14. Write a program to Implement a backtracking algorithm for Knapsack problem
15. Write a program to Implement a branch and bound algorithm for traveling salesperson problem

## Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# MATLAB

**Course Code: AIE4108**

**Credit Units: 02**

## Course Content:

1. To write a MATLAB program to perform some basic operation on matrices such as addition, subtraction, multiplication.
2. To write a “MATLAB” Program to generate various signals and sequences, such as unit impulse, unit step, unit ramp, sinusoidal, square, saw tooth, triangular, sinc signals.
3. To performs operations on signals and sequences such as addition, multiplication, scaling, shifting, folding, computation of energy and average power.
4. Write a program for finding even and odd parts of sequences Using MATLAB Software & program for finding real and imaginary parts of sequences Using MATLAB Software.
5. Write a program to find the out put with linear convolution operation Using MATLAB Software
6. Write a program to compute auto correlation and cross correlation between signals and Sequences.
7. Write a program to compute linearity and time invariance properties of a given continuous /discrete System.
8. Write a program to Unit Step And Sinusoidal Response Of The Given LTI System And Verifying Its physical reliability and stability properties.
9. Write a program to demonstrate Gibbs Phenomenon using MATLAB.
10. Write a program to obtain Fourier Transform and Inverse Fourier Transform of a given signal / sequence and to plot its Magnitude and Phase Spectra
11. Write a program to perform waveform synthesis using Laplace Transforms of a given signal.
12. Write a program to locating the zeros and poles and plotting the pole zero maps in s-plane and z-plane
13. for the given transfer function.
14. Write a program to Generate Gaussian Noise and to Compute its Mean, M.S. Values, Skew, kurtosis,
15. PS and PDF
16. Write a program to demonstrate Sampling Theorem and aliasing effect using MATLAB.
17. Write a program for removal of noise by auto correlation/cross correlation.

## Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# PYTHON PROGRAMMING LAB

**Course Code:**AIE4109

**Credit Units:** 01

## Course Contents:

1. Write a program which will find all such numbers which are divisible by 7 but are not a multiple of 5, between 2000 and 3200 (both included). The numbers obtained should be printed in a comma-separated sequence on a single line.
2. Create a program that asks the user to enter their name and their age. Print out a message addressed to them that tells them the year that they will turn 100 years old.
3. Define a function max() that takes two numbers as arguments and returns the largest of them. Use the if-then-else construct available in Python. (It is true that Python has the max() function built in, but writing it yourself is nevertheless a good exercise.)
4. Define a function max\_of\_three() that takes three numbers as arguments and returns the largest of them.
5. Define a function that computes the length of a given list or string. (It is true that Python has the len() function built in, but writing it yourself is nevertheless a good exercise.)
6. Write a function that takes a character (i.e. a string of length 1) and returns True if it is a vowel, False otherwise.
7. Write a function translate() that will translate a text into "rövarspråket" (Swedish for "robber's language"). That is, double every consonant and place an occurrence of "o" in between. For example, translate("this is fun") should return the string "tothohisosisfosfunon".
7. Define a function sum() and a function multiply() that sums and multiplies (respectively) all the numbers in a list of numbers. For example, sum([1, 2, 3, 4]) should return 10, and multiply([1, 2, 3, 4]) should return 24.
8. Define a function reverse() that computes the reversal of a string. For example, reverse("I am testing") should return the string "gnitset ma I".
9. Define a function is\_palindrome() that recognizes palindromes (i.e. words that look the same written backwards). For example, is\_palindrome("radar") should return True.
10. Ask the user for a number. Depending on whether the number is even or odd, print out an appropriate message to the user
11. Take a list, say for example this one:  
a = [1, 1, 2, 3, 5, 8, 13, 21, 34, 55, 89]  
and write a program that prints out all the elements of the list that are less than 5.
12. Create a program that asks the user for a number and then prints out a list of all the divisors of that number. (If you don't know what a divisor is, it is a number that divides evenly into another number. For example, 13 is a divisor of 26 because 26 / 13 has no remainder.)
13. Take two lists, say for example these two:  
a = [1, 1, 2, 3, 5, 8, 13, 21, 34, 55, 89]  
b = [1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13]

and write a program that returns a list that contains only the elements that are common between the lists (without duplicates). Make sure your program works on two lists of different sizes.

14. Ask the user for a string and print out whether this string is a palindrome or not. (A palindrome is a string that reads the same forwards and backwards.)

15. Let's say I give you a list saved in a variable: `a = [1, 4, 9, 16, 25, 36, 49, 64, 81, 100]`. Write one line of Python that takes this list `a` and makes a new list that has only the even elements of this list in it.

16. Make a two-player Rock-Paper-Scissors game. (Hint: Ask for player plays (using input), compare them, print out a message of congratulations to the winner, and ask if the players want to start a new game)

**Remember the rules:**

- Rock beats scissors
- Scissors beats paper
- Paper beats rock

18. Write a program that asks the user how many Fibonacci numbers to generate and then generates them. Take this opportunity to think about how you can use functions. Make sure to ask the user to enter the number of numbers in the sequence to generate. (Hint: The Fibonacci sequence is a sequence of numbers where the next number in the sequence is the sum of the previous two numbers in the sequence. The sequence looks like this: 1, 1, 2, 3, 5, 8, 13, ...)

19. Write a program (function!) that takes a list and returns a new list that contains all the elements of the first list minus all the duplicates.

20. Write a function that takes an ordered list of numbers (a list where the elements are in order from smallest to largest) and another number. The function decides whether or not the given number is inside the list and returns (then prints) an appropriate boolean.

21. Create a program that will play the “cows and bulls” game with the user. The game works like this:

## Syllabus - Second Semester

### FUNDAMENTALS OF ROBOTIC SYSTEM AND ROBOT PROGRAMMING

**Course Code: AIE4201**

**Credit Units: 03**

**Course Objective:**

The objective of this course is to enlighten the students about the fundamentals of robotic systems. To understand the basics of robot, Robot Transformations and Sensors, Micro/Nano robotic systems and to program them for functioning.

**Course Content:**

**Module-I: INTRODUCTION**

Robot anatomy-Definition, law of robotics, History and Terminology of Robotics-Accuracy and repeatability of Robotics-Simple problems- Specifications of Robot-Speed of Robot-Robot joints and links-Robot classifications-Architecture of robotic systems-Robot Drive systems- Hydraulic, Pneumatic and Electric system.

**Module-II: END EFFECTORS AND ROBOT CONTROLS**

Mechanical grippers-Slider crank mechanism, Screw type, Rotary actuators, cam type-Magnetic grippers-Vacuum grippers-Air operated grippers-Gripper force analysis-Gripper design-Simple problems-Robot controls-Point to point control, Continuous path control, Intelligent robot-Control system for robot joint-Control actions-Feedback devices-Encoder, Resolver, LVDT-Motion Interpolations-Adaptive control.

**Module-III: ROBOT TRANSFORMATIONS AND SENSORS**

Robot kinematics-Types- 2D, 3D Transformation-Scaling, Rotation, Translation- Homogeneous coordinates, multiple transformation-Simple problems. Sensors in robot – Touch sensors-Tactile sensor – Proximity and range sensors – Robotic vision sensor-Force sensor-Light sensors, Pressure sensors.

**Module-IV: ROBOT CELL DESIGN AND MICRO/NANO ROBOTICS SYSTEM**

Robot work cell design and control-Sequence control, Operator interface, Safety monitoring devices in Robot-Mobile robot working principle, actuation using MATLAB, NXT Software Introductions-Robot applications- Material handling, Machine loading and unloading, assembly, Inspection, Welding, Spray painting and undersea robot. Micro/Nanorobotics system overview-Scaling effect-Top down and bottom up approach- Actuators of Micro/Nano robotics system-Nanorobot communication techniques-Fabrication of micro/nano grippers-Wall climbing micro robot working principles-Biomimetic robot-Swarm robot-Nanorobot in targeted drug delivery system.

**Module-V: BASICS OF ROBOT PROGRAMMING**

Robot programming-Introduction-Types- Flex Pendant- Lead through programming, Coordinate systems of Robot, Robot controller- major components, functions-Wrist Mechanism-Interpolation-Interlock commands- Operating mode of robot, Jogging-Types, Robot specifications- Motion commands, end effectors and sensors commands.

**Module-VI: VAL, VAL-II, RAPID AND AML LANGUAGE**

Robot Languages-Classifications, Structures- VAL- language commands motion control, hand control, program control, pick and place applications, palletizing applications using VAL, Robot welding application using VAL program-WAIT, SIGNAL and DELAY command for communications using simple applications. RAPID- language basic commands- Motion Instructions-Pick and place operation using Industrial robot- manual mode, automatic mode, subroutine command based programming. Move-master command language- Introduction, syntax, simple

problems. VAL-II programming-basic commands, applications- Simple problem using conditional statements-Simple pick and place applications-Production rate calculations using robot. AML Language-General description, elements and functions, Statements, constants and variables-Program control statements- Operating systems, Motion, Sensor commands-Data processing.

**Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# ADVANCED CONTROL SYSTEMS & DRIVES FOR ROBOTS

**Course Code: AIE4202**

**Credit Units: 03**

## **Course Objective:**

Course provides comprehensive and insight knowledge of Digital control systems. Objective of the course is to provide the students the core knowledge of Stability theory of Digital systems and State Variable analysis of Digital System

## **Course Contents:**

### **Module I: Introduction**

Configuration of the basic Digital Control Systems, types of sampling operations, Sample and Hold operations, Sampling theorem, Basic discrete time signals.

### **Module II: Stability Methods**

Mapping between s-plane and z-plane, stability methods: Modified Routh Criterion, Jury's method, modified Schur-Cohn criterion.

### **Module III: Models of Digital Control Systems**

Digital temperature control System, Digital position control system, stepping motors and their control. Design of Digital compensator using frequency response plots.

### **Module IV: Control Systems Analysis Using State Variable Methods**

State variable representation, conversion of state variable models to transfer function and vice-versa, Eigen values and eigen vectors, Solution of state equations, Concepts of controllability and observability.

### **Module V: State Variable analysis of Digital Control Systems**

State variable description of digital control systems, conversion of state variable models to pulse transfer function and vice versa, solution of state difference equations, controllability and observability.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

## **Text & References:**

# MICROPROCESSOR AND INTERFACING

**Course Code: AIE4203**

**Credit Units: 03**

## **Course Objective:**

This course deals with the systematic study of the Architecture and programming issues of microprocessor family and its applications. The aim of this course is to give the students detailed knowledge of the above microprocessor needed to develop the systems using it.

## **Course Contents:**

### **Module I: Microprocessor**

Intel 8085 - Introduction, register structure, memory Addressing, Addressing Modes, Instruction Set, Timing Methods, CPU Pins and Associated Signals, Instruction timing and execution. programming I/O. Interrupt System, DMA, SID & SOD lines, Instruction set, 8085 based system design.

### **Module II: Intel 8086**

Introduction, Architecture, Addressing modes, instruction set, memory management, assembler dependent instructions, Input/Output, system design using 8086.

### **Module III: Pentium Processors**

Internal Architecture of 8087, operational overview of 8087, Introduction to 80186, 80286, 80386 & 80486 processors and Pentium Processors.

### **Module IV: Peripheral Interfacing**

Parallel versus serial transmission, synchronous and asynchronous serial data transmission. Interfacing of hexadecimal keyboard and display unit, interfacing of cassette recorders and parallel, serial interface standards. Study of Peripheral Devices 8255, 8253, 8257, 8251, 8259.

### **Module V: Microprocessor applications to Power Engineering**

**Protective Relaying:** over-current, impedance, MHO, reactance, bi-directional relays.

**Measurements:** Frequency, power angle & power factor, Voltage and Current, KVA, KW, & KVAR, maximum demand. Resistance, Reactance, Temperature Controls.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# KINEMATICS AND DYNAMICS OF ROBOTS

**Course Code: AIE4204**

**Credit Units: 03**

## **Course Objective:**

Objective of this course is systematic study of the Architecture and programming issues of microprocessor family and its applications. And it focus on detailed knowledge of the above microprocessor needed to develop the systems using it.

## **Course Contents:**

### **Module-I: INTRODUCTION**

Introduction, position and orientation of objects, objects coordinate frame Rotation matrix, Euler angles Roll, pitch and yaw angles coordinate

Transformations, Joint variables and position of end effectors, Dot and cross products, coordinate frames, Rotations, Homogeneous coordinates.

### **Module-II: DIRECT KINEMATICS**

Link coordinates D-H Representation, The ARM equation. Direct kinematic analysis for Four axis, SCARA Robot and three, five and six axis Articulated Robots.

### **Module-III: INVERSE KINEMATICS**

The inverse kinematics problem, General properties of solutions. Tool configuration, Inverse kinematics of four axis SCARA robot and three and five axis, Articulated robot.

### **Module-IV: WORKSPACE ANALYSIS AND TRACJECTORY PLANNING**

Workspace Analysis, work envelope of a Four axis SCARA robot and five axis articulated robot workspace fixtures, the pick and place operations, Joint space technique - continuous path motion, Interpolated motion, straight line motion and Cartesian space technique in trajectory planning.

### **Module-V: MANIPULATOR DYNAMICS**

Introduction, Lagrange's equation kinetic and potential energy. Link inertia Tensor, link Jacobian Manipulator inertia tensor. Gravity, Generalized forces, Lagrange-Euler Dynamic model, Dynamic model of a Two-axis planar robot, Newton Euler formulation, Lagrange - Euler formulation, problems.

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# ADVANCED APPLIED MATHEMATICS FOR ENGINEERING

**Course Code: AIE4205**

**Credit Units: 03**

## **Course Objective:**

Objective of this course is to develop analytical capability and to impart knowledge in Mathematical and Statistical methods and their applications in Engineering and Technology and to apply these concepts in engineering problems they would come across.

## **Course Contents:**

### **Module-I: TRANSFORM METHODS**

Laplace transform methods for one-dimensional wave equation - Displacements in a string - Longitudinal vibrations of an elastic bar – Fourier transform methods for one-dimensional heat conduction problems in infinite and semi-infinite rod.

### **Module-II: ELLIPTIC EQUATIONS**

Laplace equation - Fourier transform methods for Laplace equation – Solution of Poisson equation by Fourier transform method.

### **Module-III: CALCULUS OF VARIATIONS**

Variation and its properties - Euler's equation - Functionals dependent on first and higher order derivatives - Functionals dependent on functions of several independent variables - Some applications - Direct methods – Ritz methods.

### **Module-IV: NUMERICAL SOLUTION OF PARTIAL DIFFERENTIAL EQUATIONS**

Numerical Solution of Partial Differential Equations - Solution of Laplace's and Poisson equation on a rectangular region by Liebmann's method - Diffusion equation by the explicit and Crank Nicholson implicit methods - Solution of wave equation by explicit scheme.

### **Module-V: REGRESSION METHODS**

Principle of least squares - Correlation - Multiple and Partial correlation - Linear and non-linear regression - Multiple linear regression.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# RESEARCH METHODOLOGY AND TECHNICAL REPORT WRITING

**Course Code: AIE4206**

**Credit Units: 02**

## **Course Objectives:**

The course will enhance scientific, technical and research writing skills and impart knowledge about various stages of research process, statistical analysis, statistical tests and their applications in statistical decision making.

## **Course Contents:**

**Module I:** Introduction to research: Definition, motivation, need, objectives, significance and characteristics of research; types of research; steps in research process; planning a research proposal; literature review, web searching.

**Module II:** Population and sample, parameter and statistic, sampling and data collection, sampling design: steps, types, sample size, sampling methods, large and small samples, primary and secondary data, data processing and analysis. Sample surveys and questionnaire designing, scaling techniques.

**Module III:** Dependent and independent variables, univariate, bivariate and multivariate analysis, means-arithmetic, geometric and harmonic; measure of dispersion of data, standard deviation, variance, coefficient of variation and degree of freedom. Hypothesis testing: null hypothesis and alternate hypothesis, errors in hypothesis testing, significance and confidence levels, parametric tests and non-parametric tests, one-tailed and two-tailed tests, analysis of variance. Regression analysis and curve fitting, method of least-squares, explained and unexplained variations, coefficient of correlation, coefficient of determination.

**Module IV:** Technical/scientific/research report writing: structure and components of scientific reports, formats of dissertations, research report, report writing skills, report preparation, referencing, bibliography and footnotes. Making presentation-use of visual aids and PPTs. Publication of research papers, citations,. Intellectual property rights and copy rights, plagiarism, patents and patent laws, commercialization and ethical issues.

## **Examination Scheme:**

Attendance	Assignment/Library consultation / Thesis writing	Class test	Final Exam	Total
5	15	10	70	100

# **FUNDAMENTAL OF ROBOTICS SYSTEM AND ROBOT PROGRAMMING LAB**

**Course Code: AIE4207**

**Credit Units: 01**

## **Course Contents:**

1. Study of different types of robots based on configuration and application.
2. Study of different type of links and joints used in robots
3. Study of components of robots with drive system and end effectors.
4. Determination of maximum and minimum position of links.
5. Verification of transformation (Position and orientation) with respect to gripper and world coordinate system
6. Estimation of accuracy, repeatability and resolution.
7. Robot programming exercises

## **Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

# ADVANCED CONTROL SYSTEMS & DRIVES FOR ROBOTS LAB

Course Code: AIE4208

Credit Units: 01

## Course Contents:

### List of Experiments:

1. Determination of Transfer functions of an Electrical System.
2. Time Response Characteristics of a Second order System (Typical RLC network).
3. Characteristics of Synchros:
  - (a) Synchro transmitter characteristics.
  - (b) Implementation of error detector using synchro pair.
4. Determination of Magnetic Amplifier Characteristics with different possible connections.
5. Process Control Simulator:
  - (a) To determine the time constant and transfer function of first order process.
  - (b) To determine the time response of closed loop second order process with Proportional Control.
  - (c) To determine the time response of closed loop second order process with Proportional-Integral Control.
  - (d) To determine the time response of closed loop second order process with Proportional-Integral-Derivative Control.
  - (e) To determine the effect of disturbances on a process.
6. To study the compensation of the second order process by using:
  - (a) Lead Compensator.
  - (b) Lag Compensator.
  - (c) Lead- Lag Compensator
7. Realization of AND, OR, NOT gates, other derived gates and ladder logic on Programmable Logic Controller with computer interfacing.
8. To determination of AC servomotor Characteristics.
9. To study the position control of DC servomotor with P, PI control actions.
10. Analog Computer:
  - (a) To examine the operation of potentiometer and adder.
  - (b) To examine the operation of integrator.
11. To solve a second order differential equation.

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## MICROPROCESSOR & INTERFACING LAB

**Course Code: AIE4209**

**Credit Units: 01**

### **Course Contents:**

### **List of Experiments:**

1. To load the numbers 49H and 53H ion memory location 9510 & 9511.
2. Respectively and add the contents of memory location 9601.
3. To write the Assembly Language Programming for 8 bit addition with and without carry.
4. To write the Assembly Language Programming for 8 bit subtraction with and without borrow.
5. To write the Assembly Language Programming for 8 bit Multiplication and Division.
6. To write the Assembly Language Programming for sorting an array of numbers in Ascending & Decending order.
7. To write the Assembly Language Programming with Additional Instructions.
8. To write and execute a program using Stacks.
9. To study and program the programmable Peripheral interface (8255 board).
10. To study and program the programmable interval timer (8253 board).
11. To study and program the programmable DMA Controller (8257 board).
12. To study and program the programmable Interrupt Controller (8259 board).
13. To study of programmable Serial Communication interface (8251 board).

### **Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# FUNDAMENTALS OF ARTIFICIAL INTELLIGENCE FOR ROBOTICS

**Course Code: AIE4210**

**Credit Units: 03**

## **Course Objective:**

Objective of this course is to expose the students to the fundamentals of AI and expert systems and its application in Robotics and to familiarize the students with the Fundamental concept of AI and expert system

## **Course Contents:**

### **Module-I: INTRODUCTION**

Introduction – History, Definition of AI, Emulation of human cognitive process, Intelligent agents – The concept of rationality, the nature of environments, the structure of agents.

### **Module-II: SEARCH METHODS**

Problem – Solving Agents : Problem Definitions, Formulating Problems, Searching for solutions – Measuring Problem – Solving Performance with examples. Search Strategies : Uninformed search strategies – Breadth – first Search, Uniform – Cost Search, depth –first search, depth – limited search, Iterative deepening depth – first search, bidirectional search, comparing uninformed search strategies. Informed search strategies – Heuristic information, Hill climbing methods, best – first search, branch – and – bound search, optimal search and A\* and Iterative deepening A\*.

### **Module-III: PROGRAMMING AND LOGICS IN ARTIFICIAL INTELLIGENCE**

LISP and other programming languages – Introduction to LISP, Syntax and numerical function, LISP and PROLOG distinction, input, output and local variables, interaction and recursion, property list and arrays alternative languages, formalized symbolic logics – properties of WERS, non-deductive inference methods.

### **Module-IV: EXPERT SYSTEM**

Expert system – Introduction, difference between expert system and conventional programs, basic activities of expert system – Interpretation, Prediction, Diagnosis, Design, Planning, Monitoring, Debugging, Repair, Instruction, Control. Basic aspects of expert system – Acquisition module, Knowledge base – Production rules, semantic net, frames. Inference engine – Backward chaining and forward chaining. Explanatory interface.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# ROBOTIC SIMULATION AND SIMULTANEOUS LOCALIZATION-MAPPING

**Course Code: AIE4211**

**Credit Units: 03**

## **Course Objective:**

Objective of this course is to study the techniques of simulation for robot design and location mapping simulation.

## **Course Contents:**

### **Module-I: INTRODUCTION**

Robotics systems, robot movements, quality of simulation, types of simulation, robot applications, robotics simulation displays. Simulation notation, Auto lisp functions, Features, Command syntax, writing design functions.

### **Module-II: ROBOTIC PRINCIPLES**

Straight lines, Angles and optimal moves circular interpolation, Robotic functions Geometrical commands, Edit commands. Selecting robot views, standard Robot part, using the parts in a simulation.

### **Module-III: LOCALIZATION AND MAPPINGS**

Introduction, Robotic perception – localization, mappings planning to move – configuration space, cell decomposition methods, skeletonization methods, Planning uncertain movements – Robust methods. Moring –dynamics and control, Potential Field control, reactive control, Robotics software architecture, Applications.

### **Module-IV: ROBOTICS SIMULATION**

Simulation packages, Loading the simulation, Simulation editors, delay, Resume commands. Slide commands, program flow control. Robot motion control, Analysis of robot elements, Robotic linkages.

### **Module-V: ROBOTIC MOTION**

Solids construction, Solid animation. Types of motion, velocity and acceleration, Types of simulation motion Harmonic motion, parabolic motion, uniform motion velocity and acceleration analysis for robots.

### **Module-VI: ROBOT DESIGN**

Linkages, Types, Transmission elements Flexible connectors, pulley-and- Belt drives, variable speed transmission. Design of Robot for particular applications – A case study.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

## Syllabus - Third Semester

### AUTOMATION IN MANUFACTURING SYSTEMS

**Course Code: AIE4301**

**Credit Units: 03**

**Course Objective:**

Objective of this course is to highlight the basic concepts and procedure for Automation of Manufacturing systems and the technology behind the automation of a manufacturing system.

**Course Contents:**

**Module-I: OVER VIEW OF MANUFACTURING AND AUTOMATION:**

Production systems, Automation in production systems, Automation principles and strategies, Manufacturing operations, production facilities. Basic elements of an automated system, levels of automation; Hardware components for automation and process control, programmable logic controllers and personal computers.

**Module-II: MATERIAL HANDLING AND IDENTIFICATION TECHNOLOGIES:**

Material handling, equipment, Analysis. Storage systems, performance and location strategies, Automated storage systems, AS/RS, types. Automatic identification methods, Barcode technology, RFID.

**Module-III: MANUFACTURING SYSTEMS AND AUTOMATED PRODUCTION LINES:**

Manufacturing systems: components of a manufacturing system, Single station manufacturing cells; Manual Assembly lines, line balancing Algorithms, Mixed model Assembly lines, Alternative Assembly systems. Automated production lines, Applications, Analysis of transfer lines.

**Module-IV: AUTOMATED ASSEMBLY SYSTEMS:** Fundamentals, Analysis of Assembly systems. Cellular manufacturing, part families, cooling, production flow analysis. Group Technology and flexible Manufacturing systems, Quantitative Analysis.

**Module-V: QUALITY CONTROL AND SUPPORT SYSTEMS:** Quality in Design and manufacturing, inspection principles and strategies, Automated inspection, contact Vs non contact, CMM. Manufacturing support systems. Quality function deployment, computer aided process planning, concurrent engineering, shop floor control, just in time and lean production.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;

# ROBOTICS SENSORS, VISION AND HARDWARE IMPLEMENTATION

**Course Code: AIE4302**

**Credit Units: 03**

**Course Objective:**

Objective of this course is to impart basic knowledge of robot vision, image processing sensors and hardware implementation

**Course Contents:**

**Module-I: SENSORS IN ROBOTICS**

An Introduction to sensors and Transducers, History and definitions, Smart Sensing, AI sensing, Need of sensors in Robotics. Position sensors – optical, non-optical, Velocity sensors, Accelerometers, Proximity Sensors – Contact, non-contact, Range Sensing, touch and Slip Sensors, Force and Torque Sensors. Different sensing variables – smell, Heat or Temperature, Humidity, Light, Speech or Voice recognition Systems, Tele-presence and related technologies.

**Module-II: VISION IN ROBTICS**

The Nature of Vision- Robot vision – Need, Applications - image acquisition –illumination techniques- Point sensor, line sensor, planar sensor, camera transfer characteristic, Raster scan, Image capture time, volume sensors, Image representation, picture coding techniques. Robot Control through Vision sensors, Robot vision locating position, Robot guidance with vision system, End effector camera Sensor.

**Module-III: ELEMENTS OF IMAGE PROCESSING TECHNIQUES**

Discretization, Neighbors of a pixel-connectivity- Distance measures - preprocessing Neighborhood averaging, Median filtering. Smoothing of binary Images- Image Enhancement- Histogram Equalization-Histogram Specification –Local Enhancement-Edge detection- Gradient operator- Laplace operators-Thresholding-Morphological image processing

**Module-IV: OBJECT RECOGNITION AND FEATURE EXTRACTION**

Image segmentation- Edge linking-Boundary detection-Region growing- Region splitting and merging- Boundary Descriptors-Freeman chain code- Regional Descriptors- recognition-structural methods- Recognition procedure, mahalanobic procedure

**Module-V: COLLISON FRONTS ALGORITHM**

Introduction, skeleton of objects. Gradients, propagation, Definitions, propagation algorithm, Thinning Algorithm, Skeleton lengths of Top most objects.

**Module-VI: MULTISENSOR CONTROLLED ROBOT ASSEMBLY**

Control Computer, Vision Sensor modules, Software Structure, Vision Sensor software, Robot programming, Handling, Gripper and Gripping methods, accuracy – A Case study.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# PATTERN RECOGNITION AND IMAGE PROCESSING

Course Code: AIE4303

Credit Units: 03

## Course Objective:

This course covers the theory and methods for learning from data, with an emphasis on pattern classification. Digital Image Processing is designed to give professionals and students a powerful collection of fundamental and advanced image processing tools on the desktop

## Course Contents:

### Module I: Introduction

Machine perception, pattern recognition example, pattern recognition systems, the design cycle, learning and adaptation

### Bayesian Decision Theory

Introduction, continuous features – two categories classifications, minimum error-rate classification-zero-one loss function, classifiers, discriminant functions, and decision surfaces

### Module II:

Normal density:

Univariate and multivariate density, discriminant functions for the normal density-different cases, Bayes decision theory – discrete features, compound

Bayesian decision theory and context

### Module III: Un-supervised learning and clustering

Introduction, mixture densities and Identifiability, maximum likelihood estimates, application to normal mixtures, K-means clustering. Data description and clustering, similarity measures, criteria function for clustering

### Module IV: Image Fundamentals and Transforms

Elements of visual perception – Image sampling and quantization, Basic relationship between pixels, Some basic grayscale transformations, Introduction to Fourier Transform and DFT, Properties of 2D Fourier Transform, FFT, Separable Image Transforms, Walsh, Hadamard, Discrete Cosine Transform, Haar, Slant, Karhunen, Loeve transforms.

### Module V: Image Segmentation and Edge Detection:

Region Operations, Crack Edge Detection,

Edge Following, Gradient operators, Compass and laplace operators. Threshold detection methods, optimal thresholding, multispectral thresholding, thresholding in hierarchical data structures; edge based image segmentation- edge image thresholding, edge relaxation, border tracing, border detection,

## Examination Scheme:

# ROBOTICS SENSORS, VISION AND HARDWARE IMPLEMENTATION LAB

**Course Code: AIE4304**

**Credit Units: 02**

## **Course Objective:**

Objective of this course is to impart basic knowledge of robot vision, image processing sensors and hardware implementation

## **Course Contents:**

**Generation in Robot Language** – Robot language structure, the textual robot languages. Online and Offline programming.

**Cartesian Trajectories** – Joint space planning, Cartesian trajectories, path primitives. Coordinate system used to determine the position of TCP and direction of the tool.

**Basic Syntax-** RAPID introduction, Constant, data objects and variables, data declaration, expressions, using data and aggregates in expression, Functions, function call in expression, priority between operators, Various Instructions, WAIT, SIGNAL and DELAY commands.

**Routine and subroutine** – Input/output interrupts priority between interrupts, Program control and subroutine function call, task modules, error recovery, system and time, Builtin subroutines in RAPID, Inter-task Objects.

**Optical sensors-** Photodiodes, phototransistors and photo resistors based sensors, light-to-light detectors, Infrared sensors (thermal, PIR, AFIR, thermopiles).

## **Magnetic and Electromagnetic Sensors and Actuators-**

Motors as actuators (linear, rotational, stepping motors), magnetic valves, inductive sensors (eddy current, LVDT, RVDT, Proximity, switches), Hall Effect sensors, Magneto resistive sensors.

**Mechanical Sensors-** Accelerometers, Force sensors (strain gauges, tactile sensors), Pressure sensors (semiconductor, piezoresistive, capacitive, VRP).

## **Industrial Networks & Fieldbus-**

Types of bus – DN, PB, ProfiNet, Eth/IP Interfacing to Controller : Connecting sensors to controller directly or through fieldbus. Configuration of digital, group, and analog IO. Use of instructions and logic. Strobing and handshaking with PLC as master, Encoder and Resolvers.

**PLC-** Various hardware types of PLC (CPU and I/O modules). Centralized configuration of PLC. On-line with PLC (using serial port). Various languages and its over-view. Sample program download, Task configuration. Configuration of IP address & sample program download. Decentralized configuration of PLC (Profibus protocol). Configuration I/O modules on Profi-bus protocol. Mod-bus configuration (Master & Slave configuration). Mod-bus RTU (Remote Telemetry Unit) and Mod-bus TCP/IP communication with PC based software.

**\*Student have to submit a Small Working Prototype Model.**

## **Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# **PATTERN RECOGNITION AND IMAGE PROCESSING LAB**

**Course Code: AIE4305**

**Credit Units: 01**

## **Course Contents:**

1. Study of functions in MATLAB.
2. Linear and Non-linear operations on Images.
3. Implementation of different geometric transformations (Scaling, Rotation, Translation, Shear).
4. Implementation of Identity transformation, Contrast Stretching, Threshold and Log Transformation.
5. Plotting of Histogram for Low contrast, High Contrast, Blurred Images, Black & white images and Gray Images.
6. Smoothing and Sharpening of Images using spatial filters.
7. Implementation of Fourier Transformation of different types of Images.
8. Implementation of Edge detection in different-2 images.
9. Implementation of clustering.
- 10 Implementation of different algorithms in pattern recognition.

## **Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# SUMMER INTERNSHIP EVALUATION

Course Code: AIE4335

Credit Units: 06

## Guidelines:

There are certain phases of every Intern's professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship program can best be described as an attempt to institutionalize efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal classroom situations. These attributes are intellectual ability, professional judgment and decision-making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility etc.

In order to achieve these objectives:

- **Each student will be allotted a supervisor** for proper guidance.
- **Student will first submit synopsis in the format given by coordinator/supervisor.**
- Student will maintain a file (**Internship File/Project Report**). **Further, coordinator will provide NTCC project guidelines and sample to help in preparation of file.** The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development. The File will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

The **layout guidelines** for the Project Report

### 1. File should be in the following specification

- A4 size paper
- **Font**

For normal text Font Type and Size must be- Times New Roman, 12 pt. The minimum font size of materials within a table or a figure can be 10 point.

- **Margins**

A margin of 3.75 cm (1½ inch) is to be given on the binding edge while on the other sides it is to be 2.5 cm (1 inch). The text of the report, including headings, figures, tables, and notes, but excluding page numbers, must be accommodated within the page area.

- **Line Spacing**

The line spacing in the main text must be between one-and-a-half (1.5). Single line spacing should be given for figure captions, table titles, figure legends, and footnotes. Equations, tables, figures, and quotations should be set off from the main text with adequate space (not less than the normal line spacing adopted for the main text). Two consecutive paragraphs should be separated by a spacing which must be larger than the line spacing adopted for the text.

- **Tables and Figures**

Each sketch, drawing, graph and photograph should have a figure number and title below the figure etc. Numbering should be sequential, chapter wise. For instance, if there are 24 figures chapter 3 spread over all of its sections the figure numbers run from Figure 3.1 through Figure 3.24. In figures experimental data should typically be represented by centered symbols, and theoretical data by continuous curves.

Each table should have a table number and caption above the table. Numbering should be sequential, chapter wise, as in the case of Figure numbers. For instance, if there are 18 tables in chapter 3 the table numbers run from Figure 3.1 through Figure 3.18.

Make sure that figures and tables are complete in other respects such as legends, references (if any) and coordinate labels with units. Each figure and table must be explicitly referred to in the text and located where its first reference occurs, preferably after the reference.

- **Drawings**

All engineering drawings must conform to relevant Standards and should include a title block. If drawings are large they should be included at the back of the report in a separate pocket. In case drawings are made using CAD packages, a CD ROM should be included which contains all the files and details of the packages used.

- **Equations**

The numbering of equations should be sequential, chapter wise. Numbered equations must be explicitly referred to in the text.

**2. Report Size:** The maximum number of pages of the Report should be preferably between 50-80 pages.

**3. Report Layout:** The report should contain the following components

Front Page  
Table of Content  
Acknowledgement  
Student Certificate  
Company Profile (optional)  
Introduction  
Main Body  
References / Bibliography

The File will include **five sections** in the order described below. The content and comprehensiveness of the main body and appendices of the report should include the following:

1. **The Title Page**--Title - An Internship Experience Report For (Your Name), name of internship organization, name of the Supervisor/Guide and his/her designation, date started and completed, and number of credits for which the report is submitted.
2. **Declaration by the Students**--This is page number (i), the beginning of the small case Roman numeral page numbers. The student has to give a declaration to the effect that the data used for the work, the work depicted in the report, and the written material contained in the report are not copied from others and that due permission has been taken from, and due credit has been given to, the sources whenever they are used.
3. **Certificate**--This is page number (ii). The certificate will be signed by the Faculty Supervisor(s) before the viva-voce after verifying the format and by the Head of the Department after review with the Supervisor(s).
4. **Acknowledgements**--This is page number (iii). Keep this brief and avoid using informal language. This page must be signed by the candidate.
5. **Abstract and Keywords**--This is page number (iv). The abstract (preferably one page) should contain the context/relevance of the problem at hand, a description of what was done and a gist of the significant observations/results.  
The keywords (maximum 6) are a hint that what is contained in the report.
7. **Contents**--This is page number (v). The table of Contents should be titled just *Contents* (not Table of Contents). Try to fit it into one or two pages.
8. **Introduction**--short, but should include how and why you obtained the internship experience position and the relationship it has to your professional and career goals.
9. **Main Body**--should include but not be limited to daily tasks performed. Major projects contributed to, dates, hours on task, observations and feelings, meetings attended and their purposes, listing of

tools and materials and their suppliers, and photographs if possible of projects, buildings and co-workers.

10. **References / Bibliography** --This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

### **ASSESSMENT OF THE INTERNSHIP FILE**

#### **Continuous Internal Assessment**

40 Marks

#### **Final Assessment**

60 Marks

Continuous Internal Assessment consists of topic relevance, progress report and synopsis marks. Final Assessment includes viva, presentation and report marks.

#### **Examination Scheme:**

<b>Components</b>	<b>V</b>	<b>S</b>	<b>R</b>	<b>PR</b>	<b>FP</b>
<b>Weightage (%)</b>	20	20	20	20	20

V – Viva, S – Synopsis, FP – Final Presentation, R – Report, PR-Progress Report

# PROJECT-DISSERTATION-I

Course Code: AIE4337

Credit Units: 05

## GUIDELINES FOR DISSERTATION

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critiqued by the faculty guide and corrected by the student at each stage.

The File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation.

### **In general, the File should be comprehensive and include**

A short account of the activities that were undertaken as part of the project;

A statement about the extent to which the project has achieved its stated goals.

A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;

Any activities planned but not yet completed as part of the DISSERTATION, or as a future initiative directly resulting from the project;

Any problems that have arisen that may be useful to document for future reference.

#### ➤ Report Layout

The report should contain the following components:

#### ➤ Title or Cover Page

The title page should contain the following information: Project Title; Student's Name; Course; Year; Supervisor's Name.

#### ➤ Acknowledgements (optional)

Acknowledgment to any advisory or financial assistance received in the course of work may be given.

#### ➤ Abstract

A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project

#### ➤ Table of Contents

Titles and subtitles are to correspond exactly with those in the text.

#### ➤ Introduction

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

#### ➤ Materials and Methods

This section should aim at experimental designs, materials used. Methodology should be mentioned in details including modifications if any.

#### ➤ Results and Discussion

Present results, discuss and compare these with those from other workers, etc. In writing these section, emphasis should be given on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or

captions. All major equations should also be numbered and unless it is really necessary never write in “point” form.

➤ **Conclusion**

A conclusion should be the final section in which the outcome of the work is mentioned briefly.

➤ **Future prospects**

➤ **Appendices**

The Appendix contains material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

➤ **References / Bibliography**

This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

**Examples**

**For research article**

Voravuthikunchai SP, Lortheeranuwat A, Ninrprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichia coli* O157: H7. *Clin Microbiol Infect*, **8** (suppl 1): 116–117.

**For book**

Kowalski,M.(1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), **7**: 63-67

**ASSESSMENT OF THE DISSERTATION FILE**

Essentially, marking will be based on the following criteria: the quality of the report, the technical merit of the project and the project execution.

Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project.

Project execution is concerned with assessing how much work has been put in.

The File should fulfill the following *assessment objectives*:

**Range of Research Methods used to obtain information**

**Execution of Research**

**Data Analysis**

Analyse Quantitative/ Qualitative information

Control Quality

**Draw Conclusions**

Examination Scheme:

Dissertation	50
Viva Voce	50
<b>Total</b>	<b>100</b>

ata, leading to production of a structured report.

**Selecting the Dissertation Topic**

It is usual to give you some discretion in the choice of topic for the dissertation and the approach to be adopted. You will need to ensure that your dissertation is related to your field of specialization.

Deciding this is often the most difficult part of the dissertation process, and perhaps, you have been thinking of a topic for some time.

It is important to distinguish here between ‘dissertation topic’ and ‘dissertation title’. The topic is the specific area that you wish to investigate. The title may not be decided until the dissertation has been written so as to reflect its content properly.

Few restrictions are placed on the choice of the topic. Normally we would expect it to be:

- relevant to business, defined broadly;
- related to one or more of the subjects or areas of study within the core program and specialisation stream;
- clearly focused so as to facilitate an in-depth approach, subject to the availability of adequate sources of information and to your own knowledge;
- of value and interest to you and your personal and professional development.

### **Planning the Dissertation**

This will entail following:

- Selecting a topic for investigation.
- Establishing the precise focus of your study by deciding on the aims and objectives of the dissertation, or formulating questions to be investigated. Consider very carefully what is worth investigating and its feasibility.
- Drawing up initial dissertation outlines considering the aims and objectives of the dissertation. Workout various stages of dissertation
- Devising a timetable to ensure that all stages of dissertation are completed in time. The timetable should include writing of the dissertation and regular meetings with your dissertation guide.

### **The Dissertation plan or outline**

It is recommended that you should have a dissertation plan to guide you right from the outset. Essentially, the dissertation plan is an outline of what you intend to do, chapter wise and therefore should reflect the aims and objectives of your dissertation.

There are several reasons for having a dissertation plan

- It provides a focus to your thoughts.
- It provides your faculty-guide with an opportunity, at an early stage of your work, to make constructive comments and help guide the direction of your research.
- The writing of a plan is the first formal stage of the writing process, and therefore helps build up your confidence.
- In many ways, the plan encourages you to come to terms with the reading, thinking and writing in a systematic and integrated way, with plenty of time left for changes.
- Finally, the dissertation plan generally provides a revision point in the development of your dissertation report in order to allow appropriate changes in the scope and even direction of your work as it progresses.

### **Keeping records**

This includes the following:

- Making a note of everything you read; including those discarded.
- Ensuring that when recording sources, author’s name and initials, date of publication, title, place of publication and publisher are included. (You may consider starting a card index or database from the outset). Making an accurate note of all quotations at the time you read them.
- Make clear what is a direct a direct quotation and what is your paraphrase.

### **Dissertation format**

All students must follow the following rules in submitting their dissertation.

- Front page should provide title, author, Name of degree/diploma and the date of submission.
- Second page should be the table of contents giving page references for each chapter and section.
- The next page should be the table of appendices, graphs and tables giving titles and page references.
- Next to follow should be a synopsis or abstract of the dissertation (approximately 500 words)
- Next is the ‘acknowledgements’.

- Chapter I should be a general introduction, giving the background to the dissertation, the objectives of the dissertation, the rationale for the dissertation, the plan, methodological issues and problems. The limitations of the dissertation should also be hinted in this chapter.
- Other chapters will constitute the body of the dissertation. The number of chapters and their sequence will usually vary depending on, among others, on a critical review of the previous relevant work relating to your major findings, a discussion of their implications, and conclusions, possibly with a suggestion of the direction of future research on the area.
- After this concluding chapter, you should give a list of all the references you have used. These should be cross - references with your text. For articles from journals, the following details are required e.g.

Draper P and Pandyal K. 1991, The Investment Trust Discount Revisited, Journal of Business Finance and Accounting, Vol18, No6, Nov, pp 791-832.

For books, the following details are required:

Levi, M. 1996, International Financial Management, Prentice Hall, New York, 3rd Ed, 1996

- Finally, you should give any appendices. These should only include relevant statistical data or material that cannot be fitted into the above categories.

### **The Layout Guidelines for the Dissertation**

- A4 size Paper
  - Font: Arial (10 points) or Times New Roman (12 points)
  - Line spacing: 1.5
  - Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

### **Guidelines for the assessment of the Dissertation**

While evaluating the dissertation, faculty guide will consider the following aspects:

1. Has the student made a clear statement of the objective or objective(s).
2. If there is more than one objective, do these constitute parts of a whole?
3. Has the student developed an appropriate analytical framework for addressing the problem at hand.
4. Is this based on up-to-date developments in the topic area?
5. Has the student collected information / data suitable to the frameworks?
6. Are the techniques employed by the student to analyse the data / information appropriate and relevant?
7. Has the student succeeded in drawing conclusion form the analysis?
8. Do the conclusions relate well to the objectives of the project?
9. Has the student been regular in his work?
10. Layout of the written report.

### **Assessment Scheme:**

#### **Continuous Evaluation:**

40%

(Based on Abstract, Regularity,  
Adherence to initial plan, Records etc.)

#### **Final Evaluation:** Based on,

60%

Contents & Layout of the Report,	20
Conceptual Framework,	05
Objectives & Methodology and	05
Implications & Conclusions	10
Viva & Presentation	20

# OPTIMIZATION TECHNIQUES

Course Code: AIE4306

Credit Units: 03

## Course Objective:

This course objective is to study the principles of optimization and various techniques which can be used for Engineering optimization along with applications.

## Course Contents:

### Module-I: INTRODUCTION

Introduction to optimization – adequate and optimum design – principles of optimization – statement of an optimization problem – classification – formulation of objective function, design constraints.

### Module-II: CLASSICAL OPTIMIZATION TECHNIQUES

Single variable optimization –multivariable optimization with no constraints – exhaustive search, Fibonacci method, golden selection, Random, pattern and gradient search methods – Interpolation methods: quadratic and cubic, direct root method.

### Module-III: MULTIVARIABLE–UNCONSTRAINED AND CONSTRAINED OPTIMIZATION

Direct search methods – descent methods – conjugate gradient method. Indirect methods – Transformation techniques, penalty function method

### Module-IV: NON – TRADITIONAL OPTIMIZATION TECHNIQUES

Genetic Algorithms -steady state algorithm, fitness scaling, inversion. Genetic programming:- Genetic Algorithm in problem solving, Implementing a Genetic Algorithm:- computer implementation, operator (reproduction, crossover and Mutation, Fitness Scaling, Coding, Discretization). Knowledge based techniques in Genetic Algorithm. Advanced operators and techniques in genetic search:- Dominance, Diploidy and Abeyance. Inversion and other reordering operators, Niche and speciation and Tabu search methods.

### Module-V: OPTIMUM DESIGN OF MACHINE

Desirable and undesirable effects – functional requirement – material and geometrical parameters – Design of simple axial, transverse loaded members for minimum cost and minimum weight.

## Examination Scheme:

Components	CT	H	V/S/Q	EE
Weightage (%)	10	07	08	70

# COMPUTER NUMERICAL CONTROL (CNC) MACHINES AND ADAPTIVE CONTROL

**Course Code: AIE4307**

**Credit Units: 03**

## **Course Objective:**

This course objective is to understand NC,CNC and DNC manufacturing and generate manual part program for CNC machining. Concept of adaptive control and its various applications

## **Course Contents:**

### **Module-I:**

Concepts of NC, CNC, DNC. Classification of CNC machines, Machine configurations, Types of control, CNC controllers characteristics, Interpolators. Cutting tool materials, carbide inserts classification, qualified, semi qualified and preset tooling, tooling system for Machining centre and Turning centre, work holding devices, of CNC Machines.

### **Module-II:**

Programming CNC machines, Part print analysis and Process planning, Advanced Programming features , Canned cycles, Subroutines, Macros, special cycles etc. APT part programming using CAD/CAM, Parametric Programming. Manual part programming for CNC turning, milling and machining center. Computer assisted part programming techniques , Conversational and Graphics based software, Solids based part programming. Freeform surface machining. Simulation and Verification of CNC programs.

### **Module-III:**

Robot anatomy, robot configuration, motions joint notation work volume, robot drive system, control system and dynamic performance, precision of movement. Robot activation and feedback components. MOTION ANALYSIS AND CONTROL: Manipulator kinematics, position representation forward transformation, homogeneous transformation, manipulator path control, robot dynamics, configuration of robot controller.

### **Module-IV:**

END EFFECTORS: Grippers-types, operation, mechanism, force analysis, tools as end effectors consideration in gripper selection and design. SENSORS: Desirable features, tactile, proximity and range sensors, uses sensors in robotics. Positions sensors, velocity sensors, actuators sensors, power transmission system.

MACHINE VISION: Functions, Sensing and Digitizing-imaging, Devices, Lighting techniques, Analog to digital single conversion, image storage, Image processing and Analysis-image

### **Module-V:**

Review of Lyapunov analysis, model Reference Adaptive Control, Composite Adaptation, Parameter Convergence: Persistency of Excitation /Uniform Complete Observe-ability, Adaptive Control in the Presence of Input Constraints, Direct MRAC for Nonlinear systems with Matched Structured Nonlinearities, Robustness of MRAC: Parameter Drift, Adaptive Control in the Presence of Uniformly Bounded Residual Nonlinearity, Disturbance Rejection, Input-to-State Stability, fast adaptation.

# NEURAL NETWORK AND FUZZY LOGIC

**Course Code: AIE4308**

**Credit Units: 03**

## **Course Objective:**

Fuzzy sets and fuzzy logic find many applications in the areas of stability theory, pattern recognition, controls etc. Neural Networks offer fundamentally alternative approaches to procedural programming. These systems proved their applicability to the problems where there are missing data or information or the problems which could not be defined in an algorithm. The integration of fuzzy systems and neural networks gives a tremendous potential which can be applied to many complicated problems of Artificial Intelligence and other applications in Real World Computing. This course provides a comprehensive treatment of neural network architectures and learning algorithms, with an in-depth look at problems in data mining and in knowledge discovery.

## **Course Contents:**

### **Module I**

Basic neural computation models: Network and node properties. Inference and learning algorithms. Unsupervised learning: Signal hebbian learning and competitive learning. Supervised learning: Back propagation algorithms.

### **Module II**

Self organizing networks: Kohonen algorithm, bi-directional associative memories. Hopfield Networks: Hopfield network algorithm. Adaptive resonance theory: Network and learning rules. Neural network applications.

### **Module III**

Fuzzy Sets: Operations and properties. Fuzzy Relations: Cardinality, Operations and properties. Value Assignments: Cosine amplitude and max-min method. Fuzzy classification: Cluster analysis and validity, Fuzzy e-means clustering, hardening the Fuzzy e-partition.

### **Module IV**

Fuzzification, Membership value assignments: Inference, rank ordering and angular Fuzzy sets, defuzzification methods, fuzzy logic, approximate reasoning. Fuzzy –based systems: Canonical rule forms, decomposition of compound rules, likelihood and truth qualification, aggregation of Fuzzy rules, graphical techniques of inference.

### **Module V**

Non linear simulation using Fuzzy rule-based systems, Fuzzy associative memories. Decision making under Fuzzy states and Fuzzy actions. Fuzzy grammar and syntactic recognition. General Fuzzy logic controllers, special forms of Fuzzy logic control system models, examples of Fuzzy control system design and control problems, industrial applications. Mandatory Disclosure-2006  
Muffakham Jah College of Engineering and Technology, Hyderabad

# NEURAL NETWORK AND FUZZY LOGIC LAB

Course Code: AIE4309

Credit Units: 01

## Course Contents:

### List of Experiments:

1. Write a program to implement single layer perception algorithm.
2. Write a program to implement back propagation learning algorithm
3. Design multilayer feed forward network using back-propagation algorithm
4. Study of fuzzy inference system
5. To study fuzzy logic controller using fuzzy logic toolbox
6. Write a program to implement SDPTA
7. Write a program to implement RDPTA
8. To Study various defuzzification techniques
9. Write a program to implement of fuzzy set operation

### Examination Scheme:

# DECISION MAKING SYSTEM

Course Code: AIE4310

Credit Units: 03

## Course Objective:

To develop semantic-based and context-aware systems to acquire, organize, process, share and use the knowledge embedded in multimedia content. Research will aim to maximize automation of the complete knowledge lifecycle and achieve semantic interoperability between Web resources and services.

## Course Contents:

### Module I: Introduction

Soft computing vs. hard computing, various types of soft computing techniques, applications of soft computing. Artificial Intelligence : Introduction, Various types of production systems, characteristics of production systems, breadth first search, depth first search techniques, other Search Techniques like hill Climbing, Best first Search, A\* algorithm, AO\* Algorithms and various types of control strategies. Knowledge representation issues, Propositional and predicate logic, monotonic and non monotonic reasoning, forward Reasoning, backward reasoning, Weak & Strong Slot & filler structures, NLP.

### Module II: Neural Network

Structure and Function of a single neuron: Biological neuron, artificial neuron, definition of ANN, Taxonomy of neural net, Difference between ANN and human brain, characteristics and applications of ANN, single layer network, Perceptron training algorithm, Linear separability, Widrow & Hebb's learning rule/Delta rule, ADALINE, MADALINE, AI v/s ANN. Introduction of MLP, different activation functions, Error back propagation algorithm, derivation of BBPA, momentum, limitation, characteristics and application of EBPA

### Module III

Counter propagation network, architecture, functioning & characteristics of counter Propagation network, Hopfield/ Recurrent network, configuration, stability constraints, associative memory, and characteristics, limitations and applications. Hopfield v/s Boltzman machine. Adaptive Resonance Theory: Architecture, classifications, Implementation and training. Associative Memory.

### Module IV: Fuzzy Logic

Fuzzy set theory, Fuzzy set versus crisp set, Crisp relation & fuzzy relations, Fuzzy systems: crisp logic, fuzzy logic, introduction & features of membership functions, Fuzzy rule base system : fuzzy propositions, formation, decomposition & aggregation of fuzzy rules, fuzzy reasoning, fuzzy inference systems, fuzzy decision making & Applications of fuzzy logic.

### Module V: Genetic algorithm

Fundamentals, basic concepts, working principle, encoding, fitness function, reproduction, Genetic modeling: Inheritance operator, cross over, inversion & deletion, mutation operator, Bitwise operator, Generational Cycle, Convergence of GA, Applications & advances in GA, Differences & similarities between GA & other traditional methods.

## Examination Scheme:

Components	CT	H	V/S/O	AT	EE
Weightage (%)	10	8	7	5	70

## Text & References:

# DECISION MAKING SYSTEM LAB

Course Code: AIE4311

Credit Units: 01

## Course Contents:

### List of Experiments:

1. Study of Biological Neural Network
2. Study of Artificial Neural Network
3. Write a program of Perceptron Training Algorithm.
4. Write a program to implement Hebb's Rule
5. Write a program to implement of Delta Rule.
6. Write a program to implement back propagation learning algorithm.
7. Study of fuzzy inference system
8. To study fuzzy logic controller using fuzzy logic toolbox
9. Write a program to implement SDPTA
10. Write a program to implement RDPTA
11. To Study various defuzziification techniques
12. Write a program to implement of fuzzy set operation
13. Study of genetic algorithm
14. Study of Genetic programming and solve a real life problem

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## Syllabus - Fourth Semester

### PROJECT-DISSERTATION-II

Course Code: AIE4437

Credit Units: 15

#### GUIDELINES FOR DISSERTATION

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critiqued by the faculty guide and corrected by the student at each stage.

The File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation.

#### In general, the File should be comprehensive and include

A short account of the activities that were undertaken as part of the project;

A statement about the extent to which the project has achieved its stated goals.

A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;

Any activities planned but not yet completed as part of the DISSERTATION, or as a future initiative directly resulting from the project;

Any problems that have arisen that may be useful to document for future reference.

#### ➤ Report Layout

The report should contain the following components:

#### ➤ Title or Cover Page

The title page should contain the following information: Project Title; Student's Name; Course; Year; Supervisor's Name.

#### ➤ Acknowledgements (optional)

Acknowledgment to any advisory or financial assistance received in the course of work may be given.

#### ➤ Abstract

A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project

#### ➤ Table of Contents

Titles and subtitles are to correspond exactly with those in the text.

#### ➤ Introduction

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

#### ➤ Materials and Methods

This section should aim at experimental designs, materials used. Methodology should be mentioned in details including modifications if any.

#### ➤ Results and Discussion

Present results, discuss and compare these with those from other workers, etc. In writing these section, emphasis should be given on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in

contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary never write in “point” form.

➤ **Conclusion**

A conclusion should be the final section in which the outcome of the work is mentioned briefly.

➤ **Future prospects**

➤ **Appendices**

The Appendix contains material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

➤ **References / Bibliography**

This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

## **Examples**

### **For research article**

Voravuthikunchai SP, Lortheeranuwat A, Ninrprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichia coli* O157: H7. *Clin Microbiol Infect*, **8** (suppl 1): 116–117.

### **For book**

Kowalski, M. (1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), **7**: 63-67

## **ASSESSMENT OF THE DISSERTATION FILE**

Essentially, marking will be based on the following criteria: the quality of the report, the technical merit of the project and the project execution.

Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project.

Project execution is concerned with assessing how much work has been put in.

The File should fulfill the following *assessment objectives*:

### **Range of Research Methods used to obtain information**

#### **Execution of Research**

#### **Data Analysis**

Analyse Quantitative/ Qualitative information

Control Quality

#### **Draw Conclusions**

Examination Scheme:

Dissertation	50
Viva Voce	50
<b>Total</b>	<b>100</b>

ata, leading to production of a structured report.

## **Selecting the Dissertation Topic**

It is usual to give you some discretion in the choice of topic for the dissertation and the approach to be adopted. You will need to ensure that your dissertation is related to your field of specialization.

Deciding this is often the most difficult part of the dissertation process, and perhaps, you have been thinking of a topic for some time.

It is important to distinguish here between ‘dissertation topic’ and ‘dissertation title’. The topic is the specific area that you wish to investigate. The title may not be decided until the dissertation has been written so as to reflect its content properly.

Few restrictions are placed on the choice of the topic. Normally we would expect it to be:

- relevant to business, defined broadly;
- related to one or more of the subjects or areas of study within the core program and specialisation stream;
- clearly focused so as to facilitate an in-depth approach, subject to the availability of adequate sources of information and to your own knowledge;
- of value and interest to you and your personal and professional development.

## **Planning the Dissertation**

This will entail following:

- Selecting a topic for investigation.
- Establishing the precise focus of your study by deciding on the aims and objectives of the dissertation, or formulating questions to be investigated. Consider very carefully what is worth investigating and its feasibility.
- Drawing up initial dissertation outlines considering the aims and objectives of the dissertation. Workout various stages of dissertation
- Devising a timetable to ensure that all stages of dissertation are completed in time. The timetable should include writing of the dissertation and regular meetings with your dissertation guide.

## **The Dissertation plan or outline**

It is recommended that you should have a dissertation plan to guide you right from the outset. Essentially, the dissertation plan is an outline of what you intend to do, chapter wise and therefore should reflect the aims and objectives of your dissertation.

There are several reasons for having a dissertation plan

- It provides a focus to your thoughts.
- It provides your faculty-guide with an opportunity, at an early stage of your work, to make constructive comments and help guide the direction of your research.
- The writing of a plan is the first formal stage of the writing process, and therefore helps build up your confidence.
- In many ways, the plan encourages you to come to terms with the reading, thinking and writing in a systematic and integrated way, with plenty of time left for changes.
- Finally, the dissertation plan generally provides a revision point in the development of your dissertation report in order to allow appropriate changes in the scope and even direction of your work as it progresses.

## **Keeping records**

This includes the following:

- Making a note of everything you read; including those discarded.
- Ensuring that when recording sources, author’s name and initials, date of publication, title, place of publication and publisher are included. (You may consider starting a card index or database from the outset). Making an accurate note of all quotations at the time you read them.
- Make clear what is a direct a direct quotation and what is your paraphrase.

## **Dissertation format**

All students must follow the following rules in submitting their dissertation.

- Front page should provide title, author, Name of degree/diploma and the date of submission.
- Second page should be the table of contents giving page references for each chapter and section.
- The next page should be the table of appendices, graphs and tables giving titles and page references.
- Next to follow should be a synopsis or abstract of the dissertation (approximately 500 words)
- Next is the 'acknowledgements'.
- Chapter I should be a general introduction, giving the background to the dissertation, the objectives of the dissertation, the rationale for the dissertation, the plan, methodological issues and problems. The limitations of the dissertation should also be hinted in this chapter.
- Other chapters will constitute the body of the dissertation. The number of chapters and their sequence will usually vary depending on, among others, on a critical review of the previous relevant work relating to your major findings, a discussion of their implications, and conclusions, possibly with a suggestion of the direction of future research on the area.
- After this concluding chapter, you should give a list of all the references you have used. These should be cross - references with your text. For articles from journals, the following details are required e.g.

Draper P and Pandyal K. 1991, The Investment Trust Discount Revisited, Journal of Business Finance and Accounting, Vol18, No6, Nov, pp 791-832.

For books, the following details are required:

Levi, M. 1996, International Financial Management, Prentice Hall, New York, 3rd Ed, 1996

- Finally, you should give any appendices. These should only include relevant statistical data or material that cannot be fitted into the above categories.

### **The Layout Guidelines for the Dissertation**

- A4 size Paper
  - Font: Arial (10 points) or Times New Roman (12 points)
  - Line spacing: 1.5
  - Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

### **Guidelines for the assessment of the Dissertation**

While evaluating the dissertation, faculty guide will consider the following aspects:

- 11.Has the student made a clear statement of the objective or objective(s).
- 12.If there is more than one objective, do these constitute parts of a whole?
- 13.Has the student developed an appropriate analytical framework for addressing the problem at hand.
- 14.Is this based on up-to-date developments in the topic area?
- 15.Has the student collected information / data suitable to the frameworks?
- 16.Are the techniques employed by the student to analyse the data / information appropriate and relevant?
- 17.Has the student succeeded in drawing conclusion form the analysis?
- 18.Do the conclusions relate well to the objectives of the project?
- 19.Has the student been regular in his work?
- 20.Layout of the written report.

### **Assessment Scheme:**

#### **Continuous Evaluation:**

40%

(Based on Abstract, Regularity, Adherence to initial plan, Records etc.)

**Final Evaluation:** Based on,  
Contents & Layout of the Report,  
Conceptual Framework,  
Objectives & Methodology and  
Implications & Conclusions  
Viva & Presentation

## Syllabus

### BASICS OF LASERS

**Course Code: LOE2351**

**Credit Units: 3**

**Course Objective:**

The basic aim of this Course is to make students (with Physics & Maths background up to 12th standard) appreciate the fundamentals of lasers and their diversified applications. The approach will stress more on the concepts & fundamentals with very simple or sometimes no mathematical equations. The outcome of this Course will make the students/trainees more excited to more about lasers and their applications in specific fields of their interest.

- **Overview of Lasers** :History, Types and Applications of Lasers
- **Nature of Light**: Corpuscular Theory, Wave Theory, Electromagnetic Spectrum, Quantum nature of light, Dual nature of nature, De Broglie's hypothesis, wavelength associated with particle, momentum of photon, Energy-mass relation, Momentum of photon. Mass of photon.
- **Matter**: Structure of Atoms & Molecules. Energy Levels, Electronic, Vibrational and Rotational Energy Levels with Examples. Two-level representation.
- **Interaction of Radiation with Matter**: Absorption, Spontaneous Emission, Stimulated Emission, Einstein's A & B Coefficients of Transitions, Maxwell Boltzmann Distribution, Planck's law of blackbody radiation.
- **Principle of Laser action**: Population inversion, metastable states, gain medium, Pumping mechanisms, feedback mechanism, threshold condition for laser beam generation.
- **Optical Resonators** :Types of Resonators, Stability Criteria, g-parameters.
- **Characteristics of Laser Beams**: Monochromaticity, Directionality, Brightness, Coherence: temporal & spatial, Focusability, Ultra-short pulse generation.
- **Types of Lasers**: Three-level and Four-level Lasers, Solid, Liquid and Gas Lasers. Brief description of Ruby, He-Ne, Nd:YAG, Carbon Dioxide Lasers, Semiconductor Lasers. X-Ray Lasers, Free-electron Lasers. Fiber Lasers.
- **Longitudinal & Transverse Modes** : Temporal modes, Spatial Modes & characteristics.
- **Application of Lasers**: General Applications of Lasers, Laser Applications in Industry, Defence, Medicine, Entertainment etc.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

**Text & References:**

- Lasers: Theory and Applications : A K Ghatak and K Thyagarajan, McMillan, 2003.

# LASER TECHNOLOGY & APPLICATIONS

**Course Code: LOE2451**

**Credit Units: 3**

**Course Objective:** The aim of this Course is to make students/trainees understand the fundamentals of lasers, laser systems, their characteristics and diversified applications including industry, medicine & Defence. The approach will be to stress more on the fundamentals with the help of very simple mathematical equations. The outcome of this Course will prepare the students/trainees to use this knowledge for applications of lasers in specific fields of their interest.

**Module I: INTERACTION OF LIGHT WITH MATTER** Einstein coefficients, Relation between these coefficients, Lifetime of excited state, Line Broadening mechanisms, Population inversion, Threshold condition for Laser, Laser-Rate equations for three-level and four-level systems, Conditions for CW and pulsed laser action.

## **Module II: DIFFERENT POPULATION INVERSION TECHNIQUES WITH EXAMPLES**

Optically pumped lasers, solid state lasers, dye lasers, electrical-discharge pumped lasers, gas lasers, chemical lasers, gas dynamic lasers, semiconductor lasers, free-electron lasers, gamma ray lasers, fiber lasers (only introductory description of these lasers).

## **Module III: OPTICAL RESONATORS**

General considerations, Laser resonators, General conditions of stability, Plane and spherical mirror cavities, Modes and optical resonators, Gaussian beam propagation, Theory of Q-switching and experimental methods - Theory of Mode locking and experimental methods. Frequency stabilization of laser beams. Multimode oscillation.

## **Module-IV: CHARACTERISTICS OF LASER BEAMS AND APPLICATIONS**

Monochromaticity, Spatial & temporal coherence, temporal coherence & monochromaticity relation, connection between spatial coherence and directionality, rightness, Focusability, ultra-short pulse generation. Peak Power, Average Power, Duty Cycle in Pulsed Lasers.

## **Module V: TYPES OF LASERS**

Solid, Liquid and Gas Lasers. Brief description of Ruby, He-Ne, Nd:YAG, Nd:glass, Er:glass, Er:YAG, Carbon Dioxide Lasers, Nitrogen Lasers, Semiconductor Lasers. X-Ray Lasers, Free-electron Lasers. Fiber Lasers, Femtosecond lasers, Raman Lasers.

## **Module VI: APPLICATION OF LASERS**

General Applications of Lasers including Industry, Defence, Medicine, Entertainment etc.

### **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

### **REFERENCES:**

# LASER SYSTEMS & DEVICES

**Course Code: LOE2551**

**Credit Units: 3**

**Course Objective:** This course describes in details the principles, energy level diagrams, block diagrams and operation of various types of laser systems: solid, semiconductor, liquid and gas lasers. These laser systems are further classified according to the pumping schemes employed and systems output characteristics of each laser system are then explained. This course will make the students understand the actual functioning of various laser systems.

## **Module I: OPTICAL MATERIALS**

Optical materials for IR to UV wavelengths

## **Module II: LASER COMPONENTS**

- (a) MLD Components: metal coated, multilayer dielectric coated, AR coated, thin film polarizers, narrow-band filters.
- (b) Optical Components: Polarizers, beam splitters, beam expanders and collimators, gratings, graticules.
- (c) Arc/Flash Lamps: Electrical and spectral characteristics of arc/flash lamps, pulse forming networks for flash lamps.

## **Module III: LASER POWER SUPPLIES**

Simple DC high-voltage power supplies, switch-mode power supply (SMPS), constant current power supply. High-voltage fast switches: spark gaps, SCR, thyatrons, krytrons, saturable magnetic core, avalanche transistors. Pulsed power supplies for lasers: Marx generators for CO<sub>2</sub> lasers, pulsed circuits for nitrogen, copper, excimer and semiconductor lasers,

## **Module IV: DESIGN OF OPTICALLY-PUMPED LASERS**

- (a) Optically Pumped Lasers: Ruby, Nd:YAG, Er:glass, Dye lasers, FIR lasers, Raman shifted lasers
- (b) Electrical Discharged Lasers: He-Ne, Nitrogen, Various types of CW and Pulsed Carbodioxide lasers, argon-ion, copper and copper compound lasers, Excimer lasers.
- (c) Brief Description of Other Lasers: Chemical Lasers, Semiconductor Lasers, Free electron laser, X-ray laser, Fiber Lasers.

## **Module V: LASER PARAMETRS MEASUREMENTS**

Types of detectors (for UV, IR and visible wavelengths) and their characteristics, Measurement laser average power, peak power, energy, wavelength, frequency, linewidth, pulse duration, pulse repetition rate, beam quality, divergence, beam diameter etc. Choppers, Monocromators, Lock-in Amplifiers, Box-car averagers, Spectroradiometers, Spectrophotometers, spectrum analyzers, wavemeters, densitometers.

## **Module VI: LASER HAZARDS AND SAFETY MEASURES**

Types of hazards, hazards to eyes and skin, Maximum Permissible Exposure (MPE), Classification of lasers, from the point of view of hazards, safety measures, NOHD, buffer zone, laser safety measures.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

# LASERS IN DEFENSE APPLICATIONS

**Course Code: LOE2651**

**Credit Units: 3**

**Course Objective:** This course describes various applications of lasers Defence.

## **Module I: LASER BEAM PROPAGATION THROUGH ATMOSPHERE**

Atmospheric absorption and scattering by molecules and aerosols, Atmospheric transmission, Beer's law, atmospheric windows. Absorption of laser radiation by carbon dioxide, ozone and water molecules. Scattering of laser radiation by air molecules, haze particles, fog droplets, cloud droplets and rain drops. Types of atmospheric scattering : Rayleigh, Mie scattering, diffraction theory. Atmospheric attenuation coefficient. Visibility of the atmosphere. Atmospheric turbulence and turbidity. Refractive-index structure coefficient. Nonlinear effects in the atmosphere: thermal blooming, beam bending, kinetic cooling, bleaching, self-induced transparency, Air breakdown.

## **Module II: LASER RANGE FINDERS**

Solid-state (Nd:glass, Nd:YAG and Er:glass) laser rangefinders (LRFs), Waveguide carbondioxide LRFs, Semiconductor LRFs. Discussion in each about the laser transmitter, receiver, signal processing unit, optical arrangement. Laser range equation, maximum and minimum ranges, range accuracy, range blocking, first echo/last echo logic, field of view, boresighting. Eye safe laser rangefinders. Optoelectronic proximity fuze, Satellite to Submarine Laser Range Finders.

## **Module III: LASER TARGET DESIGNATORS AND LASER-GUIDED WEAPONS**

Laser Guidance, Laser target designators, laser guided missiles, laser guided bomb. Laser beam riding of missiles. Laser & electro-optic surveillance systems. IR guidance.

**Module IV: LASER WEAPONS** : Laser blinding gun, gas dynamic laser-baser weapon, COIL-based laser weapon, HF/DF laser based weapon.

**Module V: LASER GYROSCOPES & SENSORS:** Laser ring gyro, optical fiber gyro, optical sensors (including fiber-optic sensors) in tanks, ships, aircraft etc.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

# **LASERS IN INDUSTRIAL APPLICATIONS**

**Course Code: LOE2751**

**Credit Units: 3**

**Course Objective:** To endow the students with knowledge about industrial laser systems and interaction of laser radiation with matter and applications of lasers in various materials processing like cutting, welding, surface treatment etc.

## **MODULE I INDUSTRIAL LASER SYSTEMS**

High power laser systems - Focusing optics - Steering optics - Mechanisms - Overview of industrial lasers - CW & pulsed - Q-switched and Mode locked.

## **MODULE II THERMAL PROCESSES IN INTERACTION ZONE**

Depth of penetration with respect to laser energy density - Reflectivity of Metals with respect to wavelength - Rate of heating and cooling - Maximum temperature rise and depth of hardened layer - Different gases used during laser materials processing - Operational parameters in laser materials processing - Key hole effect.

## **MODULE III SURFACE TREATMENT**

Surface modification:- surface cladding - surface alloying - Hard facing - Shock hardening - laser parameters for surface alloying - process variables - Beam profiles - Different methods to obtain desired penetration depths - Experimental set-up.

## **MODULE IV LASER WELDING**

Different modes of laser beam welding - Comparison between laser beam and electron beam welding - Influence of different parameters - Absorptivity - Welding speed - Focussing conditions - Advantages and limitations of laser welding - Laser welding of industrial materials - Recent developments in laser welding techniques

## **MODULE V LASER CUTTING AND DRILLING**

Laser energy density for cutting and drilling - Melt flashing mechanism - Various assisting gases and their importance - Advantages of laser cutting - Laser instrumentation for cutting and drilling - Factors affecting cutting rates - Effect of laser pulse energy on diameter and depth of drilled hole.

### **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

# **LASERS IN ATMOSPHERIC STUDIES**

**Course Code: LOE2851**

**Credit Units: 3**

## **Course Objective:**

This course aims to train the students on the basics of applications of lasers and various laser-based techniques to remotely detect and measure the concentration and size etc. of various constituents of the atmosphere including aerosols, pollutants and other toxic agents.

## **MODULE I: Introduction and Overview of Laser-Based Remote Sensing Techniques**

Why Lasers for Remote Sensing of Environment. Aerosols, Pollutants, CBW Agents, Toxicity Levels, Non-Laser based Detection Techniques.

## **MODULE II: Lidar Techniques**

Aerosol Lidar Differential Absorption Lidar (DIAL), Heterodyne Lidar, Micro-Pulse Lidar, LIF-Based Lidar, Raman Lidar, Doppler Lidar, Space Borne Lidar

## **MODULE III: Laser Sources for Remote Detection**

Nd: YAG Laser, Carbondioxide Laser, UV Lasers, Tunable Lasers, Semiconductor Lasers

## **MODULE IV: Detectors and Telescopes and Data Processing:**

Various Types of Detectors and their characteristics for different wavelengths and applications, Telescopes, Data acquisition and processing systems

## **MODULE V: Laser Based Techniques for Standoff Detection of Explosive Materials**

Laser Induced Breakdown Spectroscopy (LIBS). Laser Induced Fluorescence (LIF). Raman Techniques, Hybrid (Integrated) Sensors.

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>MP</b>	<b>EE</b>
<b>Weightage (%)</b>	5	25	70

MP: Mini Project, EE: End Semester Examination; A: Attendance

# INSTRUMENTATION ENGINEERING

## Syllabus

### BASIC INSTRUMENTATION

**Course Code: ECE2351**

**Credit Units: 03**

#### Introduction

Review of measurement and measuring systems. Functional elements of a measuring system. Input-output configuration of instrumentation systems. Methods of correction for interfering and modifying inputs. Errors and uncertainty in measurements, Statistical analysis of errors. Loading effects, Generalised impedance and stiffness.

#### Generalized Performance Characteristics

Static and Dynamic performance characteristics, Characteristic of periodic and transient inputs and the response of measuring system to these inputs. Response of measuring system to random inputs, Frequency spectra, auto correlation, cross correlation spectral density, Experimental determination of system parameters, requirement of instrument transfer function to ensure accurate measurement.

#### Measurement System

Introduction, principle, design of various active and passive transducers. Introduction to semiconductor sensors and its applications, design of signal conditioning circuits for various Resistive, Capacitive and Inductive transducers and piezoelectric transducer, Analog to Digital and Digital to Analog converters, modulation – types, filters – active, passive, digital, Data transmission and telemetry-classification, Recorders – Types of recorders, XY-Plotters, Ultraviolet, magnetic and digital recording.

#### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

#### LABORATORY/FIELD EXPERIENCES

1. Experimental determination of system parameters.
2. Study and verification of transducer characteristics.
3. Study of signal conditioning techniques.
4. Verification of dynamic performance characteristics of a given system.
5. Case study of a real life measuring system in an industry.
6. Various data acquisition software.

#### BOOKS RECOMMENDED

- Measurement System, Applications, and Design, E.O. Doebelin. McGraw-Hill International.
- Introduction to Instrumentation & Control, A.K Ghosh, Prentice Hall of India.
- Principles of Measurement and Instrumentation, Alan S Morris, Prentice Hall of India
- Transducers and Instrumentation, DVS Murthy, Prentice Hall of India
- Electrical and Electronics Measurement and instrumentation, A.K. Sawhney, Dhanpat Rai & Sons. Delhi

# VIRTUAL INSTRUMENTATION

**Course Code: ECE2451**

**Credit Units: 03**

## **Course Contents:**

**Introduction to Virtual Instrumentation:** Introduction, Historical perspective, advantages, block diagram and architecture of a virtual instrument, conventional vs. virtual instrumentation.

**Introduction to Software :** Introduction to Lab VIEW, Front panel, back panel representations, Block diagram, Menus, Palettes, VI and Sub VI, Editing and Debugging VI, Structures, Arrays, Clusters, Charts and Graphs, Data acquisition, Instrument Control, Signal Generation and Signal Processing Examples

**Introduction to systems hardware:** ADC, DAC, D/O, counters and timer, PC hardware structure, timing, interrupts, DMA, software and hardware installation, Configuring data acquisition hardware using the drives in application software, use of DAQ library functions for different analog and digital input/output operations. Input/output devices & functions like data gloves, joysticks, CRT etc.

**Application of Virtual Instrumentation in various fields:** Aviation, Automotive, High Voltage, Defense, Chemical, Industrial, Marine, Medical, Mining, Nuclear Energy, Virtual landscapes.

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

## **LABORATORY / FIELD EXPERIENCES**

1. Geographical programming using Lab VIEW
2. Applications of Lab VIEW

## **BOOKS RECOMMENDED**

- Learning with LabVIEW 7 Express – R.H. Bishop, Pearson Education, Delhi.
- LabVIEW Basic 1 Course Manual, National Instruments
- Virtual Instrumentation Using LabVIEW- Sanjay Gupta & Joseph John, TMG; 2005.
- LabVIEW for everyone -Wells Lisa K and Travis Jeffrey, Prentice Hall.

# BIOMEDICAL INSTRUMENTATION

**Course Code: ECE2551**

**Credit Units: 03**

## **Course Contents:**

### **Sensors and Transducers for biological applications**

Types, properties, characteristics and selection of transducers for biological instrumentation.

### **Measurement of electrical parameters**

Leads and electrodes, electrocardiography, electrical activity of the heart, equivalent cardiac generator. Einthoven lead system, standardization of recording and display of ECT (Electrocardiogram), EEG (Electroencephalogram), EMG (Electromyogram), EOG (Electrooculogram), ERG (Electroretinogram), EGG (Electrogastogram).

### **Measurement of non-electrical parameters**

Blood flow, drop recorder, electromagnetic flow meter, measurement of systolic and diastolic pressures, blood pressure instruments, intraocular pressure, lung air pressure, Audiometers. Measurement of body temperature, thermography. Cardiac tachometer, respiration rate phonocardiogram, heart sounds electrical stethoscope pulmonary function analysers. CO<sub>2</sub> - O<sub>2</sub> - Concentration in exhaled air, blood and lungs, pH value of blood, impedance plethysmography blood gas analysers, blood cell counters.

### **Medical Imaging Systems**

Medical display systems, medical thermography X-Ray, diathermy equipment. Ultrasonics in biomedical application for diagnostic and therapeutic, CAT, MRI, Laser applications in biomedical field.

### **Patient safety**

Electrical Safety of Medical Equipments, Shock Hazards from Electrical Equipment, Methods of Accident Prevention, Test Instruments for checking Safety parameters of biomedical equipments.

### **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

### **BOOKS RECOMMENDED**

- Biomedical Instrumentation and Measurements; L.C. Cronwell F.J. Weibell. E.A. Pfeiffer, PHI.
- Principles of applied instrumentation: Gaddes and Baker, John Wiley & Sons.
- Handbook of Bio-medical Instrumentation; R.S. Khandpur, McGraw Hill
- Medical Instrumentation – Application & Design, John G. Webster, Editor, John Wiley & Sons.

# ANALYTICAL INSTRUMENTATION

**Course Code: ECE2651**

**Credit Units: 03**

## **Course Contents:**

### **Analytical Methods of Measurements**

Physical methods of chemical analysis, special methods of analysis, basic techniques, terminologies, units, Interaction of electromagnetic radiations with matter, emission, absorption and scattering techniques. Instrumentation related to X-Ray, Ultraviolet and Infrared techniques.

### **Special Analysis**

Various light sources, spectrometer, detectors and data processing, comparison of various spectral analytical techniques, refractometry, nuclear magnetic resonance spectrometry. Analytical techniques based on separation method: Basics of chromatography liquid, gas and HPLC Mass Spectrometry and related instrumentation.

### **Electrometric Methods of Analysis**

Techniques and related instrumentations for pH and selective potentiometry, Voltametry, Colometry and Conductometry, Analytical data presentation. Error analysis, Design considerations of an analytical laboratory, automated analysis, Atomic absorption, spectrometry, polarimetry, Turbidimetry, Nephelometry.

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

## **BOOKS RECOMMENDED**

- Instrumental Methods of Chemical analysis; Galen W. Ewing, McGraw-Hill, Koga Kusha Ltd.
- Instrumental Methods of Analysis: HW Willard, Lynnel Merrikt. Jr John A. Dean, F.A. Settle, Jr. Wadsworth Publishing Co. U.S.A.
- Introduction to Instrumentation Analysis: Robert D. Braun McGraw Hill Co. International Ed.
- Analytical Instrumentation HandBook: Galen W. Ewing, Marcel Decker Inc, USA.
- Instrumental Methods of Chemical Analysis: Gurdeep Chetwal, Sham Anand Himalaya Publishing House.
- Instrumental Methods of Chemical Analysis: B.K. Sharma, Goel Publishing House, Meerut.
- Instrumentation Engineers Hand Book-Process Control, BG Liptak, Butterworth Heinemann.

# INDUSTRIAL PROCESS CONTROL

**Course Code: ECE2751**

**Credit Units: 03**

## **Course Contents:**

**Process Characteristics:** Process, Process variable, mathematical modeling of liquid, gas, thermal, mechanical and chemical system. Linearizing techniques, liquid level control in a tank. Dynamics of manometer, response of non-interacting and interacting first order elements in series.

**Controller characteristics:** Characteristics of on-off, proportional, integral, derivative modes and their combinations.

**Automatic control:** Single and combined modes in closed loop, static error, velocity error. Dynamic behavior of feedback control processes for different modes. IAE, ISE, IATE criteria. Tuning of controllers.

**Controllers:** Electronics, pneumatic, hydraulic controllers implementing. Single and composite mode of controllers. Latest trends in industrial controllers employing PLCs & other logic devices such as fuzzy logic control DCS & Computer based systems etc.

## **Final control elements:**

Types & function of Control valves. Electrical, Pneumatic, hydraulic actuators.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

## **Books recommended:**

- Instrument Engineers' Handbook of Process Control; Bela G. Liptak; 3rd Edn. Chilton Book Company Randor Pennsylvania
- Process Control Instrumentation Technology; CD Johnson 8th Edn; PHI 2006

## Syllabus

### ENGINEERING GEOLOGY

**Course Code:** CIV2351

**Credit Units:** 03

**Course Objective:**

The student is given an introduction to basics of Geology genesis and characteristic of rocks: Geological structure and other effects of civil engineering structures. Geology of India is introduced.

**Course Contents:**

**Module I: Branches and scope of geology**

**Physical geology**

Geological agents and their action, weathering, volcanism, earthquake and plate tectonics

**Module II: Elements of crystallography and mineralogy**

**Petrology**

Types of rocks, genesis and physical and chemical characters, Building stones

**Module III: Structural geology**

Types of structures and classification and their effect on civil engineering projects and Geological mapping

**Hydrogeology**

Groundwater and occurrence, investigations, quality, artificial recharge

**Module IV: Geology in Civil Engineering**

Tunnels, dams, reservoirs, bridges, Runways, Roads and Buildings.

Slope failures and landslides. Investigations, Remote sensing and GIS applications

**Geology of India**

Types, age and occurrence of rock formations and economic importance

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# GEOINFORMATICS

**Course Code: CIV2451**

**Credit Units: 03**

## **Course Objective:**

Geoinformatics is an important data system for all civil engineering activities including construction of structures, dams, water systems etc. Correct and reliable information and geographical data are a requirement today. The course thus addresses this issue.

## **Course Contents:**

### **Module I**

Triangulation - principle - reconnaissance - selection of site for base line - selection of stations - orders of triangulation - triangulation figures - scaffolds and signals - marking of stations - intervisibility and heights of stations - satellite stations - base line measurement - equipment and corrections - adjustment of observations.

### **Module II**

Survey adjustments and theory of errors – introduction – laws of accidental errors – probability curve – principle of least squares – laws of weights – probable error – normal equation – most probable value – method of correlates – angle adjustment – station adjustment – figure adjustment – adjustment of triangles – adjustment of a geodetic quadrilateral.

### **Module III**

Curves - types of curves - elements of a curve - simple curves - different methods of setting out – introduction to compound curves - reverse curves, transition curves, vertical curves -hydrographic survey - scope - shoreline survey - river survey - soundings – sounding equipment - methods - ranges - locating sounding - plotting - three point problem.

### **Module IV**

Photogrammetry – terrestrial and aerial photogrammetry – heights and distances from Photographs – flight planning – elements of stereoscopy – photo mosaic – photo interpretation – applications of photogrammetry. GNSS – GPS – differential GPS.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# GEOTECHNICAL ENGINEERING-I

Course Code: CIV2551

Credit Units: 04

## Course Objective:

Soil mechanics and related topics are important areas in Civil Engineering and the first part of Geotechnical Engineering deals with soils and their characteristics.

## Course contents:

### Module I: Nature of soil and functional relationships

Soil type -Concepts of single grained, honey combed and flocculent structure and their effects on the basic soil properties - 3 phase system - void ratio - specific gravity - dry density - porosity - water content - saturated unit weight - submerged unit weight - degree of saturation. Laboratory and field identification of soils: Determination of water content by oven drying -Specific gravity using pycnometer and specific gravity bottle - Grain size analysis by sieve analysis, hydrometer analysis and pipette analysis - Atterberg limits and indices – Visual identification by simple field tests - Field density by core cutter, sand replacement and wax coating methods. Classification of soils: Necessity -Principles of classification - I.S. classification – Plasticity charts - Group index.

### Module II: Soil Water, Permeability and Stress Distribution

Soil water: Types - Effective stress - Total stress - Pore pressure - Pressure diagrams. Permeability: Definition - Darcy's law - Factors affecting permeability – Laboratory determination - Stratified soils: average permeability. Stress distribution: Boussinesq's equations for vertical pressure due to point loads- Assumptions and limitations - pressure bulb – Influence diagram - Vertical pressure due to uniformly distributed loads, line loads and strip loads - Newmark charts and their use - Westergaard's solution.

### Module III: Consolidation and Compaction

Consolidation: Definition - Concepts of coefficient of compressibility - Coefficient of volume change and compression index - e-log p curves - Terzaghi's theory of one dimensional consolidation – Determination of coefficient of consolidation- pre-consolidation pressure difference between consolidation and compaction. Compaction: Definition and objectives of compaction - Proctor test and modified proctor test - Concept of OMC and maximum dry density - Zero air voids line -Factors influencing compaction.- Effect of compaction on soil properties - Field compaction methods - Proctor needle for field control.

### Module IV: Shear Strength and Stability of Slopes

Shear Strength: Definition - Mohr's strength and stress circles - origin of planes - Mohr's envelope - Mohr-Coulomb strength theory -Direct, triaxial and UCC tests - Drainage conditions - Measurement of pore pressure - Vane shear tests -Total and effective stress -strength parameters – Stress path, Liquefaction of sand - Choice of test conditions for field problems. Stability of slopes: Slope failure, base failure and toe failure - Swedish circle method -  $\phi=0$  analysis and  $c=0$  analysis - Friction circle method - Taylor's stability number -Stability charts - Sliding block analysis.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# GEOTECHNICAL ENGINEERING-II

**Course Code: CIV2651**

**Credit Units: 04**

## **Course Objective:**

Advanced topics of soil mechanics and the design of foundations are covered in this course.

## **Course Contents:**

### **Module I: Earth pressure**

Earth pressure at rest. Active and passive earth pressure for cohesionless and cohesive soils. Coulomb's and Rankine's theories. Point of application of earth pressure for cases of with and without surcharge in cohesionless and cohesive soils. Culmann's and Rebhan's graphical construction for active earth pressure. Friction circle method for active earth pressure. Site investigation and soil exploration: Objectives. Planning. Reconnaissance. Depth of exploration. Methods of subsurface exploration. Test pits. Auger borings. Wash boring. Rotary drilling. Percussion drilling. Core drilling. Sampling. Types of soil samples. Splitspoon sampler. Thin walled sampler. Piston sampler. Denison sampler. Hand cut samples. Location of water table. S.P.T. Field vane shear test. Introduction to geophysical methods. Boring log. Soil profile.

### **Module II: Bearing capacity**

Ultimate and allowable bearing capacity. Terzaghi's equation for bearing capacity for continuous circular and square footings. Types of shear failures. Bearing capacity factors and charts. Effect of water table on bearing capacity. Meyerhoff's bearing capacity theory. Skempton's formulae. Bearing capacity from field tests. Bearing capacity from building codes. Net bearing pressure. Methods of improvement of soil bearing capacity: vibro flotation and sand drains.

Settlement analysis: Distribution of contact pressure. Immediate and consolidation settlement. Estimation of initial and final settlement under building loads. Limitations in settlement computation. Causes of . Permissible, total and differential settlements. Cracks and effects of settlement.

### **Module III: Foundations**

General considerations: Functions of foundations. Requisites of satisfactory foundations. Different types of foundations. Definition of shallow and deep foundation. Selection of type of foundation. Advantages and limitations of various types of foundations. Design considerations . Footings subjected to eccentric loading. Conventional procedure for proportioning footings for equal settlements.

Open excavation: Open foundation excavations with unsupported slopes. Supports for shallow and deep excavations. Stress distribution in sheeting and bracing of shallow and deep excavations. Stability of bottom of excavations. Raft foundations: Bearing capacity equations. Design considerations. Conventional design procedure for rigid mat. Uplift pressures. Methods of resisting uplift. Floating foundations.

### **Module IV: Pile foundations**

Uses of piles. Classification of piles based on purpose and material. Determination of type and length of piles. Determination of bearing capacity of axially loaded. Single vertical pile. Static and dynamic formulae. Determination of bearing capacity by penetration tests and pile load tests (IS methods). Negative skin friction. Group action and pile spacing. Analysis of pile groups. Load distribution by Culmann's method. Caissons and piers: Open (well) caissons. Box (floating) caissons. Pneumatic caissons. Construction details and design considerations of well foundations. Drilled piers and their construction details.

**Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	<b>5</b>	<b>10</b>	<b>8</b>	<b>7</b>	<b>70</b>

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

## **PROJECT (Geotechnical Engineering)**

**Course Code: CIV2751**

**Credit Units: 03**

### **Methodology**

The topic for the project work can be a design/experimental/field / analytical/simulation project in any topic of Geotechnical Engineering area. The work can be done individually or by a group of students under the guidance of a faculty of the Department. On completion of the project, the students are to present a report covering various aspects learnt by them and give a presentation on same.

### **Examination Scheme:**

Literature study/ Fabrication/ Experimentation	40
Written Report	20
Viva	15
Presentation	25
<b>Total</b>	<b>100</b>

## **SEMINAR (GEOTECHNICAL ENGINEERING)**

**Course Code: CIV2851**

**Credit Units: 03**

### **Objectives:**

To enable the students to acquire knowledge for searching compilation and to  
Develop skills for presentation in the form of the seminar

### **Contents:**

The seminar comprises the selection of an appropriate research proposal and developing research proposals. The student is required to organize and analyze the data/ information collected and write a complete document and presenting the document in the form of seminar.

### **Text Book:**

Relevant technical/ professional material and references in Geotechnical Engineering courses and journals.

## Syllabus

### INTRODUCTION TO MICROPROCESSOR SYSTEMS

**Course Code: ECE2352**

**Credit Units: 03**

**Course Objective:**

This course deals with the systematic study of the Architecture and programming issues of 8085-microprocessor family. The aim of this course is to give the students basic knowledge of the above microprocessor needed to develop the systems using it.

**Course Contents:**

**Module I: Introduction to Microcomputer Systems**

Introduction to Microprocessors and microcomputers, Study of 8 bit Microprocessor, 8085 pin configuration, Internal Architecture and operations, interrupts, Stacks and subroutines, various data transfer schemes.

**Module II: ALP and timing diagrams**

Introduction to 8085 instruction set, advance 8085 programming, Addressing modes, Counters and time Delays, Instruction cycle, machine cycle, T-states, timing diagram for 8085 instruction.

**Module III: Memory System Design & I/O Interfacing**

Memory interfacing with 8085. Interfacing with input/output devices (memory mapped, peripheral I/O), Cache memory system. Study of following peripheral devices 8255, 8253, 8257, 8259, 8251.

**Module IV: Architecture of 16-Bit Microprocessor**

Difference between 8085 and 8086, Block diagram and architecture of 8086 family, pin configuration of 8086, minimum mode & maximum mode Operation, Bus Interface Unit, Register Organization, Instruction Pointer, Stack & Stack pointer, merits of memory segmentation, Execution Unit, Register Organization.

**Module V: Pentium Processors**

.Internal architecture of 8087, Operational overview of 8087, Introduction to 80186, 80286, 80386 & 80486 processors, Pentium processor (P-II, P-III, P-IV).

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# MICROCONTROLLER

**Course Code: ECE2452**

**Credit Units: 03**

## **Course Objective:**

The syllabus deals with 8051 architecture and its interfacing with other devices. A microcontroller is an integrated circuit that is programmable. The syllabus makes student perfect in assembly language programming, addressing modes etc apart from it input-output programming is discussed in detail. In the second part Embedded systems and it's application is discussed. 8051 C programming is also incorporated in the syllabus.

## **Course Contents:**

### **Module I: Overview of Microcontroller**

Microcontroller and Embedded Processors, Overview of 8051 Microcontroller family: Architecture, basic assembly language programming concepts, The program Counter and ROM Spaces in the 8051, Data types, 8051 Flag Bits and PSW Register, 8051 Register Banks and Stack Instruction set, Loop and Jump Instructions, Call Instructions, Time delay generations and calculations, I/O port programming Addressing Modes, accessing memory using various addressing modes, Arithmetic instructions and programs, Logical instructions, BCD and ASCII application programs, Single-bit instruction programming, Reading input pins vs. port Latch, Programming of 8051 Timers, Counter Programming.

### **Module II: Communication with 8051**

Basics of Communication, Overview of RS-232, I2C Bus, UART, USB, IEEE 488 (GPIB). Parallel input output applications. (Stepper motor Sequencer program, Strobed input/output). Interrupt driven applications (real time clock, serial input/output with interrupt). Analog-digital interfacing (Pulse width modulator, 8-bit ADC).

### **Module III: Basics of 8051 C Programming**

Introduction to 8051 C, 8051 memory constitution, Constants, variables and data types. Arrays structures and unions, pointers, Loops and decisions, Functions, Modules and programs.

### **Module IV: 8051 C Programming**

Data interface, Timer control, Interrupt operations, Digital operations, A/D and D/A conversions, Common control problem examples (Centronics parallel interface, Printer interface, Memory access, Key matrix scanning, Stepper motor control and digital clock. ).

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

# PCB FABRICATION

**Course Code: ECE2552**

**Credit Units: 03**

**Aim:** To equip the students with the knowledge of PCB design and fabrication processes.

**Objective:**

- To make familiar with PCB design and various processes involved.
- To provide in-depth core knowledge in design, performance analysis and fabrication of Printed Circuit Boards.
- To provide the knowledge in PCB fabrication process and factors affecting PCB performance.

## **Module I: Introduction to the PCB**

Definition and Evolution of the Printed Circuit Board (PCB), Purposes of a PCB, Applications, Market Drivers, Typical Development Flow for a PCB, Printed Circuit Technology, Basic Electronic Components, Resistors, Capacitors, Inductors, Diodes, Transistors, Relays, Connectors, Integrated Circuits: How a silicon wafer becomes an IC, Printed Circuit Board Characteristics, PCB Materials, Fillers, resins, laminates, base material characteristics, Dielectric, conductors, Engineering References

## **Module II: Design and Analyses**

Design and Environmental Requirements: Functional, Thermal, Vibration, Shock, EMI/EMC; Electrical Engineering: Analog and digital signals, Signal integrity, Grounding concepts, Current carrying capacity, CAD, Schematics, Layout rules of thumb; Mechanical Engineering: Panels, Standard board sizes, Packaging, Thermal Design, Heat transfer basics, Convection, Conduction, PCB Thermal Design Features, Thermal modeling, Cycling and fatigue, Component Vibration Fatigue, Vibration Models and Terminology, Combined Thermal and Structural Fatigue

## **Module III: Contamination Control/Environmental Control**

Contamination Control, Conformal Coatings, Polluting Agents, Safety Controls, Pollution Controls, Recycling, Standards; Manufacturing: PCB Manufacturing Information, PCB Layout and Artwork; Fabrication: Machining Operations, Blanking, Cutting, Punching, Drilling, Laminating Techniques, Plating, Etching, Surface Finishing, Conformal Coatings, Inspection and Checkout, Specifications and Standards

## **Module IV: Assembly**

PCB Assembly Drawing Examples, Component Considerations, Component mounting and support, Mechanical Devices, Soldering Technology, Nonsolder Connections, Cleaning, Parts Staking, Conformal Coating Removal, Repair and Rework, Safety Considerations, ESD protection, Specifications and Standards

## **Module V: Testing & Quality Assurance**

Common PCB Production Faults, Bare Board Testing, Electrical Performance Testing, Assembled PCB Testing, Quality Assurance in Design, FMEA – Failure Mode and Effects Analysis, Software Tools, Quality Assurance in Manufacturing and in Assembly, Specifications and Standards

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# ROBOTICS AND AUTOMATION

**Course Code: ECE2652**

**Credit Units: 03**

**Aim:** To equip the students with the knowledge of Robotics, Automation and their applications.

**Objective:**

- To make students familiar with the field of robotics.
- To provide in-depth core knowledge in design and performance analysis of bots.
- To provide the knowledge in sensors, actuators, motion planning and kinematics & dynamics of robots.

## **Module-I: Introduction to Robotics**

History, Robots, Robot Usage, Robot Subsystems, Robot Classification by Application, Robot Classification by Coordinate System, Robot Classification by Actuation System, Robot Classification by Control Method, Robot Classification by Programming Method

## **Module-II: Actuators and Sensors**

Pneumatic Actuators, Hydraulic Actuators, Electric Actuators, Selection of Motors, Sensor Classification, Internal Sensors, External Sensors, Vision System, Sensor Selection,

## **Module-III: Transformations and Kinematics**

Robot Architecture, Pose of a Rigid Body, Coordinate Transformation, Denavit and Hartenberg (DH) Parameters,, Forward Position Analysis, Inverse Position Analysis, Velocity Analysis: The Jacobian Matrix, Link Velocities  $133$ , Jacobian Computation, Jacobian Using the DeNOC, Singularity, Acceleration Analysis,

## **Module-IV: Statics and Dynamics**

Forces and Moment Balance, Recursive Calculation, Equivalent Joint Torques, Role of Jacobian in Statics, Force Ellipsoid, Inertia Properties, Euler–Lagrange Formulation, Newton—Euler Formulation, Recursive Newton–Euler Algorithm, Dynamics Algorithms

## **Module-V: Recursive Robot Dynamics and Control**

Dynamic Modelling, Analytical Expressions, Recursive Inverse Dynamics using RIDIM, Recursive Forward Dynamics and Simulation, Control Techniques, Second-Order Linear Systems, Feedback Control, Performance of Feedback Control Systems, A Robotic Joint, Joint Controller, Non-linear Trajectory Control, State-space Representation and Control, Stability, Cartesian and Force Controls

## **Module-VI: Motion Planning**

Joint Space Planning, Cartesian Space Planning, Position and Orientation Trajectories, Point-to-Point Planning, Continuous Path Generation

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

## **SIMULATION & MODELLING LAB**

**Course Code: ECE2752**

**Credit Units: 03**

### **Course Contents:**

### **List of Experiments:**

1. Layout & Simulation of CMOS Inverter using CAD Tools.
2. Layout & Simulation of NAND & NOR Gates with Optimal Aspect Ratio.
3. Design & Simulation of SR Latch using NAND & NOR Representations.
4. Design & Simulation of JK Flip Flop using SR Latch.
5. Design & Simulation of Master Slave JK Flip Flop.
6. Design & Simulation of R2R Ladder DAC.
7. Design & Simulation of ADC using DAC.

### **Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# CLOUD COMPUTING

## Syllabus

### COMPUTER NETWORKS

**Course Code: CSE2353**

**Credit Units: 03**

**Course Objective:**

The course provides a unified and fundamental view of the broad field of computer networks. Furthermore, the easy to understand and extremely relevant world of Computer Networking is introduced in a top down Approach. Introduction to intranets and intranet servers and browsers, networks and network servers, LANs/WANs, internetworking technologies, the OSI reference model for networking protocols, CSMA/CD, TCP/IP implementation

**Course Contents:**

**Module I: Introduction**

Introduction to computer networks, evolution of computer networks and its uses, Advantages and Disadvantages of Computer Network, reference models: OSI reference Models, TCP/IP Protocol Suit Networking fundamentals: Internet, Circuit switching vs Packet switching, ISPs, Delay and Loss in Packet Switched Networks

**Module II: Local Area Network**

LAN Architecture, LAN topologies- Bus/ Tree LAN, Ring LAN, Star LAN, Wireless LAN, Ethernet and Fast Ethernet, Token Ring

**Module III: Application layer and data link layer**

Application Layer Protocols: HTTP, FTP, SMTP, DNS

Data link layer design issues, Flow Control- Stop and Wait, Error Detection, Error Control, error detection and correction, data link layer protocols, sliding window protocols, example of data link protocol- HDLC

**Module IV: Medium access layer**

Channel allocation problem, multiple access protocols, Introduction to ALOHA, CSMA/CD, CSMA/CA

**Module V: The network layer**

Introduction, Routers, Network layer concepts, shortest path routing, flooding, distance vector routing, link state routing (without algorithms), congestion control and quality of service, internetworking, IP, Ipv4 Addressing vs Ipv6

**Module VI: The transport layer**

The transport layer services, elements of transport protocols, TCP and UDP, Brief introduction to presentation and session layer, E-mail

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

**Text & References:**

# DISTRIBUTED SYSTEM

**Course Code: CSE2453**

**Credit Unit: 03**

## **Course Objective:**

It serves as one of the important courses in terms of having an understanding about the basic concepts about distributed systems, their types or categories with some concepts about basic networking and various different directions in which it is useful and applicable. The outcome of the course implicitly and explicitly affects the abilities of students to have a good understanding of the upcoming other related courses.

## **Course Contents:**

### **Module 1: Introduction to Distributed System**

Introduction, Goals of Distributed System Examples of distributed systems , Trends in distributed systems , Resource sharing in distributed system, Challenges faced, System Models basics, types of System Models, Physical models , Architectural models , Fundamental models.

### **Module 2: Networking and Internetworking**

Introduction to networking, Networking issues for distributed systems, Types of network (LAN, MAN, WAN, WLAN, WMAN, WWAN, internetworks), Network principles, Internet protocols, Basics of Inter-Process communication, Multicast Communication, Network virtualization: overlay networks, Remote invocation, Remote Procedure Call, Remote method invocation.

### **Module 3: Operating System Support, Web Services and Security**

Introduction , Operating System layer, Operating System Architecture, Virtualization at Operating System level, Introduction to web services, Service descriptions and IDL for web services, Applications of web services, Overview of Security Techniques, Cryptographic algorithms , Digital signatures, Needham–Schroeder, Kerberos techniques.

### **Module 4: Distributed File Systems and Distributed Transactions**

Introduction (URI, URL's ) , Name services and the Domain Name System(NameSpace, Name Resolution, DNS), Directory services, Transactions , Nested transactions , Locks , Optimistic concurrency control, Flat and nested distributed transactions , Atomic commit protocols , Concurrency control in distributed transactions , Distributed deadlocks.

### **Module 5: Distributed Multimedia System and Distributed Algorithms**

Characteristics of multimedia data, Quality of service management, Resource management, Stream adaptation, Introduction to communication protocols, Balanced sliding window protocol, Routing algorithms, Destination based routing, APP problem, Deadlock free Packet switching.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

## **Text & References:**

### **Text:**

- Coulouris, Dollimore, Kindberg, Blair, "Distributed System: Concepts and Design", Fifth Edition, Pearson Ed.
- Singhal & Shivaratri, "Advanced Concept in Operating Systems", McGraw Hill

### **References:**

- Andrew S. Tanenbaum, "Computer Networks", 4th ed., Prentice Hall

# HIGH PERFORMANCE COMPUTING

**Course Code: CSE2553**

**Credit Units: 03**

## **Course Objective:**

This course gives an insight about Cluster and Grid computing. The major objective of this course is to provide a sound foundation to the students on the concepts, percepts and practices in a field that is of immense concern to the industry and business. This would be helpful to students for understanding a subject related to but a bit higher in its hierarchy.

## **Course Contents:**

### **Module 1: Parallel and Distributed Programming Models**

Introduction to high performance computing, basic definitions: cluster, grid, meta-computing, middleware etc., examples of representative applications. Programming models: shared memory, message passing, peer-to-peer. Development of parallel and distributed applications, Design phases, Common parallel patterns, Performance metrics and profiling.

### **Module 2: Overview of Cluster Computing**

The Role of Clusters, Definition and Taxonomy, Distributed Computing, Limitations, Architecture of cluster-based systems, Design Decisions, Network Hardware, Network Software, Protocols Distributed File Systems, Virtualization technologies, Issues in cluster design: performance, single-system-image, fault tolerance, manageability, programmability, load balancing, security, storage.

### **Module 3: Introduction of Grid Computing**

Introduction, Evolution of the Grid, Definitions of Grid Computing, Infrastructure of hardware and software, Grid models, Applications, Examples of usage, Research possibilities / scope in Grid Computing, HPC and Grids, Scheduling HPC applications in Grids, Grid Monitoring Architecture (GMA) – An Overview of Grid Monitoring Systems.

### **Module 4: Integrating task parallelism with data parallelism**

Introduction and motivation, A model for integrating task parallelism into data parallel programming platforms, Integration of the model into ARC, Design and implementation applications, performance analysis, guidelines for composing user programs, related work.

Anonymous remote computing and communication model: Introduction, Location in dependent inter task communication with DP, DP model of iterative grid computations, Design and implementation of distributed pipes.

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

## **Text & References:**

# INFORMATION STORAGE MANAGEMENT

**Course Code: CSE2653**

**Credit Units: 03**

## **Course Objective:**

The course provides detailed knowledge, practical training and insight into the implementation and management of various storage technologies with a focus towards applying these technologies in an information lifecycle paradigm. This course focuses on evolution of storage and implementation models, Storage devices principles, Storage classes (SAN, NAS, CAS) and Backup, Business Continuity, and Disaster Recovery principles

## **Course Contents:**

### **Module 1: Introduction to Storage Technology**

Information Storage - Data, Types of Data, Information, Storage, Evolution of Storage Technology and Architecture, Data Center Infrastructure, Key Challenges in Managing Information, Information Lifecycle -Information Lifecycle Management, ILM Implementation, ILM Benefits.

### **Module 2: Data Protection & Intelligent Storage System**

Components of a Storage System Environment, RAID -Implementation of RAID, RAID Array Components, RAID levels, RAID Impact on Disk Performance, Components of an Intelligent Storage System, Intelligent Storage Array-High-end Storage Systems, Midrange Storage System

### **Module 3: Storage Networking Technologies & Virtualization**

Direct-Attached Storage and Introduction to SCSI- Types of DAS, DAS Benefits and Limitations, Disk Drive Interfaces, Introduction to Parallel SCSI, Storage Area Networks- Fibre Channel: Overview, SAN and its evolution, Components of SAN, Network-Attached Storage- General Purpose Servers vs. NAS Devices, Benefits of NAS, Components of NAS.

### **Module 4: CAS and Business Continuity**

CAS: Fixed Content and Archives, Types of Archives, Features and Benefits of CAS, CAS Architecture, Object Storage and Retrieval in CAS.

Introduction to Business Continuity: Information Availability, BC Terminology, BC Planning Lifecycle, Failure Analysis.

### **Module 5: Backup, Recovery & Replication**

Backup and Recovery : Backup Purpose, Backup Considerations, Backup Granularity, Recovery Considerations, Backup Methods, Backup Process, Backup and Restore Operations, Backup Topologies, Backup Technologies.

Replication: Local Replication- Uses of Local Replicas, Data Consistency, Local Replication Technologies, Remote Replication- Modes of Remote Replication, Remote Replication Technologies.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

## **Text & References:**

### **Text:**

- Information Storage and Management, Wiley Publication ISBN: 978-81-265-2147-0

# INTERFACING WITH VIRTUALIZATION

**Course Code: CSE2753**

**Credit Units: 03**

## **Course Objective:**

This course gives students an insight into the basics of cloud computing along with virtualization, cloud computing is one of the fastest growing domain from a while now. It will provide the students basic understanding about cloud and virtualization along with it how one can migrate over it.

## **Course Contents:**

### **Module-I: Introduction to Virtualization**

Virtualization and cloud computing - Need of virtualization – cost, administration, fast deployment, reduce infrastructure cost – limitations

Types of hardware virtualization: Full virtualization - partial virtualization - para virtualization

Desktop virtualization: Software virtualization – Memory virtualization - Storage virtualization – Data virtualization – Network virtualization

### **Module-II: Hypervisors and Virtual machines**

Server Virtualization: Understanding Server Virtualization, types of server virtualization, Virtual machine basics, types of virtual machines, hypervisor concepts and types

### **Module-III: Virtualization Solutions**

Understanding Microsoft's Virtualization solutions: Microsoft's Infrastructure Optimization Model, Virtualization and the Infrastructure Optimization Model, Benefits of Virtualization, Achieving the Benefits of Datacenter Virtualization, Achieving the Benefits of Client Virtualization, Achieving the Benefits of Cloud Virtualization

### **Module-IV: Migrating into a Cloud**

Introduction, Challenges while migrating to Cloud, Broad approaches to migrating into the cloud-why migrate -deciding on cloud migration, the Seven-step model of migration into a cloud, Migration Risks and Mitigation, Enterprise cloud computing paradigm, relevant Deployment Models for Enterprise Cloud Computing, Adoption and Consumption Strategies, issues for enterprise applications on the cloud

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

## **Text & References:**

### **Text:**

- David Marshall, Wade A. Reynolds, Advanced Server Virtualization: VMware and Microsoft Platform in the Virtual Data Center, Auerbach

# CLOUD COMPUTING TOOLS AND TECHNIQUES

**Course Code: CSE2853**

**Credit Units: 03**

## **Course Objective:**

This course gives students an insight into the basics of cloud computing along with virtualization, cloud computing is one of the fastest growing domain from a while now. It will provide the students basic understanding about cloud and virtualization along with it how one can migrate over it.

## **Course Contents:**

### **Module-I: Cloud Computing Overview**

Origins of Cloud computing – Cloud components - Essential characteristics – On-demand self-service, Broad network access, Location independent resource pooling ,Rapid elasticity , Measured service, Comparing cloud providers with traditional IT service providers, Roots of cloud computing.

### **Module-II: Cloud Insights**

Architectural influences – High-performance computing, Utility and Enterprise grid computing, Cloud scenarios – Benefits: scalability ,simplicity ,vendors ,security, Limitations – Sensitive information - Application development- security level of third party - security benefits, Regularity issues: Government policies.

### **Module-III: Cloud Architecture- Layers and Models**

Layers in cloud architecture, Software as a Service (SaaS), features of SaaS and benefits, Platform as a Service ( PaaS ), features of PaaS and benefits, Infrastructure as a Service ( IaaS), features of IaaS and benefits, Service providers, challenges and risks in cloud adoption.

Cloud deployment model: Public clouds – Private clouds – Community clouds - Hybrid clouds - Advantages of Cloud computing.

### **Module-IV: Cloud Simulators- CloudSim and GreenCloud**

Introduction to Simulator, understanding CloudSim simulator, CloudSim Architecture(User code, CloudSim, GridSim, SimJava) Understanding Working platform for CloudSim, Introduction to GreenCloud

### **Module-V: Introduction to VMWare Simulator**

Basics of VMWare, advantages of VMware virtualization, using VMware workstation, creating virtual machines-understanding virtual machines, create a new virtual machine on local host, cloning virtual machines, virtualize a physical machine, starting and stopping a virtual machine.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# BIOMEDICAL

## Syllabus

### HUMAN ANATOMY AND PHYSIOLOGY-I

**Course Code: BME2351**

**Credit Units: 03**

**Course Objective:**

To provide students a basic understanding of the human body structure and functioning. Students will be able to relate basic human body systems and life processes, name the major body systems and their functions , understand the anatomy of various body systems .

**Course Contents:**

**Module I:**

Basic cell structure , various cell organelles and their functions , Tissue- their types , structure and function , structure and function of skin , Different types of muscles and their function , General description of bones , their structure and function , types of joints and their structure and function .

**Module II:**

Cell , cell membrane , polarisation and repolarisation , resting membrane potential , Nernst equation , Donnan's equilibrium , Goldman equation action potential and its propagation , synaptic transmission ,

**Module III**

Blood , Lymph and circulation : blood composition , properties and function . Structure and functions of RBCs, WBCs and platelets , Blood types , Homeostasis , Immune mechanisms , Lymph., Heart position , structure and functions , Heartbeat , electrical excitation , Einthoven's triangle , Cardiac and peripheral regulation , blood pressure and its regulation , blood flow and its regulation.

**Module IV**

Respiratory System : position and functions . Mechanics of respiration , Lung volumes and capacities , Gas exchange between lungs and tissues , regulation of respiration . Digestive system : Different parts of digestive system , functions of each organ , digestion of proteins , carbohydrates , fats , vitamins and minerals.

**Module V**

Osteology , Bone , brief introduction to different bones in skull , vertebral column , upper extremity , hands , lower extremity , foot .

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# BIOINSTRUMENTATION

**Course Code : BME2451**

**Credit Units: 03**

## **Course Objective:**

To enable the student to understand the working and construction of various equipments used in the medical field.

## **Course Contents:**

### **Module I:**

**Transducers and Reference electrodes:** classification of transducers, temperature transducers , displacement transducer , pressure transducer , catheter transducer , photoelectric transducer , piezoelectric transducer . po<sub>2</sub> electrodes , membrane electrodes , blood gas analysis , Ion specific electrodes .

### **Module II :**

ECG : electrodes and conversion of ionic potentials to electric potential , ECG instrumentation amplifiers, driven right leg circuitry. Introduction and characteristics of bio signals ( EEG , ECG , EMG ) . , removal of artefacts , event detection and correlation analysis of ECG signals .

### **Module III :**

Respiration measurement using electrical impedance plethysmography : electrical impedance changes during breathing , 2 and 4 electrode measurement , 4 electrode technique .

### **Module IV :**

Oxygen saturation using pulse oximetry : optical characteristics of oxygenated and deoxygenated blood , principles of pulse oximetry , circuits of pulse oximetry , constant current source , current – voltage converter , amplifiers .

### **Module V :**

Non invasive blood pressure measurement : theory and circuitry of method using Korotkoff sounds and method based on oscillometry .

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# TISSUE ENGINEERING

**Course Code: BME2551**

**Credit Units: 03**

## **Course Objective:**

To enable students to understand the principles of tissue engineering and learn the basics of cell culture , tissue culture ,scaffolding , types of bioreactors and mass transfer reactions .

## **Course Contents:**

### **Module I:**

Cell culture: Different cell types, progenitor cells and cell differentiations, different kind of matrix, cell-cell interaction. Aspect of cell culture: cell expansion, cell transfer, cell storage and cell characterization, Bioreactors.

### **Module II :**

Molecular biology aspects: Cell signaling molecules, growth factors, hormone and growth factor signaling, growth factor delivery in tissue engineering, cell attachment: differential cell adhesion, receptor-ligand binding, and Cell surface markers.

### **Module III :**

Scaffold and transplant: Engineering biomaterials for tissue engineering, Degradable materials (collagen, silk and polylactic acid), porosity, mechanical strength, 3-D architecture and cell incorporation. Engineering tissues for replacing bone, cartilage, tendons, ligaments, skin and liver. Basic transplant immunology, stems cells: introduction, hepatopoiesis.

### **Module IV :**

Cryopreservation of cells and tissues, Transport in biological system, Mass transport through cell membranes, Mathematical modelling of mass transfer in engineered tissues

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# BIOMECHANICS

**Course Code: BME2651**

**Credit Units: 03**

## **Course Objective:**

To enable students to understand the basics of bone movement , gait analysis and mechanics of bone and muscles

## **Course Contents:**

### **Module I:**

Joint motion: relative position of two bones meeting at a joint , description of a rigid body , degrees of freedom , euler angles , rotation matrices, rotation angle anatomical directions , anatomical planes ,

### **Module II :**

Inverse Dynamics to calculate resultant force and momentum within the body link segment models , intersegmental force and moment ,

### **Module III :**

Human Gait analysis , gait cycle , angular kinematics of hip , knee and ankle , force plates and ground reaction force , gait abnormalities .

### **Module IV :**

Structure and composition of bone , microstructure of bone , skeletal muscle , mechanism of muscle contraction , force length and force velocity relationships , basic muscle models , tendons and ligaments , their basic mechanical models , injuries and factors affecting biomechanical properties , Cartilage , viscoelasticity and viscoelastic models .

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# MEDICAL IMAGE PROCESSING

**Course Code: BME2751**

**Credit Units: 03**

## **Course Objective:**

To enable students to understand techniques used in imaging in the medical profession , the artefacts and other problems experience in doing so .

## **Course Contents:**

### **Module I:**

**Digital image fundamental :**Elements of digital image processing systems, Elements of Visual perception, Image sampling and quantization,– Some Basic relationships between pixels, Matrix and Singular Value representation of discrete images

### **Module II :**

Image transforms 1DDFT, 2D DFT, Cosine, Sine Hadamard, Haar, Slant, KL transform and their properties

### **Module III :**

**Image enhancement :**Histogram – Modification and specification techniques, Enhancement by point processing Image smoothening, Image sharpening, generation of spatial masks from frequency domain specification, Homomorphic filtering, and color image processing.

### **Module IV :**

**Image segmentation :** spatial feature extraction , transforms features , segmentation techniques , analysis techniques, application of matlab for digital image processing .

### **Module V**

Run length, Huffman coding, arithmetic coding, Pixel coding, transform coding, JPEG Standard, predictive techniques, Application of image processing techniques in thermography, SPECT, PET images.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

**-Freedom to design your degree**

## **Curriculum & Scheme of Examination**

**2020**

**AMITY UNIVERSITY HARYANA**

**GURUGRAM**

# **FIRST SEMESTER**

## **MATHEMATICS – I**

**Course Code:**

**L-T-P : 2-1-0**

**Credit Units : 03**

**Course Objective:**

The objective of this course is to provide an introduction to the fundamentals and concepts of basic mathematics covering sets, functions, differentiation, integration, differential equations, vectors and matrices. This course aims to assist the students to develop confidence in handling mathematical concepts and techniques and to understand the principles and Concept of differential Calculus.

**Course Contents:**

**Module I: Matrices and Determinants**

Definition of Matrix, Sub matrix, types of Matrices such as Symmetric and Asymmetric, Square, Diagonal Matrices, Singular and Nonsingular matrices, Addition, Subtraction, Multiplication of Matrices, Determinant of Square Matrix, System of linear equations, Solution by Cramer's rule and Gauss Elimination method.

**Module II: Differentiation and Integration**

Differentiation of standard functions: Polynomial, Rational, Exponential, Logarithmic and Trigonometric functions, Product rule, Quotient rule, Successive Differentiation. Integration of functions, Method of change of variables and Method of substitution for Integrals, Definite Integrals, and their properties., Practical applications of integrals.

**Module III: Differential equations**

Order and Degree of ODE, General solution and Particular solution, formation of ODEs, Differential equations of first order, Variable separable method, Homogeneous method and its variants, Differential equations of second order with constant coefficients, Complementary function and Particular Integral for some standard functions.

**Examination Scheme:**

## COMPUTER FUNDAMENTALS AND TOOLS

**Course Code: IFT  
L-T-P:3-0-0**

**Credit Units: 03**

### Course Objective:

This course is aimed to provide a fundamental understanding of computer science for the students in their early stages of academic career. Various computer nomenclatures regarding to hardware and software will be introduced for students to develop an in-depth realization of several subjects and their significant roles in the field. After this course, you will be able to understand fundamental concepts of computer.

### Course Contents:

**Module I** Computer and its characteristics, application of computers, digital and analog computer, Generation of computers, Storage devices: primary storage devices (RAM,ROM,PROM,EPROM,EEPROM) , secondary storage devices(Floppy disk, Hard disk, optical disk, magnetic tapes), Input and output devices (keyboard, mouse, light pen, joystick, scanner, monitor, printers etc.)

**Module II** Software and its types (System Software, Application Software, Firmware Softwares) Computer Languages and its types (Machine Language, Assembly Language, High Level Language: advantages and disadvantages of computer languages),Translators :Compiler, Linker, Interpreter . Number system and its types, conversion from one base to another and vice versa.

**Module III** Word Processor and its features, Editing of Text, Find and Replace, Bullets and Numbering, Spell Checker, Grammar Checker, Auto Correct, Auto Complete, Auto Text, Header and footer, tables, mail merge, border and shading, page setup, printing.

**Module IV** Spread sheet and its features, Entering Information in Worksheet, Editing Cell Entry, Moving and Copying Data, deleting or Inserting Cells, Rows and Columns, Custom Numeric Formats, Using Formulas and functions, Creating charts.

**Module V** Presentation Software and its uses, steps for creating PowerPoint Presentation, PowerPoint Views, Assigning Slide Transitions, Using Preset Animations, Hiding Slides, Slide Show, Controlling the Slide Show with a Keyboard, Setting Slide Show Timings.

### Examination Scheme:

Components	CT1	A/C/Q	Attd	EE
Weightage (%)	15	10	5	70

## **DIGITAL ELECTRONICS**

**Course Code: IFT**

**Credit Units: 03**

**L-T-P: 3-0-0**

### **Course Objective:**

An entry level course in digital electronics covering number systems, binary mathematics, digital codes, logic gates, Boolean algebra, Karnaugh maps, and combinational logic. Emphasis will be on circuit logic analysis and design of digital circuits. The student will explain the operation of digital logic gates and use Boolean algebra and Karnaugh mapping to express logic operations and minimize logic circuits in design. The student will construct, analyze combinational logic circuits & sequential circuits; create a truth table for standard digital logic gates; and add, subtract, multiply and divide using the binary numbering system. Student will also be able to understand about digital to analog conversion and vice versa.

### **Course Contents:**

#### **Module I: Number System**

Decimal, Binary, Octal, Hexadecimal Number Systems and Conversion of the bases, Complements:  $r$ 's complement,  $(r-1)$ 's complement, Binary codes: Grey code, BCD Code, Excess-3 code

#### **Introduction to logic systems**

Positive and negative logic, Logic functions - NOT, AND, OR, NOR, EX-OR, EX NOR

Truth tables Boolean algebra, De Morgan's theorems Standard forms for Logical Expressions - Sum of Products, Product of Sums Specification of Logical functions in terms of Minterms and Maxterms, Karnaugh Maps, Simplification of Logical functions, Introduction of "don't care" states.

#### **Module II: Combinational Building Blocks**

Multiplexers, De-multiplexers, Decoders, Encoders

#### **Arithmetic circuits**

Half Adders and Full Adders, Half Subtractor and Full Subtractor

#### **Module III: Flip-flops**

The RS latch, the clocked RS flip-flop, JK Flip Flop, the Master-Slave JK flip-flop, Delay and Toggle flip-flops

#### **Flip-flops in counter circuits**

Asynchronous (ripple) Counters (UP/DOWN), Synchronous Counter design (UP/DOWN), Non Sequential Counting

#### **Module IV: Shift Registers**

Shift registers in general, Ring Counters, Johnson Counter

#### **Introduction to Memory**

Primary: RAM, Static RAM, Dynamic RAM, ROM, PROM, EPROM, Secondary: Floppy Disk, Hard Disk, CDROM

#### **Module V: Introduction to Logic Families, DACs and ADCs**

Introduction to logic families-TTL, RTL,ECL,CMOS,DTL,IIL

Binary weighted resistor DAC, Resolution, linearity and settling time of DACs, Successive approximation ADC

# COMPUTER PROGRAMMING WITH C LANGUAGE

**Course Code: IFT**  
**L-T-P: 3-0-0**

**Credit Units: 03**

## **Course Objective:**

The primary objective of this course is to understand all the components of C, including the C language, the C Preprocessor, and the C Standard Library. An understanding of some advanced practical issues, including memory management, testing and debugging, complex declarations and expression evaluation, building and using libraries, and evaluating tradeoffs, such as size vs. speed and speed vs. complexity. The ability to write C code and create and manipulate linked lists.

## **Course Contents:**

### **Module I: Introduction to 'C' Language**

History of C, Introduction of C, Basic structure of C program, Concept of variables, constants and data types in C, Operators and expressions: Introduction, arithmetic, relational, Logical, Assignment, Increment and decrement operator, Conditional, bitwise operators, Expressions, Operator precedence and associativity. Managing Input and output Operation, formatting I/O.

### **Module II: Decision making and looping**

Decision making in program, Relational Logical operators example, if statements, if -else, nested if-else statements, Switch, case loop, Do-While, While, for loop and nesting of loop, continue and break , Storage types , predefined processor.

### **Module III: Arrays and Functions**

One Dimensional Arrays, Arrays Manipulation, Sorting, Searching, Function declaration, example & calling a function. Passing Arguments, call by value and call by references, Recursive function, .Recursion.

### **Module IV: Pointers and String**

Pointers: Declaration, Pointer assignments, initialization, Pointers and Dynamic Memory Allocation, Array of Pointers, strings, string handler functions.

### **Module V: Structure Union & file handling**

Structure definition, Declaration, structure Assignments, Arrays in structure, Structure Arrays, Pointer Structure, Nested Structure, Arrays of Structure, Union declaration, assignments & example programs, Difference between structure & union, file handling and the related functions.

## **Examination Scheme:**

<b>Components</b>	<b>CT1</b>	<b>A/C/Q</b>	<b>Attd</b>	<b>EE</b>
<b>Weightage (%)</b>	15	10	5	70

## **Text & References:**

**Text:**

## Computer Fundamentals & Tools Lab

**Course Code: IFT**  
**L-T-P:0-0-2**

**Credit Units: 01**

1. Create a new folder and do the following:
  1. Make a word document in it.
  2. Make an Excel document in it.
  3. Make a new folder in it
  4. Rename the initial folder
  5. Move the initial folder
  6. Copy the initial folder.
  7. Delete the initial folder
2. Implement the various well known features of Windows operating system such as Notepad, WordPad, Paint, System tools, Entertainment etc. enclosed in Start→Programs→Accessories.
3. Implement various display properties by right clicking on the Windows Desktop.
4. Explore the taskbar of Windows.
5. Set the wall paper and screen saver.
6. Set the date/time.

### **MS-Word**

1. Create a document and
  - a. Put Bullets and Numbers
  - b. Apply various Font parameters.
  - c. Apply Left, Right, and Centre alignments.
  - d. Apply hyperlinks
  - e. Insert pictures
  - f. Insert ClipArt
  - g. Show the use of WordArt
  - h. Add Borders and Shading
  - i. Show the use of Find and Replace.
  - j. Apply header/footers
2. Create any document and show the use of File→versions.
3. Create any document and show the difference between paste and paste special.
4. Create a document to show the use of Washout/Watermark.
5. Implement the concept of mail merge.
6. Implement the concept of macros.
7. Implement the concept of importing a file/document.
8. Implement the concept of merging the documents.
9. Create a student table and do the following:
  - a. Insert new row and fill data
  - b. Delete any existing row
  - c. Resize rows and columns
  - d. Apply border and shading
  - e. Apply merging/splitting of cells
  - f. Apply sort
  - g. Apply various arithmetic and logical formulas.
10. Create your resume using General Templates.

## **COMPUTER PROGRAMMING WITH C LANGUAGE Lab**

**Course Code: IFT**  
**L-T-P:0-0-2**

**Credit Units: 01**

1. Write a program to swap 2 no

2. Write a program to demonstrate Greatest of 3 nos and to print the given no in ascending order.
3. Write a program to perform the arithmetic expression using switch statement.
4. Write a program to find factorial of given no using do while statement.
5. Write a program to print prime up to n no.
6. Write a program to sum of n natural no.
7. Write a program to print the product of two matrices of any order.
8. Write a program to print Fibonacci series.
9. Write a program to print the following pattern using for loop
 

```

1
2 2
3 3 3
4 4 4 4
      
```
10. Write a program to read n num of students and 5 subjects marks.
11. Write a program to find factorial of a num using 3 types of functions.
12. Write a program to convert all lower case to uppercase characters
13. Write a program to find the factorial of a number using recursion
14. WAP program to print the element of array using pointers.
15. WAP program to implement call by reference.
16. WAP program to find greatest of 'n' num using function.
17. WAP to Create , initialize and access the elements of a structure.
18. WAP program to print the elements of a structure using pointers
19. WAP program to display student information by initializing structures
20. WAP program to find total number of marks.
21. WAP program to find the total salary of employee and employee details using structure.
22. Program to write data into file and read data from file.

#### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## **SECOND SEMESTER**

**Course Code:**

**L-T-P : 2-1-0**

**Credit Units : 03**

**Course Objective:** The objective of this course is to expose the students to the fundamentals and the concepts of Mathematics including application of derivatives, partial differentiations and vector calculus. This course is designed to understand the basic mathematical logic as a foundation of computer science and applications.

**Module I: Application of Derivatives**

Rolle's theorem, Mean value theorem: Lagrange's form, Cauchy's form. Generalized Mean value theorem: Taylor's theorem, Indeterminate form: Taylor's infinite series, Maclaurian's series, Power Series expansion of some standard functions: e.g.,  $\sin x$ ,  $\cos x$ ,  $\log(1+x)$ , etc., Maxima and minima of one variable functions. Partial differentiation, Euler's theorem for homogeneous functions.

**Module II: Vector calculus**

Differentiation of vectors, scalar and vector point function. Gradient of a scalar field, directional derivative, divergence and curl of a vector field and their physical interpretations, integration of vectors, line integral, surface integral, volume integral.

**Module III: Partial Differential equation and its applications.**

Formation of partial differential equations, Lagrange's linear partial differential equation. Classification of second order partial differential equations. Method of separation of variables and its application to wave equation, one dimensional heat equation, Laplace equation.

**Examination Scheme:**

Components	CT1	A/C/Q	Attd	EE
Weightage (%)	15	10	5	70

**WEB TECHNOLOGIES**

**Course Code: IFT**

**L-T-P : 3-0-0**

**Credit Units: 03**

**Course Objective:**

This course is aimed to provide a fundamental understanding of web site creation. HTML is the language used for designing most basic web pages. Syllabus includes basic and advanced features of HTML. It also gives an overview of XML and CSS.

**Course Contents:****Module I: Introduction to HTML**

History of HTML, Structure of HTML, HTML Basic: Elements, Tags and Attributes. Adding Comments, Adding Title, HTML Background: using plain color, using image, Formatting Text : Paragraph, inserting line break, Heading Style, Bold text, Italicized text, Underlined text, Teletype text, Strikeout, Superscript, Subscript, Important text, Emphasized text, Inserted text, Deleted text, Larger text, Smaller text. Working with Text: Changing font Sizes and Colors. Creating List: Ordered List, Unordered List, Definition List, Nested List. Inserting image, Creating Hyper Text Links, Creating Image Links, Horizontal Rules, Marquee Tag. Address Tag.

**Module II: Table & Frames**

Tables: Creating Tables, Table Element, Adding Border, Adding Column Headings, Cellspacing and Cellpadding, Adding a Caption, Setting the table Width and Height, Add Row Headings, Aligning Cell contents, Setting Column Width, Centering a Table, Inserting Image, Rowspan, Colspan, Assigning Background Colors.

Frames: Frameset Element, Frame Element, Noframes Element, Specifying Target, Inline Frames.

**Module III: Forms and validation**

Forms: Introduction to Forms, Form Elements, Text Field, Password Field, Label, Check Box, Radio Button, Selection List, Text Area, Button.

Front level validations using JavaScript: Checking a Non-empty Text/Password Field, Restricting Length of Text/Password Field.

**Module IV: Cascading Style Sheets**

Overview of style sheets, Advantages, Different ways to use style sheet: External style sheet, Internal style sheet, Inline style sheet.

Selectors: Element selector, Id selector, Class selector, Grouping selector. Adding style to a Document, Adding Comments in CSS.

**Module V: XML**

Introduction to XML, XML Basics, XML Structure, XML Tags, XML Elements, XML Attributes, Adding Comments, XML Document Type Declaration: Internal DTD and External DTD. Well formed XML Documents and Valid XML Documents.

**Examination Scheme:**

Components	CT	A/C/Q	ATTD.	EE
Weightage	15	10	5	70

**DATA STRUCTURES THROUGH ‘C’ LANGUAGE**

**Course Code: IFT  
L-T-P:3-0-0**

**Credit Units: 03**

**Course Objective:**

This course is an introduction to the use, design, and analysis of data structures in computer programs. The very commonly used data structures like arrays, stacks, queues, lists, trees, and graphs will be discussed in detail. Sorting and hashing are important topics in the study of algorithms. They are also closely related to the design of data structures. Several algorithms to implement these techniques are included in the syllabus.

## **Course Contents:**

### **Module I: Basic concepts and Array**

Definition Accessing the address of a variable, Declaring and initializing pointers. Accessing a variable through its pointer. Meaning of static and dynamic memory allocation. Memory allocation functions : malloc, calloc, free and realloc.

Representation of arrays single and multi dimensional arrays. Address calculation using column and rows major ordering. Various operations on arrays, Application of arrays: matrix multiplication.

### **Module II: Stacks and Queues**

Definition, Array representation of stack. Operations on stack: Infix, prefix and postfix notations. Conversion of an arithmetic expression from Infix to postfix. Evaluation of postfix expression using stacks.

Definition, Array representation of Queue. Types of queue: Simple queue, circular queue, double ended queue (deque), priority queue, operations on all types of Queues.

### **Module III: Linked List**

Definition, Components of linked list, Representation of linked list, Advantages and Disadvantages of linked list. Types of linked list : Singly linked list, Doubly linked list, Circular linked list and circular doubly linked list. Operations on singly linked list : creation, insertion, deletion, search and display (based on the different position as specified by the user). Linked representation of Stacks & Queues.

### **Module IV: Trees**

Definition : Tree, Binary tree, Complete binary tree, Binary search tree, Heap Tree terminology : Root, Node, Degree of a node and tree, Terminal nodes, Non terminal nodes, Siblings, Level, Edge, Path, depth, Parent node, ancestors of a node. Binary tree : Array representation of tree, Creation of binary tree. Traversal of Binary Tree: Preorder, Inorder and post order. Representation of trees and its application, Binary search tree: Insertion & deletion in BST. Height balanced (AVL) tree

### **Module V: Searching, sorting and complexity**

Searching: Sequential and binary search, Comparison between linear and binary search. Sorting: insertion, selection, bubble, quick, merge, heap sort.

### **Module VI: Graphs**

Graph representation: adjacency list, adjacency matrix. Types of Graphs: Directed & Undirected Graph . Traversal scheme: Depth first search, Breadth first search. Spanning tree: definition, minimal spanning tree algorithms.

## **Examination Scheme:**

<b>Components</b>	<b>CT1</b>	<b>A/C/Q</b>	<b>ATTD.</b>	<b>EE</b>
<b>Weightage (%)</b>	15	10	5	70

## **DATABASE MANAGEMENT SYSTEMS**

**Course Code: IFT**  
**L-T-P:3-0-0**

**Credit Units: 03**

**Course Objective:**

The objective of this course is to expose the students to the fundamentals & basic concepts in Data Base Management Systems. This course discusses architecture of Database Systems with concept of relational model & ER model. This course explains techniques for database design, Normalization and database recovery and protection.

### **Course Contents:**

#### **Module I: Introduction to DBMS**

Definition of DBMS, Characteristics and Application of Database, Data Independence, DBMS Architecture, Levels, Database Administrator, File System Approach Vs DBMS Approach, Advantages of Using a DBMS, Data Models, Schemas, and Instances, Classification of DBMS.

#### **Module II: Relational Database & ER Model**

Relational System, Codd's Rule, Relational Model, Optimization, Tables and Views, Entity, Types of Entity, Weak Entity Attributes, Entity sets, Entity – Relationship Diagrams, Overview of Enhanced-Entity Relationship (EER) Model.

#### **Module III: Relational Model Objects**

Domains and Relations, Relations and predicates, Relational Data Integrity; Primary Key, Candidate Key, Foreign Key and their rules; Relational operators, Relational Algebra, Relational Calculus, SQL Language: Schema Definition, Constraints, Queries and Views.

#### **Module IV: Database Design**

Definition of Functional Dependencies, Process Of Normalization, First Normal Form, Second Normal Form, Third Normal Form. Boyce Codd Normal Form, Fourth Normal Form, Fifth Normal Form, Database design and implementation process.

#### **Module V: Data Recovery & Protection**

Introduction to Transaction Processing, Types of Failure, Database Recovery techniques: Based on Deferred Update, based on Immediate Update, Shadow Paging. Concurrency Control Techniques: Two-Phase Locking technique, Timestamp Ordering, Multiversion Technique. Introduction to Database Security, Data Security Requirements, Protecting data within database.

### **Examination Scheme:**

Components	CT1	A/C/Q	Attd	EE
Weightage (%)	15	10	5	70

## **COMPUTER ORGANISATION AND ARCHITECTURE**

**Course Code: IFT**

**Credit Units: 03**

**L-T-P: 3-0-0**

### **Course Objective:**

The student will develop an understanding of the underlying operation of a modern digital

computer, identify and understand the various "building blocks" from which a modern computer is constructed. The student will learn to develop simple assembly language programs and understand the underlying operations of more complex programs using Intel's 8085 Microprocessor.

### **Course Contents:**

#### **Module I: General Computer Architecture**

Block Diagram of typical Computer, Memory Section, Input/Output Section, CPU, Registers, Arithmetic Unit, Instruction handling Areas, Stacks

**Register Transfer Language and Micro operations:** Register Transfer, Bus and Memory Transfer, Arithmetic Micro operations(Binary Adder, Binary Adder-subtractor, Binary incrementer, Arithmetic Circuit), Logic Micro operations, Shift Micro operations, Arithmetic Logic Shift Unit

#### **Module II: Basic Computer Organization and Design**

Instruction Codes, stored program organization computer registers, common bus system, Timing and Control, Instruction Cycle, Memory Reference Instructions, Input Output Instructions and Interrupts

#### **Module III: Central Processing Unit**

General Register Organization, Stack Organization, Instruction Formats, Addressing Modes, RISC, CISC

**Pipelining and Vector Processing:** Parallel Processing, Pipelining(General considerations), Arithmetic Pipeline, Instruction Pipeline, Vector Processing, Array Processors

#### **Module IV: Input Output Organization**

I/O Interface, Asynchronous Data Transfer, Modes of Transfer, Priority Interrupt, DMA, IOP, Serial Communication

**Memory Organization:** Associative Memory(Hardware organization, Match logic), Cache Memory(associative mapping, Direct Mapping, Set Associative Mapping), Virtual Memory

#### **Module V: Introduction to Microprocessor**

Machine Language, Assembly Language, Assembler, High Level Language, Compiler, Interpreter, Internal Architecture 8085.

### **Examination Scheme:**

<b>Components</b>	<b>CT1</b>	<b>A/C/Q</b>	<b>Attd</b>	<b>EE</b>
<b>Weightage (%)</b>	15	10	5	70

### **Text & References:**

#### **Text:**

- Computer System Architecture, M.M. Mano, Pearson Education.

#### **References:**

- Hayes Computer Architecture and Organization, TMH Publisher.

### **DATA STRUCTURES THROUGH 'C' LANGUAGE LAB**

**Course Code: IFT**

**L-T-P: 0-0-2**

**Credit Units: 01**

**Course Contents:**

1. Write a program to perform the following operations on two given matrices: Addition and Multiplication
2. Write a program to insert & delete an element from the  $k^{\text{th}}$  element of an array
3. Write a program to search an element in a given array using linear search.
4. Write a program to search an element in a given array using binary search.
5. Write a program to sort the elements of an array using Bubble Sort.
6. Write a program to sort the elements of an array using Selection Sort.
7. Write a program to sort the elements of an array using Insertion Sort.
8. Write a program using the concept of iteration and recursion to sort the elements of an array using Quick Sort.
9. Write a program to implement a Stack, show overflow and underflow while performing push and pop operations respectively.
10. Write a program to implement a queue and show the following: insertion and deletion
11. Write a program to implement Linear Linked List and show the following operations: creation, display, insertion, deletion and searching.
12. Write a program to implement Doubly Linked List and show the following operations: creation, display, insertion, deletion and searching.
13. Write a program to construct a Binary Search tree and perform the following operations: Insertion and Deletion of a node.
14. Write a program to implement Depth First Search using linked representation of graph.
15. Write a program to implement Breadth First Search using linked representation of graph.

#### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

### WEB TECHNOLOGIES LAB

**Course Code: IFT**  
**L-T-P : 0-0-2**

**Credit Units: 01**

**Course Contents:**

Design a webpage to show a basic structure of html document using tags like head, title and body.

Design a webpage to show various tags used for formatting text.

Design a webpage to show usage of various heading tags, font tag and background color.

Design a webpage to insert image in the background.

Design a webpage to insert image with alignment.

Design a webpage to show the use of link(Text & Image).

Design a webpage to show scrolling text and scrolling image using marquee tag.

Design a webpage to show usage of ordered list.

Design a webpage to show usage of unordered list.

Design a webpage to show usage of definition list.

Design a webpage to show usage of nested list.

Design a table with 5 rows and 5 columns.

Design a table using rowspan, colspan, cell padding and cell spacing.

Divide a webpage into 3 blocks using frame tag(row wise) .

Divide a webpage into 3 blocks using frame tag(column wise) .

Design a log-in form to show various elements of form.

---

### Examination Scheme:

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

### DBMS LAB

Course Code: IFT

Credit Units: 01

**L-T-P: 0-0-2**

1. Given the table STUDENT:

Student No.	Class	Name	GAME	Grade1	SUPW	Grade2
10	7	Sameer	Cricket	B	Photography	A
11	8	Sujit	Tennis	A	Gardening	C
12	7	Kamal	Swimming	B	Photography	B
13	7	Veena	Tennis	C	Cooking	A
14	9	Archana	Basket Ball	A	Literature	A
15	10	Arpit	Cricket	A	Gardening	C

- (i) Display the names of the students who are getting a grade C in either GAME or SUPW.
- (ii) Display the number of students getting grade A in cricket.
- (iii) Display the different games offered in the school.
- (iv) Display the SUPW taken by the students, whose name starts with 'A'.
- (v) Add a new column named 'Marks'.
- (vi) Assign a value 200 for Marks for all those who are getting grade B or above in GAME.
- (vii) Arrange the whole table in the alphabetical order to SUPW.

2. Given the table SPORTS:

Student No.	Class	Name	GAME1	Grade1	GAME2	Grade2
10	7	Sameer	Cricket	B	Swimming	A
11	8	Sujit	Tennis	A	Skating	C
12	7	Kamal	Swimming	B	Football	B
13	7	Veena	Tennis	C	Tennis	A
14	9	Archana	Basket Ball	A	Cricket	A
15	10	Arpit	Cricket	A	Athletics	C

- (i) Display the names of the students who are getting a grade C in either GAME1 or GAME2.
- (ii) Display the number of students getting grade A in cricket.
- (iii) Display the names of the students who have same game for both GAME1 and GAME2.
- (iv) Display the games taken by the students, whose name starts with 'A'.
- (v) Add a new column named 'Marks'.
- (vi) Assign a value 200 for Marks for all those who are getting grade B or above in GAME.
- (vii) Arrange the whole table in the alphabetical order of Name.

3. Given the table STUDENT:

Student No.	Name	Stipend	Stream	AvgMarks	Grade	Class
1	Karan	400.00	Medical	78.5	B	12B

2	Divakar	450.00	Commerce	89.2	A	11C
3	Divya	300.00	Commerce	68.6	C	12C
4	Arun	350.00	Humanities	73.1	B	12C
5	Sabina	500.00	Nonmedical	90.6	A	11A
6	John	400.00	Medical	75.4	B	12B
7	Robert	250.00	Humaities	64.4	C	11A
8	Rubina	450.00	Nonmedical	88.5	A	12A
9	Vikas	500.00	Nonmedical	92.0	A	12A
10	Mohan	300.00	Commerce	67.5	C	12C

- (i) Select all the Nonmedical stream students from STUDENT.
- (ii) List the names of those students who are in class 12 sorted by Stipend.
- (iii) List all students sorted by AvgMarks in descending order.
- (iv) Display a report listing Name, Stipend, Stream, and amount of Stipend received in a year assuming that the stipend is paid every month.
- (v) Count the number of students with Grade 'A'.
- (vi) Insert a new student in the STUDENT table and fill all the columns with some values.
- (vii) Give the output of the following SQL statements:
  - (a) Select MIN(AvgMarks) from STUDENT where AvgMarks > 75;
  - (b) Select SUM(Stipend) from STUDENT where Grade = 'B';
  - (c) Select AVG(Stipend) from STUDENT where Class = '12A';
  - (d) Select COUNT(DISTINCT);

4. Write SQL statement to create EMPLOYEE relation which contain EmpNo, Name, Skill, PayRate.

5. Create a table with the under-mentioned structure (Table name is Emp)

```

EmpNo          NUMBER(4)
DeptNo         NUMBER(2)
EmpName        CHAR(10)
Job            CHAR(10)
Manager        NUMBER(4)
HireDate       DATE
Salary         NUMBER(7, 2)
Commission     NUMBER (7, 2)

```

6. Find out the number of employees having manager as job.
7. Display only the jobs with maximum salary greater than or equal to 3000.
8. Find all those employees whose job does not start with 'M'.
9. List the minimum and maximum salary of each job type.
10. Find all the employees who have no manager.
11. Create a table with the under-mentioned structure (Table name is Dept)
 

```

DeptNo          NUMBER(2)
DeptName        CHAR(12)

```

Location CHAR(12)

12. Create a table with the under-mentioned structure (Table name is PROJECT)

ProjId NUMBER(4)  
ProjDesig CHAR(20)  
ProjStartDT DATE  
ProjEndDT DATE  
BudgetAmount NUMBER(7)  
MaxNoStaff NUMBER(2)

13. Create a table with the under-mentioned structure (Table name is SalGrade)

LowSal NUMBER(7, 2)  
HighSal NUMBER(7, 2)  
Grade NUMBER(2)

Where LowSal is the lowest salary limit in the grade and HighSal is the highest salary limit in the grade.

14. Write SQL statements to list all employees in the following format:

EMPLOYEE WORKS IN DEPARTMENT	Dept. No
SMITH WORKS IN DEPARTMENT	20
SUDHIR WORKS IN DEPARTMENT	20
RAJWORKS IN DEPARTMENT	10
SMITHS WORKS IN DEPARTMENT	30
SANTOSH WORKS IN DEPARTMENT	30

15. Given the table MOV:

No.	Title	Type	Rating	Stars	Qty	Price
1	Gone with the Wind	Drama	G	Gable	4	39.95
2	Friday the 13 <sup>th</sup>	Horror	R	Jason	2	69.95
3	Top Gun	Drama	PG	Cruise	7	49.95
4	Splash	Comedy	PG13	Hanks	3	29.95
5	Independence Day	Drama	R	Turner	3	19.95
6	Risky Business	Comedy	R	Cruise	2	44.95
7	Cocoon	Scifi	PG	Ameche	2	31.95
8	Crocodile Dundee	Comedy	PG13	Harris	2	69.95
9	101 Dalmations	Comedy	G		3	59.95
10	Tootsie	Comedy	PG	Hoffman	1	29.95

Find the total value of the movie cassettes available I the library.

Display a list of all movies with Price over 20 and sorted by Price.

Display all the movies sorted by Qty in descending order.

Display a report listing a movie number, current value and replacement value for each movie in the above table. Calculate the replacement value for all movies as Qty \* Price \* 1.15.

Count the number of movies where rating is not 'G'.

Insert a new movie in the MOV table. Fill all the columns with some values.

Give the output of the following SQL statements:

Select AVG (Price) from MOV where Price < 30;

Select MAX (Price) from MOV where Price > 30;

Select SUM (Price \* Qty) from MOV where Qty < 4;

Select COUNT (DISTINCT);

16. Write a PL/SQL program for:

- a) Printing the Fibonacci series from 1 to 50.
- b) Printing the smallest number among any three numbers.
- c) Printing the table of any specific number entered.

17. Create a trigger named "Client\_Master" which keeps track of records deleted or updated when such operations are carried out. Records in this table are inserted into table "Audit" when database trigger fires due to an update or delete statement fired on this table "Client".

Table: Client

Column name	Data type	Size
Client_no	Varchar2	6
Name	Varchar2	20
Address	Varchar2	30
Balance_Due	Number	10,2

**Examination Scheme:**

IA				EE

5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## **THIRD SEMESTER**

# DISCRETE MATHEMATICAL STRUCTURES WITH APPLICATIONS TO CS

**CourseCode: IFT**  
**L-T-P:2-1-0**

**Credit Units: 03**

## **Course Objective:**

The Objective of this course is to provide the fundamentals and the concepts of Discrete Mathematical Structures with Applications to Computer Sciences including Mathematical Logic, Boolean Algebra and its Applications, Switching circuit & Logic Gates, Graphs and Trees. Important theorems with constructive proofs, real life problems & graph theoretic algorithms to be covered with an aim of helping the students to understand the computational and algorithmic aspects of Mathematical Logic, Boolean Algebra, Graphs and Trees in the field of Computer sciences and its applications.

## **Course Contents:**

### **Module I: Introduction**

Permutation and Combination : Counting Techniques.

Relation: Type and compositions of relations, Pictorial representation of relations, closures of relations, Composite Relations, Equivalence relations.

Function: Types, Composition of function, Mathematical Induction, Discrete Numeric Function and Generating Functions

### **Module II:Mathematical Logic**

Proposition, Propositional Calculus- Propositional Variables and Compound Propositions, Basic Logical Operations: -Conjunction, Disjunction, Negation, Conditional, Bi conditional. Compound Statements, Equivalence, Duality, Algebra of Statements, Valid and Invalid, Arguments, Tautologies, Contradiction, Contingency , Boolean Functions – Disjunctive Normal Form, Conjunctive Normal Form.  
Duality Principle.

### **Module III: Graphs**

Basic Terminology of Graphs , Handshaking Lemma , Sub graphs, and Union of Graphs , Connected graph, Disconnected graph, Null graph, Incidence matrix, Adjacency matrix, Degree of a graph, Directed Graph, Walk, Path, Circuit, Wheel, Eulerian graph, Hamiltonian graph, Planar graph , Kuratowski's graphs-I and II , Coloring , Bipartite Graph , Cyclic Graph.

### **Module IV: Trees**

Tree, Properties of Tree, Spanning Tree, Fundamental Circuit, Cut-Set, Cut-Vertices. Binary Tree , Rooted Trees, Path length, Minimum Spanning Trees, Huffman Encoding.

## **Examination Scheme:**

Components	CT1	A/C/Q	Attd	EE
Weightage (%)	15	10	5	70

## MANAGEMENT INFORMATION SYSTEM

**Course Code:**

**L-T-P :3-0-0**

**Credit Units: 03**

### **Course Objective:**

This course will provide the students with an understanding of the principles of information systems technology and its impact on the strategic goals and direction of the organization. They will learn how MIS concepts are applied in business and how information systems can provide solutions to the entire organization.

### **Course Contents:**

#### **Module I: Introduction to MIS and Fundamentals of Information**

Background, meaning, nature, characteristics, myths, requirements, problems and solutions, benefits, limitations, significance and role of management information system, Concept of information, characteristics of information, value of information, source of information, type of information, process of management.

#### **Module II: Conceptual Framework of Information System**

Concept of system, definition of system, characteristics of system, system stake holder, types of system, evolution of information system, approaches to management information system, A framework for MIS architecture, components of MIS, classification of information system.

#### **Module III: Concept of Decision Making and MIS**

Introduction, Decision Making and managers, Classification of managerial decision, Model for decision making process, MIS and Decision Making, Concept of balance, efficiency and effectiveness.

#### **Module IV: Development, Implementation, Evaluation and Maintenance of MIS**

Principles for information system development, MIS development process, methods of implementing of MIS, evaluation of MIS, structure for evaluation of MIS, maintenance, problems related to maintenance and measure to overcome these problems.

#### **Module V: Control and Security Issues in MIS**

Meaning of control, need of control, types of control, security hazards, goal of security control against hazards, security techniques.

### **Examination Scheme:**

<b>Components</b>	<b>CT1</b>	<b>A/C/Q</b>	<b>Attd</b>	<b>EE</b>
<b>Weightage (%)</b>	15	10	5	70

# INTRODUCTION TO OBJECT ORIENTED PROGRAMMING AND C++

**Course Code: IFT**

**Credit Units: 03**

**L-T-P : 3-0-0**

## **Course Objective:**

C++ is one of the most widely used programming languages for solving problems. The objective of this course is to provide object oriented programming fundamentals using C++. Topics to be covered include fundamentals of syntax & semantics of C++, loops & decisions, functions, classes and structures and features of classes such as overloading and inheritance, files, streams, pointers etc.

## **Course Contents:**

### **Module I: Overview of C++**

What is Object Oriented Programming, Characteristics of OOP, Difference between C and C++. Basics:-Input/Output in C++ using cin/cout, Preprocessor Directives, Data Types-Integer, Float, character, Enumerations, library functions, comments, storage classes, manipulators, operators in C++, scope resolution operator, memory management operator. arrays and strings .

### **Module II: Classes and objects**

Functions: Simple functions, passing arguments to functions, returning values from functions, reference arguments, returning by reference, Overloaded functions, Inline functions, friend function, Structures and class.

Classes and objects: A simple class, C++ objects as physical objects, objects as function arguments, returning objects from functions, static class data, array as class data member, array of objects.

### **Module III: Inheritance**

Inheritance, Types of Inheritance, access modes – public, private & protected, Abstract Classes, Ambiguity resolution using scope resolution operator and Virtual base class, Constructors, Types of constructors, Destructors.

### **Module IV: Polymorphism**

Polymorphism, Type of Polymorphism – Compile time and runtime, Function Overloading, Operator Overloading (Unary and Binary) Polymorphism by parameter, Pointer to objects, this pointer, Virtual Functions, pure virtual functions.

### **Module V: Files and Exception Handling and I/O**

Files and Streams: streams, string I/O, character I/O, file pointer, error handling, command line arguments.

formatted and Unformatted Input output, Introduction of Exception handling, Try Catch block, Rethrowing an Exception.

## **Examination Scheme:**

Components	CT1	A/C/Q	Attd	EE
Weightage (%)	15	10	5	70

**Text & References:****Text**

# OPERATING SYSTEMS

**Course Code: IFT**  
**L-T-P : 3-0-0**

**Credit Units: 03**

## **Course Objective:**

To study and apply concepts relating to operating systems, such as concurrency and control of asynchronous processes, deadlocks, memory management, processor and disk scheduling, parallel processing, and file system organization and Demonstrate an understanding of the differences between processes and threads, the different process or thread synchronization methods and the, the different memory management techniques used in Operating Systems, the different I/O management techniques used in Operating Systems, the tradeoffs in design and implementation concepts used in the development of Operating Systems.

## **Course Contents:**

### **Module I :Introduction and System Structure**

What is an operating system, History of OS, OS concepts, Types of OS, OS Structure, OS Operations.

System calls, Types of System Calls, System Programs, OS Structure, Virtual Machines, System Boot

### **Module II:Process Management**

Process Concept, Process Scheduling, Scheduling Criteria, Scheduling Algorithms, Overview of Thread Scheduling and Multiprocessor scheduling, Operations on Processes, Interprocess communication with example. Client-server Communication, Overview of Multithreaded programming models

### **Module III:Process Coordination**

Overview of Process Synchronization, Critical Section Problem, Semaphores, Classic problems. Deadlock- Prevention, Avoidance, Detection, Recovery, Algorithms

### **Module IV:Memory Management**

Memory Management Strategies-Introduction, Swapping, Contiguous Memory Allocation, Paging, Segmentation, Virtual Memory Management- Demand Paging, Thrashing, Page Replacement

### **Module V :Storage Management**

Overview of File System, Access Methods, Directory and Disk Structures, File Sharing, Protection, Disk Scheduling, Disk Management, I/O hardware

### **Module VI:Protection and Security**

Goals and Principles of Protection, Access Matrix, Security Problem, Program Threats, System and Network Threats, Overview of Cryptography, Overview of User Authentication and Security Defense.

## **Examination Scheme:**

<b>Components</b>	<b>CT1</b>	<b>A/C/Q</b>	<b>Attd</b>	<b>EE</b>
<b>Weightage</b>	15	10	5	70

# FUNDAMENTALS OF SOFTWARE ENGINEERING

**Course Code:**

**L-T-P : 3-0-0**

**Credit Units: 03**

## Course Objective:

The purpose of this course is to acquaint students with the concepts and methods available for software development in industrial environments. Students will be exposed to a variety of topics such as design notations, costing techniques, and testing methods, as well as to the tools which are available to support software specification, design, testing, and maintenance.

## Course Contents:

### Module I: Software Development Life Cycle

Evolution of Software Engineering, Software Problems, Issues Involved in Software Engineering, Fundamental Qualities of a Software Product, Approaches to Software Engineering, Planning the development Process, Development/Product Life-Cycle Model, Kinds of Software Life-Cycle Model.

### Module II: Project Management

Project Management Concepts, Project Management Activities, Size Metrics. Software Requirement analysis and Specification, Cost Models.

### Module III: System Design

Design Objectives, Design Principles, Effective Modular Design (Functional Independence, Coupling, and Cohesion), Design Tools and Techniques, Prototyping, Structured Programming.

### Module IV: Coding

Programming Practices, Verification, Monitoring and Control.

### Module V: Software Testing

Testing Fundamentals, Test case design, Functional Testing, Structural Testing, Test Plan, Activities during testing, Unit System, Integration Testing, Software Maintenance.

### Module VI: Software Reliability

Concept of Software Reliability, Software Repair and Availability, Software Errors, Failure and Faults.

## Examination Scheme:

Components	CT1	A/C/Q	Attd	EE
Weightage (%)	15	10	5	70

## Text & References:

## INTRODUCTION TO OBJECT ORIENTED PROGRAMMING AND C++ LAB

**Course Code: IFT**  
**L-T-P : 0-0-2**

**Credit Units: 01**

### **Course Contents:**

1. WAP to calculate factorial of a given number n.
2. WAP to do the following:
  - a. Generate the following menu:
    1. Add two numbers.
    2. Subtract two numbers.
    3. Multiply two numbers.
    4. Divide two numbers.
    5. Exit.
  - b. Ask the user to input two integers and then input a choice from the menu. Perform all the arithmetic operations which have been offered by the menu. Checks for errors caused due to inappropriate entry by user and output a statement accordingly.
3. WAP to read a set of numbers in an array & to find the largest of them.
4. WAP to exchange contents of two variables using call by value.
5. WAP to exchange contents of two variables using call by reference.
6. Calculate area of different geometrical figures (circle, rectangle, square, triangle) using function overloading.
7. WAP to add two complex numbers using friend function.
8. WAP to maintain the student record which contains Roll number, Name, Marks1, Marks2, Marks3 as data member and getdata(), display() and setdata() as member functions.
9. WAP to increment the employee salaries on the basis of their designation (Manager-5000, General Manager-10000, CEO-20000, worker-2000). Use employee name, id, designation and salary as data member and inc\_sal as member function (Use array of object).
10. Write a class bank, containing data member: Name of Depositor, A/c type, Type of A/c, Balance amount. Member function: To assign initial value, To deposit an amount, to withdraw an amount after checking the balance (which should be greater than Rs. 500) , To display name & balance.
11. WAP to define nested class 'student\_info' which contains data members such as name, roll number and sex and also consists of one more class 'date' ,whose data members are day, month and year. The data is to be read from the keyboard & displayed on the screen.
12. WAP to generate a series of Fibonacci numbers using copy constructor, where it is defined outside the class using scope resolution operator.
13. Write a class string to compare two strings, overload (=) operator.
14. Write a class to concatenate two strings, overload (+) operator.
15. Create a class item, having two data members x & y, overload '-' (unary operator) to change the sign of x and y.
16. Create a class Employee. Derive 3 classes from this class namely, Programmer, Analyst & Project Leader. Take attributes and operations on your own. WAP to implement this with array of pointers.
17. Create two classes namely Employee and Qualification. Using multiple inheritance derive two classes Scientist and Manager. Take suitable attributes & operations. WAP to implement this class hierarchy.

18. WAP to read data from keyboard & write it to the file. After writing is completed, the file is closed. The program again opens the same file and reads it.
19. WAP to creat a class student containing Name & class as parameters, create another class marks which inherit student class taking own data members as mark1 & mark2 &show result.

**Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## OPERATING SYSTEM LAB

**Course Code: IFT**  
**L-T-P: 0-0-2**

**Credit Units: 01**

### Unix Programmes

1. Write a Shell Script that takes a search string and filename from the terminal & displays the results.
2. Write a Shell Script that takes pattern and filename as command line arguments and displays the results appropriately i.e. pattern found/pattern not found.
3. Write a Shell Script that accepts only three arguments from the command line. The first argument is the pattern string, the second argument is the filename in which the pattern is to be searched and the third argument is the filename in which the result is to be stored.
4. Write a Shell Script which creates the following menu and prompts for choice from user and runs the chosen command.

Today's date  
Process of user  
List of files  
Quit to UNIX

5. Write a Shell Script that computes the factorial of a given number
6. Write a Shell Script that changes the extension of a group of files from txt to doc
7. Write a Shell Script that accepts both filename and a set of patterns as positional parameters to a script.
8. Write a Shell Script which will redirect the output of the date command without the time into a file.
9. Write a Shell Script (using while loop) to execute endlessly (until terminated by user) a loop which displays contents of current directory, disk space status, sleep for 30 seconds and display the users currently logged in on the screen.
10. Write a Shell Script that receives two filenames as arguments. It should check whether content of the two files is same or not. If they are same, second file should be deleted.
11. If a number is input through the keyboard, WASS to calculate sum of its digits.
12. Write a Shell Script which takes a command line argument of Kms and by default converts that number into meters. Also provide options to convert km to dm and km to cm.
13. Write a Shell Script using for loop, which displays the message "Welcome to the UNIX System"
14. Write a Shell Script to change the filename of all files in a directory from lower-case to upper-case.
15. Write a Shell Script that examines each file in the current directory. Files whose names end in **old** are moved to a directory named **old files** and files whose names end in **.c** are moved to directory named **cprograms**.
16. Write a Shell Script which searches all files in the given directory (to be taken as command line argument) for the file having the title (to be taken as command line argument), as the first line in the file.
  - a) Display the contents of the searched file.
  - b) In the end, print the file is ###, where  
### is small-sized if total no. of lines is <50  
### is medium-sized if total no. of lines between 50&100  
### is large-sized.

17. Write a shell script which reports names and sizes of all files in a directory (directory would be supplied as an argument to the shell script) whose size is exceeding 1000 bytes. The filenames should be printed in descending order of their sizes. The total number of such files should also be reported.
18. Write a shell script to calculate and print the first **m** Fibonacci numbers.
19. Write a shell script to compute the **GCD** and **LCM** of two numbers.
20. Write a shell script to generate all combinations of 1, 2 and 3 using **for loop**.

**Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## SUMMER PROJECT- I

**Course Code: IFT**

**Credit Units: 03**

### **Objective:**

There are certain phases of every Intern's professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship program can best be described as an attempt to institutionalize efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal classroom situations. These attributes are intellectual ability, professional judgment and decision-making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility etc.

### **Guidelines**

In order to achieve these objectives:

- **Each student will be allotted a supervisor** for proper guidance.
- **Student will first submit details of company, external guide, project title to coordinator/supervisor as per given schedule.**
- For internal assessment purpose, students will submit an industry feedback and a progress report.
- Student will maintain a file (**Internship File/Project Report**) which he/she will submit after completion of internship. **Further, coordinator will provide NTCC project guidelines and sample to help in preparation of file.** The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development. The File will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

The **layout guidelines** for the Project Report

#### **1. File should be in the following specification**

- A4 size paper
- Spiral Binding
- **Font**

For normal text Font Type and Size must be- Times New Roman, 12 pt. The minimum font size of materials within a table or a figure can be 10 point.

- **Margins**

A margin of 3.75 cm (1½ inch) is to be given on the binding edge while on the other sides it is to be 2.5 cm (1 inch). The text of the report, including headings, figures, tables, and notes, but excluding page numbers, must be accommodated within the page area.

- **Line Spacing**

The line spacing in the main text must be between one-and-a-half (1.5). Single line spacing should be given for figure captions, table titles, figure legends, and footnotes. Equations, tables, figures, and quotations should be set off from the main text with adequate space (not less than the normal line spacing adopted for the main text). Two consecutive paragraphs should be separated by a spacing which must be larger than the line spacing adopted for the text.

- **Tables and Figures**

Each sketch, drawing, graph and photograph should have a figure number and title below the figure etc. Numbering should be sequential, chapter wise. For instance, if there are 24 figures chapter 3 spread over all of its sections the figure numbers run from Figure 3.1 through Figure 3.24. In figures experimental data should typically be represented by centered symbols, and theoretical data by continuous curves.

Each table should have a table number and caption above the table. Numbering should be sequential, chapter wise, as in the case of Figure numbers. For instance, if there are 18 tables in chapter 3 the table numbers run from Figure 3.1 through Figure 3.18.

Make sure that figures and tables are complete in other respects such as legends, references (if any) and coordinate labels with units. Each figure and table must be explicitly referred to in the text and located where its first reference occurs, preferably after the reference.

- **Drawings**

All engineering drawings must conform to relevant Standards and should include a title block. If drawings are large they should be included at the back of the report in a separate pocket. In case drawings are made using CAD packages, a CD ROM should be included which contains all the files and details of the packages used.

- **Equations**

The numbering of equations should be sequential, chapter wise. Numbered equations must be explicitly referred to in the text.

**2. Report Size:** The maximum number of pages of the Report should be preferably between 50-80 pages.

**3. Report Layout:** The report should contain the following components

Front Page

Declaration

Student Certificate (University)

Certificate (Company)

Acknowledgement

Abstract

Contents

List of Figures

List of Tables

Company Profile (optional)

Chapters

The above components are described below:

1. **The Title Page**-- Format will be given by coordinator/supervisor.
2. **Declaration by the Students**-This is page number (i), the beginning of the small case Roman numeral page numbers. The student has to give a declaration to the effect that the data used for the work, the work depicted in the report, and the written material contained in the report are not copied from others and that due permission has been taken from, and due credit has been given to, the sources whenever they are used.
3. **Certificate**-This is page number (ii). It is given by the Institute. The certificate will be signed by the Faculty Supervisor(s) before the viva-voce after verifying the format and by the Head of the Department after review with the Supervisor(s).
4. **Company Certificate**: This is a certificate, which the company gives to the students.
5. **Contents**-This is page number (iii). The table of Contents should be titled just Contents (not Table of Contents). Try to fit it into one or two pages.
6. **Acknowledgement**-This is page number (iv). Keep this brief and avoid using informal language. This page must be signed by the candidate.
7. **Abstract and Keywords**-This is page number (v). The abstract (preferably one page) should contain the context/relevance of the problem at hand, a description of what was done and a gist of the significant observations/results.  
The keywords (maximum 6) are a hint that what is contained in the report.
8. **Company Profile**: A Company Profile corresponds to a file with company-specific data. Company data can be stored there and included in a booking when needed.
9. **Chapters**—Introduction, Literature Review/Background Study etc. as given by coordinator/supervisor.
10. **References / Bibliography** --This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

## ASSESSMENT OF THE INTERNSHIP FILE

Continuous Internal Assessment consists of topic relevance, progress report and industry feedback on company letterhead. Final Assessment includes viva, presentation, execution and report marks.

### Examination Scheme:

Components	IF	PR	R	E	V	FP
Weightage (%)	20	20	15	15	15	15

V – Viva, IF – Industry Feedback, FP – Final Presentation, R – Report, PR-Progress Report, E- Execution

# **FOURTH SEMESTER**

## **MULTIMEDIA AND ITS APPLICATIONS**

**Course Code:**

**Credit Units: 04**

**L-T-P :3-1-0**

### **Course Objective:**

The objective of the course is to give an overview of different multimedia technologies like audio and video including multimedia devices. The course also includes some practical sessions on these technologies.

### **Course Contents:**

#### **Module I: Introduction**

Introduction: Objectives – History of Multimedia – Its market – Content copyright – Resources for multimedia developers – Types of products – Evaluation – Hardware Architecture – OS and Software – Multimedia Architecture – Software library – Drivers.

#### **Module II: Digital Audio Representation and Processing**

Uses of audio in computer applications, digital representation of sound, transmission of digital sound, digital audio signal processing, digital audio and the computer.

#### **Module III: Video Technology**

Raster scanning principles, sensors for T.V. cameras, color fundamentals, color video, video equipment, worldwide television standards.

#### **Module IV: Digital Video and Image Compression**

Evaluating a compression system, redundancy and visibility, video compression techniques, the JPEG image compression standards, the MPEG motion video compression standard, DVI technologies, Time Based Media Representation and Delivery.

#### **Module V: Multimedia Devices, Presentation Services and the User Interface**

Introduction .Multimedia services and Window systems, client control of continuous media, device control, temporal co ordination and composition, hyper application.

#### **Module VI: Application of Multimedia**

Intelligent multimedia system, desktop virtual reality, multimedia conferencing.

### **Examination Scheme:**

<b>Components</b>	<b>CT1</b>	<b>PR.</b>	<b>ATTD.</b>	<b>EE</b>
<b>Weightage (%)</b>	10	15	5	70

### **Text & References:**

- Multimedia systems John F. Koegal Buford Addison- Wesley

## COMPUTER NETWORK

**Course Code: IFT**  
**L-T-P: 3-0-0**

**Credit Units: 03**

### **Course Objective:**

The objective of the course is to provide introductory concepts in Data Communications such as Signaling, Encoding, Modulation, Error Detection & Correction. The course is also aimed at providing basic understanding of Computer networks starting with OSI Reference Model, Protocols at different layers with special emphasis on IP, TCP & UDP and Routing algorithms.

### **Course Contents:**

#### **Module I**

Introduction to Data Communication, Networks-protocols, advantages, disadvantages & applications, Line Configuration, topology, Transmission mode, Classification of networks. OSI Model, functionality of layers in OSI model, Protocols at each layer, encapsulation, peer-to-peer communication.

#### **Module II:**

Parallel & Serial Transmissions, Analog & Digital Signals, Periodic & Aperiodic Signals, Data encoding techniques-Digital data-digital signals, Digital data-Analog signals, Analog data-Digital signals, Analog data- Analog signals, Multiplexing.

#### **Module III**

Transmission Media-Twisted Pair Cable, Coaxial Cable, Fiber-Optics Cable, Radio frequency Allocation, Terrestrial Microwave, Infrared rays, Satellite Communication, Cellular Telephony. Introduction to ISDN.

#### **Module IV**

Framing, Switching, Types of Errors, Error Detection & Correction (VRC, LRC, CRC, Checksum, Hamming Code), Flow Control (Stop-and-wait & Sliding Window), Error Control (Stop & Wait ARQ, Sliding Window ARQ using Go-back n method and Selective-Reject), IEEE Standards-802.3, Token Bus (802.4), Token Ring (802.5), FDDI.

#### **Module IV**

Routing process, Routing Algorithms-Shortest Path Routing, Flooding, Distance Vector Routing, Link State Routing, Addressing-IPv4, IPv6, Internetworking, Connection-oriented Vs Connectionless protocols- TCP,UDP.

### **Examination Scheme:**

Components	CT1	A/C/Q	Attd	EE
Weightage (%)	15	10	5	70

### **Text & References:**

**Text:**

- Data Communication and Networking by Behrouz Forouzan, Fourth Edition, TMH.
- Computer Networks by A.S. Tanenbaum, Fifth Edition, Prentice Hall.

**References:**

- Data and Computer Communications by W. Stallings, Prentice Hall.

## **BASICS OF ALGORITHM**

**Course Code: IFT  
L-T-P:3-0-0**

**Credit Units: 03**

### **Course Objective:**

The designing of algorithm is an important component of computer science. The objective of this course is to make students aware of various techniques used to evaluate the efficiency of a particular algorithm. Students eventually should learn to design efficient algorithm for a particular problem. Upon completion of this course, students will be able to do the following:

- Analyze the asymptotic performance of algorithms.
- Demonstrate a familiarity with major algorithms and data structures.
- Apply important algorithmic design paradigms and methods of analysis.
- Synthesize efficient algorithms in technical design situations.

### **Course Contents:**

#### **Module I: Introduction**

Algorithm Design paradigms - motivation, concept of algorithmic efficiency, concept of running time, analysis of algorithms, Growth of Functions, Asymptotic Notations, Structure of divide-and-conquer algorithms, analysis of divide-and-conquer algorithms, example algorithms - Quick Sort, Merge Sort, Strassen Multiplication, Recurrences- Substitution Method, Recursion Tree Method, Iteration Method , Master's Method.

#### **Module II: Advanced Design Techniques**

Greedy Algorithms - Introduction, elements of greedy strategy, Fractional Knapsack Problem, activity selection problem,

Dynamic Programming - Overview, difference between dynamic programming and divide and conquer, Matrix Chain Multiplication, Longest Common Sub-sequence, 0/1 - Knapsack Problem. Difference between Greedy and Dynamic Programming Approach.

#### **Module III: Graph Algorithms**

Representation of Graphs, Graph Traversal - BFS and DFS, Topological Sort, Strongly Connected Components.

Minimum Spanning Tree, Kruskal's Algorithm, Prim's Algorithm, , Single Source Shortest Paths, Dijkstra's Algorithm, Bellmanford Algorithm, All Pair Shortest Path Problem, Floyd Warshall's Algorithm.

#### **Module IV: Selected Topics**

Back tracking - Introduction, n-Queens Problem, NP-Completeness – Definition and examples of Class P, NP, NP-Hard and NP Complete, Polynomial reduction. Approximation Algorithms – Introduction, Performance Bounds, Example Problems – Vertex Cover Problem, Travelling Salesperson Problem. Randomized Algorithms.

Application of algorithms in different areas of Computer Science.

**Examination Scheme:**

# PRINCIPLES OF MANAGEMENT

**Course Code:**

**L-T-P : 3-0-0**

**Credit Units : 03**

## **Course Objective:**

- To provide a basis of understanding to the students with reference to working of Business Organizations through the process of Management.
- To inculcate the managerial skills of planning, organizing, and controlling and to teach how it can be executed in a variety of circumstances and apply concepts of strategic and tactical organizational planning.
- On completion of the syllabi the student will understand the basic principles of management - will acquaint himself with management process, functions and principles. Student will also get the idea about new developments in management.

## **Course Contents:**

### **Module I: NATURE OF MANAGEMENT**

Meaning, Definition, its nature purpose, importance & Functions, Management as Art, Science & Profession - Management as social System Concepts of management-Administration-Organization, Levels of Management - Concept, Significance, Role & Skills, Concepts of PODSCORB, Managerial Grid. Evolution of Management thoughts : Contribution of F.W Taylor, Henry Fayol and Contingency Approach.

### **Module II: PLANNING AND DECISION MAKING**

Planning : Meaning, Importance, Elements, Process, Types and levels, Limitations  
Decision Making: Meaning, Importance, Process, Techniques of Decision Making

### **Module III: ORGANISING**

Organizing: Concepts, Structure (Formal & Informal, Line & Staff and Matrix), Meaning, Advantages and Limitations. Departmentation: Meaning, Basis and Significance, Span of Control: Meaning, Graicunas Theory, Factors affecting span of Control, Centralization vs Decentralization, Delegation: Authority & Responsibility relationship

### **Module IV: DIRECTING , LEADERSHIP, CO-ORDINATION AND CONTROLLING**

Directing: Meaning and Process,  
Leadership: Meaning, Styles and Qualities of Good Leader, Co-Ordination as an Essence of Management, Controlling: Meaning, Process and Techniques

### **Module V: Recent Trends**

Challenges in recent Trends : Green Management, CSR, Increasing Concern for the Environment, Greater Personalization and Customization, Faster Pace of Innovation, Increasing Complexity, Increasing Competition for Talent

Solution Trends : Becoming More Connected, Becoming More Global, Becoming More Mobile Rise of the Creative Class, Increasing Collaboration

## **Examination Scheme:**

Components	CT1	A/C/Q	Attd	EE
Weightage (%)	15	10	5	70

**Text Books :** Essential of Business Administration - K.Aswathapa Himalaya Publishing House

**Books Recommended:-**

- Essential of Management - Horold Koontz and Itenz Weibrich - McGrawhills International
- Management Theory & Practice - J.N.Chandan
- Principles & practice of management - Dr. L.M.Parasad, Sultan Chand & Sons - New Delhi
- Business Organization & Management - Dr. Y.K. Bhushan
- Management: Concept and Strategies By J. S. Chandan, Vikas Publishing
- Principles of Management, By Tripathi, Reddy Tata McGraw Hill
- Business organization and Management by Talloo by Tata McGraw Hill
- Business Environment and Policy – A book on Strategic Management/Corporate Planning By Francis Cherunilam Himalaya Publishing House 2001 Edition

## COMPUTER NETWORK LAB

**Course Code:**

**Credit Units: 01**

### **Course Objective:**

The course familiarizes with the equipment applications and protocols installed in enterprise networks, with a focus on switched networks, IP Telephony requirements, and security. It also introduces advanced routing protocols such as Enhanced Interior Gateway Routing Protocol (EIGRP) and Open Shortest Path First (OSPF) Protocol. Hands-on exercises include configuration, installation, and troubleshooting.

### **Course Contents:**

1. Drawing an Enterprise Network for Amity University showing its different campuses across the country.
2. Configuring all the devices (PCs, Servers, Switches) to create a LAN within campuses of the Enterprise Network.
3. Configuring Virtual LANs (VLANs) in an Enterprise Network.
4. Configuring Trunking and Inter-VLAN Routing in an Enterprise Network.
5. Implementing RIP (Routing Information Protocol) to enable communication between different LANs.
6. Implementing OSPF (Open Shortest Path First) to enable communication between different LANs.
7. Implement EIGRP (Interior Routing Protocol) to establish connectivity within domestic campuses of the Enterprise Network.
8. Implement BGP (Border Gateway Protocol) and Redistribution to establish connectivity between different campuses of the Enterprise Network.
9. Configuring WAN connectivity using protocols-HDLC and PPP.
10. Implementing Frame-Relay to configure WAN service provider cloud.
11. Configuring Standard and Extended ACLs on a Router.
12. Troubleshooting Switching, Routing and ACL issues.

### **Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.  
Software : Packet tracer.

## **BASICS OF ALGORITHM LAB**

**Course Code:**

**Credit Units: 01**

**Lab assignment will be based on the following:**

- Programs sorting algorithms based on divide and conquer technique.
- Programs on algorithm based on greedy method.
- Programs on algorithm based on Dynamic programming.
- Programs on Graph Algorithms.
- Programs on algorithm based on backtracking.

**Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# **FIFTH SEMESTER**

## **COMPUTER ORIENTED NUMERICAL METHODS**

**Course Code:**

**L-T-P : 3-0-0**

**Credit Units : 03**

### **Course Objective:**

The objective of this course is to provide conceptual understanding of various numerical methods, in particular, with reference to numerical solution of non linear equations and system of linear equations, interpolation, numerical differentiation and integration and numerical solution of ordinary differential equations. Important theorems and different formulae for various numerical methods to be covered with an aim of helping the students to understand the fundamentals, concepts and practical use of these methods in the field of computer sciences and applications.

### **Course Contents:**

#### **Module I: Numeric Computation**

Computer Arithmetic- Floating point numbers-operations, Normalization and their Consequences, Absolute, Relative and Percent Error.

Iterative Methods:- Zeros of a single Transcendental equations and Zeros of Polynomial Equations using Bisection, False Position, Newton-Raphson Methods, Convergence of Solution.

#### **Module II: Simultaneous Linear Equations**

Solution of Simultaneous Linear Equations. Direct Methods:- Gauss elimination method, Pivoting, Gauss-Jordan Method. Iterative methods:-Jacobi's Methods, Gauss-Seidal Method.

#### **Module III: Polynomial Interpolation**

Newtons divided difference, Forward and backward difference Formulae, Difference Tables, Lagrange's Method.

#### **Module IV: Numerical Differentiation and Integration**

Formula for first and second order derivatives using newton's- Forward and Backward formula, Numerical Integration, Newton-Cotes Formula: Trapezoidal rule, Simpson's  $1/3^{\text{rd}}$  rule, Simpson's  $3/8^{\text{th}}$  rule, Weddle's rule.

#### **Module V: Numerical Solution of Differential Equations**

Basic Terminology of Differential Equations, Picard's Method, Euler's method, Taylor's Series method, Runge-Kutta Methods, Predictor –Connector Method.

**Examination Scheme:**

<b>Components</b>	<b>CT1</b>	<b>A/C/Q</b>	<b>Attd</b>	<b>EE</b>
<b>Weightage (%)</b>	15	10	5	70

## ACCOUNTING AND FINANCIAL MANAGEMENT

**Course Code:**

**L-T-P : 2-1-0**

**Credit Units : 03**

**Course Objective:**

The objective of this course is to provide to students of IFT and IMCA with an introduction to fundamentals, concepts and principles / practices of Accounting and Financial Management. The topics covered including basic accounting, preparation of Trial Balance, Profit and Loss Account and Balance Sheet Account as applied to Banking including Bank Reconciliation Statement, Definition and Principles of Working Capital Management, Capital Budgeting and Analysis of Financial Statements.

**Course Contents:**

**Module I: Accounting**

Definition of Accounting, Its Objectives, Advantages and Limitation. Principles, Concepts and Conventions of Accounting, Double entry system, Recording of Transactions in subsidiary Books – Journal, Cash Book, sales Book, Purchase Book and Return Book. Posting into Ledger accounts.

**Module II: Final Accounts**

Preparation of Trial balance, Final Accounts including adjustments Trading account, Profit and Loss account, Balance Sheet.

**Module III:Banking**

Opening of different types of Banks Accounts, Cheque Book, Pass Book, Deposit slips, Bank Reconciliation Statements.

**Module IV:Working Capital Management**

Definition of working Capital, Types of Working Capital, Determinants of working Capital, Cash Management and Receivables Management.  
Capital Budgeting: Principles and Techniques.

**Module V: Analysis of Financial statements**

Ratio Analysis: Meaning, Advantages, limitations, types of ratios and their usefulness Statements of charges in the Financial Position on Cash basis.

**Examination Scheme:**

Components	CT1	A/C/Q	Attd	EE
Weightage (%)	15	10	5	70

## CORE JAVA PROGRAMMING

**Course Code: IFT**  
**L-T-P: 3-0-0**

**Credit Units: 03**

### **Course Objective:**

The objective of this course is to give proficiency in developing applications and applets in Java, in-depth knowledge of object oriented concepts, developing GUI applications in Java, creation of packages, Event Handling, Layout Manager, SWING and String handling in Java

### **Course Contents:**

#### **Module I: Introduction to Java Programming**

Concepts of OOP, Features of Java, How Java is different from C++, Data types, Control Statements, identifiers, arrays, operators. Variables, Applications and Applets, Classes and methods, Constructor, method overloading, Inheritance: method overriding, Abstract classes, Final classes, String classess

#### **Module III: Java Packages and interfaces**

Package creation, Packages deployment, using packages, Interfaces, Exception Handling and Multithreading

#### **Module IV: AWT and Event Handling**

Introduction to AWT, Layout Manager, Event handling Mechanism, Event Model, Event Classes, Sources of Events, Event Listener Interfaces, AWT: Working with Windows, AWT Controls, Html basic tags, Applet Classes,

#### **Module V: Java Swings**

Swing classes & controls. Advantages of Swing over AWT, event handling

### **Examination Scheme:**

Components	CT1	PR.	ATTD.	EE
Weightage (%)	15	10	5	70

### **Text & References:**

#### **Text:**

- Naughton, Schidt “The Complete Reference JAVA 2 “ TMH

#### **References:**

# **BASICS OF COMPUTER GRAPHICS**

**Course Code:**

**Credit Units: 03**

**L-T-P: 3-0-0**

## **Course Objective:**

The objective of this course is to present the basic principles for the design, use and understanding of computer graphics systems. Both hardware and software components of graphics systems are discussed here. This course also teaches the students about different algorithms for creating and manipulating graphics displays. Varieties of mathematical methods are used in various computer graphics algorithm.

## **Course Contents:**

### **Module I: Introduction of Graphics**

Development of Computer Graphics, Basic Graphics System and Standards.

### **Graphics Devices:**

Raster and Random Scan Devices, Continual Refresh and Storage Displays, Display Processor, Color Display Techniques, Frame Buffer, Concepts in Raster Graphics and color generation.

### **Module II: Graphics Primitives**

Points, Pixels, Scan Conversion, Line Drawing Algorithms, Circle Drawing Algorithms, Anti-aliasing Technique, Methods of Character generator.

### **Polygon**

Polygon representation, Polygon Filling algorithm, Inside/Outside Testing

### **Module III: Transformation**

Scaling, Translation, Rotation, Composite Transformation , Fix point scaling , Rotation about arbitrary point, Reflection, Shears, Composite Transformation, Modeling and Coordinate Transformation

**Viewing:** Interactive Picture Construction Techniques, Interactive Input/Output Devices,

### **Module IV: Segment**

Segment Table, Creating Deleting and Renaming a Segment, Visibility and Image Transformation

**Windowing and Clipping:** Window, View-port, Line clipping, polygon clipping, Window to viewport transformation , polygon clipping using Sutherland Hodgman Algorithm.

### **Module V: 3-D Transformation and Visible surface detection**

3-D Transformation : shearing, scaling , translation . rotation, Homogeneous coordinates. Visible surface detection: Z - buffer algorithm, Scaline Visible surface detection algorithm, paintess algorithm, fractal and its.properties, Basic Illumination, diffuse reflection, specular reflection.

**Examination Scheme:**

Components	CT1	A/C/Q	Attd	EE
Weightage (%)	15	10	5	70

**Text & References:****Text:**

- Computer Graphics By Donald Hearn And Pauline Baker, Pearson Education

## CORE JAVA PROGRAMMING LAB

Course Code: IFT

Credit Units: 01

### Course Contents:

1. Create a "Hello, World" program that simply prints out that statement.
2. Write a program that prints three arguments taken from the command line.
3. Write a program that prints values from 1 to 100.
4. Create a class with a default constructor (one that takes no arguments) that prints a message. Create an object of this class.
5. Write Java assignment statements to evaluate the following equations:
  - (i)  $\text{Energy} = \text{mass}(\text{acceleration} * \text{height} + (\text{velocity})^2 / 2)$
  - (ii)  $\text{Torque} = 2m_1m_2 / m_1 + m_2 * g$
6. Design and write a Java program to define a class called Rectangle that contains members for representing its length and breadth. Provide members to get and set these attributes.
7. Design a class to represent a bank account. Include the following members:

Data members:

  - Name of the depositor
  - Account number
  - Type of account
  - Balance amount in the account

Methods:

  - To assign initial values
  - To deposit an amount
  - To withdraw an amount after checking balance
  - To display the name and balance
8. Write simple program to calculate the sum of digits of any number.
9. Write a simple program to display a "\*" I triangle shape.

Output will be like this

```

      *
     * * *
    * * * * *
```
10. Write a simple program to call a method called simple from a main function. The method simple should accept an integer as an argument and calculate the square of the number in the method simple.
11. Write a Java program to add two integers and two float numbers. When no arguments are supplied, give a default value to calculate the sum. Use method overloading to achieve this.
12. Write a program to perform mathematical operations. Create a class called AddSub with methods to add and subtract. Create another class called MultDiv that extends from AddSub class to use the member data of the superclass. MultDiv should have methods to multiply and divide. A main method should access the method and perform the mathematical operations.
13. Write an interface with a method called display. Implement this method in a class to display two names.
14. Write an interface that has two methods called push and pop of a stack. Write a class to implement the two methods for a fixed size stack creation.
15. Write a small program to catch Negative Array Size Exception. This exception is caused when the array is initialized to negative values.
16. Write a program to handle Null Pointer Exception and use the finally clause to display a message to the user.
17. Write a Java program that takes a string and converts it into uppercase and lowercase letters.
18. Write a Java program to find the volume of a sphere and a cone.

19. Write a Java program to convert rupees to dollars.
20. Write a Java program to find x to the power y. Use overloading for different cases when x and y are combinations of integer and floating point numbers.
21. Create an abstract class called Figure that has an abstract method called draw (). Make the subclasses called Filled\_Rectangle, Filled\_Arc and override the draw method in which you would print the message regarding the current object.
22. Write a Java program that has integer variables a, b, c and result as float. Store some values in them and apply the formula  $result = a/(b-c)$ . Catch the probable exception.
23. Write applets to draw the following shapes:
  - (i) Cone
  - (ii) Cylinder
  - (iii) Cube
  - (iv) Square inside a circle
  - (v) Circle inside a square
24. Write an applet to display the following figure:

25. Write an swings to display five buttons and five labels.
26. Write a Java program to create 5 threads by extending Thread class.
27. Write a Java program to create 5 threads by implementing Runnable interface.

#### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## BASICS OF COMPUTER GRAPHICS LAB

**Course Code:**  
**L-T-P:0-0-2**

**Credit Units: 01**

- 1) Write a program to change the working mode from text to graphics and plot a pixel.
- 2) Write a program to draw a line of same dimension in three different graphics mode.
- 3) Write a program to display line, rectangle, circle and polyline using graphics command.
- 4) Write a program to draw a line of slope between 0 and 1 using DDA algorithm.
- 5) Write a program to draw a line of slope between 1 and  $\infty$  using DDA algorithm.
- 6) Write a program to draw a line of slope between 0 and 1 using midpoint algorithm.
- 7) Write a program to draw a line of slope between 1 and  $\infty$  using midpoint algorithm.
- 8) Write a program to draw a dashed line of slope 1 using any line algorithm.
- 9) Write a program to draw a dotted line of slope 1 using DDA algorithm.
- 10) Write a program to draw a line of slope between 0 and -1 using midpoint algorithm.
- 11) Write a program to draw a line of slope between -1 and  $-\infty$  using midpoint algorithm.
- 12) Write a program to draw an octant of a circle with its center at point (0,0) using midpoint circle drawing.
- 13) Write a program to draw a circle with its center at point (0, 0) and radius r using midpoint circle drawing.
- 14) Write a program to draw an octant of a circle with its center at point (a, b) and radius r using midpoint circle drawing.
- 15) Write a program to draw a circle with its center at point (a, b) and radius r using midpoint circle drawing.
- 16) Write a program to fill a polygon using flood-fill method.
- 17) Write a program to fill a polygon using boundary-fill method.
- 18) Write a program to reflect a point in X and Y-axis both.
- 19) Write a program to rotate a point (100, 50) about origin in anti-clock wise direction.
- 20) Write a program to rotate a point (100,150) about point (30, 40) in clock wise direction..

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## SUMMER PROJECT - II

**Course Code: IFT**

**Credit Units: 06**

### **Objective:**

There are certain phases of every Intern's professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship program can best be described as an attempt to institutionalize efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal classroom situations. These attributes are intellectual ability, professional judgment and decision-making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility etc.

### **Guidelines**

In order to achieve these objectives:

- **Each student will be allotted a supervisor** for proper guidance.
- **Student will first submit details of company, external guide, project title to coordinator/supervisor as per given schedule.**
- For internal assessment purpose, students will submit an industry feedback and a progress report.
- Student will maintain a file (**Internship File/Project Report**) which he/she will submit after completion of internship. **Further, coordinator will provide NTCC project guidelines and sample to help in preparation of file.** The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development. The File will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

The **layout guidelines** for the Project Report

#### **1. File should be in the following specification**

- A4 size paper
- Spiral Binding
- **Font**

For normal text Font Type and Size must be- Times New Roman, 12 pt. The minimum font size of materials within a table or a figure can be 10 point.

- **Margins**

A margin of 3.75 cm (1½ inch) is to be given on the binding edge while on the other sides it is to be 2.5 cm (1 inch). The text of the report, including headings, figures, tables, and notes, but excluding page numbers, must be accommodated within the page area.

- **Line Spacing**

The line spacing in the main text must be between one-and-a-half (1.5). Single line spacing should be given for figure captions, table titles, figure legends, and footnotes. Equations, tables, figures, and quotations should be set off from the main text with adequate space (not less than the normal line spacing adopted for the main text). Two consecutive paragraphs should be separated by a spacing which must be larger than the line spacing adopted for the text.

- **Tables and Figures**

Each sketch, drawing, graph and photograph should have a figure number and title below the figure etc. Numbering should be sequential, chapter wise. For instance, if there are 24 figures chapter 3 spread over all of its sections the figure numbers run from Figure 3.1 through Figure 3.24. In figures experimental data should typically be represented by centered symbols, and theoretical data by continuous curves.

Each table should have a table number and caption above the table. Numbering should be sequential, chapter wise, as in the case of Figure numbers. For instance, if there are 18 tables in chapter 3 the table numbers run from Figure 3.1 through Figure 3.18.

Make sure that figures and tables are complete in other respects such as legends, references (if any) and coordinate labels with units. Each figure and table must be explicitly referred to in the text and located where its first reference occurs, preferably after the reference.

- **Drawings**

All engineering drawings must conform to relevant Standards and should include a title block. If drawings are large they should be included at the back of the report in a separate pocket. In case drawings are made using CAD packages, a CD ROM should be included which contains all the files and details of the packages used.

- **Equations**

The numbering of equations should be sequential, chapter wise. Numbered equations must be explicitly referred to in the text.

**2. Report Size:** The maximum number of pages of the Report should be preferably between 50-80 pages.

**3. Report Layout:** The report should contain the following components

Front Page

Declaration

Student Certificate (University)

Certificate (Company)

Acknowledgement

Abstract

Contents

List of Figures

List of Tables

Company Profile (optional)

Chapters

Appendices(optional)

References / Bibliography

The above components are described below:

1. **The Title Page**-- Format will be given by coordinator/supervisor.
2. **Declaration by the Students**-This is page number (i), the beginning of the small case Roman numeral page numbers. The student has to give a declaration to the effect that the data used for the work, the work depicted in the report, and the written material contained in the report are not copied from others and that due permission has been taken from, and due credit has been given to, the sources whenever they are used.
3. **Certificate**-This is page number (ii). It is given by the Institute. The certificate will be signed by the Faculty Supervisor(s) before the viva-voce after verifying the format and by the Head of the Department after review with the Supervisor(s).
4. **Company Certificate**: This is a certificate, which the company gives to the students.
5. **Contents**-This is page number (iii). The table of Contents should be titled just Contents (not Table of Contents). Try to fit it into one or two pages.
6. **Acknowledgement**-This is page number (iv). Keep this brief and avoid using informal language. This page must be signed by the candidate.
7. **Abstract and Keywords**-This is page number (v). The abstract (preferably one page) should contain the context/relevance of the problem at hand, a description of what was done and a gist of the significant observations/results.  
The keywords (maximum 6) are a hint that what is contained in the report.
8. **Company Profile**: A Company Profile corresponds to a file with company-specific data. Company data can be stored there and included in a booking when needed.
9. **Chapters**—Introduction, Literature Review/Background Study etc. as given by coordinator/supervisor.
10. **References / Bibliography** --This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

## ASSESSMENT OF THE INTERNSHIP FILE

Continuous Internal Assessment consists of topic relevance, progress report and industry feedback on company letterhead. Final Assessment includes viva, presentation, execution and report marks.

### Examination Scheme:

Components	IF	PR	R	E	V	FP
Weightage (%)	20	20	15	15	15	15

V – Viva, IF – Industry Feedback, FP – Final Presentation, R – Report, PR-Progress Report, E-Execution

# **SIXTH SEMESTER**

## **COMPUTER ORIENTED STATISTICAL & OPTIMIZATION METHODS**

**Course Code:**

**L-T-P : 3-0-0**

**Credit Units : 03**

### **Course Objective:**

The objective of this course is to expose students to the fundamentals and concepts of statistical and optimization methods, in particular, with reference to frequency distribution and measures of central tendency, measures of dispersion, skewness and kurtosis, theory of probability, linear programming problems, transportation, assignment and game problems. This course is designed with an aim of helping the students to understand important theorems, different formulae and practical applications of these statistical and optimization methods in the field of Computer Sciences and Applications.

### **Course Contents:**

#### **Module I**

Collection of Data, Sampling and Sampling Designs, Classification and Tabulation of Data, Graphical representation of Data, Measures of Central Value, Measures of Dispersion. Moments, Skewness, Kurtosis, Correlation and Regression.

#### **Module II: Probability**

Classical Definition of Probability, Algebra of Events, Probability Axioms, Conditional Probability.

**Probability Distributions:** Discrete and Continuous Distributions, Binomial Distribution, Poisson distribution, Normal Distribution.

#### **Module III: Linear Programming**

Mathematical Formulation of Linear Programming models and its Graphical Solutions, Simplex Method, Charne's Big M method, Two Phase Method.

#### **Module IV: Transportation Problem**

General Transportation model, Starting basic Solutions:-North west Corner Method, Least Cost Method, Vogel's Approximation Method, Test of optimality, unbalanced Problem. Assignment Problems

#### **Module V: Game Theory**

Two-Person Zero Sum Games, Maximin-Minimax Principle, Pure Strategies, Mixed Strategies, Expected Pay off, Concept of Dominance, Graphical Solution of  $m \times 2$  and  $2 \times n$  Games.

### **Examination Scheme:**

<b>Components</b>	<b>CT1</b>	<b>A/C/Q</b>	<b>Attd</b>	<b>EE</b>
<b>Weightage (%)</b>	15	10	5	70

### **Text & References:**

# INTERNET OF THINGS

**Course Code: IFT**

**Credit Units : 04**

**L-T-P : 3-1-0**

## **Course Objective:**

### **Course Objective:**

The Internet is evolving to connect people to physical things and also physical things to other physical things all in real time. It's becoming the Internet of Things (IoT). The course enables student to understand the basics of Internet of things and protocols. It introduces some of the application areas where Internet of Things can be applied. Students will learn about the working of Internet of Things.

## **Course Contents:**

### **Module I: INTRODUCTION TO IOT**

Introduction to IoT, its importance, Elements of an IoT ecosystem, Characteristics of IoT, Physical design of IoT: Things in IoT, Logical design of IoT- IoT functional blocks, IoT communication models, IoT communication API's

### **Module II: IoT ENABLING TECHNOLOGIES & IOT LEVELS**

Wireless Sensor Networks, cloud computing, big data analytics, communication protocols, embedded systems, IOT components, IoT levels: Level 1, Level 2, Level 3, Level 4, Level 5 and level 6.

### **Module III: IOT AND M2M**

Introduction to M2M, difference between IoT and M2M, Software Defined Networking(SDN) for IoT: its architecture, key elements and its layers, Network Function Virtualization(NFV) -its architecture and key elements

### **Module IV: IoT SYSTEM MANGEMENT:**

Need for IoT system management, SNMP and its limitations, Network Operator Requirements, NETCONF( Network Configuration Protocol) :its protocol layers, YANG

### **Module V: IOT DESIGN METHODOLOGY & APPLICATIONS**

Steps in designing IoT device, Smart Applications, Introduction to Python and Raspberry Pi

### **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

## **INTRODUCTION TO OPEN SOURCE TECHNOLOGIES (PHP, MySql)**

**Course Code:**  
**L-T-P: 3-0-0**

**Credit Units: 03**

### **Course Objective:**

This course is aimed to provide a fundamental understanding of dynamic web site creation. PHP is the language used for development of most common web sites. Syllabus includes basic and advanced features of PHP which includes detailed introduction of PHP and MYSQL, Arrays, Loops and variables etc. It also gives an overview open source framework like JOOMLA, ZEND etc...

### **Course Contents:**

#### **Module I: Introduction to Open Source and PHP programming**

Introduction to Open Sources Technologies, Introduction to PHP, installation and configuration, Advantages and Disadvantages of PHP, Client Side Scripting, Server Side Scripting, Variables, data types, various types of function, creating your own function, Strings in PHP, String Functions.

#### **Module II: Operator, Loops, Array, Exception and Error Handling**

Operators, Conditions, Loops, Using for each, Creating and Using Arrays, Multidimensional Array, Associative array.  
Error Handling in PHP, Errors and Exceptions, Exception class, try/catch block, throwing an exception, defining your own Exception subclass.

### **Module III: Classes, File system, Passing Information between pages**

Object oriented programming with Php, Working with Datetime, code re-use, require (), include(), and the include\_path; Understanding PHP file permissions, File reading and writing functions, File system functions, File uploads, Sending mail & use of email server.

HTTP, GET arguments, POST arguments, Using Session in PHP, cookies, The setcookie() function, Deleting Cookies and Reading Cookies.

### **Module IV: Working with database**

HTML Tables and Database tables, Database manipulation(Select, Insert, Update, Delete), validating User Input using Javascript.

MYSQL, Introducing MySQL; database design concepts; the Structured Query, Language (SQL); communicating with a MySQL backend via the PHP, MySQL API Building Database Applications,

### **Module V: Working with Frameworks**

Working with Mambo, Working with Joomla, Working with framework. Use of Joomla in rapid development of website. Developing of simple website using joomla.

### **Examination Scheme:**

<b>Components</b>	<b>CT1</b>	<b>PR.</b>	<b>ATTD.</b>	<b>EE</b>
<b>Weightage (%)</b>	15	10	5	70

### **Text & References:**

#### **Text:**

- Beginning PHP, Apache, MySQL Web Development, Michael K. Glass, Yann Le Scouarnec, Elizabeth Naramore, Gary Mailer, Jeremy Stolz, Jason Gerner, published by Wiley, wrox

#### **References:**

- Beginning PHP and MYSQL, by W. Jason Gilmore, Apress Publication

## **INTRODUCTION TO OPEN SOURCE TECHNOLOGIES (PHP, MySql) LAB**

**Course Code:**  
**L-T-P:0-0-2**

**Credit Units: 01**

### **Course Contents:**

1. Write the process of installation of web server.
2. Write programs to print all details of your php server. Use phpinfo().
3. Write a program to give demo of ECHO and PRINT command.
4. Write a program to implement the string functions.
5. Write a program to print Fibonacci series upto a given number.
6. Write a menu driven program to implement a calculator which performs only addition, subtraction, multiplication and division. The operation should happen based on user choice.
7. Write a program sort ten number by using array.
8. Write a program to demonstrate the concept of associative array.
9. Write a program to demonstrate the concept of multidimensional array.
10. Write a program to demonstrate the concept of Classes & objects.
11. Create a login form with two text fields called “login” and “password”. When user enters “Amity” as a user name and “university” as a password it should be redirected to a Welcome.HTML page or to Sorry.HTML in case of wrong username/password.
12. Create a database in MySql and connect that database from PHP.
13. Write a program to Update, insert and delete the values of table in database.
14. Create a form with a text box asking to enter your favorite city with a submit button when the user enters the city and clicks the submit button another php page should be opened displaying “Welcometo the city”.

15. Write a program to design login form in which find the greatest number amongst three numbers.
16. WAP for Marksheet generation.
17. Design a webpage for entering the student details with all the validations applied on it.
18. Write a php script to print current date and time.
19. Write a pp script to use include and require functions.
20. Write a php script including all the file handling functions.

#### **Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## **MOBILE COMPUTING**

**Course Code:**

**Credit Units: 03**

**L-T-P: 3-0-0**

#### **Course Objective:**

The course objectives are to make the student understand the concept of mobile computing paradigm, Its novel applications and limitations, to understand the typical mobile networking Infrastructure through 2G technologies (GSM, GPRS, EDGE), 3G technologies (WCDMA, UMTS, HSPA), to understand the issues and solutions of various layers of mobile networks, WLANs and Mobile IP, to understand the Global Mobile Satellite Systems, to understand the advanced techniques and current trends (4G and 5G networks)

#### **Course Contents:**

##### **Module I: Introduction**

Introduction to cellular engineering, Frequency Re-use, Channel Assignment Strategies, Fixed and Dynamic Channel Assignment Strategies, Handoff Process, Factors affecting Handoff Process, Handoff detection Strategies, Few practical cases of Handoff Scenario, Interference and System Capacity, Cell Splitting, Sectoring, History of Mobile phone generations, 1G technology

##### **Module II: Second Generation (2G) Mobile Technologies**

PCS Architecture, Mobility management in PCS, GSM, Architecture, GSM addresses and identifiers, Protocol Stack, GSM security, Mobility Management in GSM, GPRS (2.5G), GPRS Architecture, GPRS Network Nodes, Protocol Stack.

##### **Module III: Mobile Data Communication**

Bluetooth: Architecture, Network and Protocol stack.

WLANs (Wireless LANs), Modes of operation of WLANs, IEEE 802.11 standard, System Architecture, Protocol stack, Wireless) Multiple Access techniques: SDMA, FDMA, TDMA, CDMA.

Mobile IP, Motivation, Problems, Data Transfer, Encapsulation and tunneling.

Wireless Application Protocol (WAP): The Mobile Internet standard, WAP Gateway and Protocols, Wireless Markup Languages (WML).

#### **Module IV:Third Generation (3G) Mobile Technologies**

Introduction to International Mobile Telecommunications 2000 (IMT 2000) vision, 3GPP, UMTS, Wideband Code Division Multiple Access (W-CDMA), CDMA 2000, HSPA, Wireless Local Loop (WLL): Introduction to WLL Architecture, wireless Local Loop Technologies.

#### **Module V: Global Mobile Satellite Systems**

Global Mobile Satellite Systems, Global History, Applications, Classical Satellite System, Terminologies, Geostationary and Geosynchronous Satellites, Types of Orbits based upon distance from Earth (LEO, MEO, GEO, HEO), Based upon Eccentricity (Circular and Elliptical), Routing, Localization and Handover in satellite systems, case studies on IRIDIUM and GLOBALSTAR LEO satellite systems.

#### **Module VI:Forth Generation (4G) Mobile Technologies and Current Trends**

4G standard: IMT Advanced requirement, Long Term Evolution, architecture, Mobile IPV6 (MIPv6), WiMax standard IEEE 802.16, VoIP, VoLTE, Presence Aware Technology, Pervasive Networks, NFC (Near Field Communication), Overview into 5G technology, NGMNA and IoT.

#### **Examination Scheme:**

Components	CT1	A/C/Q	Attd	EE
Weightage (%)	15	10	5	70

#### **Text & References:**

##### **Text:**

- JochenSchiller,“MobileCommunications”,Addison-Wesley, second edition, 2004

## **NETWORK SECURITY**

**Course Code:**  
**L-T-P: 3-0-0**

**Credit Units: 03**

### **Course Objective:**

Network Security was always important, but has gained significance with the increase of application of Internet associated e-commerce. Threat and compromise /Breach potentially increased with the introduction of the end user involvement, communication and networking. Thus the course is introduced to make the student acquainted with the concepts and practices to make the network environment secure.

### **Module 1:**

Integer arithmetic, modular arithmetic, matrices, Linear Congruence: Definition – Basic properties of congruence, Divisibility - Greatest common divisor, equivalence classes, residue classes. Chinese remainder theorem, Euclid and Extended Euclid, modular inverse, exponentiation and logarithm. Algebraic structures: groups, fields, rings, Modulo groups - Primitive roots - Discrete logarithms.

### **Module 2:**

Introduction to security attacks, services and mechanism, Classical encryption techniques, substitution cipher: caesar cipher, playfair cipher, mono/polyalphabetic cipher, hill cipher, affine cipher. Transposition techniques: columnar cipher, rail fence cipher up to two round.

### **Module 3:**

Stream and block ciphers. Modern Block Ciphers: Block ciphers principles, Shannon's theory of confusion and diffusion, feistel structure, Data encryption standard (DES), Strength of DES.

### **Module 4**

Principals of public key crypto systems, RSA algorithm, security of RSA. Message Digest: Authentication requirements, authentication functions, hash function and SHA-1, message authentication code. Concept of Digital Signature. Diffie-Hellman Key Exchange.

### **Module 5:**

IP Security: Architecture, Authentication header, Encapsulating security payloads, HTTPS, Viruses, Worms, Malware, Botnets, Firewall and its types.

### **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	15	5	5	70

### **Text :**

## **E-COMMERCE**

### **Course Code:**

**L-T-P : 3-0-0**

**Credit Units: 03**

### **Course Objective:**

This course is aimed at incorporating the fundamentals of E-Commerce which involves study of Network Infrastructure, Mobile Commerce, Web Security, encryption, etc. which are essential components of Managing e-transactions making life even simpler and getting rid of various time consuming and tedious activities.

### **Course Contents:**

#### **Module I: Introduction**

Traditional commerce – an overview, What is E-commerce?, Comparison between Traditional and Electronic commerce, Issues associated with electronic commerce. Types of E-Commerce: Inter Organizational E-commerce, Intra Organizational E-Commerce, Architectural frame work of E-Commerce, Benefits, Advantages and Disadvantages of E-Commerce.

#### **Module II: Web Security**

Firewalls, Types of Firewalls, Transaction Security, Cryptography: Secret Key Encryption, Public key Encryption, Implementation & management issues, Virtual Private Networks, Client Server Network Security.

#### **Module III: Electronic Payment Scheme**

Limitations of Traditional Payment system, Cyber Cash, First Virtual payment schemes, Online credit card system: SET, Smart card, Electronic cheques, Digital Cash, Debit card.

## **Module IV: Electronic Data Interchange (EDI)**

Definition of EDI, EDI in action, Types of EDI, Benefits of EDI.

## **Module V: E-Commerce and Market**

SCM, marketing issues, Advertising and online publishing, Copyright and its protection methods

### **Examination Scheme:**

<b>Components</b>	<b>CT1</b>	<b>A/C/Q</b>	<b>Attd</b>	<b>EE</b>
<b>Weightage (%)</b>	15	10	5	70

### **Text & References:**

#### **Text:**

## **DATA WAREHOUSE AND DATA MINING**

**Course Code:**

**Credit Units: 03**

**L-T-P: 3-0-0**

### **Course Objective:**

This course is divided into two parts: one on Data Warehousing and one on Data Mining. Both data warehousing and data mining are advanced recent developments in database technology which aim to address the problem of extracting information from the overwhelmingly large amounts of data which modern societies are capable of amassing. Data warehousing focuses on supporting the analysis of data in a multidimensional way. Data mining focuses on inducing compressed representations of data in the form of descriptive and predictive models. Course gives an in-depth knowledge of both the concepts.

### **Course Contents:**

#### **Module I:Introduction to Data Warehousing**

Data Warehouse definition & Characteristics, The need for data ware housing, Operational and Informational Data Stores, Difference between Data warehouse and DBMS, Benefits of Data warehousing, Data mart, Meta Data, Conceptual Modeling of Data Warehouses: star schemas, Snowflake, Fact Constellations with example each.

#### **Module II:Data Warehousing Components& Architecture**

Data Warehouse Architecture, Components of Data Warehouse Architecture, Data Warehousing Topologies, Meta Data, Components of Meta data, Mapping Meta Data. Challenges with Data Warehousing.

### **Module III: On Line Analytical Processing (OLAP)**

Definition: OLAP, Difference between OLTP and OLAP, OLAP Server Architecture, OLAP Operations, Multi Relational & Multi Dimensional: MOLAP, ROLAP, OLAP Tools, Metadata Repository, Data Warehouse Back-End Tools and Utilities.

### **Module IV: Data Mining : Association Rules ,Classification and Clustering**

Introduction to Data Mining, Applications, Limitations, Techniques, Association Rules: Apriori Algorithm, Classification: Decision Tree

Cluster Analysis: Features, Types of Cluster Analysis Methods: Partitional, Hierarchical, Density Based, Grid based Methods, , Web Data Mining, Search Engine, Case Study, Limitations.

### **Examination Scheme:**

<b>Components</b>	<b>CT1</b>	<b>A/C/Q</b>	<b>Attd</b>	<b>EE</b>
<b>Weightage (%)</b>	15	10	5	70

### **Text & References:**

#### **Text::**

## MAJOR PROJECT

Course Code:

Credit Units: 30

### Objective:

Major Project/Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology, practical skill enhancement and an opportunity to work closely with a industry external guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation. Students require professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship program can best be described as an attempt to institutionalize efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal classroom situations. These attributes are intellectual ability, professional judgment and decision-making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility etc.

In order to achieve these objectives:

- **Each student will be allotted a supervisor** for proper guidance.
- **Student will first submit details of company, external guide, project title to coordinator/supervisor as per given schedule.**
- After project approval student will submit synopsis as per given guidelines.
- Student will maintain a file (**Internship File/Project Report**) which he/she will submit after completion of internship. **Further, coordinator will provide NTCC project guidelines and sample to help in preparation of file.** The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development. The File will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

**In general, the Project Report File should be comprehensive and include**

- A short account of the activities that were undertaken as part of the project;
- A statement about the extent to which the project has achieved its stated goals.
- A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;
- Any activities planned but not yet completed as part of the project, or as a future initiative directly resulting from the project;

- Any problems that have arisen that may be useful to document for future reference.

## The **layout guidelines** for the Project Report

### **1. File should be in the following specification**

- A4 size paper
- Hard Bound- Dark Green Colour

- **Font**

For normal text Font Type and Size must be- Times New Roman, 12 pt. The minimum font size of materials within a table or a figure can be 10 point.

- **Margins**

A margin of 3.75 cm (1½ inch) is to be given on the binding edge while on the other sides it is to be 2.5 cm (1 inch). The text of the report, including headings, figures, tables, and notes, but excluding page numbers, must be accommodated within the page area.

- **Line Spacing**

The line spacing in the main text must be between one-and-a-half (1.5). Single line spacing should be given for figure captions, table titles, figure legends, and footnotes. Equations, tables, figures, and quotations should be set off from the main text with adequate space (not less than the normal line spacing adopted for the main text). Two consecutive paragraphs should be separated by a spacing which must be larger than the line spacing adopted for the text.

- **Tables and Figures**

Each sketch, drawing, graph and photograph should have a figure number and title below the figure etc. Numbering should be sequential, chapter wise. For instance, if there are 24 figures chapter 3 spread over all of its sections the figure numbers run from Figure 3.1 through Figure 3.24. In figures experimental data should typically be represented by centered symbols, and theoretical data by continuous curves.

Each table should have a table number and caption above the table. Numbering should be sequential, chapter wise, as in the case of Figure numbers. For instance, if there are 18 tables in chapter 3 the table numbers run from Figure 3.1 through Figure 3.18.

Make sure that figures and tables are complete in other respects such as legends, references (if any) and coordinate labels with units. Each figure and table must be explicitly referred to in the text and located where its first reference occurs, preferably after the reference.

- **Drawings**

All engineering drawings must conform to relevant Standards and should include a title block. If drawings are large they should be included at the back of the report in a separate pocket. In case drawings are made using CAD packages, a CD ROM should be included which contains all the files and details of the packages used.

- **Equations**

The numbering of equations should be sequential, chapter wise. Numbered equations must be explicitly referred to in the text.

**2. Report Size:** The maximum number of pages of the Report should be preferably between 50-80 pages.

**3. Report Layout:** The report should contain the following components

Front Page

Declaration

Student Certificate (University)

Certificate (Company)

Acknowledgement

Abstract

Contents

List of Figures

List of Tables

Company Profile (optional)

Chapters

Appendices(optional)

References / Bibliography

The above given components are described below:

1. **The Title Page**-- Format will be given by coordinator/supervisor.

2. **Declaration by the Students**-This is page number (i), the beginning of the small case Roman numeral page numbers. The student has to give a declaration to the effect that the data used for the work, the work depicted in the report, and the written material contained in the report are not copied from others and that due permission has been taken from, and due credit has been given to, the sources whenever they are used.

3. **Certificate**-This is page number (ii). It is given by the Institute. The certificate will be signed by the Faculty Supervisor(s) before the viva-voce after verifying the format and by the Head of the Department after review with the Supervisor(s).

4. **Company Certificate:** This is a certificate, which the company gives to the students.

5. **Contents**-This is page number (iii). The table of Contents should be titled just Contents (not Table of Contents). Try to fit it into one or two pages.

6. **Acknowledgement**-This is page number (iv). Keep this brief and avoid using informal language. This page must be signed by the candidate.

7. **Abstract and Keywords**-This is page number (v). The abstract (preferably one page) should contain the context/relevance of the problem at hand, a description of what was done and a gist of the significant observations/results.

The keywords (maximum 6) are a hint that what is contained in the report.

8. **Company Profile:** A Company Profile corresponds to a file with company-specific data. Company data can be stored there and included in a booking when needed.

**9. Chapters**—Introduction, Literature Review/Background Study etc. as given by coordinator/supervisor.

**10. References / Bibliography** --This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

### **ASSESSMENT OF THE INTERNSHIP FILE**

**Continuous Internal Assessment**  
50 Marks

**Final Assessment**  
Marks

Continuous Internal Assessment consists of topic relevance, synopsis, progress report and draft report. Final Assessment includes viva, presentation, report and execution marks.

#### **Examination Scheme:**

## **B.Tech+M.Tech(AI & ML)**

### **Program Overview**

B.Tech + M.Tech in (Artificial Learning and Machine Learning) is an undergraduate programme with advanced learning solutions imparting knowledge of advanced innovations like machine learning, often called deep learning and artificial intelligence.

Artificial intelligence (AI) is an area of computer science that emphasizes the creation of intelligent machines that work and reacts like humans. The core problems of artificial intelligence include programming computers for certain traits such as Knowledge, Reasoning, Problem solving, Perception, Learning and Planning.

Machine learning is core part of AI in using which we make systems learn to attain objectives of AI. Learning without any kind of supervision requires an ability to identify patterns in streams of inputs, whereas learning with adequate supervision involves classification and numerical regressions.

Carriers in AI and ML appeals large number of students now days. There are various opportunities to become Machine Learning Engineer, Data Scientist, Business Intelligence Developer, Research Scientist and Big Data Engineer/Architect after doing specialization in these areas. The leading employers working in this area includes top companies like Amazon, NVIDIA, Microsoft, IBM, Facebook, Lenovo, Adobe, Google etc.

### **Programme Objectives (PO)**

The student will achieve:

- **PO1. Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- **PO2. Problem analysis:** Identify, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- **PO3. Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- **P04. Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

- **PO5. Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- **PO6. The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- **PO7. Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- **PO8. Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- **PO9. Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- **PO10. Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- **PO11. Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- **PO12. Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change.

## **Programme Specific Objectives(PSO)**

On completion of the B. Tech + M.Tech in Artificial Intelligence & Machine Learning the student will be able to:

**PSO1:** Apply the knowledge of science, mathematics, statistics, information technology and other engineering disciplines to identify and solve complex robotics engineering problems across a broad range of application areas.

**PSO2:** Able to apply their knowledge and skills of robotics engineering for the overall benefit of society with an understanding of realistic constraints and work, communicate effectively in inter-disciplinary environment either independently or in a team and demonstrate significant leadership qualities.

**PSO3:** Able to comprehend and write effective technical project reports in multidisciplinary environment with regards to evolving technological advancements.

**PSO4:** Able to work with technical uncertainty, understanding of the use of technical literature and other information sources, undertaking of appropriate codes of practice and industry standards, awareness of quality issues and their application to continuous improvement, thus recognizing the need to engage in lifelong learning.

### **Enclosure (s):**

✓Supporting document for PSOs framing

✓Programme Structure, B.Tech + M.Tech Programme-AIML

## I SEMESTER

AIE6104	Introduction to Computers and Programming in C	L	T	P	C
Version: 2020.1	Date of Approval: July 2020	2	1	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

### Catalog Description

*The objective of this course module is to acquaint the students with the basics of computers system, its components, data representation inside computer and to get them familiar with various important features of procedure-oriented programming language i.e. C.*

### Course Objectives

The objective of this course is to

1. Equip the students with concepts of Programming through C Language
2. Provide an overview of advanced programming concepts like Structure, Union and File Handling

### Course Outcomes

On completion of this course, the students will be able to

After the completion of course, the students will be able to,

- CO 1: Define the purpose and structure of C Program for programming; identify and distinguish various datatypes and operators; conditional and control statement; Apply if-else, Switch and loops to rewrite basic C program for problem solving.
- CO 2: Compare and contrast various Array types, its declaration and implementation; differentiate between Call by Value and Reference if Functions; apply the concepts to rewrite C Programs
- CO 3: Differentiate between various String Handling Functions; describe the concept of Pointers in C Language
- CO 4: Explain the concept of Structure and Union; apply the concept of File Handling to provide data storage support to the programs.
- CO 5: Apply the concept of Computer Graphics using C programming concepts for implementing line drawing, circle drawing algorithms.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Introduction</b> Introduction to computer, history, von-Neumann architecture, memory system (hierarchy, characteristics, and types), H/W concepts (I/O Devices), S/W concepts (System S/W & Application S/W, utilities). Data Representation: Number systems, character representation codes, Binary, octal, hexadecimal and their interconversions. Binary arithmetic, floating point arithmetic, signed and unsigned numbers, Memory storage unit.	L1, L2 and L3	7
<b>Module II: Programming in C</b> History of C, Introduction of C, Basic structure of C program, Concept of variables, constants and data types in C, Operators and expressions: Introduction, arithmetic, relational, Logical, Assignment, Increment and decrement operator, Conditional, bitwise operators, Expressions, Operator precedence and associativity. Managing Input and output Operation, formatting I/O.	L2, L3 and L4	7
<b>Module III: Fundamental Features in C</b> C Statements, conditional executing using if, else, nesting of if, switch and break Concepts of loops, example of loops in C using for, while and do-while, continue and break. Storage types (automatic, register etc.), predefined processor, Command Line Argument.	L2, L3 and L4	7
<b>Module IV: Arrays and Functions</b> One dimensional arrays and example of iterative programs using arrays, 2-D arrays Use in matrix computations. Concept of Sub-programming, functions Example of user defined functions. Function prototype, Return values and their types, calling function, function argument, function with variable number of argument, recursion.	L2 and L3	7
<b>Module V: Advanced features in C</b> Pointers, relationship between arrays and pointers Argument passing using pointers, Array of pointers. Passing arrays as arguments. Strings and C string library. Structure and Union. Defining C structures, Giving values to members, Array of structure, Nested structure, passing strings as arguments. File Handling.	L2, L3 and L4	8

Pre-requisites/Exposure	Nil
Co-requisites	Nil

### Catalog Description

The primary objective of this course is to understand all the components of C, including the C language, the C Preprocessor, and the C Standard Library. An understanding of some advanced practical issues, including memory management, testing, and debugging, complex declarations and expression evaluation, building and using libraries, and evaluating tradeoffs, such as size vs. speed and speed vs. complexity. The ability to write C code and create and manipulate logical programs.

### Course Objectives

The objective of this course is to

1. Equip the students with concepts of Programming through C Language
2. Provide an overview of advanced programming concepts like Structure, Union and File Handling.

### Course Outcomes

After the completion of course, the students will be able to,

CO 1: Demonstrate the use of various data types and operators in C programs; Solve various problems using conditional control statements (if-else, Switch case).

CO 2: Construct C programs related to problems involving the usage of loops, arrays and functions.

CO 3: Apply the concept of Pointers for efficient memory management and construct C programs using string handling functions.

CO 4: Demonstrate the use of Structure, Union and concept of File Handling to provide data storage support to the programs.

Modules	Blooms level*	Number of hours

## II SEM

AIE6204	<b>Object Oriented Programming Using C++</b>	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	2	1	0	3
Pre-requisites/Exposure	Hands on knowledge of C Programming				
Co-requisites	Basic concepts of C Programming				

## Catalog Description

The objective of this course is to introduce object-oriented programming. To explore and implement the various features of OOP such as inheritance, polymorphism, Exceptional handling using programming language C++. After completing this course student can easily identify the basic difference between the programming approaches like procedural and object oriented.

## Course Objectives

The objective of this course is

1. Equip the students with the basic features of C++ supporting object-oriented programming. Perform object oriented programming to develop solutions to problems demonstrating usage of control structures, modularity, I/O. and other standard language constructs.
2. Provide the overview of major object-oriented concepts to implement object oriented programs in C++ like encapsulation, inheritance and polymorphism, stream I/O, templates and operator overloading

## Course Outcomes

On completion of this course, the students will be able to

- CO 1: Explain the basic principles of object-oriented programming approach; Differentiate it with procedural programming approach and also discuss difference between C and C++.
- CO 2: Illustrate the different ways to define a member function inline and explain how the private members of a class can be accessed. Explain how the objects can be instantiated and destroyed with static data member?
- CO 3: Explain the concept of inheritance, types and implementation with suitable examples; find out ambiguity problem in inheritance; use the concept of overriding and constructors in inheritance.
- CO 4: Explain polymorphism in detail and implement the concept of overloading in functions as well as in operators. Write the programs for virtual function and pointer with objects.
- CO 5: Explain the exception handling mechanism. Design the programs for class and function Template. Compare and contrast various formatted and unformatted i/o function in file handling.

Modules	Blooms level*	Number of hours
<p>MODULE 1:</p> <p>INTRODUCTION</p> <p>Review of C, Difference between C and C++, Procedure Oriented and Object Oriented Approach. Basic Concepts: Objects, classes, Principles like Abstraction, Encapsulation, Inheritance and Polymorphism. Dynamic Binding, Message Passing. Characteristics of Object-Oriented Languages. Introduction to Object-Oriented Modeling techniques (Object, Functional and Dynamic Modeling).</p>	L1 and L2	5
<p>MODULE 2:</p> <p>CLASSES AND OBJECTS</p> <p>Abstract data types, Object &amp; classes, attributes, methods, C++ class declaration, Local Class and Global Class, State identity and behaviour of an object, Local Object and Global Object, Scope resolution operator, Friend Functions, Inline functions, Constructors and destructors, instantiation of objects, Types of Constructors, Static Class Data, Array of Objects, Constant member functions and Objects, Memory management Operators.</p>	L1, L2 and L3	7
<p>MODULE 3:</p> <p>INHERITANCE</p> <p>Inheritance, Types of Inheritance, access modes – public, private &amp; protected, Abstract Classes, Ambiguity resolution using scope resolution operator and Virtual base class, Aggregation, composition vs classification hierarchies, Overriding inheritance methods, Constructors in derived classes, Nesting of Classes</p>	L2, L3 and L4	8
<p>MODULE 4:</p> <p>POLYMORPHISM</p> <p>Polymorphism, Type of Polymorphism – Compile time and runtime, Function Overloading, Operator Overloading (Unary and Binary) Polymorphism by parameter, Pointer to objects, this pointer, Virtual Functions, pure virtual functions.</p>	L2, L3 and L4	8
<p>MODULE 5:</p> <p>STRINGS, FILES AND EXCEPTION HANDLING</p> <p>Manipulating strings, Streams and files handling, formatted and Unformatted Input output. Exception handling, Generic Programming – function template, class Template Standard Template Library: Standard Template Library, Overview of Standard Template Library, Containers, Algorithms, Iterators, Other STL Elements, The Container Classes, General Theory of Operation, Vectors.</p>	L2, L3 and L4	8

### Catalog Description

The objective of this course is to introduce object-oriented programming. To explore and implement the various features of OOP such as inheritance, polymorphism, Exceptional handling using programming language C++. After completing this course student can easily identify the basic difference between the programming approaches like procedural and object oriented.

### Course Objectives

The objective of this course is

1. Perform object-oriented programming to develop solutions to problems demonstrating usage of control structures, modularity, I/O. and other standard language constructs.
2. Demonstrate adeptness of object-oriented programming in developing solutions to problems demonstrating usage of data abstraction, encapsulation, and inheritance.
3. Demonstrate ability to implement one or more patterns involving realization of an abstract interface and utilization of polymorphism in the solution of problems which can take advantage of dynamic dispatching, syntax, features of, and how to utilize the Standard Template Library.

### Course Outcomes

On completion of this course, the students will be able to

- CO 1: Define and identify the basic principles of object-oriented programming approach; Differentiate it with procedural programming approach.
- CO 2: Determine the different ways to define a member function inline and explain how the private members of a class can be accessed. Solve how the objects can be instantiated and destroyed with static data member?
- CO 3: Apply the concept of inheritance, types and implementation with suitable examples; find out ambiguity problem in inheritance; use the concept of overriding and constructors in inheritance.
- CO 4: Relate the concept polymorphism with overloading in detail and implement the concept of overloading in functions as well as in operators. Write the programs for virtual function and pointer with objects.
- CO 5: Determine the exception handling mechanism. Design the programs for class and function Template. Compare and contrast various formatted and unformatted i/o function in file handling.

<b>Modules/Topics Covered**</b>	<b>Blooms level*</b>	<b>Number of hours</b>
1. Sample Programs using objects and classes (a) Write a program to illustrate the concept of one class with two objects by taking student data. (b) Write a program to show the relationship of class and object to display roll no., grade and fee paid by student.	L1, L3, L5	4
2. Sample Programs for different use of private, public member variables and functions and friend functions (a) Write a program to define the member function outside and inside the class. (b) Write a program to read and display the information of N persons to illustrate the concept of array of objects. (c) Write a program to add two numbers to illustrate the use of friend function.	L1, L3, L5	4
3. Sample Programs using constructors and destructors (a) Write a program to assign and copy values to illustrate the concept of parametrized and copy constructor. (b) Write a program to show the order of constructor and destructor.	L1, L3, L5	4
4. Sample Programs using operator overloading (a) Write a program to add two numbers using binary operator overloading. (b) Write a program to illustrate the assignment operator overloading.	L1, L3, L5	4
5. Sample Programs using inheritance in and accessing objects of different derived classes (a) Write a program to compute the marks explaining the concept of multiple inheritance. (b) Write a program to find the factorial of a number using inheritance.	L1, L3, L5	4

6. Sample Programs using polymorphism and virtual functions (using pointers) and File Handling		
(a) Write a program to find the volume of cylinder and cuboid using function overloading.		
(b) Write a program to reverse a string using pointers.		
(c) Write a program to explain the relationship of inheritance and virtual function.		
(d) Write a program to read the student name and fee paid using read() function from the file.		
	L1, L3, L4, L5	4

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

### III SEM

AIE6302	Database Management Systems	L	T	P	C
---------	-----------------------------	---	---	---	---

Version 2020.1	Date of Approval: July, 2020	3	1	0	4
Pre-requisites/Exposure	Computer Fundamentals and Mathematics Set Theory				
Co-requisites	Nil				

## Catalog Description

This course is design to get students familiar with the fundamentals & basic concepts in Data Base Management Systems and their use. This course discusses architecture of Database Systems with concept of different types of available database model, concurrency techniques and new applications of the DBMS. The techniques for database design, normalization, database recovery and protection will enable students to work easily and efficiently on real databases.

## Course Objectives

The objective of this course is

1. To make students familiar with the fundamental and necessary concepts of DBMS.
2. Provide an overview of normalization, concurrency techniques and database recovery with examples.

## Course Outcomes

On completion of this course, the students will be able to

CO1. Differentiate between traditional data processing system and database management system and understand characteristics and applications of DBMS in real world.

CO2. Explain and use different data models such as Entity Relationship Model, Network, and Relational Model etc.

CO3. Solve queries using relational algebra, relational calculus and SQL.

CO4. Illustrate normalization concepts and apply them in real database applications.

CO5. Explain database concurrency techniques and recovery mechanisms.

Modules	Blooms level*	Number of hours
<b>Module I: Introduction</b> <b>Concept and goals of DBMS, Database Languages, Database Users, Database Abstraction.</b>  <b>Basic Concepts of ER Model, Relationship sets, Keys, Mapping, Design of ER Model.</b>	L1, L2 and L6	9
<b>Module II: Hierarchical model &amp; Network Model</b> <b>Concepts, Data definition, Data manipulation and implementation.</b> <b>Network Data Model, DBTG Set Constructs, and Implementation</b>	L1 and L2	9

<b>Module III: Relational Model</b> <b>Relational database, Relational Algebra, Relational &amp; Tuple Calculus.</b>	L1 and L3	10
<b>Module IV: Relational Database Design and Query Language</b> <b>SQL, QUEL, QBE, Normalization using Functional Dependency, Multivalued dependency and Join dependency.</b>	L2, L3 and L4	10
<b>Module V: Concurrency Control and New Applications</b> <b>Transaction basics: ACID property, Lifecycle of Transaction, Why Concurrency Control, Schedule, Serializability, Lock Based Protocols, Time Stamped Based Protocols, Deadlock Handling, Crash Recovery. Distributed Database, Objective Oriented Database, Multimedia Database, Data Mining, Digital Libraries.</b>	L2, L3 and L4	10

## Catalog Description

This course is designed to get students familiar with the basic concepts of SQL including DDL, DML and DCL statements. The course also explains the basic concepts of PL/SQL. Students will learn practical on Oracle software and hence can work on any RDBMS software in future.

## Course Objectives

The objective of this course is

1. To make students familiar with the concepts and working of SQL.
2. Provide an overview of PL/SQL.

## Course Outcomes

On completion of this course, the students will be able to

- CO1. Illustrate SQL basic concepts like languages DDL, DML etc., data types and working.  
CO2. Explain concepts of database creation, manipulation of data and data retrieval and apply them in real database applications.  
CO3. Design and implement various data constraints on a database for a given problem.  
CO4. Solve queries using concepts like joins, subqueries, aggregate functions, triggers etc.  
CO5. Prepare PL/SQL blocks.

Modules	Blooms level*	Number of hours
<b>Lab Session 1</b> Introduction of RDBMS, Oracle, SQL and data types.	L1 and L2	2
<b>Lab Session 2</b> Basic concept of database creation and manipulation of data.	L1 and L3	2

<b>Lab Session 3</b> Working with SELECT query.	L1 and L3	2
<b>Lab Session 4</b> To apply data constraints on a table-Primary Key, Not Null, Unique.	L1 and L3	2
<b>Lab Session 5</b> Working with Foreign Key and Check Constraint.	L1 and L3	2
<b>Lab Session 6</b> To implement the basic concept of Aggregate and Grouping Functions.	L1 and L3	2
<b>Lab Session 7</b> To apply various set operators on data.	L1 and L3	2
<b>Lab Session 8</b> Concept of Nested queries in database and its application in database.	L1 and L3	2
<b>Lab Session 9</b> Implementation different types of JOINS in database.	L1 and L3	2
<b>Lab Session 10</b> Basic concepts of Triggers and Procedures and related queries.	L1 and L3	2
<b>Lab Session 11</b> Introduction to PL/SQL and basic syntax.	L1 and L3	2
<b>Lab Session 12</b> Write programs in PL/SQL Using Control Structures.	L3	2

Pre-requisites/Exposure	Nil
Co-requisites	Nil

### **Catalog Description**

In this course Operating System, its generic types, characteristics and functions are discussed in detail. Concepts covered would enable students to identify various categories of operating systems, with details about concepts of process management and scheduling. Contents will be helpful in identifying deadlocks in the system and designated approaches used to prevent, handle or recover from them. Further it covers the concepts of managing memory, devices and mechanisms for providing security to system and files using operating system.

### **Course Objectives**

The objective of this course is to

1. Equip the students with the knowledge about categories of operating systems and their functions.
2. Provide detailed knowhow about functions of operating system like process, memory and device management along with file system security and protection.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: Define and explain operating systems and their evolution, also differentiate among its various types.

CO2: Explain concepts of process and inter-process communication and synchronization. Identify solutions to detect, prevent and handle deadlocks occurring in the operating systems. Solve synchronization and CPU scheduling problems related to processes.

CO3: Define and explain concepts of memory management like fragmentation, paging and segmentation. Solve problems related to memory management using page replacement algorithms.

CO4: Describe the concepts of device management and list various disk allocation methods. Determine solutions for disk scheduling problems using available disk scheduling algorithms.

CO5: State the concept of file and file system security, also distinguish among various file allocation methods.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
----------------	----------------------	------------------------

<p>MODULE 1:</p> <p>INTRODUCTION TO OPERATING SYSTEM</p> <p>Operating system and function, Evolution of operating system, Batch, Interactive, multiprogramming, Time Sharing and Real Time System, multiprocessor system, Distributed system, System protection. Operating System structure, Operating System Services, System Program and calls</p>	L1, L2 and L4	6
<p>MODULE 2:</p> <p>PROCESS MANAGEMENT</p> <p>Process concept, State model, process scheduling, job and process synchronization, structure of process management, Threads</p> <p>Interprocess Communication and Synchronization: Principle of Concurrency, Producer Consumer Problem, Critical Section problem, Semaphores, Hardware Synchronization, Critical Regions, Conditional critical region, Monitor, Inter Process Communication.</p> <p>CPU Scheduling: Job scheduling functions, Process scheduling, Scheduling Algorithms, Non-Preemptive and preemptive Strategies, Algorithm Evaluation, Multiprocessor Scheduling.</p> <p>Deadlock: System Deadlock Model, Deadlock Characterization, Methods for handling deadlock, Prevention strategies, Avoidance and Detection, Recovery from deadlock combined approach</p>	L1, L2 and L3	12
<p>MODULE 3:</p> <p>MEMORY MANAGEMENT</p> <p>Single Contiguous Allocation: H/W support, S/W support, Advantages and disadvantages, Fragmentation, Paging, Segmentation, Virtual memory concept, Demand paging, Performance, Paged replaced algorithm, Allocation of frames, Thrashing, Cache memory, Swapping, Overlays</p>	L1, L2 and L3	7
<p>MODULE 4:</p> <p>DEVICE MANAGEMENT</p> <p>Principles of I/O hardware, Device controller, Device Drivers, Memory mapped I/O, Direct Access Memory, Interrupts, Interrupt Handlers, Application I/O interface, I/O Scheduling, Buffering, Caching, Spooling, Disk organization, Disk space management, Disk allocation Method, Disk Scheduling, Disk storage</p>	L1, L2 and L3	7
<p>MODULE 5:</p> <p>FILE SYSTEM AND PROTECTION AND SECURITY</p> <p>File Concept, File Organization and Access Mechanism, File Directories, Basic file system, File Sharing, Allocation method, Free space management. Policy Mechanism, Authentication, Internal excess Authorization</p>	L1 and L2	4

## Catalog Description

This course introduces the UNIX operating system commands, shell programming. Explores the use of operating system utilities such as vi text editors, filters, process handling etc.

## Course Objectives

The objective of this course is to

1. Provide knowledge of working on Unix.
2. Provide sound foundation of writing Shell scripts.
3. Implement features like piping, filters and redirection.

## Course Outcomes

On completion of this course, the students will be able to

CO1: To implement various Unix commands.

CO2: To demonstrate the use of Vi Editor and other editors of UNIX.

CO3: To write simple Shell scripts.

Modules	Blooms level*	Number of hours
1. UNIX structure, history, basic commands.	L1,L3	10
2. Working of Vi Editor and its commands.	L1,L3	4
3. Shell Script <ol style="list-style-type: none"> <li>Write shell script to find largest among three numbers.</li> <li>Write shell script to print multiplication table of any number.</li> <li>Write a shell script that copies multiple files into directory.</li> <li>Write a shell script to find number of words and characters in a given file.</li> <li>Write a shell script to find the sum, the average and the product of the four integers entered.</li> <li>Write a shell script to calculate the factorial of a number.</li> <li>Write a shell script to generate Fibonacci series.</li> <li>Write a shell script that computes the gross salary of employee.</li> <li>Write a shell script that takes a command –line argument and reports on whether it is directory, a file, or something else.</li> <li>Write a shell script which receives two file names as arguments. It should check whether the two file contents</li> </ol>	L1,L3	10

are same or not. If they are same then second file should be deleted.		
xi. Write a shell script to calculate gcd of two numbers.		
xii. Write a shell script to concatenate two strings and find the length of the resultant string.

### **Catalog Description**

This course covers the design, analysis, and implementation of data structures and algorithms to solve engineering problems using C programming language. Topics include elementary data structures, (including arrays, stacks, queues, and lists), advanced data structures (including trees and graphs), the algorithms used to manipulate these structures, and their application to solving practical engineering problems. At the end of this course student will gain knowledge about different kinds of file structures and their related operations.

### **Course Objectives**

The objective of this course is to

1. Equip the students with knowledge of algorithms, different types of data structures and analysis of space and time complexity.
2. Provide an overview of various algorithms of data structures like stack and queues and related operations and implementation.
3. Provide an overview of dynamic Data Structure like linked list and its related operations, algorithms and programs. Demonstrate practical use of dynamic data structure to solve engineering problems.
4. Equip the students with knowledge of algorithms and operations related to tree and graph data structures and their practical applications.
5. Provide an overview of Sorting, Searching and file structures and its related algorithms and techniques.

### **Course Outcomes**

On completion of this course, the students will be able to

CO 1: Identify operations on array, multidimensional, string and their implementation and analyze space and time complexity of algorithms.

CO 2: Explain various algorithms and operations of data structures like stack and queues and analyze complexity of each operation.

CO 3: Explain dynamic data structures and various algorithms and operations of data structures like linked list and their applications in computer science.

CO 4: Illustrate the algorithms and operations related to tree and graph data structures, their practical applications and analyze complexity of algorithm associated with each operations.

CO5: Explain Sorting, Searching and file organization and its related techniques.

Modules	Blooms level*	Number of hours
<b>Module I: Introduction to Data structures</b>  Data structures: Definition, Types. Algorithm design, Complexity, Time-Space Tradeoffs. Use of pointers in data structures. Array Definition and Analysis, Representation of Linear Arrays in Memory, Traversing of Linear Arrays, Insertion and Deletion, Single Dimensional Arrays, Two Dimensional Arrays, Multidimensional Arrays, Function Associated with Arrays, Character String in C, Character String Operations, Arrays as parameters, Implementing One Dimensional Array, Sparse matrix.	L1, L2	7
<b>Module II: Introduction to Stacks and queue</b>  Stack: Definition, Array representation of stacks, Operations Associated with Stacks- Push & Pop, Polish expressions, Conversion of infix to postfix, infix to prefix (and vice versa), Application of stacks recursion, polish expression and their compilation, conversion of infix expression to prefix and postfix expression, Tower of Hanoi problem. Queue: Definition, Representation of Queues, Operations of queues- QInsert, QDelete, Priority Queues, Circular Queue, Deque.	L1, L2, L3, L4	8
<b>Module III: Dynamic Data Structure</b>  <b>Linked list: Introduction to Singly linked lists: Representation of linked lists in memory, Traversing, Searching, Insertion into, Deletion from linked list, doubly linked list, circular linked list, generalized list. Applications of Linked List-Polynomial representation using linked list and basic operation. Stack and queue implementation using linked list.</b>	L1, L3 and L4	7
<b>Module IV: Trees and Graphs</b>  Trees: Basic Terminology, Binary Trees and their representation, expression evaluation, Complete Binary trees, extended binary trees, Traversing binary trees, Searching, Insertion and Deletion in binary search trees, General trees, AVL trees, Threaded trees, B trees. Graphs: Terminology and Representations, Graphs & Multigraphs, Directed Graphs, Sequential representation of graphs, Adjacency matrices, Transversal Connected Component and Spanning trees.	L1, L3 and L5	7
<b>Module V: Sorting and Searching and file structures</b>  Sorting: Insertion Sort, Bubble sort, Selection sort, Quick sort, two-way Merge sort, Heap sort, Partition exchange sort, Shell sort, Sorting on different keys, External sorting. Searching: Linear search, Binary search <b>File structures: Physical storage media, File Organization, Linked organization of file, Inverted file, Organization records into blocks, Sequential blocks, Hash function, Indexing &amp; Hashing, Multilevel indexing, Tree Index, Random file, Primary Indices, Secondary Indices, B tree index files.</b>	L1, L4, L5	7

### Catalog Description

This course explores the theory and operation of the basic building blocks of digital electronics which includes combinational and sequential circuits. This course also explains the logic families and data convertors. The concepts learnt in the studies of sequential circuits will be applied in the design and analysis of Melay and Moore machines.

### Course Objectives

The objective of this course is to

1. Provide the basic knowledge of digital logic levels and application of knowledge to understand combinational and sequential circuits.
2. Explain the operation of logic family and data convertors.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Explain the difference between analog and digital signal; Describe the Boolean algebra; Analyze the SOP & POS form of Boolean function; Solve k-map and tabulation method to simplify the logical function; Apply universal gates to implement the given logic.

CO2: Define the multiplexer and decoder; Explain the adder & subtractor; Apply multiplexer to design Boolean function; Analyze the difference between decoder and encoder.

CO3: Define flip flops; Compare combinational and sequential circuits; Describe shift registers; Design counters and synchronous sequential circuits.

CO4: Explain the logic families; Compare the RTL, DTL, TTL and ECL logic families.

CO5: Define data convertors; Explain analog to digital convertor and digital to analog convertor.

Modules	Blooms level*	Number of hours
<b>MODULE 1:</b>  <b>BOOLEAN FUNCTIONS</b> Analog & digital signals, AND, OR, NOT, NAND, NOR & XOR gates, Boolean algebra, Standard representation of logical functions, K-map representation and simplification of logical function, don't care	L1,L2 and L3	6

conditions, XOR & XNOR simplifications of K-maps, Tabulation method.		
<b>MODULE 2:</b>  <b>COMBINATIONAL CIRCUITS</b> Adders, Subtractors, Multiplexer, de-multiplexer, decoder & encoder, code converters, Comparators, decoder / driver for display devices, Implementation of logic functions using multiplexer / de-multiplexer.	L1, L2, L3 and L4	6
<b>MODULE 3:</b>  <b>SEQUENTIAL CIRCUITS</b> Flip-flops: SR, JK, D & T flip flops – Truth table, Excitation table, Conversion of flip-flops, race around condition, Master Slave flip flop, Shift registers: SIPO, PISO, PIPO, SIPO, Bi-directional; Counters: ripple & synchronous counters – up / down; Synchronous Sequential circuit: design procedure.	L1, L2, L4 and L5	8
<b>MODULE 4:</b>  <b>LOGIC FAMILIES</b> RTL, DTL, TTL, ECL.	L2 and L4	2
<b>MODULE 5:</b>  <b>DATA CONVERTERS</b> ADC – successive approximation, linear ramp, dual slope; DAC – Binary Weighted, R-2R ladder type.	L1 and L2	2

## Catalog Description

In this Lab course the combination and sequential circuits are designed, and their functionality is verified using truth table. Concepts covered would enable them to create complex circuits related to digital design. The objective of this course is to explore and implement the various features of digital logic using basic logic gates.

## Course Objectives

The objective of this course is to

1. Provide a basic knowledge of digital logic levels and application of knowledge to understand digital electronics circuits.
2. Equip with understanding of different combinational and sequential circuits.

## Course Outcomes

On completion of this course, the students will be able to

CO 1: Demonstrate the basic concept of logic gates;

CO 2: Illustrate the adder and subtractors.

CO 3: Demonstrate the code convertors.

CO 4: Demonstrate the combinational and sequential circuits.

Modules/Topics Covered**	Blooms level*	Number of hours
1. To verify the truth tables of NOT, OR, AND, NOR, NAND, XOR, XNOR gates.	L3, L5	2
2. To obtain half adder, full adder using gates and verify their truth tables.	L3, L5	2
3. To obtain half subtractor, full subtractor using gates and verify their truth tables.	L3, L5	2
4. To implement control circuit using multiplexer.	L3, L5	2
5. To convert BCD code into excess 3 code and verify the truth table.	L3, L5	2
6. To verify the truth tables of RS, D, JK and T flip- flops.	L3, L5	2
7. To implement and verify 3-bit bi-directional shift register.	L3, L5	2

8. To design and study asynchronous/ripple counter.	L3, L5	2
9. To design and study synchronous counter.	L3, L5	2
10. To design and study a sequence detector.	L3, L5	2

### Catalog Description

This is the first course in Electronics and Communication Engineering, to educate and explain the methods used for biasing circuits in a graphical analysis of non-linear electronic circuits and also includes small signal transistor models, parameters and their frequency responses. Following this, analyzing different types of feedback amplifiers, and power amplifiers using transistor and designing of different electronic circuits are included in the course. This course also considers the mathematical modeling of active solid state devices their analysis and design of single state circuits. Topics covered include the study of device characteristics and applications of p-n-junction diodes, bipolar junction transistors, and field effect transistors.

### Course Objectives

The objective of this course is to

1. build from basic knowledge of Semiconductor Physics to an understanding of basic devices and their models
2. familiarize the student with the analysis and design of basic transistor amplifier circuits, feedback amplifiers and wave shaping circuits
3. build a foundation for Analog Electronics-II, Digital Circuits and Systems I & II, VLSI design and analog CMOS IC Design.

### Course Outcomes

On completion of this course, the students will be able to

- CO1. explain different types of diodes and demonstrate wave shaping circuits
- CO2. explain operating principal of Bipolar Junction Transistor, its properties, biasing techniques and stability
- CO3. describe low and high frequency transistor amplifiers along with single and multi-stage amplifier
- CO4. explain operating principal of JFET, MOSFET, its properties, and biasing techniques

CO5. solve and analyse different negative feedback amplifiers configurations

CO6. describe and outline power amplifiers and their application.

Modules	Blooms level*	Number of hours
<b>Module I: Semiconductor Diode and Diode Circuits</b>  Different types of diodes: Zener, Schottky, LED. Zener as voltage regulator, Diffusion capacitance, Drift capacitance, the load line concept, half wave, full wave rectifiers, clipping and clamping circuits.	L1 L2 & L3	6
<b>Module II: Bipolar Junction Transistor</b>  Bipolar junction transistor: Introduction, Transistor, construction, transistor operations, BJT characteristics, load line, operating point, leakage currents, saturation and cut off mode of operations. Bias stabilization: Need for stabilization, fixed Bias, emitter bias, self bias, bias stability with respect to variations in $I_{CO}$ , $V_{BE}$ & $\beta$ , Stabilization factors, thermal stability.	L1 L2 & L3	9
<b>Module III: Small signal Analysis of transistor and Multistage Amplifier</b>  Hybrid model for transistors at low frequencies, Analysis of transistor amplifier using h parameters, emitter follower, Miller's theorem, THE CE amplifier with an emitter resistance, Hybrid $\pi$ model, Hybrid $\pi$ Conductances and Capacitances, CE short circuit current gain, CE short circuit current gain with $R_L$ Multistage amplifier: Cascading of Amplifiers, Coupling schemes(RC coupling and Transformer coupling)	L2 & L3	6
<b>Module IV: Field Effect Transistors</b>  Field effect transistor (JFET, MOSFET): volt-ampere characteristics, small signal model –common drain, common source, common gate, operating point, MOSFET, enhancement and -depletion mode, Common source amplifier, Source follower	L1, L2 & L3	5
<b>Module V: Feedback Amplifiers</b>  Feedback concept, Classification of Feedback amplifiers, Properties of negative Feedback amplifiers, Impedance considerations in different Configurations, Examples of analysis of feedback Amplifiers.	L1, L2, L3 & L4	6
<b>Module VI: Power amplifiers</b>  Power dissipation in transistors, difference with voltage amplifiers, Amplifier classification (Class A, Class B, Class C, Class AB) class AB push pull amplifier, collector efficiency of each, cross over distortion.	L1 & L2	4

Pre-requisites/Exposure	Knowledge of basic computer				
Co-requisites	Nil				

## Catalog Description

This course examines the evolution of enterprise resource planning (ERP) systems - from internally focused client/server systems to externally focused e-business. This class studies the types of issues that managers will need to consider in implementing cross-functional integrated ERP systems. The objective of this course is to make students aware of the potential and limitations of ERP systems. This objective will be reached through hands-on experience, case studies, lectures, guest speakers and a group project. The course would equip students with the basics of E-Commerce, technologies involved with it and various issues associated with.

## Course Objectives

The objective of this course is to

1. Understand the students with the role of consultants, vendors and employees.
2. Provide an overview of various phases in ERP implementation and identify various technologies used in ERP.

## Course Outcomes

On completion of this course, the students will be able to

- CO1: Describe the key features of Internet, Intranets and Extranets and explain how they relate to each other. Demonstrate an understanding of the foundations and importance of E-commerce and assess electronic payment systems.
- CO2: Understand concepts of reengineering, data mining, data warehousing and how they relate to ERP system implementations.
- CO3: Explain the challenges associated with implementing enterprise systems and their impacts on organizations.
- CO4: Describe the selection, acquisition and implementation of enterprise systems and demonstrate an ability to work independently and in a group.
- CO5: Identify and describe typical functionality in an ERP system.
- CO 6: Analyze the strategic options for ERP identification and adoption.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<p><b>MODULE 1:</b></p> <p><b>INTRODUCTION AND CONCEPTS:</b></p> <p>Networks and commercial transactions - Internet and other novelties; Networks and electronic transactions today, Model for commercial transactions; Internet environment - internet advantage, world wide web and other internet sales venues; Online commerce solutions.</p> <p>Security Technologies: Why is internet insecure? A brief introduction to Cryptography; Public key solution. Digital payment systems; First virtual internet payment system; cyber cash model Operational process of Digicash, Ecash Trail; Using Ecash; Smart cards; Electronic Data Interchange: Its basics; EDI versus Internet and EDI over Internet.</p>	L1, L2 and L3	8
<p><b>MODULE 2:</b></p> <p><b>INTRODUCTION ERP</b></p> <p>An Overview, Enterprise-An Overview, Benefits of ERP, ERP and Related Technologies, Business Process Reengineering (BPR), Data Warehousing, Data Mining, On-line Analytical Processing (OLAP), Supply Chain Management, Management Information systems (MIS), Decision support system (DSS), Executive Information systems (EIS). ERP – A Manufacturing Perspective Materials Requirement Planning (MRP), Bill of Material (Bom), Distribution Requirements Planning (DRP), JIT &amp; Kanban, CAD/CAM, Product Data Management (PDM), Benefits of PDM, MTO, MTS, ATO, ETO, CTO.</p>	L1,L2 and L3	10
<p><b>MODULE 3:</b></p> <p><b>ERP IMPLEMENTATION</b></p> <p>To be or not to be, ERP Implementation Lifecycle, Implementation Methodology, Not all Packages are Created Equal!, ERP Implementation-The Hidden Costs, Organizing the Implementation, Vendors, Consultants and Users, Contracts with Vendors, Consultants and Employees, Project Management and Monitoring, After ERP Implementation.</p>	L1,L2 and L3	8

<p>MODULE 4:</p> <p>THE BUSINESS MODULES</p> <p>Business Modules in an ERP Package, Finance, Manufacturing (Production), Human Resources, Plant Maintenance, Materials Management, Quality Management, Sales and Distribution</p>	L1,L2 and L3	8
<p>MODULE 5:</p> <p>THE ERP MARKET</p> <p>ERP Market Place, SAP AG, PeopleSoft, Baan Company, JD Edwards World Solutions Company, Oracle Corporation, QAD, System Software Associates, Inc (SSA) ERP-Present and Future</p> <p>Turbo Charge the ERP System, Enterprise Integration Applications (EIA), ERP and E-Commerce, ERP and Internet, Future Directions in ERP, Appendices"</p>	L2, L3 and L4	8

Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Basic Mathematics				
Co-requisites	Nil				

## Catalog Description

In this course the concepts of statistics, the science of collecting, organizing, and interpreting numerical data are discussed. Emphasis will be placed on statistical reasoning and data analysis. The main topics are study design, descriptive statistics, probability theory, and statistical inference. As a precursor to the study of cryptography studies will be made on impact of various techniques for finding independence or dependence between data variables. The concepts learnt in the studies of statistics will be applied practically to solve number of real life problems using the statistical package like R and SPSS.

## Course Objectives

The objective of this course is to

1. Equip the students with concepts of statistics through problem solving and analytical approach.
2. Provide an overview of various statistical techniques: descriptive and inferential, parametric and non-parametric and practical statistics using R and SPSS.

## Course Outcomes

On completion of this course, the students will be able to

- CO 1: Explain, describe and distinguish various population, sample, type of variables, measurement scales, central tendency, percentile and solve problems related to them.
- CO 2: Explain the concept of descriptive and inferential statistics; probability theory; Solve problems based on probability; Explain binomial, poisson distribution and solve real life problems related to discrete and continuous random variable.
- CO 3: Describe the concept of sampling distribution for large and small samples; Explain the concept of hypothesis testing and solve problems related using t-distribution and standard normal distribution.
- CO 4: Explain concept of covariance and correlation and its applications in real life; Explain Anova and its use in real life problem solving; Explain and compare various regression analysis methods statistics for prediction

CO 5: Explain various parametric and nonparametric test and apply them to solve real life statistical problems

Modules	Blooms level*	Number of hours
<b>Module 1: Introduction to Statistics and Data Analysis</b> Statistical Inference, Samples, Populations and Experimental Design, The Hole of Probability Sampling Procedures; Collection of Data, Measures of Location:, Measures of Variability ,Discrete and Continuous Data , Statistical Modeling, Scientific Inspection, and Graphical Diagnostics, Graphical Methods and Data Description ,General Types of Statistical Studies	L1, L2 and L3	7
<b>Module 2: Probability &amp; Probability Distribution</b> Sample Space, Events Probability of an Event, Additive Rules, Conditional Probability ,Multiplicative Rules ,Bayes' Rule, Concept of a Random Variable, Discrete Probability Distributions, Continuous Probability Distributions , Joint Probability Distributions ,Mean of a Random Variable, Variance and Covariance of Random Variables, Means and Variances of Linear Combinations of Random Variables, Chebyshev's Theorem, , Discrete Uniform Distribution, Binomial and Multinomial Distributions, Poisson Distribution and the Poisson Process. Continuous Uniform Distribution, Normal Distribution ,Areas under the Normal Curve ,Applications of the Normal Distribution , Gamma and Exponential Distributions, ,Chi-Squared Distribution.	L1,L2, L3	6
<b>Module 3: Sampling Distributions and Estimation</b> Random Sampling, Some Important Statistics, ,Data Displays and Graphical Methods, Sampling Distributions Introduction to Estimation, Statistical Inference ,Classical Methods of Estimation, Single Sample: Estimating the Mean ,Standard Error of a Point Estimate, Prediction Intervals, Tolerance Limits Two Samples: Estimating the Difference between Two Means ,Paired Observations , , Single Sample: Estimating a Proportion, Two Samples: Estimating the Difference between Two Proportion.	L1,L2, L3	6
<b>Module 4: Hypotheses Testing</b> Statistical Hypotheses: General Concepts ,Testing a Statistical Hypothesis, One- and Two-Tailed Tests, The Use of <i>P</i> -Values for Decision Making in Testing Hypotheses, One Sample: Test on a Single Proportion ,Two Samples: Tests on Two Proportions, Exercises ,One- and Two-Sample Tests Concerning Variances, Goodness-of-Fit Test, Test for Independence (Categorical Data),Test for Homogeneity, Testing for Several Proportions	L1, L2 L3	7
<b>Module 5: Simple Linear Regression and Correlation</b> Introduction to Linear Regression, The Simple Linear Regression Model, Least Squares and the Fitted. Model Analysis-of-Variance, Approach, Test for Linearity of Regression: Data with Repeated Observations, Data Plots and Transformations, Simple Linear Regression Case Study, Correlation, Classification	L1, L2	9

## IV SEM

AIE6403	<b>Discrete Mathematics</b>	L	T	P	C
Version 2020.1	Date of Approval: July 2020	3	0	0	3
Pre-requisites/Exposure	Basic mathematics: Set Theory and Logic Gates				
Co-requisites					

### Catalog Description

This course is intended for students, those who have little bit knowledge of logical gates and basic logical mathematics. Knowledge of basic mathematics is necessary: they need to be comfortable with simple logical, including operator precedence. They should also be comfortable working with simple recursive functions. This course will give you a better understanding on how to develop own algorithms for the conversion into programs. More importantly, you'll start to learn computational thinking, which is a fundamental approach to solving real-world problems. Computer programming languages share common fundamental concepts, and this course will introduce you to those concepts using logical thinking.

### Course Objectives

The objective of the course is to:

1. Study of the logical and mathematical relationships between discrete objects using application of Boolean algebra, graphs, lattice and trees.
2. Relate computing theory with applications and design their project machine like Finite state machine using algorithmic approach, and able
3. Apply the knowledge of graph algorithms in daily life research problem solving.

### Course Outcomes

On completion of this course, the students will be able to:

**CO1.** To give the study of the logical and mathematical relationships between discrete objects based on applications of propositional arguments.

**CO2.** Students will be able to relate computing theory with real life applications.

**CO3.** They can understand and design their project machine like finite state machine, Petri nets using algorithmic approach

**CO4.** Able to understand the importance of graph algorithms in daily life research problem solving

**CO5.** To describe the applications of Boolean algebra, graphs, lattice and trees in software engineering.

Modules	Blooms level*	Number of hours
<b>Module I: Sets, Relation and Functions:</b> Sets and Subsets, Operations on Sets, Set Identities, Matrices, Mathematical Structures, Principle of Inclusion and Exclusion. Product Sets and Partitions, Relations and Digraphs, Properties of Relation, Equivalence Relation, Functions: Properties of Function, Composition of Function, Inverse, Binary and n-ary operations.	L1, L2 and L3	12
<b>Module II: Logic</b> Proposition, Propositional Calculus- Propositional Variables and Compound Propositions, Basic Logical Operations: -Conjunction, Disjunction, Negation, Conditional, Bi-conditional. Compound Statements, Equivalence, Duality, Algebra of Statements, Valid and Invalid, Arguments, Tautologies, Contradiction, Contingency.	L1,L2, L3	11
<b>Module III: Counting</b> Pigeonhole principle, Mathematical Induction, Recurrence Relation: Solving Linear Homogeneous Recurrence Relations with Constant Coefficients, Solving Recurrence Relations using Generating Functions.	L1,L2, L3 and L5	11
<b>Module IV: Lattices</b> Lattices: Lattices as partially ordered sets, their properties, duality, Lattices as algebraic systems, Sub lattices, Direct products, Bounded Lattices, Complete Lattices, Complemented Lattices and Distributive lattices.	L1, L2 and L3	14

AIE6404	Artificial intelligence	L	T	P	C
Version 2020.1	Date of Approval: July 2020	3	0	0	3
Pre-requisites/Exposure	Exposure to data structure and programming and an ability to discuss algorithms is the only pre-requisite.				
Co-requisites	Nil				

## Catalog Description

Introduction to computational models of thought and construction of intelligent information systems. Topics include search algorithms, data dependencies and truth-maintenance systems, approaches to knowledge representation, automated deduction, reasoning under uncertainty, and machine learning. The field of Robotics is a multi-disciplinary as robots are amazingly complex system comprising mechanical, electrical, electronic H/W and S/W and issues germane to all these.

## Course Objectives

The objective of this course is to

1. Provide an overview of problem solving skills methods using Artificial Intelligence.
2. Equip the students with the study of programming languages that is used to develop an Intelligence System.

## Course Outcomes

On completion of this course, the students will be able to

- CO1: Explain how Artificial Intelligence enables capabilities that are beyond conventional technology, for example, chess-playing computers, self-driving cars, robotic vacuum cleaners and Understand the various searching techniques.
- CO2: Attain the capability to represent various real life problem domains using logic based techniques and use this to perform inference or planning.
- CO3: Acquire the knowledge of real world Knowledge representation. Apply concept Natural Language processing to problems leading to understanding of cognitive computing.
- CO4: Use different machine learning techniques to design AI machine and Write algorithms and implement programs in 'Prolog' language.
- CO5: Explain some of the more advanced topics of AI such as Robotics and Explain what constitutes "Artificial" Intelligence and how to identify systems with Artificial Intelligence.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<p><b>MODULE 1:</b></p> <p><b>PROBLEM SOLVING AND SCOPE OF AI</b></p> <p>Introduction to Artificial Intelligence. Applications- Games, theorem proving, natural language processing, vision and speech processing, robotics, expert systems. AI techniques- search knowledge, abstraction.</p> <p><b>PROBLEM SOLVING</b></p> <p>State space search; Production systems, search space control: depth-first, breadth-first search. Heuristic search - Hill climbing, best-first search, branch and bound. Problem Reduction, Constraint Satisfaction End, Means-End Analysis. LA* Algorithm, L(AO*) Algorithm.</p>	L1, L2, L3 and L4	10
<p><b>MODULE 2:</b></p> <p><b>KNOWLEDGE REPRESENTATION</b></p> <p>Knowledge Representation issues, first order predicate calculus, Horn Clauses, Resolution, Semantic Nets, Frames, Partitioned Nets, Procedural Vs Declarative knowledge, Forward Vs Backward Reasoning.</p>	L1, L2 and L4	6
<p><b>MODULE 3:</b></p> <p><b>UNDERSTANDING NATURAL LANGUAGES</b></p> <p>Introduction to NLP, Basics of Syntactic Processing, Basics of Semantic Analysis, Basics of Parsing techniques, context free and transformational grammars, transition nets, augmented transition nets, Shanks Conceptual Dependency, Scripts, Basics of grammar free analyzers, Basics of sentence generation, and Basics of translation.</p>	L1, L2 and L4	7

## Catalog Description

PROLOG programs tell the computer what to do (declarative programming) rather than how to do it (procedural programming). PROLOG does this by making deductions and derivations, instigated by user-defined queries, from facts and rules stored in a database. The module teaches PROLOG as a practical programming tool, useful in solving various interesting problems especially in the Artificial Intelligence domain.

## Course Objectives

The objective of this course is to

1. Provide an overview of a programming paradigm: programming by means of logic (also known as logic programming)
2. Provide an experience with development of AI application using PROLOG.

## Course Outcomes

On completion of this course, the students will be able to

CO1: Use the basic knowledge of PROLOG programming in order to write simple PROLOG programs and explore more sophisticated PROLOG code on their own.

CO2: Use Prolog for developing artificial intelligence applications.

Modules/Topics Covered**	Blooms level*	Number of hours
<p>1: INTRODUCTION TO PROLOG- SIMPLE FACTS, FACTS WITH ARGUMENTS.</p> <p><b>PROBLEM STATEMENT 1:</b></p> <ul style="list-style-type: none"> <li>Convert the following into Prolog Equivalent:</li> </ul> <p>It is raining.</p>	L1 and L3	4

### **Catalog Description**

Designing an algorithm is an important component of computer science. The objective of this course is to make students aware of various techniques used to evaluate the efficiency of a particular algorithm. Students eventually should learn to design efficient algorithm for a program.

### **Course Objectives**

The objective of this course is to

1. Equip the students with the concepts of complexity and analysis of algorithms.
2. Provide an understanding of different techniques used in designing algorithms for a variety of problems.
3. Equip the students with the concepts of complexity classes of different problems.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: State and explain the meaning of algorithm, analysis and design; apply the algorithmic concepts to analyze a given algorithm and compute its time complexity.

CO2: Explain and apply the concept of Divide and Conquer approach in designing algorithms; analyze a divide and conquer algorithm; explain and apply the concept of Greedy approach in designing algorithms for optimization problems.

CO3: Explain and apply the concept of Dynamic Programming in designing algorithms for optimization problems; compare and contrast the Dynamic Programming with Greedy approach and Divide and Conquer approach.

CO4: State and explain Elementary Graph Algorithms; explain and apply the concept of Branch & Bound and Backtracking in designing algorithms for different problems.

CO5: Define and explain the concept of computational complexity, Polynomial Bounded Algorithms, Class NP, Class NP Hard and Class NP Complete.

Modules	Blooms level*	Number of hours
<p>MODULE 1:</p> <p><b>INTRODUCTION</b>  Algorithm Design paradigms - motivation, concept of algorithmic efficiency, run time analysis of algorithms, Asymptotic Notations. Recurrences- substitution method, recursion tree method, master method</p>	L1, L2, L3, and L4	7
<p>MODULE 2:</p> <p><b>DIVIDE AND CONQUER APPROACH</b>  Structure of divide-and-conquer algorithms: examples; Binary search, quick sort, Merge sort, Strassen Multiplication; Analysis of divide and conquer run time recurrence relations.</p> <p><b>GREEDY APPROACH</b>  Overview of the greedy paradigm examples of exact optimization solution (minimum cost spanning tree), Approximate solution (Knapsack problem), Single source shortest paths, traveling salesman</p>	L1, L2, L3, and L4	8
<p>MODULE 3:</p> <p><b>DYNAMIC PROGRAMMING</b>  Overview, difference between dynamic programming and divide and conquer, Applications: Shortest path in graph, chain Matrix multiplication, Traveling salesman Problem, longest Common sequence, knapsack problem</p>	L1, L2, L3, and L4	8
<p>MODULE 4:</p> <p><b>ELEMENTRY GRAPH ALGORITHMS</b>  Overview, Representation of graphs, strongly connected components, Traversal methods (depth first and breadth first search)</p> <p><b>BACKTRACKING</b>  Overview, 8-queen problem, and Knapsack problem</p> <p><b>BRANCH AND BOUND</b>  LC searching Bounding, FIFO branch and bound, LC branch and bound application: 0/1 Knapsack problem, Traveling Salesman Problem</p>	L1, L2, L3, and L4	9
<p>MODULE 5:</p> <p><b>COMPUTATIONAL COMPLEXITY</b>  Complexity measures, Polynomial Vs non-polynomial time complexity; NP-hard and NP-complete classes, examples.</p>	L1 and L2	4

AIE6414	<b>DATA COMMUNICATION &amp; COMPUTER NETWORKS</b>	L	T	P	C
Version : 2020.1	Date of Approval: July 2020	3	0	0	3
Pre-requisites/Exposure	Basics of Computers				
Co-requisites	NIL				

### Catalog Description

The objective is to acquaint the students with the basics of data communication and networking. A structured approach to explain how networks work from the inside out is being covered. The physical layer of networking, computer hardware and transmission systems have been explained. In-depth application coverage includes email, the domain name system; the World Wide Web (both client- and server-side); and multimedia (including voice over IP.

### Course Objectives

The objective of this course is to

1. To provide an overview of data communication and computer networks, network specific protocols, networking devices, OSI /TCP-IP Layer concepts.
2. To familiarize with the basic taxonomy and terminology of computer networking area.
3. To experience the designing and managing of communication protocols while getting a good exposure to the TCP/IP protocol suite.

### Course Outcomes

On completion of this course, the students will be able to

CO1. State the functions of data component in communication, networking devices, characteristics of topologies and describe the functionality of layers in OSI model.

CO2. Explain Error correction and detection techniques; Differentiate between different type of protocols used at data link layer.

CO3. Describe channel allocation problem and illustrate the working and applications of different wireless LANs and WANs standards

CO4. Compare and Contrast different routing algorithms; discuss the frame format of IPv4 and IPv6 .

CO5. Compare and contrast different transport layer protocols and explain various protocols used at application layer.

Modules	Blooms level*	Number of hours
<b><u>Module I: Introduction</u></b>  <b><u>Introduction to computer networks, evolution of computer networks and its uses, reference models, example networks</u></b> <b><u>The physical layer: Theoretical basis for data communication, transmission media, wireless transmission, telecom infrastructure, PSTN, communication satellites, mobile telephone system</u></b>	L1, L2	8
<b><u>Module II: The data link layer</u></b>  <b><u>Data link layer design issues, error detection and correction, data link protocols, sliding window protocols, example of data link protocols-HDLC, PPP Access</u></b>	L2, L3 and L4	8
<b><u>Module III: Medium access layer</u></b>  Channel allocation problem, multiple access protocols, ALOHA, CSMA/CD, CSMA/CA, IEEE Standard 802 for LAN and MAN, Bridges, Wireless LANs. Introduction to wireless WANs: Cellular Telephone and Satellite Networks, SONET/SDH, Virtual-Circuit Networks: Frame Relay and ATM.	L2, L3	9
<b><u>Module IV: The network layer</u></b> <b><u>Network layer concepts, design issues, static and dynamic routing algorithms, shortest path routing, flooding, distance vector routing, link state routing, distance vector routing, multicast routing, congestion control and quality of service, internetworking, Ipv4</u></b>	L2, L3 and L4	6
<b><u>Module VI: The transport layer</u></b> The transport services, elements of transport protocols, TCP and UDP. The application layer: Brief introduction to presentation and session layer, DNS, E-mail, WWW	L2, L3 and L4	6

### Catalog Description

The objective is to acquaint the students with the basics of data communication and networking. A structured approach to explain how networks work from the inside out is being covered. The physical layer of networking, computer hardware and transmission systems have been explained. In-depth application coverage includes email, the domain name system; the World Wide Web (both client- and server-side), routing protocols and data link layer protocols.

### Course Objectives

The objective of this course is to

1. Equip the students with concepts of data communication and networking.
2. Provide an overview of various protocols and their configurations using networking devices and servers.

### Course Outcomes

On completion of this course, the students will be able to

CO 1: Demonstrate the use of Command Line Interface (CLI) and other features and Cisco Packet Tracer; describe and distinguish networking devices and transmission media.

CO 2: Apply various application layer protocols capability on server device including DNS, DHCP, HTTP, SMTP and POP.

CO 3: Construct network topology and operate routing protocols (RIP, OSPF and EIGRP) for end-to-end connectivity.

CO 4: Illustrate the use of data link protocols-HDLC and PPP; determine network connectivity issues and fix them.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>LABORATORY SESSION 1</b>  <b>THE PHYSICAL LAYER</b>  1. Introduction to different types of transmission media and cables. 2. Introduction to various networking devices and equipment. 3. Construct network topology and understand configuration of devices using Cisco Packet Tracer (tool).	L2, L3	6
<b>LABORATORY SESSION 2</b>  <b>THE APPLICATION LAYER</b>  1. Configuration of Domain Name System (DNS) server using Cisco Packet Tracer. 2. Configuration of Dynamic Host Configuration Protocol (DHCP) server using Cisco Packet Tracer. 3. Configuration of mail server using Cisco Packet Tracer. 4. Configuration of web server using Cisco Packet Tracer.	L3	6
<b>LABORATORY SESSION 3</b>  <b>THE NETWORK LAYER</b>  1. Configure Routing Information Protocol (RIP) using Cisco Packet Tracer. 2. Configure Open Shortest Path First (OSPF) routing protocol using Cisco Packet Tracer. 3. Configure Enhanced Interior Gateway Routing Protocol (EIGRP) using Cisco Packet Tracer.	L3	6
<b>LABORATORY SESSION 4</b>  <b>DATA LINK LAYER</b>  1. Configure and Analyze the working of data link control protocols-HDLC and PPP access. 2. Configure PPP security protocols-PAP and CHAP using Cisco Packet Tracer. 3. Determine various issues in network connectivity and communication using troubleshooting commands.  .	L3,L4	6

AIE6411	<b>Artificial Neural Network</b>	L	T	P	C
Version 2020.1	Date of Approval: July 2020	2	-	-	2
Pre-requisites/Exposure	Basic Knowledge of Brain functioning				
Co-requisites	Nil				

## Catalog Description

The course provides introduction to neural network and a deep insight into the basics of brain & its functioning basics of various neural models & neural schema used for learning. With this course students would be able to know the basics of each introductory feature of human brain and its features which would prove to be very helpful throughout their degree and would prove helpful in understanding other related subjects also.

## Course Objectives

The objective of this course is to

1. Equip the students with concepts of learning of brain problem solving techniques and develop proficiency in creating neural structures using the MATLAB.
2. Provide an overview of various control statements, data structures, packages related to image addition, graphics, different types of neural models.

## Course Outcome

On completion of this course, the students will be able to

CO 1: Define Artificial Neural Network & its similarity to biological neural network and explain its application in our day to day life.

CO 2: Analyze ANN learning, Error correction learning, Hebbian learning, Competitive learning and Boltzman Learning.

CO 3: Implement simple perceptron, Perceptron Learning rule, modified perceptron learning rule, feed forward neural network & feedback Neural Network.

CO 4: Explain self-organizing Map, Hopfield network, Adaptive resonance theory and its various learning rules.

CO 5: Analyze memory-based learning, Associative learning, Bi-directional learning and Auto associative learning.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module-I</b> Artificial Neural Networks (ANN) and biological neural networks, supervised and unsupervised learning rules, neural network applications	L1, L2 and L3	6
<b>Module-II</b> Unsupervised learning:- Hebbian learning and competitive learning. Supervised learning:- Back propagation algorithms, Learning rule:- Delta learning rule, Widrow-Hoff learning rule, Winner-Take-All learning rule	L1, L2 and L3	6
<b>Module-III</b> Feed forward neural network, feed backward neural network, Perceptron and its learning law, single-layer perceptron, multi-layer perceptron.	L2, L3 and L4	6
<b>Module-IV</b> Self organizing networks: Kohonen algorithm, Hopfield Networks: Hopfield network algorithm, Adaptive resonance theory: Network and learning rules.	L2, L3 and L4	6
<b>Module V</b> Associative memory, auto-associative memory, bi-directional associative memory.	L2, L3 and L4	6

### Catalog Description

In this Lab course first student should learn about advanced level of software used for easy calculation and toolbox used for software like MATLAB.

### Course Objectives

The objective of this course is to

1. Make the students apply knowledge of various neural models required for solving complex problems.
2. Provide a demonstration of different types of image processing techniques through MATLAB toolbox.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Acquiring knowledge of Basics of High-end calculation software and need in Computer Science & engineering

CO2: Demonstrate the All preliminary functions in MATLAB

CO3: Apply the knowledge of all the basics function and toolbox knowledge of MATLAB

CO4: Demonstrate the Neural Network model in MATLAB

CO5: Demonstrate usage of applications involving with Image processing & Its Toolbox used by MATLAB

<b>Modules/Topics Covered**</b>	<b>Blooms level*</b>	<b>Number of hours</b>
1. Introduction of MATLAB (a) Basic Variable declaration & its operation (b) Function use & its application	L3, L5	4
2. Sample Programs in MATLAB (a) Basic use of Matrix and Graph Plotting (b) Different type of graph plotting with use of different -2 type of data	L3, L5	6
3. Sample Programs using MATLAB functions (a) Create a basic program MATLAB using functions (b) Use of basic function Image processing (c) Practice on Basic function of Image processing tool box.	L3, L5	6
4. Sample programs of ANN functions (a) Practice on ANN toolbox function in MATLAB (b) Write a program for training a small network in MATLAB	L3, L5	6
5. Sample Programs using ANN tool box & Image processing toolbox (a) Demonstrate the use of ANN tool box & Image processing toolbox and write a program after combining it.	L3, L5	2

*\*Bloom's Level:*

AIE6407	<b>Communication System</b>	L	T	P	C
Version 2020.1	Date of Approval: July, 2020	2	0	0	2
Pre-requisites/Exposure	Signal and System				
Co-requisites					

### Catalog Description

The purpose of this course is to introduce students to the basic principles of the design and analysis of modern communication systems. It will provide a thorough study of both analog and digital modulation and demodulation schemes. The performance analysis of various techniques based on requirements of noise and bandwidth will also be explained. It also introduces the students to the information theory and coding for basic understanding of mobile communication system.

### Course Objectives

The objective of this course is to

1. Provide a thorough introduction to analog and digital communications
2. Provide in depth study of various modulation and demodulation techniques.
3. Introduce students to basics of information theory and coding for applications in mobile communication.

### Course Outcomes

On completion of this course, the students will be able to

CO1. Define and Distinguish analog and digital communication systems.

CO2. Differentiate modulation and demodulation techniques of AM and FM systems and compare them in terms of Bandwidth and noise.

CO3. Distinguish and categorize various digital modulation techniques.

CO4. Describe Information theory and coding for applications in mobile communication system by solving different encoding problems.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>MODULE I:</b>  <b>INTRODUCTION</b>  Communication Process, Source of Information, base-band and pass-band signals, Review of Fourier transforms, Random variables,	L1 and L2	4

different types of PDF, need of modulation process, analog versus digital communications		
<p>MODULE II:</p> <p>AMPLITUDE MODULATION</p> <p>Amplitude modulation with full carrier, suppressed carrier systems, single side band transmission, switching modulators, synchronous detection, envelope detection, effect of frequency and phase errors in synchronous detection, comparison of various AM systems, vestigial side band transmission.</p>	L1, L2, L3 and L4	8
<p>MODULE III:</p> <p>ANGLE MODULATION</p> <p>Narrow and wide band FM, BW calculations using Carson rule, Direct &amp; Indirect FM generations, phase modulation, Demodulation of FM signals, noise reduction using pre &amp; de-emphasis.</p>	L1, L2, L3 and L4	9
<p>MODULE IV:</p> <p>PULSE MODULATION</p> <p>Pulse amplitude, width &amp; position modulation, generation &amp; detection of PAM, PWM &amp; PPM, Comparison of frequency division and time division multiplexed systems. Basics of Digital Communications: ASK, PSK, FSK, QPSK basics &amp; waveform with brief mathematical introduction</p>	L1, L2, L3 and L4	6
<p>MODULE V:</p> <p>NOISE</p> <p>Different types of noise, noise calculations, equivalent noise band width, noise figures, effective noise temperature, noise figure.</p>	L1 and L2	4
<p>MODULE VI:</p> <p>INTRODUCTION TO INFORMATION THEORY</p> <p>Measurement of Information, mutual, Shannon's theorem, Source coding, channel coding and channel capacity theorem, Huffman code</p>	L1, L2 and L3	5

*\*Bloom's Level:*

AIE6407	<b>COMMUNICATION SYSTEMS LAB</b>	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	0	0	2	1
Pre-requisites/Exposure	Signal and System				
Co-requisites	Nil				

### Catalog Description

To impart knowledge on Amplitude Modulation and Angle modulation principles, generation, and its types. Also, to understand the basic concepts of pulse modulation techniques like PCM and PSK.

### Course Objectives

The objective of this course is to

1. To provide the basic skills required to understand, develop, and design of various engineering applications involving analog communication theory. To provide basic laboratory exposures for communication principles and applications.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Study the carrier modulation techniques like AM and FM modulation.

CO2: Study digital carrier modulation techniques using amplitude shift keying and Frequency shift keying.

CO3: Demonstrate various pulse modulation techniques (PCM), DM, ASK, DPSK and QPSK.

### List of Experiments:

Modules	Blooms level*	Number of hours
1. To study the sampling and reconstruction of a given signal. 2. To study amplitude modulation and demodulation. 3. To study frequency modulation and demodulation. 4. To study time division multiplexing.	L1, L2	8

5. To study pulse amplitude modulation. 6. To study delta and adaptive delta modulation and demodulation. 7. To study carrier modulation techniques using amplitude shift keying and Frequency shift keying.	L3 and L4	10
8. To study carrier modulation techniques using binary phase shift keying and differential shift keying. 9. To study pulse code modulation & differential pulse code modulation as well as relevant demodulations. 10. To study quadrature phase shift keying & quadrature amplitude modulation.	L2, L4	10

AIE6417	<b>Web Designing Technologies</b>	L	T	P	C
Version: 2020.1	Date of Approval: JULY 2020	2	0	0	2
Pre-requisites/Exposure	knowledge of Internet fundamentals				
Co-requisites	NIL				

## Catalog Description

The objective of this course is to introduce the basic concepts of HTML5 and CSS3. To explore and implement the various concepts of website design using HTML with the concept of the tags, script, and code that create web pages. To understand how the web and web pages work and web pages styles using CSS3. After completing this course students can easily develop static web sites and style them using CSS3.

## Course Objectives

The objective of this course is

1. Understand the advanced features of HTML5 which includes images, links, tables, frames and forms etc and gives an overview of CSS3 which is used to add style to the web pages.
2. Demonstrate the application of HTML5 in developing solutions to web site creation and understanding how CSS will affect web page creation.
3. Design a responsive web site using HTML5 and CSS3.

## Course Outcomes

On completion of this course, the students will be able to

- CO 1: Explain the basic concepts of HTML, structure of HTML. Apply the different tags for images, hypertext and lists in web pages.
- CO 2: Illustrate the different ways to use styles in web pages using CSS? Apply CSS style sheets for formatting text in web pages.
- CO 3: Explain the layout of CSS style and describe how to add audio and video in html web pages.
- CO 4: Demonstrate the use of Table and frames in web pages and setting properties for tables and frames.
- CO 5: Explain the writing scripts in web pages and publishing Webpages on web.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I</b> History of HTML, Basic HTML Structure, Creating title, Creating header and footer, Adding Comments, Formatting Text, Specifying time, Indicating citations/references, quotes, abbreviations, pre-formatted text, Inserting Images, Creating Image Links, Scaling images with the browser, setting icons for web page, Creating hypertext, anchor tag, Creating List, Creating Definition List, Creating Hyper Text Links, Creating Link Lists.	L2 and L3	8
<b>Module II</b> CSS building blocks, working with style sheets, Creating different types of style sheets- External , embedded and inline style sheets, defining selectors , Selecting on basis of class and id, selecting elements based on the attributes, combining selectors, Formatting text with styles, setting font properties.	L3 and L4	7
<b>Module III</b> CSS: Layout with style, changing the background color, setting border, changing the cursor, style sheets for mobile to desktop, working with web fonts, creating forms, organizing the form elements. Adding audio , video and other multi-media .	L2 and L3	7
<b>Module IV</b> Tables and frames, Creating Tables, Table Element, Adding Border, Adding Column Headings, Adding Spacing and Padding, Adding a Caption, Setting the table Width and Height, Add Row Headings, Aligning Cell contents, Setting Column Width, Centering a Table, Inserting and Image, Spanning Columns, Spanning Rows Assigning Background Colors, Frame Elements, Creation of Frame Based Pages.	L3	7
<b>Module V:</b> Working with scripts : Loading an external script, testing & debugging web pages, publishing your web page on the web.	L2	7

AIE6502	<b>COMPUTER ARCHITECTURE</b>	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Logic Gates				
Co-requisites	nil				

### Catalog Description

Computer architecture is concerned with the structure and behavior of the various functional modules of the computer and how they interact to provide the processing needs of the user. It includes basic register transfer language and computer organization and design. Complete insight on the working of CPU, Memory and I/O communication will be provided. Pipelining and related topics will also be discussed.

### Course Objectives

The objective of this course is to

1. Equip the students with concepts of computer architectures and their modules.
2. Provide an overview of various algorithms used and hardware implementation computer.

### Course Outcomes

On completion of this course, the students will be able to

- CO1. Explain about Register transfer language and various micro operations of arithmetic logic unit.
- CO2. Explain about the organization of computer modules and their details.
- CO3. Explain in details of central processing unit like general purpose register, accumulator etc. and computer arithmetic.
- CO4. Explain memory organization of computer and their interconnections. Details of direct memory access.
- CO5. Explain parallel processing and pipeline techniques.

Modules	Blooms level*	Number of hours
<b>Module I: Register Transfer Language</b> Register Transfer, Bus and Memory Transfers, Arithmetic Micro-operations, Logic Micro-operations, Shift Micro-operations, Arithmetic Logic shift Unit.	L1, L2 and L3	10
<b>Module II: Basic Computer Organizations and Design</b> <b>Instruction Codes, Computer Registers, Computer Instructions, Timing and Control, Instruction Cycle, Memory-Reference Instructions, Input-Output and Interrupt, Design of Accumulator Logic. Hardwired and Microprogrammed control: Control Memory, Address Sequencing, Design of Control Unit</b>	L1,L2	9
<b>Module III: Central Processing Unit</b> <b>Introduction, General Register Organization, Stack Organization, Instruction representation, Instruction Formats, Instruction type, Addressing Modes, Data Transfer and Manipulation, Program Control, Reduced Instruction Set Computer RISC and CISC Computer Arithmetic: Introduction, Addition and Subtraction Algorithm, Multiplication Algorithms, Booth Multiplication, Division Algorithms, Floating-Point Arithmetic Operations</b>	L1,L2, L3	10
<b>Module IV: Memory and Intersystem Communication and Input output organisation</b> Memory: Memory types and organization Memory Hierarchy, Main Memory, Auxiliary Memory, Associative Memory, Cache Memory with mapping techniques, Virtual Memory, Memory Management Hardware Intrasystem communication and I/O: Peripheral Devices, Input-Output Controller and I/O driver, IDE for hard disk, I/O port and Bus concept, Bus cycle, Synchronous and asynchronous transfer, Modes of Transfer, DMA, DMA Transfer, DMA Controller, I/O Processor, CPU-IOP Communication	L1,L2, L3.	10
<b>Module V: Pipelining, Vector Processing and Multiprocessors</b> <b>Parallel Processing, Pipelining, Arithmetic Pipeline, Instruction Pipeline, RISC Pipeline</b>  <b>Multiprocessors: Characteristics of Multiprocessors</b>	L1 and L2	9

AIE6503	<b>Java Programming</b>	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Basics of Programming				
Co-requisites	NIL				

## Catalog Description

The objective is to impart programming skills used in this object-oriented language java. The course explores all the basic concepts of core java programming like object, classes, data types, features, operators, control structures, interfaces, packages, applets, awt, swings and socket programming. The students are expected to learn it enough so that they can develop the basic applications as well as web solutions like creating applets etc.

## Course Objectives

The objective of this course is to

1. Equip the students with the basic feature of contemporary java required in solving complex problems.
2. Provide a practical knowhow and implementation of java programming concepts like classes, objects, packages, swings, socket programming.

## Course Outcomes

On completion of this course, the students will be able to

- CO1: Define and explain concept of byte code and platform independence, demonstrate basic java-based application development using operators, if-else, loops and arrays.
- CO2: Distinguish between various types of inheritances, polymorphisms and other concepts and able to solve complex programming problems involving class objects, inheritances, and packages.
- CO3: Describe hierarchy of exception classes and thread life cycle along with demonstrate and design solutions for some simple and complex applications using exception and multithreading concepts.
- CO4: Explain event delegation model and describe AWT class hierarchy; Apply knowledge of event handling and AWT controls create some new dynamic graphical applications.
- CO5: Explain the architecture of applet and concept of swing package. Demonstrate applications based on java applets and swings.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Java Basics</b> Concepts of OOP, Features of Java, How Java is different from C++, Environmental setup, Basic syntax, Objects and classes, Basic Data Types, Variable Types, Modifier Types, Basic operators, Loop Control, Decision Making, Strings and Arrays, Methods, I/O.	L1, L2 and L3	6
<b>Module II: Java Object Oriented</b> Inheritance, Overriding, Polymorphism, Abstraction, Encapsulation, Interfaces, Packages, Exploring java.util package.	L2 and L3	7
<b>Module III: Exception Handling and Threading</b> Exception Hierarchy, Exception Methods, Catching Exceptions, Multiple catch Clauses, Uncaught Exceptions Java's Built-in Exception. Creating, Implementing and Extending thread, thread priorities, synchronization suspending, resuming and stopping Threads, Multi-threading.	L2, L3 and L5	8
<b>Module IV: Event Handling And AWT</b> Event handling Mechanism, Event Model, Event Classes, Sources of Events, Event Listener Interfaces, AWT: Working with Windows, AWT Controls, Layout Managers	L2, L3, L4 and L5	8
<b>Module V: Java Advanced</b> Applet Class, Architecture, Skeleton, Display Methods. Swings: Japplet, Icons, labels, Text Fields, Buttons, Combo Boxes. Socket Programming: Socket methods, Server Socket methods, Socket Client and Socket Server examples.	L2 and L3	7

### Catalog Description

In this Lab course the basic features of contemporary java are implemented and demonstrated. Problems or programs will be related to concepts of classes, objects, threads, packages, exception handling, applets, AWT control, swings and socket programming. Concepts covered would enable them to create basic and complex console and graphical based applications for desktop and Internet

### Course Objectives

The objective of this course is to

1. Equip the students to apply knowledge of various basic java features required in solving basic and complex problems.
2. Provide a demonstration of basic java programming concepts like classes, objects, threads, packages, exception handling, applets, AWT control, swings and socket programming

### Course Outcomes

On completion of this course, the students will be able to

CO1: Apply the concepts learned of operators, if-else, loops and arrays to java based application development.

CO2: Demonstrate the use of various types of inheritances, polymorphisms, class objects, inheritances, packages and other concepts to basic and complex java programming problems.

CO3: Apply the knowledge of exception handling and multithreading concepts for some simple and complex applications.

CO4: Apply knowledge of event handling and AWT controls to create some new dynamic graphical applications.

CO5: Demonstrate graphical applications based on java applets, swings and event handling.

.

<b>Modules/Topics Covered**</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<p>1. Sample Programs using Objects and classes, Variable Types, Modifier Types, operators, Loops Decision Making, Strings and Arrays,</p> <p>(a) WAP to display “Hello, it’s a first program in java”.</p> <p>(b) WAP to find sum of two integers taken as input from user at runtime.</p> <p>(c) WAP to find sum of two float numbers taken as command line arguments</p> <p>(d) WAP to find changed case of entered character.</p> <p>(e) WAP to find maximum of 3 integer numbers taken as input from user at runtime.</p> <p>(f) WAP in java to find out the greatest out of ten numbers stored using arrays.</p> <p>(g) WAP to create class with “name” as String and “age” as integer data members. The class should have two methods to take input from user and display the data.</p> <p>(h) WAP to find factorial of a number using class and object.</p>	L3, L5	6
<p>2. Sample Programs using Inheritance, Overriding, Polymorphism, Interfaces, Packages</p> <p>a. WAP in java to illustrate the concept of interfaces.</p> <p>b. WAP to create a package as MyPack having a class with three methods: max, fact and show. Use it in other folder with setting classpath and without setting class path.</p> <p>c. Write a program in java to showcase uses of super keyword</p>	L3, L5	4
<p>1. Sample Programs using exception handling and threads</p> <p>a) Write a program to demonstrate the use of nesting of try-catch block</p> <p>b) WAP in java to illustrate the concept of using multiple catch clauses to handle different types of exceptions.</p> <p>c) WAP in java to create a user defined Exception and throw it explicitly.</p> <p>d) Demonstrate thread using Thread class and Runnable interface</p> <p>e) Demonstrate various thread methods using a program</p>	L3, L5	6
<p>(a) Sample Programs using event handling and AWT controls</p> <p>(b) Write a program to display “hello” in different color where user clicks left mouse button and “world” where right mouse button is clicked. Use black background.</p> <p>(c) WAP in java to create a Frame and handle window-closing event implementing the WindowListener interface.</p> <p>(d) WAP to create an Applet having various different buttons,</p>	L3, L5	6

<p>recognizing them using action command string method and handling click event generated by them.</p> <p>(e) WAP to create a frame and illustrate the concept of using an adapter class in place of interfaces for handling various mouse events generated over frame window.</p> <p>(f) WAP in java to create a frame with AWT controls (like label, push buttons, Checkbox, Checkbox Group) and handle various events generated by them.</p> <p>(g) WAP in java to create a frame with various AWT controls (like choice, list, TextField and Buttons) and handle the events thrown by them.</p>		
<p>5. Sample Programs using applets, swings and stream socket</p> <p>a) . Write an applet which will display “HAPPY” and “DEEPAVALI” as: The word “HAPPY” will roll from top to bottom and “DEEPAVLI” from bottom to “top” . Both will run at the same speed and stop simultaneously at the center of the applet.</p> <p>b) Write an applet to display last 32 shades of red, green and blue in equal sized square grid accompanied by appropriate labels like” Last 32 shades of Red/Green/Blue color”. Make use of BorderLayout to apply border for each individual shade.</p> <p>c) Create an applet with one single button with caption “Click”. On clicking the button will open a new Frame with title “Factorial”. The frame will have two three controls :TextField, Label and button. On clicking button calculate the factorial entered in TextField control.</p> <p>d) Create Java programs to demonstrate day time client and server</p> <p>e) Create java programs to create echo client and server</p>	L3, L5	2

*\*Bloom’s Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

**\*\* Sample Programs provided are not limited to these only, can include others as desired.**

### Catalog Description

The objective to this course is to equip students with advanced concepts of data structures like Huffman trees, Self organizing trees, different types of heaps and their time complexity. Advanced topics and graphs and graph algorithms, geometric algorithms and parallel algorithms.

### Course Objectives

The objective of this course is to

1. Understand and apply linear data structures-List, Stack and Queue and the graph algorithms.
2. Apply data structures and algorithms in real time applications and analyze the efficiency of algorithm

### Course Outcomes

On completion of this course, the students will be able to

CO1. Design and analyze programming problem statements.

CO2. Choose appropriate data structures and algorithms, understand the ADT/libraries, and use it to design algorithms for a specific problem.

CO3. Understand the necessary mathematical abstraction to solve problems.

CO4. Comprehend and select algorithm design approaches in a problem specific manner

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
MODULE 1:	L1, L2	7

<b>ADVANCED TREES</b> Definitions Operations on Weight Balanced Trees (Huffman Trees), 2-3 Trees and Red- Black Trees, Splay Tree. Augmenting Red-Black Trees to Dynamic Order Statistics and Interval Tree Applications. Operations on Disjoint sets and its union-find problem Implementing Sets. Dictionaries, Priority Queues and Concatenable Queues using 2-3 Trees.	and L3	
<b>MODULE 2:</b>  <b>MERGEABLE HEAPS:</b> Mergeable Heap Operations, Binomial Trees Implementing Binomial Heaps and its Operations, 2-3-4. Trees and 2-3-4 Heaps. Amortization analysis and Potential Function of Fibonacci Heap Implementing Fibonacci Heap. <b>SORTING NETWORK:</b> Comparison network, zero-one principle, bitonic sorting and merging network sorter.	L1,L2,L3	8
<b>MODULE 3:</b>  <b>GRAPH THEORY DEFINITIONS</b> Definitions of Isomorphic Components. Circuits, Fundamental Circuits, Cut-sets. Cut-Vertices Planer and Dual graphs, Spanning Trees, Kuratovski's two Graphs.	L1, L2 and L3	8
<b>MODULE 4:</b>  <b>GRAPH THEORY ALGORITHMS</b>  Algorithms for Connectedness, Finding all Spanning Trees in a Weighted Graph and Planarity Testing, Breadth First and Depth First Search, Topological Sort, Strongly Connected Components and Articulation Point. Single Min-Cut Max-Flow theorem of Network Flows. Ford-Fulkerson Max Flow Algorithms	L1, L2	7
<b>MODULE 5:Geometric algorithms</b>  Point location, convex hulls and Voronoi diagrams, Arrangements. Parallel algorithms: Basic techniques for sorting, searching, merging	L2,L4	6

### Catalog Description

Designing an algorithm is an important component of computer science. The objective of this course is to make students aware of various techniques used to evaluate the efficiency of a particular algorithm. Students eventually should learn to design efficient algorithm for a particular program.

### Course Objectives

The objective of this course is to

1. Equip the students with the concepts of complexity and analysis of algorithms.
2. Provide an understanding of different techniques used in designing algorithms for a variety of problems.
3. Equip the students with the concepts of complexity classes of different problems.

### Course Outcomes

On completion of this course, the students will be able to

CO1: State and explain the meaning of algorithm, analysis and design; apply the algorithmic concepts to analyze a given algorithm and compute its time complexity.

CO2: Explain and apply the concept of Divide and Conquer approach in designing algorithms; analyze a divide and conquer algorithm; explain and apply the concept of Greedy approach in designing algorithms for optimization problems.

CO3: Explain and apply the concept of Dynamic Programming in designing algorithms for optimization problems; compare and contrast the Dynamic Programming with Greedy approach and Divide and Conquer approach.

CO4: State and explain Elementary Graph Algorithms; explain and apply the concept of Branch & Bound and Backtracking in designing algorithms for different problems.

CO5: Define and explain the concept of computational complexity, Polynomially Bounded Algorithms, Class NP, Class NP Hard and Class NP Complete.

Modules	Blooms level*	Number of hours
<b>MODULE 1:</b>  Implementation of the following algorithms: <ul style="list-style-type: none"> <li>• Insertion Sort</li> <li>• Bubble Sort</li> <li>• Counting Number of Inversions</li> </ul>	L1, L2, L3, and L4	3

### Catalog Description

This course deals with the systematic study of the architecture and programming issues of 8085-microprocessor family. Explanation of microprocessor in terms of ALP and timing diagrams, Memory System Design & I/O Interfacing, peripheral devices and advance Pentium Processors.

### Course Objectives

The objective of this course is to

1. Equip with concepts of microprocessor and interfacing with peripheral devices.
2. Provide an overview of advance microprocessors.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Describe the architecture of 8085 microprocessor.

CO2: Describe assembly language programming and show timing diagram for 8085 microprocessors.

CO3: Explain the input output interfacing with peripheral devices and design of memory system for 8085 microprocessors.

CO4: Describe the architecture of 8086 microprocessor and compare with 8085 microprocessors.

CO5: Explain the working principles and architecture of 8087, 80x86 and Pentium processors.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Introduction to Microcomputer Systems</b> Introduction to Microprocessors and microcomputers, Study of 8-bit Microprocessor, 8085 pin configuration, Internal Architecture and operations, interrupts, Stacks and subroutines, various data transfer schemes.	L1 and L2	8
<b>Module II: ALP and timing diagrams</b> <u>Introduction to 8085 instruction set, advance 8085 programming, Addressing modes, Counters and time Delays, Instruction cycle, machine cycle, T-states, timing diagram for 8085 instruction.</u>	L2 and L3	10
<b>Module III:</b> <b>Memory System Design &amp; I/O Interfacing</b> <u>Interfacing with 8085. Interfacing with input/output devices (memory mapped, peripheral I/O), Cache memory system. Study of following peripheral devices 8255, 8253, 8257, 8255, 8251.</u>	L1 and L5	10
<b>Module IV: Architecture of 16-Bit Microprocessor</b> Difference between 8085 and 8086, Block diagram and architecture of 8086 family, pin configuration of 8086, Minimum mode & Maximum mode Operation. Internal architecture of 8086, Bus Interface Unit, Register Organization, Instruction Pointer, Stack & Stack pointer, merits of memory segmentation, Execution Unit, Register Organization.	L1 and L2	10
<b>Module V: Pentium Processors</b> .Internal architecture of 8087, Operational overview of 8087, Introduction to 80186, 80286, 80386 & 80486 processors, Pentium processor.	L1 and L2	10

### Catalog Description

This course focuses on the systematic study of the Architecture and programming of microprocessor family and its applications. The objectives of this course are:

1. To introduce students with the architecture operation and instruction set of 8085 and 8086 microprocessors.
2. To familiarize the students with the programming and interfacing of 8085 and 8086 microprocessors.
3. To provide the basic knowledge of the microprocessor needed to develop the embedded system based products as a solution to real time problems.

### Course Outcomes

On completion of this course, the students will be able to

CO1. Set up programming strategies and select proper mnemonics and run their program on the training boards

CO2. Develop assembly language programs for various problems keeping in mind technical issues and evaluate possible causes of discrepancy in practical experimental observations in comparison.

CO3. Understand the concepts related to I/O and memory interfacing and design interfacing circuits with 8085 by making use of different peripheral devices.

Modules	Blooms level*	Number of hours
<b>Lab Session 1: ALP using 8085:</b> <ol style="list-style-type: none"> <li>1. Write at least three different programs for addition of two 8 bit numbers assuming carry may or may not be generated.</li> <li>2. Write at least three different programs for subtraction of two 8 bit numbers assuming borrow may or may not be generated.</li> </ol>	L2, L3,L4	4

3. Write two different programs for 16 bit addition, one using instruction DAD and another without using instruction DAD. 4. Write assembly language program for 8 bit multiplication and division.		
<b>Lab Session II:</b> To study, understand, interface and two peripheral devices with 8085.	L4,L5,L6	2
<b>Lab session III:</b> Any three programs using 8085 based on block of data.	L4	1
<b>Lab session IV: ALP using 8086:</b> 1. Write an ALP to add list of 10 given numbers. 2. Write an ALP to sum the numbers from 1-100. 3. Write an ALP to count negative numbers from a given list of 10 numbers. 4. Write an ALP to check number of vowels in a given string.	L2, L3, L4	5

Co-requisites	NIL				

### Catalog Description:

In this course the concepts of General theory of Automata are discussed in detail. The course begins with the basic mathematical preliminaries and goes on to Theory of Computation (TOC), properties of regular sets and regular expressions, and the basics of formal languages. Besides, sufficient attention is devoted to such topics as push-down automaton and its relation with context free languages, Turing machines, the basic concepts of computability such as primitive recursive functions and partial recursive functions.

### Course Objectives

The objective of this course is to

1. Equip the students with concepts of general theory of Automata
2. Provide an overview of analyzing the various models such as Finite Automata, Push down Automata and Turing Machines under various formal languages.

### Course Outcomes

On completion of this course, the students will be able to,

CO1: Explain about Finite Automata including various formal languages, classify the role of DFA and NFA.

CO2: Define and analyzed various types of grammars in pushdown automata and classify PDA

CO3: Analyze the working of Turing Machine with its language and design new Turing machine based on problems

CO4: Categorize the solvable and un-solvable problems.

CO5: Compare the problems which are based on the different type of Recursive functions.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1: INTRODUCTION TO LANGUAGES AND AUTOMATA</b> Formal Grammars and Chomsky Hierarchy, Regular Expression	L1, L2 and L4	10

Deterministic and Nondeterministic Finite Automata, Regular Expression, two way Finite Automata, Finite Automata with output, Properties of regular sets, pumping lemma for regular sets, My-Hill-Nerode Theorem.		
<b>MODULE 2: CONTEXT FREE GRAMMARS AND PUSHDOWN AUTOMATA</b>  <b>CFG: Formal Definition, Derivation and Syntax trees, E-removal, Ambiguous Grammar, Properties of CFL, Normal Forms (CNF and GNF), Pushdown Automata: Definitions, Relationship between PDA and context free language, Decision Algorithms</b>	L1, L3 and L4	10
<b>MODULE 3: TURING MACHINE</b>  The Turing Machine Model, Language acceptability of Turing Machine, Design of TM, Universal TM, Church's Machine. Recursive and recursively enumerable language, unrestricted grammars, Context Sensitive Language, Linear Bounded Automata (LBA).	L3 and L4	10
<b>Module 4: UNDECIDABILITY</b> Turing machine halting Problem, undecidable problems for recursive enumerable language, Post correspondence problems (PCP) and Modified Post correspondence problems, Undecidable problems for CFL.	L2, L3 and L4	10
<b>Module 5: COMPUTABILITY</b> Partial and Total Functions, Primitive Recursive functions, Recursive functions.	L2 and L4	8

Version 2020.1	Date of Approval: JULY 2020	0	0	2	1
Pre-requisites/Exposure	Hands on knowledge of C and C++ Programming				
Co-requisites	Basic concepts of OOP Programming				

## Catalog Description

The course is designed to provide an introduction to the Python programming language. The focus of the course is to provide students with an introduction to programming, I/O, and visualization using the Python programming language.

## Course Objectives

The objective of this course is

1. Equip the students with the basic feature of python required in solving complex problems and build GUI applications
2. Provide a practical knowledge of implementation/demonstration of python programming concepts like of lists, tuples, dictionaries, Object Oriented Programming concepts in Python, Strings and Files in Python.

## Course Outcomes

On completion of this course, the students will be able to

- CO 1: Demonstrate the basics of python programming using if-else, loops and List, Dictionary, tuples.
- CO 2: Demonstrate the concept of inheritances, polymorphisms and other concepts and able to solve complex programming problems involving class objects.
- CO 3: Demonstrate the ability to write database applications in Python
- CO 4: Demonstrate Files Handling in Python.
- CO 5: Demonstrate database operation and GUI applications in python.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
1. Write a program which will find all such numbers which are divisible by 7 but are not a multiple of 5, between 2000 and 3200 (both included). The	L1,L2 and	4

<p>numbers obtained should be printed in a comma-separated sequence on a single line.</p> <p>2. Create a program that asks the user to enter their name and their age. Print out a message addressed to them that tells them the year that they will turn 100 years old.</p> <p>3. Define a function <code>max()</code> that takes two numbers as arguments and returns the largest of them. Use the if-then-else construct available in Python. (It is true that Python has the <code>max()</code> function built in, but writing it yourself is nevertheless a good exercise.)</p> <p>4. Define a function <code>max_of_three()</code> that takes three numbers as arguments and returns the largest of them.</p>	L3	
<p>5. Define a function that computes the length of a given list or string. (It is true that Python has the <code>len()</code> function built in, but writing it yourself is nevertheless a good exercise.)</p> <p>6. Write a function that takes a character (i.e. a string of length 1) and returns True if it is a vowel, False otherwise.</p> <p>7. Write a function <code>translate()</code> that will translate a text into "rövarspråket" (Swedish for "robber's language"). That is, double every consonant and place an occurrence of "o" in between. For example, <code>translate("this is fun")</code> should return the string "tothohisosisosfofunon".</p> <p>8. Define a function <code>sum()</code> and a function <code>multiply()</code> that sums and multiplies (respectively) all the numbers in a list of numbers. For example, <code>sum([1, 2, 3, 4])</code> should return 10, and <code>multiply([1, 2, 3, 4])</code> should return 24.</p> <p>9. Define a function <code>reverse()</code> that computes the reversal of a string. For example, <code>reverse("I am testing")</code> should return the string "gnitset ma I".</p>	L2 and L3	6
<p>10. Ask the user for a number. Depending on whether the number is even or odd, print out an appropriate message to the user</p> <p>11. Take a list, say for example this one:</p> <pre>a = [1, 1, 2, 3, 5, 8, 13, 21, 34, 55, 89]</pre> <p>and write a program that prints out all the elements of the list that are less than 5.</p> <p>12. Create a program that asks the user for a number and then prints out a list of all the divisors of that number. (If you don't know what a divisor is, it is a number that divides evenly into another number. For example, 13 is a divisor of 26 because 26 / 13 has no remainder.)</p> <p>13. Take two lists, say for example these two:</p> <pre>a = [1, 1, 2, 3, 5, 8, 13, 21, 34, 55, 89]</pre> <pre>b = [1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13]</pre> <p>and write a program that returns a list that contains only the elements that are common between the lists (without duplicates). Make sure your program works on two lists of different sizes.</p>	L2, L3, L4 and L5	4
<p>14. Ask the user for a string and print out whether this string is a palindrome or not. (A palindrome is a string that reads the same forwards and backwards.)</p>	L2, L3 and L4	4

<p>15. Let's say I give you a list saved in a variable: a = [1, 4, 9, 16, 25, 36, 49, 64, 81, 100]. Write one line of Python that takes this list a and makes a new list that has only the even elements of this list in it.</p> <p>16. Make a two-player Rock-Paper-Scissors game. (Hint: Ask for player plays (using input), compare them, print out a message of congratulations to the winner, and ask if the players want to start a new game)</p> <p><b>Remember the rules:</b></p> <ul style="list-style-type: none"> <li>• Rock beats scissors</li> <li>• Scissors beats paper</li> <li>• Paper beats rock</li> </ul>		
<p>14. Write a program that asks the user how many Fibonacci numbers to generate and then generates them. Take this opportunity to think about how you can use functions. Make sure to ask the user to enter the number of numbers in the sequence to generate.(Hint: The Fibonacci sequence is a sequence of numbers where the next number in the sequence is the sum of the previous two numbers in the sequence. The sequence looks like this: 1, 1, 2, 3, 5, 8, 13, ...)</p> <p>15. Write a program (function!) that takes a list and returns a new list that contains all the elements of the first list minus all the duplicates.</p> <p>16. Write a function that takes an ordered list of numbers (a list where the elements are in order from smallest to largest) and another number. The function decides whether or not the given number is inside the list and returns (then prints) an appropriate boolean.</p>	L2, L3 and L4	1

Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

### Catalog Description

The objective of this course is to provide practical training on some live projects that will increase capability to work on actual problem in industry. This training may undergo in an industrial environment or may be an in-house training on some latest software which is in high demand in market. This training will be designed such that it will be useful for their future employment in industry.

### Course Objectives

The objective of this course is to

1. Provide practical training on live projects
2. Increase technical capabilities on solving real life problems in company environment

### Course Outcomes

On completion of this summer internship, the students will be able to:

CO1: Develop communication, interpersonal and other critical skills in the job interview process.

CO2: Design and develop software and hardware projects

CO3: Assess interests and abilities in their field of study.

CO4: Demonstrate excellent technical and communication skills to acquire employment contacts leading directly to a full-time job following graduation from college.

AIE6511	<b>FUZZY LOGIC &amp; GENETIC ALGO</b>	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Basic Computer Concepts				
Co-requisites	Nil				

### **Catalog Description**

In this course the concepts of fuzzy logic and genetic algorithm are discussed in detail. This course will provide an understanding of fuzzy logic and genetic algorithm and an outlook on the applications of these techniques to solve real world problems. It also provides an understanding of fuzzy-genetic based machine learning.

### **Course Objectives**

The objective of this course is to

1. Provide the student with the basic understanding of genetic algorithm and fuzzy logic fundamentals, program and design the related systems.
2. Equip the students with concepts of fuzzy logic based solutions.
3. Provide an overview of performance of genetic algorithm, simulated annealing and tabu search.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: Develop the skills to gain a basic understanding of genetic algorithm and fuzzy logic theory.

CO2: Appreciate the learning and adaptation capability of neural and fuzzy systems.

CO3: Apply various operators to optimize. Perform mathematical calculation of the GA

CO4: Able to identify the present application areas of fuzzy logic and GA

CO5: Explain the working principle and compare the performance with other methods – Simulated annealing and Tabu search.

Modules	Blooms level*	Number of hours
<p>MODULE 1:</p> <p>Crisp sets: Overview, Fuzzy sets : Basic types and concepts, Characteristics and significance of paradigm shift, Fuzzy sets vs Crisp sets, Representation of fuzzy sets</p>	L1, L2 and L3	8
<p>MODULE 2:</p> <p>Types of operations, Fuzzy complements, Fuzzy intersection: t-norms, Fuzzy union: t-conorms, Combination of operations, Aggregation operation, Fuzzy numbers , Linguistic variables, Arithmetic operations on intervals, Arithmetic operations on Fuzzy numbers, Lattice of Fuzzy numbers, Fuzzy equation.</p>	L2, L3 and L6	10
<p>MODULE 3:</p> <p>General discussion, Fuzzy controller: Overview and example, Fuzzy systems and neural networks, Fuzzy neural network, Fuzzy automata. Pattern recognition in fuzzy logic, Database and information retrieval in fuzzy logic, decision making in fuzzy logic, engineering applications and fuzzy logic, Fuzzy logic in Medicine and Economics</p>	L1, L3 and L4	10
<p>MODULE 4:</p> <p>Fundamentals of genetic algorithm: A brief history of evolutionary computation, biological terminology, search space encoding, reproduction elements of genetic algorithm genetic modelling, comparison of GA and traditional search methods. The Fundamental Theorem, Schema Processing at work, Two-armed and k-armed Bandit problem, The Building block hypothesis.</p>	L1, L3 and L4	10
<p>MODULE 5:</p> <p>Genetic technology:- steady state algorithm, fitness scaling, inversion. Genetic programming:- Genetic Algorithm in problem solving, Implementing a Genetic Algorithm:- computer implementation, operator (reproduction, crossover and Mutation, Fitness Scaling, Coding, Discretization). Knowledge based techniques in Genetic Algorithm. Advanced operators and techniques in genetic search:-Dominance, Diploidy and Abeyance. Inversion and other reordering operators, Niche and speciation.</p>	L3, L4 and L6	10
<p>MODULE 5:</p> <p>Genetic Algorithm in engineering and optimization-natural evolution – Simulated annealing and Tabu search -Genetic Algorithm in scientific models and theoretical foundations. Applications of Genetic based machine learning- Genetic Algorithm and parallel processors- composite laminates- constraint optimization- multilevel optimization- real life problem.</p>	L3,L4,L6	05

## Catalog Description

This course is aimed to provide a fundamental understanding of JavaScript and two of its related library: Bootstrap and React for dynamic web site client side scripting. Javascript is a famous scripting language for client side. The bootstrap and react libraries are rich API for creating dynamic websites. The course builds strong foundation for client-side scripting for creating dynamic websites

## Course Objectives

The objective of this course is

1. Equip the students with basic and advanced features of javascript and bootstrap library to create dynamic web sites
2. Provide an overview of basic features of react library to design dynamic websites.

## Course Outcomes

On completion of this course, the students will be able to

CO1: Explain basic concepts of java scripts and apply them to create basic scripts

CO2: Explain the fundamentals of client side scripting ,document object model and apply them to create dynamic websites.

CO3: Apply basic APIs of bootstrap library to create dynamic websites

CO4: Demonstrate bootstrap java plugins and its use in designing sample websites.

CO5: Explain and apply react APIs in client side scripting

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1: Basics</b> Introduction to JavaScript, JavaScript Core Features—Overview, Data Types and Variables, Operators, Expressions, and Statements, Functions, Objects, Array, Date, Math, and Type-Related Objects, Regular Expressions	L2 and L3	8

<b>Module 2: Fundamental of Client-Side JavaScript</b> JavaScript Object Models, The Standard Document Object Model, Event Handling, Controlling Windows and Frames, Handling Documents, Form Handling, Dynamic Effects: Rollovers, Positioning, and Animation, Navigation and Site Visit Improvements, Browser and Capabilities Detection Advanced Topics: JavaScript and Embedded Objects, Remote JavaScript, JavaScript and XML	L2 and L3	7
<b>Module 3: Introduction to Bootstrap (Part 1)</b> <b>Bootstrap Scaffolding:</b> What Is Bootstrap?, Bootstrap File Structure, Basic HTML template, Global Styles Default: Grid System, Basic Grid HTML, Offsetting Columns, Nesting Column, Fluid Grid System, Container Layouts <b>Bootstrap CSS:</b> Typography, Code, Tables, <b>Bootstrap Layout Components:</b> Dropdown Menus, Button Groups, Buttons with Dropdowns, Navigation Elements, Navbar, Breadcrumbs Pagination, Labels, Badges, Typographic Elements	L2 and L3	7
<b>Module 4: Introduction to Bootstrap (Part 2)</b> <b>Bootstrap JavaScript Plugins:</b> Overview, Transitions ,Modal ,Dropdown, Scrollspy, Toggleable Tabs, Tooltips, Popover	L2and L3	7
<b>Module 5: The React Library</b> Writing Your First React App, Thinking in React, Server Communication, JSX and the Virtual DOM, Advanced Components, Forms in React.	L2 and L3	7

## VI SEMESTER

AIE 6603	Advanced Java Programming	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Basics of Java Programming				
Co-requisites	NIL				

### Catalog Description

In this course the advanced features of contemporary java are discussed in detail. Concepts covered would enable them to handle complex programs relating to managing data and processes over the network. Discussion will be on relating to concepts of remote method invocation to working with swings architecture. Further practical implementation of database connectivity and using them in servlet and jsp based applications will be made.

### Course Objectives

The objective of this course is to

1. Equip the students with the advanced feature of contemporary java required in solving complex problems.
2. Provide a practical knowhow and implementation of advanced java programming concepts like database programming with servlets and jsp.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Define and explain concept of an Remote method invocation application, demonstrate swing based application developed using concepts of remote method invocation

CO2: Distinguish between various java and open database connectivity drivers and able to solve complex programming problems involving database interaction.

CO3: Describe servlet and its lifecycle, along with demonstrate and design solutions for some complex dynamic web applications using servlets.

CO4: Explain jsp scripting and Differentiate between processing of servlets and jsp scripting pages. Apply knowledge of servlets and jsp scripting to create some new dynamic web applications.

CO5: Explain the architecture of Model View Controller and struts. Demonstrate applications based on java beans and struts.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>MODULE 1:</b>  <b>DISTRIBUTED COMPUTING</b> Introduction to Java RMI, RMI services, RMI client, Running client and server, Introduction of Swing, Swing Components, Look and Feel for Swing Components, Introduction to Multimedia Programming.	L1, L2 and L3	6
<b>MODULE 2:</b>  <b>DATABASE CONNECTIVITY</b> ODBC and JDBC Drivers, Connecting to Database with the java.sql Package, Using JDBC Terminology, JDBC with mysql, postgresql.	L2 and L3	7
<b>MODULE 3:</b>  <b>SERVLET PROGRAMMING</b> Introduction to Servlets, Servlet Life Cycle, Servlet based Applications, Servlet and HTML.Filters, jdbc with servlets, session Management techniques in detail.	L2, L3 and L5	8
<b>MODULE 4:</b>  <b>JSP PROGRAMMING</b> JSP: Introduction to JSP, JSP implicit objects, JSP based Applications, Java. Net. Login & Logout Example, jdbc with jsp.	L2, L3, L4 and L5	8
<b>MODULE 5:</b>  <b>J2EE WEB APPLICATION</b> The Model-View-Controller Architecture What is Struts, Struts Tags, Creating Beans, Other Bean Tags, Bean Output, Creating HTML Forms, The Action Form class The Action class, Simple Struts: a simple Struts application; Introduction to EJB.	L2 and L3	7

*\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

<b>AIE6608</b>	<b>Advanced Java Programming Lab</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2020.1	Date of Approval: JULY2020	0	0	2	1
Pre-requisites/Exposure	Basics of Java and Advanced Java Programming				
Co-requisites	NIL				

### **Catalog Description**

In this Lab course the advanced features of contemporary java are implemented and demonstrated. Concepts covered would enable them to create complex applications related to data management. Problems or programs will be related to concepts of remote method invocation, swings, servlets, jsp and java beans.

### **Course Objectives**

The objective of this course is to

1. Make the students apply knowledge of various advanced java features required in solving complex problems.
2. Provide a demonstration of advanced java programming concepts like database programming with servlets, jsp and creating java beans.

### **Course Outcomes**

On completion of this course, the students will be able to

- CO1: Apply the knowledge of swings architecture and remote method invocation used to provide solution to distributed computing problems
- CO2: Demonstrate the use of JDBC connectivity along with swings based architecture, thereby handling data management.
- CO3: Apply the knowledge of servlets and server programming to construct dynamic web applications using web servers.
- CO4: Demonstrate the differences between creating and deploying dynamic web applications using jsp concepts and servlets.
- CO5: Demonstrate usage of applications involving java beans and jdbc programming to handle data management.

<b>Modules/Topics Covered**</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<p>1.Sample Programs using swings architecture and remote method invocation</p> <p>(a) Write a program using swings creating tabbed panes and menu over a frame and handle their associated events</p> <p>(b) Write a program using swings List control containing list of cities, allowing the user to choose any one of them and display using event handing.</p> <p>(c) Demonstrate an application showcasing the use of remote method invocation(RMI) for designing a distributed application.</p> <p>(d) Create an application using concepts of RMI to depict a client server based interaction.</p>	L3, L5	6
<p>2.Sample Programs using JDBC and swings</p> <p>(a) Create an application demonstrating the use of swings, having a menu over a frame and jdbc programming to perform insert and select operations by handling menu related events.</p> <p>(b) Create an application using swings, having a design providing features for iterating over a dataset performing operations like forward, backward, start and end with help of jdbc programming.</p>	L3, L5	4
<p>(c) Sample Programs using servlets with jdbc, html and swings</p> <p>3. Create an application using servlets to perform redirection based on validating user data entered through a web form.</p> <p>4. Design an application to fetch data from database using servlets and display it using its post method.</p> <p>5. Demonstrate the process of writing cookies using a servlet and display a message after writing.</p> <p>6. Write a program to create a session object for the username fetched from user using a servlet, further access that session value on another servlet invoked by redirection.</p>	L3, L5	6
<p>7. Sample Programs using JSP with jdbc, html and swings</p> <p>(a) Write a program using jsp to demonstrate the features of jsp elements used to declare, define and display sum of two integers.</p> <p>(b) Create an application using jsp to calculate and display the greatest out of two integers using if else statements. Integer</p>	L3, L5	6

<p>numbers should be entered using a web form.</p> <p>(c) Demonstrate with a jsp program mechanism to retrieve checkbox data accessed using multiple value parameters fetching approach.</p> <p>(d) Write a program to demonstrate the use of jsp forward action tag used with parameters and processed using another jsp page.</p>		
<p>8. Sample Programs using jsp, java beans and swings</p> <p>(a) Demonstrate the use of jsp include action tag for including an html and another jsp page in initial jsp resource.</p> <p>(b) Write a program creating Java bean class and setting its properties using required jsp action tags. Output should also display the retrieved property values.</p>	L3, L5	2

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

**\*\* Sample Programs provided are not limited to these only, can include others as desired.**

<b>Course Code: AIE6604</b>	<b>ADVANCED DBMS</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Basic knowledge of DBMS				
Co-requisites	NIL				

### Catalog Description

*The objective of this course is to expose the students to the implementation techniques of database system. This course explains techniques for query processing and optimization with transaction and concurrency control techniques.*

### Course Objectives

The objective of this course is to

3. To understand the basic concepts and terminology related to DBMS and Relational Database Design
4. To design and understand Distributed, parallel and object oriented Databases.
5. To understand advanced DBMS techniques to handle and optimize queries in database.

### Course Outcomes

On completion of this course, the students will be able to

CO1. Understand the basics of database management system and implementation of relational database.

CO2. Knowhow of the file organization, Query Optimization, Transaction management, and database administration techniques.

CO3. Understand and design Distributed, parallel and object oriented Databases models and possible methods of proving them.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>MODULE 1:</b> <b>Relational Database</b> Integrity Constraints revisited, Extended ER diagram, Relational Algebra & Calculus, Functional, Multivalued and Join Dependency, Normal Forms, Rules about	L1, L2 and L3	8

functional dependencies.		
<b>MODULE 2:</b>  <b>Query Processing and Optimization</b> Valuation of Relational Operations, Transformation of Relational Expressions, Indexing and Query Optimization, Limitations of Relational Data Model, Null Values and Partial Information. <b>Objected Oriented and Object Relational Databases</b> Modeling Complex Data Semantics, Specialization, Generalization, Aggregation and Association, Objects, Object Identity, Equality and Object Reference, Architecture of Object Oriented and Object Relational Databases	L1,L2,13	9
<b>MODULE 3:</b>  <b>Parallel and Distributed Databases</b> Distributed Data Storage – Fragmentation & Replication, Location and Fragment Transparency Distributed Query Processing and Optimization, Distributed Transaction Modeling and concurrency Control, Distributed Deadlock, Commit Protocols, Design of Parallel Databases, and Parallel Query Evaluation. <b>Advanced Transaction Processing</b> Nested and Multilevel Transactions, Compensating Transactions and Saga, Long Duration Transactions, Weak Levels of Consistency, Transaction Work Flows, Transaction Processing Monitors.	L1, L2 and L3	10
<b>MODULE 4:</b>  Multimedia databases, Databases on the Web and Semi-Structured Data , Case Study: Oracle Xi	L1, L2	9

*\*Bloom's Level:*

## Catalog Description

*The objective of this course is to expose the students to the implementation techniques of database system. This course explains techniques for query processing and optimization with transaction and concurrency control techniques.*

### Course Objectives

The objective of this course is

1. Equip the students with the different issues involved in the design and implementation of a database system.
2. Provide a practical knowledge of implementation/demonstration of data manipulation language to query, update, and manage a database.

### Course Outcomes

On completion of this course, the students will be able to

CO1. Demonstrate and analyze and apply common SQL statements including DDL, DML and DCL statements to perform different operations.

CO2. Demonstrate and Apply different types of constraints on the database.

CO3. Design different views of tables for different users and to apply embedded and nested queries.

CO4. Design and implement a database for a given problem according to well known design principles that balance data retrieval performance with data consistency.

Modules	Blooms level*	Number of hours
Module1:  1. Introduction to SQL and understand basic commands  2. Understand various DDL and DML commands.	L1,L2 and L3	4

3. To understand joins in SQL.		
Module 2: 1. To understand constraints SQL 2. Wild cards and aggregate functions in SQL 3. To understand and execute procedures and views in SQL	L2 and L3	6
Module 3: 1. To understand and execute triggers in SQL 2. To develop a database application to demonstrate the representation of multi valued attributes and use of nested tables to represent complex objects. Write suitable queries	L2, L3, L4 and L5	4
Module 4: 1. To understand and execute Indexes in SQL	L2, L3 and L4	4
Module 5: 1. To understand the concept of Exception handling in SQL 2. Query Evaluation Plans 3. Concurrency and Transactions	L2, L3 and L4	1

### Catalog Description

The Objective of this course is to expose the students to the fundamentals and the concepts of Digital & Computer Organization and Representation of Information and Basic Building Blocks, Basic Organization, Memory Organization, Input-Output Organization, Processor Organization etc. This course is designed to understand the concepts of Computer Organization for Research & Development as well as for application.

### Course Objectives

The objective of this course is to

- An understanding of a machine's instruction set architecture (ISA) including basic instruction fetch and execute cycles, instruction formats, control flow, and operand addressing modes.

### Course Outcomes

On completion of this course, the students will be able to

CO1. Understand and Interpret the functional architecture of computing systems.

CO2. Identify, compare and assess issues related to ISA, memory, control and I/O functions.

CO3. Understand the general concepts in digital logic design, including logic elements, and their use in combinational and sequential logic circuit design.

CO4. Design and analyze solutions in the area of computer architecture.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>MODULE 1:</b> <b>Representation of Information and Basic Building Blocks</b> Overview of Computer hardware generation, Number Systems, Binary, Octal, Hexadecimal, Character Codes (BCD, ASCII, EBCDIC), Logic gates, Boolean algebra, K-map Simplification, Half adder, Full adder, Decoders, Multiplexes, Binary	L1, L2 and L3	7

Counters, Flip/Flops, Registers, Counters (Synchronous & Asynchronous), ALU, Micro-Operation, ALU-chip, Faster Algorithm and Implementation (multiplication & Division).		
<b>MODULE 2:</b>  <b>Basic Organization</b> Von Neumann Machine (IAS Computer), Operational flow chart (Fetch, Execute), Instruction Cycle, Organization of Central Processing Unit, Hardwired and Micro programmed control unit, Single Organization, General Register Organization, Stack Organization, Addressing Modes, Instruction Formats, Data transfer & Manipulation, I/O organization, Bus Architecture, Programming Registers.	L1,L2,L3	8
<b>MODULE 3:</b>  <b>Memory Organization</b> Memory hierarchy, Main Memory (RAM/ROM chips), Auxiliary memory, Associative memory, Virtual memory, Cache memory, Memory management hardware, hit/miss ratio, Magnetic disk and its performance, Magnetic Tapes etc.	L1, L2 and L3	8
<b>MODULE 4:</b>  <b>Input-Output organization</b> Peripheral devices, I/O interface, Direct memory access, Modes of transfer, Priority Interrupt, I/O Processors, Serial Communication, Asynchronous data transfer, Strobe Control, Handshaking, I/O Controllers.	L1, L2	7
<b>MODULE 5:</b>  <b>Processor Organization</b> Basic Concept of 8/16-bit microprocessor (8085/8086), Assembly Instruction Set, Assembly Language Program of 8085/8086: Addition of two numbers, Subtraction, Block Transfer, Find greatest number, Table search, Numeric manipulation, Introductory Concept of pipeline, Flynn's Classification, Parallel Architectural classification. <b>CSE2613</b>	<b>Software ENGINEERING</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2019.1	Date of Approval: 15 May 2019	3		0	3
Pre-requisites/Exposure	Basic Knowledge of software development				
Co-requisites	Nil				

### **Catalog Description**

In this course the concepts of Software development are discussed in detail. Various models of SDLC are introduced along with its application. Students will be able to apply these concepts in real time software project development.

### **Course Objectives**

The objective of this course is to

1. Gain the knowledge of how Analysis, Design, Implementation, Testing and Maintenance processes are conducted in a software project.
2. Apply their foundations in software engineering to adapt to readily changing environments using the appropriate theory, principles and processes.

### **Course Outcomes**

On completion of this course, the students will be able to

- CO1: Apply current theories, models, and techniques that provide a basis for the software lifecycle.
- CO2: Enable the students to apply a systematic application of scientific knowledge in creating and building cost effective software solutions to business and other types of problems.
- CO3: Be able to elicit, analyze and specify software requirements through a productive working relationship with various stakeholders of a software development.
- CO4: Be able to evaluate the impact of potential solutions to software engineering problems in a global society, using the knowledge of contemporary issues and emerging software engineering trends, models, tools, and techniques.
- CO5: Work as an individual and as part of a multidisciplinary team to design, develop and deliver quality software.

Modules	Blooms level*	Number of hours
<b>MODULE 1:</b> <b>Introduction</b> Software life cycle models: Waterfall, Prototype, Evolutionary and Spiral models, Overview of Quality Standards like ISO 9001, SEI-CMM	L1, L2 and L4	5
<b>MODULE 2:</b> <b>Software Metrics and Project Planning</b> Size Metrics like LOC, Token Count, Function Count, Design Metrics, Data Structure Metrics, Information Flow Metrics. Cost estimation, static, Single and multivariate models, COCOMO model, Putnam Resource Allocation Model, Risk management.	L2, L3 and L6	7
<b>MODULE 3:</b> <b>Software Requirement Analysis, design and coding</b> Problem Analysis, Software Requirement and Specifications, Behavioural and non-behavioural requirements, Software Prototyping Cohesion & Coupling, Classification of Cohesiveness & Coupling, Function Oriented Design, Object Oriented Design, User Interface Design Top-down and bottom-up Structured programming, Information hiding.	L2, L3 and L5	8
<b>MODULE 4:</b> <b>Software Reliability, Testing and Maintenance</b> Failure and Faults, Reliability Models: Basic Model, Logarithmic Poisson Model, Software process, Functional testing: Boundary value analysis, Equivalence class testing, Structural testing: path testing, Data flow and mutation testing, unit testing, integration and system testing, Debugging, Testing Tools, & Standards. Management of maintenance, Maintenance Process, Maintenance Models, Reverse Engineering, Software RE-engineering	L2, L3 and L4, L6	10
<b>MODULE 5:</b> <b>UML</b> Introduction to UML, <u>Use Case Diagrams</u> , <u>Class Diagram</u> , <u>State Diagram in UML</u> , <u>Activity Diagram in UML</u> , <u>Sequence Diagram in UML</u> , <u>Collaboration Diagram in UML</u> , Domain, Component Diagram and Deployment Diagram	L3, L4, L5	6

Version 2017.1	Date of Approval: 15 May 2019	0	0	1	1
Pre-requisites/Exposure	Basics of Software Engineering				
Co-requisites	NIL				

### **Catalog Description**

The course provides introduction to the fundamental's principles of software engineering. The organization broadly based on the classical analysis-design-implementation framework. Software Engineering is the systematic approach to the development, operation, maintenance, and retirement of software. Rational Rose Enterprise Edition software is used to serve the objectives. Students will be able to design models according to user requirement.

### **Course Objectives**

The objective of this course is to

1. The basic objective of Software Engineering is to develop methods and procedures for software development that can scale up for large systems and that can be used to consistently produce high-quality software at low cost and with a small cycle time.
2. Apply basic techniques of modeling computer systems.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: collect requirements and prepare their scenarios

CO2: Construct various UML models (including use case diagrams, class diagrams, interaction diagrams, state chart diagrams, activity diagrams, and implementation diagrams) using the appropriate notation

CO3: Demonstrate the role and function of each UML model in developing objectoriented software.

CO4: Recognize the difference between various object relationships: inheritance, association, whole-part, and dependency relationships.

<b>Modules/Topics Covered**</b>	<b>Blooms level*</b>	<b>Number of hours</b>
1. Introduction to Rational Rose Enterprise Edition tool and SRS (c) Explain features and characteristics of Rational Rose tool along with screenshots. (d) Create Software requirement specification document for Website application of educational institute.	L1, L2	4
2. Concept of UML and Use case diagram (c) Design Use case Diagram of ATM machine (d) Show dependencies and relationships through Use case diagram of Banking Management System	L1, L3	4
3. Class Diagrams and object diagram concepts (d) Design class diagram of Flight Reservation system (e) Design class diagram of student Management system (f) Design object diagram of courier service system (g) Design object diagram of Train Reservation system	L3, L1	8
4. Sequence, Activity, Collaboration, State chart diagram concepts (h) Design Activity diagram of Library Management system (i) Design Sequence diagram of Food Ordering system	L3, L1	8

1: strongly related, 2: moderately related and 3: weakly related

Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

### **Catalog Description**

The objective of this course is to provide practical training on some live/demo projects that will increase capability to work on actual problem in industry. It will be an in house training on some latest software which is in high demand in market. This training will be designed such that it will useful for their future employment in industry.

### **Course Objectives**

The objective of this course is to

1. Provide practical training on live projects
2. Increase technical capabilities on solving real life problems in company environment

### **Course Outcomes**

On completion of this minor project, the students will be able to:

CO1: Demonstrate a sound technical knowledge of their selected project topic.

CO2: Design and develop engineering solutions to complex problems utilising a systems approach.

CO3: Analyse various approaches for solving a complex engineering problem using different tools and techniques

CO4: Demonstrate the knowledge, skills and attitudes of a professional engineer.

CO5: Apply technical skills and knowledge in completing the project.

<b>CSE2614</b>	<b>IoT and Wireless Sensor Network</b>	L	T	P	C
Version 2019.1	Date of Approval: 15 May 2019	3	0	0	3
Pre-requisites/Exposure	Concept of Networking				
Co-requisites					

### Catalog Description

This course provides comprehensive and insight knowledge of Internet of Things and Wireless sensor networks. The objective of the course is to provide the students the core knowledge of architecture, routing protocols, time synchronization and security of IoT along with wireless sensor networks.

### Course Objectives

The objective of this course is to

3. Equip the students with concepts of internet-of-things and provide an overview of designing IoT devices.
4. Equip the students with concepts of wireless sensor networks and its architecture.
5. Provide a thorough understanding of routing protocols and power management.
6. Give an insight of time synchronization and network security.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Explain key terms and trends around the Internet of Things along with its physical and logical design.

CO2: Understand the potential and value of the Internet of Things and Smart Services.

CO3: Compare and analyze different routing techniques, protocols and power management.

CO4: Explain problems, fundamentals and protocols of time synchronization and localization.

CO5: Describe the fundamentals, issues and mechanism of network security.

Modules	Blooms level*	Number of hours
<b>Module 1: Introduction</b>  Module I: Introduction to Internet of Things Definition & characteristics of IoT, physical design of IoT-things in IoT, IoT protocols, logical design of IoT-IoT functional block, IoT communication models, IoT communication APIs, IoT enabling technologies-wireless sensor networks, cloud computing, big data analytics, communication protocols, embedded systems,IoT levels and deployment templates, IoT application.	L1, L2 and L4	9
<b>Module 2: Developing Internet of Things</b>  IoT Design Methodology,Logical design using Python- Python data types & data structures, control flow, functions, modules, packages,	L1, L2	6

classes, file handling, Python packages for IoTJSON, XML, HTTPLib, URLLib, SMTPLib, IoT end devices-building blocks, Introduction to Raspberry Pi.		
<b>Module 3: Introduction of WSN and Architectural Framework</b>  Motivation for a Network of Wireless Sensor Nodes, Classification of sensor networks, Hardware architecture, Applications: Structural Health Monitoring, Traffic Control, Health Care, Pipeline Monitoring, Precision Agriculture, Active Volcano, Underground Mining Node Architecture: The Sensing Subsystem, the Processor Subsystem, Communication Interfaces, Prototypes. Operating Systems: Functional Aspects, Non-functional Aspects, Prototypes, Evaluation Physical Layer,	L1, L2	9
<b>Module 4: Concept of Network Layer and Time Synchronization</b>  Basic Components, Source Encoding, Channel Encoding, Modulation Medium Access Control: Wireless MAC Protocols, Characteristics of MAC Protocols in Sensor Networks, Contention-Free MAC Protocols, Contention-Based MAC Protocols, Hybrid MAC Protocols Routing Metrics, Flooding and Gossiping, Data-Centric Routing, Proactive Routing, On-Demand Routing, Hierarchical Routing, Location-Based Routing, Clocks and the Synchronization Problem, Time Synchronization in Wireless Sensor Networks, Basics of Time Synchronization, Time Synchronization Protocols Localization: Ranging Techniques, Range-Based Localization, Range-Free Localization, Event Driven Localization.	L1, L2 and L4	8
<b>Module 5: Security in WSN</b> Fundamentals of Network Security, Challenges of Security in Wireless Sensor Networks , Security Attacks in Sensor Networks, Protocols and Mechanisms for Security, IEEE 802.15.4 and Zig Bee Security	L1, L2	6

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

Pre-requisites/Exposure	Basics of semiconductor and analog electronics				
Co-requisites	Nil				

### Catalog Description

This course deals with basic theories and techniques of digital VLSI design in CMOS technology. It covers the fundamental concepts and structures of designing digital VLSI systems which include CMOS devices and circuits, standard CMOS fabrication processes, CMOS design rules, static and dynamic logic structures, CMOS chip layout, simulation and testing, low power techniques, design tools and methodologies and Stick Diagrams.

### Course Objectives

The objective of this course is to

- Provide a deep understanding of the concepts, techniques and design of complex digital VLSI circuits.
- Apply mathematical methods and circuit analysis models to analyse CMOS digital circuits, and their logic components.

### Course Outcomes

On completion of this course, the students will be able to

CO1. Explain the characteristics of Basic VLSI components.

CO2. Apply the knowledge of various CMOS inverters to compare their performance.

CO3. To design and realize basic combinational and sequential functions using CMOS logic.

CO4. Design circuit Layout and Stick diagrams of CMOS logics.

Modules	Blooms level*	Number of hours
<b>Module I: Devices and the wire</b> Dynamic and transient behavior of Diode, Diffusion capacitance, SPICE Diode model, MOSFET basic, depletion and enhancement device.  MOSFET static behavior, Threshold voltage and its dependence on $V_{SB}$ MOSFET Operation in resistive and saturation region, channel length modulation, Velocity saturation and its impact on sub micron devices, sub threshold conduction, Model	L1, L2	8

<p>for manual analysis, Equivalent resistance for MOSFET in (velocity) saturated region, comparison of equations for PMOS and NMOS.</p> <p>Dynamic behavior, Channel capacitance in different regions of operation, junction capacitance, Level 1 SPICE models for MOS transistors.</p> <p>The Wire, Interconnect parameters: resistance, capacitance and Inductance, Lumped RC model, Elmore Delay.</p>		
<p><b>Module II: CMOS Inverter</b></p> <p>VTC of an ideal inverter, Switching Model of the CMOS inverter: NMOS /PMOS discharge and charge, VTC of CMOS inverter : PMOS and NMOS operation in various regions including velocity saturation, Switching threshold, <math>(W/L)_p/(W/L)_n</math> ratio for setting desired <math>V_M</math> with and without velocity saturation, Noise Margins, buffer. Ratioed logic: Pseudo NMOS inverter and PMOS to NMOS ratio for performance, tri-state inverter, Resistive load inverter.</p> <p>Load Capacitance calculations: fan out capacitance, self capacitance calculations: Miller effect, wire capacitance; Improving delay calculation with input slope, Propagation delay: first order analysis, analysis from a design perspective, sizing a chain of inverters for minimum delay, choosing optimum number of stages, Power, Energy and Energy Delay: Dynamic power consumption, Static power, Glitches and power dissipation due to direct path currents, power and delay trade off, Transistor sizing for energy minimization.</p>	L3, L4	8
<p><b>Module III: Combinational circuits</b></p> <p>CMOS LOGIC: Good 0 and Poor 0, series and parallel N and P switches, Two and Higher input NAND and NOR gates, Functions of the type <math>(AB+C(D+E))</math> and their complements, XOR and XNOR gates, 2 input Multiplexer, Full Adder; Transistor sizing in CMOS logic for optimal delay, Pseudo NMOS NAND NOR and other gates and the transistor sizing, Introduction to DSVCL logic, CPL AND/NAND, OR/NOR, XOR/XNOR gates, Logical effort, Electrical Effort, Branching effort, Examples of sizing Combinational logic chains for minimum delay, Pass-transistor logic, pass gate configurations for NMOS and PMOS, 2 input and 4 input MUX, XOR, XNOR and implementation of general functions like <math>AB+AB^*C+A^*C^*</math>, Robust and Efficient PTL Design, Delay of Transmission Gate chain.</p> <p>Dynamic CMOS design: Pre-charge and Evaluation, charge leakage, bootstrapping, charge sharing, Cascading Dynamic Gates, DOMINO Logic, Optimization of Domino Logic Gates, simple example circuit implementations of DOMINO logic.</p>	L2,L3,L4	10
<p><b>Module IV: Sequential Logic circuits</b></p> <p>Principle of bistability, NAND and NOR based SR latch, and clocked SR Latch, JK latch, example of master slave flip flop, CMOS D latch, , MUX based Latches, master slave edge triggered register, Static Timing Analysis –setup, hold time, clock skew, clock period, non ideal clocks, clock overlap, C2MOS register, TSPCR Register, Schmitt Trigger, Pipelining and NORA CMOS</p>	L2,L3,L4	5
<p><b>ModuleV: Layout Design Rules</b></p>	L2,L3,L4	5

Introduction to CMOS Process technology, Latch up and its prevention Layout of CMOS inverter, CMOS NAND and NOR gates, Concept of Euler path, and stick diagrams for functions like $(AB+E+CD)^*$ .

### Catalog Description

In this Lab course the designing of VLSI circuits using Mentor Graphics software are implemented and demonstrated. Concepts covered would enable them to create complex applications related to VLSI design. The objective of this course is to explore and implement the various features of VLSI design and analyze the dc and transient analysis.

### Course Objectives

The objective of this course is to

Provide a deep understanding of CMOS logic using Mentor Graphics tool.

Analyze, design concepts of different combinational and sequential circuits and their simulation.

### Course Outcomes

On completion of this course, the students will be able to

CO 1: Demonstrate the basic concept of MOSFET;

CO 2: Illustrate the static and switching characteristics of inverters using CMOS with varying capacitance, width and channel Length of CMOS using Mentor Graphics tool.

CO 3: Demonstrate and create models of moderately sized CMOS circuits that realize specified digital functions using Mentor graphics Tool.

CO 4: Demonstrate the layout and stick diagrams using Mentor graphics Tool.

CO 5: Demonstrate the power consumption during transient analysis.

<b>Modules/Topics Covered**</b>	<b>Blooms level*</b>	<b>Number of hours</b>
1. MOSFET characteristics with varying VGS for both pmos and nmos.	L3, L5	2

2. Effect on VTC of CMOS inverter with variation of W and L.	L3, L5	2
3. Transient analysis of CMOS inverter with varying capacitive load, W and L. Rise time, fall time power dissipation, propagation delay calculation of CMOS inverter with the variation of capacitive load, W and L.	L3, L5	4
4. NOR and NAND gate - Transient analysis	L3, L5	2
5. XOR/XNOR gate - Transient analysis	L3, L5	2
6. 2:1 MUX and XOR gate with P.T.L.- Transient analysis	L3, L5	2
7. D type latch and flip flop - Transient analysis	L3, L5	2
8. 3 input NAND gate implementation with DOMINO (precharge and evaluation).	L3, L5	2
9. 4 inverter chain to derive capacitive load.	L3, L5	2

*\*Bloom's Level:*

### **Catalog Description**

The course includes the content about PHP and its Programming Concepts. It includes basic architecture of running a PHP Script. It also includes the concepts about Conditional, Control Statements, Array, Associative Array, String Functions and Concepts of Functions : Call by Value and Reference. The course also includes concepts related to Object Oriented Programming in PHP and website design support along with Database Support concepts which will be useful to design Backend for the website.

### **Course Objectives**

The objective of this course is:

1. To provide a fundamental understanding of Dynamic Website Design in PHP.
2. To provide knowledge about various Frameworks build for Website Designing.

### **Course Outcomes**

On completion of this course, the students will be able to

After completing the course, the students will be able to,

CO 1: Explain the basic concepts of PHP programming and write PHP scripts using Strings and functions

CO 2: Explain and write PHP scripts based on Conditional statements, control statements and Arrays.

CO 3: Apply Object Oriented and Web Design concepts of PHP in order to create responsive web pages and websites

CO 4: Apply the concepts of Database and Database connectivity in order to provide backend support to website to make them Dynamic in nature

CO 5: Demonstrate the website designing process on various PHP Frameworks.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Introduction to Open Source and PHP programming</b> Introduction to Open Sources Technologies, Introduction to PHP, installation and configuration, Advantages and Disadvantages of PHP, Client Side Scripting, Server Side Scripting, Variables, data types, various types of function, creating your own function, Strings in PHP, String Functions.	L1, L2 and L3	4
<b>Module II: Operators, Loops, Array, Exception and Error Handling</b> Operators, Conditions, Loops, Using for each, Creating and Using Arrays, Multidimensional Array, Associative Array. Error Handling in PHP, Errors and Exceptions, Exception class, try/catch block, throwing an exception, defining your own Exception subclass.	L1, L2, L3	5
<b>Module III: Classes, File system, Passing Information between pages</b> Object oriented programming with Php, Working with Datetime, code re-use, require (), include(), and the include_path; Understanding PHP file permissions, File reading and writing functions, File system functions, File uploads, Sending mail & use of email server. HTTP, GET arguments, POST arguments, Using Session in PHP, cookies, The setcookie() function, Deleting Cookies and Reading Cookies.	L2, L3 and L4	7
<b>Module IV: Working with database</b> HTML Tables and Database tables, Databasemanipulation(Select, Insert, Update, Delete), validating User Input usingJavascript. MYSQL, Introducing MySQL; database design concepts; the Structured Query Language (SQL); communicating with a MySQL backend via the PHP, MySQL APIBuilding Database Applications, Developing PHP scripts for dynamic web page like feedback form, online admission form and online test.	L2, L3 and L4	5
<b>Module V: Working with Frameworks</b> Working with Mambo, Working with Joomla, Working with framework. Working with wordpress, Working with drupal, Use of Joomla in rapid development of website. Developing of simple website using joomla.	L2, L3 and L4	3

*\*Bloom's Level:*

## Catalog Description

The course includes PHP Programming Concepts. Conditional, Control Statements, Array, Associative Array, String Functions and Concepts of Functions: Call by Value and Reference are implemented. The course also includes concepts related to Object Oriented Programming in PHP and website design support along with Database Support concepts which will be useful to design Backend for the website.

## Course Objectives

The objective of this course is:

1. To provide a fundamental understanding of Dynamic Website Design in PHP.
2. To provide knowledge about various Frameworks build for Website Designing.

## Course Outcomes

On completion of this course, the students will be able to

- CO 1: Apply the basic concepts of PHP programming to rewrite PHP scripts using Strings and Functions
- CO 2: Demonstrate the concept of Conditional & Control Statements and 1 D, 2 D & Associative Array using PHP scripts
- CO 3: Apply Object Oriented and Web Design concepts of PHP in order to prepare responsive web pages and websites
- CO 4: Apply the concepts of Database and Database connectivity to prepare backend support for website.

Lab Sessions	Blooms level*	Number of hours
<b>1. PHP Scripts on Basic Concepts</b> <ul style="list-style-type: none"> <li>• Write the process of installation of web server.</li> <li>• Write programs to print all details of your php server. Use phpinfo().</li> <li>• Write a program to give demo of ECHO and PRINT command.</li> <li>• Write a program to implement the string functions.</li> </ul>	L1,L3	2

<b>2. PHP Script on Conditional and Control Statements</b> <ul style="list-style-type: none"> <li>Write a script to print Fibonacci series upto a given number.</li> <li>Write a menu driven program to implement a calculator which performs only addition, subtraction, multiplication and division. The operation should happen based on user choice.</li> <li>Write a script to calculate Factorial of a given number</li> </ul>	L1,L3	4
<b>3. PHP Scripts on Arrays: 1D, 2D, Associative</b> <ul style="list-style-type: none"> <li>Write a program sort ten number by using array.</li> <li>Write a program to demonstrate the concept of associative array.</li> <li>Write a program to demonstrate the concept of multidimensional array.</li> </ul>	L1,L3	4
<b>4. PHP Scripts on Object Oriented Programming and File Handling Concepts</b> <ul style="list-style-type: none"> <li>Write a program to demonstrate the concept of Classes &amp; objects.</li> <li>Write a php script including all the file handling functions.</li> </ul>	L1,L3	2
<ul style="list-style-type: none"> <li><b>PHP Scripts on Webpage and Website Design Concepts</b></li> <li>Create a login form with two text fields called “login” and “password”. When user enters “Amity” as a user name and “university” as a password it should be redirected to a Welcome.HTML page or to Sorry.HTML in case of wrong username/password.</li> <li>Write a program to design login form in which find the greatest number amongst three numbers.</li> <li>WAP for Marksheet generation.</li> <li>Design a webpage for entering the student details with all the validations applied on it.</li> <li>Create a form with a text box asking to enter your favorite city with a submit button when the user enters the city and clicks the submit button another php page should be opened displaying “Welcometo the city”.</li> </ul>	L1,L3	6
<b>5. PHP Scripts on Database Creation aConnectivity</b> <ul style="list-style-type: none"> <li>Create a database in MySql and connect that database from PHP.</li> <li>Write a program to Update, insert and delete the values of table in database.</li> </ul>	L1,L3	4

Co-requisites	Nil				

### **Catalog Description**

Data Mining serve as one of the most important courses for postgraduate students, since it builds computational abilities, inferential thinking, and practical skills for tackling core data scientific challenges. The students will get a comprehensive understanding of different data mining techniques that can be used for prediction and for discovering patterns, be prepared to select the right technique for a given data problem and will be able to create a general-purpose analytic process.

### **Course Objectives**

The objective of this course is to

- Provide students with an in-depth knowledge of data mining. To introduce students to basic applications, concepts, and techniques of data mining.
- Develop skills for using recent data mining software to solve practical problems and prediction in a variety of disciplines and
- Gain experience doing independent study and research.

### **Course Outcomes**

On completion of this course, the students will be able to

CO 1: Explain concepts of Data mining, predictive analytics and analyses architecture of data mining. Differentiate between supervised and unsupervised methods

CO 2: Apply classification techniques on different data sets and solve cost –benefit analysis numerical. Analyze decision tree methods.

CO 3: Implement various clustering algorithm on different data sets and describe these algorithms.

CO 4: Prepare data representation for market basket analysis and determine the usefulness of association rules. Interpret supervised and unsupervised learning methods.

CO 5: Predict market trends and outline different factors associated mail marketing.

## Course Content

Modules	Bloom's level	Number of Hours
<b>Module I Data Preparation</b>  An introduction to data mining and predictive analytics, Data Pre-processing Exploratory Data Analysis, Dimension- Reduction Methods.	L1, L2	8
<b>Module II Classification</b>  k- Nearest Neighbour Algorithm, Decision Trees, Model Evaluation Technique, Cost –Benefit Analysis Using Data Driven Cost.	L1, L2, L3	7
<b>Module III Clustering</b>  Hierarchical and k- Means Clustering, Kohonen Networks, Birch Clustering, Measuring Cluster Goodness.	L1, L2, L3, L4	8
<b>Module IV Association Rules</b>  Affinity Analysis and Market Basket Analysis, Data Representation for Market Basket Analysis, Support, Confidence, Frequent Item sets, and the a Priori Property, How Does a Priori Algorithm Work? Generating Frequent Item sets, Generating Association Rules, Extension from Flag Data to General Categorical Data, Information-Theoretic Approach: Generalized Rule Induction Method, J-Measure, Association Rules are Easy to do Badly, how can we Measure the Usefulness of Association Rules? Do Association Rules Represent Supervised or Unsupervised Learning?	L1, L2, L3, L6	9
<b>Module IV Case Study: Predicting Response to Direct Mail Marketing</b>  Business Understanding, Data Preparation, and Eda, Clustering and Principal Components Analysis, Modelling and Evaluation for Performance and Interpretability, Modelling and Evaluation for High Performance.	L2, L3, L4, L5	8

<b>AIE 6702</b>	<b>Computer graphics</b>	L	T	P	C
Version: 2020.1	Date of Approval: JULY 2020	3	-	-	3
Pre-requisites/Exposure	Basic Knowledge of C++ Programming				
Co-requisites	Nil				

### Catalog Description

This course covers understanding of software and hardware related to computer graphics systems. Topics include an introduction to the basic concepts, 2-D and 3-D modeling and transformations, viewing transformations, clipping, color filling, projections, rendering techniques, visible surface detection and elimination algorithms, graphical software packages and graphics systems. Students will use a standard computer graphics API to reinforce concepts and study fundamental computer graphics algorithms. Last module covers elementary image processing techniques and various library function in C to build animations.

### Course Objectives

The objective of this course is to

1. Equip the students with fundamental concepts of graphics system and standards.
2. Equip the students with mathematical concepts of graphics algorithms to draw objects using C language.
3. Provide an overview of various 2D & 3D transformation, clipping operations, algorithms related to hidden surface detection and elimination and their implementation.
4. Provide an overview of various elementary image processing techniques and basic library function in C to create animation sequence.

### Course Outcomes

On completion of this course, the students will be able to

- CO 1: Explain applications of computer graphics and define various standards and components in development of computer graphics.
- CO 2: Explain generation of graphics primitives and analyze their problems and solutions. Demonstrate solid filling algorithms. Demonstrate polygon clipping and line clipping algorithm and analyze their problems and solutions.

CO 3: Apply 2D geometric transformations on 2D graphics objects with their practical implementation. Illustrate use of window to viewport transformation in computer graphics.

CO4: Apply 3D geometric transformations on 3D objects with their practical implementation.

CO 5: Illustrate the use of 3D object modeling, Visible Surface detection and elimination algorithm

and analyze their problems and solutions.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Introduction to Graphics and Graphics Hardware System</b>  Application of computer graphics, Video Display Devices, Raster Scan Display, Random Scan Display, Input Devices, Graphic Software and graphics standards, Numerical based on Raster and Random scan display, Frame buffer, Display processor.	L1, L2	5
<b>Module II: Output Primitives and Clipping operations</b>  Algorithms for drawing 2D Primitives lines (DDA and Bresenham's line algorithm), circles (Bresenham's and midpoint circle algorithm), ellipses (midpoint ellipse algorithm), Antialiasing and filtering techniques. Line clipping (cohen-sutherland algorithm), Curve clipping algorithm, and polygon clipping with Sutherland Hodgeman algorithm, Area fill algorithms for various graphics primitives: Scanline fill algorithm, boundary fill algorithm, flood fill algorithm, Polygon representation, various method of Polygon Inside test: Even-Odd method, winding number method, Character generation techniques.	L2, L3, L4	6
<b>Module III: 2D Geometric transformation</b>  2D Transformation: Basic transformation, Translation, Rotation, Rotation relative to an arbitrary point, scaling, Matrix Representations and Homogeneous coordinates, window to viewport transformation.	L3 and L4	6
<b>Module IV: 3D Geometric transformation</b>  3D Concepts: Parallel projection and Perspective projection, 3D Transformations, composite 3D transformation, co-ordinate transformation, Inverse transformation	L3 and L5	7
<b>Module V: object modelling and Visible Surface detection</b>	L4, L5	7

fractal geometry methods, fractal dimensions, Geometric construction of deterministic self-similar fractals, Iterated function system to generate fractals. Bezier curves and Bezier surfaces, Bspline curves and surfaces, Visible surface detection method: Basic illumination, diffuse reflection, specular reflection, shadows. Ray tracing method, Depth-buffer method, A-buffer method, Depth-sorting method (painter's algorithm), Binary search partition method, Scan line method,		
<b>Module VI: Introduction to multimedia</b> Design of animation sequences, Computer Animation languages, Elementary filtering techniques and elementary Image Processing techniques, graphics library functions used in animation design	L2, L3, L5	5

## Catalog Description

This course covers understanding of software and hardware related to computer graphics systems. Topics include an introduction to the basic concepts, 2-D and 3-D modeling and transformations, viewing transformations, clipping, color filling, projections, rendering techniques, visible surface detection and elimination algorithms, graphical software packages and graphics systems. Students will use a standard computer graphics API to reinforce concepts and study fundamental computer graphics algorithms. Last module covers elementary image processing techniques and various library function in C to build animations.

## Course Objectives

The objective of this course is to

1. Equip the students with fundamental concepts of graphics system and standards.
2. Equip the students with mathematical concepts of graphics algorithms to draw objects using C language.
3. Provide an overview of various 2D & 3D transformation, clipping operations, algorithms related to hidden surface detection and elimination and their implementation.

4. Provide an overview of various elementary image processing techniques and basic library function in C to create animation sequence.

### Course Outcomes

On completion of this course, the students will be able to

CO 1: Explain applications of computer graphics and define various standards and components in development of computer graphics.

CO 2: Explain generation of graphics primitives and analyze their problems and solutions. Demonstrate solid filling algorithms. Demonstrate polygon clipping and line clipping algorithm and analyze their problems and solutions.

CO 3: Apply 2D geometric transformations on 2D graphics objects with their practical implementation. Illustrate use of window to viewport transformation in computer graphics.

CO4: Apply 3D geometric transformations on 3D objects with their practical implementation.

CO 5: Illustrate the use of 3D object modeling, Visible Surface detection and elimination algorithms and analyze their problems and solutions.

CO 6: Explain Elementary filtering techniques and elementary Image Processing techniques. Apply C++graphics library functions to design animation sequence.

Modules	Blooms level*	Number of hours
<b>Module I: Introduction to Graphics and Graphics Hardware System</b>  1. Demonstrate the use of graphics library functions to draw various graphics objects. 2. Demonstrate the use of graphics library functions to draw pie chart. 3. Demonstrate the use of graphics library functions to draw bar chart on screen.	L3,L5	2

<b>Module II: Output Primitives and Clipping operations</b> <ol style="list-style-type: none"> <li>1. Demonstrate the use of DDA line drawing algorithm to draw line on the screen when <math>m \leq 1</math> and <math>m &gt; 1</math>.</li> <li>2. Demonstrate the use of DDA line drawing algorithm to draw line on the screen when <math>m \leq 1</math> and <math>m &gt; 1</math>.</li> <li>3. Demonstrate the use of Bresenham's line drawing algorithm to draw line on the screen when <math>m \leq 1</math> and <math>m &gt; 1</math>.</li> <li>4. Demonstrate the use of circle drawing algorithm to draw circle on the screen.</li> <li>5. Write a program to draw characters on screen using bitmap character generation method.</li> <li>6. Write a program to fill a polygon using boundary fill algorithm.</li> <li>7. Write a program to fill a polygon using flood fill algorithm.</li> <li>8. Write a program to demonstrate line clipping algorithm to clip a line where line slope is <math>m \leq 1</math>.</li> </ol>	L3,L5	6
<b>Module III: 2D Geometric transformation</b> <ol style="list-style-type: none"> <li>1. Write a program to translate a triangle where translation factors are <math>t_x=20</math> and <math>t_y=30</math>.</li> <li>2. Write a program to rotate a triangle in clock-wise and anti-clock-wise direction where rotation angle is 300.</li> <li>3. Write a program to scale a square where scaling factors are <math>S_x=2</math> and <math>S_y=3</math>.</li> <li>4. Write a program to reflect a triangle about X axis.</li> <li>5. Demonstrate combine 2D transformation after applying translation, rotation and scaling transformations.</li> <li>6. Write a program to demonstrate fix point scaling where scaling factors are <math>S_x=2</math> and <math>S_y=3</math>.</li> <li>7. Write a program to demonstrate window to viewport transformation and linear mapping of the object coordinates in viewport where size of viewport is half to the size of window.</li> </ol>	L3,L5	6
<b>Module IV: 3D Geometric transformation</b> <ol style="list-style-type: none"> <li>1. Write a program to translate a 3D triangle where translation factors are <math>t_x=20</math> and <math>t_y=30</math>.</li> <li>2. Write a program to rotate a 3D triangle in clock-wise and anti-clock-wise direction where rotation angle is 300.</li> <li>3. Write a program to scale a 3D square where scaling factors are <math>S_x=2</math> and <math>S_y=3</math>.</li> <li>4. Demonstrate combine 3D transformation after applying translation, rotation and scaling transformations.</li> </ol>	L3,L5	4
<b>Module V: Object modelling and Visible Surface detection</b> <ol style="list-style-type: none"> <li>1. Write a program to draw Bezier curve on the screen with 4 control points.</li> <li>2. Write a program to draw spline curve on screen using 6 control points.</li> <li>3. Write a program to implement fractal objects using Iterated Function System.</li> </ol>	L3,L5	3

### Catalog Description

Advanced Computer Networks provides the knowledge of computer networks and related current research topics. This course illustrates the OSI and TCP-IP layers, services, devices, cables, protocols, network security, network performance parameters etc. This course focuses on advanced computer network concepts in theory as well as in real life applications in networking.

### Course Objectives

The objective of this course is to

1. Equip the students with the advanced networking concepts.
2. Explain the different techniques of error detection and correction methods used at various layers.
3. Provide an overview of various algorithms involved in advanced computer networks at OSI and TCP-IP Layers.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Explain the concept of reference model, wireless Ethernet standards, protocols and applications of networks.

CO2: Describe network Layer design issues, routing algorithms, IP addressing.

CO3: State Multicasting issues and multicast routing protocol. Describe mobile IP and its use in Multicasting.

CO4: State transport and application layers and explain services, protocols, performance parameters in these layers. Also describe DNS, Email and www with applications of each in computer network.

CO5: State network security and describe various types of computer network security, the digital signature, security algorithms. Explain the social issues related to network security and web security.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
MODULE 1: Uses computer networks, Reference Models, TCP/IP suite of protocols, MAC protocols for high-speed LANS, MANs, and wireless LANs. (For example, FDDI,	L1, L2	6

DQDB, HIPPI, Gigabit Ethernet, Wireless Ethernet, etc.)Fast access technologies. (For example, ADSL, Cable Modem, etc.)		
MODULE 2: Network Layer Design Issues, Routing Algorithms, Congestion Control Algorithms, Quality of Service, Internet Working, Network Layer in Internet.  IPv6 basic protocol, extensions and options, support for QoS, security, etc., Changes to other protocols, Application Programming Interface for IPv6.	L2, L3	8
MODULE 3: Mobile IP, IP Multicasting. Multicast routing protocols, address assignments, session discovery, etc.	L1, L2	8
MODULE 4: The Transport Protocol: The Transport Service, Elements of transport protocol, a simple Transport Protocol, Internet Transport Protocols UDP, Internet Transport Protocols TCP, TCP extensions for high-speed networks, transaction-oriented applications Performance Issues. The Application Layer: DNS-(Domain Name System), Electronic Mail, World Wide Web Multimedia.	L1, L2, and L3	8
MODULE 5: Overview of network security, Secure-HTTP, SSL, ESP, Key distribution protocols. Digital signatures, digital certificates-mail Security, Web security, Social Issues..	L1, L2	6

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation*

### Catalog Description

Advanced Computer Networks Lab provides the knowledge of various installations & connections of LAN, WAN, etc, study of Cisco Packet Tracer Tool and its implementations, simulation of flow-control protocols such as Sliding Window, Stop & Wait with help of programming languages. This course focuses on real-life applications in networking and its software implementation in the laboratory.

### Course Objectives

The objective of this course is to

- Equip the students with the advanced networking concepts.
- Explain the different techniques of error detection and correction methods used at various layers.
- Provide an overview of various algorithms involved in advanced computer networks at OSI and TCP-IP Layers.

### Course Outcomes

On completion of this course, the students will be able to

- CO1: Understand fundamental underlying principles of computer networking
- CO2: Understand details and functionality of CISCO router
- CO3: Demonstrate and configure details and functionality of DHCP server
- CO4: Analyze performance of various communication protocols.
- CO5: Compare routing algorithms

Modules	Blooms level*	Number of hours
<b>MODULE 1:</b> 1. Configuration and logging to a CISCO Router and introduction to the basic user Interfaces. Introduction to the basic router configuration and basic commands. 2. Configuration of IP addressing for a given scenario for a given set of topologies.	L1, L2	2
<b>MODULE 2:</b> 1. Configure a DHCP Server to serve contiguous IP addresses to a pool of four IP devices with a default gateway and a default DNS address. Integrate the DHCP server with a BOOTP demon to automatically serve Windows and Linux OS Binaries based on client MAC address	L2, L3	2
<b>MODULE 3:</b> 1. Configure, implement and debug the following: Use open source tools for debugging and diagnostics. a. ARP/RARP protocols b. RIP routing protocols c. BGP routing d. OSPF routing protocols e. Static routes (check using netstat)	L1, L2	3
<b>MODULE 4:</b> 1. Configure DNS: Make a caching DNS client, and a DNS Proxy; implement reverse DNS and forward DNS, using TCP dump/Wireshark characterise traffic when the DNS server is up and when it is down. 2. Configure FTP Server on a Linux/Windows machine using a FTP client/SFTP client characterise file transfer rate for a cluster of small files 100k each and a video file of 700mb. Use a TFTP client and repeat the experiment	L1, L2, and L3	3
<b>MODULE 5:</b> 1. Configure a mail server for IMAP/POP protocols and write a simple SMTP client in C/C++/Java client to send and receive mails. 2. Implement Open NMS+ SNMPD for checking Device status of devices in community MIB of a linux PC. Using yellow pages and NIS/NFS protocols implement Network Attached Storage Controller (NAS). Extend this to serve a windows client using SMB. Characterise the NAS traffic using wireshark.	L1, L2	3

### Catalog Description

In this course the concepts of cryptography and network security are discussed in detail. Substitution and transposition techniques, symmetric and asymmetric cryptographic algorithms, their applications, differences will be introduced. As a precursor to the study of cryptography studies will be made on impact of various network and web security protocols. The concepts learnt in the studies of cryptography & network security will be applied in the studies and analysis of authentication, integrity and security related protocols.

### Course Objectives

The objective of this course is to

1. Equip the students with concepts of cryptography & network security through problem solving and analytical approach.
2. Provide an overview of various network attacks and related security mechanism , various algorithms for modular arithmetic, symmetric and asymmetric cryptography and web and network security

### Course Outcomes

On completion of this course, the students will be able to

CO1: Explain, describe and distinguish various security attacks; Describe and solve block and stream ciphers and its applications in cryptography; Solve problems based on substitution and transposition ciphers.

CO2: Explain the basic mathematics of cryptography; Solve problems of groups, modular arithmetic ,gcd and inverse algorithm, chinese remainder theorem and its application in cryptography;Applying algorithms for solving problems in cryptography

CO3: Describing the concept of public key cryptosystems and its related algorithm; Explain and solve problems related to hash functions, digital signature and its applications in cryptography; Compare symmetric and asymmetric key cryptography.

CO4: Explain management,distribution,secure exchange of keys and authentication certificate and its applications in real life. Explain, compare various authentication protocols used in cryptography and network security, also solve problems based on these protocols.

CO5: Explain various security protocols: IPSec, SSL,TLS,SET; Describing malicious software's and illustrating various design approaches to Firewall.

Modules	Blooms level*	Number of hours
<b>MODULE 1:</b>  Introduction to security attacks, services and mechanism, Classical encryption techniques: substitution ciphers and transposition ciphers, cryptanalysis, steganography, Stream and block ciphers. Modern Block Ciphers: Block ciphers principles, Shannon's theory of confusion and diffusion, fiestal structure, Data encryption standard (DES), Strength of DES, Idea of differential cryptanalysis, block cipher modes of operations, Triple DES	L1, L2 and L3	7
<b>MODULE 2:</b>  Introduction to group, field, finite field of the form $GF(p)$ , modular arithmetic, prime and relativeprime numbers, Extended Euclidean Algorithm,Advanced Encryption Standard (AES) encryption and decryption, Fermat's and Euler's theorem, Primaliry testing, Chinese Remainder theorem, DiscreteLogarithmic Problem,Principals of public key crypto systems, RSA algorithm, security of RSA.	L1,L2, L3	6
<b>MODULE 3:</b>  Message Authentication Codes: Authentication requirements, authentication functions, messageauthentication code, hash functions, birthday attacks, security of hash functions, Secure hash-algorithm (SHA)Digital Signatures: Digital Signatures, Elgamal Digital Signature Techniques, Digital signaturestandards (DSS).	L1,L2, L3 and L5	7
<b>MODULE 4:</b>  Key Management and distribution: Symmetric key distribution, Diffie-Hellman Key Exchange, Public key distribution, X.509 Certificates, Public key Infrastructure. Authentication Applications: Kerberos	L1, L2 and L3	7
<b>MODULE 5:</b>  IP Security: Architecture, Authentication header, Encapsulating security payloads, combining security associations, key management. Viruses and related threats, Firewalls	L1, L2	9

<b>AIE 6714</b>	<b>System Programming and compiler construction/System Programming</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2020.1	Date of Approval: JULY 2020	3	1	0	4
Pre-requisites/Exposure	Fundamental concept of computer architecture and operating system and theory of automata				
Co-requisites	Basics of programming languages				

### **Catalog Description**

This course includes the concept of system programming and compiler construction in which all the system applications and programming concepts will be discussed. All the phases of compiler construction will be discussed in detail with some brief description of context free grammar. Using Basic Parsing Techniques efficient Parsers can be constructed with the help of error detection and recovery techniques.

### **Course Objectives**

The objective of this course is to

1. Equip the students with concepts of system programming and working of system utilities.
2. Provide an overview of estimation of performance of compiler design in real time compilation with error handling techniques during compilation.

### **Course Outcomes**

On completion of this course, the students will be able to

- CO 1: Describe the basics of compiler design and its co-relation with the subject computation theory of automation in terms of lexical analyzer.
- CO 2: Explain the working of assembler and macro processor with all the phases of it. And also describe the concept of loader and other system utilities of system software at the time of program translation.
- CO 3: Explain and differentiate the construction of parser through top-down and bottom up parsing techniques.
- CO 4: Explain and analyze the automatic construction of different parsing table which do not allow any ambiguity and backtracking in the given grammar.
- CO 5: Explain the process of syntax analyzer and identify any error occurs in this phase and also generate the three-address code the given grammar and the postfix translation.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>MODULE 1:</b>  <b>Introduction</b> Phases, FSM & RE's and their application to Lexical Analysis, Implementation of Lexical Analysers, The Syntactic specification of Languages: CFG, Derivation and Parse Trees, Capabilities of CFG.	L1 and L2	4
<b>MODULE 2:</b>  <b>System Programming</b> Editors: Introduction to system Programming Line editor, Full screen editor and multi window editor, First pass and second pass of assembler and their algorithms. Assemblers for CISC Machines: case study x85 & x86 machines. Bootstrapping for compilers, Introduction to. Design of a compiler in C++ as Prototype. Basic Macro Processor functions- Macro definition & expansion – Macro Processor Algorithm & Data Structures, conditional – Macro Expansion, Keyword Macro Parameters, Macro with in Macro Implementation, Linkers and Loaders Concept of linking. Case study of Linker in x86 machines. Loading of various loading schemes. Booting techniques and sub-routines.	L1 and L2	11
<b>MODULE 3:</b>  <b>Basic Parsing Techniques</b> Parsers, Shift Reduce Parsing, Operator precedence parsing, topdown Parsing, Predictive Parsers.	L2, L3 and L4	9
<b>MODULE 4:</b>  <b>Automatic Construction of efficient Parsers</b> LR Parsers, the canonical collection of LR(0) items, constructing SLR Parsing Tables, Constructing canonical LR Parsing tables and LALR parsing tables, An Automatic Parser Generator, Implementation of LR parsingTables, Constructing LALR sets of items.	L2, L3 and L4	8
<b>MODULE 5:</b>  <b>Syntax Directed Translation</b> Syntax directed Translation Schemes, Implementation of Syntax directed translators, Intermediate Code, Postfix notation, Parse Trees and Syntax Trees, Three address Code, Quadruple & Triples, Translation of Assignment Statements, Postfix Translation.	L2 and L3	9

<b>AIE6716</b>	<b>SYSTEM PROGRAMMING &amp; COMPILER CONSTRUCTION LAB</b>	L	T	P	C
Version 2020.1	Date of Approval:JULY 2020	0	0	2	1
Pre-requisites/Exposure	concept of pointer and file handling of C/C++ programming languages				
Co-requisites	NIL				

### Catalog Description

In this Lab course the concept of system programming and compiler construction are implemented and demonstrated. Concepts covered would enable them to create and solve complex problems.

Problems or programs will be related to concepts of assembler, macro processor, text editor and parser.

### Course Objectives

The objective of this course is to

- 1.
2. Make the students apply knowledge of various system programming concepts such as assembler, macro processor and text editor.
3. Provide a demonstration of compiler concepts like parsing techniques and implementation.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Apply the knowledge of regular languages and context free grammar.

CO2: Demonstrate the use of lexical analyzer and concept of editors.

CO3: Apply the knowledge of compiler design to convert the given expression into acceptable form of compiler.

CO4: Demonstrate the concept of assembler and macro-processor and their calling and expansion.

CO5: Demonstrate and apply the knowledge of compiler parsing techniques to construct parse tree for the given expression .

<b>Modules/Topics Covered**</b>	<b>Blooms level*</b>	<b>Number of hours</b>
1. Sample Programs using the theory of computation concepts of regular language.  (a) WAP to check whether string is accepted or not for entered grammar. (b) WAP to convert NFA to DFA. (c) WAP to convert Regular Expression to NFA.	L3, L5	6
2. Sample Programs using context free grammar and editors  (a) WAP to find no of Tokens in an expression.  (b) Write a program to implement Text Editor.	L3, L5	4
3. Sample Programs using the notation conversion and their usage in parsing.  (a) WAP to convert Infix to Postfix notation. (b) WAP to convert Infix to Prefix notation.	L3, L5	2
4. Sample Programs using the concept of assembler and macro processor  (a) Write a program to implement Assembler Pass one and Pass two.  (b) Write a program to implement Macro-processor.	L3, L5	4
5. Sample Programs using the compiler parsing techniques	L3, L5	6

(a) WAP to implement symbol table.		
(b) WAP calculate FIRST and FOLLOW of a grammar.		
(c) WAP to implement shift reduce parser.		

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

**\*\* Sample Programs provided are not limited to these only, can include others as desired.**

Pre-requisites/Exposure	C Programming				
Co-requisites	Basic knowledge of Programming				

### Catalog Description

*The objective of this course is to expose the students to the implementation techniques of Mat Lab Programming.*

### Course Objectives

The objective of this course is to

1. To understand the basic concepts and terminology related to Mat Lab.
2. Application of Mat Lab in field of Signal Processing and Control systems.

### Course Outcomes

On completion of this course, the students will be able to

- CO1. Understand the basics of Matlab programming environment.
- CO2. Analysis of given LTI System and verifying its physical reliability and stability properties.
- CO3. Waveform synthesis using Laplace Transforms and z-transform of a given signal and system.

Modules	Blooms level*	Number of hours
<ol style="list-style-type: none"> <li>1. To write a MATLAB program to perform some basic operation on matrices such as addition, subtraction, multiplication.</li> <li>2. To write a "MATLAB" Program to generate various signals and sequences, such as unit impulse, unit step, unit ramp, sinusoidal, square, saw tooth, triangular, sinc signals.</li> <li>3. To performs operations on signals and sequences such as addition, multiplication, scaling, shifting, folding, computation of energy and average power.</li> <li>4. Write a program for finding even and odd parts of sequences Using MATLAB Software&amp; program for finding real and imaginary parts of sequences Using MATLAB Software.</li> </ol>	L1, L2 and L3	8

5. Write a program to find the out put with linear convolution operation Using MATLAB Software 6. Write a program to compute auto correlation and cross correlation between signals and Sequences. 7. Write a program to compute linearity and time invariance properties of a given continuous /discrete System.	L1,L2,13	6
8. Write a program to Unit Step And Sinusoidal Response Of The Given LTI System And Verifying Its physical reliability and stability properties. 9. Write a program to demonstrate Gibbs Phenomenon using MATLAB. 10. Write a program to obtain Fourier Transform and Inverse Fourier Transform of a given signal / sequence and to plot its Magnitude and Phase Spectra 11. Write a program to perform waveform synthesis using Laplace Transforms of a given signal.	L1, L2 and L3	8
12. Write a program to locating the zeros and poles and plotting the pole zero maps in s-plane and z-plane 13. for the given transfer function. 14. Write a program to Generate Gaussian Noise and to Compute its Mean, M.S. Values, Skew, kurtosis, 15. PS and PDF 16. Write a program to demonstrate Sampling Theorem and aliasing effect using MATLAB. 17. Write a program for removal of noise by auto correlation/cross correlation.	L1, L4	12

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

AIE2535	Summer Internship Evaluation II				L	T	P	C
Version: 2020.1	Date of Approval: JULY 2020				0	0	0	3
Pre-requisites/Exposure	Nil							
Co-requisites	Nil							

### Catalog Description

The objective of this course is to provide practical training on some live projects that will increase capability to work on actual problem in industry. This training may undergo in an industrial environment or may be an in-house training on some latest software which is in high demand in market. This training will be designed such that it will be useful for their future employment in industry.

### Course Objectives

The objective of this course is to

1. Provide practical training on live projects

2. Increase technical capabilities on solving real life problems in company environment

### Course Outcomes

On completion of this summer internship, the students will be able to:

CO1: Develop communication, interpersonal and other critical skills in the job interview process.

CO2: Design and develop software and hardware projects

CO3: Assess interests and abilities in their field of study.

CO4: Demonstrate excellent technical and communication skills to acquire employment contacts leading directly to a full-time job following graduation from college.

## Catalog Description

The objective of this course is to provide practical training on some live/demo projects that will increase capability to work on actual problem in industry. It will be an in house training on some latest software which is in high demand in market. This training will be designed such that it will useful for their future employment in industry.

## Course Objectives

The objective of this course is to

1. Provide practical training on live projects
2. Increase technical capabilities on solving real life problems in company environment

## Course Outcomes

On completion of this minor project, the students will be able to:

CO1: Demonstrate a sound technical knowledge of their selected project topic.

CO2: Design and develop engineering solutions to complex problems utilising a systems approach.

CO3: Analyse various approaches for solving a complex engineering problem using different tools and techniques

CO4: Demonstrate the knowledge, skills and attitudes of a professional engineer.

CO5: Apply technical skills and knowledge in completing the project.

<b>AIE6710</b>	<b>Mobile Computing</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>Version 2020.1</b>	Date of Approval: JULY 2020	3	0	0	3
<b>Pre-requisites/Exposure</b>	Basic Networking				
<b>Co-requisites</b>	Nil				

### Catalog Description

The objective of this consortium is to shape and expand a full-scale and sound mobile computing system market. To achieve this, cooperation is required of interests related to communication (network), computer hardware/software, system integrators (including service providers), and the media.

### Course Objectives

The objective of this course is to

1. Give a general overview of the cellular technology and the associated terms and discuss the generations of the mobile technologies starting from 1G to 3G techniques.
2. Illustrate the GPRS and WAP model for 2G internet connectivity in detail.
3. Elaborate the third-generation mobile services
4. Describe the Global Mobile Satellite Systems in detail and basic architecture of Bluetooth technology and advanced topics in mobile computing.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Explain the basic concepts mobile technology, computing and basic architecture of PCS and GSM.

CO2: Describe the mobile networking Infrastructure through 2G technologies (GSM, GPRS, WAP).

CO3: Explain the basic concepts of 3G technologies (WCDMA, CDMA 2000) and WLL.

CO4: Discuss the working of mobile satellite systems like IRIDIUM and GLOBALSTAR.

CO5: Explain the concepts of Bluetooth technology, its working and protocols, virtual networks and enterprise networks.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Introduction to Personal Communications Services (PCS)</b> PCS Architecture, Mobility management, Networks signalling. Global System for Mobile Communication (GSM) system overview: GSM Architecture, Mobility management, Network signalling.	L1, L2 and L3	8
<b>Module II: General Packet Radio Services (GPRS) &amp; Wireless Application Protocol (WAP)</b> GPRS Architecture, GPRS Network Nodes. Mobile Data Communication: WLANs (Wireless LANs) IEEE 802.11 standard, Mobile IP. Wireless Application Protocol (WAP): The Mobile Internet standard, WAP Gateway and Protocols, wireless mark up Languages (WML).	L1,L2	10
<b>Module III: Third Generation (3G) Mobile Services</b> Introduction to International Mobile Telecommunications 2000 (IMT 2000) vision, Wideband Code Division Multiple Access (W-CDMA), and CDMA 2000, Quality of services in 3G. Wireless Local Loop (WLL): Introduction to WLL Architecture, wireless Local Loop Technologies.	L1, L2	7
<b>Module IV: Global Mobile Satellite Systems</b> Global Mobile Satellite Systems; case studies of the IRIDIUM and GLOBALSTAR systems.	L1, L2	7
<b>Module V: Enterprise Networks</b> Introduction to Virtual Networks, Blue tooth technology, Blue tooth Protocols. Advanced techniques in mobile computing.	L1, L2	4

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

AIE6717	<b>Robotic Process Automation Design &amp; Development</b>	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Basic Networking Concepts				
Co-requisites	Nil				

### **Catalog Description**

This course aims at providing knowledge of basic concepts of Robotic Process Automation to University students. It further builds on these concepts and introduces key RPA Design and Development strategies and methodologies specifically in context of UiPath products. The student undergoing the course shall develop the competence to design and develop a robot for a defined process.

### **Course Objectives**

The objective of this course is to

1. Equip the students with concepts of robotic process automation
2. Provide an overview of designing with uipath software.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: Explain key terms and trends around the robotic process automation along with its physical and logical design

CO2: Understand the potential and value of the robotic process automation .

CO3: Describe the technologies used for the robotic process automation and mobile devices, including (passive and active) sensors, the physical communications layer, communications protocols, programming frameworks,.

CO4: Design programs and have hands on experience on uipath software

CO5: Develop RPA programs of moderate complexity for a well-used robotic automation process using uipath.

Modules	Bloom s level*	Numbe r of hours
<b>Module 1: Programming Basic and Recap</b>  <b>Programming Concepts Basics I</b> - Understanding the application, Basic Web Concepts, Protocols, Email Clients, Data Structures, Data Tables, Algorithms, Software Processes, Software Design, SDLC.  <b>Programming Concepts Basics 2</b> - Scripting, Net Framework, Net Fundamentals, XML, Control structures and functions, XML, HTML, CSS, Variables& Arguments.	L1, L2	8
<b>Module II: RPA Concepts</b>  <b>RPA Basics</b> - History of Automation, what is RPA, RPA vs Automation, Processes & Flowcharts, Programming Constructs in RPA, What Processes can be Automated, Types of Bots, Workloads which can be automated.  <b>RPA Advanced Concepts</b> - Standardization of processes, RPA Development methodologies, Difference from SDLC, Robotic control flow architecture, RPA business case, RPA Team, Process Design Document/Solution Design Document, Industries best suited for RPA, Risks & Challenges with RPA, RPA and emerging ecosystem	L2, L3 and L4	8
<b>Module III: UiPath Introduction &amp; Basics</b>  <b>Introduction to UiPath</b> - Installing UiPath Studio community edition, The User Interface, KeyboardShortcuts,AboutUpdating,AboutAutomationProjects,IntroductiontoAutomati on Debugging, Managing Activation Packages, Reusing Automations Library, Installing the Chrome Extension, Installing the Firefox Extension, Connecting your project to a source control system, Activities Guide. <b>Variables, Control Flow</b>  <b>DataManipulation</b> - DataManipulationIntroduction,Scalarvariables,collectionsandTables, Text Manipulation, Data Manipulation, Gathering and AssemblingData.  <b>Recording and Advanced UI Interaction</b> - Recording Introduction, Basic and	L2, L3 and L4	8

Desktop Recording, Web Recording, Input/Output Methods, Screen Scraping, Data Scraping, Scraping advanced techniques. Selectors.		
<p>Module IV: UiPath Advanced Automation concepts and techniques</p> <p>Image, Text &amp; Advanced Citrix Automation- Introduction to Image &amp; Text Automation, Image based automation, Keyboard based automation, Information Retrieval, Advanced Citrix Automation challenges, Best Practices, using tab for Images, Starting Apps.</p> <p>Excel Data Tables &amp; PDF - Data Tables in RPA, Excel and Data Table basics, Data Manipulation in excel, Extracting Data from PDF, extracting a single piece of data, Anchors, Using anchors in PDF.</p> <p>Email Automation- Email Automation, Incoming Email automation, Sending Email automation</p>	L2, L3 and L4	12

<b>AIE 6718</b>	<b>Responsive Web Design</b>	L	T	P	C
Version : 2020.1	Date of Approval: JULY 2020	2	0	0	2
Pre-requisites/Exposure	knowledge of website design				
Co-requisites	NIL				

### Catalog Description

This course is aimed to provide a fundamental understanding of JavaScript and two of its related library: Bootstrap and React for dynamic web site client side scripting. Javascript is a famous scripting language for client side. The bootstrap and react libraries are rich API for creating dynamic websites. The course builds strong foundation for client-side scripting for creating dynamic websites

### Course Objectives

The objective of this course is

1. Equip the students with basic and advanced features of javascript and bootstrap library to create dynamic web sites
2. Provide an overview of basic features of react library to design dynamic websites.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Define the and explain concept of responsive web design and responsive content.

CO2 Explain HTML and CSS contents for responsive websties; Design and Create responsive websites using html, css and media queries.

CO3: Explain the concept of responsive workflow and working with responsive web design tools; Creating responsive websites that work on variety of devices.

CO4: Designing responsive websites using the concepts of typography, navigation and header layout; Evaluating performance of responsive websites .

Modules	Blooms level*	Number of hours
<b>Module 1: Foundations of responsive design</b> <b>What Is Responsive Design?:</b> Just the Basics ,A Short History, Why Responsive Design <b>Responsive Content:</b> Content Strategy ,Managing Content, Developing Content, Content Parity, Content Governance, Adaptive Content	L2 and L3	8
<b>Module 2: Creating Responsive Websites</b> <b>HTML for Responsive Sites:</b> Working with HTML, Basic Page Structure Viewport, Structural Elements, Creating a Page, Clean and Semantic HTML <b>CSS for Responsive Sites:</b> How CSS Works, Versions of CSS, Where CSS Goes, The Cascade, Using the Cascade, Comments, Organizing Your Stylesheet, The Box Model, display, Positioning, float and clear, Basic Styles <b>Media Queries:</b> What's a Media Query? Media Query Structure, Using Media Queries in Stylesheet Links, Other Ways to Use Media Queries, What We Can Query, Browser Support, Breakpoints, Design Ranges, Designing Responsively, Using Media Queries, Two-Column Layout, Setting a Maximum Width, How to Choose Breakpoints Images: Ways to Display Images, Alt Text, Image File Formats, Optimizing Images, Content Images, Background Images Responsive Images	L2 and L3	8
<b>Module 3: Working Responsively</b> <b>Responsive Workflow:</b> Strategy and Planning, Content Before Layout Thinking About Layout, Prototypes, Visual Design, Responsive Design Tools, Selling Responsive Design, Working with Clients <b>Mobile and Beyond:</b> User Experience , Device-Agnostic Design, Focusing on Mobile First, Do What You Can, Types of Devices, Touch, Screen Size, Accessibility (Universal Design), Deciding Which Devices to Support Why Use Real Devices for Testing, Testing	L2 and L3	8
<b>Module 4: Designing Responsive Websites</b> <b>Typography:</b> Start with HTML, Typefaces, Using Fonts, Sizing Text, Line Length, Whitespace, Margins and Padding, Changing Typeface for Screen Size <b>Navigation and Header Layout:</b> Responsive Navigation , Branding, Navigation Links, Navigation Patterns, Header <b>Performance:</b> Why Performance Matters, Performance as Design ,How Web Pages Are Loaded and Rendered, Measuring Performance Cleaning Up Your Code, Minimizing HTTP Requests, Server Stuff JavaScript, CSS, Hosting, Conditionally Loading Content, Reflows and Repaints, RESS	L2 and L3	12

*\*Bloom's Level:*

2. Provide an overview of basic features of react library to design dynamic websites.

## Course Outcomes

On completion of this course, the students will be able to

CO1: *Define the and explain concept of responsive web design and responsive content.*

CO2 *Explain HTML and CSS contents for responsive websties; Design and Create responsive websites using html, css and media queries.*

CO3: *Explain the concept of responsive workflow and working with responsive web design tools; Creating responsive websites that work on variety of devices.*

CO4: *Designing responsive websites using the concepts of typography, navigation and header layout; Evaluating performance of responsive websites .*

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1: Foundations of responsive design</b>  <b>Programs based on:</b> <ul style="list-style-type: none"> <li>• Content Strategy ,Managing Content,</li> </ul>	L2 and L3	3

<ul style="list-style-type: none"> <li>Developing Content, Content Parity,</li> <li>Content Governance, Adaptive Content</li> </ul>		
<b>Module 2: Creating Responsive Websites</b> <b>Programs based on:</b> <ul style="list-style-type: none"> <li>Working with HTML, Basic Page Structure Viewport, Structural Elements, Creating a Page, Clean and Semantic HTML</li> <li>The Cascade, Using the Cascade, Comments, Organizing Your Stylesheet, The Box Model, display, Positioning, float and clear, Basic Styles</li> <li>Media Query Structure, Using Media Queries in Stylesheet Links, Other Ways to Use Media Queries,</li> <li>What We Can Query, Browser Support, Breakpoints, Design Ranges, Designing Responsively, Using Media Queries, Two-Column Layout, Setting a Maximum</li> <li>Width, How to Choose Breakpoints Images: Ways to Display Images, Alt Text, Image File Formats, Optimizing Images, Content Images, Background Images Responsive Images</li> </ul>	L2 and L3	3
<b>Module 3: Working Responsively</b> <b>Programs based on:</b> <ul style="list-style-type: none"> <li><b>Responsive Workflow</b>, Visual Design, Responsive Design Tools, Selling Responsive Design, Working with Clients</li> <li><b>Mobile and Beyond:</b> User Experience , Device-Agnostic Design, Focusing on Mobile First, Do What You Can,</li> <li>Types of Devices, Touch, Screen Size, Accessibility (Universal Design), Deciding Which Devices to Support Why Use Real Devices for Testing, Testing</li> </ul>	L2 and L3	3
<b>Module 4: Designing Responsive Websites</b> <ul style="list-style-type: none"> <li><b>Typography:</b> Start with HTML, Typefaces, Using Fonts, Sizing Text, Line Length, Whitespace, Margins and Padding,</li> <li>Changing Typeface for Screen Size</li> <li><b>Navigation and Header Layout:</b> Responsive Navigation , Branding, Navigation Links, Navigation Patterns, Header</li> <li><b>Performance:</b> Why Performance Matters, Performance as Design ,How Web Pages Are Loaded and Rendered,</li> <li>Measuring Performance Cleaning Up Your Code, Minimizing HTTP Requests, Server Stuff JavaScript, CSS, Hosting, Conditionally Loading Content, Reflows and Repaints, RESS</li> </ul>	L2and L3	3

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

## VIII SEMESTER

<b>Course Code : AIE6809</b>	<b>Research Methodology and Technical Report Writing</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2020.1	Date of Approval: JULY 2020	2	0	0	2
Pre-requisites/Exposure	NIL				
Co-requisites	NIL				

### Catalogue Description

This course deals with types of research, significance and characteristics and planning a research proposal, population and sample, parameter and statistic, sampling and data collection, sampling design: steps, types, sample size, sampling methods. It deals with univariate, bivariate and multivariate analysis, measure of dispersion of data, standard deviation, variance, coefficient of variation and degree of freedom. Hypothesis testing: parametric tests and non-parametric tests, regression analysis and curve fitting, method of least-squares, explained and unexplained variations, coefficient of correlation of determination. The course also deals with technical/scientific/research report writing: referencing and bibliography and footnotes. Publication of research papers, citations, intellectual property rights and copy rights, plagiarism, patent and patent laws, commercialization and ethical issues.

### Course Objectives

The objective of this course is to:

1. Deals with types of research, significance and characteristics and planning a research proposal and to enhance scientific and technical writing and research skills.
2. Impart knowledge about various stages of research process, statistical analysis and tools & their applications in decision making by hypothesis testing and regression analysis.
3. It also deals with intellectual property rights and copy rights, plagiarism, patent and patent laws, commercialization and ethical issues.

### Course Outcomes

On completion of this course, the students will be able to:

- CO1. Classify different research types, explain steps in research process and planning research proposal.
- CO2. Describe sampling methods, sampling steps and design, carry out data processing and analysis.
- CO3. Explain hypothesis testing, parametric and non-parametric tests, carry out regression analysis, curve fitting.

CO4. Demonstrate technical and scientific report writing skills, describe plagiarism, patent laws and intellectual property rights.

### Course Content

Modules	Blooms level*	Number of hours
<b>Module I: Introduction and Research Planning</b> Introduction to research: Definition, motivation, need, objectives, significance and characteristics of research; types of research; steps in research process; planning a research proposal; literature review, web searching.	L1, L2	4
<b>Module II: Sampling Methods</b> Measurement scales, population and sample, parameter and statistic, sampling and data collection, sampling design: steps, types, sample size, sampling methods, data processing and analysis. Sampling surveys and questionnaire designing, primary and secondary data.	L1, L2, L3	5
<b>Module III: Hypothesis Testing and Regression Analysis</b> Univariate, bivariate and multivariate analysis, means-arithmetic, geometric and harmonic; measure of dispersion of data, standard deviation, variance, coefficient of variation and degree of freedom. Hypothesis testing: kinds errors in hypothesis testing, significance and confidence levels, parametric tests and non-parametric tests, one-tailed and two-tailed tests, analysis of variance. Regression analysis and curve fitting, method of least-squares, explained and unexplained variations, coefficient of correlation of determination.	L1, L3, L4	10
<b>Module IV: Technical Report Writing and Plagiarism</b> Technical/scientific/research report writing: structure and components of scientific reports, formats of dissertations, research report, report writing skills, report preparation, referencing and bibliography and footnotes. Publication of research papers, citations, making presentation-use of visual aids and PPTs. Intellectual property rights and copy rights, plagiarism, patent and patent laws, commercialization and ethical issues.	L1, L3, L4	5

### Catalog Description

The objective of this course is to provide practical training on some live/demo projects that will increase capability to work on actual problem in industry. It will be an in house training on some latest software which is in high demand in market. This training will be designed such that it will useful for their future employment in industry.

### Course Objectives

The objective of this course is to

1. Provide practical training on live projects
2. Increase technical capabilities on solving real life problems in company environment

### Course Outcomes

On completion of this summer internship, the students will be able to:

CO1: Demonstrate a sound technical knowledge of their selected project topic.

CO2: Design and develop engineering solutions to complex problems utilising a systems approach.

CO3: Analyse various approaches for solving a complex engineering problem using different tools and techniques

CO4: Demonstrate the knowledge, skills and attitudes of a professional engineer.

CO5: Apply technical skills and knowledge in completing the project.

## ROBOTICS (SPECIALISATION)

<b>Course Code: RBE6801</b>	<b>FUNDAMENTALS OF ROBOTIC SYSTEM AND ROBOT PROGRAMMING</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Basic knowledge of control system and programming				
Co-requisites	Nil				

### Catalog Description

Enlighten the students about the fundamentals of robotic systems make them to understand the basics of robot, robot transformations and sensors, micro/nano robotic systems and to program them for functioning.

### Course Objectives

The objective of this course is to

1. Equip the students with the basic knowledge and designing of robotics.
2. Implement their concept in robotics and design robot for various applications of engineering.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Explain and Understand the design and functionality of robots

CO2: Describe the control system with the help of sensor and robot transformations.

CO3: Understand and robot cell design and implement in micro/nano robotics system

CO4: Explain and Understand the robotic programming language and use in design of robot.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>MODULE 1:</b> <b>INTRODUCTION</b> Robot anatomy-Definition, law of robotics, History and Terminology of Robotics-Accuracy and repeatability of Robotics-Simple problems- Specifications of Robot-Speed of Robot-Robot joints and links-Robot classifications-Architecture of robotic systems-Robot Drive systems- Hydraulic, Pneumatic and Electric system.	L1 and L2	5
<b>MODULE 2:</b> <b>END EFFECTORS AND ROBOT CONTROLS</b> Mechanical grippers-Slider crank mechanism, Screw type, Rotary actuators, cam type-Magnetic grippers-Vacuum grippers-Air operated grippers-Gripper force analysis-Gripper design-Simple problems-Robot controls-Point to point control,	L1, L2 and L3	7

Continuous path control, Intelligent robot-Control system for robot joint-Control actions-Feedback devices-Encoder, Resolver, LVDT-Motion Interpolations-Adaptive control.		
<p>MODULE 3:</p> <p>ROBOT TRANSFORMATIONS AND SENSORS</p> <p>Robot kinematics-Types- 2D, 3D Transformation-Scaling, Rotation, Translation-Homogeneous coordinates, multiple transformation-Simple problems. Sensors in robot – Touch sensors-Tactile sensor – Proximity and range sensors – Robotic vision sensor-Force sensor-Light sensors, Pressure sensors.</p>	L1 and L2	5
<p>MODULE 4:</p> <p>ROBOT CELL DESIGN AND MICRO/NANO ROBOTICS SYSTEM</p> <p>Robot work cell design and control-Sequence control, Operator interface, Safety monitoring devices in Robot-Mobile robot working principle, actuation using MATLAB, NXT Software Introductions-Robot applications- Material handling, Machine loading and unloading, assembly, Inspection, Welding, Spray painting and undersea robot. Micro/Nanorobotics system overview-Scaling effect-Top down and bottom up approach- Actuators of Micro/Nano robotics system-Nanorobot communication techniques-Fabrication of micro/nano grippers-Wall climbing micro robot working principles-Biomimetic robot-Swarm robot-Nanorobot in targeted drug delivery system.</p>	L1, L2, L3, L4 and L5	8
<p>MODULE 5:</p> <p>BASICS OF ROBOT PROGRAMMING</p> <p>Robot programming-Introduction-Types- Flex Pendant- Lead through programming, Coordinate systems of Robot, Robot controller- major components, functions-Wrist Mechanism-Interpolation-Interlock commands- Operating mode of robot, Jogging-Types, Robot specifications- Motion commands, end effectors and sensors commands.</p>	L1, L2 and L3	5
<p>MODULE 6:</p> <p>VAL, VAL-II, RAPID AND AML LANGUAGE</p> <p>Robot Languages-Classifications, Structures- VAL- language commands motion control, hand control, program control, pick and place applications, palletizing applications using VAL, Robot welding application using VAL program-WAIT, SIGNAL and DELAY command for communications using simple applications. RAPID- language basic commands- Motion Instructions-Pick and place operation using Industrial robot- manual mode, automatic mode, subroutine command based programming. Move-master command language- Introduction, syntax, simple problems. VAL-II programming-basic commands, applications- Simple problem using conditional statements-Simple pick and place applications-Production rate calculations using robot. AML Language-General description, elements and functions, Statements, constants and variables-Program control statements-Operating systems, Motion, Sensor commands-Data processing.</p>	L1, L2 and L3	6

### Catalog Description

This course provides comprehensive and insight knowledge of Digital control systems. Objective of the course is to provide the students the core knowledge of Stability theory of Digital systems and State Variable analysis of Digital System

### Course Objectives

The objective of this course is to

3. Equip the students with concepts of basic control system and its stability.
4. Provide a thorough understanding of control system model by considering standard examples.
5. Give an insight of state variable methods for control systems.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Explain the fundamentals of a digital control system.

CO2: Apply the standard methods to check the stability of a control system.

CO3: Design model for digital control system for an application with given requirements.

CO4: Analyze the analog and digital control systems using state variable method.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1:</b>	L1,L2,L4	12

<b>Introduction</b> Configuration of the basic Digital Control Systems, types of sampling operations, Sample and Hold operations, Sampling theorem, Basic discrete time signals.		
<b>Module 2:</b>  <b>Stability Methods</b> Mapping between s-plane and z-plane, stability methods: Modified Routh Criterion, Jury's method, modified Schur-Cohn criterion.	L3	6
<b>Module 3:</b>  <b>Models Of Digital Control Systems</b> Digital temperature control System, Digital position control system, stepping motors and their control. Design of Digital compensator using frequency response plots.	L5	6
<b>Module 4:</b>  <b>Control Systems Analysis Using State Variable Methods</b> State variable representation, conversion of state variable models to transfer function and vice-versa, Eigen values and eigen vectors, Solution of state equations, Concepts of controllability and observability.	L3	6
<b>Module 5:</b> <b>State Variable Analysis Of Digital Control Systems</b> State variable description of digital control systems, conversion of state variable models to pulse transfer function and vice versa, solution of state difference equations, controllability and observability.	L3	6

## Catalog Description

This course deals with the systematic study of the Architecture and programming issues of microprocessor family and its applications. The aim of this course is

1. To introduce students with the architecture and operation of typical microprocessors.
2. To familiarize the students with the programming and interfacing of microprocessors
3. To provide expertise in designing the embedded system based products as a solution to real time problems.

## Course Outcomes

On completion of this course, the students will be able to

CO1. Explain the architecture, pin configuration, addressing modes, control words of various microprocessors and Interfacing ICs

CO2. Develop the assembly language program using 8085 and 8086 using stacks & subroutines, procedures, segments, interrupts and interfacing.

CO3. Analyze assembly language programs; select appropriate assemble into machine across assembler utility of a microprocessor and solve various automation based problems of power system.

CO4. Design circuitry to the Microprocessor I/O ports in order to interface the processor to external devices so as to provide solutions real-world control problems

Modules	Blooms level*	Number of hours
<b>Module I: Microprocessor</b> Intel 8085 - Introduction, register structure, memory Addressing, Addressing Modes, Instruction Set, Timing Methods, CPU Pins and Associated Signals, Instruction timing and execution. programming I/O. Interrupt System, DMA, SID & SOD lines, Instruction set, 8085 based system design.	L1, L2, L3, L4	8
<b>Module II: Intel 8086</b> Introduction, Architecture, Addressing modes, instruction set, memory management, assembler dependent instructions,	L2, L3, L4	7

Input/Output, system design using 8086.		
<b>Module III: Pentium Processors</b> Internal Architecture of 8087, operational overview of 8087, Introduction to 80186,80286, 80386 & 80486 processors and Pentium Processors.	L2,L3	6
<b>Module IV: Peripheral Interfacing</b> Parallel versus serial transmission, synchronous and asynchronous serial data transmission. Interfacing of hexadecimal keyboard and display unit, interfacing of cassette recorders and parallel, serial interface standards. Study of Peripheral Devices 8255, 8253,8257, 8251, 8259	L3,L4, L5,L6	7
<b>Module V: Microprocessor applications to Power Engineering</b> <b>Protective Relaying:</b> over-current, impedance, MHO, reactance, bi-directional relays. <b>Measurements:</b> Frequency, power angle & power factor, Voltage and Current, KVA, KW, & KVAR, maximum demand. Resistance, Reactance, Temperature Controls.	L4,L5,L6	8

### **Catalog Description**

This course deals with the systematic study of the Architecture and programming issues of robotic moments and design. The aim of this course is

1. To introduce students with the architecture and operation of robots.
2. To familiarize the students with the programming and interfacing of Robots
3. To provide expertise in designing the embedded system and kinematics of a robot based on real time problems.

### **Course Outcomes**

On completion of this course, the students will be able to

- CO1. Explain the architecture, kinematic analysis for axis in Robot Design.
- CO2. Understand the Workspace, Analysis And trajectory planning
- CO3. Understand the Dynamic Moments and Mathematical modeling of various forces in Moments of robotic machine
- CO4. Design a robot with understanding of dynamic kinematics.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Introduction</b> Introduction, position and orientation of objects, objects coordinate frame Rotation matrix, Euler angles Roll, pitch and yaw angles coordinate Transformations, Joint variables and position of end effectors, Dot and cross products, coordinate frames, Rotations, Homogeneous coordinates	L1, L2, L3, L4	7
<b>Module II: Direct Kinematics</b> Link coordinates D-H Representation, The ARM equation. Direct kinematic analysis for Four axis, SCARA Robot and three, five and six axis Articulated Robots.	L2, L3, L4	6
<b>Module III: Inverse Kinematics</b> The inverse kinematics problem, General properties of solutions. Tool configuration, Inverse kinematics of four axis SCARA robot and three and five axis, Articulated robot.	L2, L3	6
<b>Module IV: Workspace Analysis And Tracjectory Planning</b> Workspace Analysis, work envelope of a Four axis SCARA robot and five axis articulated robot workspace fixtures, the pick and place operations, Joint space technique - continuous path motion, Interpolated motion, straight line motion and Cartesian space technique in trajectory planning.	L3, L4, L5, L6	8
<b>Module V: Manipulator Dynamics</b> Introduction, Lagrange's equation kinetic and potential energy. Link inertia Tensor, link Jacobian Manipulator inertia tensor. Gravity, Generalized forces, Lagrange-Euler Dynamic model, Dynamic model of a Two-axis planar robot, Newton Euler formulation, Lagrange - Euler formulation, problems.	L4, L5, L6	9

### **Catalog Description**

Objective of this course is to develop analytical capability and to impart knowledge in Mathematical and Statistical methods and their applications in Engineering and Technology and to apply these concepts in engineering problems they would come across.

1. To introduce students mathematical approach in applications of Engineering
2. To familiarize the solution techniques and the concept to solve the Engineering applications
3. To provide expertise in solving real time problem and modeling it with the advance mathematical approach.

## Course Outcomes

On completion of this course, the students will be able to

CO1. Explain the transform method and approach in robotic design

CO2. Understand the calculus of variations in engineering.

CO3. Understand the numerical solution of partial differential equations

CO4. Explain the regression methods in various engineering problem solution.

Modules	Blooms level*	Number of hours
<b>Module I: TRANSFORM METHODS</b> Laplace transform methods for one-dimensional wave equation - Displacements in a string - Longitudinal vibrations of an elastic bar – Fourier transform methods for one-dimensional heat conduction problems in infinite and semi-infinite rod.	L1, L2,	6
<b>Module II: ELLIPTIC EQUATIONS</b> Laplace equation - Fourier transform methods for Laplace equation – Solution of Poisson equation by Fourier transform method.	L2 ,L4	7
<b>Module III: CALCULUS OF VARIATIONS</b> Variation and its properties - Euler's equation - Functionals dependent on first and higher order derivatives - Functionals dependent on functions of several independent variables - Some applications - Direct methods - Ritz methods.	L1,L3	7
<b>Module IV: NUMERICAL SOLUTION OF PARTIAL DIFFERENTIAL EQUATIONS</b> Numerical Solution of Partial Differential Equations - Solution of Laplace's and Poisson equation on a rectangular region by Liebmann's method - Diffusion equation by the explicit and Crank Nicholson implicit methods - Solution of wave equation by explicit scheme.	L3,L4, L5,L6	9
<b>Module V: REGRESSION METHODS</b> Principle of least squares - Correlation - Multiple and Partial correlation - Linear and non-linear regression - Multiple linear regression.	L4 ,L6	7

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

### Catalog Description

The objective of this course is to enlighten the students about the fundamentals of robotic systems. To understand the basics of robot, Robot Transformations and Sensors, Micro/Nano robotic systems and to program them for functioning.

### Course Objectives

The objective of this course is to

1. Equip the students with the basic knowledge and designing of robotics.
2. Implement their concept in robotics and design robot for various applications of engineering.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Understand and be able to apply a variety of techniques to solve problems in areas such as robot control and navigation

CO2: program a robot to perform a specified task (e.g obstacle avoidance or wall following) in a target environment.

CO3: Understand how simulations of robots work, where they can be useful and where they can break down.

Modules	Blooms level*	Number of hours
<b>Lab Session 1:</b> Study of different types of robots based on configuration and application.	L1. L2 and L3	4
<b>Lab Session 2:</b> Study of different type of links and joints used in robots	L1. L2, L3 and L4	4
<b>Lab Session 3:</b> Study of components of robots with drive system and end effectors.	L1. L2, L3 and L4	4
<b>Lab Session 4</b> Determination of maximum and minimum position of links.	L3 and L4	2
<b>Lab Session 5</b> Verification of transformation (Position and orientation) with respect to gripper and world coordinate system	L3 and L4	4
<b>Lab Session 6</b> Estimation of accuracy, repeatability and resolution.	L3 and L4	2
<b>Lab Session 7</b> Robot programming exercises	L1, L2, L3 and L4	4

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation*

Co-requisites					

### Catalog Description

This course is designed to get students an understanding of the basic concepts of control systems and its major applications. The course also includes some interdisciplinary applications like digital electronics and mechanical devices. Students will perform practical on hardware kit as well as on software.

### Course Objectives

The objective of this course is to

1. Make students demonstrate the concepts of control systems.
2. Apply the concepts of control systems in various applications.

### Course Outcomes

On completion of this course, the students will be able to

CO1. Practically verify the theoretical concepts of control systems.

CO2. Design various digital logic gates using programmable logic controller.

CO3. Analyse and explain the response of Process Control Simulator, Magnetic amplifier, Synchros, Servomotor and compensators.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Lab Session 1</b> Determination of Transfer functions of an Electrical System	L3	1
<b>Lab Session 2</b> Time Response Characteristics of a Second order System (Typical RLC network).	L3 and L4	1

<b>Lab Session 3</b> Characteristics of Synchros: (a) Synchro transmitter characteristics. (b) Implementation of error detector using synchro pair	L3 and L4	2
<b>Lab Session 4</b> Determination of Magnetic Amplifier Characteristics with different possible connections.	L3 and L4	2
<b>Lab Session 5</b> Process Control Simulator: (a) To determine the time constant and transfer function of first order process. (b) To determine the time response of closed loop second order process with Proportional Control. (c) To determine the time response of closed loop second order process with Proportional Integral Control. (d) To determine the time response of closed loop second order process with Proportional Integral-Derivative Control. (e) To determine the effect of disturbances on a process.	L3 and L4	6
<b>Lab Session 6</b> To study the compensation of the second order process by using: (a) Lead Compensator. (b) Lag Compensator. (c) Lead- Lag Compensator	L3 and L4	2
<b>Lab Session 7</b> Realization of AND, OR, NOT gates, other derived gates and ladder logic on Programmable Logic Controller with computer interfacing.	L3 and L5	2
<b>Lab Session 8</b> To determination of AC servomotor Characteristics	L3 and L4	2
<b>Lab Session 9</b> To study the position control of DC servomotor with P, PI control actions.	L3	2
<b>Lab Session 10</b> Analog Computer: (a) To examine the operation of potentiometer and adder. (b) To examine the operation of integrator	L3	2
<b>Lab Session 11</b> To solve a second order differential equation.	L3	2

*\*Bloom's Level:*

### Catalog Description

This course deals with the systematic study of the Architecture and programming issues of microprocessor family and its applications. The aim of this course is to give the students detailed knowledge of the above microprocessor needed to develop the systems using.

### Course Objectives

The objective of this course is to

1. To expose students to the operation of typical microprocessor trainer kit.
2. Learn the design aspects of I/O and Memory Interfacing circuits.
3. To provide solid foundation on interfacing the external devices to the processor according to the user requirements to create novel products and solutions for the real time problems

### Course Outcomes

On completion of this course, the students will be able to

CO1: Developing of assembly level programs and providing the basics of the processors

CO2: write programs like ASCII conversion, searching and sorting elements, reverse given string and compute nCr .

CO3: Understand the concepts related to I/O and memory interfacing

Modules	Blooms level*	Number of hours
<b>Lab Session 1:</b>  To load the numbers 49H and 53H ion memory location 9510 & 9511.	L3 and L4	2

<b>Lab Session 2:</b>  Respectively and add the contents of memory location 9601.	L3 and L4	2
<b>Lab Session 3:</b>  To write the Assembly Language Programming for 8 bit addition with and without carry.	L3 and L4	2
<b>Lab Session 4</b>  To write the Assembly Language Programming for 8 bit subtraction with and without borrow.	L1, L2, and L3	2
<b>Lab Session 5</b>  To write the Assembly Language Programming for 8 bit Multiplication and Division.	L1, L2, and L3	2
<b>Lab Session 6</b>  To write the Assembly Language Programming for sorting an array of numbers in Ascending & Decending order.	L3 and L4	2
<b>Lab Session 7</b>  To write the Assembly Language Programming with Additional Instructions.	L3 and L4	2
<b>Lab Session 8</b>  To write and execute a program using Stacks.	L3 and L4	2
<b>Lab Session 9</b>  To study and program the programmable Peripheral interface (8255 board).	L1, L2 and L3	2
<b>Lab Session 10</b>  To study and program the programmable interval timer (8253 board).	L1, L2, L3 and L4	2
<b>Lab Session 11</b>	L1, L2, L3 and L4	2

To study and program the programmable DMA Controller (8257 board).		
<b>Lab Session 12</b>  i) To study and program the programmable Interrupt Controller (8259 board).  ii) To study of programmable Serial Communication interface (8251 board).	L1, L2, L3 and L4	2

*\*Bloom's Level:*

### **Catalog Description**

This course gives students an insight into the basics of Image Processing along with visualization of real concept of Image processing. Concepts covered would enable students to define and differentiate among various types of image refinement. Further they would be able to gain insights about various Image restoration and modification technique.

### **Course Objectives**

Processing color and grayscale images or other two-dimensional signals has become an important tool for research and investigation in many areas of science and engineering. Digital Image Processing is designed to give professionals and students a powerful collection of fundamental and advanced image processing tools on the desktop. Digital Image Processing takes full advantage of the computational technology of Mathematica.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: Define and explain introductory part of Digital Image Processing

CO2: List out the Image Enhancement techniques in the Spatial Domain

CO3: Explain concepts of Image Enhancement in the Frequency Domain

CO4: Describe the architecture Image Compression

CO5: Explain the basics of Representation and Description

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>MODULE 1:</b>  <b>Introduction and Digital Image Fundamentals</b> The origins of Digital Image Processing, Examples of Fields that Use Digital Image Processing, Fundamentals Steps in Image Processing, Elements of Digital Image Processing Systems, Image Sampling and Quantization, Some basic relationships like Neighbors, Connectivity, Distance Measures between pixels, Linear and Non Linear Operations.	L1 and L2	8
<b>MODULE 2:</b>  <b>Image Enhancement in the Spatial Domain</b> Some basic Gray Level Transformations, Histogram Processing, Enhancement Using Arithmetic and Logic operations, Basics of Spatial Filters, Smoothing and Sharpening Spatial Filters, Combining Spatial Enhancement Methods.	L2 and L3	8
<b>MODULE 3:</b>  <b>Image Enhancement in the Frequency Domain</b> Introduction to Fourier Transform and the frequency Domain, Smoothing and Sharpening Frequency Domain Filters, Homomorphism Filtering.	L1 and L2	10
<b>MODULE 4:</b>  <b>Image Compression</b> Coding, Interpixel and Psychovisual Redundancy, Image Compression models, Elements of Information Theory, Error free comparison, Lossy compression, Image compression standards. <b>Image Segmentation</b> Detection of Discontinuities, Edge linking and boundary detection, Threshold, Region Oriented Segmentation, Motion based segmentation.	L2 and L3	12
<b>MODULE 5:</b>  <b>Representation and Description</b> Representation, Boundary Descriptors, Regional Descriptors, Use of Principal Components for Description, Introduction to Morphology, Some basic Morphological Algorithms. <b>Object Recognition</b> Patterns and Pattern Classes, Decision-Theoretic Methods, Structural Methods.	L2 and L3	10

*\*Bloom's Level:*

### Catalog Description

In this Lab course first student should learn about advanced level of software used for easy calculation and toolbox used for software like MATLAB.

### Course Objectives

The objective of this course is to

1. Make the students apply knowledge of various Image processing & pattern recognition required for solving complex problems.
2. Provide a demonstration of different types of image processing techniques through MATLAB toolbox.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Acquiring knowledge of Basics of High-end calculation software and need in Computer Science & engineering

CO2: Demonstrate the All preliminary functions in MATLAB

CO3: Apply the knowledge of all the basics function and toolbox knowledge of MATLAB

CO4: Demonstrate the Use of MATLAB in image Processing

CO5: Demonstrate usage of applications involving with Image processing & Recognition Its Toolbox used by MATLAB

Modules/Topics Covered**	Blooms level*	Number of hours
1. Introduction of MATLAB (e) Basic Variable deceleration & its operation (f) Function use & its application	L3, L5	4
2. Sample Programs in MATLAB (e) Basic use of Matrix and Graph Plotting (f) Different type of graph plotting with use of different -2 type of data	L3, L5	6
3. Sample Programs using MATLAB functions (l) Create a basic program MATLAB using functions (m) Use of basic function Image processing (n) Practice on Basic function of Image processing tool box.	L3, L5	6
4. Sample programs of ANN functions (c) Practice on Pattern Recognition functions in MATLAB (d) Write a program for training a small network in MATLAB	L3, L5	6
5. Sample Programs using ANN toolbox & Image processing toolbox (b) Demonstrate the use of ANN tool box & Image processing toolbox and write a program after combining it.	L3, L5	2

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

\*\* Sample Programs provided are not limited to these only, can include others as desired.

### **Catalog Description**

This course provides knowledge regarding Creating Dynamic Web Pages with the help of ASP.NET framework. Various topics

### **Course Objectives**

The objective of this course is to

1. Equip the students with concepts of ASP.NET web applications including State management, Web Controls and ADO.NET.
2. Provide knowledge to develop secure ASP.NET web applications using C#.NET programming language.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: Explain the components of .NET framework and create basic ASP.NET web page.

CO2: Use various standard and advance web controls for developing ASP.NET dynamic web pages and also create custom controls.

CO3: Establish database connectivity and perform various operations on database through ASP.NET web pages.

CO4: Maintain states at client and server site both.

CO5: Develop and use web services.

Modules	Blooms level*	Number of hours
MODULE 1:  <b>.NET FRAMEWORK</b> .NET Framework and its features CLR, MSIL,CTS, .NET class library, .NET Languages, CTS, assemblies, manifest, and metadata, What is ASP.NET?, Difference between ASP and ASP.NET	L1, L2	4
MODULE 2: WEB CONTROLS  Standard Controls, Validation controls, Adv. Controls, Custom Controls .	L2, L3 and L4	14

<b>RBE6812</b>	<b>.NET Programming LAB</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2020.1	Date of Approval: JULY 2020	0	0	1	1
Pre-requisites/Exposure	C#.NET, HTML and CSS				
Co-requisites	Nil				

### **Catalog Description**

This lab course covers development of Web applications using ASP.NET. The concepts are designed to impart the knowledge of ASP.NET framework concepts at implementation level. The major topic covered includes theme, state management, web controls and database connectivity using ADO.NET and web services.

### **Course Objectives**

The objective of this course is to

1. Equip the students with concepts of ASP.NET web applications including State management, Web Controls and ADO.NET.
2. Provide knowledge to develop secure ASP.NET web applications using C#.NET programming language.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: Use various standard and advance web controls for developing ASP.NET dynamic web pages and also create custom controls.

CO2: Maintain states at client and server site both.

CO3: Establish database connectivity and perform various operations on database through ASP.NET web pages.

CO4: Develop and use web services.

Modules	Blooms level*	Number of hours
1. Basics of ASP.NET Page a) Write a program to implement C#.NET class with properties and methods. b) Design a Login Page, which displays a Welcome Page on successful Login and an error message in case of invalid Id/Password. c) Design a form and apply themes (design time and dynamically).	L1, L2	4
2. State Management a) Implement state management for Login page which move to welcome page when credentials are correct. The welcome page displays a welcome message along with the user Id. b) Implement various state management methods using a suitable web form.		2
3. Built-in Controls, Custom Controls a) Design any web form and apply various validation controls. b) Create a web form which can work in Hindi and English language both. c) Design a web form to upload an image to server. d) Design a custom control, Numeric Textbox, which should accept only integer value for a particular range. The range should be customizable.	L2, L3 and L4	6
4. ADO.NET a) Create any database table and apply basic operations (Insert/Delete/Update) on it using ASP.NET application. b) Implement various methods of execution of SQL command. c) Display data in a Grid and perform basic database operations.	L2, L3 and L4	4
5. Security, Web Services a) Develop any web application to illustrate SQL Injection attack and redesign it to prevent the attack. b) Develop a web application to illustrate XSS attack and redesign it to prevent the attack	L2 and L3	2
6. Web Application Create a small web application having some application.	L2, L3 and L4	6

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

RBE6813	<b>Advanced Robotic Process Automation Design &amp; Development</b>	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Basic Networking Concepts				
Co-requisites	Nil				

### **Catalog Description**

This course aims at providing knowledge of basic concepts of Robotic Process Automation to University students. It further builds on these concepts and introduces key RPA Design and Development strategies and methodologies specifically in context of UiPath products. The student undergoing the course shall develop the competence to design and develop a robot for a defined process.

### **Course Objectives**

The objective of this course is to

1. Equip the students with concepts of robotic process automation
2. Provide an overview of designing with uipath software.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: Explain key terms and trends around the robotic process automation along with its physical and logical design

CO2: Understand the potential and value of the robotic process automation.

CO3: Describe the technologies used for the robotic process automation and mobile devices, including (passive and active) sensors, the physical communications layer, communications protocols, programming frameworks.

CO4: Design programs and have hands on experience on uipath software

CO5: Develop RPA programs of moderate complexity for a well-used robotic automation process using uipath.

Modules	Blooms level*	Number of hours
<b>Module 1: Exception handling and Best Practices</b> <b>Debugging and Exception Handling- Debugging</b> Tools, Strategies for solving issues, Catching errors. <b>Project Organization-</b> Concept of project organization, Best practices, Avoiding pitfalls, Invoke Activity.	L1, L2	8
<b>Module II: Introduction to Orchestrator</b> Orchestrator, Tenants, Authentication, Users, Roles, Robots, Environments, Queues & Transactions, Schedules.	L2, L3 and L4	8
<b>Module III: merging and Future Trends in IT</b> Artificial Intelligence, Machine Learning, Agent awareness, Natural Language Processing Computer Vision	L2, L3 and L4	8
<b>Module IV: Capstone Project</b> Real life case studies which can be used to apply the concepts learnt during the course. The projects shall test student's skills right from process transformation and documentation to the design and development of the actual robot	L2, L3 and L4	12

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

## MACHINE LEARNING (SPECIALISATION)

<b>Course Code: MLE 6801</b>	<b>APPLIED STATISTICAL ANALYSIS</b>	L	T	P	C
Version 2020.1	Date of Approval: JULY 200	3	0	0	3
Pre-requisites/Exposure	Basic Mathematics				
Co-requisites	Nil				

### Catalog Description

In this course the concepts of statistics, the science of collecting, organizing, and interpreting numerical data are discussed. Emphasis will be placed on statistical reasoning and data analysis. The main topics are study design, descriptive statistics, probability theory, and statistical inference. As a precursor to the study of cryptography studies will be made on impact of various techniques for finding independence or dependence between data variables. The concepts learnt in the studies of statistics will be applied practically to solve number of real life problems using the statistical package like R and SPSS.

### Course Objectives

The objective of this course is to

1. Equip the students with concepts of statistics through problem solving and analytical approach.
2. Provide an overview of various statistical techniques: descriptive and inferential, parametric and non-parametric and practical statistics using R and SPSS.

### Course Outcomes

On completion of this course, the students will be able to

CO 1: Explain, describe and distinguish various population, sample, type of variables, measurement scales; Explain central tendency, percentile and solve problems related to them.

CO 2: Explain the concept of descriptive and inferential statistics; probability theory; Solve problems based on probability; Explain binomial, Poisson distribution and solve real life problems related to discrete and continuous random variable.

CO 3: Describe the concept of sampling distribution for large and small samples; Explain the concept of hypothesis testing and solve problems related using t-distribution and standard normal distribution.

CO 4: Explain concept of covariance and correlation and its applications in real life; Explain Anova and its use in real life problem solving; Explain and compare various regression analysis methods statistics for prediction

CO 5: Explain various parametric and nonparametric test and apply them to solve real life statistical problems

Modules	Blooms level*	Number of hours
<b>Module I Introduction to Statistical Analysis</b> Introduction to Statics, Population Versus Sample, Population and Sample, Basic Terms, Types Of Variables, Quantitative Variables, Qualitative or Categorical Variables, Measurement Scales, Identifying The Scale of Measurement, Normal Variables, Ordinal Variables, Continuous Variables, Cross-Section Data, Time –Series Data, Sources of Data, Types of Statics, Measures of Central Tendency, Mean, Examples, Mode, Mode Scenarios, Symmetry, Skewness, Measures of Spread, Range, Variance and Standard Deviation, Examples, Solution, Population Parameters and Sample Statistics, Measures of Position– Quartiles and Interquartile Range, Quartiles, Example, Solution, Percentiles and Percentile Rank, Example, Solution, Box and Whisker Plot, Solution.	L1, L2 and L3	7
<b>Module II Describing Data</b> Raw Data, Graphical Presentation of Qualitative Data, Graphical Presentation of Qualitative Data, Graphing Quantitative Data, Frequency Distributions, Relative Frequency and Percentage Distributions, Graphing Grouped Data, Cumulative Frequency Distributions, Probability Concepts, Simple and Compound Events, Two Properties of Probability, Classical Probability, Probability Concepts, Complementary Events, Example, Discrete Random Variables, The Binomial Experiment, The Poisson Probability	L1,L2, L3	6

Distribution, Continuous Random Variables, Normal Distribution, Standard Normal Distribution.		
<b>Module III Testing Hypothesis</b> Population Distribution, Sampling and Non Sampling Errors, A Point Estimate, Interval Estimation, The t Distribution Hypothesis Testing, The Chi-Square Distribution.	L1,L2, L3	6
<b>Module IV Examining Relationship</b> Covariance, Pearson Correction Coefficient, Computational Formulas-Covariance, Computing A Correlation, Correlation Analysis, Scatter Plots, Relationships Between Continuous Variables, Correlation, Pearson Correlation Coefficient, Hypothesis Test For A Correlation, Extreme Data Values, Correlation Matrix, Anova Overview, Anova Hypothesis, Anova, Error Sum of Squares, Model Sum of Squares, Anova-Example, Simple Regression, Relationship Between Food Expenditure And Income: (A) Linear Relationship (B) Nonlinear Relationship, Plotting A Linear Equation, Y- Intercept And Slope Of A Line, Simple Linear Regression Analysis, Scatter Diagram, Least Squares Line, Error Sum Of Squares, The Least Squares Line, Example, Solution, Error Of Prediction, Positive And Negative Linear Relationship Between X And Y, Assumptions of Regression Model, Coefficient Of Determination, Regression Analysis.	L1, L2 L3	7
<b>Module V Advanced Techniques</b> Non Parametric Tests, Chi-Squared Goodness- of-Fit Test, Chi-Square Test of Independence, The Sign Test, Example, Mann-Whitney U Test, The Kruskal-Wallis Test, No Title, Structural Equation Modelling, Cluster Analysis, Factor Analysis, Centroid Method, Principal Components Method.	L1, L2	9

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

<b>COURSE CODE : MLE 6802</b>	<b>DATA MINING AND PREDICTIVE ANALYTICS</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Concept of Database and Data Mining				
Co-requisites					

### Course Objectives

The objective of this course is to

- Provide students with an in-depth knowledge of data mining. To introduce students to basic applications, concepts, and techniques of data mining.
- Develop skills for using recent data mining software to solve practical problems and prediction in a variety of disciplines and
- Gain experience doing independent study and research.

### Course Outcomes

On completion of this course, the students will be able to

CO 1: Explain concepts of Data mining, predictive analytics and analyses architecture of data mining. Differentiate between supervised and unsupervised methods

CO 2: Apply classification techniques on different data sets and solve cost –benefit analysis numerical. Analyze decision tree methods.

CO 3: Implement various clustering algorithm on different data sets and describe these algorithms.

CO 4: Prepare data representation for market basket analysis and determine the usefulness of association rules. Interpret supervised and unsupervised learning methods.

CO 5: Predict market trends and outline different factors associated mail marketing.

### Catalog Description

Data Mining and Predictive analytics serve as one of the most important courses for postgraduate students, since it builds computational abilities, inferential thinking, and practical skills for tackling core data scientific challenges. The students will get a comprehensive understanding of different

data mining techniques that can be used for prediction and for discovering patterns, be prepared to select the right technique for a given data problem and will be able to create a general-purpose analytic process.

## Course Content

Modules	Bloom's level	Number of Hours
<b>Module I Data Preparation</b>  An introduction to data mining and predictive analytics, Data Pre-processing Exploratory Data Analysis, Dimension- Reduction Methods.	L1, L2	8
<b>Module II Classification</b>  k- Nearest Neighbour Algorithm, Decision Trees, Model Evaluation Technique, Cost –Benefit Analysis Using Data Driven Cost.	L1, L2, L3	7
<b>Module III Clustering</b>  Hierarchical and k- Means Clustering, Kohonen Networks, Birch Clustering, Measuring Cluster Goodness.	L1, L2, L3	8
<b>Module IV Association Rules</b>  Affinity Analysis and Market Basket Analysis, Data Representation for Market Basket Analysis, Support, Confidence, Frequent Item sets, and the a Priori Property, How Does a Priori Algorithm Work? Generating Frequent Item sets, Generating Association Rules, Extension from Flag Data to General Categorical Data, Information-Theoretic Approach: Generalized Rule Induction Method, J-Measure, Association Rules are Easy to do Badly, how can we Measure the Usefulness of Association Rules? Do Association Rules Represent Supervised or Unsupervised Learning?	L1, L2, L3	9
<b>Module IV Case Study: Predicting Response to Direct Mail Marketing</b>  Business Understanding, Data Preparation, and Eda, Clustering and Principal Components Analysis, Modelling and Evaluation for Performance and Interpretability, Modelling and Evaluation for High Performance.	L2, L3, L4, L5	8

<b>Course Code: MLE 6803</b>	<b>DATA WAREHOUSING AND MULTIDIMENSIONAL MODELING</b>				L	T	P	C
Version 2020.1	Date of Approval: JULY 2020				3	0	0	3
Pre-requisites/Exposure	Basic Knowledge of Database							
Co-requisites	Nil							

### Catalog Description

In this course the concepts of basic concepts of Multi-dimensional database are discussed in detail. As a precursor to the study of the course it provide an in depth understanding of basic concepts of data warehouse which includes its architecture, data warehouse operations, data marts, metadata. The concept further enhances the understanding of advance concepts that cover the slowly and rapidly changing dimensions, indexes in OLAP and concept hierarchies. It also include the different application of data warehouse

### Course Objectives

The objective of this course is to

1. Equip the students with concepts of Multi-dimensional database, its need and various applications.
2. It provides an overview of some basic concepts in data warehouse such as its architecture, OLAP applications, and metadata. It also includes some advance concepts such as OLAP hierarchies, OLAP changing dimensions.

### 3. Course Outcomes

On completion of this course, the students will be able to

CO1: Explain the concept of Multi-dimensional database and its importance.

CO2: Analyse the fundamental concept of data warehouse which include OLAP operations, architecture.

CO 3: Explain the different types of dimensions that exist in data warehouse.

CO4: Explain the advance concepts of data warehouse which include OLAP indexing.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>MODULE 1:</b>  <b>Introduction:</b> Multidimensional Data Management, Multidimensional History, Related Terminology	L1 and L2	8
<b>MODULE 2:</b>  <b>Fundamental Concepts :</b> Cubes ,Dimensions, Facts, Measures, Relational Representations, Star Schemas, Snowflake Schemas, Data Warehouses And Data Marts, Multidimensional Modelling Process, Analysis And Querying ,Roll Up, Drill Down, Drill Out, Slicing And Dicing, Drill Across, Pivot Tables, Ranking, Multi-Dimensional Querying in MDX and SQL, Graphical Querying and Visualizations .	L1, L2 and L3	8
<b>MODULE 3:</b>  <b>Advance Concepts</b>  Slowly Changing Dimensions, The Problem, Solutions, Other Special Kinds Of Dimensions, Mini dimensions, Outriggers, Degenerate Dimensions, Junk Dimensions, Time Dimensions, Data Quality Dimensions, Advanced Hierarchies, Parent-Child Hierarchies, Unbalanced Hierarchies, Non Covering Hierarchies , Non –Strict Hierarchies, Multiple Hierarchies And Parallel Hierarchies.	L2, L3 and L4	10
<b>MODULE 4:</b>  <b>Module IV: Implementation Issues</b>  Materialized Views, Indexing, Indexing Overview, Bitmap Indices, Join Indices, Query Processing, OLAP Implementations, Extract-Transform-Load.	L3, L4 and L5	10

Pre-requisites/Exposure	Basic knowledge of statistics				
Co-requisites	Nil				

## Catalog Description

This lab will provide a basic introduction to the R programming Language and the use of R to perform basic statistics and programming tasks. The main objectives of this lab is to impart the students with the knowledge of R Programming, Machine Learning using R Mining from streaming Data, Mining from Distributed Data.

## Course Objectives

The objective of this course is

1. To make students familiar with R Programming Language and its concepts.
2. Equip the students with knowledge of R Programming, Machine Learning using R Mining from streaming Data, Mining from Distributed Data.

## Course Outcomes

On completion of this course, the students will be able to

CO1. Install and configure R Studio and R packages.

CO2. Explain concepts of Structured Data, data types, data structures and Use R for mathematical operations

CO3. Describe the use of R functions, control statements, Loop constructs and apply to iterate functions across data.

CO4. Understand basic regular expressions graphics. Use of R for descriptive statistics and inferential statistics

CO5. Predict/Score new data using models, understand basic non-linear functions in models and how to link data, statistical methods.

<b>Course Code:- MLE6804</b>	<b>BIG DATA TECHNOLOGIES</b>	L	T	P	C
Version 2020	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Basics of DBMS and SQL				
Co-requisites	Nil				

**Catalog Description**

This course brings together several key big data technologies used for storage, analysis and manipulation of data. It also introduces the students the key concepts of Hadoop framework, MapReduce, Pig, Hive, and No-SQL. Students will learn to work on Hadoop platform. The concepts learnt will make students capable of working on big data projects easier.

## Course Objectives

The objective of this course is

1. To make students familiar with big data technologies.
2. Provide an overview of Hadoop architecture and its working with other open source technologies.

## Course Outcomes

On completion of this course, the students will be able to

CO1. Explain importance and applications of Big Data Analytics.

CO2. Differentiate among analytics technologies.

CO3. Demonstrate architecture of Hadoop and Mapreduce framework.

CO4. Illustrate Hadoop installation process and commands.

CO5. Introduce concepts of Hive and Pig.

Modules	Blooms level*	Number of hours
<b>Module I: Introduction to Big Data</b> Big Data and its Importance – Four V's of Big Data – Drivers for Big Data – Introduction to Big Data Analytics – Big Data Analytics applications.	L1 and L2	5
<b>Module II: Big Data Technologies</b> Hadoop's Parallel World – Data discovery – Open source technology for Big Data Analytics – cloud and Big Data –Predictive Analytics – Mobile Business Intelligence and Big Data – Crowd Sourcing Analytics – Inter- and Trans-Firewall Analytics - Information Management.	L2 and L5	4
<b>Module III: Processing Big Data</b> Integrating disparate data stores - Mapping data to the programming framework - Connecting and extracting data from storage - Transforming data for processing - Subdividing data in preparation for Hadoop Map Reduce.	L1 and L3	8
<b>Module IV: Hadoop Map Reduce</b> Employing Hadoop Map Reduce - Creating the components of Hadoop Map Reduce jobs - Distributing data processing across server farms –Executing Hadoop Map Reduce jobs - Monitoring the progress of job flows - The Building Blocks of Hadoop Map Reduce - Distinguishing Hadoop daemons - Investigating the Hadoop Distributed File System Selecting appropriate execution modes: local, pseudo-distributed, fully distributed.	L2, L3 and L4	9

Module V Big Data Tools and Techniques	L2 and L3	10
<b>Installing and Running Pig – Comparison with Databases – Pig Latin – User- Define Functions – Data Processing Operators – Installing and Running Hive – Hive QL – Tables – Querying Data – User- Defined Functions – Oracle Big Data.</b>		

*\*Bloom's Level:*

<b>Course Code: MLE6805</b>	<b>APPLIED STATISTICAL ANALYSIS LAB</b>	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	0	0	2	1
Pre-requisites/Exposure	Basic Mathematics				
Co-requisites	Nil				

### **Catalog Description**

In this lab the concepts of statistics, the science of collecting, organizing, and interpreting numerical data learned will be practically applied to solve number of real life problems using the statistical package like R and SPSS.

## Course Objectives

The objective of this course is to

1. Equip the students with concepts of statistics through problem solving and analytical approach.
2. Provide an overview of various statistical techniques: descriptive and inferential, parametric and non-parametric and practical statistics using R and SPSS.

## Course Outcomes

On completion of this course, the students will be able to

CO 1: Explain, describe and distinguish various population, sample, type of variables, measurement scales; Explain central tendency, percentile and solve problems related to them.

CO 2: Explain the concept of descriptive and inferential statistics; probability theory; Solve problems based on probability; Explain binomial, poisson distribution and solve real life problems related to discrete and continuous random variable.

CO 3: Describe the concept of sampling distribution for large and small samples; Explain the concept of hypothesis testing and solve problems related using t-distribution and standard normal distribution.

CO 4: Explain concept of covariance and correlation and its applications in real life; Explain Anova and its use in real life problem solving; Explain and compare various regression analysis methods statistics for prediction.

CO 5: Explain various parametric and nonparametric test and apply them to solve real life statistical problems

Programs should be based on following topics:

**Quick Review** of interpretation of mathematical models such as formulas, graphs, tables, and schematics, and draw inferences from them; Representation of mathematical information symbolically, visually, numerically, and verbally; Use of arithmetic, algebraic, geometric, and statistical methods to solve problems; Estimation and check answers to mathematical problems in order to determine reasonableness, Identification of alternatives, and select optimal results; and recognize the limitations of mathematical and statistical models.

Lab Sessions	Blooms level*	Number of hours
1. Getting familiar with R environment and jupyter notebook in Anaconda 2. Running basic commands and small R scripts 3. Working with operators and input output, Writing R scripts to demonstrate	L1, L2 and L3	2

various operators available in R		
1. Demonstrating decision making statements in R by writing small R scripts. 2. Creating data frames , vectors, matrices, list in R and solving practical problems in statistics	L1, L2 and L3	2
1. Running basic R commands for central tendency, measures of variations, generating frequency tables, cumulative frequency and relative frequency table. 2. Demonstrating graphics in R with simple plot command	L1, L2 and L3	2
1. Working with bar chart in R and solving practical problems in statistics 2. Demonstrating Pie chart in R for some real life problems. 3. Demonstrate concepts of quartiles using Box and whisker plot in R with some hands on data/data sets and perform analysis	L1,L2, L3	2
1. Demonstrate stem and leaf plot in R 2. Working with loops in R by writing basic scripts. 3. Drawing standard normal distribution chart in R and finding areas under the curve in figure as well as numerica	L1,L2, L3	2
1. Perform binomial and poisson distribution in R 2. Perform operations related to PMF and CDF in R /SPSS	L1,L2, L3	2
1. Demonstrate hypothesis testing in R for some real life problems using standard normal distribution and Student-t distribution. 2. Running basic commands for covariance, correlation and doing analysis for some problems.	L1,L2, L3	2
1. Demonstrate chi-square, ANOVA test in R for some real life problems. 2. Demonstrate Linear Regression Analysis in R for some built-in data sets and for real life problems.	L1,L2, L3	2

<b>Course Code: MLE6806</b>	<b>DATA MINING AND PREDICTIVE ANALYTICS LAB</b>				L	T	P	C
Version 2020.1	Date of Approval: JULY 2020				0	0	2	1
Pre-requisites/Exposure	Basic knowledge of Database							
Co-requisites	NIL							

### Catalog Description

Data Mining and Predictive analytics serve as one of the most important courses for postgraduate students, since it builds computational abilities, inferential thinking, and practical skills for tackling core data scientific challenges. The students will get a comprehensive understanding of different data mining techniques that can be used for prediction and for discovering patterns, be prepared to select the right technique for a given data problem and will be able to create a general-purpose analytic process.

### Course Objectives

The objective of this course is to

- Provide students with an in-depth knowledge of data mining. To introduce students to basic applications, concepts, and techniques of data mining.
- Develop skills for using recent data mining software to solve practical problems and prediction in a variety of disciplines and
- Gain experience doing independent study and research.

### Course Outcomes

On completion of this course, the students will be able to

CO 1: Explain concepts of Data mining, predictive analytics and analyses architecture of data mining. Differentiate between supervised and unsupervised methods

CO 2: Apply classification techniques on different data sets and solve cost –benefit analysis numerical. Analyze decision tree methods.

CO 3: Implement various clustering algorithm on different data sets and describe these algorithms.

CO 4: Prepare data representation for market basket analysis and determine the usefulness of association rules. Interpret supervised and unsupervised learning methods.

CO 5: Predict market trends and outline different factors associated mail marketing.

Modules/Topics Covered**	Blooms level*	Number of hours
1. To understand the basic features of Data Warehousing.	L1, L2	2
2. Explore WEKA Data Mining/Machine Learning Toolkit  (a) Downloading and/or installation of WEKA data mining toolkit. (b) Understand the features of WEKA tool kit such as Explorer, Knowledge flow interface, Experimenter, command-line interface. (c) Navigate the options available in the WEKA (deselect attributes panel, preprocess panel, classify panel, cluster panel, associate panel and visualize). (d) Study the ARFF file format.	L2, L3, L5	2
3. To understand the working of datasets in WEKA & to perform demonstration of preprocessing on dataset weather.arff .	L3, L4, L5	2
4. To apply Numeric Transform (data preprocessing step) on Iris Dataset.	L3, L4, L5	2
5. To understand the importance of CSV data and then load student academic record (CSV format) in Weka.	L3, L4, L5	2

6. To understand the concept of discretization and to perform discretization on the dataset airline.arff.	L3, L4, L5	2
7. To create Training, Validation and Test dataset for iris.arff.	L3, L4, L5	2
8. To perform decision tree classification using J48 algorithm on weather.arff	L3, L4, L5	2
9. To apply Apriori technique on the dataset and to generate association rules.	L3, L4, L5	2
10. (a) Demonstration of classification rule process on dataset student.arff using j48 algorithm.  (b) Demonstration of classification rule process on dataset employee.arff using j48 algorithm.	L3, L4, L5	2
11. Demonstration of classification rule process on dataset employee.arff using naïve bayes algorithm	L3, L4, L5	4

**\*Bloom's Level:** L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation.

\*\* Sample Programs provided are not limited to these only, can include others as desired.

<b>Course Code : MLE6807</b>	<b>DATA WAREHOUSING AND MULTIDIMENSIONS MODELLING LAB</b>	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	0	0	2	1
Pre-requisites/Exposure	Basic Knowledge of Database				
Co-requisites	NIL				

### Catalog Description

In this Lab course Data warehousing and Multidimensional modeling programs are implemented and demonstrated using a SQL Server and ETL Tools. The Concepts that are covered would enable them to analyze the working of ETL tools and enable them to understand the following topics namely SQL Statements, SQL Built-in Functions, PL/SQL Cursors , Exception handling, Procedure, Functions, Trigger and concurrency control. Programs will be related to concepts of understanding the working of ETL tools on multidimensional data.

### Course Objectives

The objective of this course is to

1. Make the students apply knowledge of Database by analyzing the different database concepts in SQL Server.
2. Provide a demonstration of ETL tools to organize the data sets.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Apply the knowledge of transaction processing to gain analysis on different data sets through concurrency control mechanism.

CO2: Demonstrate the use of SQL Built-in Functions, PL/SQL Cursors, Exception handling and Procedures.

CO3: To implement the different warehousing concepts on the given ETL tools.

CO4: Demonstrate the working of basic SQL statements and triggers.

<b>Modules/Topics Covered**</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<p>1. To understand the basic of SQL statements</p> <p>(g) Perform the following SQL statements on the table that perform the following query on the database</p> <ul style="list-style-type: none"> <li>• Create, update ,alter and delete a record</li> <li>• Joins and constraints on the table.</li> <li>• Wild card operators.</li> </ul>	L1,L3,L4	4
<p>2. Sample Programs to execute the concept of Procedures</p> <p>(g) Preliminary introduction of Procedures their Syntax and usage</p> <p>(h) Write a procedural program to find out minimum of two numbers.</p> <p>(i) Write a program to print the reverse of a number using looping construct in PL/SQL Procedures.</p> <p>(j) Write a procedural program to find out the factorial of number.</p>	L3, L4,L5	4
<p>3. Sample Programs to implement the concept of Triggers</p> <p>(a) Preliminary introduction of Triggers their Syntax and usage</p> <p>(b) Create a Trigger on Employee record that automatically updates the salary of an Employee after each financial year.</p> <p>(c) Create a Trigger for the following events:</p> <ul style="list-style-type: none"> <li>• Deletion of a record</li> <li>• Updating of a record</li> <li>• Insertion of a new record.</li> </ul>	L3, L4,L5	4
<p>4. Sample Programs to implement the concept of Cursors and Exception Handling.</p> <p>(a) Write a program to demonstrate the concept of Cursors in PL/SQL</p> <p>(b) Write a program that handles an exception that incurred in the given program.</p>	L3,L4, L5	6
<p>5. To perform demonstration to understand the working of ETL tools</p> <p>(c) Preliminary introduction of ETL Tools their features and</p>	L4,L5,L6	6

importance.		
(d) Perform validation on the data set by applying the ETL tools.		
(e) Perform the following operations using ETL tools		
<ul style="list-style-type: none"> <li>• Source to target mapping</li> <li>• Data checks on source data</li> <li>• Packages and schema validation</li> <li>• Data verification in the target system</li> <li>• Data integrity and quality checks in the target system</li> </ul>

Co-requisites	Nil				

### Catalog Description

The objective of this course is to provide practical training on some live projects that will increase capability to work on actual problem in industry. This training may undergo in an industrial environment or may be an in-house training on some latest software which is in high demand in market. This training will be designed such that it will be useful for their future employment in industry.

### Course Objectives

The objective of this course is to

1. Provide practical training on live projects
2. Increase technical capabilities on solving real life problems in company environment

### Course Outcomes

On completion of this summer internship, the students will be able to:

CO1: Develop communication, interpersonal and other critical skills in the job interview process.

CO2: Design and develop software and hardware projects

CO3: Assess interests and abilities in their field of study.

CO4: Demonstrate excellent technical and communication skills to acquire employment contacts leading directly to a full-time job following graduation from college.

### Catalog Description

The objective of this course is to provide practical training on some live/demo projects that will increase capability to work on actual problem in industry. It will be an in house training on some latest software which is in high demand in market. This training will be designed such that it will useful for their future employment in industry.

### Course Objectives

The objective of this course is to

1. Provide practical training on live projects
2. Increase technical capabilities on solving real life problems in company environment

### Course Outcomes

On completion of this summer internship, the students will be able to:

CO1: Demonstrate a sound technical knowledge of their selected project topic.

CO2: Design and develop engineering solutions to complex problems utilising a systems approach.

CO3: Analyse various approaches for solving a complex engineering problem using different tools and techniques

CO4: Demonstrate the knowledge, skills and attitudes of a professional engineer.

CO5: Apply technical skills and knowledge in completing the project.

## ROBOTICS (SPECIALISATION)

Course Code: RBE6901	AUTOMATION IN MANUFACTURING SYSTEMS	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Production system, Manufacturing System				
Co-requisites	Automation in production and manufacturing system				

### Catalog Description:

In this course the concepts and procedure for Automation of Manufacturing systems and the technology behind the automation of a manufacturing system and concepts of computer aided manufacturing are discussed in detail. The concepts of computer aided process planning (CAPP), Hardware components for automation, group technology (GT), cellular manufacturing, automated

guided vehicle system, flexible manufacturing system (FMS), Automated inspection and just in time are also discussed in detail.

### Course Objectives:

The overall objective of this course is

1. To equip the students with basic and essential concepts of Automation in manufacturing system to usually increase production rate and labor productivity.
2. To provide high caliber engineering students with an in-depth understanding of cellular manufacturing, flexible manufacturing system (FMS) and computer aided process planning.

### Course Outcomes (COs):

At the end of the course, the student shall be able to:

CO1 - Define and describe the basic fundamentals of Automation in manufacturing system, computer aided manufacturing and computer integrated manufacturing.

CO2 – State, explain and demonstrate computer aided process planning, automated production lines and assembly systems.

CO3 – Outline, interpret and apply concepts of group technology and cellular manufacturing.

CO4 – Define, explain and apply knowledge of flexible manufacturing systems and industrial robotics in industries.

Modules	Blooms level*	Number of hours
<b>Module I</b>  <b>Over view of Manufacturing and Automation:</b> Production systems, Automation in production systems, Automation principles and strategies, Manufacturing operations, production facilities. Basic elements of an automated system, levels of automation; Hardware components for automation and process control, programmable logic controllers and personal computers.	L1 and L2	7
<b>Module II</b>  <b>Material Handling And Identification Technologies:</b> Material handling, equipment, Analysis. Storage systems, performance and location strategies, Automated storage systems, AS/RS, types. Automatic identification methods, Barcode technology, RFID	L1, L2, and L3	6
<b>Module III</b>  <b>Manufacturing Systems And Automated Production Lines:</b> Manufacturing systems: components of a manufacturing system, Single station manufacturing cells; Manual Assembly lines, line balancing Algorithms, Mixed model Assembly lines, Alternative Assembly systems. Automated production lines, Applications, Analysis of transfer lines	L1, L2 and L3	8

<b>Course Code:RBE6902</b>	<b>ROBOTIC SENSORS,VISIONS AND HARDWARE IMPLEMENTATION</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Knowledge of basics of Artificial Intelligence concepts, Sensors and basic Robotics hardware required.				
Co-requisites	Nil				

### Catalog Description

Robotics sensors find many applications in the areas of robotics, visions, Artificial Intelligence, pattern recognition, controls etc. Robotics sensors offer fundamentally different types of high capable sensors. Many image processing techniques are learnt. These robotics hardware design, architecture, mapping and localization can be applied to many complicated problems of Artificial Intelligence and other applications in Real World Computing. This course provides a comprehensive treatment of robotics sensors, visions and robotics hardware required.

### Course Objectives:

The objective of this course is to

1. Introduces the basics of Robot visions and image processing sensors.
2. It deals with actual hardware implementation of robots

### Course Outcomes:

On completion of this course, the students will be able to

CO1: Understand the principles of smart sensors and transducers, need and usage of sensors.

CO2: comparison various visions in robotics robotic functions, robotic views and robotic parts in simulations.

CO3: Understand concept of image processing techniques which can be applied to robotic perception, robotic movements, dynamics and controls of robotic movement, with which they can be able to apply the conceptual things to the robotic software architecture and applications.

CO4: Get thorough knowledge in robotics orientation and feature extraction.

CO5: Design multicontrolled sensors robot assembly.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>MODULE 1: SENSORS IN ROBOTICS</b>  An Introduction to sensors and Transducers, History and definitions, Smart Sensing, AI sensing, Need of sensors in Robotics. Position sensors – optical, non-optical, Velocity sensors, Accelerometers, Proximity Sensors – Contact, non-contact, Range Sensing, touch and Slip Sensors, Force and Torque Sensors. Different sensing variables – smell, Heat or Temperature, Humidity, Light, Speech or Voice recognition Systems, Tele-presence and related technologies.	L1, L2	4
<b>MODULE 2: VISIONS IN ROBOTICS</b>  The Nature of Vision- Robot vision – Need, Applications - image acquisition –illumination techniques- Point sensor, line sensor, planar sensor, camera transfer characteristic, Raster scan, Image capture time, volume sensors, Image representation, picture coding techniques. Robot Control through Vision sensors, Robot vision locating position, Robot guidance with vision system, End effector camera Sensor.	L1, L2, L3 and L4	10
<b>MODULE 3:ELEMENTS OF IMAGE PROCESSING TECHNIQUES</b>  Discretization, Neighbours of a pixel-connectivity- Distance measures - pre-processing Neighbourhood averaging, Median filtering. Smoothing of binary Images- Image Enhancement- Histogram Equalization-Histogram Specification –Local Enhancement-Edge detection- Gradient operator-Laplace operators-Thresholding-Morphological image processing.	L1, L3, L4 and L5	5
<b>MODULE 4:OBJECT ORIENTATION AND FEATURE EXTRACTION</b>  Image segmentation- Edge linking-Boundary detection-Region growing-Region splitting and merging- Boundary Descriptors-Freeman chain code-Regional Descriptors- recognition-structural methods- Recognition procedure, mahalanobic procedure.	L1, L2, L3, and L4	7
<b>MODULE 5:COLLISIONS FRONTS ALGORITHM</b>  Introduction, skeleton of objects. Gradients, propagation, Definitions, propagation algorithm, Thinning Algorithm, Skeleton lengths of Top most objects.	L2, L3, L4 and L5	5
<b>MODULE 6:MULTISENSORS CONTROLLED ROBOT ASSEMBLY</b>  Control Computer, Vision Sensor modules, Software Structure, Vision Sensor	L2, L3, L4 and	5

software, Robot programming, Handling, Gripper and Gripping methods, accuracy – A Case study.	L5	
---	----	--

Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Basics of Digital Image Processing				
Co-requisites	NIL				

### Catalog Description

This course gives students an insight into the basics of Image Processing along with Pattern Recognition. Concepts covered would enable students to define and differentiate among various types of image refinement. Further they would be able to gain insights about various Image restoration and modification technique.

### Course Objectives

This course covers the theory and methods for learning from data, with an emphasis on pattern classification. Digital Image Processing is designed to give professionals and students a powerful collection of fundamental and advanced image processing tools on the desktop.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Define and explain introductory part of Pattern recognition Concepts & Bayesian decision theory

CO2: List out the Univariate and Multivariate density

CO3: Explain concepts of Un-supervised learning and clustering

CO4: Describe the Image Fundamentals and Transforms

CO5: Explain the basics of Image Segmentation and Edge Detection

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>MODULE 1:</b> <b>Introduction of Pattern recognition and Bayesian Decision Theory</b> Machine perception, pattern recognition example, pattern recognition systems, the design cycle, learning and adaptation	L1 and L2	8

Introduction, continuous features – two categories classifications, minimum error-rate classification- zero-one loss function, classifiers, discriminant functions, and decision surfaces		
<b>MODULE 2:</b>  <b>Normal density</b> Univariate and multivariate density, discriminant functions for the normal density-different cases, Bayes decision theory – discrete features, compound Bayesian decision theory and context	L2 and L3	8
<b>MODULE 3:</b>  <b>Un-supervised learning and clustering</b> Introduction, mixture densities and Identifiability, maximum likelihood estimates, application to normal mixtures, K-means clustering. Data description and clustering, similarity measures, criteria function for clustering	L1 and L2	10
<b>MODULE 4:</b>  <b>Image Fundamentals and Transforms</b> Elements of visual perception – Image sampling and quantization, Basic relationship between pixels, Some basic grayscale transformations, Introduction to Fourier Transform and DFT, Properties of 2D Fourier Transform, FFT, Separable Image Transforms, Walsh, Hadamard, Discrete Cosine Transform, Haar, Slant, Karhunen, Loeve transforms.	L2 and L3	12
<b>MODULE 5:</b>  <b>Image Segmentation and Edge Detection</b> Region Operations, Crack Edge Detection, Edge Following, Gradient operators, Compass and laplace operators. Threshold detection methods, optimal thresholding, multispectral thresholding, thresholding in hierarchical data structures; edge based image segmentation- edge image thresholding, edge relaxation, border tracing, border detection,	L2 and L3	10

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

### Catalog Description

In this Lab course first student should learn about advanced level of software used for easy calculation and toolbox used for software like MATLAB.

### Course Objectives

The objective of this course is to

3. Make the students apply knowledge of various Image processing & pattern recognition required for solving complex problems.
4. Provide a demonstration of different types of image processing techniques through MATLAB toolbox.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Acquiring knowledge of Basics of High-end calculation software and need in Computer Science & engineering

CO2: Demonstrate the All preliminary functions in MATLAB

CO3: Apply the knowledge of all the basics function and toolbox knowledge of MATLAB

CO4: Demonstrate the Use of MATLAB in image Processing

CO5: Demonstrate usage of applications involving with Image processing & Recognition Its Toolbox used by MATLAB

Modules/Topics Covered**	Blooms	Number
--------------------------	--------	--------

	level*	of hours
6. Introduction of MATLAB (h) Basic Variable declaration & its operation (i) Function use & its application	L3, L5	4
7. Sample Programs in MATLAB (k) Basic use of Matrix and Graph Plotting (l) Different type of graph plotting with use of different -2 type of data	L3, L5	6
8. Sample Programs using MATLAB functions (o) Create a basic program MATLAB using functions (p) Use of basic function Image processing (q) Practice on Basic function of Image processing tool box.	L3, L5	6
9. Sample programs of ANN functions (e) Practice on Pattern Recognition functions in MATLAB (f) Write a program for training a small network in MATLAB	L3, L5	6
10. Sample Programs using ANN toolbox & Image processing toolbox (f) Demonstrate the use of ANN tool box & Image processing toolbox and write a program after combining it.	L3, L5	2

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

Pre-requisites/Exposure	MATLAB and concepts of Artificial Intelligence				
Co-requisites	Nil				

### Catalog Description

Robotics sensors find many applications in the areas of robotics, visions, Artificial Intelligence, pattern recognition, controls etc. Robotics sensors offer fundamentally different types of high capable sensors. Many image processing techniques are learnt. These robotics hardware design, architecture, mapping and localization can be applied to many complicated problems of Artificial Intelligence and other applications in Real World Computing. This course provides a comprehensive treatment of robotics sensors, visions and robotics hardware required.

### Course Objectives

The objective of this course is to

1. To become familiar with basics of robot visions, image processing sensors.
2. Understand and analyse concepts of hardware implementations in robotics.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Understand the principles of smart sensors and transducers, need and usage of sensors.

CO2: comparison various visions in robotics robotic functions, robotic views and robotic parts in simulations.

CO3: Understand concept of image processing techniques which can be applied to robotic perception, robotic movements, dynamics and controls of robotic movement, with which they can be able to apply the conceptual things to the robotic software architecture and applications.

CO4: Get thorough knowledge in robotics orientation and feature extraction.

Modules	Blooms level*	Number of hours
<b>Lab Session 1:Generation in robot languages</b> Learning of robot language structure, on line and offline programming	L3 and L4	2
<b>Lab Session 2:Cartesian Trajectories</b> Study of Joint space planning, Cartesian trajectories, path primitives, coordinate systems used to determine the positions of TCP and direction of tools	L3 and L4	4
<b>Lab Session 3:Basic Syntax</b> Learning of RAPID i.e. data objects, expression, function. WAIT, SIGNAL AND DELAY command.	L3 and L4	6
<b>Lab Session 4:Routine and subroutine</b> Write subroutine, task module, input-output interrupts, priority interrupts, and task modules. Study of built-in subroutines in RAPID.	L1, L2, and L3	2
<b>Lab Session 5:optical sensors</b> To study Photodiodes, phototransistors and photo resistors based sensors, light-to-light detectors, Infrared sensors (thermal, PIR, AFIR, thermopiles).	L1, L2, and L3	4
<b>Lab Session 6: Magnetic and Electromagnetic Sensors and Actuators</b> Study on Motors as actuators (linear, rotational, stepping motors), magnetic valves, inductive sensors (eddy current, LVDT, RVDT, Proximity, switches), Hall Effect sensors, Magneto resistive sensors.	L3 and L4	2
<b>Lab Session 7:Mechanical Sensors</b> Accelerometers, Force sensors (strain gauges, tactile sensors), Pressure sensors (semiconductor, piezo resistive, capacitive, VRP).	L3 and L4	2
<b>Lab Session 8:Industrial Networks and Fields Bus</b> Types of bus – DN, PB, ProfiNet, Eth/IP Interfacing to Controller: Connecting sensors to controller directly or through fieldbus. Configuration of digital, group, and analog IO. Use of instructions and logic. Strobing and handshaking with PLC as master, Encoder and Resolvers.	L1, L2, and L3	2
<b>Lab Session 9:PLC</b> Various hardware types of PLC (CPU and I/O modules).Centralized configuration of PLC.On-line with PLC (using serial port).Various languages and its over-view. Sample program down-load, Task configuration. Configuration of IP address & sample program download. Decentralized configuration of PLC (Profibus protocol).Configuration I/O modules on Profibus protocol. Mod-bus configuration (Master & Slave configuration). Mod-bus RTU (Remote Telemetry Unit) and Mod-bus TCP/IP communication with	L2, L3, and L4	2

PCbased software .

### **Catalog Description**

The purpose of this course is to develop a knowledge in the field of optimization techniques their basic concepts, ,principles. linear programming and queuing theory.

### **Course Objectives**

After successful completion of the course, student will be able to understand importance of optimization of industrial process management , apply basic concepts of mathematics to formulate an optimization problem , analyse and appreciate variety of performance measures for various optimization problems.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: Understand importance of optimization of industrial process management.

CO2: Apply basic concepts of mathematics to formulate an optimization problem

CO3: Analyse and appreciate variety of performance measures for various optimization problems

CO4: Use classical optimization techniques and numerical methods of optimization

CO5: Apply knowledge of optimization to formulate and solve engineering problems

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>MODULE 1: INTRODUCTION</b>  Introduction to optimization – adequate and optimum design – principles of optimization – statement of an optimization problem – classification – formulation of objective function, design constraints.	L1, L2	4
<b>MODULE 2: CLASSICAL OPTIMIZATION TECHNIQUES</b>  Single variable optimization –multivariable optimization with no constraints – exhaustive search, Fibonacci method, golden selection, Random, pattern and gradient search methods – Interpolation methods: quadratic and cubic, direct root method.	L1, L2, L3 and L5 , L6	12
<b>MODULE 3:MULTIVARIABLE – UNCONSTRAINED AND CONSTRAINED OPTIMIZATION</b>  Direct search methods – descent methods – conjugate gradient method. Indirect methods – Transformation techniques, penalty function method	L1, L3 and L4	8
<b>MODULE 4:NON – TRADITIONAL OPTIMIZATION TECHNIQUES</b>  Genetic Algorithms -steady state algorithm, fitness scaling, inversion. Genetic programming:- Genetic Algorithm in problem solving, Implementing a Genetic Algorithm:- computer implementation, operator (reproduction, crossover and Mutation, Fitness Scaling, Coding, Discretization). Knowledge based techniques in Genetic Algorithm. Advanced operators and techniques in genetic search:- Dominance, Diploidy and Abeyance. Inversion and other reordering operators, Niche and speciation and Tabu search methods.	L1, L3, and L4	10
<b>MODULE 5:OPTIMUM DESIGN OF MACHINE</b>  Desirable and undesirable effects – functional requirement – material and geometrical parameters – Design of simple axial, transverse loaded members for minimum cost and minimum weight.	L3 and L4	2

### Catalog Description

Fuzzy sets and fuzzy logic find many applications in the areas of stability theory, pattern recognition, controls etc. Neural Networks offer fundamentally alternative approaches to procedural programming. These systems proved their applicability to the problems where there are missing data or information or the problems which could not be defined in an algorithm. The integration of fuzzy systems and neural networks gives a tremendous potential which can be applied to many complicated problems of Artificial Intelligence and other applications in Real World Computing. This course provides a comprehensive treatment of neural network architectures and learning algorithms, with an in-depth look at problems in data mining and in knowledge discovery.

### Course Objectives

The objective of this course is to

1. Introduces the basics of Neural Networks and essentials of Artificial Neural Networks with Single Layer and Multilayer Feed Forward Networks.
2. It deals with Associate Memories and introduces Fuzzy sets and Fuzzy Logic system component

## Course Outcomes

On completion of this course, the students will be able to

CO1: Understand the principles of neural networks and fuzzy Logic fundamentals.

CO2: compare analysis between human and computer, Artificial Neural Networks models, characteristics of ANN's learning strategies, learning rules and basics of fuzzy logic.

CO3: Understand concept of classical and fuzzy sets, fuzzification and defuzzification, with which they can be able to apply the conceptual things to the real world electrical and electronics problems and applications.

CO4: Get thorough knowledge in biological neuron and artificial neurons.

CO5: Design the required and related systems

Modules	Blooms level*	Number of hours
<b>MODULE 1:</b>  Basic neural computation models: Network and node properties. Inference and learning algorithms. Unsupervised learning: Signal hebbian learning and competitive learning. Supervised learning: Back propagation algorithms.	L1, L2	4
<b>MODULE 2:</b>  Self organizing networks: Kohonen algorithm, bi-directional associative memories.  Hopfield Networks: Hopfield network algorithm.  Adaptive resonance theory: Network and learning rules. Neural network applications.	L1, L2, L3 and L4	10
<b>MODULE 3:</b>  Fuzzy Sets: Operations and properties.  Fuzzy Relations: Cardinality, Operations and properties.  Value Assignments: Cosine amplitude and max-min method.  Fuzzy classification: Cluster analysis and validity, Fuzzy e-means clustering, hardening the Fuzzy e-partition.	L1, L3, L4 and L5	6
<b>MODULE 4:</b>  Fuzzification, Membership value assignments: Inference, rank ordering and angular Fuzzy sets, defuzzification methods, fuzzy logic,	L1, L2, L3, and L4	9

approximate reasoning.		
Fuzzy –based systems: Canonical rule forms, decomposition of compound rules, likelihood and truth qualification, aggregation of Fuzzy rules, graphical techniques of inference.		
<b>MODULE 5:OPTIMUM DESIGN OF MACHINE</b>		
Non linear simulation using Fuzzy rule-based systems, Fuzzy associative memories. Decision making under Fuzzy states and Fuzzy actions. Fuzzy grammar and syntactic recognition. General Fuzzy logic controllers, special forms of Fuzzy logic control system models, examples of Fuzzy control system design and control problems, industrial applications.	L2, L3, L4 and L5	7

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation*

### Catalog Description

Neural Networks offer fundamentally alternative approaches to procedural programming. Fuzzy sets and fuzzy logic find many applications in the areas of stability theory, pattern recognition, controls etc. These systems proved their applicability to the problems where there are missing data or information or the problems which could not be defined in an algorithm.

### Course Objectives

The objective of this course is to

1. To become familiar with neural networks learning algorithms from available examples and give design methodologies for artificial neural networks.
2. Understand and analyse concepts of fuzzy set and use fuzzy set operations to implement current computing techniques used in fuzzy computing.

## Course Outcomes

On completion of this course, the students will be able to

CO1: Understand the difference between learning and programming and explore practical applications of Neural Networks (NN).

CO2: To analyse and appreciate the applications which can use fuzzy logic.

CO3: Understand the efficiency of a hybrid system and how Neural Network and fuzzy logic can be hybridized to form a Neuro-fuzzy network and its various applications and they will be able to design inference systems

Modules	Blooms level*	Number of hours
<b>Lab Session 1:</b> Write a program to implement single layer perception algorithm.	L3 and L4	2
<b>Lab Session 2:</b> Write a program to implement back propagation learning algorithm	L3 and L4	4
<b>Lab Session 3:</b> Design multilayer feed forward network using back-propagation algorithm	L3 and L4	6
<b>Lab Session 4</b> Study of fuzzy inference system	L1, L2, and L3	2
<b>Lab Session 5</b> To study fuzzy logic controller using fuzzy logic toolbox	L1, L2, and L3	4
<b>Lab Session 6</b> Write a program to implement SDPTA	L3 and L4	2
<b>Lab Session 7</b> Write a program to implement RDPTA	L3 and L4	2
<b>Lab Session 8</b> To Study various defuzziification techniques	L1, L2, and L3	2
<b>Lab Session 9</b> Write a program to implement of fuzzy set operation	L2, L3, and L4	2

### **Catalog Description**

To develop semantic-based and context-aware systems to acquire, organize process, share and use the knowledge embedded in multimedia content. Research will aim to maximize automation of the complete knowledge lifecycle and achieve semantic interoperability between Web resources and services. The field of Robotics is a multi disciplinary as robots are amazingly complex system comprising mechanical, electrical, electronic H/W and S/W and issues germane to all these.

### **Course Objectives**

The objective of this course is to

1. To provide an overview of problem solving skills methods using decision making systems .
2. To serve as a foundation for the study of programming languages that is used to develop an Intelligence System

### **Course Outcomes**

On completion of this course, the students will be able to

CO1. Understand the concept of artificial intelligence.

CO2. Differentiate between linear and non-linear problems and Learn various problem solving techniques using neural networks

CO3. Understand the concept of fuzzy logic and apply to various problems

CO4. Able to learn concepts of genetic algorithm

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Soft Computing</b>  Introduction of soft computing, soft computing vs. hard computing, various types of soft computing techniques, applications of soft computing. Artificial Intelligence : Introduction, Various types of production systems, characteristics of production systems, breadth first search, depth first search techniques, other Search Techniques like hill Climbing, Best first Search, A* algorithm, AO* Algorithms and various types of control strategies. Knowledge representation issues, Propositional and predicate logic, monotonic and non monotonic reasoning, forward Reasoning, backward reasoning, Weak & Strong Slot & filler structures, NLP.	L1, L2	12
<b>Module II: Neural Network</b>  Structure and Function of a single neuron: Biological neuron, artificial neuron, definition of ANN, Taxonomy of neural net, Difference between ANN and human brain, characteristics and applications of ANN, single layer network, Perceptron training algorithm, Linear separability, Widrow & Hebb's learning rule/Delta rule, ADALINE, MADALINE, AI v/s ANN. Introduction of MLP, different activation functions, Error back propagation algorithm, derivation of BBPA, momentum, limitation, characteristics and application of EBPA	L2, L3 and L4	10
<b>Module III</b>  Counter propagation network, architecture, functioning & characteristics of counter Propagation network, Hopfield/ Recurrent network, configuration, stability constraints, associative memory, and characteristics, limitations and applications. Hopfield v/s Boltzman machine. Adaptive Resonance Theory: Architecture, classifications, Implementation and training. Associative	L2, L3 and L4	8

Memory.		
<b>Module IV: Fuzzy Logic</b>  Fuzzy set theory, Fuzzy set versus crisp set, Crisp relation & fuzzy relations, Fuzzy systems: crisp logic, fuzzy logic, introduction & features of membership functions, Fuzzy rule base system : fuzzy propositions, formation, decomposition & aggregation of fuzzy rules, fuzzy reasoning, fuzzy inference systems, fuzzy decision making & Applications of fuzzy logic.	L2, L3 and L4	7
<b>Module V: Genetic algorithm</b>  Fundamentals, basic concepts, working principle, encoding, fitness function, reproduction, Genetic modeling: Inheritance operator, cross over, inversion & deletion, mutation operator, Bitwise operator, Generational Cycle, Convergence of GA, Applications & advances in GA, Differences & similarities between GA & other traditional methods.	L2, L4	3

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

### Catalog Description

This lab course covers development and designing of implementing basic neural networks, fuzzy systems, and optimization algorithms concepts and their relations. It aims to develop the concepts and techniques and foster the students' abilities in designing and implementing soft computing based solutions for real-world and engineering problems.

### Course Objectives

The objective of this course is to

1. Equip the students with concepts of Soft Computing which includes Neural networks, Fuzzy logic and genetic algorithms.
2. Provide knowledge to develop Soft computing programs in Matlab.

## Course Outcomes

On completion of this course, the students will be able to

CO1: Implement various neural networks using MATLAB.

CO2: Illustrate use of fuzzy in real applications.

CO3: Apply genetic algorithm to basic problems.

Modules	Blooms level*	Number of hours
<b>Lab Session 1:</b> Study of Biological Neural Network	L1 , L2 and L3	2

<b>Course Code: MLE6901</b>	<b>PATTERN RECOGNITION &amp; IMAGE PROCESSING</b>				L	T	P	C
Version 2020.1	Date of Approval: JULY 2020				3	0	0	3
Pre-requisites/Exposure	Basics of Digital Image Processing							
Co-requisites	NIL							

**Catalog Description**

This course gives students an insight into the basics of Image Processing along with Pattern Recognition. Concepts covered would enable students to define and differentiate among various types of image refinement. Further they would be able to gain insights about various Image restoration and modification technique.

**Course Objectives**

This course covers the theory and methods for learning from data, with an emphasis on pattern classification. Digital Image Processing is designed to give professionals and students a powerful collection of fundamental and advanced image processing tools on the desktop.

**Course Outcomes**

On completion of this course, the students will be able to

CO1: Define and explain introductory part of Pattern recognition Concepts & Bayesian decision theory

CO2: List out the Univariate and Multivariate density

CO3: Explain concepts of Un-supervised learning and clustering

CO4: Describe the Image Fundamentals and Transforms

CO5: Explain the basics of Image Segmentation and Edge Detection

Modules	Blooms level*	Number of hours
<b>MODULE 1:</b>  <b>Introduction of Pattern recognition and Bayesian Decision Theory</b> Machine perception, pattern recognition example, pattern recognition systems, the design cycle, learning and adaptation Introduction, continuous features – two categories classifications, minimum error-rate classification- zero-one loss function, classifiers, discriminant functions, and decision surfaces	L1 and L2	8
<b>MODULE 2:</b>  <b>Normal density</b> Univariate and multivariate density, discriminant functions for the normal density-different cases, Bayes decision theory – discrete features, compound Bayesian decision theory and context	L2 and L3	8
<b>MODULE 3:</b>  <b>Un-supervised learning and clustering</b> Introduction, mixture densities and Identifiability, maximum likelihood estimates, application to normal mixtures, K-means clustering. Data description and clustering, similarity measures, criteria function for clustering	L1 and L2	10
<b>MODULE 4:</b>  <b>Image Fundamentals and Transforms</b> Elements of visual perception – Image sampling and quantization, Basic relationship between pixels, Some basic grayscale transformations, Introduction to Fourier Transform and DFT, Properties of 2D Fourier Transform, FFT, Separable Image Transforms, Walsh, Hadamard, Discrete Cosine Transform, Haar, Slant, Karhunen, Loeve transforms.	L2 and L3	12
<b>MODULE 5:</b>  <b>Image Segmentation and Edge Detection</b> Region Operations, Crack Edge Detection, Edge Following, Gradient operators, Compass and laplace operators. Threshold detection methods, optimal thresholding, multispectral	L2 and L3	10

thresholding, thresholding in hierarchical data structures; edge based image segmentation- edge image thresholding, edge relaxation, border tracing, border detection,

### Catalog Description

In this Lab course first student should learn about advanced level of software used for easy calculation and toolbox used for software like MATLAB.

### Course Objectives

The objective of this course is to

1. Make the students apply knowledge of various Image processing & pattern recognition required for solving complex problems.
2. Provide a demonstration of different types of image processing techniques through MATLAB toolbox.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Acquiring knowledge of Basics of High-end calculation software and need in Computer Science & engineering

CO2: Demonstrate the All preliminary functions in MATLAB

CO3: Apply the knowledge of all the basics function and toolbox knowledge of MATLAB

CO4: Demonstrate the Use of MATLAB in image Processing

CO5: Demonstrate usage of applications involving with Image processing & Recognition Its Toolbox used by MATLAB

<b>Modules/Topics Covered**</b>	<b>Blooms level*</b>	<b>Number of hours</b>
16. Introduction of MATLAB (l) Basic Variable deceleration & its operation (m)Function use & its application	L3, L5	4
17. Sample Programs in MATLAB (o) Basic use of Matrix and Graph Plotting (p) Different type of graph plotting with use of different -2 type of data	L3, L5	6
18. Sample Programs using MATLAB functions (u) Create a basic program MATLAB using functions (v) Use of basic function Image processing (w)Practice on Basic function of Image processing tool box.	L3, L5	6
19. Sample programs of ANN functions (i) Practice on Pattern Recognition functions in MATLAB (j) Write a program for training a small network in MATLAB	L3, L5	6
20. Sample Programs using ANN toolbox & Image processing toolbox (h) Demonstrate the use of ANN tool box & Image processing toolbox and write a program after combining it.	L3, L5	2

### **Catalog Description**

Fuzzy sets and fuzzy logic find many applications in the areas of stability theory, pattern recognition, controls etc. Neural Networks offer fundamentally alternative approaches to procedural programming. These systems proved their applicability to the problems where there are missing data or information or the problems which could not be defined in an algorithm. The integration of fuzzy systems and neural networks gives a tremendous potential which can be applied to many complicated problems of Artificial Intelligence and other applications in Real World Computing. This course provides a comprehensive treatment of neural network architectures and learning algorithms, with an in-depth look at problems in data mining and in knowledge discovery.

## Course Objectives

The objective of this course is to

1. Introduces the basics of Neural Networks and essentials of Artificial Neural Networks with Single Layer and Multilayer Feed Forward Networks.
2. It deals with Associate Memories and introduces Fuzzy sets and Fuzzy Logic system component

## Course Outcomes

On completion of this course, the students will be able to

CO1: Understand the principles of neural networks and fuzzy Logic fundamentals.

CO2: compare analysis between human and computer, Artificial Neural Networks models, characteristics of ANN's learning strategies, learning rules and basics of fuzzy logic.

CO3: Understand concept of classical and fuzzy sets, fuzzification and defuzzification, with which they can be able to apply the conceptual things to the real world electrical and electronics problems and applications.

CO4: Get thorough knowledge in biological neuron and artificial neurons.

CO5: Design the required and related systems

Modules	Blooms level*	Number of hours
<b>MODULE 1:</b>  Basic neural computation models: Network and node properties. Inference and learning algorithms. Unsupervised learning: Signal hebbian learning and competitive learning. Supervised learning: Back propagation algorithms.	L1, L2	4
<b>MODULE 2:</b>  Self organizing networks: Kohonen algorithm, bi-directional associative memories.  Hopfield Networks: Hopfield network algorithm.  Adaptive resonance theory: Network and learning rules. Neural network applications.	L1, L2, L3 and L4	10
<b>MODULE 3:</b>	L1, L3, L4 and	6

<p>Fuzzy Sets: Operations and properties.</p> <p>Fuzzy Relations: Cardinality, Operations and properties.</p> <p>Value Assignments: Cosine amplitude and max-min method.</p> <p>Fuzzy classification: Cluster analysis and validity, Fuzzy e-means clustering, hardening the Fuzzy e-partition.</p>	L5	
<p><b>MODULE 4:</b></p> <p>Fuzzification, Membership value assignments: Inference, rank ordering and angular Fuzzy sets, defuzzification methods, fuzzy logic, approximate reasoning.</p> <p>Fuzzy –based systems: Canonical rule forms, decomposition of compound rules, likelihood and truth qualification, aggregation of Fuzzy rules, graphical techniques of inference.</p>	L1, L2, L3, and L4	9
<p><b>MODULE 5:OPTIMUM DESIGN OF MACHINE</b></p> <p>Non linear simulation using Fuzzy rule-based systems, Fuzzy associative memories. Decision making under Fuzzy states and Fuzzy actions. Fuzzy grammar and syntactic recognition. General Fuzzy logic controllers, special forms of Fuzzy logic control system models, examples of Fuzzy control system design and control problems, industrial applications.</p>	L2, L3, L4 and L5	7

### Catalog Description

Neural Networks offer fundamentally alternative approaches to procedural programming. Fuzzy sets and fuzzy logic find many applications in the areas of stability theory, pattern recognition, controls etc. These systems proved their applicability to the problems where there are missing data or information or the problems which could not be defined in an algorithm.

### Course Objectives

The objective of this course is to

1. To become familiar with neural networks learning algorithms from available examples and give design methodologies for artificial neural networks.
2. Understand and analyse concepts of fuzzy set and use fuzzy set operations to implement current computing techniques used in fuzzy computing.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Understand the difference between learning and programming and explore practical applications of Neural Networks (NN).

CO2: To analyse and appreciate the applications which can use fuzzy logic.

CO3: Understand the efficiency of a hybrid system and how Neural Network and fuzzy logic can be hybridized to form a Neuro-fuzzy network and its various applications and they will be able to design inference systems

Modules	Blooms level*	Number of hours
<b>Lab Session 1:</b> Write a program to implement single layer perception algorithm.	L3 and L4	2
<b>Lab Session 2:</b> Write a program to implement back propagation learning algorithm	L3 and L4	4

Version 2020.1	Date of Approval: JULY 2020				3	0	0	3
Pre-requisites/Exposure	Basics of Python							
Co-requisites	Nil							

**Catalog Description**

In this course general introduction including the use of state automata for language processing and syntax including a basic parse for natural language processing are discussed in detail. Basic features like regular expressions, Text Normalization, Edit Distance, n-gram model and advanced feature like feature structures and realistic parsing methodologies, part of speech tagging will be introduced. The

concepts learnt in the studies of natural language processing will be applied in jupyter notebook using python for developing small to medium level applications.

## Course Objectives

The objective of this course is to

5. Equip the students with concepts of natural language processing through problem solving and practical approach.
6. Provide an overview of various tools in the field of natural language processing to gain practical understanding of the concepts.

## Course Outcomes

On completion of this course, the students will be able to

CO1: Explain, knowledge in speech recognition, models and algorithms; Explain regular expressions and solve related problems; Explain and solve problems related to lemmatization and stemming, minimum edit distance.

CO2: Explain language models and compare their performance on datasets; Solve some problems on naïve bayes algorithm.

CO3: Explain logistic regression, similarity, language modelling and solve problems based on them.

CO4:..Describe ANN and Part of speech tagging; Solve problems based on them.

CO5: Describe RNN models and distinguish between simple ANN and RNN;

Modules	Blooms level*	Number of hours
<b>MODULE 1:</b>  Knowledge in Speech and Language Processing ,Ambiguity ,Models and Algorithms Language, Thought, and Understanding ,The State of the Art and The Near-Term Future Some Brief History, Regular Expressions, Words ,Corpora,Text Normalization ,Minimum Edit Distance	L1, L2 ,L3	7

<b>MODULE 2:</b>  Evaluating Language Models, Generalization and Zeros, Smoothing, Kneser-Ney Smoothing, The Web and Stupid Backoff, Advanced: Perplexity's Relation to Entropy, Naive Bayes Classifiers, Training the Naive Bayes Classifier, Worked example, Optimizing for Sentiment Analysis, Naive Bayes for other text classification tasks, Naive Bayes as a Language Model, Evaluation: Precision, Recall, F-measure, Test sets and Cross-validation, Statistical Significance Testing Advanced: Feature Selection.	L1,L2, L3	8
<b>MODULE 3:</b>  Classification: the sigmoid, Learning in Logistic Regression, The cross-entropy loss function, Gradient Descent, Regularization, Multinomial logistic regression, Interpreting models, Advanced: Deriving the Gradient Equation, Lexical Semantics, Vector Semantics, Words and Vectors, Cosine for measuring similarity, TF-IDF: Weighing terms in the vector, Applications of the tf-idf vector model, Optional: Pointwise Mutual Information (PMI), Word2vec, Visualizing Embeddings, Semantic properties of embeddings, Bias and Embeddings, Evaluating Vector Models.	L1,L2, L3	8
<b>MODULE 4:</b>  Units, The XOR problem, Feed-Forward Neural Networks, Training Neural Nets, Neural Language Models, (Mostly) English Word Classes, The Penn Treebank Part-of-Speech Tagset, Part-of-Speech Tagging, HMM Part-of-Speech Tagging, Maximum Entropy Markov Models, Bidirectionality, Part-of-Speech Tagging for Other Languages.	L1, L2 and L3	6
<b>MODULE 5:</b>  Simple Recurrent Networks, Applications of RNNs, Deep Networks: Stacked and Bidirectional RNNs, Managing Context in RNNs: LSTMs and GRUs, Words, Characters and Byte-Pairs.	L1, L2,L3	7

Course Code: MLE6906	<b>Hadoop Lab</b>				L	T	P	C
Version 2020.1	Date of Approval: JULY 2020				0	0	4	2
Pre-requisites/Exposure	Basic Concepts of DBMS							
Co-requisites	Relational Algebra and Relational Calculus							

**Catalog Description**

This course brings together several key big data technologies used for storage, analysis and manipulation of data. It also introduces the students the key concepts of Hadoop framework, MapReduce, Pig, Hive, and No-SQL. Students will learn to work on Hadoop platform. The concepts learnt will make students capable of working on big data projects easier.

**Course Objectives**

The objective of this course is

3. To make students familiar with big data technologies.
4. Provide an overview of Hadoop architecture and its working with other open source technologies.

### Course Outcomes

On completion of this course, the students will be able to

CO1. Install and configure Hadoop and various tools like Pig, Hive etc.

CO2. Explain concepts of files and directories in HDFS and apply them in real database applications.

CO3. Design and implement mapreduce programs for a given problem.

CO4. Solve queries using concepts of Hive and Pig.

CO5. Perform operations using HBase.

Modules	Blooms level*	Number of hours
<b>Lab Session 1</b> 1. Installation & Configuration steps of Hadoop	L1 and L2	2
<b>Lab Session 2-3</b> 1. Working with HDFS commands :mkdir, rmdir, rm, mv, ls, du, put, rm-r, cat, tail etc 2. Working with vi editor	L1and L3	4
<b>Lab Session 4-5</b> Working with Java Map Reduce : Map Class, Reduce Class, Drier Class, map side joins, reduce side joins	L1 and L3	4
<b>Lab Session 6-8</b> 1. Working with Hive : Queries for Hive : Create table, describe database, describe table, describe extended table, describe formatted table, drop table, drop database, display table, where clause 2. Commands : Load Files on table : Load from HDFS, load from local 3. Command :CTAS Create table as select 4. Queries to create external tables 5. Working with commands like : Order by, group by, like, upper, lower, max, min	L1 and L3	6

<b>Lab Session 9-10</b> 1. Working with PIG : Order by, group by, co group, like, upper, lower, Joins, Union, Cartesian, Product.Pig Scripts	L1 and L3	4
<b>Lab Session 11-12</b> Working with HBase : Start the hbase, data insert, modify, multiple version insertion, describe, delete truncate, drop etc. Working with Foreign Key and Check Constraint.	L1 and L3	6

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

### Catalog Description

This course introduces some elementary statistical methods of analysis of data and compute various measurements of central tendency, dispersion, skewness and kurtosis. Also discusses computation of the correlation coefficient from ungrouped bivariate data and interpret them and analyse data pertaining to attributes and to interpret results.

### Course Objectives

The objective of this course is to

1. Equip the students with concepts of descriptive statistics through problem solving and practical approach.
2. Provide an overview of various tools in the field of statistics to gain practical understanding of the concepts.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Explain data sampling and solve related problems; Explain and solve problems related to discrete frequency distribution and continuous frequency distribution.

CO2: Explain data samples and compare their performance on datasets

CO3: Explain regression modelling and solve problems based on them.

CO4: Describe Concept of central tendency of statistical data and solve problems based on them.

CO5: Describe Concept of dispersion and distinguish between concepts of central tendency of statistical data

Modules	Blooms level*	Number of hours
MODULE 1:	L1, L2	4

Definitions: Webster's and Secrist's definition of Statistics, Importance of Statistics, Scope of Statistics: In the field of Industry, Biological Sciences, Medical Sciences, Economics Sciences, Social, Sciences, Management Sciences, Agriculture, Insurance, Actuarial Science, Education and Psychology.	,L3	
<b>MODULE 2:</b>  Types of characteristics: Attributes: Nominal scale, ordinal scale. Variables: Interval scale, ratio scale, discrete and continuous variables, Types of data: Primary data, Secondary data, Notion of a statistical population: Finite population, infinite population, homogeneous population and heterogeneous population. Notion of sample, random sample and non-random sample, Methods of sampling: Simple random sampling with and without replacement (SRSWR and SRWOR) stratified random sampling, systematic sampling, cluster sampling and two-stage sampling.	L1,L2, L3	6
<b>MODULE 3:</b>  Classification: Raw data and its classification, Discrete frequency distribution, Sturge's rule, continuous frequency distribution, inclusive and exclusive methods of classification, Open end classes, cumulative frequency distribution and relative frequency distribution, Graphical Presentation of Data: Histogram, frequency curve, frequency polygon, ogive curves, stem and leaf chart, Check sheet, Parato diagram, Examples and Problems.	L1,L2, L3	6
<b>MODULE 4:</b>  Concept of central tendency of statistical data, Arithmetic Mean (A.M.), combined mean of a number of groups, merits and demerits, Geometric Mean (G.M.), Harmonic Mean (H.M.), Weighted Mean, Weighted A.M., G.M. and H.M. , Mode, Median, Empirical relation between mean, median and mode, Order relation between arithmetic mean, geometric mean, harmonic mean.	L1, L2 and L3	6
<b>MODULE 5:</b>  Concept of dispersion, characteristics of good measure of dispersion, Range, Mean deviation, Mean square definition, Variance and standard deviation, Combined variance, Combined standard deviation, generalization for n groups, Measures of dispersion for comparison: coefficient of range, coefficient of quartile deviation and coefficient of mean deviation, coefficient of variation.	L1, L2,L3	6
<b>MODULE 6:</b>  Concept of skewness of frequency distribution, positive skewness, negative skewness, symmetric frequency distribution, Bowley's coefficient of skewness, interpretation using Box plot, Karl Pearson's coefficient of skewness, Measures of	L1, L2 ,L3	4

Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

### Catalog Description

The purpose of this course is to develop a knowledge in the field of optimization techniques their basic concepts, ,principles. linear programming and queuing theory.

### Course Objectives

After successful completion of the course, student will be able to understand importance of optimization of industrial process management , apply basic concepts

of mathematics to formulate an optimization problem , analyse and appreciate variety of performance measures for various optimization problems.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Understand importance of optimization of industrial process management.

CO2: Apply basic concepts of mathematics to formulate an optimization problem

CO3: Analyse and appreciate variety of performance measures for various optimization problems

CO4: Use classical optimization techniques and numerical methods of optimization

CO5: Apply knowledge of optimization to formulate and solve engineering problems

Modules	Blooms level*	Number of hours
<b>MODULE 1: INTRODUCTION</b>  Introduction to optimization – adequate and optimum design – principles of optimization – statement of an optimization problem – classification – formulation of objective function, design constraints.	L1, L2	4
<b>MODULE 2: CLASSICAL OPTIMIZATION TECHNIQUES</b>  Single variable optimization –multivariable optimization with no constraints – exhaustive search, Fibonacci method, golden selection, Random, pattern and gradient search methods – Interpolation methods: quadratic and cubic, direct root method.	L1, L2, L3 and L5 , L6	12
<b>MODULE 3:MULTIVARIABLE – UNCONSTRAINED AND CONSTRAINED OPTIMIZATION</b>  Direct search methods – descent methods – conjugate gradient method.	L1, L3 and L4	8

Indirect methods – Transformation techniques, penalty function method		
<b>MODULE 4:NON – TRADITIONAL OPTIMIZATION TECHNIQUES</b>  Genetic Algorithms -steady state algorithm, fitness scaling, inversion. Genetic programming:- Genetic Algorithm in problem solving, Implementing a Genetic Algorithm:- computer implementation, operator (reproduction, crossover and Mutation, Fitness Scaling, Coding, Discretization). Knowledge based techniques in Genetic Algorithm. Advanced operators and techniques in genetic search:- Dominance, Diploidy and Abeyance. Inversion and other reordering operators, Niche and speciation and Tabu search methods.	L1, L3, and L4	10
<b>MODULE 5:OPTIMUM DESIGN OF MACHINE</b>  Desirable and undesirable effects – functional requirement – material and geometrical parameters – Design of simple axial, transverse loaded members for minimum cost and minimum weight.	L3 and L4	2

<b>COURSE CODE: MLE 6909</b>	<b>SOCIAL NETWORK ANALYTICS</b>	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Basis of Database and Networking				
Co-requisites					

### Catalog Description

This course gives an introduction to social network analysis, with a focus on modelling. It provides an overview of research questions connected to social networks, and of descriptive measures, models, and methods of analysis that can be used to analyze empirical social

network data. It helps to understand the online interactive demonstrations and hands-on analysis of real-world data sets.

## Course Objectives

The objective of this course is to

- To provide students effective data-driven intelligence to improve their decisions making and systematically estimate the expected impact on relevant performance objectives
- To equip the students with data-driven intelligence tools, the basics of data mining techniques and develop a data-analytical approach to problem-solving with their application

## Course Outcomes

On completion of this course, the students will be able to

CO1. Know the basic notation and terminology used in network science

CO2. Be able to visualize, summarize and compare networks.

CO3. Learn the basic principles behind network analysis algorithms

CO4. Develop practical skills of network analysis in R programming language

CO5: Be capable of analysing real work networks

## Course Content

Modules	Bloom's level	Number of Hours
<b>Module I Introduction</b>  Overview: Social network data-Formal methods- Paths and Connectivity-Graphs to represent social relations-Working with network data- Network Datasets-Strong and weak ties - Closure, Structural Holes, and Social Capital.	<b>L1, L2</b>	<b>6</b>

<b>Module II Community Discovery in Social Networks: Applications, Methods and Engineering Trends</b>  Introduction, Communities in Context, Core Methods, Quality Functions, The Kernighan-Lin (KL) Algorithm, Agglomerative/Divisive Algorithms, Spectral Algorithms, Multi-Level Graph Portioning, Markov Clustering. Other Approaches, Emerging Fields and Problems, Community Discovery in Dynamic Networks, Community Discovery in Heterogeneous Networks, Community Discovery in Directed Networks, Coupling Content and Relationship Information for Community Discovery,	<b>L1, L2, L3</b>	<b>7</b>
<b>Module III Information Networks and the World Wide Web</b>  The Structure of the Web- World Wide Web- Information Networks, Hypertext, and Associative Memory- Web as a Directed Graph, Bow-Tie Structure of the Web- Link Analysis and Web Search, Searching the Web: Ranking, Link Analysis using Hubs and Authorities- Page Rank- Link Analysis in Modern Web Search, Applications, Spectral Analysis, Random Walks, and Web Search.	<b>L1, L2, L3</b>	<b>5</b>
<b>Module IV Node Classifications in Social Networks</b>  Introduction, Problem Formulation, Representing Data As A Graph, The Node Classification Problem, Methods Using Local Classifiers, Iterative Classification Method, Random Walk Based Methods, Label Propagation, Graph Regularization, Adsorption, Applying Node Classification To Large Social Networks, Basic Approaches, Second-Order Methods, Implementation Within Map-Reduce, Inference Using Graphical Models, Metric Labelling, Spectral Partitioning, Graph Clustering, Variations on Node Classification	<b>L1, L2, L3</b>	<b>6</b>
<b>Module V Data and Text Mining in Social Media</b>  Data Mining In Nutshell, Social Media, Motivations For Data Mining In Social Media, Data Mining Methods For Social Media, Data Representation, Data Mining- A Process, Social Networking Sites: Illustrative Examples, Related Efforts, Ethnography And Netnography, Event Maps, Text Mining: Keyword Search, Query Semantics And Answer Ranking, Keyword Search over Xmland Relational Data, Keyword Search Over Graph Data, Classification Algorithms, Clustering Algorithms, Transfer Learning in Heterogeneous Networks.	<b>L1, L3, L4</b>	<b>6</b>
<b>Module VI Overview of Social Tagging</b>  Introduction, Problems With Metadata Generation and Fixed Taxonomies, Tags: Why And What?, Different User Tagging Motivations, Kinds Of Tags, Linguistic Classifications Of Tags, Game-Based Tagging, Tag Generation Models, Tagging System Design, Tag Analysis, Tagging Distributions ,Identifying Tag Semantics, Tags Versus Keywords, Visualization Of Tags, Tag Clouds For Browsing/Search, Tag Selection For Tag Clouds, Tag Hierarchy Generation, Tag Cloud Display Formats, Tag Evolution Visualization.	<b>L1, L2</b>	<b>6</b>

<b>Course Code: MLE6910</b>	<b>AGENT BASED INTELLIGENT SYSTEMS</b>	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Basics of Python				
Co-requisites	Nil				

### Catalog Description

This course provides students basic knowledge of employing intelligent agents in solving complex problems and gives the awareness of the building blocks of agents and working of different types of agents. It also analyses the reasons for uncertainty and ability to design agents to handle them.

### Course Objectives

The objective of this course is to

1. Equip the students with the knowledge of intelligent agents in solving complex problems.
2. Provide an overview of Building Agents, Knowledge Based Agents, Planning Agents and Higher Level Agents.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Explain the concept of knowledge intelligent agents and use in solving complex problems.

.

CO2: Describe the concept of **Concepts for Building Agents and Knowledge Based Agents.**

CO3: Explain the concept of **Planning Agents and Higher Level Agents.**

CO4: Describe the concept of **Agents and Uncertainty and Higher Level Agents.**

Modules	Blooms level*	Number of hours
---------	---------------	-----------------

<b>MODULE 1:</b>  Definitions – History – Hybrid Intelligent Agents – Agents vs Multi Agent Systems– Structure – Environment – Basic Problem Solving Agents – Complex Problem Solving Agents – Formulating Search Strategies – Intelligent Search.	L1, L2, L3	7
<b>MODULE 2:</b>  Situated Agents: Actions and Percepts - Proactive and Reactive Agents: Goals and Events- Challenging Agent Environments: Plans and Beliefs - Social Agents - Agent Execution Cycle.	L1,L2, L3	8
<b>MODULE 3:</b>  Knowledge Representation – Logic – First Order Logic – Reflex Agent – Building a Knowledge Base – General Ontology – Interference – Logical Recovery.	L1,L2, L3	7
<b>MODULE 4:</b>  Situational Calculus – Representation of Planning – Partial Order Planning – Practical Planners– Conditional Planning - Preplanning Agents.	L1, L2 and L3	5
<b>MODULE 5:</b>  Acting under uncertainty – Probability – Baye’s Rule – Belief Networks – Utility Theory - Decision Network- Value of Information – Decision Theoretic Agent Design.	L1, L2,L3	5
<b>MODULE 6:</b>  Learning Agents – General Model – Inductive Learning – Learning Decision Tree – Reinforcement Learning – Knowledge in Learning – Communicative Agents – Types of Communicative Agents – Future of AI.	L1, L2 and L3	4

#### Catalog Description

The objective of this course is to provide practical training on some live/demo projects that will increase capability to work on actual problem in industry. It will be an in house training on some latest software which is in high demand in market. This training will be designed such that it will be useful for their future employment in industry.

### Course Objectives

The objective of this course is to

1. Provide practical training on live projects
2. Increase technical capabilities on solving real life problems in company environment

### Course Outcomes

On completion of this summer internship, the students will be able to:

CO1: Demonstrate a sound technical knowledge of their selected project topic.

CO2: Design and develop engineering solutions to complex problems utilising a systems approach.

CO3: Analyse various approaches for solving a complex engineering problem using different tools and techniques

CO4: Demonstrate the knowledge, skills and attitudes of a professional engineer.

CO5: Apply technical skills and knowledge in completing the project.

**Curriculum & Scheme of Examination**

**2020**

**AMITY UNIVERSITY HARYANA**

**GURUGRAM**

### **POs B.Tech Programme**

**PO1. Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

**PO2. Problem analysis:** Identify, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

**PO3. Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

**PO4. Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

**PO5. Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

**PO6. The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

**PO7. Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

**PO8. Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

**PO9. Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

**PO10. Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

**PO11. Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

**PO12. Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change.

## **PSOs for B.Tech (Electronics & Communication Engineering)**

- PSO1:** Apply the knowledge of science, mathematics, electronics & communication related technology and other engineering disciplines to identify and solve relevant engineering problems across a broad range of application areas.
- PSO2:** Able to apply the knowledge & skills gained in the field of signal processing, microelectronics, embedded system, control system and circuit system to solve the industrial problems.
- PSO3:** Able to apply technical knowledge and skills gained in RF & microwave and communication system into telecom sector with an understanding of realistic constraints.
- PSO4:** Able to comprehend and write effective technical project reports in multidisciplinary environment with regards to evolving technological advancements.

### **Enclosure (s):**

- Supporting document for PSOs framing
- Programme Structure for B.Tech (ECE)

**Supporting document for PSOs of B.Tech (Electronics & Communication Engineering)**

<b>PSO1</b>		<b>PSO2</b>			<b>PSO3</b>			<b>PSO4</b>		
Apply the knowledge of science, mathematics, electronics & communication related technology and other engineering disciplines to identify and solve relevant engineering problems across a broad range of application areas. # ENGINEERING MATHEMATICS - I

**Course Code:** ECE2112

**L-T-P : 3-1-0**

**Credit Units: 04**

## **Course Objective:**

The knowledge of Mathematics is necessary for a better understanding of almost all the Engineering and Science subjects. Here our intention is to make the students acquainted with the concept of basic topics from Mathematics, which they need to pursue their Engineering degree in different disciplines.

## **Course Contents:**

### **Module I: Differential Calculus**

Successive differentiation, Leibnitz's theorem (without proof), Mean value theorem, Taylor's theorem (proof), Remainder terms, Asymptote & Curvature, Partial derivatives, Chain rule, Differentiation of Implicit functions, Exact differentials, Tangents and Normals, Maxima, Approximations, Differentiation under integral sign, Jacobians and transformations of coordinates.

### **Module II: Integral Calculus**

Fundamental theorems, Reduction formulae, Properties of definite integrals, Applications to length, area, volume, surface of revolution, improper integrals, Multiple Integrals-Double integrals, Applications to areas, volumes.

### **Module III: Ordinary Differential Equations**

Formation of ODEs, Definition of order, degree & solutions, ODE of first order: Method of separation of variables, homogeneous and non homogeneous equations, Exactness & integrating factors, Linear equations & Bernoulli equations, General linear ODE of  $n^{\text{th}}$  order, Solution of homogeneous equations, Operator method, Method of undetermined coefficients, Solution of simple simultaneous ODE.

### **Module IV: Vector Calculus**

Scalar and Vector Field, Derivative of a Vector, Gradient, Directional Derivative, Divergence and Curl and their Physical Significance, Arc Length, Tangent, Directional Derivative, Evaluation of Line Integral, Green's Theorem in Plane (without proof), Representation of Surfaces, Tangent Plane and Surface Normal, Surface Integral, Stoke's Theorem (without proof), Gauss Divergence Theorem (without proof).

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

## ENGINEERING CHEMISTRY

**Course Code:** ECE2114

**L-T-P : 2-0-0**

**Credit Units: 02**

### **Course Objective:**

Four basic sciences, Physics, Chemistry, Mathematics and Biology are the building blocks in engineering and technology. Chemistry is essential to develop analytical capabilities of students, so that they can characterize, transform and use materials in engineering and apply knowledge in their field. All engineering fields have unique bonds with chemistry whether it is Aerospace, Mechanical, Environmental and other fields the makeup of substances is always a key factor, which must be known. For electronics and computer science engineering, apart from the material, computer modeling and simulation knowledge can be inherited from the molecule designing. The upcoming field of technology like Nanotechnology and Biotechnology depends fully on the knowledge of basic chemistry. With this versatile need in view, course has been designed in such a way so that the student should get an overview of the whole subject.

### **Course Contents:**

#### **Module I: Water Technology**

Introduction and specifications of water,  
Hardness and its determination (EDTA method only), Alkalinity,  
Boiler feed water, boiler problems – scale, sludge, priming & foaming: causes & prevention,  
Boiler problems – caustic embrittlement & corrosion: causes & prevention,  
Carbonate & phosphate conditioning, colloidal conditioning & calgon treatment  
Water softening processes: Lime – soda process, Ion exchange method, Water for domestic use.

#### **Module II: Fuels**

Classification, calorific value of fuel, (gross and net), Determination of calorific value of fuels, bomb calorimeter, Solid fuels - Proximate and ultimate analysis, Octane & Cetane No. and its significance.  
Numericals on combustion

#### **Module III: Instrumental Methods of analysis**

Introduction; Principles of spectroscopy; Laws of absorbance  
IR: Principle, Instrumentation, Application  
UV: Principle, Instrumentation, Application  
NMR: Principle, Instrumentation, Application

#### **Module III: Lubricants**

Introduction; Mechanism of Lubrication; Types of Lubricants; Chemical structure related to Lubrication;  
Properties of lubricants; Viscosity and Viscosity Index; Iodine Value; Aniline Point; Emulsion number; Flash Point; Fire Point; Drop Point; Cloud Point; Pour Point.  
Selection of Lubricants.

#### **Module VI: Corrosion**

Introduction, Mechanism of dry and wet corrosion,

Types of corrosion-Galvanic, Concentration cell, soil, pitting, intergranular, waterline. Passivity.

Factors influencing corrosion. Corrosion control.

**Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>

Pre-requisites/Exposure	NIL				
Co-requisites	NIL				

### **Catalog Description**

In this course the concepts of various prime movers like I C Engine, Gas Turbine, Steam Turbine, and Hydraulic Turbine are discussed in detail. Concept of power absorbing devices and power transmission devices are discussed in detail. Elementary concept of mechanics of material and machine tool also discussed in detail. The aim of this course is to make the students familiar with the basic mechanical engineering.

### **Course Objectives**

The objective of this course is to

1. Equip the students with concept of heat engine, steam, boiler, steam turbine, hydraulic turbine, hydraulic pumps, stress and strain, power transmission.
2. Provide an overview of machine tool and manufacturing system.

### **Course Outcomes**

On completion of this course, the students will be able to

- CO1: Explain working of I C engine, Gas turbine, Air standard efficiency of Otto Cycle & Diesel Cycle and Boilers.
- CO2: Explain working of Steam Turbine, Hydraulic Turbine and Hydraulic Pumps.
- CO3: Describe the stress strain diagram, Elastic constants and Transmission system.
- CO4: Discuss the metal cutting and working of machine tool with manufacturing system.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<p>MODULE 1: Prime Mover (I. C. Engine)</p> <p>Internal Combustion Engine: Introduction to I.C. Engines-two &amp; four stroke S.I. and C.I. engines. Otto cycle. Diesel cycle. Working principle of gas turbine, Constant pressure gas turbine cycle.</p>	L1, L2 and L3	7
<p>MODULE 2: Prime Mover (Turbine)</p> <p>Steam Turbine: Classification of boilers, Classification of steam turbines, Working principle of impulse and reaction.</p> <p>Hydraulic Turbine: Classification of hydraulic turbine, Construction details and working of Pelton, Francis and Kaplan turbines.</p>	L1, L2 and L3	8
<p>MODULE 3: Power Absorbing machine</p> <p>Power absorbing devices:</p> <p>Hydraulic Pumps: Classification of hydraulic pumps, Working of Reciprocating and centrifugal pumps.</p> <p>Power transmission devices: Introduction to Power transmission, Belt drive, Rope drive, Chain drive, Gear drive, Gear train.</p>		7
<p>MODULE 4: Mechanics of Material</p> <p>Stress &amp; Strain: Introduction, Concept &amp; types of Stresses and strains, Poison's ratio, Stress-strain diagrams, Hooks law, Elastic constants &amp; their relationships, Stresses and strains in simple and compound bars under axial loading, Properties of material-strength, elasticity, stiffness, malleability, ductility, brittleness, hardness and plasticity etc.</p>	L1, L2 and L3	6
<p>MODULE 5: Machine Tool</p> <p>Machine Tool: Introduction to Metal Cutting, Classification of machine tool, working and operations of Lathe, Shaper, Milling, Drilling machines.</p> <p>Manufacturing system: Component of Manufacturing Systems, Fundamentals of Numerical Control (NC), Advantage of NC systems, Classifications of NC, Computer Numerical control, Comparison of NC and CNC. Comparison between conventional and NC machines.</p>	L1, L2 and L3	8

### Catalog Description

The objective of this course module is to acquaint the students with the basics of computers system, its components, data representation inside computer and to get them familiar with various important features of procedure-oriented programming language i.e. C.

### Course Objectives

The objective of this course is to

1. Equip the students with concepts of Programming through C Language
2. Provide an overview of advanced programming concepts like Structure, Union and File Handling

### Course Outcomes

On completion of this course, the students will be able to

After the completion of course, the students will be able to,

- CO 1: Define the purpose and structure of C Program for programming; identify and distinguish various data types and operators; conditional and control statement; Apply if-else, Switch and loops to rewrite basic C program for problem solving.
- CO 2: Compare and contrast various Array types, its declaration and implementation; differentiate between Call by Value and Reference if Functions; apply the concepts to rewrite C Programs
- CO 3: Differentiate between various String Handling Functions; describe the concept of Pointers in C Language
- CO 4: Explain the concept of Structure and Union; apply the concept of File Handling to provide data storage support to the programs.
- CO 5: Apply the concept of Computer Graphics using C programming concepts for implementing line drawing, circle drawing algorithms.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Introduction</b> Introduction to computer, history, von-Neumann architecture, memory system (hierarchy, characteristics and types), H/W concepts (I/O Devices), S/W concepts (System S/W & Application S/W, utilities). Data Representation: Number systems, character representation codes, Binary, octal, hexadecimal and their interconversions. Binary arithmetic, floating point arithmetic, signed and unsigned numbers, Memory storage unit.	L1, L2 and L3	7
<b>Module II: Programming in C</b> History of C, Introduction of C, Basic structure of C program, Concept of variables, constants and data types in C, Operators and expressions: Introduction, arithmetic, relational, Logical, Assignment, Increment and decrement operator, Conditional, bitwise operators, Expressions, Operator precedence and associativity. Managing Input and output Operation, formatting I/O.	L2, L3 and L4	7
<b>Module III: Fundamental Features in C</b> C Statements, conditional executing using if, else, nesting of if, switch and break Concepts of loops, example of loops in C using for, while and do-while, continue and break. Storage types (automatic, register etc.), predefined processor, Command Line Argument.	L2, L3 and L4	7
<b>Module IV: Arrays and Functions</b> One dimensional arrays and example of iterative programs using arrays, 2-D arrays Use in matrix computations. Concept of Sub-programming, functions Example of user defined functions. Function prototype, Return values and their types, calling function, function argument, function with variable number of argument, recursion.	L2 and L3	7
<b>Module V: Advanced features in C</b> Pointers, relationship between arrays and pointers Argument passing using pointers, Array of pointers. Passing arrays as arguments. Strings and C string library. Structure and Union. Defining C structures, Giving values to members, Array of structure, Nested structure, passing strings as arguments. File Handling.	L2, L3 and L4	8

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6:Evaluation*

## Catalog Description

In this course the concepts of electricity and electrical circuits are discussed in detail. Theorems related to electrical circuits, law's related to flow of current, voltages, basic knowledge of Transformer, basic knowledge of electromagnetism, basic knowledge of electrical network will be introduced.

## Course Objectives

The objective of this course is to:

1. Provide the overview of concept of flow of current/voltage of electrical circuits.
2. Provide the basic knowledge about the concepts of electrical circuits.

## Course Outcomes

On completion of this course, the students will be able to:

CO1. Explain the fundamental theorems and laws related to the electrical circuits.

CO2. Derive equations and solve problems related to network theorems.

CO3. Draw phasor diagrams for different alternating current waveforms and Explain the working principle and estimate the performance of single phase transformers.

CO4. Explain the operation, characteristic and application of PN Junction Diode, Rectifiers, Zener Diode and Bipolar Junction Transistor.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I:</b>  <b>Direct Current Circuits:</b> Ohm's Law, Kirchhoff's Current Law, Kirchhoff's Voltage Law Network Reduction: Star-Delta Transformation, Source Transformation, Nodal Analysis, Mesh analysis, Superposition theorem, Thevenin's Theorem, Norton's theorem and Reciprocity theorem, Maximum Power transfer theorem.	L1 and L2	9
<b>Module II:</b>  <b>Alternating Current Circuits:</b> Peak, Average and RMS values for	L1, L2 and L3	8

alternating currents, Power calculation: reactive power, active power, Complex power, power factor, impedance, reactance, conductance, susceptance Resonance: series Resonance, parallel resonance, basic definition of Q factor & Band-width.		
<b>Module III:</b>  <b>Transformer:</b> Basic Transformer Operation principle, Construction, Voltage relations, current relations, Linear circuit models, open circuit test, short circuit test, Transformer Efficiency.	L1, L2 and L3	6
<b>Module IV:</b>  <b>Rotating Electrical Machines:</b> D.C. machines (motors and generators), Induction motor, Synchronous machines (motors and generators): construction, working principle, classification and applications.	L1, L2 and L3	6
<b>Module V:</b>  <b>Semiconductor Devices:</b> Principle of operation characteristic and application of PN Junction Diode, Rectifiers, Zener Diode, Principle of operation, characteristic and application of Bipolar Junction Transistor, Regulated Power Supply.	L1, L2 and L3	7

## ENGINEERING CHEMISTRY LAB

**Course Code:** ECE2116  
**L-T-P :0-0-2**

**Credit Units: 01**

### Course Contents:

### List of Experiments:

(Any 10 Experiments)

1. To determine the ion exchange capacity of a given cation exchanger.
2. To determine the temporary, permanent and total hardness of a sample of water by complexometric titration method.
3. To determine the type and extent of alkalinity of given water sample.
4. To determine the number of water molecules of crystallization in Mohr's salt (ferrous ammonium sulphate) provided standard potassium dichromate solution (0.1N) using diphenylamine as internal indicator.
5. To determine the ferrous content in the supplied sample of iron ore by titrimetric analysis against standard  $K_2Cr_2O_7$  solution using potassium ferricyanide  $[K_3Fe(CN)_6]$  as external indicator.
6. (a) To determine the surface tension of a given liquid by drop number method.  
(b) To determine the composition of a liquid mixture A and B (acetic acid and water) by surface tension method.
7. To prepare and describe a titration curve for phosphoric acid – sodium hydroxide titration using pH-meter.
8. (a) To find the cell constant of conductivity cell.  
(b) Determine the strength of hydrochloric acid solution by titrating it against standard sodium hydroxide solution conductometrically
9. Determination of Dissolved oxygen in the given water sample.
- 10 To determine the total residual chlorine in water.
- 11 Determination of amount of oxalic acid and  $H_2SO_4$  in 1 L of solution using N/10 NaOH and N/10  $KMnO_4$  solution.
- 12 Determination of viscosity of given oil by means of Redwood viscometer I.
- 13 To determine flash point and fire point of an oil by Pensky Martin's Apparatus
- 14 To determine the Iodine value of the oil.

### **Catalog Description**

The primary objective of this course is to understand all the components of C, including the C language, the C Preprocessor, and the C Standard Library. An understanding of some advanced practical issues, including memory management, testing and debugging, complex declarations and expression evaluation, building and using libraries, and evaluating tradeoffs, such as size vs. speed and speed vs. complexity. The ability to write C code and create and manipulate logical programs.

### **Course Objectives**

The objective of this course is to

3. Equip the students with concepts of Programming through C Language
4. Provide an overview of advanced programming concepts like Structure, Union and File Handling.

### **Course Outcomes**

After the completion of course, the students will be able to,

CO 1: Demonstrate the use of various data types and operators in C programs; Solve various problems using conditional control statements (if-else, Switch case).

CO 2: Construct C programs related to problems involving the usage of loops, arrays and functions.

CO 3: Apply the concept of Pointers for efficient memory management and construct C programs using string handling functions.

CO 4: Demonstrate the use of Structure, Union and concept of File Handling to provide data storage support to the programs.

Modules	Blooms level*	Number of hours
<b>LABORATORY SESSSION 1</b> <b>OPERATORS, EXPRESSIONS and DECISION MAKING</b> <ol style="list-style-type: none"> <li>Write a program to calculate simple interest and amount.</li> <li>Write a program to swap two numbers using third variable.</li> <li>Write a program to demonstrate Greatest of 3 nos and to print the given no in ascending order.</li> <li>Write a program to check if the number is even or odd.</li> <li>Write a program to perform arithmetic operations using Switch Case statement.</li> <li>Write a program to calculate area of circle, rectangle, square and triangle using Switch Case statement.</li> </ol>	L3	5
<b>LABORATORY SESSSION 2</b> <b>LOOPING</b> <ol style="list-style-type: none"> <li>Write a program to find factorial of given no using do while statement.</li> <li>Write a program to print prime numbers up to 'n'.</li> <li>Write a program to sum of n natural no.</li> <li>Write a program to print Fibonacci series.</li> <li>Write a program to reverse a number.</li> <li>Write a program to print the following pattern using for loop               <pre>1 2 2 3 3 3 4 4 4 4</pre> </li> <li>Write a program to print the following pattern using for loop               <pre>A A B A B C A B C D</pre> </li> </ol>	L3	6

<b>ECE2109</b>	<b>ELEMENTS OF MECHANICAL ENGINEERING LAB</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2019.1	Date of Approval: July 14, 2019	0	0	2	1
Pre-requisites/Exposure					
Co-requisites					

**Pre –Requisite:** Elements of Mechanical Engineering  
**Catalog Description**

In this course the concepts of various prime movers like I C Engine, Gas Turbine, Steam Turbine, and Hydraulic Turbine are discussed in detail. Concept of power absorbing devices and power transmission devices are discussed in detail. Elementary concept of mechanics of material and machine tool also discussed in detail. The aim of this course is to make the students familiar with the basic mechanical engineering.

**Course Objectives:**

The objective of this course is to

1. Equip the students with practical concepts of Boiler, Turbine, IC Engine and Machine tools.
2. Understand the elements of mechanical engineering by working models and experiments.

**Course Outcomes (COs):** After studying this course the students will be able to:

**CO 1-** Define the basics of working of boilers, Steam turbines.

**CO 2-** Explain the principle and working of two strokes and four strokes internal combustion engines.

**CO 3-** Explain the working of Pelton wheel Turbine, Francis Turbine and Kaplan Turbine.

**CO 4 -** Describe the tensile test and power transmission derives.

**CO 5-** Identify and demonstrate the machine tools and lathe operation.

<b>List of Experiments</b>	<b>Blooms level*</b>	<b>Number of hours</b>
1. To Study the Cochran and Babcock & Wilcox boilers.	L1, L2 and L3	2

2. To study the working of impulse and reaction steam turbines	L1, L2 and L3	2
3. To study Two-Stroke & Four-Stroke Diesel Engines.	L1, L2 and L3	2
4. To Study Two-Stroke & Four-Stroke Petrol Engines.	L1, L2 and L3	2
5. To study the constructional features and working of Pelton wheel Turbine, Francis Turbine and Kaplan Turbine.	L1, L2 and L3	2
6. To perform tensile test, plot the stress-strain diagram and evaluate the tensile properties of a given metallic specimen.	L1, L2 and L3	2
7. To Study the different power transmission drives.	L1, L2 and L3	2
8. To Study different types of machine tools (lathe, milling, drilling & shaper).	L1, L2 and L3	2
9. To perform the metal cutting operation on Lathe machine.	L1, L2 and L3	2

*\*Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

Co-requisites	Nil				

### Catalog Description

In this course, students will become familiar with basic electrical circuits. The students will learn practical aspects and implementation of theorems related to electrical circuits, law's related to flow of current, voltages, transformer and transistors.

### Course Objectives

The objective of this course is to:

1. Provide the overview of concept of flow of current/voltage of electrical circuits.
2. Provide the basic knowledge about the concepts of electrical circuits and BJTs.

### Course Outcomes

On completion of this course, the students will be able to:

- CO1. Explain the fundamental theorems and laws related to the electrical circuits and experimentally verify the basic circuit theorems
- CO2. Explain the working principle and estimate the performance of single phase transformers.
- CO3. Understand 3 phase balanced and unbalanced, star and delta connected supply and load and to measure power in 3 phase circuits
- CO4. Able to design circuit with Bipolar Junction Transistor in CB, CE & CC configurations

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Lab Session 1: Network Analysis Techniques &amp; Theorems</b> <ol style="list-style-type: none"> <li>1. To verify KVL &amp; KCL in the given network.</li> <li>2. To verify Superposition Theorem.</li> <li>3. To verify Maximum Power Transfer Theorem.</li> <li>4. To verify Reciprocity Theorem.</li> <li>5. To determine and verify <math>R_{Th}</math>, <math>V_{Th}</math>, <math>R_N</math>, <math>I_N</math> in a given network.</li> </ol>	L1 , L2 and L3	6
<b>Lab session II: Transformers and transistors</b>	L1, L2 and	3

1. To perform open circuit & short circuit test on a single-phase transformer. 2. To perform regulation, ratio & polarity test on a single-phase transformer. 3. To obtain the characteristics of a transistor under common base (CB) and common emitter (CE) configuration.	L3	
<b>Lab session III: Alternating Current Circuits</b> 1. To study transient response of a given RLC Circuit. 2. To measure power & power factor in a three phase circuit by two wattmeter method. 3. To measure power & power factor in a three phase load using three ammeter & three voltmeter method.	L1, L2 and L3	3

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

# ENGLISH – I

Course Code: CSS2152

L-T-P : 1-0-0

Credit Units: 01

## Course Objective:

The course is intended to give a foundation of English Language. The literary texts are indented to help students to inculcate creative & aesthetic sensitivity and critical faculty through comprehension, appreciation and analysis of the prescribed literary texts. It will also help them to respond from different perspectives.

## Course Contents:

### Module I: Vocabulary

Use of Dictionary

Use of Words: Diminutives, Homonyms & Homophones

### Module II: Essentials of Grammar - I

Articles

Parts of Speech

Tenses

### Module III: Essentials of Grammar - II

Sentence Structure

Subject -Verb agreement

Punctuation

### Module IV: Communication

The process and importance

Principles & benefits of Effective Communication

### Module V: Spoken English Communication

Speech Drills

Pronunciation and accent

Stress and Intonation

### Module VI: Communication Skills-I

Developing listening skills

Developing speaking skills

### Module VII: Communication Skills-II

Developing Reading Skills

Developing writing Skills

### Module VIII: Written English communication

Progression of Thought/ideas

Structure of Paragraph

Structure of Essays

### Module IX: Short Stories

**Of Studies, by Francis Bacon**

**Dream Children, by Charles Lamb**

**The Necklace, by Guy de Maupassant**

**A Shadow, by R.K.Narayan**

**Glory at Twilight, Bhabani Bhattacharya**

### Module X: Poems

All the Worlds a Stage

To Autumn

O! Captain, My Captain.

Where the Mind is Without Fear

**Psalm of Life**

Shakespeare

Keats

Walt Whitman

Rabindranath Tagore

**H.W. Longfellow**

***Examination Scheme:***

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	05	15	10	70

**Text & References:**

**\* 30 hrs Programme to be continued for Full year**

# **UNDERSTANDING SELF FOR EFFECTIVENESS**

**Course Code: BEH 2151**

**L-T-P : 1-0-0**

**Credit Units: 01**

## **Course Objective:**

This course aims at imparting:  
Understanding self & process of self exploration  
Learning strategies for development of a healthy self esteem  
Importance of attitudes and its effective on personality  
Building Emotional Competence

## **Course Contents:**

### **Module I: Self: Core Competency**

Understanding of Self  
Components of Self – Self identity  
Self concept, Self confidence, Self image

### **Module II: Techniques of Self Awareness**

Exploration through Johari Window  
Mapping the key characteristics of self  
Framing a charter for self  
Stages – self awareness, self acceptance and self realization

### **Module III: Self Esteem & Effectiveness**

Meaning and Importance, Components of self esteem, High and low self esteem, Measuring your self esteem

### **Module IV: Building Positive Attitude**

Meaning and nature of attitude  
Components and Types of attitude  
Importance and relevance of attitude

### **Module V: Building Emotional Competence**

Emotional Intelligence – Meaning, components, Importance and Relevance  
Positive and Negative emotions  
Healthy and Unhealthy expression of emotions

### **Module VI: End-of-Semester Appraisal**

#### **Viva based on personal journal**

#### **Assessment of Behavioural change as a result of training**

Exit Level Rating by Self and Observer

## **Examination Scheme:**

<b>Components</b>	<b>SAP</b>	<b>A</b>	<b>Mid Term Test (CT)</b>	<b>VIVA</b>	<b>Journal for Success (JOS)</b>
<b>Weightage (%)</b>	20	05	20	30	25

# FRENCH - I

**L-T-P : 3-0-0**      **Course Code: LAN2151**      **Credit Units: 03**

## Course Objective:

To familiarize the students with the French language

- with the phonetic system
- with the syntax
- with the manners
- with the cultural aspects

## Course Contents:

**Module A: pp. 01 to 37: Unités 1, 2, Unité 3 Object if 1, 2**  
**Only grammar of Unité 3: object if 3, 4 and 5**

### Contenu lexical :Unité 1 : Découvrir la langue française : (oral et écrit)

1. se présenter, présenter quelqu'un, faire la connaissance des autres, formules de politesse, rencontres
2. dire/interroger si on comprend
3. Nommer les choses

### Unité 2: Faire connaissance

1. donner/demander des informations sur une personne, premiers contacts, exprimer ses goûts et ses préférences
2. Parler de soi: parler du travail, de ses activités, de son pays, de sa ville.

### Unité 3:Organiser son temps

1. dire la date et l'heure

### Contenu grammatical :

1. organisation générale de la grammaire
2. article indéfini, défini, contracté
3. nom, adjectif, masculin, féminin, singulier et pluriel
4. négation avec « de », "moi aussi", "moi non plus"
5. interrogation : Inversion, est-ce que, qui, que, quoi, qu'est-ce que, où, quand, comment, quel(s), quelle(s)  
Interro-négatif : réponses : oui, si, non
6. pronom tonique/disjoint- pour insister après une préposition
7. futur proche

## Examination Scheme:

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	20	20	20	15	5

C – Project + Presentation

I – Interaction/Conversation Practice

## Text & References:

- le livre à suivre: Campus: Tome 1

# GERMAN - I

Course Code: LAN2152

L-T-P : 3-0-0

Credit Units: 03

## Course Objective:

To enable the students to converse, read and write in the language with the help of the basic rules of grammar, which will later help them to strengthen their language.

To give the students an insight into the culture, geography, political situation and economic opportunities available in Germany

### Course Contents:

#### Module I: Introduction

Self introduction: heissen, kommen, wohnen, lernen, arbeiten, trinken, etc.

All personal pronouns in relation to the verbs taught so far.

Greetings: Guten Morgen!, Guten Tag!, Guten Abend!, Gute Nacht!, Danke sehr!, Danke!, Vielen Dank!, (es tut mir Leid!),

Hallo, wie geht's?: Danke gut!, sehr gut!, prima!, ausgezeichnet!,  
Es geht!, nicht so gut!, so la la!, miserabel!

#### Module II: Interviewspiel

To assimilate the vocabulary learnt so far and to apply the words and phrases in short dialogues in an interview – game for self introduction.

#### Module III: Phonetics

Sound system of the language with special stress on Diphthongs

#### Module IV: Countries, nationalities and their languages

To make the students acquainted with the most widely used country names, their nationalities and the language spoken in that country.

#### Module V: Articles

The definite and indefinite articles in masculine, feminine and neuter gender. All Vegetables, Fruits, Animals, Furniture, Eatables, modes of Transport

#### Module VI: Professions

To acquaint the students with professions in both the genders with the help of the verb “sein”.

#### Module VII: Pronouns

Simple possessive pronouns, the use of my, your, etc.

The family members, family Tree with the help of the verb “to have”

#### Module VIII: Colours

All the color and color related vocabulary – colored, colorful, colorless, pale, light, dark, etc.

#### Module IX: Numbers and calculations – verb “kosten”

The counting, plural structures and simple calculation like addition, subtraction, multiplication and division to test the knowledge of numbers.

“Wie viel kostet das?”

#### Module X: Revision list of Question pronouns

W – Questions like who, what, where, when, which, how, how many, how much, etc.

### Examination Scheme:

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	20	20	20	15	5

C – Project + Presentation

I – Interaction/Conversation Practice

# SPANISH – I

Course Code: LAN2153

L-T-P : 3-0-0

Credit Units: 03

## Course Objective:

To enable students acquire the relevance of the Spanish language in today's global context, how to greet each other. How to present / introduce each other using basic verbs and vocabulary

## Course Contents:

### Module I

A brief history of Spain, Latin America, the language, the culture...and the relevance of Spanish language in today's global context.

Introduction to alphabets

### Module II

Introduction to 'Saludos' (How to greet each other. How to present / introduce each other).

Goodbyes (despedidas)

The verb *llamarse* and practice of it.

### Module III

Concept of Gender and Number

Months of the years, days of the week, seasons. Introduction to numbers 1-100, Colors, Revision of numbers and introduction to ordinal numbers.

### Module IV

Introduction to *SER* and *ESTAR* (both of which mean To Be). Revision of 'Saludos' and 'Llamarse'. Some adjectives, nationalities, professions, physical/geographical location, the fact that spanish adjectives have to agree with gender and number of their nouns. Exercises highlighting usage of *Ser* and *Estar*.

### Module V

Time, demonstrative pronoun (Este/esta, Aquel/aquella etc)

### Module VI

Introduction to some key AR /ER/IR ending regular verbs.

## Examination Scheme:

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	20	20	20	15	5

C – Project + Presentation

I – Interaction/Conversation Practice

# RUSSIAN – I

Course Code: LAN2154

L-T-P : 3-0-0

Credit Units: 03

## **CHINESE – I**

**L-T-P : 3-0-0**

**Course Code: LAN2155**

**Credit Units: 03**

### **Course Objective:**

There are many dialects spoken in China, but the language which will help you through wherever you go is Mandarin, or Putonghua, as it is called in Chinese. The most widely spoken forms of Chinese are Mandarin, Cantonese, Gan, Hakka, Min, Wu and Xiang. The course aims at familiarizing the student with the basic aspects

of speaking ability of Mandarin, the language of Mainland China. The course aims at training students in practical skills and nurturing them to interact with a Chinese person.

### **Course Contents:**

#### **Module I**

Show pictures, dialogue and retell.

Getting to know each other.

Practicing chart with Initials and Finals. (CHART – The Chinese Phonetic Alphabet Called “Hanyu Pinyin” in Mandarin Chinese.)

Practicing of Tones as it is a tonal language.

Changes in 3<sup>rd</sup> tone and Neutral Tone.

#### **Module II**

Greetings

Let me Introduce

The modal particle “ne”.

Use of Please ‘qing’ – sit, have tea ..... etc.

A brief self introduction – Ni hao ma? Zaijian!

Use of “bu” negative.

#### **Module III**

Attributives showing possession

How is your Health? Thank you

Where are you from?

A few Professions like – Engineer, Businessman, Doctor, Teacher, Worker.

Are you busy with your work?

May I know your name?

#### **Module IV**

Use of “How many” – People in your family?

Use of “zhe” and “na”.

Use of interrogative particle “shenme”, “shui”, “ma” and “nar”.

How to make interrogative sentences ending with “ma”.

Structural particle “de”.

Use of “Nin” when and where to use and with whom. Use of guixing.

Use of verb “zuo” and how to make sentences with it.

#### **Module V**

Family structure and Relations.

Use of “you” – “mei you”.

Measure words

Days and Weekdays.

Numbers.

Maps, different languages and Countries.

### **Examination Scheme:**

<b>Components</b>	<b>CT1</b>	<b>CT2</b>	<b>C</b>	<b>I</b>	<b>V</b>	<b>A</b>
<b>Weightage (%)</b>	20	20	20	20	15	5

**Course Code: LAN2156**

**L-T-P : 3-0-0**

**Credit Units: 03**

## ENGINEERING MATHEMATICS - II

**Course Code:** ECE2209

**L-T-P : 3-1-0**

**Credit Units: 04**

### Course Objective:

The knowledge of Mathematics is necessary for a better understanding of almost all the Engineering and Science subjects. Here our intention is to make the students acquainted with the concept of basic topics from Mathematics, which they need to pursue their Engineering degree in different disciplines.

### Course Contents:

#### Module I: Linear Algebra

Hermitian and Skew Hermitian Matrix, Unitary Matrix, Orthogonal Matrix, Elementary Row Transformation, Reduction of a Matrix to Row Echelon Form, Rank of a Matrix, Consistency of Linear Simultaneous Equations, Gauss Elimination Method, Gauss-Jordan Method, Eigen Values and Eigen Vectors of a Matrix, Cayley-Hamilton Theorem, Diagonalization of a Matrix, Vector Space, Linear Independence and Dependence of Vectors, Linear Transformations.

#### Module II: Infinite Series

Definition of Sequence, Bounded Sequence, Limit of a Sequence, Series, Finite and Infinite Series, Convergence and Divergence of Infinite series, Cauchy's Principle of Convergence, Positive Term Infinite Series, Comparison test, D'Alembert's Ratio test, Raabe's Test, Cauchy's nth root Test, Logarithmic Test, Alternating Series, Leibnitz's Test, Absolute and conditional convergence, Uniform Convergence, Power Series and its Interval of Convergence.

#### Module III: Complex Analysis

De Moivre's Theorem and Roots of Complex Numbers, Logarithmic Functions, Circular, Hyperbolic Functions and their Inverses.

Functions of a Complex Variables, Limits, Continuity and Derivatives, Analytic Function, Cauchy-Riemann Equations (without proof), Harmonic Function, Harmonic Conjugates, Conformal Mapping, Bilinear Transformations, Complex Line Integral, Cauchy Integral Theorem, Cauchy Integral Formula, Derivative of Analytic Function, Power Series, Taylor Series, Laurent Series, Zeros and Singularities, Residues, Residue Theorem, Evaluation of

Real Integrals of the Form  $\int_{-\infty}^{\infty} \frac{f(x)}{F(x)} dx$ .

#### Module IV: Statistics and Probability

Moments, Skewness, Kurtosis, Random Variables and Probability Distribution, Mean and Variance of a Probability Distribution, Binomial Distribution, Poisson Distribution and Normal Distribution.

<b>ECE2203</b>	<b>Object Oriented Programming Using C++</b>	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	2	1	0	3
Pre-requisites/Exposure	Hands on knowledge of C Programming				
Co-requisites	Basic concepts of C Programming				

### Catalog Description

The objective of this course is to introduce object-oriented programming. To explore and implement the various features of OOP such as inheritance, polymorphism, Exceptional handling using programming language C++. After completing this course student can easily identify the basic difference between the programming approaches like procedural and object oriented.

## Course Objectives

The objective of this course is

1. Equip the students with the basic features of C++ supporting object-oriented programming. Perform object oriented programming to develop solutions to problems demonstrating usage of control structures, modularity, I/O. and other standard language constructs.
2. Provide the overview of major object-oriented concepts to implement object oriented programs in C++ like encapsulation, inheritance and polymorphism, stream I/O, templates and operator overloading

## Course Outcomes

On completion of this course, the students will be able to

- CO 1: Explain the basic principles of object-oriented programming approach; Differentiate it with procedural programming approach and also discuss difference between C and C++.
- CO 2: Illustrate the different ways to define a member function inline and explain how the private members of a class can be accessed. Explain how the objects can be instantiated and destroyed with static data member?
- CO 3: Explain the concept of inheritance, types and implementation with suitable examples; find out ambiguity problem in inheritance; use the concept of overriding and constructors in inheritance.
- CO 4: Explain polymorphism in detail and implement the concept of overloading in functions as well as in operators. Write the programs for virtual function and pointer with objects.
- CO 5: Explain the exception handling mechanism. Design the programs for class and function Template. Compare and contrast various formatted and unformatted i/o function in file handling.

Modules	Blooms level*	Number of hours
<b>MODULE 1:</b>  <b>INTRODUCTION</b> Review of C, Difference between C and C++, Procedure Oriented and Object Oriented Approach. Basic Concepts: Objects, classes, Principals like Abstraction, Encapsulation, Inheritance and Polymorphism. Dynamic Binding, Message Passing. Characteristics of Object-Oriented Languages. Introduction to Object-Oriented Modeling techniques (Object, Functional and Dynamic Modeling).	L1 and L2	5
<b>MODULE 2:</b>  <b>CLASSES AND OBJECTS</b> Abstract data types, Object & classes, attributes, methods, C++ class declaration, Local Class and Global Class, State identity and behaviour of an	L1, L2 and L3	7

object, Local Object and Global Object, Scope resolution operator, Friend Functions, Inline functions, Constructors and destructors, instantiation of objects, Types of Constructors, Static Class Data, Array of Objects, Constant member functions and Objects, Memory management Operators.		
<b>MODULE 3:</b>  <b>INHERITANCE</b> Inheritance, Types of Inheritance, access modes – public, private & protected, Abstract Classes, Ambiguity resolution using scope resolution operator and Virtual base class, Aggregation, composition vs classification hierarchies, Overriding inheritance methods, Constructors in derived classes, Nesting of Classes	L2, L3 and L4	8
<b>MODULE 4:</b>  <b>POLYMORPHISM</b> Polymorphism, Type of Polymorphism – Compile time and runtime, Function Overloading, Operator Overloading (Unary and Binary) Polymorphism by parameter, Pointer to objects, this pointer, Virtual Functions, pure virtual functions.	L2, L3 and L4	8
<b>MODULE 5:</b>  <b>STRINGS, FILES AND EXCEPTION HANDLING</b> Manipulating strings, Streams and files handling, formatted and Unformatted Input output. Exception handling, Generic Programming – function template, class Template Standard Template Library: Standard Template Library, Overview of Standard Template Library, Containers, Algorithms, Iterators, Other STL Elements, The Container Classes, General Theory of Operation, Vectors.	L2, L3 and L4	8

*\*Bloom's Level:*

ECE2204	Engineering Mechanics	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	2	1	0	3
Pre-requisites/Exposure	Basics of Mathematics, Mathematical Equations, Force systems				
Co-requisites	-				

### Catalog Description

Engineers are the ultimate problem solvers. This course introduces the principles required to solve engineering mechanics problems. It addresses the modelling and analysis of static equilibrium problems with an emphasis on real-world engineering applications and problem solving. To master this course, students should have a background in basic mathematical calculus and physics covering classical mechanics. These basic concepts of physics and mathematics will be applied to formulate problems on force systems, trusses, friction, centroid, simple lifting machines, power transmission devices and law of conservation of energy.

### Course Objectives

The objective of this course is to

5. Equip the students with concepts of free body diagram, friction, centroid or center of gravity, trusses, energy, force system and its effect on the behavior of the bodies
6. Provide an overview of estimation of performance of belts and simple lifting machines under various operating conditions.

### Course Outcomes

After completing the course, the students will be able to

CO1. Explain the concept of free body diagram, classify various force system and apply equilibrium equations to solve different truss problems.

CO2. Define and compute various terms associated with the friction, determine the efficiency of simple lifting machines and power transmission devices.

CO3. Describe various theorems and apply them to determine centroid, centre of gravity, moment of inertia, mass moment of inertia of various bodies.

CO4. Analyse and setting up the problems involving the concept of work, energy, impulse and momentum.

Modules	Blooms level*	Number of hours
<b>Module I:</b> <b><u>Force system</u></b> Types of forces, Parallelogram law of forces, Triangle law of forces, Polygon law of forces, Free body diagram, Equilibrium equations and applications. Lami's theorem and its applications. Moment and its applications,	L1, L2 and L3	10
<b>Module II:</b> <b><u>Determinate Structures</u></b> Plane truss, perfect and imperfect truss, assumption in solving the truss problems, method of joints, method of section.	L1, L2, and L3	8
<b>Module III:</b> <b><u>Friction</u></b> Static and Kinetic friction, laws of dry friction, co-efficient of friction, angle of friction, angle of repose, ladder friction, Screw jack & determination of its efficiency	L2 and L3	10
<b>Module IV:</b> <b><u>Distributed Force</u></b> Determination of center of gravity, center of mass and centroid by direct integration and by the method of composite bodies, mass moment of inertia and area moment of inertia by direct integration and composite bodies method, radius of gyration, perpendicular axis theorem, parallel axis theorem, and its application, polar moment of	L2, L3 and L4	8

inertia.

### Catalog Description

The objective of this course is to introduce object-oriented programming. To explore and implement the various features of OOP such as inheritance, polymorphism, Exceptional handling using programming language C++. After completing this course student can easily identify the basic difference between the programming approaches like procedural and object oriented.

### Course Objectives

The objective of this course is

1. Perform object-oriented programming to develop solutions to problems demonstrating usage of control structures, modularity, I/O. and other standard language constructs.
2. Demonstrate adeptness of object-oriented programming in developing solutions to problems demonstrating usage of data abstraction, encapsulation, and inheritance.
3. Demonstrate ability to implement one or more patterns involving realization of an abstract interface and utilization of polymorphism in the solution of problems which can take advantage of dynamic dispatching, syntax, features of, and how to utilize the Standard Template Library.

### Course Outcomes

On completion of this course, the students will be able to

- CO 1: Define and identify the basic principles of object-oriented programming approach; Differentiate it with procedural programming approach.
- CO 2: Determine the different ways to define a member function inline and explain how the private members of a class can be accessed. Solve how the objects can be instantiated and destroyed with static data member?
- CO 3: Apply the concept of inheritance, types and implementation with suitable examples; find out ambiguity problem in inheritance; use the concept of overriding and constructors in inheritance.

- CO 4: Relate the concept polymorphism with overloading in detail and implement the concept of overloading in functions as well as in operators. Write the programs for virtual function and pointer with objects.
- CO 5: Determine the exception handling mechanism. Design the programs for class and function Template. Compare and contrast various formatted and unformatted i/o function in filehandling.

<b>Modules/Topics Covered**</b>	<b>Blooms level*</b>	<b>Number of hours</b>
1. Sample Programs using objects and classes (a) Write a program to illustrate the concept of one class with two objects by taking student data. (b) Write a program to show the relationship of class and object to display roll no., grade and fee paid by student.	L1, L3, L5	4
2. Sample Programs for different use of private, public member variables and functions and friend functions (a) Write a program to define the member function outside and inside the class. (b) Write a program to read and display the information of N persons to illustrate the concept of array of objects. (c) Write a program to add two numbers to illustrate the use of friend function.	L1, L3, L5	4
3. Sample Programs using constructors and destructors (a) Write a program to assign and copy values to illustrate the concept of parametrized and copy constructor. (b) Write a program to show the order of constructor and destructor.	L1, L3, L5	4
4. Sample Programs using operator overloading (a) Write a program to add two numbers using binary operator overloading. (b) Write a program to illustrate the assignment operator overloading.	L1, L3, L5	4
5. Sample Programs using inheritance in and accessing objects of different derived classes (a) Write a program to compute the marks explaining the concept of multiple inheritance. (b) Write a program to find the factorial of a number using inheritance.	L1, L3, L5	4

6. Sample Programs using polymorphism and virtual functions (using pointers) and File Handling  (e) Write a program to find the volume of cylinder and cuboid using function overloading.  (f) Write a program to reverse a string using pointers.  (g) Write a program to explain the relationship of inheritance and virtual function.  (h) Write a program to read the student name and fee paid using read() function from the file.	L1, L3, L4, L5	4
--	-------------------	---

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

**\*\* Sample Programs provided are not limited to these only, can include others as desired.**

## ENGINEERING PHYSICS

**Course Code:** ECE2110  
**L-T-P :** 2-1-0

**Credit Units:** 03

**Course Objective:**

Aim of this course is to introduce the students to fundamentals of graduate level physics, which form the basis of all applied science and engineering

### Course Contents:

#### Module I: Oscillations & Waves

**Oscillations:** Introduction to S.H.M. Damped Oscillations: Differential Equation and its solution, logarithmic decrement, Quality Factor, Different conditions of damping of harmonic oscillations. Forced oscillations: Amplitude and Frequency Response, Resonance, Sharpness of Resonance

**Plane Progressive Waves:** Differential Equation and Solution, Superposition of Progressive Waves stationary waves.

**Ultrasonics:** Generation and application of ultrasonic waves.

#### Module II: Wave Nature of Light

Interference: Coherent Sources, Conditions of interference, Interference due to division of wavefront, Fresnel's biprism Interference due to division of amplitude, Newton's rings, Interference due to thin films, .

Diffraction: Fresnel and Fraunhofer diffraction, Fraunhofer diffraction at a single slit, double slit, N Slits, Transmission grating, Rayleigh criterion and Resolving power of grating.

Polarization: Birefringence, Nicol prism, Production and analysis of plane, circularly and elliptically polarized light, Half and quarter wave plates, Optical rotation, Polarimeter.

#### Module III: Electromagnetism

Scalar and vector fields, gradient of a scalar field, physical significance of gradient, equipotential surface. Line, surface and volume integrals, Divergence and curl of vector field and mathematical analysis physical significance, Electric flux, Gauss' law, Proof and Applications, Gauss divergence and Stokes theorems.

Differential form of Gauss' Law, Amperes' Law, Displacement current, Faraday's Law, Maxwell equations in free space & isotropic media (Integral form & differential form), EM wave propagation in free space, Poynting vector.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

## **ENGINEERING PHYSICS LAB**

**Course Code: ECE2111**  
**L-T-P : 0-0-2**

**Credit Units: 01**

### **List of Experiments:**

1. To determine the wavelength of sodium light by Newton's rings method.
2. To determine the dispersive power of the material of prism with the help of a spectrometer.
3. To determine the specific rotation of sugar by Bi-quartz or Laurent half shade polarimeter.
4. To determine the speed of ultrasonic waves in liquid by diffraction method.

5. To determine the width of a narrow slit using diffraction phenomena.
6. To determine the temperature coefficient of platinum wire, using a platinum resistance thermometer and a Callender & Griffith's bridge.
7. To determine the value of specific charge (ratio of  $e/m$ ) of an electron by Thomson method.
8. To determine the internal resistance of Leclanche cell with the help of Potentiometer.
9. To determine the resistance per unit length of a Carey Foster's bridge wire and also to find out the specific resistance of a given wire.
10. To plot graph showing the variation of magnetic field with distance along the axis of a circular coil carrying current, and hence estimate the radius of the coil.
11. To determine the value of acceleration due to gravity ('g') in the laboratory using bar pendulum.
12. To determine the moment of inertia of a flywheel about its own axis of rotation.
13. To determine the density of material of the given wire with the help of sonometer.

**Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

<b>Course Code: ECE2208</b>	<b>ENGINEERING GRAPHICS LAB</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2019.1	Date of Approval: July 14, 2019	0	0	4	2
Pre-requisites/Exposure	Concepts Mathematics (especially Trigonometry and Geometry)				
Co-requisites	Machine Drawing & CAD				

### **Catalog Description:**

A freshman level course which provides the undergraduate engineering students with a background in descriptive geometry, orthographic projection, engineering drawing standards and annotation, computer-aided engineering graphics. The concepts of point, line and plane relationships in projection, multi-view engineering drawings, auxiliary and section views, basic dimensioning and annotation, engineering applications of drawings are also discussed.

### **Course Objective:**

The objective of this course is to

1. Equip the students with the in-depth knowledge of drawings of points, straight line, planes, cylinders, prisms, pyramids, parabola, ellipse etc.
2. Draw different figures manually and will be capable of using various instruments involved in drawings.

### **Course Outcomes (COs):**

At the end of the course, the student shall be able to:

CO 1 - Define and explain basic principles of projections of points and lines.

CO 2 - Define, describe and construct the different orientations and projections of planes.

CO 3 – Explain and construct the projections of solids and sectioning of solids in different orientations.

CO 4 - State and draw the concepts of development of surfaces and introduction to auto CAD.

CO 5 – Define and construct orthographic and isometric view of an object.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Introduction</b>  Importance, significance and scope of engineering drawing, drawing instruments and their use, lettering, dimensioning, scales, sense of proportioning, different types of projections, B.I.S. Specifications.	L1 and L2	8

<b>Module II: Projection of points, lines and plane surface</b> Principal planes, principles of orthographic projections, Projection of points in all quadrants, Projection methods - First angle & third angle projection, Projections of straight lines (first angle projection) inclined to both the planes, true lengths and traces, projection of planes, projection of planes in simple position and inclined to both the principal planes, auxiliary planes and views	L1, L2 and L3	12
<b>Module III: Projection of solids &amp; section of solids</b> Projection of simple solids like prisms, pyramids, cylinder, cone and truncated solids when the axis is inclined to both of the principal planes, Sectioning of above solids in simple vertical position when the cutting plane is inclined to the one of the principal planes and perpendicular to the other, obtaining true shape of section	L1, L2 and L3	12
<b>Module IV: Development of surfaces &amp; Isometric projections</b> Development of surfaces of simple and sectioned solids – Prisms, pyramids cylinders and cones, Principles of isometric projection, isometric scale, Isometric projections of simple solids and truncated solids, Prisms, pyramids, cylinders, cones, Conversion of Orthographic Views to Isometric Views and Vice-versa.	L1, L2 and L3	8
<b>Module V: Introduction to CAD</b> Introduction to CAD and use of its commands, practice of some 2D figures using CAD.	L1, L2 and L3	8

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

# ENGLISH-II

Course Code: CSS2252

L-T-P : 1-0-0

Credit Units: 01

## Course Objective:

The course is intended to give a foundation of English Language. The literary texts are indented to help students to inculcate creative & aesthetic sensitivity and critical faculty through comprehension, appreciation and analysis of the prescribed literary texts. It will also help them to respond form different perspectives.

## Course Contents:

Module I: Vocabulary

Use of Dictionary

Use of Words: Diminutives, Homonyms & Homophones

### Module II: Essentials of Grammar - I

Articles

Parts of Speech

Tenses

### Module III: Essentials of Grammar - II

Sentence Structure

Subject -Verb agreement

Punctuation

Module IV: Communication

The process and importance

Principles & benefits of Effective Communication

Module V: Spoken English Communication

Speech Drills

Pronunciation and accent

Stress and Intonation

### Module VI: Communication Skills-I

Developing listening skills

Developing speaking skills

Module VII: Communication Skills-II

Developing Reading Skills

Developing writing Skills

Module VIII: Written English communication

Progression of Thought/ideas

Structure of Paragraph

Structure of Essays

Module IX: Short Stories

**Of Studies, by Francis Bacon**

**Dream Children, by Charles Lamb**

**The Necklace, by Guy de Maupassant**

**A Shadow, by R.K.Narayan**

**Glory at Twilight, Bhabani Bhattacharya**

### Module X: Poems

All the Worlds a Stage

To Autumn

O! Captain, My Captain.

Where the Mind is Without Fear

**Psalm of Life**

Shakespeare

Keats

Walt Whitman

Rabindranath Tagore

**H.W. Longfellow**

***Examination Scheme:***

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	05	15	10	70

**Text & References:**

# PROBLEM SOLVING AND CREATIVE THINKING

Course Code: BEH 2251

L-T-P : 1-0-0

Credit Units: 01

## Course Objective:

To enable the students:

Understand the process of problem solving and creative thinking.

Facilitation and enhancement of skills required for decision-making.

## Course Contents:

Module I: Thinking as a tool for Problem Solving

What is thinking: The Mind/Brain/Behaviour

Critical Thinking and Learning:

Making Predictions and Reasoning

Memory and Critical Thinking

Emotions and Critical Thinking

Thinking skills

## Module II: Hindrances to Problem Solving Process

Perception

Expression

Emotion

Intellect

Work environment

## Module III: Problem Solving

Recognizing and Defining a problem

Analyzing the problem (potential causes)

Developing possible alternatives

Evaluating Solutions

Resolution of problem

Implementation

Barriers to problem solving:

Perception

Expression

Emotion

Intellect

Work environment

## Module IV: Plan of Action

Construction of POA

Monitoring

Reviewing and analyzing the outcome

## Module V: Creative Thinking

Definition and meaning of creativity

The nature of creative thinking

Convergent and Divergent thinking

Idea generation and evaluation (Brain Storming)

Image generation and evaluation

Debating

The six-phase model of Creative Thinking: ICEDIP model

## Module VI: End-of-Semester Appraisal

Viva based on personal journal

Assessment of Behavioural change as a result of training

Exit Level Rating by Self and Observer

## Examination Scheme:

Components	SAP	A	Mid Term Test (CT)	VIVA	Journal for Success (JOS)
Weightage (%)	20	05	20	30	25

## **ENVIRONMENTAL STUDIES**

**Course Code:** ENV 2252  
**L-T-P : 4-0-0**

**Credit Units: 04**

**Course Objective:**

The term environment is used to describe, in the aggregate, all the external forces, influences and conditions, which affect the life, nature, behaviour and the growth, development and maturity of living organisms. At present a great number of environment issues, have grown in size and complexity day by day, threatening the survival of mankind on earth. A study of environmental studies is quite essential in all types of environmental

sciences, environmental engineering and industrial management. The objective of environmental studies is to enlighten the masses about the importance of the protection and conservation of our environment and control of human activities which has an adverse effect on the environment.

## **Course Contents:**

### **Module I: The multidisciplinary nature of environmental studies**

Definition, scope and importance

Need for public awareness

### **Module II: Natural Resources**

#### **Renewable and non-renewable resources:**

Natural resources and associated problems

Forest resources: Use and over-exploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forests and tribal people.

Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems.

Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies.

Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies.

Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources, case studies.

Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification.

- Role of an individual in conservation of natural resources.
- Equitable use of resources for sustainable lifestyles.

### **Module III: Ecosystems**

Concept of an ecosystem

Structure and function of an ecosystem

Producers, consumers and decomposers

Energy flow in the ecosystem

Ecological succession

Food chains, food webs and ecological pyramids

Introduction, types, characteristic features, structure and function of the following ecosystem:

- a. Forest ecosystem
- b. Grassland ecosystem
- c. Desert ecosystem
- d. Aquatic ecosystems (ponds, streams, lakes, rivers, ocean estuaries)

### **Module IV: Biodiversity and its conservation**

Introduction – Definition: genetic, species and ecosystem diversity

Biogeographical classification of India

Value of biodiversity: consumptive use, productive use, social, ethical aesthetic and option values

Biodiversity at global, national and local levels

India as a mega-diversity nation

Hot-spots of biodiversity

Threats to biodiversity: habitat loss, poaching of wildlife, man wildlife conflicts

Endangered and endemic species of India

Conservation of biodiversity: In-situ and Ex-situ conservation of biodiversity

### **Module V: Environmental Pollution**

Definition

- ☐ ☐ ☐ Causes, effects and control measures of:
  - a. Air pollution
  - b. Water pollution

# FRENCH - II

Course Code: LAN2251

L-T-P : 3-0-0

Credit Units: 03

## Course Objective:

To enable the students to overcome the fear of speaking a foreign language and take position as a foreigner speaking French.

To make them learn the basic rules of French Grammar.

## Course Contents:

Module A : pp.38 – 47 : Unité 3: Objectif 3, 4, 5, 6

Module B: pp. 47 to 75 Unité 4, 5

### Contenu lexical: Unité 3 : Organiser son temps

1. donner/demander des informations sur un emploi du temps, un horaire  
SNCF – Imaginer un dialogue
2. rédiger un message/ une lettre pour ...
  - i) prendre un rendez-vous/ accepter et confirmer/ annuler
  - ii) inviter/accepter/refuser
3. Faire un programme d'activités  
imaginer une conversation téléphonique/un dialogue  
Propositions- interroger, répondre

### Unité 4: Découvrir son environnement

1. situer un lieu
2. s'orienter, s'informer sur un itinéraire.
3. Chercher, décrire un logement
4. connaître les rythmes de la vie

### Unité 5: s'informer

1. demander/donner des informations sur un emploi du temps passé.
2. donner une explication, exprimer le doute ou la certitude.
3. découvrir les relations entre les mots
4. savoir s'informer

- Contenu grammatical:**
1. Adjectifs démonstratifs
  2. Adjectifs possessifs/exprimer la possession à l'aide de :
    - i. « de » ii. A+nom/pronom disjoint
  3. Conjugaison pronominale – négative, interrogative -  
construction à l'infinitif
  4. Impératif/exprimer l'obligation/l'interdiction à l'aide de « il faut... »/ «il ne faut pas... »
  5. passé composé
  6. Questions directes/indirectes

## Examination Scheme:

# GERMAN – II

Course Code: LAN2252

L-T-P : 3-0-0

Credit Units: 03

## Course Objective:

To enable the students to converse, read and write in the language with the help of the basic rules of grammar, which will later help them to strengthen their language.

To give the students an insight into the culture, geography, political situation and economic opportunities available in Germany

Introduction to Grammar to consolidate the language base learnt in Semester I

### Course Contents:

#### Module I: Everything about Time and Time periods

Time and times of the day.

Weekdays, months, seasons.

Adverbs of time and time related prepositions

#### Module II: Irregular verbs

Introduction to irregular verbs like to be, and others, to learn the conjugations of the same, (fahren, essen, lessen, schlafen, sprechen und ähnliche).

#### Module III: Separable verbs

To comprehend the change in meaning that the verbs undergo when used as such

Treatment of such verbs with separable prefixes

#### Module IV: Reading and comprehension

Reading and deciphering railway schedules/school time table

Usage of separable verbs in the above context

#### Module V: Accusative case

Accusative case with the relevant articles

Introduction to 2 different kinds of sentences – Nominative and Accusative

#### Module VI: Accusative personal pronouns

Nominative and accusative in comparison

Emphasizing on the universal applicability of the pronouns to both persons and objects

#### Module VII: Accusative prepositions

Accusative prepositions with their use

Both theoretical and figurative use

#### Module VIII: Dialogues

Dialogue reading: 'In the market place'

'At the Hotel'

### Examination Scheme:

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	20	20	20	15	5

## SPANISH – II

Course Code: LAN2253

L-T-P : 3-0-0

Credit Units: 03

### Course Objective:

To enable students acquire more vocabulary, grammar, Verbal Phrases to understand simple texts and start describing any person or object in Simple Present Tense.

### Course Contents:

#### Module I

Revision of earlier modules.

#### Module II

Some more AR/ER/IR verbs. Introduction to root changing and irregular AR/ER/IR ending verbs

#### Module III

More verbal phrases (eg, Dios Mio, Que lastima etc), adverbs (*bueno/malo, muy, mucho, bastante, poco*). Simple texts based on grammar and vocabulary done in earlier modules.

#### Module IV

Possessive pronouns

#### Module V

Writing/speaking essays like my friend, my house, my school/institution, myself....descriptions of people, objects etc, computer/internet related vocabulary

### Examination Scheme:

## **RUSSIAN – II**

**Course Code: LAN2254**

**L-T-P : 3-0-0**

**Credit Units: 03**

# CHINESE – II

Course Code: CSE2255

L-T-P : 3-0-0

Credit Units: 03

## Course Objective:

Chinese is a tonal language where each syllable in isolation has its definite tone (flat, falling, rising and rising/falling), and same syllables with different tones mean different things. When you say, “ma” with a third tone, it mean horse and “ma” with the first tone is Mother. The course aims at familiarizing the student with the basic aspects of speaking ability of Mandarin, the language of Mainland China. The course aims at training students in practical skills and nurturing them to interact with a Chinese person.

## Course Contents:

### Module I

Drills

Practice reading aloud

Observe Picture and answer the question.

Tone practice.

Practice using the language both by speaking and by taking notes.

Introduction of basic sentence patterns.

Measure words.

Glad to meet you.

### Module II

Where do you live?

Learning different colors.

Tones of “bu”

Buying things and how much it costs?

Dialogue on change of Money.

More sentence patterns on Days and Weekdays.

How to tell time. Saying the units of time in Chinese. Learning to say useful phrases like – 8:00, 11:25, 10:30 P.M. everyday, afternoon, evening, night, morning 3:58, one hour, to begin, to end ..... etc.

Morning, Afternoon, Evening, Night.

### Module III

Use of words of location like-li, wai hang, xia

Furniture – table, chair, bed, bookshelf,.. etc.

Description of room, house or hostel room.. eg what is placed where and how many things are there in it?

Review Lessons – Preview Lessons.

Expression ‘yao’, ‘xiang’ and ‘yaoshi’ (if).

Days of week, months in a year etc.

I am learning Chinese. Is Chinese difficult?

### Module IV

Counting from 1-1000

Use of “chang-chang”.

Making an Inquiry – What time is it now? Where is the Post Office?

Days of the week. Months in a year.

Use of Preposition – “zai”, “gen”.

Use of interrogative pronoun – “duoshao” and “ji”.

“Whose”??? Sweater etc is it?

Different Games and going out for exercise in the morning.

### Module V

The verb “qu”

– Going to the library issuing a book from the library

– Going to the cinema hall, buying tickets

– Going to the post office, buying stamps

– Going to the market to buy things.. etc

– Going to the buy clothes .... Etc.

Hobby. I also like swimming.

Comprehension and answer questions based on it.

**Examination Scheme:**

<b>ECE2302</b>	<b>Analog Electronics I</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version: 2019.1	Date of Approval: May 21, 2019	3	0	0	3
Pre-requisites/Exposure	Elementary Resistive Circuit, Theorems and Analysis Techniques: KCL, KVL, Nodal & Mesh Analysis, Thevenin & Norton Equivalents, Maximum Power Transfer.				
Co-requisites	Semiconductor Physics				

### **Catalog Description**

This is the first course in Electronics and Communication Engineering, to educate and explain the methods used for biasing circuits in a graphical analysis of non linear electronic circuits and also includes small signal transistor models, parameters and their frequency responses. Following this, analyzing different types of feedback amplifiers, and power amplifiers using transistor and designing of different electronic circuits are included in the course. This course also considers the mathematical modelling of active solid state devices their analysis and design of single state circuits. Topics covered include the study of device characteristics and applications of p-n-junction diodes, bipolar junction transistors, and field effect transistors.

### **Course Objectives**

The objective of this course is to

1. build from basic knowledge of Semiconductor Physics to an understanding of basic devices and their models
2. familiarize the student with the analysis and design of basic transistor amplifier circuits, feedback amplifiers and wave shaping circuits
3. build a foundation for Analog Electronics-II, Digital Circuits and Systems I & II, VLSI design and analog CMOS IC Design

### **Course Outcomes**

On completion of this course, the students will be able to

- CO1. explain different types of diodes and demonstrate wave shaping circuits
- CO2. explain operating principal of Bipolar Junction Transistor, its properties, biasing techniques and stability
- CO3. describe low and high frequency transistor amplifiers along with single and multi-stage amplifier
- CO4. explain operating principal of JFET, MOSFET, its properties, and biasing techniques
- CO5. solve and analyse different negative feedback amplifiers configurations
- CO6. describe and outline power amplifiers and their application.

Modules	Blooms level*	Number of hours
<b>Module I: Semiconductor Diode and Diode Circuits</b>  Different types of diodes: Zener, Schottky, LED. Zener as voltage regulator, Diffusion capacitance, Drift capacitance, the load line concept, half wave, full wave rectifiers, clipping and clamping circuits.	L1 L2 & L3	6
<b>Module II: Bipolar Junction Transistor</b>  Bipolar junction transistor: Introduction, Transistor, construction, transistor operations, BJT characteristics, load line, operating point, leakage currents, saturation and cut off mode of operations. Bias stabilization: Need for stabilization, fixed Bias, emitter bias, self bias, bias stability with respect to variations in $I_{CO}$ , $V_{BE}$ & $\beta$ , Stabilization factors, thermal stability.	L1 L2 & L3	9
<b>Module III: Small signal Analysis of transistor and Multistage Amplifier</b>  Hybrid model for transistors at low frequencies, Analysis of transistor amplifier using h parameters, emitter follower, Miller's theorem, THE CE amplifier with an emitter resistance, Hybrid $\pi$ model, Hybrid $\pi$ Conductances and Capacitances, CE short circuit current gain, CE short circuit current gain with $R_L$ Multistage amplifier: Cascading of Amplifiers, Coupling schemes(RC coupling and Transformer coupling)	L2 & L3	6
<b>Module IV: Field Effect Transistors</b>  Field effect transistor (JFET, MOSFET): volt-ampere characteristics, small signal model –common drain, common source, common gate, operating point, MOSFET, enhancement and -depletion mode, Common source amplifier, Source follower	L1, L2 & L3	5
<b>Module V: Feedback Amplifiers</b>  Feedback concept, Classification of Feedback amplifiers, Properties of negative Feedback amplifiers, Impedance considerations in different Configurations, Examples of analysis of feedback Amplifiers.	L1, L2, L3 & L4	6
<b>Module VI: Power amplifiers</b>  Power dissipation in transistors, difference with voltage amplifiers, Amplifier classification (Class A, Class B, Class C, Class AB) class AB push pull amplifier, collector efficiency of each, cross over distortion.	L1 & L2	4

### **Catalog Description**

In this course the concepts of circuits analysis based on Resistance, Inductance and Capacitance are discussed in detail. voltage- current relationship of basic circuit elements – resistors, inductors, capacitors, dependent and independent voltage and current sources; apply Kirchhoff's current and voltage laws to circuits in order to determine voltage, current and power in branches of any circuits excited by DC voltages and current sources will be discussed. Concept learnt in the studies will be applied to solve DC circuit problems using basic circuit theorems and structured methods like node voltage and mesh current analysis.

### **Course Objectives**

The objective of this course is to

1. Equip the students with concepts basic network analysis of electrical circuits using KVL and KCL.
2. Provide an overview of one port and two port network analysis in time and frequency domain.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: Expiation of graph theory for solving complex electrical circuits.

CO2: Analysis of RL, RC and RLC circuits using time domain approach.

CO3: Apply Laplace transform to solve RL, RC and RLC circuits in frequency domain.

CO4: Explanation and application of various network theorems to solve the given circuit.

CO5: Synthesis of RL, RC and RLC electrical circuits and explanation of two port network parameters.

Modules	Blooms level*	Number of hours
<b>Module 1: Graph Theory and Network equations</b> Graph of a network, Trees, Co-trees and loops, cut set matrix, Tie set matrix, number of possible trees of a graph, duality, Loop Analysis and Node Analysis.	L1 and L2	8
<b>Module 2: Analysis of circuits using classical Method</b> Time and Frequency domain analysis of RL, RC and RLC circuits, Linear constant coefficient differential equation.	L2 and L3	10
<b>Module 3: Signals and Laplace Transforms</b> Unit step signal, Ramp signal, impulse signal, Laplace transformations and its properties, Gate function, Inverse Laplace transformations, Application of Laplace Transforms in circuit analysis.	L3 and L4	10
<b>Module 4: Network Theorems</b> Reciprocity theorem, Superposition theorem, Thevenin's and Norton's theorems, Millman's theorem, Maximum power transfer theorem, Compensation theorem, Tellegan's theorem.	L2 and L3	10
<b>Module 5: Two port Network &amp; Network Functions</b> Introduction, two port z-, y-, T-, h-parameters, Inter-relations among parameters, Condition for reciprocity and symmetry, Interconnections of two port networks, Driving point and transfer functions, Poles, Zeros and necessary condition for driving point and transfer function.	L1, L3	10
<b>Module 6: Network Synthesis</b> Hurwitz polynomial, Positive real functions, synthesis of LC, RC, RL immittance functions.	L1 and L5

## Catalog Description

This course covers the design, analysis, and implementation of data structures and algorithms to solve engineering problems using C programming language. Topics include elementary data structures, (including arrays, stacks, queues, and lists), advanced data structures (including trees and graphs), the algorithms used to manipulate these structures, and their application to solving practical engineering problems. At the end of this course student will gain knowledge about different kinds of file structures and their related operations.

## Course Objectives

The objective of this course is to

1. Equip the students with knowledge of algorithms, different types of data structures and analysis of space and time complexity.
2. Provide an overview of various algorithms of data structures like stack and queues and related operations and implementation.
3. Provide an overview of dynamic Data Structure like linked list and its related operations, algorithms and programs. Demonstrate practical use of dynamic data structure to solve engineering problems.
4. Equip the students with knowledge of algorithms and operations related to tree and graph data structures and their practical applications.
5. Provide an overview of Sorting, Searching and file structures and its related algorithms and techniques.

## Course Outcomes

On completion of this course, the students will be able to

CO 1: Identify operations on array, multidimensional, string and their implementation and analyze space and time complexity of algorithms.

CO 2: Explain various algorithms and operations of data structures like stack and queues and analyze complexity of each operation.

CO 3: Explain dynamic data structures and various algorithms and operations of data structures like linked list and their applications in computer science.

CO 4: Illustrate the algorithms and operations related to tree and graph data structures, their practical applications and analyze complexity of algorithm associated with each operations.

CO5: Explain Sorting, Searching and file organization and its related techniques.

Modules	Blooms level*	Number of hours
<b>Module I: Introduction to Data structures</b>  Data structures: Definition, Types. Algorithm design, Complexity, Time-Space Tradeoffs. Use of pointers in data structures. Array Definition and Analysis, Representation of Linear Arrays in Memory, Traversing of Linear Arrays, Insertion and Deletion, Single Dimensional Arrays, Two Dimensional Arrays, Multidimensional Arrays, Function Associated with Arrays, Character String in C, Character String Operations, Arrays as parameters, Implementing One Dimensional Array, Sparse matrix.	L1, L2	7
<b>Module II: Introduction to Stacks and queue</b>  Stack: Definition, Array representation of stacks, Operations Associated with Stacks- Push & Pop, Polish expressions, Conversion of infix to postfix, infix to prefix (and vice versa), Application of stacks recursion, polish expression and their compilation, conversion of infix expression to prefix and postfix expression, Tower of Hanoi problem. Queue: Definition, Representation of Queues, Operations of queues- QInsert, QDelete, Priority Queues, Circular Queue, Deque.	L1, L2, L3, L4	8
<b>Module III: Dynamic Data Structure</b>  Linked list: Introduction to Singly linked lists: Representation of linked lists in memory, Traversing, Searching, Insertion into, Deletion from linked list, doubly linked list, circular linked list, generalized list. Applications of Linked List-Polynomial representation using linked list and basic operation. Stack and queue implementation using linked list.	L1, L3 and L4	7
<b>Module IV: Trees and Graphs</b>  Trees: Basic Terminology, Binary Trees and their representation, expression evaluation, Complete Binary trees, extended binary trees, Traversing binary trees, Searching, Insertion and Deletion in binary search trees, General trees, AVL trees, Threaded trees, B trees. Graphs: Terminology and Representations, Graphs & Multigraphs, Directed Graphs, Sequential representation of graphs, Adjacency matrices, Transversal Connected Component and Spanning trees.	L1, L3 and L5	7
<b>Module V: Sorting and Searching and file structures</b>  Sorting: Insertion Sort, Bubble sort, Selection sort, Quick sort, two-way Merge sort, Heap sort, Partition exchange sort, Shell sort, Sorting on different keys, External sorting. Searching: Linear search, Binary search File structures: Physical storage media, File Organization, Linked organization of file, Inverted file, Organization records into blocks, Sequential blocks, Hash function, Indexing & Hashing, Multilevel indexing, Tree Index, Random file, Primary Indices, Secondary Indices, B tree index files.	L1, L4, L5	7

### Catalog Description

This course provides the practical implementation and verification of the theoretical facts studied in theory course. It includes studying the characteristics of diodes, rectifiers, transistors and amplifiers.

### Course Objectives

The objective of this course is to

1. Provide a demonstration of various analog components like diodes, rectifiers etc.
2. Equip with understanding of different circuits like BJT, JFET, MOSFET and amplifiers.

### Course Outcomes

On completion of this course, the students will be able to

CO 1: Demonstrate the characteristics of pn junction and zener diode.

CO 2: Obtain and analyze the output of clipper-clamper circuit and rectifiers with various filters.

CO 3: Plot the characteristics of BJT, JFET and MOSFET.

CO 4: Obtain the gain and demonstrate the frequency response of single stage and double stage amplifiers.

<b>Modules/Topics Covered**</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Lab Session-I</b> 1. To study and plot the characteristics of a junction diode. 2. To study Zener diode I-V characteristics.	L3, L5	2
<b>Lab Session-II</b> 3. To study diode based clipping and clamping circuits. 4. To study half wave, full wave and bridge rectifier with filters.	L3, L5	2
<b>Lab Session-III</b> 5. To study the input and output characteristics of a transistor in its various configurations (CE and CB). 6. To study various types of Bias Stabilization for a transistor. 7. To study and plot the characteristics of a MOSFET in its various configurations. 8. To study and plot the characteristics of a JFET in its various configurations	L3, L5	6

<b>Lab Session-1V</b> . 9. To study the gain and plot the frequency response of a single stage transistor amplifier. 10. To measure gain and plot the frequency response of double stage RC coupled amplifier.	L3, L5	2

### Catalog Description

This course is intended for solving and synthesis of electrical circuits. A knowledge of grade school mathematics and physics is necessary. This course will give you a better understanding on how to solve various circuits using graph theory, nodal and mesh analysis and theorems in both time and Laplace domain.

### Course Objectives

The objective of this course is to

1. Provide the capability to analyze the circuits.
2. Synthesize the circuits with given transfer function.

### Course Outcomes

On completion of this course, the students will be able to

- CO1. Analyze the circuits by various methods like graph, theorems.  
CO2. Understand the various parameters to design electrical circuits.  
CO3. Understand the realizability of the circuits by driving point and transfer function.

### Course Content

Modules	Blooms level*	Number of hours
<b>LABORATORY SESSSION 1</b> 1. To verify Thevenin's theorem in a given network. 2. To verify reciprocity theorem in each network.	L1 L2 and L3	2
<b>LABORATORY SESSSION 2</b> 3. 2 To verify maximum power transfer theorem in a given network. 4. To verify Tellegen's theorem in a given network.	L1 and L3	2
<b>LABORATORY SESSSION 3</b> 5. To determine the Z- and Y- parameters of a resistive two-port network. 6. To determine the T- (ABCD) parameters of a resistive two-port network. 7. To determine the h- parameters of a resistive two-port network.	L1 and L3	4

<b>LABORATORY SESSSION 4</b> 8. To design series-series connection of 2 two-port networks and determine its Z- parameters.  9. To design parallel-parallel connection of 2 two-port networks and determine its Y- parameters.  10. To design a cascade connection of 2 two-port networks and determine its T- (ABCD) parameters.	L2 and L3	4
---	-----------	---

\*Bloom's Level: L1: Knowledge; L2: Comprehension; L3: Application; L4: Analysis; L5: Synthesis, L6: Evaluation

Pre-requisites/Exposure	Basic Knowledge of C Programming				
Co-requisites	Nil				

## Catalog Description

This course covers the design, analysis, and implementation of data structures and algorithms to solve engineering problems using C programming language. Topics include elementary data structures, (including arrays, stacks, queues, and lists), advanced data structures (including trees and graphs), the algorithms used to manipulate these structures, and their application to solving practical engineering problems. At the end of this course student will gain knowledge about different kinds of file structures and their related operations.

## Course Objectives

The objective of this course is to

1. Equip the students with knowledge of algorithms, different types of data structures and analysis of space and time complexity.
2. Provide an overview of various algorithms of data structures like stack and queues and related operations and implementation.
3. Provide an overview of dynamic Data Structure like linked list and its related operations, algorithms and programs. Demonstrate practical use of dynamic data structure to solve engineering problems.
4. Equip the students with knowledge of algorithms and operations related to tree and graph data structures and their practical applications.
5. Provide an overview of Sorting, Searching and file structures and its related algorithms and techniques.

## Course Outcomes

On completion of this course, the students will be able to

CO 1: Identify operations and their implementation on array and multidimensional, string and estimation space and time complexity.

CO 2: Explain various algorithm and operations of data structures like stack and queues and analyze complexity of each operation.

CO 3: Explain dynamic data structures and various algorithms and operations of data structures linked list and their applications in computer science.

CO 4: Illustrate the algorithms and operations related to tree and graph data structures, their practical applications and analyze complexity of algorithm associated with each operations.

CO5: Explain Sorting, Searching and file organization and its related techniques.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Introduction to Data structures</b> <ol style="list-style-type: none"> <li>1. Write a program to copy one string into another without using library functions.</li> <li>2. Write a program to demonstrate array and linked list implementation of sparse matrix.</li> <li>3. Write a program to multiply two 2D matrix.</li> </ol>	L3,L5	2
<b>Module II: Introduction to Stacks and queue</b> <ol style="list-style-type: none"> <li>1. Write a program to implement push and pop operations on the stack.</li> <li>2. Write a program to demonstrate conversion of infix to postfix.</li> <li>3. Write a program to implement simple queue and perform insertion and deletion operation on it.</li> <li>4. Write a program to implement circular queue and perform insertion and deletion operation on it.</li> <li>5. Write a program to implement dqueue and perform insertion and deletion operations on it.</li> <li>6. Write a program to implement priority queue and perform insertion and deletion operation on it.</li> </ol>	L3,L5	4
<b>Module III: Dynamic Data Structure</b> <ol style="list-style-type: none"> <li>1. Write a program to implement singly linked list and perform following operations on it. <ul style="list-style-type: none"> <li>• Insertion at end</li> <li>• Insertion at last</li> <li>• Insertion at desired place.</li> </ul> </li> <li>2. Write a program to implement singly linked list and perform following operations on it.</li> </ol>	L3,L5	4

<ul style="list-style-type: none"> <li>• Deletion at end</li> <li>• Deletion at last</li> <li>• Deletion at desired place.</li> </ul> <p>3. Write a program to implement doubly linked list and perform following operations on it.</p> <ul style="list-style-type: none"> <li>• Insertion at end</li> <li>• Insertion at last</li> <li>• Insertion at desired place.</li> </ul> <p>4. Write a program to implement singly linked list and perform addition of two polynomials.</p>		
<p><b>Module IV: Trees and Graphs</b></p> <p>1. Write a program to calculate in order, preorder and post order traversal on binary tree.</p> <p>2. Write a program to construct binary search tree and perform following operations on it.</p> <ul style="list-style-type: none"> <li>• Deletion of element</li> <li>• Insertion of elements.</li> </ul> <p>3. Write a program to construct binary search tree and search an element in it.</p> <p>4. Write a program to implement kruskal's algorithm to find out minimum spanning tree.</p>	L3,L5	6
<p><b>Module V: Sorting and Searching and file structures</b></p> <p>1. Write program to implement insertion sort.</p> <p>2. Write a program to search an element in array using binary search.</p> <p>3. Write a program to implement merge sort.</p> <p>4. Write a program to implement quick sort.</p> <p>5. Write a program to implement heap sort.</p>	L3,L5	8

## Engineering Mathematics III

**Subject Code: ECE2310**

**Credits: 4**

**L-T-P: 3-1-0**

### Course Objective:

The knowledge of Mathematics is necessary for a better understanding of almost all the Engineering and Science subjects. Here our intention is to make the students acquainted with the concept of basic topics from Mathematics, which they need to pursue their Engineering degree in different disciplines.

### Course Contents:

**Module I:** Types of Matrices, Inverse of a matrix by elementary transformations, Rank of a matrix (Echelon & Normal form), Linear dependence, Consistency of linear system of equations and their solution, Characteristic equation, Eigenvalues and Eigenvectors, Cayley-Hamilton Theorem, Diagonalization, Complex and Unitary Matrices and its properties, Vector space, Linear independence and dependence of vectors, Linear Transformations.

**Module II:** Analytic functions, C-R equations and harmonic functions, Line integral in the complex plane, Cauchy's integral theorem, Cauchy's integral formula for derivatives of analytic functions, Liouville's theorem, Fundamental theorem of algebra. Representation of a function by power series, Taylor's and Laurent's series, R Singularities, zeroes and poles, Residue theorem, evaluation of real integrals of type  $\int_0^{2\pi} f(\cos\theta, \sin\theta) d\theta$  and  $\int_{-\infty}^{\infty} f(x) dx$ , Conformal mapping and bilinear transformations.

**Module III:** Probability space, conditional probability, Bayes theorem, Moments, Moment generating functions, Skewness, Kurtosis, Correlation and Regression, Binomial distribution, Poisson distribution, Normal distribution. Method of least squares and curve fitting of straight line and parabola, Solution of cubic and biquadratic equations.

**Module IV:** Numerical solution of algebraic and transcendental equations: bisection, secant method, Newton-Raphson method, fixed point iteration; interpolation: error of polynomial interpolation, Lagrange, Newton interpolations; numerical integration: Trapezoidal and Simpson rules; numerical solution of systems of linear equations: direct methods (Gauss elimination, LU decomposition); iterative methods (Jacobi and Gauss-Seidel).

### **Catalog Description**

This course provides a brief knowledge of measurements and measuring instruments related to engineering. It introduces measuring elements of instruments, characteristics of measuring instruments, error analysis, transducers and its classification, measurement of resistance, capacitance and inductance, principles of analog and digital meters and different display techniques.

### **Course Objectives**

The objective of this course is to

1. Equip the students with concepts of measurement, measuring elements and challenges in measurement.
2. Provide in depth knowledge of each element of measurement system.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1. Explain measuring elements and characteristics of measurement system and solve problems related with measurement errors.

CO2. Classify different types of transducers and solve problems related with transducers.

CO3. Solve problems of resistance, capacitance and inductance measurement.

CO4: Explain and solve problems on different types of analog and digital meters suitable for voltage and current measurement.

CO5: Explain display devices used in measurement system and analyze the signals on CRO.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1:</b> <b>Basics of Measurement Systems</b>  Elements of Generalized Measurement System; Static & Dynamic Characteristics of Instruments; Errors in Measurements – Sources and Types of Errors; Statistical Treatment of Data – Mean, Measures of Dispersion, Rejection of data based on confidence interval	L1, L2 and L3	5
<b>Module 2:</b> <b>Transducers</b>  Classification; Selection of Transducers; Resistive Transducers – Potentiometer, Strain gauge, Rosettes, Thermistors and RTD; Capacitive Transducers – Measurement of Liquid level by change in variation of dielectric constant; Variable Inductance Transducers – self-generating type and passive type; Piezoelectric Transducers; Photoelectric Transducers; Digital Transducer	L1, L2, L3 and L4	9
<b>Module 3:</b> <b>Measurement of Resistance, Inductance and Capacitance</b>  D.C. Bridges: Wheatstone's bridge, Sensitivity & Limitations; Carey Foster Bridge; Kelvin double bridge; Megaohm bridge. A.C. Bridges: Maxwell's Inductance Capacitance Bridge; Andersons Bridge; De Sauty's Bridge; Schering Bridge.	L1, L2, and L3	8
<b>Module 4:</b> <b>Analog and Digital Meters</b>  Analog meters : PMMC meters- construction, torque equation, ammeter shunts, multirange ammeter, voltmeter multiplier, sensitivity, ohmmeters, multimeters; Construction & general equation of moving iron, electrodynamic, hot wire instruments. Digital meters: Digital voltmeter – ramp type, integrating type, potentiometer type, Applications	L1, L2, and L3	8
<b>Module 5:</b> <b>Display Devices and Recorders</b>  LED, LCD, Cold Cathode displays, Incandescent Displays, Fluorescent Displays, LVD, VDU Cathode Ray Oscilloscope : Basic functioning, Measurement of Voltage, Current, Phase and Frequency.	L1, L2, L3	6

## Catalog Description

Measurement System has become an important field for research and development in science and engineering. This course provides the students the core knowledge of measurement systems. This course introduces the experiments of measurement of various non electrical parameters.

### Course Objectives

The objective of this course is to

1. Perform experiments of measurement system.
2. Analyze characteristics of measurement system.

### Course Outcomes

On completion of this course, the students will be able to

CO1. To study working principles of various transducers utilized in measurement system.

CO2. Perform and analyze experiments on measurement system.

CO3. Draw and analyze characteristics system.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Lab Session 1</b>  1. 1 To Study various Temperature Measuring Instruments and to Estimate their Response times. 2. To study the working of Bourdon Pressure Gauge and to check the calibration of the gauge in a dead-weight pressure gauge calibration set up	L2, L3,L4 and L5	3
<b>Lab Session 2</b>  1. To study a Linear Variable Differential Transformer (LVDT) and use it in a simple Experimental set up to measure a small displacement.	L2, L3,L4 and L5	3

2. To measure load (tensile/compressive) using load cell on a tutor.		
<b>Lab Session 3</b>  1. To measure torque of a rotating shaft using torsion meter/strain gauge torque transducer. 2. To measure the speed of a motor shaft with the help of non-contact type pickups (magnetic or photoelectric).	L2, L3,L4 and L5	3
<b>Lab Session 4</b> 1. Measurement of distance using capacitive pick up 2. Measurement of temperature using RTD. 3. Measurement of pressure using piezoelectric pick up	L2, L3,L4 and L5	3

### **Catalog Description**

This Course introduces virtual instrumentation and its comparison over conventional instrumentation. In this course, LabVIEW has been adopted as the platform of virtual instrumentation programming. System hardware and its interfacing techniques are introduced. Applications of virtual instrumentation are explained in various field e.g. Aviation, Automotive Defence, Medical etc.

### **Course Objectives**

The objective of this course is to

1. To provide the core knowledge of Virtual Instruments used in research and industry.
2. To provide a LabVIEW platform on which low cost virtual instruments can be designed in very short time.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1. Explain virtual instrumentation and compare it with tradition instruments.

CO2. Explain components of LabVIEW, apply programming concept and design basic virtualinstruments using LabVIEW software.

CO3. Explain the concepts of LabVIEW system hardware including input, output and interfacing devices.

CO4: Explain applications of virtual instrumentation in industries.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1:</b> <b>Introduction to Virtual Instrumentation</b> Introduction, Historical perspective, advantages, block diagram and architecture of a virtual instrument, conventional vs. virtual instrumentation.	L1, L2 and L4	4
<b>Module 2:</b> <b>Introduction to Software</b> Introduction to Lab VIEW, Front panel, back panel representations, Block diagram, Menus, Palettes, VI and Sub VI, Editing and Debugging VI, Structures, Arrays, Clusters, Charts and Graphs, Data acquisition, Instrument Control, Signal Generation and Signal Processing Examples	L1, L2, L3, L4 and L5	9
<b>Module 3:</b> <b>Introduction to systems hardware</b> ADC, DAC, D/O, counters and timer, PC hardware structure, timing, interrupts, DMA, software and hardware installation, Configuring data acquisition hardware using the drives in application software, use of DAQ library functions for different analog and digital input/output operations. Input/output devices & functions like data gloves, joysticks, CRT etc.	L1 and L2	6
<b>Module 4:</b> <b>Application of Virtual Instrumentation in various fields</b> Aviation, Automotive, High Voltage, Defense, Chemical, Industrial, Marine, Medical, Mining, Nuclear Energy, Virtual landscapes.	L1 and L2	5

## Catalog Description

This Course introduces virtual instrumentation. In this course, LabVIEW has been adopted as the platform of virtual instrumentation programming. Experiments are introduced to create virtual instrument based on various logics. Experiments are based on graphical programming.

## Course Objectives

The objective of this course is to

Introduce LabVIEW software to design virtual instrument.

Design various logic in form virtual instrument using graphical programming.

## Course Outcomes

On completion of this course, the students will be able to

CO1. Explain and use various functions available in LabVIEW.

CO2. Explain and create sub VIs which can be used as functions in complex VIs.

CO3. Analyse and create virtual instrument using graphical programming of various logics.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Lab Session 1</b>  1. To open, and explore the components of LabView. 2. To build a simple VI that converts a Celsius temperature reading to Fahrenheit.	L2, L3, L4 and L5	3
<b>Lab Session 2</b>  1. (a) To create an icon and a connector pane so you can use a VI as a subVI. (b) To build a VI and create its icon and connector pane so you can use it as a subVI. 2. To build a VI to generate 4*5 two dimensional array of random numbers (between 1 to 2).	L2, L3, L4 and L5	3
<b>Lab Session 3</b>	L2, L3, L4 and	3

1. To Build a VI that generate Fibonacci series starting from '0'. 2. To build a VI which finds roots of quadratic equation using formula node. 3. To build a VI that reverses the contents of an array.	L5	
<b>Lab Session 4</b> 1. To build a VI that can be used for sorting of numeric array i.e. in ascending or descending order. 2. To build a VI for 4*1 multiplexer operation. 3. To build a VI for 3*8 Decoder operation.	L2, L3, L4 and L5	3

*\*Bloom's Level:*

Pre-requisites/Exposure	Basic Mathematics				
Co-requisites	Nil				

## Catalog Description

In this course the concepts of statistics, the science of collecting, organizing, and interpreting numerical data are discussed. Emphasis will be placed on statistical reasoning and data analysis. The main topics are study design, descriptive statistics, probability theory, and statistical inference. As a precursor to the study of cryptography studies will be made on impact of various techniques for finding independence or dependence between data variables. The concepts learnt in the studies of statistics will be applied practically to solve number of real life problems using the statistical package like R and SPSS.

## Course Objectives

The objective of this course is to

1. Equip the students with concepts of statistics through problem solving and analytical approach.
2. Provide an overview of various statistical techniques: descriptive and inferential, parametric and non-parametric and practical statistics using R and SPSS.

## Course Outcomes

On completion of this course, the students will be able to

- CO 1: Explain, describe and distinguish various population, sample, type of variables, measurement scales, central tendency, percentile and solve problems related to them.
- CO 2: Explain the concept of descriptive and inferential statistics; probability theory; Solve problems based on probability; Explain binomial, poisson distribution and solve real life problems related to discrete and continuous random variable.
- CO 3: Describe the concept of sampling distribution for large and small samples; Explain the concept of hypothesis testing and solve problems related using t-distribution and standard normal distribution.
- CO 4: Explain concept of covariance and correlation and its applications in real life; Explain Anova and its use in real life problem solving; Explain and compare various regression analysis methods statistics for prediction
- CO 5: Explain various parametric and nonparametric test and apply them to solve real life statistical problems

Modules	Blooms level*	Number of hours
<b>Module 1: Introduction to Statistics and Data Analysis</b> Statistical Inference, Samples, Populations and Experimental Design , The Hole of Probability Sampling Procedures; Collection of Data ,Measures of Location:, Measures of Variability ,Discrete and Continuous Data , Statistical Modeling, Scientific Inspection, and Graphical Diagnostics, Graphical Methods and Data Description ,General Types of Statistical Studies	L1, L2 and L3	7
<b>Module 2: Probability &amp; Probability Distribution</b> Sample Space, Events Probability of an Event, Additive Rules, Conditional Probability ,Multiplicative Rules ,Bayes' Rule, Concept of a Random Variable, Discrete Probability Distributions, Continuous Probability Distributions , Joint	L1,L2, L3	6

Probability Distributions ,Mean of a Random Variable, Variance and Covariance of Random Variables, Means and Variances of Linear Combinations of Random Variables, Chebyshev's Theorem, , Discrete Uniform Distribution, Binomial and Multinomial Distributions, Poisson Distribution and the Poisson Process. Continuous Uniform Distribution, Normal Distribution ,Areas under the Normal Curve ,Applications of the Normal Distribution , Gamma and Exponential Distributions, ,Chi-Squared Distribution.		
<b>Module 3: Sampling Distributions and Estimation</b> Random Sampling, Some Important Statistics, ,Data Displays and Graphical Methods, Sampling Distributions Introduction to Estimation, Statistical Inference ,Classical Methods of Estimation, Single Sample: Estimating the Mean ,Standard Error of a Point Estimate, Prediction Intervals, Tolerance Limits Two Samples: Estimating the Difference between Two Means ,Paired Observations , , Single Sample: Estimating a Proportion, Two Samples: Estimating the Difference between Two Proportion.	L1,L2, L3	6
<b>Module 4: Hypotheses Testing</b> Statistical Hypotheses: General Concepts ,Testing a Statistical Hypothesis, One- and Two-Tailed Tests, The Use of <i>P</i> -Values for Decision Making in Testing Hypotheses, One Sample: Test on a Single Proportion ,Two Samples: Tests on Two Proportions, Exercises ,One- and Two-Sample Tests Concerning Variances, Goodness-of-Fit Test, Test for Independence (Categorical Data),Test for Homogeneity, Testing for Several Proportions	L1, L2 L3	7
<b>Module 5: Simple Linear Regression and Correlation</b> Introduction to Linear Regression, The Simple Linear Regression Model, Least Squares and the Fitted .Model Analysis-of-Variance, Approach, Test for Linearity of Regression: Data with Repeated Observations, Data Plots and Transformations, Simple Linear Regression Case Study, Correlation, Classification	L1, L2	9

# EFFECTIVE LISTENING

**Course Code:** CSS2151

**L-T-P : 1-0-0**

**Credit Units: 01**

## **Course Objective:**

To form written communication strategies necessary in the workplace

## **Course Contents:**

### **Module I: Introduction to Writing Skills**

Effective Writing Skills  
Avoiding Common Errors  
Paragraph Writing  
Note Taking  
Writing Assignments

### **Module II: Letter Writing**

Types  
Formats

### **Module III**

Memo  
Agenda and Minutes  
Notice and Circulars

### **Module IV: Report Writing**

Purpose and Scope of a Report  
Fundamental Principles of Report Writing  
Project Report Writing  
Summer Internship Reports

## **Examination Scheme:**

<b>Components</b>	<b>CT1</b>	<b>CT2</b>	<b>CAF</b>	<b>V</b>	<b>GD</b>	<b>GP</b>	<b>A</b>
<b>Weightage (%)</b>	20	20	25	10	10	10	5

CAF – Communication Assessment File

GD – Group Discussion

GP – Group Presentation

# **GROUP DYNAMICS AND TEAM BUILDING**

**Course Code: BHE2351**

**L-T-P : 1-0-0**

**Credit Units: 01**

## **Course Objective:**

**To inculcate in the students an elementary level of understanding of group/team functions**

**To develop team spirit and to know the importance of working in teams**

## **Course Contents:**

### **Module I: Group formation**

Definition and Characteristics

Importance of groups

Classification of groups

Stages of group formation

Benefits of group formation

### **Module II: Group Functions**

External Conditions affecting group functioning: Authority, Structure, Org. Resources, Organizational policies etc.

Internal conditions affecting group functioning: Roles, Norms, Conformity, Status, Cohesiveness, Size, Inter group conflict.

Group Cohesiveness and Group Conflict

Adjustment in Groups

### **Module III: Teams**

Meaning and nature of teams

External and internal factors effecting team

Building Effective Teams

Consensus Building

Collaboration

### **Module IV: Leadership**

Meaning, Nature and Functions

Self leadership

Leadership styles in organization

Leadership in Teams

### **Module V: Power to empower: Individual and Teams**

Meaning and Nature

Types of power

Relevance in organization and Society

### **Module VI: End-of-Semester Appraisal**

**Viva based on personal journal**

**Assessment of Behavioural change as a result of training**

Exit Level Rating by Self and Observer

## **Examination Scheme:**

Components	SAP	A	Mid Term Test (CT)	VIVA	Journal for Success (JOS)
Weightage (%)	20	05	20	30	25

# FRENCH - III

Course Code: LAN2351

L-T-P : 2-0-0

Credit Units: 02

## Course Objective:

To provide the students with the know-how

- To master the current social communication skills in oral and in written.
- To enrich the formulations, the linguistic tools and vary the sentence construction without repetition.

## Course Contents:

Module B: pp. 76 – 88 Unité 6

Module C: pp. 89 to 103 Unité 7

### Contenu lexical: Unité 6: se faire plaisir

1. acheter : exprimer ses choix, décrire un objet (forme, dimension, poids et matières) payer
2. parler de la nourriture, deux façons d'exprimer la quantité, commander un repas au restaurant
3. parler des différentes occasions de faire la fête

### Unité 7: Cultiver ses relations

1. maîtriser les actes de la communication sociale courante (Salutations, présentations, invitations, remerciements)
2. annoncer un événement, exprimer un souhait, remercier, s'excuser par écrit.
3. caractériser une personne (aspect physique et caractère)

### Contenu grammatical:

1. accord des adjectifs qualificatifs
2. articles partitifs
3. Négations avec de, ne...rien/personne/plus
4. Questions avec combien, quel...
5. expressions de la quantité
6. ne...plus/toujours - encore
7. pronoms compléments directs et indirects
8. accord du participe passé (auxiliaire « avoir ») avec l'objet direct
9. Impératif avec un pronom complément direct ou indirect
10. construction avec « que » - Je crois que/ Je pense que/ Je sais que

## Examination Scheme:

# GERMAN - III

Course Code: LAN2352

L-T-P : 2-0-0

Credit Units: 02

## Course Objective:

To enable the students to converse, read and write in the language with the help of the basic rules of grammar, which will later help them to strengthen their language.

To give the students an insight into the culture, geography, political situation and economic opportunities available in Germany

### Course Contents:

#### Module I: Modal verbs

Modal verbs with conjugations and usage  
Imparting the finer nuances of the language

#### Module II: Information about Germany (ongoing)

Information about Germany in the form of presentations or “Referat” – neighbors, states and capitals, important cities and towns and characteristic features of the same, and also a few other topics related to Germany.

#### Module III: Dative case

Dative case, comparison with accusative case  
Dative case with the relevant articles  
Introduction to 3 different kinds of sentences – nominative, accusative and dative

#### Module IV: Dative personal pronouns

Nominative, accusative and dative pronouns in comparison

#### Module V: Dative prepositions

Dative preposition with their usage both theoretical and figurative use

#### Module VI: Dialogues

In the Restaurant,

At the Tourist Information Office,

A telephone conversation

#### Module VII: Directions

Names of the directions  
Asking and telling the directions with the help of a roadmap

#### Module VIII: Conjunctions

To assimilate the knowledge of the conjunctions learnt indirectly so far

### Examination Scheme:

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	20	20	20	15	5

C – Project + Presentation  
I – Interaction/Conversation Practice

# SPANISH – III

Course Code: LAN2353

L-T-P : 2-0-0

Credit Units: 02

## Course Objective:

To enable students acquire knowledge of the Set/definite expressions (idiomatic expressions) in Spanish language and to handle some Spanish situations with ease.

## Course Contents:

### Module I

Revision of earlier semester modules

Set expressions (idiomatic expressions) with the verb *Tener, Poner, Ir....*

Weather

### Module II

Introduction to *Gustar...* and all its forms. Revision of *Gustar* and usage of it

### Module III

Translation of Spanish-English; English-Spanish. Practice sentences.

How to ask for directions (using *estar*)

Introduction to IR + A + INFINITIVE FORM OF A VERB

### Module IV

Simple conversation with help of texts and vocabulary

En el restaurante

En el instituto

En el aeropuerto

### Module V

Reflexives

## Examination Scheme:

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	20	20	20	15	5

C – Project + Presentation

I – Interaction/Conversation Practice

## **RUSSIAN - III**

**Course Code: LAN2354**

**L-T-P : 2-0-0**

**Credit Units: 02**

# CHINESE – III

Course Code: LAN2355

L-T-P : 2-0-0

Credit Units: 02

## Course Objective:

Foreign words are usually imported by translating the concept into Chinese, the emphasis is on the meaning rather than the sound. But the system runs into a problem because the underlying name of personal name is often obscure so they are almost always transcribed according to their pronunciation alone. The course aims at familiarizing the student with the basic aspects of speaking ability of Mandarin, the language of Mainland China. The course aims at training students in practical skills and nurturing them to interact with a Chinese person.

## Course Contents:

### Module I

Drills

Dialogue practice

Observe picture and answer the question.

Introduction of written characters.

Practice reading aloud

Practice using the language both by speaking and by taking notes.

Character writing and stroke order

### Module II

Measure words

Position words e.g. inside, outside, middle, in front, behind, top, bottom, side, left, right, straight.

Directional words – beibian, xibian, nanbian, dongbian, zhongjian.

Our school and its different building locations.

What game do you like?

Difference between “hii” and “neng”, “keyi”.

### Module III

Changing affirmative sentences to negative ones and vice versa

Human body parts.

Not feeling well words e.g.; fever, cold, stomach ache, head ache.

Use of the modal particle “le”

Making a telephone call

Use of “jiu” and “cai” (Grammar portion)

Automobiles e.g. Bus, train, boat, car, bike etc.

Traveling, by train, by airplane, by bus, on the bike, by boat.. etc.

### Module IV

The ordinal number “di”

“Mei” the demonstrative pronoun e.g. mei tian, mei nian etc.

use of to enter to exit

Structural particle “de” (Compliment of degree).

Going to the Park.

Description about class schedule during a week in school.

Grammar use of “li” and “cong”.

Comprehension reading followed by questions.

### Module V

Persuasion-Please don't smoke.

Please speak slowly

Praise – This pictorial is very beautiful

Opposites e.g. Clean-Dirty, Little-More, Old-New, Young-Old, Easy-Difficult, Boy-Girl, Black-White, Big-Small, Slow-Fast ... etc.

Talking about studies and classmates

Use of “it doesn't matter”

Enquiring about a student, description about study method.

Grammar: Negation of a sentence with a verbal predicate.

### Catalog Description

The purpose of this course is to introduce students to the basic principles of the design and analysis of modern communication systems. It will provide a thorough study of both analog and digital modulation and demodulation schemes. The performance analysis of various techniques based on requirements of noise and bandwidth will also be explained. It also introduces the students to the information theory and coding for basic understanding of mobile communication system.

### Course Objectives

The objective of this course is to

1. Provide a thorough introduction to analog and digital communications
2. Provide in depth study of various modulation and demodulation techniques.
3. Introduce students to basics of information theory and coding for applications in mobile communication.

### Course Outcomes

On completion of this course, the students will be able to

CO1. Define and distinguish analog and digital communication systems.

CO2. Differentiate modulation and demodulation techniques of AM and FM systems and compare them in terms of Bandwidth and noise.

CO3. Distinguish and categorize various digital modulation techniques.

CO4. Describe Information theory and coding for applications in mobile communication system by solving different encoding problems.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>MODULE I:</b>  <b>INTRODUCTION</b>  Communication Process, Source of Information, base-band and pass-band signals, Review of Fourier transforms, Random variables, different types of PDF, need of modulation process, analog versus digital communications	L1 and L2	4
<b>MODULE II:</b>  <b>AMPLITUDE MODULATION</b>  Amplitude modulation with full carrier, suppressed carrier systems, single side band transmission, switching modulators, synchronous detection, envelope detection, effect of frequency and phase errors in synchronous detection, comparison of various AM systems, vestigial side band transmission.	L1, L2, L3 and L4	8
<b>MODULE III:</b>  <b>ANGLE MODULATION</b>  Narrow and wide band FM, BW calculations using Carson rule, Direct & Indirect FM generations, phase modulation, Demodulation of FM signals, noise reduction using pre & de-emphasis.	L1, L2, L3 and L4	9
<b>MODULE IV:</b>  <b>PULSE MODULATION</b>  Pulse amplitude, width & position modulation, generation & detection of PAM, PWM & PPM, Comparison of frequency division and time division multiplexed systems. Basics of Digital Communications: ASK, PSK, FSK, QPSK basics & waveform with brief mathematical introduction	L1, L2, L3 and L4	6
<b>MODULE V:</b>  <b>NOISE</b>  Different types of noise, noise calculations, equivalent noise band width, noise figures, effective noise temperature, noise figure.	L1 and L2	4
<b>MODULE VI:</b>  <b>INTRODUCTION TO INFORMATION THEORY</b>	L1, L2 and L3	5

Measurement of Information, mutual, Shannon's theorem, Source coding, channel coding and channel capacity theorem, Huffman code

Pre-requisites/Exposure	Basic Electronics and Circuitual Analysis				
Co-requisites	Nil				

## Catalog Description

This course introduces the application of semiconductor devices in linear analog circuits. The course stresses on circuit designs using the operational amplifier, active filters and oscillators. The course also provides the overview on the applications of IC Analog Multiplier & Timer.

## Course Objectives

The objective of this course is to

1. Provide the fundamental knowledge of linear analog circuits.
2. Provide the knowledge about practical circuit designs using OP Amp.

## Course Outcomes

On completion of this course, the students will be able to

CO1. Describe the circuits having BJT and Operational Amplifiers.

CO2. Solve the Linear and Non-linear circuits and analyze them in terms of their parameters and applications.

CO3. Categorize the waveform generation circuits and apply them in laboratory projects.

CO4. Analyze the circuitual knowledge to Linear ICs and filters and apply them for industry problem.

## Course Content

Modules	Blooms level*	Number of hours
<b>MODULE I: Building Blocks of Analog ICs 6 lecture hours</b>  Differential amplifier, Op-amp Model, op-amp DC & AC parameters, virtual ground, Current mirrors, Active loads, Level shifters and output stages.	L1 and L2	6
<b>MODULE II: Operational amplifiers</b>  Introduction, open loop and closed loop configuration, op-amp parameters (input offset current, output offset current, i/p bias current, CMRR, PSRR, null adjustment range, etc.)	L1 and L2	5

Inverting and non-inverting configuration, voltage gain of inverting and non inverting configurations.		
<b>MODULE III: Linear &amp; Non Linear Wave shaping</b>  Adders, Voltage to current, current to voltage Converter, Integrators, Differentiators, Voltage follower (voltage buffer), summer, subtractor, Comparators, log/antilog circuits using Op-amps, precision rectifiers.	L2, L3 and L4	6
<b>MODULE IV: Waveform Generations</b>  Damped and undamped oscillations, Barkhausen criterion for sustained oscillation. Tank circuit generator Astable multi Vibrators, OTA-C Oscillators, Crystal oscillator. Types of oscillators: LC-Hartley and Colpitts, RC-RC phase shift and Wien bridge oscillator, Basics of tuned Amplifiers, Voltage Controlled Oscillator.	L2 L3 and L4	7
<b>MODULE V: Active RC Filters &amp; Applications of Linear Circuits</b>  Idealistic & Realistic response of filters (LP, BP, and HP), Butter worth & Chebyshev approximation filter functions, LP,BP,HP and All pass, Notch Filter, Operational transconductance amplifier (OTA)-C filters.	L2, L3 and L4	6
<b>MODULE VI: Applications of IC Analog Multiplier &amp; Timer</b>  IC phase locked loops, 555 Timer, IC voltage regulators-(fixed, variable) 78xx, 79xx series and adjustable.	L3 and L4	6

Version 2019.1	Date of Approval: May 21, 2019	3	0	0	0
Pre-requisites/Exposure	Mathematical Basics				
Co-requisites	Wave phenomena				

### Catalog Description

Electromagnetic field theory is the most fundamental subject in the curriculum of electronics and electrical engineering education. Electromagnetics explains universal concepts in three-dimension real world, i.e., electro-magnetic wave propagation in free-space. This course provides a general introduction to the important physical concepts and mathematical methods used in treating all types of wave phenomena and electromagnetic signal propagation. This course provides essential background and basic preparation for more advanced work in device physics, microwave and ultra-fast circuitry, transmission lines, electro dynamic wave propagation. Antenna design, and optoelectronics.

### Course Objectives

The objective of this course is to

1. Equip the students with the fundamental understanding of electro-magnetic wave system.
2. To lay the foundations of mathematical Maxwell equations, electrodynamic wave propagation and transmission lines.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Explain and apply vector calculus to static and time varying electric-magnetic fields in different engineering situations.

CO2: Explain and able to solve Electromagnetic Relation using Maxwell Formulae

CO3: Examine the phenomena of electrodynamic wave propagation in unbounded media and its interfaces.

CO4: Analyze and generalized the concepts of guided structures like transmission lines and their characteristics.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>MODULE 1: Mathematical Basics and Electrostatics</b>  Coordinate Systems: Spherical and Cylindrical coordinates, Dirac delta function, Coulomb's law, Gauss's law, Poisson's Equation, Laplace's Equation, Electrostatic Boundary conditions, Work and Energy in Electro-	L1, L2 and L3	8

statics, Conductors, Surface charge and force on conductors. .		
<b>MODULE 2: Magnetostatics and Magnetic Fields in matter</b>  Magnetic induction and Faraday's law, Magnetic Flux density, Magnetic Field Intensity, Biot Savart Law, steady currents, Ampere's law, Magneto-static Boundary conditions, magnetic field inside matter, magnetic susceptibility and permeability, ferromagnetism, energy stored in a Magnetic field, Magnetic Vector Potential	L2, L3 and L4	8
<b>MODULE 3: Electrodynamics</b> Faraday's laws, Maxwell's equations, Maxwell's modification of Ampere's law, continuity equation and Poynting theorem	L2, L3 and L4	6
<b>MODULE 4: Electrodynamics Waves</b> Wave propagation in unbounded media, Boundary conditions, reflection and transmission, polarization, E.M. waves in vacuum, E. M. waves in matter: reflection and transmission of plane waves.	L1, L2 and L3	8
<b>MODULE 4: Introduction to Transmission Lines</b> Transmission Line, Line Parameters, Characteristic Impedance, Image Impedance, HVDC and HVAC Common faults in transmission lines. Skin Effect, Ferranti Effect and Corona.	L1, L2 and L3	6

### **Catalog Description**

This course explores the theory and operation of the basic building blocks of digital electronics which includes combinational and sequential circuits. This course also explains the logic families and data convertors. The concepts learnt in the studies of sequential circuits will be applied in the design and analysis of Melay and Moore machines.

### **Course Objectives**

The objective of this course is to

1. Provide the basic knowledge of digital logic levels and application of combinational and sequential circuits.
2. Equip with the understanding of logic family and data convertors.

### **Course Outcomes**

On completion of this course, the students will be able to

- CO1: Explain the various logic gates, Boolean algebra and solve the k-map & tabulation method to simplify the logical function.
- CO2: Explain the adder & subtractor; Apply and analyze multiplexer, decoder & encoder to design Boolean function.
- CO3: Describe flip flops, shift registers & Design counters and synchronous sequential circuits.
- CO4: Explain & compare different logic families and explain data convertors.

Modules	Blooms level*	Number of hours
<p>MODULE 1:</p> <p><b>BOOLEAN FUNCTIONS</b>            Analog &amp; digital signals, AND, OR, NOT, NAND, NOR , XOR &amp; XNOR gates, Boolean algebra, DeMorgan's theorems, Implementation of logical function using only NAND/NOR gates, 1's complement and 2's complement, BCD to Gray and Gray to BCD code conversion, Standard representation of logical functions ( SOP and POS forms), K-map representation and simplification of logical function up to five variables, don't care conditions, XOR &amp; XNOR simplifications of K-maps, Tabulation method</p>	L1,L2 and L3	6
<p>MODULE 2:</p> <p><b>COMBINATIONAL CIRCUITS</b>            Adders, Subtractors, Implementation of full adder using half adder, full subtractor using half subtractor, Multiplexer, de-multiplexer, decoder &amp; encoder, code converters, 1 &amp; 2 bit comparators, BCD to seven segment decoder/encoder, Implementation of logic functions using multiplexer/de-multiplexer and decoder, Implementation of 16×1 MUX using 4×1 MUX, 4×16 decoder using 3×8 decoder etc., logic implementations using PROM, PLA &amp; PAL.</p>	L1, L2,L3 and L4	6
<p>MODULE 3:</p> <p><b>SEQUENTIAL CIRCUITS</b>            Difference between combinational and sequential circuits, Latch, Flip-flops: SR, JK, D &amp; T flip flops – Truth table, Excitation table, Conversion of flip-flops, set up and hold time, race around condition, Master Slave flip flop, Shift registers: SIPO, PISO, PIPO, SIPO, Bi-directional, 4-bit universal shift register; Counters: Asynchronous/ripple &amp; synchronous counters – up/down, Ring counter, sequence detector.</p>	L2,L3, L4 and L5	7
<p>MODULE 4:</p> <p><b>LOGIC FAMILIES &amp; DATA CONVERTERS</b>            Logic families: Special characteristics (Fan out, Power dissipation, propagation delay, noise margin), working of RTL, DTL, TTL, ECL and CMOS families; Data converters: Special characteristics, ADC – successive approximation, linear ramp, dual slope; DAC – Binary Weighted, R-2R ladder type.</p>	L1, L2,L3 and L4	5

### **Catalog Description**

This course deals in Digital signal processing with significant skills in advance methods for modification, analysis, classification & sampling of signals. It provides the broad knowledge of design, and realization of digital signal processing systems. The problems based on transformation of domains and filter design will be focused on.

### **Course Objectives**

The objective of this course is to

1. Equip the students with concepts of signals and systems.
2. Provide in-depth knowledge of representation of signals in frequency & z-domain.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: Represent, analyze & categorize discrete-time signals and systems in time domain with an emphasis on linear time invariant systems.

CO2: Apply the fourier series expansion to signals and obtain its constituent frequencies.

CO3: Convert the signals from time domain to frequency domain using fourier transform.

CO4: Apply the z- transform on discrete signals to solve the problems related to computational complexity.

Modules	Blooms level*	Number of hours
<b>Module 1:</b>  <b>Signals And Systems</b> Introduction of signals and systems; classification of signal, continuous time and discrete time signals, operations performed on them, even and odd signals, periodic and non periodic signals, deterministic and random signals, energy signals, power signals, elementary signals: impulse, step, ramp and exponentials, classification of systems.	L1,L2 and L4	8
<b>Module 2:</b>  <b>LTI System</b> Response of LTI system for continuous and discrete time systems, Impulse response, Step response, properties of continuous LTI and discrete LTI systems, LTI systems described by differential and difference equation, analysis of LTI Systems, interconnection of systems.	L1,L2 and L4	6
<b>Module 3:</b>  <b>Fourier Series</b> Representation of continuous time periodic signal, properties of continuous time Fourier series, representation of discrete time periodic signals, convergence of the Fourier series, properties of discrete time Fourier series, Fourier series and LTI systems.	L2,L3	7
<b>Module 4:</b>  <b>Fourier Transform</b> Continuous time Fourier transform, properties of continuous time Fourier transform, discrete time Fourier transform, properties of discrete time Fourier transform; applications; Bandwidth determination of signals and systems.	L2,L3	7
<b>Module 4:</b>  <b>z-Transform</b>  Definition of z-transform, region of convergence, properties of z-transform, first order system, second order system, inverse z-transform, analysis of LTI system using z-transform.	L2,L3	8

Version 2019.1	Date of Approval: May 21, 2019	0	0	2	1
Pre-requisites/Exposure	Signal and System				
Co-requisites	Nil				

### Catalog Description

To impart knowledge on Amplitude Modulation and Angle modulation principles, generation, and its types. Also, to understand the basic concepts of pulse modulation techniques like PCM and PSK.

### Course Objectives

The objective of this course is to

1. To provide the basic skills required to understand, develop, and design of various engineering applications involving analog communication theory. To provide basic laboratory exposures for communication principles and applications.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Study the carrier modulation techniques like AM and FM modulation.

CO2: Study digital carrier modulation techniques using amplitude shift keying and Frequency shift keying.

CO3: Demonstrate various pulse modulation techniques (PCM), DM, ASK, DPSK and QPSK.

### List of Experiments:

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
1. To study the sampling and reconstruction of a given signal. 2. To study amplitude modulation and demodulation. 3. To study frequency modulation and demodulation. 4. To study time division multiplexing.	L1, L2	8

5. To study pulse amplitude modulation. 6. To study delta and adaptive delta modulation and demodulation. 7. To study carrier modulation techniques using amplitude shift keying and Frequency shift keying.	L3 and L4	10
8. To study carrier modulation techniques using binary phase shift keying and differential shift keying. 9. To study pulse code modulation & differential pulse code modulation as well as relevant demodulations. 10. To study quadrature phase shift keying & quadrature amplitude modulation.	L2, L4	10

Pre-requisites/Exposure	Circuit Theory				
Co-requisites	Nil				

### Catalog Description

In this course the concepts of Analog Electronics are discussed. Design and analysis of efficient circuits using op-amp like adder, subtractor, filters and oscillators.

### Course Objectives

The objective of this course is to

1. To provide the basic skills required to understand, develop, and design of various engineering applications involving Analog Electronic & Circuits.
2. To provide basic laboratory exposures for Analog Circuits and applications.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Construct adder, subtractor, an inverting and non-inverting amplifier.

CO2: Design transistor-based RC oscillator (Wien bridge and RC phase shift oscillator) circuit.

CO3: Construct astable and mono-stable mode timer circuit using IC 555.

CO4: Design of Integrator, differentiator and low pass & high pass active filter circuit using Op-Amp (I.C-741)

List of Experiments:

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
1. To study the op amp as an inverting and non inverting amplifier. 2. To use the op amp as an adder, subtractor, integrator and differentiator.	L1, L2	8

3. To design a ramp and a square wave generator.		
4. To study the IC-555 timer as stable and bistable multivibrator.		
5. To design low pass, high pass and band pass filters using op- amp. and plot their frequency response.	L3 and L4	10
6. To design and study class A power amplifier.		
7. To design and study a class B push pull amplifier.		
8. To study various feedbacks such as voltage series feedback.	L2, L4	10
9. To design RC phase shift and Wein bridge oscillators using op amplifier.		
10. To design and study Colpitt and Hartley oscillators.

### Catalog Description

In this Lab course the combination and sequential circuits are designed and their functionality is verified using truth table. Concepts covered would enable them to create complex circuits related to digital design. The objective of this course is to explore and implement the various features of digital logic using basic logic gates.

### Course Objectives

The objective of this course is to

1. Provide a basic knowledge of digital logic levels and application of knowledge to understand digital electronics circuits.
2. Equip with understanding of different combinational and sequential circuits.

### Course Outcomes

On completion of this course, the students will be able to

CO 1: Demonstrate the basic concept of logic gates;

CO 2: Illustrate the adder and subtractors.

CO 3: Demonstrate the code convertors.

CO 4: Demonstrate the combinational and sequential circuits.

Modules/Topics Covered**	Blooms level*	Number of hours
1. To verify the truth tables of NOT, OR, AND, NOR, NAND, XOR, XNOR gates.	L3, L5	2
2. To obtain half adder, full adder using gates and verify their truth tables.	L3, L5	2
3. To obtain half subtractor, full subtractor using gates and verify their truth tables.	L3, L5	2
4. To implement control circuit using multiplexer.	L3, L5	2
5. To convert BCD code into excess 3 code and verify the truth table.	L3, L5	2
6. To verify the truth tables of RS, D, JK and T flip- flops.	L3, L5	2
7. To implement and verify 3-bit bi-directional shift register.	L3, L5	2
8. To design and study asynchronous/ripple counter.	L3, L5	2
9. To design and study synchronous counter.	L3, L5	2
10. To design and study a sequence detector.	L3, L5	2

*\*Bloom's Level:*

### Catalog Description

The students will be able to understand the contribution of electronics to some extent. PCB's have definitely contributed in a significant manner as a means of interconnection of various electronic components. The field of PCB designing is a mutual contribution of wide range of various other fields.

### Course Objectives

The objective of this course is to

1. To identify basic electronic components and understand operation of electrical devices.
2. To implement mini projects based on concept of electronics circuit concepts .

### Course Outcomes

On completion of this course, the students will be able to

CO1. Measure voltage,frequency and phase of any waveform using CRO. Generate sine, square and triangular waveforms with required frequency and amplitude using function generator.

CO2. Analyse the characteristics of different electronic devices such as diodes, transistors etc., and simple circuits like rectifiers,amplifiers etc.

CO3. Obtain the PCB for a simple circuit.

### Course Content

Experiments	Blooms level*	Number of hours
1. Study of CRO, DMM & Function Generator 2. Identification of Active & Passive Components	L1 and L2	2

1. Winding shop: Step down transformer winding of less than 5VA. 2. Soldering shop: Fabrication of DC regulated power supply	L1 and L2	2
1. PCB Lab: (a) Artwork & printing of a simple PCB. (b) Etching & drilling of PCB.	L1 and L2	3
1. Wiring & fitting shop: Fitting of power supply along with a meter in cabinet. 2. Testing of regulated power supply fabricated.	L1 and L2	2

### Catalog Description

This course will introduce students to the process of fabrication of PCB and various design and analysis concepts for the techniques used. The role of environment will also be discussed. The assembly of components on PCB and testing for quality assurance will also be discussed.

### Course Objectives

The objective of this concentration elective is

1. To allow students to have insight knowledge of PCB Fabrication.
2. To enhance their knowledge domain beyond main subjects for application in working on various projects.

### Course Outcomes

On completion of this course, the students will be able to

- CO1. Explain the design flow of PCB Fabrication.
- CO2. Distinguish and Explain the techniques used and design considerations.
- CO3. Apply the knowledge of computer for automation in PCB fabrication.
- CO4. Prepare PCB for simple circuits in lab for projects.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>MODULE I:</b>  <b>INTRODUCTION TO THE PCB</b>  Definition and Evolution of the Printed Circuit Board (PCB), Purposes of a PCB, Applications, Market Drivers, Typical Development Flow for a PCB, Printed Circuit Technology, Basic Electronic Components, Resistors, Capacitors, Inductors, Diodes, Transistors, Relays, Connectors, Integrated Circuits: How a silicon wafer becomes an IC, Printed Circuit Board Characteristics, PCB Materials, Fillers, resins, laminates, base material characteristics, Dielectric, conductors, Engineering References	L1 and L2	5

<p><b>MODULE II:</b></p> <p><b>DESIGN AND ANALYSES</b></p> <p>Design and Environmental Requirements: Functional, Thermal, Vibration, Shock, EMI/EMC; Electrical Engineering: Analog and digital signals, Signal integrity, Grounding concepts, Current carrying capacity, CAD, Schematics, Layout rules of thumb; Mechanical Engineering: Panels, Standard board sizes, Packaging, Thermal Design, Heat transfer basics, Convection, Conduction, PCB Thermal Design Features, Thermal modeling, Cycling and fatigue, Component Vibration Fatigue, Vibration Models and Terminology, Combined Thermal and Structural Fatigue</p>	L1, L2 and L3	5
<p><b>MODULE III:</b></p> <p><b>CONTAMINATION CONTROL/ENVIRONMENTAL CONTROL</b></p> <p>Contamination Control, Conformal Coatings, Polluting Agents, Safety Controls, Pollution Controls, Recycling, Standards; Manufacturing: PCB Manufacturing Information, PCB Layout and Artwork; Fabrication: Machining Operations, Blanking, Cutting, Punching, Drilling, Laminating Techniques, Plating, Etching, Surface Finishing, Conformal Coatings, Inspection and Checkout, Specifications and Standards.</p>	L1 and L2	5
<p><b>MODULE IV:</b></p> <p><b>ASSEMBLY</b></p> <p>PCB Assembly Drawing Examples, Component Considerations, Component mounting and support, Mechanical Devices, Soldering Technology, Non solder Connections, Cleaning, Parts Staking, Conformal Coating Removal, Repair and Rework, Safety Considerations, ESD protection, Specifications and Standards.</p>	L1 and L2	5
<p><b>MODULE V:</b></p> <p><b>TESTING &amp; QUALITY ASSURANCE</b></p> <p>Common PCB Production Faults, Bare Board Testing, Electrical Performance Testing, Assembled PCB Testing, Quality Assurance in Design, FMEA – Failure Mode and Effects Analysis, Software Tools, Quality Assurance in Manufacturing and in Assembly, Specifications and Standards.</p>	L1 and L2	4

Version 2019.1	Date of Approval: May 21, 2019	2	0	0	2

Pre-requisites/Exposure	Basic Knowledge of Brain functioning
Co-requisites	Nil

## Catalog Description

The course provides introduction to neural network and a deep insight into the basics of brain & its functioning basics of various neural models & neural schema used for learning. With this course students would be able to know the basics of each introductory feature of human brain and its features which would prove to be very helpful throughout their degree and would prove helpful in understanding other related subjects also.

## Course Objectives

The objective of this course is to

1. Equip the students with concepts of learning of brain problem solving techniques and develop proficiency in creating neural structures using the MATLAB.
2. Provide an overview of various control statements, data structures, packages related to image addition, graphics, different types of neural models.

## Course Outcome

On completion of this course, the students will be able to

CO 1: Define Artificial Neural Network & its similarity to biological neural network and explain its application in our day to day life.

CO 2: Analyze ANN learning, Error correction learning, Hebbian learning, Competitive learning and Boltzman Learning.

CO 3: Implement simple perceptron, Perceptron Learning rule, modified perceptron learning rule, feed forward neural network & feedback Neural Network.

CO 4: Explain self-organizing Map, Hopfield network, Adaptive resonance theory and its various learning rules.

CO 5: Analyze memory-based learning, Associative learning, Bi-directional learning and Auto associative learning.

Modules	Blooms level*	Number of hours
<b>Module-I</b> Artificial Neural Networks (ANN) and biological neural networks, supervised and unsupervised learning rules, neural network applications	L1, L2 and L3	6
<b>Module-II</b> Unsupervised learning:- Hebbian learning and competitive learning. Supervised learning:- Back propagation algorithms, Learning rule:- Delta learning rule, Widrow-Hoff learning rule, Winner-Take-All learning rule	L1, L2 and L3	6
<b>Module-III</b> Feed forward neural network, feed backward neural network, Perceptron and its learning law, single-layer perceptron, multi-layer perceptron.	L2, L3 and L4	6
<b>Module-IV</b> Self organizing networks: Kohonen algorithm, Hopfield Networks: Hopfield network algorithm, Adaptive resonance theory: Network and learning rules.	L2, L3 and L4	6

<b>Module V</b> Associative memory, auto-associative memory, bi-directional associative memory.	L2, L3 and L4	6

### **Course Objectives**

The objective of this course is to

1. Make the students apply knowledge of various neural models required for solving complex problems.

2. Provide a demonstration of different types of image processing techniques through MATLAB toolbox.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Acquiring knowledge of Basics of High-end calculation software and need in Computer Science & engineering

CO2: Demonstrate the All preliminary functions in MATLAB

CO3: Apply the knowledge of all the basics function and toolbox knowledge of MATLAB

CO4: Demonstrate the Neural Network model in MATLAB

CO5: Demonstrate usage of applications involving with Image processing & Its Toolbox used by MATLAB

<b>Modules/Topics Covered**</b>	<b>Blooms level*</b>	<b>Number of hours</b>
7. Introduction of MATLAB (a) Basic Variable declaration & its operation (b) Function use & its application	L3, L5	4
8. Sample Programs in MATLAB (a) Basic use of Matrix and Graph Plotting (b) Different type of graph plotting with use of different -2 type of data	L3, L5	6
9. Sample Programs using MATLAB functions (a) Create a basic program MATLAB using functions (b) Use of basic function Image processing (c) Practice on Basic function of Image processing tool box.	L3, L5	6
10. Sample programs of ANN functions (a) Practice on ANN toolbox function in MATLAB (b) Write a program for training a small network in MATLAB	L3, L5	6
11. Sample Programs using ANN tool box & Image processing toolbox (a) Demonstrate the use of ANN tool box & Image processing toolbox and write a program after combining it.	L3, L5	2

### **Catalog Description**

The objective is to impart programming skills used in this object-oriented language java. The course explores all the basic concepts of core java programming like object, classes, data types, features, operators, control structures, interfaces, packages, applets, awt, swings and socket programming. The students are expected to learn it enough so that they can develop the basic applications as well as web solutions like creating applets etc.

### **Course Objectives**

The objective of this course is to

1. Equip the students with the basic feature of contemporary java required in solving complex problems.
2. Provide a practical knowhow and implementation of java programming concepts like classes, objects, packages, swings, socket programming.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: Define and explain concept of byte code and platform independence, demonstrate basic java-based application development using operators, if-else, loops and arrays.

CO2: Distinguish between various types of inheritances, polymorphisms and other concepts and able to solve complex programming problems involving class objects, inheritances, and packages.

CO3: Describe hierarchy of exception classes and thread life cycle along with demonstrate and design solutions for some simple and complex applications using exception and multithreading concepts.

CO4: Explain event delegation model and describe AWT class hierarchy; Apply knowledge of event handling and AWT controls create some new dynamic graphical applications.

CO5: Explain the architecture of applet and concept of swing package. Demonstrate applications based on java applets and swings.

Modules	Blooms level*	Number of hours
<b>Module I:Java Basics</b> Concepts of OOP, Features of Java, How Java is different from C++, Environmental setup, Basic syntax, Objects and classes, Basic Data Types, Variable Types, Modifier Types, Basic operators, Loop Control, Decision Making, Strings and Arrays, Methods, I/O.	L1, L2 and L3	6
<b>Module II: Java Object Oriented</b> Inheritance, Overriding, Polymorphism, Abstraction, Encapsulation, Interfaces, Packages, Exploring java.util package.	L2 and L3	7
<b>Module III: Exception Handling and Threading</b> Exception Hierarchy, Exception Methods, Catching Exceptions, Multiple catch Clauses, Uncaught Exceptions Java's Built-in Exception. Creating, Implementing and Extending thread, thread priorities, synchronization suspending, resuming and stopping Threads, Multi-threading.	L2, L3 and L5	8
<b>Module IV: Event Handling And AWT</b> Event handling Mechanism, Event Model, Event Classes, Sources of Events, Event Listener Interfaces, AWT: Working with Windows, AWT Controls, Layout Managers	L2, L3, L4 and L5	8
<b>Module V: Java Advanced</b> AppletClass, Architecture, Skeleton, Display Methods.Swings: Japplet, Icons, labels, Text Fields, Buttons, Combo Boxes.Socket Programming: Socket methods, Server Socket methods, Socket Client and Socket Server examples.	L2 and L3	7

### **Catalog Description**

In this Lab course the basic features of contemporary java are implemented and demonstrated. Problems or programs will be related to concepts of classes, objects, threads, packages, exception handling, applets, AWT control, swings and socket programming. Concepts covered would enable them to create basic and complex console and graphical based applications for desktop and Internet

### **Course Objectives**

The objective of this course is to

1. Equip the students to apply knowledge of various basic java features required in solving basic and complex problems.
2. Provide a demonstration of basic java programming concepts like classes, objects, threads, packages, exception handling, applets, AWT control, swings and socket programming

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: Apply the concepts learned of operators, if-else, loops and arrays to javabased application development.

CO2: Demonstrate the use of various types of inheritances, polymorphisms, class objects, inheritances, packages and other concepts to basic and complex java programming problems.

CO3: Apply the knowledge of exception handling and multithreading concepts for some simple and complex applications.

CO4: Apply knowledge of event handling and AWT controls to create some new dynamic graphical applications.

CO5: Demonstrate graphical applications based on java applets, swings and event handling.

.

<b>Modules/Topics Covered**</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<p>1. Sample Programs using Objects and classes, Variable Types, Modifier Types, operators, Loops Decision Making, Strings and Arrays,</p> <p>(a) WAP to display “Hello, it’s a first program in java”.</p> <p>(b) WAP to find sum of two integers taken as input from user at runtime.</p> <p>(c) WAP to find sum of two float numbers taken as command line arguments</p> <p>(d) WAP to find changed case of entered character.</p> <p>(e) WAP to find maximum of 3 integer numbers taken as input from user at runtime.</p> <p>(f) WAP in java to find out the greatest out of ten numbers stored using arrays.</p> <p>(g) WAP to create class with “name” as String and “age” as integer data members. The class should have two methods to take input from user and display the data.</p> <p>(h) WAP to find factorial of a number using class and object.</p>	L3, L5	6
<p>2. Sample Programs using Inheritance, Overriding, Polymorphism, Interfaces, Packages</p> <p>a. WAP in java to illustrate the concept of interfaces.</p> <p>b. WAP to create a package as MyPack having a class with three methods: max, fact and show. Use it in other folder with setting classpath and without setting class path.</p> <p>c. Write a program in java to showcase uses of super keyword</p>	L3, L5	4
<p>1. Sample Programs using exception handling and threads</p> <p>a) Write a program to demonstrate the use of nesting of try-catch block</p> <p>b) WAP in java to illustrate the concept of using multiple catch clauses to handle different types of exceptions.</p> <p>c) WAP in java to create a user defined Exception and throw it explicitly.</p> <p>d) Demonstrate thread using Thread class and Runnable interface</p> <p>e) Demonstrate various thread methods using a program</p>	L3, L5	6
<p>(a) Sample Programs using event handling and AWT controls</p> <p>(b) Write a program to display “hello” in different color where user clicks left mouse button and “world” where right mouse button is clicked. Use black background.</p> <p>(c) WAP in java to create a Frame and handle window-closing event implementing the WindowListener interface.</p> <p>(d) WAP to create an Applet having various different buttons, recognizing them using action command string method and handling click event generated by them.</p> <p>(e) WAP to create a frame and illustrate the concept of using an adapter class in place of interfaces for handling various mouse events</p>	L3, L5	6

<p>generated over frame window.</p> <p>(f) WAP in java to create a frame with AWT controls (like label, push buttons, Checkbox, Checkbox Group) and handle various events generated by them.</p> <p>(g) WAP in java to create a frame with various AWT controls (like choice, list, TextField and Buttons) and handle the events thrown by them.</p>		
<p>5. Sample Programs using applets, swings and stream socket</p> <p>a) . Write an applet which will display “HAPPY” and “DEEPAVALI” as: The word “HAPPY” will roll from top to bottom and “DEEPAVLI” from bottom to “top” . Both will run at the same speed and stop simultaneously at the center of the applet.</p> <p>b) Write an applet to display last 32 shades of red, green and blue in equal sized square grid accompanied by appropriate labels like” Last 32 shades of Red/Green/Blue color”. Make use of BorderLayout to apply border for each individual shade.</p> <p>c) Create an applet with one single button with caption “Click”. On clicking the button will open a new Frame with title “Factorial”. The frame will have two three controls :TextField, Label and button. On clicking button calculate the factorial entered in TextField control.</p> <p>d) Create Java programs to demonstrate day time client and server</p> <p>e) Create java programs to create echo client and server</p>	L3, L5	2

Pre-requisites/Exposure	Computer Fundamentals and Mathematics Set Theory				
Co-requisites	Nil				

### Catalog Description

This course is design to get students familiar with the fundamentals & basic concepts in Data Base Management Systems and their use. This course discusses architecture of Database Systems with concept of different types of available database model, concurrency techniques and new applications

of the DBMS. The techniques for database design, normalization, database recovery and protection will enable students to work easily and efficiently on real databases.

### Course Objectives

The objective of this course is

3. To make students familiar with the fundamental and necessary concepts of DBMS.
4. Provide an overview of normalization, concurrency techniques and database recovery with examples.

### Course Outcomes

On completion of this course, the students will be able to

CO1. Differentiate between traditional data processing system and database management system and understand characteristics and applications of DBMS in real world.

CO2. Explain and use different data models such as Entity Relationship Model, Network, and Relational Model etc.

CO3. Solve queries using relational algebra, relational calculus and SQL.

CO4. Illustrate normalization concepts and apply them in real database applications.

CO5. Explain database concurrency techniques and recovery mechanisms.

Modules	Blooms level*	Number of hours
<b>Module I: Introduction</b> Concept and goals of DBMS, Database Languages, Database Users, Database Abstraction. Basic Concepts of ER Model, Relationship sets, Keys, Mapping, Design of ER Model.	L1, L2 and L6	9
<b>Module II: Hierarchical model &amp; Network Model</b> Concepts, Data definition, Data manipulation and implementation. Network Data Model, DBTG Set Constructs, and Implementation	L1 and L2	9
<b>Module III: Relational Model</b> Relational database, Relational Algebra, Relational & Tuple Calculus.	L1 and L3	10
<b>Module IV: Relational Database Design and Query Language</b> SQL, QUEL, QBE, Normalization using Functional Dependency, Multivalued dependency and Join dependency.	L2, L3 and L4	10
<b>Module V: Concurrency Control and New Applications</b> Transaction basics: ACID property, Lifecycle of Transaction, Why Concurrency Control, Schedule, Serializability, Lock Based Protocols, Time Stamped Based Protocols, Deadlock Handling, Crash Recovery. Distributed Database, Objective Oriented Database, Multimedia Database, Data Mining, Digital Libraries.	L2, L3 and L4	10

*\*Bloom's Level:*

Pre-requisites/Exposure	Basic Concepts of DBMS				
Co-requisites	Relational Algebra and Relational Calculus				

### Catalog Description

This course is designed to get students familiar with the basic concepts of SQL including DDL, DML and DCL statements. The course also explains the basic concepts of PL/SQL. Students will learn practical on Oracle software and hence can work on any RDBMS software in future.

### Course Objectives

The objective of this course is

1. To make students familiar with the concepts and working of SQL.
2. Provide an overview of PL/SQL.

### Course Outcomes

On completion of this course, the students will be able to

CO1. Illustrate SQL basic concepts like languages DDL, DML etc., data types and working.

CO2. Explain concepts of database creation, manipulation of data and data retrieval and apply them in real database applications.

CO3. Design and implement various data constraints on a database for a given problem.

CO4. Solve queries using concepts like joins, subqueries, aggregate functions, triggers etc.

CO5. Prepare PL/SQL blocks.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Lab Session 1</b> Introduction of RDBMS, Oracle, SQL and data types.	L1 and L2	2
<b>Lab Session 2</b> Basic concept of database creation and manipulation of data.	L1 and L3	2
<b>Lab Session 3</b> Working with SELECT query.	L1 and L3	2
<b>Lab Session 4</b> To apply data constraints on a table-Primary Key, Not Null, Unique.	L1 and L3	2
<b>Lab Session 5</b> Working with Foreign Key and Check Constraint.	L1 and L3	2
<b>Lab Session 6</b> To implement the basic concept of Aggregate and Grouping Functions.	L1 and L3	2
<b>Lab Session 7</b> To apply various set operators on data.	L1 and L3	2
<b>Lab Session 8</b> Concept of Nested queries in database and its application in database.	L1 and L3	2
<b>Lab Session 9</b> Implementation different types of JOINS in database.	L1 and L3	2
<b>Lab Session 10</b> Basic concepts of Triggers and Procedures and related queries.	L1 and L3	2
<b>Lab Session 11</b> Introduction to PL/SQL and basic syntax.	L1 and L3	2
<b>Lab Session 12</b> Write programs in PL/SQL Using Control Structures.	L3	2

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

# PRESENTATION SKILLS

Course Code: CSS2251

L-T-P : 1-0-0

Credit Units: 01

## Course Objective:

To teach the participants strategies for improving academic reading and writing.  
Emphasis is placed on increasing fluency, deepening vocabulary, and refining academic language proficiency.

## Course Contents:

### Module I: Social Communication Skills

Small Talk  
Conversational English  
Appropriateness  
Building rapport

### Module II: Context Based Speaking

In general situations  
In specific professional situations  
Discussion and associated vocabulary  
Simulations/Role Play

### Module III: Professional Skills

Presentations  
Negotiations  
Meetings  
Telephony Skills

## Examination Scheme:

Components	CT1	CT2	CAF	V	GD	GP	A
Weightage (%)	20	20	25	10	10	10	5

CAF – Communication Assessment File

GD – Group Discussion

GP – Group Presentation

## Text & References:

# **STRESS AND COPING STRATEGIES**

**Course Code: BEH2451**

**L-T-P : 1-0-0**

**Credit Units: 01**

## **Course Objective:**

To develop an understanding the concept of stress its causes, symptoms and consequences.  
To develop an understanding the consequences of the stress on one's wellness, health, and work performance.

## **Course Contents:**

Module I: Stress  
Meaning & Nature  
Characteristics  
Types of stress

Module II: Stages and Models of Stress  
Stages of stress  
The physiology of stress  
Stimulus-oriented approach.  
Response-oriented approach.  
The transactional and interactional model.  
Pressure – environment fit model of stress.

Module III: Causes and symptoms of stress  
Personal  
Organizational  
Environmental

Module IV: Consequences of stress  
Effect on behaviour and personality  
Effect of stress on performance  
Individual and Organizational consequences with special focus on health

Module V: Strategies for stress management  
Importance of stress management  
Healthy and Unhealthy strategies  
Peer group and social support  
Happiness and well-being

## **Module VI: End-of-Semester Appraisal**

### **Viva based on personal journal**

### **Assessment of Behavioural change as a result of training**

Exit Level Rating by Self and Observer

## **Examination Scheme:**

Components	SAP	A	Mid Term Test (CT)	VIVA	Journal for Success (JOS)
Weightage (%)	20	05	20	30	25

## **Text & References:**

# FRENCH - IV

Course Code: LAN2451

L-T-P : 2-0-0

Credit Units: 02

## Course Objective:

To enable students:

- To develop strategies of comprehension of texts of different origin
- To present facts, projects, plans with precision
- 

## Course Contents:

Module C: pp. 104 – 139 : Unités 8,9

Contenu lexical :Unité 8: Découvrir le passé

1. parler du passé, des habitudes et des changements.
2. parler de la famille, raconter une suite d'événements/préciser leur date et leur durée.
3. connaître quelques moments de l'histoire

### Unité 9: Entreprendre

1. faire un projet de la réalisation: (exprimer un besoin, préciser les étapes d'une réalisation)
2. parler d'une entreprise
3. parler du futur

### Contenu grammatical:

1. Imparfait
2. Pronom « en »
3. Futur
4. Discours rapporté au présent
5. Passé récent
6. Présent progressif

## Examination Scheme:

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	20	20	20	15	5

C – Project + Presentation

I – Interaction/Conversation Practice

## Text & References:

- le livre à suivre: Campus: Tome 1

# GERMAN - IV

Course Code: LAN2452

L-T-P : 2-0-0

Credit Units: 02

## Course Objective:

To enable the students to converse, read and write in the language with the help of the basic rules of grammar, which will later help them to strengthen their language.

To give the students an insight into the culture, geography, political situation and economic opportunities available in Germany.

Introduction to Advanced Grammar Language and Professional Jargon

### Course Contents:

#### Module I: Present perfect tense

Present perfect tense, usage and applicability

Usage of this tense to indicate near past

Universal applicability of this tense in German

#### Module II: Letter writing

To acquaint the students with the form of writing informal letters.

#### Module III: Interchanging prepositions

Usage of prepositions with both accusative and dative cases

Usage of verbs fixed with prepositions

Emphasizing on the action and position factor

#### Module IV: Past tense

Introduction to simple past tense

Learning the verb forms in past tense

Making a list of all verbs in the past tense and the participle forms

#### Module V: Reading a Fairy Tale

Comprehension and narration

- Rotkäppchen
- Froschprinzessin
- Die Fremdsprache

#### Module VI: Genitive case

Genitive case – Explain the concept of possession in genitive

Mentioning the structure of weak nouns

#### Module VII: Genitive prepositions

Discuss the genitive prepositions and their usage: (während, wegen, statt, trotz)

#### Module VIII: Picture Description

Firstly recognize the persons or things in the picture and identify the situation depicted in the picture;

Secondly answer questions of general meaning in context to the picture and also talk about the personal experiences which come to your mind upon seeing the picture.

### Examination Scheme:

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	20	20	20	15	5

C – Project + Presentation

I – Interaction/Conversation Practice

# SPANISH - IV

Course Code: LAN2453

L-T-P : 2-0-0

Credit Units: 02

## Course Objective:

To enable students acquire working knowledge of the language; to give them vocabulary, grammar, voice modulations/intonations to handle everyday Spanish situations with ease.

## Course Contents:

### Module I

Revision of earlier semester modules  
Introduction to Present Continuous Tense (Gerunds)

### Module II

Translation with Present Continuous Tense  
Introduction to Gustar, Parecer, Apetecer, doler

### Module III

Imperatives (positive and negative commands of regular verbs)

### Module IV

Commercial/business vocabulary

### Module V

Simple conversation with help of texts and vocabulary  
En la recepcion del hotel  
En el restaurante  
En la agencia de viajes  
En la tienda/supermercado

## Examination Scheme:

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	20	20	20	15	5

C – Project + Presentation

I – Interaction/Conversation Practice

## Text & References:

# CHINESE – IV

Course Code: LAN2455

L-T-P : 2-0-0

Credit Units: 02

## Course Objective:

How many characters are there? The early Qing dynasty dictionary included nearly 50,000 characters the vast majority of which were rare accumulated characters over the centuries. An educated person in China can probably recognize around 6000 characters. The course aims at familiarizing the student with the basic aspects of speaking ability of Mandarin, the language of Mainland China. The course aims at training students in practical skills and nurturing them to interact with a Chinese person.

## Course Contents:

### Module I

Dialogue Practice  
Observe picture and answer the question  
Pronunciation and intonation  
Character writing and stroke order.  
Electronic items

### Module II

Traveling – The Scenery is very beautiful  
Weather and climate  
Grammar question with – “bu shi .... Ma?”  
The construction “yao ... le” (Used to indicate that an action is going to take place)  
Time words “yiqian”, “yiwai” (Before and after).  
The adverb “geng”.

### Module III

Going to a friend house for a visit meeting his family and talking about their customs.  
Fallen sick and going to the Doctor, the doctor examines, takes temperature and writes prescription.  
Aspect particle “guo” shows that an action has happened some time in the past.  
Progressive aspect of an action “zhengzai” Also the use of “zhe” with it.  
To welcome someone and to see off someone .... I can't go to the airport to see you off... etc.

### Module IV

Shipment. Is this the place to check luggage?  
Basic dialogue on – Where do you work?  
Basic dialogue on – This is my address  
Basic dialogue on – I understand Chinese  
Basic dialogue on – What job do you do?  
Basic dialogue on – What time is it now?

### Module V

Basic dialogue on – What day (date) is it today?  
Basic dialogue on – What is the weather like here.  
Basic dialogue on – Do you like Chinese food?  
Basic dialogue on – I am planning to go to China.

## Examination Scheme:

<b>ECE 2501</b>	<b>DIGITAL CIRCUITS &amp; SYSTEMS</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2019.1	Date of Approval: May 21, 2019	3	0	0	3

Pre-requisites/Exposure	Nil
Co-requisites	Nil

### Catalog Description

This course explores the theory and operation of the basic building blocks of digital electronics which includes combinational and sequential circuits. This course also explains the logic families and data convertors. The concepts learnt in the studies of sequential circuits will be applied in the design and analysis of Melay and Moore machines.

### Course Objectives

The objective of this course is to

1. Provide the basic knowledge of digital logic levels and application of combinational and sequential circuits.
2. Equip with the understanding of logic family and data convertors.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Explain the various logic gates, Boolean algebra and solve the k-map & tabulation method to simplify the logical function.

CO2: Explain the adder & subtractor; Apply and analyze multiplexer, decoder & encoder to design Boolean function.

CO3: Describe flip flops, shift registers & Design counters and synchronous sequential circuits.

CO4: Explain & compare different logic families and explain data convertors.

Modules	Blooms level*	Number of hours
<b>MODULE 1:</b>  <b>BOOLEAN FUNCTIONS</b> Analog & digital signals, AND, OR, NOT, NAND, NOR , XOR & XNOR gates, Boolean algebra, DeMorgan's theorems, Implementation of logical function using only NAND/NOR gates, 1's complement and 2's complement, BCD to Gray and Gray to BCD code conversion, Standard representation of logical functions ( SOP and POS forms), K-map representation and simplification of logical function up to five variables, don't care conditions, XOR & XNOR simplifications of K-maps, Tabulation method.	L1,L2 and L3	6
<b>MODULE 2:</b>  <b>COMBINATIONAL CIRCUITS</b> Adders, Subtractors, Implementation of full adder using half adder,	L1, L2,L3	6

full subtractor using half subtractor, Multiplexer, de-multiplexer, decoder & encoder, code converters, 1 & 2 bit comparators, BCD to seven segment decoder/encoder, Implementation of logic functions using multiplexer/de-multiplexer and decoder, Implementation of 16×1 MUX using 4×1 MUX, 4×16 decoder using 3×8 decoder etc., logic implementations using PROM, PLA & PAL.	and L4	
<b>MODULE 3:</b>  <b>SEQUENTIAL CIRCUITS</b> Difference between combinational and sequential circuits, Latch, Flip-flops: SR, JK, D & T flip flops – Truth table, Excitation table, Conversion of flip-flops, set up and hold time, race around condition, Master Slave flip flop, Shift registers: SIPO, PISO, PIPO, SIPO, Bi-directional, 4-bit universal shift register; Counters: Asynchronous/ripple & synchronous counters – up/down, Ring counter, sequence detector.	L2,L3, L4 and L5	7
<b>MODULE 4:</b>  <b>LOGIC FAMILIES&amp;DATA CONVERTERS</b> Logic families: Special characteristics (Fan out, Power dissipation, propagation delay, noise margin), working of RTL, DTL, TTL, ECL and CMOS families; Data converters: Special characteristics, ADC – successive approximation, linear ramp, dual slope; DAC – Binary Weighted, R-2R ladder type.	L1, L2,L3 and L4	5

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

### Catalog Description

The purpose of this course is to introduce students to the basic principles of the design and analysis of digital communication systems. It will provide a thorough study of digital modulation techniques and receiver design.

### Course Objectives

The objective of this course is to

1. Provide a thorough introduction to digital communications
2. Provide in depth study of various analog and digital modulation techniques.
3. Introduce students to basics of multiplexing in digital signals.

### Course Outcomes

On completion of this course, the students will be able to

CO1. Define and distinguish analog and digital communication systems.

CO2. Compare different analog and digital modulation techniques and their receiver design.

CO3. Explain the concepts of digital multiplexing.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>MODULE I:</b>  <b>DIGITAL COMMUNICATION SYSTEM BASICS</b>  Basic building blocks of Digital communications, analog versus digital communication, Advantages disadvantages of digital communications.	L1 and L2	4
<b>MODULE II:</b>  <b>DIGITAL BASEBAND TRANSMISSION</b>  Pulse code modulation, Signal to quantization ratio, non-uniform quantization companding, BW calculations.	L1, L2, and L4	8
<b>MODULE III:</b>  <b>TRANSMISSION OF ANALOG SAMPLES</b>  Delta Modulation, Adaptive delta-modulation, DPCM, ADCM, ADPCM, Matched Filter Receiver, Derivation of Its Impulse Response and Peak Pulse Signal to Noise	L1, L2 and L4	9

Ratio, Correlator receiver, Decision Threshold and Error Probability For, Unipolar (ON-OFF) Signaling, ISI, Nyquist Criterion For Zero ISI & Raised Cosine Spectrum		
<b>MODULE IV:</b>  <b>DIGITAL MODULATION TECHNIQUES</b>  Gram-Schmidt Orthogonalization Procedure, Types of Digital Modulation, Wave forms for Amplitude, Frequency and Phase Shift Keying, Method of Generation and Detection of Coherent & Non-Coherent Binary ASK, FSK & PSK Differential Phase Shift Keying, Quadrature Modulation Techniques QPSK, Probability of Error and Comparison of Various Digital Modulation Techniques.	L1, L2 and L4	6
<b>MODULE V:</b>  <b>DIGITAL MULTIPLEXING</b>  Fundamentals of Time Division Multiplexing, Electronic Commutator, Bit, Byte Interleaving T1 Carrier System, Synchronization and Signaling of T1, TDM, PCM Hierarchy, T1 to T4 PCM TDM System (DS1 to DS4 Signals)	L1 and L2	4

ECE2503	CONTROL SYSTEM	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	2	1	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

### Catalog Description

This course provides the students the core knowledge of control systems. This introduces the methods of mathematical modeling of control systems with time & frequency domain analysis along with concepts of stability.

### Course Objectives

The objective of this course is to

- Equip the students with concepts of Control System.
- Provide the students in depth knowledge of time domain, frequency domain and concepts of stability.

### Course Outcomes

On completion of this course, the students will be able to

CO1. Understand and compare between types of control system and find mathematical model of control system.

CO2. Understand, explain and solve problems on time domain analysis.

CO3. Understand, explain and solve problems on frequency domain analysis.

CO4: Analysis of control system stability

Modules	Blooms level*	Number of hours
<b>Module 1:</b> <b>Input / Output Relationship</b> Introduction of open loop and closed loop control systems, mathematical modeling and representation of physical systems (Electrical Mechanical and Thermal), derivation of transfer function for different types of systems, block diagram & signal flow graph, Reduction Technique, Mason's Gain Formula.	L1, L2, L3 and L4	12
<b>Module 2:</b> <b>Time – Domain Analysis</b> Time domain performance criteria, transient response of first, second & higher order systems, steady state errors and static error constants in unity feedback control systems, error criteria, generalized error constants, performance indices, response with P, PI and PID Controllers.	L1, L2 and L3	12

<b>Module 3:</b> <b>Frequency Domain Analysis</b> Polar and inverse polar plots, frequency domain specifications, Logarithmic plots (Bode Plots), gain and phase margins, relative stability, Correlation with time domain, constant close loop frequency responses, from open loop response, Nyquist Plot.	L1, L2 and L3	12
<b>Module 4:</b> <b>Concept of Stability</b> Asymptotic stability and conditional stability, Routh – Hurwitz criterion, Root Locus plots and their applications. Compensation Techniques: Concept of compensation, Lag, Lead and Lag-Lead networks, design of closed loop systems using compensation techniques. P, PI, PID controllers.	L1, L2, L3 and L4	12

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

### Catalog Description

This course deals with the systematic study of the Architecture and programming issues of microprocessor family and its applications. The aim of this course is

1. To introduce students with the architecture and operation of typical microprocessors.
2. To familiarize the students with the programming and interfacing of microprocessors
3. To provide the basic knowledge of the microprocessor needed to develop the embedded system based products as a solution to real time problems.

### Course Outcomes

On completion of this course, the students will be able to

CO1. Explain the architecture, pin configuration, addressing modes, control words, timing diagram, instruction set of 8085 microprocessors and Interfacing ICs

CO2. Explain the architecture, pin configuration, addressing modes, control words of 8086, 8087 and other 16 bit microprocessors and Interfacing ICs

CO3. Develop the assembly language program using 8085 using stacks & subroutines.

CO4. Design circuitry to the Microprocessor I/O ports in order to interface the processor to external devices so as to provide solutions real-world control problems

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I:</b> Introduction to Microcomputer Systems Introduction to Microprocessors and microcomputers, Study of 8 bit Microprocessor, 8085 pin configuration, Internal Architecture and operations, interrupts, Stacks and subroutines, various data transfer schemes.	L1, L2, L3, L4	6
<b>Module II: ALP and timing diagrams</b> Introduction to 8085 instruction set, advance 8085 programming, Addressing modes, Counters and time Delays, Instruction cycle, machine cycle, T-states, timing diagram for 8085 instruction.	L4, L5, L6	8
<b>Module III: Memory System Design &amp; I/O Interfacing</b> Memory interfacing with 8085. Interfacing with input/output	L3, L4,	9

devices (memory mapped, peripheral I/O), Cache memory system. Study of following peripheral devices 8255, 8253, 8257, 8259, 8251.	L5,L6	
<b>Module IV: Architecture of 16-Bit Microprocessor</b> Difference between 8085 and 8086, Block diagram and architecture of 8086 family, pin configuration of 8086, minimum mode & maximum mode Operation, Bus Interface Unit, Register Organization, Instruction Pointer, Stack & Stack pointer, merits of memory segmentation, Execution Unit, Register Organization.	L2, L3, L4	7
<b>Module V: Pentium Processors</b> Internal architecture of 8087, Operational overview of 8087, Introduction to 80186, 80286, 80386 & 80486 processors, Pentium processor (P-II, P-III, P-IV). .	L1,L2	6

## Catalog Description

In this Lab course the combination and sequential circuits are designed and their functionality is verified using truth table. Concepts covered would enable them to create complex circuits related to digital design. The objective of this course is to explore and implement the various features of digital logic using basic logic gates.

## Course Objectives

The objective of this course is to

1. Provide a basic knowledge of digital logic levels and application of knowledge to understand digital electronics circuits.
2. Equip with understanding of different combinational and sequential circuits.

### Course Outcomes

On completion of this course, the students will be able to

CO 1: Demonstrate the basic concept of logic gates;

CO 2: Illustrate the adder and subtractors.

CO 3: Demonstrate the code convertors.

CO 4: Demonstrate the combinational and sequential circuits.

<b>Modules/Topics Covered**</b>	<b>Blooms level*</b>	<b>Number of hours</b>
1. To verify the truth tables of NOT, OR, AND, NOR, NAND, XOR, XNOR gates.	L3, L5	2
2. To obtain half adder, full adder using gates and verify their truth tables.	L3, L5	2
3. To obtain half subtractor, full subtractor using gates and verify their truth tables.	L3, L5	2
4. To implement control circuit using multiplexer.	L3, L5	2
5. To convert BCD code into excess 3 code and verify the truth table.	L3, L5	2
6. To verify the truth tables of RS, D, JK and T flip- flops.	L3, L5	2
7. To implement and verify 3-bit bi-directional shift register.	L3, L5	2
8. To design and study asynchronous/ripple counter.	L3, L5	2
9. To design and study synchronous counter.	L3, L5	2
10. To design and study a sequence detector.	L3, L5	2

*\*Bloom's Level:*

### Catalog Description

This course focuses on the systematic study of the Architecture and programming of microprocessor family and its applications. The objectives of this course are:

1. To introduce students with the architecture operation and instruction set of 8085 and 8086 microprocessors.
2. To familiarize the students with the programming and interfacing of 8085 and 8086 microprocessors.
3. To provide the basic knowledge of the microprocessor needed to develop the embedded system based products as a solution to real time problems.

### Course Outcomes

On completion of this course, the students will be able to

CO1. Set up programming strategies and select proper mnemonics and run their program on the training boards

CO2. Develop assembly language programs for various problems keeping in mind technical issues and evaluate possible causes of discrepancy in practical experimental observations in comparison.

CO3. Understand the concepts related to I/O and memory interfacing and design interfacing circuits with 8085 by making use of different peripheral devices.

Modules	Blooms level*	Number of hours
<b>Lab Session 1: ALP using 8085:</b> <ol style="list-style-type: none"> <li>1. Write at least three different programs for addition of two 8 bit numbers assuming carry may or may not be generated.</li> <li>2. Write at least three different programs for subtraction of two 8 bit numbers assuming borrow may or may not be generated.</li> <li>3. Write two different programs for 16 bit addition, one using instruction DAD and another without using instruction DAD.</li> <li>4. Write assembly language program for 8 bit multiplication and division.</li> </ol>	L2, L3,L4	4

<b>Lab Session II:</b> To study, understand, interface and two peripheral devices with 8085.	L4,L5,L6	2
<b>Lab session III:</b> Any three programs using 8085 based on block of data.	L4	1
<b>Lab session IV: ALP using 8086:</b> <ol style="list-style-type: none"> <li>1. Write an ALP to add list of 10 given numbers.</li> <li>2. Write an ALP to sum the numbers from 1-100.</li> <li>3. Write an ALP to count negative numbers from a given list of 10 numbers.</li> <li>4. Write an ALP to check number of vowels in a given string.</li> </ol>	L2, L3, L4	5

<b>ECE2506</b>	<b>CONTROL SYSTEM LAB</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2019.1	Date of Approval: May 21, 2019	0	0	2	1
Pre-requisites/Exposure	MATLAB Basics				
Co-requisites	Nil				

### Catalog Description

Control System has become an important field for research and development in science and engineering. This course provides the students the core knowledge of control systems. This course introduces the Practical of control system with time & frequency domain analysis along with stability of control systems on kits and MATLAB.

### Course Objectives

The objective of this course is to

Perform experiments of control system.

Time & frequency domain analysis along with stability of control systems on kits and MATLAB

### Course Outcomes

On completion of this course, the students will be able to

CO1. Perform and analyse experiments on time domain of control system.

CO2. Perform and analyse experiments on frequency domain of control system.

CO3. Perform and analyse experiments for stability of control system.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Lab Session 1</b> 1. Study and draw a) Step response of open Loop system (linear 1 <sup>st</sup> order, 2 <sup>nd</sup> order b) Step response of closed loop systems (1 <sup>st</sup> order) 2. Study and draw temperature control system the open loop response and closed loop response with different values of gains	L2, L3 and L5	3
<b>Lab Session 2</b> 1. Study of operations and characteristics of a stepper motor 2. To Study a D.C. motor speed control system.	L2, L3 and L5	3
<b>Lab Session 3</b>	L2, L3	3

1. Performance evaluation and design of PID controller. 2. To design a suitable cascade compensator for the given system and verify the resulting improvement.	and L5	
<b>Lab Session 4</b> 1. Note: three experiments in MATLAB have to be performed in the slot of MATLAB. Using MATLAB obtain the unit-step response and unit impulse response of the following system: $\frac{C(s)}{R(s)} = \frac{16}{s^2 + 1.6s + 16}$ 2. For a 2 <sup>nd</sup> order transfer function using MATLAB a) Bode Plot b) Root locus plot c) Nyquist plot.	L2, L3 and L5	3

ECE 2535	SUMMER INTERNSHIP EVALUATION I	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	0	0	0	3
Pre-requisites/Exposure	Basic Concepts of Programming Language and Electronics				
Co-requisites	Nil				

### Catalog Description

There are certain phases of every Intern's professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship program can best be described as an attempt to institutionalize efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal classroom situations. These attributes are intellectual ability, professional judgment and decision-making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility etc. In order to achieve these objectives, each student will maintain a file (**Internship File**). The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development. The report will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

### Course Objectives

The objective of this course is to

1. Equip the students with concepts of new technologies and practical exposure
2. Provide an overview of presentation and preparation of report.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Study the literature and identify the problem statement

CO2: Work on a real world problem and solve it using latest technology

CO3: Prepare a detailed report of the project

CO4: Prepare a brief presentation of their project

CO5: Present and explain the project for evaluation

### Text Books

As per topic of summer internship project is chosen and discussion with guide.

Co-requisites	Nil
---------------	-----

### Catalog Description

This course will help the students earn the basic understanding of nano electronics followed with advanced understanding of the fabrication at nano-micro level. It provides an in-depth study of device electronics for integrated circuits, a foundation for the device fabrication and various applications in the field of sensors technology, optoelectronics, communication and nanotechnology etc.

### Course Objectives

The objective of this course is to

1. Equip the students with fundamentals of Nanoelectronics and Nanostructures.
2. Provide in depth knowledge of fabrication steps and process.
3. Throw light on different applications in the field of sensors technology, optoelectronics, communication and nanotechnology

### Course Outcomes

On completion of this course, the students will be able to

- CO1. Explain the fundamentals of Nanoelectronics and Nanostructures.  
CO2. Illustrate different steps and process involved in fabrication of nanostructures.  
CO3. Explain the applications of nanoelectronics in context of sensors technology, logic devices, communication and optoelectronics.

Modules	Blooms level*	Number of hours
<b>Module 1:</b> <b>Introduction to Nanoelectronics</b> Overview of nanoscience and engineering, development milestones in microfabrication and electronic industry, Moore's law and continued miniaturization, Classification of Nanostructures, Electronic properties of atoms and solids: Isolated atom, Bonding between atoms, Giant molecular solids, Free electron models and energy bands, crystalline solids, Periodicity of crystal lattices, Electronic conduction, effects of nanometer length scale, Fabrication methods: Top down processes, Bottom up processes methods for templating the growth of nanomaterials, ordering of nanosystems	L1 and L2	6
<b>Module 2:</b> <b>Fabrication techniques</b> Requirements of ideal semiconductor, epitaxial growth of quantum wells, lithography and etching, cleaved-edge over growth, growth of vicinal substrates, strain induced dots and wires, electro statically induced dots and wires, Quantum well width fluctuations, thermally annealed quantum wells, semiconductor nanocrystals, colloidal quantum dots, self-assembly techniques. Physical processes: modulation doping, quantum hall effect, resonant tunneling, charging effects, ballistic carrier transport, Inter band absorption, intra band absorption, Light emission processes, phonon bottleneck, quantum confined stark effect, nonlinear effects, coherence and dephasing, characterization of semiconductor nanostructures: optical electrical and structural	L1, L2	9
<b>Module 3:</b> <b>Carbon Nanostructures &amp; Nanosensors</b> Carbon molecules, Carbon Clusters, Carbon Nanotubes, application of Carbon Nanotubes Nanosensors: Introduction, What is Sensor and Nanosensors?, What makes them Possible?, Nanosensors Based On Quantum Size Effects, Electrochemical Sensors, Sensors Based On Physical Properties, Nanobiosensors, Smartdust-Sensor for the future.	L1, L2	8
<b>Module 4:</b> <b>Logic Devices &amp; Applications</b> Logic Devices-Silicon MOSFETs-Ferroelectric Field Effect Transistors-Quantum Transport Devices Based on Resonant Tunneling-Single-Electron Devices for Logic Applications: Injection lasers, quantum cascade lasers, single-photon sources, biological tagging, optical memories, coulomb blockade devices, photonic structures,	L1, L2	6

#### **Catalog Description**

In this course Operating System, its generic types, characteristics and functions are discussed in detail. Concepts covered would enable students to identify various categories of operating systems, with details about concepts of process management and scheduling. Contents will be helpful in identifying deadlocks in the system and designated approaches used to prevent,

handle or recover from them. Further it covers the concepts of managing memory, devices and mechanisms for providing security to system and files using operating system.

### Course Objectives

The objective of this course is to

1. Equip the students with the knowledge about categories of operating systems and their functions.
2. Provide detailed knowhow about functions of operating system like process, memory and device management along with file system security and protection.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Define and explain operating systems and their evolution, also differentiate among its various types.

CO2: Explain concepts of process and inter-process communication and synchronization. Identify solutions to detect, prevent and handle deadlocks occurring in the operating systems. Solve synchronization and CPU scheduling problems related to processes.

CO3: Define and explain concepts of memory management like fragmentation, paging and segmentation. Solve problems related to memory management using page replacement algorithms.

CO4: Describe the concepts of device management and list various disk allocation methods. Determine solutions for disk scheduling problems using available disk scheduling algorithms.

CO5: State the concept of file and file system security, also distinguish among various file allocation methods.

Modules	Blooms level*	Number of hours
MODULE 1:  INTRODUCTION TO OPERATING SYSTEM Operating system and function, Evolution of operating system, Batch, Interactive, multiprogramming, Time Sharing and Real Time System, multiprocessor system, Distributed system, System protection. Operating System structure, Operating System Services, System Program and calls	L1, L2 and L4	6
MODULE 2:  PROCESS MANAGEMENT Process concept, State model, process scheduling, job and process synchronization, structure of process management, Threads Interprocess Communication and Synchronization: Principle of Concurrency, Producer Consumer Problem, Critical Section problem,	L1, L2 and L3	12

Semaphores, Hardware Synchronization, Critical Regions, Conditional critical region, Monitor, Inter Process Communication. CPU Scheduling: Job scheduling functions, Process scheduling, Scheduling Algorithms, Non-Preemptive and preemptive Strategies, Algorithm Evaluation, Multiprocessor Scheduling. Deadlock: System Deadlock Model, Deadlock Characterization, Methods for handling deadlock, Prevention strategies, Avoidance and Detection, Recovery from deadlock combined approach		
<b>MODULE 3:</b>  <b>MEMORY MANAGEMENT</b> Single Contiguous Allocation: H/W support, S/W support, Advantages and disadvantages, Fragmentation, Paging, Segmentation, Virtual memory concept, Demand paging, Performance, Paged replaced algorithm, Allocation of frames, Thrashing, Cache memory, Swapping, Overlays	L1, L2 and L3	7
<b>MODULE 4:</b>  <b>DEVICE MANAGEMENT</b> Principles of I/O hardware, Device controller, Device Drivers, Memory mapped I/O, Direct Access Memory, Interrupts, Interrupt Handlers, Application I/O interface, I/O Scheduling, Buffering, Caching, Spooling, Disk organization, Disk space management, Disk allocation Method, Disk Scheduling, Disk storage	L1, L2 and L3	7
<b>MODULE 5:</b>  <b>FILE SYSTEM AND PROTECTION AND SECURITY</b> File Concept, File Organization and Access Mechanism, File Directories, Basic file system, File Sharing, Allocation method, Free space management. Policy Mechanism, Authentication, Internal excess Authorization	L1 and L2	4

*\*Bloom's Level:*

### Catalog Description

The course provides a unified and fundamental view of the broad field of computer networks. The objective is to acquaint the students with the basics of networking. The world of computer networking is introduced in a top down Approach. A structured approach to explain how networks work from the inside out is being covered. In-depth application coverage includes email, the domain name system; the World Wide Web (both client- and server-side); and multimedia (including voice over IP).

### Course Objectives

The objective of this course is to

1. To provide an overview of data transmission and computer networks.
2. To familiarize with the basic taxonomy and terminology of computer networking area.
3. To equip with the knowledge of different protocols and different layers of computer networks.

### Course Outcomes

On completion of this course, the students will be able to

- CO1. Explain different concepts of data transmission and apply the knowledge of encoding techniques.
- CO2. Illustrate the concepts and applications of different data communication methods.
- CO3. Explain different concepts of computer networks and its layers.
- CO4: Compare and contrast different layers and protocols used at different layers.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1:</b> <b>Data Transmission</b> Analog and Digital transmission, transmission media, line configuration, data communications codes, error detection and correlation methods. Data encoding methods: analog to digital, digital to analog etc.	L1,L2 and L3	6
<b>Module 2:</b> <b>Data Communication Methods</b> Data communication interface, line control unit, UART, USRT, Serial interface, terminal types. SDLC, HDLC, Addressing Switched networks, circuit switching,	L1, L2, L3	7

packet switching, broadcast networks. IEEE 802 LAN Standards, framing, error control, flow control.		
<b>Module 3:</b> <b>Introduction to Computer Networking</b> Internet, Circuit switching vs Packet switching, Network Access and Physical Media, ISPs, Delay and Loss in Packet Switched Networks, Five Layer concept and their PDU's	L1, L2, L3	5
<b>Module 4:</b> <b>Application layer and Transport layer</b> Application Layer Protocols: Web and HTTP, FTP, SMTP, DNS, brief overview of socket Programming with TCP and UDP Multiplexing and Demultiplexing, UDP, Reliable Data Transfer, UDP segment structure, Reliable Data Transfer, TCP, TCP segment Structure, Basics of Congestion Control	L2, L3 and L4	7
<b>Module 5:</b> <b>Network Layer</b> Datagram and virtual circuit, link state routing, distance vector routing, Hierarchical Routing, IP, IPv4 Addressing, IPv6	L2, L3 and L4	4
<b>Module VI:</b> <b>Link Layer and Physical Layer</b> Services Provided, Error Detection and Correction, Multiple Access Protocols, TDM, FDM and CDMA, ALOHA, CSMA, LANs, Ethernet, Hubs, Bridges and Switches, Introduction to PPP The physical layer: Theoretical basis for data communication, transmission media, wireless transmission, telecom infrastructure, PSTN, communication satellites, mobile telephone system	L2, L3 and L4	7

### Catalog Description

Computer architecture is concerned with the structure and behavior of the various functional modules of the computer and how they interact to provide the processing needs of the user. It includes basic register transfer language and computer organization and design. Complete insight on the working of CPU, Memory and I/O communication will be provided. Pipelining and related topics will also be discussed.

### Course Objectives

The objective of this course is to

1. Equip the students with concepts of computer architectures and their modules.
2. Provide an overview of various algorithms used and hardware implementation computer.

### Course Outcomes

On completion of this course, the students will be able to

- CO1. Explain about Register transfer language and various micro operations of arithmetic logic unit.
- CO2. Explain about the organization of computer modules and their details.
- CO3. Explain in details of central processing unit like general purpose register, accumulator etc. and computer arithmetic.
- CO4. Explain memory organization of computer and their interconnections. Details of direct memory access.
- CO5. Explain parallel processing and pipeline techniques.

Modules	Blooms level*	Number of hours
<b>Module I: Register Transfer Language</b> Register Transfer, Bus and Memory Transfers, Arithmetic Micro-operations, Logic Micro-operations, Shift Micro-operations, Arithmetic Logic shift Unit.	L1, L2 and L3	10

### Catalog Description

In this course the concepts of fuzzy logic and genetic algorithm are discussed in detail. This course will provide an understanding of fuzzy logic and genetic algorithm and an outlook on the applications of these techniques to solve real world problems. It also provides an understanding of fuzzy-genetic based machine learning.

### Course Objectives

The objective of this course is to

1. Provide the student with the basic understanding of genetic algorithm and fuzzy logic fundamentals, program and design the related systems.
2. Equip the students with concepts of fuzzy logic based solutions.
3. Provide an overview of performance of genetic algorithm, simulated annealing and tabu search.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Develop the skills to gain a basic understanding of genetic algorithm and fuzzy logic theory.

CO2: Appreciate the learning and adaptation capability of neural and fuzzy systems.

CO3: Apply various operators to optimize. Perform mathematical calculation of the GA

CO4: Able to identify the present application areas of fuzzy logic and GA

CO5: Explain the working principle and compare the performance with other methods – Simulated annealing and Tabu search.

Modules	Blooms level*	Number of hours
<b>MODULE 1:</b>  Crisp sets: Overview, Fuzzy sets : Basic types and concepts, Characteristics and significance of paradigm shift, Fuzzy sets vs Crisp sets, Representation of fuzzy sets	L1, L2 and L3	8

<b>MODULE 2:</b>  Types of operations, Fuzzy complements, Fuzzy intersection: t-norms, Fuzzy union: t-conorms, Combination of operations, Aggregation operation, Fuzzy numbers, Linguistic variables, Arithmetic operations on intervals, Arithmetic operations on Fuzzy numbers, Lattice of Fuzzy numbers, Fuzzy equation.	L2, L3 and L6	10
<b>MODULE 3:</b>  General discussion, Fuzzy controller: Overview and example, Fuzzy systems and neural networks, Fuzzy neural network, Fuzzy automata. Pattern recognition in fuzzy logic, Database and information retrieval in fuzzy logic, decision making in fuzzy logic, engineering applications and fuzzy logic, Fuzzy logic in Medicine and Economics	L1, L3 and L4	10
<b>MODULE 4:</b>  Fundamentals of genetic algorithm: A brief history of evolutionary computation, biological terminology, search space encoding, reproduction elements of genetic algorithm genetic modelling, comparison of GA and traditional search methods. The Fundamental Theorem, Schema Processing at work, Two-armed and k-armed Bandit problem, The Building block hypothesis.	L1, L3 and L4	10
<b>MODULE 5:</b>  Genetic technology:- steady state algorithm, fitness scaling, inversion. Genetic programming:- Genetic Algorithm in problem solving, Implementing a Genetic Algorithm:- computer implementation, operator (reproduction, crossover and Mutation, Fitness Scaling, Coding, Discretization). Knowledge based techniques in Genetic Algorithm. Advanced operators and techniques in genetic search:-Dominance, Diploidy and Abeyance. Inversion and other reordering operators, Niche and speciation.	L3, L4 and L6	10
<b>MODULE 5:</b>  Genetic Algorithm in engineering and optimization-natural evolution – Simulated annealing and Tabu search -Genetic Algorithm in scientific models and theoretical foundations. Applications of Genetic based machine learning- Genetic Algorithm and parallel processors- composite laminates- constraint optimization- multilevel optimization- real life problem.	L3,L4,L6	05

# READING & COMPREHENSION

Course Code: CSS2351

L-T-P : 1-0-0

Credit Units: 01

## Course Objective:

To equip the participant with linguistic skills required in the field of science and technology while guiding them to excel in their academic field.

## Course Contents:

### Module I

Reading Comprehension

Summarizing

Paraphrasing

### Module II

Essay Writing

Dialogue Report

### Module III

Writing Emails

Brochure

Leaflets

### Module IV: Introduction to Phonetics

Vowels

Consonants

Accent and Rhythm

Accent Neutralization

Spoken English and Listening Practice

## Examination Scheme:

Components	CT1	CT2	CAF	V	GD	GP	A
Weightage (%)	20	20	25	10	10	10	5

CAF – Communication Assessment File

GD – Group Discussion

GP – Group Presentation

## Text & References:

- Effective English for Engineering Students, B Cauveri, Macmillan India
- Creative English for Communication, Krishnaswamy N, Macmillan
- A Textbook of English Phonetics, Balasubramanian T, Macmillan

# **PERSONALITY, NATIONALISM & HUMAN VALUES**

**Course Code: BEH2552**

**L-T-P : 1-0-0**

**Credit Units: 01**

# FRENCH – V

Course Code: LAN2551

L-T-P : 2-0-0

Credit Units: 02

## Course Objective:

To furnish some basic knowledge of French culture and civilization for understanding an authentic document and information relating to political and administrative life

## Course Contents:

Module D: pp. 131 – 156 Unités 10,11

**Contenu lexical: Unité 10:** Prendre des décisions

1. Faire des comparaisons
2. décrire un lieu, le temps, les gens, l'ambiance
3. rédiger une carte postale

**Unité 11: faire face aux problèmes**

1. Exposer un problème.
2. parler de la santé, de la maladie
3. interdire/demander/donner une autorisation
4. connaître la vie politique française

**Contenu grammatical:**

1. comparatif - comparer des qualités/ quantités/actions
2. supposition: Si + présent, futur
3. adverbe - caractériser une action
4. pronom "Y"

## Examination Scheme:

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	20	20	20	15	5

C – Project + Presentation

I – Interaction/Conversation Practice

## Text & References:

- le livre à suivre: Campus: Tome 1

# GERMAN - V

Course Code: LAN2552

L-T-P : 2-0-0

Credit Units: 02

## Course Objective:

To enable the students to converse, read and write in the language with the help of the basic rules of grammar, which will later help them to strengthen their language.

To give the students an insight into the culture, geography, political situation and economic opportunities available in Germany

Introduction to Advanced Grammar and Business Language and Professional Jargon

### Course Contents:

#### Module I: Genitive case

Genitive case – Explain the concept of possession in genitive  
Mentioning the structure of weak nouns

#### Module II: Genitive prepositions

Discuss the genitive prepositions and their usage: (während, wegen, statt, trotz)

#### Module III: Reflexive verbs

Verbs with accusative case  
Verbs with dative case  
Difference in usage in the two cases

#### Module IV: Verbs with fixed prepositions

Verbs with accusative case  
Verbs with dative case  
Difference in the usage of the two cases

#### Module V: Texts

A poem 'Maxi'  
A text Rocko

#### Module VI: Picture Description

Firstly recognize the persons or things in the picture and identify the situation depicted in the picture;  
Secondly answer questions of general meaning in context to the picture and also talk about the personal experiences which come to your mind upon seeing the picture.

### Examination Scheme:

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	20	20	20	15	5

C – Project + Presentation

I – Interaction/Conversation Practice

# SPANISH - V

Course Code: LAN2553

L-T-P : 2-0-0

Credit Units: 02

## Course Objective:

To enable students acquire working knowledge of the language; to give them vocabulary, grammar, voice modulations/intonations to handle everyday Spanish situations with ease.

## Course Contents:

### Module I

Revision of earlier semester modules

### Module II

Future Tense

### Module III

Presentations in English on  
Spanish speaking countries'

Culture

Sports

Food

People

Politics

Society

Geography

### Module IV

Situations:

En el hospital

En la comisaria

En la estacion de autobus/tren

En el banco/cambio

### Module V

General revision of Spanish language learnt so far.

## Examination Scheme:

**Credit Units: 02**

# CHINESE – V

Course Code: LAN2555

L-T-P : 2-0-0

Credit Units: 02

## Course Objective:

What English words come from Chinese? Some of the more common English words with Chinese roots are ginseng, silk, dim sum, fengshui, typhoon, yin and yang, T'ai chi, kung-fu. The course aims at familiarizing the student with the basic aspects of speaking ability of Mandarin, the language of Mainland China. The course aims at training students in practical skills and nurturing them to interact with a Chinese person.

## Course Contents:

### Module I

Drills

Dialogue practice

Observe picture and answer the question.

Pronunciation and intonation.

Character writing and stroke order

### Module II

Intonation

Chinese foods and tastes – tofu, chowmian, noodle, Beijing duck, rice, sweet, sour....etc. Learning to say phrases like – Chinese food, Western food, delicious, hot and spicy, sour, salty, tasteless, tender, nutritious, good for health, fish, shrimps, vegetables, cholesterol is not high, pizza, milk, vitamins, to be able to cook, to be used to, cook well, once a week, once a month, once a year, twice a week.....

Repetition of the grammar and verbs taught in the previous module and making dialogues using it.

Compliment of degree “de”.

### Module III

Grammar the complex sentence “suiran ... danshi....”

Comparison – It is colder today than it was yesterday.....etc.

The Expression “chule....yiwai”. (Besides)

Names of different animals.

Talking about Great Wall of China

Short stories

### Module IV

Use of “huozhe” and “haishi”

Is he/she married?

Going for a film with a friend.

Having a meal at the restaurant and ordering a meal.

### Module V

Shopping – Talking about a thing you have bought, how much money you spent on it? How many kinds were there? What did you think of others?

Talking about a day in your life using compliment of degree “de”. When you get up? When do you go for class?

Do you sleep early or late? How is Chinese? Do you enjoy your life in the hostel?

Making up a dialogue by asking question on the year, month, day and the days of the week and answer them.

ECE2601	VLSI DESIGN	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	3	0	0	0

Pre-requisites/Exposure	Basics of semiconductor and analog electronics
Co-requisites	Nil

### Catalog Description

This course deals with basic theories and techniques of digital VLSI design in CMOS technology. It covers the fundamental concepts and structures of designing digital VLSI systems which include CMOS devices and circuits, standard CMOS fabrication processes, CMOS design rules, static and dynamic logic structures, CMOS chip layout, simulation and testing, low power techniques, design tools and methodologies and Stick Diagrams.

### Course Objectives

The objective of this course is to

- Provide a deep understanding of the concepts, techniques and design of complex digital VLSI circuits.
- Apply mathematical methods and circuit analysis models to analyse CMOS digital circuits, and their logic components.

### Course Outcomes

On completion of this course, the students will be able to

CO1.Explain the characteristics of Basic VLSI components.

CO2. Apply the knowledge of various CMOS inverters to compare their performance.

CO3. To design and realize basic combinational and sequential functions using CMOS logic.

CO4. Design circuit Layout and Stick diagrams of CMOS logics.

Modules	Blooms level*	Number of hours
<b>Module I: Devices and the wire</b> Dynamic and transient behavior of Diode, Diffusion capacitance, SPICE Diode model, MOSFET basic, depletion and enhancement device.  MOSFET static behavior, Threshold voltage and its dependence on $V_{SB}$ MOSFET Operation in resistive and saturation region, channel length modulation, Velocity saturation and its impact on sub micron devices, sub threshold conduction, Model for manual analysis, Equivalent resistance for MOSFET in (velocity) saturated region, comparison of equations for PMOS and NMOS.  Dynamic behavior, Channel capacitance in different regions of operation, junction capacitance, Level 1 SPICE models for MOS	L1, L2	8

transistors.  The Wire, Interconnect parameters: resistance, capacitance and Inductance, Lumped RC model, Elmore Delay.		
<b>Module II: CMOS Inverter</b> VTC of an ideal inverter, Switching Model of the CMOS inverter: NMOS /PMOS discharge and charge, VTC of CMOS inverter : PMOS and NMOS operation in various regions including velocity saturation, Switching threshold, $(W/L)_p/(W/L)_n$ ratio for setting desired $V_M$ with and without velocity saturation, Noise Margins, buffer.  Ratioed logic: Pseudo NMOS inverter and PMOS to NMOS ratio for performance, tri-state inverter, Resistive load inverter.  Load Capacitance calculations: fan out capacitance, self capacitance calculations: Miller effect, wire capacitance; Improving delay calculation with input slope, Propagation delay: first order analysis, analysis from a design perspective, sizing a chain of inverters for minimum delay, choosing optimum number of stages, Power, Energy and Energy Delay: Dynamic power consumption, Static power, Glitches and power dissipation due to direct path currents, power and delay trade off, Transistor sizing for energy minimization.	L3, L4	8
<b>Module III: Combinational circuits</b>  CMOS LOGIC: Good 0 and Poor 0, series and parallel N and P switches, Two and Higher input NAND and NOR gates, Functions of the type $(AB+C(D+E))$ and their complements, XOR and XNOR gates, 2 input Multiplexer, Full Adder; Transistor sizing in CMOS logic for optimal delay, Pseudo NMOS NAND NOR and other gates and the transistor sizing, Introduction to DSVCL logic, CPL AND/NAND, OR/NOR, XOR/XNOR gates, Logical effort, Electrical Effort, Branching effort, Examples of sizing Combinational logic chains for minimum delay, Pass-transistor logic, pass gate configurations for NMOS and PMOS, 2 input and 4 input MUX, XOR, XNOR and implementation of general functions like $AB+AB*C+A*C^*$ , Robust and Efficient PTL Design, Delay of Transmission Gate chain.  Dynamic CMOS design: Pre-charge and Evaluation, charge leakage, bootstrapping, charge sharing, Cascading Dynamic Gates, DOMINO Logic, Optimization of Domino Logic Gates, simple example circuit implementations of DOMINO logic.	L2,L3,L4	10
<b>Module IV: Sequential Logic circuits</b> Principle of bistability, NAND and NOR based SR latch, and clocked SR Latch, JK latch, example of master slave flip flop, CMOS	L2,L3,L4	5

D latch, , MUX based Latches, master slave edge triggered register, Static Timing Analysis –setup, hold time, clock skew, clock period, non ideal clocks, clock overlap, C2MOS register, TSPCR Register, Schmitt Trigger, Pipelining and NORA CMOS		
<b>Module V: Layout Design Rules</b> Introduction to CMOS Process technology, Latch up and its prevention Layout of CMOS inverter, CMOS NAND and NOR gates, Concept of Euler path, and stick diagrams for functions like $(AB+E+CD)^*$ .	L2,L3,L4	5

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

<b>ECE2602</b>	<b>DIGITAL SIGNAL PROCESSING</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2019.1	Date of Approval: May 21, 2019	2	1	0	3
Pre-requisites/Exposure	Hands on knowledge of MATLAB Programming				
Co-requisites	Basic signals & Systems				

### Catalog Description

This course deals in Digital signal processing with significant skills in advance methods for modification, analysis, classification & sampling of signals. It provides the broad knowledge of design, and realization of digital signal processing systems. The problems based on transformation of domains and filter design will be focused on.

### Course Objectives

The objective of this course is to

1. Equip the students with concepts of signals and systems.
2. Provide in-depth knowledge of various transformations and filtering concepts.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Represent, analyze & categorize discrete-time signals and systems in time domain.

CO2: Apply the transformations to solve the problems related to computational complexity.

CO3: Explain the technique for conversion of real life signals to processing ready signals.

CO4: Design a digital filter with desired response and specifications.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1:</b>  <b>Discrete Time Signals And Systems In Time Domain</b> Classification of signal, signal processing operations, classification of systems, discrete time systems, examples of types of signal, sampling process, time domain characterization of LTI discrete- time systems, state space representation of LTI discrete time systems.	L1,L2 and L4	10
<b>Module 2:</b>  <b>Discrete Time Signals In Transform Domain</b> DTFT, properties, applications, inverse DTFT, DFT, properties, applications, inverse DFT, Z-transform, properties, applications, inverse Z-transform, frequency response, transfer function, Fast Fourier transform algorithms: DIT algorithm, DIF algorithm.	L2,L3	16

<b>Module 3:</b>		
<b>Discrete Time Processing Of Continuous Time Signals</b> Discrete time processing of continuous time signal sampling, analog filter design, anti-aliasing filter design	L2,L4 and L5	10
<b>Module 4:</b>		
<b>Discrete Time Processing Of Discrete- Time Signals</b> Digital filters: Digital filter structure: FIR filter structure, IIR filter structure Digital filter design: Impulse invariance method, bilinear transform method of IIR filter design, FIR filter design.	L2,L3 and L5	12

ECE2615	<b>ANTENNA AND MICROWAVE ENGINEERING</b>	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	3	0	0	3
Pre-requisites/Exposure	Basic Electronics and Electromagnetic Theory				
Co-requisites	Nil				

### Catalog Description

The basic objective of this course is to provide the core knowledge of antenna and wave propagation. The course also focuses on measurements of the antenna parameters. Microwaves are important when we are going to the high frequency regime. By studying this course students will be able to know about the microwave components and devices,

microwave generators and their characteristics, microwave applications and measurement. Also, they will be familiar about the rectangular and circular waveguides, their equations and the modes existing in these waveguides.

## Course Objectives

The objective of this course is to

1. Provide the basic knowledge of antenna fundamentals and Equip with the understanding various antenna types and measurements of antenna parameters .
2. Provide the fundamental knowledge of microwave frequencies, behavior of circuits at high frequencies and waveguides.
3. Provide the knowledge about microwave components and tubes.

## Course Outcomes

On completion of this course, the students will be able to

CO1: Explain the antenna working principle, its parameters and use of arrays for improving them.

CO2: Describe the design equations of the practical antennas and their applications and Explain measurement methods of the antenna parameters.

CO3: Describe the microwave frequencies and behavior of circuits at high frequencies and waveguides.

CO4: Describe and analysis of rectangular and circular waveguides and Categorize various microwave components and describe them on basis of their parameters.

Modules	Blooms level*	Number of hours
<b>MODULE I: ANTENNA</b>  Antenna Principles: Potential Functions & Electromagnetic Field, Current Elements, Radiation from Monopole & Half Wave Dipole, power radiated by current element, radiation resistance. Directional Properties of Dipole Antenna. Antenna parameters: Radiation intensity, Radiation pattern, beam area, beam efficiency Antenna Gain, Directivity, Effective Area, Antenna Efficiency, Antenna Terminal Impedance, Antenna Temperature and Signal to Noise Ratio.	L1 and L2	9
<b>MODULE II: PRACTICAL ANTENNAS &amp; MEASUREMENTS</b> Antennas Arrays: Two Element Array, Horizontal Patterns in Broadcast Arrays, Linear Arrays, Multiplication of patterns,  Practical Antenna, their principle, geometrical equations, parameters & applications : Loop Antennas, Yagi-Uda array: Parabolic Reflectors, Horn Antenna, Log periodic antenna, spiral antenna, Microstrip	L1, L2 and L3	10

antennas.  Measurements: Radiation Pattern measurement, Gain Measurement: Comparison method, Near field method, Polarization measurement.		
MODULE III: WAVE PROPAGATION Modes of Propagation, Plane Earth Reflection, Space wave and Surface Wave, Reflection and refraction waves by the Ionosphere Tropospheric Wave. Ionosphere Wave Propagation in the Ionosphere, Virtual Height, MUF Critical frequency, Skip Distance, Duct Propagation, Space wave	L1, L2 and L3	10
MODULE IV: MICROWAVE & WAVEGUIDES  Microwave frequencies, standard frequency bands, behaviour of circuits at conventional and microwave frequencies, microwave application.  Overview of guided waves, TE, TM and TEM modes, rectangular and cylindrical wave guide resonators, choice of the type of waveguide	L1, L2 and L3	9
MODULE V: MICROWAVE COMPONENTS AND DEVICES  Scattering matrix and its properties, coupling probes, coupling loops, windows, waveguide tuners, termination, E-plane Tee, H-plane Tee, Magic Tee, Phase-Shifter, attenuators, Directional Coupler, Gunn diode, Resonator and circulators, IMPATT and TRAPATT  Microwave tubes: Transit-time effect, limitations of conventional tubes, Two-cavity and multi-cavity Klystrons, Reflex Klystron, TWT and Magnetrons.	L1, L2 and L3, L4	10

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

### **Catalog Description**

Antennas are used to transmit electromagnetic energy and Microwaves are important when we are going to the high frequency regime. By studying this course students will be able to understand antenna design parameters and know about the microwave components and devices, microwave generators and their characteristics, microwave applications and measurement.

### **Course Objectives**

The objective of this course is to

1. Provide knowledge about Radiation phenomena and pattern and characteristics of different types of antennas.
2. Provide the fundamental knowledge of microwave frequencies and components of microwave bench.
3. Provide the knowledge about microwave components, tunes and oscillators.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: Analyze the radiation mechanisms of antennas and Demonstrate knowledge of antennas in communication systems.

CO2: Describe the characteristics of microwave oscillators and Explain and study the working of the various microwave tees.

CO3: Analyse microwave frequency signal and Categorize various microwave components and study their operations.

### Course Content

Experiments	Blooms level*	Number of hours
1. To study and design dipole antenna, horn antenna and yadi uda antenna in Simulation software like ANSYS HFSS. 2. To design a rectangular microstrip patch antenna in Simulation software and draw its hardware on LPKF Protomat PCB machine.	L1 L2 and L3	4
1. To measure frequency and guided wavelength of a microwave signal. 2. To measure the impedance of a given load. 3. To measure various parameters of a directional coupler.	L1 L2 and L3	3
1. To study the characteristic and functions of an isolator. 2. To study and simulate the characteristic and functions of a circulator. 3. To study and simulate the characteristic and functions of various tees.	L1 L2 and L3	3
1. To study the characteristics of reflex klystron. 2. To study the characteristic of Gunn diode.	L1 L2 and L3	2

<b>ECE 2605</b>	<b>VLSI DESIGN LAB</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2019.1	Date of Approval: May 21, 2019	0	0	2	1
Pre-requisites/Exposure	Hands on knowledge of analog electronics				
Co-requisites	Basic concepts of Digital electronics				

## Catalog Description

In this Lab course the designing of VLSI circuits using Mentor Graphics software are implemented and demonstrated. Concepts covered would enable them to create complex applications related to VLSI design. The objective of this course is to explore and implement the various features of VLSI design and analyze the dc and transient analysis.

## Course Objectives

The objective of this course is to

Provide a deep understanding of CMOS logic using Mentor Graphics tool.

Analyze, design concepts of different combinational and sequential circuits and their simulation.

## Course Outcomes

On completion of this course, the students will be able to

CO 1: Demonstrate the basic concept of MOSFET;

CO 2: Illustrate the static and switching characteristics of inverters using CMOS with varying capacitance, width and channel Length of CMOS using Mentor Graphics tool.

CO 3: Demonstrate and create models of moderately sized CMOS circuits that realize specified digital functions using Mentor graphics Tool.

CO 4: Demonstrate the layout and stick diagrams using Mentor graphics Tool.

CO 5: Demonstrate the power consumption during transient analysis.

<b>Modules/Topics Covered**</b>	<b>Blooms level*</b>	<b>Number of hours</b>
1. MOSFET characteristics with varying VGS for both pmos and nmos.	L3, L5	2
2. Effect on VTC of CMOS inverter with variation of W and L.	L3, L5	2
3. Transient analysis of CMOS inverter with varying capacitive load, W and L. Rise time, fall time power dissipation, propagation delay calculation of CMOS inverter with the variation of capacitive load, W and L.	L3, L5	4
4. NOR and NAND gate - Transient analysis	L3, L5	2
5. XOR/XNOR gate - Transient analysis	L3, L5	2
6. 2:1 MUX and XOR gate with P.T.L.- Transient analysis	L3, L5	2

7. D type latch and flip flop - Transient analysis	L3, L5	2
8. 3 input NAND gate implementation with DOMINO (precharge and evaluation).	L3, L5	2
9. 4 inverter chain to derive capacitive load.	L3, L5	2

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

<b>ECE 2609</b>	<b>DIGITAL SIGNAL PROCESSING LAB</b>	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	0	0	2	1
Pre-requisites/Exposure	Basics of MATLAB				
Co-requisites					

## Catalog Description

Signal processing has become an important tool for research and investigation in many areas of science and engineering. This course is designed to provide the students an understanding of the basic concepts of digital signal processing and various techniques used in it. Students will perform practical on MATLAB to demonstrate the theoretical concepts of the subject.

## Course Objectives

The objective of this course is to

1. Make students demonstrate the basic concepts of digital signal processing.
2. Design filters and determine its coefficients.

## Course Outcomes

On completion of this course, the students will be able to

CO1. Practically apply the theoretical concepts of digital signal processing.

CO2. Design analog and digital filters using different techniques.

CO3. Verify FFT algorithm in decimation in time and decimation in frequency domain.

Modules	Blooms level*	Number of hours
<b>Lab Session 1</b>  1. To generate unit step sequence, exponential sequence and sinusoidal sequence. 2. To determine convolution of two given sequences. 3. To compute DFT and IDFT of a given sequence. 4. To determine the circular convolution of two given sequences. 5. To determine z and inverse z transform of a given sequence	L3	4
<b>Lab Session 2</b>  6. To design various analog filters. 7. To design FIR filter using Hamming window. 8. To convert Analog filter into Digital Filter using bilinear transformation. 9. To plot the frequency response of an FIR system	L3 and L4	4
<b>Lab Session 3</b>  10. To verify 8 points FFT algorithm in decimation in time (DIT)	L3 and L4	4

&decimation in frequency (DIF). 11. To determine the filter coefficient using Ramez exchange algorithm. 12. To design an IIR digital filter and its parallel realization.

<b>ECE2637</b>	<b>MINOR PROJECT</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version : 2019.1	Date of Approval: May 21, 2019	0	0	4	2
Pre-requisites/Exposure	Basics of Electronics and Communication				
Co-requisites	Nil				

## Catalog Description

Minor Project is a professional problem-solving activity included in the curriculum. It provides exposure to research methodology, practical skill enhancement and an opportunity to work closely with latest technology for development of solution of real-world problems. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation. This course develops attributes like intellectual ability, professional judgment and decision-making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility.

## Course Objectives

The objective of this course is to

1. Equip the students with concepts of new technologies and practical exposure
2. Provide an overview of presentation and preparation of report

## Course Outcomes

On completion of this course, the students will be able to

CO1: Study the literature and identify the problem statement

CO2: Work on a real world problem and solve it using latest technology

CO3: Prepare a brief report of the project

CO4: Present and explain the project for evaluation

Modes of Evaluation: Quiz/Assignment/ Seminar/Written Examination

<b>ECE2607</b>	<b>ADVANCED JAVA PROGRAMMING</b>	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	2	0	0	2
Pre-requisites/Exposure	Basics of Java Programming				
Co-requisites	NIL				

### Catalog Description

In this course the advanced features of contemporary java are discussed in detail. Concepts covered would enable them to handle complex programs relating to managing data and processes over the network. Discussion will be on relating to concepts of remote method invocation to working with swings architecture. Further practical implementation of database connectivity and using them in servlet and jsp based applications will be made.

### Course Objectives

The objective of this course is to

1. Equip the students with the advanced feature of contemporary java required in solving complex problems.
2. Provide a practical knowhow and implementation of advanced java programming concepts like database programming with servlets and jsp.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Define and explain concept of an Remote method invocation application, demonstrate swing based application developed using concepts of remote method invocation

CO2: Distinguish between various java and open database connectivity drivers and able to solve complex programming problems involving database interaction.

CO3: Describe servlet and its lifecycle, along with demonstrate and design solutions for some complex dynamic web applications using servlets.

CO4: Explain jsp scripting and Differentiate between processing of servlets and jsp scripting pages. Apply knowledge of servlets and jsp scripting to create some new dynamic web applications.

CO5: Explain the architecture of Model View Controller and struts. Demonstrate applications based on java beans and struts.

Modules	Blooms level*	Number of hours
<b>MODULE 1:</b>  <b>DISTRIBUTED COMPUTING</b> Introduction to Java RMI, RMI services, RMI client, Running client and server, Introduction of Swing, Swing Components, Look and Feel for Swing Components, Introduction to Multimedia Programming.	L1, L2 and L3	6
<b>MODULE 2:</b>  <b>DATABASE CONNECTIVITY</b> ODBC and JDBC Drivers, Connecting to Database with the java.sql Package, Using JDBC Terminology, JDBC with mysql, postgresql.	L2 and L3	7
<b>MODULE 3:</b>  <b>SERVLET PROGRAMMING</b> Introduction to Servlets, Servlet Life Cycle, Servlet based	L2, L3 and L5	8

Applications, Servlet and HTML.Filters, jdbc with servelets, session Management techniques in detail.		
<b>MODULE 4:</b> <b>JSP PROGRAMMING</b> JSP: Introduction to JSP, JSP implicit objects, JSP based Applications, Java. Net. Login & Logout Example, jdbc with jsp.	L2, L3, L4 and L5	8
<b>MODULE 5:</b> <b>J2EE WEB APPLICATION</b> The Model-View-Controller Architecture What is Struts, Struts Tags, Creating Beans, Other Bean Tags, Bean Output, Creating HTML Forms, The Action Form class The Action class, Simple Struts: a simple Struts application; Introduction to EJB.	L2 and L3	7

Pre-requisites/Exposure	Basics of Java and Advanced Java Programming				
Co-requisites	NIL				

### Catalog Description

In this Lab course the advanced features of contemporary java are implemented and demonstrated. Concepts covered would enable them to create complex applications related to data management. Problems or programs will be related to concepts of remote method invocation, swings, servlets, jsp and java beans.

### Course Objectives

The objective of this course is to

1. Make the students apply knowledge of various advanced java features required in solving complex problems.
2. Provide a demonstration of advanced java programming concepts like database programming with servlets, jsp and creating java beans.

## Course Outcomes

On completion of this course, the students will be able to

CO1: Apply the knowledge of swings architecture and remote method invocation used to provide solution to distributed computing problems

CO2: Demonstrate the use of JDBC connectivity along with swings based architecture, thereby handling data management.

CO3: Apply the knowledge of servlets and server programming to construct dynamic web applications using web servers.

CO4: Demonstrate the differences between creating and deploying dynamic web applications using jsp concepts and servlets.

CO5: Demonstrate usage of applications involving java beans and jdbc programming to handle data management.

<b>Modules/Topics Covered**</b>	<b>Blooms level*</b>	<b>Number of hours</b>
1. Sample Programs using swings architecture and remote method invocation  (a) Write a program using swings creating tabbed panes and menu over a frame and handle their associated events  (b) Write a program using swings List control containing list of cities, allowing the user to choose any one of them and display using event handing.  (c) Demonstrate an application showcasing the use of remote method invocation(RMI) for designing a distributed application.  (d) Create an application using concepts of RMI to depict a client server based interaction.	L3, L5	6
2.Sample Programs using JDBC and swings  (a) Create an application demonstrating the use of swings, having a menu over a frame and jdbc programming to perform insert and select operations by handling menu related events.  (b) Create an application using swings, having a design providing features for iterating over a dataset performing operations like forward, backward, start and end with help of jdbc programming.	L3, L5	4
(c) Sample Programs using servlets with jdbc, html and swings 3. Create an application using servlets to perform redirection based	L3, L5	6

<p>on validating user data entered through a web form.</p> <p>4. Design an application to fetch data from database using servlets and display it using its post method.</p> <p>5. Demonstrate the process of writing cookies using a servlet and display a message after writing.</p> <p>6. Write a program to create a session object for the username fetched from user using a servlet, further access that session value on another servlet invoked by redirection.</p>		
<p>7. Sample Programs using JSP with jdbc, html and swings</p> <p>(a) Write a program using jsp to demonstrate the features of jsp elements used to declare, define and display sum of two integers.</p> <p>(b) Create an application using jsp to calculate and display the greatest out of two integers using if else statements. Integer numbers should be entered using a web form.</p> <p>(c) Demonstrate with a jsp program mechanism to retrieve checkbox data accessed using multiple value parameters fetching approach.</p> <p>(d) Write a program to demonstrate the use of jsp forward action tag used with parameters and processed using another jsp page.</p>	L3, L5	6
<p>8. Sample Programs using jsp, java beans and swings</p> <p>(a) Demonstrate the use of jsp include action tag for including an html and another jsp page in initial jsp resource.</p> <p>(b) Write a program creating Java bean class and setting its properties using required jsp action tags. Output should also display the retrieved property values.</p>	L3, L5	2

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

Version 2019.1	Date of Approval: May 21, 2019	3	0	0	3
Pre-requisites/Exposure	Circuit Theory				
Co-requisites	Nil				

### Catalog Description

This course covers the fundamentals of IoT systems with emphasis on translating theoretical bases into practical network design and technologies. It covers the bigger picture of IoT systems with a focus on wireless IoT technologies, network design, system architecture, Overview of Wireless Sensor Networks and Communication Protocols.

### Course Objective:

The objective of this course is to

Introduction and description of core concepts of IoT, role and scope of smart sensors for insuring convergence of Technologies and multidisciplinary engineering practices, Machine Intelligence Quotient.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Introduction and description of core concepts of IoT, role and scope.

CO2: Architecture and Design Principles of internet network for IoT based system applications.

CO3: Introduction to physical devices used in IoT based systems.

CO4: Recognize upcoming challenges in Sensor Networks.

CO5: To identify communication protocols employed in WSNs.

### Course Contents:

Modules	Blooms level*	Number of hours
<b>Module 1 Overview of Internet of Things</b> IoT Conceptual Framework, IoT Architectural View, Technology Behind IoT, Sources of IoT,M2M communication, Examples of IoT. Modified OSI Model for the IoT/M2M Systems, data enrichment, data consolidation and device management at IoT/M2M Gateway, web communication protocols used by connected IoT/M2M devices, Message communication protocols (CoAP-SMS, CoAP-MQ, MQTT,XMPP) for IoT/M2M devices.	L1 and L2	8

<b>Module-2 Architecture and Design Principles for IoT</b>  Internet connectivity, Internet-based communication, IPv4, IPv6, 6LoWPAN protocol, IP Addressing in the IoT, Application layer protocols: HTTP, HTTPS, FTP, TELNET and ports  Data Collection, Storage and Computing using a Cloud Platform: Introduction, Cloud computing paradigm for data collection, storage and computing, Cloud service models, IoT Cloud- based data collection, storage and computing services using Nimbits.	L2 and L3	10
<b>Module-3: IoT Physical Devices and Endpoints</b>  Arduino UNO: Introduction to Arduino, Arduino UNO, Installing the Software, Fundamentals of Arduino Programming. IoT Physical Devices and Endpoints  RaspberryPi: Introduction to RaspberryPi, About the RaspberryPi Board: Hardware Layout, Operating Systems on RaspberryPi, Configuring RaspberryPi, Programming RaspberryPi with Python, Wireless Temperature Monitoring System Using Pi, DS18B20 Temperature Sensor, Connecting Raspberry Pi via SSH, Accessing Temperature from DS18B20 sensors, Remote access to RaspberryPi, Smart and Connected Cities, An IoT Strategy for Smarter Cities, Smart City IoT Architecture, Smart City Security Architecture, Smart City Use-Case Examples.	L2 and L4	10
<b>Module-4 Overview of Wireless Sensor Networks</b>  Challenges for Wireless Sensor Networks, Enabling Technologies for Wireless Sensor Networks.  Architectures: Single-Node Architecture - Hardware Components, Energy Consumption of Sensor Nodes, Operating Systems and Execution Environments, Network Architecture-Sensor Network Scenarios, Optimization Goals and Figures of Merit, Design principles for WSNs, Service interfaces of WSNs Gateway Concepts.	L3 and L4	10
<b>Module-5 Communication Protocols:</b>  Physical Layer and Transceiver Design Considerations, MAC Protocols for Wireless Sensor Networks, Low Duty Cycle Protocols And Wakeup Concepts - S-MAC , The Mediation Device Protocol, Wakeup Radio Concepts, Contention based protocols (CSMA, PAMAS), Schedule based protocols (LEACH, SMACS, TRAMA) Address and Name Management in WSNs, Assignment of MAC Addresses, Routing Protocols- Energy-Efficient Routing, Geographic Routing, Hierarchical networks by clustering.	L1 and L2	10

ECE2618	Data Mining	L	T	P	C
Version 2019.1	Date of Approval: 14 July 2019	3	0	0	3
Pre-requisites/Exposure	Concept of Database and Data Mining				
Co-requisites	Nil				

#### Catalog Description

Data Mining serve as one of the most important courses for postgraduate students, since it builds computational abilities, inferential thinking, and practical skills for tackling core data scientific challenges. The students will get a comprehensive understanding of different data mining techniques that can be used for prediction and for discovering patterns, be prepared to select the right technique for a given data problem and will be able to create a general-purpose analytic process.

### Course Objectives

The objective of this course is to

- Provide students with an in-depth knowledge of data mining. To introduce students to basic applications, concepts, and techniques of data mining.
- Develop skills for using recent data mining software to solve practical problems and prediction in a variety of disciplines and
- Gain experience doing independent study and research.

### Course Outcomes

On completion of this course, the students will be able to

CO 1: Explain concepts of Data mining, predictive analytics and analyses architecture of data mining. Differentiate between supervised and unsupervised methods

CO 2: Apply classification techniques on different data sets and solve cost –benefit analysis numerical. Analyze decision tree methods.

CO 3: Implement various clustering algorithm on different data sets and describe these algorithms.

CO 4: Prepare data representation for market basket analysis and determine the usefulness of association rules. Interpret supervised and unsupervised learning methods.

CO 5: Predict market trends and outline different factors associated mail marketing.

### Course Content

Modules	Bloom's level	Number of Hours
<b>Module I Data Preparation</b> An introduction to data mining and predictive analytics, Data Pre-processing Exploratory Data Analysis, Dimension- Reduction Methods.	L1, L2	8
<b>Module II Classification</b> k- Nearest Neighbour Algorithm, Decision Trees, Model Evaluation Technique, Cost –Benefit Analysis Using Data Driven Cost.	L1, L2, L3	7
<b>Module III Clustering</b> Hierarchical and k- Means Clustering, Kohonen Networks, Birch Clustering, Measuring Cluster Goodness.	L1, L2, L3,L4	8

<b>Module IV Association Rules</b> Affinity Analysis and Market Basket Analysis, Data Representation for Market Basket Analysis, Support, Confidence, Frequent Item sets, and the a Priori Property, How Does a Priori Algorithm Work? Generating Frequent Item sets, Generating Association Rules, Extension from Flag Data to General Categorical Data, Information-Theoretic Approach: Generalized Rule Induction Method, J-Measure, Association Rules are Easy to do Badly, how can we Measure the Usefulness of Association Rules? Do Association Rules Represent Supervised or Unsupervised Learning?	<b>L1, L2, L3, L6</b>	<b>9</b>
<b>Module IV Case Study: Predicting Response to Direct Mail Marketing</b> Business Understanding, Data Preparation, and Eda, Clustering and Principal Components Analysis, Modelling and Evaluation for Performance and Interpretability, Modelling and Evaluation for High Performance.	<b>L2, L3, L4, L5</b>	<b>8</b>

**\*Bloom's Level:**

*L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation*

ECE2613	<b>Embedded System</b>	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	2	0	0	2
Pre-requisites/Exposure	Hands on knowledge of Microcontrollers, their interfacing, and programing, and Embedded Systems				
Co-requisites					

### Course Description:

The syllabus is divided into two parts, the first one deals with 8051 architecture and its interfacing with other devices. Second part of the syllabus deals with the basic embedded system and it's design. This course will provide an introduction of the basic concepts of embedded systems design, RTOSs, various types of microcontrollers, communication with 8051 microcontroller, RS 232, analog-digital interface, and A/D and D/A conversions. This course also provides the knowledge of C-language programming for microcontrollers. The syllabus makes student perfect in assembly language programming, addressing modes etc. apart from it input-output programming is discussed in detail. In the second part Embedded systems and it's application is discussed. Real Time Operating System is also explained at length. 8051 C programming is also incorporated in the syllabus.

### Course Objectives:

The objective of this course is to;

1. Provide the basic knowledge of introduction to an embedded systems design and RTOS, OS Services, I/O Subsystems, Interrupt Routines in RTOS Environment, RTOS Task Scheduling model.
2. Equip with the understanding of various types of microcontrollers, arithmetic instructions and programs, and several application based programing.
3. Equip with the understanding of basics of communication, overview of RS-232, I2C Bus, UART, USB, IEEE 488 (GPIB), and analog-digital interfacing.
4. Provide the basic knowledge of 8051 C, 8051 memory constitution, Data interface, and A/D and D/A conversions.
5. Provide the knowledge of advance microcontrollers, PIC microcontrollers, AVR microcontrollers, and ARM microcontrollers.

### Course Outcomes:

On completion of this course, the students will be able to:

CO1: Explain the design of embedded systems and RTOS, and RTOS Task Scheduling model.

CO2: Describe the fundamentals of various types of microcontrollers, and their several applications based programing.

CO3: Describe fundamentals of communication of 8051 microcontroller, RS-232, I2C Bus, 8051 C, 8051, analog-digital interfacing, and A/D and D/A conversions.

CO4: Explain the fundamentals of advance microcontrollers, PIC microcontrollers, AVR microcontrollers, and ARM microcontrollers.

Modules	Blooms level*	Number of hours
---------	---------------	-----------------

<p><b>Module1:</b></p> <p><b>Introduction to an embedded systems design &amp; RTOS</b>  Introduction to Embedded system, Processor in the System, Microcontroller, Memory Devices, Embedded System Project Management, ESD and Co-design issues in System development Process, Design cycle in the development phase for an embedded system, Use of target system or its emulator and In-circuit emulator, Use of software tools for development of an ES. Inter-process Communication and Synchronization of Processes, Tasks and Threads, Problem of Sharing Data by Multiple Tasks, Real Time Operating Systems: OS Services, I/O Subsystems, Interrupt Routines in RTOS Environment, RTOS Task Scheduling model, Interrupt Latency and Response times of the tasks.</p>	L1, L2, L3, and L4	8
<p><b>Module 2:</b></p> <p><b>Overview of Microcontroller</b>  Microcontroller and Embedded Processors, Overview of 8051 Microcontroller family: Architecture, basic assembly language programming concepts, The program Counter and ROM Spaces in the 8051, Data types, 8051 Flag Bits and PSW Register, 8051 Register Banks and Stack Instruction set, Loop and Jump Instructions, Call Instructions, Time delay generations and calculations, I/O port programming Addressing Modes, accessing memory using various addressing modes, Arithmetic instructions and programs, Logical instructions, BCD and ASCII application programs, Single-bit instruction programming, Reading input pins vs. port Latch, Programming of 8051 Timers, Counter Programming.</p>	L1, L2, L3, and L4	8
<p><b>Module 3:</b></p> <p>Communication with 8051  Basics of Communication, Overview of RS-232, I2C Bus, UART, USB, IEEE 488 (GPIB). Parallel input output applications. (Stepper motor Sequencer program, Strobed input/output). Interrupt driven applications (real time clock, serial input/output with interrupt). Analog-digital interfacing (Pulse width modulator, 8-bit ADC).</p>	L1, L2, L3, and L5	7
<p><b>Module 4:</b></p> <p>8051 C Programming  Introduction to 8051 C, 8051 memory constitution, Constants, variables and data types. Arrays structures and unions, pointers, Loops and decisions, Functions, Modules and programs, Data interface, Timer control, Interrupt operations, Digital operations, A/D and D/A conversions.</p>	L1, L2 L3, and L5	7

<b>ECE 2614</b>	<b>EMBEDDED SYSTEM LAB</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2019.1	Date of Approval: May 21, 2019	0	0	2	1
Pre-requisites/Exposure	Basics of Microcontroller (8051), its programing and interfacing				
Co-requisites					

### **Course Description:**

This course will provide the practical introduction of microcontroller 8051, its interfacing and programming for various applications, and also designing of microcontrollers.

### **Course Objectives:**

The objective of this course is to;

1. Provide the practical knowledge of microcontrollers (specially 8051), and its interfacing and programming.
2. Equip with the understanding of designing of a model of microcontroller.
3. Equip with understanding of parallel data communication, interfacing microcontroller with a LCD.

### **Course Outcomes:**

On completion of this laboratory course work, the students will be able to:

CO1: Explain the interfacing of microcontroller 8051, and its programming for several applications.

CO2: Describe the fundamentals of design of microcontroller model, and their several applications based programing.

CO3: Describe fundamentals of parallel data communication by interfacing microcontroller (8051) with a LCD.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
----------------	----------------------	------------------------

<b>Lab Session 1</b>  13. Write a program to add two 8-bit numbers using microcontroller 8051. 14. Write a program to multiply two 8-bit numbers using microcontroller 8051.	L1 and L3	2
<b>Lab Session 2</b>  15. Write a program to divide two 8-bit numbers using microcontroller 8051. 16. Write a program to subtract two 8-bit numbers using microcontroller 8051.	L1, L3, and L4	2
<b>Lab Session 3</b>  17. Write a program to generate a geometric progression using microcontroller 8051. 18. Write a program to generate a square wave using microcontroller 8051.	L1, L3, and L4	4
<b>Lab Session 4</b>  19. Write a program to generate a delay of 5 ms using microcontroller 8051. 20. Study and implement serial communication by interfacing microcontroller with a computer.	L1, L3, and L4	2
<b>Lab Session 5</b>  9. Study and implement parallel data communication by interfacing microcontroller with a LCD. 10. Study of temperature measurement.	L1, L3, and L4	2
<b>Lab Session 5</b>  *Student has to submit working model based on 8051 and its interfaces.	L1, L3, and L4	2

*\*Bloom's Level:*

# CORPORATE COMMUNICATION

Course Code: CSS2451

L-T-P : 1-0-0

Credit Units: 01

## Course Objective:

To enhance the skills needed to work in an English-speaking global business environment.

## Course Contents:

### Module I: Business/Technical Language Development

Advanced Grammar: Syntax, Tenses, Voices

Advanced Vocabulary skills: Jargons, Terminology, Colloquialism

Individualised pronunciation practice

### Module II: Social Communication

Building relationships through Communication, Communication, Culture and Context, Entertainment and Communication, Informal business/ Technical Communication

### Module III: Business Communication

Reading Business/ Technical press, Listening to Business/ Technical reports (TV, radio)

Researching for Business /Technology

### Module IV: Presentations

Planning and getting started, Design and layout of presentation

Information Packaging, Making the Presentation

## Examination Scheme:

Components	CT1	CT2	CAF	V	GD	GP	A
Weightage (%)	20	20	25	10	10	10	5

CAF – Communication Assessment File

GD – Group Discussion

GP – Group Presentation

## Text & References:

# INTERPERSONAL COMMUNICATION

Course Code: BHE2652

L-T-P : 1-0-0

Credit Units: 01

## Course Objective:

This course provides practical guidance on  
Enhancing personal effectiveness and performance through effective interpersonal communication  
Enhancing their conflict management and negotiation skills

## Course Contents:

### Module I: Interpersonal Communication: An Introduction

Importance of Interpersonal Communication  
Types – Self and Other Oriented  
Rapport Building – NLP, Communication Mode  
Steps to improve Interpersonal Communication

### Module II: Behavioural Communication

Meaning and Nature of behavioural communication  
Persuasion, Influence, Listening and Questioning  
Guidelines for developing Human Communication skills  
Relevance of Behavioural Communication for personal and professional development

### Module III: Interpersonal Styles

Transactional Analysis  
Life Position/Script Analysis  
Games Analysis  
Interactional and Transactional Styles

### Module IV: Conflict Management

Meaning and nature of conflicts  
Styles and techniques of conflict management  
Conflict management and interpersonal communication

### Module V: Negotiation Skills

Meaning and Negotiation approaches (Traditional and Contemporary)  
Process and strategies of negotiations  
Negotiation and interpersonal communication

### Module VI: End-of-Semester Appraisal

#### Viva based on personal journal

#### Assessment of Behavioural change as a result of training

Exit Level Rating by Self and Observer

## Examination Scheme:

Components	SAP	A	Mid Term Test (CT)	VIVA	Journal for Success (JOS)
Weightage (%)	20	05	20	30	25

# FRENCH - VI

Course Code: LAN2651

L-T-P : 2-0-0

Credit Units: 02

## Course Objective:

To strengthen the language of the students both in oral and written so that they can:

- i) express their sentiments, emotions and opinions, reacting to information, situations;
- ii) narrate incidents, events;
- iii) perform certain simple communicative tasks.

## Course Contents:

Module D: pp. 157 – 168 – Unité 12

### Unité 12: s'évader

1. présenter, caractériser, définir
2. parler de livres, de lectures
3. préparer et organiser un voyage
4. exprimer des sentiments et des opinions
5. téléphoner
6. faire une réservation

## Contenu grammatical:

1. proposition relative avec pronom relatif "qui", "que", "où" - pour caractériser
2. faire + verbe

## Examination Scheme:

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	20	20	20	15	5

C – Project + Presentation

I – Interaction/Conversation Practice

## Text & References:

- le livre à suivre: Campus: Tome 1

## Course Objective:

**To enable the students to converse, read and write in the language with the help of the basic rules of grammar, which will later help them to strengthen their language.**

To give the students an insight into the culture, geography, political situation and economic opportunities available in Germany

Introduction to Advanced Grammar and Business Language and Professional Jargon

### **Course Contents:**

#### **Module I: Adjective endings**

Adjective endings in all the four cases discussed so far

Definite and indefinite articles

Cases without article

#### **Module II: Comparative adverbs**

Comparative adverbs as and like

#### **Module III: Compound words**

To learn the structure of compound words and the correct article which they take

Exploring the possibility of compound words in German

#### **Module IV: Infinitive sentence**

Special usage of 'to' sentences called zu+ infinitive sentences

#### **Module V: Texts**

A Dialogue: 'Ein schwieriger Gast'

A text: 'Abgeschlossene Vergangenheit'

#### **Module VI: Comprehension texts**

Reading and comprehending various texts to consolidate the usage of the constructions learnt so far in this semester.

#### **Module VII: Picture Description**

Firstly recognize the persons or things in the picture and identify the situation depicted in the picture;

Secondly answer questions of general meaning in context to the picture and also talk about the personal experiences which come to your mind upon seeing the picture.

### **Examination Scheme:**

<b>Components</b>	<b>CT1</b>	<b>CT2</b>	<b>C</b>	<b>I</b>	<b>V</b>	<b>A</b>
<b>Weightage (%)</b>	20	20	20	20	15	5

C – Project + Presentation

I – Interaction/Conversation Practice

# SPANISH – VI

Course Code: LAN2653

L-T-P : 2-0-0

Credit Units: 02

## Course Objective:

To enable students acquire working knowledge of the language; to give them vocabulary, grammar, voice modulations/intonations to handle everyday Spanish situations in Present as well as in Present Perfect Tense with ease.

## Course Contents:

### Module I

Revision of the earlier modules

### Module II

Present Perfect Tense

### Module III

Commands of irregular verbs

### Module IV

Expressions with **Tener que** and **Hay que**

### Module V

En la embajada

Emergency situations like fire, illness, accident, theft

## Examination Scheme:

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	20	20	20	15	5

C – Project + Presentation

I – Interaction/Conversation Practice

## **RUSSIAN - VI**

**Course Code: LAN2654**

**L-T-P : 2-0-0**

**Credit Units: 02**

## **CHINESE – VI**

**Course Code: LAN2655**

**L-T-P : 2-0-0**

**Credit Units: 02**

**Course Objective:**

Chinese emperor Qin Shi Huang – Ti who built the great wall of China also built a network of 270 palaces, linked by tunnels, and was so afraid of assassination that he slept in a different palace each night. The course aims at familiarizing the student with the basic aspects of speaking ability of Mandarin, the language of Mainland China. The course aims at training students in practical skills and nurturing them to interact with a Chinese person.

**Course Contents:****Module I**

Drills

Dialogue practice

Observe picture and answer the question.

Pronunciation and intonation.

Character writing and stroke order.

**Module II**

Going out to see a science exhibition

Going to the theatre.

Train or Plane is behind schedule.

Indian Economy-Chinese Economy

Talking about different Seasons of the Year and Weather conditions. Learning to say phrases like-spring, summer, fall, winter, fairly hot, very cold, very humid, very stuffy, neither hot nor cold, most comfortable, pleasant .... etc.

**Module III**

Temperature – how to say – What is the temperature in May here?How is the weather in summer in your area?

Around 30 degrees

Heating, air-conditioning

Is winter in Shanghai very cold?

Talking about birthdays and where you were born?

The verb “shuo” (speak) saying useful phrases like speak very well, do not speak very well, if speak slowly then understand if speak fast then don’t understand, difficult to speak, difficult to write, speak too fast, speak too slow, listen and can understand, listen and cannot understand ... etc.

Tell the following in Chinese – My name is .... I was born in ... (year). My birthday is ..... Today is ... (date and day of the week). I go to work (school) everyday. I usually leave home at . (O’clock). In the evening, I usually ..... (do what)? At week end, I ..... On Sundays I usually ..... It is today..... It will soon be my younger sisters birthday. She was born in ..... (year). She lives in ..... (where). She is working (or studying)..... where... She lives in ..... (where.)

**Examination Scheme:**

<b>ECE 2719</b>	<b>Radar and Satellite Communications</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2019.1	Date of Approval: May 21, 2019	3	0	0	3
Pre-requisites/Exposure	Basic Electronics and Communication systems				
Co-requisites	Nil				

### **Catalog Description**

This course builds basic knowledge of different types of Radar systems and satellite communication along with link designing & application. It also covers different modulation schemes & channels used.

## Course Objectives

The objective of this course is to

1. Provide the fundamental knowledge of Radar and its types.
2. Provide the knowledge about satellite communication and its components.

## Course Outcomes

On completion of this course, the students will be able to

CO1. Describe the working of Radar and its equation.

CO2. Describe the various types of radars and their applications.

CO3. Explain the satellite communications and the components used in this communication.

CO4. Explain the various access techniques used in communication and the satellite link budget.

## Course Content

Modules	Blooms level*	Number of hours
<b>MODULE I: Introduction to Radar</b> Principle of detection and ranging, Radar frequencies and bands. Applications, Radar block diagram and operation. Radar Range Equation: Range prediction, Minimum detectable signal, Receiver noise SNR, Integration of radar pulses, Radar cross section of targets, Transmitter Power, PRF and system losses & Propagation effects.	L1 and L2	6
<b>MODULE II: CW FM Radar</b> Doppler effect, CW Radar, Frequency-modulated CW Radar, Multiple-frequency CW Radar. MTI and Pulse Doppler Radar: MTI delay lines, Delay line Cancellers, Coherent and Non-Coherent MTI, Pulse Doppler Radar.	L1 and L2	7
<b>MODULE III: Introduction to Satellite</b> Communication satellites, Orbiting satellites, Frequencies and bands, Satellite multiple access formats. Satellite Channel: Power flow, Polarization, Atmospheric losses, Receiver noise, CNR, Satellite link analysis for uplinks and downlinks. Overview of Coaxial cable system and optical Network (SONET); Overview of WLL (Wireless loop)	L1 and L2	8
<b>MODULE IV: Satellite Transponder</b> Transponder model, Satellite signal processing RF-RF translation, IF demodulation.	L2 L3 and L4	7
<b>Module V: Multiple-Access</b> FDMA; amplification with multiple FDMA carriers, AM/FM Conversion with FDMA, Switched FDMA, Synchronization, SS-TDMA; CDMA; DS CDMA, Frequency-hopped, CDMA. Carrier recovery & bit timing. Satellite link budget analysis	L2 L3 and L4	8

<b>ECE2720</b>	<b>ADVANCED MOBILE COMMUNICATIONS</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version: 2019.1	Date of Approval: May 21, 2019	2	0	0	2
Pre-requisites/Exposure	Communication systems, Digital Communication				
Co-requisites	NIL				

### **Catalog Description**

This course introduces fundamental concepts of mobile communications and global system for mobile. This course enables the student to understand the technical functionality of a mobile network. This course also gives mathematical formulations to calculate losses using different propagation models.

### **Course Objectives**

The objective of this course is to

1. Make students familiar with fundamentals of mobile communication systems
2. Understand different multiple access systems like TDMA, FDMA, CDMA with respect to complexity, installation cost, speed of transmission, channel properties etc.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: Define and explain the concepts of mobile communications.

CO2: Explain and compare different multiple access techniques

CO3: Obtain propagation losses for a given transmission system.

CO4: Explain fundamentals of GSM system.

Modules	Blooms level*	Number of hours
<b>MODULE 1:</b> <b>Introduction to Wireless Communication System</b> Evolution of mobile radio communication, Mobile radiotelephony in U.S., Mobile radio system around the world, second generation (2G) cellular network, evolution to 2.5G wireless network, evolution for 2.5G TDMA standards, third generation (3G) and forth generation wireless networks.	L1 and L2	4
<b>MODULE 2:</b> <b>The Cellular Concept</b> System design fundamentals, frequency reuse channel assignment strategies, Hand off strategies, Interference and system capacity, improving coverage and capacity in cellular system.	L2 and L3	10
<b>MODULE 3:</b> <b>Propagation Model and Spread Spectrum Modulation Techniques</b> Longley rice model, okumara model, hata model, pcs extension to hata model, wolfish and bertoni model, Pseudo Noise (PN) sequence, Direct sequence spread spectrum (DSSS), frequency hopped spread spectrum (FHSS).	L2 and L4	12
<b>MODULE 4:</b> <b>Multiple Access Techniques for Wireless Communication</b> Introduction to multiple access, Frequency division multiple access (FDMA), Time division Multiple access (TDMA), Spread spectrum multiple access, Packet Radio.	L2 and L3	6
<b>MODULE 5:</b> <b>Global System for Mobile</b> Global system for mobile (GSM), GSM system architecture, GSM radio subsystem, GSM channel types, Example of a GSM cell, Frame structure of GSM.	L2	4

ECE2721	<b>EMBEDDED SYSTEM WITH ARM MICROCONTROLLER</b>	L	T	P	C
Version: 2019.1	Date of Approval: May 21, 2019	2	0	0	2
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

### Catalog Description

This course introduces the concept of architecture and programming of advanced embedded microcontrollers i.e, ARM family of microcontrollers that are widely used in design of real time sophisticated embedded systems like tablets, hand held devices, automation and industrial control systems.

### Course Objectives

The objective of this course is to

1. Provide an overview of embedded system and real time operating system.
2. Equip the students with concepts of ARM microcontroller and its interfacing with external devices.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Explain and analyse the architecture of ARM microcontroller, Debugging and programming techniques.

CO2: Explain and classify embedded systems and its applications.

CO3: Explain hardware and software design concepts of embedded system.

CO4: Explain real time operating system for embedded system.

Modules	Blooms level*	Number of hours
<b>Module 1</b>	L1, L2, L3 and	9

<b>ARM Microcontroller</b>  A brief history of ARM evolution, ARM-32 bit Microcontroller: Thumb-2 technology and applications of ARM, Architecture of ARM Cortex M3, Various Units in the architecture, Debugging support, General Purpose Registers, Special Registers, exceptions, interrupts, stack operation, reset sequence  ARM Cortex M3 Instruction Sets and Programming: Assembly basics, Instruction list and description, Useful instructions, Memory mapping, Bit-band operations and CMSIS, Assembly and C language Programming	L4	
<b>Module2</b>  <b>Embedded System Components</b>  Embedded Vs General computing system, Classification of Embedded systems, Major applications and purpose of ES. Core of an Embedded System including all types of processor/controller, Memory, Sensors, Actuators, LED, 7 segment LED display, Optocoupler, Relay, Piezo buzzer, Push button switch, Communication Interface (onboard and external types), Embedded firmware, Other system components.	L1, L2 and L4	9
<b>Module 3</b>  <b>Embedded System Design Concepts</b>  Characteristics and Quality Attributes of Embedded Systems, Operational and non-operational quality attributes, Embedded 86 Systems-Application and Domain specific, Hardware Software Co-Design and Program Modelling (excluding UML), Embedded firmware design and development (excluding C language).	L1 and L2	9
<b>Module 4</b>  <b>RTOS and IDE for Embedded System Design</b>  Operating System basics, Types of operating systems, Task, process and threads (Only POSIX Threads with an example program), Thread preemption, Preemptive Task scheduling techniques, Task Communication, Task synchronization issues – Racing and Deadlock, Concept of Binary and counting semaphores (Mutex example without any program), How to choose an RTOS, Integration and testing of Embedded hardware and firmware, Embedded system Development Environment – Block diagram (excluding Keil), Disassembler/decompiler, simulator, emulator and debugging techniques.	L1 and L2	9

<b>ECE 2722</b>	<b>Radar and Satellite Communications Lab</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2019.1	Date of Approval: May 21, 2019	0	0	2	1
Pre-requisites/Exposure	Basic Electronics and Communication systems				
Co-requisites	Nil				

## Catalog Description

This course builds basic knowledge and practical skills for different types of Radar systems and satellite communication along with link designing & application. It also covers different modulation schemes & channels used.

## Course Objectives

The objective of this course is to

1. Provide the fundamental knowledge of Radar and its types.
2. Provide the knowledge about modulation techniques.

## Course Outcomes

On completion of this course, the students will be able to

CO1. Describe the working of AM transmitter and receiver.

CO2. Describe the working of FM transmitter and receiver.

CO3. Explain the satellite communications and the components used in this communication.

CO4. Explain the various access techniques used in communication.

## Course Content

Modules	Blooms level*	Number of hours
1. To study AM transmitter and receiver.	L1 and L2	1
2. To study FM transmitter and receiver.	L1 and L2	1
3. To implement the following circuits. <ul style="list-style-type: none"> <li>- AM Transmitter</li> <li>- FM Transmitter</li> <li>- AM Receiver</li> <li>- FM Receiver</li> <li>- Remote Control</li> <li>- Wireless Mic System</li> </ul>	L1 and L2	3
4. To study RF portion of satellite receiver. <ul style="list-style-type: none"> <li>- Study of dish antenna and section N.B section</li> </ul>	L2 L3 and L4	3

<ul style="list-style-type: none"> <li>- Study of tuner</li> <li>- Study of R.F modulator section</li> </ul>		
5. To study the base-band portion of satellite receiver <ul style="list-style-type: none"> <li>- study of video section</li> <li>- study of sound section</li> <li>- study of signal indicator</li> <li>- study of power supply section</li> </ul>	L2 L3 and L4	4

\*Bloom's Level: L1: Knowledge; L2: Comprehension; L3: Application; L4: Analysis; L5: Synthesis, L6: Evaluation

<b>ECE2723</b>	<b>Python Lab</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version : 2019.1	Date of Approval: May 21, 2019	0	0	2	1
Pre-requisites/Exposure	Python programming platform basics				
Co-requisites	Nil				

### **Catalog Description**

Python has become an important programming tool for research and development in science and engineering. It can be used for programming very easily using various already available packages. This course provides the students the knowledge of python programming. This course introduces the experiments related to logic design using python.

### Course Objectives

The objective of this course is

1. Demonstration of python tool for programming.
2. Practice of logic development using python.

### Course Outcomes

On completion of this course, the students will be able to

CO1. Use python platform for programming purpose.

CO2. Perform experiments and analyze output for various logics.

CO3. Simulate and analyze real problems using python.

Modules	Blooms level*	Number of hours
<b>Lab Session 1</b>  1. Compute the GCD of two numbers. 2. Find the square root of a number (Newton's method) 3. Exponentiation (power of a number)	L2, L3,L4 and L5	3
<b>Lab Session 2</b>  1. Find the maximum of a list of numbers 2. Linear search and Binary search 3. Selection sort, Insertion sort	L2, L3,L4 and L5	3
<b>Lab Session 3</b>  3. Merge sort 4. First n prime numbers 5. Multiply matrices 6. Programs that take command line arguments (word count)	L2, L3,L4 and L5	3
<b>Lab Session 4</b>  4. Find the most frequent words in a text read from a file 5. Simulate elliptical orbits in Pygame	L2, L3,L4 and L5	3

6. Simulate bouncing ball using Pygame

<b>ECE2735</b>	<b>SUMMER INTERNSHIP EVALUATION II</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2019.1	Date of Approval: May 21, 2019	0	0	0	3
Pre-requisites/Exposure	NA				
Co-requisites	Nil				

### Catalog Description

There are certain phases of every Intern's professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship program can best be described as an attempt to institutionalize efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal classroom situations. These attributes are intellectual ability, professional judgment and decision-making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility etc. In order to achieve these objectives, each student will maintain a file (**Internship File**). The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development. The report will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

### Course Objectives

The objective of this course is to

1. Equip the students with concepts of new technologies and practical exposure
2. Provide an overview of presentation and preparation of report.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Study the literature and identify the problem statement

CO2: Work on a real world problem and solve it using latest technology

CO3: Prepare a detailed report of the project

CO4: Prepare a brief presentation of their project

CO5: Present and explain the project for evaluation

### Text Books

As per topic of summer internship project is chosen and discussion with guide.

<b>ECE2706</b>	<b>OPTICAL COMMUNICATION</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2019.1	Date of Approval: May 21, 2019	2	0	0	2
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

### **Catalog Description**

This course deals with the study of fundamentals of optical communication. This includes the properties of optical fibers and how they are used to establish optical links for communication systems. The aim of this course is

1. To introduce students with the basics of optical communication system through the wave propagation principles in optical fiber, different sources and detectors used for formation of optical links.
2. To familiarize the students with the different degradation factors for quality of transmission.
3. To gives exposure of advanced Communication use in present optical communication networks through advanced multiplexing technologies, networking and system set up.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: Demonstrate basics of optical fiber communication link, structure, propagation and transmission properties of an optical fiber.

CO2: Describe the principles of optical sources and detectors and power launching-coupling methods.

CO3: Estimate the losses and analyze the propagation characteristics of an optical signal in different types of fibers

CO4: Identify the applications of optical fiber communication links in various fields.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Fundamentals of Fiber Optics</b> Different generations of optical fiber communication systems, Optical fiber structure, light propagation- total internal reflection, acceptance angle and numerical aperture, signal attenuation and dispersion. Modes in an optical fiber, Optical fibers: step-index, Graded-index, Single and Multimode, other types of fibers.	L1, L2, L3, L4	5
<b>Module II: Optical Sources</b> LED-spontaneous emission- material used in LED, LED efficiency, surface emitting LED, edge emitters, stimulated emission, spontaneous emission, Structure of various LED's, LASER: stimulated emission, double heterostructure LASER, LASER tuning and degradation, driver for LED and LASER.	L2, L3	4
<b>Module III: Photo Detectors</b> Characteristics of photo detector, direct and indirect band gap semiconductors, homo junction and hetero junction photodiodes, p-i-n photodiode, avalanche photodiode, phototransistor, optocouplers	L2, L3	4
<b>Module IV: Fiber Properties</b> Fiber end preparation, fiber splicing, fiber connectors, connection losses, fiber couplers, fiber materials, fiber fabrication, mechanical properties of fibers, different fiber cables.	L2	3
<b>Module V: Fiber Optic Communication System</b> Basic communication components, coupling to and from the fiber, multiplexing and coding, repeaters, bandwidth and rise time budgets, noise, bit error rate and eye pattern.	L3, L4, L5	5
<b>Module VI: Application of Fiber Optics</b> Long haul communication, LAN, medical application, undersea communication, military application, coherent optical communication, Fiber optic sensors- Intensity modulated sensor, Phase sensor, Diffraction Grating sensors.	L3, L4	3

### Catalog Description

This course deals with the practical aspects of fundamentals of optical communication. This includes the properties of optical fibers and how they are used to establish optical links for communication systems. The aim of this course is

1. To introduce students with the basics of optical communication system through the basics of optical waveguides, their parameters and link set up using different type of fibers.
2. To familiarize the students with the different degradation factors for quality of transmission.
3. To gives exposure of multiplexing techniques, coding, coupling techniques used in present optical communication networks

### Course Outcomes

On completion of this course, the students will be able to

CO1: Analyze different types of optical waveguides for their properties like Numerical Aperture, basic properties, coupling and transmission characteristic of optical fibres.

CO2: Identify and estimate the losses in optical fiber that affect the performance of transmission systems.

CO3: Design the basic optical links through digital and analog links, different modulation and coding techniques.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Lab Session 1:</b> To measure the Numerical Aperture of a multimode fiber	L1,L2	1
<b>Lab Session II:</b> To measure attenuation by cut Back technique.	L4	1
<b>Lab session III:</b> To study the model properties of a multimode fiber.	L1,L2	1
<b>Lab session IV:</b> To couple the light into a single mode fiber & measure the far-field power distribution	L2, L3, L4	1
<b>Lab session V:</b> To measure various fiber alignment losses.	L3,L4	1
<b>Lab session VI:</b> To estimate the power budget for a fiber optic system.	L3,L4	1

<b>Lab session VII:</b> To set up a fiber optic analog link.	L3	1
<b>Lab session VIII:</b> To set up a fiber optic digital link.	L3	1
<b>Lab session IX:</b> To study Time Division Multiplexing of signals.	L3	1
<b>Lab session X:</b> To study Manchester Coding.	L3	1
<b>Lab session XI</b> To study voice digitization	L3	1
<b>Lab session XII:</b> To simulate optical fiber wave guide.	L4, L5	1

### **Catalog Description**

Image processing has become an important tool for research and investigation in many areas of science and engineering. It takes full advantage of the computational technology of Mathematics and utilization of various tools. This course gives a detailed insight of Image Processing with different techniques used for different purposes.

### **Course Objectives**

The objective of this course is to

1. Equip the students with concepts of digital image processing.
2. Provide in-depth knowledge of various techniques used at different steps of image processing.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Define and explain the fundamentals of image and its histogram.

CO2: Explain different techniques of image restoration and enhancement.

CO3: Apply coding techniques to remove different types of redundancies in image.

CO4: Represent and recognize the image.

Modules	Blooms level*	Number of hours
<p>MODULE 1:</p> <p><b>Introduction to Digital Image Fundamentals</b>  The origins of Digital Image Processing, Examples of Fields that Use Digital Image Processing, Fundamentals Steps in Image Processing, Elements of Digital Image Processing Systems, Image Sampling and Quantization, Some basic relationships like Neighbors, Connectivity, Distance Measures between pixels, Linear and Non Linear Operations.  <b>Image Enhancement in the Spatial Domain:</b> Some basic Gray Level Transformations, Histogram Processing, Enhancement Using Arithmetic and Logic operations, Basics of Spatial Filters, Smoothing and Sharpening Spatial Filters, Combining Spatial Enhancement Methods.</p>	L1 and L2	7
<p>MODULE 2:</p> <p><b>Image Enhancement in Frequency Domain</b>  Introduction to Fourier Transform and the frequency Domain, Smoothing and Sharpening Frequency Domain Filters, Homomorphic Filtering.  <b>Image Restoration:</b> A model of The Image Degradation / Restoration Process, Noise Models, Restoration in the presence of Noise Only Spatial Filtering, Periodic Noise Reduction by Frequency Domain Filtering, Linear Position-Invariant Degradations, Estimation of Degradation Function, Inverse filtering, Wiener filtering, Constrained Least Square Filtering, Geometric Mean Filter, Geometric Transformations.</p>	L2 and L3	13
<p>MODULE 3:</p> <p><b>Image Compression</b>  Coding, Interpixel and Psychovisual Redundancy, Image Compression models, Elements of Information Theory, Error free comparison, Lossy compression, Image compression standards.  <b>Image Segmentation:</b> Detection of Discontinuities, Edge linking and boundary detection, Thresholding, Region Oriented Segmentation,</p>	L1 and L2	12

Motion based segmentation		
<b>MODULE 4:</b>  <b>Representation and Description</b> Representation, Boundary Descriptors, Regional Descriptors, Use of Principal Components for Description, Introduction to Morphology, Some basic Morphological Algorithms. <b>Object Recognition:</b> Patterns and Pattern Classes, Decision-Theoretic Methods, Structural Methods.	L2 and L3	6

### **Catalog Description**

Image processing has become an important tool for research and investigation in many areas of science and engineering. This course is designed to provide the students an understanding of the basic concepts of digital image processing and various techniques used in it. Students will perform practical on hardware kit as well as on software.

### **Course Objectives**

The objective of this course is to

1. Make students demonstrate the concepts of image processing.
2. Apply the different techniques to process image.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1. Explain the basic image processing tools and commands.

CO2. Apply the filters to remove noise in spatial & frequency domain.

CO3. Apply image processing techniques for compression, segmentation and restoration.

Modules	Blooms level*	Number of hours
<b>Lab Session 1</b> 1. To study about the basic image processing tools. 2. Write program for histogram processing.	L3	3
<b>Lab Session 2</b> 3. Write program for filtering in frequency domain. 4. Write program for filtering in spatial domain.	L3 and L4	3
<b>Lab Session 3</b> 5. Write programs for different compression schemes. 6. Write program image restoration.	L3 and L4	3
<b>Lab Session 4</b> 7. Write program for performing different morphological operations. 8. Write program for image segmentation.	L3 and L4	3

ECE2724	<b>ROBOTIC PROCESS AUTOMATION DESIGN &amp; DEVELOPMENT</b>	L	T	P	C
Version 2019.1	Date of Approval: 14 July 2019	3	0	0	3
Pre-requisites/Exposure	Basic Networking Concepts				
Co-requisites	Nil				

### Catalog Description

This course aims at providing knowledge of basic concepts of Robotic Process Automation to University students. It further builds on these concepts and introduces key RPA Design and Development strategies and methodologies specifically in context of UiPath products. The student undergoing the course shall develop the competence to design and develop a robot for a defined process.

### Course Objectives

The objective of this course is to

1. Equip the students with concepts of robotic process automation
2. Provide an overview of designing with uipath software.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Explain key terms and trends around the robotic process automation along with its physical and logical design

CO2: Understand the potential and value of the robotic process automation .

CO3: Describe the technologies used for the robotic process automation and mobile devices, including (passive and active) sensors, the physical communications layer, communications protocols, programming frameworks,.

CO4: Design programs and have hands on experience on uipath software

CO5: Develop RPA programs of moderate complexity for a well-used robotic automation process using uipath.

Modules	Bloom	Number of
---------	-------	-----------

	s level*	hours
<b>Module 1: Programming Basic and Recap</b>  <b>Programming Concepts Basics I</b> - Understanding the application, Basic Web Concepts, Protocols, Email Clients, Data Structures, Data Tables, Algorithms, Software Processes, Software Design, SDLC.  <b>Programming Concepts Basics 2-</b> Scripting, Net Framework, Net Fundamentals, XML, Control structures and functions, XML, HTML, CSS, Variables & Arguments.	L1, L2	8
<b>Module II: RPA Concepts</b>  <b>RPA Basics</b> - History of Automation, what is RPA, RPA vs Automation, Processes & Flowcharts, Programming Constructs in RPA, What Processes can be Automated, Types of Bots, Workloads which can be automated.  <b>RPA Advanced Concepts</b> - Standardization of processes, RPA Development methodologies, Difference from SDLC, Robotic control flow architecture, RPA business case, RPA Team, Process Design Document/Solution Design Document, Industries best suited for RPA, Risks & Challenges with RPA, RPA and emerging ecosystem	L2, L3 and L4	8
<b>Module III: UiPath Introduction &amp; Basics</b>  <b>Introduction to UiPath-</b> Installing UiPath Studio community edition, The User Interface, KeyboardShortcuts,AboutUpdating,AboutAutomationProjects,IntroductiontoAutomation Debugging, Managing Activation Packages, Reusing Automations Library, Installing the Chrome Extension, Installing the Firefox Extension, Connecting your project to a source control system, Activities Guide. <b>Variables, Control Flow</b>  <b>DataManipulation-</b> DataManipulationIntroduction,Scalarvariables,collectionsandTables, Text Manipulation, Data Manipulation, Gathering and AssemblingData.  <b>Recording and Advanced UI Interaction</b> - Recording Introduction, Basic and Desktop Recording, Web Recording, Input/Output Methods, Screen Scraping, Data Scraping,Scraping advanced techniques.Selectors.	L2, L3 and L4	8
<b>Module IV: UiPath Advanced Automation concepts and techniques</b>  <b>Image, Text &amp; Advanced Citrix Automation-</b> Introduction to Image & Text Automation, Image based automation, Keyboard based automation, Information Retrieval, Advanced Citrix Automation challenges, Best Practices, using tab for Images, Starting Apps.  <b>Excel Data Tables &amp; PDF</b> - Data Tables in RPA, Excel and Data Table basics, Data Manipulation in excel, Extracting Data from PDF, extracting a single piece of data, Anchors, Using anchors in PDF.	L2, L3 and L4	12

Email Automation- Email Automation, Incoming Email automation, Sending Email automation

ECE2731	<b>TERM PAPER</b>	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	0	0	0	2

Pre-requisites/Exposure	Nil
Co-requisites	Nil

### Catalog Description

Term paper evaluation course requires the students to study about the current technology topic in detail. The students have to read research papers, books and other study sources and finalize the topics for their presentation. Then the student has to prepare it in detail and write a detailed a research paper mentioning all the content related to the topic. The evaluation is later done and a presentation is also to be prepared.

### Course Objectives

The objective of this course is to

1. To increase the knowledge and the understanding of a particular topic.
2. To introduce the students about how to write technical papers/research papers.

It trains the students to make use of research tools and material available both in print and digital formats.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Study the literature and identify the current technical topic

CO2: Study the identified topic in detail

CO3: Prepare a detailed report including the introduction, architecture, advantages, disadvantages etc

CO4: Prepare a brief presentation of the concerned topic

CO5: Present and explain the topic for evaluation

### Text Books

As per topic of term paper and discussion with guide.

### Reference Books

As per topic of term paper and discussion with guide.

Version 2019.1	Date of Approval: May 21, 2019	0	0	0	2
Pre-requisites/Exposure	Basics of Electrical & Electronics				
Co-requisites	Nil				

### Catalog Description

Project/Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology, practical skill enhancement and an opportunity to work closely with a industry external guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation. Students require professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship program can best be described as an attempt to institutionalize efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal classroom situations. These attributes are intellectual ability, professional judgment and decision-making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility

### Course Objectives

The objective of this course is to

1. Equip the students with concepts of new technologies and practical exposure
2. Provide an overview of presentation and preparation of report

### Course Outcomes

On completion of this course, the students will be able to

- CO1: Study the literature and identify the problem statement
- CO2: Work on a real world problem and solve it using latest technology
- CO3: Prepare a detailed report of the project
- CO4: Prepare a brief presentation of their project
- CO5: Present and explain the project for evaluation

## EMPLOYABILITY SKILLS

Course Code: CSS2751

L-T-P : 1-0-0

Credit Units: 01

### Course Objective:

To facilitate the learner with Academic Language Proficiency and make them effective users of functional language to excel in their profession.

### Course Contents:

#### Module I

Introduction to Public Speaking

Business Conversation, Effective Public Speaking, Art of Persuasion

#### Module II: Speaking for Employment

Types of Interview, Styles of Interview, Facing Interviews-Fundamentals and Practice Session

Conducting Interviews- Fundamentals and Practice Session

Question Answer on Various Dimensions

#### Module III

Resume Writing, Covering Letters, Interview Follow Up Letters

#### Module IV: Basic Telephony Skills

Guidelines for Making a Call, Guidelines for Answering a Call

#### Module V: Work Place Speaking

Negotiations, Participation in Meetings, Keynote Speeches

### Examination Scheme:

Components	CT1	CT2	CAF	V	GD	GP	A
Weightage (%)	20	20	25	10	10	10	5

CAF – Communication Assessment File

GD – Group Discussion

GP – Group Presentation

# **RELATIONSHIP MANAGEMENT**

**Course Code: BEH 2751**

**L-T-P : 1-0-0**

**Credit Units: 01**

## **Course Objective:**

- To understand the basis of interpersonal relationship
- To understand various communication style
- To learn the strategies for effective interpersonal relationship

## **Course Contents:**

### **Module I: Understanding Relationships**

- Importance of relationships
- Role and relationships
- Maintaining healthy relationships

### **Module II: Bridging Individual Differences**

- Understanding individual differences
- Bridging differences in Interpersonal Relationship – TA
- Communication Styles

### **Module III: Interpersonal Relationship Development**

- Importance of Interpersonal Relationships
- Interpersonal Relationships Skills
- Types of Interpersonal Relationships

### **Module IV: Theories of Interpersonal Relationships**

- Theories: Social Exchange, Uncertainty Reduction Theory
- Factors Affecting Interpersonal Relationships
- Improving Interpersonal Relationships

### **Module V: Impression Management**

- Meaning & Components of Impression Management
- Impression Management Techniques (Influencing Skills)
- Impression Management Training-Self help and Formal approaches

### **Module VI:End-of-Semester Appraisal**

#### **Viva based on personal journal**

#### **Assessment of Behavioural change as a result of training**

#### **Exit Level Rating by Self and Observer**

# FRENCH - VII

Course Code: LAN2751

L-T-P : 2-0-0

Credit Units: 02

## Course Objective:

Revise the portion covered in the first volume, give proper orientation in communication and culture.

## Course Contents:

Module A: Unités 1 – 3: pp. 06 - 46

### Contenu lexical :

Unité 1: Rédiger et présenter son curriculum vitae

Exprimer une opinion

Caractériser, mettre en valeur

Parler des rencontres, des lieux, des gens

Unité 2: Imaginer - Faire des projets

Proposer - conseiller

Parler des qualités et des défauts

Faire une demande écrite

Raconter une anecdote

Améliorer son image

Unité 3: Exprimer la volonté et l'obligation

Formuler des souhaits

Exprimer un manque/un besoin

Parler de l'environnement, des animaux, des catastrophes naturelles

### Contenu grammatical :

Le passé : passé composé/imparfait

Pronoms compléments directs/indirects, y/en (idées/choses)

Propositons relatives introduites par qui, que, où

Comparatif et superlatif

Le conditionnel présent

Situer dans le temps

Féminin des adjectifs

La prise de paroles : expressions

Le subjonctif : volonté, obligation

## Examination Scheme:

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	20	20	20	15	5

C – Project + Presentation

I – Interaction/Conversation Practice

**GERMAN - VII**  
**Course Code: LAN2752**

**L-T-P : 2-0-0**

**Credit Units: 02**

**Course Objective:**

**To enable the students to converse, read and write in the language with the help of the basic rules of grammar, which will later help them to strengthen their language.**

To give the students an insight into the culture, geography, political situation and economic opportunities available in Germany

Introduction to Advanced Grammar and Business Language and Professional Jargon

**Course Contents:**

**Module I: Dass- Sätze**

Explain the use of the conjunction “-that”, where verb comes at the end of the sentence

**Module II: Indirekte Fragesätze**

To explain the usage of the “Question Pronoun” as the Relative Pronoun in a Relative Sentence, where again the verb falls in the last place in that sentence.

**Module III: Wenn- Sätze**

Equivalent to the conditional “If-” sentence in English. Explain that the verb comes at the end of the sentence.

**Module IV: Weil- Sätze**

Explain the use of the conjunction “because-” and also tell that the verb falls in the last place in the sentence.

**Module V: Comprehension texts**

Reading and comprehending various texts to consolidate the usage of the constructions learnt so far in this semester.

**Module VI: Picture Description**

Firstly recognize the persons or things in the picture and identify the situation depicted in the picture;

Secondly answer questions of general meaning in context to the picture and also talk about the personal experiences which come to your mind upon seeing the picture.

**Examination Scheme:**

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	20	20	20	15	5

# SPANISH - VII

**L-T-P : 2-0-0**

**Course Code: LAN2753**

**Credit Units: 02**

## **Course Objective:**

To enable students acquire working knowledge of the language; to give them vocabulary, grammar, expressions used on telephonic conversation and other situations to handle everyday Spanish situations with ease.

## **Course Contents:**

### **Module I**

Revision of earlier semester modules

### **Module II**

Zodiac signs. More adjectives...to describe situations, state of minds, surroundings, people and places.

### **Module III**

Various expressions used on telephonic conversation (formal and informal)

### **Module IV**

Being able to read newspaper headlines and extracts (Material to be provided by teacher)

### **Module V**

Negative commands (AR ending verbs)

### **Module VI**

Revision of earlier sessions and introduction to negative ER ending commands, introduction to negative IR ending verbs

## **Examination Scheme:**

**Course Objective:**

The story of Cinderella first appears in a Chinese book written between 850 and 860 A.D. The course aims at familiarizing the student with the basic aspects of speaking ability of Mandarin, the language of Mainland China. The course aims at training students in practical skills and nurturing them to interact with a Chinese person.

**Course Contents:**

**Module I**

Drills

Dialogue practice

Observe picture and answer the question.

About china part –I Lesson 1,2.

**Module II**

Pronunciation and intonation

Character Writing and stroke order.

**Module III**

Ask someone what he/she usually does on weekends?

Visiting people, Party, Meeting, After work....etc.

**Module IV**

Conversation practice

Translation from English to Chinese and vice-versa.

Short fables.

**Module V**

A brief summary of grammar.

The optative verb “yuanyi”.

The pronoun “ziji”.

## Catalog Description

The purpose of this course is to introduce students to the basics of coding used in communication system. The course aims to discuss the different entropies, channel capacity and purpose of encoding

## Course Objectives

The objective of this course is to

4. Provide a thorough introduction to coding used in communication system.
5. Provide in depth study of entropies, channel capacity and purpose of encoding.

## Course Outcomes

On completion of this course, the students will be able to

CO1. Measure entropy in terms of probability and mutual information.

CO2 Explain shannon fano and Huffman coding.

CO3. Prepare linear and cyclic codes for communication system.

CO4 Synthesize different BCH and convolutional codes for information source.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>MODULE I:</b>  <b>Basic Concepts of Information Theory</b> A measure of Uncertainty, Binary Sources, Measure of Information for two – dimensional discrete finite probability Scheme, Noise characteristics of channel, Basic relationship among different entropies, Measure of mutual information channel capacity, Capacity of channel with symmetric noise structure BSC and BEC.	L1 and L2	7
<b>MODULE II:</b>  <b>Element of Encoding</b> Propose of encoding separable binary codes, Shannon Fano encoding , Noiseless coding Theorem of decidability, Mc Millen's Theorem, Average length of encoding	L1 and L2	9

<p>message, Shannon's Binary encoding, Fundamental Theorem of discrete Noiseless coding, Huffman's Minimum Redundancy codes.</p> <p><b>Coding for Reliable Digital Transmission &amp; Storage</b></p> <p>Introduction, types of codes, Modulation and Demodulation, Maximum likelihood decoding, types of error, error control strategies.</p>		
<p><b>MODULE III:</b></p> <p><b>Introduction to Algebra</b></p> <p>Groups, Fields Binary field Arithmetic, Construction of Galois field GF (2<sup>m</sup>), Basic Properties of Galois Field GF (2<sup>m</sup>), Vector Space, Matrices.</p> <p>Linear Block Codes: Introduction to Linear Block codes, Syndrome and Error detection, Minimum distance of block code, error detecting and Error correcting capability a block code Hamming Code.</p> <p><b>Cyclic Codes:</b> Description of Cyclic codes, Generator and parity check matrices of cyclic codes, encoding of cyclic codes syndrome computation &amp; error detection decoding of cyclic codes, Error trapping decoding of cyclic codes, Goley Codes.</p> <p>.</p>	L1, L2, L3 and L4	10
<p><b>MODULE IV:</b></p> <p><b>BCH Codes</b></p> <p>Description of codes, Decoding of BCH codes, Implementation of Galois Field Arithmetic, Implementation of error connection,</p> <p><b>Convolution Codes:</b> Encoding of convolution codes, structural properties of Convolution codes, distance properties of Convolution codes, Distance Properties of convolution codes, Maximum likelihood decoding of convolution codes.</p> <p><b>Automatic Repeat Request Strategies</b></p> <p>Stop and wait, Go back and selective repeat ARQ strategies, Hybrid ARQ Schemes.</p>	L1, L2, L3 and L4	10

## Catalog Description

The syllabus introduces real time operating systems and resource analysis. It introduces the concepts of Processing, I/O Resources, Memory, Multi-resource, Soft Real-Time Services, Embedded System components, Debugging Components, Performance Tuning, High availability and Reliability Design.

## Course Objectives

The objective of this course is to

1. Provide an overview of real time operating system.
2. Equip the students with concepts of Resources ,debugging techniques, performance tuning and reliability analysis.

## Course Outcomes

On completion of this course, the students will be able to

CO1: Explain history of real time operating system and the concepts of resource analysis.

CO2: Explain the concepts of processing and I/O resources.

CO3: Explain the concept of memory, multi-resource and soft real-time services.

CO4: Explain embedded system components and apply debugging techniques.

CO5: Explain performance tuning, high availability and the concepts of reliability design.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
Module-1 <b>Introduction to Real-Time Embedded Systems:</b> Brief history of Real Time Systems, A brief history of Embedded Systems, System Resources: Resource Analysis, Real-Time Service Utility, Scheduling Classes, The	L1 and L2	7

Cyclic Executive, Scheduler Concepts, Preemptive Fixed Priority Scheduling Policies, Real-Time OS, Thread Safe Reentrant Functions.		
<b>Module-2</b> <b>Processing and I/O Resources:</b> Preemptive Fixed-Priority Policy, Feasibility, Rate Monotonic least upper bound, Necessary and Sufficient feasibility, Deadline – Monotonic Policy, Dynamic priority policies, I/O Resources: Worst-case Execution time, Intermediate I/O, Execution efficiency, I/O Architecture.	L1 and L2	8
<b>Module-3</b> <b>Memory, Multi-resource and Soft Real-Time Services:</b> Physical hierarchy, Capacity and allocation, Shared Memory, ECC Memory, Flash file systems, Multi-resource Services: Blocking, Deadlock and livestock, Critical sections to protect shared resources, priority inversion, Soft Real-Time Services: Missed Deadlines, QoS, Alternatives to rate monotonic policy, Mixed hard and soft real-time services.	L1 and L2	8
<b>Module-4</b> <b>Embedded System and Debugging Components:</b> Firmware components, RTOS system software mechanisms, Software application components, Debugging Components: Exceptions assert, Checking return codes, Single-step debugging, kernel scheduler traces, Test access ports, Trace ports, Power-On self test and diagnostics, External test equipment, Application-level debugging.	L1, L2 and L3	7
<b>Module-5</b> <b>Performance Tuning, High availability and Reliability Design:</b> Basic concepts of drill-down tuning, hardware – supported profiling and tracing, Building performance monitoring into software, Path length, Efficiency, and Call frequency, Fundamental optimizations. High availability and Reliability Design: Reliability and Availability, Similarities and differences, Reliability, Reliable software, Available software, Design tradeoffs, Hierarchical applications for Fail-safe design.	L1, L2, L3 and L4	6

## Catalog Description

This course discusses fundamental Verilog concepts of today's most advanced digital design techniques. It offers broad coverage of Verilog HDL from a practical design perspective. Introduces students to gate, dataflow (RTL), behavioural, and switch level modeling, describes leading logic synthesis methodologies; explains timing and delay simulation; and introduces many other essential techniques for creating tomorrow's complex digital designs

## Course Objectives

The objective of this course is to

1. Provide the fundamental knowledge of Verilog HDL for practical designs.
2. Introduces the knowledge logic synthesis and design methodologies.

## Course Outcomes

On completion of this course, the students will be able to

CO1. Describe the basic concepts of Verilog HDL.

CO2. Design and solve the Gate level and dataflow modeling of various circuits.

CO3. Solve the circuits using Behavioural modeling.

CO4. Utilize the circuit knowledge on advanced Verilog topics.

## Course Content

Modules	Blooms level*	Number of hours
<b>MODULE I: : Introduction to Verilog HDL and Basic Concepts</b> Emergence of HDL, typical design flow, trends in HDL, Modeling concept Design methodologies, modules, instances, simulation, design block and stimulus block Lexical conventions, Data Types. System Tasks and Compiler Directives, Modules and Ports	L1 and L2	6

<b>MODULE II: Gate-Level Modeling and Dataflow Modeling</b> Gate Types. Gate Delays, Continuous Assignments. Delays. Expressions, Operators, and Operands. Operator Types. Examples for combinational and sequential circuit using Gate level and Data-flow modeling.	L1 and L2	5
<b>MODULE III: Behavioural Modeling</b> Structured Procedures. Procedural Assignments. Timing Controls. Conditional Statements. Multiway Branching. Loops. Sequential and Parallel Blocks. Generate Blocks. Examples	L1 and L2	6
<b>MODULE IV: Tasks and Functions and Useful Modeling Techniques</b> Difference between Tasks and Functions. Tasks. Functions. Procedural Continuous Assignments. Overriding Parameters. Conditional Compilation and Execution. Time Scales. Useful System Tasks	L1 and L2	7
<b>MODULE V: Advanced Verilog Topics</b> Timing and Delays. Switch Level Modeling, User-Defined Primitives, Logic Synthesis with Verilog HDL, Advanced Verification Techniques.	L2, L3 and L5	6

### Catalog Description

This course discusses fundamental Verilog concepts of today's most advanced digital design techniques. It offers broad coverage of Verilog HDL from a practical design perspective. Introduces students to gate, dataflow (RTL), behavioral, and switch level modeling, describes leading logic synthesis methodologies; explains timing and delay simulation; and introduces many other essential techniques for creating tomorrow's complex digital designs

### Course Objectives

The objective of this course is to

1. Provide the fundamental knowledge of designing digital circuits in Verilog HDL.
2. Provide the knowledge logic synthesis methodologies of digital circuits.

### Course Outcomes

On completion of this course, the students will be able to

CO1. Describe the codes for various combinational circuits.

CO2. Write the codes for various sequential circuits.

CO3. Model circuits using behavioral and dataflow methods.

CO4. Synthesize the circuits using various methodologies.

### Course Content

Experiments	Blooms level*	Number of hours
1. Write a Verilog code to realize all the logic gates. 2. Write a Verilog code to implement Half Adders, Full adders and Subtractors using Gates.	L1 and L2	2
3. Write a Verilog code to describe the function of Multiplexer and Demultiplexer using different modelling styles. 4. Write a Verilog code to realize D Flip-Flop and D Latch.	L1 and L2	2

5. Write a Verilog code to implement 2:1 Mux and D Latch using Switches. 6. Write a Verilog code to implement Encoders and Decoders Using if-else Statement and case Statement.	L1 and L2	2
7. Write a Verilog code to implement SR Flip Flop using UDP (User Defined Program). 8. Write the Verilog code for a JK Flip-flop, and its test bench. Use all possible combinations of inputs to test its working.	L1 and L2	3
9. Write the hardware description of a 8-bit register with parallel load, shift left and shift right modes of operation and test its operation. 10. Write a Verilog code to realize Up/Down Counter and Divide by 4.5 Counter. Write a Verilog code to describe the function of Synchronous FIFO. 11. Write a Verilog code using FSM to realize a sequence detector (101101).	L1 and L2	3

\*Bloom's Level: L1: Knowledge; L2: Comprehension; L3: Application; L4: Analysis; L5: Synthesis, L6: Evaluation

ECE2818	<b>WIRELESS COMMUNICATION</b>	L	T	P	C
Version : 2019.1	Date of Approval: May 21, 2019	3	0	0	3
Pre-requisites/Exposure	Communication System				
Co-requisites	Nil				

### Course Objective:

The objective of the course is to provide an overview of Wireless Communication networks area and its applications in communication engineering. The contribution of Wireless Communication networks to overall technological growth and the various terminology, principles, devices, schemes, concepts, algorithms and different methodologies used in Wireless Communication Networks are described.

### Course Objectives

The objective of this course is to

1. To introduce advanced wireless communication systems.
2. To learn the wireless channel characteristics and models.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Evolution of mobile radio communications and comparative study of 2G, 3G.

CO2: Explain cellular concepts, fading, wireless networks and Wireless standards.

CO3: Apply the TDMA, FDMA and CDMA techniques for a given network application.

CO4: Comparison based on various parameters of wireless, telephone and ISDN networks.

CO5: Study the advanced concepts of Intelligent cell concept and application.

### Course Contents:

Modules	Blooms level*	Number of hours
<b>Module 1 Introduction to Wireless Communication Systems</b>  Evolution of mobile radio communications, examples of wireless comm. systems, paging systems, Cordless telephone systems, comparison of various wireless systems.	L1 and L2	8

Modern Wireless Communication Systems: Second generation cellular networks, third generation wireless networks, wireless in local loop, wireless local area networks, Blue tooth and Personal Area networks.		
<b>Module 2 Introduction to Cellular Mobile Systems</b>  Spectrum Allocation, basic Cellular Systems, performance Criteria, Operation of cellular systems, analog cellular systems, digital Cellular Systems.  Ellular System Design Fundamentals: Frequency Reuse, channel assignment strategies, handoff Strategies, Interference and system capacity, tracking and grade off service, improving coverage and capacity.	L2 and L3	10
<b>Module 3 Multiple Access Techniques For Wireless Communication</b>  Introduction to Multiple Access, FDMA, TDMA, Spread Spectrum multiple Access, space division multiple access, packet ratio, capacity of a cellular systems.	L2 and L4	10
<b>Module 4 Wireless Networking</b>  Difference between wireless and fixed telephone networks, development of wireless networks, fixed network transmission hierarchy, traffic routing in wireless networks, wireless data services, common channel signaling, ISDN (Integrated Services digital Networks), advanced intelligent networks.	L3 and L4	10
<b>Module 5 Intelligent cell concept and application</b>  Intelligent cell concept, applications of intelligent micro-cell Systems, in-Building Communication, CDMA cellular Radio Networks.	L1 and L2	10

ECE2816	<b>ADVANCED ROBOTIC PROCESS AUTOMATION DESIGN &amp; DEVELOPMENT</b>	L	T	P	C
Version 2019.1	Date of Approval: 14 July 2019	3	0	0	3
Pre-requisites/Exposure	Basic Networking Concepts				
Co-requisites	Nil				

## Catalog Description

This course aims at providing knowledge of basic concepts of Robotic Process Automation to University students. It further builds on these concepts and introduces key RPA Design and Development strategies and methodologies specifically in context of UiPath products. The student undergoing the course shall develop the competence to design and develop a robot for a defined process.

## Course Objectives

The objective of this course is to

1. Equip the students with concepts of robotic process automation
2. Provide an overview of designing with uipath software.

## Course Outcomes

On completion of this course, the students will be able to

CO1: Explain key terms and trends around the robotic process automation along with its physical and logical design

CO2: Understand the potential and value of the robotic process automation .

CO3: Describe the technologies used for the robotic process automation and mobile devices, including (passive and active) sensors, the physical communications layer, communications protocols, programming frameworks,.

CO4: Design programs and have hands on experience on uipath software

CO5: Develop RPA programs of moderate complexity for a well-used robotic automation process using uipath.

Modules	Blooms level*	Number of hours
<b>Module 1: Exception handling and Best Practices</b> <b>Debugging and Exception Handling- Debugging</b> Tools, Strategies for solving issues, Catching errors. <b>Project Organization-</b> Concept of project organization, Best practices, Avoiding pitfalls, Invoke Activity.	L1, L2	8
<b>Module II: Introduction to Orchestrator</b>	L2, L3	8

Orchestrator, Tenants, Authentication, Users, Roles, Robots, Environments, Queues & Transactions, Schedules.	and L4	
<b>Module III: merging and Future Trends in IT</b> Artificial Intelligence, Machine Learning, Agent awareness, Natural Language Processing Computer Vision	L2, L3 and L4	8
<b>Module IV: Capstone Project</b> Real life case studies which can be used to apply the concepts learnt during the course. The projects shall test student's skills right from process transformation and documentation to the design and development of the actual robot	L2, L3 and L4	12

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

<b>ECE 2812</b>	<b>ADVANCED VLSI DESIGN</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2019.1	Date of Approval: May 21, 2019	3	0	0	3
Pre-requisites/Exposure	VLSI Design				
Co-requisites	Nil				

### Catalog Description

This course explores the theory and operation of the basic building blocks of VLSI design which includes current mirror and Op-amp. This course also explains the designing of OTA and their types. The concepts learnt in the studies of OTA will be applied in the design and analysis of filters and oscillators.

### Course Objectives

The objective of this course is to

1. Provide the advanced knowledge of VLSI design with building blocks and designing of OTA.
2. Equip with the understanding various types of OTA with their noise analysis.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Explain the basic operation of MOS transistor, cascade transistors and noise performances.

CO2: Explain the CMOS inverter with DC characteristics, active load and current mirrors.

CO3: Describe gain margin and phase margin; Design and analysis of OTA and explanation on CMRR, offset and PSRR.

CO4: Explain & design cascade and folded OTA.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>MODULE 1:</b>  <b>Review of Elementary Transistor Stages</b> MOST single transistor amplifying phase, BJT single transistor, Source and emitter follower and their noise performance, Cascade transistors and noise performance.	L1 and L2	8
<b>MODULE 2:</b>	L1, L2	10

<b>Inverter stage and Building Blocks</b> CMOS inverter, DC analysis, low frequency gain, bandwidth, current capacity, slew rate, amplifying phase, BJT inverter stage and Noise performance, Cascade and its Bandwidth, active load, differential stages, current mirrors and their noise output.	and L3	
<b>MODULE 3:</b>  <b>Op amp Design: Introduction</b> Design of single transistor OTA: GBW and phase margin, Miller CMOS OTA: GBW and phase margin, Full Dc analysis: Common mode input voltage range versus current supply, output range versus supply voltage, maximum output current, source and sink, Noise analysis of OTAs.	L2,L3, L4 and L5	10
<b>MODULE 4:</b>  <b>Op amp Design: Matching specifications</b> Transistor mismatch, Offset voltage definition, Mismatch definition, differential stage with active load, Offset drift, CMRR, Offset and CMRR of Miller OTA, Offset in BJT and JFET, Power Supply rejection ratio of simple and Miller OTA.	L1, L2,L3 and L4	10
<b>MODULE 5:</b>  <b>Design of OTAs and design Options</b>  Symmetrical, Cascade OTA, Folded Cascade OTA, Operational Current Amplifier, design for optimum GBW and SR, CMOS Configurations, Bipolar op amp configurations.	L1, L2,L3 and L4	10

### Catalog Description

This course introduces students to the theory of Power Electronics. It includes basics of Thyristor family devices with its firing circuits. It includes the design concepts of Converter, Inverter, Chopper, AC voltage controller, cycloconverter along with some basic application based on power electronics.

### Course Objectives

The objective of this course is to

1. Equip the students with concepts of Power Electronics Devices.
2. Provide in depth knowledge so that they can design applications based on Power Electronic concepts.

### Course Outcomes

On completion of this course, the students will be able to

CO1. Explain concept of various triggering elements.

CO2. Explain and solve problems on thyristor, its rating, protection and firing circuits as well as compare and design firing circuits of thyristor.

CO3. Analyze and solve the problems of Converter, Inverter, Chopper, AC voltage controller and

Cycloconverter for different types of load.

CO4: Explain design concept of power electronic applications.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1:</b> <b>Triggering Devices</b> Triggering devices, Unijunction Transistor, Characteristics and applications of UJT, Programmable Unijunction Transistor, DIAC, Silicon Controlled Switch, Silicon Unilateral Switch, silicon Silicon bilateral Switch, Shockley diode.	L1 and L2	6

<b>Module 2:</b> <b>Thyristor Firing Circuits, Turn on systems</b> Two transistor model of Thyristor, Method of Triggering a thyristor, Thyristor Types, Requirement for triggering circuits, Thyristor Firing Circuits, Fullwave control of Ac with one thyristor, Light activated SCRs (LASCR), Control Circuit, dv/dt and di/dt protection of Thyristor, Pulse Transformer triggering, Firing SCR by UJT, TRIAC firing circuit, Phase control of SCR by pedestal and Ramp.	L1, L2, L3, L4 and L5	9
<b>Module 3:</b> <b>Controlled Rectifiers</b> Types of Converters, effect of inductive load, Commutating diode or free wheeling diode, controlled rectifiers, Bi phase half wave, single phase full wave phase controlled converter using bridge principle, harmonics.	L1, L2, L3 and L4	8
<b>Module 4:</b> <b>Inverters</b> Types of Inverters, Bridge Inverters, Voltage Source Inverters, Pulse Width Modulation Inverters, Current source Inverters.	L1, L2, L3 and L4	6
<b>Module 5:</b> <b>AC Voltage Controllers</b> Types of AC voltage Controllers, AC Phase Voltage controllers, single Phase Voltage Controller with RL load, harmonic analysis of single phase full wave controller with RL load.	L1, L2, L3 and L4	5
<b>Module VI:</b> <b>DC to DC Converters</b> DC choppers, Chopper classification, two quadrant chopper, Four quadrant chopper.	L1, L2, L3 and L4	5
<b>Module VII:</b> <b>Cyclo Converter</b> Single phase and three phase cycloconverters.	L1, L2, L3 and L4	4
<b>Module VIII:</b> <b>Industrial Applications</b> One shot Thyristor trigger Circuit, over voltage protection, simple battery charger, battery charging regulator, AC static switches, DC static switch	L1 and L2	5

**Credit Units: 01**

# **PERSONAL AND PROFESSIONAL EXCELLENCE**

**Course Code: BEH 2851**

**L-T-P : 1-0-0**

**Credit Units: 01**

## **Course Objective:**

Importance of Personal and Professional excellence  
Inculcating the components of excellence

## **Course Contents:**

### **Module I: Components of Excellence**

Personal Excellence:

Identifying long-term choices and goals

Uncovering the talent, strength & style

Analyzing choke points in your personal processes by analysis in area of placements, events, seminars, conference, extracurricular activities, projects etc.

### **Module II: Managing Personal Effectiveness**

Setting goals to maintain focus

Dimensions of personal effectiveness (self disclosure, openness to feedback and perceptiveness)

Integration of personal and organizational vision for effectiveness

A healthy balance of work and play

Managing Stress creatively and productively

### **Module III: Personal Success Strategy**

Time management

Handling criticism and interruptions

Dealing with difficult people

Mapping and evaluating the situations

Identifying long-term goals

### **Module IV: Positive Personal Growth**

Understanding & Developing positive emotions

Positive approach towards future

Resilience during loss and challenge

### **Module V: Professional Success**

Building independence & interdependence

Reducing resistance to change

Continued reflection (Placements, events, seminars, conferences, projects extracurricular Activities etc.)

### **Module VI: End-of-Semester Appraisal**

Viva based on personal journal

Assessment of Behavioural change as a result of training

Exit Level Rating by Self and Observer

## **Examination Scheme:**

Components	SAP	A	Mid Term Test (CT)	VIVA	Journal for Success (JOS)
Weightage (%)	20	05	20	30	25

## **Bachelor of Technology - Biomedical Engineering**

**FLEXILEARN**

**-Freedom to design your degree**

## **Curriculum & Scheme of Examination**

**2020**

**AMITY UNIVERSITY HARYANA**

**GURUGRAM**

### **POs B.Tech Programme**

**PO1. Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

**PO2. Problem analysis:** Identify, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

**PO3. Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

**PO4. Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

**PO5. Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

**PO6. The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

**PO7. Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

**PO8. Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

**PO9. Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

**PO10. Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

**PO11. Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

**PO12. Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change.

### **PSOs for B.Tech (Biomedical Engineering)**

- PSO1.** Apply fundamental knowledge of basic science and engineering courses to develop core competency in the areas of biomedical engineering.
- PSO2.** Able to apply knowledge of biomedical modalities, clinical science, safety & hazards and accessibility in the fields maintaining biomedical equipment as per standard specifications.
- PSO3.** Apply interdisciplinary core competency such as mechanics, electronics, programming and artificial intelligence with modern tools in field of biomedical to analyse and solve real healthcare problems.
- PSO4.** Apply the principles of creativity & innovation, entrepreneurial skill with integrated knowledge approach to develop project and provide solution to healthcare contemporary issues, considering legal, ethical and socio-economic aspects.

#### **Purpose of Meeting and Revision of Syllabus:**

1. Revise the syllabus from Learning Base to Outcome Based Education.
2. Revise the curriculum from Teaching Centric Approach to Student Centric Approach.
3. Revise the syllabus from Pedagogic Learning to Skill Development & Capacity Building.

**Supporting document for PSOs of B.Tech (Biomedical Engineering)**

Basic Science Course	Basic Engineering and Prerequisite	Clinical Application	Biomedical Modalities	Biomedical Programming Skill	Biomedical Mechanics	Biomedical Electronics	Legal, Ethical, socio-economic and Soft & Managerial Skill	Innovation and Life-Long Learning

# ENGINEERING MATHEMATICS - I

**Course Code: BME2112**

**L-T-P : 3-1-0**

**Credit Units: 04**

## **Course Objective:**

The knowledge of Mathematics is necessary for a better understanding of almost all the Engineering and Science subjects. Here our intention is to make the students acquainted with the concept of basic topics from Mathematics, which they need to pursue their Engineering degree in different disciplines.

## **Course Contents:**

### **Module I: Differential Calculus**

Successive differentiation, Leibnitz's theorem (without proof), Mean value theorem, Taylor's theorem (proof), Remainder terms, Asymptote & Curvature, Partial derivatives, Chain rule, Differentiation of Implicit functions, Exact differentials, Tangents and Normals, Maxima, Approximations, Differentiation under integral sign, Jacobians and transformations of coordinates.

### **Module II: Integral Calculus**

Fundamental theorems, Reduction formulae, Properties of definite integrals, Applications to length, area, volume, surface of revolution, improper integrals, Multiple Integrals-Double integrals, Applications to areas, volumes.

### **Module III: Ordinary Differential Equations**

Formation of ODEs, Definition of order, degree & solutions, ODE of first order: Method of separation of variables, homogeneous and non homogeneous equations, Exactness & integrating factors, Linear equations & Bernoulli equations, General linear ODE of  $n^{\text{th}}$  order, Solution of homogeneous equations, Operator method, Method of undetermined coefficients, Solution of simple simultaneous ODE.

### **Module IV: Vector Calculus**

Scalar and Vector Field, Derivative of a Vector, Gradient, Directional Derivative, Divergence and Curl and their Physical Significance, Arc Length, Tangent, Directional Derivative, Evaluation of Line Integral, Green's Theorem in Plane (without proof), Representation of Surfaces, Tangent Plane and Surface Normal, Surface Integral, Stoke's Theorem (without proof), Gauss Divergence Theorem (without proof).

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

## ENGINEERING CHEMISTRY

**Course Code:** BME2114

**L-T-P : 2-0-0**

**Credit Units: 02**

### **Course Objective:**

Four basic sciences, Physics, Chemistry, Mathematics and Biology are the building blocks in engineering and technology. Chemistry is essential to develop analytical capabilities of students, so that they can characterize, transform and use materials in engineering and apply knowledge in their field. All engineering fields have unique bonds with chemistry whether it is Aerospace, Mechanical, Environmental and other fields the makeup of substances is always a key factor, which must be known. For electronics and computer science engineering, apart from the material, computer modeling and simulation knowledge can be inherited from the molecule designing. The upcoming field of technology like Nanotechnology and Biotechnology depends fully on the knowledge of basic chemistry. With this versatile need in view, course has been designed in such a way so that the student should get an overview of the whole subject.

### **Course Contents:**

#### **Module I: Water Technology**

Introduction and specifications of water,  
Hardness and its determination (EDTA method only), Alkalinity,  
Boiler feed water, boiler problems – scale, sludge, priming & foaming: causes & prevention,  
Boiler problems – caustic embrittlement & corrosion: causes & prevention,  
Carbonate & phosphate conditioning, colloidal conditioning & calgon treatment  
Water softening processes: Lime – soda process, Ion exchange method, Water for domestic use.

#### **Module II: Fuels**

Classification, calorific value of fuel, (gross and net), Determination of calorific value of fuels, bomb calorimeter, Solid fuels - Proximate and ultimate analysis, Octane & Cetane No. and its significance.  
Numericals on combustion

#### **Module III: Instrumental Methods of analysis**

Introduction; Principles of spectroscopy; Laws of absorbance  
IR: Principle, Instrumentation, Application  
UV: Principle, Instrumentation, Application  
NMR: Principle, Instrumentation, Application

#### **Module III: Lubricants**

Introduction; Mechanism of Lubrication; Types of Lubricants; Chemical structure related to Lubrication;  
Properties of lubricants; Viscosity and Viscosity Index; Iodine Value; Aniline Point; Emulsion number; Flash Point; Fire Point; Drop Point; Cloud Point; Pour Point.  
Selection of Lubricants.

#### **Module VI: Corrosion**

Introduction, Mechanism of dry and wet corrosion,

Types of corrosion-Galvanic, Concentration cell, soil, pitting, intergranular, waterline. Passivity.

Factors influencing corrosion. Corrosion control.

**Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

<b>BME2104</b>	<b>Introduction to Computers and Programming in C</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version: 2019.1	Date of Approval: May 21, 2019	2	1	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

### Catalog Description

The objective of this course module is to acquaint the students with the basics of computers system, its components, data representation inside computer and to get them familiar with various important features of procedure-oriented programming language i.e. C.

### Course Objectives

The objective of this course is to

1. Equip the students with concepts of Programming through C Language
2. Provide an overview of advanced programming concepts like Structure, Union and File Handling

### Course Outcomes

On completion of this course, the students will be able to

After the completion of course, the students will be able to,

- CO 1: Define the purpose and structure of C Program for programming; identify and distinguish various data types and operators; conditional and control statement; Apply if-else, Switch and loops to rewrite basic C program for problem solving.
- CO 2: Compare and contrast various Array types, its declaration and implementation; differentiate between Call by Value and Reference if Functions; apply the concepts to rewrite C Programs
- CO 3: Differentiate between various String Handling Functions; describe the concept of Pointers in C Language
- CO 4: Explain the concept of Structure and Union; apply the concept of File Handling to provide data storage support to the programs.
- CO 5: Apply the concept of Computer Graphics using C programming concepts for implementing line drawing, circle drawing algorithms.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Introduction</b> Introduction to computer, history, von-Neumann architecture, memory system (hierarchy, characteristics and types), H/W concepts (I/O Devices), S/W concepts (System S/W & Application S/W, utilities). Data Representation: Number systems, character representation codes, Binary, octal, hexadecimal and their interconversions. Binary arithmetic, floating point arithmetic, signed and unsigned numbers, Memory storage unit.	L1, L2 and L3	7
<b>Module II: Programming in C</b> History of C, Introduction of C, Basic structure of C program, Concept of variables, constants and data types in C, Operators and expressions: Introduction, arithmetic, relational, Logical, Assignment, Increment and decrement operator, Conditional, bitwise operators, Expressions, Operator precedence and associativity. Managing Input and output Operation, formatting I/O.	L2, L3 and L4	7
<b>Module III: Fundamental Features in C</b> C Statements, conditional executing using if, else, nesting of if, switch and break Concepts of loops, example of loops in C using for, while and do-while, continue and break. Storage types (automatic, register etc.), predefined processor, Command Line Argument.	L2, L3 and L4	7
<b>Module IV: Arrays and Functions</b> One dimensional arrays and example of iterative programs using arrays, 2-D arrays Use in matrix computations. Concept of Sub-programming, functions Example of user defined functions. Function prototype, Return values and their types, calling function, function argument, function with variable number of argument, recursion.	L2 and L3	7
<b>Module V: Advanced features in C</b> Pointers, relationship between arrays and pointers Argument passing using pointers, Array of pointers. Passing arrays as arguments. Strings and C string library. Structure and Union. Defining C structures, Giving values to members, Array of structure, Nested structure, passing strings as arguments. File Handling.	L2, L3 and L4	8

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6:Evaluation*

Version 2019.1	Date of Approval: May 16, 2019	3	0	0	3
Pre-requisites/Exposure	NIL				
Co-requisites	NIL				

### **Catalog Description**

In this course the concepts of various prime movers like I C Engine, Gas Turbine, Steam Turbine, and Hydraulic Turbine are discussed in detail. Concept of power absorbing devices and power transmission devices are discussed in detail. Elementary concept of mechanics of material and machine tool also discussed in detail. The aim of this course is to make the students familiar with the basic mechanical engineering.

### **Course Objectives**

The objective of this course is to

1. Equip the students with concept of heat engine, steam, boiler, steam turbine, hydraulic turbine, hydraulic pumps, stress and strain, power transmission.
2. Provide an overview of machine tool and manufacturing system.

### **Course Outcomes**

On completion of this course, the students will be able to

- CO1: Explain working of I C engine, Gas turbine, Air standard efficiency of Otto Cycle & Diesel Cycle and Boilers.
- CO2: Explain working of Steam Turbine, Hydraulic Turbine and Hydraulic Pumps.
- CO3: Describe the stress strain diagram, Elastic constants and Transmission system.
- CO4: Discuss the metal cutting and working of machine tool with manufacturing system.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>MODULE 1: Prime Mover (I. C. Engine)</b> Internal Combustion Engine: Introduction to I.C. Engines-two & four stroke S.I. and C.I. engines. Otto cycle. Diesel cycle. Working principle of gas turbine, Constant pressure gas turbine cycle.	L1, L2 and L3	7
<b>MODULE 2: Prime Mover (Turbine)</b> Steam Turbine: Classification of boilers, Classification of steam turbines, Working principle of impulse and reaction. Hydraulic Turbine: Classification of hydraulic turbine, Construction details and working of Pelton, Francis and Kaplan turbines.	L1, L2 and L3	8
<b>MODULE 3: Power Absorbing machine</b> Power absorbing devices: Hydraulic Pumps: Classification of hydraulic pumps, Working of Reciprocating and centrifugal pumps. Power transmission devices: Introduction to Power transmission, Belt drive, Rope drive, Chain drive, Gear drive, Gear train.		7
<b>MODULE 4: Mechanics of Material</b> Stress & Strain: Introduction, Concept & types of Stresses and strains, Poison's ratio, Stress-strain diagrams, Hooks law, Elastic constants & their relationships, Stresses and strains in simple and compound bars under axial loading, Properties of material-strength, elasticity, stiffness, malleability, ductility, brittleness, hardness and plasticity etc.	L1, L2 and L3	6
<b>MODULE 5: Machine Tool</b> Machine Tool: Introduction to Metal Cutting, Classification of machine tool, working and operations of Lathe, Shaper, Milling, Drilling machines. Manufacturing system: Component of Manufacturing Systems, Fundamentals of Numerical Control (NC), Advantage of NC systems, Classifications of NC, Computer Numerical control, Comparison of NC and CNC. Comparison between conventional and NC machines.	L1, L2 and L3	8

*\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

## Catalog Description

In this course the concepts of electricity and electrical circuits are discussed in detail. Theorems related to electrical circuits, law's related to flow of current, voltages, basic knowledge of Transformer, basic knowledge of electromagnetism, basic knowledge of electrical network will be introduced.

## Course Objectives

The objective of this course is to:

1. Provide the overview of concept of flow of current/voltage of electrical circuits.
2. Provide the basic knowledge about the concepts of electrical circuits.

## Course Outcomes

On completion of this course, the students will be able to:

CO1. Explain the fundamental theorems and laws related to the electrical circuits.

CO2. Derive equations and solve problems related to network theorems.

CO3. Draw phasor diagrams for different alternating current waveforms and Explain the working principle and estimate the performance of single phase transformers.

CO4. Explain the operation, characteristic and application of PN Junction Diode, Rectifiers, Zener Diode and Bipolar Junction Transistor.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I:</b>  <b>Direct Current Circuits:</b> Ohm's Law, Kirchhoff's Current Law, Kirchhoff's Voltage Law Network Reduction: Star-Delta Transformation, Source Transformation, Nodal Analysis, Mesh analysis, Superposition theorem, Thevenin's Theorem, Norton's theorem and Reciprocity theorem, Maximum Power transfer theorem.	L1 and L2	9
<b>Module II:</b>  <b>Alternating Current Circuits:</b> Peak, Average and RMS values for	L1, L2 and L3	8

alternating currents, Power calculation: reactive power, active power, Complex power, power factor, impedance, reactance, conductance, susceptance Resonance: series Resonance, parallel resonance, basic definition of Q factor & Band-width.		
<b>Module III:</b>  <b>Transformer:</b> Basic Transformer Operation principle, Construction, Voltage relations, current relations, Linear circuit models, open circuit test, short circuit test, Transformer Efficiency.	L1, L2 and L3	6
<b>Module IV:</b>  <b>Rotating Electrical Machines:</b> D.C. machines (motors and generators), Induction motor, Synchronous machines (motors and generators): construction, working principle, classification and applications.	L1, L2 and L3	6
<b>Module V:</b>  <b>Semiconductor Devices:</b> Principle of operation characteristic and application of PN Junction Diode, Rectifiers, Zener Diode, Principle of operation, characteristic and application of Bipolar Junction Transistor, Regulated Power Supply.	L1, L2 and L3	7

### Catalog Description

The primary objective of this course is to understand all the components of C, including the C language, the C Preprocessor, and the C Standard Library. An understanding of some advanced practical issues, including memory management, testing and debugging, complex declarations and expression evaluation, building and using libraries, and evaluating tradeoffs, such as size vs. speed and speed vs. complexity. The ability to write C code and create and manipulate logical programs.

### Course Objectives

The objective of this course is to

3. Equip the students with concepts of Programming through C Language
4. Provide an overview of advanced programming concepts like Structure, Union and File Handling.

### Course Outcomes

After the completion of course, the students will be able to,

CO 1: Demonstrate the use of various data types and operators in C programs; Solve various problems using conditional control statements (if-else, Switch case).

CO 2: Construct C programs related to problems involving the usage of loops, arrays and functions.

CO 3: Apply the concept of Pointers for efficient memory management and construct C programs using string handling functions.

CO 4: Demonstrate the use of Structure, Union and concept of File Handling to provide data storage support to the programs.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>LABORATORY SESSSION 1</b> <b>OPERATORS, EXPRESSIONS and DECISION MAKING</b>  1. Write a program to calculate simple interest and amount.	L3	5

<ol style="list-style-type: none"> <li>Write a program to swap two numbers using third variable.</li> <li>Write a program to demonstrate Greatest of 3 nos and to print the given no in ascending order.</li> <li>Write a program to check if the number is even or odd.</li> <li>Write a program to perform arithmetic operations using Switch Case statement.</li> <li>Write a program to calculate area of circle, rectangle, square and triangle using Switch Case statement.</li> </ol>		
<b>LABORATORY SESSSION 2</b> <b>LOOPING</b> <ol style="list-style-type: none"> <li>Write a program to find factorial of given no using do while statement.</li> <li>Write a program to print prime numbers up to 'n'.</li> <li>Write a program to sum of n natural no.</li> <li>Write a program to print Fibonacci series.</li> <li>Write a program to reverse a number.</li> <li>Write a program to print the following pattern using for loop           <pre>1 2 2 3 3 3 4 4 4 4</pre> </li> <li>Write a program to print the following pattern using for loop           <pre>A A B A B C A B C D</pre> </li> </ol>	L3	6
<b>LABORATORY SESSSION 3</b> <b>ARRAYS and FUNCTIONS</b> <ol style="list-style-type: none"> <li>Write a program to read n num of students and 5 subjects marks.</li> <li>Write a program to swap two numbers using call by value.</li> <li>Write a program to convert all lower case to uppercase characters</li> <li>Write a program to find the factorial of a number using recursion.</li> <li>Write a program to print the add/product of two matrices of any order.</li> </ol>	L3	5
<b>LABORATORY SESSSION 4</b> <b>POINTERS AND STRING</b> <ol style="list-style-type: none"> <li>Write a program to perform operations on strings using string handling in-built functions (concatenation, reversal, copy etc.)</li> <li>Write a program to swap two numbers using call by reference.</li> <li>Write a program to perform dynamic memory allocation and de-allocation.</li> <li>Write a program to print elements of array using pointers.</li> </ol>	L3	4
<b>LABORATORY SESSSION 5</b> <b>STRUCTURE,UNION &amp; FILE HANDLING</b> <ol style="list-style-type: none"> <li>WAP program to display student information by initializing structures.</li> <li>WAP program to find the total salary of employee and employee details using structure.</li> </ol>	L3	4

3. Write a program to store and display information using Union. 4. Program to write data into file and read data from file.

<b>BME2111</b>	<b>ELEMENTS OF MECHANICAL ENGINEERING LAB</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2019.1	Date of Approval: May 16, 2019	0	0	2	1
Pre-requisites/Exposure					
Co-requisites					

**Pre –Requisite:** Elements of Mechanical Engineering  
**Catalog Description**

In this course the concepts of various prime movers like I C Engine, Gas Turbine, Steam Turbine, and Hydraulic Turbine are discussed in detail. Concept of power absorbing devices and power transmission devices are discussed in detail. Elementary concept of mechanics of material and machine tool also discussed in detail. The aim of this course is to make the students familiar with the basic mechanical engineering.

**Course Objectives:**

The objective of this course is to

1. Equip the students with practical concepts of Boiler, Turbine, IC Engine and Machine tools.
2. Understand the elements of mechanical engineering by working models and experiments.

**Course Outcomes (COs):** After studying this course the students will be able to:

**CO 1-** Define the basics of working of boilers, Steam turbines.

**CO 2-** Explain the principle and working of two strokes and four strokes internal combustion engines.

**CO 3-** Explain the working of Pelton wheel Turbine, Francis Turbine and Kaplan Turbine.

**CO 4 -** Describe the tensile test and power transmission derives.

**CO 5-** Identify and demonstrate the machine tools and lathe operation.

<b>List of Experiments</b>	<b>Blooms level*</b>	<b>Number of hours</b>
1. To Study the Cochran and Babcock & Wilcox boilers.	L1, L2 and L3	2
2. To study the working of impulse and reaction steam turbines	L1, L2 and L3	2
3. To study Two-Stroke & Four-Stroke Diesel Engines.	L1, L2 and L3	2
4. To Study Two-Stroke & Four-Stroke Petrol Engines.	L1, L2 and L3	2
5. To study the constructional features and working of Pelton wheel Turbine, Francis Turbine and Kaplan Turbine.	L1, L2 and L3	2
6. To perform tensile test, plot the stress-strain diagram and evaluate the tensile properties of a given metallic specimen.	L1, L2 and L3	2
7. To Study the different power transmission drives.	L1, L2 and L3	2
8. To Study different types of machine tools (lathe, milling, drilling & shaper).	L1, L2 and L3	2
9. To perform the metal cutting operation on Lathe machine.	L1, L2 and L3	2

*\*Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

## ENGINEERING CHEMISTRY LAB

**Course Code:** BME2116  
**L-T-P :0-0-2**

**Credit Units: 01**

### Course Contents:

### List of Experiments:

(Any 10 Experiments)

1. To determine the ion exchange capacity of a given cation exchanger.
2. To determine the temporary, permanent and total hardness of a sample of water by complexometric titration method.
3. To determine the type and extent of alkalinity of given water sample.
4. To determine the number of water molecules of crystallization in Mohr's salt (ferrous ammonium sulphate) provided standard potassium dichromate solution (0.1N) using diphenylamine as internal indicator.
5. To determine the ferrous content in the supplied sample of iron ore by titrimetric analysis against standard  $K_2Cr_2O_7$  solution using potassium ferricyanide  $[K_3Fe(CN)_6]$  as external indicator.
6. (a) To determine the surface tension of a given liquid by drop number method.  
(b) To determine the composition of a liquid mixture A and B (acetic acid and water) by surface tension method.
7. To prepare and describe a titration curve for phosphoric acid – sodium hydroxide titration using pH-meter.
8. (a) To find the cell constant of conductivity cell.  
(b) Determine the strength of hydrochloric acid solution by titrating it against standard sodium hydroxide solution conductometrically
9. Determination of Dissolved oxygen in the given water sample.
- 10 To determine the total residual chlorine in water.
- 11 Determination of amount of oxalic acid and  $H_2SO_4$  in 1 L of solution using N/10 NaOH and N/10  $KMnO_4$  solution.
- 12 Determination of viscosity of given oil by means of Redwood viscometer I.
- 13 To determine flash point and fire point of an oil by Pensky Martin's Apparatus
- 14 To determine the Iodine value of the oil.

Co-requisites	Nil				

### List of Experiments:

1. To verify KVL & KCL in the given network.
2. To verify Superposition Theorem.
3. To verify Maximum Power Transfer Theorem.
4. To verify Reciprocity Theorem.
5. To determine and verify  $R_{Th}$ ,  $V_{Th}$ ,  $R_N$ ,  $I_N$  in a given network.
6. To perform open circuit & short circuit test on a single-phase transformer.
7. To study transient response of a given RLC Circuit.
8. To perform regulation, ratio & polarity test on a single-phase transformer.
9. To measure power & power factor in a three phase circuit by two wattmeter method.
10. To measure power & power factor in a three phase load using three ammeter & three voltmeter method.
11. To obtain the characteristics of a transistor under common base (CB) and common emitter (CE) configuration.

# ENGLISH – I

Course Code: CSS2152

L-T-P : 1-0-0

Credit Units: 01

## Course Objective:

The course is intended to give a foundation of English Language. The literary texts are indented to help students to inculcate creative & aesthetic sensitivity and critical faculty through comprehension, appreciation and analysis of the prescribed literary texts. It will also help them to respond form different perspectives.

## Course Contents:

### Module I: Vocabulary

Use of Dictionary

Use of Words: Diminutives, Homonyms & Homophones

### Module II: Essentials of Grammar - I

Articles

Parts of Speech

Tenses

### Module III: Essentials of Grammar - II

Sentence Structure

Subject -Verb agreement

Punctuation

### Module IV: Communication

The process and importance

Principles & benefits of Effective Communication

### Module V: Spoken English Communication

Speech Drills

Pronunciation and accent

Stress and Intonation

### Module VI: Communication Skills-I

Developing listening skills

Developing speaking skills

### Module VII: Communication Skills-II

Developing Reading Skills

Developing writing Skills

### Module VIII: Written English communication

Progression of Thought/ideas

Structure of Paragraph

Structure of Essays

### Module IX: Short Stories

**Of Studies, by Francis Bacon**

**Dream Children, by Charles Lamb**

**The Necklace, by Guy de Maupassant**

**A Shadow, by R.K.Narayan**

**Glory at Twilight, Bhabani Bhattacharya**

### Module X: Poems

All the Worlds a Stage

To Autumn

O! Captain, My Captain.

Where the Mind is Without Fear

**Psalm of Life**

Shakespeare

Keats

Walt Whitman

Rabindranath Tagore

**H.W. Longfellow**

***Examination Scheme:***

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	05	15	10	70

**Text & References:**

- Madhulika Jha, Echoes, Orient Long Man

**\* 30 hrs Programme to be continued for Full year**

# **UNDERSTANDING SELF FOR EFFECTIVENESS**

**Course Code: BEH 2151**

**L-T-P : 1-0-0**

**Credit Units: 01**

## **Course Objective:**

This course aims at imparting:  
Understanding self & process of self exploration  
Learning strategies for development of a healthy self esteem  
Importance of attitudes and its effective on personality  
Building Emotional Competence

## **Course Contents:**

### **Module I: Self: Core Competency**

Understanding of Self  
Components of Self – Self identity  
Self concept, Self confidence, Self image

### **Module II: Techniques of Self Awareness**

Exploration through Johari Window  
Mapping the key characteristics of self  
Framing a charter for self  
Stages – self awareness, self acceptance and self realization

### **Module III: Self Esteem & Effectiveness**

Meaning and Importance, Components of self esteem, High and low self esteem, Measuring your self esteem

### **Module IV: Building Positive Attitude**

Meaning and nature of attitude  
Components and Types of attitude  
Importance and relevance of attitude

### **Module V: Building Emotional Competence**

Emotional Intelligence – Meaning, components, Importance and Relevance  
Positive and Negative emotions  
Healthy and Unhealthy expression of emotions

### **Module VI: End-of-Semester Appraisal**

#### **Viva based on personal journal**

#### **Assessment of Behavioural change as a result of training**

Exit Level Rating by Self and Observer

## **Examination Scheme:**

<b>Components</b>	<b>SAP</b>	<b>A</b>	<b>Mid Term Test (CT)</b>	<b>VIVA</b>	<b>Journal for Success (JOS)</b>
<b>Weightage (%)</b>	20	05	20	30	25

# FRENCH - I

Course Code: LAN2151

L-T-P : 3-0-0

Credit Units: 03

## Course Objective:

To familiarize the students with the French language

- with the phonetic system
- with the syntax
- with the manners
- with the cultural aspects

## Course Contents:

Module A: pp. 01 to 37: Unités 1, 2, Unité 3 Object if 1, 2

Only grammar of Unité 3: object if 3, 4 and 5

### Contenu lexical :Unité 1 : Découvrir la langue française : (oral et écrit)

1. se présenter, présenter quelqu'un, faire la connaissance des autres, formules de politesse, rencontres
2. dire/interroger si on comprend
3. Nommer les choses

### Unité 2: Faire connaissance

1. donner/demander des informations sur une personne, premiers contacts, exprimer ses goûts et ses préférences
2. Parler de soi: parler du travail, de ses activités, de son pays, de sa ville.

### Unité 3:Organiser son temps

1. dire la date et l'heure

### Contenu grammatical :

1. organisation générale de la grammaire
2. article indéfini, défini, contracté
3. nom, adjectif, masculin, féminin, singulier et pluriel
4. négation avec « de », "moi aussi", "moi non plus"
5. interrogation : Inversion, est-ce que, qui, que, quoi, qu'est-ce que, où, quand, comment, quel(s), quelle(s)  
Interro-négatif : réponses : oui, si, non
6. pronom tonique/disjoint- pour insister après une préposition
7. futur proche

## Examination Scheme:

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	20	20	20	15	5

C – Project + Presentation

I – Interaction/Conversation Practice

## Text & References:

- le livre à suivre: Campus: Tome 1

# GERMAN - I

Course Code: LAN2152

L-T-P : 3-0-0

Credit Units: 03

## Course Objective:

To enable the students to converse, read and write in the language with the help of the basic rules of grammar, which will later help them to strengthen their language.

To give the students an insight into the culture, geography, political situation and economic opportunities available in Germany

## Course Contents:

### Module I: Introduction

Self introduction: heissen, kommen, wohnen, lernen, arbeiten, trinken, etc.

All personal pronouns in relation to the verbs taught so far.

Greetings: Guten Morgen!, Guten Tag!, Guten Abend!, Gute Nacht!, Danke sehr!, Danke!, Vielen Dank!, (es tut mir Leid!),

Hallo, wie geht's?: Danke gut!, sehr gut!, prima!, ausgezeichnet!,  
Es geht!, nicht so gut!, so la la!, miserabel!

### Module II: Interviewspiel

To assimilate the vocabulary learnt so far and to apply the words and phrases in short dialogues in an interview – game for self introduction.

### Module III: Phonetics

Sound system of the language with special stress on Diphthongs

### Module IV: Countries, nationalities and their languages

To make the students acquainted with the most widely used country names, their nationalities and the language spoken in that country.

### Module V: Articles

The definite and indefinite articles in masculine, feminine and neuter gender. All Vegetables, Fruits, Animals, Furniture, Eatables, modes of Transport

### Module VI: Professions

To acquaint the students with professions in both the genders with the help of the verb “sein”.

### Module VII: Pronouns

Simple possessive pronouns, the use of my, your, etc.

The family members, family Tree with the help of the verb “to have”

### Module VIII: Colours

All the color and color related vocabulary – colored, colorful, colorless, pale, light, dark, etc.

### Module IX: Numbers and calculations – verb “kosten”

The counting, plural structures and simple calculation like addition, subtraction, multiplication and division to test the knowledge of numbers.

“Wie viel kostet das?”

### Module X: Revision list of Question pronouns

W – Questions like who, what, where, when, which, how, how many, how much, etc.

## Examination Scheme:

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	20	20	20	15	5

C – Project + Presentation

I – Interaction/Conversation Practice

# SPANISH – I

Course Code: LAN2153

L-T-P : 3-0-0

Credit Units: 03

## Course Objective:

To enable students acquire the relevance of the Spanish language in today's global context, how to greet each other. How to present / introduce each other using basic verbs and vocabulary

## Course Contents:

### Module I

A brief history of Spain, Latin America, the language, the culture...and the relevance of Spanish language in today's global context.

Introduction to alphabets

### Module II

Introduction to '*Saludos*' (How to greet each other. How to present / introduce each other).

Goodbyes (*despedidas*)

The verb *llamarse* and practice of it.

### Module III

Concept of Gender and Number

Months of the years, days of the week, seasons. Introduction to numbers 1-100, Colors, Revision of numbers and introduction to ordinal numbers.

### Module IV

Introduction to *SER* and *ESTAR* (both of which mean To Be). Revision of '*Saludos*' and '*Llamarse*'. Some adjectives, nationalities, professions, physical/geographical location, the fact that Spanish adjectives have to agree with gender and number of their nouns. Exercises highlighting usage of *Ser* and *Estar*.

### Module V

Time, demonstrative pronoun (*Este/esta, Aquel/aquella* etc)

### Module VI

Introduction to some key AR /ER/IR ending regular verbs.

## Examination Scheme:

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	20	20	20	15	5

## CHINESE – I

**L-T-P : 3-0-0**                      **Course Code: LAN2155**                      **Credit Units: 03**

### Course Objective:

There are many dialects spoken in China, but the language which will help you through wherever you go is Mandarin, or Putonghua, as it is called in Chinese. The most widely spoken forms of Chinese are Mandarin, Cantonese, Gan, Hakka, Min, Wu and Xiang. The course aims at familiarizing the student with the basic aspects of speaking ability of Mandarin, the language of Mainland China. The course aims at training students in practical skills and nurturing them to interact with a Chinese person.

### Course Contents:

#### Module I

Show pictures, dialogue and retell.

Getting to know each other.

Practicing chart with Initials and Finals. (CHART – The Chinese Phonetic Alphabet Called “Hanyu Pinyin” in Mandarin Chinese.)

Practicing of Tones as it is a tonal language.

Changes in 3<sup>rd</sup> tone and Neutral Tone.

#### Module II

Greetings

Let me Introduce

The modal particle “ne”.

Use of Please ‘qing’ – sit, have tea ..... etc.

A brief self introduction – Ni hao ma? Zaijian!

Use of “bu” negative.

#### Module III

Attributives showing possession

How is your Health? Thank you

Where are you from?

A few Professions like – Engineer, Businessman, Doctor, Teacher, Worker.

Are you busy with your work?

May I know your name?

#### Module IV

Use of “How many” – People in your family?

Use of “zhe” and “na”.

Use of interrogative particle “shenme”, “shui”, “ma” and “nar”.

How to make interrogative sentences ending with “ma”.

Structural particle “de”.

Use of “Nin” when and where to use and with whom. Use of guixing.

Use of verb “zuo” and how to make sentences with it.

**Module V**

Family structure and Relations.

Use of “you” – “mei you”.

Measure words

Days and Weekdays.

Numbers.

Maps, different languages and Countries.

**Examination Scheme:**

<b>Components</b>	<b>CT1</b>	<b>CT2</b>	<b>C</b>	<b>I</b>	<b>V</b>	<b>A</b>

**Course Code: LAN2156**

**L-T-P : 3-0-0**

**Credit Units: 03**

## ENGINEERING MATHEMATICS - II

**Course Code: BME2210**

**L-T-P : 3-1-0**

**Credit Units: 04**

### Course Objective:

The knowledge of Mathematics is necessary for a better understanding of almost all the Engineering and Science subjects. Here our intention is to make the students acquainted with the concept of basic topics from Mathematics, which they need to pursue their Engineering degree in different disciplines.

### Course Contents:

#### Module I: Linear Algebra

Hermitian and Skew Hermitian Matrix, Unitary Matrix, Orthogonal Matrix, Elementary Row Transformation, Reduction of a Matrix to Row Echelon Form, Rank of a Matrix, Consistency of Linear Simultaneous Equations, Gauss Elimination Method, Gauss-Jordan Method, Eigen Values and Eigen Vectors of a Matrix, Caley-Hamilton Theorem, Diagonalization of a Matrix, Vector Space, Linear Independence and Dependence of Vectors, Linear Transformations.

#### Module II: Infinite Series

Definition of Sequence, Bounded Sequence, Limit of a Sequence, Series, Finite and Infinite Series, Convergence and Divergence of Infinite series, Cauchy's Principle of Convergence, Positive Term Infinite Series, Comparison test, D'Alembert's Ratio test, Raabe's Test, Cauchy's nth root Test, Logarithmic Test, Alternating Series, Leibnitz's Test, Absolute and conditional convergence, Uniform Convergence, Power Series and its Interval of Convergence.

#### Module III: Complex Analysis

De Moivre's Theorem and Roots of Complex Numbers, Logarithmic Functions, Circular, Hyperbolic Functions and their Inverses.

Functions of a Complex Variables, Limits, Continuity and Derivatives, Analytic Function, Cauchy-Riemann Equations (without proof), Harmonic Function, Harmonic Conjugates, Conformal Mapping, Bilinear Transformations, Complex Line Integral, Cauchy Integral Theorem, Cauchy Integral Formula, Derivative of Analytic Function, Power Series, Taylor Series, Laurent Series, Zeros and Singularities, Residues, Residue Theorem, Evaluation of Real Integrals of the Form and

$$\int_{-\infty}^{\infty} \frac{f(x)}{F(x)} dx .$$

#### Module IV: Statistics and Probability

Moments, Skewness, Kurtosis, Random Variables and Probability Distribution, Mean and Variance of a Probability Distribution, Binomial Distribution, Poisson Distribution and Normal Distribution.

## ENGINEERING PHYSICS

**Course Code:** BME2211  
**L-T-P : 2-1-0**

**Credit Units: 03**

### Course Objective:

Aim of this course is to introduce the students to fundamentals of graduate level physics, which form the basis of all applied science and engineering

### Course Contents:

#### Module I: Oscillations & Waves

**Oscillations:** Introduction to S.H.M. Damped Oscillations: Differential Equation and its solution, logarithmic decrement, Quality Factor, Different conditions of damping of harmonic oscillations. Forced oscillations: Amplitude and Frequency Response, Resonance, Sharpness of Resonance

**Plane Progressive Waves:** Differential Equation and Solution, Superposition of Progressive Waves stationary waves.

**Ultrasonics:** Generation and application of ultrasonic waves.

#### Module II: Wave Nature of Light

Interference: Coherent Sources, Conditions of interference, Interference due to division of wavefront, Fresnel's biprism Interference due to division of amplitude, Newton's rings, Interference due to thin films, .

Diffraction: Fresnel and Fraunhofer diffraction, Fraunhofer diffraction at a single slit, double slit, N Slits, Transmission grating, Rayleigh criterion and Resolving power of grating.

Polarization: Birefringence, Nicol prism, Production and analysis of plane, circularly and elliptically polarized light, Half and quarter wave plates, Optical rotation, Polarimeter.

#### Module III: Electromagnetism

Scalar and vector fields, gradient of a scalar field, physical significance of gradient, equipotential surface. Line, surface and volume integrals, Divergence and curl of vector field and mathematical analysis physical significance, Electric flux, Gauss' law, Proof and Applications, Gauss divergence and Stokes theorems.

Differential form of Gauss' Law, Amperes' Law, Displacement current, Faraday's Law, Maxwell equations in free space & isotropic media (Integral form & differential form), EM wave propagation in free space, Poynting vector.

<b>BME2203</b>	<b>Engineering Mechanics</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2019.1	Date of Approval: May 16, 2019	2	1	0	3
Pre-requisites/Exposure	Basics of Mathematics, Mathematical Equations, Force systems				
Co-requisites	-				

### **Catalog Description**

Engineers are the ultimate problem solvers. This course introduces the principles required to solve engineering mechanics problems. It addresses the modelling and analysis of static equilibrium problems with an emphasis on real-world engineering applications and problem solving. To master this course, students should have a background in basic mathematical calculus and physics covering classical mechanics. These basic concepts of physics and mathematics will be applied to formulate problems on force systems, trusses, friction, centroid, simple lifting machines, power transmission devices and law of conservation of energy.

### **Course Objectives**

The objective of this course is to

5. Equip the students with concepts of free body diagram, friction, centroid or center of gravity, trusses, energy, force system and its effect on the behavior of the bodies
6. Provide an overview of estimation of performance of belts and simple lifting machines under various operating conditions.

### **Course Outcomes**

After completing the course, the students will be able to

- CO1. Explain the concept of free body diagram, classify various force system and apply equilibrium equations to solve different truss problems.
- CO2. Define and compute various terms associated with the friction, determine the efficiency of simple lifting machines and power transmission devices.

CO3. Describe various theorems and apply them to determine centroid, centre of gravity, moment of inertia, mass moment of inertia of various bodies.

CO4. Analyse and setting up the problems involving the concept of work, energy, impulse and momentum.

Modules	Blooms level*	Number of hours
<b>Module I:</b> <b><u>Force system</u></b> Types of forces, Parallelogram law of forces, Triangle law of forces, Polygon law of forces, Free body diagram, Equilibrium equations and applications. Lami's theorem and its applications. Moment and its applications,	L1, L2 and L3	10
<b>Module II:</b> <b><u>Determinate Structures</u></b> Plane truss, perfect and imperfect truss, assumption in solving the truss problems, method of joints, method of section.	L1, L2, and L3	8
<b>Module III:</b> <b><u>Friction</u></b> Static and Kinetic friction, laws of dry friction, co-efficient of friction, angle of friction, angle of repose, ladder friction, Screw jack & determination of its efficiency	L2 and L3	10
<b>Module IV:</b> <b><u>Distributed Force</u></b> Determination of center of gravity, center of mass and centroid by direct integration and by the method of composite bodies, mass moment of inertia and area moment of inertia by direct integration and composite bodies method, radius of gyration, perpendicular axis theorem, parallel axis theorem, and its application, polar moment of inertia.	L2, L3 and L4	8

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5:Synthesis, L6:Evaluation*

CO	1	2	3	--	--	--	--	--	--	--	--	--	2	--	--	--

## **Course Outcomes**

On completion of this course, the students will be able to

- CO1. List the fundamental units and components of living systems
- CO2. Identify various Biochemical and biophysical processes responsible for the generation of energy to sustain life within living organisms and their management
- CO3. Identify the molecular structure of various macro-molecules/ micro-molecules' structure, function and their interrelationship under natural environments.
- CO4. Describe various biological processes and their regulation through various energy regulating factors such as enzymes, cofactors, conversion of chemical to mechanical energy and physiological forces

## Course Content

---

Modules	Blooms level*	Number of hours
<b>Module I:</b>  <b>From Atoms to organism</b>  The Cell: Basic Unit of Life, Molecular Components of Cells, Gene expression, Protein Structure and Function, Cell Metabolism, Homeostasis, the External response of cells, Cell Reproduction, Cell Differentiation.	L1, L2	5
<b>Module II</b>  <b>Molecular design of life</b>  Biochemistry and Genomic Revolution, DNA illustrates between form and function, Chemical Bonds in Biochemistry, Protein Synthesis	L1, L2	5
<b>Module III:</b>  <b>Catalytic Strategies</b>  Proteases: Speed up a reaction, Enzyme Inhibitor, Highly specific DNA cleavage reactions – Nucleoside Monophosphate Kinases, Hydrolysis, phosphoryl group exchange, metabolism, anabolism and catabolism, photosynthesis, carbon fixation, biology energy production.	L1, L2	5
<b>Module IV:</b>  <b>Mechano-Chemistry</b>  Conversion of chemical energy to mechanical work, ATP synthase structure, Power Stroke, Bacterial flagellar motion, proton motive force, sodium motive force, Chimeric Kinesin Motors, chimeric myosin motors.	L1, L2	5
<b>Module V:</b>  <b>Sensory and Immune</b>  General principles of cell signaling, Cellular basis of immunity, antibodies and their properties, T cells and their structure	L1, L2	4

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation*

<b>BME2205</b>	<b>Object Oriented Programming Using C++</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2019.1	Date of Approval: May 16, 2019	2	1	0	3
Pre-requisites/Exposure	Hands on knowledge of C Programming				
Co-requisites	Basic concepts of C Programming				

## Catalog Description

The objective of this course is to introduce object-oriented programming. To explore and implement the various features of OOP such as inheritance, polymorphism, Exceptional handling using programming language C++. After completing this course student can easily identify the basic difference between the programming approaches like procedural and object oriented.

## Course Objectives

The objective of this course is

1. Equip the students with the basic features of C++ supporting object-oriented programming. Perform object oriented programming to develop solutions to problems demonstrating usage of control structures, modularity, I/O. and other standard language constructs.
2. Provide the overview of major object-oriented concepts to implement object oriented programs in C++ like encapsulation, inheritance and polymorphism, stream I/O, templates and operator overloading

## Course Outcomes

On completion of this course, the students will be able to

- CO 1: Explain the basic principles of object-oriented programming approach; Differentiate it with procedural programming approach and also discuss difference between C and C++.
- CO 2: Illustrate the different ways to define a member function inline and explain how the private members of a class can be accessed. Explain how the objects can be instantiated and destroyed with static data member?
- CO 3: Explain the concept of inheritance, types and implementation with suitable examples; find out ambiguity problem in inheritance; use the concept of overriding and constructors in inheritance.
- CO 4: Explain polymorphism in detail and implement the concept of overloading in functions as well as in operators. Write the programs for virtual function and pointer with objects.
- CO 5: Explain the exception handling mechanism. Design the programs for class and function Template. Compare and contrast various formatted and unformatted i/o function in file handling.

Modules	Blooms level*	Number of hours
<b>MODULE 1:</b>  <b>INTRODUCTION</b> Review of C, Difference between C and C++, Procedure Oriented and Object Oriented Approach. Basic Concepts: Objects, classes, Principles like Abstraction, Encapsulation, Inheritance and Polymorphism. Dynamic Binding, Message Passing. Characteristics of Object-Oriented Languages. Introduction to Object-Oriented Modeling techniques (Object, Functional and Dynamic Modeling).	L1 and L2	5
<b>MODULE 2:</b>  <b>CLASSES AND OBJECTS</b> Abstract data types, Object & classes, attributes, methods, C++ class declaration, Local Class and Global Class, State identity and behaviour of an object, Local Object and Global Object, Scope resolution operator, Friend Functions, Inline functions, Constructors and destructors, instantiation of objects, Types of Constructors, Static Class Data, Array of Objects, Constant member functions and Objects, Memory management Operators.	L1, L2 and L3	7
<b>MODULE 3:</b>  <b>INHERITANCE</b> Inheritance, Types of Inheritance, access modes – public, private & protected, Abstract Classes, Ambiguity resolution using scope resolution operator and Virtual base class, Aggregation, composition vs classification hierarchies, Overriding inheritance methods, Constructors in derived classes, Nesting of Classes	L2, L3 and L4	8
<b>MODULE 4:</b>  <b>POLYMORPHISM</b> Polymorphism, Type of Polymorphism – Compile time and runtime, Function Overloading, Operator Overloading (Unary and Binary) Polymorphism by parameter, Pointer to objects, this pointer, Virtual Functions, pure virtual functions.	L2, L3 and L4	8
<b>MODULE 5:</b>  <b>STRINGS, FILES AND EXCEPTION HANDLING</b> Manipulating strings, Streams and files handling, formatted and Unformatted Input output. Exception handling, Generic Programming – function template, class Template Standard Template Library: Standard Template Library, Overview of Standard Template Library, Containers, Algorithms, Iterators, Other STL Elements, The Container Classes, General Theory of Operation, Vectors.	L2, L3 and L4	8

*\*Bloom's Level:*

<b>Course Code: BME2208</b>	<b>ENGINEERING GRAPHICS LAB</b>	L	T	P	C
Version 2019.1	Date of Approval: May 16, 2019	0	0	4	2
Pre-requisites/Exposure	Concepts Mathematics (especially Trigonometry and Geometry)				
Co-requisites	Machine Drawing & CAD				

### Catalog Description:

A freshman level course which provides the undergraduate engineering students with a background in descriptive geometry, orthographic projection, engineering drawing standards and annotation, computer-aided engineering graphics. The concepts of point, line and plane relationships in projection, multi-view engineering drawings, auxiliary and section views, basic dimensioning and annotation, engineering applications of drawings are also discussed.

### Course Objective:

The objective of this course is to

1. Equip the students with the in-depth knowledge of drawings of points, straight line, planes, cylinders, prisms, pyramids, parabola, ellipse etc.
2. Draw different figures manually and will be capable of using various instruments involved in drawings.

### Course Outcomes (COs):

At the end of the course, the student shall be able to:

CO 1 - Define and explain basic principles of projections of points and lines.

CO 2 - Define, describe and construct the different orientations and projections of planes.

CO 3 – Explain and construct the projections of solids and sectioning of solids in different orientations.

CO 4 - State and draw the concepts of development of surfaces and introduction to auto CAD.

CO 5 – Define and construct orthographic and isometric view of an object.

Modules	Blooms level*	Number of hours
<b>Module I: Introduction</b>  Importance, significance and scope of engineering drawing, drawing instruments and their use, lettering, dimensioning, scales, sense of proportioning, different types of projections, B.I.S. Specifications.	L1 and L2	8

<b>Module II: Projection of points, lines and plane surface</b> Principal planes, principles of orthographic projections, Projection of points in all quadrants, Projection methods - First angle & third angle projection, Projections of straight lines (first angle projection) inclined to both the planes, true lengths and traces, projection of planes, projection of planes in simple position and inclined to both the principal planes, auxiliary planes and views	L1, L2 and L3	12
<b>Module III: Projection of solids &amp; section of solids</b> Projection of simple solids like prisms, pyramids, cylinder, cone and truncated solids when the axis is inclined to both of the principal planes, Sectioning of above solids in simple vertical position when the cutting plane is inclined to the one of the principal planes and perpendicular to the other, obtaining true shape of section	L1, L2 and L3	12
<b>Module IV: Development of surfaces &amp; Isometric projections</b> Development of surfaces of simple and sectioned solids – Prisms, pyramids cylinders and cones, Principles of isometric projection, isometric scale, Isometric projections of simple solids and truncated solids, Prisms, pyramids, cylinders, cones, Conversion of Orthographic Views to Isometric Views and Vice-versa.	L1, L2 and L3	8
<b>Module V: Introduction to CAD</b> Introduction to CAD and use of its commands, practice of some 2D figures using CAD.	L1, L2 and L3	8

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

### Catalog Description

The objective of this course is to introduce object-oriented programming. To explore and implement the various features of OOP such as inheritance, polymorphism, Exceptional handling using programming language C++. After completing this course student can easily identify the basic difference between the programming approaches like procedural and object oriented.

### Course Objectives

The objective of this course is

1. Perform object-oriented programming to develop solutions to problems demonstrating usage of control structures, modularity, I/O. and other standard language constructs.
2. Demonstrate adeptness of object-oriented programming in developing solutions to problems demonstrating usage of data abstraction, encapsulation, and inheritance.
3. Demonstrate ability to implement one or more patterns involving realization of an abstract interface and utilization of polymorphism in the solution of problems which can take advantage of dynamic dispatching, syntax, features of, and how to utilize the Standard Template Library.

### Course Outcomes

On completion of this course, the students will be able to

- CO 1: Define and identify the basic principles of object-oriented programming approach; Differentiate it with procedural programming approach.
- CO 2: Determine the different ways to define a member function inline and explain how the private members of a class can be accessed. Solve how the objects can be instantiated and destroyed with static data member?
- CO 3: Apply the concept of inheritance, types and implementation with suitable examples; find out ambiguity problem in inheritance; use the concept of overriding and constructors in inheritance.
- CO 4: Relate the concept polymorphism with overloading in detail and implement the concept of overloading in functions as well as in operators. Write the programs for virtual function and pointer with objects.
- CO 5: Determine the exception handling mechanism. Design the programs for class and function Template. Compare and contrast various formatted and unformatted i/o function in filehandling.

<b>Modules/Topics Covered**</b>	<b>Blooms level*</b>	<b>Number of hours</b>
1. Sample Programs using objects and classes (a) Write a program to illustrate the concept of one class with two	L1, L3, L5	4

objects by taking student data. (b) Write a program to show the relationship of class and object to display roll no., grade and fee paid by student.		
2. Sample Programs for different use of private, public member variables and functions and friend functions (a) Write a program to define the member function outside and inside the class. (b) Write a program to read and display the information of N persons to illustrate the concept of array of objects. (c) Write a program to add two numbers to illustrate the use of friend function.	L1, L3, L5	4
3. Sample Programs using constructors and destructors (a) Write a program to assign and copy values to illustrate the concept of parametrized and copy constructor. (b) Write a program to show the order of constructor and destructor.	L1, L3, L5	4
4. Sample Programs using operator overloading (a) Write a program to add two numbers using binary operator overloading. (b) Write a program to illustrate the assignment operator overloading.	L1, L3, L5	4
5. Sample Programs using inheritance in and accessing objects of different derived classes (a) Write a program to compute the marks explaining the concept of multiple inheritance. (b) Write a program to find the factorial of a number using inheritance.	L1, L3, L5	4
6. Sample Programs using polymorphism and virtual functions (using pointers) and File Handling (a) Write a program to find the volume of cylinder and cuboid using function overloading. (b) Write a program to reverse a string using pointers. (c) Write a program to explain the relationship of inheritance and virtual function. (d) Write a program to read the student name and fee paid using read() function from the file.	L1, L3, L4, L5	4

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

**\*\* Sample Programs provided are not limited to these only, can include others as desired.**

## ENGINEERING PHYSICS LAB

**Course Code: BME2212**

**L-T-P : 0-0-2**

**Credit Units: 01**

### List of Experiments:

1. To determine the wavelength of sodium light by Newton's rings method.
2. To determine the dispersive power of the material of prism with the help of a spectrometer.
3. To determine the specific rotation of sugar by Bi-quartz or Laurent half shade polarimeter.
4. To determine the speed of ultrasonic waves in liquid by diffraction method.
5. To determine the width of a narrow slit using diffraction phenomena.
6. To determine the temperature coefficient of platinum wire, using a platinum resistance thermometer and a Callender & Griffith's bridge.
7. To determine the value of specific charge (ratio of  $e/m$ ) of an electron by Thomson method.
8. To determine the internal resistance of Leclanche cell with the help of Potentiometer.
9. To determine the resistance per unit length of a Carey Foster's bridge wire and also to find out the specific resistance of a given wire.
10. To plot graph showing the variation of magnetic field with distance along the axis of a circular coil carrying current, and hence estimate the radius of the coil.
11. To determine the value of acceleration due to gravity ('g') in the laboratory using bar pendulum.
12. To determine the moment of inertia of a flywheel about its own axis of rotation.
13. To determine the density of material of the given wire with the help of sonometer.

# ENGLISH-II

Course Code: CSS2252

L-T-P : 1-0-0

Credit Units: 01

## Course Objective:

The course is intended to give a foundation of English Language. The literary texts are indented to help students to inculcate creative & aesthetic sensitivity and critical faculty through comprehension, appreciation and analysis of the prescribed literary texts. It will also help them to respond form different perspectives.

## Course Contents:

Module I: Vocabulary  
Use of Dictionary  
Use of Words: Diminutives, Homonyms & Homophones

### Module II: Essentials of Grammar - I

Articles  
Parts of Speech  
Tenses

### Module III: Essentials of Grammar - II

Sentence Structure  
Subject -Verb agreement  
Punctuation

Module IV: Communication  
The process and importance  
Principles & benefits of Effective Communication

Module V: Spoken English Communication  
Speech Drills  
Pronunciation and accent  
Stress and Intonation

### Module VI: Communication Skills-I

Developing listening skills  
Developing speaking skills

### Module VII: Communication Skills-II

Developing Reading Skills  
Developing writing Skills

Module VIII: Written English communication  
Progression of Thought/ideas  
Structure of Paragraph  
Structure of Essays

Module IX: Short Stories  
**Of Studies, by Francis Bacon**  
**Dream Children, by Charles Lamb**  
**The Necklace, by Guy de Maupassant**  
**A Shadow, by R.K.Narayan**  
**Glory at Twilight, Bhabani Bhattacharya**

### Module X: Poems

All the Worlds a Stage	Shakespeare
To Autumn	Keats
O! Captain, My Captain.	Walt Whitman
Where the Mind is Without Fear	Rabindranath Tagore
<b><u>Psalm of Life</u></b>	<b><u>H.W. Longfellow</u></b>

***Examination Scheme:***

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	05	15	10	70

**Text & References:**

# PROBLEM SOLVING AND CREATIVE THINKING

Course Code: BEH 2251

L-T-P : 1-0-0

Credit Units: 01

## Course Objective:

To enable the students:

Understand the process of problem solving and creative thinking.

Facilitation and enhancement of skills required for decision-making.

## Course Contents:

Module I: Thinking as a tool for Problem Solving

What is thinking: The Mind/Brain/Behaviour

Critical Thinking and Learning:

Making Predictions and Reasoning

Memory and Critical Thinking

Emotions and Critical Thinking

Thinking skills

## Module II: Hindrances to Problem Solving Process

Perception

Expression

Emotion

Intellect

Work environment

## Module III: Problem Solving

Recognizing and Defining a problem

Analyzing the problem (potential causes)

Developing possible alternatives

Evaluating Solutions

Resolution of problem

Implementation

Barriers to problem solving:

Perception

Expression

Emotion

Intellect

Work environment

## Module IV: Plan of Action

Construction of POA

Monitoring

Reviewing and analyzing the outcome

## Module V: Creative Thinking

Definition and meaning of creativity

The nature of creative thinking

Convergent and Divergent thinking

Idea generation and evaluation (Brain Storming)

Image generation and evaluation

Debating

The six-phase model of Creative Thinking: ICEDIP model

## Module VI: End-of-Semester Appraisal

Viva based on personal journal

Assessment of Behavioural change as a result of training

Exit Level Rating by Self and Observer

**Examination Scheme:**

Components	SAP	A	Mid Term Test (CT)	VIVA	Journal for Success (JOS)
Weightage (%)	20	05	20	30	25

**Text & References:**

# ENVIRONMENTAL STUDIES

**Course Code:** ENV 2252  
**L-T-P : 4-0-0**

**Credit Units: 04**

## **Course Objective:**

The term environment is used to describe, in the aggregate, all the external forces, influences and conditions, which affect the life, nature, behaviour and the growth, development and maturity of living organisms. At present a great number of environment issues, have grown in size and complexity day by day, threatening the survival of mankind on earth. A study of environmental studies is quite essential in all types of environmental sciences, environmental engineering and industrial management. The objective of environmental studies is to enlighten the masses about the importance of the protection and conservation of our environment and control of human activities which has an adverse effect on the environment.

## **Course Contents:**

### **Module I: The multidisciplinary nature of environmental studies**

Definition, scope and importance  
Need for public awareness

### **Module II: Natural Resources**

#### **Renewable and non-renewable resources:**

Natural resources and associated problems

Forest resources: Use and over-exploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forests and tribal people.

Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems.

Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies.

Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies.

Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources, case studies.

Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification.

- Role of an individual in conservation of natural resources.
- Equitable use of resources for sustainable lifestyles.

### **Module III: Ecosystems**

Concept of an ecosystem

Structure and function of an ecosystem

Producers, consumers and decomposers

Energy flow in the ecosystem

Ecological succession

Food chains, food webs and ecological pyramids

Introduction, types, characteristic features, structure and function of the following ecosystem:

- a. Forest ecosystem
- b. Grassland ecosystem
- c. Desert ecosystem
- d. Aquatic ecosystems (ponds, streams, lakes, rivers, ocean estuaries)

### **Module IV: Biodiversity and its conservation**

Introduction – Definition: genetic, species and ecosystem diversity

Biogeographical classification of India

Value of biodiversity: consumptive use, productive use, social, ethical aesthetic and option values

Biodiversity at global, national and local levels

India as a mega-diversity nation

Hot-spots of biodiversity

Threats to biodiversity: habitat loss, poaching of wildlife, man wildlife conflicts

Endangered and endemic species of India

Conservation of biodiversity: In-situ and Ex-situ conservation of biodiversity

## **Module V: Environmental Pollution**

### **Definition**

- ☐ ☐ ☐ Causes effects and control measures of:
  - a. Air pollution
  - b. Water pollution

# FRENCH - II

Course Code: LAN2251

L-T-P : 3-0-0

Credit Units: 03

## Course Objective:

To enable the students to overcome the fear of speaking a foreign language and take position as a foreigner speaking French.

To make them learn the basic rules of French Grammar.

## Course Contents:

Module A : pp.38 – 47 : Unité 3: Objectif 3, 4, 5, 6

Module B: pp. 47 to 75 Unité 4, 5

### Contenu lexical: Unité 3 : Organiser son temps

1. donner/demander des informations sur un emploi du temps, un horaire  
SNCF – Imaginer un dialogue
2. rédiger un message/ une lettre pour ...  
i) prendre un rendez-vous/ accepter et confirmer/ annuler  
ii) inviter/accepter/refuser
3. Faire un programme d'activités  
imaginer une conversation téléphonique/un dialogue  
Propositions- interroger, répondre

### Unité 4: Découvrir son environnement

1. situer un lieu
2. s'orienter, s'informer sur un itinéraire.
3. Chercher, décrire un logement
4. connaître les rythmes de la vie

### Unité 5: s'informer

1. demander/donner des informations sur un emploi du temps passé.
2. donner une explication, exprimer le doute ou la certitude.
3. découvrir les relations entre les mots
4. savoir s'informer

- Contenu grammatical:**
1. Adjectifs démonstratifs
  2. Adjectifs possessifs/exprimer la possession à l'aide de :  
i. « de » ii. A+nom/pronom disjoint
  3. Conjugaison pronominale – négative, interrogative -  
construction à l'infinitif
  4. Impératif/exprimer l'obligation/l'interdiction à l'aide de « il faut... »/ «il ne faut pas... »
  5. passé composé
  6. Questions directes/indirectes

## Examination Scheme:

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	20	20	20	15	5

C – Project + Presentation

I – Interaction/Conversation Practice

## Text & References:

# GERMAN – II

Course Code: LAN2252

L-T-P : 3-0-0

Credit Units: 03

## Course Objective:

To enable the students to converse, read and write in the language with the help of the basic rules of grammar, which will later help them to strengthen their language.

To give the students an insight into the culture, geography, political situation and economic opportunities available in Germany

Introduction to Grammar to consolidate the language base learnt in Semester I

## Course Contents:

### Module I: Everything about Time and Time periods

Time and times of the day.

Weekdays, months, seasons.

Adverbs of time and time related prepositions

### Module II: Irregular verbs

Introduction to irregular verbs like to be, and others, to learn the conjugations of the same, (fahren, essen, lessen, schlafen, sprechen und ähnliche).

### Module III: Separable verbs

To comprehend the change in meaning that the verbs undergo when used as such

Treatment of such verbs with separable prefixes

### Module IV: Reading and comprehension

Reading and deciphering railway schedules/school time table

Usage of separable verbs in the above context

### Module V: Accusative case

Accusative case with the relevant articles

Introduction to 2 different kinds of sentences – Nominative and Accusative

### Module VI: Accusative personal pronouns

Nominative and accusative in comparison

Emphasizing on the universal applicability of the pronouns to both persons and objects

### Module VII: Accusative prepositions

Accusative prepositions with their use

Both theoretical and figurative use

### Module VIII: Dialogues

Dialogue reading: 'In the market place'

'At the Hotel'

## Examination Scheme:

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	20	20	20	15	5

C – Project + Presentation

I – Interaction/Conversation Practice

## Text & References:

## SPANISH – II

Course Code: LAN2253

L-T-P : 3-0-0

Credit Units: 03

### Course Objective:

To enable students acquire more vocabulary, grammar, Verbal Phrases to understand simple texts and start describing any person or object in Simple Present Tense.

### Course Contents:

#### Module I

Revision of earlier modules.

#### Module II

Some more AR/ER/IR verbs. Introduction to root changing and irregular AR/ER/IR ending verbs

#### Module III

More verbal phrases (eg, Dios Mio, Que lastima etc), adverbs (*bueno/malo, muy, mucho, bastante, poco*). Simple texts based on grammar and vocabulary done in earlier modules.

#### Module IV

Possessive pronouns

#### Module V

Writing/speaking essays like my friend, my house, my school/institution, myself....descriptions of people, objects etc, computer/internet related vocabulary

### Examination Scheme:

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	20	20	20	15	5

C – Project + Presentation

I – Interaction/Conversation Practice

## **RUSSIAN – II**

**Course Code: LAN2254**

**L-T-P : 3-0-0**

**Credit Units: 03**

# CHINESE – II

Course Code: CSE2255

L-T-P : 3-0-0

Credit Units: 03

## Course Objective:

Chinese is a tonal language where each syllable in isolation has its definite tone (flat, falling, rising and rising/falling), and same syllables with different tones mean different things. When you say, “ma” with a third tone, it mean horse and “ma” with the first tone is Mother. The course aims at familiarizing the student with the basic aspects of speaking ability of Mandarin, the language of Mainland China. The course aims at training students in practical skills and nurturing them to interact with a Chinese person.

## Course Contents:

### Module I

Drills

Practice reading aloud

Observe Picture and answer the question.

Tone practice.

Practice using the language both by speaking and by taking notes.

Introduction of basic sentence patterns.

Measure words.

Glad to meet you.

### Module II

Where do you live?

Learning different colors.

Tones of “bu”

Buying things and how much it costs?

Dialogue on change of Money.

More sentence patterns on Days and Weekdays.

How to tell time. Saying the units of time in Chinese. Learning to say useful phrases like – 8:00, 11:25, 10:30 P.M. everyday, afternoon, evening, night, morning 3:58, one hour, to begin, to end ..... etc.

Morning, Afternoon, Evening, Night.

### Module III

Use of words of location like-li, wai hang, xia

Furniture – table, chair, bed, bookshelf,.. etc.

Description of room, house or hostel room.. eg what is placed where and how many things are there in it?

Review Lessons – Preview Lessons.

Expression ‘yao’, ‘xiang’ and ‘yaoshi’ (if).

Days of week, months in a year etc.

I am learning Chinese. Is Chinese difficult?

### Module IV

Counting from 1-1000

Use of “chang-chang”.

Making an Inquiry – What time is it now? Where is the Post Office?

Days of the week. Months in a year.

Use of Preposition – “zai”, “gen”.

Use of interrogative pronoun – “duoshao” and “ji”.

“Whose”??? Sweater etc is it?

Different Games and going out for exercise in the morning.

### Module V

The verb “qu”

– Going to the library issuing a book from the library

– Going to the cinema hall, buying tickets

– Going to the post office, buying stamps

– Going to the market to buy things.. etc

– Going to the buy clothes .... Etc.

Hobby. I also like swimming.

Comprehension and answer questions based on it.

**Examination Scheme:**

<b>Components</b>	<b>CT1</b>	<b>CT2</b>	<b>C</b>	<b>I</b>	<b>V</b>	<b>A</b>
<b>Weightage (%)</b>	20	20	20	20	15	5

<b>BME2302</b>	<b>Analog Electronics I</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version: 2019.1	Date of Approval: May 21, 2019	3	0	0	3
Pre-requisites/Exposure	Elementary Resistive Circuit, Theorems and Analysis Techniques: KCL, KVL, Nodal & Mesh Analysis, Thevenin & Norton Equivalents, Maximum Power Transfer.				
Co-requisites	Semiconductor Physics				

## Catalog Description

This is the first course in Electronics and Communication Engineering, to educate and explain the methods used for biasing circuits in a graphical analysis of non linear electronic circuits and also includes small signal transistor models, parameters and their frequency responses. Following this, analyzing different types of feedback amplifiers, and power amplifiers using transistor and designing of different electronic circuits are included in the course. This course also considers the mathematical modelling of active solid state devices their analysis and design of single state circuits. Topics covered include the study of device characteristics and applications of p-n-junction diodes, bipolar junction transistors, and field effect transistors.

## Course Objectives

The objective of this course is to

1. build from basic knowledge of Semiconductor Physics to an understanding of basic devices and their models
2. familiarize the student with the analysis and design of basic transistor amplifier circuits, feedback amplifiers and wave shaping circuits
3. build a foundation for Analog Electronics-II, Digital Circuits and Systems I & II, VLSI design and analog CMOS IC Design

## Course Outcomes

On completion of this course, the students will be able to

- CO1. explain different types of diodes and demonstrate wave shaping circuits
- CO2. explain operating principal of Bipolar Junction Transistor, its properties, biasing techniques and stability
- CO3. describe low and high frequency transistor amplifiers along with single and multi-stage amplifier
- CO4. explain operating principal of JFET, MOSFET, its properties, and biasing techniques
- CO5. solve and analyse different negative feedback amplifiers configurations
- CO6. describe and outline power amplifiers and their application.

Modules	Blooms level*	Number of hours
<b>Module I: Semiconductor Diode and Diode Circuits</b>  Different types of diodes: Zener, Schottky, LED. Zener as voltage regulator, Diffusion capacitance, Drift capacitance, the load line concept, half wave, full wave rectifiers, clipping and clamping circuits.	L1 L2 & L3	6
<b>Module II: Bipolar Junction Transistor</b>  Bipolar junction transistor: Introduction, Transistor, construction, transistor operations, BJT characteristics, load line, operating point, leakage currents, saturation and cut off mode of operations. Bias stabilization: Need for stabilization, fixed Bias, emitter bias, self bias, bias stability with respect to variations in $I_{CO}$ , $V_{BE}$ & $\beta$ , Stabilization factors, thermal stability.	L1 L2 & L3	9
<b>Module III: Small signal Analysis of transistor and Multistage Amplifier</b>  Hybrid model for transistors at low frequencies, Analysis of transistor amplifier using h parameters, emitter follower, Miller's theorem, THE CE amplifier with an emitter resistance, Hybrid $\pi$ model, Hybrid $\pi$ Conductances and Capacitances, CE short circuit current gain, CE short circuit current gain with $R_L$ Multistage amplifier: Cascading of Amplifiers, Coupling schemes(RC coupling and Transformer coupling)	L2 & L3	6
<b>Module IV: Field Effect Transistors</b>  Field effect transistor (JFET, MOSFET): volt-ampere characteristics, small signal model –common drain, common source, common gate, operating point, MOSFET, enhancement and -depletion mode, Common source amplifier, Source follower	L1, L2 & L3	5
<b>Module V: Feedback Amplifiers</b>  Feedback concept, Classification of Feedback amplifiers, Properties of negative Feedback amplifiers, Impedance considerations in different Configurations, Examples of analysis of feedback Amplifiers.	L1, L2, L3 & L4	6
<b>Module VI: Power amplifiers</b>  Power dissipation in transistors, difference with voltage amplifiers, Amplifier classification (Class A, Class B, Class C, Class AB) class AB push pull amplifier, collector efficiency of each, cross over distortion.	L1 & L2	4

<b>BME2303</b>	<b>CIRCUITS AND SYSTEMS</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2019.1	Date of Approval: May 16, 2019	2	1	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

### **Catalog Description**

In this course the concepts of circuits analysis based on Resistance, Inductance and Capacitance are discussed in detail. voltage- current relationship of basic circuit elements – resistors, inductors, capacitors, dependent and independent voltage and current sources; apply Kirchhoff's current and voltage laws to circuits in order to determine voltage, current and power in branches of any circuits excited by DC voltages and current sources will be discussed. Concept learnt in the studies will be applied to solve DC circuit problems using basic circuit theorems and structured methods like node voltage and mesh current analysis.

### **Course Objectives**

The objective of this course is to

1. Equip the students with concepts basic network analysis of electrical circuits using KVL and KCL.
2. Provide an overview of one port and two port network analysis in time and frequency domain.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: Expiation of graph theory for solving complex electrical circuits.

CO2: Analysis of RL, RC and RLC circuits using time domain approach.

CO3: Apply Laplace transform to solve RL, RC and RLC circuits in frequency domain.

CO4: Explanation and application of various network theorems to solve the given circuit.

CO5: Synthesis of RL, RC and RLC electrical circuits and explanation of two port network parameters.

Modules	Blooms level*	Number of hours
<b>Module 1: Graph Theory and Network equations</b> Graph of a network, Trees, Co-trees and loops, cut set matrix, Tie set matrix, number of possible trees of a graph, duality, Loop Analysis and Node Analysis.	L1 and L2	8
<b>Module 2: Analysis of circuits using classical Method</b> Time and Frequency domain analysis of RL, RC and RLC circuits, Linear constant coefficient differential equation.	L2 and L3	10
<b>Module 3: Signals and Laplace Transforms</b> Unit step signal, Ramp signal, impulse signal, Laplace transformations and its properties, Gate function, Inverse Laplace transformations, Application of Laplace Transforms in circuit analysis.	L3 and L4	10
<b>Module 4: Network Theorems</b> Reciprocity theorem, Superposition theorem, Thevenin's and Norton's theorems, Millman's theorem, Maximum power transfer theorem, Compensation theorem, Tellegan's theorem.	L2 and L3	10
<b>Module 5: Two port Network &amp; Network Functions</b> Introduction, two port z-, y-, T-, h-parameters, Inter-relations among parameters, Condition for reciprocity and symmetry, Interconnections of two port networks, Driving point and transfer functions, Poles, Zeros and necessary condition for driving point and transfer function.	L1, L3	10
<b>Module 6: Network Synthesis</b> Hurwitz polynomial, Positive real functions, synthesis of LC, RC, RL immittance functions.	L1 and L5

# Engineering Mathematics III

**Subject Code: ECE2310**

**Credits: 3**

**L-T-P: 3-1-0**

## Course Objective:

The knowledge of Mathematics is necessary for a better understanding of almost all the Engineering and Science subjects. Here our intention is to make the students acquainted with the concept of basic topics from Mathematics, which they need to pursue their Engineering degree in different disciplines.

## Course Contents:

**Module I:** Types of Matrices, Inverse of a matrix by elementary transformations, Rank of a matrix (Echelon & Normal form), Linear dependence, Consistency of linear system of equations and their solution, Characteristic equation, Eigenvalues and Eigenvectors, Cayley-Hamilton Theorem, Diagonalization, Complex and Unitary Matrices and its properties, Vector space, Linear independence and dependence of vectors, Linear Transformations.

**Module II:** Analytic functions, C-R equations and harmonic functions, Line integral in the complex plane, Cauchy's integral theorem, Cauchy's integral formula for derivatives of analytic functions, Liouville's theorem, Fundamental theorem of algebra. Representation of a function by power series, Taylor's and Laurent's series, R Singularities, zeroes and poles, Residue theorem, evaluation of real integrals of type  $\int_0^{2\pi} f(\cos\theta, \sin\theta)d\theta$  and  $\int_{-\infty}^{\infty} f(x)dx$ , Conformal mapping and bilinear transformations.

**Module III:** Probability space, conditional probability, Bayes theorem, Moments, Moment generating functions, Skewness, Kurtosis, Correlation and Regression, Binomial distribution, Poisson distribution, Normal distribution. Method of least squares and curve fitting of straight line and parabola, Solution of cubic and biquadratic equations.

**Module IV:** Numerical solution of algebraic and transcendental equations: bisection, secant method, Newton-Raphson method, fixed point iteration; interpolation: error of polynomial interpolation, Lagrange, Newton interpolations; numerical integration: Trapezoidal and Simpson rules; numerical solution of systems of linear equations: direct methods (Gauss elimination, LU decomposition); iterative methods (Jacobi and Gauss-Seidel).

## Examination Scheme

## Catalog Description

### Catalog Description

This course helps the students to understand various diagnostic imaging modalities used in medical profession e.g. X-Rays, CT scan, MRI, Ultrasound, and PET, Optical imaging, Near-Infra-red Imaging etc. etc. The content of the course will also speak about the artefacts and other problems related to the machines. The course also stresses the importance of radiation safety, ethics and legal considerations as well as professionalism.

### Course Objectives

The objective of this course is to

The objective of this course is to

1. To provide an overview of medical imaging principles and machine.
2. To serve as a foundation for clinical significance of medical images.

### Course Outcomes

On completion of this course, the students develop capabilities of:

- CO1. *Identify* various component of Ultrasound and Doppler machine and *explain* the working principle of ultrasound and its different operating modes.
- CO2. *Describe* the principle of production of X-Rays and *identify* function of various component of X-Ray machine.
- CO3. *List* various component of CT-Scan, *explain* principle of CT-Scan imaging.
- CO4. *List* the MRI hardware components, *explain* principles of MRI imaging, and *determine* the cause of artefact by observing the MRI images.
- CO5. *Explain* the principles of PET, Optical imaging and Infrared Imaging and *determine* application of each for various pathological situation.

## Course Content

Modules	Blooms level*	Number of hours
<b>MODULE I:</b>  <b>Ultrasonic and Doppler Imaging</b> Basic of Imaging techniques and Clinical Application Introduction to Ultrasonic and Doppler Medical imaging modalities, Physics of ultrasound, Principles of image formation, Capture and display, Principles of A-Mode, B-Mode, M-Mode, Scan convertersFrame grabbers, Single line and multi-line monitoring of ultrasound displays. Various Application of Ultrasound and Doppler imaging.	L1 and L2	8
<b>MODULE II:</b>  <b>X-Ray and Angiography Imaging</b> Principles and production of soft and hard X- rays, Photon Interaction and K-shell, Details of radiographic and fluoroscopic images in X-Ray systems. Screen-film and image intensifier systems, Different generation of x-rays, X-Ray machine, Clinical significance of X-ray images, Digital Subtraction Angiography and its application.	L1 and L2	7
<b>MODULE III:</b>  <b>CT-Scanner</b> Principle of CT-Scan, Evolution of CT Machines, CT image formation, Conversion of X-Ray data into scan image, Mathematical details of various algorithms, Spiral CT, Transverse Tomography, CT Angiography.	L1 and L2	5
<b>MODULE IV:</b>  <b>Magnetic Resonance Imaging</b> MRI Hardware, Principle of MRI, Lamour Frequency, Mathematical Equation Governing MRI, Bloch equation, Time of Echo (TE) and Repetition Time(TR) and its significance, Image acquisition in magnetic resonance imaging, T1, T2, proton density weighted images, , Artifacts in imaging, Various Application of T1, T2 and PD weighted images, NMR spectroscopy	L2 and L3	10
<b>MODULE V:</b>  <b>Other Advance Imaging techniques</b> Principles and Application of PET, Infrared Imaging, Optical Imaging.	L1 L2 and L3	6

<b>BME2351</b>	<b>Human Anatomy and Physiology</b>	L	T	P	C
Version 1.1	Date of Approval: 16,MAY,2019	3	0	0	3
Pre-requisites/Exposure	Biology for Engineers				
Co-requisites	General Science				

## Catalog Description

### Catalog Description

This course provides students a basic understanding of the human body structure and functioning. Students will be able to relate basic human body systems and life processes, name the major body systems and their functions, understand the anatomy of various body systems, including musculo-skeletal System, nervous system, cardiovascular system, Renal system, etc.. This course covers the basic anatomy and physiology topics for better understanding of the human body. This is the first part of this course which is continued in the next semester.

### Course Objectives

The objective of this course is to

1. To provide the student with an in-depth study of anatomy and physiology (structure and function) of the human body.
2. To explain and identify biological levels of organization: i.e. cells to tissues, tissues to organs.
3. To identify and develop understanding of major organ systems, list the organs found in each, and their primary functions.
4. To identify the basic structural and functional principles of human organ systems including repair systems.

### Course Outcomes

On completion of this course, the students develop capabilities of:

- CO6. *Outline* cell organization and *describe* the physiology of various cell functioning.
- CO7. *List* various muscles, bone and joint and *distinguish* between joint functioning & Structure.
- CO8. *List and Describe* various structure and functioning of blood component and functioning of heart. *Apply* Einthoven's triangle to heart functioning to obtain ECG.
- CO9. *Explain* the physiology of respiratory and digestive system and *determine* respiratory clinical parameters.
- CO10. *Outline and describe* anatomy and physiology of nervous and renal system in interaction with endocrine gland.

## Course Content

Modules	Blooms level*	Number of hours
<b>MODULE I:</b>  <b>Basic Cell Structure and physiology</b> Basic cell structure, various cell organelles and their functions, Cell, cell membrane, polarization and repolarisation, resting membrane potential, Nernst equation, Donnan's equilibrium, Goldman equation, action potential and its propagation, synaptic transmission. Tissues- their types, structure and function, structure and function of skin.	L1 and L2	6
<b>MODULE II:</b>  <b>Musculo-Skeletal System and Its Physiology</b> Different types of muscles and their function, General description of bones, their structure and function, types of joints and their structure and function. 1. Functional aspect of bones and joints 2. Shoulder joint, Elbow joint 3. Radioulnar and wrist joint 4. Joints of hand 5. Hip joint 6. Knee joint 7. Ankle and foot	L1 and L2	7
<b>MODULE III:</b>  <b>Cardiovascular System and its Physiology</b> Blood, Lymph and circulation: blood composition, properties and function. Structure and functions of RBCs, WBCs and platelets, Blood types, Homeostasis, Immune mechanisms, Lymph, Heart position, structure and functions, Heartbeat, electrical excitation, Einthoven's triangle, Cardiac and peripheral regulation, blood pressure and its regulation, blood flow and its regulation	L1, L2 and L3	7
<b>MODULE IV:</b>  <b>Respiratory System and Digestive System</b> Respiratory System: position and functions. Mechanics of respiration, Lung volumes and capacities, Gas exchange between lungs and tissues, regulation of respiration. Digestive system: Different parts of digestive system, functions of each organ, digestion of proteins, carbohydrates, fats, vitamins and minerals.	L2 and L3	8
<b>MODULE V:</b>  <b>Nervous System, Renal System and endocrine system</b>  Nervous system: Basic functions and structure of CNS, ventricles, and CSF, ANS. Organs of vision, hearing, taste, and smell. Mechanism of sight, colored vision, hearing, reflex action and reflex arc. Renal system: parts of the renal system, its structure and function, formation and composition of urine. Endocrine System and Reproductive system: basic knowledge of endocrine glands, functions of male and female reproductive parts and contraception.	L1 and L2	8

\*Bloom's Level:

L1: Knowledge; L2: Comprehension; L3: Application; L4: Analysis; L5: Synthesis, L6: Evaluation

Version 2019.1	Date of Approval: May 21, 2019	0	0	2	1
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

### Catalog Description

This course provides the practical implementation and verification of the theoretical facts studied in theory course. It includes studying the characteristics of diodes, rectifiers, transistors and amplifiers.

### Course Objectives

The objective of this course is to

1. Provide a demonstration of various analog components like diodes, rectifiers etc.
2. Equip with understanding of different circuits like BJT, JFET, MOSFET and amplifiers.

### Course Outcomes

On completion of this course, the students will be able to

CO 1: Demonstrate the characteristics of pn junction and zener diode.

CO 2: Obtain and analyze the output of clipper-clamper circuit and rectifiers with various filters.

CO 3: Plot the characteristics of BJT, JFET and MOSFET.

CO 4: Obtain the gain and demonstrate the frequency response of single stage and double stage amplifiers.

<b>Modules/Topics Covered**</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Lab Session-I</b> 1. To study and plot the characteristics of a junction diode. 2. To study Zener diode I-V characteristics.	L3, L5	2
<b>Lab Session-II</b> 3. To study diode based clipping and clamping circuits. 4. To study half wave, full wave and bridge rectifier with filters.	L3, L5	2
<b>Lab Session-III</b> 5. To study the input and output characteristics of a transistor in its various configurations (CE and CB). 6. To study various types of Bias Stabilization for a transistor. 7. To study and plot the characteristics of a MOSFET in its various configurations. 8. To study and plot the characteristics of a JFET in its various configurations	L3, L5	6

<b>Lab Session-1V</b> . 9. To study the gain and plot the frequency response of a single stage transistor amplifier. 10. To measure gain and plot the frequency response of double stage RC coupled amplifier.	L3, L5	2

Co-requisites	Nil				

### **Catalog Description**

This course provides a brief knowledge of measurements and measuring instruments related to engineering. It introduces measuring elements of instruments, characteristics of measuring instruments, error analysis, transducers and its classification, measurement of resistance, capacitance and inductance, principles of analog and digital meters and different display techniques.

### **Course Objectives**

The objective of this course is to

1. Equip the students with concepts of measurement, measuring elements and challenges in measurement.
2. Provide in depth knowledge of each element of measurement system.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1. Explain measuring elements and characteristics of measurement system and solve problems related with measurement errors.

CO2. Classify different types of transducers and solve problems related with transducers.

CO3. Solve problems of resistance, capacitance and inductance measurement.

CO4: Explain and solve problems on different types of analog and digital meters suitable for voltage and current measurement.

CO5: Explain display devices used in measurement system and analyze the signals on CRO.

### **Course Contents:**

1. To Study various Temperature Measuring Instruments and to Estimate their Response times.
2. To study the working of Bourdon Pressure Gauge and to check the calibration of the gauge in a dead-weight pressure gauge calibration set up
3. To study a Linear Variable Differential Transformer (LVDT) and use it in a simple Experimental set up to measure a small displacement.
4. To measure load (tensile/compressive) using load cell on a tutor.
5. To measure torque of a rotating shaft using torsion meter/strain gauge torque transducer.
6. To measure the speed of a motor shaft with the help of non-contact type pickups (magnetic or photoelectric).
7. Measurement of distance using capacitive pick up
8. Measurement of temperature using RTD.
9. Measurement of pressure using piezoelectric pick up.

### **Catalog Description**

This Course introduces virtual instrumentation and its comparison over conventional instrumentation. In this course, LabVIEW has been adopted as the platform of virtual instrumentation programming. System hardware and its interfacing techniques are introduced. Applications of virtual instrumentation are explained in various field e.g. Aviation, Automotive Defence, Medical etc.

### **Course Objectives**

The objective of this course is to

1. To provide the core knowledge of Virtual Instruments used in research and industry.
2. To provide a LabVIEW platform on which low cost virtual instruments can be designed in very short time.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1. Explain virtual instrumentation and compare it with tradition instruments.

CO2. Explain components of LabVIEW, apply programming concept and design basic virtual instruments using LabVIEW software.

CO3. Explain the concepts of LabVIEW system hardware including input, output and interfacing devices.

CO4: Explain applications of virtual instrumentation in industries.

## Course Content

Modules	Blooms level*	Number of hours
<b>Module 1:</b> <b>Introduction to Virtual Instrumentation</b> Introduction, Historical perspective, advantages, block diagram and architecture of a virtual instrument, conventional vs. virtual instrumentation.	L1, L2 and L4	4
<b>Module 2:</b> <b>Introduction to Software</b> Introduction to Lab VIEW, Front panel, back panel representations, Block diagram, Menus, Palettes, VI and Sub VI, Editing and Debugging VI, Structures, Arrays, Clusters, Charts and Graphs, Data acquisition, Instrument Control, Signal Generation and Signal Processing Examples	L1, L2, L3, L4 and L5	9
<b>Module 3:</b> <b>Introduction to systems hardware</b> ADC, DAC, D/O, counters and timer, PC hardware structure, timing, interrupts, DMA, software and hardware installation, Configuring data acquisition hardware using the drives in application software, use of DAQ library functions for different analog and digital input/output operations. Input/output devices & functions like data gloves, joysticks, CRT etc.	L1 and L2	6
<b>Module 4:</b> <b>Application of Virtual Instrumentation in various fields</b> Aviation, Automotive, High Voltage, Defense, Chemical, Industrial, Marine, Medical, Mining, Nuclear Energy, Virtual landscapes.	L1 and L2	5

### List of Experiments:

1. To open, and explore the components of LabView.
2. To build a simple VI that converts a Celsius temperature reading to Fahrenheit.
3. (a) To create an icon and a connector pane so you can use a VI as a subVI.  
(b) To build a VI and create its icon and connector pane so you can use it as a subVI.
4. To build a VI to generate 4\*5 two dimensional array of random numbers (between 1 to2).
5. To Build a VI that generate Fibonacci series starting from '0'.
6. To build a VI which finds roots of quadratic equation using formula node.
7. To build a VI that reverses the contents of an array.
8. To build a VI that can be used for sorting of numeric array i.e. in ascending or descending order.
9. To build a VI for 4\*1 multiplexer operation.
10. To build a VI for 3\*8 Decoder operation.

## Catalog Description

In this course the concepts of statistics, the science of collecting, organizing, and interpreting numerical data are discussed. Emphasis will be placed on statistical reasoning and data analysis. The main topics are study design, descriptive statistics, probability theory, and statistical inference. As a precursor to the study of cryptography studies will be made on impact of various techniques for finding independence or dependence between data variables. The concepts learnt in the studies of statistics will be applied practically to solve number of real life problems using the statistical package like R and SPSS.

## Course Objectives

The objective of this course is to

1. Equip the students with concepts of statistics through problem solving and analytical approach.
2. Provide an overview of various statistical techniques: descriptive and inferential, parametric and non-parametric and practical statistics using R and SPSS.

## Course Outcomes

On completion of this course, the students will be able to

- CO 1: Explain, describe and distinguish various population, sample, type of variables, measurement scales, central tendency, percentile and solve problems related to them.
- CO 2: Explain the concept of descriptive and inferential statistics; probability theory; Solve problems based on probability; Explain binomial, poisson distribution and solve real life problems related to discrete and continuous random variable.
- CO 3: Describe the concept of sampling distribution for large and small samples; Explain the concept of hypothesis testing and solve problems related using t-distribution and standard normal distribution.
- CO 4: Explain concept of covariance and correlation and its applications in real life; Explain Anova and its use in real life problem solving; Explain and compare various regression analysis methods statistics for prediction
- CO 5: Explain various parametric and nonparametric test and apply them to solve real life statistical problems

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1: Introduction to Statistics and Data Analysis</b> Statistical Inference, Samples, Populations and Experimental Design , The Hole of Probability Sampling Procedures; Collection of Data ,Measures of Location:, Measures of Variability ,Discrete and Continuous Data , Statistical Modeling, Scientific Inspection, and Graphical Diagnostics, Graphical Methods and Data Description ,General Types of Statistical Studies	L1, L2 and L3	7

<b>Module 2: Probability &amp; Probability Distribution</b> Sample Space, Events Probability of an Event, Additive Rules, Conditional Probability, Multiplicative Rules, Bayes' Rule, Concept of a Random Variable, Discrete Probability Distributions, Continuous Probability Distributions, Joint Probability Distributions, Mean of a Random Variable, Variance and Covariance of Random Variables, Means and Variances of Linear Combinations of Random Variables, Chebyshev's Theorem, Discrete Uniform Distribution, Binomial and Multinomial Distributions, Poisson Distribution and the Poisson Process. Continuous Uniform Distribution, Normal Distribution, Areas under the Normal Curve, Applications of the Normal Distribution, Gamma and Exponential Distributions, Chi-Squared Distribution.	L1, L2, L3	6
<b>Module 3: Sampling Distributions and Estimation</b> Random Sampling, Some Important Statistics, Data Displays and Graphical Methods, Sampling Distributions Introduction to Estimation, Statistical Inference, Classical Methods of Estimation, Single Sample: Estimating the Mean, Standard Error of a Point Estimate, Prediction Intervals, Tolerance Limits Two Samples: Estimating the Difference between Two Means, Paired Observations, Single Sample: Estimating a Proportion, Two Samples: Estimating the Difference between Two Proportions.	L1, L2, L3	6
<b>Module 4: Hypotheses Testing</b> Statistical Hypotheses: General Concepts, Testing a Statistical Hypothesis, One- and Two-Tailed Tests, The Use of <i>P</i> -Values for Decision Making in Testing Hypotheses, One Sample: Test on a Single Proportion, Two Samples: Tests on Two Proportions, Exercises, One- and Two-Sample Tests Concerning Variances, Goodness-of-Fit Test, Test for Independence (Categorical Data), Test for Homogeneity, Testing for Several Proportions	L1, L2, L3	7
<b>Module 5: Simple Linear Regression and Correlation</b> Introduction to Linear Regression, The Simple Linear Regression Model, Least Squares and the Fitted Model Analysis-of-Variance, Approach, Test for Linearity of Regression: Data with Repeated Observations, Data Plots and Transformations, Simple Linear Regression Case Study, Correlation, Classification	L1, L2	9

# **GROUP DYNAMICS AND TEAM BUILDING**

**Course Code: BEH2351**

**L-T-P : 1-0-0**

**Credit Units: 01**

## **Course Objective:**

To inculcate in the students an elementary level of understanding of group/team functions  
To develop team spirit and to know the importance of working in teams

## **Course Contents:**

### **Module I: Group formation**

Definition and Characteristics  
Importance of groups  
Classification of groups  
Stages of group formation  
Benefits of group formation

### **Module II: Group Functions**

External Conditions affecting group functioning: Authority, Structure, Org. Resources, Organizational policies etc.  
Internal conditions affecting group functioning: Roles, Norms, Conformity, Status, Cohesiveness, Size, Inter group conflict.  
Group Cohesiveness and Group Conflict  
Adjustment in Groups

### **Module III: Teams**

Meaning and nature of teams  
External and internal factors effecting team  
Building Effective Teams  
Consensus Building  
Collaboration

### **Module IV: Leadership**

Meaning, Nature and Functions  
Self leadership  
Leadership styles in organization  
Leadership in Teams

### **Module V: Power to empower: Individual and Teams**

Meaning and Nature  
Types of power  
Relevance in organization and Society

### **Module VI: End-of-Semester Appraisal**

#### **Viva based on personal journal**

#### **Assessment of Behavioural change as a result of training**

Exit Level Rating by Self and Observer

# FRENCH - III

Course Code: LAN2351

L-T-P : 2-0-0

Credit Units: 02

## Course Objective:

To provide the students with the know-how

- To master the current social communication skills in oral and in written.
- To enrich the formulations, the linguistic tools and vary the sentence construction without repetition.

## Course Contents:

Module B: pp. 76 – 88 Unité 6

Module C: pp. 89 to 103 Unité 7

### Contenu lexical: Unité 6: se faire plaisir

1. acheter : exprimer ses choix, décrire un objet (forme, dimension, poids et matières) payer
2. parler de la nourriture, deux façons d'exprimer la quantité, commander un repas au restaurant
3. parler des différentes occasions de faire la fête

### Unité 7: Cultiver ses relations

1. maîtriser les actes de la communication sociale courante (Salutations, présentations, invitations, remerciements)
2. annoncer un événement, exprimer un souhait, remercier, s'excuser par écrit.
3. caractériser une personne (aspect physique et caractère)

### Contenu grammatical:

1. accord des adjectifs qualificatifs
2. articles partitifs
3. Négations avec de, ne...rien/personne/plus
4. Questions avec combien, quel...
5. expressions de la quantité
6. ne...plus/toujours - encore
7. pronoms compléments directs et indirects
8. accord du participe passé (auxiliaire « avoir ») avec l'objet direct
9. Impératif avec un pronom complément direct ou indirect
10. construction avec « que » - Je crois que/ Je pense que/ Je sais que

Credit Units: 02

## Course Objective:

To enable the students to converse, read and write in the language with the help of the basic rules of grammar, which will later help them to strengthen their language.

To give the students an insight into the culture, geography, political situation and economic opportunities available in Germany

## Course Contents:

### Module I: Modal verbs

Modal verbs with conjugations and usage

Imparting the finer nuances of the language

### Module II: Information about Germany (ongoing)

Information about Germany in the form of presentations or “Referat” – neighbors, states and capitals, important cities and towns and characteristic features of the same, and also a few other topics related to Germany.

### Module III: Dative case

Dative case, comparison with accusative case

Dative case with the relevant articles

Introduction to 3 different kinds of sentences – nominative, accusative and dative

### Module IV: Dative personal pronouns

Nominative, accusative and dative pronouns in comparison

### Module V: Dative prepositions

Dative preposition with their usage both theoretical and figurative use

### Module VI: Dialogues

In the Restaurant,

At the Tourist Information Office,

A telephone conversation

### Module VII: Directions

Names of the directions

Asking and telling the directions with the help of a roadmap

### Module VIII: Conjunctions

To assimilate the knowledge of the conjunctions learnt indirectly so far

## Examination Scheme:

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	20	20	20	15	5

C – Project + Presentation

I – Interaction/Conversation Practice

# SPANISH – III

Course Code: LAN2353

L-T-P : 2-0-0

Credit Units: 02

## Course Objective:

To enable students acquire knowledge of the Set/definite expressions (idiomatic expressions) in Spanish language and to handle some Spanish situations with ease.

## Course Contents:

### Module I

Revision of earlier semester modules

Set expressions (idiomatic expressions) with the verb *Tener, Poner, Ir....*

Weather

### Module II

Introduction to *Gustar...* and all its forms. Revision of *Gustar* and usage of it

### Module III

Translation of Spanish-English; English-Spanish. Practice sentences.

How to ask for directions (using *estar*)

Introduction to IR + A + INFINITIVE FORM OF A VERB

### Module IV

Simple conversation with help of texts and vocabulary

En el restaurante

En el instituto

En el aeropuerto

### Module V

Reflexives

## Examination Scheme:

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	20	20	20	15	5

C – Project + Presentation

I – Interaction/Conversation Practice

## **RUSSIAN - III**

**Course Code: LAN2354**

**L-T-P : 2-0-0**

**Credit Units: 02**

# CHINESE – III

Course Code: LAN2355

L-T-P : 2-0-0

Credit Units: 02

## Course Objective:

Foreign words are usually imported by translating the concept into Chinese, the emphasis is on the meaning rather than the sound. But the system runs into a problem because the underlying name of personal name is often obscure so they are almost always transcribed according to their pronunciation alone. The course aims at familiarizing the student with the basic aspects of speaking ability of Mandarin, the language of Mainland China. The course aims at training students in practical skills and nurturing them to interact with a Chinese person.

## Course Contents:

### Module I

Drills

Dialogue practice

Observe picture and answer the question.

Introduction of written characters.

Practice reading aloud

Practice using the language both by speaking and by taking notes.

Character writing and stroke order

### Module II

Measure words

Position words e.g. inside, outside, middle, in front, behind, top, bottom, side, left, right, straight.

Directional words – beibian, xibian, nanbian, dongbian, zhongjian.

Our school and its different building locations.

What game do you like?

Difference between “hii” and “neng”, “keyi”.

### Module III

Changing affirmative sentences to negative ones and vice versa

Human body parts.

Not feeling well words e.g.; fever, cold, stomach ache, head ache.

Use of the modal particle “le”

Making a telephone call

Use of “jiu” and “cai” (Grammar portion)

Automobiles e.g. Bus, train, boat, car, bike etc.

Traveling, by train, by airplane, by bus, on the bike, by boat.. etc.

### Module IV

The ordinal number “di”

“Mei” the demonstrative pronoun e.g. mei tian, mei nian etc.

use of to enter to exit

Structural particle “de” (Compliment of degree).

Going to the Park.

Description about class schedule during a week in school.

Grammar use of “li” and “cong”.

Comprehension reading followed by questions.

### Module V

Persuasion-Please don't smoke.

Please speak slowly

Praise – This pictorial is very beautiful

Opposites e.g. Clean-Dirty, Little-More, Old-New, Young-Old, Easy-Difficult, Boy-Girl, Black-White, Big-Small, Slow-Fast ... etc.

Talking about studies and classmates

Use of “it doesn't matter”

Enquiring about a student, description about study method.

Grammar: Negation of a sentence with a verbal predicate.

## Examination Scheme:

<b>Components</b>	<b>CT1</b>	<b>CT2</b>	<b>C</b>	<b>I</b>	<b>V</b>	<b>A</b>
<b>Weightage (%)</b>	20	20	20	20	15	5

<b>BME2408</b>	<b>Digital Electronics</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2019.1	Date of Approval: May 16, 2019	2	1	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

### **Catalog Description**

This course explores the theory and operation of the basic building blocks of digital electronics which includes combinational and sequential circuits. This course also explains the logic families and data convertors. The concepts learnt in the studies of sequential circuits will be applied in the design and analysis of Melay and Moore machines.

### **Course Objectives**

The objective of this course is to

1. Provide the basic knowledge of digital logic levels and application of combinational and sequential circuits.
2. Equip with the understanding of logic family and data convertors.

### **Course Outcomes**

On completion of this course, the students will be able to

- CO1: Explain the various logic gates, Boolean algebra and solve the k-map & tabulation method to simplify the logical function.
- CO2: Explain the adder & subtractor; Apply and analyze multiplexer, decoder & encoder to design Boolean function.
- CO3: Describe flip flops, shift registers & Design counters and synchronous sequential circuits.
- CO4: Explain & compare different logic families and explain data convertors.

Modules	Blooms level*	Number of hours
<p>MODULE 1:</p> <p><b>BOOLEAN FUNCTIONS</b>            Analog &amp; digital signals, AND, OR, NOT, NAND, NOR , XOR &amp; XNOR gates, Boolean algebra, DeMorgan's theorems, Implementation of logical function using only NAND/NOR gates, 1's complement and 2's complement, BCD to Gray and Gray to BCD code conversion, Standard representation of logical functions ( SOP and POS forms), K-map representation and simplification of logical function up to five variables, don't care conditions, XOR &amp; XNOR simplifications of K-maps, Tabulation method</p>	L1,L2 and L3	6
<p>MODULE 2:</p> <p><b>COMBINATIONAL CIRCUITS</b>            Adders, Subtractors, Implementation of full adder using half adder, full subtractor using half subtractor, Multiplexer, de-multiplexer, decoder &amp; encoder, code converters, 1 &amp; 2 bit comparators, BCD to seven segment decoder/encoder, Implementation of logic functions using multiplexer/de-multiplexer and decoder, Implementation of 16×1 MUX using 4×1 MUX, 4×16 decoder using 3×8 decoder etc., logic implementations using PROM, PLA &amp; PAL.</p>	L1, L2,L3 and L4	6
<p>MODULE 3:</p> <p><b>SEQUENTIAL CIRCUITS</b>            Difference between combinational and sequential circuits, Latch, Flip-flops: SR, JK, D &amp; T flip flops – Truth table, Excitation table, Conversion of flip-flops, set up and hold time, race around condition, Master Slave flip flop, Shift registers: SIPO, PISO, PIPO, SIPO, Bi-directional, 4-bit universal shift register; Counters: Asynchronous/ripple &amp; synchronous counters – up/down, Ring counter, sequence detector.</p>	L2,L3, L4 and L5	7
<p>MODULE 4:</p> <p><b>LOGIC FAMILIES &amp; DATA CONVERTERS</b>            Logic families: Special characteristics (Fan out, Power dissipation, propagation delay, noise margin), working of RTL, DTL, TTL, ECL and CMOS families; Data converters: Special characteristics, ADC – successive approximation, linear ramp, dual slope; DAC – Binary Weighted, R-2R ladder type.</p>	L1, L2,L3 and L4	5

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

Version 1.1	Date of Approval: MAY 16,2019	3	0	0	0
Pre-requisites/Exposure	Anatomy & physiology, Engineering Physics, Element of Mechanical Engineering, Engineering Mechanics				
Co-requisites	General Science				

## Catalog Description

The course is about the biomaterials used in biomedical implants. It includes the concept of biocompatibility and toxicity test. Various biomaterial used in specific applications are content of course. It consist of metallic, polymer, ceramics and biological tissues. Course also provide understanding with material testing and sterilisation techniques.

## Course Objectives

After successfully completing this course, students will be able to:

1. Understand the fundamental principals in biomedical engineering, material science and chemistry, and how they contribute to biomaterial development and performance.
2. Apply the math, science, and engineering knowledge gained in the course to biomaterial selection and design.
3. Critically review papers from the scientific literature and identify areas of research opportunities

## Course Outcomes

On completion of this course, the students develop capabilities of:

- CO11. *Define* the biomaterials and its requirements. *Explain* the metallic implant properties.
- CO12. *Define* the polymer and ceramic biomaterial and *describe* their application in various implants.
- CO13. *Describe* methodology to enhance biomaterial properties for better compatibility with biological tissues. *Setup* test for Biocompatibility and toxicological aspect of material.
- CO14. *Explain*sterilization techniques and *determine* mechanical testing setup for biomaterials for various application.

## Course Content

Modules	Blooms level*	Number of hours
<b>MODULE I:</b>  <b>Introduction</b> Definition of biomaterials, requirements of biomaterials, classification of biomaterials, Comparison of properties of some common biomaterials. Effects of physiological fluid on the properties of biomaterials, Surface properties, physical properties and mechanical properties of materials. Host tissue reactions to biomaterials  <b>Metallic implant materials:</b> Stainless steel, Co-based alloys, Ti and Ti-based alloys. Importance of stress-corrosion cracking, corrosion behavior and the importance of passive films for tissue adhesion. Hard tissue replacement implant: Orthopedic implants and Dental implants. Soft tissue replacement implants: Percutaneous, skin implants and vascular implants,	L1 and L2	9
<b>MODULE II:</b>  <b>Polymeric implant materials</b> Classification of polymers according to thermosets, thermoplastics and elastomers : Polyolefins, polyamides, acrylic polymers, fluorocarbon polymers, silicon rubbers, acetals. Physiochemical characteristics of biopolymers. Biodegradable polymers for medical purposes, Biopolymers in controlled release systems, Synthetic polymeric membranes and their biological applications.  <b>Ceramic implant materials:</b> Definition of bioceramics. Common types of bioceramics: Aluminium oxides, Glass ceramics, Carbons. Bioresorbable and bioactive ceramics	L1 and L2	9
<b>MODULE III:</b>  <b>Composite implant materials:</b> Mechanics of improvement of properties by incorporating different elements. Composite theory of fiber reinforcement (short and long fibers, fibers pull out). Polymers filled with osteogenic fillers (e.g. hydroxyapatite). Host tissue reactions to composite materials..  <b>Biocompatibility &amp; toxicological screening of biomaterials:</b> Definition of biocompatibility, blood compatibility and tissue compatibility. Toxicity tests: acute and chronic toxicity studies (in situ implantation, tissue culture, haemolysis, thrombogenic potential tests, systemic toxicity, intracutaneous irritation test), sensitization, carcinogenicity, mutagenicity and special tests.	L1, L2 and L3	9
<b>MODULE IV:</b>  <b>Sterilisation Techniques:</b> Definition of sterilization, Types of sterilization: autoclaving, ETO and gamma radiation. Effects of sterilization on the properties of materials.  <b>Testing of biomaterials/Implants:</b> In vitro testing (Mechanical testing): tensile, compression, wears, fatigue, corrosion studies and fracture toughness. In-vivo testing (animals studies): biological performance of implants. Ex-vivo testing: in vitro testing simulating the in vivo conditions. Standards of implant materials.	L2 and L3	9

Co-requisites					

### **Catalog Description**

This course deals in Digital signal processing with significant skills in advance methods for modification, analysis, classification & sampling of signals. It provides the broad knowledge of design, and realization of digital signal processing systems. The problems based on transformation of domains and filter design will be focused on.

### **Course Objectives**

The objective of this course is to

1. Equip the students with concepts of signals and systems.
2. Provide in-depth knowledge of representation of signals in frequency & z-domain.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: Represent, analyze & categorize discrete-time signals and systems in time domain with an emphasis on linear time invariant systems.

CO2: Apply the fourier series expansion to signals and obtain its constituent frequencies.

CO3: Convert the signals from time domain to frequency domain using fourier transform.

CO4: Apply the z- transform on discrete signals to solve the problems related to computational complexity.

Modules	Blooms level*	Number of hours
<b>Module 1:</b>  <b>Signals And Systems</b> Introduction of signals and systems; classification of signal, continuous time and discrete time signals, operations performed on them, even and odd signals, periodic and non periodic signals, deterministic and random signals, energy signals, power signals, elementary signals: impulse, step, ramp and exponentials, classification of systems.	L1,L2 and L4	8
<b>Module 2:</b>  <b>LTI System</b> Response of LTI system for continuous and discrete time systems, Impulse response, Step response, properties of continuous LTI and discrete LTI systems, LTI systems described by differential and difference equation, analysis of LTI Systems, interconnection of systems.	L1,L2 and L4	6
<b>Module 3:</b>  <b>Fourier Series</b> Representation of continuous time periodic signal, properties of continuous time Fourier series, representation of discrete time periodic signals, convergence of the Fourier series, properties of discrete time Fourier series, Fourier series and LTI systems.	L2,L3	7
<b>Module 4:</b>  <b>Fourier Transform</b> Continuous time Fourier transform, properties of continuous time Fourier transform, discrete time Fourier transform, properties of discrete time Fourier transform; applications; Bandwidth determination of signals and systems.	L2,L3	7
<b>Module 4:</b>  <b>z-Transform</b>  Definition of z-transform, region of convergence, properties of z-transform, first order system, second order system, inverse z-transform, analysis of LTI system using z-transform.	L2,L3	8

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

Co-requisites	General Science				

## Catalog Description

Bio-instruments comprise of all equipment use in healthcare system for diagnosis and therapy. This course is consist of diagnosis equipment using various physiological parameters. Course inculcate an understanding of the measurement principles of medical instrumentation, including biochemical sensors, bio-potential amplifiers, bioelectrical signals (ECG, EEG), measurement of respiratory function, cardiac variables, blood pressure, blood flow as well as medical devices.

## Course Objectives

The objective of this course is to

3. To provide an overview of bio-instrumentation principles and constraint.
4. To serve as a foundation for design and use of medical instruments.

## Course Outcomes

On completion of this course, the students develop capabilities of:

- CO15. *Identify* appropriate transducer and electrode to *estimate* specific physiological parameter.
- CO16. *List* electro-physiological signal (ECG, EEG, EMG) specification and *construct* device to analysis signal characteristics.
- CO17. *List* various respiratory parameter and *demonstrate* the use of electrical impedance tomography for plethysmography.
- CO18. *Explain* the principle of oximetry and *construct* oximeter device.
- CO19. *Explain and demonstrate* the principle of non-invasive blood pressure measurement.

## Course Content

Modules	Blooms level*	Number of hours
<b>MODULE I:</b>  <b>Introduction to Bio-Instrumentation</b> Transducers and Reference electrodes: classification of transducers, temperature transducers, displacement transducer, pressure transducer. Magnetic induction transducer, photoelectric transducer, piezoelectric transducer, magnetic induction. Electrode theory,	L1 and L2	10

biopotential electrodes, microelectrodes, skin surface electrodes, needle electrodes.		
<b>MODULE II:</b>  <b>Electrophysiological Signals and Measurement Devices</b> ECG: electrodes and conversion of ionic potentials to electric potential, ECG instrumentation amplifiers, driven right leg circuitry. Introduction and characteristics of bio signals (EEG, ECG, EMG), removal of artifacts, event detection and correlation analysis of ECG signals.	L1, L2 and L3	8
<b>MODULE III:</b>  <b>Respiratory System and Measurement Devices</b> Respiratory System: position and functions. Methods to measure residual volumes, Introduction to respiration measurement using electrical impedance plethysmography, Electrical impedance changes during breathing, 2 and 4 electrode measurement, 4 electrode technique.	L1, L2 and L3	6
<b>MODULE IV:</b>  <b>Oximetry and Measurement devices</b> Introduction to Oxygen saturation using pulse oximetry, optical characteristics of oxygenated and deoxygenated blood, amplifiers. Principles of pulse oximetry, circuits of pulse oximetry, constant current source, current – voltage converter	L2 and L3	6
<b>MODULE V:</b>  <b>Blood Pressure measurement techniques</b> Theories of Non-invasive blood pressure measurement, Korotkoff sounds and circuitry for method based on oscillometry. Fino-sphygmomanometer principles and limitation.	L2 and L3	6

\*Bloom's Level:

L1: Knowledge; L2: Comprehension; L3: Application; L4: Analysis; L5: Synthesis, L6: Evaluation

### **Course Objectives**

The objective of this course is to

5. To provide hands-on practice with medical signal analysis.
6. To serve as a foundation for design of medical device.

### **Course Outcomes**

On completion of this course, the students will be able to

- CO20. Designing of medical device component as amplifier, sensors, power supplies, filters etc.  
CO21. Design and measure the physiological signal in real time.

### **Catalog Description**

This course helps the students to do hands-on practice with various medical equipment as pulse oximeter, ECG, EMG etc. Course also help student to build capacity to design components for medical devices as, electronic filter, power supplies, amplifiers, etc. with desire output. Course included the basic demonstration of transducer and sensors use for measurement. It consists of signal analysis and visual presentation of analyzed result.

### **Course Content**

---

#### **Laboratory Session 1: 2 hours**

1. Study of pulmonary function analyzer using spirogram.

#### **Laboratory Session 2: 2 hours**

2. To study finger-tip oximeter.

#### **Laboratory Session 3: 2 hours**

3. Designing of instrumentation amplifier.

**Laboratory Session 4: 2 hours**

4. Designing of notch filter.

**Laboratory Session 5: 2 hours**

5. To study voltage regulator IC 7805, 7809, 7812 series.

**Laboratory Session 6: 2 hours**

6. To determine Bradycardia and Tachycardia using ECG Training Kit.

**Laboratory Session 7: 2 hours**

7. To determine heart rate using ECG simulator Kit.

**Laboratory Session 8: 2 hours**

8. Circuitry explanation for patient leakage current.

**Laboratory Session 9: 2 hours**

9. To determine balancing condition for thermistor using wheat stone bridge.

**Laboratory Session 10: 2 hours**

10. Study of pressure changes using strain gauge.

**Text Books**

6. Khandpur R.S, Handbook of Biomedical Instrumentation, Tata McGraw-Hill, 2008

<b>BME2414</b>	<b>Signals &amp; Systems Lab</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 1.1	Date of Approval: 16, May 2019	0	0	2	1
Pre-requisites/Exposure	Basic knowledge of Matlab				
Co-requisites					

## Course Objectives

The objective of this course is to

1. To equip the students with the signal processing tool of Matlab through practical exposure.
2. To provide sound foundation of the basic signal generation and its various operations in Matlab.

## Course Outcomes

On completion of this course, the students will be able to

CO1. Understand the concepts of basic signals and write matlab code to generate them.

CO2. Write programs related to various operations performed between two signals like correlation & convolution.

CO3. Write programs for transforming the signal from time domain to frequency domain & z-domain.

CO4. Use Matlab as a computation and visualization tool in the study of signals and systems.

## Catalog Description

This lab exercises provide opportunities for applying & implementing basic signal and system concepts. Topics include signal generation, convolution, correlation, discrete Fourier Transforms and z transforms with an emphasis on using computer software (Matlab) for analysis and simulation.

## Course Content

---

### Laboratory Session 1: 4 hours

1. To Study auto correlation of two signals.
2. To study cross correlation of two sequences.

**Laboratory Session2: 2 hours**

3. To study convolution of two sequences.
4. To study impulse response.

**Laboratory Session 3: 4 hours**

5. To study z transform of a a) sinusoidal signal, b) step function.
6. To compare fourier and z transform of a signal.

**Laboratory Session 4: 2 hours**

7. To study convolution theorem in time and frequency domain

<b>BME 2407</b>	<b>Analog Electronics- II</b>	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	3	0	0	3
Pre-requisites/Exposure	Basic Electronics and Circuitual Analysis				
Co-requisites	Nil				

## Catalog Description

This course introduces the application of semiconductor devices in linear analog circuits. The course stresses on circuit designs using the operational amplifier, active filters and oscillators. The course also provides the overview on the applications of IC Analog Multiplier & Timer.

## Course Objectives

The objective of this course is to

1. Provide the fundamental knowledge of linear analog circuits.
2. Provide the knowledge about practical circuit designs using OP Amp.

## Course Outcomes

On completion of this course, the students will be able to

CO1. Describe the circuits having BJT and Operational Amplifiers.

CO2. Solve the Linear and Non-linear circuits and analyze them in terms of their parameters and applications.

CO3. Categorize the waveform generation circuits and apply them in laboratory projects.

CO4. Analyze the circuitual knowledge to Linear ICs and filters and apply them for industry problem.

## Course Content

Modules	Blooms level*	Number of hours
<b>MODULE I: Building Blocks of Analog ICs 6 lecture hours</b>  Differential amplifier, Op-amp Model, op-amp DC & AC parameters, virtual ground, Current mirrors, Active loads, Level shifters and output stages.	L1 and L2	6
<b>MODULE II: Operational amplifiers</b>  Introduction, open loop and closed loop configuration, op-amp parameters (input offset current, output offset current, i/p bias current, CMRR, PSRR, null adjustment range, etc.)	L1 and L2	5

Inverting and non-inverting configuration, voltage gain of inverting and non inverting configurations.		
<b>MODULE III: Linear &amp; Non Linear Wave shaping</b>  Adders, Voltage to current, current to voltage Converter, Integrators, Differentiators, Voltage follower (voltage buffer), summer, subtractor, Comparators, log/antilog circuits using Op-amps, precision rectifiers.	L2, L3 and L4	6
<b>MODULE IV: Waveform Generations</b>  Damped and undamped oscillations, Barkhausen criterion for sustained oscillation. Tank circuit generator Astable multi Vibrators, OTA-C Oscillators, Crystal oscillator. Types of oscillators: LC-Hartley and Colpitts, RC-RC phase shift and Wien bridge oscillator, Basics of tuned Amplifiers, Voltage Controlled Oscillator.	L2 L3 and L4	7
<b>MODULE V: Active RC Filters &amp; Applications of Linear Circuits</b>  Idealistic & Realistic response of filters (LP, BP, and HP), Butter worth & Chebyshev approximation filter functions, LP,BP,HP and All pass, Notch Filter, Operational transconductance amplifier (OTA)-C filters.	L2, L3 and L4	6
<b>MODULE VI: Applications of IC Analog Multiplier &amp; Timer</b>  IC phase locked loops, 555 Timer, IC voltage regulators-(fixed, variable) 78xx, 79xx series and adjustable.	L3 and L4	6

\*Bloom's Level:

L1: Knowledge; L2: Comprehension; L3: Application; L4: Analysis; L5: Synthesis, L6: Evaluation

Version 2019.1	Date of Approval: May 21, 2019	0	0	2	1
Pre-requisites/Exposure	Circuit Theory				
Co-requisites	Nil				

### Catalog Description

In this course the concepts of Analog Electronics are discussed. Design and analysis of efficient circuits using op-amp like adder, subtractor, filters and oscillators.

### Course Objectives

The objective of this course is to

1. To provide the basic skills required to understand, develop, and design of various engineering applications involving Analog Electronic & Circuits.
2. To provide basic laboratory exposures for Analog Circuits and applications.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Construct adder, subtractor, an inverting and non-inverting amplifier.

CO2: Design transistor-based RC oscillator (Wien bridge and RC phase shift oscillator) circuit.

CO3: Construct astable and mono-stable mode timer circuit using IC 555.

CO4: Design of Integrator, differentiator and low pass & high pass active filter circuit using Op-Amp (I.C-741)

List of Experiments:

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
1. To study the op amp as an inverting and non inverting amplifier. 2. To use the op amp as an adder, subtractor, integrator and differentiator. 3. To design a ramp and a square wave generator. 4. To study the IC-555 timer as stable and bistable multivibrator.	L1, L2	8

5. To design low pass, high pass and band pass filters using op- amp. and plot their frequency response. 6. To design and study class A power amplifier. 7. To design and study a class B push pull amplifier.	L3 and L4	10
8. To study various feedbacks such as voltage series feedback. 9. To design RC phase shift and Wein bridge oscillators using op amplifier. 10. To design and study Colpitt and Hartley oscillators.	L2, L4	10

Pre-requisites/Exposure	Anatomy & physiology and Engineering Chemistry				
Co-requisites	General Science				

## Catalog Description

This course explores the basic principles of biochemistry and develops the student's appreciation and understanding of biological networks.

This course focuses on the understanding of biochemical processes in the context of chemical principles; and the importance of research design and application in the investigation of questions in biochemistry. Because the field of biochemistry is continually evolving and touches many areas of cell biology.

## Course Objectives

The objective of this course is to

- To provide an overview of biochemistry and application in field of biomedical.
- To serve as a foundation for biocompatibility and interaction of biological tissues with changing environment.

## Course Outcomes

On completion of this course, the students develop capabilities of:

- CO22. *Define* biochemistry and *describe* cell transportation phenomenon.
- CO23. *List* various proteins, enzymes and nucleic acids and *describe* their biological
- CO24. *List* various biochemical clinical parameters and *describe* analytical techniques to observe them.
- CO25. *Explain* the principle of acid-base homeostasis and *application* of various radio-isotopes for biological cycle.

## Course Content

Modules	Blooms level*	Number of hours
<b>MODULE I:</b>  <b>Introduction to Bio-Chemistry</b> Introduction to Biochemistry and Medicine: Cell, Eukaryotic cell structure, functional role of each Organelle, Sub cellular Fractionation: Differential Centrifugation, Redox potentials & Oxidative phosphorylation, Transport of substances across biological membrane function.	L1 and L2	10
<b>MODULE II:</b>	L1 and L2	10

<b>Enzymes and Nucleic Acids</b>  <b>Enzymes (Proteins):</b> Chemical nature of enzymes (Proteins). Spectrophotometric measurement of enzymes (proteins), isolation methods, Study of enzyme properties, Diagnostic enzymes, Enzyme biotechnology  <b>Nucleic Acids:</b> Composition and functions of nucleic acids (A brief account) Genes, Outlines of DNA structure, Recombinant DNA and its applications		
<b>MODULE III:</b>  <b>Biochemical Clinical Parameters and Analytic techniques</b>  <b>Urine chemistry:</b> Chemical composition of urine under normal and abnormal conditions. <b>Analytic Techniques:</b> Principles and applications of photometry, spectrophotometry fluorometry, Nephelometry and turbidimetry, Biochemical analysis carried out in the estimation of blood constituents like glucose, urea, creatinine, protein, cholesterol, bilirubin etc., Separation of Serum Proteins by electrophoresis, Automation in biochemical analysis.	L1 and L2	15
<b>MODULE IV:</b>  <b>Acid base homeostasis:</b> Acids, bases, measurement of pH and glass electrodes, Role of kidney and lungs in acid base balance, Biochemical measurement of acid base status of patients, Blood gas analyzer, disorders of acid-base balances.  <b>Isotopes:</b> Definitions, Units, radioactive isotopes, Applications of isotopes in life sciences and medicine.	L1 and L2	13

\*Bloom's Level:

L1: Knowledge; L2: Comprehension; L3: Application; L4: Analysis; L5: Synthesis, L6: Evaluation

## Catalog Description

### Catalog Description

This course helps the students to understand various advance techniques imaging modalities used in medical profession e.g. MRI, MRI Pulse Sequences, Diffusion, Perfusion, Contrast imaging, etc. The content of the course will also speak about the artefacts and other problems related to the machines. The course also stresses the importance of radiation safety, ethics and legal considerations as well as professionalism.

### Course Objectives

The objective of this course is to

1. To provide an overview of advance medical imaging principles and machine.
2. To serve as a foundation for research in field of medical imaging.

### Course Outcomes

On completion of this course, the students develop capabilities of:

- CO26. *Explain* basic component of Pulse sequence and *design* and *stimulate* Echoes.
- CO27. *Describe* advance techniques of pulse sequences, and able to *differentiate* between them
- CO28. *Describe* various contrast imaging principles and *analyses* clinical parameters.
- CO29. *Illustrate* MRS and MRE and *compile* processed data.
- CO30. *Describe* application of MRI in field of clinical research and diagnosis.

### Course Content

Modules	Blooms level*	Number of hours
<b>MODULE I:</b>  <b>Basic of Magnetic Resonance Pulse Sequences</b>  Basic Classification, Response to a single RF Pulse: Saturation and inverse recovery, Spin Echo, Spin-echo equation, General Response of two or more RF pulses: Stimulated Echoes.	L2, L3, and L4	8
<b>MODULE II:</b>  <b>Advance Techniques of Pulse Sequences</b> Review of the main classes of imaging pulse sequence, Gradient Echo-Pulse	L2 and L3	10

sequence(GRE), Rapid-GRE, Echo-planar and spiral imaging, Interleaved and hybrid sequence, Multislice vs 'True-3D' sequence for volume imaging, Acquisition Strategies in k-space, Gating, Parallel imaging. Other imaging Methods with Historical Interest: Points Methods and Line Scanning Methods		
<b>MODULE III:</b>  <b>Image contrast Mechanism and Quantitative Imaging</b> General Principles of Quantitative Imaging(QI), Relaxation Times and Dynamic contrast enhance MRI, Flow, Diffusion and Perfusion, Susceptibility and functional MRI, Ultra-Short TE imaging, Magnetic transfer and polarisation Transfer, Chemical shift Imaging, Current-Density Imaging, Imaging of nuclei other than Hydrogen	L2, L3 and L4	15
<b>MODULE IV:</b>  <b>MR Spectroscopy and MR elastography</b> Introduction to MRS, Chemical –Shifted Spectroscopy, 1D Spectroscopy data processing, Introduction to MRE and its typical application.	L2 and L3	8
<b>MODULE V:</b>  <b>Application of MR in Medicine</b> Cancer, Neurology, Cardiology, Interventional Procedures and Monitoring of Therapy, Other Medical Applications, Molecular and Cellular Imaging, Genetic Phenotyping for Pre-Clinical Imaging	L1 and L2	7

\*Bloom's Level:

L1: Knowledge; L2: Comprehension; L3: Application; L4: Analysis; L5: Synthesis, L6: Evaluation

<b>BME2418</b>	<b>Artificial Neural Network</b>	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	2	0	0	2
Pre-requisites/Exposure	Basic Knowledge of Brain functioning				
Co-requisites	Nil				

## Catalog Description

The course provides introduction to neural network and a deep insight into the basics of brain & its functioning basics of various neural models & neural schema used for learning. With this course students would be able to know the basics of each introductory feature of human brain and its features which would prove to be very helpful throughout their degree and would prove helpful in understanding other related subjects also.

## Course Objectives

The objective of this course is to

1. Equip the students with concepts of learning of brain problem solving techniques and develop proficiency in creating neural structures using the MATLAB.
2. Provide an overview of various control statements, data structures, packages related to image addition, graphics, different types of neural models.

## Course Outcome

On completion of this course, the students will be able to

CO 1: Define Artificial Neural Network & its similarity to biological neural network and explain its application in our day to day life.

CO 2: Analyze ANN learning, Error correction learning, Hebbian learning, Competitive learning and Boltzman Learning.

CO 3: Implement simple perceptron, Perceptron Learning rule, modified perceptron learning rule, feed forward neural network & feedback Neural Network.

CO 4: Explain self-organizing Map, Hopfield network, Adaptive resonance theory and its various learning rules.

CO 5: Analyze memory-based learning, Associative learning, Bi-directional learning and Auto associative learning.

Modules	Blooms level*	Number of hours
<b>Module-I</b> Artificial Neural Networks (ANN) and biological neural networks, supervised and unsupervised learning rules, neural network applications	L1, L2 and L3	6
<b>Module-II</b> Unsupervised learning:- Hebbian learning and competitive learning. Supervised learning:- Back propagation algorithms, Learning rule:- Delta learning rule, Widrow-Hoff learning rule, Winner-Take-All learning rule	L1, L2 and L3	6
<b>Module-III</b> Feed forward neural network, feed backward neural network, Perceptron and its learning law, single-layer perceptron, multi-layer perceptron.	L2, L3 and L4	6

<b>Module-IV</b> Self organizing networks: Kohonen algorithm, Hopfield Networks: Hopfield network algorithm, Adaptive resonance theory: Network and learning rules.	L2, L3 and L4	6
<b>Module V</b> Associative memory, auto-associative memory, bi-directional associative memory.	L2, L3 and L4	6

Co-requisites	NIL				

### Catalog Description

In this Lab course first student should learn about advanced level of software used for easy calculation and toolbox used for software like MATLAB.

### Course Objectives

The objective of this course is to

3. Make the students apply knowledge of various neural models required for solving complex problems.
4. Provide a demonstration of different types of image processing techniques through MATLAB toolbox.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Acquiring knowledge of Basics of High-end calculation software and need in Computer Science & engineering

CO2: Demonstrate the All preliminary functions in MATLAB

CO3: Apply the knowledge of all the basics function and toolbox knowledge of MATLAB

CO4: Demonstrate the Neural Network model in MATLAB

CO5: Demonstrate usage of applications involving with Image processing & Its Toolbox used by MATLAB

<b>Modules/Topics Covered**</b>	<b>Blooms level*</b>	<b>Number of hours</b>
7. Introduction of MATLAB (a) Basic Variable deceleration & its operation (b) Function use & its application	L3, L5	4
8. Sample Programs in MATLAB (a) Basic use of Matrix and Graph Plotting (b) Different type of graph plotting with use of different -2 type of data	L3, L5	6

9. Sample Programs using MATLAB functions (a) Create a basic program MATLAB using functions (b) Use of basic function Image processing (c) Practice on Basic function of Image processing tool box.	L3, L5	6
10. Sample programs of ANN functions (a) Practice on ANN toolbox function in MATLAB (b) Write a program for training a small network in MATLAB	L3, L5	6
11. Sample Programs using ANN tool box & Image processing toolbox (a) Demonstrate the use of ANN tool box & Image processing toolbox and write a program after combining it.	L3, L5	2

# PRESENTATION SKILLS

Course Code: CSS2251

L-T-P : 1-0-0

Credit Units: 01

## Course Objective:

To teach the participants strategies for improving academic reading and writing.  
Emphasis is placed on increasing fluency, deepening vocabulary, and refining academic language proficiency.

## Course Contents:

### Module I: Social Communication Skills

Small Talk  
Conversational English  
Appropriateness  
Building rapport

### Module II: Context Based Speaking

In general situations  
In specific professional situations  
Discussion and associated vocabulary  
Simulations/Role Play

### Module III: Professional Skills

Presentations  
Negotiations  
Meetings  
Telephony Skills

## Examination Scheme:

Components	CT1	CT2	CAF	V	GD	GP	A
Weightage (%)	20	20	25	10	10	10	5

CAF – Communication Assessment File

GD – Group Discussion

GP – Group Presentation

# **STRESS AND COPING STRATEGIES**

**Course Code:BEH2451**

**L-T-P : 1-0-0**

**Credit Units: 01**

## **Course Objective:**

To develop an understanding the concept of stress its causes, symptoms and consequences.

To develop an understanding the consequences of the stress on one's wellness, health, and work performance.

## **Course Contents:**

Module I: Stress  
Meaning & Nature  
Characteristics  
Types of stress

Module II: Stages and Models of Stress  
Stages of stress  
The physiology of stress  
Stimulus-oriented approach.  
Response-oriented approach.  
The transactional and interactional model.  
Pressure – environment fit model of stress.

Module III: Causes and symptoms of stress  
Personal  
Organizational  
Environmental

Module IV: Consequences of stress  
Effect on behaviour and personality  
Effect of stress on performance  
Individual and Organizational consequences with special focus on health

Module V: Strategies for stress management  
Importance of stress management  
Healthy and Unhealthy strategies  
Peer group and social support  
Happiness and well-being

## **Module VI: End-of-Semester Appraisal**

### **Viva based on personal journal**

### **Assessment of Behavioural change as a result of training**

Exit Level Rating by Self and Observer

## **Examination Scheme:**

Components	SAP	A	Mid Term Test (CT)	VIVA	Journal for Success (JOS)
Weightage (%)	20	05	20	30	25

## **Text & References:**

# FRENCH - IV

Course Code: LAN2451

L-T-P : 2-0-0

Credit Units: 02

## Course Objective:

To enable students:

- To develop strategies of comprehension of texts of different origin
- To present facts, projects, plans with precision
- 

## Course Contents:

Module C: pp. 104 – 139 : Unités 8,9

Contenu lexical :Unité 8: Découvrir le passé

1. parler du passé, des habitudes et des changements.
2. parler de la famille, raconter une suite d'événements/préciser leur date et leur durée.
3. connaître quelques moments de l'histoire

### Unité 9: Entreprendre

1. faire un projet de la réalisation: (exprimer un besoin, préciser les étapes d'une réalisation)
2. parler d'une entreprise
3. parler du futur

### Contenu grammatical:

1. Imparfait
2. Pronom « en »
3. Futur
4. Discours rapporté au présent
5. Passé récent
6. Présent progressif

## Examination Scheme:

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	20	20	20	15	5

C – Project + Presentation

I – Interaction/Conversation Practice

# GERMAN - IV

Course Code: LAN2452

L-T-P : 2-0-0

Credit Units: 02

## Course Objective:

To enable the students to converse, read and write in the language with the help of the basic rules of grammar, which will later help them to strengthen their language.

To give the students an insight into the culture, geography, political situation and economic opportunities available in Germany.

Introduction to Advanced Grammar Language and Professional Jargon

## Course Contents:

### Module I: Present perfect tense

Present perfect tense, usage and applicability

Usage of this tense to indicate near past

Universal applicability of this tense in German

### Module II: Letter writing

To acquaint the students with the form of writing informal letters.

### Module III: Interchanging prepositions

Usage of prepositions with both accusative and dative cases

Usage of verbs fixed with prepositions

Emphasizing on the action and position factor

### Module IV: Past tense

Introduction to simple past tense

Learning the verb forms in past tense

Making a list of all verbs in the past tense and the participle forms

### Module V: Reading a Fairy Tale

Comprehension and narration

- Rotkäppchen
- Froschprinzessin
- Die Fremdsprache

### Module VI: Genitive case

Genitive case – Explain the concept of possession in genitive

Mentioning the structure of weak nouns

### Module VII: Genitive prepositions

Discuss the genitive prepositions and their usage: (während, wegen, statt, trotz)

### Module VIII: Picture Description

Firstly recognize the persons or things in the picture and identify the situation depicted in the picture;

Secondly answer questions of general meaning in context to the picture and also talk about the personal experiences which come to your mind upon seeing the picture.

## Examination Scheme:

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	20	20	20	15	5

C – Project + Presentation

I – Interaction/Conversation Practice

# SPANISH - IV

Course Code: LAN2453

L-T-P : 2-0-0

Credit Units: 02

## Course Objective:

To enable students acquire working knowledge of the language; to give them vocabulary, grammar, voice modulations/intonations to handle everyday Spanish situations with ease.

## Course Contents:

### Module I

Revision of earlier semester modules  
Introduction to Present Continuous Tense (Gerunds)

### Module II

Translation with Present Continuous Tense  
Introduction to Gustar, Parecer, Apetecer, doler

### Module III

Imperatives (positive and negative commands of regular verbs)

### Module IV

Commercial/business vocabulary

### Module V

Simple conversation with help of texts and vocabulary  
En la recepcion del hotel  
En el restaurante  
En la agencia de viajes  
En la tienda/supermercado

## Examination Scheme:

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	20	20	20	15	5

C – Project + Presentation  
I – Interaction/Conversation Practice

**Course Code: LAN2454**

**Credit Units: 02**

# CHINESE – IV

Course Code: LAN2455

L-T-P : 2-0-0

Credit Units: 02

## Course Objective:

How many characters are there? The early Qing dynasty dictionary included nearly 50,000 characters the vast majority of which were rare accumulated characters over the centuries. An educate person in China can probably recognize around 6000 characters. The course aims at familiarizing the student with the basic aspects of speaking ability of Mandarin, the language of Mainland China. The course aims at training students in practical skills and nurturing them to interact with a Chinese person.

## Course Contents:

### Module I

Dialogue Practice  
Observe picture and answer the question  
Pronunciation and intonation  
Character writing and stroke order.  
Electronic items

### Module II

Traveling – The Scenery is very beautiful  
Weather and climate  
Grammar question with – “bu shi .... Ma?”  
The construction “yao ... le” (Used to indicate that an action is going to take place)  
Time words “yiqian”, “yiwai” (Before and after).  
The adverb “geng”.

### Module III

Going to a friend house for a visit meeting his family and talking about their customs.  
Fallen sick and going to the Doctor, the doctor examines, takes temperature and writes prescription.  
Aspect particle “guo” shows that an action has happened some time in the past.  
Progressive aspect of an actin “zhengzai” Also the use if “zhe” with it.  
To welcome someone and to see off someone .... I cant go the airport to see you off... etc.

### Module IV

Shipment. Is this the place to checking luggage?  
Basic dialogue on – Where do u work?  
Basic dialogue on – This is my address  
Basic dialogue on – I understand Chinese  
Basic dialogue on – What job do u do?  
Basic dialogue on – What time is it now?

### Module V

Basic dialogue on – What day (date) is it today?  
Basic dialogue on – What is the weather like here.  
Basic dialogue on – Do u like Chinese food?  
Basic dialogue on – I am planning to go to China.

## Examination Scheme:

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	20	20	20	15	5

C – Project + Presentation  
I – Interaction/Conversation Practice

<b>BME2501</b>	<b>Microprocessor Systems</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version: 2019.1	Date of Approval: May 21, 2019	3	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

### Catalog Description

This course deals with the systematic study of the Architecture and programming issues of microprocessor family and its applications. The aim of this course is

1. To introduce students with the architecture and operation of typical microprocessors.
2. To familiarize the students with the programming and interfacing of microprocessors
3. To provide the basic knowledge of the microprocessor needed to develop the embedded system based products as a solution to real time problems.

### Course Outcomes

On completion of this course, the students will be able to

CO1. Explain the architecture, pin configuration, addressing modes, control words, timing diagram, instruction set of 8085 microprocessors and Interfacing ICs

CO2. Explain the architecture, pin configuration, addressing modes, control words of 8086, 8087 and other 16 bit microprocessors and Interfacing ICs

CO3. Develop the assembly language program using 8085 using stacks & subroutines.

CO4. Design circuitry to the Microprocessor I/O ports in order to interface the processor to external devices so as to provide solutions real-world control problems

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I:</b> Introduction to Microcomputer Systems Introduction to Microprocessors and microcomputers, Study of 8 bit Microprocessor, 8085 pin configuration, Internal Architecture and operations, interrupts, Stacks and subroutines, various data transfer schemes.	L1, L2, L3, L4	6
<b>Module II: ALP and timing diagrams</b> Introduction to 8085 instruction set, advance 8085 programming, Addressing modes, Counters and time Delays, Instruction cycle, machine cycle, T-states, timing diagram for 8085 instruction.	L4, L5, L6	8
<b>Module III: Memory System Design &amp; I/O Interfacing</b> Memory interfacing with 8085. Interfacing with input/output devices (memory mapped, peripheral I/O), Cache memory system.	L3, L4, L5, L6	9

Study of following peripheral devices 8255, 8253, 8257, 8259, 8251.		
<b>Module IV: Architecture of 16-Bit Microprocessor</b> Difference between 8085 and 8086, Block diagram and architecture of 8086 family, pin configuration of 8086, minimum mode & maximum mode Operation, Bus Interface Unit, Register Organization, Instruction Pointer, Stack & Stack pointer, merits of memory segmentation, Execution Unit, Register Organization.	L2, L3, L4	7
<b>Module V: Pentium Processors</b> Internal architecture of 8087, Operational overview of 8087, Introduction to 80186, 80286, 80386 & 80486 processors, Pentium processor (P-II, P-III, P-IV).	L1,L2	6

<b>BME2513</b>	<b>Medical Image Processing</b>	L	T	P	C
Version 1.1	Date of Approval: 21 May, 2019	3	0	0	3
Pre-requisites/Exposure	Engineering Mathematics				
Co-requisites	General Science				

## Catalog Description

Course give introduction to digital image processing and its application with clinical image. Course consists of image enhancement, denoise, filtering in spatial and frequency domain etc. techniques. Its include image segmentation and feature extraction methods. Besides, course gives the insight in the process of registration and its application. Course provide the foundation for medical image constriction, to develop complex algorithm and application of machine learning. Furthermore, course develop a life long learning capabilities in the students.

## Course Objectives

The objective of this course is to

9. To provide an overview of medical image processing and its constraint.
10. To serve as a foundation for design and develop complex medical image processing algorithms.

## Course Outcomes

On completion of this course, the students develop capabilities of:

- CO31. *Identify* the relation between pixels in an image, and coccots of quantization, resolution inn images.
- CO32. *Apply* intensity transformation and spatial filter for various application of Image Processing.
- CO33. *Develop and Apply* various frequency domain operation on an image for filtering, and analyzing.
- CO34. *Deploy* the programming skill of segmentation of RoI using various algorithm.
- CO35. *Deploy* the programming skill of Registration of images using various algorithm

## Course Content

Modules	Blooms level*	Number of hours
<b>MODULE I:</b>  <b>Introduction to Medical Imaging</b> Digital image processing, fundamental steps in digital image processing, Component of Image processing. Simple Image Formation Model, Image Sampling and Quantization, Representing Digital Images, Spatial and Intensity Resolution, Image Interpolation, Some Basic Relationships between Pixels, An Introduction to the Mathematical Tools Used in Digital Image Processing,  Medical Imaging History, Various Projection or View of Medical Imaging, Fundamental Principles of Medical imaging, DICOM images format.	L1 and L2	10

<b>MODULE II:</b>  <b>Intensity Transformations and Spatial Filtering</b> The Basics of Intensity Transformations and Spatial Filtering, Some Basic Intensity Transformation Functions, Histogram Processing, Fundamentals of Spatial Filtering, Smoothing Spatial Filters, Sharpening Spatial Filters, Noise model and noise filtering, Application	L1, L2 and L3	8
<b>MODULE III:</b>  <b>Filtering in the Frequency Domain Filtering in the Frequency Domain</b> The brief Introduction to Fourier Series and Transform, The Basics of Filtering in the Frequency Domain Image Smoothing Using Frequency Domain Filters , Image Sharpening Using Frequency Domain Filters, Noise filtering in frequency domain, Application.	L1, L2 and L3	6
<b>MODULE IV:</b>  <b>Segmentation</b> Morphological Image Processing: Erosion and Dilation, Opening and Closing and its segmentation application. Point, Line, and Edge Detection, Thresholding Region-Based Segmentation; Region Growing, Hough Transformation.	L2 and L3	6
<b>MODULE V:</b>  <b>Registration</b> Geometric Transformation, Intensity interpolation, Similarity measure, Sum of Square difference, Correlation coefficient, Mutual Information, Structural Similarity Index, Feature based registration, Least Square Fit.	L2 and L3	6

\*Bloom's Level:

L1: Knowledge; L2: Comprehension; L3: Application; L4: Analysis; L5: Synthesis, L6: Evaluation

## Catalog Description

Machine learning is the science of getting computers to act without being explicitly programmed. In the past decade, machine learning has given us self-driving cars, practical speech recognition, effective web search, and a vastly improved understanding of the human genome. Machine learning is so pervasive today that you probably use it dozens of times a day without knowing it. Many researchers also think it is the best way to make progress towards human-level AI. In this class, you will learn about the most effective machine learning techniques, and gain practice implementing them and getting them to work for yourself. More importantly, student will learn about not only the theoretical underpinnings of learning, but also gain the practical know-how needed to quickly and powerfully apply these techniques to new problems. Finally, student will learn about some of Silicon Valley's best practices in innovation as it pertains to machine learning and AI.

This course provides a broad introduction to machine learning, datamining, and statistical pattern recognition. Topics include: (i) Supervised learning (parametric/non-parametric algorithms, support vector machines, kernels, neural networks). (ii) Unsupervised learning (clustering, dimensionality reduction, recommender systems, deep learning). (iii) Best practices in machine learning (bias/variance theory; innovation process in machine learning and AI). The course will also draw from numerous case studies and applications, so that you'll also learn how to apply learning algorithms to building smart robots (perception, control), text understanding (web search, anti-spam), computer vision, medical informatics, audio, database mining, and other areas.

## Course Objectives

The objective of this course is to

11. To provide an overview of Machine Learning and its constraint.
12. To serve as a foundation for design and develop complex ML algorithms.

## Course Outcomes

On completion of this course, the students develop capabilities of:

- CO36. *Identify* the constrain of ML, *differentiate* between supervised and unsupervised learning; *develop* function for regression and cost function.
- CO37. *Apply* the concept of ML and *deploy* gradient descent algorithm for logistic regression.
- CO38. *Apply* the regularization parameters to optimize the ML algorithm.
- CO39. *Develop* the Algorithm using Neural network principle.
- CO40. *Deploy* the principle of ML for Optimization and rectification of output error.

## Course Content

Modules	Blooms level*	Number of hours
<b>MODULE I:</b>  <b>Introduction to Machine Learning</b> What is Machine Learning? Supervised Learning, Unsupervised Learning; Linear  <b>Regression with One Variable:</b> Model Representation, Cost Function, Cost Function - Intuition I, Cost Function - Intuition II, Gradient Descent, Gradient Descent Intuition, Gradient Descent For Linear Regression;  <b>Linear Algebra Review:</b> Matrices and Vectors, Addition and Scalar Multiplication, Matrix Vector Multiplication, Matrix Multiplication, Matrix Multiplication Properties, Inverse and Transpose	L1 and L3	10
<b>MODULE II:</b>  Linear Regression with Multiple Variables  Multiple Features: Gradient Descent for Multiple Variables, Gradient Descent in Practice I - Feature Scaling, Gradient Descent in Practice II - Learning Rate, Features and Polynomial Regression, Normal Equation, Normal Equation Noninvertibility;  Logistic Regression: Classification, Hypothesis Representation, Decision Boundary, Cost Function, Simplified Cost Function and Gradient Descent, Advanced Optimization, Multiclass Classification: One-vs-all	L1, L2 and L3	8
<b>MODULE III:</b>  Regularization  The Problem of Overfitting, Cost Function, Regularized Linear Regression, Regularized Logistic Regression	L1, L2 and L3	6
<b>MODULE IV:</b>  Neural Networks: Representation  Non-linear Hypotheses, Neurons and the Brain, Model Representation I, Model Representation II, Examples and Intuitions I, Examples and Intuitions II, Multiclass Classification  Neural Networks: Learning  Cost Function, Backpropagation Algorithm, Backpropagation Intuition, Implementation Note: Unrolling Parameters, Gradient Checking, Random Initialization, Putting It Together	L2 and L3	6
<b>MODULE V:</b>  Practical Aspects for Applying Machine Learning  Deciding What to Try Next, Evaluating a Hypothesis, Model Selection and Train/Validation/Test Sets, Diagnosing Bias vs. Variance, Regularization and Bias/Variance, Learning Curves, Deciding What to Do Next Revisited  Machine Learning System Design  Prioritizing What to Work On, Error Analysis, Error Metrics for Skewed Classes,	L2 and L3	6

Co-requisites					

**Pre –Requisite:** Matlab Programming  
**Catalog Description**

This course helps the students to do hands-on practice with various machine learning techniques. Machine Learning is known to be future electricity and a key need in medical data processing. Course built the foundation for develop software program for medical data processing. It also lay down the foundation for deep Learning and Artificial intelligence for life-long learning.

The objective of this course is to

13. To provide hands-on practice with machine learning.
14. To serve as a foundation for develop critical thinking for developing software program for medical data processing.

**Course Outcomes**

On completion of this course, the students will be able to

- CO1. *Develop* machine learning programming program for data classification, using linear regression and logistic regression.
- CO2. *Optimization* of machine learning program using regularization techniques.
- CO3. *Develop* Neural Network program for identification and multi level classification.
- CO4. *Analysis* of error and rectify algorithm for accurate classification using machine learning concept.

List of Experiments	Blooms level*	Number of hours
10. Write program of basic matrix operation in using MATLAB.	L1, L2 and L3	2
11. Write a program to learning programming using loops and decision structure in MATLAB	L1, L2 and L3	2
12. To write Function to compute the cost of linear regression. 13. To write Function to run gradient descent. 14. To write function to normalize features. 15. To writes function to compute normal equation.	L1, L2 and L3	2
16. To write and execute program Function to plot 2D classifcation data 17. To write and execute program Sigmoid Function	L1, L2 and L3	2

18. To write and execute program Logistic Regression Cost Function		
19. To write and execute program Logistic Regression Prediction Function		
20. To write and execute program Regularized Logistic Regression Cost for geometric transformation of image		
21. To write and execute program Logistic regression cost function 22. To write and execute program Train a one-vs-all multi-class classi_er 23. To write and execute program Predict using a one-vs-all multi-class classifier	L1, L2 and L3	2
24. Write and execute programs Neural network prediction function	L1, L2 and L3	2

<b>BME2516</b>	<b>MEDICAL IMAGE PROCESSING LAB</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 1.1	Date of Approval: 21 May 2019	0	0	2	1
Pre-requisites/Exposure					
Co-requisites					

**Pre –Requisite:** Matlab Programming  
**Catalog Description**

This course helps the students to do hands-on practice with various medical image processing techniques. Medical imaging and post processing is a key need for diagnostic techniques. Course built the foundation for develop software program for medical image enhancement, denoising, segmentation and registration. It also includes the use of MatLab image processing toolbox use for medical images post processing.

The objective of this course is to

15. To provide hands-on practice with medical images.
16. To serve as a foundation for develop critical thinking for developing software program for medical imaging.

**Course Outcomes**

On completion of this course, the students will be able to

- CO5. Develop program to enhance, denoise and better visualization in medical image (Region of Interest) ROI.
- CO6. Develop program for image segmentation and registration for selection of ROI and using MatLab Image Processing Toolbox.

List of Experiments	Blooms level*	Number of hours
25. Write program to read and display digital image using MATLAB.	L1, L2 and L3	2
26. Write a program to perform convolution operation for 1D and 2D data in MATLAB	L1, L2 and L3	2
27. To write and execute programs for image arithmetic operations 28. To write and execute programs for image logical operations	L1, L2 and L3	2
29. To write and execute program for geometric transformation of image	L1, L2 and L3	2
30. To understand various image noise models and to write programs for image restoration	L1, L2 and L3	2
31. Write and execute programs to remove noise using spatial filters	L1, L2 and L3	2

32. Write and execute programs for image frequency domain filtering	L1, L2 and L3	2
33. Write a program in MATLAB for edge detection using quick mask	L1, L2 and L3	2
34. Write a program in MATLAB for histogram calculation and equalization. 35. Write and execute programs of image manipulation Zoom and Shrink	L1, L2 and L3	2
36. To process image using image processing toolbox	L1, L2 and L3	2

BME 2535	SUMMER INTERNSHIP EVALUATION I	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	0	0	0	3
Pre-requisites/Exposure	Basic Concepts of Programming Language and Electronics				
Co-requisites	Nil				

## Catalog Description

There are certain phases of every Intern's professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship program can best be described as an attempt to institutionalize efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal classroom situations. These attributes are intellectual ability, professional judgment and decision-making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility etc. In order to achieve these objectives, each student will maintain a file (**Internship File**). The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development. The report will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

## Course Objectives

The objective of this course is to

1. Equip the students with concepts of new technologies and practical exposure
2. Provide an overview of presentation and preparation of report.

## Course Outcomes

On completion of this course, the students will be able to

CO1: Study the literature and *identify* the problem statement

CO2: Work on a real world problem and *solve* it using latest technology

CO3: *Prepare* a detailed report of the project

CO4: *Prepare* a brief presentation of their project

CO5: Present and *explain* the project for evaluation

## Text Books

As per topic of summer internship project is chosen and discussion with guide.

<b>BME2503</b>	<b>CONTROL SYSTEM</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2019.1	Date of Approval: May 21, 2019	2	1	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

### Catalog Description

This course provides the students the core knowledge of control systems. This introduces the methods of mathematical modeling of control systems with time & frequency domain analysis along with concepts of stability.

### Course Objectives

The objective of this course is to

5. Equip the students with concepts of Control System.
6. Provide the students in depth knowledge of time domain, frequency domain and concepts of stability.

### Course Outcomes

On completion of this course, the students will be able to

CO1. Understand and compare between types of control system and find mathematical model of control system.

CO2. Understand, explain and solve problems on time domain analysis.

CO3. Understand, explain and solve problems on frequency domain analysis.

CO4: Analysis of control system stability

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1:</b> <b>Input / Output Relationship</b> Introduction of open loop and closed loop control systems, mathematical modeling and representation of physical systems (Electrical Mechanical and Thermal), derivation of transfer function for different types of systems, block diagram & signal flow graph, Reduction Technique, Mason's Gain Formula.	L1, L2, L3 and L4	9
<b>Module 2:</b> <b>Time – Domain Analysis</b> Time domain performance criteria, transient response of first, second & higher order systems, steady state errors and static error constants in unity feedback control systems, error criteria, generalized error constants, performance indices, response with P, PI and PID Controllers.	L1, L2 and L3	9

<b>Module 3:</b> <b>Frequency Domain Analysis</b> Polar and inverse polar plots, frequency domain specifications, Logarithmic plots (Bode Plots), gain and phase margins, relative stability, Correlation with time domain, constant close loop frequency responses, from open loop response, Nyquist Plot.	L1, L2 and L3	9
<b>Module 4:</b> <b>Concept of Stability</b> Asymptotic stability and conditional stability, Routh – Hurwitz criterion, Root Locus plots and their applications. Compensation Techniques: Concept of compensation, Lag, Lead and Lag-Lead networks, design of closed loop systems using compensation techniques. P, PI, PID controllers.	L1, L2, L3 and L4	9

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

Version 2019.1	Date of Approval: May 21, 2019	0	0	2	1
Pre-requisites/Exposure	MATLAB Basics				
Co-requisites	Nil				

### Catalog Description

Control System has become an important field for research and development in science and engineering. This course provides the students the core knowledge of control systems. This course introduces the Practical of control system with time & frequency domain analysis along with stability of control systems on kits and MATLAB.

### Course Objectives

The objective of this course is to

Perform experiments of control system.

Time & frequency domain analysis along with stability of control systems on kits and MATLAB

### Course Outcomes

On completion of this course, the students will be able to

CO1. Perform and analyse experiments on time domain of control system.

CO2. Perform and analyse experiments on frequency domain of control system.

CO3. Perform and analyse experiments for stability of control system.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Lab Session 1</b> 1. Study and draw a) Step response of open Loop system (linear 1 <sup>st</sup> order, 2 <sup>nd</sup> order b) Step response of closed loop systems (1 <sup>st</sup> order) 2. Study and draw temperature control system the open loop response and closed loop response with different values of gains	L2, L3 and L5	3
<b>Lab Session 2</b> 1. Study of operations and characteristics of a stepper motor 2. To Study a D.C. motor speed control system.	L2, L3 and L5	3
<b>Lab Session 3</b>	L2, L3	3

1. Performance evaluation and design of PID controller. 2. To design a suitable cascade compensator for the given system and verify the resulting improvement.	and L5	
<b>Lab Session 4</b> 1. Note: three experiments in MATLAB have to be performed in the slot of MATLAB. Using MATLAB obtain the unit-step response and unit impulse response of the following system: $\frac{C(s)}{R(s)} = \frac{16}{s^2 + 1.6s + 16}$ 2. For a 2 <sup>nd</sup> order transfer function using MATLAB a) Bode Plot b) Root locus plot c) Nyquist plot.	L2, L3 and L5	3

<b>BME 2507</b>	<b>DIGITAL CIRCUITS &amp; SYSTEMS</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2019.1	Date of Approval: May 21, 2019	3	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

### Catalog Description

This course explores the theory and operation of the basic building blocks of digital electronics which includes combinational and sequential circuits. This course also explains the logic families and data convertors. The concepts learnt in the studies of sequential circuits will be applied in the design and analysis of Melay and Moore machines.

### Course Objectives

The objective of this course is to

1. Provide the basic knowledge of digital logic levels and application of combinational and sequential circuits.
2. Equip with the understanding of logic family and data convertors.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Explain the various logic gates, Boolean algebra and solve the k-map & tabulation method to simplify the logical function.

CO2: Explain the adder & subtractor; Apply and analyze multiplexer, decoder & encoder to design Boolean function.

CO3: Describe flip flops, shift registers & Design counters and synchronous sequential circuits.

CO4: Explain & compare different logic families and explain data convertors.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>MODULE 1:</b>  <b>BOOLEAN FUNCTIONS</b> Analog & digital signals, AND, OR, NOT, NAND, NOR , XOR & XNOR gates, Boolean algebra, DeMorgan's theorems, Implementation of logical function using only NAND/NOR gates, 1's complement and 2's complement, BCD to Gray and Gray to BCD code conversion, Standard representation of logical functions ( SOP and POS forms), K-map representation and simplification of logical function up to five variables, don't care conditions, XOR & XNOR simplifications of K-maps, Tabulation method.	L1,L2 and L3	6

MODULE 2:		
<b>COMBINATIONAL CIRCUITS</b> Adders, Subtractors, Implementation of full adder using half adder, full subtractor using half subtractor, Multiplexer, de-multiplexer, decoder & encoder, code converters, 1 & 2 bit comparators, BCD to seven segment decoder/encoder, Implementation of logic functions using multiplexer/de-multiplexer and decoder, Implementation of 16×1 MUX using 4×1 MUX, 4×16 decoder using 3×8 decoder etc., logic implementations using PROM, PLA & PAL.	L1, L2,L3 and L4	6
MODULE 3:  <b>SEQUENTIAL CIRCUITS</b> Difference between combinational and sequential circuits, Latch, Flip-flops: SR, JK, D & T flip flops – Truth table, Excitation table, Conversion of flip-flops, set up and hold time, race around condition, Master Slave flip flop, Shift registers: SIPO, PISO, PIPO, SIPO, Bi-directional, 4-bit universal shift register; Counters: Asynchronous/ripple & synchronous counters – up/down, Ring counter, sequence detector.	L2,L3, L4 and L5	7
MODULE 4:  <b>LOGIC FAMILIES&amp;DATA CONVERTERS</b> Logic families: Special characteristics (Fan out, Power dissipation, propagation delay, noise margin), working of RTL, DTL, TTL, ECL and CMOS families; Data converters: Special characteristics, ADC – successive approximation, linear ramp, dual slope; DAC – Binary Weighted, R-2R ladder type.	L1, L2,L3 and L4	5

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

## Catalog Description

In this Lab course the combination and sequential circuits are designed and their functionality is verified using truth table. Concepts covered would enable them to create complex circuits related to digital design. The objective of this course is to explore and implement the various features of digital logic using basic logic gates.

## Course Objectives

The objective of this course is to

1. Provide a basic knowledge of digital logic levels and application of knowledge to understand digital electronics circuits.
2. Equip with understanding of different combinational and sequential circuits.

### Course Outcomes

On completion of this course, the students will be able to

CO 1: Demonstrate the basic concept of logic gates;

CO 2: Illustrate the adder and subtractors.

CO 3: Demonstrate the code convertors.

CO 4: Demonstrate the combinational and sequential circuits.

<b>Modules/Topics Covered**</b>	<b>Blooms level*</b>	<b>Number of hours</b>
1. To verify the truth tables of NOT, OR, AND, NOR, NAND, XOR, XNOR gates.	L3, L5	2
2. To obtain half adder, full adder using gates and verify their truth tables.	L3, L5	2
3. To obtain half subtractor, full subtractor using gates and verify their truth tables.	L3, L5	2
4. To implement control circuit using multiplexer.	L3, L5	2
5. To convert BCD code into excess 3 code and verify the truth table.	L3, L5	2
6. To verify the truth tables of RS, D, JK and T flip- flops.	L3, L5	2
7. To implement and verify 3-bit bi-directional shift register.	L3, L5	2
8. To design and study asynchronous/ripple counter.	L3, L5	2
9. To design and study synchronous counter.	L3, L5	2
10. To design and study a sequence detector.	L3, L5	2

<b>BME2517</b>	<b>DATA STRUCTURES with C ++</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version:2017.1	Date of Approval: 2020	3	1	2	5
Pre-requisites/Exposure	Basic Knowledge of C++ Programming				
Co-requisites	Nil				

## Catalog Description

This course covers the design, analysis, and implementation of data structures and algorithms to solve engineering problems using C++ programming language. Topics include elementary data structures, (including arrays, stacks, queues, and lists), advanced data structures (including trees and graphs), the algorithms used to manipulate these structures, and their application to solving practical engineering problems. At the end of this course student will gain knowledge about different kinds of file structures and their related operations.

## Course Objectives

The objective of this course is to

1. Equip the students with knowledge of algorithms, different types of data structures and analysis of space and time complexity.
2. Provide an overview of various algorithms of data structures like stack and queues and related operations and implementation.
3. Provide an overview of dynamic Data Structure like linked list and its related operations, algorithms and programs. Demonstrate practical use of dynamic data structure to solve engineering problems.
4. Equip the students with knowledge of algorithms and operations related to tree and graph data structures and their practical applications.
5. Provide an overview of Sorting, Searching and file structures and its related algorithms and techniques.

## Course Outcomes

On completion of this course, the students will be able to

CO 1: Identify operations on array, multidimensional, string and their implementation and analyze space and time complexity of algorithms.

CO 2: Explain various algorithms and operations of data structures like stack and queues and analyze complexity of each operation.

CO 3: Explain dynamic data structures and various algorithms and operations of data structures like linked list and their applications in computer science.

CO 4: Illustrate the algorithms and operations related to tree and graph data structures, their practical applications and analyze complexity of algorithm associated with each operations.

CO5: Explain Sorting, Searching and file organization and its related techniques.

Modules	Blooms level*	Number of hours
<b>Module I: Introduction to Data structures</b>  Data structures: Definition, Types. Algorithm design, Complexity, Time-Space Tradeoffs. Use of pointers in data structures. Array Definition and Analysis, Representation of Linear Arrays in Memory, Traversing of Linear Arrays, Insertion and Deletion, Single Dimensional Arrays, Two Dimensional Arrays, Multidimensional Arrays, Function Associated with Arrays, Character String in C++, Character String Operations, Arrays as parameters, Implementing One Dimensional Array, Sparse matrix.	L1, L2	7
<b>Module II: Introduction to Stacks and queue</b>  Stack: Definition, Array representation of stacks, Operations Associated with Stacks- Push & Pop, Polish expressions, Conversion of infix to postfix, infix to prefix (and vice versa), Application of stacks recursion, polish expression and their compilation, conversion of infix expression to prefix and postfix expression, Tower of Hanoi problem. Queue: Definition, Representation of Queues, Operations of queues- QInsert, QDelete, Priority Queues, Circular Queue, Deque.	L1, L2, L3, L4	8
<b>Module III: Dynamic Data Structure</b>  Linked list: Introduction to Singly linked lists: Representation of linked lists in memory, Traversing, Searching, Insertion into, Deletion from linked list, doubly linked list, circular linked list, generalized list. Applications of Linked List- Polynomial representation using linked list and basic operation. Stack and queue implementation using linked list.	L1, L3 and L4	7
<b>Module IV: Trees and Graphs</b>  Trees: Basic Terminology, Binary Trees and their representation, expression evaluation, Complete Binary trees, extended binary trees, Traversing binary trees, Searching, Insertion and Deletion in binary search trees, General trees, AVL trees, Threaded trees, B trees. Graphs: Terminology and Representations, Graphs & Multigraphs, Directed Graphs, Sequential representation of graphs, Adjacency matrices, Transversal Connected Component and Spanning trees.	L1, L3 and L5	7
<b>Module V: Sorting and Searching and file structures</b>  Sorting: Insertion Sort, Bubble sort, Selection sort, Quick sort, two-way Merge sort, Heap sort, Partition exchange sort, Shell sort, Sorting on different keys, External sorting. Searching: Linear search, Binary search File structures: Physical storage media, File Organization, Linked organization of file, Inverted file, Organization records into blocks, Sequential blocks, Hash function, Indexing & Hashing, Multilevel indexing, Tree Index, Random file, Primary Indices, Secondary Indices, B tree index files.	L1, L4, L5	7

Pre-requisites/Exposure	Basic Knowledge of C++ Programming				
Co-requisites	Nil				

## Catalog Description

This course covers the design, analysis, and implementation of data structures and algorithms to solve engineering problems using C++ programming language. Topics include elementary data structures, (including arrays, stacks, queues, and lists), advanced data structures (including trees and graphs), the algorithms used to manipulate these structures, and their application to solving practical engineering problems. At the end of this course student will gain knowledge about different kinds of file structures and their related operations.

## Course Objectives

The objective of this course is to

1. Equip the students with knowledge of algorithms, different types of data structures and analysis of space and time complexity.
2. Provide an overview of various algorithms of data structures like stack and queues and related operations and implementation.
3. Provide an overview of dynamic Data Structure like linked list and its related operations, algorithms and programs. Demonstrate practical use of dynamic data structure to solve engineering problems.
4. Equip the students with knowledge of algorithms and operations related to tree and graph data structures and their practical applications.
5. Provide an overview of Sorting, Searching and file structures and its related algorithms and techniques.

## Course Outcomes

On completion of this course, the students will be able to

- CO 1: Identify operations and their implementation on array and multidimensional, string and estimation space and time complexity.
- CO 2: Explain various algorithm and operations of data structures like stack and queues and analyze complexity of each operation.
- CO 3: Explain dynamic data structures and various algorithms and operations of data structures like linked list and their applications in computer science.
- CO 4: Illustrate the algorithms and operations related to tree and graph data structures, their practical applications and analyze complexity of algorithm associated with each operations.
- CO5: Explain Sorting, Searching and file organization and its related techniques.

Modules	Blooms level*	Number of hours
<b>Module I: Introduction to Data structures</b> <ol style="list-style-type: none"> <li>1. Write a program to copy one string into another without using library functions.</li> <li>2. Write a program to demonstrate array and linked list implementation of sparse matrix.</li> <li>3. Write a program to multiply two 2D matrix.</li> </ol>	L3,L5	2
<b>Module II: Introduction to Stacks and queue</b> <ol style="list-style-type: none"> <li>1. Write a program to implement push and pop operations on the stack.</li> <li>2. Write a program to demonstrate conversion of infix to postfix.</li> <li>3. Write a program to implement simple queue and perform insertion and deletion operation on it.</li> <li>4. Write a program to implement circular queue and perform insertion and deletion operation on it.</li> <li>5. Write a program to implement dqueue and perform insertion and deletion operations on it.</li> <li>6. Write a program to implement priority queue and perform insertion and deletion operation on it.</li> </ol>	L3,L5	4
<b>Module III: Dynamic Data Structure</b> <ol style="list-style-type: none"> <li>1. Write a program to implement singly linked list and perform following operations on it. <ul style="list-style-type: none"> <li>• Insertion at end</li> <li>• Insertion at last</li> <li>• Insertion at desired place.</li> </ul> </li> <li>2. Write a program to implement singly linked list and perform following operations on it. <ul style="list-style-type: none"> <li>• Deletion at end</li> <li>• Deletion at last</li> <li>• Deletion at desired place.</li> </ul> </li> <li>3. Write a program to implement doubly linked list and perform following operations on it. <ul style="list-style-type: none"> <li>• Insertion at end</li> <li>• Insertion at last</li> <li>• Insertion at desired place.</li> </ul> </li> <li>4. Write a program to implement singly linked list and perform addition of two polynomials.</li> </ol>	L3,L5	4

<b>Module IV: Trees and Graphs</b> <ol style="list-style-type: none"> <li>Write a program to calculate in order, preorder and post order traversal on binary tree.</li> <li>Write a program to construct binary search tree and perform following operations on it. <ul style="list-style-type: none"> <li>Deletion of element</li> <li>Insertion of elements.</li> </ul> </li> <li>Write a program to construct binary search tree and search an element in it.</li> <li>Write a program to implement kruskal's algorithm to find out minimum spanning tree.</li> </ol>	L3,L5	6
<b>Module V: Sorting and Searching and file structures</b> <ol style="list-style-type: none"> <li>Write program to implement insertion sort.</li> <li>Write a program to search an element in array using binary search.</li> <li>Write a program to implement merge sort.</li> <li>Write a program to implement quick sort.</li> <li>Write a program to implement heap sort.</li> </ol>	L3,L5	8

### **Catalog Description**

In this course the concepts of fuzzy logic and genetic algorithm are discussed in detail. This course will provide an understanding of fuzzy logic and genetic algorithm and an outlook on the applications of these techniques to solve real world problems. It also provides an understanding of fuzzy-genetic based machine learning.

### **Course Objectives**

The objective of this course is to

1. Provide the student with the basic understanding of genetic algorithm and fuzzy logic fundamentals, program and design the related systems.
2. Equip the students with concepts of fuzzy logic based solutions.
3. Provide an overview of performance of genetic algorithm, simulated annealing and tabu search.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: Develop the skills to gain a basic understanding of genetic algorithm and fuzzy logic theory.

CO2: Appreciate the learning and adaptation capability of neural and fuzzy systems.

CO3: Apply various operators to optimize. Perform mathematical calculation of the GA

CO4: Able to identify the present application areas of fuzzy logic and GA

CO5: Explain the working principle and compare the performance with other methods – Simulated annealing and Tabu search.

Modules	Blooms level*	Number of hours
<b>MODULE 1:</b>  Crisp sets: Overview, Fuzzy sets : Basic types and concepts, Characteristics and significance of paradigm shift, Fuzzy sets vs Crisp sets, Representation of fuzzy sets	L1, L2 and L3	8
<b>MODULE 2:</b>  Types of operations, Fuzzy complements, Fuzzy intersection: t-norms, Fuzzy union: t-conorms, Combination of operations, Aggregation operation, Fuzzy numbers , Linguistic variables, Arithmetic operations on intervals, Arithmetic operations on Fuzzy numbers, Lattice of Fuzzy numbers, Fuzzy equation.	L2, L3 and L6	10
<b>MODULE 3:</b>  General discussion, Fuzzy controller: Overview and example, Fuzzy systems and neural networks, Fuzzy neural network, Fuzzy automata. Pattern recognition in fuzzy logic, Database and information retrieval in fuzzy logic, decision making in fuzzy logic, engineering applications and fuzzy logic, Fuzzy logic in Medicine and Economics	L1, L3 and L4	10
<b>MODULE 4:</b>  Fundamentals of genetic algorithm: A brief history of evolutionary computation, biological terminology, search space encoding, reproduction elements of genetic algorithm genetic modelling, comparison of GA and traditional search methods. The Fundamental Theorem, Schema Processing at work, Two-armed and k-armed Bandit problem, The Building block hypothesis.	L1, L3 and L4	10
<b>MODULE 5:</b>  Genetic technology:- steady state algorithm, fitness scaling, inversion. Genetic programming:- Genetic Algorithm in problem solving, Implementing a Genetic Algorithm:- computer implementation, operator (reproduction, crossover and Mutation, Fitness Scaling, Coding, Discretization). Knowledge based techniques in Genetic Algorithm. Advanced operators and techniques in genetic search:-Dominance, Diploidy and Abeyance. Inversion and other reordering operators, Niche and speciation.	L3, L4 and L6	10
<b>MODULE 5:</b>  Genetic Algorithm in engineering and optimization-natural evolution – Simulated annealing and Tabu search -Genetic Algorithm in scientific models and theoretical foundations. Applications of Genetic based machine learning- Genetic Algorithm and parallel processors- composite laminates- constraint optimization- multilevel optimization- real life problem.	L3,L4,L6	05

# READING & COMPREHENSION

Course Code: CSS2351

L-T-P : 1-0-0

Credit Units: 01

## Course Objective:

To equip the participant with linguistic skills required in the field of science and technology while guiding them to excel in their academic field.

## Course Contents:

### Module I

Reading Comprehension  
Summarizing  
Paraphrasing

### Module II

Essay Writing  
Dialogue Report

### Module III

Writing Emails  
Brochure  
Leaflets

### Module IV: Introduction to Phonetics

Vowels  
Consonants  
Accent and Rhythm  
Accent Neutralization  
Spoken English and Listening Practice

## Examination Scheme:

Components	CT1	CT2	CAF	V	GD	GP	A
Weightage (%)	20	20	25	10	10	10	5

CAF – Communication Assessment File

GD – Group Discussion

GP – Group Presentation

# **PERSONALITY, NATIONALISM & HUMAN VALUES**

**Course Code: BEH2552**

**L-T-P : 1-0-0**

**Credit Units: 01**

# FRENCH – V

Course Code: LAN2551

L-T-P : 2-0-0

Credit Units: 02

## Course Objective:

To furnish some basic knowledge of French culture and civilization for understanding an authentic document and information relating to political and administrative life

## Course Contents:

Module D: pp. 131 – 156 Unités 10,11

**Contenu lexical: Unité 10:** Prendre des décisions

1. Faire des comparaisons
2. décrire un lieu, le temps, les gens, l'ambiance
3. rédiger une carte postale

**Unité 11: faire face aux problèmes**

1. Exposer un problème.
2. parler de la santé, de la maladie
3. interdire/demander/donner une autorisation
4. connaître la vie politique française

**Contenu grammatical:**

1. comparatif - comparer des qualités/ quantités/actions
2. supposition: Si + présent, futur
3. adverbe - caractériser une action
4. pronom "Y"

## Examination Scheme:

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	20	20	20	15	5

C – Project + Presentation

I – Interaction/Conversation Practice

## Text & References:

# GERMAN - V

Course Code: LAN2552

L-T-P : 2-0-0

Credit Units: 02

## Course Objective:

To enable the students to converse, read and write in the language with the help of the basic rules of grammar, which will later help them to strengthen their language.

To give the students an insight into the culture, geography, political situation and economic opportunities available in Germany

Introduction to Advanced Grammar and Business Language and Professional Jargon

## Course Contents:

### Module I: Genitive case

Genitive case – Explain the concept of possession in genitive

Mentioning the structure of weak nouns

### Module II: Genitive prepositions

Discuss the genitive prepositions and their usage: (während, wegen, statt, trotz)

### Module III: Reflexive verbs

Verbs with accusative case

Verbs with dative case

Difference in usage in the two cases

### Module IV: Verbs with fixed prepositions

Verbs with accusative case

Verbs with dative case

Difference in the usage of the two cases

### Module V: Texts

A poem 'Maxi'

A text Rocko

### Module VI: Picture Description

Firstly recognize the persons or things in the picture and identify the situation depicted in the picture;

Secondly answer questions of general meaning in context to the picture and also talk about the personal experiences which come to your mind upon seeing the picture.

## Examination Scheme:

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	20	20	20	15	5

# SPANISH - V

**L-T-P : 2-0-0**

**Course Code: LAN2553**

**Credit Units: 02**

## **Course Objective:**

To enable students acquire working knowledge of the language; to give them vocabulary, grammar, voice modulations/intonations to handle everyday Spanish situations with ease.

## **Course Contents:**

### **Module I**

Revision of earlier semester modules

### **Module II**

Future Tense

### **Module III**

Presentations in English on  
Spanish speaking countries'

Culture

Sports

Food

People

Politics

Society

Geography

### **Module IV**

Situations:

En el hospital

En la comisaria

En la estacion de autobus/tren

En el banco/cambio

### **Module V**

General revision of Spanish language learnt so far.

## **Examination Scheme:**

<b>Components</b>	<b>CT1</b>	<b>CT2</b>	<b>C</b>	<b>I</b>	<b>V</b>	<b>A</b>

# CHINESE – V

Course Code: LAN2555

L-T-P : 2-0-0

Credit Units: 02

## Course Objective:

What English words come from Chinese? Some of the more common English words with Chinese roots are ginseng, silk, dim sum, fengshui, typhoon, yin and yang, T'ai chi, kung-fu. The course aims at familiarizing the student with the basic aspects of speaking ability of Mandarin, the language of Mainland China. The course aims at training students in practical skills and nurturing them to interact with a Chinese person.

## Course Contents:

### Module I

Drills

Dialogue practice

Observe picture and answer the question.

Pronunciation and intonation.

Character writing and stroke order

### Module II

Intonation

Chinese foods and tastes – tofu, chowmian, noodle, Beijing duck, rice, sweet, sour....etc. Learning to say phrases like – Chinese food, Western food, delicious, hot and spicy, sour, salty, tasteless, tender, nutritious, good for health, fish, shrimps, vegetables, cholesterol is not high, pizza, milk, vitamins, to be able to cook, to be used to, cook well, once a week, once a month, once a year, twice a week.....

Repetition of the grammar and verbs taught in the previous module and making dialogues using it.

Compliment of degree “de”.

### Module III

Grammar the complex sentence “suiran ... danshi....”

Comparison – It is colder today than it was yesterday.....etc.

The Expression “chule....yiwai”. (Besides)

Names of different animals.

Talking about Great Wall of China

Short stories

### Module IV

Use of “huozhe” and “haishi”

Is he/she married?

Going for a film with a friend.

Having a meal at the restaurant and ordering a meal.

### Module V

Shopping – Talking about a thing you have bought, how much money you spent on it? How many kinds were there? What did you think of others?

Talking about a day in your life using compliment of degree “de”. When you get up? When do you go for class?

Do you sleep early or late? How is Chinese? Do you enjoy your life in the hostel?

Making up a dialogue by asking question on the year, month, day and the days of the week and answer them.

Co-requisites	Nil				

### **Catalog Description**

In this course the 8051 microcontroller is discussed in detail. Assembly language programming concepts are introduced to program 8051 as a timer and to provide serial communication. Further, the use of microcontroller in biomedical engineering has been described. The concepts learnt in the assembly language programming has been applied in the studies and interfacing of ADC, DAC and 8255. The overall educational objective is to provide hands-on experiences of how an embedded system could be used to solve biomedical application based problems.

### **Course Objectives**

The objective of this course is to

7. Provide the knowledge of 8051 microcontroller and with a basic understanding of instruction sets & assembly language programming.
8. Inculcate a working knowledge of the necessary steps and methods used to interface a microcontroller system to devices such as DAC, sensors, ADC etc.
9. Provide the general knowledge of the microcontroller architecture in biomedical applications.

### **Course Outcomes**

On completion of this course, the students will be able to

- CO1: List the main features of 8051 microcontroller; Distinguish between microprocessor and microcontroller; Describe the block and pin diagram of 8051.
- CO2: Explain the various addressing modes of 8051; Describe the instruction set; Apply the branching instruction to generate delay.
- CO3: Describe the timer modes; Apply timers to generate square wave; Calculation of delay; Explain the concept of interrupt and apply concept of interrupt in serial interface.
- CO4: Explain the memory interfacing; Demonstrate a working knowledge of the necessary steps and methods used to interface a microcontroller system to devices such as DAC, LCD, ADC and 8255.
- CO5: List the use of microcontroller in biomedical application; Explain the use of computer in biomedical engineering; apply the general knowledge of microcontroller in biomedical applications

<b>BME2608</b>	<b>Medical Imaging and Reconstruction Algorithm</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 1.1	Date of Approval: 16, May 2019	3	0	1	4
Pre-requisites/Exposure	Medical Imaging Techniques, Medical Image Processing				
Co-requisites	Engineering Mathematics, General Science				

### Catalog Description

Fundamentals and applications of medical image reconstruction and processing. Reconstruction from non-uniformly sampled data, projection data, regularly/randomly undersampled data. Parallel imaging and compressed sensing for medical imaging. Improving image quality, denoising, deconvolution, off-resonance correction. Post-processing of images, image registration, image segmentation. Examples from magnetic resonance imaging (MRI), X-ray computed tomography (CT), and magnetic particle imaging (MPI)..

The objective of this course is to

17. To provide hands-on practice with Image Reconstruction Algorithm specific with Ct and MRI.
18. To serve as a foundation for to develop an advanced medical image reconstruction or processing technique.

### Course Outcomes

On completion of this course, the students will be able to

- CO7. Develop various reconstruction algorithm for CT-Scan raw images.
- CO8. Develop various restructuring algorithm for quantitative data extraction from MRI images.
- CO9. Develop Neural Network program for reconstruction of images.
- CO10. Develop 3D rendering algorithm for medical image stack.

### Course Content

Modules	Blooms level*	Number of hours
<b>MODULE I:</b>  <b>Basic Principle of Tomography</b> Tomography, Projection, Image Reconstruction, Back-projection, Mathematical Expression: Projection, Back-Projection, The Dirac Function	L1 and L2	12
<b>MODULE II:</b>  <b>CT-Image Reconstruction</b>  Fan Beam Geometry and Point Spread Function, Parallel Beam to Fan-Beam Algorithm Conversion, Short Scan, Radon Transformation, Inverse Radon Transformation: parallel Beam Geometry; Filtered Back Projection; Radon and Inverse radon Transformation: fan Beam Geometry. Image Reconstruction.	L1, L2 and L3	12
<b>MODULE III:</b>	L1, L2 and L3	12

<b>MRI Image Reconstruction</b> Introduction to MRI Image Reconstruction, Data Acquisition and Pulse Sequences, Spin-Echo Sequence Mathematical Equation describe Signal intensity relation to machine and biological parameters, Gradient Echo Sequence Mathematical Equation describe Signal intensity relation to machine and biological parameters		
<b>MODULE IV:</b>  Quantitative MRI Introduction to Quantitative Mapping and image construction, T2- mapping, T1-mapping, T2*- mapping: Equation and Implementation Advance reconstruction algorithm using Machine Learning and Deep Learning	L2 and L3	12

\*Bloom's Level:

L1: Knowledge; L2: Comprehension; L3: Application; L4: Analysis; L5: Synthesis, L6: Evaluation

<b>BME2651</b>	<b>BIOMECHANICS</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 1.1	Date of Approval: 16, May 2019	3	0	0	3
Pre-requisites/Exposure	Medical Imaging Techniques, Medical Image Processing				
Co-requisites	Engineering Mathematics, General Science				

### **Catalogue Description**

This course is intended for engineering students to make them understand the various components of biomechanics which deals with the application of mechanics to biology. Mechanics is a branch of applied mathematics that deals with movement and tendency to movement.. it entails the study of the action of external and internal forces on the living body, especially on the skeletal system. A biomechanist is often interested in the physiology underlying movement (muscle physiology, nervous control, for example) and also the biological role of the movement)and ergonomics that is the analysis of a human performing for a given task and the design of appropriate tools. One part of this analysis is to understand the mechanics of the person and any interactions with surroundings.

### **Course Objectives**

The objective of this course is to

1. Equip the students with concepts of the basics of bone movement , gait analysis and mechanics of bone and muscles
2. To provide the overview of Structure and composition of bone , microstructure of bone, muscle. Joint motions and various forces implied, basic mechanical models , injuries and factors affecting biomechanical properties of human body

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: Explain the human body joints, axes of planes and motions, degree of freedom and related matrixes calculations.

CO2: Derive equations and solve problems related to Inverse Dynamics to calculate resultant force and momentum

CO3: Analyze gait cycle, angular kinematics of hip, knee and ankle

CO4: Describe microstructure of bone, skeletal muscle, mechanism of muscle, viscoelasticity and other related issues

Modules	Blooms level*	Number of hours
<b>Module I:</b> Joint motion: relative position of two bones meeting at a joint , description of a rigid body , degrees of freedom , euler angles , rotation matrices, rotation angle anatomical directions , anatomical planes ,	L-1, L-2, L-3	12
<b>Module II :</b> Inverse Dynamics to calculate resultant force and momentum within the body link segment models , intersegmental force and moment ,	L-1, L-2, L-3	12
<b>Module III :</b> Human Gait analysis , gait cycle , angular kinematics of hip , knee and ankle , force plates and ground reaction force , gait abnormalities .	L-1, L-2, L-3	12
<b>Module IV :</b> Structure and composition of bone , microstructure of bone , skeletal muscle , mechanism of muscle contraction , force length and force velocity relationships , basic muscle models , tendons and ligaments , their basic mechanical models , injuries and factors affecting biomechanical properties , Cartilage , viscoelasticity and viscoelastic models .	L-1, L-2, L-3	12

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

## Catalog Description

This course helps the students to understand various requirements of hospital and healthcare systems including all stakeholders of hospital system. Various department of hospital get exposed by student to understand needs and its drive students to find solutions for them. The content of the course will also give opportunities to interact with end user of medical equipment to find out their concern and what difficulties they face. The course also familiar students with working culture of hospital including safety standards, ethical and legal considerations as well as professionalism.

Students will learn techniques for improving the flexibility and originality of their thinking and will explore approaches used by managers and organizations to create and sustain high levels of innovation. Topics include: personal thinking preferences, everyday creativity and eliminating mental blocks, creative thinking techniques, idea selection approaches, teaming techniques for creativity, conditions that promote creativity, design for interaction, disruptive technologies, and intellectual property. The course uses fun and hands-on activities to stimulate innovation.

## Course Objectives

The objective of this course is to

19. To provide an overview of hospital equipment and requirements.
20. To serve as a foundation for innovation in healthcare by understanding the difficulties of hospital system.

## Course Outcomes

On completion of this course, the students will be able to

- CO41. Identify and explain the requirements and difficulties of hospital system.
- CO42. Provide the innovative solution for healthcare system with understanding of present need.
- CO43. Demonstrate the capability of critical thinking, brainstorming, presentation and team building process.

## Course Content

Modules	Blooms level*	Number of hours
<b>MODULE I:</b>  <b>Introduction to Innovation</b> Introduction Making a case for creativity, Creative thinking as a skill, Valuing diversity in thinking, Thinking preferences, Creativity styles, Recognizing and avoiding mental blocks, Avoiding mindsets, Risk taking, Paradigm shift and paradigm paralysis, Individual and teamwork	L2, L3 and L4	4

<b>MODULE II:</b>  <b>Creativity and Problem Solving</b> Creativity in problem solving, Problem Definition, Understanding, Representing, Pattern Breaking, Thinking differently, Changing your point of view, Watching for paradigm shift, Challenging conventional wisdom, Lateral thinking, provocation (escape, random word), Mind stimulation: games, brain-twisters and puzzles	L2, L3 and L4	4
<b>MODULE III:</b>  <b>Ideation and Solution</b>  Decision and Evaluation, Focused thinking framework, Six thinking hats, PMI, Ethical considerations, Design for Interaction, Introduction to design for interaction,	L2, L3 and L4	4
<b>MODULE III:</b>  <b>Project and Peer Review</b> Each student must spend 3 hours per week or 6 hours every two weeks observing and shadowing a doctor in a hospital environment. The visits will be organized by ASET. Students will be exposed to practical implementation of biomedical engineering. Students will be required to identify some key clinical needs in the hospitals and come up with a biomedical engineering solution for the same.  Students will have to present their findings and solutions in the form of a presentation at the end of the term	L2, L3 and L4	12

<b>BME2610</b>	<b>Medical Imaging and Reconstruction Algorithm Lab</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 1.1	Date of Approval: 16 May 2019	0	0	2	1
Pre-requisites/Exposure	Matlab, Engineering Mathematics, Medical Image Processing				
Co-requisites					

**Pre –Requisite:** MatLab Programming

### **Catalog Description**

Fundamentals and applications of medical image reconstruction and processing. Reconstruction from non-uniformly sampled data, projection data, regularly/randomly undersampled data. Parallel imaging and compressed sensing for medical imaging. Improving image quality, denoising, deconvolution, off-resonance correction. Post-processing of images, image registration, image segmentation. Examples from magnetic resonance imaging (MRI), X-ray computed tomography (CT), and magnetic particle imaging (MPI)..

The objective of this course is to

21. To provide hands-on practice with Image Reconstruction Algorithm specific with Ct and MRI.
22. To serve as a foundation for to develop an advanced medical image reconstruction or processing technique.

### **Course Outcomes**

On completion of this course, the students will be able to

- CO11. Develop various reconstruction algorithm for CT-Scan raw images.
- CO12. Develop various restructuring algorithm for quantitative data extraction from MRI images.
- CO13. Develop Neural Network program for reconstruction of images.
- CO14. Develop 3D rendering algorithm for medical image stack.

List of Experiments	Blooms level*	Number of hours
37. Write program of basic Fourier transformation.	L1, L2 and L3	2
38. Write a program for Radon Transformation to reconstruct images.	L1, L2 and L3	2
39. To write Function for 3D rendering of stack of imaging 40. To writes function to compute T2 Mapping.	L1, L2 and L3	2
1. To writes function to compute T1 Mapping.	L1, L2 and L3	2
2. To writes function to compute T1-Values.	L1, L2 and L3	2

3. To writes function to compute T2-Values.	L1, L2 and L3	2
4. To writes function to compute PD weighted-Values.	L1, L2 and L3	2
5. To write and execute program for Neural style Learning (Using Deep Learning Concept)	L1, L2 and L3	2
6. Advance Deep Learning Programming for reconstruct T1 weighted Images from PD-Weighted	L1, L2 and L3	2

Co-requisites					

### Catalog Description

This course provides students a basic understanding of the working, regulations and management of a hospital environment.

### Course Objectives

The objective of this course is

5. To develop the basic awareness of management functions and various dimensions of organizational life.
6. To make the students aware of the various functional aspects of management.
7. To develop the understanding of the functioning and management of the hospital in general and also aware about the critical issues related to managing a hospital.
8. To make the student understand the health environment in India and also the regulatory mechanisms involved in promoting the health programs.

### Course Outcomes

On completion of this course, the students will be able to

CO1. Identify the working and management of a hospital environment.

CO2. Identify the role of the manager in healthcare and how organizations and people work within the healthcare system.

CO3. Evaluate and use measurement tools for quality and safety.

CO4. List the various departments in hospital.

### Course Content

Modules	Blooms level*	Number of hours
<b>MODULE I:</b>  <b>Introduction to Hospital Architecture</b> Classification of hospital & architecture: General hospital, specialized hospital, primary health care –their role and functions. Aspects of hospital services: inpatient, outpatient and emergency, location and environment of hospital, hierarchy of medical and paramedical staff & their functions and responsibilities. Modern Hospital Architecture- space in a hospital building, design of ward, intensive care units, air conditioning, plumbing & sanitation, gas supply, waste disposal, cleaning, dietary, sterilizing, laundry, storage and operation theatre systems, Radiology, Central labs,	L1 and L2	14

Blood banks, OPD, Casualty, etc		
<b>MODULE II:</b>  <b>Hospital Air and Gas Supply</b>  Air conditioning & gas supply systems: Air conditioning and refrigeration systems for small and large areas, Air changes, filtering, and sterility, Deodorization, disinfection, dehumidification, cryogenic systems, Centralized supply of air, oxygen, nitrous oxide & vacuum, Principle of production of liquid oxygen. Management lifts fire fighting equipments	L1 and L2	8
<b>MODULE III:</b>  <b>Hospital engineering &amp; Management:</b> Definition of biomedical Engineering, clinical engineering & hospital engineering. Importance of BME department – servicing and maintenance, testing, acceptance & maintenance protocols, computerized preventive maintenance planning, MROs, Training of men for medical equipments preventive and periodical maintenance procedures. Preparation of estimates, specifications, tender details etc. Importance of ISO 9000 Certificates: Obtaining ISO certificates in hospitals, proposed protocols. Necessity for standardization, FDA, AERB, Joint Commission on Accreditation of hospitals, ICRP and other standard organization, methods to monitor the standards.	L1 and L2	7
<b>MODULE IV:</b>  <b>Hospital Information system:</b>  Role of database in HIS, Need of networking in HIS, overview of Networking, topologies and its configuration, structuring medical records to carry out functions like admissions, discharges, treatment history etc. , Computerization in pharmacy & billing, automated clinical laboratory systems & radiology information system. Need for evolving health policy, health organization in state, health financing system, health education, health insurance, health legislation.	L1 and L2	7

\*Bloom's Level:

L1: Knowledge; L2: Comprehension; L3: Application; L4: Analysis; L5: Synthesis, L6: Evaluation

<b>BME2611</b>	<b>Threpuetic and Surgical Equipments</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 1.1	Date of Approval: 16 May 2019	3	0	0	3
Pre-requisites/Exposure	Bio-instrumentation				
Co-requisites	Engineering Mathematics, General Science				

## Catalog Description

Therapeutic medical instruments are widely used in the field of biomedical engineering. The students studying the subject are supposed to learn the therapy for any disease after diagnosing it. The course in addition, will provide knowledge of principle and constructional features of various therapeutic medical equipments. The course will also deal with different advance Therapeutic Technology..

## Course Objectives

The objective of this course is to

23. To provide an overview of Threpuetic and Surgical Equipments.
24. To serve as a foundation for design and develop a new insight in Medical Equipment use in Surgrey.

## Course Outcomes

On completion of this course, the students develop capabilities of:

- CO44. *Identify* appropriate design aspects of defibrillator and Pacemaker.
- CO45. *Identify* various electro-Surgical equipment and its application.
- CO46. *Identify* various monitor and control parameters of ventilator and *design* aspects custom built ventilator.
- CO47. *Explain* the principle of Hemodialysis machine and its component.
- CO48. *Explain* and *demonstrate* the principle of physiotherapy machine.

## Course Content

Modules	Blooms level*	Number of hours
<b>MODULE I:</b>  <b>Pacemaker and Defibrillator</b> Need of Pacemaker, External and Implantable Pacemaker, Various type of pacemaker as per clinical need, Recent Advancement in Pacemaker; Need of Defibrillator, Type as of Defibrillator, Mono-phasic and Bi-Phasic Defibrillator, Physiological mechanism of therapy	L1 and L2	10
<b>MODULE II:</b>  <b>Surgical Equipment</b>  Principle of Surgical Diathermy, Surgical Diathermy Machine, Safety aspects in Electro-Surgical Units	L1 and L2	7

<b>MODULE III:</b>  Ventilator  Introduction to Ventilator, Basic therapeutic mechanism of ventilators; Types of Ventilators, Ventilator monitoring and Control Parameters, Ventilator design and machine,	L1, L2 and L3	7
<b>MODULE IV:</b>  Hemodialysis Machine  Functioning of Kidney, Artificial Kidney, Dialyzers, Membrane of Hemodialysis , dialysis machine	L1 and L2	5
<b>MODULE IV:</b>  Physiotherapy and Electrotherapy Equipment  High Frequency Heat Therapy, Short-wave Diathermy, Microwave Diathermy, Ultrasonic Therapy Unit, Electrodiagnostic/Therapeutic Apparatus, Pain Relief Through Electrical Stimulation	L1 and L2	7

<b>BME2612</b>	<b>Data Mining</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2019.1	Date of Approval: 15 May 2019	3	0	0	3
Pre-requisites/Exposure	Concept of Database and Data Mining				
Co-requisites	Nil				

### **Catalog Description**

Data Mining serve as one of the most important courses for postgraduate students, since it builds computational abilities, inferential thinking, and practical skills for tackling core data scientific challenges. The students will get a comprehensive understanding of different data mining techniques that can be used for prediction and for discovering patterns, be prepared to select the right technique for a given data problem and will be able to create a general-purpose analytic process.

### **Course Objectives**

The objective of this course is to

- Provide students with an in-depth knowledge of data mining. To introduce students to basic applications, concepts, and techniques of data mining.
- Develop skills for using recent data mining software to solve practical problems and prediction in a variety of disciplines and
- Gain experience doing independent study and research.

### **Course Outcomes**

On completion of this course, the students will be able to

CO 1: Explain concepts of Data mining, predictive analytics and analyses architecture of data mining. Differentiate between supervised and unsupervised methods

CO 2: Apply classification techniques on different data sets and solve cost –benefit analysis numerical. Analyze decision tree methods.

CO 3: Implement various clustering algorithm on different data sets and describe these algorithms.

CO 4: Prepare data representation for market basket analysis and determine the usefulness of association rules. Interpret supervised and unsupervised learning methods.

CO 5: Predict market trends and outline different factors associated mail marketing.

## Course Content

Modules	Bloom's level	Number of Hours
<b>Module I Data Preparation</b> An introduction to data mining and predictive analytics, Data Pre-processing Exploratory Data Analysis, Dimension- Reduction Methods.	L1, L2	8
<b>Module II Classification</b> k- Nearest Neighbour Algorithm, Decision Trees, Model Evaluation Technique, Cost –Benefit Analysis Using Data Driven Cost.	L1, L2, L3	7
<b>Module III Clustering</b> Hierarchical and k- Means Clustering, Kohonen Networks, Birch Clustering, Measuring Cluster Goodness.	L1, L2, L3, L4	8
<b>Module IV Association Rules</b> Affinity Analysis and Market Basket Analysis, Data Representation for Market Basket Analysis, Support, Confidence, Frequent Item sets, and the a Priori Property, How Does a Priori Algorithm Work? Generating Frequent Item sets, Generating Association Rules, Extension from Flag Data to General Categorical Data, Information-Theoretic Approach: Generalized Rule Induction Method, J-Measure, Association Rules are Easy to do Badly, how can we Measure the Usefulness of Association Rules? Do Association Rules Represent Supervised or Unsupervised Learning?	L1, L2, L3, L6	9
<b>Module IV Case Study: Predicting Response to Direct Mail Marketing</b> Business Understanding, Data Preparation, and Eda, Clustering and Principal Components Analysis, Modelling and Evaluation for Performance and Interpretability, Modelling and Evaluation for High Performance.	L2, L3, L4, L5	8

# CORPORATE COMMUNICATION

Course Code: CSS2451

L-T-P : 1-0-0

Credit Units: 01

## Course Objective:

To enhance the skills needed to work in an English-speaking global business environment.

## Course Contents:

### Module I: Business/Technical Language Development

Advanced Grammar: Syntax, Tenses, Voices

Advanced Vocabulary skills: Jargons, Terminology, Colloquialism

Individualised pronunciation practice

### Module II: Social Communication

Building relationships through Communication, Communication, Culture and Context, Entertainment and Communication, Informal business/ Technical Communication

### Module III: Business Communication

Reading Business/ Technical press, Listening to Business/ Technical reports (TV, radio)

Researching for Business /Technology

### Module IV: Presentations

Planning and getting started, Design and layout of presentation

Information Packaging, Making the Presentation

## Examination Scheme:

Components	CT1	CT2	CAF	V	GD	GP	A
Weightage (%)	20	20	25	10	10	10	5

CAF – Communication Assessment File

GD – Group Discussion

GP – Group Presentation

## Text & References:

- Business Communication, Raman – Prakash, Oxford
- Business Communications, Rodgers, Cambridge
- Working in English, Jones, Cambridge
- New International Business English, Jones/Alexander, Cambridge

# INTERPERSONAL COMMUNICATION

Course Code: BHE2652

L-T-P : 1-0-0

Credit Units: 01

## Course Objective:

This course provides practical guidance on  
Enhancing personal effectiveness and performance through effective interpersonal communication  
Enhancing their conflict management and negotiation skills

## Course Contents:

### Module I: Interpersonal Communication: An Introduction

Importance of Interpersonal Communication  
Types – Self and Other Oriented  
Rapport Building – NLP, Communication Mode  
Steps to improve Interpersonal Communication

### Module II: Behavioural Communication

Meaning and Nature of behavioural communication  
Persuasion, Influence, Listening and Questioning  
Guidelines for developing Human Communication skills  
Relevance of Behavioural Communication for personal and professional development

### Module III: Interpersonal Styles

Transactional Analysis  
Life Position/Script Analysis  
Games Analysis  
Interactional and Transactional Styles

### Module IV: Conflict Management

Meaning and nature of conflicts  
Styles and techniques of conflict management  
Conflict management and interpersonal communication

### Module V: Negotiation Skills

Meaning and Negotiation approaches (Traditional and Contemporary)  
Process and strategies of negotiations  
Negotiation and interpersonal communication

### Module VI: End-of-Semester Appraisal

#### Viva based on personal journal

#### Assessment of Behavioural change as a result of training

Exit Level Rating by Self and Observer

## Examination Scheme:

Components	SAP	A	Mid Term Test (CT)	VIVA	Journal for Success (JOS)
Weightage (%)	20	05	20	30	25

# FRENCH - VI

Course Code: LAN2651

L-T-P : 2-0-0

Credit Units: 02

## Course Objective:

To strengthen the language of the students both in oral and written so that they can:

- i) express their sentiments, emotions and opinions, reacting to information, situations;
- ii) narrate incidents, events;
- iii) perform certain simple communicative tasks.

## Course Contents:

Module D: pp. 157 – 168 – Unité 12

### Unité 12: s'évader

1. présenter, caractériser, définir
2. parler de livres, de lectures
3. préparer et organiser un voyage
4. exprimer des sentiments et des opinions
5. téléphoner
6. faire une réservation

## Contenu grammatical:

1. proposition relative avec pronom relatif "qui", "que", "où" - pour caractériser
2. faire + verbe

## Examination Scheme:

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	20	20	20	15	5

C – Project + Presentation

I – Interaction/Conversation Practice

## Text & References:

- le livre à suivre: Campus: Tome 1

**GERMAN - VI**  
**Course Code: LAN2652**

**L-T-P : 2-0-0**

**Credit Units: 02**

**Course Objective:**

To enable the students to converse, read and write in the language with the help of the basic rules of grammar, which will later help them to strengthen their language.

To give the students an insight into the culture, geography, political situation and economic opportunities available in Germany

Introduction to Advanced Grammar and Business Language and Professional Jargon

**Course Contents:**

**Module I: Adjective endings**

Adjective endings in all the four cases discussed so far

Definite and indefinite articles

Cases without article

**Module II: Comparative adverbs**

Comparative adverbs as and like

**Module III: Compound words**

To learn the structure of compound words and the correct article which they take

Exploring the possibility of compound words in German

**Module IV: Infinitive sentence**

Special usage of 'to' sentences called zu+ infinitive sentences

**Module V: Texts**

A Dialogue: 'Ein schwieriger Gast'

A text: 'Abgeschlossene Vergangenheit'

**Module VI: Comprehension texts**

Reading and comprehending various texts to consolidate the usage of the constructions learnt so far in this semester.

**Module VII: Picture Description**

Firstly recognize the persons or things in the picture and identify the situation depicted in the picture;

Secondly answer questions of general meaning in context to the picture and also talk about the personal experiences which come to your mind upon seeing the picture.

**Examination Scheme:**

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	20	20	20	15	5

C – Project + Presentation

I – Interaction/Conversation Practice

**Text & References:**

# SPANISH – VI

Course Code: LAN2653

L-T-P : 2-0-0

Credit Units: 02

## Course Objective:

To enable students acquire working knowledge of the language; to give them vocabulary, grammar, voice modulations/intonations to handle everyday Spanish situations in Present as well as in Present Perfect Tense with ease.

## Course Contents:

### Module I

Revision of the earlier modules

### Module II

Present Perfect Tense

### Module III

Commands of irregular verbs

### Module IV

Expressions with **Tener que** and **Hay que**

### Module V

En la embajada

Emergency situations like fire, illness, accident, theft

## Examination Scheme:

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	20	20	20	15	5

C – Project + Presentation

I – Interaction/Conversation Practice

## **RUSSIAN - VI**

**Course Code: LAN2654**

**L-T-P : 2-0-0**

**Credit Units: 02**

# CHINESE – VI

Course Code: LAN2655

L-T-P : 2-0-0

Credit Units: 02

## Course Objective:

Chinese emperor Qin Shi Huang – Ti who built the great wall of China also built a network of 270 palaces, linked by tunnels, and was so afraid of assassination that he slept in a different palace each night. The course aims at familiarizing the student with the basic aspects of speaking ability of Mandarin, the language of Mainland China. The course aims at training students in practical skills and nurturing them to interact with a Chinese person.

## Course Contents:

### Module I

Drills

Dialogue practice

Observe picture and answer the question.

Pronunciation and intonation.

Character writing and stroke order.

### Module II

Going out to see a science exhibition

Going to the theatre.

Train or Plane is behind schedule.

Indian Economy-Chinese Economy

Talking about different Seasons of the Year and Weather conditions. Learning to say phrases like-spring, summer, fall, winter, fairly hot, very cold, very humid, very stuffy, neither hot nor cold, most comfortable, pleasant .... etc.

### Module III

Temperature – how to say – What is the temperature in May here?How is the weather in summer in your area?

Around 30 degrees

Heating, air-conditioning

Is winter in Shanghai very cold?

Talking about birthdays and where you were born?

The verb “shuo” (speak) saying useful phrases like speak very well, do not speak very well, if speak slowly then understand if speak fast then don’t understand, difficult to speak, difficult to write, speak too fast, speak too slow, listen and can understand, listen and cannot understand ... etc.

Tell the following in Chinese – My name is .... I was born in ... (year). My birthday is ..... Today is ... (date and day of the week). I go to work (school) everyday. I usually leave home at . (O’clock). In the evening, I usually ..... (do what)? At week end, I ..... On Sundays I usually ..... It is today..... It will soon be my younger sister's birthday. She was born in ..... (year). She lives in ..... (where). She is working (or studying)..... where... She lives in ..... (where.)

## Examination Scheme:

<b>BME2710</b>	<b>EMBEDDED SYSTEM WITH RECENT TECHNOLOGY</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version: 2019.1	Date of Approval: May 16, 2019	2	0	0	2
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

## Catalog Description

This practical course is designed to quickly take students from beginner to basic functional knowledge of the Arduino microcontroller in three weekend 5-hour sessions. You can expect to learn a) how to write and upload simple code for the Arduino to perform basic logic functions like reading a switch to change a motors direction, b) how to integrate a variety of physical inputs including knobs, distance sensors, and light sensors, c) how to integrate a variety of physical outputs such as motors, lights, and speakers, and d) how to put all of these together to build simple self-contained low-cost low-power systems.

## Course Objectives

The objective of this course is to

1. Provide an overview of embedded system and real time operating system.
2. Equip the students with concepts of Arduino microcontroller and its interfacing with external devices.

## Course Outcomes

On completion of this course, the students will be able to

CO1: Explain and analyse the architecture of Arduino microcontroller, Debugging and programming techniques.

CO2: Explain and classify embedded systems and its applications.

CO3: Explain hardware and software design concepts of embedded system.

CO4: Explain real time operating system for embedded system.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1</b>  <b>Introduction to Arduino</b>  The Arduino Platform, Block diagram, Architecture, Pin functions, overview of main features such as I/O Ports, Timers, interrupts serial port, PWM, ADC, etc. Introduction to Arduino IDE, writing, saving, compiling and uploading sketches.	L1, L2, L3 and L4	8
<b>Module2</b>		8

<b>Introduction to Arduino IDE</b>		
Introduction to Arduino IDE, writing, saving, compiling and uploading sketches.		
<b>Module3</b>		
<b>Arduino and Interfaces</b>	L1, L2 and L4	8
Interfacing discrete LEDs, Binary counter, Seven Segment LEDs. Interfacing LCD, switch Interface. Interfacing with different type of sensors and communication modules

<b>BME2711</b>	<b>Artificial organs and rehabilitation engineering</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version	Date of Approval: 16 May 2019	3	0	-	3
Pre-requisites/Exposure					
Co-requisites					

## Catalog Description

This course is intended for Biomedical engineering students to make them understand the various techniques developed to restore the functionalities of malfunctioning organs/organ system. It entails information of different health parameters by restoring the biochemical/ biophysical and physiological processing which might have undergone deterioration due to some disease or accidental injuries. The subject is designed to introduce the initial level of details about various artificial engineering instruments or devices which are used to maintain vital functions such as blood circulation, renal activities, breathing supporting measure, & Wheeled and seated mobility devices.

## Course Objectives

The objective of this course is to

1. Equip the students with concepts of Artificial organs, prosthetics and engineering solution for various impairments
2. Provide an over view of Artificial Heart, artificial kidney, Artificial heart lung machine, Wheeled and seated mobility devices (WSMDs), Audimetric devices & associated assisting devices

## Course Outcomes

On completion of this course, the students will be able to

CO1: Explain concepts of modern artificial organs, Biomaterials, Rheological properties of blood

CO2: Explain functioning and design of Artificial heart lung machine, artificial artificial heart lung devices, Oxygenators, artificial pancreas , blood and skin .

CO3: Describe Audiometry :Wheeled and seated mobility devices (WSMDs) & ergonomics of wheelchair propulsion , power wheelchair electrical systems .

CO4: Explain the concepts of Impairments , disabilities and handicaps, engineering concepts in sensory and motor rehabilitation

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I:</b> Introduction to artificial organs , biomaterials , inflammation , rejection , correction . Rheological properties of blood , blood viscosity , effect of shear rate , haematocrit , temperature and protein contents . Casson equation , flow of blood thorough blood vessels , problems of extracorporeal blood flow.	L-1, L-2, L-3	8
<b>Module II:</b>	L-1, L-2,	10

Artificial heart lung machine : brief explanation of gas exchange , artificial heart lung devices , Oxygenators : bubble , film oxygenators and membrane oxygenator . Liver support system , artificial pancreas , blood and skin .	L-3	
<b>Module III:</b> Audiometry : air conduction , bone conduction , masking , functional diagram of audiometer . Wheeled mobility : categories of wheelchairs , wheelchair structure and component design , ergonomics of wheelchair propulsion , power wheelchair electrical systems .	L-1, L-2, L-3	8
<b>Module IV</b> Rehabilitation Engineering : Impairments , disabilities and handicaps , engineering concepts in sensory and motor rehabilitation . Rehab for locomotion , vision , speech and hearing . Artificial limbs , prosthetic heart valves . Externally powered and controlled prosthetics . Spinal rehabilitation and Marcus study .	L-1, L-2, L-3	10

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

<b>BME2712</b>	<b>Clinical Electrical Hazards and Safety</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 1.1	Date of Approval:16, May 2020	2	0	0	2
Pre-requisites/Exposure	Anatomy &Physiology				
Co-requisites	Electronic Circuit				

## Catalog Description

The objective of the course is to provide a brief knowledge of Clinical Electrical Hazards, safety standards and Safety procedures. Curriculum introduce students with safety testing method and equipment.

## Course Objectives

The objective of this course is to

- 25. To provide an overview of clinical electrical hazards and safety.
- 26. To introduces and overview of various safety standard and organization

## Course Outcomes

On completion of this course, the students develop capabilities of:

On completion of this course, the students will be able to

- CO49. Differentiate various electrical hazards with effect of level of currents.
- CO50. Deploy various safety techniques with knowledge of various medical standard, in designing of medical equipment.
- CO51. Conduct various test to confirm safety standards for medical device and clinical setup.

## Course Content

Modules	Blooms level*	Number of hours
<b>MODULE I:</b>  <b>Clinical Electrical Hazard</b> Introduction to electrical safety; Various effect of current flowing from one contact point to another: Sensitivity Limits, Let-go current, Muscles Contraction, Suffocation, Cardiac fibrillation, Burn; Difference between Macro-shocks and Micro-shocks	L1 and L2	4
<b>MODULE II:</b>  <b>Electrical Safety</b> Physical Test, electrical Safety Analyzer Setup, Ground Wire Resistance, Insulation Test, Equipment Leakage Current (Direct, Differential, Alternative), Patient Applied part leakage current, Leads Isolation Test/Mains applied part Leakage.	L1, L2 and L3	4

<b>MODULE III:</b>		
<b>Type of Test</b> Physical Test, electrical Safety Analyzer Setup, Ground Wire Resistance, Insulation Test, Equipment Leakage Current (Direct, Differential, Alternative), Patient Applied part leakage current, Leads Isolation Test/Mains applied part Leakage.	L1, L2 and L3	4

Co-requisites					

**Pre –Requisite:** Matlab Programming  
**Catalog Description**

This course helps the students to do hands-on practice with various simulation techniques use for Biomechanics. Biomechanics simulations study are known to be one of efficient techniques for various application of healthcare. Course built the foundation for develop software program for medical data processing.

The objective of this course is to

- 27. To provide hands-on practice with 3D Modelling Tools.
- 28. To provide hands-on practice with FEA Modelling.

**Course Outcomes**

On completion of this course, the students will be able to

- CO15. Develop an efficient 3D model of human body part from 3D stacks of images.
- CO16. Develop a FEA Model for solve an approximate solution on Medical Data.

List of Experiments	Blooms level*	Number of hours
41. To Develop a Bone3D modeling using 3D rendering Software.	L1, L2 and L3	2
42. To operate smoothening function on 3D model using 3D rendering Software.	L1, L2 and L3	2
43. To operate wrapping function on 3D model using 3D rendering Software.	L1, L2 and L3	2
7. To operate error analysis and rectification on 3D model using 3D rendering Software.	L1, L2 and L3	2
8. To operate 3D analysis Tool on 3D model using 3D rendering Software.	L1, L2 and L3	2
9. To develop assembly of 3D bone.	L1, L2 and L3	2
10. To Assign material properties to each component of 3D model.	L1, L2 and L3	2
11. To develop meshed 3D model.	L1, L2 and	2

	L3	
12. To apply boundary condition and force component on 3D surfaces.	L1, L2 and L3	2
13. To simulate for FEA modelling.	L1, L2 and L3	2

<b>BME2735</b>	<b>SUMMER INTERNSHIP EVALUATION II</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2019.1	Date of Approval: May 21, 2019	0	0	0	3
Pre-requisites/Exposure	NA				
Co-requisites	Nil				

## Catalog Description

There are certain phases of every Intern's professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship program can best be described as an attempt to institutionalize efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal classroom situations. These attributes are intellectual ability, professional judgment and decision-making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility etc. In order to achieve these objectives, each student will maintain a file (**Internship File**). The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development. The report will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

## Course Objectives

The objective of this course is to

1. Equip the students with concepts of new technologies and practical exposure
2. Provide an overview of presentation and preparation of report.

## Course Outcomes

On completion of this course, the students will be able to

CO1: Study the literature and identify the problem statement

CO2: Work on a real world problem and solve it using latest technology

CO3: Prepare a detailed report of the project

CO4: Prepare a brief presentation of their project

CO5: Present and explain the project for evaluation

## Text Books

As per topic of summer internship project is chosen and discussion with guide.

Pre-requisites/Exposure	Whole Curriculum				
Co-requisites	Nil				

## Catalog Description

Major Project/Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology, practical skill enhancement and an opportunity to work closely with a industry external guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation. Students require professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship program can best be described as an attempt to institutionalize efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal classroom situations. These attributes are intellectual ability, professional judgment and decision-making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility

## Catalog Description

The objective of the course is to provide a brief knowledge of Clinical Science. It is to provide the students of biomedical, a clinical aspects of Nephrology, General Surgery and Gastroenterology and cardiology. Engineering student able to understand clinical related issue and develop foundation to built futuristic solution for them.

## Course Objectives

The objective of this course is to

- 29. To provide an overview of clinical science.
- 30. To develop the foundation to provide solution with understanding of clinical aspects of problems.

## Course Outcomes

On completion of this course, the students develop capabilities of:

On completion of this course, the students will be able to

- CO52. Identify various clinical aspects and issue related to Nephrology.
- CO53. Identify various clinical aspects and issue related to general surgery.
- CO54. Identify various clinical aspects and issue related to Cardiology.

## Course Content

Modules	Blooms level*	Number of hours
<b>MODULE I:</b>  <b>Nephrology-I</b> Diseases in Nephrology, Principles of dialysis, Haemodialysis, Acetate dialysis, Bicarbonate dialysis. Peritoneal dialysis, Chronic ambulatory peritonealdialysis, Haemoperfusion, Sequential ultra-filtration. Haemofiltration, Adequacy ofdialysis, Clearance, dialysance, Components of dialysing system, Dialysate, compositionof dialysate, Types of dialysers, controls and monitoring devices for dialysers. Clinicalsignificance. Renal transplantation: Basic principles.	L1 and L2	9
<b>MODULE II:</b>  <b>Nephrology-II</b>	L1 and L2	9

Diseases of nervous system, Electroencephalography, Pneumoencephalography, neuromuscular stimulation, Electromyography, Clinical applications. Motor neuron disorders, the electrical study of reflexes, the silent period. The F response, The H reflex, the axon reflexes, Disorders of neuromuscular transmission		
<b>MODULE III:</b>  <b>General Surgery and Gastroenterology</b> Pre- operative preparation for surgical patient, Study and operation of surgical equipment, safety aspects in electro-surgical units, Anatomy and physiology of G.I.T. Nutritional support and parenteral therapy, Height and weight estimations according to age. Intravenous cannulae, stomach wash tubes, Introduction to Hypertension and Diabetes..	L1 and L2	9
<b>MODULE IV:</b>  <b>Cardiology:</b> Cardio vascular measurements, Normal and abnormal ECG, interpretation of ECG, Prosthetic devices, Monitors, Heart lung machine applications and Clinical significance, CVP and SWAN catheters. Diagnostic applications, Cardiac pacing. Diagnostic indications. Criteria for selection. Therapeutic indications.	L1 and L2	9

<b>BME2716</b>	<b>Neural Network and Fuzzy Logic</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 1.1	Date of Approval:16, May, 2019	3	0	0	3
Pre-requisites/Exposure	Machine Learning				
Co-requisites					

## Catalog Description

Course has been divided in to two parts: Neural Networks and Fuzzy Logic. Neural networks part aims at introducing the fundamental theory and concepts of biological and artificial neural network and their applications in the area of machine intelligence. This part also offers knowledge of learning rules and architecture of various neural nets. The second part covers fuzzy logic: Fuzzy logic is a tool that can be applied to ambiguous problems, which cannot easily solved by classical techniques. Course discusses the fundamental of fuzzy set theory and fuzzy logic. In addition, this course also introduces applications of fuzzy logic in several areas such as fuzzy control and fuzzy decision making.

## Course Objectives

The objective of this course is to

1. To cater the knowledge of Neural Networks and Fuzzy Logic Control and use these for controlling real time systems.

## Course Outcomes

On completion of this course, the students will be able to

- CO55. Demonstrate the concepts of feed forward neural networks
- CO56. Demonstrate adequate knowledge about feedback networks.
- CO57. Apply the concept of fuzziness involved in various systems.
- CO58. Demonstrate adequate knowledge about fuzzy set theory
- CO59. Apply fuzzy logic control to real time systems.

## Course Content

Modules	Blooms level*	Number of hours
<b>MODULE I:</b>  <b>Architecture</b> Introduction –Biological neuron-Artificial neuron-Neuron modeling Learning rules-Single layer-Multi layer feed forward network-Back propagation-Learning factors.	L1 and L2	7
<b>MODULE II:</b>  <b>Neural Network for Control</b> Feedback networks-Discrete time hop field networks-Schemes of neuro –control, identification and control of dynamical systems-case studies (Inverted Pendulum, Articulation Control).	L1 and L2	7
<b>MODULE III:</b>	L1 and L2	7

<b>Fuzzy System</b> Classical sets-Fuzzy sets-Fuzzy relations-Fuzzification – Defuzzification- Fuzzy rules.		
<b>MODULE IV:</b>  <b>Fuzzy Logic Control</b> Membership function – Knowledge base-Decision –making logic – Optimizations of membership function using neural networks-Adaptive fuzzy systems-Introduction to genetic algorithm.	L1 and L2	8
<b>MODULE IV:</b>  Application of FLC  Fuzzy logic control-Inverted pendulum-Image processing-Home Heating system- Blood pressure during anesthesia-Introduction to neuro fuzzy controller	L1 and L2	7

<b>BME2717</b>	<b>VIRTUAL REALITY</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version: 2019.1	Date of Approval: 16 May 2019	3	-	-	3
Pre-requisites/Exposure	Basic Knowledge of C++ Programming				
Co-requisites	Nil				

## Catalog Description

This course covers understanding of software and hardware related to computer graphics systems. Topics include an introduction to the basic concepts, 2-D and 3-D modeling and transformations, viewing transformations, clipping, color filling, projections, rendering techniques, visible surface detection and elimination algorithms, graphical software packages and graphics systems. Students will use a standard computer graphics API to reinforce concepts and study fundamental computer graphics algorithms. Last module covers elementary image processing techniques and various library function in C to build animations.

## Course Objectives

The objective of this course is to

1. Equip the students with fundamental concepts of graphics system and standards.
2. Equip the students with mathematical concepts of graphics algorithms to draw objects using C language.
3. Provide an overview of various 2D & 3D transformation, clipping operations, algorithms related to hidden surface detection and elimination and their implementation.
4. Provide an overview of various elementary image processing techniques and basic library function in C to create animation sequence.

## Course Outcomes

On completion of this course, the students will be able to

- CO 1: Explain applications of computer graphics and define various standards and components in development of computer graphics.
- CO 2: Explain generation of graphics primitives and analyze their problems and solutions. Demonstrate solid filling algorithms. Demonstrate polygon clipping and line clipping algorithm and analyze their problems and solutions.
- CO 3: Apply 2D geometric transformations on 2D graphics objects with their practical implementation. Illustrate use of window to viewport transformation in computer graphics.
- CO4: Apply 3D geometric transformations on 3D objects with their practical implementation.
- CO 5: Illustrate the use of 3D object modeling, Visible Surface detection and elimination algorithm and analyze their problems and solutions.

Modules	Blooms level*	Number of hours
<b>Module I: Introduction to Graphics and Graphics Hardware System</b>  Application of computer graphics, Video Display Devices, Raster Scan Display, Random Scan Display, Input Devices, Graphic Software and graphics standards, Numerical based on Raster and Random scan display, Frame buffer, Display processor.	L1, L2	5
<b>Module II: Output Primitives and Clipping operations</b>  Algorithms for drawing 2D Primitives lines (DDA and Bresenham's line algorithm), circles (Bresenham's and midpoint circle algorithm), ellipses (midpoint ellipse algorithm), Antialiasing and filtering techniques. Line clipping (cohen-sutherland algorithm), Curve clipping algorithm, and polygon clipping with Sutherland Hodgeman algorithm, Area fill algorithms for various graphics primitives: Scanline fill algorithm, boundary fill algorithm, flood fill algorithm, Polygon representation, various method of Polygon Inside test: Even-Odd method, winding number method, Character generation techniques.	L2, L3, L4	6
<b>Module III: 2D Geometric transformation</b>  2D Transformation: Basic transformation, Translation, Rotation, Rotation relative to an arbitrary point, scaling, Matrix Representations and Homogeneous coordinates, window to viewport transformation.	L3 and L4	6
<b>Module IV: 3D Geometric transformation</b>  3D Concepts: Parallel projection and Perspective projection, 3D Transformations, composite 3D transformation, co-ordinate transformation, Inverse transformation	L3 and L5	7
<b>Module V: object modelling and Visible Surface detection</b>  fractal geometry methods, fractal dimensions, Geometric construction of deterministic self-similar fractals, Iterated function system to generate fractals. Bezier curves and Bezier surfaces, Bspline curves and surfaces, Visible surface detection method: Basic illumination, diffuse reflection, specular reflection, shadows. Ray tracing method, Depth-buffer method, A-buffer method, Depth-sorting method (painter's algorithm), Binary search partition method, Scan line method,	L4, L5	7
<b>Module VI: Introduction to multimedia</b> Design of animation sequences, Computer Animation languages, Elementary filtering techniques and elementary Image Processing techniques, graphics library functions used in animation design	L2, L3, L5	5

Version 2019.1	Date of Approval: 16May, 2019	3	0	0	3
Pre-requisites/Exposure	Basic Networking Concepts				
Co-requisites	Nil				

## Catalog Description

This course aims at providing knowledge of basic concepts of Robotic Process Automation to University students. It further builds on these concepts and introduces key RPA Design and Development strategies and methodologies specifically in context of UiPath products. The student undergoing the course shall develop the competence to design and develop a robot for a defined process.

## Course Objectives

The objective of this course is to

1. Equip the students with concepts of robotic process automation
2. Provide an overview of designing with uipath software.

## Course Outcomes

On completion of this course, the students will be able to

CO1: Explain key terms and trends around the robotic process automation along with its physical and logical design

CO2: Understand the potential and value of the robotic process automation .

CO3: Describe the technologies used for the robotic process automation and mobile devices, including (passive and active) sensors, the physical communications layer, communications protocols, programming frameworks,.

CO4: Design programs and have hands on experience on uipath software

CO5: Develop RPA programs of moderate complexity for a well-used robotic automation process using uipath.

<b>Modules</b>	<b>Bloom s level*</b>	<b>Numbe r of hours</b>
<b>Module 1: Programming Basic and Recap</b>  <b>Programming Concepts Basics I</b> - Understanding the application, Basic Web Concepts, Protocols, Email Clients, Data Structures, Data Tables, Algorithms, Software Processes, Software Design, SDLC.  <b>Programming Concepts Basics 2-</b> Scripting, Net Framework, Net Fundamentals, XML, Control structures and functions, XML, HTML, CSS, Variables & Arguments.	L1, L2	8

<p><b>Module II: RPA Concepts</b></p> <p><b>RPA Basics</b> - History of Automation, what is RPA, RPA vs Automation, Processes &amp; Flowcharts, Programming Constructs in RPA, What Processes can be Automated, Types of Bots, Workloads which can be automated.</p> <p><b>RPA Advanced Concepts</b> - Standardization of processes, RPA Development methodologies, Difference from SDLC, Robotic control flow architecture, RPA business case, RPA Team, Process Design Document/Solution Design Document, Industries best suited for RPA, Risks &amp; Challenges with RPA, RPA and emerging ecosystem</p>	L2, L3 and L4	8
<p><b>Module III: UiPath Introduction &amp; Basics</b></p> <p><b>Introduction to UiPath-</b> Installing UiPath Studio community edition, The User Interface, Keyboard Shortcuts, About Updating, About Automation Projects, Introduction to Automation Debugging, Managing Activation Packages, Reusing Automations Library, Installing the Chrome Extension, Installing the Firefox Extension, Connecting your project to a source control system, Activities Guide. <b>Variables, Control Flow</b></p> <p><b>Data Manipulation-</b> Data Manipulation Introduction, Scalar variables, collections and Tables, Text Manipulation, Data Manipulation, Gathering and Assembling Data.</p> <p><b>Recording and Advanced UI Interaction</b> - Recording Introduction, Basic and Desktop Recording, Web Recording, Input/Output Methods, Screen Scraping, Data Scraping, Scraping advanced techniques. Selectors.</p>	L2, L3 and L4	8
<p><b>Module IV: UiPath Advanced Automation concepts and techniques</b></p> <p>Image, Text &amp; Advanced Citrix Automation- Introduction to Image &amp; Text Automation, Image based automation, Keyboard based automation, Information Retrieval, Advanced Citrix Automation challenges, Best Practices, using tab for Images, Starting Apps.</p> <p>Excel Data Tables &amp; PDF - Data Tables in RPA, Excel and Data Table basics, Data Manipulation in excel, Extracting Data from PDF, extracting a single piece of data, Anchors, Using anchors in PDF.</p> <p>Email Automation- Email Automation, Incoming Email automation, Sending Email automation</p>	L2, L3 and L4	12

# EMPLOYABILITY SKILLS

Course Code: CSS2751

L-T-P : 1-0-0

Credit Units: 01

## Course Objective:

To facilitate the learner with Academic Language Proficiency and make them effective users of functional language to excel in their profession.

## Course Contents:

### Module I

Introduction to Public Speaking

Business Conversation, Effective Public Speaking, Art of Persuasion

### Module II: Speaking for Employment

Types of Interview, Styles of Interview, Facing Interviews-Fundamentals and Practice Session

Conducting Interviews- Fundamentals and Practice Session

Question Answer on Various Dimensions

### Module III

Resume Writing, Covering Letters, Interview Follow Up Letters

### Module IV: Basic Telephony Skills

Guidelines for Making a Call, Guidelines for Answering a Call

### Module V: Work Place Speaking

Negotiations, Participation in Meetings, Keynote Speeches

## Examination Scheme:

Components	CT1	CT2	CAF	V	GD	GP	A
Weightage (%)	20	20	25	10	10	10	5

CAF – Communication Assessment File

GD – Group Discussion

GP – Group Presentation

# **RELATIONSHIP MANAGEMENT**

**Course Code: BEH 2751**

**L-T-P : 1-0-0**

**Credit Units: 01**

## **Course Objective:**

- To understand the basis of interpersonal relationship
- To understand various communication style
- To learn the strategies for effective interpersonal relationship

## **Course Contents:**

### **Module I: Understanding Relationships**

- Importance of relationships
- Role and relationships
- Maintaining healthy relationships

### **Module II: Bridging Individual Differences**

- Understanding individual differences
- Bridging differences in Interpersonal Relationship – TA
- Communication Styles

### **Module III: Interpersonal Relationship Development**

- Importance of Interpersonal Relationships
- Interpersonal Relationships Skills
- Types of Interpersonal Relationships

### **Module IV: Theories of Interpersonal Relationships**

- Theories: Social Exchange, Uncertainty Reduction Theory
- Factors Affecting Interpersonal Relationships
- Improving Interpersonal Relationships

### **Module V: Impression Management**

- Meaning & Components of Impression Management
- Impression Management Techniques (Influencing Skills)
- Impression Management Training-Self help and Formal approaches

### **Module VI:End-of-Semester Appraisal**

#### **Viva based on personal journal**

#### **Assessment of Behavioural change as a result of training**

#### **Exit Level Rating by Self and Observer**

## **Examination Scheme:**

Components	SAP	A	Mid Term Test (CT)	VIVA	Journal for Success (JOS)
Weightage (%)	20	05	20	30	25

# FRENCH - VII

Course Code: LAN2751

L-T-P : 2-0-0

Credit Units: 02

## Course Objective:

Revise the portion covered in the first volume, give proper orientation in communication and culture.

## Course Contents:

Module A: Unités 1 – 3: pp. 06 - 46

### Contenu lexical :

Unité 1: Rédiger et présenter son curriculum vitae

Exprimer une opinion

Caractériser, mettre en valeur

Parler des rencontres, des lieux, des gens

Unité 2: Imaginer - Faire des projets

Proposer - conseiller

Parler des qualités et des défauts

Faire une demande écrite

Raconter une anecdote

Améliorer son image

Unité 3: Exprimer la volonté et l'obligation

Formuler des souhaits

Exprimer un manque/un besoin

Parler de l'environnement, des animaux, des catastrophes naturelles

### Contenu grammatical :

Le passé : passé composé/imparfait

Pronoms compléments directs/indirects, y/en (idées/choses)

Propositons relatives introduites par qui, que, où

Comparatif et superlatif

Le conditionnel présent

Situer dans le temps

Féminin des adjectifs

La prise de paroles : expressions

Le subjonctif : volonté, obligation

## Examination Scheme:

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	20	20	20	15	5

C – Project + Presentation

I – Interaction/Conversation Practice

**GERMAN - VII**  
**Course Code: LAN2752**

**L-T-P : 2-0-0**

**Credit Units: 02**

**Course Objective:**

To enable the students to converse, read and write in the language with the help of the basic rules of grammar, which will later help them to strengthen their language.

To give the students an insight into the culture, geography, political situation and economic opportunities available in Germany

Introduction to Advanced Grammar and Business Language and Professional Jargon

**Course Contents:**

**Module I: Dass- Sätze**

Explain the use of the conjunction “-that”, where verb comes at the end of the sentence

**Module II: Indirekte Fragesätze**

To explain the usage of the “Question Pronoun” as the Relative Pronoun in a Relative Sentence, where again the verb falls in the last place in that sentence.

**Module III: Wenn- Sätze**

Equivalent to the conditional “If-” sentence in English. Explain that the verb comes at the end of the sentence.

**Module IV: Weil- Sätze**

Explain the use of the conjunction “because-” and also tell that the verb falls in the last place in the sentence.

**Module V: Comprehension texts**

Reading and comprehending various texts to consolidate the usage of the constructions learnt so far in this semester.

**Module VI: Picture Description**

Firstly recognize the persons or things in the picture and identify the situation depicted in the picture;

Secondly answer questions of general meaning in context to the picture and also talk about the personal experiences which come to your mind upon seeing the picture.

**Examination Scheme:**

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	20	20	20	15	5

C – Project + Presentation; I – Interaction/Conversation Practice

**Text & References:**

- Braun, Nieder, Schmoe, Deutsch als Fremdsprache 1A, Grundkurs

## SPANISH - VII

**L-T-P : 2-0-0**

**Course Code: LAN2753**

**Credit Units: 02**

### **Course Objective:**

To enable students acquire working knowledge of the language; to give them vocabulary, grammar, expressions used on telephonic conversation and other situations to handle everyday Spanish situations with ease.

### **Course Contents:**

#### **Module I**

Revision of earlier semester modules

#### **Module II**

Zodiac signs. More adjectives...to describe situations, state of minds, surroundings, people and places.

#### **Module III**

Various expressions used on telephonic conversation (formal and informal)

#### **Module IV**

Being able to read newspaper headlines and extracts (Material to be provided by teacher)

#### **Module V**

Negative commands (AR ending verbs)

#### **Module VI**

Revision of earlier sessions and introduction to negative ER ending commands, introduction to negative IR ending verbs

### **Examination Scheme:**

<b>Components</b>	<b>CT1</b>	<b>CT2</b>	<b>C</b>	<b>I</b>	<b>V</b>	<b>A</b>
<b>Weightage (%)</b>	20	20	20	20	15	5

C – Project + Presentation

I – Interaction/Conversation Practice

### **Text & References:**

## **RUSSIAN - VII**

**Course Code:**

**LAN2754**

**L-T-P : 2-0-0**

**Credit Units: 02**

**CHINESE – VII**  
**Course Code: LAN2755**

**L-T-P : 2-0-0**

**Credit Units: 02**

**Course Objective:**

The story of Cinderella first appears in a Chinese book written between 850 and 860 A.D. The course aims at familiarizing the student with the basic aspects of speaking ability of Mandarin, the language of Mainland China. The course aims at training students in practical skills and nurturing them to interact with a Chinese person.

**Course Contents:**

**Module I**

Drills

Dialogue practice

Observe picture and answer the question.

About china part –I Lesson 1,2.

**Module II**

Pronunciation and intonation

Character Writing and stroke order.

**Module III**

Ask someone what he/she usually does on weekends?

Visiting people, Party, Meeting, After work....etc.

**Module IV**

Conversation practice

Translation from English to Chinese and vice-versa.

Short fables.

**Module V**

A brief summary of grammar.

The optative verb “yuanyi”.

The pronoun “ziji”.

**Examination Scheme:**

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	20	20	20	15	5

C – Project + Presentation

I – Interaction/Conversation Practice

<b>BME2837</b>	<b>PROJECT (DISSERTATION)</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2019.1	Date of Approval: May 21, 2019	0	0	0	8
Pre-requisites/Exposure	Whole Curriculum				
Co-requisites	Nil				

### **Catalog Description**

Major Project/Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology, practical skill enhancement and an opportunity to work closely with a industry external guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation. Students require professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship program can best be described as an attempt to institutionalize efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal classroom situations. These attributes are intellectual ability, professional judgment and decision-making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility

### **Course Objectives**

The objective of this course is to

3. Equip the students with concepts of new technologies and practical exposure
4. Provide an overview of presentation and preparation of report

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: Study the literature and identify the problem statement

CO2: Work on a real world problem and solve it using latest technology

CO3: Prepare a detailed report of the project

CO4: Prepare a brief presentation of their project

CO5: Present and explain the project for evaluation

Modes of Evaluation: Quiz/Assignment/ Seminar/Written Examination

### **Examination Scheme:**

Components	V	PPT	R	IM	EM
Weightage (%)	10	10	10	30	70

V – Viva, PPT-Power Point Presentation, R – Report, IP-Internal Marks, EM-External Marks

<b>BME2802</b>	<b>Introduction to Medical Physics</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 1.1	Date of Approval: 16, May 2019	3	0	0	3
Pre-requisites/Exposure	Engineering Physics, Biomedical Instrumentation				
Co-requisites	Anatomy and Physiology				

## Catalog Description

This Course addresses DNA damage, depression of Macro molecular synthesis, Chromosomal damage, radiation and contamination surveys, instrument calibration, radioactive waste disposal, radiation safety compliance, and other matters contributing to professional competence in the field of medical health physics. Course includes lectures and seminars.

## Course Objectives

The course objective is

1. To clear the concepts and methods of physics in the diagnosis and treatment of human disease
2. To provide the knowledge of the application of physics in the area of medicine.

## Course Outcomes

On completion of this course, the students will be able to

- CO1. Identify and describe fundamental principles of Atomic and nuclear physics.
- CO2. Identify and explain fundamental theories of Radiology and radiation therapy.
- CO3. Describe the basic phenomenon associated with photo medicines, its effect and hazards.

## Course Content

Modules	Blooms level*	Number of hours
<b>MODULE I:</b>  <b>Atomic physics</b> Definition of atom, periodic system of elements, mechanical properties of atom, emission of light and its frequencies. Electromagnetic spectra. Interaction with Living cells: Target theory, single hit and multi target theory, cellular effects of radiation, DNA damage, depression of Macro molecular synthesis, Chromosomal damage.	L1 and L2	8
<b>MODULE II:</b>  <b>Principles of nuclear physics</b> Natural radioactivity, Decay series, type of radiation and their applications, artificially produced isotopes and its application, accelerator principles; Radionuclides used in Medicine and technology	L1 and L2	5
<b>MODULE III:</b>  <b>Fundamental physics of radiology</b> Radioactivity materials, Production of X-ray, Effects of X-rays, Interaction of X-ray	L1 and L2	8

and Gamma rays with matter. Somatic Effect of Radiation: Radio sensitivity protocol of different tissues in human, LD 50/30 effect of radiation on skin, blood forming organs, lenses of eye, embryo and Endocrinal glands.		
<b>MODULE IV:</b>  <b>Genetic effect of radiation</b> Threshold of linear dose effect, relationship, factors affecting frequency of radiation induced mutation, Gene controlled hereditary diseases, biological effect of microwave and RF wave. Variation in dielectric constant and specific conductivity of tissues. Penetration and propagation of signals effects in various vital organs, Protection standards.	L1 and L2	8
<b>MODULE V:</b>  <b>Photo medicine</b> Synthesis of Vitamin D in early and late cutaneous effects, Phototherapy, Photo chemotherapy, exposure level, hazards and maximum permissible exposures.  LASER PHYSICS – Characteristics of Laser radiation, Laser speckle, biological effects, laser safety management.	L1 and L2	7

\*Bloom's Level:

L1: Knowledge; L2: Comprehension; L3: Application; L4: Analysis; L5: Synthesis, L6: Evaluation

<b>BME2803</b>	<b>Medical Informatics</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 1.1	Date of Approval: 16, May 2019	3	0	0	3
Pre-requisites/Exposure	Engineering Physics, Biomedical Instrumentation				
Co-requisites	Anatomy and Physiology				

## Catalog Description

Collecting, storing and using information has always been an integral part of the practice of medicine. It has, however, become more complex and technology-based thereby creating an increasing need for biomedical graduates to be competent in information handling skills ranging from simple record-keeping to accessing and using computer-based data. As well as having the technical skills to undertake such tasks it is important that graduates appreciate the role of informatics in the day-to-day care of medical equipment and the advancement of medical science in general.

## Course Objectives

The objective of course is to

1. To provide an overview of computers and multimedia applications in medical field to develop educational / training packages.
2. To serve as a foundation for the study of components of virtual reality and virtual reality applications in medicine.

## Course Outcomes

On completion of this course, the students will be able to

- CO1. Identify and Explain requirements of the implementation of medical database.
- CO2. Outline and explain the visual basic tools for medical information system.
- CO3. Identify and explain various requirement of Computer, multimedia systems and its algorithm for Medical informatics.
- CO4. Explain the role of Computer in Medical research.

## Course Content

Modules	Blooms level*	Number of hours
<b>MODULE I:</b>  <b>Medical Database Implementation</b> Medical data acquisition and database systems; PC based multichannel data acquisition system; storage, analysis and retrieval techniques	L1 and L2	6
<b>MODULE II:</b>  <b>Visual Basic</b> Visual programming concepts; visual Basic environment, tools and controls; Dynamic data exchange; VB based Medical Information System	L1 and L2	6

<b>MODULE III:</b>  <b>Computers in system design</b> Hospital Information System its design and functional characteristics; Principles and application of Artificial Intelligence, Pattern Recognition, Neural Network and Fuzzy Logic in Medicine	L1 and L2	6
<b>MODULE IV:</b>  <b>Multimedia and virtual reality applied to medicine</b> Basic concepts of Multimedia; Design of Multimedia information systems; Components of virtual reality; Virtual reality applications in medicine	L1 and L2	8
<b>MODULE V:</b>  <b>Computers in medical research</b> Medical Informatics and its levels; Design and development of educational packages on medical sciences; Integrated design concepts; Interactive multimedia, Virtual and digital libraries, Internet and its applications.	L1 and L2	10

## Catalog Description

This course provide insight in the recent development in the field of Biomedical Equipment. It is a open ended course for final semester students where recent on going research and newly adapt technologies in market would be discuss. Course largely help student to develop carrier path and a lifelong learning opportunities.

## Course Objectives

The objective of course is to

3. To provide an insight in recent development in field of Biomedical.
4. To serve as a foundation for life-long learning in field of biomedical.

## Course Outcomes

On completion of this course, the students will be able to

- CO5. Identify the new development in field of MRI.
- CO6. Identify the new development in field of CT-Scan.
- CO7. Identify the new development in field of Artificial Intelligence in Medicine.
- CO8. Identify the new development in field of robotic surgery.

## Course Content

<b>BME2805</b>	<b>ADVANCED ROBOTIC PROCESS AUTOMATION DESIGN &amp; DEVELOPMENT</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2019.1	Date of Approval: 16May 2019	3	0	0	3
Pre-requisites/Exposure	Basic Networking Concepts				
Co-requisites	Nil				

## Catalog Description

This course aims at providing knowledge of basic concepts of Robotic Process Automation to University students. It further builds on these concepts and introduces key RPA Design and Development strategies and methodologies specifically in context of UiPath products. The student undergoing the course shall develop the competence to design and develop a robot for a defined process.

## Course Objectives

The objective of this course is to

1. Equip the students with concepts of robotic process automation
2. Provide an overview of designing with uipath software.

## Course Outcomes

On completion of this course, the students will be able to

CO1: Explain key terms and trends around the robotic process automation along with its physical and logical design

CO2: Understand the potential and value of the robotic process automation .

CO3: Describe the technologies used for the robotic process automation and mobile devices, including (passive and active) sensors, the physical communications layer, communications protocols, programming frameworks,.

CO4: Design programs and have hands on experience on uipath software

CO5: Develop RPA programs of moderate complexity for a well-used robotic automation process using uipath.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1: Exception handling and Best Practices</b> <b>Debugging and Exception Handling- Debugging</b> Tools, Strategies for solving issues, Catching errors. <b>Project Organization-</b> Concept of project organization, Best practices, Avoiding pitfalls, Invoke Activity.	L1, L2	8
<b>Module II: Introduction to Orchestrator</b>	L2, L3	8

Orchestrator, Tenants, Authentication, Users, Roles, Robots, Environments, Queues & Transactions, Schedules.	and L4	
<b>Module III: merging and Future Trends in IT</b> Artificial Intelligence, Machine Learning, Agent awareness, Natural Language Processing Computer Vision	L2, L3 and L4	8
<b>Module IV: Capstone Project</b> Real life case studies which can be used to apply the concepts learnt during the course. The projects shall test student's skills right from process transformation and documentation to the design and development of the actual robot	L2, L3 and L4	12

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

## **Course Objective:**

Importance of Personal and Professional excellence  
Inculcating the components of excellence

## **Course Contents:**

### **Module I: Components of Excellence**

Personal Excellence:

Identifying long-term choices and goals

Uncovering the talent, strength & style

Analyzing choke points in your personal processes by analysis in area of placements, events, seminars, conference, extracurricular activities, projects etc.

### **Module II: Managing Personal Effectiveness**

Setting goals to maintain focus

Dimensions of personal effectiveness (self disclosure, openness to feedback and perceptiveness)

Integration of personal and organizational vision for effectiveness

A healthy balance of work and play

Managing Stress creatively and productively

### **Module III: Personal Success Strategy**

Time management

Handling criticism and interruptions

Dealing with difficult people

Mapping and evaluating the situations

Identifying long-term goals

### **Module IV: Positive Personal Growth**

Understanding & Developing positive emotions

Positive approach towards future

Resilience during loss and challenge

### **Module V: Professional Success**

Building independence & interdependence

Reducing resistance to change

Continued reflection (Placements, events, seminars, conferences, projects extracurricular Activities etc.)

### **Module VI: End-of-Semester Appraisal**

Viva based on personal journal

Assessment of Behavioural change as a result of training

Exit Level Rating by Self and Observer

GURUGRAM**

## **B.Tech (AIML)**

### **Program Overview**

B.Tech in (Artificial Learning and Machine Learning) is an undergraduate programme with advanced learning solutions imparting knowledge of advanced innovations like machine learning, often called deep learning and artificial intelligence.

Artificial intelligence (AI) is an area of computer science that emphasizes the creation of intelligent machines that work and reacts like humans. The core problems of artificial intelligence include programming computers for certain traits such as Knowledge, Reasoning, Problem solving, Perception, Learning and Planning.

Machine learning is core part of AI in using which we make systems learn to attain objectives of AI. Learning without any kind of supervision requires an ability to identify patterns in streams of inputs, whereas learning with adequate supervision involves classification and numerical regressions.

Carriers in AI and ML appeals large number of students now days. There are various opportunities to become Machine Learning Engineer, Data Scientist, Business Intelligence Developer, Research Scientist and Big Data Engineer/Architect after doing specialization in these areas. The leading employers working in this area includes top companies like Amazon, NVIDIA, Microsoft, IBM, Facebook, Lenovo, Adobe, Google etc.

### **Programme Objectives (PO)**

The student will achieve:

- **PO1. Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- **PO2. Problem analysis:** Identify, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- **PO3. Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- **P04. Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

- **PO5. Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- **PO6. The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- **PO7. Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- **PO8. Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- **PO9. Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- **PO10. Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- **PO11. Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- **PO12. Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change.

## **Programme Specific Objectives(PSO)**

On completion of the B. Tech in Artificial Intelligence & Machine Learning the student will be able to:

**PSO1:** Apply the knowledge of science, mathematics, statistics, information technology and other engineering disciplines to identify and solve complex robotics engineering problems across a broad range of application areas.

**PSO2:** Able to apply their knowledge and skills of machine learning for the overall benefit of society with an understanding of realistic constraints and work, communicate effectively in inter-disciplinary environment either independently or in a team and demonstrate significant leadership qualities.

**PSO3:** Able to comprehend and write effective technical project reports in multidisciplinary environment with regards to evolving technological advancements.

**PSO4:** Able to work with technical uncertainty, understanding of the use of technical literature and other information sources, undertaking of appropriate codes of practice and industry standards, awareness of quality issues and their application to continuous improvement, thus recognizing the need to engage in lifelong learning.

### **Enclosure (s):**

✓Supporting document for PSOs framing

✓Programme Structure, B.Tech in AIML

PSO 1			PSO 2					PSO 3		PSO 4

## SEMESTER-I

<b>MLE2103</b>	Introduction to Computers and Programming in C	L	T	P	C
Version: 2020.1	Date of Approval: July 2020	2	1	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

### Catalog Description

The objective of this course module is to acquaint the students with the basics of computers system, its components, data representation inside computer and to get them familiar with various important features of procedure-oriented programming language i.e. C.

### Course Objectives

The objective of this course is to

1. Equip the students with concepts of Programming through C Language
2. Provide an overview of advanced programming concepts like Structure, Union and File Handling

### Course Outcomes

On completion of this course, the students will be able to

After the completion of course, the students will be able to,

- CO 1: Define the purpose and structure of C Program for programming; identify and distinguish various datatypes and operators; conditional and control statement; Apply if-else, Switch and loops to rewrite basic C program for problem solving.
- CO 2: Compare and contrast various Array types, its declaration and implementation; differentiate between Call by Value and Reference if Functions; apply the concepts to rewrite C Programs
- CO 3: Differentiate between various String Handling Functions; describe the concept of Pointers in C Language
- CO 4: Explain the concept of Structure and Union; apply the concept of File Handling to provide data storage support to the programs.
- CO 5: Apply the concept of Computer Graphics using C programming concepts for implementing line drawing, circle drawing algorithms.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Introduction</b>  Introduction to computer, history, von-Neumann architecture, memory system (hierarchy, characteristics, and types), H/W concepts (I/O Devices), S/W concepts (System S/W & Application S/W, utilities). Data Representation: Number systems, character representation codes, Binary, octal, hexadecimal and their interconversions. Binary arithmetic, floating point arithmetic, signed and unsigned numbers, Memory storage unit.	L1, L2 and L3	7
<b>Module II: Programming in C</b>  History of C, Introduction of C, Basic structure of C program, Concept of variables, constants and data types in C, Operators and expressions: Introduction, arithmetic, relational, Logical, Assignment, Increment and decrement operator, Conditional, bitwise operators, Expressions, Operator precedence and associativity. Managing Input and output Operation, formatting I/O.	L2, L3 and L4	7
<b>Module III: Fundamental Features in C</b>  C Statements, conditional executing using if, else, nesting of if, switch and break Concepts of loops, example of loops in C using for, while and do-while, continue and break. Storage types (automatic, register etc.), predefined processor, Command Line Argument.	L2, L3 and L4	7
<b>Module IV: Arrays and Functions</b>  One dimensional arrays and example of iterative programs using arrays, 2-D arrays Use in matrix computations.  Concept of Sub-programming, functions Example of user defined functions. Function prototype, Return values and their types, calling function, function argument, function with variable number of argument, recursion.	L2 and L3	7
<b>Module V: Advanced features in C</b>  Pointers, relationship between arrays and pointers Argument passing using pointers, Array of pointers. Passing arrays as arguments. Strings and C string library. Structure and Union. Defining C structures, Giving values to members, Array of structure, Nested structure, passing strings as arguments.  File Handling.	L2, L3 and L4	8

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6:Evaluation*

### **Text Books**

1. E Balagurusamy, “Programming in ANSI C”, Seventh Edition, Tata McGraw Hill Education private limited, July 2017.
2. YashwantKanetkar, “Let Us C”, 16<sup>th</sup> Edition, BPB Publication, June 2017.

### **Reference Books**

1. Brain W Kernighan and Dennis M Ritchie, “The C Programming Language”, 2<sup>nd</sup> Edition, Pearson Publication, Jan 2015.
2. Byron Gottfried, “Programming with C”, Third Edition, Tata McGraw Hill Education private limited, July 2017.
3. E Balagurusamy, “Computer Concepts & Programming in C”, Seventh Edition, Tata McGraw Hill Education private limited, July 2011.

### **Modes of Evaluation: Quiz/Assignment/ Seminar/Written Examination**

#### **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

#### **CO, PO and PSO mapping**

	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3	PSO 4
CO1	1	2	--	2	--	--	--	--	--	--	--	--	1	--	1	--
CO2	1	1	2	2	--	--	--	--	--	--	--	--	1	--	1	--
CO3	1	1	2	3	--	--	--	--	--	--	--	--	1	--	1	--
CO4	1	1	2	2	3	--	--	--	--	--	--	--	1	--	1	--
CO5	1	1	2	2	3	--	--	--	--	--	--	--	1	--	1	--

<b>MLE 2106</b>	<b>Programming in C Lab</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2020.1	Date of Approval: July, 2020	0	0	2	1
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

## Catalog Description

The primary objective of this course is to understand all the components of C, including the C language, the C Preprocessor, and the C Standard Library. An understanding of some advanced practical issues, including memory management, testing, and debugging, complex declarations and expression evaluation, building and using libraries, and evaluating tradeoffs, such as size vs. speed and speed vs. complexity. The ability to write C code and create and manipulate logical programs.

## Course Objectives

The objective of this course is to

1. Equip the students with concepts of Programming through C Language
2. Provide an overview of advanced programming concepts like Structure, Union and File Handling.

## Course Outcomes

After the completion of course, the students will be able to,

CO 1: Demonstrate the use of various data types and operators in C programs; Solve various problems using conditional control statements (if-else, Switch case).

CO 2: Construct C programs related to problems involving the usage of loops, arrays and functions.

CO 3: Apply the concept of Pointers for efficient memory management and construct C programs using string handling functions.

CO 4: Demonstrate the use of Structure, Union and concept of File Handling to provide data storage support to the programs.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>LABORATORY SESSSION 1</b> <b>OPERATORS, EXPRESSIONS and DECISION MAKING</b>  1. Write a program to calculate simple interest and amount. 2. Write a program to swap two numbers using third variable.	L3	5

3. Write a program to demonstrate Greatest of 3 nos and to print the given no in ascending order. 4. Write a program to check if the number is even or odd. 5. Write a program to perform arithmetic operations using Switch Case statement. 6. Write a program to calculate area of circle, rectangle, square and triangle using Switch Case statement.		
<b>LABORATORY SESSSION 2</b>  <b>LOOPING</b>  1. Write a program to find factorial of given no using do while statement. 2. Write a program to print prime numbers up to 'n'. 3. Write a program to sum of n natural no. 4. Write a program to print Fibonacci series. 5. Write a program to reverse a number. 6. Write a program to print the following pattern using for loop 1 2 2 3 3 3 4 4 4 4 7. Write a program to print the following pattern using for loop A A B A B C A B C D	L3	6
<b>LABORATORY SESSSION 3</b>  <b>ARRAYS and FUNCTIONS</b>  1. Write a program to read n num of students and 5 subjects marks. 2. Write a program to swap two numbers using call by value. 3. Write a program to convert all lower case to uppercase characters 4. Write a program to find the factorial of a number using recursion. 5. Write a program to print the add/product of two matrices of any order.	L3	5
<b>LABORATORY SESSSION 4</b>  <b>POINTERS AND STRING</b>  1. Write a program to perform operations on strings using string handling in-built functions (concatenation, reversal, copy etc.) 2. Write a program to swap two numbers using call by reference. 3. Write a program to perform dynamic memory allocation and deallocation.	L3	4

4. Write a program to print elements of array using pointers.		
<b>LABORATORY SESSSION 5</b> <b>STRUCTURE,UNION &amp; FILE HANDLING</b>  1. WAP program to display student information by initializing structures. 2. WAP program to find the total salary of employee and employee details using structure. 3. Write a program to store and display information using Union. 4. Program to write data into file and read data from file.	L3	4

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

### Text Books

1. E Balagurusamy, "Programming in ANSI C", Seventh Edition, Tata McGraw Hill Education private limited, July 2017.
2. YashwantKanetkar, "Let Us C", 16<sup>th</sup> Edition, BPB Publication, June 2017.

### Reference Books

1. Brain W Kernighan and Dennis M Ricchie, "The C Programming Language", 2<sup>nd</sup> Edition, Pearson Publication, Jan 2015.
2. Byron Gottfried, "Programming with C", Third Edition, Tata McGraw Hill Education private limited, July 2017.
3. E Balagurusamy, "Computer Concepts & Programming in C", Seventh Edition, Tata McGraw Hill Education private limited, July 2011.

### Modes of Evaluation: Quiz/Assignment/ Seminar/Written Examination

#### Examination Scheme:

IA				EE
A	PR	LR	V	70
5	10	10	5	

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

### CO, PO and PSO mapping

	PO	PO	PO	PO	PO	PO	PO	PO	PO	PO	PO	PO	PSO	PSO	PSO	PSO
--	----	----	----	----	----	----	----	----	----	----	----	----	-----	-----	-----	-----
