The possibility for companies to look beyond domestic markets while making the financial decisions has given new dimensions to the way these decisions are taken. This has essentially led to changes in financial environment by linking domestic markets to global markets causing unprecedented increase in opportunities as well as risks. Management in such environment requires understanding of innovative conceptual and physical tools for better financial decision-making. The course on International Financial Management aims at equipping the financial manager with concepts, tools that enable financial decisions making in a global market and help better achieve the objectives of the firm. International boundaries are blurring therefore MNCs can raise funds from international financial management. The purpose of this paper is to equip the students with financial and investment decisions of MNCs.

The investment decisions of MNCs involves basics & trading mechanics of Indian & International FX Markets ; Read, understand, convert, calculate rates and negotiate FX rates ; Understand linkages of money markets, interest rates, economic & world events to FX rates ; Understand FX Hedging, Speculation & Arbitrage trading strategies ; Use FX Derivatives (Forwards/Futures/Options/Swaps) to hedge FX risk ; Know Regulatory compliances

#### **Course Contents:**

##### **Module I: International Financial Environment :**

An overview of multinational financial management, Finance functions in multinational firms. International Monetary System, International Financial Markets and Instruments, Balance of Payments, Trading Terminologies & Mechanism, Currency Convertibility.

##### **Module II: International Financial and Foreign Exchange Markets**

Spot and Forward Foreign Exchange Markets, Speculation and Arbitrage in Foreign Exchange Markets and Implications of Market Efficiency. International capital money markets; euro dollar and currency market; financial market instruments – GDRs, ADRs, Euro issues, CP and ECB

##### **Module III: International Financial Management**

Multinational capital budgeting, cost of capital and capital structure decisions; dividend policy of multinational firm; Management of funds of MNC's operating in different countries; Political Risk Analysis. International working capital management; international cash management; international receivable management; managing short term assets and liabilities;

##### **Module IV: Foreign Exchange Rate Determination and Arithmetic.**

Exchange Rate Determination, Cross-currency calculations, Interest Rate & Purchasing Power Parity, Exchange Arithmetic, Types of Transaction and Settlement Dates, Exchange Rate Quotations and Arbitrage, Forward Quotations.

##### **Module V: Foreign Exchange Rate Exposure & Trading Strategies**

Transaction, Translation and Operating Exposure. FX Trading Strategies for Hedging, Speculation & Arbitrage.

## Module VI: Foreign Exchange Risk Management using Derivatives

Concept of Hedging, Hedging strategies of Corporates, FX Risk Management using Currency Derivatives like Forwards, Futures, Options & Swaps.

### Examination Scheme:

Components	CT	HA	C	V	A	EE
Weightage (%)	10	5	5	5	5	70

**C** - Case Discussion/ Presentation; **HA** - Home Assignment; **P** - Project; **S** - Seminar; **V** - Viva; **Q** - Quiz; **CT** - Class Test; **A** - Attendance; **EE** - End Semester Examination

# RISK AND INSURANCE IN INTERNATIONAL TRADE

**Course Code:IBM4302**

**Credit Units: 03**

## **Course Objective:**

The course aims at making the students conversant with risk of cross border business (Trade, Investments and Long Term Projects) and the techniques available for mitigating those risks. The role of Insurers and the products and services offered by them would help equip the students with decisions making tools.

## **Learning Outcomes:**

At the end of the course, the student will be able to:

- Understand the concept of risk in business management
- Learn various techniques available to assess and mitigate those risks
- Develop strategic alternatives
- Evaluate different kinds of risks and their impact on different areas

## **Course Contents:**

### **Module I: Risk Management Overview**

Concept of Business Risk; Meaning of Business Risk; Nature of Business Risk; Causes of Business Risk; Types of Business Risk including International Risk

### **Module II: Identification of Risk and types of risk**

Sources of Risk; Measurement of Risk; Kinds of exposures; Political Risk; Credit Risk; Interest Rate Risk; Transport Risk; Foreign Exchange Risk

### **Module III: Evaluation of Risk and mitigation of Risk in Trade**

Evaluation of exposures; Basic strategies for evaluation of Risk; Exercise on evaluation of Risk; Payment Risk; UCP 600 – Cases; URC 522 – Cases

### **Module IV: Concept of Marine Risk**

Concept of Marine Insurance; Content of Marine Policy; Laws governing Marine Insurance; Kinds of Losses; Need for cargo Insurance; Principles Governing the Contract of Insurance; Types of Insurance Documents; Risks Coverage; Claim Procedures; Liability Insurance; Concept of Seller contingency Insurance

### **Module V: Modern Techniques of Risk Management**

Concept of Risk Management Techniques; Identifying Risk Management Techniques; Types of Techniques; Risk Management Alternatives; Concept of Risk Management Institutions-ECGC; Concept of Hedging tools; Strategy Development and Implementation

## **Learning Methods:**

Tutorials, Interactive sessions, Case studies, Field visits, Management games, Extensive research projects, Seminars, Weekend experience in companies - the course is covered by adopting a combination of lecture methods, class presentation by groups of students, self study sessions. Each student is required to do the back ground reading from the specified chapters of the prescribed book before coming to class. Cases are also to be analyzed, discussed in groups (teams) outside the class as preparatory work.

## **Examination Scheme:**

Components	C1	V	A	CT	EE
Weightage (%)	10	5	5	10	70

**Text & References:****Text:**

# WTO AND INTERNATIONAL REGULATORY ENVIRONMENT

**Course Code: IBM4303**

**Credit Units: 03**

## **Course Objective:**

The primary objective of this course is to provide the students with a thorough understanding of the global, economic, political and legal environment prevalent in international trade. The major focus of this course is to highlight the international norms and regulatory bodies for enhancing global trade. Finally the students will be able to analyze the various nuances associated with international trade.

## **Learning Outcomes:**

On the successful completion of this module the student will be able to:

- Understand the concept of global and national regulatory environment in business management
- Appreciate the role of various bodies in the international regulatory environment
- Evaluate the various measures taken by different nations to regulate their business environments
- Impact of WTO agreements in regulating trade in developed and developing countries

## **Course Contents:**

### **Module I: Introduction to WTO and GATT-**

Historical background, Bretton Woods origins, evolution from GATT to WTO, Origin of WTO, Objectives and functions of WTO, organization structure, Membership, ministerial conferences, Principles of trading system, Decision Making procedure. Dispute Settlement Mechanism, Introduction to Service trade and the GATS, Service negotiation, WTO and Developing Countries- India and WTO.

### **Module II: International Trading Environment and Rules Governing International Trade under WTO**

Multilateral and Plurilateral Trading System and the legal framework - MFN and NTC clauses, Unfair Trade Practices and Barriers to Trade (Non technical), Agreements on Antidumping, Subsidies and countervailing measures, Pre-shipment Inspections, The Cotton Arrangements (1961-73), The Multifibre Arrangements (1974-94).

### **Module III: Protectionism in International Trade & Major Regional Trade Agreements**

Determination of Tariff, Types of Tariff & Role, Effective Rate of Protection, Welfare effect: Small nation vis a vis large nation, Concept of Binding Tariff, Concept of Trade Creation and Diversion, NAFTA, LAFTA, SAFTA, EEC, ASEAN, BIMSTEC, EU, ASEAN, GCC, ECOWAS, SAARC.

### **Module IV: Measures to Regulate Trade Environment**

Sanitary and Phyto Sanitary Measures, Technical Barriers to Trade, Safeguards and Rules of Origin Agreement on Agriculture, Trade Related Intellectual Property Rights (TRIPS), Trade Related Investment Measures (TRIMS), General Agreements on Trade and Services.

### **Module V: Current ongoing Negotiations: WTO and Developing Countries**

Evaluation of Regional trading agreements among developed and developing countries, Overlaps of conflict and jurisdiction between WTO and RTA, Issues in DOHA negotiation, Compatibility of Rules of Origin in Free Trade Agreements with article XXIV.

## **Learning Methods:**

Tutorials, Interactive sessions, Case studies, Field visits, Management games, Extensive research projects, Seminars, Weekend experience in companies - the course is covered by adopting a combination of lecture methods, class presentation by groups of students, self study sessions. Each student is required to do the back ground reading from the specified chapters of the prescribed book

before coming to class. Cases are also to be analyzed, discussed in groups (teams) outside the class as preparatory work.

# FOREIGN TRADE POLICY

**Course Code: IBM4305**

**Credit Units: 03**

## **Course Objective:**

Know the world's top economies and their Trade Policies, Regional & bi-lateral agreement.; Learning the direction, composition & procedures of India's Foreign Trade Policy 2009-2014; Knowing which Assistance, Promotion Schemes and Incentives exporters enjoy; knowing Import Tariffs & Customs duties; Learning International Documentary & Govt. Regulatory compliances

## **Course Contents:**

### **Module I: World Trade & Economic integration**

Why Trade, Link between Trade & Economic growth, World's leading economies, Complexities & Barriers to free trade, World's Top Trading Nations, Emerging markets. Free Trade Areas, Customs Union, Common Markets, Economic Unions; Regional Economic Blocks- EU, NAFTA, MERCOSUR, SAARC, SAFTA, APEC, ASEAN, ECOWAS, GCC, OPEC. Global integration, WTO, IMF, World Bank. Harmonized Commodity Description & Coding System, ISO Currency codes.

### **Module II: Overview of India's Foreign Trade Policy**

The Foreign Trade (Development & Regulation) Act, Objectives of India's Trade Policy 2015-2020, Post 1991 India's Trade Liberalization, India's Economic Indicators, Export/Import data & major Trading partner countries. How to start an Export/Import business, Import Export Code (IEC), Registration cum Membership Certificate (RCMC) with appropriate Export Promotion Council (EPC). Commercial, Financial, Transport, Title, Govt., Insurance, Export Assistance Documents & Certificates used in Exports. Licenses & Customs documents for imports.

### **Module III: India Trade Policy 2015-20: General Provisions regarding Exports and Imports**

Prohibitions (Country and Product specific), Export/Import through State Trading Enterprise (STE), Import of specific categories of Goods, Second Hand Goods, Free Exports, Exemptions, Third Party Exports, Export of specific categories

### **Module IV: Export Promotion Policies**

Export Promotion Council, Export from India Scheme, MEIS, SEIS, Duty Exemption/ Remission Scheme, Duty Free Import Authorisation Scheme, Export Promotion Capital Goods Scheme, Special Economic Zones, EOU/EHTP/STP/BTP/FTZ, Deemed Exports.

### **Module V: Trade Policy of Leading Trade Economies vis-a-vis Indian Trade Policy**

Indo European Union, US & China Trade Policy. Expansion of trade to Latin America, Africa & Asia.

## **Examination Scheme:**

Components	CPA	TP	Q/S	A	ME	EE
Weightage (%)	5	5	5	5	10	70

# **SPECIALISATION: INFORMATION TECHNOLOGY**

## **NETWORKING FUNDAMENTALS**

**Course Code: ITM4301**

**Credit Units: 03**

### **Course Objective:**

The goal of this course is to introduce you to fundamental networking concepts and technologies. The course aims at training the student for the following: Install, maintain, and troubleshoot computer hardware; connect a variety of peripherals to a PC and correctly configure them. This course will assist you in developing the skills necessary to plan and implement small networks across a range of applications.

### **Course Contents:**

#### **Module I: Introduction to Networks**

Elements of Network, Introduction to different types of Networks-LAN,WAN,MAN,SAN and others, Network topologies- Bus, Ring, Star, Mesh. Working, Advantages and Limitations of each topology.

#### **Module II: Network Hardware**

Introduction to Network hardware: Workstation, printer, Server, UPS. Cable types, Networking devices and their role- Hub, repeater, amplifier, bridge, switch, router, gateway, firewall, multiplexer, de-multiplexer, modem, wireless Access Point.

#### **Module III: Introduction to Networks & OSI Model**

OSI Model and functionality of each layer of OSI model, data entities at each layer- Segment, packet and frame. Protocols and services supported by OSI layers, Application layer protocols- HTTP, FTP, TFTP, ICMP, DNS, DHCP, Telnet, SSH, SMTP, POP, IMAP etc.

#### **Module IV: TCP/IP Model**

Introduction to TCP/IP model and the functionality of each of the layers, Protocols working at each layer. TCP-communicating with reliability, UDP- Communicating with low overhead, IPv4, IPv4 addresses for different purposes, assigning addresses, calculating addresses, sub-netting,

#### **Module V: Routing Algorithms**

Routing- handling data packets. Routing algorithms, Congestion control Algorithms, Quality of service, Internetworking, Network-Layer in the internet.

### **Examination Scheme:**

<b>Components</b>	<b>CPA</b>	<b>TP</b>	<b>Q/S</b>	<b>A</b>	<b>ME</b>	<b>EE</b>
<b>Weightage (%)</b>	5	5	5	5	10	70

# DATABASE MANAGEMENT SYSTEMS

**Course Code: ITM4302**

**Credit Units: 03**

## Course Objectives

The course aims to make the students understand the basic and advanced concepts in databases and database management systems. Students will be able to understand the importance of databases in day to day life. The course will also provide the students, a hands-on experience on the SQL-the language of databases.

## Course Contents:

### Module I: Introduction to DBMS

Definition of DBMS, Concept and Goals of DBMS, Data Independence, DBMS Architecture, Levels, Database Administrator, File System Approach Vs DBMS Approach, Advantages of Using a DBMS, Data Models, Schemas, and Instances, Database Languages, Database Users, Database Abstraction.

### Module II: Relational Database & ER Model

**Relational Database:** Relational System, Codd's Rule, Relational Model, Optimization, Tables and Views

**ER Model:** Entity Type, Entity Set, Relationship type, Relationship sets, Constraints: Cardinality Ratio and Participation Constraint, Keys, Mapping, Design of ER diagrams.

### Module III: Relational Model Objects

Domains and Relations, Relations and predicates, Relational Data Integrity; Primary Key, Candidate Key, Foreign Key and their rules, Relational operators, Relational Algebra

### Module IV: SQL

SQL Language, DDL,DML and DCL commands. Data definition, Data retrieval and update operations on MS ACCESS and SQL Server DBMS.

### Module V: Database Applications and Types

Distributed Database, Object Oriented Database, Multimedia Database, Data Mining, Digital Libraries. Data Warehouse.

## Examination Scheme:

Components	CPA	TP	Q/S	A	ME	EE
Weightage (%)	5	5	5	5	10	70

# DIGITAL MARKETING

**Course Code: ITM4303**

**Credit Units: 03**

## **Course Overview:**

The course examines digital marketing strategy, implementation and executional considerations for B-to-B and B-to-C brands and provides a detailed understanding of all digital marketing concepts. Participants will complete the course with a comprehensive knowledge of and experience with how to develop an integrated digital marketing strategy, from formulation to implementation. Strong focus will be on developing student's business skills and growing real-world experience of the digital media sector to enhance their knowledge to cope with employability demand.

## **Course Objectives:**

Digital Marketing Course is an initiative designed to educate students and practitioners in the area of Digital Marketing analytics and make them ready for jobs or prepare them to launch campaign for their own organisations.

- To Understand how and why to use digital marketing for multiple goals within a larger marketing and/or media strategy
- Understand the major digital marketing channels - online advertising: Digital display, video, mobile, search engine, and social media
- Learn to develop, evaluate, and execute a comprehensive digital marketing strategy and plan
- Learn how to measure digital marketing efforts and calculate ROI
- Explore the latest digital ad technologies

## **Course Contents:**

### **Module-I: Digital Marketing Overview:**

What is Digital Marketing? Understanding Marketing Process? Why Digital Marketing Wins Over traditional Marketing? Understanding Digital Marketing Process; Digital Marketing Planning and Strategy

### **Module-II: Website Planning and Creation:**

Understanding Internet; Difference between Internet & web; Understanding websites; Understanding domain names & domain extensions; What is web server & web hosting? Different types of web servers; Different types of websites; Planning & Conceptualising a Website; Building website using CMS in Class.

### **Module-III: Digital Advertising (PPC, Digital Display and YouTube):**

Google AdWords Overview; Understanding Adwords Algorithm; Creating Search Campaigns; Types of Search Campaigns - Standard, All features, dynamic search & product listing. Tracking Performance/Conversion: What is conversion tracking? Why is it important, how to set up conversion tracking. Optimizing Search Campaigns: How to optimize campaigns at the time of creation? Optimizing campaign via adgroups. Creating Display Campaign; Types of display campaigns- All features, Mobile app, Remarketing, Engagement. Optimizing Display Campaign and Re-marketing . What is Online Advertising? Types of Online Advertising, Display Advertising, Contextual advertising, what are Payment Modules? Different Online advertising platforms Creating Banner Ads Using Tools.

### **Module-IV: Emerging trends in Digital Marketing:**

**Affiliate Marketing-** Affiliate marketing history, Affiliate marketing scenario in India, Different ways to do affiliate marketing. **Email Marketing-** What is email marketing and how it works? Types of email marketing- Opt-in & bulk emailing; Setting up email marketing account, creating a broadcast email. What are auto responders? Setting up auto responders; Tricks to land in inbox instead of spam folder; **Social Media Marketing-** Concept, How social media marketing is different than others Forms

of Internet marketing, Understanding Facebook marketing, LinkedIn Marketing, Twitter Marketing, Video Marketing **and** VIDEO & AUDIO (PODCASTING) marketing; **and Mobile Web Marketing-** Understanding Mobile Devices, Mobile Marketing Measurement and Analytics; Fundamentals of Mobile Marketing, Creating mobile website through wordpress; Using tools to create mobile websites; Using tools to create mobile app Advertising on mobile (App & Web); Content Marketing on mobile. **Content Marketing**-Introduction to content marketing, Objective of content marketing, Content marketing 7 step strategy building process, How to write great compelling content, Optimizing content for search engines, How to increase opt-in email list with content marketing with examples.

#### **Module-V: Search Engine Optimization (SEO):**

What is SEO? Introduction to SERP, What are search engines? How search engines work? Major functions of a search engine; what are keywords? Different types of keywords ; Google keyword planner tool; Keywords research process; Understanding keywords; On page optimization; Off Page optimization; Top tools for SEO; Monitoring SEO process; Preparing SEO reports, How to create SEO Strategy for your business, What is link juice? Importance of domain and page authority?How to optimize exact keywords for your business. What is Google Panda Algorithm, Google Penguin and Google EMD Update. How to save your site from Google Panda, Penguin and EMD Update, How to recover your site from Panda, Penguin and EMD.

#### **Module-VI: E-Commerce and Payment Gateway:**

What is ecommerce? Top ecommerce websites around the world & it's scenario in India; Difference between E-Commerce software and Shopping Cart; software Payment Gateways, Merchant Accounts & Logistics for physical goods. Integrating Woo-commerce and setting up an ecommerce store on WordPress. Case studies on ecommerce websites. How to do Google Product Listing Ads (PLA) for ecommerce websites.How to do SEO for an ecommerce website.

#### **Examination Scheme:**

<b>Components</b>	<b>CPA</b>	<b>TP</b>	<b>Q/S</b>	<b>A</b>	<b>ME</b>	<b>EE</b>
<b>Weightage (%)</b>	5	5	5	5	10	70

SEOMoz.org ;mashable.com; <http://www.convinceandconvert.com>; ClickZ.com ; eMarketer forrester.com; contentmarketinginstitute.com ; adage.com; adweek.com

#### **Final Project:** Group Paper and Presentation

Students will work in instructor-selected groups of four or five to complete a 15-20 page digital marketing plan utilizing the concepts and frameworks covered in the course. Papers should be double-spaced using 12-point font and 1-inch margins, and submitted accordingly. All groups will be required to give a presentation in class highlighting the important points of their plan and submit their presentation slides for review. Presentations will take place in class via web conference on prescribed date. Students will need to ensure their audio is working well in order to present. All students will be required to complete evaluations of the group presentations given in class. 25% will be deducted per day for late papers and slides.

# INTRODUCTION TO CLOUD COMPUTING

**Course Code: ITM4304**

**Credit Units: 03**

## **Course Objective:**

This course gives students an insight into the basics of cloud computing along with virtualization, cloud computing is one of the fastest growing domain from a while now. It will provide the students basic understanding about cloud and virtualization along with it how one can migrate over it.

## **Course Contents:**

### **Module-I: Cloud Computing Overview**

Origins of Cloud computing – Cloud components - Essential characteristics – On-demand self-service, Broad network access, Location independent resource pooling ,Rapid elasticity , Measured service, Comparing cloud providers with traditional IT service providers, Roots of cloud computing.

### **Module-II: Cloud Insights**

Architectural influences – High-performance computing, Utility and Enterprise grid computing, Cloud scenarios – Benefits: scalability ,simplicity ,vendors ,security, Limitations – Sensitive information - Application development- security level of third party - security benefits, Regularity issues: Government policies.

### **Module-III: Cloud Architecture- Layers and Models**

Layers in cloud architecture, Software as a Service (SaaS), features of SaaS and benefits, Platform as a Service ( PaaS ), features of PaaS and benefits, Infrastructure as a Service ( IaaS), features of IaaS and benefits, Service providers, challenges and risks in cloud adoption.Cloud deployment model: Public clouds – Private clouds – Community clouds - Hybrid clouds - Advantages of Cloud computing.

### **Module-IV: Cloud Simulators- CloudSim and GreenCloud**

Introduction to Simulator, understanding CloudSim simulator, CloudSim Architecture, Understanding Working platform for CloudSim, Introduction to GreenCloud

### **Module-V: Introduction to VMWare Simulator**

Basics of VMWare, virtualization, advantages of virtualization, using VMware workstation, creating virtualmachines-understanding virtual machines, create a new virtual machine on local host, cloning virtual machines, virtualize a physical machine.

## **Examination Scheme:**

<b>Components</b>	<b>CPA</b>	<b>TP</b>	<b>Q/S</b>	<b>A</b>	<b>ME</b>	<b>EE</b>
<b>Weightage (%)</b>	5	5	5	5	10	70

# SYSTEM ANALYSIS AND DESIGN

**Course Code: ITM4305**

**Credit Units: 03**

## **Course Objective:**

The course aims at preparing students conceptualize and define scope and domain of system analysis and design. It also focuses on system development life cycle using conventional and structural look.

## **Course Contents:**

### **Module I: Systems Development Environment. (Information system development life cycle)**

System & its parts, Types of Systems, Characteristics of a System, System Analyst in system Development, Developing Systems- SDLC, Approaches to System Development (Prototyping, Joint Application Design (JAD), Participatory Design (PD)), System Development Models (Waterfall model & Spiral Model), System Planning & Selection (Identifying, Selecting, Initiating & Planning System Development Project).

### **Module II: System Planning and Selection (Graphic technology modeling tool)**

Identifying and Selecting Projects (Identifying potential development projects, classifying and ranking projects, and selecting projects for development), Methods for project identification and selection, Evaluation criteria for classifying and ranking projects, Initiating and Planning System Development Projects (Process & performed Activities, Deliverables & Outcomes), Assessing Project Feasibility (Economic, Operational, Technical, Schedule, Legal & Contractual, Political Feasibility)

### **Module III: System & Data Analysis (Data Analyzing Modeling)**

Determining System Requirements (Traditional Methods, Modern & Radical Methods), Structuring System Requirements (Process Modeling – DFD, Logic Modeling – Structured English & Decision Tables, Conceptual Modeling – ER Model), Data Analysis & Techniques (Interpretive, Coding, Recursive Abstraction and Mechanical Technique), Types of Analysis (Descriptive, Exploratory, Confirmatory and Predictive), Modeling Methodologies (Bottom Up method & Top Down Method), Generic and Schematic Data Modeling.

### **Module IV: System Design**

System Design (Design Objectives, Phases in Designing, Purpose of System Design), System Design Goals, Type of Design, Design Strategy, System Decomposition (Modeling, Connection and Coupling of a System), System Design Methodologies, Roles & Duties of System Administration. Succeeding as System Analyst, Interpersonal skills, Management skills, Analytical skills and Technical skills.

### **Module V: System Implementation & Operation (System Management)**

Activities in implementing (Coding, Testing & Installation, Documentation, Training, Support, Maintenance), Types of testing, planning installation, approaches to installation, Documenting a system, Training and Supporting users, Types & Frequencies of Training Methods, Reasons of System Implementation Failures, Project Closedown, Conducting System Maintenance – Types of Maintenance (Corrective, Adaptive and Perfective Maintenance), effective maintenance, Evaluation of System's Success, System Enhancement, Quality Assurance in System Cycle.

### **Module VI: System Security and Auditing**

System Security: Data Security, Backup & Recovery during System & Database failure, Ethical Issues in System Development, Threat and Risk Analysis, Audit, System Audit, System Audit Standards (Planning, Implantation and Reporting Standards), System Analysis and Programming (Overview, Role & Duties of System Experts as Analyst and Programmer).

**Examination Scheme:**

Components	CT	HA	C	V	A	EE
Weightage (%)	10	5	5	5	5	70

**C** - Case Discussion/ Presentation; **HA** - Home Assignment; **P** - Project; **S** - Seminar; **V** - Viva; **Q** - Quiz; **CT** - Class Test; **A** - Attendance; **EE** - End Semester Examination

# DYNAMIC WEB DESIGN & DEVELOPMENT

Course Code: ITM4306

Credit Units: 03

## Course Objective:

To develop applications in PHP using various concepts like arrays, user defined functions, Sessions which makes the students to understand and to establish the connectivity between PHP and database and develop programs to add records, retrieve records and delete records from a table.

## Course Contents:

### Module I: Introduction to Web Development & Cascading Style Sheets

Web pages, Static and Dynamic web pages, Client side VS Server side, Introduction to HTML, HTML Elements, HTML attributes, Styling and formatting HTML, Forms, Tables.

**CSS Basics: CSS Introduction:** CSS Syntax, CSS Id & Class, CSS How

**CSS Styling:** Styling Backgrounds, Styling Text, Styling Fonts, Styling Links, Styling Lists, Styling Tables. **CSS Box Model:** CSS Border, CSS Outline, CSS Margin, CSS Padding

### Module II: CSS Advanced

CSS Grouping/Nesting, CSS Dimension, CSS Display, CSS Positioning, CSS Floating, CSS Align, CSS Pseudo-class, CSS Pseudo-element, CSS Navigation Bar, CSS Image Gallery, CSS Image Opacity, CSS Image Sprites. CSS Media Types, CSS Attribute Selectors

### Module III: Introduction to PHP, Decisions, Loop & Functions

Evaluation of Php, Basic Syntax, Defining variable and constant, Php Data type, Operator and Expression, Making Decisions, Doing Repetitive task with looping, Mixing Decisions and looping with Html.

What is a function, Define a function, Call by value and Call by reference, Recursive function, String Creating and accessing, String Searching & Replacing String, Formatting String, String Related Library function, Anatomy of an Array, Creating index based and Associative array Accessing array, Element Looping with Index based array, Looping with associative array using each () and foreach(), Some useful Library function

### Module IV: Handling HTML Forms using PHP, Working with Files and Directories

Capturing Form, Data Dealing with Multi-value filed, and Generating File uploaded form, redirecting a form after submission.

Understanding, file & directory, Opening and closing a file, Coping, renaming and deleting a file, working with directories, Creating and deleting folder, File Uploading & Downloading.

### Module V: Session and Cookie, Database Connectivity with MySql, Exception Handling

Introduction to Session Control, Session Functionality What is a Cookie, Setting Cookies with PHP. Using Cookies with Sessions, Deleting Cookies, Registering Session variables, Destroying the variables and Session. Introduction to RDBMS, Connection with MySql Database, Performing basic database operation(DML) (Insert, Delete, Update, Select), Setting query parameter, Executing queryJoin (Cross joins, Inner joins, Outer Joins, Self joins.)

Understanding Exception and error, Try, catch, throw. Error tracking and debugging.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# CYBER SECURITY SYSTEM

**Course Code: ITM4307**

**Credit Units: 03**

## **Course Objective:**

In today's networked world, most of the organizations and enterprises depend on different kinds of Information Technology solutions, say e-commerce, e-governance, e-learning, e-banking etc.. All communications must be secured and under control since the information stored and conveyed is ultimately an invaluable resource of the business. Securing vital resources and information in the network is the most challenging feat for system enterprise. Therefore the need of the hour is to update the knowledge on the network security issues and solutions. This course gives students an insight into security aspects of networks. Students will be able to learn about concepts related to cyber security, cryptography techniques, various security management practices and network security techniques.

## **Course Contents:**

### **Module-I: Introduction and Cryptography Basics**

**Basic Concepts:** Threats, Vulnerabilities, risk, confidentiality, integrity, availability, security policies, security mechanisms, prevention and detection. **Basic Cryptography:** Introduction to Cryptography, Types: Symmetric and Asymmetric Cryptography, Digital Signature, Modes of operation, Hash Function, Applications of Cryptography

### **Module-II: Cyber Security**

Principles of Cyber Security, Cyber Security Models, Cyber Security Architecture. **Cyber Security Management concepts:** Security governance, management models, roles and functions. **Enterprise Roles and Structures:** Information security roles & positions, Alternative enterprise structures and interfaces, Case Study: Corporate Security

### **Module-III: Security Management Practices**

**Security Plans & Policies:** Levels of planning, the system security plan (SSP), Policy development and implementation. **Risk Management:** Principles of Risk, Types of Risk, Risk strategies, The Risk Management Framework. **Security Laws & Standards:** Security Assurance, Security Laws, International Standards, Security Audits, SEE-CMM

### **Module-IV: Information & Network Security**

Overview of Identification & Authorization, Intrusion Detection System & Intrusion Prevention Susie. Overview of Firewalls, Types of firewalls, Features of Firewalls. VPN Security, Security in multimedia network, various computing platforms: High performance computing, Grid Computing, Cloud & Virtualization

### **Module-V: System & Application Security**

**Secure Architecture:** Designing Secure Operating System, Information Security Models. **System Security:** Desktop Security, Email Security: PGP, SMIME, Web Security: Web Authentication, SSL, SET.

**Wireless Networks & Security:** Components of wireless network, Security issues in wireless network

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

# SOFTWARE PROJECT MANAGEMENT

**Course Code: ITM4308**

**Credit Units: 03**

## **Course Objective:**

The course will enable students to understand the need for Software Project Management. Students will also learn about techniques for software cost estimation and activity planning.

## **Course Contents**

### **Module-I: Project Evaluation and Project Planning**

Importance of Software Project Management – Activities Methodologies – Categorization of Software Projects – Setting objectives – Management Principles – Management Control – Project portfolio Management – Cost-benefit evaluation technology – Risk evaluation – Strategic program Management – Stepwise Project Planning.

### **Module-II: Project Life Cycle and Effort Estimation**

Software process and Process Models – Choice of Process models – mental delivery – Rapid Application development – Agile methods – Extreme Programming – SCRUM – Managing interactive processes – Basics of Software estimation – Effort and Cost estimation techniques – COSMIC Full function points – COCOMO II A Parametric Productivity Model – Staffing Pattern.

### **Module-III: Activity Planning and Risk Management**

Objectives of Activity planning – Project schedules – Activities – Sequencing and scheduling – Network Planning models – Forward Pass & Backward Pass techniques – Critical path (CRM) method – Risk identification – Assessment – Monitoring – PERT technique – Monte Carlo simulation – Resource Allocation – Creation of critical patterns – Cost schedules.

### **Module-IV: Project Management and Control**

Framework for Management and control – Collection of data Project termination – Visualizing progress – Cost monitoring – Earned Value Analysis- Project tracking – Change control- Software Configuration Management – Managing contracts – Contract Management.

### **Module-V: Staffing in Software Projects**

Managing people – Organizational behavior – Best methods of staff selection – Motivation – The Oldham-Hackman job characteristic model – Ethical and Programmed concerns – Working in teams – Decision making – Team structures – Virtual teams – Communications genres – Communication plans.

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

## **SPECIALISATION: MARKETING & SALES**

### **ADVERTISING AND SALES PROMOTION**

**Course Code: MKT4301**

**Credit Units: 03**

#### **Course Objective:**

The main objective of this course is to familiarize the students with the role of advertising in the context of promoting products and services. Advertising is one of the most used promotional tools. It will help students to understand the advertising process and key decision areas for effective management of this function.

#### **Course Contents:**

##### **Module-I: Introduction**

Evolution of advertisement, Advertiser, Facilitating Institutions, advertising and society, advertising and regulations; **Advertising Planning and decision making:** Planning framework, Situation analysis, advertising plan, Communication and persuasion process.

##### **Module-II: Objective Setting and Market Positioning**

**IMC:** Role of advertising within marketing program and communication mix, sales promotion, public relations, publicity and integrating different elements; **Setting goals and objectives:** Behavioral dynamics, advertising response variables, DAGMAR. **How advertising works:** Low-Involvement learning, Central versus Peripheral routes to persuasion, ELM, Cognitive response model.

##### **Module-III: Message Strategy**

**Attention and comprehension:** Attention, Comprehension, Recall, Interpretation; **Understanding Benefit-based attitude:** Attitude levels, Means-Ends and Laddering Analysis, Multi-attribute models, Segmentation using attitude structure; **Associating feelings with brands:** Modeling the feelings response to advertising, transformational advertising, role of classical conditioning; brand personality associations; **WOM Advertising:** Informational influence and Normative influence.

**Message Tactics-Creative approaches:** Rational and emotional creative approaches, Using Endorser, Distraction Effect; **Copywriting:** Illustrating, layout, creative styles; **Copy testing:** Strategy, diagnostic copy tests; **Production and implementation:** Advertising production process, model of the creation and production process, Client-Agency relationship.

##### **Module-IV: Media Strategy and tactics**

**Setting Media Budgets:** Budget allocation, budgeting methods; **Media Tactics:** Media class decisions, media vehicle decisions, media option decisions, scheduling and timing decision, creativity in media planning.

##### **Module-V: Sales Promotion**

Introduction, Role & Scope, Consumer & Trade Promotions, Sales promotion Strategy, Promotional offers- coupons, price-offs, premiums, sweepstakes, refund and rebates, sampling, loyalty programmes, POP displays, Dealer loader, Celebrity Endorsements.

#### **Examination Scheme:**

Components	CPA	TP	Q/S	A	ME	EE
Weightage (%)	5	5	5	5	10	70

# MARKETING OF FINANCIAL SERVICES

Course Code: MKT4302

Credit Units: 03

## Course Description:

Marketing of financial services is inimitable in its variety, stringent regulatory compliances and distinctive challenges, even though many of the concepts of marketing in financial services are similar to marketing in other industries.

Marketing of financial services can take place at B-2-B, B-2-C level, or both. Marketing often differs in an important way from other financial services functions, in that it is both quantitative and qualitative – it is both creative and analytical.

## Objectives:

This course aim to develop the student's ability to:

1. Explore opportunities in the financial services sector;
2. Develop and implement effective marketing strategies to optimize a company's chance of success in the markets in which it operates;

## Course Contents:

### Module-I:

**Financial Services:** The significance and relevance of principles of marketing to financial services organizations (FSOs). Introduction to various theories, nature and characteristics of financial services marketing versus marketing of goods.

**Marketing Environment:** Analyzing marketing environment of financial services in India. Introduction to basic tools, techniques and models used to analyze the context within which any, FSO, operates.

### Module-II:

**Segmentation and positioning of Financial Market:** Various bases of segmenting the financial services industry; Targeting and positioning of financial market.

**Product Conceptualization:** Introduction to the idea of financial product, various levels of product; product branding, product mix, PLC & new product development(NPD).

### Module-III:

**Decisions related to pricing, promotion:** Pricing: Study of various factors and strategies; Promotion: Study of communication process; Promotion mix: Advertising, Publicity, Personal Selling, PR & sales promotion.

**Decisions related to Distribution:** Analysis of various strategies adopted for channel selection.

### Module-IV:

**Extended Marketing mix for FSOs:** Processes: Balancing the demand-supply gap; Peoples-Managing employees and customers; managing Physical Evidence i.e. understanding the image created by tangible items such as décor, etc.

## Examination Scheme:

Components	CPA	TP	Q/S	A	ME	EE
Weightage (%)	5	5	5	5	10	70

## Suggested Texts:

# DIGITAL MARKETING

**Course Code: MKT4303**

**Credit Units: 03**

## **Course Overview**

The course examines digital marketing strategy, implementation and executional considerations for B-to-B and B-to-C brands and provides a detailed understanding of all digital marketing concepts. Participants will complete the course with a comprehensive knowledge of and experience with how to develop an integrated digital marketing strategy, from formulation to implementation. Strong focus will be on developing student's business skills and growing real-world experience of the digital media sector to enhance their knowledge to cope with employability demand.

## **Course Objectives**

Digital Marketing Course is an initiative designed to educate students and practitioners in the area of Digital Marketing analytics and make them ready for jobs or prepare them to launch campaign for their own organisations.

- To Understand how and why to use digital marketing for multiple goals within a larger marketing and/or media strategy
- Understand the major digital marketing channels - online advertising: Digital display, video, mobile, search engine, and social media
- Learn to develop, evaluate, and execute a comprehensive digital marketing strategy and plan
- Learn how to measure digital marketing efforts and calculate ROI
- Explore the latest digital ad technologies

## **Course Contents:**

### **Module-I: Digital Marketing Overview:**

What is Digital Marketing? Understanding Marketing Process? Why Digital Marketing Wins Over traditional Marketing? Understanding Digital Marketing Process; Digital Marketing Planning and Strategy

### **Module-II: Website Planning and Creation:**

Understanding Internet; Difference between Internet & web; Understanding websites; Understanding domain names & domain extensions; What is web server & web hosting? Different types of web servers; Different types of websites; Planning & Conceptualising a Website; Building website using CMS in Class.

### **Module-III: Digital Advertising (PPC, Digital Display and YouTube):**

Google AdWords Overview; Understanding Adwords Algorithm; Creating Search Campaigns; Types of Search Campaigns - Standard, All features, dynamic search & product listing. Tracking Performance/Conversion: What is conversion tracking? Why is it important, how to set up conversion tracking. Optimizing Search Campaigns: How to optimize campaigns at the time of creation? Optimizing campaign via adgroups. Creating Display Campaign; Types of display campaigns- All features, Mobile app, Remarketing, Engagement. Optimizing Display Campaign and Re-marketing . What is Online Advertising? Types of Online Advertising, Display Advertising, Contextual advertising, what are Payment Modules? Different Online advertising platforms Creating Banner Ads Using Tools.

### **Module-IV: Emerging trends in Digital Marketing:**

**Affiliate Marketing-** Affiliate marketing history, Affiliate marketing scenario in India, Different ways to do affiliate marketing. **Email Marketing-** What is email marketing and how it works? Types of email marketing- Opt-in & bulk emailing; Setting up email marketing account, creating a broadcast email. What are auto responders? Setting up auto responders; Tricks to land in inbox instead of spam folder; **Social Media Marketing-** Concept, How social media marketing is different than others Forms

of Internet marketing, Understanding Facebook marketing, LinkedIn Marketing, Twitter Marketing, Video Marketing **and** VIDEO & AUDIO (PODCASTING) marketing; **and Mobile Web Marketing-** Understanding Mobile Devices, Mobile Marketing Measurement and Analytics; Fundamentals of Mobile Marketing, Creating mobile website through wordpress; Using tools to create mobile websites; Using tools to create mobile app Advertising on mobile (App & Web); Content Marketing on mobile. **Content Marketing**-Introduction to content marketing, Objective of content marketing, Content marketing 7 step strategy building process, How to write great compelling content, Optimizing content for search engines, How to increase opt-in email list with content marketing with examples.

#### **Module-V: Search Engine Optimization (SEO):**

What is SEO? Introduction to SERP, What are search engines? How search engines work? Major functions of a search engine; what are keywords? Different types of keywords ; Google keyword planner tool; Keywords research process; Understanding keywords; On page optimization; Off Page optimization; Top tools for SEO; Monitoring SEO process; Preparing SEO reports, How to create SEO Strategy for your business, What is link juice? Importance of domain and page authority? How to optimize exact keywords for your business. What is Google Panda Algorithm, Google Penguin and Google EMD Update. How to save your site from Google Panda, Penguin and EMD Update, How to recover your site from Panda, Penguin and EMD.

#### **Module-VI: E-Commerce and Payment Gateway:**

What is ecommerce? Top ecommerce websites around the world & it's scenario in India; Difference between E-Commerce software and Shopping Cart; software Payment Gateways, Merchant Accounts & Logistics for physical goods. Integrating Woo-commerce and setting up an ecommerce store on WordPress. Case studies on ecommerce websites. How to do Google Product Listing Ads (PLA) for ecommerce websites. How to do SEO for an ecommerce website.

#### **Examination Scheme:**

<b>Components</b>	<b>CPA</b>	<b>TP</b>	<b>Q/S</b>	<b>A</b>	<b>ME</b>	<b>EE</b>
<b>Weightage (%)</b>	5	5	5	5	10	70

#### **Text & References:**

SEOMoz.org ;mashable.com; <http://www.convinceandconvert.com>; ClickZ.com ; eMarketer forrester.com; contentmarketinginstitute.com ; adage.com; adweek.com

#### **Final Project:** Group Paper and Presentation

Students will work in instructor-selected groups of four or five to complete a 15-20 page digital marketing plan utilizing the concepts and frameworks covered in the course. Papers should be double-spaced using 12-point font and 1-inch margins, and submitted accordingly. All groups will be required to give a presentation in class highlighting the important points of their plan and submit their presentation slides for review. Presentations will take place in class via web conference on prescribed date. Students will need to ensure their audio is working well in order to present. All students will be required to complete evaluations of the group presentations given in class. 25% will be deducted per day for late papers and slides.

# INTERNATIONAL MARKETING

**Course Code: MKT4304**

**Credit Units: 03**

## **Course Objective:**

In today's dynamic global scenario people who succeed will have to learn the art of managing functions across domestic borders. Thus the course aims at exposing the students to the international business activities. The course would develop a general perspective about managing international business both in operational as well as strategic context.

## **Course Contents:**

### **Module I: Introduction to International Marketing**

Concept of International Marketing, Domestic vs. International marketing, International trade theories of: absolute advantage, comparative advantage and IPLC; Importance of International Marketing, International marketing orientations, Internationalization of Indian Firms Framework.

### **Module II: International Marketing Environment & Business Strategies**

**International Marketing Environment**-Economic Environment, Social & Cultural environment, Political & Legal Environment.

**International Business Strategies**- International Market Entry & Expansion Strategies, Stages of Development Models.

### **Module III: Product & Price Strategy for International Market**

**Product Strategy for International Market** -Identification of products for International Markets, Product Standardization vs Adaptation in International Markets, New product launch for International Markets, Concept of International Product Life cycle theory, Role of Services in International Market.

**Pricing Strategy for International Market**- Pricing Approaches for International Markets, Terms of delivery & payment in International Transactions, Counter Trade, Dumping, Grey Marketing, Transfer Pricing.

### **Module IV: Distribution & Promotion Strategy for International Market**

**Distribution strategy for International Market**- Concept of International distribution, Types of distribution Channels, Channel Intermediaries in International Markets, Structure of Distribution Channels in International Markets.

**Promotion Strategy for International Market**- International Marketing Communication Mix, Tools for International Communication, International Trade Fairs & Exhibitions.

### **Module-V: Contemporary Issues in International Marketing**

Global E- Marketing, Emerging issues in International Marketing, Ethical Issues in International Marketing, India: Emerges at the Global Stage

## **Examination Scheme:**

Components	CPA	TP	Q/S	A	ME	EE
Weightage (%)	5	5	5	5	10	70

## **Text & References:**

# DIRECT MARKETING

**Course Code: MKT4305**

**Credit Units: 03**

## **Course Objective:**

Direct marketing is quickly becoming an integral part of the marketing strategies of general marketing as well as the method of operation of traditional direct marketers. The course focuses on the marketing perspectives and technologies that are distinctly direct marketing and with the interrelationship of direct marketing with the general marketing field.

## **Course Contents:**

### **Module I: Conceptual Framework of Direct Marketing**

Basics and scope of Direct Marketing, Objectives of Direct Marketing, Advantage & Disadvantage of Direct Marketing, Integrated Direct Marketing, Business, Strategic & Direct Marketing planning, Strengths & weakness of Social Media

### **Module II: Analyzing & Encashing Marketing opportunities for Direct Marketing**

Research design for direct marketers, The Customer Database: Analysis and Application, Consumer & Business mailing list, offer, Media of direct marketing, Telemarketing, Internet E-communications, Managing Direct Sales Force.

### **Module III: Managing the Creativity Process in Direct Marketing**

Introducing Creative Practices and techniques, Direct Marketing Creativity, Basic Steps of Managing catalogue & print advertising, Innovation through Creativity & testing The Strategic drivers of Creative Practices.

### **Module IV: Direct Marketing into Business**

B to B Marketing, Making a lead generation programme, Overview of E-commerce. retaining and activating customers

### **Module V: Direct Marketing Implementation and Control**

Marketing Intelligence- Modeling for business decision support, Mathematics tool for control in Direct marketing, Future of Direct Marketing.

### **Module VI: Emerging Trends**

Integrating the concepts with other functions of Management

Live project to be undertaken starting with conception of idea to final execution.,

Case studies

Latest emerging trends and practices.

## **Examination Scheme:**

Components	CPA	TP	Q/S	A	ME	EE
Weightage (%)	5	5	5	5	10	70

## **Text & References:**

# RETAIL MANAGEMENT

**Course Code: MKT4306**

**Credit Units: 03**

## **Course Objective:**

The primary objective of the course is to develop fundamental competencies in retail management. The course is designed to prepare students for positions in the FMCG/Pharmaceutical/Electronics/Consumer Durable/Fashion/Apparel retail businesses or positions in the real estate companies with additional interest in mall management. The course also benefit students interested in starting their own entrepreneurial retail operation. Additionally this course aims at familiarizing students with emergence of malls as a new format of market with emphasis on mall management principles and practices.

## **Course Contents:**

### **Module-I: Introduction to Retailing**

Introduction, Meaning of Retailing, Economic Significance of Retailing, Retailing Management Decision Process, Product Retailing vs. Service Retailing, Types of Retailers, Indian vs. Global Scenario, Difference between organized and unorganized retailing, Issues and challenges of retailing in India

### **Module-II: Store Planning, Design and Layout**

**Store Planning-** Introduction, Types of Retail Stores Location, Factors Affecting Retail Location Decisions, Country/Region Analysis, Trade Area Analysis, Site Evaluation, Site Selection, Location Based Retail Strategies

**Store Design-** Atmospherics, Retailing Image Mix, Space mix

**Store Layout-** Effective retail space management based on Store Layout

### **Module-III: Retail Merchandise Management**

Retail Merchandising: Introduction, Understanding Merchandising Management, Activities of a Merchandiser, Retail Merchandising Management Process

**Private Branding in Retail-** Introduction, Difference between a Store/Private Brand and a National Brand, Growth Drivers of Private Label, Advantages of Private Label, Disadvantages of Private Label

### **Module-IV: Store Operations**

POS (Point of Sale) / Cash process, Customer service and accommodation, Retail selling process, Retail floor and shelf management, Retail accounting and cash management, Merchandise and category management. Visual merchandising and displays, Retail technology and retail automation, POS and Back-end Technologies.

### **Module-V: Mall Management**

**Introduction** – Defining the shopping mall, Difference between Shopping Mall and other retail formats, **Shopping Centre / Mall Location:** Existing mall traffic, Clean environment, Designated parking area, Medium to high rental cost, Strengths and Weaknesses of the Mall format; Licenses and Permits for mall operations, **Positioning & Zoning of mall** – formulating the right tenant mix and its placement in a mall, **Facility management** – Infrastructure, Traffic and ambience management, Finance management, Lifestyle centers and their management, Indian scenario of mall management practices.

## **Examination Scheme:**

# SALES MANAGEMENT

**Course Code: MKT4307**

**Credit Units: 03**

## **Course Objective:**

This course has been designed to help students learn sales management concepts and how to apply them to solve business problems and to function as effective managers. It deals with all important back end management of sales and front end personal selling issues with a view to handle the situations professionally and improve the outcome with result orientation.

## **Course Contents:**

### **Module I**

Changing world of Sales Management and Professionalism in sales. Classification of Personal Selling approaches. Sales jobs, Qualification and skill required for success. Organizational buyer behavior and buying situations. Contrasting Transactional and Relationship Selling models, Sales Teams. Sales management Competencies for effective and outstanding results. Developing Sales Management Strategy / Objectives and Sales Force Roles. Buyer-Seller Daydic Relationship.

### **Module II**

Recruitment planning process: Job analysis, description, qualifications, buyer's perspective and methods of locating prospective candidates. Selection: Application forms, Types of Interviews, Testing and Validating the hiring process.

Sales Training: Determining training needs, Training analysis, Methods of Evaluating sales Training and building a sales training program. Instructional methods used in training.

### **Module III**

Motivation and the reasons for motivating sales people. Maslow's Hierarchy of Needs related to the sales force motivators and company's actions to fill needs. Methods of giving status to sales people to motivate them.

Sales force compensation. Components of compensation and their purpose. Comparison of various compensation plans. Optimizing sales compensation: Customer – Product Matrix and relating it to the appropriate compensation plans.

### **Module IV**

Sales territory; Reasons for establishing or revising Sales Territories, Setting up and revising Sales Territories: Market build-up and Work load method; optimizing sales territory.

Sales quotas; Objectives in using Quotas, Types of Sales Quotas and Quota setting procedures. Reasons when not to use Quotas.

### **Module V**

Personal Selling process: Prospecting: Developing a prospect base, Strategic prospecting, Sources of prospects, common causes of customer attrition, Preparing a prospect list and organizing information. Planning the initial sales call and approach: Pre call information on the Buyer and Organisation, Call Objectives, Planning the approach. Sales Presentation techniques: Types of presentation techniques, Presentation sequence, Adoptive Selling Model. Demonstrations: Demonstration plans, actions, custom fitting demonstrations, use of sales tools. Handling customer objections: types of objections, types of close, Trial Close. Closing the sales.

## **Examination Scheme:**

<b>Components</b>	<b>CPA</b>	<b>TP</b>	<b>Q/S</b>	<b>A</b>	<b>ME</b>	<b>EE</b>
<b>Weightage (%)</b>	5	5	5	5	10	70

# CONSUMER BEHAVIOUR

Course Code:MKT4308

Credit Units: 03

## Course Objective:

The course will enable the students to define the concept of consumer behavior and reveal its importance in the context of marketing, to identify various factors that influence consumer behavior and also to examine the intricacies involved in the consumer decision-making process.

## Course Contents:

### Module-I: Introduction:

Introduction to CB, Model of Consumer buying Decision Making, Participants in buying process, Individual v/s org buying behavior, Concept of consumer Research, Consumer Research Process, Consumer Research Design, Identifying segments, Addressing the needs of market, Profitability of segmentation, Criteria of segmentation, Bayesian Analysis, Value of brand, Brand Loyalty, Seven R's of marketing mix, Inter-market segmentation, STP.

### Module-II: Consumer as an Individual:

**Consumer demographics:** Analysis, Consumer life styles and lifestyle marketing VALS, LOV; **Motivation:** Types of Needs and Goals, Nature and role of motive, Classifying motives, Motive arousal, Motivation Research; **Personality:** Personality theories, Measuring Personality, How self concept develops, Consistency of Self; **Perception:** Active Search, Passive reception, concepts related to perception, Marketing Implications; **Learning:** Cues, Response, Reinforcement, Characteristics of Memory systems, Theories of learning; **Attitude:** Characteristics of attitude, Functions of attitude, Sources of attitude development. , Attitude theories and models, Strategies for changing attitude.

### Module-III: Environmental influences on CB:

**Group Dynamics:** Importance of group dynamics in decision making, Characteristics of group, Types of groups; **Reference groups:** Types of reference groups, Application of reference group in CB; **Family:** Significance of family in CB, Family life cycle, Family purchasing decision; **Social Class:** Meaning of social class, Process of social stratification, Nature of social class, Social class measurement, Role of social class in segmenting markets, Social class and consumer behavior; **Culture:** What is culture, The content of culture, Culture as a process. **Sub-Culture:** Defining subculture, Analyzing subculture; **Personal Influence** : Nature and significance of personal influence, Who are opinion leaders, Why do opinion leader attempts to influence others, Why followers accept personal influence, The market maven,, Marketing Implications of Personal influence, Identifying and using opinion leaders directly, Creating opinion leaders, Simulating opinion leadership, Stifling opinion leadership, Identifying OL

### Module-IV: Consumer Decision Making Process

**Decision Process:** Buying decision process, Nicosia Model, Howard Sheth Model, Engel –Kollat-Blackwell Model, Types of buying behavior, Steps in buying decision process, Impulse purchase and customer loyalty; **Diffusion of innovation:** What is an innovation, Types of Innovation, The Adoption process, The Diffusion process.

### Examination Scheme:

Components	CPA	TP	Q/S	A	ME	EE
Weightage (%)	5	5	5	5	10	70

### Suggested books:

- Gupta, S.L. & Pal, S (2006). *Consumer Behavior*. N. Delhi, India: Sultan Chand & Sons.

## **SPECIALISATION: E-COMMERCE**

### **DIGITAL MARKETING**

**Course Code: ECM4301**

**Credit Units: 03**

#### **Course Overview**

The course examines digital marketing strategy, implementation and executional considerations for B-to-B and B-to-C brands and provides a detailed understanding of all digital marketing concepts. Participants will complete the course with a comprehensive knowledge of and experience with how to develop an integrated digital marketing strategy, from formulation to implementation. Strong focus will be on developing student's business skills and growing real-world experience of the digital media sector to enhance their knowledge to cope with employability demand.

#### **Course Objectives**

Digital Marketing Course is an initiative designed to educate students and practitioners in the area of Digital Marketing analytics and make them ready for jobs or prepare them to launch campaign for their own organisations.

- To Understand how and why to use digital marketing for multiple goals within a larger marketing and/or media strategy
- Understand the major digital marketing channels - online advertising: Digital display, video, mobile, search engine, and social media
- Learn to develop, evaluate, and execute a comprehensive digital marketing strategy and plan
- Learn how to measure digital marketing efforts and calculate ROI
- Explore the latest digital ad technologies

#### **Course Contents:**

##### **Module-I: Digital Marketing Overview:**

What is Digital Marketing? Understanding Marketing Process? Why Digital Marketing Wins Over traditional Marketing? Understanding Digital Marketing Process; Digital Marketing Planning and Strategy

##### **Module-II: Website Planning and Creation:**

Understanding Internet; Difference between Internet & web; Understanding websites; Understanding domain names & domain extensions; What is web server & web hosting? Different types of web servers; Different types of websites; Planning & Conceptualising a Website; Building website using CMS in Class.

##### **Module-III: Digital Advertising (PPC, Digital Display and YouTube):**

Google AdWords Overview; Understanding Adwords Algorithm; Creating Search Campaigns; Types of Search Campaigns - Standard, All features, dynamic search & product listing. Tracking Performance/Conversion: What is conversion tracking? Why is it important, how to set up conversion tracking. Optimizing Search Campaigns: How to optimize campaigns at the time of creation? Optimizing campaign via adgroups. Creating Display Campaign; Types of display campaigns- All features, Mobile app, Remarketing, Engagement. Optimizing Display Campaign and Re-marketing . What is Online Advertising? Types of Online Advertising, Display Advertising, Contextual advertising, what are Payment Modules? Different Online advertising platforms Creating Banner Ads Using Tools.

##### **Module-IV: Emerging trends in Digital Marketing:**

**Affiliate Marketing-** Affiliate marketing history, Affiliate marketing scenario in India, Different ways to do affiliate marketing. **Email Marketing-** What is email marketing and how it works? Types of email marketing- Opt-in & bulk emailing; Setting up email marketing account, creating a broadcast email. What are auto responders? Setting up auto responders; Tricks to land in inbox instead of spam folder; **Social Media Marketing-** Concept, How social media marketing is different than others Forms

of Internet marketing, Understanding Facebook marketing, LinkedIn Marketing, Twitter Marketing, Video Marketing **and** VIDEO & AUDIO (PODCASTING) marketing; **and Mobile Web Marketing-** Understanding Mobile Devices, Mobile Marketing Measurement and Analytics; Fundamentals of Mobile Marketing, Creating mobile website through wordpress; Using tools to create mobile websites; Using tools to create mobile app Advertising on mobile (App & Web); Content Marketing on mobile. **Content Marketing**-Introduction to content marketing, Objective of content marketing, Content marketing 7 step strategy building process, How to write great compelling content, Optimizing content for search engines, How to increase opt-in email list with content marketing with examples.

#### **Module-V: Search Engine Optimization (SEO):**

What is SEO? Introduction to SERP, What are search engines? How search engines work? Major functions of a search engine; what are keywords? Different types of keywords ; Google keyword planner tool; Keywords research process; Understanding keywords; On page optimization; Off Page optimization; Top tools for SEO; Monitoring SEO process; Preparing SEO reports, How to create SEO Strategy for your business, What is link juice? Importance of domain and page authority?How to optimize exact keywords for your business. What is Google Panda Algorithm, Google Penguin and Google EMD Update. How to save your site from Google Panda, Penguin and EMD Update, How to recover your site from Panda, Penguin and EMD.

#### **Module-VI: E-Commerce and Payment Gateway:**

What is ecommerce? Top ecommerce websites around the world & it's scenario in India; Difference between E-Commerce software and Shopping Cart; software Payment Gateways, Merchant Accounts & Logistics for physical goods. Integrating Woo-commerce and setting up an ecommerce store on WordPress. Case studies on ecommerce websites. How to do Google Product Listing Ads (PLA) for ecommerce websites.How to do SEO for an ecommerce website.

#### **Examination Scheme:**

<b>Components</b>	<b>CPA</b>	<b>TP</b>	<b>Q/S</b>	<b>A</b>	<b>ME</b>	<b>EE</b>
<b>Weightage (%)</b>	5	5	5	5	10	70

#### **Text & References:**

#### **Websites:**

SEOMoz.org ;mashable.com; <http://www.convinceandconvert.com>; ClickZ.com ; eMarketer forrester.com; contentmarketinginstitute.com ; adage.com; adweek.com

#### **Final Project:** Group Paper and Presentation

Students will work in instructor-selected groups of four or five to complete a 15-20 page digital marketing plan utilizing the concepts and frameworks covered in the course. Papers should be double-spaced using 12-point font and 1-inch margins, and submitted accordingly. All groups will be required to give a presentation in class highlighting the important points of their plan and submit their presentation slides for review. Presentations will take place in class via web conference on prescribed date. Students will need to ensure their audio is working well in order to present. All students will be required to complete evaluations of the group presentations given in class. 25% will be deducted per day for late papers and slides.

# DATABASE MANAGEMENT SYSTEMS

**Course Code: ECM4302**

**Credit Units: 3**

## Course Objectives

The course aims to make the students understand the basic and advanced concepts in databases and database management systems. Students will be able to understand the importance of databases in day to day life. The course will also provide the students, a hands-on experience on the SQL-the language of databases.

## Course Contents:

### Module I: Introduction to DBMS

Definition of DBMS, Concept and Goals of DBMS, Data Independence, DBMS Architecture, Levels, Database Administrator, File System Approach Vs DBMS Approach, Advantages of Using a DBMS, Data Models, Schemas, and Instances, Database Languages, Database Users, Database Abstraction.

### Module II: Relational Database & ER Model

**Relational Database:** Relational System, Codd's Rule, Relational Model, Optimization, Tables and Views

**ER Model:** Entity Type, Entity Set, Relationship type, Relationship sets, Constraints: Cardinality Ratio and Participation Constraint, Keys, Mapping, Design of ER diagrams.

### Module III: Relational Model Objects

Domains and Relations, Relations and predicates, Relational Data Integrity; Primary Key, Candidate Key, Foreign Key and their rules, Relational operators, Relational Algebra

### Module IV: SQL

SQL Language, DDL,DML and DCL commands. Data definition, Data retrieval and update operations on MS ACCESS and SQL Server DBMS.

### Module V: Database Applications and Types

Distributed Database, Object Oriented Database, Multimedia Database, Data Mining, Digital Libraries. Data Warehouse.

## Examination Scheme:

Components	CPA	TP	Q/S	A	ME	EE
Weightage (%)	5	5	5	5	10	70

# NETWORKING FUNDAMENTALS

**Course Code: ECM4303**

**Credit Units: 03**

## **Course Objective:**

The goal of this course is to introduce you to fundamental networking concepts and technologies. The course aims at training the student for the following: Install, maintain, and troubleshoot computer hardware; connect a variety of peripherals to a PC and correctly configure them. This course will assist you in developing the skills necessary to plan and implement small networks across a range of applications.

## **Course Contents:**

### **Module I: Introduction to Networks**

Elements of Network, Introduction to different types of Networks-LAN,WAN,MAN,SAN and others, Network topologies- Bus, Ring, Star, Mesh. Working, Advantages and Limitations of each topology.

### **Module II: Network Hardware**

Introduction to Network hardware: Workstation, printer, Server, UPS. Cable types, Networking devices and their role- Hub, repeater, amplifier, bridge, switch, router, gateway, firewall, multiplexer, de-multiplexer, modem, wireless Access Point.

### **Module III: Introduction to Networks & OSI Model**

OSI Model and functionality of each layer of OSI model, data entities at each layer- Segment, packet and frame. Protocols and services supported by OSI layers, Application layer protocols- HTTP, FTP, TFTP, ICMP, DNS, DHCP, Telnet, SSH, SMTP, POP, IMAP etc.

### **Module IV: TCP/IP Model**

Introduction to TCP/IP model and the functionality of each of the layers, Protocols working at each layer. TCP-communicating with reliability, UDP- Communicating with low overhead, IPv4, IPv4 addresses for different purposes, assigning addresses, calculating addresses, sub-netting,

### **Module V: Routing Algorithms**

Routing- handling data packets. Routing algorithms, Congestion control Algorithms, Quality of service, Internetworking, Network-Layer in the internet.

## **Examination Scheme:**

Components	CPA	TP	Q/S	A	ME	EE
Weightage (%)	5	5	5	5	10	70

## **Texts & references**

# SOFTWARE DEVELOPMENT METHODOLOGIES

**Course Code:ECM4304**

**Credit Units: 03**

## **Course Objective:**

The basic objective of Software Engineering is to develop methods and procedures for software development that can scale up for large systems and that can be used to consistently produce high-quality software at low cost and with a small cycle time. Software Engineering is the systematic approach to the development, operation, maintenance, and retirement of software. The course provides a thorough introduction to the fundamentals principles of software engineering. The organization broadly based on the classical analysis-design-implementation framework.

## **Course Contents:**

### **Module I: Introduction**

Phases of software life cycle, Software life cycle models: Waterfall, iterative waterfall, Prototype, Evolutionary and Spiral models.

### **Module II: Software Metrics and Project Planning**

Size Metrics like LOC, Token Count, Function Count, Design Metrics, Data Structure Metrics, and Information Flow Metrics. Static, Single and multivariate models, COCOMO model, Risk management, risk identification, risk abatement and risk mitigation, risk migration.

### **Module III: Software Requirement Analysis, design and coding**

Problem Analysis, Software Requirement and Specifications and its documentation, Software Prototyping Cohesion & Coupling, Classification of Cohesiveness & Coupling, Function Oriented Design, Object Oriented Design, User Interface Design Top-down and bottom-up Structured programming, Information hiding.

### **Module IV: Software Reliability, Testing and Maintenance**

Failure and Faults, Reliability Models: Basic Model, Software process, reliability metrics  
Functional testing: Boundary value analysis, Equivalence class testing, path testing, mutation testing, unit testing, integration and system testing, Debugging: error seeding.  
Management of maintenance, Maintenance Process, Maintenance Models, Reverse Engineering, Software RE-engineering

### **Module V: UML**

Introduction to UML, Use Case Diagrams, Class Diagram: State Diagram in UML Activity Diagram in UML Sequence Diagram in UML Collaboration Diagram in UML.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# SOFTWARE PROJECT MANAGEMENT

**Course Code: ECM4305**

**Credit Units: 03**

## **Course Objective:**

The course will enable students to understand the need for Software Project Management. Students will also learn about techniques for software cost estimation and activity planning.

## **Course Contents**

### **Module-I: Project Evaluation and Project Planning**

Importance of Software Project Management – Activities Methodologies – Categorization of Software Projects – Setting objectives – Management Principles – Management Control – Project portfolio Management – Cost-benefit evaluation technology – Risk evaluation – Strategic program Management – Stepwise Project Planning.

### **Module-II: Project Life Cycle and Effort Estimation**

Software process and Process Models – Choice of Process models – mental delivery – Rapid Application development – Agile methods – Extreme Programming – SCRUM – Managing interactive processes – Basics of Software estimation – Effort and Cost estimation techniques – COSMIC Full function points – COCOMO II A Parametric Productivity Model – Staffing Pattern.

### **Module-III: Activity Planning and Risk Management**

Objectives of Activity planning – Project schedules – Activities – Sequencing and scheduling – Network Planning models – Forward Pass & Backward Pass techniques – Critical path (CRM) method – Risk identification – Assessment – Monitoring – PERT technique – Monte Carlo simulation – Resource Allocation – Creation of critical patterns – Cost schedules.

### **Module-IV: Project Management and Control**

Framework for Management and control – Collection of data Project termination – Visualizing progress – Cost monitoring – Earned Value Analysis- Project tracking – Change control- Software Configuration Management – Managing contracts – Contract Management.

### **Module-V: Staffing in Software Projects**

Managing people – Organizational behavior – Best methods of staff selection – Motivation – The Oldham-Hackman job characteristic model – Ethical and Programmed concerns – Working in teams – Decision making – Team structures – Virtual teams – Communications genres – Communication plans.

## **Examination Scheme:**

<b>Components</b>	<b>CPA</b>	<b>TP</b>	<b>Q/S</b>	<b>A</b>	<b>ME</b>	<b>EE</b>
<b>Weightage (%)</b>	5	5	5	5	10	70

## **Text & References:**

# TECHNOLOGY IN BANKING

**Course Code: ECM4306**

**Credit Units: 03**

## **Course Objectives:**

Revolutionary developments in technology continue to transform the banking and financial industry. Distribution of banking services through the Internet is an important part of this transformation. Through this course students will be able to understand various tool & techniques of e-banking. Students will also understand various types of cyber law.

## **Course Contents:**

### **Module I: Branch Operation and Core Banking**

Introduction and Evolution of Bank Management - Technological Impact in Banking Operations - Total Branch Computerization - Concept of Opportunities - Centralized Banking - Concept, Opportunities, Challenges & Implementation

### **Module II: Delivery Channels**

Overview of delivery channels - Automated Teller Machine (ATM) - Phone Banking - Call centers - Internet Banking - Mobile Banking - Payment Gateways - Card technologies - MICR electronic clearing

### **Module III: Back office Operations**

Bank back office management - Inter branch reconciliation - Treasury Management - Forex Operations - Risk Management - Data centre Management - Net work Management - Knowledge Management - Customer Relationships Management (CRM)

### **Module IV: Interbank Payment System**

Interface with Payment system Network - Structured Financial Messaging system - Electronic Fund transfer - RTGS - Negotiated Dealing Systems & Securities Settlement Systems - Electronic Money, E Cheques

### **Module V: Contemporary Issues in Banking Techniques**

Analysis of Rangarajan Committee Reports - E Banking - Budgeting - Banking Softwares

### **Module VI: Overview of Cyber Law**

Scope of Cyber Law: Nature of Cyber Space; Cyber Property; Cyber Personality; Cyber Transactions; Cyber Jurisprudence: Concepts of Historical, Analytical and Ethical Jurisprudence; Relationship between Meta Society Laws and Cyber Law; How Cyber Law need to be developed. Cyber Crimes and Cyber Laws; Types of Cyber Crimes; Legal Provisions regarding Cyber Crimes; Investigation and adjudication of cyber crimes; Digital evidence; Methodology of Cyber Crime Investigation; Basic Investigation Techniques.

## **Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>CT</b>	<b>CP</b>	<b>A</b>	<b>EE</b>
<b>Weightage (%)</b>	10	10	05	05	70

## **Text:**

- Financial Services Information Systems - Jessica Keyes Auerbach publication; 2nd edition (March 24, 2000)

# DYNAMIC WEB DESIGN & DEVELOPMENT

**Course Code: ECM4307**

**Credit Units: 03**

## **Course Objective:**

To develop applications in PHP using various concepts like arrays, user defined functions, Sessions which makes the students to understand and to establish the connectivity between PHP and database and develop programs to add records, retrieve records and delete records from a table.

## **Course Contents:**

### **Module I: Introduction to Web Development & Cascading Style Sheets**

Web pages, Static and Dynamic web pages, Client side VS Server side, Introduction to HTML, HTML Elements, HTML attributes, Styling and formatting HTML, Forms, Tables.

**CSS Basics: CSS Introduction:** CSS Syntax, CSS Id & Class, CSS How

**CSS Styling:** Styling Backgrounds, Styling Text, Styling Fonts, Styling Links, Styling Lists, Styling Tables

**CSS Box Model:** CSS Border, CSS Outline, CSS Margin, CSS Padding

### **Module II: CSS Advanced**

CSS Grouping/Nesting, CSS Dimension, CSS Display, CSS Positioning, CSS Floating, CSS Align, CSS Pseudo-class, CSS Pseudo-element, CSS Navigation Bar, CSS Image Gallery, CSS Image Opacity, CSS Image Sprites

CSS Media Types, CSS Attribute Selectors

### **Module III: Introduction to PHP, Decisions, Loop & Functions**

Evaluation of Php, Basic Syntax, Defining variable and constant, Php Data type, Operator and Expression, Making Decisions, Doing Repetitive task with looping, Mixing Decisions and looping with Html.

What is a function, Define a function, Call by value and Call by reference, Recursive function, String Creating and accessing, String Searching & Replacing String, Formatting String, String Related Library function, Anatomy of an Array, Creating index based and Associative array Accessing array, Element Looping with Index based array, Looping with associative array using each () and foreach(), Some useful Library function

### **Module IV: Handling HTML Forms using PHP, Working with Files and Directories**

Capturing Form, Data Dealing with Multi-value filed, and Generating File uploaded form, redirecting a form after submission.

Understanding, file & directory, Opening and closing a file, Coping, renaming and deleting a file, working with directories, Creating and deleting folder, File Uploading & Downloading.

### **Module V: Session and Cookie, Database Connectivity with MySql, Exception Handling**

Introduction to Session Control, Session Functionality What is a Cookie, Setting Cookies with PHP. Using Cookies with Sessions, Deleting Cookies, Registering Session variables, Destroying the variables and Session.

Introduction to RDBMS, Connection with MySql Database, Performing basic database operation(DML) (Insert, Delete, Update, Select), Setting query parameter, Executing queryJoin (Cross joins, Inner joins, Outer Joins, Self joins.)

Understanding Exception and error, Try, catch, throw. Error tracking and debugging.

**Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

**Text & References:**

# SYSTEM ANALYSIS AND DESIGN

**Course Code: ECM4308**

**Credit Units: 03**

## **Course Objective:**

The course aims at preparing students conceptualize and define scope and domain of system analysis and design. It also focuses on system development life cycle using conventional and structural look.

## **Course Contents:**

### **Module I: Systems Development Environment. (Information system development life cycle)**

System & its parts, Types of Systems, Characteristics of a System, System Analyst in system Development, Developing Systems- SDLC, Approaches to System Development (Prototyping, Joint Application Design (JAD), Participatory Design (PD)), System Development Models (Waterfall model & Spiral Model), System Planning & Selection (Identifying, Selecting, Initiating & Planning System Development Project).

### **Module II: System Planning and Selection (Graphic technology modeling tool)**

Identifying and Selecting Projects (Identifying potential development projects, classifying and ranking projects, and selecting projects for development), Methods for project identification and selection, Evaluation criteria for classifying and ranking projects, Initiating and Planning System Development Projects (Process & performed Activities, Deliverables & Outcomes), Assessing Project Feasibility (Economic, Operational, Technical, Schedule, Legal & Contractual, Political Feasibility)

### **Module III: System & Data Analysis (Data Analyzing Modeling)**

Determining System Requirements (Traditional Methods, Modern & Radical Methods), Structuring System Requirements (Process Modeling – DFD, Logic Modeling – Structured English & Decision Tables, Conceptual Modeling – ER Model), Data Analysis & Techniques (Interpretive, Coding, Recursive Abstraction and Mechanical Technique), Types of Analysis (Descriptive, Exploratory, Confirmatory and Predictive), Modeling Methodologies (Bottom Up method & Top Down Method), Generic and Schematic Data Modeling.

### **Module IV: System Design**

System Design (Design Objectives, Phases in Designing, Purpose of System Design), System Design Goals, Type of Design, Design Strategy, System Decomposition (Modeling, Connection and Coupling of a System), System Design Methodologies, Roles & Duties of System Administration. Succeeding as System Analyst, Interpersonal skills, Management skills, Analytical skills and Technical skills.

### **Module V: System Implementation & Operation (System Management)**

Activities in implementing (Coding, Testing & Installation, Documentation, Training, Support, Maintenance), Types of testing, planning installation, approaches to installation, Documenting a system, Training and Supporting users, Types & Frequencies of Training Methods, Reasons of System Implementation Failures, Project Closedown, Conducting System Maintenance – Types of Maintenance (Corrective, Adaptive and Perfective Maintenance), effective maintenance, Evaluation of System's Success, System Enhancement, Quality Assurance in System Cycle.

### **Module VI: System Security and Auditing**

System Security: Data Security, Backup & Recovery during System & Database failure, Ethical Issues in System Development, Threat and Risk Analysis, Audit, System Audit, System Audit Standards (Planning, Implantation and Reporting Standards), System Analysis and Programming (Overview, Role & Duties of System Experts as Analyst and Programmer).

**Examination Scheme:**

Components	CT	HA	C	V	A	EE
Weightage (%)	10	5	5	5	5	70

C - Case Discussion/ Presentation; HA - Home Assignment; P - Project; S - Seminar; V - Viva; Q - Quiz; CT - Class Test; A - Attendance; EE - End Semester Examination

# CYBER SECURITY SYSTEM

**Course Code: ECM4309**

**Credit Units: 03**

## **Course Objective:**

In today's networked world, most of the organizations and enterprises depend on different kinds of Information Technology solutions, say e-commerce, e-governance, e-learning, e-banking etc.. All communications must be secured and under control since the information stored and conveyed is ultimately an invaluable resource of the business. Securing vital resources and information in the network is the most challenging feat for system enterprise. Therefore the need of the hour is to update the knowledge on the network security issues and solutions. This course gives students an insight into security aspects of networks. Students will be able to learn about concepts related to cyber security, cryptography techniques, various security management practices and network security techniques.

## **Course Contents:**

### **Module-I: Introduction and Cryptography Basics**

**Basic Concepts:** Threats, Vulnerabilities, risk, confidentiality, integrity, availability, security policies, security mechanisms, prevention and detection. **Basic Cryptography:** Introduction to Cryptography, Types: Symmetric and Asymmetric Cryptography, Digital Signature, Modes of operation, Hash Function, Applications of Cryptography

### **Module-II: Cyber Security**

Principles of Cyber Security, Cyber Security Models, Cyber Security Architecture. **Cyber Security Management concepts:** Security governance, management models, roles and functions. **Enterprise Roles and Structures:** Information security roles & positions, Alternative enterprise structures and interfaces, Case Study: Corporate Security

### **Module-III: Security Management Practices**

**Security Plans & Policies:** Levels of planning, the system security plan (SSP), Policy development and implementation. **Risk Management:** Principles of Risk, Types of Risk, Risk strategies, The Risk Management Framework. **Security Laws & Standards:** Security Assurance, Security Laws, International Standards, Security Audits, SEE-CMM

### **Module-IV: Information & Network Security**

Overview of Identification & Authorization, Intrusion Detection System & Intrusion Prevention Susie. Overview of Firewalls, Types of firewalls, Features of Firewalls. VPN Security, Security in multimedia network, various computing platforms: High performance computing, Grid Computing, Cloud & Virtualization

### **Module-V: System & Application Security**

**Secure Architecture:** Designing Secure Operating System, Information Security Models. **System Security:** Desktop Security, Email Security: PGP, SMIME, Web Security: Web Authentication, SSL, SET.

**Wireless Networks & Security:** Components of wireless network, Security issues in wireless network

## **Examination Scheme:**

Components	CT	HA	C	V	A	EE
Weightage (%)	10	5	5	5	5	70

## Syllabus - Fourth Semester

### TOTAL QUALITY MANAGEMENT

**Course Code: MGT4428**

**Credit Units: 02**

**Course Objective:**

The aim of this course is to provide a structured learning framework to students in order that they can understand that total quality management is a philosophy, methodology and system of tools aimed to create and maintain mechanism of organization's continuous improvement. It will also help the students to understand the main principles of business and social excellence; generate knowledge and skills to use models and quality management methodology for the implementation of total quality management in any sphere of business and public sector.

**Course Contents:**

**Module I: Introduction**

Definition of quality, brief history, quality in manufacturing and service industries, quality and price, quality and market share, quality and cost, quality and competitive advantage  
Evolution of the concept of total quality management, elements of total quality management, benefits of total quality management, the Deming management philosophy, the Juran philosophy, the Crosby philosophy

**Module II: Organization for Quality**

Quality objectives, quality policy, leadership for quality, quality and organization culture, cross functional teams, quality circles, suppliers/customers partnership

**Module III: Quality Control**

Concept of quality control, quality assurance, concept of process variation, sampling inspection vs. 100% inspection, acceptance sampling by attributes: Operating Characteristics (OC) curves; producer risk: AQL, RQL, TQL, AOQL  
Statistical Process Control: advantages of SQC, construction of control charts: X-R chart, np chart, C-chart, U chart, Pareto analysis (20/80 rule)

**Module IV: Benchmarking and Kaizen**

Benchmarking, rationale of benchmarking, approach and process, prerequisite of benchmarking, obstacles of successful benchmarking, perceptual benchmarking, concept of Kaizen, kaizen vs innovation, Kaizen practice

**Module V: Quality Management Systems**

Quality certification, quality management principles, ISO 9001:2000, ISO 14000, Capability Model Maturity Integration (CMMI): Fundamentals and Concepts, quality system audit, types of quality audit

**Examination Scheme:**

Components	CPA	TP	Q/S	A	ME	EE
Weightage (%)	5	5	5	5	10	70

# ENTREPRENEURSHIP DEVELOPMENT

Course Code: MGT4429

Credit Units: 02

## Course Contents:

### Module I: Decision to Become an Entrepreneur

**Introduction to Entrepreneurship:** What Is Entrepreneurship? Why Become an Entrepreneur?, Characteristics of Successful Entrepreneurs, Common Myths About Entrepreneurs, Types of Start-Up Firms, Changing Demographics Of Entrepreneurs.

**Entrepreneurship's Importance:** Economic Impact of Entrepreneurial Firms, Entrepreneurial Firms' Impact on Society, and Entrepreneurial Firms' Impact on Larger Firms.

**The Entrepreneurial Process:** Decision to Become an Entrepreneur, Developing Successful Business Ideas Moving from an Idea to an Entrepreneurial Firm, Managing and Growing an Entrepreneurial Firm.

### Module II: Developing Successful Business Ideas

**Identifying And Recognizing Opportunities:** Observing Trends, Solving a Problem, Finding Gaps In The Marketplace, Personal Characteristics of the Entrepreneur.

**Techniques for Generating Ideas:** Brainstorming, Focus Groups Library and Internet Research, Other Techniques.

**Encouraging and Protecting New Ideas:** Establishing a Focal Point for Ideas, Encouraging Creativity at the Firm Level, Protecting Ideas from Being Lost or Stolen, Find a mentor.

**Feasibility Analysis:** Product/Service Feasibility Analysis, Industry/Target Market Feasibility Analysis, organizational Feasibility Analysis, Financial Feasibility Analysis.

**The Business Plan:** Reasons for Writing a Business Plan, Who Reads the Business Plan—And What Are They Looking For? Guidelines for Writing a Business Plan, Outline Of the Business Plan and Exploring Each Section of the Plan Oral Presentation of a Business Plan, Questions and Feedback to Expect from Investors.

**Industry and Competitor Analysis:** Studying Industry Trends, The Five Forces Model, The Value of the Five Forces Model, Industry Types and the Opportunities They Offer, Identifying Competitors, Sources of Competitive Intelligence, Completing a Competitive Analysis Grid.

**Business Models:** The Importance and Diversity of Business Models, How Business Models Emerge, Potential Fatal Flaws of Business Models, Components of An Effective Business Model, Core Strategy, Strategic Resources, Partnership Network, customer interface.

### Module III: Moving from an Idea to an reality

**Initial Ethical and Legal Issues Facing a New Firm:** Establishing a Strong Ethical Culture for a Firm, Choosing an Attorney for a Firm, Drafting a Founders' Agreement.

**Obtaining Business Licenses and Permits:** Business Licenses, Business Permits, Choosing a Form of Business Organization, Sole Proprietorship, Partnerships, Corporations, Limited Liability Company.

**Introduction To Financial Management :** Financial Objectives of a Firm, The Process of Financial Management, Financial Statements, Forecasts, Pro Forma Income Statement, Pro Forma Balance Sheet, Pro Forma Statement of Cash Flows, Ratio Analysis.

**Building a New-Venture:** Recruiting and Selecting Key Employees, Roles of the Board of Directors Board of Advisers, Lenders and Other Professionals.

**Getting Financing or Funding:** The Importance, Sources of Personal Financing, Preparing to Raise Debt or Equity Financing, business Angels, Venture Capital, Initial Public Offering, Commercial Banks, SBA Guaranteed Loans, Other Sources of Debt Financing, Leasing, Strategic Partners.

### Module IV: Managing and Growing the new venture

**Marketing Issues:** Segmenting the Market, Selecting a Target Market, Establishing a Unique Positioning, Branding, 4Ps/7Ps Of Marketing For New Ventures.

**The Importance of Intellectual Property:** Determining What Intellectual Property to Legally Protect, The Four Key Forms of Intellectual Property, Types of Patents, Who Can Apply for a Patent? The Process of Obtaining a Patent, Patent Infringement, The Four Types of Trademarks, What Is Protected Under Trademark Law? Exclusions from Trademark Protection, The Process of Obtaining a Trademark, What Is Protected by a Copyright? Exclusions from Copyright Protection, How to Obtain a Copyright , Copyright Infringement, Copyrights and the Internet , Conducting an Intellectual Property Audit, The Process of Conducting an Intellectual Property Audit.

**Preparing for and Evaluating the Challenges of Growth :**Appreciating the Nature of Business Growth ,Staying Committed to a Core Strategy ,Planning for Growth, Knowing and Managing the Stages of Growth , Challenges Of Growth , Strategies for Firm Growth (internal and external),Franchising.

#### **Examination Scheme:**

<b>Components</b>	<b>CPA</b>	<b>TP</b>	<b>Q/S</b>	<b>A</b>	<b>ME</b>	<b>EE</b>
<b>Weightage (%)</b>	5	5	5	5	10	70

# DISSERTATION

**Course Code: MGT4437**

**Credit Units: 06**

The aim of the dissertation is to provide you with an opportunity to further your intellectual and personal development in your chosen field by undertaking a significant practical unit of activity, having an educational value at a level commensurate with the award of your degree

The dissertation can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

## **Selecting the Dissertation Topic**

It is usual to give you some discretion in the choice of topic for the dissertation and the approach to be adopted. You will need to ensure that your dissertation is related to your field of specialization.

Deciding this is often the most difficult part of the dissertation process, and perhaps, you have been thinking of a topic for some time.

It is important to distinguish here between ‘dissertation topic’ and ‘dissertation title’. The topic is the specific area that you wish to investigate. The title may not be decided until the dissertation has been written so as to reflect its content properly.

Few restrictions are placed on the choice of the topic. Normally we would expect it to be:

- relevant to business, defined broadly;
- related to one or more of the subjects or areas of study within the core program and specialisation stream;
- clearly focused so as to facilitate an in-depth approach, subject to the availability of adequate sources of information and to your own knowledge;
- of value and interest to you and your personal and professional development.

## **Planning the Dissertation**

This will entail following:

- Selecting a topic for investigation.
- Establishing the precise focus of your study by deciding on the aims and objectives of the dissertation, or formulating questions to be investigated. Consider very carefully what is worth investigating and its feasibility.
- Drawing up initial dissertation outlines considering the aims and objectives of the dissertation. Workout various stages of dissertation
- Devising a timetable to ensure that all stages of dissertation are completed in time. The timetable should include writing of the dissertation and regular meetings with your dissertation guide.

## **The Dissertation plan or outline**

It is recommended that you should have a dissertation plan to guide you right from the outset. Essentially, the dissertation plan is an outline of what you intend to do, chapter wise and therefore should reflect the aims and objectives of your dissertation.

There are several reasons for having a dissertation plan

- It provides a focus to your thoughts.
- It provides your faculty-guide with an opportunity, at an early stage of your work, to make constructive comments and help guide the direction of your research.
- The writing of a plan is the first formal stage of the writing process, and therefore helps build up your confidence.
- In many ways, the plan encourages you to come to terms with the reading, thinking and writing in a systematic and integrated way, with plenty of time left for changes.

- Finally, the dissertation plan generally provides a revision point in the development of your dissertation report in order to allow appropriate changes in the scope and even direction of your work as it progresses.

### **Keeping records**

This includes the following:

- Making a note of everything you read; including those discarded.
- Ensuring that when recording sources, author's name and initials, date of publication, title, place of publication and publisher are included. (You may consider starting a card index or database from the outset). Making an accurate note of all quotations at the time you read them.
- Make clear what is a direct quotation and what is your paraphrase.

### **Dissertation format**

All students must follow the following rules in submitting their dissertation.

- Front page should provide title, author, Name of degree/diploma and the date of submission.
- Second page should be the table of contents giving page references for each chapter and section.
- The next page should be the table of appendices, graphs and tables giving titles and page references.
- Next to follow should be a synopsis or abstract of the dissertation (approximately 500 words) titled: **Executive Summary**
- Next is the 'acknowledgements'.
- Chapter I should be a general introduction, giving the background to the dissertation, the objectives of the dissertation, the rationale for the dissertation, the plan, methodological issues and problems. The limitations of the dissertation should also be hinted in this chapter.
- Other chapters will constitute the body of the dissertation. The number of chapters and their sequence will usually vary depending on, among others, on a critical review of the previous relevant work relating to your major findings, a discussion of their implications, and conclusions, possibly with a suggestion of the direction of future research on the area.
- After this concluding chapter, you should give a list of all the references you have used. These should be cross - references with your text. For articles from journals, the following details are required e.g.

Draper P and Pandyal K. 1991, The Investment Trust Discount Revisited, Journal of Business Finance and Accounting, Vol18, No6, Nov, pp 791-832.

For books, the following details are required:

Levi, M. 1996, International Financial Management, Prentice Hall, New York, 3rd Ed, 1996

- Finally, you should give any appendices. These should only include relevant statistical data or material that cannot be fitted into the above categories.

### **The Layout Guidelines for the Dissertation**

- A4 size Paper
- Font: Arial (10 points) or Times New Roman (12 points)
- Line spacing: 1.5
- Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

### **Guidelines for the Assessment of the Dissertation**

While evaluating the dissertation, faculty guide will consider the following aspects:

1. Has the student made a clear statement of the objective or objective(s).
2. If there is more than one objective, do these constitute parts of a whole?
3. Has the student developed an appropriate analytical framework for addressing the problem at hand.
4. Is this based on up-to-date developments in the topic area?

5. Has the student collected information / data suitable to the frameworks?
6. Are the techniques employed by the student to analyse the data / information appropriate and relevant?
7. Has the student succeeded in drawing conclusion form the analysis?
8. Do the conclusions relate well to the objectives of the project?
9. Has the student been regular in his work?
10. Layout of the written report.

**Examination Scheme:**

Contents & Layout of the Report	30
Conceptual Framework	10
Objectives & Methodology	15
Implications & Conclusions	15
Viva/ Presentations	30
<b>TOTAL</b>	<b>100</b>

# **SPECIALISATION: FINANCE & ACCOUNTING**

## **FINANCIAL ENGINEERING**

**Course Code: FIN4401**

**Credit Units: 03**

### **Course Objective:**

Finance has evolved as an exciting discipline in terms of innovations it has witnessed in recent past. This aspect known as Financial Engineering starts where financial analysis ends. The objective of the course is to enable the students to think in terms of innovative solutions to financial problems with particular emphasis on understanding new risks, which the changing scenario of finance is creating for individuals and firms and equip them with innovative tools of financial engineering called derivatives and skills to use them in forming effective strategies to cope with the changing environment and hedge against the financial risks.

### **Course Contents:**

#### **Module I: Introduction**

Changing Environment and Increasing Price Risks, Financial Engineering as a response to Increased Risks, Types of Risks and Risk Management, Tools of Risk Management, Conceptual and Physical Tools of Financial Engineering, Effect of Speculation and Arbitrage on Market Efficiency, Derivative Market in India

#### **Module II: Futures and Forwards**

The Futures Markets, Buying and Selling Futures, Devising a Hedging Strategy Using Futures, Stock Index Futures, Value at Risk, Short Term and Long Term Interest Rate Futures, Foreign Currency Futures and Commodity Futures

#### **Module III: Swaps**

Structure of a Swap, Interest Rate Swaps, Currency of Swaps, Commodity Swaps, Other Swaps, Credit Risk, Role of a Swap Dealer.

#### **Module IV: Options**

Options Markets; Properties of Stock Option Prices; Option Pricing Models – Binomial Model, Black-Scholes; Model, Single Period Options – Calls and Puts, Payoff Diagrams of Simple and Complex Option Strategies, Cash Settled Options, Multi-Period Options – Caps, Floors, Collars, Captions, Swaptions and Compound options, Cross-currency Futures and Options.

#### **Module V: Other Innovations**

Debt Market Innovations, Mortgage Backed Securities, Hybrid Securities, Asset-Liability Management

#### **Module VI: Recent Trends**

Exotic Options, Synthetic Instruments, Developments in Equity-Based Strategies, Direct and Cross Hedges, Future Trends and Issues in Financial Engineering.

### **Examination Scheme:**

<b>Components</b>	<b>CPA</b>	<b>TP</b>	<b>Q/S</b>	<b>A</b>	<b>ME</b>	<b>EE</b>
<b>Weightage (%)</b>	5	5	5	5	10	70

# INVESTMENT BANKING

**Course Code: FIN4402**

**Credit Units: 03**

## **Course Objective:**

To Equip students proficient in understanding of the IPO process. Learn how IPOs are arranged, managed, priced and distributed. The sequence of the issue process, with timelines. The role of merchant bankers in the issue process. Key regulations and documentation requirements To make students acquainted with depository receipts and basics of their issuance process. To understand the nitty-gritty of merger and acquisition & role of an Investment bank in facilitating the deal.

## **Course Contents:**

### **Module-I: Introduction**

Overview of investment Banking, Forms of Bank investment, Key Elements of Investment Banking, Principles and Culture of Investment Banking Regulation of Investment Banking, Short-term investment, Long-term investment, Investment in Foreign Exchange.

### **Module-II: Initial Public Offering - Issuance Process**

IPO, Preparation/approvals stage- Decision to go for IPO Appointment of lead manager and legal counsel Due Diligence Draft red herring prospectus Filing with SEBI and stock exchanges Marketing and estimation of price range- Pre-marketing Road shows Book building Launch and completion- Pricing and allocation ROC filing of final prospectus Listing

### **Module-III**

Depository receipts- ADR GDR EDR IDR-need, ADR- issuance process, tax treatment, regulations, Fungibility, reverse fungibility. Form 20F, F6. IDR-Guidelines.

### **Module-IV**

Bonds Issuance process. Redemption/ Rollover of Debentures. FCCB, Commercial paper- Issuance process, Commercial paper- Redemption process.

### **Module-V**

Merger and Acquisition overview. Types of transactions under M&A. M&A deal drivers. Role of an Investment bank in M&A transaction.

### **Module-VI**

Offer document, Key features of offer documents, Cover page-General risk clause, issuer absolute responsibility. Inner page information, No complaint information.

# BEHAVIORAL FINANCE

**Course Code:FIN4403**

**Credit Units: 03**

## **Course Description:**

This course is intended to complement other finance courses that are mainly based on the traditional paradigm which assumes that investors and managers are generally rational. Specifically, this course has three main objectives. First, we aim to examine how the insights of behavioural finance theories shed light on the behaviour of individual investors and finance professionals in investment decision-making and corporate financial decision-making. Second, we explore the possibility to improve investment performance and corporate performance by recognising the cognitive biases and applying appropriate 'debiasing' techniques. Finally, we investigate the implications of behavioural finance for the construction of good corporate governance mechanisms.

## **Objectives:**

After this students will be able to:

- Identify persistent or systematic behavioral factors that influence investment behavior
- Understand and critically discuss the differences between a behavioural finance perspective and a traditional finance perspective
- Understand and critically discuss the cognitive biases and errors of judgment that affect financial decisions
- Critically evaluate behavioural influences involving individuals in investment decisions
- Critically evaluate behavioural influences involving corporate (executive) financial decisions
- Critically discuss important developments in this new area and the associated practical insights they provide

## **Course Contents:**

**Module I: Psychology & Finance:** Behavioral Finance an overview, Traditional vs behavioral finance, Morals & Ethics: why they matter in the business world.

**Module II: Behavioral Corporate Finance:** Corporate Governance, Loyalty issues, corporate ethics issues, agency conflicts, Behavioral portfolio management.

**Module III: Behavioral Biases in Finance:** Definition of average investor; Behavioral Biases & corporate decision (valuation, capital budgeting, capital structure, dividend policy and Mergers & Acquisition), Belief biases: Biases of average investor, Forecasting Biases, overconfidence, self control, Limited attention and categorization.

**Module IV: Investors Decision:** Perceived risk on financial product, Social interactions and positional concerns. The role of advisors, advertising, Emotion & Investment Decision, Investment decision cycle: judgment under uncertainty, group behavior: Conformism, herding, fatal attraction.

**Module V: Supply by firms and managerial decisions:** Supply of securities and firm investment characteristics (market timing, catering) by rational firms; Associated institutions; Relative horizons and incentives; Biased managers.

## **Examination Scheme:**

Components	CT	HA	C	V	A	EE
Weightage (%)	10	5	5	5	5	70

# **FINTECH: TECHNOLOGY INNOVATION IN FINANCIAL SERVICES**

**Course Code:FIN4404**

**Credit Units: 03**

## **Introduction**

**Financial technology**, also known as **fintech**, is an economic industry composed of companies that use technology to make financial services more efficient. Financial technology companies are generally startups trying to displace incumbent financial systems and challenge traditional corporations that are less reliant on software.

This course aims to give an insight in the financial technology revolution, and the disruption, innovation and opportunity therein. We will see the global fintech investment space; this course will aggregate diverse industry expertise into a single informative course to provide students with the answers they need to capitalize on this lucrative market. Key industry developments are explained in detail, and critical insights from cutting-edge practitioners offer first-hand information and lessons learned.

The financial technology sector is booming, and entrepreneurs, bankers, consultants, investors and asset managers are scrambling for more information: Who are the key players? What's driving the explosive growth? What are the risks? This course collates insights, knowledge and guidance from industry experts to provide the answers to these questions and more.

## **By the end of the course the participants should be better able to:**

- Get up to speed on the latest industry developments
- Grasp the market dynamics of the 'fintech revolution'
- Realize the sector's potential and impact on related industries
- Gain expert insight on investment and entrepreneurial opportunities
- Learn about the modeling skills and emerging technologies

## **Course Contents:**

### **Module-I: Introduction to fintech:**

#### **FinTech – Breaking the financial services value chain.**

Payments; Deposits and Lending; Capital Raising; Investment Management; Market Provisioning; Insurance

#### **FinTech Hubs**

#### **The history of fintech**

### **Module-II: Technology : Blockchain, wearables and other emerging technologies, Financial modeling and Fintech : Big Data 102 and Artificial Intelligence 102**

### **Module-III: FinTech Solutions**

- Robo-Advisors
- Rewiring the Deal – The Path Forward for B2B Supply Chains
- Payments and Point of Sales (POS) Innovation
- Predictive Algorithms – Building Innovative Online Banking Solutions
- Big Data is the Cornerstone of Regulatory Compliance Systems
- FinTech Solutions in Complex Contracts Optimization
- Behavioural Biometrics – A New Era of Security
- Ultra-Fast Text Analytics in Trading Strategies
- Regulated Crowdfunding Ecosystems
- Remittances – International FX Payments at Low Cost
- Payment Solutions Including Apple Pay
- FinTech Innovation for Wearables

#### Module IV: The future of Fintech

- Using emerging technologies
- The future of financial services
- Innovation through big data
- The API economy

#### Examination Scheme:

Components	CT	HA	C	V	A	EE
Weightage (%)	10	5	5	5	5	70

(C - Case Discussion/ Presentation; HA - Home Assignment; Q – Quiz; V - Viva; CT - Class Test; A- Attendance; EE - End Semester Examination)

## **SPECIALISATION: HUMAN RESOURCE**

### **COMPENSATION AND REWARD MANAGEMENT**

**Course Code: HRM4401**

**Credit Units: 03**

**Course Objective:**

This course helps students to learn how compensation system operates to attract, retain and motivate competent work force.

**Course Contents:**

**Module I: Introduction**

Concept of Compensation, System of Compensating, Concept of Reward and Reward System, Economic Theory of Wages, Limitations of Economic Theories. Wage and Salary Administration at micro level, Wage concepts, Methods of Job Evaluation, Role of various parties – Employees, Employers, Unions & Government, Overview of Legislations affecting Compensation

**Module II: Compensation Structure- Indian Practices**

Salary Progression, Methods of Payment, Limitations of the Job Related Compensation, Competency based Compensations, Performance linked Compensations- Performance Appraisal

**Module III: Elements of Compensation**

Variable Compensation, Principles of Reward Strategy, Perquisites, Bonuses & Incentives Scope and Process, Ethical Considerations, Social Security, Sharing Productivity Gains with Employees, Gain Sharing, Team Based Pay, The Role of Compensation in Sales Force Success, Constructing pay structure

**Module IV: Incentive Schemes / Payment by Results**

Types of Incentive Schemes/ Systems and Plans, Merits and Demerits of Incentives

**Module V: Benefits and Services**

Concept of Benefit- Strategic Perspectives on Benefits, Type of Benefits, Factor Influencing Choice of Benefit Package, Administration of Benefits and Services

**Module VI: Current Trends in Compensation and Reward Management**

Elements of Managerial Compensation- A New Approach, VRS, Pay the Person, Rewarding Excellence, Individualizing the Pay System, Executive compensation, International Compensation

**Examination Scheme:**

Components	CPA	TP	Q/S	A	ME	EE
Weightage (%)	5	5	5	5	10	70

# PSYCHOLOGICAL TESTING

**Course Code: HRM4402**

**Credit Units: 03**

## **Course Objective:**

To develop an understanding of the concept of psychological testing by providing a theoretical background of psychological assessment of personality tests and their applications and the ethics of the usage of different types of psychological tests.

## **Course Contents:**

### **Module I: Functions and Origins of Psychological Testing**

Concept of Psychological Testing, Nature and Use of Psychological Tests, Historical Antecedents of Modern Testing

### **Module II: Technical and Methodological Principles**

Norms and Meaning of Test Scores, Reliability and Validity

### **Module III: Personality Testing**

Self-Report Inventories and Scales- MBTI and FIRO-B  
Projective Techniques- TAT, Sentence Completion Test  
Measures of Styles and Types  
Situational Tests  
Self-Concepts and Personal Constructs  
Observer Reports

### **Module IV: Applications of testing**

Educational Testing  
Occupational Testing

### **Module V: Ethical and Social Considerations in Testing**

Protection of Privacy and Confidentiality  
Communicating Test Results

## **Examination Scheme:**

Components	CPA	TP	Q/S	A	ME	EE
Weightage (%)	5	5	5	5	10	70

## **Text & References:**

## LABOUR LEGISLATIONS IN INDIA

Course Code: HRM4403

Credit Units: 03

**Course Objective:** To familiarize students with the intricacies of main labour laws, problems involved and recent developments in the arena of labour legislation.

### Course Contents:

#### Module I: Labour Legislation

Origin of labour legislation, Purposes of labour legislation, Classification of labour laws, an overview of labour laws prevalent in our country.

#### Module II: The Employees' Compensation Act, 1923

Object of the Act, Definitions, Reports of fatal accidents and serious bodily injuries, Employers' liability for compensation, Amount of compensation, Penalties, Powers of Commissioners, Case Study.

#### Module III: The Employees' State Insurance Act, 1948

Object and applicability of the Act, Definitions; Registration of factories and establishments under the Act, Employees' State Insurances Corporation – Standing Committee, Medical Benefits Council, Principal Officers, etc., Employees' State Insurance Fund, Contribution period and benefit periods, Benefits available under the Act, Liabilities of the employers, Penalties for offences, Critical Comments and recent developments, Case study.

#### Module IV: The Employees' Provident Fund and Miscellaneous Provisions Act, 1952

Object of the Act, Definitions and applicability of the Act, Employees' Provident Fund Schemes – Employees' Pension Scheme, 1971, Employees' Deposit-Linked Scheme, 1976, Employees' Pension Scheme, 1995, Appellate Tribunals, Authorities and their powers under the Act, Critical comments and Recent Developments, Case study.

#### Module V: The Payment of Gratuity Act, 1972

Object of the Act, Definitions and applicability of the Act, Determination of Amount of Gratuity, Authorities and their power under the Act, Liability of employers, Penalties for offences under the Act, Critical Comments and recent developments, Case study.

#### Module VI: The Industrial Employment (Standing Orders) Act, 1946

Object of the Act, Definitions and applicability of the Act, Certification of Standing Orders, Authorities and their powers under the Act, Penalties and Procedures under the Act, Critical comments and recent developments, Case study.

#### Module VII: The Factories Act, 1948

Object of the Act, Definitions and applicability of the Act, Health, Safety and Welfare Provisions under the Act, Authorities and their powers under the Act, Penalties for offence under the Act, Critical Comments and recent developments, Case study.

# DYNAMICS OF LEADERSHIP

**Course Code: HRM4404**

**Credit Units: 03**

## **Course Objective:**

The primary objective of the course is to develop fundamental competencies of leadership. The course also benefits students in developing relevant skills, maintain self awareness, compensate for weakness, planning operations, clarifying roles, monitoring performance, coaching and mentoring, team building, vision, encourage innovation.

## **Course Contents:**

### **Module I: Introduction**

Leadership concept, Interaction between the Leader, the Followers, and the Situation, Overview of Major Approaches, Perspectives on Effective Leadership Behavior – Ohio State Leadership and Michigan Leadership Studies, Assessing Leadership and Measuring its Effects.

### **Module II: The Leader**

Political Power and Strategic Leadership, Managing Leadership in Different Cultures, Leadership Traits and Skills - Findings in Early Research, Specific Traits Related to Leadership Effectiveness – Personality, Intelligence, and Emotional Intelligence.

### **Module III: The Followers**

Define Motivation, Satisfaction, and Performance – Need Theories, Cognitive Theories, Situational Approaches, Groups, Team Building.

### **Module IV: The Situation**

Contingency Theories of Leadership – Normative Decision Model, Situational Leadership Model, Contingency Model, Path-Goal Theory, Participative Leadership, Delegation, and Empowerment - Decision Procedures of Managers, Charismatic and Transformational Leadership, Impression Management, Integrating Leader and Follower Roles, Leading Change in Organizations, Vision – Change Processes, Implementation, Guidelines for increasing Learning and Innovation.

### **Module V: Leadership Skills: Towards Integrating, A Conceptual Framework**

Typical Activity Patterns of Managers, Self-Help Activities – Designing Effective Training, Developmental Activities – Learning from Experience: Basic Leadership Skills, Advanced Leadership Skills, Building High Performance Teams.

### **Module VI: Term Paper**

Creating Essence of Leadership – Choose your Leader and Write a paper on his Leadership Style.

## **Examination Scheme:**

Components	CPA	TP	Q/S	A	ME	EE
Weightage (%)	5	5	5	5	10	70

# ORGANIZATIONAL DESIGN AND STRUCTURAL PROCESSES

**Course Code: HRM4405**

**Credit Units: 03**

## **Course Objective:**

To develop an understanding of the nature, functioning and design of organization as social collectives and to develop theoretical & practical insights & problem solving capabilities for effectively managing the organizational processes. This course aims to provide a comprehensive perspective on new emergent organizational forms by discussing them in the context of environment, systems & processes.

## **Course Contents:**

### **Module I: Overview of Organizations**

Defining Organizations, Types of Organizations, Determinants of Organization Design, Parameters of Organization Design, Definition of Organizational Structure, Complexity, Formalization and Centralization

### **Module II: Organization & Environment**

Organizational Environment, Specific and General Environment, Sources of Uncertainty in Organizational Environment, Hyper-Turbulence; Networks and Business Eco-Systems; Technological Discontinuities; Paradigm Shift

### **Module III: Types of Organization**

Organization Design, Approaches to Organizational Design, Basic Challenges of Organizational Design, Organizational Design for Different Excellences, New Design Option

### **Module IV: Organizational Effectiveness**

Organizational Effectiveness- Definition, Importance and Approaches to Organizational Effectiveness - The Goal Attainment Approach, The System Approach, The Strategic Approach.

### **Module V: Emerging Organizational Forms**

Organizations as Networks/ Clusters; Self Organizing Systems; Designing for Innovation and Change.

## **Examination Scheme:**

Components	CPA	TP	Q/S	A	ME	EE
Weightage (%)	5	5	5	5	10	70

# MANAGERIAL COUNSELLING

**Course Code: HRM4406**

**Credit Units: 03**

## **Course Objective:**

To understand the concept and process so as to develop the professional counseling skills among the students.

## **Course Contents:**

### **Module I: Introduction**

Self-Development of Managers as Counselors, Barefoot Counseling, Assertiveness and Interpersonal Skills for Counselors, Counseling Relationship.

### **Module II: Approaches to Counseling**

Development of Counseling Skill, Introduction to the Important Schools of Counseling, Psychoanalytic Foundations, Transactional Analysis, Gestalt Therapy, Rational Emotive Therapy, Person-Centered Approach to Counseling, An Integrated Model, Essentials of Skills, Nonverbal Clues.

### **Module III: Counseling Process**

Counseling Interventions in Organizations, Empathy, Listening and Responding, Effective Feedback, Role conflict in counselling, Genuineness, Social Skills at workplace

### **Module IV: Counseling at Work**

Performance Counseling, Counseling in Problem Situations, Interpersonal Conflicts, Midlife Blues, Integration and Action Plan.

### **Module V: Current Trends in Counselling**

Modern trends in counselling, role of a counsellor, Importance of mindfulness, Counselling in Indian Industries.

## **Examination Scheme:**

Components	CPA	TP	Q/S	A	ME	EE
Weightage (%)	5	5	5	5	10	70

## **SPECIALISATION: INTERNATIONAL BUSINESS**

### **LEVERAGING INFORMATION TECHNOLOGY IN GLOBAL BUSINESS**

**Course Code: IBM4401**

**Credit Units: 03**

#### **Course Objective:**

The aim of this unit is to introduce the student to the evolution, role, function and impact of Information Technology (IT) and Information Systems (IS) in international business operations. It will develop the students' ability to identify sources of information and how these can be used in the decision-making process by leveraging IT and networking.

This course requires the students to develop practical applications ability and knowledge as well as the ability to recommend how IS and IT should be used in global business. Students will also demonstrate their understanding of fundamental business issues of the Information Age Enterprise through in-class discussion of real-world business cases.

#### **Learning Outcomes:**

At the end of the course students will be able to:

- Explain key concepts and elements of information technology and information systems
- Examine the evolution, role, function and impact of IT & IS in global business operation.
- Identify sources of information and assess how they can be used in the decision making process by leveraging information technology and networks.

#### **Course Contents:**

##### **Module I: Information Technology in Management**

Fundamentals of Information Technology in management

Organizations, Environments, IT & IS

E-business/E-commerce in global scenario: Role in transforming business and management in organizations with focus on IB

Use of communication systems in information management

##### **Module II: Information Systems within Business Management**

Introduction to common used system and models

Relationship between IS, organizations and business processes

Types of IS(TPS, OAS, MIS, DSS, ESS and SIS)

Information management and decision making

Managing international Information systems

##### **Module III: Knowledge based systems**

Intelligent support systems & concepts of Artificial Intelligence

Data Mining & Data warehousing

Emerging trends in Information management systems

##### **Module IV: Managerial implications of IT/IS in Global business**

Planning, Organizing and controlling

Information Security, Tools and techniques

Legal and Ethical issues

Future of Information management

## **Module V: Practical aspects and applications of IT/IS**

Introduction to MIS packages and tools

Web interface and techniques

Introduction to ERP & CRM solutions

### **Learning Methods:**

This course is based upon interaction between the students and the teachers. Wherever possible a link should be made between the academic underpinning and its practical application. Students will be given time to develop skills and analyse the benefits and limitations of the use of IS and IT in organisations. A 'hands on' approach will ensure that students can use integrated programmes and have a wide range of knowledge of different applications. The practical knowledge can be used to develop an awareness of how IT and IS can be adopted by organisations to improve business efficiency. This will be achieved via a tutor-developed case study, an evaluation of a local organisation, guest lectures and industry visits. Part of the learning process will also be producing a paper (in groups) on a relevant topic.

### **Examination Scheme:**

<b>Components</b>	<b>C1</b>	<b>V</b>	<b>A</b>	<b>CT</b>	<b>EE</b>
<b>Weightage (%)</b>	10	5	5	10	70

# INTERNATIONAL SUPPLY CHAIN MANAGEMENT

**Course Code:IBM4402**

**Credit Units: 03**

## **Course Objective:**

Developing an understanding of the various components of an integrated supply chain management suited to global markets; Teaching criticality of an efficient supply chain with “zero defects” in the WTO border-less world ; Understanding the micro aspects of global distribution and logistics; imparting knowledge of Multi-modal Transport operators , ocean & air transportation in world trade.

## **Course Contents:**

### **Module I: Global Supply Chain – Overview**

Introduction & Importance of Supply Chain Management, Developing Supply Chain as a Competitive Tool for Customer Satisfaction and Corporate Profitability, Channel Structure, Supplier Network Development, Outsourcing., Supply Chain Logistics Operations.

### **Module II: Strategic Issues in Supply Chain Management**

Value chain and value delivery system, Concept of multi-modal transportation and infrastructure needs; Transportation Choices and Third Party Logistics, Fourth Party Logistics Distribution Channel Design, Strategic Alliances, Communication Flow of Supply Chain, Documentation needs and liabilities; Inter-functional coordination, Inter-corporate cooperation, Outsourcing in Supply Chain; Vendor Management & Development, Strategic Lead Time Management, Warehousing

### **Module III: International Logistic System**

Concept, Objectives & Scope, The System Elements, International Transportation Issues, Warehousing, Inventory Management, Packaging and Unitization Issues, Communication and Control, Centralized and Decentralized Logistic Management, Third Party Logistics (3PL), Multimodal Transport Operator (M.T.O.)

### **Module IV: Air & Ocean Transport and Chartering**

The General Structure of shipping industry, Characteristics of Shipping Industry, Liner and Tramp Operations and Significance, World Seaborne Trade and World Shipping, Composition of World Seaborne Trade, Problems of Developing Countries, Liner Freight Practice, Principles – Freight Structure, Voyage Charter, Time Charter, Barboat Charter. Indian Shipping, Growth and Perspective, Problems of Shipping Industry, Shipping Policy, International Air Transport System, Air Transport and PDM Approach to Export Distribution, International Set – up for Air Transport, Air Freight Rates, India’s Export – Import Trade by Air, Problems and Prospects, Law Relating to Carriage of Goods

### **Module V: Managing the Supply Chain Performance**

SCM and Information Technology, IT Enabled Supply Chain Management, Inter-firm Integration: Implementation Issues, Application of ERP, JIT, Optimization of Supply Chain, Retailing Management, Waste Elimination and Lean Thinking in Supply Chain; Supply chain performance measurement systems; Supply Chain Balanced Score Card.

## **Examination Scheme:**

# GLOBAL SOURCING AND BUSINESS DEVELOPMENT

**Course Code: IBM4404**

**Credit Units: 03**

## **Course Objective:**

This course will explore the opportunities and challenges that managers face in global competition. We will deal with companies that operate across country boundaries and the managerial issues in selling and sourcing on a global basis. Globalization is not the same as just doing business in a foreign country; that is, after all, domestic business from the perspective of managers in that country. The importance of establishing supply relationships with foreign sources requires companies to develop competencies in strategic sourcing, purchasing and importation of goods. This course will emphasize the strategic and operational elements of establishing and maintaining global relationships. Emphasis is also given to make the budding HR professionals thoroughly prepared to recognize negotiation situations so as to Plan, Implement, and Complete Successful Negotiations to maximize results.

## **Learning Outcomes:**

As an outcome of this course, students will be able to:

- Explain the importance of global sourcing in supply chain management
- Describe the global sourcing process.
- Understand negotiation strategies and skills between nations
- Analyse buyer-supplier relationships
- Develop an insight on the relationship between negotiation and global sourcing

## **Course Contents:**

### **Module I: Understanding Basics of Global Sourcing**

Definition, need and relevance of Global Sourcing; Evolution of sourcing; Purchasing a dynamic profession- origins of purchasing and transition to supply chain management; Five major developments- cross functional teams, supply chain and supply networks, supply alliances, strategic sourcing, e-procurement, global sourcing

### **Module II: Types of Global Sourcing**

Global sourcing of HR, Accounting or Finance; Global sourcing of Procurement/Supply Chain; Global sourcing of Innovation; Global sourcing Governance: PMO, contracts, key roles; Emerging Trends, Sourcing in BPO

### **Module III: International Sourcing Decisions**

Manufacturing/National brands; Private label brands; Premium branding; International sourcing; Costs associated with global sourcing decisions; Foreign currency fluctuations; Tariffs; Free trade zones and Retailing; Managerial issues associated with Global sourcing decisions; International vendor management

### **Module IV: Negotiation fundamentals**

The nature of Negotiation; Strategy and Tactics of Distributive Bargaining; Integrative Negotiation; Negotiation Strategy and Planning; Negotiation sub-processes; Perception; Cognition and Emotion; Communication; Finding and using negotiation Power;

**Influence:** Routes to Influence; Role of Receivers in Influence; Ethics in Negotiation; Relationships in Negotiation: Key Elements in Managing Negotiations within Relationships  
Parties in Negotiation: Coalitions, The nature of Multi-party negotiation

### **Module V: Foundations of Entrepreneurship Development**

Concept and Need of Entrepreneurship Development Definition of Entrepreneur, Entrepreneurship, Innovation, Invention, Creativity, Business Idea, Opportunities through change.

Concepts of Entrepreneur, Manager, Intrapreneur / Corporate Entrepreneur – comparative study – Roles, Responsibilities, Career opportunities. Entrepreneurship as a career, Entrepreneurship as a style of management, The changing role of the entrepreneur: mid career dilemmas – Closing the window: Sustaining Competitiveness – Maintaining competitive advantage. Entrepreneurial Traits External Influences on Entrepreneurship Development: Socio-Cultural, Political, Economical, Personal. Entrepreneurial culture with special reference to Intrapreneurship / Corporate Entrepreneurship.

Entrepreneurial Success and Failure: Reasons and Remedies.

### **Learning Methods:**

Tutorials, Interactive sessions, Case studies, Extensive research projects, Seminars, - the course is covered by adopting a combination of lecture methods, class presentation by groups of students, self study sessions. Each student is required to do the back ground reading from the specified chapters of the prescribed book before coming to class. Cases are also to be analyzed, discussed in groups (teams) outside the class as preparatory work.

### **Examination Scheme:**

<b>Components</b>	<b>C1</b>	<b>V</b>	<b>A</b>	<b>CT</b>	<b>EE</b>
<b>Weightage (%)</b>	10	5	5	10	70

# INTERNATIONAL COMMODITY MANAGEMENT

**Course Code: IBM4405**

**Credit Units: 3**

## **Course Objective:**

Knowing which countries dominate world trade in commodities; Familiarization with international commodity markets; Functions and mechanism of Indian and International Commodity Exchanges; Learning to identify commodity risks and formulating suitable strategies to minimize it.

## **Course Contents:**

### **Module I: International Commodity Trading**

Changing Int'l Trade scenario & in 21<sup>st</sup> Century; Commodities – Definition, Features, History, Participants, Structure; systems of commodity, Top Exporter & Importer countries of World's most traded commodities, India's place in World Markets.

### **Module II: World's Commodity Exchanges**

Major Commodity Exchanges in World - USA, Canada, Latin America, Europe, China, Asia, Africa & Oceanic: History, Shareholding, Products & contract specifications.

### **Module III: Indian Commodity Exchanges**

Turnover, Evolution, Forward Market Commission, Contracts Act: Regional & National Commodity Exchanges, Structure, Shareholding, Turnover, Products Traded on National Exchanges MCX, NCDEX, NMCE, ICEX.

### **Module IV: Commodity Derivatives**

Derivatives - Definition, Types, OTC vs Exchange Traded, Participants, Evolution, Economic Functions & benefits, Risks. Commodity Futures & Options - Characteristics, Terminologies, Margins, Physical Delivery, Assignment, Warehousing, Quality specifications, Membership, Charges; Trading, Clearing & Settlement; Strategies for Hedging, Speculation & Arbitrage. Types of Orders, Difference between & Options & Futures, Right/Obligation of Buyer/Seller, Call/Put Options.

### **Module V: World's Most Traded Commodities**

Presentations on Cotton, Edible oils (Rapeseed, Soy, Palm Oil), Tea, Coffee, Sugar, Wheat, Crude Oil, Steel, Rice, Pulses, Rubber, Gold, Silver, Copper etc - World Trade, India's share, Production, Global demand & supply, Consumption & price patterns, Quality, Trading, Contract specifications, substitutes etc.

## **Examination Scheme:**

# **CROSS CULTURAL MANAGEMENT AND MANAGEMENT OF MULTINATIONAL COMPANIES**

**Course Code:IBM4406**

**Credit Units: 03**

## **Course Objective:**

The course seeks to impart understanding of Cross Cultural Management, so as to be able to relate it to managerial activity in the new geo-economy. The Course Contents provide exposure to the diverse management styles across the globe and impart understanding of different approaches to comparative analysis of each management style.

The course study provides knowledge of mechanics of doing business abroad. The importance of cultural, economic, political and environmental aspects when doing business abroad is reinstated while highlighting the challenges, which management faces today in a global environment.

The course also introduces the importance of Business Ethics and how it pertains to social responsibility of Cross Cultural Managers and the role ethics play in the management of transnational companies.

## **Learning Outcomes:**

Ability to integrate and apply concepts about managing in different work cultures.

Appreciation cross-cultural and ethical issues faced by managers in global enterprises.

Ability to understand the work culture and management style of Multi National Organisations.

Enhance skill to manage international Business Negotiations

Enhance the ability to work in groups. Provide opportunities for students to exercise leadership skills.

Polish verbal and written communication skills, as well as presentation skills through projects.

## **Course Contents:**

### **Module I: Introduction**

Concept of Cross cultural Management, The Concept of International Comparative Management; Definition of Culture and impact of the culture on International Business.

### **Module II: Modalities of Cross-Cultural Dimensions**

Kluckhohn and Strodtbeck's Cultural Dimension; Hofstede's Cultural Dimensions ;Trompenaars Cultural Dimensions ; Hall and Hall's Cultural Dimension

### **Module III: Styles of Management and its impact on the International Business**

Japanese Style of Management; German style of Management; UK style of Management; French style of Management; Spanish style of Management; Style of Management of United States companies; Management Characteristics of West European Companies; Styles of Management in African Countries; Style of Management of Latin American Countries

Indian style of Management

### **Module IV: Cross Cultural Leadership and Business Ethics with focus on Corporate Governance**

Differences in managerial behavior; Cultural influences on leaders and their behavioural patterns; Business Ethics and Corporate Governance; Business Ethics and Management of Change in the International Organisation; Comparative Analysis of Cultural Patterns in Different Economics and the issues, which affect the good governance

### **Module V: Management of Multinational companies and Concept of International Negotiation**

Management of Multinational Companies - Problems & Prospects of MNCs in an International environment; Culture and Communication; Major Obstacles to Intercultural Communication; Nonverbal Communication; Subtle art of negotiation; Managing Negotiation with Multinational Companies

**Learning Methods:**

A series of lectures will impart information and be complemented by interactive tutor-led and student-led discussion. Teaching consists of 2½ hours per week. The unit has thus been designed to use a variety of teaching methods that should help students to study the various aspects of international business environment. Formative tasks and presentations will enable students to build towards the completion of their assignment during the delivery of the unit.

**Examination Scheme:**

## **SPECIALISATION: INFORMATION TECHNOLOGY**

### **DATA WAREHOUSING & DATA MINING**

**Course Code: ITM4401**

**Credit Units: 03**

#### **Course Contents:**

##### **Module-I: DATA WAREHOUSING**

Data warehousing Components –Building a Data warehouse – Mapping the Data Warehouse to a Multiprocessor Architecture – DBMS Schemas for Decision Support – Data Extraction, Cleanup, and Transformation Tools –Metadata.

##### **Module-II: BUSINESS ANALYSIS**

Reporting and Query tools and Applications – Tool Categories – The Need for Applications – Cognos Impromptu – Online Analytical Processing (OLAP) – Need – Multidimensional Data Model – OLAP Guidelines – Multidimensional versus Multi relational OLAP – Categories of Tools – OLAP Tools and the Internet.

##### **Module-III: DATA MINING AND TRENDS IN DATA MINING**

Introduction – Data – Types of Data – Data Mining Functionalities – Interestingness of Patterns – Classification of Data Mining Systems – Data Mining Task Primitives – Integration of a Data Mining System with a Data Warehouse – Issues –Data Preprocessing,– Based Cluster Analysis – Outlier Analysis – Data Mining Applications.

##### **Module-IV: CLUSTERING AND APPLICATIONS**

Cluster Analysis - Types of Data – Categorization of Major Clustering Methods – K means – Partitioning Methods – Hierarchical Methods - Density-Based Methods –Grid Based Methods – Model-Based Clustering Methods – Clustering High Dimensional Data - Constraint

##### **Module-V: ASSOCIATION RULE MINING AND CLASSIFICATION**

Mining Frequent Patterns, Associations and Correlations – Mining Methods – Mining Various Kinds of Association Rules – Correlation Analysis – Constraint Based Association Mining – Classification and Prediction - Basic Concepts - Decision Tree Induction - Bayesian Classification – Rule Based Classification – Classification by Back propagation – Support Vector Machines – Associative Classification – Other Classification Methods – Prediction

#### **Examination Scheme:**

<b>Components</b>	<b>CPA</b>	<b>TP</b>	<b>Q/S</b>	<b>A</b>	<b>ME</b>	<b>EE</b>
<b>Weightage (%)</b>	5	5	5	5	10	70

#### **TEXT BOOKS:**

# LEVERAGING INFORMATION TECHNOLOGY IN GLOBAL BUSINESS

**Course Code: ITM4402**

**Credit Units: 03**

## **Course Objective:**

The aim of this unit is to introduce the student to the evolution, role, function and impact of Information Technology (IT) and Information Systems (IS) in international business operations. It will develop the students' ability to identify sources of information and how these can be used in the decision-making process by leveraging IT and networking.

This course requires the students to develop practical applications ability and knowledge as well as the ability to recommend how IS and IT should be used in global business. Students will also demonstrate their understanding of fundamental business issues of the Information Age Enterprise through in-class discussion of real-world business cases.

## **Learning Outcomes:**

At the end of the course students will be able to:

- Explain key concepts and elements of information technology and information systems
- Examine the evolution, role, function and impact of IT & IS in global business operation.
- Identify sources of information and assess how they can be used in the decision making process by leveraging information technology and networks.

## **Course Contents:**

### **Module I: Information Technology in Management**

Fundamentals of Information Technology in management

Organizations, Environments, IT & IS

E-business/E-commerce in global scenario: Role in transforming business and management in organizations with focus on IB

Use of communication systems in information management

### **Module II: Information Systems within Business Management**

Introduction to common used system and models

Relationship between IS, organizations and business processes

Types of IS(TPS, OAS, MIS, DSS, ESS and SIS)

Information management and decision making

Managing international Information systems

### **Module III: Knowledge based systems**

Intelligent support systems & concepts of Artificial Intelligence

Data Mining & Data warehousing

Emerging trends in Information management systems

### **Module IV: Managerial implications of IT/IS in Global business**

Planning, Organizing and controlling

Information Security, Tools and techniques

Legal and Ethical issues

Future of Information management

### **Module V: Practical aspects and applications of IT/IS**

Introduction to MIS packages and tools

Web interface and techniques

Introduction to ERP & CRM solutions

**Learning Methods:**

This course is based upon interaction between the students and the teachers. Wherever possible a link should be made between the academic underpinning and its practical application. Students will be given time to develop skills and analyse the benefits and limitations of the use of IS and IT in organisations. A ‘hands on’ approach will ensure that students can use integrated programmes and have a wide range of knowledge of different applications. The practical knowledge can be used to develop an awareness of how IT and IS can be adopted by organisations to improve business efficiency. This will be achieved via a tutor-developed case study, an evaluation of a local organisation, guest lectures and industry visits. Part of the learning process will also be producing a paper (in groups) on a relevant topic.

**Examination Scheme:**

Components	C1	V	A	CT	EE
Weightage (%)	10	5	5	10	70

# MARKETING OF IT SOLUTIONS

**Course Code: ITM4403**

**Credit Units: 03**

## **Course Objective:**

“Marketing and Management of Software Solutions” course is in two parts, the first one exposes the students to various typical features of solutions marketing and the second part to the Management of software solutions.

## **Course Contents:**

### **Module I: Introduction to IT Sector**

Introduction to software, industry, software business models: service, product, hybrid models

### **Module II: Solutions Marketing**

IT marketing, internet marketing, sales cycle, service development lifecycle

### **Module III: Introduction to marketing strategies for cloud computing**

PAAS, SAAS, IAAS

### **Module IV: Customer Handling**

Writing proposals, handling proposals, customer handling strategies, account planning, relationship building

### **Module V: IT investment and Budgeting**

Product pricing, service pricing, TPO, TCO

### **Module VI: IT solutions – implementation and maintenance**

PM, Implementation and Maintenance of IT solutions

## **Examination Scheme:**

<b>Components</b>	<b>CPA</b>	<b>TP</b>	<b>Q/S</b>	<b>A</b>	<b>ME</b>	<b>EE</b>
<b>Weightage (%)</b>	5	5	5	5	10	70

## **Text & References:**

# MANAGERIAL DECISION SUPPORT SYSTEMS

**Course Code: ITM4404**

**Credit Units: 03**

## **Course Objective:**

The course is devoted to introduce decision support systems; show their relationship to other computer based information systems, demonstrate DSS development approaches, and show students how to utilize DSS capacities to support different types of decisions

## **Course Contents:**

### **Module-I: DECISION MAKING AND INFORMATION SYSTEMS**

Decision making concepts, rational & irrational decision making, Problems in making rational decisions, Business Value of Improved Decision Making, Information, Decision & Management. Types of Decisions, Types of Information. The Decision-Making Process, Herbert Simon Model of Decision Making

### **Module-II: DECISION SUPPORT SYSTEMS**

Introduction to Decision Support Systems. Characteristics & Components of DSS- Data Management, Model Management, User Interface Management and Knowledge management. Decision Analysis by Analytical Modeling. Managers and Decision Making in the Real World, High-Velocity Automated Decision Making

### **Module-III: Types of DSS**

The Concept of Decision Support Systems; Group Support Systems; Enterprise Information Systems; Knowledge Management Systems; Expert Systems; Artificial Neural Networks; Advanced Intelligent Decision Support Systems; Hybrid Support Systems

### **Module-IV: BUSINESS INTELLIGENCE IN THE ENTERPRISE**

What Is Business Intelligence?, The Business Intelligence Environment, Business Intelligence and Analytics Capabilities, Management Strategies for Developing BI and BA Capabilities. Decision Support for Operational and Middle Management. Decision Support for Senior Management: The Balanced Scorecard and Enterprise Performance Management Methods. Group Decision-Support Systems (GDSS)

### **Module-V: INTELLIGENT DECISION SUPPORT SYSTEMS**

Concepts and Definitions of Artificial Intelligence; Evolution of Artificial Intelligence; The Artificial Intelligence Field; Basic Concepts of Expert Systems; Applications of Expert Systems; Structure of Expert Systems; How Expert Systems Work; Problem Areas Suitable for Expert Systems; Benefits and Capabilities of Expert Systems; Problems and Limitations of Expert Systems; Expert System Success Factors; Types of Expert Systems; Expert Systems on the Web

## **Examination Scheme:**

Components	CPA	TP	Q/S	A	ME	EE
Weightage (%)	5	5	5	5	10	70

# SEARCH ENGINE OPTIMIZATION

**Course Code: ITM4405**

**Credit Units: 3**

**Course Objective:**

**Course Contents:**

## **Module-I: SEO Basics**

Introduction about Domain, World Wide Web, Difference between Portal & Search Engine, Importance of Search Engine, Working of search engine, Difference between directories & search engine. Website performance monitor in search engine

## **Module-II:**

Introduction to SEO, Web Traffic, Need of SEO, Working of SEO, Steps in SEO, Types of SEO techniques : Black Hat Techniques, White Hat Techniques,

## **Module-III: Keyword Research & Analysis**

Introduction to Keyword research: Types of keywords, Keyword research methodology, keywords analysis tools, Preparing keyword list, localized keyword research, Keyword density, Keyword prominence, keyword stuffing

## **Module-IV: On Page Optimization**

Basis of website designing, Essentials of good website designing, HTML Basics for SEO : Page Title, Meta Descriptions & Meta Keywords, Headings, Bod Text, Image & Alt tag, Invisible text, HTML Site Map Creation, Web Master Tools

## **Module-V: Off Page SEO Optimization**

Page Rank, Link Popularity, Link Building, Types of Link Building, Book Marking, Article Submission Blog Marketing, Blog commenting, XML Site Ma submission, Customer review submission, press release submission, search engine submission

## **Examination Scheme:**

<b>Components</b>	<b>CPA</b>	<b>TP</b>	<b>Q/S</b>	<b>A</b>	<b>ME</b>	<b>EE</b>
<b>Weightage (%)</b>	5	5	5	5	10	70

## **Text & References**

# TOOLS FOR BUSINESS INTELLIGENCE

**Course Code: ITM4406**

**Credit Units: 03**

## **Course Objective:**

This course provides an introduction to the concepts of business intelligence (BI) as components and functionality of information systems. The course aims at examining Business Intelligence (BI) as a broad category of applications and technologies for gathering, storing, analyzing, sharing and providing access to data to help enterprise users make better managerial decisions. Students will be able to learn the principles and best practices for how to use data in order to support fact-based decision making

## **Course Contents:**

### **Module-I: Business Intelligence: An Introduction**

Introduction, Definition, History and Evolution, Business Intelligence Segments, Difference between Information and Intelligence, Defining Business Intelligence Value Chain, Factors of Business Intelligence System, Real time Business Intelligence, Business Intelligence Applications.

### **Module-II: Business Intelligence Types:**

Types of Business Intelligence, Business Intelligence Platform, Dynamic roles in Business Intelligence, Roles of Business Intelligence in Modern Business- Challenges of BI, Multiplicity of Business Intelligence Tools, Types of Business Intelligence Tools, Modern Business Intelligence, the Enterprise Business Intelligence, Information Workers

### **Module-III: Business Intelligence Life Cycle**

Introduction, Business Intelligence Lifecycle, **Enterprise Performance Life Cycle (EPLC)** Framework Elements, Life Cycle Phases, Human Factors in BI Implementation, BI Strategy, Objectives and Deliverables, Transformation Roadmap, Building a transformation roadmap, BI Development Stages and Steps, Parallel Development Tracks, BI Framework

### **Module-IV: Introduction to Data Warehousing & Data Mining**

Data Warehousing, Advantages and Disadvantages, Data Mart, Online Analytical Processing (OLAP), Characteristics, Tools, Difference between OLAP and OLTP, Multidimensional Data Model. Definition of Data Mining, Data mining parameters, How Data Mining works?, Types of relationships, Architecture of Data Mining, Kinds of Data which can be mined, Functionalities of Data Mining, Classification on Data Mining system, Various risks in Data Mining, Advantages and disadvantages of Data Mining

### **Module-V: Business Intelligence User Model**

Introduction, Evolution of Business Intelligence, Business Intelligence Opportunity Analysis Overview, Content Management System, End User Segmentation, Basic Reporting and Querying, Online Analytical Processing, OLAP Techniques, OLAP Applications, Applying the OLAP to Data Warehousing, Benefits of using OLAP, Dashboard, Advanced/Emerging BI Technologies, Future of Business Intelligence

## **Examination Scheme:**

<b>Components</b>	<b>CPA</b>	<b>TP</b>	<b>Q/S</b>	<b>A</b>	<b>ME</b>	<b>EE</b>
<b>Weightage (%)</b>	5	5	5	5	10	70

## **Text & References**

- Business Intelligence: A Managerial Perspective on Analytics, R. Sharda, D. Delen, 3<sup>rd</sup> edition, Pearson Education **ISBN-13:** 978-0133051056

## **SPECIALISATION: MARKETING & SALES**

### **CUSTOMER RELATIONSHIP MANAGEMENT**

**Course Code: MKT4401**

**Credit Units: 03**

#### **Course Objective:**

This course examines customer relationship management as a key strategic process for organizations. Composed of people, technology, and processes, an effective CRM optimizes the selection or identification, acquisition, growth and retention of desired customers to maximize profit. Anyone interested in being an architect of CRM within his or her organization, or responsible for the development of any major aspect of CRM will find this course beneficial. CRM discussions and projects will address both organizational customers (B2B) and consumers/households (B2C).

#### **Course Contents:**

##### **Module I: Introduction and Significance of Customer Relationship Management**

Evolution of Customer Relationship Management, Benefits of CRM, Transaction vs. Relationship orientation, CRM process framework, Types of CRM, an Insight into CRM, e-CRM and m-CRM.

##### **Module II: Managing Customer Relationship**

Relationship Building as a process, Bonding for customer relationship; Relationship Building Strategies, the ladder of loyalty, Building Customer Relationship Management by Customer Retention, Stages of Retention, Sequences in Retention Process, Customer Defection, Strategies to Prevent Defection and Recover Customers. Market share vs. Share of customers, Lifetime Value of customers and Segmentation of customers.

##### **Module III: CRM Process**

The CRM cycle i.e. Assessment Phase; Planning Phase; The Executive Phase, 4C's (Elements) of CRM Process, Customer Acquisition Strategies, Cross selling and up selling strategies, Customer Equity, Customer Metrics, Customer Complaint Management.

##### **Module IV: CRM practices in Business Economy (B 2 C and B 2 B Market)**

Growth of Service in India, Service Customer Classification, Service Marketing Mix, Service Recovery, Characteristics of Business Markets, Importance of CRM in B2B and B 2 C Markets, Key Account Management, Supplier-Channel Management, CRM practices and application in Banking Industry, Retail Industry, Aviation Industry, Hospitality Industry, Pharmaceutical Industry, Telecom Industry and Product Markets.

##### **Module V: Technological Tools for Customer Relationship Management**

Components of e-CRM; Data management and construction of databases for data warehousing and data mining. CLTV, ACD (automatic call distribution), IVR (interactive voice response), CTI (computer telephony integration), web enabling the call center, automated intelligent call routing, logging and monitoring. Functional components of CRM solution; Contact centre for CRM.

##### **Module VI: Issues and Challenges in Implementation of CRM**

CRM Implementation Road Map, building organizational capabilities through Internal Marketing, CRM Roadblocks (4P's), Phased development, Challenges of CRM implementation, Learning from customer defections, Evaluating customer retention programs, Emerging trends in CRM.

#### **Examination Scheme:**

<b>Components</b>	<b>CPA</b>	<b>TP</b>	<b>Q/S</b>	<b>A</b>	<b>ME</b>	<b>EE</b>
<b>Weightage (%)</b>	5	5	5	5	10	70

# E-SUPPLY CHAIN MANAGEMENT

Course Code: MKT4402

Credit Units:03

## Course Contents:

### Module-I: Introduction to SCM

Concept of supply chain, integrated supply chain, Growth of Supply chain; Strategic decision in supply chain; Supply Chain Management as a Management Philosophy; Scope & function of SCM,.

### Module-II: SCM Strategies Performance

Supply chain strategies, achieving strategic fit, value chain, Supply chain drivers and obstacles, Strategic Alliances and Outsourcing, purchasing aspects of supply chain, Supply chain performance measurement: The balanced score card approach, Performance Metrics.; Planning demand and supply: Demand forecasting in supply chain, Aggregate planning in supply chain, Predictable variability.

### Module-III: Role of IT in Supply chain

Uses of IT in inventories, transportation & facilities within a supply chain; SCM frame Work-macro Processes, Advent of internet business technologies; Supply chain information System Design-Planning, Capacity, Performance requirement ,manufacturing requirement ,Operation , Transportation ,Inventory development ; E-Business –Role in Supply chain, Framework ,Impact on Cost;

### Module-IV: Impact of IT on integrated SCM and DSS

Infrastructure, impact of e-commerce; framework for IT integrated SCM, Impact of integrating IT with SCM; Decision support systems for SCM: introduction DSS, Components, types, processing information, specific types of DSS, Information Technology (IT) Support System for Effective Supply Chain Decision Making.

### Module-V: SCM Inventory management& Relationship Management

Overview, benefits, key features, warehouse and inventory control, purchasing and vendormanagement, Optimised manufacturing process; Supplier Relationship Management: Integrating suppliers into the value chain, Defining purchasing and SRM, Internet driven SRM environment, implementation of e-SRM

### Module-VI: The future of IT in the Supply Chain

Internal Supply Chain management, Supply relationship management, Transactionmanagement ,Data mining –Methods and application area in supply chain.

# INDUSTRIAL MARKETING

**Course Code: MKT4403**

**Credit Units: 03**

## **Course Objective:**

To provide an understanding of industrial market characteristics, evolution of strategies and to learn practical application of different concepts of industrial market

## **Course Contents:**

### **Module I**

Introduction to industrial marketing, environment of industrial and consumer marketing, nature of an industrial buyer, standard product classification

Industrial buying behaviour, individual vs. group decision making, concept of buying center and environmental & organizational influences, buy-grid framework and its practical application, after-sales service (AMC)

Industrial market segmentation, targeting and positioning techniques; sequential segmentation, niche market

### **Module II**

Industrial channel, types, nature, difference between merchant, agents and broker, selection criteria, channel conflicts, channel integration (VMS), marketing strategies, policy, sales management practices training, motivation and examination., e-commerce

Industrial marketing communication, advertising, publicity and sales promotion Trade shows – exhibits – Catalogs – Samples – promotional letters – Promotional novelties

### **Module III**

New product development through in-house (R&D) and technology transfer, different stages in NPD, different types of test markets; IPRs, patent, copyright, non-disclosure agreement (NDA), industrial PLC and effect of various external and internal environmental factors

### **Module IV**

Different types of bids – tender and auction, two parts bid, price discovery mechanism under different market scenarios, OEM and their impact on pricing policies, break-even point calculation

Line of credit and mode of payment, its implication on working capital management, Pricing Objectives - Price Decision Analysis – Breakeven analysis – net pricing – discount pricing – trade discounts – eographic

pricing – factory pricing – freight allowance pricing – Terms of Sale – Outright purchase – Hire-purchase – Leasing

### **Module V**

Industrial marketing research techniques, marketing intelligence, sales and demand forecast in industrial market

Industrial marketing in international context, Incoterms, role of contingency factors affecting industrial marketing decisions

Brief introduction to nature of turnkey and BOT projects, its contractual agreement; leasing

## **Examination Scheme:**

# COMPETITIVE MARKETING

**Course Code: MKT4404**

**Credit Units: 03**

## **Course Objective:**

To develop skills for analyzing market competition and design competitive marketing strategies to be a winner at the market place.

## **Course Contents:**

### **Module-I: Introduction**

Introduction to the competitive marketing strategies: Understanding the competitor, Outwitting, outmaneuvering and outsmarting the competition; Competitor learning;

### **Module-II: Competitor analysis**

Marketplace strategy – Scope, posture and goals; Competitive strategic analysis: Activity/value chain, Alliances, Networks, Capabilities and competencies, Assets and Assumptions.

### **Module-III: Growth Strategies**

Competitive market strategies for emerging industries, strategies for mature and declining brands and fragmented industries; projecting the Competitor's Future Marketplace strategies; Marketing warfare strategies: Market leader strategies, market challenger strategies, market niches strategies

### **Module-IV: Portfolio Analysis**

PLC, Portfolio Matrix, Porter's Strategies Framework. Designing and Managing value networks and marketing channels – channel design decisions, channel management decisions, channel dynamics;

### **Module-V: Managing Communication**

Integrated marketing communication; Managing Advertising , sales promotion, public relations and Direct marketing

## **Examination Scheme:**

Components	CPA	TP	Q/S	A	ME	EE
Weightage (%)	5	5	5	5	10	70

# MARKETING OF NON-PROFIT ORGANIZATION

**Course Code: MKT4405**

**Credit Units: 03**

## **Course Objectives:**

The course aims at familiarizing the students with the application of the concept & need of marketing in Non-Profit organization.

## **Course Contents:**

### **Module I- Introduction to Non-Profit Organization**

Concept & Characteristics, Non-Profit Organization in India, Types, Problems, Need of Marketing of Non-Profit Organization.

### **Module II-NPOs and Image Management**

Differentiation of NPOs: Concept of Responsive Organization- Image management, image causation, image modification, Mission, Exchange, Environment affecting operations of NPOs (Publics), Image & Satisfaction measurement.

### **Module III- Managing Marketing efforts**

Understanding Consumer Behavior; **Product-** Product Mix, Product Mix decisions for Non-profit Organization; Pricing for Non Profit organizations.

### **Module IV- NPOs Market Segmentation & Promotion Mix**

Market Segmentation for Non-profit Organization, Target Marketing; **Promotion:** Advertising, personal selling, sales promotion and Public Relations for Non-profit Organization.

### **Module V- Managing Human and Financial Resource**

**Managing Human Resource:** Attracting People, Analyzing people, Recruitment, Members and membership criterion, Volunteers.

**Managing Financial Resource:** Donor Marketing, Attracting Funds, Analyzing Donor markets, Fund raising goals and strategy.

## **Examination Scheme:**

Components	CPA	TP	Q/S	A	ME	EE
Weightage (%)	5	5	5	5	10	70

## **Texts & References:**

- Philip Kotler: Marketing of Non-Profit Organizations.
- Andresen Alan R: Strategic marketing for NPOs

## BUSINESS AT BOTTOM OF PYRAMID

**Course Code: MKT4406**

**Credit Units: 03**

### **Course Objective:**

The main objective of the course is to develop a deeper understanding of BOP markets among the students. This course will expose the students to the theoretical concepts and frameworks to better understand opportunities and challenges at the BOP markets. They will be in a position after the course to appreciate various complexities involved in doing business at the BOP.

### **Course Contents:**

#### **Module-I: Introduction**

The Market at the Bottom of the Pyramid, The Power of Dominant Logic, The Nature of the BOP Market, Potential of BOP market in India ,Challenges offered by Indian BOP market.

#### **Module-II: The Fortune at the Bottom of the Pyramid**

There Is Money at the BOP, Access to BOP Markets, The BOP Markets Are Brand Conscious, The BOP Market Is Connected, BOP Consumers Accept Advanced Technology Readily ;The Market Development Imperative :Create the Capacity to Consume ,The Need for New Goods and Services ,Trust Is a pre-prerequisite ;Benefits to the Private Sector , Developing Products and Services for the BOP, Twelve Principles of Innovation for BOP Markets ,

#### **Module-III: BOP: A Global Opportunity?**

Engaging the BOP , Local Growth Opportunities ,Local Innovations and Global Opportunity ,BOP Solutions for Developed Markets ,Lessons for MNCs from BOP Markets, The Cost of Managing, Learning to Live in a Network of Relationships; The Ecosystem for Wealth Creation, Reducing Corruption.

#### **Module-IV: Development as Social Transformation**

Development as Social Transformation ,Breaking Down Barriers to Communication, BOP Consumers Upgrade ,Gaining Access to Knowledge, Identity for the Individual, Women Are Critical for development ,Evolving Checks and Balances

#### **Module-V: Innovative Practices at the Bottom of the Pyramid**

The Market at the Bottom of the Pyramid, Known Problems and Known Solutions: What Is the Missing Link? Known Problems and Unique Solutions, Known Problems and System wide Reform, Scaling Innovations, Creating Enabling Conditions for the Development of the Private Sector

### **Examination Scheme:**

Components	CPA	TP	Q/S	A	ME	EE
Weightage (%)	5	5	5	5	10	70

### **Suggested Readings:**

## **SPECIALISATION: E-COMMERCE**

### **SOCIAL MEDIA ANALYTICS**

**Course Code: ECM4401**

**Credit Units: 03**

#### **Course Objective:**

Social media not only provides marketers with a means of communicating with their customers, but also a way to better understand their customers. This course will provide students with an advanced understanding of social media, marketing plans and social media analytics.

#### **Course Contents:**

##### **Module-I: Introduction**

Introduction to various social network platforms- Twitter, Facebook, Google+, LinkedIn and their features. Utilizing social media for Business. Promoting business on social media.

##### **Module-II: Mining Twitter**

Introduction to Twitter, Exploring Twitter's API and Terminology, exploring trending topics, searching for keywords, extracting tweet entities with frequency analysis, computing tweet diversity, examining patterns in retweets, visualizing frequency data with histograms.

##### **Module-III: Mining Facebook & LinkedIn**

Introduction, Understanding the Social Graph API, the Open Graph Protocol, Analyzing Social Graph Connections, analyzing facebook pages, examining friendships.

Introduction, Making LinkedIn API Requests, Data Clustering, normalizing data for analysis, measuring similarity, clustering algorithms.

##### **Module-IV: Mining Google+**

Introduction, Exploring the Google+ API, Term Frequency, Inverse Document Frequency, Querying Human Language Data with TF-IDF 1. Introducing the Natural Language Toolkit, Applying TF-IDF to Human Language, Finding Similar Documents, Analyzing Bigrams in Human Language Reflections on Analyzing Human Language Data

##### **Module-V: Mining Web pages**

Scraping, Parsing, and Crawling the Web, Breadth-First Search in Web Crawling, Discovering Semantics by Decoding Syntax. Natural Language Processing Illustrated Step-by-Step. Sentence Detection in Human Language Data. Document Summarization. Entity-Centric Analysis: A Paradigm Shift. Gisting Human Language Data. Quality of Analytics for Processing Human Language Data

##### **Module-VI: Twitter Cookbook**

Discovering the Trending Topics, Searching for Tweets, Collecting Time-Series Data, Extracting Tweet Entities Finding the Most Popular Tweets in a Collection of Tweets, Tabulating Frequency Analysis, Finding Users Who Have Retweeted a Status, Extracting a Retweet's Attribution, Making Robust Twitter Request, Resolving User Profile Information Extracting Tweet Entities from Arbitrary Text. Getting All Friends or Followers for a User, Analyzing a User's Friends and Followers Harvesting a User's Tweets. Crawling a Friendship Graph

#### **Examination Scheme:**

<b>Components</b>	<b>CPA</b>	<b>TP</b>	<b>Q/S</b>	<b>A</b>	<b>ME</b>	<b>EE</b>
<b>Weightage (%)</b>	5	5	5	5	10	70

# M-COMMERCE & MOBILE APP DEVELOPMENT

**Course Code: ECM4402**

**Credit Units: 03**

## **Course Objective:**

This course will examine the concepts, technology, and applications of mobile commerce, also called m-commerce. The students will be able to learn about the technology needed for m-commerce including mobile client hardware and software, and wireless communications technology. Then the course will examine the range of m-commerce applications.

## **Course Contents:**

### **Module-I: Introduction**

Introduction to e-commerce and mobile commerce, definition, applications, advantages, M-Commerce and e-commerce business models, Mcommerce value chain. Ethical and Social Issues in Mobile Commerce. Mobile computing, Pervasive computing, devices-PDAs, netbooks, smartphones

### **Module-II: WAP Protocol Suite**

Underlying Technologies of M-Commerce-Wireless Application Protocol (WAP), WAP Browser, Enhanced Features of WAP 2.0. Various layers in WAP- Wireless Application Environment (WAE), Wireless Session protocol (WSP), Wireless Transaction protocol (WTP), Wireless Transport layer Security (WTLS), Wireless Datagram protocol (WDP)

### **Module-III: MOBILE COMMERCE: THEORY AND APPLICATIONS**

The Ecology Of Mobile Commerce – The Wireless Application Protocol – Mobile Business Services – Mobile Portal – Factors Influencing The Adoption of Mobile Gaming Services – Mobile Data Technologies And Small Business Adoption And Diffusion – E-commerce in The Automotive Industry – Location- Based Services: Criteria For Adoption And Solution Deployment – The Role of Mobile Advertising In Building A Brand – M-commerce Business Models

### **Module-IV: BUSINESS- TO- BUSINESS MOBILE E- COMMERCE**

Enterprise Enablement – Email and Messaging – Field Force Automation (Insurance, Real Estate, Maintenance, Healthcare) – Field Sales Support (Content Access, Inventory) – Asset Tracking and Maintenance/Management – Remote IT Support – Customer Retention (B2C Services, Financial, Special Deals) – Warehouse Automation – Security.

### **Module-V: The Android Platform:**

Introduction to the Android platform and the Android Studio IDE, Android components, Activities. **User Interface Design:** Intents, Activity lifecycle, UI Design: Widgets and Layouts, UI Events, Event Listeners.

### **Module-VI: Graphics Support in Android:**

Drawables, Basics of Material Design, 2D graphics: Canvas/Drawing using a view

**Multimedia in Android:** Audio playback and MediaPlayer, SoundPool

**Week 5: Networking support:** Basics of networking in Android, AsyncTask, HttpURLConnection

## **Examination Scheme:**

<b>Components</b>	<b>CPA</b>	<b>TP</b>	<b>Q/S</b>	<b>A</b>	<b>ME</b>	<b>EE</b>
<b>Weightage (%)</b>	5	5	5	5	10	70

# E-CUSTOMER RELATIONSHIP MANAGEMENT

**Course Code: ECM4403**

**Credit Units: 03**

## **Course Objective:**

This course examines customer relationship management as a key strategic process for organizations. Composed of people, technology, and processes, an effective CRM optimizes the selection or identification, acquisition, growth and retention of desired customers to maximize profit. Anyone interested in being an architect of CRM within his or her organization, or responsible for the development of any major aspect of CRM will find this course beneficial. CRM discussions and projects will address both organizational customers (B2B) and consumers/households (B2C).

## **Course Contents:**

### **Module I: Introduction and Significance of Customer Relationship Management**

Evolution of CRM, Need for CRM, Benefits of CRM, Transaction vs. Relationship orientation, Introduction and Objectives of a CRM Process, an Insight into CRM, e-CRM and m-CRM.

### **Module II: Managing Customer Relationship**

Relationship Building as a process, Relationship Building Strategies, the ladder of loyalty, Building Customer Relationship Management by Customer Retention, Stages of Retention, Sequences in Retention Process, Customer Defection, Strategies to Prevent Defection and Recover Customers. Market share vs. Share of customers, CLV and Segmentation of customers.

### **Module III: CRM Process**

The CRM cycle i.e. Assessment Phase; Planning Phase; The Executive Phase, Modules in CRM, 4C's (Elements) of CRM Process, Customer Acquisition Strategies, Cross selling and up selling strategies, Customer Equity, Customer Metrics, Customer Complaint Management.

### **Module IV: CRM practices in Business Economy (B 2 C and B 2 B Market)**

Growth of Service in India, Service Customer Classification, Service Marketing Mix, Service Recovery, Characteristics of Business Markets, Importance of CRM in B2B and B 2 C Markets, Key Account Management, Supplier-Channel Management, CRM practices and application in Banking Industry, Retail Industry, Aviation Industry, Hospitality Industry, Pharmaceutical Industry, Telecom Industry and Product Markets.

### **Module V: Technological Tools for Customer Relationship Management**

Components of e-CRM, Data management and construction of databases for Data warehousing and data mining. Analytical and operational CRM, CLTV, what is ACD (automatic call distribution), IVR (interactive voice response), CTI (computer telephony integration), web enabling the call center, automated intelligent call routing, logging and monitoring.

### **Module VI: Issues and Challenges in Implementation of CRM**

CRM Implementation Road Map, building organizational capabilities through Internal Marketing, CRM Roadblocks (4P's), Phased development, Learning from customer defections, Evaluating customer retention programmes, Emerging trends in CRM.

## **Examination Scheme:**

<b>Components</b>	<b>CPA</b>	<b>TP</b>	<b>Q/S</b>	<b>A</b>	<b>ME</b>	<b>EE</b>
<b>Weightage (%)</b>	5	5	5	5	10	70

# TOOLS FOR BUSINESS INTELLIGENCE

**Course Code: ECM4404**

**Credit Units: 03**

## **Course Objective:**

This course provides an introduction to the concepts of business intelligence (BI) as components and functionality of information systems. The course aims at examining Business Intelligence (BI) as a broad category of applications and technologies for gathering, storing, analyzing, sharing and providing access to data to help enterprise users make better managerial decisions. Students will be able to learn the principles and best practices for how to use data in order to support fact-based decision making

## **Course Contents:**

### **Module-I: Business Intelligence: An Introduction**

Introduction, Definition, History and Evolution, Business Intelligence Segments, Difference between Information and Intelligence, Defining Business Intelligence Value Chain, Factors of Business Intelligence System, Real time Business Intelligence, Business Intelligence Applications.

### **Module-II: Business Intelligence Types:**

Types of Business Intelligence, Business Intelligence Platform, Dynamic roles in Business Intelligence, Roles of Business Intelligence in Modern Business- Challenges of BI, Multiplicity of Business Intelligence Tools, Types of Business Intelligence Tools, Modern Business Intelligence, the Enterprise Business Intelligence, Information Workers

### **Module-III: Business Intelligence Life Cycle**

Introduction, Business Intelligence Lifecycle, **Enterprise Performance Life Cycle (EPLC)** Framework Elements, Life Cycle Phases, Human Factors in BI Implementation, BI Strategy, Objectives and Deliverables, Transformation Roadmap, Building a transformation roadmap, BI Development Stages and Steps, Parallel Development Tracks, BI Framework

### **Module-IV: Introduction to Data Warehousing & Data Mining**

Data Warehousing, Advantages and Disadvantages, Data Mart, Online Analytical Processing (OLAP), Characteristics, Tools, Difference between OLAP and OLTP, Multidimensional Data Model. Definition of Data Mining, Data mining parameters, How Data Mining works?, Types of relationships, Architecture of Data Mining, Kinds of Data which can be mined, Functionalities of Data Mining, Classification on Data Mining system, Various risks in Data Mining, Advantages and disadvantages of Data Mining

### **Module-V: Business Intelligence User Model**

Introduction, Evolution of Business Intelligence, Business Intelligence Opportunity Analysis Overview, Content Management System, End User Segmentation, Basic Reporting and Querying, Online Analytical Processing, OLAP Techniques, OLAP Applications, Applying the OLAP to Data Warehousing, Benefits of using OLAP, Dashboard, Advanced/Emerging BI Technologies, Future of Business Intelligence

## **Examination Scheme:**

<b>Components</b>	<b>CPA</b>	<b>TP</b>	<b>Q/S</b>	<b>A</b>	<b>ME</b>	<b>EE</b>
<b>Weightage (%)</b>	5	5	5	5	10	70

# ADVANCEMENTS IN ELECTRONIC PAYMENT SYSTEMS

Course Code: ECM4405

Credit Units: 3

## Course Objective:

The course will enable students to understand different kinds of payment methods and requirements for a secure electronic payment system. Students will also be able to learn about different forms of electronic money, how money moves through the world's banking systems, how security is achieved in payment systems.

## Course Contents:

### Module-I: Introduction to E-Commerce

Introduction to e-commerce & e-business, features, benefits & limitations of e-commerce, traditional & e-commerce, various business models. Applications of e-commerce in various sectors.

### Module-II: Electronic Payment Systems Types

Meaning, definition and features of electronic payment system Types- Digital Token-Based Electronic Payment Systems, Smart Cards & Stored value cards, Credit Card- Based Electronic Payment Systems, Brick & Mortar Payment Systems. Digital wallets, Risks associated with payment systems.

### Module-III: Protocols for EPS

Security requirements for EPS- Authentication, Trust, Privacy, Non-repudiation and availability. Network Protocols, Secure Socket Layer (SSL)- Introduction and its working, Secure Hypertext Transfer Protocol (S-HTTP), Secure Electronic Transactions (SET), Authentication Techniques- Shared Secrets and Tokens.

### Module-IV: E-Banking

Introduction to e-banking, features, services, advantages & limitations of e-banking. Types of e-banking systems, Growth in e-banking, Risks associated with e-banking. Safe Internet banking. NEFT, RTGS, SWIFT transfers, ACH transactions.

### Module-V: Electronic Invoice Presentment and Payment

Electronic statement delivery, EIPP providers: biller service providers, customer service providers. Thick vs. thin consolidation. Reconciliation. Bill data mining. B2B integration. Invoice elimination: scan-based trading (SBT).

### Module-VI: Security Environment

Security threats in e-payment systems, malicious code and unwanted programs, Phishing & identity theft, hacking & cyber crimes, credit card frauds/theft, spoofing. Protecting Internet Communications, Encryption, Symmetric & Asymmetric cryptography, Digital Envelops, Digital Signatures.

## Examination Scheme:

# SEARCH ENGINE OPTIMIZATION

**Course Code: ECM4406**

**Credit Units: 03**

## **Course Objective**

The course will enable students the craft of optimizing websites for Search Engines. Students will learn about how the search engine works, the techniques for conducting SEO and keywords searching.

## **Course Contents:**

### **Module-I: SEO Basics**

Introduction about Domain, World Wide Web, Difference between Portal & Search Engine, Importance of Search Engine, Working of search engine, Difference between directories & search engine. Website performance monitor in search engine

### **Module-II:**

Introduction to SEO, Web Traffic, Need of SEO, Working of SEO, Steps in SEO, Types of SEO techniques : Black Hat Techniques, White Hat Techniques,

### **Module-III: Keyword Research & Analysis**

Introduction to Keyword research: Types of keywords, Keyword research methodology, keywords analysis tools, Preparing keyword list, localized keyword research, Keyword density, Keyword prominence, keyword stuffing

### **Module-IV: On Page Optimization**

Basis of website designing, Essentials of good website designing, HTML Basics for SEO : Page Title, Meta Descriptions & Meta Keywords, Headings, Bod Text, Image & Alt tag, Invisible text, HTML Site Map Creation, Web Master Tools

### **Module-V: Off Page SEO Optimization**

Page Rank, Link Popularity, Link Building, Types of Link Building, Book Marking, Article Submission Blog Marketing, Blog commenting, XML Site Ma submission, Customer review submission, press release submission, search engine submission

## **Examination Scheme:**

Components	CPA	TP	Q/S	A	ME	EE

# E-SUPPLY CHAIN MANAGEMENT

**Course Code: ECM4407**

**Credit Units:3**

## **Course Contents:**

### **Module I-Introduction to SCM**

Concept of supply chain, integrated supply chain, Growth of Supply chain; Strategic decision in supply chain; Supply Chain Management as a Management Philosophy; Scope &function of SCM,.

### **Module II-SCM Strategies Performance**

Supply chain strategies, achieving strategic fit, value chain, Supply chain drivers and obstacles, Strategic Alliances and Outsourcing, purchasing aspects of supply chain, Supply chain performance measurement: The balanced score card approach, Performance Metrics.; Planning demand and supply: Demand forecasting in supply chain, Aggregate planning in supply chain, Predictable variability.

### **Module III- Role of IT in Supply chain**

Uses of IT in inventories, transportation & facilities within a supply chain; SCM frame Work-macro Processes, Advent of internet business technologies; Supply chain information System Design-Planning, Capacity, Performance requirement ,manufacturing requirement ,Operation , Transportation ,Inventory development ; E-Business –Role in Supply chain, Framework ,Impact on Cost;

### **Module IV- Impact of IT on integrated SCM and DSS**

Infrastructure, impact of e-commerce; framework for IT integrated SCM, Impact of integrating IT with SCM; Decision support systems for SCM: introduction DSS, Components, types, processing information, specific types of DSS, Information Technology (IT) Support System for Effective Supply Chain Decision Making.

### **Module V-SCM Inventory management& Relationship Management**

Overview, benefits, key features, warehouse and inventory control, purchasing and vendormanagement, Optimised manufacturing process; Supplier Relationship Management: Integrating suppliers into the value chain, Defining purchasing and SRM, Internet driven SRM environment, implementation of e-SRM

### **Module VI- The future of IT in the Supply Chain**

Internal Supply Chain management, Supply relationship management, Transactionmanagement ,Data mining –Methods and application area in supply chain.

## **Examination Scheme:**

<b>Components</b>	<b>CPA</b>	<b>TP</b>	<b>Q/S</b>	<b>A</b>	<b>ME</b>	<b>EE</b>
<b>Weightage (%)</b>	5	5	5	5	10	70

### **MARKETING MANAGEMENT**

**Course Code: MWP4101**

**Credit Units: 04**

**Course Objective:**

The objective of this course is to introduce the basic concepts of marketing and to develop a feel of the marketplace.

**Course Contents:**

**Module I: Understanding Marketing Management**

The orientations towards market place, Relationship marketing, Social marketing, Strategic Planning.

**Module II: Market research & environmental scanning**

Research, Objectives, Primary and Secondary Research, Gathering and Analyzing Data

**Module III: Understanding Consumer Behaviour**

The factors influencing consumer behaviour. The stages in the buying process, the buying decision making process, factors effecting the buying decision. The industrial buying process

**Module IV: Segmentation**

Segmentation, targeting, positioning. Product life cycles, stages in lifecycle and factors affecting each stage, Managing product life cycles.

**Module V: Managing Competition**

Analyzing Competition, reaction patterns of various market players,

**Module VI: Product Management**

Classification of products, New Product development, stages of product development, Adoption process, Product mix decisions and line management, Length, width and depth of a line, line analysis, and brand management.

**Module VII: Pricing Strategies**

Setting the price, adapting the price, initiating and responding the price changes.

**Module VIII: Designing & managing value networks & marketing channels.**

Channel functions and flows. Channel design decisions. Channel management decisions. Channel dynamics; vertical horizontal and multi channel marketing systems. Conflict, cooperation and competition.

**Module IX: Managing the Integrated Communication**

Advertising, sales promotions, public relations, direct marketing.

**Module X: Marketing implementation**

Formulating the marketing plan.

## ACCOUNTING & FINANCE

**Course Code: MWP4102**

**Credit Units: 04**

### **Course Objective:**

Participants in this course will develop the essential ability of all managers, to use complex accounting information as a platform for decision-making. As the course unfolds, participants will build an increasingly sophisticated level of understanding of the language of accounting and its key concepts. In addition the course develops skills in interpreting earnings statements, balance sheets, and cash flow reports. This ability to analyze financial statements will enable participants to deal more effectively with strategic options for their businesses or business units.

### **Course Contents:**

#### **Module I: Accounting Basics**

Introduction, Foundations, Accounting policies, Accounting and management control, Branches of accounting, recording of transactions and classification, Trial Balance & Errors, Cash book and Bank reconciliation statement.

#### **Module II: Final Accounts**

Preparation, Adjustments, Analysis, Depreciation Accounting, Reserves & Provisions. Form and contents of financial statements with reference to Indian Companies Act.

#### **Module III: Financial Statement Analysis**

Relation and Comparison of Accounting data and using financial statement information, Ratio Analysis, Fund flow and Cash flow analysis. Determination of Existing and future capital requirement.

#### **Module IV: Cost Accounting**

Elements of cost, Cost Classification and Allocation, Cost Sheet, Method of Inventory Valuation.

#### **Module V: Management Accounting**

Emergence of Management Accounting, Marginal Costing and Cost Volume Profit Analysis, Budgeting & Variance Analysis.

#### **Module VI: Common Issues and recent trends in Accounting**

Accounting for Investments, Payroll Accounting, Inflation Accounting & Pricing decisions. Activity Based Costing & responsibility Accounting.

### **Examination Scheme:**

Components	C	A	CT	EE
Weightage (%)	10	5	15	70

# QUANTITATIVE APPLICATIONS IN MANAGEMENT

**Course Code: MWP4103**

**Credit Units: 04**

## **Course Objective:**

The aim of this course is to develop the understanding of the various statistical models used for decisions making and how each applies to and can be used in the business environment using contemporary computerbased technology.

## **Course Contents:**

### **Module I: Introduction**

Application of Statistics in Business & Management; Basic Concepts of Statistical Studies: Variable and Classification of Data; Diagrammatic & Graphical Presentation of Data: Bar Diagram, Histogram, Pie – Diagram, Stem Leaf Display, Frequency Polygons, and Ogives.

### **Module II: Summary Statistics**

Measures of Central Tendency: Arithmetic Mean, Weighted Mean, Median and Mode

Measures of Dispersion: Range, Quartiles, Average Deviation, Standard Deviation, Variance and Coefficient of Variation.

### **Module III: Forecasting Techniques**

Simple Correlation & Regression Analysis, Time Series Analysis- Introduction, Variation in Time Series, Trend Analysis, Cyclical Analysis, Seasonal Analysis, Irregular Variation

### **Module IV: Probability & Probability Distributions**

Probability: Basic Terminology in Probability, Types of Probability, Probability rules, Probabilities under condition of Statistical Independence, Probabilities under condition of Statistical dependence, Baye's Theorem Probability Distributions: How Random Variable arise, Probability distribution of random variable, Mean or Expected value of random variable, Variance and Standard Deviation of random variable. Binomial Distribution, Poisson Distribution, The Normal Distribution.

### **Module V: Sampling, Estimation and Testing of Hypotheses**

Sampling & Sampling Distribution: Parameter and Statistic, Point and Interval Estimation, Interval Estimation of three common parameters viz. Mean, Standard Deviation and Proportion.

Hypothesis Testing for a Single Population: Concept of Hypothesis, Test involving a population mean, Test involving a population proportion, Test involving population Standard Deviation, The concept of P – Value Hypothesis Testing to compare two populations: Test for two population means (Independent Samples), Tests for two population means (Dependent Samples), Tests for two population proportions (Independent Samples), Tests for two population variances (Dependent Samples), F-test, Non-parametric Tests (Chi – Square Test)

### **Module VI: Decision Theory & Introduction to Operations Research**

*Decision Theory:* Introduction of Decision Theory, Steps in decision theory approach, Types of Decision Making Environments, Decision Making under Uncertainty- Criterion of Optimism, Criterion of Pessimism, Equally likely decision (Laplace) criterion, Criterion of Realism (Hurwicz Criterion), Criterion

of Regret (Savage criterion) Decision Making under Risk- Expected Monetary Value & Expected Opportunity Loss. Linear Programming: Introduction of Linear Programming, Formulation of LPP, Solution of LPP – Graphical Method

## **ECONOMIC ANALYSIS**

**Course Code: MWP4104**

**Credit Units: 04**

### **Course Objective:**

To familiarize the students with theoretical concepts of modern Economic Analysis so that they can use these as inputs in managerial decision making process. Emphasis would be laid on the understanding of key economic variables both at micro and macro level which influence the business operations and strategies of the firm and the business environment under which they operate.

### **Course Contents:**

#### **Module I: Theory of demand and supply**

Nature and scope of economic analysis: its relevance for managerial decision making, Demand analysis: nature of demand for a product- individual demand and market demand, demand by market segmentation. Demand function and determinants of demand. Supply function: determinants of supply of a product, law of supply.

Elasticity of supply. Concept of elasticity of demand- income, cross, price and advertising elasticity. Theorems on the price elasticity of demand. Applications of the concept of price elasticity of demand in business decisions. Demand forecasting need for forecasting and techniques of forecasting. Cost concepts: costs relevant for management decision making. Economies of scale: internal and external. Cost function: cost and output relationship. Short run and long run.

#### **Module II: Theory of production and cost**

Production analysis: Production function- neo-classical, Cobb- Douglas, Leontief. Least cost combination of inputs for a firm. Concept of an isoquant- smooth curvature and right angle. Returns to scale and returns to a factor. Expansion path of a firm. Cost Analysis: Cost relevant for management decision making. Economies of scale: Internal and External, Cost Function: Cost and output relationship. Short Run and Long run. An Analysis of the Objectives of a Business Firm: Profit Maximization Model, Baumol's Sales Maximization Model, Marris's Model of 'Managerial Enterprise' Williamson's Model of 'Managerial Discretion'.

#### **Module III: Market Structure: Price and Output decisions**

Pricing and Output decisions – Perfectly Competitive and Monopoly Market Pricing and Output Decisions- Under Monopolistically Competitive Market- Product Differentiation; Price Discriminating Monopolist; Models of Oligopolistic Market: Price Rigidity – The Kinky Demand Curve Model Interdependence - The Cournot Model, Price Leadership Models, Cartels and Collusion.

#### **Module IV: Macro Economics Analysis**

Economic Policy and Analysis: Macro Economic Variables and Functional Relationships. Business Environment: An Exogenous Variable. Factors Influencing the Business Environment. National Income Analysis: National Income Aggregates. Approaches to National Income Measurement. Circular Flow of income, Money-Incorporating Savings Investment, Foreign Trade and Government Sector. Consumption Function, Saving Function and investment Function. Concepts of Investment Multiplier. Factors Influencing Consumption Function- Objective, Subjective and Structural. Demand and Supply of Money: Transaction,

Precautionary and Speculative Demand for Money; Liquidity preference function; Components of Money Supply. Business Cycles: An Analysis of Fluctuation in the level of Economic Activity. Phases of Business Cycles.

Inflation and Deflation: Demand – Pull and Cost – Push Inflation. Impact of Inflation on Employment, Price Level and other Macro Economic Variables and Analysis of Policies to control inflation. Deflation. Monetary Policy: Objectives of Monetary Policy. Function of Central Bank. Credit Policy and its implications on the Corporate Sector. Fiscal Policy: meaning, objectives and impact on economy. Money Market, Capital Market and Foreign Exchange Market.

**Examination Scheme:**

## **Syllabus – Second Semester**

### **STRATEGIC HUMAN RESOURCE MANAGEMENT**

**Course Code: MWP4201**

**Credit Units: 04**

**Course Objective:**

This module will place previous studies of Human Resource Management within a strategic, international dimension so as to illustrate the concept of competitive advantage applied to human resources.

On completion of this module students will be able to:

- ☐ Identify ways that HR management operates as a strategic business partner in today's business organizations.
- ☐ Develop means to evaluate human resources and the effectiveness of HR practices
- Develop HR strategies to compete internationally

**Course Contents:**

**Module I: Introduction to Strategic HRM**

Definition, need and importance - Introduction to business and corporate strategies - Integrating HR strategies with business strategies – Developing HR plans and policies, Best fit approach vs Best practice approach

Strategic planning in SBUs , HR strategy in Multinational and Transnational companies.

Technology and structure, Workforce diversity, Demographic changes, Global sourcing of labour - WTO and labour standards

**Module II: Recruitment and retention strategies**

Strategies for employee shortages and surplus, efficient utilization of human resources, Recruitment process outsourcing, Flexi timing , Quality of work life Work – life balance , Employee empowerment , Employee involvement , Autonomous work teams

**Module III: Training and Development Strategies**

Creating learning organization - Competency mapping – Multi-skilling – Succession planning - Cross cultural training

**Module IV: Performance Management strategies**

Defining key result areas (KRA) - Result based performance - Linking performance to pay - Merit based promotions, Reward and Compensation Strategies Performance based pay , Skill based pay , Team based pay ,Broad banding, Profit sharing,- Executive compensation , Variable pay

**Module V: Retrenchment strategies**

Downsizing - Voluntary retirement schemes (VRS), HR Outsourcing , Early retirement plans, Project based employment, Human Aspects of Strategy implementation

**Module VI: Behavioral issues in strategic implementation –**

Matching culture with strategy Human side of mergers and acquisitions - Leadership, power and politics  
Employee morale, Personal values and business ethics Global HR Strategies

### **Learning Methods:**

Tutorials, Interactive sessions, Case studies, Field visits, Extensive research projects, Seminars, - the course is covered by adopting a combination of lecture methods, class presentation by groups of students, self study sessions. Each student is required to do the back ground reading from the specified chapters of the prescribed book before coming to class. Cases are also to be analyzed, discussed in groups (teams) outside the class as preparatory work.

### **Examination Scheme:**

Components	C 1	V	A	CT	EE
Weightage (%)	10	5	5	10	70

# **OPERATIONS RESEARCH**

**Course Code: MWP4202**

**Credit Units: 04**

## **Course Objective:**

The course aims to provide a thorough understanding of the essential features, relevance, application, tools and techniques of Operations Research. The objective of this course is to develop the understanding of models building and quantitative approach to decisions making in the functions of the management of any organization with special focus on International Business. It also aims to develop the understanding of the various optimization techniques used for decisions making in the functions of the management of any organization.

On Completion of this module, students will be able to understand the Importance of learning Operations Research. The student will also be able to mathematically capture the behavior in strategic situations. They will better analyze the situation among the two, which will increase the Decision Making Capability.

## **Course Contents:**

### **Module 1: Introduction to Operations Research**

History, models  
Modeling in operations research  
Methods of solving operations research problems  
Applications and scope  
Types of Models

### **Module 2: Linear Programming**

Structure, assumptions, terms used, Application, general model  
Linear Programming Model Formulation  
Graphical Solution Methods  
Simplex Method, Big-M method  
Infeasibility, Unboundedness, Degeneracy, Multiple optimal solutions  
Duality

### **Module 3: Transportation Problems**

Structure  
Model formulation, mathematical representation  
North west corner method, least cost method, Vogel's approximation method  
Stepping Stone method, Modified Distribution Method for testing optimality  
Unbalanced supply and demand, Degeneracy, Prohibited Routes, Duality  
Maximization transportation problems  
Transshipment problems

### **Module 4: Assignment Problems**

Structure, Model  
Methods of solving Assignment Problem- Simplex, transportation, exhaustive

Hungarian method  
Multiple optimal solutions  
Unbalanced Assignment Problems  
Restrictions in Assignment problems  
Maximization models  
Traveling Sales man problems

### **Module 5: Theory of Games**

Structure, Factors  
Two-Person Zero-Sum Games  
Pure Strategy games, Saddle point  
Mixed Strategies games  
Rules of dominance  
Methods of solving games without saddle point

### **Module 6: Network Analysis**

Concept of CPM/PERT  
Difference between CPM/PERT  
Network Diagrams and rules for preparing networks  
CPM, Critical Path Analysis, float, project crashing, time cost trade off  
PERT, Probability in PERT, estimation of completion time

### **Module7: Theory of Queuing**

Structure, Characteristics of queuing  
Pure birth, pure death process  
Types of queuing models  
Single Server Unlimited Queue Model and limited queue model  
Multiple Server unlimited queue model and limited queue models

### **Module 8 A: Break Even Analysis**

Break even volumes of production  
Forecasting profits, determining effects of change in output on profit and cost

### **Module 8 B: Annuities**

Present value of annuities, perpetual annuities, deferred annuities

### **Module 9: Replacement Decisions**

Types of failures of machinery and equipment  
Replacement of assets that deteriorate over time  
Replacement of assets that fail completely

### **Module 10: Simulation**

Basic Concepts  
Stochastic and Random numbers  
Monte Carlo method of simulation for queuing, inventory etc  
Learning Methods:

Occasional, non-graded homework sets will be handed out in class. It is also expected that students will work the problems as the part of assignments. The class will be doing *Cases* throughout the semester. Students will prepare three written cases in small groups of 4-6 students. There will be presentations also in which the student have to collect, collate and analyze the data.

**Examination Scheme:**

Components	P1	A	C1	EE
Weightage (%)	15	5	10	70

# **LEVERAGING INFORMATION TECHNOLOGY IN GLOBAL BUSINESS**

**Course Code: MWP4203**

**Credit Units: 04**

## **Course Objective:**

Information Technology (I.T.) has become a major factor in nearly every aspect of our society. The personal computer has developed into a powerful tool for gathering, manipulating, and delivering information and sophisticated databases allow us to store, collate, and access data. Networks and telecommunications technology allow delivering and retrieving information from around the world. Managers at all levels must have a better understanding of IT, its language and issues. Armed with this knowledge, the manager will be able to improve communication with the IT group and make more accurate business decisions. This course aims to develop the students' ability to manage commercial transactions electronically, particularly through the internet. The course is concerned with the main functional areas of management and processing in the world of international business.

## **Course Contents:**

### **Module I: Foundation of IT & E-business**

Introduction of ICT for Managers  
Fundamentals of ICT (Office Automation & Communication Technologies)  
Definitions and content of E-business  
Case Study  
Presentation & Internal Assessment

### **Module II: Essential tools in IT for Business**

Presentation skills- MS-PowerPoint  
Using MS-Word as a Reporting tool  
Basic Ms-Excel tools for computing-1  
Practical application of basic excel tools  
Advanced Excel tools for analysis(VLOOKUP, PIVOT TABLE,GOAL SEEK)  
Presentation & Internal Assessment

### **Module III: Essential tools in IT for Business-2**

Practical application of advanced Excel for computing  
Excel in Financial analysis  
Excel in Marketing analysis

### **Module IV: Cyber Laws : Global Perspective**

Laws related to E-banking  
Case study on e-banking  
The Risks & threats in Cyberspace  
Protection and Recovery -Encryption  
Legal & ethical issues  
E-governance

**Learning Methods:**

This course is based upon interaction between the students and the teachers. Wherever possible a link will be made between the academic underpinning and its practical application. Students will be given time to develop skills and analyse the benefits and limitations of using e commerce in organisations.

A 'hands on' approach will ensure that students can develop a wide range of knowledge of different applications of IT. The practical knowledge can be used to develop an awareness of how e commerce can be adopted by organisations to improve business efficiency. This will be achieved via a combination of case studies, evaluations of actual e commerce projects, guest lectures and self study sessions. It is very important that the students go through the textbook chapter(s) and other reference material before coming to the class.

**Examination Scheme:**

Components	C 1	V	A	CT	EE
Weightage (%)	10	5	5	10	70

## **RESEARCH METHODS AND REPORT PREPARATION**

**Course Code: MWP4204**

**Credit Units: 04**

### **Course Objective:**

The course aims to provide a thorough understanding of the essential characteristics and the basic tenets of research methodology and report preparation. The course will focus on quantitative and descriptive research methods and techniques that are essential for the validity and reliability of the research process. The course will identify and review the components essential for preparation of research proposals, research reports, business proposals and feasibility studies in order to develop report writing and formal presentation skills of the research projects undertaken.

### **Course Contents:**

#### **Module I: Research Methodology and Research Methods**

Objective, significance and types of research  
Research Methods vis-à-vis Methodology  
Research Process and criterion for good research  
Ethics in Business Research

#### **Module II: Research Problem and Research Design**

Defining and Identifying the Problem  
Formulation of Hypothesis  
Techniques involved in defining the Problem  
Meaning and features of Research Design  
Types of Research: Qualitative and Quantitative Research  
Developing a Research Plan: Industry Specific **Research Proposals**

#### **Module III: Sampling Design and Scaling Techniques**

Census and sample survey  
Criteria for selecting a sampling procedure  
Measurement and Scaling techniques  
Classification and importance of Scaling techniques  
Market Specific Sample survey

#### **Module IV: Interpretation and Analysis of Data**

Methods of Data collection: Primary and Secondary Data  
Constructing Questionnaires: Guidelines  
Elements / Type of Analysis of Data  
Processing Operations  
Usage of Statistical Software such as SPSS  
Problems of accuracy in interpretation of data

#### **Module V: Testing of Hypothesis**

Z-test  
F-test  
T-test  
Chi-Square Test

### **Module VI: Design and Analysis of Experiments**

Analysis of Variance  
Completely Randomized Design  
Factorial Design (22 Factorial Experiment, 23 Design)

### **Module VII: Report Writing**

Significance of Report Writing: Market Research and Experience Based Reports  
Mechanics and Steps in writing a Research Report  
Techniques and Interpretation of Research Process  
Salient aspects of Oral Presentation

### **Learning Methods:**

Occasional, non-graded homework sets will be handed out in class. It is also expected that students will work the problems as the part of assignments.

The class will be doing *Cases* throughout the semester. Students will prepare three written cases in small groups of 4-6 students. There will be presentations also in which the student have to collect, collate and analyze the data.

### **Examination Scheme:**

<b>Components</b>	<b>P1</b>	<b>C1</b>	<b>CT1</b>	<b>EE</b>
<b>Weightage (%)</b>	10	10	20	70

## **Syllabus – Third Semester**

### **OPERATIONS AND SUPPLY CHAIN MANAGEMENT**

**Course Code: MWP4301**

**Credit Units: 04**

**Course Objective:**

Operations and Supply chain are an integral contributor to an organisation's top and bottom line success. This course is based on a foundation in the theories and practice of management in businesses where operations and supply chain management are critical to success. These include product and process design, choosing appropriate technology, adopting efficient work methods, planning (including location and facilities layout), streamlining the flow of people and materials, and continuously improving the quality of the final product, in order to create internal and external customer value.

**Course Contents:**

**Module I: Introduction**

Significance of POM in business  
POM model and its elements  
Scope of POM  
History of POM

**Module II: Competitive Advantage through operations management**

Competitive Advantage through POM  
Critical factors for gaining competitive advantage  
Operations models  
Operations strategy  
Case discussion

**Module III: Product**

Product – levels, types, categories  
Product design and development  
Commercial production and launch  
Support and up-gradation  
Case discussion

**Module IV: Processes and Technology**

Types of productive systems  
Types of production processes  
Comparison of production processes  
Case discussion

**Module V: Forecasting**

Significance of forecasting for operations management

Forecasting techniques  
Mathematical models and their practical applications  
Forecasting errors.  
Laws of forecasting and how they affect operations

**Module VI: Planning and Scheduling**

Operations Planning and Scheduling  
Long range and aggregate output planning  
Master production schedules  
Functional planning and production control  
Operations scheduling  
Case discussion

**Module VII: Quality Management**

Quality management  
SQT, AS, SQC, SPC and practical applications  
Case discussion

**Module VIII: Performance improvement in operations**

Latest techniques in operations management  
Just-In-Time technique  
Ergonomics and work study  
Case discussion

**Module IX: Operations Management in the Indian context**

Implementation of operations management techniques by Indian companies  
Case discussion

**Module X: Supply Chain Management**

Operations capacity  
Capacity measures  
Capacity planning process  
Evaluation of alternatives for capacity expansion  
Module XI: Site Location and Layout Planning  
Factors affecting site location decisions  
Evaluation of site location options  
Objectives of layout planning  
Types of layouts

**Designing of layouts**

Module XII: Supply Chain Management  
Basic Concepts

Characteristics of business partners of a supply chain.  
Elements of supply chain management systems  
Demand management, customer service management  
Procurement, Outsourcing, supplier relationship management  
Physical distribution management, returns management  
Learning Methods:

Tutorials, Interactive sessions, Case studies, Field visits, Management games, Extensive research projects, Seminars, Weekend experience in companies - the course is covered by adopting a combination

of lecture methods, class presentation by groups of students, self study sessions. Each student is required to do the back ground reading from the specified chapters of the prescribed book before coming to class. Cases are also to be analyzed, discussed in groups (teams) outside the class as preparatory work.

#### **Examination Scheme:**

<b>Components</b>	<b>P1</b>	<b>C1</b>	<b>CT1</b>	<b>EE</b>
<b>Weightage (%)</b>	10	10	20	60

# STRATEGIC MANAGEMENT

**Course Code: MWP4302**

**Credit Units: 04**

## **Course Objective:**

International Strategy is a term used to describe strategic activities of firm operating across borders. It is a distinct area of management. 'Global' is a new replacement for the term 'International'. Hence 'International Strategy' and 'Global Strategy' are sometime used interchangeably. International Strategic Management is relatively new and dynamic discipline and requires strong relationship with other areas of management. A new strategic initiative can not be successfully implemented unless it is supported by all the other functional areas of the organization like production, finance, HR.marketing, material management and quality etc. International Strategic Management is thus deeply interwoven with other aspects of business management. The aim of this course is to give learner an understanding of theory and principles of strategic management with a wider perspective towards 'Global Strategic Thinking'. The course presents a process of developing and implementing a strategic plan within an organization for international business

## **Course Contents:**

### **Module I: Introduction & Basic Concepts**

Introduction and Course Overview,  
Concept of Strategy and Strategic management,  
Nature of 'International Strategic Management',  
Evolution of Strategic Management  
Strategic Management Process- **strategic choices, strategy into action**, Levels of Strategy

### **Module II: Role of environment on strategy**

Value chain analysis  
External environment  
- Macro & Micro environment  
- Opportunities & threats  
- Global business environment  
Internal Environment  
- Strengths & weaknesses – **strategic gaps**  
- Present strategies, Capabilities & Core Competencies.  
-

### **Module III: Vision, Mission, Business Definition, Goals and Objectives of Global Companies**

### **Module IV: Evolution of Global Corporation**

Why do firms Internationalize /Globalize,  
Phases of Global strategy,  
Global Strategic Planning/ Management,  
Problems in IS Planning,  
Corporate Social Responsibility as strategy

**Module V: Global Strategic Analysis- Building strategic alternatives & choices**

Porter's 5 Force Model,  
ETOP & SAP Profile,  
SWOT/TOWS Matrix, BCG, GE Nine Cell Matrix

**Module VI: Formulation, Implementation, Evaluation and Control of International Strategies**

Generic strategies,  
Grand strategies,  
Corporate/Business/Functional strategies,  
International strategic alliances.  
Operationalising and Institutionalizing strategy,  
Strategic leadership,  
Managing culture in a global organization,  
Strategic evaluation and control,  
Goal flow down processes,  
Balanced Score Card

**Module VII: Current trends and Contemporary Concepts-**

Blue ocean, White space, disruptive strategy etc.,  
Concept of strategic intent-view of Hamel & Prahalad.  
Why restructuring? Numerator and Denominator Management as expressed by Hamel & Prahalad,  
Turn around strategy  
Learning Methods:  
Various teaching and learning styles will be used in this module. Lecturing will be used in a number of classes to clarify background information. Interactive discussions will be used to help students learn from each other. Case studies will be used as a basis for reinforcing ideas, improving oral presentation skills, improving written communication skills, and develop an appreciation for team participation.

**Examination Scheme:**

Components	V	A	C1	CT1	EE
Weightage (%)	5	5	10	10	70

## **PRODUCT AND BRAND MANAGEMENT**

**Course Code: MWP4303**

**Credit Units: 04**

### **Course Objective:**

The main objective of the course is to make the students learn and conceptualize the entire gamut of developing new products, improving the existing products and managing the performance of product items and product line(s) as a whole to maximize the company's profit. The course also gives students the insight of process involved in branding decisions and strategies for growth of brands.

### **Course Contents:**

#### **Module I: The Product Management Process**

The Product Management

Function

Product Management Decisions

What is a Product Portfolio?

Drawbacks of the Product

Portfolio Approach

Product Management Basics

Defining competitive set

Category Attractiveness Analysis

Competitor Analysis

Customer Analysis

#### **Module II: The Product Planning System**

The Traditional Approaches to Product Planning

A Matrix Approach to Product Planning

Product Evaluation Matrix in a Nutshell

PLC as an aid to Product Planning

PLC as a Tool to Plan Market Share Strategies

Product Strategy over Life Cycle

#### **Module III: Diffusion of Innovation**

The adoption Process

Classification of Adopters

Diffusion of Consumer Innovations

Diffusion of Industrial Innovations

#### **Module IV: Generation, Screening And Development of New Product Ideas**

Innovation and the new product development process

Generation of new product ideas

Sources of new product ideas

Methods of generating new product ideas

Screening of new product ideas

Criteria for screening new product ideas  
Development of new product ideas

### **Module V: Economic Analysis Evaluation of New Product ideas/concepts**

Purpose of Economic Analysis  
Market Potential  
Market Demand  
Estimating Sales  
Sales Forecasting Methodologies  
Estimating Costs, Sales and Profits  
Break-Even Analysis  
Return on Investment  
Economic Analysis Summary Form

### **Module VI: Test Marketing and New Product Launch**

Purposes of Test Market  
Test Marketing Strategies  
Simulated Test Marketing  
New Product Launch – the Marketing Plan  
Defining and Selecting the Target Market  
Product Strategy and Product Positioning  
Pricing the New Product  
Advertising the New Product

### **Module VII: Packaging Decisions**

Importance of Packaging in Marketing  
Packaging Strategies  
Legal Aspects of Packaging  
Cost Effectiveness of Packaging  
Social Aspects of Packaging

### **Module VIII: Branding and Brand Positioning**

Branding  
Consumer Based Brand Equity [CBBE]  
What is brand equity? CBBE: Keller's Model  
Aaker's BE Model  
Brand Identity Elements  
Brand identity prism  
Meaning of Brand identity  
Need for Identity  
Dimensions of brand identity  
Brand identity prism  
Brand Extension-  
Meaning, Types, Needs, Advantages & Disadvantages of Brand Extension,  
Brand architecture Brand Hierarchy  
Designing Branding Strategy  
Brand Valuation  
Brand Valuation Methods

Aaker's Brand Equity 10  
Interbrand Method  
Brand Name Selection Process  
Positioning of a Brand  
Repositioning the Competition

### **Module IX: Marketing Integrated Communication Process**

The Role of Marketing Communication  
Concept of Marketing Communication\  
The Occurrence of Marketing Communication  
The Sources of Misunderstanding in Communication  
Elements of the Promotion Mix

### **Learning Methods:**

Tutorials, Interactive sessions, Case studies, Field visits, Management games, Extensive research projects, Seminars, Weekend experience in companies - the course is covered by adopting a combination of lecture methods, class presentation by groups of students, self study sessions. Each student is required to do the back ground reading from the specified chapters of the prescribed book before coming to class. Cases are also to be analyzed, discussed in groups (teams) outside the class as preparatory work.

### **Examination Scheme:**

<b>Components</b>	<b>P1</b>	<b>C1</b>	<b>CT1</b>	<b>EE</b>
<b>Weightage (%)</b>	10	10	20	60

### **Text & References:**

# **MARKETING OF SERVICES**

**Course Code: MWP4304**

**Credit Units: 04**

## **Course Objective:**

The course aims to differentiate services from tangible products and to make the students understand the complexities of handling intangibles. It also aims to sensitize the students on strategic areas needing special attention in effective marketing of services and to explain service quality management and related challenges in service management

## **Course Contents:**

### **Module I: Foundation of Services Marketing**

Introduction-services; A comparative analysis; Salient features of marketing services; Why Marketing of Services? The behavioural profile of users; Marketing Information system

### **Module II: Detailed aspects of services marketing**

Marketing Mix of Services – an Introduction: Service attributes; Life cycle concept, Positioning of services; Segmentation and targeting.

Pricing:

Pricing the service, pricing issues for services, Organisational objectives and pricing policy

Promotion and communication:

Internal/ external communication process; Promotional message, Promotion mix; Media choice and selection;

Managing the promotional effort.

People:

Role of employee, Staff selection and recruitment; Training and development Process and physical evidence.

### **Module III: Customer expectations of the service**

Levels; Influencing factors; related issues;

Corporate image; Corporate identity; Customer perceptions and physical evidence; Process and technological development.

Customer perception:

Influencing factors; Strategies; Understanding perception through Marketing Research

Building Customer Relations:

Relationship Marketing; Market segmentation; Retention strategies; Service design and positioning

### **Module IV: Financial Services Marketing – an introduction**

Special characteristics of financial services marketing; Financial services rules and regulation; Marketing and competitive environment; Financial services marketing mix

Bank Marketing.

The concept: Justification of marketing banking services; Users of the above services; Marketing segmentation

basis; Marketing mix

### **Module V: Non Financial Services Marketing – an introduction**

Special characteristics of Non-financial services marketing; Non-financial services rules and regulation; Marketing and competitive environment; Non- financial services marketing mix  
Bank Marketing.

The concept: Justification of marketing banking services; Users of the above services; Marketing segmentation basis; Marketing mix

Hospitality Services

The concept: Justification of marketing hospitality services; Users of the above services; Marketing segmentation basis; Marketing mix

Educational Services

The concept: Justification of marketing Educational services; Users of the above services; Marketing segmentation basis; Marketing mix

Hospital Services

The concept: Justification of marketing hospital services; Users of the above services; Marketing segmentation basis; Marketing mix

Consultancy Services

The concept: Justification of marketing consultancy services; Users of the above services; Marketing segmentation basis; Marketing mix

### **Learning Methods:**

Tutorials, Interactive sessions, Case studies, Field visits, Management games, Extensive research projects, Seminars, Weekend experience in companies - the course is covered by adopting a combination of lecture methods, class presentation by groups of students, self study sessions. Each student is required to do the back ground reading from the specified chapters of the prescribed book before coming to class. Cases are also to be analyzed, discussed in groups (teams) outside the class as preparatory work.

### **Examination Scheme:**

<b>Components</b>	<b>P1</b>	<b>C1</b>	<b>CT1</b>	<b>EE</b>
<b>Weightage (%)</b>	10	10	20	60

# MERGERS, ACQUISITIONS AND RE-STRUCTURING

**Course Code: MWP4305**

**Credit Units: 04**

## **Course Objective:**

The course aims to make students learn how to analyze the mechanisms underlying the creation (and destruction) of value in mergers, acquisitions and corporate restructuring. The students will learn to examine the reasons to acquire, choice of target and recognition of the anticipated challenges, risks and pitfalls of the approach. They will also study some instances of corporate restructuring, whether they are driven by strategic considerations of external pressures, and again, the potential sources of value creation, risks and challenges.

## **Course Contents:**

### **Module I: Basics of Mergers and Acquisition**

Corporate Restructuring-objectives of merger, demerger, acquisition, types of merger, competition, Bill 2002 Horizontal, Vertical, Conglomerate, Case studies on Tata Tetley, HLL Restructuring, OBC-GTB, BSNL;MTNL

### **Module II: Introduction to Acts and policies**

Merger & Acquisition and Amalgamation as per AS-14.

### **Module III: De-mergers and Reverse Mergers**

De-merger, spin off, split up, tax advantages of demerger, Reverse Merger (L & T-Grasim).

### **Module IV: Role of SEBI**

SEBI regulations on Merger & Acquisition, Takeover Code

### **Module V: Defensive Strategies**

Defensive actions on takeover bids

### **Module VI: Merchant Banking and M&A**

Role of Merchant Bankers in Mergers & Acquisition

### **Module VII: M&A Models and Theories**

Valuation Models on Merger & Acquisition: (a) DCF Model, (b) Public Enterprises, (c) Book Value, (d) Adjusted Book value (e) Three Stage growth model,

### **Module VIII: Ratio Analysis and Valuation Strategies**

Swap Ratio, Valuation Practices in India, LBO, MBO, Case Study-Tata Tetley

### **Module IX: Taxation Aspects in M&A**

Treatment of goodwill, premium & Taxation aspects 72A, 2(140), Tax Benefit of Merger & Acquisition.

### **Module X: Post Merger Analysis**

Success and failure of Merger & Acquisition, International Cases: AOL & Time Warner  
Learning Methods:

Tutorials, Interactive sessions, Case studies, Field visits, Management games, Extensive research projects, Seminars, Weekend experience in companies - the course is covered by adopting a combination of lecture methods, class presentation by groups of students, self study sessions. Each student is required to do the back ground reading from the specified chapters of the prescribed book before coming to class. Cases are also to be analyzed, discussed in groups (teams) outside the class as preparatory work.

**Examination Scheme:**

Components	P1	C1	CT1	EE
Weightage (%)	10	10	20	60

# **CORPORATE TAX PLANNING**

**Course Code: MWP4306**

**Credit Units: 04**

## **Course Objective:**

In this unit students will learn about tax provisions for both individuals and limited companies. They will learn how to calculate taxable income and tax payable taking account of all types of Income and relevant expenditure and any appropriate tax-free allowances. The unit covers Income tax, corporation tax and capital gains tax for individuals and businesses.

## **Course Contents:**

### **Module I: Basic term and concept**

Person, assessee, previous year, assessment year, rate of taxes, income, total income, scope of total income and residential status & income exempt from tax. Tax planning in respect of residential status

Concepts: Tax planning, tax avoidance, tax evasion. Tax avoidance v tax evasion. Tax planning v tax management

### **Module II: Income under the head salary**

Employer–employee relationship, basis of charge, meaning of salary, treatment of gratuity, pension, encashment of leave, , allowance, perquisites, profit in lieu of salary, leave travel concession, provident fund, standard deduction, entertainment allowance. Tax planning with respect to salaries

#### **Income under the head house property**

**Basis of charge, essential condition for taxing income under this head, concept of deemed ownership, determination of annual value, deduction from annual value.**

#### **Income under the head of profit and gain of business & profession**

Chargeability of income under the head profit and gain of business and profession, expenses deductible, amount not deductible, maintenance of accounts by certain person carrying out business and profession, compulsory audit of accounts.

#### **Income under the head capital gain**

Basis of charge, type of capital asset, transaction not considered as transfer. Computation of capital gain

#### **Income under the head income from other sources**

Chargeability, Deduction, Computation under this head

### **Module III**

Setting off of losses inter heads of income and carry forward of losses to next year.

### **Module IV**

Corporate tax in India; types of companies; residential status and tax incidence; taxation of companies; carry forward and set off of losses. Tax planning with respect to companies.

### **Module V**

Computation of total income, net taxable income, and tax payable in case of individual and company. Deduction under sec 80CCC to 80U, rebate u/s 88, 88b, 88c. Filing of return, assessment procedure, provision of advance tax, tax deducted at source, taxation authorities. Minimum alternate tax. Value added tax.

## **Learning Methods:**

Tutorials, Interactive sessions, Case studies, Field visits, Management games, Extensive research projects, Seminars, Weekend experience in companies - the course is covered by adopting a combination of lecture methods, class presentation by groups of students, self study sessions. Each student is required to do the back ground reading from the specified chapters of the prescribed book before coming to class. Cases are also to be analyzed, discussed in groups (teams) outside the class as preparatory work.

# INDUSTRIAL RELATIONS AND LABOUR LAWS

**Course Code: MWP4307**

**Credit Units: 04**

## **Course Objective:**

The main Purpose of this paper is to familiarize the participants with the various aspects of Industrial Relations and to inculcate in-depth knowledge on labour laws as well as Industrial relations as designed and enacted in India. An insight about the systems in case of employer – employee disputes is also given for the students understanding.

## **Course Contents:**

### **Module I:** Theory and Concepts of Industrial Relations

IR – Theories, Attitudes and Different Schools of thought

Roles of Workers, Management & Government in IR

Conditions for good IR and cause of poor IR

Introduction to Social Security, impact on employee relations

Summary & Review Questions, Case Studies.

### **Module II:** Trade Unions and Industrial Disputes

Origin and Importance of Trade unions, Forms of Unrest & Effect of strikes

Changing Public Perception of Trade unions, Future role of Trade unions in India

Trade Union Act – 1926, Industrial Dispute Act – 1947

Machinery for settlement of industrial disputes, key provisions of I. D act

Summary & Review Questions, Case Studies.

### **Module III:** Collective Bargaining

Nature and advantages of collective bargaining

Negotiation of Agreement and Implementation of agreement

Renewal and revision of agreement

Current Collective Bargaining trends and reasons for failure of CB in India

Summary & Review Questions, Case Studies.

### **Module IV:** Grievance Management

Types, Causes and Effects of grievances

Model grievance redressal in India & Procedure

Handling a grievance & Enforcing Grievance resolution methodology

Collecting & Analysing Grievance data

Summary & Review Questions, Case Studies.

### **Module V:** Employee discipline and workers participation

Importance of discipline & disciplinary actions (Process and limitations)

Handling indiscipline – Management's options

Objectives and forms of workers participation in Management

Forums of Participation and how to make WPM effective in India?

Summary & Review Questions, Case Studies.

### **Module VI:** Labour Legislation

Scope and significance of social security, legislations

EPF and miscellaneous provisions act – 1952, Payment of Gratuity act - 1972

ESI act – 1948, Workmen's Compensation act - 1923

Maternity Benefits act – 1961, Payment of Wages Act  
Contract Labour (Regulation & Abolition) act -1970

**Summary & Review Questions, Case Studies.**

**Learning Methods:**

Tutorials, Interactive sessions, Case studies, Field visits, Management games, Extensive research projects, Seminars, Weekend experience in companies - the course is covered by adopting a combination of lecture methods, class presentation by groups of students, self study sessions. Each student is required to do the back ground reading from the specified chapters of the prescribed book before coming to class. Cases are also to be analyzed, discussed in groups (teams) outside the class as preparatory work.

# MANAGEMENT OF CHANGE AND COMPENSATION MANAGEMENT

**Course Code: MWP4308**

**Credit Units: 04**

## **Course Objective:**

The main Purpose of this paper is to familiarize the participants with the various aspects of Change Management, with a view that conducting business is exciting, challenging and globally oriented. This course will provide the students with an integrated and practical approach to understand the basic concepts of Change in Management, technologies and various approaches with reference to globalisation and also to provoke critical thinking about various principles, guidelines and mechanisms adopted in this science. The course discusses meaning, importance and scope of Compensation Management.

## **Course Contents:**

### **Module I:** Overview of Compensation Management

Nature, Importance & Objective of Compensation Management  
Philosophy, Scope and wage concepts  
Principles & Machinery for wage determination  
Management Thinkers & critical evaluation  
Acts related to Compensation management  
Summary & Review Questions, Case Studies.

### **Module II:** Management – Job Evaluation

Nature, Scope, and importance of Job evaluation  
Concepts of Job Description and specification  
Principles and Methods of Job evaluation  
Internal & External equity, Job surveys  
Summary & Review Questions, Case Studies.

### **Module III:** Pay and benefits

Principles of reward strategy, developing and designing salary structures  
Pre requisites for salary fixation, bonus, incentives  
Monitory benefits as motivators – scope and process  
Social security and retirement benefits  
Summary & Review Questions, Case Studies.

### **Module IV:** Linking wages with performance

Performance criteria & Choices  
Objectives & scope of linking wages with performance  
Types of performance based compensation schemes, international perspective  
Designing performance based compensation schemes  
Summary & Review Questions, Case Studies.

### **Module V:** Change Management

Global Organisation, Reaching out the Global Customer  
Adaptations of change in organisation  
Learning and preparing for the change  
Consulting approaches and skills

Summary & Review Questions, Case Studies.

**Learning Methods:**

Tutorials, Interactive sessions, Case studies, Field visits, Management games, Extensive research projects, Seminars, Weekend experience in companies - the course is covered by adopting a combination of lecture methods, class presentation by groups of students, self study sessions. Each student is required to do the back ground reading from the specified chapters of the prescribed book before coming to class. Cases are also to be analyzed, discussed in groups (teams) outside the class as preparatory work.

# DATA WAREHOUSING AND DATA MINING

**Course Code: MWP4309**

**Credit Units: 04**

## **Course Objective:**

The objective of this course is to familiarize the students with the concepts of databases, decision support systems, data Warehouses and to provide an in-depth insight into their architectural types, various activities starting from design, loading, extraction and usage of transformed data for various functional areas. The course also provides an insight into another related area that helps mines useful information from loads of data. Various data mining techniques are examined to assess their relevance in respective areas of mining information.

## **Course Contents:**

### **Module I: Data Warehousing in Business**

Data Warehousing goals and objectives, Failures of past Decision support systems, operational versus Decision support systems, Warehousing as a viable solution, and definition of data warehousing

### **Module II: Data Warehouse: The building blocks**

Defining Features, Data warehouses and data marts, Overview of components and metadata in the data warehouse.

### **Module III: Data Warehousing Planning & requirements**

Key issues is planning data warehouse, Development Phases, Process flow within a data warehouse, Dimensional analysis

### **Module IV: Data warehouses architecture**

Data warehouse architecture model, components & framework, importance of Metadata.

### **Module V: Data warehouse design**

From requirements to data design, Dimensional Modeling Concepts - Star Schema, Snowflake Schema

### **Module VI: OLAP in the Data Warehouse**

Data warehouse versus Operational systems, Need for multidimensional analysis, major features and functions, OLAP models, OLAP implementation considerations.

### **Module VII: Data Mining Basics & techniques**

Data Mining definition, Knowledge discovery process, OLAP vs. data Mining, Major Data Mining Techniques, Data Mining Applications.

Learning Methods: Lectures, Exercise for Practice, Presentations for better understanding of concepts

## **Examination Scheme:**

<b>Components</b>	<b>P1</b>	<b>C1</b>	<b>CT1</b>	<b>EE</b>
<b>Weightage (%)</b>	10	10	20	60

# **DATA COMMUNICATIONS, NETWORKING AND EMERGING COMPUTING ENVIRONMENTS**

**Course Code: MWP4310**

**Credit Units: 04**

## **Course Objective:**

The objective of this course is to familiarize the students with the concepts, applications and managerial implications of data communication, networking and emerging computing environments.

## **Course Contents:**

### **Module I: Introduction to Data Communications & Networks**

Data Communications networks & its components,  
Communications Channels, Channel Capacity & bandwidth  
Computer networks- definition, goals & types  
Communication media  
Network Topologies  
Network Models, Network Standards and Future Trends

### **Module II: Network Architecture**

ISO OSI Model – its description & its drawbacks  
Protocols in OSI Reference Model  
TCP/IP Model & its drawbacks  
Comparison between OSI and TCP/IP

### **Module III: Networking Technologies**

LANs – Importance, types, Components & IEEE 802.3 (Ethernet), implications for management  
Wireless LANs  
WANs architecture  
Virtual Private Networks  
Internet – Concept, architecture & access technologies, implications for management

### **Module IV: Mobile Communication**

GSM, CDMA technologies and their pros and cons

### **Module V: Network Security and Managerial Implications**

Need for Security, types of threats  
Emerging solutions  
Network Configuration and management  
Cost Management  
Implications for management  
Learning Methods:  
Tutorials, Interactive sessions, Case studies, Field visits, Management games, Extensive research projects, Seminars  
Each student is required to do the back ground reading from the specified chapters of the prescribed book before coming to class. Cases are also to be analyzed, discussed in groups (teams) outside the class as preparatory work.

**Examination Scheme:**

Components	P1	C1	CT1	EE
Weightage (%)	10	10	20	60

## **Syllabus – Fourth Semester**

### **GROWTH PROSPECTS & THRUST AREAS OF INDIAN EXPORTS**

**Course Code: MWP4401**

**Credit Units: 04**

**Course Objective:**

The course aims to develop an awareness of thrust products of India's exports and to identify specific market for thrust products of India's export. It will enable the students to understand prospects of India's export in the background of multi lateral trading system & global competitors and to develop an ability to use trade information avail from various sources to analyze and prepare market potential reports, to understand India's Foreign Trade Policy and the Institutional mechanism for promoting exports from India.

**Course Contents:**

**Module I: Introduction**

India's International Trade-Present Scenario  
Trends in India's Export  
Future outlook

**Module II: Focus on Specific Growth Sectors**

Gems and Jewellery  
Leather and Footwear  
Textiles  
Agriculture and Processed Food Sector  
Engineering/Automobile Sector  
Tea, Coffee and Spices

**Module III: Foreign Trade Policy-2004-09**

Special Focus Initiatives  
General Provisions Regarding Imports and Exports  
Promotional Measures  
Duty Exemption / Remission Schemes  
Export Promotion Capital Goods Scheme

**Module IV: Study of Specific Markets**

USA: World biggest importer and Exporter  
EU: Single Largest market  
Focus LAC: Potential Market for Export from India

**Module V: Institutional Framework for Export Promotion of Thrust Sectors**

Role of EPCs and other Trade Promotion bodies in promoting Export from India  
Role of EoUs, EPZs and SEZs in India's Export

**Learning Methods:**

Tutorials, Interactive sessions, Case studies, Field visits, Management games, Extensive research projects, Seminars, Weekend experience in companies - the course is covered by adopting a combination of lecture methods, class presentation by groups of students, self study sessions. Each student is required to do the

back ground reading from the specified chapters of the prescribed book before coming to class. Cases are also to be analyzed, discussed in groups (teams) outside the class as preparatory work.

## **CORPORATE SOCIAL RESPONSIBILITY AND SUSTAINABILITY MANAGEMENT**

**Course Code: MWP4402**

**Credit Units: 04**

### **Course Objective:**

The main purpose of this paper is to make the managers of tomorrow aware of the imperative need to recognize and address the global environmental and social impacts of their activities which, together with profits are popularly known as the ‘**triple bottom line**’ issues of Sustainable Development (SD).

The course reflects that investors are also showing growing concern not only on eco-efficiency, but in business ethics, corporate social responsibility and human rights, all integral to the agenda of sustainable development which directly relates to competitive advantage and corporate governance on a continuous basis.

At the end of the course, students will be able to:

- Define new and emerging business opportunities and financial risks associated with environmental quality, social justice and economic efficiency.
- Discuss on how businesses need to manage their sustainability agenda as an integral part of their competitive strategy and to get their various stakeholder groups onto the same platform.
- Examine shifts in responsibility for sustainability from self regulation to public regulation and use new technology, ‘soft innovation’ focusing on new forms of strategic thinking, new styles of networked commerce, and radically new triple bottom line management systems.
- Evaluate ways to meet such challenges proactively using tools such as selfregulatory initiatives, voluntary standards, new accounting procedures, reporting and communication processes etc., to remain globally competitive.
- To assist businesses and concerned stakeholders in establishing and managing systems to steer environmental, social and economic sustainability on a continuous basis.

The primary objective of this course is to impart a basic understanding of the social and environmental sustainability challenges facing managers in today’s world. The course seeks to develop students’ critical capacities for selfreflection and action in relation to these concepts. Course graduates will possess the understanding and experience to integrate environmental and social sustainability with commercial and economic success. Lectures and readings provide an overview of the critical literature in environmental and social issues, the history of the sustainability movement, including the various social and economic movement from which the current practices of sustainability in business and society grew, and the key actors and the basic literature in the field. The course also addresses the global issues surrounding sustainable management and reviews the major frameworks of sustainability that provide the scientific foundations and economic principles of how sustainability can help managers to achieve natural competitive advantage.

### **Course Contents:**

#### **Module I: Introduction**

Definitions, relevance and need for internalization of CSR & sustainability management for corporations

Principles of Sustainable Management

Triple Bottom Line – TBL/3BL: ‘People, Planet, Profit’: the social, environmental, and financial accountability of businesses

#### **Module II: Principles of Sustainable Management (SM)**

Social and environmental sustainability challenges

Integration of SM with commercial and economic success

Current practices of sustainability in business

Global issues and major frameworks

Scientific foundations and economic principles

**Module III: Strategic Corporate Social Responsibility**

Bottom of the Pyramid: Social Responsibility or Market Opportunity

Corporate Strategy and CSR

What CSR Is and Is Not

A Moral Argument for CSR

A Rational Argument for CSR

An Economic Argument for CSR

Why is CSR Relevant Today

CSR: Do Stakeholders Care?

**Module IV: The Strategic Context of CSR & its Implementation**

The Strategic Lens: The E.S.C.S. Framework

Positive Brand Building

Crisis Management

CSR Business Plan of Action - Short Term & Medium term

Implementation from a Strategic Perspective: Planning

Implementation from a Firm Perspective: Action

**Module V: Managing Global Corporate Social Responsibility: Issues**

Organizational Issues

Economic Issues

Societal Issues

**Module VI: Triple Bottom Line (TBL/3BL) – the goal of sustainability**

Definition

The Bottom Lines

Arguments in favor of the concept

Arguments against the concept

Legislation

**Module VII: Monitoring and Reporting Systems**

Energy, Environment and Social Audits

Sustainability Reporting

**Learning Methods:**

Tutorials, Interactive sessions, Case studies, Field visits, Management games, Extensive research projects, Seminars, Weekend experience in companies - the course is covered by adopting a combination of lecture methods, class presentation by groups of students, self study sessions. Each student is required to do the back ground reading from the specified chapters of the prescribed book before coming to class. Cases are also to be analyzed, discussed ingroups (teams) outside the class as preparatory work.

# **RETAIL AND SALES MANAGEMENT**

**Course Code: MWP4403**

**Credit Units: 04**

## **Course Objective:**

The Retail Management module aims to make students learn the intricacies of formulating and implementing Retail Strategies and the Retail Mix by taking into account the logistics and supplies of goods/services and to understand the implications of retail management on customer satisfaction and leveraging the Retail Strategy to create Competitive Advantage. On the successful completion of this module the student will be able to:

- ☐ Understand the concepts of retail and sales in business management
- ☐ Develop plans for retail and sales of different product categories
- ☐ Analyse strategies of retail and sales management adopted by multinational organisations
- ☐ Assess the importance of quality, budgeting and auditing in the area of retail and sales.

## **Course Contents:**

### **Module I**

Introduction/Overview of Retailing

Key terms and concepts

Benefits and nature of the retailing industry

### **Module II**

Strategies and Operational framework

Strategic positioning tactics

Developing retail plan to achieve competitive advantage

Analysis of ethical, social, legal, economic and competitive environment, and their implications on retail management

### **Module III**

Customer identification and understanding consumer behaviour

Purchase decision process and categorizing customers

Applying research and customer information to retail management

### **Module IV**

All about retail stores

(Location and site evaluation, Design and Layout, Human Resource Management and Operations Management, Financial Analysis and Mgmt., Merchandise Management and Pricing)

### **Module V**

Merchandising and pricing in retail management

Retailer/Vendor relations

Integrated marketing communications in retail management

Challenges and recent developments in retail management

Integrating and controlling the retail strategy

### **Module VI**

Sales Auditing

Sales Budgeting

## Sales Organization

### Module VII

Quality of a good sales person

Compensation of the sales person

Learning Methods:

Tutorials, Interactive sessions, Case studies, Field visits, Management games, Extensive research projects, Seminars, Weekend experience in companies - the course is covered by adopting a combination of lecture methods, class presentation by groups of students, self study sessions. Each student is required to do the back ground reading from the specified chapters of the prescribed book before coming to class. Cases are also to be analyzed, discussed in groups (teams) outside the class as preparatory work.

### Examination Scheme:

Components	P1	C1	CT1	EE
Weightage (%)	10	10	20	60

# CONSUMER BEHAVIOUR

**Course Code: MWP4404**

**Credit Units: 04**

## **Course Objective:**

Consumer Behaviour is full of complexities due to involvement of umpteen variables. Each of these variable influences each other in the buying process. The course therefore will help students stimulate their minds to think coherently about consumers by identifying relevant variables, describing their basic characteristics and specifying how the variable relates to each other. An attempt will be to make the subject easier by examine in an organized fashion the consumer behavioural aspects such as personality, learning, perception of a variety of external situation, motives and so and so forth.

On the successful completion of this module the student will be able to:

- ☐ Understand the characteristics and significance of consumer behaviour.
- ☐ Appreciate the influencing factors on consumer behaviour
- ☐ Assess the various models and theories of consumer behaviour and apply them suitably for making decisions

## **Course Contents:**

### **Module I: Introduction**

Defining and describing the scope of Consumer Behaviour

A few examples of consumer behaviour having a variety of marketing implication

Consumer characteristics leading to selection of target markets

### **Module II: Environmental influences**

Socio- culture influences

#### **Role of:**

Culture

Sub-culture

Social Class

Social Groups

Inter-personal influences

### **Module III: Individual determinants of consumer behaviour**

How consumer proceeds through a decision process relating to product and services

Personality and Self concept

Motivation and involvement

Information processing

Learning and Memory

Attitudes and Attitude change

### **Module IV: Consumer Decision Process**

Decision-making based on environmental influences and individual determinants

Problem Recognition

Information Search and evaluation

Purchasing process

Post purchase behaviour

**Module V: Popular models of consumer behaviour**

Consumer Research Process

Importance of research in marketing decision making

Consumerism-Consumer position in society and the problems facing the market place and the marketer

Ethical and Social Responsibilities of Business, Government and consumers themselves

**Module VI: Organizational Buying Behaviour**

Psychology of Buyers and Suppliers

The concepts of Buying Centre

The role of each of the member involved in organization buying process

The weightage given to observations/comments of each member in term of materials, quality, delivery and price issue while making final buying decisions

**Learning Methods:**

Tutorials, Interactive sessions, Case studies, Field visits, Management games, Extensive research projects, Seminars, Weekend experience in companies - the course is covered by adopting a combination of lecture methods, class presentation by groups of students, self study sessions. Each student is required to do the back ground reading from the specified chapters of the prescribed book before coming to class. Cases are also to be analyzed, discussed in groups (teams) outside the class as preparatory work.

**Examination Scheme:**

Components	P1	C1	CT1	EE
Weightage (%)	10	10	20	60

# SECURITY ANALYSIS AND PORTFOLIO MANAGEMENT

**Course Code:MWP4405**

**Credit Units: 04**

## **Course Objective:**

The far-reaching developments in the world of finance have redefined the role of the finance manager, placing a premium on well-trained young men and women possessing superior professional skills in financial analysis and management. The finance manager of today is called upon to evolve finance strategies that dovetail with the firm's competitive business strategies.

On the successful completion of this module the student will be able to:

- ☐ Assess the various financial market instruments and securities
- ☐ Understand the factors effecting equity valuations
- ☐ Analyse the various theories of portfolio management and apply quantitative tools for optimum results

## **Course Contents:**

### **Module I: Nature and Scope of Investment Management and Portfolio Analysis**

Investment Management and Security Analysis - Portfolio Management Practices in International markets.

Risk and Return - Total Risk - Portfolio Risk - How Diversification Helps? - Market Risk - Combining Risky and

Risk less - Securities.

### **Module II: Fundamental Security Analysis**

Economic Environment Analysis - Industry Analysis - Company Analysis - Growth Stocks.

Technical Analysis : Basic Tenets of Technical Analysis - Dow Theory - Behaviour of Stock Prices - Major Trends -Charts and Trend Lines - Resistance and support Lines - Different Patterns.Efficient market theory.

### **Module III**

Capital Asset Pricing Model - Assumptions - the Capital Market Line - Security Market Line - CAPM with Relaxed Assumptions.

**Portfolio Evaluation:** Portfolio Formula Plans - Risk Adjusted Measures - Sharpe's Reward-to-Variability - Treynor's Volatility Ratio - Jensen's Differential Return.

### **Module IV: Equity Valuation**

Financial Markets and Instruments, Analysis and Valuation of Equity Investments

### **Module V: Fixed Income Valuation and Analysis**

Financial Markets and Instruments

Analysis of Derivatives and Other Products

### **Module VI: Portfolio Management**

Modern Portfolio Theory, Investment Policy, Asset Allocation, Practical Portfolio Management, Performance Measurement, Management of Investment Institutions

Learning Methods:

Tutorials, Interactive sessions, Case studies, Field visits, Management games, Extensive research projects, Seminars, Weekend experience in companies - the course is covered by adopting a combination of lecture

methods, class presentation by groups of students, self study sessions. Each student is required to do the back ground reading from the specified chapters of the prescribed book before coming to class. Cases are also to be analyzed, discussed in groups (teams) outside the class as preparatory work.

# STRATEGIC FINANCIAL MANAGEMENT

**Course Code: MWP4406**

**Credit Units: 04**

## **Course Objective:**

To make students learn the intricacies of formulating and implementing Financial Strategies and the Financial Mix by taking into account the EVA, ABC, OVA & other financial reengineering techniques. The words 'Strategy' and Strategic Management' is a game plan a policy an action plan or a 'tactic'? It is long-term or short term? It is visible or invisible? It is to be decided upon only by seniors? Is it a piece of advice? Ultimately, what is it?

On the successful completion of this module the student will be able to:

- ☐ Understand the role of strategy in the area of business finance
- ☐ Assess the various tools of value chain analysis, cost analysis and business accounting
- ☐ Evaluate the need for corporate restructuring and its strategies
- ☐ Develop the ability to carry out the valuation of business units and brands.

## **Course Contents:**

### **Module I**

Strategic Financial Management

Strategy and the Strategist

The 'Nine References' for Strategic Financial Management

Strategic Investigation of Growth on Profit-Leakages (A qualitative assessment)

### **Module II**

Value Chain Analysis

Value chain and Investment

Strategic Business Units (SBU'S)

Responsibility Accounting

Activity Based Costing (ABC) and objective Based Costing (OBC)

Economic Value Added

Owners Value Added (OVA)

### **Module III**

Strategic Cost Analysis

Discussion on the Case-Problem

Cost Profit-Sales Analysis Using a Product/Project as Profit Centre Ratios

### **Module IV**

Financial Aspects of Corporate Restructuring

What is Corporate Restructuring?

Scope for Restructuring

Symptoms for Restructuring

Operational Symptoms

Strategic Symptoms

Financial Symptoms

Market, Economy-level and Global Symptoms

Financial Aspects of Various Restructuring Exercises (for Various Purposes)

**Module V**

Innovative Financial Engineering  
Project-Finance Instrument  
Venture Finance  
Futuristic Securitisation  
Special Purpose vehicle

**Module VI**

Valuation  
Valuation of a Business Enterprise  
Approaches to Enterprise Valuation Based on Various Objectives  
Realisable Value Vs Replacement Cost  
Realisable Value  
Valuation of the Company's Intrinsic Strength  
Important Conclusion  
The Components of Business Valuation  
Brand Valuation  
Various Methods of Brand Valuation

**Learning Methods:**

Tutorials, Interactive sessions, Case studies, Field visits, Management games, Extensive research projects, Seminars, Weekend experience in companies - the course is covered by adopting a combination of lecture methods, class presentation by groups of students, self study sessions. Each student is required to do the back ground reading from the specified chapters of the prescribed book before coming to class. Cases are also to be analyzed, discussed in groups (teams) outside the class as preparatory work.

**Examination Scheme:**

Components	P1	C1	CT1	EE
Weightage (%)	10	10	20	60

# **RECRUITMENT, SELECTION, TRAINING AND DEVELOPMENT**

**Course Code: MWP4407**

**Credit Units: 04**

## **Course Objective:**

The main Purpose of this paper is to familiarize the participants understanding the applicability and techniques of Recruitment, Selection, Training and Development in any organisation on global context. A Broader and wider perspective is undertaken in relation to the management of employment relationship. The module is designed to understand the role of HR Planning, development and its effective link to policies and strategic practices in organisation for effective people management right from forecasting the requirement of employees to the effective development.

On the successful completion of this module the student will be able to:

- ☐ Identify the key issues of Selection, training and development
- ☐ Understand the factors effecting recruitment due to mergers, acquisitions & globalisation
- ☐ Appreciate the various tools of training and structured training programmes in organisation
- ☐ Forecast demand & supply of human resources, training and development

## **Course Contents:**

### **Module I: Introduction to Recruitment**

Introduction and Importance of Recruitment  
Recruitment strategies in diverse work force  
Labour Market information & Sources  
Forecasting supply and demand for labour  
Internal & External Applicants  
Summary, Review Questions & Case Studies

### **Module II: Employee Selection**

Selection – An HR Responsibility  
Evaluating Abilities & Selection Process  
Screening & Hiring Alternatives  
International HRM, Expatriate Rights  
Temporary and Leasing Help  
Summary, Review Questions & Case Studies

### **Module III: Trends effecting HRM & Requirement of Training**

Impact of technology  
Diversity initiatives at Intel, Cisco Systems  
Industry and occupational trends  
Strategies to accommodate change  
Summary & Review Questions, Case Studies.

### **Module IV: Managerial Effectiveness & Training**

Tools to improve managerial effectiveness - Kaizen  
Quality Circles - Time Management  
Training Process and Methodology –  
Need and objectives, Tools and Aids for Training  
Learning Principles, Climate for Change  
Summary & Review Questions, Case Studies.

### **Module V: Retaining Human Resources**

Global Dilemma, Managing Transnational Teams

Motivation – Rewarding and Rewarded Jobs  
Team / Incentive based systems  
Design and redesign of working systems  
Summary & Review Questions, Case Studies

**Learning Methods:**

Tutorials, Interactive sessions, Case studies, Field visits, Management games, Extensive research projects, Seminars, Weekend experience in companies - the course is covered by adopting a combination of lecture methods, class presentation by groups of students, self study sessions. Each student is required to do the back ground reading from the specified chapters of the prescribed book before coming to class. Cases are also to be analyzed, discussed in groups (teams) outside the class as preparatory work.

**Examination Scheme:**

# PERFORMANCE APPRAISAL AND POTENTIAL EVALUATION

**Course Code: MWP4408**

**Credit Units: 04**

## **Course Objective:**

The main Purpose of this paper is to familiarize the participants understanding the applicability and techniques of performance appraisal and potential evaluation on global context. A Broader and wider perspective is undertaken in relation to the management of employment relationship. The module is designed to understand the role of HR Planning, development and its effective link to policies and strategic practices in organisation for effective people management.

On the successful completion of this module the student will be able to:

- ☐ Identify the key issues of potential evaluation and performance appraisal.
- ☐ Understand the factors effecting performance appraisal and performance management
- ☐ Various tools of performance measurement and performance appraisal
- ☐ Management by objectives, role of HR personnel in Performance appraisal

## **Course Contents:**

### **Module I:** Introduction to Performance Appraisal

Performance Appraisal Management System

Classical approaches to people and organisations

Current trends in Performance Appraisal

Definition, Ethics and Concepts of Performance Management

Summary, Review Questions & Case Studies

### **Module II:** Evaluation of Management Systems

Performance Management and feedback

Need and objective of Appraisal Systems

Tools and aids for evaluation of performance

Model for benchmarking HR Practices, Legal Considerations

Summary, Review Questions & Case Studies

### **Module III:** Methods and importance of Performance Management

Importance and Scope of Performance Management

Different methods of Performance Appraisal

Rating Errors & Tools for improvement

Steps for effective Performance Appraisal System

Summary, Review Questions & Case Studies

### **Module IV:** Management by Objectives

Management by Objectives

Appraisal Schedule, Problems with PA Forms

Monitoring Employees on the job

International Applications

Competency Mapping

Summary, Review Questions & Case Studies

### **Module V:** Training and Development

Training the Appraisers

Planning and strategizing training

Integrating training with Performance management systems

Importance of employee development

Setting Objectives and Selecting Training Approach

**Learning Methods:**

Tutorials, Interactive sessions, Case studies, Field visits, Management games, Extensive research projects, Seminars, Weekend experience in companies - the course is covered by adopting a combination of lecture methods, class presentation by groups of students, self study sessions. Each student is required to do the back ground reading from the specified chapters of the prescribed book before coming to class. Cases are also to be analyzed, discussed in groups (teams) outside the class as preparatory work.

# SYSTEMS ENGINEERING AND PROJECT MANAGEMENT

**Course Code: MWP4409**

**Credit Units: 04**

## **Course Objective:**

The objective of this course is to make the student aware of the latest practices in Project management and systems engineering with an emphasis on Quality concepts, Risk Management and Configuration Management

## **Learning Outcomes:**

On the successful completion of this module the student will be able to:

- ☐ Identify the key issues in Software Processes, tools and Quality.
- ☐ Understand the concept of System Modeling, Data Modeling, Business Modeling, Product Modeling and modeling of system architecture
- ☐ Plan , Estimate and Schedule a project plan

## **Course Contents:**

### **Module I: Introduction to Software Engineering**

Introduction to Software Engineering - definitions, Key challenges in SE, evolving role of software.

### **Module II: The Software Process**

Software Engineering – Process, Methods and Tools

Software Process Models – Waterfall Model, Prototyping, Spiral Model, Rapid Application Development, V Model Software Engineering Institute Capability Maturity Model – SEI/CMM

### **Module III: Software Requirements and Design**

Requirements Engineering Process, SRS – contents and characteristics, Software Design Basics, Architectural design, Data design, User Interface design, Design Approaches – function & object-oriented, Cohesion & Coupling

### **Module IV: Software Testing**

Software Testing Fundamentals, Testing Strategies, Types of Testing - WBT & BBT, Test Plans, Test Case Design, Milestones, Walkthroughs and Inspections, Debugging

### **Module V: Software Reliability and Quality Management**

Software Reliability, Quality Concepts, Quality Factors, SQA, Quality Models, FTRs.

### **Module VI: Software Project Management**

Project Management Concepts, Types of Projects, Activities covered by SPM, Software Project Planning, Project Evaluation, Effort Estimation (COCOMO Model) and Project Scheduling, Risk Management, Software Configuration Management

## **Learning Methods:**

Tutorials, Interactive sessions, Case studies, Field visits, Management games, Extensive research projects, Seminars, Weekend experience in companies - the course is covered by adopting a combination of lecture methods, class presentation by groups of students, self study sessions. Each student is required to do the back ground reading from the specified chapters of the prescribed book before coming to class. Cases are also to be analyzed, discussed in groups (teams) outside the class as preparatory work.

## WORKFLOW, ERP AND BPR

**Course Code: MWP4410**

**Credit Units: 04**

### **Course Objective:**

In the face of intense competition and other business pressures on organizations, quality initiatives and continuous, incremental process improvement, though still essential, will no longer be sufficient. Such radical levels of change require powerful information technology tools such as ERP to facilitate the fundamental redesign of work. Students learn about the state-of-the-art techniques used in support of business process redesign.

On the successful completion of this module the student will be able to:

- ☐ Understand the concepts, vies and latest methodologies of business process design
- ☐ Understand key concepts in the design and utilization of best business practices embedded in an Enterprise Resource Planning System.

### **Course Contents:**

#### **Module I: Introduction to ERP**

Overview of ERP, its importance, Evolution, ERP Packages, Advantages of ERP, and its future  
Functional Modules of ERP, Risks & Benefits of ERP, ERP & related technologies  
Integration of ERP, SCM and CRM applications

#### **Module II: ERP Implementation**

Introduction, Why ERP, Reasons for Implementing ERP, Implementation Challenges  
ERP Implementation Life Cycle,  
Success & Failure Factors of an ERP Implementation  
ERP Package Selection and Evaluation  
ERP Implementation Process

#### **Module III: Present and Future**

ERP and eBusiness, ERP, Internet and WWW, Future Directions and Trends in ERP

#### **Module IV: Business Engineering and marketing of ERP**

BPR, ERP & IT – their linkage  
Business Model of ERP  
Marketing Dynamics & Competitive Strategy

#### **Module V: Practical aspects of ERP**

Introduction to ERP packages – SAP, BAAN, PeopleSoft & Open Source ERP

### **Examination Scheme:**

Components	P1	C1	CT1	EE
Weightage (%)	10	10	20	60

# Master of Business Administration

## (Hospital & Healthcare Management)

### Syllabus – First Semester

#### HOSPITAL ORGANIZATION & MANAGEMENT PROCESS

**Course Code: HHM4101**

**Credit Units: 04**

**Course Objective:** This subject focuses on acquainting the student with the principles and practices essential for managing a hospital. The subject encompasses management principles, functions and processes, discussing their significance and role in effective and efficient management of health care organizations.

##### **Course Contents:**

##### **Module I- Unique features of Hospital Management**

Hospital as an organization, Characteristics of a Modern Hospital, Growing significance of management in organizations; Evolution of Management Thought- Frederic Taylor's scientific Management, Henry Fayol's principles of management, concept of bureaucracy, human relations approach, Behavioral approach, Systems theory of organization, Contingency Theory of organization, Management by Objectives (MBO).

##### **Module II- Management Functions**

Management process and functions, Nature of management process and managerial functions - Planning, Organizing, Staffing, Directing, Coordinating and Controlling, Application of managerial functions to health care organizations.

##### **Module III- Organization Concepts and Processes**

Nature and structure of organization, Types of organizations-Functional, Divisional, Departmental and Matrix forms, Formal and Informal organizations, Line and Staff Relationships; Decision-Making Process-Setting priorities for planning and decision-making, Guidelines for improved decision-making, Modern approach to decision making; Leadership- Traits of leaders, Functions of leadership, Significance of leadership,

##### **Module IV-Behavioral Concepts and Theories**

Cognitive process, Perception process and its stages, Creativity and problem solving; Motivation-motivation process, different types of motives, selected theories of motivation- McGregor's theory X and theory Y, Maslow's theory, Herzberg's two-factor theory of motivation, Vroom's Expectancy theory, Motivating medical and paramedical professionals; Conflict management, Team building, Concepts of organization Behavior, Major components of OB – personality development, transactional analysis.

##### **Module V- Social Responsibilities of Management**

Management and society, Culture and Management, Management ethics, Social Objectives and Responsibilities of management, Corporate Social Responsibility- Hospitals and Social responsibility

##### **Examination Scheme**

Components	CP	V	A	ME	EE
Weightage (%)	5	5	5	15	70

## **ACCOUNTING FOR MANAGEMENT**

**Course Code: HHM4102**

**Credits Units: 03**

**Course Objective:** Participants in this course will develop the essential ability of all managers, to use complex accounting information as a platform for decision-making. As the course unfolds, participants will build an increasingly sophisticated level of understanding of the language of accounting and its key concepts. In addition the course develops skills in interpreting earnings statements, balance sheets, and cash flow reports. This ability to analyse financial statements will enable participants to deal more effectively with strategic options for their businesses or business units.

### **Course Contents:**

#### **Module I: Accounting Basics**

Introduction, Foundations, Accounting policies, Accounting and management control, Branches of accounting, Recording of transactions and classification, Trial Balance & Errors, Cash book

#### **Module II: Final Accounts**

Preparation, Adjustments, Analysis, Depreciation Accounting, Reserves & Provisions. Form and contents of financial statements with reference to Indian Companies Act.

#### **Module III: Financial Statement Analysis**

Relation and Comparison of Accounting data and using financial statement information, Ratio Analysis, Cash flow analysis. Determination of Existing and future capital requirement.

#### **Module IV: Cost Accounting**

Elements of cost, Cost Classification and Allocation, Cost Sheet

#### **Module V: Management Accounting**

Emergence of Management Accounting, Marginal Costing and Cost Volume Profit Analysis, Budgeting & Variance Analysis.

### **Examination Scheme:**

# MARKETING MANAGEMENT

**Course Code: HHM4103**

**Credit Units: 03**

## **Course Objective:**

The objective of this course is to provide the students exposure to modern marketing concepts, tools, and techniques, and help them develop abilities and skills required for the performance of marketing functions.

## **Course Contents:**

### **Module I: Understanding Marketing in New Perspective**

Fundamentals of Marketing, Customer Value and Satisfaction, Customer Delight, Conceptualizing Tasks and Philosophies of Marketing Management, Value Chain, Scanning the Marketing Environment, Marketing Mix Elements, Difference between marketing and Selling, Relationship marketing, Social marketing, Strategic Planning in marketing, Formulating the marketing plan.

### **Module II: Analyzing Consumers & Selecting Markets**

Factors influencing consumer behavior, Buying decision-making process; Market Segmentation- Bases of market segmentations, Patterns, Procedures, Requirement for Effective Segmentation, Evaluating the Market Segments, Selecting the Market Segments, Tool for Competitive Differentiation, Developing a Positioning Strategy.

### **Module III: Managing Product & Pricing Strategies**

Classification of products, New Product development-stages of product development, Product mix decisions and line decisions, Brand management, Product Life-cycle- stages in lifecycle and factors affecting each stage, managing product life cycles; Pricing- setting the price, adapting the price, initiating and responding the price changes.

### **Module IV: Designing & Managing the Integrated Communication**

Channel functions and flows, Channel design decisions, Channel management decisions, channel dynamics, Vertical, horizontal and multi-channel marketing systems, Market Logistics decisions; Integrated Marketing Communication- marketing communication process, Promotion Mix- Advertising, Personal Selling, Sales Promotion, Publicity and Public Relations, Direct Marketing.

### **Module V: Emerging Trends in Marketing**

An Introduction to Internet Marketing, Multi-Level Marketing, E-Marketing, Green Marketing, Event Marketing- Types of Events, Sponsorship, Cause Related Marketing, Marketing for Non Profit Organizations Marketing Strategies for Leaders, Challenges, Followers and Nichers.

## **Examination Scheme**

<b>Components</b>	<b>CP</b>	<b>V</b>	<b>A</b>	<b>ME</b>	<b>EE</b>
<b>Weightage (%)</b>	5	5	5	15	70

# BIOSTATISTICS

**Course Code: HHM4104**

**Credit Units: 03**

## **Course Objective:**

The aim of this course is to develop the understanding of various statistical tools used for decisions making and how each applies to and can be used in the Hospital environment.

## **Course Contents:**

### **Module I- Introduction to Statistics**

Variables -Types of Variables ,Sampling-Sample size and Sampling techniques Data Collection – Types of data (Primary and Secondary Data) , Methods of Data Collection - Respondents, interviews, observation, questionnaire, survey, direct and indirect research techniques, Data Collection in Quantitative and Qualitative Research , Organizing the data.

### **Module II- Data Analysis**

Data Analysis – techniques and tools, Manual and Computerized, Use of statistical software in data analysis - univariate, bivariate and multivariate analysis.

### **Module III- Data Presentation**

Data Presentation - frequency distribution, charting of data – Bar Chart, Pie chart, Line Diagram, Tables, Histogram.

### **Module IV-Demography and Vital Statistics**

Mortality and Morbidity Rates, Birth Rates, Specific Death Rates, Fertility Rates, Abortion Rates.

### **Module V-Hospital Statistics**

Application of statistics in healthcare and hospital settings - utilization of the basic data, sources of health statistics, problems in collection of sickness data, measurement of sickness, vital statistics.

## **Examination Scheme:**

<b>Components</b>	<b>CP</b>	<b>V</b>	<b>A</b>	<b>ME</b>	<b>EE</b>
<b>Weightage (%)</b>	5	5	5	15	70

# MEDICAL TERMINOLOGY AND MEDICAL RECORDS

**Course Code: HHM4105**

**Credit Units: 02**

## **Course Objective:**

This course provides an opportunity to develop skills for interpreting and understanding medical terms and abbreviations that are essential for working with auto accident, personal injury, or medical malpractice cases. The course includes a study of techniques for interpreting medical records related to these types of cases. The student will learn basic concepts related to records including; determination of accuracy, how technology can impact record retrieval, what to look for within the record and the basic principles of medical summaries.

## **Course Contents:**

### **Module I- Medical Records**

Definition, Characteristics of 'Good' Medical Record , Values of 'Good' Medical Record to various users , Required Characteristics of entries in medical Records , Responsibility for Medical Record Quality, Medical Record Forms and their Content , Incomplete Record Control.

### **Module II- Utility of Medical Records**

Utility & functions of Medical Records in Health care delivery System, Organizations & management of Medical Records Department, Role of Hospital managers & MRD personnel in Medical record keeping, Reports & returns in Medical Record System.

### **Module III- Medico-Legal Aspects of Medical Records**

Basic knowledge of legal aspects of Medical Records including Factories Act, Workmen Compensation Act & Consumer Protection Act, Procedures of Medical Auditing & its importance.

## **Examination Scheme:**

<b>Components</b>	<b>CP</b>	<b>V</b>	<b>A</b>	<b>ME</b>	<b>EE</b>
<b>Weightage (%)</b>	5	5	5	15	70

## **Text & References:**

- A medical dictionary (Taber's, Stedman's, etc.). This will be an invaluable resource throughout this course.

# ESSENTIALS OF HEALTHCARE SYSTEMS

**Course Code: HHM4106**

**Credit Units: 03**

## **Course Objective:**

To provide the students a basic insight into the main features of Indian health care delivery system and how it compares with the other systems of the world.

## **Course Contents:**

### **Module I- Health and Development**

Concept of Health, disease, illness and sickness; Health indicators, Health and its determinants, Health burden and issues, DALY, Major health challenges, Social context of Health- Culture, health belief model, social stress; Gender & Health, Nutrition & Health, Nutritional Transition, Communicable and non-communicable health problems.

### **Module II- Health systems and Policies**

Evolution of Health Planning in India, Concept & Elements of Primary Health Care, Rural Health care system in India-Structure & Current scenario, Organization and management of Public Healthcare system, issues in healthcare delivery system, National health Mission-NRHM & NUHM, National Health Policy, National population policy, Reproductive and child health programme, Universal Immunization coverage, Health sector Reforms, Five year plans, Public Private Partnership in Health Sector.

### **Module III- National health Programme**

Management and implementation of National Health Programme- Revised National Tuberculosis Control Programme, National AIDS control programme, National Programme for Control Of Blindness, Vector Borne Diseases Control Programme, National leprosy Eradication Programme, National Cancer Control Programme, National Diabetes Control Programme, National Mental Health Programme and others.

## **Examination Scheme:**

<b>Components</b>	<b>CP</b>	<b>V</b>	<b>A</b>	<b>ME</b>	<b>EE</b>
<b>Weightage (%)</b>	5	5	5	15	70

# HUMAN RESOURCE MANAGEMENT

**Course Code: HHM4108**

**Credit Units: 03**

## **Course Objective:**

The objective of this course is to help the students develop an understanding of the dimensions of the management of human resources, with particular reference to HRM policies and practices in India. Attention will also be paid to help them develop their communication and decision making skills through case discussions, role plays etc.

## **Course Contents:**

### **Module I: Introduction to Human Resource Management**

Nature and scope of HRM, HRM functions, Role and Responsibilities of the Human Resource Manager, HRM models, understanding concepts of personnel management, Human Resource Development and Strategic Human Resource Management, HR Environment, changing Role of HR

### **Module II: Meeting and Acquiring Human Resource Requirements**

Job Analysis, Job Description, Job specification, Strategic Human Resource Planning, Recruitment, Selection Process, Methods – Interview, Tests, Induction and Placement, Promotion and Transfer

### **Module III: Development of Human Resources**

Training and Development, Managing Careers, Understanding Performance Appraisal

### **Module IV: Managing Compensation**

Compensation, Components of compensation, Job evaluation, methods of job evaluation, Designing and administration of wage and salary structure

### **Module V: Separation Processes**

Turnover, Retirement, Layoff, Retrenchment and Discharge, VRS

### **Module VI: Emerging Trends and Challenges in HRM**

Overview of Human Resource Information System (HRIS), Introduction to HR Audit, IHRM Practices, Cross- Cultural and Diversity Management, Work-life integration, Human Resource Outsourcing

## **Examination Scheme:**

Components	CPA	TP	Q/S	A	ME	EE
Weightage (%)	5	5	5	5	10	70

## **Text & References:**

- Snell S and Bohlander G (2007). Human Resource Management, Cengage Learning (Thomson Learning).

# INFORMATION TECHNOLOGY& E-COMMERCE

**Course Code: HHM4109**

**Credit Units: 02**

## **Course Objective:**

This course will expose students to developments in computer technology and understand the working of a computer system. It will introduce end-user computing and build skills in using IT and understanding various technologies like internet, telecom, DBMS concepts, e-commerce etc. The course will expose the students to the latest trends in computer.

## **Course Contents:**

### **Module I: Modern Computer Systems**

Evolution of Computer Systems, Input, output and storage technologies, Computer Assisted Control and Automation , ( e.g. Delhi Metro , Digitally Controlled Car engines etc. ) , Computer Controlled Biometric/RFID based Access Control , Contemporary hardware and software platforms(Open Source, Web Software etc.), Storage of Data Resources

### **Module II: Data Resource Management**

Introduction to DBMS, Benefits of DBMS over traditional file system, Types of DBMS, Application of DBMS using MS-ACCESS / ORACLE as a tool for understanding of DBMS concepts. SQL Query handling , Forms, Concept of Data Warehouses and Data Marts, Introduction to Data Centers. Storage Technologies and Architecture (DAT, NAS, SAN etc. ) . Live examples of storage strategies of companies like Google, Amazon Wal-Mart dealing with storage crisis

### **Module III: Telecommunications and Computer Networks**

Networked Enterprise :- Components, Types of networks, Advantages of Network Environment, Business Uses of Internet, Intranet and Extranet, Web 2.0/3.0 , Distributed/Cloud/Grid Computing, GSM & CDMA, GPRS ,3G & 4G technologies, VOIP and IPTV.

### **Module IV: Electronic Commerce Systems**

Introduction to e-Commerce and M-Commerce, Advantages and Disadvantages of each. Concept of B2B, B2C, C2C , with examples. Concept of Internet Banking and Online Shopping, Electronic Payment Systems. Project Discussion :- Development of e-commerce store (Web Site Development, Internet Publicity , Payment Gateway, Packaging & Delivery , After Sales Support) .

### **Module V: E-governance**

Concept of e-governance , World Perspective , Indian Perspective , Technologies for e-governance , e-governance as an effective tool to manage the country's citizens and resources, Advantages and Disadvantage of E-governance, E-governance perspective in India. Discussion on MCA21 Project ,Bhoomi etc. .

### **Module VI: Security Management**

The Information Security, System Vulnerability and Abuse, Security Threats (Malicious Software , Hacking etc.) and counter measure. Definition of Cyber Crime and Types. Antivirus, Firewalls, Anti-Spyware , Security Audit, Discussion on Overview of IT-ACT 2000.

## **Examination Scheme:**

<b>Components</b>	<b>CPA</b>	<b>TP</b>	<b>Q/S</b>	<b>A</b>	<b>ME</b>	<b>EE</b>
<b>Weightage (%)</b>	5	5	5	5	10	70

## **Text &References:**

# Syllabus - Second Semester

## FINANCIAL MANAGEMENT

**Course Code: HHM4201**

**Credit Units: 03**

**Course Objective:**

The objective of this course is to develop an understanding of short-term and long-term financial decisions of a firm and various financial tools used in taking these decisions. It is also aimed to develop the understanding of the financial environment in which a company operates and how it copes with it.

**Course Contents:**

**Module I: Introduction**

A Framework for Financial Decision-Making- Financial Environment, Changing Role of Finance Managers, Objectives of the firm.

**Module II: Valuation Concepts**

Time Value of Money, Risk and Return, Financial and Operating Leverage.

**Module III: Financing Decisions**

Capital Structure and Cost of Capital, Marginal Cost of Capital.

**Module IV: Capital Budgeting**

Estimation of Cash Flows, Criteria for Capital Budgeting Decisions, Issues Involved in Capital Budgeting, Risk analysis in Capital Budgeting – An Introduction.

**Module V: Working Capital Management**

Factors Influencing Working Capital Policy, Operating Cycle Analysis, Management of Inventory, Management of Receivables, Management of Cash and Marketable Securities, Financing of Working Capital.

**Module VI: Dividend Policy Decisions**

An introduction: Different Schools of Thought on Dividend Policy.

**Examination Scheme:**

Components	CPA	TP	Q/S	A	ME	EE
Weightage (%)	5	5	5	5	10	70

**Text & References:**

- Chandra, P. (2006), Financial Management: Theory and Practice, Tata McGraw Hill.

# RESEARCH METHODOLOGY

**Course Code: HHM4203**

**CreditUnits: 03**

**Course Objective:** To provide basic understanding towards research principles and methods. To introduce important analytical tools for research data analysis. To assist in the development of research proposals/reports

## **Course Contents:**

### **Module I: Basics of Research**

Definitions and designs, uses of research in healthcare, formulation of research problems, developing hypothesis, writing research questions

### **Module II**

Sampling, Design, and development of interview schedule, questionnaire construction, pre-testing (reliability & validity), research ethics

### **Module III**

- Data collection: field work, mapping and listing operations, selecting of respondents and MIS for major research projects
- Data Management: editing, entry and preparing data sets for analysis
- Data analysis: using SPSS/ epi.info/ use of matrices

### **Module IV: Qualitative Research**

- Development of conceptual framework
- Qualitative methods: FGDs, in-depth interviews, biographics, participatory methods, participant observation etc.

### **Module V: Research Ethics**

History of ethics in health research, Principles and Concepts in research ethics – confidentiality and privacy, informed consent, vulnerable subjects and special treatments, standards of care – principles, review processes etc.

## **Examination Scheme:**

Components	CPA	TP	Q/S	A	ME	EE
Weightage (%)	5	5	5	5	10	70

## **Text & References**

# HEALTH ECONOMICS

**Course Code: HHM4204**

**Credit Units: 03**

## **Course Objective:**

The primary aim of this subject is to provide a clear, concise introduction to micro economic concepts, health economics as applied to hospital sector.

## **Course Contents:**

### **Module I: Nature and scope of Economics**

Basic Economic Concepts - Using Economics to study Health Issues - Nature and relevance of Economics to Health and Medical care, Concept of Health- Health Determinants, Valuation & Measurement of Health Demand analysis.

### **Module II: Utility Analysis**

Laws of Demand and Supply, The Demand for Health, The Demand for Medical Care, Concept of Elasticity, Cost functions, Policies to Contain Costs Supply and cost analysis

### **Module III: Demand and Supply**

Market forms- Demand and Supply of Medical and Healthcare Services, Price determination under various configurations

### **Module IV: Analyzing Medical care Markets**

- Medical Care Market Place, The competitive market Model, Market Failure in Medical Markets, Government Intervention in Medical Markets.
- Market for Medical Professionals and medical services, Alternative Models of Hospital Behavior- Utility Maximizing Model, Physician Control Models, Trends towards Multi Hospital Systems.
- Role of Private Sector and PPP

### **Module V: Healthcare system**

Indian Healthcare system - Expenditure and Allocations under Five-Year Plans

## **Examination Scheme:**

Components	CP	V	A	ME	EE
Weightage (%)	5	5	5	15	70

## **Text & References:**

- Ceri J Phillips. *Health Economics- An introduction for health professionals*, Blackwell publishing.
- Clewer Ann and D Perkins. *Economics for healthcare management*, Prentice Hall.

- *Principles of Health Economics for developing countries*, The World bank.

# HOSPITAL PLANNING

**Course Code: HHM4205**

**Credit Units: 03**

## Course Objective

To expose the students to planning and operation of hospitals in a detailed manner which will include all facets of hospital planning activities covering every department that is involved both in clinical care as well as supportive services. A chapter on research in Hospital Services and Resources is also added to give impetus for research in this field.

## Course Contents

### Module I: Introduction to Hospital Planning

Conception of idea, formation of hospital planning team, market survey, feasibility study, selection of location, Financial planning of hospitals, Macro level planning.

Conception to commissioning- site development, architects brief working drawings and specifications, engineering drawing, equipment planning, bed distribution, space allocation, interior designing and construction of building - commissioning, shake down period

### Module II

Planning for the out-patient services and emergency services, day care services

Planning for patient care units –Inpatient services and intensive care units

Planning for surgical suites.

Planning for labor and delivery suites-LDRP suites

### Module III

Planning for laboratory service, blood banking and Radiological services.

### Module IV

Conceptual planning for advanced facilities like Cardiac catheterization laboratory, various endoscopy units, Extra corporeal shock wave lithotripsy, radiotherapy unit, IVF unit and Dialysis unit

### Module V

Planning for supportive services-medical gases, HVAC, House-keeping, CSSD, Food and beverages.

## Examination Scheme:

Components	CP	V	A	ME	EE
Weightage (%)	5	5	5	15	70

## Texts & References:

- *Hospitals: Facilities Planning and Management*, GD Kunders by Tata Mcgraw Hill
- *Modern Trends in Planning & Designing of Hospitals: Principles and Practice*: Shakti Kumar Gupta, Sunil Kant, R Chandrashekhar, SidharthSatpathy, by Jaypee – 2007

# HOSPITAL MATERIALS MANAGEMENT

**Course Code: HHM4206**

**Credit Units: 03**

## **Course Objective:**

Hospitals carry a large inventory of drugs, sophisticated and highly costly equipment besides beds, furniture and linen. The student should be conversant with Inventory and various methods of control and Purchase management.

## **Course Contents:**

### **Module I: The Materials Function**

Definition, scope and importance of materials management, objectives of materials management, functional areas of materials management, documents used in materials function, material identification codes, role of computers in the materials management, special features of materials management applied to hospitals.

### **Module II: Stores Management**

Responsibilities and functioning of stores, Types of stores in hospitals, Location and layout of stores, Stock verification techniques, Control of pilferages, Standardization and codification.

### **Module III: Inventory Management**

Definition of inventory- Need of control, objectives of inventory control, scope & importance, categories of materials in hospital, hospital, Cost associated with inventories- Ordering cost, carrying cost, over stocking cost, under stocking cost, other costs associated with service level. Inventory control Techniques, Economic order quantity (EOQ), inventory models: safety stocks, fixation of re-order level,

### **Module IV: Purchase Management**

Objectives and responsibilities of purchasing, Vendor evaluation techniques, Price and quality considerations, Tendering procedures, Types of purchasing.

### **Module V: Legal aspects**

Letter of credit, Duty of customs, Types of hospital imports, import procedures & Documentation, government policy.

### **Module VI: Maintenance Management & Disposal**

Maintenance of equipment, Inventory control of spares, Maintenance contracts, Disposal of Waste and Scrap

## **Examination Scheme:**

<b>Components</b>	<b>CP</b>	<b>V</b>	<b>A</b>	<b>ME</b>	<b>EE</b>
<b>Weightage (%)</b>	5	5	5	15	70

## **Texts & References:**

- *Procurement and Materials management for Hospitals*, Rex H Gregor, Harold C. Mickey
- *Material Management* by Dr. PawanArora, Global India Publication Pvt Ltd
- *Handbook of Materials Management*, P. Gopalkrishnan, EasternEconomy Edition.

# INTERNATIONAL BUSINESS ENVIRONMENT & PRACTICES

**Course Code:HHM4207**

**Credit Units:03**

## **Course Objective:**

This course provides a comprehensive overview of the role that international business plays in the global economy. This knowledge shall help to understand the complexities, risks and opportunities of international business and provide a global perspective on international trade, including foreign investments, impact of financial markets, international marketing, and the operation of MNC's. Learn business practices organizations adopt to tap global opportunities. Create awareness on career opportunities that exist in international business.

## **Course Contents:**

### **Module I: Globalisation & Multinational Corporations**

Globalisation - Meaning and implications ; Globalisation of markets and production ; Drivers of Globalisation ;  
Modes of entry into international business; The globalisation debate - arguments for and against ; Differences between domestic and international business ; Multinational Corporations- Definition, Types, Organisation, Design & Structures, Head quarters and Subsidiary relations.

### **Module II: Introduction to International Trade**

Theories- Theory of Mercantilism, Absolute advantage, Comparative advantage, Hecksher-Ohlin theory, The new product life cycle theory, The new trade theory, Porter's diamond model ; Instruments of International trade policy – tariffs, subsidies, local content requirements, administrative policies, anti dumping policies, political and economic arguments for intervention ; GATT, WTO, IPR, TRIPS, TRIMS, GATS, Ministerial Conferences, Uruguay round of negotiations; Introduction to International Supply chain management & Logistics; Introduction to current EXIM policy.

### **Module III: International Business Environment**

Implication of environment differences: a) Economic factors – the determinants of economic development ; b) Political and Legal factors c) Cultural factors -Culture, Values, Norms, Social, Religious, Ethical, Language, Education; Regional Integrations, Trading Blocks - European Union, ASEAN, APEC, NAFTA, SAARC, ANDEAN PACT and MERCOSUR ; Global sourcing and its impact on Indian Industry - India's competitive advantage & potential threats in industries like IT, Textiles, Gems & Jewellery, Engineering etc.

### **Module IV: Introduction to International Financial Systems**

International Financial Markets – Equity, Debt, Foreign Exchange & Commodities; Role & funding facilities of World Bank & International Monetary System; International Financial Risks of Trade Payments, FDI's, FII's, Expatriation, Repatriation, Currency fluctuations etc.; Introduction to Foreign Exchange Market – functions, nature, trading, rate determination, currency convertibility; Introduction to Export and Import Finance – Methods of payment in International Trade.

### **Module V: Introduction to International Business Practices**

Country Risk Analysis – How to assess Political, Social & Economic risks; International Marketing – Potential, Barriers, Entry strategies, Market selection, localization, organizational structures in order to compete effectively globally; Decision-making and controlling practices; Developing individual/team/organizational skills, knowledge & capabilities in intercultural communication, international marketing, cross-cultural operations, international negotiations & settlement of international business disputes; Indian companies becoming Multinationals – Potential, Need and Problems; International Regulatory & Dispute Settlement Mechanisms; Practices in Social Responsibility and Ethics in International operations.

**Examination Scheme:**

<b>Components</b>	<b>CPA</b>	<b>TP</b>	<b>Q/S</b>	<b>A</b>	<b>ME</b>	<b>EE</b>
<b>Weightage (%)</b>	5	5	5	5	10	70

**Text & References:**

# EPIDEMIOLOGY

**Course Code:HHM4208**

**Credit Units: 03**

## Course Objective

To provide an introduction to the basic concepts and methods of epidemiology and to highlight inter-relationship between epidemiology and medicine to understand evidence based medicine.

## Course Contents

### Module I: Introduction

To familiarize on concepts and use of epidemiology, methods to measure and describe health of population and risk measurement.

### Module II:Descriptive epidemiology

Determinants of disease, natural history of disease, epidemiological principles in prevention and control of disease, risk measurement, measurement of morbidity and mortality, incidence, prevalence, age adjustment and survival analysis, use of morbidity and mortality, epidemiological study designs.

### Module III: Study designs

- Epidemiological study designs and analysis, its application and use in the community.
- Bias, cofounding and interaction; nutritional surveillance.
- Studies: Descriptive studies - Sampling and survey methods; Analytic studies - case control method and cohort method; Intervention studies.

## Examination Scheme:

Components	CP	V	A	ME	EE
Weightage (%)	5	5	5	15	70

## Text & References:

# EXCEL FOR MANAGERS

**Course Code: HHM4209**

**Credit Units: 01**

## **Course Overview:**

Microsoft Excel is a very popular business productivity application for the management and manipulation of data. With the right training and understanding of Excel, businesses and individual users can unlock the world of opportunities that this powerful business application offers. This course will provide all the tools necessary to create and use basic and advanced spreadsheets. After completion of this course, students will be able to learn the various methods for entering and editing data and also learn the various ways to write simple formulas.

## **Course Contents:**

### **Module-I: Getting Started with Excel**

Introduction to Spreadsheets: Launching Excel, entering data in spreadsheet, widening rows and columns, applying basic formatting in spreadsheet, saving work in excel. Entering Data into cells: Using autofill, sort & filter feature, creating lists, inserting & deleting rows and columns. Wrapping & merging text and cells,

### **Module-II: Basics in excel**

Protecting & sharing workbooks, freeze panes, understanding normal, page layout and page break preview in excel. Setting the page orientation and print area. Adding hyperlinks to cells, inserting images, objects, equations and symbols.

### **Module-III: Charts & Formulas in Excel**

Understanding Charts: Inserting bar charts, pie charts, column charts and line charts in spreadsheets, formatting and resizing the chart. Using Basic functions- average, sum, min, max, product etc. date functions, time functions. Math Operators in Excel, combining mathematical operators.

### **Module-IV: Functions in Excel**

Logical- using IF, AND, OR, NOT, TRUE, FALSE Functions. Textual- using TRIM, UPPER, LOWER, REPLACE Functions. Import data into excel, Look up functions with index and match. Rounding, sum product, conditional counts and conditional sums, Filtering data, pivot table, pivot charts, conditional formatting.

### **Module-V: Financial and Statistical Functions in Excel**

Financial functions: Time value of money- Present value, Future value, PMT with beginning date, PMT with ending date, NPV, Goal seek, Scenario Manager, IRR. Statistical functions: Max, Min, Average, Large, Rank, Small, Var, Std Dev.

## **Examination Scheme:**

Components	Written Test	Practical	V/P	File/Assignment	Attendance
Weightage (%)	20	30	30	15	5

## **Suggested Readings & Textbooks**

- Business Analysis with Microsoft Excel by Conrad George Carlberg,,Que Publishing, second edition, ISBN 0974415626.
- Excel 2013 for Dummies by Greg Harvey, John Wiley & Sons , 2012, ISBN 9781118559703

# TERM PAPER

Course Code: HHM4231

Credit Units: 04

## Course Objective:

The aim of the term paper is to provide the students with an opportunity to further enhance their knowledge by undertaking a **significant practical unit of examining and analyzing various aspects of healthcare management** at a level commensurate with the learning outcomes of the various courses taken upto them in the ongoing semester.

For students of the first semester, the required term paper is primarily a self- worded structured report written by the students after interpreting & analyzing various primary & secondary records of intelligent interviews/readings from several sources on a particular sector.

## Conduct of Term Paper

The term paper will be executed & submitted by students individually.

- The students have to decide the topic of study / hospital of interest **within two weeks of the start of the semester**.
- A Faculty Mentor will be assigned to each group of students undertaking a Team Paper.
- Special Time slot to conduct the research will be included in the timetable.
- The Mentor will conduct weekly sessions to guide & follow up the students as well as to clarify any queries or problem faced by the students.
- Weekly review of the Work in Progress will be maintained by Faculty Mentor & will carry 20% weightage during the final evaluation.
- This will be substantiated through a proper economic diary maintained by the students documenting their daily objectives, plan of action, activities undertaken, documentation of reading & referencing material, analysis (if any) & learning outcomes.
- Students may use innovative tools & techniques to maintain this diary such as e-concepts, online blogs, charts, graphs etc.
- Students will be given some discretion in the choice of topic for the term paper and the approach to be adopted.
- The term paper has to be formulated with multi-disciplinary aspects explained in the section below.

## Focus Areas of Study

### 1. Hospital organization & Management Process (HOMP)

Analysis of organisational process of 5 hospitals ( include public and private hospitals) while maintaining a scrap book of the latest news & views.

### 2. Medical Records (MR)

- Role of E-codes in injury prevention.
- Differentiation of roles and functions of medical record practitioners
- Bar code tracking system enhances record- and film-handling productivity
- Evaluation of use of bar coding in medical record processing
- Trends in utilization management: legal implications for health record administration

### 3. Management in Healthcare Systems (MEHS)

- a. A brief overview of the major management functions of health systems.
- b. Procurement Management in Healthcare Systems
- c. Cultural Variation in healthcare consumption in 5 Asian Countries including India: National and individual drivers in mild medical conditions

### 4. Epidemiology (ED)

- a. Epidemiology and RiskFactors for Isolation of Multi-Drug ResistantOrganisms in patients
- b. Overview of NutritionalEpidemiology
- c. RiskAssessmentStudies : Epidemiology
- d. Epidemiology of Endophthalmitis and Treatment trend in India

e. Epidemiology of cause of death in Children with Acute Respiratory Distress Syndrome

5. Quality Management in Hospitals (QMH)

- a. Assessing the organizational characteristics influencing Quality Improvement implementation in Indian Hospitals
- b. Basic quality tools applied in Indian healthcare system
- c. Total Quality Management Approach to improve patient safety by preventing medication error incidences
- d. A Holistic Approach for Conceptualizing Hospital Service Quality

Needless to add, effective deployment of Self -Development, Interpersonal Skills & techniques of Business Communication is integral to all aspects of the term paper and will be evaluated accordingly.

**General Guidelines**

- All students must submit an *independently written* report of their term paper project.
- All contents need to be sourced from reliable primary & secondary sources; references for which **MUST** be maintained in proper format.
- At least one middle level or senior level person of a hospital from healthcare sector has to be interviewed face to face.
- Though the term paper is more a descriptive report covering the 'What, Why and How' aspects; participation in leg work or field research of a hospital (s) will add value to the study.
- The paper should utilise class room learning and industry exposure to evaluate issues on hand and suggest remedial/progressive measures that may be taken by a hospital(s).

**Assessment & Evaluation:**

The term paper will be in the form of an integrated report and assignment.

- A board consisting of all the faculty members who are teaching the students in the first semester will conduct the final evaluation.
- The faculty mentor assigned to the students will do the continuous evaluation.

**All reports will be examined most strictly for plagiarism.**

Components	Continuous Assessment & Economic Diary	Presentation	Content & Layout of Report	Analysis	Conclusion & Recommendations	Viva/ Defending Questions
Weightage (%)	20%	15%	20%	20%	10%	15%

## Syllabus - Third Semester

### MEDICAL & HEALTH LAWS

**Course Code: HHM4302**

**CreditUnits: 03**

**Course Objective:**

To acquaint the students with various legal aspects concerning type and character of the health care organizations and its duties towards patients and its employees. To familiarize the students in matters of liability of hospital medical negligence and medical malpractice in diagnosis, administration of drugs, surgery etc.

**Course Contents:**

**Module I**

Law and establishment of hospitals-private and public, legal requirements under Medical Council Acts.

**Module II**

Basic concepts of labour laws in India.Hospitals as an 'industry' - application of labour enactments - discipline in hospitals-' disciplinary action - a study of valid requirements of domestic enquiry. Trade union act

**Module III**

Essentials of Contractual obligations in hospital services - requisites of a valid contract - sale and purchase of goods- duties towards patients - code of ethics - violation legal consequences.

**Module IV**

Legal aspects relating to organ transplantation, MTP Act, 1971, Basics of Drugs and Cosmetic Acts, anaesthesia. ESI Act, PNDT Act, Human experimentation, clinical trials, industrial dispute act

**Module V**

Legal liability of hospitals - criminal, civil and tortuous; liability for negligence, consumer protection law, absolute liability and vicarious liability, legal remedies available to patients: remedies under contract law, tort, criminal law and consumer protection Act. Medical Jurisprudence.

**Module VI**

**Medical ethics & auditory procedures**

Ethical principles, Civic rights, Consumer protection act, CPA, Patient complaints, powers & procedures of the district forum, State and National commission, Role of supreme court, Patient appeals, Autopsy, Tort liability, Vicarious liability, Medical negligence, Central & state laws, Use of investigational drugs, Introduction/need & procedures for medical audit, Audit administration & Regulating committees.

Confidentiality and professional secrecy, ethics of trust and ethics of rights – autonomy and informed consent, under trading of patient rights – universal accessibility – equity and social justice, human dignity.

Medical ethics – basic issues, importance, process of developing and implementing ethics and values in an institution – codes of conduct: Hippocrates oath and declaration of Geneva – MCI regulation – professional conduct, etiquette and ethics

**Examination Scheme:**

Components	CP	V	A	ME	EE
Weightage (%)	5	5	5	15	70

# MANAGEMENT OF CLINICAL SERVICES

Course Code: HHM4303

Credit Units: 03

## Course Objective:

To enable the students gain insights into various aspects like importance, functions, policies and procedures, equipping, controlling, co-ordination, communication, staffing, reporting and documentation of both clinical services in a hospital. To understand the processes and details related to effective patient care and to further increase the satisfaction level of patients

## Course Contents:

### Module I: Patient centric management

Concept of patient care, Patient-centric management, Organization of hospital departments, Roles of departments/managers in enhancing care, Patient counseling & Practical examples of patient centric management in hospitals. Patient safety and patient risk management.

### Module II: Quality in patient care management

Defining quality, Systems approach towards quality, towards a quality framework, Key theories and concepts, Models for quality improvement & Variations in practice

### Module III: Patient classification systems

Types of patient classification systems, ICD 9 (CM, PM), Casemix classification systems, DRG, HBG, ARDRG.

### Module IV: Patient Medical Records

Policies & procedures for maintaining medical records. e-records, legal aspects of medical records, its safety, preservation and storage.

### Module V: Overview

Hospital operations management, role and decisions, Difference of hospital operations from other service and manufacturing organizations.

### Module VI: Out Patient Services

Overview of the department, day care, accident and emergency services, physical medicine and rehabilitation, occupational therapy unit, physiotherapy department

### Module VII: In Patient Services

Ward design (general & specialized), critical care services – ICU, CCU, NICU, , medical services, surgical services – operation theater, nuclear medicine, burn unit, nursing services and administration.

### Module VIII: Specialty Services

Pediatrics, Obs&Gynec, ENT, Ophthalmology, Orthopedic, Psychiatry, Anesthesia, Dental

### Module IX: Super-specialty Services

Cardiology, Thoracic Surgery, Neurology, Neurosurgery, Nephrology- Dialysis Unit, Transplantation Services.

## Examination Scheme:

Components	CP	V	A	ME	EE
Weightage (%)	5	5	5	15	70

# STRATEGIC MANAGEMENT

**Course Code: HHM4304**

**Credit Units: 03**

## **Course Objective:**

The course is designed to help students to understand the concept of strategy and strategic management process. Acquaint students with basic concepts and principles of strategic management, develop and prepare organizational strategies that will be effective for the current dynamic environment and likewise to impart the strategic management conceptual framework which will increase students' skills and knowledge in identifying and describing organizations' strategic posture and direction.

## **Course Contents:**

### **Module I: Introduction and Purpose of Strategy Formulation**

Evolution and Introduction of strategic management, Concept of Strategy, corporate, Business and Functional Levels of Strategy, Mission, Vision, Objectives, Approaches to four Phases in Strategic Management Process, Stakeholders in business and their roles in strategic management, Strategic decision making.

### **Module II: Environmental Analysis**

Analyzing company's External Environment: PESTLE Analysis; Preparing an Environmental Threat and Opportunity Profile (ETOP), Analyzing Industry Environment: Industry Analysis – Porter's Five Forces Model of competition, Strategic Group analysis.

### **Module III: Analysis of Organizational Competencies**

Analyzing Company's Internal Environment Resource based view of a firm, meaning, types & sources of competitive advantage, analyzing company's Resources and Competitive Position, VRIO Framework; Benchmarking as a method of comparative analysis, Competitive advantage; Concept of a Core competence and Distinctive competitiveness, Characteristics of Core Competencies; Value Chain Analysis Using Porter's Model; Organizational Capability Profile: Strategic Advantage Profile;

### **Module IV: Strategic Analysis and Choice**

Generic Competitive Strategies: Meaning of Generic competitive strategies, Low cost, Differentiation, Focus – when to use which strategy; Grand Strategies: Stability, Growth (Diversification Strategies, Vertical Integration Strategies, Mergers, Acquisition & Takeover Strategies, Strategic alliances & Collaborative Partnerships), Retrenchment – Turnaround, Divestment, Liquidation, Outsourcing Strategies; Offensive and Defensive Strategies, Blue Ocean Strategy, Strategy in the age of Internet and E-commerce; Portfolio Analysis Business Portfolio Analysis – BCG Matrix – GE 9 Cell Model; Evaluation of Strategic Alternatives: SWOT Analysis, Grand Strategy Selection Matrix.

### **Module V: Strategy Implementation and Evaluation**

Strategy Implementation, Barriers to implementation of strategy, Mc Kinsey's 7s Framework; Organization Structures for Strategy Implementation, Leadership Implementation, Functional Implementation, Strategic evaluation review and control.

## **Examination Scheme:**

# OPERATIONS RESEARCH

**Course Code: HHM4305**

**CreditUnits: 03**

## **Course Contents:**

### **Module I: Introduction**

The OR approach to problem-solving and decision-making, Scope and limitations of OR in managerial decision-making.

### **Module II: Introduction to OR Techniques**

Linear Programming, Decision Tree Analysis, Queuing theory, PERT/CPM, Replacement models, Sensitivity analysis, Assignment models, Inventory control models, Forecasting.

### **Module III: Applications of OR in Hospitals and Health Agencies**

Resource allocation, Health services planning, Deployment of health human power, Materials Management, Equipment replacement, Patient scheduling.

## **Examination Scheme:**

<b>Components</b>	<b>CPA</b>	<b>TP</b>	<b>Q/S</b>	<b>A</b>	<b>ME</b>	<b>EE</b>

# QUALITY MANAGEMENT IN HOSPITALS

**Course Code: HHM4307**

**Credit Units: 03**

## **Course Objective:**

The objective of this paper is to introduce the student to the concept and practice of Quality Management and Control.

## **Course Contents:**

### **Module-I: Introduction**

Aspects of quality - Quality mission, policy and objectives; concepts, evolution and determinants of quality; interpretation and process of quality audits; cost of quality and economics of quality.

### **Module II-Total Quality Management**

Definition, underlying concepts, implementation and measurement of TQM, Internal Customer Supplier relationship, QFD, Quality Circles, Quality Improvement teams, team work and motivation in TQM implementation, training and education, role of communication in implementing TQM.

### **Module III- Management of Processes**

#### **Management of Process I**

Process in service organization and their control, simple seven tools of quality control: Check Sheet, Histogram, Scatter diagram, Process Mapping, Cause and Effect diagram, Pareto analysis, control charts and Advanced tools of quality.

#### **Management of Process II**

SQC: Control Charts for variables – X, Xbar, and R charts and control charts for attributes-p, Np, and c charts. Acceptance sampling plan and occurrence. Vendor selection and vendor rating.

### **Module IV- Management of Quality**

Facets of quality, quality planning, quality improvement methods. Kaizen, quality audits, medical audit, accreditation, nursing care standards, Six Sigma, JIT and NABI.

### **Module V- Systems approach to Quality**

Introduction to ISO 2000, ISO 14000, and ISO 18000.

Documentation of quality systems, quality manual, procedure manuals, work instruction manuals and records for ISO 2000. Bench Marking and Business Process Reengineering. Definition, methodology and design, evaluation and analysis.

## **Examination Scheme:**

<b>Components</b>	<b>CP</b>	<b>V</b>	<b>A</b>	<b>ME</b>	<b>EE</b>
<b>Weightage (%)</b>	5	5	5	15	70

# MANAGEMENT OF SUPPORT & UTILITY SERVICES

Course Code: HHM4308

Credit Units: 03

## Course Objective:

To enable the students gain insights into various aspects like importance, functions, policies and procedures, equipping, controlling, co-ordination, communication, staffing, reporting and documentation of non clinical services in a hospital.

To understand the processes and details related to effective patient care and to further increase the satisfaction level of patients

## Course Contents:

### Module-I: Support Services

Diagnostic-Radiology & Imaging Services, Hospital Laboratory etc, Blood Bank & Transfusion Services, Ambulance Services, Pharmacy, CSSD, Oxygen Manifold/Concentrator, Dietary Service, Hospital Laundry and Linen, Medical Social Worker, Marketing and Public Relations, Finance and Administrative Departments, Outsourcing.

### Module-II: Utility Services

Housekeeping, Hospital Engineering and Maintenance, Biomedical Department, Medical Records-confidentiality of records, reception, enquiry, registration and admission, central billing and accounts, Cafeteria/canteen, Mortuary.

### Module-III: Biomedical Waste Management and Hazards in Hospital

Definition of Biomedical Waste, BMW – Segregation, collection, transportation, disposal, Liquid BMW, Radioactive waste, Metals / Chemicals / Drug waste, BMW Management & methods of disinfection, Modern technology for handling BMW, Monitoring & controlling of cross infection (Protective devices), BMW from Administrative point (Budget, Health check-up, Insurance)

### Module-IV: Other Hospital Functional Activities

Hospital Acquired Infection - Source and Control, Modern trends in Hospital Administration, Telemedicine.

## Examination Scheme:

Components	CP	V	A	ME	EE
Weightage (%)	5	5	5	15	70

## Texts & References:

# SUMMER INTERNSHIP EVALUATION

**Course Code: HHM4335**

**Credits Units: 06**

## **Course Objective:**

To provide on the job experience, as an understudy in a hospital, to help the student understand systems and procedures and learn to make decisions considering the Hospital as an integral unit.

**Duration: 2 months**

## **Objectives of Training:**

- To collect the information about organization
- To learn about the different projects run by the organization
- To be familiar with communication procedure between health workers and community
- To identify practical things about project planning and implementation
- To discover the problems faced in implementing the project
- To learn about working of the information system
- To know about method and source of evaluation

## **Format for Report Writing**

1. Title of the project
2. About the organization
3. Introduction and objectives of the project/ programme / organization
4. Funding agency—about the agency, how to get funding, Nature of funding agency
5. Staffing pattern of the project with their functions
6. Major activities going under project
7. Results achieved so far (target Vs achievement)
8. Role of the candidate in the project/programme / organization
9. Evaluation by the candidate

## **Guidelines for presentation-**

- Powerpoint presentation
- Time for presentation: 20 minutes
- Time for discussion: 10 minutes

## **Examination Scheme:**

<b>Components</b>	<b>Presentation</b>	<b>Report submitted</b>	<b>Viva-voce</b>
<b>Weightage (%)</b>	25	50	25

## Syllabus - Fourth Semester

### HOSPITAL MANAGEMENT INFORMATION SYSTEM

**Course Code: HHM4401**

**CreditUnits: 04**

**Course Objective:**

To understand the various indicators of health and health information system and health management information system in hospitals.

**Course Contents:**

**Module I: Introduction**

Concept of information as a resource, Understanding the principles of information systems, Classification of information systems in hospitals.

**Module II: Managing Hospital Information Systems**

Setting strategic objectives for information systems, organizing an information systems department, Principles of systems development, Importance of security and confidentiality of data.

**Module III: Role of Information Technology in Hospitals**

Principles of information processing, Role of information technology in information processing, Role of database management systems, Role of communication in managing hospital information systems.

**Module IV: Management Information System**

Concept of Management Information System (MIS).Developing indicators, identifying data and developing tools of measurement. Use of MIS: monitoring progress and evaluation, hospital planning, monitoring employees, monitoring health development, decision making. Computerization of MIS: demonstration and critical analysis of different MIS software packages used in health projects in hospitals.

**Examination Scheme:**

Components	CP	V	A	CT 1	CT 2
Weightage (%)	20	15	5	30	30

**Text & References**

# HEALTH INSURANCE AND MEDICAL TOURISM

**Course Code: HHM4402**

**CreditUnits: 02**

## **Course Objective:**

To acquaint students to the concept of HI and various HI products, so that the students are ready for challenges of healthcare insurance which is emerging as a sector holding great promise.

## **Course Contents:**

### **Module I: Introduction**

History of Health Insurance, Principles of Health Insurance, Health Insurance Products, Group Insurance Products, current trends in Health Insurance - International and Indian scenario.

### **Module II:**

Economic and financial management of Health Insurance

### **Module III:**

Scope of Medical Tourism in India

## **Examination Scheme:**

<b>Components</b>	<b>CT1</b>	<b>CT2</b>	<b>CAF</b>	<b>V</b>	<b>GD</b>	<b>GP</b>	<b>A</b>
<b>Weightage (%)</b>	20	20	25	10	10	10	5

# ENTREPRENEURSHIP & CONSULTANCY IN HEALTHCARE

Course Code: HHM4406

Credit Units: 03

## Course Objective:

To create interest in students to start a venture, learn the intricacies of starting an enterprise, identifying opportunities, inculcating enterprising values with orientation towards setting up own enterprises and equip the student to take up consultancy work in various facets of hospital management.

## Course Contents:

### Module I- Overview of Entrepreneurship

Overview: Definition and Meaning of Entrepreneurship Characteristics and Function of Entrepreneur Importance and Limitations of Entrepreneurship: Entrepreneurial Laboratory: Types of Entrepreneurs Entrepreneurship Games Innovation and Entrepreneurship.

Idea Generation: Brain Storming in terms for Project Ideas, Normal Group Technique; Creativity. Lateral Thinking; Research & Development, Reverse Engineering IPR, Patenting ;Environment Scanning Opportunities in Health care ; NGO Collaboration.

### Module II- Feasibility Study

Operational Feasibility, Technical Feasibility, Market Feasibility, Financial Feasibility, Economic Forecasting Project Report Writing; Support Systems for New Enterprise Creation, New Enterprise Identification and Selection Enterprise Establishment and Management.

### Module III-Sources of Finance

Short Term Sources – Instruments – Long term Sources – Instruments – Sources – Commercial Banks, Development Agencies. Indian and International Funding Organizations Capita Market Venture and Startup Capital.

### Module IV-Overview of Health care Consultancy

Consulting industry with specific reference to hospital and Health care Consulting Perspective. Professionalism & Ethics in Consulting Consultant – Client Relationship, Behavioral roles of consultants.

### Module V-Consulting Process in Health care

Entry: Initial Contracts – Preliminary Problem Diagnosis – Terms and Reference – Assignment Strategy and Plan – Proposal to the Client – Consulting Contract.

**Diagnosis:** Conceptual Framework of Diagnosis – Diagnosing Purpose and Problem - Defining Necessary Facts – Sources and Ways of Obtaining Facts – Data Analysis – Feedback.

Action Planning: Possible Solutions – Evaluating Alternatives – Presentation of Action. Implementation & Termination: Consulting in Various Areas of Health care Management.

## Examination Scheme:

Components	CP	V	A	ME	EE
Weightage (%)	5	5	5	15	70

# HOSPITAL SERVICES MARKETING

**Course Code:HHM4407**

**Credit Units:04**

## **Course Objective :**

The objective of this course is to enhance the marketing skills of the student with special reference to Hospital Services marketing.

## **Course Contents:**

### **Module-I:**

Concept of Service Marketing, characteristics of service marketing, Expanded service marketing mix, Scope of hospital services marketing.

### **Module-II:**

Service Consumer Behaviour – Search, Experience and Credence attributes; Market segmentation, targeting and positioning; Service Triangle.

### **Module-III:**

Designing health care service products – New Service Development process, PLC, Physical evidence, Pricing Strategies, Channel management in Hospitals, Franchisee management.

### **Module-IV:**

Internal marketing -Importance and Objectives, Roles of a service employee, Internal marketing strategies; External marketing, Interactive marketing.

### **Module-V:**

Service Distribution; Service Demand and Capacity Management; Service Quality Management– GAP model, SERVQUAL model – Service recovery strategies.

## **Examination Scheme:**

<b>Components</b>	<b>CP</b>	<b>V</b>	<b>A</b>	<b>ME</b>	<b>EE</b>
<b>Weightage (%)</b>	5	5	5	15	70

# DISASTER MANAGEMENT

**Course Code:HHM4408**

**CreditUnits: 02**

## Course Objective

To learn, identify and assess disasters in the community. To set-forth policies and procedures for disaster preparedness and to prepare disaster plan.

## Course Contents

### Module I: Basics of Disaster Management

Basics of disaster management and Mass casualties, Classification of disaster on the basis of origin, source, onset response; Disaster Phases, Disaster Process, Effects of Disasters, Disasters and Health Problems, Triage, Impact of Disasters on the Hospitals, Disaster Response – local, national & International, Disaster Management Act – 2005.

### Module II: Disaster preparedness

Policies & procedures for general safety, fire safety procedure for evacuation, Components of Disaster Plan – Pre-hospital & Hospital, Hospital disaster plan formulation & implementation, crisis management.

### Examination Scheme:

Components	CP	V	A	CT 1	CT 2
Weightage (%)	20	15	5	30	30

### Text&References:

- *A guide to emergency health management after natural disasters*, American health organization scientific publication.
- *Emergency vector control after Natural disaster*, American health organization scientific publication.
- *District Health facilities*, WHO regional publication western pacific services.
- *Medical supply management after natural disaster*, American health organization scientific publication.

# DISSERTATION

**Course Code: HHM4437**

**CreditUnits: 06**

## **The Aim of the Dissertation**

The aim of the dissertation is to provide the students with an opportunity to further their intellectual and personal development in their chosen field by undertaking a significant practical unit of activity, having an educational value at a level commensurate with the award of their degree.

The dissertation can be defined as a scholarly inquiry into problem(s) or issues(s), involving a systematic approach to gathering and analysis of information / data and leading to production of a structured report.

## **The Dissertation Topic**

It is usual to give the student some discretion in the choice of topic for the dissertation and the approach to be adopted. Kindly ensure that the dissertation is related to the field of specialization.

Deciding this is often the most difficult part of the dissertation process, and requires thorough preparation and background research.

It is important to distinguish here between ‘dissertation topic’ and ‘dissertation title’. The topic is the specific area that the student wishes to investigate. The title may not be decided until the dissertation has been written so as to reflect its content properly.

Few restrictions are placed on the choice of the topic. Normally, it is expected that the topic is:

- Relevant to business, defined broadly;
- Related to one or more of the subjects or areas of study within the core program and specialization stream;
- Clearly focused so as to facilitate an in-depth approach, subject to the availability of adequate sources of information and to the student’s knowledge;
- Of value and interest to the student’s personal and professional development.

## **Planning the dissertation**

This entails the following:

- Selecting a topic for investigation.
- Establishing the precise focus of the study by deciding on the aims and objectives of the dissertation, or formulating questions to be investigated. Consider very carefully what is worth investigating and its feasibility.
- Drawing up initial dissertation outlines considering the aims and objectives of the dissertation. Workout various stages of dissertation
- Devising a timetable to ensure that all stages of dissertation are completed in time. The timetable should include writing of the dissertation and regular meetings with your dissertation guide.

## **The dissertation plan/ outline or Synopsis**

It is recommended that the students should have a synopsis/dissertation plan to guide them right from the outset. Essentially, the synopsis/dissertation plan is an outline of what the student intends to do, chapter wise and therefore should reflect the aims and objectives of the dissertation in detail along with detailed bibliography and critical review of literature.

## **There are several reasons for having a dissertation plan**

- It provides the correct area of focus
- It provides the faculty-guide with an opportunity, at an early stage, to make constructive comments and help guide the direction of the research.
- The writing of a plan is the first formal stage of the writing process, and therefore helps build up confidence.
- In many ways, the plan encourages the student to come to terms with the reading, thinking and writing in a systematic and integrated way, with plenty of time left for changes.
- Finally, the dissertation plan generally provides a revision point in the development of the dissertation report in order to allow appropriate changes in the scope and even direction of work as it progresses.

## Keeping records

This includes the following:

- Making a note of everything read; including those discarded.
- Ensuring that when recording sources, author's name and initials, date of publication, title, place of publication and publisher are included. (Students may consider starting a card index or database from the outset).
- Making an accurate note of all quotations at the time they are read.
- Make clear what is a direct quotation and what is a paraphrase.

## Dissertation format

All students must follow the following rules in submitting their dissertation.

- Front page should provide title, author, Name of degree/diploma and the date of submission.
- Second page should be the table of contents giving page references for each chapter and section.
- The next page should be the table of appendices, graphs and tables giving titles and page references.
- Next to follow should be a synopsis or abstract of the dissertation (approximately 500 words) titled: **Executive Summary**.
- Next is the 'acknowledgements'.
- Chapter I should be a general introduction, giving the background to the dissertation, the objectives of the dissertation, the rationale for the dissertation, the plan, methodological issues and problems. The limitations of the dissertation should also be hinted in this chapter.
- Other chapters will constitute the body of the dissertation. The number of chapters and their sequence will usually vary depending on, among others, on a critical review of the previous relevant work relating to the major findings, a discussion of their implications, and conclusions, possibly with a suggestion of the direction of future research on the area.
- After this concluding chapter, give a list of all the references used. These should be cross - references with the text. For articles from journals, the following details are required e.g.  
Draper P and Pandyal K. 1991, The Investment Trust Discount Revisited, Journal of Business Finance and Accounting, Vol18, No6, Nov, pp 791-832.  
For books, the following details are required:  
Levi, M. 1996, International Financial Management, Prentice Hall, New York, 3rd Ed, 1996
- Finally, include appendices. These should only include relevant statistical data or material that cannot be fitted into the above categories.

## Guidelines for the assessment of the dissertation

While evaluating the dissertation, faculty guide will consider the following aspects:

1. Has the student made a clear statement of the objective or objective(s)
2. If there is more than one objective, do these constitute parts of a whole?
3. Are the objectives and methodology of practical relevance to the business world/economy?
4. Has the student done sufficient background reading and reviewed the available literature critically?
5. Has the student developed an appropriate analytical framework for addressing the problem at hand?
6. Is this based on up-to-date developments in the topic area?
7. Has the student collected information / data suitable to the frameworks?
8. Are the techniques employed by the student to analyse the data / information appropriate and relevant?
9. Has the student succeeded in drawing conclusion from the analysis?
10. Do the conclusions relate well to the objectives of the project?
11. Has the student been regular in his work?
12. Layout of the written report.
13. Confidence and knowledge of the student while answering questions and giving the presentation.

# Syllabus - Semester Fifth

## STATISTICAL METHODS IN ECONOMICS

**Course Code:** ECO2552

**Credit Units:** 03

**Course Objective:**

This subject will deal with all fundamental statistical methods of tools which the students have to use in economic analysis and decision making problems.

**Course Contents:**

**Module I: Introduction:**

Basic concepts: Population, Sample, Parameter, Statistic, Frequency distribution, Cumulative frequency distribution; Graphic and diagrammatic representation of data; Techniques of data collection. Sampling vs. Population, primary and secondary data.

**Module II: Central Tendency and Dispersion:**

Measures of Central Tendency: Mean, Median, Mode, Geometric mean, Harmonic mean; Measures of Dispersion; Range, Quartile deviation Mean deviation, Standard deviation; Skewness and Kurtosis, Moments.

**Module III: Correlation and Regression:**

Correlation: Simple; Coefficient of correlation; Karl Pearson and Rank correlation; Partial and Multiple Correlation analysis; Regression analysis – Estimation of a regression line in a bivariate distribution, Least squares method; Interpretation of correlation and regression coefficients; Coefficient of determination.

**Module IV: Time Series:**

Time Series Analysis - concept and components, determination of trend (Linear, Quadratic and Exponential) and seasonal indices

**Module V: Index Numbers**

Concept of an index number; Laspeyer's, Paasche's and Fisher's Index Numbers; Time Reversal, Factor reversal and circular tests; Chain base index; Problems in the Construction of an index number; splicing; base shifting and use of index number for deflating other series.

**Examination Scheme:**

Components	A	P	HA	CT	EE
Weightage (%)	5	10	5	10	70

(A-Attendance; P-Project/Seminar/Quiz/Viva; HA-Home Assignment; CT-Class Test; EE-End Semester Examination)

# ENTREPRENEURSHIP

## Syllabus - Semester First

### ORIENTATION PROGRAMME IN ENTREPRENEURSHIP

**Course Code: MGT2152**

**Credit Units: 03**

#### **Course Overview**

The goals of this programme are to inspire students and help them imbibe an entrepreneurial mind-set. The students will learn what entrepreneurship is and how it has impacted the world and their country. They will be introduced to key traits and the DNA of an entrepreneur, and be given an opportunity to assess their own strengths and identify gaps that need to be addressed to become a successful entrepreneur.

The programme comprises several short courses, each focusing on a specific entrepreneurial knowledge or skill requirement such as creative thinking, communication, risk taking, and resilience and helping them become career ready, whether it is entrepreneurship or any other career.

#### **Course Contents:**

##### **Module-I: Introduction to Entrepreneurship**

Meaning and concept of entrepreneurship, the history of entrepreneurship development, role of entrepreneurship in economic development, Myths about entrepreneurs, agencies in entrepreneurship management and future of entrepreneurship types of entrepreneurs.

##### **Module-II: The Entrepreneur**

Why to become entrepreneur, the skills/ traits required to be an entrepreneur, Creative and Design Thinking, the entrepreneurial decision process, skill gap analysis, and role models, mentors and support system, entrepreneurial success stories.

##### **Module-III: E-Cell**

Meaning and concept of E-cells, advantages to join E-cell, significance of E-cell, various activities conducted by E-cell

##### **Module-IV: Communication**

Importance of communication, barriers and gateways to communication, listening to people, the power of talk, personal selling, risk taking & resilience, negotiation.

**Module-V:** Introduction to various form of business organization (sole proprietorship, partnership, corporations, Limited Liability company), mission, vision and strategy formulation.

#### **Examination Scheme:**

Components	CT	HA	C	V	A	EE
Weightage (%)	10	5	5	5	5	70

(C - Case Discussion/ Presentation; HA - Home Assignment; V - Viva; CT- Class Test; A - Attendance; EE - End Semester Examination)

**Learning Outcomes**

**At the end of the course, the students will:**

- Develop awareness about entrepreneurship and successful entrepreneurs.
- Develop an entrepreneurial mind-set by learning key skills such as design, personal selling, and communication.
- Understand the DNA of an entrepreneur and assess their strengths and weaknesses from an entrepreneurial perspective.

**Learning Methods**

Videos and quizzes through the on-line Learning Management System (LMS); Classroom learning through an experienced Facilitator/Faculty on campus (Videos, In-class Activities, Outbound Activities); Assignments and Projects; and Practical Experiences including challenges, internships and apprenticeships.

# Syllabus - Semester Second

## EXPLORING BUSINESS OPPORTUNITY

**Course Code: MGT2252**

**Credit Units: 03**

### Course Overview

The goal of this programme is to provide a space and platform for discovery, both self discovery and opportunity discovery. Students will discover their strengths in terms of an entrepreneurial founding team and learn basics such as opportunity discovery, prototyping, competition analysis, and early customer insights and participate in on-line and campus activities and events such as idea competitions, business plan challenges, etc.

### Course Contents:

#### Module-I: Self-Discovery

Natural born entrepreneur, the reluctant entrepreneur, the hidden traits, discovers your own strength.

#### Module-II: Idea Generation

Sources of business ideas, how to find & assess ideas? Where to find data for ideation? What is a good problem? Opportunity recognition.

#### Module-III: Idea Evaluation

Design thinking for finding solutions, prototyping, idea evaluation, entrepreneurial Outlook, value proposition design, customer insight, ideas development, capstone project presentation.

#### Module-IV: Feasibility Analysis

Product/Service Feasibility Analysis, Industry & competition analysis, environment analysis, financial feasibility analysis.

### Examination Scheme:

Components	CT	HA	C	V	A	EE
Weightage (%)	10	5	5	5	5	70

(C - Case Discussion/ Presentation; HA - Home Assignment; V - Viva; CT- Class Test; A - Attendance; EE - End Semester Examination)

### Learning Outcomes

**At the end of the course, the students will be able to:**

- Further discover their strengths and weaknesses in terms of qualities and traits required to be a successful entrepreneur in the context of a founding team.
- Identify gaps in terms of qualities and traits required to be an entrepreneur, if any, and make a personal action plan to close those gaps.
- Develop the entrepreneurial mind-set further in terms of acquiring a business focus, creative thinking, risk-taking ability, and more.
- Learn about opportunity discovery and evaluation of viable business ideas for new venture creation.

- Practice critical talents and traits required for entrepreneurs such as problem solving, creativity, communication, business math, sales, and negotiation.
- Start customer development, validate their ideas, and learn what prototyping is.
- Understand the value of mentorship in the success of an entrepreneur and their ventures.

**Learning Methods**

Videos and quizzes through the on-line Learning Management System (LMS); Classroom learning through an experienced Facilitator/Faculty on campus (Videos, In-class Activities, Outbound Activities); Assignments and Projects; and Practical Experiences including challenges, internships and apprenticeships.

# Syllabus - Semester Third

## DEVELOPING A BUSINESS MODEL

**Course Code: MGT2352**

**Credit Units: 03**

### Course Overview

The goal of this program is to take the students from the MVP (Minimum Viable Product) stage to the Business Model stage, i.e. the students will acquire the skills required to transform their MVP into a business model. In this course, they will start building their teams by finding co-founders and perhaps even hiring. They will transform their business idea into the Business Model Canvas and will use it to further refine their MVP. They will also set up a digital presence and learn to use promotional channels and distribution channels to engage and serve their customers. Additionally, they will get started with various legal and operational aspects as well as initial funding concepts such as bootstrapping.

### Course Contents:

#### Module-I: Team

Finding your team, art of team formation, teamwork planning, chief mentor/ founder & Co founders, team formation, and delegation of work.

#### Module-II: Preparation of Business model/Plan

Meaning and significance of a business plan, components of a business plan, and feasibility study, Iterating the MVP, Digital Presence for Ventures, Clarifying the value proposition, Guidelines for writing BP, pre-requisites from the perspective of investor.

#### Module-III: Business Model

The importance and diversity of business model, how business model emerge, potential fatal flaws of business models, components of an effective business model, core strategy, strategic resources, partnership network, customer interface.

#### Module-IV: Product/ Market Fit

Understanding basics of unit economics, cost and profitability, Refining the product/service, Establish the success and operational matrix, Starting Operations.

**Customer Validation:** Evaluate the efficiency with which customers can be captured and kept, Early insights on cost of customer acquisition, Other Stakeholder Validation, Customer Development and Experience.

### Examination Scheme:

Components	CT	HA	C	V	A	EE
Weightage (%)	10	5	5	5	5	70

(C - Case Discussion/ Presentation; HA - Home Assignment; V - Viva; CT- Class Test; A - Attendance; EE - End Semester Examination)

**Learning Outcomes**

At the end of this course, the students will be able to:

- Acquire the skills and knowledge related to the various phases in venture creation process such as creating a business model and building a prototype.
- Practice entrepreneurship by forming and running a Campus Venture as part of a team.

**Learning Methods**

Videos and quizzes through the on-line Learning Management System (LMS); Classroom learning through an experienced Facilitator/Faculty on campus (Videos, In-class Activities, Outbound Activities); Assignments and Projects; and Practical Experiences including challenges, internships and apprenticeships.

## Syllabus - Semester Fourth

### TRANSLATING BUSINESS MODEL INTO STARTUP

**Course Code: MGT2452**

**Credit Units: 03**

#### **Course Overview**

The students who are keen to launch their own venture will take this course. Students will select a vertical and launch their own venture. They will learn about market size, costs, channels and customer acquisition, business model and plan finalization, efficiency and growth processes.

#### **Course Contents:**

##### **Module-I: Gaining marketing Intelligence**

Identify the vertical you will operate in and the business opportunity, understand your customers and accurately assess market opportunity, minimum viable product and the lean method.

##### **Module-II: Develop and validate business model for your venture**

Value Proposition, Customer Segments, Channels and Partners, Revenue Model and Streams, Key Resources, Activities, and Costs Customer Relationships and Customer.

##### **Module-III: Development Processes**

Translate Business Model into a Business Plan, Visioning for venture, Take product or service to market, Deliver an investor pitch to a panel of investors, Identify possible sources of funding for your venture – customers, friends and family, Angels, VCs, Bank Loans and key elements of raising money for a new venture.

##### **Module-IV: Business Plan & Startup-I**

Get to market Plan, Effective ways of marketing for start-ups – Digital and Viral Marketing; Hire and Manage a Team, Managing start-up finance: The Concept of Costs, Profits, and Losses, Manage your Cash Flow, analyse your Financial Performance, budgeting.

##### **Module-V: Business Plan & Startup-II**

Establishing a ethical culture for a firm, Legal and regulatory aspects for starting up specific to your venture, Enhancing the growth process and creating scalability (customers, market share, and/or sales), Thorough understanding of market size, costs, margins, delivery channels, customer acquisition costs, Identify areas to build efficiency (product making, service delivery, and channels - key areas of the BM Canvas are identified by now), Finalize business model and plan, Have a 1-2 year roadmap and trajectory.

##### **Module-VI: Obtaining Business Licenses and permits**

Business Licenses, business permits, choosing a form of business organization, sole proprietorship, partnership, corporations, Limited Liability company.

#### **Examination Scheme:**

Components	CT	HA	C	V	A	EE
Weightage (%)	10	5	5	5	5	70

(C - Case Discussion/ Presentation; HA - Home Assignment; V - Viva; CT- Class Test; A - Attendance; EE - End Semester Examination)

**Learning Outcomes**

**At the end of the course, the students will be able to:**

- Launch a sustainable venture with a valid business model, with co-founder(s) on or off campus, and real paying customers.
- Create and validate a business model and business plan for their idea.
- Develop the Minimum Viable Product (MVP).
- Implement an inexpensive and optimum Go-to-Market plan for their business.
- Craft and present an effective business pitch for investors, partners and other stakeholders.
- Gain in-depth knowledge and relevant skills about a specific vertical.
- Students build a prototype or service, generate jobs and revenue.

**Learning Methods**

Videos and quizzes through the on-line Learning Management System (LMS); Classroom learning through an experienced Facilitator/Faculty on campus (Videos, In-class Activities, Outbound Activities); Assignments and Projects including Student Venture; and Practical Experiences including challenges, internships and apprenticeships.

## Syllabus - Semester Fifth

### ADVANCED PROGRAMME IN ENTREPRENEURSHIP: GROWTH

Course Code: MGT2552

Credit Units: 03

#### Course Overview

The students who already have their own venture will take this course to focus on a growth agenda. They will learn advanced concepts and build sustainability in their venture in various ways such as Growth Financing, process refinement, and scalability.

#### Course Contents:

##### Module-I: Growth Opportunities

Characteristics of high growth new ventures, strategies for growth, and building the new venture capital, discovering and assessing opportunities for growth, developing a growth mind-set and visioning for growth, review the robustness and relevance of business model vis-à-vis current market situation, map financing decisions to business models and reiterating business models

##### Module-II: Retention & Expansion Strategies

Dealing with stagnation of customer base and developing customer base: expansion to new markets – options and strategies, product Life Cycle – Product Road Map; Getting to Plan B, *project to Process*: Build, adapt, test, and establish key processes and systems that enable efficiency, continuous and sustained innovation

##### Module-III: Developing the organizational capabilities for growth

Develop strong leadership capabilities, ability to delegate and manage key leadership tasks. o Streamline operations and organizational design to accommodate growth, Implement new and effective approaches to marketing and communication for customers, suppliers, and employees, Acquire new resources for strategic growth: executive hires.

##### Module-IV: Planning and streamlining financial/ Legal processes:

Managing cash for growth, Balance between profitability and growth costs, Role of business services – accountant, lawyer, Understanding legal requirements, and compliance issues, Exit options :Evaluating opportunities for acquisition; Growth financing, Scalability & efficiency improvements, IPR.

#### Examination Scheme:

Components	CT	HA	C	V	A	EE
Weightage (%)	10	5	5	5	5	70

(C - Case Discussion/ Presentation; HA - Home Assignment; V - Viva; CT- Class Test; A - Attendance; EE - End Semester Examination)

#### Learning Outcomes

At the end of the course, the students will be able to:

- Manage and grow their business in terms of jobs and revenue.
- Make a Growth Plan and pitch it to all stakeholders (investors, partners, key employees etc.).
- Sign up for advanced support for entrepreneurs – Mentor Platform.
- Identify key drivers of growth in a venture.

- Develop a growth mind-set.
- Understand the basics of organization and team building; and establishing policies to hire and retain staff.
- Understanding legal and compliance issues related to their business.
- Present a pitch for funding their growth plan.

**Learning Methods**

Videos and quizzes through the on-line Learning Management System (LMS); Classroom learning through an experienced Facilitator/Faculty on campus (Videos, In-class Activities, Outbound Activities); Assignments and Projects; and Practical Experiences including challenges, internships and apprenticeships.

## Syllabus - Semester Sixth

### ADVANCED PROGRAMME IN ENTREPRENEURSHIP: EXPANSION

**Course Code: MGT2652**

**Credit Units: 03**

#### Course Overview

The students who have a sustainable venture will get ready for the expansion phase. They will focus on expansion and go on the path of creating a high-performance company. They will learn advanced concepts such as franchising, renewal, and profit maximization.

#### Audience

This course will be offered to all the students who have gone through Advanced Programme in Entrepreneurship. It is suitable for students, keen to continue to grow their ventures. Ideally, they will have a reasonable understanding of growth challenges and how to tackle them and would seek to expand further through inputs from this course.

#### Course Contents:

**Module-I:** Expansion model – Geographical/Franchising/Licensing routes to new market expansion

**Module-II:** Maximizing Profits- Testing price elasticity, Cost reduction through scaling up, Expanding offerings, other revenue streams (partnerships)

**Module-III:** Renewal - Similar to Take-off and Resource Maturity of SMEs

**Module-IV:** Harvesting Rewards- Exit strategies for entrepreneurs, bankruptcy, and succession and harvesting strategy

#### Examination Scheme:

Components	CT	HA	C	V	A	EE
Weightage (%)	10	5	5	5	5	70

(C - Case Discussion/ Presentation; HA - Home Assignment; V - Viva; CT- Class Test; A - Attendance; EE - End Semester Examination)

#### Learning Outcomes

**At the end of the course, the students will be able to:**

- Effectively tackle growth challenges of their venture.
- Nurture and apply a growth mind-set.
- Continue refining their business model.
- Draw an expansion plan for their venture.
- Scale up their business.
- HR policies, How to attract and retain key management team.
- Focus on revenue maximization.
- Build key aspects of adaptation and sustainability.
- Manage and grow their business in terms of expansion and look for partnerships.

## **Learning Methods**

Videos and quizzes through the on-line Learning Management System (LMS); Classroom learning through an experienced Facilitator/Faculty on campus (Videos, In-class Activities, Outbound Activities); Assignments and Projects; and Practical Experiences including challenges, internships and apprenticeships.

## **PRACTICUM PROGRAMMES**

- Practicum programmes enable real-world experiences that empower students to explore and strengthen their entrepreneurial abilities. Students join E-cells in the first year, build their skills through a series of activities, and practice by starting campus companies as they move forward.
- The Practicum Approach motivates and nurtures entrepreneurial development through hands-on work at the E-Cells. By managing operations of E-cells, interacting with entrepreneurs, organizing workshops, enabling start-up internships, and running campus companies, students apply learnings to real world situations and challenges. Additionally, all E-Cells participate in entrepreneurship events through the year.
- The Practicum Programme is designed to cater the learning needs of new (basic) students and advanced students in the entrepreneurship learning curve.
- A bouquet of 16 activities, 8 per category will be offered both for the Basic and Advanced students. In addition to two hands-on Programs.
- Additionally, a select number of students from each institute will be trained as leaders. These E-leaders manage the E-cells and run the Practicum activities along with the designated faculty.
- The structure of the Programme is provided in the below table.

# Syllabus - Semester Second

## MARKETING MANAGEMENT

**Course Code: MGT2251**

**Credit Units: 03**

### **Course Objective:**

The main objective of this course is to give students an elementary knowledge of the fundamentals in the field of marketing. The focus will be both on developing and helping them imbibe basic marketing principles and establishing an appreciation of contemporary realities.

### **Course Contents:**

#### **Module I: Introduction to Marketing**

Meaning of marketing, Core concepts of marketing, Evolution and its role in the changing business environment, various marketing management philosophies, viz., the production concept, the product concept, selling concept and the marketing concept, Newer definitions of marketing- societal marketing and relationship marketing, Strategies planning in marketing, Formulation of marketing plan.

#### **Module II: Analyzing Marketing Opportunities**

Internal and External Marketing Environment Analysis, Introduction to Marketing Information System and Marketing Research, BCG matrix, GE 9 cell model.

#### **Module III: Studying Consumer Behaviour and Selecting Markets**

Buying Behaviour for Consumer Markets and Industrial Markets, Types of Buying Situations, Buying Decision Process and Factors Affecting Buyer Behaviour, Consumer Adoption Process, Concept of Market Segmentation, Bases for segmenting Consumer and Business markets, Approaches for Targeting, Differentiation and Positioning.

#### **Module IV: Product Mix Strategy**

Product: concept & levels, Classification of consumer and industrial products, Product Differentiation, Product Mix, Product Life Cycle and various strategies, Branding: concept and challenges, Brand decisions, Packaging and Labeling.

#### **Module V: Product Development Decision and Pricing**

Product Line Decisions, New Product Development: Challenges & Process; Consumer Adoption Process, Diffusion of Innovation, Pricing Strategies; Setting the price, Understanding various pricing strategies and their application.

#### **Module VI: Distribution and Logistics Decision and Integrated Communication Mix**

Nature of Marketing Channels, Channel Functions and Flows, Channel Design and Management Decisions, Channel Dynamics, Introduction to Wholesaling, Retailing and Logistics, Marketing communication mix and Introduction to various elements of integrated marketing communications briefly

#### **Module VII: Emerging Marketing Paradigms**

E-marketing, Global marketing, Mobile marketing, Kiosk marketing, Green marketing, Tele marketing, Multi level marketing, Rural marketing.

**Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>HA</b>	<b>C</b>	<b>V</b>	<b>A</b>	<b>EE</b>
<b>Weightage (%)</b>	10	5	5	5	5	70

**C** - Case Discussion/ Presentation; **HA** - Home Assignment; **P** - Project; **S** - Seminar; **V** - Viva; **Q** - Quiz; **CT** - Class Test; **A** - Attendance; **EE** - End Semester Examination

# Syllabus - Semester Third

## ORGANISATIONAL BEHAVIOUR

**Course Code: MGT2351**

**Credit Units: 03**

**Course Objective:**

The objective of this course is to familiarize the students with the behavioural patterns of Human beings at individual and group levels.

**Course Contents:**

**Module I: Understanding Human Behaviour**

Concept, Nature and Significance of Human Behaviour, Factors Affecting Human Behaviour, Levels of Human Behaviour; Disciplines contributing to OB.

**Module II: Individual Behaviour**

Individual Differences; Personality and Theories of Personality; Perception; Learning and Behaviour reinforcement, Values.

**Module III: Motivation & Attitude**

Concept, Significance and Theories of Motivation, Motivation and Behaviour, Motivation at Work, Attitudes, Meaning and nature, Formation and change in attitudes, Job related attitudes.

**Module IV: Interpersonal Behaviour, Power & Politics**

Interpersonal Dimensions of Behaviour; Transactional Analysis Implications of TA, Organizational communication, making communication effective, Power: Concept, determinants, types; Organizational Politics: Tactics, Impression Management.

**Module V: Group Behaviour and Leadership**

Group Behaviour; Types, Functions, Determinants of Group Behaviour, Inter Group Problems, Leadership: Nature and Significance of Leadership, Leadership Styles, Theories of Leadership; Trait Theory, Behavioural Theory, Managerial Grid.

**Module VI: Change and Conflicts**

Organizational conflict, Nature and types of conflict, Management of organizational conflict, Approaches to conflict management, Organizational culture, Learning and maintaining organizational culture, Organizational change, Planned change, Resistance to change, Organization development, Definition, Need for organization development, Organization development process.

**Examination Scheme:**

Components	CT	HA	C	V	A	EE
Weightage (%)	10	5	5	5	5	70

C - Case Discussion/ Presentation; HA - Home Assignment; P - Project; S - Seminar; V - Viva; Q - Quiz; CT - Class Test; A - Attendance; EE - End Semester Examination

# Syllabus - Semester Fourth

## BUSINESS ENVIRONMENT

**Course Code: MGT2451**

**Credit Units: 03**

### **Course Objective:**

The aim of the course is to orient the students towards the basic concepts of Indian and global business environment.

### **Course Contents:**

#### **Module I: Overview of Business Environment**

Meaning and types of business environment, Internal and external environment, Micro and macro environment, Factors (Cultural, social, Political economic legal, demographic and technological) effecting business environment.

#### **Module II: Indian Industrial environment**

Industrial policy up to 1991, New industrial policy, Liberalization, Privatization and Globalization process in India, Disinvestment, Industrial sickness, MRTP act 1969, Competition law 2002, Foreign Exchange Regulation Act and Foreign Exchange Management Act (FERA and FEMA).

#### **Module III: Financial Environment**

Indian money and capital markets: meaning, functions and constituents, Stock exchange- importance and functions, SEBI, Capital market reforms and development, Industrial financial institutions (IDBI, SIDBI, ICICI, IFCI etc.).

#### **Module IV: Labour Environment**

Labour legislation in India, Social security benefits, Industrial disputes- causes and preventive measures, Settlement of disputes, International Labour Organisation (ILO), Trade union- meaning and functions, Trade Union Act.

#### **Module V: Economic Planning and Development**

Planning in India- needs and objectives, five year plans, planning commission, 11<sup>th</sup> five year plan, Green and white revolution- achievements and failures, Second green revolution, foreign trade policy 2009, Export processing zones, Export oriented units, Special economic zones (EPZ's, EOU's, SEZ's) and trading houses in India.

#### **Module VI: Global Environment**

Bretton woods system, features of Uruguay round of negotiations, GATT/ WTO- role, functions and ministerial conferences, IMF, World Bank (International Bank for Reconstruction and Development), Regional economic cooperation institutions, SAARC, EU, NAFTA and ASEAN.

### **Examination Scheme:**

Components	CT	HA	C	V	A	EE
Weightage (%)	10	5	5	5	5	70

C - Case Discussion/ Presentation; HA - Home Assignment; P - Project; S - Seminar; V - Viva; Q - Quiz; CT - Class Test; A - Attendance; EE - End Semester Examination

# Syllabus - Semester Fifth

## OPERATIONS RESEARCH

**Course Code: MGT2551**

**Credit Units: 03**

**Course Objective:**

The objective of this paper is to make students familiar with basic concepts and tools in Operations Research. These techniques assist in solving complex problems and help in decision making.

**Course Contents:**

**Module I: Introduction**

Introduction to Operations Research, Definition, scope and limitations of Operations Research

**Module II: Linear Programming**

Linear Programming – Basic Concepts, Model formulation; Solution methods – Graphical Solution method, Simplex method (problems involving only upto 3 constraints and of inequality <), Application of LPP in business decision making.

**Module III: Transportation Problem**

Transportation problem- Initial Basic feasible solution (North - West corner rule, Vogels approximation method), Test for optimality (Modified Distribution (MODI) method)

**Module IV: Assignment Problem**

Assignment Problem – Introduction, Approach of the Assignment model, Solution Methods (Hungarian method)

**Module V: Game Theory**

Game Theory - Concept and definition; Solution methods of Pure Strategy games (with saddle point), Significance of Game Theory.

**Module VI: Queuing & Simulation**

Introduction, Elementary queuing system, Introduction to Single – channel queuing model (with Poisson arrivals and Exponential service times), (no numerical); Introduction to Simulation, applications, advantages and drawbacks of simulation, Introduction to Monte – Carlo Simulation, Role of computers in Simulation.

**Examination Scheme:**

Components	CT	HA	Q	C	A	EE
Weightage (%)	10	5	5	5	5	70

**C** - Case Discussion/ Presentation; **HA** - Home Assignment; **P** - Project; **S** - Seminar; **V** - Viva; **Q** - Quiz; **CT** - Class Test; **A** - Attendance; **EE** - End Semester Examination

# Syllabus - Semester Sixth

## BUSINESS LAW

**Course Code: MGT2651**

**Credit Units: 03**

**Course Objective:**

The objective of the course is to acquaint the students with the fundamentals of business related laws, which have an important role over smooth conduct of business.

**Course Contents:**

**Module I: Legal Environment of Business**

Importance of Law, Legal environment of business, Sources of law, Function of law.

**Module II: Indian Contract Act, 1872**

Nature and kinds of Contracts, Concepts related to offer, Acceptance and Consideration, Principles Governing Capacity of Parties and Free Consent, Legality of Objects, Performance and Discharge of Contract, Breach of Contract and its Remedies, Basic Elements of Law Relating to Agency, Guarantee and Pledge.

**Module III: Indian Sale of Goods Act, 1930**

Sale and Agreement to Sell, Hire Purchase, Pledge, Mortgage, Hypothecation Lease, Goods, Different types of Goods, Passing of Property in Goods, Conditions and Warranties, Doctrine of Caveat emptor, Rights of an unpaid Seller.

**Module IV: Negotiable Instruments Act, 1881**

Meaning of Negotiability and Definition of Negotiable Instruments, Features, Cheques, Bill of Exchange and Promissory Note, Holder in Due Course, Crossing of Cheques, Endorsement and Dishonour of Cheques.

**Module V: Elements of Company Law**

Meaning and types of companies, Formation of a company, Memorandum and Articles of Association, Prospectus and Issue of Shares, Share Capital and Shareholders, Company Meetings and Proceedings, Powers and Liabilities of Directors, meeting, Managerial Remuneration and Winding up of Company.

**Module VI: Consumer Protection Act 1986 and Torts**

Need for Consumer Protection, Meaning of Consumer, Different Redressal Forums for Consumers, Rights of Consumers, Unfair Trade Practices, and Procedure for Filing Complaints, Meaning of tort, Application of Tortious Liability in Business Situations.

**Examination Scheme:**

Components	CT	HA	C	V	A	EE
Weightage (%)	10	5	5	5	5	70

C - Case Discussion/ Presentation; HA - Home Assignment; P - Project; S - Seminar; V - Viva; Q - Quiz; CT - Class Test; A - Attendance; EE - End Semester Examination

GEN2051	Military Training Foundation	-	-	-	3
	<b>TOTAL</b>				<b>3</b>

# MILITARY TRAINING FOUNDATION

## Syllabus

### MILITARY TRAINING FOUNDATION

**Course Code: GEN2051**

**Credit Units: 03**

#### **SINGLE SEMESTER COURSE**

#### **Introduction**

In accordance with the National Youth Policy which envisages that youth of the country should spend at least one fifth of their total time spent in an educational institution on outdoor activities. In furtherance of our National Youth Policy compulsory military training is being conducted for UG students at Amity University Gurgaon. A tented camp has been established at the sprawling campus at Amity University Gurgaon, surrounded by forest land and orchards within the campus, the camp gives a feeling of living in field conditions, in the wild.

#### **Proposal**

It is proposed to introduce military training (MTC) for under graduate students as an open elective, as part and parcel of the flexi credit system, wherein a student can design his own degree from a basket of courses.

#### **Aim& Objectives**

The aim of Military Training for UG students is :-

- To inculcate an essence of camaraderie and brotherhood amongst the students.
- To bring energy and team spirit amongst participants.
- To expose the students to the essentials of physical well-being and fitness.
- To give exposure to students regarding adventure training.
- To inculcate leadership qualities in students.
- To expose students to subjects of general awareness such as role of armed forces in nation building, map reading and fire fighting.

#### **Methodology**

MTC is organized as a combined camp for both boys and girls, however, separate infrastructure for boys and girls have been created at AUG.

#### **Assessment**

Assessment of a student is based on the following :-

- (a) Participating in all activities and successfully completing the course.
- (b) Performance in the assimilation exercise held at the end of the course.
- (c) Participation in debate and class participation.
- (d) Exhibiting leadership qualities i.e. leading drill contingents.

Maximum of three credit will be given to participants.

Three modules have been designed to fulfill the aim and objectives of this Military Training Foundation Course as under :-

- |                |   |                            |
|----------------|---|----------------------------|
| (a) Module I   | - | Military Training.         |
| (b) Module II  | - | Leadership and Motivation. |
| (c) Module III | - | Adventure training.        |

## **MODULES: MILITARY TRAINING CAMAPS (MTC)**

### **Module-I: Military Training**

#### **Part-A**

- 1.1 Introduction of Basic principles of Camping.
- 1.2 Drill aspect of discipline.
- 1.3 Camp Layout.
- 1.4 Hygiene and sanitation of camp.
- 1.5 Introduction to Armed Forces.
- 1.6 Role of Armed force in Nation building.

#### **Part-B**

- I. Conducting drill.
- II. Camp setting.
- III. General fitness exercises.
- IV. Obstacle crossing.
- V. Weapon firing.

### **Module-II: Leadership and Motivation**

#### **Part-A**

- 2.1 National character and values
- 2.2 Role and importance of Leadership
- 2.3 Law of Armed Conflict
- 2.4 Team play and group cohesion

#### **Part-B**

- I. Tug of war
- II. Task assignment and conduct
- III. Group Discussion
- IV. Games
- V. Fire safety drills
- VI. March past

### **Module-III: Adventure Training**

#### **Part-B**

- I. Trekking
- II. Rappelling
- III. Rope Climbing

## **BUSINESS ORGANIZATION AND MANAGEMENT**

**Course Code: COM2101**

**Credit Units: 03**

### **Course Objective:**

This course aims to provide students with an understanding of the principles and practices of organisation and management. This course enables students to understand the fundamental management theories and their evolution, identify the elements of the organizational environments, manage resources and develop the ability to make sound decision within an organization.

### **Course Contents:**

#### **Module I: Introduction**

Introduction to business, Business firms - Forms of organisation - sole proprietors, Partnership, Joint-Hindu family, Joint stock Company, Co-operative organisations - Public Enterprises, BPO, E-commerce and M-commerce.

#### **Module II: Management**

Introduction - Meaning, nature and characteristics of Management - Scope and functional areas of management - Social responsibility of management and Ethics.

#### **Module III: Planning**

Nature importance and purpose of planning - Planning process, Objectives - Types of plans (Meaning only) - Decision-making – importance & steps.

#### **Module IV: Organising & Staffing**

Nature and purpose of organisation, Principles of organisation - Types of organization - Departmentation, Committees - Centralisation Vs decentralisation of authority and responsibility - Span of Control - MBO and MBE( Meaning only) - Nature and importance of staffing - Process of selection & recruitment(in brief) – retaining (training and compensation).

#### **Module V: Directing**

Meaning and nature of directing - Leadership styles - Motivation theories (Maslow's, Herzberg, Mcgregors X & Y theory), Ouchi's Theory- Communication meaning and importance, barriers to communication, types of communication - Coordination meaning and importance.

#### **Module VI: Controlling**

Meaning and steps in controlling - Essentials of a sound control system - Methods of establishing control(in brief) – Balance score card, Economic value added, Market value added.

#### **Module VII: Management in perspective**

Change Management, Knowledge Management, Learning organization, Managing Diversity, Corporate Governance.

### **Examination Scheme:**

Components	A	P	HA	CT	EE
Weightage (%)	5	5	5	15	70

A-Attendance; P-Project/Seminar/Quiz/Viva; HA-Home Assignment; CT-Class Test; EE-End Semester Examination

# MICROECONOMIC THEORY AND APPLICATIONS

**Course Code: COM2102**

**Credit Units: 03**

## **Course Objective:**

The objective of this paper is to make the student to understand how the business organizations work by applying economic principles in their business management. The course will attempt to relate theory to practice and try to instill in students the ability to apply basic microeconomic concepts to the understanding of everyday phenomena.

## **Course Contents:**

### **Module I: Introduction**

Nature and scope of economics; Difference between micro and macroeconomics, Nature of economic problem. Basic postulates, Role of price mechanism. Theory of Demand and Analysis: Demand-demand determinants – law of demand-characteristics exceptions -Elasticity of demand – price elasticity – types – determining factors- change in demand and elasticity of demand-business applications of price elasticity- concepts of income and cross elasticity of demand. Measurement of price elasticity of demand by total outlay method.

### **Module II: Consumer Behaviour**

Consumer sovereignty-limitations. Approaches to the study of consumer behaviour-cardinal approach-the law of equi-marginal utility, ordinal approach – indifference curve analysis-properties – consumer surplus – meaning-analysis limitations. Price, income and substitution effects. Giffen goods. Engel curve.

### **Module III: Theory of Production and Cost**

Concept of Production Function. Isoquants, marginal rate of technical substitution, Law of variable proportions. The concepts of firm and industry. Revenue and cost curves - short and long run. Equilibrium of the firm.

### **Module IV: Market Structures**

Market structures & business decisions; Objectives of Business firm

- Perfect competition: Profit Maximization, and equilibrium of firm & industry; Short-run and long-run supply curves; price and output determination, practical applications
- Monopoly: Determination of price under monopoly; Equilibrium of a firm; Comparison between perfect competition and monopoly; Multi plant monopoly, Price discrimination; Practical applications.
- Monopolistic Competition: Meaning & Characteristics; Price and Output determination under monopolistic Competition; Excess capacity under monopolistic competition.
- Oligopoly: Characteristics, indeterminate pricing and output; classical models of oligopoly; price leadership; Collusive oligopoly, kinked demand curve.

### **Module V: Income Distribution & Factor Pricing**

Demand for factors, supply of factor, backward bending supply curve for labour, concepts of economic rent; Functional distribution of income

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>P</b>	<b>HA</b>	<b>CT</b>	<b>EE</b>

# PRINCIPLES OF MARKETING

**Course Code: COM2104**

**Credit Units: 03**

## **Course Objective:**

To help students to understand the concept of marketing and its applications, also to expose the Students to the latest trends in marketing.

## **Course Contents:**

### **Module I: Introduction**

Nature and scope of marketing- Importance of marketing as a business function - and in the economy - Marketing concepts - Traditional and Modern, Selling V/S marketing - Marketing Environment.

### **Module II**

Markets and Segmentation. Meaning of Market - Various types of markets and their characteristics. Concept of market segmentation and its Importance - bases for market segmentation.

**Consumer behaviour** Nature, scope & significance of consumer behaviour - factors affecting consumer behaviour.

### **Module III**

Product - concept of product - consumer and Industrial goods - product planning and development packaging - role and functions - Brand name and Trademark - after sale service - product life cycle concept.

### **Module IV**

Price - Importance of price in the marketing mix, factor affecting price of a product / service, Pricing Strategies.

### **Module V**

Distribution channels - concept and role - types of distribution channels - Factors affecting choice of a distribution channel.

### **Module VI**

Promotion : Method of promotion - optimum promotion mix.

Meaning and Importance of advertising - advertising medias - ethics of good advertising.

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>P</b>	<b>HA</b>	<b>CT</b>	<b>EE</b>
<b>Weightage (%)</b>	5	5	5	15	70

A-Attendance; P -Project/Seminar/Quiz/Viva; HA-Home Assignment; CT-Class Test; EE-End Semester Examination

# E-COMMERCE

**Course Code: COM2103**

**Credit Units: 03**

## **Course Objective:**

The subject will provide students with the knowledge to cover wide-ranging aspects of conducting business on the Internet.

## **Course Contents:**

### **Module I: E-Commerce Concept**

Meaning, definition, concept, features, function of E-Commerce, E-Commerce practices v/s traditional practices, scope and basic models of E-Commerce, limitations of E-Commerce, precaution for secure E-Commerce, proxy services. Concept of EDI, difference between paper based Business and EDI Based business, Advantages of EDI, Application areas for EDI, Action plan for Implementing EDI, Factors influencing the choice of EDI, Software Concept of Electronic Signature, Access Control.

### **Module II: Types of E-Commerce**

Meaning of B2C, B2B, C2C, P2P. Applications in B2C- E-Banking, E-Trading. E-Auction - Introduction and overview of these concepts. Application of B2B- E-distributor, B2B service provider, benefits of B2B on Procurement, Just in time delivery. Consumer to consumer and peer to peer business model Introduction and basic concepts.

### **Module III: E-Marketing**

Traditional Marketing V/S E-Marketing, Impact of Ecommerce on markets, Marketing issue in E-Marketing, Promoting your E-Business. Direct marketing, one to one marketing, Marketing Strategies

### **Module IV: E-Finance**

Areas of E-Financing, E-Banking, traditional v/s E-Banking, operations in E-Banking. E-Trading- Stock marketing, trading v/s E-Trading, Importance of E-Trading, Advantages of E-trading, operational aspects of E-Trading.

### **Module V: E-Payment**

Transactions through Internet, Requirements of E-Payment system, Post paid payment system- Credit card solutions, cyber cash Internet cheques. Instant Paid payment system- Debit card, direct debit. Prepaid payment system- Electronic cash, digicash, Netcash, cybercash, smart cards.

### **Module VI: E-Security**

How sites are hacked security on the internet, Firewall, Network & Website Security, Benefits of Internet Firewall.

## **Examination Scheme:**

Components	A	P	HA	CT	EE
Weightage (%)	5	5	5	15	70

A-Attendance; P -Project/Seminar/Quiz/Viva; HA-Home Assignment; CT-Class Test; EE-End Semester Examination

## **Text & References:**

## READINGS IN MANAGEMENT

**Course Code: COM2130**

**Credit Units: 02**

### **Objectives**

The objective of this concentration elective is to inculcate reading habit alongwith value addition to the existing understanding of the subject. The book would be a kind of knowledge enhancer that would envision the student about some current thoughts related to the discipline. The book reading and its critical analysis would help broaden the intellectual horizon of the student. A contemporary and relevant book will be selected by the concerned department.

### **Guidelines**

The student is expected to thoroughly go through the discipline related prescribed book with the objective of critically reviewing each aspect and character of the book. The student is supposed to have a detailed insight into the following:

1. Content
2. Writing style
3. Information/learning
4. Content handling
5. Characters(if any)
6. Thematic Clarity

The report is to be submitted in about 3000 words on A4 size sheets, Font 12pt., Times New Roman, 1.5 spacing. Headings in Font Size16.

### **Evaluation Scheme**

<b>Report on the Book in 3000 words</b>	<b>Written Test</b>
50 marks	50 marks

## TERM PAPER

Course Code: COM2131

Credit Units: 02

### Objectives

The objective of this course is to judge the understanding as well as application of the knowledge gained by the students. The aim of the term paper is to provide the students with an opportunity to further enhance their knowledge in a sector of their choice by undertaking a significant practical unit of examining and analyzing various aspects of business management at a level commensurate with the learning outcomes of the various courses taken up by them in the ongoing semester.

A term paper is primarily a record of intelligent reading in several sources on a particular subject. The students will choose the topic at the beginning of the session in consultation with the faculty assigned. At least one middle level or senior level person of a company from the chosen sector may be interviewed face to face.

### Guidelines:

1. The term paper will be related to the contemporary business issue and the topic will be given by the department.
2. The presentation of the term paper is scheduled to be held before the commencement of Semester examinations.
3. The paper will carry 100 marks that will be marked on the basis of understanding and organization of content based on the literature review. The Bibliography shall form an important part of the paper.
4. **Examples of a few broad areas for Term Paper (List is indicative, not exhaustive)**

- Credit rating
- Risk management
- Subprime meltdown and its after effect with case study from Indian industry
- Corporate frauds
- Micro finance institutions in India
- Carbon Trading
- IFRS
- Celebrity Endorsement in real estate
- Social media marketing
- Green marketing
- Sustainable branding practices
- Relationship management
- CSR
- Balanced Score Card
- Corporate Governance
- Employee retention
- NGOs.

### Evaluation Scheme

Organisation and relevance of content	Literature Review	Bibliography	Total
40	40	20	100

# PROJECT

Course Code: COM2132

Credit Units: 03

## Objectives:

The aim of the project is to provide the students with an opportunity to further their intellectual and personal development in the chosen field by undertaking a significant practical unit of activity. The project can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

## Chapter Scheme and distribution of marks:

Chapter 1: Introduction – 10 marks

Chapter 2: Conceptual Framework/ National/International Scenario – 25 marks

Chapter 3: Presentation, Analysis & Findings -- 25 marks

Chapter 4: Conclusion & Recommendations -- 10 marks

Chapter 5: Bibliography -- 05 marks

Project Report	Power Point Presentation & Viva
75 marks	25 marks

## Components of a Project Report

The outcome of Project Work is the Project Report. A project report should have the following components:

**1) Cover Page:** This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.

**2) Acknowledgement:** Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.

**3) Table of Content:** Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.

**4) Body of the Report:** The body of the report should have these four logical divisions

a) **Introduction:** This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, and method of analysis), Limitations of the Study, and Chapter Planning.

b) **Conceptual Framework / National and International Scenario:** (relating to the topic of the Project).

c) **Presentation of Data, Analysis and Findings:** (using the tools and techniques mentioned in the methodology).

d) **Conclusion and Recommendations:** In this section, the concluding observations based on the main findings and suggestions are to be provided.

**5) Bibliography or References:** This section will include the list of books and articles which have been used in the project work, and in writing a project report.

**6) Annexures:** Questionnaires (if any), relevant reports, etc.

(The main text of the Project should normally be in the range of 5000 words. However, there may be annexure in addition to the main text)

## The Steps of a Project Report

**Step I :** Selection of the topic for the project by taking following points into consideration:

- Suitability of the topic.
- Relevance of the topic
- Time available at the disposal.
- Feasibility of data collection within the given time limit.

- Challenges involved in the data collection (time & cost involved in the data collection, possibility of getting responses, etc.)

**Step II** : Finalisation of the Topic and preparation of Project Proposal in consultation with the Supervisor.

**Step III** : Collection of information and data relating to the topic and analysis of the same.

**Step IV** : Writing the report dividing it into suitable chapters, viz.,

Chapter 1: Introduction,

Chapter 2: Conceptual Framework / National & International Scenario,

Chapter 3: Analysis & Findings

Chapter 4: Conclusion and Recommendations.

**Step V** : The following documents are to be attached with the Final Project Report.

1) Approval letter from the supervisor (Annexure-IA)

2) Student's declaration (Annexure-IB)

3) Certificate from the Competent Authority of the Organisation / Institution, if the student undertakes the Project Work in any Organisation / Institution.

#### **Guidelines for Evaluation:**

- Each of the students has to undertake a Project individually under the supervision of a teacher and to submit the same following the guidelines stated below.
- Language of Project Report and Viva-Voce Examination may be English. The Project Report must be typed and hard bound.
- Failure to submit the Project Report or failure to appear at the Viva-voce Examination will be treated as "Absent" in the Examination. He /she has to submit the Project Report and appear at the Viva-Voce Examination in the subsequent years (within the time period as per University Rules).
- No marks will be allotted on the Project Report unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her Project Report.
- Evaluation of the Project Work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate.

# WORKSHOP

**Course Code: COM2133**

**Credit Units: 01**

## Objectives

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two way. The trainer has to make sure that the aspect covered are practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

## Major Themes for Workshop

The workshop may be conducted on any of the following major themes:

Accounting

Finance

Human Resources

Marketing

Economics

Operations

Supply Chain Management

These themes are merely indicative and other recent and relevant topics of study may be included.

## Guidelines for Workshop

The procedure for earning credits from workshop consists of the following steps:

1. Relevant study material and references will be provided by the trainer in advance.
2. The participants are expected to explore the topic in advance and take active part in the discussions held
3. Attending and Participating in all activities of the workshop
4. Group Activities have to be undertaken by students as guided by the trainer.
5. Evaluation of workshop activities would be done through test and quiz at the end of the workshop.
6. Submitting a write up of atleast 500 words about the learning outcome from the workshop.

## Methodology

The methodology followed at the workshop could be based on any one or more of the following methods:

Case Study

Business Game

Simulation

Group Activity

Role Play

Business Planning

Quiz

## Evaluation Scheme:

Attendance	Active Participation	Multiple Choice Questions/ Quiz	Solving the case/ Assignment/ Write up	Total
10	30	30	30	100

## Syllabus - Second Semester

### FINANCIAL ACCOUNTING-II

Course Code: COM2251

Credit Units: 03

#### Course Objective:

To develop conceptual understanding of the fundamentals of financial accounting system which processes transactions and other events through a book-keeping mechanism to prepare financial statements, and also to impart skills in accounting for recording various kinds of business transactions.

#### Course Contents:

##### Module I: Partnership

Admission of a partner: partnership deed, goodwill valuation and treatment. Sacrificing ratio.

Retirement and death of a partner: gaining ratio, goodwill treatment

Dissolution of partnership: revaluation of assets and liabilities. Legal Position, Accounting for simple dissolution,

Applications of rule in case of Garner Vs. Murray in case of insolvency of partner(s)

(excluding piecemeal distribution and sale of a firm to a company).

##### Module II: Branch & Departmental Accounting

Branch & Departmental Accounting – Meaning, Types of Branch, Methods of Recording, Journal Entries in case of dependent branch, ascertainment of profit by debtors method and stock and debtors method. Departmental Account – Meaning, Methods of Recording, Transaction in case of departments

##### Module III: Consignment and Joint Venture Accounts

(i) **Consignments:** Features, Accounting treatment in the books of the consignor and consignee.

(ii) **Joint Ventures:** Accounting procedures: Joint Bank Account, Records Maintained by Co-venturer of (a) all transactions (b) only his own transactions. (Memorandum joint venture account).

##### Module IV: Hire purchase and Installment Payment System

Hire purchase - Meaning, Accounting for Hire Purchase Transactions, Journal entries and ledger accounts in the books of Hire Vendors and Hire purchaser. Instalment payment system, difference between hire purchase system & instalment payment system - Journal entries and ledger accounts in the books of Hire Vendors and Hire purchaser

#### Examination Scheme:

Components	A	P	HA	CT	EE
Weightage (%)	5	5	5	15	70

A-Attendance; P -Project/Seminar/Quiz/Viva; HA-Home Assignment; CT-Class Test; EE-End Semester Examination

# BUSINESS MATHEMATICS

**Course Code: COM2201**

**Credit Units: 04**

## **Course Objective:**

To familiarize the students with basic mathematical tools and the application of the same to business and economic situations.

## **Course Contents:**

### **Module I**

Arithmetic Progressions, Geometric progressions and Harmonic Progressions: Definition of A.P, G.P and H.P. Simple Examples

### **Module II: Matrices and determinants**

Definition of a matrix; Types of matrices; Algebra of matrices; properties of determinants; calculation of values of Determinants upto third order; Adjoint of a matrix, Finding inverse of a matrix; Rank of a matrix, Solution of system of linear equations by Cramer's Rule and Matrix Inverse Method (including not more than three variables).

### **Module III: Differentiation**

Definition; Derivative using first Principle; Method of Differentiation of sum, difference, product and Quotient of two functions; Derivative of composite, inverse, exponential, Logarithmic, parametric and Implicit functions; second order derivative, Application of Differentiation.

### **Module IV: Maxima and minima**

Case of one variable involving Second Order derivative; Average Cost, Average revenue functions, marginal cost, marginal revenue, Elasticity of demand, Application of Maxima or Minima.

### **Module V: Integration**

Integration as anti-derivative process; Standard forms; Method of Integration by substitution, by parts and by use of partial fractions. Definite integral and their properties; Finding areas in simple cases; Determination of Cost, revenue and demand function; Consumer's surplus and Producer's surplus.

## **Examination Scheme:**

Components	A	P	HA	CT	EE
Weightage (%)	5	5	5	15	70

A-Attendance; P -Project/Seminar/Quiz/Viva; HA-Home Assignment; CT-Class Test; EE-End Semester Examination

# BUSINESS AND ECONOMIC LAWS

Course Code: COM2202

Credit Units: 03

## Course Objective:

The objective of the course is to impart basic knowledge that a common person comes across in this various business dealings and, make him aware of the relevant case laws

## Course Contents:

### Module I: Introduction

Meaning and Scope of business law – Sources of Indian Business Law.

### Module II: Indian Contract Act

Definition – types of contract – essentials – offer, acceptance, consideration, capacity of parties – free consent (meaning only) – legality of object and consideration – various modes of discharge of a contract – remedies for breach of contract ,contract of indemnity and guarantee, bailment and pledge, law of agency.

### Module III: Indian Sale of Goods Act

Formation of a contract, Condition and warranties, Transfer of ownership, Performance of the contract, Rights of unpaid seller.

### Module IV: Negotiable Instruments Act

Definition of a negotiable instrument; instruments negotiable by law and by custom; types of negotiable instruments; parties to a negotiable instrument - duties, rights, liabilities and discharge; material alteration; crossing of cheques;

### Module V: Indian Partnership Act

Definition and nature of partnership - Rights and duties of partner - Types of partners - Incoming and outgoing and minor as a partner - Dissolution of partnership - Registration of firm

### Module VI: Consumer Protection Act. [COPRA] 1986

Back ground – definitions of 1) Consumer 2) Consumer Dispute 3) Complaint 4) Deficiency 5) Service Consumer Protection Council – Consumer Redressal Agencies – District Forum, State Commission and National Commission.

### Module VII: Foreign Exchange Management Act 1999

Objectives, Scope and salient features – offences under the Act.

## Examination Scheme:

Components	A	P	HA	CT	EE
Weightage (%)	5	5	5	15	70

A-Attendance; P -Project/Seminar/Quiz/Viva; HA-Home Assignment; CT-Class Test; EE-End Semester Examination

# ADVERTISING MANAGEMENT

**Course Code: COM2205**

**Credit Units: 03**

**Course Objectives:** To develop an in -depth understanding of the modern concepts and latest techniques of advertising and personal selling and sales force management which constitute a fast - growing area of marketing.

## **Course Contents:**

### **Module I: Advertising Management**

Communication Basics: Communication and marketing; Communication process; Communication response hierarchy models; Cognitive processing of communication; EKB model; Marketing communication mix; Integrated marketing communication – an introduction; Advertising - Its importance and nature; Advertising and publicity; Advertising management process; Advertising objectives; DAGMAR Approach; Determination of Target Audience and positioning; Advertising budget – factors influencing budget decision and methods.

### **Module II: Advertising Message and Media Decisions**

Creativity and advertising; Creative process; Creative appeals and execution styles; Developing advertising copy for print ad - headline, body copy, logo, illustration and layout. Media Decisions – Types of media, Advertising through Internet and interactive media; Developing media plan; media selection and scheduling.

### **Module III: Organization and Evaluation of Advertising Efforts**

Centralized and decentralized systems; Inhouse agency arrangements; Advertising agencies – selection, compensation and appraisal of advertising agency; managing advertising agency relations; IMC services; Reasons for evaluating Advertising Effectiveness; Advertising testing process - Before and after advertising tests and techniques.

### **Module IV: Advertising in India**

Social and regulatory aspects of advertising in India. Recent developments and issues in advertising.  
Section B: Sales Management

## **Examination Scheme:**

Components	A	P	HA	CT	EE
Weightage (%)	5	5	5	15	70

A-Attendance; P -Project/Seminar/Quiz/Viva; HA-Home Assignment; CT-Class Test; EE-End Semester Examination

# COMPUTER APPLICATIONS IN BUSINESS

**Course Code: COM2204**

**Credit Units: 03**

## **Course Objective:**

To provide computer skills and knowledge for commerce students, and to make them complacent with the use of new tools of IT.

## **Course Contents:**

### **Module I**

General features of a Computer. Generation of computers. Personal Computer, Workstation, Mainframe Computer and super Computers. Computer applications – data processing, information processing, Application areas of computer.

### **Module II**

Computer organization. Central processing module. Computer memory- primary memory and secondary memory. Secondary storage devices – magnetic and optical media. Input and output modules. OMR, OCR, MICR, scanner, mouse, Modem.

### **Module III**

Computer hardware and software. Machine language and high level language. Application software. Computer program. Operating system. Computer virus, Antivirus and Computer security, Windows OS and its features.

Computer arithmetic. Binary, octal and hexadecimal number systems. Algorithm and flowcharts. Illustrations. Elements of database and its applications.

### **Module IV**

Introduction to MS office Packages- Ms-Word – Editing a Document – Move and Copy text – Formatting text and paragraph – Finding and Replacing text and spelling checking – Using tabs, Tables, and other features, Enhancing document – using mail merge and other features.

Introduction to Worksheet- Getting started with excel – Editing Cells and using commands and functions – Moving And Coping, Inserting and Deleting Rows and Columns – Getting help and formatting a worksheet – Printing the worksheet – Creating Charts – using formulae and functions in excel. Introduction to Power Point Presentation

### **Module V**

Computer Networks & Internet Technology

Introduction to Computer Networks, Networking components, Classification and types of Networks, Network Topologies – Overview with Advantages and Disadvantages, Communication Channels, Client Sever Architecture, LAN concepts.

Introduction to internet intranet and Extranet, Myths about the Internet, Basic concepts of internet, Domain Name Service, Internet Protocols and Addressing, Services of internet, Internet and support Technologies, Censorship and Privacy issues

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>P</b>	<b>HA</b>	<b>CT</b>	<b>EE</b>

# ANALYSIS AND DESIGN OF BUSINESS SYSTEMS

**Course Code: COM2206**

**Credit Units: 03**

## **Course Objective:**

The course aims at preparing students conceptualize and define scope and domain of system analysis and design. It also focuses on system development life cycle using conventional and structural look.

## **Course Contents:**

### **Module I: The systems development Environment. (Information system development life cycle)**

System & its parts, Types of Systems, Characteristics of a System, System Analyst in system Development, Developing Systems- SDLC, Approaches to System Development (Prototyping, Joint Application Design (JAD), Participatory Design (PD)), System Development Models (Waterfall model & Spiral Model), System Planning & Selection (Identifying, Selecting, Initiating & Planning System Development Project).

### **Module II : System Planning and Selection (Graphic technology modeling tool)**

Identifying and Selecting Projects (Identifying potential development projects, classifying and ranking projects, and selecting projects for development), Methods for project identification and selection, Evaluation criteria for classifying and ranking projects, Initiating and Planning System Development Projects (Process & performed Activities, Deliverables & Outcomes), Assessing Project Feasibility (Economic, Operational, Technical, Schedule, Legal & Contractual, Political Feasibility)

### **Module III: System & Data Analysis (Data Analyzing Modeling)**

Determining System Requirements (Traditional Methods, Modern & Radical Methods), Structuring System Requirements (Process Modeling – DFD, Logic Modeling – Structured English & Decision Tables, Conceptual Modeling – ER Model), Data Analysis & Techniques (Interpretive, Coding, Recursive Abstraction and Mechanical Technique), Types of Analysis (Descriptive, Exploratory, Confirmatory and Predictive), Modeling Methodologies (Bottom Up method & Top Down Method), Generic and Schematic Data Modeling.

### **Module IV: System & Database Design**

System Design (Design Objectives, Phases in Designing, Purpose of System Design), System Design Goals, Type of Design, Design Strategy, System Decomposition (Modeling, Connection and Coupling of a System), System Design Methodologies, Database Design, Database Management System – an introduction, Overview of Data Models, Relational Database Model – Well structured relations, Keys, Schema & Subschema, Structure, Facilities & Users, Constraints, Anomalies, Functional Dependency, Normalization, Roles & Duties of System Administration.

### **Module V: System Implementation & Operation (System Management)**

Activities in implementing (Coding, Testing & Installation, Documentation, Training, Support, Maintenance), Types of testing, planning installation, approaches to installation, Documenting a system, Training and Supporting users, Types & Frequencies of Training Methods, Reasons of System Implementation Failures, Project Closedown, Conducting System Maintenance – Types of Maintenance (Corrective, Adaptive and Perfective Maintenance), effective maintenance, Evaluation of System's Success, System Enhancement, Quality Assurance in System Cycle.

### **Module VI: System Security and Auditing**

System Security: Data Security, Backup & Recovery during System & Database failure, Ethical Issues in System Development, Threat and Risk Analysis, Audit, System Audit, System Audit Standards (Planning, Implantation and Reporting Standards), System Analysis and Programming (Overview, Role & Duties of System Experts as Analyst and Programmer).

**Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>P</b>	<b>HA</b>	<b>CT</b>	<b>EE</b>
<b>Weightage (%)</b>	5	5	5	15	70

A-Attendance; P -Project/Seminar/Quiz/Viva; HA-Home Assignment; CT-Class Test; EE-End Semester Examination

# INNOVATION & CREATIVITY MANAGEMENT

**Course Code: COM2207**

**Credit Units: 03**

## **Course Objective:**

To develop an appreciation for new ideas and out of the box thinking so that students can successfully imbibe the habit of innovative and creative thinking in situations is demanding such an approach.

## **Course Contents:**

### **Module I:**

Innovation Management- Introduction, characteristics, Components, Types, Models of Innovation process, Innovation Environment-Originators of Innovation, Key Drivers of Innovation, Factors influencing innovation, Nurturing innovation in e-business.

### **Module II:**

Organizing for Innovation- Organizational theories and structures, traits of innovative organizations, current trends, factors influencing organizational design and size decisions, Need & Characteristics for creative organization, 7S framework, creativity crushers, fostering innovation climate and culture, The creativity Hit List.

### **Module III:**

Research and Development management- Significance, Prerequisites, Process, Technology development approaches, management of R &D, In source to open source environment, R&D in small industry, Managing Creative employees, significance and challenges of managing creative employees, Traits of a creative person, motivation to creativity, strategies for unblocking creativity, factors influencing group creativity, Promoting group creativity, Left and right thinking, Linear and non-linear thinking process, creative thinking, Tradition vs creative thinking.

### **Module IV:**

Individual creativity techniques- Inner and Directed creativity techniques, Group Creativity Techniques-creativity methods, writing techniques, techniques based on pictures, maps and networks, Product innovation-types of new products, Target markets for Disruptive Innovation, Technology strategies for innovation, new product development, packaging and positioning innovations, beyond product innovation, New product failures.

### **Module V:**

Innovation Diffusion- Concept of diffusion and adaptation, diffusion types, Innovation diffusion theory, Innovation adoption by organizations, Innovation adoption across countries, Marketing strategy and the diffusion process.

### **Module VI:**

Legal aspects of innovation- IPR, Indian Patents Act, trademark, Copyrights, Trade secrets, Towards Innovative Society-Innovation for social development, Spirit of innovation in India, Favourable and Unfavourable factors.

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>P</b>	<b>HA</b>	<b>CT</b>	<b>EE</b>

# HUMAN VALUES AND PROFESSIONAL ETHICS

Course Code: COM2208

Credit Units: 03

## Course Objective:

The aim of this course is to facilitate the development of a holistic perspective among students towards life, profession and happiness, based on a correct understanding of the Human reality and the rest of Existence. Such a holistic perspective forms the basis of value based living in a natural way. Recognize the need for lifelong learning and have the knowledge and skills that prepare them to identify the Moral issues involved in Management areas and to provide an understanding of the interface between Social, Technological and Natural environments.

## Course Contents:

### Module I: Human Values

Morals, Values, Types of values, evolution of human values, Ethics – Integrity – Work Ethic – Honesty – Courage –Empathy – Self-Confidence – Character, Challenges at Work place

### Module II: Values in Management

Relevance of values in Management, need for values in global change, values for managers, holistic approach for managers in decision making, problems related to stress in corporate management

### Module III:

Workplace Rights and Responsibilities: Organizational complaint procedures. Government agencies. Resolving Employee concerns. Limits on acceptable behavior in large corporation.

Work environment: Ethical and legal considerations, Organizational responses to offensive behavior and harassment. Ethics in a Global Context.

### Module IV: Industrial Integrity

The epitome of industrial success, Integrity and organization, Exploring learning process of integrity, Consequences of lack of integrity.

## Examination Scheme:

Components	A	P	HA	CT	EE
Weightage (%)	5	5	5	15	70

A-Attendance; P -Project/Seminar/Quiz/Viva; HA-Home Assignment; CT-Class Test; EE-End Semester Examination

## READINGS IN MANAGEMENT

**Course Code: COM2230**

**Credit Units: 02**

### **Objectives**

The objective of this concentration elective is to inculcate reading habit alongwith value addition to the existing understanding of the subject. The book would be a kind of knowledge enhancer that would envision the student about some current thoughts related to the discipline. The book reading and its critical analysis would help broaden the intellectual horizon of the student. A contemporary and relevant book will be selected by the concerned department.

### **Guidelines**

The student is expected to thoroughly go through the discipline related prescribed book with the objective of critically reviewing each aspect and character of the book. The student is supposed to have a detailed insight into the following:

1. Content
2. Writing style
3. Information/learning
4. Content handling
5. Characters(if any)
6. Thematic Clarity

The report is to be submitted in about 3000 words on A4 size sheets, Font 12pt., Times New Roman, 1.5 spacing. Headings in Font Size16.

### **Evaluation Scheme**

<b>Report on the Book in 3000 words</b>	<b>Written Test</b>
50 marks	50 marks

## TERM PAPER

Course Code: COM2231

Credit Units: 02

### Objectives

The objective of this course is to judge the understanding as well as application of the knowledge gained by the students. The aim of the term paper is to provide the students with an opportunity to further enhance their knowledge in a sector of their choice by undertaking a significant practical unit of examining and analyzing various aspects of business management at a level commensurate with the learning outcomes of the various courses taken up by them in the ongoing semester.

A term paper is primarily a record of intelligent reading in several sources on a particular subject. The students will choose the topic at the beginning of the session in consultation with the faculty assigned. At least one middle level or senior level person of a company from the chosen sector may be interviewed face to face.

### Guidelines:

1. The term paper will be related to the contemporary business issue and the topic will be given by the department.
2. The presentation of the term paper is scheduled to be held before the commencement of Semester examinations.
3. The paper will carry 100 marks that will be marked on the basis of understanding and organization of content based on the literature review. The Bibliography shall form an important part of the paper.
4. **Examples of a few broad areas for Term Paper (List is indicative, not exhaustive)**

- Credit rating
- Risk management
- Subprime meltdown and its after effect with case study from Indian industry
- Corporate frauds
- Micro finance institutions in India
- Carbon Trading
- IFRS
- Celebrity Endorsement in real estate
- Social media marketing
- Green marketing
- Sustainable branding practices
- Relationship management
- CSR
- Balanced Score Card
- Corporate Governance
- Employee retention
- NGOs.

Organisation and relevance of content	Literature Review	Bibliography	Total
40	40	20	100

# PROJECT

Course Code: COM2232

Credit Units: 03

## Objectives:

The aim of the project is to provide the students with an opportunity to further their intellectual and personal development in the chosen field by undertaking a significant practical unit of activity. The project can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

## Chapter Scheme and distribution of marks:

Chapter 1: Introduction – 10 marks

Chapter 2: Conceptual Framework/ National/International Scenario – 25 marks

Chapter 3: Presentation, Analysis & Findings -- 25 marks

Chapter 4: Conclusion & Recommendations -- 10 marks

Chapter 5: Bibliography -- 05 marks

Project Report	Power Point Presentation & Viva
75 marks	25 marks

## Components of a Project Report

The outcome of Project Work is the Project Report. A project report should have the following components:

**1) Cover Page:** This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.

**2) Acknowledgement:** Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.

**3) Table of Content:** Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.

**4) Body of the Report:** The body of the report should have these four logical divisions

a) **Introduction:** This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, and method of analysis), Limitations of the Study, and Chapter Planning.

b) **Conceptual Framework / National and International Scenario:** (relating to the topic of the Project).

c) **Presentation of Data, Analysis and Findings:** (using the tools and techniques mentioned in the methodology).

d) **Conclusion and Recommendations:** In this section, the concluding observations based on the main findings and suggestions are to be provided.

**5) Bibliography or References:** This section will include the list of books and articles which have been used in the project work, and in writing a project report.

**6) Annexures:** Questionnaires (if any), relevant reports, etc.

(The main text of the Project should normally be in the range of 5000 words. However, there may be annexure in addition to the main text)

## The Steps of a Project Report

**Step I :** Selection of the topic for the project by taking following points into consideration:

- Suitability of the topic.
- Relevance of the topic
- Time available at the disposal.
- Feasibility of data collection within the given time limit.
- Challenges involved in the data collection (time & cost involved in the data collection, possibility of getting responses, etc.)

**Step II** : Finalisation of the Topic and preparation of Project Proposal in consultation with the Supervisor.

**Step III** : Collection of information and data relating to the topic and analysis of the same.

**Step IV** : Writing the report dividing it into suitable chapters, viz.,

Chapter 1: Introduction,

Chapter 2: Conceptual Framework / National & International Scenario,

Chapter 3: Analysis & Findings

Chapter 4: Conclusion and Recommendations.

**Step V** : The following documents are to be attached with the Final Project Report.

1) Approval letter from the supervisor (Annexure-IA)

2) Student's declaration (Annexure-IB)

3) Certificate from the Competent Authority of the Organisation / Institution, if the student undertakes the Project Work in any Organisation / Institution.

**Guidelines for Evaluation:**

- Each of the students has to undertake a Project individually under the supervision of a teacher and to submit the same following the guidelines stated below.
- Language of Project Report and Viva-Voce Examination may be English. The Project Report must be typed and hard bound.
- Failure to submit the Project Report or failure to appear at the Viva-voce Examination will be treated as "Absent" in the Examination. He /she has to submit the Project Report and appear at the Viva-Voce Examination in the subsequent years (within the time period as per University Rules).
- No marks will be allotted on the Project Report unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her Project Report.
- Evaluation of the Project Work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate.

# WORKSHOP

**Course Code: COM2233**

**Credit Units: 01**

## Objectives

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two way. The trainer has to make sure that the aspect covered are practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

## Major Themes for Workshop

The workshop may be conducted on any of the following major themes:

Accounting

Finance

Human Resources

Marketing

Economics

Operations

Supply Chain Management

These themes are merely indicative and other recent and relevant topics of study may be included.

## Guidelines for Workshop \

The procedure for earning credits from workshop consists of the following steps:

1. Relevant study material and references will be provided by the trainer in advance.
2. The participants are expected to explore the topic in advance and take active part in the discussions held
3. Attending and Participating in all activities of the workshop
4. Group Activities have to be undertaken by students as guided by the trainer.
5. Evaluation of workshop activities would be done through test and quiz at the end of the workshop.
6. Submitting a write up of atleast 500 words about the learning outcome from the workshop.

## Methodology

The methodology followed at the workshop could be based on any one or more of the following methods:

Case Study

Business Game

Simulation

Group Activity

Role Play

Business Planning

Quiz

## Evaluation Scheme:

Attendance	Active Participation	Multiple Choice Questions/ Quiz	Solving the case/ Assignment/ Write up	Total
10	30	30	30	100

# Syllabus - Third Semester

## CORPORATE ACCOUNTING

**Course Code: COM2351**

**Credit Units: 03**

**Course Objective:**

This course enables the students to develop awareness about Corporate Accounting in conformity with the Provision of Companies' Act and latest amendments thereto with adoption of Accounting Standards that are likely to be introduced from time to time.

**Course Contents:**

**Module I- Accounting for Share Capital**

Statutory records to be maintained by a company; Accounting for share capital transactions- issue of shares at par, at premium forfeiture and re-issue of shares; buy-back of equity shares; redemption of preference shares - statutory requirements, disclosure in balance sheet; rights issue, bonus shares.

**Module II: Accounting For Debentures**

Issue & Redemption of debentures - accounting treatment and procedures; conversion of debentures into shares

**Module III: Valuation of Goodwill and shares**

Good will- Meaning, definition, elements, types and methods of valuation of Goodwill, Methods of share valuation (Equity & preference shares).

**Module IV: Amalgamation**

Accounting treatment for amalgamation with reference to As-14 (excluding intercompany transactions & holdings), absorption and reconstruction of companies; internal & external reconstruction

**Examination Scheme:**

Components	A	P	HA	CT	EE
Weightage (%)	5	5	5	15	70

A-Attendance; P -Project/Seminar/Quiz/Viva; HA-Home Assignment; CT-Class Test; EE-End Semester Examination

# STATISTICAL METHODS IN RESEARCH-I

Course Code: COM2301

Credit Units: 03

## Course Objectives:

To provide basic understanding of quantitative tools and their elementary application to business problems.

## Course Contents:

### Module I- Introduction to Statistics

Basic Concepts, Primary & Secondary data, classification of data, Graphical representation of data, frequency distribution.

### Module II- Central Tendency and Dispersion

Measures of central tendency; Mean, Median, Mode, Geometric mean and Harmonic mean; Measures of dispersion; Range, Mean Deviation, Standard Deviation, Coefficient of variation, Quartile Deviation, Skewness and Kurtosis; Difference between these measures and their interpretation.

### Module III- Correlation & Regression

**Correlation-** Concepts and importance, Positive & Negative correlation, Karl-Pearson's coefficient of correlation, Rank correlation coefficient, Spurious correlation, Coefficient of determination.

**Regression-**Concept, Difference between correlation & regression.

### Module IV- Time Series and Index numbers

**Time Series-** Introduction, components of a time series, Multiplicative and additive models, Semi Average & Moving Average method;

**Index Numbers-** Concept, price relative, quantity relative, value relative, Laspeyre's, Passche's and Fisher's index numbers, Family Budget method, problems in construction and limitations of index numbers Tests for adequacy of index numbers.

## Examination Scheme:

Components	A	P	HA	CT	EE
Weightage (%)	5	5	5	15	70

A-Attendance; P -Project/Seminar/Quiz/Viva; HA-Home Assignment; CT-Class Test; EE-End Semester Examination

## Text & References:

### Text:

# CORPORATE LAW

**Course Code: COM2302**

**Credit Units: 03**

## **Course Objective:**

To develop an understanding of the regulation of registered companies and to provide thorough understanding of the various provisions of the Indian Company Law

## **Course Contents:**

### **Module I-**

Brief History of Company Law : Definition and Characteristics, Lifting of Corporate Veil, Kinds of Companies, Exemptions and Privileges to Private Companies; Promoters' Liability, Pre- incorporation Contracts, Formation of Company. Memorandum and Articles of Association; Doctrine of Ultra-virus; Doctrine of Indoor Management.

### **Module II-**

Prospectus: Meaning and contents, Deemed Prospectus; Shares and Debentures: Meaning, Types and their Allotment, Reduction of Share Capital, Buy-Back of Shares Borrowing Powers: Debentures-issue, floating and Fixed Charge; Registration of Mortgage and Charges, Disposal of Profits-Dividends, Issue of Bonus Shares.

### **Module III-**

Directors, Managing Directors and Manager: Appointment, Retirement Removal, Duties and Rights, Company Management, Prevention of Mismanagement and Oppressions.

### **Module IV-**

Role and Importance of Corporate Governance. Investigation, Winding up of Companies and Legal Provisions under the Indian Companies Act, 2013

### **Module V-**

Company Secretary : Appointment, Position, Rights, Duties and Liabilities Meeting : Types, Requisites of a Valid Meeting, Members' Meeting : Statutory, Annual General Meeting, Extraordinary General Meeting. Regulatory Powers of SEBI and RBI with reference to Issue of Shares, Listing of Shares and borrowing powers.

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>P</b>	<b>HA</b>	<b>CT</b>	<b>EE</b>
<b>Weightage (%)</b>	5	5	5	15	70

A-Attendance; P -Project/Seminar/Quiz/Viva; HA-Home Assignment; CT-Class Test; EE-End Semester Examination

# HUMAN RESOURCE MANAGEMENT

Course Code: COM2303

Credit Units: 03

## Course Objective:

To help students to understand the concept of human resource management to enable them to better manage the most important asset of any organisation which are people.

## Course Contents:

### Module I:

**Human Resource Management:** Relevance and spectrum, HRD: concept and evolution, Organization of HR Department, Role, Status and competencies of HR Manager, HR Policies. Emerging dimensions in HRM like empowerment, diversity etc.

### Module II

**Acquisition of Human Resource:** Human Resource Planning- Quantitative and Qualitative dimensions; job analysis – job description and job specification; recruitment – Concept and sources; selection – Concept and process; test and interview; placement induction.

### Module III

**Training and Development:** Concept and importance; identifying training and development needs; designing training programmes; role specific and competency based training; evaluating training effectiveness; training process outsourcing; management development systems; career development.

### Module IV

**Performance Appraisal System:** nature and objectives; techniques of performance appraisal; potential appraisal and employee counseling; job changes - transfers and promotions.

### Module V

**Compensation:** concept, policies and administration; job evaluation; methods of wage payments and incentive plans; fringe benefits; performance linked compensation. Maintenance: employee health and safety; employee welfare; social security; grievance handling and redressal.

## Examination Scheme:

Components	A	P	HA	CT	EE
Weightage (%)	5	5	5	15	70

A-Attendance; P -Project/Seminar/Quiz/Viva; HA-Home Assignment; CT-Class Test; EE-End Semester Examination

# SALES AND DISTRIBUTION MANAGEMENT

**Course Code: COM2304**

**Credit Units: 03**

## **Course Objective:**

The major objective of this course is to acquaint the students with the theory and practice of Management of Sales Operations.

## **Course Contents:**

### **Module I:** Introduction

Sales management- Concept, Objectives and functions. Evolution of sales management. Nature and role of Sales Manager's job. Sales management as a career. Emerging trends in sales management.

### **Module II:** Sales Organization

Purpose of sales organization. Setting sales organization. Types of sales organization. Coordination of selling functions with other marketing activities. Sales forecasting.

### **Module III:** Controlling sales effort

Sales Budget: Purpose and budgetary procedure. Quotas: Concept, Objectives and Types. Sales Territory: Concept and procedure of devising sales territories, Routing and Scheduling of Sales force. Sales Audit.

### **Module IV:** Managing Sales Force

Concept of sales force management. Recruitment and Selection of sales personnel (domestic and international perspective). Cross Cultural challenges. Sales training. Compensating and motivating sales personnel. Controlling and evaluating sales personnel.

### **Module V:** Distribution Management and channel control

Distribution channels: Concept and need. Distribution Channel Strategy. Managing distribution channel. Features of effective channel design. Channel Conflict: Concept and stages. Conflict management.

### **Module VI:** Logistics Management

Objectives of logistics. Concept of logistics planning: inventory management decisions, transportation decisions, Location decisions.

## **Examination Scheme:**

Components	A	P	HA	CT	EE
Weightage (%)	5	5	5	15	70

A-Attendance; P -Project/Seminar/Quiz/Viva; HA-Home Assignment; CT-Class Test; EE-End Semester Examination

# MERGERS AND ACQUISITIONS

**Course Code: COM2305**

**Credit Units: 03**

## Course Objective:

The main objective of this course is to familiarize the students with the basic aspects of mergers and acquisitions.

## Course Contents:

### Module I: Mergers and Acquisitions – Overview

Introduction – Forms of Corporate Restructuring – Expansion – Mergers and Acquisitions – Tender Offers – Joint Ventures – Sell Offs – Spin Offs – Split Offs – Split Ups – Divestitures – Equity Carve outs - Corporate Control – Premium Buy Backs – Standstill Agreements – Anti- Takeover Amendments – Proxy Contests - Changes in Ownership Structures - Share Repurchases – Exchange Offers – Leveraged Buy – out – Going Private – Issue Raised by Restructuring – History of Merger Movements.

### Module II: Mergers and Acquisitions

Economic Rationale for Major Types of Mergers - Horizontal Mergers – Vertical Mergers – Conglomerate Mergers - Concentric Mergers.

### Module III: Theories of Mergers

Efficiency Theories – Differential Efficiency - Inefficient Management – Operating Synergy – Pure Diversification - Financial Synergy – Strategic Realignment to Changing Environments – Undervaluation – Information and Signaling – Agency Problems and Managerialism - Takeovers as a Solution to Agency Problems

### Module IV: Divestment of Public Sector Undertakings and Leveraged Buy-outs

General Economic and Financial Factors illustration of an LBO Takeover Defenses

Anti-Takeover Amendments, Any case study

## Examination Scheme:

Components	A	P	HA	CT	EE

## TERM PAPER

Course Code: COM2331

Credit Units: 02

### Objectives

The objective of this course is to judge the understanding as well as application of the knowledge gained by the students. The aim of the term paper is to provide the students with an opportunity to further enhance their knowledge in a sector of their choice by undertaking a significant practical unit of examining and analyzing various aspects of business management at a level commensurate with the learning outcomes of the various courses taken up by them in the ongoing semester.

A term paper is primarily a record of intelligent reading in several sources on a particular subject. The students will choose the topic at the beginning of the session in consultation with the faculty assigned. At least one middle level or senior level person of a company from the chosen sector may be interviewed face to face.

### Guidelines:

1. The term paper will be related to the contemporary business issue and the topic will be given by the department.
2. The presentation of the term paper is scheduled to be held before the commencement of Semester examinations.
3. The paper will carry 100 marks that will be marked on the basis of understanding and organization of content based on the literature review. The Bibliography shall form an important part of the paper.
4. **Examples of a few broad areas for Term Paper (List is indicative, not exhaustive)**

- Credit rating
- Risk management
- Subprime meltdown and its after effect with case study from Indian industry
- Corporate frauds
- Micro finance institutions in India
- Carbon Trading
- IFRS
- Celebrity Endorsement in real estate
- Social media marketing
- Green marketing
- Sustainable branding practices
- Relationship management
- CSR
- Balanced Score Card
- Corporate Governance
- Employee retention
- NGOs.

# PROJECT

Course Code: COM2332

Credit Units: 02

## Objectives:

The aim of the project is to provide the students with an opportunity to further their intellectual and personal development in the chosen field by undertaking a significant practical unit of activity. The project can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

## Chapter Scheme and distribution of marks:

Chapter 1: Introduction – 10 marks

Chapter 2: Conceptual Framework/ National/International Scenario – 25 marks

Chapter 3: Presentation, Analysis & Findings -- 25 marks

Chapter 4: Conclusion & Recommendations -- 10 marks

Chapter 5: Bibliography -- 05 marks

Project Report	Power Point Presentation & Viva
75 marks	25 marks

## Components of a Project Report

The outcome of Project Work is the Project Report. A project report should have the following components:

**1) Cover Page:** This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.

**2) Acknowledgement:** Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.

**3) Table of Content:** Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.

**4) Body of the Report:** The body of the report should have these four logical divisions

a) **Introduction:** This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, and method of analysis), Limitations of the Study, and Chapter Planning.

b) **Conceptual Framework / National and International Scenario:** (relating to the topic of the Project).

c) **Presentation of Data, Analysis and Findings:** (using the tools and techniques mentioned in the methodology).

d) **Conclusion and Recommendations:** In this section, the concluding observations based on the main findings and suggestions are to be provided.

**5) Bibliography or References:** This section will include the list of books and articles which have been used in the project work, and in writing a project report.

**6) Annexures:** Questionnaires (if any), relevant reports, etc.

(The main text of the Project should normally be in the range of 5000 words. However, there may be annexure in addition to the main text)

## The Steps of a Project Report

**Step I :** Selection of the topic for the project by taking following points into consideration:

- Suitability of the topic.
- Relevance of the topic
- Time available at the disposal.
- Feasibility of data collection within the given time limit.
- Challenges involved in the data collection (time & cost involved in the data collection, possibility of getting responses, etc.)

**Step II** : Finalisation of the Topic and preparation of Project Proposal in consultation with the Supervisor.

**Step III** : Collection of information and data relating to the topic and analysis of the same.

**Step IV** : Writing the report dividing it into suitable chapters, viz.,

Chapter 1: Introduction,

Chapter 2: Conceptual Framework / National & International Scenario,

Chapter 3: Analysis & Findings

Chapter 4: Conclusion and Recommendations.

**Step V** : The following documents are to be attached with the Final Project Report.

1) Approval letter from the supervisor (Annexure-IA)

2) Student's declaration (Annexure-IB)

3) Certificate from the Competent Authority of the Organisation / Institution, if the student undertakes the Project Work in any Organisation / Institution.

**Guidelines for Evaluation:**

- Each of the students has to undertake a Project individually under the supervision of a teacher and to submit the same following the guidelines stated below.
- Language of Project Report and Viva-Voce Examination may be English. The Project Report must be typed and hard bound.
- Failure to submit the Project Report or failure to appear at the Viva-voce Examination will be treated as "Absent" in the Examination. He /she has to submit the Project Report and appear at the Viva-Voce Examination in the subsequent years (within the time period as per University Rules).
- No marks will be allotted on the Project Report unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her Project Report.
- Evaluation of the Project Work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate.

# WORKSHOP

**Course Code: COM2333**

**Credit Units: 01**

## Objectives

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two way. The trainer has to make sure that the aspect covered are practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

## Major Themes for Workshop

The workshop may be conducted on any of the following major themes:

Accounting

Finance

Human Resources

Marketing

Economics

Operations

Supply Chain Management

These themes are merely indicative and other recent and relevant topics of study may be included.

## Guidelines for Workshop

The procedure for earning credits from workshop consists of the following steps:

1. Relevant study material and references will be provided by the trainer in advance.
2. The participants are expected to explore the topic in advance and take active part in the discussions held
3. Attending and Participating in all activities of the workshop
4. Group Activities have to be undertaken by students as guided by the trainer.
5. Evaluation of workshop activities would be done through test and quiz at the end of the workshop.
6. Submitting a write up of atleast 500 words about the learning outcome from the workshop.

## Methodology

The methodology followed at the workshop could be based on any one or more of the following methods:

Case Study

Business Game

Simulation

Group Activity

Role Play

Business Planning

Quiz

## Evaluation Scheme:

Attendance	Active Participation	Multiple Choice Questions/ Quiz	Solving the case/ Assignment/ Write up	Total
10	30	30	30	100

# Syllabus - Fourth Semester

## FINANCIAL MANAGEMENT

**Course Code: COM2451**

**Credit Units: 03**

**Course Objective:**

To give insight into financial decision making and composition of different securities in the total Capital structure.

**Course Contents:**

**Module I**

Nature, Scope & Objectives of Financial Management, Goals of Financial Management, Time value of money, Concept of risk & return (including capital asset pricing model).

**Module II**

Financing Decisions: Operating & Financial leverage, Capital structure theories; NI, NOI and MM & Traditional Approach, Factors determining capital structure. Concept & measurement of cost of capital, weighed Average cost of capital.

**Module III**

Capital Budgeting Decisions: Capital budgeting process; estimation of relevant cash flows, Non-discounted & discounted cash flows techniques- pay back, ARR, NPV, IRR, and profitability index;

**Module IV**

Dividend Decisions – dividend policy – determinants of dividend policy – types of dividend policy – forms of dividend. Different Schools of thought on dividend policy (Gordon, Walter, MM).

**Module V**

Working Capital Management – meaning – importance of adequate working capital- excess or Inadequate working capital – determinants of working capital requirement – cash management, Receivable management and inventory management – sources of working capital.

**Examination Scheme:**

Components	A	P	HA	CT	EE
Weightage (%)	5	5	5	15	70

A-Attendance; P -Project/Seminar/Quiz/Viva; HA-Home Assignment; CT-Class Test; EE-End Semester Examination

# AUDITING

**Course Code: COM2401**

**Credit Units: 03**

## **Course Objective:**

To provide knowledge of auditing principles, procedures and techniques in accordance with the professional standards and requirements.

## **Course Contents:**

### **Module I**

Introduction to auditing Introduction – meaning - definition – difference between accountancy and auditing – types of audit - advantages of auditing – preparation before commencement of new audit

### **Module II**

Internal check Meaning and objects of internal check – internal control-meaning definition-fundamental Principles-internal check as regards wages, cash sales, cash purchases - internal check in a departmental stores-internal audit – meaning-importance – advantage and disadvantages.

### **Module III**

Verification and valuation of assets and liabilities: Meaning and objectives – position of an auditor as regards to the valuation of assets – verification and valuation of different items – assets –fixed assets - goodwill – stock in trade – investments – liabilities – capital – debentures – bills payable sundry creditors – contingent liabilities –

### **Module IV**

Audit of different organizations drafting of audit program or trading and non-trading organization in a tabular form. Preparation of clean and qualified audit report with special reference to manufacturing and other Companies Audit Report 1975

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>P</b>	<b>HA</b>	<b>CT</b>	<b>EE</b>
<b>Weightage (%)</b>	5	5	5	15	70

A-Attendance; P -Project/Seminar/Quiz/Viva; HA-Home Assignment; CT-Class Test; EE-End Semester Examination

## STATISTICAL METHODS IN RESEARCH-II

**Course Code: COM2402**

**Credit Units: 03**

### **Course Objectives:**

To provide basic understanding of quantitative tools and their elementary application to business problems.

### **Course Contents:**

#### **Module I- Probability Theory**

Independent, Dependent, Mutually Exclusive, Favourable, Exhaustive & Complementary events, Addition theorem, Conditional Probability, multiplication Theorem, Bayes's Theory.

#### **Module II- Statistical Methods**

Random Variable- Continuous & discrete; Discrete distribution- Binomial & Poisson, Bernoulli's trials; Continuous Distribution- Normal distribution, Properties of normal curve, importance & application

#### **Module III- Tests of Hypothesis**

Significance test: concepts and applications, acceptance and critical regions, null and alternative hypothesis, judgemental errors, level of significance. Power of a test, z test for testing of mean, proportion and equality of means, t- test, Chi square Test.

#### **Module IV- Decision Tree**

Decision Theory: Decision making, under certainty, uncertainty & risk, Bayesian Analysis, Decision tree.

### **Examination Scheme:**

Components	A	P	HA	CT	EE
Weightage (%)	5	5	5	15	70

A-Attendance; P -Project/Seminar/Quiz/Viva; HA-Home Assignment; CT-Class Test; EE-End Semester Examination

# INCOME TAX LAW AND PRACTICE

**Course Code: COM2403**

**Credit Units: 03**

## **Course Objective:**

To prepare the students with the concepts and theory of income tax accounting and to give a practical exposure to them

## **Course Contents:**

### **Module-I: Introduction**

Brief History of Income Tax, Legal Frame work, Cannons of Taxation – Finance Bill – Scheme of Income Tax. Definition: Assessee, Person, assessment year, previous year, income, Gross Total Income, Total Income, Agricultural Income (including integration of Agricultural Income with Non-Agriculture Income), Revenue and Capital (a) Receipts (b) Expenditure (c) Loss. Residential Status and Incidence of Tax.

### **Module II : Income from Salary**

Income from Salary – Features of Salary Income – Basic Salary – Allowance, Perquisites section 89(1) – Tax Rebate U/S 88 – Problems.

### **Module III : Income from House Property**

Income from House Property – Introduction – Annual value under different situations – deductions– problems.

### **Module IV : Profits from Business & Profession**

Profits & Gains of Business & Profession – Introduction, Basic Principles, Basic Principles, Computation of Taxable profits of Business & Profession, deductions, problems.

### **Module V : Income from Capital Gains**

Income from Capital Gains:- Introduction, Meaning & types of capital assets, Computation of Capital Gains, Problems.

### **Module VI : Income from Other Sources**

Income from Other Sources:- Meaning, examples of income, Computation of income, Problems.

### **Module VII: Computation of Individual Tax Liability**

Deductions from GTI: Rebates and reliefs, Clubbing provisions; set off and carry forward of losses. Assessment of an Individual

## **Examination Scheme:**

Components	A	P	C	CT	EE
Weightage (%)	5	10	5	10	70

A-Attendance; P-Project/Seminar/Quiz/Viva/Home Assignment; C-Case Discussion CT-Class Test; EE-End Semester Examination

# BUSINESS INFORMATION AND DATABASE SYSTEM

**Course Code: COM2404**

**Credit Units: 03**

## **Course Objective:**

The aim of this course is to introduce the students to the managerial issues relating to information systems, its role in organization and how information technology can be leveraged to provide business value.

## **Course Contents:**

### **Module I:**

MIS need and concepts, characteristics, Typology of MIS, Structure of MIS. Planning for MIS, System Development Methodologies, Conceptual and detailed designs of MIS, System Implementation strategies and process, System Evaluation and Maintenance.

### **Module II:**

Introduction to data base management system- Data versus information, record, file; data dictionary, database administrator, functions and responsibilities, file-oriented system versus databases system.

### **Module III:**

Advanced Concepts in Information Systems: Enterprise Resource Planning, Supply Chain Management, Customer Relationship Management, Data, Warehousing and Data Mining.

### **Module IV:**

Database system architecture- Introduction, schemas, sub schemas and instances; data base architecture, data independence, mapping, data models, types of database systems.

### **Module V:**

Data base security- Threats and security issues, firewalls and database recovery; techniques of data base security; distributed data base.

## **Examination Scheme:**

Components	A	P	HA	CT	EE
Weightage (%)	5	5	5	15	70

A-Attendance; P -Project/Seminar/Quiz/Viva; HA-Home Assignment; CT-Class Test; EE-End Semester Examination

# TERM PAPER

Course Code: COM2431

Credit Units: 02

## Objectives

The objective of this course is to judge the understanding as well as application of the knowledge gained by the students. The aim of the term paper is to provide the students with an opportunity to further enhance their knowledge in a sector of their choice by undertaking a significant practical unit of examining and analyzing various aspects of business management at a level commensurate with the learning outcomes of the various courses taken up by them in the ongoing semester.

A term paper is primarily a record of intelligent reading in several sources on a particular subject. The students will choose the topic at the beginning of the session in consultation with the faculty assigned. At least one middle level or senior level person of a company from the chosen sector may be interviewed face to face.

## Guidelines:

1. The term paper will be related to the contemporary business issue and the topic will be given by the department.

2. The presentation of the term paper is scheduled to be held before the commencement of Semester examinations.

3. The paper will carry 100 marks that will be marked on the basis of understanding and organization of content based on the literature review. The Bibliography shall form an important part of the paper.

## 4. Examples of a few broad areas for Term Paper (List is indicative, not exhaustive)

- Credit rating
- Risk management
- Subprime meltdown and its after effect with case study from Indian industry
- Corporate frauds
- Micro finance institutions in India
- Carbon Trading
- IFRS
- Celebrity Endorsement in real estate
- Social media marketing
- Green marketing
- Sustainable branding practices
- Relationship management
- CSR
- Balanced Score Card
- Corporate Governance
- Employee retention
- NGOs.

## Evaluation Scheme

Organisation and relevance of content	Literature Review	Bibliography	Total
40	40	20	100

# PROJECT

Course Code: COM2432

Credit Units: 03

## Objectives:

The aim of the project is to provide the students with an opportunity to further their intellectual and personal development in the chosen field by undertaking a significant practical unit of activity. The project can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

## Chapter Scheme and distribution of marks:

Chapter 1: Introduction – 10 marks

Chapter 2: Conceptual Framework/ National/International Scenario – 25 marks

Chapter 3: Presentation, Analysis & Findings -- 25 marks

Chapter 4: Conclusion & Recommendations -- 10 marks

Chapter 5: Bibliography -- 05 marks

Project Report	Power Point Presentation & Viva
75 marks	25 marks

## Components of a Project Report

The outcome of Project Work is the Project Report. A project report should have the following components:

**1) Cover Page:** This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.

**2) Acknowledgement:** Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.

**3) Table of Content:** Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.

**4) Body of the Report:** The body of the report should have these four logical divisions

a) **Introduction:** This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, and method of analysis), Limitations of the Study, and Chapter Planning.

b) **Conceptual Framework / National and International Scenario:** (relating to the topic of the Project).

c) **Presentation of Data, Analysis and Findings:** (using the tools and techniques mentioned in the methodology).

d) **Conclusion and Recommendations:** In this section, the concluding observations based on the main findings and suggestions are to be provided.

**5) Bibliography or References:** This section will include the list of books and articles which have been used in the project work, and in writing a project report.

**6) Annexures:** Questionnaires (if any), relevant reports, etc.

(The main text of the Project should normally be in the range of 5000 words. However, there may be annexure in addition to the main text)

## The Steps of a Project Report

**Step I :** Selection of the topic for the project by taking following points into consideration:

- Suitability of the topic.
- Relevance of the topic
- Time available at the disposal.
- Feasibility of data collection within the given time limit.
- Challenges involved in the data collection (time & cost involved in the data collection, possibility of getting responses, etc.)

**StepII :** Finalisation of the Topic and preparation of Project Proposal in consultation with the Supervisor.

**Step III :** Collection of information and data relating to the topic and analysis of the same.

**Step IV :** Writing the report dividing it into suitable chapters, viz.,

Chapter 1:Introduction,

Chapter 2: Conceptual Framework / National & International Scenario,

Chapter 3: Analysis & Findings

Chapter 4: Conclusion and Recommendations.

**Step V :** The following documents are to be attached with the Final Project Report.

- 1) Approval letter from the supervisor (Annexure-IA)
- 2) Student's declaration (Annexure-IB)
- 3) Certificate from the Competent Authority of the Organisation / Institution, if the student undertakes the Project Work in any Organisation / Institution.

**Guidelines for Evaluation:**

- Each of the students has to undertake a Project individually under the supervision of a teacher and to submit the same following the guidelines stated below.
- Language of Project Report and Viva-Voce Examination may be English. The Project Report must be typed and hard bound.
- Failure to submit the Project Report or failure to appear at the Viva-voce Examination will be treated as "Absent" in the Examination. He /she has to submit the Project Report and appear at the Viva-Voce Examination in the subsequent years (within the time period as per University Rules).
- No marks will be allotted on the Project Report unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her Project Report.
- Evaluation of the Project Work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate.

# WORKSHOP

**Course Code: COM2433**

**Credit Units: 01**

## Objectives

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two way. The trainer has to make sure that the aspect covered are practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

## Major Themes for Workshop

The workshop may be conducted on any of the following major themes:

Accounting

Finance

Human Resources

Marketing

Economics

Operations

Supply Chain Management

These themes are merely indicative and other recent and relevant topics of study may be included.

## Guidelines for Workshop

The procedure for earning credits from workshop consists of the following steps:

1. Relevant study material and references will be provided by the trainer in advance.
2. The participants are expected to explore the topic in advance and take active part in the discussions held
3. Attending and Participating in all activities of the workshop
4. Group Activities have to be undertaken by students as guided by the trainer.
5. Evaluation of workshop activities would be done through test and quiz at the end of the workshop.
6. Submitting a write up of atleast 500 words about the learning outcome from the workshop.

## Methodology

The methodology followed at the workshop could be based on any one or more of the following methods:

Case Study

Business Game

Simulation

Group Activity

Role Play

Business Planning

Quiz

## Evaluation Scheme:

Attendance	Active Participation	Multiple Choice Questions/ Quiz	Solving the case/ Assignment/ Write up	Total
10	30	30	30	100

# Syllabus - Fifth Semester

## COST ACCOUNTING

**Course Code: COM2551**

**Credit Units: 03**

**Course Objective:**

To get an expert knowledge in the area of cost management and cost control to enable effective management decisions.

**Course Contents:**

**Module I: Cost Accounting**

Introduction – Meaning of Cost, costing and Cost Accounting – Comparison between Financial Accounts and Cost Accounts –Cost concepts and Classification of Costs – Cost Module – Cost Center, cost object –Preparation of cost sheet

**Module II: Material Costing**

Issue of materials, Methods of pricing of material issues- LIFO, FIFO- Weighed Average Method, Simple Average Method; Inventory Control- Concept & techniques like fixing of stock levels, EOQ, ABC analysis, perpetual & periodic inventory systems, material losses & their treatment.

**Module III: Labour Costing**

Control of labour cost – Labour Turn Turnover – Causes and effects of labour turnover – Meaning of Time and Motion Study, Merit Rating, Job Analysis, Time keeping and Time booking – Idle time, causes and treatment – Overtime – Methods of Wage Payment, Time rate and Piece Rate – Incentive Schemes – Halsey Premium Plan – Rowan Bonus Plan – Taylor's and Merrick's differential piece rate systems – Problems.

**Module IV: Overhead Costing**

Definition, Classification, allocation, apportionment & absorption of overhead, treatment of over & under absorption

**Module V: Costing Methods Introduction**

Unit Costing, Tender Costing Job Costing – Batch Costing – Contract Costing. Process Costing – principles – distinction between Process and Job – Preparation of process accounts – treatment of normal loss – abnormal loss – abnormal gain – Joint and By-products.

**Examination Scheme:**

Components	A	P	HA	CT	EE
Weightage (%)	5	5	5	15	70

A-Attendance; **P** -Project/Seminar/Quiz/Viva; **HA**-Home Assignment; **CT**-Class Test; **EE**-End Semester Examination

# MACRO ECONOMICS

**Course Code: COM2501**

**Credit Units: 03**

## **Course Objective:**

This course aims at introducing the fundamentals of Macroeconomic theories, policies and models in a historical perspective. It will enable the students to develop a critical insight on Classical and Keynesian macroeconomic models, to understand the relationship between inflation and employment by providing exposure to the constructions of Friedman, Phelps & Phillips.

## **Course Contents:**

### **Module I: Introduction to Macroeconomics**

The roots of macroeconomics, macroeconomic concerns, the role of government in the macro economy, the components of the macro economy, the methodology of macroeconomics

### **Module II: Introduction to National Income Accounting**

Concepts of GDP and national income, approaches to calculating GDP, GDP and personal income, Nominal and real GDP, Limitations of the GDP concept, GDP and the black economy.

### **Module III: Schools of Macroeconomic Thoughts**

Classical, Neo Classical and Keynesian Models.; Say's Law of Markets and Classical Theory of Employment

### **Module IV: Keynesian Model**

Aggregate expenditure and equilibrium output; Consumption function; theory of investment-marginal efficiency of capital; saving and investment; The Investment Multiplier and its application to LDC's

### **Module V: Money in the Modern Economy**

Theories of Demand for Money: Quantity Theory and Keynes approach. Baumol and Tobin Contributions and Friedman's restatement of quantity theory Characteristics of a monetary economy; the supply of money and overall liquidity position; credit creation

### **Module VI: Inflation**

The causes of inflation, level of prices and the value of money, The Fisher effect, the cost of inflation.

## **Examination Scheme:**

Components	A	P	HA	CT	EE
Weightage (%)	5	5	5	15	70

A-Attendance; P -Project/Seminar/Quiz/Viva; HA-Home Assignment; CT-Class Test; EE-End Semester Examination

# SUMMER INTERNSHIP EVALUATION

**Course code: COM2535**

**Credit Units: 06**

**Objective:**

The basic objective of a Summer Internship is to refine the practical exposure of the corporate functioning. This summer training will provide an opportunity to the students to apply their theoretical understanding while working on the concerned project in the industry. Thus this summer internship programme is an attempt to bridge the gap between theory and practice. This will also enhance the students' intellectual ability and attributes related to data handling, decision making, report writing, oral presentation and imbibing an interdisciplinary approach.

**General Guidelines:**

Every student of B.Com (Hons.) shall be required to undergo a practical training in an corporate organization approved by the Institute for eight weeks, normally in the Summer Vacation, after the end of the fourth semester examinations. The candidates shall be required to undergo training in the various areas of the organization concerned. The organization may assign a specific project to the candidate, which will be completed by him/her during the period of training. The work done by the candidate during the training period shall be submitted in form of a training report.

The last date for the receipt of training report in the department shall be one month after the date of completion of training, i.e. at the beginning of the fifth semester.

**Chapter Scheme**

Chapter I: Introduction 20 marks

Chapter II: Conceptual Framework/National/International Scenario 5 marks

Chapter III: Presentation, Analysis and Findings 35 marks

Chapter IV: Conclusion and Recommendations 15 marks

The report has to be type written in font Times New Roman, 12 points, 1.5 line spacing on both sides of the paper, Spiral Bound. The report should comprise of a maximum of 80 to 100 pages and has to be submitted in two copies.

**Evaluation Scheme:**

<b>SIP Report</b>	<b>Power Point Presentation &amp; Viva</b>
75 marks	25 marks

**Components of the Report**

The outcome of Summer Internship is the Project Report. A project report should have the following components:

- 1) Cover Page:** This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.
- 2) Acknowledgement:** Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.
- 3) Table of Content:** Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.
- 4) Body of the Report:** The body of the report should have these four logical divisions
  - a) Introduction:** This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, and method of analysis), Limitations of the Study, and Chapter Planning.
  - b) Conceptual Framework / National and International Scenario:** (relating to the topic of the Project).
  - c) Presentation of Data, Analysis and Findings:** (using the tools and techniques mentioned in the methodology).
  - d) Conclusion and Recommendations:** In this section, the concluding observations based on the main findings and suggestions are to be provided.
- 5) Bibliography or References:** This section will include the list of books and articles which have been used in the project work, and in writing a project report.
- 6) Annexures:** Questionnaires (if any), relevant reports, etc.

# ACCOUNTING THEORY

**Course Code: COM2502**

**Credit Units: 04**

**Course Objectives:** The objective of this paper is to introduce the basics of accounting theory. The paper also tends to give a deep insight into the changing scenario of national and international accounting standards.

## **Course Contents:**

### **Module I:**

Accounting Theory: Meaning, need and structure development, Income measurement concept, valuation and capital maintenance concept, development of financial accounting standards in India and abroad.

### **Module II:**

Corporate Reporting and Information disclosures: Concept of adequate disclosure, methods of disclosures, Indian company Law and disclosure practice. Current issues in corporate reporting: Reporting for investor and employees and social responsibility accounts, Social Accounting & Reporting. Revenue and Expenses recognition

### **Module III:**

Productivity Accounting: Input output relationship and their Accounting. Human Resource Accounting: Concepts, Methods, Evaluation and Reporting.

### **Module IV:**

Conceptual Framework of Accounting, Accounting Standards in India and Guidance, Notes on Various Accounting Aspects.

### **Module V:**

Harmonization Accounting & Reporting: Nature of Harmonization, recommendation of the report of the advisory group on accounting and auditing RBI, International Accounting Standards Committee & International Accounting Standard Board (IASB), Obstacles in Harmonization

## **Examination Scheme:**

Components	A	P	HA	CT	EE
Weightage (%)	5	5	5	15	70

## ADVANCED CORPORATE ACCOUNTING

**Course Code:** COM2503

**Credit Units:** 04

**Course Objectives:** This course enables the students to develop advanced and thorough understanding of Corporate Accounting in conformity with the Provision of Companies' Act and latest amendments thereto with adoption of Accounting Standards that are likely to be introduced from time to time.

**Course Contents:**

**Module I:**

Advanced problems on final Accounts of Companies

**Module II:**

Problems of Amalgamation, (AS-14) and Reconstruction, Aspects Of Corporate Reconstructuring.

**Module III:**

Consolidated Accounts of Holding and Group Companies.

**Module IV:**

Preparation of Final Accounts of Banking Companies and Insurance Companies.

**Module V:**

Preparation of Final Accounts of electricity Companies and Double Account System.

**Examination Scheme:**

Components	A	P	HA	CT	EE
Weightage (%)	5	5	5	15	70

# Syllabus - Sixth Semester

## MANAGEMENT ACCOUNTING

**Course Code: COM2651**

**Credit Units: 03**

**Course Objective:**

To provide the students knowledge about the use of costing data for planning, control and decision making.

**Course Contents:**

**Module I: Management Accounting**

Nature & Scope: Meaning and Definition - Objectives of Management Accounting - Management Accounting and Financial Accounting - Management Accounting and Cost Accounting - Utility of Management Accounting - Limitations of Management Accounting - Position of Management Accountant in the Organisation.

**Module II: Analysis and Interpretation of Financial Statements - I**

Concept of Financial Statements and their Nature - Limitations of Financial Statements - Analysis and Interpretation - Tools - Comparative Financial Statements - Common size Statements - Trend Percentages  
Ratio Analysis - Nature and Interpretation - Utility and Limitations of Ratios - Short-term Financial Ratios - Long-term Financial Ratios - Profitability Ratios - Proprietary and Yield Ratios - Turnover Ratios - DUPONT Control Chart

**Module III: Cash Flow Analysis & Fund Flow Analysis**

Distinction of cash from funds-utility of cash flow statement construction of cash flow statement

**Module IV: Responsibility Accounting and Standard Costing**

Concept of Responsibility Accounting - Cost Centers and Profit Centers - Contribution by Segments, Standard Costing

**Module V: Budgets and Budgetary Control**

Concept of Budgets and Budgetary Control - Nature and Objectives of Budgetary Control - Advantages and Limitations of Budgetary Control - Establishing a system of Budgetary Control - Preparation of Sales Budget, Selling and Distribution Cost Budget, Production Budget, Purchase Budget, Cash Budget etc. - Flexible Budgets and Master Budgets

**Examination Scheme:**

# SECURITY ANALYSIS AND PORTFOLIO MANAGEMENT

**Course Code: COM2606**

**Credit Units: 03**

**Course Objectives :** To equip the students with advanced analytical tools, models and financial theory necessary for making sound investment decisions and optimum portfolio choice as well as understanding the paradigms by which financial securities are valued

## **Course Contents:**

### **Module I: Introduction**

Investment environment, various asset classes and financial instruments. Investment process. Return-risk analysis and impact of taxes and inflation. Types and sources of risks. Risk Aversion. Diversification and Hedging. Contemporary issues in investment management- Socially responsible investing (SRI), Ethical investing etc.

### **Module II: Analysis of Fixed Income Securities:**

Bond fundamentals; Types of bonds; valuation of bonds; bond yields; bond price- yield relationship; analysis of risks in bonds-duration and convexity. Bond portfolio management- passive bond management and active bond management including bond immunization strategies.

### **Module III: Equity Analysis**

Measurement of return and risk of equity shares. Approaches to equity analysis. Fundamental Analysis- Economy, Industry, Company Analysis; Equity Valuation Models ( DDM, P/E Ratio model and Free Cash Flow Valuation approach).Forecasting P/E ratio. Technical Analysis – Market indicators and specific stock indicators including Bollinger bands. Efficient market hypothesis. Tests of market efficiency and empirical evidence. Assumption of Investor's rationality and its critique. Behavioural Finance- behavioural biases (Framing, Mental accounting, Regret avoidance and Prospect theory).

### **Module IV: Portfolio Analysis, Selection and Management**

Risk aversion and capital allocation to risky assets and risk free asset; Risk tolerance and asset allocation; Optimal risky portfolio- Markowitz portfolio selection model. Sharpe's single Index Model and optimal portfolio construction. Capital Asset Pricing Model (CAPM) and Market Anomalies ( Size effect, Value effect, Seasonality effect, Overreaction effect etc) . Extensions of CAPM (Zero beta CAPM and Merton's Inter temporal CAPM).Arbitrage Pricing Theory and Multifactor Asset Pricing Models. Active and Passive portfolio management. Investment strategies-value investing, momentum and contrarian strategies etc. Portfolio performance evaluation (Sharpe index, Treynor Index, Jensen's alpha, Information ratio, Fama's decomposition measure).Portfolio revision.

**Module V: Financial Derivatives:** Futures-types and payoffs. Pricing of financial futures and commodity futures (Cost of carry model). Options- types and valuation using Black and Scholes Model. Put call parity. Options trading strategies. Exotic options, Portfolios of futures and options synthetics. Financial engineering. Department of Commerce, University of Delhi 39 Note: Some case studies related to above topics are required to be discussed.

## **Examination Scheme:**

Components	A	P	HA	CT	EE
Weightage (%)	5	5	5	15	70

A-Attendance; P -Project/Seminar/Quiz/Viva; HA-Home Assignment; CT-Class Test; EE-End Semester Examination

# DISSERTATION

Course Code: COM2637

Credit Units: 09

## Objectives:

The aim of the dissertation is to provide you with an opportunity to further your intellectual and personal development in your chosen field by undertaking a significant practical unit of activity, having an educational value at a level commensurate with the award of your degree. The dissertation can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

## Chapter Scheme and distribution of marks:

Chapter 1: Introduction – 10 marks

Chapter 2: Conceptual Framework/ National/International Scenario – 25 marks

Chapter 3: Presentation, Analysis & Findings -- 25 marks

Chapter 4: Conclusion & Recommendations -- 10 marks

Bibliography: 5 marks

Dissertation	Power Point Presentation & Viva
75 marks	25 marks

## The Components of a Dissertation

A Dissertation should have the following components:

**1) Cover Page:** This should contain the title of the, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the work and name of the University.

**2) Acknowledgement:** Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.

**3) Table of Content:** Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.

**4) Body of the Report:** The body of the report should have these four logical divisions

a) **Introduction:** This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, and method of analysis), Limitations of the Study, and Chapter Planning.

b) **Conceptual Framework / National and International Scenario:** (relating to the topic of the Dissertation).

c) **Presentation of Data, Analysis and Findings:** (using the tools and techniques mentioned in the methodology).

d) **Conclusion and Recommendations:** In this section, the concluding observations based on the main findings and suggestions are to be provided.

**5) Bibliography or References:** This section will include the list of books and articles which have been used in the work, and in writing the report.

**6) Annexures:** Questionnaires (if any), relevant reports, etc.

(The main text of the Dissertation should normally be in the range of 5000 words. However, there may be annexure in addition to the main text)

## Steps of the Dissertation Work

**Step I:** Selection of the topic should be made keeping the following points into consideration:

- Suitability of the topic.
- Relevance of the topic
- Time available at the disposal.
- Feasibility of data collection within the given time limit.
- Challenges involved in the data collection (time & cost involved in the data collection, possibility of getting responses, etc.)

**Step II:** Finalisation of the Topic and preparation of Dissertation Proposal in consultation with the Supervisor.

**Step III:** Collection of information and data relating to the topic and analysis of the same.

**Step IV:** Writing the report dividing it into suitable chapters, viz.,

Chapter 1: Introduction,  
Chapter 2: Conceptual Framework / National & International Scenario,  
Chapter 3: Analysis & Findings  
Chapter 4: Conclusion and Recommendations.

**Step V:** The following documents are to be attached with the Dissertation:

- 1) Approval letter from the supervisor (Annexure-IA)
- 2) Student's declaration (Annexure-IB)
- 3) Certificate from the Competent Authority of the Organisation / Institution, if the student undertakes the Dissertation Work in any Organisation / Institution.

Annexures,

References / Bibliography

**Guidelines for Evaluation:**

- Each of the students has to undertake a topic individually under the supervision of a teacher and to submit the same following the guidelines stated below.
- Language of Dissertation and Viva-Voce Examination has to be English. The Dissertation must be typed and hard bound.
- Failure to submit the Dissertation or failure to appear at the Viva-voce Examination will be treated as "Absent" in the Examination. He /she has to submit the Dissertation and appear at the Viva-Voce Examination in the subsequent years (within the time period as per University Rules).
- No marks will be allotted on the Dissertation unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her Dissertation.
- Evaluation of the Dissertation to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate.
- A candidate has to qualify in the Dissertation separately, obtaining a minimum marks of 40 (Dissertation and Viva-Voce taken together) in paper 3.5.
- Marking Scheme for Dissertation and Viva-Voce Examination:

**Cover Page / Title page**

**Project Report on  
Title of the Project**

**XXXXXXXXXXXXXXXXXXXX**

**(Submitted for the partial fulfilment for the award of Degree of B.Com. Honours in  
Accounting / Taxation/ .....**

### **Examples of a few broad areas for Dissertation (List is indicative, not exhaustive)**

- Any topic concerning local economic /entrepreneurial issues / **New Business Proposal**
- IFRS and Indian Accounting Standard – Opportunities & Challenges
- Revised Schedule VI
- Credit Rating
- Risk Management
- Credit Risk Management in Banks: Opportunities & Challenges.
- Subprime Meltdown and its after effect with case study from Indian Industry.
- Corporate Frauds/ White Collar Frauds
- Financial Inclusion
- Micro-finance Institutions in India.
- Carbon Credit
- Direct Tax Code (DTC)
- Goods and Service Tax (GST)
- Role of MSMEs in the Indian Economic Development
- Public Sector Undertakings and Indian Economic Development
- Business & Government
- Corporate Social Responsibilities
- Corporate Governance
- Financial Sector Reforms
- On-line Banking
- NPA Management
- Business Process Outsourcing
- Capital Market
- Environmental Accounting
- Environmental Management
- Financial Statement Analysis
- Performance Analysis
- Working Capital Management
- Cash Management
- Debtors Management

- Inventory Management
- Mergers & Acquisitions
- e-Commerce
- Study on Aviation Sector in India.
- Venture Capital
- Equity Linked Savings Scheme
- Insurance Industry in India
- Analysis of Mutual Funds
- Study of Non-Performing Assets
- Risk and Return Analysis
- Commercialization of Sports in India.
- The Sub-Prime Crisis.
- Rural and Agricultural Banking
- Marketing Strategy of different companies for their different products and Promotional Strategies
- Market Research
- Study on the Market Awareness of Intellectual Property
- Preservation & Storage of Agricultural Products
- Marketing Strategy of Ball/ Gel Pens
- Brand Repositioning
- Customer Relationship Management
- Sales & Distribution Management
- Customer Awareness
- Industrial Marketing Vs. Consumer
- Study of Consumer Behaviour
- “ Is attractive packaging really a necessity or an eyewash?” A study on packaging of some selected companies-
- Consumer Behaviour
- After Sales Service and Customer Satisfaction
- Effectiveness of Advertising
- Direct Marketing & Networking

## ADVANCED ACCOUNTS

**Course Code: COM2602**

**Credit Units: 04**

### **Course Objectives:**

#### **Course Contents:**

##### **Module I-**

Valuation of Assets: Inventories, Goodwill, Shares and Business, (AS-26).

##### **Module II-**

Investment Accounts: Accounting Standard 13, Accounting for Financial asset and Instrument.

##### **Module III-**

Agricultural Farm Accounting, Hotel Accounting, Accounting for inflation.

##### **Module IV-**

Fund Based Accounting, Introduction to Government Accounting, Corporate Social Accounting and Environmental Accounting.

##### **Module V-**

Value Added Statement, Economic Value Added (EVA) Statement, Human Resource Accounting.

### **Examination Scheme:**

Components	A	P	HA	CT	EE
Weightage (%)	5	5	5	15	70

A-Attendance; P- Project/Seminar/Quiz/Viva; HA-Home Assignment; CT-Class Test; EE-End Semester Examination

### **Texts & References:**

#### **Texts:**

# ADVANCED COST ACCOUNTING

Course Code: COM2603

Credit Units: 04

## Course Objectives:

## Course Contents:

### Module I: Cost Book-Keeping

Non-integrated Accounting system, Accounting Ledgers And Control Accounts, Integrated Accounting, Reconciliation of Cost & Financial Accounts.

### Module II: Process Costing

Basic Concept, Joint products and By-products, work-in-progress, (Equivalent production), inter-Process profits, Uniform Costing and inter firm comparisons.

### Module III: Activity Based Costing

Problems of Traditional Costing, Cost analysis under ABC, Institution of ABC, Benefits and Weaknesses, Life Cycle Costing; Target Costing.

### Module IV: Cost Management System

Total Quality Management, Benchmark, Back-flush Costing, Reengineering, Cost Reduction and value Analysis: Concept and Techniques.

### Module V:

Service Costing, Marginal Costing, Standard Costing, Decision Making, Make or buy, Add or Drop, Operate/Shutdown, Sell/Process.

## Examination Scheme:

Components	A	P	HA	CTT	EE
Weightage (%)	5	5	5	15	70

A-Attendance; P -Project/Seminar/Quiz/Viva; HA-Home Assignment; CT-Class Test; EE-End Semester Examination

# INDIRECT TAXES INCLUDING GST

Course Code: COM2604

Credit Units: 04

**Course Objectives:** To provide students with adequate theoretical and working knowledge about GST and its practical application in unification of indirect tax system in India. The course intends to make students aware of the latest developments and changes being incorporated in GST at the systemic level and its implications in the process of economic and financial integration.

## Course Contents:

### Module I-

Origin of GST – Evolution of GST concept, How GST came into existence, GST Laws, Constitutional Perspectives – Cooperative Federalism in economic system, Application of GST in tax sharing – CGST/SGST/IGST, Classification of goods and services in GST assessment, Exemption from Tax, Composition levy.

### Module II-

Basic Framework of GST – Unification of indirect tax system, GST Council – composition, objectives, functions and significance, Tax sharing and disbursement mechanism between the Centre and states, Responsibilities of various stakeholders – government, firms, traders, consumers,. Registration, Tax invoice, Returns.

### Module III-

Administration of GST – GST Network, Registration, Tax Invoice, Credit & Debit Notes, Electronic way bill for interstate movement of goods, Computation of GST Liability, Input Tax Credit, Concept of times value of supply, Filing of Returns, Payment of Tax, Search, Seizure & arrest, Demand & Recovery, Offences & Penalties.

### Module IV-

Safeguard Measures – Anti-profiteering clause, Reverse charge mechanism, Assessment & Audit, Inspection – Concept of HSN and SAC, Advance Ruling, Appeals & Revision, Implications on Tax terrorism, corruption, tax evasion and black money

### Module V-

Comparative analysis between GST in India and other countries such as Canada, France, Australia and China, Advantages and Disadvantages.

## Examination Scheme:

Components	A	P	HA	CT	EE
Weightage (%)	5	5	5	15	70

A-Attendance; P -Project/Seminar/Quiz/Viva; HA-Home Assignment; CT-Class Test; EE-End Semester Examination

# PUBLIC FINANCE AND TAX PRACTICES

Course Code: COM2605

Credit Units: 04

## Course Objective:

### Course Contents:

#### Module I:

##### Origin and Development of Public Finance

Meaning, public finance and federal finance, public finance and private finance, principle

##### Principles of Taxation and Government Expenditure

Benefit approach, allocation of public goods, ability to pay approach, excess burden of taxes

#### Module II:

##### Raising of Public Funds

Sources and classification of public revenues, incidences and shifting of taxes

##### Distribution of Public Funds

Effect on production, employment, distribution and stability, public debt and fiscal deficit

#### Module III:

Public Debt Management and Taxation

Development of Federal Finance in India

The constitutional arrangements, Finance Commissions

#### Module IV: Central and State Finances

Sources and uses of funds, effects of Fiscal Policy, relation between planning and central budgeting

State Finances- Sources and uses of funds, issues of federalism

#### Module V: Financing of Five-year Plans

Changing scenario of Indian tax Structure, new economic policy since 1991

Indian Fiscal Policy and Deficit Financing

## Examination Scheme:

Components	A	P	HA	CT	EE
Weightage (%)	5	15	5	5	70

A-Attendance; P-Project/Seminar/Quiz/Viva; HA-Home Assignment; CT-Class Test; EE-End Semester Examination

### ORGANIZATION THEORY AND BEHAVIOUR

**Course Code: COM4101**

**Credit Units: 03**

**Course Objective:**

The objective of the course is to develop a theoretical understanding among students about the structure and behaviour of organization as it develops over time. The course will also make them capable of realizing the competitiveness for firms.

**Course Contents:**

**Module-I : Introduction to Organizational Theories and Behaviour**

Organizational Theories and Behaviour: Classical, Neo -classical and Contemporary. Authority, Power, status, formal and informal structure. Flat and Tall structures. Bureaucratization of organizations. Organizational Behaviour-concepts, determinants, models, challenges and opportunities of OB. Transaction cost and organizational behaviours. Contributing disciplines to the OB. Individual Behaviour: Foundations of individual behaviour, values, attitudes, personality and emotions. Theory X and Theory Y, Chris Argyris behaviour patterns, Perceptual process.

**Module-II : Group Decision making and Communication**

Group Decision making and Communication: Concept and nature of decision making process, Individual versus group decision making, Nominal group technique and Delphi technique, models of communication, communication effectiveness in organizations. Feedback, TA, Johari Window.

**Module-III : Motivation**

Motivation: Need hierarchy, Maslow's Need Hierarchy, Two factor theory, Contemporary theories of motivation (ERG, Cognitive evaluation, goal setting, equity) expectancy model. Behaviour modification, Motivation and organizational effectiveness.

**Module-IV : Leadership, Power and Conflict**

Leadership, Power and Conflict: Concept and theories, Behavioral approach, Situational approach, Leadership effectiveness, Contemporary issues in leadership . Power and conflict. Bases of Power, power tactics, sources of conflict patterns, levels and conflict resolution strategies.

**Module-V**

Organizational Culture, Organizational Development and Stress Management: Concept and determinants of organizational culture, Organizational Development: concept and intervention techniques. Individual and organizational factors to stress, consequences of stress on individual and organization, management of stress. Case Studies: Some cases of real business world are required to be discussed.

**Examination Scheme:**

Components	A	P	C	CT	EE
Weightage (%)	5	10	5	10	70

A-Attendance; P-Project/Seminar/Quiz/Viva/Home Assignment; C-Case Discussion CT-Class Test; EE-End Semester Examination

**Suggested Readings:**

1. Robbins; S.P., *Organizational Behaviour* (13th edition), Prentice Hall of India Pvt. Ltd., New Delhi, 2008.
2. Luthans, Fred, *Organizational Behaviour*, 11th Edition, Mc Graw Hill International, New York, 2007.

3. Robins S.P., *Organizational Theory: Structure Design and Application*, 3rd ed. Prentice Hall of India Pvt. Ltd., 2007.

## QUANTITATIVE TECHNIQUES FOR BUSINESS DECISIONS

**Course Code: COM4102**

**Credit Units: 03**

### Course Objective:

*The objective of the course is to acquaint the students with the use of quantitative models in decision making.*

### Course Contents:

#### Module-I : Introduction

Introduction: Quantitative approach to management decision making. Linear Programming: Mathematical formulation of linear programming problems and their solution using graphic approach and simplex algorithm. Duality Sensitivity analysis. Big M Method

#### Module-II : Transportation

Transportation: Solving the problem, testing optimality MODI method. Cases of unbalanced problems, degeneracy, maximization objective, multiple solutions and prohibited routes.

#### Module-III

Assignment: Solving the problem. Cases of unbalanced problems, multiple optimum solutions, maximization objective and unacceptable assignments. Integer Programming: problem Formulation and solution.

#### Module-IV

Game Theory: Games of pure strategy. Games of mixed strategy. Dominance. Queuing Theory: Elements of a queuing system. Models with Poisson arrival and services rates, single server and infinite and finite population.

#### Module-V: Sequencing

Sequencing: n-jobs to be processed on two machines in the same order of machines. N-jobs to be processed on m machines in the same order of machines – by converting it into a two – n machine case. Two jobs to be processed on machines in the different orders of machines.

**(The emphasis should be on concepts and application of concepts)**

### Examination Scheme:

Components	A	P	C	CT	EE
Weightage (%)	5	10	5	10	70

A-Attendance; P-Project/Seminar/Quiz/Viva/Home Assignment; C-Case Discussion CT-Class Test; EE-End Semester Examination

### Suggested Readings:

- Levin, R.I., D.S. Rubin and J.P. Stinson, “*Quantitative Approaches to Management*”, 1986, McGraw - Hill.
- Vohra N.D., “*Quantitative Techniques in Management*”, 3rd Edition, The McGraw Hill companies, 2006.
- Bierman H. Jr, C.P. Bonini and W.H. Hausman, “*Quantitative Analysis for Business Decisions*”, 7th Edition, Homewood, Ill., Irwin 1983
- Taha, Hamdy A., “*Operations Research: An Introduction*”, 8 th Edition, Prentice – Hall of India.

# **ECONOMIC ANALYSIS FOR BUSINESS**

**Course Code: COM4103**

**Credit Units: 03**

## **Course Objective:**

To familiarize the students with theoretical concepts of modern Economic Analysis so that they can use these as inputs in managerial decision making process. Emphasis would be laid on the understanding of key economic variables both at micro and macro level which influence the business operations and strategies of the firm and the under which they operate.

## **Course Content:**

### **Module I: Theory of Demand and Supply**

Nature and scope of economic analysis: its relevance for managerial decision making, Demand analysis: nature of demand for a product- individual demand and market demand, demand by market segmentation. Demand function and determinants of demand. Supply function: determinants of supply of a product, law of supply. Elasticity of supply.

Concept of elasticity of demand- income, cross, price and advertizing elasticity. Theorems on the price elasticity of demand. Applications of the concept of price elasticity of demand in business decisions. Demand forecasting-need for forecasting and techniques of forecasting. Cost concepts: costs relevant for management decision making. Economies of scale: internal and external. Cost function: cost and output relationship.

### **Module II: Theory of Production and Cost**

Production analysis: Production function-neo-classical, Cobb- Douglas, Leontief. Least cost combination of inputs for a firm. Concept of an isoquant-smooth curvature and right angle. Returns to scale and returns to a factor. Expansion path of a firm. Cost Analysis: Cost relevant for management decision making. Economies of scale: Cost Function: Cost and output relationship. An Analysis of the Objectives of a Business Firm: Profit Maximization Model, Baumoul's Sales Maximization Model, Marris's Model of 'Managerial Enterprise' Williamson's Model Of 'Managerial Discretion.

### **Module III: Market Structure: Price and Output Decisions**

Pricing and Output decisions – Perfectly Competitive and Monopoly Market Pricing and Output Decisions- Under Monopolistically Competitive Market- Product Differentiation; Price Discriminating Monopolist; Models of Oligopolistic Market: Price Rigidity – The Kinky Demand Curve Model Interdependence - The Cournot Model, Price Leadership Models, Cartels and Collusion.

### **Module IV: Macro Economics Analysis**

Economic Policy and Analysis: Macro Economic Variables and Functional Relationships. Business Environment: Factors Influencing the Business Environment. National Income Analysis. Models of Circular Flow of Money-Incorporating Savings Investment, Foreign Trade and Government Sector. Consumption Function, Saving Function and investment Function. Concepts of Investment Multiplier. Factors Influencing Consumption Function. Demand and Supply of Money: Transaction, Precautionary and Speculative Demand for Money; Liquidity preference function; Components of Money Supply. Business Cycles: An Analysis of Fluctuation in the level of Economic Activity. Phases of Business Cycles.

Inflation and Deflation: Demand – Pull and Cost – Push Inflation. Impact of Inflation . Analysis of Policies to control inflation. Deflation. Monetary Policy: Objectives of Monetary Policy. Function of

Central Bank. Credit Policy and its implications on the Corporate Sector. Fiscal Policy: meaning, objectives and impact on economy. Money Market, Capital Market and Foreign Exchange Market.

**Examination Scheme:**

Components	A	P	C	CT	EE
Weightage (%)	5	10	5	10	70

A-Attendance; P-Project/Seminar/Quiz/Viva/Home Assignment; C-Case Discussion CT-Class Test; EE-End Semester Examination

# FINANCIAL MANAGEMENT AND POLICY

Course Code: COM4104

Credit Units: 03

## Course Objective:

*The objective of the course is to acquaint the students with the basic analytical techniques and methods of financial management of business firms. The course also provides students the exposure to certain sophisticated and analytical techniques that are used for taking financial policy decisions.*

## Course Contents:

### Module-I : Introduction

Financial Management: Nature, objectives and scope; financial decision-making and types of financial decisions ; role of a finance manager in a firm and Agency problem. Risk-Return framework for financial decision -making.

### Module-II : Capital Budgeting

Capital Budgeting Decisions: Nature and Kinds of Capital Budgeting Decisions; techniques of evaluating capital budgeting decisions, capital budgeting decisions under constraints and with multiple objectives using Mathematical Programming Models; Capital budgeting decisions under inflation; Capital budgeting decisions under uncertainty and their evaluation using Statistical Decision Theory. Analysis of Real life capital budgeting decisions-some case studies.

### Module-III : Capital Structure

Capital Structure: Concept; financial leverage and its impact on the valuation of firm; theories of capital structure, optimal capital structure; determinants of capital structure.

### Module-IV : Dividend Policy

Dividend Policy: Dividend and its form; cash dividend, right and bonus shares, and buy-back of shares; theories of dividend policy and their impact on the value of a firm; types of dividend policy-constant pay-out ratio and constant dividend amount policies; determinants of dividend policy and some case studies.

### Module-V: Working Capital Management

Working Capital Planning and Management: Basics of working capital planning and management; estimation of working capital requirement; working capital policy and its management of cash, accounts receivables and inventories; Mathematical and Simulation Models for Working Capital Decisions; financing working capital.

### Module-VI: Corporate Restructuring

Corporate re-structuring: Mergers and Acquisitions -types; sources of takeover gains; valuation and financing of acquisitions; Analysis of some case studies. The empirical evidences on theories and the case studies relevant for above topics are required to be discussed.

## Examination Scheme:

Components	A	P	C	CT	EE
Weightage (%)	5	10	5	10	70

A-Attendance; P-Project/Seminar/Quiz/Viva/Home Assignment; C-Case Discussion CT-Class Test; EE-End Semester Examination

## Suggested Readings:

1. Van Horne, James C., *Financial Management and Policy*, Prentice Hall of India 12th Ed, 2008.
2. Pandey I. M., *Financial Management*, 9th Ed. Vikas Publishing.
3. Ross S.A., R.W. Westerfield and J. Jaffe, *Corporate Finance*, 7th Ed. McGraw Hill.
4. Brealey R.A. and S.C. Myers, *Principles of Corporate Finance*, McGraw Hill, 6<sup>th</sup> Ed.
5. Damodaran, A, "*Corporate Finance: Theory and Practice*". John Wiley & Sons, 2nd Ed., 2001.

# AUDITING

**Course Code: COM4105**

**Credit Units: 03**

## **Course Objective:**

To provide knowledge of auditing principles, procedures and techniques in accordance with the professional standards and requirements.

## **Course Contents:**

### **Module-I: Introduction**

Introduction to auditing Introduction – meaning- definition – difference between accountancy and auditing – types of audit—advantages of auditing – preparation before commencement of new audit

### **Module-II: Internal Check & Control**

Internal check - Meaning and objects of internal check – internal control-meaning definition-fundamental Principles-internal check as regards wages, cash sales, cash purchases - internal check in a departmental stores-internal audit – meaning-importance – advantage and disadvantages. Duties and Responsibilities of an auditor.

### **Module-III: Valuation & Verification of Assets & Liabilities**

Verification and valuation of assets and liabilities: Meaning and objectives – position of an auditor as regards to the valuation of assets – verification and valuation of different items – assets –fixed assets - goodwill – stock in trade – investments – liabilities – capital – debentures – bills payable sundry creditors – contingent liabilities –

### **Module-IV**

Audit of different organizations drafting of audit program or trading and non-trading organization in a tabular form. Preparation of clean and qualified audit report with special reference to manufacturing and other Companies Audit Report 1975

### **Module-V**

Visit an audit firm, write about the procedure followed by them in Auditing the books of accounts of a firm. Record the verification procedure with respect to any one fixed asset.

Prepare a qualified or clean audit report for a given situation.

Audit Program, Draft an audit program.

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>P</b>	<b>C</b>	<b>CT</b>	<b>EE</b>

# COMPUTER APPLICATIONS IN BUSINESS

**Course Code: COM4106**

**Credit Units: 03**

## **Course Objective:**

*The purpose of this course is to equip the students with fundamental aspects of computers and communication and their application in Commerce.*

## **Course Contents:**

### **Module-I: Introduction**

Introduction to Data Information, and knowledge and IT. Changing decision making scenario; Quality of information role of IT in information generation and value addition.

### **Module-II: Computer Hardware & Software**

Computer Hardware and Software: Types of computer systems – micro, mini, mainframe, super. Personal Database Management System: Concept of Database Management System, database Design - Physical and Logical. Data computers –its main component and configuration. Operating system, Application Software. Programming Language.

### **Module-III : Introduction to Internet**

Internet and World Wide Web: History and future of Internet. Web client and Web-Server. Web page and Website. Domain Name System. WWW as a marketplace. Client side programming and server - side programming.

### **Module-IV**

Desktop Application: Important features of Word processing, Presentation, Graphics and Spreadsheet Application Software. Statistical Packages: for Analysis of Variance Multi-variate analysis, Factor, Cluster Discriminant and Regression Analysis.

### **Module-V : Database Management system**

Databases Management System: Concept of Database Management System. Database Design – Physical and Logical. Data bases and tables Forms, Queries and Reports. SQL. Client server Architecture, Distributed Databases.

### **Module-VI : Networking**

Fundamentals of Networking and Communication: LAN, MAN, WAN, Networking Topologies Data communication. Broad Band Communication, Wireless Mobile Communication.

### **Module-VII: Management Information System**

Management information system: Transaction processing system (TPS) Traditional v/s contemporary TPS. Decision support system (DSS). Expert system. Recent developments in Computer Application.

## **Examination Scheme:**

Components	A	P	C	CT	EE
Weightage (%)	5	10	5	10	70

A-Attendance; P-Project/Seminar/Quiz/Viva/Home Assignment; C-Case Discussion CT-Class Test; EE-End Semester Examination

## **Suggested Readings:**

1. Comer, Douglas E. (2007), the Internet Book, New Delhi : PHI Learning Private Limited).
2. Morley, Deborah and Charles S. parker (2007) Fundamentals of Computers (New Delhi : Learning India Pvt. Ltd.)
3. Leon a. and Leon M., (2002) Fundamental of Information Technology, Vikas Software Manuals.
4. Laudon, Kenneth C. and Jane P. Laudon, (2003), Management Information Systems (New Delhi: Prentice Hall of India).

## Syllabus - Second Semester

### MANAGERIAL ACCOUNTING

**Course Code: COM4201**

**Credit Units: 03**

**Course Objective:**

*The objective of the course is to enable students to acquire sound Knowledge of concepts, methods and techniques of management accounting and to make the students develop competence with their usage in managerial decision making and control.*

**Course Contents:**

**Module-I: Introduction**

Management Accounting – Nature and Functions; Financial vs. Management Accounting; Cost vs. Management Accounting; Role of Management Accountant, Cost Concepts and Classifications.

**Module-II: Cost-Volume-Profit Analysis**

Cost-Volume-Profit (CVP) Analysis – Contribution Margin; Break – Even Analysis; Profit Volume (P/V) Analysis; Multiple -Product Analysis; Optimal use of Limited Resources, Relevant Information and Short -Run Managerial Decisions – Managerial Decision Making; Decision Making Process; Differential Analysis; Types of Managerial Decisions – Make/Buy, Add/Drop, Sell/ Process Further, Operate/Shutdown, Special Order, Product-Mix, Pricing Decisions.

**Module-III: Budgeting**

Budgeting – Nature and functions; Preparation of Different Types of Budgets, Fixed Versus Flexible Budgeting.

**Module-IV: Marginal and Standard Costing**

Variable and Absorption Costing – Concept, Comparison, Applications of Variable Costing, Preparation of Income Statements. Standard Costing – Concept, Advantages; Types of Standards; Variance Analysis; Materials, Labour, Overhead; Managerial Uses of Variances.

**Module-V: Responsibility Accounting**

Responsibility Accounting and Divisional Performance Measurement – Advantages and Disadvantages of Divisionalisation; Concept of Responsibility Accounting; Responsibility Centres – Cost Centre, Revenue Centre, Profit Centre, Investment Centre, Responsibility Performance Reporting, Divisional Performance Measurement – Measures of Performance; Return on Investment (ROI) Versus Residual Income (RI); Non- Financial Performance Measures; Transfer Pricing Methods.

**Examination Scheme:**

Components	A	P	C	CT	EE
Weightage (%)	5	10	5	10	70

A-Attendance; P-Project/Seminar/Quiz/Viva/Home Assignment; C-Case Discussion CT-Class Test; EE-End Semester Examination

**Suggested Readings:**

- Atkinson Anthony A., Rajiv D. Banker, Robert Kaplan and S. Mark Young, *Management Accounting*, Prentice Hall, 2001.
- Horngreen Charles T., and Gary L. Sundem and William O. Stratton, *Introduction to Management Accounting*, Prentice Hall of India, 2006.
- Drury Colin, *Management and Cost Accounting*, Thomson Learning, 2001. 4. Garison R.H. and E.W. Noreeb, *Managerial Accounting*, McGraw Hill, 2000.
- Ronald W. Hilton, *Managerial Accounting*, McGraw Hill Education, 2006.
- Jawahar Lal, *Advanced Management Accounting, Text, Problems and Cases*, S. Chand & Co., New Delhi, 2009

# BUSINESS ENVIRONMENT

**Course Code: COM4202**

**Credit Units: 03**

## **Course Objective:**

*The objective of the course is to acquaint students with the concepts of macro-economics and the macro environment in which a business organization operates. The course would also make the student capable of analyzing and understanding the macro economic policies of the government implemented from time to time and assess their impact on business.*

## **Course Contents:**

### **Module-I: Introduction**

Basic IS-LM frame-work, Asset markets, the demand for and the supply of real balances and their interest elasticities. Implications of modified IS and LM functions on relative efficacy of fiscal and monetary policies. Short and long run aggregate supply and shifts in aggregate supply. Aggregate demand, aggregate supply and the price level. Interaction of aggregate demand and aggregate supply and the determination of real income. Shifts in aggregate demand, demand management policies.

### **Module-II: Open Economy**

Exchange rate regimes, foreign exchange markets, Asset choices in an open economy and capital flows. Trade flows, External balances, IS -LM-BOP curve analysis and implications for policy choices. Expectations and Economic Behaviour.

### **Module-III: Inflation and Unemployment**

Inflation and unemployment: Impact of unemployment on IS -Curve. Theories of unemployment, types, causes and costs of unemployment. Inflation and unemployment, policy alternatives. Real Business Cycles.

### **Module- V: Macro-Economic Environment**

Macro-economic environment, Economic Growth (Theories in Modern Context) its variables and strategic planning. Macro economic indicators and forecasting of macro-economy. Economic Policies and Macro Economic movements in an open economy.

### **Module-V**

Globalization, Liberalization and Business environment. Economic Planning and the emerging environment.

### **Module-VI: Business Laws**

Environmental Laws, Costs and Business Behaviour. Consumer Laws, Cost and Business Behaviour, W.T.O. and emerging business environment.

NOTE: - This course is to be taught with contemporary issues relevant in the environment of Indian business with notable examples and illustrations.

## **Examination Scheme:**

Components	A	P	C	CT	EE
Weightage (%)	5	10	5	10	70

A-Attendance; P-Project/Seminar/Quiz/Viva/Home Assignment; C-Case Discussion CT-Class Test; EE-End Semester Examination

**Suggested Readings:**

The basic readings have been provided below and additional readings will be provided on year to year basis.

- Branson William H., *Macro Economic Theory and Policy*, First East – West Press, 3rd edition 2005.
- Dornbusch, R. and S. Fischer *Macro Economic* 6th edition Publisher Tata McGraw Hill.
- Oliver Blanchard *Macro Economic* 4th edition Pearson Education, LPE.
- Mankiw, N. Gregory, *Macro Economic* 4th edition. Macmillan.

# CORPORATE ACCOUNTING

**Course Code: COM4203**

**Credit Units: 03**

## **Course Objective:**

This course enables the students to develop awareness about Corporate Accounting in conformity with the Provision of Companies' Act and latest amendments thereto with adoption of Accounting Standards that are likely to be introduced from time to time.

## **Course Contents:**

### **Module-I: Accounting for Shares and Debentures**

Accounting for share capital transactions - issue of shares at par, at premium and at discount; forfeiture and re-issue of shares; buy-back of shares; redemption of preference shares - statutory requirements, disclosure in balance sheet; rights issue, with advanced problems. Issue of debentures - accounting treatment and procedures; redemption of debentures; conversion of debentures into shares, different methods for redemption of debentures.

### **Module-II: Final Accounts of Company**

Preparation and presentation of final accounts of joint stock companies as per company law requirements; provisions and reserves; determination of managerial remuneration; appropriation out of profits; transfer of profits to reserves; payment of dividend, transfer of unpaid dividend to Investor Education and Protection Fund; bonus shares and payment of interest out of capital.

### **Module-III**

Accounting treatment for amalgamation, absorption and reconstruction of companies; internal and external reconstruction, Advanced Problems.

### **Module-IV: Holding & Subsidiary Company**

Holding and subsidiary companies - accounting treatment and disclosures; consolidation of accounts.

### **Module-V: Valuation of Goodwill & Shares**

Valuation of Goodwill and Shares

Goodwill - Meaning – Definition – Elements of goodwill – Types of Goodwill – Purchased Goodwill – Nonpurchased or inherent Goodwill – Valuation of Non-purchased Goodwill – Average Profit Method – Super Profit Method – Capitalization of Average Profit Method – Capitalization of Super Profit Method – annuity method Shares - Meaning – need for valuation – factors affecting valuation – methods of valuation – Asset Backing or Intrinsic Value Method –Yield Valuation Method – Dividend Yield –Fair Value method – value of right shares – valuation of preference shares.

### **Module-VI: Liquidation Accounts**

Voluntary Liquidation – Preparation of Liquidator's Statement of affairs – order of payment - Calculation of commission on Assets Realized – payment to unsecured creditors – payment to Unsecured creditors other than preferential creditors – calculation of pro rata- treatment of uncalled Capital – liability of contributors.

## **Examination Scheme:**

Components	A	P	C	CT	EE
Weightage (%)	5	10	5	10	70

A-Attendance; P-Project/Seminar/Quiz/Viva/Home Assignment; C-Case Discussion CT-Class Test; EE-End Semester Examination

**Text & References:**

# MARKETING MANAGEMENT

**Course Code: COM4204**

**Credit Units: 03**

## **Course Objective:**

*The objective of the course is to familiarize the students with the basic concepts and principles of marketing and to develop their conceptual and analytical skills to be able to manage marketing operations of a business firm.*

## **Course Contents:**

### **Module-I: Introduction**

Introduction : Traditional view of marketing; Evolution of marketing concept; Modern concept of marketing; Marketing functions and role; Marketing management process- a strategic perspective.

### **Module-II: Marketing Environment**

Marketing Environment: Significance of scanning marketing environment; Economic, demographic, socio-cultural, technical, political and legal environment of marketing in India. Buyer's behaviour- Consumer vs. business buying behaviour; Consumer buying decision process and influences; Industrial buying process.

### **Module-III: Market Segmentation**

Market Segmentation, Targeting and Positioning: Bases and procedure for segmenting a consumer market; Criteria for effective market segmentation; Target market selection and strategies; Positioning – concept, bases and process.

### **Module-IV: Product Decision**

Product Decision: Product concept and classification; Major product decisions; New product development; Consumer adoption and innovation diffusion, Product life cycle – concept and appropriate strategies to be adopted at different stages. Pricing Decisions:- Objectives of pricing; Factors affecting price of a product; Procedure for setting price; Pricing policies and strategies.

### **Module-V: Distribution Decision**

Distribution Decisions: Channels of distribution – concept and importance; Different types of distributions, middlemen and their functions; Channel management, Selection, motivation and performance appraisal of distribution middlemen; Retailing and wholesaling – Developments and Indian perspective; Distribution logistics – concept, importance and major logistics decisions.

### **Module-VI: Promotion Decision**

Promotion Decisions: Meaning and importance of promotion; Communication process; Promotion tools- their effectiveness; determining optimal promotion mix; Developing and implementing a promotional campaign; Promoting through internet; Promotion scene in India.

### **Module-VII: Marketing Planning**

Marketing Planning, Organizing and Control: Marketing planning process; Different ways of organizing the marketing department; Sales, cost and profit analysis.

### **Module-VIII:**

Social, Ethical and Legal Aspects of Marketing; Consumer Protection in India; Services marketing, rural marketing, direct marketing, internet marketing and other marketing developments – Issues, salient features and their applications in India.

**Examination Scheme:**

Components	A	P	C	CT	EE
Weightage (%)	5	10	5	10	70

A-Attendance; P-Project/Seminar/Quiz/Viva/Home Assignment; C-Case Discussion CT-Class Test; EE-End Semester Examination

**Suggested Readings:**

- Kotler Philip and Kevin Keller *Marketing Management*, 13th ed., Pearson Prentice – 2008.
- Kotler, Philip, and Gary Armstrong, *Principles of Marketing*, 12th ed., Pearson Prentice-Hall 2008.

- Keller, Philip, Keller Kevin lane, Koshy Abraham, Jha Mithileshwar, *Marketing Management : A South Asian Perspective*, 13 th Edition, 2008

# E-COMMERCE

**Course Code: COM4205**

**Credit Units: 03**

## **Course Objective:**

*The purpose of this course is to develop understanding of Web - based Commerce and equip them to assess e-commerce requirements of a business and develop e –business plans and to interact with various IT professionals who may be developing e-commerce applications.*

## **Course Contents:**

### **Module-I: Introduction**

Introduction to Electronic Commerce: Meaning, nature and scope; Business application of e-commerce; Global trading environment and adopting of e -commerce, evolution of World Wide Web, future of Web.

### **Module–II**

Web-site Design: Web sites as market place; Role of web site in B2C e -commerce; Web site strategies; Web site design principles; push and pull approaches; Alternative methods of customer communication such as e -mail, BBA; E-mail etiquette and e-mail security.

### **Module–III**

Business Models of E-Commerce; B2B, B2C, B2G and other models of e - commerce; Applications of e-commerce to supply chain management; Product and service digitisation; Remote servicing, procurement and online marketing and advertising; Applications to Customer Relationship Management. Business to Consumer E-Commerce Applications: Cataloging, Order planning and order generation; Cost estimation and pricing; Order receipt and accounting; Order selection and prioritization; Order scheduling , fulfilling and delivery, Order billing, Post sales services.

### **Module–IV**

Business to Business E-Commerce: Need and alternative models of B2B e - commerce; Using public and private computer networks for B2B trading; EDI and paperless trading; characteristic features of EDI service arrangement; Internet based EDI; EDI architecture and standards; Vans; Costs of EDI infrastructure; Reasons for slow acceptability of EDI for trading; E -marketing-Traditional web promotion; Web counters; Web advertisements. XML, XML -EDI and its application.

### **Module–V: E-Payment System**

Electronic Payment System: Types of payment systems –e-cash and currency servers, e-cheques, credit cards, smart cards; electronic purses and debit cards; Operational, credit and legal risk of e - payment, Risk management options for epayment systems, Set standards.

### **Module–VI**

Security Issues in E-Commerce: Risks of e-commerce –Types and sources of threats, Protecting electronic commerce assets and intellectual property; Firewalls; Client server network security; Data and message security; Security tools; Digital identity and electronic signature; Encryption and concepts of public and private key infrastructure; Risk management approach to e -commerce security.

### **Module–VII : Environment of E-commerce**

Environment of E-Commerce: Issues regarding language, culture and infrastructure, Legal environment-borders and jurisdiction, contracting and contract enforcement;58 International cyber laws – cyber laws – Aims and salient Provisions; Cyber laws in India and their limitations; Taxation and e-commerce, Ethical Issues in e - commerce.

**Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>P</b>	<b>C</b>	<b>CT</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	5	10	70

A-Attendance; P-Project/Seminar/Quiz/Viva/Home Assignment; C-Case Discussion CT-Class Test; EE-End Semester Examination

**Suggested Readings:**

- Laudon, Kenneth C. and Carol Guercio Traver (2002) E -commerce: business, technology, society. (New Delhi : Pearson Education).
- Awad, Elias M. (2007), Electronic Commerce: From Vision to Fulfillment (New Delhi : Pearson Education).
- Kalakota, Ravi and Marcia Robinson (2001). Business 2.0: Roadmap for Success (New Delhi : Pearson Education).
- Smith, P.R. and Dave Chaffey (2005), eMarketing eXcellence; The Heart of eBusiness (UK : Elsevier Ltd.)

# HUMAN RESOURCE MANAGEMENT

**Course Code: COM4206**

**Credit Units: 03**

## **Course Objective:**

*The objective of the course is to acquaint students with the techniques and principles to manage human resource of an organization. This knowledge would make the student capable of employing these techniques to harness the best of each individual working in the organization.*

## **Course Contents:**

### **Module-I: Introduction**

Nature of Human Resource Management, concepts, functions, themes and controversies. HRM, Job Analysis and Job Design: Role of HR manager, Human resource planning and HR effectiveness. Job analysis techniques, job evaluation techniques, job description, job specification, job design approaches, job characteristics, approach to job design.

### **Module-II: Business & Human Resource Strategy**

Business Strategy and Human Resource Strategy: Concepts and Relationship. Contemporary global trends and management of human resources.

### **Module-III: Staffing**

Recruitment, Selection, Training and Development: Factors affecting recruitment, sources of recruitment (internal and external), basic selection model, psychological tests for selection. Requirement of a good test for selection. Training and Development.

### **Module-IV: Performance appraisal**

Performance appraisal: Objectives, PA process, comparing actual performance with standards, Methods of appraisal.

### **Module-V: Diversity at Work**

Diversity at Work: Managing diversity, causes of diversity, the paradox of diversity, diversity with special reference to handicapped, women and aging. Empowerment and gender issues. Compensation Management, Personnel audit and Research: Wage versus salary, determination of compensation, incentives schemes, fringe benefits and labour welfare. Personnel audit and research. Emerging horizons in HRM.

### **Module-VI: Career Development**

Career planning and succession concepts, approaches and issues.

### **Module-VII: HRIS and IR**

Human Resource information system: Developing HR information system. Employees relations: Shifting forms from industrial relation to employees relations. Handling employees' grievances.

Case Studies: Some Cases relating the learning from the course to business world are required to be discussed.

## **Examination Scheme:**

Components	A	P	C	CT	EE
Weightage (%)	5	10	5	10	70

A-Attendance; P-Project/Seminar/Quiz/Viva/Home Assignment; C-Case Discussion CT-Class Test; EE-End Semester Examination

**Suggested Readings:**

- De Cenzo and Robins, *Fundamentals of Human Resource Management* , 8th Edition, Prentice Hall of India, 2005.
- Decenzo, David A. and Robbins, S.P. *Fundamentals of Human Resource Management*, 9th Edition, Wiley and Sons Ltd., John, 2006.
- Flippo, Edwin B., *Personnel Management*, McGraw Hill, Tokyo, 1984-2000.

## Syllabus - Third Semester

### CORPORATE LAW

**Course Code: COM4301**

**Credit Units: 03**

**Course Objectives:**

*The objective of the course is to familiarize the students with the nature of legal regulatory environment of corporate enterprises in India.*

**Course Contents:**

**Module-I**

Provisions of the Companies Act, 2013 and case law relating to Managerial remuneration, Accounts and audit. The Companies Amendment Act, 2015 (Their Main Provisions).

**Module-II**

Prevention & Money Laundry Act, 2002 – Definition, Punishment for the offence of Money Laundry, Obligation of Banking Companies, Appellate Tribunal, Special Court, Fines & Penalties.

**Module-III**

SEBI Act, 1992 – Functions of SEBI. Powers of SEBI in relation to securities markets. Guidelines for Securities issues.

**Module-IV**

Consumer Protection Act, 1986 – Objectives. Rights of consumers. Mechanism of Redressal of Consumer grievances.

**Module-V**

Environment Protection Act, 1986 – Objectives. Powers of the Central Government, Major Provisions.

**Module-VI**

Foreign Exchange Management Act (FEMA). Emerging issues in Corporate Laws and Governance. Introduction, Definition, Regulation & Management of Foreign Exchange, Contravention & Penalties, Miscellaneous Provision in Brief.

**Examination Scheme:**

Components	A	P	C	CT	EE
Weightage (%)	5	10	5	10	70

A-Attendance; P-Project/Seminar/Quiz/Viva/Home Assignment; C-Case Discussion CT-Class Test; EE-End Semester Examination

**Suggested Readings:**

- Mayson, French & Ryan, *Company Law*, 25th edn, 2009, Oxford University Press.
- Brenda Hannigan, *Company Law*, 2009 edn, LexisNexis, UK.
- Ramaiya A, Guide to *Company Law*, 2009 edn, Wadhwa Nagpur.
- The Institute of Company Secretaries of India, *Company Law, Course Study Material*, 2009

# **COST ACCOUNTING**

**Course Code: COM4302**

**Credit Units: 03**

## **Course Objective:**

To get an expert knowledge in the area of cost management and cost control to enable effective management decisions.

## **Course Contents:**

### **Module I: Cost Accounting**

Introduction – Meaning of Cost, costing and Cost Accounting – Comparison between Financial Accounts and Cost Accounts – Application of Cost Accounting – Designing and installing a Cost Accounting system – Cost concepts and Classification of Costs – Cost Module – Cost Center – Elements of Cost – Preparation of cost sheet – Tenders and Quotations – Problems.

### **Module II: Labour Costing**

Control of labour cost – Labour Turnover – Causes and effects of labour turnover – Meaning of Time and Motion Study, Merit Rating, Job Analysis, Time keeping and Time booking – Idle time, causes and treatment – Overtime – Methods of Wage Payment, Time rate and Piece Rate – Incentive Schemes – Halsey Premium Plan – Rowan Bonus Plan – Taylor's and Merrick's differential piece rate systems – Problems.

### **Module III: Overhead Costing**

Definition – Classification of overheads – Procedure for accounting and control of overheads – Allocation of overheads – Apportionment of overheads – Apportionment of Service department costs to production departments – Repeated Distribution method – Simultaneous equation method – absorption of OH's – Methods of Absorption – Percentage of direct material cost – Direct Labour Cost – Prime Cost, Direct Labour hour rate and Machine Hour Rate – Problems.

### **Module IV: Costing Methods**

Costing Methods Introduction - Job Costing – Batch Costing – Contract Costing- Process Costing – principles – distinction between Process and Job – Preparation of process accounts – treatment of normal loss – abnormal loss – abnormal gain – Joint and By-products. Service costing. Unit, Output and Operating Costing,

### **Module V:**

Reconciliation of Cost and Financial Accounts - Need for reconciliation – Reasons for difference in profits – Problems on preparation of Reconciliation statements including Memorandum Reconciliation account,

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>P</b>	<b>C</b>	<b>CT</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	5	10	70

A-Attendance; P-Project/Seminar/Quiz/Viva/Home Assignment; C-Case Discussion CT-Class Test; EE-End Semester Examination

# ADVANCE BUSINESS STATISTICS AND RESEARCH METHODOLOGY

**Course Code: COM4303**

**Credit Units: 03**

## **Course Objective:**

*The objective of the course is to acquaint students with some of the important statistical techniques for managerial decision making. The emphasis will be on their applications to business and economic situations.*

## **Course Contents:**

### **Module-I: Probability and Expectation**

Probability and Expectation: Approaches to probability. Addition, multiplication and Bayes Theorem, Mathematical Expectation. Probability Distribution: Binomial, Poisson, Exponential, Beta and Normal Distributions.

### **Module-II: Statistical Decision Theory**

Statistical Decision Theory: Risk and uncertainty, Expected value approach, Marginal analysis, Decision tree.

### **Module-III: Sampling and Sampling Distributions**

Sampling and Sampling Distributions: Methods of sampling, Sampling distribution of a statistic and its standard error. Point Estimation and interval estimation, Properties of an estimator.

### **Module-IV: Hypothesis Testing**

Hypothesis Testing; Power of a test, Large sample tests for proportions, means and standard deviations. Small sample tests –t and F tests. Design of Experiments and analysis of variance. Non-Parametric Tests: Chi-square test, Sign test, Median test and Rank correlation test.

### **Module-V: Inventory Control**

Inventory Control: Techniques of selective control, Economic order quantity (EOQ) models- classical, gradual replenishment without shortages, price breaks and planned stock outs, Deciding optimum safety stock and reorder level. PERT/CPM: Networking with one estimate of time. Networks with three estimates of time. Time-cost trade-off. PERT/cost. Resource allocation and resource leveling.

### **Module-VI: Regression Analysis**

Regression Analysis: Simple and linear regression analysis up to three variables. Statistical Quality Control: Control charts for variables and attributes, Acceptance sampling.

Case Studies: Application of statistics to some cases of business enterprise are required to be discussed.

## **Examination Scheme:**

Components	A	P	C	CT	EE
Weightage (%)	5	10	5	10	70

A-Attendance; P-Project/Seminar/Quiz/Viva/Home Assignment; C-Case Discussion CT-Class Test; EE-End Semester Examination

## **Suggested Readings:**

- Levin, R.I. and D.S. Rubin, *Statistics for Management*, Prentice-Hall of India.
- Spiegel, M.R. *Theory and Problems of Statistics*, Schaum Publishing Company.
- Aczel, Amir D., *Complete Business Statistics*, McGraw Hill, 1999.
- Kazmeir Leonard J., Norval F. Pohl, *Basic Statistics for Business and Economics*, McGraw Hill International (2nd ed.)

# INCOME TAX LAW AND PRACTICE

**Course Code: COM4304**

**Credit Units: 03**

## **Course Objective:**

To prepare the students with the concepts and theory of income tax accounting and to give a practical exposure to them

## **Course Contents:**

### **Module I:**

- (a) Conceptual Frame-work: Definitions: Residential status and incidence of tax.
- (b) Exemptions and exclusions: Exempted income and incomes not included in total income

### **Module II:**

Heads of Income (1): (i) Salaries (ii) Income from House Property

### **Module III:**

Head of Income (2): Profits and gains of Business or Profession; depreciation allowance, capital gains and income from other sources

### **Module IV:**

Deductions from GTI: Rebates and reliefs, Clubbing provisions; set off and carry forward of losses. Assessment of an Individual

### **Module V:**

Assessment of H.U.F./Firm/A.O.P.

## **Examination Scheme:**

Components	A	P	HA	CT	EE
Weightage (%)	5	5	5	15	70

A-Attendance; P -Project/Seminar/Quiz/Viva; HA-Home Assignment; CT-Class Test; EE-End Semester Examination

## **Texts & References:**

### **Texts:**

- Income Tax, Kanga & Palkiwala, N.M. Tripathi & Sons Ltd., Bombay
- India Income Tax Law, Sampat Ayenger

### **References:**

## **TAX PLANNING & TAX MANAGEMENT**

**Course Code: COM4305**

**Credit Units: 03**

### **Course Objectives:**

To Provide an in depth knowledge of tax-laws and their impact on management decisions. The course will help the students to understand the intricacies of tax planning and management.

### **Course Contents:**

**Module-I:** Recognised Methods of Tax Planning, Problems of Tax Planning and Tax Management

**Module-II:** Tax Planning for Individuals and H.U.F.

**Module-III:** Tax Planning For Non-corporate entities: Partnership firms and Association of person

**Module-IV:** Corporate Tax Planning

Tax Planning for Corporate entities, Public and Private Companies, Tax incentives, Tax incentives for Industrial growth, tax holidays and other reliefs and rebates

**Module-V:** Assessment of Charitable Trust, Assessment of Non-Resident, Special procedure for assessment of search cases, Application of Computer technique in Tax Management

### **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>P</b>	<b>C</b>	<b>CT</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	5	10	70

**A**-Attendance; **P**-Project/Seminar/Quiz/Viva/Home Assignment; **C**-Case Discussion **CT**-Class Test; **EE**-End Semester Examination

### **Suggested Readings**

# MANAGEMENT CONTROL AND INFORMATION SYSTEM

**Course Code: COM4306**

**Credit Units: 03**

## **Course Objective:**

*The objective of this course is to acquaint the students about the concept and application of management control system in large organizations and to make them familiar with modern control techniques.*

## **Course Contents:**

### **Module –I: Introduction**

Nature of Control Function; evolution of control system in an organization; strategic planning; organization goals and strategies; role of controller in an organization; converting corporate vision into long term planning, management control system in corporate governance.

### **Module-II: Management Control Process**

Management Control Structure; Responsibility centers – Expense, Administrative and support, Research & Development, Marketing and Profit; Management Control Process: Programming and budgeting. Preparation and process of budgets, Budgetary Control, Zero based budgeting.

### **Module III: Management Information System**

Control reports and follow-up action, Problems of implementation and administration of Control System, Process of MIS Development, Strategic Planning and MIS Design, MIS implementation, MIS data, information and communication, Problem solving and decision making, Security control measures, managing international information system.

### **Module IV: Performance Reports**

Analyzing financial performance reports; calculating variances and limitations of variance analysis; Preparation and presentation of MIS reports using advanced Excel and Power point techniques; emerging concepts – Virtualization and digitization, Grid Computing, and Cloud Delivery model.

### **Module V: Decision Support System and Ethical Challenges**

Introduction to ERP; Managerial issues in implementation of ERP, business processes using ERP, introduction to Artificial intelligence and data mining for decision making; ethical responsibility of business professional; social and environmental issues in conducting ethical behavior.

## **Examination Scheme:**

## SUMMER INTERNSHIP EVALUATION

Course Code: COM4335

Credit Units: 06

### GUIDELINES FOR INTERNSHIP FILE

There are certain phases of every Intern's professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship program can best be described as an attempt to institutionalise efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal class room situations. These attributes are intellectual ability, professional judgment and decision making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility etc.

In order to achieve these objectives, each student will maintain a file (Internship File). The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development.

The File will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

#### The layout guidelines for the Internship File

- A4 size Paper
  - font: Arial (10 points) or Times New Roman (12 points)
  - line spacing: 1.5
  - top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

The File will include *five sections* in the order described below. The content and comprehensiveness of the main body and appendices of the report should include the following:

1. The Title Page--Title - An Internship Experience Report for (Your Name), name of internship organization, name of the Supervisor/Guide and his/her designation, date started and completed, and number of credits for which the report is submitted.
2. Table of Content--an outline of the contents by topics and subtopics with the page number and location of each section.
3. Introduction--short, but should include how and why you obtained the internship experience position and the relationship it has to your professional and career goals.
4. Main Body--should include but not be limited to daily tasks performed. Major projects contributed to, dates, hours on task, observations and feelings, meetings attended and their purposes, listing of tools and materials and their suppliers, and photographs if possible of projects, buildings and co-workers.
5. Appendices--include pamphlets, forms, charts, brochures, technical and descriptive literature, graphs and other information related to your Internship experience.

The Main Body will have three sections and will include the following items which will be evaluated for the final assessment:-

An analysis of the company/organization in which the student is working

A personal review of the student's management skills and how they have been developed through the programme.

The research report that the student has prepared on the project assigned to him by the organization.

(Incase a student is not assigned a specific research project in the organization, he has to select any one aspect of the organization and prepare a research report on it).

## **ASSESSMENT OF THE INTERNSHIP FILE**

The student will be provided with the Student Assessment Record (SAR) to be placed in front of the Internship File. Each item in the SAR is ticked off when it is completed successfully. The faculty will also assess each item as it is completed. The SAR will be signed by the student and by the faculty to indicate that the File is the student's own work. It will also ensure regularity and meeting the deadlines.

### **STUDENT ASSESSMENT RECORD (SAR)**

Management File Item	Criteria for successful completion of the item
1. Analysis of organization (1500- 2000 words)	<ul style="list-style-type: none"><li>• Clear presentation of ideas and analysis</li><li>• Provides an organizational diagram, following organization presentation conventions</li><li>• Analysis covers the organization's:<ul style="list-style-type: none"><li>➤ Business strategy and mission</li><li>➤ Structure</li><li>➤ Resources and assets</li><li>➤ Current financial performance</li><li>➤ Leadership/decision-making style</li><li>➤ Staffing and skill base</li><li>➤ Products/services and customers</li></ul></li></ul>
2. Personal review of Management skills development (1000-1500 words)	<ul style="list-style-type: none"><li>• Clear presentation of ideas and analysis</li><li>• Demonstrate awareness of own management skills</li><li>• Presents critical analysis of own management effectiveness, supported with examples</li><li>• Provides evidence of development of specific management skills e.g. strategic, financial, leadership</li><li>• Explains how new skills and learning have benefited the organization and self</li></ul>
3. Design of Research Project (1500- 2000 words)	<ul style="list-style-type: none"><li>• Clear presentation of ideas and analysis</li><li>• Justifies the choice of subject for the research project and why this might be beneficial to the organization</li><li>• Selects and justifies appropriate research methods for the project</li><li>• Demonstrate understanding of the key stages in undertaking a research project</li><li>• Indicates which analytical/statistical tools would be most appropriate and why</li><li>• The design plan takes account of the resourcing implications of carrying out the research e.g. staffing and other costs</li></ul>

**Examination Scheme:**

Report by Student (Internship File)

- a. Organization & Presentation/Language and clarity /substance  
of Contents covered and Comprehensiveness

20%

- b. Research Report

30%

Industry Feedback (continuous)

20%

Presentation & Viva (At the end)

30%

**Total**

# Syllabus - Fourth Semester

## INTERNATIONAL BUSINESS

**Course Code: COM4401**

**Credit Units: 03**

**Course Objective:**

*The purpose of this course is to acquaint the students with nature, scope, structure and operations of international business and familiarize them with trends and developments in India's foreign trade and investments and policy framework.*

**Course Contents:**

**Module-I: Introduction**

International Business: Its Importance, nature and scope; Modes of entry into international business; Management of international business operations – complexities and issues; IT and international business, India's involvement in International Business.

**Module-II: Fundamentals of International Trade**

Theoretical Foundations of International Trade: Reasons for international trade; theories of international trade; Gains from trade; Foreign trade multiplier; Terms of trade.

**Module-III: Instruments of Commercial Policy**

Instruments of Commercial Policy: Tariffs, quotas and other measures and their effects; World trade and protectionism. Balance of Payment Account: Current and Capital Account components and accounting system; Balance of payment deficits and adjustment policies.

**Module-IV: International Business Environment**

International Business Environment: Framework for analyzing international business environment; Domestic and foreign environments and their impact on international business decisions; World trading environment – Pattern and structure of world trade in goods and services; Counter trade. International Financial Environment: Exchange rate mechanism and arrangement; International money and capital markets; Foreign investment flows – Pattern, structure and effects. Movements in foreign exchange and interest rates and their impact on trade and investment flows.

**Module-V: International Economic Institutions and Agreements**

International Economic Institutions and Agreements: WTO, IMF, World bank, UNCTAD, Agreement on Textiles and Clothing, GSP, GSTP and other international agreements and treaties; International commodity trading and agreements- India's involvement and consequences .

**Module-VI: Regional Economic Integration**

Regional Economic Integration: Free trade area, customs union and common market; Theory of customs union; Trade creation and diversion effects; Regionalism vs. multilateralism; Structure and functioning of EC and NAFTA; Regional Economic Cooperation.

**Module-VII: Multinational Companies**

Multinationals (MNCs) in International Business: Issue in investment, technology transfer, pricing and regulations; International collaborations and strategic alliances. Contemporary Developments and Issues in International Business.

**Examination Scheme:**

Components	A	P	C	CT	EE
Weightage (%)	5	10	5	10	70

A-Attendance; P-Project/Seminar/Quiz/Viva/Home Assignment; C-Case Discussion CT-Class Test; EE-End Semester Examination

# SECURITY ANALYSIS AND PORTFOLIO MANAGEMENT

**Course Code: COM4407**

**Credit Units: 03**

## **Course Objective:**

The objective of the course is to establish a conceptual frame work for the study of security analysis and portfolio management. This course will provide the student the ability to understand and utilise the skill of optimising returns. The focus at different places is to build models and discuss their validity and application to practical situations.

## **Course Contents:**

### **Module-I: Introduction**

Nature, process and scope of financial assets investment decisions; Structure of Indian Securities market-An overview; Sources of Financial Information.

### **Module-II: Risk & Return**

Securities Analysis: two-parameters frame work; understanding of return and risk of a security; types of return and risk; sources of risk

### **Module-III: Fixed Income Security Analysis**

Analysis of Fixed Income Securities: Bond fundamentals; valuation of bonds; analysis of risk in bonds-duration and convexity; bond portfolio management strategies-passive, semi-active and active along with immunization strategies. Certificate of Deposits, Debentures.

### **Module-IV: Variable Income Securities Analysis**

Analysis of Variable Income Securities (Equity): Approaches to security (equity) analysis-Fundamental Analysis along with valuation models of equity and Technical Analysis, Efficient market hypothesis.

### **Module-V: Portfolio Management**

Portfolio Theories and Management: Traditional and Modern Portfolio Theories; Single and multi-index models. Markowitz Model; Sharpe's Single Index Model; Capital Asset Pricing Model (CAPM) and Arbitrage Pricing Model (APT); performance evaluation of portfolios; problems associated with revision of portfolio. Active and Passive portfolio management

### **Module-VI: Financial Engineering**

Financial Derivatives: Futures, Options, Portfolios of futures and options synthetics, Exotics and Financially engineered products.

## **Examination Scheme:**

Components	A	P	C	CT	EE
Weightage (%)	5	10	5	10	70

A-Attendance; P-Project/Seminar/Quiz/Viva/Home Assignment; C-Case Discussion CT-Class Test; EE-End Semester Examination

# INTERNATIONAL FINANCIAL MANAGEMENT

**Course Code: COM4408**

**Credit Units: 03**

## **Course Objective:**

The objective of the course is to acquaint the students with financial management problems of multinational corporations and prepare them to tackle these problems.

## **Course Contents:**

### **Module I**

International Monetary System: Developments in the international monetary system, gold standard, Bretton Woods system of exchange rate, exchange rate regime since mid-1970s. IMF and international Liquidity. System of exchanging currencies. Exchange rate quotation and determination: direct and indirect quotes, bid and ask quote, spot and forward quote, cross rates. Determination of exchange rate in spot and forward market. PPP theory, IRP theory, Monetary theories of exchange rate determination, Overshooting models.

### **Module II**

Foreign exchange market – spot and forward. Participants in foreign exchange market – arbitraging, hedging and speculation, covered interest rate arbitrage. Borrowing and investing markets. Tax consideration and investment. Exchange rate risk: translation, transaction and real operating exposure – their measurement and management. Investment decisions of multinational corporations (MNCs): International capital budgeting – estimation of cash flows, the cost of capital. Portfolio consideration of a multinational corporation.

### **Module III**

International Financial markets: Multilateral development banks, Euro-currency markets, Euro-banking, Market for international securities – international bonds, Euro notes and Euro-commercial papers, Medium-term Euro-notes. Market for derivatives, currency futures, options and synthetics, currency risk management, financial swaps and interest – rate risk management. Assessment and management of political risk.

### **Module IV**

International working capital management: Cash management. Management of receivables and inventory. Financing of foreign trade: Foreign trade documents, modes of payment, Pre-shipment, post-shipment and medium-term credit, Forfaiting. International accounting: Consolidation and harmonisation of accounts. Transfer pricing.

### **Module V**

Case Studies: Some case studies involving the conceptual learning from the course are required to be discussed.

## **Examination Scheme:**

Components	A	P	C	CT	EE
Weightage (%)	5	10	5	10	70

A-Attendance; P-Project/Seminar/Quiz/Viva/Home Assignment; C-Case Discussion CT-Class Test; EE-End Semester Examination

# MARKETING RESEARCH

**Course Code: COM4409**

**Credit Units: 03**

## **Course Objective:**

The course aims at exposing the students to the concept, tools and techniques of marketing research and developing their skills to be able to apply research techniques to aid marketing decision making.

## **Course Contents:**

### **Module I**

Introduction : Meaning, nature and importance of marketing research; Marketing research and scientific method; Research reliability and validity; Problems in conducting marketing research; Marketing information system (MIS); Ways of conducting marketing research; Syndicated research.

### **Module II**

Marketing Research Process : Steps involved in conducting marketing research; Problem identification; Determining information needs; Developing marketing research proposal.

### **Module III**

Research Design : Meaning and importance; Types of research designs – explorative, descriptive and conclusive researches; Secondary data – sources, uses and limitations; Primary data collection methods – questioning techniques and observation methods; Online data sources and research; Questionnaire preparation.

### **Module IV**

Sample Design and Field Work : Defining universe and sampling unit; Determining sampling frame; Probability and non-probability sampling methods; Sample size determination; Field work and data collection – sampling and non-sampling errors.

Data Analysis and Report Preparation: Data editing, coding tabulation and graphical presentation; Univariate and multivariate data analyses techniques and their applications in marketing research; Report preparation, presentation and follow-up.

### **Module V**

Marketing Research Applications : Consumer research – behaviour and motivation research, attitude measurement and scaling techniques; Product research; Advertising research; Marketing and sales forecasting; Sales analysis. Marketing Research in India : Status, organization and developments; Ethical issues in marketing research.

## **Examination Scheme:**

Components	A	P	C	CT	EE
Weightage (%)	5	10	5	10	70

A-Attendance; P-Project/Seminar/Quiz/Viva/Home Assignment; C-Case Discussion CT-Class Test; EE-End Semester Examination

# CONSUMER BEHAVIOUR

**Course Code: COM4410**

**Credit Units: 03**

## **Course Objective:**

The course aims to explore the core concepts and theories of shopper behavior at individual, group and organizational level so that students may use these as inputs in marketing decision making.

## **Course Contents:**

### **Module I**

Consumer demographics, consumer life styles. Retailing implications of consumer demographics and lifestyle. Consumer profiles. Lifestyle marketing. Environmental factors and individual factors affecting consumers.

### **Module II**

Consumer as an Individual, Motivation, Needs, Goals, Personality, Self and Self Images, Perception, Imagery, Learning, Cues, Response, Reinforcement, Behavioral Learning and Cognitive Learning Theory, Brand Loyalty.

### **Module III**

Attitude, Attitude Formation and Change. Shopping attitudes and behavior, where people shop. Consumer Buying Decision Process, types of consumer decision making. Impulse purchases and customer loyalty.

### **Module IV**

Group Dynamics and Reference Groups, Family Decision Making, Social Class, Culture, Subculture

### **Module V**

Opinion Leadership Process, Diffusions of Innovations, Adoption Process.

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>P</b>	<b>C</b>	<b>CT</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	5	10	70

A-Attendance; P-Project/Seminar/Quiz/Viva/Home Assignment; C-Case Discussion CT-Class Test; EE-End Semester Examination

# TRAINING AND DEVELOPMENT

**Course Code: COM4411**

**Credit Units: 03**

## **Course Objective:**

The objective of the course is to familiarize the students with basic concepts and principles of Training and Development of Human Resource and train them to understand the learning environment of a firm. The knowledge so obtained will make them capable of providing training to Human Resource of a business firm.

## **Course Contents:**

### **Module I**

Conceptual Framework: The functions of training, relationship of training to organizational individual goals, Factors effecting successful training process, Skills of a successful trainer – Internal and external trainer. Training and Learning: The learning process, learning curve, principles of learning, training guidelines, experience versus training, kinds of training, system approach to training, programmed instruction, transfer of training.

### **Module II**

Training Needs Assessment and Curriculum Development: Identification of Training and Development needs, training needs assessment-various approaches (the job and the Individual), Advantages and disadvantages of basic needs assessment techniques, Assessing curriculum needs, curriculum standards, matching organisational training needs, Developing training materials.

### **Module III**

Training Methods: Three Stages of training (Preparatory, implementation and followup stage), On the job and off-the job methods,, experiential versus non-experiential methods.

### **Module IV**

Evaluation of Training and Development, and Emerging Pattern: Reasons of evaluating training, Criteria for evaluation, problems of evaluation, steps involved in evaluation, methods for training evaluation, analysis and costing of training. Emerging Pattern of Training and development in India. Two Indian case studies to be discussed in the class.

### **Module V**

Case Studies: Some cases to be discussed in the class relating to the learning from the course to business world are required to be discussed.

## **Examination Scheme:**

Components	A	P	C	CT	EE
Weightage (%)	5	10	5	10	70

A-Attendance; P-Project/Seminar/Quiz/Viva/Home Assignment; C-Case Discussion CT-Class Test; EE-End Semester Examination

## **Suggested Readings:**

# MANAGEMENT OF TRANSFORMATION

**Course Code: COM4412**

**Credit Units: 03**

## **Course Objective:**

The objective of the course is to make the students develop the art or unlearning for thinking afresh to provide new solutions to the problems which can act as benchmarks for others to follow.

## **Course Contents:**

### **Module I**

Introduction: Concept, nature and process of planned change. Resistance to change. Emerging Horizons of management in changing Environment. Concepts of transformation vs. change. Transformational Leadership. Charismatic vs. Noncharismatic Leadership. Leadership from Within: Concept, need and importance of developing leadership from within. Distinction between leadership from without and leadership from within. Steps for developing leadership from within.

### **Module II**

Turnaround Management: Definition of sickness. Causes and Symptoms of Sickness. Prediction of sickness. Revival of sick unit – Role of BIFR, SICA, Financial Institutions. Behavioural, economic and technical issues in Turnaround Management. Learning from the success stories of organisations where turnaround management strategies have been adopted and sick or potentially sick companies have been turned around.

### **Module III**

Business Process Reengineering as a tool of managing transformation: BPR – An imperative for survival. Reengineering imperative in USA, the re-engineering scenario in Europe, the re-engineering imperative in India, Instances of re -engineering in Indian organisations (Case studies). Five steps methodology to implement BPR.

### **Module IV**

Management of Transformation through New Technology and Innovations: Technological revolution – adoption and adaptation of technology (problems of technology transfer). Innovative Technology – autonomous vs. induced inventions. Management of New Technology in relation to organisational productivity and quality of work life. Learning experiences from real life case studies.

## **Examination Scheme:**

Components	A	P	C	CT	EE
Weightage (%)	5	10	5	10	70

A-Attendance; P-Project/Seminar/Quiz/Viva/Home Assignment; C-Case Discussion CT-Class Test; EE-End Semester Examination

# DISSERTATION

**Course Code: COM4437**

**Credit Units: 06**

## **The Aims of the Dissertation**

The aim of the dissertation is to provide you with an opportunity to further your intellectual and personal development in your chosen field by undertaking a significant practical unit of activity, having an educational value at a level commensurate with the award of your degree

The dissertation can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

## **The Dissertation Topic**

It is usual to give you some discretion in the choice of topic for the dissertation and the approach to be adopted. You will need to ensure that your dissertation is related to your field of specialisation.

Deciding this is often the most difficult part of the dissertation process, and perhaps, you have been thinking of a topic for some time.

It is important to distinguish here between ‘dissertation topic’ and ‘dissertation title’. The topic is the specific area that you wish to investigate. The title may not be decided until the dissertation has been written so as to reflect its content properly.

Few restrictions are placed on the choice of the topic. Normally we would expect it to be:

- relevant to business, defined broadly;
- related to one or more of the subjects or areas of study within the core program and specialisation stream;
- clearly focused so as to facilitate an in-depth approach, subject to the availability of adequate sources of information and to your own knowledge;
- of value and interest to you and your personal and professional development.

## **Planning your dissertation**

This will entail following:

- Selecting a topic for investigation.
- Establishing the precise focus of your study by deciding on the aims and objectives of the dissertation, or formulating questions to be investigated. Consider very carefully what is worth investigating and its feasibility.
- Drawing up initial dissertation outlines considering the aims and objectives of the dissertation. Workout various stages of dissertation
- Devising a timetable to ensure that all stages of dissertation are completed in time. The timetable should include writing of the dissertation and regular meetings with your dissertation guide.

## **The dissertation plan or outline**

It is recommended that you should have a dissertation plan to guide you right from the outset. Essentially, the dissertation plan is an outline of what you intend to do, chapter wise and therefore should reflect the aims and objectives of your dissertation.

There are several reasons for having a dissertation plan

- It provides a focus to your thoughts.
- It provides your faculty-guide with an opportunity, at an early stage of your work, to make constructive comments and help guide the direction of your research.

- The writing of a plan is the first formal stage of the writing process, and therefore helps build up your confidence.
- In many ways, the plan encourages you to come to terms with the reading, thinking and writing in a systematic and integrated way, with plenty of time left for changes.
- Finally, the dissertation plan generally provides a revision point in the development of your dissertation report in order to allow appropriate changes in the scope and even direction of your work as it progresses.

### **Keeping records**

This includes the following:

- Making a note of everything you read; including those discarded.
- Ensuring that when recording sources, author's name and initials, date of publication, title, place of publication and publisher are included. (You may consider starting a card index or database from the outset). Making an accurate note of all quotations at the time you read them.
- Make clear what is a direct quotation and what is your paraphrase.

### **Dissertation format**

All students must follow the following rules in submitting their dissertation.

- Front page should provide title, author, Name of degree/diploma and the date of submission.
- Second page should be the table of contents giving page references for each chapter and section.
- The next page should be the table of appendices, graphs and tables giving titles and page references.
- Next to follow should be a synopsis or abstract of the dissertation (approximately 500 words) titled: **Executive Summary**
- Next is the 'acknowledgements'.
- Chapter I should be a general introduction, giving the background to the dissertation, the objectives of the dissertation, the rationale for the dissertation, the plan, methodological issues and problems. The limitations of the dissertation should also be hinted in this chapter.
- Other chapters will constitute the body of the dissertation. The number of chapters and their sequence will usually vary depending on, among others, on a critical review of the previous relevant work relating to your major findings, a discussion of their implications, and conclusions, possibly with a suggestion of the direction of future research on the area.
- After this concluding chapter, you should give a list of all the references you have used. These should be cross - references with your text. For articles from journals, the following details are required e.g.  
Draper P and Pandyal K. 1991, The Investment Trust Discount Revisited, Journal of Business Finance and Accounting, Vol18, No6, Nov, pp 791-832.  
For books, the following details are required:  
Levi, M. 1996, International Financial Management, Prentice Hall, New York, 3rd Ed, 1996
- Finally, you should give any appendices. These should only include relevant statistical data or material that cannot be fitted into the above categories.

### **Guidelines for the assessment of the dissertation**

While evaluating the dissertation, faculty guide will consider the following aspects:

1. Has the student made a clear statement of the objective or objective(s).
2. If there is more than one objective, do these constitute parts of a whole?
3. Has the student developed an appropriate analytical framework for addressing the problem at hand.
4. Is this based on up-to-date developments in the topic area?
5. Has the student collected information / data suitable to the frameworks?
6. Are the techniques employed by the student to analyse the data / information appropriate and relevant?
7. Has the student succeeded in drawing conclusion form the analysis?
8. Do the conclusions relate well to the objectives of the project?

9. Has the student been regular in his work?  
10. Layout of the written report.

**Examination Scheme:**

Dissertation:	75

## Syllabus – First Semester

### FOOD PRODUCTION FOUNDATION-I

**Course Code: HMC2101**

**Credit Units: 02**

**Course Objective:**

The curriculum is based on to familiarize the students with the basic concepts of food such as –

- To make the students learn about the professionalism and basic etiquette of culinary art
- To make them learnt about raw material, uses, composition, benefits and methods
- To sharpen the culinary skills in the field of food production
- To impart knowledge of history of culinary art and changes along with the times
- To give the basic idea about physical and chemical composition of different food products.

**Course Contents:**

**Cookery**

**Module – I :Food Service industry**

- 1.1 Culinary History

**Module – II :Standards of Professionalism**

- 2.1 Levels of Skills
- 2.2 Attitude and Professionalism in Kitchen
- 2.3 Attires of chefs

**Module – III :Kitchen Organization**

- 3.1 Kitchen Brigade & Work Flow
- 3.2 Duties & responsibilities of various chefs
- 3.3 Interdepartmental Relationship

**Module – IV :Kitchen Equipment**

- 4.1 Introduction to Different Equipments
- 4.2 Safety procedure in handling equipment

**Module – V :Basic Cookery Principles**

- 5.1 Transfer of heat
- 5.2 Aims & Objective of Cooking
- 5.3 Effect of Heat on Cooking
- 5.4 Characteristic of Raw Materials
- 5.5 Preparation of ingredients
- 5.6 Cooking Times
- 5.7 Different fuels used in commercial kitchen
- 5.8 Methods of Cooking with advantages & disadvantages
- 5.9 Pre-Preparation
- 5.10 Culinary Terms Indian & Western

## **Module – VI : Commodities**

- 6.1 Cereals – Types & Forms in Which The Products Are Available in The Market, Their Vernacular & English Names & Uses- Wheat, Rice, Maize, Oats, Barley, Ragi, Bajra & Other Millets
- 6.2 Pulses – Identification of The Wide Range of Pulses Available in The Market, The Vernacular & English Names and Uses.
- 6.3 Herbs, Spices & Condiments – Classification, Identification, Vernacular & English Names.
- 6.4 Fats & Oils – Types & Forms, Sources, Processing and Uses of Vanaspati, Margarine, Refined, Double Refined, Unrefined. Butter etc.

## **Bakery & Confectionery**

### **Module – VII : Introduction to Bakery and Patisserie**

- 7.1 History of Baking
- 7.2 Baking As An Art and Science

### **Module – VIII : Basic Principles of Bakery**

- 8.1 Formulas and Measurements
- 8.2 Baking Process

### **Module – IX : Equipment Used in Bakery**

- 9.1 Use, Care, Cleaning, Storage

### **Module – X : Ingredients Used in Bakery - Types and Use**

- 10.1 Flour
- 10.2 Fat
- 10.3 Cream
- 10.4 Sugar
- 10.5 Milk
- 10.6 Egg

### **Module – XI : Definition and Terms Used in Bakery**

### **Module – XII : Yeast Products**

- 12.1 Importance of Yeast in Baking –
- 12.2 Types, Storage and Use

### **Module – XIII : Bread Making**

- 13.1 Functions of ingredients Used
- 13.2 Steps in Bread Making
- 13.3 Bread Diseases –Origin and Remedies
- 13.4 Different Recipes of Breads - Rye Bread, Corn Bread, French bread, international Breads
- 13.5 Types of Rolls - Soft Rolls; Hard Rolls
- 13.6 Quick Breads.- Ingredients, Types of Batter and Dough, Examples

## **Examination Scheme:**

Components	V	H	CT	A	EE
------------	---	---	----	---	----

<b>Weightage (%)</b>	06	04	15	5	70
----------------------	----	----	----	---	----

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

# **FOOD & BEVERAGE SERVICE FOUNDATION-I**

**Course Code: HMC2102**

**Credit Units: 02**

## **Course Objective:**

At the end of the semester the students will be able to –

- Explain the growth and role of hotel industry and catering establishment
- Understand the various types of hotels and their features
- List and explain various catering establishment with their features
- Explain staff organization structure of food and beverage department
- Describe and understand job description of each personnel working in each F&B service outlet
- List various F&B service equipments with its use and care.

## **Course Contents:**

### **Module –I : Introduction to the World of Hospitality, Food & Beverage**

- 1.1 Sectors of Hospitality industry
  - 1.1.1 Railway
  - 1.1.2 Airline
  - 1.1.3 Cruise Liners
  - 1.1.4 Industrial Catering
  - 1.1.5 Institutional Catering
- 1.2 Major Hospitality Organisations - international & National
  - 1.2.1 Oberoi, Taj Groups & Others

### **Module –II : Introduction to The Hotel industry**

- 2.1 Classification of Catering Establishments
- 2.2 Types of F&B Outlets
- 2.3 Food & Beverage Departmental Organization
- 2.4 Duties & Responsibilities of F&B Staff at Various Levels
- 2.5 Attributes of a Hotelier

### **Module -III : Ancillary Departments**

- 3.1 Still Room / Pantry
- 3.2 Wash Up (Kitchen Stewarding)
- 3.3 Plate Room

### **Module – IV : Restaurant Equipment**

- 4.1 Glassware
- 4.2 Crockery
- 4.3 Silverware
- 4.4 Furniture
- 4.5 Linen

### **Module – V : Meals & Menu**

- 5.1 Types of Meals
  - 5.1.1 EMT
  - 5.1.2 Breakfast
  - 5.1.3 Lunch
  - 5.1.4 Dinner

- 5.1.5 Brunch
- 5.1.6 High Tea
- 5.1.7 Afternoon Tea
- 5.1.8 Elevenses
- 5.2 Types of Menu
  - 5.2.1 À La Carte & Table d'hôte
- 5.3 Courses of Menu
  - 5.3.1 Course Item Examples with Accompaniments
  - 5.3.2 Covers for Each Course

## **Module – VI : Service Procedures**

- 6.1 Types of Services
  - 6.1.1 Assisted
    - 6.1.1.1 Platter to Plate / Silver
    - 6.1.1.2 Pre-Plated
    - 6.1.1.3 Host
    - 6.1.1.4 Guéridon
  - 6.1.2 Non-Assisted
    - 6.2.1.1 Buffet – Sit-down, Standing
    - 6.2.1.2 Single Service
    - 6.2.1.3 Counter Service

## **Examination Scheme:**

Components	V	H	CT1	A	EE1
Weightage (%)	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

# HOUSEKEEPING FOUNDATION

**Course Code: HMC2104**

**Credit Units: 02**

## **Course Objective:**

At the end of the semester the students would have a through knowledge of:  
Organization of Housekeeping department and its basic functioning  
All agents and equipment used for cleaning of all possible surfaces  
Room layouts and what are constitutes in a guest room  
Pests found in the hotel and their control.

## **Course Contents:**

### **Module – I : The Role of Housekeeping in Hospitality Operation**

- 1.1 Role of Housekeeping in Guest satisfaction and repeat Business

### **Module – II : Introduction to Housekeeping Department**

- 2.1 Identifying Housekeeping Responsibilities
- 2.2 Organizational Structure of Housekeeping Department for: Small Hotel, Medium Hotel, Large Hotel
- 2.3 Duties & Responsibilities of Housekeeping Staff
- 2.4 Personality Attributes of Housekeeping Staff
- 2.5 Layout of the Housekeeping Department

### **Module – III : Cleaning Equipments**

- 3.1 General Consideration for Selection
- 3.2 Classification & Types of Equipments
- 3.3 Method of Use and Mechanism for Each Type
- 3.4 Care and Maintenance

### **Module – IV : Cleaning Agents**

- 4.1 Classification
- 4.2 General Criteria for Selection
- 4.3 Use, Care & Storage
- 4.4 Distribution & Control

### **Module – V :Use of Computers in Housekeeping Department**

### **Module – VI : Care and Cleaning of Different Surface**

- 6.1 Metals, Glass, Ceramics, Wood, Wall finishes, Floor finishes

### **Module – VII : Inter-Departmental Coordination with**

- 7.1 Front office
- 7.2 Maintenance
- 7.3 Food Production & Service Areas
- 7.4 Personnel
- 7.5 Purchase, Receiving & Stores
- 7.6 Laundry
- 7.7 Computer Centre
- 7.8 Security

7.9 Accounts & Credit

7.10 Other Departments

**Examination Scheme:**

<b>Components</b>	<b>V</b>	<b>H</b>	<b>CT</b>	<b>A</b>	<b>EE</b>

# APPLICATION OF COMPUTERS

**Course Code: HMC2105**

**Credit Units: 01**

## **Course Objective:**

The basic objective of the course is to introduce the students to the world of computers and computer technology. The students will be introduced to the basic concept of operating system, word processing, database, presentation.

## **Course Contents:**

### **Module I: Computer Fundamentals**

Elements of a Computer system

Characteristic of Computers

Classification of Computers

Limitations

Hardware features and uses

Generations of Computer

Primary and Secondary Storage Concepts

Data Entry Devices

Data Output Devices

Software Concepts

System Software

Application Software

Language Classification

Compilers and Interpreters

### **Module II: Operating Systems/Environment**

Introduction to Windows

GUI/Features

What are Window & Window 95 and above

Part of a Typical Window and their functions

## **Examination Scheme:**

Components	V	H	A	CT	EE
Weightage (%)	05	05	05	15	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

# FOOD PRODUCTION FOUNDATION LAB-I

Course Code: HMC2106

Credit Units: 03

## Course Objective:

At the end of the semester the students will be able-

- To learn about the basics of food production in continental and Indian cuisine
- To make a menu and would be able to explain the meaning of the dishes
- To prepare the basic stock, sauce and soup
- To use the knife and other equipments confidently
- To cut all kind of vegetable cutting.

## Course Contents:

### Practical

#### Module – I : Cookery

- Identification of Kitchen Equipments
- Identification of raw materials
- Preparing & Cooking Vegetables
- Different cuts of vegetables
- Demonstration of various Cooking Methods
- Compiled 3 course menu

#### Module – II : Bakery & Confectionery

- Preparation of Breads using different Methods
- Identification & Understanding of Bread Ingredients
- Preparation of different types of bread rolls
- Preparation of Various Quick Breads – Muffins, Pancakes

## Examination Scheme:

### Internal: 30 Marks

Components	JE	LE	VV	A
Weightage (%)	05	15	5	5

### End-Term: 70 Marks

Components	JE	VV	INDENT	LE
Weightage (%)	05	05	10	50

**Abbreviation:** JE= Journal Evaluation; LE= Lab Evaluation; VV= Viva-Voce; GP= Grooming & Punctuality

# FOOD & BEVERAGE SERVICE FOUNDATION LAB-I

Course Code: HMC2107

Credit Units: 01

## Course Objective:

At the end of the semester the students will be able-

- To use and maintain all items of crockery, cutlery, glassware, flatware and hollowware used in a restaurant
- To arrange the restaurant and connected service area
- To serve water & food as per the standard rules

## Course Contents:

### Module – I : Basics of Service

- Service Grooming and Restaurant Etiquettes.
- Identification of equipments
- Mis-en-Place and Mis-en-Scene

### Module – II : Essentials of Service

- Writing a Menu in French
- Food and Beverage service sequence
- Water pouring and seating a guest.
- Laying and relaying of Tablecloth
- Napkin folds
- Carrying a Salver or Tray
- Sideboard setup

### Module – III :Service at Table

- Rules for laying table - Laying covers as per menus
- TDH and A la carte cover Layout
- Handling service gear
- Carrying plates, Glasses and other Equipment
- Clearing an ashtray
- Crumbing, Clearance and presentation of bill
- Sequence of Service of a Meal
- Breakfast table lay-up
- Silver service
- American service

### Module – IV : Basics of Service

- Situation handling
- Restaurant reservation system
- Hostess desk functions
- Order taking – writing a food KOT, writing a BOT

## Examination Scheme:

### Internal: 30 Marks

Components	JE	LE	VV	A

## FIELD WORK PROJECT-I

**Course Code: HMC2111**

**Credit Units: 02**

### **Course Objective:**

Students of hospitality need to go through the basics of practical service exposure in different hospitality outlets. To maximize this exposure students will be send for different hospitality services in all the major & minor areas of operation & management within & outside the campus.

### **Methodology:**

Students should be send for various learning opportunity outside the class room. They should submit the journal after the event is over to assigned faculty from the committee in following format.

- Name of the event
- Location
- Time
- Faculty Responsible
- Task Assigned
- Learning Outcome
- Suggestions

All the assignments should be duly authorized by the faculty responsible for the event.

Student services will be monitored & evaluated by the committee comprising of Program leader & faculty (as approved by HOI) and the marks will be allotted based on the performance, attitude, learning and utilization of knowledge in practical field.

### **Examination Scheme:**

<b>Components</b>	<b>C</b>	<b>S</b>	<b>V</b>	<b>P</b>	<b>JE</b>
<b>Weightage (%)</b>	20	20	20	20	20

# Syllabus - Second Semester

## FOOD PRODUCTION FOUNDATION–II

**Course Code: HMC2201**

**Credit Units: 02**

### **Course Objective:**

The curriculum is based on to familiarize the students with the basic concepts of food such as –

- To make the students learn about the professionalism and basic etiquette of culinary art
- To make them learnt about raw material, uses, composition, benefits and methods
- To sharpen the culinary skills in the field of food production
- To impart knowledge of history of culinary art and changes along with the times
- To give the basic idea about physical and chemical composition of different food products.

### **Course Contents:**

#### **Cookery**

##### **Module – I :Breakfast Cookery**

- 1.1 Types of breakfast
- 1.2 International & Indian menu for breakfast
- 1.3 Various breakfast rolls

##### **Module – II :Commodities**

- 2.1 Elementary Pastas - Method of Manufacture, Ranges Available in The Market e.g. : Macaroni, Spaghetti, Noodle Etc. & Their Uses.
- 2.2 Milk & Milk Product - Forms in Which Available, Processing e.g. : Full Cream, Fresh Milk, Toned Milk, Skimmed Milk, Buffalo & Cow's Milk; Pasteurized, Sterilised, Dehydrated etc. Khoa, Paneer, Cream, Etc.
- 2.3 Cream - Process of Making Cream, Types of Cream
- 2.4 Cheese- Introduction, Types, Processing of Cheese, Serving of Cheese

##### **Module – III :Stocks**

- 2.5 Definition, Elements of Stock
- 2.6 Classification & uses
- 2.7 Special care during stock making

##### **Module – IV :Sauces**

- 2.8 Definition
- 2.9 Classification of Mother Sauces
- 2.10 Derivatives

##### **Module – V :Soups**

- 2.11 Definition
- 2.12 Classification With example

##### **Module – VI :Vegetable Cookery**

- 2.13 Basic Knowledge, Identification, Various Cuts.
- 2.14 Preparation, Storage, Nutritional Aspects

**Module – VII :Fruits**

- 2.15 Types, Classification
- 2.16 Preparation, Handling, Storage
- 2.17 Nutritional Aspects

**Bakery & Patisserie****Module – VIII :Cookies**

- 2.18 Definition, ingredients Used & Their Functions, Different Methods Used and Examples

**Module – IX :Pastries**

- 2.19 Definition of Pastries
- 2.20 Classification
- 2.21 Ingredients Used, Methods
- 2.22 Usage, Faults

**Examination Scheme:**

Components	V	H	CT	A	EE
Weightage (%)	06	04	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

# FOOD & BEVERAGE SERVICE FOUNDATION-II

Course Code: HMC2202

Credit Units: 02

## Module – I :Beverages

- 1.1 Classification
  - 1.1.1 Non-Alcoholic Beverages
    - 1.1.1.1 Types of Waters
    - 1.1.1.2 Soft Drinks
    - 1.1.1.3 Juices / Syrups / Crushes
    - 1.1.1.4 Tea Coffee
  - 1.1.2 Alcoholic Beverages
    - 1.1.2.1 Introduction
    - 1.1.2.2 Types

## Module – II :Beer

## Module – III :Wines

- 2.1 Introduction to Wines
- 2.2 Classification of Wines
- 2.3 Grapes & Factors Affecting Wine Quality
- 2.4 Vinification
- 2.5 Production of Red / White / Rosé Wines
- 2.6 Production of Fortified & Aromatised Wines
- 2.7 Production of Sparkling Wine
- 2.8 Wine Producing Regions of the World
- 2.9 France, Germany, Italy, Spain, Portugal
- 2.10 USA
- 2.11 Australia & India
- 2.12 Food & Wine Harmony

## Examination Scheme:

Components	V	H	CT1	A	EE1
Weightage (%)	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

# **FRONT OFFICE OPERATION-I**

**Course Code: HMC2203**

**Credit Units: 02**

## **Module – I :Reservation Activities**

- 1.1 Importance of Reservations
- 1.2 Sources of Reservation
- 1.3 Modes of Reservation
- 1.4 Telephone Etiquette
- 1.5 Reservation Activities
- 1.6 Tools of Reservation
  - 1.6.1 Room Status Board
  - 1.6.2 Advance Letting Chart
  - 1.6.3 Density Control Chart
  - 1.6.4 Movement List / Expected Arrival List
- 1.7 Systems of Reservation
  - 1.7.1 Diary System
  - 1.7.2 Whitney System
- 1.8 Processing Group Reservation
- 1.9 Product Knowledge of Receptionists
- 1.10 Up-selling : Techniques
- 1.11 Over-booking : Why & How
- 1.12 Cancellation Procedure
- 1.13 Amendment Procedure

## **Module – II :Registration**

- 2.1 Room Position

## **Module – III :Pre Arrival**

- 3.1 Pre Registration Procedure

## **Module – IV :On Arrival Procedures**

- 4.1 Receiving, Greeting, Welcoming A Guest
- 4.2 Assessing The Guest Requirements
- 4.3 Registration & Rooming Procedure

## **Module – V :Post Arrival Procedure**

## **Module – VI :Chapter 2 to Chapter 5 for :**

- 6.1 FIT
- 6.2 VIP
- 6.3 Group
- 6.4 Foreigner

## **Module – VII :Room Change Procedure**

## **Module – VIII :Handling of Special Situations Like**

- 8.1 DNS
- 8.2 DNA
- 8.3 RNA

- 8.4 NI (No information)
- 8.5 VIP / Spat / DG Guests
- 8.6 Scanty Baggage Guest
- 8.7 Refusing Accommodation
  - 8.7.1 Black Listed Guest
  - 8.7.2 Walking A Guest

**Module – IX :Manual Key Control Procedure**

**Examination Scheme:**

Components	A	JE	P	CT	EE
<b>Weightage (%)</b>	05	05	05	15	70

CT-class test; A-attendance; EE-end semester examination; P-project: JE-Journal Evaluation

# HOUSE KEEPING OPERATION-I

**Course Code: HMC2204**

**Credit Units: 02**

## **Course Objective:**

At the end of the semester the students will have a thorough knowledge of-

- Key Control & its importance
- All types of beds and mattresses
- Cleaning Procedures & schedule
- All routine and records maintained of H.K. department
- Pest Control

## **Module – I :Keys**

- 1.1 Types of keys,
- 1.2 Key control

## **Module – II :Types of Beds and Mattresses**

## **Module – III :Introduction to Cleaning**

- 3.1 Principles of cleaning
- 3.2 Methods of organizing cleaning
- 3.3 Frequency of cleaning daily, periodic, special

## **Module – IV :Cleaning Organization**

- 4.1 Guestroom Cleaning
  - 4.1.1 Stacking of Chambers Maid Trolley
  - 4.1.2 Pre – Preparation
  - 4.1.3 Entering the guestroom
  - 4.1.4 Bed Making
  - 4.1.5 Bathroom Cleaning
  - 4.1.6 Second Service
  - 4.1.7 Turndown Service
- 4.2 Public Area CleaningHotel Entrance, Lobby, Front Office, Restaurants, Elevators, etc
- 4.3 Guest Room inspection

## **Module – V :Routine Systems and Records of Housekeeping Department**

- 5.1 Room Occupancy Report,
- 5.2 Guest Room Inspection Checklists,
- 5.3 Work Orders, Log Sheet,
- 5.4 Lost and Found Register and Enquiry File,
- 5.5 Housekeeper's Report,
- 5.6 Guest's Special Requests Register,
- 5.7 Record of Special Cleaning,
- 5.8 Call Register,
- 5.9 VIP Lists.

## **Module – VI :Pest Control**

- 6.1 Definitions of Pests & Control
- 6.2 Areas of infestations

- 6.3 Prevention & Control of Pests
- 6.4 Responsibility of Housekeeping in Pests Control

**Examination Scheme:**

<b>Components</b>	<b>V</b>	<b>H</b>	<b>CT</b>	<b>A</b>	<b>EE</b>
<b>Weightage (%)</b>	05	05	15	5	70

# FOOD SCIENCE & NUTRITION

**Course Code: HMC2205**

**Credit Units: 01**

## **Course Objective:**

At the end of the semester students will be able to-

- Understand functions of Foods which supply our nutritional needs
- Explain how to meet human need nutrients in terms of available foods
- Acquire techniques of preparation which help us meet our needs in an enjoyable manner
- Understand role of nutrients in menu planning

## **Course Contents:**

### **Module I: Food Science**

Definition and scope of Food Science

### **Module II: Nutrition & Nutrients**

Introduction, Type of Nutrients (Macro & Micro Nutrients), Classification of various nutrients, Dietary Sources of various nutrients, Effect of cooking on Nutrients, Uses of various nutrients in food preparation

### **Module III: Nutrient specific chemical Processes**

Dextrinization, Autoxidation (factors and prevention measures), Flavour reversion, Refining, Hydrogenation & winterization, **Gelation, Emulsification, Foamability, Viscosity**, Browning

### **Module IV: Food Processing**

Definition, Objectives, Types of treatment, Effect of factors like heat, acid, alkali on food constituents

### **Module V: Evaluation of Food**

Objectives, Sensory assessment of food quality, Methods  
Introduction to proximate analysis of Food constituents, Rheological aspects of food

### **Module VI: Emulsions & Colloids**

Theory of emulsification & Colloids, Types of emulsions, Emulsifying agents, Role of emulsifying agents & Colloids in food preparation

### **Module VII: Flavour**

Definition, Description of food flavours (tea, coffee, wine, meat, fish spices)

### **Module VIII: Energy**

Definition of Energy and Units of its measurement (Kcal), Energy contribution from macronutrients (Carbohydrates, Proteins and Fat), Factors affecting energy requirements, Concept of BMR, SDA, Thermodynamic action of food, Dietary sources of energy, Concept of energy balance and the health hazards associated with Underweight, Overweight

### **Module IX: Balanced Diet**

Definition, Importance of balanced diet, RDA for various nutrients – age, gender, physiological state

**Module X: Menu Planning**

Planning of nutritionally balanced meals based upon the three food group system, Factors affecting meal planning, Critical evaluation of few meals served at the Institutes/Hotels based on the principle of meal planning, Calculation of nutritive value of dishes/meals

**Examination Scheme:**

Components	V	A	CT	EE
Weightage (%)	10	05	15	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

# FUNDAMENTALS OF ACCOUNTING-I

**Course Code: HMC2206**

**Credit Units: 02**

## **Course Objective:**

At the end of the semester the students will be able to-

- Understand basic concept of hospitality accounting system
- The meaning and need for accounting
- Distinguish between book keeping and accounting
- Record the transactions using rules of debit and credit
- Ascertain the correct bank balances
- To check the accuracy of accounting records.

## **Course Contents:**

### **Module I: Introduction to Accounting**

Meaning & Definition, Types and Classification, Principles of Accounting, Systems of Accounting, Generally Accepted Accounting, Principles

### **Module II: Primary Books (Journal)**

Meaning and Definition, Format of Journal, Rules of Debit and Credit, Opening entry, simple and compound entries, Practical

### **Module III: Subsidiary Books (Ledger)**

Meaning and Uses, Formats, Posting, Practical

### **Module IV: Subsidiary Books**

Need and Use

Classification

- Purchase book
- Sales book
- Purchase returns
- Sales return
- Journal proper
- Practical

### **Module V: Trial Balance**

Meaning, Methods, Advantages, Limitations, Practical

## **Examination Scheme:**

Components	H	P	CT	A	EE
Weightage (%)	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination; P-project

# Syllabus - Third Semester

## FOOD PRODUCTION OPERATIONS-I

**Course Code: HMC2301**

**Credit Units: 02**

**Course Objective:**

After completion of this course the students will have the basic concepts of –

- Standard Recipe, Menu planning
- Classification & cooking of Egg, Meat, Poultry / Game, Fish
- Indian Gravies & Masalas
- Accompaniments & Garnish
- Production of Cakes, role of different ingredients used

**Module I:Standard Recipe**

- Introduction & Types of standard Recipes
- Method of writing & Uses

**Module II :Menu planning**

- Introduction
- Types of menus
- Factor effecting menu planning

**Module III:Egg Cookery**

- Structure, Composition, Varieties, Storage
- Nutritional Aspects
- Preparation

**Module IV :Meat Cookery**

- Composition, Selection, Grading of Mutton, Lamb, Pork, Beef, Veal
- Cuts of Different Meats, Cooking Times, & Handling
- Nutritional and Storage Points

**Module V :Poultry / Game Cookery**

- Types/Classification
- Food Value, Storage & Nutritional Value

**Module VI:Fish Cookery**

- Classification, Source
- Storage, Food Value Preservation

**Module VII:Basic Gravies**

- Basic ingredients used in gravies
- Types of gravies
- Uses with examples

**Module VIII:Masalas**

- Blending of spices
- Different Masalas used in Indian cookery

- Wet Masala
- Dry Masala
- Composition of different Masalas
- Verities of Masalasavailable in regional areas
- Special Masala blends

### **Module IX : Accompaniments&Garnish**

### **Module X :Cakes (Bakery & Patisserie)**

- Ingredients Used in Cake-Making & Their Functions
- Type of Methods
- Cake Balancing Formulas, Faults & Remedies
- High Ratio Cakes, Pound Cakes - Definitions, Formulas
- Cake Decorations , Icings, Types of Icing, Other Decorative Items

### **Examination Scheme:**

<b>Components</b>	<b>V</b>	<b>H</b>	<b>CT</b>	<b>A</b>	<b>EE</b>

# FOOD & BEVERAGE SERVICE OPERATIONS-I

Course Code: HMC2302

Credit Units: 02

## Course Objective:

After completion of this course the students will have the clear concepts of –

- Spirits & their production methods
- Calculation of strength of Spirit
- Types of Spirits
- Liqueurs & Bitters
- Cigars & Cigarettes

## Module I :Spirits

- 1.1 Introduction & Types
- 1.2 Measuring Strength of Spirit
- 1.3 Styles of Production
- 1.4 Whisky
- 1.5 Brandy
- 1.6 Rum
- 1.7 Gin
- 1.8 Vodka
- 1.9 Tequila
- 1.10 Other Spirits (Pernod, Marc, Grappa Etc.)

## Module II :Liqueurs & Bitters

- 2.1 Types
- 2.2 Production
- 2.3 Bases & Brands

## Module III :Cigars & Cigarettes

- 3.1 Manufacturing
- 3.2 Care & Storing
- 3.3 Types, Brands

## Examination Scheme:

Components	V	H	CT1	A	EE1
Weightage (%)	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

## FRONT OFFICE OPERATION-II

**Course Code: HMC2303**

**Credit Units: 02**

### **Course Objective:**

After completion of this course the students will have clear concept on –

- Front office Communication
- Bell Desk Service
- Guest Services

### **Module I : Bell Desk Service**

- 1.1 Bell Desk Layout, Equipment
- 1.2 Staff Organisation, Duty Rotas & Work Schedule
- 1.3 Luggage Handling Procedures
- 1.4 Left Luggage Procedures
- 1.5 Other Functions of Bell Desk

### **Module II :Front office Communication**

- 2.1 Importance of inter-Departmental Communication
- 2.2 Types & Methods of Communication

### **Module III :Guest Services**

- 3.1 Handling Guest Requests
- 3.2 Handling Guest Complaints
- 3.3 Mail Handling Procedures
  - 3.3.1 Importance of Handling Mail without Delay, Sorting of Mail
  - 3.3.2 Categories of Guest Mail :- Resident Guest, Departed Guest & Guest Still to Arrive
  - 3.3.3 Special Handling of Registered Mail and Parcels
- 3.4 Message Handling Procedure
  - 3.4.1 Importance, Procedure, Method of Receiving and Transmitting Messages for Guest, Location Form, Paging Procedure

### **Examination Scheme:**

Components	A	JE	P	CT	EE
Weightage (%)	05	05	05	15	70

CT-class test; A-attendance; EE-end semester examination; P-project; JE-Journal Evaluation

### **Text & References:**

## HOUSE KEEPING OPERATION-II

**Course Code: HMC2304**

**Credit Units: 02**

### **Course Objective:**

At the end of the semester the students will have a thorough knowledge of-

- Fibres & Fabrics, Methods of Weaving, Linen
- Linen Room
- Uniforms & Uniform Room
- Sewing Room.

### **Module I : Fibres & Fabrics**

Definition of Fibre

Classification of Fibre - The Origin, Characteristics & Usage in the Hotel

### **Module II :Weaving**

Stages

Terms Used - Weft, Warp, Selvage, Thread Count

Classification of Weaves - Plain -Basket, Twill, Damask, Satin, Figured, Bird Eye, Herring Bone, Dobby, Jacquard, Pile (Cut & Uncut)

Fabric Commonly Used - Flannel, Parcale, Calico, Cambrioc, Candlewick, Denim, Rayon, Velvet,

Finishes -Sizing, Degumming, Weighting, Boiling off, Scouring, Singeing, Calendering, Decatizing, Shearing, Brushing, Floacking, Sanforisation, Mercerization, Pleating / Fluting, Napping, Bleaching, Dyeing, Printing (Roller & Screen)

### **Module III :Linen**

Classification of Linen

Items Classified As Bed and Bath Linen, Their Sizes

Items Classified As Table Linen, Their Sizes

Materials Used For Making Fabric & Their Classification

Selection Criteria for the Linen Items (Bed Sheets Pillowcases, Towels and Bath Mats, Table Cloths, Serviettes)

Selection Criteria & Calculating Material Required for Soft Furnishings (Curtains, Bedspreads, Upholstery & Cushions)

### **Module IV :Linen Room**

Activities of Linen Room

Location, Equipment & Layout of a Linen Room (Basic Rules)

Purchase of Linen / Linen Hire / Quality & Quantity

Storage & inspection

Issuing of Linen to Floors & Departments (Procedure & Records)

Dispatch & Delivery from Laundry (Procedure & Records)

Stock Taking - Procedure & Records

Condemned Linen & Cut-Down-Procedure and Records

Marking & Monogramming

### **Module V :Uniforms & Uniform Room**

Purpose of Uniforms

Number of Sets, Issuing Procedure & Exchange of Uniforms

Designing A Uniform - Functional Aesthetic Considerations  
Layout & Planning of the Uniform Room (Basic Considerations)

**Module VI :Sewing Room**

Equipments in a sewing room  
Functions carried out in a sewing room

**Examination Scheme:**

Components	V	H	CT	A	EE
Weightage (%)	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

# FOOD SAFETY & HYGIENE

**Course Code: HMC2305**

**Credit Units: 01**

## **Course Objective:**

At the end of the semester the students will be able to –

- Explain the Significance of safety, hygiene & sanitation in the catering industry
- Classify Microbes, their action on food
- Control of Microbes & their Contamination
- Methods of Food storage, Cleaning procedures & Waste disposal
- Role of Management in Food Safety & Hygiene

## **Module I :Introduction**

- 1.1 Significance of safety, hygiene & sanitation in the catering industry

## **Module II :Classification of microbes**

- 2.1 Bacteria- classification, growth & multiplication of
- 2.2 Microbes

## **Module III :Food contamination & spoilage**

- 3.1 Food spoilage, infection & poisoning
- 3.2 Source, means of spread & control measures of various food poisoning bacteria
- 3.3 Naturally occurring toxicants, toxic metals & chemicals

## **Module IV :Hygiene system & sanitary procedures in hospitality industry**

- 4.1 Importance of sanitary procedures
- 4.2 Commodity hygiene
- 4.3 Work area hygiene
- 4.4 Equipment hygiene
- 4.5 Personal hygiene
- 4.6 Basic rules to be observed during preparation cooking & holding food

## **Module V :Food storage**

- 5.1 General guidelines for food storage
- 5.2 Storage for specific food- meat, poultry, egg, seafood, dairy products & vegetables

## **Module VI :Cleaning procedures**

- 6.1 Necessity for an efficient cleaning programme
- 6.2 Types of cleaning agent, their functions, advantages & disadvantages
- 6.3 Sanitising- good sanitizer & its properties
- 6.4 Disinfectants, antiseptic
- 6.5 Methods of cleaning & sanitising- 3 bucket method, sink method, dishwashing machine method

## **Module VII :Waste disposal**

- 7.1 Difference between garbage & refuse
- 7.2 Methods of disposal of solid & liquid waste

**Module VIII :Management & sanitation**

- 8.1 Reasons for training programme
- 8.2 Advantages of the programme
- 8.3 HACCP – use in catering industry

**Module IX :Safety &Sanitation Regulation & Standards**

- 9.1 COSHH
- 9.2 Health & safety at work regulations
- 9.3 Food hygiene regulation ( amendments ) 1990/1991

**Examination Scheme:**

Components	V	H	CT	A	EE
Weightage (%)	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

**Text & References:*****Text:***

## FUNDAMENTALS OF ACCOUNTING-II

Course Code: HMC2306

Credit Units: 02

### Course Objective:

At the end of the semester students will be able to

- The concept of double entry book keeping system
- Reconcile the bank statement
- Check the accuracy of accounts
- Prepare trial balance / P&L A/c and balance sheet concept
- The hospitality revenue and non revenue producing departmental accounting system
- The for casting of expense and revenue
- The concept of budgeting
- The hotel departmental accounting system.

### Course Contents:

#### Module I

Cash Book, Meaning, Advantages, Simple, Double and Three Column Petty Cash book with imprest system (simple and tabular forms) , Practical

#### Module II: Final Accounts

Meaning, Procedure for preparation of final accounts , Difference between Trading Accounts, Profit & Loss Accounts & Balance Sheet

#### Module III: Adjustments

Closing Stock, Prepaid expenses, Outstanding expenses, Depreciation

#### Module IV: Capital and Revenue Expenditure

Meaning, Definition of Capital and Revenue Expenditure,

#### Module V: Depreciation

Meaning of Depreciation, Need and Causes, Straight line method, Diminishing Balance method, Practical

#### Module VI: Ratio Analysis

##### Importance of Ratios

▪ Liquidity Ratios, Current ratio, Quick ratio, **Solvency Ratios**, Debt equity ratio, Interest coverage ratio

**Activity Ratio**, Capital turnover ratio, Stock turnover ratio, Debtors turnover ratio, **Profitability Ratios**

- Gross profit ratio, Net profit ratio.

### Examination Scheme:

Components	V	H	CT	A	EE
Weightage (%)	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

# HOTEL ENGINEERING

**Course Code: HMC2307**

**Credit Units: 01**

## **Course Objective:**

At the end of the semester students will be able to understand and explain-

- Importance of maintenance & engineering in Hospitality Industry.
- The effective management of energy in the hospitality sector.
- Duties and responsibilities of a chief engineer.
- Organization of maintenance & engineering department in a hotel.
- The safety, security & hygiene procedure in the hospitality industry.
- Maintenance procedure in the hotel

## **Course Contents:**

### **Module I: Maintenance**

- 1.1 Introduction & Scope in Hotels
- 1.2 Role & Importance of maintenance department in the hotel industry with emphasis on its relation with other departments of the hotel.
- 1.3 Organization Structure of maintenance department, duties and responsibilities of maintenance department staffs
- 1.4 Classification and Types Preventive and Breakdown Maintenance - comparisons Maintenance Programmes

### **Module II: Fuels Used in Catering Industry**

- 2.1 Types of fuel used in catering industry, Calorific Value, comparative study of different fuels
- 2.2 Calculation of amount of fuel required and cost.
- 2.3 Heat terms and units, method of transfer
- 2.4 Precautions while using them

### **Module III: Gas**

- 3.1 LPG and its properties, principles of Bunsen burner, precautions to be taken while handling gas, low and high-pressure burners, corresponding heat output.
- 3.2 Gas bank, location, different types of manifolds

### **Module VI: Electricity**

- 4.1 Fundamentals of electricity,
- 4.2 Conductors, Insulators – properties and application
- 4.3 Current, Potential Difference Resistance, Power, Energy Concepts – definitions, their units and relationships, simple conversation.
- 4.4 AC and DC - their differences, advantages and disadvantages
- 4.5 Single Phase and Three Phase,
- 4.6 Electric Circuits, Open Circuits and Closed Circuits, Symbols of Circuit Elements, Series and Parallel Connections, Short Circuit, Fuses; MCB,
- 4.7 Earthing (Grounding) – importance
- 4.8 Electric Wires and types of wiring system – fittings and accessories
- 4.9 Lighting – Different types of Lighting Devices, External Lighting
- 4.10 Use of Thermostat in electrical equipments.
- 4.11 Calculation of Power Requirements, Meter Reading and Bill Calculations.

- 4.12 Safety Precaution to be observed while using electric appliances – reason for placing switches on live wire side. Maintenance of electrical equipment.

#### **Module V: Water Systems Management**

- 5.1 Sources of Water and its quality
- 5.2 Hardness of Water, Water Softening, Base Exchange Method
- 5.3 Water distribution system in a hotel, calculations of water requirements and capacity of storage, systems. Water control Taps, Bibcock and Stopcock.
- 5.4 Flushing system, Construction and working of various types of flushing cisterns
- 5.5 Swimming Pools
- 5.6 Hot Water Supply System in Hotels
- 5.7 Traps, Function of Waste Pipe and Anti-Siphon Pipe. Closets & Bidets
- 5.8 Inspection Chambers, Sewer Blockings, Leakages and their remedies.

#### **Module VI: Waste Disposal and Pollution Control**

- 6.1 Solid and Liquid Waste, Sullage and Sewage, Disposal of Solid Waste
- 6.2 Sewage Treatment
- 6.3 Pollution related to hotel industry
- 6.4 Water Pollution, Sewage pollution
- 6.5 Air Pollution, Noise Pollution, Thermal Pollution
- 6.6 Legal requirements

#### **Module VII: Refrigeration & Air-Conditioning:**

- 7.1 Basic principles, Latent Heat, Boiling Point and its Dependence on pressure, Vapour Compressor, System of refrigeration and refrigerants.
- 7.2 Conditions for comfort, relative humidity, humidification, de-humidifying, dew point control, unit of air Conditioning
- 7.3 Window type air conditioner, central air conditioning, preventive maintenance
- 7.4 Layout of AC Plant.

#### **Module VIII: Safety & Security**

- 8.1 Factors involved in Safety & Security
- 8.2 Accident prevention
- 8.3 Security Devices

#### **Module IX: Fire Prevention and Fire Fighting System**

- 9.1 Classes of fire, methods of extinguishing fires
- 9.2 fire extinguishers, portable and stationery
- 9.3 Fire detectors and alarm
- 9.4 Rules to be followed in case of Fire hazards.

#### **Module X: Audio Visual Equipments & Communication Devices**

- 10.1 Various audio visual equipment used in hotel & their working principles - public address system, Telephone & Intercom system, Music system, Television system

#### **Module XI: Equipments used in Hospitality Industry**

- 11.1 Food Production Equipment
- 11.2 Food Service Equipment
- 11.3 Housekeeping Equipment
- 11.4 Selection & Economic factors
- 11.5 Care & Cleaning
- 11.6 Preventive Maintenance, Electrical & Plumbing considerations

**Module XII: Equipment Replacement Policy**

- 12.1 Circumstances under which equipment are replaced
- 12.2 Replacement policy of items which gradually deteriorates
- 12.3 Replacement when the average annual cost is minimum
- 12.4 Replacement when the present cost is minimum
- 12.5 Economic replacement cycle for suddenly failing equipment

**Module XIII: Contract Maintenance**

- 13.1 Necessity of contract maintenance advantages and disadvantages of Contract maintenance
- 13.2 Essential requirements of a contract, types of contract their comparative Advantages and disadvantages
- 13.3 Procedure for inviting and processing tenders, negotiating and finalizing

**Examination Scheme:**

Components	V	HA	CT	A	EE
Weightage (%)	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

## FOOD PRODUCTION OPERATIONS LAB-I

Course Code: HMC2308

Credit Units: 03

### Cookery

- Preparing Indian Masalas & Gravies
- Preparing & Cooking Indian Vegetables
- Preparing Rice, Dal, Breads
- Preparing Indian & continental Menus
- Preparing for Indian & Continental Desserts

### Patisserie

- Different methods & Types Cake making
- Icing – Types & Applications

### Examination Scheme:

#### Internal: 30 Marks

Components	JE	LE	VV	A
Weightage (%)	05	15	5	5

#### End-Term: 70 Marks

Components	JE	VV	INDENT	LE
Weightage (%)	05	05	10	50

**Abbreviation:** JE= Journal Evaluation; LE= Lab Evaluation; VV= Viva-Voce; GP= Grooming & Punctuality

### Text & References:

## FOOD & BEVERAGE SERVICE OPERATIONS LAB-I

Course Code: HMC2309

Credit Units: 02

- Service of spirits and liqueurs
- Bar setup and operations
- Cocktail and Mocktail preparations, presentation and service
- Service of Cigars and cigarettes
- Service of Afternoon and High Teas
- Cocktail Parties

### Examination Scheme:

#### Internal: 30 Marks

Components	JE	LE	VV	A
Weightage (%)	05	15	05	5

#### End-Term: 70 Marks

Components	JE	VV	GP	LE
Weightage (%)	10	10	10	40

**Abbreviation:** JE= Journal Evaluation; LE= Lab Evaluation; VV= Viva-Voce; GP= Grooming & Punctuality

## FRONT OFFICE OPERATION LAB-II

Course Code: HMC2310

Credit Units: 01

- Handling Telephones
- Taking Reservations
- Processing Reservations
- Role Play – Check-in / Walk-in / FIT / GIT / VIP / CIP / HG etc.
- Mock Situations – Role – Plays
- Filling up of C – Forms
- Preparation & Filling up of Guest Registration Card

### Examination Scheme:

#### Internal: 30 Marks

Components	JE	LE	VV	A
Weightage (%)	05	15	05	05

#### End-Term: 70 Marks

Components	JE	VV	GP	LE
Weightage (%)	10	10	10	40

**Abbreviation:** JE= Journal Evaluation; LE= Lab Evaluation; VV= Viva-Voce; GP= Grooming & Punctuality A: Attendance

# Syllabus - Fourth Semester

## FOOD PRODUCTION OPERATIONS-II

**Course Code: HMC2401**

**Credit Units: 02**

### **Course Objective:**

At the end of the semester the students will develop a clear concept on –

- Quantity Food Production
- Menu Planning
- Regional Indian Cuisine
- Frozen Desserts
- Sugar Cookery
- Chocolate Confectionary

### **Module I: Quantity Food Production- Equipment**

Equipment required for mass/volume feeding  
Heat and cold generating equipment  
Care and maintenance of these equipments  
Modern development in equipment manufacture

### **Module II: Menu Planning**

Basic principles of menu planning – recapitulation  
Points to consider in menu planning for various volume feeding outlets such as Industrial, Institutional, Mobile Catering Units  
Planning menus for;  
1. School/college students  
2. Industrial workers  
3. Hospitals  
4. Outdoor parties  
5. Theme dinners  
6. Transport facilities, cruise lines, airlines, railway  
Nutrition factors for the above

### **Module III: Indenting**

Principles of indenting for volume feeding  
Portion sizes of various items for different types of volume feeding  
Modifying recipes for indenting for large scale catering  
Practical difficulties while indenting for volume feeding

### **Module IV: Planning**

**Principles of planning for quantity food production with regard to**

- Space allocation
- Equipment selection
- Staffing

### **Module V: Volume Feeding**

**Institutional and Industrial Catering**

- Types of Institutional & Industrial Catering
- Problems associated with this type of catering

- Scope of development and growth

#### **Hospital Catering**

- Highlights of hospital catering for patients, staff, visitors
- Diet menus and nutritional requirements

#### **Off Premises Catering**

- Reasons for growth and development
- Menu planning and theme parties
- Concept of a Central Production Unit
- Problems associated with off-premises catering

#### **Mobile Catering**

- Characteristics of Rail, Airline (Flight Kitchen) and Sea Catering.
- Branches of Mobile Catering

#### **Quantity Purchase & Storage**

- Introduction of purchasing
- Purchasing system
- Purchasing specifications
- Purchasing techniques
- Storage

### **Module VI: Regional Indian Cuisine**

Introduction to Regional Indian Cuisine

Heritage of Indian Cuisine

Cuisine and its highlights of different states/region/ communities to be discussed under:

- Geographic location
- Seasonal availability
- Special equipment
- Staple diets
- Specialty cuisine for festivals and special occasions

**States** - Andhra Pradesh, Bengal, Goa, Gujarat, Karnataka, Kashmir, Kerala, Madhya Pradesh, Maharashtra, North-Eastern States, Punjab, Rajasthan, Tamil Nadu and Uttar Pradesh/Uttarakhand

**Communities**- Parsee, Chettinad, Hyderabadi, Lucknowi (Awadhi), Malabari / Syrian, Christian and Bohri

**Discussions**- Indian Breads, Indian Sweets, Indian Snacks.

### **Patisserie**

#### **Module VII : Frozen Desserts : ingredients; Types**

Sherbets,

Ice-creams

#### **Module VIII :Sugar Cookery**

Manufacturing, Syrups, Types, Stages of Cooking With Temperatures

#### **Module IX :Chocolate Confectionary**

Origin of Chocolate, Manufacturing, Tempering, Types, Usage

**Examination Scheme:**

<b>Components</b>	<b>V</b>	<b>H</b>	<b>CT</b>	<b>A</b>	<b>EE</b>
<b>Weightage (%)</b>	06	04	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

**Text & References:*****Text:***

## FOOD & BEVERAGE SERVICE OPERATIONS-II

Course Code: HMC2402

Credit Units: 02

### Course Objective:

At the end of the semester the students will develop a clear concept on –

- Guéridon Service
- Banquets
- Bar Operations

### Module I:Guéridon Service

- Types of Trolleys
- Sequence of Service

### Module II:Banquets

- History of Banquets
- Types of Banquets
- Organization of Banquet Section
- Banquet Procedures
- Buffets
- Banquet Protocols
- Conferences

### Module III :Bar Operations

- Bar Set Up
- Equipment
- Bar Control
- Cocktails

### Examination Scheme:

Components	V	H	CT1	A	EE1
Weightage (%)	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

# **FRONT OFFICE MANAGEMENT-I**

**Course Code: HMC2403**

**Credit Units: 02**

## **Course Objective:**

At the end of the semester the students will develop a clear concept on –

- Checkout & Settlement
- Front office Accounting Systems
- Night Audit
- Hotel / Front office Security System
- Property Management Systems

## **Module I :Checkout & Settlement**

- Procedures at Reception, Cash Section, Bell Desk
- Express Check-Out & Self Check-Out
- Reduction of Late Charges
- Effective Billing & Collection

## **Module II: Front office Accounting Systems**

- Accounting Fundamentals
- Creation & Maintenance of Accounts
- Audits & internal Control
- Settlement of Accounts
- Cash Control
- Credit Control

## **Module III: Night Audit**

- Night Audit Process
- Function of Night Auditor
- Night Audit Reports

## **Module IV: Hotel / Front office Security System**

- Methods
- Equipment Used
- Card Key Control
- Emergency Procedures
- Management's Role in Security

## **Module V:Property Management Systems**

- Reservation Management Software
- Room Management Software
- Guest Account Management Software
- General Management Software

**Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>JE</b>	<b>P</b>	<b>CT</b>	<b>EE</b>
<b>Weightage (%)</b>	05	05	05	15	70

CT-class test; A-attendance; EE-end semester examination; P-project; JE-Journal Evaluation

# HOUSEKEEPING MANAGEMENT-I

**Course Code: HMC2404**

**Credit Units: 02**

## **Course Objective:**

At the end of the semester the students will develop a clear concept on –

- Laundry Operation
- Contract Cleaning
- Flower Arrangement

## **Module I : Laundry Operation**

- Duties & Responsibilities of Laundry Staff (Laundry Manager and Shift-In-Leader, Dry Cleaning, Supervisor, Spotter cum Presser, Laundry Clerk, Attendants Valet Runner, Laundry)
- Importance and Principles of Laundry Operations
- Flow Process of industrial Laundering [Collection, Transportation Arrivals, Sorting, Weighing, Loading, Washing, Rinsing, Starching, Hydro-Extraction, Drying, Unloading, Tumbling, Finishing (Calender / Steam Press) Folding, & Storing Transfer & Use]
- Stages in Wash Cycle (Flush-Suds-Bleach Rinse-Sour & Soft-Extract, Break & Soaking)
- Equipment, Layout & Planning & Laundry (Basic Rules)
- Role of Laundry Agents
- Classification of Laundry Agents (Synthetic, Detergent, Built Soap Detergents, Enzyme Action-Detergents, Explain Briefly)
- Stain Removal

## **Module II :Contract Cleaning**

- Types of Contract Cleaning
- Methods of Pricing of Contract Cleaning
- Advantages and Disadvantages of Contract Cleaning
- Eco-Friendly Process

## **Module III :Flower Arrangement**

- Purpose of Flower Arrangement, Placement & Level of Placement
- With Relevant Examples
- Equipment & Materials Required
- Conditioning of Plant Material
- Styles of Flower Arrangement (Western, Japanese, Free-Style & Abstract)
- Principle of Flower Arrangement (Design, Scale, Balance, Focal Point, Rhythm, Texture, Repetition, Unity & Harmony)

## **Examination Scheme:**

<b>Components</b>	<b>V</b>	<b>H</b>	<b>CT</b>	<b>A</b>	<b>EE</b>
<b>Weightage (%)</b>	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

# **HOTEL INFORMATION SYSTEM**

**Course Code: HMC2405**

**Credit Units: 01**

## **Course Objective:**

At the end of the semester the students will develop a clear concept on –

- Management Information System (MIS)
- Role of Hotel Information System
- Various interfaces used in Hospitality Industry

## **Module I :Management Information System (MIS)**

- Concepts, evaluation & meaning
- MIS Designs and functions
- Managing multi processor environments.
- MIS Security issues
- MIS performance evaluation

## **Module II : Hotel Information System**

- The HIS Concept
- Software Modules
  - Reservation
  - Guest Accounting
  - Room Management
  - Point of Sales
  - General Management

## **Module III : Computer Based Reservation System**

- Global Distribution System
- Inter sell agencies
- Central Reservation Systems(CRS)
- Affiliate and Non Affiliate Systems
- Property Level Reservation Systems
  - Reservation Inquiry
  - Determination of Availability
  - Creation of Reservation Record
  - Maintenance of Reservation Records
- Generation of reports.
- New Developments Reservation through the Internet

## **Module IV : Rooms Management Applications**

- Rooms Management Module
  - Room Status
  - Room and Rate Assignment
  - In House guest Information Functions
  - Housekeeping Functions
- Generation of Reports

**Module V : Guest Accounting Module**

- Types of Accounts
- Posting entries to Accounts
- Night audit routine
- Account settlement
- Generation of reports

**Module VI : Property Management System Interfaces**

- Point of sale Systems ( POS)
- Cash Accounting Systems (CAS)
- CAS / PMS Advantages and concerns.
- Electronic Locking Systems.
- Energy Management Systems.
- Auxiliary Guest Services
- Guest Operated Devices in room Vending Systems
- Guest Information Systems

**Module VII : Food & Beverage Applications**

- POS order - Entry units
- Key Boards and Monitors
- Touch Screen Terminals
- Immediate Character Recognition (ICR) Terminal.
- Wireless Terminals
- POSD Printers.
- Guest check Printers
- Receipt Printers
- Workstation Printers
- Consolidated reports

**Module VIII : Food & Beverage Management Applications**

- Recipe Management
- Sales Analysis.
- Menu Management Integrated Food Service Software
- Management Reports from Automated Beverage Systems

**Module IX : Accounting Applications**

- Account Receivable Module
- Account Payable Module
- Payroll Module
- Inventory Module
- Purchasing Module
- Financial Reporting Module

**Module X : Selecting And Implementing Computer Systems**

- Analyzing Current Information Needs
- Collection Information of Computer Systems
- Establishing System Requirements
- Proposals from Vendors

- Contract Negotiations
- Installation Factors

**Examination Scheme:**

<b>Components</b>	<b>V</b>	<b>H</b>	<b>CT</b>	<b>A</b>	<b>EE</b>
<b>Weightage (%)</b>	06	04	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

# PRINCIPLES OF MANAGEMENT

**Course Code: HMC2406**

**Credit Units: 01**

**Course Objective:** To make students understand management concepts and their application in the field of tourism industry.

## **Course Contents:**

### **Module1: Introduction to Management**

- Concept, Nature, Functions, Process, Traits of a Successful Manager and Managerial Role.
- Management and Society: Business Ethics and Social Responsibilities

### **Module 2: Planning**

- Nature, Purpose, Types and Process of Planning.

### **Module 3: Organizing**

- Concept of Organizing and Organization. Line & Staff, Span of Control.
- Delegation, Decentralization Organization Structure.

### **Module 4: Directing**

- Communication-Process and Types of Communication, Barriers and Principles of Effective Communication
- Motivation: Meaning, Theories, Maslow and Herzberg, Leadership
- Co-Ordination: Meaning, Definition, Principles of Co-Ordination, Techniques of Effective Co-Ordination.

### **Module 5: Leadership**

- Concept, Qualities of a Successful Leader: Factors Influencing Performance of Leaders. Styles of Leadership, Management Grid.
- Controlling: Process. Methods and Techniques

## **Examination Scheme:**

<b>Components</b>	<b>V</b>	<b>H</b>	<b>CT</b>	<b>A</b>	<b>EE</b>
<b>Weightage (%)</b>	06	04	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

# **ECONOMICS OF HOSPITALITY**

**Course Code: HMC2407**

**Credit Units: 01**

## **Course Objective:**

At the end of the semester students would be able to:-

It intends to help the students in understanding the nature of Indian Economy in general & economic planning for tourism & hospitality in general.

It will further help them to understand the basic mechanism of pricing of products in different sector of economy with a special focus on product formulation, packaging & pricing of tourist & hospitality product.

## **Course Contents:**

### **Module I**

- Meaning of Economics

### **Module II**

- Relevance of Economics in Hospitality and Tourism Industry

### **Module III**

- Meaning of Demand

### **Module IV**

- Demand Curve Analysis

### **Module V**

- Factors Affecting Demand

### **Module VI**

- Concept of inflation and types of inflation

### **Module VII**

- Demand and methods of Forecasting

### **Module VIII**

- GDP (Gross Domestic Product) & GNP (Gross National Product)

### **Module IX**

- Fiscal Policy and its Feature and Mechanism

### **Module X**

- Monetary Policy and its functions

### **Module XI**

- Economic Growth and Economic Development, Growth Patterns of Indian Economy

### **Module XII**

- Market Structure and Hospitality and Tourism Industry

### **Module XIII**

- A small capsule on WTO and its implications on Hospitality and Tourism Industry has also been included.

### **Examination Scheme:**

<b>Components</b>	<b>C</b>	<b>HA</b>	<b>CT</b>	<b>A</b>	<b>EE</b>
<b>Weightage (%)</b>	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

## FOOD PRODUCTION OPERATIONS LAB-II

Course Code: HMC2408

Credit Units: 04

### Cookery

- To formulate different sets of menus from the following regions and to include more dishes from the respective regions. The practical class will be conducted preferably by demonstrative method.
  - Awadh
  - Bengal
  - Goa
  - Gujarat
  - Hyderabad
  - Kashmiri
  - Maharashtra
  - Punjabi
  - Rajasthan
  - South India (Tamil Nadu, Karnataka, Kerala).

### Patisserie

- Preparation & Application of Cream, Filling & Custards & Their uses
- Sugar Products
- Chocolate Confectionery

### Examination Scheme:

#### Internal: 30 Marks

Components	JE	LE	VV	A
Weightage (%)	05	15	5	5

#### End-Term: 70 Marks

Components	JE	VV	INDENT	LE
Weightage (%)	05	05	10	50

**Abbreviation:** JE= Journal Evaluation; LE= Lab Evaluation; VV= Viva-Voce; GP= Grooming & Punctuality

## Syllabus - Fifth Semester

### FOOD PRODUCTION TRAINING REPORT

**Course Code: HMC2501**

**Credit Units: 05**

**Course Objective:**

At the end of the industrial training the student would be able to;

- (i) Explain the organizational structure of the department
- (ii) Describe job description of various job titles, work schedules, opening & closing duties.
- (iii) Explain various sections and their functions
- (iv) Observe personal hygiene, kitchen hygiene and sanitation
- (v) Identify forms/formats, records and registers maintained
- (vi) Help in preparation of various dishes, garnish and service
- (vii) Observe food production standards of finished products

**On completion of the project the student will be required to submit the following:**

**Project File or Industrial workflow log book** - The File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation.

In general, the File should be comprehensive and include:

- A short account of the activities that were undertaken as part of the training;
- A statement about the extent to which the training has achieved its stated goals.
- A statement about the outcomes of the learning, evaluation and dissemination processes engaged in as part of the training;
- Any activities planned but not yet completed as part of the training, or as a future initiative directly resulting from the project;
- Any problems that have arisen that may be useful to document for future reference.

**Training Report**

The report should be submitted in duplicate (2 copies) spiral bound and a CD and should contain the following components:

- **Title or Cover Page**

The title page should contain the following information: Department Name; Student's Name; Course; Year; Supervisor's Name.

- **Acknowledgements**

Acknowledgment to any advisory received in the course of work may be given.

- **Table of Contents**

Titles and subtitles are to correspond exactly with those in the text.

- **Introduction**

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

- **Materials and Methods**

This section should aim at experimental designs, materials used. Methodology should be mentioned in details including modifications if any.

- **Suggestions**

In writing these section, emphasis should be given on what has been performed and achieved in the course of the work and any ideas/suggestions they feel will can be implemented, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis.

- **Conclusion**

A conclusion should be the final section in which the outcome of the work is mentioned briefly.

- **Appendices**

The Appendix contains material which is of interest to the reader ,and may include any forms, formats and any problem that have arisen that may be useful to document for future reference.

- **Performance Appraisal & Completion Certificate** duly signed and stamped

**Examination Scheme:**

Project Report:	50
Log book + Attendance + Appraisal	20
Presentation & Viva Voce:	30
<b>Total:</b>	<b>100</b>

# FOOD & BEVERAGE SERVICE TRAINING REPORT

**Course Code: HMC2502**

**Credit Units: 05**

## **Course Objective:**

At the end of the industrial training the student would be able to:

- (i) explain staff organization
- (ii) do layout
- (iii) list all equipments used (including crockery, cutlery, glassware etc) and use of these equipment
- (iv) describe and explain the menu and bar card
- (v) perform task for table reservation & receiving the guest
- (vi) lay the table, placing the order and pick-up, service and clearance procedure
- (vii) list all bar equipments
- (viii) take and serve orders of different beverages, cigars and cigarettes.

**On completion of the project the student will be required to submit the following:**

**Project File or Industrial workflow log book** - The File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation.

In general, the File should be comprehensive and include:

- A short account of the activities that were undertaken as part of the training;
- A statement about the extent to which the training has achieved its stated goals.
- A statement about the outcomes of the learning, evaluation and dissemination processes engaged in as part of the training;
- Any activities planned but not yet completed as part of the training, or as a future initiative directly resulting from the project;
- Any problems that have arisen that may be useful to document for future reference.

## **Training Report**

The report should be submitted in duplicate (2 copies) spiral bound and a CD and should contain the following components:

- **Title or Cover Page**

The title page should contain the following information: Department Name; Student's Name; Course; Year; Supervisor's Name.

- **Acknowledgements**

Acknowledgment to any advisory received in the course of work may be given.

- **Table of Contents**

Titles and subtitles are to correspond exactly with those in the text.

- **Introduction**

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

- **Materials and Methods**

# Syllabus - Sixth Semester

## ADVANCED FOOD PRODUCTION OPERATIONS-I

**Course Code: HMC2601**

**Credit Units: 02**

### **Course Objective:**

At the end of the semester the students will develop a clear concept on –

- Larder and its activities
- Chaud Froid, Aspic & Jelly
- Charcuterie, Ham, Bacon & Gammon, Forcemeats, Galantines, Pates, Terrine, Mouse & Mousseline, Quenelles, Parfaits, Roulades, Brines, Cures & Marinades
- Non edible Displays

### **Module I: Larder**

#### **Layout & Equipment**

- Introduction of Larder Work
- Definition
- Equipment found in the larder
- Layout of typical larder with equipment and various sections

#### **Terms & Larder Control**

- Common terms used in the Larder and Larder Control
- Essentials of Larder Control
- Importance of larder Control
- Devising Larder Control Systems
- Liasoning with Other Departments
- Yield Testing

#### **Duties & Responsibilities of the Larder Chef**

- Functions of the Larder
- Hierarchy of larder Staff
- Sections of the Larder
- Duties and responsibilities of larder Chef.

### **Module II: Charcuterie**

- Introduction to charcuterie
- Sausage – Types & Varieties
- Casings – Types & Varieties
- Fillings – Types & Varieties
- Additives & Preservatives

### **Module III :Forcemeats**

- Types of forcemeats
- Preparation of forcemeats
- Uses of forcemeats

**Module IV :Brines, Cures & Marinades**

- Types of Brines
- Preparation of Brines
- Methods of Curing
- Types of marinades
- Uses of Marinades
- Difference between Brines, Cures & Marinades

**Module V :Ham, Bacon & Gammon**

- Cuts of Ham, Bacon & Gammon
- Differences between Ham, Bacon & Gammon
- Processing of Ham & Bacon
- Green Bacon
- Uses of the different cuts

**Module VI :Galantines**

- Making of Galantines
- Types of Galantine
- Ballotines

**Module VII: Pate& Terrine**

- Types of Pate
- Pate de foie gras
- Making of Pate
- Commercial pate and Pate Maison
- Truffle – sources, cultivation and uses of types of truffle

**Module VIII: Mouse & Mousseline**

- Types of mousse
- Preparation of mousse
- Preparation of mousseline
- Difference between mousse and mousseline

**Module IX : Chaud Froid**

- Meaning of chaud froid
- Making of chaud froid & precautions
- Types of chaud froid
- Uses of chaud froid

**Module X :Aspic & Jelly**

- Definition of aspic and jelly
- Difference between the two
- Making of aspic and Jelly
- Uses of aspic and Jelly

**Module XI:Quenelles, Parfaits, Roulades**

- Preparation of Quenelles, Parfaits and roulades

**Module XII :Non edible Displays**

- Ice carvings
- Tallow sculpture
- Fruit & vegetable displays
- Salt dough
- Pastillage
- Jelly Logo
- Thermocol work.

**Examination Scheme:**

Components	V	H	CT	A	EE
Weightage (%)	06	04	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

# ADVANCED FOOD & BEVERAGE SERVICE OPERATIONS-I

**Course Code: HMC2602**

**Credit Units: 02**

## **Course Objective:**

At the end of the semester the students will develop a clear concept on –

- Restaurant Planning & Layout
- Menu Planning
- Manpower Planning

## **Module I :Restaurant Planning & Layout**

- Choosing of Location
- Layout Planning
- Décor
- Furnishing, Fixtures & Fittings
- Equipment Selection

## **Module II :Menu Planning**

- Objectives & Procedures
- Menu Planning Considerations & Constrains
- Menu Designing
- Menu Merchandising

## **Module III :Manpower Planning**

- Job Description
- Job Specification
- Recruitment
- Induction & Training

## **Examination Scheme:**

<b>Components</b>	<b>V</b>	<b>H</b>	<b>CT1</b>	<b>A</b>	<b>EE1</b>
<b>Weightage (%)</b>	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

## FRONT OFFICE MANAGEMENT-II

Course Code: HMC2603

Credit Units: 02

### Course Objective:

At the end of the semester the students will develop a clear concept on –

- Establishing Room Rates
- Forecasting Room Availability
- Budgeting for Operations
- Evaluating Front office Operations

### Module I :Establishing Room Rates

- Market Condition Approach
- Rule-of-Thumb Approach
- Hubbart Formula

### Module II :Forecasting Room Availability

- Forecasting Data
- Percentage of No-Shows
- Percentage of Walk-Ins
- Percentage of Over-stays
- Percentage of Under-stays
- ARR (Average Room Rate)
- RevPAR (Revenue Per Available Room)
- Forecast Formula
- Room Count Considerations

### Module III :Budgeting for Operations

- Forecasting Rooms Revenue
- Estimating Expenses

### Module IV :Evaluating Front office Operations

- Daily Operations Report
- Occupancy Ratios
- Rooms Revenue Analysis
- Operating Ratios
- Rooms Division income Statement & Budget Reports

### Examination Scheme:

Components	A	JE	P	CT	EE
Weightage (%)	05	05	05	15	70

CT-class test; A-attendance; EE-end semester examination; P-project; JE-Journal Evaluation

# INTRODUCTION TO TOURISM

**Course Code: HMC2605**

**Credit Units: 01**

## **Course Objective:**

At the end of the semester the students will develop a clear concept on –

- Tourism Activities
- Marketing of Tourism Products
- Present scenario in our country
- Planning & Development activities
- Growth of Tourism in our country

## **Module I :Introduction to Tourism**

- Origin, Growth & Development of Tourism
- Early History
- Development of Tourism
- Forms & Types of Tourism
- Classification of Tourism Accommodation & Consumer Groups
- Geographical Resources for Tourism
- Tourism Potential
- Various Tourist Attractions of India

## **Module II :Travel & Tourism Statistics**

- Measurement of Tourism
- Categories of Tourist Statistics
- Methods of Measurement; Problems

## **Module III :The Organization of Tourism**

- Need for Organization
- Factors Influencing Type of Organization
- Tourism Organization in India
- Travel Agency & Tour Operations

## **Module IV :Tourism Planning & Development**

- Planning for Tourism; Coordination
- Tourist Demand & Supply
- Environmental Planning
- Carrying Capacity

## **Module V :Marketing Concepts And Strategies in Tourism**

- Marketing in Travel & Tourism ; Special Features
- The Tourist Product
- Market Research
- Market Segmentation
- Tourist Marketing Mix
- Tourist Publicity - Methods; Brand Concept; Media

## **Module VI :Information Technology in Tourism**

- Modern Media Techniques

- Networking
- Internet & Tourism Industry
- Computers in Air Cargo, Airlines, Hotels, Railways & Crs

#### **Module VII: International Tourism Organizations**

- WTO; PATA; IATA; ICAO; OECD; IOTO

#### **Module VIII :Tourist Transport & Their Role in Growth of Tourism**

- Modes of Transport - Road, Air, Rail, Sea
- Technological Advances

#### **Module IX :Economic Dimensions of Tourism**

- Economic Benefits
- Tourism Multiplier
- Infrastructural & Regional Development
- Employment Generation & Employment Multiplier
- International Understanding & Manila Declaration
- Socio - Economic Significance of Tourism

#### **Examination Scheme:**

<b>Components</b>	<b>V</b>	<b>H</b>	<b>CT</b>	<b>A</b>	<b>EE</b>
<b>Weightage (%)</b>	06	04	15	5	70

V-Viva; H-Home Assignment; CT-Class Test; A-Attendance; EE-End Semester Examination

# MANAGERIAL ACCOUNTING

**Course Code: HMC2607**

**Credit Units: 01**

## **Course Objective:**

At the end of the semester the students would be able to-

- Understand the concept of managerial accounting
- Explain contents of income statement, balance sheet and departmental income statements and expense statement and solve practical problem
- Understand objectives, characteristics and implementations of internal control
- Distinguish between internal and statutory audit and views of internal audit

## **Course Contents:**

### **Module I: Managerial Accounting**

- Meaning of managerial accounting
- Functions of managerial accounting
- Utility of managerial accounting

### **Module II: Uniform System of Accounts for Hotels**

- Introduction to Uniform system of accounts
- Contents of the Income Statement
- Practical Problems
- Contents of the Balance Sheet (under uniform system)
- Practical Problem
- Departmental Income Statements and Expense Statement (Schedules 1 to 16)
- Practical Problem

### **Module III: Internal Control**

- Definition and objectives of Internal Control
- Characteristics of Internal Control
- Implementation and Review of Internal Control

### **Module IV: Internal Audit and Statutory Audit**

- An introduction to Internal and Statutory Audit
- Distinction between Internal Audit and Statutory Audit
- Implementation and Review of Internal Audit

## **Examination Scheme:**

<b>Components</b>	<b>V</b>	<b>H</b>	<b>CT</b>	<b>A</b>	<b>EE</b>
<b>Weightage (%)</b>	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

# ADVANCED FOOD PRODUCTION OPERATIONS LAB-I

**Course Code: HMC2608**

**Credit Units: 04**

## **Course Objective:**

At the end of the semester students would be able to-

- learn about the technique of advance skill in food production
- develop concept of International cuisine

## **Course Contents:**

### **Module I: Three course menus to be formulated featuring International Cuisines**

- French.
- Oriental (Chinese and Thai)
- Italian
- Scandinavian
- British
- Spanish
- Demonstration
  - German Greece, Mexican, Mediterranean and Lebanese.

### **Module II: Demonstration of- Charcuterie**

- Galantines
- Pate
- Terrines
- Mousselines

### **Module III: Bakery & Patisserie Practical-**

- Decorated Cakes
- Gateaux
- International Breads
- Sorbets, Parfaits
- Hot / Cold Desserts

## **Examination Scheme:**

### **Internal: 30 Marks**

<b>Components</b>	<b>JE</b>	<b>LE</b>	<b>VV</b>	<b>A</b>
<b>Weightage (%)</b>	05	15	5	5

### **End-Term: 70 Marks**

<b>Components</b>	<b>JE</b>	<b>VV</b>	<b>INDENT</b>	<b>LE</b>
<b>Weightage (%)</b>	05	05	10	50

**Abbreviation:** JE= Journal Evaluation; LE= Lab Evaluation; VV= Viva-Voce

# **ADVANCED FOOD & BEVERAGE SERVICE OPERATIONS LAB-I**

**Course Code: HMC2609**

**Credit Units: 02**

## **Course Objective:**

At the end of the semester students will be able to-

- Prepare and give presentation on case studies on planning of F&B outlets
- Plan and supervise service of banquet, buffet, cocktails, gueridon service and setup bar for parties.

## **Course Contents:**

### **Module I: Case Study on planning of**

- Special Restaurant
- Room Service
- Coffee Shop
- Presentation.

### **Module II**

- Case Study on Planning of Manpower of F&B department:-
- Presentation.

### **Module III**

- Supervision of F&B Service in Training Restaurant.

### **Module IV**

- Case Study of Planning Formal & Informal Banquet function including space requirement, Menu Planning.

### **Module V**

- Setting up of various types of Buffet (Design, Layout).

### **Module VI**

- Demonstration and Practice of Guerdon Service.

### **Module VII**

- Case Study on setting up of Bar for parties.

### **Module VIII**

- Demonstration and Practice of Making Cocktails.

**Examination Scheme:****Internal: 30 Marks**

Components	JE	LE	VV	A
Weightage (%)	05	15	05	5

**End-Term: 70 Marks**

Components	JE	VV	GP	LE
Weightage (%)	10	10	10	40

# Syllabus - Seventh Semester

## ADVANCED FOOD PRODUCTION-II

**Course Code: HMC2701**

**Credit Units: 02**

**Course Objective:**

At the end of the semester the students will develop clear concept on -

- Modern Trend in Food Production
- Rechauffé Cookery
- Kitchen Planning, Layout and Design
- Quality Control & Standardization of Recipes
- Freezing Techniques
- Food Cost

**Module – I :Modern Trend in Food Production Concept**

- Frozen Foods
- Types
- Advantages & Disadvantages
- Handling Frozen Foods
- Defrosting Techniques

**Module – II : Rechauffé Cookery**

- Changes in Food Items
- Optimum Utilization

**Module – III :Kitchen Planning, Layout and Design**

- Principles of kitchen layout and design,
- Areas of various kitchens with recommended dimension,
- Factors that affect kitchen design,
- Placement of equipments,Flow of work,
- Space allocation,
- Layout of commercial kitchen (types, drawing a layout of a Commercial kitchen),
- Central Kitchen, Satellite Kitchen
- Planning of various supporting services (pot wash, wet grinding, chef room, larder, store and other staff facilities)

**Module – IV :Quality Control & Standardization of Recipes**

- Raw Materials
- Finished Goods
- Structure of Recipe

**Module – V :Indenting**

- Concept of indenting\
- Problems Related to indenting
- Storage System

**Module – VI :Purchasing**

- Receiving
- Ordering
- Movements of Goods
- Purchasing Techniques

**Module – VII :Freezing Techniques**

- Dry Storage
- Cold Rooms

**Module – VIII :Food Cost**

- Food Cost
- Food Cost Percentage
- Control Cycle
- Various Reports

**Examination Scheme:**

Components	V	H	CT	A	EE
Weightage (%)	06	04	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

## ADVANCED FOOD & BEVERAGE SERVICE-II

Course Code: HMC2702

Credit Units: 02

### Course Objective:

At the end of the semester the students will develop clear concept on -

- Cycles of Control
- Food Cost Control
- Budgets & Budgetary Control
- Liquor Control

### Module – I :Cycles of Control

- 3.1 Purchasing
- 3.2 Receiving
- 3.3 Storing
- 3.4 Issuing
- 3.5 Preparation
- 3.6 Costing & Selling
- 3.7 Control

### Module – II :Food Cost Control

- 4.1 Food Costing
- 4.2 Checks & Checking System
- 4.3 Standard Costing
- 4.4 Variance Analysis

### Module – III :Budgets & Budgetary Control

- 5.1 Definition, Different Types of Budgeting
- 5.2 Different Steps of Preparing Different Budgets
- 5.3 Budgetary Control
- 5.4 Formats for Budgeting

### Module – IV :Liquor Control

- 6.1 Purchase Procedures
- 6.2 Assessment of Quality
- 6.3 Stock Control
- 6.4 Beverage Sales Control

### Examination Scheme:

Components	V	H	CT1	A	EE1
Weightage (%)	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

## ADVANCED FRONT OFFICE MANAGEMENT

**Course Code: HMC2703**

**Credit Units: 02**

### **Course Objective:**

At the end of the semester the students will develop clear concept on -

- Yield Management
- Human Relations Management

### **Module – I :Yield Management**

- Concept of Yield Management
- Capacity Management
- Discount Allocation

### **Module – II :Measuring Yield**

- Potential Average SGL / DBL Rate
- Multiple Occupancy Percentage
- Rate Spread
- Potential Average Rate
- Room Rate Achievement Factor
- Yield Statistic
- Equivalent Occupancy
- Required Non-Room Revenue Per Guest

### **Module – III :Elements of Yield Management**

- Group Room Sales
- Transient Room Sales
- Food & Beverage Activity
- Special Events
- Using Yield Management

### **Module – IV :Human Relations Management**

### **Examination Scheme:**

<b>Components</b>	<b>V</b>	<b>H</b>	<b>CT</b>	<b>A</b>	<b>EE</b>
<b>Weightage (%)</b>	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

# ACCOMMODATION MANAGEMENT

**Course Code: HMC2704**

**Credit Units: 02**

## **Course Objective:**

At the end of the semester the students will develop clear concept on -

- Budgeting, Purchasing, Controls in Housekeeping Department
- Recruitment of Staff, Induction & Training of Hotel Housekeeping Staff
- Working Methods

## **Module – I :Budgeting**

- Definition
- Capital & Operational Budget
- Advantages
- Preparation of a Budget
- Budgetary Control

## **Module – II :Purchasing**

- Department Requirements
- Methods of Purchasing

## **Module – III :Controls in Housekeeping Department**

- Purpose
- Expenses
- Functioning
- Forms

## **Module – IV :Recruitment of Staff**

- Job Specifications & Job Descriptions
- Duty Rotas,
- Manual for Standard Housekeeping Procedures of Commercial Establishments

## **Module – V :Induction & Training of Hotel Housekeeping Staff**

## **Module – VI :Working Methods**

- Optimum Time Requirement
- Planning of Work Methods

## **Examination Scheme:**

<b>Components</b>	<b>V</b>	<b>H</b>	<b>CT</b>	<b>A</b>	<b>EE</b>
<b>Weightage (%)</b>	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

# **FACILITY MANAGEMENT, PLANNING & DESIGN**

**Course Code: HMC2705**

**Credit Units: 01**

## **Course Objective:**

At the end of the semester the students will be able to-

- Explain & understand hotel design, project management, architectural aspects of facility planning, kitchen stewarding layout & design and methods of energy conservation.,.

## **Course Contents:**

### **Module I: Hotel Design**

Design Consideration, Attractive Appearance, Efficient Plan, Good Location, Suitable Material, Good Workmanship, Sound financing, Competent Management

### **Module II : Project Management**

Introduction of Network analysis, Basic rules and procedures for Network analysis, C.P.M. and PERT, Comparison of CPM and PERT, Classroom exercises, Network crashing determining crash cost, normal cost.

### **Module III : Facilities Planning**

The Systematic Layout Planning Pattern (SLP) for hotel, Planning Consideration, Flow Process and Flow Diagram Procedure for determining space considering the guiding factors for the guest room / public facilities, support facilities and services, hotel administration,

### **Module IV : Architectural Consideration**

Difference between carpet area, plinth area and super built area, their relationships, reading of blueprint (plumbing, electrical, AC, ventilation, FSI, FAR, public areas), Approximate cost of construction estimation Approximate operating areas in budget type / 5 star type hotel / guest room, Approximate requirement and estimation of water / electrical load gas, ventilation.

### **Module V : Kitchen Stewarding Layout and Design**

Importance of kitchen stewarding, Kitchen stewarding department layout and design, Equipment found in kitchen stewarding department

### **Module VI: Stores – Layout and Design**

Stores layout and planning (dry, cold and bar), Various equipment of the stores work flow in stores

### **Module VII : Car Parking**

Calculation of car park area for different types of hotels

### **Module VIII : Energy Conservation**

Necessity for energy conservation, Methods of conserving energy in different area of operation of a hotel, Developing and implementing energy conservation program for a hotel

**Examination Scheme:**

<b>Components</b>	<b>V</b>	<b>H</b>	<b>CT</b>	<b>A</b>	<b>EE</b>
<b>Weightage (%)</b>	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

- Recruitment & Selection; Rosters
- Training; Briefing Staff
- Managing Volunteers

**Module XIII :Operations & Logistics**

- Logistics
- Policies
- Procedures
- Performance Standards
- Functional Areas

**Module XIV :Crowd Management & Evacuation**

- The Crowd Management Plan
- Emergency Planning
- Implementing Emergency Procedures

**Module XV :Control & Evaluation**

- Monitoring & Control Systems
- Operational Monitoring & Control
- Evaluation

## ADVANCED FOOD PRODUCTION OPERATIONS LAB-II

Course Code: HMC2710

Credit Units: 04

### Preparation & Presentation of International Cuisine

- France
- Italian
- Spanish
- Chinese
- Thai
- Mexican

### Basket Cooking

- Planning & Practicing for 3 to 5 course including Patisserie Products

### Examination Scheme:

#### Internal: 30 Marks

Components	JE	LE	VV	A
Weightage (%)	05	15	5	5

#### End-Term: 70 Marks

Components	JE	VV	INDENT	LE
Weightage (%)	05	05	10	50

**Abbreviation:** JE= Journal Evaluation; LE= Lab Evaluation; VV= Viva-Voce; GP= Grooming & Punctuality

## ADVANCED FOOD & BEVERAGE SERVICE LAB-II

**Course Code: HMC2711**

**Credit Units: 01**

### **Course Objective:**

At the end of the semester the students will be able to-

- Prepare budget of a F&B outlet
- Calculate breakeven point & display on graphs
- Take & record inventories
- Demonstrate & perform supervisory skills in a F&B service outlet.

### **Course Contents:**

#### **Module I**

Preparation of Budget of an Event / Outlet.

#### **Module II**

Calculate breakeven for an F&B outlet and prepare graphs for the above.

#### **Module III**

Case Study & Presentation on calculating cost and cost %.

#### **Module IV**

Taking and Recording of Inventory.

#### **Module V**

Preparation of Bar Inventory procedure and taking Bar Inventory.

#### **Module VI**

Case Study and Presentation of Menu Engineering.

#### **Module VII**

Preparation of MIS of F&B Outlet of a month with Graphs.

#### **Module VIII**

Supervision - F&B Service in Training Restaurant.

### **Examination Scheme:**

#### **Internal: 30 Marks**

<b>Components</b>	<b>JE</b>	<b>LE</b>	<b>VV</b>	<b>A</b>
<b>Weightage (%)</b>	05	15	05	5

#### **End-Term: 70 Marks**

<b>Components</b>	<b>JE</b>	<b>VV</b>	<b>GP</b>	<b>LE</b>
<b>Weightage (%)</b>	10	10	10	40

# Syllabus - Eighth Semester

## BASICS OF REVENUE MANAGEMENT

**Course Code: HMC2801**

**Credit Units: 02**

**Course Objective:**

At the end of the semester the students will be able to Explain & understand the concept of Revenue Management, necessity of its implementation in Hospitality Industry

1. Concept of Revenue Management
2. Basic Terms
3. Core Concepts of Revenue Management
4. Strategic Planning
  - 4.1 Supply & Demand Ratio
  - 4.2 Cost & Pricing
  - 4.3 Value Pricing
  - 4.4 Differential Pricing
5. Revenue Maximization vs. Optimization
6. Forecasting Demand
7. Inventory and Price Management
8. Overbooking as a Strategy
9. Managing Distribution Channels
10. Ethical aspects of Revenue Management

**Examination Scheme:**

Components	V	A	S	CT	EE
Weightage (%)	05	05	05	15	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination; S-seminar

**Suggested Reading :**

- An Introduction to Revenue Management for the Hospitality Industry: Principles and Practices for the Real World, by Tranter

# INDIAN HERITAGE

**Course Code: HMC2802**

**Credit Units: 02**

**Course Objective:**

At the end of the semester the students will be develop a brief idea about Indian culture & Heritage

**Module - 1 Culture**

1. Culture: An Introduction
2. Indian Culture

**Module 2: History and Culture through the Ages**

3. Ancient India
4. Medieval India
5. Modern India

**Module 3: Languages and Literature**

6. Indian Languages and Literature-I
7. Indian Languages and Literature-II

**Module 4: Religion and Philosophy**

8. Religion and Philosophy in ancient India
9. Religion and Philosophy in Medieval India
10. Religious Reform Movements in Modern India

**Module 5: Painting, Performing Arts and Architecture**

11. Indian Painting
12. Performing Arts: Music, Dance and Drama
13. Indian Architecture

**Module 6: Science and Technology**

14. Science and Technology in India
15. Scientists of Ancient India
16. Science and Scientists of Medieval India
17. Scientists of Modern India

**Module 7: Education**

18. Education in India

**Module 8: Social Structure**

19. Indian Social Structure
20. Socio-Cultural Issues in Contemporary India
21. Spread of Indian Culture Abroad

**Examination Scheme:**

<b>Components</b>	<b>V</b>	<b>A</b>	<b>S</b>	<b>CT</b>	<b>EE</b>
<b>Weightage (%)</b>	05	05	05	15	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination; S-seminar

**Suggested Reading :**

Cultural Heritage of India - M. P Mchcha Shiksha, Anudan Ayog  
Heritage Tourism - Praveen Sethi

# RESEARCH METHODOLOGY

**Course Code: HMC2803**

**Credit Units: 02**

## **Course Objective:**

Research methodology will be taught in the theory class to prepare students how to approach the subject of research project in the semester. To deal with surging information data regarding the various aspects of tourism industry, one should have a working efficiency with research and statistical techniques. The techniques may be applied in collecting, organizing, analyzing and interpreting data for decision-making. These may also be applied for formulating and testing research hypothesis. The course has been designed to equip the students with latest and necessary field techniques and to build a necessary statistical acumen among them. Students will master the skill for-

- Writing different types of research proposals
- Constructing the relevant tools of research
- Conduct a research project using appropriate qualitative and quantitative techniques
- Write a research report
- Evaluate a research report
- Give presentation of report supported by latest aids.

## **Course Contents:**

### **Module I: Research Methodology**

Meaning of research, Need and importance of research, Types of research, Criteria of good research

### **Module III: Data collection, analysis and interpretation (Sample designing)**

Types & Sources of Data, Techniques of data collection; Correlation and regression analysis of two variables only. Hypothesis testing Test of significance, Chi-square analysis, Reports

### **Module IV: Preparation of research proposals-**

Selection and formulation of research problem, Operationalization of concepts and constructs, Review of related literature, Aims and objectives, Hypothesis, method, sample and tools.

### **Module V: Evaluation of research report**

Research Report Format, Presentation of Report

## **Examination Scheme:**

Components	V	A	S	CT	EE
Weightage (%)	05	05	05	15	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination; S-seminar

## **Text & References:**

### **Text:**

- Applied General Statistics by Crovton and Crowder
- Behavioural Process in Organizations by Pareek, U.Rao. T.V. & Pestonjee D.M

- Quantitative Approaches to Management by Levin I Richerd

## **SPECIALIZATION COURSE (LAB)**

**Course Code: HMC2804**

**Credit Units: 04**

### **Course Objective:**

At the end of the semester the students will be develop competency in specialized area selected by him/her.

### **FOOD PRODUCTION**

- **Module I**  
Theme Cuisine
- **Module II**  
Planning and implementing strategies for Quantity Food Production
- **Module III**  
Fusion Cooking
- **Module IV**  
Display Cuisine
- **Module V**  
Designing & setting up Commercial Kitchen Area

### **F&B SERVICE**

- **Module I: Case Study on planning of**  
Special Restaurant  
Room Service  
Coffee Shop  
Presentation.
- **Module II**  
Case Study on Planning of Manpower of F&B department:-  
Presentation.
- **Module III**  
Supervision of F&B Service in Training Restaurant.
- **Module IV**  
Case Study of Planning Formal & Informal Banquet function including space requirement, Menu Planning.
- **Module V**  
Setting up of various types of Buffet (Design, Layout).
- **Module VI**  
Demonstration and Practice of Guerdon Service.
- **Module VII**

Case Study on setting up of Bar for parties.

- **Module VIII**  
Demonstration and Practice of Making Cocktails.

#### **FRONT OFFICE**

- **Module I**  
Role Play
- **Module II**  
Situation Handling
- **Module III**  
Work – Time Management
- **Module IV**  
Work Schedule Designing

#### **HOUSEKEEPING**

- **Module I:**  
First Aid  
First aid kit  
Dealing with emergency situation
- **Module II**  
Special Decorations
- **Module III**  
Layout of a guest room (Refurbishing & Redecoration)
- **Module IV**  
Team cleaning Management
- **Module V**  
Devising Training modules/standard operating procedure/Inspection check lists

#### **Internal: 30 Marks**

<b>Components</b>	<b>JE</b>	<b>LE</b>	<b>VV</b>	<b>A</b>
<b>Weightage (%)</b>	05	15	05	5

#### **End-Term: 70 Marks**

<b>Components</b>	<b>JE</b>	<b>VV</b>	<b>GP</b>	<b>LE</b>
<b>Weightage (%)</b>	10	10	10	40

**Abbreviation:** JE= Journal Evaluation; LE= Lab Evaluation; VV= Viva-Voce; GP= Grooming & Punctuality

## GDPI SESSIONS

**Course Code: HMC2805**

**Credit Units: 03**

### **Course Objective:**

These sessions would help the students to perform well in the campus interview at the final year stage.

#### **1. Pre-Preparation before GD/PI**

- 1.1 Previous day
- 1.2 Previous night
- 1.3 Type of food
- 1.4 Rest & sleep
- 1.5 On GD/PI day
- 1.6 Personal Hygiene
- 1.7 Grooming
- 1.8 Curriculum Vitae & Testimonials
- 1.9 Sense of Time

#### **2. Process of Evaluation during Group Discussion**

- 2.1 Skills assessed in a Group Discussion Session
  - 2.1.1 Leadership skills
  - 2.1.2 Communication skills
  - 2.1.3 Interpersonal skills
  - 2.1.4 Persuasive skills
  - 2.1.5 Problem solving skills
  - 2.1.6 Conceptualizing skills
- 2.2 Rules to follow during the Group Discussion
- 2.3 Points to remember during Group Discussion
- 2.4 What to avoid during Group Discussion - Common Mistakes
- 2.5 Preparations to be taken before appearing in a Group Discussion
  - 2.5.1 Get noticed - But for the right reasons
  - 2.5.2 Egotism Showing off
  - 2.5.3 Quality Vs Quantity

#### **3. Types of Group Discussion GD topics**

- 3.1 Factual
- 3.2 Abstract
- 3.3 Argumentative/ Controversial topics
- 3.4 Opinion based
- 3.5 Current topics
- 3.6 Case based topics

#### **4. Steps on how to prepare for an interview?**

#### **5. What is an interview?**

#### **6. What's the purpose of an interview**

#### **7. What to do Before an Interview**

8. What to do During the Interview
  - 8.1 Make Your Entrance
  - 8.2 Getting Started
  - 8.3 Attitude Counts
9. What to do after the Interview is over
10. Interview Do's and Don'ts

**Examination Scheme:**

<b>Components</b>	<b>V</b>	<b>A</b>	<b>S</b>	<b>CT</b>	<b>EE</b>
<b>Weightage (%)</b>	05	05	05	15	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination; S-seminar

**Suggested Reading :**

- Body Language – Your Success Mantra Dr. Shalini Verma S. Chand
- The Pocket Guide to Manwatching; Desmond Morris Triad Grafton Books

# RESEARCH PROJECT

**Course Code: HMC2837**

**Credit Units: 12**

## **Course Objective:**

The purpose of research (Hospitality and Tourism based) is to seek answers to problems through the application of scientific methodology, which guarantees that the information is reliable and unbiased. This information is utilized to make conclusions and recommend solution. Some elementary factors need to be kept in mind while preparing a research and deciding the topic, these could be based on its relevance, feasibility, coverage, accuracy and research, objectivity and ethics.

To deal with surging information data regarding the various aspects of tourism industry, one should have a working efficiency with research and statistical techniques. The techniques may be applied in collecting, organizing, analyzing and interpreting data for decision-making. These may also be applied for formulating and testing research hypothesis. The course has been designed to equip the students with latest and necessary field techniques and to build a necessary statistical acumen among them. Students will master the skill for-

- Writing different types of research proposals and reports
- Constructing the relevant tools of research
- Conduct a research project using appropriate qualitative and quantitative techniques
- Do presentation with the help of tutorial aid
- Evaluate a research report.

The research topic should be assigned by the deputed subject faculty in the beginning of semester & should be approved by PL & HOI. Continuous monitoring and guidance should be provided to student at all the steps.

At the term end, the research project will be presented before a panel and evaluated by examiners (As nominated by HOI). The evaluation should be based on presentation, viva, report content & format & conclusion.

## **Examination Scheme:**

### **Internal Assessment:**

Abstract:	10
Draft:	15
Research Orientation:	10
Reading:	05

### **External Evaluation:**

Objective:	05
Issue Profile:	10
Comprehensiveness	10
Relevance:	10
Presentation:	15
Viva:	10

# Bachelor of Tourism & Travel Management

## Syllabus - First Semester

### BASICS OF TOURISM MANAGEMENT

**Course Code: TRM2101**

**Credit Units : 03**

**Course Objective:** The primary purpose of the paper is to acquaint the students about the basic and preliminary knowledge of the terms, concepts, systems and trends in tourism. It will form the first step to move forward to interact with the advanced knowledge pertaining to travel and tourism.

#### **Course Contents:**

#### **Module – I : Conceptual Framework**

- Tourism: Definition, Meaning, Nature and Scope.
- Tourist, Travelers, Visitor, Transit Visitor and Excursionist - Definition and Differentiation
- Meaning and Relationship between Leisure, Recreation and Tourism.
- Components and Elements of Tourism
- Types and Typologies (International, Inbound, Outbound, Inter regional, Intra Regional, Domestic, International, National and other Forms, Social Tourism.) of Tourism.

#### **Module – II : Historical Dimensions of Tourism**

- Travel and Tourism through the Ages: Early Travels, 'Renaissance' and 'Age of Grand Tours'; Emergence of Modern Tourism, Concept of "Paid Holiday", Silk Route.
- Thomas Cook and the Development of Tourism, & Present Scenario of the Tourism Industry.

#### **Module – III : Motivation and Significance of Travel and Tourism**

##### ➤ **Motivations**

- Physical Motivations: Travel for Sports and Adventure, Rest and Relaxation, Health and Medical Reasons etc.
- Cultural Motivations: Pilgrimage Tourism, Cultural Curiosity, Religious etc.
- Interpersonal Motivation: Meeting New People, VFR, etc
- Status and Prestige Motivation
- Business Motivation

##### ➤ **Significances**

- The Economic, Social and Cultural Significance of Tourism

#### **Module – IV : Factors that have led to the Growth of Tourism**

##### ➤ **Growth factors**

- Technology and Destination Development
- Changing Social Patterns
- Changing Living Standards

##### ➤ **Barriers to the Growth of Tourism**

- Factors Existing at the Destination: Terrorism, & Political and Social Environment
- Factors Barring a Potential Tourist from Traveling: Time, Cost, and Social Barriers.

#### **Module – V : Studying Tourism**

- Tourism Education and its Significance for Tourism Business Growth
- Professionalism – Key to Tourism Growth

**Examination Scheme:**

<b>Components</b>	<b>V</b>	<b>H</b>	<b>CT</b>	<b>A</b>	<b>EE</b>
<b>Weightage (%)</b>	05	05	15	5	70

# INDIAN GEOGRAPHY OF TOURISM

**Course Code: TRM2102**

**Credit Units : 03**

**Course Objective:** Geography of Tourism includes the phenomena of tourism over the global space with 'spatial' attention on the place of origin, place of destination & routes through which the travel & tourism takes place. This course has been simplified with very few case studies & broad information about the continents, so the students can have knowledge of India.

## **Course Contents:**

### **Module – I : India**

- General Introduction, States & Capitals
- Physiographic Units
- Seasons and Climatic Regions & their Impacts on Tourism.
- Natural Vegetation & Wild Animals of India
- India: A Destination for all Reasons & Seasons.

### **Module – II : The Northern Mountains**

- General Introduction of the Himalayas & other Ranges
- Importance of the Himalayas & other Ranges for Religious Tourism
- Importance of the Himalayas & other Ranges for Hill Station & Adventure Tourism.
- **Case studies**
  - Sri Nagar, Shimla, Nainital, Darjeeling & Gangtok.

### **Module – III : The Deserts & Central Plains**

- General Introduction of Deserts & Central Plains.
- Their Importance for Cultural, Religious & Adventure Tourism.
- **Case studies**
  - Amritsar, Jaipur, Delhi, Lucknow, Kolkata.

### **Module – IV : The Peninsula**

- General Features of Indian Peninsula with their Tourism Significance.
- **Case studies**
  - Bhopal, Khajuraho, Hyderabad, Bangalore, Ooty

### **Module – V : The Coastal Plains and Islands**

- General Features of Coastal Regions, their Importance for Religious, Cultural & Beach Tourism.
- **Case Studies**
  - Mumbai, Goa, Cochin, Chennai, Andaman & Nicobar Islands.

**Examination Scheme:**

Components	V	H	CT	A	EE
Weightage (%)	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

# NATURAL TOURISM PRODUCTS OF INDIA

**Course Code: TRM2104**

**Credit Units : 03**

**Course Objective:** Tourism begins with the motivation to visit attractions at destinations. The attractions may be natural or man-made (cultural). This course will help the students to give an insight about the rich natural tourist products of India.

## **Course Contents:**

### **Module – I : Natural and Wild life Tourism**

- Meaning, Concept and Scope
- The Importance of Nature in Tourism

### **Module - II: Natural Attractions**

- Brief Study of National Parks and Wildlife Sanctuaries, Bird Sanctuaries, Tiger ,Crocodile and Elephant Project Sites of India.
- Major Hill Stations, Islands, River and River Islands of India

### **Module - III: Beaches of India**

- Important of Sea Beaches of India- Mumbai, Puri, Goa, Chennai, Trivandrum and Kerela.

### **Module - IV: Adventure Sports**

- Existing Trends and Places of Importance for Land Based, Water Based and Aero Based Adventure Sports of India.

### **Module - V: Hill Stations**

- Manali, Mussoorie, Almora, Chamba, Gulmarg, Darjeeling.

## **Examination Scheme:**

<b>Components</b>	<b>V</b>	<b>H</b>	<b>CT</b>	<b>A</b>	<b>EE</b>
<b>Weightage (%)</b>	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

## **Suggested Readings:**

- Rai. H. C. Hill Tourism Planning & Development
- Ahmad, Aizaz: General Geography of India, NCERT, New Delhi
- Goh Cheong Long: An Economics Atlas of India, Oxford University.
- National Atlas of India, Govt. of India Publication, Calcutta 1997.

# RELIGIOUS TOURISM-I

**Course Code: TRM2105**

**Credit Units : 02**

**Course Objective:** The paper focuses on the religions in India which constitute the major motivation for tourists particularly the domestic tourists. The paper gives an exhaustive and selective view of the major religions in India and familiarizes the student with various popular religious destinations associated with different religions.

## **Course Contents:**

### **Module – I : Hinduism**

- Hinduism (Vedic, Bhagvatism and Shaivism Streams): Basic Features; Growth Over the Years

### **Module – II : Sikhism**

- Sikhism: Basic Features and Growth Over the Year

### **Module – III : Islam and Christianity**

- Islam and Christianity in India: Basic Features and Geographical Extent

### **Module – IV : Buddhism and Jainism**

- Buddhism and Jainism: Their Teachings and Philosophy and Growth Over the Year

### **Module – V : Religious Tourism: An Overview**

- Religious Tourism: Concept, Definition and Significance
- Trends and Pattern in Religious Tourism in India
- Problems and Prospects of Religious Tourism in India

## **Examination Scheme:**

<b>Components</b>	<b>V</b>	<b>H</b>	<b>CT</b>	<b>A</b>	<b>EE</b>
<b>Weightage (%)</b>	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

# APPLICATION OF COMPUTERS

**Course Code: TRM2106**

**Credit Units: 01**

## **Course Objective:**

The basic objective of the course is to introduce the students to the world of computers and computer technology. The students will be introduced to the basic concept of operating system, word processing, database, presentation.

## **Course Contents:**

### **Module - I: Computer Fundamentals**

Elements of a Computer system  
Characteristic of Computers  
Classification of Computers  
Limitations  
Hardware features and uses  
Generations of Computer  
Primary and Secondary Storage Concepts  
Data Entry Devices

- The Birth of Internet Marketing & Communication by Don Stan Boch

## APPLICATION OF COMPUTERS LAB

**Course Code: TRM2107**

**Credit Units: 01**

### **Course Objective:**

At the end of the semester the students would be able to-

- Create folders
- Shortcuts copy files & folders
- Deleting files and exploring windows etc.

### **Course Contents:**

#### **Module - I: Window Operations**

Creating Folders, Creating Shortcuts, Copying Files/Folders, Renaming Files/Folders, Deleting Files  
Exploring Windows  
Quick Menu

#### **Module - II: MS Word**

Creating a Document, Formatting Documents, Special Effects  
Cut, Copy, Paste.  
Table, Graphics.  
Print Options.

### **Examination Scheme:**

#### **Internal: 30 Marks**

Components	JE	LE	VV	A
Weightage (%)	05	15	05	05

#### **End-Term: 70 Marks**

Components	JE	VV	GP	LE
Weightage (%)	10	10	10	40

**Abbreviation:** JE= Journal Evaluation; LE= Lab Evaluation; VV= Viva-Voce; GP= Grooming & Punctuality

### **Suggested Reading :**

- Banerjee, S. (2006), Principles and Practice of Management, Oxford & IBH Publishing Co. Pvt. Ltd. New Delhi

# WORLD GEOGRAPHY OF TOURISM

Course Code: TRM2202

Credit Units : 03

**Course Objective:** This course has been simplified with very few case studies & broad information about the continents. It provides a thorough knowledge about the characteristics of tourist markets, attractions of destinations & the accessibility of the world with a focus on a few selected countries of world.

## Course Contents:

### Module - I: Introduction to World Geography

- Brief Introduction of Continents & Oceans.
- Map Reading.
- Greenwich Mean Time. International Date Line.
- Elements of Weather & Climate. Climatic Zones of the World.
- Natural Vegetation of the World.
- Main Tourist Activities in Different Climatic Zones.

### Module - II: Asia

- General Geographical Features: Physiographic Units, Climate, Vegetation Main Countries, Capitals & their Tourist Attractions.
- A Case Study of Japan, Singapore, Sri Lanka, Saudi Arabia.

### Module - III: Europe

- General Geographical Features; Physiography, Climate, Vegetation. Main Countries, Capitals & Their Tourist Attractions.
- A Case Study of France, United Kingdom, Switzerland, Netherlands

### Module - IV: America

- General Geographical Features of North & South Americas; Physiographic, Climate, Vegetation, Main Countries, Capitals & Their Tourist Attractions.
- A Case Study of The U.S.A. (Only 5 Destinations), Canada, Brazil, Cuba.

### Module - V: Other Countries

- General Geographical Features of Given Countries with Information about Physiographic, Climate, Vegetation & Tourist Attractions of South Africa, Egypt, Australia, New Zealand.

## Examination Scheme:

Components	V	H	CT	A	EE
Weightage (%)	05	05	15	5	70

5. ThaparRomila, A History of India

# FUNDAMENTALS OF ACCOUNTING-I

Course Code: TRM2207

Credit Units : 02

## Course Objective:

At the end of the semester the students will be able to-

- Understand basic concept of hospitality accounting system
- The meaning and need for accounting
- Distinguish between book keeping and accounting
- Record the transactions using rules of debit and credit
- Ascertain the correct bank balances
- To check the accuracy of accounting records.

## Course Contents:

### Module – I : Introduction to Accounting

Meaning & Definition, Types and Classification, Principles of Accounting, Systems of Accounting, Generally Accepted Accounting, Principles

### Module – II : Primary Books (Journal)

Meaning and Definition, Format of Journal, Rules of Debit and Credit, Opening entry, simple and compound entries, Practical

### Module – III : Subsidiary Books (Ledger)

Meaning and Uses, Formats, Posting, Practical

### Module - IV: Subsidiary Books

Need and Use

Classification

- Purchase book
- Sales book
- Purchase returns
- Sales return
- Journal proper
- Practical

### Module – V : Trial Balance

Meaning, Methods, Advantages, Limitations, Practical

## Examination Scheme:

Components	V	H	CT	A	EE
Weightage (%)	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

# TRAVEL DOCUMENTATION

**Course Code: TRM2304**

**Credit Units : 03**

**Course Objective:** To make students understand about the documentation process of travelling.

**Course Contents:**

## **Module - I: Passport**

- Passport, Requirements, Checklists, Types, Changes, Procedure, Tatkal Scheme and Fees, Passport Act and Penalties under Section 12 (1) B

## **Module - II: Visas**

- Documents for obtaining Visa of Major Tourist Destinations of World including Health Check Documents, Types of Visa, Visa Fees, , Refused or Pending Visas, Destination Departure Records.
- Difference between Visa and Passport.

## **Module - III: Travel out of India**

- Rules and Regulations about Eligibility, Quantum and Documentation Required for Foreign Exchange Management Act, Basic Travel Quota, Foreign Exchange for Business, TC, Emigration Requirements, ECNR

## **Module - IV: Passenger Ticket**

- Different Coupons, Ticketing Instruction and Conjunction Tickets, Open Tickets, E-Tickets and its Advantages, Miscellaneous Charges Order (MCO) and Prepaid Ticket Advice (PTA), The Rounding off of Currencies, Referring to Airline Time Table, TIM, OAG, PAT.

## **Module - V: Destinations**

- Tourist Visa for New Zealand and Australia Tourist Visa for Europe Tourist Visa of USA & Canada

## **Examination Scheme:**

<b>Components</b>	<b>V</b>	<b>H</b>	<b>CT</b>	<b>A</b>	<b>EE</b>
<b>Weightage (%)</b>	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

## **Suggested Readings**

- Websites of UK, USA, Canada and Australia
- Websites of Indian ministries and offices related to foreign exchange

# TOUR PACKAGING MANAGEMENT

**Course Code: TRM2305**

**Credit Units : 03**

**Course Objective:** To provide students with the ability to initiate and carry out advanced analysis and research in the field of destination development.

## **Course Contents:**

### **Module – I : Tour Package**

- Meaning, Type of Tour Package & its Components

### **Module – II : Planning of Tour Package**

- Designing and Process of Tour Package
- Factor Affecting Tour Package

### **Module – III : Designing of Different Tour Packages**

- Cultural Tourism Product: Designing, Development, Issues and Considerations
- Heritage Tourism Product: Designing, Development, Issues and Considerations

### **Module – IV : Designing of Different Tour Packages**

- Religious Tourism Product: Designing, Development, Issues and Considerations
- Medical Tourism Product: Designing, Development, Issues and Considerations

### **Module – V : Destination Management Handling Company**

- Meaning, Factor of Consideration to choose Destination Management Handling Company

## **Examination Scheme:**

<b>Components</b>	<b>V</b>	<b>H</b>	<b>CT</b>	<b>A</b>	<b>EE</b>
<b>Weightage (%)</b>	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

## **Suggested Readings:**

# **AUTOMATION IN TRAVEL AND TOURISM**

**Course Code: TRM2306**

**Credit Units : 02**

**Course Objective:** To make students familiar with the different CRS/GDS systems.

**Course Contents:**

## **Module – I : Automation in the Tourism Industry**

- An Introduction of CRS/GDS
- Importance of Information Technology in Tourism
- Automation in the Hotel, Airlines and Travel Business

## **Module – II : CRS/GDS**

- Use and Practices of Galileo / Amadeus

**Examination Scheme:**

**Internal: 30 Marks**

<b>Components</b>	<b>JE</b>	<b>LE</b>	<b>VV</b>	<b>A</b>
<b>Weightage (%)</b>	05	15	05	05

**End-Term: 70 Marks**

<b>Components</b>	<b>JE</b>	<b>VV</b>	<b>GP</b>	<b>LE</b>
<b>Weightage (%)</b>	05	5	10	50

**Abbreviation:** JE= Journal Evaluation; LE= Lab Evaluation; VV= Viva-Voce; GP= Grooming & Punctuality

**Suggested Readings:**

- Lucas Jr., H. C. ( 2005) Information Technology For Management McGraw Hill.
- Burch, J. and Grudnitski G. (1989). Information Systems: Theory and Practice. 5th ed., John Wiley, New York.
- David, V. (1992). Foundations of Business Systems, Dryden Press, Fort Worth.

## FUNDAMENTALS OF ACCOUNTING-II

Course Code: TRM2307

Credit Units : 02

### Course Objective:

At the end of the semester students will be able to

- The concept of double entry book keeping system
- Reconcile the bank statement
- Check the accuracy of accounts
- Prepare trial balance / P&L A/c and balance sheet concept
- The hospitality revenue and non revenue producing departmental accounting system
- The for casting of expense and revenue
- The concept of budgeting
- The hotel departmental accounting system.

### Course Contents:

#### Module - I

Cash Book, Meaning, Advantages, Simple, Double and Three Column Petty Cash book with imprest system (simple and tabular forms), Practical

#### Module - II: Final Accounts

Meaning, Procedure for preparation of final accounts , Difference between Trading Accounts, Profit & Loss Accounts & Balance Sheet

#### Module - III: Adjustments

Closing Stock, Prepaid expenses, Outstanding expenses, Depreciation

#### Module - IV: Capital and Revenue Expenditure

Meaning, Definition of Capital and Revenue Expenditure,

#### Module V: Depreciation

Meaning of Depreciation, Need and Causes, Straight line method, Diminishing Balance method, Practical

#### Module VI: Ratio Analysis

##### Importance of Ratios

- Liquidity Ratios, Current ratio, Quick ratio, **Solvency Ratios**, Debt equity ratio, Interest coverage ratio

**Activity Ratio**, Capital turnover ratio, Stock turnover ratio, Debtors turnover ratio, **Profitability Ratios**

- Gross profit ratio, Net profit ratio.

### Examination Scheme:

Components	V	H	CT	A	EE
Weightage (%)	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

**Suggested Readings:**

- Element of Hotel Accounting by Dr. J.M Negi, HKS International

- Fundamentals of Hotel Accounting by G.S. Rawat& Dr. J.M Negi.

## Syllabus – Fourth Semester

### TOURISM PLANNING AND POLICY

**Course Code:** TRM2401

**Credit Units : 03**

**Course Objective:** To develop an understanding of the basic concepts of tourism planning for public and private sector community and regional tourism development

**Course Contents:**

**Module – I : Introduction to Tourism Planning**

- Evolution of Tourism planning, Importance, Planning Process, Planning Approaches, Tourism Planning.

**Module – II : Stakeholder Participation**

- Concept, Need, Objective, Institutional Framework of Public Tourism Policy.
- The Role of Government, Public and Private Sector in Formulation of Tourism Policy.
- Policy Making Bodies and its Process at National Levels.

**Module – III : Outline of Tourism Policy**

- L.K. Jha Committee - 1963, National Tourism Policy - 1982,
- National Committee Report - 2002, National Action Plan on Tourism – 1992.
- The Latest Policy Document on Tourism.

**Module – IV : Type of Tourism Planning**

- International, National, Regional, State and Local Level.
- Agents and Typologies of Tourism Development.

**Module – V : International Agreements**

- Chicago Convention, Warsaw Convention, Open Sky Policy, Bermuda Convention, Euro Agreement, Schengen Agreement

**Examination Scheme:**

Components	V	H	CT	A	EE
Weightage (%)	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

**Suggested Readings:**

- Indian Tourism Beyond the Millennium - Bezbaruah M.P. (New Delhi)
- Tourism: Past Present & Future : Burkart A.J. and Medlik (London, Heinemann)
- Essays on Tourism : Chib, SomNath (New Delhi, Cross Section Publication)
- Travel Industry : Gee, Chunk Y., James C. & Dexter J.L. Choy (New York, Van Nostrand Reinhold)
- Tourism Planning : Gunn. Clare A. (New York, Taylor & Francis)
- Tourism Dimensions : S.P. Tiwari (New Delhi)
- Tourism : A Community Approach - Murphy, Peter E. (New York, Methuen)
- Tourism Planning : An integrated and Sustainable Approach - Inskeep E.
- National & Regional Tourism Planning : Inskeep E. (London, Routledge)
- Ecotourism: A case guide for planners and managers - Ecotourism Society
- Report of Adhoc Committee on Tourism - 1963
- National Tourism Policy - 1982
- National Committee Report - 2002
- National Action - 1992

- Draft of Tourism Policy – 1997
- Young G. Tourism: Blessing or Blight Penguin Book 1973.
- Cheechi and Co. The Future of Tourism in far East 1961.
- Copen Evic. 'Towards a Sociology of International Tourism, Social Research 39.1 91972) 164-82.
- Cleverdon Robert: The Economic and Social Impact of International Tourism in Developing Countries (London: The Economic Intelligence Unit Ltd. 1979)

# CARGO MANAGEMENT

**Course Code: TRM2402**

**Credit Units : 03**

**Course Objective:** The objective of this subject is to provide the participants with a good knowledge of airfreight operations, services and management that can support them in various business functions and roles such as operations, customer service, account management and sales

## **Course Contents:**

### **Module – I : Introduction to Air Cargo**

- Aviation and Airline Terminology, IATA Areas, Country Currency, Airlines /Aircraft Layout , Different Types of Aircraft

### **Module – II : Aircraft Manufacturers**

- Aircraft Manufacturers, ULD, International Air Routes, Airports Codes, Consortium, Hub & Spoke Process Flow

### **Module – III : General Process**

- Advices, Booking , SLI, Labeling , Volume/ Weight Ratio, Shipment Planning , TACT, Air Cargo Rates and Charges, Cargo Operations, Cargo Operations Process, Customs Clearance

### **Module – IV : Air Freight**

- Air Freight Forwarding: Air freight Exports and Imports, Special Cargoes , Consolidation

### **Module – V : Documentation**

- Air Way Bill (AWB), Communication, Handling COD Shipments, POD, Conditions of Contract, Dangerous (DGR) or Hazardous Goods

## **Examination Scheme:**

<b>Components</b>	<b>V</b>	<b>H</b>	<b>CT</b>	<b>A</b>	<b>EE</b>
<b>Weightage (%)</b>	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

## **Suggested Readings:**

- Air transport logistics by Simon Taylor (Hampton)
- Air cargo distributions: a management analysis of its economic and marketing benefits / [by] Paul ackson and William Brackenridge (Gower Press)
- Air freight: operations, marketing and economics / (by) Peter S. Smith ( Faber)
- 4th Party Cyber Logistics for Air Cargo by Sung Chi-Chu (Boston : Kluwer Academic Publishers)
- Accelerated Logistics by Mark Wang (Santa Monica CA)
- Airports; some elements of designs and future development-John Walter wood
- Fundamental of air transport management by P.S.Senguttavan.
- Oxford ATLAS-OXFORD PUBLISHING
- Aviation century: wings of change- A global survey-Ratandeepsingh-jain book

## ITINERARY DESIGNING MANAGEMENT

**Course Code: TRM2403**

**Credit Units : 03**

**Course Objective:** To make students understand about different tour packages and itinerary.

**Course Contents:**

### **Module – I : Itinerary Planning**

- Itinerary and its Importance
- Types of Itineraries and Component of Itinerary
- Factors to keep in Mind while Designing an Itinerary
- Type of Journey

### **Module – II : Itinerary for Inbound Tourist**

- Itinerary on Buddhist Circuit, Itinerary on Puri-Bhubaneswar-Konark

### **Module – III : Itinerary for Inbound Tourist**

- Itineraries for Inbound and Domestic Tourists:- Golden Triangle, Rajasthan Tour, Kerala Tour

### **Module – IV : Itinerary for Outbound Tourist**

- Popular Outbound Itineraries of Singapore, Malaysia, Thailand , Europe Tour, Australia Tour

### **Examination Scheme:**

<b>Components</b>	<b>V</b>	<b>H</b>	<b>CT</b>	<b>A</b>	<b>EE</b>
<b>Weightage (%)</b>	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

### **Suggested Readings:**

- Travel Agency and Tour Operation, Concepts and Principles - J.M.S. Negi
- Professional Travel Agency Management - Chunk, James, Dexter &Boberg
- The Business of Travel Agency Operations and Management - D.L. Foster
- Travel Agency Management-An Introductory Text, Anmol Publication New Delhi.
- Tourist Guide and Tour Operations, Kanishka Publication, New Delhi.

# AIRLINE OPERATION MANAGEMENT

**Course Code: TRM2404**

**Credit Units : 03**

**Course Objective:** To make students familiarize with the travel modes and documents.

**Course Contents:**

## **Module – I : Management of Airport**

- Airport Codes, Airline Codes, Phonetic Alphabet, Airport Lounges, How airports Work?, Baggage Handling, Airport Security

## **Module – II : Introduction to Journey and Tickets**

- Types of Journeys (OW, CT, RT, OJ, RTW).
- Passenger Ticket: Different Coupons, Ticketing Instruction and Conjunction Tickets, Open Tickets, E-Tickets and Its Advantages
- Miscellaneous Charges Order (MCO) and Prepaid Ticket Advice (PTA), The Rounding off of Currencies
- Referring to Airline Time Table, TIM, OAG, PAT.

## **Module – III : Management of Airlines**

- Types of Airlines, Airlines Personnel and Revenue Earning, Airport Management, Study of Aircraft Parts, The Aircraft Turnaround, The Control Tower, Airport Facilities and Special Passengers, Airport Access.

## **Module – IV : Airport Formalities**

- Check in Facilities, Landing Facilities for Departing Passengers, In-Flight Services, Cabin Component, Audio and Video Projection Equipment, Emergency Equipment for Disembarkation, In-Flight Entertainment, Classes of Service with more Comfort.

## **Module – V : Case Study Discussions**

- Jet Airways, Kingfisher, Indian Airlines
- British Airways, Fly Emirates, Singapore Airlines

## **Examination Scheme:**

<b>Components</b>	<b>V</b>	<b>H</b>	<b>CT</b>	<b>A</b>	<b>EE</b>
<b>Weightage (%)</b>	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

## **Suggested Readings:**

- JagmohanNegi: Travel Agency & Tour Operation – Concepts and Principles. (Kanishka Pub, New Delhi)
- JagmohanNegi: Air Travel and Fare Construction. - Kanishka Pub, New Delhi 2004
- Dennis. L. Foster: The Business of Travel Agency Operations and Administration (Mc. Graw Hill)
- Study Kit for IATA/UFTAA - Foundation Course: -
  - Module – I – Introduction to tourism
  - Module – II – Travel Geography
  - Module – III – Air Transport
  - Module – IV – Air Fares & Ticketing

# **MANAGEMENT INFORMATION SYSTEM**

**Course Code: TRM2405**

**Credit Units : 01**

## **Course Objective:**

At the end of the semester the students will develop a clear concept on –

- Management Information System (MIS)
- Role of Hotel Information System
- Various interfaces used in Hospitality Industry

## **Module – I : Management Information System (MIS)**

- Concepts, evaluation & meaning
- MIS Designs and functions
- Managing multi processor environments.
- MIS Security issues
- MIS performance evaluation

## **Module – II : Hotel Information System**

- The Concept
- Software Modules
  - Reservation
  - Guest Accounting
  - Room Management
  - Point of Sales
  - General Management

## **Module – III : Computer Based Reservation System**

- Global Distribution System
- Inter sell agencies
- Central Reservation Systems(CRS)
- Affiliate and Non Affiliate Systems
- Property Level Reservation Systems
  - Reservation Inquiry
  - Determination of Availability
  - Creation of Reservation Record
  - Maintenance of Reservation Records
- Generation of reports.
- New Developments Reservation through the Internet

## **Module – IV : Guest Accounting Module**

- Types of Accounts
- Posting entries to Accounts
- Night audit routine
- Account settlement
- Generation of reports

## **Module – V : Property Management System Interfaces**

- Point of sale Systems ( POS)
- Cash Accounting Systems (CAS)
- CAS / PMS Advantages and concerns.
- Electronic Locking Systems.
- Energy Management Systems.
- Auxiliary Guest Services

- Guest Operated Devices in room Vending Systems
- Guest Information Systems

#### **Module – VI : Point of Sale - Applications**

- POS order - Entry units
- Key Boards and Monitors
- Touch Screen Terminals
- Immediate Character Recognition (ICR) Terminal.
- Wireless Terminals
- POSD Printers.
- Guest check Printers
- Receipt Printers
- Workstation Printers
- Consolidated reports

#### **Module – VII : Accounting Applications**

- Account Receivable Module
- Account Payable Module
- Payroll Module
- Inventory Module
- Purchasing Module
- Financial Reporting Module

#### **Module – VIII : Selecting and Implementing Computer Systems**

- Analyzing Current Information Needs
- Collection Information of Computer Systems
- Establishing System Requirements
- Proposals from Vendors
- Contract Negotiations
- Installation Factors

#### **Examination Scheme:**

<b>Components</b>	<b>V</b>	<b>H</b>	<b>CT</b>	<b>A</b>	<b>EE</b>
<b>Weightage (%)</b>	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

#### **Suggested Reading :**

- Hospitality Management: Current Trends & Practices by Dr. JM Negi, Amity University Press, New Delhi
- Management Information System James A O' Brien
- Management Information System 2nd Ed Gordon B Davis

# PRINCIPLES OF MANAGEMENT

**Course Code: TRM2406**

**Credit Units : 01**

**Course Objective:** To make students understand management concepts and their application in the field of tourism industry.

## **Course Contents:**

### **Module – I : Introduction to Management**

- Concept, Nature, Functions, Process, Traits of a Successful Manager and Managerial Role.
- Management and Society: Business Ethics and Social Responsibilities

### **Module – II : Planning**

- Nature, Purpose, Types and Process of Planning.

### **Module – III : Organizing**

- Concept of Organizing and Organization. Line & Staff, Span of Control.
- Delegation, Decentralization Organization Structure.

### **Module – IV : Directing**

- Communication-Process and Types of Communication, Barriers and Principles of Effective Communication
- Motivation: Meaning, Theories, Maslow and Herzberg, Leadership
- Co-Ordination: Meaning, Definition, Principles of Co-Ordination, Techniques of Effective Co-Ordination.

### **Module – V : Leadership**

- Concept, Qualities of a Successful Leader: Factors Influencing Performance of Leaders. Styles of Leadership, Management Grid.
- Controlling: Process. Methods and Techniques

## **Examination Scheme:**

<b>Components</b>	<b>V</b>	<b>H</b>	<b>CT</b>	<b>A</b>	<b>EE</b>
<b>Weightage (%)</b>	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

## **Suggested Readings:**

- Stoner. Jeen (2005), Management. Prentice Hall, New Delhi
- R.K. Singla,(2007) Business Management, V.K. publication, new Delhi.
- D.K.Goyal,(2008), Business Management, Arya publication
- Prasad. L.M.(2007), Principles and Practice of Management, Sultan Chand and Sons, New Delhi
- Banerjee, S. (2006), Principles and Practice of Management, Oxford & IBH Publishing Co. Pvt. Ltd. New Delhi

# **ECONOMICS OF TOURISM**

**Course Code: TRM2407**

**Credit Units : 01**

## **Course Objective:**

At the end of the semester students would be able to:-

It intends to help the students in understanding the nature of Indian Economy in general & economic planning for tourism & hospitality in general.

It will further help them to understand the basic mechanism of pricing of products in different sector of economy with a special focus on product formulation, packaging & pricing of tourist & hospitality product.

## **Course Contents:**

### **Module - I**

- Meaning of Economics

### **Module - II**

- Relevance of Economics in Hospitality and Tourism Industry

### **Module - III**

- Meaning of Demand

### **Module - IV**

- Demand Curve Analysis

### **Module V**

- Factors Affecting Demand

### **Module VI**

- Concept of inflation and types of inflation

### **Module VII**

- Demand and methods of Forecasting

### **Module VIII**

- GDP (Gross Domestic Product) & GNP (Gross National Product)

### **Module - IX**

- Fiscal Policy and its Feature and Mechanism

### **Module X**

- Monetary Policy and its functions

### **Module XI**

- Economic Growth and Economic Development, Growth Patterns of Indian Economy

### **Module XII**

- Market Structure and Hospitality and Tourism Industry

### **Module XIII**

- A small capsule on WTO and its implications on Hospitality and Tourism Industry has also been included.

**Examination Scheme:**

Components	V	H	CT	A	EE
Weightage (%)	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

**Suggested Reading :****Text:**

- Tourism Economics by Mathieson Alistor& Wall Gerllliej, Physical & Social Impacts.
- The Economics, Travel & Tourism by Anil Andirous, LengmanCheshues, Melbourne.
- International Travel & Tourism- Principles & Concepts by Dr. JM Negi, S. Chand & Co, New Delhi

**References:**

- Managerial Economics by Mote Lal& Gupta, Tata McGraw Hill, New Delhi
- Fundamentals of Economic Balances
- Indian Economy by AN Aggarwal
- Indian Economy by Dutta&Sundram
- Indian Economy by Saradesai.

## Syllabus - Fifth Semester

### INDUSTRIAL TRAINING PROJECT & PRACTICUM

Course Code: TRM2535

Credit Units: 20

#### Course Objective:

At the end of the industrial training the student would be able to:

- (i) understand and explain the organization structure of a Travel Agency / Tour Operator
- (ii) prepare job descriptions of various job titles in the organisation
- (iii) understand various procedures & functions followed for:-
  1. Reservations
  2. Information
  3. Booking
  4. Ticketing
  5. Bills and Cash
  6. Guest Relations
  7. Auditing
- (iv) maintain various records & registers and understand their uses.

#### On completion of the project the student will be required to submit the following:

**Project File or Industrial workflow log book** - The File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation.

In general, the File should be comprehensive and include:

- A short account of the activities that were undertaken as part of the training;
- A statement about the extent to which the training has achieved its stated goals.
- A statement about the outcomes of the learning, evaluation and dissemination processes engaged in as part of the training;
- Any activities planned but not yet completed as part of the training, or as a future initiative directly resulting from the project;
- Any problems that have arisen that may be useful to document for future reference.

#### Training Report

The report should be submitted in duplicate (2 copies) spiral bound and a CD and should contain the following components:

- **Title or Cover Page**

The title page should contain the following information: Department Name; Student's Name; Course; Year; Supervisor's Name.

- **Acknowledgements**

Acknowledgment to any advisory received in the course of work may be given.

- **Table of Contents**

Titles and subtitles are to correspond exactly with those in the text.

- **Introduction**

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

- **Materials and Methods**

This section should aim at experimental designs, materials used. Methodology should be mentioned in details including modifications if any.

- **Suggestions**

In writing these section, emphasis should be given on what has been performed and achieved in the course of the work and any ideas/suggestions they feel will can be implemented, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis.

- **Conclusion**

A conclusion should be the final section in which the outcome of the work is mentioned briefly.

- **Appendices**

The Appendix contains material which is of interest to the reader ,and may include any forms, formats and any problem that have arisen that may be useful to document for future reference.

- **Performance Appraisal & Completion Certificate** duly signed and stamped

**Examination Scheme:**

Appraisal Report:	50
Log book + Attendance + Appraisal	20
Presentation & Viva Voce:	30
<b>Total:</b>	<b>100</b>

## Syllabus – Sixth Semester

### ECO-TOURISM AND SUSTAINABLE TOURISM

**Course Code:** TRM2601

**Credit Units : 03**

**Course Objective:** To explore the interrelationships between the environment & its resource for sustainable tourism planning and development.

**Course Contents:**

**Module – I : Eco Tourism**

- Eco Tourism and Development: Community Awareness and Participation Contribution of Eco-Tourism to Environmental Conservation: Socio-Cultural Conservation

**Module – II : Benefits and Impacts**

- Mass and Alternative Tourism, Potential Benefits from Ecotourism.
- Environmental Impacts of Tourism
- Difference Between Mass and Green Tourism

**Module – III : Eco-Tourism Planning and development strategies**

- Eco-Tourism Strategies with Special Reference to Environmental Protection (Environmental Impact Analysis)

**Module – IV : Sustainable Tourism**

- Definition of, Benefits and Importance of Sustainable Tourism, Agenda 21, Definition and Bodies Promoting Sustainable Tourism, Principles of Sustainable Tourism, Process to set up Sustainable Development at Tourist Destination.

**Module – V : Carrying Capacity**

- Types of Carrying Capacity: Physical, Biological, Social Carrying Capacity, Importance of Carrying Capacity, Effect of Guest Population on the Carrying Capacity.

**Examination Scheme:**

Components	V	H	CT	A	EE
Weightage (%)	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

**Suggested Readings:**

- Kandari O. P., Chandra Ashish : Tourism Biodiversity & Sustainable Development, Isha Books, Delhi.

# TOURIST BEHAVIOUR

Course Code: TRM2602

Credit Units : 03

## Module – I : Understanding Travel & Tourism Behavior

- Characteristics affecting consumer behavior - cultural Factors, Social Factors, Personal Factors, Psychological Factors, Group Factors
- Models of consumer behavior - Economic Man, Passive Men, Cognitive Man, Emotional Man,
- Black Box Model
- High Commitment & Low Commitment Consumer Behavior.

## Module – II : Examination of tourist forms & types & there characteristics

- Activities, Interests & Opinions of Tourism Market Segments & Their Buying Decision Behavior.
- Buyer Decision Process - Need Recognition, Information Search, Evaluation of Alternatives, Purchase Decision
- Post Purchase Behaviour.

## Module – III : Tourist as an individual

- Tourist Behaviour, Tourist Perception, Learning and Attitudes Concepts, Process, Important Theories and Application of The Concepts to Tourist Behaviour.

## Module – IV : Impact of Tourism in Society

- Specific consideration of Host Guest-Interaction & Their Impact On Physical, Social & Cultural Environments, Cross-Cultural Impacts.
- Management Implication- Consideration of the Implications for Tourism Managements, Communication, Promotion, Tourist Guide Interactions.

## Examination Scheme:

Components	V	H	CT	A	EE
Weightage (%)	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

## Suggested Reading :

# MANAGERIAL ACCOUNTING

Course Code: TRM2605

Credit Units : 01

## Course Objective:

At the end of the semester the students would be able to-

- Understand the concept of managerial accounting
- Explain contents of income statement, balance sheet and departmental income statements and expense statement and solve practical problem
- Understand objectives, characteristics and implementations of internal control
- Distinguish between internal and statutory audit and views of internal audit

## Course Contents:

### Module – I : Managerial Accounting

- Meaning of managerial accounting
- Functions of managerial accounting
- Utility of managerial accounting

### Module – II : Uniform System of Accounts for Hotels

- Introduction to Uniform system of accounts
- Contents of the Income Statement
- Practical Problems
- Contents of the Balance Sheet (under uniform system)
- Practical Problem
- Departmental Income Statements and Expense Statement (Schedules 1 to 16)
- Practical Problem

### Module – III : Internal Control

- Definition and objectives of Internal Control
- Characteristics of Internal Control
- Implementation and Review of Internal Control

### Module – IV : Internal Audit and Statutory Audit

- An introduction to Internal and Statutory Audit
- Distinction between Internal Audit and Statutory Audit
- Implementation and Review of Internal Audit

## Examination Scheme:

Components	V	H	CT	A	EE
Weightage (%)	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

## Suggested Readings:

- Financial & Cost Control Techniques in Hotel & Catering Industry by JM Negi, Metropolitan, New Delhi
- Elements of Hotel Accountancy by Dr. JM Negi, Aman Publications New Delhi
- Hotel Management – Accounting & Control by Dr. JagmohanNegi, Himalaya Publishing House, New Delhi
- Basic Financial Accounting by Raymond Schmidgall
- Accounting for Hospitality Management by Andrew N Valdamir
- Fundamentals of Accounting by Raymond S Kolt
- An introduction to Accountancy by S N Maheshwari

# **HOSPITALITY & TOURISM MARKETING**

**Course Code: TRM2606**

**Credit Units : 01**

## **Course Objective:**

At the end of the semester the students will be able to understand the concept of –

- Marketing Hospitality Tourism Products
- Various tools of marketing
- Service Marketing Mix

## **Module – I : Introduction to Marketing**

- Marketing Concepts
- Functions of Marketing
- Importance of Marketing
- Difference between Marketing and Selling
- Related Application of Concept in Hotel Service Industry

## **Module – II : Marketing Mix – 7P's of Marketing**

- Product – Product Management, Development, Product Lifecycle and Branding
- Pricing – Factors Influencing Pricing, Methods of Price Fixation and Strategies
- Promotion – Promotion Mix and Tools,
- People – Encounters, Managing Tourism Experience Through People and Important Practices to Manage People
- Process – Elements, Managing Process, Developments in Service Processes in Tourism,
- Physical Evidence – Concept, Role & Components

## **Module – III : Market Segmentation and Targeting**

- Concept of Market Segmentation
- Procedure and Importance of Market Segmentation
- Market Targeting Process
- Product Positioning

## **Module – IV : Marketing of Tourism & Hospitality Products**

- The Tourism Destination
- Marketing Hotels
- Investment in Tourist Attractions
- Identifying Target Markets
- Classification of Visitor Segments
- Monitoring the Tourist Markets
- Organizing and Managing Tourism Marketing
- Marketing to Business and Leisure Travellers
- Marketing to of Hotels to Travel Agents

## **Module – V : Destination Marketing**

- Country, Regions, Cities
- Events and Activities
- Leisure Activities
- Accommodation Marketing
- Marketing Local Foods

**Module – VI : Designing of Marketing Mix for Specific situations**

- Familiarization Tours
- Tourism Fairs
- During Off Season / On Season – For Hotels

**Examination Scheme:**

Components	V	H	CT	A	EE
Weightage (%)	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

**Suggested Readings:**

- Case studies in marketing :the Indian Context - R. Srinivason
- Event Marketing & Management - Sanjaya Singh Gaur, Sanjay V Saggere,
- Hospitality Marketing - Phillip Kotler
- Marketing Hospitality: Sales & Marketing for Hotels Motels & Resorts - Dennis L. Foster TATA McGrawhill
- Customer Service: Career Success Through Customer Loyalty, 5/e - Timm
- Hospitality Marketing in E-Commerce Age - Wearne
- Hospitality Marketing Management, 5th Ed - Robert D. Reid, David e Bojanic
- Hotel & Food Service Marketing - Francis ButtleCassell education ltd.
- Hotel Sales & Operation - Ahmed IsmailDelmar pub.
- Marketing for Tourism, 4/e - Holloway
- Marketing Hotel & Restaurant Into The 90's - Melvyn Grefne
- Marketing in Hospitality & Tourism - Richard Teare...[et al.] Cassell education ltd.

## DMC INTEGRATED PROJECT

Course Code: TRM2632

Credit Units: 12

### Course Objective:

To plan a Tourism Destination with varied facilities and attractions

### Modus Operandi:

➤ **Formation of Team of 5 members**

Team Designates are the following:

- Project Head
- Finance Head
- HR Head
- Marketing Head
- Operations Head

The planning process is shared by the team members according to their respective portfolio.

➤ **Presentation & Dissertation**

The Team should present the Project Plan before the selected Board. Dissertation led by the Team Leader and supported by the rest of the team members.

➤ **Open to Question-Answer Session**

The Team will be asked Questions on the Project planned by the Board which should be justified by relevant answers.

➤ **On completion of the project the student will be required to submit the following:**

- Project Report
- Presentation

### Examination Scheme:

Project Plan:	50
Presentation	20
Viva Voce:	30
<b>Total:</b>	<b>100</b>

## Syllabus – Seventh Semester

### FACILITY MANAGEMENT PLANNING & DESIGN

**Course Code: TRM2701**

**Credit Units : 01**

**Course Objective:**

At the end of the semester the students will be able to-

- Explain the Procedures for Planning, Designing & Managing of Hospitality project, its architectural aspects of facility planning, layout & design, and also develop concepts & methods of energy conservation.,.

**Course Contents:**

**Module – I : Design Hospitality Unit**

Design Consideration, Attractive Appearance, Efficient Plan, Good Location, Suitable Material, Good Workmanship, Sound financing, Competent Management

**Module – II : Project Management**

Introduction of Network analysis, Basic rules and procedures for Network analysis, C.P.M. and PERT, Comparison of CPM and PERT, Classroom exercises, Network crashing determining crash cost, normal cost.

**Module – III : Facilities Planning**

The Systematic Layout Planning Pattern (SLP) for hotel, Planning Consideration, Flow Process and Flow Diagram Procedure for determining space considering ,the guiding factors for the guest room / public facilities, support facilities and services, administration,

**Module – IV : Architectural Consideration**

Difference between carpet area, plinth area and super built area, their relationships, reading of blueprint (plumbing, electrical, AC, ventilation, FSI, FAR, public areas), Approximate cost of construction estimation Approximate operating areas in various types budget wise, Approximate requirement and estimation of water / electrical load gas, ventilation.

**Module – V : Operational Area requirements**

Layout and design, Furniture, Equipment, Installation & functioning

**Module – VII : Car Parking**

Calculation of car park area for different types of hotels

**Module – VIII : Energy Conservation**

Necessity for energy conservation, Methods of conserving energy in different area of operation of a hotel, Developing and implementing energy conservation program for a hotel

**Examination Scheme:**

Components	V	H	CT	A	EE
Weightage (%)	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

**Suggested Readings:**

- Systematic Layout Planning by Richard Muther, Cahnners Books Division of Sahnners Publishing Company Inc. 9 Franklin Street, USA
- Food Service Planning- Layout Equipment by Lendal H Kotschevar&Margrat E Terrell
- Management Operations & Research by N. Satyanarayan&Latika Raman, Himalaya Publishing House.
- Hospitality Facilities Management and Design by David M Stipanuk

# TOURISM & ENVIRONMENTAL LAW

Course Code: TRM2702

Credit Units : 03

## Module – I : Understanding Law in Tourism Industry

Company - meaning, definition, types, formation and incorporation under companies act, 1956.  
Contract act - meaning and essentials of a valid contract, breach and termination of contract.

## Module – II : Hotel & Accommodation

Laws relating to Accommodation

## Module – III : Travel Agents & Tour Operators

Tourism Packages & Legal Issues  
Consumer Protection Act - meaning and its relevance in travel and tourism business.  
MRTPC - applicability and significance in tourism and travel related business.  
Travel Insurance and consumer protection act, International consumer protection acts in tourism

## Module – IV : Common Carriers – Air, Land & Sea

Air Law- Law and regulations related to airlines and airways, Laws relating to passenger safety, convenience and compensation during air travel, Baggage concessions for tourist, Compensation for lost and damaged baggage. Insurance for tourists and their baggage. DGCA formalities for business and recreational flying in India  
Laws related to surface transport.  
Law of Sea - concept, bill of lading and foreign travels

## Module – V : Tourist Documents

Laws and legislation relating to tourist entry, stay and departure.  
Passport Act & Visa Extension.  
Procedure and requirement for procuring various travel documents (passport, visa, Health Certificates & Insurance) with relation to inbound and outbound tourists.  
Laws relating to currency exchange, FEMA.

## Module – VI : Foreigners Act

Foreigners Act 1946. Special permits to restricted areas for foreign tourist in India, restricted area in India for foreign tourists and related authorities at these places to obtain permits, permits related to various monasteries and wild life areas and their procedure.

## Module – VII : Adventure Tour Operation

Law designed for Adventure Tour operation, special permits for Rafting, Paragliding, Heli-Skiing & Angling. Peak booking formalities, IMF rules for mountain expeditions, cancellation of permits and bookings.

## Module – VIII : Wild Life, Heritage and Environment

Wild Life Protection Act - Laws related to Environment and Wild Life.  
Antiquities & Art Treasures Act – Laws related to Antiquities & Art Treasures  
The Ancient Monument & Archaeological Sites & Remains Act  
Laws relating to protection, presentation and conservation of heritage and environment.  
Environment Protection Act. Air, Water & Noise Pollution Act.

## Examination Scheme:

Components	V	H	CT	A	EE
Weightage (%)	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

Suggested Reading :

- Sachindra Shekhar Bishwas - Protecting The Cultural Heritage

# MICE MANAGEMENT

**Course Code: TRM2703**

**Credit Units : 02**

## **Course Objective:**

At the end of the semester the students will be able to Explain & understand the concept of Event Management, its Design & Feasibility, Marketing of Event, Financial Management, Risk Management, Planning, Operations & Logistics, Control& Evaluation

## **Module - I : Introduction to Concept of MICE**

- Types of Events- meetings, incentives, conference/conventions, and exhibitions
- Size of Events
- The Event Team
- Code of Ethics
- The impact of conventions on local and national communities.

## **Module - II : Concept and Design**

- Developing The Concept
- Analysing The Concept
- Designing The Event
- Logistics of The Concept

## **Module – III : Feasibility**

- Keys to Success
- The SWOT Analysis

## **Module - IV : Legal Compliance**

- Relevant Legislation
- Official Bodies Involved
- Contracts

## **Module – V : Marketing of Event**

- Nature of Event Marketing
- Process of Event Marketing
- The Marketing Mix
- Sponsorship

## **Module – VI : Promotion**

- Image / Branding
- Advertising
- Publicity
- Public Relations

## **Module – VII : Financial Management**

- The Budget
- Break-Even Point & Cash Flow Analysis
- Profit & Loss Statement
- Balance Sheet
- Financial Control Systems

## **Module – VIII : Risk Management**

- Process of Risk Management
- Incident Reporting

- Emergency Response Plans
- Standards for Risk Management

#### **Module – IX : Planning**

- Establish The Aims of The Event & Objectives
- Prepare an Event Proposal
- Planning Tools

#### **Module – X : Protocol**

- Order of Precedence; Titles; Styles of Address; Dress Codes
- Protocol for Speakers
- Seating Plans
- Religious & Cultural Protocol
- Rules of Flag Flying

#### **Module – XI : Staging The Event**

- Choosing The Event Site
- Developing The Theme
- Providing Services
- Managing The Environment

#### **Module – XII : Staffing**

- Recruitment & Selection; Rosters
- Training; Briefing Staff
- Managing Volunteers

#### **Module – XIII : Operations & Logistics**

- Logistics
- Policies
- Procedures
- Performance Standards
- Functional Areas

**Module – XIV : Crowd Management & Evacuation**

- The Crowd Management Plan
- Emergency Planning
- Implementing Emergency Procedures

**Module – XV : Control & Evaluation**

- Monitoring & Control Systems
- Operational Monitoring & Control
- Evaluation

**Examination Scheme:**

<b>Components</b>	<b>V</b>	<b>H</b>	<b>CT</b>	<b>A</b>	<b>EE</b>
<b>Weightage (%)</b>	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

**Suggested Reading :**

- Behind The Scenes at Special Events - by Lena Malouf
- Global Meetings & Exhibitions, - by Krugman, John Wiley & Sons
- How to Plan Exhibitions & Conferences From A to Z, Sam Black

# TOURISM TECHNOLOGY & MEDIA

Course Code: TRM2705

Credit Units : 03

## Module – I : The application of technology in tourism

Introduction – Concept – Development – Benefit to Service Providers & Tourists – Future Prospect

## Module – II : Tourism Related Software & Internet links

- Brief idea about Software related to booking of Hotel, Ticket for Airlines, Train, Road Transport, Ocean liners
- Tourism related IT innovations such as Virtual Globetrotting, Virtual Adventure Sports, tourism related Apps, Digital Guide, Digital Map etc.
- Digital Marketing and Travel Distribution Emerging Trends
- Creative on-line Destination and Business Approaches and Successes
- On-line Consumer Reviews and the Impact on Operators and Destinations
- On-line data sources to enhance business success like PATAmPOWER [<http://mpower.pata.org/>]

## Module – III : Digital gadgets - replace the need for human tour guides

- Mobile Phone
- Digital Audio Guide
- New Innovations

## Module – IV : Role of media in tourism

Awareness generation through powerful effects of media communications in line of -

- Social Interaction and cultural and educational aspects of our life
- peace, security and sustainable development
- social, cultural, economic, political and environmental benefits
- developing eco tourism

## Module – V : Dependency of Tourism on media reporting

## Module – VI : Social Media and Simple Acts of Kindness

### Examination Scheme:

Components	V	H	CT	A	EE
Weightage (%)	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

# Syllabus – Eighth Semester

## BASICS OF REVENUE MANAGEMENT

**Course Code: TRM2801**

**Credit Units : 02**

**Course Objective:**

At the end of the semester the students will be able to Explain & understand the concept of Revenue Management, necessity of its implementation in Hospitality Industry

1. Concept of Revenue Management
2. Basic Terms
3. Core Concepts of Revenue Management
4. Strategic Planning
  - 4.1 Supply & Demand Ratio
  - 4.2 Cost & Pricing
  - 4.3 Value Pricing
  - 4.4 Differential Pricing
5. Revenue Maximization vs. Optimization
6. Forecasting Demand
7. Inventory and Price Management
8. Overbooking as a Strategy
9. Managing Distribution Channels
10. Ethical aspects of Revenue Management

**Examination Scheme:**

Components	V	H	CT	A	EE
Weightage (%)	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

**Suggested Reading :**

An Introduction to Revenue Management for the Hospitality Industry: Principles and Practices for the Real World, by Tranter

# RESEARCH METHODOLOGY

**Course Code: TRM2802**

**Credit Units : 02**

## **Course Objective:**

Research methodology will be taught in the theory class to prepare students how to approach the subject of research project in the semester. To deal with surging information data regarding the various aspects of tourism industry, one should have a working efficiency with research and statistical techniques. The techniques may be applied in collecting, organizing, analyzing and interpreting data for decision-making. These may also be applied for formulating and testing research hypothesis. The course has been designed to equip the students with latest and necessary field techniques and to build a necessary statistical acumen among them. Students will master the skill for-

- Writing different types of research proposals
- Constructing the relevant tools of research
- Conduct a research project using appropriate qualitative and quantitative techniques
- Write a research report
- Evaluate a research report
- Give presentation of report supported by latest aids.

## **Course Contents:**

### **Module - I: Research Methodology**

Meaning of research, Need and importance of research, Types of research, Criteria of good research

### **Module - III: Data collection, analysis and interpretation (Sample designing)**

Types & Sources of Data, Techniques of data collection; Correlation and regression analysis of two variables only. Hypothesis testing Test of significance, Chi-square analysis, Reports

### **Module - IV: Preparation of research proposals-**

Selection and formulation of research problem, Operationalization of concepts and constructs, Review of related literature, Aims and objectives, Hypothesis, method, sample and tools.

### **Module V: Evaluation of research report**

Research Report Format, Presentation of Report

## **Examination Scheme:**

Components	V	H	CT	A	EE
Weightage (%)	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

## **Suggested Reading :**

- Applied General Statistics by Crovton and Crowder
- Behavioural Process in Organizations by Pareek, U.Rao. T.V. & Pestonjee D.M
- Professional Hotel Management by J.M. Negi, S Chand & Co, New Delhi
- Towards Appropriate Tourism– The case of Developing Countries by Peter long Frankfurt
- Method of Social Research – New York; The Free Press
- How to Complete Your Research Work Successfully by Judith Bell; UBS Publisher, Delhi
- How to Research and Write a Thesis in Hospitality & Tourism by James M. Paynter, John Wiley & Sons, New York, USA
- Strategic Management by John A Pearce II & Richard B Robinson Jr.

- Strategic Management by Samual C Cerco
- Quantitative Techniques in Management by Vokra
- Quantitative Approaches to Management by Levin I Richerd

# ETHICS IN HOSPITALITY & TOURISM

Course Code: TRM2803

Credit Units: 03

## Module – I : Ethics and its Significance

Defining ethics and its significance in tourism, Principles and Practices in Business Ethics - its relevance and applicability in Travel & Tourism Industry, Business Compulsions, Motivation and Ethical parameters.

## Module – II : Safety & Security

Safety & Security of tourist, Tourist Police, place of Tourism in the constitution, need of tourism legislation

## Module – III : Attitude & Behaviour

Attitude & Behaviour of the Tourists, Respect for Local Culture, Respect for Other Religions, Knowledge of Local Laws & Regulations

## Module –IV : Impact on Host

Sense of Conservation towards Natural Resources, Concept of Carrying Capacity & Sustainable consumption, Socio-Cultural Impact of Tourism in the host area, Impact of Personal Grooming and Dress Code among the conservative area

## Module –V : Communication – Micro level & Macro Level

Communication through Verbal Language & Body Language, Role of Travel Agents, Tour Operator, Guides & Escorts, Role of Media

## Examination Scheme:

Components	V	H	CT	A	EE
Weightage (%)	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

## Suggested Reading :

- R. K. Malhotra (2005) Socio – Environmental and Legal Issues In Tourism, New Delhi.
- Tourism Guidelines Issued By Department of Tourism for Hotel and Restaurant Operation.
- Tourism Guide Lines Published by Govt. of India, Ministry of Tourism.
- Malik S - Ethical & Legal & Regulatory Aspects Tourism Business
- Sinha P. C - International Encyclopedia of Tourism Management
- Sinha P. C - Tourism Impact Assessment

## GDPI SESSIONS

Course Code: TRM2804

Credit Units : 03

### Course Objective:

These sessions would help the students to perform well in the campus interview at the final year stage.

#### 1. Pre-Preparation before GD/PI

- 1.1 Previous day
- 1.2 Previous night
- 1.3 Type of food
- 1.4 Rest & sleep
- 1.5 On GD/PI day
- 1.6 Personal Hygiene
- 1.7 Grooming
- 1.8 Curriculum Vitae & Testimonials
- 1.9 Sense of Time

#### 2. Process of Evaluation during Group Discussion

- 2.1 Skills assessed in a Group Discussion Session
  - 2.1.1 Leadership skills
  - 2.1.2 Communication skills
  - 2.1.3 Interpersonal skills
  - 2.1.4 Persuasive skills
  - 2.1.5 Problem solving skills
  - 2.1.6 Conceptualizing skills
- 2.2 Rules to follow during the Group Discussion
- 2.3 Points to remember during Group Discussion
- 2.4 What to avoid during Group Discussion - Common Mistakes
- 2.5 Preparations to be taken before appearing in a Group Discussion
  - 2.5.1 Get noticed - But for the right reasons
  - 2.5.2 Egotism Showing off
  - 2.5.3 Quality Vs Quantity

#### 3. Types of Group Discussion GD topics

- 3.1 Factual
- 3.2 Abstract
- 3.3 Argumentative/ Controversial topics
- 3.4 Opinion based
- 3.5 Current topics
- 3.6 Case based topics

#### 4. Steps on how to prepare for an interview?

#### 5. What is an interview?

#### 6. What's the purpose of an interview

#### 7. What to do Before an Interview

8. What to do During the Interview
  - 8.1 Make Your Entrance
  - 8.2 Getting Started
  - 8.3 Attitude Counts
9. What to do after the Interview is over
10. Interview Do's and Don'ts

**Examination Scheme:**

Components	V	H	CT	A	EE
Weightage (%)	05	05	15	5	70

V-viva; H-home assignment; CT-class test; A-attendance; EE-end semester examination

**Suggested Reading :**

- Body Language – Your Success Mantra Dr. Shalini Verma S. Chand
- The Pocket Guide to Man watching; Desmond Morris Triad Grafton Books

# RESEARCH PROJECT

**Course Code: TRM2837**

**Credit Units: 15**

## **Course Objective:**

The purpose of research (Hospitality and Tourism based) is to seek answers to problems through the application of scientific methodology, which guarantees that the information is reliable and unbiased. This information is utilized to make conclusions and recommend solution. Some elementary factors need to be kept in mind while preparing a research and deciding the topic, these could be based on its relevance, feasibility, coverage, accuracy and research, objectivity and ethics.

To deal with surging information data regarding the various aspects of tourism industry, one should have a working efficiency with research and statistical techniques. The techniques may be applied in collecting, organizing, analyzing and interpreting data for decision-making. These may also be applied for formulating and testing research hypothesis. The course has been designed to equip the students with latest and necessary field techniques and to build a necessary statistical acumen among them. Students will master the skill for-

- Writing different types of research proposals and reports
- Constructing the relevant tools of research
- Conduct a research project using appropriate qualitative and quantitative techniques
- Do presentation with the help of tutorial aid
- Evaluate a research report.

The research topic should be assigned by the deputed subject faculty in the beginning of semester & should be approved by PL & HOI. Continuous monitoring and guidance should be provided to student at all the steps.

At the term end, the research project will be presented before a panel and evaluated by examiners (As nominated by HOI). The evaluation should be based on presentation, viva, report content & format & conclusion.

## **Examination Scheme:**

### **Internal Assessment:**

Abstract:	10
Draft:	15
Research Orientation:	10
Reading:	05

### **External Evaluation:**

Objective:	05
Issue Profile:	10
Comprehensiveness	10
Relevance:	10
Presentation:	15
Viva:	10

## **Suggested Reading :**

**Course Code: VHM2152**

**Credit Units: 03**

**Prerequisites : 10+2**

**Course Objective:**

At the end of the semester the students will be able to –

- Explain the growth and role of hotel industry and catering establishment
- Understand the various types of hotels and their features
- List and explain various catering establishment with their features
- Explain staff organization structure of food and beverage department
- Describe and understand job description of each personnel working in each F&B outlet
- List various F&B service equipment with its use and care.

**Course Contents:**

**Module –I**

- 1.0 Growth of Hotel Industry
  - 1.1 Sections of The Industry
- 2.0 Catering Establishments
  - 2.1 Different Types

**Module –II**

- 3.0 Personnel
  - 3.1 Staff Organisation in F&B Department
  - 3.2 Attributes of a Waiter

**Module –III**

- 4.0 Furniture & Equipment in a Restaurant

**Module –IV**

- 5.0 Plan for serving food and beverages
- 6.0 Greet customer, take orders and serve
- 7.0 Clean tables and counters

**Module –V**

- 8.0 Communicate with customer and colleagues
- 9.0 Maintain customer-centric service orientation
- 10.0 Maintain standard of etiquette and hospitable conduct

**Examination Scheme:**

<b>Components</b>	<b>Internal Assessment</b>			<b>EE</b>	
	<b>V</b>	<b>LP</b>	<b>A</b>	<b>Th</b>	<b>Pr</b>
<b>Weightage (%)</b>	05	20	05	40	30

V-Viva; LP-Lab Performance; A-Attendance; EE-End Semester Examination

**Suggested Readings :**

- Food & Beverage Services by SN Bagchi & Anita Sharma, Aman Publications, New Delhi
- Food & Beverage Service by Lilicrap
- Food & Beverage Service by R. Singaravelavan, OUP
- F & B Service Manual by Sudhir Andrews, Tata McGraw Hill
- The Waiter by John Fullar
- Professional Table Service by Dennis Lilicrap.
- Food & Beverage Management & Control by Dr. JM Negi, Kanishka Publications, New Delhi

# Syllabus - Semester Second

## ADVANCED FOOD SERVICE

**Course Code: VHM2252**

**Credit Units: 03**

**Prerequisites** : Basics of Food Service (VHM2152)

### Course Objective:

At the end of the semester the students will be able to –

- Explain the various types of Meals
- Define & explain the concept of Menu
- Classify various methods of Service
- Calculate bill for meals & Handle payment made by the guests
- Deal with different types of guests in different situations
- Maintain hygiene and safety at workplace

### Course Contents:

#### Module – I

- 1.0 Meals & Menu
  - 1.1 Types of Meals
  - 1.2 Introduction to Menu
  - 1.3 Courses of Menu
  - 1.4 Classification of Menu
  - 1.5 Types of Service

#### Module – II

- 2.0 Deal with customer payment
- 3.0 Resolve customer service issues
- 4.0 Follow gender and age sensitive service practices

#### Module – III

- 5.0 Maintain IPR of organisation and customers

#### Module – IV

- 6.0 Maintain health and hygiene
- 7.0 Maintain safety at workplace

#### Module – V

- 8.0 Service Terminology

### Examination Scheme:

Components	Internal Assessment			EE	
	V	LP	A	Th	Pr
Weightage (%)	05	20	05	40	30

V-Viva; LP-Lab Performance; A-Attendance; EE-End Semester Examination

**Suggested Readings :**

- Food & Beverage Services by SN Bagchi & Anita Sharma, Aman Publications, New Delhi
- Food & Beverage Service by Lilicrap
- Food & Beverage Service by R. Singaravelavan, OUP
- F & B Service Manual by Sudhir Andrews, Tata McGraw Hill
- The Waiter by John Fullar
- Professional Table Service by Dennis Lilicrap.
- Food & Beverage Management & Control by Dr. JM Negi, Kanishka Publications, New Delhi

*After successful completion of study of the above Courses (VHM2152 & VHM2252), the student becomes eligible to appear for “Qualification Pack: Food & Beverage Service – Steward” (NSQF level - 4) examination under THSC & NSDC by paying fees as applicable.*

## Syllabus - Semester Third

### BEVERAGE STUDIES - BASIC

Course Code: VHM2352

Credit Units: 03

**Prerequisites** : Advanced Food Service (VHM2252)

**Course Objective:**

At the end of the semester the students will be able to –

- Define & Classify Beverage
- State the various types of Non-Alcoholic & Alcoholic Beverages
- Understand & Explain the Classification, Production & service of Beer & Wine
- Manage inventory

**Course Contents:**

**Module – I**

- 1.0 Classification of Beverage
- 2.0 Non-Alcoholic Beverages

**Module – II**

- 3.0 Alcoholic Beverages : Classification
- 4.0 Beer : Manufacture, Service, Brands

**Module – III**

- 5.0 Wine : Classification, Still Wine, Fortified Wine, Sparkling Wine, Production, Wine producing countries, Wine & Food Harmony

**Module – IV**

- 6.0 Supervise food and beverage service
- 7.0 Manage customer service

**Module – V**

- 8.0 Manage inventory and staff

**Examination Scheme:**

Components	Internal Assessment			EE	
	V	LP	A	Th	Pr
Weightage (%)	05	20	05	40	30

V-Viva; LP-Lab Performance; A-Attendance; EE-End Semester Examination

**Suggested Readings :**

- Food & Beverage Services by SN Bagchi & Anita Sharma, Aman Publications, New Delhi
- Food & Beverage Service by Lilicrap
- Food & Beverage Service by R. Singaravelavan, OUP
- F & B Service Manual by Sudhir Andrews, Tata McGraw Hill
- The Waiter by John Fullar
- Professional Table Service by Dennis Lilicrap.
- Food & Beverage Management & Control by Dr. JM Negi, Kanishka Publications, New Delhi

# Syllabus - Semester Fourth

## BEVERAGE STUDIES - ADVANCED

**Course Code: VHM2452**

**Credit Units: 03**

**Prerequisites** : Beverage Studies – Basic (VHM2352)

### **Course Objective:**

At the end of the semester the students will be able to –

- Define & Explain Distillation process
- Classify Spirits
- State the various types of Non-Alcoholic & Alcoholic Beverages
- Understand & Explain the Production & service of various Spirits
- Prepare Cocktails

### **Course Contents:**

#### **Module – I**

1.0 Distillation & Spirits

#### **Module – II**

2.0 Whisky : Manufacture, Service, Brands

3.0 Rum : Manufacture, Service, Brands

4.0 Gin : Manufacture, Service, Brands

5.0 Vodka : Manufacture, Service, Brands

6.0 Brandy : Manufacture, Service, Brands

#### **Module – III**

7.0 Other Spirits – Country of origin, Manufacture, Service, Brands

#### **Module – IV**

8.0 Liqueurs : Manufacture, Service, Brands

#### **Module – V**

9.0 Cocktails

### **Examination Scheme:**

Components	Internal Assessment			EE	
	V	LP	A	Th	Pr
Weightage (%)	05	20	05	40	30

V-Viva; LP-Lab Performance; A-Attendance; EE-End Semester Examination

**Suggested Readings :**

- Food & Beverage Services by SN Bagchi & Anita Sharma, Aman Publications, New Delhi
- Food & Beverage Service by Lilicrap
- Food & Beverage Service by R. Singaravelavan, OUP
- F & B Service Manual by Sudhir Andrews, Tata McGraw Hill
- The Waiter by John Fullar
- Professional Table Service by Dennis Lilicrap.
- Food & Beverage Management & Control by Dr. JM Negi, Kanishka Publications, New Delhi

*After successful completion of study of the above Courses (VHM2552&VHM2452), the student becomes eligible to appear for “Qualification Pack: Captain” (NSQF level - 6) examination under THSC & NSDC by paying fees as applicable.*

# Syllabus - Semester Fifth

## F&B SERVICE SUPERVISORY SKILLS

**Course Code:** VHM2552

**Credit Units:** 03

**Prerequisites :** Beverage Studies – Advanced (VHM2452)

**Course Objective:**

At the end of the semester the students will be able to –

- Develop Supervisory Skills
- Train Staffs
- Manage Inventory & Budget

**Course Contents:**

**Module – I**

- 1.0 Restaurant Planning & Layout
  - 1.1 Choosing of Location
  - 1.2 Layout Planning
  - 1.3 Décor
  - 1.4 Furnishing, Fixtures & Fittings
  - 1.5 Equipment Selection

**Module – II**

- 2.0 Arranging Equipment
- 3.0 Manage stock

**Module – III**

- 4.0 Supervisory Skills

**Module – IV**

- 5.0 Training Staffs
- Manage human resource and quality

**Module – V**

- 6.0 Manage finances of the facility

**Examination Scheme:**

Components	Internal Assessment			EE	
	V	LP	A	Th	Pr
Weightage (%)	05	20	05	40	30

V-Viva; LP-Lab Performance; A-Attendance; EE-End Semester Examination

- F & B Service Manual by Sudhir Andrews, Tata McGraw Hill
- The Waiter by John Fullar
- Professional Table Service by Dennis Lilicrap.
- Food & Beverage Management & Control by Dr. JM Negi, Kanishka Publications, New Delhi

# Syllabus - Semester Sixth

## F&B MANAGEMENT SKILLS

**Course Code:** VHM2652

**Credit Units:** 03

**Prerequisites :** Service Supervisory Skills (VHM2552)

**Course Objective:**

At the end of the semester the students will be able to –

- Understand & Explain F&B Control
- Implement Menu Engineering

**Course Contents:**

**Module – I**

- 1.0 Cycles of Control
  - 1.1 Purchasing
  - 1.2 Receiving
  - 1.3 Storing
  - 1.4 Issuing
  - 1.5 Preparation
  - 1.6 Costing & Selling
  - 1.7 Control

**Module – II**

- 2.0 Food Cost Control
  - 2.1 Food Costing
  - 2.2 Checks & Checking System
  - 2.3 Standard Costing
  - 2.4 Variance Analysis

**Module – III**

- 3.0 Budgets & Budgetary Control
  - 3.1 Definition, Different Types of Budgeting
  - 3.2 Different Steps of Preparing Different Budgets
  - 3.3 Budgetary Control
  - 3.4 Formats for Budgeting

**Module – IV**

- 4.0 Liquor Control
  - 4.1 Purchase Procedures
  - 4.2 Assessment of Quality
  - 4.3 Stock Control
  - 4.4 Beverage Sales Control

**Module – V**

- 5.0 Menu Engineering

**Examination Scheme:**

Components	Internal Assessment				EE
	V	H	CT	A	Th
Weightage (%)	05	05	15	05	70

V-Viva; H-Home Assignment; CT-Class Test; A-Attendance; EE-End Semester Examination

**Suggested Readings :**

- Food & Beverage Services by SN Bagchi & Anita Sharma, Aman Publications, New Delhi
- Food & Beverage Service by Lilicrap
- Food & Beverage Service by R. Singaravelavan, OUP

# FOOD PRODUCTION TECHNIQUES

## Syllabus - Semester First

### BASICS OF FOOD PRODUCTION

Course Code: VHM2151

Credit Units: 03

#### Course Objective:

At the end of the semester the students will be able to –

- Explain the structure of Kitchen in hotel industry
- Understand the use of various resources used in kitchen
- Handle Commodities used in Food Production
- State the methods of cooking & apply them on various ingredients
- Define & prepare Stocks, Sauces & Gravies
- Understand Vegetable Cookery
- Set up and close kitchen
- Meet the need of the customers

#### Course Contents:

##### Module –I

1. Organising Kitchen
  - 1.1. Kitchen Brigade
  - 1.2. Kitchen Equipment
  - 1.3. Commodities

##### Module – II

2. Fundamentals of Cookery
  - 2.1. Preparation of Ingredients
  - 2.2. Methods of Cooking
  - 2.3. Stocks – Definition, Types & Methods
  - 2.4. Sauce – Definition, Types & Methods
  - 2.5. Gravy – Definition, Types & Methods

##### Module – III

3. Soups – Definition, Types & Methods
4. Vegetable Cookery - Basic Knowledge, Identification, Various Cuts, Preparation

##### Module – IV

5. Assist in food preparation
6. Set up and close kitchen

##### Module – V

7. Communicate with customer and colleagues
8. Maintain customer-centric service orientation
9. Maintain standard of etiquette and hospitable conduct

#### Examination Scheme:

Components	Internal Assessment			EE	
	V	LP	A	Th	Pr

- Front Office Manual by Sudhir Andrews, Tata McGraw Hill

*After successful completion of study of the above Course (VHM2453), the student becomes eligible to appear for “Qualification Pack: Guest Relations Manager” (NSQF level - 6) examination under THSC & NSDC by paying fees as applicable.*

# Syllabus - Semester Fifth

## FRONT OFFICE YIELD MANAGEMENT

**Course Code: VHM2553**

**Credit Units: 03**

**Prerequisites** : Front Office Supervisory Skills (VHM2453)

**Course Objective:**

At the end of the semester the students will be able to –

- Explain the concept of Yield Management
- Take measures to maximize yield of the department
- Deal with Staff needs
- Analyze Training needs and arrange Training

**Course Contents:**

**Module –I**

1.0 Yield Management

- 1.1 Concept of Yield Management
- 1.2 Capacity Management
- 1.3 Discount Allocation

**Module – II**

2.0 Measuring Yield

- 2.1 Potential Average SGL / DBL Rate
- 2.2 Multiple Occupancy Percentage
- 2.3 Rate Spread
- 2.4 Potential Average Rate
- 2.5 Room Rate Achievement Factor
- 2.6 Yield Statistic
- 2.7 Equivalent Occupancy
- 2.8 Required Non-Room Revenue Per Guest

**Module – III**

3.0 Elements of Yield Management

- 3.1 Group Room Sales
- 3.2 Transient Room Sales
- 3.3 Food & Beverage Activity
- 3.4 Special Events

**Module – IV**

4.0 Application of Yield Management Concepts

**Module – V**

5.0 Human Relations Management

**Examination Scheme:**

<b>Components</b>	<b>Internal Assessment</b>				<b>EE</b>
	<b>V</b>	<b>H</b>	<b>CT</b>	<b>A</b>	<b>Th</b>
<b>Weightage (%)</b>	05	05	15	05	70

V-Viva; H-Home Assignment; CT-Class Test; A-Attendance; EE-End Semester Examination

**Suggested Readings :**

- Front Office Management by Bardi, John Willy and Sons
- Front Office Management by Mr. Sbhal Nagar
- Professional Hotel Front Office Management – Anutosh Bhakta
- Hotel Management by Dr. Jagmohan Negi, Himalaya Publishing House, New Delhi.
- Professional Hotel Management by Dr. JM Negi, S. Chand & Co, New Delhi
- Hospitality Management: Current Trends & Practices by Dr. JM Negi, Amity University Press, New Delhi
- Front Office by Abbott, Butter Worth Hiemann.
- Front Office Manual by Sudhir Andrews, Tata McGraw Hill

# Syllabus - Semester Sixth

## MANAGING FRONT OFFICE

**Course Code: VHM2653**

**Credit Units: 03**

**Prerequisites** : Front Office Yield Management (VHM2553)

### **Course Objective:**

At the end of the semester the students will be able to –

- Explain the various types of Meals
- Define & explain the concept of Menu
- Classify various methods of Service
- Calculate bill for meals & Handle payment made by the guests
- Deal with different types of guests in different situations
- Maintain hygiene and safety at workplace

### **Course Contents:**

#### **Module – I**

- 1.0 Planning & Operations
  - 1.1 Plan and control day to day front office activities
  - 1.2 Assist in managing the front office operation
  - 1.3 Manage the front office staffing process

#### **Module – II**

- 2.0 Establishing Room Rates
  - 2.1 Market Condition Approach
  - 2.2 Rule-of-Thumb Approach
  - 2.3 Hubbart Formula

#### **Module – III**

- 3.0 Forecasting Room Availability
  - 3.1 Forecasting Data
  - 3.2 Percentage of No-Shows
  - 3.3 Percentage of Walk-Ins
  - 3.4 Percentage of Over-stays
  - 3.5 Percentage of Under-stays
  - 3.6 ARR (Average Room Rate)
  - 3.7 RevPAR (Revenue Per Available Room)
  - 3.8 Forecast Formula
  - 3.9 Room Count Considerations

#### **Module – IV**

- 4.0 Budgeting for Operations
  - 4.1 Forecasting Rooms Revenue
  - 4.2 Estimating Expenses

## Module – V

### 5.0 Evaluating Front Office Operations

- 5.1 Daily Operations Report
- 5.2 Occupancy Ratios
- 5.3 Rooms Revenue Analysis
- 5.4 Operating Ratios
- 5.5 Rooms Division Income Statement & Budget Reports

### Examination Scheme:

Components	Internal Assessment				EE
	V	H	CT	A	Th
Weightage (%)	05	05	15	05	70

# Syllabus - Semester Third

## HANDLING TRAVEL AGENCY

**Course Code: VTM2351**

**Credit Units: 03**

**Prerequisites** : Tour Operations & Tourist Guidance (VTM2251)

### Course Objective:

At the end of the semester the students would have a thorough knowledge of:

- Tour Package
- Planning of Tour Package
- Designing Tour Packages

### Course Contents:

#### Module –I

1.0 Tour Package - Meaning, Type of Tour Package & its Components

#### Module – II

2.0 Planning of Tour Package

- 2.1 Designing and Process of Tour Package
- 2.2 Engage with customer to understand their tour packaging requirements
- 2.3 Plan travel itinerary as per customer's requirement
- 2.4 Factor Affecting Tour Package
- 2.5 Arrange tour package in coordination with service providers and partners

#### Module – III

3.0 Designing Tour Packages

- 3.1 Cultural Tourism Product: Designing, Development, Issues and Considerations
- 3.2 Heritage Tourism Product: Designing, Development, Issues and Considerations
- 3.3 Religious Tourism Product: Designing, Development, Issues and Considerations

#### Module – IV

4.0 Designing Tour Packages

- 4.1 Adventure Tourism Product: Designing, Development, Issues and Considerations
- 4.2 Medical Tourism Product: Designing, Development, Issues and Considerations

#### Module – V

5.0 Destination Management

- 5.1 Meaning, Factor of Consideration to choose Destination Management Handling Company
- 5.2 Monitor the tour progress
- 5.3 Maintain IPR of organisation and customer

### Examination Scheme:

Components	Internal Assessment				EE
	V	H	CT	A	Th
Weightage (%)	05	05	15	05	70

V-Viva; H-Home Assignment; CT-Class Test; A-Attendance; EE-End Semester Examination

***Suggested Readings:***

- Pran Seth: Successful tourism Management (Vol. 1 & 2)
- Anand, M.M., Tourism and hotel Industry in India, Prentice Hall, New Delhi, 1976

- Negi, J.M.S., Tourism and Travel- Concepts and principles, Gitanjali Publishing House, New Delhi, 1990
- Robinson, H.A., Geography of Tourism, Me Donald and Evans, London, 1976

***After successful completion of study of the above Course (VTM2351), the student becomes eligible to appear for “Qualification Pack: Travel Consultant” (NSQF level - 4) examination under THSC & NSDC by paying fees as applicable.***

## Syllabus - Semester Fourth

### COORDINATING TOUR TRANSPORTATIONS

**Course Code:** VTM2451

**Credit Units:** 03

**Prerequisites :** Handling Travel Agency (VTM2351)

**Course Objective:**

At the end of the semester the students would have a thorough knowledge of:

Transport System

Transport Schedule & Arrangement for tourists

**Course Contents:**

**Module – I**

1.0 Modes of Transport

1.1 Road ways

1.2 Railways

1.3 Air ways

1.4 Water ways

**Module – II**

2.0 Types of transport operator

2.1 Public & Private

2.2 Domestic & International

**Module – III**

3.0 Transport Schedule

3.1 Travel Time

3.2 Preparation of itinerary

**Module – IV**

4.0 Interact with the customers or tourists

5.0 Arrange for the travel

**Module – V**

6.0 Follow up with customer or tourist

**Examination Scheme:**

Components	Internal Assessment				EE
	V	H	CT	A	Th
Weightage (%)	05	05	15	05	70

V-Viva; H-Home Assignment; CT-Class Test; A-Attendance; EE-End Semester Examination

***Suggested Readings:***

- Pran Seth: Successful tourism Management (Vol. 1 & 2)
- Anand, M.M., Tourism and hotel Industry in India, Prentice Hall, New Delhi, 1976

- Negi, J.M.S., Tourism and Travel- Concepts and principles, Gitanjali Publishing House, New Delhi, 1990
- Robinson, H.A., Geography of Tourism, Me Donald and Evans, London, 1976

***After successful completion of study of the above Course (VTM2451), the student becomes eligible to appear for “Qualification Pack: Transport Coordinator” (NSQF level - 5) examination under THSC & NSDC by paying fees as applicable.***

# Syllabus - Semester Fifth

## TOURISM MANAGEMENT

**Course Code: VTM2551**

**Credit Units: 03**

**Prerequisites** : Coordinating Tour Transportations (VTM2451)

**Course Objective:**

At the end of the semester the students would have a thorough knowledge of:

- Motivation of Travel and Tourism
- Significance of Travel and Tourism
- Growth factors of Tourism& its barriers
- Eco-Tourism

**Course Contents:**

**Module –I**

1.0 Motivation of Travel and Tourism

- 1.1 Physical Motivations: Travel for Sports and Adventure, Rest and Relaxation, Health and Medical Reasons etc.
- 1.2 Cultural Motivations: Pilgrimage Tourism, Cultural Curiosity, Religious etc.
- 1.3 Interpersonal Motivation: Meeting New People, VFR, etc
- 1.4 Status and Prestige Motivation
- 1.5 Business Motivation

**Module – II**

2.0 Significance of Travel and Tourism

- 2.1 The Economic, Social and Cultural Significance of Tourism

**Module – III**

3.0 Growthfactors of Tourism

- 3.1 Technology and Destination Development
- 3.2 Changing Social Patterns
- 3.3 Changing Living Standards

**Module –IV**

4.0 Barriers to the Growth of Tourism

- 4.1 Factors Existing at the Destination: Terrorism, & Political and Social Environment
- 4.2 Factors Barring a Potential Tourist from Traveling: Time, Cost, and Social Barriers.

**Module – V**

5.0 Eco-Tourism Planning and development strategies

- 5.1 Eco-Tourism Strategies with Special Reference to Environmental Protection (Environmental Impact Analysis)

**Examination Scheme:**

Components	Internal Assessment				EE
	V	H	CT	A	Th
Weightage (%)	05	05	15	05	70

V-Viva; H-Home Assignment; CT-Class Test; A-Attendance; EE-End Semester Examination

***Suggested Readings:***

- Pran Seth: Successful tourism Management (Vol. 1 & 2)

- Robinson, H.A., Geography of Tourism, Me Donald and Evans, London, 1976

# Syllabus - Semester Sixth

## EVENT PLANNING

**Course Code: VTM2651**

**Credit Units: 03**

**Prerequisites :** Tourism Management (VTM2551)

**Course Objective:**

At the end of the semester the students would have a thorough knowledge of:

- Concept of MICE
- Marketing MICE
- Planning MICE
- Staging MICE

**Course Contents:**

**Module – I**

1.0 Introduction to Concept of MICE

- 1.1 Types of Events- meetings, incentives, conference/conventions, and exhibitions
- 1.2 Size of Events
- 1.3 The Event Team
- 1.4 Code of Ethics
- 1.5 The impact of conventions on local and national communities.

**Module – II**

2.0 Map the customer requirement

- 2.1 Visualise the need
- 2.2 Guide the customer
- 2.3 Estimate the budget

**Module – III**

3.0 Concept and Design

- 3.1 Developing The Concept
- 3.2 Analysing The Concept
- 3.3 Designing The Event
- 3.4 Logistics of The Concept

**Module – IV**

4.0 Marketing of Event

- 4.1 Nature of Event Marketing
- 4.2 Process of Event Marketing
- 4.3 The Marketing Mix
- 4.4 Sponsorship

**Module – V**

5.0 Staging The Event

- 5.1 Choosing The Event Site
- 5.2 Developing The Theme
- 5.3 Providing Services
- 5.4 Managing The Environment

**Examination Scheme:**

Components	Internal Assessment				EE
	V	H	CT	A	Th
Weightage (%)	05	05	15	05	70

V-Viva; H-Home Assignment; CT-Class Test; A-Attendance; EE-End Semester Examination

**Suggested Reading :**

- Behind The Scenes at Special Events - by Lena Malouf
- Global Meetings & Exhibitions, - by Krugman, John Wiley & Sons
- How to Plan Exhibitions & Conferences From A to Z, Sam Black
- Special Events : Event Leadership for a New World, Goldblatt

*After successful completion of study of the above Courses (VTM2551&VTM2651), the student becomes eligible to appear for “Qualification Pack: Meeting, Conference and Event Planner” (NSQF level - 5) examination under THSC & NSDC by paying fees as applicable.*

# Syllabus - First Semester

## PLANT DIVERSITY-I

Course Code: BLS2101

Credit Units-03

**Course Objective:** The objective of this course is to familiarize the students with the classification, morphology, reproduction and economic importance of various groups of lower plants which will provide the basic knowledge for the employment of these plants to study plant diversity.

### Module -I

Cyanobacteria: General features, Classification, Distribution, Cell structure, Envelope, cell wall, Heterocyst, Nutrition, Water bloom, Reproduction and economic importance. Type of *Nostoc*.

### Module -II

Algae: General features, Classification, Distribution, Range of thallus organization, Reproduction, Life Cycle and Economic importance with special reference to *Volvox*, *Oedogonium*, *Chara*, *Ectocarpus*, *Vaucheria* and *Polysiphonia*.

### Module -III

Fungi: General features, Classification, Range of thallus organization, Reproduction, Parasexual cycle and Economic importance with special reference to Slime molds, *Albugo*, *Phytophthora*, *Penicillium*, *Saccharomyces*, and *Puccinia*. Selected plant Diseases caused by fungi: White rust of Crucifers, Late blight of Potato, Black stem Rust of wheat.

### Module - IV

Lichens: General features, Classification, Habitat, Distribution, Thallus organization, Structure, Nutrition, Asexual and sexual reproduction, Ecological significance and Economic importance.

### Module -V:

Bryophytes: Amphibians of plant kingdom, General features, Classification, Habitat, Distribution, Thallus organization, Structure, Reproduction and Economic importance with special reference to *Marchantia*, *Anthoceros* and *Funaria*.

### Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination

**Text & References:**

- Cryptogamic Botany, G. M. Smith.
- A Text book of Algae, B. R. Vashishtha
- Bryophytes, N. S. Parihar
- Pteridophytes, N. S. Parihar
- An Introduction to Pteridophytes, A. Rashid.

## ANIMAL DIVERSITY-I

Course Code: BLS2102

Credit Units-03

**Course objective-** Patterns of current Biodiversity, including the description of its taxonomic structure and the proposal of phylogenetic and phylogeographic hypothesis which describe the geographic distribution of genetic variability and the historical relationships among organisms and their geographic ranges, are identified as key-lines across all world scientific programs in response to the basic principle.

### Module –I

Introduction and classification of Invertebrates Principles of taxonomy and relationship with systematics. General characters and criteria for classification of invertebrates. An outline classification of non-chordates.

### Module –II Phylum Protozoa

General characters and classification of Protozoans. Type study of *Parameciumcaudatum* and *Plasmodium vivax*. Locomotion and reproduction in Protozoa. Protozoa and human diseases.

### Module –III Sub kingdom Metazoa and phylum Porifera

Organization of metazoa including symmetry, metamerism and body cavity or coelom. Theories of origin of metazoa. General characters and classification of phylum Porifera. Type study of *Sycon* with reference to reproduction and development. Canal system and skeleton in Sponges.

### Module -IV Phylum Coelenterata and Platyhelminthes

General characters and classification of Coelenterates. Type study of *Aurelia*. Polymorphism. Corals and coral reefs. General characters and classification of phylum Platyhelminthes. Type study of *Taenia solium*.

### Module V- Phylum Nematoda and Annelida

General characters and classification of nematodes. Type study of *Ascaris lumbricoides*. Nematodes and human diseases. *Coenorhabditis elegans* and its application in research. General characters and classification of phylum Annelida. Type study of *Pheretima posthuma*. Nephridial system in annelids.

### Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination

# CHEMISTRY-I

Course Code: BLS2103

Credit Units-03

## Course Objective:

The objective of this course is to educate the students about molecules, their energy to form bonds, metallurgy of elements, kinetic theory of gases, Vander walls equation and also enzymatic catalysis

## Course Contents:

### INORGANIC

#### Module I

Chemical bonds and molecules, Shapes of simple molecules, bond energy, bond length, resonance and Hydrogen bond.

#### Module II

Radioactivity: Natural and artificial, group displacement law, half life period, binding energy, nuclear reaction equations, isotopes, tracers, radio dating, Application of radioactivity.

#### Module III

Periodic table: Modern periodic table, periodicity in properties of elements, atomic radii, ionic and covalent radii, ionization energies, electron affinity, electro-negativity.

#### Module IV

Metallurgy of S block elements (Na, K, Be, Mg, Ca)

### PHYSICAL

#### Module V

Gases: Kinetic theory of gases, Vander Waal's equation, critical constants, Liquefaction of gases.

#### Module VI

Chemical-Kinetics: Velocity of a reaction, Law of mass action; determination of rate constants for first and second order reactions, collision theory of bimolecular reactions.

Catalysis: Promoters and Poisons, Enzyme catalysis.

## Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination

# PHYSICS – I

Course Code: BLS2104

Credit Units-03

**Course Objective:** An important objective of the course is to develop an understanding of 'core physics' at successively deeper levels, each stage revealing new phenomena and greater insight into the properties of matter. Heat, electricity and magnetism, Sound waves and optics

## Course Contents:

### Module I: Properties of matter

Elasticity : Hooke's Law – Elastic Constants – bending of beam – Bending moment – Cantilever Depression at the loaded end of a cantilever – determination of Young's modulus by non-uniform bending. Torsion : Torsion couple – Potential energy in a twisted wire – Torsional pendulum – Time period – Rigidity Modulus – Determination of rigidity modulus by Torsional oscillation (without masses). Viscosity: Viscosity of a liquid – Viscous force – Co-efficient of viscosity of a liquid – Poiseuille's formula – Comparison of viscosities of two liquids by graduated burette method. Surface Tension: Surface Tension – Excess of pressure inside a curved surface – Synclatic system – Surface Tension and interfacial surface tension by the method of drops.

### Module II: Heat

Heat: Specific heat – Newton's law of cooling – determination of specific heat of a liquid using Newton's law of cooling – Emissivity and Emissive Power.

Low Temperature: J.K. Effect – Positive Effect – Negative Effect – Temperature of Inversion – Super conductors. Type I and II – Meisner Effect – Helium I and II.

### Module III: Electricity and magnetism

Electricity: Potentiometer – Principle – Calibration of low range voltmeter – Measurement of internal resistance of cell – measurement of an unknown resistance. Magnetism – Moment and pole strength of a magnet – Deflection magnetometer – Tan C position – Vibration magnetometer – Theory – Period of Oscillation – Determination of M and BH using the deflection magnetometer in Tan C position and the vibration magnetometer.

### Module IV: Sound and acoustics of building

Sound: Transverse vibration of strings – Velocity and frequency of vibrations of a stretched string – laws – sonometer – A.C. Frequency – Steel Wire – Brass wire. Ultrasonics – Production by Piezo – electric method – properties and uses. Acoustics of buildings: Reverberation – Reverberation time – Sabine's formula (definition only) – Sound absorption co-efficient of surface – conditions for the perfect acoustics.

### Module V: Geometrical optics and physical optics

Defects of Images (Lens): Spherical aberration – minimizing spherical aberration by using two thin lenses in contact – chromatic aberration – Achromatic combination of two thin lenses in contact.

Physical Optics: Interference – Air Wedge – Description – Test for optical flatness of glass plate – Determination of diameter of a thin wire by air wedge.

Diffraction: Theory of transmission grating – Normal Incidence – Determination of Wavelength of monochromatic source and Wavelength of mercury line using a grating by normal Incidence.

Polarisation: Optical activity – Specific rotatory power – Polarimeter – Determination of specific rotatory power of a solution using the polarimeter.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# MATHEMATICS-I

Course Code: BLS2105

Credit Units-03

Course Objective:- The knowledge of Mathematics is necessary for a better understanding of almost all the Engineering and Science subjects. Here our intention is to make the students acquainted with the concept of basic topics from Mathematics, which they need to pursue their Engineering degree in different disciplines.

## Module I: Set Theory

Set and their representations, finite and infinite sets, subsets, type of sets, operations on sets and their algebraic properties, Venn diagram, ordered pair, Cartesian product, Relation, application.

## Module II: Permutations and Combination

The factorial introduction, fundamental principle of counting, permutation as arrangement, practical problems on permutations, permutation under certain conditions. Combinations, practical problems on combinations, combinational identities.

## Module III: Binomial Theorem

Binomial theorem for any positive integral exponent (without proof), general and middle term, Binomial theorem for any index, some applications.

## Module IV: Probability

Random experiment and associated sample space, events, definition of probability of event, algebra of events, and addition and multiplication theorem on probability (without proof). Conditional probability, Independent event, Baye's theorem (without proof).

## Module V: Probability Distribution

Binomial, Poisson and Normal distribution

## Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination

## PLANT & ANIMAL DIVERSITY LAB-I

Course Code: BLS2106

Credit Units-02

### Module I: Algae & Fungi

Study of Algal types with the help of permanent slides and also by preparing suitable slides as prescribed in the theory course. (Chlamydomonas, Chara, Sargassum, Polysiphonia,) Study of Fungal types with the help of permanent slides and also by preparing suitable slides as prescribed in the theory course. (Eurotium, Morchella, Agaricus)

### Module II: Bryophytes & Pteridophytes

Study of Bryophytes like Riccia, Marchantia, Anthoceros pteridophytes like Selaginella, Equisetum, and Marsilea with the help of permanent slides and also by cutting sections and making suitable preparations with the help of permanent slides and also by cutting sections and making suitable preparations.

### Module III

Histological study of important animal tissues. Estimation of enzyme activity from animal tissues. Study of toxicity on invitro model. Culture and maintenance of animal cell lines. Invitro expression of proteins in animal cell lines.

### Examination Scheme:

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

## **CHEMISTRY LAB - I**

**Course Code: BLS2107**

**Credit Units: 01**

**Course Contents:**

### **INORGANIC CHEMISTRY**

#### **Module I**

Volumetric analysis: Oxidation-reduction titration using  $\text{KMnO}_4$  and  $\text{K}_2\text{Cr}_2\text{O}_7$

#### **Module II**

Iodometry titrations: Estimation of sodium thiosulphate & potassium dichromate.

#### **Module III**

Preparation of the following inorganic compounds: Prussian blue from iron fillings, chrome alum, cuprous chloride and potassium trioxalatochromate.

### **PHYSICAL CHEMISTRY**

#### **Module IV**

Determination of surface tension and viscosity of liquids

#### **Module V**

Heat of neutralisation of a strong acid and a strong base.

#### **Module VI**

Solubility curve of  $\text{KNO}_3$  or benzoic acid.

## PHYSICS LAB - I

Course Code: BLS2108

Credit Units-01

### Course Contents:

1. Young's modulus – non uniform bending – pin and microscope.
2. Rigidity modulus – Static Torsion Method Using Scale and Telescope.
3. Rigidity modulus – Torsional oscillation method (without symmetric masses).
4. Determination of Co-efficient of Viscosity – Graduated Burette.
5. Surface Tension and Interfacial Tension – By drop weight method.
6. Specific Heat Capacity of a liquid – by Newton's Law of Cooling.
7. Sonometer – Determining A.C. Frequency. (Screw Gauge is given).
8. Sonometer – frequency of tuning fork.
9. Newton's Rings – Radius of Curvature.
10. Air Wedge – Determination of thickness of thin wire.

*Any other experiment carried out in the class.*

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# Syllabus - Second Semester

## PLANT DIVERSITY-II

**Course Code: BLS2201**

**Credit Units: 03**

### **Course Objective:**

The objective of this course is to acquaint the students with the details of classification of gymnosperms and angiosperms, taxonomy of angiosperms, anatomy, embryology, ecology and plant pathology which will make a strong foundation so that students can explore this knowledge for further biotechnological studies and research.

### **Course Contents:**

#### **Module I:**

**Gymnosperms** General characteristics, affinities and classification of Gymnosperms morphology and development reproductive structures of the following taxa-*Cycas*, *Pinu.*

#### **Module II**

##### **Taxonomy of Angiosperms**

Classification of angiosperms as proposed by Bentham and Hooker and Hutchinson, merits, demerits and comparison Binomial Nomenclature

#### **Module III**

Economic importance of family: ,Cucurbitaceae Apiaceae, Apocynaceae, Asclepiadaceae, Lamiaceae, Euphorbiaceae, and Poaceae.

#### **Module IV**

##### **Embryology**

Structure of anther, microsporogenesis and development of the male gametophyte. Structure of Ovule, megasporogenesis and development of the female gametophyte e.

#### **Module V**

##### **Plant Pathology**

General Symptoms of fungal, bacterial and viral diseases and their control. Disease cycles of the following diseases, Loose smut of wheat, Rust of wheat, Late blight of potato

#### **Module VI**

##### **Plant Anatomy**

Meristems. Anatomy of root, stem and leaf, Root-stem transition, structure and function of cambium in root and stem.

#### **Module VI**

**Ecology** Ecosystem– abiotic and biotic factors, food chain, food web, ecological pyramids. Energy flow and productivity. Ecological niche and Ecological succession

#### **Examination Scheme:**

Components	H/S	A	CT	EE
Weightage (%)	10	5	15	70

## ANIMAL DIVERSITY-II

**Course code: BLS2202**

**Credit Units: 03**

### **Objectives**

This paper will provide the conceptual knowledge about Vertebrates, which includes from Pisces to Mammals. This paper will be helpful to understand the variations from one class to another. The knowledge gained from this subject will be helpful for students to realise the significance of animal sciences towards its applications in modern biotechnology.

### **Course Contents:**

#### **Module I:**

Origin and features of Chordates and Vertebrates. Salient features and outline classification of Phylum Chordata upto order with suitable examples. General Characters and affinities of Hemichordata, Cephalochordata & Urochordata.

#### **Module II:**

**Pisces:** Salient features of class Pisces. Respiration and Gills, Osmoregulation, Fish scales. Induced breeding and seed production of economically important fishes.

#### **Module III:**

**Amphibia:** Salient Features of Class Amphibia, Circulation, Respiration, Reproduction and Hibernation.

#### **Module IV:**

**Reptiles:** Salient features of Class Reptilia, Poisonous and non- poisonous snakes, Poison apparatus and biting mechanism of snakes. Snake venom:

#### **Module V:**

**Aves:** Salient features of Class Aves. Flight adaptations, aerodynamics of flight and migration in birds.

#### **Module VI:**

**Mammals:** Salient features of Prototheria, Metatheria and Eutheria. Rabbit as model for Class Mammalia.

### **Examination Scheme:**

Components	H/S	A	CT	EE
Weightage (%)	10	5	15	70

### **References:**

1. Jordan E.L. and P.S. Verma 1995. Chordata Zoology and Elements of Animal Physiology. S. Chand and Co., New Delhi.

## CHEMISTRY - II

**Course Code: BLS2203**

**Credit Units: 03**

### **Course Objective:**

The students will acquire knowledge about the compounds of carbon mainly hydrocarbon. They will be acquainted with the methods of qualitative and quantitative analysis of elements of hydrocarbons and methods of preparation of these compounds. They will get knowledge about the behavior of chemical and physical reactions along with electrolysis process.

### **Course Contents:**

## **ORGANIC CHEMISTRY**

### **Module I**

Organic chemistry as chemistry of carbon compounds, Methods of purification, tests of purity: qualitative and quantitative elemental analysis, determination of molecular masses: calculation of Empirical and Molecular formula, Structural formula. Tetrahedral concept of carbon compounds; nomenclature of organic compounds; Isomerism; stereo-isomerism, geometrical and optical isomerism.

### **Module II**

Petroleum: Fractionation, cracking and synthetic petrol.

General methods of preparation and properties of alkanes, alkenes, alkynes, Halogen substituted alkanes ( $\text{CH}_2\text{Cl}_2$ ,  $\text{CHCl}_3$ ,  $\text{CCl}_4$ ,  $\text{CHI}_3$ ), Electrophilic substitutions. General study of Cycloalkanes

### **Module III**

- Grignard reagent; preparation and uses,
- Alcohol; ethanol, propanol, glycerol
- Monocarboxylic acids and their simple derivatives, descriptive studies of dicarboxylic acids, viz. malic, oxalic, tartaric, maleic,

General methods of preparation of aliphatic aldehydes and ketones,

Keto-enol tautomerism; aceto-acetic ester and malonic ester.

## **PHYSICAL CHEMISTRY**

### **Module IV**

**Chemical equilibrium:** Reversible reactions, equilibrium law, equilibrium constant, factors influencing equilibrium states.

### **Module V**

**Electrochemistry:** Electrolysis, laws of electrolysis, ionisation constant, specific, equivalent and molecular conductance, common ion effect; Hydrogen ion concentration, pH value, Theory of acid base indicators, buffer solutions, hydrolysis of salts and solubility product simple calculations based on these concepts.

**Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## PHYSICS-II

**Course Code: BLS2204**

**Credit Units: 03**

**Course Objective:** An important objective of the course is to develop an understanding of physics at successively deeper levels with a greater insight into the topics such as wave mechanics and nuclear and energy physics along with electronics.

### **Course Contents:**

#### **Module I: Wave mechanics**

Wave Mechanics – De Broglie Waves – Dual Nature – Experimental Study of Matter Waves – Davisson and Germer's Experiment – G.P. Thomson's Experiment – Heisenberg's uncertainty Principle – The position and moment of a particle.

#### **Module II: Nuclear physics**

Particle accelerators – cyclotron, particle detectors – GM Counter Artificial Transmutation – Rutherford's Experiment – The Q value equation for nuclear reaction – Threshold energy – Nuclear Reactions. Conservation Laws: Conservation of Charge – Conservation of Nucleons – Conservation of Mass – Energy – Conservation of Parity – Quantities conserved and quantities not conserved in a nuclear reaction. Biological effects of radiation – control of radiation hazards.

#### **Module III: Energy physics**

Sources of conventional energy – Need for non-conventional energy resources – solar energy utilization – solar water heater – solar drier – conversion of light into electrical energy – solar cell – merits and demerits of solar energy – wind energy – its conversion systems – energy from Bio mass – Bio gas generation – Industrial and space application.

#### **Module IV: Crystallography and fiber optics**

Crystallography : The crystal structure – Unit Cell – Miller indices – Reciprocal Vectors – Properties of Reciprocal Lattice – Bragg's Law.

Fibre Optics: Principle – classification of optical fibres – fiber optic communication system block diagram.

#### **Module V: Electronics**

Electronics : Zener diode – Characteristics – Voltage regulation using zener diode – LED – uses of LED. Digital Electronics : AND, OR, NOT, NAND and NOR gates – NAND and NOR as universal building blocks – Fabrication of a Integrated circuit by monolithic technology – Advantages and limitations of an integrated circuit – LSI, MSI and VLSI.

### **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

## MATHEMATICS-II

Course Code: BLS2205

Credit Units: 03

**Course objective:** To make the students explore the basic concepts of mathematics and statistics which are relevant for branches of earth sciences.

### Unit I

Integral Calculus: Bernoulli's formula for integration by parts; Reduction formulae for:  $\int x^m e^{ax} dx$ ,  $\int \sin^m x dx$ ,  $\int \cos^n x dx$  (with proof & problems),  $\int_0^{\pi/2} \sin^m x \cos^n x dx$  (no proof, problems only); properties of definite integrals and simple problems.

Application of Integration: Evaluation of double, triple integrals; Simple applications to area, volume; Fourier series for functions in  $(0, 2\pi)$  and  $(-\pi, \pi)$ .

### Unit II

Statistics: Frequency and distribution; Arithmetic mean, Median, Partition values, Mode, Variance and standard deviation; Curve fitting; Principle of least square; Linear regression.

### Unit III

Probability: Introduction to Probability; Addition and multiplication theorem of Probability; Random variables and Probability distribution; Expected values; Binomial distribution; Poisson distribution & Normal distribution and their application.

### Examination Scheme:

Components	A	CT	HA	EE
Weightage (%)	5	15	10	70

A: Attendance, CT: Class Test, HA: Home Assignment, EE: End Semester Examination;

### Suggested Readings

1. P. Duraipandian and S.Udayabaskaran,(1997) *Allied Mathematics*, Vol. I &II.Muhil Publishers, Chennai
2. Shaum's Series "outlines of Statistics:

## ANIMAL DIVERSITY LAB-II

**Course Code: BLS2206**

**Credit Units: 01**

**Course objective:** Course objective is to provide the knowledge about plant science that should be useful to understand and apply different concepts about the diversity and complexity of animals.

### **Course Contents:**

#### **Module I:**

Study of different types of scales in fishes, permanent preparations of scales. Internal ear Different types of important edible fishes of India.

#### **Module II:**

Study of *Rana tigrina*, physiological systems through model.

#### **Module III:**

Hyoid apparatus of home lizard, Demonstration of biting mechanism by using model.

#### **Module IV:**

Development of chick up to formation of primitive streak.

#### **Module V:**

Mice: Arterial system and reproductive system.

## PLANT DIVERSITY LAB-II

**Course code: BLS2206**

**Credit Unit: 1**

### **Course objective:**

Course objective is to provide the knowledge about plant science that should be useful to understand and apply different concepts about the diversity and complexity of plants.

### **Course Contents:**

#### **Module I:**

**Gymnosperms** Study of the Gymnosperms like *Cycas*, and *Pinus* by cutting sections and making suitable temporary preparations.

#### **Module II:**

**Taxonomy** Detailed description and identification of locally available plants of the families as prescribed in theory course.

#### **Module III:**

**Plant Anatomy** Anatomy of normal dicot and monocot roots, stems & leaves.

#### **Module IV:**

**Embryology** Study of permanent slides of the:

- a) T.S. anther, pollen, germinating pollen
- b) L.S. ovule types
- c) Endosperm
- d) Embryos
- e) L.S. caryopsis
- f) Dissection of embryo

#### **Module V:**

**Plant Pathology** Examination of local diseased plants representing bacterial, viral, fungal parasites.

Study of symptoms caused by parasites, study of selected diseased specimen (mentioned under theory) through specimens, temporary presentations.

#### **Module VI:**

**Ecology** Measurement of temperature (Soil). Demonstration of Soil texture, carbonate, sulphate, pH, soil moisture percentage. A comparative study of plants (with external and internal characters) to water availability.

### **Examination Scheme:**

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

## CHEMISTRY LAB-II

Course Code: BLS2207

Credit Units: 01

### Module I

**Qualitative analysis of inorganic mixtures, containing not more than four ionic species (excluding insoluble substances) out of the following:**

Pb<sup>2+</sup>, Hg<sup>2+</sup>, Hg<sub>2</sub><sup>2+</sup>, Ag<sup>1+</sup>, Bi<sup>3+</sup>, Cu<sup>2+</sup>, Cd<sup>2+</sup>, As<sup>3+</sup>, Sn<sup>2+</sup>, Sn<sup>4+</sup>, Fe<sup>2+</sup>, Fe<sup>3+</sup>, Al<sup>3+</sup>, Co<sup>2+</sup>, Ni<sup>2+</sup>, Mn<sup>2+</sup>, Zn<sup>2+</sup>, Ba<sup>2+</sup>, Sr<sup>2+</sup>, Ca<sup>2+</sup>, Mg<sup>2+</sup>, NH<sub>4</sub><sup>1+</sup>, K<sup>1+</sup>, CO<sub>3</sub><sup>2-</sup>, S<sup>2-</sup>, SO<sub>3</sub><sup>2-</sup>, NO<sub>2</sub><sup>1-</sup>, CH<sub>3</sub>COO<sup>1-</sup>, F<sup>1-</sup>, Cl<sup>1-</sup>, Br<sup>1-</sup>, I<sup>1-</sup>, NO<sub>3</sub><sup>1-</sup>, SO<sub>4</sub><sup>2-</sup>, C<sub>2</sub>O<sub>4</sub><sup>2-</sup>, PO<sub>4</sub><sup>3-</sup>, BO<sub>3</sub><sup>3-</sup>.

### Module II

Purification of Organic compounds by crystallization (from water or alcohol) and distillation.

### Examination Scheme:

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

## PHYSICS LAB-II

**Course Code: BLS2208**

**Credit Units: 01**

### **Course Contents:**

1. Spectrometer Grating – Minimum Deviation – Mercury Lines.
2. Spectrometer – Refractive Index of a liquid – Hollow Prism.
3. Potentiometer – Calibration of High Range Ammeter.
4. Potentiometer – Calibration of Low Range Voltmeter.
5. Determination of M and BH using Deflection Magnetometer in Tan C position and vibration magnetometer.
6. Figure of merit and voltage sensitiveness of table galvanometer.
7. Construction of AND, OR gates using diodes and NOT by transistors.
8. Zener diode – Voltage Regulation.
9. NAND / NOR as universal gate.
10. Demorgan's theorem verification.

*Any other experiments can be carried out in class.*

### **Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## Syllabus - Third Semester

### PLANT ANATOMY

**Course Code: BLS2301**

**Credit Units-02**

**Module I**

The Plant cell: protoplast, ergastic substances the cell wall; protoplast

**Module-II**

The Plant tissues: meristematic tissues; Shoot apical meristem; Root apical meristem; Permanent tissues; Dermal tissue system (epidermis), Ground tissue system: parenchyma, Collenchyma, sclerenchyma

**Module-III**

The Plant tissues: Permanent tissues Vascular tissue system xylem and Phloem; Lateral meristem: Vascular cambium

**Module IV**

Secondary growth; Anomalous secondary growth; Phellogen and formation of periderm Secretory structures; Ecological effect on plant

**Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# ANIMAL ANATOMY

**Course Code: BLS2302**

**Credit Units : 02**

## **Module I**

Basic organization and principle chemical processes of the cells and tissues.

## **Module II**

The structural and functional relationships among the bones, articulations and muscles and the role of these systems in the maintenance of homeostasis.

## **Module III**

The regulatory system of the body (nervous and endocrine), how they interact with each other and their role in the maintenance of homeostasis.

## **Module IV**

The anatomy and physiology of body systems whose principal function is to maintain homeostasis. These systems include the circulatory, lymphatic, respiratory, urinary, and digestive.

## **Module V**

The anatomy and physiology of the male and female reproductive systems and how these systems produce new individuals

### **Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>Attendance</b>	<b>Assignment/ Project/Seminar/Quiz</b>	<b>EE</b>
<b>Weightage (%)</b>	15	5	10	70

# CELL BIOLOGY

**Course Code: BLS2303**

**Credit Units: 03**

## **Course Objective:**

Cell Biology and genetics plays a central role to connect the different fields of biotechnology, which is highly interdisciplinary. They incorporate elements of biology, maths, physics and chemistry with combination of computers and electronics. The objective of the present course is to understand the structure and function of the cellular and subcellular components of cells and tissues with the help of these recent techniques. Students are also exposed to phenomenon that regulates cell death and etiology of cancerous cells.

## **Course Contents:**

### **Module II: Cell Organelles**

Structure of nuclear envelope, nuclear pore,

Targeting proteins to endoplasmic reticulum, Protein sorting and export from Golgi apparatus; Protein import into Mitochondria, Import and sorting of chloroplast protein

### **Module III**

Structure and organization of actins filaments; Actins, myosin muscle contraction, Microtubule-structure and assembly

### **Module IV**

Modes of cell signaling, G-protein coupled receptors; cAMP pathway of signal transduction; cGMP, phospholipids and calcium ions, Ras, Raf, MAP kinase pathway, Apoptosis – role of caspases

### **Module V: Cell Cycle**

Phases of eukaryotic cell cycle; Cell cycle regulation, checkpoints in cell cycle; regulators of cell cycle inhibitors of cell cycle, stem cells – properties and medical application

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# GENETICS

**Course Code BLS2304**

**Credit Units: 03**

## **Course Objective:**

The objective of the course is to focus on the basic principles of genetics incorporating the concepts of classical, molecular and population genetics. Compilation is required for recent advances in genetic principles for strong foundation in Biotechnology.

Course Contents:

## **Module I**

The science of genetics -introduction, history, classical and molecular genetics, role of genetics in medicine, agriculture and society.

## **Module II: Mendelism**

Mendelian inheritance and its applications, Mendelian principles in human genetics and in agriculture.

Extension of Mendelism - Allelic variations, influence of environment on expression, penetrance and expressivity, epistasis, pleiotropy. Chromosomal basis of inheritance; sex linkage,, crossing over and chromosome mapping in eukaryotes.

## **Module III**

Numerical changes and structural changes in chromosomes with emphasis on human disease/syndromes/plant breeding and genetic counseling.

## **Module IV**

Mutation and mutagenic agents, types of mutations, economic importance of mutation

## **Module V**

Concept of gene – classical and modern, pseudoallelism, position effect, intragenic crossing over & complementation (cistron, recon & nutron) Benzer's work on r II locus in T<sub>2</sub> bacteriophage

## **Module VI: Genetics of Population**

Hardy- Weinburg Law and its deviations

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## PLANT ANATOMY LAB

**Course Code BLS2305**

**Credit Units: 01**

### **Module-I**

Microscopy, Photography, and Plant Diversity

### **Module-II**

Experimental study of Plant Cells; Cell Walls and Pits; Shoot Apical Meristem; Shoot Apical Meristem

### **Module-III**

Experimental study of Xylum, Phloem; Vascular Cambium and Wood

### **Examination Scheme:**

<b>IA</b>			<b>EE</b>			
<b>Class Test (Practical Based)</b>	<b>Mid Term Viva</b>	<b>Attendance</b>	<b>Major Experiment</b>	<b>Minor Experiment/Spotting</b>	<b>Practical Record</b>	<b>Viva</b>
15	10	05	35	15	10	10

## ANIMAL ANATOMY LAB

Course Code: BLS2305

Credit Units : 01

### Module-I

Study of permanent slides (mammalian tissues)

1. T. S. of long bone
2. Study of smooth, skeletal and cardiac muscle
3. T. S. of spleen
4. T.S. of thyroid gland
5. T. S. of pancreas
6. T.S. of adrenal gland

### Module II

Preparation of stains

1. Ehrlich's Alum Haematoxylin
2. Deafield's Harmatoxylin
3. Acetocarmine
4. Eosin

### Module III

Temporary mounting of buccal mucosa, skeletal muscle, blood smear.

### Module IV

Histological preparation : Fixation to section cutting and staining of a suitable mammalian tissue

### Examination Scheme:

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

## CELL BIOLOGY AND GENETICS LAB

Course Code: BLS2306

Credit Units : 01

### Course Contents:

#### Module I

Cell fractionation and separation of cell organelles by ultra centrifugation

#### Module II

Isolation of chloroplast from spinach

#### Module III

Isolation of mitochondria

#### Module IV

1. Study of gene interaction.
2. Study of bacterial conjugation.
3. Study of bacterial transduction.
4. Study of physical and chemical mutagens on growth of E. coli.

### Examination Scheme:

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

## PROJECT (WITH PRESENTATION AND EVALUATION)

Course Code: BLS2332

Credit Units: 04

### Objectives:

The aim of the project is to provide the students with an opportunity to further their intellectual and personal development in the chosen field by undertaking a significant practical unit of activity. The project can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

### Chapter Scheme and distribution of marks:

Chapter 1: Introduction – 10 marks

Chapter 2: Conceptual Framework/ National/International Scenario – 25 marks

Chapter 3: Presentation, Analysis & Findings -- 25 marks

Chapter 4: Conclusion & Recommendations -- 10 marks

Chapter 5: Bibliography -- 05 marks

Project Report	Power Point Presentation & Viva
75 marks	25 marks

### Components of a Project Report

The outcome of Project Work is the Project Report. A project report should have the following components:

**1) Cover Page:** This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.

**2) Acknowledgement:** Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.

**3) Table of Content:** Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.

**4) Body of the Report:** The body of the report should have these four logical divisions

a) **Introduction:** This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, and method of analysis), Limitations of the Study, and Chapter Planning.

b) **Conceptual Framework / National and International Scenario:** (relating to the topic of the Project).

c) **Presentation of Data, Analysis and Findings:** (using the tools and techniques mentioned in the methodology).

d) **Conclusion and Recommendations:** In this section, the concluding observations based on the main findings and suggestions are to be provided.

**5) Bibliography or References:** This section will include the list of books and articles which have been used in the project work, and in writing a project report.

**6) Annexures:** Questionnaires (if any), relevant reports, etc.

(The main text of the Project should normally be in the range of 5000 words. However, there may be annexure in addition to the main text)

### **The Steps of a Project Report**

**Step I :** Selection of the topic for the project by taking following points into consideration:

- Suitability of the topic.
- Relevance of the topic
- Time available at the disposal.
- Feasibility of data collection within the given time limit.
- Challenges involved in the data collection (time & cost involved in the data collection, possibility of getting responses, etc.)

**Step II :** Finalisation of the Topic and preparation of Project Proposal in consultation with the Supervisor.

**Step III :** Collection of information and data relating to the topic and analysis of the same.

**Step IV :** Writing the report dividing it into suitable chapters, viz.,

Chapter 1: Introduction,

Chapter 2: Conceptual Framework / National & International Scenario,

Chapter 3: Analysis & Findings

Chapter 4: Conclusion and Recommendations.

**Step V :** The following documents are to be attached with the Final Project Report.

1) Approval letter from the supervisor (Annexure-IA)

2) Student's declaration (Annexure-IB)

3) Certificate from the Competent Authority of the Organisation / Institution, if the student undertakes the Project Work in any Organisation / Institution.

### **Guidelines for Evaluation:**

- Each of the students has to undertake a Project individually under the supervision of a teacher and to submit the same following the guidelines stated below.
- Language of Project Report and Viva-Voce Examination may be English. The Project Report must be typed and hard bound.
- Failure to submit the Project Report or failure to appear at the Viva-voce Examination will be treated as "Absent" in the Examination. He /she has to submit the Project Report and appear at the Viva-Voce Examination in the subsequent years (within the time period as per University Rules).
- No marks will be allotted on the Project Report unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her Project Report.
- Evaluation of the Project Work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate.

# Syllabus - Fourth Semester

## PLANT PHYSIOLOGY

**Course Code: BLS2401**

**Credit Units: 02**

**Course Objective:**

Course objective to provide the knowledge about plant physiology that should be useful to understand and apply different concepts of biotechnology

**Course Contents:**

**Module I**

Water relation, Ion and solute transport, Mineral nutrition and deficiency, Translocation in the phloem, Transpiration.

**Module II**

Photosynthesis, photochemical reaction, photophosphorelation and carbon fixation pathways: C3, C4 and CAM pathways.

**Module III**

Respiration, electron transport chain, oxidative phosphorylation, photorespiration, chemiosmotic theory and ATP synthesis.

**Module IV**

Plant growth and development, growth regulators (physiological effect), photoperiodism and flowering, vernalization and senescence.

**Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

- Teiz & Ziger
- Devlin & Withan

# ANIMAL PHYSIOLOGY

**Course code: BLS2402**

**Credit Unit: 2**

**Course Objective:**

Course objective to provide the knowledge about animal physiology that should be useful to understand and apply different concepts of biotechnology

**Course Contents:**

**Module I: Physiology of Digestive System**

Composition and function of saliva, Mechanical and chemical digestion, Functions of pancreatic juices and biles, Absorption and distribution of food

**Module II: Physiology of Cardiovascular System**

Blood, Blood Groups and Blood Transfusion, Blood Clotting, Hemodynamics, Cardiac Cycle and its regulation,

**Module III: Physiology of Neuromuscular System**

Contraction and relaxation of muscle, Sarcomere, Cori's cycle, Organization of Nervous System, Neuron, Nerve Impulse, Synaptic Transmission, Neurotransmitters.

**Module IV: Endocrine Physiology and Unrinogential System**

Endocrine gland in mammals, general account of thyroid, parathyroid, pituitary, pancreatic islets, nephron, glomerular filtration, hormonal regulation of spermatogenesis, ovulation, fertilization and pregnancy.

**Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

**Text & References:**

# MICROBIOLOGY

**Course Code: BLS2403**

**Credit Units: 03**

## **Course Objective:**

To acquaint the students about the microbiology and role of various microorganisms in different biotechnological applications, various techniques for their cultivation and control

## **Course Contents:**

### **Module I: Introduction and historical perspective**

Discovery of microbial world, Concept of pure culture, Theory and practice of sterilization; Isolation of microorganisms, staining methods, microscopy, preservation of microbial cultures

### **Module II**

**Microbial Physiology:** cell structure and function. Microbial growth: Growth curve, Enumeration of cells by direct and indirect methods, Microbial fermentations, Microbial Stress Responses.

### **Module III**

**Evolutionary microbiology and microbial diversity:** Microbial evolution and systematics, prokaryotic diversity: bacteria and archaea, eukaryotic microorganisms (structure of algae and fungi), microbial community analysis (overview), classical and molecular taxonomy.

**Virology:** Viruses and virions, growth and quantification, viral replication, viroids and prions, Bacterial, plant and animal viruses,

### **Module IV**

**Microbial Ecology** Methods in microbial ecology (culture dependent and culture independent techniques), microbial habitats and nutrient cycling (Carbon, sulphur and nitrogen cycles), plant-microbes, animal-microbes interactions. Soil microorganisms associated with vascular plants, bioremediation and biodegradation.

### **Module V**

**Applied microbiology:** Biocatalysts, microbial metabolites, wine production, single cell proteins, microbial transformation of steroids, role of microbes in food industry, production of dairy products (fermented milks and cheese), Role of microbes in Agriculture (biofertilizers, biopesticides), Waste water treatment.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Text & References:**

# BIOSTATS & BIOINFORMATICS

**Course Code: BLS2404**

**Credit Units: 03**

## **Course Objective:**

Course objective is to provide the knowledge that should be useful to understand different concepts of molecular properties of basic life molecules like proteins nucleic acids and their relative structure and function across the genus or kingdom

## **Module I:**

Introduction to Molecular modeling, data bases for proteins and DNA – PDB and MMDB, structure file formats, visualizing structural information, advance structure modeling, Internal and external co-ordinate system, cartesian and cylindrical polar co-ordinate system, Potential energy calculations using semiempirical potential energy function,

## **Module II:**

Software and Programmes for sequence comparison and analysis, Phylogenetics analysis software, Molecular Structure drawing tool,

## **Module III:**

Molecular modeling/Docking, Molecular mechanics and dynamics, Knowledge base structure prediction, Molecular Design, structure similarity searching; Secondary structure prediction in proteins, prediction of buried residues in proteins

## **Module IV**

Application of molecular modeling & computational biology/Bioinformatics in Agriculture, Human health, Environment, Biotechnology, Molecular Biology, Neurobiology, Drug Designing, Veterinary Science.

## **Module V: Introduction to the following Statistical terms**

Parameter, Statistic, Null hypothesis, Alternative hypothesis, Critical region, Type1 Error, Type 11 Error, Level of significance, P-value and its applications.

Test of Significance for Small samples: One sample t-test, Paired t-test, Degrees of freedom for t-test, F test for equality of Population variances, Degrees of freedom for F-test.

Test of Significance for Large samples: Normal test for sample mean and population mean, Normal test for two sample means.

Chi-square Test: Test of goodness of fit, Test of Independence of attributes, Degrees of freedom for Chisquare test, Coefficient of contingency, Yates' correction for continuity.

Analysis of Variance: One way and Two way (only Examples)

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# ECOLOGY & EVOLUTION

**Course Code BLS2405**

**Credit Units : 03**

## **Course Objective:**

The term environment is used to describe, in the aggregate, all the external forces, influences and conditions, which affect the life, nature, behaviour and the growth, development and maturity of living organisms. At present a great number of environment issues, have grown in size and complexity day by day, threatening the survival of mankind on earth. A study of environmental studies is quite essential in all types of environmental sciences, environmental engineering and industrial management. The objective of environmental studies is to enlighten the masses about the importance of the protection and conservation of our environment and control of human activities which has an adverse effect on the environment.

## **Course Contents:**

### **Module I: The multidisciplinary nature of environmental studies**

Definition, scope and importance

Need for public awareness

### **Module II: Natural Resources**

#### **Renewable and non-renewable resources:**

Natural resources and associated problems

Forest resources: Use and over-exploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forests and tribal people.

Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems.

Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies.

Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies.

Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources, case studies.

Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification.

- Role of an individual in conservation of natural resources.
- Equitable use of resources for sustainable lifestyles.

### **Module III: Ecosystems**

Concept of an ecosystem

Structure and function of an ecosystem

Producers, consumers and decomposers

Energy flow in the ecosystem

Ecological succession

Food chains, food webs and ecological pyramids

Introduction, types, characteristic features, structure and function of the following ecosystem:

- a. Forest ecosystem
- b. Grassland ecosystem
- c. Desert ecosystem
- d. Aquatic ecosystems (ponds, streams, lakes, rivers, ocean estuaries)

#### **Module IV: Biodiversity and its conservation**

Introduction – Definition: genetic, species and ecosystem diversity

Biogeographical classification of India

Value of biodiversity: consumptive use, productive use, social, ethical aesthetic and option values

Biodiversity at global, national and local levels

India as a mega-diversity nation

Hot-spots of biodiversity

Threats to biodiversity: habitat loss, poaching of wildlife, man wildlife conflicts

Endangered and endemic species of India

Conservation of biodiversity: In-situ and Ex-situ conservation of biodiversity

#### **Module V: Environmental Pollution**

Definition Causes, effects and control measures of:

- a. Air pollution
- b. Water pollution
- c. Soil pollution
- d. Marine pollution
- e. Noise pollution
- f. Thermal pollution
- g. Nuclear pollution

Solid waste management: Causes, effects and control measures of urban and industrial wastes.

Role of an individual in prevention of pollution.

Pollution case studies.

Disaster management: floods, earthquake, cyclone and landslides.

#### **Module VI: Social Issues and the Environment**

From unsustainable to sustainable development

Urban problems and related to energy

Water conservation, rain water harvesting, watershed management

Resettlement and rehabilitation of people; its problems and concerns. Case studies.

Environmental ethics: Issues and possible solutions

Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies.

Wasteland reclamation

Consumerism and waste products

Environmental Protection Act

Air (Prevention and Control of Pollution) Act

Water (Prevention and control of Pollution) Act

Wildlife Protection Act

Forest Conservation Act

Issues involved in enforcement of environmental legislation

Public awareness

#### **Module VII: Human Population and the Environment**

Population growth, variation among nations

Population explosion – Family Welfare Programmes

Environment and human health

Human Rights

Value Education

HIV / AIDS

Women and Child Welfare  
Role of Information Technology in Environment and Human Health  
Case Studies

### Module VIII: Field Work

Visit to a local area to document environmental assets-river / forest/ grassland/ hill/ mountain.

Visit to a local polluted site – Urban / Rural / Industrial / Agricultural

Study of common plants, insects, birds

Study of simple ecosystems-pond, river, hill slopes, etc (Field work equal to 5 lecture hours)

### Examination Scheme:

Components	CT	HA	S/V/Q	A	EE
Weightage (%)	15	5	5	5	70

## PLANT PHYSIOLOGY LAB

Course Code: BLS2406

Credit Units: 01

### Plant Physiology

- Effects of plant growth hormones on rooting and shooting.
- Estimation of salicylic acid as secondary signaling molecule in plants
- Separation of photosynthetic pigments through thin layer chromatography
- Determination of Respiration Quotient (RQ)

### Examination Scheme:

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

## ANIMAL PHYSIOLOGY LAB

**Course Code: BLS2406**

**Credit Units: 01**

### **Animal Physiology**

- Enumeration of red blood cells using hemocytometer.
- Estimation of haemoglobin using Sahli's hemoglobinometer.
- Preparation of haemin and hemochromogen crystals.
- Enumeration of total and differential count of white blood cells.
- Effect of pH on amylase activity from saliva.
- Biochemical analysis: carbohydrate, proteins and fats.
- Estimation of serum bilirubin (direct and indirect method).

### **Examination Scheme:**

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

## MICROBIOLOGY LAB

**Course Code: BLS2407**

**Credit Units: 01**

### Course Contents:

- Laboratory safety and instrument handling, General rules and regulations, Aseptic techniques, preparation of culture media for cultivation of specific microorganisms.  
Observation of permanent slides (*E.coli*, *Yeast*, *Sarcina*, *Streptococcus*, *Acid fast staining*)
- Isolation and enumeration of microorganisms from air, water and rhizosphere (actinomycetes, bacteria and fungi), serial dilution and viable plate counting methods, Use of differential, selective and enriched media.
- Staining techniques: Simple staining, differential Gram staining, endospore staining, lactophenol cotton blue staining for fungi
- Growth curve measurement of bacterial population by turbidometry
- Biochemical tests – Triple Sugar Iron test (TSI) , Indole test. Methyl red test. Voges proskaeur test, Citrate utilization test (IMViC), starch hydrolysis, casein hydrolysis, catalase test
- Water microbiology- presumptive, confirmed and complete test for water potability.

### Examination Scheme:

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

# Syllabus - Fifth Semester

## MOLECULAR BIOLOGY

**Course Code: BLS2501**

**Credit Units: 03**

**Course Objective:**

The objective of the course is to provide a clear understanding of DNA (genetic material) so that they can manipulate it and understand basic tools and techniques involved in its manipulation. Strong foundation in molecular biology enables the students to familiarize themselves with Genetic engineering technology.

**Course Contents:**

**Module I: DNA replication and repair**

DNA structure, DNA replication; DNA repair mechanism,

**Module II: Transcription of DNA**

Transcription in prokaryotes and eukaryotes, RNA polymerase – Composition and function; transcription mechanism; transcription factor and their role, inhibition of RNA synthesis

**Module III: Processing of RNA**

Processing of ribosomal and transfer RNA's processing of mRNA-5'cap formation; 3' polyadenylation ; RNA splicing , RNA editing , RNA degradation.

**Module IV: Translation**

Translation mechanism in prokaryotes and eukaryotes; ribosomes, initiation of translation, elongation, termination, amino acid activation; inhibitors, post translation modification of protein

**Module V: Regulation of gene expression**

Regulation in prokaryotes – repressors and negative control, positive control, role of c AMP, **Ampr** receptor protein, lac, tryp, His and ara operons, Regulation in Eukaryotes=promoters and enhancers, transcriptional regulatory protein, transcriptional activators, eukaryotic repressor.

**Module VI: Gene Silencing**

Antisense molecules; Biochemistry of ribozyme, Hammer head, hairpin ribozymes. Application of antisense and ribozymes in genetic engineering.

**Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# BIOCHEMISTRY

**Course Code: BLS2502**

**Credit Units : 03**

## **Course Contents:**

### **Module I: Chemical basis of Life**

Composition of living matter; properties of water, properties of biomolecules in aqueous environment; biomolecular interactions; bioenergetics

### **Module II: Carbohydrates**

Structure and functions of carbohydrates; carbohydrate metabolism: glycolysis, Krebs's cycle, phosphogluconate pathway, glyoxlate pathway, pentose phosphate pathway, Cori cycle, Gluconeogenesis and glycogenolysis and its regulation. Oxidative phosphorylation. Major metabolic disorders of carbohydrate metabolism: diabetes.

### **Module III: Amino acids and Proteins**

Structure and functions of amino acid and proteins; Overview of amino acid biosynthesis, Major metabolic disorders of amino acid metabolism, biological Nitrogen fixation; structure and functions of vitamin derivative co-factors;.

### **Module IV: Lipids**

Structure and functions of lipids and derivative lipids: glycerols, fatty acids, waxes, phospholipids, sphingolipids, lipoproteins. Biosynthesis and oxidation of fatty acids; Cholesterol synthesis; formation of ketone bodies.

### **Module V: Nucleotide Metabolism**

Structure and functions of nucleic acids DNA and RNA. De novo and salvage pathways for synthesis of pyrimidine and purine nucleotides; purine degradation, pyrimidine breakdown; Major metabolic disorders of nucleotide metabolism Gout, Lesch-nuhan syndrome, immuno deficiency)

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Text & References:**

# IMMUNOLOGY

**Corse Code: BLS2503**

**Credit Units: 03**

## **Course Objective:**

Role of antibody engineering in biomedical applications and the importance of immuno genetics in disease processes, tissue transplantation and immune regulation are some of the areas of attributes of this course which can help the students to understand the biotechnology related to human kind.

## **Course Contents:**

### **Module I**

Historical perspective of immune system and immunity; Innate and specific immunity, Humoral immunity, Cell-mediated immunity

### **Module II**

Antibody structure in relation to function and antigen-binding; Types of antibodies and their structures: isotypes, allotypes, idiotypes; Genetic basis of antibody diversity

### **Module III**

The organs and cells of the immune system; Histocompatibility: structure of MHC class I, II & III antigens & their mode of antigen presentation, MHC restriction; Antigens & antigenicity;

### **Module IV**

Measurement of antigen – antibody interaction: agglutination, immunodiffusion, immuno-electrophoresis, ELISA, RIE, production of monoclonal antibodies.

### **Module V**

Complement system; Autoimmunity; Hypersensitivity

### **Module VI:**

Hybridoma Technology; Introduction to transplantation immunology, Introduction to Cancer immunology, Vaccines (attenuated and recombinant);

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Text & References:**

### **Text:**

# BIO-ANALYTICAL AND BIOPHYSICAL TECHNIQUES

**Course Code: BLS2504**

**Credit Units: 02**

## **Course Objective:**

The students will be exposed to basic concepts related with techniques and instrumentation widely used in Biotechnology.

## **Course Contents:**

### **Module I: Buffers & Sample preparation**

Preparation of solutions, concept of pH and buffer, types of buffers and their preparation, pH meter. Cell Disruption techniques, ultra filtration, dialysis and reverse osmosis.

### **Module II: Centrifugation**

Principle of centrifugation, rotors, different types of centrifuges, ultra centrifugation.

### **Module III: Microscopy**

Principles of microscopy, types of microscopy Bright field, Dark field, phase contrast and fluorescence microscopy. Electron microscopy: Transmission and scanning electron microscopy.

### **Module IV: Radioisotope techniques**

Study of radioisotopes in biological samples, proportional and GM counter, scintillation counters, autoradiography.

### **Module V: Electrophoresis & Chromatography**

SDS-PAGE, isoelectric focusing, two-dimensional electrophoresis; Paper, TLC, gel filtration, ion-exchange chromatography, affinity chromatography, HPLC and GLC

### **Module VI: Spectroscopy**

UV and visible spectroscopy, Infrared and Atomic absorption spectroscopy, fluorescence spectroscopy.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Text & References:**

### **Text:**

- Principles of Physical Biochemistry, K.E. Van Holde, Prentice Hall.

# BIOMATERIALS

**Course Code: BLS2505**

**Credit Units : 02**

## **Module I**

Introduction to biomaterials: definition, classification, properties and requirements

## **Module -II**

- Biomaterials used in medicine: ceramics, polymers, metals, composites
- Bone tissue engineering scaffolds

## **Module -III**

Applications of biomaterials in medicine

- Sterilisation
- Surface modification of biomaterials
- Medical imaging
- Bioreactors
- Medical Device/ Advanced Therapy Medicinal Product
- Good Manufacturing Practice facilities

### **Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>Attendance</b>	<b>Assignment/ Project/Seminar/Quiz</b>	<b>EE</b>
<b>Weightage (%)</b>	15	5	10	70

## MOLECULAR BIOLOGY LAB

**Course Code: BLS2506**

**Credit Units: 01**

### **Course Contents:**

1. Isolation of genomic DNA.
2. Isolation of plasmid DNA.
3. Isolation of eukaryotic total RNA.
4. Study of in vitro transcription.
5. Invitro study of translation

### **Examination Scheme:**

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

## IMMUNOLOGY LAB

**Course Code: BLS2507**

**Credit Units: 01**

### **Module I**

Blood film preparation and identification of cells.

### **Module II**

Isolation of serum, Purification of IgG through affinity chromatography

### **Module III**

Lymphoid organs and their microscopic organization.

### **Module IV**

WIDAL Test

### **Module V**

Radial Immuno Diffusion Test; Ouchterlony Double diffusion Test

### **Module VI: ELISA**

Dot, Sandwich

### **Examination Scheme:**

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

## BIOCHEMISTRY AND BIOANALYTICAL LAB

**Course Code: BLS2508**

**Credit Units: 01**

### **Module I: Solutions and buffers**

Preparation of molar, normal and % (w/v) solutions. preparation of buffers of different pH and molar strength.

### **Module II: Carbohydrates**

Extraction and estimation of carbohydrates from given plant/animal materials: determination of total sugars by Anthrone method Separation of sugars by thin layer chromatography

### **Module III: Proteins**

Extraction of total proteins; Estimation of proteins by Lowery/ Bradford Method; Electrophoretic (SDS-PAGE) separation of isolated proteins

### **Module IV: Lipids**

Extraction of total lipids; estimation of phospholipids/glycolipids; thin layer chromatographic separation of lipids

### **Module IV: Nucleic Acid**

Extraction and estimation of DNA and RNA by UV-spectrophotometer

### **Examination Scheme:**

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

### **Text & References:**

- Practical book of Biochemistry by Plummer
- Practical book of Biochemistry by S.K. Sawhney and Randhir Singh

## SUMMER INTERSHIP PROJECT (EVALUATION)

Course Code: BLS2535

Credit Units: 04

### Objectives:

The aim of the project is to provide the students with an opportunity to further their intellectual and personal development in the chosen field by undertaking a significant practical unit of activity. The project can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

### Chapter Scheme and distribution of marks:

Chapter 1: Introduction – 10 marks

Chapter 2: Conceptual Framework/ National/International Scenario – 25 marks

Chapter 3: Presentation, Analysis & Findings -- 25 marks

Chapter 4: Conclusion & Recommendations -- 10 marks

Chapter 5: Bibliography -- 05 marks

Project Report	Power Point Presentation & Viva
75 marks	25 marks

### Components of a Project Report

The outcome of Project Work is the Project Report. A project report should have the following components:

**1) Cover Page:** This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.

**2) Acknowledgement:** Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.

**3) Table of Content:** Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.

**4) Body of the Report:** The body of the report should have these four logical divisions

a) **Introduction:** This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, and method of analysis), Limitations of the Study, and Chapter Planning.

b) **Conceptual Framework / National and International Scenario:** (relating to the topic of the Project).

c) **Presentation of Data, Analysis and Findings:** (using the tools and techniques mentioned in the methodology).

d) **Conclusion and Recommendations:** In this section, the concluding observations based on the main findings and suggestions are to be provided.

**5) Bibliography or References:** This section will include the list of books and articles which have been used in the project work, and in writing a project report.

**6) Annexures:** Questionnaires (if any), relevant reports, etc.

(The main text of the Project should normally be in the range of 5000 words. However, there may be annexure in addition to the main text)

### **The Steps of a Project Report**

**Step I :** Selection of the topic for the project by taking following points into consideration:

- Suitability of the topic.
- Relevance of the topic
- Time available at the disposal.
- Feasibility of data collection within the given time limit.
- Challenges involved in the data collection (time & cost involved in the data collection, possibility of getting responses, etc.)

**Step II :** Finalisation of the Topic and preparation of Project Proposal in consultation with the Supervisor.

**Step III :** Collection of information and data relating to the topic and analysis of the same.

**Step IV :** Writing the report dividing it into suitable chapters, viz.,

Chapter 1: Introduction,

Chapter 2: Conceptual Framework / National & International Scenario,

Chapter 3: Analysis & Findings

Chapter 4: Conclusion and Recommendations.

**Step V :** The following documents are to be attached with the Final Project Report.

1) Approval letter from the supervisor (Annexure-IA)

2) Student's declaration (Annexure-IB)

3) Certificate from the Competent Authority of the Organisation / Institution, if the student undertakes the Project Work in any Organisation / Institution.

### **Guidelines for evaluation:**

- Each of the students has to undertake a Project individually under the supervision of a teacher and to submit the same following the guidelines stated below.
- Language of Project Report and Viva-Voce Examination may be English. The Project Report must be typed and hard bound.
- Failure to submit the Project Report or failure to appear at the Viva-voce Examination will be treated as "Absent" in the Examination. He /she has to submit the Project Report and appear at the Viva-Voce Examination in the subsequent years (within the time period as per University Rules).
- No marks will be allotted on the Project Report unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her Project Report.
- Evaluation of the Project Work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate.

# Syllabus - Sixth Semester

## RECOMBINANT DNA TECHNOLOGY

**Course Code: BLS2601**

**Credit Units: 03**

**Course Objective:**

A complete understanding of molecular techniques can be obtained through the course. The successful application of biotechnology largely depends on these advanced molecular techniques.

**Course Contents:**

**Module I**

Restriction endonuclease, methyltransferase, ligase, polymerase, kinase, phosphatase, nuclease, transferase, reverse transcriptase.

**Module II**

Cloning vectors: Plasmids, bacteriophages (Lambda and M13), phagemids, cosmids, artificial chromosomes (YAC, BAC). expression vectors (Bacteria and yeast); Basic cloning strategy and screening clones; Gene libraries

**Module III**

Blotting techniques and hybridization: Southern, Northern and Western blotting techniques. Radioactive and non-radioactive probes.

**Module IV**

Principles of PCR, types of PCRs and its applications

**Module V**

DNA sequencing (Maxam Gilbert, Sanger's and automated), protein engineering.

**Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

**Text & References:**

# GENOMICS AND PROTEOMICS

**Course Code: BLS2602**

**Credit Units: 03**

## **Course Objective:**

The course helps in developing a detailed understanding of eukaryotic genome complexity and organization. Current research on the molecular basis of the control of gene expression in eukaryotic system has developed a detailed understanding of techniques of gene diagnostics and DNA profile to acquire the fundamentals of genomics and Proteomics.

## **Course Contents:**

### **GENOMICS**

#### **Module I: Genome Evolution**

Origin of genomes, functional genomics. Forward genetics

#### **Module II: Structural Genomics**

Chromosome structure and Genome organization, Genome sequencing methods, Gene identification  
Genome annotation methods

#### **Module III: Comparative Genomics**

Phylogeny, COGS [Cluster of orthologues genes], paralogues and gene displacement.

#### **Module IV: Functional Genomics**

ESTs, SAGE, DNA Microarrays, Application of Microarrays, Real Time PCR

#### **Module V: Genotyping Background and Applications.**

Genetic and physical mapping: Introduction to molecular markers-RFLP, RAPD, AFLP, SSRs. Genetic and physical maps, FISH for genome analysis, DNA fingerprinting; Single nucleotide polymorphisms, RNA interference, antisense RNA, siRNA, miRNA, ; Human Genome Project.

### **PROTEOMICS**

#### **Module VI**

Basics of Proteomics: Protein preparation and Separation, 2D Gel Electrophoresis, mass spectrometry, post translation modification.

Protein-Protein Interaction, Protein Microarray, Application of Microarray in proteome analysis.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Text & References:**

# IPR, BIOSAFETY AND BIOETHICS

**COURSE CODE: BLS2603**

**Credit Units: 02**

## **Course Objective:**

The objectives of the course are to explain the biosafety and bioethics. Students will study and assess biosafety, and bioethics related to genetically engineered plant, animal and microbial products.

## **Course Contents:**

### **Module I: Biotechnology and Intellectual Property Rights**

**Biotechnology and the Law-** Objective, Evolution, Basic Structure of Gene Techniques, Applications, Commercial Potential of Biotech Inventions, Rationale for Intellectual Property Protection. Patenting Biotechnology Inventions-Objective, Concept of Novelty, Concept of inventive step, Microorganisms, Moral Issues in Patenting Biotechnological inventions. Plant Varieties Protection-Objectives, Justification, International Position, Plant Varieties Protection in India Protection of Geographical Indications Objectives, Justification, International Position, Multilateral Treaties, National Level, Indian Position.

**Protection of Traditional Knowledge-** Objective, Concept of Traditional Knowledge, Holders, Issues concerning, Bio-Propecting and Bio-Piracy, Alternative ways, Protectability, need for a Sui-Generis regime, Traditional Knowledge on the International Arena, at WTO, at National level, Traditional Knowledge Digital Library.

### **Module II: Biosafety**

Definition and requirement; biosafety in relation to human health, environment, transgenic research and applications, biosafety laws, guidelines and conventions, biosafety regulation: principles and practices in microbial and biomedical labs, guidelines for research involving DNA molecule ; Regulation bodies at National and International level

### **Module III: Bioethics**

Defination of bioethics, importance of bioethics, Bioethics in plant, animal and microbial genetic engineering, Ethical issues in healthcare, Biopiracy and ethical conflicts Legal and socioeco'omic impact of the products and techniques in Biotechnology,

## APPLIED BIOLOGY

**Course Code: BLS2604**

**Credit Units: 03**

### **Course Contents:**

#### **Module I**

Introduction to fermentation, the fermentation industry, Production process batch and Continuous system of cultivation, Solid-state fermentation

#### **Module II**

Selection of industrial microorganisms, media for fermentation, aeration, pH, temperature and other requirements during fermentation, downstream processing and product recovery, food industry waste as fermentation substrate.

#### **Module III**

Production of compounds like, antibiotics, enzymes, organic acids, solvents, beverages, SCP.

#### **Module IV**

Production of fermented dairy products

#### **Module V**

Immobilized enzymes systems, production and applications.

### **Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>Attendance</b>	<b>Assignment/ Project/Seminar/Quiz</b>	<b>EE</b>
<b>Weightage (%)</b>	15	5	10	70

## RECOMBINANT DNA TECHNOLOGY LAB

**Course Code: BLS2605**

**Credit Units: 01**

**Course Objective:**

The laboratory experiments in Recombinant DNA Technology would certainly help to comprehend the theoretical aspects of the subject.

**Course Contents:**

**Module I**

Study of cloning

**Module II**

Study of PCR

**Module III**

Study of Southern hybridization

**Module IV**

Study of RAPD

**Examination Scheme:**

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

## APPLIED BIOLOGY LAB

**Course Code: BLS2606**

**Credit Units: 01**

### **Course Contents:**

#### **Module I**

Conventional filtration and membrane based filtration

#### **Module II**

Protein precipitation and recovery

#### **Module III**

Aqueous two-phase separation

#### **Module IV**

Ion exchange chromatography

#### **Module V**

Gel Permeation chromatography

#### **Module VI**

Electrophoresis

### **Examination Scheme:**

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

## PLANT SCIENCES-I

**Course Code: BTH2101**

**Credit Units: 03**

### **Course Objective:**

The objective of this course is to familiarize the students with the classification, morphology, reproduction and economic importance of various groups of lower plants which will provide the basic knowledge for the employment of these plants to study plant biotechnology.

### **Course Contents:**

#### **Module I**

General accounts of plant diversity, theory of evolution and classification of plants, concept of species, three domains of life- Archaea, Bacteria and Eukaryota. Evolutionary relationship among the three domain with an example.

#### **Module II**

Outline classification of algae (Based on classical and molecular concepts), occurrence, types of cell structure, thallus organization (both fresh water algae and marine algae) and mode of reproduction in algae. Alternation of generation

Important features of life cycle of *Nostoc*, *Anabaena*, *Chlamydomonas*, *Oedogonium*, *Chara*, *Sargassum*, and *Polysiphonia*

Algae as source of food, nutritional supplements, chemical, drug, fertilizer and biofuels.

#### **Module III**

General characters and classification of fungi, modes of nutrition, diversity in cell structure and mode of reproduction.

Life cycle of *Phytophthora*, *Aspergillus*, *Puccinia*, *Agaricus* and *Alternaria*.

Importance of fungi as food, medicine and its role as pathogen.

Lichens and Mycorrhiza : salient features and economic importance.

#### **Module IV**

Interrelationship and diversity in Bryophytes, classification, structure of thallus (Gametophytes and sporophytes), alternation of generation.

Life cycle of *Marchantia*, and *Anthoceros*

Economic importance of Bryophytes and their role as ecological indicators.

#### **Module V**

Morphological diversity and classification of pteridophytes, reproduction and salient feature of *Selaginella*, *Equisetum* and *Marsilea*.

Heterospory and evolution of seed habit, telome theory, stellar evolution. Phylogeny and evolution of eusporangiates and leptosporangiates.

**Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# ANIMAL SCIENCES-I

**Course Code: BTH2102**

**Credit Units: 03**

## **Course Objective:**

The main objective of this course is to introduce characteristics and variation among different phylum of Invertebrates from Protozoa to Echinodermata.

## **Course Contents:**

### **Module I: Diversity among Invertebrates**

Binomial classification of invertebrates and salient features of each phylum.

### **Module II: Lower Invertebrates**

General characteristics of Protozoa. Amoeba as a model to study protozoan characters. Parasitic amoeba.

General characteristics of Porifera. Sycon as a model to study poriferan characters. Study of canal system and spicule formation among sponges.

General characteristics of Coelentrata. Hydra as a model to study morphology, anatomy and locomotion, reproduction. Polymorphism in siphonophora.

General characteristics of Helminths. Reproduction, life-cycle and parasitism of Taenia (Tape worm)

### **Module III: Higher Invertebrates**

General characteristics of Annelida. Earth worm: Morphology, anatomy, nervous system, locomotion, reproduction and physiology..

General characteristics of Arthropoda. Life cycle of Cockroach : Morphology, appendages, respiration, nervous system, circulation, excretion.

General characteristics of Mollusca. Pila:

General characteristics of Echinodermata. Life cycle of Starfish: Water vascular system,

# COMPUTER APPLICATIONS

**Course Code: BTH2103**

**Credit Units: 03**

## **Course Objective:**

To provide computer skills and knowledge for commerce students, and to make them complacent with the use of new tools of IT

## **Course Contents:**

### **Module I**

General features of a Computer. Generation of computers. Personal Computer, Workstation, Mainframe Computer and super Computers. Computer applications – data processing, information processing, Application areas of computer.

### **Module II**

Computer organization. Central processing module. Computer memory- primary memory and secondary memory. Secondary storage devices – magnetic and optical media. Input and output modules. OMR, OCR, MICR, scanner, mouse, Modem.

### **Module III**

Computer hardware and software. Machine language and high level language. Application software. Computer program. Operating system. Computer virus, Antivirus and Computer security, Windows OS and its features.

Computer arithmetic. Binary, octal and hexadecimal number systems. Algorithm and flowcharts. Illustrations. Elements of database and its applications.

### **Module IV**

Introduction to MS office Packages- Ms-Word – Editing a Document – Move and Copy text – Formatting text and paragraph – Finding and Replacing text and spelling checking – Using tabs, Tables, and other features, Enhancing document – using mail merge and other features.

Introduction to Worksheet- Getting started with excel – Editing Cells and using commands and functions – Moving And Coping, Inserting and Deleting Rows and Columns – Getting help and formatting a worksheet – Printing the worksheet – Creating Charts – using formulae and functions in excel.

Introduction to Power Point Presentation

### **Module V**

Computer Networks & Internet Technology

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>P</b>	<b>HA</b>	<b>CT</b>	<b>EE</b>
<b>Weightage (%)</b>	5	5	5	15	70

A-Attendance; P -Project/Seminar/Quiz/Viva; HA-Home Assignment; CT-Class Test; EE-End Semester Examination

## PLANT SCIENCES- I LAB

Course Code: BTH2104

Credit Units: 01

### Course Contents:

#### Module I

Microscopic study of *Chlamydomonas*, *Volvox*, *Spirogyra*, *Chara* and *Polysiphonia* ( Fresh preparations and permanent slides)

#### Module II

Fresh microscopic preparation of *Aspergillus* and *Agaricus*.

#### Module III

Microscopic study of fresh preparations of *Riccia*, *Marchantia* and *Anthoceros*.

#### Module IV

Microscopic study of fresh preparations of *Selaginella*, *Equisetum* and *Marsilea*.

Study algal diversity of pond water.

#### Module VII

Study of soil fungal diversity.

### Examination Scheme:

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

## ANIMAL SCIENCES-I LAB

**Course Code: BTH2105**

**Credit Units: 01**

### **Course Contents:**

- 1) Preparation of slides of amoeba, paramecium.
- 2) Dissection of earthworm and digestive system of earth worm
- 3) Dissection of cockroach and glycerin preparation of mouth parts.
- 4) Dissection of Pila.
- 5) Use specimens and permanent slides.

### **Examination Scheme:**

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

## COMPUTER APPLICATIONS LAB

**Course Code: BTH2106**

**Credit Units: 01**

**Course Contents:**

1. Introduction to computers and its peripherals
2. Introduction to Word and its application
3. Introduction to Excel and its application
4. Introduction to Powerpoint and its application
5. Introduction to paint and its application
6. Introduction to internet and its application

**Examination Scheme:**

Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

# MICROBIAL BIOTECHNOLOGY

**Course Code: BTH2107**

**Credit Units: 03**

## **Course Objective:**

The basic knowledge of Microbiology gained in the previous semester would be applied in the various disciplines like evolution, Immunology & Industrial fermentation.

## **Course Contents:**

### **Module I**

Microbial nutrition and growth -The definition of growth, growth curve, measurement of growth and growth yields, synchronous growth, culture collection and maintenance of cultures.

### **Module II**

Microbial evolution, systematics and taxonomy - new approaches to bacterial taxonomy,

### **Module III**

Host-parasite relationship (Normal micro flora of skin, oral cavity, gastrointestinal tract), types of toxins (Exo, endo, entero) and their mode of actions,

### **Module IV**

Microbes in extreme environments: Archaea as the earliest forms, thermophiles, psychrophiles, halophiles, alkalophiles, acidophiles, hyperthermophiles.

### **Module V**

Introduction to industrially important microbes and microbial fermentative products (Production of antibiotics with special reference to penicillin & streptomycin, enzymes, biotransformation of steroids), food products from microbes (Dairy & SCP etc)

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Text & References:**

### **Text:**

- The Microbial World, Roger Y. Stanier, Prentice Hall
- Microbiology, Prescott and Dunn, C.B.S. Publishers

### **References:**

- Industrial Microbiology, Casida, New Age International

# FOOD BIOTECHNOLOGY

**Course Code: BTH2108**

**Credit Units: 03**

## **Course Objective:**

This course will provide a broad grounding in concepts, techniques and issues involved in food products and their processing.

## **Course Contents:**

### **Module I: Introduction**

Scope and importance of food industry; Concept of 'functional food'; Advances and trends, ethical issues, quality control, legislation, FDA & FPO (India), RDT and other technologies involved in development of food products; GM food and GM crops.

### **Module II: Techniques used in Food Industry**

Sterilization, isolation, screening and strain improvement, cell harvesting and disruption, recovery and purification, production of organic acids – citric acid, lactic acid and acetic acid;

### **Module III: Dairy Biotechnology**

Starter cultures, prebiotics, probiotics – their use as flavor enhancers and disease/ infection combats, applications in production of cheese, butter, ice-cream, yoghurt; Modified milk proteins.

### **Module IV: Microbial, Plant and Animal Biotechnology**

Production of SCP (Single cell protein), production of baker's yeast, brewing industry, applications of transgenic plants in food production, transgenic fish, and transgenic poultry.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Text & References:**

### **Text:**

# AGRICULTURE BIOTECHNOLOGY

**Course Code: BTH2109**

**Credit Units: 03**

## **Course Objective:**

The agriculture plant biotechnology course basically meant for understanding the basic techniques of plant tissue culture and genetic engineering in plants along with the latest ongoing research on the different aspects of plants and its products to redefine agriculture priorities and produce human resource with academic, scientific and technical expertise along with management or business experience.

## **MODULE I Plant Regeneration Technologies**

Introduction and historical perspective, organ culture, cell suspension, organogenesis, somatic embryogenesis, micropropagation, anther and ovary culture-haploid production, embryo culture and rescue, protoplast culture, somatic hybridization and cybrids.

## **MODULE II Transgenic Plants Technology**

Genetic Transformation, Methods for gene transfer in plants, Molecular mechanism of *Agrobacterium* mediated transformation. Selectable markers, Reporter gene and Promoters used in plant transformation vectors.

## **MODULE III Industrial and Agricultural Application**

Biotic stress tolerance; insect, pest and pathogen resistance. Abiotic stress tolerance; salt, water and drought tolerance. Herbicide tolerance. Molecular farming

## **Examination Scheme:**

<b>Components</b>	<b>H/S</b>	<b>A</b>	<b>CT</b>	<b>EE</b>
<b>Weightage (%)</b>	10	5	15	70

## **References**

1. Plant Biotechnology: The Genetic Manipulation of Plants. A. Slater, N. W. Scott and M. R. Fower. 2008. Oxford University Press

4. An Introduction to Plant Tissue Culture. M.K. Razdan. Oxford and IBH Publishing.

# **TERM PAPER**

**Course Code: BTH2131**

**Credit Units: 02**

A term (or research) paper is primarily a record of intelligent reading in several sources on a particular subject.

The students will choose the topic at the beginning of the session in consultation with the faculty assigned. The progress of the paper will be monitored regularly by the faculty. At the end of the semester the detailed paper on the topic will be submitted to the faculty assigned. The evaluation will be done by Board of examiners comprising of the faculties.

## **GUIDELINES FOR TERM PAPER**

The procedure for writing a term paper may consists of the following steps:

1. Choosing a subject
2. Finding sources of materials
3. Collecting the notes
4. Outlining the paper
5. Writing the first draft
6. Editing & preparing the final paper

### **1. Choosing a Subject**

The subject chosen should not be too general.

### **2. Finding Sources of materials**

- a) The material sources should be not more than 10 years old unless the nature of the paper is such that it involves examining older writings from a historical point of view.
- b) Begin by making a list of subject-headings under which you might expect the subject to be listed.
- c) The sources could be books and magazines articles, news stories, periodicals, scientific journals etc.

### **3. Collecting the notes**

Skim through sources, locating the useful material, then make good notes of it, including quotes and information for footnotes.

- a) Get facts, not just opinions. Compare the facts with author's conclusion.
- b) In research studies, notice the methods and procedures, results & conclusions.
- c) Check cross references.

### **4. Outlining the paper**

- a) Review notes to find main sub-divisions of the subject.
- b) Sort the collected material again under each main division to find sub-sections for outline so that it begins to look more coherent and takes on a definite structure. If it does not, try going back and sorting again for main divisions, to see if another general pattern is possible.

### **5. Writing the first draft**

Write the paper around the outline, being sure that you indicate in the first part of the paper what its purpose is. You may follow the following:

- a) statement of purpose
- b) main body of the paper
- c) statement of summary and conclusion

Avoid short, bumpy sentences and long straggling sentences with more than one main ideas.

## **6. Editing &preparing the final Paper**

- a) Before writing a term paper, you should ensure you have a question which you attempt to answer in your paper. This question should be kept in mind throughout the paper. Include only information/ details/ analyses of relevance to the question at hand. Sometimes, the relevance of a particular section may be clear to you but not to your readers. To avoid this, ensure you briefly explain the relevance of every section.
- b) Read the paper to ensure that the language is not awkward, and that it "flows" properly.
- c) Check for proper spelling, phrasing and sentence construction.
- d) Check for proper form on footnotes, quotes, and punctuation.
- e) Check to see that quotations serve one of the following purposes:
- f) Show evidence of what an author has said.
- g) Avoid misrepresentation through restatement.
- h) Save unnecessary writing when ideas have been well expressed by the original author.
- i) Check for proper form on tables and graphs. Be certain that any table or graph is self-explanatory.

Term papers should be composed of the following sections:

- 1) Title page
- 2) Table of contents
- 3) Introduction
- 4) Review
- 5) Discussion & Conclusion
- 6) References
- 7) Appendix

Generally, the introduction, discussion, conclusion and bibliography part should account for a third of the paper and the review part should be two thirds of the paper.

### **Discussion**

The discussion section either follows the results or may alternatively be integrated in the results section. The section should consist of a discussion of the results of the study focusing on the question posed in the research paper.

### **Conclusion**

The conclusion is often thought of as the easiest part of the paper but should by no means be disregarded. There are a number of key components which should not be omitted. These include:

- a) summary of question posed
- b) summary of findings
- c) summary of main limitations of the study at hand
- d) details of possibilities for related future research

### **References**

From the very beginning of a research project, you should be careful to note all details of articles gathered.

The bibliography should contain ALL references included in the paper. References not included in the text in any form should NOT be included in the bibliography.

The key to a good bibliography is consistency. Choose a particular convention and stick to this.

## **Conventions**

### **Monographs**

Crystal, D. (2001), *Language and the internet*. Cambridge: Cambridge University Press.

### **Edited volumes**

Gass, S./Neu, J. (eds.) (1996), *Speech acts across cultures. Challenges to communication in a second language*. Berlin/ NY: Mouton de Gruyter.

[(eds.) is used when there is more than one editor; and (ed.) where there is only one editor. In German the abbreviation used is (Hrsg.) for Herausgeber].

### **Edited articles**

Schmidt, R./Shimura, A./Wang, Z./Jeong, H. (1996), *Suggestions to buy: Television commercials from the U.S., Japan, China, and Korea*. In: Gass, S./Neu, J. (eds.) (1996), *Speech acts across cultures. Challenges to communication in a second language*. Berlin/ NY: Mouton de Gruyter: 285-316.

### **Journal articles**

McQuarrie, E.F./Mick, D.G. (1992), *On resonance: A critical pluralistic inquiry into advertising rhetoric*. *Journal of consumer research* 19, 180-197.

### **Electronic book**

Chandler, D. (1994), *Semiotics for beginners* [HTML document]. Retrieved [5.10.'01] from the World Wide Web, <http://www.aber.ac.uk/media/Documents/S4B/>.

### **Electronic journal articles**

Watts, S. (2000) *Teaching talk: Should students learn 'real German'?* [HTML document]. *German as a Foreign Language Journal* [online] 1. Retrieved [12.09.'00] from the World Wide Web, <http://www.gfl-journal.com/>.

### **Other websites**

Verterhus, S.A. (n.y.), *Anglicisms in German car advertising. The problem of gender assignment* [HTML document]. Retrieved [13.10.'01] from the World Wide Web, <http://olaf.hiof.no/~sverrev/eng.html>.

### **Unpublished papers**

Takahashi, S./DuFon, M.A. (1989), *Cross-linguistic influence in indirectness: The case of English directives performed by native Japanese speakers*. Unpublished paper, Department of English as a Second Language, University of Hawai'i at Manoa, Honolulu.

### **Unpublished theses/ dissertations**

Möhl, S. (1996), *Alltagssituationen im interkulturellen Vergleich: Realisierung von Kritik und Ablehnung im Deutschen und Englischen*. Unpublished MA thesis, University of Hamburg.

Walsh, R. (1995), *Language development and the year abroad: A study of oral grammatical accuracy amongst adult learners of German as a foreign language*. Unpublished PhD dissertation, University College Dublin.

## **Appendix**

The appendix should be used for data collected (e.g. questionnaires, transcripts, ...) and for tables and graphs not included in the main text due to their subsidiary nature or to space constraints in the main text.

**Assessment Scheme:**

**Continuous Evaluation:**

40%

(Based on abstract writing, interim draft, general approach, research orientation, readings undertaken etc.)

**Final Evaluation:**

60%

(Based on the organization of the paper, objectives/ problem profile/ issue outlining, comprehensiveness of the research, flow of the idea/ ideas, relevance of material used/ presented, outcomes vs. objectives, presentation/ viva etc.)

# PROJECT

Course Code: BTH2132

Credit Units: 03

## Objectives:

The aim of the project is to provide the students with an opportunity to further their intellectual and personal development in the chosen field by undertaking a significant practical unit of activity. The project can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

## Chapter Scheme and distribution of marks:

Chapter 1: Introduction – 10 marks

Chapter 2: Conceptual Framework/ National/International Scenario – 25 marks

Chapter 3: Presentation, Analysis & Findings -- 25 marks

Chapter 4: Conclusion & Recommendations -- 10 marks

Chapter 5: Bibliography -- 05 marks

Project Report	Power Point Presentation & Viva
75 marks	25 marks

## Components of a Project Report

The outcome of Project Work is the Project Report. A project report should have the following components:

**1) Cover Page:** This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.

**2) Acknowledgement:** Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.

**3) Table of Content:** Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.

**4) Body of the Report:** The body of the report should have these four logical divisions

a) **Introduction:** This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, and method of analysis), Limitations of the Study, and Chapter Planning.

b) **Conceptual Framework / National and International Scenario:** (relating to the topic of the Project).

c) **Presentation of Data, Analysis and Findings:**(using the tools and techniques mentioned in the methodology).

d) **Conclusion and Recommendations:** In this section, the concluding observations based on the main findings and suggestions are to be provided.

**5) Bibliography or References:** This section will include the list of books and articles which have been used in the project work, and in writing a project report.

**6) Annexures:** Questionnaires (if any), relevant reports, etc.

(The main text of the Project should normally be in the range of 5000 words. However, there may be annexure in addition to the main text)

## **The Steps of a Project Report**

**Step I :** Selection of the topic for the project by taking following points into consideration:

- Suitability of the topic.
- Relevance of the topic
- Time available at the disposal.
- Feasibility of data collection within the given time limit.
- Challenges involved in the data collection (time & cost involved in the data collection, possibility of getting responses, etc.)

**Step II :** Finalisation of the Topic and preparation of Project Proposal in consultation with the Supervisor.

**Step III :** Collection of information and data relating to the topic and analysis of the same.

**Step IV :** Writing the report dividing it into suitable chapters, viz.,

Chapter 1: Introduction,

Chapter 2: Conceptual Framework / National & International Scenario,

Chapter 3: Analysis & Findings

Chapter 4: Conclusion and Recommendations.

**Step V :** The following documents are to be attached with the Final Project Report.

- 1) Approval letter from the supervisor (Annexure-IA)
- 2) Student's declaration (Annexure-IB)
- 3) Certificate from the Competent Authority of the Organisation / Institution, if the student undertakes the Project Work in any Organisation / Institution.

### **Guidelines for Evaluation:**

- Each of the students has to undertake a Project individually under the supervision of a teacher and to submit the same following the guidelines stated below.
- Language of Project Report and Viva-Voce Examination may be English. The Project Report must be typed and hard bound.
- Failure to submit the Project Report or failure to appear at the Viva-voce Examination will be treated as "Absent" in the Examination. He /she has to submit the Project Report and appear at the Viva-Voce Examination in the subsequent years (within the time period as per University Rules).
- No marks will be allotted on the Project Report unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her Project Report.
- Evaluation of the Project Work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate.

## WORKSHOP / CERTIFICATION

**Course Code: BTH2133**

**Credit Units: 01**

### Objectives

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two way. The trainer has to make sure that the aspect covered are practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

### Major Themes for Workshop

The workshop may be conducted on any of the following major themes:

Accounting

Finance

Human Resources

Marketing

Economics

Operations

Supply Chain Management

These themes are merely indicative and other recent and relevant topics of study may be included.

### Guidelines for Workshop

The procedure for earning credits from workshop consists of the following steps:

Relevant study material and references will be provided by the trainer in advance.

The participants are expected to explore the topic in advance and take active part in the discussions held

Attending and Participating in all activities of the workshop

Group Activities have to be undertaken by students as guided by the trainer.

Evaluation of workshop activities would be done through test and quiz at the end of the workshop.

Submitting a write up of atleast 500 words about the learning outcome from the workshop.

### Methodology

The methodology followed at the workshop could be based on any one or more of the following methods:

Case Study

Business Game

Simulation

Group Activity

Role Play

Business Planning

Quiz

### Evaluation Scheme:

Attendance	Active Participation	Multiple Choice Questions/ Quiz	Solving the case/ Assignment/ Write up	Total
10	30	30	30	100

# Syllabus – Second Semester

## PLANT SCIENCES-II

**Course Code: BTH2201**

**Credit Units: 03**

### **Course Objective:**

The objective of this course is to acquaint the students with the details of classification of gymnosperms and angiosperms, taxonomy of angiosperms, anatomy, embryology, ecology and plant pathology which will make a strong foundation so that students can explore this knowledge for further biotechnological studies and research.

### **Course Contents:**

#### **Module I:**

**Gymnosperms** General characteristics, affinities and classification of Gymnosperms morphology and development reproductive structures of the following taxa-*Cycas*, *Pinu*

#### **Module II**

##### **Taxonomy of Angiosperms**

Classification of angiosperms as proposed by Bentham and Hooker and Hutchinson, merits, demerits and comparison Binomial Nomenclature

#### **Module III**

Economic importance of family: Cucurbitaceae Apiaceae, Apocynaceae, Asclepiadaceae, Lamiaceae, Euphorbiaceae, and Poaceae.

#### **Module IV**

##### **Embryology**

Structure of anther, microsporogenesis and development of the male gametophyte. Structure of Ovule, megasporogenesis and development of the female gametophyte e.

#### **Module V**

##### **Plant Pathology**

General Symptoms of fungal, bacterial and viral diseases and their control. Disease cycles of the following diseases, Loose smut of wheat, Rust of wheat, Late blight of potato

#### **Module VI**

##### **Plant Anatomy**

Meristems. Anatomy of root, stem and leaf, Root-stem transition, structure and function of cambium in root and stem.

#### **Module VI**

**Ecology** Ecosystem– abiotic and biotic factors, food chain, food web, ecological pyramids. Energy flow and productivity. Ecological niche and Ecological succession

### **Examination Scheme:**

Components	H/S	A	CT	EE
Weightage (%)	10	5	15	70

## ANIMAL SCIENCES-II

Course code: BTH2202

Credit Units-03

### Objectives

This paper will provide the conceptual knowledge about Vertebrates, which includes from Pisces to Mammals. This paper will be helpful to understand the variations from one class to another. The knowledge gained from this subject will be helpful for students to realise the significance of animal sciences towards its applications in modern biotechnology.

### Course Contents:

#### Module I:

Origin and features of Chordates and Vertebrates. Salient features and outline classification of Phylum Chordata upto order with suitable examples. General Characters and affinities of Hemichordata, Cephalochordata & Urochordata.

#### Module II:

**Pisces:** Salient features of class Pisces. Respiration and Gills, Osmoregulation, Fish scales. Induced breeding and seed production of economically important fishes.

#### Module III:

**Amphibia:** Salient Features of Class Amphibia, Circulation, Respiration, Reproduction and Hibernation.

#### Module IV:

**Reptiles:** Salient features of Class Reptilia, Poisonous and non- poisonous snakes, Poison apparatus and biting mechanism of snakes. Snake venom:

#### Module V:

**Aves:** Salient features of Class Aves. Flight adaptations, aerodynamics of flight and migration in birds.

#### Module VI:

**Mammals:** Salient features of Prototheria, Metatheria and Eutheria. Rabbit as model for Class Mammalia.

### Examination Scheme:

Components	H/S	A	CT	EE
Weightage (%)	10	5	15	70

# ANIMAL PHYSIOLOGY

**Course code: BTH2203**

**Credit Units: 02**

**Course Objective:**

Course objective to provide the knowledge about animal physiology that should be useful to understand and apply different concepts of biotechnology.

**Course Contents:**

**Module I: Physiology of Digestive System**

Composition and function of saliva, Mechanical and chemical digestion, Functions of pancreatic juices and biles, Absorption and distribution of food

**Module II: Physiology of Cardiovascular System**

Blood, Blood Groups and Blood Transfusion, Blood Clotting, Hemodynamics, Cardiac Cycle and its regulation,

**Module III: Physiology of Neuromuscular System**

Contraction and relaxation of muscle, Sarcomere, Cori's cycle, Organization of Nervous System, Neuron, Nerve Impulse, Synaptic Transmission, Neurotransmitters.

**Module IV: Endocrine Physiology and Unrinogential System**

Endocrine gland in mammals, general account of thyroid, parathyroid, pituitary, pancreatic islets, nephron, Glomerular filtration, hormonal regulation of spermatogenesis, ovulation, fertilization and pregnancy.

**Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# PLANT PHYSIOLOGY

**Course code: BTH2204**

**Credit Units: 02**

**Course Objective:**

Course objective to provide the knowledge about plant physiology that should be useful to understand and apply different concepts of biotechnology

**Course Contents:**

**Module I**

Water relation, Ion and solute transport, Mineral nutrition and deficiency, Translocation in the phloem, Transpiration.

**Module II**

Photosynthesis, photochemical reaction, photophosphorylation and carbon fixation pathways: C3, C4 and CAM pathways.

**Module III**

Respiration, electron transport chain, oxidative phosphorylation, photorespiration, chemiosmotic theory and ATP synthesis.

**Module IV**

Plant growth and development, growth regulators (physiological effect), photoperiodism and flowering, vernalization and senescence.

**Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## PLANT SCIENCES-II LAB

Course code: BTH2205

Credit Units: 01

### Course objective:

Course objective is to provide the knowledge about plant science that should be useful to understand and apply different concepts about the diversity and complexity of plants.

### Course Contents:

#### Module I:

**Gymnosperms** Study of the Gymnosperms like *Cycas*, and *Pinus* by cutting sections and making suitable temporary preparations.

#### Module II:

**Taxonomy** Detailed description and identification of locally available plants of the families as prescribed in theory course.

#### Module III:

**Plant Anatomy** Anatomy of normal dicot and monocot roots, stems & leaves.

#### Module IV:

**Embryology** Study of permanent slides of the:

- a) T.S. anther, pollen, germinating pollen
- b) L.S. ovule types
- c) Endosperm
- d) Embryos
- e) L.S. caryopsis
- f) Dissection of embryo

#### Module V:

**Plant Pathology** Examination of local diseased plants representing bacterial, viral, fungal parasites.

Study of symptoms caused by parasites, study of selected diseased specimen (mentioned under theory) through specimens, temporary presentations.

#### Module VI:

Ecology Measurement of temperature (Soil). Demonstration of Soil texture, carbonate, sulphate, pH., soil moisture percentage. A comparative study of plants (with external and internal characters) to water availability.

### Examination Scheme:

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

## ANIMAL SCIENCES-II LAB

**Course Code: BTH2206**

**Credit Units: 01**

**Course objective:** Course objective is to provide the knowledge about plant science that should be useful to understand and apply different concepts about the diversity and complexity of animals.

### **Course Contents:**

#### **Module I:**

Study of different types of scales in fishes, permanent preparations of scales. Internal ear Different types of important edible fishes of India

#### **Module II:**

Study of *Ranatigrina*, physiological systems through model

#### **Module III:**

Hyoid apparatus of home lizard, Demonstration of biting mechanism by using model

#### **Module IV:**

Development of chick up to formation of primitive streak

#### **Module V:**

Mice: Arterial system and reproductive system.

### **Examination Scheme:**

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

## PLANT PHYSIOLOGY LAB

Course Code: BTH2207

Credit Units: 01

### Plant Physiology

- Effects of plant growth hormones on rooting and shooting.
- Estimation of salicylic acid as secondary signaling molecule in plants
- Separation of photosynthetic pigments through thin layer chromatography
- Determination of Respiration Quotient (RQ)

### Examination Scheme:

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

## ANIMAL PHYSIOLOGY LAB

Course Code: BTH2208

Credit Units: 01

### Animal Physiology

- Enumeration of red blood cells using hemo cytometer.
- Estimation of haemoglobin using Sahli's hemoglobinometer.
- Preparation of haemin and hemochromogen crystals.
- Enumeration of total and differential count of white blood cells.
- Effect of pH on amylase activity from saliva.
- Biochemical analysis: carbohydrate, proteins and fats.
- Estimation of serum bilirubin (direct and indirect method).

### Examination Scheme:

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

# MOLECULAR MODELING

**Course Code: BTH2209**

**Credit Units: 03**

## **Course Objective:**

Course objective is to provide the knowledge that should be useful to understand different concepts of molecular properties of basic life molecules like proteins nucleic acids and their relative structure and function across the genus orkingdom

## **Module I:**

Introduction to Molecular modeling, data bases for proteins and DNA – PDB and MMDB, structure file formats, visualizing structural information, advance structure modeling, Internal and external co-ordinate system, cartesian and cylindrical polar co-ordinate system, Potential energy calculations using semiempirical potential energy function,

## **Module II:**

Software and Programmes for sequence comparision and analysis, Phylogenetics analysis software, Molecular Structure drawing tool,

## **Module III:**

Molecular modeling/Docking, Molecular mechanics and dynamics, Knowledge base structure prediction, Molecular Design, structure similarity searching; Secondary structure prediction in proteins, prediction of buried residues in proteins

## **Module IV**

Application of molecular modeling & computational biology/Bioinformatics in Agriculture, Human health, Environment, Biotechnology, Molecular Biology, Neurobiology, Drug Designing, Veterinary Science.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# BIO-SAFETY & BIOETHICS

**Course Code: BTH2210**

**Credit Units: 03**

## **Course Objective:**

The objectives of the course are to explain the biosafety and bioethics. Students will study and assess biosafety, and bioethics related to genetically engineered plant, animal and microbial products.

## **Course Contents:**

### **Module I: Biosafety**

Definition and requirement; biosafety in relation to human health, environment, transgenic research and applications, biosafety laws, guidelines and conventions, biosafety regulation: principles and practices in microbial and biomedical labs, guidelines for research involving DNA molecule ; Regulation bodies at National and International level

### **Module II Bioethics**

Definition of bioethics, importance of bioethics, Bioethics in plant, animal and microbial genetic engineering, Ethical issues in healthcare, Biopiracy and ethical conflicts Legal and socioeco'omic impact of the products and techniques in Biotechnology,

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Text & References:**

### **Text:**

- *Coyles information highway handbook*; A Practical File on the New Information Order, American Library Association, 2000.

# BIOINFORMATICS

**Course Code: BTH2211**

**Credit Units: 03**

## **Course Objective:**

The course involves a basic understanding of computer and bioinformatics tools and skills in the field of biology.

## **Course Contents:**

### **Module I: Computers**

General introduction (characteristics, capabilities, generations), software, hardware : organization of hardware (input devices, memory, control unit arithmetic logic unit, output devices); software : (System software; application software, languages -low level, high level), interpreter, compiler, data processing; batch, on-line, real-time (examples from bioindustries; e.g. application of computers in co-ordination of solute concentration, pH, temperature, etc., of a fermenter in operation); internet application.

### **Module II: Basic Bioinformatics**

Introduction to Internet, Search Engines (Google, Yahoo, Entrezetc)

### **Module III: Biological Databases**

Sequence databases (EMBL, GenBank, DDBJ, -UNIPROT, PIR, TrEMBL), Protein family/domain databases (PROSITE, PRINTS, Pfam, BLOCK, etc), Cluster databases-An Introduction, Specialised databases (KEGG, etc), Database technologies (Flat-file), Structural databases (PDB)

### **Module IV:**

Trees-splits and metrics on trees, tree interpretation, Distance – additive, ultrametric and nonadditive distances, tree building methods, phylogenetic analysis.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Text & References:**

### **Text:**

# TERM PAPER

**Course Code: BTH2231**

**Credit Units: 02**

A term (or research) paper is primarily a record of intelligent reading in several sources on a particular subject.

The students will choose the topic at the beginning of the session in consultation with the faculty assigned. The progress of the paper will be monitored regularly by the faculty. At the end of the semester the detailed paper on the topic will be submitted to the faculty assigned. The evaluation will be done by Board of examiners comprising of the faculties.

## GUIDELINES FOR TERM PAPER

The procedure for writing a term paper may consists of the following steps:

- Choosing a subject
- Finding sources of materials
- Collecting the notes
- Outlining the paper
- Writing the first draft
- Editing & preparing the final paper

### 1. Choosing a Subject

The subject chosen should not be too general.

### 2. Finding Sources of materials

- d) The material sources should be not more than 10 years old unless the nature of the paper is such that it involves examining older writings from a historical point of view.
- e) Begin by making a list of subject-headings under which you might expect the subject to be listed.
- f) The sources could be books and magazines articles, news stories, periodicals, scientific journals etc.

### 3. Collecting the notes

Skim through sources, locating the useful material, then make good notes of it, including quotes and information for footnotes.

- d) Get facts, not just opinions. Compare the facts with author's conclusion.
- e) In research studies, notice the methods and procedures, results & conclusions.
- f) Check cross references.

### 4. Outlining the paper

- c) Review notes to find main sub-divisions of the subject.
- d) Sort the collected material again under each main division to find sub-sections for outline so that it begins to look more coherent and takes on a definite structure. If it does not, try going back and sorting again for main divisions, to see if another general pattern is possible.

### 5. Writing the first draft

Write the paper around the outline, being sure that you indicate in the first part of the paper what its purpose is. You may follow the following:

- a) statement of purpose
- b) main body of the paper
- c) statement of summary and conclusion

Avoid short, bumpy sentences and long straggling sentences with more than one main ideas.

## **6. Editing & Preparing the final Paper**

- j) Before writing a term paper, you should ensure you have a question which you attempt to answer in your paper. This question should be kept in mind throughout the paper. Include only information/ details/ analyses of relevance to the question at hand. Sometimes, the relevance of a particular section may be clear to you but not to your readers. To avoid this, ensure you briefly explain the relevance of every section.
- k) Read the paper to ensure that the language is not awkward, and that it "flows" properly.
- l) Check for proper spelling, phrasing and sentence construction.
- m) Check for proper form on footnotes, quotes, and punctuation.
- n) Check to see that quotations serve one of the following purposes:
- o) Show evidence of what an author has said.
- p) Avoid misrepresentation through restatement.
- q) Save unnecessary writing when ideas have been well expressed by the original author.
- r) Check for proper form on tables and graphs. Be certain that any table or graph is self-explanatory.

Term papers should be composed of the following sections:

- Title page
- Table of contents
- Introduction
- Review
- Discussion & Conclusion
- References
- Appendix

Generally, the introduction, discussion, conclusion and bibliography part should account for a third of the paper and the review part should be two thirds of the paper.

### **Discussion**

The discussion section either follows the results or may alternatively be integrated in the results section. The section should consist of a discussion of the results of the study focusing on the question posed in the research paper.

### **Conclusion**

The conclusion is often thought of as the easiest part of the paper but should by no means be disregarded. There are a number of key components which should not be omitted. These include:

- e) summary of question posed
- f) summary of findings
- g) summary of main limitations of the study at hand
- h) details of possibilities for related future research

### **References**

From the very beginning of a research project, you should be careful to note all details of articles gathered.

The bibliography should contain ALL references included in the paper. References not included in the text in any form should NOT be included in the bibliography.

The key to a good bibliography is consistency. Choose a particular convention and stick to this.

## **Conventions**

### **Monographs**

Crystal, D. (2001), *Language and the internet*. Cambridge: Cambridge University Press.

### **Edited volumes**

Gass, S./Neu, J. (eds.) (1996), *Speech acts across cultures. Challenges to communication in a second language*. Berlin/ NY: Mouton de Gruyter.

[(eds.) is used when there is more than one editor; and (ed.) where there is only one editor. In German the abbreviation used is (Hrsg.) for Herausgeber].

### **Edited articles**

Schmidt, R./Shimura, A./Wang, Z./Jeong, H. (1996), *Suggestions to buy: Television commercials from the U.S., Japan, China, and Korea*. In: Gass, S./Neu, J. (eds.) (1996), *Speech acts across cultures. Challenges to communication in a second language*. Berlin/ NY: Mouton de Gruyter: 285-316.

### **Journal articles**

McQuarrie, E.F./Mick, D.G. (1992), *On resonance: A critical pluralistic inquiry into advertising rhetoric*. *Journal of consumer research* 19, 180-197.

### **Electronic book**

Chandler, D. (1994), *Semiotics for beginners* [HTML document]. Retrieved [5.10.'01] from the World Wide Web, <http://www.aber.ac.uk/media/Documents/S4B/>.

### **Electronic journal articles**

Watts, S. (2000) *Teaching talk: Should students learn 'real German'?* [HTML document]. *German as a Foreign Language Journal* [online] 1. Retrieved [12.09.'00] from the World Wide Web, <http://www.gfl-journal.com/>.

### **Other websites**

Verterhus, S.A. (n.y.), *Anglicisms in German car advertising. The problem of gender assignment* [HTML document]. Retrieved [13.10.'01] from the World Wide Web, <http://olaf.hiof.no/~sverrev/eng.html>.

### **Unpublished papers**

Takahashi, S./DuFon, M.A. (1989), *Cross-linguistic influence in indirectness: The case of English directives performed by native Japanese speakers*. Unpublished paper, Department of English as a Second Language, University of Hawai'i at Manoa, Honolulu.

### **Unpublished theses/ dissertations**

Möhl, S. (1996), *Alltagssituationen im interkulturellen Vergleich: Realisierung von Kritik und Ablehnung im Deutschen und Englischen*. Unpublished MA thesis, University of Hamburg.

Walsh, R. (1995), *Language development and the year abroad: A study of oral grammatical accuracy amongst adult learners of German as a foreign language*. Unpublished PhD dissertation, University College Dublin.

## **Appendix**

The appendix should be used for data collected (e.g. questionnaires, transcripts, ...) and for tables and graphs not included in the main text due to their subsidiary nature or to space constraints in the main text.

**Assessment Scheme:****Continuous Evaluation:**

40%

(Based on abstract writing, interim draft, general approach, research orientation, readings undertaken etc.)

**Final Evaluation:**

60%

(Based on the organization of the paper, objectives/ problem profile/ issue outlining, comprehensiveness of the research, flow of the idea/ ideas, relevance of material used/ presented, outcomes vs. objectives, presentation/ viva etc.)

# PROJECT

Course Code: BTH2232

Credit Units: 03

## Objectives:

The aim of the project is to provide the students with an opportunity to further their intellectual and personal development in the chosen field by undertaking a significant practical unit of activity. The project can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

## Chapter Scheme and distribution of marks:

Chapter 1: Introduction – 10 marks

Chapter 2: Conceptual Framework/ National/International Scenario – 25 marks

Chapter 3: Presentation, Analysis & Findings -- 25 marks

Chapter 4: Conclusion & Recommendations -- 10 marks

Chapter 5: Bibliography -- 05 marks

Project Report	Power Point Presentation & Viva
75 marks	25 marks

## Components of a Project Report

The outcome of Project Work is the Project Report. A project report should have the following components:

**1) Cover Page:** This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.

**2) Acknowledgement:** Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.

**3) Table of Content:** Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.

**4) Body of the Report:** The body of the report should have these four logical divisions

a) **Introduction:** This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, and method of analysis), Limitations of the Study, and Chapter Planning.

b) **Conceptual Framework / National and International Scenario:** (relating to the topic of the Project).

c) **Presentation of Data, Analysis and Findings:**(using the tools and techniques mentioned in the methodology).

d) **Conclusion and Recommendations:** In this section, the concluding observations based on the main findings and suggestions are to be provided.

**5) Bibliography or References:** This section will include the list of books and articles which have been used in the project work, and in writing a project report.

**6) Annexures:** Questionnaires (if any), relevant reports, etc.

(The main text of the Project should normally be in the range of 5000 words. However, there may be annexure in addition to the main text)

## **The Steps of a Project Report**

**Step I :** Selection of the topic for the project by taking following points into consideration:

- Suitability of the topic.
- Relevance of the topic
- Time available at the disposal.
- Feasibility of data collection within the given time limit.
- Challenges involved in the data collection (time & cost involved in the data collection, possibility of getting responses, etc.)

**Step II :** Finalisation of the Topic and preparation of Project Proposal in consultation with the Supervisor.

**Step III :** Collection of information and data relating to the topic and analysis of the same.

**Step IV :** Writing the report dividing it into suitable chapters, viz.,

Chapter 1: Introduction,

Chapter 2: Conceptual Framework / National & International Scenario,

Chapter 3: Analysis & Findings

Chapter 4: Conclusion and Recommendations.

**Step V :** The following documents are to be attached with the Final Project Report.

- 1) Approval letter from the supervisor (Annexure-IA)
- 2) Student's declaration (Annexure-IB)
- 3) Certificate from the Competent Authority of the Organisation / Institution, if the student undertakes the Project Work in any Organisation / Institution.

### **Guidelines for Evaluation:**

- Each of the students has to undertake a Project individually under the supervision of a teacher and to submit the same following the guidelines stated below.
- Language of Project Report and Viva-Voce Examination may be English. The Project Report must be typed and hard bound.
- Failure to submit the Project Report or failure to appear at the Viva-voce Examination will be treated as "Absent" in the Examination. He /she has to submit the Project Report and appear at the Viva-Voce Examination in the subsequent years (within the time period as per University Rules).
- No marks will be allotted on the Project Report unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her Project Report.
- Evaluation of the Project Work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate.

## WORKSHOP / CERTIFICATION

**Course Code: BTH2233**

**Credit Units: 01**

### Objectives

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two way. The trainer has to make sure that the aspect covered are practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

### Major Themes for Workshop

The workshop may be conducted on any of the following major themes:

Accounting

Finance

Human Resources

Marketing

Economics

Operations

Supply Chain Management

These themes are merely indicative and other recent and relevant topics of study may be included.

### Guidelines for Workshop

The procedure for earning credits from workshop consists of the following steps:

Relevant study material and references will be provided by the trainer in advance.

The participants are expected to explore the topic in advance and take active part in the discussions held

Attending and Participating in all activities of the workshop

Group Activities have to be undertaken by students as guided by the trainer.

Evaluation of workshop activities would be done through test and quiz at the end of the workshop.

Submitting a write up of atleast 500 words about the learning outcome from the workshop.

### Methodology

The methodology followed at the workshop could be based on any one or more of the following methods:

Case Study

Business Game

Simulation

Group Activity

Role Play

Business Planning

Quiz

### Evaluation Scheme:

Attendance	Active Participation	Multiple Choice Questions/ Quiz	Solving the case/ Assignment/ Write up	Total
10	30	30	30	100

# Syllabus – Third Semester

## BIOCHEMISTRY

**Course Code: BTH2301**

**Credit Units: 03**

**Course Objective:**

The course is aimed to impart an in-depth understanding into the dynamic processes with which various biomolecules undergo in a living system. The understanding of above has its ramifications in medicine, nutrition, agriculture, fermentation and natural products chemistry.

**Course Contents:**

**Module I: Chemical basis of Life**

Composition of living matter; properties of water, properties of biomolecules in aqueous environment; biomolecular interactions; bioenergetics.

**Module II: Carbohydrates**

Structure and functions of carbohydrates; carbohydrate metabolism: glycolysis, Krebs' cycle, phosphogluconate pathway, glyoxylate pathway, pentose phosphate pathway, Cori cycle, Gluconeogenesis and glycogenolysis and its regulation. Oxidative phosphorylation. Major metabolic disorders of carbohydrate metabolism: diabetes.

**Module III: Amino acids and Proteins**

Structure and functions of amino acid and proteins; Overview of amino acid biosynthesis, Major metabolic disorders of amino acid metabolism, biological Nitrogen fixation; structure and functions of vitamin derivative co-factors;.

**Module IV: Lipids**

Structure and functions of lipids and derivative lipids: glycerols, fatty acids, waxes, phospholipids, sphingolipids, lipoproteins. Biosynthesis and oxidation of fatty acids; Cholesterol synthesis; formation of ketone bodies.

**Module V: Nucleotide Metabolism**

Structure and functions of nucleic acids DNA and RNA. De novo and salvage pathways for synthesis of pyrimidine and purine nucleotides; purine degradation, pyrimidine breakdown; Major metabolic disorders of nucleotide metabolism Gout, Lesch-nuham syndrome, immuno deficiency)

**Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# MICROBIOLOGY

**Course Code: BTH2302**

**Credit Units: 03**

## **Course Objective:**

To acquaint the students about the microbiology and role of various microorganisms in different biotechnological applications, various techniques for their cultivation and control.

## **Course Contents:**

### **Module I: Introduction and historical perspective**

Discovery of microbial world, Concept of pure culture, Theory and practice of sterilization; Isolation of microorganisms, staining methods, microscopy, preservation of microbial cultures

### **Module II**

**Microbial Physiology:** cell structure and function. Microbial growth: Growth curve, Enumeration of cells by direct and indirect methods, Microbial fermentations, Microbial Stress Responses.

### **Module III**

**Evolutionary microbiology and microbial diversity:** Microbial evolution and systematics, prokaryotic diversity: bacteria and archaea, eukaryotic microorganisms (structure of algae and fungi), microbial community analysis (overview), classical and molecular taxonomy.

**Virology:** Viruses and virions, growth and quantification, viral replication, viroids and prions, Bacterial, plant and animal viruses,

### **Module IV**

**Microbial Ecology** Methods in microbial ecology (culture dependent and culture independent techniques), microbial habitats and nutrient cycling (Carbon, sulphur and nitrogen cycles), plant-microbes, animal-microbes interactions. Soil microorganisms associated with vascular plants, bioremediation and biodegradation.

### **Module V**

**Applied microbiology:** Biocatalysts, microbial metabolites, wine production, single cell proteins, microbial transformation of steroids, role of microbes in food industry, production of dairy products (fermented milks and cheese), Role of microbes in Agriculture (biofertilizers, biopesticides), Waste water treatment.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Text & References:**

# ENZYMOLGY

**Course Code: BTH2303**

**Credit Units: 03**

## **Course Objective:**

The course aims to provide an understanding of the principles and application of proteins, secondary metabolites and enzyme biochemistry in therapeutic applications and clinical diagnosis. The theoretical understanding of biochemical systems would certainly help to interpret the results of laboratory experiments.

## **Course Contents:**

### **Module I: Enzymes**

Introduction and scope, Nomenclature, Mechanism of Catalysis. Specificity of enzyme action, monomeric and oligomeric enzymes, Enzyme inhibition.

### **Module II Enzyme Kinetics**

Single substrate steady state kinetics; MichaelisMenten equation, Linear plots, Inhibitors and activators; Multisubstrate systems; Allosteric enzymes

### **Module III**

Immobilization of Enzymes; Advantages, Carriers, adsorption, covalent coupling, cross-linking and entrapment methods, Micro-environmental effects.

### **Module VI: Biotechnological applications of enzymes**

Large scale production and purification of enzymes, enzyme utilization in industry, enzymes and recombinant DNA technology

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Text & References:**

### **Text:**

# GENETICS & CELL BIOLOGY

**Course Code: BTH2304**

**Credit Units: 03**

## **Course Objective:**

Cell Biology and genetics plays a central role to connect the different fields of biotechnology, which is highly interdisciplinary. They incorporate elements of biology, maths, physics and chemistry with combination of computers and electronics. The objective of the present course is to understand the structure and function of the cellular and subcellular components of cells and tissues with the help of these recent techniques. Students are also exposed to phenomenon that regulates cell death and etiology of cancerous cells.

## **Course Contents:**

### **Module I**

Mendelian principles on inheritance; Chromosome theory of inheritance, linkage and crossing over  
Extrachromosomal inheritance; Chromosomal aberration and polyploidy  
Concept of gene –position effect, complementation (cistron, recon &muton) Population genetics- Hardy-Weinbergs selection, k and r selection

### **Module II: Cell Organelles**

Structure of nuclear envelope, nuclear pore,  
Targeting proteins to endoplasmic reticulum, Protein sorting and export from Golgi apparatus; Protein import into Mitochondria, Import and sorting of chloroplast protein

### **Module III**

Structure and organization of actins filaments; Actins, myosin muscle contraction, Microtubule-structure and assembly,

### **Module IV**

Modes of cell signaling, G-protein coupled receptors; cAMP pathway of signal transduction; cGMP, phospholipids and calcium ions, Ras, Raf, MAP kinase pathway, Apoptosis – role of caspases.

### **Module V: Cell Cycle**

Phases of eukaryotic cell cycle; Cell cycle regulation, checkpoints in cell cycle; regulators of cell cycle inhibitors of cell cycle, stem cells – properties and medical application.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Text & References:**

## BIOCHEMISTRY LAB

Course Code: BTH2305

Credit Units: 01

### Course Contents:

#### Module I: Solutions and buffers

Preparation of molar, normal and % (w/v) solutions preparation of buffers of different pH and molar strength.

#### Module II: Carbohydrates

Extraction and estimation of carbohydrates from given plant/animal materials: determination of total sugars by Anthrone method Separation of sugars by thin layer chromatography

#### Module III: Proteins

Extraction of total proteins; Estimation of proteins by Lowery/ Bradford Method; Electrophoretic (SDS-PAGE) separation of isolated proteins

#### Module IV: Lipids

Extraction of total lipids; estimation of phospholipids/glycolipids; thin layer chromatographic separation of lipids

#### Module IV: Nucleic Acid

Extraction and estimation of DNA and RNA by UV-spectrophotometer

### Examination Scheme:

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

### Text & References:

- Practical book of Biochemistry by Plummer
- Practical book of Biochemistry by S.K. Sawhney and Randhir Singh

## MICROBIOLOGY LAB

Course Code: BTH2306

Credit Units: 01

### Course Contents:

- Laboratory safety and instrument handling, General rules and regulations, Aseptic techniques, preparation of culture media for cultivation of specific microorganisms.  
Observation of permanent slides (*E.coli*, *Yeast*, *Sarcina*, *Streptococcus*, *Acid fast staining*)
- Isolation and enumeration of microorganisms from air, water and rhizosphere (actinomycetes, bacteria and fungi), serial dilution and viable plate counting methods, Use of differential, selective and enriched media.
- Staining techniques: Simple staining, differential Gram staining, endospore staining, lactophenol cotton blue staining for fungi
- Growth curve measurement of bacterial population by turbidometry
- Biochemical tests – Triple Sugar Iron test (TSI), Indole test. Methyl red test. Vogesproskauer test, Citrate utilization test (IMViC), starch hydrolysis, casein hydrolysis, catalase test
- Water microbiology- presumptive, confirmed and complete test for water potability.

### Examination Scheme:

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

# ENZYMOLGY LAB

**Course Code: BTH2307**

**Credit Units: 01**

## **Course Objective:**

The laboratory will help the students to isolate enzymes from different sources, enzyme assays and studying their kinetic parameters which have immense importance in industrial processes.

## **Course Contents:**

### **Module I**

Isolation of enzymes from plant and microbial sources.

### **Module II**

Enzyme assay; activity and specific activity – determination of amylase, nitrate reductase, cellulase, protease.

### **Module III**

Purification of Enzyme by ammonium sulphate fractionation.

### **Module IV: Enzyme Kinetics**

Effect of varying substrate concentration on enzyme activity, determination of Michaelis-Menten constant ( $K_m$ ) and Maximum Velocity ( $V_{max.}$ ) using Lineweaver-Burk plot.

### **Module V**

Effect of Temperature and pH on enzyme activity.

## **Examination Scheme:**

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

**Note:** Minor variation could be there depending on the examiner.

## GENETICS & CELL BIOLOGY LAB

Course Code: BTH2308

Credit Units: 01

### Course Contents:

#### Module I

Cell fractionation and separation of cell organelles by ultra centrifugation.

#### Module II

Isolation of chloroplast from spinach

#### Module III

Isolation of mitochondria.

#### Module IV

Study of apoptosis by TUNEL method.

Site directed mutagenesis

Mutation detection and analysis

Mitosis

Meiosis

### Examination Scheme:

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

# INTELLECTUAL PROPERTY RIGHTS

**Course Code: BTH2309**

**Credit Units: 03**

## **Course Objective:**

The aim of this course is to develop the understanding of relevance, business impact and protection of Intellectual property along with the types of Intellectual Property Rights; Patents, Copyrights, Trademarks, Industrial Designs, Geographical Indications and International Conventions, Biosafety and Bioethics

## **Course Contents:**

### **Module I**

General Overview of Intellectual Property Rights, WIPO, WTO, Trade Related Intellectual Property Rights.

### **Module II**

Patent - Basic requirements of Patentability, Patentable Subject Matter, Procedure for Obtaining Patent, Provisional and Complete Specification

### **Module III**

Copyright - Objectives of copyright, Rights conferred by registration of copyright, Infringement of copyright

### **Module IV**

Trademarks-Basic Principles of Trademark, Rights conferred by Registration of Trademark, Infringement of Trademark

### **Module V**

Geographical Indications-Objectives of Geographical Indications, Rights conferred, Infringement of Geographical Indications, International Position, Indian Position, Bioprospecting and Biopiracy.

### **Module VI**

Biosafety and Bioethics Management-Key to environmentally responsible use of biotechnology. Cartagena Protocol on Biosafety, Ethical implications of Biotechnological products and techniques.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Text & References:**

### **Text:**

- Intellectual Property Rights by Brigitte Anderson, Edward Elgar Publishing
- Intellectual Property Rights and the Life Sciences Industries by Graham Dutfield, Ashgate Publishing

### **References:**

- WIPO Intellectual Property Handbook
- Intellectual Property Rights by William Rodelph Cornish, David Clewelyn
- Journals and Current magazines

# PHARMACEUTICAL BIOTECHNOLOGY

**Course Code: BTH2310**

**Credit Units: 03**

## **Course Objective:**

The objective of this course to apply the basic concepts in the specific field of Pharmaceutical Biotechnology Industry. The student will gain insight into the working of a pharma industry, various classes of biotech products and the regulations governing production and marketing of pharmaceutical products.

## **Course Contents:**

### **Module I**

Introduction and History, Drug Discovery Process, Methods of Drug Discovery and development.

### **Module II**

Physicochemical Properties, Effects of route of administration, Drug Targets, Pharmacokinetics and pharmacodynamics of drugs, Drug Toxicity.

### **Module III**

DNA vaccines, Vaccines & Monoclonal antibody based pharmaceuticals, Antibiotics, Characterisation and Bioanalytical aspects of Recombinant proteins as pharmaceutical drugs.

### **Module IV**

Formulation of Biotechnological Products, Drug Delivery, Examples of some Biotechnological products in clinical development

### **Module V: Regulations**

Role of FDA, ICH Guidelines, cGMP, The Regulation of Pharmaceutical Biotechnological Products and Ethical Issues.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Text & References:**

### **Text:**

# CLINICAL BIOTECHNOLOGY

**Course Code: BTH2311**

**Credit Units: 03**

## **Course Objective:**

To develop an understanding of role of biochemistry and molecular biology in the diagnosis and clinical management of disease

## **Course Contents:**

### **Module I**

Clinical significance of biochemical tests and their role in the diagnosis and monitoring of disease, Clinical characteristic of disease. Role of clinical biochemistry in detection, diagnosis of diseases

### **Module II**

Genetic disease, example of genetic diseases. transplantation/gene therapy.

### **Module III**

Clinically important taxonomic grouping of bacteria, etiology, transmission; Epidemics, pandemics and endemic disease. Control measure of microbial diseases. Hygiene regulations.

### **Module IV**

Manipulation of reproduction and development for application in medicine, agriculture, aquaculture and conservation.

### **Module V**

Management of Clinical Data.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Text & References:**

# TERM PAPER

**Course Code: BTH2331**

**Credit Units: 02**

A term (or research) paper is primarily a record of intelligent reading in several sources on a particular subject.

The students will choose the topic at the beginning of the session in consultation with the faculty assigned. The progress of the paper will be monitored regularly by the faculty. At the end of the semester the detailed paper on the topic will be submitted to the faculty assigned. The evaluation will be done by Board of examiners comprising of the faculties.

## GUIDELINES FOR TERM PAPER

The procedure for writing a term paper may consists of the following steps:

- Choosing a subject
- Finding sources of materials
- Collecting the notes
- Outlining the paper
- Writing the first draft
- Editing & preparing the final paper

### 1. Choosing a Subject

The subject chosen should not be too general.

### 2. Finding Sources of materials

- g) The material sources should be not more than 10 years old unless the nature of the paper is such that it involves examining older writings from a historical point of view.
- h) Begin by making a list of subject-headings under which you might expect the subject to be listed.
- i) The sources could be books and magazines articles, news stories, periodicals, scientific journals etc.

### 3. Collecting the notes

Skim through sources, locating the useful material, then make good notes of it, including quotes and information for footnotes.

- g) Get facts, not just opinions. Compare the facts with author's conclusion.
- h) In research studies, notice the methods and procedures, results & conclusions.
- i) Check cross references.

### 4. Outlining the paper

- e) Review notes to find main sub-divisions of the subject.
- f) Sort the collected material again under each main division to find sub-sections for outline so that it begins to look more coherent and takes on a definite structure. If it does not, try going back and sorting again for main divisions, to see if another general pattern is possible.

### 5. Writing the first draft

Write the paper around the outline, being sure that you indicate in the first part of the paper what its purpose is. You may follow the following:

- a) statement of purpose
- b) main body of the paper
- c) statement of summary and conclusion

Avoid short, bumpy sentences and long straggling sentences with more than one main ideas.

## **6. Editing & Preparing the final Paper**

- s) Before writing a term paper, you should ensure you have a question which you attempt to answer in your paper. This question should be kept in mind throughout the paper. Include only information/ details/ analyses of relevance to the question at hand. Sometimes, the relevance of a particular section may be clear to you but not to your readers. To avoid this, ensure you briefly explain the relevance of every section.
- t) Read the paper to ensure that the language is not awkward, and that it "flows" properly.
- u) Check for proper spelling, phrasing and sentence construction.
- v) Check for proper form on footnotes, quotes, and punctuation.
- w) Check to see that quotations serve one of the following purposes:
  - x) Show evidence of what an author has said.
  - y) Avoid misrepresentation through restatement.
  - z) Save unnecessary writing when ideas have been well expressed by the original author.
- aa) Check for proper form on tables and graphs. Be certain that any table or graph is self-explanatory.

Term papers should be composed of the following sections:

- Title page
- Table of contents
- Introduction
- Review
- Discussion & Conclusion
- References
- Appendix

Generally, the introduction, discussion, conclusion and bibliography part should account for a third of the paper and the review part should be two thirds of the paper.

### **Discussion**

The discussion section either follows the results or may alternatively be integrated in the results section. The section should consist of a discussion of the results of the study focusing on the question posed in the research paper.

### **Conclusion**

The conclusion is often thought of as the easiest part of the paper but should by no means be disregarded. There are a number of key components which should not be omitted. These include:

- i) summary of question posed
- j) summary of findings
- k) summary of main limitations of the study at hand
- l) details of possibilities for related future research

### **References**

From the very beginning of a research project, you should be careful to note all details of articles gathered.

The bibliography should contain ALL references included in the paper. References not included in the text in any form should NOT be included in the bibliography.

The key to a good bibliography is consistency. Choose a particular convention and stick to this.

## **Conventions**

### **Monographs**

Crystal, D. (2001), *Language and the internet*. Cambridge: Cambridge University Press.

### **Edited volumes**

Gass, S./Neu, J. (eds.) (1996), *Speech acts across cultures. Challenges to communication in a second language*. Berlin/ NY: Mouton de Gruyter.

[(eds.) is used when there is more than one editor; and (ed.) where there is only one editor. In German the abbreviation used is (Hrsg.) for Herausgeber].

### **Edited articles**

Schmidt, R./Shimura, A./Wang, Z./Jeong, H. (1996), *Suggestions to buy: Television commercials from the U.S., Japan, China, and Korea*. In: Gass, S./Neu, J. (eds.) (1996), *Speech acts across cultures. Challenges to communication in a second language*. Berlin/ NY: Mouton de Gruyter: 285-316.

### **Journal articles**

McQuarrie, E.F./Mick, D.G. (1992), *On resonance: A critical pluralistic inquiry into advertising rhetoric*. *Journal of consumer research* 19, 180-197.

### **Electronic book**

Chandler, D. (1994), *Semiotics for beginners* [HTML document]. Retrieved [5.10.'01] from the World Wide Web, <http://www.aber.ac.uk/media/Documents/S4B/>.

### **Electronic journal articles**

Watts, S. (2000) *Teaching talk: Should students learn 'real German'?* [HTML document]. *German as a Foreign Language Journal* [online] 1. Retrieved [12.09.'00] from the World Wide Web, <http://www.gfl-journal.com/>.

### **Other websites**

Verterhus, S.A. (n.y.), *Anglicisms in German car advertising. The problem of gender assignment* [HTML document]. Retrieved [13.10.'01] from the World Wide Web, <http://olaf.hiof.no/~sverrev/eng.html>.

### **Unpublished papers**

Takahashi, S./DuFon, M.A. (1989), *Cross-linguistic influence in indirectness: The case of English directives performed by native Japanese speakers*. Unpublished paper, Department of English as a Second Language, University of Hawai'i at Manoa, Honolulu.

### **Unpublished theses/ dissertations**

Möhl, S. (1996), *Alltagssituationen im interkulturellen Vergleich: Realisierung von Kritik und Ablehnung im Deutschen und Englischen*. Unpublished MA thesis, University of Hamburg.

Walsh, R. (1995), *Language development and the year abroad: A study of oral grammatical accuracy amongst adult learners of German as a foreign language*. Unpublished PhD dissertation, University College Dublin.

## **Appendix**

The appendix should be used for data collected (e.g. questionnaires, transcripts, ...) and for tables and graphs not included in the main text due to their subsidiary nature or to space constraints in the main text.

**Assessment Scheme:****Continuous Evaluation:**

40%

(Based on abstract writing, interim draft, general approach, research orientation, readings undertaken etc.)

**Final Evaluation:**

60%

(Based on the organization of the paper, objectives/ problem profile/ issue outlining, comprehensiveness of the research, flow of the idea/ ideas, relevance of material used/ presented, outcomes vs. objectives, presentation/ viva etc.)

# PROJECT

Course Code: BTH2332

Credit Units: 03

## Objectives:

The aim of the project is to provide the students with an opportunity to further their intellectual and personal development in the chosen field by undertaking a significant practical unit of activity. The project can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

## Chapter Scheme and distribution of marks:

Chapter 1: Introduction – 10 marks

Chapter 2: Conceptual Framework/ National/International Scenario – 25 marks

Chapter 3: Presentation, Analysis & Findings -- 25 marks

Chapter 4: Conclusion & Recommendations -- 10 marks

Chapter 5: Bibliography -- 05 marks

Project Report	Power Point Presentation & Viva
75 marks	25 marks

## Components of a Project Report

The outcome of Project Work is the Project Report. A project report should have the following components:

**1) Cover Page:** This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.

**2) Acknowledgement:** Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.

**3) Table of Content:** Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.

**4) Body of the Report:** The body of the report should have these four logical divisions

a) **Introduction:** This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, and method of analysis), Limitations of the Study, and Chapter Planning.

b) **Conceptual Framework / National and International Scenario:** (relating to the topic of the Project).

c) **Presentation of Data, Analysis and Findings:**(using the tools and techniques mentioned in the methodology).

d) **Conclusion and Recommendations:** In this section, the concluding observations based on the main findings and suggestions are to be provided.

**5) Bibliography or References:** This section will include the list of books and articles which have been used in the project work, and in writing a project report.

**6) Annexures:** Questionnaires (if any), relevant reports, etc.

(The main text of the Project should normally be in the range of 5000 words. However, there may be annexure in addition to the main text)

## **The Steps of a Project Report**

**Step I :** Selection of the topic for the project by taking following points into consideration:

- Suitability of the topic.
- Relevance of the topic
- Time available at the disposal.
- Feasibility of data collection within the given time limit.
- Challenges involved in the data collection (time & cost involved in the data collection, possibility of getting responses, etc.)

**Step II :** Finalisation of the Topic and preparation of Project Proposal in consultation with the Supervisor.

**Step III :** Collection of information and data relating to the topic and analysis of the same.

**Step IV :** Writing the report dividing it into suitable chapters, viz.,

Chapter 1: Introduction,

Chapter 2: Conceptual Framework / National & International Scenario,

Chapter 3: Analysis & Findings

Chapter 4: Conclusion and Recommendations.

**Step V :** The following documents are to be attached with the Final Project Report.

- 1) Approval letter from the supervisor (Annexure-IA)
- 2) Student's declaration (Annexure-IB)
- 3) Certificate from the Competent Authority of the Organisation / Institution, if the student undertakes the Project Work in any Organisation / Institution.

### **Guidelines for Evaluation:**

- Each of the students has to undertake a Project individually under the supervision of a teacher and to submit the same following the guidelines stated below.
- Language of Project Report and Viva-Voce Examination may be English. The Project Report must be typed and hard bound.
- Failure to submit the Project Report or failure to appear at the Viva-voce Examination will be treated as "Absent" in the Examination. He /she has to submit the Project Report and appear at the Viva-Voce Examination in the subsequent years (within the time period as per University Rules).
- No marks will be allotted on the Project Report unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her Project Report.
- Evaluation of the Project Work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate.

## WORKSHOP / CERTIFICATION

Course Code: BTH2333

Credit Units: 01

### Objectives

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two way. The trainer has to make sure that the aspect covered are practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

### Major Themes for Workshop

The workshop may be conducted on any of the following major themes:

Accounting

Finance

Human Resources

Marketing

Economics

Operations

Supply Chain Management

These themes are merely indicative and other recent and relevant topics of study may be included.

### Guidelines for Workshop

The procedure for earning credits from workshop consists of the following steps:

- Relevant study material and references will be provided by the trainer in advance.
- The participants are expected to explore the topic in advance and take active part in the discussions held
- Attending and Participating in all activities of the workshop
- Group Activities have to be undertaken by students as guided by the trainer.
- Evaluation of workshop activities would be done through test and quiz at the end of the workshop.
- Submitting a write up of atleast 500 words about the learning outcome from the workshop.

### Methodology

The methodology followed at the workshop could be based on any one or more of the following methods:

Case Study

Business Game

Simulation

Group Activity

Role Play

Business Planning

Quiz

### Evaluation Scheme:

Attendance	Active Participation	Multiple Choice Questions/ Quiz	Solving the case/ Assignment/ Write up	Total
10	30	30	30	100

# Syllabus – Fourth Semester

## MOLECULAR BIOLOGY

**Course Code: BTH2401**

**Credit Units: 03**

**Course Objective:**

The objective of the course is to provide a clear understanding of DNA (genetic material) so that they can manipulate it and understand basic tools and techniques involved in its manipulation. Strong foundation in molecular biology enables the students to familiarize themselves with Genetic engineering technology.

**Course Contents:**

**Module I: DNA replication and repair**

DNA structure, DNA replication; DNA repair mechanism,

**Module II: Transcription of DNA**

Transcription in prokaryotes and eukaryotes, RNA polymerase – Composition and function; transcription mechanism; transcription factor and their role, inhibition of RNA synthesis

**Module III: Processing of RNA**

Processing of ribosomal and transfer RNA's processing of mRNA-5'cap formation; 3' polyadenylation ; RNA splicing , RNA editing , RNA degradation.

**Module IV: Translation**

Translation mechanism in prokaryotes and eukaryotes; ribosomes, initiation of translation, elongation, termination, amino acid activation; inhibitors, post translation modification of protein.

**Module V: Regulation of gene expression**

Regulation in prokaryotes – repressors and negative control, positive control, role of c AMP, **Amptreceptor**protein, lac, tryp, His and ara operons, Regulation in Eukaryotes=promoters and enhancers, transcriptional regulatory protein, transcriptional activators, eukaryotic repressor.

**Module VI: Gene Silencing**

Antisense molecules; Biochemistry of ribozyme, Hammer head, hairpin ribozymes. Application of antisense and ribozymes in genetic engineering.

**Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# INTRODUCTORY IMMUNOLOGY

**Course Code: BTH2402**

**Credit Units: 03**

## **Course Objective:**

Role of antibody engineering in biomedical applications and the importance of immuno genetics in disease processes, tissue transplantation and immune regulation are some of the areas of attributes of this course which can help the students to understand the biotechnology related to human kind.

## **Course Contents:**

### **Module I**

Historical perspective of immune system and immunity; Innate and specific immunity, Humoral immunity, Cell-mediated immunity

### **Module II**

Antibody structure in relation to function and antigen-binding; Types of antibodies and their structures: isotypes, allotypes, idiotypes; Genetic basis of antibody diversity

### **Module III**

The organs and cells of the immune system; Histocompatibility: structure of MHC class I, II & III antigens & their mode of antigen presentation, MHC restriction; Antigens & antigenicity;

### **Module IV**

Measurement of antigen – antibody interaction: agglutination, immunodiffusion, immuno-electrophoresis, ELISA, RIE, production of monoclonal antibodies.

### **Module V**

Complement system; Autoimmunity; Hypersensitivity

### **Module VI:**

Hybridoma Technology; Introduction to transplantation immunology, Introduction to Cancer immunology, Vaccines (attenuated and recombinant);

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Text & References:**

### **Text:**

# INSTRUMENTATION & BIOANALYTICAL TECHNIQUES

**Course Code: BTH2403**

**Credit Units: 02**

## **Course Objective:**

The students will be exposed to basic concepts related with techniques and instrumentation widely used in Biotechnology.

## **Course Contents:**

### **Module I: Buffers & Sample preparation**

Preparation of solutions, concept of pH and buffer, types of buffers and their preparation, pH meter. Cell Disruption techniques, ultra filtration, dialysis and reverse osmosis.

### **Module II: Centrifugation**

Principle of centrifugation, rotors, different types of centrifuges, ultra centrifugation

### **Module III: Microscopy**

Principles of microscopy, types of microscopy Bright field, Dark field, phase contrast and fluorescence microscopy. Electron microscopy: Transmission and scanning electron microscopy.

### **Module IV: Radioisotope techniques**

Study of radioisotopes in biological samples, proportional and GM counter, scintillation counters, autoradiography.

### **Module V: Electrophoresis & Chromatography**

SDS-PAGE, isoelectric focusing, two-dimensional electrophoresis; Paper, TLC, gel filtration, ion-exchange chromatography, affinity chromatography, HPLC and GLC

### **Module VI: Spectroscopy**

UV and visible spectroscopy, Infrared and Atomic absorption spectroscopy, fluorescence spectroscopy.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Text & References:**

### **Text:**

- Principles of Physical Biochemistry, K.E. Van Holde, Prentice Hall.

# RESEARCH METHODOLOGY

**Course Code: BTH2404**

**Credit Units: 02**

## **Course Objective:**

To develop understanding of information and library science research issues in the domain of bioinformatics through review of journal articles, invited talks, and critical group discussions of methods. The main objectives for this course are to develop: familiarity with information and library science-oriented problems in the biomedical sciences, an understanding of research methods in the biomedical domain, critical thinking and evaluation skills and presentation and summarization skills.

## **Course Contents:**

### **Module I**

Introduction: Science, Scientific research. Role of a researcher in different stages of a project, Routes to research funding (academic and commercial)

### **Module II**

Research – Definition – Importance and Meaning of research – Characteristics of research – Types of Research – Steps in research – Identification, Selection and formulation of research problem – Research questions – Research design – Formulation of Hypothesis – Review of Literature.

### **Module III: Sampling techniques**

Types of sampling, Steps in sampling; Advantages and limitations of sampling. Collection of Data;; Statistics in Research.

### **Module IV**

Type of Articles (review, letters etc). Scientific paper format (Abstract, Introduction, Materials and Methods, Results, Discussion). Writing, evaluating, presenting and publishing the results of scientific research in the academic press (journals, conferences etc). Choosing the appropriate journal (Sources, Information, Instructions to authors, peer review system, journal evaluation)

### **Module V**

Case studies of areas of current research. Formulating a research plan and its presentation

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Text & References:**

### **Text:**

- Statistical Methods By S.P. Gupta

### **References:**

## IN SILICO ANALYSIS OF BIOMOLECULES

**Course Code: BTH2405**

**Credit Units: 02**

**Course Objective:** The objective is to describe relational data models and database management systems with an emphasis on biologically important techniques to store various data on DNA sequencing structures genetic mapping etc.

### **Course Content:**

#### **Module I: Introduction and overview**

The NCBI data model; sequence databases, sequence retrieval, sequence file formats, submitting DNA and protein sequences. Types of biological databases, Databases and rapid sequence analysis

#### **Module II: Sequence alignment**

Global and local alignments, Pairwise and multiple alignment, programs and methods for sequence alignment, pattern searching programs, family and superfamily representation, structural inference, dynamic programming algorithms, alignment by hidden Markov models,

#### **Module III: Phylogenetic prediction**

Phylogenetic analysis, parsimony, tree evaluation, maximum likelihood trees, analysis software.

#### **Module IV: Predictive methods using DNA and protein sequences**

ESTs – databases, clustering, gene discovery and identification, and functional classification. Protein identification, physical properties, motifs and patterns, structure,

### **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

### **Text & References:**

#### **Text:**

- Essentials of Genomics and Bioinformatics, C.W. Sensen, John Wiley and Sons
- Bioinformatics: Sequence and Genome Analysis, D.W. Mount, Cold Spring Harbor Laboratory Press

- Sequence Analysis in Molecular Biology: Treasure Trove or Trivial Pursuit, G. Von Heijne and G. Von Heijne, Academic Press.

## MOLECULAR BIOLOGY LAB

**Course Code: BTH2406**

**Credit Units: 01**

### **Course Contents:**

1. Isolation of genomic DNA.
2. Isolation of plasmid DNA.
3. Isolation of eukaryotic total RNA.
4. Study of in vitro transcription.
5. Invitro study of translation

### **Examination Scheme:**

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

## INTRODUCTORY IMMUNOLOGY LAB

Course Code: BTH2407

Credit Units: 01

### Course Contents:

#### Module I

Blood film preparation and identification of cells.

#### Module II

Isolation of serum, Purification of IgG through affinity chromatography

#### Module III

Lymphoid organs and their microscopic organization.

#### Module IV

WIDAL Test

#### Module V

Radial Immuno Diffusion Test; Ouchterlony Double diffusion Test

#### Module VI: ELISA

Dot, Sandwich

### Examination Scheme:

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

## IN SILICO ANALYSIS OF BIOMOLECULES LAB

**Course Code: BTH2408**

**Credit Units: 01**

### **Course Contents:**

1. Basics of sequence analysis Retrieving a sequence-nucleic acid/Protein
2. Local and Global Alignment- concepts Pair wise sequence alignment
3. Multiple sequence alignment
4. Dynamic Programming – Smith Watermann Algorithm Needleman Wunsch Algorithm
5. Motif and pattern searching
6. Phylogentic prediction and analysis
7. Structure predication
8. Finding transcription regulatory signals
9. Docking

### **Examination Scheme:**

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

# NANO BIOTECHNOLOGY

**Course Code: BTH2409**

**Credit Units: 03**

## **Course Objective:**

Nanotechnology is one of the most important emerging fields in today's scenario and holds tremendous potential in the field of Biotechnology. The objective of this course is to introduce this emerging field to the students so that they can apply this to develop new drug delivery systems and biomarkers.

## **Course Contents:**

### **Module I: Introduction to Nanotechnology**

Overview of nanotechnology developments, different nanostructured materials, properties related to nanostructured surfaces, atomic theory and bonding, quantum theory, electromagnetic properties of matter, molecular structure and macromolecules, intramolecular and intermolecular forces, solubility and solvation, thermodynamics and fluid behaviour.

### **Module II: Nanostructured Materials**

Choice of nanomaterials, carbon nanotubes and nanowires, Physical characteristics of nanomaterials and nanostructured surfaces, quantum dots, nanostructured thin films, pattern surfaces, composites, magnetic nanoparticles, scaffolds, gels and drug delivery systems.

### **Module III: Nanobiostructure Systems – Drug Delivery**

The assembly of drug delivery systems, preparation and assembly of pharmaceutical molecule into nanometric material within the parameters of GLP and health and safety standards.

### **Module IV: Nanobiostructure Systems - Biosensor**

The functional assembling of the components of a nanostructured biosensor, putting together a bioreceptor and putting together nanometric support and a signal transduction system. Assembly and production of a nanobiosensor.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Text & References:**

- Molecular Engineering of Nanosystems by Edward A. Rietman.
- Nanobiotech- Concepts, Applications and Perspectives, Christot, Chad Mirkin.
- Nanoscale Science and technology, Robert W Kelsall, Mark Geoghegan, Ian W Hamley.
- Nano surface chemistry, Morton Rosoff.

# FORENSIC BIOTECHNOLOGY

**Course Code: BTH2410**

**Credit Units: 03**

## **Course Objective:**

An introduction to forensic science and application of biotechnology in Forensic sciences can be understood by studying the various modules of this paper.

## **Course Contents:**

### **Module I**

History and Development of Forensic Science, Definition of Forensic Science, Scope of Forensic Science, Need of Forensic Science, Basic Principles of Forensic Science, Tools and Techniques of Forensic Science.

### **Module II**

Organizational setup of Forensic Science Laboratories, CFSL, FSL, GEQD, FPB, NICFS, Central Detective Training School, NCRB (Maintenance of Crime Records), NPA Mobile Forensic Science Laboratory, Branch of Forensic Science,

### **Module III**

Modus Operandi and MOB and its role in Criminal Investigation, Methods of Investigation: Narco analysis; Hypnosis etc. Limitations and legal aspects.

Brain fingerprinting, Criminal Profiling, Profile of the victim and culprit, investigative strategy, crime scene characteristics, criminal behavior on the internet, limitations.

### **Module IV**

Education of Forensic Science, Role of Media, Human Rights & Criminal Justice System.

Ethics in Forensic Science, Duties of Forensic Scientist, History and Development of Finger Print as Science for Personal Identification, Type of Finger Prints, Classification of Finger Prints

Presentation of Expert Evidence: Data, Reports, Evidence in the Court.

### **Module VII:**

MLP, SLP technology, PCR technology in crime detection, STR and databases, mitochondrial DNA and Y chromosome analysis in forensic science, DNA chip technology, role of molecular biology and biotechnology in crime detection.

# GENETICALLY MODIFIED ORGANISM

**Course Code: BTH2411**

**Credit Units: 03**

## **Course Contents:**

### **Module I**

Microbial genetic engineering, genetically modified microbes of industrial importance.

### **Module II**

Plants genetic engineering, Transgenic crop with new traits-herbicide tolerance, insect and disease resistance, Therapeutic proteins and compounds; Molecular farming of biopharmaceuticals.

### **Module III**

Animal genetic engineering; Transgenic animals with new traits, transgenic animals as bioreactors for producing pharmaceutically important compounds and therapeutic etc.

### **Module IV**

Detection and diagnosis of genetically modified organisms.

# TERM PAPER

**Course Code: BTH2431**

**Credit Units: 02**

A term (or research) paper is primarily a record of intelligent reading in several sources on a particular subject.

The students will choose the topic at the beginning of the session in consultation with the faculty assigned. The progress of the paper will be monitored regularly by the faculty. At the end of the semester the detailed paper on the topic will be submitted to the faculty assigned. The evaluation will be done by Board of examiners comprising of the faculties.

## GUIDELINES FOR TERM PAPER

The procedure for writing a term paper may consists of the following steps:

- Choosing a subject
- Finding sources of materials
- Collecting the notes
- Outlining the paper
- Writing the first draft
- Editing & preparing the final paper

### 1. Choosing a Subject

The subject chosen should not be too general.

### 2. Finding Sources of materials

- j) The material sources should be not more than 10 years old unless the nature of the paper is such that it involves examining older writings from a historical point of view.
- k) Begin by making a list of subject-headings under which you might expect the subject to be listed.
- l) The sources could be books and magazines articles, news stories, periodicals, scientific journals etc.

### 3. Collecting the notes

Skim through sources, locating the useful material, then make good notes of it, including quotes and information for footnotes.

- j) Get facts, not just opinions. Compare the facts with author's conclusion.
- k) In research studies, notice the methods and procedures, results & conclusions.
- l) Check cross references.

### 4. Outlining the paper

- g) Review notes to find main sub-divisions of the subject.
- h) Sort the collected material again under each main division to find sub-sections for outline so that it begins to look more coherent and takes on a definite structure. If it does not, try going back and sorting again for main divisions, to see if another general pattern is possible.

### 5. Writing the first draft

Write the paper around the outline, being sure that you indicate in the first part of the paper what its purpose is. You may follow the following:

- a) statement of purpose
- b) main body of the paper
- c) statement of summary and conclusion

Avoid short, bumpy sentences and long straggling sentences with more than one main ideas.

## **6. Editing & Preparing the final Paper**

- bb) Before writing a term paper, you should ensure you have a question which you attempt to answer in your paper. This question should be kept in mind throughout the paper. Include only information/ details/ analyses of relevance to the question at hand. Sometimes, the relevance of a particular section may be clear to you but not to your readers. To avoid this, ensure you briefly explain the relevance of every section.
- cc) Read the paper to ensure that the language is not awkward, and that it "flows" properly.
- dd) Check for proper spelling, phrasing and sentence construction.
- ee) Check for proper form on footnotes, quotes, and punctuation.
- ff) Check to see that quotations serve one of the following purposes:
- gg) Show evidence of what an author has said.
- hh) Avoid misrepresentation through restatement.
- ii) Save unnecessary writing when ideas have been well expressed by the original author.
- jj) Check for proper form on tables and graphs. Be certain that any table or graph is self-explanatory.

Term papers should be composed of the following sections:

- Title page
- Table of contents
- Introduction
- Review
- Discussion&Conclusion
- References
- Appendix

Generally, the introduction, discussion, conclusion and bibliography part should account for a third of the paper and the review part should be two thirds of the paper.

### **Discussion**

The discussion section either follows the results or may alternatively be integrated in the results section. The section should consist of a discussion of the results of the study focusing on the question posed in the research paper.

### **Conclusion**

The conclusion is often thought of as the easiest part of the paper but should by no means be disregarded. There are a number of key components which should not be omitted. These include:

- m) summary of question posed
- n) summary of findings
- o) summary of main limitations of the study at hand
- p) details of possibilities for related future research

### **References**

From the very beginning of a research project, you should be careful to note all details of articles gathered.

The bibliography should contain ALL references included in the paper. References not included in the text in any form should NOT be included in the bibliography.

The key to a good bibliography is consistency. Choose a particular convention and stick to this.

## **Conventions**

### **Monographs**

Crystal, D. (2001), *Language and the internet*. Cambridge: Cambridge University Press.

### **Edited volumes**

Gass, S./Neu, J. (eds.) (1996), *Speech acts across cultures. Challenges to communication in a second language*. Berlin/ NY: Mouton de Gruyter.

[(eds.) is used when there is more than one editor; and (ed.) where there is only one editor. In German the abbreviation used is (Hrsg.) for Herausgeber].

### **Edited articles**

Schmidt, R./Shimura, A./Wang, Z./Jeong, H. (1996), *Suggestions to buy: Television commercials from the U.S., Japan, China, and Korea*. In: Gass, S./Neu, J. (eds.) (1996), *Speech acts across cultures. Challenges to communication in a second language*. Berlin/ NY: Mouton de Gruyter: 285-316.

### **Journal articles**

McQuarrie, E.F./Mick, D.G. (1992), *On resonance: A critical pluralistic inquiry into advertising rhetoric*. *Journal of consumer research* 19, 180-197.

### **Electronic book**

Chandler, D. (1994), *Semiotics for beginners* [HTML document]. Retrieved [5.10.'01] from the World Wide Web, <http://www.aber.ac.uk/media/Documents/S4B/>.

### **Electronic journal articles**

Watts, S. (2000) *Teaching talk: Should students learn 'real German'?* [HTML document]. *German as a Foreign Language Journal* [online] 1. Retrieved [12.09.'00] from the World Wide Web, <http://www.gfl-journal.com/>.

### **Other websites**

Verterhus, S.A. (n.y.), *Anglicisms in German car advertising. The problem of gender assignment* [HTML document]. Retrieved [13.10.'01] from the World Wide Web, <http://olaf.hiof.no/~sverrev/eng.html>.

### **Unpublished papers**

Takahashi, S./DuFon, M.A. (1989), *Cross-linguistic influence in indirectness: The case of English directives performed by native Japanese speakers*. Unpublished paper, Department of English as a Second Language, University of Hawai'i at Manoa, Honolulu.

### **Unpublished theses/ dissertations**

Möhl, S. (1996), *Alltagssituationen im interkulturellen Vergleich: Realisierung von Kritik und Ablehnung im Deutschen und Englischen*. Unpublished MA thesis, University of Hamburg.

Walsh, R. (1995), *Language development and the year abroad: A study of oral grammatical accuracy amongst adult learners of German as a foreign language*. Unpublished PhD dissertation, University College Dublin.

## **Appendix**

The appendix should be used for data collected (e.g. questionnaires, transcripts, ...) and for tables and graphs not included in the main text due to their subsidiary nature or to space constraints in the main text.

**Assessment Scheme:****Continuous Evaluation:**

40%

(Based on abstract writing, interim draft, general approach, research orientation, readings undertaken etc.)

**Final Evaluation:**

60%

(Based on the organization of the paper, objectives/ problem profile/ issue outlining, comprehensiveness of the research, flow of the idea/ ideas, relevance of material used/ presented, outcomes vs. objectives, presentation/ viva etc.)

# PROJECT

Course Code: BTH2432

Credit Units: 03

## Objectives:

The aim of the project is to provide the students with an opportunity to further their intellectual and personal development in the chosen field by undertaking a significant practical unit of activity. The project can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

## Chapter Scheme and distribution of marks:

Chapter 1: Introduction – 10 marks

Chapter 2: Conceptual Framework/ National/International Scenario – 25 marks

Chapter 3: Presentation, Analysis & Findings -- 25 marks

Chapter 4: Conclusion & Recommendations -- 10 marks

Chapter 5: Bibliography -- 05 marks

Project Report	Power Point Presentation & Viva
75 marks	25 marks

## Components of a Project Report

The outcome of Project Work is the Project Report. A project report should have the following components:

**1) Cover Page:** This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.

**2) Acknowledgement:** Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.

**3) Table of Content:** Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.

**4) Body of the Report:** The body of the report should have these four logical divisions

a) **Introduction:** This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, and method of analysis), Limitations of the Study, and Chapter Planning.

b) **Conceptual Framework / National and International Scenario:** (relating to the topic of the Project).

c) **Presentation of Data, Analysis and Findings:**(using the tools and techniques mentioned in the methodology).

d) **Conclusion and Recommendations:** In this section, the concluding observations based on the main findings and suggestions are to be provided.

**5) Bibliography or References:** This section will include the list of books and articles which have been used in the project work, and in writing a project report.

**6) Annexures:** Questionnaires (if any), relevant reports, etc.

(The main text of the Project should normally be in the range of 5000 words. However, there may be annexure in addition to the main text)

## **The Steps of a Project Report**

**Step I :** Selection of the topic for the project by taking following points into consideration:

- Suitability of the topic.
- Relevance of the topic
- Time available at the disposal.
- Feasibility of data collection within the given time limit.
- Challenges involved in the data collection (time & cost involved in the data collection, possibility of getting responses, etc.)

**Step II :** Finalisation of the Topic and preparation of Project Proposal in consultation with the Supervisor.

**Step III :** Collection of information and data relating to the topic and analysis of the same.

**Step IV :** Writing the report dividing it into suitable chapters, viz.,

Chapter 1: Introduction,

Chapter 2: Conceptual Framework / National & International Scenario,

Chapter 3: Analysis & Findings

Chapter 4: Conclusion and Recommendations.

**Step V :** The following documents are to be attached with the Final Project Report.

- 1) Approval letter from the supervisor (Annexure-IA)
- 2) Student's declaration (Annexure-IB)
- 3) Certificate from the Competent Authority of the Organisation / Institution, if the student undertakes the Project Work in any Organisation / Institution.

### **Guidelines for Evaluation:**

- Each of the students has to undertake a Project individually under the supervision of a teacher and to submit the same following the guidelines stated below.
- Language of Project Report and Viva-Voce Examination may be English. The Project Report must be typed and hard bound.
- Failure to submit the Project Report or failure to appear at the Viva-voce Examination will be treated as "Absent" in the Examination. He /she has to submit the Project Report and appear at the Viva-Voce Examination in the subsequent years (within the time period as per University Rules).
- No marks will be allotted on the Project Report unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her Project Report.
- Evaluation of the Project Work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate.

## WORKSHOP / CERTIFICATION

**Course Code: BTH2433**

**Credit Units: 01**

### Objectives

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two way. The trainer has to make sure that the aspect covered are practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

### Major Themes for Workshop

The workshop may be conducted on any of the following major themes:

Accounting

Finance

Human Resources

Marketing

Economics

Operations

Supply Chain Management

These themes are merely indicative and other recent and relevant topics of study may be included.

### Guidelines for Workshop

The procedure for earning credits from workshop consists of the following steps:

- Relevant study material and references will be provided by the trainer in advance.
- The participants are expected to explore the topic in advance and take active part in the discussions held
- Attending and Participating in all activities of the workshop
- Group Activities have to be undertaken by students as guided by the trainer.
- Evaluation of workshop activities would be done through test and quiz at the end of the workshop.
- Submitting a write up of atleast 500 words about the learning outcome from the workshop.

### Methodology

The methodology followed at the workshop could be based on any one or more of the following methods:

Case Study

Business Game

Simulation

Group Activity

Role Play

Business Planning

Quiz

### Evaluation Scheme:

Attendance	Active Participation	Multiple Choice Questions/ Quiz	Solving the case/ Assignment/ Write up	Total
10	30	30	30	100

## Syllabus – Fifth Semester

### ANIMAL BIOTECHNOLOGY

**Course Code: BTH2501**

**Credit Units: 02**

**Course Contents:**

**Module I**

Historical perspectives, sterilization methods, Culture techniques, plasma clot, raft methods, agar gel, grid method, organ engineering.

**Module II**

Cell culture substrates, cultural media, natural and artificial media, initiation and maintenance of cell cultures, cell culture products, cryopreservation techniques, immobilized cultures

**Module III**

In vitro fertilization and embryo transfer

**Module IV**

Somatic cell hybridization, hybridoma technology

**Module V**

Bioethical issues related to animal biotechnology,

**Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

**Text & References**

- Cell Culture LabFAx, M. Butler and M. Dawson, Bios scientific Publications Ltd.
- Cell Growth and Division – A Practical approach, R. Basega, IRL Press

- Comprehensive Biotechnology, Moo-Young, Alan T. Bullm Howard Dalton, Panima Publication

# PLANT BIOTECHNOLOGY

**Course Code: BTH2502**

**Credit Units: 02**

## **Course Objective:**

The application of Plant Biotechnology covers major areas related to commercial applications. Regeneration of plants through *in vitro* techniques offers a practical strategy for micro propagation. Importance will also be given to areas like *in vitro* fertilization, animal cell and tissue culture, hormone vaccine and important enzyme production through animal biotechnology.

## **Course Contents:**

### **Module I**

Historical perspective of plant tissue culture. Tissue culture lab and organization, Sterilization techniques; Types of nutrient media and media composition; Role of phytohormones; Cell culture techniques- cell, tissue, organ cultures, callus culture, suspension culture ; Culture techniques Callus culture, cell culture and protoplast cultures.

### **Module II**

Organogenesis and somatic embryogenesis. Micropopagation, pathogen free plant production; haploids, Somaclonal variation

### **Module III**

Plant transformation vectors; Gene transfer techniques; Transgenic plants transgene integration and expression

### **Module IV**

Transgenic crop expressing new traits-herbicide tolerance, insect and disease resistance, Therapeutic proteins;oral vaccines;

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# STEM CELL AND GENE THERAPY

**Course Code: BTH2503**

**Credit Units: 03**

## **Course Objective:**

The course is designed to give a broad view of mammalian stem cells, reviewing where they are found in the body, the different types and how they are cultured. The topics will cover the basic biology of these stem cells as well as bioengineering and application of these stem cells to potential treatments of human diseases.

## **Course Contents:**

### **Module I**

Stem Cell biology and therapy, types embryonic stem cell, Adult stem cell, Stem Cell Biology and Therapy, Embryonic Stem Cells, culture and the potential benefits of stem cell technology

### **Module II:**

Introduction to Gene Therapy, History and evolution of Gene therapy, optimal disease targets, Failures and successes with gene therapy and future prospects, Gene transfer methods

### **Module III**

Innate and Acquired Immune Response to Cell and Gene Therapy,

### **Module IV**

Cell, Disease, and Genetic Perspectives for Gene Therapy, Promise of Stem Cell-Based Therapies, Stem Cells and Diabetes, Stem Cells and heart Repair

### **Module V**

Regulatory and Ethical Considerations of Cell and Gene Therapy, Assessing Human Stem Cell Safety, Use of Genetically Modified Stem Cells in Experimental Gene Therapies.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Text & References:**

# MARINE BIOTECHNOLOGY

**Course Code: BTH2504**

**CreditUnits: 03**

## **Course Contents:**

### **Module I**

The marine ecosystem and its functioning: intertidal, estuarine, salt marsh, mangrove, coral reef, coastal & deep sea ecosystems. Marine viruses, Bacteria and their significance Hydrothermal vents; Marine Biodiversity: defining, measurement and conservation strategies.

### **Module II**

Nutrients cycling: carbon, nitrogen sulphur& phosphorus.

Global climate changes: impact on species diversity & productivity, oceans as a carbon sink, effects on corals bleaching. Biological rhythms.

### **Module III**

Important Marine Products: Bioactive compounds from marine organisms, GFP, RFP characteristics and their applications; Green mussel adhesive protein, Chitosan and its applications

### **Module IV**

Probiotic bacteria and their importance in aquaculture; Vaccines in aquaculture: Fish ,shrimps& prawns; Marine food analysis-spoilage, quality control; Techniques for identification of bacterial & viral pathogens in aquaculture and Remedies.

## **Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>Attendance</b>	<b>Assignment/ Project/Seminar/Quiz</b>	<b>EE</b>
<b>Weightage (%)</b>	15	5	10	70

# BIOSENSORS

**Course Code: BTH2505**

**Credit Units: 03**

## **Course Objective:**

On completion of the module students should Be able to Appreciate the basic configuration and distinction among biosensor systems, To gain an understanding of general biosensor principles and terms, To be able to design, model, simulate, fabricate, and test a biosensor, To gain an overall knowledge of biosensor types, applications, requirements, and capabilities to allow improved interaction with physicians, clinicians, and biomedical engineers, and to enable the student to conduct biomedical engineering research.

## **Course Contents:**

### **Module I: Biosensors**

Definition, History, Properties of biosensors, Design features of Biosensors, The Biological Component, SignalTransduction: Amperometric Biosensors, Potentiometric Biosensors, Detection of H<sup>+</sup> cation, Detections ofNH<sup>4+</sup>cation, Detection of CN<sup>-</sup> anion, Calorimetric biosensors, Optical Biosensors, Measuring the change inlight reflectance, Measuring luminescence, Pizo-electric biosensors, Immunosensors, Commercial examples of biosensors. Biosensors markets- Opportunities and obstacles.

### **Module II: Biomedical sensors**

Sensors and transducers: an overview, measurement systems, Classification of Biomedical sensors andtransducers, who do we need Biomedical sensors and Transducers? Important Design considerations and systemcalibration, the future of Biosensors and Transducers, Sensing Layer: The importance of computers in sensors and Transducer technology, Recent Engineering Solutions to Health care using Biosensors and Transducers, Modern health care solutions.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Text & References:**

## MODERN KILLER DISEASES

**Course Code: BTH2506**

**Credit Units: 03**

### **Course Contents:**

#### **Module I**

Definition of disease, Modern and ancient human diseases: AIDS, Cancer, hepatitis, influenza, diphtheria, Botulism, tetanus, diarrhoea, Malaria, tuberculosis Rabies diseases

#### **Module II**

Mode of infection, mechanism of infection of important human disease and their symptoms

#### **Module III**

Available therapies to killer diseases

#### **Module III**

Bottlenecks in development of therapy of killer diseases

### **Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>Attendance</b>	<b>Assignment/ Project/Seminar/Quiz</b>	<b>EE</b>
<b>Weightage (%)</b>	15	5	10	70

# BIOFUEL AND GREEN BIOTECHNOLOGY

**Course Code: BTH2507**

**Credit Units: 03**

## **Course Objective:**

This course will acquaint the students with bioenergy resources, their properties, preparation, processing alongwith the details of equipments utilized for the purpose.

## **Course Contents:**

### **Module I: Biomass Sources, Characteristics & Preparation: Biomass Sources and Classification**

Chemical composition and properties of different biomass materials and bio-fuels – Sugar cane molasses for fermentation ethanol; Sources and processing of oils and fats for liquid fuels- Energy plantations - Preparation of woody biomass; Drying, Storage and Handling of Biomass.

### **Module II: Biogas Technology**

Feedstock for biogas production, biodegradable organic matter, Operating parameters for biogas production, Dry and wet fermentation

### **Module III: Bio-Ethanol and Bio-Diesel Technology**

Production of Fuel Ethanol by Fermentation of Sugars. Trans-esterification of Oils to Produce Bio-Diesel.

### **Module IV: Pyrolysis and Gasification of Biomass**

Thermo-chemical conversion of ligno-cellulose biomass - Pyrolysis of biomass, Thermo-chemical gasification principles

### **Module V: Combustion of Biomass and Cogeneration Systems**

Combustion of Woody Biomass, Cogeneration in Biomass Processing Industries. Use of biogases for cogeneration.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# ARTIFICIAL NEURAL NETWORKS

**Course Code: BTH2508**

**Credit Units: 03**

## **Course Objective:**

This course will enable the students to gain knowledge about a relatively newer area of science. The course is designed to model the different technical properties, applications, besides the closely related aspects of artificial neural networks.

## **Course Contents:**

### **Module I**

Historical background, Why is learning hard?

### **Module II**

Memorization, generalization and function approximation, Linear Associators, Perceptrons and Capacity, Multilayer neural networks, Maximum Likelihood and Gradient Descent learning, Stochastic gradient descent for supervised learning.

### **Module III**

The back propagation algorithm, Aspects of Learning Theory and Generalization, Bias vs. variance, Overtraining, pruning and regularization, VC dimension and how much data is enough?

### **Module IV**

Neural networks and analog VLSI, Selected Applications

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Text & References:**

### **Text:**

# TERM PAPER

**Course Code: BTH2531**

**Credit Units: 02**

A term (or research) paper is primarily a record of intelligent reading in several sources on a particular subject.

The students will choose the topic at the beginning of the session in consultation with the faculty assigned. The progress of the paper will be monitored regularly by the faculty. At the end of the semester the detailed paper on the topic will be submitted to the faculty assigned. The evaluation will be done by Board of examiners comprising of the faculties.

## GUIDELINES FOR TERM PAPER

The procedure for writing a term paper may consists of the following steps:

- Choosing a subject
- Finding sources of materials
- Collecting the notes
- Outlining the paper
- Writing the first draft
- Editing & preparing the final paper

### 1. Choosing a Subject

The subject chosen should not be too general.

### 2. Finding Sources of materials

- m) The material sources should be not more than 10 years old unless the nature of the paper is such that it involves examining older writings from a historical point of view.
- n) Begin by making a list of subject-headings under which you might expect the subject to be listed.
- o) The sources could be books and magazines articles, news stories, periodicals, scientific journals etc.

### 3. Collecting the notes

Skim through sources, locating the useful material, then make good notes of it, including quotes and information for footnotes.

- m) Get facts, not just opinions. Compare the facts with author's conclusion.
- n) In research studies, notice the methods and procedures, results & conclusions.
- o) Check cross references.

### 4. Outlining the paper

- i) Review notes to find main sub-divisions of the subject.
- j) Sort the collected material again under each main division to find sub-sections for outline so that it begins to look more coherent and takes on a definite structure. If it does not, try going back and sorting again for main divisions, to see if another general pattern is possible.

### 5. Writing the first draft

Write the paper around the outline, being sure that you indicate in the first part of the paper what its purpose is. You may follow the following:

- a) statement of purpose
- b) main body of the paper
- c) statement of summary and conclusion

Avoid short, bumpy sentences and long straggling sentences with more than one main ideas.

## **6. Editing & Preparing the final Paper**

- kk) Before writing a term paper, you should ensure you have a question which you attempt to answer in your paper. This question should be kept in mind throughout the paper. Include only information/ details/ analyses of relevance to the question at hand. Sometimes, the relevance of a particular section may be clear to you but not to your readers. To avoid this, ensure you briefly explain the relevance of every section.
- ll) Read the paper to ensure that the language is not awkward, and that it "flows" properly.
- mm) Check for proper spelling, phrasing and sentence construction.
- nn) Check for proper form on footnotes, quotes, and punctuation.
- oo) Check to see that quotations serve one of the following purposes:
- pp) Show evidence of what an author has said.
- qq) Avoid misrepresentation through restatement.
- rr) Save unnecessary writing when ideas have been well expressed by the original author.
- ss) Check for proper form on tables and graphs. Be certain that any table or graph is self-explanatory.

Term papers should be composed of the following sections:

- Title page
- Table of contents
- Introduction
- Review
- Discussion & Conclusion
- References
- Appendix

Generally, the introduction, discussion, conclusion and bibliography part should account for a third of the paper and the review part should be two thirds of the paper.

### **Discussion**

The discussion section either follows the results or may alternatively be integrated in the results section. The section should consist of a discussion of the results of the study focusing on the question posed in the research paper.

### **Conclusion**

The conclusion is often thought of as the easiest part of the paper but should by no means be disregarded. There are a number of key components which should not be omitted. These include:

- q) summary of question posed
- r) summary of findings
- s) summary of main limitations of the study at hand
- t) details of possibilities for related future research

### **References**

From the very beginning of a research project, you should be careful to note all details of articles gathered.

The bibliography should contain ALL references included in the paper. References not included in the text in any form should NOT be included in the bibliography.

The key to a good bibliography is consistency. Choose a particular convention and stick to this.

## **Conventions**

### **Monographs**

Crystal, D. (2001), *Language and the internet*. Cambridge: Cambridge University Press.

### **Edited volumes**

Gass, S./Neu, J. (eds.) (1996), *Speech acts across cultures. Challenges to communication in a second language*. Berlin/ NY: Mouton de Gruyter.

[(eds.) is used when there is more than one editor; and (ed.) where there is only one editor. In German the abbreviation used is (Hrsg.) for Herausgeber].

### **Edited articles**

Schmidt, R./Shimura, A./Wang, Z./Jeong, H. (1996), *Suggestions to buy: Television commercials from the U.S., Japan, China, and Korea*. In: Gass, S./Neu, J. (eds.) (1996), *Speech acts across cultures. Challenges to communication in a second language*. Berlin/ NY: Mouton de Gruyter: 285-316.

### **Journal articles**

McQuarrie, E.F./Mick, D.G. (1992), *On resonance: A critical pluralistic inquiry into advertising rhetoric*. *Journal of consumer research* 19, 180-197.

### **Electronic book**

Chandler, D. (1994), *Semiotics for beginners* [HTML document]. Retrieved [5.10.'01] from the World Wide Web, <http://www.aber.ac.uk/media/Documents/S4B/>.

### **Electronic journal articles**

Watts, S. (2000) *Teaching talk: Should students learn 'real German'?* [HTML document]. *German as a Foreign Language Journal* [online] 1. Retrieved [12.09.'00] from the World Wide Web, <http://www.gfl-journal.com/>.

### **Other websites**

Verterhus, S.A. (n.y.), *Anglicisms in German car advertising. The problem of gender assignment* [HTML document]. Retrieved [13.10.'01] from the World Wide Web, <http://olaf.hiof.no/~sverrev/eng.html>.

### **Unpublished papers**

Takahashi, S./DuFon, M.A. (1989), *Cross-linguistic influence in indirectness: The case of English directives performed by native Japanese speakers*. Unpublished paper, Department of English as a Second Language, University of Hawai'i at Manoa, Honolulu.

### **Unpublished theses/ dissertations**

Möhl, S. (1996), *Alltagssituationen im interkulturellen Vergleich: Realisierung von Kritik und Ablehnung im Deutschen und Englischen*. Unpublished MA thesis, University of Hamburg.

Walsh, R. (1995), *Language development and the year abroad: A study of oral grammatical accuracy amongst adult learners of German as a foreign language*. Unpublished PhD dissertation, University College Dublin.

## **Appendix**

The appendix should be used for data collected (e.g. questionnaires, transcripts, ...) and for tables and graphs not included in the main text due to their subsidiary nature or to space constraints in the main text.

**Assessment Scheme:****Continuous Evaluation:**

40%

(Based on abstract writing, interim draft, general approach, research orientation, readings undertaken etc.)

**Final Evaluation:**

60%

(Based on the organization of the paper, objectives/ problem profile/ issue outlining, comprehensiveness of the research, flow of the idea/ ideas, relevance of material used/ presented, outcomes vs. objectives, presentation/ viva etc.)

# PROJECT

Course Code: BTH2532

Credit Units: 03

## Objectives:

The aim of the project is to provide the students with an opportunity to further their intellectual and personal development in the chosen field by undertaking a significant practical unit of activity. The project can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

## Chapter Scheme and distribution of marks:

Chapter 1: Introduction – 10 marks

Chapter 2: Conceptual Framework/ National/International Scenario – 25 marks

Chapter 3: Presentation, Analysis & Findings -- 25 marks

Chapter 4: Conclusion & Recommendations -- 10 marks

Chapter 5: Bibliography -- 05 marks

Project Report	Power Point Presentation & Viva
75 marks	25 marks

## Components of a Project Report

The outcome of Project Work is the Project Report. A project report should have the following components:

**1) Cover Page:** This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.

**2) Acknowledgement:** Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.

**3) Table of Content:** Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.

**4) Body of the Report:** The body of the report should have these four logical divisions

a) **Introduction:** This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, and method of analysis), Limitations of the Study, and Chapter Planning.

b) **Conceptual Framework / National and International Scenario:** (relating to the topic of the Project).

c) **Presentation of Data, Analysis and Findings:**(using the tools and techniques mentioned in the methodology).

d) **Conclusion and Recommendations:** In this section, the concluding observations based on the main findings and suggestions are to be provided.

**5) Bibliography or References:** This section will include the list of books and articles which have been used in the project work, and in writing a project report.

**6) Annexures:** Questionnaires (if any), relevant reports, etc.

(The main text of the Project should normally be in the range of 5000 words. However, there may be annexure in addition to the main text)

## **The Steps of a Project Report**

**Step I :** Selection of the topic for the project by taking following points into consideration:

- Suitability of the topic.
- Relevance of the topic
- Time available at the disposal.
- Feasibility of data collection within the given time limit.
- Challenges involved in the data collection (time & cost involved in the data collection, possibility of getting responses, etc.)

**Step II :** Finalisation of the Topic and preparation of Project Proposal in consultation with the Supervisor.

**Step III :** Collection of information and data relating to the topic and analysis of the same.

**Step IV :** Writing the report dividing it into suitable chapters, viz.,

Chapter 1: Introduction,

Chapter 2: Conceptual Framework / National & International Scenario,

Chapter 3: Analysis & Findings

Chapter 4: Conclusion and Recommendations.

**Step V :** The following documents are to be attached with the Final Project Report.

- 1) Approval letter from the supervisor (Annexure-IA)
- 2) Student's declaration (Annexure-IB)
- 3) Certificate from the Competent Authority of the Organisation / Institution, if the student undertakes the Project Work in any Organisation / Institution.

### **Guidelines for Evaluation:**

- Each of the students has to undertake a Project individually under the supervision of a teacher and to submit the same following the guidelines stated below.
- Language of Project Report and Viva-Voce Examination may be English. The Project Report must be typed and hard bound.
- Failure to submit the Project Report or failure to appear at the Viva-voce Examination will be treated as "Absent" in the Examination. He /she has to submit the Project Report and appear at the Viva-Voce Examination in the subsequent years (within the time period as per University Rules).
- No marks will be allotted on the Project Report unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her Project Report.
- Evaluation of the Project Work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate.

## WORKSHOP / CERTIFICATION

**Course Code: BTH2533**

**Credit Units: 01**

### Objectives

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two way. The trainer has to make sure that the aspect covered are practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

### Major Themes for Workshop

The workshop may be conducted on any of the following major themes:

Accounting

Finance

Human Resources

Marketing

Economics

Operations

Supply Chain Management

These themes are merely indicative and other recent and relevant topics of study may be included.

### Guidelines for Workshop

The procedure for earning credits from workshop consists of the following steps:

- Relevant study material and references will be provided by the trainer in advance.
- The participants are expected to explore the topic in advance and take active part in the discussions held
- Attending and Participating in all activities of the workshop
- Group Activities have to be undertaken by students as guided by the trainer.
- Evaluation of workshop activities would be done through test and quiz at the end of the workshop.
- Submitting a write up of atleast 500 words about the learning outcome from the workshop.

### Methodology

The methodology followed at the workshop could be based on any one or more of the following methods:

Case Study

Business Game

Simulation

Group Activity

Role Play

Business Planning

Quiz

### Evaluation Scheme:

Attendance	Active Participation	Multiple Choice Questions/ Quiz	Solving the case/ Assignment/ Write up	Total
10	30	30	30	100

# Syllabus – Six Semester

## RECOMBINANT DNA TECHNOLOGY

**Course Code: BTH2601**

**Credit Units: 03**

**Course Objective:**

A complete understanding of molecular techniques can be obtained through the course. The successful application of biotechnology largely depends on these advanced molecular techniques.

**Course Contents:**

**Module I**

Restriction endonuclease, methyltransferase, ligase, polymerase, kinase, phosphatase, nuclease, transferase, reverse transcriptase.

**Module II**

Cloning vectors: Plasmids, bacteriophages (Lambda and M13), phagemids, cosmids, artificial chromosomes (YAC, BAC). expression vectors (Bacteria and yeast); Basic cloning strategy and screening clones; Gene libraries

**Module III**

Blotting techniques and hybridization: Southern, Northern and Western blotting techniques. Radioactive and non-radioactive probes.

**Module IV**

Principles of PCR, types of PCRs and its applications

**Module V**

DNA sequencing (Maxam Gilbert, Sanger's and automated), protein engineering.

**Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

**Text & References:**

# GENOMICS AND PROTEOMICS

**Course Code: BTH2602**

**Credit Units: 02**

## **Course Objective:**

The course helps in developing a detailed understanding of eukaryotic genome complexity and organization. Current research on the molecular basis of the control of gene expression in eukaryotic system has developed a detailed understanding of techniques of gene diagnostics and DNA profile to acquire the fundamentals of genomics and Proteomics.

## **Course Contents:**

### **GENOMICS**

#### **Module I: Genome Evolution**

Origin of genomes, functional genomics. Forward genetics

#### **Module II: Structural Genomics**

Chromosome structure and Genome organization, Genome sequencing methods, Gene identification  
Genome annotation methods

#### **Module III: Comparative Genomics**

Phylogeny, COGS [Cluster of orthologues genes], paralogues and gene displacement.

#### **Module IV: Functional Genomics**

ESTs, SAGE, DNA Microarrays, Application of Microarrays, Real Time PCR

#### **Module V: Genotyping Background and Applications.**

Genetic and physical mapping: Introduction to molecular markers-RFLP, RAPD, AFLP, SSRs. Genetic and physical maps, FISH for genome analysis, DNA fingerprinting; Single nucleotide polymorphisms, RNA interference, antisense RNA, siRNA, miRNA, ; Human Genome Project.

### **PROTEOMICS**

#### **Module VI**

Basics of Proteomics: Protein preparation and Separation, 2D Gel Electrophoresis, mass spectrometry, post translation modification.

Protein-Protein Interaction, Protein Microarray, Application of Microarray in proteome analysis.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# INDUSTRIAL BIOTECHNOLOGY

**Course Code: BTH2603**

**Credit Units: 03**

## **Course Objective:**

The objective of this course is to use microorganism to produce various compounds of commercial interest. The student will be exposed to various techniques available for large scale cultivation of microorganisms.

## **Course Contents:**

### **Module I**

Introduction to fermentation, the fermentation industry, Production process batch and Continuous system of cultivation, Solid-state fermentation

### **Module II**

Selection of industrial microorganisms, media for fermentation, aeration, pH, temperature and other requirements during fermentation, downstream processing and product recovery, food industry waste as fermentation substrate.

### **Module III**

Production of compounds like, antibiotics, enzymes, organic acids, solvents, beverages, SCP.

### **Module IV**

Production of fermented dairy products

### **Module V**

Immobilized enzymes systems, production and applications.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Text & References:**

# STRESS BIOLOGY

**Course Code: BTH2604**

**Credit Units: 03**

## **Course Contents:**

### **Module I**

Introduction to stress biology; Types of stresses; Molecular biology of stress responses

### **Module II**

Microbial Stress Responses.

### **Module III**

Biotic and abiotic stress response mechanisms in Plants

### **Module IV**

Biotic and abiotic stress response mechanisms in Animals.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Text & References:**

## RECOMBINANT DNA TECHNOLOGY LAB

**Course Code: BTH2605**

**Credit Units: 02**

### **Course Objective:**

The laboratory experiments in Recombinant DNA Technology would certainly help to comprehend the theoretical aspects of the subject.

### **Course Contents:**

#### **Module I**

Study of cloning

#### **Module II**

Study of PCR

#### **Module III**

Study of Southern hybridization

#### **Module IV**

Study of RAPD

### **Examination Scheme:**

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

# BIOSAFETY MANAGEMENT

**Course Code: BTH2606**

**Credit Units: 03**

## **Course Objective:**

Course addresses management and engineering design concepts required for process safety in chemical and biotechnology systems, with pharmaceutical manufacturing applications. Content focuses on sound engineering principles and practices as they apply to industrial situations, project design, risk mitigation, process and equipment integrity, and engineering codes and standards.

## **Course Contents:**

### **Module I: Hazards**

Chemical hazards classification. Radiation hazards and control of exposure to radiation. Types of fire and fire prevention methods. Mechanical hazards. Electrical hazards

### **Module II: Psychology and Hygiene**

Industrial psychology Industrial hygiene. Safety in plant site selection and plant layout. Industrial lighting and ventilation. Industrial noise.

### **Module III: Occupational diseases and control**

Occupational diseases and prevention methods. Safe housekeeping, Instrumentation for safe operation. Personal protective equipments. Safety in chemical operations and processes.

### **Module IV: Management**

Safety organization – safety committee – safety education and training. Management process. Philosophy and need for Industrial safety. Role of Government in Industrial safety.

### **Module V: Laws**

Factory Act. ESI Act, Environmental Act. Workmen's Compensation Act. Advantages of adopting safety laws.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Text & References:**

### **Text:**

- Guide for Safety in the Chemical laboratory second edition, Manufacturing Chemists Association. Van Nostrand Reinhold Company, New York.

# DRUG DESIGN AND DEVELOPMENT

**Course Code: BTH2607**

**Credit Units: 03**

## **Course Objective:**

The above course will be aimed to identify and design drugs that could be potentially useful in the identification of the candidate drugs, which have efficacy in cell culture or animal models, and thus the most effective compounds could be employed based on the above results for being moved through preclinical studies to clinical trials.

## **Course Contents:**

### **Module I: Drug targets classification**

DNA, RNA, Enzymes involved in nucleic acid metabolism, Signal transduction across membrane GPCR, small molecule receptors, neuropeptide receptors, ion channels.

### **Module II: Target discovery and validation strategies**

New target discovery, biological activity, types of screening, natural products, General overview of validation techniques.

### **Module III: Structure-based design**

Drug design to discovery and development, drug metabolism, toxicity and pharmacokinetics, problems and drawbacks on drug discovery and development.

### **Module IV: Basic concepts of Drug Delivery**

Basic terminologies in drug delivery and drug targeting, Concepts of Bio availability, Process of drug absorption, Drug delivery considerations for the new biotherapeutics  
Introduction to routes of administration of drugs

### **Module V: Delivery of Genetic material**

New generation technologies in genetic drug delivery, Nanotechnology, Genetically engineered cell implants in drug deliver.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Text & References:**

- Drug Delivery and Targeting, A.M. Hillery, A.W. Lloyd and J. Swarbrick, Harwood Academic Publisher

# BIOPROCESS TECHNOLOGY

Course Code: BTH2608

Credit Units: 03

## Course Objective:

The objective of the course is to apply the principles of biochemical engineering in large scale cultivation of microorganism for production of important products.

## Course Contents:

### Module I

Basic principle in bioprocess technology. Advantage of bioprocess over chemical process. Media formulation, Cell culture techniques; Inoculum development and aseptic transfers.

### Module II

Process technology for the production of primary metabolites, eg. biomass, ethanol, acetone-butanol, citric acid, amino acids, polysaccharides and plastics.

**Ethanol:** production by batch, continuous and cell recycle adopted by various technologies practiced in Indian distilleries using molasses and grains. Computation of fermentation efficiency, distillation efficiency and overall efficiency of ethanol production, recovery, uses, glucose effect etc. Power alcohol – definition, uses, merits and demerits of various technologies for its production.

**Amino Acid:** Genetic Control of metabolic pathway.

**Lysine:** Indirect and direct fermentation – mechanism of ph of metabolic block in accumulation of L-lysine by inhibition and repression mechanism.

**Biomass:** Bakers and distillers yeast production using various raw materials, “bios” factors for growth, Crabtree effect, harvesting, different forms and uses.

What are mushroom, different forms of common mushroom production from agro based raw materials and uses. Biofertilizers, biocompost and biopesticides

### Module III

Production of secondary metabolites – penicillin, cephalosporins, streptomycin, tetracycline etc. Metabolites from plant and animal cell culture

**Penicillin:** Classification, various penicillin as precursor and ‘R’ – side chain, penicillinase, 6-APA, penicillin production, harvest and recovery, uses of various forms etc.

**Streptomycin:** chemical structure, production, harvest and recovery, use by-product of streptomycin fermentation etc.

**Tetracycline:** chemical structure, production, harvest and recovery, use by-product of tetracycline fermentation etc.

### Module IV

Microbial production of industrial enzymes – glucose isomerase, penicillin acylase, cellulase, amylase, lipase, protease etc.

## Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# TERM PAPER

**Course Code: BTH2631**

**Credit Units: 02**

A term (or research) paper is primarily a record of intelligent reading in several sources on a particular subject.

The students will choose the topic at the beginning of the session in consultation with the faculty assigned. The progress of the paper will be monitored regularly by the faculty. At the end of the semester the detailed paper on the topic will be submitted to the faculty assigned. The evaluation will be done by Board of examiners comprising of the faculties.

## GUIDELINES FOR TERM PAPER

The procedure for writing a term paper may consists of the following steps:

- Choosing a subject
- Finding sources of materials
- Collecting the notes
- Outlining the paper
- Writing the first draft
- Editing & preparing the final paper

### 1. Choosing a Subject

The subject chosen should not be too general.

### 2. Finding Sources of materials

- The material sources should be not more than 10 years old unless the nature of the paper is such that it involves examining older writings from a historical point of view.
- Begin by making a list of subject-headings under which you might expect the subject to be listed.
- The sources could be books and magazines articles, news stories, periodicals, scientific journals etc.

### 3. Collecting the notes

Skim through sources, locating the useful material, then make good notes of it, including quotes and information for footnotes.

- p) Get facts, not just opinions. Compare the facts with author's conclusion.
- q) In research studies, notice the methods and procedures, results & conclusions.
- r) Check cross references.

### 4. Outlining the paper

- k) Review notes to find main sub-divisions of the subject.
- l) Sort the collected material again under each main division to find sub-sections for outline so that it begins to look more coherent and takes on a definite structure. If it does not, try going back and sorting again for main divisions, to see if another general pattern is possible.

### 5. Writing the first draft

Write the paper around the outline, being sure that you indicate in the first part of the paper what its purpose is. You may follow the following:

- a) statement of purpose
- b) main body of the paper
- c) statement of summary and conclusion

Avoid short, bumpy sentences and long straggling sentences with more than one main ideas.

## **6. Editing & preparing the final Paper**

- tt) Before writing a term paper, you should ensure you have a question which you attempt to answer in your paper. This question should be kept in mind throughout the paper. Include only information/ details/ analyses of relevance to the question at hand. Sometimes, the relevance of a particular section may be clear to you but not to your readers. To avoid this, ensure you briefly explain the relevance of every section.
- uu) Read the paper to ensure that the language is not awkward, and that it "flows" properly.
- vv) Check for proper spelling, phrasing and sentence construction.
- ww) Check for proper form on footnotes, quotes, and punctuation.
- xx) Check to see that quotations serve one of the following purposes:
- yy) Show evidence of what an author has said.
- zz) Avoid misrepresentation through restatement.
- aaa) Save unnecessary writing when ideas have been well expressed by the original author.
- bbb) Check for proper form on tables and graphs. Be certain that any table or graph is self-explanatory.

Term papers should be composed of the following sections:

- Title page
- Table of contents
- Introduction
- Review
- Discussion & Conclusion
- References
- Appendix

Generally, the introduction, discussion, conclusion and bibliography part should account for a third of the paper and the review part should be two thirds of the paper.

### **Discussion**

The discussion section either follows the results or may alternatively be integrated in the results section. The section should consist of a discussion of the results of the study focusing on the question posed in the research paper.

### **Conclusion**

The conclusion is often thought of as the easiest part of the paper but should by no means be disregarded. There are a number of key components which should not be omitted. These include:

- u) summary of question posed
- v) summary of findings
- w) summary of main limitations of the study at hand
- x) details of possibilities for related future research

### **References**

From the very beginning of a research project, you should be careful to note all details of articles gathered.

The bibliography should contain ALL references included in the paper. References not included in the text in any form should NOT be included in the bibliography.

The key to a good bibliography is consistency. Choose a particular convention and stick to this.

## **Conventions**

### **Monographs**

Crystal, D. (2001), *Language and the internet*. Cambridge: Cambridge University Press.

### **Edited volumes**

Gass, S./Neu, J. (eds.) (1996), *Speech acts across cultures. Challenges to communication in a second language*. Berlin/ NY: Mouton de Gruyter.

[(eds.) is used when there is more than one editor; and (ed.) where there is only one editor. In German the abbreviation used is (Hrsg.) for Herausgeber].

### **Edited articles**

Schmidt, R./Shimura, A./Wang, Z./Jeong, H. (1996), *Suggestions to buy: Television commercials from the U.S., Japan, China, and Korea*. In: Gass, S./Neu, J. (eds.) (1996), *Speech acts across cultures. Challenges to communication in a second language*. Berlin/ NY: Mouton de Gruyter: 285-316.

### **Journal articles**

McQuarrie, E.F./Mick, D.G. (1992), *On resonance: A critical pluralistic inquiry into advertising rhetoric*. *Journal of consumer research* 19, 180-197.

### **Electronic book**

Chandler, D. (1994), *Semiotics for beginners* [HTML document]. Retrieved [5.10.'01] from the World Wide Web, <http://www.aber.ac.uk/media/Documents/S4B/>.

### **Electronic journal articles**

Watts, S. (2000) *Teaching talk: Should students learn 'real German'?* [HTML document]. *German as a Foreign Language Journal* [online] 1. Retrieved [12.09.'00] from the World Wide Web, <http://www.gfl-journal.com/>.

### **Other websites**

Verterhus, S.A. (n.y.), *Anglicisms in German car advertising. The problem of gender assignment* [HTML document]. Retrieved [13.10.'01] from the World Wide Web, <http://olaf.hiof.no/~sverrev/eng.html>.

### **Unpublished papers**

Takahashi, S./DuFon, M.A. (1989), *Cross-linguistic influence in indirectness: The case of English directives performed by native Japanese speakers*. Unpublished paper, Department of English as a Second Language, University of Hawai'i at Manoa, Honolulu.

### **Unpublished theses/ dissertations**

Möhl, S. (1996), *Alltagssituationen im interkulturellen Vergleich: Realisierung von Kritik und Ablehnung im Deutschen und Englischen*. Unpublished MA thesis, University of Hamburg.

Walsh, R. (1995), *Language development and the year abroad: A study of oral grammatical accuracy amongst adult learners of German as a foreign language*. Unpublished PhD dissertation, University College Dublin.

## **Appendix**

The appendix should be used for data collected (e.g. questionnaires, transcripts, ...) and for tables and graphs not included in the main text due to their subsidiary nature or to space constraints in the main text.

**Assessment Scheme:****Continuous Evaluation:**

40%

(Based on abstract writing, interim draft, general approach, research orientation, readings undertaken etc.)

**Final Evaluation:**

60%

(Based on the organization of the paper, objectives/ problem profile/ issue outlining, comprehensiveness of the research, flow of the idea/ ideas, relevance of material used/ presented, outcomes vs. objectives, presentation/ viva etc.)

# PROJECT

Course Code: BTH2632

Credit Units: 03

## Objectives:

The aim of the project is to provide the students with an opportunity to further their intellectual and personal development in the chosen field by undertaking a significant practical unit of activity. The project can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

## Chapter Scheme and distribution of marks:

Chapter 1: Introduction – 10 marks

Chapter 2: Conceptual Framework/ National/International Scenario – 25 marks

Chapter 3: Presentation, Analysis & Findings -- 25 marks

Chapter 4: Conclusion & Recommendations -- 10 marks

Chapter 5: Bibliography -- 05 marks

Project Report	Power Point Presentation & Viva
75 marks	25 marks

## Components of a Project Report

The outcome of Project Work is the Project Report. A project report should have the following components:

**1) Cover Page:** This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.

**2) Acknowledgement:** Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.

**3) Table of Content:** Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.

**4) Body of the Report:** The body of the report should have these four logical divisions

a) **Introduction:** This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, and method of analysis), Limitations of the Study, and Chapter Planning.

b) **Conceptual Framework / National and International Scenario:** (relating to the topic of the Project).

c) **Presentation of Data, Analysis and Findings:**(using the tools and techniques mentioned in the methodology).

d) **Conclusion and Recommendations:** In this section, the concluding observations based on the main findings and suggestions are to be provided.

**5) Bibliography or References:** This section will include the list of books and articles which have been used in the project work, and in writing a project report.

**6) Annexures:** Questionnaires (if any), relevant reports, etc.

(The main text of the Project should normally be in the range of 5000 words. However, there may be annexure in addition to the main text)

### **The Steps of a Project Report**

**Step I :** Selection of the topic for the project by taking following points into consideration:

- Suitability of the topic.
- Relevance of the topic
- Time available at the disposal.
- Feasibility of data collection within the given time limit.
- Challenges involved in the data collection (time & cost involved in the data collection, possibility of getting responses, etc.)

**Step II :** Finalisation of the Topic and preparation of Project Proposal in consultation with the Supervisor.

**Step III :** Collection of information and data relating to the topic and analysis of the same.

**Step IV :** Writing the report dividing it into suitable chapters, viz.,

Chapter 1: Introduction,

Chapter 2: Conceptual Framework / National & International Scenario,

Chapter 3: Analysis & Findings

Chapter 4: Conclusion and Recommendations.

**Step V :** The following documents are to be attached with the Final Project Report.

1) Approval letter from the supervisor (Annexure-IA)

2) Student's declaration (Annexure-IB)

3) Certificate from the Competent Authority of the Organisation / Institution, if the student undertakes the Project Work in any Organisation / Institution.

### **Guidelines for Evaluation:**

- Each of the students has to undertake a Project individually under the supervision of a teacher and to submit the same following the guidelines stated below.
- Language of Project Report and Viva-Voce Examination may be English. The Project Report must be typed and hard bound.
- Failure to submit the Project Report or failure to appear at the Viva-voce Examination will be treated as "Absent" in the Examination. He /she has to submit the Project Report and appear at the Viva-Voce Examination in the subsequent years (within the time period as per University Rules).
- No marks will be allotted on the Project Report unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her Project Report.
- Evaluation of the Project Work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate.

## WORKSHOP / CERTIFICATION

**Course Code: BTH2633**

**Credit Units: 01**

### **Objectives**

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two way. The trainer has to make sure that the aspect covered are practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

### **Major Themes for Workshop**

The workshop may be conducted on any of the following major themes:

Accounting

Finance

Human Resources

Marketing

Economics

Operations

Supply Chain Management

These themes are merely indicative and other recent and relevant topics of study may be included.

### **Guidelines for Workshop**

The procedure for earning credits from workshop consists of the following steps: Relevant study material and references will be provided by the trainer in advance. The participants are expected to explore the topic in advance and take active part in the discussions held. Attending and participating in all activities of the workshop. Group Activities have to be undertaken by students as guided by the trainer. Evaluation of workshop activities would be done through test and quiz at the end of the workshop. Submitting a write up of atleast 500 words about the learning outcome of the workshop.

### **Methodology**

The methodology followed at the workshop could be based on any one or more of the following methods:

Case Study

Business Game

Simulation

Group Activity

Role Play

Business Planning

Quiz

### **Evaluation Scheme:**

<b>Attendance</b>	<b>Active Participation</b>	<b>Multiple Choice Questions/ Quiz</b>	<b>Solving the case/ Assignment/ Write up</b>	<b>Total</b>
<b>10</b>	<b>30</b>	<b>30</b>	<b>30</b>	<b>100</b>

## INTRODUCTION TO COMPUTERS AND PROGRAMMING IN C

**Course Code: BTE2104**

**Credit Units: 03**

### **Course Objective:**

The objective of this course module is to acquaint the students with the basics of computers system, its components, data representation inside computer and to get them familiar with various important features of procedure oriented programming language i.e. C.

### **Course Contents:**

#### **Module I: Introduction**

Introduction to computer, history, von-Neumann architecture, memory system (hierarchy, characteristics and types), H/W concepts (I/O Devices), S/W concepts (System S/W & Application S/W, utilities). Data Representation: Number systems, character representation codes, Binary, octal, hexadecimal and their interconversions. Binary arithmetic, floating point arithmetic, signed and unsigned numbers, Memory storage unit.

#### **Module II: Programming in C**

History of C, Introduction of C, Basic structure of C program, Concept of variables, constants and data types in C, Operators and expressions: Introduction, arithmetic, relational, Logical, Assignment, Increment and decrement operator, Conditional, bitwise operators, Expressions, Operator precedence and associativity. Managing Input and output Operation, formatting I/O.

#### **Module III: Fundamental Features in C**

C Statements, conditional executing using if, else, nesting of if, switch and break Concepts of loops, example of loops in C using for, while and do-while, continue and break. Storage types (automatic, register etc.), predefined processor, Command Line Argument.

#### **Module IV: Arrays and Functions**

One dimensional arrays and example of iterative programs using arrays, 2-D arrays Use in matrix computations.

Concept of Sub-programming, functions Example of user defined functions. Function prototype, Return values and their types, calling function, function argument, function with variable number of argument, recursion.

#### **Module V: Advanced features in C**

Pointers, relationship between arrays and pointers Argument passing using pointers, Array of pointers. Passing arrays as arguments.

Strings and C string library.

Structure and Union. Defining C structures, Giving values to members, Array of structure, Nested structure, passing strings as arguments.

File Handling.

### **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# ELECTRICAL SCIENCE

**Course Code: BTE2106**

**Credit Units: 03**

## **Course Objective:**

The objective of the course is to provide a brief knowledge of Electrical Engineering to students of all disciplines. This Course includes some theorems related to electrical, some law's related to flow of current, voltages, basic knowledge of Transformer, basic knowledge of electromagnetism, basic knowledge of electrical network.

## **Course Contents:**

### **Module I: Basic Electrical Quantities**

Basic Electrical definitions-Energy, Power, Charge, Current, Voltage, Electric Field Strength, Magnetic Flux Density, etc., Resistance, Inductance and Capacitance. Ideal Source, Independent Source and Controlled Source

### **Module II: Network Analysis Techniques & Theorems**

Circuit Principles: Ohm's Law, Kirchoff's Current Law, Kirchoff's Voltage Law Network Reduction: Star-Delta Transformation, Source Transformation, Nodal Analysis, Loop analysis. Superposition theorem, Thevenin's Theorem, Norton's theorem and Reciprocity theorem.

### **Module III: Alternating Current Circuits**

Peak, Average and RMS values for alternating currents, Power calculation: reactive power, active power, Complex power, power factor, impedance, reactance, conductance, susceptance Resonance: series Resonance, parallel resonance, basic definition of Q factor & Band-width.

### **Module IV: Transformers**

Basic Transformer Operation principle, Construction, Voltage relations, current relations, Linear circuit models, open circuit test, short circuit test, Transformer Efficiency.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# PROGRAMMING IN C LAB

**Course Code: BTE2108**

**Credit Units: 01**

**Software Required:** Turbo C

**Course Contents:**

- C program involving problems like finding the nth value of cosine series, Fibonacci series. Etc.
- C programs including user defined function calls
- C programs involving pointers, and solving various problems with the help of those.
- File handling

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# ELECTRICAL SCIENCE LAB

Course Code: BTE2110

Credit Units: 01

## List of Experiments:

- To verify KVL & KCL in the given network.
- To verify Superposition Theorem.
- To verify Maximum Power Transfer Theorem.
- To verify Reciprocity Theorem.
- To determine and verify  $R_{Th}$ ,  $V_{Th}$ ,  $R_N$ ,  $I_N$  in a given network.
- To perform open circuit & short circuit test on a single-phase transformer.
- To study transient response of a given RLC Circuit.
- To perform regulation, ratio & polarity test on a single-phase transformer.
- To measure power & power factor in a three phase circuit by two wattmeter method.
- To measure power & power factor in a three phase load using three ammeter & three voltmeter method.

## Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# ENGINEERING MATHEMATICS-I

Course Code: BTE2111

Credit Units: 04

## Course Objective:

The knowledge of Mathematics is necessary for a better understanding of almost all the Engineering and Science subjects. Here our intention is to make the students acquainted with the concept of basic topics from Mathematics, which they need to pursue their Engineering degree in different disciplines.

## Course Contents:

### Module I: Differential Calculus

Successive differentiation, Leibnitz's theorem (without proof), Mean value theorem, Taylor's theorem (proof), Remainder terms, Asymptote & Curvature, Partial derivatives, Chain rule, Differentiation of Implicit functions, Exact differentials, Tangents and Normals, Maxima, Approximations, Differentiation under integral sign, Jacobians and transformations of coordinates.

### Module II: Integral Calculus

Fundamental theorems, Reduction formulae, Properties of definite integrals, Applications to length, area, volume, surface of revolution, improper integrals, Multiple Integrals-Double integrals, Applications to areas, volumes.

### Module III: Ordinary Differential Equations

Formation of ODEs, Definition of order, degree & solutions, ODE of first order: Method of separation of variables, homogeneous and non homogeneous equations, Exactness & integrating factors, Linear equations & Bernoulli equations, General linear ODE of  $n^{\text{th}}$  order, Solution of homogeneous equations, Operator method, Method of undetermined coefficients, Solution of simple simultaneous ODE.

### Module IV: Vector Calculus

Scalar and Vector Field, Derivative of a Vector, Gradient, Directional Derivative, Divergence and Curl and their Physical Significance, Arc Length, Tangent, Directional Derivative, Evaluation of Line Integral, Green's Theorem in Plane (without proof), Representation of Surfaces, Tangent Plane and Surface Normal, Surface Integral, Stoke's Theorem (without proof), Gauss Divergence Theorem (without proof).

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# ENGINEERING CHEMISTRY

Course Code: BTE2112

Credit Units: 02

## Course Objective:

Four basic sciences, Physics, Chemistry, Mathematics and Biology are the building blocks in engineering and technology. Chemistry is essential to develop analytical capabilities of students, so that they can characterize, transform and use materials in engineering and apply knowledge in their field. All engineering fields have unique bonds with chemistry whether it is Aerospace, Mechanical, Environmental and other fields the makeup of substances is always a key factor, which must be known. For electronics and computer science engineering, apart from the material, computer modeling and simulation knowledge can be inherited from the molecule designing. The upcoming field of technology like Nanotechnology and Biotechnology depends fully on the knowledge of basic chemistry. With this versatile need in view, course has been designed in such a way so that the student should get an overview of the whole subject.

## Course Contents:

### Module I: Water Technology

Introduction and specifications of water,  
Hardness and its determination (EDTA method only), Alkalinity,  
Boiler feed water, boiler problems – scale, sludge, priming & foaming: causes & prevention, Boiler problems – caustic embrittlement & corrosion: causes & prevention,  
Carbonate & phosphate conditioning, colloidal conditioning & calgon treatment  
Water softening processes: Lime – soda process, Ion exchange method, Water for domestic use.

### Module II: Fuels

Classification, calorific value of fuel, (gross and net), Determination of calorific value of fuels, bomb calorimeter, Solid fuels - Proximate and ultimate analysis, Octane & Cetane No. and its significance.  
Numericals on combustion

### Module III: Instrumental Methods of analysis

Introduction; Principles of spectroscopy; Laws of absorbance  
IR: Principle, Instrumentation, Application  
UV: Principle, Instrumentation, Application  
NMR: Principle, Instrumentation, Application

### Module IV: Lubricants

Introduction; Mechanism of Lubrication; Types of Lubricants; Chemical structure related to Lubrication; Properties of lubricants; Viscosity and Viscosity Index; Iodine Value; Aniline Point; Emulsion number; Flash Point; Fire Point; Drop Point; Cloud Point; Pour Point.  
Selection of Lubricants.

### Module V: Corrosion

Introduction, Mechanism of dry and wet corrosion,  
Types of corrosion-Galvanic, Concentration cell, soil, pitting, intergranular, waterline.Passivity.  
Factors influencing corrosion.Corrosion control.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# ENGINEERING CHEMISTRY LAB

Course Code: BTE2113

Credit Units: 01

## Course Contents:

### List of Experiments:(Any 10 Experiments)

1. To determine the ion exchange capacity of a given cation exchanger.
2. To determine the temporary, permanent and total hardness of a sample of water by complexometric titration method.
3. To determine the type and extent of alkalinity of given water sample.
4. To determine the number of water molecules of crystallization in Mohr's salt (ferrous ammonium sulphate) provided standard potassium dichromate solution (0.1N) using diphenylamine as internal indicator.
5. To determine the ferrous content in the supplied sample of iron ore by titrimetric analysis against standard  $K_2Cr_2O_7$  solution using potassium ferricyanide  $[K_3Fe(CN)_6]$  as external indicator.
6. (a) To determine the surface tension of a given liquid by drop number method.  
(b) To determine the composition of a liquid mixture A and B (acetic acid and water) by surface tension method.
7. To prepare and describe a titration curve for phosphoric acid – sodium hydroxide titration using pH-meter.
8. (a) To find the cell constant of conductivity cell.  
(b) Determine the strength of hydrochloric acid solution by titrating it against standard sodium hydroxide solution conductometrically
9. Determination of Dissolved oxygen in the given water sample.
- 10 To determine the total residual chlorine in water.
- 11 Determination of amount of oxalic acid and  $H_2SO_4$  in 1 L of solution using N/10 NaOH and N/10  $KMnO_4$  solution.
- 12 Determination of viscosity of given oil by means of Redwood viscometer I.
- 13 To determine flash point and fire point of an oil by Pensky Martin's Apparatus
- 14 To determine the Iodine value of the oil.

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# Syllabus – Second Semester

## OBJECT ORIENTED PROGRAMMING IN C++

**Course Code: BTE2203**

**Credit Units: 03**

### Course Objective:

The objective of this module is to introduce object oriented programming. To explore and implement the various features of OOP such as inheritance, polymorphism, Exceptional handling using programming language C++. After completing this course student can easily identify the basic difference between the programming approaches like procedural and object oriented.

### Course Contents:

#### Module I: Introduction

Review of C, Difference between C and C++, Procedure Oriented and Object Oriented Approach. Basic Concepts: Objects, classes, Principals like Abstraction, Encapsulation, Inheritance and Polymorphism. Dynamic Binding, Message Passing. Characteristics of Object-Oriented Languages. Introduction to Object-Oriented Modeling techniques (Object, Functional and Dynamic Modeling).

#### Module II: Classes and Objects

Abstract data types, Object & classes, attributes, methods, C++ class declaration, Local Class and Global Class, State identity and behaviour of an object, Local Object and Global Object, Scope resolution operator, Friend Functions, Inline functions, Constructors and destructors, instantiation of objects, Types of Constructors, Static Class Data, Array of Objects, Constant member functions and Objects, Memory management Operators.

#### Module III: Inheritance

Inheritance, Types of Inheritance, access modes – public, private & protected, Abstract Classes, Ambiguity resolution using scope resolution operator and Virtual base class, Aggregation, composition vs classification hierarchies, Overriding inheritance methods, Constructors in derived classes, Nesting of Classes.

#### Module IV: Polymorphism

Polymorphism, Type of Polymorphism – Compile time and runtime, Function Overloading, Operator Overloading (Unary and Binary) Polymorphism by parameter, Pointer to objects, this pointer, Virtual Functions, pure virtual functions.

#### Module V: Strings, Files and Exception Handling

Manipulating strings, Streams and files handling, formatted and Unformatted Input output. Exception handling, Generic Programming – function template, class Template Standard Template Library: Standard Template Library, Overview of Standard Template Library, Containers, Algorithms, Iterators, Other STL Elements, The Container Classes, General Theory of Operation, Vectors.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# OBJECT ORIENTED PROGRAMMING IN C++ LAB

**Course Code: BTE2205**

**Credit Units: 01**

**Software Required:** Turbo C++

## **Course Contents:**

- Creation of objects in programs and solving problems through them.
- Different use of private, public member variables and functions and friend functions.
- Use of constructors and destructors.
- Operator overloading
- Use of inheritance in and accessing objects of different derived classes.
- Polymorphism and virtual functions (using pointers).
- File handling.

## **Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab

# ENGINEERING GRAPHICS LAB

**Course Code: BTE2206**

**Credit Units: 01**

## **Course Objective:**

This course will provide students concepts on the drawings of different curves like straight line, parabola, ellipse etc. After completion of this course, students will be able to draw different figures manually and will be capable of using various instruments involved in drawings.

## **Course Contents:**

### **Module I: General**

Importance, Significance and scope of engineering drawing, Lettering, Dimensioning, Scales, Sense of proportioning, Different types of projections, Orthographic Projection, B.I.S. Specifications.

### **Module II: Projections of Point and Lines**

Introduction of planes of projection, Reference and auxiliary planes, projections of points and Lines in different quadrants, traces, inclinations, and true lengths of the lines, projections on Auxiliary planes, shortest distance, intersecting and non-intersecting lines.

### **Module III: Planes other than the Reference Planes**

Introduction of other planes (perpendicular and oblique), their traces, inclinations etc., Projections of points and lines lying in the planes, conversion of oblique plane into auxiliary Plane and solution of related problems.

### **Module IV: Projections of Plane Figures**

Different cases of plane figures (of different shapes) making different angles with one or both reference planes and lines lying in the plane figures making different given angles (with one of both reference planes). Obtaining true shape of the plane figure by projection.

### **Module V: Projection of Solids**

Simple cases when solid is placed in different positions, Axis faces and lines lying in the faces of the solid making given angles.

### **Module VI: Development of Surface**

Development of simple objects with and without sectioning. Isometric Projection

## **Examination Scheme:**

# ENGINEERING MATHEMATICS-II

Course Code: BTE2207

Credit Units: 04

## Course Objective:

The knowledge of Mathematics is necessary for a better understanding of almost all the Engineering and Science subjects. Here our intention is to make the students acquainted with the concept of basic topics from Mathematics, which they need to pursue their Engineering degree in different disciplines.

## Course Contents:

### Module I: Linear Algebra

Hermitian and Skew Hermitian Matrix, Unitary Matrix, Orthogonal Matrix, Elementary Row Transformation, Reduction of a Matrix to Row Echelon Form, Rank of a Matrix, Consistency of Linear Simultaneous Equations, Gauss Elimination Method, Gauss-Jordan Method, Eigen Values and Eigen Vectors of a Matrix, Caley-Hamilton Theorem, Diagonalization of a Matrix, Vector Space, Linear Independence and Dependence of Vectors, Linear Transformations.

### Module II: Infinite Series

Definition of Sequence, Bounded Sequence, Limit of a Sequence, Series, Finite and Infinite Series, Convergence and Divergence of Infinite series, Cauchy's Principle of Convergence, Positive Term Infinite Series, Comparison test, D'Alembert's Ratio test, Raabe's Test, Cauchy's nth root Test, Logarithmic Test, Alternating Series, Leibnitz's Test, Absolute and conditional convergence, Uniform Convergence, Power Series and its Interval of Convergence.

### Module III: Complex Analysis

De Moivre's Theorem and Roots of Complex Numbers, Logarithmic Functions, Circular, Hyperbolic Functions and their Inverses.

Functions of a Complex Variables, Limits, Continuity and Derivatives, Analytic Function, Cauchy-Riemann Equations (without proof), Harmonic Function, Harmonic Conjugates, Conformal Mapping, Bilinear Transformations, Complex Line Integral, Cauchy Integral Theorem, Cauchy Integral Formula, Derivative of Analytic Function, Power Series, Taylor Series, Laurent Series, Zeros and Singularities,

Residues, Residue Theorem, Evaluation of Real Integrals of the Form  $\int_{-\infty}^{\infty} \frac{f(x)}{F(x)} dx$ .

### Module IV: Statistics and Probability

Moments, Skewness, Kurtosis, Random Variables and Probability Distribution, Mean and Variance of a Probability Distribution, Binomial Distribution, Poisson Distribution and Normal Distribution.

## Examination Scheme:

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	15	20	20	20	5

C – Project + Presentation

I – Interaction/Conversation Practice

# ENGINEERING PHYSICS

**Course Code: BTE2208**

**Credit Units: 03**

## **Course Objective:**

Aim of this course is to introduce the students to fundamentals of graduate level physics, which form the basis of all applied science and engineering

## **Course Contents:**

### **Module I: Oscillations & Waves**

**Oscillations:** Introduction to S.H.M. Damped Oscillations: Differential Equation and its solution, logarithmic decrement, Quality Factor, Different conditions of damping of harmonic oscillations. Forced oscillations: Amplitude and Frequency Response, Resonance, Sharpness of Resonance

**Plane Progressive Waves:** Differential Equation and Solution, Superposition of Progressive Waves stationary waves.

**Ultrasonics:** Generation and application of ultrasonic waves.

### **Module II: Wave Nature of Light**

Interference: Coherent Sources, Conditions of interference, Interference due to division of wavefront, Fresnel's biprism Interference due to division of amplitude, Newton's rings, Interference due to thin films,

Diffraction: Fresnel and Fraunhofer diffraction, Fraunhofer diffraction at a single slit, double slit, N Slits, Transmission grating, Rayleigh criterion and Resolving power of grating.

Polarization: Birefringence, Nicol prism, Production and analysis of plane, circularly and elliptically polarized light, Half and quarter wave plates, Optical rotation, Polarimeter.

### **Module III: Electromagnetism**

Scalar and vector fields, gradient of a scalar field, physical significance of gradient, equipotential surface. Line, surface and volume integrals, Divergence and curl of vector field and mathematical analysis physical significance, Electric flux, Gauss' law, Proof and Applications, Gauss divergence and Stokes theorems.

Differential form of Gauss' Law, Amperes' Law, Displacement current, Faradays Law, Maxwell equations in free space & isotropic media (Integral form & differential form), EM wave propagation in free space, Poynting vector.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# ENGINEERING PHYSICS LAB

Course Code: BTE2209

Credit Units: 01

## List of Experiments:

1. To determine the wavelength of sodium light by Newton's rings method.
2. To determine the dispersive power of the material of prism with the help of a spectrometer.
3. To determine the specific rotation of sugar by Bi-quartz or Laurent half shade polarimeter.
4. To determine the speed of ultrasonic waves in liquid by diffraction method.
5. To determine the width of a narrow slit using diffraction phenomena.
6. To determine the temperature coefficient of platinum wire, using a platinum resistance thermometer and a Callender & Griffith's bridge.
7. To determine the value of specific charge (ratio of  $e/m$ ) of an electron by Thomson method.
8. To determine the internal resistance of Leclanche cell with the help of Potentiometer.
9. To determine the resistance per unit length of a Carey Foster's bridge wire and also to find out the specific resistance of a given wire.
10. To plot graph showing the variation of magnetic field with distance along the axis of a circular coil carrying current, and hence estimate the radius of the coil.
11. To determine the value of acceleration due to gravity ('g') in the laboratory using bar pendulum.
12. To determine the moment of inertia of a flywheel about its own axis of rotation.
13. To determine the density of material of the given wire with the help of sonometer.

## Examination Scheme:

A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# LIFE SCIENCES

**Course Code: BTE2210**

**Credit Units: 03**

## **Course Objective:**

The objective of the course is to provide students an understanding of the very basic molecules of life- DNA, RNA, proteins and how these molecules, when form further complex molecules like carbohydrates, vitamins and lipids, then functioning of body takes place. Since technology is advancing in every field, emphasis is also given on the understanding of application of some biotechnological concepts used in our daily life like biofuels, biofertilizers. An introduction to the origin of earth, the environment-air, water and land, origin of life on Earth, how life evolved from a single cell, some environmental problems and measures to be taken to combat them.

## **Course Contents:**

### **Module I: Cell Biology**

Organization of cell (Inorganic-Water and Ions; Organic-Proteins, Lipids and Carbohydrates constituents) Physical structure of the cell-Brief introduction to the Cell Membrane, Cytoplasm and its Organelles (Nucleus, Mitochondria, Golgi, Endoplasmic Reticulum, Lysosomes, Peroxisomes, Ribosomes, Chloroplasts), Cell cycle.

### **Module II: Introduction to Cell Physiology**

Transport of substances through the cell membrane- Osmosis, Diffusion and its types, Active transport (Sodium-potassium pump) and Passive transport, Membrane potential, Measuring Membrane Potential, Action Potential

### **Module III: Environmental Biotechnology**

Biosensors, Biochips and Biofilms, GMO's and Biofertilizers  
Biofuels  
Gene Therapy, Stem cell and Nanobiomolecules  
Bio Informatics- Introduction and Applications

### **Module IV: Ecology & Environment**

Ecosystem- Structure and functions, Food chain, Food web, Energy flow, Ecological pyramids  
Energy sources- Conventional (Coal, Petrol, Natural gas) and Non-conventional (Solar, Wind, Geothermal, Hydro and Biomass)  
Pollution- Air, Water, Land, Thermal and Nuclear  
Conferences and Protocols- Stockholm, Montreal, Rio-de-Janerio, Kyoto  
Environmental issues- Green House Effect, Global Warming and Warning, El-Nino, Acid Rain, Sustainable Development, Environmental Disasters (Earthquake, Floods, Drought and Cyclones)

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Text & References:**

- Fundamentals of Environmental Chemistry, G.S.Sodhi, Narosa Publishers.

# Syllabus – Third Semester

## CELL BIOLOGY & GENETICS

**Course Code: BTE2301**

**Credit Units: 03**

### Course Objective

Cell biology connects different fields of biotechnology by incorporating elements of biology, maths, physics and chemistry. The objective of the course is to understand the structure and function of cellular and sub cellular components of cells and tissues. It also focuses on the understanding of basic principles of genetics, incorporating the concepts of classical, molecular and population genetics. Compilation is required for recent advances in genetic principles for strong foundation in Biotechnology.

### Course Contents

#### Module I

Cell theory, pre-cellular evolution, prokaryotic and eukaryotic cells. Cell cycle: molecular events, cell division, mitosis and meiosis.

#### Module II

Cellular organelles - structure and function of cell wall, plasma membrane nucleus, Mitochondria, Chloroplast, Nucleus, lysosomes, peroxisomes, golgi bodies, and transport across membranes. Cell locomotion- cytoskeleton, structure and function of cilia and flagella.

#### Module III

Cellular signaling –general mechanism of signaling and structures of the various types of receptors. Types of cancer, etiology of cancer, metastasis, cytological role of p53 and p21 genes in cancer development. Apoptosis.

#### Module IV

Genetics: classical and molecular genetics, Mendelian principles of inheritance, human genetics. Extension of Mendelism: Allelic variations, influence of environment on expression, penetrance and expressivity, epistasis, pleiotropy. Chromosomal basis of inheritance; linkage, crossing over and chromosome mapping.

#### Module V

Mutation and mutagenic agents, types of mutations. Numerical and structural changes in chromosomes with emphasis on human syndromes/plant breeding and genetic counseling. Economic importance of mutation

#### Module VI

Classical and modern concept of gene, pseudoallelism, position effect, intragenic crossing over & complementation (cistron, recon & nutron) Benzer's work on rII locus in T<sub>2</sub> bacteriophage. Genetics of Population: Hardy- Weinburg Law and its deviations.

# BIOCHEMISTRY

**Course Code: BTE2302**

**Credit Units: 03**

## Course Objective

The course aims on understanding of the relationships between structure and function in the major classes of biopolymers. It augurs understanding on central metabolic process and the role of enzymes in modulating pathways. The theoretical background of biochemical systems helps to interpret the results of laboratory experiments.

## Course Contents

### Module I

Properties of water; acids, bases and buffers; covalent and Non-covalent interactions in biological systems; Bioenergetics: First and second law, concept of free energy and chemical equilibrium, ATP-ADP cycle. Cellular energy transactions: role of mitochondria and chloroplast

### Module II

*Carbohydrates:* Sugars and Polysaccharides; Carbohydrate metabolism: glycolysis and its regulation, Glycogen breakdown, synthesis, Regulation; Citric acid cycle and its regulation, amphibolic nature of Citric acid cycle; Electron transport System, oxidative phosphorylation and control of ATP production; Gluconeogenesis, glyoxylate pathway, Pentose phosphate pathway.

### Module III

*Lipids:* classification, structure and function. Lipids and biological membranes, lipoproteins, Phospholipids, Sphingolipids, Glycolipids; Lipid metabolism: digestion, absorption and transport; fatty acid metabolism:  $\beta$ -oxidation, biosynthesis and regulation; ketone bodies; Cholesterol and Arachidonic Acid metabolism.

### Module IV

*Amino acids:* classification, chemical and physical properties. Amino acid metabolism: deamination, urea cycle, biosynthesis and breakdown non-essential amino acids (asparagine, aspartic acid, cysteine, glutamic acid, glutamine, glycine, proline, serine, Tyrosine); Specialized Products of Amino Acids.

### Module V

*Proteins:* structure and function. Glycoproteins: structure and function. *Vitamins and Coenzymes:* structure and function of water soluble vitamins. Enzymes: Introduction to kinetic and catalytic mechanisms; Regulation of enzyme activity; Effects of physical parameters on enzyme activity, enzyme inhibitors: types of inhibition.

### Module VI

*Nucleic acids:* nitrogenous bases, nucleotides, structure and properties of nucleic acids. Nitrogen fixation; Nucleotide Metabolism: metabolism of purines and pyrimidine, biosynthesis of nucleotide, coenzymes (NAD, NADP, FAD, FMN); Catabolism of heam and clinical significance of bilirubin.

# BIOSTATISTICS

**Course Code: BTE2303**

**Credit Units: 03**

## **Course Objective:**

The course aims to develop competency and expertise in the application of statistical methods applied to biological data obtained in experimental techniques, methodology and the safe laboratory practice.

## **Course Contents:**

### **Module I**

Statistics and Biostatistics: Preliminary concepts; Measures of Central Tendency: Mean, Median, Mode  
Measures of Dispersion: Range, Standard deviation, Variance

### **Module II: Probability**

Random Experiments, Trial and Event, Sample Space, Mutually Exclusive or Disjoint Events, Mutually Exhaustive Events, Equally Probable Events, Complementary Event, Classical definition of Probability, Statistical definition of Probability, Axiomatic definition of Probability, Addition theorem, Multiplication theorem, Conditional Probability, Bayes' Theorem. Expectation.

### **Module III: Continuous Distribution**

Normal Distribution, Properties of Normal distribution

### **Module IV: Correlation**

Bivariate distribution Correlation, Types of Correlation, Simple Correlation Coefficient for ungrouped data, Properties and Interpretation of Correlation Coefficient, Coefficient of determination, Scatter diagram, Standard Error, Probable error of Correlation Coefficient. Rank correlation, Some examples.

### **Module V: Regression**

Definition, Regression lines and Regression Coefficients, Properties of Regression Coefficients, Some examples. Method of least square: Fitting of straight line

### **Module VI: Introduction to the following Statistical terms**

Parameter, Statistic, Null hypothesis, Alternative hypothesis, Critical region, Type I Error, Type II Error, Level of significance, P-value and its applications.

**Test of Significance for Small samples:** One sample t-test, Paired t-test, Degrees of freedom for t-test, F test for equality of Population variances, Degrees of freedom for F-test.

**Test of Significance for Large samples:** Normal test for sample mean and population mean, Normal test for two sample means.

**Chi-square Test:** Test of goodness of fit, Test of Independence of attributes, Degrees of freedom for Chi-square test, Coefficient of contingency, Yates' correction for continuity.

Analysis of Variance: One way and Two way (only Examples)

## **Examination Scheme:**

# DATABASE MANAGEMENT SYSTEM

**Course Code: BTE2304**

**Credit Units: 02**

**Course Objective:**

It enables the students to access biological information networks and databases in order to understand the different techniques of biotechnology to build detection systems especially in the prevention and treatment of human diseases.

**Course Contents:**

## **Module I: Overview and historical perspective**

File systems vs. DBMS, advantages of DBMS

## **Module II: Describing and storing data in DBMS**

Levels of abstraction and data independence; Data models and their comparison; Entity relationship model -concepts, design, keys and features; Relational model -introduction, structure of the relational databases, integrity constraints, Relational algebra and calculus -selection and projection, set operations, renaming, Joins, Division etc.

## **Module III: SQL and Perl**

## **Module IV: Database design**

Functional dependencies, Normal forms; Concurrency control and database discovery -concept of transaction: atomicity, consistency, isolation and durability, transactions and schedules, concurrent execution of transactions, Lock based concurrency control, Database recovery

## **Module V: Current trends**

Distributed databases and multimedia databases;

## **Module VI: Data warehousing and Data Mining**

**Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# CHEMICAL BIOLOGY

**Course Code: BTE2305**

**Credit Units: 02**

## **Course Objective:**

Chemical biology is that branch of life science, which deals with the study and manipulation of biological systems through the application of chemical techniques and tools. It differs from the more traditional disciplines of chemistry and biology in its emphasis on integrating a wider series of experimental techniques, ranging from synthetic organic chemistry, to biochemistry, to structural, molecular, and cellular biology. Chemical biology has historical and philosophical roots in medicinal chemistry, supramolecular chemistry (particularly host-guest chemistry), bioorganic chemistry, pharmacology, genetics, biochemistry and metabolic engineering.

## **Course Contents:**

### **Module I: Principles of chemical biology**

Classification & chemistry of carbohydrates, proteins and nucleic acids. Chemical method to synthesise peptides, polynucleotides, Cellular Receptors for drug action, strategies for identifying the cellular target of physiologically active natural products (paclitaxel, vancomycin).

### **Module II: Chemical reactions in living systems**

Classification of Enzymes, Introduction to enzyme chemistry: Redox reactions (1), Group transfer reactions, Isomerases, Carboxylation and decarboxylation, Types of chemical reactions important in organic synthesis: Eliminations, additions, condensation (Aldol condensation) and Substitutions, and Rearrangements (Claisen Reactions).

### **Module III: Structural chemical biology**

Purine biosynthesis, thiamine biosynthesis, vitamin E biosynthesis, Steroids (Cholesterol), porphyrin biosynthesis.

## **Examination Scheme:**

# BIOCHEMISTRY LAB

**Course Code: BTE2306**

**Credit Units: 02**

## Course Contents

### Module I

Colorimetric determination of pK and sugars (Molischs test, iodine test, Saliwanoff test, Fehlings test, Benedicts test, Bials test).

### Module II

Biochemical estimation Cholestrol, free fatty acids, iodine number.

### Module III

Biochemical estimation of proteins (Ninhydrin test, Biuret test, Xanthoprotein test)

### Module IV

Biochemical estimation of DNA and RNA, Quantitative determination of DNA and RNA by UV spectrophotometer, Determination of melting temperature of DNA from thermal denaturation characteristics.

## Examination Scheme:

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

# CELL BIOLOGY & GENETICS LAB

Course Code: BTE2307

Credit Units: 02

## Course Contents

### Module I

Microscopy: Light microscopy, Bright field, Phase contrast.

### Module II

Study of chromoplasts, chloroplast in plant cell; Mitosis and Meiosis

### Module III

Study of permanent slides of types of cancer; Study of apoptosis

### Module IV

Study of gene interaction; chromosomal translocation in *Rhoeo discolor*

### Module V

Study of bacterial conjugation and bacterial transduction

### Module IV

Study of physical and chemical mutagens on growth of *E. coli*; PTC test

## Examination Scheme:

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

# DATABASE MANAGEMENT SYSTEMS LAB

**Course Code: BTE2308**

**Credit Units: 01**

## **Course Contents:**

### **Module I**

Database creation using DDL and DML.

### **Module II**

Defining the primary and secondary keys.

### **Module III**

Implementation of selection, projection and joins (internal and external) with SQL and Perl .

### **Module IV**

Normalization of databases with SQL and Perl

### **Module V**

Implementation of transactions and schedules.

### **Module VI**

Detection of association rules and knowledge recovery.

## **Examination Scheme:**

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

**Note:** Minor variation could be there depending on the examiner

# INDUSTRIAL BIOTECHNOLOGY

**Course Code: BTE2309**

**Credit Units: 02**

## **Course Objective:**

The objective of this course is to use microorganism to produce various compounds of commercial interest. The student will be exposed to various techniques available for large scale cultivation of microorganisms.

## **Course Contents:**

### **Module I**

Introduction to fermentation, the fermentation industry, Production process batch and Continuous system of cultivation, Solid-state fermentation

### **Module II**

Selection of industrial microorganisms, media for fermentation, aeration, pH, temperature and other requirements during fermentation, downstream processing and product recovery, food industry waste as fermentation substrate.

### **Module III**

Production of compounds like, antibiotics, enzymes, organic acids, solvents, beverages, SCP.

### **Module IV**

Production of fermented dairy products

### **Module V**

Immobilized enzymes systems, production and applications.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Text & References:**

### **Text:**

- Industrial Microbiology – Cassida

### **References:**

- Industrial microbiology – Prescott & Duhn.

# FERMENTATION TECHNOLOGY

**Course Code: BTE2310**

**Credit Units: 02**

Objective of the course is for the acquaintance of large scale cultivation of microbes for production of industrially important products.

## Course Contents

### Module I: Fermentation Technology-An Overview

Development and overview of fermentation processes, strain development, media design and optimization, commercial media for fermentation

### Module II: Bioproduct Production

Production of Organic acids: citric acid, acetic acid, lactic acid

Production of ethanol

Production of Antibiotics: penicillins, tetracyclins, chloramphenicol

Production of Recombinant products

Production of Industrial enzymes: cellulase, amylase, protease

Production of vitamins: B<sub>12</sub>, riboflavin, fermented dairy products.

## Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## Text & references:

### Text:

# DRUG DESIGN AND DEVELOPMENT

Course Code: BTE2311

Credit Units: 02

## Course Objective:

The above course will be aimed to identify and design drugs that could be potentially useful in the identification of the candidate drugs, which have efficacy in cell culture or animal models, and thus the most effective compounds could be employed based on the above results for being moved through preclinical studies to clinical trials.

## Course Contents:

### Module I: Drug targets classification

DNA, RNA, post-translational, processing enzymes, metabolic enzymes involved in nucleic acid synthesis, G-protein coupled receptors (monomeric transmembrane proteins), small molecule receptors, neuropeptide receptors, ion channels (monomeric multi-transmembrane) proteins, ligand-gated ion channels (oligomeric transmembrane proteins), transporters (multi-transmembrane proteins).

### Module II: Target discovery and validation strategies

Genomics (new target discovery), biological activity directed and other types of screening, natural products, combinatorial chemistry; General overview of validation techniques.

### Module III: Structure-based design

Drug design to discovery and development, drug metabolism, toxicity and pharmacokinetics, toxicology considerations, problems and drawbacks on drug discovery and development.

*'de novo' design methodologies : indirect drug design, pharmacophore development and receptor mapping, combinatorial libraries and new strategies and recent technologies in drug design.*

### Module IV: Basic concepts of Drug Delivery

Introductory lecture (1-2), Concepts of Bio availability, Process of drug absorption, Pharmacokinetic processes, Timing for optimal therapy, Drug delivery considerations for the new biotherapeutics

Basic terminologies in drug delivery and drug targeting, Drug release, Drug targeting, Doses forms, Various routes of administration of drugs (just introduction), Strategies for enhanced therapeutic efficacies (Basic principles)

### Module V: Delivery of Genetic material

Basic principles of gene expression, Viral and nonviral vectors in gene delivery, Clinical applications of gene therapy and antisense therapy

New generation technologies in Drug delivery and targeting

Nanotechnology / Nanobiotechnology, Use of biosensors and challenge of chronopharmacology, Microchips and controlled drug delivery, genetically engineered cell implants in drug deliver.

## Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# RECOMBINANT DNA TECHNOLOGY

**Course Code: BTE2312**

**Credit Units: 02**

## **Course Objective:**

A complete understanding of molecular techniques like DNA sequencing, restriction mapping, PCR for the cloning and expression of genes can be obtained through the course.

## **Course Contents:**

### **Module I**

Purification of DNA from bacterial, plant and animal cells, manipulation of purified DNA.

### **Module II**

Introduction of DNA into living cells

### **Module III**

Introduction to gene cloning and its uses, tools and techniques: plasmids and other vectors, DNA, RNA, cDNA.

### **Module IV**

Production of proteins from cloned genes: gene cloning in medicine (Pharmaceutical agents such as insulin, growth hormones, recombinant vaccines), gene therapy for genetic diseases.

### **Module V**

Analysis of DNA by Southern blotting, Analysis of RNA by Northern blotting, Analysis of proteins by Western blot techniques, Dot blots and slot blots, RFLP, AFLP.

PCR: Basic principles and its modification application and uses.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# TERM PAPER

**Course Code: BTE2331**

**Credit Units: 02**

## **METHODOLOGY**

A term (or research) paper is primarily a record of intelligent reading in several sources on a particular subject.

The students will choose the topic at the beginning of the session in consultation with the faculty assigned. The progress of the paper will be monitored regularly by the faculty. At the end of the semester the detailed paper on the topic will be submitted to the faculty assigned. The evaluation will be done by Board of examiners comprising of the faculties.

## **GUIDELINES FOR TERM PAPER**

The procedure for writing a term paper may consists of the following steps:

1. Choosing a subject
2. Finding sources of materials
3. Collecting the notes
4. Outlining the paper
5. Writing the first draft
6. Editing & preparing the final paper

### **1. Choosing a Subject**

The subject chosen should not be too general.

### **2. Finding Sources of materials**

- a) The material sources should be not more than 10 years old unless the nature of the paper is such that it involves examining older writings from a historical point of view.
- b) Begin by making a list of subject-headings under which you might expect the subject to be listed.
- c) The sources could be books and magazines articles, news stories, periodicals, scientific journals etc.

### **3. Collecting the notes**

Skim through sources, locating the useful material, then make good notes of it, including quotes and information for footnotes.

- a) Get facts, not just opinions. Compare the facts with author's conclusion.
- b) In research studies, notice the methods and procedures, results & conclusions.
- c) Check cross references.

### **4. Outlining the paper**

- a) Review notes to find main sub-divisions of the subject.
- b) Sort the collected material again under each main division to find sub-sections for outline so that it begins to look more coherent and takes on a definite structure. If it does not, try going back and sorting again for main divisions, to see if another general pattern is possible.

### **5. Writing the first draft**

Write the paper around the outline, being sure that you indicate in the first part of the paper what its purpose is. You may follow the following:

- a) statement of purpose
- b) main body of the paper
- c) statement of summary and conclusion

Avoid short, bumpy sentences and long straggling sentences with more than one main ideas.

### **6. Editing & Preparing the final Paper**

- a) Before writing a term paper, you should ensure you have a question which you attempt to answer in your paper. This question should be kept in mind throughout the paper. Include only information/details/ analyses of relevance to the question at hand. Sometimes, the relevance of a particular section

may be clear to you but not to your readers. To avoid this, ensure you briefly explain the relevance of every section.

- b) Read the paper to ensure that the language is not awkward, and that it "flows" properly.
- c) Check for proper spelling, phrasing and sentence construction.
- d) Check for proper form on footnotes, quotes, and punctuation.
- e) Check to see that quotations serve one of the following purposes:
  - (i) Show evidence of what an author has said.
  - (ii) Avoid misrepresentation through restatement.
  - (iii) Save unnecessary writing when ideas have been well expressed by the original author.
- f) Check for proper form on tables and graphs. Be certain that any table or graph is self-explanatory.

Term papers should be composed of the following sections:

- 1) Title page
- 2) Table of contents
- 3) Introduction
- 4) Review
- 5) Discussion & Conclusion
- 6) References
- 7) Appendix

Generally, the introduction, discussion, conclusion and bibliography part should account for a third of the paper and the review part should be two thirds of the paper.

### **Discussion**

The discussion section either follows the results or may alternatively be integrated in the results section. The section should consist of a discussion of the results of the study focusing on the question posed in the research paper.

### **Conclusion**

The conclusion is often thought of as the easiest part of the paper but should by no means be disregarded. There are a number of key components which should not be omitted. These include:

- a) summary of question posed
- b) summary of findings
- c) summary of main limitations of the study at hand
- d) details of possibilities for related future research

### **References**

From the very beginning of a research project, you should be careful to note all details of articles gathered.

The bibliography should contain ALL references included in the paper. References not included in the text in any form should NOT be included in the bibliography.

The key to a good bibliography is consistency. Choose a particular convention and stick to this.

### **Bibliographical conventions**

Monographs

Crystal, D. (2001), Language and the internet. Cambridge: Cambridge University Press.

### **Edited Volumes**

Gass, S./Neu, J. (eds.) (1996), Speech acts across cultures. Challenges to communication in a second language. Berlin/ NY: Mouton de Gruyter.

[(eds.) is used when there is more than one editor; and (ed.) where there is only one editor. In German the abbreviation used is (Hrsg.) for Herausgeber].

### **Edited Articles**

Schmidt, R./Shimura, A./Wang, Z./Jeong, H. (1996), Suggestions to buy: Television commercials from the U.S., Japan, China, and Korea. In: Gass, S./Neu, J. (eds.) (1996), Speech acts across cultures. Challenges to communication in a second language. Berlin/ NY: Mouton de Gruyter: 285-316.

### **Journal Articles**

McQuarrie, E.F./Mick, D.G. (1992), On resonance: A critical pluralistic inquiry into advertising rhetoric. Journal of consumer research 19, 180-197.

### **Electronic Book**

Chandler, D. (1994), Semiotics for beginners [HTML document]. Retrieved [5.10.'01] from the World Wide Web, <http://www.aber.ac.uk/media/Documents/S4B/>.

### **Electronic Journal Articles**

Watts, S. (2000) Teaching talk: Should students learn 'real German'? [HTML document]. German as a Foreign Language Journal [online] 1. Retrieved [12.09.'00] from the World Wide Web, <http://www.gfl-journal.com/>.

### **Other Websites**

Verterhus, S.A. (n.y.), Anglicisms in German car advertising. The problem of gender assignment [HTML document]. Retrieved [13.10.'01] from the World Wide Web, <http://olaf.hiof.no/~sverrev/eng.html>.

### **Unpublished Papers**

Takahashi, S./DuFon, M.A. (1989), Cross-linguistic influence in indirectness: The case of English directives performed by native Japanese speakers. Unpublished paper, Department of English as a Second Language, University of Hawai'i at Manoa, Honolulu.

### **Unpublished Theses/ Dissertations**

Möhl, S. (1996), Alltagssituationen im interkulturellen Vergleich: Realisierung von Kritik und Ablehnung im Deutschen und Englischen. Unpublished MA thesis, University of Hamburg.

Walsh, R. (1995), Language development and the year abroad: A study of oral grammatical accuracy amongst adult learners of German as a foreign language. Unpublished PhD dissertation, University College Dublin.

### **Appendix**

The appendix should be used for data collected (e.g. questionnaires, transcripts,...) and for tables and graphs not included in the main text due to their subsidiary nature or to space constraints in the main text.

### **Assessment Scheme:**

#### **Continuous Evaluation:**

40%

(Based on abstract writing, interim draft, general approach, research orientation, readings undertaken etc.)

#### **Final Evaluation:**

60%

(Based on the organization of the paper, objectives/ problem profile/ issue outlining, comprehensiveness of the research, flow of the idea/ ideas, relevance of material used/ presented, outcomes vs. objectives, presentation/ viva etc.)

# PROJECT

Course Code: BTE2332

Credit Units: 02

## Objectives:

The aim of the project is to provide the students with an opportunity to further their intellectual and personal development in the chosen field by undertaking a significant practical unit of activity. The project can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

## Chapter Scheme and distribution of marks:

Chapter 1: Introduction – 10 marks

Chapter 2: Conceptual Framework/ National/International Scenario – 25 marks

Chapter 3: Presentation, Analysis & Findings -- 25 marks

Chapter 4: Conclusion & Recommendations -- 10 marks

Chapter 5: Bibliography -- 05 marks

Project Report	Power Point Presentation & Viva
75 marks	25 marks

## Components of a Project Report

The outcome of Project Work is the Project Report. A project report should have the following components:

**1) Cover Page:** This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.

**2) Acknowledgement:** Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.

**3) Table of Content:** Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.

**4) Body of the Report:** The body of the report should have these four logical divisions

a) **Introduction:** This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, and method of analysis), Limitations of the Study, and Chapter Planning.

b) **Conceptual Framework / National and International Scenario:** (relating to the topic of the Project).

c) **Presentation of Data, Analysis and Findings:** (using the tools and techniques mentioned in the methodology).

d) **Conclusion and Recommendations:** In this section, the concluding observations based on the main findings and suggestions are to be provided.

**5) Bibliography or References:** This section will include the list of books and articles which have been used in the project work, and in writing a project report.

**6) Annexures:** Questionnaires (if any), relevant reports, etc.

(The main text of the Project should normally be in the range of 5000 words. However, there may be annexure in addition to the main text)

## The Steps of a Project Report

**Step I :** Selection of the topic for the project by taking following points into consideration:

- Suitability of the topic.
- Relevance of the topic

- Time available at the disposal.
- Feasibility of data collection within the given time limit.
- Challenges involved in the data collection (time & cost involved in the data collection, possibility of getting responses, etc.)

**Step II :** Finalisation of the Topic and preparation of Project Proposal in consultation with the Supervisor.

**Step III :** Collection of information and data relating to the topic and analysis of the same.

**Step IV:** Writing the report dividing it into suitable chapters, viz.,

Chapter 1: Introduction,

Chapter 2: Conceptual Framework / National & International Scenario,

Chapter 3: Analysis & Findings

Chapter 4: Conclusion and Recommendations.

**Step V:** The following documents are to be attached with the Final Project Report.

1) Approval letter from the supervisor (Annexure-IA)

2) Student's declaration (Annexure-IB)

3) Certificate from the Competent Authority of the Organisation / Institution, if the student undertakes the Project Work in any Organisation / Institution.

#### **Guidelines for Evaluation:**

- Each of the students has to undertake a Project individually under the supervision of a teacher and to submit the same following the guidelines stated below.
- Language of Project Report and Viva-Voce Examination may be English. The Project Report must be typed and hard bound.
- Failure to submit the Project Report or failure to appear at the Viva-voce Examination will be treated as "Absent" in the Examination. He /she has to submit the Project Report and appear at the Viva-Voce Examination in the subsequent years (within the time period as per University Rules).
- No marks will be allotted on the Project Report unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her Project Report.
- Evaluation of the Project Work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate.

# WORKSHOP / CERTIFICATION

**Course Code: BTE2333**

**Credit Units: 02**

## Objectives

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two way. The trainer has to make sure that the aspect covered are practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

## Major Themes for Workshop

The workshop may be conducted on any of the following major themes:

Accounting

Finance

Human Resources

Marketing

Economics

Operations

Supply Chain Management

These themes are merely indicative and other recent and relevant topics of study may be included.

## Guidelines for Workshop

The procedure for earning credits from workshop consists of the following steps:

Relevant study material and references will be provided by the trainer in advance.

The participants are expected to explore the topic in advance and take active part in the discussions held

Attending and Participating in all activities of the workshop

Group Activities have to be undertaken by students as guided by the trainer.

Evaluation of workshop activities would be done through test and quiz at the end of the workshop.

Submitting a write up of at least 500 words about the learning outcome from the workshop.

## Methodology

The methodology followed at the workshop could be based on any one or more of the following methods:

Case Study

Business Game

Simulation

Group Activity

Role Play

Business Planning

Quiz

## Evaluation Scheme:

Attendance	Active Participation	Multiple Choice Questions/ Quiz	Solving the case/ Assignment/ Write up	Total
10	30	30	30	100

# Syllabus – Fourth Semester

## MICROBIOLOGY

**Course Code: BTE2401**

**Credit Units: 03**

**Course Objective:**

The course imparts the knowledge of different types of microorganisms that are invisible to our naked eyes. Discovery origin and evaluation of different forms of bacteria, fungi, protozoa and viruses constitute the basics of biotechnology.

**Course Contents:**

**Module I**

Introduction and historical perspective - Discovery of the microbial world, controversy over spontaneous generation, role of microorganisms in transformation of organic matter and in the causation of diseases, development of pure culture methods. Methods in Microbiology -Principles of microbial nutrition, Culture media, Theory and practice of sterilization, pure culture techniques.

**Module II**

Prokaryotic structure and function - functional anatomy of bacteria: cell envelope, cell wall, cytoplasmic membrane, capsule, surface appendages, cytoplasm and cytoplasmic inclusions. Growth - The definition of growth, mathematical expression of growth, growth curve, measurement of growth, synchronous growth, continuous culture, culture collection and maintenance of cultures.

**Module III**

Systematics and taxonomy - new approaches to bacterial taxonomy, classification including ribotyping, ribosomal RNA sequencing, characteristics of primary domains, taxonomy, nomenclature and Bergey's manual.

**Module IV**

Metabolic Diversity among microorganisms - photosynthesis in microorganisms, role of bacteriochlorophylls, carotenoids and phycobilins, Chemolithotrophy, hydrogen-iron-nitrite-oxidizing bacteria, nitrate and sulphate reduction, methanogenesis and acetogenesis, Fermentations, nitrogen fixation, plant microbe interactions (mycorrhizae).

**Module V: Archaea**

Archae as earliest life forms, thermophiles, psychrophiles, halophiles, alkalophiles, acidophiles, hyperthermophiles Viruses: Bacterial, animal; structure of viruses; Reproduction and life cycle of RNA and DNA viruses; Viroids and prions. Algae and Fungi: Classification and Reproduction.

**Module VI**

Host-parasite relationship - Normal micro flora of skin, oral cavity, gastrointestinal tract, Respiratory infections; entry of pathogens into the host, types of toxins (Exo, endo, entero) and their mode of actions, Microbial pathogenesis -Disease reservoirs; Epidemiological terminologies; Infectious disease transmission; Sexually transmitted disease including AIDS, Food and water- borne diseases; pathogenic fungi.

**Module VII**

Chemotherapy/antibiotics -Antimicrobial agents, sulfa drugs, antibiotics -penicillin and cephalosporins, broad spectrum antibiotics, antifungal antibiotics; mode of action.

**Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# DATA STRUCTURE AND ALGORITHMS

**Course Code: BTE2402**

**Credit Units: 02**

## **Course Objective:**

It helps the students to utilize the information acquired through electronic media to access biological information network and data bases in order to understand biological functions and then to evaluate genetic diseases, their causes and risks related to human kind.

## **Course Contents:**

### **Module I: Introduction**

### **Module II: Programming strategies**

Objects and ADTs with example, Constructors and destructors, Data structure, methods, Pre and post conditions, C conventions, Error handling, Some programming language notes.

### **Module III: Data structures**

Arrays; lists; stacks and stack frames; Recursion -Recursive functions with example of factorial, Queue, Dequeue.

### **Module IV: Searching**

Sequential and binary search, Trees, binary search tree, complexity.

### **Module V: Queues**

Priority queues and heaps

### **Module VI: Sorting**

Bubble, Heap, Quick, Bin, Radix

### **Module VII: Searching revisited**

Red-Black trees, AVL trees, general n-ary trees, hash tables; Hashing and collision resolution

### **Module VIII: Dynamic algorithm**

Fibonacci numbers, binomial coefficients, optimal binary search trees, matrix chain multiplication, longest common subsequence, optimal triangulation.

### **Module IX: Graphs**

Minimum spanning tree and Dijkstra's algorithm

### **Module X: Huffman encoding, FFT, Hard or intractable problems**

Eulerian or Hamiltonian paths, Travelling salesman problem.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# ENZYMOMOLOGY AND ENZYME TECHNOLOGY

**Course Code: BTE2403**

**Credit Units: 03**

## **Course Objective:**

The course aims to provide an understanding of the principles and application of proteins, secondary metabolites and enzyme biochemistry in therapeutic applications and clinical diagnosis. The theoretical understanding of biochemical systems would certainly help to interpret the results of laboratory experiments.

## **Course Contents:**

### **Module I: Enzymes**

Introduction and scope, Nomenclature, Mechanism of Catalysis.

### **Module II: Enzyme Kinetics**

Single substrate steady state kinetics; Michaelis Menten equation, Linear plots, King-Altman's method; Inhibitors and activators; Multisubstrate systems; ping-pong mechanism, Alberty equation, Sigmoidal kinetics and Allosteric enzymes

### **Module III**

Immobilization of Enzymes; Advantages, Carriers, adsorption, covalent coupling, cross-linking and entrapment methods, Micro-environmental effects.

### **Module IV: Enzyme reactors**

Reactors for batch/continuous enzymatic processing, choice of reactor type; idealized enzyme reactor systems, Mass transfer in enzyme reactors: Steady state analysis of mass transfer and biochemical reaction in enzyme reaction.

### **Module V: Bioprocess Design**

Physical parameters, reactor operational stability, Immobilized cells.

### **Module VI: Challenges and future trends**

Enzyme catalysis in organic media; catalytic antibodies and non protein biomolecules as catalysts, biocatalysts from extreme thermophilic and hyper thermophilic Archae and Bacteria.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# CHEMICAL ENGINEERING PRINCIPLES

**Course Code: BTE2404**

**Credit Units: 02**

## **Course Objective:**

The knowledge gained through chemical reaction engineering and material and energy balances will help the students to understand the tools and techniques of biotechnology.

## **Course Contents:**

### **Module I: Material and Energy Balances**

Units and dimensions, Dimensional analysis; Simple problems on material balance calculations involving unit processes and reactive systems; Available electron balances.

Basic energy concepts -enthalpy changes in chemical/biochemical reactions and in non-reactive processes, Energy balance calculations, Use of Steam tables; Heat of reaction and energy balance for microbial processes.

### **Module II: Chemical reaction engineering**

Kinetics of homogenous reactions: Concepts of reaction rate, order of reaction and molecularity, Analysis of batch reactors for kinetic interpretation of data and isothermal reactor design for single and multiple reactions, Design equations for CSTR and plug flow reactors.

### **Module III: Instrumentation and process control**

Principles of measurement: error, accuracy and sensitivity; Measurement of flow, pressure, temperature, level, pH, viscosity and chemical composition.

Basic concepts of feedback control, control loop and its elements, Dynamic behaviour of first, second and higher order physical systems, controller hardware, choice of controllers and settings. Introduction to advanced control systems: feed forward, cascade and ratio control.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# METHODS AND INSTRUMENTATION IN BIOTECHNOLOGY

**Course Code: BTE2405**

**Credit Units: 03**

**Course Objective:**

The students will be exposed to techniques and instruments that are used in biotech industries.

**Course Contents:**

**Module I: Electrophoresis**

Gel electrophoresis, SDS-PAGE, isoelectric focusing, two-dimensional electrophoresis, immuno electrophoresis, capillary electrophoresis

**Module II: Chromatography**

Paper, TLC, gel filtration, ion-exchange chromatography, affinity chromatography, HPLC and GLC

**Module III: Spectroscopy**

UV and visible spectroscopy, Infrared and Atomic absorption spectroscopy, fluorescence spectroscopy, Mass Spectrometry, MALDITOF, Nuclear Magnetic Resonance and Electron Spin Resonance spectroscopy,

**Module IV**

X-ray diffraction and X-ray Crystallography

**Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# MICROBIOLOGY LAB

**Course Code: BTE2406**

**Credit Units: 02**

## **Course Contents:**

1. Preparation of solid and liquid media.
2. Isolation and maintenance of organisms by plating, streaking and serial dilution.
3. Preparation of slant cultures.
4. Growth curve measurement of bacterial population by turbidometry.
5. Measurement of bacterial population by dilution method.
6. Effect of temperature, pH, carbon and nitrogen sources on growth of bacteria.
7. Microscopic examination of bacteria by gram staining.
8. Endospore staining.
9. Capsule staining.
10. Isolation and identification of Rhizobium from root nodules.

## **Examination Scheme:**

<b>IA</b>			<b>EE</b>			
<b>Class Test (Practical Based)</b>	<b>Mid Term Viva</b>	<b>Attendance</b>	<b>Major Experiment</b>	<b>Minor Experiment/Spotting</b>	<b>Practical Record</b>	<b>Viva</b>
15	10	05	35	15	10	10

# DATA STRUCTURE & ALGORITHMS LAB

**Course Code: BTE2407**

**Credit Units: 01**

## **Course Contents:**

### **Module I**

Stack implementation through arrays, link list

### **Module II**

Programs for recursion functions

### **Module III**

Implementation of queues and leap structures

### **Module IV**

Application of binary trees in pre-order, post-order and in-order evaluation

### **Module V**

A VL tree implementation

### **Module VI**

Optimal matrix multiplication

## **Examination Scheme:**

<b>IA</b>			<b>EE</b>			
<b>Class Test (Practical Based)</b>	<b>Mid Term Viva</b>	<b>Attendance</b>	<b>Major Experiment</b>	<b>Minor Experiment/Spotting</b>	<b>Practical Record</b>	<b>Viva</b>

# ENZYMOLGY AND ENZYME TECHNOLOGY LAB

**Course Code: BTE2408**

**Credit Units: 01**

## **Course Objective:**

The laboratory will help the students to isolate enzymes from different sources, enzyme assays and studying their kinetic parameters which have immense importance in industrial processes.

## **Course Contents:**

### **Module I**

Isolation of enzymes from plant and microbial sources.

### **Module II**

Enzyme assay; activity and specific activity – determination of amylase, nitrate reductase, cellulase, protease.

### **Module III**

Purification of Enzyme by ammonium sulphate fractionation.

### **Module IV**

Enzyme Kinetics: Effect of varying substrate concentration on enzyme activity, determination of Michaelis-Menten constant ( $K_m$ ) and Maximum Velocity ( $V_{max}$ ) using Lineweaver-Burk plot.

### **Module V**

Effect of Temperature and pH on enzyme activity.

### **Module VI**

Enzyme immobilization

## **Examination Scheme:**

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva

# METHODS AND INSTRUMENTATION IN BIOTECHNOLOGY LAB

**Course Code: BTE2409**

**Credit Units: 01**

## **Course Contents:**

### **Module I**

Cell disruption techniques

### **Module II**

Centrifugation – low speed and high speed.

### **Module III**

Spectrophotometer techniques

### **Module IV**

Chromatography –Paper Chromatography and Thin Layer Chromatography

### **Module V**

Electrophoresis –SDS Page and Agarose gel electrophoresis.

## **Examination Scheme:**

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

# MARINE BIOTECHNOLOGY

**Course Code: BTE2410**

**Credit Units: 02**

## **Course Objective**

The students will be exposed to basic concepts related to marine life. Also the subject deals with the scope and application of marine biota in biotechnology.

## **Course Contents**

### **Module I**

The marine ecosystem and its functioning: intertidal, estuarine, salt marsh, mangrove, coral reef, coastal & deep sea ecosystems. Marine viruses, Bacteria and their significance; Hydrothermal vents; Marine Biodiversity: defining, measurement and conservation strategies.

### **Module II**

Nutrients cycling: carbon, nitrogen sulphur & phosphorus.

Global climate changes: impact on species diversity & productivity, oceans as a carbon sink, effects on corals bleaching. Biological rhythms.

### **Module III**

Important Marine Products: Bioactive compounds from marine organisms, GFP, RFP characteristics and their applications; Green mussel adhesive protein, Chitosan and its applications

### **Module IV**

Probiotic bacteria and their importance in aquaculture; Vaccines in aquaculture: Fish, shrimps & prawns; Marine food analysis-spoilage, quality control; Techniques for identification of bacterial & viral pathogens in aquaculture and Remedies.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# VACCINE DEVELOPMENT

**Course Code: BTE2411**

**Credit Units: 02**

## **Course Objective**

The students will be exposed to basic concepts related with development of vaccines.

## **Course Contents**

### **Module I**

History of Vaccine Development

Definition of Vaccine

Evolution of Vaccines

### **Module II**

Process development for vaccines

Manufacturing of vaccines

Various aspects of vaccines, process development and manufacturing

### **Module III**

Clinical development of vaccines

Clinical end-point: Evolution of vaccines

General specifications and pharmaceuticals release criteria for the existing vaccines

Cold chain management of vaccines

Current vaccine research

## **Examination Scheme:**

<b>Components</b>	<b>H/S</b>	<b>A</b>	<b>CT</b>	<b>EE</b>
<b>Weightage (%)</b>	10	5	15	70

## **Text & Reference**

- Vaccines, 4th Edition by Stanley A. Plotkin, Elsevier publication
- Vaccines and Immunotherapy by Stanley J. Cryz Elsevier science publishing co.

# AGRICULTURAL BIOTECHNOLOGY

**Course code: BTE2412**

**Credit Units: 02**

## **Course Objective:**

The agriculture plant biotechnology course basically meant for understanding the basic techniques of plant tissue culture and genetic engineering in plants along with the latest ongoing research on the different aspects of plants and its products to redefine agriculture priorities and produce human resource with academic, scientific and technical expertise along with management or business experience.

## **MODULE I Plant Regeneration Technologies**

Introduction and historical perspective, organ culture, cell suspension, organogenesis, somatic embryogenesis, micropropagation, anther and ovary culture-haploid production, embryo culture and rescue, protoplast culture, somatic hybridization and cybrids.

## **MODULE II Transgenic Plants Technology**

Genetic Transformation, Methods for gene transfer in plants, Molecular mechanism of *Agrobacterium* mediated transformation. Selectable markers, Reporter gene and Promoters used in plant transformation vectors.

## **MODULE III Industrial and Agricultural Application**

Biotic stress tolerance; insect, pest and pathogen resistance. Abiotic stress tolerance; salt, water and drought tolerance. Herbicide tolerance. Molecular farming

## **Examination Scheme:**

<b>Components</b>	<b>H/S</b>	<b>A</b>	<b>CT</b>	<b>EE</b>
<b>Weightage (%)</b>	10	5	15	70

# NATURAL PRODUCTS AND MEDICINAL CHEMISTRY

**Course Code: BTE2413**

**Credit Units: 02**

**Course Objective:** The students will be exposed to basic concepts related with natural products and medicinal chemistry and its biological application.

## **Course Contents:**

### **Natural Products**

#### **Module I**

Introductory bio-organic chemistry: enzymatic transformations, co-factors, examples from carbohydrate chemistry.

#### **Module II**

Isoprenoids, Terpenes and Flavonoids: biosynthetic origins of the group, survey of classes, electron-deficient rearrangements, chemical synthesis, steroids; Alkaloids: shikimate pathway to aromatic amino acids, pyridoxyl phosphate mediated transformations in alkaloid biosynthesis

### **Medicinal Chemistry**

#### **Module III**

Drug processing in mammals

The molecular basis of drug action

The multiphore conceptualization of drugs

Messenger and non-messenger target systems

#### **Examination Scheme:**

<b>Components</b>	<b>H/S</b>	<b>A</b>	<b>CT</b>	<b>EE</b>
<b>Weightage (%)</b>	10	5	15	70

# STEM CELL TECHNOLOGY

**Course Code: BTE2414**

**Credit Units: 02**

**Course Objective:** The objective of this paper is to familiarize the students with stem cell technology and its applications for betterment of the society. The course is designed to give a broad view of mammalian stem cells, reviewing where they are found in the body, the different types and how they are cultured. The topics will cover the basic biology of these stem cells as well as bioengineering and application of these stem cells to potential treatments of human diseases.

## **Course Contents:**

### **Module I**

Definition, properties, proliferation, culture of stem cells, medical applications of stem cells, ethical and legal issues in use of stem cells.

### **Module II**

Stem Cell biology and therapy, types embryonic stem cell, Adult stem cell, Stem Cell Biology and Therapy, Embryonic Stem Cells, culture and the potential benefits of stem cell technology

### **Module III**

Gene Therapy: Introduction, History and evolution of Gene therapy, optimal disease targets, Failures and successes with gene therapy and future prospects, Genetic Perspectives for Gene Therapy, **Gene Delivery** methods: Viral vectors and Non-viral Vectors

### **Module IV**

Regulatory and Ethical Considerations of stem cell and Gene Therapy, Assessing Human Stem Cell Safety, Use of Genetically Modified Stem Cells in Experimental Gene Therapies.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Text & References:**

### **Text:**

# TERM PAPER

**Course Code: BTE2431**

**Credit Units: 02**

## METHODOLOGY

A term (or research) paper is primarily a record of intelligent reading in several sources on a particular subject.

The students will choose the topic at the beginning of the session in consultation with the faculty assigned. The progress of the paper will be monitored regularly by the faculty. At the end of the semester the detailed paper on the topic will be submitted to the faculty assigned. The evaluation will be done by Board of examiners comprising of the faculties.

## GUIDELINES FOR TERM PAPER

The procedure for writing a term paper may consists of the following steps:

- Choosing a subject
- Finding sources of materials
- Collecting the notes
- Outlining the paper
- Writing the first draft
- Editing & preparing the final paper

### 1. Choosing a Subject

The subject chosen should not be too general.

### 2. Finding Sources of materials

- d) The material sources should be not more than 10 years old unless the nature of the paper is such that it involves examining older writings from a historical point of view.
- e) Begin by making a list of subject-headings under which you might expect the subject to be listed.
- f) The sources could be books and magazines articles, news stories, periodicals, scientific journals etc.

### 3. Collecting the notes

Skim through sources, locating the useful material, then make good notes of it, including quotes and information for footnotes.

- d) Get facts, not just opinions. Compare the facts with author's conclusion.
- e) In research studies, notice the methods and procedures, results & conclusions.
- f) Check cross references.

### 4. Outlining the paper

- c) Review notes to find main sub-divisions of the subject.
- d) Sort the collected material again under each main division to find sub-sections for outline so that it begins to look more coherent and takes on a definite structure. If it does not, try going back and sorting again for main divisions, to see if another general pattern is possible.

### 5. Writing the first draft

Write the paper around the outline, being sure that you indicate in the first part of the paper what its purpose is. You may follow the following:

- a) statement of purpose
- b) main body of the paper
- c) statement of summary and conclusion

Avoid short, bumpy sentences and long straggling sentences with more than one main ideas.

### 6. Editing & Preparing the final Paper

- g) Before writing a term paper, you should ensure you have a question which you attempt to answer in your paper. This question should be kept in mind throughout the paper. Include only information/

details/ analyses of relevance to the question at hand. Sometimes, the relevance of a particular section may be clear to you but not to your readers. To avoid this, ensure you briefly explain the relevance of every section.

- h) Read the paper to ensure that the language is not awkward, and that it "flows" properly.
- i) Check for proper spelling, phrasing and sentence construction.
- j) Check for proper form on footnotes, quotes, and punctuation.
- k) Check to see that quotations serve one of the following purposes:
  - (iv) Show evidence of what an author has said.
  - (v) Avoid misrepresentation through restatement.
  - (vi) Save unnecessary writing when ideas have been well expressed by the original author.
- l) Check for proper form on tables and graphs. Be certain that any table or graph is self-explanatory.

Term papers should be composed of the following sections:

- Title page
- Table of contents
- Introduction
- Review
- Discussion & Conclusion
- References
- Appendix

Generally, the introduction, discussion, conclusion and bibliography part should account for a third of the paper and the review part should be two thirds of the paper.

### **Discussion**

The discussion section either follows the results or may alternatively be integrated in the results section. The section should consist of a discussion of the results of the study focusing on the question posed in the research paper.

### **Conclusion**

The conclusion is often thought of as the easiest part of the paper but should by no means be disregarded. There are a number of key components which should not be omitted. These include:

- e) summary of question posed
- f) summary of findings
- g) summary of main limitations of the study at hand
- h) details of possibilities for related future research

### **References**

From the very beginning of a research project, you should be careful to note all details of articles gathered.

The bibliography should contain ALL references included in the paper. References not included in the text in any form should NOT be included in the bibliography.

The key to a good bibliography is consistency. Choose a particular convention and stick to this.

### **Bibliographical conventions**

Monographs

Crystal, D. (2001), Language and the internet. Cambridge: Cambridge University Press.

### **Edited Volumes**

Gass, S./Neu, J. (eds.) (1996), Speech acts across cultures. Challenges to communication in a second language. Berlin/ NY: Mouton de Gruyter.

[(eds.) is used when there is more than one editor; and (ed.) where there is only one editor. In German the abbreviation used is (Hrsg.) for Herausgeber].

### **Edited Articles**

Schmidt, R./Shimura, A./Wang, Z./Jeong, H. (1996), Suggestions to buy: Television commercials from the U.S., Japan, China, and Korea. In: Gass, S./Neu, J. (eds.) (1996), Speech acts across cultures. Challenges to communication in a second language. Berlin/ NY: Mouton de Gruyter: 285-316.

### **Journal Articles**

McQuarrie, E.F./Mick, D.G. (1992), On resonance: A critical pluralistic inquiry into advertising rhetoric. Journal of consumer research 19, 180-197.

### **Electronic Book**

Chandler, D. (1994), Semiotics for beginners [HTML document]. Retrieved [5.10.'01] from the World Wide Web, <http://www.aber.ac.uk/media/Documents/S4B/>.

### **Electronic Journal Articles**

Watts, S. (2000) Teaching talk: Should students learn 'real German'? [HTML document]. German as a Foreign Language Journal [online] 1. Retrieved [12.09.'00] from the World Wide Web, <http://www.gfl-journal.com/>.

### **Other Websites**

Verterhus, S.A. (n.y.), Anglicisms in German car advertising. The problem of gender assignment [HTML document]. Retrieved [13.10.'01] from the World Wide Web, <http://olaf.hiof.no/~sverrev/eng.html>.

### **Unpublished Papers**

Takahashi, S./DuFon, M.A. (1989), Cross-linguistic influence in indirectness: The case of English directives performed by native Japanese speakers. Unpublished paper, Department of English as a Second Language, University of Hawai'i at Manoa, Honolulu.

### **Unpublished Theses/ Dissertations**

Möhl, S. (1996), Alltagssituationen im interkulturellen Vergleich: Realisierung von Kritik und Ablehnung im Deutschen und Englischen. Unpublished MA thesis, University of Hamburg.

Walsh, R. (1995), Language development and the year abroad: A study of oral grammatical accuracy amongst adult learners of German as a foreign language. Unpublished PhD dissertation, University College Dublin.

### **Appendix**

The appendix should be used for data collected (e.g. questionnaires, transcripts,...) and for tables and graphs not included in the main text due to their subsidiary nature or to space constraints in the main text.

### **Assessment Scheme:**

#### **Continuous Evaluation:**

40%

(Based on abstract writing, interim draft, general approach, research orientation, readings undertaken etc.)

#### **Final Evaluation:**

60%

(Based on the organization of the paper, objectives/ problem profile/ issue outlining, comprehensiveness of the research, flow of the idea/ ideas, relevance of material used/ presented, outcomes vs. objectives, presentation/ viva etc.)

# PROJECT

**Course Code: BTE2432**

**Credit Units: 02**

## **Objectives:**

The aim of the project is to provide the students with an opportunity to further their intellectual and personal development in the chosen field by undertaking a significant practical unit of activity. The project can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

## **Chapter Scheme and distribution of marks:**

Chapter 1: Introduction – 10 marks

Chapter 2: Conceptual Framework/ National/International Scenario – 25 marks

Chapter 3: Presentation, Analysis & Findings -- 25 marks

Chapter 4: Conclusion & Recommendations -- 10 marks

Chapter 5: Bibliography -- 05 marks

<b>Project Report</b>	<b>Power Point Presentation &amp; Viva</b>
75 marks	25 marks

## **Components of a Project Report**

The outcome of Project Work is the Project Report. A project report should have the following components:

**1) Cover Page:** This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.

**2) Acknowledgement:** Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.

**3) Table of Content:** Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.

**4) Body of the Report:** The body of the report should have these four logical divisions

a) **Introduction:** This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, and method of analysis), Limitations of the Study, and Chapter Planning.

b) **Conceptual Framework / National and International Scenario:** (relating to the topic of the Project).

c) **Presentation of Data, Analysis and Findings:** (using the tools and techniques mentioned in the methodology).

d) **Conclusion and Recommendations:** In this section, the concluding observations based on the main findings and suggestions are to be provided.

**5) Bibliography or References:** This section will include the list of books and articles which have been used in the project work, and in writing a project report.

**6) Annexures:** Questionnaires (if any), relevant reports, etc.

(The main text of the Project should normally be in the range of 5000 words. However, there may be annexure in addition to the main text)

## **The Steps of a Project Report**

**Step I :** Selection of the topic for the project by taking following points into consideration:

- Suitability of the topic.
- Relevance of the topic
- Time available at the disposal.
- Feasibility of data collection within the given time limit.
- Challenges involved in the data collection (time & cost involved in the data collection, possibility of getting responses, etc.)

**Step II** : Finalisation of the Topic and preparation of Project Proposal in consultation with the Supervisor.

**Step III** : Collection of information and data relating to the topic and analysis of the same.

**Step IV** : Writing the report dividing it into suitable chapters, viz.,

Chapter 1: Introduction,

Chapter 2: Conceptual Framework / National & International Scenario,

Chapter 3: Analysis & Findings

Chapter 4: Conclusion and Recommendations.

**Step V** : The following documents are to be attached with the Final Project Report.

1) Approval letter from the supervisor (Annexure-IA)

2) Student's declaration (Annexure-IB)

3) Certificate from the Competent Authority of the Organisation / Institution, if the student undertakes the Project Work in any Organisation / Institution.

#### **Guidelines for Evaluation:**

- Each of the students has to undertake a Project individually under the supervision of a teacher and to submit the same following the guidelines stated below.
- Language of Project Report and Viva-Voce Examination may be English. The Project Report must be typed and hard bound.
- Failure to submit the Project Report or failure to appear at the Viva-voce Examination will be treated as "Absent" in the Examination. He /she has to submit the Project Report and appear at the Viva-Voce Examination in the subsequent years (within the time period as per University Rules).
- No marks will be allotted on the Project Report unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her Project Report.
- Evaluation of the Project Work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate.

## WORKSHOP / CERTIFICATION

**Course Code: BTE2433**

**Credit Units: 02**

### Objectives

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two way. The trainer has to make sure that the aspect covered are practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

### Major Themes for Workshop

The workshop may be conducted on any of the following major themes:

Accounting

Finance

Human Resources

Marketing

Economics

Operations

Supply Chain Management

These themes are merely indicative and other recent and relevant topics of study may be included.

### Guidelines for Workshop

The procedure for earning credits from workshop consists of the following steps:

Relevant study material and references will be provided by the trainer in advance.

The participants are expected to explore the topic in advance and take active part in the discussions held

Attending and Participating in all activities of the workshop

Group Activities have to be undertaken by students as guided by the trainer.

Evaluation of workshop activities would be done through test and quiz at the end of the workshop.

Submitting a write up of at least 500 words about the learning outcome from the workshop.

### Methodology

The methodology followed at the workshop could be based on any one or more of the following methods:

Case Study

Business Game

Simulation

Group Activity

Role Play

Business Planning

Quiz

### Evaluation Scheme:

Attendance	Active Participation	Multiple Choice Questions/ Quiz	Solving the case/ Assignment/ Write up	Total
10	30	30	30	100

# Syllabus – Fifth Semester

## MOLECULAR BIOLOGY

**Course Code: BTE2501**

**Credit Units: 03**

**Course Objective:**

The aim is to extend understanding of the molecular mechanisms via which genetic information is stored, expressed and transmitted among generations.

**Course Contents:**

**Module I: DNA Replication and repair**

Mechanism of Prokaryotic and Eukaryotic DNA replication, Enzymes and accessory proteins involved in DNA replication, DNA repair Mechanism.

**Module II: Transcription**

Prokaryotic transcription, Eukaryotic transcription, RNA polymerase, General and specific transcription factors, Regulatory elements.

**Module III: Modifications in RNA**

5'-cap formation, transcription termination, 3'-end processing and polyadenylation, Splicing, Editing, Nuclear export of mRNA and mRNA stability.

**Module IV: Translation**

Prokaryotic and Eukaryotic translation, the translation Machinery; Mechanisms of initiation, elongation and termination, regulation of translation, co-and post-translational modifications of proteins.

**Module V: Regulation of Gene Expression in prokaryotic and eukaryotic systems**

Lac operon, Ara operon, regulation in Eukaryotes

**Module VI: Antisense and Ribozyme technology**

Molecular mechanism of antisense molecules, inhibition of splicing, polyadenylation and translation, disruption of RNA structure and capping, Biochemistry of Ribozyme; Hammerhead, hairpin and other ribozymes, strategies for designing ribozymes, applications of antisense and ribozyme technologies.

**Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# ANIMAL BIOTECHNOLOGY

**Course Code: BTE2502**

**Credit Units: 03**

## **Course Objective:**

The application of Animal Biotechnology covers major areas related to commercial applications. Importance will also be given to areas like *in vitro* fertilization, animal cell and tissue culture, hormone vaccine and important enzyme production through animal biotechnology.

## **Course Contents:**

### **Module I**

Historical perspectives, sterilization methods, organ culture - culture techniques, plasma clot, raft methods, agar gel, grid method, organ engineering.

### **Module II**

Cell culture substrates, cultural media, natural and artificial media, initiation and maintenance of cell cultures, cell culture products, cryopreservation techniques, immobilized cultures

### **Module III**

In vitro fertilization and embryo transfer

### **Module IV**

Somatic cell hybridization, hybridoma technology

### **Module V**

Animal genetic engineering -vectors, gene transfer methods - microinjection, virus mediated and other methods of gene transfer

### **Module VI**

Transgenic animals with new traits, transgenic animals as bioreactors for producing pharmaceutically important compounds and therapeutic etc.

### **Module VII**

Bioethical issues related to animal biotechnology,

## **Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>Attendance</b>	<b>Assignment/ Project/Seminar/Quiz</b>	<b>EE</b>
<b>Weightage (%)</b>	15	5	10	70

## **Text & References**

- Cell Culture LabFax, M. Butler and M. Dawson, Bios scientific Publications Ltd.

- Culture of Animal Cells, R.I Freshney, Wiley-Leiss
- Comprehensive Biotechnology, Moo-Young, Alan T. Bullm Howard Dalton, Panima Publication

# PLANT BIOTECHNOLOGY

**Course Code: BTE2503**

**Credit Units: 03**

## **Course Objective:**

The application of Plant Biotechnology covers major areas related to commercial applications. Regeneration of plants through *in vitro* techniques offers a practical strategy for micro propagation. Importance will also be given to areas like *in vitro* fertilization, animal cell and tissue culture, hormone vaccine and important enzyme production through animal biotechnology.

## **Course Contents:**

### **Module I**

Historical perspective of plant tissue culture.

Tissue culture lab and organization

Sterilisation techniques

Types of nutrient media and media composition

Plant regeneration pathways

Role of phytohormones

Cell culture techniques- cell, tissue, organ cultures, callus culture, suspension culture

Culture techniques Callus culture, cell culture and protoplast cultures.

### **Module II**

Organogenesis and somatic embryogenesis.

Applications of plant tissue and cell culture.

Micropopagation, pathogen free plants. production haploids,

Somaclonal variation. preservation of germplasm.

### **Module III**

Genetic engineering in plants, - transformation vectors

Gene transfer techniques-vector mediated and vector less gene transfer.

Transgenic plants trans gene integration and expression

### **Module IV**

Transgenic crop with new traits-herbicide tolerance, insect and disease resistance,

Therapeutic proteins and compounds

Oral vaccines

Production of secondary metabolites via tissue culture

Bioethics of plant genetic engineering.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Text & References:**

- An Introduction to Plant Tissue Culture, M.K. Razdan, Oxford and IBH Publishing

# BIOINFORMATICS

**Course Code: BTE2504**

**Credit Units: 03**

## **Course Objective:**

The course involves a basic understanding of computer and bioinformatics tools and skills in the field of biology.

## **Course Contents:**

### **Module I: Introduction and overview**

The NCBI data model; sequence databases, sequence retrieval, sequence file formats, submitting DNA and protein sequences; classification of biological databases

### **Module II: Biological Databases**

Sequence databases (EMBL, GenBank, DDBJ, -UNIPROT, PIR, TrEMBL), Protein family/domain databases (PROSITE, PRINTS, Pfam, BLOCK, etc), Cluster databases-An Introduction, Specialised databases (KEGG, etc), Database technologies (Flat-file), Structural databases (PDB)

### **Module III: Sequence alignment**

Global and local alignments, statistical significance of alignments, scoring matrices and gap penalties, position specific scoring matrices, programs and methods for Pairwise and multiple alignment, pattern searching programs, family and superfamily representation - Pfam, hidden Markov models

### **Module IV: Phylogenetic prediction**

Phylogenetic analysis, Evolutionary Models, Character and distance based Tree building methods; tree evaluation, phylogenetic analysis, parsimony, maximum likelihood trees; Trees-splits and metrics on trees, tree interpretation, Distance – additive, ultrametric and nonadditive distances.

### **Module V: Predictive methods using DNA and protein sequences**

ESTs: construction, databases, clustering, gene discovery and identification, and functional classification. Protein identification tools, physical properties, motifs and patterns, structure, folding classes, structure classification databases – Scop and Cath;

### **Module VI: Structure databases**

Structural databases - PDB and MMDB, structure file formats, Secondary and tertiary structure prediction methods in proteins, Internal and external co-ordinate system, software to visualize secondary and tertiary structural information in protein.

### **Module VII: Comparative genome analysis**

Reconstruction of metabolic pathways; Genome analysis, genome anatomy, genome rearrangements with inversions, signed inversions, gene identification, gene expression, expression analysis, gene identification and functional classification.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# MOLECULAR BIOLOGY LAB

**Course Code: BTE2505**

**Credit Units: 01**

## **Course Contents:**

### **Module I**

Preparation of DNA: genomic, Plasmid

### **Module II**

Isolation of RNA

### **Module III**

RFLP analysis

### **Module IV**

Gel filtration

### **Module V**

Preparation of Competent Cells

### **Module VI**

Restriction Digestion and Ligation of DNA

## **Examination Scheme:**

<b>IA</b>			<b>EE</b>			
<b>Class Test (Practical Based)</b>	<b>Mid Term Viva</b>	<b>Attendance</b>	<b>Major Experiment</b>	<b>Minor Experiment/Spotting</b>	<b>Practical Record</b>	<b>Viva</b>
15	10	05	35	15	10	10

## **ANIMAL BIOTECHNOLOGY LAB**

**Course Code: BTE2506**

**CreditUnits: 02**

### **Course Contents:**

1. Preparation, standardization and sterilization of culture media
2. Inoculation of specific tissues for callusing
3. Inoculation and maintenance of cell lines
4. Study of toxicity on cell lines

### **Examination Scheme:**

<b>IA</b>			<b>EE</b>			
<b>Class Test (Practical Based)</b>	<b>Mid Term Viva</b>	<b>Attendance</b>	<b>Major Experiment</b>	<b>Minor Experiment/Spotting</b>	<b>Practical Record</b>	<b>Viva</b>

# PLANT BIOTECHNOLOGY LAB

**Course Code: BTE2507**

**Credit Units: 02**

## **Course Contents:**

### **Module I**

Sterilization of glasswares and equipments.  
Preparation of cotton plugs and culture media  
Preparation of stocks for culture media  
Preparation of culture media

### **Module II**

Preparation and sterilization of different explants  
Inoculation of explants on culture media

### **Module III**

Study of viability of seeds  
Embryo culture

## **Examination Scheme:**

<b>IA</b>			<b>EE</b>			
<b>Class Test (Practical Based)</b>	<b>Mid Term Viva</b>	<b>Attendance</b>	<b>Major Experiment</b>	<b>Minor Experiment/Spotting</b>	<b>Practical Record</b>	<b>Viva</b>
15	10	05	35	15	10	10

# BIOINFORMATICS LAB

**Course Code: BTE2508**

**Credit Units: 01**

## List of Experiments/Exercises

1. Basics of sequence analysis Retrieving a sequence-nucleic acid/Protein
2. Local and Global Alignment- concepts Pair wise sequence alignment
3. Multiple sequence alignment
4. DOT Matrix Analysis
5. Analysis Using Scoring Matrices
6. Dynamic Programming – Smith Watermann Algorithm Needleman Wunsch Algorithm
7. Protein identification, physical properties, motifs and patterns, structure, folding classes, structure classification
8. ESTs – databases, clustering, gene discovery and identification, and functional classification.
9. Molecular Structure drawing tool, Molecular modeling/Docking.

## Examination Scheme:

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

**Note:** Minor variation could be there depending on the examiner.

# SUMMER INTERNSHIP EVALUATION-I

**Course Code: BTE2535**

**Credit Units: 03**

## **GUIDELINES FOR PROJECT FILE**

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critiqued by the faculty guide and corrected by the student at each stage.

The File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation.

## **Methodology**

The students will be sent to various industries and institutes where they will undergo short term training. After the completion of the training the students will be required to submit project report which shall then be evaluated by two internal examiners. The students will then have to appear for a Viva Voce examination to be conducted by an external evaluator at the end of the semester.

## **In general, the File should be comprehensive and include**

- A short account of the activities that were undertaken as part of the project;
- A statement about the extent to which the project has achieved its stated goals.
- A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;
- Any activities planned but not yet completed as part of the project, or as a future initiative directly resulting from the project;
- Any problems that have arisen that may be useful to document for future reference.

## **Report Layout**

The report should contain the following components:

### ➤ **Title or Cover Page**

The title page should contain the following information: Project Title; Student's Name; Course; Year; Supervisor's Name.

### ➤ **Acknowledgements** (optional)

Acknowledgment to any advisory or financial assistance received in the course of work may be given.

### ➤ **Abstract**

A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project

### ➤ **Table of Contents**

Titles and subtitles are to correspond exactly with those in the text.

### ➤ **Introduction**

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

➤ **Materials and Methods**

This section should aim at experimental designs, materials used. Methodology should be mentioned in details including modifications if any.

➤ **Results and Discussion**

Present results, discuss and compare these with those from other workers, etc. In writing these section, emphasis should be given on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary never write in “point” form.

➤ **Conclusion**

A conclusion should be the final section in which the outcome of the work is mentioned briefly.

➤ **Future prospects**

➤ **Appendices**

The Appendix contains material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

➤ **References / Bibliography**

This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

**Examples**

**For research article**

Voravuthikunchai SP, Lortheeranuwat A, Ninrprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichia coli* O157: H7. *Clin Microbiol Infec*, **8** (suppl 1): 116–117.

**For book**

Kowalski, M. (1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), **7**: 63–67

**ASSESSMENT OF THE PROJECT FILE**

Essentially, marking will be based on the following criteria: the quality of the report, the technical merit of the project and the project execution.

Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project.

Project execution is concerned with assessing how much work has been put in.

The File should fulfill the following *assessment objectives*:

**Range of Research Methods used to obtain information**

**Execution of Research**

**Data Analysis**

Analyse Quantitative/ Qualitative information

Control Quality

## **Draw Conclusions**

### **Examination Scheme:**

Project Report	50
Viva Voce	50
<b>Total</b>	<b>100</b>

# BIOFUEL AND GREEN BIOTECHNOLOGY

**Course Code: BTE2509**

**Credit Units: 02**

## **Course Objective:**

This course will acquaint the students with bioenergy resources, their properties, preparation, processing along with the details of equipments utilized for the purpose.

## **Course Contents:**

### **Module I: Biomass Sources, Characteristics & Preparation: Biomass Sources and Classification**

Chemical composition and properties of different biomass materials and bio-fuels – Sugar cane molasses for fermentation ethanol; Sources and processing of oils and fats for liquid fuels- Energy plantations - Preparation of woody biomass; Drying, Storage and Handling of Biomass.

### **Module II: Biogas Technology**

Feedstock for biogas production, biodegradable organic matter, Operating parameters for biogas production, Dry and wet fermentation

### **Module III: Bio-Ethanol and Bio-Diesel Technology**

Production of Fuel Ethanol by Fermentation of Sugars. Trans-esterification of Oils to Produce Bio-Diesel.

•

### **Module IV: Pyrolysis and Gasification of Biomass**

Thermo-chemical conversion of ligno-cellulose biomass - Pyrolysis of biomass, Thermo-chemical gasification principles

### **Module V: Combustion of Biomass and Cogeneration Systems**

Combustion of Woody Biomass, Cogeneration in Biomass Processing Industries. Use of biogases for cogeneration.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# STEM CELLS AND TISSUE ENGINEERING

**Course Code: BTE2510**

**Credit Units: 02**

## **Course Objective:**

The course is designed to give a broad view of mammalian stem cells, reviewing where they are found in the body, different types and how they are cultured. The topics will cover the basic biology of these stem cells as well as bioengineering and application of these stem cells to potential treatments of human diseases.

## **Course Contents:**

### **Module I**

Stem Cell biology; types; embryonic stem cell, Adult stem cell and potential benefits of stem cell technology, Bone marrow transplants, Immunotherapy, Autoimmune Diseases and Promise of Stem Cell-Based Therapies, Stem Cells and Diabetes, Stem Cells and heart Repair

### **Module II**

Gene Therapy: Introduction, History and evolution of Gene therapy, optimal disease targets, Failures and successes of gene therapy and future prospects; Gene Therapy and Immune System: Genetic Immunization, Innate and Acquired Immune Response to Gene Therapy

### **Module III**

Gene Delivery methods; Viral vectors: Adenoviral, Adeno-associated virus (AAV), Retroviral, Lentiviral, Herpes Virus; Non-viral Vectors and Physical Methods & Combinatorial methods. Genetic perspectives for Gene Therapy, Gene Therapy for Cancer and Vascular Disorders, Nervous System.

### **Module IV**

Regulatory and Ethical Considerations of Cell and Gene Therapy, Assessing Human Stem Cell Safety, Use of Genetically Modified Stem Cells in Experimental Gene Therapies.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Text & References:**

# JAVA-I

**Course Code: BTE2511**

**Credit Units: 02**

## **Course Objective:**

The objective is to introduce students to a modern programming language and help them gain sufficient fluency to undertake research projects with a programming component; to lay the foundations for more advanced study of object-oriented languages

Emphasis is on to understand the basic concepts of programming; to learn the syntax and semantics of Java; to be able to use a program development environment

## **Course Contents:**

### **Module I**

Introduction to Java - Features, Inheritance, Strings, Packages, Interfaces; Multi- Threading, Applet Programming: AWT- Components, Menus, Layout manager, etc., Event Handling,, Java Packages - java.util, -java.io; exception handling,

### **Module II**

**Collection API** - Arrays, Collection Interfaces, Concrete Collections, The Collections Framework, Legacy Collections

### **Module III**

Swing

### **Module IV**

- JDBC
- Introduction to Client Server Application
- Java Drivers
- java.sql Package
- Installing and setting up JDBC
- Basic JDBC Programming concepts
- Populating a database
- Executing Queries
- Scrollable and Updateable Result Sets

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Text & References:**

- Complete reference by Herbert Schildt TataMcGraw Hill

# TERM PAPER

**Course Code: BTE2531**

**Credit Units: 02**

## METHODOLOGY

A term (or research) paper is primarily a record of intelligent reading in several sources on a particular subject.

The students will choose the topic at the beginning of the session in consultation with the faculty assigned. The progress of the paper will be monitored regularly by the faculty. At the end of the semester the detailed paper on the topic will be submitted to the faculty assigned. The evaluation will be done by Board of examiners comprising of the faculties.

## GUIDELINES FOR TERM PAPER

The procedure for writing a term paper may consists of the following steps:

- Choosing a subject
- Finding sources of materials
- Collecting the notes
- Outlining the paper
- Writing the first draft
- Editing & preparing the final paper

### 1. Choosing a Subject

The subject chosen should not be too general.

### 2. Finding Sources of materials

- g) The material sources should be not more than 10 years old unless the nature of the paper is such that it involves examining older writings from a historical point of view.
- h) Begin by making a list of subject-headings under which you might expect the subject to be listed.
- i) The sources could be books and magazines articles, news stories, periodicals, scientific journals etc.

### 3. Collecting the notes

Skim through sources, locating the useful material, then make good notes of it, including quotes and information for footnotes.

- g) Get facts, not just opinions. Compare the facts with author's conclusion.
- h) In research studies, notice the methods and procedures, results & conclusions.
- i) Check cross references.

### 4. Outlining the paper

- e) Review notes to find main sub-divisions of the subject.
- f) Sort the collected material again under each main division to find sub-sections for outline so that it begins to look more coherent and takes on a definite structure. If it does not, try going back and sorting again for main divisions, to see if another general pattern is possible.

### 5. Writing the first draft

Write the paper around the outline, being sure that you indicate in the first part of the paper what its purpose is. You may follow the following:

- a) statement of purpose
- b) main body of the paper
- c) statement of summary and conclusion

Avoid short, bumpy sentences and long straggling sentences with more than one main ideas.

### 6. Editing & Preparing the final Paper

- m) Before writing a term paper, you should ensure you have a question which you attempt to answer in your paper. This question should be kept in mind throughout the paper. Include only information/details/ analyses of relevance to the question at hand. Sometimes, the relevance of a particular section

may be clear to you but not to your readers. To avoid this, ensure you briefly explain the relevance of every section.

- n) Read the paper to ensure that the language is not awkward, and that it "flows" properly.
- o) Check for proper spelling, phrasing and sentence construction.
- p) Check for proper form on footnotes, quotes, and punctuation.
- q) Check to see that quotations serve one of the following purposes:
  - (vii) Show evidence of what an author has said.
  - (viii) Avoid misrepresentation through restatement.
  - (ix) Save unnecessary writing when ideas have been well expressed by the original author.
- r) Check for proper form on tables and graphs. Be certain that any table or graph is self-explanatory.

Term papers should be composed of the following sections:

- Title page
- Table of contents
- Introduction
- Review
- Discussion & Conclusion
- References
- Appendix

Generally, the introduction, discussion, conclusion and bibliography part should account for a third of the paper and the review part should be two thirds of the paper.

### **Discussion**

The discussion section either follows the results or may alternatively be integrated in the results section. The section should consist of a discussion of the results of the study focusing on the question posed in the research paper.

### **Conclusion**

The conclusion is often thought of as the easiest part of the paper but should by no means be disregarded. There are a number of key components which should not be omitted. These include:

- i) summary of question posed
- j) summary of findings
- k) summary of main limitations of the study at hand
- l) details of possibilities for related future research

### **References**

From the very beginning of a research project, you should be careful to note all details of articles gathered.

The bibliography should contain ALL references included in the paper. References not included in the text in any form should NOT be included in the bibliography.

The key to a good bibliography is consistency. Choose a particular convention and stick to this.

### **Bibliographical conventions**

Monographs

Crystal, D. (2001), *Language and the internet*. Cambridge: Cambridge University Press.

### **Edited Volumes**

Gass, S./Neu, J. (eds.) (1996), *Speech acts across cultures. Challenges to communication in a second language*. Berlin/ NY: Mouton de Gruyter.

[(eds.) is used when there is more than one editor; and (ed.) where there is only one editor. In German the abbreviation used is (Hrsg.) for Herausgeber].

### **Edited Articles**

Schmidt, R./Shimura, A./Wang, Z./Jeong, H. (1996), *Suggestions to buy: Television commercials from the U.S., Japan, China, and Korea*. In: Gass, S./Neu, J. (eds.) (1996), *Speech acts across cultures. Challenges to communication in a second language*. Berlin/ NY: Mouton de Gruyter: 285-316.

### **Journal Articles**

McQuarrie, E.F./Mick, D.G. (1992), On resonance: A critical pluralistic inquiry into advertising rhetoric. Journal of consumer research 19, 180-197.

### **Electronic Book**

Chandler, D. (1994), Semiotics for beginners [HTML document]. Retrieved [5.10.'01] from the World Wide Web, <http://www.aber.ac.uk/media/Documents/S4B/>.

### **Electronic Journal Articles**

Watts, S. (2000) Teaching talk: Should students learn 'real German'? [HTML document]. German as a Foreign Language Journal [online] 1. Retrieved [12.09.'00] from the World Wide Web, <http://www.gfl-journal.com/>.

### **Other Websites**

Verterhus, S.A. (n.y.), Anglicisms in German car advertising. The problem of gender assignment [HTML document]. Retrieved [13.10.'01] from the World Wide Web, <http://olaf.hiof.no/~sverrev/eng.html>.

### **Unpublished Papers**

Takahashi, S./DuFon, M.A. (1989), Cross-linguistic influence in indirectness: The case of English directives performed by native Japanese speakers. Unpublished paper, Department of English as a Second Language, University of Hawai'i at Manoa, Honolulu.

### **Unpublished Theses/ Dissertations**

Möhl, S. (1996), Alltagssituationen im interkulturellen Vergleich: Realisierung von Kritik und Ablehnung im Deutschen und Englischen. Unpublished MA thesis, University of Hamburg.

Walsh, R. (1995), Language development and the year abroad: A study of oral grammatical accuracy amongst adult learners of German as a foreign language. Unpublished PhD dissertation, University College Dublin.

### **Appendix**

The appendix should be used for data collected (e.g. questionnaires, transcripts,...) and for tables and graphs not included in the main text due to their subsidiary nature or to space constraints in the main text.

### **Assessment Scheme:**

#### **Continuous Evaluation:**

40%

(Based on abstract writing, interim draft, general approach, research orientation, readings undertaken etc.)

#### **Final Evaluation:**

60%

(Based on the organization of the paper, objectives/ problem profile/ issue outlining, comprehensiveness of the research, flow of the idea/ ideas, relevance of material used/ presented, outcomes vs. objectives, presentation/ viva etc.)

# PROJECT

Course Code: BTE2532

Credit Units: 02

## Objectives:

The aim of the project is to provide the students with an opportunity to further their intellectual and personal development in the chosen field by undertaking a significant practical unit of activity. The project can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

## Chapter Scheme and distribution of marks:

Chapter 1: Introduction – 10 marks

Chapter 2: Conceptual Framework/ National/International Scenario – 25 marks

Chapter 3: Presentation, Analysis & Findings -- 25 marks

Chapter 4: Conclusion & Recommendations -- 10 marks

Chapter 5: Bibliography -- 05 marks

Project Report	Power Point Presentation & Viva
75 marks	25 marks

## Components of a Project Report

The outcome of Project Work is the Project Report. A project report should have the following components:

**1) Cover Page:** This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.

**2) Acknowledgement:** Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.

**3) Table of Content:** Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.

**4) Body of the Report:** The body of the report should have these four logical divisions

a) **Introduction:** This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, and method of analysis), Limitations of the Study, and Chapter Planning.

b) **Conceptual Framework / National and International Scenario:** (relating to the topic of the Project).

c) **Presentation of Data, Analysis and Findings:** (using the tools and techniques mentioned in the methodology).

d) **Conclusion and Recommendations:** In this section, the concluding observations based on the main findings and suggestions are to be provided.

**5) Bibliography or References:** This section will include the list of books and articles which have been used in the project work, and in writing a project report.

**6) Annexures:** Questionnaires (if any), relevant reports, etc.

(The main text of the Project should normally be in the range of 5000 words. However, there may be annexure in addition to the main text)

## The Steps of a Project Report

**Step I :** Selection of the topic for the project by taking following points into consideration:

- Suitability of the topic.

- Relevance of the topic
- Time available at the disposal.
- Feasibility of data collection within the given time limit.
- Challenges involved in the data collection (time & cost involved in the data collection, possibility of getting responses, etc.)

**Step II :** Finalisation of the Topic and preparation of Project Proposal in consultation with the Supervisor.

**Step III :** Collection of information and data relating to the topic and analysis of the same.

**Step IV :** Writing the report dividing it into suitable chapters, viz.,

Chapter 1: Introduction,

Chapter 2: Conceptual Framework / National & International Scenario,

Chapter 3: Analysis & Findings

Chapter 4: Conclusion and Recommendations.

**Step V :** The following documents are to be attached with the Final Project Report.

1) Approval letter from the supervisor (Annexure-IA)

2) Student's declaration (Annexure-IB)

3) Certificate from the Competent Authority of the Organisation / Institution, if the student undertakes the Project Work in any Organisation / Institution.

#### **Guidelines for Evaluation:**

- Each of the students has to undertake a Project individually under the supervision of a teacher and to submit the same following the guidelines stated below.
- Language of Project Report and Viva-Voce Examination may be English. The Project Report must be typed and hard bound.
- Failure to submit the Project Report or failure to appear at the Viva-voce Examination will be treated as "Absent" in the Examination. He /she has to submit the Project Report and appear at the Viva-Voce Examination in the subsequent years (within the time period as per University Rules).
- No marks will be allotted on the Project Report unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her Project Report.
- Evaluation of the Project Work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate.

# WORKSHOP / CERTIFICATION

**Course Code: BTE2533**

**Credit Units: 02**

## Objectives

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two way. The trainer has to make sure that the aspect covered are practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

## Major Themes for Workshop

The workshop may be conducted on any of the following major themes:

Accounting

Finance

Human Resources

Marketing

Economics

Operations

Supply Chain Management

These themes are merely indicative and other recent and relevant topics of study may be included.

## Guidelines for Workshop

The procedure for earning credits from workshop consists of the following steps:

Relevant study material and references will be provided by the trainer in advance.

The participants are expected to explore the topic in advance and take active part in the discussions held

Attending and Participating in all activities of the workshop

Group Activities have to be undertaken by students as guided by the trainer.

Evaluation of workshop activities would be done through test and quiz at the end of the workshop.

Submitting a write up of at least 500 words about the learning outcome from the workshop.

## Methodology

The methodology followed at the workshop could be based on any one or more of the following methods:

Case Study

Business Game

Simulation

Group Activity

Role Play

Business Planning

Quiz

## Evaluation Scheme:

Attendance	Active Participation	Multiple Choice Questions/ Quiz	Solving the case/ Assignment/ Write up	Total
10	30	30	30	100

# Syllabus – Sixth Semester

## RECOMBINANT DNA TECHNOLOGY

**Course Code: BTE2601**

**Credit Units: 03**

**Course Objective:**

A complete understanding of molecular techniques can be obtained through the course. The successful application of biotechnology largely depends on these advanced molecular techniques.

**Course Contents:**

**Module I: Enzymes used in RDT**

Restriction endonuclease, methyltransferase, ligase, polymerase, kinase, phosphatase, nuclease, transferase, reverse transcriptase.

**Module II: Cloning vectors**

Plasmids, bacteriophages (Lambda and M13), phagemids, cosmids, artificial chromosomes (YAC, BAC). expression vectors (Bacteria and yeast), vector engineering (fusion tags, antibiotic markers), codon optimization, host engineering

**Module III: Blotting techniques and hybridization**

Southern, Northern and Western blotting techniques. Radioactive and non-radioactive probes.

**Module IV: Nucleic acid amplification and its applications**

Principles of PCR, designing of primers

**Module V: Cloning Techniques**

Basic cloning experiment: Design of cloning strategy and stepwise experimental procedure, Complementation, colony and plaque hybridization, restriction, PCR, plus-minus screening, immunoscreening.

**Module VI: DNA Libraries**

Purpose of constructing DNA libraries. Construction of cDNA and genomic libraries.

**Module VII: Sequencing of DNA**

DNA sequencing (Maxam Gilbert, Sanger's and automated), protein engineering.

**Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

**Text & References:**

**Text:**

# BIOPROCESS TECHNOLOGY

**Course Code: BTE2602**

**Credit Units: 03**

## **Course Objective:**

The objective of the course is to apply the principles of biochemical engineering in large scale cultivation of microorganism for production of important products.

## **Course Contents:**

### **Module I**

Advantage of bioprocess over chemical process. Basic principle in bioprocess technology. Media formulation, Cell culture techniques; Inoculum development and aseptic transfers. Different types of pumps, valves, and line materials, piping conventions etc. used in Biochemical Process

### **Module II**

Process technology for the production of primary metabolites, eg. biomass, ethanol, acetone-butanol, citric acid, amino acids, polysaccharides and plastics.

**Ethanol:** production by batch, continuous and cell recycle adopted by various technologies practiced in Indian distilleries using molasses and grains. Computation of fermentation efficiency, distillation efficiency and overall efficiency of ethanol production, recovery, uses, glucose effect etc. Power alcohol – definition, uses, merits and demerits of various technologies for its production.

**Amino Acid:** Genetic Control of metabolic pathway.

**Lysine:** Indirect and direct fermentation – mechanism of ph of metabolic block in accumulation of L-lysine by inhibition and repression mechanism.

**Biomass:** Bakers and distillers yeast production using various raw materials, “bios” factors for growth, Crabtree effect, harvesting, different forms and uses.

What are mushroom, different forms of common mushroom production from agro based raw materials and uses. Biofertilizers, biocompost and biopesticides

### **Module III**

Production of secondary metabolites – penicillin, cephalosporins, streptomycin, tetracycline etc. Metabolites from plant and animal cell culture

**Penicillin:** Classification, various penicillin as precursor and ‘R’ – side chain, penicillinase, 6-APA, penicillin production, harvest and recovery, uses of various forms etc.

**Streptomycin:** chemical structure, production, harvest and recovery, use by-product of streptomycin fermentation etc.

**Tetracycline:** chemical structure, production, harvest and recovery, use by-product of tetracycline fermentation etc.

### **Module IV**

Microbial production of industrial enzymes – glucose isomerase, penicillin acylase, cellulase, amylase, lipase, protease etc.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# IMMUNOLOGY AND IMMUNOTECHNOLOGY

**Course Code: BTE2603**

**Credit Units: 03**

## **Course Objective:**

Role of antibody engineering in biomedical applications and the importance of immuno genetics in disease processes, tissue transplantation and immune regulation are some of the areas of attributes of this course which can help the students to understand the biotechnology related to human kind.

## **Course Contents:**

### **Module I: Introduction**

Phylogeny of Immune System, Innate and acquired immunity, clonal nature of Immune Response. Organization and structure of lymphoid organs Nature and Biology of antigens and super antigens Antibody structure and function; Types of immunity- innate, acquired, active and passive.

### **Module II: Major Histocompatibility**

MHC, BCR and TCR, generation of antibody diversity, Complement system

### **Module III: Cells of the immune system**

Hematopoiesis and differentiation, lymphocyte trafficking, B-Lymphocytes, T -Lymphocytes, macrophages, dendritic cells, natural killer, lymphokines and lymphokine activated killer cells, eosinophils, neutrophils and mast cells

### **Module IV: Regulation of immune response**

Antigen processing and presentation, activation of B and T lymphocytes, cytokines and their role in immune regulation, T cell regulation and MHC restriction, immunological tolerance

### **Module V: Cell mediated toxicity**

Mechanism of T cell and NK cell mediated lysis and macrophage mediated cytotoxicity.

### **Module VI: Hypersensitivity**

### **Module VII: Autoimmunity**

### **Module VIII: Tumor immunology, Immunity to infectious agents**

### **Module IX: Transplantation Immunology**

### **Module X: Synthetic vaccines**

**Vaccines:** General consideration, ideotype network hypothesis, Synthetic vaccines

### **Module XI: Immunological Techniques**

Immuno diffusion, immuno-electrophoresis, ELISA, RIA, fluorescence activated cell sorter

### **Module XII: Hybridoma technology and its applications**

Fusion of myeloma cells with lymphocytes

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# FUNDAMENTALS OF BIOCHEMICAL ENGINEERING

**Course Code: BTE2604**

**Credit Units: 02**

## **Course Objective:**

The course material on the kinetics of microbial growth, substrate utilization and product formation etc. may help the students to understand the various principles involved in instrumentation and control of bioprocess.

## **Course Contents:**

### **Module I**

Kinetics of microbial growth, substrate utilization and product formation.

### **Module II**

Sterilization of air and medium.

### **Module III**

Batch, continuous, cell recycle and fed batch reactors; mass and energy balance in microbial processes, Bioreactor design, Different types of bioreactors, their parts and functions. Different types of valves.

### **Module IV**

Mass transfer in Biological reactions; Scale-up principles; Instrumentation and control of bioprocesses.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Text & References:**

# RECOMBINANT DNA TECHNOLOGY LAB

**Course Code: BTE2605**

**Credit Units: 02**

## **Course Objective:**

The laboratory experiments in Recombinant DNA Technology would certainly help to comprehend the theoretical aspects of the subject.

## **Course Contents:**

### **Module I**

**Study of cloning (GFP CLONING)**

### **Module II**

**Study of PCR**

### **Module III**

**Study of Southern hybridisation**

### **Module IV**

**Study of RAPD**

### **Module V**

**Site directed mutagenesis**

## **Examination Scheme:**

<b>IA</b>			<b>EE</b>			
<b>Class Test (Practical Based)</b>	<b>Mid Term Viva</b>	<b>Attendance</b>	<b>Major Experiment</b>	<b>Minor Experiment/Spotting</b>	<b>Practical Record</b>	<b>Viva</b>
15	10	05	35	15	10	10

# BIOPROCESS TECHNOLOGY LAB

Course Code: BTE2606

Credit Units: 02

## Course Contents:

### Module I

Isolation of industrially important micro organisms for microbial processes.

### Module II

Determination of Thermal Death Point and Thermal death time of micro organisms for design of a sterilizer

### Module III

Determination of growth curve of a supplied micro organism and also determine substrate degradation profile and to compute specific growth rate and growth yield from the data obtained.

### Module IV

Comparative studies of ethanol production using different substrates.

### Module V

Production of single cell protein

### Module VI

Production and estimation of alkaline protease

### Module VII

Sauer Krant fermentation

### Module VIII

Use of alginate for cell immobilization

## Examination Scheme:

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

# IMMUNOLOGY AND IMMUNOTECHNOLOGY LAB

**Course Code: BTE2607**

**Credit Units: 01**

## **Course Contents:**

### **Module I**

Blood film preparation and identification of cells.

### **Module II**

Identification of blood group.

### **Module III**

Isolation of serum.

### **Module IV**

Lymphoid organs and their microscopic organization.

### **Module V**

WIDAL Test

### **Module VI**

Radial Immuno Diffusion Test

### **Module VII**

Ouchterlony Double diffusion Test

### **Module VIII: Elisa**

DOT, SANDWICH

### **Module IX**

Purification of IgG through affinity chromatography

### **Module X**

Immunohistochemistry

## **Examination Scheme:**

<b>IA</b>			<b>EE</b>			
<b>Class Test (Practical Based)</b>	<b>Mid Term Viva</b>	<b>Attendance</b>	<b>Major Experiment</b>	<b>Minor Experiment/Spotting</b>	<b>Practical Record</b>	<b>Viva</b>
15	10	05	35	15	10	10

# PHARMACEUTICAL BIOTECHNOLOGY

**Course Code: BTE2608**

**Credit Units: 02**

## **Course Objective:**

The main objectives are to cover representative pharmaceutical dosage forms, and general issues of formulation, production, quality requirements, validation and uses and to gain an understanding of the challenges associated with quality pharmaceutical manufacturing

## **Course Contents:**

### **Module I**

Introduction to Physical Pharmaceutics - Metrology and Calculations,

### **Module II**

Molecular structure, properties and States of Matter, Solutions, Phase Equilibria, Micromeritic and Powder Rheology, Surface and Interfacial Phenomena, Dispersion Systems, Diffusion & Dissolution, Kinetics and drug stability, Viscosity & Rheology

### **Module III**

Polymer Science and Applications, Formulations and Development, Packaging

### **Module IV**

Introduction to Industrial Processing, Transport Phenomena (Fluid Flow, Heat Transfer and Mass Transfer)

### **Module V**

Particulate Technology (Particle Size, Size reduction, Size Separation, Powder Flow and Compaction), Unit Operations (Mixing, Evaporation, Filtration, Centrifugation, Extraction, Distillation, and Drying)

### **Module VI**

Materials of Pharmaceutical Plant Construction, Good Manufacturing Practice (GMP's) Guidelines

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Text & References:**

### **Text:**

- Bentley's Pharmaceutics by E A Rawlins
- Pharmaceutical Sciences by Remington

### **References:**

- Physical Pharmacy by Alfred Martin.
- Cooper and Gunn's Tutorial Pharmacy

# MOLECULAR MODELLING

**Course Code: BTE2609**

**Credit Units: 02**

## **Course Objective:**

The students should be able to understand and work on the following topics: various levels of structural organizations in bio-molecules; representation of the 2D and 3D structures: coordinate systems & modeling; bioinformatics approaches for structure analysis and structure predictions; conformations & analysis of macromolecules.

## **Course Contents**

### **Module I**

Internal and external co-ordinate system; Generation of co-ordinates of biopolymers in Cartesian and cylindrical polar co-ordinate System.

### **Module II: Anatomy of Biomolecules**

Proteins: Ramachandran plot; Secondary structures; Motifs; Domains; Tertiary and quaternary structures; Fold recognition; Methods for Comparison of 3D structures; DNA: A, B, Z DNA, DNA bending etc.; RNA structure; Structure of Ribosome

### **Module III: Analysis of Structural data banks**

Protein Data Bank, Cambridge small molecular crystal structure data bank; Calculation of conformational energy for bio-macromolecules; Developing the energy functions & Force fields; Charge calculation methods

### **Module IV: Molecular optimization techniques**

Newton Raphson, Conjugate Gradient, Genetic algorithms, simulated annealing applied to Biomolecules.

### **Module V**

Methods to predict three dimensional structures of nucleic acids, rRNA, tRNA, and proteins

### **Module VI**

Molecular mechanics & dynamics of oligopeptides, proteins, nucleotides and small molecules; Conformational Searches; Simulation of molecular mechanics and dynamics; Simulations of Free Energy changes; Electrostatics of Biomolecules

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Text & References:**

# ARTIFICIAL NEURAL NETWORKS

**Course Code: BTE2610**

**Credit Units: 02**

## **Course Objective:**

This course will enable the students to gain knowledge about a relatively newer area of science. The course is designed to model the different technical properties, applications, besides the closely related aspects of artificial neural networks.

## **Course Contents:**

### **Module I**

Historical background, Why is learning hard?

### **Module II**

Memorization, generalization and function approximation, Linear Associators, Perceptrons and Capacity, Multilayer neural networks, Maximum Likelihood and Gradient Descent learning, Stochastic gradient descent for supervised learning.

### **Module III**

The back propagation algorithm, Aspects of Learning Theory and Generalization, Bias vs. variance, Overtraining, pruning and regularization, VC dimension and how much data is enough?.

### **Module IV**

Neural networks and analog VLSI, Selected Applications.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Text & References:**

### **Text:**

- Neural Networks: A Comprehensive Foundation by S. Haykin, Prentice Hall.

### **References:**

- Neural Networks for Pattern Recognition by C. Bishop, Oxford University Press.

# JAVA-II

**Course Code: BTE2611**

**Credit Units: 02**

## Course Objective

The objective is to introduce students to a serverside programming language and help them gain sufficient fluency to undertake research projects with a programming component; to lay the foundations for study of web technologies and different tools used for the same.

Emphasis is on to understand the basic concepts of web programming; to learn the syntax and semantics of Servlet and JSP; to be able to use a server side program development environment

## Course Contents

### Module I

HTML and JavaScript, Creating and processing HTML forms

### Module II

Java Servlets

Introduction to Server Side Application Development

Basics of Servlet Programming

Web Container

Session Tracking

Servlet Context

### Module III: JSP

Advantage of JSP technology (Comparision with ASP / Servlet)

JSP Architecture, JSP Access Model

JSP Syntax Basic (Directions, Declarations, Expression, Scriptlets, Comments)

JSP Implicit Object, Object Scope

Synchronization Issue

Exception Handling

Session Management

### Module IV: Java Network Programming

Connecting to a server

Implementing Servers in Java

URL Connections

Reading and Posting data

Security and the Network

Java Beans

## Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# TERM PAPER

**Course Code: BTE2631**

**Credit Units: 02**

## METHODOLOGY

A term (or research) paper is primarily a record of intelligent reading in several sources on a particular subject.

The students will choose the topic at the beginning of the session in consultation with the faculty assigned. The progress of the paper will be monitored regularly by the faculty. At the end of the semester the detailed paper on the topic will be submitted to the faculty assigned. The evaluation will be done by Board of examiners comprising of the faculties.

## GUIDELINES FOR TERM PAPER

The procedure for writing a term paper may consists of the following steps:

- Choosing a subject
- Finding sources of materials
- Collecting the notes
- Outlining the paper
- Writing the first draft
- Editing & preparing the final paper

### 1. Choosing a Subject

The subject chosen should not be too general.

### 2. Finding Sources of materials

- j) The material sources should be not more than 10 years old unless the nature of the paper is such that it involves examining older writings from a historical point of view.
- k) Begin by making a list of subject-headings under which you might expect the subject to be listed.
- l) The sources could be books and magazines articles, news stories, periodicals, scientific journals etc.

### 3. Collecting the notes

Skim through sources, locating the useful material, then make good notes of it, including quotes and information for footnotes.

- j) Get facts, not just opinions. Compare the facts with author's conclusion.
- k) In research studies, notice the methods and procedures, results & conclusions.
- l) Check cross references.

### 4. Outlining the paper

- g) Review notes to find main sub-divisions of the subject.
- h) Sort the collected material again under each main division to find sub-sections for outline so that it begins to look more coherent and takes on a definite structure. If it does not, try going back and sorting again for main divisions, to see if another general pattern is possible.

### 5. Writing the first draft

Write the paper around the outline, being sure that you indicate in the first part of the paper what its purpose is. You may follow the following:

- a) statement of purpose
- b) main body of the paper
- c) statement of summary and conclusion

Avoid short, bumpy sentences and long straggling sentences with more than one main ideas.

### 6. Editing & Preparing the final Paper

- s) Before writing a term paper, you should ensure you have a question which you attempt to answer in your paper. This question should be kept in mind throughout the paper. Include only information/details/ analyses of relevance to the question at hand. Sometimes, the relevance of a particular section

may be clear to you but not to your readers. To avoid this, ensure you briefly explain the relevance of every section.

- t) Read the paper to ensure that the language is not awkward, and that it "flows" properly.
- u) Check for proper spelling, phrasing and sentence construction.
- v) Check for proper form on footnotes, quotes, and punctuation.
- w) Check to see that quotations serve one of the following purposes:
  - (x) Show evidence of what an author has said.
  - (xi) Avoid misrepresentation through restatement.
  - (xii) Save unnecessary writing when ideas have been well expressed by the original author.
- x) Check for proper form on tables and graphs. Be certain that any table or graph is self-explanatory.

Term papers should be composed of the following sections:

- Title page
- Table of contents
- Introduction
- Review
- Discussion & Conclusion
- References
- Appendix

Generally, the introduction, discussion, conclusion and bibliography part should account for a third of the paper and the review part should be two thirds of the paper.

### **Discussion**

The discussion section either follows the results or may alternatively be integrated in the results section. The section should consist of a discussion of the results of the study focusing on the question posed in the research paper.

### **Conclusion**

The conclusion is often thought of as the easiest part of the paper but should by no means be disregarded. There are a number of key components which should not be omitted. These include:

- m) summary of question posed
- n) summary of findings
- o) summary of main limitations of the study at hand
- p) details of possibilities for related future research

### **References**

From the very beginning of a research project, you should be careful to note all details of articles gathered.

The bibliography should contain ALL references included in the paper. References not included in the text in any form should NOT be included in the bibliography.

The key to a good bibliography is consistency. Choose a particular convention and stick to this.

### **Bibliographical conventions**

Monographs

Crystal, D. (2001), *Language and the internet*. Cambridge: Cambridge University Press.

### **Edited Volumes**

Gass, S./Neu, J. (eds.) (1996), *Speech acts across cultures. Challenges to communication in a second language*. Berlin/ NY: Mouton de Gruyter.

[(eds.) is used when there is more than one editor; and (ed.) where there is only one editor. In German the abbreviation used is (Hrsg.) for Herausgeber].

### **Edited Articles**

Schmidt, R./Shimura, A./Wang, Z./Jeong, H. (1996), *Suggestions to buy: Television commercials from the U.S., Japan, China, and Korea*. In: Gass, S./Neu, J. (eds.) (1996), *Speech acts across cultures. Challenges to communication in a second language*. Berlin/ NY: Mouton de Gruyter: 285-316.

### **Journal Articles**

McQuarrie, E.F./Mick, D.G. (1992), On resonance: A critical pluralistic inquiry into advertising rhetoric. Journal of consumer research 19, 180-197.

### **Electronic Book**

Chandler, D. (1994), Semiotics for beginners [HTML document]. Retrieved [5.10.'01] from the World Wide Web, <http://www.aber.ac.uk/media/Documents/S4B/>.

### **Electronic Journal Articles**

Watts, S. (2000) Teaching talk: Should students learn 'real German'? [HTML document]. German as a Foreign Language Journal [online] 1. Retrieved [12.09.'00] from the World Wide Web, <http://www.gfl-journal.com/>.

### **Other Websites**

Verterhus, S.A. (n.y.), Anglicisms in German car advertising. The problem of gender assignment [HTML document]. Retrieved [13.10.'01] from the World Wide Web, <http://olaf.hiof.no/~sverrev/eng.html>.

### **Unpublished Papers**

Takahashi, S./DuFon, M.A. (1989), Cross-linguistic influence in indirectness: The case of English directives performed by native Japanese speakers. Unpublished paper, Department of English as a Second Language, University of Hawai'i at Manoa, Honolulu.

### **Unpublished Theses/ Dissertations**

Möhl, S. (1996), Alltagssituationen im interkulturellen Vergleich: Realisierung von Kritik und Ablehnung im Deutschen und Englischen. Unpublished MA thesis, University of Hamburg.

Walsh, R. (1995), Language development and the year abroad: A study of oral grammatical accuracy amongst adult learners of German as a foreign language. Unpublished PhD dissertation, University College Dublin.

### **Appendix**

The appendix should be used for data collected (e.g. questionnaires, transcripts,...) and for tables and graphs not included in the main text due to their subsidiary nature or to space constraints in the main text.

### **Assessment Scheme:**

#### **Continuous Evaluation:**

40%

(Based on abstract writing, interim draft, general approach, research orientation, readings undertaken etc.)

#### **Final Evaluation:**

60%

(Based on the organization of the paper, objectives/ problem profile/ issue outlining, comprehensiveness of the research, flow of the idea/ ideas, relevance of material used/ presented, outcomes vs. objectives, presentation/ viva etc.)

# PROJECT

Course Code: BTE2632

Credit Units: 02

## Objectives:

The aim of the project is to provide the students with an opportunity to further their intellectual and personal development in the chosen field by undertaking a significant practical unit of activity. The project can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

## Chapter Scheme and distribution of marks:

Chapter 1: Introduction – 10 marks

Chapter 2: Conceptual Framework/ National/International Scenario – 25 marks

Chapter 3: Presentation, Analysis & Findings -- 25 marks

Chapter 4: Conclusion & Recommendations -- 10 marks

Chapter 5: Bibliography -- 05 marks

Project Report	Power Point Presentation & Viva
75 marks	25 marks

## Components of a Project Report

The outcome of Project Work is the Project Report. A project report should have the following components:

**1) Cover Page:** This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.

**2) Acknowledgement:** Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.

**3) Table of Content:** Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.

**4) Body of the Report:** The body of the report should have these four logical divisions

a) **Introduction:** This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, and method of analysis), Limitations of the Study, and Chapter Planning.

b) **Conceptual Framework / National and International Scenario:** (relating to the topic of the Project).

c) **Presentation of Data, Analysis and Findings:** (using the tools and techniques mentioned in the methodology).

d) **Conclusion and Recommendations:** In this section, the concluding observations based on the main findings and suggestions are to be provided.

**5) Bibliography or References:** This section will include the list of books and articles which have been used in the project work, and in writing a project report.

**6) Annexures:** Questionnaires (if any), relevant reports, etc.

(The main text of the Project should normally be in the range of 5000 words. However, there may be annexure in addition to the main text)

## The Steps of a Project Report

**Step I :** Selection of the topic for the project by taking following points into consideration:

- Suitability of the topic.
- Relevance of the topic

- Time available at the disposal.
- Feasibility of data collection within the given time limit.
- Challenges involved in the data collection (time & cost involved in the data collection, possibility of getting responses, etc.)

**Step II :** Finalisation of the Topic and preparation of Project Proposal in consultation with the Supervisor.

**Step III :** Collection of information and data relating to the topic and analysis of the same.

**Step IV :** Writing the report dividing it into suitable chapters, viz.,

Chapter 1: Introduction,

Chapter 2: Conceptual Framework / National & International Scenario,

Chapter 3: Analysis & Findings

Chapter 4: Conclusion and Recommendations.

**Step V :** The following documents are to be attached with the Final Project Report.

1) Approval letter from the supervisor (Annexure-IA)

2) Student's declaration (Annexure-IB)

3) Certificate from the Competent Authority of the Organisation / Institution, if the student undertakes the Project Work in any Organisation / Institution.

#### **Guidelines for Evaluation:**

- Each of the students has to undertake a Project individually under the supervision of a teacher and to submit the same following the guidelines stated below.
- Language of Project Report and Viva-Voce Examination may be English. The Project Report must be typed and hard bound.
- Failure to submit the Project Report or failure to appear at the Viva-voce Examination will be treated as "Absent" in the Examination. He /she has to submit the Project Report and appear at the Viva-Voce Examination in the subsequent years (within the time period as per University Rules).
- No marks will be allotted on the Project Report unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her Project Report.
- Evaluation of the Project Work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate.

# WORKSHOP / CERTIFICATION

**Course Code: BTE2633**

**Credit Units: 02**

## Objectives

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two way. The trainer has to make sure that the aspect covered are practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

## Major Themes for Workshop

The workshop may be conducted on any of the following major themes:

Accounting

Finance

Human Resources

Marketing

Economics

Operations

Supply Chain Management

These themes are merely indicative and other recent and relevant topics of study may be included.

## Guidelines for Workshop

The procedure for earning credits from workshop consists of the following steps:

Relevant study material and references will be provided by the trainer in advance.

The participants are expected to explore the topic in advance and take active part in the discussions held

Attending and Participating in all activities of the workshop

Group Activities have to be undertaken by students as guided by the trainer.

Evaluation of workshop activities would be done through test and quiz at the end of the workshop.

Submitting a write up of at least 500 words about the learning outcome from the workshop.

## Methodology

The methodology followed at the workshop could be based on any one or more of the following methods:

Case Study

Business Game

Simulation

Group Activity

Role Play

Business Planning

Quiz

## Evaluation Scheme:

Attendance	Active Participation	Multiple Choice Questions/ Quiz	Solving the case/ Assignment/ Write up	Total
10	30	30	30	100

# Syllabus – Seventh Semester

## GENOMICS AND PROTEOMICS

**Course Code: BTE2701**

**Credit Units: 03**

### **Course Objective:**

The course helps in developing a detailed understanding of eukaryotic genome complexity and organization. Current research on the molecular basis of the control of gene expression in eukaryotic system has developed a detailed understanding of techniques of gene diagnostics and DNA profile to acquire the fundamentals of genomics and Proteomics.

### **Course Contents:**

#### **Module I: Genome Evolution**

Origin of genomes, Acquisition of new genes, Noncoding DNA and Genome Evolution, Human Genome Project., Forward genetics (Phenotype to gene structure) and Reverse genetics (Gene structure to phenotype). DNA sequencing – chemical and enzymatic methods

#### **Module II: Structural Genomics**

Structural Genomics: Study of 3D- Structure of Protein

Protein Structure, Basics of High Throughput Determination of Protein Structure, Protein Structure Initiative Project, Computational Protein Structure Modeling, Protein Structure and Function.

#### **Module III: Comparative Genomics**

Phylogeny, COGS [Cluster of orthologues genes], Introduction to System Biology, Metabolic Reconstruction, The Basic Principles and Methodology. Gene Identification Methods.

#### **Module IV: Functional Genomics**

cDNA Microarrays, Oligonucleotide Microarray Chips, Application of Microarrays with examples, Microarray Data Analysis; Real Time PCR.

#### **Module V: Genotyping Background and Applications of Genomics**

Genetic and physical mapping, Introduction to molecular markers, DNA fingerprinting, Single nucleotide polymorphisms, RNA interference, antisense RNA, siRNA, MiRNA.

## **PROTEOMICS**

#### **Module VI: Fundamentals of Proteomics**

Introduction to Proteomics, 2D Gel Electrophoresis

Protein Identification and Analysis:

- a. Protein preparation and Separation
- b. Protein Identification by mass spectrometry and its applications.
- c. Identification of post translation modification
- d. Current concepts of peptide sequencing with MS-MS methods, MALDI-TOF mass spectrometry and nanospray MS

Protein Expression Mapping, Unstructured Proteins.

High-throughput cloning of ORFs, Chromatography

Protein- Protein Interaction Mapping. Its application in health and disease.

Protein Chip/Array. Experimental design and its application. Application of Microarray in proteome analysis.

**Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# IPR, BIOSAFETY & BIOETHICS

**Course Code: BTE2702**

**Credit Units: 02**

## **Course Objective**

The aim of this course is to develop the understanding of relevance, business Impact and protection of Intellectual Property along with the types of Intellectual Property Rights: Patents, Trademarks, Copyrights, Industrial Designs, Geographical Indications and International Conventions, Biosafety and Bioethics

## **Course Contents**

### **Module I: Basic Principles and Acquisition of Intellectual Property Rights**

Basic Principles of Patent Law, Patent Application procedure, Drafting of a Patent Specification, Understanding Copyright Law, Basic Principles of Trade Mark and Design Rights, International Background of Intellectual Property

### **Module II: Ownership and Enforcement of Intellectual Property Rights**

Patents-Objectives, Rights, Assignments, Defences in case of Infringement. Copyright-Objectives, Rights, Transfer of Copyright, work of employment Infringement, Defences for infringement. Trademarks-Objectives, Rights, Protection of goodwill, Infringement, Passing off, Defences. Designs-Objectives, Rights, Assignments, Infringements, Defences of Design Infringement, Enforcement of Intellectual Property Rights - Civil Remedies, Criminal Remedies, Border Security measures, Practical Aspects of Licensing - Benefits, Determinative factors, important clauses, licensing clauses.

### **Module III: Information Technology Related Intellectual Property Rights**

Computer Software and Intellectual Property-Objective, Copyright Protection, Reproducing, Defences, Patent Protection, Database and Data Protection-Objective, Need for Protection, UK Data Protection Act, 1998, US Safe Harbor Principle, Enforcement. Protection of Semi-conductor Chips-Objectives Justification of protection, Criteria, Subject-matter of Protection, WIPO Treaty, Trips, SCPA. Domain Name Protection-Objectives, domain name and Intellectual Property, Registration of domain names, disputes under Intellectual Property Rights, Jurisdictional Issues, International Perspective.

### **Module IV: Biotechnology and Intellectual Property Rights**

**Biotechnology and the Law-** Objective, Evolution, Basic Structure of Gene Techniques, Applications, Commercial Potential of Biotech Inventions, Rationale for Intellectual Property Protection. Patenting Biotechnology Inventions-Objective, Concept of Novelty, Concept of inventive step, Microorganisms, Moral Issues in Patenting Biotechnological inventions. Plant Varieties Protection-Objectives, Justification, International Position, Plant Varieties Protection in India Protection of Geographical Indications Objectives, Justification, International Position, Multilateral Treaties, National Level, Indian Position.

### **Module V**

**Protection of Traditional Knowledge-** Objective, Concept of Traditional Knowledge, Holders, Issues concerning, Bio-Prospecting and Bio-Piracy, Alternative ways, Protectability, need for a Sui-Generis regime, Traditional Knowledge on the International Arena, at WTO, at National level, Traditional Knowledge Digital Library.

### **Module VI**

Biosafety and Bioethics Management-Key to environmentally responsible use of biotechnology. Cartagena Protocol on Biosafety, Ethical implications of Biotechnological products and techniques.

**Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# RESEARCH METHODOLOGY AND REPORT WRITING

Course Code: BTE2703

Credit Units: 02

## Course Objective

To develop understanding of information and library science research issues in the domain of bioinformatics through review of journal articles, invited talks, and critical group discussions of methods. The main objectives for this course are to develop: familiarity with information and library science-oriented problems in the biomedical sciences, an understanding of research methods in the biomedical domain, critical thinking and evaluation skills and presentation and summarization skills.

## Course Contents

### Module I

Introduction: Science, Scientific Field and Biological research. Role of a researcher in different stages of a project, Routes to research funding (academic and commercial)

### Module II

Research – Definition – Importance and Meaning of research – Characteristics of research – Types of Research – Steps in research – Identification, Selection and formulation of research problem – Research questions – Research design – Formulation of Hypothesis – Review of Literature.

### Module III: Sampling techniques

Sampling theory – types of sampling – Steps in sampling – Sampling and Non-sampling error – Sample size – Advantages and limitations of sampling. Collection of Data: Primary Data – Meaning – Data Collection methods – Secondary data – Meaning - Relevance's, Limitations and cautions. Statistics in Research.

### Module IV

Type of Articles (review, letters etc). Scientific paper format (Abstract, Introduction, Materials and Methods, Results, Discussion). Writing, evaluating, presenting and publishing the results of scientific research in the academic press (journals, conferences etc). Choosing the appropriate journal (Sources, Information, Instructions to authors, peer review system, journal evaluation)

### Module V

Case studies of areas of current research. Formulating a research plan and its presentation

## Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## Text & References:

### Text:

- Statistical Methods By S.P. Gupta

### References:

# GENOMICS AND PROTEOMICS LAB

**Course Code: BTE2704**

**Credit Units: 02**

## **Course Contents:**

### **Module I**

Three dimensional Structures – In silico study – large molecular complexes RNA polymerase II, ribosome, unstructured proteins

### **Module II**

DNA sequencing methods

### **Module III**

Gene finding tools and Genome annotation

### **Module IV**

Comparison of two given genomes

### **Module V**

Analysis of 2D – IEF data

### **Module VI**

Microarray and Microarray data analysis

### **Module VII**

Inference of protein function from structure

### **Module VIII**

Inference of protein function and structure

### **Module IX**

Two-hybrid methods

## **Examination Scheme:**

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

## SUMMER INTERNSHIP EVALUATION-II

Course Code: BTE2735

Credit Units: 03

### GUIDELINES FOR PROJECT FILE

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critiqued by the faculty guide and corrected by the student at each stage.

The File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation.

### Methodology

The students will be sent to various industries and institutes where they will undergo short term training. After the completion of the training the students will be required to submit project report which shall then be evaluated by two internal examiners. The students will then have to appear for a Viva Voce examination to be conducted by an external evaluator at the end of the semester.

### In general, the File should be comprehensive and include

- A short account of the activities that were undertaken as part of the project;
- A statement about the extent to which the project has achieved its stated goals.
- A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;
- Any activities planned but not yet completed as part of the project, or as a future initiative directly resulting from the project;
- Any problems that have arisen that may be useful to document for future reference.

### Report Layout

The report should contain the following components:

#### ➤ Title or Cover Page

The title page should contain the following information: Project Title; Student's Name; Course; Year; Supervisor's Name.

#### ➤ Acknowledgements (optional)

Acknowledgment to any advisory or financial assistance received in the course of work may be given.

#### ➤ Abstract

A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project

#### ➤ Table of Contents

Titles and subtitles are to correspond exactly with those in the text.

➤ **Introduction**

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

➤ **Materials and Methods**

This section should aim at experimental designs, materials used. Methodology should be mentioned in details including modifications if any.

➤ **Results and Discussion**

Present results, discuss and compare these with those from other workers, etc. In writing these section, emphasis should be given on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary never write in “point” form.

➤ **Conclusion**

A conclusion should be the final section in which the outcome of the work is mentioned briefly.

➤ **Future prospects**

➤ **Appendices**

The Appendix contains material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

➤ **References / Bibliography**

This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

**Examples**

**For research article**

Voravuthikunchai SP, Lortheeranuwat A, Ninrprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichia coli* O157: H7. *Clin Microbiol Infec*, **8** (suppl 1): 116–117.

**For book**

Kowalski, M. (1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), **7**: 63-67

**ASSESSMENT OF THE PROJECT FILE**

Essentially, marking will be based on the following criteria: the quality of the report, the technical merit of the project and the project execution.

Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project.

Project execution is concerned with assessing how much work has been put in.

The File should fulfill the following *assessment objectives*:

**Range of Research Methods used to obtain information**

**Execution of Research**

**Data Analysis**

Analyse Quantitative/ Qualitative information  
Control Quality

**Draw Conclusions**

**Examination Scheme:**

Project Report	50
Viva Voce	50
<b>Total</b>	<b>100</b>

# BIOPROCESS PLANT DESIGNING

**Course Code: BTE2705**

**Credit Units: 02**

## **Course Objective:**

The objective of this paper is to include not only the application of chemical engineering principles/unit operations to bioprocess systems but also to include the principles of disciplines of mechanical, electrical and industrial engineering to design a completely economically optimal process using living or subcomponent of cells.

## **Course Contents:**

### **Module I**

Introduction; general design information; Mass and energy balance; Flow sheeting; Piping and instrumentation; Materials of construction for bioprocess plants; Mechanical design of process equipment; Vessels for biotechnology application; Design of fermenters; Design considerations for maintaining sterility of process streams processing equipment; Selection and specification of equipment for handling fluids and solids; Selection, specification, design of heat and mass transfer equipment used in bioprocess industries; Design of facilities for cleaning of process equipment used in biochemical industries; Utilities for biotechnology production plants; Process economics; Bioprocess validation; Safety considerations; Case studies.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# MOLECULAR MEDICINE AND DIAGNOSIS

**Course Code: BTE2706**

**Credit Units: 02**

## **Course Contents:**

### **Module I**

Human Health and Diseases

### **Module II**

Human Diseases – morbidity, mortality, impact on social development

### **Module III**

Mechanism of disease development, Genetic susceptibility, Identification of targets for diagnosis and therapy: Acquired diseases, cardiovascular diseases, Neurological diseases, Hematology, Cancer

### **Module IV**

Epidemiology of disorders

# APPLICATIONS OF PLANT BIOTECHNOLOGY

**Course Code: BTE2707**

**Credit Units: 02**

## **Course Content:**

### **Module I**

Homozygous Plant Production through Ovule, Anther & Pollen Culture, Embryo Rescue & Embryo Culture, Endosperm Culture & Production of Seedless Plants, Apomixis & Experimental Polyembryony

### **Module II**

AFLP – Variety Identification & Fingerprinting; Molecular Farming; Marker Assisted Technology; Use of Bioreactors in Plant Production & Scale-up; Basic Aspects of Application-case studies; Metabolic Engineering

### **Module III**

Biotic & Abiotic Stress

Secondary Metabolites

Edible Vaccines and PHBV

Diagnostic Kits & Virus Indexing

## **Examination Scheme:**

# BIO-ENERGY ENGINEERING

**Course Code: BTE2708**

**Credit Units: 02**

## **Course Objective:**

The goal is to introduce students to biotechnology and tools that enable engineers and process scientists to connect innovations in industrial microorganisms and bioprocess unit operations to the engineering fundamentals, fundamentals of systems biology, and biological tools for design, modeling and evaluation of manufacturing facilities for the production of biofuels, bioproducts and biotherapeutics using a case study approach combined with computer modeling.

## **Course Contents:**

### **Module I: Biomass Sources, Characteristics & Preparation**

Biomass Sources and Classification. – Chemical composition and properties of different biomass materials and bio-fuels – Sugar cane molasses and other sources for fermentation ethanol-Sources and processing of oils and fats for liquid fuels- Energy plantations  
-Preparation of woody biomass: Size reduction, Briquetting of loose biomass, Drying, Storage and Handling of Biomass.

### **Module II: Biogas, Technology**

Feedstock for biogas production, Aqueous wastes containing biodegradable organic matter, animal residues-. Microbial and biochemical aspects- Operating parameters for biogas production Kinetics and mechanism - Dry and wet fermentation. Digesters for rural application-High rate digesters for industrial waste water treatment.

### **Module III: Bio-Ethanol and Bio-Diesel Technology**

Production of Fuel Ethanol by Fermentation of Sugars. Gasohol as a Substitute for Leaded Petrol. - Trans-Esterification of Oils to Produce Bio-Diesel.

### **Module IV: Pyrolysis and Gasification of Biomass**

Thermo-chemical conversion of ligno-cellulose biomass – Biomass processing for liquid fuel production - Pyrolysis of biomass-Pyrolysis regime, effect of particle size, temperature, and products obtained.

**Thermo-chemical gasification principles:** Effect of pressure, temperature and of introducing steam and oxygen. Design and operation of Fixed and Fluidized Bed Gasifiers.

### **Module V: Combustion of Biomass and Cogeneration Systems**

Combustion of Woody Biomass: Theory, Calculations and Design of Equipments. Cogeneration in Biomass Processing Industries. Case Studies: Combustion of Rice Husk, Use of Bagasse for Cogeneration.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# TERM PAPER

**Course Code: BTE2731**

**Credit Units: 02**

## METHODOLOGY

A term (or research) paper is primarily a record of intelligent reading in several sources on a particular subject.

The students will choose the topic at the beginning of the session in consultation with the faculty assigned. The progress of the paper will be monitored regularly by the faculty. At the end of the semester the detailed paper on the topic will be submitted to the faculty assigned. The evaluation will be done by Board of examiners comprising of the faculties.

## GUIDELINES FOR TERM PAPER

The procedure for writing a term paper may consists of the following steps:

- Choosing a subject
- Finding sources of materials
- Collecting the notes
- Outlining the paper
- Writing the first draft
- Editing & preparing the final paper

### 1. Choosing a Subject

The subject chosen should not be too general.

### 2. Finding Sources of materials

- m) The material sources should be not more than 10 years old unless the nature of the paper is such that it involves examining older writings from a historical point of view.
- n) Begin by making a list of subject-headings under which you might expect the subject to be listed.
- o) The sources could be books and magazines articles, news stories, periodicals, scientific journals etc.

### 3. Collecting the notes

Skim through sources, locating the useful material, then make good notes of it, including quotes and information for footnotes.

- m) Get facts, not just opinions. Compare the facts with author's conclusion.
- n) In research studies, notice the methods and procedures, results & conclusions.
- o) Check cross references.

### 4. Outlining the paper

- i) Review notes to find main sub-divisions of the subject.
- j) Sort the collected material again under each main division to find sub-sections for outline so that it begins to look more coherent and takes on a definite structure. If it does not, try going back and sorting again for main divisions, to see if another general pattern is possible.

### 5. Writing the first draft

Write the paper around the outline, being sure that you indicate in the first part of the paper what its purpose is. You may follow the following:

- a) statement of purpose
- b) main body of the paper
- c) statement of summary and conclusion

Avoid short, bumpy sentences and long straggling sentences with more than one main ideas.

## **6. Editing & Preparing the final Paper**

- y) Before writing a term paper, you should ensure you have a question which you attempt to answer in your paper. This question should be kept in mind throughout the paper. Include only information/ details/ analyses of relevance to the question at hand. Sometimes, the relevance of a particular section may be clear to you but not to your readers. To avoid this, ensure you briefly explain the relevance of every section.
- z) Read the paper to ensure that the language is not awkward, and that it "flows" properly.
- aa) Check for proper spelling, phrasing and sentence construction.
- bb) Check for proper form on footnotes, quotes, and punctuation.
- cc) Check to see that quotations serve one of the following purposes:
  - (xiii) Show evidence of what an author has said.
  - (xiv) Avoid misrepresentation through restatement.
  - (xv) Save unnecessary writing when ideas have been well expressed by the original author.
- dd) Check for proper form on tables and graphs. Be certain that any table or graph is self-explanatory.

Term papers should be composed of the following sections:

- Title page
- Table of contents
- Introduction
- Review
- Discussion & Conclusion
- References
- Appendix

Generally, the introduction, discussion, conclusion and bibliography part should account for a third of the paper and the review part should be two thirds of the paper.

### **Discussion**

The discussion section either follows the results or may alternatively be integrated in the results section. The section should consist of a discussion of the results of the study focusing on the question posed in the research paper.

### **Conclusion**

The conclusion is often thought of as the easiest part of the paper but should by no means be disregarded. There are a number of key components which should not be omitted. These include:

- q) summary of question posed
- r) summary of findings
- s) summary of main limitations of the study at hand
- t) details of possibilities for related future research

### **References**

From the very beginning of a research project, you should be careful to note all details of articles gathered.

The bibliography should contain ALL references included in the paper. References not included in the text in any form should NOT be included in the bibliography.

The key to a good bibliography is consistency. Choose a particular convention and stick to this.

## **Bibliographical conventions**

### **Monographs**

Crystal, D. (2001), *Language and the internet*. Cambridge: Cambridge University Press.

### **Edited Volumes**

Gass, S./Neu, J. (eds.) (1996), *Speech acts across cultures. Challenges to communication in a second language*. Berlin/ NY: Mouton de Gruyter.

[(eds.) is used when there is more than one editor; and (ed.) where there is only one editor. In German the abbreviation used is (Hrsg.) for Herausgeber].

### **Edited Articles**

## **Appendix**

The appendix should be used for data collected (e.g. questionnaires, transcripts,...) and for tables and graphs not included in the main text due to their subsidiary nature or to space constraints in the main text.

**Assessment Scheme:****Continuous Evaluation:**

40%

(Based on abstract writing, interim draft, general approach, research orientation, readings undertaken etc.)

**Final Evaluation:**

60%

(Based on the organization of the paper, objectives/ problem profile/ issue outlining, comprehensiveness of the research, flow of the idea/ ideas, relevance of material used/ presented, outcomes vs. objectives, presentation/ viva etc.)

# PROJECT

Course Code: BTE2732

Credit Units: 02

## Objectives:

The aim of the project is to provide the students with an opportunity to further their intellectual and personal development in the chosen field by undertaking a significant practical unit of activity. The project can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

## Chapter Scheme and distribution of marks:

Chapter 1: Introduction – 10 marks

Chapter 2: Conceptual Framework/ National/International Scenario – 25 marks

Chapter 3: Presentation, Analysis & Findings -- 25 marks

Chapter 4: Conclusion & Recommendations -- 10 marks

Chapter 5: Bibliography -- 05 marks

Project Report	Power Point Presentation & Viva
75 marks	25 marks

## Components of a Project Report

The outcome of Project Work is the Project Report. A project report should have the following components:

**1) Cover Page:** This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.

**2) Acknowledgement:** Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.

**3) Table of Content:** Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.

**4) Body of the Report:** The body of the report should have these four logical divisions

a) **Introduction:** This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, and method of analysis), Limitations of the Study, and Chapter Planning.

b) **Conceptual Framework / National and International Scenario:** (relating to the topic of the Project).

c) **Presentation of Data, Analysis and Findings:** (using the tools and techniques mentioned in the methodology).

d) **Conclusion and Recommendations:** In this section, the concluding observations based on the main findings and suggestions are to be provided.

**5) Bibliography or References:** This section will include the list of books and articles which have been used in the project work, and in writing a project report.

**6) Annexures:** Questionnaires (if any), relevant reports, etc.

(The main text of the Project should normally be in the range of 5000 words. However, there may be annexure in addition to the main text)

## **The Steps of a Project Report**

**Step I :** Selection of the topic for the project by taking following points into consideration:

- Suitability of the topic.
- Relevance of the topic
- Time available at the disposal.
- Feasibility of data collection within the given time limit.
- Challenges involved in the data collection (time & cost involved in the data collection, possibility of getting responses, etc.)

**Step II :** Finalisation of the Topic and preparation of Project Proposal in consultation with the Supervisor.

**Step III :** Collection of information and data relating to the topic and analysis of the same.

**Step IV:** Writing the report dividing it into suitable chapters, viz.,

Chapter 1: Introduction,

Chapter 2: Conceptual Framework / National & International Scenario,

Chapter 3: Analysis & Findings

Chapter 4: Conclusion and Recommendations.

**Step V:** The following documents are to be attached with the Final Project Report.

- 1) Approval letter from the supervisor (Annexure-IA)
- 2) Student's declaration (Annexure-IB)
- 3) Certificate from the Competent Authority of the Organisation / Institution, if the student undertakes the Project Work in any Organisation / Institution.

### **Guidelines for Evaluation:**

- Each of the students has to undertake a Project individually under the supervision of a teacher and to submit the same following the guidelines stated below.
- Language of Project Report and Viva-Voce Examination may be English. The Project Report must be typed and hard bound.
- Failure to submit the Project Report or failure to appear at the Viva-voce Examination will be treated as "Absent" in the Examination. He /she has to submit the Project Report and appear at the Viva-Voce Examination in the subsequent years (within the time period as per University Rules).
- No marks will be allotted on the Project Report unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her Project Report.
- Evaluation of the Project Work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate.

## WORKSHOP / CERTIFICATION

**Course Code: BTE2733**

**Credit Units: 02**

### Objectives

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two way. The trainer has to make sure that the aspect covered are practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

### Major Themes for Workshop

The workshop may be conducted on any of the following major themes:

Accounting

Finance

Human Resources

Marketing

Economics

Operations

Supply Chain Management

These themes are merely indicative and other recent and relevant topics of study may be included.

### Guidelines for Workshop

The procedure for earning credits from workshop consists of the following steps:

Relevant study material and references will be provided by the trainer in advance.

The participants are expected to explore the topic in advance and take active part in the discussions held

Attending and Participating in all activities of the workshop

Group Activities have to be undertaken by students as guided by the trainer.

Evaluation of workshop activities would be done through test and quiz at the end of the workshop.

Submitting a write up of at least 500 words about the learning outcome from the workshop.

### Methodology

The methodology followed at the workshop could be based on any one or more of the following methods:

Case Study

Business Game

Simulation

Group Activity

Role Play

Business Planning

Quiz

### Evaluation Scheme:

Attendance	Active Participation	Multiple Choice Questions/ Quiz	Solving the case/ Assignment/ Write up	Total
10	30	30	30	100

# Syllabus – Eighth Semester

## PROJECT/ DISSERTATION

**Course Code: BTE2837**

**Credit Units: 17**

### **Course Objective:**

The students are expected to utilize their scheduled periods by undertaking the project that would be completed during the semester

Every student shall undertake a major Project. The major Project shall be undertaken in some biotechnology industry or laboratory of repute. Each student shall be assigned to a faculty who shall continuously monitor the progress of the Project in the concerned laboratory or industry. The faculty, in consultation with the concerned scientist of the industry/laboratory, shall decide the topic of the project. At the conclusion of the project the student shall submit a seminar and a dissertation. The dissertation shall be evaluated by the internal faculty/examiner. The student then shall have to appear for the viva voce examination.

### **GUIDELINES FOR PROJECT FILE**

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critiqued by the faculty guide and corrected by the student at each stage.

The File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation.

### **In general, the File should be comprehensive and include**

- A short account of the activities that were undertaken as part of the project;
- A statement about the extent to which the project has achieved its stated goals.
- A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;
- Any activities planned but not yet completed as part of the project, or as a future initiative directly resulting from the project;
- Any problems that have arisen that may be useful to document for future reference.

### **Report Layout**

The report should contain the following components:

#### **➤ Title or Cover Page**

The title page should contain the following information: Project Title; Student's Name; Course; Year; Supervisor's Name.

➤ **Acknowledgements** (optional)

Acknowledgment to any advisory or financial assistance received in the course of work may be given.

➤ **Abstract**

A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project

➤ **Table of Contents**

Titles and subtitles are to correspond exactly with those in the text.

➤ **Introduction**

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

➤ **Materials and Methods**

This section should aim at experimental designs, materials used. Methodology should be mentioned in details including modifications if any.

➤ **Results and Discussion**

Present results, discuss and compare these with those from other workers, etc. In writing these section, emphasis should be given on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

➤ Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary never write in "point" form.

➤ **Conclusion**

A conclusion should be the final section in which the outcome of the work is mentioned briefly.

➤ **Future prospects**

➤ **Appendices**

The Appendix contains material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

➤ **References / Bibliography**

This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

## Examples

### *For research article*

Voravuthikunchai SP, Lortheeranuwat A, Ninrprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichia coli* O157: H7. *Clin Microbiol Infect*, 8 (suppl 1): 116–117.

### *For book*

Kowalski, M.(1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), 7: 63-67

## ASSESSMENT OF THE PROJECT FILE

Essentially, marking will be based on the following criteria: the quality of the report, the technical merit of the project and the project execution.

Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project.

Project execution is concerned with assessing how much work has been put in.

The File should fulfill the following *assessment objectives*:

## Range of Research Methods used to obtain information

### Execution of Research

#### Data Analysis

Analyse Quantitative/ Qualitative information

Control Quality

### Draw Conclusions

#### Examination Scheme:

Dissertation: 100

Viva Voce: 100

**Total: 200**

## **Master of Science - Biotechnology**

**FLEXILEARN**

-Freedom to design your degree

**Curriculum & Scheme of Examination**

**2020**

**AMITY UNIVERSITY HARYANA**

**GURUGRAM**

# Syllabus – First Semester

## BIOCHEMISTRY

**Course Code: BTH4101**

**Credit Units: 02**

### Course Objective:

The course is aimed to impart an in-depth understanding into the dynamic processes with which various biomolecules undergo in a living system. The understanding of above has its ramifications in medicine, nutrition, agriculture, fermentation and natural products chemistry.

### Course Contents:

#### Module I: Chemical basis of Life

Composition of living matter; properties of water, properties of biomolecules in aqueous environment; biomolecular interactions; bioenergetics

#### Module II: Carbohydrates

Structure and functions of carbohydrates; carbohydrate metabolism: glycolysis, Krebs' cycle, phosphogluconate pathway, glyoxylate pathway, pentose phosphate pathway, Cori cycle, Gluconeogenesis and glycogenolysis and its regulation. Oxidative phosphorylation. Major metabolic disorders of carbohydrate metabolism: diabetes.

#### Module III: Amino acids and Proteins

Structure and functions of amino acid and proteins; Overview of amino acid biosynthesis, biosynthesis of aromatic (phenylalanine, tryptophan and tyrosine) and branched chain (valine, leucine and isoleucine) amino acids; urea cycle, porphyrin and heme metabolism, succinate-glycine pathway; Major metabolic disorders of amino acid metabolism, biological Nitrogen fixation; structure and functions of vitamin derivative co-factors;

#### Module IV: Lipids

Structure and functions of lipids and derivative lipids: glycerols, fatty acids, waxes, phospholipids, sphingolipids, lipoproteins. Biosynthesis and oxidation of fatty acids; Cholesterol synthesis; formation of ketone bodies. Integration of lipid metabolism; acetic acid as a central precursor for biosynthesis of lipids.

#### Module V: Nucleotide Metabolism

Structure and functions of nucleic acids DNA and RNA. De novo and salvage pathways for synthesis of pyrimidine and purine nucleotides; purine degradation, pyrimidine breakdown; reduction of ribonucleotides to deoxyribonucleotides, thymidylate synthetase – as target enzyme for chemotherapy. Major metabolic disorders of nucleotide metabolism Gout, Lesch-Nahur syndrome, immuno deficiency)

### Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# PLANT& ANIMAL PHYSIOLOGY

**Course Code: BTH4102**

**Credit Units: 02**

## **Course Objective:**

Course objective to provide the knowledge about plant and animal physiology that should be useful to understand and apply different concepts of biotechnology

## **PLANT PHYSIOLOGY**

### **Course Contents:**

#### **Module I**

Water relation, Ion and solute transport, Mineral nutrition and deficiency, Translocation in the phloem, Transpiration.

#### **Module II**

Photosynthesis, photochemical reaction, photophosphorylation and carbon fixation pathways: C3, C4 and CAM pathways.

#### **Module III**

Respiration, electron transport chain, oxidative phosphorylation, photorespiration, chemiosmotic theory and ATP synthesis.

#### **Module IV**

Plant growth and development, growth regulators (physiological effect), photoperiodism and flowering, vernalization and senescence.

## **ANIMAL PHYSIOLOGY**

### **Course Contents:**

#### **Module I: Physiology of Digestive System**

Composition and function of saliva, Mechanical and chemical digestion, Functions of pancreatic juices and biles, Absorption and distribution of food

#### **Module II: Physiology of Cardiovascular System**

Blood, Blood Groups and Blood Transfusion, Blood Clotting, Hemodynamics, Cardiac Cycle and its regulation,

#### **Module III: Physiology of Neuromuscular System**

Contraction and relaxation of muscle, Sarcomere, Cori's cycle, Organization of Nervous System, Neuron, Nerve Impulse, Synaptic Transmission, Neurotransmitters.

#### **Module IV: Endocrine Physiology and Unrinogential System**

Endocrine gland in mammals, general account of thyroid, parathyroid, pituitary, pancreatic islets, nephron, glomerularfiltration, hormonal regulation of spermatogenesis, ovulation, fertilization and pregnancy.

### **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# MICROBIOLOGY

**Course Code: BTH4103**

**Credit Units: 03**

## **Course Objective:**

To acquaint the students about the microbiology and role of various microorganisms in different biotechnological applications, various techniques for their cultivation and control

## **Course Contents:**

### **Module I: Introduction and historical perspective**

Discovery of microbial world, controversy over spontaneous generation, Concept of pure culture, Theory and practice of sterilization; Isolation of microorganisms, staining methods, microscopy, preservation of microbial cultures

### **Module II**

**Microbial Physiology:** cell structure and function. Microbial growth: Growth curve, growth parameters, batch and continuous cultures diauxic and synchronous growth Enumeration of cells by direct and indirect methods, microbial growth control, phototrophy; chemolithotrophy, anaerobic way of life, Microbial fermentations, Microbial Stress Responses.

### **Module III**

**Evolutionary microbiology and microbial diversity:** Microbial evolution and systematics, prokaryotic diversity: bacteria and archaea, eukaryotic microorganisms (structure of algae and fungi), microbial community analysis (overview), classical and molecular taxonomy.

**Virology:** Viruses and virions, growth and quantification, viral replication, viroids and prions, Bacterial, plant and animal viruses,

### **Module IV**

**Microbial Ecology** Methods in microbial ecology (culture dependent and culture independent techniques), microbial habitats and nutrient cycling (Carbon, sulphur and nitrogen cycles), plant-microbes, animal-microbes interactions. Soil microorganisms associated with vascular plants, bioremediation and biodegradation.

### **Module V**

**Medical Microbiology:** Normal microbiota, host pathogen interactions, epidemiology of microbial diseases, Microbial toxins, microbial diseases (e.g. AIDS, influenza, tuberculosis, diphtheria, Botulism, tetanus, *E.coli* diarrhoea and hepatitis), Antibiotics,

### **Module VI**

**Applied microbiology:** Biocatalysts, microbial metabolites, wine production, single cell proteins, microbial transformation of steroids, role of microbes in food industry, production of dairy products (fermented milks and cheese), Role of microbes in Agriculture (biofertilizers, biopesticides), Waste water treatment.

## **Examination Scheme:**

# GENETICS

**Course code: BTH4104**

**Credit Units: 03**

## **Course objective:**

Genetics is pivotal to modern life sciences. Genetic principles are unifying principles applicable across all the living forms. "Gene" is central to genetics, molecular biology and genetic engineering. Therefore the basic objectives of this course are to apprise the students with both classical and molecular genetics.

## **Course Contents:**

### **Module I**

Introduction and scope, Mendel's laws of inheritance, alleles, inter-allelic relationships, multiple alleles, human pedigree analysis. Mitosis and Meiosis, chromosomal basis of inheritance, cell cycle. Gene interactions: Epistasis, modifications in gene expression, gene modifiers, penetrance and expressivity. Life cycle of model organisms used in genetics: *Neurospora*, *Drosophila*, Maize.

### **Module II**

DNA as genetic material, Structure of DNA and RNA. Basic aspects of DNA replication. Chromosomes: Types of chromosomes: Polytene and lampbrush, sex chromosomes, Karyotype, Euchromatin and Heterochromatin, Sex determination in plants, *Drosophila* and Humans. Dosage compensation.

### **Module III**

Linkage and crossing, gene mapping in lower and higher eukaryotes, molecular markers and their applications in gene mapping. Evolution of gene concept. Fine structure of gene: Benzer's experiment with rII region of T4 bacteriophage, complementation and recombination, Gene conversion, Modern concept of gene: Promoter and coding sequences; exons and introns. Genes and pseudogenes. Overlapping genes and alternative splicing.

### **Module IV**

Bacterial genetics: conjugation and transduction, lysogenic and lytic cycles of lambda phage, specialized and generalized transduction, plasmids. Extranuclear inheritance: extrachromosomal and cytoplasmic inheritance. Mitochondrial and chloroplast heredity. Gene organization: Eukaryotes (Nuclear, chloroplast and mitochondrial) and prokaryotes. Transposable elements: Transposons and retrotransposons.

### **Module V**

Mutations, spontaneous and induced mutations. Mutagens and mutagenesis. Structural and numerical changes in chromosomes: Structural rearrangements: deletions, duplication, inversions and translocations. Numerical changes: Haploidy, polyploidy and aneuploidy. Chromosomal non-disjunction, chromosomal disorders in humans. Origin and evolution of wheat and *Brassica*.

### **Module VI**

Population genetics: Hardy – Weinberg genetic equilibrium, Genetic polymorphism, causes of changes in gene frequency (migration, selection, genetic drift, inbreeding and mutations), genetic load. Importance of population genetics in modern biology. Developmental genetics: Genes in early development, pattern formation genes and homeotic genes.

## **Examination Scheme:**

## FOUNDATION COURSE - I (MATHEMATICS)

**Course code: BTH4105**

**Credit Units: 02**

### **Course Objective:**

This course will enable the students to achieve skills in mathematics that are essential for application in biology.

### **Course Contents:**

#### **Module I**

Real Number System, Elements of Coordinate Geometry and Algebra Trigonometry: Trigonometric Functions, Series Expansion, Inverse, General Values, Graphs, Calculus: Limits, Continuity, Analysis, Differentiation (1D & Partial), Riemann Integration, Definite Integrals, Recursion Theorems.

#### **Module II**

Ordinary & Partial Differential Equation: 1<sup>st</sup> Order & 2<sup>nd</sup> Order Ordinary Differential Equations. Self Adjoint Equations, Special Functions, Nature of Partial Differential Equations, Method of Separation of Variables.

#### **Module III**

Vector & Matrices: Vector Algebra, Vector Calculus, Basic Computations, Matrices Introduction To Set Theory & Groups: Introductory Notions, Composition, Boolean Logic Algebraic Structures, Groups, Vector Spaces. Numerical Techniques: Basic Formalism, Methods for Solving Equations, Finding Eigenvalues & Eigenvectors, Solving ODE & PDE, Differentiation and Integration

## FOUNDATION COURSE - II (PHYSICS)

Course code: BTH4106

Credit Units: 02

### Course objective:

This course will enable the students to achieve skills in physics that are essential for application in biotechnology.

### Course Contents:

#### Module I

Properties of Matter: Atomic masses and *Avogadro's* number, Inter-atomic interactions, binding and molecules, Transport properties: effusion, diffusion, viscosity and conductivity, *van-der-Waals* equation, Structure of liquids, Surface energy, surface tension and capillary action, Flow properties and viscosity, Elasticity; Young's, shear and bulk modulus, Crystal structure and symmetry, X-ray diffraction and *Bragg's* law.

#### Module II

Quantum Physics: Wave-particle duality and de Broglie relation, Heisenberg's Uncertainty Principle, Wave function and role of probability, Photoelectric effect, Quanta, Particles, Schrodinger's wave equation.

#### Module III

Thermal Physics: Concept of thermodynamic state, Heat and Work, Internal energy function and First law of thermodynamics, Entropy and Second law of thermodynamics, Entropy maximum and energy minimum principles, Thermodynamic potentials.

#### Module IV

Electromagnetism: Electric charge and its properties, Coulomb's law and superposition, Electric field and potential, Capacitance, Magnetic fields, Lorentz force, Ampère's laws, Electromotive force, Electromagnetic induction; Faraday and Lenz's laws, Forces on charge in Electric and Magnetic field.

# BIOCHEMISTRY LAB

Course Code: BTH4107

Credit Units: 02

## Course Contents:

### Module I: Solutions and buffers

Preparation of molar, normal and % (w/v) solutions. preparation of buffers of different pH and molar strength.

### Module II: Carbohydrates

Extraction and estimation of carbohydrates from given plant/animal materials: determination of total sugars by Anthrone method Separation of sugars by thin layer chromatography

### Module III: Proteins

Extraction of total proteins; Estimation of proteins by Lowery/ Bradford Method; Electrophoretic (SDS-PAGE) separation of isolated proteins

### Module IV: Lipids

Extraction of total lipids; estimation of phospholipids/glycolipids; thin layer chromatographic separation of lipids

### Module IV: Nucleic Acid

Extraction and estimation of DNA and RNA by UV-spectrophotometer

## PLANT & ANIMAL PHYSIOLOGY LAB

**Course Code: BTH4108**

**Credit Units: 02**

### **Plant Physiology**

- Effects of plant growth hormones on rooting and shooting.
- Estimation of salicylic acid as secondary signaling molecule in plants
- Separation of photosynthetic pigments through thin layer chromatography
- Determination of Respiration Quotient (RQ)

### **Animal Physiology**

- Enumeration of red blood cells using hemocytometer.
- Estimation of haemoglobin using Sahli's hemoglobinometer.
- Preparation of haemin and hemochromogen crystals.
- Enumeration of total and differential count of white blood cells.
- Effect of pH on amylase activity from saliva.
- Biochemical analysis: carbohydrate, proteins and fats.
- Estimation of serum bilirubin (direct and indirect method).

# MICROBIOLOGY LAB

Course Code: BTH4109

Credit Units: 01

## Course Contents:

- Laboratory safety and instrument handling, General rules and regulations, Aseptic techniques, preparation of culture media for cultivation of specific microorganisms.  
Observation of permanent slides (*E.coli*, *Yeast*, *Sarcina*, *Streptococcus*, *Acid fast staining*)
- Isolation and enumeration of microorganisms from air, water and rhizosphere (actinomycetes, bacteria and fungi), serial dilution and viable plate counting methods, Use of differential, selective and enriched media.
- Staining techniques: Simple staining, differential Gram staining, endospore staining, lactophenol cotton blue staining for fungi
- Growth curve measurement of bacterial population by turbidometry
- Biochemical tests – Triple Sugar Iron test (TSI) ,Indole test. Methyl red test. Vogesproskauer test, Citrate utilization test (IMViC), starch hydrolysis, casein hydrolysis, catalase test
- Water microbiology- presumptive, confirmed and complete test for water potability.

**Credit Units: 01**

## **Course Contents:**

- To make squash preparations of pre-treated metaphase chromosomes, and PMCs to view diplotene, diakinesis, metaphase I and anaphase I in *Phlox drummondii*, *Allium cepa* and (or) *Rhoeodiscolor*
- Preparation of karyograms from the given photographs for karyotypic formula
- To study through photographs normal and deviant cytogenetic mechanisms
- Study of Mendel's laws, and deviations from Mendelian ratios using seed samples in the ratios of 9:7, 9:4:3, 13:3, 15:1, 12:3:1. Use Chi-Square Test for Testing the ratios
- Isolation of chloroplasts by sucrose gradient. Photographs of Restriction site variation of chloroplast DNA
- Exercises wrt determination of correct sequence and distance between the linked genes
- Induction and recovery of mutants in bacteria by UV irradiation
- Conjugation in bacteria
- Interaction of a transposable element with a maize and (or) snapdragon gene(s)
- Demonstration of induced puffing in the salivary gland chromosomes of *Drosophila melanogaster* larvae Problems on quantitative genetics

# Syllabus – Second Semester

## MOLECULAR BIOLOGY

**Course Code: BTH4201**

**Credit Units: 02**

**Course objective:** The objective of this course is to provide an understanding of the molecular aspects of the structure and function of the genetic material and their implication in regulating the functioning of the cell.

### Course Contents:

#### Module I : Basics of molecular biology

Central dogma, structure of DNA and RNA –physical and chemical properties, reassociation kinetics, Genes and chromosomes, genome organization in prokaryotes and eukaryotes.

#### Module II : Replication

DNA Polymerases, concept of origin of replication, modes of DNA replication, replication fork, okazaki fragments, leading and lagging strands, problems of linear replicons.

Mechanism of replication in prokaryotes and eukaryotes – initiation, elongation and termination, involvement of proteins and enzymes (including DNA polymerase) in replication, fidelity of replication, replication of RNA.

#### Module III : Repair and recombination

Photoreactivation, excision repair, error prone repair, recombination and post replication repair, mismatch repair, SOS mechanism, Recombination – models of recombination (Holliday model etc).

#### Module IV: Transcription

Gene and its control regions, structure of protein coding genes; promoter and enhancers.

Coding sequences, split genes, introns, exons. Transcription in prokaryotes and eukaryotes – RNA Polymerases, structure and function, transcription factors and their functions, mechanism of transcription.

#### Module V: Processing of RNA

Different types of RNA – coding RNA, post transcriptional modifications – 5' cap formation, 3' polyadenylation, RNA editing, splicing type I, II, spliceosomes, ribozymes. Non – coding RNAs, miRNA, siRNA, gene silencing.

#### Module VI: Translation

Concept of genetic code, tRNA structure, Ribosomes – prokaryotic and eukaryotic ribosomes, composition and structure, rRNA, proteins involved in translation, amino acid activation, mechanism of translation in prokaryotes and eukaryotes – initiation, elongation and termination, fidelity of translation.

#### Module VII: Regulation of gene expression

Prokaryotes : concept of operon, lac operon, repressors, negative and positive control, c AMP, trp operon, attenuation, transcriptional activators, transcriptional regulatory proteins, repressors. Regulatory mechanisms in protein coding eukaryotic genes.

### Examination Scheme:

Components	H/S	Q	CT2	EE
Weightage (%)	15	5	20	60

# PLANT BIOTECHNOLOGY

Course Code: BTH4202

Credit Units: 02

## MODULE I Plant Regeneration Technologies

Introduction and historical perspective, organ culture, cell suspension, organogenesis, somatic embryogenesis, micro propagation, anther and ovary culture-haploid production, embryo culture and rescue, protoplast culture, somatic hybridization and cybrids.

## MODULE II Transgenic Plants Technology

Genetic Transformation, Methods for gene transfer in plants, Molecular mechanism of *Agrobacterium* mediated transformation. Selectable markers, Reporter gene and Promoters used in plant transformation vectors. Selection of transgenic (verification of transgene and agronomic traits). Marker free transgenics

## MODULE III Industrial and Agricultural Application

Biotic stress tolerance; insect, pest and pathogen resistance. Abiotic stress tolerance; salt, water and drought tolerance. Herbicide tolerance. Molecular farming and industrial and pharmaceutical products. Present status of transgenic plants and its ethical and regulatory consideration.

### Examination Scheme:

Components	H/S	A	CT	EE
Weightage (%)	10	5	15	70

# IMMUNOLOGY

**Course Code: BTH4203**

**Credit Units: 02**

## **Course Objectives:**

Aim of this course is to provide in-depth information of immune-system and its implication for health and diseases. Knowledge about the principles and applications of immune-assay to evaluate the immune-status.

## **Course Contents:**

### **Module I**

#### **Introduction:**

Overview of immune system: Types of immunity clonal nature of immune response; Organization and structure of lymphoid organs; Hematopoiesis and differentiation; Cells of the Immune System

### **Module II**

#### **Antigen and Antibody:**

Antigens: Types, Responses and Characteristics, Immunoglobulin: structure, function, antibody diversity and its mechanism, Therapeutic applications of antibodies.

### **Module III**

#### **Mechanism of Immune-response:**

Complement system, Major histocompatibility complex, Lymphocyte Biology: Development, differentiation and activation of lymphocytes, Cytokines and Cell Signaling, Homeostatic Regulation of Immune Responses.

### **Module IV**

#### **Immune-system in Health and Disease:**

Transplantation Immunology, Tumor Immunology, Infection and Infectious Disease, Hypersensitivity, Immune System Disorders; Immunotherapy, Vaccines

### **Module V**

#### **Immunoassays:**

Methods of antibody production and their use in Immunoassays; Immunodiffusion, Immunoelectrophoresis and Immunohistochemistry; ELISA,-principle, types and applications; Flow cytometry

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# ENVIRONMENTAL BIOTECHNOLOGY

Course code: BTH4204

Credit Units: 02

## COURSE OBJECTIVE

To familiarize the students with the processes and microorganisms used for a cleaner environment with respect to various microbial treatments, biofuels, biofertilizers, biopesticides, biomineralization, biodegradation etc. The course also aims to make the students aware of legislations prevalent to control the deterioration of our ecosystem.

## COURSE CONTENTS

### Module-I:

Renewable and Non-renewable energy resources, Biofuels: Bioethanol, Biodiesel, Biogas and Algal fuels

### Module-II:

Bioremediation and Biodegradation of major environmental pollutants- heavy metals, pesticides and hydrocarbons

Biomineralization- Use of microbes for mining of metals from ores

### Module-III

Biofertilizers- Concept of N<sub>2</sub>-fixation, nodule formation, azolla, cyanobacteria, rhizobium and VAM  
Biopesticides and IPM

## Examination Scheme

Components	CT	Attendance	Assignment/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# CELL BIOLOGY

**Course Code: BTH4205**

**Credit Units: 02**

## **Course Objective:**

The object of the present course is to develop basic knowledge and skills in cell and molecular biology and to understand the structure and function of the cellular and sub cellular components of cells and tissues with the help of recent techniques. This course will help students to get an understanding of cell function at the molecular level including the fundamentals of DNA. They will become aware of the complexity and harmony of the cell. Applications of cellular and molecular biology in Biotechnology will also be presented.

## **Course Contents:**

**Module-I: Membrane Structure :** Chemical and physical properties of cell membranes and their major components, significance of these properties to membrane structure, integral and peripheral membrane proteins, biosynthesis of membrane and secreted proteins.

Structure of nuclear envelope, nuclear pore, complex. transport across nuclear envelope; regulation of nuclear import

**Module-II: Cell Trafficking :** Targeting proteins to endoplasmic reticulum, signal recognition particle, signal recognition particle receptor, protein folding and processing in ER protein export from ER; Protein sorting and export from Golgi Apparatus; SNARE hypothesis; Protein import into Mitochondria, mitochondrial genome; Import and sorting of chloroplast protein.

Targeting of proteins to membranes, mechanisms for transport of small molecules across the membrane, including simple diffusion, facilitative diffusion, primary and secondary active transport, action of ionophores ; transport across nuclear envelope; regulation of nuclear import.

**Module-III: Cell division and regulation of cell cycle:** control of the cell cycle and the proteins involved; know the role of the cyclins and cyclin-dependent kinases, cell cycle checkpoints, methods for synchronizing the cell cycle in cell populations

**Module-IV: Intracellular Signaling** - Modes of cell signaling, steroid hormone receptors, peptide hormones and growth factor, plant hormones, G-protein coupled receptors; receptor –protein tyrosine kinase , c- AMP pathway of signal transduction ; c GMP, phospholipids and calcium ions , Ras, Raf , MAP kinase pathway , JAK –STAT pathway , Apoptosis –role of caspases.

## **Suggested reading:**

# BIOSTATISTICS

**Course Code: BTH4206**

**Credit Units: 02**

## **Course Objective:**

The course aims to develop competency and expertise in the application of statistical methods applied to biological data obtained in experimental techniques.

## **Course Contents:**

### **Module I: Descriptive statistics**

Measures of Central Tendency (Mean, Median, Mode), Measures of dispersion (Range, Mean Deviation, Standard Deviation, Quartile Deviation), combined mean and variance, covariance, Graphs (Bar Chart, Pie Chart, Box Plot, Histogram, Ogive, scatter plot)

### **Module II**

Probability (Addition and Multiplication Theorem), Bayes theorem, Binomial, Poisson and Normal distribution. Correlation and linear regression

### **Module III: Inferential statistics**

Formulation of Hypothesis (One-tailed & Two-tailed), Type I and Type II errors, power of a test, Significance of a test, P-value testing, Hypothesis Testing (students T-test, Chi-square test). Analysis of variance (ANOVA) one and two way . Pearson correlation test.

### **Module IV**

Sampling theory and different techniques, Applications of statistical methods using statistical software, SAS.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## CELL & MOLECULAR BIOLOGY LAB

Course code: BTH4207

Credit Units: 02

### Course Content:

- Isolation of cell organelles by centrifugation.
- Study of membrane potential in isolated mitochondria
- Study of cell viability / death assay by use of trypan blue, MTT assay and wright staining.
- Study of apoptosis through analysis of DNA fragmentation patterns in mitochondria
- Isolation of genomic DNA from bacteria, plant and animal tissues.
- Isolation of plasmid.
- Study of physico – chemical properties of DNA including its melting point.
- Study of repair in UV damaged DNA.

### Examination Scheme:

Components	H/S	Q	CT2	EE
Weightage (%)	15	5	20	60

## PLANT BIOTECHNOLOGY LAB

**Course Code: BTH4208**

**Credit Units: 01**

### **MODULE I:**

Tissue culture lab and organization.  
Study of sterilization techniques.

### **MODULE II:**

Preparation of stock and media.  
Surface sterilization of various explants.

### **MODULE III:**

Organ and callus culture.  
Anther and embryo culture.

### **MODULE IV:**

Protoplast isolation and culture.  
*Agrobacterium* mediated transformation in tobacco.

### **Examination Scheme:**

<b>Components</b>	<b>H/S</b>	<b>Q</b>	<b>CT2</b>	<b>EE</b>
<b>Weightage (%)</b>	15	5	20	60

# IMMUNOLOGY LAB

**Course Code: BTH4209**

**Credit Units: 02**

## Course Contents

- Agglutination – Blood typing/ Blood group study
- Blood Smear Preparation; Serum isolation; identification of different immune cells in the blood
- WIDAL
- Antigen/antibody purification by affinity chromatography
- Immunodiffusion: SRID and DRID
- Immunoelectrophoresis
- Immunohistochemistry
- ELISA: DOT ELISA, Straight ELISA; Sandwich ELISA

## Examination Scheme:

Components	H/S	Q	CT2	EE
Weightage (%)	15	5	20	60

# TERM PAPER

**Course Code: BTH4231**

**Credit Units: 02**

## **Course Objective :**

A term (or research) paper is primarily a record of intelligent reading in several sources on a particular subject. The students will choose the topic at the beginning of the session in consultation with the faculty assigned. The progress of the paper will be monitored regularly by the faculty. At the end of the semester the detailed paper on the topic will be submitted to the faculty assigned. The evaluation will be done by Board of examiners comprising of the faculties.

## **GUIDELINES FOR TERM PAPER**

The procedure for writing a term paper may consist of the following steps:

1. Choosing a subject
2. Finding sources of materials
3. Collecting the notes
4. Outlining the paper
5. Writing the first draft
6. Editing & preparing the final paper

### **1. Choosing a Subject**

The subject chosen should not be too general.

### **2. Finding Sources of materials**

- a) The material sources should be not more than 10 years old unless the nature of the paper is such that it involves examining older writings from a historical point of view.
- b) Begin by making a list of subject-headings under which you might expect the subject to be listed.
- c) The sources could be books and magazine articles, news stories, periodicals, scientific journals etc.

### **3. Collecting the notes**

Skim through sources, locating the useful material, then make good notes of it, including quotes and information for footnotes.

- a) Get facts, not just opinions. Compare the facts with author's conclusion.
- b) In research studies, notice the methods and procedures, results & conclusions.
- c) Check cross references.

### **4. Outlining the paper**

- a) Review notes to find main sub-divisions of the subject.
- b) Sort the collected material again under each main division to find sub-sections for outline so that it begins to look more coherent and takes on a definite structure. If it does not, try going back and sorting again for main divisions, to see if another general pattern is possible.

### **5. Writing the first draft**

Write the paper around the outline, being sure that you indicate in the first part of the paper what its purpose is. You may follow the following:

- a) statement of purpose
- b) main body of the paper
- c) statement of summary and conclusion

Avoid short, bumpy sentences and long straggling sentences with more than one main idea.

### **6. Editing & Preparing the final Paper**

- a) Before writing a term paper, you should ensure you have a question which you attempt to answer in your paper. This question should be kept in mind throughout the paper. Include only information/ details/ analyses of relevance to the question at hand. Sometimes, the relevance of a particular section may be clear to you but not to your readers. To avoid this, ensure you briefly explain the relevance of every section.

- b) Read the paper to ensure that the language is not awkward, and that it "flows" properly.
- c) Check for proper spelling, phrasing and sentence construction.
- d) Check for proper form on footnotes, quotes, and punctuation.
- e) Check to see that quotations serve one of the following purposes:
  - (i) Show evidence of what an author has said.
  - (ii) Avoid misrepresentation through restatement.
  - (iii) Save unnecessary writing when ideas have been well expressed by the original author.
- f) Check for proper form on tables and graphs. Be certain that any table or graph is self-explanatory.

Term papers should be composed of the following sections:

1. Title page
2. Table of contents
3. Introduction
4. Review
5. Discussion & Conclusion
6. References
7. Appendix

Generally, the introduction, discussion, conclusion and bibliography part should account for a third of the paper and the review part should be two thirds of the paper.

### **Discussion**

The discussion section either follows the results or may alternatively be integrated in the results section. The section should consist of a discussion of the results of the study focusing on the question posed in the research paper.

### **Conclusion**

The conclusion is often thought of as the easiest part of the paper but should by no means be disregarded. There are a number of key components which should not be omitted. These include:

- a) summary of question posed
- b) summary of findings
- c) summary of main limitations of the study at hand
- d) details of possibilities for related future research

### **References**

From the very beginning of a research project, you should be careful to note all details of articles gathered.

The bibliography should contain ALL references included in the paper. References not included in the text in any form should NOT be included in the bibliography.

The key to a good bibliography is consistency. Choose a particular convention and stick to this.

### **Conventions**

Monographs

Crystal, D. (2001), *Language and the internet*. Cambridge: Cambridge University Press.

### **Edited volumes**

Gass, S./Neu, J. (eds.) (1996), *Speech acts across cultures. Challenges to communication in a second language*. Berlin/ NY: Mouton de Gruyter.

[(eds.) is used when there is more than one editor; and (ed.) where there is only one editor. In German the abbreviation used is (Hrsg.) for Herausgeber].

### **Edited articles**

Schmidt, R./Shimura, A./Wang, Z./Jeong, H. (1996), *Suggestions to buy: Television commercials from the U.S., Japan, China, and Korea*. In: Gass, S./Neu, J. (eds.) (1996), *Speech acts across cultures. Challenges to communication in a second language*. Berlin/ NY: Mouton de Gruyter: 285-316.

### **Journal articles**

McQuarrie, E.F./Mick, D.G. (1992), *On resonance: A critical pluralistic inquiry into advertising rhetoric*. *Journal of consumer research* 19, 180-197.

### **Electronic book**

Chandler, D. (1994), Semiotics for beginners [HTML document]. Retrieved [5.10.'01] from the World Wide Web, <http://www.aber.ac.uk/media/Documents/S4B/>.

### **Electronic journal articles**

Watts, S. (2000) Teaching talk: Should students learn 'real German'? [HTML document]. German as a Foreign Language Journal [online] 1. Retrieved [12.09.'00] from the World Wide Web, <http://www.gfl-journal.com/>.

### **Other websites**

Verterhus, S.A. (n.y.), Anglicisms in German car advertising. The problem of gender assignment [HTML document]. Retrieved [13.10.'01] from the World Wide Web, <http://olaf.hiof.no/~sverrev/eng.html>.

### **Unpublished papers**

Takahashi, S./DuFon, M.A. (1989), Cross-linguistic influence in indirectness: The case of English directives performed by native Japanese speakers. Unpublished paper, Department of English as a Second Language, University of Hawai'i at Manoa, Honolulu.

### **Unpublished theses/ dissertations**

Möhl, S. (1996), Alltagssituationen im interkulturellen Vergleich: Realisierung von Kritik und Ablehnung im Deutschen und Englischen. Unpublished MA thesis, University of Hamburg.

Walsh, R. (1995), Language development and the year abroad: A study of oral grammatical accuracy amongst adult learners of German as a foreign language. Unpublished PhD dissertation, University College Dublin.

### **Appendix**

The appendix should be used for data collected (e.g. questionnaires, transcripts, ...) and for tables and graphs not included in the main text due to their subsidiary nature or to space constraints in the main text.

### **Assessment Scheme:**

#### **Continuous Evaluation:**

40%

(Based on abstract writing, interim draft, general approach, research orientation, readings undertaken etc.)

#### **Final Evaluation:**

60%

(Based on the organization of the paper, objectives/ problem profile/ issue outlining, comprehensiveness of the research, flow of the idea/ ideas, relevance of material used/presented, outcomes vs. objectives, presentation/ viva etc.)

# Syllabus – Third Semester

## ANIMAL BIOTECHNOLOGY

**Course Code: BTH4301**

**Credit Units: 02**

**Course Objective:**

It aims to promote an understanding and knowledge of animal cell structure and function with particular emphasis on in vitro proliferation and differentiation.

**Course Contents:**

**Module I**

Introduction of animal cell culture, Primary culture and cell lines-culture substrate, Composition and types of culture media, initiation and maintenance of cell lines, cryopreservation

**Module II**

Transgenic animal production and application in production of therapeutic proteins, transgenic animals as bioreactors for production of pharmaceutically important compounds.

**Module III**

Transgenic mice through gene knock out and their application as model for human genetic disorder

**Module IV**

**DNA based vaccines**, subunit vaccines, peptide vaccines, recombinant DNA vaccines, attenuated vaccines, vector vaccines.

**Module V**

Transfection - microinjection, virus mediated gene transfer, stem cell mediated gene transfer , calcium phosphate method and liposome mediated method. Animal vectors - Animal vectors, Use of specific vectors for expression of genes in cell lines such as retrovirus, SV 40, adenovirus, Bovine papilloma virus and baculovirus expression vector

**Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# BIOPHYSICS & STRUCTURAL BIOLOGY

Course Code: BTH4302

Credit Units: 02

**Course Objective:** The course aims to provide an understanding of the canonical and non-canonical structure of the nucleic acids and the detail structure of proteins, enzymes etc. Detailed structural analysis will also give an idea about the mode of recognition of different biomolecules, nature of interaction and their role in therapy and nanotechnology.

## Course Contents:

### Module I: Canonical and Non-canonical Structure of Nucleic acids:

**Canonical Structure:** Structure of Nucleic acids, Detail structure of Double-Stranded DNA, Major and Minor groove, Chemical differences in DNA and RNA, Wobble base-pairing, DNA-drug interaction.

**Non-canonical Structures:** DNA polymorphism (A-DNA, B-DNA, Z-DNA), Parallel DNA, base flipping. Repeat elements (inverted repeat, mirror repeat and direct repeat) and cruciform structures, Intramolecular and Intermolecular Triplex DNA and its role in therapeutics, Intramolecular and intermolecular four-stranded DNA (G-quadruplex and i-motif), Telomeric DNAs of different eukaryotic species, role of telomere in cancer and aging, G-quadruplex as a therapeutic target, G-wire, role of G-quadruplex and i-motif in nanotechnology.

**Module II: Protein structure and function:** Primary structure of protein, Ramachandran plot, secondary structure of protein (alpha helix,  $3_{10}$  helix,  $\pi$ -helix,  $\beta$ -sheet, loops, turns), sequence and structural motifs (helix-turn-helix, helix-loop-helix, leucine zipper, Greek key motif etc.), tertiary and quaternary structure of proteins.

**Module III: Effect of physical and chemical parameters on structure and stability of Nucleic acids and proteins:** Effect of cations, pH, temperature and chemical agents on the structure and stability of nucleic acids and protein, concept of thermodynamic parameters (free energy, enthalpy and entropy).

**Module IV: Biomolecular Interactions:** DNA-protein interaction, DNA-drug interactions, protein-protein interactions (hemoglobin, myoglobin, G-protein coupled receptors).

**Module V: Characterization of Nucleic Acid Structure and Protein by biophysical and biochemical approach:** Structural analysis by UV-VIS spectroscopy, Circular Dichroism, NMR and X-ray crystallography, thermal stability of Nucleic acid structure and protein by thermal denaturation curves, Principles of Isothermal Calorimetry (ITC), Differential Scanning calorimetry (DSC), Fluorescence Spectroscopy.

# GENOMICS AND PROTEOMICS

**Course code: BTH4303**

**Credit Units: 02**

## **Course Objectives:**

The course covers the basic principles that underlying the structure, function, expression and evolution of diverse genomes and proteomes, by assessing contents of genomic /proteomic characterization and bioinformatics analysis. This course introduces a comprehensive overview of analytical platforms, computational tools; experimental design, analysis methods and databases intended to study DNA/protein sequences, characterization, gene expression and genome evolution, remodeling as well as the implications of this research.

## **Course Contents:**

### **Module I - Introduction & Structural Genomics**

Concepts of Genes and Genomes, Genome size, Sequence complexity, genome organization in diverse organisms (eukaryotes, prokaryotes, virus), and organelle genomes, genome evolution.

Structural features of the genome - Organization of single-copy sequences, Repetitive sequences (Tandem repeats, Copy Number variations, duplications, Transposable elements)

### **Module II – Resources of Genome Study**

Structuring genomic resources – Subdividing genomes, DNA markers, Genetic and Physical mapping, Mapping populations. Genome Sequencing (eukaryotic and prokaryotic) – methods (chemical, chain termination) and strategies (WGS, H-WGS, de novo), Human genome project (findings and impact). Next Generation Sequencing technologies (Pyrosequencing, Virtual terminator sequencing, Ion torrent, nanopore). Genome finishing – Annotation of genome (structural and functional- de novo, homology based).

### **Module III – Comparative and Functional Genomics**

Overview of sequence analysis – methods, databases, genome browsers (NCBI, UCSC, ENSEMBL). Homologs, paralogs, orthologs, synteny, colinearity and gene displacement. Implications of comparative genomics – molecular evolution and multigene family evolution. Forward and reverse genetics (Tools and Methods – mutagenesis, knock outs/ knock ins, RNAi, morpholino), genome wide expression analysis. Concept of Epigenomics, Concepts of genome evolution (finding signatures of function, remodeling and applications).

### **Module IV – Transcriptomics and Gene Expression**

mRNA/ protein expression profiles, Transcriptomes (tools and resources), Gene expression profiling / gene regulation (traditional to high throughput techniques- Northern, Subtractive hybridization, SAGE, Microarray).

### **Module V – Proteomics : Fundamentals and Interactomics**

Proteomics Techniques (sequence based and hybridization based techniques - 2D Gel Electrophoresis, HPLC, Mass Spectrometry, Protein/ peptide arrays), Quantitative and Qualitative proteomics, Mining Proteomes, Computational approaches for studying proteomes.

Protein Mapping (expression and interaction mapping) techniques (Two hybrid methods and variations, Phage display, Co-IP, Mass Spectrometry, labeled and unlabeled tagging), Data Analysis using bioinformatics tools, Protein – (Protein/ligand) interaction networks.

**Module VI – Proteomics : Structure-omics and Cellular Proteomics**

High throughput proteome analysis (2D GE & MS, Microarray & MS; SAGE & Microarray), 3 D structure determination (X-ray and NMR, PDB, Pfam, Modeller, SMART), structure to functional analysis (Fold comparison, Threading, Functional sites, homology and ab initio modeling)

High throughput cloning, Activity and functional characterization, Post-translational modifications, Concepts of protein engineering, Proteomic workflows.

**Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# RECOMBINANT DNA TECHNOLOGY

**Course Code: BTH4304**

**Credit Units: 03**

**Course Objective:** A complete understanding of molecular techniques like DNA sequencing, restriction mapping, PCR, cloning and expression of genes can be obtained through this course.

## **Course Contents:**

**Module I: Concept of gene:** Concept of gene, prokaryotic and eukaryotic control elements and their analysis, Restriction enzymes, DNA polymerase, DNA modifying enzymes and their uses.

**Module II:** Plasmids, M13 single stranded DNA Phage, Bacteriophage lambda- lysogeny and lytic cycle and their genetic switch. Lambda (insertional and replacement vectors) DNA cloning and expression vectors: cosmids, YAC, BAC, PAC, topocloning.

**Module III:** Genomic and cDNA libraries and their construction. Methods for identification of recombinant clones.

**Module IV:** DNA sequencing, genome mapping and sequencing, next generation sequencing, Genome – wide high throughput analysis and its application. Polymerase chain reaction (PCR) and its applications, bioinformatics and database analysis.

**Module V:** Analysis of gene expression: Northern blotting, RT-PCR, Real time (Q) PCR and microarray analysis. Isolation of recombinant DNA clone, gene transfection /transformation in cell and tissues, knockout mice, animal cloning and their applications.

**Module VI:** Transposon mediated and site – directed mutagenesis and its applications, expression of recombinant proteins in *E.coli* and its application. RNA interference - transgenic plants and animals.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Text and references:**

- Gene cloning and analysis: An Introduction by T. A Brown, Blackwell Publishing
- Principles of gene manipulation: An Introduction to genetic engineering by R.W. Old and C.B.Primrose, Blackwell publishing.

# BIOINFORMATICS & COMPUTATIONAL BIOLOGY

**Course Code: BTH4305**

**Credit Units: 02**

## **Course Objective:**

This course will enable the students to achieve skills in Bioinformatics & Computational Biology that are essential for application in Biotechnology.

## **Course Contents:**

### **Module I: Basic Bioinformatics and Biological Sequence Databases**

Introduction to Bioinformatics, History of Bioinformatics, Interdisciplinary nature of Bioinformatics; Aim, Scope and Research areas of Bioinformatics, Overview of various primary and secondary databases that deal with protein and nucleic acid sequences. Importance of biological databases, Sequence and structure databases: GenBank, EMBL, DDBJ, UniProt, iHOP, PDB, STRING

### **Module II: Sequence Alignment**

Introduction to sequence alignments and its applications, methods of pairwise sequence alignment (Dotplot and Dynamic Programming) and Multiple Sequence Alignment (Progressive, Iterative and Block Based), Database Similarity Searching Tools: BLAST and FASTA (Algorithms and Statistical Significance), Variants of BLAST.

### **Module III: Molecular Phylogeny**

Objectives of molecular phylogeny, the concept of evolutionary tree, terminology of phylogenetics, introduction to evolutionary models, Types of phylogenetic trees (rooted vs. unrooted trees). Phylogenetic analysis methods: UPGMA, Neighbor-Joining, Maximum Parsimony, Maximum Likelihood. Tree evaluation methods: Bootstrap test.

### **Module IV: Predictive Methods using DNA and Protein Sequences**

Concepts of motif, pattern and profile, Gene predictions methods for Prokaryotic and Eukaryotic, Promoter predictions, Identification and characterization of proteins, Protein structure prediction methods: Secondary and tertiary approaches. Concept of Markov Chain, Hidden Markov Model and its applications.

### **Module V: Introduction to Molecular modelling & Drug designing**

Introduction of Molecular Modelling, Structure Representation and Coordinate Systems, Molecular building, Important databases containing data for Molecular Modelling, Commercial and freely available tools of Molecular Modelling, Secondary and tertiary Structure prediction methods of protein, Evaluation of internal energy of biological macro-molecules, Energy minimization of small molecules, Empirical representation of molecular energies, Use of force fields and the molecular mechanics method, Discussion of local and global minima, Chemical similarity search methods, Molecular Docking and Virtual Screening.

### **Module VI: Introductory Systems Biology**

Introduction to systems biology and its applications, Brief introduction to types of biological networks: gene regulatory network, PPI networks, metabolic networks.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

**Text Books:**

- Bioinformatics: Sequence and Genome Analysis by D.W. Mount, Cold Spring Harbor Laboratory Press.
- Introduction to Bioinformatics By Arthur Lesk
- Bioinformatics for Biologists By Pavel Pevzner and Ron Shamir
- Inferring Phylogenies by Joseph Felsenstein
- Molecular Evolution and Phylogenetics Masatoshi Nei and Sudhir Kumar
- Molecular Modelling: Principles and Applications (2nd Edition) By Andrew Leach
- Systems Biology: Principles, Methods, and Concepts By A.K. Konopka

# IPR, BIOSAFETY & BIOETHICS

**Course Code: BTH4306**

**Credit Units: 02**

## **Course Objective:**

The aim of this course is to develop the understanding of the Intellectual Property Rights, Biosafety and Bioethics.

## **Course Contents:**

### **Module I**

General Overview of Intellectual Property Rights, Its importance and applications in Biotechnology, WIPO, WTO, TRIPs , Budapest Treaty, The Patent Law Treaty, Madrid Agreement, Paris Convention and Berne Convention.

### **Module II**

Patent- History of Indian Patent Laws, Basic requirements of Patentability, Novelty, Inventive step ,Non obviousness, Patentable Subject Matter, Public Domain, Procedure for Obtaining Patent, Provisional and Complete Specification, Publication, Request of Examination, patent Litigation. IPR issues in Biotechnological Patents: Haldi, Neem and Basmati Rice, International Patents.

### **Module III**

Copyright – Objectives, Rights conferred by registration of copyright, Trademarks and Geographical Indications. Infringement and Biopiracy issues in copyright, Trademark, and Geographical Indications with some case studies.

### **Module IV**

Biosafety: Basic laboratory biosafety levels 1,2,3 and 4 laid by WHO, Microbiological risk assessment including genetically modified organisms, personal protection, essential biosafety equipments, waste handling, Animal facility, biosafety and recombinant DNA technology, Chemical, fire and electrical safety and guidelines for laboratory facility commissioning and certification. Biosafety issues in plant biotechnology including genetically modified crops, Cartagena Protocol.

### **Module V**

Ethics and Policies in Biotechnology, Biological weapons and Ethical Issues, Ethical aspects of cloning techniques, Ethical issues involved in Human Genom Project, animal research and biotechnological products.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Text & References:**

### **Text:**

- Intellectual Property Rights by Brigitte Anderson, Edward Elgar Publishing
- Intellectual Property Rights and the Life Sciences Industries by Graham Dutfield, Ashgate Publishing

### **References:**

## RECOMBINANT DNA TECHNOLOGY LAB

Course code: BTH4307

Credit Units: 02

- Preparation competent cell and transformation plasmid DNA.
- Study of restriction digestion, ligation and cloning.
- Southern blotting.
- Western blotting.
- RFLP
- PCR

### Examination Scheme:

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment / Spotting	Practical Record	Viva
15	10	05	35	15	10	10

## **ANIMAL BIOTECHNOLOGY LAB**

**Course Code: BTH4308**

**Credit Units: 01**

### **Course Contents:**

1. Histological study of important animal tissues.
2. Estimation of enzyme activity from animal tissues.
3. Study of toxicity on invitro model.
4. Culture and maintenance of animal cell lines.
5. Invitro expression of proteins in animal cell lines.

### **Examination Scheme:**

<b>IA</b>			<b>EE</b>			
<b>Class Test (Practical Based)</b>	<b>Mid Term Viva</b>	<b>Attendance</b>	<b>Major Experiment</b>	<b>Minor Experiment/Spotting</b>	<b>Practical Record</b>	<b>Viva</b>
15	10	05	35	15	10	10

# GENOMICS AND PROTEOMICS LAB

**Course Code: BTH4309**

**Credit Units: 02**

**Course Objectives:** The course will familiarize students with the tools and principles of contemporary genomics and proteomics. Bioinformatics resources relevant to genome / proteome investigations will be provided for a sound working knowledge of current genomics and proteomics technology and approaches.

## **Module I – An Introduction to Genome Browsers –**

1. NCBI and UCSC – General features
2. Important Sequence formats – Raw, Fasta and EMBL
3. Sequence retrieval methods – Whole Genomes (command line and browser), Gene or position search (browser)

## **Module II - Sequence annotation**

Restriction site annotation  
Repeat Annotation of sequence Repeat Masker  
ORF annotation – using ORF finder  
Gene Prediction – using Gene Scan and Glimmer  
Primer designing using Primer 3

## **Module III – Homology Search, Sequence conservation and Phylogeny**

1. Homology Search – BLAST and its variants, BLAT
2. Multiple Sequence Alignment – Clustal W and ClustalX
3. Phylogeny and molecular evolution – MEGA

## **Module IV: Integration of bioinformatics workflow**

NCBI Genome biology workbench

## **Module V: Proteome analysis**

EXPASY Server, RCSB Protein data banks, BLASTp  
Primary structure analysis tools (Translate and reverse translate, Codon Usage, FindPept, FindMOD, pI/Mw computing, Multident, ProtParam, Peptide cutter, Mascot)  
Secondary structure analysis tools (hydropathy plots, motif searches, conserved domains, PROSITE, InterPro Scan, PfamHMM, SMART, threading)  
Tertiary structure analysis tools ( Jmol/ Pymol / Rasmol), MODELLER  
Phylogenetic profiling

## **Examination Scheme:**

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

## **Text & Web References:**

- EMBLtools
- Ensembl tools

# BIOINFORMATICS & COMPUTATIONAL BIOLOGY LAB

Course Code: BTH4310

Credit Units: 01

## Course Contents:

### Module I: Databases and file formats

Biological databases: NCBI, EMBL, DDBJ, iHOP, PDB, UniProt, KEGG, Ensembl, STRING; Sequence file formats: GenBank, FASTA, EMBL, PDB format

### Module II: Sequence Analysis

DotPlot Analysis: DOTPLOT, DOTTER, DOTMATCHER.

Pairwise Sequence Alignment programs: LALIGN, EMBOSS NEEDLE, EMBOSS Water.

Multiple Sequence Alignment programs: Clustalw, Muscle, T-Coffee.

Similarity Searching: BLAST, Variants of Blast.

### Module III: Phylogenetic Analysis

Phylogenetic analysis software: MEGA, PHYLIP

### Module IV: Predictive Software

Primer Designing: PRIMER3

Gene Identification Programs: GENSCAN, ORF finder. Fgenesh, Glimmer

Protein Identification and characterization: Protparam, Peptide cutter.

Motif and Patterns program: Prosite, InterProScan, Pfam.

### Module V: Proteins and Comparative Modelling

Modelling software: Swiss Model workspace, ArgusLab

Model Evaluation: PROcheck.

## Examination Scheme:

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

# PHARMACEUTICAL BIOTECHNOLOGY & DRUG DESIGN

Course Code: BTH4311

Credit Units: 02

## Course Objective:

The main objectives are to cover representative pharmaceutical dosage forms and general issues of formulation, drug delivery, production, quality requirements, Preclinical validation, ADME and to gain an understanding of the challenges associated with quality pharmaceutical manufacturing

## Course Contents:

### Module I Pharmaceutical Sciences

Introduction to Pharmaceutical Sciences, Sources of drugs, Recombinant therapeutics, Micromeritics, Viscosity & Rheology, Dispersion Systems, Diffusion & Dissolution, Kinetics and drug stability.

### Module II Biopharmaceutics

Particulate Technology (Particle Size, Size reduction, Size Separation, Powder Flow and Compaction), principles of dosage forms, Principles of drug delivery via dosage forms, (eg, liquid, solid, semi-solid, controlled release, patches, and implants), development of biopharmaceuticals and biosimilars drug delivery system, genomics & proteomics in drug discovery, Polymers, biopolymers & their Applications. Good Manufacturing Practice (GMP's), Good Lab Practices, Packaging.

### Module III Pharmacodynamics & Pharmacokinetics

Principles of pharmacodynamics, Role of time course of drug action in disease management, Pharmacodynamic models and biomarkers, General principles of pharmacokinetics, Route and timing of administration, Plasma concentration and its relationship to drug actions, Drug concentration at target site. Principles of bioavailability/bioequivalence, Adverse drug reactions.

### Module IV Clinical Pharmacology

*Preclinical Drug Developments:* Drug testing in animals, toxicology, genotoxicology, pharmacogenomics  
*Biological and novel therapies :* Biological therapies, their mechanism of action, their combination with standard therapy, The mode of action of Interferons, interleukins, growth factors, antibody therapy, gene therapy and immunotherapy, Novel targets for anti-cancer drugs, Bioreductive drugs, Cancer vaccines.

### Module V Computational Drug Discovery

Drug Discovery process, Drug development in the past decade, Computational drug discovery: capabilities and challenges, Tools and databases important for drug discovery, Web based chemoinformatics system for drug discovery, Strategies for hit identification and hit-to-lead optimization. Polypharmacological approach in drug discovery.

**Module VI** Case study: Membrane transporters in drug development.

## Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

### Text & References:

# DOWNSTREAM PROCESSING & FERMENTATION TECHNOLOGY

**Course Code: BTH4312**

**Credit Units: 02**

**Course Objective:** Objective of the course is for the acquaintance of large scale cultivation of microbes for production of industrially important products.

## **Course Contents:**

### **Module I: Fermentation Technology-An Overview**

Development and overview of fermentation processes, strain development, media design and optimization, commercial media for fermentation

### **Module II: Bioproduct Production**

Production of Ethanol, Antibiotics, Recombinant products, Citric acid, Industrial enzymes

### **Module III: Downstream Processing-An Overview**

Importance of downstream processing in biotechnology; characteristics of bio-products and fermentation broth

### **Module IV: Bioproduct Isolation**

Cell disruption; Filtration; Centrifugation; Precipitation

### **Module V: Purification**

Membrane Based Separation; Chromatographic methods of separation based on size, charge and biological affinity, 1D, 2D gel electrophoresis

### **Module VI: Polishing**

Crystallization; Drying and Formulations; Case studies

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Text:**

# STEM CELL & GENE THERAPY

**Course Code: BTH4313**

**Credit Units: 02**

## **Course Objective:**

The course is designed to give a broad view of mammalian stem cells, reviewing where they are found in the body, the different types and how they are cultured. The topics will cover the basic biology of these stem cells as well as bioengineering and application of these stem cells to potential treatments of human diseases.

## **Course Contents:**

### **Module I**

Introduction to Gene Therapy, History and evolution of Gene therapy, optimal disease targets, Failures and successes with gene therapy and future prospects

### **Module II: Gene Delivery**

Adenoviral Vectors, Adeno-associated virus (AAV) Vectors, Non-viral Vectors and Physical Methods, Retroviral and Lentiviral Vectors, Herpes Virus Vectors & Combinatorial methods, Gene transfer methods

### **Module III**

Innate and Acquired Immune Response to Cell and Gene Therapy, Gene Therapy and the Immune System: Genetic Immunization

### **Module IV**

Stem Cell biology and therapy, types embryonic stem cell, Adult stem cell, Stem Cell Biology and Therapy, Embryonic Stem Cells, culture and the potential benefits of stem cell technology

### **Module V**

Cell, Disease, and Genetic Perspectives for Gene Therapy, Cell and Gene Therapy of the Nervous System, Cancer Gene Therapy, Cell and Gene Therapy for Vascular Disorders, Bone marrow transplants, Cancer Gene Therapy, Immunotherapy, Autoimmune Diseases and the Promise of Stem Cell-Based Therapies, Stem Cells and Diabetes, Stem Cells and heart Repair

### **Module VI**

Regulatory and Ethical Considerations of Cell and Gene Therapy, Assessing Human Stem Cell Safety, Use of Genetically Modified Stem Cells in Experimental Gene Therapies.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Text & References:**

# NANOBIOTECHNOLOGY

**Course Code: BTH4314**

**Credit Units: 02**

**Course Objective:**

To evolve a detail understanding into the application of nanotechnology in the field of biological sciences.

**Course Contents:**

**Module I**

Biosensors as Precursors of Bioelectronics, Functionlization of Sensing Substrates, Biochip, Nanosensors-Miniaturization of Biosensors, Nanomaterial Based Biosensors.

**Module II**

Electron Transfer of Biomolecules, Nanoparticle-Biomaterial Hybrid Systems for Sensing and Electronic Devices

**Module III**

DNA Templated Electronics, Sequence –specific molecular lithography, Single Biomolecule Manipulation for Bioelectronics, DNA as a semiconductor.

**Module IV**

Applications of nanobiotechnology in medical diagnostics and other biomedical field.

**Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

**Text & References:**

**Text:**

- Smart Biosensor Technology, George K. Knopf, Amarjeet S. Bassi, CRC press, 2006

# SUMMER INTERNSHIP EVALUATION

**Course Code: BTH4335**

**Credit Units: 06**

## **GUIDELINES FOR SUMMER TRAINING**

The main objective of summer training is to familiarize students to laboratory environment and make them learn to handle equipments and softwares, design experiments and analyze the results. The student will be supervised by one or more faculty members and he or she will be required to submit a synopsis. While writing a synopsis emphasis should be given to make it publishable. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student. Initial drafts should be critiqued by the faculty guide and corrected by the student at each stage.

The File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation.

### **In general, the File should be comprehensive and include**

- A short account of the activities that were undertaken as part of the project;
- A statement about the extent to which the project has achieved its stated goals.
- A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;
- Any activities planned but not yet completed as part of the project, or as a future initiative directly resulting from the project;
- Any problems that have arisen that may be useful to document for future reference.

### **Report Layout**

The report should contain the following components:

- TITLE PAGE
- CERTIFICATE
- ACKNOWLEDGEMENT
- ABBREVIATIONS
- CONTENTS WITH PAGE NUMBERS
- CHAPTER –
  - a. INTRODUCTION
  - b. REVIEW OF LITERATURE
  - c. MATERIALS & METHODS
  - d. RESULTS & DISCUSSION
  - e. SUMMARY AND CONCLUSION
  - f. REFERENCES
  - g. APPENDIX (OPTIONAL)
- 1 inch Margin on left side & 1" each on other sides.
- Single side of the paper to be used.
- Times New Roman.

### **Font Size**

- 12 (Bold for headings)
- 12 (Normal for Matter)
- 14 (for Chapter Names)
- 1.5 line spacing
- Numbering on the right hand Top of the page
- Numbers on pages before chapters to be done in Roman at the bottom of the page

## References

This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

## Examples

### For research article

Voravuthikunchai SP, Lortheeranuwat A, Ninrprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichia coli* O157: H7. *Clin Microbiol Infect*, **8** (suppl 1): 116–117.

### For Book

Kowalski, M. (1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), 7: 63-67

- Scientific names in Italics
- Cover Page containing - Title, Students Name, Supervisors Name, University, Name (along with logo), Course name & year of Submission in the prescribed format
- 2 copies to be submitted

## ASSESSMENT OF THE PROJECT FILE

Essentially, marking will be based on the following criteria: the quality of the report, the technical merit of the project and the project execution.. Evaluation will compose of two components - Project report assessment and Viva - voce. Project report assessment will be done by the two internal faculty members in respective fields. A committee of three faculty members will conduct Viva-voce.

Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project will be assessed as per evaluation format.

### Examination Scheme:

Project Report	50
Viva Voce	50

<b>Total</b>	<b>100</b>
--------------	------------

## Syllabus – Fourth Semester

### DISSERTATION/ PROJECT

**Course Code: BTH4437**

**Credit Units: 20**

#### **GUIDELINES FOR PROJECT FILE**

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critiqued by the faculty guide and corrected by the student at each stage.

The File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation.

#### **In general, the File should be comprehensive and include**

- A short account of the activities that were undertaken as part of the project;
- A statement about the extent to which the project has achieved its stated goals.
- A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;
- Any activities planned but not yet completed as part of the project, or as a future initiative directly resulting from the project;
- Any problems that have arisen that may be useful to document for future reference.

#### **Report Layout**

The report should contain the following components:

##### ➤ **Title or Cover Page**

The title page should contain the following information: Project Title; Student's Name; Course; Year; Supervisor's Name.

##### ➤ **Acknowledgements** (optional)

Acknowledgment to any advisory or financial assistance received in the course of work may be given.

##### ➤ **Abstract**

A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project

##### ➤ **Table of Contents**

Titles and subtitles are to correspond exactly with those in the text.

##### ➤ **Introduction**

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

➤ **Materials and Methods**

This section should aim at experimental designs, materials used. Methodology should be mentioned in details including modifications if any.

➤ **Results and Discussion**

Present results, discuss and compare these with those from other workers, etc. In writing these section, emphasis should be given on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary never write in “point” form.

➤ **Conclusion**

A conclusion should be the final section in which the outcome of the work is mentioned briefly.

➤ **Future prospects**

➤ **Appendices**

The Appendix contains material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

➤ **References / Bibliography**

This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

**Examples**

**For research article**

Voravuthikunchai SP, Lortheeranuwat A, Ninrprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichia coli* O157: H7. *Clin Microbiol Infect*, **8** (suppl 1): 116–117.

**For book**

Kowalski, M.(1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), **7**: 63-67

**ASSESSMENT OF THE PROJECT FILE**

Essentially, marking will be based on the following criteria: the quality of the report, the technical merit of the project and the project execution.

Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project.

Project execution is concerned with assessing how much work has been put in.

The File should fulfill the following *assessment objectives*:

## **Range of Research Methods used to obtain information**

### **Execution of Research**

#### **Data Analysis**

Analyse Quantitative/ Qualitative information

Control Quality

### **Draw Conclusions**

#### **Examination Scheme:**

Project Report	50
Viva Voce	50
<b>Total</b>	<b>100</b>

## **Master of Science - Data Science**

**FLEXILEARN**

**-Freedom to design your degree**

**2020**

**AMITY UNIVERSITY HARYANA**

**GURUGRAM**

# Syllabus - First Semester

## INTRODUCTION TO DATA SCIENCE

**Course Code: DSC4101**

**Credit Units-04**

### **Course Contents:**

#### **Module 1: Introduction to Data Science**

Introduction to Data Science, Key components in Data Science , Use cases from different application domains such as Banking, Retail, Telecom, Life Science and Healthcare, etc

#### **Module 2: Data Science Life Cycle**

Data Science life cycle , The roles in a Data Science stream, Challenges involved in Data Science, Ethics in Data Science

#### **Module 3: Characteristics of Data**

Characteristics of Data – Big data introduction, Structured, Semi-structured and Unstructured data, data at rest, data in motion, etc, Good data versus bad data

#### **Module 4: Challenges in handling large data**

Challenges in handling large data sets

#### **Module 5: Types of Data Analysis**

Types of Data Analysis – Descriptive, Exploratory, Predictive, Inferential, Steps in Data Analysis

#### **Module 6: Data Science Tools**

Tools used in Data storage, Databases, Data Analysis, Data Visualization

#### **Module 7: Job profiles in Data Science**

Different job profiles their roles and Skillset requirements for each of them

#### **Module 8: Programming tools require for Data Science**

Different programming tools required for Data Science.

#### **Module 9 : Overview of Machine learning for Data Science**

Overview of Machine learning with the help of cases in Data Science

#### **Module 10 : Case studies of Data Science**

Discuss different case studies of Data Science domain.

### **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

**Text & References:**

# MACHINE LEARNING-I

**Course Code: DSC4102**

**Credit Units-03**

## **Course Contents:**

### **Module 1: An Introduction to Machine Learning:**

Introduction to machine learning, What is ML, Types of ML, Applications used for ML, AI vs ML, Essential for ML and AI.

### **Module 2: Techniques of Machine Learning:**

Introduction to Supervised, unsupervised, semi-supervised, and reinforced machine learning techniques

### **Module 3: Introduction to Supervised Learning:**

Training, validation, test data, and Over fitting and complexity

### **Module 4: Managing and understanding data:**

Data description, Data processing, Dimension Reduction.

### **Module 5: Data Preprocessing:**

Comprehend the meaning, process, and importance of data preparation, feature engineering and scaling of datasets.

### **Module 6: Evaluating model performance:**

Measures performance for the classification problem. Discuss different performance measures.

### **Module 7: Resampling methods:**

Discuss different cross validation techniques. Leave-One-Out Cross-Validation, k-Fold Cross Validation

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# STATISTICS & EXPLORATORY DATA ANALYSIS

Course Code: DSC4103

Credit Units-03

## Course Contents:

### Module 1: Descriptive Statistics

Statistics: Preliminary concepts; Measures of Central Tendency: Mean, Median, Mode

Measures of Dispersion: Range, Standard deviation, Variance, Covariance, Graphical Representation of Statistics: Histograms, Bar plots, Scatter plots etc.

### Module 2: Probability

Random Experiments, Trial and Event, Sample Space, Mutually Exclusive or Disjoint Events, Mutually Exhaustive Events, Equally Probable Events, Complementary Event, Classical definition of Probability, Statistical definition of Probability, Axiomatic definition of Probability, Addition theorem, Multiplication theorem, Conditional Probability, Bayes' Theorem. Expectation.

### Module 3: Continuous Distribution

Normal Distribution, Properties of Normal distribution

### Module 4: Correlation

Bivariate distribution Correlation, Types of Correlation, Simple Correlation Coefficient for ungrouped data, Properties and Interpretation of Correlation Coefficient, Coefficient of determination, Scatter diagram, Standard Error, Probable error of Correlation Coefficient. Rank correlation, Some examples.

### Module 5: Introduction to the Inferential Statistics

Parameter, Statistic, Null hypothesis, Alternative hypothesis, Critical region, Type1 Error, Type 11 Error, Level of significance, P-value and its applications.

**Test of Significance for Small samples:** One sample t-test, Paired t-test, Degrees of freedom for t-test, F test for equality of Population variances, Degrees of freedom for F-test.

Test of Significance for Large samples: Normal test for sample mean and population mean, Normal test for two sample means.

Chi-square Test: Test of goodness of fit, Test of Independence of attributes, Degrees of freedom for Chisquare test, Coefficient of contingency, Yates' correction for continuity.

Analysis of Variance: One way and Two way (only Examples)

### Module 6: Introduction to Model Building:

Basics of Model building, Definition of a Model, Point estimation, Confidence intervals, Testing

## Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# DATABASE MANAGEMENT SYSTEM-I

**Course Code: DSC4104**

**Credit Units-02**

## **Course Contents:**

- SQL (Structured Query Language)
- Data Definition Language (DDL): Create, Alter and Drop commands
- Data Manipulation Language (DML): Select, Insert, Update, and Delete commands, Basic SQL queries, Integrity constraints on tables,
- Data Control Language Commands(DCL): Grant and Revoke
- SQL Functions
- SQL querying to do operations such as identifying nulls, special characters, blank rows/columns, and run distributions, run data summaries, merge tables, get unique counts
- SQL Joins, Aggregate functions and GROUP BY, Nested queries and sub queries. GROUP BY CLAUSE along basic aggregations such as SUM, COUNT, AVG RANK(), ROWNUM() & DENSE\_RANK. UNION and UNION ALL CASE statement
- Introduction to Advanced SQL concepts: Indexes, Sequence, Clusters, Views, Cursors and Triggers, Embedded SQL
- Introduction to SQLITE
- Introduction to NoSQL and its capabilities
- Contrast MySQL with NOSQL
- Introduction to SQLITE
- Introduction to POSTGRESQL

## **Examination Scheme:**

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

## **Text & References:**

- Database System Concepts, Abraham Silberschatz, Henry F. Korth, and S. Sudarshan
- An Introduction to Database Systems, C J Date
- Fundamentals of Databases – Elmasri and Navathe.
- Database Management Systems – Raghu Ramakrishna, Johannes Gehrke

# PROGRAMMING TOOL BOX I-R

Course Code: DSC4105

Credit Units-01

## Course Contents:

### Module 1: An Introduction to R

Overview of R programming, applications, usage and comparative study with other softwares and introduction to R for Data Science

### Module 2: Setting up R environment and packages

Setting up R environment and install packages and supporting libraries in R

### Module 3: Basics of R

Manage your data and work-space, Save your work, How to use R, Data structure in R, Data creation and curation and special function using R

### Module 4: File Handling

Reading different file format using R, file handling and processing, writing output file.

### Module 5: Graphics using R

Graphics device, Basic plot function, scatter plot, 3-D scatter plot, pairplots, Lineplot, Matplot, Matpoints, Bar plot, Histogram plot, Density plot, Dot plot, Pie chart, Venn diagram, Grid graphics, Lattice, ggplot2, Interactive plotting, combine multiple plots in same graphics screen, save graphics to a file.

### Module 6: Programming using R

Conditional Executions, Comparison Operators, Logical Operators, Control Structures, If statements, Ifelse statements, Loops, For loop, While loop, Apply loop family, Other loops,

### Module 7: Functions

Define and Call functions, Syntax Rules for functions, Control utilities for functions, Writing own function

### Module 8: Advance R

Advance R functions and Regular expressions, Object oriented programming, Building R package

### Module 9: Case study

## Examination Scheme:

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

**Text & References:**

- Linear Models with R, Julian J. Faraway

# PROGRAMMING TOOL BOX II-PYTHON

Course Code: DSC4106

Credit Units-01

## Course Contents:

### Python Programming

#### Module 1: Introduction to Python :

Overview of Python, applications, usage and comparative study with other softwares.

#### Module 2: Basics of Python :

Syntax, Data Types, Variables, Operators, Input/output, Flow of Control (Modules, Branching)

#### Module 3: Basic Programming with Python :

If, If- else, Nested if-else, Looping, For, While, Nested loops, Control Structure, Break, Continue, Pass,

#### Module 4: Data Structures of Python :

Strings and Tuples, Accessing Strings, Basic Operations, String slices, Working with Lists, Introduction, Accessing list, Operations, Function and Methods, Files, Modules, Dictionaries, Functions and Functional Programming, Declaring and calling Functions, Declare, assign and retrieve values from Lists, Introducing Tuples, Accessing tuples

#### Module 5: Advanced Python :

Object Oriented, OOPs concept, Class and object, Attributes, Inheritance, Overloading, Overriding, Data hiding, Operations Exception, Exception Handling, Except clause, Try finally clause, User Defined Exceptions

#### Module 6: Python Libraries :

Introduction to Machine learning packages like NUMPY, SCIPY, PANDAS etc.

### Examination Scheme:

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

# BIG DATA TOOLS & TECHNOLOGIES-I

**Course Code: DSC4107**

**Credit Units-01**

## **Course Contents:**

### **Module 1: Introduction to Big Data**

Big Data and its Importance, V's of Big Data, Drivers for Big Data, Introduction to Big Data Analytics, Big Data Analytics applications.

### **Module 2: Introduction to Hadoop**

Hadoop Introduction, Hadoop key characteristics, Hadoop Core Components, Hadoop Ecosystem, Hadoop Services, Different Hadoop Modes, Hadoop's Parallel World – Data discovery

### **Module 3: Understanding Hadoop**

Hadoop Installation, Hadoop Cluster Setup, Storing Data in Hadoop, HDFS Commands (Basics, Intermediate and Advanced), Processing your data with Map Reduce, Customizing Map Reduce Execution, Building Reliable MapReduce Apps, Run test example using Map reduce, Distributed Cache, Map side join vs Reduce Side Join, Running Hadoop applications

### **Module 4: Processing Big Data**

Integrating disparate data stores, Mapping data to the programming framework, Connecting and extracting data from storage, Transforming data for processing, Subdividing data in preparation for Hadoop Map Reduce.

### **Module 5: Hadoop Map Reduce**

Employing Hadoop Map Reduce, Creating the components of Hadoop Map Reduce jobs, Distributing data processing across server farms, Executing Hadoop Map Reduce jobs, Monitoring the progress of job flows, The Building Blocks of Hadoop Map Reduce, Distinguishing Hadoop daemons, Investigating the Hadoop Distributed File System Selecting appropriate execution modes: local, pseudo-distributed, fully distributed.

## **Examination Scheme:**

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

## **Text & References:**

- Big Data and Analytics, Seema Acharya , Subhashini Chellappan
- Professional Hadoop Solution, Boris Lublinsky, Kevin T. Smith, Alexey Yakubovich

# INTRODUCTION TO LINUX

**Course Code: DSC4108**

**Credit Units-01**

## **Course Contents:**

### **Module 1: Operating System:**

Introduction: Windows and Unix/Linux, Definition; Concepts; Function of Operating System; Batch Processing; Multiprogrammed Batch System; Time Sharing System; Parallel System; Distributed System; Real Time System.

### **Module 2: Process & Memory Management:**

Process; Process State(New, Running, Waiting, Ready, Termination); Process Control Block; Process Scheduling (Round Robin Scheduling, Priority Scheduling, Multiple Queues, Shortest Job Scheduling); Operations on Process; Basic Management of Memory; Swapping Virtual Memory; Paging.

### **Module 3: Input/Output Management:**

I/O Devices; Device Controllers; I/O Software; Device Drivers; Deadlock; Resources; Principles of Dead Lock; Detection and Recovery; Deadlock Prevention; Deadlock Avoidance.

### **Module 4: UNIX/LINUX Operating Systems:**

Introduction; Concepts; Layers of UNIX; Role of System Administrator and Ordinary User; Tree Structure of UNIX; Root File System; /bin Directory; /dev Directory; /bin Directory; /etc Directory; /lib Directory; /proc Directory; /mnt Directory; /root Directory; /sbin Directory; /tmp Directory; /var Directory; Relative Path; Absolute Path; Creation of Directory; Creating file; removing file; Listing Files and Directories copying file; renaming file; Changing File Permission; Changing Director Permission; Changing Group; Changing Owner; Pipe; Filters; pwd command; date command; head command; tail command less command; more command; grep command; VI Editor (Creating a new File; Inserting Text in File; Deleting Text in File; Copy , Cut & Paste Text; Save File).

### **Module 5: Shell Programming:**

Variables(Configuration Variable & Environmental Variable); Operators( Arithmetic Operator, Logical Operator, Relational Operator); Instruction(Sequence Control Instruction, Selection Control Instruction, Repetition or Loop Instruction); echo command; read command; outtput command.

### **Module 6: System Monitoring:**

System monitoring, process information, log files, run level, system recovery, Memory management

## **Examination Scheme:**

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

# MACHINE LEARNING-I LAB

Course Code: DSC4109

Credit Units-01

## Course Contents:

### Module 1: Supervised Learning:

Splitting the data into Training and test data, Understanding Overfitting and complexity with case studies

### Module 2: Managing and understanding data:

**Understanding** Data description, Data processing, Dimension Reduction through case studies

### Module 3: Data Preprocessing:

Understanding data preparation, feature engineering and scaling, datasets, dimensionality reduction through case studies

**Module 4: Evaluating model performance:** Calculation of Measures performance for the classification problem.

**Module 5: Cross Validation techniques:** Case studies of Leave-One-Out Cross-Validation, k-Fold Cross Validation and other cross validation techniques

## Examination Scheme:

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

# STATISTICS & EXPLORATORY DATA ANALYSIS LAB

Course Code: DSC4110

Credit Units-01

## Course Contents:

### Module 1: Descriptive Statistics

Calculation and interpretation of Descriptive Statistics

### Module 2: Probability

Understanding the preliminary concepts of probability through case studies

### Module 3: Continuous Distribution

Generation of statistical distributions

### Module 4: Correlation

Calculation of correlation understanding and interpreting correlation through case studies

### Module 5: Introduction to the Inferential Statistics

Understanding inferential statistics through case studies

### Module 6: Introduction to Model Building:

Understanding Basics of Model building, Definition of a Model, Point estimation, Confidence intervals, Testing through case studies

## Examination Scheme:

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

# Syllabus - Second Semester

## MACHINE LEARNING-II

Course Code: DSC4201

Credit Units-03

### Course Contents:

#### Module 1: Basic concepts to calculate distance and similarities

Discuss different methods to calculate distance and similarities including euclidean distance, squared euclidean distance, Manhattan distance, Cosine distance, Chebyshev distance, Canberra distance, Minikowski distance, correlation distance, partial correlation distance, mutual information and rank correlation coefficients

#### Module 2: Introduction to unsupervised learning

Discuss theory and concepts behind unsupervised learning

#### Module 3: Clustering:

Finding grouping of data. Hierarchical clustering, k-means and K-medoid clustering algorithm

#### Module 4: Application to Machine Learning:

Classification using Nearest Neighbors, Naive Bayes, Support Vector Machine, Market basket analysis using Association Rules

#### Module 5: Case study

Solve a case study on real world data and apply machine learning concepts.

### Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

### Text & References:

# REGRESSION THEORY & ANALYSIS

Course Code: DSC4202

Credit Units-03

## Course Contents:

**Module 1: Simple linear regression:** Estimation of the Parameters, Hypothesis Testing on the Slope and Intercept, Interval Estimation in Simple Linear Regression, Prediction of New Observations, Coefficient of Determination

**Module 2: Multiple regression:** Estimation of Parameters, Hypothesis Testing, Confidence Intervals, Prediction

**Module 3: Model Adequacy testing:** Residual Analysis, PRESS statistic, Lack of Fit

**Module 4: Transformations:** Variance stabilising transformations, Transformations to linearise the model, Methods to select a transformation, Weighted least squares, Regression and random effect

**Module 5: Multicollinearity:** Sources, Effects, Diagnostics, Methods of dealing with Multicollinearity

**Module 6: Validation of regression models:** Techniques for validation

**Module 7: Introduction to non linear regression and GLM:** Non linear least squares, Transformations, Parameter estimation, Logistic and poisson regression

## Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## Text & References:

- Introduction to Linear Regression Analysis, by Douglas C. Montgomery, Elizabeth A. Peck, G. Geoffrey Vining
- Introduction to Regression Analysis, M. Golberg and H.A Cho
- Applied Regression Analysis, Norman R. Draper and Harry Smith

# DATA STRUCTURE & ALGORITHM DESIGN

Course Code: DSC4203

Credit Units-03

## Course Contents:

### Module I: Introduction

### Module II: Programming strategies

Objects and ADTs with example, Constructors and destructors, Data structure, methods, Pre and post conditions, C conventions, Error handling, Some programming language notes.

### Module III: Data structures

Arrays; lists; stacks and stack frames; Recursion -Recursive functions with example of factorial, Queue, Dequeue.

### Module IV: Searching

Sequential and binary search, Trees, binary search tree, complexity.

### Module V: Queues

Priority queues and heaps

### Module VI: Sorting

Bubble, Heap, Quick, Bin, Radix

### Module VII: Searching revisited

Red-Black trees, AVL trees, general n-ary trees, hash tables; Hashing and collision resolution

### Module VIII: Dynamic algorithm

Fibonacci numbers, binomial coefficients, optimal binary search trees, matrix chain multiplication, longest common subsequence, optimal triangulation.

### Module IX: Graphs

Minimum spanning tree and Dijkstra's algorithm

### Module X: Huffman encoding, FFT, Hard or intractable problems

Eulerian or Hamiltonian paths, Travelling salesman problem.

## Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## DATABASE MANAGEMENT SYSTEM-II

Course Code: DSC4204

Credit Units-02

### Course Contents:

#### Module 1: MongoDB

A Database for the internet, MongoDB's key features, MongoDB's core server and tools, Why MongoDB? , History of MongoDB, Diving into the MongoDB shell, Creating and Querying with indexes, Basic Administration, Writing Program using MongoDB

#### Module 2: Application Development in MongoDB

Document oriented data, Constructing queries, Aggregation, Update ,atomic operations and deletes, E-commerce updates, Atomic document processing

#### Module 3: MongoDB Mastery

Indexing and query optimization, Text Search, Wired Tiger and pluggable storage, Replication, Scaling your system with Sharding, Deployment and Administration

#### Module 4: Apache Cassandra

Big Data and Apache Cassandra, Importance of Cassandra, Cassandra as a Distributed Database, Cassandra and High Availability, Cassandra and Replication Mechanism, Cassandra's Elastic Scalability, Tune able consistency ( Strict Consistency , Casual Consistency , Weak Consistency , Brewer's CAP Theorem ,Cassandra as a Schema Free Database, Where should we use Cassandra , Who and why using the Cassandra

### Examination Scheme:

# SPARK

**Course Code: DSC4205**

**Credit Units-01**

## **Course Contents:**

### **Module 1: Introduction to Apache Spark**

Introduction to Apache Spark, Features of Apache Spark, Apache Spark Stack, Introduction to RDD's, RDD's Transformation, What is good and Bad in Map Reduce , Why to use Apache Spark

### **Module 2: Spark: A Hadoop Replacement?**

Java, Scala, or Python? , Scala, Packages, Data Types, Classes, Calling Functions, Operators, Control Structures

### **Module 3: A Quick Intro to Spark**

Starting the shell, Data Sources, Testing Spark, Spark Monitor, Comparing Hadoop Map Reduce to Spark, Writing Standalone program with Spark

### **Module 4: Spark SQL**

Basic Concepts, Using Spark SQL with RDDs

### **Module 5: Spark Streaming**

Basic Concepts, Creating Your First Stream with Scala, Creating Your First Stream with Java

## **Examination Scheme:**

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

## **Text & References:**

# DATA VISUALIZATION

Course Code: DSC4206

Credit Units-01

## Course Contents:

### Module 1: Introduction to data visualization:

Introduction to data visualization. Explore and manipulate all graphical parameter. Drawing graphs such as scatterplot, stripchart, histogram, boxplot, violin chart, bar chart, dot plot, line graph, line plot, multiplot, stacked bar chart, pie diagram, venn diagram, pair plot. Explore 3d chart, motion chart, interactive charts. Discuss selecting appropriate chart for strategy presentation. Save graphs in various formats. Discuss different ways to combine multiple figures. Discuss margin and graph size.

### Module 2: Introduction to Tableau:

Creating Visual Analytics with Tableau Desktop, Connecting to your data, Building your first visualization, Creating Calculations to enhance your data, using maps to improve insight, developing an Ad Hoc Analysis Environment, Tips Tricks and Time Savers, Bringing it all together with dashboards. Installing Tableau Server, Using Tableau server to facilitate fact based team collaboration, Automating Server with Tableau's command line tools, Use case for rapid fire visual analytics, other Tools. Explore various case studies to visualize the data.

### Examination Scheme:

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

### Text & References:

## BIG DATA TOOLS & TECHNOLOGIES-II

Course Code: DSC4207

Credit Units-01

### Course Contents:

#### Module 1: Fundamental of Apache Pig

What is Pig?, Introduction to Pig Data Flow Engine, Pig and Map Reduce in Detail, When should Pig Used?, Pig and Hadoop Cluster, Pig Interpreter and Map Reduce, Pig Relations and Data Types, Pig example in Detail, Debugging and Generating Example in Apache Pig

Pig philosophy and architecture, Pig installation, Grunt shell, Loading data, Exploring Pig Latin commands, Pig Transformations functions, Joins in Pig, Hands on Exercises

#### Module 2: Fundamental of Apache Hive

What is Hive?, Architecture of Hive, Hive Services, Hive Clients, How Hive Differs from Traditional RDBMS, Introduction to HiveQL, Data Types and File Formats in Hive, File Encoding , Common problems while working with Hive

Hive architecture, Hive installation, Hive vs. RDBMS, HiveQL and the Hive shell, Data types and schemas, Creating tables (external vs. managed), Creating Partitions, Creating Views, UDF function in java in Hive, Using hive to create diff types of format

### Examination Scheme:

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva

# DATA STRUCTURE & ALGORITHM DESIGN LAB

**Course Code: DSC4210**

**Credit Units-01**

## **Course Contents:**

### **Module I**

Stack implementation through arrays, link list

### **Module II**

Programs for recursion functions

### **Module III**

Implementation of queues and leap structures

### **Module IV**

Application of binary trees in pre-order, post-order and in-order evaluation

### **Module V**

A VL tree implementation

### **Module VI**

Optimal matrix multiplication

## **Examination Scheme:**

# PATTERN RECOGNITION

**Course Code: DSC4211**

**Credit Units-01**

## **Course Contents:**

### **Statistical Pattern Recognition**

Introduction, Gaussian model, discriminant functions, classifier performance, risk and errors; supervised learning using parametric and nonparametric approaches: ML estimation, Bayesian parameter estimation approach, Parzen Windows, k-nn estimation; Unsupervised learning and clustering: the clustering concept, c-means algorithm, learning vector quantization, clustering strategies, a hierarchical clustering procedure.

### **Examination Scheme:**

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

# NEXT GENERATION SEQUENCING ANALYSIS

Course Code: DSC4212

Credit Units-01

## Course Contents:

### Module 1: Introduction to NGS and NGS Technologies

Introduction to sequencing technologies from a data analysts view, Concept, Applications of sequencing technologies in Whole genome assembly; Gene expression analysis; Genome annotation; Gene regulation analysis; Variation studies

### Module 2: NGS data analysis: Preprocessing

Introduction to NGS data analysis, Raw sequence files (FASTQ format), Preprocessing of raw reads: quality control (FastQC), adapter clipping, quality trimming, Introduction to read mapping (Alignment methods, Mapping heuristics), Read alignment to a reference genome (BWA, Bowtie2, TopHat), Mapping output (SAM/BAM format), Usage of important NGS toolkits (samtools, BEDtools), Mapping statistics, Visualization of mapped reads (IGV, UCSC)

### Module 3: NGS data analysis: Variant calling

DNA variant calling and Filtering DNA variants using GATK pipeline

### Module 4: NGS data analysis: Gene Expression Analysis

Genomics and transcriptome assembly, Differential Expression analysis, Quantification of expression,

## Syllabus - Third Semester

### GENERALIZED & LINEAR MODELING

**Course Code: DSC4301**

**Credit Units-03**

**Course Contents:**

**Module 1: Introduction to Generalized Linear Models:**

Linear model, Non linear model, GLM

**Module 2: Linear Regression Models:**

Multiple regression model, Parameter estimation, Maximum likelihood, Model adequacy checking, Weighted least squares

**Module 3: Nonlinear Regression Models:**

Linear and Non linear regression models, transforming a linear model, Parameter estimation

**Module 4: Logistic and Poisson Regression Models:**

Logistic regression, Poisson regression, Overdispersion

**Module 5: The Generalized Linear Model:** Exponential family, Likelihood equations, Quasi likelihood, Gamma family, The power function, Generalized Estimating Equation

**Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

**Text & References:**

- Generalised Linear Models: With Applications in Engineering and the Sciences by Raymond H. Myers, Douglas C. Montgomery, G. Geoffrey Vining, Timothy J. Robinson
- Data Analysis Using Regression and Multilevel/ Hierarchical Models, Andrew Gelman and Jennifer Hill
- Categorical data analysis, Ala Agresti

# DEEP LEARNING & NEURAL NETWORKS

Course Code: DSC4302

Credit Units-03

## Course Contents:

### Module 1: Introduction to deep learning:

Conceptual overview of neural network, Supervised Learning with Neural Networks, Deep neural network, Why is Deep Learning a Buzz word

### Module 2: Neural Networks Basics:

Binary Classification, Logistic Regression Cost Function, Gradient Descent, Derivatives, More Derivative Examples, Computation graph, Derivatives with a Computation Graph, Logistic Regression Gradient Descent, Gradient Descent on m Examples, Vectorization, More Vectorization Examples, Vectorizing Logistic Regression, Vectorizing Logistic Regression's Gradient Output, Explanation of logistic regression cost function

### Module 3: Shallow neural networks:

Neural Networks Overview, Neural Network Representation, Computing a Neural Network's Output, Vectorizing across multiple examples, Explanation for Vectorized Implementation, Activation functions, Why do you need non-linear activation functions?, Derivatives of activation functions, Gradient descent for Neural Networks, Backpropagation intuition, Random Initialization

### Module 4: Deep Neural Networks:

Deep L-layer neural network, Forward Propagation in a Deep Network, Getting your matrix dimensions right, Why deep representations?, Building blocks of deep neural networks, Forward and Backward Propagation, Parameters vs Hyperparameters, What does this have to do with the brain?

### Module 5: Case study using real world data.

Building a neural network model and generating predictions from the model.

## Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## Text & References:

- Deep learning: adaptive computation and machine learning, Bengio, Yoshua, Courville, Aaron, Goodfellow, Ian J
- Deep Learning: A Practitioner's Approach, J. Patterson, A. Gibson
- Neural Networks and Deep Learning: A Textbook, Charu C. Aggarwal
- Neural Networks and Deep Learning, Michael Nielsen.

# TIME SERIES

**Course Code: DSC4303**

**Credit Units-03**

## **Course Contents:**

**Module 1:** Autoregressive-moving average models ARIMA

Moving average models MA(q). Condition of invertability. Autoregressive models AR(p). Yull-Worker equations. Stationarity conditions. Autoregressive-moving average models ARMA (p,q).

**Module 2:** Coefficient estimation in ARIMA processes.

Coefficients estimation in autoregressive models. Coefficient estimation in ARMA (p) processes. Quality of adjustment of time series models. AIC information criterion. BIC information criterion. “Portmonto”-statistics.

**Module 3:** Forecasting in the framework of Box-Jenkins model

Forecasting, trend and seasonality in Box-Jenkins model.

**Module 4:** Non-stationary time series

Non-stationary time series. Time series with non-stationary variance. Non-stationary mean. ARIMA (p,d,q) models. The use of Box-Jenkins methodology to determination of order of integration.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Text & References:**

- Enders W. Applied Econometric Time Series. John Wiley & Sons, Inc., 1995

# GRAPH & SOCIAL NETWORK ANALYSIS

Course Code: DSC4304

Credit Units-03

## Course Contents:

### Module 1: Introduction to graph theory

Use of graph theory to construct different types of networks : Undirected, directed graphs, Cyclic, Directed acyclic graphs, trees, weighted graphs, bipartite graph, Study data structures of the graphs. Adjacency matrix, adjacency list.

### Module 2: Study different network models

Small world phenomena, Scale free network, Erdős-Rényi model for random graphs, Watts and Strogatz model, Barabasi-Albert model

### Module 3: Study network properties

Degree distribution, power law, graph density, graph isomorphism, path length, diameter, clique, shortest distance, clustering coefficient, network motifs, network centralities and node ranking, degree centrality, closeness centrality, betweenness centrality, eigenvector centrality, eccentricity centrality, subgraph centrality, matching index,

### Module 4: Network randomization

Randomization with Erdős-Rényi model, Randomization with node degree conservation, Permutation of node labels

### Module 5: Introduction to social network

Introduction to social network data, Different data format, Paths and Connectivity-Graphs to represent social relations. Working with network data- Network Datasets-Strong and weak ties - Closure, Structural Holes, and Social Capital.

### Module 6: Data and Text Mining In Social Media

Data mining in nutshell, Social media, Motivations for data mining in social media, Data mining methods for social media. Social networking sites: illustrative examples. Text Mining: Keyword search, query semantics and answer ranking, Classification algorithms, Clustering algorithms.

### Module 7: Community Detection in Social Networks

Introduction, Communities in context, core methods and algorithm for community detection, Quality functions, Agglomerative/Divisive algorithms, discuss different approaches for clustering.

### Module 8: Case study using real world data.

## Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# NATURAL LANGUAGE PROCESSING

Course Code: DSC4305

Credit Units-02

## Course Contents:

### Module 1: Introduction to text mining

Introduction, Challenges of Text Processing, Character-Set Dependence, Language Dependence, Corpus Dependence, Application Dependence

### Module 2: Exploring Text Data For Preliminary Ideas

A case study for a brief introduction, Examine multiple document corpus of text, Creation of text corpus, Text pre-processing, Stemming, Word tokenisation, Word vectorisation, Word embedding

### Module 3: Natural Language Processing:

Sentiment Analysis, Word Frequency in text data, Wordclouds for visualizing sentiments with a case study, Wordclouds for Visualizing text data, Tidy wordclouds, Topic modelling a document

### Module 4: Text Data and Machine Learning

Clustering for text data, Clustering tweets, Regression on text data, Introduction to RTextTools, More on RTextTools, Word2Vec approach, The Doc2Vec approach, Doc2Vec approach for predicting a binary outcome, Doc2Vec approach for multi-class classification

### Module 5: Sentiment Analysis

What is sentiment, What is sentiment analysis, Scope of sentiment analysis: Document level, Sentence level, Sub-sentence level, Types of sentiment analysis, Word embeddings, Word associations or Text similarities, Building dictionaries, Summarise text, Polarity calculation, Algorithms for sentiment analysis: Rule based, Automatic Hybrid

### Module 6: Case study using real world data.

Identify Spam-ham Emails or sms classification.

## Examination Scheme:

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

# GRAPH & SOCIAL NETWORK ANALYSIS LAB

**Course Code: DSC4306**

**Credit Units-01**

## **Course Contents:**

### **Module 1: Study Tools for graphs and network study :**

Case studies will be implemented by using any programming language such as R or python. Learn other tools like Cytoscape and Gephi, and igraph

### **Module 2: Introduction to graph theory**

Input graph data : Read different network format, load network data, Construct network from matrix, Adjacency matrix. Input different types of networks : Undirected, directed graphs, Cyclic, Directed acyclic graphs, trees, weighted graphs, bipartite graph. Study data structures of the graphs. Adjacency matrix, adjacency list.

### **Module 3: Study different network models**

Small world phenomena, Scale free network, Erdős-Rényi model for random graphs, Watts and Strogatz model, Barabasi-Albert model

### **Module 4: Study network properties**

Degree distribution, power law, graph density, graph isomorphism, path length, diameter, clique, shortest distance, clustering coefficient, network motifs, network centralities and node ranking, degree centrality, closeness centrality, betweenness centrality, eigenvector centrality, eccentricity centrality, subgraph centrality, matching index,

### **Module 5: Network randomization**

Randomization with Erdős-Rényi model, Randomization with node degree conservation, Permutation of node labels

### **Module 6: Introduction to social network**

Introduction to social network data, Different data format, Paths and Connectivity-Graphs to represent social relations. Working with network data- Network Datasets-Strong and weak ties - Closure, Structural Holes, and Social Capital.

### **Module 7: Data and Text Mining In Social Media**

Data mining in nutshell, Social media, Motivations for data mining in social media, Data mining methods for social media. Social networking sites: illustrative examples. Text Mining: Keyword search, query semantics and answer ranking, Classification algorithms, Clustering algorithms.

### **Module 8: Community Detection in Social Networks**

Introduction, Communities in context, core methods and algorithm for community detection, Quality functions, Agglomerative/Divisive algorithms, discuss different approaches for clustering.

### **Module 9: Case study using real world data.**

**Examination Scheme:**

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

**Text & References:**

## BIG DATA TOOLS & TECHNOLOGIES-III

Course Code: DSC4307

Credit Units-01

### Course Contents:

#### Module 1: Apache Sqoop (SQL to Hadoop)

Sqoop Tutorial, How does Sqoop Work, Sqoop JDBC Driver and Connectors ,Sqoop Importing Data Various Options to Import Data (Table Import , Binary Data Import ,Speedup the Import ,Filtering Import, Full Database Import ,Introduction to Sqoop

#### Module 2: Apache Flume

Data Acquisition: Apache Flume Introduction, Apache Flume Components, POSIX and HDFS File Write, Flume Events, Interceptors, Channel Selectors, Sink Processor

#### Module 3: Advanced Apache Flume

Sample Twitter Feed Configuration, Flume Channel (Memory Channel, File Channel),Sinks and Sink Processors, Sources, Channel Selectors, Interceptors

#### Module 4: HBase Introduction

Fundamentals of HBase, Usage Scenario of HBase, Use of HBase in Search Engine, HBase Data Model (Table and Row, Column Family and Column Qualifier, Cell and its Versioning, Regions and Region Server), HBase Designing Tables, HBase Data Coordinates, Versions and HBase Operation (Get/Scan, Put, Delete)

### Examination Scheme:

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

## GENERALIZED & LINEAR MODELING LAB

Course Code: DSC4308

Credit Units-01

### Course Contents:

#### Module 1: Linear Regression Models:

Multiple regression model, Parameter estimation, Maximum likelihood, Model adequacy checking, Weighted least squares with case studies

#### Module 2: Nonlinear Regression Models:

Linear and Non linear regression models, transforming a linear model, Parameter estimation with case studies

#### Module 3: Logistic and Poisson Regression Models:

Logistic regression, Poisson regression, Overdispersion with case studies

**Module 4: The Generalized Linear Model:** Exponential family, Likelihood equations, Quasi likelihood, Gamma family, The power function, Generalized Estimating Equation with case studies

### Examination Scheme:

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

### Text & References:

## TIME SERIES LAB

**Course Code: DSC4309**

**Credit Units-01**

### Course Contents:

**Module 1:** Autoregressive-moving average models ARMA

Moving average models MA(q). Condition of invertability. Autoregressive models AR. Yull-Worker equations. Stationarity conditions. Autoregressive-moving average models ARMA with case studies

**Module 2:** Coefficient estimation in ARMA processes. Box-Jenkins' approach

Coefficients estimation in autoregressive models. Coefficient estimation in ARMA processes. Quality of adjustment of time series models. AIC information criterion. BIC information criterion. "Portmanto"-statistics. Box-Jenkins methodology to identification of stationary time series models with case studies

**Module 3:** Forecasting in the framework of Box-Jenkins model

Forecasting, trend and seasonality in Box-Jenkins model with case studies

### Examination Scheme:

IA			EE

# SUMMER INTERNSHIP EVALUATION

Course Code: DSC4335

Credit Units: 08

## Guidelines:

There are certain phases of every Intern's professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship program can best be described as an attempt to institutionalize efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal classroom situations. These attributes are intellectual ability, professional judgment and decision-making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility etc.

In order to achieve these objectives:

- **Each student will be allotted a supervisor** for proper guidance.
- **Student will first submit synopsis in the format given by coordinator/supervisor.**
- Student will maintain a file (**Internship File/Project Report**). **Further, coordinator will provide NTCC project guidelines and sample to help in preparation of file.** The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development. The File will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

The **layout guidelines** for the Project Report

### 1. File should be in the following specification

- A4 size paper
- **Font**

For normal text Font Type and Size must be- Times New Roman, 12 pt. The minimum font size of materials within a table or a figure can be 10 point.

- **Margins**

A margin of 3.75 cm (1½ inch) is to be given on the binding edge while on the other sides it is to be 2.5 cm (1 inch). The text of the report, including headings, figures, tables, and notes, but excluding page numbers, must be accommodated within the page area.

- **Line Spacing**

The line spacing in the main text must be between one-and-a-half (1.5). Single line spacing should be given for figure captions, table titles, figure legends, and footnotes. Equations, tables, figures, and quotations should be set off from the main text with adequate space (not less than the normal line spacing adopted for the main text). Two consecutive paragraphs should be separated by a spacing which must be larger than the line spacing adopted for the text.

- **Tables and Figures**

Each sketch, drawing, graph and photograph should have a figure number and title below the figure etc. Numbering should be sequential, chapter wise. For instance, if there are 24 figures chapter 3 spread

over all of its sections the figure numbers run from Figure 3.1 through Figure 3.24. In figures experimental data should typically be represented by centered symbols, and theoretical data by continuous curves.

Each table should have a table number and caption above the table. Numbering should be sequential, chapter wise, as in the case of Figure numbers. For instance, if there are 18 tables in chapter 3 the table numbers run from Figure 3.1 through Figure 3.18.

Make sure that figures and tables are complete in other respects such as legends, references (if any) and coordinate labels with units. Each figure and table must be explicitly referred to in the text and located where its first reference occurs, preferably after the reference.

- **Drawings**

All engineering drawings must conform to relevant Standards and should include a title block. If drawings are large they should be included at the back of the report in a separate pocket. In case drawings are made using CAD packages, a CD ROM should be included which contains all the files and details of the packages used.

- **Equations**

The numbering of equations should be sequential, chapter wise. Numbered equations must be explicitly referred to in the text.

**2. Report Size:** The maximum number of pages of the Report should be preferably between 50-80 pages.

**3. Report Layout:** The report should contain the following components

Front Page

Table of Content

Acknowledgement

Student Certificate

Company Profile (optional)

Introduction

Main Body

References / Bibliography

The File will include *five sections* in the order described below. The content and comprehensiveness of the main body and appendices of the report should include the following:

1. **The Title Page**--Title - An Internship Experience Report For (Your Name), name of internship organization, name of the Supervisor/Guide and his/her designation, date started and completed, and number of credits for which the report is submitted.

2. **Declaration by the Students**--This is page number (i), the beginning of the small case Roman numeral page numbers. The student has to give a declaration to the effect that the data used for the work, the work depicted in the report, and the written material contained in the report are not copied from others and that due permission has been taken from, and due credit has been given to, the sources whenever they are used.

3. **Certificate**--This is page number (ii). The certificate will be signed by the Faculty Supervisor(s) before the viva-voce after verifying the format and by the Head of the Department after review with the Supervisor(s).

4. **Acknowledgements**--This is page number (iii). Keep this brief and avoid using informal language. This page must be signed by the candidate.

5. **Abstract and Keywords**--This is page number (iv). The abstract (preferably one page) should contain the context/relevance of the problem at hand, a description of what was done and a gist of the significant observations/results.

The keywords (maximum 6) are a hint that what is contained in the report.

**7. Contents**-This is page number (v). The table of Contents should be titled just *Contents* (not Table of Contents). Try to fit it into one or two pages.

**8. Introduction**--short, but should include how and why you obtained the internship experience position and the relationship it has to your professional and career goals.

**9. Main Body**--should include but not be limited to daily tasks performed. Major projects contributed to, dates, hours on task, observations and feelings, meetings attended and their purposes, listing of tools and materials and their suppliers, and photographs if possible of projects, buildings and co-workers.

**10. References / Bibliography** --This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

#### **ASSESSMENT OF THE INTERNSHIP FILE**

<b>Continuous Internal Assessment</b>		<b>Final Assessment</b>
40 Marks		60 Marks

Continuous Internal Assessment consists of topic relevance, progress report and synopsis marks. Final Assessment includes viva, presentation and report marks.

#### **Examination Scheme:**

<b>Components</b>	<b>V</b>	<b>S</b>	<b>R</b>	<b>PR</b>	<b>FP</b>
<b>Weightage (%)</b>	20	20	20	20	20

V – Viva, S – Synopsis, FP – Final Presentation, R – Report, PR-Progress Report

## Syllabus - Fourth Semester

### DISSERTATION/ PROJECT REPORT/ PRESENTATION/ VIVA VOCE

Course Code: DSC4437

Credit Units: 20

#### GUIDELINES FOR DISSERTATION

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critiqued by the faculty guide and corrected by the student at each stage.

The File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation.

#### In general, the File should be comprehensive and include

A short account of the activities that were undertaken as part of the project;

A statement about the extent to which the project has achieved its stated goals.

A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;

Any activities planned but not yet completed as part of the DISSERTATION, or as a future initiative directly resulting from the project;

Any problems that have arisen that may be useful to document for future reference.

#### ➤ Report Layout

The report should contain the following components:

#### ➤ Title or Cover Page

The title page should contain the following information: Project Title; Student's Name; Course; Year; Supervisor's Name.

#### ➤ Acknowledgements (optional)

Acknowledgment to any advisory or financial assistance received in the course of work may be given.

#### ➤ Abstract

A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project

#### ➤ Table of Contents

Titles and subtitles are to correspond exactly with those in the text.

➤ **Introduction**

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

➤ **Materials and Methods**

This section should aim at experimental designs, materials used. Methodology should be mentioned in details including modifications if any.

➤ **Results and Discussion**

Present results, discuss and compare these with those from other workers, etc. In writing these section, emphasis should be given on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary never write in “point” form.

➤ **Conclusion**

A conclusion should be the final section in which the outcome of the work is mentioned briefly.

➤ **Future prospects**

➤ **Appendices**

The Appendix contains material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

➤ **References / Bibliography**

This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

## **Examples**

### **For research article**

Voravuthikunchai SP, Lortheeranuwat A, Ninrprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichia coli* O157: H7. *Clin Microbiol Infect*, **8** (suppl 1): 116–117.

### **For book**

Kowalski,M.(1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), **7**: 63-67

## **ASSESSMENT OF THE DISSERTATION FILE**

Essentially, marking will be based on the following criteria: the quality of the report, the technical merit of the project and the project execution.

Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project.

Project execution is concerned with assessing how much work has been put in.

The File should fulfill the following *assessment objectives*:

**Range of Research Methods used to obtain information**

**Execution of Research**

**Data Analysis**

Analyse Quantitative/ Qualitative information  
Control Quality

**Draw Conclusions**

**Examination Scheme:**

Dissertation	50
Viva Voce	50
<b>Total</b>	<b>100</b>

**Selecting the Dissertation Topic**

It is usual to give you some discretion in the choice of topic for the dissertation and the approach to be adopted. You will need to ensure that your dissertation is related to your field of specialization.

Deciding this is often the most difficult part of the dissertation process, and perhaps, you have been thinking of a topic for some time.

It is important to distinguish here between ‘dissertation topic’ and ‘dissertation title’. The topic is the specific area that you wish to investigate. The title may not be decided until the dissertation has been written so as to reflect its content properly.

Few restrictions are placed on the choice of the topic. Normally we would expect it to be:

- relevant to business, defined broadly;
- related to one or more of the subjects or areas of study within the core program and specialisation stream;
- clearly focused so as to facilitate an in-depth approach, subject to the availability of adequate sources of information and to your own knowledge;
- of value and interest to you and your personal and professional development.

**Planning the Dissertation**

This will entail following:

- Selecting a topic for investigation.
- Establishing the precise focus of your study by deciding on the aims and objectives of the dissertation, or formulating questions to be investigated. Consider very carefully what is worth investigating and its feasibility.
- Drawing up initial dissertation outlines considering the aims and objectives of the dissertation. Workout various stages of dissertation
- Devising a timetable to ensure that all stages of dissertation are completed in time. The timetable should include writing of the dissertation and regular meetings with your dissertation guide.

### **The Dissertation plan or outline**

It is recommended that you should have a dissertation plan to guide you right from the outset. Essentially, the dissertation plan is an outline of what you intend to do, chapter wise and therefore should reflect the aims and objectives of your dissertation.

There are several reasons for having a dissertation plan

- It provides a focus to your thoughts.
- It provides your faculty-guide with an opportunity, at an early stage of your work, to make constructive comments and help guide the direction of your research.
- The writing of a plan is the first formal stage of the writing process, and therefore helps build up your confidence.
- In many ways, the plan encourages you to come to terms with the reading, thinking and writing in a systematic and integrated way, with plenty of time left for changes.
- Finally, the dissertation plan generally provides a revision point in the development of your dissertation report in order to allow appropriate changes in the scope and even direction of your work as it progresses.

### **Keeping records**

This includes the following:

- Making a note of everything you read; including those discarded.
- Ensuring that when recording sources, author's name and initials, date of publication, title, place of publication and publisher are included. (You may consider starting a card index or database from the outset). Making an accurate note of all quotations at the time you read them.
- Make clear what is a direct quotation and what is your paraphrase.

### **Dissertation format**

All students must follow the following rules in submitting their dissertation.

- Front page should provide title, author, Name of degree/diploma and the date of submission.
- Second page should be the table of contents giving page references for each chapter and section.
- The next page should be the table of appendices, graphs and tables giving titles and page references.
- Next to follow should be a synopsis or abstract of the dissertation (approximately 500 words)
- Next is the 'acknowledgements'.
- Chapter I should be a general introduction, giving the background to the dissertation, the objectives of the dissertation, the rationale for the dissertation, the plan, methodological issues and problems. The limitations of the dissertation should also be hinted in this chapter.
- Other chapters will constitute the body of the dissertation. The number of chapters and their sequence will usually vary depending on, among others, on a critical review of the previous relevant work relating to your major findings, a discussion of their implications, and conclusions, possibly with a suggestion of the direction of future research on the area.
- After this concluding chapter, you should give a list of all the references you have used. These should be cross - references with your text. For articles from journals, the following details are required e.g.

Draper P and Pandyal K. 1991, The Investment Trust Discount Revisited, Journal of Business Finance and Accounting, Vol18, No6, Nov, pp 791-832.

For books, the following details are required:

Levi, M. 1996, International Financial Management, Prentice Hall, New York, 3rd Ed, 1996

- Finally, you should give any appendices. These should only include relevant statistical data or material that cannot be fitted into the above categories.

### **The Layout Guidelines for the Dissertation**

- A4 size Paper
- Font: Arial (10 points) or Times New Roman (12 points)
- Line spacing: 1.5
- Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

### **Guidelines for the assessment of the Dissertation**

While evaluating the dissertation, faculty guide will consider the following aspects:

1. Has the student made a clear statement of the objective or objective(s).
2. If there is more than one objective, do these constitute parts of a whole?
3. Has the student developed an appropriate analytical framework for addressing the problem at hand.
4. Is this based on up-to-date developments in the topic area?
5. Has the student collected information / data suitable to the frameworks?
6. Are the techniques employed by the student to analyse the data / information appropriate and relevant?
7. Has the student succeeded in drawing conclusion form the analysis?
8. Do the conclusions relate well to the objectives of the project?
9. Has the student been regular in his work?
10. Layout of the written report.

### **Assessment Scheme:**

**Continuous Evaluation:** 40%  
(Based on Abstract, Regularity,  
Adherence to initial plan, Records etc.)

<b>Final Evaluation:</b> Based on,	60%
Contents & Layout of the Report,	20
Conceptual Framework,	05
Objectives & Methodology and	05
Implications & Conclusions	10
Viva & Presentation	20

# Syllabus – First Semester

## BIOCHEMISTRY AND METABOLIC REGULATION

**Course Code: BTE4101**

**Credit Units: 02**

### **Course Objective:**

The primary focus of this course is metabolic regulation of carbohydrates, lipids and nitrogenous compounds. It is also aimed to expose the students to the technological applications in understanding the process of photosynthesis, and production of secondary metabolites through metabolic engineering. It is expected that the knowledge consolidated would help them to explore further into these areas by undertaking advanced research and studies.

### **Course Contents:**

#### **Module I**

**Carbohydrate and lipid metabolism:** Glycolysis, Krebs's cycle, Electron Transport chain (ETS), energetics and regulation of these pathways, HMP pathway and its importance, gluconeogenesis, mechanism of oxidative phosphorylation (Chemiosmotic theory), fatty acid oxidation and their metabolic routes to carbon, biosynthesis of lipids (fatty acids and sterols), glycogen metabolism.

#### **Module II**

**Protein and nucleotide metabolism:** oxidative deamination, decarboxylation and transamination reactions, Urea cycle, overview of biosynthetic families of amino acids, denovo synthesis, breakdown and regulation of purine and pyrimidine nucleotides, salvage pathways of nucleotide synthesis; biosynthesis of nucleotide co-enzymes NAD, NADP, FAD and FMN .

#### **Module III**

**Integration of cellular metabolism and hormonal regulation:** Action of major hormones (insulin, glucagons, epinephrine) responses to metabolic stress; starvation, metabolic disorders (phenylketonuria, arthritis) and role of antifolates in chemotherapy.

#### **Module IV:**

**Regulatory aspects of photosynthesis:** Mechanism of light interacting with photo pigments, energy transfer and transduction process during photosynthesis, artificial light harvesting system and application in carbon sequestration , Engineering of Rubisco enzyme for photosynthetic process optimization.

#### **Module V Secondary plant metabolism**

Importance of secondary metabolites, classification, terpenes, mevalonic acid pathway, phenolic compounds and alkaloids. Application of metabolic engineering in production of any two class of secondary metabolites. Contribution of metabolic engineering principles in promoting Green Chemistry.

**Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# GENETICS AND MOLECULAR BIOLOGY

**Course Code: BTE4102**

**Credit Units: 03**

## **Course objective**

Knowledge of genetics is fundamental to any field of biotechnology. Molecular biology has brought new dimension to the discipline of genetics in every sense of the word. The course is structured to achieve a balance somewhere between genetics and molecular biology for the student to get a “feel” for what are these overlapping disciplines all about

## **Course Contents:**

### **Module I**

Historical developments in genetics leading to evolution of molecular biology. DNA as genetic material, structure of DNA and RNA, complementarity, phosphodiester bond, denaturation and reassociation. Basic methods used in studying nucleic acids.

DNA replication, DNA polymerases, modes of replication, mechanism of replication in *E.coli*, synthesis of leading and lagging strands, DNA replication in eukaryotes.

### **Module II**

Mendel's laws of inheritance, alleles and multiple alleles, pedigree analysis in humans, gene interaction, epistasis, mitosis and meiosis, chromosomal basis of inheritance, cell cycle, sex determination in *Drosophila* and humans, sex chromosomes and sex linked inheritance. Dosage compensation.

### **Module III**

Concept of linkage and gene mapping in eukaryotes. Molecular markers and their utility in genetic mapping, molecular basis of recombination.

Evolution of gene concept. Fine structure mapping, Benzer's T4, rII system, complementation and recombination. Bacterial genetics – conjugation and transduction.

### **Module IV**

Genome organization in prokaryotes and eukaryotes (nuclear, chloroplast and mitochondria), genes and pseudogenes, repeated sequences. Transposable elements – transposons, retrotransposons. C value paradox.

Chromosome structure: heterochromatin, euchromatin, histone proteins, histone code.

Chromosomal rearrangements, aneuploidy, chromosomal human disorders.

### **Module V**

Transcription: Gene structure: promoter and coding sequences, regulatory and transcription units, RNA polymerases, basic mechanism of transcription (initiation, elongation and termination) in prokaryotes and eukaryotes, tRNAs, rRNA.

Salient features of genetic code.

Translation – initiation, elongation and termination.

### **Module VI**

Regulation of gene expression, Prokaryotes negative and positive regulation, attenuation.

Eukaryotes: Transcription factors, activators and enhancers.

**Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# INSTRUMENTATION AND RESEARCH METHODOLOGY

**Course Code: BTE4103**

**Credit Units: 02**

## **Course Objective:**

To provide knowledge on key features and applications of the equipment particularly used in molecular biology, protein engineering and analysis of the structure of bio-molecules. An introductory session will be conducted on the basic instruments used in biotechnology, keeping in mind the requirements of the students who have not done B.Tech Biotechnology. Research methodology is aimed to expose and inculcate the research spirit among the students. The course is expected to impart in depth understanding of various steps of research such as formulation of research problem, construction of research design, data collection and generation of a research report. It will also develop the skill of scientific writing.

## **Course Contents:**

### **Module I: Instruments used in Molecular biology**

PCR system; Quantitative and real time PCR, Nucleotide sequencing of DNA (DNA sequencer), Flow cytometer, Microarrays and DNA chips, Gel-Documentation and Image analysis systems, Radioimmunoassay, ELISA

### **Module II: Cell Disruption Techniques**

Chemical and Physical cell disruption techniques: homogenizers, sonicators, permeabilization techniques

### **Module III: Characterization of Molecules**

Mass spectrometry, MALDI, ESI-MS; Nuclear Magnetic Resonance spectroscopy,  $^1\text{H}$  NMR,  $^{13}\text{C}$  NMR, MRI; X-ray Crystallography and analysis of data to predict a protein structure

### **Module IV**

Research – Definition – Importance and Meaning of research – Characteristics of research – Types of Research – Steps in research – Identification, Selection and formulation of research problem – Research questions – Research design – Formulation of Hypothesis – Review of Literature

### **Module V**

Formulation of research plan, report, Type of Articles (review, letters etc). Scientific paper format (Abstract, Introduction, Materials and Methods, Results, Discussion). Writing, evaluating, presenting and publishing the results of scientific research in the academic press (journals, conferences etc). Choosing the appropriate journal (Sources, Information, Instructions to authors, peer review system, journal evaluation)

## **Examination Scheme:**

# MICROBIAL TECHNOLOGY

**Course Code: BTE4104**

**Credit Units: 02**

## **Course Objective:**

An introduction to microorganisms, their morphology, reproduction, cultivation, metabolism, genetics, ecology of microorganisms and their relationships to health and environment

## **Course Contents:**

### **Module I**

General concept of Microbial biotechnology, Concept of pure culture, Theory and practice of sterilization; isolation of industrially important microorganisms

### **Module II**

**Microbial Physiology and Metabolic diversity** Nutritional requirements of major groups of microbes, nutritional uptake; transport across the membranes and cell wall; Growth curve and growth parameters, measurement of growth (biomass, turbidity, dry weight, protein content); environmental factors affecting microbial growth, Phototrophy, chemolithotrophy, anaerobic way of life, Microbial fermentation.

### **Module III**

**Industrial Microbiology** :Principles of exploitation of microorganisms, primary and secondary metabolism, microbes in the production of: Antibiotics: Penicillin, streptomycin; Enzymes: proteases, amylases, Organic acids: Citric acid, acetic acid; Vitamins: Vit B12, B2; Amino acids: Glutamic acid, Lysine; Alkaloids; Alcohol, beer, wine, sake; Polysaccharides; microbial transformation of steroids.

### **Module IV**

**Food Microbiology:** Food and dairy products (fermented milks, cheese, bread and yogurt), Mushroom cultivation, SCP, their uses and contamination; preservation and spoilage of fruits vegetables, meat and poultry products.

### **Module V**

**Bioremediation and Biodegradation:** Microbial degradation of natural substances (cellulose, xylan, lignin, chitin and keratin), Microbial degradation of xenobiotics; Biodeterioration: microbial deterioration of paper, textile, wood, paint; Bioremediation of heavy metals; Microbes in sugar, leather, paper and pulp industry; Biomagnification.

**Agricultural microbiology:** Role of microbes in biogeochemical cycling, role of microorganisms in crop improvement, Biofertilizers and biopesticides, Biopolymers and bioplastics.

### **Module V**

**Microbiology of waste disposal:** Microbes in solid waste and solid waste management; Sewage treatment systems (primary, secondary, tertiary and disinfection); Disinfection of potable water supplies; Indicators organism for water safety; Microbial assessment of water quality.

**Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>Attendance</b>	<b>Assignment/ Project/Seminar/Quiz</b>	<b>EE</b>
<b>Weightage (%)</b>	15	5	10	70

# BIOSTATISTICS

**Course Code: BTE4105**

**Credit Units: 02**

## **Course Objective:**

The course aims to develop competency and expertise in the application of statistical methods applied to biological data obtained in experimental techniques.

## **Course Contents:**

### **Module I: Descriptive statistics**

Measures of Central Tendency (Mean, Median, Mode), Measures of dispersion (Range, Mean Deviation, Standard Deviation, Quartile Deviation), combined mean and variance, covariance, Graphs (Bar Chart, Pie Chart, Box Plot, Histogram, Ogive, scatter plot)

### **Module II**

Concepts of Probability (Addition and Multiplication Theorem) Bayes theorem, Binomial, Poisson and Normal distribution. Correlation and linear regression, method of least squares. Sampling theory (Probability and non probability)

### **Module III: Inferential statistics**

Formulation of Hypothesis (One-tailed & Two-tailed), Type I and Type II errors, power of a test, Significance of a test, P-value testing, Hypothesis testing (students T-test, F-test, Chi-square test). Analysis of variance (ANOVA)

### **Module IV**

Applications of statistical methods using statistical software SPSS or Excel

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# BIOCHEMISTRY AND METABOLIC REGULATION LAB

Course Code: BTE4106

Credit Units: 01

## Course Contents:

### Module I: Solutions and buffers

Preparation of molar, normal and % (w/v) solutions. Calibration of pH meter and preparation of buffers of different pH and molar strength.

### Module II: Carbohydrates

Extraction and estimation of carbohydrates from given plant/animal materials: determination of total sugars by Anthrone method

Separation of sugars by thin layer chromatography

### Module III: Proteins

Extraction of total proteins by TCA precipitation; Estimation of proteins by Lowery and Bradford Methods; Electrophoretic (PAGE and SDS-PAGE) separation of isolated proteins

### Module IV: Lipids

Extraction of total lipids by Folch's method; estimation of phospholipids and glycolipids; thin layer chromatographic separation of lipids

### Module V: Nucleic Acid

Extraction of DNA from germinating seeds or other plant tissues; quantitative estimation of nucleic acid by diphenylamine (DPA) method; quantitative estimation of RNA by Orcinol method; characterization of isolated nucleic acid by agarose gel electrophoresis.

## Examination Scheme:

## GENETICS AND MOLECULAR BIOLOGY LAB

**Course Code: BTE4107**

**Credit Units: 02**

### **Course Contents:**

- To make squash preparations of pre-treated metaphase chromosomes, and PMCs to view diplotene, diakinesis, metaphase I and anaphase I
- To study through photographs normal and deviant cytogenetic mechanisms
- Study of Mendel's laws, and deviations from Mendelian ratios using seed samples in the ratios of 9:7, 9:4:3, 13:3, 15:1, 12:3:1. Use Chi-Square Test for Testing the ratios
- Isolation of chloroplasts by sucrose gradient. Photographs of Restriction site variation of chloroplast DNA
- Isolation and purification of total plant and animal genomic DNA
- Determine quality and quantity of the isolated DNA
- Isolation of bacterial and plasmid DNA
- Restriction digestion profile through agarose gel electrophoresis.

# MICROBIAL TECHNOLOGY LAB

**Course Code: BTE4108**

**Credit Units: 01**

## **Course Contents:**

### **Module I**

Isolation and enumeration of microorganisms from rhizosphere, Staining techniques: Simple staining, differential Gram staining, endospore staining, lactophenol cotton blue staining for fungi

### **Module II**

Growth curve measurement of bacterial population by turbidometry

### **Module III**

Water microbiology- presumptive, confirmed and complete test for water potability.

### **Module IV**

Antibiotic drug sensitivity by Kirby-Bauer method and Broth-Dilution method, Isolation of antibiotic producing microorganisms and determination of antimicrobial activity of isolates.

### **Module V**

Preparation of sauerkraut, methylene blue reductase test, microbial analysis of food products.

## **Examination Scheme:**

IA			EE

# ANIMAL BIOTECHNOLOGY

**Course Code: BTE4111**

**Credit Units: 02**

**Course Objective:**

To introduce significance of animal tissue culture and transgenesis.

**Course Contents:**

**Module I: Animal Cell and Tissue Culture: Principles and Applications**

Types of Media, Types of Cell Culture-Primary and Secondary, Cell Transformation, Cryopreservation, Contamination.

**Module II: Transgenesis**

Principles and Applications of Gene Transfer Technology Methods of Gene Transfer, Vectors: SV-40, Retroviral Vector, Adenoviral Vector, Adeno-associated viral vector, Vaccinia Virus vector, Methods for Gene Delivery: Chemical Method, Physical Method. Screening and selection of Transfected cells.

**Module III: Mouse as A Model for Transgenesis**

Transgenic Mouse as a model to study Human Diseases. Strategies for production of Genetically Altered Mice, Transgenic Animals, Animals as Bioreactors.

**Module IV: Animal Cloning and *in vitro* Fertilization**

Cloning of Animal, *in vitro* fertilization and ethical issues.

**Examination Scheme:**

# PLANT CELL, TISSUE & ORGAN CULTURE

**Course Code: BTE4112**

**Credit Units: 02**

## **Course Objective:**

The objective of this course is to acquaint the students with technological aspects of plant tissue culture which have direct applications in agriculture, crop improvement and industrial processes.

## **Course Contents:**

### **Module I**

Introduction and potential application of plant cell, tissue and organ culture techniques. Common pathways of plant regeneration and organogenesis. Organ culture, anther and pollen culture. Ovary, ovule and embryo culture (direct and indirect embryogenesis). Callus suspension culture. Protoplast, isolation, culture and fusion. Suspension cultures. Production of hybrids and cybrids.

### **Module II**

Plant genetic transformation (Direct and indirect methods). Regeneration methodologies and recovery of transgenics.

### **Module III**

Somaclonal and Gametoclonal Variations. Induction & Utilization of Somatic Variants; somaclonal variation, its genetic basis and application in crop improvement

### **Module IV**

Types of plant cell reactors. Comparison of reactor performances. Novel design concepts. Elicitation and immobilization techniques. Reactors for production of secondary metabolites, peptide hormones, antigens and therapeutic molecules. Cell lines (BY2) and their development and uses. Artificial seeds and their automated production

### **Module V**

Germplasm Preservation (Short and long term). Ex situ conservation.

## Syllabus – Second Semester

### RECOMBINANT DNA TECHNOLOGY

**Course Code: BTE4201**

**Credit Units: 02**

**Course Objective:**

A complete understanding of molecular techniques like DNA sequencing, restriction mapping, PCR, cloning and expression of genes can be obtained through this course.

**Course Contents:**

**Module I: Concept of gene**

Concept of gene, prokaryotic and eukaryotic control elements and their analysis, random, Restriction enzymes, DNA polymerase, DNA modifying enzymes and their use.

**Module II:** Plasmids, M13 Single stranded DNA Phage, bacteriophage lambda, lysogeny and lytic cycle and their genetic switches. DNA cloning and expression vectors – plasmids, lambda, insertional and replacement vectors, cosmids, YAC, BAC, PAC.

**Module III:** Construction of genomic and cDNA library .Genomic DNA, mRNA isolation, cDNA synthesis. Methods for identification of recombinant clones.

**Module IV:** DNA sequencing, genome mapping and sequencing, next generation sequencing, polymerase chain reaction (PCR) and its application, bioinformatics and database analysis.

**Module V:** Analysis of gene expression: Northern blotting, RT – PCR, Real time (Q) PCR and microarray analysis. Isolation of recombinant DNA clones, gene transfection / transformation in cells and tissues, knock out / in mice, animal cloning and their applications. Genome – wide high through – put analysis and its application.

**Module VI :** Transposon mediated and site – directed mutagenesis and its applications, Expression of recombinant proteins in *E.coli* and its applications, RNA interference, applications in disease diagnosis, gene therapy, vaccine production, transgenic plants and animals.

**Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

**Text and references:**

- Gene cloning and analysis: An Introduction by T. A Brown, Blackwell Publishing
- Principles of gene manipulation: An introduction to genetic engineering by R.W Old and S.B Primrose, Blackwell Publishing.

# BIOINFORMATICS & COMPUTATIONAL BIOLOGY

**Course code: BTE4202**

**Credit Units: 02**

## **Course Objective:**

This course will enable the students to achieve skills in Bioinformatics & Computational Biology that are essential for application in Biotechnology.

## **Course Contents:**

### **Module I: Introduction to Bioinformatics**

Overview of Bioinformatics and computational biology. Importance of databases - EMBL – NCBI nucleic acid sequence databases - protein sequence databases (SwissProt) - structure databases (PDB) - bibliographic databases

### **Module II: Sequence Alignment Methods**

Sequence analysis of biological data - methods of alignment - methods for optimal alignments; using gap penalties and scoring matrices- multiple sequence alignment – introduction - tools for MSA (MUSCLE, T-coffee) - application of multiple sequence alignment. Similarity Searching Tools: BLAST and FASTA, Theory and Algorithms, variants of BLAST and FASTA, PSI-BLAST and PHI BLAST, Statistical Significance.

### **Module III: Molecular Phylogenetics and Methods**

The concept of evolutionary tree, terminology of phylogenetics, introduction to evolutionary models, Types of phylogenetic trees (rooted vs. unrooted trees).Phylogenetic analysis algorithms: UPGMA, Neighbors-Relation, Neighbor-Joining, maximum Parsimony, maximum likelihood. Tree evaluation methods: Bootstrapping,Randomized and jack-knifing methods, Phylogenetic analysis software: PHYLIP, MEGA, and PhyML.

### **Module IV: Predictive methods using DNA and protein sequences**

Concepts of motif, pattern and profile, Gene Identification methods, Gene predictions strategies – Prokaryotic and Eukaryotic, Identification and characterization of proteins, Protein structure prediction methods: Secondary and tertiary approaches.

### **Module V: Introduction to Chemoinformatics, Molecular modelling& Drug designing**

Chemical similarity search methods, Designing focused chemical libraries, Comparative protein modelling, Molecular docking and virtual high-throughput screening, Search algorithms, Scoring methods, Challenges in Molecular docking, Introduction of receptor flexibility through multiple receptor conformations (MRC docking), Hit-to-lead optimization, Introductory concept of Activity Cliffs.

# BIOCHEMICAL ENGINEERING

**Course Code: BTE4203**

**Credit Units: 02**

## **Course Objective:**

The course material on the types of bioreactor, mass and energy balance, aeration and agitation, scale-up principles etc. may help the students to understand the various principles involved in instrumentation and control and scale-up of bioprocess.

## **Course Contents:**

### **Module I**

Concepts of Mass Balance and Energy Balance, Kinetics of microbial growth and Batch Fermentation processes and Maintenance coefficient. Fed batch fermentation.

### **Module II**

Design considerations for maintaining sterility of the fermentation medium for various temperature-time profiles for Batch and Continuous Processes, Residence Time Concept, Design Calculation.

### **Module III**

Aeration and Agitation in Bioreactors: Mass Transfer Theories, Bubble aeration and Mechanical agitation, Correlation between Mass transfer coefficients and Operating variables.

### **Module IV**

Comparison of batch and continuous fermentation, Cell recycle, Two stage continuous Culture . Principles of scale up, Criteria of scale up

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# ENVIRONMENTAL BIOTECHNOLOGY

**Course Code: BTE4204**

**Credit Units: 02**

## **COURSE OBJECTIVE**

To introduce the students to regenerate clean environment using biotechnology as the key tool and also provide them the insight for various eco-friendly approaches and technologies along with the concept of sustainable development

## **COURSE CONTENTS**

### **Module-I:**

Greenhouse effect, Global Warming, Global Ozone Problem, Acid Rain, Eutrophication and Biomagnification

### **Module-II:**

Renewable and Non-Renewable energy resources

Clean fuel technology and Biofuels- Bioethanol, Biogas, Biodiesel, Algal fuels.

### **Module-III:**

Waste Water Engineering: Treatment of municipal waste water and industrial effluents with special focus on biological and advanced water treatments

Solid Waste Management

### **Module-IV:**

Bioremediation and Biodegradation of major environmental pollutants- release of genetically engineered microbes in environment.

Bio-mineralisation- Use of microbial technology for mining of metals from ores

### **Module-V:**

Biofertilizers, Biopesticides and IPM, Vermicomposting

Bioassessment of environmental quality- Bioindicators and Biosensors

### **Module-VI**

EIA and Environmental Audit

Related case studies at national and global level

## **Examination Scheme**

<b>Components</b>	<b>CT</b>	<b>Attendance</b>	<b>Assignment/Seminar/Quiz</b>	<b>EE</b>
<b>Weightage (%)</b>	<b>15</b>	<b>5</b>	<b>10</b>	<b>70</b>

# IPR AND BIOETHICS

**Course Code: BTE4205**

**Credit Units: 02**

## **Course Objective:**

The objectives of the course are to explain the fundamental principles of IPR and issues related to IP and examine information policy issues from different perspectives. Students will study and assess policy groups, intellectual property rights, access to information and research policy issues that usually include plant, animal and microbial genetic engineering products.

## **Course Contents:**

### **Module I: Introduction**

Introduction – Invention and Creativity – Intellectual Property (IP) – Importance – Protection of IPR – Basic types of property and Objectives of Intellectual Property Rights, origin and evolution of IPR, tangible and intangible property; concept and classification of intellectual property: Copyrights and related rights, Patent, Industrial Design, Trademarks and Geographical indications, Rights of traditional Knowledge and Protection of Plant varieties

### **Module II: IPR**

International convention relating to Intellectual Property – Establishment of WIPO – Mission and Activities – History – General Agreement on Trade and Tariff (GATT) – TRIPS Agreement. Indian Position Vs WTO and Strategies – Indian IPR legislations – commitments to WTO-Patent Ordinance and the Bill – Draft of a national Intellectual Property Policy – Present against unfair competition.

### **Module III: Patent**

Basic criterion for patentability, patentable subjects, patentable inventions, patent acquisition, infringement of patent, discovery Vs invention, product patenting Vs process patenting, special issue in biotechnology patent, Patent laws in Indian and international perspective, Patent Application procedure, patent Claim and specifications, Case study: Basmati case, Neem controversy, Turmeric Case

### **Module IV: Biosafety**

Definition and requirement; biosafety in relation to human health, environment, transgenic research and applications, biosafety laws, guidelines and conventions, biosafety regulation: principles and practices in microbial and biomedical labs, guidelines for research involving DNA molecule ; Regulation bodies at National and International level

### **Module V Bioethics**

Legal and socioeco' nomic impact of the products and techniques in Biotechnology, Bioethics in plant, animal and microbial genetic engineering, Ethical issues in healthcare, Biopiracy and ethical conflicts

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Text & References:**

# MOLECULAR CELL BIOLOGY

Course Code: BTE4206

Credit Units: 03

## Course Objective:

The object of the present course is to develop basic knowledge and skills in cell and molecular biology and to understand the structure and function of the cellular and sub cellular components of cells and tissues with the help of recent techniques. This course will help students to get an understanding of cell function at the molecular level including the fundamentals of DNA. They will become aware of the complexity and harmony of the cell. Applications of cellular and molecular biology in Biotechnology will also be presented.

## Course Contents:

**Module-I: Membrane structure :** Chemical and physical properties of cell membranes and their major components, significance of these properties to membrane structure, integral and peripheral membrane proteins, biosynthesis of membrane and secreted proteins.

Structure of nuclear envelope, nuclear pore, complex. transport across nuclear envelope; regulation of nuclear import

**Module-II: Cell Trafficking :** Targeting proteins to endoplasmic reticulum, signal recognition particle, signal recognition particle receptor, protein folding and processing in ER protein export from ER; Protein sorting and export from Golgi Apparatus; SNARE hypothesis; Protein import into Mitochondria, mitochondrial genome; Import and sorting of chloroplast protein.

Targeting of proteins to membranes, mechanisms for transport of small molecules across the membrane, including simple diffusion, facilitative diffusion, primary and secondary active transport, action of ionophores ; transport across nuclear envelope; regulation of nuclear import

**Module-III: Cell division and regulation of cell cycle :** control of the cell cycle and the proteins involved; know the role of the cyclins and cyclin-dependent kinases, cell cycle checkpoints, methods for synchronizing the cell cycle in cell populations.

**Module-IV: Intracellular Signaling** - Modes of cell signaling, steroid hormone receptors, peptide hormones and growth factor, plant hormones, G-protein coupled receptors; receptor –protein tyrosine kinase , c- AMP pathway of signal transduction ; c GMP, phospholipids and calcium ions , Ras, Raf , MAP kinase pathway , JAK –STAT pathway , Apoptosis –role of caspases.

## Module-V: Cancer Biology

Types of cancer; development of cancer, cells; Oncogenes, protooncogenes , function of oncogene products , tumor suppressor genes , function of tumor suppression gene products, role of oncogene and tumor suppressor gene in development, molecular diagnosis of cancer.

## Examination Scheme

Components	CT	Attendance	Assignment/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## Text and references:

- Molecular Cell Biology by Bruce Albert
- Molecular Biology by Lodish Darnell and Baltimore
- Molecular Biology of the gene by Watson et al 4th ed.
- Genes VIII by Benjamin Lewis

## RECOMBINANT DNA TECHNOLOGY LAB

Course Code: BTE4207

Credit Units: 02

- Preparation and transformation of competent cells
- Study of restriction digestion.
- Study of ligation.
- Study of southern blotting.
- Study of Western blotting
- Study of RFLP
- Study of PCR.

### Examination Scheme:

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

# BIOINFORMATICS & COMPUTATIONAL BIOLOGY LAB

**Course Code: BTE4208**

**Credit Units: 02**

## **Course Contents:**

### **Module I: Databases and file formats**

Biological databases: NCBI, EMBL, DDBJ, PIR, PDB, SwissProt, KEGG, UNIGene, Ensembl, STRING, GEO. Sequence file formats: GenBank, FASTA, EMBL, PDB format

### **Module II: Sequence Analysis**

DotPlot Analysis: DOTPLOT, DOTTER.DOTMATCHER.

Pairwise Sequence Alignment programs: LALIGN, EMBOSS NEEDLE, EMBOSS Water.

Multiple Sequence Alignment programs: Clustalw, Cobalt, Muscle, T-Coffee.

Similarity Searching: BLAST, Variants of Blast.

### **Module III: Phylogenetic Analysis**

Phylogenetic analysis softwares: Phylip, Mega.

### **Module IV: Predictive softwares**

Primer Designing: PRIMER3

Gene Identification Programs: Genscan, ORF finder. Fgenesh, Glimmer

Protein Identification and characterization: Protparam, Peptide cutter.

Motif and Patterns program: Prosite, InterProScan, Pfam.

### **Module V: Proteins and Comparative Modeling**

Modellingsoftwares: Swiss Model workspace, Modeller,

Model Evaluation: PROcheck.

Docking Software: Hex

### **Module VI: Network Analysis**

Network Analysis Software: Cytoscape, Complex pathway Simulator.

## **Examination Scheme:**

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

## ENVIRONMENTAL BIOTECHNOLOGY LAB

**Course Code: BTE4209**

**Credit Units: 01**

### **Course Objective:**

The present course aims to develop the practical understanding of use of various processes and microbes in environmental monitoring and clean up. Hence will provide an insight to envisage the different environmental problems and their solutions

### **Course Contents:**

#### **Module I**

Foliar symptomological study of air pollution- chlorosis and necrosis

#### **Module II**

Physical and Chemical analysis of water and soil.  
BOD, COD, DO determination in water samples

#### **Module III**

Isolation and characterization of microbes in contaminated soil and water  
And to determine their bioremediation efficiency.

#### **Module IV**

Vermicomposting

#### **Module V**

Estimation and comparison of pigment content and sugar content in leaves due to air pollution with control.

### **Examination Scheme:**

IA (30)			EE (70)			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

**Note:** Minor variation could be there depending on the examiner.

## MOLECULAR CELL BIOLOGY LAB

Course Code: BTE4210

Credit Units: 01

### Course objective:

- Isolation of cell organelles by centrifugation.
- Study of membrane potential in isolated mitochondria.
- Study of cell viability / death assay by use of trypanblue, MTT assay and wright staining.
- Study of apoptosis through analysis of DNA fragmentation patterns in mitochondria

### Examination Scheme:

IA (30)			EE (70)			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

**Note:** Minor variation could be there depending on the examiner.

# IMMUNOLOGY

**Course Code: BTE4211**

**Credit Units: 02**

## **Course Objectives:**

Aim of this course is to provide in-depth information of immune-system and its implication for health and diseases. Knowledge about the principles and applications of immune-assay to evaluate the immune-status.

## **Course Contents:**

### **Module I**

#### **Introduction:**

Overview of immune system: Types of immunity clonal nature of immune response; Organization and structure of lymphoid organs; Hematopoiesis and differentiation; Cells of the Immune System

### **Module II**

#### **Antigen and Antibody:**

Antigens: Types, Responses and Characteristics, Immunoglobulin: structure, function, antibody diversity and its mechanism, Therapeutic applications of antibodies.

### **Module III**

#### **Mechanism of Immune-response:**

Complement system, Major histocompatibility complex, Lymphocyte Biology: Development, differentiation and activation of lymphocytes, Cytokines and Cell Signaling, Homeostatic Regulation of Immune Responses.

### **Module IV**

#### **Immune-system in Health and Disease:**

Transplantation Immunology, Tumor Immunology, Infection and Infectious Disease, Hypersensitivity, Immune System Disorders; Immunotherapy, Vaccines

### **Module V**

#### **Immunoassays:**

Methods of antibody production and their use in Immunoassays; Immunodiffusion, Immunoelectrophoresis and Immunohistochemistry; ELISA,-principle, types and applications; Flow cytometry

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Text & References:**

- Kuby Immunology 6<sup>th</sup> Edition, by Thomas J. Kindt, Barbara A. Osborne, Richard A. Goldsby, WH Freeman Publishers (2006).

- Fundamental Immunology, Edited by W. Paul, Lippincot Williams and Wilkins Publishers (2008)

## IMMUNOLOGY LAB

**Course Code: BTE4212**

**Credit Units: 02**

### Course Contents

- Agglutination – Blood typing/ Blood group study
- Blood Smear Preparation; Serum isolation; identification of different immune cells in the blood
- WIDAL
- Antigen/antibody purification by affinity chromatography
- Immunodiffusion: SRID and DRID
- Immunoelectrophoresis
- Immunohistochemistry
- ELISA: DOT ELISA, Straight ELISA; Sandwich ELISA

### Examination Scheme:

Components	H/S	Q	CT2	EE
Weightage (%)	15	5	20	60

# TERM PAPER

**Course Code: BTE4231**

**Credit Units: 01**

A term (or research) paper is primarily a record of intelligent reading in several sources on a particular subject. The students will choose the topic at the beginning of the session in consultation with the faculty assigned. The progress of the paper will be monitored regularly by the faculty. At the end of the semester the detailed paper on the topic will be submitted to the faculty assigned. The evaluation will be done by Board of examiners comprising of the faculties.

## GUIDELINES FOR TERM PAPER

The procedure for writing a term paper may consist of the following steps:

1. Choosing a subject
2. Finding sources of materials
3. Collecting the notes
4. Outlining the paper
5. Writing the first draft
6. Editing & preparing the final paper

### 1. Choosing a Subject

The subject chosen should not be too general.

### 2. Finding Sources of materials

- a) The material sources should be not more than 10 years old unless the nature of the paper is such that it involves examining older writings from a historical point of view.
- b) Begin by making a list of subject-headings under which you might expect the subject to be listed.
- c) The sources could be books and magazine articles, news stories, periodicals, scientific journals etc.

### 3. Collecting the notes

Skim through sources, locating the useful material, then make good notes of it, including quotes and information for footnotes.

- a) Get facts, not just opinions. Compare the facts with author's conclusion.
- b) In research studies, notice the methods and procedures, results & conclusions.
- c) Check cross references.

### 4. Outlining the paper

- a) Review notes to find main sub-divisions of the subject.
- b) Sort the collected material again under each main division to find sub-sections for outline so that it begins to look more coherent and takes on a definite structure. If it does not, try going back and sorting again for main divisions, to see if another general pattern is possible.

### 5. Writing the first draft

Write the paper around the outline, being sure that you indicate in the first part of the paper what its purpose is. You may follow the following:

- a) statement of purpose
- b) main body of the paper
- c) statement of summary and conclusion

Avoid short, bumpy sentences and long straggling sentences with more than one main idea.

## **6. Editing & preparing the final Paper**

- a) Before writing a term paper, you should ensure you have a question which you attempt to answer in your paper. This question should be kept in mind throughout the paper. Include only information/ details/ analyses of relevance to the question at hand. Sometimes, the relevance of a particular section may be clear to you but not to your readers. To avoid this, ensure you briefly explain the relevance of every section.
- b) Read the paper to ensure that the language is not awkward, and that it "flows" properly.
- c) Check for proper spelling, phrasing and sentence construction.
- d) Check for proper form on footnotes, quotes, and punctuation.
- e) Check to see that quotations serve one of the following purposes:
  - (i) Show evidence of what an author has said.
  - (ii) Avoid misrepresentation through restatement.
  - (iii) Save unnecessary writing when ideas have been well expressed by the original author.
- f) Check for proper form on tables and graphs. Be certain that any table or graph is self-explanatory.

Term papers should be composed of the following sections:

1. Title page
2. Table of contents
3. Introduction
4. Review
5. Discussion & Conclusion
6. References
7. Appendix

Generally, the introduction, discussion, conclusion and bibliography part should account for a third of the paper and the review part should be two thirds of the paper.

### **Discussion**

The discussion section either follows the results or may alternatively be integrated in the results section. The section should consist of a discussion of the results of the study focusing on the question posed in the research paper.

### **Conclusion**

The conclusion is often thought of as the easiest part of the paper but should by no means be disregarded. There are a number of key components which should not be omitted. These include:

- a) summary of question posed
- b) summary of findings
- c) summary of main limitations of the study at hand
- d) details of possibilities for related future research

### **References**

From the very beginning of a research project, you should be careful to note all details of articles gathered.

The bibliography should contain ALL references included in the paper. References not included in the text in any form should NOT be included in the bibliography.

The key to a good bibliography is consistency. Choose a particular convention and stick to this.

### **Conventions**

Monographs

Crystal, D. (2001), Language and the internet. Cambridge: Cambridge University Press.

### **Edited volumes**

Gass, S./Neu, J. (eds.) (1996), Speech acts across cultures. Challenges to communication in a second language. Berlin/ NY: Mouton de Gruyter.

[(eds.) is used when there is more than one editor; and (ed.) where there is only one editor. In German the abbreviation used is (Hrsg.) for Herausgeber].

### **Edited articles**

Schmidt, R./Shimura, A./Wang, Z./Jeong, H. (1996), Suggestions to buy: Television commercials from the U.S., Japan, China, and Korea. In: Gass, S./Neu, J. (eds.) (1996), Speech acts across cultures. Challenges to communication in a second language. Berlin/ NY: Mouton de Gruyter: 285-316.

### **Journal articles**

McQuarrie, E.F./Mick, D.G. (1992), On resonance: A critical pluralistic inquiry into advertising rhetoric. Journal of consumer research 19, 180-197.

### **Electronic book**

Chandler, D. (1994), Semiotics for beginners [HTML document]. Retrieved [5.10.'01] from the World Wide Web, <http://www.aber.ac.uk/media/Documents/S4B/>.

### **Electronic journal articles**

Watts, S. (2000) Teaching talk: Should students learn 'real German'? [HTML document]. German as a Foreign Language Journal [online] 1. Retrieved [12.09.'00] from the World Wide Web, <http://www.gfl-journal.com/>.

### **Other websites**

Verterhus, S.A. (n.y.), Anglicisms in German car advertising. The problem of gender assignment [HTML document]. Retrieved [13.10.'01] from the World Wide Web, <http://olaf.hiof.no/~sverrev/eng.html>.

### **Unpublished papers**

Takahashi, S./DuFon, M.A. (1989), Cross-linguistic influence in indirectness: The case of English directives performed by native Japanese speakers. Unpublished paper, Department of English as a Second Language, University of Hawai'i at Manoa, Honolulu.

### **Unpublished theses/ dissertations**

Möhl, S. (1996), Alltagssituationen im interkulturellen Vergleich: Realisierung von Kritik und Ablehnung im Deutschen und Englischen. Unpublished MA thesis, University of Hamburg.

Walsh, R. (1995), Language development and the year abroad: A study of oral grammatical accuracy amongst adult learners of German as a foreign language. Unpublished PhD dissertation, University College Dublin.

### **Appendix**

The appendix should be used for data collected (e.g. questionnaires, transcripts, ...) and for tables and graphs not included in the main text due to their subsidiary nature or to space constraints in the main text.

**Assessment Scheme:**

**Continuous Evaluation:**

40%

(Based on abstract writing, interim draft, general approach, research orientation, readings undertaken etc.)

**Final Evaluation:**

60%

(Based on the organization of the paper, objectives/ problem profile/ issue outlining, comprehensiveness of the research, flow of the idea/ ideas, relevance of material used/ presented, outcomes vs. objectives, presentation/ viva etc.)

# Syllabus – Third Semester

## ENZYME TECHNOLOGY

**Course Code: BTE4301**

**Credit Unit: 02**

### **Course Objective**

The course objective covers an understanding of the principles and application of protein, secondary metabolites and enzyme biochemistry applicable to industrial bioprocesses, process design, and operation strategies of various enzyme reactors.

### **Course Contents:**

#### **Module I: Introduction to Enzymes**

Structure and general properties of enzymes; Mechanism of Enzyme Action; Concept of active site and Energetics of enzyme-substrate complex formation, Activation energy; Specificity of enzyme action; Cofactors; Monomeric and Oligomeric enzymes.

#### **Module II: Kinetics of single-substrate enzyme catalysed reactions**

Derivation and significance of Michaelis-Menten rate expression; Linear plots, King-Altman's method; Turnover number; Effect of temperature and pH on enzyme activity and stability; Inhibition kinetics.

#### **Module III: Kinetics of Multisubstrate enzyme catalysed reactions**

Multisubstrate enzyme kinetics: Ping-pong and Ordered (Sequential and Random) mechanisms; Alberty equation; Co-operativity; Sigmoidal kinetics; Allosteric enzymes; Isozyme and Multienzyme complex.

#### **Module IV: Enzyme Immobilization and Bioreactors**

Techniques for enzyme Immobilization-adsorption, matrix entrapment, encapsulation, cross-linking, covalent binding; Characteristics of Immobilized systems; Design of Enzyme Reactors-Packed-bed, Fluidized-bed, Membrane reactors; CSTRs.

#### **Module V: Applications of enzymes and future trends**

Enzymes applications-Industrial, Analytical, Medical and Environmental; Enzyme based biosensors; Enzyme Inhibitors as therapeutic agents; Extremozymes, Abzymes, Ribozymes, Hybrid enzymes, Inteins.

### **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# GENOMICS AND PROTEOMICS

**Course code: BTE4302**

**Credit Units: 02**

## **Course Objectives:**

The course covers the basic principles that underlying the structure, function, expression and evolution of diverse genomes and proteomes, by assessing contents of genomic /proteomic characterization and bioinformatics analysis. This course introduces a comprehensive overview of analytical platforms, computational tools; experimental design, analysis methods and databases intended to study DNA/protein sequences, characterization, gene expression and genome evolution, remodeling as well as the implications of this research.

## **Course Contents:**

### **Module I - Introduction & Structural Genomics**

Concepts of Genes and Genomes, Genome size, Sequence complexity, genome organization in diverse organisms (eukaryotes, prokaryotes, virus), and organelle genomes, genome evolution.

Structural features of the genome - Organization of single-copy sequences, Repetitive sequences (Tandem repeats, Copy Number variations, duplications, Transposable elements)

### **Module II – Resources of Genome Study**

Structuring genomic resources – Subdividing genomes, DNA markers, Genetic and Physical mapping, Mapping populations. Genome Sequencing (eukaryotic and prokaryotic) – methods (chemical, chain termination) and strategies (WGS, H-WGS, de novo), Human genome project (findings and impact). Next Generation Sequencing technologies (Pyrosequencing, Virtual terminator sequencing, Ion torrent, nanopore). Genome finishing – Annotation of genome (structural and functional- de novo, homology based).

### **Module III – Comparative and Functional Genomics**

Overview of sequence analysis – methods, databases, genome browsers (NCBI, UCSC, ENSEMBL). Homologs, paralogs, orthologs, synteny, colinearity and gene displacement. Implications of comparative genomics – molecular evolution and multigene family evolution. Forward and reverse genetics (Tools and Methods – mutagenesis, knock outs/ knock ins, RNAi, morpholino), genome wide expression analysis. Concept of Epigenomics, Concepts of genome evolution (finding signatures of function, remodeling and applications).

### **Module IV – Transcriptomics and Gene Expression**

mRNA/ protein expression profiles, Transcriptomes (tools and resources), Gene expression profiling / gene regulation (traditional to high throughput techniques- Northern, Subtractive hybridization, SAGE, Microarray).

### **Module V – Proteomics: Fundamentals and Interactomics**

Proteomics Techniques (sequence based and hybridization based techniques - 2D Gel Electrophoresis, HPLC, Mass Spectrometry, Protein/ peptide arrays), Quantitative and Qualitative proteomics, Mining Proteomes, Computational approaches for studying proteomes.

Protein Mapping (expression and interaction mapping) techniques (Two hybrid methods and variations, Phage display, Co-IP, Mass Spectrometry, labeled and unlabeled tagging), Data Analysis using bioinformatics tools, Protein – (Protein/ligand) interaction networks.

**Module VI – Proteomics: Structure-omics and Cellular Proteomics**

High throughput proteome analysis (2D GE & MS, Microarray & MS; SAGE & Microarray), 3 D structure determination (X-ray and NMR, PDB, Pfam, Modeller, SMART), structure to functional analysis (Fold comparison, Threading, Functional sites, homology and ab initio modeling)

High throughput cloning, Activity and functional characterization, Post-translational modifications, Concepts of protein engineering, Proteomic workflows.

**Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# STRUCTURAL BIOLOGY

Course Code: BTE4303

Credit Units: 02

## Course Objective:

The course aims to provide an understanding of the canonical and non-canonical structure of the nucleic acids and the detail structure of proteins, enzymes etc. Detailed structural analysis will also give an idea about the mode of recognition of different biomolecules, nature of interaction and their role in therapy and nanotechnology.

## Course Contents:

### Module I: Canonical and Non-canonical Structure of Nucleic acids:

**Canonical Structure:** Structure of Nucleic acids, Detail structure of Double-Stranded DNA, Major and Minor groove, Chemical differences in DNA and RNA, Wobble base-pairing, DNA-drug interaction.

**Non-canonical Structures:** DNA polymorphism (A-DNA, B-DNA, Z-DNA), Parallel DNA, base flipping. Repeat elements (inverted repeat, mirror repeat and direct repeat) and cruciform structures, Intramolecular and Intermolecular Triplex DNA and its role in therapeutics, Intramolecular and intermolecular four-stranded DNA (G-quadruplex and i-motif), Telomeric DNAs of different eukaryotic species, role of telomere in cancer and aging, G-quadruplex as a therapeutic target, G-wire, role of G-quadruplex and i-motif in nanotechnology.

**Module II: Protein structure and function:** Primary structure of protein, Ramachandran plot, secondary structure of protein ( $\alpha$  helix,  $3_{10}$  helix,  $\pi$ -helix,  $\beta$ -sheet, loops, turns), sequence and structural motifs (helix-turn-helix, helix-loop-helix, leucine zipper, Greek key motif etc.), tertiary and quaternary structure of proteins.

**Module III: Effect of physical and chemical parameters on structure and stability of Nucleic acids and proteins:** Effect of cations, pH, temperature and chemical agents on the structure and stability of nucleic acids and protein, concept of thermodynamic parameters (free energy, enthalpy and entropy).

**Module IV: Biomolecular Interactions:** DNA-protein interaction, DNA-drug interactions, protein-protein interactions (hemoglobin, myoglobin, G-protein coupled receptors).

**Module V: Characterization of Nucleic Acid Structure and Protein by biophysical and biochemical approach:** Structural analysis by UV-VIS spectroscopy, Circular Dichroism, NMR and X-ray crystallography, thermal stability of Nucleic acid structure and protein by thermal denaturation curves, Principles of Isothermal Calorimetry (ITC), Differential Scanning calorimetry (DSC), Fluorescence Spectroscopy.

## Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# DOWNSTREAM PROCESSING & FERMENTATION TECHNOLOGY

**Course Code: BTE4304**

**Credit Unit: 02**

## **Course Objective:**

The syllabus will help the students to characterize the Bioproducts of biotechnological importance and to get expertise in their downstream processing.

## **Course Contents:**

### **Module I: Fermentation Technology-An Overview**

Development and overview of fermentation processes, strain development, media design and optimization, commercial media for fermentation

### **Module II: Bioproduct Production**

Production of Ethanol, Antibiotics, Recombinant products, Citric acid, Industrial enzymes

### **Module III: Downstream Processing-An Overview**

Importance of downstream processing in biotechnology; characteristics of bio-products and fermentation broth

### **Module IV: Bioproduct Isolation**

Cell disruption; Filtration; Centrifugation; Precipitation

### **Module V: Purification**

Membrane Based Separation; Chromatographic methods of separation based on size, charge and biological affinity, 1D, 2D gel electrophoresis

### **Module VI: Polishing**

Crystallization; Drying and Formulations; Case studies

## ENZYME TECHNOLOGY LAB

Course Code: BTE4305

Credit Units: 02

### Course Contents:

#### Module I:

Isolation of enzymes from various sources

#### Module II:

Determination of specific activity of lipase, phosphatase, cellulase, protease and amylase

#### Module III:

Determination of Temperature and pH optima of an enzyme catalyzed reaction

#### Module IV:

Determination of Michaelis-Menten constant ( $K_m$ ) and Maximum Velocity ( $V_{max}$ ) of an enzyme catalyzed reaction using Linear plot method; Turnover number; catalytic efficiency

#### Module V:

Effect of various additives on enzyme activity

#### Module VI:

Enzyme immobilization and its effect on activity

### Examination Scheme:

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

# GENOMICS AND PROTEOMICS LAB

**Course Code: BTE4306**

**Credit Units: 02**

## **Course Objectives:**

The course will familiarize students with the tools and principles of contemporary genomics and proteomics. Bioinformatics resources relevant to genome / proteome investigations will be provided for a sound working knowledge of current genomics and proteomics technology and approaches.

## **Course Contents:**

### **Module I – An Introduction to Genome Browsers –**

NCBI and UCSC – General features; Important Sequence formats – Raw, Fasta and EMBL; Sequence retrieval methods – Whole Genomes (command line and browser), Gene or position search (browser)

### **Module II - Sequence annotation**

Restriction site annotation; Repeat Annotation of sequence Repeat Masker; ORF annotation – using ORF finder; Gene Prediction – using Gene Scan and Glimmer; Primer designing using Primer 3

### **Module III – Homology Search, Sequence conservation and Phylogeny**

Homology Search – BLAST and its variants, BLAT; Multiple Sequence Alignment – Clustal W and ClustalX; Phylogeny and molecular evolution – MEGA

### **Module IV: Integration of bioinformatics workflow**

NCBI Genome biology workbench

### **Module V: Proteome analysis**

EXPASY Server, RCSB Protein data banks, BLASTp

Primary structure analysis tools (Translate and reverse translate, Codon Usage, FindPept, FindMOD, pI/Mw computing, Multident, ProtParam, Peptide cutter, Mascot)

Secondary structure analysis tools (hydropathy plots, motif searches, conserved domains, PROSITE, InterPro Scan, PfamHMM, SMART, threading); Tertiary structure analysis tools (JMOL/ Pymol / Rasmol), MODELLER; Phylogenetic profiling

## **Examination Scheme:**

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

## **Text & Web References:**

- Ensembl tools

## STRUCTURAL BIOLOGY LAB

**Course Code: BTE4307**

**Credit Units: 01**

### **Course Contents:**

- Calculation of extinction coefficient of oligonucleotides either manually or using the software.
- Quantification of genomic DNA, oligonucleotides and proteins by UV-VIS Spectroscopy.
- Effect of cations (monovalent or divalent) and pH on genomic DNA, oligonucleotides and proteins by UV-VIS Spectroscopy.
- Study of DNA-ligand (spermine, ethidium bromide, proflavin etc.) interactions using UV-VIS spectroscopy and PAGE.
- Electrophoretic shift assays to check molecularity of the structures with short designed synthetic nucleotide sequences.
- Protein Folding using SDS-PAGE.
- Effect of physical and chemical factors on protein structure.

### **Examination Scheme:**

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

# FERMENTATION BIOTECHNOLOGY & DOWNSTREAM PROCESSING LAB

**Course Code: BTE4308**

**Credit Unit: 02**

## **Fermentation Biotechnology**

### **Module I:**

Isolation of industrially important microorganisms for microbial processes

### **Module II:**

Determination of growth curve of supplied microorganisms and determination of substrate degradation profile and computation of specific growth rate and growth yield from the data obtained

### **Module III:**

Comparative studies of ethanol production using different substrates; Production of enzyme

## **Downstream Processing**

### **Module I:**

Product Isolation

### **Module II:**

Protein precipitation and recovery

### **Module III:**

Membrane-based separation

### **Module IV:**

Ion exchange chromatography

### **Module V:**

Gel Permeation chromatography

### **Module VI:**

Poly-acrylamide Gel Electrophoresis (PAGE)

## **Examination Scheme:**

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

# INDUSTRIAL MANAGEMENT

**Course Code: BTE4309**

**Credit Unit: 03**

## **Course Objective:**

The course is designed to provide students the ability to understand Industrial Business, its markets and relevant industrial management strategies. The course will equip students the knowledge to cope up changing environment due the advent of technology & other influences. It will also cover the Safety laws & Acts required in managing industrial business. Also it will make students to understand the nature and role of Industrial business, characteristics of business markets, implementation of relevant industrial strategies and developing comprehensive insight for Entrepreneurship Development.

## **Course Contents:**

### **Module I: Introduction to Industrial Management**

Introduction to the Concept of industrial Management, Planning and decision making in industrial management process, Application and scope of Industrial Management, Understanding Industrial Market need, Want & demand management, Industrial Relations, Role & Responsibility of Industrial Manager.

### **Module II: Understanding Safety & Legal Framework in Industrial management**

Factory Act, ESI Act, Environmental Act, Workmen's Compensation Act, Need for industrial safety. Role of Government in industrial safety, Safety organization - safety committee - safety education and training, Advantages of adopting safety laws.

### **Module III: Understanding Industrial Markets, Goods & Customers and Industrial Buying**

**Behavior:** Introduction to the industrial goods, Types of industrial goods, Identifying sources for resource suppliers, Industrial customers, Industrial demand, purchasing practices of Industrial customers, Concept of business buying behavior.

### **Module IV: Introduction to Entrepreneurial Development**

Introduction to the concept of Entrepreneurship & characteristics of entrepreneurship, Entrepreneurial process Stages in Entrepreneurial process, Entrepreneurial competencies, Entrepreneurship in India, Barriers in Entrepreneurship, Types of ownership suitable for business. Woman Entrepreneur, Challenges faced by women entrepreneurs.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Text:**

- Essentials of Management, H. Koontz, H. Weihrich and C. O'Donnell, McGraw-Hill/Irwin

# IMMUNOTECHNOLOGY

**Course Code: BTE4310**

**Credit Units: 03**

## **Course Objective:**

Aim of this course is to provide in-depth information of immune-system and its implication for health and diseases. Knowledge about the principles and applications of immune-assay to evaluate the immune-status

## **Course Contents:**

### **Module-I**

#### **Introduction to Immunotechnology**

Antigen and Antibody: Tools for immunodiagnostics, Kinetics of immune response, Principles of Immunization

### **Module II**

#### **Immunization and Antigen and Antibody**

Immuno-chemistry of Antigens - immunogenicity, Antigenicity; Haptens, Toxins-Toxioids, Hapten-carrier system; Production of Polyclonal and Monoclonal Antibodies- Hybridoma Technology, Antibody interaction, affinity, cross reactivity, specificity; Immunoassays- RIA, ELISA, Western blotting, ELISPOT assay, immunofluorescence, Other applications; Antibody engineering, phase display library.

### **Module III**

#### **CMI and Imaging Techniques**

Principle of Immunofluorescence Microscopy, Flurochromes, Staining techniques for live cell imaging and fixed cells, Flow cytometry, Lymphoproliferation, Cell Cytotoxicity, mixed lymphocyte reaction, Apoptosis, Cytokine expression, In vivo cell tracking techniques.

### **Module IV**

#### **Vaccine Technology**

Active and Passive Immunization, Rationale for vaccine design, Kinds of vaccines live, killed, attenuated, Sub unit vaccines, Recombinant DNA vaccine, Peptide vaccines, conjugate vaccines; Role and properties of adjuvants.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Texts/References**

# AGRI-FOOD BIOTECHNOLOGY

Course code: BTE4311

Credit Units: 03

## Course Contents:

### Module I: Introduction

Scope and importance of food industry; RDT and other technologies involved in development of food products; Concept of 'functional food'; Advances and trends, ethical issues, quality control, legislation, FDA & FPO (India), patenting processes and products, consumer acceptance scenario for GM food products and GM crops.

### Module II: Techniques used in Food Industry

Sterilization, isolation, screening and strain improvement, cell harvesting and disruption, recovery and purification, production of organic acids – citric acid, lactic acid and acetic acid; Gene cloning, production of recombinant proteins e.g. chymosin

### Module III: Dairy Biotechnology

Starter cultures, prebiotics, probiotics – their use as flavor enhancers and disease/ infection combats, applications in production of cheese, butter, ice-cream, yoghurt; applications in biomedical research, e.g. recombinant LABs as vaccines; Modified milk proteins.

### Module IV: Microbial, Plant and Animal Biotechnology

Production of SCP (Single cell protein), production of baker's yeast, brewing industry, applications of transgenic plants in food production, transgenic fish, and transgenic poultry.

## Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# BIOFUELS & GREEN TECHNOLOGY

**Course code: BTE4312**

**Credit Units: 03**

## **Course Objective:**

This course will acquaint the students with bioenergy resources, their properties, preparation, processing along with the details of equipments utilized for the purpose.

## **Course Contents:**

### **Module I: Biomass Sources, Characteristics & Preparation: Biomass Sources and Classification**

Chemical composition and properties of different biomass materials and bio-fuels – Sugar cane molasses for fermentation ethanol; Sources and processing of oils and fats for liquid fuels- Energy plantations - Preparation of woody biomass; Drying, Storage and Handling of Biomass.

### **Module II: Biogas Technology**

Feedstock for biogas production, biodegradable organic matter, Operating parameters for biogas production, Dry and wet fermentation

### **Module III: Bio-Ethanol and Bio-Diesel Technology**

Production of Fuel Ethanol by Fermentation of Sugars. Trans-esterification of Oils to Produce Bio-Diesel.

### **Module IV: Pyrolysis and Gasification of Biomass**

Thermo-chemical conversion of ligno-cellulose biomass - Pyrolysis of biomass, Thermo-chemical gasification principles

### **Module V: Combustion of Biomass and Cogeneration Systems**

Combustion of Woody Biomass, Cogeneration in Biomass Processing Industries. Use of biogases for cogeneration.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# STEM CELLS & GENE THERAPY

**Course Code: BTE4313**

**Credit Units: 03**

## **Course Objective:**

The course is designed to give a broad view of mammalian stem cells, reviewing where they are found in the body, the different types and how they are cultured. The topics will cover the basic biology of these stem cells as well as bioengineering and application of these stem cells to potential treatments of human diseases.

## **Course Contents:**

### **Module I**

Introduction to Gene Therapy, History and evolution of Gene therapy, optimal disease targets, Failures and successes with gene therapy and future prospects

### **Module II: Gene Delivery**

Adenoviral Vectors, Adeno-associated virus (AAV) Vectors, Non-viral Vectors and Physical Methods, Retroviral and Lentiviral Vectors, Herpes Virus Vectors & Combinatorial methods, Gene transfer methods

### **Module III**

Innate and Acquired Immune Response to Cell and Gene Therapy, Gene Therapy and the Immune System: Genetic Immunization

### **Module IV**

Stem Cell biology and therapy, types embryonic stem cell, Adult stem cell, Stem Cell Biology and Therapy, Embryonic Stem Cells, culture and the potential benefits of stem cell technology

### **Module V**

Cell, Disease, and Genetic Perspectives for Gene Therapy, Cell and Gene Therapy of the Nervous System, Cancer Gene Therapy, Cell and Gene Therapy for Vascular Disorders, Bone marrow transplants, Cancer Gene Therapy, Immunotherapy, Autoimmune Diseases and the Promise of Stem Cell-Based Therapies, Stem Cells and Diabetes, Stem Cells and heart Repair

### **Module VI**

Regulatory and Ethical Considerations of Cell and Gene Therapy, Assessing Human Stem Cell Safety, Use of Genetically Modified Stem Cells in Experimental Gene Therapies.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# DRUG DESIGN & PHARMACEUTICAL BIOTECHNOLOGY

Course code: BTE4314

Credit Units: 03

## Course Objective:

The above course will be aimed to identify targets and design drugs that could be potentially useful in the identification of the candidate drugs, which have efficacy in cell culture or animal models. The student will gain basic concepts in the specific field of Pharmaceutical Biotechnology Industry and insight into the working of a pharma industry, various classes of biotech products and the regulations governing production and marketing of pharmaceutical products.

## Course Contents:

### Module I: Drug targets classification, discovery & validation strategies

Introduction to drug discovery & development; Target classification: DNA, RNA, post-translational, processing enzymes, metabolic enzymes involved in nucleic acid synthesis, G-protein coupled receptors, small molecule receptors, neuropeptide receptors, ion channels proteins, ligand-gated ion channels, transporters; Genomics (new target discovery), biological activity directed and other types of screening, natural products, combinatorial chemistry; General overview of validation techniques.

### Module II: Structure-based design

Physicochemical properties of drugs, metabolism, toxicity and pharmacokinetics, toxicology considerations, problems and drawbacks on drug discovery and development.

'de novo' design methodologies: indirect drug design, pharmacophore development and receptor mapping, combinatorial libraries. DNA vaccines, Vaccines & Monoclonal antibody based pharmaceuticals, Antibiotics, Characterization.

### Module III: Basic concepts of Drug Delivery

Concepts of Bio availability, drug absorption, pharmacodynamic & Pharmacokinetic processes, Timing for optimal therapy, Drug delivery considerations for the new biotherapeutics. Basic terminologies in drug delivery and drug targeting, Drug release, Drug targeting, Doses forms, Routes of drug administration, Basic strategies for enhanced therapeutic efficacies

### Module IV: Delivery of Genetic material

Basic principles of gene expression, Viral and nonviral vectors in gene delivery, Clinical applications of gene therapy and antisense therapy; Bioanalytical aspects of Recombinant proteins as pharmaceutical drugs: Formulation of Biotechnological Products and their role in clinical development

Nanotechnology, Use of biosensors and challenge of chronopharmacology, Microchips and controlled drug delivery, Genetically engineered cell implants in drug deliver.

### Module V: Regulations

Role of FDA, ICH Guidelines, cGMP, The Regulation of Pharmaceutical Biotechnological Products and Ethical Issues.

## Examination Scheme:

# NANOBIOTECHNOLOGY

**Course code: BTE4315**

**Credit Units: 03**

**Course Objective:**

To evolve a detail understanding into the application of nanotechnology in the field of biological sciences.

**Course Contents:**

**Module I**

Biosensors as Precursors of Bioelectronics, Functionlization of Sensing Substrates, Biochip, Nanosensors-Miniaturization of Biosensors, Nanomaterial Based Biosensors.

**Module II**

Electron Transfer of Biomolecules, Nanoparticle-Biomaterial Hybrid Systems for Sensing and Electronic Devices

**Module III**

DNA Templated Electronics, Sequence –specific molecular lithography, Single Biomolecule Manipulation for Bioelectronics, DNA as a semiconductor.

**Module IV**

Applications of nanobiotechnology in medical diagnostics and other biomedical field.

**Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

**Text & References:**

**Text:**

# SUMMER INTERNSHIP EVALUATION

**Course Code: BTE4335**

**Credit Units: 06**

## **GUIDELINES FOR SUMMER TRAINING**

The main objective of summer training is to familiarize students to laboratory environment and make them learn to handle equipments and softwares, design experiments and analyze the results. The student will be supervised by one or more faculty members and he or she will be required to submit a synopsis. While writing a synopsis emphasis should be given to make it publishable. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student. Initial drafts should be critiqued by the faculty guide and corrected by the student at each stage.

The File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation.

### **In general, the File should be comprehensive and include**

- A short account of the activities that were undertaken as part of the project;
- A statement about the extent to which the project has achieved its stated goals.
- A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;
- Any activities planned but not yet completed as part of the project, or as a future initiative directly resulting from the project;
- Any problems that have arisen that may be useful to document for future reference.

### **Report Layout**

The report should contain the following components:

- TITLE PAGE
- CERTIFICATE
- ACKNOWLEDGEMENT
- ABBREVIATIONS
- CONTENTS WITH PAGE NUMBERS
- CHAPTER –
  - a. INTRODUCTION
  - b. REVIEW OF LITERATURE
  - c. MATERIALS & METHODS
  - d. RESULTS & DISCUSSION
  - e. SUMMARY AND CONCLUSION
  - f. REFERENCES
  - g. APPENDIX (OPTIONAL)
- 1 inch Margin on left side & 1" each on other sides.
- Single side of the paper to be used.
- Times New Roman.

### **Font Size**

- 12 (Bold for headings)
- 12 (Normal for Matter)
- 14 (for Chapter Names)
- 1.5 line spacing
- Numbering on the right hand Top of the page
- Numbers on pages before chapters to be done in Roman at the bottom of the page

## References

This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

## Examples

### For research article

Voravuthikunchai SP, Lortheeranuwat A, Ninrprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichia coli* O157: H7. *Clin Microbiol Infect*, **8** (suppl 1): 116–117.

### For Book

Kowalski, M. (1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), 7: 63-67

- Scientific names in Italics
- Cover Page containing - Title, Students Name, Supervisors Name, University, Name (along with logo), Course name & year of Submission in the prescribed format
- 2 copies to be submitted

## ASSESSMENT OF THE PROJECT FILE

Essentially, marking will be based on the following criteria: the quality of the report, the technical merit of the project and the project execution.. Evaluation will compose of two components - Project report assessment and Viva - voce. Project report assessment will be done by the two internal faculty members in respective fields. A committee of three faculty members will conduct Viva-voce.

Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project will be assessed as per evaluation format.

### Examination Scheme:

Project Report	50
Viva Voce	50

<b>Total</b>	<b>100</b>
--------------	------------

## Syllabus – Fourth Semester

### DISSERTATION/ PROJECT

Course Code: BTE4437

Credit Units: 20

#### GUIDELINES FOR PROJECT FILE

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critiqued by the faculty guide and corrected by the student at each stage.

The File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation.

#### In general, the File should be comprehensive and include

- A short account of the activities that were undertaken as part of the project;
- A statement about the extent to which the project has achieved its stated goals.
- A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;
- Any activities planned but not yet completed as part of the project, or as a future initiative directly resulting from the project;
- Any problems that have arisen that may be useful to document for future reference.

#### Report Layout

The report should contain the following components:

##### ➤ Title or Cover Page

The title page should contain the following information: Project Title; Student's Name; Course; Year; Supervisor's Name.

##### ➤ Acknowledgements (optional)

Acknowledgment to any advisory or financial assistance received in the course of work may be given.

##### ➤ Abstract

A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project

##### ➤ Table of Contents

Titles and subtitles are to correspond exactly with those in the text.

##### ➤ Introduction

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

➤ **Materials and Methods**

This section should aim at experimental designs, materials used. Methodology should be mentioned in details including modifications if any.

➤ **Results and Discussion**

Present results, discuss and compare these with those from other workers, etc. In writing these section, emphasis should be given on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary never write in “point” form.

➤ **Conclusion**

A conclusion should be the final section in which the outcome of the work is mentioned briefly.

➤ **Future prospects**

➤ **Appendices**

The Appendix contains material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

➤ **References / Bibliography**

This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

**Examples**

**For research article**

Voravuthikunchai SP, Lortheeranuwat A, Ninrprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichia coli* O157: H7. *Clin Microbiol Infect*, **8** (suppl 1): 116–117.

**For book**

Kowalski, M.(1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), **7**: 63-67

**ASSESSMENT OF THE PROJECT FILE**

Essentially, marking will be based on the following criteria: the quality of the report, the technical merit of the project and the project execution.

Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project.

Project execution is concerned with assessing how much work has been put in.

The File should fulfill the following *assessment objectives*:

## **Range of Research Methods used to obtain information**

### **Execution of Research**

#### **Data Analysis**

Analyse Quantitative/ Qualitative information

Control Quality

### **Draw Conclusions**

#### **Examination Scheme:**

Project Report	50
Viva Voce	50
<b>Total</b>	<b>100</b>

# **Post Graduate Diploma in Data Science**

## **Curriculum & Scheme of Examination**

**2020**

**AMITY UNIVERSITY HARYANA**  
**GURUGRAM**

# Syllabus - First Semester

## INTRODUCTION TO DATA SCIENCE

**Course Code: DSC3101**

**Credit Units-04**

### **Course Contents:**

#### **Module 1: Introduction to Data Science**

Introduction to Data Science, Key components in Data Science , Use cases from different application domains such as Banking, Retail, Telecom, Life Science and Healthcare, etc

#### **Module 2: Data Science Life Cycle**

Data Science life cycle , The roles in a Data Science stream, Challenges involved in Data Science, Ethics in Data Science

#### **Module 3: Characteristics of Data**

Characteristics of Data – Big data introduction, Structured, Semi-structured and Unstructured data, data at rest, data in motion, etc, Good data versus bad data

#### **Module 4: Challenges in handling large data**

Challenges in handling large data sets

#### **Module 5: Types of Data Analysis**

Types of Data Analysis – Descriptive, Exploratory, Predictive, Inferential, Steps in Data Analysis

#### **Module 6: Data Science Tools**

Tools used in Data storage, Databases, Data Analysis, Data Visualization

#### **Module 7: Job profiles in Data Science**

Different job profiles their roles and Skill set requirements for each of them

#### **Module 8: Programming tools require for Data Science**

Different programming tools required for Data Science.

#### **Module 9 : Overview of Machine learning for Data Science**

Overview of Machine learning with the help of cases in Data Science

#### **Module 10 : Case studies of Data Science**

Discuss different case studies of Data Science domain.

### **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

### **Text & References:**

- An Introduction to Data Science, Jeffrey Stanton, Syracuse University
- A Simple Introduction to DATA SCIENCE, Lars Nielsen, Noreen Burlingame
- Introduction to Data Science, DAN POTTER,CARSTEN BINNING,ELI UPFAL

# MACHINE LEARNING-I

**Course Code: DSC3102**

**Credit Units-03**

## **Course Contents:**

### **Module 1: An Introduction to Machine Learning:**

Introduction to machine learning, What is ML, Types of ML, Applications used for ML, AI vs ML, Essential for ML and AI.

### **Module 2: Techniques of Machine Learning:**

Introduction to Supervised, unsupervised, semi-supervised, and reinforced machine learning techniques

### **Module 3: Introduction to Supervised Learning:**

Training, validation, test data, and Over fitting and complexity

### **Module 4: Managing and understanding data:**

Data description, Data processing, Dimension Reduction.

### **Module 5: Data Preprocessing:**

Comprehend the meaning, process, and importance of data preparation, feature engineering and scaling of datasets.

### **Module 6: Evaluating model performance:**

Measures performance for the classification problem. Discuss different performance measures.

### **Module 7: Resampling methods:**

Discuss different cross validation techniques. Leave-One-Out Cross-Validation, k-Fold Cross Validation

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## **Text & References:**

- Programming Collective Intelligence by Toby Segaran
- Machine Learning for Hackers by Drew Conway and John Myles
- Machine Learning by Tom M. Mitchell
- Pattern Recognition and Machine Learning by Christopher M. Bishop (Author)
- Machine Learning Yearning by Andrew NG
- The Elements of Statistical Learning by Trevor Hastie , Robert Tibshirani , Jerome Friedman

# STATISTICS & EXPLORATORY DATA ANALYSIS

Course Code: DSC3103

Credit Units-03

## Course Contents:

### Module 1: Descriptive Statistics

Statistics: Preliminary concepts; Measures of Central Tendency: Mean, Median, Mode

Measures of Dispersion: Range, Standard deviation, Variance, Covariance, Graphical Representation of Statistics: Histograms, Bar plots, Scatter plots etc.

### Module 2: Probability

Random Experiments, Trial and Event, Sample Space, Mutually Exclusive or Disjoint Events, Mutually Exhaustive Events, Equally Probable Events, Complementary Event, Classical definition of Probability, Statistical definition of Probability, Axiomatic definition of Probability, Addition theorem, Multiplication theorem, Conditional Probability, Bayes' Theorem. Expectation.

### Module 3: Continuous Distribution

Normal Distribution, Properties of Normal distribution

### Module 4: Correlation

Bivariate distribution Correlation, Types of Correlation, Simple Correlation Coefficient for ungrouped data, Properties and Interpretation of Correlation Coefficient, Coefficient of determination, Scatter diagram, Standard Error, Probable error of Correlation Coefficient. Rank correlation, Some examples.

### Module 5: Introduction to the Inferential Statistics

Parameter, Statistic, Null hypothesis, Alternative hypothesis, Critical region, Type1 Error, Type 11 Error, Level of significance, P-value and its applications.

**Test of Significance for Small samples:** One sample t-test, Paired t-test, Degrees of freedom for t-test, F test for equality of Population variances, Degrees of freedom for F-test.

Test of Significance for Large samples: Normal test for sample mean and population mean, Normal test for two sample means.

Chi-square Test: Test of goodness of fit, Test of Independence of attributes, Degrees of freedom for Chisquare test, Coefficient of contingency, Yates' correction for continuity.

Analysis of Variance: One way and Two way (only Examples)

### Module 6: Introduction to Model Building:

Basics of Model building, Definition of a Model, Point estimation, Confidence intervals, Testing

## Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# DATABASE MANAGEMENT SYSTEM-I

Course Code: DSC3104

Credit Units-02

## Course Contents:

- SQL (Structured Query Language)
- Data Definition Language (DDL): Create, Alter and Drop commands
- Data Manipulation Language (DML): Select, Insert, Update, and Delete commands, Basic SQL queries, Integrity constraints on tables,
- Data Control Language Commands(DCL): Grant and Revoke
- SQL Functions
- SQL querying to do operations such as identifying nulls, special characters, blank rows/columns, and run distributions, run data summaries, merge tables, get unique counts
- SQL Joins, Aggregate functions and GROUP BY, Nested queries and sub queries. GROUP BY CLAUSE along basic aggregations such as SUM, COUNT, AVG RANK(), ROWNUM() & DENSE\_RANK. UNION and UNION ALL CASE statement
- Introduction to Advanced SQL concepts: Indexes, Sequence, Clusters, Views, Cursors and Triggers, Embedded SQL
- Introduction to SQLITE
- Introduction to NoSQL and its capabilities
- Contrast MySQL with NOSQL
- Introduction to SQLITE
- Introduction to POSTGRESQL

## Examination Scheme:

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

## Text & References:

# PROGRAMMING TOOL BOX I-R

Course Code: DSC3105

Credit Units-01

## Course Contents:

### Module 1: An Introduction to R

Overview of R programming, applications, usage and comparative study with other softwares and introduction to R for Data Science

### Module 2: Setting up R environment and packages

Setting up R environment and install packages and supporting libraries in R

### Module 3: Basics of R

Manage your data and work-space, Save your work, How to use R, Data structure in R, Data creation and curation and special function using R

### Module 4: File Handling

Reading different file format using R, file handling and processing, writing output file.

### Module 5: Graphics using R

Graphics device, Basic plot function, scatter plot, 3-D scatter plot, pairplots, Lineplot, Matplot, Matpoints, Bar plot, Histogram plot, Density plot, Dot plot, Pie chart, Venn diagram, Grid graphics, Lattice, ggplot2, Interactive plotting, combine multiple plots in same graphics screen, save graphics to a file.

### Module 6: Programming using R

Conditional Executions, Comparison Operators, Logical Operators, Control Structures, If statements, Ifelse statements, Loops, For loop, While loop, Apply loop family, Other loops,

### Module 7: Functions

Define and Call functions, Syntax Rules for functions, Control utilities for functions, Writing own function

### Module 8: Advance R

Advance R functions and Regular expressions, Object oriented programming, Building R package

### Module 9: Case study

## Examination Scheme:

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

**Text & References:**

# PROGRAMMING TOOL BOX II-PYTHON

Course Code: DSC3106

Credit Units-01

## Course Contents:

### Python Programming

#### Module 1: Introduction to Python :

Overview of Python, applications, usage and comparative study with other softwares.

#### Module 2: Basics of Python :

Syntax, Data Types, Variables, Operators, Input/output, Flow of Control (Modules, Branching)

#### Module 3: Basic Programming with Python :

If, If- else, Nested if-else, Looping, For, While, Nested loops, Control Structure, Break, Continue, Pass,

#### Module 4: Data Structures of Python :

Strings and Tuples, Accessing Strings, Basic Operations, String slices, Working with Lists, Introduction, Accessing list, Operations, Function and Methods, Files, Modules, Dictionaries, Functions and Functional Programming, Declaring and calling Functions, Declare, assign and retrieve values from Lists, Introducing Tuples, Accessing tuples

#### Module 5: Advanced Python :

Object Oriented, OOPs concept, Class and object, Attributes, Inheritance, Overloading, Overriding, Data hiding, Operations Exception, Exception Handling, Except clause, Try finally clause, User Defined Exceptions

#### Module 6: Python Libraries :

Introduction to Machine learning packages like NUMPY, SCIPY, PANDAS etc.

### Examination Scheme:

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

# BIG DATA TOOLS & TECHNOLOGIES-I

**Course Code: DSC3107**

**Credit Units-01**

## **Course Contents:**

### **Module 1: Introduction to Big Data**

Big Data and its Importance, V's of Big Data, Drivers for Big Data, Introduction to Big Data Analytics, Big Data Analytics applications.

### **Module 2: Introduction to Hadoop**

Hadoop Introduction, Hadoop key characteristics, Hadoop Core Components, Hadoop Ecosystem, Hadoop Services, Different Hadoop Modes, Hadoop's Parallel World – Data discovery

### **Module 3: Understanding Hadoop**

Hadoop Installation, Hadoop Cluster Setup, Storing Data in Hadoop, HDFS Commands (Basics, Intermediate and Advanced), Processing your data with Map Reduce, Customizing Map Reduce Execution, Building Reliable MapReduce Apps, Run test example using Map reduce, Distributed Cache, Map side join vs Reduce Side Join, Running Hadoop applications

### **Module 4: Processing Big Data**

Integrating disparate data stores, Mapping data to the programming framework, Connecting and extracting data from storage, Transforming data for processing, Subdividing data in preparation for Hadoop Map Reduce.

### **Module 5: Hadoop Map Reduce**

Employing Hadoop Map Reduce, Creating the components of Hadoop Map Reduce jobs, Distributing data processing across server farms, Executing Hadoop Map Reduce jobs, Monitoring the progress of job flows, The Building Blocks of Hadoop Map Reduce, Distinguishing Hadoop daemons, Investigating the Hadoop Distributed File System Selecting appropriate execution modes: local, pseudo-distributed, fully distributed.

## **Examination Scheme:**

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

## **Text & References:**

- Big Data and Analytics, Seema Acharya , Subhashini Chellappan
- Professional Hadoop Solution, Boris Lublinsky, Kevin T. Smith, Alexey Yakubovich

# INTRODUCTION TO LINUX

**Course Code: DSC3108**

**Credit Units-01**

## **Course Contents:**

### **Module 1: Operating System:**

Introduction: Windows and Unix/Linux, Definition; Concepts; Function of Operating System; Batch Processing; Multiprogrammed Batch System; Time Sharing System; Parallel System; Distributed System; Real Time System.

### **Module 2: Process & Memory Management:**

Process; Process State(New, Running, Waiting, Ready, Termination); Process Control Block; Process Scheduling (Round Robin Scheduling, Priority Scheduling, Multiple Queues, Shortest Job Scheduling); Operations on Process; Basic Management of Memory; Swapping Virtual Memory; Paging.

### **Module 3: Input/Output Management:**

I/O Devices; Device Controllers; I/O Software; Device Drivers; Deadlock; Resources; Principles of Dead Lock; Detection and Recovery; Deadlock Prevention; Deadlock Avoidance.

### **Module 4: UNIX/LINUX Operating Systems:**

Introduction; Concepts; Layers of UNIX; Role of System Administrator and Ordinary User; Tree Structure of UNIX; Root File System; /bin Directory; /dev Directory; /bin Directory; /etc Directory; /lib Directory; /proc Directory; /mnt Directory; /root Directory; /sbin Directory; /tmp Directory; /var Directory; Relative Path; Absolute Path; Creation of Directory; Creating file; removing file; Listing Files and Directories copying file; renaming file; Changing File Permission; Changing Director Permission; Changing Group; Changing Owner; Pipe; Filters; pwd command; date command; head command; tail command less command; more command; grep command; VI Editor (Creating a new File; Inserting Text in File; Deleting Text in File; Copy , Cut & Paste Text; Save File).

### **Module 5: Shell Programming:**

Variables(Configuration Variable & Environmental Variable); Operators( Arithmetic Operator, Logical Operator, Relational Operator); Instruction(Sequence Control Instruction, Selection Control Instruction, Repetition or Loop Instruction); echo command; read command; outtput command.

### **Module 6: System Monitoring:**

System monitoring, process information, log files, run level, system recovery, Memory management

## **Examination Scheme:**

# MACHINE LEARNING-I LAB

Course Code: DSC3109

Credit Units-01

## Course Contents:

### Module 1: Supervised Learning:

Splitting the data into Training and test data, Understanding Overfitting and complexity with case studies

### Module 2: Managing and understanding data:

**Understanding** Data description, Data processing, Dimension Reduction through case studies

### Module 3: Data Preprocessing:

Understanding data preparation, feature engineering and scaling, datasets, dimensionality reduction through case studies

**Module 4: Evaluating model performance:** Calculation of Measures performance for the classification problem.

**Module 5: Cross Validation techniques:** Case studies of Leave-One-Out Cross-Validation, k-Fold Cross Validation and other cross validation techniques

## Examination Scheme:

# STATISTICS & EXPLORATORY DATA ANALYSIS LAB

Course Code: DSC3110

Credit Units-01

## Course Contents:

### Module 1: Descriptive Statistics

Calculation and interpretation of Descriptive Statistics

### Module 2: Probability

Understanding the preliminary concepts of probability through case studies

### Module 3: Continuous Distribution

Generation of statistical distributions

### Module 4: Correlation

Calculation of correlation understanding and interpreting correlation through case studies

### Module 5: Introduction to the Inferential Statistics

Understanding inferential statistics through case studies

### Module 6: Introduction to Model Building:

Understanding Basics of Model building, Definition of a Model, Point estimation, Confidence intervals, Testing through case studies

# Syllabus - Second Semester

## MACHINE LEARNING-II

Course Code: DSC3201

Credit Units-03

### Course Contents:

#### Module 1: Basic concepts to calculate distance and similarities

Discuss different methods to calculate distance and similarities including euclidean distance, squared euclidean distance, Manhattan distance, Cosine distance, Chebyshev distance, Canberra distance, Minikowski distance, correlation distance, partial correlation distance, mutual information and rank correlation coefficients

#### Module 2: Introduction to unsupervised learning

Discuss theory and concepts behind unsupervised learning

#### Module 3: Clustering:

Finding grouping of data. Hierarchical clustering, k-means and K-medoid clustering algorithm

#### Module 4: Application to Machine Learning:

Classification using Nearest Neighbors, Naive Bayes, Support Vector Machine, Market basket analysis using Association Rules

#### Module 5: Case study

Solve a case study on real world data and apply machine learning concepts.

### Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

# REGRESSION THEORY & ANALYSIS

Course Code: DSC3202

Credit Units-03

## Course Contents:

**Module 1: Simple linear regression:** Estimation of the Parameters, Hypothesis Testing on the Slope and Intercept, Interval Estimation in Simple Linear Regression, Prediction of New Observations, Coefficient of Determination

**Module 2: Multiple regression:** Estimation of Parameters, Hypothesis Testing, Confidence Intervals, Prediction

**Module 3: Model Adequacy testing:** Residual Analysis, PRESS statistic, Lack of Fit

**Module 4: Transformations:** Variance stabilising transformations, Transformations to linearise the model, Methods to select a transformation, Weighted least squares, Regression and random effect

**Module 5: Multicollinearity:** Sources, Effects, Diagnostics, Methods of dealing with Multicollinearity

**Module 6: Validation of regression models:** Techniques for validation

**Module 7: Introduction to non linear regression and GLM:** Non linear least squares, Transformations, Parameter estimation, Logistic and poisson regression

## Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## Text & References:

- Introduction to Linear Regression Analysis, by Douglas C. Montgomery, Elizabeth A. Peck, G. Geoffrey Vining
- Introduction to Regression Analysis, M. Golberg and H.A Cho

# DATA STRUCTURE & ALGORITHM DESIGN

**Course Code: DSC3203**

**Credit Units-03**

## **Course Contents:**

### **Module I: Introduction**

### **Module II: Programming strategies**

Objects and ADTs with example, Constructors and destructors, Data structure, methods, Pre and post conditions, C conventions, Error handling, Some programming language notes.

### **Module III: Data structures**

Arrays; lists; stacks and stack frames; Recursion -Recursive functions with example of factorial, Queue, Dequeue.

### **Module IV: Searching**

Sequential and binary search, Trees, binary search tree, complexity.

### **Module V: Queues**

Priority queues and heaps

### **Module VI: Sorting**

**Bubble, Heap, Quick, Bin, Radix**

### **Module VII: Searching revisited**

Red-Black trees, AVL trees, general n-ary trees, hash tables; Hashing and collision resolution

### **Module VIII: Dynamic algorithm**

Fibonacci numbers, binomial coefficients, optimal binary search trees, matrix chain multiplication, longest common subsequence, optimal triangulation.

### **Module IX: Graphs**

Minimum spanning tree and Dijkstra's algorithm

### **Module X: Huffman encoding, FFT, Hard or intractable problems**

Eulerian or Hamiltonian paths, Travelling salesman problem.

## **Examination Scheme:**

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

## DATABASE MANAGEMENT SYSTEM-II

Course Code: DSC3204

Credit Units-02

### Course Contents:

#### Module 1: MongoDB

A Database for the internet, MongoDB's key features, MongoDB's core server and tools, Why MongoDB? , History of MongoDB, Diving into the MongoDB shell, Creating and Querying with indexes, Basic Administration, Writing Program using MongoDB

#### Module 2: Application Development in MongoDB

Document oriented data, Constructing queries, Aggregation, Update ,atomic operations and deletes, E-commerce updates, Atomic document processing

#### Module 3: MongoDB Mastery

Indexing and query optimization, Text Search, Wired Tiger and pluggable storage, Replication, Scaling your system with Sharding, Deployment and Administration

#### Module 4: Apache Cassandra

Big Data and Apache Cassandra, Importance of Cassandra, Cassandra as a Distributed Database, Cassandra and High Availability, Cassandra and Replication Mechanism, Cassandra's Elastic Scalability, Tune able consistency ( Strict Consistency , Casual Consistency , Weak Consistency , Brewer's CAP Theorem ,Cassandra as a Schema Free Database, Where should we use Cassandra , Who and why using the Cassandra

### Examination Scheme:

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

# SPARK

**Course Code: DSC3205**

**Credit Units-01**

## **Course Contents:**

### **Module 1: Introduction to Apache Spark**

Introduction to Apache Spark, Features of Apache Spark, Apache Spark Stack, Introduction to RDD's, RDD's Transformation, What is good and Bad in Map Reduce , Why to use Apache Spark

### **Module 2: Spark: A Hadoop Replacement?**

Java, Scala, or Python? , Scala, Packages, Data Types, Classes, Calling Functions, Operators, Control Structures

### **Module 3: A Quick Intro to Spark**

Starting the shell, Data Sources, Testing Spark, Spark Monitor, Comparing Hadoop Map Reduce to Spark, Writing Standalone program with Spark

### **Module 4: Spark SQL**

Basic Concepts, Using Spark SQL with RDDs

### **Module 5: Spark Streaming**

Basic Concepts, Creating Your First Stream with Scala, Creating Your First Stream with Java

## **Examination Scheme:**

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

## **Text & References:**

# DATA VISUALIZATION

Course Code: DSC3206

Credit Units-01

## Course Contents:

### Module 1: Introduction to data visualization:

Introduction to data visualization. Explore and manipulate all graphical parameter. Drawing graphs such as scatterplot, stripchart, histogram, boxplot, violin chart, bar chart, dot plot, line graph, line plot, multiplot, stacked bar chart, pie diagram, venn diagram, pair plot. Explore 3d chart, motion chart, interactive charts. Discuss selecting appropriate chart for strategy presentation. Save graphs in various formats. Discuss different ways to combine multiple figures. Discuss margin and graph size.

### Module 2: Introduction to Tableau:

Creating Visual Analytics with Tableau Desktop, Connecting to your data, Building your first visualization, Creating Calculations to enhance your data, using maps to improve insight, developing an Ad Hoc Analysis Environment, Tips Tricks and Time Savers, Bringing it all together with dashboards. Installing Tableau Server, Using Tableau server to facilitate fact based team collaboration, Automating Server with Tableau's command line tools, Use case for rapid fire visual analytics, other Tools. Explore various case studies to visualize the data.

### Examination Scheme:

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

### Text & References:

- Tableau your data, Daniel G Murray

## BIG DATA TOOLS & TECHNOLOGIES-II

Course Code: DSC3207

Credit Units-01

### Course Contents:

#### Module 1: Fundamental of Apache Pig

What is Pig?, Introduction to Pig Data Flow Engine, Pig and Map Reduce in Detail, When should Pig Used?, Pig and Hadoop Cluster, Pig Interpreter and Map Reduce, Pig Relations and Data Types, Pig example in Detail, Debugging and Generating Example in Apache Pig

Pig philosophy and architecture, Pig installation, Grunt shell, Loading data, Exploring Pig Latin commands, Pig Transformations functions, Joins in Pig, Hands on Exercises

#### Module 2: Fundamental of Apache Hive

What is Hive?, Architecture of Hive, Hive Services, Hive Clients, How Hive Differs from Traditional RDBMS, Introduction to HiveQL, Data Types and File Formats in Hive, File Encoding , Common problems while working with Hive

Hive architecture, Hive installation, Hive vs. RDBMS, HiveQL and the Hive shell, Data types and schemas, Creating tables (external vs. managed), Creating Partitions, Creating Views, UDF function in java in Hive, Using hive to create diff types of format

### Examination Scheme:

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

### Text & References:

## MACHINE LEARNING-II LAB

Course Code: DSC3208

Credit Units-01

### Course Contents:

#### Module 1: Basic concepts to calculate distance and similarities

Discuss different methods to calculate distance and similarities including euclidean distance, squared euclidean distance, Manhattan distance, Cosine distance, Chebyshev distance, Canberra distance, Minikowski distance, correlation distance, partial correlation distance, mutual information and rank correlation coefficients

#### Module 2: Clustering:

Finding grouping of data. Hierarchical clustering, k-means and K-medoid clustering algorithm

#### Module 3: Application to Machine Learning:

Solve a case study on real world data and apply machine learning concepts. Classification using Nearest Neighbors, Naive Bayes, Support Vector Machine, Market basket analysis using Association Rules

### Examination Scheme:

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

## REGRESSION THEORY & ANALYSIS LAB

**Course Code: DSC3209**

**Credit Units-01**

### **Course Contents:**

**Module 1:** Simple linear regression:

Estimation of the Parameters, Hypothesis Testing on the Slope and Intercept, Interval Estimation in Simple Linear Regression, Prediction of New Observations, Coefficient of Determination through case studies

**Module 2:** Multiple regression:

Estimation of Parameters, Hypothesis Testing, Confidence Intervals, Prediction through case studies

**Module 3:** Model Adequacy testing:

Residual Analysis, PRESS statistic, Lack of Fit through case studies

**Module 4:** Multicollinearity:

Sources, Effects, Diagnostics, Methods of dealing with Multicollinearity through case studies

### **Examination Scheme:**

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

# DATA STRUCTURE & ALGORITHM DESIGN LAB

**Course Code: DSC3210**

**Credit Units-01**

## **Course Contents:**

### **Module I**

Stack implementation through arrays, link list

### **Module II**

Programs for recursion functions

### **Module III**

Implementation of queues and leap structures

### **Module IV**

Application of binary trees in pre-order, post-order and in-order evaluation

### **Module V**

A VL tree implementation

### **Module VI**

Optimal matrix multiplication

## **Examination Scheme:**

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

# PATTERN RECOGNITION

**Course Code: DSC3211**

**Credit Units-01**

## **Course Contents:**

### **Statistical Pattern Recognition**

Introduction, Gaussian model, discriminant functions, classifier performance, risk and errors; supervised learning using parametric and nonparametric approaches: ML estimation, Bayesian parameter estimation approach, Parzen Windows, k-nn estimation; Unsupervised learning and clustering: the clustering concept, c-means algorithm, learning vector quantization, clustering strategies, a hierarchical clustering procedure.

### **Examination Scheme:**

IA			EE			
<b>Class Test (Practical Based)</b>	<b>Mid Term Viva</b>	<b>Attendance</b>	<b>Major Experiment</b>	<b>Minor Experiment/Spotting</b>	<b>Practical Record</b>	<b>Viva</b>
15	10	05	35	15	10	10

# NEXT GENERATION SEQUENCING ANALYSIS

Course Code: DSC3212

Credit Units-01

## Course Contents:

### Module 1: Introduction to NGS and NGS Technologies

Introduction to sequencing technologies from a data analysts view, Concept, Applications of sequencing technologies in Whole genome assembly; Gene expression analysis; Genome annotation; Gene regulation analysis; Variation studies

### Module 2: NGS data analysis: Preprocessing

Introduction to NGS data analysis, Raw sequence files (FASTQ format), Preprocessing of raw reads: quality control (FastQC), adapter clipping, quality trimming, Introduction to read mapping (Alignment methods, Mapping heuristics), Read alignment to a reference genome (BWA, Bowtie2, TopHat), Mapping output (SAM/BAM format), Usage of important NGS toolkits (samtools, BEDtools), Mapping statistics, Visualization of mapped reads (IGV, UCSC)

### Module 3: NGS data analysis: Variant calling

DNA variant calling and Filtering DNA variants using GATK pipeline

### Module 4: NGS data analysis: Gene Expression Analysis

Genomics and transcriptome assembly, Differential Expression analysis, Quantification of expression,

## Examination Scheme:

# PROJECT

**Course Code: DSC3237**

**Credit Units: 08**

## **GUIDELINES FOR DISSERTATION**

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critiqued by the faculty guide and corrected by the student at each stage.

The File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation.

### **In general, the File should be comprehensive and include**

A short account of the activities that were undertaken as part of the project;

A statement about the extent to which the project has achieved its stated goals.

A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;

Any activities planned but not yet completed as part of the DISSERTATION, or as a future initiative directly resulting from the project;

Any problems that have arisen that may be useful to document for future reference.

### **➤ Report Layout**

The report should contain the following components:

#### **➤ Title or Cover Page**

The title page should contain the following information: Project Title; Student's Name; Course; Year; Supervisor's Name.

#### **➤ Acknowledgements (optional)**

Acknowledgment to any advisory or financial assistance received in the course of work may be given.

#### **➤ Abstract**

A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project

#### **➤ Table of Contents**

Titles and subtitles are to correspond exactly with those in the text.

#### **➤ Introduction**

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

➤ **Materials and Methods**

This section should aim at experimental designs, materials used. Methodology should be mentioned in details including modifications if any.

➤ **Results and Discussion**

Present results, discuss and compare these with those from other workers, etc. In writing these section, emphasis should be given on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary never write in “point” form.

➤ **Conclusion**

A conclusion should be the final section in which the outcome of the work is mentioned briefly.

➤ **Future prospects**

➤ **Appendices**

The Appendix contains material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

➤ **References / Bibliography**

This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

**Examples**

**For research article**

Voravuthikunchai SP, Lortheeranuwat A, Ninrprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichia coli* O157: H7. *Clin Microbiol Infect*, **8** (suppl 1): 116–117.

**For book**

Kowalski,M.(1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), **7**: 63-67

**ASSESSMENT OF THE DISSERTATION FILE**

Essentially, marking will be based on the following criteria: the quality of the report, the technical merit of the project and the project execution.

Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project.

Project execution is concerned with assessing how much work has been put in.

The File should fulfill the following *assessment objectives*:

**Range of Research Methods used to obtain information**

## **Execution of Research**

### **Data Analysis**

Analyse Quantitative/ Qualitative information

Control Quality

### **Draw Conclusions**

### **Examination Scheme:**

Dissertation	50
Viva Voce	50
<b>Total</b>	<b>100</b>

### **Selecting the Dissertation Topic**

It is usual to give you some discretion in the choice of topic for the dissertation and the approach to be adopted. You will need to ensure that your dissertation is related to your field of specialization.

Deciding this is often the most difficult part of the dissertation process, and perhaps, you have been thinking of a topic for some time.

It is important to distinguish here between ‘dissertation topic’ and ‘dissertation title’. The topic is the specific area that you wish to investigate. The title may not be decided until the dissertation has been written so as to reflect its content properly.

Few restrictions are placed on the choice of the topic. Normally we would expect it to be:

- relevant to business, defined broadly;
- related to one or more of the subjects or areas of study within the core program and specialisation stream;
- clearly focused so as to facilitate an in-depth approach, subject to the availability of adequate sources of information and to your own knowledge;
- of value and interest to you and your personal and professional development.

### **Planning the Dissertation**

This will entail following:

- Selecting a topic for investigation.
- Establishing the precise focus of your study by deciding on the aims and objectives of the dissertation, or formulating questions to be investigated. Consider very carefully what is worth investigating and its feasibility.
- Drawing up initial dissertation outlines considering the aims and objectives of the dissertation. Workout various stages of dissertation
- Devising a timetable to ensure that all stages of dissertation are completed in time. The timetable should include writing of the dissertation and regular meetings with your dissertation guide.

### **The Dissertation plan or outline**

It is recommended that you should have a dissertation plan to guide you right from the outset. Essentially, the dissertation plan is an outline of what you intend to do, chapter wise and therefore should reflect the aims and objectives of your dissertation.

There are several reasons for having a dissertation plan

- It provides a focus to your thoughts.
- It provides your faculty-guide with an opportunity, at an early stage of your work, to make constructive comments and help guide the direction of your research.
- The writing of a plan is the first formal stage of the writing process, and therefore helps build up your confidence.
- In many ways, the plan encourages you to come to terms with the reading, thinking and writing in a systematic and integrated way, with plenty of time left for changes.
- Finally, the dissertation plan generally provides a revision point in the development of your dissertation report in order to allow appropriate changes in the scope and even direction of your work as it progresses.

### **Keeping records**

This includes the following:

- Making a note of everything you read; including those discarded.
- Ensuring that when recording sources, author's name and initials, date of publication, title, place of publication and publisher are included. (You may consider starting a card index or database from the outset). Making an accurate note of all quotations at the time you read them.
- Make clear what is a direct quotation and what is your paraphrase.

### **Dissertation format**

All students must follow the following rules in submitting their dissertation.

- Front page should provide title, author, Name of degree/diploma and the date of submission.
- Second page should be the table of contents giving page references for each chapter and section.
- The next page should be the table of appendices, graphs and tables giving titles and page references.
- Next to follow should be a synopsis or abstract of the dissertation (approximately 500 words)
- Next is the 'acknowledgements'.
- Chapter I should be a general introduction, giving the background to the dissertation, the objectives of the dissertation, the rationale for the dissertation, the plan, methodological issues and problems. The limitations of the dissertation should also be hinted in this chapter.
- Other chapters will constitute the body of the dissertation. The number of chapters and their sequence will usually vary depending on, among others, on a critical review of the previous relevant work relating to your major findings, a discussion of their implications, and conclusions, possibly with a suggestion of the direction of future research on the area.
- After this concluding chapter, you should give a list of all the references you have used. These should be cross - references with your text. For articles from journals, the following details are required e.g.

Draper P and Pandyal K. 1991, The Investment Trust Discount Revisited, Journal of Business Finance and Accounting, Vol18, No6, Nov, pp 791-832.

For books, the following details are required:

Levi, M. 1996, International Financial Management, Prentice Hall, New York, 3rd Ed, 1996

- Finally, you should give any appendices. These should only include relevant statistical data or material that cannot be fitted into the above categories.

### **The Layout Guidelines for the Dissertation**

- A4 size Paper

- Font: Arial (10 points) or Times New Roman (12 points)
- Line spacing: 1.5
- Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

### **Guidelines for the assessment of the Dissertation**

While evaluating the dissertation, faculty guide will consider the following aspects:

1. Has the student made a clear statement of the objective or objective(s).
2. If there is more than one objective, do these constitute parts of a whole?
3. Has the student developed an appropriate analytical framework for addressing the problem at hand.
4. Is this based on up-to-date developments in the topic area?
5. Has the student collected information / data suitable to the frameworks?
6. Are the techniques employed by the student to analyse the data / information appropriate and relevant?
7. Has the student succeeded in drawing conclusion form the analysis?
8. Do the conclusions relate well to the objectives of the project?
9. Has the student been regular in his work?
10. Layout of the written report.

### **Assessment Scheme:**

<b>Continuous Evaluation:</b>	40%
(Based on Abstract, Regularity, Adherence to initial plan, Records etc.)	

<b>Final Evaluation:</b> Based on,	60%
Contents & Layout of the Report,	20
Conceptual Framework,	05
Objectives & Methodology and	05
Implications & Conclusions	10
Viva & Presentation	20

# B.Sc (Honors) Chemistry (Total Credits 150)

## Syllabus- First Semester

### INORGANIC CHEMISTRY-I

**Course Code:** CHY2101

**Credit Units:** 03

**Course Objective:** This will cover the fundamental concepts of inorganic chemistry at the undergraduate level. The main objective is to prepare students for the study of the basic inorganic chemistry, particularly in areas covered by the topics listed below.

**Course Contents:**

#### Module I: Atomic Structure

Bohr's theory, its limitations and atomic spectrum of hydrogen atom. Wave mechanics: de Broglie equation, Heisenberg's uncertainty principle and its significance, Schrodinger's wave equation, significance of  $\psi$  and  $\psi^2$ . Quantum numbers and their significance. Normal and orthogonal wave functions. Sign of wave functions. Radial and angular wave functions. Radial and angular distribution curves. Shapes of *s*, *p*, *d* and *f* orbitals. Contour boundary and probability diagrams. Pauli's exclusion principle, Hund's rule of maximum multiplicity, Aufbau's principle and its limitations, Variation of orbital energy with atomic number.

#### Module II: Periodicity of Elements:

*s*, *p*, *d*, *f* block elements, the long form of periodic table. Detailed discussion of the following properties of the elements, with reference to *s* & *p*- block.

(a) Effective nuclear charge, shielding or screening effect, Slater rules, variation of effective nuclear charge in periodic table.

(b) Atomic radii (van der Waals)

(c) Ionic and crystal radii.

(d) Covalent radii (octahedral and tetrahedral )

(e) Ionization enthalpy, Successive ionization enthalpies and factors affecting ionization energy. Applications of ionization enthalpy.

(f) Electron gain enthalpy, trends of electron gain enthalpy.

(g) Electronegativity, Pauling's/Mulliken's/Allred Rachow's/Mulliken-Jaffe's electronegativity scales. Variation of electronegativity with bond order, partial charge, hybridization, group electronegativity. Sanderson's electron density ratio.

#### Module III: Acids and Bases:

Arrhenius Theory, Bronsted- Lowry concept of acid-base reaction, solvated proton, relative strength of acids, types of acid-base reactions, levelling solvents, Lewis acid-base concept, Classification of Lewis acids, Hard and Soft Acids and Bases (HSAB) Application of HSAB principle.

#### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# ORGANIC CHEMISTRY-I

**Course Code:** CHY2102

**Credit Units:** 03

**Course Objective:** The main objective is to prepare students for the study of some fundamentals of the organic chemistry like reaction mechanism, Concept of nucleophile, electrophile, types of reagent used in synthesis of organic compounds, stereochemistry and the structure of various hydrocarbons and their derivatives.

**Course Contents:**

**Module I: Structure and Bonding**

Hybridizations, Bond lengths and bond angles, bond energy, Localized and delocalized chemical bond, van-der Waals interactions, inclusion compounds, clathrates, charge transfer complex, resonance, hyperconjugation, aromaticity, inductive, mesomeric, electromeric and field effects, hydrogen bonding.

**Module II: Types of Reagents**

Electrophiles and nucleophiles. Types of organic reactions. Energy consideration. Reactive intermediates- carbocations, carbanions, free radicals and carbenes. Methods of determination of reaction mechanism.

**Module III: Mechanism of Organic reactions and Stereochemistry**

Curved arrow notations, drawing electron movement with arrows, half headed and double headed arrow, homolytic and heterolytic bond cleavage, relative and absolute configurations, sequence rules, D & L, R & S systems of nomenclature, Newman projection and Saw horse formulae, Fischer and Flying wedge formulae. Concept of isomerism, types of isomerism, optical isomerism, elements of symmetry, molecular chirality, enantiomers, stereogenic centres, Eliel and Epling modification, optical activity, properties of enantiomers, chiral and achiral molecules with two stereogenic centres, diastereoisomers, meso compounds, resolution of enantiomers, inversion, retention and racemization.

**Module IV: Alkanes and alkenes**

IUPAC nomenclature, classification, isomerism in alkanes, sources and methods of preparation (with special reference to Wurtz, Kolbe, Corey-House reactions and decarboxylation of carboxylic acids). Physical properties and chemical reactions of alkanes. Mechanism of free radical halogenation of alkanes.

Formation of alkenes and alkynes by elimination reactions, Mechanism of E1, E2, E1cb reactions. Saytzeff and Hofmann eliminations.

Reactions of alkenes: Electrophilic additions their mechanisms (Markownikoff/Anti Markownikoff addition), mechanism of oxymercuration-demercuration, hydroboration-oxidation, ozonolysis, reduction (catalytic and chemical), syn and anti hydroxylation (oxidation).

1, 2- and 1, 4- addition reactions in conjugated dienes and, Diels-Alder reaction; Allylic and benzylic bromination and mechanism, e.g. propene, 1-butene, toluene, ethyl benzene. Reactions of alkynes: Acidity, Electrophilic and Nucleophilic additions. Hydration to form carbonyl compounds, Alkylation of terminal alkynes.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# PHYSICS-I

**Course Code:** CHY2106

**Credit Units:** 02

**Course Objective:** An important objective of the course is to develop an understanding of 'core physics' at successively deeper levels, each stage revealing new phenomena and greater insight into the properties of matter. Heat, electricity and magnetism, Sound waves and optics

**Course Contents:**

## **Module I: Properties of matter**

Elasticity: Hooke's Law – Elastic Constants – bending of beam – Bending moment – Cantilever Depression at the loaded end of a cantilever – determination of Young's modulus by non-uniform bending. Torsion: Torsion couple – Potential energy in a twisted wire – Torsional pendulum – Time period – Rigidity Modulus – Determination of rigidity modulus by Torsional oscillation (without masses). Viscosity: Viscosity of a liquid – Viscous force – Co-efficient of viscosity of a liquid – Poiseuille's formula – Comparison of viscosities of two liquids by graduated burette method. Surface Tension: Surface Tension – Excess of pressure inside a curved surface – Synclatic system – Surface Tension and interfacial surface tension by the method of drops.

## **Module II: Heat**

Heat: Specific heat – Properties of heat, Newton's law of cooling – determination of specific heat of a liquid using Newton's law of cooling – Emissivity and Emissive Power  
Low Temperature: J.K. Effect – Positive Effect – Negative Effect – Temperature of Inversion – Liquification of gases

## **Module III: Electricity and Magnetism**

Coulomb's Law, Electric Field, Electric Flux, Gauss's law of Electrostatics, Magnetic field; The magnetic dipole; Current and the magnetic field; Gauss's law Ampere's Law- Motion of charged particle in an EM field, Faraday's Laws of Electromagnetic Induction- Maxwell's equation (no derivation).

## **Module IV: Physical optics**

Physical Optics:

Coherence - Interference

Diffraction: Types of diffraction-Theory of transmission grating – Normal Incidence – Determination of Wavelength of monochromatic source

Polarisation: Optical activity – Specific rotation – Polarimeter

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# APPLIED MATHEMATICS-I

Course Code: CHY2105

Credit Units: 02

**Course Objective:** To Explore the Fundamental Concepts of Mathematics

**Course Contents:**

## Module I: Algebra

Partial Fractions - Binomial, Exponential and logarithmic Series (without Proof) -Summation -Simple problems.

## Module II: Theory of equations

Polynomial Equations with real Coefficients - Irrational roots - Complex roots- Transformation of equation by increasing or decreasing roots by a constant - Reciprocal equations - Newton's method to find a root approximately - Simple problems.

## Module III: MATRICES

Symmetric - Skew-Symmetric - Orthogonal and Unitary matrices - Rank of a matrix -Consistency of equations - Eigen roots and eigen vectors - Cayley-Hamilton theorem (without proof)-Verification and computation of inverse matrix.

## Module IV: Differential calculus

Introduction, Fundamental formulae, rules of differentiation, Differentiation of logarithmic functions, parametric functions, implicit functions, n-th derivatives - Leibnitz theorem (without proof) and applications – Jacobians

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# INORGANIC CHEMISTRY LAB-I

**Course Code:** CHY2103

**Credit Units:** 01

**Course Contents:**

## **[I] Titrimetric Analysis**

- (i) Calibration and use of apparatus
- (i) Preparation of solutions of different Molarity/Normality of titrants

## **[II] Acid- Base Titrations**

- (i) Estimation of carbonate and hydroxide present together in mixture.
- (ii) Estimation of carbonate and bicarbonate present together in a mixture.
- (ii) Estimation of free alkali present in different soaps/detergents

## **[III] Oxidation- Reduction Titrimetry**

- (i) Estimation of Fe(II) and oxalic acid using standardized  $\text{KMnO}_4$  solution.
- (ii) Estimation of oxalic acid and sodium oxalate in a given mixture.
- (iii) Estimation of Fe(II) with  $\text{K}_2\text{Cr}_2\text{O}_7$  using internal (diphenylamine, anthranilic acid) and external indicator.

**\*MSDS – Compilation of MSDS of chemicals used by students in each experiments is compulsory.**

**Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# ORGANIC CHEMISTRY LAB-I

**Course Code: CHY2104**

**Credit Units: 01**

**Course Contents:**

1. Calibration of the thermometer.
2. Purification of organic compounds by crystallization using the following solvents: Water, Alcohol, Alcohol-Water & Charcoal
3. Purification by Distillation, Decolouration and Sublimation.
4. Determination of the melting points of above compounds and unknown organic compounds (Kjeldahl method and electrically heated melting point apparatus)
5. Effect of impurities on the melting point – mixed melting point of two unknown organic compounds.
6. Determination of boiling point of liquid compounds. (Boiling point lower than and more than 100° C by distillation and capillary method)
7. Chromatography
  - a. Separation of a mixture of two amino acids by ascending and horizontal paper chromatography.
  - b. Separation of a mixture of two sugars by ascending paper chromatography.
  - c. Separation of a mixture of o- and p-nitrophenol or o- and p-aminophenol by thin layer chromatography (TLC)

**\*MSDS – Compilation of MSDS of chemicals used by students in each experiments is compulsory.**

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## PHYSICS LAB-I

**Course Code: CHY2107**

**Credit Units: 01**

**Course Contents:**

1. Young's modulus – non uniform bending – pin and microscope.
2. Rigidity modulus – Static Torsion Method Using Scale and Telescope.
3. Rigidity modulus – Torsional oscillation method (without symmetric masses).
4. Determination of Co-efficient of Viscosity – Graduated Burette.
5. Surface Tension and Interfacial Tension – By drop weight method.
6. Specific Heat Capacity of a liquid – by Newton's Law of Cooling.
7. Sonometer – Determining A.C. Frequency (Screw Gauge is given).
8. Sonometer – frequency of tuning fork.
9. Newton's Rings – Radius of Curvature.
10. Air Wedge – Determination of thickness of thin wire.

*Any other experiment carried out in the class.*

**Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# Syllabus- Second Semester

## PHYSICAL CHEMISTRY-I

**Course Code:** CHY2201

**Credit Units:** 03

**Course Objective:** Objective of the course is to make students well aware of different states of matters and their properties along with some fundamentals of energy like average kinetic energy, law of equipartition of energy and heat capacity

**Course Contents:**

**Module I: Gaseous state**

Kinetic molecular model of a gas: postulates and derivation of the kinetic gas equation; collision frequency; collision diameter; mean free path and viscosity of gases, including their temperature and pressure dependence, relation between mean free path and coefficient of viscosity.

Deviations from ideal gas behaviour, compressibility factor  $Z$ , and its variation with pressure for different gases. Causes of deviation from ideal behaviour. van der Waals equation of state, its derivation and application in explaining real gas behaviour, virial equation of state; van der Waals equation expressed in virial form and calculation of Boyle temperature. Isotherms of real gases and their comparison with van der Waals isotherms, continuity of states, critical state, relation between critical constants and van der Waals constants, law of corresponding states.

**Module II: Liquid state:**

Qualitative treatment of the structure of the liquid state; physical properties of liquids; vapour pressure, surface tension and coefficient of viscosity, and their determination. Effect of addition of various solutes on surface tension and viscosity. Temperature variation of viscosity of liquids and comparison with that of gases.

**Module III: Solid state:**

Nature of the solid state, Miller indices, elementary ideas of symmetry, symmetry elements and symmetry operations, qualitative idea of point and space groups, seven crystal systems and fourteen Bravais lattices; X-ray diffraction, Bragg's law, a simple account of rotating crystal method and powder pattern method. Analysis of powder diffraction patterns of NaCl, CsCl and KCl. Defects in crystals.

**Module IV: Velocities**

Maxwell distribution and its use in evaluating molecular velocities (average, root mean square and most probable) and average kinetic energy, law of equipartition of energy, degrees of freedom and molecular basis of heat capacities.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# ANALYTICAL CHEMISTRY

**Course Code:** CHY2202

**Credit Units:** 03

**Course Objective:** To help the student to develop the habit of accurate manipulation and an attitude of critical thinking and to learn the basic analytical methods and appreciate what is involved in an analysis.

**Course Contents:**

## Module I:

Data analysis – theory of errors – idea of significant figures and its importance with examples – precision – accuracy – methods of expressing accuracy . Error analysis – minimizing errors – method of expressing precision – average deviation – standard deviation.

## Module II: Separation and purification techniques

### General purification techniques

Purification of solid organic compounds, recrystallisation, use of miscible solvents, use of drying agents and their properties, sublimation. Purification of liquids. Experimental techniques of distillation, fractional distillation, distillation under reduced pressure. Extraction, use of immiscible solvents, solvent extraction. Chemical methods of purification and test of purity.

### Chromatography

Principle and application of adsorption, partition chromatography, Column chromatography, Thin Layer Chromatography, Paper chromatography, Ion exchange chromatography, Gas Chromatography.

## Module III: Titrimetric methods of analysis

**General Introduction:** General principle. Types of titrations. Requirements for titrimetric analysis. Concentration systems: Molarity, formality, normality, wt% ppm, milliequivalence and millimoles-problems. Primary and secondary standards, criteria for primary standards, preparation of standard solutions, standardization of solutions. Limitation of volumetric analysis, endpoint and equivalence point.

**Acid-base Equilibria:** pH of strong and weak acid solutions. Buffer solutions. Henderson equations. Preparation of acidic and basic buffers. Relative strength of acids and bases from  $K_a$  and  $K_b$  values. Neutralisation-titration curve, theory of indicators, choice of indicators. Use of phenolphthalein and methyl orange.

**Complexometric titrations:** Stability of complexes, titration involving EDTA. Metal ion indicators and characteristics.

## Module IV: Solubility equilibria

**General Separation Techniques:** Solubility and solubility products, expressions for solubility products. Determination of solubility from solubility products.

**Precipitation titrations:** Argentometric titrations, indicators for precipitation titrations involving silver. Determination of chloride by Volhard's method. Adsorption indicators.

**Gravimetric methods of analysis:** Separation by precipitation, factors affecting solubility, gravimetric factor. Purity of precipitates, von Weiman ratio. Co-precipitation, post precipitation.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

## PHYSICS-II

**Course Code:** CHY2206

**Credit Units:** 02

**Course Objective:** An important objective of the course is to develop an understanding of physics at successively deeper levels with a greater insight into the topics such as wave mechanics and nuclear and energy physics along with electronics.

**Course Contents:**

### **Module I: Wave mechanics**

Wave Mechanics – De Broglie Waves – Dual Nature – Experimental Study of Matter Waves – Davission and Germer's Experiment – G.P. Thomson's Experiment – Heisenberg's uncertainty Principle – The position and moment of a particle.

### **Module II: Nuclear physics**

Rutherford's Experiment – Stability of nucleus. The Q value equation for nuclear reaction – Threshold energy – Nuclear Reactions. Artificial Transmutation

Conservation Laws: Conservation of Charge – Conservation of Nucleons – Conservation of Mass – Energy – Biological effects of radiation – control of radiation hazards.

### **Module III: Energy physics**

Sources of conventional energy – Need for non-conventional energy resources – solar energy utilization – solar water heater – solar drier – conversion of light into electrical energy – solar cell – merits and demerits of solar energy – wind energy – its conversion systems – energy from Bio mass – Bio gas generation – Industrial and space application.

### **Module IV: Fiber optics & Electronics**

Fibre Optics: Principle – classification of optical fibres – fiber optic communication system block diagram.

Electronics : Zener diode – Characteristics – Voltage regulation using zener diode – LED – uses of LED.

Digital Electronics: AND, OR, NOT, NAND and NOR gates – NAND and NOR as universal building blocks – Fabrication of a Integrated circuit by monolithic technology – Advantages and limitations of an integrated circuit – LSI, MSI and VLSI.

### **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

## APPLIED MATHEMATICS-II

**Course Code:** CHY2205

**Credit Units:** 02

**Course Objective:** To Explore the Fundamental Concepts of Mathematics

### Course Contents:

#### Module I: Integral Calculus

Introduction, fundamental formulae, method of integration, by parts, partial fraction, Bernoulli's formula for integration by parts - Reduction formulae for:  $\int x^m e^{ax} dx$ ,  $\int \sin^n x dx$ ,  $\int \cos^n x dx$  (with proof & problems),  $\int \sin^m x \cos^n x dx$  (no proof, problems only), properties of definite integrals and simple problems.

#### Module II: Application of Integration

Evaluation of double, triple integrals, Simple applications to area, volume, Fourier series for functions in  $(0, 2\pi)$  and  $(-\pi, \pi)$ .

#### Module III: Laplace Transforms

Laplace Transformations of standard functions and simple properties, Inverse Laplace transforms, Applications to solutions of linear differential equations of order 1 and 2, simple problems

#### Module IV: Vector Analysis

Scalar point functions - Vector point functions, Gradient, divergence, curl, Directional derivatives, Unit normal to a surface, Line and surface integrals, Gauss, Stoke's and Green's theorems (without proofs), Simple problem based on these Theorems.

#### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

# PHYSICAL CHEMISTRY LAB-I

**Course Code: CHY2203**

**Credit Units: 01**

**Course Contents:**

**(I) Surface tension measurements** (use of organic solvents excluded).

- a) Determine the surface tension by (i) drop number (ii) drop weight method.
- b) Study the variation of surface tension of detergent solutions with concentration

**(II) Viscosity measurement using Ostwald's viscometer** (use of organic solvents excluded).

- (a) Study the effect of the addition of solutes such as (i) polymer (ii) ethanol (iii) sodium chloride on the viscosity of water at room temperature.
- (b) Study the effect of variation of viscosity of an aqueous solution with the concentration of solute.

**(III) pH measurements**

- (a) Measurement of pH of different solutions using pH-meter.
- (b) Preparation of buffer solutions
  - (i) Sodium acetate-acetic acid
  - (ii) Ammonium chloride-ammonium hydroxide
- (c) Measurement of the pH of buffer solutions and comparison of the values

**\*MSDS – Compilation of MSDS of chemicals used by students in each experiments is compulsory.**

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# ANALYTICAL CHEMISTRY LAB

**Course Code: CHY2204**

**Credit Units: 01**

**Course Contents:**

## **Module I: Separation Techniques**

1. Chromatography: (a) Separation of mixtures

(i) Paper chromatographic separation of  $\text{Fe}^{3+}$ ,  $\text{Al}^{3+}$ , and  $\text{Cr}^{3+}$

(ii) Separate and identify the monosaccharides present in the given mixture (glucose & fructose) by paper chromatography. Report the  $R_f$  values.

(b) Separate a mixture of Sudan yellow and Sudan Red by TLC technique and identify them on the basis of their  $R_f$  values.

(c) Chromatographic separation of the active ingredients of plants, flowers and juices by TLC

2. Solvent Extractions:

To separate a mixture of  $\text{Ni}^{2+}$  &  $\text{Fe}^{3+}$  by complexing with DMG and extracting the  $\text{Ni}^{2+}$  DMG complex in chloroform, and determine its concentration with spectrophotometry.

3. Determine the pH of given aerated drinks fruit juices, shampoos and soaps.

4. Analysis of soil:

(i) Determination of pH of soil.

(ii) Total soluble salt

(iii) Estimation of calcium, magnesium, phosphate, nitrate

6. Ion exchange:

(i) Determination of exchange capacity of cation exchange resins and anion exchange resins.

(ii) Separation of metal ions from their binary mixture.

(iii) Separation of amino acids from organic acids by ion exchange chromatography.

7. Determination of  $pK_a$  values of indicator using spectrophotometry.

8. Determination of dissolved oxygen in water.

9. Determination of chemical oxygen demand (COD).

10. Determination of Biological oxygen demand (BOD).

**\*MSDS – Compilation of MSDS of chemicals used by students in each experiments is compulsory.**

## **Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## PHYSICS LAB-II

**Course Code:** CHY2207

**Credit Units:** 01

**Course Contents:**

1. Spectrometer Grating – Minimum Deviation – Mercury Lines.
2. Spectrometer – Refractive Index of a liquid – Hollow Prism.
3. Potentiometer – Calibration of High Range Ammeter.
4. Potentiometer – Calibration of Low Range Voltmeter.
5. Determination of M and BH using Deflection Magnetometer in Tan C position and vibration magnetometer.
6. Figure of merit and voltage sensitiveness of table galvanometer.
7. Construction of AND, OR gates using diodes and NOT by transistors.
8. Zener diode – Voltage Regulation.
9. NAND / NOR as universal gate.
10. Demorgan's theorem verification.

*Any other experiments can be carried out in class.*

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# Syllabus- Third Semester

## INORGANIC CHEMISTRY-II

**Course Code:** CHY2301

**Credit Units: 03**

**Course Objective:** Objective of the course is to make students well aware of different types of bonds leading to formation of various compounds and various theories explaining bond formation.

**Course Contents:**

### Module I: Ionic & Covalent bond

General characteristics, types of ions, size effects, radius ratio rule and its limitations. Packing of ions in crystals. Born-Landé equation with derivation and importance of Kapustinskii expression for lattice energy. Madelung constant, Born-Haber cycle and its application, Solvation energy, Lewis structure. Covalent character in ionic compounds, polarizing power and polarizability. Fajan's rules and consequences of polarization. Ionic character in covalent compounds: Bond moment and dipole moment. Percentage ionic character from dipole moment and electronegativity difference.

### Module II: Bond Theory

Valence shell electron pair repulsion theory (VSEPR), shapes of simple molecules and ions containing lone pairs and bond pairs of electrons, multiple bonding ( $\sigma$  and  $\pi$  bond approach), and bond lengths. Valence Bond theory (Heitler-London approach) & its limitations, Energetics of hybridization, equivalent and non-equivalent hybrid orbitals. Bent's rule, Resonance and resonance energy, Molecular orbital theory. Molecular orbital diagrams of diatomic and simple polyatomic molecules  $N_2$ ,  $O_2$ ,  $C_2$ ,  $B_2$ ,  $F_2$ , CO, NO and their ions; HCl,  $BeF_2$ ,  $CO_2$ , (idea of s-p mixing and orbital interaction to be given). Formal charge

### Module III: Metallic Bond:

Qualitative idea of valence bond and band theories. Semiconductors and insulators, defects in solids.

### Module IV: Weak Chemical forces:

van der Waals forces, ion-dipole forces, dipole-dipole interactions, induced dipole interactions, Instantaneous dipole-induced dipole interactions. Repulsive forces, Hydrogen bonding (theories of hydrogen bonding, valence bond treatment).

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

# ORGANIC CHEMISTRY-II

**Course Code:** CHY2302

**Credit Units:** 03

**Course Objective:** Course objective is to teach students concept of aromaticity and various reactions of aromatic as well as non aromatic compounds. This course also imparts the knowledge of different functional groups and the way how to incorporate the desired functionality in a given compound.

**Course Contents:**

## **Module I: Arenes and Aromaticity**

Nomenclature of benzene derivative, Kekule structure. Stability and carbon-carbon bond lengths of benzene, resonance structure. MO picture. Aromaticity the Huckel rule, aromatic ions. Aromatic electrophilic substitution general pattern of the mechanism, role of (a and n complexes) Mechanism of nitration, halogenations, sulphonation, mercuration and Friedel-Crafts reaction Energy profile diagrams. Activating and deactivating substituents. orientation and ortho/para ratio. Side chain reactions of benzene derivatives. Birch reduction. Methods of formation and chemical reactions of alkylbenzenes, alkynylbenzenes and biphenyl Aromaticity: Huckel's rule, aromatic character of arenes, cyclic carbocations/carbanions and heterocyclic compounds with suitable examples (Pinacol- Pinacolone rearrangement). Electrophilic aromatic substitution: halogenation, nitration, sulphonation and Friedel-Craft's alkylation/acylation with their mechanism. Directing effects of the groups.

## **Module II: Chemistry of Halogenated hydrocarbons:**

Alkyl halides: Methods of preparation, nucleophilic substitution reactions –  $SN_1$ ,  $SN_2$  and  $SN_i$  mechanisms with stereochemical aspects and effect of solvent etc.; nucleophilic substitution vs elimination.

Aryl halides: Preparation, including preparation from diazonium salts. nucleophilic aromatic substitution;  $SN_{Ar}$ , Benzyne mechanism

Relative reactivity of Alkyl, allyl/benzyl, vinyl and aryl halides towards nucleophilic substitution reactions.

Organometallic compounds of Mg and Li – Use in synthesis of organic compounds. Synthesis and uses of DDT and BHC, Freon.

## **Module III: Alcohols, Phenols, Ethers and epoxide:**

Alcohols: preparation, properties and relative reactivity of  $1^\circ$ ,  $2^\circ$ ,  $3^\circ$  alcohols, Bouvaelt-Blanc Reduction; Preparation and properties of glycols: Oxidation by periodic acid and lead tetraacetate, Phenols: Preparation and properties; Acidity and factors effecting it, Ring substitution reactions, Reimer – Tiemann and Kolbe's – Schmidt Reactions, Fries and Claisen rearrangements with Mechanism. Ethers and Epoxides: Preparation and reactions with acids. Reactions of epoxides with alcohols, ammonia derivatives and  $LiAlH_4$

## **Module IV: Cycloalkanes & their conformational analysis**

Types of cycloalkanes nomenclature, methods of preparations and relative stability, Baeyer strain and Pitzer strain theory and its limitations, ring strain in cyclopropane and cyclobutanes. Theory of strainless rings chemical reactions, Energy diagrams of cyclohexane: Chair, Boat and Twist boat forms.

### **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

### **Recommended Texts:**

1. Morrison, R. T. & Boyd, R. N. *Organic Chemistry*, Dorling Kindersley (India) Pvt. Ltd. (Pearson Education).
2. Finar, I. L. *Organic Chemistry (Volume I)*, Dorling Kindersley (India) Pvt. Ltd. (Pearson Education).

# PHYSICAL CHEMISTRY-II

**Course Code:** CHY2303

**Credit Units:** 03

**Course Objective:** Course gives an overview of Ionic and chemical equilibria in solution and gaseous state. This course also imparts basic knowledge regarding various properties of solution such as relative lowering of vapour pressure, elevation of boiling point, Depression of freezing point and osmotic pressure

**Course Contents:**

## **Module I: Ionic equilibria**

Strong, moderate and weak electrolytes, degree of ionization, factors affecting degree of ionization, ionization constant and ionic product of water. Ionization of weak acids and bases, pH scale, common ion effect; dissociation constants of mono-, di- and tri-protic acids (exact treatment). Salt hydrolysis-calculation of hydrolysis constant, degree of hydrolysis and pH for different salts. Buffer solutions; derivation of Henderson equation and its applications; buffer capacity, buffer range, buffer action and applications of buffers in analytical chemistry and biochemical processes in the human body. Solubility and solubility product of sparingly soluble salts – applications of solubility product principle. Qualitative treatment of acid – base titration curves (calculation of pH at various stages). Theory of acid – base indicators; selection of indicators and their limitations. Multistage equilibria in polyelectrolyte systems; hydrolysis and hydrolysis constants.

## **Module II: Chemical equilibrium:**

Criteria of thermodynamic equilibrium, degree of advancement of reaction, chemical equilibrium in ideal gases, concept of fugacity. Thermodynamic derivation of relation between Gibbs free energy of reaction and reaction quotient. Coupling of exothermic and endothermic reactions. Equilibrium constants and their quantitative dependence on temperature, pressure and concentration. Free energy of mixing and spontaneity; thermodynamic derivation of relations between the various equilibrium constants  $K_p$ ,  $K_c$  and  $K_x$ . Le Chatelier principle (quantitative treatment); equilibrium between ideal gases and a pure condensed phase.

## **Module III: Solutions and colligative properties:**

Dilute solutions, Raoult's and Henry's Laws and their applications, Excess thermodynamic functions. Thermodynamic derivation using chemical potential to derive relations between the four colligative properties. Applications in calculating molar masses of normal, dissociated and associated solutes in solution.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;

Att: Attendance

# BIOCHEMISTRY

**Course Code:** CHY2304

**Credit Units:** 03

**Course Objective:** The course is designed to equip students with a broad understanding of the chemical and molecular events involved in biological processes. It provides a foundation for careers in medicine, biotechnology, or research in all branches of the biological sciences. The general objective is to ensure that the students learn the necessary chemical and physical chemical background of naturally occurring compounds such as carbohydrate, proteins, lipids, nucleic acids and amino acids.

**Course Contents:**

**Module I:**

Chemistry of Carbohydrates: Definition and Classification of carbohydrates, Open chain, cyclic structure of monosaccharides (Haworth formula) for glucose and fructose. Disaccharides-sucrose and lactose. Physical properties-mutarotation and Killiani Fischer synthesis and Ruff degradation. synthesis. Chemical properties-Oxidation, reduction, osazone formation. Disaccharide-sucrose and lactose-occurrence, structure; Physical and chemical properties. Polysaccharides: starch and cellulose-occurrence, structure, physical and chemical properties.

**Module II:**

Chemistry of aminoacids: Definition and classification of aminoacids, common properties of aminoacids, amphoteric nature, isoelectric point, isoelectric pH and Zwitter ion. Reaction with ninhydrin, 1-fluoro-2, 4-dinitrobenzene (FDNB) and Siegfried's carbamino reaction.

**Module III:**

Chemistry of Proteins: Classifications-shape and size, solubility and physical properties and functional properties. Physical properties: salting in and salting out, denaturation, peptide bond. Structure of protein: primary, secondary, tertiary and quaternary. N-terminal determination-Edman's and Dansyl chloride method. C-terminal determination-Van-Slyke reaction, Phosgene reaction.

**Module IV:**

Chemistry of Lipids: Definition, classification and functions. Occurrence, chemistry and biological functions-simple lipids: tertiary compound lipids (e.g. phospholipids), derived lipids: steroids (e.g. cholesterol). Saturated fatty acids: arachidic acid. Unsaturated fatty acids: linolenic acid, Physical property-emulsification. Chemical properties-saponification, rancidity, definition of acid number, saponification number, iodine number and Reichert-Meissl number. Bile acid and bile salt functions.

**Module V:**

Chemistry of Nucleic acids: Definition, nucleoside, nucleotide and polynucleotide, Double helical model of DNA and its biological functions. Structure of RNA: tRNA, mRNA and rRNA-occurrence, chemistry and its biological functions. Differences between DNA and RNA properties: cot curve and cot value, T<sub>m</sub>, hypo and hyper chromicity.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;

## INORGANIC CHEMISTRY LAB-II

**Course Code:** CHY2305

**Credit Units:** 01

**Course Objective:** To provide training and experience in practical aspects of inorganic chemistry including preparation of some important inorganic compounds and estimation of some ions like Cu(II) ion etc

**Course Contents:**

**Module I: Iodo / Iodimetric Titrations**

- (i) Estimation of Cu (II) and  $K_2Cr_2O_7$  Using sodium thiosulphate solution (Iodimetrically).
- (ii) Estimation of (i) arsenite and (ii) antimony in tartar-emetic iodimetrically
- (iii) Estimation of available chlorine in bleaching powder iodometrically.

**Module II: Inorganic preparations**

- (i) Cuprous Chloride,  $Cu_2Cl_2$
- (ii) Preparation of Manganese (III) phosphate,  $MnPO_4 \cdot H_2O$
- (iii) Preparation of Aluminium Potassium sulphate  $KAl(SO_4)_2 \cdot 12H_2O$  (Potash alum) or Chrome alum.

\*MSDS – Compilation of MSDS of chemicals used by students in each experiments is compulsory.

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

**Recommended Texts:**

1. Vogel, A.I. A text book of quantitative Inorganic Analysis, ELBS. 1978.

## ORGANIC CHEMISTRY LAB-II

**Course Code:** CHY2306

**Credit Units:** 01

**Course Objective:** To provide experience in practical aspects of qualitative analysis of unknown organic compounds and detection of functional groups present.

**.Course Contents:**

1. Systematic analysis of extra elements in the given unknown compounds
2. Tests for following functional groups and unsaturation.
3. Qualitative analysis of the following types of unknown organic compounds
  - a. Carboxylic acids
  - b. Phenols
  - c. Alcohols
  - d. Aldehydes
  - e. Ketones
  - f. Esters
  - a. Carbohydrates
  - b. Primary, secondary and tertiary amines
  - c. Nitro compounds
  - d. Amides
  - e. Aryl halides
  - f. Hydrocarbons

\*MSDS – Compilation of MSDS of chemicals used by students in each experiments is compulsory.

**Examination Scheme:**

IA				EE

5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## PHYSICAL CHEMISTRY LAB-II

**Course Code:** CHY2307

**Credit Units:** 01

**Course Objective:** To provide training in practical aspects of physical chemistry including determination of heat capacity, enthalpy of ionization, enthalpy of hydration of given compound. The course also involves determination of basicity/proticity of a polyprotic acid by the thermochemical method.

### Course Contents:

#### (I) Thermochemistry

- (a) Determination of heat capacity of a calorimeter for different volumes using change of enthalpy data of a known system (method of back calculation of heat capacity of calorimeter from known enthalpy of solution or enthalpy of neutralization).
- (b) Determination of heat capacity of the calorimeter and enthalpy of neutralization of hydrochloric acid with sodium hydroxide.
- (c) Calculation of the enthalpy of ionization of ethanoic acid.
- (d) Determination of heat capacity of the calorimeter and integral enthalpy (endothermic and exothermic) solution of salts.
- (e) Determination of basicity/proticity of a polyprotic acid by the thermochemical method in terms of the changes of temperatures observed in the graph of temperature versus time for different additions of a base. Also calculate the enthalpy of neutralization of the first step.
- (f) Determination of enthalpy of hydration of copper sulphate.
- (g) Study of the solubility of benzoic acid in water and determination of  $\Delta H$ .

#### (II) Indexing of given powder diffraction pattern of a cubic crystalline system.

(III) To determine the enthalpy of neutralization of a weak acid/ weak base versus base/ strong acid and determine the enthalpy of ionization of the weak acid base.

(IV) Determination of critical solution temperature and composition of the phenol-water system and to study the effect of impurities on it.

(V) Phase equilibria: Construction of the phase diagram of (i) simple eutectic and (ii) congruently melting systems, using cooling curves and ignition tube methods.

**\*MSDS – Compilation of MSDS of chemicals used by students in each experiments is compulsory.**

*Any other experiment carried out in the class.*

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA – Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# INDUSTRIAL CHEMISTRY

**Course Code:** CHY2308

**Credit Units:** 03

**Course Objective:** To enable a student to understand the generation of energy from various types of fuels and various manufacturing methods and types of glass, sugar, cement and soap & detergent.

**Course Contents:**

## **Module I: Industrial fuels**

**Energy:** Sources: non-renewable, classification of fuels: solid, liquid and gaseous, Calorific value of fuels and its determination.

**Solid fuels:** Coal: types – properties and uses – lignite, sub-bituminous coal, bituminous coal and anthracite Coking and non-coking coal.

**Liquid fuels:** Refining of crude petroleum and uses of fractions, Hydrodesulphurisation, Cracking: thermal and catalytic (fixed bed and fluidised bed catalysis), Octane number, Cetane number.

**Gaseous fuels:** Natural gas and gobar gas: production, composition and uses, Gobar electric cell.

## **Module II: Glass industry**

Introduction, classification of glass, basic raw materials of glass, manufacturing processes including chemical reactions, some special glasses: optical glass, coloured glass, fibre glass, laminate glass, safety glass, photosensitive glass, photochromatic glass, lead glass, borosilicate glass and glass wool.

## **Module III: Cement industry**

Types of cement, manufacture of Portland cement, composition, setting and hardening of cement, Mortars and concrete, gypsum, plaster of paris, estimation of silica, alumina, calcium oxide and sulphates in Portland cement.

## **Module IV: Soaps and synthetic detergents**

Manufacture of detergent, types of detergents, anionic, cationic, nonionic and amphoteric detergents, manufacture of soap, Liquid soap.

## **Module V: Sugar industry**

Double sulphitation process, Refining and grading of sugar, Saccharin: synthesis and use as a sugar substitute – aspartame, Ethanol: manufacture from molasses by fermentation.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# BIOINORGANIC CHEMISTRY

**Course Code:** CHY2309

**Credit Units:** 03

**Course Objective:** Course objective is to give students an understanding of which metals are found in biological systems and why. To enable students to learn about the structure and function of several enzymes that activates small molecules. To make students learn about the goals and methods of chemists that aim to mimic biological systems. Course also describes selected organometallic and inorganic complexes that do a good job of mimicking biological catalysis.

## Course Contents:

### Module I: Scope of Bioinorganic Chemistry

Inorganic elements in biological systems, cells, biologically important compounds amino acids, proteins, nucleotides, carbohydrates and lipids, basic bioenergetics, classification of enzymes. Biochemistry: Distribution, biological roles, active transport of cations across membranes, the sodium pump, biology of calcium carriers, role in muscle contraction, enzyme stabilization, blood clotting and biological calcification

### Module II: Metalloporphyrins

Structure and optical spectra; heme proteins: magnetic susceptibility and electronic spectra; hemoglobin and myoglobin: molecular structures, thermodynamics and kinetics of oxygenation, electronic and spatial structures, synthetic oxygen carriers, model systems; iron enzymes, peroxidase, catalase and cytochrome P-450

### Module III: Metalloenzymes

Copper enzymes, superoxide dismutase, cytochrome oxidase and ceruloplasmin; Coenzymes; Molybdenum enzyme: xanthine oxidase; Zinc enzymes: carbonic anhydrase, carboxy peptidase and interchangeability of zinc and cobalt in enzymes; Vitamin B12 and B12 coenzymes; Iron storage, transport, biomineralization and siderophores, ferritin and transferrins.

### Module IV: Metals in Medicine

Metal deficiency and disease; toxicity of mercury, cadmium, lead, beryllium, selenium and arsenic; biological defence mechanisms; chelation therapy; metals used for diagnosis and chemotherapy, platinum complexes as anticancer drugs, Pt-DNA binding, complexes of gold, copper, zinc, mercury, arsenic and antimony as drugs.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;

Att: Attendance

# Syllabus- Fourth Semester

## INORGANIC CHEMISTRY-III

**Course Code:** CHY2401

**Credit Units:** 03

**Course Objective:** Objective of the course is to make students well aware of chemistry of s,p and d block elements, their properties, stable oxidation state and the important compounds derived from these elements, their properties, structure and preparation.

**Course Contents:**

**Module I : Chemistry of s and p block elements:**

General properties of s and p block elements. Inert pair effect, Relative stability of different oxidation states, diagonal relationship and anomalous behaviour of first member of each group. Allotropy and catenation. Complex formation tendency of s and p block elements, Hydrides and their classification ionic, covalent and interstitial.

**Module II:**

Study of the following compounds with emphasis on structure, bonding, preparation, properties and uses.

Basic beryllium acetate and nitrate, Boric acid and borates, boron nitrides, borohydrides (diborane) carboranes and graphitic compounds, silanes, Oxides and oxoacids of nitrogen, Phosphorus and chlorine. Peroxoacids of sulphur, interhalogen compounds, polyhalide ions, pseudohalogens,

**Module III: Chemistry of Elements of First Transition Series**

Characteristic properties & electronic configuration of d-block elements, Properties of first transition series, their Binary compounds (Carbides, Oxides and Sulphides), Extraction of Ni, Cu, Au.

**Module IV: Transition elements**

Chemistry of Elements of Second and Third Transition Series: General characteristics, comparative treatment with their 3d analogues in respect of ionic radii, oxidation states. magnetic behaviour, spectral properties.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

**Recommended Texts:**

# ORGANIC CHEMISTRY-III

**Course Code:** CHY2402

**Credit Units:** 03

**Course Objective:** The main objective is to prepare students for the study of important reactions in organic chemistry along with the chemistry of carboxylic acids and amines and their derivatives.

**Course Contents:**

**Module I: Carbonyl Compounds:**

Structure, reactivity and preparation; Nucleophilic additions, Nucleophilic addition-elimination reactions with ammonia derivatives with mechanism; Mechanisms of Aldol and Benzoin condensation, Knoevenagel condensation, Claisen-Schmidt, Perkin, Cannizzaro and Wittig reaction, Beckmann and Benzil-Benzilic acid rearrangements, haloform reaction and Baeyer Villiger oxidation,  $\alpha$ -substitution reactions, oxidations and reductions (Clemmensen, Wolff-Kishner,  $\text{LiAlH}_4$ ,  $\text{NaBH}_4$ , MPV, PDC and PGC); Addition reactions of unsaturated carbonyl compounds: Michael addition.

**Module II: Active methylene compounds**

Keto-enol tautomerism, Preparation and synthetic applications of diethyl malonate and ethyl acetoacetate.

**Module III: Carboxylic Acids and their Derivatives:**

Preparation, physical properties and reactions of monocarboxylic acids: Typical reactions of dicarboxylic acids, hydroxy acids and unsaturated acids: succinic/phthalic, lactic, malic, tartaric, citric, maleic and fumaric acids. Preparation and reactions of acid chlorides, anhydrides, esters and amides; Comparative study of nucleophilic substitution at acyl group - Mechanism of acidic and alkaline hydrolysis of esters, Claisen condensation, Dieckmann and Reformatsky reactions, Hofmann-bromamide degradation and Curtius rearrangement

**Module IV: Nitrogen Containing Functional Groups**

Preparation and important reactions of nitro compounds, nitriles and isonitriles Amines: Effect of substituent and solvent on basicity; Preparation and properties: Gabriel phthalimide synthesis, Carbylamine reaction, Mannich reaction, Hoffmann's exhaustive methylation, Hofmann-elimination reaction; Distinction between 1<sup>o</sup>, 2<sup>o</sup> and 3<sup>o</sup> amines with Hinsberg reagent and nitrous acid; Diazonium Salts: Preparation and their synthetic applications.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# PHYSICAL CHEMISTRY-III

**Course Code:** CHY2403

**Credit Units:** 03

**Course Objective:** Course gives students an overview of thermodynamics involved in various processes in our surrounding, relation between heat and energy, different laws of thermodynamics, thermochemistry, different variable influencing state of a system and their interrelation.

**Course Contents:**

**Module I: Chemical thermodynamics:**

Intensive and extensive variables; state and path functions; isolated, closed and open systems; zeroth law of thermodynamics. *First law:* Concept of heat,  $q$ , work,  $w$ , internal energy  $U$  and statement of first law; enthalpy,  $H$ , relation between heat capacities, calculations of  $q$ ,  $w$ ,  $U$  and  $H$  for reversible, irreversible and free expansion of gases (ideal and van der Waals) under isothermal and adiabatic conditions.

**Module II: Thermochemistry:** Heats of reactions: standard states; enthalpy of formation of molecules and ions and enthalpy of combustion and its applications; calculation of bond energy, bond dissociation energy and resonance energy from thermochemical data, effect of temperature (Kirchoff's equations) and pressure on enthalpy of reactions, Adiabatic flame temperature, explosion temperature.

**Module III: Second and Third Law of thermodynamics**

*Second Law:* Concept of entropy; thermodynamic scale of temperature, statement of the second law of thermodynamics; molecular and statistical interpretation of entropy, Calculation of entropy change for reversible and irreversible processes. *Third Law:* Statement of third law, concept of residual entropy, calculation of absolute entropy of molecules.

**Module IV: Free Energy Functions:**

Gibbs and Helmholtz energy, variation of  $S$ ,  $G$ ,  $A$  with  $T$ ,  $V$ ,  $P$ ; Free energy change and spontaneity. Relation between Joule-Thomson effect inversion temperature; Gibbs-Helmholtz equation; Maxwell relations; thermodynamic equation of state.

**Module V: Systems of variable composition:**

Partial molar properties, dependence of thermodynamic parameters on composition; Gibbs-Duhem equation, chemical potential of ideal mixtures, change in thermodynamic functions in mixing of ideal gases.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# POLYMER CHEMISTRY

**Course Code:** CHY2404

**Credit Units:** 03

**Course Objective:** To know about the types of polymers, polymerization techniques and commercial polymers.

## **Course Contents:**

### **Module I:**

Polymers: Basic Concept, classification of polymers on the basis of structures and applications. Distinction among plastics, elastomers, and fibers, Homo and hetero polymers, copolymers, properties of polymers, glass transition temp. ( $T_g$ ) - definition, factors affecting  $T_g$ , Relationship between  $T_g$  and molecular weight.

### **Module II:**

Molecular Weight of polymers, Number average, weight average, sedimentation and viscosity, average molecular weights, Molecular weights and degree of polymerization. Reactions - Hydrolysis, Hydrogenation, addition, substitution, cross linking - vulcanization and cyclisation.

### **Module III:**

Polymerization techniques: Bulk, solution, suspension & emulsion polymerization, melt polycondensation, Polymer processing, calendaring, die casting, rotational casting.

### **Module IV:**

Chemistry of commercial polymers- General methods of preparation, properties and uses of the following - Teflon, polyethylene, polystyrene, polyesters, poly amides, polycarbonates and PVC.

### **Module V:**

Advances in polymers; Bio-Polymers, biomaterials, polymers in medical field, High temperature and fire resistant polymers – synthesis, structural aspects and applications of silicones and siloxanes. Borazines, silicates and phosphazenes and polysulphates.

### **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

## INORGANIC CHEMISTRY LAB-III

**Course Code:** CHY2405

**Credit Units:** 01

**Course Objective:** To provide training and experience in practical aspects of inorganic chemistry including estimation of Ca/Mg by complexometric titration and  $\text{Cl}^-$  ion determination.

**Course Contents:**

**(a) Complexometric Titrations:**

- (i) Complexometric estimation of (i)  $\text{Mg}^{2+}$  (ii)  $\text{Zn}^{2+}$  using EDTA
- (ii) Estimation of total hardness of water samples
- (iii) Estimation of  $\text{Ca}^{2+}$  in solution by (substitution method) using Erio-chrome black-T as indicator.
- (ii) Estimation of Ca/Mg in drugs and Biological samples.

**(b) Argentometry**

Estimation of  $\text{Cl}^-$  (i) By Mohr's method, (ii) By Vohlard's method, (iii) By Fajan's method.

**(c) Paper Chromatographic separation of Ni (II) and Co(II); Cu(II) and Cd (II)**

**\*MSDS – Compilation of MSDS of chemicals used by students in each experiments is compulsory.**

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

**Recommended Texts:**

1. Vogel, A.I. A text book of quantitative Inorganic Analysis, ELBS. 1978.

## ORGANIC CHEMISTRY LAB-III

**Course Code:** CHY2406

**Credit Units:** 01

**Course Objective:** To provide experience in separation techniques of mixture of organic compounds by means of thin layer chromatography and paper chromatography. Also it gives students a hands on experience involving preparation of synthetically important organic compounds.

**Course Contents:**

### 1. Thin Layer Chromatography:

Determination of  $R_f$  values and identification of organic compounds.

- Separation of green leaf pigments (spinach leaves may be used)
- Preparation and separation of 2,4 - dinitrophenylhydrazones of acetone, 2-butanone, hexane-2 and 3-one using toluene and light petroleum (40:60) as solvent system.
- Separation of a mixture of dyes using cyclohexane and ethylacetate (8.5:1.5) as solvent system.

### 2. Paper Chromatography: Ascending and Circular

- Determination of  $R_f$  values and identification of organic compounds.
- Separation of a mixture of phenylalanine and glycine. Alanine and aspartic acid. Leucine and glutamic acid. Spray reagent-ninhydrin.
- Separation of a mixture of D, L-alanine, glycine and L-Leucine using n-butanol:acetic acid : water (4:1:5) Spray reagent-ninhydrin.
- Separation of monosaccharides- A mixture of D-galactose and D-fructose using n-butanol:acetone:water (4:1:5) Spray reagent aniline hydrogen phthalate.

### 3. Organic preparations

- Acetylation of amines and phenols
- Benzoylation of amines and phenols by Schotten-Baumann reaction
- Hydrolysis of amides and esters to obtain benzoic acid.
- 2,4-DNP, semicarbazone and oxime derivative of carbonyl compound
- Nitration of nitrobenzene, chlorobenzene & bromobenzene
- Oxidation of the benzaldehyde, benzyl alcohol acetophenone to benzoic

\*MSDS – Compilation of MSDS of chemicals used by students in each experiments is compulsory.

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## PHYSICAL CHEMISTRY LAB-III

**Course Code:** CHY2407

**Credit Units:** 01

**Course Objective:**

To provide training which involves determination of important property of fluids like surface tension , viscosity. It also enables student to compare strength of two acids and also to perform the potentiometric titration.

**Course Contents:**

- 1.To determine the velocity constant (specific reaction rate) of hydrolysis of methylacetate/ethyl acetate catalyzed by hydrogen ions at room temperature.
  2. To compare the strength of HCl and H<sub>2</sub> SO<sub>4</sub> by studying the kinetics of hydrolysis of ester.
  3. To study kinetically the reaction rate of decomposition of iodide by H<sub>2</sub>O<sub>2</sub>.
  4. Determination of surface tension/percentage composition of given organic mixture using surface tension method.
  5. Determination of viscosity/percentage composition of given organic mixture using viscosity method.
- (I) Study the equilibrium of at least one of the following reactions by the distribution method:
- (i)  $I_2(aq) + I^- \rightarrow I_3^-(aq)$
  - (ii)  $Cu^{2+}(aq) + nNH_3 \rightarrow Cu(NH_3)_n^{2+}$
- (II) Perform the following potentiometric titrations (at least two):
- (i) Strong acid with strong base (ii) weak acid with strong base and (iii) dibasic acid with strong base
- (III) Potentiometric titration of Mohr's salt with potassium dichromate.

\*MSDS – Compilation of MSDS of chemicals used by students in each experiments is compulsory.

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# GREEN CHEMISTRY

**Course Code:** CHY2408

**Credit Units:** 03

**Course Objective:** To know the basics of Green Chemistry and its developments.

## **Course Contents:**

### **Module I: Introduction**

Need for green chemistry – principles of green chemistry – atom economy – definition with example (ibuprofen synthesis) – green oxidant – hydrogen peroxide.

Microwave assisted organic synthesis – apparatus required – examples of MAOS (synthesis of fused anthroquinones, acetalization of a byproduct of sugar industry, 1, 3-dipolar cycloaddition of nitrones to fluorinated dipolarophiles, Leukart reductive amination of ketones) – advantages and disadvantages of MAOS.

Organic reactions by sonication method – apparatus required – examples of sonochemical reactions (Heck, Hunsdiecker and Wittig reactions).

### **Module II: Green Reactions**

Acetylation of primary amine, base catalyzed aldol condensation (synthesis of dibenzalpropanone), halogen addition to C=C bond (bromination of trans-stilbene), [4+2] cycloaddition reaction (Diels-Alder reaction between furan and maleic acid).

Rearrangement reaction (benzyl-benzilic acid rearrangement), coenzyme catalyzed benzoin condensation (thiamine hydrochloride catalyzed synthesis of enzoin, Pechmann condensation for coumarin synthesis (clay catalyzed solid state synthesis of 7-hydroxy-4-methylcoumarin).

Electrophilic aromatic substitution reactions (nitration of phenol, bromination of acetanilide) – green oxidation reactions (synthesis of adipic acid, preparation of manganese (III) acetylacetonate) – zeolite catalyzed Friedel-Crafts acylation.

### **Module III: Green Solvents**

Ionic liquids: simple preparation – types – properties and application – ionic liquids in organic reactions (Heck reaction, Suzuki reactions, epoxidation), industrial (battery) and analytical chemistry (matrices for MALDI-TOF MS, gas chromatography stationary phases – advantages and disadvantages.

Super critical CO<sub>2</sub> – preparation, properties and applications (decaffeination, dry cleaning) – environmental impact.

Diels-Alder reaction in water – catalysis in water (aerobic oxidation of alcohols catalyzed by Pd(II) / bathophenanthroline).

### **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;

Att: Attendance

### **Text & References:**

# AGRICULTURE CHEMISTRY

**Course Code:** CHY2409

**Credit Units:** 03

**Course Objective:** To give the students the importance of Agricultural chemistry and an exposure to find, analyse and find a suitable method to cultivate and promote agricultural methods.

**Course Contents:**

## **Module I: Soil Chemistry**

Introduction: Formation of Soil. Classification of soil and properties of soil - soil Acidity - Causes of acidity - soil alkalinity - determination of soil pH - Buffering of soils - Amending the soil - Reclamation of acid soil - Liming agents.

## **Module II: Soil Fertility and Productivity**

Organic Manures - Farmyard Manure - Compost - Oil cakes - Bone meal - Meat meal - Fish meal - Blood meal and green Manures - Fertilizers - Classification of fertilizers - Requisites of a good fertilizers - Nitrogenous fertilizers - Phosphatic fertilizers - super Phosphate of lime - Triple super phosphate - NPK fertilizers - ill effects of fertilizers - effect of mixed fertilizers on soil pH - Micronutrients - role of micronutrients sources - Need for nutrient balance - Soil management and Micronutrients needs.

## **Module III: Pesticides**

Classification of Insecticides - Stomach poisons - Contact poisons and Fumigants - Insecticides - Organic Insecticides - DDT - Gammexane - Malathion - Parathion - Fungicides - Herbicides - Rodenticides - Pesticides in India - Adverse environmental effects of pesticides.

## **Module IV: Plant growth regulators**

3-Indole acetic acid, Naphthalene Acetic Acid, Ethephon (2-chloroethyl phosphoric acid), Alar (succinin acid-2, 2-dimethylhydrazine) their function, Plant hormones: Gibberlin, Cyclocel, Phosphon, Defoliant

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# TERM PAPER

**Course Code: CHY2431**

**Credit Units: 02**

## Objectives

The objective of this course is to judge the understanding as well as application of the knowledge gained by the students. The aim of the term paper is to provide the students with an opportunity to further enhance their knowledge in a sector of their choice by undertaking a significant practical unit of examining and analyzing various aspects of Chemistry & its application at a level commensurate with the learning outcomes of the various courses taken up them in the ongoing semester.

A term paper is primarily a record of intelligent reading in several sources on a particular subject. The students will choose the topic at the beginning of the session in consultation with the faculty assigned. At least one middle level or senior level person of a company from the chosen sector may be interviewed face to face

## Guidelines:

1. The term paper will be related to the contemporary business issue and the topic will be given by the department.
2. The presentation of the term paper is scheduled to be held before the commencement of Semester examinations.
3. The paper will carry 100 marks that will be marked on the basis of understanding and organization of content based on the literature review. The Bibliography shall form an important part of the paper.
4. Examples of a few broad areas for term paper (List is indicative, not exhaustive)
  - Inorganic chemistry
  - Organic chemistry
  - Physical chemistry
  - Green chemistry
  - Agriculture chemistry

## Evaluation Scheme

Organisation and relevance of content	Literature Review	Bibliography	Presentation	Total
30	30	20	20	100

# PROJECT

**Course Code: CHY2432**

**Credit Units: 03**

## **Objectives:**

The aim of the project is to provide the students with an opportunity to further their intellectual and personal development in the chosen field by undertaking a significant practical unit of activity. The project can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information/data, leading to production of a structured report.

## **Chapter Scheme and distribution of marks:**

**Chapter 1:** Introduction – 10 marks

**Chapter 2:** Conceptual Framework/National/International Scenario – 25 marks

**Chapter 3:** Presentation, Analysis & Findings -- 25 marks

**Chapter 4:** Conclusion & Recommendations -- 10 marks

**Chapter 5:** Bibliography -- 05 marks

## **Components of a Project Report**

The outcome of Project Work is the Project Report. A project report should have the following components:

**1) Cover Page:** This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.

**2) Acknowledgement:** Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.

**3) Table of Content:** Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.

**4) Body of the Report:** The body of the report should have these four logical divisions

**a) Introduction:** This will cover the background, rationale/need/justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, and method of analysis), Limitations of the Study, and Chapter Planning.

**b) Conceptual Framework/National and International Scenario:** (relating to the topic of the Project).

**c) Presentation of Data, Analysis and Findings:** (using the tools and techniques mentioned in the methodology).

**d) Conclusion and Recommendations:** In this section, the concluding observations based on the main findings and suggestions are to be provided.

**5) Bibliography or References:** This section will include the list of books and articles which have been used in the project work, and in writing a project report.

**6) Annexures:** Questionnaires (if any), relevant reports, etc.

(The main text of the Project should normally be in the range of 5000 words. However, there may be annexure in addition to the main text)

## **The Steps of a Project Report**

**STEP I :** Selection of the topic for the project by taking following points into consideration:

- Suitability of the topic.
- Relevance of the topic
- Time available at the disposal.
- Feasibility of data collection within the given time limit.
- Challenges involved in the data collection (time & cost involved in the data collection, possibility of getting responses, etc.)

**STEP II :** Finalisation of the Topic and preparation of Project Proposal in consultation with the Supervisor.

**STEP III :** Collection of information and data relating to the topic and analysis of the same.

**STEP IV :** Writing the report dividing it into suitable chapters, viz.,

**Chapter 1:** Introduction,

**Chapter 2:** Conceptual Framework / National & International Scenario,

**Chapter 3:** Analysis & Findings,

**Chapter 4:** Conclusion and Recommendations,

**Chapter 5:** Bibliography.

**STEP V:** The following documents are to be attached with the Final Project Report.

- Approval letter from the supervisor (Annexure-IA)
- Student's declaration (Annexure-IB)
- Certificate from the Competent Authority of the Organisation/Institution, if the student undertakes the Project Work in any Organisation/Institution.

**Guidelines for evaluation:**

- Each of the students has to undertake a Project individually under the supervision of a teacher and to submit the same following the guidelines stated below.
- Language of Project Report and Viva-Voce Examination may be English. The Project Report must be typed and hard bound.
- Failure to submit the Project Report or failure to appear at the Viva-voce Examination will be treated as "Absent" in the Examination. He/she has to submit the Project Report and appear at the Viva-Voce Examination in the subsequent years (within the time period as per University Rules).
- No marks will be allotted on the Project Report unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her Project Report.
- Evaluation of the Project Work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate. The evaluation scheme shall be as follows:

<b>Project Report</b>	<b>Power Point Presentation &amp; Viva</b>
75 marks	25 marks

## **Annexure-IB**

### **Student's Declaration**

I .....hereby declare that the Project Work with the title (in block letters).....

submitted by me for the partial fulfilment of the degree of B.Sc. Honours in Chemistry is my original work and has not been submitted earlier to any other University /Institution for the fulfilment of the requirement for any course of study.

I also declare that no chapter of this manuscript in whole or in part has been incorporated in this report from any earlier work done by others or by me. However, extracts of any literature which has been used for this report has been duly acknowledged providing details of such literature in the references.

# WORKSHOP

**Course Code: CHY2433**

**Credit Units: 01**

## Objectives

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two way. The trainer has to make sure that the aspect covered are practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

## Major Themes for Workshop

The workshop may be conducted on any of the following major themes:

- Nuclear Chemistry
- Modern trend in Inorganic Chemistry
- Modern trend in Organic Chemistry
- Modern trend in Physical Chemistry
- Nanotechnology and its application
- Polymer Chemistry
- Pharmaceuticals
- Food Technology
- Agriculture Chemistry
- Computational Chemistry
- Green Chemistry

These themes are merely indicative and other recent and relevant topics of study may be included.

## Guidelines for Workshop

The procedure for earning credits from workshop consists of the following steps:

1. Relevant study material and references will be provided by the trainer in advance.
2. The participants are expected to explore the topic in advance and take active part in the discussions held
3. Attending and Participating in all activities of the workshop
4. Group Activities have to be undertaken by students as guided by the trainer.
5. Evaluation of workshop activities would be done through test and quiz at the end of the workshop.
6. Submitting a write up of at least 500 words about the learning outcome from the workshop.

## Methodology

The methodology followed at the workshop could be based on any one or more of the following methods:

- Case Study
- Simulation
- Quiz
- Quality analysis& characterization
- Identification and preparation of materials

## Evaluation Scheme:

Attendance	Active Participation	Multiple Choice Questions/ Quiz	Solving the case/ Assignment/ Write up	Total
10	30	30	30	100

# Syllabus- Fifth Semester

## INORGANIC CHEMISTRY-IV

**Course Code:** CHY2501

**Credit Units:** 03

**Course Objective:** Objective of the course is to make students well aware of chemistry of lanthanides and actinides, properties of noble gases, non aqueous solvents and Inorganic polymers.

**Course Contents:**

**Module I: Chemistry of Lanthanide Elements**

Electronic configuration, oxidation states and ionic radii and lanthanide contraction & its consequences, complex formation, colour, spectral and magnetic properties, occurrence and isolation of lanthanide compounds.

**Module II: Chemistry of Actinides**

General features, electronic configuration, oxidation states and chemistry of actinides, chemistry of separation of Np, Pu, and Am from U, similarities between the later actinides and the later lanthanides.

**Module III: Noble gases:**

Occurrence & uses, rationalization of inertness of noble gases, Clathrates, preparation and properties of XeF<sub>2</sub> and XeF<sub>4</sub>, XeF<sub>6</sub>; Nature of bonding in noble gas compounds (Valence bond treatment and MO treatment for XeF<sub>2</sub>). Molecular shapes of noble gas compounds (VSEPR theory).

**Module IV: Radioactivity**

Discovery of radioactivity,  $\alpha$ ,  $\beta$  and  $\gamma$  radiations, the radioactive series, radioactive decay, modes of decay, the n/p ratio, odd even rule, artificial radioactivity, transmutation of elements, the G.M counter.

Positions of radioactive elements in periodic table, trans-uranides and trans-actinides, super heavy elements; nomenclature & predicted chemistry, Liquid-drop model, electron shell model, nuclear reactions, fission and fusion.

**Module V: Non-aqueous Solvents**

Physical properties of solvent, types of solvents and their general characteristics, reactions in non-aqueous solvents with reference to liquid NH<sub>3</sub> and liquid SO<sub>2</sub>.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# ORGANIC CHEMISTRY-IV

**Course Code:** CHY2502

**Credit Units:** 03

**Course Objective:** The main objective is to transfer knowledge to students regarding some selected compounds comprising organometallic compounds, sulfur compounds, heterocyclic compounds and polynuclear aromatic hydrocarbons.

**Course Contents:**

**Module I: Organometallic Compounds**

Organomagnesium compounds: the Grignard reagents-formation, structure and chemical reactions, Organozinc compounds: formation, chemical reactions and their limitations. Organolithium compounds: formation, chemical reactions and their limitations.

**Module II: Sulphur containing compounds**

Preparation and reactions of thiols, thioethers and sulphonic acids.

**Module III: Heterocyclic Compounds**

Molecular orbital picture and aromatic characteristics of pyrrole, furan, thiophene and pyridine. Methods of synthesis and chemical reactions with particular emphasis on the mechanism of electrophilic substitution. Mechanism of nucleophilic substitution reactions in pyridine derivatives.

Comparison of basicity of pyridine, piperidine and pyrrole. Introduction to condensed five and six membered heterocycles. Preparation and reactions of Indole, quinoline and isoquinoline with special reference to Fischer indole synthesis and Bischler-Napieral. Mechanism of electrophilic substitution reactions of indole, quinoline and isoquinoline.

**Module IV: Polynuclear Hydrocarbons**

Reactions of naphthalene phenanthrene and anthracene Structure, Preparation and structure elucidation and important derivatives of naphthalene and anthracene, Polynuclear hydrocarbons.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# PHYSICAL CHEMISTRY-IV

**Course Code:** CHY2503

**Credit Units:** 03

**Course Objective:** Course gives students indepth knowledge of rate of reactions under topic chemical kinetics. Also it enables students to know about colloids and euillibiria between different phases of one component systems such as water, CO<sub>2</sub> and sulfur.

## **Course Contents:**

### **Module I :Colloidal State**

Definition of colloids, classification of colloids, Solids in liquids (sols): properties- Kinetic, optical and electrical; stability of colloids, protective action, Hardy-Schulz law, gold number. Liquidsin liquids (emulsions) types of emulsions, preparation.Emulsifier. Liquids in solids (gels):classification, preparation and properties, inhibition, genera applications of colloids.

### **Module II: Chemical Kinetics I**

Chemical kinetics and its scope, rate of a reaction, factors influencing the rate of a reaction concentration, temperature, pressure, solvent, light, catalyst concentration dependence of rates, mathematical characteristics of simple chemical reactions- zero. order, pseudo order, half life and mean life Determination of the order of reaction differential method, method of integration, method of half life period and isolation method.

### **Module III: Chemical Kinetics-II**

Experimental methods of chemical kinetics-conductometric, potentiometric, optical methods,polarimetry and spectrophotometer. Theories of chemical kinetics: effect of temperature on rateof reaction, Arrhenius equation, concept of activation energy. Simple collision theory based onhard sphere model, transition state theory (equilibrium hypothesis) Expression for the rateconstant based on equilbr ium constant and thermodynamic aspects.

### **Module IV: Phase Equilibrium**

Statement and meaning of the terms - phase, component and degree of freedom, derivation of Gibbs phase rule, *phase equilibria of one component system* - water, CO<sub>2</sub> and sulphur system.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

## INORGANIC CHEMISTRY LAB-IV

**Course Code:** CHY2504

**Credit Units:** 01

**Course Objective:** To provide training and experience in practical aspects of **inorganic chemistry** including preparation of some important inorganic compounds and estimation of some ions like Cu (II) ion, Ni(II) ion etc

**Course Contents:**

- (a) Quantitative Analysis: The following quantitative estimations are to be carried out.
- (i) Estimation of nickel(II) using Dimethylglyoxime as the precipitant.
  - (ii) Estimation of copper as CuSCN
  - (iii) Estimation of iron as  $\text{Fe}_2\text{O}_3$  by precipitating iron as  $\text{Fe}(\text{OH})_3$  through (i) Heterogeneous and (ii) Homogeneous media.
  - (iv) Estimation of Al (III) by precipitating with oxine and weighing as  $\text{Al}(\text{oxine})_3$  (aluminium oxinate).
- (b) Inorganic Preparations
- (i) Tetraammine copper (II) sulphate,  $[\text{Cu}(\text{NH}_3)_4]\text{SO}_4\cdot\text{H}_2\text{O}$
  - (ii) Potassium trisoxalatochromate (III),  $\text{K}_3[\text{Cr}(\text{C}_2\text{O}_4)_3]$
  - (iii) Cis and trans  $\text{K}[\text{Cr}(\text{C}_2\text{O}_4)_2(\text{H}_2\text{O})_2]$  Potassium dioxalatodiaquachromate
  - (iv) Pentaammine carbonato Cobalt(III) ion
- (c) Spectrophotometric estimation of Ferrous ions by using 1,10 phenanthroline

\*MSDS – Compilation of MSDS of chemicals used by students in each experiments is compulsory.

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

**Recommended Texts:**

1. Vogel, A.I. A text book of Quantitative Analysis, ELBS 1986.

## ORGANIC CHEMISTRY LAB-IV

**Course Code:** CHY2505

**Credit Units:** 01

**Course Objective:**

To provide practical experience in organic preparation of azobenzene, benzpinacol and some other selected valuable organic compounds.

**Course Contents:**

**Module 1: Organic Preparations**

1. Diels-Alder reaction between anthracene and maleic anhydride
2. Reduction: nitrobenzene to azobenzene (TLC of the mixture), m-dinitrobenzene to m-nitroaniline
3. S-benzylisothiuronium salts of any one water soluble and one water insoluble acid: acetic acid, phenyl acetic acid, oxalic acid, benzoic acid, phthalic acid
4. Photochemical reduction of benzophenone to benzopinacol
5. Benzoin condensation of benzaldehyde (using thiamine hydrochloride)
6. Condensation of p-toluidine with benzaldehyde/salicylaldehyde/2-hydroxy-3-methoxy benzaldehyde to get Schiff's base (solventless condensation)

**Estimation of:**

1. Phenol and aniline by bromination with potassium bromate-potassium bromide method
2. Glycine by formylation method
3. Saponification value of an oil/fat

**\*MSDS – Compilation of MSDS of chemicals used by students in each experiment is compulsory.**

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA – Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## PHYSICAL CHEMISTRY LAB-IV

**Course Code: CHY2506**

**Credit Units: 01**

(I) To study changes in conductance in the following systems

(i) strong acid-strong base

(ii) weak acid-strong base and

(iii) mixture of strong acid and weak acid-strong base

(II) Study the kinetics of the following reactions.

1. Initial rate method: Iodide-persulphate reaction

2. Integrated rate method:

(a) Acid hydrolysis of methyl acetate with hydrochloric acid, volumetrically or conductometrically.

(b) Iodide-persulphate reaction

(c) Saponification of ethyl acetate.

*Any other experiment carried out in the class.*

\*MSDS – Compilation of MSDS of chemicals used by students in each experiments is compulsory.

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# FOOD & NUTRITION CHEMISTRY

**Course Code:** CHY2507

**Credit Units:** 03

**Course Objective:** To obtain knowledge about different foods, their nutritive values and food preservation.

## **Course Contents:**

### **Module I:**

Cereals definition - Classification, Processing - Structure of Cereals - Composition and nutritive value. Pulses definition - Classification - Processing - Structure of Pulses - Composition and nutritive value - Toxic Constituents in pulses - medicinal value of cereals and pulses.

Sugar and related products. Sugar Structure and Properties. Nutritive value - Sugar composition in different food items. Sugar related product - Classification & nutritive value. Artificial sweeteners - example - advantages and disadvantages.

### **Module II:**

Vegetables - classification - composition & nutritive values - Fruits- Classification - Composition & nutritive values.

Fungi and algae as food - enzymatic browning and non enzymatic browning - Nutritive value of some common foods - milk, egg, soyabeans

### **Module III:**

Beverages - definition and examples - Classification of beverages Fruit beverages - Milk based beverages - malted beverages - examples. Alcoholic and non alcoholic beverages - examples. Appetizers - definition - classification - examples - Water - functions and deficiency.

### **Module IV:**

Food Preservatives - definition - classification - Food Spoilage - definition - Prevention. Methods of preservation - classification - Low and high temperature - preservatives examples - Dehydration - osmotic pressure - food irradiation.

### **Module V:**

Food additives - Definition – classification - their functions - chemical substance. Packaging of foods - classification - Materials used for packaging.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;

Att: Attendance

# QUANTUM CHEMISTRY

**Course Code:** CHY2508

**Credit Units:** 03

**Course Objective:** To obtain knowledge about quantum mechanics and LCAO-MO treatment of single electron system hydrogen.

## Course Contents:

### Module I:

Postulates of quantum mechanics, quantum mechanical operators, Schrodinger equation and its application to free particle and “particle-in-a-box” (rigorous treatment), quantization of energy levels, zero-point energy and Heisenberg Uncertainty principle; wave functions, probability distribution functions, nodal properties, Extension to two and three dimensional boxes, separation of variables, degeneracy.

### Module II:

Angular momentum: Commutation rules, quantization of square of total angular momentum and z-component, Qualitative treatment of hydrogen atom and hydrogen-like ions: setting up of Schrodinger equation in spherical polar coordinates, radial part, quantization of energy (only final energy expression), radial distribution functions of 1s, 2s, 2p, 3s, 3p and 3d orbitals. Average and most probable distances of electron from nucleus.

### Module III:

Covalent bonding, valence bond and molecular orbital approaches, LCAO-MO treatment of  $H^{2+}$ . Bonding and antibonding orbitals, Qualitative extension to  $H_2$ .
