The objective of this course is to introduce object-oriented programming. To explore and implement the various features of OOP such as inheritance, polymorphism, Exceptional handling using programming language C++. After completing this course student can easily identify the basic difference between the programming approaches like procedural and object oriented.

## Course Objectives

The objective of this course is

1. Equip the students with the basic features of C++ supporting object-oriented programming. Perform object oriented programming to develop solutions to problems demonstrating usage of control structures, modularity, I/O. and other standard language constructs.
2. Provide the overview of major object-oriented concepts to implement object oriented programs in C++ like encapsulation, inheritance and polymorphism, stream I/O, templates and operator overloading

## Course Outcomes

On completion of this course, the students will be able to

- CO 1: Explain the basic principles of object-oriented programming approach; Differentiate it with procedural programming approach and also discuss difference between C and C++.
- CO 2: Illustrate the different ways to define a member function inline and explain how the private members of a class can be accessed. Explain how the objects can be instantiated and destroyed with static data member?
- CO 3: Explain the concept of inheritance, types and implementation with suitable examples; find out ambiguity problem in inheritance; use the concept of overriding and constructors in inheritance.
- CO 4: Explain polymorphism in detail and implement the concept of overloading in functions as well as in operators. Write the programs for virtual function and pointer with objects.
- CO 5: Explain the exception handling mechanism. Design the programs for class and function Template. Compare and contrast various formatted and unformatted i/o function in file handling.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>MODULE 1:</b>  <b>INTRODUCTION</b>  Review of C, Difference between C and C++, Procedure Oriented and Object Oriented Approach. Basic Concepts: Objects, classes, Principles like Abstraction, Encapsulation, Inheritance and Polymorphism. Dynamic Binding, Message Passing. Characteristics of Object-Oriented Languages. Introduction to Object-Oriented Modeling techniques (Object, Functional and Dynamic Modeling).	L1 and L2	5
<b>MODULE 2:</b>  <b>CLASSES AND OBJECTS</b> Abstract data types, Object & classes, attributes, methods, C++ class declaration, Local Class and Global Class, State identity and behaviour of an object, Local Object and Global Object, Scope resolution operator, Friend Functions, Inline functions, Constructors and destructors, instantiation of objects, Types of Constructors, Static Class Data, Array of Objects, Constant member functions and Objects, Memory management Operators.	L1, L2 and L3	7
<b>MODULE 3:</b>  <b>INHERITANCE</b>  Inheritance, Types of Inheritance, access modes – public, private & protected, Abstract Classes, Ambiguity resolution using scope resolution operator and Virtual base class, Aggregation, composition vs classification hierarchies, Overriding inheritance methods, Constructors in derived classes, Nesting of Classes	L2, L3 and L4	8
<b>MODULE 4:</b>  <b>POLYMORPHISM</b>  Polymorphism, Type of Polymorphism – Compile time and runtime, Function Overloading, Operator Overloading (Unary and Binary) Polymorphism by parameter, Pointer to objects, this pointer, Virtual Functions, pure virtual functions.	L2, L3 and L4	8
<b>MODULE 5:</b>  <b>STRINGS, FILES AND EXCEPTION HANDLING</b> Manipulating strings, Streams and files handling, formatted and Unformatted Input output. Exception handling, Generic Programming – function template, class Template Standard Template Library: Standard Template Library, Overview of Standard Template Library, Containers, Algorithms, Iterators, Other STL Elements, The Container Classes, General Theory of Operation,	L2, L3 and L4	8

Vectors.

### **Catalog Description**

The objective of this course is to introduce object-oriented programming. To explore and implement the various features of OOP such as inheritance, polymorphism, Exceptional handling using programming language C++. After completing this course student can easily identify the basic difference between the programming approaches like procedural and object oriented.

### **Course Objectives**

The objective of this course is

1. Perform object-oriented programming to develop solutions to problems demonstrating usage of control structures, modularity, I/O. and other standard language constructs.
2. Demonstrate adeptness of object-oriented programming in developing solutions to problems demonstrating usage of data abstraction, encapsulation, and inheritance.
3. Demonstrate ability to implement one or more patterns involving realization of an abstract interface and utilization of polymorphism in the solution of problems which can take advantage of dynamic dispatching, syntax, features of, and how to utilize the Standard Template Library.

### **Course Outcomes**

On completion of this course, the students will be able to

- CO 1: Define and identify the basic principles of object-oriented programming approach; Differentiate it with procedural programming approach.
- CO 2: Determine the different ways to define a member function inline and explain how the private members of a class can be accessed. Solve how the objects can be instantiated and destroyed with static data member?

CO 3: Apply the concept of inheritance, types and implementation with suitable examples; find out ambiguity problem in inheritance; use the concept of overriding and constructors in inheritance.

CO 4: Relate the concept polymorphism with overloading in detail and implement the concept of overloading in functions as well as in operators. Write the programs for virtual function and pointer with objects.

CO 5: Determine the exception handling mechanism. Design the programs for class and function Template. Compare and contrast various formatted and unformatted i/o function in file handling.

<b>Modules/Topics Covered**</b>	<b>Blooms level*</b>	<b>Number of hours</b>
1. Sample Programs using objects and classes  (a) Write a program to illustrate the concept of one class with two objects by taking student data.  (b) Write a program to show the relationship of class and object to display roll no., grade and fee paid by student.	L1, L3, L5	4
2. Sample Programs for different use of private, public member variables and functions and friend functions  (a) Write a program to define the member function outside and inside the class.  (b) Write a program to read and display the information of N persons to illustrate the concept of array of objects.  (c) Write a program to add two numbers to illustrate the use of friend function.	L1, L3, L5	4
3. Sample Programs using constructors and destructors  (a) Write a program to assign and copy values to illustrate the concept of parametrized and copy constructor.  (b) Write a program to show the order of constructor and destructor.	L1, L3, L5	4
4. Sample Programs using operator overloading  (a) Write a program to add two numbers using binary operator overloading.	L1, L3, L5	4

(b) Write a program to illustrate the assignment operator overloading.		
5. Sample Programs using inheritance in and accessing objects of different derived classes  (a) Write a program to compute the marks explaining the concept of multiple inheritance.  (b) Write a program to find the factorial of a number using inheritance.	L1, L3, L5	4
6. Sample Programs using polymorphism and virtual functions (using pointers) and File Handling  (a) Write a program to find the volume of cylinder and cuboid using function overloading.  (b) Write a program to reverse a string using pointers.  (c) Write a program to explain the relationship of inheritance and virtual function.  (d) Write a program to read the student name and fee paid using read() function from the file.	L1, L3, L4, L5	4

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

**\*\* Sample Programs provided are not limited to these only, can include others as desired.**

Co-requisites	Nil				

#### Catalog Description

This course is design to get students familiar with the fundamentals & basic concepts in Data Base Management Systems and their use. This course discusses architecture of Database Systems with concept of different types of available database model, concurrency techniques and new applications of the DBMS. The techniques for database design, normalization, database recovery and protection will enable students to work easily and efficiently on real databases.

#### Course Objectives

The objective of this course is

1. To make students familiar with the fundamental and necessary concepts of DBMS.
2. Provide an overview of normalization, concurrency techniques and database recovery with examples.

#### Course Outcomes

On completion of this course, the students will be able to

CO1. Differentiate between traditional data processing system and database management system and understand characteristics and applications of DBMS in real world.

CO2. Explain and use different data models such as Entity Relationship Model, Network, and Relational Model etc.

CO3. Solve queries using relational algebra, relational calculus and SQL.

CO4. Illustrate normalization concepts and apply them in real database applications.

CO5. Explain database concurrency techniques and recovery mechanisms.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Introduction</b> Concept and goals of DBMS, Database Languages, Database Users, Database Abstraction.  Basic Concepts of ER Model, Relationship sets, Keys, Mapping, Design of ER Model.	L1, L2 and L6	9

<b>Module II: Hierarchical model &amp; Network Model</b> Concepts, Data definition, Data manipulation and implementation. Network Data Model, DBTG Set Constructs, and Implementation	L1 and L2	9
<b>Module III: Relational Model</b> Relational database, Relational Algebra, Relational & Tuple Calculus.	L1 and L3	10
<b>Module IV: Relational Database Design and Query Language</b> SQL, QUEL, QBE, Normalization using Functional Dependency, Multivalued dependency and Join dependency.	L2, L3 and L4	10
<b>Module V: Concurrency Control and New Applications</b> Transaction basics: ACID property, Lifecycle of Transaction, Why Concurrency Control, Schedule, Serializability, Lock Based Protocols, Time Stamped Based Protocols, Deadlock Handling, Crash Recovery. Distributed Database, Objective Oriented Database, Multimedia Database, Data Mining, Digital Libraries.	L2, L3 and L4	10

## Catalog Description

This course is designed to get students familiar with the basic concepts of SQL including DDL, DML and DCL statements. The course also explains the basic concepts of PL/SQL. Students will learn practical on Oracle software and hence can work on any RDBMS software in future.

## Course Objectives

The objective of this course is

1. To make students familiar with the concepts and working of SQL.
2. Provide an overview of PL/SQL.

## Course Outcomes

On completion of this course, the students will be able to

CO1. Illustrate SQL basic concepts like languages DDL, DML etc., data types and working.  
CO2. Explain concepts of database creation, manipulation of data and data retrieval and apply them in real database applications.

CO3. Design and implement various data constraints on a database for a given problem.

CO4. Solve queries using concepts like joins, subqueries, aggregate functions, triggers etc.  
CO5. Prepare PL/SQL blocks.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Lab Session 1</b> Introduction of RDBMS, Oracle, SQL and data types.	L1 and L2	2
<b>Lab Session 2</b> Basic concept of database creation and manipulation of data.	L1 and L3	2
<b>Lab Session 3</b> Working with SELECT query.	L1 and L3	2

<b>Lab Session 4</b> To apply data constraints on a table-Primary Key, Not Null, Unique.	L1 and L3	2
<b>Lab Session 5</b> Working with Foreign Key and Check Constraint.	L1 and L3	2
<b>Lab Session 6</b> To implement the basic concept of Aggregate and Grouping Functions.	L1 and L3	2
<b>Lab Session 7</b> To apply various set operators on data.	L1 and L3	2
<b>Lab Session 8</b> Concept of Nested queries in database and its application in database.	L1 and L3	2
<b>Lab Session 9</b> Implementation different types of JOINS in database.	L1 and L3	2
<b>Lab Session 10</b> Basic concepts of Triggers and Procedures and related queries.	L1 and L3	2
<b>Lab Session 11</b> Introduction to PL/SQL and basic syntax.	L1 and L3	2
<b>Lab Session 12</b> Write programs in PL/SQL Using Control Structures.	L3	2

## Catalog Description

In this course Operating System, its generic types, characteristics and functions are discussed in detail. Concepts covered would enable students to identify various categories of operating systems, with details about concepts of process management and scheduling. Contents will be helpful in identifying deadlocks in the system and designated approaches used to prevent, handle or recover from them. Further it covers the concepts of managing memory, devices and mechanisms for providing security to system and files using operating system.

## Course Objectives

The objective of this course is to

1. Equip the students with the knowledge about categories of operating systems and their functions.
2. Provide detailed knowhow about functions of operating system like process, memory and device management along with file system security and protection.

## Course Outcomes

On completion of this course, the students will be able to

- CO1: Define and explain operating systems and their evolution, also differentiate among its various types.
- CO2: Explain concepts of process and inter-process communication and synchronization. Identify solutions to detect, prevent and handle deadlocks occurring in the operating systems. Solve synchronization and CPU scheduling problems related to processes.
- CO3: Define and explain concepts of memory management like fragmentation, paging and segmentation. Solve problems related to memory management using page replacement algorithms.
- CO4: Describe the concepts of device management and list various disk allocation methods. Determine solutions for disk scheduling problems using available disk scheduling algorithms.
- CO5: State the concept of file and file system security, also distinguish among various file allocation methods.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>MODULE 1:</b>  <b>INTRODUCTION TO OPERATING SYSTEM</b>  Operating system and function, Evolution of operating system, Batch, Interactive, multiprogramming, Time Sharing and Real Time System, multiprocessor system, Distributed system, System protection. Operating System structure, Operating System Services, System Program and calls	L1, L2 and L4	6
<b>MODULE 2:</b>  <b>PROCESS MANAGEMENT</b>  Process concept, State model, process scheduling, job and process synchronization, structure of process management, Threads  Interprocess Communication and Synchronization: Principle of Concurrency, Producer Consumer Problem, Critical Section problem, Semaphores, Hardware Synchronization, Critical Regions, Conditional critical region, Monitor, Inter Process Communication.  CPU Scheduling: Job scheduling functions, Process scheduling, Scheduling Algorithms, Non-Preemptive and preemptive Strategies, Algorithm Evaluation, Multiprocessor Scheduling.  Deadlock: System Deadlock Model, Deadlock Characterization, Methods for handling deadlock, Prevention strategies, Avoidance and Detection, Recovery from deadlock combined approach	L1, L2 and L3	12
<b>MODULE 3:</b>  <b>MEMORY MANAGEMENT</b>  Single Contiguous Allocation: H/W support, S/W support, Advantages and disadvantages, Fragmentation, Paging, Segmentation, Virtual memory concept, Demand paging, Performance, Paged replaced algorithm, Allocation of frames, Thrashing, Cache memory, Swapping, Overlays	L1, L2 and L3	7
<b>MODULE 4:</b>  <b>DEVICE MANAGEMENT</b>  Principles of I/O hardware, Device controller, Device Drivers, Memory mapped I/O, Direct Access Memory, Interrupts, Interrupt Handlers, Application I/O interface, I/O Scheduling, Buffering, Caching, Spooling,  Disk organization, Disk space management, Disk allocation Method, Disk	L1, L2 and L3	7

Scheduling, Disk storage		
<b>MODULE 5:</b>  <b>FILE SYSTEM AND PROTECTION AND SECURITY</b>  File Concept, File Organization and Access Mechanism, File Directories, Basic file system, File Sharing, Allocation method, Free space management.  Policy Mechanism, Authentication, Internal excess Authorization	L1 and L2	4

Co-requisites					

## Catalog Description

This course introduces the UNIX operating system commands, shell programming. Explores the use of operating system utilities such as vi text editors, filters, process handling etc.

## Course Objectives

The objective of this course is to

1. Provide knowledge of working on Unix.
2. Provide sound foundation of writing Shell scripts.
3. Implement features like piping, filters and redirection.

## Course Outcomes

On completion of this course, the students will be able to

CO1: To implement various Unix commands.

CO2: To demonstrate the use of Vi Editor and other editors of UNIX.

CO3: To write simple Shell scripts.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>1.</b> UNIX structure, history, basic commands.	L1,L3	10
<b>2.</b> Working of Vi Editor and its commands.	L1,L3	4
<b>3.</b> Shell Script <ol style="list-style-type: none"> <li>Write shell script to find largest among three numbers.</li> <li>Write shell script to print multiplication table of any number.</li> <li>Write a shell script that copies multiple files into directory.</li> <li>Write a shell script to find number of words and characters in a given file.</li> <li>Write a shell script to find the sum, the average and the product of the four integers entered.</li> <li>Write a shell script to calculate the factorial of a number.</li> <li>Write a shell script to generate Fibonacci series.</li> <li>Write a shell script that computes the gross salary of</li> </ol>	L1,L3	10

employee.		
ix. Write a shell script that takes a command –line argument and reports on whether it is directory, a file, or something else.		
x. Write a shell script which receives two file names as arguments. It should check whether the two file contents are same or not. If they are same then second file should be deleted.		
xi. Write a shell script to calculate gcd of two numbers.		
xii. Write a shell script to concatenate two strings and find the length of the resultant string.

Co-requisites	Nil				

## Catalog Description

This course covers the design, analysis, and implementation of data structures and algorithms to solve engineering problems using C programming language. Topics include elementary data structures, (including arrays, stacks, queues, and lists), advanced data structures (including trees and graphs), the algorithms used to manipulate these structures, and their application to solving practical engineering problems. At the end of this course student will gain knowledge about different kinds of file structures and their related operations.

## Course Objectives

The objective of this course is to

1. Equip the students with knowledge of algorithms, different types of data structures and analysis of space and time complexity.
2. Provide an overview of various algorithms of data structures like stack and queues and related operations and implementation.
3. Provide an overview of dynamic Data Structure like linked list and its related operations, algorithms and programs. Demonstrate practical use of dynamic data structure to solve engineering problems.
4. Equip the students with knowledge of algorithms and operations related to tree and graph data structures and their practical applications.
5. Provide an overview of Sorting, Searching and file structures and its related algorithms and techniques.

## Course Outcomes

On completion of this course, the students will be able to

- CO 1:Identify operations on array, multidimensional, string and their implementation and analyze space and time complexity of algorithms.
- CO 2: Explain various algorithms and operations of data structures like stack and queues and analyze complexity of each operation.
- CO 3: Explain dynamic data structures and various algorithms and operations of data structures like linked list and their applications in computer science.

CO 4: Illustrate the algorithms and operations related to tree and graph data structures, their practical applications and analyze complexity of algorithm associated with each operations.

CO5: Explain Sorting, Searching and file organization and its related techniques.

Modules	Blooms level*	Number of hours
<b>Module I: Introduction to Data structures</b>  Data structures: Definition, Types. Algorithm design, Complexity, Time-Space Tradeoffs. Use of pointers in data structures. Array Definition and Analysis, Representation of Linear Arrays in Memory, Traversing of Linear Arrays, Insertion and Deletion, Single Dimensional Arrays, Two Dimensional Arrays, Multidimensional Arrays, Function Associated with Arrays, Character String in C, Character String Operations, Arrays as parameters, Implementing One Dimensional Array, Sparse matrix.	L1, L2	7
<b>Module II: Introduction to Stacks and queue</b>  Stack: Definition, Array representation of stacks, Operations Associated with Stacks- Push & Pop, Polish expressions, Conversion of infix to postfix, infix to prefix (and vice versa), Application of stacks recursion, polish expression and their compilation, conversion of infix expression to prefix and postfix expression, Tower of Hanoi problem. Queue: Definition, Representation of Queues, Operations of queues- QInsert, QDelete, Priority Queues, Circular Queue, Deque.	L1, L2, L3, L4	8
<b>Module III: Dynamic Data Structure</b>  Linked list: Introduction to Singly linked lists: Representation of linked lists in memory, Traversing, Searching, Insertion into, Deletion from linked list, doubly linked list, circular linked list, generalized list. Applications of Linked List-Polynomial representation using linked list and basic operation. Stack and queue implementation using linked list.	L1, L3 and L4	7
<b>Module IV: Trees and Graphs</b>  Trees: Basic Terminology, Binary Trees and their representation, expression evaluation, Complete Binary trees, extended binary trees, Traversing binary trees, Searching, Insertion and Deletion in binary search trees, General trees, AVL trees, Threaded trees, B trees.  Graphs: Terminology and Representations, Graphs & Multigraphs, Directed Graphs, Sequential representation of graphs, Adjacency matrices, Transversal Connected Component and Spanning trees.	L1, L3 and L5	7

<b>Module V: Sorting and Searching and file structures</b>  Sorting: Insertion Sort, Bubble sort, Selection sort, Quick sort, two-way Merge sort, Heap sort, Partition exchange sort, Shell sort, Sorting on different keys, External sorting.  Searching: Linear search, Binary search  File structures: Physical storage media, File Organization, Linked organization of file, Inverted file, Organization records into blocks, Sequential blocks, Hash function, Indexing & Hashing, Multilevel indexing, Tree Index, Random file, Primary Indices, Secondary Indices, B tree index files.	L1, L4, L5	7

## Catalog Description

This course covers the design, analysis, and implementation of data structures and algorithms to solve engineering problems using C programming language. Topics include elementary data structures, (including arrays, stacks, queues, and lists), advanced data structures (including trees and graphs), the algorithms used to manipulate these structures, and their application to solving practical engineering problems. At the end of this course student will gain knowledge about different kinds of file structures and their related operations.

## Course Objectives

The objective of this course is to

1. Equip the students with knowledge of algorithms, different types of data structures and analysis of space and time complexity.
2. Provide an overview of various algorithms of data structures like stack and queues and related operations and implementation.

3. Provide an overview of dynamic Data Structure like linked list and its related operations, algorithms and programs. Demonstrate practical use of dynamic data structure to solve engineering problems.
4. Equip the students with knowledge of algorithms and operations related to tree and graph data structures and their practical applications.
5. Provide an overview of Sorting, Searching and file structures and its related algorithms and techniques.

### Course Outcomes

On completion of this course, the students will be able to

CO 1: Identify operations and their implementation on array and multidimensional, string and estimation space and time complexity.

CO 2: Explain various algorithm and operations of data structures like stack and queues and analyze complexity of each operation.

CO 3: Explain dynamic data structures and various algorithms and operations of data structures like linked list and their applications in computer science.

CO 4: Illustrate the algorithms and operations related to tree and graph data structures, their practical applications and analyze complexity of algorithm associated with each operations.

CO5: Explain Sorting, Searching and file organization and its related techniques.

<b>MLE 2304</b>	<b>Digital Electronics</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2020.1	Date of Approval: JULY, 2020	2	0	0	2
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

## Catalog Description

This course explores the theory and operation of the basic building blocks of digital electronics which includes combinational and sequential circuits. This course also explains the logic families and data convertors. The concepts learnt in the studies of sequential circuits will be applied in the design and analysis of Melay and Moore machines.

## Course Objectives

The objective of this course is to

1. Provide the basic knowledge of digital logic levels and application of knowledge to understand combinational and sequential circuits.
2. Explain the operation of logic family and data convertors.

## Course Outcomes

On completion of this course, the students will be able to

CO1: Explain the difference between analog and digital signal; Describe the Boolean algebra; Analyze the SOP & POS form of Boolean function; Solve k-map and tabulation method to simplify the logical function; Apply universal gates to implement the given logic.

CO2: Define the multiplexer and decoder; Explain the adder & subtractor; Apply multiplexer to design Boolean function; Analyze the difference between decoder and encoder.

CO3: Define flip flops; Compare combinational and sequential circuits; Describe shift registers; Design counters and synchronous sequential circuits.

CO4: Explain the logic families; Compare the RTL, DTL, TTL and ECL logic families.

CO5: Define data convertors; Explain analog to digital convertor and digital to analog convertor.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
MODULE 1:	L1,L2	6

<b>BOOLEAN FUNCTIONS</b>  Analog & digital signals, AND, OR, NOT, NAND, NOR & XOR gates, Boolean algebra, Standard representation of logical functions, K-map representation and simplification of logical function, don't care conditions, XOR & XNOR simplifications of K-maps, Tabulation method.	and L3	
<b>MODULE 2:</b>  <b>COMBINATIONAL CIRCUITS</b>  Adders, Subtractors, Multiplexer, de-multiplexer, decoder & encoder, code converters, Comparators, decoder / driver for display devices, Implementation of logic functions using multiplexer / de-multiplexer.	L1, L2, L3 and L4	6
<b>MODULE 3:</b>  <b>SEQUENTIAL CIRCUITS</b>  Flip-flops: SR, JK, D & T flip flops – Truth table, Excitation table, Conversion of flip-flops, race around condition, Master Slave flip flop, Shift registers: SIPO, PISO, PIPO, SIPO, Bi-directional; Counters: ripple & synchronous counters – up / down; Synchronous Sequential circuit: design procedure.	L1, L2, L4 and L5	8
<b>MODULE 4:</b>  <b>LOGIC FAMILIES</b>  RTL, DTL, TTL, ECL.	L2 and L4	2
<b>MODULE 5:</b>  <b>DATA CONVERTERS</b>  ADC – successive approximation, linear ramp, dual slope; DAC – Binary Weighted, R-2R ladder type.	L1 and L2	2

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

### Catalog Description

In this Lab course the combination and sequential circuits are designed, and their functionality is verified using truth table. Concepts covered would enable them to create complex circuits related to digital design. The objective of this course is to explore and implement the various features of digital logic using basic logic gates.

### Course Objectives

The objective of this course is to

1. Provide a basic knowledge of digital logic levels and application of knowledge to understand digital electronics circuits.
2. Equip with understanding of different combinational and sequential circuits.

### Course Outcomes

On completion of this course, the students will be able to

CO 1: Demonstrate the basic concept of logic gates;

CO 2: Illustrate the adder and subtractors.

CO 3: Demonstrate the code convertors.

CO 4: Demonstrate the combinational and sequential circuits.

<b>Modules/Topics Covered**</b>	<b>Blooms level*</b>	<b>Number of hours</b>
1. To verify the truth tables of NOT, OR, AND, NOR, NAND, XOR, XNOR gates.	L3, L5	2
2. To obtain half adder, full adder using gates and verify their truth tables.	L3, L5	2
3. To obtain half subtractor, full subtractor using gates and verify their truth tables.	L3, L5	2
4. To implement control circuit using multiplexer.	L3, L5	2
5. To convert BCD code into excess 3 code and verify the truth table.	L3, L5	2
6. To verify the truth tables of RS, D, JK and T flip- flops.	L3, L5	2
7. To implement and verify 3-bit bi-directional shift register.	L3, L5	2

8. To design and study asynchronous/ripple counter.	L3, L5	2
9. To design and study synchronous counter.	L3, L5	2
10. To design and study a sequence detector.	L3, L5	2

Co-requisites	Semiconductor Physics				

### **Catalog Description**

This is the first course in Electronics and Communication Engineering, to educate and explain the methods used for biasing circuits in a graphical analysis of non-linear electronic circuits and also includes small signal transistor models, parameters and their frequency responses. Following this, analyzing different types of feedback amplifiers, and power amplifiers using transistor and designing of different electronic circuits are included in the course. This course also considers the mathematical modeling of active solid state devices their analysis and design of single state circuits. Topics covered include the study of device characteristics and applications of p-n-junction diodes, bipolar junction transistors, and field effect transistors.

### **Course Objectives**

The objective of this course is to

1. build from basic knowledge of Semiconductor Physics to an understanding of basic devices and their models
2. familiarize the student with the analysis and design of basic transistor amplifier circuits, feedback amplifiers and wave shaping circuits
3. build a foundation for Analog Electronics-II, Digital Circuits and Systems I & II, VLSI design and analog CMOS IC Design.

### **Course Outcomes**

On completion of this course, the students will be able to

- CO1. explain different types of diodes and demonstrate wave shaping circuits
- CO2. explain operating principal of Bipolar Junction Transistor, its properties, biasing techniques and stability
- CO3. describe low and high frequency transistor amplifiers along with single and multi-stage amplifier
- CO4. explain operating principal of JFET, MOSFET, its properties, and biasing techniques

CO5. solve and analyse different negative feedback amplifiers configurations

CO6. describe and outline power amplifiers and their application.

Modules	Blooms level*	Number of hours
<b>Module I: Semiconductor Diode and Diode Circuits</b>  Different types of diodes: Zener, Schottky, LED. Zener as voltage regulator, Diffusion capacitance, Drift capacitance, the load line concept, half wave, full wave rectifiers, clipping and clamping circuits.	L1 L2 & L3	6
<b>Module II: Bipolar Junction Transistor</b>  Bipolar junction transistor: Introduction, Transistor, construction, transistor operations, BJT characteristics, load line, operating point, leakage currents, saturation and cut off mode of operations. Bias stabilization: Need for stabilization, fixed Bias, emitter bias, self bias, bias stability with respect to variations in $I_{co}$ , $V_{BE}$ & $\beta$ , Stabilization factors, thermal stability.	L1 L2 & L3	9
<b>Module III: Small signal Analysis of transistor and Multistage Amplifier</b>  Hybrid model for transistors at low frequencies, Analysis of transistor amplifier using h parameters, emitter follower, Miller's theorem, THE CE amplifier with an emitter resistance, Hybrid $\pi$ model, Hybrid $\pi$ Conductances and Capacitances, CE short circuit current gain, CE short circuit current gain with $R_L$ Multistage amplifier: Cascading of Amplifiers, Coupling schemes(RC coupling and Transformer coupling)	L2 & L3	6
<b>Module IV: Field Effect Transistors</b>  Field effect transistor (JFET, MOSFET): volt-ampere characteristics, small signal model –common drain, common source, common gate, operating point, MOSFET, enhancement and -depletion mode, Common source amplifier, Source follower	L1, L2 & L3	5
<b>Module V: Feedback Amplifiers</b>  Feedback concept, Classification of Feedback amplifiers, Properties of	L1, L2, L3 & L4	6

negative Feedback amplifiers, Impedance considerations in different Configurations, Examples of analysis of feedback Amplifiers.		
<b>Module VI: Power amplifiers</b>  Power dissipation in transistors, difference with voltage amplifiers, Amplifier classification (Class A, Class B, Class C, Class AB) class AB push pull amplifier, collector efficiency of each, cross over distortion.	L1 & L2	4

### **Catalog Description**

This course examines the evolution of enterprise resource planning (ERP) systems - from internally focused client/server systems to externally focused e-business. This class studies the types of issues that managers will need to consider in implementing cross-functional integrated ERP systems. The objective of this course is to make students aware of the potential and limitations of ERP systems. This objective will be reached through hands-on experience, case studies, lectures, guest speakers and a group project. The course would equip students with the basics of E-Commerce, technologies involved with it and various issues associated with.

### **Course Objectives**

The objective of this course is to

1. Understand the students with the role of consultants, vendors and employees.
2. Provide an overview of various phases in ERP implementation and identify various technologies used in ERP.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: Describe the key features of Internet, Intranets and Extranets and explain how they relate to each other. Demonstrate an understanding of the foundations and importance of E-commerce and assess electronic payment systems.

CO2: Understand concepts of reengineering, data mining, data warehousing and how they relate to ERP system implementations.

CO3: Explain the challenges associated with implementing enterprise systems and their impacts on organizations.

CO4: Describe the selection, acquisition and implementation of enterprise systems and demonstrate an ability to work independently and in a group.

CO5: Identify and describe typical functionality in an ERP system.

CO 6: Analyze the strategic options for ERP identification and adoption.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<p><b>MODULE 1:</b></p> <p><b>INTRODUCTION AND CONCEPTS:</b></p> <p>Networks and commercial transactions - Internet and other novelties; Networks and electronic transactions today, Model for commercial transactions; Internet environment - internet advantage, world wide web and other internet sales venues; Online commerce solutions.</p> <p>Security Technologies: Why is internet insecure? Pre-requisites/Exposure	Basic Mathematics				
Co-requisites	Nil				

## Catalog Description

In this course the concepts of statistics, the science of collecting, organizing, and interpreting numerical data are discussed. Emphasis will be placed on statistical reasoning and data analysis. The main topics are study design, descriptive statistics, probability theory, and statistical inference. As a precursor to the study of cryptography studies will be made on impact of various techniques for finding independence or dependence between data variables. The concepts learnt in the studies of statistics will be applied practically to solve number of real life problems using the statistical package like R and SPSS.

## Course Objectives

The objective of this course is to

1. Equip the students with concepts of statistics through problem solving and analytical approach.
2. Provide an overview of various statistical techniques: descriptive and inferential, parametric and non-parametric and practical statistics using R and SPSS.

## Course Outcomes

On completion of this course, the students will be able to

- CO 1: Explain, describe and distinguish various population, sample, type of variables, measurement scales, central tendency, percentile and solve problems related to them.
- CO 2: Explain the concept of descriptive and inferential statistics; probability theory; Solve problems based on probability; Explain binomial, poisson distribution and solve real life problems related to discrete and continuous random variable.
- CO 3: Describe the concept of sampling distribution for large and small samples; Explain the concept of hypothesis testing and solve problems related using t-distribution and standard normal distribution.
- CO 4: Explain concept of covariance and correlation and its applications in real life; Explain Anova and its use in real life problem solving; Explain and compare various regression analysis methods statistics for prediction

CO 5: Explain various parametric and nonparametric test and apply them to solve real life statistical problems

Modules	Blooms level*	Number of hours
<b>Module 1: Introduction to Statistics and Data Analysis</b> Statistical Inference, Samples, Populations and Experimental Design , The Hole of Probability Sampling Procedures; Collection of Data ,Measures of Location:, Measures of Variability ,Discrete and Continuous Data , Statistical Modeling, Scientific Inspection, and Graphical Diagnostics, Graphical Methods and Data Description ,General Types of Statistical Studies	L1, L2 and L3	7
<b>Module 2: Probability &amp; Probability Distribution</b> Sample Space, Events Probability of an Event, Additive Rules, Conditional Probability ,Multiplicative Rules ,Bayes' Rule, Concept of a Random Variable, Discrete Probability Distributions, Continuous Probability Distributions , Joint Probability Distributions ,Mean of a Random Variable, Variance and Covariance of Random Variables, Means and Variances of Linear Combinations of Random Variables, Chebyshev's Theorem, , Discrete Uniform Distribution, Binomial and Multinomial Distributions, Poisson Distribution and the Poisson Process. Continuous Uniform Distribution, Normal Distribution ,Areas under the Normal Curve ,Applications of the Normal Distribution , Gamma and Exponential Distributions, ,Chi-Squared Distribution.	L1,L2, L3	6
<b>Module 3: Sampling Distributions and Estimation</b> Random Sampling, Some Important Statistics, ,Data Displays and Graphical Methods, Sampling Distributions Introduction to Estimation, Statistical Inference ,Classical Methods of Estimation, Single Sample: Estimating the Mean ,Standard Error of a Point Estimate, Prediction Intervals, Tolerance Limits Two Samples: Estimating the Difference between Two Means ,Paired Observations , , Single Sample: Estimating a Proportion, Two Samples: Estimating the Difference between Two Proportion.	L1,L2, L3	6
<b>Module 4: Hypotheses Testing</b> Statistical Hypotheses: General Concepts ,Testing a Statistical Hypothesis, One- and Two-Tailed Tests, The Use of <i>P</i> -Values for Decision Making in Testing Hypotheses, One Sample: Test on a Single Proportion ,Two Samples: Tests on Two Proportions, Exercises ,One- and Two-Sample Tests Concerning Variances, Goodness-of-Fit Test, Test for Independence (Categorical Data),Test for Homogeneity, Testing for Several Proportions	L1, L2 L3	7
<b>Module 5: Simple Linear Regression and Correlation</b> Introduction to Linear Regression, The Simple Linear Regression Model, Least Squares and the Fitted.Model Analysis-of-Variance, Approach, Test for Linearity of Regression: Data with Repeated Observations, Data Plots and Transformations, Simple Linear Regression Case Study, Correlation, Classification	L1, L2	9

## IV SEM

<b>MLE2401</b>	<b>Discrete Mathematics</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2020.1	Date of Approval: July 2020	3	0	0	3
Pre-requisites/Exposure	Basic mathematics: Set Theory and Logic Gates				
Co-requisites					

### Catalog Description

This course is intended for students, those who have little bit knowledge of logical gates and basic logical mathematics. Knowledge of basic mathematics is necessary: they need to be comfortable with simple logical, including operator precedence. They should also be comfortable working with simple recursive functions. This course will give you a better understanding on how to develop own algorithms for the conversion into programs. More importantly, you'll start to learn computational thinking, which is a fundamental approach to solving real-world problems. Computer programming languages share common fundamental concepts, and this course will introduce you to those concepts using logical thinking.

### Course Objectives

The objective of the course is to:

1. Study of the logical and mathematical relationships between discrete objects using application of Boolean algebra, graphs, lattice and trees.
2. Relate computing theory with applications and design their project machine like Finite state machine using algorithmic approach, and able
3. Apply the knowledge of graph algorithms in daily life research problem solving.

### Course Outcomes

On completion of this course, the students will be able to:

**CO1.** To give the study of the logical and mathematical relationships between discrete objects based on applications of propositional arguments.

**CO2.** Students will be able to relate computing theory with real life applications.

**CO3.** They can understand and design their project machine like finite state machine, Petri nets using algorithmic approach

**CO4.** Able to understand the importance of graph algorithms in daily life research problem solving

**CO5.** To describe the applications of Boolean algebra, graphs, lattice and trees in software engineering.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Sets, Relation and Functions:</b> Sets and Subsets, Operations on Sets, Set Identities, Matrices, Mathematical Structures, Principle of Inclusion and Exclusion. Product Sets and Partitions, Relations and Digraphs, Properties of Relation, Equivalence Relation, Functions: Properties of Function, Composition of Function, Inverse, Binary and n-ary operations.	L1, L2 and L3	12
<b>Module II: Logic</b> Proposition, Propositional Calculus- Propositional Variables and Compound Propositions, Basic Logical Operations: -Conjunction, Disjunction, Negation, Conditional, Bi-conditional. Compound Statements, Equivalence, Duality, Algebra of Statements, Valid and Invalid, Arguments, Tautologies, Contradiction, Contingency.	L1,L2, L3	11
<b>Module III: Counting</b> Pigeonhole principle, Mathematical Induction, Recurrence Relation: Solving Linear Homogeneous Recurrence Relations with Constant Coefficients, Solving Recurrence Relations using Generating Functions.	L1,L2, L3 and L5	11
<b>Module IV: Lattices</b> Lattices: Lattices as partially ordered sets, their properties, duality, Lattices as algebraic systems, Sub lattices, Direct products, Bounded Lattices, Complete Lattices, Complemented Lattices and Distributive lattices.	L1, L2 and L3	14

*\*Bloom's Level:*

Version2020.1	Date of Approval: July 2020	3	0	0	3
Pre-requisites/Exposure	Exposure to data structure and programming and an ability to discuss algorithms is the only pre-requisite.				
Co-requisites	Nil				

## Catalog Description

Introduction to computational models of thought and construction of intelligent information systems. Topics include search algorithms, data dependencies and truth-maintenance systems, approaches to knowledge representation, automated deduction, reasoning under uncertainty, and machine learning. The field of Robotics is a multi-disciplinary as robots are amazingly complex system comprising mechanical, electrical, electronic H/W and S/W and issues germane to all these.

## Course Objectives

The objective of this course is to

1. Provide an overview of problem solving skills methods using Artificial Intelligence.
2. Equip the students with the study of programming languages that is used to develop an Intelligence System.

## Course Outcomes

On completion of this course, the students will be able to

- CO1: Explain how Artificial Intelligence enables capabilities that are beyond conventional technology, for example, chess-playing computers, self-driving cars, robotic vacuum cleaners and Understand the various searching techniques.
- CO2: Attain the capability to represent various real life problem domains using logic based techniques and use this to perform inference or planning.
- CO3: Acquire the knowledge of real world Knowledge representation. Apply concept Natural Language processing to problems leading to understanding of cognitive computing.
- CO4: Use different machine learning techniques to design AI machine and Write algorithms and implement programs in 'Prolog' language.
- CO5: Explain some of the more advanced topics of AI such as Robotics and Explain what constitutes "Artificial" Intelligence and how to identify systems with Artificial Intelligence.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<p><b>MODULE 1:</b></p> <p><b>PROBLEM SOLVING AND SCOPE OF AI</b></p> <p>Introduction to Artificial Intelligence. Applications- Games, theorem proving, natural language processing, vision and speech processing, robotics, expert systems. AI techniques- search knowledge, abstraction.</p> <p><b>PROBLEM SOLVING</b></p> <p>State space search; Production systems, search space control: depth-first, breadth-first search. Heuristic search - Hill climbing, best-first search, branch and bound. Problem Reduction, Constraint Satisfaction End, Means-End Analysis. LA* Algorithm, L(AO*) Algorithm.</p>	L1, L2, L3 and L4	10
<p><b>MODULE 2:</b></p> <p><b>KNOWLEDGE REPRESENTATION</b></p> <p>Knowledge Representation issues, first order predicate calculus, Horn Clauses, Resolution, Semantic Nets, Frames, Partitioned Nets, Procedural Vs Declarative knowledge, Forward Vs Backward Reasoning.</p>	L1, L2 and L4	6
<p><b>MODULE 3:</b></p> <p><b>UNDERSTANDING NATURAL LANGUAGES</b></p> <p>Introduction to NLP, Basics of Syntactic Processing, Basics of Semantic Analysis, Basics of Parsing techniques, context free and transformational grammars, transition nets, augmented transition nets, Shanks Conceptual Dependency, Scripts, Basics of grammar free analyzers, Basics of sentence generation, and Basics of translation.</p>	L1, L2 and L4	7
<p><b>MODULE 4:</b></p> <p><b>EXPERT SYSTEM</b></p> <p>Need and justification for expert systems, knowledge acquisition, Case studies: MYCIN, R1</p> <p><b>LEARNING</b></p> <p>Concept of learning, learning automation, genetic algorithm, learning by inductions, neural nets. Programming Language: Introduction to programming Language, LISP and PROLOG.</p> <p><b>HANDLING UNCERTAINTIES</b></p> <p>Non-monotonic reasoning, Probabilistic reasoning, use of certainty factors,</p>	L1, L2, L4 and L5	7

Fuzzy logic.		
<b>MODULE 5:</b>  <b>INTRODUCTION TO ROBOTICS</b>  Fundamentals of Robotics, Robot Kinematics: Position Analysis, Dynamic Analysis and Forces, Robot Programming languages & systems: Introduction, the three levels of robot programming, requirements of a robot programming language, problems peculiar to robot programming languages.	L1, L2 and L3	6

## Catalog Description

PROLOG programs tell the computer what to do (declarative programming) rather than how to do it (procedural programming). PROLOG does this by making deductions and derivations, instigated by user-defined queries, from facts and rules stored in a database. The module teaches PROLOG as a practical programming tool, useful in solving various interesting problems especially in the Artificial Intelligence domain.

## Course Objectives

The objective of this course is to

1. Provide an overview of a programming paradigm: programming by means of logic (also known as logic programming)
2. Provide an experience with development of AI application using PROLOG.

## Course Outcomes

On completion of this course, the students will be able to

CO1: Use the basic knowledge of PROLOG programming in order to write simple PROLOG programs and explore more sophisticated PROLOG code on their own.

CO2: Use Prolog for developing artificial intelligence applications.

<b>Modules/Topics Covered**</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<p>1: INTRODUCTION TO PROLOG- SIMPLE FACTS, FACTS WITH ARGUMENTS.</p> <p><b>PROBLEM STATEMENT 1:</b></p> <ul style="list-style-type: none"> <li>• Convert the following into Prolog Equivalent:</li> </ul> <p>It is raining.</p> <p>This is a book.</p>	L1 and L3	4

<p><b>PROBLEM STATEMENT 2:</b></p> <ul style="list-style-type: none"> <li>Convert the following into Prolog Equivalent:</li> </ul> <ol style="list-style-type: none"> <li>The cakes are delicious.</li> <li>Priya relishes coffee.</li> <li>Edwin plays badminton.</li> </ol>		
<p>2: DEFINING VARIABLES, MATCHING AND BACKTRACKING.</p> <p><b>PROBLEM STATEMENT 3:</b></p> <ul style="list-style-type: none"> <li>Convert the sentences into Prolog Equivalent and answer the following questions:</li> </ul> <ol style="list-style-type: none"> <li>Sun rises in east.</li> <li>Dovey is a good girl.</li> <li>Dora likes books.</li> <li>Chin is an intelligent student?</li> </ol> <p>Query 1: Who is a good girl?</p> <p>Query 2: Dora likes What?</p> <p><b>PROBLEM STATEMENT 4:</b></p> <ul style="list-style-type: none"> <li>Consider the following facts:</li> </ul> <ol style="list-style-type: none"> <li>parent (pam, bob).</li> <li>parent (tom, bob).</li> <li>parent (bob, ann).</li> <li>parent (tom, liz).</li> </ol> <p>Query: Who is the parent of Whom? Or Find X and Y such that X is the parent of Y.</p>	L1, L3 and L5	4
<p>3: RULES.</p> <p><b>PROBLEM STATEMENT 5:</b></p> <ul style="list-style-type: none"> <li>Consider the given knowledge. Represent the knowledge into the PROLOG equivalence and answer the question using rules.</li> </ul> <p>Joy is father of Jay. Jay is father of Sam. Sam is brother of Sue. Alvin is</p>	L1, L3 and L5	2

father of Ali. Sim is mother of Sam. Sis is mother of Alvin.  Question: Who are Sue's parent?		
<b>4: INPUT AND OUTPUT PREDICATES.</b>  <b>PROBLEM STATEMENT 6:</b> <ul style="list-style-type: none"> <li>Write a code to print a message on the screen.</li> <li>Write a program to perform addition of two numbers.</li> </ul>	L1 and L3	2

### **Catalog Description**

Designing an algorithm is an important component of computer science. The objective of this course is to make students aware of various techniques used to evaluate the efficiency of a particular algorithm. Students eventually should learn to design efficient algorithm for a program.

### **Course Objectives**

The objective of this course is to

1. Equip the students with the concepts of complexity and analysis of algorithms.
2. Provide an understanding of different techniques used in designing algorithms for a variety of problems.
3. Equip the students with the concepts of complexity classes of different problems.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: State and explain the meaning of algorithm, analysis and design; apply the algorithmic concepts to analyze a given algorithm and compute its time complexity.

CO2: Explain and apply the concept of Divide and Conquer approach in designing algorithms; analyze a divide and conquer algorithm; explain and apply the concept of Greedy approach in designing algorithms for optimization problems.

CO3: Explain and apply the concept of Dynamic Programming in designing algorithms for optimization problems; compare and contrast the Dynamic Programming with Greedy approach and Divide and Conquer approach.

CO4: State and explain Elementary Graph Algorithms; explain and apply the concept of Branch & Bound and Backtracking in designing algorithms for different problems.

CO5: Define and explain the concept of computational complexity, Polynomial Bounded Algorithms, Class NP, Class NP Hard and Class NP Complete.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>MODULE 1:</b>  <b>INTRODUCTION</b>  Algorithm Design paradigms - motivation, concept of algorithmic efficiency, run time analysis of algorithms, Asymptotic Notations. Recurrences- substitution method, recursion tree method, master method	L1, L2, L3, and L4	7
<b>MODULE 2:</b>  <b>DIVIDE AND CONQUER APPROACH</b> Structure of divide-and-conquer algorithms: examples; Binary search, quick sort, Merge sort, Strassen Multiplication; Analysis of divide and conquer run time recurrence relations.  <b>GREEDY APPROACH</b> Overview of the greedy paradigm examples of exact optimization solution (minimum cost spanning tree), Approximate solution (Knapsack problem), Single source shortest paths, traveling salesman	L1, L2, L3, and L4	8
<b>MODULE 3:</b>  <b>DYNAMIC PROGRAMMING</b> Overview, difference between dynamic programming and divide and conquer, Applications: Shortest path in graph, chain Matrix multiplication, Traveling salesman Problem, longest Common sequence, knapsack problem	L1, L2, L3, and L4	8
<b>MODULE 4:</b>  <b>ELEMENTRY GRAPH ALGORITHMS</b>  Overview, Representation of graphs, strongly connected components, Traversal methods (depth first and breadth first search)  <b>BACKTRACKING</b>  Overview, 8-queen problem, and Knapsack problem  <b>BRANCH AND BOUND</b>  LC searching Bounding, FIFO branch and bound, LC branch and bound	L1, L2, L3, and L4	9

application: 0/1 Knapsack problem, Traveling Salesman Problem		
<b>MODULE 5:</b>  <b>COMPUTATIONAL COMPLEXITY</b>  Complexity measures, Polynomial Vs non-polynomial time complexity; NP-hard and NP-complete classes, examples.	L1 and L2	4

Pre-requisites/Exposure	Application of Data Structures				
Co-requisites	Nil				

### **Catalog Description**

Designing an algorithm is an important component of computer science. The objective of this course is to make students aware of various techniques used to evaluate the efficiency of a particular algorithm. Students eventually should learn to design efficient algorithm for a particular program.

### **Course Objectives**

The objective of this course is to

1. Equip the students with the concepts of complexity and analysis of algorithms.
2. Provide an understanding of different techniques used in designing algorithms for a variety of problems.
3. Equip the students with the concepts of complexity classes of different problems.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: State and explain the meaning of algorithm, analysis and design; apply the algorithmic concepts to analyze a given algorithm and compute its time complexity.

CO2: Explain and apply the concept of Divide and Conquer approach in designing algorithms; analyze a divide and conquer algorithm; explain and apply the concept of Greedy approach in designing algorithms for optimization problems.

CO3: Explain and apply the concept of Dynamic Programming in designing algorithms for optimization problems; compare and contrast the Dynamic Programming with Greedy approach and Divide and Conquer approach.

CO4: State and explain Elementary Graph Algorithms; explain and apply the concept of Branch & Bound and Backtracking in designing algorithms for different problems.

CO5: Define and explain the concept of computational complexity, Polynomially Bounded Algorithms, Class NP, Class NP Hard and Class NP Complete.

Modules	Blooms level*	Number of hours
<p>MODULE 1:</p> <p>Implementation of the following algorithms:</p> <ul style="list-style-type: none"> <li>• Insertion Sort</li> <li>• Bubble Sort</li> <li>• Counting Number of Inversions</li> </ul>	L1, L2, L3, and L4	3

<b>MLE2404</b>	<b>DATA COMMUNICATION &amp; COMPUTER NETWORKS</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version : 2020.1	Date of Approval: July 2020	3	0	0	3
Pre-requisites/Exposure	Basics of Computers				
Co-requisites	NIL				

### Catalog Description

The objective is to acquaint the students with the basics of data communication and networking. A structured approach to explain how networks work from the inside out is being covered. The physical layer of networking, computer hardware and transmission systems have been explained. In-depth application coverage includes email, the domain name system; the World Wide Web (both client- and server-side); and multimedia (including voice over IP).

### Course Objectives

The objective of this course is to

1. To provide an overview of data communication and computer networks, network specific protocols, networking devices, OSI /TCP-IP Layer concepts.
2. To familiarize with the basic taxonomy and terminology of computer networking area.
3. To experience the designing and managing of communication protocols while getting a good exposure to the TCP/IP protocol suite.

### Course Outcomes

On completion of this course, the students will be able to

CO1. State the functions of data component in communication, networking devices, characteristics of topologies and describe the functionality of layers in OSI model.

CO2. Explain Error correction and detection techniques; Differentiate between different type of protocols used at data link layer.

CO3. Describe channel allocation problem and illustrate the working and applications of different wireless LANs and WANs standards

CO4. Compare and Contrast different routing algorithms; discuss the frame format of IPv4 and IPv6 .

CO5. Compare and contrast different transport layer protocols and explain various protocols used at application layer.

Modules	Blooms level*	Number of hours
<b>Module I: Introduction</b>  Introduction to computer networks, evolution of computer networks and its uses, reference models, example networks The physical layer: Theoretical basis for data communication, transmission media, wireless transmission, telecom infrastructure, PSTN, communication satellites, mobile telephone system	L1, L2	8
<b>Module II: The data link layer</b>  Data link layer design issues, error detection and correction, data link protocols, sliding window protocols, example of data link protocols-HDLC, PPP Access .	L2, L3 and L4	8
<b>Module III: Medium access layer</b>  Channel allocation problem, multiple access protocols, ALOHA, CSMA/CD, CSMA/CA, IEEE Standard 802 for LAN and MAN, Bridges, Wireless LANs. Introduction to wireless WANs: Cellular Telephone and Satellite Networks, SONET/SDH, Virtual-Circuit Networks: Frame Relay and ATM.	L2, L3	9
<b>Module IV: The network layer</b> Network layer concepts, design issues, static and dynamic routing algorithms, shortest path routing, flooding, distance vector routing, link state routing, distance vector routing, multicast routing, congestion control and quality of service, internetworking, IPv4	L2, L3 and L4	6
<b>Module VI: The transport layer</b> The transport services, elements of transport protocols, TCP and UDP. The application layer: Brief introduction to presentation and session layer, DNS, E-mail, WWW	L2, L3 and L4	6

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5:Synthesis, L6:Evaluation*

## Catalog Description

The objective is to acquaint the students with the basics of data communication and networking. A structured approach to explain how networks work from the inside out is being covered. The physical layer of networking, computer hardware and transmission systems have been explained. In-depth application coverage includes email, the domain name system; the World Wide Web (both client- and server-side), routing protocols and data link layer protocols.

## Course Objectives

The objective of this course is to

1. Equip the students with concepts of data communication and networking.
2. Provide an overview of various protocols and their configurations using networking devices and servers.

## Course Outcomes

On completion of this course, the students will be able to

CO 1: Demonstrate the use of Command Line Interface (CLI) and other features and Cisco Packet Tracer; describe and distinguish networking devices and transmission media.

CO 2: Apply various application layer protocols capability on server device including DNS, DHCP, HTTP, SMTP and POP.

CO 3: Construct network topology and operate routing protocols (RIP, OSPF and EIGRP) for end-to-end connectivity.

CO 4: Illustrate the use of data link protocols-HDLC and PPP; determine network connectivity issues and fix them.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>LABORATORY SESSION 1</b>  <b>THE PHYSICAL LAYER</b>  1. Introduction to different types of transmission media and cables. 2. Introduction to various networking devices and equipment. 3. Construct network topology and understand configuration of devices using Cisco Packet Tracer (tool).	L2, L3	6
<b>LABORATORY SESSION 2</b>  <b>THE APPLICATION LAYER</b>  1. Configuration of Domain Name System (DNS) server using Cisco Packet Tracer. 2. Configuration of Dynamic Host Configuration Protocol (DHCP) server using Cisco Packet Tracer. 3. Configuration of mail server using Cisco Packet Tracer. 4. Configuration of web server using Cisco Packet Tracer.	L3	6
<b>LABORATORY SESSION 3</b>  <b>THE NETWORK LAYER</b>  1. Configure Routing Information Protocol (RIP) using Cisco Packet Tracer. 2. Configure Open Shortest Path First (OSPF) routing protocol using Cisco Packet Tracer. 3. Configure Enhanced Interior Gateway Routing Protocol (EIGRP) using Cisco Packet Tracer.	L3	6
<b>LABORATORY SESSION 4</b>  <b>DATA LINK LAYER</b>  1. Configure and Analyse the working of data link control protocols-HDLC and PPP access. 2. Configure PPP security protocols-PAP and CHAP using Cisco Packet Tracer. 3. Determine various issues in network connectivity and communication using troubleshooting commands.  .	L3,L4	6

<b>MLE 2408</b>	<b>Artificial Neural Network</b>	L	T	P	C
Version 2020.1	Date of Approval: July 2020	2	-	-	2
Pre-requisites/Exposure	Basic Knowledge of Brain functioning				
Co-requisites	Nil				

## Catalog Description

The course provides introduction to neural network and a deep insight into the basics of brain & its functioning basics of various neural models & neural schema used for learning. With this course students would be able to know the basics of each introductory feature of human brain and its features which would prove to be very helpful throughout their degree and would prove helpful in understanding other related subjects also.

## Course Objectives

The objective of this course is to

1. Equip the students with concepts of learning of brain problem solving techniques and develop proficiency in creating neural structures using the MATLAB.
2. Provide an overview of various control statements, data structures, packages related to image addition, graphics, different types of neural models.

## Course Outcome

On completion of this course, the students will be able to

CO 1: Define Artificial Neural Network & its similarity to biological neural network and explain its application in our day to day life.

CO 2: Analyze ANN learning, Error correction learning, Hebbian learning, Competitive learning and Boltzman Learning.

CO 3: Implement simple perceptron, Perceptron Learning rule, modified perceptron learning rule, feed forward neural network & feedback Neural Network.

CO 4: Explain self-organizing Map, Hopfield network, Adaptive resonance theory and its various learning rules.

CO 5: Analyze memory-based learning, Associative learning, Bi-directional learning and Auto associative learning.

Modules	Blooms	Number

### **Catalog Description**

In this Lab course first student should learn about advanced level of software used for easy calculation and toolbox used for software like MATLAB.

### **Course Objectives**

The objective of this course is to

1. Make the students apply knowledge of various neural models required for solving complex problems.
2. Provide a demonstration of different types of image processing techniques through MATLAB toolbox.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: Acquiring knowledge of Basics of High-end calculation software and need in Computer Science & engineering

CO2: Demonstrate the All preliminary functions in MATLAB

CO3: Apply the knowledge of all the basics function and toolbox knowledge of MATLAB

CO4: Demonstrate the Neural Network model in MATLAB

CO5: Demonstrate usage of applications involving with Image processing & Its Toolbox used by MATLAB

<b>Modules/Topics Covered**</b>	<b>Blooms level*</b>	<b>Number of hours</b>
1. Introduction of MATLAB (a) Basic Variable declaration & its operation (b) Function use & its application	L3, L5	4
2. Sample Programs in MATLAB (a) Basic use of Matrix and Graph Plotting (b) Different type of graph plotting with use of different -2 type of data	L3, L5	6
3. Sample Programs using MATLAB functions (a) Create a basic program MATLAB using functions (b) Use of basic function Image processing (c) Practice on Basic function of Image processing tool box.	L3, L5	6
4. Sample programs of ANN functions (a) Practice on ANN toolbox function in MATLAB (b) Write a program for training a small network in MATLAB	L3, L5	6
5. Sample Programs using ANN tool box & Image processing toolbox (a) Demonstrate the use of ANN tool box & Image processing toolbox and write a program after combining it.	L3, L5	2

### Catalog Description

The purpose of this course is to introduce students to the basic principles of the design and analysis of modern communication systems. It will provide a thorough study of both analog and digital modulation and demodulation schemes. The performance analysis of various techniques based on requirements of noise and bandwidth will also be explained. It also introduces the students to the information theory and coding for basic understanding of mobile communication system.

### Course Objectives

The objective of this course is to

1. Provide a thorough introduction to analog and digital communications
2. Provide in depth study of various modulation and demodulation techniques.
3. Introduce students to basics of information theory and coding for applications in mobile communication.

### Course Outcomes

On completion of this course, the students will be able to

CO1. Define and Distinguish analog and digital communication systems.

CO2. Differentiate modulation and demodulation techniques of AM and FM systems and compare them in terms of Bandwidth and noise.

CO3. Distinguish and categorize various digital modulation techniques.

CO4. Describe Information theory and coding for applications in mobile communication system by solving different encoding problems.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
MODULE I:	L1 and	4

<p>INTRODUCTION</p> <p>Communication Process, Source of Information, base-band and pass-band signals, Review of Fourier transforms, Random variables, different types of PDF, need of modulation process, analog versus digital communications</p>	L2	
<p>MODULE II:</p> <p>AMPLITUDE MODULATION</p> <p>Amplitude modulation with full carrier, suppressed carrier systems, single side band transmission, switching modulators, synchronous detection, envelope detection, effect of frequency and phase errors in synchronous detection, comparison of various AM systems, vestigial side band transmission.</p>	L1, L2, L3 and L4	8
<p>MODULE III:</p> <p>ANGLE MODULATION</p> <p>Narrow and wide band FM, BW calculations using Carson rule, Direct &amp; Indirect FM generations, phase modulation, Demodulation of FM signals, noise reduction using pre &amp; de-emphasis.</p>	L1, L2, L3 and L4	9
<p>MODULE IV:</p> <p>PULSE MODULATION</p> <p>Pulse amplitude, width &amp; position modulation, generation &amp; detection of PAM, PWM &amp; PPM, Comparison of frequency division and time division multiplexed systems.</p> <p>Basics of Digital Communications: ASK, PSK, FSK, QPSK basics &amp; waveform with brief mathematical introduction</p>	L1, L2, L3 and L4	6

### Catalog Description

To impart knowledge on Amplitude Modulation and Angle modulation principles, generation, and its types. Also, to understand the basic concepts of pulse modulation techniques like PCM and PSK.

### Course Objectives

The objective of this course is to

1. To provide the basic skills required to understand, develop, and design of various engineering applications involving analog communication theory. To provide basic laboratory exposures for communication principles and applications.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Study the carrier modulation techniques like AM and FM modulation.

CO2: Study digital carrier modulation techniques using amplitude shift keying and Frequency shift keying.

CO3: Demonstrate various pulse modulation techniques (PCM), DM, ASK, DPSK and QPSK.

### List of Experiments:

Modules	Blooms level*	Number of hours
1. To study the sampling and reconstruction of a given signal. 2. To study amplitude modulation and demodulation. 3. To study frequency modulation and demodulation. 4. To study time division multiplexing.	L1, L2	8

5. To study pulse amplitude modulation. 6. To study delta and adaptive delta modulation and demodulation. 7. To study carrier modulation techniques using amplitude shift keying and Frequency shift keying.	L3 and L4	10
8. To study carrier modulation techniques using binary phase shift keying and differential shift keying. 9. To study pulse code modulation & differential pulse code modulation as well as relevant demodulations. 10. To study quadrature phase shift keying & quadrature amplitude modulation.	L2, L4	10

<b>MLE2412</b>	<b>Web Designing Technologies</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version: 2020.1	Date of Approval: JULY 2020	2	0	0	2
Pre-requisites/Exposure	knowledge of Internet fundamentals				
Co-requisites	NIL				

## Catalog Description

The objective of this course is to introduce the basic concepts of HTML5 and CSS3. To explore and implement the various concepts of website design using HTML with the concept of the tags, script, and code that create web pages. To understand how the web and web pages work and web pages styles using CSS3. After completing this course students can easily develop static web sites and style them using CSS3.

## Course Objectives

The objective of this course is

1. Understand the advanced features of HTML5 which includes images, links, tables, frames and forms etc and gives an overview of CSS3 which is used to add style to the web pages.
2. Demonstrate the application of HTML5 in developing solutions to web site creation and understanding how CSS will affect web page creation.
3. Design a responsive web site using HTML5 and CSS3.

## Course Outcomes

On completion of this course, the students will be able to

- CO 1: Explain the basic concepts of HTML, structure of HTML. Apply the different tags for images, hypertext and lists in web pages.
- CO 2: Illustrate the different ways to use styles in web pages using CSS? Apply CSS style sheets for formatting text in web pages.
- CO 3: Explain the layout of CSS style and describe how to add audio and video in html web pages.
- CO 4: Demonstrate the use of Table and frames in web pages and setting properties for tables and frames.
- CO 5: Explain the writing scripts in web pages and publishing Webpages on web.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I</b> History of HTML, Basic HTML Structure, Creating title, Creating header and footer, Adding Comments, Formatting Text, Specifying time, Indicating citations/references, quotes, abbreviations, pre-formatted text, Inserting Images, Creating Image Links, Scaling images with the browser, setting icons for web page, Creating hypertext, anchor tag, Creating List, Creating Definition List, Creating Hyper Text Links, Creating Link Lists.	L2 and L3	8
<b>Module II</b> CSS building blocks, working with style sheets, Creating different types of style sheets- External , embedded and inline style sheets, defining selectors , Selecting on basis of class and id, selecting elements based on the attributes, combining selectors, Formatting text with styles, setting font properties.	L3 and L4	7
<b>Module III</b>  CSS: Layout with style, changing the background color, setting border, changing the cursor, style sheets for mobile to desktop, working with web fonts, creating forms, organizing the form elements. Adding audio , video and other multi-media .	L2 and L3	7
<b>Module IV</b>  Tables and frames, Creating Tables, Table Element, Adding Border, Adding Column Headings, Adding Spacing and Padding, Adding a Caption, Setting the table Width and Height, Add Row Headings, Aligning Cell contents, Setting Column Width, Centering a Table, Inserting and Image, Spanning Columns, Spanning Rows Assigning Background Colors, Frame Elements, Creation of Frame Based Pages.	L3	7
<b>Module V:</b>  Workingwith scripts : Loading an external script, testing&debugging web pages, publishingyour web page on the web.	L2	7

## V SEM

MLE2501	COMPUTER ARCHITECTURE	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Logic Gates				
Co-requisites	nil				

### Catalog Description

Computer architecture is concerned with the structure and behavior of the various functional modules of the computer and how they interact to provide the processing needs of the user. It includes basic register transfer language and computer organization and design. Complete insight on the working of CPU, Memory and I/O communication will be provided. Pipelining and related topics will also be discussed.

### Course Objectives

The objective of this course is to

1. Equip the students with concepts of computer architectures and their modules.
2. Provide an overview of various algorithms used and hardware implementation computer.

### Course Outcomes

On completion of this course, the students will be able to

- CO1. Explain about Register transfer language and various micro operations of arithmetic logic unit.
- CO2. Explain about the organization of computer modules and their details.
- CO3. Explain in details of central processing unit like general purpose register, accumulator etc. and computer arithmetic.
- CO4. Explain memory organization of computer and their interconnections. Details of direct memory access.
- CO5. Explain parallel processing and pipeline techniques.

Modules	Blooms level*	Number of hours
<b>Module I: Register Transfer Language</b> Register Transfer, Bus and Memory Transfers, Arithmetic Micro-operations, Logic Micro-operations, Shift Micro-operations, Arithmetic Logic shift Unit.	L1, L2 and L3	10
<b>Module II: Basic Computer Organizations and Design</b> Instruction Codes, Computer Registers, Computer Instructions, Timing and Control, Instruction Cycle, Memory-Reference Instructions, Input-Output and Interrupt, Design of Accumulator Logic. Hardwired and Microprogrammed control: Control Memory, Address Sequencing, Design of Control Unit	L1,L2	9
<b>Module III: Central Processing Unit</b> Introduction, General Register Organization, Stack Organization, Instruction representation, Instruction Formats, Instruction type, Addressing Modes, Data Transfer and Manipulation, Program Control, Reduced Instruction Set Computer RISC and CISC Computer Arithmetic: Introduction, Addition and Subtraction Algorithm, Multiplication Algorithms, Booth Multiplication, Division Algorithms, Floating-Point Arithmetic Operations	L1,L2, L3	10
<b>Module IV: Memory and Intersystem Communication and Input output organisation</b> Memory: Memory types and organization Memory Hierarchy, Main Memory, Auxiliary Memory, Associative Memory, Cache Memory with mapping techniques, Virtual Memory, Memory Management Hardware Intrasystem communication and I/O: Peripheral Devices, Input-Output Controller and I/O driver, IDE for hard disk, I/O port and Bus concept, Bus cycle, Synchronous and asynchronous transfer, Modes of Transfer, DMA, DMA Transfer, DMA Controller, I/O Processor, CPU-IOP Communication	L1,L2, L3.	10
<b>Module V: Pipelining, Vector Processing and Multiprocessors</b> Parallel Processing, Pipelining, Arithmetic Pipeline, Instruction Pipeline, RISC Pipeline Multiprocessors: Characteristics of Multiprocessors	L1 and L2	9

<b>MLE2502</b>	<b>Java Programming</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Basics of Programming				
Co-requisites	NIL				

## Catalog Description

The objective is to impart programming skills used in this object-oriented language java. The course explores all the basic concepts of core java programming like object, classes, data types, features, operators, control structures, interfaces, packages, applets, awt, swings and socket programming. The students are expected to learn it enough so that they can develop the basic applications as well as web solutions like creating applets etc.

## Course Objectives

The objective of this course is to

1. Equip the students with the basic feature of contemporary java required in solving complex problems.
2. Provide a practical knowhow and implementation of java programming concepts like classes, objects, packages, swings, socket programming.

## Course Outcomes

On completion of this course, the students will be able to

- CO1: Define and explain concept of byte code and platform independence, demonstrate basic java-based application development using operators, if-else, loops and arrays.
- CO2: Distinguish between various types of inheritances, polymorphisms and other concepts and able to solve complex programming problems involving class objects, inheritances, and packages.
- CO3: Describe hierarchy of exception classes and thread life cycle along with demonstrate and design solutions for some simple and complex applications using exception and multithreading concepts.
- CO4: Explain event delegation model and describe AWT class hierarchy; Apply knowledge of event handling and AWT controls create some new dynamic graphical applications.
- CO5: Explain the architecture of applet and concept of swing package. Demonstrate applications based on java applets and swings.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Java Basics</b> Concepts of OOP, Features of Java, How Java is different from C++, Environmental setup, Basic syntax, Objects and classes, Basic Data Types, Variable Types, Modifier Types, Basic operators, Loop Control, Decision Making, Strings and Arrays, Methods, I/O.	L1, L2 and L3	6
<b>Module II: Java Object Oriented</b> Inheritance, Overriding, Polymorphism, Abstraction, Encapsulation, Interfaces, Packages, Exploring java.util package.	L2 and L3	7
<b>Module III: Exception Handling and Threading</b> Exception Hierarchy, Exception Methods, Catching Exceptions, Multiple catch Clauses, Uncaught Exceptions Java's Built-in Exception. Creating, Implementing and Extending thread, thread priorities, synchronization suspending, resuming and stopping Threads, Multi-threading.	L2, L3 and L5	8
<b>Module IV: Event Handling And AWT</b> Event handling Mechanism, Event Model, Event Classes, Sources of Events, Event Listener Interfaces, AWT: Working with Windows, AWT Controls, Layout Managers	L2, L3, L4 and L5	8
<b>Module V: Java Advanced</b> Applet Class, Architecture, Skeleton, Display Methods. Swings: Japplet, Icons, labels, Text Fields, Buttons, Combo Boxes. Socket Programming: Socket methods, Server Socket methods, Socket Client and Socket Server examples.	L2 and L3	7

### **Catalog Description**

In this Lab course the basic features of contemporary java are implemented and demonstrated. Problems or programs will be related to concepts of classes, objects, threads, packages, exception handling, applets, AWT control, swings and socket programming. Concepts covered would enable them to create basic and complex console and graphical based applications for desktop and Internet

### **Course Objectives**

The objective of this course is to

1. Equip the students to apply knowledge of various basic java features required in solving basic and complex problems.
2. Provide a demonstration of basic java programming concepts like classes, objects, threads, packages, exception handling, applets, AWT control, swings and socket programming

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: Apply the concepts learned of operators, if-else, loops and arrays to java based application development.

CO2: Demonstrate the use of various types of inheritances, polymorphisms, class objects, inheritances, packages and other concepts to basic and complex java programming problems.

CO3: Apply the knowledge of exception handling and multithreading concepts for some simple and complex applications.

CO4: Apply knowledge of event handling and AWT controls to create some new dynamic graphical applications.

CO5: Demonstrate graphical applications based on java applets, swings and event handling.

.

<b>Modules/Topics Covered**</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<p>1. Sample Programs using Objects and classes, Variable Types, Modifier Types, operators, Loops Decision Making, Strings and Arrays,</p> <p>(a) WAP to display “Hello, it’s a first program in java”.</p> <p>(b) WAP to find sum of two integers taken as input from user at runtime.</p> <p>(c) WAP to find sum of two float numbers taken as command line arguments</p> <p>(d) WAP to find changed case of entered character.</p> <p>(e) WAP to find maximum of 3 integer numbers taken as input from user at runtime.</p> <p>(f) WAP in java to find out the greatest out of ten numbers stored using arrays.</p> <p>(g) WAP to create class with “name” as String and “age” as integer data members. The class should have two methods to take input from user and display the data.</p> <p>(h) WAP to find factorial of a number using class and object.</p>	L3, L5	6
<p>2. Sample Programs using Inheritance, Overriding, Polymorphism, Interfaces, Packages</p> <p>a. WAP in java to illustrate the concept of interfaces.</p> <p>b. WAP to create a package as MyPack having a class with three methods: max, fact and show. Use it in other folder with setting classpath and without setting class path.</p> <p>c. Write a program in java to showcase uses of super keyword</p>	L3, L5	4
<p>1. Sample Programs using exception handling and threads</p> <p>a) Write a program to demonstrate the use of nesting of try-catch block</p> <p>b) WAP in java to illustrate the concept of using multiple catch clauses to handle different types of exceptions.</p> <p>c) WAP in java to create a user defined Exception and throw it explicitly.</p> <p>d) Demonstrate thread using Thread class and Runnable interface</p> <p>e) Demonstrate various thread methods using a program</p>	L3, L5	6
<p>(a) Sample Programs using event handling and AWT controls</p> <p>(b) Write a program to display “hello” in different color where user clicks left mouse button and “world” where right mouse button is clicked. Use black background.</p> <p>(c) WAP in java to create a Frame and handle window-closing event</p>	L3, L5	6

<p>implementing the WindowListener interface.</p> <p>(d) WAP to create an Applet having various different buttons, recognizing them using action command string method and handling click event generated by them.</p> <p>(e) WAP to create a frame and illustrate the concept of using an adapter class in place of interfaces for handling various mouse events generated over frame window.</p> <p>(f) WAP in java to create a frame with AWT controls (like label, push buttons, Checkbox, Checkbox Group) and handle various events generated by them.</p> <p>(g) WAP in java to create a frame with various AWT controls (like choice, list, TextField and Buttons) and handle the events thrown by them.</p>		
<p>5. Sample Programs using applets, swings and stream socket</p> <p>a) . Write an applet which will display “HAPPY” and “DEEPAVALI” as: The word “HAPPY” will roll from top to bottom and “DEEPAVALI” from bottom to “top” . Both will run at the same speed and stop simultaneously at the center of the applet.</p> <p>b) Write an applet to display last 32 shades of red, green and blue in equal sized square grid accompanied by appropriate labels like” Last 32 shades of Red/Green/Blue color”. Make use of BorderLayout to apply border for each individual shade.</p> <p>c) Create an applet with one single button with caption “Click”. On clicking the button will open a new Frame with title “Factorial”. The frame will have two three controls :TextField, Label and button. On clicking button calculate the factorial entered in TextField control.</p> <p>d) Create Java programs to demonstrate day time client and server</p> <p>e) Create java programs to create echo client and server</p>	L3, L5	2

*\*Bloom’s Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

**\*\* Sample Programs provided are not limited to these only, can include others as desired.**

Version 2020.1	Date of Approval: JULY 2020	0	0	2	1
Pre-requisites/Exposure	Hands on knowledge of C and C++ Programming				
Co-requisites	Basic concepts of OOP Programming				

## Catalog Description

The course is designed to provide an introduction to the Python programming language. The focus of the course is to provide students with an introduction to programming, I/O, and visualization using the Python programming language.

## Course Objectives

The objective of this course is

1. Equip the students with the basic feature of python required in solving complex problems and build GUI applications
2. Provide a practical knowledge of implementation/demonstration of python programming concepts like of lists, tuples, dictionaries, Object Oriented Programming concepts in Python, Strings and Files in Python.

## Course Outcomes

On completion of this course, the students will be able to

- CO 1: Demonstrate the basics of python programming using if-else, loops and List, Dictionary, tuples.
- CO 2: Demonstrate the concept of inheritances, polymorphisms and other concepts and able to solve complex programming problems involving class objects.
- CO 3: Demonstrate the ability to write database applications in Python
- CO 4: Demonstrate Files Handling in Python.
- CO 5: Demonstrate database operation and GUI applications in python.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
1. Write a program which will find all such numbers which are divisible by 7 but are not a multiple of 5, between 2000 and 3200 (both included). The numbers obtained should be printed in a comma-separated sequence on a	L1, L2 and L3	4

<p>single line.</p> <ol style="list-style-type: none"> <li>2. Create a program that asks the user to enter their name and their age. Print out a message addressed to them that tells them the year that they will turn 100 years old.</li> <li>3. Define a function <code>max()</code> that takes two numbers as arguments and returns the largest of them. Use the if-then-else construct available in Python. (It is true that Python has the <code>max()</code> function built in, but writing it yourself is nevertheless a good exercise.)</li> <li>4. Define a function <code>max_of_three()</code> that takes three numbers as arguments and returns the largest of them.</li> </ol>		
<ol style="list-style-type: none"> <li>5. Define a function that computes the length of a given list or string. (It is true that Python has the <code>len()</code> function built in, but writing it yourself is nevertheless a good exercise.)</li> <li>6. Write a function that takes a character (i.e. a string of length 1) and returns <code>True</code> if it is a vowel, <code>False</code> otherwise.</li> <li>7. Write a function <code>translate()</code> that will translate a text into "rövarspråket" (Swedish for "robber's language"). That is, double every consonant and place an occurrence of "o" in between. For example, <code>translate("this is fun")</code> should return the string "tothohisosisosfofunon".</li> <li>8. Define a function <code>sum()</code> and a function <code>multiply()</code> that sums and multiplies (respectively) all the numbers in a list of numbers. For example, <code>sum([1, 2, 3, 4])</code> should return 10, and <code>multiply([1, 2, 3, 4])</code> should return 24.</li> <li>9. Define a function <code>reverse()</code> that computes the reversal of a string. For example, <code>reverse("I am testing")</code> should return the string "gnitset ma I".</li> </ol>	L2 and L3	6
<ol style="list-style-type: none"> <li>10. Ask the user for a number. Depending on whether the number is even or odd, print out an appropriate message to the user</li> <li>11. Take a list, say for example this one: <pre>a = [1, 1, 2, 3, 5, 8, 13, 21, 34, 55, 89]</pre> and write a program that prints out all the elements of the list that are less than 5.</li> <li>12. Create a program that asks the user for a number and then prints out a list of all the divisors of that number. (If you don't know what a divisor is, it is a number that divides evenly into another number. For example, 13 is a divisor of 26 because 26 / 13 has no remainder.)</li> <li>13. Take two lists, say for example these two: <pre>a = [1, 1, 2, 3, 5, 8, 13, 21, 34, 55, 89]</pre> <pre>b = [1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13]</pre> and write a program that returns a list that contains only the elements that are common between the lists (without duplicates). Make sure your program works on two lists of different sizes.</li> </ol>	L2, L3, L4 and L5	4
<ol style="list-style-type: none"> <li>14. Ask the user for a string and print out whether this string is a palindrome or</li> </ol>	L2, L3 and	4

<p>not. (A palindrome is a string that reads the same forwards and backwards.)</p> <p>15. Let's say I give you a list saved in a variable: a = [1, 4, 9, 16, 25, 36, 49, 64, 81, 100]. Write one line of Python that takes this list a and makes a new list that has only the even elements of this list in it.</p> <p>16. Make a two-player Rock-Paper-Scissors game. (Hint: Ask for player plays (using input), compare them, print out a message of congratulations to the winner, and ask if the players want to start a new game)</p> <p><b>Remember the rules:</b></p> <ul style="list-style-type: none"> <li>• Rock beats scissors</li> <li>• Scissors beats paper</li> <li>• Paper beats rock</li> </ul>	L4	
<p>14. Write a program that asks the user how many Fibonacci numbers to generate and then generates them. Take this opportunity to think about how you can use functions. Make sure to ask the user to enter the number of numbers in the sequence to generate.(Hint: The Fibonacci sequence is a sequence of numbers where the next number in the sequence is the sum of the previous two numbers in the sequence. The sequence looks like this: 1, 1, 2, 3, 5, 8, 13, ...)</p> <p>15. Write a program (function!) that takes a list and returns a new list that contains all the elements of the first list minus all the duplicates.</p> <p><b>16.</b> Write a function that takes an ordered list of numbers (a list where the elements are in order from smallest to largest) and another number. The function decides whether or not the given number is inside the list and returns (then prints) an appropriate boolean.</p>	L2, L3 and L4	1

MLE2503	FUNDAMENTALS OF MACHINE LEARNING				L	T	P	C
Version: 2020.1	Date of Approval: July 2020				3	-	-	3
Pre-requisites/Exposure	Basic Knowledge of Programming							
Co-requisites	Nil							

### Catalog Description

Python is a general-purpose high level programming language that is being increasingly used in data science and in designing machine learning algorithms. This course provides an introduction to Python and its libraries like numpy, pandas, matplotlib and explains how it can be applied to develop machine learning algorithms that solve real world problems.

This course starts with Python language followed by machine learning and covers concepts of python and all important concepts such as exploratory data analysis, data preprocessing, data visualization and clustering, classification, regression and model performance evaluation etc. This course covers all three types of machine learning algorithms including Supervise, Unsupervised and Reinforcement learning.

### Course Objectives

The objective of this course is to

3. Equip the students with concepts of programming and problem solving and develop proficiency in creating applications using the Python Programming Language.
4. Provide knowledge of various types of machine learning models, its algorithms and development of the models using Python programming language.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Develop programs in Python to develop algorithmic solutions to computational problems.

CO2: Manage data in python using available data structures such as string, list, and dictionary and file handling operations.

CO3: Apply functions to decompose python program and develop modules and packages.

CO4: Preprocess and analyze data before applying suitable machine learning models.

CO5: Understand basic concepts and techniques of Machine Learning and apply machine learning algorithms to develop machine learning models for solving real word problems.

Modules	Blooms level*	Number of hours
<b>Module-I</b>  Python basis: Installing Anaconda, Basics of Python: basic syntax, interactive shell, editing, saving, and running a script. Working with jupyternotebook, datatypes, operators, conditional statements, String, functions, Lists, tuples, and dictionaries; basic list operators, replacing, inserting, removing an element; searching and sorting lists; dictionary literals, adding and removing keys, accessing and replacing values; traversing dictionaries. modules and packages.	L1, L2 and L3	6
<b>Module-II</b>  Arrays and Matrices: The NumPy Module, Creating Arrays and Matrices, Copying, Arithmetic Operations, Cross product & Dot product , Saving and Restoring, Matrix inversion, Vectorized Functions  Data Visualization: The Matplotlib Module, Histograms, Bar charts Density Plots, Box Plots, Scatter Plots, Heat Maps etc.  DataFrames: Pandas , Loading data from different sources, Concept of DataFrames, Working with Dataframes such as selecting, filtering, grouping, joining etc. Dealing with missing values	L1, L2 and L3	7

<p>Module-IV</p> <p>Introduction to Machine Learning: Introduction, Applications, Framework for developing machine learning models</p> <p>Supervised Learning: Linear regression,ridge and lasso regression Multiple linear regression, logistic regression, classification and regression trees,decision tree, Ensemble techniques,,Support Vector Machines, K-nearest neighbors,naive bayes classifier.</p> <p>Representing Data and Engineering Features. Categorical Variables One-Hot-Encoding (Dummy Variables), Label encoding</p>	L2, L3 and L4	6
<p>Preprocessing and Scaling , Different Kinds of Preprocessing ,Applying Data Transformations Overfitting, underfitting, bias-variance tradeoff.</p> <p>various metrics for regression,classification,confusionmatrix,crossvalidation,precision-recall curve,ROC-AUC curve,gridsearch,Algorihtm chains and pipeline,</p>	L2, L3 and L4	7
<p>Module-IV</p> <p>Unsupervised Learning: Introduction to Clustering, k-means clustering Hierarchical clustering, Dimensionality Reduction, Feature Selection, PCA, factor analysis, manifold learning.</p>	L2, L3 and L4	6

### Catalog Description

The objective of this course is to provide practical training on some live projects that will increase capability to work on actual problem in industry. This training may undergo in an industrial environment or may be an in-house training on some latest software which is in high demand in market. This training will be designed such that it will be useful for their future employment in industry.

### Course Objectives

The objective of this course is to

1. Provide practical training on live projects
2. Increase technical capabilities on solving real life problems in company environment

### Course Outcomes

On completion of this summer internship, the students will be able to:

CO1: Develop communication, interpersonal and other critical skills in the job interview process.

CO2: Design and develop software and hardware projects

CO3: Assess interests and abilities in their field of study.

CO4: Demonstrate excellent technical and communication skills to acquire employment contacts leading directly to a full-time job following graduation from college.

### Catalog Description

In this course the concepts of fuzzy logic and genetic algorithm are discussed in detail. This course will provide an understanding of fuzzy logic and genetic algorithm and an outlook on the applications of these techniques to solve real world problems. It also provides an understanding of fuzzy-genetic based machine learning.

### Course Objectives

The objective of this course is to

1. Provide the student with the basic understanding of genetic algorithm and fuzzy logic fundamentals, program and design the related systems.
2. Equip the students with concepts of fuzzy logic based solutions.
3. Provide an overview of performance of genetic algorithm, simulated annealing and tabu search.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Develop the skills to gain a basic understanding of genetic algorithm and fuzzy logic theory.

CO2: Appreciate the learning and adaptation capability of neural and fuzzy systems.

CO3: Apply various operators to optimize. Perform mathematical calculation of the GA

CO4: Able to identify the present application areas of fuzzy logic and GA

CO5: Explain the working principle and compare the performance with other methods – Simulated annealing and Tabu search.

Modules	Blooms level*	Number of hours
---------	---------------	-----------------

<p>MODULE 1:</p> <p>Crisp sets: Overview, Fuzzy sets : Basic types and concepts, Characteristics and significance of paradigm shift, Fuzzy sets vs Crisp sets, Representation of fuzzy sets</p>	L1, L2 and L3	8
<p>MODULE 2:</p> <p>Types of operations, Fuzzy complements, Fuzzy intersection: t-norms, Fuzzy union: t-conorms, Combination of operations, Aggregation operation, Fuzzy numbers , Linguistic variables, Arithmetic operations on intervals, Arithmetic operations on Fuzzy numbers, Lattice of Fuzzy numbers, Fuzzy equation.</p>	L2, L3 and L6	10
<p>MODULE 3:</p> <p>General discussion, Fuzzy controller: Overview and example, Fuzzy systems and neural networks, Fuzzy neural network, Fuzzy automata. Pattern recognition in fuzzy logic, Database and information retrieval in fuzzy logic, decision making in fuzzy logic, engineering applications and fuzzy logic, Fuzzy logic in Medicine and Economics</p>	L1, L3 and L4	10
<p>MODULE 4:</p> <p>Fundamentals of genetic algorithm: A brief history of evolutionary computation, biological terminology, search space encoding, reproduction elements of genetic algorithm genetic modelling, comparison of GA and traditional search methods. The Fundamental Theorem, Schema Processing at work, Two-armed and k-armed Bandit problem, The Building block hypothesis.</p>	L1, L3 and L4	10
<p>MODULE 5:</p> <p>Genetic technology:- steady state algorithm, fitness scaling, inversion. Genetic programming:- Genetic Algorithm in problem solving, Implementing a Genetic Algorithm:- computer implementation, operator (reproduction, crossover and Mutation, Fitness Scaling, Coding, Discretization). Knowledge based techniques in Genetic Algorithm. Advanced operators and techniques in genetic search:-Dominance, Diploidy and Abeyance. Inversion and other reordering operators, Niche and speciation.</p>	L3, L4 and L6	10
<p>MODULE 5:</p> <p>Genetic Algorithm in engineering and optimization-natural evolution – Simulated annealing and Tabu search -Genetic Algorithm in scientific models and theoretical foundations. Applications of Genetic based machine learning- Genetic Algorithm and parallel processors- composite laminates- constraint optimization- multilevel optimization- real life problem.</p>	L3,L4,L6	05

## Catalog Description

This course is aimed to provide a fundamental understanding of JavaScript and two of its related library: Bootstrap and React for dynamic web site client side scripting. Javascript is a famous scripting language for client side. The bootstrap and react libraries are rich API for creating dynamic websites. The course builds strong foundation for client-side scripting for creating dynamic websites

## Course Objectives

The objective of this course is

1. Equip the students with basic and advanced features of javascript and bootstrap library to create dynamic web sites
2. Provide an overview of basic features of react library to design dynamic websites.

## Course Outcomes

On completion of this course, the students will be able to

CO1: Explain basic concepts of java scripts and apply them to create basic scripts

CO2: Explain the fundamentals of client side scripting ,document object model and apply them to create dynamic websites.

CO3: Apply basic APIs of bootstrap library to create dynamic websites

CO4: Demonstrate bootstrap java plugins and its use in designing sample websites.

CO5: Explain and apply react APIs in client side scripting

This course deals with types of research, significance and characteristics and planning a research proposal, population and sample, parameter and statistic, sampling and data collection, sampling design: steps, types, sample size, sampling methods. It deals with univariate, bivariate and multivariate analysis, measure of dispersion of data, standard deviation, variance, coefficient of variation and degree of freedom. Hypothesis testing: parametric tests and non-parametric tests, regression analysis and curve fitting, method of least-squares, explained and unexplained variations, coefficient of correlation of determination. The course also deals with technical/scientific/research report writing: referencing and bibliography and footnotes. Publication of research papers, citations, intellectual property rights and copy rights, plagiarism, patent and patent laws, commercialization and ethical issues.

### Course Objectives

The objective of this course is to:

1. Deals with types of research, significance and characteristics and planning a research proposal and to enhance scientific and technical writing and research skills.
2. Impart knowledge about various stages of research process, statistical analysis and tools & their applications in decision making by hypothesis testing and regression analysis.
3. It also deals with intellectual property rights and copy rights, plagiarism, patent and patent laws, commercialization and ethical issues.

### Course Outcomes

On completion of this course, the students will be able to:

- CO1. Classify different research types, explain steps in research process and planning research proposal.
- CO2. Describe sampling methods, sampling steps and design, carry out data processing and analysis.
- CO3. Explain hypothesis testing, parametric and non-parametric tests, carry out regression analysis, curve fitting.
- CO4. Demonstrate technical and scientific report writing skills, describe plagiarism, patent laws and intellectual property rights.

## Course Content

Modules	Blooms level*	Number of hours
<b>Module I: Introduction and Research Planning</b> Introduction to research: Definition, motivation, need, objectives, significance and characteristics of research; types of research; steps in research process; planning a research proposal; literature review, web searching.	L1, L2	4
<b>Module II: Sampling Methods</b> Measurement scales, population and sample, parameter and statistic, sampling and data collection, sampling design: steps, types, sample size, sampling methods, data processing and analysis. Sampling surveys and questionnaire designing, primary and secondary data.	L1, L2, L3	5
<b>Module III: Hypothesis Testing and Regression Analysis</b> Univariate, bivariate and multivariate analysis, means-arithmetic, geometric and harmonic; measure of dispersion of data, standard deviation, variance, coefficient of variation and degree of freedom. Hypothesis testing: kinds errors in hypothesis testing, significance and confidence levels, parametric tests and non-parametric tests, one-tailed and two-tailed tests, analysis of variance. Regression analysis and curve fitting, method of least-squares, explained and unexplained variations, coefficient of correlation of determination.	L1, L3, L4	10
<b>Module IV: Technical Report Writing and Plagiarism</b> Technical/scientific/research report writing: structure and components of scientific reports, formats of dissertations, research report, report writing skills, report preparation, referencing and bibliography and footnotes. Publication of research papers, citations, making presentation-use of visual aids and PPTs. Intellectual property rights and copy rights, plagiarism, patent and patent laws, commercialization and ethical issues.	L1, L3, L4	5

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

## Catalog Description

In this course the advanced features of contemporary java are discussed in detail. Concepts covered would enable them to handle complex programs relating to managing data and processes over the network. Discussion will be on relating to concepts of remote method invocation to working with swings architecture. Further practical implementation of database connectivity and using them in servlet and jsp based applications will be made.

## Course Objectives

The objective of this course is to

1. Equip the students with the advanced feature of contemporary java required in solving complex problems.
2. Provide a practical knowhow and implementation of advanced java programming concepts like database programming with servlets and jsp.

## Course Outcomes

On completion of this course, the students will be able to

- CO1: Define and explain concept of an Remote method invocation application, demonstrate swing based application developed using concepts of remote method invocation
- CO2: Distinguish between various java and open database connectivity drivers and able to solve complex programming problems involving database interaction.
- CO3: Describe servlet and its lifecycle, along with demonstrate and design solutions for some complex dynamic web applications using servlets.
- CO4: Explain jsp scripting and Differentiate between processing of servlets and jsp scripting pages. Apply knowledge of servlets and jsp scripting to create some new dynamic web applications.
- CO5: Explain the architecture of Model View Controller and struts. Demonstrate applications based on java beans and struts.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>MODULE 1:</b>  <b>DISTRIBUTED COMPUTING</b>  Introduction to Java RMI, RMI services, RMI client, Running client and server, Introduction of Swing, Swing Components, Look and Feel for Swing Components, Introduction to Multimedia Programming.	L1, L2 and L3	6
<b>MODULE 2:</b>  <b>DATABASE CONNECTIVITY</b>  ODBC and JDBC Drivers, Connecting to Database with the java.sql Package, Using JDBC Terminology, JDBC with mysql, postgresql.	L2 and L3	7
<b>MODULE 3:</b>  <b>SERVLET PROGRAMMING</b>  Introduction to Servlets, Servlet Life Cycle, Servlet based Applications, Servlet and HTML.Filters, jdbc with servlets, session Management techniques in detail.	L2, L3 and L5	8
<b>MODULE 4:</b>  <b>JSP PROGRAMMING</b>  JSP: Introduction to JSP, JSP implicit objects, JSP based Applications, Java. Net. Login & Logout Example, jdbc with jsp.	L2, L3, L4 and L5	8
<b>MODULE 5:</b>  <b>J2EE WEB APPLICATION</b>  The Model-View-Controller Architecture What is Struts, Struts Tags, Creating Beans, Other Bean Tags, Bean Output, Creating HTML Forms, The Action Form class The Action class, Simple Struts: a simple Struts application; Introduction to EJB.	L2 and L3	7

*\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

### **Catalog Description**

In this Lab course the advanced features of contemporary java are implemented and demonstrated. Concepts covered would enable them to create complex applications related to data management. Problems or programs will be related to concepts of remote method invocation, swings, servlets, jsp and java beans.

### **Course Objectives**

The objective of this course is to

1. Make the students apply knowledge of various advanced java features required in solving complex problems.
2. Provide a demonstration of advanced java programming concepts like database programming with servlets, jsp and creating java beans.

### **Course Outcomes**

On completion of this course, the students will be able to

- CO1: Apply the knowledge of swings architecture and remote method invocation used to provide solution to distributed computing problems
- CO2: Demonstrate the use of JDBC connectivity along with swings based architecture, thereby handling data management.
- CO3: Apply the knowledge of servlets and server programming to construct dynamic web applications using web servers.
- CO4: Demonstrate the differences between creating and deploying dynamic web applications using jsp concepts and servlets.
- CO5: Demonstrate usage of applications involving java beans and jdbc programming to handle data management.

<b>Modules/Topics Covered**</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<p>1. Sample Programs using swings architecture and remote method invocation</p> <p>(a) Write a program using swings creating tabbed panes and menu over a frame and handle their associated events</p> <p>(b) Write a program using swings List control containing list of cities, allowing the user to choose any one of them and display using event handing.</p> <p>(c) Demonstrate an application showcasing the use of remote method invocation(RMI) for designing a distributed application.</p> <p>(d) Create an application using concepts of RMI to depict a client server based interaction.</p>	L3, L5	6
<p>2.Sample Programs using JDBC and swings</p> <p>(a) Create an application demonstrating the use of swings, having a menu over a frame and jdbc programming to perform insert and select operations by handling menu related events.</p> <p>(b) Create an application using swings, having a design providing features for iterating over a dataset performing operations like forward, backward, start and end with help of jdbc programming.</p>	L3, L5	4
<p>(c) Sample Programs using servlets with jdbc, html and swings</p> <p>3. Create an application using servlets to perform redirection based on validating user data entered through a web form.</p> <p>4. Design an application to fetch data from database using servlets and display it using its post method.</p> <p>5. Demonstrate the process of writing cookies using a servlet and display a message after writing.</p> <p>6. Write a program to create a session object for the username fetched from user using a servlet, further access that session value on another servlet invoked by redirection.</p>	L3, L5	6
<p>7. Sample Programs using JSP with jdbc, html and swings</p> <p>(a) Write a program using jsp to demonstrate the features of jsp elements used to declare, define and display sum of two</p>	L3, L5	6

<p>integers.</p> <p>(b) Create an application using jsp to calculate and display the greatest out of two integers using if else statements. Integer numbers should be entered using a web form.</p> <p>(c) Demonstrate with a jsp program mechanism to retrieve checkbox data accessed using multiple value parameters fetching approach.</p> <p>(d) Write a program to demonstrate the use of jsp forward action tag used with parameters and processed using another jsp page.</p>		
<p>8. Sample Programs using jsp, java beans and swings</p> <p>(a) Demonstrate the use of jsp include action tag for including an html and another jsp page in initial jsp resource.</p> <p>(b) Write a program creating Java bean class and setting its properties using required jsp action tags. Output should also display the retrieved property values.</p>	L3, L5	2

Pre-requisites/Exposure	Basic Knowledge of Machine Learning & Brain functioning				
Co-requisites	Nil				

### Catalog Description

In this course, students will learn the fundamentals of deep learning, and the main research activities in this field. Moreover, students will learn to implement, train, and validate their own neural network, and they will improve their understanding of the on-going research in computer vision and multimedia field.

### Course Objectives

The objective of this course is to

1. Equip the students with concepts of major deep learning algorithms, the problem settings.
2. Provide an overview of various deep learning applications to solve real world problems

### Course Outcome

On completion of this course, the students will be able to

CO 1: Identify the deep learning algorithms which are more appropriate for various types of learning tasks in various domains.

CO 2: Implement deep learning algorithms and solve real-world problems.

CO3: Be able to identify reasonable work goals and estimate the resources required to achieve the objectives.

CO4: Be able to autonomously extend the knowledge acquired during the study course by reading and understanding scientific and technical documentation.

Modules	Blooms level*	Number of hours
<b>Module 1: Review of Machine Learning Basics</b> Learning Algorithms, Capacity, Overfitting and Underfitting, Hyperparameters and Validation Sets, Estimators, Bias and Variance ,Maximum Likelihood Estimation ,Bayesian Statistics ,Supervised Learning Algorithms ,Unsupervised Learning Algorithms ,Stochastic Gradient Descent ,Building a Machine Learning Algorithm ,Challenges Motivating Deep Learning	L1, L2 and L3	6
<b>Module 2: Deep Feedforward Networks</b> Example: Learning XOR, Gradient-Based Learning , Hidden Units , Architecture Design Back-Propagation and Other Differentiation, Algorithms <b>Regularization for Deep Learning:</b> Parameter Norm Penalties, Norm Penalties as Constrained Optimization, Regularization and Under-Constrained Problems, Dataset Augmentation, Noise Robustness, Semi-Supervised Learning, Multitask Learning, Early Stopping, Parameter Tying and Parameter Sharing, Sparse Representations, Bagging and Other Ensemble Methods, Dropout Adversarial Training, Tangent Distance, Tangent Prop and Manifold, Tangent Classifier	L1, L2 and L3	6
<b>Module 3: Optimization for Training Deep Models</b> How Learning Differs from Pure Optimization, Challenges in Neural Network Optimization. Basic Algorithms, Parameter Initialization Strategies, Algorithms with Adaptive Learning Rates Approximate Second-Order Methods, Optimization Strategies and Meta-Algorithms.	L2, L3 and L4	6
<b>Module 4: Convolutional Networks</b> The Convolution Operation, Motivation, Pooling, Convolution and Pooling as an Infinitely Strong Prior, Variants of the Basic Convolution Function, Structured Outputs, Data Types, Efficient, Convolution Algorithms , Random or Unsupervised Features , The Neuroscientific Basis for Convolutional Networks , Convolutional Networks and the History of Deep Learning	L2, L3 and L4	6
<b>Module 5: Sequence Modeling: Recurrent and Recursive Nets</b> Unfolding Computational Graphs,Recurrent Neural Networks, Bidirectional RNNs,Encoder-Decoder Sequence-to-Sequence Architectures , Deep Recurrent Networks , Recursive Neural Networks , The Challenge of Long-Term Dependencies , Echo State Networks , Leaky Units and Other Strategies for MultipleTime Scales , The Long Short-Term Memory and Other Gated RNNs , Optimization for Long-Term Dependencies , Explicit Memory	L2, L3 and L4	6

### Catalog Description

This Lab course will introduce the concepts of data to formulate deep learning problems corresponding to different applications.

### Course Objectives

The objectives of this course are:

1. To understand various supervised, semi-supervised and unsupervised deep learning algorithms.
2. To familiarize various deep learning software libraries and data sets publicly available.
3. To develop deep learning based system for various real-world problems.
4. To assess how the choice of a deep learning algorithm impacts the accuracy of a system.

### Course Outcomes

On completion of this course, the students will be able to

**CO1:**Formulate deep learning problems corresponding to different applications: data, model selection, model complexity

**CO2:**Demonstrate understanding of a range of deep learning algorithms along with their strengths and weaknesses

**CO3:** Implement deep learning solutions to classification, regression, and clustering problems

**CO4:**Design and implement various deep learning models, Execute and analyse deep learning algorithms

Program Covered**	Blooms level*	Number of hours
-------------------	---------------	-----------------

1. Develop Your First Neural Network With Keras.	L3, L5	2
2. Evaluate the Performance of Deep Learning Models.	L3, L5	2
3. Use Keras Models with scikit-learn.	L3,L4, L5	2
4. For a given set of training data examples stored in a .CSV file, implement and demonstrate the Candidate-Elimination algorithm to output a description of the set of all hypotheses consistent with the training examples 5. Write a program to demonstrate the working of the decision tree based ID3 algorithm. Use an appropriate data set for building the decision tree and apply this knowledge to classify a new sample	L3,L4, L5	2
6. Binary Classification of Sonar Returns.	L3,L4, L5	2
7. Multiclass Classification of Flower Species.	L3,L4, L5	2
8. Sequence Classification with LSTMs for Movie Reviews.	L3,L4, L5	2
9. How to Setup and Test Your Python Development Environment	L3,L4, L5	2
10. How to Run Large Deep Learning Models in the Cloud	L3,L4, L5	2

Version 2020.1	Date of Approval: July 2020	0	0	4	2
Pre-requisites/Exposure	Basic knowledge of statistics				
Co-requisites	Nil				

## Catalog Description

This lab will provide a basic introduction to the R programming Language and the use of R to perform basic statistics and programming tasks. The main objective of this lab is to impart the students with the knowledge of R Programming, Machine Learning using R Mining from streaming Data, Mining from Distributed Data.

## Course Objectives

The objective of this course is

1. To make students familiar with R Programming Language and its concepts.
2. Equip the students with knowledge of R Programming, Machine Learning using R Mining from streaming Data, Mining from Distributed Data.

## Course Outcomes

On completion of this course, the students will be able to

CO1. Install and configure R Studio and R packages.

CO2. Explain concepts of Structured Data, data types, data structures and Use R for mathematical operations

CO3. Describe the use of R functions, control statements, Loop constructs and apply to iterate functions across data.

CO4. Understand basic regular expressions graphics. Use of R for descriptive statistics and inferential statistics

CO5. Predict/Score new data using models, understand basic non-linear functions in models and how to link data, statistical methods.

Modules	Blooms level*	Number of hours
<b>Lab Session 1</b> <ul style="list-style-type: none"> <li>• Installation &amp; Configuration steps of R Studio.</li> <li>• use of the R interactive environment</li> <li>• Expand R by installing R packages</li> </ul>	L1 and L2	2

<ul style="list-style-type: none"> <li>Explore and understand how to use the R documentation.</li> </ul>		
<b>Lab Session 2-3</b> <ul style="list-style-type: none"> <li>Read Structured Data into R from various sources</li> <li>Understand the different data types in R</li> <li>Understand the different data structures in R</li> <li>Understand how to use dates in R</li> <li>Use R for mathematical operations</li> </ul>	L1 and L3	4
<b>Lab Session 4-5</b> <ul style="list-style-type: none"> <li>Use of vectorised calculations</li> <li>Write user-defined R functions</li> <li>Use control statements</li> <li>Write Loop constructs in R</li> <li>Use Apply to iterate functions across data</li> </ul>	L1 and L3	4
<b>Lab Session 6-8</b> <ul style="list-style-type: none"> <li>Reshape data to support different analyses</li> <li>Understand split-apply-combine (group-wise operations) in R</li> <li>Deal with missing data</li> <li>Manipulate strings in R</li> <li>Understand basic regular expressions in R</li> <li>Understand base R graphics</li> </ul>	L1 and L3	6
<b>Lab Session 9-10</b> <ul style="list-style-type: none"> <li>Focus on GGplot2 graphics for R</li> <li>Be familiar with trellis (lattice) graphics</li> <li>Use R for descriptive statistics</li> <li>Use R for inferential statistics</li> <li>Write multivariate models in R</li> </ul>	L1 and L3	4
<b>Lab Session 11-12</b> <ul style="list-style-type: none"> <li>Understand confounding and adjustment in multivariate models</li> <li>Understand interaction in multivariate models</li> <li>Predict/Score new data using models</li> <li>Understand basic non-linear functions in models</li> <li>Understand how to link data, statistical methods, and actionable questions</li> </ul>	L1 and L3	6

Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

### Catalog Description

The objective of this course is to provide practical training on some live/demo projects that will increase capability to work on actual problem in industry. It will be an in house training on some latest software which is in high demand in market. This training will be designed such that it will be useful for their future employment in industry.

### Course Objectives

The objective of this course is to

1. Provide practical training on live projects
2. Increase technical capabilities on solving real life problems in company environment

### Course Outcomes

On completion of this minor project, the students will be able to:

CO1: Demonstrate a sound technical knowledge of their selected project topic.

CO2: Design and develop engineering solutions to complex problems utilising a systems approach.

CO3: Analyse various approaches for solving a complex engineering problem using different tools and techniques

CO4: Demonstrate the knowledge, skills and attitudes of a professional engineer.

CO5: Apply technical skills and knowledge in completing the project.

MLE 2607	<b>VLSI Design</b>	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	2	0	0	2
Pre-requisites/Exposure	Basics of semiconductor and analog electronics				
Co-requisites	Nil				

### Catalog Description

This course deals with basic theories and techniques of digital VLSI design in CMOS technology. It covers the fundamental concepts and structures of designing digital VLSI systems which include CMOS devices and circuits, standard CMOS fabrication processes, CMOS design rules, static and dynamic logic structures, CMOS chip layout, simulation and testing, low power techniques, design tools and methodologies and Stick Diagrams.

### Course Objectives

The objective of this course is to

- Provide a deep understanding of the concepts, techniques, and design of complex digital VLSI circuits.
- Apply mathematical methods and circuit analysis models to analyse CMOS digital circuits, and their logic components.

### Course Outcomes

On completion of this course, the students will be able to

CO1. Explain the characteristics of Basic VLSI components.

CO2. Apply the knowledge of various CMOS inverters to compare their performance.

CO3. To design and realize basic combinational and sequential functions using CMOS logic.

CO4. Design circuit Layout and Stick diagrams of CMOS logics.

Modules	Blooms level*	Number of hours
<b>Module I: Devices and the wire</b> Dynamic and transient behavior of Diode, Diffusion capacitance, SPICE Diode model, MOSFET basic, depletion and enhancement device. MOSFET static behavior, Threshold voltage and its dependence on $V_{SB}$ MOSFET Operation in resistive and saturation region, channel length modulation, Velocity saturation and its impact on sub micron devices, sub threshold conduction, Model for manual analysis, Equivalent resistance for MOSFET in (velocity) saturated region, comparison of	L1, L2	8

<p>equations for PMOS and NMOS.</p> <p>Dynamic behavior, Channel capacitance in different regions of operation, junction capacitance, Level 1 SPICE models for MOS transistors.</p> <p>The Wire, Interconnect parameters: resistance, capacitance and Inductance, Lumped RC model, Elmore Delay.</p>		
<p><b>Module II: CMOS Inverter</b></p> <p>VTC of an ideal inverter, Switching Model of the CMOS inverter: NMOS /PMOS discharge and charge, VTC of CMOS inverter : PMOS and NMOS operation in various regions including velocity saturation, Switching threshold, <math>(W/L)_p/(W/L)_n</math> ratio for setting desired <math>V_M</math> with and without velocity saturation, Noise Margins, buffer.</p> <p>Ratioed logic: Pseudo NMOS inverter and PMOS to NMOS ratio for performance, tri-state inverter, Resistive load inverter.</p> <p>Load Capacitance calculations: fan out capacitance, self capacitance calculations: Miller effect, wire capacitance; Improving delay calculation with input slope, Propagation delay: first order analysis, analysis from a design perspective, sizing a chain of inverters for minimum delay, choosing optimum number of stages, Power, Energy and Energy Delay: Dynamic power consumption, Static power, Glitches and power dissipation due to direct path currents, power and delay trade off, Transistor sizing for energy minimization.</p>	L3, L4	8
<p><b>Module III: Combinational circuits</b></p> <p>CMOS LOGIC: Good 0 and Poor 0, series and parallel N and P switches, Two and Higher input NAND and NOR gates, Functions of the type <math>(AB+C(D+E))</math> and their complements, XOR and XNOR gates, 2 input Multiplexer, Full Adder; Transistor sizing in CMOS logic for optimal delay, Pseudo NMOS NAND NOR and other gates and the transistor sizing, Introduction to DSVCL logic, CPL AND/NAND, OR/NOR, XOR/XNOR gates, Logical effort, Electrical Effort, Branching effort, Examples of sizing Combinational logic chains for minimum delay, Pass-transistor logic, pass gate configurations for NMOS and PMOS, 2 input and 4 input MUX, XOR, XNOR and implementation of general functions like <math>AB+AB*C+A*C^*</math>, Robust and Efficient PTL Design, Delay of Transmission Gate chain.</p> <p>Dynamic CMOS design: Pre-charge and Evaluation, charge leakage, bootstrapping, charge sharing, Cascading Dynamic Gates, DOMINO Logic, Optimization of Domino Logic Gates, simple example circuit implementations of DOMINO logic.</p>	L2,L3,L4	10
<p><b>Module IV: Sequential Logic circuits</b></p> <p>Principle of bistability, NAND and NOR based SR latch, and clocked SR Latch, JK latch, example of master slave flip flop, CMOS D latch, , MUX based Latches, master slave edge triggered register, Static Timing Analysis –setup, hold time, clock skew, clock period, non ideal clocks, clock overlap, C2MOS register, TSPCR Register, Schmitt Trigger, Pipelining and NORA CMOS</p>	L2,L3,L4	5
<p><b>ModuleV: Layout Design Rules</b></p>	5 Lecture hours	L2,L3,L4
		5

Introduction to CMOS Process technology, Latch up and its prevention Layout of CMOS inverter, CMOS NAND and NOR gates, Concept of Euler path, and stick diagrams for functions like $(AB+E+CD)^*$ .

### **Catalog Description**

In this Lab course the designing of VLSI circuits using Mentor Graphics software are implemented and demonstrated. Concepts covered would enable them to create complex applications related to VLSI design. The objective of this course is to explore and implement the various features of VLSI design and analyze the dc and transient analysis.

### **Course Objectives**

The objective of this course is to

Provide a deep understanding of CMOS logic using Mentor Graphics tool.

Analyze, design concepts of different combinational and sequential circuits and their simulation.

### **Course Outcomes**

On completion of this course, the students will be able to

CO 1: Demonstrate the basic concept of MOSFET;

CO 2: Illustrate the static and switching characteristics of inverters using CMOS with varying capacitance, width and channel Length of CMOS using Mentor Graphics tool.

CO 3: Demonstrate and create models of moderately sized CMOS circuits that realize specified digital functions using Mentor graphics Tool.

CO 4: Demonstrate the layout and stick diagrams using Mentor graphics Tool.

CO 5: Demonstrate the power consumption during transient analysis.

<b>Modules/Topics Covered**</b>	<b>Blooms level*</b>	<b>Number of hours</b>
1. MOSFET characteristics with varying VGS for both pmos and nmos.	L3, L5	2
2. Effect on VTC of CMOS inverter with variation of W and L.	L3, L5	2

3. Transient analysis of CMOS inverter with varying capacitive load, W and L. Rise time, fall time power dissipation, propagation delay calculation of CMOS inverter with the variation of capacitive load, W and L.	L3, L5	4
4. NOR and NAND gate - Transient analysis	L3, L5	2
5. XOR/XNOR gate - Transient analysis	L3, L5	2
6. 2:1 MUX and XOR gate with P.T.L.- Transient analysis	L3, L5	2
7. D type latch and flip flop - Transient analysis	L3, L5	2
8. 3 input NAND gate implementation with DOMINO (precharge and evaluation).	L3, L5	2
9. 4 inverter chain to derive capacitive load.	L3, L5	2

### **Catalog Description**

The course includes the content about PHP and its Programming Concepts. It includes basic architecture of running a PHP Script. It also includes the concepts about Conditional, Control Statements, Array, Associative Array, String Functions and Concepts of Functions : Call by Value and Reference. The course also includes concepts related to Object Oriented Programming in PHP and website design support along with Database Support concepts which will be useful to design Backend for the website.

### **Course Objectives**

The objective of this course is:

1. To provide a fundamental understanding of Dynamic Website Design in PHP.
2. To provide knowledge about various Frameworks build for Website Designing.

### **Course Outcomes**

On completion of this course, the students will be able to

After completing the course, the students will be able to,

CO 1: Explain the basic concepts of PHP programming and write PHP scripts using Strings and functions

CO 2: Explain and write PHP scripts based on Conditional statements, control statements and Arrays.

CO 3: Apply Object Oriented and Web Design concepts of PHP in order to create responsive web pages and websites

CO 4: Apply the concepts of Database and Database connectivity in order to provide backend support to website to make them Dynamic in nature

CO 5: Demonstrate the website designing process on various PHP Frameworks.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Introduction to Open Source and PHP programming</b> Introduction to Open Sources Technologies, Introduction to PHP, installation and configuration, Advantages and Disadvantages of PHP, Client Side Scripting, Server Side Scripting, Variables, data types, various types of function, creating your own function, Strings in PHP, String Functions.	L1, L2 and L3	4
<b>Module II: Operators, Loops, Array, Exception and Error Handling</b> Operators, Conditions, Loops, Using for each, Creating and Using Arrays, Multidimensional Array, Associative Array. Error Handling in PHP, Errors and Exceptions, Exception class, try/catch block, throwing an exception, defining your own Exception subclass.	L1, L2, L3	5
<b>Module III: Classes, File system, Passing Information between pages</b> Object oriented program minigwithPhp, Working with Datetime, code re-use, require (), include(), and the include_path; Understanding PHP file permissions, File reading and writing functions, File system functions, File uploads, Sending mail & use of email server. HTTP, GET arguments, POST arguments, Using Session in PHP, cookies, The setcookie() function, Deleting Cookies and Reading Cookies.	L2, L3 and L4	7
<b>Module IV: Workingwithdatabase</b> HTML Tables and Database tables, Databasemanipulation(Select, Insert, Update, Delete), validating User Input usingJavascript. MYSQL, Introducing MySQL; database design concepts; the Structured Query Language (SQL); communicating with a MySQL backend via the PHP, MySQL APIBuilding Database Applications, Developing PHP scripts for dynamic web page like feedback form, online admission form and online test.	L2, L3 and L4	5
<b>Module V: WorkingwithFrameworks</b> Working with Mambo, Working with Joomla, Working with framework. Working with wordpress, Working with drupal, Use of Joomla in rapid development of website. Developing of simple website using joomla.	L2, L3 and L4	3

*\*Bloom's Level:*

Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Concept of Database and Data Mining				
Co-requisites	Nil				

### **Catalog Description**

Data Mining serve as one of the most important courses for postgraduate students, since it builds computational abilities, inferential thinking, and practical skills for tackling core data scientific challenges. The students will get a comprehensive understanding of different data mining techniques that can be used for prediction and for discovering patterns, be prepared to select the right technique for a given data problem and will be able to create a general-purpose analytic process.

### **Course Objectives**

The objective of this course is to

- Provide students with an in-depth knowledge of data mining. To introduce students to basic applications, concepts, and techniques of data mining.
- Develop skills for using recent data mining software to solve practical problems and prediction in a variety of disciplines and
- Gain experience doing independent study and research.

### **Course Outcomes**

On completion of this course, the students will be able to

CO 1: Explain concepts of Data mining, predictive analytics and analyses architecture of data mining. Differentiate between supervised and unsupervised methods

CO 2: Apply classification techniques on different data sets and solve cost –benefit analysis numerical. Analyze decision tree methods.

CO 3: Implement various clustering algorithm on different data sets and describe these algorithms.

CO 4: Prepare data representation for market basket analysis and determine the usefulness of association rules. Interpret supervised and unsupervised learning methods.

CO 5: Predict market trends and outline different factors associated mail marketing.

## Course Content

Modules	Bloom's level	Number of Hours
<b>Module I Data Preparation</b> An introduction to data mining and predictive analytics, Data Pre-processing Exploratory Data Analysis, Dimension- Reduction Methods.	L1, L2	8
<b>Module II Classification</b> k- Nearest Neighbour Algorithm, Decision Trees, Model Evaluation Technique, Cost –Benefit Analysis Using Data Driven Cost.	L1, L2, L3	7
<b>Module III Clustering</b> Hierarchical and k- Means Clustering, Kohonen Networks, Birch Clustering, Measuring Cluster Goodness.	L1, L2, L3, L4	8
<b>Module IV Association Rules</b> Affinity Analysis and Market Basket Analysis, Data Representation for Market Basket Analysis, Support, Confidence, Frequent Item sets, and the a Priori Property, How Does a Priori Algorithm Work? Generating Frequent Item sets, Generating Association Rules, Extension from Flag Data to General Categorical Data, Information-Theoretic Approach: Generalized Rule Induction Method, J-Measure, Association Rules are Easy to do Badly, how can we Measure the Usefulness of Association Rules? Do Association Rules Represent Supervised or Unsupervised Learning?	L1, L2, L3, L6	9
<b>Module IV Case Study: Predicting Response to Direct Mail Marketing</b> Business Understanding, Data Preparation, and Eda, Clustering and Principal Components Analysis, Modelling and Evaluation for Performance and Interpretability, Modelling and Evaluation for High Performance.	L2, L3, L4, L5	8

## VII SEM

<b>Course Code: DSE4308</b>	<b>Natural Language Processing</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Basics of Python				
Co-requisites	Nil				

### Catalog Description

In this course general introduction including the use of state automata for language processing and syntax including a basic parse for natural language processing are discussed in detail. Basic features like regular expressions, Text Normalization, Edit Distance, n-gram model and advanced feature like feature structures and realistic parsing methodologies, part of speech tagging will be introduced. The concepts learnt in the studies of natural language processing will be applied in jupyter notebook using python for developing small to medium level applications.

### Course Objectives

The objective of this course is to

1. Equip the students with concepts of natural language processing through problem solving and practical approach.
2. Provide an overview of various tools in the field of natural language processing to gain practical understanding of the concepts.

### Course Outcomes

On completion of this course, the students will be able to

- CO1: Explain, knowledge in speech recognition, models and algorithms; Explain regular expressions and solve related problems; Explain and solve problems related to lemmatization and stemming, minimum edit distance.
- CO2: Explain language models and compare their performance on datasets; Solve some problems on naïve bayes algorithm.
- CO3: Explain logistic regression, similarity, language modelling and solve problems based on them.
- CO4: Describe ANN and Part of speech tagging; Solve problems based on them.
- CO5: Describe RNN models and distinguish between simple ANN and RNN;

Modules	Blooms level*	Number of hours
<b>MODULE 1:</b>  Knowledge in Speech and Language Processing ,Ambiguity ,Models and Algorithms  Language, Thought, and Understanding ,The State of the Art and The Near-Term Future  Some Brief History, Regular Expressions, Words ,Corpora,Text Normalization ,Minimum Edit Distance	L1, L2 ,L3	7
<b>MODULE 2:</b>  Evaluating Language Models, Generalization and Zeros, Smoothing, Kneser-Ney Smoothing, The Web and Stupid Backoff, Advanced: Perplexity's Relation to Entropy, Naive Bayes Classifiers, Training the Naive Bayes Classifier, Worked example, Optimizing for Sentiment Analysis, Naive Bayes for other text classification tasks, Naive Bayes as a Language Model, Evaluation: Precision, Recall, F-measure, Test sets and Cross-validation, Statistical Significance Testing Advanced: Feature Selection.	L1,L2, L3	8
<b>MODULE 3:</b>  Classification: the sigmoid, Learning in Logistic Regression, The cross-entropy loss function, Gradient Descent, Regularization, Multinomial logistic regression, Interpreting models, Advanced: Deriving the Gradient Equation, Lexical Semantics, Vector Semantics, Words and Vectors, Cosine for measuring similarity, TF-IDF: Weighing terms in the vector, Applications of the tf-idf vector model, Optional: Pointwise Mutual Information (PMI), Word2vec, Visualizing Embeddings, Semantic properties of embeddings, Bias and Embeddings, Evaluating Vector Models.	L1,L2, L3	8
<b>MODULE 4:</b>  Units,The XOR problem, Feed-Forward Neural Networks, Training Neural Nets, Neural Language Models, (Mostly) English Word Classes, The Penn Treebank Part-of-Speech Tagset, Part-of-Speech Tagging , HMM Part-of-Speech Tagging, Maximum Entropy Markov Models, Bidirectionality, Part-of-Speech Tagging for Other Languages.	L1, L2 and L3	6
<b>MODULE 5:</b>  Simple Recurrent Networks, Applications of RNNs, Deep Networks: Stacked and Bidirectional RNNs, Managing Context in RNNs: LSTMs and GRUs, Words, Characters and Byte-Pairs.	L1, L2,L3	7

Pre-requisites/Exposure	Basic knowledge on computer				
Co-requisites	NIL				

### Catalog Description

This Lab course will introduce the concepts of data ware house and data mining, which gives a complete description about the principles, used, architectures, applications, design and implementation of data mining and data ware housing concepts.

### Course Objectives

The objectives of this course are:

5. Course provides knowledge of installation and use of NLTK in python.
6. Course provides knowledge of implementation of text files processing operations and Regular Expressions in NLP
7. Course provide knowledge of implementation of dependency parser, porter stemmer, Morphology, PoS Tagging

### Course Outcomes

On completion of this course, the students will be able to

**CO1:** Understand how to access the computer in terms of natural process languages.

**CO2:**Idea about installation and use of NLTK in python.

**CO3:**Understanding of implementation of text files procesing operation and Regular Expressions in NLP

**CO4:**Knowledge of implementation of dependency parser, porter stemmer, Morphology, PoS Tagging and other NLP applications

<b>Program Covered**</b>	<b>Blooms level*</b>	<b>Number of hours</b>
--------------------------	----------------------	------------------------

11. Install NLTK and perform basic preprocessing steps of NLP like tokenization, stemming, lemmatization, chunking etc using NLTK in python.	L3, L5	2
12. Write a program to perform text files statistical operation like count number of lines in files, number of words in file.	L3, L5	2
13. Working with PDF files in Python like Extracting text from PDF, Rotating PDF pages, Merging PDFs, Splitting PDF, Adding watermark to PDF pages	L3,L4, L5	2
14. Write program to count number of articles (a, an, the) in file. 15. Write a program to perform tokenization and filtering stopwords in file.	L3,L4, L5	2
16. Write a program which makes use of basics in regular expressions like /a*/ , /a+/, /a? /, /[^AZ]/, /[^Ss]/, etc.	L3,L4, L5	2
17. Write a program for minimum edit distance algorithm.	L3,L4, L5	2
18. Write a program for Understanding the morphology of a Marathi word. Take one or two suffixes of Marathi language and show the inflection on Gender, Number, Person, and Case.	L3,L4, L5	2
19. Write a program to demonstrate use of porter stemmer in python. 20. Write a program to demonstrate use of dependency parser.	L3,L4, L5	2
21. Write a program to demonstrate use of NP and VP chunker	L3,L4, L5	2
22. Write a program for Tagging Sentences which takes input as sentence and performs PoS Tagging.	L3,L4, L5	2
23. Write a program for bigram formation from given list	L3,L4, L5	4

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

**\*\* Sample Programs provided are not limited to these only, can include others as desired.**

Pre-requisites/Exposure	Concept of Machine Learning				
Co-requisites	Nil				

### Catalog Description

Reinforcement Learning is a subfield of Machine Learning, but is also a general purpose formalism for automated decision-making and AI. This course introduces you to statistical learning techniques where an agent explicitly takes actions and interacts with the world. Understanding the importance and challenges of learning agents that make decisions is of vital importance today, with more and more companies interested in interactive agents and intelligent decision-making.

### Course Objectives

The objective of this course is to

- Learn how to define RL tasks and the core principals behind the RL, including policies, value functions, deriving Bellman equations.
- Implement in code common algorithms following code standards and libraries used in RL
- Understand and work with tabular methods to solve classical control problems
- Recognize current advanced techniques and applications in RL

### Course Outcomes

On completion of this course, the students will be able to

CO 1: Discuss possibilities and limitations of reinforcement learning.

CO 2: Analyze relevant applications, decide if they can be formulated as a reinforcement learning problem, and in such case define it formally.

CO 3: Implement and use central algorithms for reinforcement learning.

CO 4: Explore imitation learning tasks and solutions

CO 5: Analyze and evaluate methods through different performance criteria.

### Course Content

Modules	Bloom's	Number
---------	---------	--------

	level	of Hours
<b>Module I Introduction</b>  Origin and history of Reinforcement Learning research. Its connections with other related fields and with different branches of machine learning. Brush up of Probability concepts - Axioms of probability, concepts of random variables, PMF, PDFs, CDFs, Expectation. Concepts of joint and multiple random variables, joint, conditional and marginal distributions. Correlation and independence.	<b>L1, L2</b>	<b>8</b>
<b>Module II Markov Decision Process</b>  Introduction to RL terminology, Markov property, Markov chains, Markov reward process (MRP). Introduction to and proof of Bellman equations for MRPs along with proof of existence of solution to Bellman equations in MRP. Introduction to Markov decision process (MDP), state and action value functions, Bellman expectation equations, optimality of value functions and policies, Bellman optimality equations.	<b>L1, L2, L3</b>	<b>7</b>
<b>Module III Prediction and Control by Dynamic Programming</b>  Overview of dynamic programming for MDP, definition and formulation of planning in MDPs, principle of optimality, iterative policy evaluation, policy iteration, value iteration, Banach fixed point theorem, proof of contraction mapping property of Bellman expectation and optimality operators	<b>L1, L2, L3, L4</b>	<b>8</b>
<b>Module IV Monte Carlo Methods &amp; Function Approximation</b>  <b>Methods</b>  Overview of Monte Carlo methods for model free RL, First visit and every visit Monte Carlo, Monte Carlo control, On policy and off policy learning, Importance sampling.  Getting started with the function approximation methods, Revisiting risk minimization, gradient descent from Machine Learning, Gradient MC and Semi-gradient TD(0) algorithms, Eligibility trace for function approximation, Afterstates, Experience replay in deep Q-Networks.	<b>L1, L2, L3, L6</b>	<b>9</b>

<b>Module V Policy Gradients</b>	<b>L2, L3, L4, L5</b>	<b>8</b>
Getting started with policy gradient methods, Log-derivative trick, Naive REINFORCE algorithm, bias and variance in Reinforcement Learning, Reducing variance in policy gradient estimates, baselines, advantage function, actor-critic methods.

Co-requisites					

### **Catalog Description**

This course gives an introduction to social network analysis, with a focus on modelling. It provides an overview of research questions connected to social networks, and of descriptive measures, models, and methods of analysis that can be used to analyze empirical social network data. It helps to understand the online interactive demonstrations and hands-on analysis of real-world data sets.

### **Course Objectives**

The objective of this course is to

- To provide students effective data-driven intelligence to improve their decisions making and systematically estimate the expected impact on relevant performance objectives
- To equip the students with data-driven intelligence tools, the basics of data mining techniques and develop a data-analytical approach to problem-solving with their application

### **Course Outcomes**

On completion of this course, the students will be able to

CO1. Know the basic notation and terminology used in network science

CO2. Be able to visualize, summarize and compare networks.

CO3. Learn the basic principles behind network analysis algorithms

CO4. Develop practical skills of network analysis in R programming language

CO5: Be capable of analyzing real work networks

## Course Content

<b>Modules</b>	<b>Bloom's level</b>	<b>Number of Hours</b>
<b>Module I Introduction</b>  Overview: Social network data-Formal methods- Paths and Connectivity-Graphs to represent social relations-Working with network data- Network Datasets-Strong and weak ties - Closure, Structural Holes, and Social Capital.	<b>L1, L2</b>	<b>6</b>
<b>Module II Community Discovery in Social Networks: Applications, Methods and Engineering Trends</b>  Introduction, Communities in Context, Core Methods, Quality Functions, The Kernighan-Lin (Kl) Algorithm, Agglomerative/Divisive Algorithms, Spectral Algorithms, Multi-Level Graph Portioning, Markov Clustering. Other Approaches, Emerging Fields and Problems, Community Discovery in Dynamic Networks, Community Discovery in Heterogeneous Networks, Community Discovery in Directed Networks, Coupling Content and Relationship Information for Community Discovery,	<b>L1, L2, L3</b>	<b>7</b>
<b>Module III Information Networks and the World Wide Web</b>  The Structure of the Web- World Wide Web- Information Networks, Hypertext, and Associative Memory- Web as a Directed Graph, Bow-Tie Structure of the Web- Link Analysis and Web Search, Searching the Web: Ranking, Link Analysis using Hubs and Authorities- Page Rank- Link Analysis in Modern Web Search, Applications, Spectral Analysis, Random Walks, and Web Search.	<b>L1, L2, L3</b>	<b>5</b>
<b>Module IV Node Classifications in Social Networks</b>  Introduction, Problem Formulation, Representing Data As A Graph, The Node Classification Problem, Methods Using Local Classifiers, Iterative Classification Method, Random Walk Based Methods, Label Propagation, Graph Regularization, Adsorption, Applying Node Classification To Large Social Networks, Basic Approaches, Second-Order Methods, Implementation Within Map-Reduce, Inference Using Graphical Models, Metric Labelling, Spectral Partitioning, Graph Clustering, Variations on Node Classification	<b>L1, L2, L3</b>	<b>6</b>
<b>Module V Data and Text Mining in Social Media</b>  Data Mining In Nutshell, Social Media, Motivations For Data Mining In Social Media, Data Mining Methods For Social Media, Data Representation, Data Mining- A Process, Social Networking Sites: Illustrative Examples, Related Efforts, Ethnography And Netnography, Event Maps, Text Mining: Keyword Search, Query Semantics And Answer Ranking, Keyword Search over Xml and Relational Data, Keyword Search Over Graph Data, Classification Algorithms, Clustering Algorithms, Transfer Learning in Heterogeneous	<b>L1, L3, L4</b>	<b>6</b>

Networks.		
<b>Module VI Overview of Social Tagging</b> Introduction, Problems With Metadata Generation and Fixed Taxonomies, Tags: Why And What?, Different User Tagging Motivations, Kinds Of Tags, Linguistic Classifications Of Tags, Game-Based Tagging, Tag Generation Models, Tagging System Design, Tag Analysis, Tagging Distributions ,Identifying Tag Semantics, Tags Versus Keywords, Visualization Of Tags, Tag Clouds For Browsing/Search, Tag Selection For Tag Clouds, Tag Hierarchy Generation, Tag Cloud Display Formats, Tag Evolution Visualization.	<b>LI, L2</b>	<b>6</b>

## Catalog Description

The objective of this course is to expose the students to the implementation techniques of Mat Lab Programming.

## Course Objectives

The objective of this course is to

1. To understand the basic concepts and terminology related to Mat Lab.
2. Application of Mat Lab in field of Signal Processing and Control systems.

## Course Outcomes

On completion of this course, the students will be able to

- CO1. Understand the basics of Matlab programming environment.
- CO2. Analysis of given LTI System and verifying its physical reliability and stability properties.
- CO3. Waveform synthesis using Laplace Transforms and z-transform of a given signal and system.

Modules	Blooms level*	Number of hours
<ol style="list-style-type: none"> <li>1. To write a MATLAB program to perform some basic operation on matrices such as addition, subtraction, multiplication.</li> <li>2. To write a "MATLAB" Program to generate various signals and sequences, such as unit impulse, unit step, unit ramp, sinusoidal, square, saw tooth, triangular, sinc signals.</li> <li>3. To performs operations on signals and sequences such as addition, multiplication, scaling, shifting, folding, computation of energy and average power.</li> </ol>	L1, L2 and L3	8

4. Write a program for finding even and odd parts of sequences Using MATLAB Software& program for finding real and imaginary parts of sequences Using MATLAB Software.		
5. Write a program to find the out put with linear convolution operation Using MATLAB Software 6. Write a program to compute auto correlation and cross correlation between signals and Sequences. 7. Write a program to compute linearity and time invariance properties of a given continuous /discrete System.	L1,L2,l3	6
8. Write a program to Unit Step And Sinusoidal Response Of The Given LTI System And Verifying Its physical reliability and stability properties. 9. Write a program to demonstrate Gibbs Phenomenon using MATLAB. 10. Write a program to obtain Fourier Transform and Inverse Fourier Transform of a given signal / sequence and to plot its Magnitude and Phase Spectra 11. Write a program to perform waveform synthesis using Laplace Transforms of a given signal.	L1, L2 and L3	8
12. Write a program to locating the zeros and poles and plotting the pole zero maps in s-plane and z-plane 13. for the given transfer function. 14. Write a program to Generate Gaussian Noise and to Compute its Mean, M.S. Values, Skew, kurtosis, 15. PS and PDF 16. Write a program to demonstrate Sampling Theorem and aliasing effect using MATLAB. 17. Write a program for removal of noise by auto correlation/cross correlation.	L1, L4	12

<b>MLE2737</b>	<b>Minor Project II</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version: 2020.1	Date of Approval: JULY 2020	0	0	0	2
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

### Catalog Description

The objective of this course is to provide practical training on some live/demo projects that will increase capability to work on actual problem in industry. It will be an in house training on some latest software which is in high demand in market. This training will be designed such that it will be useful for their future employment in industry.

### Course Objectives

The objective of this course is to

1. Provide practical training on live projects
2. Increase technical capabilities on solving real life problems in company environment

### Course Outcomes

On completion of this minor project, the students will be able to:

CO1: Demonstrate a sound technical knowledge of their selected project topic.

CO2: Design and develop engineering solutions to complex problems utilising a systems approach.

CO3: Analyse various approaches for solving a complex engineering problem using different tools and techniques

CO4: Demonstrate the knowledge, skills and attitudes of a professional engineer.

CO5: Apply technical skills and knowledge in completing the project.

<b>MLE2707</b>	<b>Mobile Computing</b>	L	T	P	C
<b>Version 2020.1</b>	Date of Approval: JULY 2020	3	0	0	3
<b>Pre-requisites/Exposure</b>	Basic Networking				
<b>Co-requisites</b>	Nil				

### Catalog Description

The objective of this consortium is to shape and expand a full-scale and sound mobile computing system market. To achieve this, cooperation is required of interests related to communication (network), computer hardware/software, system integrators (including service providers), and the media.

### Course Objectives

The objective of this course is to

1. Give a general overview of the cellular technology and the associated terms and discuss the generations of the mobile technologies starting from 1G to 3G techniques.
2. Illustrate the GPRS and WAP model for 2G internet connectivity in detail.
3. Elaborate the third-generation mobile services
4. Describe the Global Mobile Satellite Systems in detail and basic architecture of Bluetooth technology and advanced topics in mobile computing.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Explain the basic concepts mobile technology, computing and basic architecture of PCS and GSM.

CO2: Describe the mobile networking Infrastructure through 2G technologies (GSM, GPRS, WAP).

CO3: Explain the basic concepts of 3G technologies (WCDMA, CDMA 2000) and WLL.

CO4: Discuss the working of mobile satellite systems like IRIDIUM and GLOBALSTAR.

CO5: Explain the concepts of Bluetooth technology, its working and protocols, virtual networks and enterprise networks.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Introduction to Personal Communications Services (PCS)</b> PCS Architecture, Mobility management, Networks signalling. Global System for Mobile Communication (GSM) system overview: GSM Architecture, Mobility management, Network signalling.	L1, L2 and L3	8
<b>Module II: General Packet Radio Services (GPRS) &amp; Wireless Application Protocol (WAP)</b> GPRS Architecture, GPRS Network Nodes. Mobile Data Communication: WLANs (Wireless LANs) IEEE 802.11 standard, Mobile IP. Wireless Application Protocol (WAP): The Mobile Internet standard, WAP Gateway and Protocols, wireless mark up Languages (WML).	L1,L2	10
<b>Module III: Third Generation (3G) Mobile Services</b> Introduction to International Mobile Telecommunications 2000 (IMT 2000) vision, Wideband Code Division Multiple Access (W-CDMA), and CDMA 2000, Quality of services in 3G. Wireless Local Loop (WLL): Introduction to WLL Architecture, wireless Local Loop Technologies.	L1, L2	7
<b>Module IV: Global Mobile Satellite Systems</b> Global Mobile Satellite Systems; case studies of the IRIDIUM and GLOBALSTAR systems.	L1, L2	7
<b>Module V: Enterprise Networks</b> Introduction to Virtual Networks, Blue tooth technology, Blue tooth Protocols. Advanced techniques in mobile computing.	L1, L2	4

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

MLE2708	<b>ROBOTIC PROCESS AUTOMATION DESIGN &amp; DEVELOPMENT</b>	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Basic Networking Concepts				
Co-requisites	Nil				

## Catalog Description

This course aims at providing knowledge of basic concepts of Robotic Process Automation to University students. It further builds on these concepts and introduces key RPA Design and Development strategies and methodologies specifically in context of UiPath products. The student undergoing the course shall develop the competence to design and develop a robot for a defined process.

## Course Objectives

The objective of this course is to

1. Equip the students with concepts of robotic process automation
2. Provide an overview of designing with uipath software.

## Course Outcomes

On completion of this course, the students will be able to

CO1: Explain key terms and trends around the robotic process automation along with its physical and logical design

CO2: Understand the potential and value of the robotic process automation .

CO3: Describe the technologies used for the robotic process automation and mobile devices, including (passive and active) sensors, the physical communications layer, communications protocols, programming frameworks,.

CO4: Design programs and have hands on experience on uipath software

CO5: Develop RPA programs of moderate complexity for a well-used robotic automation process using uipath.

Modules	Bloom s level*	Numbe r of hours
---------	-------------------	------------------------

<p><b>Module 1: Programming Basic and Recap</b></p> <p><b>Programming Concepts Basics I</b> - Understanding the application, Basic Web Concepts, Protocols, Email Clients, Data Structures, Data Tables, Algorithms, Software Processes, Software Design, SDLC.</p> <p><b>Programming Concepts Basics 2-</b> Scripting, Net Framework, Net Fundamentals, XML, Control structures and functions, XML, HTML, CSS, Variables &amp; Arguments.</p>	L1, L2	8
<p><b>Module II: RPA Concepts</b></p> <p><b>RPA Basics</b> - History of Automation, what is RPA, RPA vs Automation, Processes &amp; Flowcharts, Programming Constructs in RPA, What Processes can be Automated, Types of Bots, Workloads which can be automated.</p> <p><b>RPA Advanced Concepts</b> - Standardization of processes, RPA Development methodologies, Difference from SDLC, Robotic control flow architecture, RPA business case, RPA Team, Process Design Document/Solution Design Document, Industries best suited for RPA, Risks &amp; Challenges with RPA, RPA and emerging ecosystem</p>	L2, L3 and L4	8
<p><b>Module III: UiPath Introduction &amp; Basics</b></p> <p><b>Introduction to UiPath-</b> Installing UiPath Studio community edition, The User Interface, KeyboardShortcuts,AboutUpdating,AboutAutomationProjects,IntroductiontoAutomati on Debugging, Managing Activation Packages, Reusing Automations Library, Installing the Chrome Extension, Installing the Firefox Extension, Connecting your project to a source control system, Activities Guide. <b>Variables, Control Flow</b></p> <p><b>DataManipulation-</b> DataManipulationIntroduction,Scalarvariables,collectionsandTables, Text Manipulation, Data Manipulation, Gathering and AssemblingData.</p> <p><b>Recording and Advanced UI Interaction</b> - Recording Introduction, Basic and Desktop Recording, Web Recording, Input/Output Methods, Screen Scraping, Data Scraping,Scraping advanced techniques.Selectors.</p>	L2, L3 and L4	8
<p><b>Module IV: UiPath Advanced Automation concepts and techniques</b></p> <p>Image, Text &amp; Advanced Citrix Automation- Introduction to Image &amp; Text Automation, Image based automation, Keyboard based automation, Information Retrieval, Advanced Citrix Automation challenges, Best Practices, using tab for Images, Starting Apps.</p>	L2, L3 and L4	12

Excel Data Tables & PDF - Data Tables in RPA, Excel and Data Table basics, Data Manipulation in excel, Extracting Data from PDF, extracting a single piece of data, Anchors, Using anchors in PDF.		
Email Automation- Email Automation, Incoming Email automation, Sending Email automation		

*\*Bloom's Level:*

<b>MLE2709</b>	<b>Responsive Web Design</b>	L	T	P	C
Version : 2020.1	Date of Approval: JULY 2020	2	0	0	2
Pre-requisites/Exposure	knowledge of website design				
Co-requisites	NIL				

## Catalog Description

This course is aimed to provide a fundamental understanding of JavaScript and two of its related library: Bootstrap and React for dynamic web site client side scripting. Javascript is a famous scripting language for client side. The bootstrap and react libraries are rich API for creating dynamic websites. The course builds strong foundation for client-side scripting for creating dynamic websites

## Course Objectives

The objective of this course is

1. Equip the students with basic and advanced features of javascript and bootstrap library to create dynamic web sites
2. Provide an overview of basic features of react library to design dynamic websites.

## Course Outcomes

On completion of this course, the students will be able to

CO1: Define the and explain concept of responsive web design and responsive content.

CO2 Explain HTML and CSS contents for responsive websties; Design and Create responsive websites using html, css and media queries.

CO3: Explain the concept of responsive workflow and working with responsive web design tools; Creating responsive websites that work on variety of devices.

CO4: Designing responsive websites using the concepts of typography, navigation and header layout; Evaluating performance of responsive websites .

Modules	Blooms level*	Number of hours
<b>Module 1: Foundations of responsive design</b> <b>What Is Responsive Design?:</b> Just the Basics ,A Short History, Why Responsive Design	L2 and L3	8

<b>Responsive Content:</b> Content Strategy ,Managing Content, Developing Content, Content Parity, Content Governance, Adaptive Content		
<b>Module 2: Creating Responsive Websites</b>  <b>HTML for Responsive Sites:</b> Working with HTML, Basic Page Structure Viewport, Structural Elements, Creating a Page, Clean and Semantic HTML  <b>CSS for Responsive Sites:</b> How CSS Works, Versions of CSS, Where CSS Goes, The Cascade, Using the Cascade, Comments, Organizing Your Stylesheet, The Box Model, display, Positioning, float and clear, Basic Styles  <b>Media Queries:</b> What's a Media Query? Media Query Structure, Using Media Queries in Stylesheet Links, Other Ways to Use Media Queries, What We Can Query, Browser Support, Breakpoints, Design Ranges, Designing Responsively, Using Media Queries, Two-Column Layout, Setting a Maximum Width, How to Choose Breakpoints Images: Ways to Display Images, Alt Text, Image File Formats, Optimizing Images, Content Images, Background Images Responsive Images	L2 and L3	8
<b>Module 3: Working Responsively</b>  <b>Responsive Workflow:</b> Strategy and Planning, Content Before Layout Thinking About Layout, Prototypes, Visual Design, Responsive Design Tools, Selling Responsive Design, Working with Clients  <b>Mobile and Beyond:</b> User Experience , Device-Agnostic Design, Focusing on Mobile First, Do What You Can, Types of Devices, Touch, Screen Size, Accessibility (Universal Design), Deciding Which Devices to Support Why Use Real Devices for Testing, Testing	L2 and L3	8
<b>Module 4: Designing Responsive Websites</b>  <b>Typography:</b> Start with HTML, Typefaces, Using Fonts, Sizing Text, Line Length, Whitespace, Margins and Padding, Changing Typeface for Screen Size  <b>Navigation and Header Layout:</b> Responsive Navigation , Branding, Navigation Links, Navigation Patterns, Header  <b>Performance:</b> Why Performance Matters, Performance as Design ,How Web Pages Are Loaded and Rendered, Measuring Performance Cleaning Up Your Code, Minimizing HTTP Requests, Server Stuff JavaScript, CSS, Hosting, Conditionally Loading Content, Reflows and Repaints, RESS	L2 and L3	12

### **Catalog Description**

This course provides knowledge regarding Creating Dynamic Web Pages with the help of ASP.NET framework. Various topics

### **Course Objectives**

The objective of this course is to

1. Equip the students with concepts of ASP.NET web applications including State management, Web Controls and ADO.NET.
2. Provide knowledge to develop secure ASP.NET web applications using C#.NET programming language.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: Explain the components of .NET framework and create basic ASP.NET web page.

CO2: Use various standard and advance web controls for developing ASP.NET dynamic web pages and also create custom controls.

CO3: Establish database connectivity and perform various operations on database through ASP.NET web pages.

CO4: Maintain states at client and server site both.

CO5: Develop and use web services.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>

MLE2804	.NET PROGRAMMING LAB				L	T	P	C
---------	----------------------	--	--	--	---	---	---	---

Version 2020.1	Date of Approval: JULY 2020	0	0	1	1
Pre-requisites/Exposure	C#.NET, HTML and CSS				
Co-requisites	Nil				

## Catalog Description

This lab course covers development of Web applications using ASP.NET. The concepts are designed to impart the knowledge of ASP.NET framework concepts at implementation level. The major topic covered includes theme, state management, web controls and database connectivity using ADO.NET and web services.

## Course Objectives

The objective of this course is to

1. Equip the students with concepts of ASP.NET web applications including State management, Web Controls and ADO.NET.
2. Provide knowledge to develop secure ASP.NET web applications using C#.NET programming language.

## Course Outcomes

On completion of this course, the students will be able to

CO1: Use various standard and advance web controls for developing ASP.NET dynamic web pages and also create custom controls.

CO2: Maintain states at client and server site both.

CO3: Establish database connectivity and perform various operations on database through ASP.NET web pages.

CO4: Develop and use web services.

Modules	Blooms level*	Number of hours
1. Basics of ASP.NET Page a) Write a program to implement C#.NET class with properties and methods. b) Design a Login Page, which displays a Welcome Page on successful Login and an error message in case of invalid Id/Password. c) Design a form and apply themes (design time and dynamically).	L1, L2	4

2. State Management a) Implement state management for Login page which move to welcome page when credentials are correct. The welcome page displays a welcome message along with the user Id. b) Implement various state management methods using a suitable web form.		2
3. Built-in Controls, Custom Controls a) Design any web form and apply various validation controls. b) Create a web form which can work in Hindi and English language both. c) Design a web form to upload an image to server. d) Design a custom control, Numeric Textbox, which should accept only integer value for a particular range. The range should be customizable.	L2, L3 and L4	6
4. ADO.NET a) Create any database table and apply basic operations (Insert/Delete/Update) on it using ASP.NET application. b) Implement various methods of execution of SQL command. c) Display data in a Grid and perform basic database operations.	L2, L3 and L4	4
5. Security, Web Services a) Develop any web application to illustrate SQL Injection attack and redesign it to prevent the attack. b) Develop a web application to illustrate XSS attack and redesign it to prevent the attack	L2 and L3	2
6. Web Application Create a small web application having some application.	L2, L3 and L4	6

MLE2805	<b>ADVANCED ROBOTIC PROCESS AUTOMATION DESIGN &amp; DEVELOPMENT</b>				L	T	P	C
Version 2020.1	Date of Approval: JULY 2020				3	0	0	3
Pre-requisites/Exposure	Basic Networking Concepts							
Co-requisites	Nil							

### Catalog Description

This course aims at providing knowledge of basic concepts of Robotic Process Automation to University students. It further builds on these concepts and introduces key RPA Design and

Development strategies and methodologies specifically in context of UiPath products. The student undergoing the course shall develop the competence to design and develop a robot for a defined process.

### Course Objectives

The objective of this course is to

1. Equip the students with concepts of robotic process automation
2. Provide an overview of designing with uipath software.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Explain key terms and trends around the robotic process automation along with its physical and logical design

CO2: Understand the potential and value of the robotic process automation.

CO3: Describe the technologies used for the robotic process automation and mobile devices, including (passive and active) sensors, the physical communications layer, communications protocols, programming frameworks.

CO4: Design programs and have hands on experience on uipath software

CO5: Develop RPA programs of moderate complexity for a well-used robotic automation process using uipath.

Modules	Blooms level*	Number of hours
<b>Module 1: Exception handling and Best Practices</b> <b>Debugging and Exception Handling- Debugging</b> Tools, Strategies for solving issues, Catching errors. <b>Project Organization-</b> Concept of project organization, Best practices, Avoiding pitfalls, Invoke Activity.	L1, L2	8
<b>Module II: Introduction to Orchestrator</b> Orchestrator, Tenants, Authentication, Users, Roles, Robots, Environments, Queues & Transactions, Schedules.	L2, L3 and L4	8
<b>Module III: merging and Future Trends in IT</b> Artificial Intelligence, Machine Learning, Agent awareness, Natural Language Processing Computer Vision	L2, L3 and L4	8

<b>Module IV: Capstone Project</b>		
Real life case studies which can be used to apply the concepts learnt during the course. The projects shall test student's skills right from process transformation and documentation to the design and development of the actual robot	L2, L3 and L4	12

<b>MLE2801</b>	<b>DIGITAL IMAGE PROCESSING</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version: 2020.1	Date of Approval: JULY 2020	2	0	0	2
Pre-requisites/Exposure	Basics of Computer Graphics				
Co-requisites	NIL				

### **Catalog Description**

This course gives students an insight into the basics of Image Processing along with visualization of real concept of Image processing. Concepts covered would enable students to define and differentiate among various types of image refinement. Further they would be able to gain insights about various Image restoration and modification technique.

### **Course Objectives**

Processing color and grayscale images or other two-dimensional signals has become an important tool for research and investigation in many areas of science and engineering. Digital Image Processing is designed to give professionals and students a powerful collection of fundamental and advanced image processing tools on the desktop. Digital Image Processing takes full advantage of the computational technology of Mathematica.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: Define and explain introductory part of Digital Image Processing

CO2: List out the Image Enhancement techniques in the Spatial Domain

CO3: Explain concepts of Image Enhancement in the Frequency Domain

CO4: Describe the architecture Image Compression

CO5: Explain the basics of Representation and Description

Modules	Blooms level*	Number of hours
<b>MODULE 1:</b>  <b>Introduction and Digital Image Fundamentals</b> The origins of Digital Image Processing, Examples of Fields that Use Digital Image Processing, Fundamentals Steps in Image Processing, Elements of Digital Image Processing Systems, Image Sampling and Quantization, Some basic relationships like Neighbors, Connectivity, Distance Measures between pixels, Linear and Non Linear Operations.	L1 and L2	8
<b>MODULE 2:</b>  <b>Image Enhancement in the Spatial Domain</b> Some basic Gray Level Transformations, Histogram Processing, Enhancement Using Arithmetic and Logic operations, Basics of Spatial Filters, Smoothing and Sharpening Spatial Filters, Combining Spatial Enhancement Methods.	L2 and L3	8
<b>MODULE 3:</b>  <b>Image Enhancement in the Frequency Domain</b> Introduction to Fourier Transform and the frequency Domain, Smoothing and Sharpening Frequency Domain Filters, Homomorphism Filtering.	L1 and L2	10
<b>MODULE 4:</b>  <b>Image Compression</b> Coding, Interpixel and Psychovisual Redundancy, Image Compression models, Elements of Information Theory, Error free comparison, Lossy compression, Image compression standards. <b>Image Segmentation</b> Detection of Discontinuities, Edge linking and boundary detection, Threshold, Region Oriented Segmentation, Motion based segmentation.	L2 and L3	12
<b>MODULE 5:</b>  <b>Representation and Description</b> Representation, Boundary Descriptors, Regional Descriptors, Use of Principal Components for Description, Introduction to Morphology, Some basic Morphological Algorithms. <b>Object Recognition</b> Patterns and Pattern Classes, Decision-Theoretic Methods, Structural Methods.	L2 and L3	10

MLE2802	<b>DIGITAL IMAGE PROCESSING LAB</b>	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	0	0	2	1
Pre-requisites/Exposure	Basics of MATLAB				
Co-requisites	NIL				

### Catalog Description

In this Lab course first student should learn about advanced level of software used for easy calculation and toolbox used for software like MATLAB.

### Course Objectives

The objective of this course is to

1. Make the students apply knowledge of various Image processing & pattern recognition required for solving complex problems.
2. Provide a demonstration of different types of image processing techniques through MATLAB toolbox.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Acquiring knowledge of Basics of High-end calculation software and need in Computer Science & engineering

CO2: Demonstrate the All preliminary functions in MATLAB

CO3: Apply the knowledge of all the basics function and toolbox knowledge of MATLAB

CO4: Demonstrate the Use of MATLAB in image Processing

CO5: Demonstrate usage of applications involving with Image processing & Recognition Its Toolbox used by MATLAB

<b>Modules/Topics Covered**</b>	<b>Blooms level*</b>	<b>Number of hours</b>
1. Introduction of MATLAB  (c) Basic Variable declaration & its operation  (d) Function use & its application	L3, L5	4
2. Sample Programs in MATLAB  (c) Basic use of Matrix and Graph Plotting  (d) Different type of graph plotting with use of different -2 type of data	L3, L5	6
3. Sample Programs using MATLAB functions  (d) Create a basic program MATLAB using functions  (e) Use of basic function Image processing  (f) Practice on Basic function of Image processing tool box.	L3, L5	6
4. Sample programs of ANN functions  (c) Practice on Pattern Recognition functions in MATLAB  (d) Write a program for training a small network in MATLAB	L3, L5	6
5. Sample Programs using ANN toolbox & Image processing toolbox  (b) Demonstrate the use of ANN tool box & Image processing toolbox and write a program after combining it.	L3, L5	2

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

**\*\* Sample Programs provided are not limited to these only, can include others as desired.**

## ENGINEERING MATHEMATICS-I

Course Code: DSE6101

Credit Units: 04

### Course Objective:

The knowledge of Mathematics is necessary for a better understanding of almost all the Engineering and Science subjects. Here our intention is to make the students acquainted with the concept of basic topics from Mathematics, which they need to pursue their Engineering degree in different disciplines.

### Course Contents:

#### Module I: Differential Calculus

Successive differentiation, Leibnitz's theorem (without proof), Mean value theorem, Taylor's theorem (proof), Remainder terms, Asymptote & Curvature, Partial derivatives, Chain rule, Differentiation of Implicit functions, Exact differentials, Tangents and Normals, Maxima, Approximations, Differentiation under integral sign, Jacobians and transformations of coordinates.

#### Module II: Integral Calculus

Fundamental theorems, Reduction formulae, Properties of definite integrals, Applications to length, area, volume, surface of revolution, improper integrals, Multiple Integrals-Double integrals, Applications to areas, volumes.

#### Module III: Ordinary Differential Equations

Formation of ODEs, Definition of order, degree & solutions, ODE of first order: Method of separation of variables, homogeneous and non-homogeneous equations, Exactness & integrating factors, Linear equations & Bernoulli equations, General linear ODE of  $n^{\text{th}}$  order, Solution of homogeneous equations, Operator method, Method of undetermined coefficients, Solution of simple simultaneous ODE.

#### Module IV: Vector Calculus

Scalar and Vector Field, Derivative of a Vector, Gradient, Directional Derivative, Divergence and Curl and their Physical Significance, Arc Length, Tangent, Directional Derivative, Evaluation of Line Integral, Green's Theorem in Plane (without proof), Representation of Surfaces, Tangent Plane and Surface Normal, Surface Integral, Stoke's Theorem (without proof), Gauss Divergence Theorem (without proof).

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE

# ENGINEERING PHYSICS

Course Code: DSE6102

Credit Units: 03

## Course Objective:

Aim of this course is to introduce the students to fundamentals of graduate level physics, which form the basis of all applied science and engineering

## Course Contents:

### Module I: Oscillations & Waves

**Oscillations:** Introduction to S.H.M. Damped Oscillations: Differential Equation and its solution, logarithmic decrement, Quality Factor, Different conditions of damping of harmonic oscillations. Forced oscillations: Amplitude and Frequency Response, Resonance, Sharpness of Resonance

**Plane Progressive Waves:** Differential Equation and Solution, Superposition of Progressive Waves stationary waves.

**Ultrasonics:** Generation and application of ultrasonic waves.

### Module II: Wave Nature of Light

Interference: Coherent Sources, Conditions of interference, Interference due to division of wavefront, Fresnel's biprism Interference due to division of amplitude, Newton's rings, Interference due to thin films, Diffraction: Fresnel and Fraunhofer diffraction, Fraunhofer diffraction at a single slit, double slit, N Slits, Transmission grating, Rayleigh criterion and Resolving power of grating.

Polarization: Birefringence, Nicol prism, Production and analysis of plane, circularly and elliptically polarized light, Half and quarter wave plates, Optical rotation, Polarimeter.

### Module III: Electromagnetics

Scalar and vector fields, gradient of a scalar field, physical significance of gradient, equipotential surface. Line, surface and volume integrals, Divergence and curl of vector field and mathematical analysis physical significance, Electric flux, Gauss' law, Proof and Applications, Gauss divergence and Stokes theorems.

Differential form of Gauss' Law, Amperes' Law, Displacement current, Faradays Law, Maxwell equations in free space & isotropic media (Integral form & differential form), EM wave propagation in free space, Poynting vector.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# ENGINEERING MECHANICS

Course Code: DSE6103

Credit Units: 03

## Course Objective:

Objective of this course is to provide fundamental knowledge of force system and its effect on the behaviour of the bodies that may be in dynamic or in static state. It includes the equilibrium of different structures like beams, frames, truss etc and the force transfer mechanism in the different components of a body under given loading condition.

## Course Contents:

### Module I: Force system & Structure

Free body diagram, Equilibrium equations and applications. Plane truss, perfect and imperfect truss, assumption in the truss analysis, analysis of perfect plane trusses by the method of joints, method of section.

### Module II: Friction

Static and Kinetic friction, laws of dry friction, co-efficient of friction, angle of friction, angle of repose, cone of friction, friction lock, efficiency of screw jack, transmission of power through belt

### Module III: Distributed Force

Determination of center of gravity, center of mass and centroid by direct integration and by the method of composite bodies, mass moment of inertia and area moment of inertia by direct integration and composite bodies method, radius of gyration, parallel axis theorem, Pappus theorems and its application, polar moment of inertia.

### Module IV: Work -Energy

Work energy equation, conservation of energy, Virtual work, impulse, momentum conservation, impact of bodies, co-efficient of restitution, loss of energy during impact, D'Alembert principle

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# INTRODUCTION TO COMPUTERS AND PROGRAMMING IN C

**Course Code: DSE6104**

**Credit Units: 03**

## **Course Objective:**

The objective of this course module is to acquaint the students with the basics of computers system, its components, data representation inside computer and to get them familiar with various important features of procedure oriented programming language i.e. C.

## **Course Contents:**

### **Module I: Introduction**

Introduction to computer, history, von-Neumann architecture, memory system (hierarchy, characteristics and types), H/W concepts (I/O Devices), S/W concepts (System S/W & Application S/W, utilities). Data Representation: Number systems, character representation codes, Binary, octal, hexadecimal and their interconversions. Binary arithmetic, floating point arithmetic, signed and unsigned numbers, Memory storage unit.

### **Module II: Programming in C**

History of C, Introduction of C, Basic structure of C program, Concept of variables, constants and data types in C, Operators and expressions: Introduction, arithmetic, relational, Logical, Assignment, Increment and decrement operator, Conditional, bitwise operators, Expressions, Operator precedence and associativity. Managing Input and output Operation, formatting I/O.

### **Module III: Fundamental Features in C**

C Statements, conditional executing using if, else, nesting of if, switch and break Concepts of loops, example of loops in C using for, while and do-while, continue and break. Storage types (automatic, register etc.), predefined processor, Command Line Argument.

### **Module IV: Arrays and Functions**

One dimensional arrays and example of iterative programs using arrays, 2-D arrays Use in matrix computations.

Concept of Sub-programming, functions Example of user defined functions. Function prototype, Return values and their types, calling function, function argument, function with variable number of argument, recursion.

### **Module V: Advanced features in C**

Pointers, relationship between arrays and pointers Argument passing using pointers, Array of pointers. Passing arrays as arguments.

Strings and C string library.

Structure and Union. Defining C structures, Giving values to members, Array of structure, Nested structure, passing strings as arguments.

File Handling.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# ENGINEERING PHYSICS LAB

Course Code: DSE6105

Credit Units: 01

## List of Experiments:

1. To determine the wavelength of sodium light by Newton's rings method.
2. To determine the dispersive power of the material of prism with the help of a spectrometer.
3. To determine the specific rotation of sugar by Bi-quartz or Laurent half shade polarimeter.
4. To determine the speed of ultrasonic waves in liquid by diffraction method.
5. To determine the width of a narrow slit using diffraction phenomena.
6. To determine the temperature coefficient of platinum wire, using a platinum resistance thermometer and a Callender & Griffith's bridge.
7. To determine the value of specific charge (ratio of  $e/m$ ) of an electron by Thomson method.
8. To determine the internal resistance of Leclanche cell with the help of Potentiometer.
9. To determine the resistance per unit length of a Carey Foster's bridge wire and also to find out the specific resistance of a given wire.
10. To plot graph showing the variation of magnetic field with distance along the axis of a circular coil carrying current, and hence estimate the radius of the coil.
11. To determine the value of acceleration due to gravity ('g') in the laboratory using bar pendulum.
12. To determine the moment of inertia of a flywheel about its own axis of rotation.
13. To determine the density of material of the given wire with the help of sonometer.

## Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# PROGRAMMING IN C LAB

**Course Code: DSE6106**

**Credit Units: 01**

**Software Required:** Turbo C

**Course Contents:**

- C program involving problems like finding the nth value of cosine series, Fibonacci series. Etc.
- C programs including user defined function calls
- C programs involving pointers, and solving various problems with the help of those.
- File handling

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## ENGINEERING MECHANICS LAB

Course Code: DSE6107

Credit Units: 01

### Engineering Mechanics:

- To verify the law of Force Polygon
- To verify the law of Moments using Parallel Force apparatus. (Simply supported type)
- To determine the co-efficient of friction between wood and various surface (like Leather, Wood, Aluminum) on an inclined plane.
- To find the forces in the members of Jib Crane.
- To determine the mechanical advantage, Velocity ratio and efficiency of a screw jack.
- To determine the mechanical advantage, Velocity ratio and Mechanical efficiency of the Wheel and Axle
- To determine the MA, VR,  $\eta$  of Worm Wheel (2-start)
- Verification of force transmitted by members of given truss.
- To verify the law of moments using Bell crank lever
- To find CG and moment of Inertia of an irregular body using Computation method

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# ENGINEERING GRAPHICS LAB

**Course Code: DSE6108**

**Credit Units: 01**

## **Course Objective:**

This course will provide students concepts on the drawings of different curves like straight line, parabola, ellipse etc. After completion of this course, students will be able to draw different figures manually and will be capable of using various instruments involved in drawings.

## **Course Contents:**

### **Module I: General**

Importance, Significance and scope of engineering drawing, Lettering, Dimensioning, Scales, Sense of proportioning, Different types of projections, Orthographic Projection, B.I.S. Specifications.

### **Module II: Projections of Point and Lines**

Introduction of planes of projection, Reference and auxiliary planes, projections of points and Lines in different quadrants, traces, inclinations, and true lengths of the lines, projections on Auxiliary planes, shortest distance, intersecting and non-intersecting lines.

### **Module III: Planes other than the Reference Planes**

Introduction of other planes (perpendicular and oblique), their traces, inclinations etc., Projections of points and lines lying in the planes, conversion of oblique plane into auxiliary Plane and solution of related problems.

### **Module IV: Projections of Plane Figures**

Different cases of plane figures (of different shapes) making different angles with one or both reference planes and lines lying in the plane figures making different given angles (with one of both reference planes). Obtaining true shape of the plane figure by projection.

### **Module V: Projection of Solids**

Simple cases when solid is placed in different positions, Axis faces and lines lying in the faces of the solid making given angles.

### **Module VI: Development of Surface**

Development of simple objects with and without sectioning. Isometric Projection

## **Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# Syllabus - Second Semester

## ENGINEERING MATHEMATICS-II

Course Code: DSE6201

Credit Units: 04

### Course Objective:

The knowledge of Mathematics is necessary for a better understanding of almost all the Engineering and Science subjects. Here our intention is to make the students acquainted with the concept of basic topics from Mathematics, which they need to pursue their Engineering degree in different disciplines.

### Course Contents:

#### Module I: Linear Algebra

Hermitian and Skew Hermitian Matrix, Unitary Matrix, Orthogonal Matrix, Elementary Row Transformation, Reduction of a Matrix to Row Echelon Form, Rank of a Matrix, Consistency of Linear Simultaneous Equations, Gauss Elimination Method, Gauss-Jordan Method, Eigen Values and Eigen Vectors of a Matrix, Caley-Hamilton Theorem, Diagonalization of a Matrix, Vector Space, Linear Independence and Dependence of Vectors, Linear Transformations.

#### Module II: Infinite Series

Definition of Sequence, Bounded Sequence, Limit of a Sequence, Series, Finite and Infinite Series, Convergence and Divergence of Infinite series, Cauchy's Principle of Convergence, Positive Term Infinite Series, Comparison test, D'Alembert's Ratio test, Raabe's Test, Cauchy's nth root Test, Logarithmic Test, Alternating Series, Leibnitz's Test, Absolute and conditional convergence, Uniform Convergence, Power Series and its Interval of Convergence.

#### Module III: Complex Analysis

De Moivre's Theorem and Roots of Complex Numbers, Logarithmic Functions, Circular, Hyperbolic Functions and their Inverses.

Functions of a Complex Variables, Limits, Continuity and Derivatives, Analytic Function, Cauchy-Riemann Equations (without proof), Harmonic Function, Harmonic Conjugates, Conformal Mapping, Bilinear Transformations, Complex Line Integral, Cauchy Integral Theorem, Cauchy Integral Formula, Derivative of Analytic Function, Power Series, Taylor Series, Laurent Series, Zeros and

Singularities, Residues, Residue Theorem, Evaluation of Real Integrals of the Form  $\int_{-\infty}^{\infty} \frac{f(x)}{F(x)} dx$

#### Module IV: Statistics and Probability

Moments, Skewness, Kurtosis, Random Variables and Probability Distribution, Mean and Variance of a Probability Distribution, Binomial Distribution, Poisson Distribution and Normal Distribution.

### Examination Scheme:

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	15	20	20	20	5

C – Project + Presentation

I – Interaction/Conversation Practice

# ENGINEERING CHEMISTRY

**Course Code: DSE6202**

**Credit Units: 02**

## Course Objective:

Four basic sciences, Physics, Chemistry, Mathematics and Biology are the building blocks in engineering and technology. Chemistry is essential to develop analytical capabilities of students, so that they can characterize, transform and use materials in engineering and apply knowledge in their field. All engineering fields have unique bonds with chemistry whether it is Aerospace, Mechanical, Environmental and other fields the makeup of substances is always a key factor, which must be known. For electronics and computer science engineering, apart from the material, computer modeling and simulation knowledge can be inherited from the molecule designing. The upcoming field of technology like Nanotechnology and Biotechnology depends fully on the knowledge of basic chemistry. With this versatile need in view, course has been designed in such a way so that the student should get an overview of the whole subject.

## Course Contents:

### Module I: Water Technology

Introduction and specifications of water,  
Hardness and its determination (EDTA method only), Alkalinity,  
Boiler feed water, boiler problems – scale, sludge, priming & foaming: causes & prevention, Boiler problems – caustic embrittlement & corrosion: causes & prevention,  
Carbonate & phosphate conditioning, colloidal conditioning & calgon treatment  
Water softening processes: Lime – soda process, Ion exchange method, Water for domestic use.

### Module II: Fuels

Classification, calorific value of fuel, (gross and net), Determination of calorific value of fuels, bomb calorimeter, Solid fuels - Proximate and ultimate analysis, Octane & Cetane No. and its significance.  
Numericals on combustion

### Module III: Instrumental Methods of analysis

Introduction; Principles of spectroscopy; Laws of absorbance  
IR: Principle, Instrumentation, Application  
UV: Principle, Instrumentation, Application  
NMR: Principle, Instrumentation, Application

### Module IV: Lubricants

Introduction; Mechanism of Lubrication; Types of Lubricants; Chemical structure related to Lubrication;  
Properties of lubricants; Viscosity and Viscosity Index; Iodine Value; Aniline Point; Emulsion number; Flash Point; Fire Point; Drop Point; Cloud Point; Pour Point.  
Selection of Lubricants.

### Module V: Corrosion

Introduction, Mechanism of dry and wet corrosion,  
Types of corrosion-Galvanic, Concentration cell, soil, pitting, intergranular, waterline. Passivity.  
Factors influencing corrosion. Corrosion control.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# ELECTRICAL SCIENCE

**Course Code: DSE6203**

**Credit Units: 03**

## **Course Objective:**

The objective of the course is to provide a brief knowledge of Electrical Engineering to students of all disciplines. This Course includes some theorems related to electrical, some law's related to flow of current, voltages, basic knowledge of Transformer, basic knowledge of electromagnetism, basic knowledge of electrical network.

## **Course Contents:**

### **Module I: Basic Electrical Quantities**

Basic Electrical definitions-Energy, Power, Charge, Current, Voltage, Electric Field Strength, Magnetic Flux Density, etc., Resistance, Inductance and Capacitance. Ideal Source, Independent Source and Controlled Source

### **Module II: Network Analysis Techniques & Theorems**

Circuit Principles: Ohm's Law, Kirchoff's Current Law, Kirchoff's Voltage Law Network Reduction: Star-Delta Transformation, Source Transformation, Nodal Analysis, Loop analysis. Superposition theorem, Thevenin's Theorem, Norton's theorem and Reciprocity theorem.

### **Module III: Alternating Current Circuits**

Peak, Average and RMS values for alternating currents, Power calculation: reactive power, active power, Complex power, power factor, impedance, reactance, conductance, susceptance Resonance: series Resonance, parallel resonance, basic definition of Q factor & Bandwidth.

### **Module IV: Transformers**

Basic Transformer Operation principle, Construction, Voltage relations, current relations, Linear circuit models, open circuit test, short circuit test, Transformer Efficiency.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# OBJECT ORIENTED PROGRAMMING USING C++

Course Code: DSE6204

Credit Units: 03

## Course Objective:

The objective of this module is to introduce object oriented programming. To explore and implement the various features of OOP such as inheritance, polymorphism, Exceptional handling using programming language C++. After completing this course student can easily identify the basic difference between the programming approaches like procedural and object oriented.

## Course Contents:

### Module I: Introduction

Review of C, Difference between C and C++, Procedure Oriented and Object Oriented Approach. Basic Concepts: Objects, classes, Principals like Abstraction, Encapsulation, Inheritance and Polymorphism. Dynamic Binding, Message Passing. Characteristics of Object-Oriented Languages. Introduction to Object-Oriented Modeling techniques (Object, Functional and Dynamic Modeling).

### Module II: Classes and Objects

Abstract data types, Object & classes, attributes, methods, C++ class declaration, Local Class and Global Class, State identity and behaviour of an object, Local Object and Global Object, Scope resolution operator, Friend Functions, Inline functions, Constructors and destructors, instantiation of objects, Types of Constructors, Static Class Data, Array of Objects, Constant member functions and Objects, Memory management Operators.

### Module III: Inheritance

Inheritance, Types of Inheritance, access modes – public, private & protected, Abstract Classes, Ambiguity resolution using scope resolution operator and Virtual base class, Aggregation, composition vs classification hierarchies, Overriding inheritance methods, Constructors in derived classes, Nesting of Classes.

### Module IV: Polymorphism

Polymorphism, Type of Polymorphism – Compile time and runtime, Function Overloading, Operator Overloading (Unary and Binary) Polymorphism by parameter, Pointer to objects, this pointer, Virtual Functions, pure virtual functions.

### Module V: Strings, Files and Exception Handling

Manipulating strings, Streams and files handling, formatted and Unformatted Input output. Exception handling, Generic Programming – function template, class Template Standard Template Library: Standard Template Library, Overview of Standard Template Library, Containers, Algorithms, Iterators, Other STL Elements, The Container Classes, General Theory of Operation, Vectors.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# ELEMENTS OF MECHANICAL ENGINEERING

Course Code: DSE6205

Credit Units: 02

## Course Objective:

The objective of this course is to impart the basic knowledge of thermodynamics, stress- strain, materials & their properties and various manufacturing processes to the students of all engineering discipline.

## Course Contents:

### Module I: Fundamental Concepts

Definition of thermodynamics, system, surrounding and universe, phase, concept of continuum, macroscopic & microscopic point of view, Thermodynamic equilibrium, property, state, path, process, cyclic process, Zeroth, first and second law of thermodynamics, Carnot Cycle, Introduction to I.C. Engines-two & four stroke S.I. and C.I. engines. Otto cycle. Diesel cycle.

### Module II: Stress And Strain Analysis

Simple stress and strain: introduction, normal shear, and stresses-strain diagrams for ductile and brittle materials. Elastic constants, one-dimensional loadings of members of varying cross-section, Strain Energy, Properties of material-strength, elasticity, stiffness, malleability, ductility, brittleness, hardness and plasticity etc; Concept of stress and strain stress strain diagram, tensile test, impact test and hardness test.

### Module III: Casting & Forging

Introduction of casting, pattern, mould making procedures, sand mould casting, casting defects, allowances of pattern. Forging-introduction, upsetting & drawing out, drop forging, press forging & m/c forging

### Module IV: Welding & Sheet metal working:

Introduction of welding processes, classification, gas welding, arc welding, resistance welding. Introduction to sheet metal shop, Shearing, trimming, blanking, piercing, shaving, notching, stretch forming, nibbling coining, embossing and drawing.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# ENGINEERING CHEMISTRY LAB

Course Code: DSE6207

Credit Units: 01

## Course Contents:

### List of Experiments:

(Any 10 Experiments)

To determine the ion exchange capacity of a given cation exchanger.

1. To determine the temporary, permanent and total hardness of a sample of water by complexometric titration method.
2. To determine the type and extent of alkalinity of given water sample.
3. To determine the number of water molecules of crystallization in Mohr's salt (ferrous ammonium sulphate) provided standard potassium dichromate solution (0.1N) using diphenylamine as internal indicator.
4. To determine the ferrous content in the supplied sample of iron ore by titrimetric analysis against standard  $K_2Cr_2O_7$  solution using potassium ferricyanide  $[K_3Fe(CN)_6]$  as external indicator.
5. (a) To determine the surface tension of a given liquid by drop number method.  
(b) To determine the composition of a liquid mixture A and B (acetic acid and water) by surface tension method.
6. To prepare and describe a titration curve for phosphoric acid – sodium hydroxide titration using pH-meter.
7. (a) To find the cell constant of conductivity cell.  
(b) Determine the strength of hydrochloric acid solution by titrating it against standard sodium hydroxide solution conductometrically
8. Determination of Dissolved oxygen in the given water sample.
- 10 To determine the total residual chlorine in water.
- 11 Determination of amount of oxalic acid and  $H_2SO_4$  in 1 L of solution using N/10 NaOH and N/10  $KMnO_4$  solution.
- 12 Determination of viscosity of given oil by means of Redwood viscometer I.
- 13 To determine flash point and fire point of an oil by Pensky Martin's Apparatus
- 14 To determine the Iodine value of the oil.

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## OBJECT ORIENTED PROGRAMMING USING C++ LAB

**Course Code: DSE6208**

**Credit Units: 01**

**Software Required:** Turbo C++

### Course Contents:

- Creation of objects in programs and solving problems through them.
- Different use of private, public member variables and functions and friend functions.
- Use of constructors and destructors.
- Operator overloading
- Use of inheritance in and accessing objects of different derived classes.
- Polymorphism and virtual functions (using pointers).
- File handling.

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab

## ELEMENTS OF MECHANICAL ENGINEERING LAB

Course Code: DSE6209

Credit Units: 01

### Course Contents:

1. Welding
  - (a) Arc Welding
    - Butt Joint
    - Lap Joint
    - T Joint
  - (b) Gas Welding
    - Butt Joint
    - Lap Joint
    - Brazing of Broken pieces
2. Foundry
  - Sand mould casting by single piece pattern & Split pattern bracket with cores
3. Sheet Metal
  - Dust Bin
  - Mug
  - Funnel
  - Cylindrical Mug with handle-Rectangular
4. Fitting Shop
  - Male – Female Joint
  - Rectangular piece
  - Filing the job

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# Syllabus - Third Semester

## DATA COMMUNICATION AND COMPUTER NETWORKS

**Course Code: DSE6301**

**Credit Units: 03**

### Course Objective:

The objective is to acquaint the students with the basics of data communication and networking. A structured approach to explain how networks work from the inside out is being covered. The physical layer of networking, computer hardware and transmission systems have been explained. In-depth application coverage includes email, the domain name system; the World Wide Web (both client- and server-side); and multimedia (including voice over IP).

### Course Contents:

#### Module I: Introduction

Introduction to computer networks, evolution of computer networks and its uses, reference models, example networks

The physical layer: Theoretical basis for data communication, transmission media, wireless transmission, telecom infrastructure, PSTN, communication satellites, mobile telephone system

#### Module II: The data link layer

Data link layer design issues, error detection and correction, data link protocols, sliding window protocols, example of data link protocols- HDLC, PPP Access

#### Module III: Medium access layer

Channel allocation problem, multiple access protocols, ALOHA, CSMA/CD, CSMA/CA, IEEE Standard 802 for LAN and MAN, Bridges, Wireless LANs. Introduction to wireless WANs: Cellular Telephone and Satellite Networks, SONET/SDH, Virtual-Circuit Networks: Frame Relay and ATM.

#### Module IV: The network layer

Network layer concepts, design issues, static and dynamic routing algorithms, shortest path routing, flooding, distance vector routing, link state routing, distance vector routing, multicast routing, congestion control and quality of service, internetworking, Ipv4

#### Module V: The transport layer

The transport services, elements of transport protocols, TCP and UDP

The application layer: Brief introduction to presentation and session layer, DNS, E-mail, WWW

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# DATABASE MANAGEMENT SYSTEMS

**Course Code: DSE6302**

**Credit Units: 04**

## **Course Objective:**

The objective of this course is to get students familiar with Databases and their use. They can identify different types of available database model, concurrency techniques and new applications of the DBMS.

## **Course Contents:**

### **Module I: Introduction**

Concept and goals of DBMS, DBMS Architecture, Database Languages, Database Users, Database Abstraction.

Basic Concepts of ER Model: Entity Type, Entity Set, Relationship type, Relationship sets, Constraints: Cardinality Ratio and Participation Constraint, Keys, Mapping, Design of ER Model

### **Module II: Hierarchical model & Network Model**

Concepts, Data definition, Data manipulation and implementation.

Network Data Model, DBTG Set Constructs, and Implementation

### **Module III: Relational Model**

Relational database, Relational Algebra, Relational Calculus, Tuple Calculus.

### **Module IV: Relational Database Design and Query Language**

SQL, QUEL, QBE, Normalization using Functional Dependency, 1NF, 2NF, 3NF, BCNF, Multivalued dependency and Join dependency.

### **Module V: Concurrency Control and New Applications**

Transaction basics: ACID property, Lifecycle of Transaction, Why Concurrency Control, Schedule, Serializability, Lock Based Protocols, Time Stamped Based Protocols, Deadlock Handling, Crash Recovery. Distributed Database, Objective Oriented Database, Multimedia Database, Data Mining, Digital Libraries.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# OPERATING SYSTEMS

**Course Code: DSE6303**

**Credit Units: 03**

## **Course Objective:**

Operating Systems serve as one of the most important courses for undergraduate students, since it provides the students with a new sight to envision every computerized systems especially general purpose computers. Therefore, the students are supposed to study, practice and discuss on the major fields discussed in the course to ensure the success of the education process. The outcome of this course implicitly and explicitly affects the abilities the students to understand, analyze and overcome the challenges they face with in the other courses and the real world.

## **Course Contents:**

### **Module I: Introduction to operating system**

Operating system and function, Evolution of operating system, Batch, Interactive, multiprogramming, Time Sharing and Real Time System, multiprocessor system, Distributed system, System protection. Operating System structure, Operating System Services, System Program and calls.

### **Module II: Process Management**

Process concept, State model, process scheduling, job and process synchronization, structure of process management, Threads, Inter-process Communication and Synchronization: Principle of Concurrency, Producer Consumer Problem, Critical Section problem, Semaphores, Hardware Synchronization, Critical Regions, Conditional critical region, Monitor, Inter Process Communication.

CPU Scheduling: Job scheduling functions, Process scheduling, Scheduling Algorithms, Non Preemptive and preemptive Strategies, Algorithm Evaluation, Multiprocessor Scheduling.

Deadlock: System Deadlock Model, Deadlock Characterization, Methods for handling deadlock, Prevention strategies, Avoidance and Detection, Recovery from deadlock combined approach.

### **Module III: Memory Management**

Single Contiguous Allocation: H/W support, S/W support, Advantages and disadvantages, Fragmentation, Paging, Segmentation, Virtual memory concept, Demand paging, Performance, Paged replaced algorithm, Allocation of frames, Thrashing, Cache memory, Swapping, Overlays

### **Module IV: Device management**

Principles of I/O hardware, Device controller, Device Drivers, Memory mapped I/O, Direct Access Memory, Interrupts, Interrupt Handlers, Application I/O interface, I/O Scheduling, Buffering, Caching, Spooling,

Disk organization, Disk space management, Disk allocation Method, Disk Scheduling, Disk storage.

### **Module V: File System and Protection and security**

File Concept, File Organization and Access Mechanism, File Directories, Basic file system, File Sharing, Allocation method, Free space management.

Policy Mechanism, Authentication, Internal excess Authorization.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# DATA STRUCTURES USING C

Course Code: DSE6304

Credit Units: 04

## Course Objective:

Data structure deals with organizing large amount of data in order to reduce space complexity and time requirement. This course gives knowledge of algorithms, different types of data structures and the estimation space and time complexity.

## Course Contents:

### Module I: Introduction to Data structures

Data structures: Definition, Types. Algorithm design, Complexity, Time-Space Trade- offs. Use of pointers in data structures. Array Definition and Analysis, Representation of Linear Arrays in Memory, Traversing of Linear Arrays, Insertion And Deletion, Single Dimensional Arrays, Two Dimensional Arrays, Multidimensional Arrays, Function Associated with Arrays, Character String in C, Character String Operations, Arrays as parameters, Implementing One Dimensional Array, Sparse matrix.

### Module II: Introduction to Stacks and queue

**Stack:** Definition, Array representation of stacks, Operations Associated with Stacks- Push & Pop, Polish expressions, Conversion of infix to postfix, infix to prefix (and vice versa), Application of stacks recursion, polish expression and their compilation, conversion of infix expression to prefix and postfix expression, Tower of Hanoi problem.

**Queue:** Definition, Representation of Queues, Operations of queues- QInsert, QDelete, Priority Queues, Circular Queue, Deque.

### Module III: Dynamic Data Structure

Linked list: Introduction to Singly linked lists: Representation of linked lists in memory, Traversing, Searching, Insertion into, Deletion from linked list, doubly linked list, circular linked list, generalized list. Applications of Linked List-Polynomial representation using linked list and basic operation. Stack and queue implementation using linked list.

### Module IV: Trees and Graphs

**Trees:** Basic Terminology, Binary Trees and their representation, expression evaluation, Complete Binary trees, extended binary trees, Traversing binary trees, Searching, Insertion and Deletion in binary search trees, General trees, AVL trees, Threaded trees, B trees.

**Graphs:** Terminology and Representations, Graphs & Multigraphs, Directed Graphs, Sequential representation of graphs, Adjacency matrices, Transversal Connected Component and Spanning trees.

### Module V: Sorting and Searching and file structures

**Sorting:** Insertion Sort, Bubble sort, Selection sort, Quick sort, two-way Merge sort, Heap sort, Partition exchange sort, Shell sort, Sorting on different keys, External sorting.

**Searching:** Linear search, Binary search, File structures: Physical storage media, File Organization, Linked organization of file, Inverted file, Organization records into blocks, Sequential blocks, Hash function, Indexing & Hashing, Multilevel indexing, Tree Index, Random file, Primary Indices, Secondary Indices, B tree index files.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

## DATA STRUCTURES USING C LAB

**Course Code: DSE6305**

**Credit Units: 01**

**Software Required:** Turbo C++

**Assignment will be provided for following:**

- Practical application of sorting and searching algorithm.
- Practical application of various data structure like linked list, queue, stack, tree

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# DATA COMMUNICATION AND COMPUTER NETWORKS LAB

**Course Code: DSE6306**

**Credit Units: 01**

## **Equipments Required:**

Switch Network Cables, Patch Chord- Fiber optical and twisted pair cable, LAN cards, RJ-45 connectors etc.

Platforms required: Linux Server

## **Course Contents:**

- Introduction and Installation of Linux
- Administrating Linux
- Setting up a Local Area Network
- Connecting to the Internet
- Setting up Print Server
- Setting up File Server
- Setting up Mail Server
- Setting up FTP Server
- Setting up Web Server
- Setting up MySQL Database Server

## **Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## DATABASE MANAGEMENT SYSTEMS LAB

**Course Code: DSE6307**

**Credit Units: 01**

**Software Required:** Oracle 9i

**Topics covered in lab will include:**

- Database Design
- Data Definition (SQL)
- Data Retrieval (SQL)
- Data Modification (SQL)
- Views
- Triggers and Procedures
- PL\SQL

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## UNIX PROGRAMMING LAB

**Course Code: DSE6308**

**Credit Units: 01**

**Software Required: UNIX SCO**

**Assignments will be provided for the following**

- Introduction to UNIX Commands
- Introduction to vi editor
- Programming in shell script
- Introduction to programming in C Shell

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# INTRODUCTION TO IOT

**Course Code: DSE6309**

**Credit Units: 03**

## **Course Objective:**

The Internet is evolving to connect people to physical things and also physical things to other physical things all in real time. It's becoming the Internet of Things (IoT). The course enables student to understand the basics of Internet of things and protocols. It introduces some of the application areas where Internet of Things can be applied. Students will learn about the working of Internet of Things. To understand the concepts of Web of Things.

## **Course Contents:**

**Module I: IOT** - What is the IoT and why is it important? Elements of an IoT ecosystem, Technology drivers, Business drivers, Trends and implications, Overview of Governance, Privacy and Security Issues.

**Module II: IOT PROTOCOLS** - Protocol Standardization for IoT – Efforts – M2M and WSN Protocols – SCADA and RFID Protocols – Issues with IoT Standardization – Unified Data Standards – Protocols – IEEE802.15.4–BACNet Protocol– Modbus – KNX – Zigbee– Network layer – APS layer – Security

**Module III: IOT ARCHITECTURE** - IoT Open source architecture (OIC)- OIC Architecture & Design principles- IoT Devices and deployment models- IoTivity : An Open source IoT stack - Overview- IoTivity stack architecture- Resource model and Abstraction, IoT and Big Data.

**Module IV: WEB OF THINGS** - Web of Things versus Internet of Things – Two Pillars of the Web – Architecture Standardization for WoT– Platform Middleware for WoT – Unified Multitier WoT Architecture – WoT Portals and Business Intelligence.

**Module V: IOT APPLICATIONS** - IoT applications for industry: Future Factory Concepts, Brownfield IoT, Smart Objects, Smart Applications. Study of existing IoT platforms /middleware, IoT- A, Hydra etc., Introduction to Fog Computing.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# E-COMMERCE AND ERP

**Course Code: DSE6310**

**Credit Units: 03**

## **Course Objective:**

This course examines the evolution of enterprise resource planning (ERP) systems - from internally focused client/server systems to externally focused e-business. This class studies the types of issues that managers will need to consider in implementing cross-functional integrated ERP systems. The objective of this course is to make students aware of the potential and limitations of ERP systems. This objective will be reached through hands-on experience, case studies, lectures, guest speakers and a group project. The course would equip students with the basics of E-Commerce, technologies involved with it and various issues associated with.

## **Course Contents:**

### **Module I: Introduction E-commerce and ERP**

E-commerce and its types, EDI and its basics, Digital payment systems, Enterprise-An Overview, Benefits of ERP, ERP and Related Technologies-Business Process Reengineering (BPR), Data Warehousing, Data Mining, On-line Analytical Processing (OLAP), Supply Chain Management, Management Information systems (MIS), Decision support system (DSS), Executive Information systems (EIS). ERP – A Manufacturing Perspective Materials Requirement Planning (MRP), Bill of Material (Bom), Distribution Requirements Planning (DRP), JIT & Kanban, CAD/CAM, Product Data Management (PDM), Benefits of PDM, MTO, MTS, ATO, ETO, CTO.

### **Module II: ERP Modules**

Business Modules in an ERP Package- Finance, Manufacturing (Production), Human Resources, Plant Maintenance, Materials Management, Quality Management, Sales and Distribution.

### **Module III: Benefits of ERP**

Time Reduction, On time shipment, Improved Resource Utilization, Performance, Customer Satisfaction, Flexibility, information accuracy and decision making capability, reduction in quality costs, Accuracy.

### **Module IV: ERP Implementation**

ERP Implementation Lifecycle, Implementation Methodology, In-house implementation-Pros and cons, Vendors, Consultants and Users and their roles, Project Management and Monitoring after ERP Implementation.

### **Module V: The ERP Market and Future Directions**

ERP Market Place- SAP AG, PeopleSoft, Baan Company, JD Edwards World Solutions Company, Oracle Corporation, QAD, System Software Associates, Inc. (SSA).Future directions in ERP.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# ELECTRONIC DEVICES & CIRCUITS

Course Code: DSE6311

Credit Units: 02

## Course Objective:

This course builds from basic knowledge of Semiconductor Physics to an understanding of basic devices and their models. This course builds a foundation for courses on VLSI design and analog CMOS IC Design.

## Course Contents:

**Module I:** Semiconductor physics: Mobility & conductivity, Charge densities in a semiconductor, Fermi dirac distribution, carrier concentration and Fermi levels in semiconductor, generation and recombination of charges, diffuse and continuity equations, Hall effect.

### Module II: Semiconductor Diode and Diode Circuits

Junction diode, Diode as circuit element, Different types of diodes: Zener, Schottky, LED. Zener as voltage regulator, Diffusion capacitance, Drift capacitance, the load line concept, half wave, full wave rectifiers, clipping and clamping circuits.

### Module III: Bipolar Junction Transistor

Bipolar junction transistor: Introduction, Transistor, construction, transistor operations, BJT characteristics, load line, operating point, leakage currents, saturation and cut off mode of operations. Bias stabilization: Need for stabilization, fixed Bias, emitter bias, self bias, bias stability with respect to variations in  $I_{co}$ ,  $V_{BE}$  &  $\beta$ , Stabilization factors, thermal stability.

### Module IV: Small signal Analysis of transistor and Multistage Amplifier

Hybrid model for transistors at low frequencies, Analysis of transistor amplifier using h parameters, emitter follower, Miller's theorem, THE CE amplifier with an emitter resistance, Hybrid  $\pi$  model, Hybrid  $\pi$  Conductances and Capacitances, CE short circuit current gain, CE short circuit current gain with  $R_L$  Multistage amplifier: Cascading of Amplifiers, Coupling schemes (RC coupling and Transformer coupling)

### Module V: Field Effect Transistors

Field effect transistor (JFET, MOSFET): volt-ampere characteristics, small signal model –common drain, common source, common gate, operating point, MOSFET, enhancement and -depletion mode, Common source amplifier, Source follower

### Module VI: Feedback Amplifiers

Feedback concept, Classification of Feedback amplifiers, Properties of negative Feedback amplifiers, Impedance considerations in different Configurations, Examples of analysis of feedback Amplifiers.

### Module VII: Power Amplifiers

Power dissipation in transistors, difference with voltage amplifiers, Amplifier classification (Class A, Class B, Class C, Class AB) class AB push pull amplifier, collector efficiency of each, cross over distortion.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

## **ELECTRONIC DEVICES & CIRCUITS LAB**

**Course Code: DSE6312**

**Credit Units: 01**

### **Course Contents:**

1. To study and plot the characteristics of a junction diode.
2. To study Zener diode as a voltage regulator.
3. To study diode based clipping and clamping circuits.
4. To study half wave, full wave and bridge rectifier with filters.
5. To study the input and output characteristics of a transistor in its various configurations.
6. To study and plot the characteristics of a JFET in its various configurations.
7. To study and plot the characteristics of a MOSFET in its various configurations.
8. To study various types of Bias Stabilization for a transistor.
9. To study the gain and plot the frequency response of a single stage transistor amplifier.
10. To measure gain and plot the frequency response of double stage RC coupled amplifier.

### **Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# Syllabus - Fourth Semester

## THEORY OF AUTOMATA AND COMPUTATION

**Course Code: DSE6401**

**Credit Units: 04**

### Course Objective:

The course begins with the basic mathematical preliminaries and goes on to discuss the general theory of automata, properties of regular sets and regular expressions, and the basics of formal languages. Besides, sufficient attention is devoted to such topics as pushdown automata and its relation with context free languages, Turing machines and linear bounded automata, the basic concepts of computability such as primitive recursive functions and partial recursive functions.

### Course Contents:

#### Module I: Introduction to Languages and Automata

Formal Grammars and Chomsky Hierarchy, Regular Expression Deterministic and Nondeterministic Finite Automata, Regular Expression, Two way Finite Automata, Finite Automata with output, Properties of regular sets, pumping lemma for regular sets, My-Hill-Nerode Theorem.

#### Module II: Context Free Grammars and Pushdown Automata

**CFG: Formal Definition, Derivation and Syntax trees, E-removal, Ambiguous Grammar, Properties of CFL, Normal Forms (CNF and GNF)**

Pushdown Automata: Definitions, Relationship between PDA and context free language, Decision Algorithms

#### Module III: Turing Machine

The Turing Machine Model, Language acceptability of Turing Machine, Design of TM, Universal TM, Church's Machine.

Recursive and recursively enumerable language, unrestricted grammars, Context Sensitive Language, Linear Bounded Automata (LBA).

#### Module IV: Undecidability

Turing machine halting Problem, undecidable problems for recursive enumerable language, Post correspondence problems (PCP) and Modified Post correspondence problems, Undecidable problems for CFL.

#### Module V: Computability

Partial and Total Functions, Primitive Recursive functions, Recursive functions.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# DIGITAL ELECTRONICS

**Course Code: DSE6402**

**Credit Units: 02**

## **Course Objective:**

This course is an introduction to the basic principles of digital electronics. At the conclusion of this course, the student will be able to quantitatively identify the fundamentals of computers, including number systems, logic gates, logic and arithmetic subsystems, and integrated circuits. They will gain the practical skills necessary to work with digital circuits through problem solving and hands on laboratory experience with logic gates, encoders, flip-flops, counters, shift registers, adders, etc. The student will be able to analyze and design simple logic circuits using tools such as Boolean Algebra and Karnaugh Mapping, and will be able to draw logic diagrams.

## **Course Contents:**

### **Module I: Boolean Functions**

Analog & digital signals, AND, OR, NOT, NAND, NOR & XOR gates, Boolean algebra, Standard representation of logical functions, K-map representation and simplification of logical function, don't care conditions, XOR & XNOR simplifications of K-maps, Tabulation method.

### **Module II: Combinational Circuits**

Adders, Subtractors, Multiplexer, de-multiplexer, decoder & encoder, code converters, Comparators, decoder / driver for display devices, Implementation of logic functions using multiplexer / de-multiplexer,.

### **Module III: Sequential Circuits**

Flip-flops: SR, JK, D & T flip flops – Truth table, Excitation table, Conversion of flip-flops, race around condition, Master Slave flip flop, Shift registers: SIPO, PISO, PIPO, SIPO, Bi-directional; Counters: ripple & synchronous counters – up / down; Synchronous Sequential circuit: design procedure.

### **Module IV: Logic families**

Logic families: RTL, DTL, TTL, ECL

### **Module V: Data Converters**

Data converters: ADC – successive approximation, linear ramp, dual slope; DAC – Binary Weighted, R-2R ladder type

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

## **Text & References:**

# DISCRETE MATHEMATICS

**Course Code: DSE6403**

**Credit Units: 04**

## **Course Objective:**

This subject provides students with an in-depth education in the conceptual foundations of computer science and in engineering complex software and hardware systems. It allows them to explore the connections between computer science and a variety of other disciplines in engineering and outside. Combined with a strong education in mathematics, sciences, and the liberal arts it prepares students to be leaders in computer science practice, applications to other disciplines, and research.

## **Course Contents:**

### **Module I: Formal Logic**

Statement, Symbolic Representation and Tautologies, Quantifiers, Predicator and validity, Normal form. Propositional Logic, Predicate Logic, First Order Logic.

### **Module II: Proof & Relation**

Techniques for theorem proving: Direct Proof, Proof by Contra position, Proof by exhausting cares and proof by contradiction, principle of mathematical induction, principle of complete induction. Recursive definitions, solution methods for linear, first-order recurrence relations with constant coefficients.

### **Module III: Sets and Combinations**

Sets, Subtracts, power sets, binary and unary operations on a set, set operations/set identities, fundamental country principles, principle of inclusion, exclusion and pigeonhole principle, permutation and combination, Pascal's triangles, Comparing rates of growth: big theta, little oh, big oh and big omega.

### **Module IV: Relation/function and matrices**

Relation/function and matrices: Relation, properties of binary relation, operation on binary relation, closures, partial ordering, equivalence relation, Function, properties of function, composition of function, inverse, binary and n-ary operations, characteristic function, Permutation function, composition of cycles, Boolean matrices, Boolean matrices multiplication.

### **Module V: Lattices & Boolean Algebra**

Lattices: definition, sub lattices, direct product, homomorphism Boolean algebra: definition, properties, isomorphic structures (in particulars, structures with binary operations) sub algebra, direct product and homo-morphism, Boolean function, Boolean expression, representation & minimization of Boolean function.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# ARTIFICIAL INTELLIGENCE

**Course Code: DSE6404**

**Credit Units: 03**

## **Course Objective:**

To develop semantic-based and context-aware systems to acquire, organize process, share and use the knowledge embedded in multimedia content. Research will aim to maximize automation of the complete knowledge lifecycle and achieve semantic interoperability between Web resources and services. The field of Robotics is a multi disciplinary as robots are amazingly complex system comprising mechanical, electrical, electronic H/W and S/W and issues germane to all these.

## **Course Contents:**

### **Module I: Problem solving and Scope of AI**

Introduction to Artificial Intelligence. Applications- Games, theorem proving, natural language processing, vision and speech processing, robotics, expert systems. AI techniques- search knowledge, abstraction.

#### **Problem Solving**

State space search; Production systems, search space control: depth-first, breadth-first search.

Heuristic search - Hill climbing, best-first search, branch and bound. Problem Reduction, Constraint Satisfaction End, Means-End Analysis. LA\* Algorithm, L(AO\*) Algorithm.

### **Module II: Knowledge Representation**

Knowledge Representation issues, first order predicate calculus, Horn Clauses, Resolution, Semantic Nets, Frames, Partitioned Nets, Procedural Vs Declarative knowledge, Forward Vs Backward Reasoning.

### **Module III: Understanding Natural Languages**

Introduction to NLP, Basics of Syntactic Processing, Basics of Semantic Analysis, Basics of Parsing techniques, context free and transformational grammars, transition nets, augmented transition nets, Shanks Conceptual Dependency, Scripts ,Basics of grammar free analyzers, Basics of sentence generation, and Basics of translation..

### **Module IV**

**Expert System:** Need and justification for expert systems, knowledge acquisition, Case studies: MYCIN, R1

**Learning:** Concept of learning, learning automation, genetic algorithm, learning by inductions, neural nets. **Programming Language:** Introduction to programming Language, LISP and PROLOG.

**Handling Uncertainties:** Non-monotonic reasoning, Probabilistic reasoning, use of certainty factors, Fuzzy logic.

### **Module V: Introduction to Robotics**

Fundamentals of Robotics, Robot Kinematics: Position Analysis, Dynamic Analysis and Forces, Robot Programming languages & systems: Introduction, the three levels of robot programming, requirements of a robot programming language, problems peculiar to robot programming languages.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

## DIGITAL ELECTRONICS LAB

Course Code: DSE6405

Credit Units: 01

### List of Experiments:

1. To verify the truth tables of OR, AND, NOR, NAND, EX-OR, EX-NOR gates.
2. To obtain half adder, full adder and subtractor using gates and verify their truth tables.
3. To verify the truth tables of RS, JK and D flip- flops.
4. To design and study a binary counter.
5. To design and study synchronous counter.
6. To design and study ripple counter.
7. To convert BCD number into excess 3 form
8. To design and study a decade counter.
9. To design and study a sequence detector.
10. To implement control circuit using multiplexer.

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## ARTIFICIAL INTELLIGENCE LAB

**Course Code: DSE6406**

**Credit Units: 01**

### Course Contents:

Assignments will be provided for the following:

- Programming in Prolog
- Programming for Robotics

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# COMMUNICATION SYSTEMS

**Course Code: DSE6407**

**Credit Units: 02**

## **Course Objective:**

The purpose of this course is to provide a thorough introduction to analog and digital communications with an in depth study of various modulation techniques, Random processes are discussed, and information theory is introduced.

## **Course Contents:**

### **Module I: Introduction**

Communication Process, Source of Information, Communication channels, base-band and pass-band signals, Review of Fourier transforms, Random variables, different types of PDF, need of modulation process, primary communication resources, analog versus digital communications

### **Module II: Amplitude modulation**

Amplitude modulation with full carrier, suppressed carrier systems, single side band transmission, switching modulators, synchronous detection, envelope detection, effect of frequency and phase errors in synchronous detection, comparison of various AM systems, vestigial side band transmission.

### **Module III: Angle Modulation**

Narrow and wide band FM, BW calculations using Carlson rule, Direct & Indirect FM generations, phase modulation, Demodulation of FM signals, noise reduction using pre & de-emphasis.

### **Module IV: Pulse Modulation**

Pulse amplitude, width & position modulation, generation & detection of PAM, PWM & PPM, Comparison of frequency division and time division multiplexed systems, Basics of digital communications: ASK, PSK, FSK, QPSK basics & waveform with brief mathematical introduction

### **Module V: Noise**

Different types of noise, noise calculations, equivalent noise band width, noise figures, effective noise temperature, noise figure.

### **Module VI: Introduction to Information Theory**

Measurement of Information, mutual, Shannon's theorem, Source coding, channel coding and channel capacity theorem, Huffman code

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

## COMMUNICATION SYSTEMS LAB

Course Code: DSE6408

Credit Units: 01

### List of Experiments:

- To study the sampling and reconstruction of a given signal.
- To study amplitude modulation and demodulation.
- To study frequency modulation and demodulation.
- To study time division multiplexing.
- To study pulse amplitude modulation.
- To study delta and adaptive delta modulation and demodulation.
- To study carrier modulation techniques using amplitude shift keying and Frequency shift keying.
- To study carrier modulation techniques using binary phase shift keying and differential shift keying.
- To study pulse code modulation & differential pulse code modulation as well as relevant demodulations.
- To study quadrature phase shift keying & quadrature amplitude modulation.

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# INTRODUCTION TO OPEN SOURCE TECHNOLOGIES (PHP and MySql)

Course Code: DSE6409

Credit Units: 02

## Course Objective:

This course is aimed to provide a fundamental understanding of dynamic web site creation. PHP is the language used for development of most common web sites. Syllabus includes basic and advanced features of PHP which includes detailed introduction of PHP and MYSQL, Arrays, Loops and variables etc. It also gives an overview open source framework like JOOMLA, ZEND etc.

## Course Contents:

### Module I: Introduction to Open Source and PHP programming

Introduction to Open Sources Technologies, Introduction to PHP, installation and configuration, Advantages and Disadvantages of PHP, Client Side Scripting, Server Side Scripting, Variables, data types, various types of function, creating your own function, Strings in PHP, String Functions.

### Module II: Operator, Loops, Array, Exception and Error Handling

Operators, Conditions, Loops, Using for each, Creating and Using Arrays, Multidimensional Array, Associative Array.

Error Handling in PHP, Errors and Exceptions, Exception class, try/catch block, throwing an exception, defining your own Exception subclass.

### Module III: Classes, File system, Passing Information between pages

Object oriented programming with Php, Working with Datetime, code re-use, require (), include(), and the include\_path; Understanding PHP file permissions, File reading and writing functions, File system functions, File uploads, Sending mail & use of email server.

HTTP, GET arguments, POST arguments, Using Session in PHP, cookies, The setcookie() function, Deleting Cookies and Reading Cookies.

### Module IV: Working with database

HTML Tables and Database tables, Database manipulation (Select, Insert, Update, Delete), validating User Input using Javascript.

MYSQL, Introducing MySQL; database design concepts; the Structured Query Language (SQL); communicating with a MySQL backend via the PHP, MySQL API Building Database Applications, Developing PHP scripts for dynamic web page like feedback form, online admission form and online test.

### Module V: Working with Frameworks

Working with Mambo, Working with Joomla, Working with framework. Working with wordpress, Working with drupal, Use of Joomla in rapid development of website. Developing of simple website using Joomla.

## Examination Scheme:

Components	CT1	A/C/Q	ATTD.	EE
Weightage (%)	15	10	5	70

# INTRODUCTION TO OPEN SOURCE TECHNOLOGIES (PHP and MySql) LAB

Course Code: DSE6410

Credit Units: 01

## Course Contents:

1. Write the process of installation of web server.
2. Write programs to print all details of your php server. Use phpinfo().
3. Write a program to give demo of ECHO and PRINT command.
4. Write a program to implement the string functions.
5. Write a program to print Fibonacci series upto a given number using recursion.
6. Write a menu driven program to implement a calculator which performs only addition, subtraction, multiplication and division. The operation should happen based on user choice.
7. Write a program sort ten number by using array.
8. Write a program to demonstrate the concept of associative array.
9. Write a program to demonstrate the concept of multidimensional array.
10. Write a program to demonstrate the concept of Classes & objects.
11. Create a login form with two text fields called "login" and "password". When user enters "Amity" as a user name and "university" as a password it should be redirected to a Welcome.HTML page or to Sorry.HTML in case of wrong username/password.
12. How to work with sessions in PHP?
13. Introduction to Mysql creating databases, tables, using command line and gui interface, phpmyadmin
14. How to connect to MySQL using PHP ? Write programs for insertion, deletion updates and other sql queries. Design front end using html, css and write php scripts for processing of data. Try all different methods of connecting from php to MySQL
15. Make a small project with mysql and php to perform CRUD operations. Use Session also.
16. Create a form with a text box asking to enter your favorite city with a submit button when the user enters the city and clicks the submit button another php page should be opened displaying "Welcometo the city".
17. Write a program to design login form in which find the greatest number amongst three numbers.
18. WAP for Marksheet generation.
19. Design a webpage for entering the student details with all the validations applied on it.
20. Write a php script to print current date and time.
21. Write a pp script to use include and require functions.
22. Write a php script including all the file handling functions.
23. Design a website using Wordpress /Joomla/Drupal
24. Introduction to Laravel frame work and one simple project.

## Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# ARTIFICIAL NEURAL NETWORK

**Course Code: DSE6411**

**Credit Units: 02**

## **Course Objective:**

Aim of this course is to introduce the students fundamentals concepts of Nural network and its various application in computer science.

## **Module I:-**

Artificial Neural Networks (ANN) and biological neural networks, supervised and unsupervised learning rules, neural network applications.

## **Module II:-**

Unsupervised learning:- Hebbian learning and competitive learning. Supervised learning:- Back propagation algorithms,

Learning rule:-

Delta learning rule, Widrow-Hoff learning rule, Winner-Take-All learning rule.

## **Module III:-**

Feed forward neural network, feed backward neural network, Perceptron and its learning law, single-layer perceptron, multi-layer perceptron.

## **Module IV:-**

Self organizing networks: Kohonen algorithm, Hopfield Networks: Hopfield network algorithm, Adaptive resonance theory: Network and learning rules.

## **Module V:-**

Associative memory, auto-associative memory, bi-directional associative memory.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

## **Text Book:**

- Kenji Suzuki (ed.) - InTech , 2013
- Todd Troyer - University of Texas at San Antonio , 2005

## ARTIFICIAL NEURAL NETWORK LAB

**Course Code: DSE6412**

**Credit Units: 01**

### Course Objective

The aim of this lab to gain the practical knowledge of basic neuron models and learning algorithms.

### Lab Assignment

To study some basic neuron models and learning algorithms by using Matlab's neural network toolbox

### Examination Scheme

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# Syllabus - Fifth Semester

## SOFTWARE ENGINEERING

**Course Code: DSE6501**

**Credit Units: 03**

### Course Objective:

The basic objective of Software Engineering is to develop methods and procedures for software development that can scale up for large systems and that can be used to consistently produce high-quality software at low cost and with a small cycle time. Software Engineering is the systematic approach to the development, operation, maintenance, and retirement of software. The course provides a thorough introduction to the fundamental principles of software engineering. The organization broadly be based on the classical analysis-design-implementation framework.

### Course Contents:

#### Module I: Introduction

Software life cycle models: Waterfall, Prototype, Evolutionary and Spiral models, Overview of Quality Standards like ISO 9001, SEI-CMM

#### Module II: Software Metrics and Project Planning

Size Metrics like LOC, Token Count, Function Count, Design Metrics, Data Structure Metrics, Information Flow Metrics. Cost estimation, static, Single and multivariate models, COCOMO model, Putnam Resource Allocation Model, Risk management.

#### Module III: Software Requirement Analysis, design and coding

Problem Analysis, Software Requirement and Specifications, Behavioural and non-behavioural requirements, Software Prototyping Cohesion & Coupling, Classification of Cohesiveness & Coupling, Function Oriented Design, Object Oriented Design, User Interface Design Top-down and bottom-up Structured programming, Information hiding,

#### Module IV: Software Reliability, Testing and Maintenance

Failure and Faults, Reliability Models: Basic Model, Logarithmic Poisson Model, Software process, Functional testing: Boundary value analysis, Equivalence class testing, Structural testing: path testing, Data flow and mutation testing, unit testing, integration and system testing, Debugging, Testing Tools, & Standards. Management of maintenance, Maintenance Process, Maintenance Models, Reverse Engineering, Software RE-engineering

#### Module V: UML

Introduction to UML, Use Case Diagrams, Class Diagram: State Diagram in UML Activity Diagram in UML Sequence Diagram in UML Collaboration Diagram in UML, Domain, Component Diagram and Deployment Diagram

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# COMPUTER ARCHITECTURE

**Course Code: DSE6502**

**Credit Units: 04**

## **Course Objective:**

This course deals with computer architecture as well as computer organization and design. Computer architecture is concerned with the structure and behaviour of the various functional modules of the computer and how they interact to provide the processing needs of the user. Computer organization is concerned with the way the hardware components are connected together to form a computer system. Computer design is concerned with the development of the hardware for the computer taking into consideration a given set of specifications.

## **Course Contents:**

### **Module I: Register Transfer Language**

Register Transfer, Bus and Memory Transfers, Arithmetic Micro-operations, Logic Micro-operations, Shift Micro-operations, Arithmetic Logic shift Unit.

### **Module II: Basic Computer Organizations and Design**

Instruction Codes, Computer Registers, Computer Instructions, Timing and Control, Instruction Cycle, Memory-Reference Instructions, Input-Output and Interrupt, Design of Accumulator Logic. Hardwired and Microprogrammed control: Control Memory, Address Sequencing, Design of Control Unit

### **Module III: Central Processing Unit**

Introduction, General Register Organization, Stack Organization, Instruction representation, Instruction Formats, Instruction type, Addressing Modes, Data Transfer and Manipulation, Program Control, Reduced Instruction Set Computer RISC and CISC. Computer Arithmetic: Introduction, Addition and Subtraction Algorithm, Multiplication Algorithms, Booth Multiplication, Division Algorithms, Floating-Point Arithmetic Operations

### **Module IV: Memory and Intrasystem Communication and Input output organisation**

**Memory:** Memory types and organization Memory Hierarchy, Main Memory, Auxiliary Memory, Associative Memory, Cache Memory with mapping techniques, Virtual Memory, Memory Management Hardware, **Intrasystem communication and I/O:** Peripheral Devices, Input-Output, Controller and I/O driver, IDE for hard disk, I/O port and Bus concept, Bus cycle, Synchronous and asynchronous transfer, Modes of Transfer, DMA, DMA Transfer, DMA Controller, I/O Processor, CPU-IOP Communication

### **Module V: Introduction to Pipelining and Multi-Processor**

Parallel Processing, Pipelining, Arithmetic Pipeline, Instruction Pipeline, RISC Pipeline, Multiprocessors: Characteristics of Multiprocessors

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# JAVA PROGRAMMING

**Course Code: DSE6503**

**Credit Units: 03**

## **Course Objective:**

The objective is to impart programming skills used in this object oriented language java. The course explores all the basic concepts of core java programming. The students are expected to learn it enough so that they can develop the web solutions like creating applets etc.

## **Course Contents:**

### **Module I: Java Basics**

Concepts of OOP, Features of Java, How Java is different from C++, Environmental setup, Basic syntax, Objects and classes, Basic Data Types, Variable Types, Modifier Types, Basic operators, Loop Control, Decision Making, Strings and Arrays, Methods, I/O.

### **Module II: Java Object Oriented**

Inheritance, Overriding, Polymorphism, Abstraction, Encapsulation, Interfaces, Packages, Exploring java.util package.

### **Module III: Exception Handling and Threading**

Exception Hierarchy, Exception Methods, Catching Exceptions, Multiple catch Clauses, Uncaught Exceptions Java's Built-in Exception.

Creating, Implementing and Extending thread, thread priorities, synchronization suspending, resuming and stopping Threads, Multi-threading.

### **Module IV : Event Handling And AWT**

Event handling Mechanism, Event Model, Event Classes, Sources of Events, Event Listener Interfaces, AWT: Working with Windows, AWT Controls, Layout Managers

### **Module V: Java Advanced**

AppletClass, Architecture, Skeleton, Display Methods., Swings: Japplet, Icons, labels, Text Fields, Buttons, Combo Boxes., Socket Programming: Socket methods, Server Socket methods, Socket Client and Socket Server examples.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# ADVANCE DATA STRUCTURE AND ALGORITHM

**Course Code: DSE6504**

**Credit Units: 03**

## **Course Objective:**

The objective to this course is to equip students with advanced concepts of data structures like Huffman trees, Self organizing trees, different types of heaps and their time complexity. Advanced topics and graphs and graph algorithms, geometric algorithms and parallel algorithms.

## **Course Contents:**

### **Module-I:**

ADVANCED TREES: Definitions Operations on Weight Balanced Trees (Huffman Trees), 2-3 Trees and Red- Black Trees, Splay Tree. Augmenting Red-Black Trees to Dynamic Order Statistics and Interval Tree Applications. Operations on Disjoint sets and its union-find problem Implementing Sets. Dictionaries, Priority Queues and Concatenable Queues using 2-3 Trees.

### **Module-II:**

MERGEABLE HEAPS: Mergeable Heap Operations, Binomial Trees Implementing Binomial Heaps and its Operations, 2-3-4. Trees and 2-3-4 Heaps. Amortization analysis and Potential Function of Fibonacci Heap Implementing Fibonacci Heap. SORTING NETWORK: Comparison network, zero-one principle, bitonic sorting and merging network sorter.

### **Module-III:**

GRAPH THEORY DEFINITIONS: Definitions of Isomorphic Components. Circuits, Fundamental Circuits, Cut-sets. Cut-Vertices Planer and Dual graphs, Spanning Trees, Kuratowski's two Graphs.

### **Module-IV:**

GRAPH THEORY ALGORITHMS: Algorithms for Connectedness, Finding all Spanning Trees in a Weighted Graph and Planarity Testing, Breadth First and Depth First Search, Topological Sort, Strongly Connected Components and Articulation Point. Single Min-Cut Max-Flow theorem of Network Flows. Ford-Fulkerson Max Flow Algorithms.

### **Module-V:**

Geometric algorithms: Point location, convex hulls and Voronoi diagrams, Arrangements. Parallel algorithms: Basic techniques for sorting, searching, merging

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# ANALYSIS AND DESIGN OF ALGORITHM

**Course Code: DSE6505**

**Credit Units: 03**

## **Course Objective:**

The designing of algorithm is an important component of computer science. The objective of this course is to make students aware of various techniques used to evaluate the efficiency of a particular algorithm. Students eventually should learn to design efficient algorithm for a particular program

## **Course Contents:**

### **Module I: Introduction**

Algorithm Design paradigms - motivation, concept of algorithmic efficiency, run time analysis of algorithms, Asymptotic Notations. Recurrences- substitution method, recursion tree method, master method

### **Module II: Divide and conquer**

Structure of divide-and-conquer algorithms: examples; Binary search, quick sort, Merge sort, Strassen Multiplication; Analysis of divide and conquer run time recurrence relations.

#### **Greedy Method**

Overview of the greedy paradigm examples of exact optimization solution (minimum cost spanning tree), Approximate solution (Knapsack problem), Single source shortest paths, traveling salesman

### **Module III: Dynamic programming**

Overview, difference between dynamic programming and divide and conquer, Applications: Shortest path in graph, chain Matrix multiplication, Traveling salesman Problem, longest Common sequence, knapsack problem

### **Module IV: Graph searching and Traversal**

Overview, Representation of graphs, strongly connected components, Traversal methods (depth first and breadth first search)

#### **Back tracking**

Overview, 8-queen problem, and Knapsack problem

#### **Brach and bound**

LC searching Bounding, FIFO branch and bound, LC branch and bound application: 0/1 Knapsack problem, Traveling Salesman Problem

### **Module V: Computational Complexity**

Complexity measures, Polynomial Vs non-polynomial time complexity; NP-hard and NP-complete classes, examples.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

## SOFTWARE ENGINEERING LAB

**Course Code: DSE6506**

**Credit Units: 01**

**Software Required:** Rational Rose

**Assignments will be provided for the following:**

- Use of Rational Rose for visual modeling.
- Creating various UML diagrams such as use case, sequence, collaboration, activity, state diagram, and class diagrams.

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## JAVA PROGRAMMING LAB

**Course Code: DSE6507**

**Credit Units: 01**

**Software Required: JDK1.3**

**Assignments will be provided for the following:**

- Java programs using classes & objects and various control constructs such as loops etc, and data structures such as arrays, structures and functions
- Java programs for creating Applets for display of images and texts.
- Programs related to Interfaces & Packages.
- Input/Output and random files programs in Java.
- Java programs using Event driven concept.
- Programs related to network programming.

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## ADVANCE DATA STRUCTURES AND ALGORITHM LAB

**Course Code: DSE6509**

**Credit Units: 01**

Programs based on Implementation of Graphs using Adjacency Matrix, Linked List , implementation of graph algorithms like BFS,DFS, Minimum Spanning Tree, Binary Search Tree, Knapsack Problem using Greedy Algorithm, Dynamic Programming, Shortest Path Algo (Dijkstra's), Implementing B-Tree,AVL Tree ,Red Black Tree. Implementing Sets, Dictionaries, Priority Queue using Heap.

**Recommended Software:** Java/C++/C/Python

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## ANALYSIS AND DESIGN OF ALGORITHM LAB

**Course Code: DSE6510**

**Credit Units: 01**

**Lab assignment will be based on the following:**

Programs for binary search and Quick sort by using divide and conquer techniques.

Programs on algorithm based on greedy method.

Programs on algorithm based on Dynamic programming.

Programs on Depth First and Breadth Search traversals of graphs.

Programs on algorithm based on backtracking.

Programs on algorithm based on Brach and Bound.

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## PYTHON PROGRAMMING LAB

**Course Code: DSE6508**

**Credit Units: 01**

### Course Contents:

- Setting up python on Windows/Linux/Mac
- First program in python
- Programs related to basic input/output.
- Programs related to variables, strings, numbers
- Programs related to Lists and Tuples
- Programs related to Functions
- Programs related to If Statements
- Programs related to While Loops and Input
- Programs related to Basic Terminal Apps
- Programs related to Dictionaries
- Programs related to Classes
- Programs related to Exceptions
- Programs related to GUI programming
- Using Word, Excel, PDF files in python.
- Web programming in python,
- Case study of application areas of python.

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## SUMMER INTERNSHIP EVALUATION-I

**Course Code: DSE6535**

**Credit Units: 03**

**Course Objective:**

The objective of this course is to provide practical training on some live projects that will increase capability to work on actual problem in industry. This training may undergo in an industrial environment or may be an in house training on some latest software which is in high demand in market. This training will be designed such that it will useful for their future employment in industry.

**Examination Scheme:**

Feedback from industry/work place	20
Training Report	40
Viva	15
Presentation	25
<b>Total</b>	<b>100</b>

# FUZZY LOGIC & GENETIC ALGORITHM

Course Code: DSE6511

Credit Units: 03

## Course Objective:

This course is intended to mathematical introduction to the analysis, synthesis, and design of control systems using fuzzy logic and Genetic Algorithm. A study of the fundamentals of fuzzy sets, operations on these sets, and their geometrical interpretations. Methodologies to design fuzzy models and feedback controllers for dynamical systems, Various applications and case studies.

fuzzy inference systems, fuzzy logic control, parallel processors, multilevel optimization- real life problem and other machine intelligence applications of fuzzy logic and Genetic Algorithm.

## Course Contents:

### Module I: Introduction

Crisp sets: Overview, Fuzzy sets : Basic types and concepts, Characteristics and significance of paradigm shift, Fuzzy sets vs Crisp sets, Representation of fuzzy sets

### Module II: Fuzzy operations and Fuzzy arithmetic

Types of operations, Fuzzy complements, Fuzzy intersection: t-norms, Fuzzy union: t-conorms, Combination of operations, Aggregation operation, Fuzzy numbers, Linguistic variables, Arithmetic operations on intervals, Arithmetic operations on Fuzzy numbers, Lattice of Fuzzy numbers, Fuzzy equation.

### Module III: Fuzzy systems And Applications

General discussion, Fuzzy controller: Overview and example, Fuzzy systems and neural networks, Fuzzy neural network, Fuzzy automata. Pattern recognition in fuzzy logic, Database and information retrieval in fuzzy logic, decision making in fuzzy logic, engineering applications and fuzzy logic, Fuzzy logic in Medicine and Economics

### Module- IV: Introduction to Genetic Algorithm

Fundamentals of genetic algorithm: A brief history of evolutionary computation, biological terminology, search space encoding, reproduction elements of genetic algorithm genetic modeling, comparison of GA and traditional search methods. The Fundamental Theorem, Schema Processing at work, Two-armed and k-armed Bandit problem, The Building block hypothesis.

### Module-V: Genetic Technology

Genetic technology:- steady state algorithm, fitness scaling, inversion. Genetic programming:- Genetic Algorithm in problem solving, Implementing a Genetic Algorithm:- computer implementation, operator (reproduction, crossover and Mutation, Fitness Scaling, Coding, Discretization). Knowledge based techniques in Genetic Algorithm. Advanced operators and techniques in genetic search:- Dominance, Diploidy and Abeyance. Inversion and other reordering operators, Niche and speciation.

### Module- VI: Applications

5 lecture hours

Genetic Algorithm in engineering and optimization-natural evolution –Simulated annealing and Tabu search -Genetic Algorithm in scientific models and theoretical foundations. Applications of Genetic based machine learning-Genetic Algorithm and parallel processors- composite laminates- constraint optimization- multilevel optimization- real life problem.

## Modes of Evaluation: Quiz/Assignment/ Seminar/Written Examination

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# VHDL PROGRAMMING

**Course Code: DSE6512**

**Credit Units: 02**

## **Course Objective:**

VHDL is commonly used as a design-entry language for field-programmable gate arrays and application-specific integrated circuits in electronic design automation of digital circuits. The course aims to discuss the syntax of the language to model a digital system.

## **Course Contents:**

### **Module I**

Fundamental VHDL Units, LIBRARY Declarations, ENTITY, ARCHITECTURE, Introductory Examples, Specification of combinational systems using VHDL, Introduction to VHDL, Basic language element of VHDL, Behavioural Modeling, Data flow modeling, Structural modeling, Subprograms and overloading, VHDL description of gates.

### **Module II**

Data Types; Pre-Defined Data Types, User-Defined Data Types, Subtypes, Arrays, Port Array, Records, Signed and Unsigned Data Types, Data Conversion

### **Module III: Sequential codes**

PROCESS: Signals and Variables, IF, WAIT, CASE, LOOP, CASE versus IF, CASE versus WHEN, Bad Clocking, Using Sequential Code to Design Combinational Circuits  
Description and design of sequential circuits using VHDL,

### **Module IV**

Standard combinational modules, Design of a Serial Adder with Accumulator, State Graph for Control Network, design of a Binary Multiplier, Multiplication of a Signed Binary Number, Design of a Binary Divider.

### **Module V**

Micro programmed Controller, Structure of a micro programmed controller, Basic component of a micro system, memory subsystem. Overview of PAL, PLA, FPGA, CPLD.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

## VHDL PROGRAMMING LAB

**Course Code: DSE6513**

**Credit Units: 01**

**Software Required:** Mentor Graphics

**Topics covered in lab will include:**

- Designing Basic Gates.
- Designing Combinational circuits like adder, multiplexer, PLA
- Designing Sequential Circuits like flip-flops, counters, registers.

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# DISTRIBUTED OPERATING SYSTEM

**Course Code: DSE6514**

**Credit Units: 03**

## **Course Objective:**

This Subject provides students with an in-depth knowledge about the operating system. The former treats the standard principles of single processor system, including processes, synchronization, I/O, deadlocks, mutual exclusion, fault tolerance, Memory Management, File Management systems, security and so on. This subject covers distributed operating system in detail, including communication process, file system and memory management synchronization and so on but this time in the context of distributed systems

## **Course Contents:**

### **Module I: Introduction**

Functions of an Operating System, Design Approaches, Review of Network Operating System and Distributed Operating System, Issue in the design of Distributed Operating System, Overview of Computer Networks, Modes of communication, System Process, Interrupt Handling, Handling Systems calls, Protection of resources, Micro-Kernel Operating System, client server architecture.

### **Module II: Distributed Mutual Exclusion**

Lamport's Algorithm, The Critical Section Problem, Other Synchronization Problems, Language Mechanisms for Synchronization, Axiomatic Verification of Parallel Programs, Inter process communication (Linux IPC Mechanism), Remote Procedure calls, RPC exception handling, security issues, RPC in Heterogeneous Environment, Case studies.

### **Module III: Synchronization in Distributed System**

Deadlocks in Distributed Systems, Centralized Deadlock- Detection Algorithms, Distributed Deadlock Detection Algorithm, Path Pushing Algorithm, Edge Chasing Algorithm, Diffusion Computation Based Algorithm.

Clock Synchronization: Logical clocks, Physical clocks, Vector Clock, clock synchronization algorithms, Mutual Exclusion, Non-Token Based Algorithms – Lamport's Algorithm, Token-Based Algorithms, Suzuki-Kasami's Broadcast Algorithm, Election Algorithms,

### **Module IV: Distributed Shared Memory**

Introduction, Architecture & Motivation Algorithms for Implementing DSM: The Central – Server Algorithms, The Migration Algorithms, The Read – Replication Algorithms, The Full- Replication Algorithms. Memory Coherence, Coherence Protocols: Write Invalidate Protocol, Write Update Protocol, Design Issues: Granularity, Page Replacement

### **Module V: Concurrency Control Algorithms**

Basic Synchronization Primitives, Two –Phase Locking Protocol, Timestamp Based Algorithms, Two –Phase Commit Protocol. Voting Protocols: Static Voting, Majority Based Dynamic Voting Protocol.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# Syllabus - Sixth Semester

## MICROPROCESSOR

**Course Code: DSE6601**

**Credit Units: 03**

### Course Objective:

This course deals with the systematic study of the Architecture and programming issues of 8085-microprocessor family. The aim of this course is to give the students basic knowledge of the above microprocessor needed to develop the systems using it.

### Course Contents:

#### Module I: Introduction to Microcomputer Systems

Introduction to Microprocessors and microcomputers, Study of 8 bit Microprocessor, 8085 pin configuration, Internal Architecture and operations, interrupts, Stacks and subroutines, various data transfer schemes.

#### Module II: ALP and timing diagrams

Introduction to 8085 instruction set, advance 8085 programming, Addressing modes, Counters and time Delays, Instruction cycle, machine cycle, T-states, timing diagram for 8085 instruction.

#### Module III: Memory System Design & I/O Interfacing

Interfacing with 8085. Interfacing with input/output devices (memory mapped, peripheral I/O), Cache memory system. Study of following peripheral devices 8255, 8253, 8257, 8255, 8251.

#### Module IV: Architecture of 16-Bit Microprocessor

Difference between 8085 and 8086, Block diagram and architecture of 8086 family, pin configuration of 8086, Minimum mode & Maximum mode Operation. Internal architecture of 8086, Bus Interface Unit, Register Organization, Instruction Pointer, Stack & Stack pointer, merits of memory segmentation, Execution Unit, Register Organization.

#### Module V: Pentium Processors

Internal architecture of 8087, Operational overview of 8087, Introduction to 80186, 80286, 80386 & 80486 processors, Pentium processor.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# SYSTEM PROGRAMMING AND COMPILER CONSTRUCTION

**Course Code: DSE6602**

**Credit Units: 03**

## **Course Objective:**

This course provides knowledge to design various system programs.

## **Course Contents:**

### **Module I: Introduction**

Definition, Evolution, Components, Editors: Introduction to system Programming Line editor, Full screen editor and multi window editor. Case study MS-Word, DOS Editor and vi editor.

### **Module II: Assemblers**

First pass and second pass of assembler and their algorithms. Assemblers for CISC Machines: case study x85 & x86 machines.

### **Module III: Compilers & Macro Processor**

Introduction to various translators. Various phases of compiler. Bootstrapping for compilers, Introduction to. Design of a compiler in C++ as Prototype. Basic Macro Processor functions- Macro definition & expansion – Macro Processor Algorithm & Data Structures, conditional – Macro Expansion, Keyword Macro Parameters, Macro with in Macro Implementation, case study MASM and ANSI C Macro language.

### **Module IV: Debuggers, Loaders and Linkers**

Introduction to various debugging techniques. Case study:- Debugging in Turbo C++ IDE. Linkers and Loaders Concept of linking. Case study of Linker in x86 machines. Loading of various loading schemes.

### **Module V: Operating System**

Booting techniques and sub-routines. Design of kernel and various management for OS. Design of Shell and other utilities, (**Overview of Unix OS, Difference Between Unix and Linux, Commands in Unix.**)-changes made

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>

# ADVANCED JAVA PROGRAMMING

**Course Code: DSE6603**

**Credit Units: 03**

## **Course Objective:**

The objective is to equip the students with the advanced feature of contemporary java which would enable them to handle complex programs relating to managing data and processes over the network. The major objective of this course is to provide a sound foundation to the students on the concepts, precepts and practices, in a field that is of immense concern to the industry and business.

## **Course Contents:**

### **Module I: Distributed Computing**

Introduction to Java RMI, RMI services, RMI client, Running client and server, Introduction of Swing, Swing Components, Look and Feel for Swing Components, Introduction to Multimedia Programming.

### **Module II: Database Connectivity**

ODBC and JDBC Drivers, Connecting to Database with the java.sql Package, Using JDBC Terminology, JDBC with mysql, postgresql.

### **Module III: Servlet Programming**

Introduction to Servlets, Servlet Life Cycle, Servlet based Applications, Servlet and HTML.Filters, jdbc with servlets, session Management techniques in detail.

### **Module IV: JSP Programming**

JSP: Introduction to JSP, JSP implicit objects, JSP based Applications, Java. Net. Login & Logout Example, jdbc with jsp.

### **Module V: JEE Web Appliaction**

The Model-View-Controller Architecture What is Struts, Struts Tags, Creating Beans, Other Bean Tags, Bean Output, Creating HTML Forms, The Action Form class The Action class, Simple Struts: a simple Struts application; Introduction to EJB.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# ADVANCE DATABASE MANAGEMENT SYSTEM

Course Code: DSE6604

Credit Units: 03

## Course Objective:

The objective of this course is to expose the students to the implementation techniques of database system. This course explains techniques for query processing and optimization with transaction and concurrency control techniques

## Course Contents:

### Module I: Relational Databases

Integrity Constraints revisited, Extended ER diagram, Relational Algebra & Calculus, Functional, Multivalued and Join Dependency, Normal Forms, Rules about functional dependencies.

### Module II: Query Processing and Optimization

Valuation of Relational Operations, Transformation of Relational Expressions, Indexing and Query Optimization, Limitations of Relational Data Model, Null Values and Partial Information.

### Object Oriented and Object Relational Databases

Modeling Complex Data Semantics, Specialization, Generalization, Aggregation and Association, Objects, Object Identity, Equality and Object Reference, Architecture of Object Oriented and Object Relational Databases

### Module III: Parallel and Distributed Databases

Distributed Data Storage – Fragmentation & Replication, Location and Fragment

Transparency Distributed Query Processing and Optimization, Distributed Transaction Modeling and concurrency Control, Distributed Deadlock, Commit Protocols, Design of Parallel Databases, Parallel Query Evaluation.

### Advanced Transaction Processing

Nested and Multilevel Transactions, Compensating Transactions and Saga, Long Duration Transactions, Weak Levels of Consistency, Transaction Work Flows, Transaction Processing Monitors.

### Module IV

Multimedia databases, Databases on the Web and Semi-Structured Data

Case Study: Oracle Xi

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# DIGITAL COMPUTER ORGANIZATION

**Course Code: DSE6605**

**Credit Units: 03**

## **Course Objective:**

The Objective of this course is to expose the students to the fundamentals and the concepts of Digital & Computer Organization and Representation of Information and Basic Building Blocks, Basic Organization, Memory Organization, Input-Output Organization, Processor Organization etc. This course is designed to understand the concepts of Computer Organization for Research & Development as well as for application.

## **Course Contents:**

### **Module I: Representation of Information and Basic Building Blocks**

Number Systems, Binary, Octal, Hexadecimal, Character Codes (BCD, ASCII, EBCDIC), Logic gates, Boolean algebra, K-map Simplification, Half adder, Full adder, Decoders, Multiplexes, Binary Counters, Flip/Flops: SR FF, JK FF, Master Slave FF, T and D FF, Registers: Parallel and Serial Registers, Counters (Synchronous & Asynchronous), ALU, Micro-Operation, ALU-chip.

### **Module II: Basic Organization**

Von Neumann Machine (IAS Computer), Operational flow chart (Fetch, Execute), Instruction Cycle, Organization of Central Processing Unit, Hardwired and Micro programmed control unit, Single Organization, General Register Organization, Stack Organization, Addressing Modes, Instruction Formats, Data transfer & Manipulation, I/O organization, Bus Architecture, Programming Registers.

### **Module III: Memory Organization**

Memory hierarchy, Main Memory (RAM/ROM chips) with mapping, Auxiliary memory, Associative memory and its mapping, Virtual memory, Cache memory with mapping techniques, Memory management hardware.

### **Module IV: Input-Output organization**

Peripheral devices, I/O interface, Direct memory access, Modes of transfer, Priority Interrupt, I/O Processors, Serial Communication, Asynchronous data transfer, Strobe Control, Handshaking, I/O Controllers, CPU-IOP Communication.

### **Module V: Processor Organization**

Introductory Concept of pipeline, Flynn's Classification, Parallel processing. RISC and CISC characteristics, arithmetic pipeline with example.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

## MICROPROCESSOR LAB

**Course Code: DSE6606**

**Credit Units: 01**

### Course Contents:

- To load the numbers 49H and 53H in the memory location 9510 and 9511 respectively and add the contents of memory location 9601
- To write assembly language programming for 8 bit addition with and without carry.
- To write assembly language programming for 8 bit subtraction with and without borrow.
- To write assembly language programming for 8 bit multiplication and division.
- To write assembly language programming for sorting an array of numbers in ascending and descending order.
- To write assembly language programming with additional instructions.
- To write and execute a program using stacks.
- To study and program the programmable peripheral interface (8255) board.
- To study and program the programmable interval timer (8253) board.
- To study and program the programmable DMA controller (8257) board.
- To study and program the programmable interrupt controller (8259) board.

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# SYSTEM PROGRAMMING AND COMPILER CONSTRUCTION LAB

**Course Code: DSE6607**

**Credit Units: 01**

**Software Required:**Turbo C++

**Assignment will be provided for following:**

- WAP to determine the length of the machine instructions.
- WAP to differentiate between symbols, literals and tokens.
- WAP to implement Symbol table.
- WAP to implement base table.
- WAP to find the relative addresses.
- Design a macro to perform add operation.
- On the basis of above program display the values of PC, LC and IR.
- Perform programming on loader based programme.
- Perform programming on linker based programme.
- Perform Programming on editor based programme.

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## ADVANCED JAVA PROGRAMMING LAB

Course Code: DSE6608

Credit Units: 01

Programming Language: Java

1. WAP to display label on a frame with the help of JFrame
2. WAP to display six buttons on a panel using JFrame.
3. WAP. To display an image and a string in a label on the JFrame.
4. WAP that implement a JApplet that display a simple label
5. WAP that implement a JApplet and display the following frame
  - a. Customer name
  - b. Customer number
  - c. Age
  - d. Address
6. WAP to access a table Product Master from MS-Access using Java code.
7. WAP that implement a simple servlet program.
8. WAP for authentication, which validate the login-id and password by the servlet code.
9. WAP to connecting a database using user-id and password.
10. WAP to insert data into the database using the prepared statement.
11. WAP to read data from the database using the ResultSet.
12. WAP to read data send by the client (HTML page) using servlet.
13. WAP to include a HTML page into a JSP page.
14. WAP to handle the JSPEException.
15. WAP to read data send by a client (HTML page) using JSP.

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## ADVANCE DATABASE MANAGEMENT SYSTEM LAB

Course Code: DSE6609

Credit Units: 01

**Programs should be based on following topics:**

**Quick Review** of Simple SQL Statements, SQL Built-in Functions, Primary Key, Foreign Key, Normalization, Joins View, Union. **Emphasis** on PL/SQL, Cursors 8. Exception handling, Procedure, Functions, Trigger, concurrency control, transaction processing. Introduction to SQLite. Recommended Software: PostgreSQL, MySQL, Oracle.

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# CRYPTOGRAPHY AND NETWORK SECURITY

**Course Code: DSE6610**

**Credit Units: 03**

## **Course Objective:**

The objective here is to acquaint the students with the application of networking. Detail description of the various TCP/IP protocols and the working of ATM and its performance, Network security and authentication, and various algorithms related to it has been dealt, to get a practical approach.

## **Course Contents:**

### **Module I: Advanced TCP/IP**

TCP Services, TCP format and connection management, Encapsulation in IP, UDP Services, Format and Encapsulation in IP, IP Services, Header format and addressing, Fragmentation and reassembly, Migration to IPv6, Protocols: BOOTP, DHCP, ICMP, IGMP; Internet Routing Protocols: OSPF, RIP, EIGRP, BGP.

### **Module II: High Speed Networks**

Packet Switching Networks; Frame Relay Networks; Asynchronous Transfer Mode (ATM); ATM protocol Architecture; ATM logical connections; ATM cells; ATM Service categories; ATM Adaptation Layer; QoS in ATM and Frame Relay

### **Module III: High Speed LANs**

LAN Ethernet, fast Ethernet, gigabit Ethernet, FDDI, DSL, ADSL

### **Module IV: Wireless communication**

Wireless networks, wireless channels, channel access, network architecture, IEEE 802.11, Bluetooth, Satellite Networks.

### **Module V: Network Security and Management**

Principles of cryptography, Authentication, integrity, key distribution and certification, Access control and Firewalls, attacks and counter measures, security in many layers. Infrastructure for network management, The internet standard management framework, SMI, MIB, SNMP, Security and administration.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# SOFTWARE TESTING AND QUALITY ASSURANCE

**Course Code: DSE6611**

**Credit Units: 03**

## **Course Objective:**

To apply all the testing skills of software testing in such a way that it can provide and improve the software development methodology. Basic objective of Software Testing is to develop methods and procedures that can scale up for large systems and that can be used to consistently produce high-quality software at low cost and with a small cycle for the development.

## **Course Contents:**

### **Module I**

Software Testing Fundamentals - Software Testing Definition, Importance, objectives, why is it too hard? Errors, faults and failure. Testing process, STLC, QA and QC, Verification and Validation, Inspections and walkthroughs, Test Plan, test cases, drivers, stubs, Validation checks.

### **Module II**

Black box testing - Definition, Equivalence Class, Boundary Value Analysis, Documentation testing, state based testing, White box testing – Definition, Difference between black box testing and white box testing, Path testing, Cyclomatic complexity, graph metrics, mutation testing.

### **Module III**

Levels of testing- Low level testing- Unit testing and Integration testing. High level testing- System testing, performance testing, stress testing, load testing, volume testing, smoke and sanity testing, Installation testing, usability testing, website testing, security testing, recovery testing, Domain testing, Static testing and dynamic testing,

### **Module IV**

Test cases– Designing, Execution. Reducing number of test cases- Prioritization guidelines, priority category, scheme, risk analysis, regression testing. Designing scripts, RTM, TRS.

### **Module V**

Cohesion and coupling in class testing, GUI testing, integration and system testing, Automated Testing tools - Manual vs. Automated testing, Static and Dynamic Testing tools, Characteristics: Rational tools, Quality Standards- CMM, ISO, Six sigma, McCall's Quality Factors and Criteria, Quality Metrics

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# VLSI DESIGN

**Course Code: DSE6612**

**Credit Units: 02**

## **Course Objective:**

In the recent years, IC manufacturing technology has gone through dramatic evolution and changes, continuously scaling to ever smaller dimensions. This scaling has a double impact on the design of ICs. First, the complexity of the designs that can be put on a single die has increased dramatically which led to new design methodologies. At the same time, this plunge into deep submicron space causes devices to behave differently and brings challenging issues to forefront. This course along with the course of Digital Circuits and Systems II and Analog CMOS IC design will give you many of the basic essentials to work in the area of Circuit Design. Since this course takes the latest trends in the industry into account, you will find yourself at a definite edge.

## **Course Contents:**

### **Module I: Devices and the wire**

Diode, dynamic and transient behaviour-diffusion capacitance, SPICE diode model.

MOSFET STATIC BEHAVIOUR: Threshold voltage and its dependence on  $V_{SB}$  MOSFET Operation in resistive and saturation region, channel length modulation, Velocity saturation and its impact on sub micron devices, sub threshold conduction, Model for manual analysis, Equivalent resistance for MOSFET in (velocity) saturated region, comparison of equations for PMOS and NMOS, depletion and enhancement device

DYNAMIC BEHAVIOUR: Channel capacitance in different regions of operation, junction capacitance, Level 1 SPICE MODELS for MOS transistors

The Wire: Interconnect parameters: resistance, capacitance and Inductance, Lumped RC model, Elmore Delay

### **Module II: CMOS Inverter**

VTC of an ideal inverter, Switching Model of the CMOS inverter: nMOS /pMOS discharge and charge, VTC of CMOS inverter: PMOS AND NMOS operation in various regions including velocity saturation, Switching threshold,  $(W/L)_p/(W/L)_n$  ratio for setting desired  $V_M$  with and without velocity saturation, Noise Margins, buffer

Ratioed logic: Pseudo NMOS inverter and PMOS to NMOS ratio for performance, tristate inverter, Resistive load inverter.

Load Capacitance calculations: fan out capacitance, self capacitance calculations: Miller effect, wire capacitance; Improving delay calculation with input slope, Propagation delay: first order analysis, analysis from a design perspective, sizing a chain of inverters for minimum delay, choosing optimum number of stages

Power, Energy and Energy Delay: Dynamic power consumption, Static power, Glitches and power dissipation due to direct path currents, power and delay trade off, Transistor sizing for energy minimization

### **Module III: Combinational circuits**

CMOS LOGIC: Good 0 and poor 0, Good 1 and poor 1, series and parallel N and P switches, 2 and Higher input NAND and NOR gates, Functions of the type  $(AB+C(D+E))$  and their complements, XOR and XNOR gates, 2 input Multiplexer, Full Adder; Transistor sizing in CMOS logic for optimal delay,

Pseudo NMOS NAND NOR and other gates and the transistor sizing, Introduction to DSVCL logic, CPL AND/NAND, OR/NOR, XOR/XNOR gates

Logical effort, Electrical Effort, Branching effort, Examples of sizing Combinational logic chains for minimum delay. Pass-transistor logic, pass gate configurations for nmos and pmos, 2 input and 4 input MUX, XOR, XNOR and implementation of general functions like  $AB+AB*C+A*C*$ , Robust and Efficient PTL Design, Delay of Transmission Gate chain

Dynamic CMOS design: Precharge and Evaluation, charge leakage, bootstrapping, charge sharing, Cascading Dynamic Gates, DOMINO Logic, Optimization of Domino Logic Gates, simple example circuit implementations of DOMINO logic

**Module IV: Sequential Logic circuits**

Principle of Bistability, NAND and NOR based SR latch, and clocked SR Latch, JK latch, example of master slave flip flop, CMOS D latch, MUX based Latches, master slave edge triggered register, non ideal clocks, clock overlap, C2MOS register, TSPCR Register, Schmitt Trigger, Pipelining and NORA CMOS

**Module V: Layout Design Rules**

Introduction to CMOS Process technology, Layout of CMOS inverter, CMOS NAND and NOR gates, Concept of Euler path, and stick diagrams for functions like  $(AB+E+CD)^*$

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

## VLSI DESIGN LAB

**Course Code: DSE6613**

**Credit Units: 01**

### Course Contents:

- Using Design architect and simulate V vs time for CMOS inverter using same W/L ratio for PMOS and NMOS.
- Design and simulate again by Sizing PMOS to NMOS appropriately and repeat experiment 1
- Design and simulate V vs t for 2 input NAND and Nor gates.
- Design and Simulation for general CMOS functions
- One bit full adder simulation
- 2:1 MUX using pass transistor logic
- Other functions using pass transistor logic
- Layout of CMOS inverter
- Layout of NAND and NOR gates
- Design and Simulation SR latch using NAND and NOR representations
- Design and simulate D flip flop

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# Syllabus - Seventh Semester

## DATA WAREHOUSING AND DATA MINING

**Course Code: DSE6701**

**Credit Units: 03**

### Course Objective:

The objective of this course is to introduce students to Data Warehousing & Data mining technologies that will help To Inspect, Control and Secure Information through Databases.

### Course Contents:

#### Module I: Introduction to Data Warehousing

The need for data ware housing, Operational & Informational Data Stores, Data Warehouse definition & Characteristics, Data Warehouse role & Structure, The cost of warehousing data, Foundation & Roots of Data,

#### Module II: Data Warehousing Components& Architecture:

Stores, warehouses and marts, Data warehouse database, Sourcing, acquisition, clean up & transformation tools, meta data, Access tools, Data ware house administration & management,. operational & External Database layer, Information access layer, data access layer, metadata layer, process management layer, Application messaging layer, Physical DW layer, Data staging layer.

#### Module III: Building a Data Warehouse:

Business, Design, Technical & Implementation Considerations, DW project plan. Overview of Mapping the DW to Multiprocessor Architecture, & DBMS Schemas for Decision Support.

#### Module IV: Metadata and OLAP:

METADATA: Definition, repository, management & trends.

OLAP: Need, guidelines, Multi Relational & Multi-Dimensional: MOLAP, ROLAP, OLAP Tools.

#### Module V: Data Mining & Visualization:

Techniques to mine the data, Market Basket analysis, Measuring data mining effectiveness, embedding data mining to business process, current limitations and challenges in DM.

Introduction to EIS, The future of Data Mining, Warehousing & Virtualization, Applications: PowerBuilder, Forte. Technical Exposure to Data Mining

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# COMPUTER GRAPHICS

**Course Code: DSE6702**

**Credit Units: 03**

## **Course Objective:**

The objective of the course is to provide the understanding of the fundamental graphical operations and the implementation on computer, the mathematics behind computer graphics, including the use of spline curves and surfaces. It gives the glimpse of recent advances in computer graphics, user interface issues that make the computer easy, for the novice to use.

## **Course Contents:**

### **Module I: Introduction to Graphics and Graphics Hardware System**

Application of computer graphics, Video Display Devices, Raster Scan Display, Random Scan Display, Input Devices, Graphic Software and graphics standards, Numerical based on Raster and Random scan display, Frame buffer, Display processor.

### **Module II: Output Primitives and Clipping operations**

Algorithms for drawing 2D Primitives lines (DDA and Bresenham's line algorithm), circles (Bresenham's and midpoint circle algorithm), Antialiasing and filtering techniques. Line clipping (Cohen-Sutherland algorithm), Curve clipping algorithm, and polygon clipping with Sutherland-Hodgeman algorithm, Area fill algorithms for various graphics primitives: Scanline fill algorithm, boundary fill algorithm, flood fill algorithm, Polygon representation, various method of Polygon Inside test: Even-Odd method, winding number method, Character generation techniques.

### **Module III: 2D Geometric transformation**

2D Transformation: Basic transformation, Translation, Rotation, Rotation relative to an arbitrary point, scaling, Matrix Representations and Homogeneous coordinates, window to viewport transformation.

### **Module IV: 3D Geometric transformation**

3D Concepts: Parallel projection and Perspective projection, 3D Transformations, composite 3D transformation, co-ordinate transformation, Inverse transformation

### **Module V: Object modeling and Visible Surface detection**

fractal geometry methods, fractal dimensions, Geometric construction of deterministic self-similar fractals, Iterated function system to generate fractals. Bezier curves and Bezier surfaces, B-spline curves and surfaces, Visible surface detection method: Basic illumination, diffuse reflection, specular reflection, shadows. Ray tracing method, Depth-buffer method, A-buffer method, Depth-sorting method (Painter's algorithm), Binary search partition method, Scan line method,

### **Module VI: Introduction to multimedia**

Design of animation sequences, Computer Animation languages, Elementary filtering techniques and elementary Image Processing techniques, graphics library functions used in animation design

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# ADVANCED COMPUTER ARCHITECTURE

**Course Code: DSE6703**

**Credit Units: 03**

## **Course Objective:**

With increase in availability of system resources, concept of parallel architecture has obtained immense popularity. This course provides a comprehensive study of scalable and parallel computer architectures for achieving a proportional increase in performance with increasing system resources. In this course we have discussed the theory, technology, architecture (hardware) and software aspects of parallel computer and Vector computers.

## **Course Contents:**

### **Module I: Parallel computer models**

The state of computing, Multiprocessors and multicomputers, Multivector and SIMD computers, Architectural development tracks

Program and network properties: Conditions of parallelism, Data and resource dependences, Hardware and software parallelism, Program partitioning and scheduling, Grain size and latency, Program flow mechanisms, Control flow versus data flow, Data flow architecture, Demand driven mechanisms, Comparisons of flow mechanisms

### **Module II: System Interconnect Architectures**

Network properties and routing, Static interconnection networks, Dynamic interconnection Networks, Multiprocessor system interconnects, Hierarchical bus systems, Crossbar switch and multiport memory, Multistage and combining network.

### **Module III: Processors and Memory Hierarchy**

Advanced processor technology, Instruction-set Architectures, CISC Scalar Processors, RISC Scalar Processors, Superscalar Processors, VLIW Architectures, Vector and Symbolic processors

Memory Technology: Hierarchical memory technology, Inclusion, Coherence and Locality, Memory capacity planning, Virtual Memory Technology

### **Module IV: Backplane Bus System**

Backplane bus specification, Addressing and timing protocols, Arbitration transaction and interrupt, Pipelining: Linear pipeline processor, Nonlinear pipeline processor, Instruction pipeline design, Mechanisms for instruction pipelining, Dynamic instruction scheduling, Branch handling techniques, Arithmetic Pipeline Design, Computer arithmetic principles.

### **Module V: Vector Processing Principles**

Vector instruction types, Vector-access memory schemes.

**Synchronous Parallel Processing: SIMD Architecture and Programming Principles, SIMD Parallel Algorithms**

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# ADVANCED COMPUTER NETWORKS

**Course Code: DSE6704**

**Credit Units: 03**

## **Course Objective:**

The objective of the course is to provide thorough understanding & in-depth knowledge of concepts in computer networks Such as Internet protocols and routing, local area networks, wireless communications and networking, performance analysis, congestion control, TCP, network address translation, multimedia over IP, switching and routing, mobile IP, multicasting, IPv6. Peer-to-peer networking, network security, and other current research topics. A focus will be placed on wireless networking, reflecting rapid advances in this area. This course motivates the students to explore current research areas in the same field.

## **Course Contents:**

### **Module I : Introduction to Networks**

Networking introduction, Reference Models, TCP/IP, OSI, Addressing, Protocol Layering, Transmission impairment, performance, Switching, Transmission Media, Introduction to MAC, Channel allocation, MAC protocol classification for LAN's, MAN's, MAC protocols for Adhoc N/ws, MAC Protocol for WLAN's(adhoc and sensor n/ws), Introduction to Ethernet protocol ( Fast, Gigabit and standard Ethernet).

### **Module II: Network Layer**

Network Layer Design Issues, Routing Algorithms, Congestion Control Algorithms, Quality of Service, Internet Working, Network Layer in Internet.  
IPv6 basic protocol, extensions and options, support for QoS, security, etc., Changes to other protocols, Application Programming Interface for IPv6.

### **Module III : Mobile IP**

Mobile IP, IP Multicasting. Multicast routing protocols, address assignments, session discovery, etc.

### **Module IV : Transport Layer and Application Layer**

The Transport Protocol: The Transport Service, Elements of transport protocol, a simple Transport Protocol, Internet Transport Protocols UDP, Internet Transport Protocols TCP, TCP extensions for high-speed networks, transaction-oriented applications Performance Issues.

The Application Layer: DNS-(Domain Name System), Electronic Mail, World Wide Web Multimedia.

### **Module V : Network Security**

Overview of network security, Secure-HTTP, SSL, ESP, Key distribution protocols. Digital signatures, digital certificates-mail Security, Web security, Social Issues.

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>H</b>	<b>V/S/O</b>	<b>EE</b>

## DATAWARE HOUSING & DATA MINING LAB

Course Code: DSE6705

Credit Units: 01

Course Contents:

Programming Language: Weka 3.6

List of Experiments/Programs:

- Defining Weather relation for different attributes
- Defining employee relation for different attributes
- Defining labor relation for different attributes
- Defining student relation for different attributes
- Exploring weather relation using experimenter and obtaining results in various schemes
- Exploring employee relation using experimenter
- Exploring labor relation using experimenter
- Exploring student relation using experimenter
- Setting up a flow to load an arff file (batch mode) and perform a cross validation using J48
- Design a knowledge flow layout, to load attribute selection normalize the attributes and to store the result in a csv saver.

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## COMPUTER GRAPHICS LAB

**Course Code: DSE6706**

**Credit Units: 01**

**Software Required:** Turbo C++

**Course Contents:**

**Assignments will be provided for the following:**

- Geometrical shapes based on graphics algorithms
- 2D Geometric transformation translation, rotation, scaling, reflection.
- Clipping
- Animation

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## ADVANCED COMPUTER NETWORKS LAB

**Course Code: DSE6707**

**Credit Units: 01**

### **Course Contents:**

Various installations and connections of LAN, WAN, ETC

Working on NS2.

Socket Programming using C Language on Linux

### **Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# MATLAB

**Course Code: DSE6708**

**Credit Units: 02**

Understanding The MATLAB Environment, Using the Help System in MATLAB, MATLAB Basics, Linear Algebra; Vectors and Matrices and various operations on them, M files; Scripts and User-defined functions, Plotting, Flow Control and Loops; For and While Loops, If and Case statements, structures, writing basic programs using the above, study of various toolboxes available in matlab and case study of any one tool box.

**Recommended Software:** MATLAB/Octave

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## SUMMER INTERNSHIP EVALUATION-II

Course Code: DSE6735

Credit Units: 03

### **Guidelines:**

There are certain phases of every Intern's professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship program can best be described as an attempt to institutionalize efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal classroom situations. These attributes are intellectual ability, professional judgment and decision-making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility etc.

In order to achieve these objectives, each student will maintain a file (**Internship File**). The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development.

The File will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

The **layout guidelines** for the Project & Seminar Report:

### **1. File should be in the following specification:**

A4 size paper

Font: Arial (10 points) or Times New Roman (12 points)

Line spacing: 1.5

Top & bottom margins: 1 inch/ 2.5 cm

Left & right margins: 1.25 inches/ 3 cm

### **2. Report Layout:** The report should contain the following components:

Front Page

Table of Content

Acknowledgement

Student Certificate

Company Profile (optional)

Introduction

Main Body

References / Bibliography

The File will include **five sections** in the order described below. The content and comprehensiveness of the main body and appendices of the report should include the following:

- 1. The Title Page**--Title - An Internship Experience Report For (Your Name), name of internship organization, name of the Supervisor/Guide and his/her designation, date started and completed, and number of credits for which the report is submitted.
- 2. Table of Content**--an outline of the contents by topics and subtopics with the page number and location of each section.
- 3. Introduction**--short, but should include how and why you obtained the internship experience position and the relationship it has to your professional and career goals.
- 4. Main Body**--should include but not be limited to daily tasks performed. Major projects contributed to, dates, hours on task, observations and feelings, meetings attended and their purposes, listing of

tools and materials and their suppliers, and photographs if possible of projects, buildings and co-workers.

**5. References / Bibliography** --This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system

### **ASSESSMENT OF THE INTERNSHIP FILE**

The student will be provided with the Student Assessment Record (SAR) to be placed in front of the Internship File. Each item in the SAR is ticked off when it is completed successfully. The faculty will also assess each item as it is completed. The SAR will be signed by the student and by the faculty to indicate that the File is the student's own work. It will also ensure regularity and meeting the deadlines.

### **STUDENT ASSESSMENT RECORD (SAR)**

#### **1. Range of Research Methods used to obtain information**

#### **2. Execution of Research**

#### **3. Data Analysis**

- Analyse Quantitative/ Qualitative information
- Control Quality

#### **4. Draw Conclusions**

#### **Examination Scheme:**

<b>Components</b>	<b>V</b>	<b>S</b>	<b>R</b>	<b>FP</b>
<b>Weightage (%)</b>	20	20	20	40

V – Viva, S – Synopsis, FP – Final Presentation, R - Report

# SOFT COMPUTING

**Course Code: DSE6709**

**Credit Units: 03**

## **Course Objective:**

To develop semantic-based and context-aware systems to acquire, organise, process, share and use the knowledge embedded in multimedia content. Research will aim to maximise automation of the complete knowledge lifecycle and achieve semantic interoperability between Web resources and services.

## **Course Contents:**

### **Module I: Soft Computing**

Introduction of soft computing, soft computing vs. hard computing, various types of soft computing techniques, applications of soft computing.

### **Module II: Neural Network**

Structure and Function of a single neuron: Biological neuron, artificial neuron, definition of ANN, Taxonomy of neural net, Difference between ANN and human brain, characteristics and applications of ANN, single layer network, Perceptron training algorithm, Linear separability, Widrow & Hebb's learning rule/Delta rule, ADALINE, MADALINE, AI v/s ANN. Introduction of MLP, different activation functions, Error back propagation algorithm, derivation of BBPA, momentum, limitation, characteristics and application of EBPA

### **Module III**

Counter propagation network, architecture, functioning & characteristics of counter Propagation network, Hopfield/ Recurrent network, configuration, stability constraints, associative memory, and characteristics, limitations and applications. Hopfield v/s Boltzman machine. Adaptive Resonance Theory: Architecture, classifications, Implementation and training. Associative Memory.

### **Module IV: Fuzzy Logic**

Fuzzy set theory, Fuzzy set versus crisp set, Crisp relation & fuzzy relations, Fuzzy systems: crisp logic, fuzzy logic, introduction & features of membership functions, Fuzzy rule base system : fuzzy propositions, formation, decomposition & aggregation of fuzzy rules, fuzzy reasoning, fuzzy inference systems, fuzzy decision making & Applications of fuzzy logic.

### **Module V: Genetic algorithm**

Fundamentals, basic concepts, working principle, encoding, fitness function, reproduction, Genetic modeling: Inheritance operator, cross over, inversion & deletion, mutation operator, Bitwise operator, Generational Cycle, Convergence of GA, Applications & advances in GA, Differences & similarities between GA & other traditional methods.

## **Examination Scheme:**

Components	CT	H	V/S/O	AT	EE
Weightage (%)	10	8	7	5	70

## **Text & References:**

# MOBILE COMPUTING

**Course Code: DSE6710**

**Credit Units: 03**

## **Course Objective:**

The objective of this consortium is to shape and expand a full-scale and sound mobile computing system market. To achieve this, cooperation is required of interests related to communication (network), computer hardware/software, system integrators (including service providers), and the media.

## **Course Contents:**

### **Module I: Introduction to Personal Communications Services (PCS)**

PCS Architecture, Mobility management, Networks signaling.

Global System for Mobile Communication (GSM) system overview: GSM Architecture, Mobility management, Network signaling.

### **Module II: General Packet Radio Services (GPRS) & Wireless Application Protocol (WAP)**

GPRS Architecture, GPRS Network Nodes.

Mobile Data Communication: WLANs (Wireless LANs) IEEE 802.11 standard, Mobile IP.

Wireless Application Protocol (WAP): The Mobile Internet standard, WAP Gateway and Protocols, wireless mark up Languages (WML).

### **Module III: Third Generation (3G) Mobile Services**

Introduction to International Mobile Telecommunications 2000 (IMT 2000) vision, Wideband Code Division Multiple Access (W-CDMA), and CDMA 2000, Quality of services in 3G.

Wireless Local Loop(WLL): Introduction to WLL Architecture, wireless Local Loop Technologies.

### **Module IV: Global Mobile Satellite Systems**

Global Mobile Satellite Systems; case studies of the IRIDIUM and GLOBALSTAR systems.

### **Module V: Enterprise Networks**

Introduction to Virtual Networks, Blue tooth technology, Blue tooth Protocols. Advanced techniques in mobile computing.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# GRID COMPUTING

Course Code: DSE6711

Credit Units: 03

## Course Objective:

Grid computing (or the use of a *computational grid*) is applying the resources of many computers in a network to a single problem at the same time - usually to a scientific or technical problem that requires a great number of computer processing cycles or access to large amounts of data. The major objective of this course is to provide a sound foundation to the students on the concepts, percepts and practices in a field that is of immense concern to the industry and business.

## Course Contents:

### Module I: Introduction-Cluster to grid computing

Cluster computing models, Grid models, Mobile grid models, Applications.

**Parset: System independent parallel programming on distributed systems:** Motivation and introduction, Semantics of the parset construct, Expressing parallelism through parsets, Implementing parsets on a loosely coupled distributed system.

**Anonymous remote computing model:** Introduction, Issues in parallel computing on interconnected workstations, Existing distributed programming approaches, The arc model of computation, The two tiered arc language constructs, Implementation

### Module II: Integrating task parallelism with data parallelism

Introduction and motivation, A model for integrating task parallelism into data parallel programming platforms, Integration of the model into ARC, Design and implementation applications, performance analysis, guidelines for composing user programs, related work

**Anonymous remote computing and communication model:** Introduction, Location in dependent inter task communication with DP, DP model of iterative grid computations, Design and implementation of distributed pipes, Case study, and Performance analysis.

### Module III: Parallel programming model on CORBA

Introduction, Existing works, notion of concurrency, system support implementation performance, suitability of CORBA: introspection.

**Grid computing model:** Introduction, a parallel computing model over grids, Design and implementation of the model, Performance studies, Related work.

### Module IV: Introducing mobility into anonymous remote computing and communication model

Introduction, issues in mobile clusters and parallel computing on mobile clusters, model overview, model computation model, implementation, performance.

### Module V: Parallel Simulated Annealing algorithms

Introduction, Simulated annealing (SA) Technique, Clustering algorithm for simulated annealing (SA), Combination of genetic algorithm and simulated annealing (SA) algorithm

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# TERM PAPER

**Course Code: DSE6731**

**Credit Units: 02**

A term (or research) paper is primarily a record of intelligent reading in several sources on a particular subject.

The students will choose the topic at the beginning of the session in consultation with the faculty assigned. The progress of the paper will be monitored regularly by the faculty. At the end of the semester the detailed paper on the topic will be submitted to the faculty assigned. The evaluation will be done by Board of examiners comprising of the faculties.

## GUIDELINES FOR TERM PAPER

The procedure for writing a term paper may consist of the following steps:

1. Choosing a subject
2. Finding sources of materials
3. Collecting the notes
4. Outlining the paper
5. Writing the first draft
6. Editing & preparing the final paper

### 1. Choosing a Subject

The subject chosen should not be too general.

### 2. Finding Sources of Materials

- a) The material sources should be not more than 10 years old unless the nature of the paper is such that it involves examining older writings from a historical point of view.
- b) Begin by making a list of subject-headings under which you might expect the subject to be listed.
- c) The sources could be books and magazine articles, news stories, periodicals, scientific journals etc.

### 3. Collecting the Notes

Skim through sources, locating the useful material, then make good notes of it, including quotes and information for footnotes.

- a) Get facts, not just opinions. Compare the facts with author's conclusion.
- b) In research studies, notice the methods and procedures, results & conclusions.
- c) Check cross references.

### 4. Outlining the paper

- a) Review notes to find main sub-divisions of the subject.
- b) Sort the collected material again under each main division to find sub-sections for outline so that it begins to look more coherent and takes on a definite structure. If it does not, try going back and sorting again for main divisions, to see if another general pattern is possible.

### 5. Writing the first draft

Write the paper around the outline, being sure that you indicate in the first part of the paper what its purpose is. You may follow the following:

- a) statement of purpose
- b) main body of the paper
- c) statement of summary and conclusion

Avoid short, bumpy sentences and long straggling sentences with more than one main idea.

### 6. Editing & Preparing the final Paper

- a) Before writing a term paper, you should ensure you have a question which you attempt to answer in your paper. This question should be kept in mind throughout the paper. Include only information/ details/ analyses of relevance to the question at hand. Sometimes, the relevance of a particular section may be clear to you but not to your readers. To avoid this, ensure you briefly explain the relevance of every section.

- b) Read the paper to ensure that the language is not awkward, and that it "flows" properly.
- c) Check for proper spelling, phrasing and sentence construction.
- d) Check for proper form on footnotes, quotes, and punctuation.
- e) Check to see that quotations serve one of the following purposes:
  - (i) Show evidence of what an author has said.
  - (ii) Avoid misrepresentation through restatement.
  - (iii) Save unnecessary writing when ideas have been well expressed by the original author.
- f) Check for proper form on tables and graphs. Be certain that any table or graph is self-explanatory.

Term papers should be composed of the following sections:

- 1) Title page
- 2) Table of contentsIntroduction
- 3) Review
- 4) Discussion&Conclusion
- 5) References
- 6) Appendix

Generally, the introduction, discussion, conclusion and bibliography part should account for a third of the paper and the review part should be two thirds of the paper.

### **Discussion**

The discussion section either follows the results or may alternatively be integrated in the results section. The section should consist of a discussion of the results of the study focusing on the question posed in the research paper.

### **Conclusion**

The conclusion is often thought of as the easiest part of the paper but should by no means be disregarded. There are a number of key components which should not be omitted. These include:

- a) summary of question posed
- b) summary of findings
- c) summary of main limitations of the study at hand
- d) details of possibilities for related future research

### **Reference**

From the very beginning of a research project, you should be careful to note all details of articles gathered.

The bibliography should contain ALL references included in the paper. References not included in the text in any form should NOT be included in the bibliography.

The key to a good bibliography is consistency. Choose a particular convention and stick to this.

### **Conventions**

Monographs

Crystal, D. (2001), Language and the internet. Cambridge: Cambridge University Press.

### **Edited volumes**

Gass, S./Neu, J. (eds.) (1996), Speech acts across cultures. Challenges to communication in a second language. Berlin/ NY: Mouton de Gruyter.

[(eds.) is used when there is more than one editor; and (ed.) where there is only one editor. In German the abbreviation used is (Hrsg.) for Herausgeber].

### **Edited articles**

Schmidt, R./Shimura, A./Wang, Z./Jeong, H. (1996), Suggestions to buy: Television commercials from the U.S., Japan, China, and Korea. In: Gass, S./Neu, J. (eds.) (1996), Speech acts across cultures. Challenges to communication in a second language. Berlin/ NY: Mouton de Gruyter: 285-316.

### **Journal articles**

McQuarrie, E.F./Mick, D.G. (1992), On resonance: A critical pluralistic inquiry into advertising

rhetoric. Journal of consumer research 19, 180-197.

### **Electronic book**

Chandler, D. (1994), Semiotics for beginners [HTML document]. Retrieved [5.10.'01] from the World Wide Web, <http://www.aber.ac.uk/media/Documents/S4B/>.

### **Electronic journal articles**

Watts, S. (2000) Teaching talk: Should students learn 'real German'? [HTML document]. German as a Foreign Language Journal [online] 1. Retrieved [12.09.'00] from the World Wide Web, <http://www.gfl-journal.com/>.

### **Other websites**

Verterhus, S.A. (n.y.), Anglicisms in German car advertising. The problem of gender assignment [HTML document]. Retrieved [13.10.'01] from the World Wide Web, <http://olaf.hiof.no/~sverrev/eng.html>.

### **Unpublished papers**

Takahashi, S./DuFon, M.A. (1989), Cross-linguistic influence in indirectness: The case of English directives performed by native Japanese speakers. Unpublished paper, Department of English as a Second Language, University of Hawai'i at Manoa, Honolulu.

### **Unpublished theses/ dissertations**

Möhl, S. (1996), Alltagssituationen im interkulturellen Vergleich: Realisierung von Kritik und Ablehnung im Deutschen und Englischen. Unpublished MA thesis, University of Hamburg.  
Walsh, R. (1995), Language development and the year abroad: A study of oral grammatical accuracy amongst adult learners of German as a foreign language. Unpublished PhD dissertation, University College Dublin.

### **Appendix**

The appendix should be used for data collected (e.g. questionnaires, transcripts, ...) and for tables and graphs not included in the main text due to their subsidiary nature or to space constraints in the main text.

### **Assessment Scheme:**

#### **Continuous Evaluation:**

(Based on abstract writing, interim draft, general approach, research orientation, readings undertaken etc.)

40%

#### **Final Evaluation:**

(Based on the organization of the paper, objectives/ problem profile/ issue outlining, comprehensiveness of the research, flow of the idea/ ideas, relevance of material used/ presented, outcomes vs. objectives, presentation/ viva etc.)

60%

## PROJECT

**Course Code: DSE6732**

**Credit Units: 02**

### **Course Objective:**

The objective of this course is to provide practical training on some live/demo projects that will increase capability to work on actual problem in industry. It will be an in house training on some latest software which is in high demand in market. This training will be designed such that it will be useful for their future employment in industry.

### **STUDENT ASSESSMENT RECORD (SAR)**

Record to be maintained by project guide.

- 1. Project Tools (Hardware/ Software) used for implementation.**
- 2. Project Evaluation & Execution.**

### **Examination Scheme:**

<b>Components</b>	<b>V</b>	<b>S</b>	<b>R</b>	<b>FP</b>
<b>Weightage (%)</b>	20	20	20	40

V – Viva, S – Synopsis, FP – Final Presentation, R - Report

## **WORKSHOP/ INDEPENDENT STUDY**

**Course Code: DSE6733**

**Credit Units: 02**

This is an elective, self-directed course to investigate emerging areas of IT and Computer Science like Mobile Operating System, Cloud Computing, or from Current Research Areas etc. The primary goal of the course is to provide students with research exploration of a specific topic of interest to the individual student under the advisement of an instructor who will monitor and critique the student's progress.

Independent study provides students with the opportunity to work one-on-one with a Faculty on a particular topic. The student and faculty should discuss the aims and content of the study and present the proposal to Head of Department. The independent study proposal should include the study's title, theme, readings, work to be submitted, and syllabus. Faculty and student should meet for a minimum number of 2 hours per week. Student will give a seminar after completion of study.

# Syllabus - Eighth Semester

## APPLIED STATISTICAL ANALYSIS

**Course Code: DSE6801**

**Credit Units: 03**

**Course Objective:** This course is an introduction to statistics, the science of collecting, organizing, and interpreting numerical data. Emphasis will be placed on statistical reasoning and data analysis. The main topics are study design, descriptive statistics, probability theory, and statistical inference. Hands-on data analysis projects will be assigned. Students will be required to use a computer software package to solve various statistical problems.

### Course Contents:

#### Module-I: Introduction to Statistical Analysis

Introduction to Statics, Population Versus Sample, Population and Sample, Basic Terms, Types Of Variables, Quantitative Variables, Qualitative or Categorical Variables, Measurement Scales, Identifying The Scale of Measurement, Normal Variables, Ordinal Variables, Continuous Variables, Cross-Section Data, Time –Series Data, Sources of Data, Types of Statics, Measures of Central Tendency, Mean, Examples, Mode, Mode Scenarios, Symmetry, Skewness, Measures of Spread, Range, Variance and Standard Deviation, Examples, Solution, Population Parameters and Sample Statistics, Measures of Position–Quartiles and Interquartile Range, Quartiles, Example, Solution, Percentiles and Percentile Rank, Example, Solution, Box and Whisker Plot, Solution.

#### Module-II: Describing Data

Raw Data, Graphical Presentation of Qualitative Data, Graphical Presentation of Qualitative Data, Graphing Quantitative Data, Frequency Distributions, Relative Frequency and Percentage Distributions, Graphing Grouped Data, Cumulative Frequency Distributions, Probability Concepts, Simple and Compound Events, Two Properties of Probability, Classical Probability, Probability Concepts, Complementary Events, Example, Discrete Random Variables, The Binomial Experiment, The Poisson Probability Distribution, Continuous Random Variables, Normal Distribution, Standard Normal Distribution.

#### Module-III: Testing Hypothesis

Population Distribution, Sampling and Non Sampling Errors, A Point Estimate, Interval Estimation, The t Distribution Hypothesis Testing, The Chi-Square Distribution.

#### Module-IV: Examining Relationship

Covariance, Pearson Correction Coefficient, Computational Formulas- Covariance, Computing A Correlation, Correlation Analysis, Scatter Plots, Relationships Between Continuous Variables, Correlation, Pearson Correlation Coefficient, Hypothesis Test For A Correlation, Extreme Data Values, Correlation Matrix, Anova Overview, Anova Hypothesis, Anova, Error Sum of Squares, Model Sum of Squares, Anova-Example, Simple Regression, Relationship Between Food Expenditure And Income: (A) Linear Relationship (B) Nonlinear Relationship, Plotting A Linear Equation, Y-Intercept And Slope Of A Line, Simple Linear Regression Analysis, Scatter Diagram, Least Squares Line, Error Sum Of Squares, The Least Squares Line, Example, Solution, Error Of Prediction, Positive And Negative Linear Relationship Between X And Y, Assumptions of Regression Model, Coefficient Of Determination, Regression Analysis.

#### Module-V: Advanced Techniques

Non Parametric Tests, Chi-Squared Goodness- of-Fit Test, Chi-Square Test of Independence, The Sign Test, Example, Mann-Whitney U Test, The Kruskal-Wallis Test, No Title, Structural Equation Modelling, Cluster Analysis, Factor Analysis, Centroid Method, Principal Components Method.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# DATA MINING AND PREDICTIVE ANALYTICS

**Course Code: DSE6802**

**Credit Units: 03**

**Course Objective:** This course introduces the topics of Data Mining, and Data Analytics by providing a basic, practical foundation that allows the students to participate in Data Analytics projects. The course incorporates an introduction to the Data Analytics lifecycle, Machine Learning (ML), Data Mining algorithms and computational paradigms that allow computers to find patterns and regularities in databases, perform prediction and forecasting, and generally improve their performance through interaction with data.

## **Course Contents:**

### **Module I: Data Preparation**

An introduction to data mining and predictive analytics, Data Pre-processing Exploratory Data Analysis, Dimension- Reduction Methods.

### **Module II: Classification**

k- Nearest Neighbour Algorithm, Decision Trees, Model Evaluation Technique, Cost –Benefit Analysis Using Data Driven Cost.

### **Module III: Clustering**

Hierarchical and k- Means Clustering, Kohonen Networks, Birch Clustering, Measuring Cluster Goodness.

### **Module IV: Association Rules**

Affinity Analysis and Market Basket Analysis, Data Representation for Market Basket Analysis, Support, Confidence, Frequent Item sets, and the a Priori Property, How Does a Priori Algorithm Work ? Generating Frequent Item sets, Generating Association Rules, Extension from Flag Data to General Categorical Data, Information-Theoretic Approach: Generalized Rule Induction Method, *J*-Measure, Association Rules are Easy to do Badly, How can we Measure the Usefulness of Association Rules? Do Association Rules Represent Supervised or Unsupervised Learning?

### **Module V: Case Study: Predicting Response to Direct Mail Marketing**

Business Understanding, Data Preparation, and Eda, Clustering and Principal Components Analysis, Modelling and Evaluation for Performance and Interpretability, Modelling and Evaluation for High Performance.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# DATA WAREHOUSING AND MULTIDIMENSIONS MODELLING

**Course Code: DSE6803**

**Credit Units: 03**

## **Course Objective:**

This course focuses on the fundamentals of data warehousing and multidimensional Modelling. Data warehouse development life cycle, Data warehouse analysis, CUBE, ROLL UP and STAR queries, Data Warehouse Design - Massive de-normalisation, STAR schema design, Data ware house Architecture, OLAP, ROLAP and MOLAP, concepts of Fact and dimension table are the major areas of coverage of this course. This course also deals with the issues while implementing the multidimensional models

## **Course Contents:**

### **Module I: Introduction**

Multidimensional Data Management, Multidimensional History, Related Terminology,

### **Module II: Fundamental Concepts**

Cubes ,Dimensions, Facts, Measures, Relational Representations, Star Schemas, Snowflake Schemas, Data Warehouses And Data Marts, Multidimensional Modelling Process, Analysis And Querying ,Roll Up, Drill Down, Drill Out, Slicing And Dicing, Drill Across, Pivot Tables, Ranking, Multi-Dimensional Querying in MDX and SQL, Graphical Querying and Visualizations .

### **Module III: Advance Concepts**

Slowly Changing Dimensions, The Problem, Solutions, Other Special Kinds Of Dimensions, Mini dimensions, Outriggers, Degenerate Dimensions, Junk Dimensions, Time Dimensions, Data Quality Dimensions, Advanced Hierarchies, Parent-Child Hierarchies, Unbalanced Hierarchies, Non Covering Hierarchies , Non –Strict Hierarchies, Multiple Hierarchies And Parallel Hierarchies.

### **Module IV: Implementation Issues**

Materialized Views, Indexing, Indexing Overview, Bitmap Indices, Join Indices, Query Processing, OLAP Implementations, Extract-Transform-Load.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# DATABASE AND KNOWLEDGE BASE SYSTEM

**Course Code: DSE6804**

**Credit Units: 03**

## **Course Objective:**

This course discusses design methodology for databases to verify their structural correctness and implements databases. It also provides applications software primarily in the relational model using querying languages, primarily SQL, and other database supporting software applying the theory behind various database models and query languages implementing security and integrity policies relating to databases and preparation for data analytics working in group settings to design and implementing database projects.

## **Course Contents:**

### **Module I: Introduction**

Database Languages, Object-Base Systems, Knowledge-base Systems, History and Perspective, Data Models for Database Systems: Data Models, The Entity-relationship Model, The Relational Data Model, Operations in the Relational Data Model, The Network Data Model, The Hierarchical Data Model, An Object-Oriented Model, Logic as a Data Model: The Datalog Data Model, Evaluating Non- recursive Rules, Computing the Meaning of Recursive Rules, Incremental Evaluation of Least Fixed Points, Negations in Rule Bodies, Relational Algebra and Logic, Relational Calculus, Tuple Relational Calculus.

### **Module II: Relational Query and Object-Oriented Database Language**

ISBL: A “Pure” Relational Algebra Language, QUEL: A Tuple Relational Calculus Language, Query-by-Example: A DRC Language, Data Definition in QBE, The Query Language SQL, Data Definition in SQL, The DBTG Data Definition language, The DBTG Query Language, The DBTG Database Modification Commands, Data Definition in IMS, A Hierarchical Data Manipulation Language, Data Definition in OPAL, Data Manipulation in OPAL

### **Module III: Physical Data Organization and Design of Relational Databases**

The Physical Data Model, The Heap Organization, Hashed Files, Indexed Files, B-trees, Files with a Dense Index, Secondary Indices, Data Structures in DBTG Databases, Data Structures for Hierarchies, Data Structures for Relations, A Search Tree Structure, Functional Dependencies, Lossless-Join Decomposition, Normalization, Generalized Dependencies.

### **Module IV: Transaction Management**

Basic Concepts, A Simple Transaction Model, The Two-phase Locking Protocol, a Model with Read and write-Locks, Lock Modes, A Read-Only, Write-Only Model, Concurrency for Hierarchically Structured Items, Handling Transaction Failures, Aggressive and Conservative Protocols, Recovery From Crashes, Timestamp-based Concurrency Control.

### **Module V: Distributed Database Management**

Distributed Databases, Distributed Locking, Distributed Two-phase Locking, Distributed Commitment, A Nonblocking Commit Protocol, Timestamp-based, Distributed Concurrency, Recovery of Nodes, Distributed Deadlocks.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# BIG DATA TECHNOLOGIES

**Course Code: DSE6805**

**Credit Units: 03**

## **Course Objective:**

This course brings together several key big data technologies used for storage, analysis and manipulation of data. It also introduces the students the key concepts of Hadoop framework, MapReduce, Pig, Hive, and No-SQL. Students will prepare a sample project in Hadoop.

## **Course Contents:**

### **Module I: Introduction to Big Data**

Big Data and its Importance – Four V's of Big Data – Drivers for Big Data – Introduction to Big Data Analytics – Big Data Analytics applications.

### **Module II: Big Data Technologies**

Hadoop's Parallel World – Data discovery – Open source technology for Big Data Analytics – cloud and Big Data – Predictive Analytics – Mobile Business Intelligence and Big Data – Crowd Sourcing Analytics – Inter- and Trans-Firewall Analytics - Information Management.

### **Module III: Processing Big Data**

Integrating disparate data stores - Mapping data to the programming framework - Connecting and extracting data from storage - Transforming data for processing - Subdividing data in preparation for Hadoop Map Reduce.

### **Module IV: Hadoop Map Reduce**

Employing Hadoop Map Reduce - Creating the components of Hadoop Map Reduce jobs - Distributing data processing across server farms –Executing Hadoop Map Reduce jobs - Monitoring the progress of job flows - The Building Blocks of Hadoop Map Reduce - Distinguishing Hadoop daemons - Investigating the Hadoop Distributed File System Selecting appropriate execution modes: local, pseudo-distributed, fully distributed.

### **Module V: Big Data Tools and Techniques**

Installing and Running Pig – Comparison with Databases – Pig Latin – User- Define Functions – Data Processing Operators – Installing and Running Hive – Hive QL – Tables – Querying Data – User-Defined Functions – Oracle Big Data.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# RESEARCH METHODOLOGY AND TECHNICAL REPORT WRITING

**Course Code: DSE6809**

**Credit Units: 02**

## **Course Objectives:**

The course will enhance scientific, technical and research writing skills and impart knowledge about various stages of research process, statistical analysis, statistical tests and their applications in statistical decision making.

## **Course Contents:**

**Module I:** Introduction to research: Definition, motivation, need, objectives, significance and characteristics of research; types of research; steps in research process; planning a research proposal; literature review, web searching.

**Module II:** Population and sample, parameter and statistic, sampling and data collection, sampling design: steps, types, sample size, sampling methods, large and small samples, primary and secondary data, data processing and analysis. Sample surveys and questionnaire designing, scaling techniques.

**Module III:** Dependent and independent variables, univariate, bivariate and multivariate analysis, means-arithmetic, geometric and harmonic; measure of dispersion of data, standard deviation, variance, coefficient of variation and degree of freedom. Hypothesis testing: null hypothesis and alternate hypothesis, errors in hypothesis testing, significance and confidence levels, parametric tests and non-parametric tests, one-tailed and two-tailed tests, analysis of variance. Regression analysis and curve fitting, method of least-squares, explained and unexplained variations, coefficient of correlation, coefficient of determination.

**Module IV:** Technical/scientific/research report writing: structure and components of scientific reports, formats of dissertations, research report, report writing skills, report preparation, referencing, bibliography and footnotes. Making presentation-use of visual aids and PPTs. Publication of research papers, citations,. Intellectual property rights and copy rights, plagiarism, patents and patent laws, commercialization and ethical issues.

## **Examination Scheme:**

Attendance	Assignment/Library consultation / Thesis writing	Class test	Final Exam	Total
5	15	10	70	100

## **Text Books:**

## APPLIED STATISTICAL ANALYSIS LAB

**Course Code: DSE6806**

**Credit Units: 01**

Programs should be based on following topics:

**Quick Review** of interpretation of mathematical models such as formulas, graphs, tables, and schematics, and draw inferences from them;

Representation of mathematical information symbolically, visually, numerically, and verbally;

Use of arithmetic, algebraic, geometric, and statistical methods to solve problems;

Estimation and check answers to mathematical problems in order to determine reasonableness,

Identification of alternatives, and select optimal results; and recognize the limitations of mathematical and statistical models.

**Recommended Software:** SPSS (IBM).

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# DATA MINING AND PREDICTIVE ANALYTICS LAB

**Course Code: DSE6807**

**Credit Units: 01**

## **Course Objective:**

- To analyse the data using statistical methods.
- To understand and demonstrate data mining using any open source data mining tool.

**Recommended Software:** ORANGE, Rapid Miner

## **List of Experiments**

1. Data Analysis- Getting to know the Data (Using ORANGE, Rapid Miner)
  - Parametric - Means, T-Test, Correlation
  - Prediction for numerical outcomes - Linear regression
  - Correlation analysis
  - Preparing data for analysis
  - Pre-processing techniques
2. Data Mining (Using ORANGE, Rapid Miner or any open source data mining tool)
  - Implement clustering algorithm
  - Implement classification using
  - Decision tree
  - Back propagation
  - Visualization methods.

## **Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## DATA WAREHOUSING AND MULTIDIMENSIONS MODELLING LAB

**Course Code: DSE6808**

**Credit Units: 01**

Programs should be based on following topics:

**Quick Review** SQL Statements, SQL Built-in Functions, **Emphasis** on PL/SQL, Cursors 8. Exception handling, Procedure, Functions, Trigger, concurrency control, transaction processing. Introduction to ETL Tools: Talend Open Source Data Integrator, Scriptella, KETL  
Pentaho Data Integrator - Kettle, Jaspersoft ETL, GeoKettle, CloverETL, HPCC Systems

**Recommended Software:** SQL Server, ETL Tools (Open Source)

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# MINOR PROJECT

Course Code: DSE6837

Credit Units: 08

## GUIDELINES FOR PROJECT FILE

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critiqued by the faculty guide and corrected by the student at each stage.

The File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation.

### In general, the File should be comprehensive and include

A short account of the activities that were undertaken as part of the project;

A statement about the extent to which the project has achieved its stated goals.

A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;

Any activities planned but not yet completed as part of the project, or as a future initiative directly resulting from the project;

Any problems that have arisen that may be useful to document for future reference.

### ➤ **Report Layout**

The report should contain the following components:

### ➤ **Title or Cover Page**

The title page should contain the following information: Project Title; Student's Name; Course; Year; Supervisor's Name.

### ➤ **Acknowledgements(optional)**

Acknowledgment to any advisory or financial assistance received in the course of work may be given.

### ➤ **Abstract**

A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project

### ➤ **Table of Contents**

Titles and subtitles are to correspond exactly with those in the text.

### ➤ **Introduction**

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

### ➤ **Materials and Methods**

This section should aim at experimental designs, materials used. Methodology should be mentioned in details including modifications if any.

### ➤ **Results and Discussion**

Present results, discuss and compare these with those from other workers, etc. In writing these section, emphasis should be given on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in

contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary never write in “point” form.

➤ **Conclusion**

A conclusion should be the final section in which the outcome of the work is mentioned briefly.

➤ **Future prospects**

➤ **Appendices**

The Appendix contains material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

➤ **References / Bibliography**

This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

**Examples**

**For research article**

Voravuthikunchai SP, Lortheeranuwat A, Ninrprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichia coli* O157: H7. *Clin Microbiol Infect*, **8** (suppl 1): 116–117.

**For book**

Kowalski, M. (1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), **7**: 63-67

**ASSESSMENT OF THE PROJECT FILE**

Essentially, marking will be based on the following criteria: the quality of the report, the technical merit of the project and the project execution.

Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project.

Project execution is concerned with assessing how much work has been put in.

The File should fulfill the following *assessment objectives*:

**Range of Research Methods used to obtain information**

**Execution of Research**

**Data Analysis**

Analyse Quantitative/ Qualitative information

Control Quality

**Draw Conclusions**

**Examination Scheme:**

Dissertation	50
Viva Voce	50
<b>Total</b>	<b>100</b>

# INFORMATION MANAGEMENT SYSTEM

**Course Code: DSE6810**

**Credit Units: 03**

## **Course Objective:**

This course exposes students with the basics of managing the information and explores the various aspects of database design and modelling. It examines the basic issues in information governance and information integration and also helps to understand the information architecture

## **Course Contents:**

### **Module I: Database Modelling, Management and Development**

Database design and modelling – Business Rules and Relationship; Java database Connectivity (JDBC), Database connection Manager, Stored Procedures. Trends in Big Data systems including NoSQL – Hadoop HDFS, MapReduce, Hive, and enhancements.

### **Module II: Data Security and Privacy**

Program Security, Malicious code and controls against threats; OS level protection; Security – Firewalls, Network Security Intrusion detection systems. Data Privacy principles. Data Privacy Laws and compliance.

### **Module III: Information Governance**

Master Data Management (MDM) – Overview, Need for MDM, Privacy, regulatory requirements and compliance. Data Governance – Synchronization and data quality management.

### **Module IV: Information Architecture**

Principles of Information architecture and framework, Organizing information, Navigation systems and Labelling systems, Conceptual design, Granularity of Content.

### **Module V: Information Lifecycle Management**

Data retention policies; Confidential and Sensitive data handling, lifecycle management costs. Archive data using Hadoop; Testing and delivering big data applications for performance and functionality; Challenges with data administration;

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# INFORMATION SYSTEM SECURITY

**Course Code: DSE6811**

**Credit Units: 03**

## **Course Objective:**

This course provides a deep and comprehensive study of the security principles and practices of information systems. Topics include basic information security concepts, common attacking techniques, common security policies, basic cryptographic tools, authentication, access control, software security, operating system security, and legal and ethical issues in information systems security

## **Course Contents:**

### **Module I: Introduction**

Computer Security Concepts, Threats, Attacks, and Assets Security Functional Requirements A Security Architecture for Open Systems Computer Security Trends.

### **Module II: COMPUTER SECURITY TECHNOLOGY AND PRINCIPLES**

Cryptographic Tools, User Authentication, Access Control, Database Security, Malicious Software, Denial-of-Service Attacks.

### **Module III: SOFTWARE SECURITY**

Buffer Overflow: Stack Overflows, Defending Against Buffer Overflows, Other Forms of Overflow Attacks, Software Security: Software Security Issues, Handling Program Input, Writing Safe Program Code, Interacting with the Operating System and Other Programs, Handling Program Output

### **Module IV: TRUSTED SYSTEMS SECURITY**

Operating System Security: Introduction to Operating System Security, System Security Planning, Operating Systems Hardening, Application Security, Security Maintenance, Linux/Unix Security, Windows Security, Virtualization Security. Trusted Computing and Multilevel Security: Bell-LaPadula Model for Computer Security, Other Formal Models for Computer Security, Concept of Trusted Systems, Application of Multilevel Security, Trusted Computing and the Trusted Platform Module, Common Criteria for Information Technology Security Evaluation, Assurance and Evaluation

### **Module V: MANAGEMENT ISSUES**

IT Security Management and Risk Assessment, IT Security Controls, Plans, and Procedures, Physical and Infrastructure Security, Human Resources Security, Security Auditing, Legal and Ethical Aspects

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# Syllabus - Ninth Semester

## DESCRIPTIVE ANALYSIS

**Course Code: DSE6901**

**Credit Units: 03**

### **Course Objective:**

This course introduces some elementary statistical methods of analysis of data and compute various measurements of central tendency, dispersion, skewness and kurtosis. Also discusses computation of the correlation coefficient from ungrouped bivariate data and interpret them and analyse data pertaining to attributes and to interpret results.

### **Course Contents:**

#### **Module I: Introduction to Statistics:**

Definitions: Webster's and Secrist's definition of Statistics, Importance of Statistics, Scope of Statistics: In the field of Industry, Biological Sciences, Medical Sciences, Economics Sciences, Social, Sciences, Management Sciences, Agriculture, Insurance, Actuarial Science, Education and Psychology.

#### **Module II: Population and Sample**

Types of characteristics: Attributes: Nominal scale, ordinal scale. Variables: Interval scale, ratio scale, discrete and continuous variables, Types of data: Primary data, Secondary data, Notion of a statistical population: Finite population, infinite population, homogeneous population and heterogeneous population. Notion of sample, random sample and non-random sample, Methods of sampling: Simple random sampling with and without replacement (SRSWR and SRWOR) stratified random sampling, systematic sampling, cluster sampling and two-stage sampling.

#### **Module III: Presentation of Data**

Classification: Raw data and its classification, Discrete frequency distribution, Sturge's rule, continuous frequency distribution, inclusive and exclusive methods of classification, Open end classes, cumulative frequency distribution and relative frequency distribution, Graphical Presentation of Data: Histogram, frequency curve, frequency polygon, ogive curves, stem and leaf chart, Check sheet, Parato diagram, Examples and Problems.

#### **Module IV: Measures of Central Tendency**

Concept of central tendency of statistical data, Arithmetic Mean (A.M.), combined mean of a number of groups, merits and demerits, Geometric Mean (G.M.), Harmonic Mean (H.M.), Weighted Mean, Weighted A.M., G.M. and H.M. , Mode, Median, Empirical relation between mean, median and mode, Order relation between arithmetic mean, geometric mean, harmonic mean.

#### **Module V: Measures of Dispersion**

Concept of dispersion, characteristics of good measure of dispersion, Range, Mean deviation, Mean square definition, Variance and standard deviation, Combined variance, Combined standard deviation, generalization for n groups, Measures of dispersion for comparison: coefficient of range, coefficient of quartile deviation and coefficient of mean deviation, coefficient of variation.

#### **Module VI: Skewness and Kurtosis**

Concept of skewness of frequency distribution, positive skewness, negative skewness, symmetric frequency distribution, Bowley's coefficient of skewness, interpretation using Box plot, Karl Pearson's coefficient of skewness, Measures of skewness based on moments ( $\beta_1$ ,  $\gamma_1$ ), Concepts of kurtosis, leptokurtic, mesokurtic and platykurtic frequency distributions, Measures of kurtosis based on moments, ( $\beta_2$ ,  $\gamma_2$ ).

## Module VII: Correlation & Regression

Bivariate data, bivariate frequency distribution, Concept of correlation between two variables, positive correlation, negative correlation, Scatter diagram, conclusion about the type of correlation from scatter diagram, Covariance between two variables, Karl Pearson's coefficient of correlation, Spearman's rank correlation coefficient, In case of ties, compute Karl Pearson's correlation coefficient between ranks. Regression: lines of regression, fitting of lines of regression by the least squares method, interpretation of slope and intercept. 9.2 Regression coefficient ( $b_{yx}$ ,  $b_{xy}$ ), Effect of change of origin and scale, Angle between the two lines of regression, Mean residual sum of squares, Residual plot and its interpretation.

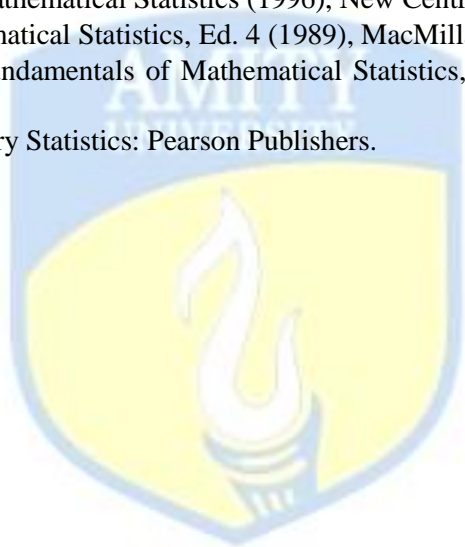

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# LEARNING AND REASONING WITH BAYESIAN NETWORKS

**Course Code: DSE6902**

**Credit Units: 04**

## **Course Objective:**

This course provides an in-depth exposition of knowledge representation, reasoning, and machine learning under uncertainty using the framework of Bayesian networks. Both theoretical underpinnings and practical considerations will be covered, with a special emphasis on constructing and learning graphical models, and on various exact and approximate inference algorithms.

## **Course Contents:**

### **Module I: Introduction**

Reasoning about beliefs using Logic and Probability Propositional Logic, Probability Calculus and Bayesian Reasoning, Bayesian Networks, Syntax and Semantics, Building Bayesian Networks.

### **Module II: Bayesian Networks Inference**

Inference by variable elimination, Inference by Factor Elimination (Jointree), Compiling Bayesian Networks, Complexity of probabilistic inference, compiling bayesian networks.

### **Module III: Approximate Inference**

Inference by Belief Propagation: Algorithm, Iterative belief propagation, semantics of IBP, Join graphs, edge-detection semantics, Approximate Inference by Stochastic Sampling: Simulating a Bayesian network, direct sampling, expectations, estimating a conditional probability, Markov chain simulation.

### **Module IV: Learning: The Maximum Likelihood Approach**

Introduction, estimating parameters from complete data, estimating parameters from incomplete data, learning network structure, searching for network structure.

### **Module V: Learning: The Bayesian Approach**

Introduction, Meta Networks, Learning with Discrete Parameter Sets, Learning with Continuous Parameter Sets, Learning Network Structure

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;

# SOCIAL NETWORK DATA ANALYTICS

**Course Code: DSE6903**

**Credit Units: 03**

## **Course Objective:**

This course gives an introduction to social network analysis, with a focus on modelling. It provides an overview of research questions connected to social networks, and of descriptive measures, models, and methods of analysis that can be used to analyse empirical social network data. It helps to understand the online interactive demonstrations and hands-on analysis of real-world data sets

## **Course Contents:**

### **Module I: Introduction**

Overview: Social network data-Formal methods- Paths and Connectivity-Graphs to represent social relations-Working with network data- Network Datasets-Strong and weak ties - Closure, Structural Holes, and Social Capital.

### **Module II: Community Discovery in Social Networks: Applications, Methods and Engineering Trends**

Introduction, Communities In Context, Core Methods, Quality Functions, The Kernighan-Lin (KL) Algorithm, Agglomerative/Divisive Algorithms, Spectral Algorithms, Multi-Level Graph Portioning, Markov Clustering. Other Approaches, Emerging Fields and Problems, Community Discovery in Dynamic Networks, Community Discovery in Heterogeneous Networks, Community Discovery in Directed Networks, Coupling Content and Relationship Information for Community Discovery,

### **Module III: Information Networks and the World Wide Web**

The Structure of the Web- World Wide Web- Information Networks, Hypertext, and Associative Memory- Web as a Directed Graph, Bow-Tie Structure of the Web- Link Analysis and Web Search, Searching the Web: Ranking, Link Analysis using Hubs and Authorities- Page Rank- Link Analysis in Modern Web Search, Applications, Spectral Analysis, Random Walks, and Web Search. Module IV

### **Module IV: Node Classifications in Social Networks**

Introduction, Problem Formulation, Representing Data As A Graph, The Node Classification Problem, Methods Using Local Classifiers, Iterative Classification Method, Random Walk Based Methods, Label Propagation, Graph Regularization, Adsorption, Applying Node Classification To Large Social Networks, Basic Approaches, Second-Order Methods, Implementation Within Map-Reduce, Inference Using Graphical Models, Metric Labelling, Spectral Partitioning, Graph Clustering, Variations on Node Classification.

### **Module V: Data and Text Mining In Social Media**

Data Mining In Nutshell, Social Media, Motivations For Data Mining In Social Media, Data Mining Methods For Social Media, Data Representation, Data Mining- A Process, Social Networking Sites: Illustrative Examples, Related Efforts, Ethnography And Netnography, Event Maps, Text Mining: Keyword Search, Query Semantics And Answer Ranking, Keyword Search over Xml and Relational Data, Keyword Search Over Graph Data, Classification Algorithms, Clustering Algorithms, Transfer Learning in Heterogeneous Networks.

### **Module VI: Overview of Social Tagging**

Introduction, Problems With Metadata Generation and Fixed Taxonomies, Tags: Why And What?, Different User Tagging Motivations, Kinds Of Tags, Linguistic Classifications Of Tags, Game-Based Tagging, Tag Generation Models, Tagging System Design, Tag Analysis, Tagging Distributions, Identifying Tag Semantics, Tags Versus Keywords, Visualization Of Tags, Tag Clouds For Browsing/Search, Tag Selection For Tag Clouds, Tag Hierarchy Generation, Tag Cloud Display Formats, Tag Evolution Visualization.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# R PROGRAMMING LAB

**Course Code: DSE6904**

**Credit Units: 01**

## Course Objective:

This lab will provide a basic introduction to the R programming Language and the use of R to perform basic statistics and programming tasks. The main objectives of this lab is to impart the students with the knowledge of R Programming, Machine Learning using R Mining from streaming Data, Mining from Distributed Data.

## R Programming Objective

- Master the use of the R interactive environment
- Expand R by installing R packages
- Explore and understand how to use the R documentation
- Read Structured Data into R from various sources
- Understand the different data types in R
- Understand the different data structures in R
- Understand how to use dates in R
- Use R for mathematical operations
- Use of vectorised calculations
- Write user-defined R functions
- Use control statements
- Write Loop constructs in R
- Use Apply to iterate functions across data
- Reshape data to support different analyses
- Understand split-apply-combine (group-wise operations) in R
- Deal with missing data
- Manipulate strings in R
- Understand basic regular expressions in R
- Understand base R graphics
- Focus on GGplot2 graphics for R
- Be familiar with trellis (lattice) graphics
- Use R for descriptive statistics
- Use R for inferential statistics
- Write multivariate models in R
- Understand confounding and adjustment in multivariate models
- Understand interaction in multivariate models
- Predict/Score new data using models
- Understand basic non-linear functions in models
- Understand how to link data, statistical methods, and actionable questions

## Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## HADOOP LAB

**Course Code: DSE6905**

**Credit Units: 02**

**Course Objective:**

- To provide an overview of several key technologies used in manipulating, storing, and analysing big data.
- To understand the fundamentals of Hadoop.
- To apply the learning specific problems in various domains.

**Recommended Tools**

Big Data Tools and Technology [Learning and Demonstration of Big Data Ecosystem]

- Hadoop
- HBase
- NoSQL
- Hive
- Pig

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V

# WEB TECHNOLOGY

**Course Code: DSE6906**

**Credit Units: 03**

## **Course Objectives:**

This course provides knowledge on Core technologies that are needed for the web like HTML and XML and facilitate how to build XML applications with DTD and style sheets that span multiple domains ranging from finance to vector graphics to genealogy for use with legacy browsers.

## **Course Contents:**

### **MODULE I: Introduction**

HTML Common tags, Cascading Style sheets - Introduction to Java Scripts - Objects in Java Script - Dynamic HTML with Java Script.

### **MODULE II: Vbscript Language Elements**

Constants - Variables and Data Types - Mathematical Operations – Logical Operators - Looping and Decision Structures - VBScript Functions and Objects: Data Conversion Functions - Mathematical Functions - Data Formatting Functions - Text Manipulation Functions - Data and Time Functions - Built-in Objects.

### **MODULE III: ASP Fundamentals**

Using Server – Side Includes- Learning the SSI Directives – Creating Modular ASP Code -Using the Request Object: Using Form Information - Using QueryString Information – Using Server Variables - Using the Response Object: Create Output – Managing Output – Managing the Connection.

### **MODULE IV: Using Cookies**

Introduction to Cookies: Cookies and Your Browser – Creating a Cookie – Modifying and removing Cookies – Tracking Preferences with Cookies Using the Application, Session and Server Objects: The application Object – The Session Object – The Server Object – Using the global .asa file - Active Data Objects Essentials: Microsoft's Universal Data Access Strategy – The Connection Object – The Record set and Field Objects – The Command and Parameter Objects – Using the Errors Collection.

### **MODULE V: Introducing XML**

XML: The Life of an XML documents - Related technologies- First XML Document: Hello XML – Exploring the Simple XML Document – Assigning Meaning to XML Tags – Writing a Style Sheet for an XML Document – Attaching a Style Sheet to an XML Document – Style Languages: CSS Style Sheets, CSS Layouts, CSS Text Styles.

### **MODULE VI: Attributes, Empty Tags & XSL**

Attributes – Attributes versus Elements – Empty Elements and Empty Element Tags – XSL-DTDs and Validity: Document Type Definitions – Element Declarations – DTD Files – Document Type Declarations – Validating Against a DTD-Element Declaration - Entity Declarations: What Is an Entity – Internal General Entities – External General Entities – Internal Parameter Entities – External Parameter Entities – Building a Document from Places-Attribute Declaration: What is an Attribute – Declaring Attributes in DTDs – Declaring Multiple Attributes – Specifying Default Values for Attributes – Attribute Types – Predefined Attributes – A DTD for Attribute- Based Baseball Statistics.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# SERVICE ORIENTED ARCHITECTURE

**Course Code: DSE6907**

**Credit Units: 03**

## **Course Objective:**

The subject gives an introduction to the fundamentals and issues relating to Service Oriented Architecture and bring out the importance of service orientation and web services. It also teaches appropriate tools as technique on how to build the Service Oriented Architecture with web services.

## **Course Contents:**

### **Module I: Introduction**

Basic definition - Fundamentals of SOA - Characteristics and misperceptions about SOA-Benefits and pitfalls of SOA.

### **Module II: Evolution of SOA**

The evolution of SOA - Web service and primitive SOA - The extension of SOA - Web service extension.

### **Module III: Web Service and Contemporary SOA**

Message Exchange Pattern- Service Activity- Coordination- Atomic Transaction- Business Activity- Orchestration – Choreography- Addressing- Reliable Messaging- Correlation and Policies- Meta data Exchange- Security- Notification and Eventing.

### **Module IV: Principles of Service Orientation**

Principles of service orientation -Building SOA-Planning and Analysis- SOA delivery strategies - Service Oriented Analysis Introduction -Service Modelling of Service Oriented Analysis.

### **Module V: Service Oriented Design**

Introduction to service oriented design - WSDL related XML Schema language Basics - WSDL Language Basics - SOAP Language Basics - Service interface design tools - Steps to composing SOA - Consideration for choosing service layers, positioning core SOA standards and choosing SOA extension – Service design and business process design.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

## **Text & References:**

# NATURAL LANGUAGE PROCESSING

**Course Code: DSE6908**

**Credit Units: 03**

## **Course Objective:**

This course provides a general introduction including the use of state automata for language processing and syntax including a basic parse. It explains advanced feature like feature structures and realistic parsing methodologies. It also gives concepts of remotes processing and detail information about a typical natural language processing applications.

## **Course Contents:**

### **Module-I: Introduction**

Introduction: Knowledge in speech and language processing - Ambiguity - Models and Algorithms - Language, Thought and Understanding- Regular Expressions and automata: Regular expressions - Finite-State automata. Morphology and Finite-State Transducers: Survey of English morphology - Finite-State Morphological parsing - Combining FST lexicon and rules - Lexicon- Free FSTs: The porter stammer - Human morphological processing.

### **Module-II: Syntax Analysis**

Word classes and part-of-speech tagging: English word classes - Tagsets for English - Part-of-speech tagging - Rule-based part-of-speech tagging - Stochastic part-of-speech tagging - Transformation-based tagging – Other issues - Context-Free Grammars for English: Constituency - Context-Free rules and trees - Sentence-level constructions - The noun phrase - Coordination - Agreement - The verb phrase and sub categorization – Auxiliaries - Spoken language syntax - Grammars equivalence and normal form - Finite- State and Context-Free grammars - Grammars and human processing. Parsing with Context-Free Grammars: Parsing as search - A Basic Top-Down parser - Problems with the basic Top-Down parser - The early algorithm - Finite-State parsing methods.

### **MODULE-III: Advanced Features and Syntax**

Features and Unification: Feature structures - Unification of feature structures  
- Features structures in the grammar - Implementing unification - Parsing with unification constraints  
- Types and Inheritance. Lexicalized and Probabilistic  
Parsing: Probabilistic context-free grammar - Problems with PCFGs -  
Probabilistic lexicalized CFGs - Dependency Grammars - Human parsing.

### **MODULE-IV: Semantic**

Representing Meaning: Computational desiderata for representations – Meaning structure of language  
- First order predicate calculus - Some linguistically relevant concepts - Related representational approaches – Alternative approaches to meaning. Semantic Analysis: Syntax-Driven semantic analysis - Attachments for a fragment of English - Integrating semantic analysis into the early parser - Idioms and compositionality - Robust semantic analysis. Lexical semantics: relational among lexemes and their senses - WordNet: A database of lexical relations - The Internal structure of words - Creativity and the lexicon.

### **MODULE-V: Natural Language Generation**

Introduction to language generation - Architecture for generation – Surface realization - Discourse planning - Other issues- Machine Translation: Language similarities and differences - The transfer metaphor - The interlingua idea: Using meaning - Direct translation - Using statistical techniques – Usability and system development.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# AGENT BASED INTELLIGENT SYSTEMS

**Course Code: DSE6909**

**Credit Units: 03**

## **Course Objective:**

This course provides students basic knowledge of employing intelligent agents in solving complex problems and gives the awareness of the building blocks of agents and working of different types of agents. It also analyses the reasons for uncertainty and ability to design agents to handle them.

## **Course Contents:**

### **Module I: Introduction**

Definitions – History – Hybrid Intelligent Agents – Agents vs Multi Agent Systems– Structure – Environment – Basic Problem Solving Agents – Complex Problem Solving Agents – Formulating Search Strategies – Intelligent Search.

### **Module II: Concepts for Building Agents**

Situated Agents: Actions and Percepts - Proactive and Reactive Agents: Goals and Events- Challenging Agent Environments: Plans and Beliefs - Social Agents - Agent Execution Cycle.

### **Module III: Knowledge Based Agents**

Knowledge Representation – Logic – First Order Logic – Reflex Agent – Building a Knowledge Base – General Ontology – Inference – Logical Recovery.

### **Module IV: Planning Agents**

Situational Calculus – Representation of Planning – Partial Order Planning – Practical Planners– Conditional Planning - Preplanning Agents.

### **Module V: Agents and Uncertainty**

Acting under uncertainty – Probability – Baye's Rule – Belief Networks – Utility Theory - Decision Network- Value of Information – Decision Theoretic Agent Design.

### **Module VI: Higher Level Agents**

Learning Agents – General Model – Inductive Learning – Learning Decision Tree – Reinforcement Learning – Knowledge in Learning – Communicative Agents – Types of Communicative Agents – Future of AI.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

## SUMMER INTERNSHIP EVALUATION-III

Course Code: DSE6935

Credit Units: 06

### **Guidelines:**

There are certain phases of every Intern's professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship program can best be described as an attempt to institutionalize efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal classroom situations. These attributes are intellectual ability, professional judgment and decision-making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility etc.

In order to achieve these objectives, each student will maintain a file (**Internship File**). The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development.

The File will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

The **layout guidelines** for the Project & Seminar Report:

### **1. File should be in the following specification:**

A4 size paper

Font: Arial (10 points) or Times New Roman (12 points)

Line spacing: 1.5

Top & bottom margins: 1 inch/ 2.5 cm

Left & right margins: 1.25 inches/ 3 cm

### **2. Report Layout:** The report should contain the following components:

Front Page

Table of Content

Acknowledgement

Student Certificate

Company Profile (optional)

Introduction

Main Body

References / Bibliography

The File will include **five sections** in the order described below. The content and comprehensiveness of the main body and appendices of the report should include the following:

1. **The Title Page**--Title - An Internship Experience Report For (Your Name), name of internship organization, name of the Supervisor/Guide and his/her designation, date started and completed, and number of credits for which the report is submitted.
2. **Table of Content**--an outline of the contents by topics and subtopics with the page number and location of each section.
3. **Introduction**--short, but should include how and why you obtained the internship experience position and the relationship it has to your professional and career goals.
4. **Main Body**--should include but not be limited to daily tasks performed. Major projects contributed to, dates, hours on task, observations and feelings, meetings attended and their purposes, listing of

tools and materials and their suppliers, and photographs if possible of projects, buildings and co-workers.

**5. References / Bibliography** --This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system

## **ASSESSMENT OF THE INTERNSHIP FILE**

The student will be provided with the Student Assessment Record (SAR) to be placed in front of the Internship File. Each item in the SAR is ticked off when it is completed successfully. The faculty will also assess each item as it is completed. The SAR will be signed by the student and by the faculty to indicate that the File is the student's own work. It will also ensure regularity and meeting the deadlines.

## **STUDENT ASSESSMENT RECORD (SAR)**

### **5. Range of Research Methods used to obtain information**

### **6. Execution of Research**

### **7. Data Analysis**

- Analyse Quantitative/ Qualitative information
- Control Quality

### **8. Draw Conclusions**

#### **Examination Scheme:**

<b>Components</b>	<b>V</b>	<b>S</b>	<b>R</b>	<b>FP</b>
<b>Weightage (%)</b>	20	20	20	40

V – Viva, S – Synopsis, FP – Final Presentation, R - Report

# Syllabus - Tenth Semester

## PROJECT-DISSERTATION-II

Course Code: DSE6037

Credit Units: 15

### GUIDELINES FOR DISSERTATION

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critiqued by the faculty guide and corrected by the student at each stage.

The File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation.

### In general, the File should be comprehensive and include

A short account of the activities that were undertaken as part of the project;

A statement about the extent to which the project has achieved its stated goals.

A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;

Any activities planned but not yet completed as part of the DISSERTATION, or as a future initiative directly resulting from the project;

Any problems that have arisen that may be useful to document for future reference.

#### ➤ Report Layout

The report should contain the following components:

#### ➤ **Title or Cover Page**

The title page should contain the following information: Project Title; Student's Name; Course; Year; Supervisor's Name.

#### ➤ **Acknowledgements** (optional)

Acknowledgment to any advisory or financial assistance received in the course of work may be given.

#### ➤ **Abstract**

A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project

#### ➤ **Table of Contents**

Titles and subtitles are to correspond exactly with those in the text.

#### ➤ **Introduction**

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

#### ➤ **Materials and Methods**

This section should aim at experimental designs, materials used. Methodology should be mentioned in details including modifications if any.

#### ➤ **Results and Discussion**

Present results, discuss and compare these with those from other workers, etc. In writing these section, emphasis should be given on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary never write in “point” form.

➤ **Conclusion**

A conclusion should be the final section in which the outcome of the work is mentioned briefly.

➤ **Future prospects**

➤ **Appendices**

The Appendix contains material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

➤ **References / Bibliography**

This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

**Examples**

**For research article**

Voravuthikunchai SP, Lortheeranuwat A, Ninprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichia coli* O157: H7. *Clin Microbiol Infect*, **8** (suppl 1): 116–117.

**For book**

Kowalski, M. (1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), **7**: 63-67

**ASSESSMENT OF THE DISSERTATION FILE**

Essentially, marking will be based on the following criteria: the quality of the report, the technical merit of the project and the project execution.

Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project.

Project execution is concerned with assessing how much work has been put in.

The File should fulfill the following *assessment objectives*:

**Range of Research Methods used to obtain information**

**Execution of Research**

**Data Analysis**

Analyse Quantitative/ Qualitative information

Control Quality

**Draw Conclusions**

### Examination Scheme:

Dissertation	50
Viva Voce	50
<b>Total</b>	<b>100</b>

ata, leading to production of a structured report.

### **Selecting the Dissertation Topic**

It is usual to give you some discretion in the choice of topic for the dissertation and the approach to be adopted. You will need to ensure that your dissertation is related to your field of specialization.

Deciding this is often the most difficult part of the dissertation process, and perhaps, you have been thinking of a topic for some time.

It is important to distinguish here between ‘dissertation topic’ and ‘dissertation title’. The topic is the specific area that you wish to investigate. The title may not be decided until the dissertation has been written so as to reflect its content properly.

Few restrictions are placed on the choice of the topic. Normally we would expect it to be:

- relevant to business, defined broadly;
- related to one or more of the subjects or areas of study within the core program and specialisation stream;
- clearly focused so as to facilitate an in-depth approach, subject to the availability of adequate sources of information and to your own knowledge;
- of value and interest to you and your personal and professional development.

### **Planning the Dissertation**

This will entail following:

- Selecting a topic for investigation.
- Establishing the precise focus of your study by deciding on the aims and objectives of the dissertation, or formulating questions to be investigated. Consider very carefully what is worth investigating and its feasibility.
- Drawing up initial dissertation outlines considering the aims and objectives of the dissertation. Workout various stages of dissertation
- Devising a timetable to ensure that all stages of dissertation are completed in time. The timetable should include writing of the dissertation and regular meetings with your dissertation guide.

### **The Dissertation plan or outline**

It is recommended that you should have a dissertation plan to guide you right from the outset. Essentially, the dissertation plan is an outline of what you intend to do, chapter wise and therefore should reflect the aims and objectives of your dissertation.

There are several reasons for having a dissertation plan

- It provides a focus to your thoughts.
- It provides your faculty-guide with an opportunity, at an early stage of your work, to make constructive comments and help guide the direction of your research.
- The writing of a plan is the first formal stage of the writing process, and therefore helps build up your confidence.
- In many ways, the plan encourages you to come to terms with the reading, thinking and writing in a systematic and integrated way, with plenty of time left for changes.
- Finally, the dissertation plan generally provides a revision point in the development of your dissertation report in order to allow appropriate changes in the scope and even direction of your work as it progresses.

## **Keeping records**

This includes the following:

- Making a note of everything you read; including those discarded.
- Ensuring that when recording sources, author's name and initials, date of publication, title, place of publication and publisher are included. (You may consider starting a card index or database from the outset). Making an accurate note of all quotations at the time you read them.
- Make clear what is a direct quotation and what is your paraphrase.

## **Dissertation format**

All students must follow the following rules in submitting their dissertation.

- Front page should provide title, author, Name of degree/diploma and the date of submission.
- Second page should be the table of contents giving page references for each chapter and section.
- The next page should be the table of appendices, graphs and tables giving titles and page references.
- Next to follow should be a synopsis or abstract of the dissertation (approximately 500 words)
- Next is the 'acknowledgements'.
- Chapter I should be a general introduction, giving the background to the dissertation, the objectives of the dissertation, the rationale for the dissertation, the plan, methodological issues and problems. The limitations of the dissertation should also be hinted in this chapter.
- Other chapters will constitute the body of the dissertation. The number of chapters and their sequence will usually vary depending on, among others, on a critical review of the previous relevant work relating to your major findings, a discussion of their implications, and conclusions, possibly with a suggestion of the direction of future research on the area.
- After this concluding chapter, you should give a list of all the references you have used. These should be cross - references with your text. For articles from journals, the following details are required e.g.

Draper P and Pandyal K. 1991, The Investment Trust Discount Revisited, Journal of Business Finance and Accounting, Vol18, No6, Nov, pp 791-832.

For books, the following details are required:

Levi, M. 1996, International Financial Management, Prentice Hall, New York, 3rd Ed, 1996

- Finally, you should give any appendices. These should only include relevant statistical data or material that cannot be fitted into the above categories.

## **The Layout Guidelines for the Dissertation**

- A4 size Paper
- Font: Arial (10 points) or Times New Roman (12 points)
- Line spacing: 1.5
- Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

## **Guidelines for the assessment of the Dissertation**

While evaluating the dissertation, faculty guide will consider the following aspects:

1. Has the student made a clear statement of the objective or objective(s).
2. If there is more than one objective, do these constitute parts of a whole?
3. Has the student developed an appropriate analytical framework for addressing the problem at hand.
4. Is this based on up-to-date developments in the topic area?
5. Has the student collected information / data suitable to the frameworks?
6. Are the techniques employed by the student to analyse the data / information appropriate and relevant?
7. Has the student succeeded in drawing conclusion from the analysis?
8. Do the conclusions relate well to the objectives of the project?
9. Has the student been regular in his work?
10. Layout of the written report.

**Credit Units: 4**

### Course Objectives:

The knowledge of Mathematics is necessary for a better understanding of almost all the Engineering and Science subjects. Here our intention is to make the students acquainted with the concept of basic topics from Mathematics, which they need to pursue their Engineering degree in different disciplines.

### Prerequisites:

Students must have a back ground of Mathematics in senior secondary level.

### Course Contents/Syllabus:

Module I : Matrix Algebra	Weightage
<ul style="list-style-type: none"> <li>Elementary operations,</li> <li>Reduction of matrices to row echelon form</li> <li>Rank of matrix, Rank of a matrix by Echelon form and Normal form</li> <li>System of Linear Equations (Homogeneous and Nonhomogeneous)</li> <li>Consistency of system linear equations using Rank</li> <li>Solution of system of linear equations by Gauss Elimination method and Gauss-Jordan method</li> <li>Eigen values and Eigen vectors of a matrix</li> <li>Cayley-Hamilton theorem(without proof)</li> <li>Application of Cayley-Hamilton for finding inverse and power of matrix</li> <li>Diagonalization of a matrix</li> </ul>	25%
Module II : Differential Calculus	
<ul style="list-style-type: none"> <li>Higher order derivatives(<math>\cos(ax + b), \sin(ax + b), e^{ax+b}, \log(ax + b), (ax + b)^n</math>,</li> <li>Successive Differentiation, Leibnitz's Theorem(without proof)</li> <li>Taylor's series and Maclaurin's series (Statement only), Expansion of function of one variable by Taylor's series and Maclaurin's series</li> <li>Function with two or more variable, Limit, continuity and Partial differentiation</li> <li>Euler's theorem for homogeneous functions</li> <li>Maxima and Minima of two variable, Method of Lagrange's multiplier</li> <li>Taylor's series and Maclaurin's series for function with two variable</li> <li>Jacobian</li> </ul>	30%
Module III: Integral calculus	
<ul style="list-style-type: none"> <li>Definite integral: Area of plane region and length of plane curve</li> <li>Double Integral, change of order of integration</li> <li>Triple integral</li> <li>Application to area and volume using double and triple integral</li> </ul>	20%
Module IV Vector Calculus	
<ul style="list-style-type: none"> <li>Scalar and vector fields</li> </ul>	25%

<ul style="list-style-type: none"> <li>• Gradient, Directional derivative, Divergence, Curl and their properties</li> <li>• Line integral</li> <li>• Green's theorem in plane (without proof)</li> <li>• Surface integral</li> <li>• Stoke's theorem (without proof)</li> <li>• Volume Integral</li> <li>• Gauss-Divergence' theorem (without proof)</li> </ul>	
---	--

### Student Learning Outcomes:

At the end of the course, the students will be able

- to recognize, identify, classify and describe the problems like they can classify rows and columns and then to apply different transformations and explain the solutions of system of equations
- to find partial derivatives, maxima and minima of two variables, Jacobians and expand the functions using Taylor's series and students will be able to evaluate and assess the results of various problems in other subjects based on these concepts
- to calculate double, single integrals and can apply concepts to find area, volume etc.
- to find the solutions of problems using line integral, surface integral and volume integral and some important theorems of vector calculus.

### Pedagogy for Course Delivery:

- This course is taught as a lecture course with student participation and use of standard text books.
- Two or three examinations which may include in-class parts.
- Short quizzes, graded homework assignments which may be included in class assessment.

### Assessment/ Examination Scheme:

Theory L/T (%)	Lab/Practical/Studio (%)	End Term Examination
100	NA	70

### Theory Assessment (L&T):

Continuous Assessment/Internal Assessment					End Term Examination
Components (Drop down)	MID TERM	HOME ASSIGNMENT	VIVA	ATTENDANCE	
Weightage (%)	10	7	8	5	70

# ENGINEERING PHYSICS

Course Code: CSG2102

Credit Units: 5

**Course Objectives:** The aim of this course is to introduce the students about the fundamental concepts of under graduate level Physics and which forms the basis of all applied science and engineering disciplines.

**Pre-requisites:** Nil

**Student Learning Outcomes:** After the completion of this course students will be able to gain the fundamental concepts of (i) wave optics, (ii) laser and fiber optics, (iii) electromagnetic theory, (iv) relativistic mechanics and (v) wave mechanics. Moreover, they will be able to apply these fundamental concepts in various engineering applications.

**Course Contents/Syllabus:**

	Weightage (%)
<b>Module I: Wave Optics</b>	35
Coherent Sources, Conditions of Interference, Interference in thin films-parallel and Wedge shaped, Newton's rings, Fresnel and Fraunhofer diffraction, Fraunhofer diffraction at a Single Slit, and N Slits, Plane Transmission grating, Rayleigh criterion and Resolving power of grating, Birefringence, Nicol prism, Production and Analysis of Plane, Circularly and Elliptically Polarized Light, Half and Quarter Wave Plates, Optical and Specific Rotation. Introduction of Lasers, Induced Absorption, Spontaneous and Stimulated Emission, Einstein Coefficients, Population inversion, Concept of three and four level Lasers, Construction and Working of He-Ne and Ruby Laser.	
<b>Module II: Electromagnetic Theory</b>	25
Scalar and Vector fields, Gradient, Divergence and Curl, Gauss's and Stoke's Theorems, Gauss's Law in Electrostatics, Differential form of Gauss's Law, Ampere's Law, Displacement Current, Maxwell's Equations in Free Space and Isotropic media, EM Wave Propagation in Free Space, Poynting theorem.	
<b>Module III: Relativistic Mechanics</b>	15
Inertial and Non-inertial Frames, Postulates of Special Theory of Relativity, Lorentz Transformation, Length Contraction and Time Dilation, Addition of Velocities, Variation of Mass with Velocity, Mass Energy Equivalence.	
<b>Module IV: Wave Mechanics</b>	25
Wave particle duality, De-Broglie Matter Waves, Phase and Group Velocity, Davisson Germer's Experiment, Heisenberg Uncertainty Principle, Wave Function and its Physical Significance, Operators, Expectation Values, Time Dependent and Time Independent Schrödinger Wave Equation for Free and Bound States, Particle in a One Dimensional Potential Box. Application of emerging Physics for engineers	

**Lab/Practicals details, if applicable:**

**List of Experiments:**

1. To determine the wavelength of sodium light by Newton's rings method.
2. To determine the thickness of a given wire using wedge shape method.

- To find angle of the prism and to determine the dispersive power of the material of prism with the help of a spectrometer.
- To determine the specific rotation of sugar by Bi-quartz or Laurent half shade polarimeter.
- To determine the width of a narrow slit using diffraction phenomena.
- To determine the resistance per unit length of a Carey Foster's bridge wire and also to find out the specific resistance of a given wire.
- To determine the value of acceleration due to gravity (g) in the laboratory using bar pendulum.
- To determine the acceleration due to gravity (g) by Kater's reversible pendulum.
- To determine the moment of inertia of a flywheel about its own axis of rotation.
- To determine the frequency of an electrically maintained tuning fork by Melde's method.
- To find the wavelength of the prominent lines of mercury spectrum using plane transmission grating.
- To determine the frequency of A.C. mains using sonometer and electromagnet.
- To study the V-I characteristics of forward and reversed biased p-n junction diode.
- To study the characteristics of a solar cell and find the fill factor.
- To study the characteristics of a photo-cell and verify the inverse law of radiation.

#### Assessment/Examination Scheme:

Theory L/T (%)	Lab/Practical/Studio (%)	Total (%)
75	25	100

#### Theory Assessment (L&T):

Continuous Assessment/Internal Assessment					
Components (Drop down)	Mid Term Exam	Home Assignment	Quizz/Viva	Attendance	End Term Examination
Weightage (%)	10	7	8	5	70

#### Lab/ Practical/ Studio Assessment:

Continuous Assessment/Internal Assessment					
Components (Drop down)	Lab Record	Performance	Viva	Attendance	End Term Examination
Weightage (%)	10	10	5	5	70

# INTRODUCTION TO PROGRAMMING IN C

**Course Code: CSG2103**

**Credit Units: 03**

**Course Objectives:** The objective of this course module is to acquaint the students with the basics of computers system, its components, data representation inside computer and to get them familiar with various important features of procedure oriented programming language i.e. C. This Course guides the students to read, write and modify C programs and to implement basic projects.

**Pre-requisites:** Basic knowledge of Computers

## Course Contents/Syllabus:

	<b>Weightage (%)</b>
<b>Module I: Introduction</b>	<b>15</b>
Introduction to computer, history, von-Neumann architecture, memory system (hierarchy, characteristics and types), H/W concepts (I/O Devices), S/W concepts (System S/W & Application S/W, utilities). Data Representation: Number systems, character representation codes, Binary, octal, hexadecimal and their interconversions. Binary arithmetic, floating point arithmetic, signed and unsigned numbers, Memory storage unit.	
<b>Module II: Programming in C</b>	<b>20</b>
History of C, Introduction of C, Basic structure of C program, Concept of variables, constants and data types in C, Operators and expressions: Introduction, arithmetic, relational, Logical, Assignment, Increment and decrement operator, Conditional, bitwise operators, Expressions, Operator precedence and associativity. Managing Input and output Operation, formatting I/O.	
<b>Module III: Fundamental Features in C</b>	<b>20</b>
C Statements, conditional executing using if, else, nesting of if, switch and break Concepts of loops, example of loops in C using for, while and do-while, continue and break. Storage types (automatic, register etc.), predefined processor, Command Line Argument.	
<b>Module IV : Arrays and Functions</b>	<b>20</b>
One dimensional arrays and example of iterative programs using arrays, 2-D arrays Use in matrix computations. Concept of Sub-programming, functions Example of user defined functions. Function prototype, Return values and their types, calling function, function argument, function with variable number of argument, recursion	
<b>Module V: Advanced features in C</b>	<b>25</b>

Pointers, relationship between arrays and pointers Argument passing using pointers, Array of pointers. Passing arrays as arguments. Strings and C string library. Structure and Union. Defining C structures, Giving values to members, Array of structure, Nested structure, passing strings as arguments. File Handling.	
--	--

### **Student Learning Outcomes:**

- Graduates will understand programming principles and techniques for problem solving in C Programming Language
- Design, implement, and evaluate a computer-based system, process, program to meet desired needs.
- Ability to use techniques, skills, and tools necessary for computing practice.
- Design and Develop principles in the construction of software systems of varying complexity.

Pedagogy for Course Delivery: The class will be taught using theory and lab method. Lab helps the students to generate the logic of assigned assignments. The course instructor will spend considerable time in understanding the concept of C Programming Language from the scratch and covers most of the programming structures of C Language. The course will cover the ways to think innovatively & liberally. Tools Used: TURBOC.

### **Lab/ Practicals details, if applicable:**

#### **List of Experiments:**

- Introduction to TURBO C IDE and Programming Environment
- C Building Blocks
- Decision making the if and if-else structure
- Decision making the Switch case and conditional operator
- Loop Constructs in C Language
- Nested looping
- Functions in C-Language programming
- Arrays in C (single dimensional)
- Arrays in C (Multidimensional)
- Structures and Unions
- Pointers in C-Language
- Pointers with arrays and function
- File Handling in C-Language

**Assessment/ Examination Scheme:**

Theory L/T (%)	Lab/Practical/Studio (%)	Total
67	33	100

**Theory Assessment (L&T):**

Continuous Assessment/Internal Assessment					End Term Examination
Components (Drop down)	A	CT	S/V/Q	HA	EE

# **ELEMENTS OF MECHANICAL ENGINEERING LAB**

**Course Code: CSG2104**

**Credit Units: 01**

**Course Objectives:** This subject gives a very primitive but general information finding wide application in day to day life with emphasis upon the principles and fundamentals involved in various operations and processes used in manufacturing. The subject also offers a birds eye-view to all students about the common engineering materials finding wide application in Mechanical Engineering Industry and about their strength and other related vital aspects.

**Pre-requisites:** No pre-requisites required

## **Student Learning Outcomes:**

### **On completion of the course the student will be able to:**

1. Identify a broad range of materials used in mechanical engineering processes
2. List the different characteristics of metals used in mechanical engineering processes
3. Describe how hard and soft metals are selectively used in mechanical engineering processes
4. Follow a drawing or sketch for a specified mechanical engineering task
5. Carry out specified bench work activities using hand and power tools
6. Measure and mark out various geometric shapes accurately on metal
7. Ability to do arc and welding and make different types of joints.
8. Ability to make sand moulds and patterns for casting process
9. Apply appropriate health, safety and personal hygiene procedures when performing mechanical engineering tasks
10. Demonstrate the application of communications, team working and quality awareness in a engineering environment.

## **Pedagogy for Course Delivery:**

**The course pedagogy will include lectures and practical performance of various jobs.**

## **Lab/ Practicals details, if applicable:**

### **List of Experiments:**

- To make a two side square piece from a rectangular plate.
- To make a male female joint from a rectangular plate.
- To make a dust bin from zinc coated iron sheet.
- To make a funnel of a zinc coated iron sheet
- To make a cylindrical mug with handle of zinc coated iron sheet.
- To make a two side square piece from rectangular plate for Welding.
- To make a Butt joint, Lap joint and T- joint with the help of Arc-Welding.
- To make a Butt joint, Lap joint and T- joint with the help of Gas Welding.
- To make a mould casting by single piece pattern and split pattern bracket with cores.
- To make a mould casting by double piece pattern with pulley block.

**Assessment/ ExaminationScheme:**

<b>Theory L/T (%)</b>	<b>Lab/Practical/Studio (%)</b>	<b>Total</b>
<b>Nil</b>	<b>100%</b>	<b>100%</b>

# ECONOMICS FOR ENGINEERS

**Course Code: CSG2105**

**Credit Units: 02**

## **Course Objective:**

The objective of this course is to familiarize the prospective engineers with elementary principles of economics. It also deals with acquainting the students with standard concepts and tools that they are likely to find useful in their profession when employed in the firm/industry/corporation in public or private sector. It also seeks to create awareness about the status of the current economic parameters /indicators/ policy debates.

## **Pre-requisites: Nil**

## **Student Learning Outcomes:**

- On successful completion of the course, students will be able to:
- Students should be able to define the various economic concepts of Utility, demand, production function, cost and revenue curves and business cycles. Compare different market structures
- Students should be able to explain practical importance and applications of various economic tools
- Students should be able to interpret basic macroeconomic concepts in existing economic structure of the country

## **Course Contents/Syllabus:**

	<b>Weightage (%)</b>
<b>Module I: OVERVIEW</b>	<b>25</b>
Definition of economics, nature of economic problem, relation between science, engineering , technology and economics Concepts and measurement of utility, law of diminishing marginal utility-its practical applications and importance Law of demand, elasticity of demand (price, income and cross)-Measurement, practical importance and applications	
<b>Module II Supply and Elasticity of Supply</b>	<b>25</b>
Law of supply, elasticity of supply and its practical applications, market equilibrium Production, factors of production, production functions (one variable, two variable, all variable and Cobb-Douglas )	

<b>Module III concepts of Revenue and cost</b>	<b>25</b>
Costs, various concepts of cost and revenue in short and long run. Cost and revenue curves Meaning of market, types-Perfect, Monopoly, Oligopoly, Monopolistic (Main features)	
<b>Module IV Concepts of National Income</b>	<b>25</b>
Concepts of GDP, GNP, NI and Disposable income. Aggregate demand and supply (Both open and closed economies) Basic concepts of inflation, deflation, stagflation, business cycles and BOP	

**Pedagogy for Course Delivery:**

The class will be taught using lecture method and basic concepts will be explained in detail in order to develop conceptual understanding amongst the students. Practical application of economics will be discussed in class.

**Assessment/ Examination Scheme:**

<b>Theory L/T (%)</b>	<b>Lab/Practical/Studio (%)</b>	<b>End Term Examination</b>
<b>100</b>		<b>100</b>

**Theory Assessment (L&T):**

<b>Continuous Assessment/Internal Assessment</b>					<b>End Term Examination</b>
<b>Components (Drop down)</b>	Class test 1	Class Test 2	Viva	Attendance	
<b>Weightage (%)</b>	5%	15%	5%	5%	70%

**Text Reading:**

# SOCIOLOGY FOR ENGINEERS

**Course Code: CSG2106**

**Credit Units: 01**

## Course Objectives:

1. To familiarize the prospective engineers with elements of Indian history and sociological concepts and theories by which they could understand contemporary issues
2. To understand the problems in Indian society
3. To enable its student to analyze critically the social processes of globalization, modernization and social change.

**Pre-requisites:** Student should be 10+2 from any discipline

## Course Contents/Syllabus:

	Weightage (%)
<b>Module I</b>	<b>50</b>
<b>Descriptors/Topics</b> Sociological perspective; Sociology as a science; Sociology and other social Sciences, Society, community, Institution, Association, Social Structure, Social Function, Status and Role and its Elements.	
<b>Module II</b>	<b>50</b>
<b>Descriptors/Topics</b> Introduction to sociological concepts- social institutions, Culture social stratification (caste, class, gender, power), Social Change.	

**Pedagogy for Course Delivery:** The course is designed to be taught through the lecture mode.

## Student Learning Outcomes:

Understanding of professional and ethical Responsibility to discuss the dynamics and nature of Indian Society.

## Assessment/ Examination Scheme:

Theory L/T (%)	Lab/Practical/Studio (%)	Total
100	N.A	100

## Theory Assessment (L&T):

Continuous Assessment/Internal Assessment					End Term Examination
Components (Drop down)	CT	HA	PPT	ATT	
Weightage (%)	15	05	05	05	70

# INTRODUCTION TO ENVIRONMENTAL STUDIES

**Course Code: CSG2107**

**Credit Units: 03**

**Course Objectives:** The importance of environmental science and environmental studies cannot be disputed. The need for sustainable development is a key to the future of mankind. Continuing problems of pollution, loss of forest, solid waste disposal, degradation of environment, issues like economic productivity and national security, Global warming, the depletion of ozone layer and loss of biodiversity have made everyone aware of environmental issues. It is clear that no citizen of the earth can afford to be ignorant of environment issues. Environmental management has captured the attention of health care managers. Managing environmental hazards has become very important. The objective is to sensitize students about the environmental crisis and how to overcome them.

**Pre-requisites: Basic knowledge of science and humanity**

**Student Learning Outcomes: By the end of the course students will:**

- To help students acquire awareness and sensitivity to the total environment and its allied problems
- To help students acquire a basic knowledge and understanding of the environment active participation in its improvement and resolution of its associated problems
- To provide students with an opportunity to be actively involved at all levels in working towards resolution of the environmental problems
- To help students acquire the skill for identifying and solving environmental problems
- To help students acquire a set of values and feelings of concern for the environment and motivation for active participation in the activities regarding environmental improvement and protection

**Course Contents/Syllabus:**

<b>Course Contents/Syllabus:</b>	<b>Weightage (%)</b>
<b>Module I : The Multidisciplinary Nature of Environmental Studies &amp; Natural Resources</b>	<b>20</b>
Definition, scope and importance Need for public awareness. Types of natural resources, natural resource conservation, Land resources: Land as a resource, land degradation, Soil erosion, Forest resources: Use and over-exploitation, deforestation, case studies, Water resources: Use and over-utilization of surface and ground water, Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies, Food resources: Food resources effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies, Energy resources renewable and non-renewable energy sources, Changes caused by agriculture and overgrazing, Energy resources use of alternate energy sources, case studies, Role of individual in conservation of natural resources, Equitable use of resources for sustainable lifestyles, Desertification, man induced landslides, Timber extraction, dams and their effects on forests and tribal people, Floods, drought, conflicts over water, Case studies, Uses of minerals and steps of mining and World food problems, Energy resources: Growing energy needs, Case Studies	
<b>Module II: Ecosystems</b>	<b>20</b>
Concept of an ecosystem & Types of ecosystem, Structure and function of an ecosystem, Producers, consumers and decomposers, Energy flow in the ecosystem, Productivity, Food chains, food webs, Ecological pyramids, Ecological succession. Introduction of different Ecosystems, Types, characteristic features, structure and function of Forest ecosystem, Grassland ecosystem and Desert ecosystem, Aquatic ecosystems (ponds, streams, lakes, rivers, ocean estuaries), Case studies of various	

ecosystems. <ul style="list-style-type: none"> <li>Visit to a local area to document environmental assets—river/forest/grassland/hill/ mountain, Study of simple ecosystems—pond, river, hill slopes, etc.</li> </ul>	
<b>Module III : Biodiversity and Its Conservation</b>	<b>20</b>
<p>Introduction - Definition: genetic, species and ecosystem diversity, Value of biodiversity: consumptive use, productive use, social, ethical aesthetic and option values, Biogeographical classification of India with respect to phytogeography &amp; Zoogeography, India as a mega-diversity nation, Hot-spots of biodiversity, Threats to biodiversity: habitat loss, poaching of wildlife, Conservation of biodiversity: In-situ and Ex-situ conservation of biodiversity.</p> <p>Various national parks, sanctuaries and biosphere reserves, laboratories, organizations for biodiversity conservation in India, Endemism in India with special reference to Hotspots in India, Biodiversity at global, national and local levels, Man wildlife conflicts, Case studies of loss and extinction of biodiversity</p> <ul style="list-style-type: none"> <li>Visit to a local area to document environmental assets—river/forest/grassland/hill/ mountain, Study of common plants, insects, birds.</li> </ul>	
<b>Module IV: Environmental Pollution</b>	<b>20</b>
<p>Definition, Cause and effects and control measures of :- Air pollution, Water pollution, Noise pollution, Soil pollution, Marine pollution, nuclear and Thermal pollution and Nuclear hazards, Introduction to various disasters, Solid waste Management: Causes, effects and control measures of urban and industrial wastes. Visit to a local polluted site—Urban/Rural/Industrial/Agricultural</p> <p>Disaster management: floods, earthquake, cyclone and landslides, Pollution case studies, Role of an individual in prevention of pollution, Various types of disasters and 5R's and solution for waste management, Introduction to ETP/STP/organic farm etc facilities at the campus.</p> <ul style="list-style-type: none"> <li>ETP/STP/organic farm etc facilities at the campus</li> </ul>	
<b>Module V: Social Issues and the Environment &amp; Human Population and the Environment</b>	
<p><b>Social Issues and the Environment :</b> Water conservation, rain water harvesting, watershed management, Climate change, global warming, Acid rain, ozone layer depletion, Environment Protection Act, Air (Prevention and Control of Pollution) Act, Water (Prevention and control of Pollution) Act, Wildlife Protection Act, Forest Conservation Act, Resettlement and rehabilitation of people; its problems and concerns. From Unsustainable to Sustainable development, Urban problems related to energy, Wasteland reclamation, Consumerism and waste products &amp; Nuclear accidents and holocaust. Case Studies. Environmental ethics: Issues and possible solutions.</p> <p><b>Human Population and the Environment:</b> Population growth, variation among nations, Population explosion – Family Welfare Programme, Environment and human health. Human Rights, Value Education. Need of environmental Education, Role of Information Technology in Environment and human health. HIV/AIDS. Women and Child Welfare, Reason for growing populations and the government policies to curb the problem, Various water borne diseases and disease associated with poor and unhygienic environment, Various Case Studies related to society, environmental health.</p>	<b>20</b>

**Pedagogy for Course Delivery:** Course will be delivered through both power point presentation and black board teaching. Students will be provided with reference materials in form of handouts or PPTs. Regular internal assessment will be done through class seminar and class test for evaluating the continuous progress of students.

**Assessment/ Examination Scheme:**

<b>Theory L/T (%)</b>	<b>Lab/Practical/Studio (%)</b>	<b>Total Marks</b>
<b>100%</b>	-	<b>100</b>

**Theory Assessment (L&T):**

<b>Continuous Assessment/Internal Assessment</b>					<b>End Term Examination</b>

# Syllabus - Semester-II

## APPLIED MATHEMATICS-II

**Course Code: CSG2201**

**Credit Units: 4**

**Course Objectives:**

By the end of the semester, students will be able to analyze techniques to solve differential equations, complex analysis problems and Laplace transform which can be further applied to solve practical engineering problems in fluid dynamics, mechanics and modelling of simple electrical circuits etc.

**Prerequisites:** Students must have knowledge of Differential Calculus, Integral Calculus, and Complex numbers.

**Course Contents/Syllabus:**

Module I Ordinary Differential Equations	Weightage%
<ul style="list-style-type: none"> <li>Overview of solution of ordinary Differential Equations of First Order and first degree</li> <li>Exact Differential Equations, equations reducible to exact differential equation</li> <li>Linear Differential Equations of Higher Order</li> <li>Complete Solution</li> <li>Complementary Function</li> <li>Particular Integrals</li> <li>Euler Cauchy Equation</li> <li>Legendre's Linear Equation</li> <li>Simultaneous linear equations with constant coefficient.</li> </ul>	25%
Module II Laplace Transform	
<ul style="list-style-type: none"> <li>Existence of Laplace transform,</li> <li>Linear property</li> <li>First shifting theorems</li> <li>change of scale property</li> <li>Laplace transform of derivative and integrals</li> <li>multiplication by <math>t^n</math>, division by <math>t</math></li> <li>evaluation by integrals using Laplace transform</li> <li>inverse Laplace transform,</li> <li>convolution theorem,</li> <li>Laplace transform of periodic functions,</li> <li>Heavside function unit step function formula</li> <li>unit impulse functions</li> <li>second shifting theorems</li> <li>solution of initial value problem by Laplace transform.</li> <li></li> </ul>	25%

<b>Module IV Complex Integration</b>	
<ul style="list-style-type: none"> <li>• Complex Line Integrals</li> <li>• Real Line Integrals</li> <li>• Connection between Real and Complex Line Integrals</li> <li>• Cauchy Integral Theorem (without proof)</li> <li>• Cauchy Integral Formula (without proof)</li> <li>• Power Series, Taylor Series, Laurent Series</li> <li>• Zeroes and Singularities</li> <li>• Residues, Cauchy Residue Theorem (without proof) .</li> </ul>	<b>25%</b>

#### **Student Learning Outcomes:**

After completing this course, students learning outcomes are as follows:

- Students will be able to analyze and solve first second and higher order ordinary differential equations using different analytical and numerical methods.
- Students will be able to apply concept of analyticity using Cauchy Riemann Equations and analyze harmonic function and its conjugate.
- Students will be able to evaluate complex contour integral by applying Cauchy Integral Theorem and Cauchy Integral Formula.
- Students will be able to represent complex numbers as Taylor and Laurent series.
- Students will be able to classify singularities and poles and find residue which will be further used to evaluate complex integral using Residue Theorem.
- Students will be able to learn Laplace Transform and its application.

#### **Pedagogy for Course Delivery:**

1. Reviewing relevant, previously-learned topics.
2. Presenting the new information by linking it to previous topics.
3. Providing learning guidance and assignments.
4. Providing time for practice, problem solving sessions and feedback.
5. Taking tests and quiz on regular basis.

**Lab/ Practicals details, if applicable: NA**

#### **Assessment/ Examination Scheme:**

<b>Theory L/T (%)</b>	<b>Lab/Practical/Studio (%)</b>	<b>End Term Examination</b>
<b>100%</b>	<b>NA</b>	<b>70</b>

- Differential Equation by A.R.Forsyth.

# ENGINEERING CHEMISTRY

Course Code: CSG2202

Credit Units: 5

#	Course Title	Weightage (%)
1	<b>Course Objectives:</b> The objective of the course is to give the students a general view on the industrial applications of chemistry in field of water technology, fuel quality, effect of corrosion and measures for control and usage of lubricants and polymers. It also gives a basic knowledge of instrumental methods to identify the structure of compounds.	
2	<b>Prerequisites:</b> Basic knowledge of Chemistry in school level	
3	<b>Student Learning Outcomes:</b> The student will be able to <ul style="list-style-type: none"> <li>• Apply the knowledge of water treatment processes for water quality monitoring.</li> <li>• Calculate the calorific value based on fuel composition</li> <li>• Propose a suitable control method to combat corrosion in daily life</li> <li>• Choose lubricants based on their properties for a particular application.</li> <li>• Interpret the structure of molecules based on the spectral data.</li> <li>• Understand the mechanism of polymerization and gain knowledge about some commercially available polymers.</li> </ul>	
4	<b>Module I Water Technology</b> <ul style="list-style-type: none"> <li>• Introduction and specifications of water,</li> <li>• Hardness and its determination (EDTA method only), Alkalinity</li> <li>• Boiler feed water, boiler problems – scale, sludge, priming &amp; foaming: causes &amp; prevention, caustic embrittlement&amp; corrosion : causes &amp; prevention,</li> <li>• Carbonate &amp; phosphate conditioning, colloidal conditioning &amp; calgon treatment,</li> <li>• Water softening processes : Lime – soda process, Zeolite, Ion exchange method,</li> <li>• Water for domestic use.</li> </ul>	25
5	<b>Module II Fuels</b> <ul style="list-style-type: none"> <li>• Classification, calorific value of fuel, (gross and net),</li> <li>• Determination of calorific value of fuels, bomb calorimeter and its corrections, theoretical determination of Calorific value</li> <li>• Solid fuels - Proximate and ultimate analysis,</li> <li>• Knocking-Octane and Cetane rating</li> <li>• Numerical on combustion</li> </ul>	20
6	<b>Module III : Instrumental Methods of analysis</b> <ul style="list-style-type: none"> <li>• Introduction; Principles of spectroscopy; Laws of absorbance</li> <li>• IR : Principle, Instrumentation, Application</li> <li>• UV : Principle, Instrumentation, Application</li> <li>• NMR : Principle, Instrumentation, Application</li> </ul>	15
7	<b>Module IV Corrosion</b> <ul style="list-style-type: none"> <li>• Introduction, Mechanism of dry and wet corrosion,</li> <li>• Types of corrosion-Galvanic, Concentration cell, soil, pitting, intergranular, waterline. Passivity.</li> </ul>	15

	<ul style="list-style-type: none"><li>• Factors influencing corrosion.</li><li>• Corrosion control</li></ul>																																									
8	<b>Module V Polymers and Lubricants</b> <ul style="list-style-type: none"><li>• Polymers: Introduction, Classification, Mechanism of polymerization-Addition (Free radical, anionic, cationic) and Condensation, Molecular weight of polymers-number average and weight average, Preparation property and uses: PMMA, Polyester, Bakelite, Epoxy resin, Nylon 66.</li><li>• Lubricants: Introduction; Mechanism of Lubrication; Types of Lubricants, Properties of lubricants; Viscosity and Viscosity Index; Iodine Value; Aniline Point; Emulsion number; Flash Point; Fire Point; Drop Point; Cloud Point; Pour Point.</li><li>• Application of Chemistry in Engineering.</li></ul>	25																																								
10	<b>Pedagogy for Course Delivery:</b> The course will be delivered by lectures and numericals by assignments. The students will be asked to make presentations on some topics based on practical applications.

#### List of Experiments:

- To determine the ion exchange capacity of a given cation exchanger.
- To determine the temporary, permanent and total hardness of a sample of water by complexometric titration method.
- To determine the type and extent of alkalinity of given water sample.
- Determination of amount of oxalic acid and  $\text{H}_2\text{SO}_4$  in 1 L of solution using N/10 NaOH and N/10  $\text{KMnO}_4$  solution.
- To prepare and describe a titration curve for phosphoric acid – sodium hydroxide titration using pH-meter.
- (a) To find the cell constant of conductivity cell.  
(b) Determine the strength of hydrochloric acid solution by titrating it against standard sodium hydroxide solution conductometrically
- Determination of Dissolved oxygen in the given water sample
- To determine the total residual chlorine in water.
- Determination of viscosity of given oil by means of Redwood viscometer I.
- To determine flash point and fire point of an oil by Pensky Martin's Apparatus
- To determine the number of water molecules of crystallization in Mohr's salt.

# ENGINEERING MECHANICS

**Course Code: CSG2203**

**Credit Units: 04**

**Course Objectives:** Objective of this course is to provide fundamental knowledge of force system and its effect on the behaviour of the bodies that may be in dynamic or in static state. It includes the equilibrium of different structures like beams, frames, truss etc and the force transfer mechanism in the different components of a body under given loading condition.

**Pre-requisites:** The Basic Concepts of Physics and Mathematics (especially Trigonometry, Geometry and Calculus).

## Course Contents/Syllabus:

	Weightage (%)
<b>Module I: Force system &amp; Structure</b>	<b>20%</b>
<b>Descriptors/Topics</b> <ol style="list-style-type: none"><li>1. Free body diagram,</li><li>2. Equilibrium equations and applications.</li><li>3. Plane truss, perfect and imperfect truss, assumption in the truss analysis,</li><li>4. analysis of perfect plane trusses by the method of joints, method of section</li></ol>	
<b>Module II</b>	<b>20%</b>
<b>Friction</b> <ol style="list-style-type: none"><li>1. Static and Kinetic friction, laws of dry friction, coefficient of friction,</li><li>2. angle of friction, angle of repose, cone of friction, friction lock,</li><li>3. efficiency of screw jack, transmission of power through belt</li></ol>	
<b>Module III</b>	<b>40%</b>

<b>Distributed Force</b> <ol style="list-style-type: none"> <li>1. Determination of center of gravity, center of mass and centroid by direct integration and by the method of composite bodies,</li> <li>2. mass moment of inertia and area moment of inertia by direct integration and composite bodies method,</li> <li>3. radius of gyration, parallel axis theorem,</li> <li>4. Pappus theorems and its application, polar moment of inertia.</li> </ol>	
<b>Module IV</b>	<b>20%</b>
<b>Work -Energy</b> <ol style="list-style-type: none"> <li>1. Work energy equation, conservation of energy,</li> <li>2. Virtual work, impulse, momentum conservation, impact of bodies, coefficient of restitution,</li> <li>3. loss of energy during impact,</li> <li>4. D'Alembert principle</li> </ol>	

### Student Learning Outcomes:

On completion of the course the student will be able to:

1. Demonstrate knowledge of fundamental concepts of Mechanics.
2. Identify various components of Trusses and mechanism.
3. Design and analyze problems relating to real world kinematics.

### Pedagogy for Course Delivery:

The course pedagogy will include lectures, numerical practice, case studies, seminars and presentations.

### Lab/ Practicals details, if applicable:

#### List of Experiments:

- To verify the law of Force Polygon.
- To verify the law of Moments using Parallel Force apparatus. (Simply supported type)
- To determine the co-efficient of friction between wood and various surface (like Leather, Wood, Aluminum) on an inclined plane.
- To find the forces in the members of Jib Crane.
- To determine the mechanical advantage, Velocity ratio and efficiency of a screw jack.
- To determine the mechanical advantage, Velocity ratio and Mechanical efficiency of the Wheel and Axle
- To determine the MA, VR,  $\eta$  of Worm Wheel (2 start)
- Verification of force transmitted by members of given truss.
- To verify the law of moments using Bell crank lever
- To find CG and moment of Inertia of an irregular body using Computation method

### Assessment/ Examination Scheme:

Theory L/T (%)	Lab/Practical/Studio (%)	Total
75%	25%	100%

**Theory Assessment (L&T):**

# BASIC ELECTRICAL ENGINEERING

**Course Code: CSG2204**

**Credit Units: 04**

**Course Objectives:**

The aim of this course is to make students aware of basic concepts of Electrical Engineering like Fundamental Law's & Theorems, Analysis of AC & DC Circuits and working principles of Electrical Machines.

**Pre-requisites:**

Physics & Mathematics at +2 level

**Course Contents/Syllabus:**

	<b>Weightage (%)</b>
<b>Module I : DC Circuits and Network Theorems</b>	<b>25</b>
Ohm's law, Resistance in series and parallel, Voltage divider and current division rules, types of resistors, Equivalent resistance, Relative Potential Circuit Principles, Kirchhoff's Current Law, Kirchhoff's Voltage Law Network Reduction: Star-Delta Transformation, Source Transformation, Ideal Source, Independent Source and Controlled Source, Nodal Analysis, Loop analysis, Superposition theorem, Thevenin's Theorem, Norton's theorem, Maximum Power transfer theorem.	
<b>Module II : Alternating Current Circuits</b>	<b>20</b>
Generation of alternating voltages and currents, Peak, Average and RMS values for alternating currents, Form and Peak factor, Power calculation, reactive power, active power, Complex power, power factor, AC through resistance, capacitance and inductance and RLC circuit, impedance, reactance, conductance, susceptance Series and Parallel circuits, Resonance: series Resonance, parallel resonance, basic definition of Q factor & Band-width., Power in choking coil.	
<b>Module III : Measuring Instruments</b>	<b>15</b>
Types of instruments, Construction and working principles of PMMC and moving iron type voltmeters & ammeters, Single phase dynamometer wattmeter, Use of shunts and multipliers (Simple numerical problems on shunts and multipliers).	

<b>Module IV : Three Phase Circuits</b>	<b>20</b>
Generation, Phase sequence, Numbering, Interconnection- star and delta and current and voltages in them, Balanced star to delta and delta to star, Parallel loads, Power measurement in 3 phase circuits by three watt meter, two and one wattmeter method, Unbalanced loads.	
<b>Module V : Electrical Machines</b>	<b>20</b>
Single Phase Transformer: Principle of operation, construction, EMF equation, Power Losses, Efficiency (Simple Problems) DC machines: Principle and Construction, Types of DC machines based on excitation, Characteristics and Applications of DC motors (simple numerical problems).	

### Student Learning Outcomes:

#### After completion of this course the students will have

1. An ability to apply fundamental and advance knowledge of mathematics, science and engineering to solve electrical and electronics engineering problem.
2. An ability to design and conduct experiments in electrical and electronics engineering as well as to collect, analyze and interpret data to reach logical conclusions.
3. An appreciation for the need for, and preparedness to engage in lifelong learning.

### Pedagogy for Course Delivery:

- Class room Lectures, assignments, Quiz.
- Seminars and discussions
- Practical on the Hard ware and study setups

### Lab/ Practicals details, if applicable:

#### List of Experiments:

1. To verify KVL & KCL in the given network.
2. To verify Superposition Theorem.
3. To verify Maximum Power Transfer Theorem.
4. To verify Reciprocity Theorem.
5. To determine and verify  $R_{Th}$ ,  $V_{Th}$ ,  $R_N$ ,  $I_N$  in a given network.
6. To perform open circuit & short circuit test on a single-phase transformer.
7. To study transient response of a given RLCCircuit.
8. To perform regulation, ratio & polarity test on a single-phase transformer.
9. To measure power & power factor in a three phase circuit by two wattmeter method.
10. To measure power & power factor in a three phase load using three ammeter & three voltmeter method.

### Assessment/ Examination Scheme:

Theory L/T (%)	Lab/Practical/Studio (%)	Total
75	25	100

#### Theory Assessment (L&T):

Continuous Assessment/Internal Assessment					End Term Examination
Components (Drop down)	A	C T	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

**Lab/ Practical/ Studio Assessment:**

Continuous Assessment/Internal Assessment					End Term Examination		
Components (Drop down)	A	PR	LR	V	PR	V	70
Weightage (%)	5	10	10	5	35	35

# ENGINEERING GRAPHICS LAB

**Course Code: CSG2205**

**Credit Units: 01**

**Course Objectives:** This course will provide students concepts on the drawings of different curves like straight line, parabola, ellipse etc. After completion of this course, students will be able to draw different figures manually and will be capable of using various instruments involved in drawings.

**Pre-requisites:** Concepts Mathematics (especially Trigonometry and Geometry)

## **Student Learning Outcomes:**

### **On completion of the course the student will be able to:**

1. Acquire knowledge on the fundamentals of engineering drawing and units.
2. Demonstrate proficiency with a metric and engineer's scales.
3. Demonstrate the proper use of drawing equipment.
4. Ability to develop and/or comprehend a simple engineering drawing.
5. Ability to draw in both First and Third angle orthographic projections.
6. Understand the meaning of sections and cutting-plane lines.
7. Understand international standards in engineering drawing practice and engineering graphics.

### **Pedagogy for Course Delivery:**

The course pedagogy will include lectures, problem solving on drawing sheets in classroom and drawing assignments.

### **Lab/ Practicals details, if applicable:**

#### **List of Drawing Sheets**

Sheet no. 1- Lettering and Dimensioning

Single stroke, vertical and inclined capital letters, numerals, types of conventional lines, types of dimensioning

Sheet no. 2- Geometrical Constructions

Construction of basic geometrical figures like pentagon, hexagon, conic sections by different methods.

Sheet no. 3- Scales

Construction of plain scale, diagonal scale and scale of chord.

Sheet no. 4- Projection of Points and Lines

Orthographic projection of points and lines in different angles of projection.

Sheet no. 5- Projection of Planes

Orthographic projection of planes like pentagon, hexagon, circle, rectangle etc. in 1st angle and 3rd angle.

Sheet no. 6- Projection of Solids

Orthographic projection of polyhedra and solids of revolution in 1st angle and 3rd angle.

Sheet no. 7- Section of Solids

Drawing sectional views and true shape of section for different solids.

Sheet no. 8- Development of Surfaces

Drawing developments of different solids by parallel line and radial line development method.

Sheet no. 9- Isometric Projection

Isometric views of plane figures and solids by box method

Sheet no. 10- Orthographic Projection of Blocks

Drawing orthographic projection of different blocks in 1st angle and 3rd angle.

**Assessment/ ExaminationScheme:**

Theory L/T (%)	Lab/Practical/Studio (%)	Total
Nil	100%	100%

**Lab/ Practical/ StudioAssessment:**

	Continuous Assessment/Internal Assessment				End Term Examination	
Components (Drop down)	A	PR	LR	V	PR	V
Weightage (%)	5	10	10	5	35	35

# LAW FOR ENGINEERS

**Course Code: CSG2206**

**Credit Units: 02**

**Course Objective:**

The aim of the course is provide general exposure to the students about the elementary knowledge of law that would be of utility in their profession; to enable the students to appreciate the importance of law and its impact on business and society.

<b>Course Contents/Syllabus:</b>	<b>Weightage (%)</b>
<b>Module I: Introduction to Law and Law Making</b>	<b>20</b>
Law: its meaning, sources and concepts; Constitutional Law with emphasis on Fundamental Rights, Directive Principles of State Policy and Fundamental Duties; Law making in India.	
<b>Module II: General Principles of Contract under Indian Contract Act, 1872</b>	<b>20</b>
Sec. 1 to 75 of Indian Contract Act and including Government as contracting party, Kinds of government contracts and dispute settlement, Standard form contracts; Promissory Estoppel and Legitimate Expectations.	
<b>Module III: Adjudicatory System in India</b>	<b>20</b>

Adjudicatory System in India as under the Constitution and statutes; Tribunals and Commissions like Competition Tribunal and Consumer Protection Commissions; Alternative Dispute Resolution: Nature, Scope and Types; Arbitration and Conciliation Act, 1996; Legal Services Authority Act, 1986.	
<b>Module IV: Law Relating to Intellectual Property</b>	<b>20</b>
Concept of Property, Types of Property; Introduction to IPR; Types of IPR: Copyrights, Patents, Trademarks, Designs, Trade Secrets, Plant Varieties and Geographical Indications; Infringement of IPRs and Remedies available under the Indian Law.	
<b>Module V: Privacy in Governance and Transparency</b>	<b>20</b>
Confidentiality in Government Business/Administration: Official Secrets Act, 1923; Right to Information Act, 2005 covering, Evolution and concept; Practice and procedures; Privileged Communications under the Indian Evidence Act, 1872; Offences under the Information Technology Act, 2000 with special reference to Protected Systems; Labour Disputes and the Settlement – Industrial Disputes Act, 1947; Collective bargaining; Industrial Employment (Standing Orders) Act, 1946; Payment of Wages Act, 1936.	

#### **Pedagogy for Course Delivery:**

The course will be delivered by using lecture method and discussion method.

#### **Lab/ Practicals details, if applicable: N.A. Assessment/ Examination Scheme:**

<b>Theory L/T (%)</b>	<b>Lab/Practical/Studio (%)</b>	<b>End Term Examination</b>
100	-	100

#### **Theory Assessment (L&T):**

<b>Continuous Assessment/Internal Assessment</b>					<b>End Term Examination</b>
<b>Components (Drop down)</b>	<b>MID TERM EXAM</b>	<b>PROJECT</b>	<b>PRESENTATION</b>	<b>ATTN.</b>	
<b>Weightage (%)</b>	10	10	5	5	70

# ASPECTS OF INDIAN HISTORY FOR ENGINEERS

**Course Code: CSG2207**

**Credit Units: 01**

**Course Objectives:** The paper is designed to provide adequate understanding of history and scientific achievements of Ancient India.

**Pre-requisites:** The student should have keen interest to know the history of India.

## **Student Learning Outcomes:**

At the end of the course the student will be able to:

- Identify major dynasties.
- Examine social, economic and cultural conditions.
- Analyze the scientific achievements.
- Recognize the ancient heritage.
- Examine the past and present scenario.

	Weightage%
<b>Module I - Ancient India: The beginning (2600- 600 BCE)</b>	20
<ul style="list-style-type: none"><li>• Salient features of Harappan Culture<ul style="list-style-type: none"><li>○ Town planning, Drainage system, Great Bath, Buildings, Seals, Social and economic condition, Reasons of decline</li></ul></li><li>• Vedic Period<ul style="list-style-type: none"><li>○ Vedic literature, Social ,Political and Economic conditions</li></ul></li><li>• Rise of Buddhism and Jainism</li></ul>	
<b>Module II - From states to empires</b>	20
<ul style="list-style-type: none"><li>• Early kingdoms &amp; republics : Sixteen Mahajanpadas &amp; ten Republics</li><li>• The Mauryan Empire: Origin &amp; growth, Administration, Achievements of Chandragupta, Ashoka's Dhamma policy</li></ul>	
<b>Module III- The Golden Period</b>	20
<ul style="list-style-type: none"><li>• Achievements of Kanishka, Samudragupta and Chandragupta II, The Gupta administration &amp; its decline. Main features of the Golden Era</li></ul>	
<b>Module IV- Scientific Achievements in Ancient India</b>	40
<ul style="list-style-type: none"><li>• Astronomy in ancient India</li><li>• Mathematics in ancient India</li><li>• Civil engineering &amp; architecture in ancient India</li><li>• Science, Medicine, Technology in ancient India</li><li>• Agriculture Development and ecological balance in ancient India</li></ul>

## **B.Sc. (Information Technology) Programme Overview**

Bachelor of Science (Information Technology) is one of the popular courses among students who want to make their career in IT industry. It is an undergraduate degree course of 3 years duration. The program provides a good balance between theoretical and practical aspects, analytical methods and industry practices. The study period of the course includes various subjects such as Programming (C, C++, Java), Networking (Basic and Advanced), Database, Data Structure, Website design and development (HTML, CSS, PHP), Operating System, Software Engineering, Mathematics (Basic, Discrete) etc. The course also requires the students to undergo various Internship Programs, Minor and Major Projects. After the completion of the course, students can go for higher studies MCA which is a master course in computer application considered equivalent to engineering course or work as an IT professional.

There is a huge scope in this field. With the rapid growth of IT industry, the demand of computer professionals is increasing day by day. It has created a lot of opportunities for Computer Graduates. The student can work as a Network Administrator, System Engineer, Programmer, Website Developer or as a System Administrator. Students can do freelancing or develop their own software.

### **Programme Outcomes (POs)**

PO1: Apply knowledge of science, mathematics, computers and Information Technology fundamentals to solve complex problems related to the discipline.

PO2: Identify, analyze and evaluate problems specific to domain using knowledge of fundamentals, computational techniques, software tools and programming principles. .

PO3: Design and develop solutions in terms of computer network, hardware and software systems, modules or processes on the basis of customer needs and business goals considering cost, security, intellectual property, copyrights and other limitations.

PO4: Analyze and evaluate existing systems to understand complex problems and derive a solution to it.

PO5: Identify and apply current techniques, skills, and tools necessary for computing practices and producing solutions.

PO6: Apply professional practices and contextual knowledge to assess societal, safety and legal issues.

PO7: Comprehend the effects of the professionally developed solutions in societal and environmental contexts to produce viable developments.

PO8: Recognize and demonstrate ethical principles, responsibilities and commitments towards the profession.

PO9: Contribute profoundly and efficiently to the profession as an individual or as a member/leader of multi-faceted team by demonstrating proper coordination..

PO10: Communicate effectively with the society and the professional community through oral and written presentations with clear descriptions.

PO11: Apply management and professional principles while assigning responsibilities, performing designated work and meeting the deadlines of a project as an individual or a team member.

PO12:Exhibit the understanding of and have readiness and capability to engage in life-long learning through education and research.

### **Programme Specific Outcomes (PSOs)**

On completion of B.Sc.(IT) course, the students will be able to:

**PSO1.**Apply the fundamental knowledge of basic science and technical courses to model, design and analyse computational systems, software and web applications using the concepts of mathematics, database, computer programming and algorithms.

**PSO2.**Analyze and solve complex problems related to system software, data communication & networking, and other specialized domains of information technology by making use of modern tools and techniques.

**PSO3.**Work as an IT professional in Industry within a team or as an individual by applying principles of management, ethics, lifelong learning and able to communicate effectively in the professional environment

#### **Enclosure (s):**

- ✓ Supporting document for PSOs framing
- ✓ Programme Structure, B.Sc. IT (2017)
- ✓ Supporting document\_PSOs\_B.Sc. (Information Technology)

# MATHEMATICS

**Course Code: IFT2109**

**Credit Units: 03**

**L-T-P: 3-0-0**

## **Course Objective:**

The objective of this course is to provide an introduction to the fundamentals and concepts of basic mathematics covering sets, functions, differentiation, integration, differential equations, vectors and matrices. This course aims to assist the students to develop confidence in handling mathematical concepts and techniques and to understand the principles and Concept of differential Calculus.

## **Course Contents:**

### **Module I: Matrices**

Definition of Matrix, Submatrix, types of matrices, such as symmetric, square, diagonal matrices, singular and nonsingular matrices. Addition, Subtraction, multiplication of matrices, determinant of Square matrix, Matrix equation, Solution by Cramer's rule and Gauss elimination method.

### **Module II: Limits and Continuity**

Limit of a function. Infinitelimits. Right hand and left hand Limit. Some important limits. Continuity of a Function. Discontinuity. Type of Discontinuity. Algebra of Continuous function.

### **Module III: Differentiation**

Differentiation of function, Derivative of some common functions, polynomial, rational, exponential, logarithmic and trigonometric functions.

Successive differentiation.

## **Examination Scheme:**

Components	CT1	A/C/Q	Attd	EE
Weightage (%)	15	10	5	70

## **Text:**

1. NCERT MATHEMATICS – PART I- II, Textbook for Class XII
2. R.B. Babat, Linear algebra and linear model, Hindustan book agency
3. K. Hoffman and R. Kunze, Linear algebra, second edition, Prentice Hall India Learning Private Limited

# DIGITAL ELECTRONICS

**Course Code: IFT2112**

**Credit Units: 03**

**L-T-P: 3-0-0**

## **Course Objective:**

An entry level course in digital electronics covering number systems, binary mathematics, digital codes, logic gates, Boolean algebra, Karnaugh maps, and combinational logic. Emphasis will be on circuit logic analysis and design of digital circuits. The student will explain the operation of digital logic gates and use Boolean algebra and Karnaugh mapping to express logic operations and minimize logic circuits in design. The student will construct, analyze combinational logic circuits & sequential circuits; create a truth table for standard digital logic gates; and add, subtract, multiply and divide using the binary numbering system. Student will also be able to understand about digital to analog conversion and vice versa.

## **Course Contents:**

### **Module I: Number System**

Decimal, Binary, Octal, Hexadecimal Number Systems and Conversion of the bases, Complements:  $r$ 's complement,  $(r-1)$ 's complement, Binary codes: Grey code, BCD Code, Excess-3 code

#### **Introduction to logic systems**

Positive and negative logic, Logic functions - NOT, AND, OR, NOR, EX-OR, EX NOR  
Truth tables Boolean algebra, De Morgan's theorems Standard forms for Logical Expressions - Sum of Products, Product of Sums Specification of Logical functions in terms of Minterms and Maxterms, Karnaugh Maps, Simplification of Logical functions, Introduction of "don't care" states.

### **Module II: Combinational Building Blocks**

Multiplexers, De-multiplexers, Decoders, Encoders

#### **Arithmetic circuits**

Half Adders and Full Adders, Half Subtractor and Full Subtractor

### **Module III: Flip-flops**

The RS latch, the clocked RS flip-flop, JK Flip Flop, the Master-Slave JK flip-flop, Delay and Toggle flip-flops

**Flip-flops in counter circuits** Asynchronous (ripple) Counters (UP/DOWN), Synchronous Counter design (UP/DOWN), Non Sequential Counting

### **Module IV: Shift Registers**

Shift registers in general, Ring Counters, Johnson Counter

#### **Introduction to Memory**

Primary: RAM, Static RAM, Dynamic RAM, ROM, PROM, EAPROM, Secondary: Floppy Disk, Hard Disk, CDROM

### **Module V: Introduction to Logic Families, DACs and ADCs**

Introduction to logic families-TTL, RTL,ECL,CMOS,DTL,IIL

Binary weighted resistor DAC, Resolution, linearity and settling time of DACs, Successive approximation ADC

#### **Examination Scheme:**

<b>Components</b>	<b>CT1</b>	<b>A/C/Q</b>	<b>Attd</b>	<b>EE</b>
<b>Weightage (%)</b>	15	10	5	70

<b>IFT 2114</b>	<b>COMPUTER FUNDAMENTALS AND TOOLS</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2017.1	Date of Approval: 14 June, 2017	3	0	0	3
Pre-requisites/Exposure	Basis of Computers				
Co-requisites	Nil				

### **Catalog Description**

Examines key computational abstraction levels below modern high-level languages; number representation, assembly language, memory management, the operating-system process model, high-level machine architecture including the memory hierarchy, and how high-level languages are implemented. This course is aimed to provide a fundamental understanding of computer science for the students in their early stages of academic career. Various computer nomenclatures regarding to hardware and software are introduced in this course to develop an in-depth realization of several subjects and their significant roles in the field.

### **Course Objectives**

The objective of this course is to

1. Give students an in-depth understanding of why computers are essential components in business, education and society.
2. Introduce the fundamentals of computing devices and reinforce computer vocabulary, particularly with respect to personal use of computer hardware and software, the Internet, networking and mobile computing.
3. Provide hands-on use of Microsoft Office 2013 applications Word, Excel, Access and PowerPoint.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1: Describe the usage of computers and why computers are essential components in business and society.

CO2: Utilize the Internet Web resources and evaluate on-line e-business system.

CO3: Solve common business problems using appropriate Information Technology applications and systems.

CO4: Identify categories of programs, system software and applications. Organize and work with files and folders.

CO5: Describe various types of networks standards and communication software.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>MODULE 1:</b>  Computer and its characteristics, application of computers, digital and analog computer, Generation of computers, Storage devices: primary storage devices (RAM,ROM,PROM,EPROM,EEPROM) , secondary storage devices(Floppy disk, Hard disk, optical disk, magnetic tapes), Input and output devices (keyboard, mouse, light pen, joystick, scanner, monitor, printers etc.)	L1, L2, L3	7
<b>MODULE 2:</b>  Software and its types (System Software, Application Software, Firmware Software's) Computer Languages and its types (Machine Language, Assembly Language, High Level Language: advantages and disadvantages of computer languages), Translators: Compiler, Linker, Interpreter, Number system and its types, conversion from one base to another and vice versa.	L1, L2	8
<b>MODULE 3:</b>  Word Processor and its features, Editing of Text, Find and Replace, Bullets and Numbering, Spell Checker, Grammar Checker, Auto Correct, Auto Complete, Auto Text, Header and footer, tables, mail merge, border and shading, page setup, printing.	L2, L3 and L4	7
<b>MODULE 4:</b>  Spread sheet and its features, Entering Information in Worksheet, Editing Cell Entry, Moving and Copying Data, deleting or Inserting Cells, Rows and Columns, Custom Numeric Formats, Using Formulas and functions, Creating charts.	L2, L3, L4	7
<b>MODULE 5:</b> Presentation Software and its uses, steps for creating PowerPoint Presentation, PowerPoint Views, Assigning Slide Transitions, Using Preset Animations, Hiding Slides, Slide Show, Controlling the Slide Show with a Keyboard, Setting Slide Show Timings.	L3, L5 and L6	7

Co-requisites	Nil				

### Catalog Description

This course is aimed to provide a fundamental understanding of programming concepts. C Language is the language which used to write solution for the basic computational problem in the form of instructions and programs. The basic and advanced features of C Language including Data types, Operators, Conditional & Control Statements, Arrays, Strings, Structure & Union and File Handling will be introduced.

### Course Objectives

The objective of this course is to

1. Equip the students with concepts of Programming through C Language
2. Provide an overview of advanced programming concepts like Structure, Union and File Handling

### Course Outcomes

On completion of this course, the students will be able to

After the completion of course, the students will be able to,

CO 1: Define the purpose and structure of C Program for programming; identify and distinguish various datatypes and operators for arithmetic, logical relational operations; solve the problems related to finding errors and output in program.

CO 2: Describe conditional and control statement; apply if-else, Switch and loops to rewrite basic C program for problem solving.

CO 3: Compare and contrast various Array types, its declaration and implementation; differentiate between Call by Value and Reference if Functions; apply the concepts to rewrite C Programs

CO 4: Differentiate between various String Handling Functions; describe the concept of Pointers in C Language

CO 5: Explain the concept of Structure and Union; apply the concept of File Handling to provide data storage support to the programs.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Introduction to 'C' Language</b>  History of C, Introduction of C, Basic structure of C program, Concept of variables, constants and data types in C, Operators and expressions: Introduction, arithmetic, relational, Logical, Assignment, Increment and decrement operator, Conditional, bitwise operators, Expressions, Operator precedence and associativity. Managing Input and output Operation, formatting I/O.	L1, L2 and L3	6
<b>Module II: Decision making and looping</b>  Decision making in program, Relational Logical operators example, if statements, if -else, nested if-else statements, Switch, case loop, Do-While, While, for loop and nesting of loop, continue and break , Storage types , predefined processor.	L2 and L3	8
<b>Module III: Arrays and Functions</b>  One Dimensional Arrays, Arrays Manipulation, Sorting, Searching, Function declaration, example & calling a function. Passing Arguments, call by value and call by references, Recursive function, .Recursion.	L2, L3 and L4	7
<b>Module IV: Pointers and String</b>  Pointers: Declaration, Pointer assignments, initialization, Pointers and Dynamic Memory Allocation, Array of Pointers, strings, string handler functions.	L2, L3 and L4	8
<b>Module V: Structure Union &amp; file handling</b>  Structure definition, Declaration, structure Assignments, Arrays in structure, Structure Arrays, Pointer Structure, Nested Structure, Arrays of Structure, Union declaration, assignments & example programs, Difference between structure & union, file handling and the related functions.	L2 and L3	7

## Catalog Description

This course is aimed to provide a fundamental understanding of computer science for the students in their early stages of academic career. Various computer nomenclatures regarding hardware and software will be introduced for students to develop an in-depth realization of several subjects and their significant roles in the field. After this course, the students will be able to understand and apply the fundamental concepts of computer.

## Course Objectives

The objective of this course is

1. Give students an in-depth understanding of why computers are essential components in business, education and society.
2. Introduce the fundamentals of computing devices and reinforce computer vocabulary, particularly with respect to personal use of computer hardware and software, the Internet, networking and mobile computing.
3. Provide hands-on use of Microsoft Office 2016 applications Word, Excel, Access and PowerPoint. Completion of the assignments will result in MS Office applications knowledge and skills.

## Course Outcomes

On completion of this course, the students will be able to:

CO 1: Outline the usage of computers and why computers are essential components in business and society. Creating the folder and apply it where necessary.

CO 2: Identify the features of windows operating system. Determine the operations of taskbar of Windows and Set the wall paper, screen saver and date/time.

CO 3: State and demonstrate the use of word document and relate its applications with the day to day use of files.

CO 4: Identify and relate the concept of macros and mail merging. Design and work with files and folders.

CO 5: List the features of the excel document and apply and relate its calculation part with the real world. Design a document for resume writing.

Modules/Topics Covered**	Blooms	Number
--------------------------	--------	--------

	level*	of hours
1. Create a new folder and do the following: <ol style="list-style-type: none"> <li>Make a word document in it.</li> <li>Make an Excel document in it.</li> <li>Make a new folder in it</li> <li>Rename the initial folder</li> <li>Move the initial folder</li> <li>Copy the initial folder.</li> <li>Delete the initial folder</li> </ol>	L1, L3 and L5	4
2. Implement the various well known features of Windows operating system such as Notepad, WordPad, Paint, System tools, Entertainment etc. enclosed in Start→Programs→Accessories.	L1, L3	4
3. Implement various display properties by right clicking on the Windows Desktop.		
4. Explore the taskbar of Windows. 5. Set the wall paper and screen saver. 6. Set the date/time.		
7. Create a document and <ol style="list-style-type: none"> <li>Put Bullets and Numbers</li> <li>Apply various Font parameters.</li> <li>Apply Left, Right, and Centre alignments.</li> <li>Apply hyperlinks.</li> <li>Insert pictures</li> <li>Insert ClipArt</li> <li>Show the use of WordArt</li> <li>Add Borders and Shading</li> <li>Show the use of Find and Replace.</li> <li>Apply header/footers</li> </ol>	L1, L3, L5	4
<b>8. Create any document and show the use of File→versions.</b> <b>9. Create any document and show the difference between paste and paste special.</b> 10. Create a document to show the use of Washout/Watermark. 11. Implement the concept of mail merge.	L1, L3, L5	4
12. Implement the concept of macros.  13. Implement the concept of importing a file/document.  14. Implement the concept of merging the documents.	L1, L3, L5	4
15. Create a student table and do the following: <ol style="list-style-type: none"> <li>Insert new row and fill data</li> <li>Delete any existing row</li> <li>Resize rows and columns</li> <li>Apply border and shading</li> <li>Apply merging/splitting of cells</li> <li>Apply sort</li> <li>Apply various arithmetic and logical formulas.</li> </ol> 16. Create your resume using General Templates.	L1, L3, L4, L5	4

*\*Bloom's Level:*

### Catalog Description

The primary objective of this course is to understand all the components of C, including the C language, the C Preprocessor, and the C Standard Library. An understanding of some advanced practical issues, including memory management, testing and debugging, complex declarations and expression evaluation, building and using libraries, and evaluating tradeoffs, such as size vs. speed and speed vs. complexity. The ability to write C code and create and manipulate logical programs.

### Course Objectives

The objective of this course is to

1. Equip the students with concepts of Programming through C Language
2. Provide an overview of advanced programming concepts like Structure, Union and File Handling

### Course Outcomes

After the completion of course, the students will be able to,

CO 1: Demonstrate the use of various data types and operators in C programs; Solve various problems using conditional control statements (if-else, Switch case).

CO 2: Construct C programs related to problems involving the usage of loops, arrays and functions.

CO 3: Apply the concept of Pointers for efficient memory management and construct C programs using string handling functions.

CO 4: Demonstrate the use of Structure, Union and concept of File Handling to provide data storage support to the programs.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
LABORATORY SESSION 1 OPERATORS, EXPRESSIONS and DECISION MAKING <ol style="list-style-type: none"> <li>1. Write a program to calculate simple interest and amount.</li> <li>2. Write a program to swap two numbers using third variable.</li> </ol>	L3	5

3. Write a program to demonstrate Greatest of 3 nos and to print the given no in ascending order. 4. Write a program to check if the number is even or odd. 5. Write a program to perform arithmetic operations using Switch Case statement. 6. Write a program to calculate area of circle, rectangle, square and triangle using Switch Case statement.		
<b>LABORATORY SESSSION 2</b> <b>LOOPING</b> <ol style="list-style-type: none"> <li>Write a program to find factorial of given no using do while statement.</li> <li>Write a program to print prime numbers up to 'n'.</li> <li>Write a program to sum of n natural no.</li> <li>Write a program to print Fibonacci series.</li> <li>Write a program to reverse a number.</li> <li>Write a program to print the following pattern using for loop <pre> 1 2 2 3 3 3 4 4 4 4 </pre> </li> <li>Write a program to print the following pattern using for loop <pre> A A B A B C A B C D </pre> </li> </ol>	L3	6
<b>LABORATORY SESSSION 3</b> <b>ARRAYS and FUNCTIONS</b> <ol style="list-style-type: none"> <li>Write a program to read nnum of students and 5 subjects marks.</li> <li>Write a program to swap two numbers using call by value.</li> <li>Write a program to convert all lower case to uppercase characters</li> <li>Write a program to find the factorial of a number using recursion.</li> <li>Write a program to print the add/product of two matrices of any order.</li> </ol>	L3	5
<b>LABORATORY SESSSION 4</b> <b>POINTERS AND STRING</b> <ol style="list-style-type: none"> <li>Write a program to perform operations on strings using string handling in-built functions (concatenation, reversal, copy etc.)</li> <li>Write a program to swap two numbers using call by reference.</li> <li>Write a program to perform dynamic memory allocation and deallocation.</li> <li>Write a program to print elements of array using pointers.</li> </ol>	L3	4

LABORATORY SESSION 5 STRUCTURE, UNION & FILE HANDLING  1. WAP program to display student information by initializing structures. 2. WAP program to find the total salary of employee and employee details using structure. 3. Write a program to store and display information using Union. 4. Program to write data into file and read data from file.	L3	4

<b>IFT 2202</b>	<b>INTRODUCTION TO DATABASE MANAGEMENT SYSTEMS</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2017.1	Date of Approval: 14 June, 2017	3	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

### **Catalog Description**

This course is to expose the students to the fundamentals & basic concepts in Data Base Management Systems. This course discusses architecture of Database Systems with concept of relational model & ER model. This course explains techniques for database design, Normalization and database recovery and protection.

### **Course Objectives**

This objectives of the course is to expose the students to

1. The fundamentals & basic concepts in Data Base Management Systems.
2. Architecture of Database Systems with concept of relational model & ER model.
3. The techniques for database design, Normalization and database recovery and protection.

### **Course Outcomes**

After completing the course, the student will be able to:

CO1: Define and list the basic terminologies used in database

CO2: Explain and describe the relational model and relational algebra

CO3: Apply and construct the concepts used in modelling

CO4: Compare and illustrate different concurrency control protocols

CO5: Design the ER Model and SQL queries

CO6: Assess and interpret different issues associated with database systems

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>MODULE 1:</b>  <b>Introduction to DBMS</b>  Definition of DBMS, Data Independence, DBMS Architecture, Levels, Database Administrator, File System Approach Vs DBMS Approach, Advantages of Using a DBMS, Data Models, Schemas, and Instances.	L1, L2	8
<b>MODULE 2:</b>  <b>Relational Database &amp; ER Model</b> Relational System, Codd's Rule, Relational Model, Optimization, Tables and Views, Entity, Types of Entity, Weak Entity Attributes, Entity sets, Entity – Relationship Diagrams.	L1, L2, L3	7
<b>MODULE 3:</b>  <b>Relational Model Objects</b> Domains and Relations, Relations and predicates, Relational Data Integrity; Primary Key, Candidate Key, Foreign Key and their rules; Relational operators, Relational Algebra, Relational Calculus, SQL Language, Data definition, Data retrieval and update operations.	L1, L2, L3	8
<b>MODULE 4:</b>  <b>Database Design</b> Definition Of Functional Dependencies, Process Of Normalization, First Normal Form, Second Normal Form, Third Normal Form. BoyceCodd Normal Form, Fourth Normal Form, Fifth Normal Form.	L3, L4	5
<b>MODULE 5:</b>  <b>Data Recovery &amp; Protection</b> Transaction ACID Properties ,Recovery- Transaction recovery, System recovery, Media Recovery, Concurrency Control Techniques Lost Update Problem , Dirty Read Problem, Locking, Dead Lock, Serializability; Security- Introduction.	L3, L4, L5, L6	8

Version 2017.1	Date of Approval:14 June, 2017	3	0	0	3
Pre-requisites/Exposure	Hands on knowledge of C Programming				
Co-requisites	Basic concepts of C Programming				

### **Catalog Description**

This course is an introduction to the use, design, and analysis of data structures in computer programs. The very commonly used data structures like arrays, stacks, queues, lists, trees, and graphs will be discussed in detail. Sorting and hashing are important topics in the study of algorithms. They are also closely related to the design of data structures. Several algorithms to implement these techniques are included in the syllabus.

### **Course Objectives**

The objective of this course is to

1. Equip the students with the basic concepts of data structures and algorithms
2. Understand concepts about searching and sorting techniques
3. Understand basic concepts about stacks, queues, lists, trees and graphs

### **Course Outcomes**

On completion of this course, the students will be able to

- CO 1: Explain fundamental data structures and algorithms and summarize their typical uses, strengths, and weaknesses; Address calculation, application of 1D and 2D arrays and various operations applied on arrays.
- CO 2: Explain Stack and Queue data structure, various types of Queues; Representation of stack and queue in memory; Applications of stack and queue.
- CO 3: Explain and compare link list with other linear data structure; Advantage, disadvantages, types, application and memory representation of link list.

CO 4: Explain Binary search tree and its types. Applying in-order, pre-order and post order traversal to create the tree; application of tree in searching and storing huge amount of data.

CO 5: Analyze and compare the complexity different searching and sorting algorithms. Evaluate algorithms and data structures in terms of time and memory complexity of basic operations.

CO 6: Explain different types of graphs and their representation in memory. Applying BFS and DFS graph traversal scheme to find shortest path. Determine minimum spanning tree using Kruskal and Prim's method.

Modules	Blooms level*	Number of hours
<b>MODULE 1:</b>  <b>BASIC CONCEPTS AND ARRAY</b>  Definition Accessing the address of a variable, Declaring and initializing pointers. Accessing a variable through its pointer. Meaning of static and dynamic memory allocation. Memory allocation functions :malloc, calloc, free and realloc.  Representation of arrays single and multi dimensional arrays. Address calculation using column and rows major ordering. Various operations on arrays, Application of arrays: matrix multi multiplication.	L1, L2 and L3	5
<b>MODULE 2:</b>  <b>STACKS AND QUEUES</b>  Definition, Array representation of stack. Operations on stack: Infix, prefix and postfix notations. Conversion of an arithmetic expression from Infix to postfix. Evaluation of postfix expression using stacks.  Definition, Array representation of Queue. Types of queue: Simple queue, circular queue, double ended queue (deque), priority queue, operations on all types of Queues.	L2, L3 and L4	7
<b>MODULE 3:</b>  <b>LINKED LIST</b>  Definition, Components of linked list, Representation of linked list, Advantages and Disadvantages of linked list. Types of linked list : Singly linked list, Doubly linked list, Circular linked list and circular doubly linked list. Operations on singly linked list : creation, insertion, deletion, search and display (based on the different position as specified by the user). Linked representation of Stacks & Queues.	L2, L3 and L4	7
<b>MODULE 4:</b>	L2, L3, L4 and	6

<p><b>TREES</b></p> <p>Definition : Tree, Binary tree, Complete binary tree, Binary search tree, Heap Tree terminology : Root, Node, Degree of a node and tree, Terminal nodes, Non terminal nodes, Siblings, Level, Edge, Path, depth, Parent node, ancestors of a node. Binary tree : Array representation of tree, Creation of binary tree. Traversal of Binary Tree: Preorder, Inorder and post order. Representation of trees and its application, Binary search tree: Insertion &amp; deletion in BST. Height balanced (AVL) tree</p>	L5	
<p><b>MODULE 5:</b></p> <p><b>SEARCHING, SORTING AND COMPLEXITY</b></p> <p>Searching: Sequential and binary search, Comparison between linear and binary search. Sorting: insertion, selection, bubble, quick, merge, heap sort.</p>	L2, L3 and L4	5
<p><b>MODULE 6:</b></p> <p><b>GRAPHS</b></p> <p>Graph representation: adjacency list, adjacency matrix. Types of Graphs: Directed &amp; Undirected Graph .Traversal scheme: Depth first search, Breadth first search. Spanning tree: definition, minimal spanning tree algorithms.</p>	L2, L3 and L4	6

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

### Catalog Description

This course is aimed to provide a fundamental understanding of web site creation. Hypertext Markup Language (HTML) is the language used for designing most basic web pages (static). The basic and advanced features of HTML including lists, images, hyperlinks, tables, frames and forms will be introduced. It will also provide an overview of Cascading Style Sheets (CSS) and Extensible Markup Language (XML) which can be used with HTML for better data organization and presentation of content on website.

### Course Objectives

The objective of this course is to

1. Equip the students with concepts of website design through Hypertext Markup Language and basics of Javascript.
2. Provide an overview of Cascading Style Sheets and Extensible Markup Language for better management of website content.

### Course Outcomes

After the completion of course, the students will be able to,

- CO 1: Define the purpose and structure of HTML for website development; identify and distinguish various HTML tags for background settings, text-formatting, HTML lists, image insertion and hyperlinks; prepare web page/website content using basic HTML tags and attributes.
- CO 2: Describe HTML table, its structure and attributes; Apply table, frameset and frame elements to web-site design.
- CO 3: Compare and contrast various form controls; design various kinds of form for user related information and apply front-level validations using Javascript.

CO 4: Differentiate between Inline, Internal and external CSS; modify the website content presentation by incorporating Cascading style sheet properties to existing HTML files.

CO 5: Demonstrate the use of XML document Type Declaration; differentiate between well-formed or Valid XML document.

Modules	Blooms level*	Number of hours
<b>MODULE 1:</b>  <b>INTRODUCTION TO HTML</b> History of HTML, Structure of HTML, HTML Basic: Elements, Tags and Attributes. Adding Comments, Adding Title, HTML Background: using plain color, using image, Formatting Text : Paragraph, inserting line break, Heading Style, Bold text, Italicized text, Underlined text, Teletype text, Strikeout, Superscript, Subscript, Important text, Emphasized text, Inserted text, Deleted text, Larger text, Smaller text. Working with Text: Changing font Sizes and Colors. Creating List: Ordered List, Unordered List, Definition List, Nested List. Inserting image, Creating Hyper Text Links, Creating Image Links, Horizontal Rules, Marquee Tag. Address Tag.	L1, L2 and L3	10
<b>MODULE 2:</b>  <b>TABLES AND FRAMES</b> Tables: Creating Tables, Table Element, Adding Border, Adding Column Headings, Cellspacing and Cellpadding, Adding a Caption, Setting the table Width and Height, Add Row Headings, Aligning Cell contents, Setting Column Width, Centering a Table, Inserting Image, Rowspan, Colspan, Assigning Background Colors. Frames: Frameset Element, Frame Element, Noframes Element, Specifying Target, Inline Frames.	L2 and L3	8
<b>MODULE 3:</b>  <b>FORMS AND VALIDATION</b> Forms: Introduction to Forms, Form Elements, Text Field, Password Field, Label, Check Box, Radio Button, Selection List, Text Area, Button. Front level validations using JavaScript: Checking a Non-empty Text/Password Field, Restricting Length of Text/Password Field.	L4 and L5	8
<b>MODULE 4:</b>  <b>CASCADING STYLE SHEETS</b> Overview of style sheets, Advantages, Different ways to use style sheet: External style sheet, Internal style sheet, Inline style sheet. Selectors: Element selector, Id selector, Class selector, Grouping selector. Adding style to a Document, Adding Comments in CSS.	L4 and L5	5

MODULE 5:		
XML Introduction to XML, XML Basics, XML Structure, XML Tags, XML Elements, XML Attributes, Adding Comments, XML Document Type Declaration: Internal DTD and External DTD. Well formed XML Documents and Valid XML Document	L3 and L4	5

### Catalog Description

The course provides a detailed description about Computer System and all its Components. The process of execution of an Instruction from the time it arrives till it is finished is explained. The organization of various Computer System Components such as Registers, Stack is mentioned. Further, the interaction of CPU with Memory and Input Output devices is also explained in detail. The course also provides an introduction to traditional Microprocessor Concept and Assembly Language Program.

### Course Objectives

The objective of this course is:

1. To provide an overview of computer's architecture.
2. To understand how a computer is organized and what are its different components.

### Course Outcomes

On completion of this course, the students will be able to

- CO 1: Explain the basic Computer System Architecture describing all the components; Memory, Input Output, CPU Registers, ALU and Control unit
- CO 2: Explain the Instruction Cycle and Distinguish among Memory Reference, Register Reference and Input Output Reference Instructions.
- CO 3: Explain the organization of CPU and method of executing instructions in parallel to increase CPU throughput.
- CO 4: Explain the interaction of CPU with Input Output Devices and Organization of Memory Section
- CO 5: Apply the concept of Microprocessor and rewrite various Assembly Language Scripts.

<b>Modules</b>	<b>Blooms</b>	<b>Number</b>
----------------	---------------	---------------

	level*	of hours
<b>MODULE 1:</b>  <b>General Computer Architecture</b> Block Diagram of typical Computer, Memory Section, Input/Output Section, CPU, Registers, Arithmetic Unit, Instruction handling Areas, Stacks  <b>Register Transfer Language and Micro operations:</b> Register Transfer, Bus and Memory Transfer, Arithmetic Micro operations(Binary Adder, Binary Adder-subtractor, Binary increment, Arithmetic Circuit), Logic Micro operations, Shift Micro operations, Arithmetic Logic Shift Unit	L1, L2	5

## **DISCRETE MATHEMATICAL STRUCTURE WITH APPLICATION TO CS**

**CourseCode: IFT 2222**

**Credit Units: 03**

**L-T-P:2-1-0**

### **Course Objective:**

The Objective of this course is to provide the fundamentals and the concepts of Discrete Mathematical Structures with Applications to Computer Sciences including Mathematical Logic, Boolean Algebra and its Applications, Switching circuit & Logic Gates, Graphs and Trees. Important theorems with constructive proofs, real life problems & graph theoretic algorithms to be covered with an aim of helping the students to understand the computational and algorithmic aspects of Mathematical Logic, Boolean Algebra, Graphs and Trees in the field of Computer sciences and its applications.

### **Course Contents:**

#### **Module I: Introduction**

Permutation and Combination : Counting Techniques.

Relation: Type and compositions of relations, Pictorial representation of relations, closures of relations, Composite Relations, Equivalence relations.

Function: Types, Composition of function, Mathematical Induction, Discrete Numeric Function and Generating Functions

#### **Module II:Mathematical Logic**

Proposition, Propositional Calculus- Propositional Variables and Compound Propositions, Basic Logical Operations: -Conjunction, Disjunction, Negation, Conditional, Bi conditional. Compound Statements, Equivalence, Duality, Algebra of Statements, Valid and Invalid, Arguments, Tautologies, Contradiction, Contingency , Boolean Functions – Disjunctive Normal Form, Conjunctive Normal Form.

Duality Principle.

### **Module III: Graphs**

Basic Terminology of Graphs , Handshaking Lemma , Sub graphs, and Union of Graphs , Connected graph, Disconnected graph, Null graph, Incidence matrix, Adjacency matrix, Degree of a graph, Directed Graph, Walk, Path, Circuit, Wheel, Eulerian graph, Hamiltonian graph, Planar graph , Kuratowski's graphs-I and II , Coloring , Bipartite Graph , Cyclic Graph.

### **Module IV: Trees**

Tree, Properties of Tree, Spanning Tree, Fundamental Circuit, Cut-Set, Cut-Vertices. Binary Tree , Rooted Trees, Path length, Minimum Spanning Trees, Huffman Encoding.

### **Examination Scheme:**

<b>Components</b>	<b>CT1</b>	<b>A/C/Q</b>	<b>Attd</b>	<b>EE</b>
<b>Weightage (%)</b>	15	10	5	70

IFT2216	<b>DATA STRUCTURE THROUGH C LANGUAGE LAB</b>		L	T	P	C
Version 2017.1	Date of Approval: 14 June, 2017		0	0	2	1
Pre-requisites/Exposure	Hands on knowledge of C Programming					
Co-requisites	Basic concepts of C Programming					

### Catalog Description

The course is designed to develop skills to design and analyse simple linear and non- linear data structures like arrays, stacks, queues, lists, trees, and graphs. It strengthen the ability of the students to identify and apply the suitable data structure for the given real world problem. It enables them to gain knowledge in practical applications of data structures.

### Course Objectives

The objective of this course is to

1. Equip the students to apply knowledge of basic concepts of data structures in solving complex problems.
2. Provide demonstration of the data structure concepts like stacks, queues, lists, trees, graphs and various searching and sorting techniques

### Course Outcomes

On completion of this course, the students will be able to

CO 1: Apply the knowledge of basic fundamentals of data structures in order to analyze the time and space efficiency of the data structure

CO 2: Demonstrate the use and applications of Stack and Queue data structure along with various types of Queues.

CO 3: Demonstrate and compare link list with other linear data structure; Advantage, disadvantages, types and application of link list.

CO 4: Apply the knowledge of trees and heaps and demonstrate the application of tree in searching and storing huge amount of data.

CO 5: Apply algorithm for solving problems like sorting, searching, insertion and deletion of data.

CO 6: Demonstrate the usage of graphs and their applications of BFS and DFS to find shortest path.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
1. Sample programs of 1D and 2-D arrays (a) Write a program to insert an element at any position in an array (b) Write a program to perform addition of matrix for order 3*3 (c) Write a program to perform multiplication of matrix of any order	L1, L2 and L3	4
2. Sample Programs of stack and queues.  (a) Write a program that perform the following function i) Create stack of integers. ii) PUSH operation on stack iii) POP operation on stack  (b) Write a program that perform the following function i) Create Queue of integers. ii) Insert operation on Queue iii) Delete operation on Queue  (c) Write a program that perform the following function i) Create Circular Queue of integers. ii) Insert operation on Circular Queue iii) Delete operation on Circular Queue	L2, L3	4
3. Sample Programs of Linked List  (a) Write a C program that perform the following: i) Create a singly linked list of integers. ii) Delete a given integer from the above linked list. iii) Display the contents of the above list after deletion  (b) Write a C program that performs the following: a) Create a doubly linked list of integers. b) Delete a given integer from the above doubly linked list. c) Display the contents of the above list after deletion .	L2, L3 and L4	6
4. Sample Programs of trees  (a) Write a C program that uses functions to perform the following: i) Create a binary search tree of characters. ii) Traverse the above Binary search tree recursively in Postorder.	L2, L3, L4 and L5	2
5. Sample programs on sorting and searching (a) Write C programs for implementing the Bubble Sort (b) Write C programs for implementing the Selection Sort (c) Write C programs for implementing the Insertion Sort (d) Write a program to perform linear Search (e) Write a program to perform binary Search	L2, L3 and L4	6
6. Sample programs on graphs  (a) Write C programs for implementing the graph traversal algorithms:

## Catalog Description

This course is aimed to provide a fundamental understanding of web site creation. Hypertext Markup Language (HTML) is the language used for designing most basic web pages (static). The basic and advanced features of HTML including lists, images, hyperlinks, tables, frames and forms will be introduced. It will also provide an overview of Cascading Style Sheets (CSS) and Extensible Markup Language (XML) which can be used with HTML for better data organization and presentation of content on website.

## Course Objectives

The objective of this course is to

1. Equip the students with concepts of website design through Hypertext Markup Language and basics of Javascript.
2. Provide an overview of Cascading Style Sheets and Extensible Markup Language for better management of website content.

## Course Outcomes

After the completion of course, the students will be able to,

CO 1: Prepare web page/website content various HTML elements including tags and attributes for background settings, text-formatting, HTML lists, image insertion and hyperlinks, Moving content across screen.

CO 2: Apply table, frameset and frame elements to web-site design.

CO 3: Construct various kinds of forms to take user related information and apply front-level validations using Javascript.

CO 4: Design and modify the website content presentation by incorporating inline, internal and external Cascading style sheets to existing HTML files.

CO 5: Demonstrate the use of well-formed or Valid XML document.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>LABORATORY SESSION 1</b>  <b>INTRODUCTION TO HTML</b> 1. Design a webpage to show various tags used for formatting text. 2. Design a webpage to show usage of various heading tags, font tag and background color. 3. Design a webpage to insert image as an inline element and in the background. 4. Design a webpage to show usage of ordered list, unordered list and definition list. 5. Design a webpage to show the use of hyperlink (Text & Image) and image map. 6. Design a webpage to show scrolling text and scrolling image using marquee tag.	L3	6
<b>LABORATORY SESSION 2</b>  <b>TABLES AND FRAMES</b> 1. Design a table using rowspan, colspan, cell padding, cell spacing, grouping, caption and border. 2. Divide a webpage into various frames (row or col wise) and populate them with web content.	L3	4
<b>LABORATORY SESSION 3</b>  <b>FORMS AND VALIDATION</b> 1. Create a log-in form/sign-up/feedback/registration form using various elements of form. 2. Write Javascript code to perform basic arithmetic operations, calculate factorial and other such functions using loops, if-else, switch etc. 3. Write javascript code to perform front-end validations ( basic and data format validations) on HTML forms. 4. Prepare HTML code to perform form validations using HTML 5.0 elements.	L3	8
<b>LABORATORY SESSION 4</b>  <b>CASCADING STYLE SHEETS</b>  1. Apply Inline Cascading style sheet properties to enhance the appearance and outlook of webpage. 2. Modify the placement and styling of web page content (pictures, hyperlinks, images, videos, lists etc.) using Internal and/or External CSS file.	L3 and L5	4

1: strongly related, 2: moderately related and 3: weakly related

<b>IFT2223</b>	<b>Introduction to Database Management System Lab</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2017.1	Date of Approval: 14 June 2017	0	0	2	1
Pre-requisites/Exposure	Basic Concepts of DBMS				
Co-requisites	Relational Algebra and Relational Calculus				

### Catalog Description

This course is design to get students familiar with the basic concepts of SQL including DDL, DML and DCL statements. The course also explains the basic concepts of PL/SQL. Students will learn practical on Oracle software and hence can work on any RDBMS software.

### Course Objectives

The objective of this course is

1. To make students familiar with the concepts and working of SQL.
2. Provide an overview of PL/SQL.

### Course Outcomes

On completion of this course, the students will be able to

CO1. Illustrate SQL basic concepts like languages DDL, DML etc., data types and working.

CO2. Explain concepts of database creation, manipulation of data and data retrieval and apply them in real database applications.

CO3. Design and implement various data constraints on a database for a given problem.

CO4. Solve queries using concepts like joins, subqueries, aggregate functions, triggers etc.

CO5. Prepare PL/SQL blocks.

<b>Modules</b>	<b>Blooms</b>	<b>Number</b>
----------------	---------------	---------------

	<b>level*</b>	<b>of hours</b>
<b>Lab Session 1</b> Introduction of RDBMS, Oracle, SQL and data types.	L1 and L2	2
<b>Lab Session 2</b> Basic concept of database creation and manipulation of data.	L1 and L3	2
<b>Lab Session 3</b> Working with SELECT query.	L1 and L3	2
<b>Lab Session 4</b> To apply data constraints on a table-Primary Key, Not Null, Unique.	L1 and L3	2
<b>Lab Session 5</b> Working with Foreign Key and Check Constraint.	L1 and L3	2
<b>Lab Session 6</b> To implement the basic concept of Aggregate and Grouping Functions.	L1 and L3	2
<b>Lab Session 7</b> To apply various set operators on data.	L1 and L3	2
<b>Lab Session 8</b> Concept of Nested queries in database and its application in database.	L1 and L3	2
<b>Lab Session 9</b> Implementation different types of JOINS in database.	L1 and L3	2
<b>Lab Session 10</b> Basic concepts of Triggers and Procedures and related queries.	L1 and L3	2
<b>Lab Session 11</b> Introduction to PL/SQL and basic syntax.	L1 and L3	2
<b>Lab Session 12</b> Write programs in PL/SQL Using Control Structures.	L3	2

<b>IFT2312</b>	<b>INTRODUCTION TO OBJECT ORIENTED PROGRAMMING with C++</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2017.1	Date of Approval: 14 June,2017	3	0	0	3
Pre-requisites/Exposure	Hands on knowledge of C Programming				
Co-requisites	Basic concepts of C Programming				

### Catalog Description

This course is aimed at developing Programming skills using Object Oriented Technology in C++. This purpose of this subject is to improve the programming approach and development of software using OOPS technology. The Subject involves various concepts of Object Oriented Programming such as Classes, Objects, Polymorphism, Inheritance, Exception Handling etc. needed for a better approach towards software development.

### Course Objectives

The objective of this course is

1. Perform object oriented programming to develop solutions to problems demonstrating usage of control structures, modularity, I/O. and other standard language constructs.
2. Demonstrate the application of object oriented programming in developing solutions to problems demonstrating usage of data abstraction, encapsulation, and inheritance.
3. Demonstrate ability to implement one or more patterns involving realization of an abstract interface and utilization of polymorphism in the solution of problems which can take advantage of dynamic dispatching, syntax and features .

### Course Outcomes

On completion of this course, the students will be able to

CO 1: Explain the basic principles of object oriented programming approach; Differentiate it with procedural programming approach and also discuss difference between C and C++.

CO 2: Illustrate the different ways to define a member function inline and explain how the private members of a class can be accessed .Explain how the objects can be instantiated and destroyed with static data member.

CO 3: Explain the concept of inheritance, types and implementation with suitable examples; find out ambiguity problem in inheritance ; use the concept of overriding and constructors in inheritance.

CO 4: Explain polymorphism in detail and implement the concept of overloading in functions as well as in operators. Write the programs for virtual function and pointer with objects.

CO 5: Demonstrate the exception handling mechanism. Compare and contrast various formatted and unformatted i/o function in file handling.

Modules	Blooms level*	Number of hours
<b>Module I: Overview of C++</b> What is Object Oriented Programming, Characteristics of OOP, Difference between C and C++. Basics:-Input/Output in C++ using cin/cout, Preprocessor Directives, Data Types-Integer, Float, character, Enumerations, library functions, comments, storage classes, manipulators, operators in C++, scope resolution operator, memory management operator. arrays and strings.	L1 and L2	5
<b>Module II: Classes and objects</b> Functions: Simple functions, passing arguments to functions, returning values from functions, reference arguments, returning by reference, Overloaded functions, Inline functions, friend function, Structures and class. Classes and objects: A simple class, C++ objects as physical objects, objects as function arguments, returning objects from functions, static class data, array as class data member, array of objects.	L1, L2 and L3	7
<b>Module III: Inheritance</b> Inheritance, Types of Inheritance, access modes – public, private & protected, Abstract Classes, Ambiguity resolution using scope resolution operator and Virtual base class, Constructors, Types of constructors, Destructors.	L2, L3 and L4	8
<b>Module IV: Polymorphism</b> Polymorphism, Type of Polymorphism – Compile time and runtime, Function Overloading, Operator Overloading (Unary and Binary) Polymorphism by parameter, Pointer to objects, this pointer, Virtual Functions, pure virtual functions	L2, L3 and L4	8
<b>Module V: Files and Exception Handling and I/O</b> Files and Streams: streams, string I/O, character I/O, file pointer, error handling, command line arguments. formatted and Unformatted Input output, Introduction of Exception handling, Try Catch block, Rethrowing an Exception.	L2, L3 and L4	8

\*Bloom's Level:

<b>IFT 2314</b>	<b>Operating System</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2017.1	Date of Approval: 14 June, 2017	3	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

### Catalog Description

To study and apply concepts relating to operating systems, such as concurrency and control of asynchronous processes, deadlocks, memory management, processor and disk scheduling, parallel processing, and file system organization and Demonstrate an understanding of the differences between processes and threads, the different process or thread synchronization methods and the, the different memory management techniques used in Operating Systems, the different I/O management techniques used in Operating Systems, the tradeoffs in design and implementation concepts used in the development of Operating Systems.

### Course Objectives

The objective of this course is to

3. Equip the students with the knowledge about categories of operating systems and their functions.
4. Provide detailed knowhow about functions of operating system like process, memory and device management along with file system security and protection.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Define and explain operating systems and their evolution also differentiate among its various types.

CO2: Explain concepts of process and inter-process communication and synchronization. Identify solutions to detect, prevent and handle deadlocks occurring in the operating systems. Solve synchronization and CPU scheduling problems related to processes.

CO3: Define and explain concepts of memory management like fragmentation, paging and segmentation. Solve problems related to memory management using page replacement algorithms.

- CO4: Describe the concepts of device management and list various disk allocation methods.  
Determine solutions for disk scheduling problems using available disk scheduling algorithms.
- CO5: State the concept of file and file system security, also distinguish among various file allocation methods.

Modules	Blooms level*	Number of hours
<b>MODULE 1:</b>  <b>INTRODUCTION AND SYSTEM STRUCTURE</b> What is an operating system, History of OS, OS concepts, Types of OS, OS Structure, OS Operations. System calls, Types of System Calls, System Programs, OS Structure, Virtual Machines, System Boot	L1, L2 and L4	6
<b>MODULE 2:</b>  <b>PROCESS MANAGEMENT</b> Process Concept, Process Scheduling, Scheduling Criteria, Scheduling Algorithms, Overview of Thread Scheduling and Multiprocessor scheduling, Operations on Processes, Interprocess communication with example. Client-server Communication, Overview of Multithreaded programming models	L1, L2 and L3	6
<b>MODULE 3:</b>  <b>PROCESS COORDINATION</b> Overview of Process Synchronization, Critical Section Problem, Semaphores, Classic problems. Deadlock- Prevention, Avoidance, Detection, Recovery, Algorithms	L1, L2 and L3	6
<b>MODULE 4:</b>  <b>MEMORY MANAGEMENT</b> Memory Management Strategies-Introduction, Swapping, Contiguous Memory Allocation, Paging, Segmentation, Virtual Memory Management-Demand Paging, Thrashing, Page Replacement	L1, L2 and L3	6
<b>MODULE 5:</b>  <b>STORAGE MANAGEMENT</b> Overview of File System, Access Methods, Directory and Disk Structures, File Sharing, Protection, Disk Scheduling, Disk Management, I/O hardware	L1 and L2	6
<b>MODULE 6:</b>  <b>PROTECTION AND SECURITY</b>  Goals and Principles of Protection, Access Matrix, Security Problem, Program Threats, System and Network Threats, Overview of Cryptography, Overview of User Authentication and Security Defense.	L1 and L2	6

### **Catalog Description**

The purpose of this course is to acquaint students with the concepts and methods available for software development in industrial environments. Students will be exposed to a variety of topics such as design notations, costing techniques, and testing methods, as well as to the tools, which are available to support software specification, design, testing, and maintenance.

### **Course Objectives**

The objective of this course is to

1. Have knowledge of basic SW engineering methods and practices, and their appropriate application.
2. Describe software engineering layered technology and Process framework.
3. give a general understanding of software process models such as the waterfall and evolutionary models.
4. Understanding of the role of project management including planning, scheduling, risk management, etc.
5. Understanding on quality control and how to ensure good quality software.

### **Course Outcomes**

On completion of this course, the students will have

CO1. Basic knowledge and understanding of the analysis and design of complex systems.

CO 2. Ability to apply software engineering principles and techniques.

CO 3. Ability to develop, maintain and evaluate large-scale software systems.

CO 4. Knowledge to produce efficient, reliable, robust and cost-effective software solutions.

CO 5. Ability to work as an effective member or leader of software engineering teams.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>MODULE 1: Software Development Life Cycle</b>  Evolution of Software Engineering, Software Problems, Issues Involved in Software Engineering, Fundamental Qualities of a Software Product, Approaches to Software Engineering, Planning the development Process, Development/Product Life-Cycle Model, Kinds of Software Life-Cycle Model	L1, L2 and L3	8
<b>MODULE 2: Project Management</b>  Project Management Concepts, Project Management Activities, Size Metrics. Software Requirement analysis and Specification, Cost Models.	L2, L3 and L6	10
<b>MODULE 3: System Design</b>  Design Objectives, Design Principles, Effective Modular Design (Functional Independence, Coupling, and Cohesion), Design Tools and Techniques, Prototyping, Structured Programming.	L1, L3 and L4	10
<b>MODULE 4: Coding</b>  Programming Practices, Verification, Monitoring and Control.	L1, L3 and L4	10
<b>MODULE 5: Software Testing</b>	L3, L4	10

IFT 2321	Fuzzy Logic	L	T	P	C
Version 2017.1	Date of Approval: 14 <sup>th</sup> June 2017	3	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

## Catalog Description

This course introduces the student to intelligent control theory, introduce Machine Intelligence and to understand Fuzzy Logic. Fuzzy logic is a tool that can be applied to ambiguous, complicated, complex or non-linear systems or problems which cannot be easily solved by classical techniques. This course discusses the fundamentals of fuzzy sets theory and fuzzy logic. In addition this course also introduces applications of fuzzy logic in several areas such as fuzzy control and fuzzy decision making.

## Course Objectives

The objective of this course is:

1. To provide an overview of Fuzzy Set Theory and Fuzzy Logic.
2. To understand how Fuzzy Logic can help in solving Non Linear Problems

## Course Outcomes

On completion of this course, the students will be able to

CO 1: Explain the concept of Crisp Sets and Fuzzy Sets. Apply the knowledge to solve various problems.

CO 2: Distinguish between Fuzzification and Defuzzification. Demonstrate various problems using Fuzzy Logic Methodology

CO 3: Distinguish between various properties of Classical and Fuzzy Sets and apply the concepts to prove the properties using numerical problems

CO 4: Explain the concepts of Fuzzy Operations and Fuzzy Arithmetic and solve various mathematical problem based on that

CO 5: Define and Summarize various applications of Fuzzy Logic in real world problem solving.

Modules	Blooms level*	Number of hours
<b>Module I: Introduction</b> Crisp sets: Overview, Fuzzy sets : Basic types and concepts, Characteristics and significance of paradigm shift, Fuzzy sets vs Crisp sets, Representation of fuzzy sets, Applications of fuzzy logic.	L1, L2 & L3	7
<b>Module II: Fuzzy Logic</b> Fuzzy logic introduction, basic concepts of fuzzy logic, linguistic variable, possibility distributions, fuzzy rules, fuzzy rule based inference system, fuzzy inference systems, defuzzification.	L1, L2 & L3	7
<b>Module III: Fuzzy Sets</b> Classical sets, set operation, fuzzy sets, representation of fuzzy sets, types of membership functions, designing membership functions, basic operations in fuzzy sets, introduction & features of membership functions, hedges, operations of fuzzy sets, properties of fuzzy sets.	L2, L3	8
<b>Module IV: Fuzzy operations and Fuzzy arithmetic</b> Types of operations, Fuzzy complements, Fuzzy intersection: t-norms, Fuzzy union: t-conorms, Combination of operations, Aggregation operation, Fuzzy numbers, Linguistic variables, Arithmetic operations on intervals, Arithmetic operations on Fuzzy numbers, Lattice of Fuzzy numbers, Fuzzy equation.	L2, L3	8
<b>Module V : Applications</b> Pattern recognition in fuzzy logic, Database and information retrieval in fuzzy logic, decision making in fuzzy logic, engineering applications and fuzzy logic, Fuzzy logic in Medicine and Economics.	L1, L2	6

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5:Synthesis, L6:Evaluation*

<b>IFT2323</b>	<b>Accounting and Financial Management</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2017.1	Date of Approval: 14 <sup>th</sup> June 2017	3	0	0	3
Pre-requisites/ Exposure	Attitude and Aptitude for the accounts				
Co-requisites	General Awareness and reading of the financial statements and regular newspapers.				

### **Catalog Description**

This course will be learnt by student of B.Sc - IT discipline is more useful who has a passion for seeking knowledge in financial accounting business and its related areas and may be in future work on accounting software's and the financial environment.

To develop intellectual formation on Accounting and Financial domain Environment - concept, significance, objectives, concepts and conventions of accounting which makes the accounting base, through the golden rules of the accounting and accounts.

The study of Journal and Ledger includes double entry system, recording of the transactions into books and creating Journal, cash books and posting the entries into the ledger. Understanding the various financial books such as purchase books, return book, sales books etc..used into day to day business transactions.

The importance of Preparation of Trial balance, Final Accounts including adjustments Trading account, Profit and Loss account. is analyzed from the perspective of a business firm. Other important dimensions which are into business environment are also studied in detail roles of Balance sheet and its assessment to make the accounts settled.

The role of banking and its instruments such as Cheque / Passbook/Deposit Sips etc along with the different types of bank's accounts and being make familiar to the student. The requirements of the reconciliations of bank statements are also explained.

The next domain of the subject includes in the accounting side is day to day operating fund's –Working Capital and its management. Various types and determinants of the working capital is important for the understanding of managing the operating funds.

Further to this, overview on the topics such as Cash management, Receivable management and capital budgeting along with its principles and techniques are been taught to students to make them familiar on the domain.

Finally, the impact of Financial Statements and the role of Ratio analysis in the accounting environment of a business firm is analyzed by understanding the importance of types of ratios and applying the concept to analyze the financial position of the statement.

### **Course Objectives**

The objective of this course is :

4. Develop the ability to use accounting concepts, principles, and frameworks to analyze and effectively communicate information to a variety of audiences. Outfit the students with the ability to study of basic accounting system by creating, recording and summarizing the accounting entries and converting them into the accounting statements..
5. Furnish student the knowledge on financial acquaintance's and tools that are in direct connect with the Indian banking business operations.
6. Prepare the student on accounting management tools by making them familiar of the various ways to analyze the effect of business transactions on an organization's accounting records and financial statements.
7. Equip the students with the theoretical framework on the concept of financial statements in relationship to decision making using the financial tools and concepts for which data needed to solve a mixture of financial decision troubles. Develop the ability to use accounting information to solve a variety of business problems.

### Course Outcomes

On completion of this course, the students will be able to :-

**CO1:** *Outline and distinguish* various types of Account and Accounting related to general Business, *interpret and describe* the golden rules of the accounting on which process off accounting directly or indirectly depends on the accounting process, and able to *determine and predict* and develop the skill of recording financial transactions and preparation of reports in accordance with GAAP of business accounting records by *analyzing* the factors affecting at, which will help to *judge* and make *contrast* the various types of accounting books by *relating* with conceptual knowledge.

**CO2:** *Identify* the various entries that need to be recorded in the accounting records and their posting, *estimate* the impact of them on the business growth, in the form of either Gross /Net – Profit/Loss and the capability to *interpret* various business financial entireties and problem and challenges into domains accounting environment and *demonstrate* the skill to handle the issues related to trading account, manufacturing account, profit and loss account by *analyzing and summarizing* using principles and formats studied and generating the balance sheets to final positions of the company at that moment of time.

**CO3:** Acquire the knowledge of Indian Banking system associated into Indian business environment by *defining and describing* various banking terms. Able to *distinguish* between various banking instruments. *Explain* the importance of banking reconciliation statements. Recognize circumstances providing for increased exposure to errors and frauds

**CO4:** Identify and outline the needs and outcomes of the various accounting management tools by predicting and judging their scope for the financial business scenario. The knowledge of the Working capital also able to criticize and distinguish between various types of working capital, further able to determine and relate cash management process and receivable management which acts as major accounting tools for day to day operations of the organization. Capital Budgeting, the scope and various ways and interpreting the challenges attached with them.

**CO5:** Define and explain importance of Ratio analysis and its advantages and limitations to summarize the usefulness and functions of them and state the applications and advantages attached with them by analyzing the financial statements.

Modules	Blooms level*	Number of hours
---------	---------------	-----------------

<b>MODULE 1: Overview of Accounting –</b> Definition of Accounting, Its Objectives, Advantages and Limitation. Principles, Concepts and Conventions of Accounting, Double entry system, Recording of Transactions in subsidiary Books – Journal, Cash Book, sales Book, Purchase Book and Return Book. Posting into Ledger accounts	L1, L2, L3, L4 and L6	8
<b>MODULE 2: Final Accounts</b> Preparation of Trial balance, Final Accounts including adjustments Trading account, Profit and Loss account, Balance Sheet.	L1, L2, L3 and L4	8
<b>Module 3: Banking</b> Opening of different types of Banks Accounts, Cheque Book, Pass Book, Deposit slips, Bank Reconciliation Statements	L1 and L2	4
<b>Module IV: Management Accounting Tools</b> Definition of working Capital, Types of Working Capital, Determinants of working Capital, Cash Management and Receivables Management. Capital Budgeting: Principles and Techniques.	L1, L2, L3 and L5,L6	9
<b>Module V: Analysis of Financial statements</b> Ratio Analysis: Meaning, Advantages, limitations, types of ratios and their usefulness Statements of charges in the Financial Position on Cash basis.	L1 and L2	7

<b>IFT2315</b>	<b>Object oriented Programming with C++ Lab</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2017.1	Date of Approval: 14 June,2017	0	0	2	1
Pre-requisites/Exposure	Hands on knowledge of C Programming				
Co-requisites	Basic concepts of C Programming				

## Catalog Description

In this Lab course the object oriented programming using C++ is implemented and demonstrated. Concepts covered would enable them to create complex applications related to object oriented programming. The objective of this course is to explore and implement the various features of OOP such as inheritance, polymorphism, Exceptional handling using programming language C++.

## Course Objectives

The objective of this course is to

1. Perform object oriented programming to develop solutions to problems demonstrating usage of control structures, modularity, I/O. and other standard language constructs.
2. Demonstrate the application of object oriented programming in developing solutions to problems demonstrating usage of data abstraction, encapsulation, and inheritance.
3. Demonstrate ability to implement one or more patterns involving realization of an abstract interface and utilization of polymorphism in the solution of problems which can take advantage of dynamic dispatching, syntax and features.

## Course Outcomes

On completion of this course, the students will be able to

CO 1: Demonstrate the basic programming structure of C++ program;

CO 2: Illustrate the different ways to write a program for member function inline and explain how the private members of a class can be accessed. Demonstrate how the objects can be instantiated and destroyed with static data member?

CO 3: Demonstrate the concept of inheritance, types and implementation with suitable examples; find out ambiguity problem in inheritance; use the concept of overriding and constructors in inheritance.

CO 4: Demonstrate polymorphism in detail and implement the concept of overloading in functions as well as in operators. Write the programs for virtual function and pointer with objects.

CO 5: Demonstrate the exception handling mechanism. Compare and contrast various formatted and unformatted i/o function in file handling.

<b>Modules/Topics Covered**</b>	<b>Blooms</b>	<b>Number</b>
---------------------------------	---------------	---------------

	level*	of hours
<p>1. Sample Programs for basic structure of program in C++ using Cout and Cin.</p> <p>a) WAP to print Fibonacci series of 'n' numbers, where n is given by the programmer.</p> <p>b) WAP to read a set of numbers in an array and to find the largest of them.</p> <p>c) WAP to sort a list of names in ascending order.</p> <p>d) WAP to sort an array of integers using functions.</p> <p>e) WAP to exchange contents of two variables using call by value and call by reference.</p>	L3, L5	6
<p>2. Sample Programs using concept of class and object.</p> <p>(a) WAP to maintain the student record which contains Roll number, Name, Marks1, Marks2, Marks3 as data member and getdata(), display() and setdata() as member functions.</p> <p>(b) WAP to add two complex numbers using friend function.</p> <p>(c) Write a program to exchange values between two classes using friend function.</p> <p>(d) Calculate area of different geometrical figures (circle, rectangle, square, triangle) using function overloading.</p> <p>(e) Create a class Complex for performing all arithmetic operations with complex numbers using inline function.</p> <p>(f) Write a class bank, containing data member: Name of Depositor, A/c type, Type of A/c, Balance amount. Member function: To assign initial value, To deposit an amount, to withdraw an amount after checking the balance (which should be greater than Rs. 500), To display name &amp; balance.</p>	L3, L5	4
<p>3. Sample Programs using inheritance.</p> <p>(a) Declare a class of vehicle. Derived classes are two-wheeler, three-wheeler &amp; four-wheeler. Display the properties of each type of vehicle using member functions of classes.</p> <p>(b) Create two classes namely Employee and Qualification. Using multiple inheritance derive two classes Scientist and Manager.</p>	L3, L5	6

<p>Take suitable attributes &amp; operations. WAP to implement this class hierarchy.</p> <p>(c) Consider an example of book shop which sells books and video tapes. These two classes are inherited from base class called media. The media class has command data members such as title and publication. The Book class has data members for storing number of pages in a book and tape class has playing time in a tape. Each class will have member functions such as read() and show(). In the base class, these members have to be defined as virtual functions. Write a program to model the class hierarchy for book shop and process objects of these classes using pointers to base class.</p>		
<p>4. Sample Programs using concepts of polymorphism. operator overloading</p> <p>(a) Write a program to Subtract two Complex numbers using operator overloading.</p> <p>(b) Write a program to add and multiply two time values by overloading + and * operators respectively.</p> <p>(c) Write a class string to compare two strings, overload (=) operator.</p> <p>(d) Write a program to compare age of two persons using this pointer.</p> <p>(e) write a program to implement the concept of pointer to object and pointer to derived class.</p>	L3, L5	5
<p>5. Sample Programs using exception handling and file handling.</p> <p>(a) Demonstrate the concept of exception handling for simple try catch block and multiple catch.</p> <p>(b) Write the programs using file handling.</p>	L3, L5	4

*\*Bloom's Level:*

Pre-requisites/Exposure	Basic knowledge of Operating System
Co-requisites	

## Catalog Description

This course introduces the UNIX operating system commands, shell programming. Explores the use of operating system utilities such as vi text editors, filters, process handling etc.

## Course Objectives

The objective of this course is to

1. Provide knowledge of working on Unix OS.
2. Provide sound foundation of writing Shell scripts.
3. Implement features like piping, filters and redirection.

## Course Outcomes

On completion of this course, the students will be able to

CO1: To implement various UNIX commands.

CO2: To demonstrate the use of Vi Editor and other editors of UNIX.

CO3: To write simple Shell scripts.

Modules	Blooms level*	Number of hours
<b>1. UNIX structure, history, basic commands.</b>	L1,L3	4
<b>2. Working of Vi Editor and its commands.</b>	L1,L3	4
<b>Shell Script</b> 1. Write a Shell Script that takes a search string and filename from the terminal & displays the results. 2. Write a Shell Script that takes pattern and filename as command line arguments and displays the results appropriately i.e. pattern found/pattern not found. 3. Write a Shell Script that accepts only three arguments from the command line. The first argument is the pattern string, the second argument is the filename in which the pattern is to be searches and the third argument is the filename in which the result is to be stored. 4. Write a Shell Script which creates the following menu and prompts for choice from user and runs the chosen command. Today's date Process of user List of files	L1,L3	16

<p>Quit to UNIX</p> <ol style="list-style-type: none"> <li>5. Write a Shell Script that computes the factorial of a given number</li> <li>6. Write a Shell Script that changes the extension of a group of files from txt to doc</li> <li>7. Write a Shell Script that accepts both filename and a set of patterns as positional parameters to a script.</li> <li>8. Write a Shell Script which will redirect the output of the date command without the time into a file.</li> <li>9. Write a Shell Script (using while loop) to execute endlessly (until terminated by user) a loop which displays contents of current directory, disk space status, sleep for 30 seconds and display the users currently logged in on the screen.</li> <li>10. Write a Shell Script that receives two filenames as arguments. It should check whether content of the two files is same or not. If they are same, second file should be deleted.</li> <li>11. If a number is input through the keyboard, WASS to calculate sum of its digits.</li> <li>12. Write a Shell Script which takes a command line argument of Kms and by default converts that number into meters. Also provide options to convert km to dm and km to cm.</li> <li>13. Write a Shell Script using for loop, which displays the message "Welcome to the UNIX System"</li> <li>14. Write a Shell Script to change the filename of all files in a directory from lower-case to upper-case.</li> <li>15. Write a Shell Script that examines each file in the current directory. Files whose names end in <b>old</b> are moved to a directory named <b>old files</b> and files whose names end in <b>.c</b> are moved to directory named <b>cprograms</b>.</li> <li>16. Write a Shell Script which searches all files in the given directory (to be taken as command line argument) for the file having the title (to be taken as command line argument), as the first line in the file. <ol style="list-style-type: none"> <li>a) Display the contents of the searched file.</li> <li>b) In the end, print the file is ###, where  ### is small-sized if total no. of lines is &lt;50  ### is medium-sized if total no. of lines between 50&amp;100  ### is large-sized.</li> </ol> </li> <li>17. Write a shell script which reports names and sizes of all files in a directory (directory would be supplied as an argument to the shell script) whose size is exceeding 1000 bytes. The filenames should be printed in descending order of their sizes. The total number of such files should also be reported.</li> <li>18. Write a shell script to calculate and print the first <i>m</i> Fibonacci numbers.</li> <li>19. Write a shell script to compute the <b>GCD</b> and <b>LCM</b> of two numbers.</li> <li>20. Write a shell script to generate all combinations of 1, 2 and 3 using for loop.</li> </ol>

### **Catalog Description**

The objective of this course is to provide practical training on some live projects that will increase capability to work on actual problem in industry. This training may undergo in an industrial environment or may be an in-house training on some latest software which is in high demand in market. This training will be designed such that it will be useful for their future employment in industry.

### **Course Objectives**

The objective of this course is to

1. Provide practical training on live projects
2. Increase technical capabilities on solving real life problems in company environment

### **Course Outcomes**

On completion of this summer internship, the students will be able to:

CO1: Develop communication, interpersonal and other critical skills in the job interview process.

CO2: Design and develop software and hardware projects

CO3: Assess interests and abilities in their field of study.

CO4: Demonstrate excellent technical and communication skills to acquire employment contacts leading directly to a full-time job following graduation from college.

### **Text Books**

As per topic of summer internship project is chosen and discussion with guide.

### **Reference Books**

As per topic of summer internship project is chosen and discussion with guide.

<b>IFT2413</b>	<b>DESIGN &amp; ANALYSIS OF ALGORITHM</b>				L	T	P	C
Version 2017.1	Date of Approval: 14 June, 2017				3	0	0	3

Pre-requisites/Exposure	Basic knowledge of Data Structure
Co-requisites	Nil

### Catalog Description

The designing of algorithm is an important component of computer science. The objective of this course is to make students aware of various techniques used to evaluate the efficiency of a particular algorithm. Students eventually should learn to design efficient algorithm for a particular problem.

### Course Objectives

The objective of this course is to

1. Analyze the asymptotic performance of algorithms.
2. Demonstrate a familiarity with major algorithms and data structures.
3. Apply important algorithmic design paradigms and methods of analysis.
4. Synthesize efficient algorithms in technical design situations.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Explain use of asymptotic notations and principles of Divide and Conquer algorithms and solve various problems using that strategy.

CO2: Explain principles of Greedy Algorithms and Dynamic Programming and apply the strategy to solve various problems.

CO3: Explain basic concepts of graphs and apply various design strategies to solve graph related problems.

CO4: Apply the various algorithms indifferent areas of Computer Science.

Modules	Blooms level*	Number of hours
---------	---------------	-----------------

<b>Module I: Introduction</b> Algorithm Design paradigms - motivation, concept of algorithmic efficiency, concept of running time, analysis of algorithms, Growth of Functions, Asymptotic Notations, Structure of divide-and-conquer algorithms, analysis of divide-and-conquer algorithms, example algorithms - Quick Sort, Merge Sort, Strassen Multiplication, Recurrences- Substitution Method, Recursion Tree Method, Iteration Method , Master's Method.	L1, L2 and L3	8
<b>Module II: Advanced Design Techniques</b> Greedy Algorithms - Introduction, elements of greedy strategy, Fractional Knapsack Problem, activity selection problem, Dynamic Programming - Overview, difference between dynamic programming and divide and conquer, Matrix Chain Multiplication, Longest Common Sub-sequence, 0/1 - Knapsack Problem. Difference between Greedy and Dynamic Programming Approach.	L2, L3 and L4	10
<b>Module III: Graph Algorithms</b> Representation of Graphs, Graph Traversal - BFS and DFS, Topological Sort, Strongly Connected Components. Minimum Spanning Tree, Kruskal's Algorithm, Prim's Algorithm, , Single Source Shortest Paths, Dijkstra's Algorithm, Bellmanford Algorithm, All Pair Shortest Path Problem, Floyd Warshall's Algorithm.	L2, L3 and L4	10
<b>Module IV: Selected Topics</b> Back tracking - Introduction, n-Queens Problem, NP-Completeness – Definition and examples of Class P, NP, NP-Hard and NP Complete, Polynomial reduction. Approximation Algorithms – Introduction, Performance Bounds, Example Problems – Vertex Cover Problem, Travelling Salesperson Problem. Randomized Algorithms. Application of algorithms in different areas of Computer Science.	L2, L3 and L4	8

### Catalog Description

This course is intended to describe technical characteristics and performance of multimedia system and terminals. It will help in designing creative approach in application of multimedia devices, equipment and systems. . Also provide students to interpret and analyze measurement results obtained on the multimedia system and components. It provides to test multimedia communication systems and equipment in real conditions.

### Course Objectives

The objective of the course is

1. to provide an overview of different multimedia technologies like audio and video including multimedia devices.
2. to include some practical sessions on these technologies.

### Course Outcomes

After the completion of course, the students will be able to,

- CO1. Identify and Describe basic principles of multimedia communication systems and its application.
- CO2. Identify and define concepts of digital audio representation and processing using computer techniques and tools for creating and editing the Interactive multimedia applications.
- CO3. Identify and describe video technology including Raster Scanning Principles.
- CO4. Identify and describe video technology including Raster Scanning Principles, Sensors for T.V.Cameras, Color Fundamentals, color Video, Video Equipments and Worldwide Television Standards.
- CO5. Identify and describe Multimedia Devices, Presentation Services and the User Interface. Apply multimedia in different field of life.

Modules	Blooms level*	Number of hours
---------	---------------	-----------------

Module I: Introduction Introduction: Objectives – History of Multimedia – Its market – Content copyright – Resources for multimedia developers – Types of produces – Evaluation – Hardware Architecture – OS and Software – Multimedia Architecture – Software library – Drivers.	L1, L2 and L3	8
Module II: Digital Audio Representation and Processing Uses of audio in computer applications, digital representation of sound, transmission of digital sound, digital audio signal processing, digital audio and the computer.	L2 and L3	7
Module III: Video Technology Raster scanning principles, sensors for T.V. cameras, color fundamentals, color video, video equipment, worldwide television standards.	L4 and L5	7
Module IV: Digital Video and Image Compression Evaluating a compression system, redundancy and visibility, video compression techniques, the JPEG image compression standards, the MPEG motion video compression standard, DVI technologies, Time Based Media Representation and Delivery.	L4 and L5	5
Module V: Multimedia Devices, Presentation Services and the User Interface-Introduction .Multimedia services and Window systems, client control of continuous media, device control, temporal co ordination and composition, hyper application.	L3 and L4	5
Module VI: Application of Multimedia Intelligent multimedia system, desktop virtual reality, multimedia conferencing.	L3 and L4	4

### **Catalog Description**

The goal is to acquaint the students with the basics of data communication and networking. A structured approach to explain how networks work from the inside out is being covered. The physical layer of networking, computer hardware and transmission systems have been explained. In-depth includes routing process, error detection techniques, noisy protocols and various applications of layers of OSI model.

### **Course Objectives**

The objective of this course is to

1. To provide an overview of data communication and computer networks, network specific protocols, networking devices, OSI /TCP-IP Layer concepts.
2. To serve as a foundation for the study of advanced networking concepts.

### **Course Outcomes**

On completion of this course, the students will be able to

CO1. State the functions of data component in communication, networking devices, characteristics of topologies and describe the functionality of layers in OSI model.

CO2. Explain parallel and serial transmission; Differentiate between periodic and aperiodic signals including data encoding techniques.

CO3. Illustrate the working and applications of guided and unguided media. Explain working of ISDN.

CO4. Explain flow control and error control protocols.

CO5. Compare and Contrast different routing algorithms; discuss the frame format of IPv4 and IPv6 with working of TCP protocol.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>MODULE 1:</b> Introduction to Data Communication, Networks-protocols, advantages, disadvantages & applications, Line Configuration, topology, Transmission mode, Classification of networks. OSI Model, functionality of layers in OSI model, Protocols at each layer, encapsulation, peer-to-peer communication.	L1, L2	8
<b>MODULE 2:</b> Parallel & Serial Transmissions, Analog& Digital Signals, Periodic & Aperiodic Signals, Data encoding techniques-Digital data-digital signals, Digital data-Analog signals, Analog data- Digital signals, Analog data-Analog signals, Multiplexing.	L2, L3 and L4	8
<b>MODULE 3:</b> Transmission Media-Twisted Pair Cable, Coaxial Cable, Fiber-Optics Cable, Radio frequency Allocation, Terrestrial Microwave, Infrared rays, Satellite Communication, Cellular Telephony. Introduction to ISDN.	L3 and L4	6
<b>MODULE 4:</b> Framing, Switching, Types of Errors, Error Detection & Correction (VRC, LRC, CRC, Checksum, Hamming Code), Flow Control (Stop-and-wait & Sliding Window), Error Control (Stop & Wait ARQ, Sliding Window ARQ using Go-back n method and Selective-Retry), IEEE Standards-802.3, Token Bus (802.4), Token Ring (802.5), FDDI.	L2, L3 and L4	6
<b>MODULE 5:</b> Routing process, Routing Algorithms-Shortest Path Routing, Flooding, Distance Vector Routing, Link State Routing, Addressing-IPv4, IPv6, Internetworking, Connection-oriented Vs Connectionless protocols-TCP,UDP.	L2, L3 and L4	10

### Catalog Description

This course presents basic principles for the design, use and understanding of computer graphics systems. This course includes various standard algorithms and their complexity to draw graphics objects. This course also teaches the students about different algorithms for 2D /3D transformation, clipping operations on objects, hidden surface removal and detection.

### Course Objectives

The objective of this course is to

1. Equip the students with mathematical concepts of graphics algorithms to draw Graphics objects using C language and standard algorithms.
2. Provide an overview of various 2D & 3D transformation, clipping operations, algorithms related to hidden surface detection and elimination and their implementation.

### Course Outcomes

On completion of this course, the students will be able to

CO 1: Define various standards and components in development of computer graphics.

CO 2: Explain generation of graphics primitives and analyze their problems and solutions.

CO 3: Demonstrate solid filling using polygon fill algorithm with interior region testing methods.

CO 4: Apply 2D geometric transformations on 2D graphics objects with their practical implementation.

CO 5: Illustrate use of coordinate mapping and their transformation and analyze use of line and polygon clipping algorithms.

CO 6: Apply 3D geometric transformations on 3D objects with their practical implementation and assess logic behind visible surface detection algorithms with practical implementation of 3D transformations.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Introduction of Graphics</b> Development of Computer Graphics, Basic Graphics System and Standards. Graphics Devices: Raster and Random Scan Devices, Continual Refresh and Storage Displays, Display Processor, Color Display Techniques, Frame Buffer, Concepts in Raster Graphics and color generation.	L1, L2 and L3	6
<b>Module II: Graphics Primitives</b> Points, Pixels, Scan Conversion, Line Drawing Algorithms, Circle Drawing Algorithms, Anti-aliasing Technique, Methods of Character generator. Polygon Polygon representation, Polygon Filling algorithm, Inside/Outside Testing .	L1, L2 and L3	7
<b>Module III: Transformation</b> Scaling, Translation, Rotation, Composite Transformation , Fix point scaling , Rotation about arbitrary point, Reflection, Shears, Composite Transformation, Modeling and Coordinate Transformation Viewing: Interactive Picture Construction Techniques, Interactive Input/Output Devices	L2, L3 and L4	7
<b>Module IV: Segment</b> Segment Table, Creating Deleting and Renaming a Segment, Visibility and Image Transformation Windowing and Clipping: Window, View-port, Line clipping, polygon clipping, Window to viewport transformation, polygon clipping using Sutherland Hodgman Algorithm.	L2, L3 and L4	8
<b>Module V: 3-D Transformation and Visible surface detection</b> 3-D Transformation: shearing, scaling, translation. Rotation, Homogeneous coordinates. Visible surface detection: Z - buffer algorithm, Scanline Visible surface detection algorithm, painter's algorithm, fractal and its. Properties	L2, L3 and L4	8

<b>IFT 2420</b>	<b>DATA COMMUNICATION AND COMPUTER NETWORKS LAB</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2017.1	Date of Approval :14 June, 2017	-	-	2	1
Pre-requisites/Exposure	Basics of CISCO router				
Co-requisites	NIL				

### Catalog Description

The course familiarizes with the equipment applications and protocols installed in enterprise networks, with a focus on switched networks, IP Telephony requirements, and security. It also introduces advanced routing protocols such as Enhanced Interior Gateway Routing Protocol (EIGRP) and Open Shortest Path First (OSPF) Protocol. Hands-on exercises include configuration, installation, and troubleshooting.

### Course Objectives

The objective of this course is to

1. Make the students understand configuration of routing protocols.
2. Provide a demonstration of troubleshooting of different protocols.

### Course Outcomes

On completion of this course, the students will be able to

- CO1. Apply the knowledge of CISCO router to understand its basic configuration, Enterprise network and implement inter -VLAN routing.
- CO2. Demonstrate the configuration of OSPF and RIP protocol.
- CO3. Demonstrate the configuration of EIGRP and BGP protocol.
- CO4. Apply the knowledge of basic WAN connections using HDLC and PPP protocol.
- CO5. Demonstrate the standard and extended ACL on router.

<b>Modules</b>	<b>Blooms</b>	<b>Number</b>

IFT2421	DESIGN & ANALYSIS OF ALGORITHM LAB	L	T	P	C
---------	---------------------------------------	---	---	---	---

Version 2017.1	Date of Approval: 14 June, 2017	0	0	2	1
Pre-requisites/Exposure	C Programming				
Co-requisites	Basic knowledge of Data Structure				

## Catalog Description

This course is intended to implement the various algorithm strategies for solving the problems using programming language.

## Course Objectives

The objective of this course is to

1. equip the students with implementation of various algorithms.
2. provide sound foundation of design strategies for problem solving.
3. measure and compare the performance of different algorithms.

## Course Outcomes

On completion of this course, the students will be able to

CO1: Implement the concept of Divide and Conquer algorithms to solve various problems.

CO2: Demonstrate the use of Greedy Algorithms to solve various problems.

CO3: Apply the principle of Dynamic Programming to solve various problems.

CO4: Apply various design strategies to solve graph related problems.

Modules	Blooms level*	Number of hours

Pre-requisites/Exposure	Basic Knowledge of C Programming
Co-requisites	Nil

### Catalog Description

This course presents basic principles for the design, use and understanding of computer graphics systems. This course includes various standard algorithms and their complexity to draw graphics objects. This course also teaches the students about different algorithms for 2D /3D transformation, clipping operations on objects, hidden surface removal and detection.

### Course Objectives

The objective of this course is to

1. Equip the students with mathematical concepts of graphics algorithms to draw Graphics objects using C language and with standard algorithms.
2. Provide an overview of various 2D & 3D transformation, clipping operations, algorithms related to hidden surface detection and elimination and their implementation.

### Course Outcomes

On completion of this course, the students will be able to

CO 1: Define various standards and components in development of computer graphics.

CO 2: Explain generation of graphics primitives and analyze their problems and solutions. Demonstrate solid filling in objects using polygon fill algorithm with interior region testing methods.

CO 3: Apply 2D geometric transformations on 2D graphics objects with their practical implementation.

CO4: Illustrate use of coordinate mapping and their transformation and analyze use of line and polygon clipping algorithms with their practical implementation.

CO 5: Apply 3D geometric transformations on 3D objects with their practical implementation and assess logic behind visible surface detection algorithms with practical implementation of 3D transformations. Illustrate use of fractal and iterated function system and analyze the use of illumination model in 3D graphics.

Modules	Blooms level*	Number of hours

IFT2510	Java Programming	L	T	P	C
---------	------------------	---	---	---	---

Version 2017.1	Date of Approval: 14 June, 2017	3	0	0	3
Pre-requisites/Exposure	Basics of Programming				
Co-requisites	NIL				

### Catalog Description

The objective is to impart programming skills used in this object oriented language java. The course explores all the basic concepts of core java programming like object, classes, data types, features, operators, control structures, interfaces, packages, applets, awt, swings and socket programming. The students are expected to learn it enough so that they can develop the basic applications as well as web solutions like creating applets etc.

### Course Objectives

The objective of this course is to

1. Equip the students with the basic feature of contemporary java required in solving complex problems.
2. Provide a practical knowhow and implementation of java programming concepts like classes, objects, packages, swings, socket programming

### Course Outcomes

On completion of this course, the students will be able to

- CO1: Define and explain concept of byte code and platform independence, demonstrate basic java based application development using operators, if-else, loops and arrays.
- CO2: Distinguish between various types of inheritances, polymorphisms and other concepts and able to solve complex programming problems involving class objects, inheritances, and packages
- CO3: Describe hierarchy of exception classes and thread life cycle along with demonstrate and design solutions for some simple and complex applications using exception and multithreading concepts.
- CO4: Explain event delegation model and describe AWT class hierarchy; Apply knowledge of event handling and AWT controls create some new dynamic graphical applications.
- CO5: Explain the architecture of applet and concept of swing package. Demonstrate applications based on java applets and swings.

## **COMPUTER ORIENTED NUMERICAL METHODS**

**Course Code: IFT2517**

**Credit Units: 03**

**L-T-P: 3-0-0**

### **Course Objective:**

The objective of this course is to provide conceptual understanding of various numerical methods, in particular, with reference to numerical solution of non linear equations and system of linear equations, interpolation, numerical differentiation and integration and numerical solution of ordinary differential equations. Important theorems and different formulae for various numerical methods to be covered with an aim of helping the students to understand the fundamentals, concepts and practical use of these methods in the field of computer sciences and applications.

### **Course Contents:**

#### **Module I: Numeric Computation**

Computer Arithmetic- Floating point numbers-operations, Normalization and their Consequences, Absolute, Relative and Percent Error.

Iterative Methods:- Zeros of a single Transacendental equations and Zeros of Polynomial Equations using Bisection ,False Position, Newton-Raphson Methods, Convergence of Solution.

#### **Module II: Simultaneous Linear Equations**

Solution of Simultaneous Linear Equations. Direct Methods:- Gauss elimination method, Pivoting, Gauss-Jordan Method. Iterative methods:-Jacobi's Methods, Gauss-Seidal Method.

#### **Module III: Polynomial Interpolation**

Newtons divided difference, Forward and backward difference Formulae, Difference Tables, Lagrange's Method.

#### **Module IV: Numerical Differentiation and Integration**

Formula for first and second order derivatives using newton's- Forward and Backward formula, Numerical Integartion, Newton-Cotes Formula: Trapizoidal rule, Simpson's  $1/3^{\text{rd}}$  rule ,Simpson's  $3/8^{\text{th}}$  rule, Weddle's rule.

## **Module V: Numerical Solution of Differential Equations**

Basic Terminology of Differential Equations, Picard's Method, Euler's method, Taylor's Series method, Runge-Kutta Methods, Predictor –Connector Method.

### **Examination Scheme:**

<b>IFT2525</b>	<b>BASICS OF CLOUD COMPUTING</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2019.1	Date of Approval: 15 May, 2019	3	1	0	4
Pre-requisites/Exposure	General Networking and basics of virtualization				
Co-requisites	Nil				

### **Catalog Description**

The course introduces the basic concepts and methods of Cloud computing and develops the concepts and skills necessary to build applications in Cloud environments. The course starts by explaining the concepts of cloud computing, cloud architecture, model and the concepts of Virtualization. It then explains how such ideas form the basis for creating Computing Clouds where the concept of resources is virtualized. Case studies are used to show how applications can be run in a Cloud and the principles of creating images to run in Clouds are explained. The programming skills for business models that underlie Cloud Computing are also presented.

### **Course Objectives**

The objective of this course is to

1. Equip the students with concepts virtualization and Cloud
2. Provide an overview of security issues and various tools available in Cloud

### **Course Outcomes**

On completion of this course, the students will be able to

- CO1: Explain and differentiate between different types of computing and also determine them with the upcoming Cloud Computing environment.
- CO 2: Identify the different layers in the architecture of Cloud and explain the different services, deployment models and types of virtualization available.
- CO 3: Explain the power of scalability and fault tolerant system and other features of cloud, analyzing the management of cloud in business.
- CO 4: Explain, apply and compare the various security issues and their solutions and policies for security in Cloud environment.
- CO 5: Analyze programming Models, its workings and comparing them with each other.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>MODULE 1:</b>  Overview of Client/Server Computing, Peer to Peer Computing, Distributed Computing, Col-laborative Computing, Cloud Computing; Behaviour of Cloud Computing; Pros and Cons of Cloud Computing.	L1, L2, L3	8
<b>MODULE 2:</b>  Understanding of Cloud Architecture, Cloud Storage, Cloud Services; Types of Cloud service development; Software as a Service, Platform as a Service, Web Services, On Demand Com-puting; Virtualization: Fundamental concepts of compute storage, Network virtualization; Pros and Cons of Cloud Service Development; Case study with Cloud Services Development Service and Tools.	L1,L2, L3	8
<b>MODULE 3:</b>  Introduction to Scalability and Fault Tolerance with Cloud Computing; Cloud Solutions; Cloud Ecosystems; Cloud Business Process Management; Portability and Interoperability.	L1, L2 and L4	6
<b>MODULE 4:</b>  Security Overview; Cloud Computing Security Challenges; Security Policy Implementation, Computer Intrusion Detection and Response, Virtualization Security Management and Virtu-al Threats; Cloud Security Controls; Cloud Computing Attacks; Cloud Security services; Se-cure Cloud Software requirements; Policy Implementation.	L2, L3 and L4	8
<b>MODULE 5:</b>  Map Reduce; Hadoop ;Analyzing the data with Hadoop; Case Study on Google App Engine, Microsoft Azure and Hadoop.	L2, L4	6

Version 2017.1	Date of Approval: 14 June 2017	2	0	0	2
Pre-requisites/Exposure	Basics of OS				
Co-requisites	Nil				

## Catalog Description

The Objective of this course is to explore the idea of Linux platform to graduate students. The fundamentals concepts of Linux Operating System, commands and Shell Programming will be prepared by the students to work on Linux platform, which is the requirement of each industry and in academic. The syllabus will cover the study of scripting languages such as PERL, TCL/TK and BASH. Creation of programs in the Linux environment, the principles of scripting languages and usage of scripting languages in IC design flow.

## Course Objectives

The objective of this course is

1. Ability to create and run scripts using Perl / TCL.
2. Ability to use Linux environment and write programs.

## Course Outcomes

On completion of this course, the students will be able to

CO1. Outline basics of UNIX OS and Linux security system.

CO2. Describe Linux file system and related commands.

CO3. Illustrate implementation of Linux networking concepts.

CO4. Demonstrate Perl and Tcl/tk scripts.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Introduction</b>  History of Operating System, Types of Operating Systems, History of Linux and Unix, UNIX Family, Unix System Architecture, Kernel, Shell: Types of shells, Files and Directories, Absolute Path and Relative Path, root and hierarchical file structure of Unix, telnet, Introduction to Linux server security and administration.	L1 and L2	6
<b>Module II: Linux Basics</b>	L2 and	6

Introduction to Linux, File System of the Linux, General usage of Linux kernel & basic commands, Linux users and group, Permissions for file, directory and users, Searching a file & directory, zipping and unzipping concepts.	L3	
<b>Module III: Linux Networking</b>  Introduction to Networking in Linux, Network basics & tools, File transfer protocol in Linux, Network file system, Domain Naming Services, Dynamic hosting configuration Protocol & Network information Services.	L1 and L3	6
<b>Module IV: Perl Scripting and Tcl/tk Scripting</b>  Introduction to Perl Scripting, working with Simple Values, Lists and Hashes, Loops and Decisions, Regular Expressions;Data Structures, Control Flow Commands, Procedures and Scope, Eval, Working With UNIX, Reflection and Debugging, Script Libraries, Tk Fundamentals, Tk by Examples, The Pack Geometry Manager, Binding Commands to XEvents, Buttons and Menus, Simple Tk Widgets, Entry and Listbox Widgets Focus, Grabs and Dialog.	L2, L3 and L4	6

<b>IFT2504</b>	<b>Java Programming Lab</b>	L	T	P	C
Version 2017.1	Date of Approval: June, 2017	0	0	2	1

Pre-requisites/Exposure	Basics of Programming
Co-requisites	NIL

### Catalog Description

In this Lab course the basic features of contemporary java are implemented and demonstrated. Problems or programs will be related to concepts of classes, objects, threads, packages, exception handling, applets, AWT control, swings and socket programming. Concepts covered would enable them to create basic and complex console and graphical based applications for desktop and Internet.

### Course Objectives

The objective of this course is to

1. Equip the students to apply knowledge of various basic java features required in solving basic and complex problems.
2. Provide a demonstration of basic java programming concepts like classes, objects, threads, packages, exception handling, applets, AWT control, swings and socket programming

### Course Outcomes

On completion of this course, the students will be able to

CO1: Apply the concepts learned of operators, if-else, loops and arrays to java based application development.

CO2: Demonstrate the use of various types of inheritances, polymorphisms, class objects, inheritances, packages and other concepts to basic and complex java programming problems.

CO3: Apply the knowledge of exception handling and multithreading concepts for some simple and complex applications.

CO4: Apply knowledge of event handling and AWT controls to create some new dynamic graphical applications.

CO5: Demonstrate graphical applications based on java applets, swings and event handling.

Modules/Topics Covered**	Blooms level*	Number of hours
--------------------------	---------------	-----------------

<p>Sample Programs using Objects and classes, Variable Types, Modifier Types, operators, Loops Decision Making, Strings and Arrays,</p> <ol style="list-style-type: none"> <li>1. WAP to display “Hello, it’s a first program in java”.</li> <li>2. WAP to find sum of two integers taken as input from user at runtime.</li> <li>3. WAP to find sum of two float numbers taken as command line arguments</li> <li>4. WAP to find changed case of entered character.</li> <li>5. WAP to find maximum of 3 integer numbers taken as input from user at runtime.</li> <li>6. WAP in java to find out the greatest out of ten numbers stored using arrays.</li> <li>7. WAP to create class with “name” as String and “age” as integer data members. The class should have two methods to take input from user and display the data.</li> <li>8. WAP to find factorial of a number using class and object.</li> </ol>	L3, L5	6
<p>Sample Programs using Inheritance, Overriding, Polymorphism, Interfaces, Packages</p> <ol style="list-style-type: none"> <li>1. WAP in java to illustrate the concept of interfaces.</li> <li>2. WAP to create a package as MyPack having a class with three methods: max, fact and show. Use it in other folder with setting classpath and without setting class path.</li> <li>3. Write a program in java to showcase uses of super keyword</li> </ol>	L3, L5	4
<p>Sample Programs using exception handling and threads</p> <ol style="list-style-type: none"> <li>1. Write a program to demonstrate the use of nesting of try-catch block</li> <li>2. WAP in java to illustrate the concept of using multiple catch clauses to handle different types of exceptions.</li> <li>3. WAP in java to create a user defined Exception and throw it explicitly.</li> <li>4. Demonstrate thread using Thread class and Runnable interface</li> <li>5. Demonstrate various thread methods using a program</li> </ol>	L3, L5	6
<p>Sample Programs using event handling and AWT controls</p> <ol style="list-style-type: none"> <li>1. Write a program to display “hello” in different color where user clicks left mouse button and “world” where right mouse button is clicked. Use black background.</li> <li>2. WAP in java to create a Frame and handle window-closing event implementing the WindowListener interface.</li> <li>3. WAP to create an Applet having various different buttons, recognizing them using action command string method and</li> </ol>	L3, L5	6

<p>handling click event generated by them.</p> <ol style="list-style-type: none"> <li>WAP to create a frame and illustrate the concept of using an adapter class in place of interfaces for handling various mouse events generated over frame window.</li> <li>WAP in java to create a frame with AWT controls (like label, push buttons, Checkbox, Checkbox Group) and handle various events generated by them.</li> <li>WAP in java to create a frame with various AWT controls (like choice, list, TextField and Buttons) and handle the events thrown by them.</li> </ol>		
<p>Sample Programs using applets, swings and stream socket</p> <ol style="list-style-type: none"> <li>Write an applet which will display “HAPPY” and “DEEPAVALI” as: The word “HAPPY” will roll from top to bottom and “DEEPAVALI” from bottom to “top”. Both will run at the same speed and stop simultaneously at the center of the applet.</li> <li>Write an applet to display last 32 shades of red, green and blue in equal sized square grid accompanied by appropriate labels like” Last 32 shades of Red/Green/Blue color”. Make use of BorderLayout to apply border for each individual shade.</li> <li>Create an applet with one single button with caption “Click”. On clicking the button will open a new Frame with title “Factorial”. The frame will have two three controls :TextField, Label and button. On clicking button calculate the factorial entered in TextField control.</li> <li>Create Java programs to demonstrate day time client and server.</li> <li>Create java programs to create echo client and server</li> </ol>	L3, L5	2

## Catalog Description

This course is designed to get students familiar with the advance concepts of Linux. The course provides familiarity to concepts like C Programming in Linux, Perl and TCL scripting. Students will learn practical on Linux and hence can work on any application based on Linux advanced concepts.

## Course Objectives

The objective of this course is

1. To make students familiar with the advance concepts and working of Linux.
2. Provide an overview of Perl and TCL scripting.

## Course Outcomes

On completion of this course, the students will be able to

CO1. Illustrate Linux basic concepts like shell scripts and working.

CO2. Explain concepts of C programming in Linux and apply them in real applications.

CO3. Design and implement various Perl scripts for a given problem.

CO4. Work on TCL scripts.

Modules	Blooms level*	Number of hours
<b>Lab Session 1-2</b> Review of UNIX Commands, Redirection, Piping and shell programming.	L1 and L2	4
<b>Lab Session 3-5</b> Writing shell scripts.	L1 and L3	6
<b>Lab Session 6-8</b> Writing Perl Script.	L1 and L3	6
<b>Lab Session 9-10</b> To prepare C programs in Linux	L1 and L3	4
<b>Lab Session 11-12</b> Working with Foreign Key and Check Constraint.	L1 and L3	4

### **Catalog Description**

The objective of this course is to provide practical training on some live projects that will increase capability to work on actual problem in industry. This training may undergo in an industrial environment or may be an in-house training on some latest software which is in high demand in market. This training will be designed such that it will useful for their future employment in industry.

### **Course Objectives**

The objective of this course is to

1. Provide practical training on live projects
2. Increase technical capabilities on solving real life problems in company environment

### **Course Outcomes**

On completion of this summer internship, the students will be able to:

CO1: Develop communication, interpersonal and other critical skills in the job interview process.

CO2: Design and develop software and hardware projects

CO3: Assess interests and abilities in their field of study.

CO4: Demonstrate excellent technical and communication skills to acquire employment contacts leading directly to a full-time job following graduation from college.

### **Text Books**

As per topic of summer internship project is chosen and discussion with guide.

<b>IFT2622</b>	<b>Internet of Things</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2019.1	Date of Approval: 15 May, 2019	3	1	0	4
Pre-requisites/Exposure	Basic Networking Concepts				
Co-requisites	Nil				

## Catalog Description

The Internet is evolving to connect people to physical things and also physical things to other physical things all in real time. It's becoming the Internet of Things (IoT). The course enables student to understand the basics of Internet of things and protocols. It introduces some of the application areas where Internet of Things can be applied. Students will learn about the working of Internet of Things.

## Course Objectives

The objective of this course is to

1. Equip the students with concepts of internet-of-things
2. Provide an overview of designing iot devices

## Course Outcomes

On completion of this course, the students will be able to

CO1: Explain key terms and trends around the Internet of Things along with its physical and logical design

CO2: Understand the potential and value of the Internet of Things and Smart Services.

CO3: Describe the technologies used for the Internet of Things and mobile devices, including (passive and active) sensors, the physical communications layer, communications protocols, programming frameworks,.

CO4: Design python programs and have hands on experience on python programming

CO5: Develop IoT application of moderate complexity for a well-used mobile platform.using python, raspberry Pi and arduino programming

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
Module I: Introduction to Internet of Things Definition & characteristics of IoT, physical design of IoT-things in IoT, IoT protocols, logical design of IoT- IoT functional block, IoT communication models, IoT communication	L1, L2	8

APIs, IoT enabling technologies-wireless sensor networks, cloud computing, big data analytics, communication protocols, embedded systems,IoT levels and deployment templates, IoT application		
<b>MODULE 2: IoT and M2M</b>  Introduction to M2M , difference between IoT and M2M, SDN (software defined networking ) and NFV (Network Function Virtualization) and their applications for IoT.	L2, L3 and L4	8
<b>MODULE 3: IoT system management with NETCONF-YANG</b>  Need for IoT systems management, SNMP and its limitations, Network Operator Requirements, Introduction to NETCONF and YANG.	L2, L3 and L4	8
<b>MODULE 4: Developing Internet of Things IoT Design Methodology,Logical design using Python- Python data types &amp; data structures, control flow, functions, modules, packages, classes, file handling, Python packages for IoTJSON, XML, HTTPLib, URLLib, SMTPLib, IoT end devices-building blocks, Introduction to Raspberry Pi.</b>	L2, L3 and L4	12
<b>MODULE 5: Case Studies of IoT</b> Home Automation- Smart Lighting, Home Intrusion Detection, Cities-Smart Parking	L2, L4	2

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation*

# **COMPUTER ORIENTED STATISTICAL & OPTIMIZATION METHODS**

**Course Code: IFT2616**

**Credit Units: 03**

**L-T-P: 3-0-0**

## **Course Objective:**

The objective of this course is to expose students to the fundamentals and concepts of statistical and optimization methods, in particular, with reference to frequency distribution and measures of central tendency, measures of dispersion, skewness and kurtosis, theory of probability, linear programming problems, transportation, assignment and game problems. This course is designed with an aim of helping the students to understand important theorems, different formulae and practical applications of these statistical and optimization methods in the field of Computer Sciences and Applications.

## **Course Contents:**

### **Module I**

Collection of Data, Sampling and Sampling Designs, Classification and Tabulation of Data, Graphical representation of Data, Measures of Central Value, Measures of Dispersion. Moments, Skewness, Kurtosis, Correlation and Regression.

### **Module II: Probability**

Classical Definition of Probability, Algebra of Events, Probability Axioms, Conditional Probability.

**Probability Distributions:** Discrete and Continuous Distributions, Binomial Distribution, Poisson distribution, Normal Distribution.

### *Module III: Linear Programming*

Mathematical Formulation of Linear Programming models and its Graphical Solutions, Simplex Method, Charne's Big M method, Two Phase Method.

### **Module IV: Transportation Problem**

General Transportation model, Starting basic Solutions:-North west Corner Method, Least Cost Method, Vogel's Approximation Method, Test of optimality, unbalanced Problem. Assignment Problems

### *Module V: Game Theory*

Two-Person Zero Sum Games, Maximin-Minimax Principal, Pure Strategies, Mixed Strategies, Expected Pay off, Concept of Dominance, Graphical Solution of  $m \times 2$  and  $2 \times n$  Games.

**Examination Scheme:**

Components	CT1	A/C/Q	Attd	EE
Weightage (%)	15	10	5	70

<b>IFT 2618</b>	<b>INTRODUCTION TO OPEN SOURCE TECHNOLOGIES (PHP, MYSQL)</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2017.1	Date of Approval: 14 <sup>th</sup> June 2017	3	0	0	3
Pre-requisites/Exposure	Basic Knowledge of HTML				
Co-requisites	Nil				

## Catalog Description

The course includes the content about PHP and its Programming Concepts. It includes basic architecture of running a PHP Script. It also includes the concepts about Conditional, Control Statements, Array, Associative Array, String Functions and Concepts of Functions: Call by Value and Reference. The course also includes concepts related to Object Oriented Programming in PHP and website design support along with Database Support concepts which will be useful to design Backend for the website.

## Course Objectives

The objective of this course is:

1. To provide a fundamental understanding of Dynamic Website Design in PHP.
2. To provide knowledge about various Frameworks build for Website Designing.

## Course Outcomes

On completion of this course, the students will be able to

After completing the course, the students will be able to,

CO 1: Explain the basic concepts of PHP programming and apply it to rewrite PHP scripts using Strings and Functions

CO 2: Distinguish between various Conditional and Control Statements and rewrite PHP scripts based on the concepts

CO 3: Apply Object Oriented and Web Design concepts of PHP in order to prepare responsive web pages and websites

CO 4: Apply the concepts of Database and Database connectivity to prepare backend support for website.

CO 5: Compare and Contrast the behavior of various PHP frameworks and apply them to construct webpages and websites

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Introduction to Open Source and PHP programming</b> Introduction to Open Sources Technologies, Introduction to PHP, installation and configuration, Advantages and Disadvantages of PHP, Client Side Scripting, Server Side Scripting, Variables, data types, various types of function, creating your own function, Strings in PHP, String Functions.	L1, L2	4
<b>Module II: Operators, Loops, Array, Exception and Error Handling</b> Operators, Conditions, Loops, Using for each, Creating and Using Arrays, Multidimensional Array, Associative Array. Error Handling in PHP, Errors and Exceptions, Exception class, try/catch block, throwing an exception, defining your own Exception subclass.	L1, L2	5
<b>Module III: Classes, File system, Passing Information between pages</b> Object oriented programming with Php, Working with Datetime, code re-use, require (), include(), and the include_path; Understanding PHP file permissions, File reading and writing functions, File system functions, File uploads, Sending mail & use of email server. HTTP, GET arguments, POST arguments, Using Session in PHP, cookies, The setcookie() function, Deleting Cookies and Reading Cookies.	L2, L3	7
<b>Module IV: Working with database</b> HTML Tables and Database tables, Database manipulation (Select, Insert, Update, Delete), validating User Input using Javascript. MYSQL, Introducing MySQL; database design concepts; the Structured Query Language (SQL); communicating with a MySQL backend via the PHP, MySQL API Building Database Applications, Developing PHP scripts for dynamic web page like feedback form, online admission form and online test.	L2, L3	5
<b>Module V: Working with Frameworks</b> Working with Mambo, Working with Joomla, Working with framework. Working with wordpress, Working with drupal, Use of Joomla in rapid development of website. Developing of simple website using Joomla.	L2, L3 and L4	3

<b>IFT 2620</b>	<b>INTRODUCTION TO OPEN SOURCE TECHNOLOGIES (PHP, MYSQL) LAB</b>	L	T	P	C
Version 2017.1	Date of Approval: 14 <sup>th</sup> June 2017	0	0	2	1
Pre-requisites/Exposure	Basic Knowledge of HTML				
Co-requisites	Nil				

## Catalog Description

The course includes PHP Programming Concepts. Conditional, Control Statements, Array, Associative Array, String Functions and Concepts of Functions: Call by Value and Reference are implemented. The course also includes concepts related to Object Oriented Programming in PHP and website design support along with Database Support concepts which will be useful to design Backend for the website.

## Course Objectives

The objective of this course is:

1. To provide a fundamental understanding of Dynamic Website Design in PHP.
2. To provide knowledge about various Frameworks build for Website Designing.

## Course Outcomes

On completion of this course, the students will be able to

- CO 1: Apply the basic concepts of PHP programming to rewrite PHP scripts using Strings and Functions
- CO 2: Demonstrate the concept of Conditional & Control Statements and 1 D, 2 D & Associative Array using PHP scripts
- CO 3: Apply Object Oriented and Web Design concepts of PHP in order to prepare responsive web pages and websites
- CO 4: Apply the concepts of Database and Database connectivity to prepare backend support for website.

Lab Sessions	Blooms level*	Number of hours
<b>1. PHP Scripts on Basic Concepts</b> <ul style="list-style-type: none"> <li>• Write the process of installation of web server.</li> <li>• Write programs to print all details of your php server. Use phpinfo().</li> <li>• Write a program to give demo of ECHO and PRINT</li> </ul>	L1,L3	2

command. <ul style="list-style-type: none"> <li>Write a program to implement the string functions.</li> </ul>		
<b>2. PHP Script on Conditional and Control Statements</b> <ul style="list-style-type: none"> <li>Write a script to print Fibonacci series upto a given number.</li> <li>Write a menu driven program to implement a calculator which performs only addition, subtraction, multiplication and division. The operation should happen based on user choice.</li> <li>Write a script to calculate Factorial of a given number</li> </ul>	L1,L3	4
<b>3. PHP Scripts on Arrays : 1D, 2D, Associative</b> <ul style="list-style-type: none"> <li>Write a program sort ten number by using array.</li> <li>Write a program to demonstrate the concept of associative array.</li> <li>Write a program to demonstrate the concept of multidimensional array.</li> </ul>	L1,L3	4
<b>4. PHP Scripts on Object Oriented Programming and File Handling Concepts</b> <ul style="list-style-type: none"> <li>Write a program to demonstrate the concept of Classes &amp; objects.</li> <li>Write a php script including all the file handling functions.</li> </ul>	L1,L3	2
<ul style="list-style-type: none"> <li><b>PHP Scripts on Webpage and Website Design Concepts</b></li> <li>Create a login form with two text fields called “login” and “password”. When user enters “Amity” as a user name and “university” as a password it should be redirected to a Welcome.HTML page or toSorry.HTML in case of wrong username/password.</li> <li>Write a program to design login form in which find the greatest number amongst three numbers.</li> <li>WAP for Marksheet generation.</li> <li>Design a webpage for entering the student details with all the validations applied on it.</li> <li>Create a form with a text box asking to enter your favorite city with a submit button when the user enters the city and clicks the submit button another php page should be opened displaying “Welcometo the city”.</li> </ul>	L1,L3	6
<b>5. PHP Scripts on Database Creation an Connectivity</b> <ul style="list-style-type: none"> <li>Create a database in MySql and connect that database</li> </ul>	L1,L3	4

from PHP. • Write a program to Update, insert and delete the values of table in database.

<b>IFT2604</b>	<b>Data Warehousing and Mining</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2017.1	Date of Approval: 14 June, 2017	3	0	0	3
Pre-requisites/Exposure	Introduction to Database Management System				
Co-requisites	Nil				

### Catalog Description

In this course the concepts of Data warehouse and Data Mining are discussed in detail. The different data mining techniques such as clustering, classification, association are introduced. As a precursor to the study of data warehouse its architecture, types of OLAP Servers, and usage of OLAP are studied in detail. The concepts further enhances the concept of different attributes supported by data mining process, application of data mining in marketing, banking, retail sector and other areas are analyzed. .

### Course Objectives

The objective of this course is to

1. Equip the students with concepts of data mining techniques namely classification, clustering and association.
2. Provide an overview of data warehouse which include the usage of OLAP ,its characteristics, OLAP architecture.

### Course Outcomes

On completion of this course, the students will be able to

- CO1: Explain the concept of Datawarehouse, its characteristics, Metadata concepts and its importance, The schemas of Data warehouse with their application areas.
- CO2: Explain the architectural components of data warehouse and the challenges the data warehousing is facing.
- CO3: Explain the indexing of OLAP, the different OLAP operations performed on the data cube.
- CO4: Explain the concept of Data mining, its application and advantages
- CO5: Explain the concept of different data mining techniques like association, clustering and classification. The implement of these techniques on the different data sets.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>MODULE 1:</b>  <b>Data Warehousing:</b> Data Warehouse definition & Characteristics, The need for data ware housing, Operational and Informational Data Stores, Difference between Data warehouse and DBMS, Benefits of Data warehousing,Data mart, Meta Data, Conceptual Modeling of Data Warehouses: star schemas, Snowflake, Fact Constellations with example each.	L1 and L2	8
<b>MODULE 2:</b>  <b>Data Warehousing Components&amp; Architecture</b> Data Warehouse Architecture, Components of Data Warehouse Architecture, Data Warehousing Topologies, Meta Data, Components of Meta data, Mapping Meta Data. Challenges with Data Warehousing.	L2, L3 and L4	8
<b>MODULE 3:</b>  <b>On Line Analytical Processing (OLAP)</b> Definition: OLAP, Difference between OLTP and OLAP, OLAP Server Architecture, OLAP Operations, Multi Relational &Multi Dimensional: MOLAP, ROLAP, OLAP Tools, Metadata Repository, Data Warehouse Back-End Tools and Utilities.	L2 and L3	10
<b>MODULE 4:</b>  <b>Data Mining</b> Introduction to Data Mining, Applications, Limitations, Techniques, Association Rules: Apriori Algorithm, Classification: Decision Tree Cluster Analysis: Features, Types of Cluster Analysis Methods: Partitional, Hierarchical, Density Based, Grid based Methods, , Web Data Mining, Search Engine, Case Study, Limitations	L2, L3 and L4	10

Pre-requisites/Exposure	Basic knowledge of Computer Networks				
Co-requisites	Nil				

### Catalog Description

The objective of this consortium is to shape and expand a full-scale and sound mobile computing system market. To achieve this, cooperation is required of interests related to communication (network), computer hardware/software, system integrators (including service providers), and the media.

### Course Objectives

The objective of this course is to

1. Give a general overview of the cellular technology and the associated terms and discuss the generations of the mobile technologies starting from 1G to 3G techniques.
2. Illustrate the GPRS and WAP model for 2G internet connectivity in detail.
3. Elaborate the third-generation mobile services
4. Describe the Global Mobile Satellite Systems in detail and basic architecture of Bluetooth technology and advanced topics in mobile computing.

### Course Outcomes

On completion of this course, the students will be able to

CO1: Explain the basic concepts mobile technology, computing and basic architecture of PCS and GSM.

CO2: Describe the mobile networking Infrastructure through 2G technologies (GSM, GPRS, WAP).

CO3: Explain the basic concepts of 3G technologies (WCDMA, CDMA 2000) and WLL.

CO4: Discuss the working of mobile satellite systems like IRIDIUM and GLOBALSTAR.

CO5: Explain the concepts of Bluetooth technology, its working and protocols, virtual networks and enterprise networks.

<b>Modules</b>	<b>Blooms</b>	<b>Number</b>
----------------	---------------	---------------

	level*	of hours
<b>Module I: Introduction to Personal Communications Services (PCS)</b> PCS Architecture, Mobility management, Networks signaling. Global System for Mobile Communication (GSM) system overview: GSM Architecture, Mobility management, Network signaling.	L1, L2 and L3	8
<b>Module II: General Packet Radio Services (GPRS) &amp; Wireless Application Protocol (WAP)</b> GPRS Architecture, GPRS Network Nodes. Mobile Data Communication: WLANs (Wireless LANs) IEEE 802.11 standard, Mobile IP. Wireless Application Protocol (WAP): The Mobile Internet standard, WAP Gateway and Protocols, wireless mark up Languages (WML).	L1 and L2	10
<b>Module III: Third Generation (3G) Mobile Services</b> Introduction to International Mobile Telecommunications 2000 (IMT 2000) vision, Wideband Code Division Multiple Access (W-CDMA), and CDMA 2000, Quality of services in 3G. Wireless Local Loop(WLL): Introduction to WLL Architecture, wireless Local Loop Technologies.	L1 and L2	7
<b>Module IV: Global Mobile Satellite Systems</b> Global Mobile Satellite Systems; case studies of the IRIDIUM and GLOBALSTAR systems.	L1 and L2	7
<b>Module V: Enterprise Networks</b> Introduction to Virtual Networks, Blue tooth technology, Blue tooth Protocols. Advanced techniques in mobile computing.	L1 and L2	4

## Catalog Description

This course examines the evolution of enterprise resource planning (ERP) systems - from internally focused client/server systems to externally focused e-business. This class studies the types of issues that managers will need to consider in implementing cross-functional integrated ERP systems. The objective of this course is to make students aware of the potential and limitations of ERP systems. This objective will be reached through hands-on experience, case studies, lectures, guest speakers and a group project. The course would equip students with the basics of E-Commerce, technologies involved with it and various issues associated with.

## Course Objectives

The objective of this course is to

1. Understand the students with the role of consultants, vendors and employees.
2. Provide an overview of various phases in ERP implementation and identify various technologies used in ERP.

## Course Outcomes

On completion of this course, the students will be able to

- CO1: Describe the key features of Internet, Intranets and Extranets and explain how they relate to each other. Demonstrate an understanding of the foundations and importance of E-commerce and assess electronic payment systems.
- CO2: Understand concepts of reengineering, data mining, data warehousing and how they relate to ERP system implementations.
- CO3: Explain the challenges associated with implementing enterprise systems and their impacts on organizations.
- CO4: Describe the selection, acquisition and implementation of enterprise systems and demonstrate an ability to work independently and in a group.
- CO5: Identify and describe typical functionality in an ERP system.
- CO 6: Analyze the strategic options for ERP identification and adoption.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<p><b>MODULE 1:</b></p> <p><b>INTRODUCTION AND CONCEPTS:</b></p> <p>Networks and commercial transactions - Internet and other novelties; Networks and electronic transactions today, Model for commercial transactions; Internet environment - internet advantage, world wide web and other internet sales venues; Online commerce solutions.</p> <p>Security Technologies: Why is internet insecure? A brief introduction to Cryptography; Public key solution. Digital payment systems; First virtual internet payment system; cyber cash model Operational process of Digicash, Ecash Trail; Using Ecash; Smart cards; Electronic Data Interchange: Its basics; EDI versus Internet and EDI over Internet.</p>	L1, L2 and L3	8
<p><b>MODULE 2:</b></p> <p><b>INTRODUCTION ERP</b></p> <p>An Overview, Enterprise-An Overview, Benefits of ERP, ERP and Related Technologies, Business Process Reengineering (BPR), Data Warehousing, Data Mining, On-line Analytical Processing (OLAP), Supply Chain Management, Management Information systems (MIS), Decision support system (DSS), Executive Information systems (EIS). IFT 2621	CRYPTOGRAPHY & NETWORK SECURITY				L	T	P	C
----------	---------------------------------	--	--	--	---	---	---	---

Version 2017.1	Date of Approval: 14 June,2017	3	-	-	3
Pre-requisites/Exposure	Basic Mathematics				
Co-requisites	Nil				

## Catalog Description

In this course the concepts of cryptography and network security are discussed in detail. Substitution and transposition techniques, symmetric and asymmetric cryptographic algorithms, their applications, differences will be introduced. As a precursor to the study of cryptography studies will be made on impact of various network and web security protocols. The concepts learnt in the studies of cryptography & network security will be applied in the studies and analysis of authentication, integrity and security related protocols.

## Course Objectives

The objective of this course is to

1. Equip the students with concepts of cryptography & network security through problem solving and analytical approach.
2. Provide an overview of various network attacks and related security mechanism , various algorithms for modular arithmetic, symmetric and asymmetric cryptography and web and network security

## Course Outcomes

On completion of this course, the students will be able to

CO1: Explain, describe and distinguish various security attacks; Describe and solve block and stream ciphers and its applications in cryptography; Solve problems based on substitution and transposition ciphers.

CO2: Explain the basic mathematics of cryptography; Solve problems of groups, modular arithmetic ,gcd and inverse algorithm, chinese remainder theorem and its application in cryptography; Applying algorithms for solving problems in cryptography

CO3: Describing the concept of public key cryptosystems and its related algorithm; Explain and solve problems related to hash functions, digital signature and its applications in cryptography; Compare symmetric and asymmetric key cryptography.

CO4: Explain management ,distribution ,secure exchange of keys and authentication certificate and its applications in real life. Explain , compare various authentication protocols used in cryptography and network security, also solve problems based on these protocols.

CO5: Explain various security protocols : IPSec, SSL,TLS,SET; Describing malicious softwares and illustrating various design approaches to Firewall

Modules	Blooms level*	Number of hours
<b>MODULE 1:</b>  Introduction to security attacks, services and mechanism, Classical encryption techniques: substitution ciphers and transposition ciphers, cryptanalysis, steganography, Stream and block ciphers. Modern Block Ciphers: Block ciphers principles, Shannon's theory of confusion and diffusion, fiestal structure, Data encryption standard (DES), Strength of DES, Idea of differential cryptanalysis, block cipher modes of operations, Triple DES	L1, L2 and L3	7
<b>MODULE 2:</b>  Introduction to group, field, finite field of the form GF(p), modular arithmetic, prime and relativeprime numbers, Extended Euclidean Algorithm,Advanced Encryption Standard (AES) encryption and decryption, Fermat's and Euler's theorem, Primaliry testing, Chinese Remainder theorem, DiscreteLogarithmicProblem,Principals of public key crypto systems, RSA algorithm, security of RSA.	L1,L2, L3	6
<b>MODULE 3:</b>  Message Authentication Codes: Authentication requirements, authentication functions, messageauthentication code, hash functions, birthday attacks, security of hash functions, Secure hashalgorithm (SHA)Digital Signatures: Digital Signatures, Elgamal Digital Signature Techniques, Digital signaturestandards (DSS).	L1,L2, L3 and L5	7
<b>MODULE 4:</b>  Key Management and distribution: Symmetric key distribution, Diffie-Hellman Key Exchange, Public key distribution, X.509 Certificates, Public key Infrastructure. Authentication Applications: Kerberos	L1, L2 and L3	7
<b>MODULE 5:</b>  IP Security: Architecture, Authentication header, Encapsulating security payloads, combining security associations, key management. Viruses and related threats, Firewalls	L1, L2	9

### Catalog Description

The objective of this course is to provide practical training on some live/demo projects that will increase capability to work on actual problem in industry. It will be an in house training on some latest software which is in high demand in market. This training will be designed such that it will useful for their future employment in industry.

### Course Objectives

The objective of this course is to

1. Provide practical training on live projects
2. Increase technical capabilities on solving real life problems in company environment

### Course Outcomes

On completion of this summer internship, the students will be able to:

CO1: Demonstrate a sound technical knowledge of their selected project topic.

CO2: Design and develop engineering solutions to complex problems utilising a systems approach.

CO3: Analyse various approaches for solving a complex engineering problem using different tools and techniques

CO4: Demonstrate the knowledge, skills and attitudes of a professional engineer.

CO5: Apply technical skills and knowledge in completing the project.

# Syllabus - First Semester

## ENGINEERING MATHEMATICS-I

Course Code: NCE6101

Credit Units : 04

### Course Objective:

The knowledge of Mathematics is necessary for a better understanding of almost all the Engineering and Science subjects. Here our intention is to make the students acquainted with the concept of basic topics from Mathematics, which they need to pursue their Engineering degree in different disciplines.

### Course Contents:

#### Module I: Differential Calculus

Successive differentiation, Leibnitz's theorem (without proof), Mean value theorem, Taylor's theorem (proof), Remainder terms, Asymptote & Curvature, Partial derivatives, Chain rule, Differentiation of Implicit functions, Exact differentials, Tangents and Normals, Maxima, Approximations, Differentiation under integral sign, Jacobians and transformations of coordinates.

#### Module II: Integral Calculus

Fundamental theorems, Reduction formulae, Properties of definite integrals, Applications to length, area, volume, surface of revolution, improper integrals, Multiple Integrals-Double integrals, Applications to areas, volumes.

#### Module III: Ordinary Differential Equations

Formation of ODEs, Definition of order, degree & solutions, ODE of first order: Method of separation of variables, homogeneous and non-homogeneous equations, Exactness & integrating factors, Linear equations & Bernoulli equations, General linear ODE of  $n^{\text{th}}$  order, Solution of homogeneous equations, Operator method, Method of undetermined coefficients, Solution of simple simultaneous ODE.

#### Module IV: Vector Calculus

Scalar and Vector Field, Derivative of a Vector, Gradient, Directional Derivative, Divergence and Curl and their Physical Significance, Arc Length, Tangent, Directional Derivative, Evaluation of Line Integral, Green's Theorem in Plane (without proof), Representation of Surfaces, Tangent Plane and Surface Normal, Surface Integral, Stoke's Theorem (without proof), Gauss Divergence Theorem (without proof).

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# ENGINEERING PHYSICS

Course Code: NCE6102

Credit Units : 03

## Course Objective:

Aim of this course is to introduce the students to fundamentals of graduate level physics, which form the basis of all applied science and engineering

## Course Contents:

### Module I: Oscillations & Waves

**Oscillations:** Introduction to S.H.M. Damped Oscillations: Differential Equation and its solution, logarithmic decrement, Quality Factor, Different conditions of damping of harmonic oscillations. Forced oscillations: Amplitude and Frequency Response, Resonance, Sharpness of Resonance

**Plane Progressive Waves:** Differential Equation and Solution, Superposition of Progressive Waves stationary waves.

**Ultrasonics:** Generation and application of ultrasonic waves.

### Module II: Wave Nature of Light

**Interference:** Coherent Sources, Conditions of interference, Interference due to division of wavefront, Fresnel's biprism Interference due to division of amplitude, Newton's rings, Interference due to thin films, Diffraction: Fresnel and Fraunhofer diffraction, Fraunhofer diffraction at a single slit, double slit, N Slits, Transmission grating, Rayleigh criterion and Resolving power of grating.

**Polarization:** Birefringence, Nicol prism, Production and analysis of plane, circularly and elliptically polarized light, Half and quarter wave plates, Optical rotation, Polarimeter.

### Module III: Electromagnetics

Scalar and vector fields, gradient of a scalar field, physical significance of gradient, equipotential surface. Line, surface and volume integrals, Divergence and curl of vector field and mathematical analysis physical significance, Electric flux, Gauss' law, Proof and Applications, Gauss divergence and Stokes theorems.

Differential form of Gauss' Law, Amperes' Law, Displacement current, Faraday's Law, Maxwell equations in free space & isotropic media (Integral form & differential form), EM wave propagation in free space, Poynting vector.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# ENGINEERING MECHANICS

Course Code: NCE6103

Credit Units : 03

## Course Objective:

Objective of this course is to provide fundamental knowledge of force system and its effect on the behaviour of the bodies that may be in dynamic or in static state. It includes the equilibrium of different structures like beams, frames, truss etc and the force transfer mechanism in the different components of a body under given loading condition.

## Course Contents:

### Module I: Force system & Structure

Free body diagram, Equilibrium equations and applications. Plane truss, perfect and imperfect truss, assumption in the truss analysis, analysis of perfect plane trusses by the method of joints, method of section.

### Module II: Friction

Static and Kinetic friction, laws of dry friction, co-efficient of friction, angle of friction, angle of repose, cone of friction, friction lock, efficiency of screw jack, transmission of power through belt

### Module III: Distributed Force

Determination of center of gravity, center of mass and centroid by direct integration and by the method of composite bodies, mass moment of inertia and area moment of inertia by direct integration and composite bodies method, radius of gyration, parallel axis theorem, Pappus theorems and its application, polar moment of inertia.

### Module IV: Work -Energy

Work energy equation, conservation of energy, Virtual work, impulse, momentum conservation, impact of bodies, co-efficient of restitution, loss of energy during impact, D'Alembert principle

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# INTRODUCTION TO COMPUTERS AND PROGRAMMING IN C

Course Code: NCE6104

Credit Units : 03

## Course Objective:

The objective of this course module is to acquaint the students with the basics of computers system, its components, data representation inside computer and to get them familiar with various important features of procedure oriented programming language i.e. C.

## Course Contents:

### Module I: Introduction

Introduction to computer, history, von-Neumann architecture, memory system (hierarchy, characteristics and types), H/W concepts (I/O Devices), S/W concepts (System S/W & Application S/W, utilities). Data Representation: Number systems, character representation codes, Binary, octal, hexadecimal and their interconversions. Binary arithmetic, floating point arithmetic, signed and unsigned numbers, Memory storage unit.

### Module II: Programming in C

History of C, Introduction of C, Basic structure of C program, Concept of variables, constants and data types in C, Operators and expressions: Introduction, arithmetic, relational, Logical, Assignment, Increment and decrement operator, Conditional, bitwise operators, Expressions, Operator precedence and associativity. Managing Input and output Operation, formatting I/O.

### Module III: Fundamental Features in C

C Statements, conditional executing using if, else, nesting of if, switch and break Concepts of loops, example of loops in C using for, while and do-while, continue and break. Storage types (automatic, register etc.), predefined processor, Command Line Argument.

### Module IV: Arrays and Functions

One dimensional arrays and example of iterative programs using arrays, 2-D arrays Use in matrix computations.

Concept of Sub-programming, functions Example of user defined functions. Function prototype, Return values and their types, calling function, function argument, function with variable number of argument, recursion.

### Module V: Advanced features in C

Pointers, relationship between arrays and pointers Argument passing using pointers, Array of pointers. Passing arrays as arguments.

Strings and C string library.

Structure and Union. Defining C structures, Giving values to members, Array of structure, Nested structure, passing strings as arguments.

File Handling.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# ENGINEERING PHYSICS LAB

Course Code: NCE6105

Credit Units : 01

## List of Experiments:

1. To determine the wavelength of sodium light by Newton's rings method.
2. To determine the dispersive power of the material of prism with the help of a spectrometer.
3. To determine the specific rotation of sugar by Bi-quartz or Laurent half shade polarimeter.
4. To determine the speed of ultrasonic waves in liquid by diffraction method.
5. To determine the width of a narrow slit using diffraction phenomena.
6. To determine the temperature coefficient of platinum wire, using a platinum resistance thermometer and a Callender & Griffith's bridge.
7. To determine the value of specific charge (ratio of  $e/m$ ) of an electron by Thomson method.
8. To determine the internal resistance of Leclanche cell with the help of Potentiometer.
9. To determine the resistance per unit length of a Carey Foster's bridge wire and also to find out the specific resistance of a given wire.
10. To plot graph showing the variation of magnetic field with distance along the axis of a circular coil carrying current, and hence estimate the radius of the coil.
11. To determine the value of acceleration due to gravity ('g') in the laboratory using bar pendulum.
12. To determine the moment of inertia of a flywheel about its own axis of rotation.
13. To determine the density of material of the given wire with the help of sonometer.

## Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# PROGRAMMING IN C LAB

**Course Code: NCE6106**

**Credit Units : 01**

**Software Required:** Turbo C

**Course Contents:**

- C program involving problems like finding the nth value of cosine series, Fibonacci series. Etc.
- C programs including user defined function calls
- C programs involving pointers, and solving various problems with the help of those.
- File handling

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# ENGINEERING MECHANICS LAB

Course Code: NCE6107

Credit Units : 01

## Engineering Mechanics:

- To verify the law of Force Polygon
- To verify the law of Moments using Parallel Force apparatus. (Simply supported type)
- To determine the co-efficient of friction between wood and various surface (like
- Leather, Wood, Aluminum) on an inclined plane.
- To find the forces in the members of Jib Crane.
- To determine the mechanical advantage, Velocity ratio and efficiency of a screw jack.
- To determine the mechanical advantage, Velocity ratio and Mechanical efficiency of the
- Wheel and Axle
- To determine the MA, VR,  $\eta$  of Worm Wheel (2-start)
- Verification of force transmitted by members of given truss.
- To verify the law of moments using Bell crank lever
- To find CG and moment of Inertia of an irregular body using Computation method

## Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# ENGINEERING GRAPHICS LAB

**Course Code: NCE6108**

**Credit Units : 01**

**Course Objective:**

This course will provide students concepts on the drawings of different curves like straight line, parabola, ellipse etc. After completion of this course, students will be able to draw different figures manually and will be capable of using various instruments involved in drawings.

**Course Contents:**

## **Module I: General**

Importance, Significance and scope of engineering drawing, Lettering, Dimensioning, Scales, Sense of proportioning, Different types of projections, Orthographic Projection, B.I.S. Specifications.

## **Module II: Projections of Point and Lines**

Introduction of planes of projection, Reference and auxiliary planes, projections of points and Lines in different quadrants, traces, inclinations, and true lengths of the lines, projections on Auxiliary planes, shortest distance, intersecting and non-intersecting lines.

## **Module III: Planes other than the Reference Planes**

Introduction of other planes (perpendicular and oblique), their traces, inclinations etc., Projections of points and lines lying in the planes, conversion of oblique plane into auxiliary Plane and solution of related problems.

## **Module IV: Projections of Plane Figures**

Different cases of plane figures (of different shapes) making different angles with one or both reference planes and lines lying in the plane figures making different given angles (with one of both reference planes). Obtaining true shape of the plane figure by projection.

## **Module V: Projection of Solids**

Simple cases when solid is placed in different positions, Axis faces and lines lying in the faces of the solid making given angles.

## **Module VI: Development of Surface**

Development of simple objects with and without sectioning. Isometric Projection

## **Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# Syllabus - Second Semester

## ENGINEERING MATHEMATICS-II

Course Code: NCE6201

Credit Units : 04

### Course Objective:

The knowledge of Mathematics is necessary for a better understanding of almost all the Engineering and Science subjects. Here our intention is to make the students acquainted with the concept of basic topics from Mathematics, which they need to pursue their Engineering degree in different disciplines.

### Course Contents:

#### Module I: Linear Algebra

Hermitian and Skew Hermitian Matrix, Unitary Matrix, Orthogonal Matrix, Elementary Row Transformation, Reduction of a Matrix to Row Echelon Form, Rank of a Matrix, Consistency of Linear Simultaneous Equations, Gauss Elimination Method, Gauss-Jordan Method, Eigen Values and Eigen Vectors of a Matrix, Caley-Hamilton Theorem, Diagonalization of a Matrix, Vector Space, Linear Independence and Dependence of Vectors, Linear Transformations.

#### Module II: Infinite Series

Definition of Sequence, Bounded Sequence, Limit of a Sequence, Series, Finite and Infinite Series, Convergence and Divergence of Infinite series, Cauchy's Principle of Convergence, Positive Term Infinite Series, Comparison test, D'Alembert's Ratio test, Raabe's Test, Cauchy's nth root Test, Logarithmic Test, Alternating Series, Leibnitz's Test, Absolute and conditional convergence, Uniform Convergence, Power Series and its Interval of Convergence.

#### Module III: Complex Analysis

De Moivre's Theorem and Roots of Complex Numbers, Logarithmic Functions, Circular, Hyperbolic Functions and their Inverses.

Functions of a Complex Variables, Limits, Continuity and Derivatives, Analytic Function, Cauchy-Riemann Equations (without proof), Harmonic Function, Harmonic Conjugates, Conformal Mapping, Bilinear Transformations, Complex Line Integral, Cauchy Integral Theorem, Cauchy Integral Formula, Derivative of Analytic Function, Power Series, Taylor Series, Laurent Series, Zeros and

Singularities, Residues, Residue Theorem, Evaluation of Real Integrals of the Form  $\int_{-\infty}^{\infty} \frac{f(x)}{F(x)} dx$

#### Module IV: Statistics and Probability

Moments, Skewness, Kurtosis, Random Variables and Probability Distribution, Mean and Variance of a Probability Distribution, Binomial Distribution, Poisson Distribution and Normal Distribution.

### Examination Scheme:

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	15	20	20	20	5

C – Project + Presentation

I – Interaction/Conversation Practice

# ENGINEERING CHEMISTRY

Course Code: NCE6202

Credit Units : 02

## Course Objective:

Four basic sciences, Physics, Chemistry, Mathematics and Biology are the building blocks in engineering and technology. Chemistry is essential to develop analytical capabilities of students, so that they can characterize, transform and use materials in engineering and apply knowledge in their field. All engineering fields have unique bonds with chemistry whether it is Aerospace, Mechanical, Environmental and other fields the makeup of substances is always a key factor, which must be known. For electronics and computer science engineering, apart from the material, computer modeling and simulation knowledge can be inherited from the molecule designing. The upcoming field of technology like Nanotechnology and Biotechnology depends fully on the knowledge of basic chemistry. With this versatile need in view, course has been designed in such a way so that the student should get an overview of the whole subject.

## Course Contents:

### Module I: Water Technology

Introduction and specifications of water,  
Hardness and its determination (EDTA method only), Alkalinity,  
Boiler feed water, boiler problems – scale, sludge, priming & foaming: causes & prevention, Boiler problems – caustic embrittlement & corrosion: causes & prevention,  
Carbonate & phosphate conditioning, colloidal conditioning & calgon treatment  
Water softening processes: Lime – soda process, Ion exchange method, Water for domestic use.

### Module II: Fuels

Classification, calorific value of fuel, (gross and net), Determination of calorific value of fuels, bomb calorimeter, Solid fuels - Proximate and ultimate analysis, Octane & Cetane No. and its significance.  
Numericals on combustion

### Module III: Instrumental Methods of analysis

Introduction; Principles of spectroscopy; Laws of absorbance  
IR: Principle, Instrumentation, Application  
UV: Principle, Instrumentation, Application  
NMR: Principle, Instrumentation, Application

### Module IV: Lubricants

Introduction; Mechanism of Lubrication; Types of Lubricants; Chemical structure related to Lubrication; Properties of lubricants; Viscosity and Viscosity Index; Iodine Value; Aniline Point; Emulsion number; Flash Point; Fire Point; Drop Point; Cloud Point; Pour Point.  
Selection of Lubricants.

### Module V: Corrosion

Introduction, Mechanism of dry and wet corrosion,  
Types of corrosion-Galvanic, Concentration cell, soil, pitting, intergranular, waterline. Passivity.  
Factors influencing corrosion. Corrosion control.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# ELECTRICAL SCIENCE

Course Code: NCE6203

Credit Units : 03

## Course Objective:

The objective of the course is to provide a brief knowledge of Electrical Engineering to students of all disciplines. This Course includes some theorems related to electrical, some law's related to flow of current, voltages, basic knowledge of Transformer, basic knowledge of electromagnetism, basic knowledge of electrical network.

## Course Contents:

### Module I: Basic Electrical Quantities

Basic Electrical definitions-Energy, Power, Charge, Current, Voltage, Electric Field Strength, Magnetic Flux Density, etc., Resistance, Inductance and Capacitance. Ideal Source, Independent Source and Controlled Source

### Module II: Network Analysis Techniques & Theorems

Circuit Principles: Ohm's Law, Kirchoff's Current Law, Kirchoff's Voltage Law Network Reduction: Star-Delta Transformation, Source Transformation, Nodal Analysis, Loop analysis. Superposition theorem, Thevenin's Theorem, Norton's theorem and Reciprocity theorem.

### Module III: Alternating Current Circuits

Peak, Average and RMS values for alternating currents, Power calculation: reactive power, active power, Complex power, power factor, impedance, reactance, conductance, susceptance Resonance: series Resonance, parallel resonance, basic definition of Q factor & Bandwidth.

### Module IV: Transformers

Basic Transformer Operation principle, Construction, Voltage relations, current relations, Linear circuit models, open circuit test, short circuit test, Transformer Efficiency.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# OBJECT ORIENTED PROGRAMMING USING C++

Course Code: NCE6204

Credit Units : 03

## Course Objective:

The objective of this module is to introduce object oriented programming. To explore and implement the various features of OOP such as inheritance, polymorphism, Exceptional handling using programming language C++. After completing this course student can easily identify the basic difference between the programming approaches like procedural and object oriented.

## Course Contents:

### Module I: Introduction

Review of C, Difference between C and C++, Procedure Oriented and Object Oriented Approach. Basic Concepts: Objects, classes, Principles like Abstraction, Encapsulation, Inheritance and Polymorphism. Dynamic Binding, Message Passing. Characteristics of Object-Oriented Languages. Introduction to Object-Oriented Modeling techniques (Object, Functional and Dynamic Modeling).

### Module II: Classes and Objects

Abstract data types, Object & classes, attributes, methods, C++ class declaration, Local Class and Global Class, State identity and behaviour of an object, Local Object and Global Object, Scope resolution operator, Friend Functions, Inline functions, Constructors and destructors, instantiation of objects, Types of Constructors, Static Class Data, Array of Objects, Constant member functions and Objects, Memory management Operators.

### Module III: Inheritance

Inheritance, Types of Inheritance, access modes – public, private & protected, Abstract Classes, Ambiguity resolution using scope resolution operator and Virtual base class, Aggregation, composition vs classification hierarchies, Overriding inheritance methods, Constructors in derived classes, Nesting of Classes.

### Module IV: Polymorphism

Polymorphism, Type of Polymorphism – Compile time and runtime, Function Overloading, Operator Overloading (Unary and Binary) Polymorphism by parameter, Pointer to objects, this pointer, Virtual Functions, pure virtual functions.

### Module V: Strings, Files and Exception Handling

Manipulating strings, Streams and files handling, formatted and Unformatted Input output. Exception handling, Generic Programming – function template, class Template Standard Template Library: Standard Template Library, Overview of Standard Template Library, Containers, Algorithms, Iterators, Other STL Elements, The Container Classes, General Theory of Operation, Vectors.

# ELEMENTS OF MECHANICAL ENGINEERING

Course Code: NCE6205

Credit Units : 02

## Course Objective:

The objective of this course is to impart the basic knowledge of thermodynamics, stress- strain, materials & their properties and various manufacturing processes to the students of all engineering discipline.

## Course Contents:

### Module I: Fundamental Concepts

Definition of thermodynamics, system, surrounding and universe, phase, concept of continuum, macroscopic & microscopic point of view, Thermodynamic equilibrium, property, state, path, process, cyclic process, Zeroth, first and second law of thermodynamics, Carnot Cycle, Introduction to I.C. Engines-two & four stroke S.I. and C.I. engines. Otto cycle. Diesel cycle.

### Module II: Stress And Strain Analysis

Simple stress and strain: introduction, normal shear, and stresses-strain diagrams for ductile and brittle materials. Elastic constants, one-dimensional loadings of members of varying cross-section, Strain Energy, Properties of material-strength, elasticity, stiffness, malleability, ductility, brittleness, hardness and plasticity etc; Concept of stress and strain stress strain diagram, tensile test, impact test and hardness test.

### Module III: Casting& Forging

Introduction of casting, pattern, mould making procedures, sand mould casting, casting defects, allowances of pattern. Forging-introduction, upsetting & drawing out, drop forging, press forging & m/c forging

### Module IV: Welding & Sheet metal working:

Introduction of welding processes, classification, gas welding, arc welding, resistance welding. Introduction to sheet metal shop, Shearing, trimming, blanking, piercing, shaving, notching, stretch forming, nibbling coining, embossing and drawing.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# ENGINEERING CHEMISTRY LAB

Course Code: NCE6207

Credit Units : 01

## Course Contents:

### List of Experiments:

(Any 10 Experiments)

1. To determine the ion exchange capacity of a given cation exchanger.
2. To determine the temporary, permanent and total hardness of a sample of water by complexometric titration method.
3. To determine the type and extent of alkalinity of given water sample.
4. To determine the number of water molecules of crystallization in Mohr's salt (ferrous ammonium sulphate) provided standard potassium dichromate solution (0.1N) using diphenylamine as internal indicator.
5. To determine the ferrous content in the supplied sample of iron ore by titrimetric analysis against standard  $K_2Cr_2O_7$  solution using potassium ferricyanide  $[K_3Fe(CN)_6]$  as external indicator.
6. (a) To determine the surface tension of a given liquid by drop number method.  
(b) To determine the composition of a liquid mixture A and B (acetic acid and water) by surface tension method.
7. To prepare and describe a titration curve for phosphoric acid – sodium hydroxide titration using pH-meter.
8. (a) To find the cell constant of conductivity cell.  
(b) Determine the strength of hydrochloric acid solution by titrating it against standard sodium hydroxide solution conductometrically
9. Determination of Dissolved oxygen in the given water sample.
- 10 To determine the total residual chlorine in water.
- 11 Determination of amount of oxalic acid and  $H_2SO_4$  in 1 L of solution using N/10 NaOH and N/10  $KMnO_4$  solution.
- 12 Determination of viscosity of given oil by means of Redwood viscometer I.
- 13 To determine flash point and fire point of an oil by Pensky Martin's Apparatus
- 14 To determine the Iodine value of the oil.

### Examination Scheme:

# Syllabus - Third Semester

## DATA COMMUNICATION AND COMPUTER NETWORKS

Course Code: NCE6301

Credit Units : 03

### Course Objective:

The objective is to acquaint the students with the basics of data communication and networking. A structured approach to explain how networks work from the inside out is being covered. The physical layer of networking, computer hardware and transmission systems have been explained. In-depth application coverage includes email, the domain name system; the World Wide Web (both client- and server-side); and multimedia (including voice over IP).

### Course Contents:

#### Module I: Introduction

Introduction to computer networks, evolution of computer networks and its uses, reference models, example networks

The physical layer: Theoretical basis for data communication, transmission media, wireless transmission, telecom infrastructure, PSTN, communication satellites, mobile telephone system

#### Module II: The data link layer

Data link layer design issues, error detection and correction, data link protocols, sliding window protocols, example of data link protocols- HDLC, PPP Access

#### Module III: Medium access layer

Channel allocation problem, multiple access protocols, ALOHA, CSMA/CD, CSMA/CA, IEEE Standard 802 for LAN and MAN, Bridges, Wireless LANs. Introduction to wireless WANs: Cellular Telephone and Satellite Networks, SONET/SDH, Virtual-Circuit Networks: Frame Relay and ATM.

#### Module IV: The network layer

Network layer concepts, design issues, static and dynamic routing algorithms, shortest path routing, flooding, distance vector routing, link state routing, distance vector routing, multicast routing, congestion control and quality of service, internetworking, Ipv4

#### Module V: The transport layer

The transport services, elements of transport protocols, TCP and UDP

The application layer: Brief introduction to presentation and session layer, DNS, E-mail, WWW

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# DATABASE MANAGEMENT SYSTEMS

**Course Code: NCE6302**

**Credit Units : 04**

## **Course Objective:**

The objective of this course is to get students familiar with Databases and their use. They can identify different types of available database model, concurrency techniques and new applications of the DBMS.

## **Course Contents:**

### **Module I: Introduction**

Concept and goals of DBMS, DBMS Architecture, Database Languages, Database Users, Database Abstraction. Basic Concepts of ER Model: Entity Type, Entity Set, Relationship type, Relationship sets, Constraints: Cardinality Ratio and Participation Constraint, Keys, Mapping, Design of ER Model

### **Module II: Hierarchical model & Network Model**

Concepts, Data definition, Data manipulation and implementation.  
Network Data Model, DBTG Set Constructs, and Implementation

### **Module III: Relational Model**

Relational database, Relational Algebra, Relational Calculus, Tuple Calculus.

### **Module IV: Relational Database Design and Query Language**

SQL, QUEL, QBE, Normalization using Functional Dependency, 1NF, 2NF, 3NF, BCNF, Multivalued dependency and Join dependency.

### **Module V: Concurrency Control and New Applications**

Transaction basics: ACID property, Lifecycle of Transaction, Why Concurrency Control, Schedule, Serializability, Lock Based Protocols, Time Stamped Based Protocols, Deadlock Handling, Crash Recovery. Distributed Database, Objective Oriented Database, Multimedia Database, Data Mining, Digital Libraries.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# OPERATING SYSTEMS

**Course Code: NCE6303**

**Credit Units : 03**

## **Course Objective:**

Operating Systems serve as one of the most important courses for undergraduate students, since it provides the students with a new sight to envision every computerized systems especially general purpose computers. Therefore, the students are supposed to study, practice and discuss on the major fields discussed in the course to ensure the success of the education process. The outcome of this course implicitly and explicitly affects the abilities the students to understand, analyze and overcome the challenges they face with in the other courses and the real world.

## **Course Contents:**

### **Module I: Introduction to operating system**

Operating system and function, Evolution of operating system, Batch, Interactive, multiprogramming, Time Sharing and Real Time System, multiprocessor system, Distributed system, System protection. Operating System structure, Operating System Services, System Program and calls.

### **Module II: Process Management**

Process concept, State model, process scheduling, job and process synchronization, structure of process management, Threads, Inter-process Communication and Synchronization: Principle of Concurrency, Producer Consumer Problem, Critical Section problem, Semaphores, Hardware Synchronization, Critical Regions, Conditional critical region, Monitor, Inter Process Communication.

CPU Scheduling: Job scheduling functions, Process scheduling, Scheduling Algorithms, Non Preemptive and preemptive Strategies, Algorithm Evaluation, Multiprocessor Scheduling.

Deadlock: System Deadlock Model, Deadlock Characterization, Methods for handling deadlock, Prevention strategies, Avoidance and Detection, Recovery from deadlock combined approach.

### **Module III: Memory Management**

Single Contiguous Allocation: H/W support, S/W support, Advantages and disadvantages, Fragmentation, Paging, Segmentation, Virtual memory concept, Demand paging, Performance, Paged replaced algorithm, Allocation of frames, Thrashing, Cache memory, Swapping, Overlays

### **Module IV: Device management**

Principles of I/O hardware, Device controller, Device Drivers, Memory mapped I/O, Direct Access Memory, Interrupts, Interrupt Handlers, Application I/O interface, I/O Scheduling, Buffering, Caching, Spooling,

Disk organization, Disk space management, Disk allocation Method, Disk Scheduling, Disk storage.

### **Module V: File System and Protection and security**

File Concept, File Organization and Access Mechanism, File Directories, Basic file system, File Sharing, Allocation method, Free space management.

Policy Mechanism, Authentication, Internal excess Authorization.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# DATA STRUCTURES USING C

Course Code: NCE6304

Credit Units : 04

## Course Objective:

Data structure deals with organizing large amount of data in order to reduce space complexity and time requirement. This course gives knowledge of algorithms, different types of data structures and the estimation space and time complexity.

## Course Contents:

### Module I: Introduction to Data structures

Data structures: Definition, Types. Algorithm design, Complexity, Time-Space Trade- offs. Use of pointers in data structures. Array Definition and Analysis, Representation of Linear Arrays in Memory, Traversing of Linear Arrays, Insertion And Deletion, Single Dimensional Arrays, Two Dimensional Arrays, Multidimensional Arrays, Function Associated with Arrays, Character String in C, Character String Operations, Arrays as parameters, Implementing One Dimensional Array, Sparse matrix.

### Module II: Introduction to Stacks and queue

**Stack:** Definition, Array representation of stacks, Operations Associated with Stacks- Push & Pop, Polish expressions, Conversion of infix to postfix, infix to prefix (and vice versa), Application of stacks recursion, polish expression and their compilation, conversion of infix expression to prefix and postfix expression, Tower of Hanoi problem.

**Queue:** Definition, Representation of Queues, Operations of queues- QInsert, QDelete, Priority Queues, Circular Queue, Deque.

### Module III: Dynamic Data Structure

Linked list: Introduction to Singly linked lists: Representation of linked lists in memory, Traversing, Searching, Insertion into, Deletion from linked list, doubly linked list, circular linked list, generalized list. Applications of Linked List-Polynomial representation using linked list and basic operation. Stack and queue implementation using linked list.

### Module IV: Trees and Graphs

**Trees:** Basic Terminology, Binary Trees and their representation, expression evaluation, Complete Binary trees, extended binary trees, Traversing binary trees, Searching, Insertion and Deletion in binary search trees, General trees, AVL trees, Threaded trees, B trees.

**Graphs:** Terminology and Representations, Graphs & Multigraphs, Directed Graphs, Sequential representation of graphs, Adjacency matrices, Transversal Connected Component and Spanning trees.

### Module V: Sorting and Searching and file structures

**Sorting:** Insertion Sort, Bubble sort, Selection sort, Quick sort, two-way Merge sort, Heap sort, Partition exchange sort, Shell sort, Sorting on different keys, External sorting.

**Searching:** Linear search, Binary search, File structures: Physical storage media, File Organization, Linked organization of file, Inverted file, Organization records into blocks, Sequential blocks, Hash function, Indexing & Hashing, Multilevel indexing, Tree Index, Random file, Primary Indices, Secondary Indices, B tree index files.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

## Text & References:

## DATA STRUCTURES USING C LAB

**Course Code: NCE6305**

**Credit Units : 01**

**Software Required:**Turbo C++

**Assignment will be provided for following:**

- Practical application of sorting and searching algorithm.
- Practical application of various data structure like linked list, queue, stack, tree

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# DATA COMMUNICATION AND COMPUTER NETWORKS LAB

**Course Code: NCE6306**

**Credit Units : 01**

## **Equipments Required:**

Switch Network Cables, Patch Chord- Fiber optical and twisted pair cable, LAN cards, RJ-45 connectors etc.

Platforms required: Linux Server

## **Course Contents:**

- Introduction and Installation of Linux
- Administrating Linux
- Setting up a Local Area Network
- Connecting to the Internet
- Setting up Print Server
- Setting up File Server
- Setting up Mail Server
- Setting up FTP Server
- Setting up Web Server
- Setting up MySQL Database Server

## **Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## DATABASE MANAGEMENT SYSTEMS LAB

**Course Code:** NCE6307

**Credit Units : 01**

**Software Required:** Oracle 9i

**Topics covered in lab will include:**

- Database Design
- Data Definition (SQL)
- Data Retrieval (SQL)
- Data Modification (SQL)
- Views
- Triggers and Procedures
- PL\SQL

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# UNIX PROGRAMMING LAB

Course Code: NCE6308

Credit Units : 01

Software Required: UNIX SCO

Assignments will be provided for the following

- Introduction to UNIX Commands
- Introduction to vi editor
- Programming in shell script
- Introduction to programming in C Shell

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# INTRODUCTION TO IOT

**Course Code: NCE6309**

**Credit Units : 03**

## **Course Objective:**

The Internet is evolving to connect people to physical things and also physical things to other physical things all in real time. It's becoming the Internet of Things (IoT). The course enables student to understand the basics of Internet of things and protocols. It introduces some of the application areas where Internet of Things can be applied. Students will learn about the working of Internet of Things. To understand the concepts of Web of Things.

## **Course Contents:**

**Module I: IOT** - What is the IoT and why is it important? Elements of an IoT ecosystem, Technology drivers, Business drivers, Trends and implications, Overview of Governance, Privacy and Security Issues.

**Module II: IOT PROTOCOLS** - Protocol Standardization for IoT – Efforts – M2M and WSN Protocols – SCADA and RFID Protocols – Issues with IoT Standardization – Unified Data Standards – Protocols – IEEE802.15.4–BACNet Protocol– Modbus – KNX – Zigbee– Network layer – APS layer – Security

**Module III: IOT ARCHITECTURE** - IoT Open source architecture (OIC)- OIC Architecture & Design principles- IoT Devices and deployment models- IoTivity : An Open source IoT stack - Overview- IoTivity stack architecture- Resource model and Abstraction, IoT and Big Data.

**Module IV: WEB OF THINGS** - Web of Things versus Internet of Things – Two Pillars of the Web – Architecture Standardization for WoT– Platform Middleware for WoT – Unified Multitier WoT Architecture – WoT Portals and Business Intelligence.

**Module V: IOT APPLICATIONS** - IoT applications for industry: Future Factory Concepts, Brownfield IoT, Smart Objects, Smart Applications. Study of existing IoT platforms /middleware, IoT- A, Hydra etc., Introduction to Fog Computing.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# E-COMMERCE AND ERP

Course Code: NCE6310

Credit Units : 03

## Course Objective:

This course examines the evolution of enterprise resource planning (ERP) systems - from internally focused client/server systems to externally focused e-business. This class studies the types of issues that managers will need to consider in implementing cross-functional integrated ERP systems. The objective of this course is to make students aware of the potential and limitations of ERP systems. This objective will be reached through hands-on experience, case studies, lectures, guest speakers and a group project. The course would equip students with the basics of E-Commerce, technologies involved with it and various issues associated with.

## Course Contents:

### Module I: Introduction E-commerce and ERP

E-commerce and its types, EDI and its basics, Digital payment systems, Enterprise-An Overview, Benefits of ERP, ERP and Related Technologies-Business Process Reengineering (BPR), Data Warehousing, Data Mining, On-line Analytical Processing (OLAP), Supply Chain Management, Management Information systems (MIS), Decision support system (DSS), Executive Information systems (EIS). ERP – A Manufacturing Perspective Materials Requirement Planning (MRP), Bill of Material (Bom), Distribution Requirements Planning (DRP), JIT & Kanban, CAD/CAM, Product Data Management (PDM), Benefits of PDM, MTO, MTS, ATO, ETO, CTO.

### Module II: ERP Modules

Business Modules in an ERP Package- Finance, Manufacturing (Production), Human Resources, Plant Maintenance, Materials Management, Quality Management, Sales and Distribution.

### Module III: Benefits of ERP

Time Reduction, On time shipment, Improved Resource Utilization, Performance, Customer Satisfaction, Flexibility, information accuracy and decision making capability, reduction in quality costs, Accuracy.

### Module IV: ERP Implementation

ERP Implementation Lifecycle, Implementation Methodology, In-house implementation-Pros and cons, Vendors, Consultants and Users and their roles, Project Management and Monitoring after ERP Implementation.

### Module V: The ERP Market and Future Directions

ERP Market Place- SAP AG, PeopleSoft, Baan Company, JD Edwards World Solutions Company, Oracle Corporation, QAD, System Software Associates, Inc. (SSA).Future directions in ERP.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# ELECTRONIC DEVICES & CIRCUITS

Course Code: NCE6311

Credit Units : 02

## Course Objective:

This course builds from basic knowledge of Semiconductor Physics to an understanding of basic devices and their models. This course builds a foundation for courses on VLSI design and analog CMOS IC Design.

## Course Contents:

**Module I:** Semiconductor physics: Mobility & conductivity, Charge densities in a semiconductor, Fermi dirac distribution, carrier concentration and Fermi levels in semiconductor, generation and recombination of charges, diffuse and continuity equations, Hall effect.

## Module II: Semiconductor Diode and Diode Circuits

Junction diode, Diode as circuit element, Different types of diodes: Zener, Schottky, LED. Zener as voltage regulator, Diffusion capacitance, Drift capacitance, the load line concept, half wave, full wave rectifiers, clipping and clamping circuits.

## Module III: Bipolar Junction Transistor

Bipolar junction transistor: Introduction, Transistor, construction, transistor operations, BJT characteristics, load line, operating point, leakage currents, saturation and cut off mode of operations. Bias stabilization: Need for stabilization, fixed Bias, emitter bias, self bias, bias stability with respect to variations in  $I_{co}$ ,  $V_{BE}$  &  $\beta$ , Stabilization factors, thermal stability.

## Module IV: Small signal Analysis of transistor and Multistage Amplifier

Hybrid model for transistors at low frequencies, Analysis of transistor amplifier using h parameters, emitter follower, Miller's theorem, THE CE amplifier with an emitter resistance, Hybrid  $\pi$  model, Hybrid  $\pi$  Conductances and Capacitances, CE short circuit current gain, CE short circuit current gain with  $R_L$  Multistage amplifier: Cascading of Amplifiers, Coupling schemes (RC coupling and Transformer coupling)

## Module V: Field Effect Transistors

Field effect transistor (JFET, MOSFET): volt-ampere characteristics, small signal model –common drain, common source, common gate, operating point, MOSFET, enhancement and -depletion mode, Common source amplifier, Source follower

## Module VI: Feedback Amplifiers

Feedback concept, Classification of Feedback amplifiers, Properties of negative Feedback amplifiers, Impedance considerations in different Configurations, Examples of analysis of feedback Amplifiers.

## Module VII: Power Amplifiers

Power dissipation in transistors, difference with voltage amplifiers, Amplifier classification (Class A, Class B, Class C, Class AB) class AB push pull amplifier, collector efficiency of each, cross over distortion.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

## Text & References:

# ELECTRONIC DEVICES & CIRCUITS LAB

Course Code: NCE6312

Credit Units : 01

## Course Contents:

1. To study and plot the characteristics of a junction diode.
2. To study Zener diode as a voltage regulator.
3. To study diode based clipping and clamping circuits.
4. To study half wave, full wave and bridge rectifier with filters.
5. To study the input and output characteristics of a transistor in its various configurations.
6. To study and plot the characteristics of a JFET in its various configurations.
7. To study and plot the characteristics of a MOSFET in its various configurations.
8. To study various types of Bias Stabilization for a transistor.
9. To study the gain and plot the frequency response of a single stage transistor amplifier.
10. To measure gain and plot the frequency response of double stage RC coupled amplifier.

## Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## Syllabus - Fourth Semester

### THEORY OF AUTOMATA AND COMPUTATION

Course Code: NCE6401

Credit Units : 04

#### Course Objective:

The course begins with the basic mathematical preliminaries and goes on to discuss the general theory of automata, properties of regular sets and regular expressions, and the basics of formal languages. Besides, sufficient attention is devoted to such topics as pushdown automata and its relation with context free languages, Turing machines and linear bounded automata, the basic concepts of computability such as primitive recursive functions and partial recursive functions.

#### Course Contents:

##### Module I: Introduction to Languages and Automata

Formal Grammars and Chomsky Hierarchy, Regular Expression Deterministic and Nondeterministic Finite Automata, Regular Expression, Two way Finite Automata, Finite Automata with output, Properties of regular sets, pumping lemma for regular sets, My-Hill-Nerode Theorem.

##### Module II: Context Free Grammars and Pushdown Automata

CFG: Formal Definition, Derivation and Syntax trees, E-removal, Ambiguous Grammar, Properties of CFL, Normal Forms (CNF and GNF)  
Pushdown Automata: Definitions, Relationship between PDA and context free language, Decision Algorithms

##### Module III: Turing Machine

The Turing Machine Model, Language acceptability of Turing Machine, Design of TM, Universal TM, Church's Machine.  
Recursive and recursively enumerable language, unrestricted grammars, Context Sensitive Language, Linear Bounded Automata (LBA).

##### Module IV: Undecidability

Turing machine halting Problem, undecidable problems for recursive enumerable language, Post correspondence problems (PCP) and Modified Post correspondence problems, Undecidable problems for CFL.

##### Module V: Computability

Partial and Total Functions, Primitive Recursive functions, Recursive functions.

#### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# DIGITAL ELECTRONICS

Course Code: NCE6402

Credit Units : 02

## Course Objective:

This course is an introduction to the basic principles of digital electronics. At the conclusion of this course, the student will be able to quantitatively identify the fundamentals of computers, including number systems, logic gates, logic and arithmetic subsystems, and integrated circuits. They will gain the practical skills necessary to work with digital circuits through problem solving and hands on laboratory experience with logic gates, encoders, flip-flops, counters, shift registers, adders, etc. The student will be able to analyze and design simple logic circuits using tools such as Boolean Algebra and Karnaugh Mapping, and will be able to draw logic diagrams.

## Course Contents:

### Module I: Boolean Functions

Analog & digital signals, AND, OR, NOT, NAND, NOR & XOR gates, Boolean algebra, Standard representation of logical functions, K-map representation and simplification of logical function, don't care conditions, XOR & XNOR simplifications of K-maps, Tabulation method.

### Module II: Combinational Circuits

Adders, Subtractors, Multiplexer, de-multiplexer, decoder & encoder, code converters, Comparators, decoder / driver for display devices, Implementation of logic functions using multiplexer / de-multiplexer,.

### Module III: Sequential Circuits

Flip-flops: SR, JK, D & T flip flops – Truth table, Excitation table, Conversion of flip-flops, race around condition, Master Slave flip flop, Shift registers: SIPO, PISO, PIPO, SIPO, Bi-directional; Counters: ripple & synchronous counters – up / down; Synchronous Sequential circuit: design procedure.

### Module IV: Logic families

Logic families: RTL, DTL, TTL, ECL

### Module V: Data Converters

Data converters: ADC – successive approximation, linear ramp, dual slope; DAC – Binary Weighted, R-2R ladder type

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# DISCRETE MATHEMATICS

Course Code: NCE6403

Credit Units : 04

## Course Objective:

This subject provides students with an in-depth education in the conceptual foundations of computer science and in engineering complex software and hardware systems. It allows them to explore the connections between computer science and a variety of other disciplines in engineering and outside. Combined with a strong education in mathematics, sciences, and the liberal arts it prepares students to be leaders in computer science practice, applications to other disciplines, and research.

## Course Contents:

### Module I: Formal Logic

Statement, Symbolic Representation and Tautologies, Quantifiers, Predicator and validity, Normal form. Propositional Logic, Predicate Logic, First Order Logic.

### Module II: Proof & Relation

Techniques for theorem proving: Direct Proof, Proof by Contra position, Proof by exhausting cares and proof by contradiction, principle of mathematical induction, principle of complete induction. Recursive definitions, solution methods for linear, first-order recurrence relations with constant coefficients.

### Module III: Sets and Combinations

Sets, Subtracts, power sets, binary and unary operations on a set, set operations/set identities, fundamental country principles, principle of inclusion, exclusion and pigeonhole principle, permutation and combination, Pascal's triangles, Comparing rates of growth: big theta, little oh, big oh and big omega.

### Module IV: Relation/function and matrices

Relation/function and matrices: Relation, properties of binary relation, operation on binary relation, closures, partial ordering, equivalence relation, Function, properties of function, composition of function, inverse, binary and n-ary operations, characteristic function, Permutation function, composition of cycles, Boolean matrices, Boolean matrices multiplication.

### Module V: Lattices & Boolean Algebra

Lattices: definition, sub lattices, direct product, homomorphism Boolean algebra: definition, properties, isomorphic structures (in particulars, structures with binary operations) sub algebra, direct product and homo-morphism, Boolean function, Boolean expression, representation & minimization of Boolean function.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# ARTIFICIAL INTELLIGENCE

**Course Code: NCE6404**

**Credit Units : 03**

## **Course Objective:**

To develop semantic-based and context-aware systems to acquire, organize process, share and use the knowledge embedded in multimedia content. Research will aim to maximize automation of the complete knowledge lifecycle and achieve semantic interoperability between Web resources and services. The field of Robotics is a multi disciplinary as robots are amazingly complex system comprising mechanical, electrical, electronic H/W and S/W and issues germane to all these.

## **Course Contents:**

### **Module I: Problem solving and Scope of AI**

Introduction to Artificial Intelligence. Applications- Games, theorem proving, natural language processing, vision and speech processing, robotics, expert systems. AI techniques- search knowledge, abstraction.

#### **Problem Solving**

State space search; Production systems, search space control: depth-first, breadth-first search. Heuristic search - Hill climbing, best-first search, branch and bound. Problem Reduction, Constraint Satisfaction End, Means-End Analysis. LA\* Algorithm, L(AO\*) Algorithm.

### **Module II: Knowledge Representation**

Knowledge Representation issues, first order predicate calculus, Horn Clauses, Resolution, Semantic Nets, Frames, Partitioned Nets, Procedural Vs Declarative knowledge, Forward Vs Backward Reasoning.

### **Module III: Understanding Natural Languages**

Introduction to NLP, Basics of Syntactic Processing, Basics of Semantic Analysis, Basics of Parsing techniques, context free and transformational grammars, transition nets, augmented transition nets, Shanks Conceptual Dependency, Scripts ,Basics of grammar free analyzers, Basics of sentence generation, and Basics of translation..

### **Module IV**

**Expert System:** Need and justification for expert systems, knowledge acquisition, Case studies: MYCIN,R1

**Learning:** Concept of learning, learning automation, genetic algorithm, learning by inductions, neural nets. **Programming Language:** Introduction to programming Language, LISP and PROLOG.

**Handling Uncertainties:** Non-monotonic reasoning, Probabilistic reasoning, use of certainty factors, Fuzzy logic.

### **Module V: Introduction to Robotics**

Fundamentals of Robotics, Robot Kinematics: Position Analysis, Dynamic Analysis and Forces, Robot Programming languages & systems: Introduction, the three levels of robot programming, requirements of a robot programming language, problems peculiar to robot programming languages.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# DIGITAL ELECTRONICS LAB

Course Code: NCE6405

Credit Units : 01

## List of Experiments:

1. To verify the truth tables of OR, AND, NOR, NAND, EX-OR, EX-NOR gates.
2. To obtain half adder, full adder and subtractor using gates and verify their truth tables.
3. To verify the truth tables of RS, JK and D flip- flops.
4. To design and study a binary counter.
5. To design and study synchronous counter.
6. To design and study ripple counter.
7. To convert BCD number into excess 3 form
8. To design and study a decade counter.
9. To design and study a sequence detector.
10. To implement control circuit using multiplexer.

## Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# ARTIFICIAL INTELLIGENCE LAB

**Course Code: NCE6406**

**Credit Units : 01**

## **Course Contents:**

Assignments will be provided for the following:

- Programming in Prolog
- Programming for Robotics

## **Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# COMMUNICATION SYSTEMS

Course Code: NCE6407

Credit Units : 02

## Course Objective:

The purpose of this course is to provide a thorough introduction to analog and digital communications with an in depth study of various modulation techniques, Random processes are discussed, and information theory is introduced.

## Course Contents:

### Module I: Introduction

Communication Process, Source of Information, Communication channels, base-band and pass-band signals, Review of Fourier transforms, Random variables, different types of PDF, need of modulation process, primary communication resources, analog versus digital communications

### Module II: Amplitude modulation

Amplitude modulation with full carrier, suppressed carrier systems, single side band transmission, switching modulators, synchronous detection, envelope detection, effect of frequency and phase errors in synchronous detection, comparison of various AM systems, vestigial side band transmission.

### Module III: Angle Modulation

Narrow and wide band FM, BW calculations using Carlson rule, Direct & Indirect FM generations, phase modulation, Demodulation of FM signals, noise reduction using pre & de-emphasis.

### Module IV: Pulse Modulation

Pulse amplitude, width & position modulation, generation & detection of PAM, PWM & PPM, Comparison of frequency division and time division multiplexed systems, Basics of digital communications: ASK, PSK, FSK, QPSK basics & waveform with brief mathematical introduction

### Module V: Noise

Different types of noise, noise calculations, equivalent noise band width, noise figures, effective noise temperature, noise figure.

### Module VI: Introduction to Information Theory

Measurement of Information, mutual, Shannon's theorem, Source coding, channel coding and channel capacity theorem, Huffman code

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# COMMUNICATION SYSTEMS LAB

Course Code: NCE6408

Credit Units : 01

## List of Experiments:

- To study the sampling and reconstruction of a given signal.
- To study amplitude modulation and demodulation.
- To study frequency modulation and demodulation.
- To study time division multiplexing.
- To study pulse amplitude modulation.
- To study delta and adaptive delta modulation and demodulation.
- To study carrier modulation techniques using amplitude shift keying and Frequency shift keying.
- To study carrier modulation techniques using binary phase shift keying and differential shift keying.
- To study pulse code modulation & differential pulse code modulation as well as relevant demodulations.
- To study quadrature phase shift keying & quadrature amplitude modulation.

## Examination Scheme:

5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# INTRODUCTION TO OPEN SOURCE TECHNOLOGIES (PHP and MySql)

**Course Code: NCE6409**

**Credit Units : 02**

## **Course Objective:**

This course is aimed to provide a fundamental understanding of dynamic web site creation. PHP is the language used for development of most common web sites. Syllabus includes basic and advanced features of PHP which includes detailed introduction of PHP and MYSQL, Arrays, Loops and variables etc. It also gives an overview open source framework like JOOMLA, ZEND etc.

## **Course Contents:**

### **Module I: Introduction to Open Source and PHP programming**

Introduction to Open Sources Technologies, Introduction to PHP, installation and configuration, Advantages and Disadvantages of PHP, Client Side Scripting, Server Side Scripting, Variables, data types, various types of function, creating your own function, Strings in PHP, String Functions.

### **Module II: Operator, Loops, Array, Exception and Error Handling**

Operators, Conditions, Loops, Using for each, Creating and Using Arrays, Multidimensional Array, Associative Array.

Error Handling in PHP, Errors and Exceptions, Exception class, try/catch block, throwing an exception, defining your own Exception subclass.

### **Module III: Classes, File system, Passing Information between pages**

Object oriented programming with Php, Working with Datetime, code re-use, require (), include(), and the include\_path; Understanding PHP file permissions, File reading and writing functions, File system functions, File uploads, Sending mail & use of email server.

HTTP, GET arguments, POST arguments, Using Session in PHP, cookies, The setcookie() function, Deleting Cookies and Reading Cookies.

### **Module IV: Working with database**

HTML Tables and Database tables, Database manipulation (Select, Insert, Update, Delete), validating User Input using Javascript.

MYSQL, Introducing MySQL; database design concepts; the Structured Query Language (SQL); communicating with a MySQL backend via the PHP, MySQL API Building Database Applications, Developing PHP scripts for dynamic web page like feedback form, online admission form and online test.

### **Module V: Working with Frameworks**

Working with Mambo, Working with Joomla, Working with framework. Working with wordpress, Working with drupal, Use of Joomla in rapid development of website. Developing of simple website using Joomla.

## **Examination Scheme:**

Components	CT1	A/C/Q	ATTD.	EE
Weightage (%)	15	10	5	70

## **Text & References:**

### **Text:**

# INTRODUCTION TO OPEN SOURCE TECHNOLOGIES (PHP and MySql) LAB

Course Code: NCE6410

Credit Units : 01

## Course Contents:

1. Write the process of installation of web server.
2. Write programs to print all details of your php server. Use phpinfo().
3. Write a program to give demo of ECHO and PRINT command.
4. Write a program to implement the string functions.
5. Write a program to print Fibonacci series upto a given number using recursion.
6. Write a menu driven program to implement a calculator which performs only addition, subtraction, multiplication and division. The operation should happen based on user choice.
7. Write a program sort ten number by using array.
8. Write a program to demonstrate the concept of associative array.
9. Write a program to demonstrate the concept of multidimensional array.
10. Write a program to demonstrate the concept of Classes & objects.
11. Create a login form with two text fields called "login" and "password". When user enters "Amity" as a user name and "university" as a password it should be redirected to a Welcome.HTML page or to Sorry.HTML in case of wrong username/password.
12. How to work with sessions in PHP?
13. Introduction to Mysql creating databases, tables, using command line and gui interface, phpmyadmin
14. How to connect to MySQL using PHP ? Write programs for insertion, deletion updates and other sql queries. Design front end using html, css and write php scripts for processing of data. Try all different methods of connecting from php to MySQL
15. Make a small project with mysql and php to perform CRUD operations. Use Session also.
16. Create a form with a text box asking to enter your favorite city with a submit button when the user enters the city and clicks the submit button another php page should be opened displaying "Welcometo the city".
17. Write a program to design login form in which find the greatest number amongst three numbers.
18. WAP for Marksheet generation.
19. Design a webpage for entering the student details with all the validations applied on it.
20. Write a php script to print current date and time.
21. Write a pp script to use include and require functions.
22. Write a php script including all the file handling functions.
23. Design a website using Wordpress /Joomla/Drupal
24. Introduction to Laravel frame work and one simple project.

## Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# ARTIFICIAL NEURAL NETWORK

**Course Code: NCE6411**

**Credit Units : 02**

## **Course Objective:**

Aim of this course is to introduce the students fundamentals concepts of Neural network and its various application in computer science.

## **Course Contents:**

### **Module I:-**

Artificial Neural Networks (ANN) and biological neural networks, supervised and unsupervised learning rules, neural network applications.

### **Module II:-**

Unsupervised learning:- Hebbian learning and competitive learning. Supervised learning:- Back propagation algorithms,

Learning rule:-

Delta learning rule, Widrow-Hoff learning rule, Winner-Take-All learning rule.

### **Module III:-**

Feed forward neural network, feed backward neural network, Perceptron and its learning law, single-layer perceptron, multi-layer perceptron.

### **Module IV:-**

Self organizing networks: Kohonen algorithm, Hopfield Networks: Hopfield network algorithm, Adaptive resonance theory: Network and learning rules.

### **Module V:-**

Associative memory, auto-associative memory, bi-directional associative memory.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

- Todd Troyer - University of Texas at San Antonio , 2005

# ARTIFICIAL NEURAL NETWORK LAB

**Course Code: NCE6412**

**Credit Units : 01**

## Course Objective

The aim of this lab to gain the practical knowledge of basic neuron models and learning algorithms.

## Lab Assignment

To study some basic neuron models and learning algorithms by using Matlab's neural network toolbox

## Examination Scheme :

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# Syllabus - Fifth Semester

## SOFTWARE ENGINEERING

Course Code: NCE6501

Credit Units : 03

### Course Objective:

The basic objective of Software Engineering is to develop methods and procedures for software development that can scale up for large systems and that can be used to consistently produce high-quality software at low cost and with a small cycle time. Software Engineering is the systematic approach to the development, operation, maintenance, and retirement of software. The course provides a thorough introduction to the fundamentals principles of software engineering. The organization broadly be based on the classical analysis-design-implementation framework.

### Course Contents:

#### Module I: Introduction

Software life cycle models: Waterfall, Prototype, Evolutionary and Spiral models, Overview of Quality Standards like ISO 9001, SEI-CMM

#### Module II: Software Metrics and Project Planning

Size Metrics like LOC, Token Count, Function Count, Design Metrics, Data Structure Metrics, Information Flow Metrics. Cost estimation, static, Single and multivariate models, COCOMO model, Putnam Resource Allocation Model, Risk management.

#### Module III: Software Requirement Analysis, design and coding

Problem Analysis, Software Requirement and Specifications, Behavioural and non-behavioural requirements, Software Prototyping Cohesion & Coupling, Classification of Cohesiveness & Coupling, Function Oriented Design, Object Oriented Design, User Interface Design Top-down and bottom-up Structured programming, Information hiding,

#### Module IV: Software Reliability, Testing and Maintenance

Failure and Faults, Reliability Models: Basic Model, Logarithmic Poisson Model, Software process, Functional testing: Boundary value analysis, Equivalence class testing, Structural testing: path testing, Data flow and mutation testing, unit testing, integration and system testing, Debugging, Testing Tools, & Standards. Management of maintenance, Maintenance Process, Maintenance Models, Reverse Engineering, Software RE-engineering

#### Module V: UML

Introduction to UML, Use Case Diagrams, Class Diagram: State Diagram in UML Activity Diagram in UML Sequence Diagram in UML Collaboration Diagram in UML, Domain, Component Diagram and Deployment Diagram

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# COMPUTER ARCHITECTURE

Course Code: NCE6502

Credit Units : 04

## Course Objective:

This course deals with computer architecture as well as computer organization and design. Computer architecture is concerned with the structure and behaviour of the various functional modules of the computer and how they interact to provide the processing needs of the user. Computer organization is concerned with the way the hardware components are connected together to form a computer system. Computer design is concerned with the development of the hardware for the computer taking into consideration a given set of specifications.

## Course Contents:

### Module I: Register Transfer Language

Register Transfer, Bus and Memory Transfers, Arithmetic Micro-operations, Logic Micro-operations, Shift Micro-operations, Arithmetic Logic shift Unit.

### Module II: Basic Computer Organizations and Design

Instruction Codes, Computer Registers, Computer Instructions, Timing and Control, Instruction Cycle, Memory-Reference Instructions, Input-Output and Interrupt, Design of Accumulator Logic. Hardwired and Microprogrammed control: Control Memory, Address Sequencing, Design of Control Unit

### Module III: Central Processing Unit

Introduction, General Register Organization, Stack Organization, Instruction representation, Instruction Formats, Instruction type, Addressing Modes, Data Transfer and Manipulation, Program Control, Reduced Instruction Set Computer RISC and CISC. Computer Arithmetic: Introduction, Addition and Subtraction Algorithm, Multiplication Algorithms, Booth Multiplication, Division Algorithms, Floating-Point Arithmetic Operations

### Module IV: Memory and Intrasystem Communication and Input output organisation

**Memory:** Memory types and organization Memory Hierarchy, Main Memory, Auxiliary Memory, Associative Memory, Cache Memory with mapping techniques, Virtual Memory, Memory Management Hardware, **Intrasystem communication and I/O:** Peripheral Devices, Input-Output, Controller and I/O driver, IDE for hard disk, I/O port and Bus concept, Bus cycle, Synchronous and asynchronous transfer, Modes of Transfer, DMA, DMA Transfer, DMA Controller, I/O Processor, CPU-IOP Communication

### Module V: Introduction to Pipelining and Multi-Processor

Parallel Processing, Pipelining, Arithmetic Pipeline, Instruction Pipeline, RISC Pipeline, Multiprocessors: Characteristics of Multiprocessors

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# JAVA PROGRAMMING

**Course Code: NCE6503**

**Credit Units : 03**

## **Course Objective:**

The objective is to impart programming skills used in this object oriented language java. The course explores all the basic concepts of core java programming. The students are expected to learn it enough so that they can develop the web solutions like creating applets etc.

## **Course Contents:**

### **Module I: Java Basics**

Concepts of OOP, Features of Java, How Java is different from C++, Environmental setup, Basic syntax, Objects and classes, Basic Data Types, Variable Types, Modifier Types, Basic operators, Loop Control, Decision Making, Strings and Arrays, Methods, I/O.

### **Module II: Java Object Oriented**

Inheritance, Overriding, Polymorphism, Abstraction, Encapsulation, Interfaces, Packages, Exploring java.util package.

### **Module III: Exception Handling and Threading**

Exception Hierarchy, Exception Methods, Catching Exceptions, Multiple catch Clauses, Uncaught Exceptions Java's Built-in Exception.

Creating, Implementing and Extending thread, thread priorities, synchronization suspending, resuming and stopping Threads, Multi-threading.

### **Module IV : Event Handling And AWT**

Event handling Mechanism, Event Model, Event Classes, Sources of Events, Event Listener Interfaces, AWT: Working with Windows, AWT Controls, Layout Managers

### **Module V: Java Advanced**

AppletClass, Architecture, Skeleton, Display Methods., Swings: Japplet, Icons, labels, Text Fields, Buttons, Combo Boxes., Socket Programming: Socket methods, Server Socket methods, Socket Client and Socket Server examples.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# ADVANCE DATA STRUCTURE AND ALGORITHM

Course Code: NCE6504

Credit Units : 03

## Course Objective:

The objective to this course is to equip students with advanced concepts of data structures like Huffman trees, Self organizing trees, different types of heaps and their time complexity. Advanced topics and graphs and graph algorithms, geometric algorithms and parallel algorithms.

## Course Contents:

### Module-I:

ADVANCED TREES: Definitions Operations on Weight Balanced Trees (Huffman Trees), 2-3 Trees and Red- Black Trees, Splay Tree. Augmenting Red-Black Trees to Dynamic Order Statistics and Interval Tree Applications. Operations on Disjoint sets and its union-find problem Implementing Sets. Dictionaries, Priority Queues and Concatenable Queues using 2-3 Trees.

### Module-II:

MERGEABLE HEAPS: Mergeable Heap Operations, Binomial Trees Implementing Binomial Heaps and its Operations, 2-3-4. Trees and 2-3-4 Heaps. Amortization analysis and Potential Function of Fibonacci Heap Implementing Fibonacci Heap. SORTING NETWORK: Comparison network, zero-one principle, bitonic sorting and merging network sorter.

### Module-III:

GRAPH THEORY DEFINITIONS: Definitions of Isomorphic Components. Circuits, Fundamental Circuits, Cut-sets. Cut-Vertices Planer and Dual graphs, Spanning Trees, Kuratowski's two Graphs.

### Module-IV:

GRAPH THEORY ALGORITHMS: Algorithms for Connectedness, Finding all Spanning Trees in a Weighted Graph and Planarity Testing, Breadth First and Depth First Search, Topological Sort, Strongly Connected Components and Articulation Point. Single Min-Cut Max-Flow theorem of Network Flows. Ford-Fulkerson Max Flow Algorithms.

### Module-V:

Geometric algorithms: Point location, convex hulls and Voronoi diagrams, Arrangements. Parallel algorithms: Basic techniques for sorting, searching, merging

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# ANALYSIS AND DESIGN OF ALGORITHM

Course Code: NCE6505

Credit Units : 03

## Course Objective:

The designing of algorithm is an important component of computer science. The objective of this course is to make students aware of various techniques used to evaluate the efficiency of a particular algorithm. Students eventually should learn to design efficient algorithm for a particular program

## Course Contents:

### Module I: Introduction

Algorithm Design paradigms - motivation, concept of algorithmic efficiency, run time analysis of algorithms, Asymptotic Notations. Recurrences- substitution method, recursion tree method, master method

### Module II: Divide and conquer

Structure of divide-and-conquer algorithms: examples; Binary search, quick sort, Merge sort, Strassen Multiplication; Analysis of divide and conquer run time recurrence relations.

#### Greedy Method

Overview of the greedy paradigm examples of exact optimization solution (minimum cost spanning tree), Approximate solution (Knapsack problem), Single source shortest paths, traveling salesman

### Module III: Dynamic programming

Overview, difference between dynamic programming and divide and conquer, Applications: Shortest path in graph, chain Matrix multiplication, Traveling salesman Problem, longest Common sequence, knapsack problem

### Module IV: Graph searching and Traversal

Overview, Representation of graphs, strongly connected components, Traversal methods (depth first and breadth first search)

#### Back tracking

Overview, 8-queen problem, and Knapsack problem

#### Brach and bound

LC searching Bounding, FIFO branch and bound, LC branch and bound application: 0/1 Knapsack problem, Traveling Salesman Problem

### Module V: Computational Complexity

Complexity measures, Polynomial Vs non-polynomial time complexity; NP-hard and NP-complete classes, examples.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

## SOFTWARE ENGINEERING LAB

**Course Code: NCE6506**

**Credit Units : 01**

**Software Required:**Rational Rose

**Assignments will be provided for the following:**

- Use of Rational Rose for visual modeling.
- Creating various UML diagrams such as use case, sequence, collaboration, activity, state diagram, and class diagrams.

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# JAVA PROGRAMMING LAB

**Course Code: NCE6507**

**Credit Units : 01**

**Software Required: JDK1.3**

**Assignments will be provided for the following:**

- Java programs using classes & objects and various control constructs such as loops etc, and data structures such as arrays, structures and functions
- Java programs for creating Applets for display of images and texts.
- Programs related to Interfaces & Packages.
- Input/Output and random files programs in Java.
- Java programs using Event driven concept.
- Programs related to network programming.

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## ADVANCE DATA STRUCTURES AND ALGORITHM LAB

**Course Code: NCE6509**

**Credit Units : 01**

Programs based on Implementation of Graphs using Adjacency Matrix, Linked List , implementation of graph algorithms like BFS,DFS, Minimum Spanning Tree, Binary Search Tree, Knapsack Problem using Greedy Algorithm, Dynamic Programming, Shortest Path Algo (Dijkstra's), Implementing B-Tree,AVL Tree ,Red Black Tree. Implementing Sets, Dictionaries, Priority Queue using Heap.

**Recommended Software:** Java/C++/C/Python

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# ANALYSIS AND DESIGN OF ALGORITHM LAB

**Course Code: NCE6510**

**Credit Units : 01**

**Lab assignment will be based on the following:**

Programs for binary search and Quick sort by using divide and conquer techniques.

Programs on algorithm based on greedy method.

Programs on algorithm based on Dynamic programming.

Programs on Depth First and Breadth Search traversals of graphs.

Programs on algorithm based on backtracking.

Programs on algorithm based on Brach and Bound.

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## PYTHON PROGRAMMING LAB

Course Code: NCE6508

Credit Units : 01

### Course Contents:

- Setting up python on Windows/Linux/Mac
- First program in python
- Programs related to basic input/output.
- Programs related to variables, strings, numbers
- Programs related to Lists and Tuples
- Programs related to Functions
- Programs related to If Statements
- Programs related to While Loops and Input
- Programs related to Basic Terminal Apps
- Programs related to Dictionaries
- Programs related to Classes
- Programs related to Exceptions
- Programs related to GUI programming
- Using Word, Excel, PDF files in python.
- Web programming in python,
- Case study of application areas of python.

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## SUMMER INTERNSHIP EVALUATION-I

**Course Code: NCE6535**

**Credit Units : 03**

### **Course Objective:**

The objective of this course is to provide practical training on some live projects that will increase capability to work on actual problem in industry. This training may undergo in an industrial environment or may be an in house training on some latest software which is in high demand in market. This training will be designed such that it will useful for their future employment in industry.

### **Examination Scheme:**

Feedback from industry/work place	20
Training Report	40
Viva	15
Presentation	25
<b>Total</b>	<b>100</b>

# FUZZY LOGIC & GENETIC ALGORITHM

Course Code: NCE6511

Credit Units : 03

## Course Objective:

This course is intended to mathematical introduction to the analysis, synthesis, and design of control systems using fuzzy logic and Genetic Algorithm. A study of the fundamentals of fuzzy sets, operations on these sets, and their geometrical interpretations. Methodologies to design fuzzy models and feedback controllers for dynamical systems, Various applications and case studies.

fuzzy inference systems, fuzzy logic control, parallel processors, multilevel optimization- real life problem and other machine intelligence applications of fuzzy logic and Genetic Algorithm.

## Course Contents:

### Module I: Introduction

Crisp sets: Overview, Fuzzy sets : Basic types and concepts, Characteristics and significance of paradigm shift, Fuzzy sets vs Crisp sets, Representation of fuzzy sets

### Module II: Fuzzy operations and Fuzzy arithmetic

Types of operations, Fuzzy complements, Fuzzy intersection: t-norms, Fuzzy union: t-conorms, Combination of operations, Aggregation operation, Fuzzy numbers, Linguistic variables, Arithmetic operations on intervals, Arithmetic operations on Fuzzy numbers, Lattice of Fuzzy numbers, Fuzzy equation.

### Module III: Fuzzy systems And Applications

General discussion, Fuzzy controller: Overview and example, Fuzzy systems and neural networks, Fuzzy neural network, Fuzzy automata. Pattern recognition in fuzzy logic, Database and information retrieval in fuzzy logic, decision making in fuzzy logic, engineering applications and fuzzy logic, Fuzzy logic in Medicine and Economics

### Module- IV: Introduction to Genetic Algorithm

Fundamentals of genetic algorithm: A brief history of evolutionary computation, biological terminology, search space encoding, reproduction elements of genetic algorithm genetic modeling, comparison of GA and traditional search methods. The Fundamental Theorem, Schema Processing at work, Two-armed and k-armed Bandit problem, The Building block hypothesis.

### Module-V: Genetic Technology

Genetic technology:- steady state algorithm, fitness scaling, inversion. Genetic programming:- Genetic Algorithm in problem solving, Implementing a Genetic Algorithm:- computer implementation, operator (reproduction, crossover and Mutation, Fitness Scaling, Coding, Discretization). Knowledge based techniques in Genetic Algorithm. Advanced operators and techniques in genetic search:- Dominance, Diploidy and Abeyance. Inversion and other reordering operators, Niche and speciation.

### Module- VI: Applications

5 lecture hours

Genetic Algorithm in engineering and optimization-natural evolution –Simulated annealing and Tabu search -Genetic Algorithm in scientific models and theoretical foundations. Applications of Genetic based machine learning-Genetic Algorithm and parallel processors- composite laminates- constraint optimization- multilevel optimization- real life problem.

## Modes of Evaluation: Quiz/Assignment/ Seminar/Written Examination

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# VHDL PROGRAMMING

**Course Code: NCE6512**

**Credit Units : 02**

## **Course Objective:**

VHDL is commonly used as a design-entry language for field-programmable gate arrays and application-specific integrated circuits in electronic design automation of digital circuits. The course aims to discuss the syntax of the language to model a digital system.

## **Course Contents:**

### **Module I**

Fundamental VHDL Units, LIBRARY Declarations, ENTITY, ARCHITECTURE, Introductory Examples, Specification of combinational systems using VHDL, Introduction to VHDL, Basic language element of VHDL, Behavioural Modeling, Data flow modeling, Structural modeling, Subprograms and overloading, VHDL description of gates.

### **Module II**

Data Types; Pre-Defined Data Types, User-Defined Data Types, Subtypes, Arrays, Port Array, Records, Signed and Unsigned Data Types, Data Conversion

### **Module III: Sequential codes**

PROCESS: Signals and Variables, IF, WAIT, CASE, LOOP, CASE versus IF, CASE versus WHEN, Bad Clocking, Using Sequential Code to Design Combinational Circuits  
Description and design of sequential circuits using VHDL,

### **Module IV**

Standard combinational modules, Design of a Serial Adder with Accumulator, State Graph for Control Network, design of a Binary Multiplier, Multiplication of a Signed Binary Number, Design of a Binary Divider.

### **Module V**

Micro programmed Controller, Structure of a micro programmed controller, Basic component of a micro system, memory subsystem. Overview of PAL, PLA, FPGA, CPLD.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

## VHDL PROGRAMMING LAB

**Course Code:** NCE6513

**Credit Units : 01**

**Software Required:** Mentor Graphics

**Topics covered in lab will include:**

- Designing Basic Gates.
- Designing Combinational circuits like adder, multiplexer, PLA
- Designing Sequential Circuits like flip-flops, counters, registers.

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# DISTRIBUTED OPERATING SYSTEM

Course Code: NCE6514

Credit Units : 03

## Course Objective:

This Subject provides students with an in-depth knowledge about the operating system. The former treats the standard principles of single processor system, including processes, synchronization, I/O , deadlocks, mutual exclusion, fault tolerance , Memory Management, File Management systems, security and so on. This subject covers distributed operating system in detail, including communication process, file system and memory management synchronization and so on but this time in the context of distributed systems

## Course Contents:

### Module I: Introduction

Functions of an Operating System, Design Approaches, Review of Network Operating System and Distributed Operating System, Issue in the design of Distributed Operating System, Overview of Computer Networks, Modes of communication, System Process, Interrupt Handling, Handling Systems calls, Protection of resources, Micro-Kernel Operating System, client server architecture.

### Module II: Distributed Mutual Exclusion

Lamport's Algorithm, The Critical Section Problem, Other Synchronization Problems, Language Mechanisms for Synchronization, Axiomatic Verification of Parallel Programs, Inter process communication (Linux IPC Mechanism), Remote Procedure calls, RPC exception handling, security issues, RPC in Heterogeneous Environment, Case studies.

### Module III: Synchronization in Distributed System

Deadlocks in Distributed Systems, Centralized Deadlock- Detection Algorithms, Distributed Deadlock Detection Algorithm' Path Pushing Algorithm, Edge Chasing Algorithm, Diffusion Computation Based Algorithm.

Clock Synchronization: Logical clocks, Physical clocks, Vector Clock, clock synchronization algorithms, Mutual Exclusion, Non-Token Based Algorithms – Lamport's Algorithm, Token-Based Algorithms, Suzuki-Kasami's Broadcast Algorithm, Election Algorithms,

### Module IV: Distributed Shared Memory

Introduction, Architecture & Motivation Algorithms for Implementing DSM: The Central – Server Algorithms, The Migration Algorithms, The Read – Replication Algorithms, The Full- Replication Algorithms. Memory Coherence, Coherence Protocols: Write Invalidate Protocol, Write Update Protocol, Design Issues: Granularity , Page Replacement

### Module V: Concurrency Control Algorithms

Basic Synchronization Primitives, Two –Phase Locking Protocol, Timestamp Based Algorithms, Two –Phase Commit Protocol. Voting Protocols: Static Voting, Majority Based Dynamic Voting Protocol.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# Syllabus - Sixth Semester

## MICROPROCESSOR

**Course Code: NCE6601**

**Credit Units : 03**

### Course Objective:

This course deals with the systematic study of the Architecture and programming issues of 8085-microprocessor family. The aim of this course is to give the students basic knowledge of the above microprocessor needed to develop the systems using it.

### Course Contents:

#### Module I: Introduction to Microcomputer Systems

Introduction to Microprocessors and microcomputers, Study of 8 bit Microprocessor, 8085 pin configuration, Internal Architecture and operations, interrupts, Stacks and subroutines, various data transfer schemes.

#### Module II: ALP and timing diagrams

Introduction to 8085 instruction set, advance 8085 programming, Addressing modes, Counters and time Delays, Instruction cycle, machine cycle, T-states, timing diagram for 8085 instruction.

#### Module III: Memory System Design & I/O Interfacing

Interfacing with 8085. Interfacing with input/output devices (memory mapped, peripheral I/O), Cache memory system. Study of following peripheral devices 8255, 8253, 8257, 8255, 8251.

#### Module IV: Architecture of 16-Bit Microprocessor

Difference between 8085 and 8086, Block diagram and architecture of 8086 family, pin configuration of 8086, Minimum mode & Maximum mode Operation. Internal architecture of 8086, Bus Interface Unit, Register Organization, Instruction Pointer, Stack & Stack pointer, merits of memory segmentation, Execution Unit, Register Organization.

#### Module V: Pentium Processors

Internal architecture of 8087, Operational overview of 8087, Introduction to 80186, 80286, 80386 & 80486 processors, Pentium processor.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# SYSTEM PROGRAMMING AND COMPILER CONSTRUCTION

Course Code: NCE6602

Credit Units : 03

## Course Objective:

This course provides knowledge to design various system programs.

## Course Contents:

### Module I: Introduction

Definition, Evolution, Components, Editors: Introduction to system Programming Line editor, Full screen editor and multi window editor. Case study MS-Word, DOS Editor and vi editor.

### Module II: Assemblers

First pass and second pass of assembler and their algorithms. Assemblers for CISC Machines: case study x85 & x86 machines.

### Module III: Compilers & Macro Processor

Introduction to various translators. Various phases of compiler. Bootstrapping for compilers, Introduction to. Design of a compiler in C++ as Prototype. Basic Macro Processor functions- Macro definition & expansion – Macro Processor Algorithm & Data Structures, conditional – Macro Expansion, Keyword Macro Parameters, Macro with in Macro Implementation, case study MASM and ANSI C Macro language.

### Module IV: Debuggers, Loaders and Linkers

Introduction to various debugging techniques. Case study:- Debugging in Turbo C++ IDE. Linkers and Loaders Concept of linking. Case study of Linker in x86 machines. Loading of various loading schemes.

### Module V: Operating System

Booting techniques and sub-routines. Design of kernel and various management for OS. Design of Shell and other utilities, (**Overview of Unix OS, Difference Between Unix and Linux, Commands in Unix.**)-changes made

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# ADVANCED JAVA PROGRAMMING

Course Code: NCE6603

Credit Units : 03

## Course Objective:

The objective is to equip the students with the advanced feature of contemporary java which would enable them to handle complex programs relating to managing data and processes over the network. The major objective of this course is to provide a sound foundation to the students on the concepts, precepts and practices, in a field that is of immense concern to the industry and business.

## Course Contents:

### Module I: Distributed Computing

Introduction to Java RMI, RMI services, RMI client, Running client and server, Introduction of Swing, Swing Components, Look and Feel for Swing Components, Introduction to Multimedia Programming.

### Module II: Database Connectivity

ODBC and JDBC Drivers, Connecting to Database with the java.sql Package, Using JDBC Terminology, JDBC with mysql, postgresql.

### Module III: Servlet Programming

Introduction to Servlets, Servlet Life Cycle, Servlet based Applications, Servlet and HTML.Filters, jdbc with servelets, session Management techniques in detail.

### Module IV: JSP Programming

JSP: Introduction to JSP, JSP implicit objects, JSP based Applications, Java. Net. Login & Logout Example, jdbc with jsp.

### Module V: JEE Web Appliaction

The Model-View-Controller Architecture What is Struts, Struts Tags, Creating Beans, Other Bean Tags, Bean Output, Creating HTML Forms, The Action Form class The Action class, Simple Struts: a simple Struts application; Introduction to EJB.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# ADVANCE DATABASE MANAGEMENT SYSTEMS

Course Code: NCE6604

Credit Units : 03

## Course Objective:

The objective of this course is to expose the students to the implementation techniques of database system. This course explains techniques for query processing and optimization with transaction and concurrency control techniques

## Course Contents:

### Module I: Relational Databases

Integrity Constraints revisited, Extended ER diagram, Relational Algebra & Calculus, Functional, Multivalued and Join Dependency, Normal Forms, Rules about functional dependencies.

### Module II: Query Processing and Optimization

Valuation of Relational Operations, Transformation of Relational Expressions, Indexing and Query Optimization, Limitations of Relational Data Model, Null Values and Partial Information.

### Object Oriented and Object Relational Databases

Modeling Complex Data Semantics, Specialization, Generalization, Aggregation and Association, Objects, Object Identity, Equality and Object Reference, Architecture of Object Oriented and Object Relational Databases

### Module III: Parallel and Distributed Databases

Distributed Data Storage – Fragmentation & Replication, Location and Fragment

Transparency Distributed Query Processing and Optimization, Distributed Transaction Modeling and concurrency Control, Distributed Deadlock, Commit Protocols, Design of Parallel Databases, Parallel Query Evaluation.

### Advanced Transaction Processing

Nested and Multilevel Transactions, Compensating Transactions and Saga, Long Duration Transactions, Weak Levels of Consistency, Transaction Work Flows, Transaction Processing Monitors.

### Module IV

Multimedia databases, Databases on the Web and Semi-Structured Data

Case Study: Oracle Xi

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# DIGITAL COMPUTER ORGANIZATION

Course Code: NCE6605

Credit Units : 03

## Course Objective:

The Objective of this course is to expose the students to the fundamentals and the concepts of Digital & Computer Organization and Representation of Information and Basic Building Blocks, Basic Organization, Memory Organization, Input-Output Organization, Processor Organization etc. This course is designed to understand the concepts of Computer Organization for Research & Development as well as for application.

## Course Contents:

### Module I: Representation of Information and Basic Building Blocks

Number Systems, Binary, Octal, Hexadecimal, Character Codes (BCD, ASCII, EBCDIC), Logic gates, Boolean algebra, K-map Simplification, Half adder, Full adder, Decoders, Multiplexes, Binary Counters, Flip/Flops: SR FF, JK FF, Master Slave FF, T and D FF, Registers: Parallel and Serial Registers, Counters (Synchronous & Asynchronous), ALU, Micro-Operation, ALU-chip.

### Module II: Basic Organization

Von Neumann Machine (IAS Computer), Operational flow chart (Fetch, Execute), Instruction Cycle, Organization of Central Processing Unit, Hardwired and Micro programmed control unit, Single Organization, General Register Organization, Stack Organization, Addressing Modes, Instruction Formats, Data transfer & Manipulation, I/O organization, Bus Architecture, Programming Registers.

### Module III: Memory Organization

Memory hierarchy, Main Memory (RAM/ROM chips) with mapping, Auxiliary memory, Associative memory and its mapping, Virtual memory, Cache memory with mapping techniques, Memory management hardware.

### Module IV: Input-Output organization

Peripheral devices, I/O interface, Direct memory access, Modes of transfer, Priority Interrupt, I/O Processors, Serial Communication, Asynchronous data transfer, Strobe Control, Handshaking, I/O Controllers, CPU-IOP Communication.

### Module V: Processor Organization

Introductory Concept of pipeline, Flynn's Classification, Parallel processing. RISC and CISC characteristics, arithmetic pipeline with example.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# MICROPROCESSOR LAB

**Course Code: NCE6606**

**Credit Units : 01**

## Course Contents:

- To load the numbers 49H and 53H in the memory location 9510 and 9511 respectively and add the contents of memory location 9601
- To write assembly language programming for 8 bit addition with and without carry.
- To write assembly language programming for 8 bit subtraction with and without borrow.
- To write assembly language programming for 8 bit multiplication and division.
- To write assembly language programming for sorting an array of numbers in ascending and descending order.
- To write assembly language programming with additional instructions.
- To write and execute a program using stacks.
- To study and program the programmable peripheral interface (8255) board.
- To study and program the programmable interval timer (8253) board.
- To study and program the programmable DMA controller (8257) board.
- To study and program the programmable interrupt controller (8259) board.

## Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# SYSTEM PROGRAMMING AND COMPILER CONSTRUCTION LAB

**Course Code:** NCE6607

**Credit Units : 01**

**Software Required:** Turbo C++

**Assignment will be provided for following:**

- WAP to determine the length of the machine instructions.
- WAP to differentiate between symbols, literals and tokens.
- WAP to implement Symbol table.
- WAP to implement base table.
- WAP to find the relative addresses.
- Design a macro to perform add operation.
- On the basis of above program display the values of PC, LC and IR.
- Perform programming on loader based programme.
- Perform programming on linker based programme.
- Perform Programming on editor based programme.

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## ADVANCED JAVA PROGRAMMING LAB

Course Code: NCE6608

Credit Units : 01

Programming Language: Java

1. WAP to display label on a frame with the help of JFrame
2. WAP to display six buttons on a panel using JFrame.
3. WAP. To display an image and a string in a label on the JFrame.
4. WAP that implement a JApplet that display a simple label
5. WAP that implement a JApplet and display the following frame
  - a. Customer name
  - b. Customer number
  - c. Age
  - d. Address
6. WAP to access a table Product Master from MS-Access using Java code.
7. WAP that implement a simple servlet program.
8. WAP for authentication, which validate the login-id and password by the servlet code.
9. WAP to connecting a database using user-id and password.
10. WAP to insert data into the database using the prepared statement.
11. WAP to read data from the database using the ResultSet.
12. WAP to read data send by the client (HTML page) using servlet.
13. WAP to include a HTML page into a JSP page.
14. WAP to handle the JSPEException.
15. WAP to read data send by a client (HTML page) using JSP.

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## ADVANCE DATABASE MANAGEMENT SYSTEM LAB

Course Code: NCE6609

Credit Units : 01

**Programs should be based on following topics:**

**Quick Review** of Simple SQL Statements, SQL Built-in Functions, Primary Key, Foreign Key, Normalization, Joins View, Union. **Emphasis** on PL/SQL, Cursors 8. Exception handling, Procedure, Functions, Trigger, concurrency control, transaction processing. Introduction to SQLite. Recommended Software: PostgreSQL, MySQL, Oracle.

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# CRYPTOGRAPHY AND NETWORK SECURITY

Course Code: NCE6610

Credit Units : 03

## Course Objective:

The objective here is to acquaint the students with the application of networking. Detail description of the various TCP/IP protocols and the working of ATM and its performance, Network security and authentication, and various algorithms related to it has been dealt, to get a practical approach.

## Course Contents:

### Module I: Advanced TCP/IP

TCP Services, TCP format and connection management, Encapsulation in IP, UDP Services, Format and Encapsulation in IP, IP Services, Header format and addressing, Fragmentation and reassembly, Migration to IPv6, Protocols: BOOTP, DHCP, ICMP, IGMP; Internet Routing Protocols: OSPF, RIP, EIGRP, BGP.

### Module II: High Speed Networks

Packet Switching Networks; Frame Relay Networks; Asynchronous Transfer Mode (ATM); ATM protocol Architecture; ATM logical connections; ATM cells; ATM Service categories; ATM Adaptation Layer; QoS in ATM and Frame Relay

### Module III: High Speed LANs

LAN Ethernet, fast Ethernet, gigabit Ethernet, FDDI, DSL, ADSL

### Module IV: Wireless communication

Wireless networks, wireless channels, channel access, network architecture, IEEE 802.11, Bluetooth, Satellite Networks.

### Module V: Network Security and Management

Principles of cryptography, Authentication, integrity, key distribution and certification, Access control and Firewalls, attacks and counter measures, security in many layers. Infrastructure for network management, The internet standard management framework, SMI, MIB, SNMP, Security and administration.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# SOFTWARE TESTING AND QUALITY ASSURANCE

Course Code: NCE6611

Credit Units : 03

## Course Objective:

To apply all the testing skills of software testing in such a way that it can provide and improve the software development methodology. Basic objective of Software Testing is to develop methods and procedures that can scale up for large systems and that can be used to consistently produce high-quality software at low cost and with a small cycle for the development.

## Course Contents:

### Module I

Software Testing Fundamentals - Software Testing Definition, Importance, objectives, why is it too hard? Errors, faults and failure. Testing process, STLC, QA and QC, Verification and Validation, Inspections and walkthroughs, Test Plan, test cases, drivers, stubs, Validation checks.

### Module II

Black box testing - Definition, Equivalence Class, Boundary Value Analysis, Documentation testing, state based testing, White box testing – Definition, Difference between black box testing and white box testing, Path testing, Cyclomatic complexity, graph metrics, mutation testing.

### Module III

Levels of testing- Low level testing- Unit testing and Integration testing. High level testing- System testing, performance testing, stress testing, load testing, volume testing, smoke and sanity testing, Installation testing, usability testing, website testing, security testing, recovery testing, Domain testing, Static testing and dynamic testing,

### Module IV

Test cases– Designing, Execution. Reducing number of test cases- Prioritization guidelines, priority category, scheme, risk analysis, regression testing. Designing scripts, RTM, TRS.

### Module V

Cohesion and coupling in class testing, GUI testing, integration and system testing, Automated Testing tools - Manual vs. Automated testing, Static and Dynamic Testing tools, Characteristics: Rational tools, Quality Standards- CMM, ISO, Six sigma, McCall's Quality Factors and Criteria, Quality Metrics

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# VLSI DESIGN

Course Code: NCE6612

Credit Units : 02

## Course Objective:

In the recent years, IC manufacturing technology has gone through dramatic evolution and changes, continuously scaling to ever smaller dimensions. This scaling has a double impact on the design of ICs. First, the complexity of the designs that can be put on a single die has increased dramatically which led to new design methodologies. At the same time, this plunge into deep submicron space causes devices to behave differently and brings challenging issues to forefront. This course along with the course of Digital Circuits and Systems II and Analog CMOS IC design will give you many of the basic essentials to work in the area of Circuit Design. Since this course takes the latest trends in the industry into account, you will find yourself at a definite edge.

## Course Contents:

### Module I: Devices and the wire

Diode, dynamic and transient behaviour-diffusion capacitance, SPICE diode model.

MOSFET STATIC BEHAVIOUR: Threshold voltage and its dependence on  $V_{SB}$  MOSFET Operation in resistive and saturation region, channel length modulation, Velocity saturation and its impact on sub micron devices, sub threshold conduction, Model for manual analysis, Equivalent resistance for MOSFET in (velocity) saturated region, comparison of equations for PMOS and NMOS, depletion and enhancement device

DYNAMIC BEHAVIOUR: Channel capacitance in different regions of operation, junction capacitance, Level 1 SPICE MODELS for MOS transistors

The Wire: Interconnect parameters: resistance, capacitance and Inductance, Lumped RC model, Elmore Delay

### Module II: CMOS Inverter

VTC of an ideal inverter, Switching Model of the CMOS inverter: nMOS /pMOS discharge and charge, VTC of CMOS inverter: PMOS AND NMOS operation in various regions including velocity saturation, Switching threshold,  $(W/L)_p/(W/L)_n$  ratio for setting desired  $V_M$  with and without velocity saturation, Noise Margins, buffer

Ratioed logic: Pseudo NMOS inverter and PMOS to NMOS ratio for performance, tristate inverter, Resistive load inverter.

Load Capacitance calculations: fan out capacitance, self capacitance calculations: Miller effect, wire capacitance; Improving delay calculation with input slope, Propagation delay: first order analysis, analysis from a design perspective, sizing a chain of inverters for minimum delay, choosing optimum number of stages

Power, Energy and Energy Delay: Dynamic power consumption, Static power, Glitches and power dissipation due to direct path currents, power and delay trade off, Transistor sizing for energy minimization

### Module III: Combinational circuits

CMOS LOGIC: Good 0 and poor 0, Good 1 and poor 1, series and parallel N and P switches, 2 and Higher input NAND and NOR gates, Functions of the type  $(AB+C(D+E))$  and their complements, XOR and XNOR gates, 2 input Multiplexer, Full Adder; Transistor sizing in CMOS logic for optimal delay,

Pseudo NMOS NAND NOR and other gates and the transistor sizing, Introduction to DSVCL logic, CPL AND/NAND, OR/NOR, XOR/XNOR gates

Logical effort, Electrical Effort, Branching effort, Examples of sizing Combinational logic chains for minimum delay. Pass-transistor logic, pass gate configurations for nmos and pmos, 2 input and 4 input MUX, XOR, XNOR and implementation of general functions like  $AB+AB*C+A*C^*$ , Robust and Efficient PTL Design, Delay of Transmission Gate chain

Dynamic CMOS design: Precharge and Evaluation, charge leakage, bootstrapping, charge sharing, Cascading Dynamic Gates, DOMINO Logic, Optimization of Domino Logic Gates, simple example circuit implementations of DOMINO logic

**Module IV: Sequential Logic circuits**

Principle of Bistability, NAND and NOR based SR latch, and clocked SR Latch, JK latch, example of master slave flip flop, CMOS D latch, MUX based Latches, master slave edge triggered register, non ideal clocks, clock overlap, C2MOS register, TSPCR Register, Schmitt Trigger, Pipelining and NORA CMOS

**Module V: Layout Design Rules**

Introduction to CMOS Process technology, Layout of CMOS inverter, CMOS NAND and NOR gates, Concept of Euler path, and stick diagrams for functions like  $(AB+E+CD)^*$

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# VLSI DESIGN LAB

Course Code: NCE6613

Credit Units : 01

## Course Contents:

- Using Design architect and simulate V vs time for CMOS inverter using same W/L ratio for PMOS and NMOS.
- Design and simulate again by Sizing PMOS to NMOS appropriately and repeat experiment 1
- Design and simulate V vs t for 2 input NAND and Nor gates.
- Design and Simulation for general CMOS functions
- One bit full adder simulation
- 2:1 MUX using pass transistor logic
- Other functions using pass transistor logic
- Layout of CMOS inverter
- Layout of NAND and NOR gates
- Design and Simulation SR latch using NAND and NOR representations
- Design and simulate D flip flop

## Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# Syllabus - Seventh Semester

## DATA WAREHOUSING AND DATA MINING

**Course Code: NCE6701**

**Credit Units : 03**

### **Course Objective:**

The objective of this course is to introduce students to Data Warehousing & Data mining technologies that will help To Inspect, Control and Secure Information through Databases.

### **Course Contents:**

#### **Module I: Introduction to Data Warehousing**

The need for data ware housing, Operational & Informational Data Stores, Data Warehouse definition & Characteristics, Data Warehouse role & Structure, The cost of warehousing data, Foundation & Roots of Data,

#### **Module II: Data Warehousing Components& Architecture:**

Stores, warehouses and marts, Data warehouse database, Sourcing, acquisition, clean up & transformation tools, meta data, Access tools, Data ware house administration & management,. operational & External Database layer, Information access layer, data access layer, metadata layer, process management layer, Application messaging layer, Physical DW layer, Data staging layer.

#### **Module III: Building a Data Warehouse:**

Business, Design, Technical & Implementation Considerations, DW project plan. Overview of Mapping the DW to Multiprocessor Architecture, & DBMS Schemas for Decision Support.

#### **Module IV: Metadata and OLAP:**

METADATA: Definition, repository, management & trends.

OLAP: Need, guidelines, Multi Relational & Multi-Dimensional: MOLAP, ROLAP, OLAP Tools.

#### **Module V: Data Mining & Visualization:**

Techniques to mine the data, Market Basket analysis, Measuring data mining effectiveness, embedding data mining to business process, current limitations and challenges in DM.

Introduction to EIS, The future of Data Mining, Warehousing & Virtualization, Applications: PowerBuilder, Forte. Technical Exposure to Data Mining

### **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

### **TEXT BOOKS:**

- Alex Berson, Data Warehousing, Data Mining, and Olap, Tata McGraw Hill.
- George M Marakas, Modern Data Warehousing, Mining & Visualization Core Concepts, Pearson Education.

### **References:**

# COMPUTER GRAPHICS

Course Code: NCE6702

Credit Units : 03

## Course Objective:

The objective of the course is to provide the understanding of the fundamental graphical operations and the implementation on computer, the mathematics behind computer graphics, including the use of spline curves and surfaces. It gives the glimpse of recent advances in computer graphics, user interface issues that make the computer easy, for the novice to use.

## Course Contents:

### Module I: Introduction to Graphics and Graphics Hardware System

Application of computer graphics, Video Display Devices, Raster Scan Display, Random Scan Display, Input Devices, Graphic Software and graphics standards, Numerical based on Raster and Random scan display, Frame buffer, Display processor.

### Module II: Output Primitives and Clipping operations

Algorithms for drawing 2D Primitives lines (DDA and Bresenham's line algorithm), circles (Bresenham's and midpoint circle algorithm), Antialiasing and filtering techniques. Line clipping (cohen-sutherland algorithm), Curve clipping algorithm, and polygon clipping with Sutherland Hodgeman algorithm, Area fill algorithms for various graphics primitives: Scanline fill algorithm, boundary fill algorithm, flood fill algorithm, Polygon representation, various method of Polygon Inside test: Even-Odd method, winding number method, Character generation techniques.

### Module III: 2D Geometric transformation

2D Transformation: Basic transformation, Translation, Rotation, Rotation relative to an arbitrary point, scaling, Matrix Representations and Homogeneous coordinates, window to viewport transformation.

### Module IV: 3D Geometric transformation

3D Concepts: Parallel projection and Perspective projection, 3D Transformations, composite 3D transformation, co-ordinate transformation, Inverse transformation

### Module V: object modeling and Visible Surface detection

fractal geometry methods, fractal dimensions, Geometric construction of deterministic self-similar fractals, Iterated function system to generate fractals. Bezier curves and Bezier surfaces, Bspline curves and surfaces, Visible surface detection method: Basic illumination, diffuse reflection, specular reflection, shadows. Ray tracing method, Depth-buffer method, A-buffer method, Depth-sorting method (painter's algorithm), Binary search partition method, Scan line method,

### Module VI: Introduction to multimedia

Design of animation sequences, Computer Animation languages, Elementary filtering techniques and elementary Image Processing techniques, graphics library functions used in animation design

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# ADVANCED COMPUTER ARCHITECTURE

Course Code: NCE6703

Credit Units : 03

## Course Objective:

With increase in availability of system resources, concept of parallel architecture has obtained immense popularity. This course provides a comprehensive study of scalable and parallel computer architectures for achieving a proportional increase in performance with increasing system resources. In this course we have discussed the theory, technology, architecture (hardware) and software aspects of parallel computer and Vector computers.

## Course Contents:

### Module I: Parallel computer models

The state of computing, Multiprocessors and multicomputers, Multivector and SIMD computers, Architectural development tracks

Program and network properties: Conditions of parallelism, Data and resource dependences, Hardware and software parallelism, Program partitioning and scheduling, Grain size and latency, Program flow mechanisms, Control flow versus data flow, Data flow architecture, Demand driven mechanisms, Comparisons of flow mechanisms

### Module II: System Interconnect Architectures

Network properties and routing, Static interconnection networks, Dynamic interconnection Networks, Multiprocessor system interconnects, Hierarchical bus systems, Crossbar switch and multiport memory, Multistage and combining network.

### Module III: Processors and Memory Hierarchy

Advanced processor technology, Instruction-set Architectures, CISC Scalar Processors, RISC Scalar Processors, Superscalar Processors, VLIW Architectures, Vector and Symbolic processors

Memory Technology: Hierarchical memory technology, Inclusion, Coherence and Locality, Memory capacity planning, Virtual Memory Technology

### Module IV: Backplane Bus System

Backplane bus specification, Addressing and timing protocols, Arbitration transaction and interrupt, Pipelining: Linear pipeline processor, Nonlinear pipeline processor, Instruction pipeline design, Mechanisms for instruction pipelining, Dynamic instruction scheduling, Branch handling techniques, Arithmetic Pipeline Design, Computer arithmetic principles.

### Module V: Vector Processing Principles

Vector instruction types, Vector-access memory schemes.

**Synchronous Parallel Processing: SIMD Architecture and Programming Principles, SIMD Parallel Algorithms**

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# ADVANCED COMPUTER NETWORKS

Course Code: NCE6704

Credit Units : 03

## Course Objective:

The objective of the course is to provide thorough understanding & in-depth knowledge of concepts in computer networks Such as Internet protocols and routing, local area networks, wireless communications and networking, performance analysis, congestion control, TCP, network address translation, multimedia over IP, switching and routing, mobile IP, multicasting, IPv6. Peer-to-peer networking, network security, and other current research topics. A focus will be placed on wireless networking, reflecting rapid advances in this area. This course motivates the students to explore current research areas in the same field.

## Course Contents:

### Module I : Introduction to Networks

Networking introduction, Reference Models, TCP/IP, OSI, Addressing, Protocol Layering, Transmission impairment, performance, Switching, Transmission Media, Introduction to MAC, Channel allocation, MAC protocol classification for LAN's, MAN's, MAC protocols for Adhoc N/ws, MAC Protocol for WLAN's(adhoc and sensor n/ws), Introduction to Ethernet protocol ( Fast, Gigabit and standard Ethernet).

### Module II: Network Layer

Network Layer Design Issues, Routing Algorithms, Congestion Control Algorithms, Quality of Service, Internet Working, Network Layer in Internet.  
IPv6 basic protocol, extensions and options, support for QoS, security, etc., Changes to other protocols, Application Programming Interface for IPv6.

### Module III : Mobile IP

Mobile IP, IP Multicasting. Multicast routing protocols, address assignments, session discovery, etc.

### Module IV : Transport Layer and Application Layer

The Transport Protocol: The Transport Service, Elements of transport protocol, a simple Transport Protocol, Internet Transport Protocols UDP, Internet Transport Protocols TCP, TCP extensions for high-speed networks, transaction-oriented applications Performance Issues.  
The Application Layer: DNS-(Domain Name System), Electronic Mail, World Wide Web Multimedia.

### Module V : Network Security

Overview of network security, Secure-HTTP, SSL, ESP, Key distribution protocols. Digital signatures, digital certificates-mail Security, Web security, Social Issues.

## Examination Scheme:

Components	A	CT	H	V/S/O	EE
Weightage (%)	5	10	7	8	70

# DATAWARE HOUSING & DATA MINING LAB

Course Code: NCE6705

Credit Units : 01

## Course Contents:

Programming Language: Weka 3.6

## List of Experiments/Programs:

- Defining Weather relation for different attributes
- Defining employee relation for different attributes
- Defining labor relation for different attributes
- Defining student relation for different attributes
- Exploring weather relation using experimenter and obtaining results in various schemes
- Exploring employee relation using experimenter
- Exploring labor relation using experimenter
- Exploring student relation using experimenter
- Setting up a flow to load an arff file (batch mode) and perform a cross validation using J48
- Design a knowledge flow layout, to load attribute selection normalize the attributes and to store the result in a csv saver.

## Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## COMPUTER GRAPHICS LAB

**Course Code:** NCE6706

**Credit Units :** 01

**Software Required:** Turbo C++

**Course Contents:**

**Assignments will be provided for the following:**

- Geometrical shapes based on graphics algorithms
- 2D Geometric transformation translation, rotation, scaling, reflection.
- Clipping
- Animation

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## ADVANCED COMPUTER NETWORKS LAB

**Course Code: NCE6707**

**Credit Units : 01**

### **Course Contents:**

Various installations and connections of LAN, WAN, ETC

Working on NS2.

Socket Programming using C Language on Linux

### **Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# MATLAB

**Course Code: NCE6708**

**Credit Units : 02**

Understanding The MATLAB Environment, Using the Help System in MATLAB, MATLAB Basics, Linear Algebra; Vectors and Matrices and various operations on them, M files; Scripts and User-defined functions, Plotting, Flow Control and Loops; For and While Loops, If and Case statements, structures, writing basic programs using the above, study of various toolboxes available in matlab and case study of any one tool box.

**Recommended Software:** MATLAB/Octave

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# SUMMER INTERNSHIP EVALUATION-II

Course Code: NCE6735

Credit Units : 03

## Guidelines:

There are certain phases of every Intern's professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship program can best be described as an attempt to institutionalize efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal classroom situations. These attributes are intellectual ability, professional judgment and decision-making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility etc.

In order to achieve these objectives, each student will maintain a file (**Internship File**). The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development.

The File will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

The **layout guidelines** for the Project & Seminar Report:

### 1. File should be in the following specification:

A4 size paper

Font: Arial (10 points) or Times New Roman (12 points)

Line spacing: 1.5

Top & bottom margins: 1 inch/ 2.5 cm

Left & right margins: 1.25 inches/ 3 cm

### 2. Report Layout: The report should contain the following components:

Front Page

Table of Content

Acknowledgement

Student Certificate

Company Profile (optional)

Introduction

Main Body

References / Bibliography

The File will include **five sections** in the order described below. The content and comprehensiveness of the main body and appendices of the report should include the following:

1. **The Title Page**--Title - An Internship Experience Report For (Your Name), name of internship organization, name of the Supervisor/Guide and his/her designation, date started and completed, and number of credits for which the report is submitted.

2. **Table of Content**--an outline of the contents by topics and subtopics with the page number and location of each section.

3. **Introduction**--short, but should include how and why you obtained the internship experience position and the relationship it has to your professional and career goals.

4. **Main Body**--should include but not be limited to daily tasks performed. Major projects contributed to, dates, hours on task, observations and feelings, meetings attended and their purposes, listing of tools and materials and their suppliers, and photographs if possible of projects, buildings and co-workers.

**5. References / Bibliography** --This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system

## **ASSESSMENT OF THE INTERNSHIP FILE**

The student will be provided with the Student Assessment Record (SAR) to be placed in front of the Internship File. Each item in the SAR is ticked off when it is completed successfully. The faculty will also assess each item as it is completed. The SAR will be signed by the student and by the faculty to indicate that the File is the student's own work. It will also ensure regularity and meeting the deadlines.

## **STUDENT ASSESSMENT RECORD (SAR)**

### **1. Range of Research Methods used to obtain information**

### **2. Execution of Research**

### **3. Data Analysis**

- Analyse Quantitative/ Qualitative information
- Control Quality

### **4. Draw Conclusions**

#### **Examination Scheme:**

<b>Components</b>	<b>V</b>	<b>S</b>	<b>R</b>	<b>FP</b>
<b>Weightage (%)</b>	20	20	20	40

V – Viva, S – Synopsis, FP – Final Presentation, R - Report

# SOFT COMPUTING

Course Code: NCE6709

Credit Units : 03

## Course Objective:

To develop semantic-based and context-aware systems to acquire, organise, process, share and use the knowledge embedded in multimedia content. Research will aim to maximise automation of the complete knowledge lifecycle and achieve semantic interoperability between Web resources and services.

## Course Contents:

### Module I: Soft Computing

Introduction of soft computing, soft computing vs. hard computing, various types of soft computing techniques, applications of soft computing.

### Module II: Neural Network

Structure and Function of a single neuron: Biological neuron, artificial neuron, definition of ANN, Taxonomy of neural net, Difference between ANN and human brain, characteristics and applications of ANN, single layer network, Perceptron training algorithm, Linear separability, Widrow & Hebb's learning rule/Delta rule, ADALINE, MADALINE, AI v/s ANN. Introduction of MLP, different activation functions, Error back propagation algorithm, derivation of BBPA, momentum, limitation, characteristics and application of EBPA

### Module III

Counter propagation network, architecture, functioning & characteristics of counter Propagation network, Hopfield/ Recurrent network, configuration, stability constraints, associative memory, and characteristics, limitations and applications. Hopfield v/s Boltzman machine. Adaptive Resonance Theory: Architecture, classifications, Implementation and training. Associative Memory.

### Module IV: Fuzzy Logic

Fuzzy set theory, Fuzzy set versus crisp set, Crisp relation & fuzzy relations, Fuzzy systems: crisp logic, fuzzy logic, introduction & features of membership functions, Fuzzy rule base system : fuzzy propositions, formation, decomposition & aggregation of fuzzy rules, fuzzy reasoning, fuzzy inference systems, fuzzy decision making & Applications of fuzzy logic.

### Module V: Genetic algorithm

Fundamentals, basic concepts, working principle, encoding, fitness function, reproduction, Genetic modeling: Inheritance operator, cross over, inversion & deletion, mutation operator, Bitwise operator, Generational Cycle, Convergence of GA, Applications & advances in GA, Differences & similarities between GA & other traditional methods.

## Examination Scheme:

Components	CT	H	V/S/O	AT	EE
Weightage (%)	10	8	7	5	70

## Text & References:

# MOBILE COMPUTING

Course Code: NCE6710

Credit Units : 03

## Course Objective:

The objective of this consortium is to shape and expand a full-scale and sound mobile computing system market. To achieve this, cooperation is required of interests related to communication (network), computer hardware/software, system integrators (including service providers), and the media.

## Course Contents:

### Module I: Introduction to Personal Communications Services (PCS)

PCS Architecture, Mobility management, Networks signaling.

Global System for Mobile Communication (GSM) system overview: GSM Architecture, Mobility management, Network signaling.

### Module II: General Packet Radio Services (GPRS) & Wireless Application Protocol (WAP)

GPRS Architecture, GPRS Network Nodes.

Mobile Data Communication: WLANs (Wireless LANs) IEEE 802.11 standard, Mobile IP.

Wireless Application Protocol (WAP): The Mobile Internet standard, WAP Gateway and Protocols, wireless mark up Languages (WML).

### Module III: Third Generation (3G) Mobile Services

Introduction to International Mobile Telecommunications 2000 (IMT 2000) vision, Wideband Code Division Multiple Access (W-CDMA), and CDMA 2000, Quality of services in 3G.

Wireless Local Loop(WLL): Introduction to WLL Architecture, wireless Local Loop Technologies.

### Module IV: Global Mobile Satellite Systems

Global Mobile Satellite Systems; case studies of the IRIDIUM and GLOBALSTAR systems.

### Module V: Enterprise Networks

Introduction to Virtual Networks, Blue tooth technology, Blue tooth Protocols. Advanced techniques in mobile computing.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# GRID COMPUTING

Course Code: NCE6711

Credit Units : 03

## Course Objective:

Grid computing (or the use of a *computational grid*) is applying the resources of many computers in a network to a single problem at the same time - usually to a scientific or technical problem that requires a great number of computer processing cycles or access to large amounts of data. The major objective of this course is to provide a sound foundation to the students on the concepts, percepts and practices in a field that is of immense concern to the industry and business.

## Course Contents:

### Module I: Introduction-Cluster to grid computing

Cluster computing models, Grid models, Mobile grid models, Applications.

**Parset: System independent parallel programming on distributed systems:** Motivation and introduction, Semantics of the parset construct, Expressing parallelism through parsets, Implementing parsets on a loosely coupled distributed system.

**Anonymous remote computing model:** Introduction, Issues in parallel computing on interconnected workstations, Existing distributed programming approaches, The arc model of computation, The two tired arc language constructs, Implementation

### Module II: Integrating task parallelism with data parallelism

Introduction and motivation, A model for integrating task parallelism into data parallel programming platforms, Integration of the model into ARC, Design and implementation applications, performance analysis, guidelines for composing user programs, related work

**Anonymous remote computing and communication model:** Introduction, Location in dependent inter task communication with DP, DP model of iterative grid computations, Design and implementation of distributed pipes, Case study, and Performance analysis.

### Module III: Parallel programming model on CORBA

Introduction, Existing works, notion of concurrency, system support implementation performance, suitability of CORBA: introspection.

**Grid computing model:** Introduction, a parallel computing model over grids, Design and implementation of the model, Performance studies, Related work.

### Module IV: Introducing mobility into anonymous remote computing and communication model

Introduction, issues in mobile clusters and parallel computing on mobile clusters, model overview, model computation model, implementation, performance.

### Module V: Parallel Simulated Annealing algorithms

Introduction, Simulated annealing (SA) Technique, Clustering algorithm for simulated annealing (SA), Combination of genetic algorithm and simulated annealing (SA) algorithm

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# TERM PAPER

Course Code: NCE6731

Credit Units : 02

A term (or research) paper is primarily a record of intelligent reading in several sources on a particular subject.

The students will choose the topic at the beginning of the session in consultation with the faculty assigned. The progress of the paper will be monitored regularly by the faculty. At the end of the semester the detailed paper on the topic will be submitted to the faculty assigned. The evaluation will be done by Board of examiners comprising of the faculties.

## GUIDELINES FOR TERM PAPER

The procedure for writing a term paper may consist of the following steps:

1. Choosing a subject
2. Finding sources of materials
3. Collecting the notes
4. Outlining the paper
5. Writing the first draft
6. Editing & preparing the final paper

### 1. Choosing a Subject

The subject chosen should not be too general.

### 2. Finding Sources of Materials

- a) The material sources should be not more than 10 years old unless the nature of the paper is such that it involves examining older writings from a historical point of view.
- b) Begin by making a list of subject-headings under which you might expect the subject to be listed.
- c) The sources could be books and magazine articles, news stories, periodicals, scientific journals etc.

### 3. Collecting the Notes

Skim through sources, locating the useful material, then make good notes of it, including quotes and information for footnotes.

- a) Get facts, not just opinions. Compare the facts with author's conclusion.
- b) In research studies, notice the methods and procedures, results & conclusions.
- c) Check cross references.

### 4. Outlining the paper

- a) Review notes to find main sub-divisions of the subject.
- b) Sort the collected material again under each main division to find sub-sections for outline so that it begins to look more coherent and takes on a definite structure. If it does not, try going back and sorting again for main divisions, to see if another general pattern is possible.

### 5. Writing the first draft

Write the paper around the outline, being sure that you indicate in the first part of the paper what its purpose is. You may follow the following:

- a) statement of purpose
- b) main body of the paper
- c) statement of summary and conclusion

Avoid short, bumpy sentences and long straggling sentences with more than one main idea.

### 6. Editing & Preparing the final Paper

- a) Before writing a term paper, you should ensure you have a question which you attempt to answer in your paper. This question should be kept in mind throughout the paper. Include only information/ details/ analyses of relevance to the question at hand. Sometimes, the relevance of a particular section may be clear to you but not to your readers. To avoid this, ensure you briefly explain the relevance of every section.
- b) Read the paper to ensure that the language is not awkward, and that it "flows" properly.
- c) Check for proper spelling, phrasing and sentence construction.

- d) Check for proper form on footnotes, quotes, and punctuation.
- e) Check to see that quotations serve one of the following purposes:
  - (i) Show evidence of what an author has said.
  - (ii) Avoid misrepresentation through restatement.
  - (iii) Save unnecessary writing when ideas have been well expressed by the original author.
- f) Check for proper form on tables and graphs. Be certain that any table or graph is self-explanatory.

Term papers should be composed of the following sections:

- 1) Title page
- 2) Table of contentsIntroduction
- 3) Review
- 4) Discussion&Conclusion
- 5) References
- 6) Appendix

Generally, the introduction, discussion, conclusion and bibliography part should account for a third of the paper and the review part should be two thirds of the paper.

### **Discussion**

The discussion section either follows the results or may alternatively be integrated in the results section. The section should consist of a discussion of the results of the study focusing on the question posed in the research paper.

### **Conclusion**

The conclusion is often thought of as the easiest part of the paper but should by no means be disregarded. There are a number of key components which should not be omitted. These include:

- a) summary of question posed
- b) summary of findings
- c) summary of main limitations of the study at hand
- d) details of possibilities for related future research

### **Reference**

From the very beginning of a research project, you should be careful to note all details of articles gathered.

The bibliography should contain ALL references included in the paper. References not included in the text in any form should NOT be included in the bibliography.

The key to a good bibliography is consistency. Choose a particular convention and stick to this.

### **Conventions**

Monographs

Crystal, D. (2001), Language and the internet. Cambridge: Cambridge University Press.

### **Edited volumes**

Gass, S./Neu, J. (eds.) (1996), Speech acts across cultures. Challenges to communication in a second language. Berlin/ NY: Mouton de Gruyter.

[(eds.) is used when there is more than one editor; and (ed.) where there is only one editor. In German the abbreviation used is (Hrsg.) for Herausgeber].

### **Edited articles**

Schmidt, R./Shimura, A./Wang, Z./Jeong, H. (1996), Suggestions to buy: Television commercials from the U.S., Japan, China, and Korea. In: Gass, S./Neu, J. (eds.) (1996), Speech acts across cultures. Challenges to communication in a second language. Berlin/ NY: Mouton de Gruyter: 285-316.

### **Journal articles**

McQuarrie, E.F./Mick, D.G. (1992), On resonance: A critical pluralistic inquiry into advertising rhetoric. Journal of consumer research 19, 180-197.

### **Electronic book**

Chandler, D. (1994), Semiotics for beginners [HTML document]. Retrieved [5.10.'01] from the World

Wide Web, <http://www.aber.ac.uk/media/Documents/S4B/>.

### **Electronic journal articles**

Watts, S. (2000) Teaching talk: Should students learn 'real German'? [HTML document]. German as a Foreign Language Journal [online] 1. Retrieved [12.09.'00] from the World Wide Web, <http://www.gfl-journal.com/>.

### **Other websites**

Verterhus, S.A. (n.y.), Anglicisms in German car advertising. The problem of gender assignment [HTML document]. Retrieved [13.10.'01] from the World Wide Web, <http://olaf.hiof.no/~sverrev/eng.html>.

### **Unpublished papers**

Takahashi, S./DuFon, M.A. (1989), Cross-linguistic influence in indirectness: The case of English directives performed by native Japanese speakers. Unpublished paper, Department of English as a Second Language, University of Hawai'i at Manoa, Honolulu.

### **Unpublished theses/ dissertations**

Möhl, S. (1996), Alltagssituationen im interkulturellen Vergleich: Realisierung von Kritik und Ablehnung im Deutschen und Englischen. Unpublished MA thesis, University of Hamburg.

Walsh, R. (1995), Language development and the year abroad: A study of oral grammatical accuracy amongst adult learners of German as a foreign language. Unpublished PhD dissertation, University College Dublin.

### **Appendix**

The appendix should be used for data collected (e.g. questionnaires, transcripts, ...) and for tables and graphs not included in the main text due to their subsidiary nature or to space constraints in the main text.

### **Assessment Scheme:**

#### **Continuous Evaluation:**

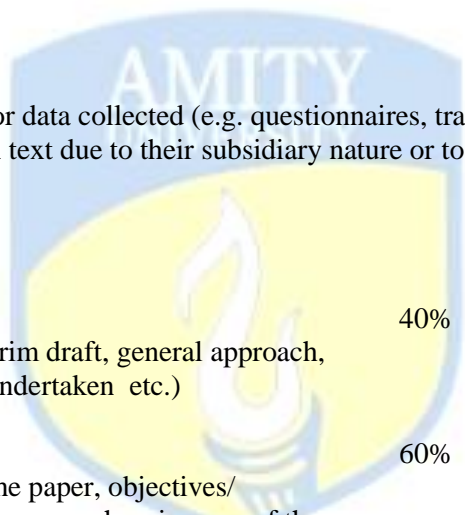

(Based on abstract writing, interim draft, general approach, research orientation, readings undertaken etc.)

40%

#### **Final Evaluation:**

(Based on the organization of the paper, objectives/ problem profile/ issue outlining, comprehensiveness of the research, flow of the idea/ ideas, relevance of material used/ presented, outcomes vs. objectives, presentation/ viva etc.)

60%

# PROJECT

**Course Code: NCE6732**

**Credit Units : 02**

## **Course Objective:**

The objective of this course is to provide practical training on some live/demo projects that will increase capability to work on actual problem in industry. It will be an in house training on some latest software which is in high demand in market. This training will be designed such that it will be useful for their future employment in industry.

## **STUDENT ASSESSMENT RECORD (SAR)**

Record to be maintained by project guide.

- 1. Project Tools (Hardware/ Software) used for implementation.**
- 2. Project Evaluation & Execution.**

## **Examination Scheme:**

<b>Components</b>	<b>V</b>	<b>S</b>	<b>R</b>	<b>FP</b>
<b>Weightage (%)</b>	20	20	20	40

V – Viva, S – Synopsis, FP – Final Presentation, R - Report

## **WORKSHOP/ INDEPENDENT STUDY**

**Course Code: NCE6733**

**Credit Units : 02**

This is an elective, self-directed course to investigate emerging areas of IT and Computer Science like Mobile Operating System, Cloud Computing, or from Current Research Areas etc. The primary goal of the course is to provide students with research exploration of a specific topic of interest to the individual student under the advisement of an instructor who will monitor and critique the student's progress.

Independent study provides students with the opportunity to work one-on-one with a Faculty on a particular topic. The student and faculty should discuss the aims and content of the study and present the proposal to Head of Department. The independent study proposal should include the study's title, theme, readings, work to be submitted, and syllabus. Faculty and student should meet for a minimum number of 2 hours per week. Student will give a seminar after completion of study.

## Syllabus - Eighth Semester

### MATHEMATICAL FOUNDATION FOR CYBER SECURITY

Course Code: NCE6801

Credit Units : 03

#### Course Contents:

##### Module-I:

Integer arithmetic, modular arithmetic, matrices, Linear Congruence: Definition – Basic properties of congruence, Divisibility - Greatest common divisor, equivalence classes, residue classes.

##### Module-II:

Primes, primality testing, factorization, Chinese remainder theorem, quadratic congruence, exponentiation and logarithm.

##### Module-III:

Algebraic structures: groups, fields, rings, Modulo groups - Primitive roots - Discrete logarithms. Finite fields –  $GF(p)$ ,  $GF(2^n)$  – polynomial arithmetic

##### Module-IV:

SHANNON'S THEORY: Introduction, Elementary Probability Theory, Perfect Secrecy, Entropy, Properties of Entropy, Spurious Keys & Unicity distance, Product Cryptosystems

##### Module-V:

PSEUDORANDOM NUMBER GENERATION: Introduction and examples Indistinguishability of Probability Distributions - Next Bit Predictors - The Blum-Blum-Shub Generator – Security of the BBS Generator.

#### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

#### Text & References:

# NETWORK AND WIRELESS SECURITY

Course Code: NCE6802

Credit Units : 03

## Course Contents:

### Module-I: INTRODUCTION

Network concepts – Threats in networks – Network security controls – Importance of security – Threat models – Security concepts – Common mitigation methods

**Why is Wireless Different?** Introduction ,Protecting the Means Of Communication Protecting Privacy, Promoting Safety ,The Personal and the Public ,Shaking Up the Status Quo ,Understanding Wireless Forecasts ,Reasonable Degrees of Security, Regulatory Environments and Issues ,Security-Related Regulations ,Security Related Market Factors, Guidelines for Security Measures, Cellular Networks and Bearer Technologies ,First-Generation Wireless (1G), Second-Generation Wireless (2G), Spread Spectrum ,Code Division Multiple Access (CDMA) ,Time Division Multiple Scss (TDMA) ,Global System for Mobile Communications (GSM) ,Third-Generation Wireless (3G) ,Short Message Service (SMS) ,Fourth-Generation Wireless (4G)

### Module-II: The Wireless Local Area Network (WLAN)

Wireless Transmission Media ,Infrared Systems ,Narrowband Radio Systems ,Wideband Radio Systems: SpreadSpectrum ,Frequency-Hopping Spread Spectrum (FHSS) ,Direct-Sequence Spread Spectrum (DSSS) ,WLAN Products and Standards—Today's Leaders? ,802.11 Security? ,IEEE 802.11b ,Securing WLANs ,Eavesdropping ,Unauthorized Access ,Interference and Jamming ,Physical Threats ,Countermeasures ,Frequency-Hopping Spread Spectrum (FHSS), Direct-Sequence Spread Spectrum (DSSS) ,Infrared (IR) ,Narrowband ,The Infamous WEP ,Encryption ,Authentication ,Wired Equivalency Protocol Flaws Too Public ,Other Authentication Techniques ,Physical Security.

### Module-III: Wireless Application Protocol(WAP)

Comparison of the TCP/IP, OSI, and WAP Models, How WAP Works ,The Security Status of WAP ,Viruses ,Authorization ,Non-repudiation ,Authentication ,Secure Sessions ,Security Products ,Securant Technologies ClearTrust Control ,WAP Security Architecture ,Marginal Security ,Wireless Access to the Internet ,Wireless Middleware

### Module-IV: Wireless Transport Layer Security (WTLS)

Secure Socket Layer, Record Protocol, SSL Handshake Protocol ,Transport Layer Security, Advantages and Disadvantages of SSL/TLS ,Netscape ,Microsoft ,Entrust ,EAP-TLS ,Alternatives to SSL/TLS , IP Security (IPSec) ,Authentication Header Protocol (AH) ,Encapsulating Security Payload (ESP) ,Transport and Tunnel Modes, Secure Shell (SSH) ,SSH Transport Layer Protocol ,SSH Versus TLS Implementations ,Light Extensible Authentication Protocol (LEAP) ,Wireless Transport Layer Security and WAP ,Understanding Wireless Transport Layer Security ,WTLS Handshake Protocol ,WTLS Alert Protocol ,WTLS Change Cipher Protocol ,Pros and Cons of WTLS ,WTLS Vulnerabilities ,Implementations of WTLS

### Module-V: Bluetooth Security

Bluetooth Basic Specifications ,Bluetooth Technology, Bluetooth Specification Development ,Design Decisions ,Piconets ,Bluetooth Security Architecture ,Scatternets ,The Bluetooth stack ,Security Functions at the Baseband Layer ,Security Functions of the Service Discovery Protocol ,Security Functions at the Link Layer ,Frequency-Hopping ,

Channel Establishment ,Security Manager ,Authentication,Authentication with the SAFER1 Block Cipher ,Encryption ,Encryption Modes ,Key Length Negotiation ,Encryption With the E0 Stream Cipher ,Threats to Bluetooth Security ,Jamming ,Bluetooth holes

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

**Text & References:**

# CYBER CRIME AND IT LAW

Course Code: NCE6803

Credit Units : 03

## Course Contents:

### **Module-I: Power of Arrest Without Warrant Under the IT Act, 2000: A Critique**

Crimes of this Millennium, Section 80 of the IT Act, 2000 – A Weapon or a Farce, Forgetting the Line Between Cognizable and Non-Cognizable Offences, Necessity of Arrest without Warrant from Any Place, Public or Otherwise, Checks and Balances Against Arbitrary Arrests, Arrest for “About to Commit” an Offence Under the IT Act: A Tribute to Draco, Arrest, But No Punishment!

### **Module-II: Cyber Crime and Criminal Justice: Penalties, Adjudication and Appeals Under the IT Act, 2000**

Concept of ‘Cyber Crime’ and the IT Act, 2000, Hacking, Teenage Web vandals, Cyber Fraud and Cyber cheating, Virus on the Internet, Defamation, Harassment and E-mail Abuse, Cyber Pornography, Other IT Act Offences, Monetary Penalties, Adjudication and Appeals Under IT Act, 2000, Network Service Providers, Jurisdiction and cyber Crimes, Nature of Cyber Criminality, Strategies to Tackle Cyber Crime and Trends, Criminal Justice in India and Implications on Cyber Crime.

### **Module-III: Jurisdiction in the Cyber World**

Questioning the Jurisdiction and Validity of the Present Law of Jurisdiction, Civil Law of Jurisdiction in India, Cause of Action, Jurisdiction and the Information Technology Act, 2000, Foreign Judgments in India, Place of Cause of Action in Contractual and IPR Disputes, Exclusion Clauses in Contracts, Abuse of Exclusion Clauses, Objection of Lack of Jurisdiction, Misuse of the Law of Jurisdiction, Legal Principles on Jurisdiction in the United States of America, Jurisdictional Disputes W.R.T. the Internet in the United States of America.

### **Module-IV: Battling Cyber Squatters and copyright Protection in the Cyber World**

Concept of Domain Name and Reply to Cyber Squatters, Meta-Tagging, Legislative and Other Innovative Moves Against Cyber Squatting, The Battle Between Freedom and Control on the Internet, Works in Which Copyright Subsists and Meaning of Copyright, Copyright Ownership and Assignment, Licence of Copyright, Copyright Term and Respect for Foreign Works, Copyright Infringement, Remedies and Offences, Copyright Protection of Content on the Internet; Copyright Notice, Disclaimer and Acknowledgement, Downloading for Viewing Content on the Internet, Hyper-linking and Framing, Liability of ISPs for Copyright violations in the Cyber World: Legal Developments in the US, Napster and its Cousins: A Revolution on the Internet but a Crisis for Copyright Owners, Computer Software Piracy.

### **Module-V: Protection of Cyber Consumers in India**

Are Cyber consumers Covered Under the Consumer Protection Act, Goods and Services, Consumer Complaint, Defect in Goods and Deficiency in Services, Restrictive and Unfair Trade Practices, Instances of Unfair Trade Practices, Reliefs Under CPA, Beware Consumers, Consumer Foras, Jurisdiction and Implications on Cyber Consumers in India, Applicability of CPA to Manufacturers, Distributors, Retailers and Service Providers Based in Foreign Lands Whose Goods are Sold or Services Provided to a consumer in India.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# CYBER CRIME INVESTIGATION & FORENSICS

Course Code: NCE6804

Credit Units : 03

## Course Contents:

### Module-I: Computer Forensics and Investigations as a Profession, Understanding

Computer Forensics ,Computer Forensics Versus Other Related Disciplines ,A Brief History of Computer Forensics, Understanding Case Law ,Developing Computer Forensics Resources ,Preparing for Computer Investigations, Understanding Law Enforcement Agency Investigations, Following the Legal Processes, Understanding Corporate Investigations, Establishing Company Policies, Displaying Warning Banners ,Designating an Authorized Requester, Conducting Security Investigations, Distinguishing Personal and Company Property ,Maintaining Professional Conduct.

### Module-II: Understanding Computer Investigations

Preparing a Computer Investigation, An Overview of a Computer Crime ,An Overview of a Company Policy Violation ,Taking a Systematic Approach ,Assessing the Case ,Planning Your Investigation ,Securing Your Evidence ,Procedures for Corporate High-Tech Investigations, Employee Termination Cases, Internet Abuse Investigations-mail Abuse Investigations, Attorney-Client Privilege Investigations, Media Leak Investigations, Industrial Espionage Investigations, Interviews and Interrogations in High-Tech Investigations ,Understanding Data Recovery Workstations and Software, Setting Up Your Workstation for Computer Forensics ,Conducting an Investigation, Gathering the Evidence ,Understanding Bit-stream Copies ,Acquiring an Image of Evidence Media, Using ProDiscover Basic to Acquire a USB Drive ,Analyzing Your Digital Evidence, Completing the Case, Critiquing the Case

### Module-III: Data Acquisition

Understanding Storage Formats for Digital Evidence, Raw Format, Proprietary Formats, Advanced Forensic Format ,Determining the Best Acquisition Method, Contingency Planning for Image Acquisitions ,Using Acquisition Tools ,Windows XP Write-Protection with USB Devices, Acquiring Data with a Linux Boot CD, Capturing an Image with ProDiscover Basic ,Capturing an Image with AccessData FTK Imager ,Validating Data Acquisitions ,Linux Validation Methods, Windows Validation Methods ,Performing RAID Data Acquisitions ,Understanding RAID ,Acquiring RAID Disks ,Using Remote Network Acquisition Tools ,Remote Acquisition with ProDiscover, Remote Acquisition with EnCase Enterprise , Remote Acquisition with R-Tools R-Studio ,Remote Acquisition with WetStone Livewire, Remote Acquisition with F-Response ,Remote Acquisition with Runtime Software ,Using Other Forensics Acquisition Tools, SnapBack DataArrest ,NTI SafeBack, DIBS USA RAID ,Look Investigator I imager ,ASRData SMART ,Australian Department of Defence PyFlag,

### Module-IV: Processing Crime and Incident Scenes

Identifying Digital Evidence, Understanding Rules of Evidence ,Collecting Evidence in Private-Sector Incident Scenes, Processing Law Enforcement Crime Scenes ,Understanding Concepts and Terms Used in Warrants ,Preparing for a Search, Identifying the Nature of the Case, Identifying the Type of Computing System, Determining Whether You Can Seize a Computer, Obtaining a Detailed Description of the Location, Determining Who Is in Charge, Using Additional Technical Expertise ,Determining the Tools You Need ,Preparing the Investigation Team, Securing a Computer Incident or Crime Scene ,Seizing Digital Evidence at the Scene ,Preparing to Acquire Digital Evidence, Processing an Incident or Crime Scene ,Processing Data Centers with RAID Systems ,Using a Technical Advisor, Documenting Evidence in the Lab, Processing and Handling Digital Evidence ,Storing Digital Evidence, Evidence Retention and Media Storage Needs, Documenting Evidence ,Obtaining a Digital Hash,

Reviewing a Case ,Sample Civil Investigation ,Sample Criminal Investigation ,Reviewing Background Information for a Case ,Identifying the Case Requirements, Planning the Investigation ,Conducting the Investigation: Acquiring Evidence withAccessData FTK

### **Module-V: Current Computer Forensics Tools,**

Evaluating Computer Forensics Tool Needs ,Types of Computer Forensics Tools ,Tasks Performed by Computer Forensics Tools, Tool Comparisons ,Other Considerations for Tools ,Computer Forensics Software Tools, Command-Line Forensics Tools, UNIX/Linux Forensics Tools ,Other GUI Forensics Tools, Computer Forensics Hardware Tools, Forensic Workstations,

Using a Write-Blocker, Recommendations for a Forensic Workstation,Validating and Testing Forensics Software ,Using National Institute of Standards and Technology (NIST) Tools ,Using Validation Protocols

### **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

### **Recommended Books:**

# INTRUSION DETECTION AND PREVENTION SYSTEM

Course Code: NCE6805

Credit Units : 03

## Course Contents:

**Module-I: Network Attacks:** Attack Taxonomies, Probes: IPSweep and PortSweep, NMap, MScan, SAINT, Satan Privilege Escalation Attacks: Buffer Overflow Attacks, Misconfiguration Attacks, Race-condition Attacks, Man-in-the-Middle Attacks. Social Engineering Attacks. Denial of Service (DoS) and Distributed Denial of Service (DDoS) Attacks: Detection Approaches for DoS and DDoS Attacks, Prevention and Response for DoS and DDoS Attacks, Examples of DoS and DDoS Attacks. Worms Attacks: Modeling and Analysis of Worm Behaviors, Detection and Monitoring of Worm Attacks, Worms Containment, Examples of Well Known Worm Attacks. Routing Attacks: OSPF Attacks, BGP Attacks.

**Module-II: Detection Approaches:** Misuse Detection: Pattern Matching, Rule-based Techniques, State-based Techniques, Techniques based on Data Mining Anomaly Detection: Advanced Statistical Models, Rule based Techniques, Biological Models, Learning Models Specification-based Detection, Hybrid Detection

**Module-III: Theoretical Foundation of Detection:** Taxonomy of Anomaly Detection Systems, Fuzzy Logic, Bayes Theory, Artificial Neural Networks, Support Vector Machine (SVM), Evolutionary Computation, Association Rules, Clustering, Signal Processing Techniques Based Models, Comparative Study of Anomaly Detection Techniques.

**Module-IV: Architecture and Implementation:** Centralized, Distributed, Cooperative Intrusion Detection, Alert Management and Correlation: Data Fusion, Alert Correlation, Cooperative Intrusion Detection

## Module-V: Evaluation Criteria & Intrusion Response:

Accuracy, Performance, Completeness, Timely Response, Adaptation and Cost-Sensitivity, Intrusion Tolerance and Attack Resistance, Test, Evaluation and Data Sets.

Response Type, Response Approach, Survivability and Intrusion Tolerance, case study of any commercial IDS.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

## Recommended Books:

- Ali A. Ghorbani, Wei Lu, "Network Intrusion Detection and Prevention: Concepts and Techniques", Springer, 2010.
- Carl Enrolf, Eugene Schultz, Jim Mellander, "Intrusion detection and Prevention", McGraw Hill, 2004

- Ankit Fadia and Mnu Zacharia, "Intrusion Alert", Vikas Publishing house Pvt., Ltd, 2007.
- Earl Carter, Jonathan Hogue, "Intrusion Prevention Fundamentals", Pearson Education, 2006.

## CRYPTOGRAPHY FOUNDATION LAB

Course Code: NCE6806

Credit Units : 01

### Course Contents:

- Program to implement division theorem
- checking number is prime or composite using simple logic
- Implement Miller Rabin Primality Algorithm
- Implement Euclid and Extended Algorithm.
- Implement Chinese Remainder Theorem
- Implement Baby Step Giant Step Algorithm.
- Implement at least 2 algorithms for random number generation. One is Blum Blum Shub.
- Implement Modular Exponentiation Algorithm
- Implement algorithm for modular linear equation solver.
- Implement Fermat's and Euler's theorem.
- Implement Fermat's Factorization method.
- Few programs based on Probability Theory and theorems

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## WEB SECURITY LAB

**Course Code: NCE6807**

**Credit Units : 01**

Exercises related to SQL injection attacks, XSS attacks, writing java script files for launching and preventing XSS attacks, Stored and Reflected XSS Attacks, URL interpretation attack, input validation attack, buffer overflow attacks, impersonation attacks, password-based attacks, denial of service attacks, session hijacking

Use Apache Web Server or Xamp Server and create a temporary site for performing attacks.

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## NETWORK SECURITY LAB

Course Code: NCE6808

Credit Units : 01

### Course Contents:

- Learn to install wine / virtual box/vmware or any other equivalent software on the host os.
- Perform an experiment to grab a banner with telnet and perform the task using netcat utility.
- Banner grabbing is a technique to determine which application or service is running on the specified port by attempting to make a connection to this host.
- Perform an experiment for port scanning with nmap, superscan or any other software.
- Using nmap 1)find open ports on a system 2) find the machines which are active 3)find the version of remote os on other systems 4) find the version of s/w installed on other system
- Perform an experiment on active and passive fingerprinting using xprobe2 and nmap.
- Perform an experiment to demonstrate how to sniff for router traffic by using the tool wireshark
- Perform an experiment how to use dumpsec.
- Perform an wireless audit of an access point / router and decrypt wep and wpa.
- Perform an experiment to sniff traffic using arp poisoning.
- Generating password hashes with openssl

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# RESEARCH METHODOLOGY AND TECHNICAL REPORT WRITING

**Course Code: NCE6809**

**Credit Units : 02**

## **Course Objectives:**

The course will enhance scientific , technical and research writing skills and impart knowledge about various stages of research process, statistical analysis, statistical tests and their applications in statistical decision making.

## **Course Contents:**

**Module I:** Introduction to research: Definition, motivation, need, objectives, significance and characteristics of research; types of research; steps in research process; planning a research proposal; literature review, web searching.

**Module II:** Population and sample, parameter and statistic, sampling and data collection, sampling design: steps, types, sample size, sampling methods, large and small samples, primary and secondary data, data processing and analysis. Sample surveys and questionnaire designing, scaling techniques.

**Module III:** Dependent and independent variables, univariate, bivariate and multivariate analysis, means-arithmetic, geometric and harmonic; measure of dispersion of data, standard deviation, variance, coefficient of variation and degree of freedom. Hypothesis testing: null hypothesis and alternate hypothesis, errors in hypothesis testing, significance and confidence levels, parametric tests and non-parametric tests, one-tailed and two-tailed tests, analysis of variance. Regression analysis and curve fitting, method of least-squares, explained and unexplained variations, coefficient of correlation, coefficient of determination.

**Module IV:** Technical/scientific/research report writing: structure and components of scientific reports, formats of dissertations, research report, report writing skills, report preparation, referencing , bibliography and footnotes. Making presentation-use of visual aids and PPTs. Publication of research papers, citations,. Intellectual property rights and copy rights, plagiarism, patents and patent laws, commercialization and ethical issues.

## **Examination Scheme:**

Attendance	Assignment/Library consultation / Thesis writing	Class test	Final Exam	Total
5	15	10	70	100

## **Text Books:**

- Blake, G. and Bly, R.W. 1993, The Elements of Technical Writing. MacMillan, New York
- Booth, V. 1981. Writing a Scientific Paper and Speaking at Scientific Meetings. The Biochemical Society, London
- Chawla,D and Sondhi, N. 2016, Research Methodology- Concepts and Cases. Vikas Publishing House Pvt Ltd. New Delhi
- Kothari, C.R.2008. Research Methodology- Methods and Techniques, 2<sup>nd</sup>.ed. New Age International Publishers, New Delhi.

## **Reference Books:**

- Geode, Millian J.& Paul K. Hatl, Methods in Research, McGraw Hills, New Delhi.
- Montgomery, Douglas C.(2007), 5<sup>th</sup> Ed. Design and Analysis of Experiments, Wiley India.
- Panneerselvam, R.2009. Research Methodology, PHI Learning Pvt.Ltd., New Delhi-110001
- Ranjit Kumar 2009. Research Methodology- A step –by- step Guide for beginners; 2<sup>nd</sup> ed. Dorling Kindersley (India) Pvt. Ltd. Patpargang, Delhi- 110092

# MINOR PROJECT

Course Code: NCE6837

Credit Units : 08

## GUIDELINES FOR PROJECT FILE

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critiqued by the faculty guide and corrected by the student at each stage.

The File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation.

### **In general, the File should be comprehensive and include**

A short account of the activities that were undertaken as part of the project;

A statement about the extent to which the project has achieved its stated goals.

A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;

Any activities planned but not yet completed as part of the project, or as a future initiative directly resulting from the project;

Any problems that have arisen that may be useful to document for future reference.

### ➤ **Report Layout**

The report should contain the following components:

#### ➤ **Title or Cover Page**

The title page should contain the following information: Project Title; Student's Name; Course; Year; Supervisor's Name.

#### ➤ **Acknowledgements(optional)**

Acknowledgment to any advisory or financial assistance received in the course of work may be given.

#### ➤ **Abstract**

A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project

#### ➤ **Table of Contents**

Titles and subtitles are to correspond exactly with those in the text.

#### ➤ **Introduction**

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

#### ➤ **Materials and Methods**

This section should aim at experimental designs, materials used. Methodology should be mentioned in details including modifications if any.

### ➤ **Results and Discussion**

Present results, discuss and compare these with those from other workers, etc. In writing these section, emphasis should be given on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary never write in “point” form.

### ➤ **Conclusion**

A conclusion should be the final section in which the outcome of the work is mentioned briefly.

### ➤ **Future prospects**

### ➤ **Appendices**

The Appendix contains material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

### ➤ **References / Bibliography**

This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

## **Examples**

### **For research article**

Voravuthikunchai SP, Lortheeranuwat A, Ninrprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichia coli* O157: H7. *Clin Microbiol Infect*, **8** (suppl 1): 116–117.

### **For book**

Kowalski,M.(1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), **7**: 63-67

## **ASSESSMENT OF THE PROJECT FILE**

Essentially, marking will be based on the following criteria: the quality of the report, the technical merit of the project and the project execution.

Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project.

Project execution is concerned with assessing how much work has been put in.

The File should fulfill the following *assessment objectives*:

### **Range of Research Methods used to obtain information**

### **Execution of Research**

**Data Analysis**

Analyse Quantitative/ Qualitative information

Control Quality

**Draw Conclusions****Examination Scheme:**

Dissertation	50
Viva Voce	50

# BIG DATA SYSTEMS

Course Code: NCE6810

Credit Units : 03

## Course Contents:

**Module-I: A NEW PARADIGM FOR BIG DATA :** Scaling with a traditional database NoSQL is not a panacea, First principles, Desired properties of a Big Data system , The problems with fully incremental architectures, Lambda Architecture, Recent trends in technologyExample application: SuperWebAnalytics.com, data model for big data: , data model for big data: illustration

**Module-II: Hadoop. & MapReduce :** Data! ,Data Storage and Analysis ,Comparison with Other Systems ,RDBMS ,Grid Computing ,Volunteer Computing ,A Brief History of Hadoop ,Apache Hadoop and the Hadoop Ecosystem , Hadoop Releases ,A Weather Dataset, Data Format ,Analyzing the Data with Unix Tools , Analyzing the Data with Hadoop ,Map and Reduce ,Java MapReduce ,Scaling Out ,Data Flow , Combiner Functions ,Running a Distributed MapReduce Job , Hadoop Streaming ,Ruby ,Python, Hadoop Pipes ,Compiling and Running.

**Module-III: The Hadoop Distributed Filesystem:** The Design of HDFS ,HDFS Concepts ,Blocks ,Namenodes and Datanodes ,HDFS Federation ,HDFS High-Availability ,The Command-Line Interface ,Basic Filesystem Operations ,Hadoop Filesystems , Interfaces ,The Java Interface ,Reading Data from a Hadoop URL ,Reading Data Using the FileSystem API ,Writing Data ,Directories ,Querying the Filesystem ,Deleting Data ,Data Flow ,Anatomy of a File Read ,Anatomy of a File Write ,Coherency Model ,Parallel Copying with distcp ,Keeping an HDFS Cluster Balanced ,Hadoop Archives ,Using Hadoop Archives ,Limitations ,

**Module-IV: Hadoop I/O:** Data Integrity ,Data Integrity in HDFS ,LocalFileSystem ,ChecksumFileSystem ,Compression ,Codecs , Compression and Input Splits ,Using Compression in MapReduce ,Serialization ,The Writable Interface , Writable Classes ,Implementing a Custom Writable ,Serialization Frameworks ,Avro ,File-Based Data Structures ,SequenceFile ,MapFile.

**Module-V: Developing a MapReduce Application:** The Configuration API ,Combining Resources ,Variable Expansion ,Configuring the Development Environment ,Managing Configuration ,GenericOptionsParser, Tool, and ToolRunner ,Writing a Unit Test ,Mapper ,Reducer ,Running Locally on Test Data ,Running a Job in a Local Job Runner , Testing the Driver ,Running on a Cluster ,Packaging ,Launching a Job ,The MapReduce Web UI ,Retrieving the Results ,Debugging a Job ,Hadoop Logs ,Remote Debugging ,Tuning a Job ,Profiling Tasks ,MapReduce Workflows ,Decomposing a Problem into MapReduce Jobs ,JobControl ,Apache Oozie.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

## Recommended books:

- “Big Data: Principles and best practices of scalable realtime data systems”,Nathan Matz, Manning Publications, 2015
- “Hadoop: The Definitive Guide: Storage and Analysis at Internet Scale” Tom White, Oreilly.
- “High-Performance Big-Data Analytics, Computing Systems and Approaches” Raj, P., Raman, A., Nagaraj, D., Duggirala, S.,Springer

# DISTRIBUTED SYSTEM SECURITY

Course Code: NCE6811

Credit Units : 03

## Course Contents:

### Module-I:

Introduction – Distributed Systems, Distributed Systems Security. Security in Engineering: Secure Development Lifecycle Processes - A Typical Security Engineering Process – Security Engineering Guidelines and Resources. Common Security Issues and Technologies: Security Issues, Common Security Techniques.

### Module-II:

Host-level Threats and Vulnerabilities: Transient code Vulnerabilities - Resident Code Vulnerabilities - Malware: Trojan Horse – Spyware - Worms/Viruses – Eavesdropping – Job Faults. Infrastructure-Level Threats and Vulnerabilities: Network-Level Threats and Vulnerabilities - Grid Computing Threats and Vulnerabilities – Storage Threats and Vulnerabilities – Overview of Infrastructure Threats and Vulnerabilities.

### Module-III:

Application-Level Threats and Vulnerabilities: Application-Layer Vulnerabilities –Injection Vulnerabilities - Cross-Site Scripting (XSS) - Improper Session Management - Improper Error Handling - Improper Use of Cryptography - Insecure Configuration Issues - Denial of Service - Canonical Representation Flaws - Overflow Issues. Service-Level Threats and Vulnerabilities: SOA and Role of Standards - Service-Level Security Requirements - Service-Level Threats and Vulnerabilities - Service-Level Attacks – Services Threat Profile.

### Module-IV:

Host-Level Solutions: Sandboxing – Virtualization - Resource Management - Proof-Carrying Code - Memory Firewall – Antimalware. Infrastructure-Level Solutions: Network-Level Solutions - Grid-Level Solutions - Storage-Level Solutions. Application-Level Solutions: Application-Level Security Solutions.

### Module-V:

Service-Level Solutions: Services Security Policy - SOA Security Standards Stack – Standards in Dept - Deployment Architectures for SOA Security - Managing Service-Level Threats - Compliance in Financial Services - SOX Compliance - SOX Security Solutions – Multilevel Policy-Driven Solution Architecture - Case Study: Grid - The Financial Application – Security Requirements Analysis. Future Directions – Cloud Computing Security – Security Appliances - Usercentric Identity Management - Identity-Based Encryption (IBE) - Virtualization in Host Security.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

**Recommended Books:**

- Abhijit Belapurkar, Anirban Chakrabarti and et al., “Distributed Systems Security: Issues. Processes and solutions”, Wiley, Ltd., Publication, 2009.
- Abhijit Belapurkar, Anirban Chakrabarti, Harigopal Ponnappalli, Niranjana Varadarajan, Srinivas Padmanabhuni and Srikanth Sundarajan, “Distributed Systems Security: Issues, Processes and Solutions”, Wiley publications, 2009.
- Rachid Guerraoui and Franck Petit, “Stabilization, Safety, and Security of Distributed Systems”, Springer, 2010.

# Syllabus - Ninth Semester

## BIOMETRIC SYSTEMS AND BIOMETRIC IMAGE PROCESSING

Course Code: NCE6901

Credit Units : 03

### Course Contents:

#### Module-I:

**Introduction:** Biometric fundamentals – Biometric technologies – Biometrics Vs traditional techniques – Characteristics of a good biometric system – Benefits of biometrics – Key biometric processes: verification, identification and biometric matching – Performance measures in biometric systems, FAR, FRR, FTE rate, EER and ATV rate, Applications of Biometric Systems, Security and Privacy Issues.

**Physiological Biometrics :** Leading technologies : Finger-scan – Facial-scan – Iris-scan – Voice-scan – components, working principles, competing technologies, strengths and weaknesses – Other physiological biometrics : Hand-scan, Retina-scan – components, working principles, competing technologies, strengths and weaknesses – Automated fingerprint identification systems.

#### Module-II:

**Behavioral Biometrics:** Leading technologies: Signature-scan – Keystroke scan – components, working principles, strengths and weaknesses.

**Privacy and Standards in Biometrics:** Assessing the Privacy Risks of Biometrics – Designing Privacy-Sympathetic Biometric Systems – Need for standards – different biometric standards.

#### Module-III:

**Fundamentals of Image Processing:** Digital Image representation - Fundamental steps in Image Processing Image Enhancement: The Spatial Domain Methods, The Frequency Domain Methods – Image Segmentation: Pixel Classification by Thresholding, Histogram Techniques, Smoothing and Thresholding - Gradient Based Segmentation: Gradient Image, Boundary Tracking, Laplacian Edge Detection.

#### Module-IV:

**Fingerprint Biometrics:** Fingerprint Patterns, Fingerprint Features, Fingerprint Image, width between two ridges - Fingerprint Image Processing - Minutiae Determination - Fingerprint Matching: Fingerprint Classification, Matching policies.

#### Module-V:

**Iris Biometrics:** Iris System Architecture, Definitions and Notations - Iris Recognition: Iris location, Doubly Dimensionless Projection, Iris code, Comparison - Coordinate System: Head Tilting Problem, Basic Eye Model, Searching Algorithm, Texture Energy Feature.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

**Recommended Books:**

- Anil K Jain, Patrick Flynn, Arun A Ross, “Handbook of Biometrics”, Springer, 2008
- Anil K Jain, Arun A Ross, Karthik Nandakumar, “Introduction to Biometrics”, Springer, 2011
- Rafael C.Gonzalez, Richard E.Woods, Steven L.Eddins, “Digital Image Processing”, Pearson Education, New Delhi, 2009

# SOFTWARE VULNERABILITY ANALYSIS

Course Code: NCE6902

Credit Units : 04

## Course Contents:

### Module-I: Introduction to Software Security

It's All about the Software, Dealing with Widespread Security Failures, Bugtraq, CERT Advisories, RISKS Digest, Technical Trends Affecting Software Security, The ilities, What is Security?, Isn't That Just Reliability?, Penetrate and Patch Is Bad, On Art and Engineering, Security Goals, Prevention, Traceability and Auditing, Monitoring, Privacy and Confidentiality, Multilevel Security, Anonymity, Authentication, Integrity, Know Your Enemy: Common Software Security Pitfalls, Software Project Goals, Conclusion. **Managing Software Security Risk:** An Overview of Software Risk Management for Security, The Role of Security Personnel, Software Security Personnel in the Life Cycle, Deriving Requirements, Risk Assessment, Design for Security, Implementation, Security Testing, A dose of Reality, Getting People to Think about Security, Software Risk management in Practice, When Development Goes Astray, When Security Analysis Goes Astray, The Common Criteria.

### Module-II: On Open Source and Closed Source

Security by Obscurity, Reverse Engineering, Code Obfuscation, Security for Shrink-Wrapped Software, Security by Obscurity Is No Panacea, The Flip Side: Open- Source Software, Is the "Many-Eyeballs Phenomenon" Real?. Why Vulnerability Detection Is Hard, Other Worries, On Publishing Cryptographic Algorithms, Two More Open-Source Fallacies, The Microsoft Fallacy, The Java Fallacy, An Example: GNU Mailman Security, More Evidence: Trojan Horses, To Open Source or Not to Open Source, Another Security Lesson from Buffer Overflows, Beating the Drum.

**Guiding Principles for Software Security:** Principle1: Secure the Weakest Link, Principle 2: Practice Defense in Depth, Principle 3: Fail Securely, Principle 4: Follow the Principle of Least Privilege, Principle 5: Compartmentalize, Principle 6: Keep It Simple, Principle 7: Promote Privacy, Principle 8: Remember That Hiding Secrets is Hard, Principle 9: Be Reluctant to Trust, Principle 10: Use Your Community Resources Conclusion.

### Module-III: Buffer Overflows & Access Control

What Is a Buffer Overflow?, Why Are Buffer Overflows a Security Problem?, Defending against Buffer Overflow, Major Gotchas, Internal Buffer Overflows, More Input Overflows, Other Risks, Tools That Can Help, Smashing Heaps and Stacks, Heap Overflows, Stack Overflows, Decoding the Stack, To Infinity ... and Beyond!, Attack Code, A UNIX Exploit, What About Windows?The UNIX Access Control Model, How UNIX Permissions Work, Modifying File Attributes, Modifying Ownership, The unask, The Programmatic Interface, Setuid Programming, Access Control in Windows NT, Compartmentalization, Fine-Grained Privileges.

### Module-IV: NETWORKING

OSI Model, Sockets, Socket Functions, Socket Addresses, Network Byte Order, Internet Address Conversion, A Simple Server Example, A Web Client Example, A Tinyweb Server, Peeling Back the Lower Layers, Data-Link Layer, Network Layer, Transport Layer , Network Sniffing, Raw Socket Sniffer, libpcap Sniffer, Decoding the Layers, Active Sniffing, Denial of Service, SYN Flooding, The Ping of Death, Teardrop, Ping Flooding, Amplification Attacks, Distributed DoS Flooding, TCP/IP Hijacking, RST Hijacking, Continued Hijacking, Port Scanning, Stealth SYN Scan, FIN, X-mas, and Null Scans, Spoofing Decoys, Idle Scanning, Proactive Defense (shroud), Reach Out and Hack Someone, Analysis with GDB, Almost Only Counts with Hand Grenades, Port-Binding Shellcode.

### Module-V: SHELLCODE

Assembly vs. C, Linux System Calls in Assembly, The Path to Shellcode, Assembly Instructions Using the Stack, Investigating with GDB, Removing Null Bytes, Shell-Spawning Shellcode, A Matter of Privilege, And Smaller Still, Port-Binding Shellcode, Duplicating Standard File Descriptors, Branching Control Structures, Connect-Back Shellcode.

#### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

#### Recommended Books:

- “Building Secure Software: How to Avoid Security Problems the Right Way” John Viega, Gary R. Tata McGraw Hill
- Michael Howard, David LeBlanc, John Viega: 19 Deadly Sins of Software Security: Programming Flaws and How to Fix Them (Security One-off) (Addison-Wesley Professional Computing Series)
- Richard Sinn “ Software Security , Theory Programming and Practice” Cengage Learning

# APPLIED CRYPTOGRAPHY

Course Code: NCE6903

Credit Units : 03

## Course Contents:

### Module-I:

Introduction to security attacks, services and mechanism, Classical encryption techniques: substitution ciphers and transposition ciphers, cryptanalysis, steganography, Stream and block ciphers. Modern Block Ciphers: Block ciphers principles, Shannon's theory of confusion and diffusion, feistel structure, Data encryption standard (DES), Strength of DES, Idea of differential cryptanalysis, block cipher modes of operations, Triple DES

### Module-II:

Advanced Encryption Standard (AES) encryption and decryption, Analysis, Principles of public key crypto systems, RSA algorithm, security of RSA. Rabin cryptosystem, Elgamal cryptosystem, Elliptical Curve cryptography,

### Module-III:

Message Authentication Codes: Authentication requirements, authentication functions, message authentication code, Random Oracle Model, hash functions, birthday attacks, security of hash functions, Secure hash algorithm (SHA), SHA-512, Whirlpool, Digital Signatures: Digital Signatures, Elgamal Digital Signature Techniques, Digital signature standards (DSS).

### Module-IV:

Key Management and distribution: Symmetric key distribution, Diffie-Hellman Key Exchange, Public key distribution, X.509 Certificates, Public key Infrastructure. Entity authentication, Authentication Applications: Kerberos,

### Module-V:

IP Security: Architecture, Authentication header, Encapsulating security payloads, combining security associations, key management. Introduction to Secure Socket Layer, Secure electronic transaction (SET).

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

## Recommended books:

- "Cryptography & Network Security", William Stallings, PHI
- "Cryptography & Network Security", Behrouz A. Forouzan, TMH
- "Cryptography & Network Security", Atuk Kahate, PHI

## BIOMETRIC IMAGE PROCESSING LAB

Course Code: NCE6904

Credit Units : 01

### List of Exercises

Basic exercises on image loading, manipulation, edge finding, features extraction, face recognition, segmentation, fingerprint, iris, signature recognition.

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## APPLIED CRYPTOGRAPHY LAB

Course Code: NCE6905

Credit Units : 02

### Course Contents:

- Program to implement Ceaser Cipher.
- Program to implement Ceaser Cipher for any value of shift parameter.
- Programs to implement Playfair cipher, affine cipher, vengere cipher.
- Program to implement Vernam Cipher.
- Program to implement Hill Cipher.
- Program to implement Rail fence and Columnar transposition cipher.
- Program to implement DES/AES/IDEA algorithm
- Program to implement RSA algorithm
- Program to implement Rabin Cryptosystem and Elgamal Cryptosystem.
- Program to implement Digital Signature using RSA/Elgamal.
- Implementation study of MD5/SHA-1.
- Programs to implement ECB/CBC/OFB modes of operation.

Software: C/C++/Python/Java

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# WEB APPLICATION & PENETRATION TESTING

Course Code: NCE6906

Credit Units : 03

## Course Contents:

### Module-I: Introduction to Web Applications and Security

The Web Application Architecture ,A Brief Word about HTML ,Transport: HTTP ,The Web Client ,The Web Server,The Web Application ,The Database ,Complications and Intermediaries ,The New Model: Web Services ,Potential Weak Spots ,The Methodology of Web Hacking ,Profile the Infrastructure ,Attack Web Servers ,Survey the Application,Attack the Authentication Mechanism ,Attack the Authorization Schemes , Perform a Functional Analysis,Exploit the Data Connectivity,Attack the Management Interfaces,Attack the Client,Launch a Denial-of-Service Attack Profiling: Server Discovery,Intuition ,Internet Footprinting, DNS Interrogation Ping,Discovery Using Port Scanning , Dealing with Virtual Servers, Service Discovery , Server Identification,Dealing with SSL.

### Module-II: Hacking Web Servers

Common Vulnerabilities by Platform ,Apache,Microsoft Internet Information Server (IIS), Attacks Against IIS Components, Attacks Against IIS, Escalating Privileges on IIS, Netscape Enterprise Server , Other Web Server Vulnerabilities , Miscellaneous Web Server Hacking Techniques , Automated Vulnerability Scanning Software ,Whisker, Nikto , twwwwscan/arirang , Stealth HTTP Scanner, Typhon , WebInspect , AppScan , FoundScan Web Module , Denial of Service Against Web Servers,

### Module-III: Surveying the Application

Documenting Application Structure , Manually Inspecting the Application , Statically and Dynamically Generated Pages, Directory Structure , Helper Files , Java Classes and Applets , HTML Comments and Content ,Forms, Query Strings , Back-End Connectivity , Tools to Automate the Survey, lynx , Wget,Teleport Pro, Black Widow, WebSleuth, Common Countermeasures , A Cautionary Note, Protecting Directories,Protecting Include Files, Miscellaneous Tips. Authentication: Authentication Mechanisms, HTTP Authentication: Basic and Digest, Forms-Based Authentication, Microsoft Passport, Attacking Web Authentication,Password Guessing, Session ID Prediction and Brute Forcing, Subverting Cookies,Bypassing SQL-Backed Login Forms,Bypassing Authentication.

### Module-IV: Authorization

The Attacks, Role Matrix, The Methodology , Query String, POST Data , Hidden Tags, URI,HTTP Headers,Cookies, Final Notes,Case Study: Using Curl to Map Permissions, Apache Authorization, IIS AuthorizationAttacking Session State Management:Client-Side Techniques, Hidden Fields, The URL,HTTP Headers and Cookies, Server-Side Techniques, Server-Generated Session IDs, Session Database, SessionID Analysis, Content Analysis, Time Windows.

### Module-V: Input Validation Attacks

Expecting the Unexpected, Input Validation EndGame, Where to Find Potential Targets,Bypassing Client-Side Validation Routines , Common Input Validation Attacks , Buffer Overflow, Canonicalization (dot-dot-slash),Script Attacks , Boundary Checking, Manipulating the Application , SQL Injection and Datastore Attacks,Command Execution, Common Side Effects,Common Countermeasures. Attacking Web Datastores: A SQL Primer,SQL Injection, Common Countermeasures. Web Client Hacking :The Problem of Client-Side Security,Attack Methodologies ,Active Content Attacks ,Java and JavaScript ,ActiveX,Cross-Site Scripting,Cookie Hijacking ,Case Study #: From the URL to the Command Line and Back,Case Study #: The Cross-Site Scripting Calendar

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

**Recommended Books:**

- “Hacking Exposed Web Applications”, 3rd edition, JOEL SCAMBRAY, VINCENT LIU, CALEB SIMA.
- “The Web Application Hacker's Handbook Discovering and Exploiting Security Flaws” Dafydd Stuttard, Marcus Pinto
- Rich Bowen, Ken Coar, “Apache Cookbook”, O'Reilly

# MALWARE ANALYSIS IN NETWORK SECURITY

Course Code: NCE6907

Credit Units : 03

## Course Contents:

### Module-I: BASIC STATIC TECHNIQUES

Antivirus Scanning: A Useful First Step, Hashing: A Fingerprint for Malware, Finding Strings, Packed and Obfuscated Malware, Packing Files, Detecting Packers with PEiD, Portable Executable File Format, Linked Libraries and Functions, Static, Runtime, and Dynamic Linking, Exploring Dynamically Linked Functions with Dependency Walker, Imported Functions, Exported Functions, Static Analysis in Practice, PotentialKeylogger.exe: An Unpacked Executable, PackedProgram.exe: A Dead End, The PE File Headers and Sections, Examining PE Files with PEview, Viewing the Resource Section with Resource Hacker, Using Other PE File Tools, PE Header Summary

### Module-II: VIRTUAL MACHINES & DYNAMIC ANALYSIS

The Structure of a Virtual Machine, Creating Your Malware Analysis Machine, Configuring VMware, Using Your Malware Analysis Machine, Connecting Malware to the Internet, Connecting and Disconnecting Peripheral Devices, Taking Snapshots, Transferring Files from a Virtual Machine, The Risks of Using VMware for Malware Analysis, Record/Replay: Running Your Computer in Reverse, Sandboxes: The Quick-and-Dirty Approach Using a Malware Sandbox, Sandbox Drawbacks, Running Malware, Monitoring with Process Monitor, The Procmon Display, Filtering in Procmon, Viewing Processes with Process Explorer, The Process Explorer Display, Using the Verify Option, Comparing Strings, Using Dependency Walker, Analyzing Malicious Documents, Comparing Registry Snapshots with Regshot, Faking a Network, Using ApatDNS, Monitoring with Netcat, Packet Sniffing with Wireshark, Using INetSim, Basic Dynamic Tools in Practice,

### Module-III: RECOGNIZING C CODE CONSTRUCTS IN ASSEMBLY

Overview of working with IDA Pro, Global vs Local Variables, Disassembling Arithmetic Operations, Recognizing if Statements, Analyzing Functions Graphically with IDA Pro, Recognizing Nested if Statements, Recognizing Loops, Finding for Loops, Finding while Loops, Understanding Function Call Conventions, cdecl, Stdcall, fastcall, Push vs Move, Analyzing switch Statements, if Style, Jump Table, Disassembling Arrays, Identifying Structs, Analyzing Linked List Traversal,

### Module-IV: ANALYZING MALICIOUS WINDOWS PROGRAMS

The Windows API, Types and Hungarian Notation, Handles, File System Functions, Special Files, The Windows Registry, Registry Root Keys, Regedit, Programs that Run Automatically, Common Registry Functions, Analyzing Registry Code in Practice, Registry Scripting with reg Files, Networking APIs, Berkeley Compatible Sockets, The Server and Client Sides of Networking, The WinINet API, Following Running Malware, DLLs, Processes, Threads, Interprocess Coordination with Mutexes, Services, The Component Object Model, Exceptions: When Things Go Wrong, Kernel vs User Mode, The Native API,

### Module-V: MALWARE BEHAVIOR & COVERT MALWARE LAUNCHING

Downloaders and Launchers, Backdoors, Reverse Shell, RATs, Botnets, RATs and Botnets Compared, Credential Stealers, GINA Interception, Hash Dumping, Keystroke Logging, Persistence Mechanisms, The Windows Registry, Trojanized System Binaries, DLL Load-Order Hijacking, Privilege Escalation, Using SeDebugPrivilege, Covering Its Tracks—User-Mode Rootkits, IAT Hooking, Inline Hooking, Launchers, Process Injection, DLL Injection, Direct Injection, Process Replacement, Hook Injection,

Local and Remote Hooks, Keyloggers Using Hooks, Using SetWindowsHookEx, Thread Targeting, Detours, APC Injection, APC Injection from User Space, APC Injection from Kernel Space .

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

**Recommended Books:**

- “Practical Malware Analysis” by Michael Sikorski and Andrew Honig
- “The Rootkit Arsenal: Escape and Evasion in the Dark Corners of the System” Second Edition by Reverend Bill Blunden
- “Rootkits: Subverting the Windows Kernel” by Jamie Butler and Greg Hoglund
- “Practical Reverse Engineering” by Dang, Gazet, Bachaalany

# WEB SECURITY

Course Code: NCE6908

Credit Units : 03

## Course Contents:

### Module-I: The E-Commerce Playground

Web Languages: The Babylon of the 21st Century, Languages of the Web, HTML, Dynamic HTML (DHTML), XML, XHTML, Perl, PHP, ColdFusion, Active Server Pages, CGI, Java. Web and Database Servers: Web Servers, Apache, Microsoft's Internet Information Server (IIS), Database Servers, Microsoft SQL Server, Oracle.

### Module-II: Shopping Carts and Payment Gateways

Evolution of the Storefront, Electronic Shopping, Shopping Cart Systems, Scope and Lifetime of an Electronic Shopping Cart, Collecting, Analyzing, and Comparing Selected Components, Keeping Track of the Total Cost, Change of Mind, Processing the Purchase, Implementation of a Shopping Cart Application, Product Catalog, Session Management, Database Interfacing, Integration with the Payment Gateway, Examples of Poorly Implemented Shopping Carts, Carello Shopping Cart, DCShop Shopping Cart, Hassan Consulting's Shopping Cart, Cart32 and Several Other Shopping Carts, Processing Payments, Finalizing the Order, Method of Payment, Verification and Fraud Protection, Order Fulfillment and Receipt Generation, Overview of the Payment Processing System, Innovative Ways to Combat Credit Card Fraud, Order Confirmation Page, Payment Gateway Interface, Transaction Database Interface, Interfacing with a Payment Gateway—An Example, Payment System Implementation Issues, Integration, Temporary Information, SSL, Storing User Profiles, Vulnerabilities Caused by Poor Integration of Shopping Cart and Payment Gateway, PayPal—Enabling Individuals to Accept Electronic Payments,

### Module-III: HTTP and HTTPS: The Hacking Protocols, Protocols of the Web, HTTP, HTTPS (HTTP over SSL).

URL: The Web Hacker's Sword: URL Structure, Web Hacker Psychology, URLs and Parameter Passing. URL Encoding, Meta-Characters, Specifying Special Characters on the URL String, Meta-Characters and Input Validation, Unicode Encoding, The Acme Art, Inc. Hack, Abusing URL Encoding, Unicode Encoding and Code Red's Shell Code, Unicode Vulnerability, The Double-Decode or Superfluous Decode Vulnerability, HTML Forms, Anatomy of an HTML Form, Input Elements, Parameter Passing Via GET and POST, Case Study: Reconnaissance Leaks Corporate Assets.

### Module-IV: Web: Under (the) Cover.

The Components of a Web Application, The Front-End Web Server, The Web Application Environment. The Database Server, Wiring the Components, The Native Application Processing Environment, Web Server APIs and Plug-Ins, URL Mapping and Internal Proxying, Proxying with a Back-End Application Server. Examples. Connecting with the Database, The Craftiest Hack of Them All, Using Native Database APIs. Examples.

Using ODBC, Using JDBC, Specialized Web Application Servers, Identifying Web Application Components from URLs, The Basics of Technology Identification, Examples, More Examples, Advanced Techniques for Technology Identification, Examples, Identifying Database Servers, Countermeasures, Rule 1: Minimize Information Leaked from the HTTP Header, Rule 2: Prevent Error Information from Being Sent to the Browser.

**Module-V: Reading Between the Lines.**

Information Leakage Through HTML,What the Browsers Don't Show You,Netscape Navigator—View | Page Source,Internet Explorer—View | Source,Clues to Look For,HTML Comments,Revision History,Developer or Author Details,Cross-References to Other Areas of the Web Application,Reminders and Placeholders, Comments Inserted by Web Application Servers,Old “Commented-Out” Code,Internal and External Hyperlinks,E-mail Addresses and Usernames,UBE, UCE, Junk Mail, and Spam,Keywords and Meta Tags,Hidden Fields,Client-Side Scripts,Automated Source Sifting Techniques,Using wget,Using grep,Sam Spade, Black Widow, and Teleport Pro.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

**Recommended Books:**

- McClure, Stuart, Saumil Shah, and Shreeraj Shah. Web Hacking:attacks and defense. AddisonWesley. 2003.
- Garms, Jess and Daniel Somerfield. Professional Java Security. Wrox. 2001.

# DIGITAL WATERMARKING & STAGENOGRAPHY

Course Code: NCE6909

Credit Units : 03

## Course Contents:

### Module-I: Introduction Applications and Properties

Information Hiding, Steganography, and Watermarking , History of Watermarking , History of Steganography , Importance of Digital Watermarking , Importance of Steganography , Applications of Watermarking , Applications of Steganography , Steganography for Dissidents, Steganography for Criminals , Properties of Watermarking Systems , Evaluating Watermarking Systems , Properties of Steganographic and Steganalysis Systems , Evaluating and Testing Steganographic Systems

### Module-II: Models of Watermarking

Notation , Communications , Communication-Based Models of Watermarking , Geometric Models of Watermarking , Modeling Watermark Detection by Correlation  
Watermarking with side information: Informed Embedding, Watermarking Using Side Information, Dirty-Paper Codes

### Module-III: Practical Dirty-Paper Codes

Practical Considerations for Dirty-Paper Codes , Broad Approaches to Dirty-Paper Code Design , Implementing DM with a Simple Lattice Code , Typical Tricks in Implementing Lattice Codes  
Coding with Better Lattices , Making Lattice Codes Survive Valumetric Scaling Dirty-Paper Trellis Codes

**Watermark Security** : Security Requirements , Watermark Security and Cryptography Some Significant Known Attacks

### Module-IV: Steganography

Steganographic Communication , The Channel , The Building Blocks , Notation and Terminology , Information-Theoretic Foundations of Steganography , Cachin's Definition of Steganographic Security , Practical Steganographic Methods , Statistics Preserving Steganography , Model-Based Steganography  
Masking Embedding as Natural Processing , Minimizing the Embedding Impact , Matrix Embedding, Nonshared Selection Rule,

### Module-V: Steganalysis

Steganalysis Scenarios , Detection , Forensic Steganalysis , The Influence of the Cover Work on Steganalysis , Some Significant Steganalysis Algorithms , LSB Embedding and the Histogram Attack , Sample Pairs Analysis , Blind Steganalysis of JPEG Images Using Calibration, Blind Steganalysis in the Spatial Domain.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

**Recommended Books:**

- “Digital Watermarking and Steganography” Ingemar J. Cox, Matthew L. Miller, Jeffrey A. Bloom, Jessica Fridrich, Ton Kalker, , Morgan Kaufmann Publishers, New York, 2008.
- “Digital Watermarking”, Ingemar J. Cox, Matthew L. Miller, Jeffrey A. Bloom, Morgan Kaufmann Publishers, New York, 2003.
- “Techniques and Applications of Digital Watermarking and Content Protection”, Michael Arnold, Martin Schmucker, Stephen D. Wolthusen, Artech House, London, 2003.

## SUMMER INTERNSHIP EVALUATION-III

Course Code: NCE6935

Credit Units : 06

### Guidelines:

There are certain phases of every Intern's professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship program can best be described as an attempt to institutionalize efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal classroom situations. These attributes are intellectual ability, professional judgment and decision-making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility etc.

In order to achieve these objectives, each student will maintain a file (**Internship File**). The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development.

The File will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

The **layout guidelines** for the Project & Seminar Report:

### 1. File should be in the following specification:

A4 size paper

Font: Arial (10 points) or Times New Roman (12 points)

Line spacing: 1.5

Top & bottom margins: 1 inch/ 2.5 cm

Left & right margins: 1.25 inches/ 3 cm

### 2. Report Layout: The report should contain the following components:

Front Page

Table of Content

Acknowledgement

Student Certificate

Company Profile (optional)

Introduction

Main Body

References / Bibliography

The File will include **five sections** in the order described below. The content and comprehensiveness of the main body and appendices of the report should include the following:

1. **The Title Page**--Title - An Internship Experience Report For (Your Name), name of internship organization, name of the Supervisor/Guide and his/her designation, date started and completed, and number of credits for which the report is submitted.
2. **Table of Content**--an outline of the contents by topics and subtopics with the page number and location of each section.
3. **Introduction**--short, but should include how and why you obtained the internship experience position and the relationship it has to your professional and career goals.
4. **Main Body**--should include but not be limited to daily tasks performed. Major projects contributed to, dates, hours on task, observations and feelings, meetings attended and their purposes, listing of tools and materials and their suppliers, and photographs if possible of projects, buildings and co-workers.
5. **References / Bibliography** --This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system

### **ASSESSMENT OF THE INTERNSHIP FILE**

The student will be provided with the Student Assessment Record (SAR) to be placed in front of the Internship File. Each item in the SAR is ticked off when it is completed successfully. The faculty will also assess each item as it is completed. The SAR will be signed by the student and by the faculty to indicate that the File is the student's own work. It will also ensure regularity and meeting the deadlines.

### **STUDENT ASSESSMENT RECORD (SAR)**

#### **5. Range of Research Methods used to obtain information**

#### **6. Execution of Research**

#### **7. Data Analysis**

- Analyse Quantitative/ Qualitative information
- Control Quality

#### **8. Draw Conclusions**

### **Examination Scheme:**

<b>Weightage (%)</b>	20	20	20	40

V – Viva, S – Synopsis, FP – Final Presentation, R - Report

# Syllabus - Tenth Semester

## PROJECT-DISSERTATION-II

Course Code: NCE6037

Credit Units: 15

### GUIDELINES FOR DISSERTATION

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critiqued by the faculty guide and corrected by the student at each stage.

The File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation.

### In general, the File should be comprehensive and include

A short account of the activities that were undertaken as part of the project;

A statement about the extent to which the project has achieved its stated goals.

A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;

Any activities planned but not yet completed as part of the DISSERTATION, or as a future initiative directly resulting from the project;

Any problems that have arisen that may be useful to document for future reference.

### ➤ Report Layout

The report should contain the following components:

### ➤ **Title or Cover Page**

The title page should contain the following information: Project Title; Student's Name; Course; Year; Supervisor's Name.

### ➤ **Acknowledgements** (optional)

Acknowledgment to any advisory or financial assistance received in the course of work may be given.

### ➤ **Abstract**

A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project

### ➤ **Table of Contents**

Titles and subtitles are to correspond exactly with those in the text.

### ➤ **Introduction**

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

➤ **Materials and Methods**

This section should aim at experimental designs, materials used. Methodology should be mentioned in details including modifications if any.

➤ **Results and Discussion**

Present results, discuss and compare these with those from other workers, etc. In writing these section, emphasis should be given on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary never write in “point” form.

➤ **Conclusion**

A conclusion should be the final section in which the outcome of the work is mentioned briefly.

➤ **Future prospects**

➤ **Appendices**

The Appendix contains material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

➤ **References / Bibliography**

This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

## **Examples**

### **For research article**

Voravuthikunchai SP, Lortheeranuwat A, Ninrprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichia coli* O157: H7. *Clin Microbiol Infect*, **8** (suppl 1): 116–117.

### **For book**

Kowalski,M.(1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), **7**: 63-67

## **ASSESSMENT OF THE DISSERTATION FILE**

Essentially, marking will be based on the following criteria: the quality of the report, the technical merit of the project and the project execution.

Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project.

Project execution is concerned with assessing how much work has been put in.

The File should fulfill the following *assessment objectives*:

## **Range of Research Methods used to obtain information**

### **Execution of Research**

#### **Data Analysis**

Analyse Quantitative/ Qualitative information  
Control Quality

### **Draw Conclusions**

#### Examination Scheme:

Dissertation	50
Viva Voce	50
<b>Total</b>	<b>100</b>

ata, leading to production of a structured report.

#### **Selecting the Dissertation Topic**

It is usual to give you some discretion in the choice of topic for the dissertation and the approach to be adopted. You will need to ensure that your dissertation is related to your field of specialization.

Deciding this is often the most difficult part of the dissertation process, and perhaps, you have been thinking of a topic for some time.

It is important to distinguish here between 'dissertation topic' and 'dissertation title'. The topic is the specific area that you wish to investigate. The title may not be decided until the dissertation has been written so as to reflect its content properly.

Few restrictions are placed on the choice of the topic. Normally we would expect it to be:

- relevant to business, defined broadly;
- related to one or more of the subjects or areas of study within the core program and specialisation stream;
- clearly focused so as to facilitate an in-depth approach, subject to the availability of adequate sources of information and to your own knowledge;
- of value and interest to you and your personal and professional development.

#### **Planning the Dissertation**

This will entail following:

- Selecting a topic for investigation.
- Establishing the precise focus of your study by deciding on the aims and objectives of the dissertation, or formulating questions to be investigated. Consider very carefully what is worth investigating and its feasibility.
- Drawing up initial dissertation outlines considering the aims and objectives of the dissertation. Workout various stages of dissertation
- Devising a timetable to ensure that all stages of dissertation are completed in time. The timetable should include writing of the dissertation and regular meetings with your dissertation guide.

### **The Dissertation plan or outline**

It is recommended that you should have a dissertation plan to guide you right from the outset. Essentially, the dissertation plan is an outline of what you intend to do, chapter wise and therefore should reflect the aims and objectives of your dissertation.

There are several reasons for having a dissertation plan

- It provides a focus to your thoughts.
- It provides your faculty-guide with an opportunity, at an early stage of your work, to make constructive comments and help guide the direction of your research.
- The writing of a plan is the first formal stage of the writing process, and therefore helps build up your confidence.
- In many ways, the plan encourages you to come to terms with the reading, thinking and writing in a systematic and integrated way, with plenty of time left for changes.
- Finally, the dissertation plan generally provides a revision point in the development of your dissertation report in order to allow appropriate changes in the scope and even direction of your work as it progresses.

### **Keeping records**

This includes the following:

- Making a note of everything you read; including those discarded.
- Ensuring that when recording sources, author's name and initials, date of publication, title, place of publication and publisher are included. (You may consider starting a card index or database from the outset). Making an accurate note of all quotations at the time you read them.
- Make clear what is a direct quotation and what is your paraphrase.

### **Dissertation format**

All students must follow the following rules in submitting their dissertation.

- Front page should provide title, author, Name of degree/diploma and the date of submission.
- Second page should be the table of contents giving page references for each chapter and section.
- The next page should be the table of appendices, graphs and tables giving titles and page references.
- Next to follow should be a synopsis or abstract of the dissertation (approximately 500 words)
- Next is the 'acknowledgements'.
- Chapter I should be a general introduction, giving the background to the dissertation, the objectives of the dissertation, the rationale for the dissertation, the plan, methodological issues and problems. The limitations of the dissertation should also be hinted in this chapter.
- Other chapters will constitute the body of the dissertation. The number of chapters and their sequence will usually vary depending on, among others, on a critical review of the previous relevant work relating to your major findings, a discussion of their implications, and conclusions, possibly with a suggestion of the direction of future research on the area.
- After this concluding chapter, you should give a list of all the references you have used. These should be cross - references with your text. For articles from journals, the following details are required e.g.

Draper P and Pandyal K. 1991, The Investment Trust Discount Revisited, Journal of Business Finance and Accounting, Vol18, No6, Nov, pp 791-832.

For books, the following details are required:

Levi, M. 1996, International Financial Management, Prentice Hall, New York, 3rd Ed, 1996

- Finally, you should give any appendices. These should only include relevant statistical data or material that cannot be fitted into the above categories.

### The Layout Guidelines for the Dissertation

- A4 size Paper
  - Font: Arial (10 points) or Times New Roman (12 points)
  - Line spacing: 1.5
  - Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

### Guidelines for the assessment of the Dissertation

While evaluating the dissertation, faculty guide will consider the following aspects:

1. Has the student made a clear statement of the objective or objective(s).
2. If there is more than one objective, do these constitute parts of a whole?
3. Has the student developed an appropriate analytical framework for addressing the problem at hand.
4. Is this based on up-to-date developments in the topic area?
5. Has the student collected information / data suitable to the frameworks?
6. Are the techniques employed by the student to analyse the data / information appropriate and relevant?
7. Has the student succeeded in drawing conclusion form the analysis?
8. Do the conclusions relate well to the objectives of the project?
9. Has the student been regular in his work?
10. Layout of the written report.

### Assessment Scheme:

#### Continuous Evaluation:

(Based on Abstract, Regularity, Adherence to initial plan, Records etc.)

**Final Evaluation:** Based on,  
Contents & Layout of the Report,  
Conceptual Framework,  
Objectives & Methodology and  
Implications & Conclusions  
Viva & Presentation

# Syllabus - First Semester

## ENGINEERING MATHEMATICS-I

Course Code: MAE2112

Credit Units: 04

### Course Objective:

The knowledge of Mathematics is necessary for a better understanding of almost all the Engineering and Science subjects. Here our intention is to make the students acquainted with the concept of basic topics from Mathematics, which they need to pursue their Engineering degree in different disciplines.

### Course Contents:

#### Module I: Differential Calculus

Successive differentiation, Leibnitz's theorem (without proof), Mean value theorem, Taylor's theorem (proof), Remainder terms, Asymptote & Curvature, Partial derivatives, Chain rule, Differentiation of Implicit functions, Exact differentials, Tangents and Normals, Maxima, Approximations, Differentiation under integral sign, Jacobians and transformations of coordinates.

#### Module II: Integral Calculus

Fundamental theorems, Reduction formulae, Properties of definite integrals, Applications to length, area, volume, surface of revolution, improper integrals, Multiple Integrals-Double integrals, Applications to areas, volumes.

#### Module III: Ordinary Differential Equations

Formation of ODEs, Definition of order, degree & solutions, ODE of first order: Method of separation of variables, homogeneous and non homogeneous equations, Exactness & integrating factors, Linear equations & Bernoulli equations, General linear ODE of  $n^{\text{th}}$  order, Solution of homogeneous equations, Operator method, Method of undetermined coefficients, Solution of simple simultaneous ODE.

#### Module IV: Vector Calculus

Scalar and Vector Field, Derivative of a Vector, Gradient, Directional Derivative, Divergence and Curl and their Physical Significance, Arc Length, Tangent, Directional Derivative, Evaluation of Line Integral, Green's Theorem in Plane (without proof), Representation of Surfaces, Tangent Plane and Surface Normal, Surface Integral, Stoke's Theorem (without proof), Gauss Divergence Theorem (without proof).

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;

# ENGINEERING CHEMISTRY

Course Code: MAE2113

Credit Units: 02

## Course Objective:

Four basic sciences, Physics, Chemistry, Mathematics and Biology are the building blocks in engineering and technology. Chemistry is essential to develop analytical capabilities of students, so that they can characterize, transform and use materials in engineering and apply knowledge in their field. All engineering fields have unique bonds with chemistry whether it is Aerospace, Mechanical, Environmental and other fields the makeup of substances is always a key factor, which must be known. For electronics and computer science engineering, apart from the material, computer modeling and simulation knowledge can be inherited from the molecule designing. The upcoming field of technology like Nanotechnology and Biotechnology depends fully on the knowledge of basic chemistry. With this versatile need in view, course has been designed in such a way so that the student should get an overview of the whole subject.

## Course Contents:

### Module I: Water Technology

Introduction and specifications of water,  
Hardness and its determination (EDTA method only), Alkalinity,  
Boiler feed water, boiler problems – scale, sludge, priming & foaming: causes & prevention, Boiler problems – caustic embrittlement & corrosion: causes & prevention,  
Carbonate & phosphate conditioning, colloidal conditioning & calgon treatment  
Water softening processes: Lime – soda process, Ion exchange method, Water for domestic use.

### Module II: Fuels

Classification, calorific value of fuel, (gross and net), Determination of calorific value of fuels, bomb calorimeter, Solid fuels - Proximate and ultimate analysis, Octane & Cetane No. and its significance.  
Numericals on combustion

### Module III: Instrumental Methods of analysis

Introduction; Principles of spectroscopy; Laws of absorbance  
IR: Principle, Instrumentation, Application  
UV: Principle, Instrumentation, Application  
NMR: Principle, Instrumentation, Application

### Module IV: Lubricants

Introduction; Mechanism of Lubrication; Types of Lubricants; Chemical structure related to Lubrication; Properties of lubricants; Viscosity and Viscosity Index; Iodine Value; Aniline Point; Emulsion number; Flash Point; Fire Point; Drop Point; Cloud Point; Pour Point.  
Selection of Lubricants.

### Module V: Corrosion

Introduction, Mechanism of dry and wet corrosion,  
Types of corrosion-Galvanic, Concentration cell, soil, pitting, intergranular, waterline. Passivity.  
Factors influencing corrosion. Corrosion control.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# ELEMENTS OF MECHANICAL ENGINEERING

**Course Code: MAE2104**

**Credit Units: 02**

## **Course Objective:**

The objective of this course is to impart the basic knowledge of thermodynamics, stress- strain, materials & their properties and various manufacturing processes to the students of all engineering discipline.

## **Course Contents:**

### **Module I: Fundamental Concepts**

Definition of thermodynamics, system, surrounding and universe, phase, concept of continuum, macroscopic & microscopic point of view, Thermodynamic equilibrium, property, state, path, process, cyclic process, Zeroth, first and second law of thermodynamics, Carnot Cycle, Introduction to I.C. Engines-two & four stroke S.I. and C.I. engines. Otto cycle. Diesel cycle.

### **Module II: Stress And Strain Analysis**

Simple stress and strain: introduction, normal shear, and stresses-strain diagrams for ductile and brittle materials. Elastic constants, one-dimensional loadings of members of varying cross-section, Strain Energy, Properties of material-strength, elasticity, stiffness, malleability, ductility, brittleness, hardness and plasticity etc; Concept of stress and strain stress strain diagram, tensile test, impact test and hardness test.

### **Module III: Casting & Forging**

Introduction of casting, pattern, mould making procedures, sand mould casting, casting defects, allowances of pattern. Forging-introduction, upsetting & drawing out, drop forging, press forging & m/c forging

### **Module IV: Welding & Sheet metal working:**

Introduction of welding processes, classification, gas welding, arc welding, resistance welding. Introduction to sheet metal shop, Shearing, trimming, blanking, piercing, shaving, notching, stretch forming, nibbling coining, embossing and drawing.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# INTRODUCTION TO COMPUTERS AND PROGRAMMING IN C

**Course Code: MAE2105**

**Credit Units: 03**

## **Course Objective:**

The objective of this course module is to acquaint the students with the basics of computers system, its components, data representation inside computer and to get them familiar with various important features of procedure oriented programming language i.e. C.

## **Course Contents:**

### **Module I: Introduction**

Introduction to computer, history, von-Neumann architecture, memory system (hierarchy, characteristics and types), H/W concepts (I/O Devices), S/W concepts (System S/W & Application S/W, utilities). Data Representation: Number systems, character representation codes, Binary, octal, hexadecimal and their interconversions. Binary arithmetic, floating point arithmetic, signed and unsigned numbers, Memory storage unit.

### **Module II: Programming in C**

History of C, Introduction of C, Basic structure of C program, Concept of variables, constants and data types in C, Operators and expressions: Introduction, arithmetic, relational, Logical, Assignment, Increment and decrement operator, Conditional, bitwise operators, Expressions, Operator precedence and associativity. Managing Input and output Operation, formatting I/O.

### **Module III: Fundamental Features in C**

C Statements, conditional executing using if, else, nesting of if, switch and break Concepts of loops, example of loops in C using for, while and do-while, continue and break. Storage types (automatic, register etc.), predefined processor, Command Line Argument.

### **Module IV: Arrays and Functions**

One dimensional arrays and example of iterative programs using arrays, 2-D arrays Use in matrix computations.

Concept of Sub-programming, functions Example of user defined functions. Function prototype, Return values and their types, calling function, function argument, function with variable number of argument, recursion.

### **Module V: Advanced features in C**

Pointers, relationship between arrays and pointers Argument passing using pointers, Array of pointers. Passing arrays as arguments.

Strings and C string library.

Structure and Union. Defining C structures, Giving values to members, Array of structure, Nested structure, passing strings as arguments.

File Handling.

## **Examination Scheme:**

# ELECTRICAL SCIENCE

**Course Code: MAE2106**

**Credit Units: 03**

## **Course Objective:**

The objective of the course is to provide a brief knowledge of Electrical Engineering to students of all disciplines. This Course includes some theorems related to electrical, some law's related to flow of current, voltages, basic knowledge of Transformer, basic knowledge of electromagnetism, basic knowledge of electrical network.

## **Course Contents:**

### **Module I: Basic Electrical Quantities**

Basic Electrical definitions-Energy, Power, Charge, Current, Voltage, Electric Field Strength, Magnetic Flux Density, etc., Resistance, Inductance and Capacitance. Ideal Source, Independent Source and Controlled Source

### **Module II: Network Analysis Techniques & Theorems**

Circuit Principles: Ohm's Law, Kirchoff's Current Law, Kirchoff's Voltage Law Network Reduction: Star-Delta Transformation, Source Transformation, Nodal Analysis, Loop analysis. Superposition theorem, Thevenin's Theorem, Norton's theorem and Reciprocity theorem.

### **Module III: Alternating Current Circuits**

Peak, Average and RMS values for alternating currents, Power calculation: reactive power, active power, Complex power, power factor, impedance, reactance, conductance, susceptance Resonance: series Resonance, parallel resonance, basic definition of Q factor & Bandwidth.

### **Module IV: Transformers**

Basic Transformer Operation principle, Construction, Voltage relations, current relations, Linear circuit models, open circuit test, short circuit test, Transformer Efficiency.

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# ENGINEERING CHEMISTRY LAB

Course Code: MAE2114

Credit Units: 01

## Course Contents:

### List of Experiments:

(Any 10 Experiments)

1. To determine the ion exchange capacity of a given cation exchanger.
2. To determine the temporary, permanent and total hardness of a sample of water by complexometric titration method.
3. To determine the type and extent of alkalinity of given water sample.
4. To determine the number of water molecules of crystallization in Mohr's salt (ferrous ammonium sulphate) provided standard potassium dichromate solution (0.1N) using diphenylamine as internal indicator.
5. To determine the ferrous content in the supplied sample of iron ore by titrimetric analysis against standard  $K_2Cr_2O_7$  solution using potassium ferricyanide  $[K_3Fe(CN)_6]$  as external indicator.
6. (a) To determine the surface tension of a given liquid by drop number method.  
(b) To determine the composition of a liquid mixture A and B (acetic acid and water) by surface tension method.
7. To prepare and describe a titration curve for phosphoric acid – sodium hydroxide titration using pH-meter.
8. (a) To find the cell constant of conductivity cell.  
(b) Determine the strength of hydrochloric acid solution by titrating it against standard sodium hydroxide solution conductometrically
9. Determination of Dissolved oxygen in the given water sample.
- 10 To determine the total residual chlorine in water.
- 11 Determination of amount of oxalic acid and  $H_2SO_4$  in 1 L of solution using N/10 NaOH and N/10  $KMnO_4$  solution.
- 12 Determination of viscosity of given oil by means of Redwood viscometer I.
- 13 To determine flash point and fire point of an oil by Pensky Martin's Apparatus
- 14 To determine the Iodine value of the oil.

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# Syllabus - Second Semester

## ENGINEERING MATHEMATICS-II

Course Code: MAE2209

Credit Units: 04

### Course Objective:

The knowledge of Mathematics is necessary for a better understanding of almost all the Engineering and Science subjects. Here our intention is to make the students acquainted with the concept of basic topics from Mathematics, which they need to pursue their Engineering degree in different disciplines.

### Course Contents:

#### Module I: Linear Algebra

Hermitian and Skew Hermitian Matrix, Unitary Matrix, Orthogonal Matrix, Elementary Row Transformation, Reduction of a Matrix to Row Echelon Form, Rank of a Matrix, Consistency of Linear Simultaneous Equations, Gauss Elimination Method, Gauss-Jordan Method, Eigen Values and Eigen Vectors of a Matrix, Caley-Hamilton Theorem, Diagonalization of a Matrix, Vector Space, Linear Independence and Dependence of Vectors, Linear Transformations.

#### Module II: Infinite Series

Definition of Sequence, Bounded Sequence, Limit of a Sequence, Series, Finite and Infinite Series, Convergence and Divergence of Infinite series, Cauchy's Principle of Convergence, Positive Term Infinite Series, Comparison test, D'Alembert's Ratio test, Raabe's Test, Cauchy's nth root Test, Logarithmic Test, Alternating Series, Leibnitz's Test, Absolute and conditional convergence, Uniform Convergence, Power Series and its Interval of Convergence.

#### Module III: Complex Analysis

De Moivre's Theorem and Roots of Complex Numbers, Logarithmic Functions, Circular, Hyperbolic Functions and their Inverses.

Functions of a Complex Variables, Limits, Continuity and Derivatives, Analytic Function, Cauchy-Riemann Equations (without proof), Harmonic Function, Harmonic Conjugates, Conformal Mapping, Bilinear Transformations, Complex Line Integral, Cauchy Integral Theorem, Cauchy Integral Formula, Derivative of Analytic Function, Power Series, Taylor Series, Laurent Series, Zeros and Singularities,

Residues, Residue Theorem, Evaluation of Real Integrals of the Form  $\int_{-\infty}^{\infty} \frac{f(x)}{F(x)} dx$ .

#### Module IV: Statistics and Probability

Moments, Skewness, Kurtosis, Random Variables and Probability Distribution, Mean and Variance of a Probability Distribution, Binomial Distribution, Poisson Distribution and Normal Distribution.

### Examination Scheme:

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	15	20	20	20	5

C – Project + Presentation

I – Interaction/Conversation Practice

# ENGINEERING PHYSICS

Course Code: MAE2210

Credit Units: 03

## Course Objective:

Aim of this course is to introduce the students to fundamentals of graduate level physics, which form the basis of all applied science and engineering

## Course Contents:

### Module I: Oscillations & Waves

**Oscillations:** Introduction to S.H.M. Damped Oscillations: Differential Equation and its solution, logarithmic decrement, Quality Factor, Different conditions of damping of harmonic oscillations. Forced oscillations: Amplitude and Frequency Response, Resonance, Sharpness of Resonance

**Plane Progressive Waves:** Differential Equation and Solution, Superposition of Progressive Waves stationary waves.

**Ultrasonics:** Generation and application of ultrasonic waves.

### Module II: Wave Nature of Light

**Interference:** Coherent Sources, Conditions of interference, Interference due to division of wavefront, Fresnel's biprism Interference due to division of amplitude, Newton's rings, Interference due to thin films, .

**Diffraction:** Fresnel and Fraunhofer diffraction, Fraunhofer diffraction at a single slit, double slit, N Slits, Transmission grating, Rayleigh criterion and Resolving power of grating.

**Polarization:** Birefringence, Nicol prism, Production and analysis of plane, circularly and elliptically polarized light, Half and quarter wave plates, Optical rotation, Polarimeter.

### Module III: Electromagnetics

Scalar and vector fields, gradient of a scalar field, physical significance of gradient, equipotential surface. Line, surface and volume integrals, Divergence and curl of vector field and mathematical analysis physical significance, Electric flux, Gauss' law, Proof and Applications, Gauss divergence and Stokes theorems.

Differential form of Gauss' Law, Amperes' Law, Displacement current, Faradays Law, Maxwell equations in free space & isotropic media (Integral form & differential form), EM wave propagation in free space, Poynting vector.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# OBJECT ORIENTED PROGRAMMING USING C++

Course Code: MAE2203

Credit Units: 03

## Course Objective:

The objective of this module is to introduce object oriented programming. To explore and implement the various features of OOP such as inheritance, polymorphism, Exceptional handling using programming language C++. After completing this course student can easily identify the basic difference between the programming approaches like procedural and object oriented.

## Course Contents:

### Module I: Introduction

Review of C, Difference between C and C++, Procedure Oriented and Object Oriented Approach. Basic Concepts: Objects, classes, Principals like Abstraction, Encapsulation, Inheritance and Polymorphism. Dynamic Binding, Message Passing. Characteristics of Object-Oriented Languages. Introduction to Object-Oriented Modeling techniques (Object, Functional and Dynamic Modeling).

### Module II: Classes and Objects

Abstract data types, Object & classes, attributes, methods, C++ class declaration, Local Class and Global Class, State identity and behaviour of an object, Local Object and Global Object, Scope resolution operator, Friend Functions, Inline functions, Constructors and destructors, instantiation of objects, Types of Constructors, Static Class Data, Array of Objects, Constant member functions and Objects, Memory management Operators.

### Module III: Inheritance

Inheritance, Types of Inheritance, access modes – public, private & protected, Abstract Classes, Ambiguity resolution using scope resolution operator and Virtual base class, Aggregation, composition vs classification hierarchies, Overriding inheritance methods, Constructors in derived classes, Nesting of Classes.

### Module IV: Polymorphism

Polymorphism, Type of Polymorphism – Compile time and runtime, Function Overloading, Operator Overloading (Unary and Binary) Polymorphism by parameter, Pointer to objects, this pointer, Virtual Functions, pure virtual functions.

### Module V: Strings, Files and Exception Handling

Manipulating strings, Streams and files handling, formatted and Unformatted Input output. Exception handling, Generic Programming – function template, class Template Standard Template Library: Standard Template Library, Overview of Standard Template Library, Containers, Algorithms, Iterators, Other STL Elements, The Container Classes, General Theory of Operation, Vectors.

# ENGINEERING MECHANICS

**Course Code: MAE2204**

**Credit Units: 03**

## **Course Objective:**

Objective of this course is to provide fundamental knowledge of force system and its effect on the behaviour of the bodies that may be in dynamic or in static state. It includes the equilibrium of different structures like beams, frames, truss etc and the force transfer mechanism in the different components of a body under given loading condition.

## **Course Contents:**

### **Module I: Force system & Structure**

Free body diagram, Equilibrium equations and applications. Plane truss, perfect and imperfect truss, assumption in the truss analysis, analysis of perfect plane trusses by the method of joints, method of section.

### **Module II:Friction**

Static and Kinetic friction, laws of dry friction, co-efficient of friction, angle of friction, angle of repose, cone of friction, friction lock, efficiency of screw jack, transmission of power through belt

### **Module III: Distributed Force**

Determination of center of gravity, center of mass and centroid by direct integration and by the method of composite bodies, mass moment of inertia and area moment of inertia by direct integration and composite bodies method, radius of gyration, parallel axis theorem, Pappus theorems and its application, polar moment of inertia.

### **Module IV: Work -Energy**

Work energy equation, conservation of energy, Virtual work, impulse, momentum conservation, impact of bodies, co-efficient of restitution, loss of energy during impact, D'alembert principle

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# OBJECT ORIENTED PROGRAMMING USING C++ LAB

**Course Code: MAE2206**

**Credit Units: 01**

**Software Required:** Turbo C++

## Course Contents:

- Creation of objects in programs and solving problems through them.
- Different use of private, public member variables and functions and friend functions.
- Use of constructors and destructors.
- Operator overloading
- Use of inheritance in and accessing objects of different derived classes.
- Polymorphism and virtual functions (using pointers).
- File handling.

## Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab

# ENGINEERING MECHANICS LAB

Course Code: MAE2207

Credit Units: 01

## Engineering Mechanics:

1. To verify the law of Force Polygon
2. To verify the law of Moments using Parallel Force apparatus. (Simply supported type)
3. To determine the co-efficient of friction between wood and various surface (like
4. Leather, Wood, Aluminum) on an inclined plane.
5. To find the forces in the members of Jib Crane.
6. To determine the mechanical advantage, Velocity ratio and efficiency of a screw jack.
7. To determine the mechanical advantage, Velocity ratio and Mechanical efficiency of the
8. Wheel and Axle
9. To determine the MA, VR,  $\eta$  of Worm Wheel (2-start)
10. Verification of force transmitted by members of given truss.
11. To verify the law of moments using Bell crank lever
12. To find CG and moment of Inertia of an irregular body using Computation method

## Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# ENGINEERING GRAPHICS LAB

**Course Code: MAE2208**

**Credit Units: 01**

## **Course Objective:**

This course will provide students concepts on the drawings of different curves like straight line, parabola, ellipse etc. After completion of this course, students will be able to draw different figures manually and will be capable of using various instruments involved in drawings.

## **Course Contents:**

### **Module I: General**

Importance, Significance and scope of engineering drawing, Lettering, Dimensioning, Scales, Sense of proportioning, Different types of projections, Orthographic Projection, B.I.S. Specifications.

### **Module II: Projections of Point and Lines**

Introduction of planes of projection, Reference and auxiliary planes, projections of points and Lines in different quadrants, traces, inclinations, and true lengths of the lines, projections on Auxiliary planes, shortest distance, intersecting and non-intersecting lines.

### **Module III: Planes other than the Reference Planes**

Introduction of other planes (perpendicular and oblique), their traces, inclinations etc., Projections of points and lines lying in the planes, conversion of oblique plane into auxiliary Plane and solution of related problems.

### **Module IV: Projections of Plane Figures**

Different cases of plane figures (of different shapes) making different angles with one or both reference planes and lines lying in the plane figures making different given angles (with one of both reference planes). Obtaining true shape of the plane figure by projection.

### **Module V: Projection of Solids**

Simple cases when solid is placed in different positions, Axis faces and lines lying in the faces of the solid making given angles.

### **Module VI: Development of Surface**

Development of simple objects with and without sectioning. Isometric Projection

## **Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# ENGINEERING PHYSICS LAB

Course Code: MAE2211

Credit Units: 01

## List of Experiments:

1. To determine the wavelength of sodium light by Newton's rings method.
2. To determine the dispersive power of the material of prism with the help of a spectrometer.
3. To determine the specific rotation of sugar by Bi-quartz or Laurent half shade polarimeter.
4. To determine the speed of ultrasonic waves in liquid by diffraction method.
5. To determine the width of a narrow slit using diffraction phenomena.
6. To determine the temperature coefficient of platinum wire, using a platinum resistance thermometer and a Callender & Griffith's bridge.
7. To determine the value of specific charge (ratio of  $e/m$ ) of an electron by Thomson method.
8. To determine the internal resistance of Leclanche cell with the help of Potentiometer.
9. To determine the resistance per unit length of a Carey Foster's bridge wire and also to find out the specific resistance of a given wire.
10. To plot graph showing the variation of magnetic field with distance along the axis of a circular coil carrying current, and hence estimate the radius of the coil.
11. To determine the value of acceleration due to gravity (' $g$ ') in the laboratory using bar pendulum.
12. To determine the moment of inertia of a flywheel about its own axis of rotation.
13. To determine the density of material of the given wire with the help of sonometer.

## Examination Scheme:

A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# Syllabus - Third Semester

## KIMEMATICS OF MACHINE

Course Code: MAE2301

Credit Units: 04

### Course Contents:

#### Module-I: Introduction

Links-types, Kinematics pairs-classification, Constraints-types, Degrees of freedom of planar mechanism, Grubler's equation, linkage mechanisms, inversions of four bar chain, slider crank chain and double slider crank chain

#### Velocity in Mechanisms

Velocity of point in mechanism, relative velocity method, Velocities in four bar mechanism, slider crank mechanism and quick return motion mechanism, Rubbing velocity at a pin joint, Instantaneous center method, Types & location of instantaneous centers, Kennedy's theorem, Velocities in four bar mechanism & slider crank mechanism

#### Module-II: Acceleration in Mechanisms

Acceleration of a point on a link, Acceleration diagram, Coriolis component of acceleration, Crank and slotted lever mechanism, Klein's construction for Slider Crank mechanism and Four Bar mechanism, Analytical method for slider crank mechanism

#### Mechanisms with Lower Pairs

Pantograph, Exact straight line motion mechanisms-Peaucellier's, Hart and Scott Russell mechanisms, Approximate straight line motion mechanisms-Grass-Hopper, Watt and Tchebicheff mechanisms, Analysis of Hooke's joint, Davis and Ackermann steering gear mechanisms.

#### Module-III: FRICTION

Laws of friction, Friction on inclined plane, Efficiency on inclined plane, Friction in journal bearing-friction circle, Pivots and collar friction-uniform pressure and uniform wear, Belt and pulley drive, Length of open and cross belt drive, Ratio of driving tensions for flat belt drive, centrifugal tension, condition for maximum power transmission, V belt drive

#### Brakes & Dynamometers

Shoe brake, Band brake, Band and Block brake, Absorption and transmission type dynamometers

#### Module-IV: CAMS

Cams and Followers - Classification & terminology, Cam profile by graphical methods with knife edge and radial roller follower for uniform velocity, simple harmonic and parabolic motion of followers, Analytical methods of cam design – tangent cam with roller follower and circular cams with flat faced follower

#### Module-V: Gears & Gear Trains

Classification & terminology, law of gearing, tooth forms & comparisons, Systems of gear teeth, Length of path of contact, contact ratio, interference & under cutting in involute gear teeth, minimum number of teeth on gear and pinion to avoid interference, simple, compound, reverted and planetary gear trains, Sun and planet gear.

### Examination Scheme:

# MATERIAL SCIENCE AND METALLURGY

Course Code: MAE2303

Credit Units: 03

## Course Objective:

Metallurgy and Materials deal with the structure and properties of all materials, which have engineering applications. Metallurgists and Materials Engineers are responsible for designing, producing, examining and testing materials as diverse as metallic engineering alloys, semiconductors and superconductors, ceramics, plastics and composites. This course will help students understand the properties of different types of materials and their applications.

## Course Contents:

### Module I

Atomic structure of metals crystal structure, crystal lattice of (i) Body centered cubic (ii) face centered cubic (iii) closed packed hexagonal, crystallographic notation of atomic planes, polymorphism and allotropy, solidification of crystallization (i) nuclear formation (crystal growth) (ii) crystal imperfection Elementary treatment of theories of plastic deformation, phenomenon of slip twinning, dislocation, identification of crystallographic possible slip planes and direction in FCC, BCC, C.P., recovery, re-crystallization, preferred orientation causes and effects on the property of metals.

### Module II

Introduction to Engineering materials, their mechanical behaviour, testing and manufacturing properties of materials, physical properties of materials, classification of engineering materials.

### Module III

General principles of phase transformation in alloys, phase rule and equilibrium diagrams, Equilibrium diagrams of Binary system in which the components form a mechanical mixture of crystals in the solid state and are completely mutually soluble in both liquid state. Equilibrium diagrams of a systems whose components have complete mutual solubility in the liquid state and limited solubility in the solid state in which the solid state solubility decreases with temperature. Equilibrium diagram of alloys whose components have complete mutual solubility in the liquid state and limited solubility in solid state (Alloy with a peritectic transformation) Equilibrium diagrams of a system whose components are subject to allotropic change. Iron carbon equilibrium diagram. Phase transformation in the iron carbon diagram (i) Formation of Austenite (ii) Transformation of austenite into pearlite (iii) Martensite transformation in steel, time temperature transformation curves.

### Module IV

Principles and applications of heat treatment processes viz. annealing, normalizing hardening, tempering; harden ability & its measurement, surface hardening processes. Defects in heat treatment and their remedies; effects produced by alloying elements on the structures and properties of steel. Distribution of alloying elements (Si, Mn. Ni. Cr. Mo. TL. Al) in steel.

## Examination Scheme:

# APPLIED THERMODYNAMICS

Course Code: MAE2311

Credit Units: 03

## Course Objective:

Objective of this course is to impart in depth understanding of the principles of thermodynamics and heat transfer. This course also helps students understand the application of basic fluid mechanics, thermodynamic, and heat transfer principles and techniques, including the use of empirical data, to the analysis of representative fluid and thermal energy components and systems encountered in the practice of electrical, electronic, industrial, and related disciplines of engineering.

## Course Contents:

### Module I: Basic concepts

Thermodynamic system, intensive and extensive properties, cyclic process, Zeroth Law of Thermodynamics, Work and heat, Flow work

### Module II: First Law of Thermodynamics

Mechanical equivalent of heat, internal energy, Analysis of non-flow system, flow process and control volume, steady flow, energy equation, flow processes

### Module III: Second Law of Thermodynamics and Entropy

Heat Engine, heat pump, Kelvin Planck and Clausius statement of Second Law of Thermodynamics, Perpetual motion machine, Reversible cycle- Carnot Cycle, Clausius inequality, entropy, Principle of entropy increase, concepts of availability, irreversibility.

### Module IV: Air-Cycles

Carnot cycle, Otto cycle, Diesel cycle, Dual cycle, Stirling cycle, Ericsson cycle, Brayton cycle; Reversed Carnot cycle.

### Module V: Properties of Steam

Use of steam tables, wet steam, superheat steam, different processes of vapour, Mollier Diagram.

### Module VI: Reciprocating Air compressors

Single stage compressor, Isothermal efficiency, adiabatic efficiency, clearance volume, volumetric efficiency, and multi-stage compression with intercooling.

# STRENGTH OF MATERIALS-I

Course Code: MAE2312

Credit Units: 04

## Course Objective:

The objective of this course is to make the students understand the concept of stress and strain in different types of structure/machine under different loading conditions. The course also covers the simple and compound stresses due to forces, stresses and deflection in beams due to bending, torsion in circular section, strain energy, different theories of failure, stress in thin cylinder thick cylinder and spheres due to external and internal pressure.

## Course Contents:

### Module I: Simple stresses and strains

Concept of stress and strain; Hooke's law, Young's modulus, Poisson ratio, stress at a point, stress and strains in bars subjected to axial loading. Modulus of elasticity, stress produced in compound bars subject to axial loading. Temperature stress and strain calculations due to applications of axial loads and variation of temperature in single and compound walls.

### Module II: Compound stress and strains

The two dimensional system; stress at a point on a plane, principal stresses and principal planes; Mohr's circle of stress. Graphical and Analytical methods for stresses on oblique section of body. Shear force and bending moment diagrams for cantilever, simply supported and overhanging beams.

### Module III: Bending Stress

Theory of bending stresses in beams due to bending, assumptions in the simple bending theory, derivation of formula: its application to beams of rectangular, circular and channel sections, composite / flitched beams, bending and shear stresses in composite beams.

### Module IV: Torsion

Derivation of torsion equation and its assumptions. Applications of the equation of the hollow and solid circular shafts torsional rigidity, combined torsion and bending of circular shafts principal stress and maximum shear stresses under combined loading of bending and torsion, analysis of close-coiled-helical springs.

### Module V: Thin cylinders and spheres

Derivation of formulae and calculation of hoop stress, longitudinal stress in a cylinder and sphere subjected to internal pressure.

### Module VI: Columns and struts

Columns and failure of columns, Euler's formulas; Rankine-Gordon's formula, Johnson's empirical formula for axially loaded columns and their applications.

### Module VII: Slope and deflection

Relationship between moment, slope and deflection, Mohr's theorem; Moment area method; method of integration; Macaulay's method: Use of all these methods to calculate slope and deflection for the following:

- a) Cantilevers
- b) Simply supported beams with or without overhang
- c) Under concentrated loads, uniformly distributed loads or combination of concentrated and uniformly distributed loads

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# KINEMATICS OF MACHINE LAB

Course Code: MAE2307

Credit Units: 01

1. To study inversion of 3 R-IP Kinematics chain
2. To study inversions of 2R-2P Kinematics Chain
3. To carry out computer implementable kinematics analysis of 4 R mechanisms
4. To carry out computer implementable kinematics analysis of slider bar mechanism
5. To study gear box, clutch and differential gear
6. To find coefficient of friction for clutch plate
7. To determine gear ratio for an epicyclical gear train and verify it by analytical method
8. To study different types of Cam follower systems
9. To determine moment of inertia of the given object using of Trifler suspension.
10. To plot slider displacement, velocity and acceleration against crank rotation for single slider crank mechanism.
11. To find coefficient of friction between belt and pulley.
12. To study various types of gears – Helical, cross helical, worm, bevel gear.
13. To study the different types of brakes and dynamometers.

## Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# RENEWABLE ENERGY & ENERGY MANAGEMENT

**Course Code: MAE2314**

**Credit Units: 03**

## **Course Objective:**

Current Energy Scenario, Principles of renewable energy, fundamentals, scientific principles of renewable energy, technical implications, social implications.

## **Course Contents:**

### **Module-I: Solar Energy**

Solar radiation: Extraterrestrial solar radiation, components of radiation, geometry of earth and sun, geometry of collector and solar beam, measurements of solar radiations, Solar water heating system, solar air heaters, solar concentrators

### **Module-II: Energy from Oceans**

Principles of Ocean thermal energy conversion, Principles of Geothermal energy conversion, suitable sites and criteria, Advantages and disadvantages.

### **Module-III: Energy from Wind**

Basic principles of wind energy conversion; design of windmills; wind data and energy estimation site selection considerations.

### **Module-IV: Energy from Water**

Classification of small hydro power (SHP) stations; description of basic civil works design considerations turbines and generators for SHP; advantages and limitations.

### **Module-V: Energy from Earth**

Origin and nature of geothermal energy; classification of geothermal resources: schematic of geothermal power plants

### **Module-VI: Energy Management**

The relevance of energy management profession, general principles of energy management and energy management planning.

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

# ERGONOMICS

**Course Code: MAE2315**

**Credit Units: 03**

**Course Objective:** To explain the general principles those govern the interaction of humans and their working environment for improving worker performance and safety.

**Module-I: INTRODUCTION** Brief history of human factors Engineering/Ergonomics, Interdisciplinary nature, Principles of Human factors Engineering, Biostatic and Biodynamic Mechanics, Human Machine Systems – interfaces.

**Module-II: HUMAN PERFORMANCE** Factors influencing performance, Information receiving and processing, Information theory and its application, Human response and errors, Signal detection theory, Posture and Body Mechanics: Muscle Functioning, Spine, Musculoskeletal problems in Sitting and Standing.

**Module-III: PHYSIOLOGICAL ASPECTS OF HUMAN AT WORK** Metabolism, Physiological factors involved in muscular activity, Measurement of energy expenditure, Quantitative work load analysis, Physical work capacity and its evaluation, Physiological fatigue, Work and rest schedules, Physical fitness tests.

**Module-IV: WORK PLACE DESIGN** Problems of body size, Anthropometry measures, Work posture, Work space layout and work station design, Design of displays, controls and VDT work stations, Hand tool design, Illumination.

**Module-V: OCCUPATIONAL HEALTH AND SAFETY** Industrial accidents, Personnel Protective devices, Safety Management practices, Effect of Environment – heat, cold & noise, NIOSH regulations and Factories Act, Legal and Safety Aspects.

**OUTCOMES:** The Student should apply ergonomic principles to design workplaces for the improvement of human performance and implement latest occupational health and safety to the work place.

## Examination Scheme:

# SOLAR ENERGY

**Course Code: MAE2316**

**Credit Units: 03**

## Course Objectives

The course provides introduction to solar energy based systems. The course also provides the understanding of generation of power from solar insolation and power generation through solar photovoltaics and solar thermal etc. The components of power generation via solar photovoltaics and solar thermal routes and their performance characteristics will also be covered.

## Course Contents

### Module-I: Introduction

Current Energy Scenario, Principles of renewable energy, fundamentals, scientific principles of renewable energy, technical implications, social implications.

### Module-II: Solar Radiations

Solar radiation: Extra-terrestrial solar radiation, components of radiation, geometry of earth and sun, geometry of collector and solar beam, measurements of solar radiations, Solar water heating system, solar air heaters, solar concentrators

### Module-III: Solar Energy

Solar thermal power and its conversion, Solar collectors, Flat plate collector, Performance analysis of flat plate collector,

### Module-IV: Solar concentrating collectors,

Types of concentrating collectors, Thermodynamic limits to concentration, Cylindrical collectors, Thermal analysis of solar collectors, Tracking CPC and solar swing.

### Module-V: Solar Thermal Energy Storage

Solar thermal energy storage, Different systems, Solar pond. Applications, Water heating, Space heating & cooling, Solar distillation, Solar pumping, Solar cooking, Greenhouses, Solar power plants.

### Module-VI: Solar Photovoltaic Systems

Photovoltaic effect, Efficiency of solar cells, Semiconductor materials for solar cells, Solar photovoltaic system, Standards of solar photovoltaic system, Applications of PV system, PV hybrid system.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# Syllabus - Fourth Semester

## DYNAMICS OF MACHINES

Course Code: MAE2401

Credit Units: 04

### Course Contents:

#### Module I

**Static Force Analysis:** Static force analysis of planer mechanisms, Free body diagrams, dynamic force analysis including inertia and frictional forces of planer mechanisms

**Inertia forces:** D-Alembert's Principle, Velocity and acceleration of piston, Torque exerted on the crank shaft when friction and inertia of moving parts are neglected, Forces on the reciprocating parts of an engine considering friction and inertia of moving parts, Turning moment on crank shaft, Dynamically equivalent system, Torque exerted on the crank shaft, considering the weight of the connecting rod.

#### Module-II

**Balancing of rotating masses:** Balancing of single rotating mass, Balancing of several masses rotating in the same plane, Balancing of several masses rotating in different planes.

**Balancing of reciprocating masses:** Balancing of reciprocating engine, Partial balancing of primary force, Partial balancing of locomotives, Variation of tractive force, swaying couple, hammer blow, coupled locomotive, primary balance of multi-cylinder inline engine, Secondary balance of multi-cylinder in line engines, Method of direct and reverse cranks, V-engines balancing.

#### Module-III

**Governors:** Types of Governor, Watt Governor, Porter governor, Proell Governor, Hartnell Governor, Wilson-Hartnell governor, Sensitivity, Stability, Isochronism, Hunting, Governor Effort and Power, controlling force

#### Module-IV

**Gyroscopic effect and Gyroscope:** Spinning and precession, gyroscopic couple, Effect of gyroscopic couple on the stability of automotive vehicles: Stability of four wheelers, Stability of two wheelers, Gyroscopic effects on ships and aero planes.

#### Module-V

**Vibration:** Vibration analysis of SDOF systems, natural, damped, forced vibrations, base-excited vibrations, transmissibility ratio

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# THEORY OF METAL FORMING

**Course Code: MAE2403**

**Credit Units: 03**

## **Course Objective:**

The objective of this course is to introduce the fundamentals of basic manufacturing processes (solidification process, heat treatment, deformation processes, material removal processes, and joining processes). The students are expected to be able to select, analyze and design basic manufacturing processes for product development.

## **Course Contents:**

### **Module I: Introduction**

Review of tensile test, True stress and true strain, Yielding criteria for ductile metals, Yield locus, Plastic stress-strain relations-Levymises equation, prandtl-Reuss equations.

### **Module II: Plastic deformation**

Crystal Geometry, Lattice defects, Deformation by slip, Shear Stress required to cause slip in a perfect Crystal, Deformation by twinning, Fracture, Types of Fracture, Creep Failure.

### **Module III: Introduction to metal working**

Classification of metal working processes-Cold working, Hot working, Effect of variables on metal working processes, Methods of Analysis of metal working processes.

### **Module IV: Forging**

Classification of Forging Processes, Forging equipment, Open die forging, Closed die forging, Load calculation in Plane strain forging, Forging defects.

### **Module V: Rolling**

Rolling Mills, Hot rolling, Cold rolling, Forces and Geometrical Relationships in Rolling, Rolling load & torque, rolling defects.

### **Module VI: Extrusion**

Methods of Extrusion, Hot Extrusion, Cold Extrusion, Analysis of Extrusion processes, Effect of Variables on Extrusion pressure, Extrusion defects.

### **Module VII: Sheet metal forming**

Forming Methods, Forming Operations-Shearing, Blanking, Bending, Stretch Forming, Deep Drawing, Stresses developed in Deep Drawing, Defects in Formed Parts.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# MANUFACTURING PROCESSES

**Course Code: MAE2411**

**Credit Units: 03**

## **Course Objective:**

This is a new developmental graduate course for students interested in learning how to design, analyze and build specialty manufacturing process machines. It anticipated that this course would become part of the new manufacturing emphasis area in mechanical engineering.

## **Course Contents:**

### **Module I: Introduction to Machine Tools**

Classification of machine tools, kinds of motion in machine tool operations, definition of cutting speed, feed and depth of cut.

### **Module II: Lathe**

Classification and various parts of Lathe, specification, Description of important mechanism viz. apron, tail stock, head stock, work holding, devices and operations, e.g. taper, turning, eccentric turning and screw-cutting, Geometry of a single point cutting tool. Calculation of machining time, Capstan and turret lathe

### **Module III: Drilling Machine**

Geometry and nomenclature of a twist drill, specification and classification of drilling machines, cutting speed, feed, depth of cut and calculation machining time in drilling, tool holding devices, different types of operations performed on a drilling machine.

### **Module IV: Milling Machine**

Classification, up milling and down milling, dividing Head, different types of operations – simple, compound and differential indexing, slab milling, spiral milling, slot milling, T-slot milling and end milling.

### **Module V: Shaper, Slotter & Planner**

Principal part of a shaper, classification, Quick Return mechanism, table feed mechanism of a shaper, Operations, e.g. horizontal, vertical and inclined shaping, difference between a shaper, planer and slotter, cutting speed, feed, and depth of cut and calculation of machining time in shaping.

### **Module VI: Grinding Machines**

Construction and specification of a grinding wheel, wheel turning and dressing, Grinding machines surface, cylindrical and center less grinding.

### **Module VII: Special Machines**

Horizontal and vertical boring machines, Gear Geometry, Gear generation and hobbing; Lapping, honing and super finishing processes.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# STRENGTH OF MATERIALS-II

Course Code: MAE2412

Credit Units: 04

## Course Contents:

**Module-I: Energy Methods:** Definitions, expressions for strain energy stored in a body when load is applied (i) gradually, (ii) suddenly and (iii) with impact, strain energy of beams in bending, beam deflections, strain energy of shafts in twisting, energy methods in determining spring deflection, Castigliano's & Maxwell's theorems. Numericals.

**Module-II: Theories of Elastic Failure:** Various theories of elastic failures with derivations and graphical representations, applications to problems of 2- dimensional stress system with (i) Combined direct loading and bending, and (ii) combined torsional and direct loading, Numericals.

**Module-III: Springs:** Stresses and Deflection of springs by energy method, helical springs under axial load and under axial twist axial load and twisting moment acting simultaneously both for open and closed coiled springs, leaf springs.

**Module-IV: Thin Pressure Vessels:** Hoop & Longitudinal stresses & strains in cylindrical & spherical vessels & their derivations under internal pressure.

**Module-V: Thick Pressure Vessels:** Derivation of Lamé's equations, radial & hoop stresses and strains in thick and compound cylinders shells subjected to internal fluid pressure. Numericals.

**Module-VI: Rotating Rings & Discs:** Stresses in uniform rotating rings & discs, rotating disc of uniform strength, stresses in rotating cylinders, hollow cylinders & solid cylinders. Numericals.

# FLUID MECHANICS

Course Code: MAE2413

Credit Units: 04

## Course Objective:

The objective of Fluid Mechanics subject is that students should understand the, properties of fluids, pressure measurement devices, hydraulic forces on surfaces, buoyancy and flotation in fluids, kinematics and static behaviour of fluids, dimension and model analysis, laminar and turbulent flow, flow through pipes and orifices, boundary layer theory.

## Course Contents:

### Module I: Fluid Properties and Fluid Statics

Newtonian and Non-Newtonian Fluids; Viscosity; Incompressible and compressible fluids, compressibility. Forces on plane surfaces, forces on curved surfaces, buoyant forces, and stability of floating bodies, metacentre and metacentre height.

### Module II: Kinematics of Fluid Motion

Steady and unsteady flow; uniform and non-uniform flow; Laminar and turbulent flow; streamline, path line and streak line; continuity equation, irrotational and rotational flow, velocity potential and stream function, vortex flow, free and forced vortex.

### Module III: Dynamics of Fluid Flow

Euler's equation of motion and its integration to yield Bernoulli's equation, its practical applications – Pilot tube, Venturi meter; steady flow momentum equation, force exerted on a pipe bend.

### Module IV: Dimensional Analysis and Principles of Similarity

Buckingham  $\pi$ -Theorem and its applications, Geometric, Kinematics and Dynamic similarity; Dimensionless numbers-Reynolds, Froude, Euler, Mach, Weber Number and their significance.

### Module V: Laminar and Turbulent Flow

Reynold's experiment, critical velocity, steady laminar flow through a circular tube, flow between parallel plates. Transition from laminar to turbulent flow, courses of turbulence, velocity distribution law near a solid boundary, velocity distribution in rough pipes, Hazen – Williams's formula.

### Module VI: Analysis of Pipe Flow

Energy losses, minor losses in pipe lines, concept of equivalent length, flow between two reservoirs, and multiple pipe systems – in series and parallel, siphon.

### Module VII: Flow Measurements

Measurement of flow using Venturi meter, orifice meter, Pitot tube, measurement of flow in open channels – rectangular, triangular, trapezoidal weir, Cipolletti weir.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# DYNAMICS OF MACHINES LAB

Course Code: MAE2405

Credit Units: 01

## List of Experiments:

1. To study gyroscopic effects through models
2. To determine gyroscopic couple on Motorized Gyroscope.
3. To determine and verify the whirling speed of a shaft-disc system
4. To determine the damping factor for a given horizontal vibration set up
5. To perform experiment on Watt and Porter Governors to prepare performance characteristic Curves, and to find stability & sensitivity.
6. To perform experiment on Proell Governor to prepare performance characteristic curves, and to find stability & sensitivity.
7. To perform experiment on Hartnell Governor to prepare performance characteristic Curves, and to find stability & sensitivity.
8. To perform the experiment for static balancing on static balancing machine.
9. To perform the experiment for dynamic balancing on dynamic balancing machine.
10. To determine mass moment of inertia of a flywheel.
11. To perform wheel balancing
12. To plot pressure distribution curves on a journal bearing

# NUMERICAL ANALYSIS AND PROGRAMMING

Course Code: MAE2408

Credit Units: 02

## Course Objective:

This course deals with the techniques of numerical analysis, which gives the solution to applied problem when ordinary analytical method fails. Emphasis is given on computer programming also so that the given techniques can be used in design of engineering and scientific problems.

## Course Contents:

### Module I: Solution of Algebraic and Transcendental Equation

Error in a series approximation, Bisection Method, Iteration method, Method of false position, Newton-Raphson method

### Solutions of Simultaneous equation

Gauss elimination method, Jacobi iteration method, Gauss Seidal method

### Module II: Interpolation

Finite Differences, Difference tables

Polynomial Interpolation: Newton's forward and backward formula

Central Difference Formulae: Gauss forward and backward formula.

Interpolation with unequal intervals: Lagrange's Interpolation, Newton Divided difference formula

### Module III: Numerical Integration and Differentiation

Introduction, Numerical differentiation Numerical Integration: Trapezoidal rule, Simpson's 1/3 and 3/8 rules.

### Module IV: Solution of differential Equations

Euler's Method, Runge-Kutta Methods.

### Module V: Statistical Computation

Frequency chart, Curve fitting by method of least squares, fitting of straight lines, polynomials, exponential curves etc, Data fitting with Cubic splines.

## Examination Scheme:

# NUMERICAL ANALYSIS & PROGRAMMING LAB

**Course Code: MAE2409**

**Credit Units: 01**

**Software Required:** Turbo C/C++

**Course Contents:**

**Assignments will be provided for the following:**

1. Analysis of various numerical and statistical techniques

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# GAS TURBINES

**Course Code: MAE2416**

**Credit Units: 03**

**Course Objective:** To explain the theory of a simple ideal gas turbine cycle and the methods which help in the improvement of the efficiency and net work output.

**Course Contents:**

## **Module-I: Introduction**

Air standard cycles, assumptions of air standard cycles, general aspects of gas turbine, classification of gas turbine, gas turbine vs. reciprocating IC engines, gas turbine vs. steam turbines

## **Module-II: Types of Gas Turbines**

Constant pressure combustion gas turbines, open cycle gas turbine, closed cycle gas turbine, closed cycle gas turbine plant vs. open cycle gas turbine plant, constant volume combustion gas turbines, advantages and disadvantages

## **Module-III: Simple gas turbine cycles**

Theory of a simple ideal gas turbine cycle, efficiency of air standard gas turbine cycle, variation of efficiency with pressure ratio, optimum pressure ratio, maximum pressure ratio, isentropic efficiency of compressor and turbine

## **Module-IV: Methods improving thermal efficiency of gas turbine plant**

Regenerative gas turbine cycle, reheat gas turbine cycle, gas turbine cycle with intercooling, gas turbine cycle with reheat and regeneration, Real gas turbine cycles

## **Module-V: Pollution from gas turbine emissions**

Gas turbine combustion chamber, types of combustion chambers, description of a typical combustion chamber, performance of combustion chamber, pollution aspects, automotive gas turbines

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# ELECTRICAL MACHINE

**Course Code: MAE2417**

**Credit Units: 02**

## **Course Objective:**

Electrical Machines provides the backbone for successful and uninterrupted smooth functioning of any industry. Knowledge of this subject in any engineering branch is vital in process industry. The course covers the machines e.g. Motors & generators characteristics and classifications related to mechanical & automation as well as recent development engineering applications. Successful completion of this course will be very helpful for the students who wish to join challenging industry.

## **Course Contents:**

### **Module I**

Introduction to Subject, Some important fundamentals, Electrical Power generation, Utilization & distribution facts & figures. Simple Loop Generator, D C Machines, Construction Features, Principle of Operation.

### **Module II**

DC Generator Analysis & DC Motor, Classification & Characteristics & Analysis. Speed Torque Characteristics, Speed control of D C Motor. Application of D C Motor. Starters.

### **Module III**

A C Machines, 3 phase IM, Revolving Magnetic field theory, IM as a transformer, Equivalent Circuit. 3 phase Synchronous Machines, Synchronous Motor, Synchronous Generator, Equivalent Ckt.

### **Module IV**

Single phase Induction Motor, Double Revolving Field theory, Different types of 3 phase IM. Characteristics & typical Applications. Fractional Kilo Watt Hour Motor, Stepper Motor, Hysteresis Motor, A C Series Motors, Universal Motors.

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>

# ELECTRICAL MACHINE LAB

Course Code: MAE2418

Credit Units: 01

## Course Contents:

S. NO.	NAME OF THE EXPERIMENTS
1.	Speed Control of DC Shunt Motor
2.	To obtain magnetization characteristics of 1) Separately excited DC Generator 2) Shunt Generator
3.	To obtain the load characteristics 1) DC Shunt Motor 2) Cumulative Compound generator
4.	To conduct Swinburne Test on a DC. Shunt Motor and hence obtain its efficiency at full load.
5.	To perform No Load Test and blocked rotor test on a three phase Induction motor and hence determine its equivalent circuit parameters.
6.	To perform load test on a three phase Induction Motor and obtain its various performance characteristics.
7.	Retardation Test on a three phase induction motor and calculate its moment of inertia.
8.	To perform No Load and Blocked Rotor Test on a single phase Induction motor and hence determine its equivalent circuit parameters.
9.	To perform open circuit and short circuit test on a three phase alternator and hence determine its voltage regulation by synchronous Impedance Method.
10.	To obtain V curves of a three phase synchronous motor at no load.

## Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# Syllabus - Fifth Semester

## MACHINE DESIGN-I

**Course Code: MAE2501**

**Credit Units: 03**

### Course Objective:

The objective of this course is to help students apply concepts learned in the mechanics, structure, material and manufacturing courses. This course offers working knowledge in the use of proper failure theories under steady and variable loading, design of mechanical elements, such as shaft, coupling, power screws, and detachable, permanent and welded connections.

### Course Contents:

#### Module I: Variable stresses in Machine Parts

Fatigue and Endurance Limit, Factor of Safety for Fatigue Loading, Stress concentration, Notch sensitivity, Gerber Method, Goodman Method and Soderberg Method for combination of stresses.

#### Module II: Power Screws

Types of screw threads, Torque required to raise and lower the load, Efficiency of square threaded screw, overhauling and self locking screw, stresses in power screw, design of screw jack.

#### Module III: Cotter and Knuckle Joints

Types of cotter joints, design of socket and spigot joint, design of sleeve and cotter joint, design of jib and cotter joint, Design procedure of Knuckle joint.

#### Module IV: Riveted and Welded Joint

Types of Riveted joint, Lap joint, Butt Joint, Caulking and Fullering, Failure of Riveted joint, Strength of Riveted joint, Efficiency of Riveted joint. Advantages and Disadvantages of welded joint over Riveted joint, Strength of Fillet joint, strength of Butt joints.

#### Module V: Keys and Couplings

Types of Keys, Splines, Strength of Sunk Key, types of shaft coupling, Sleeve and muff coupling, Flange coupling, Flexible coupling, Oldham coupling, Universal coupling.

#### Module VI: Drives

Types of Belt drives, Flat Belt drives, Velocity ratio, Slip, Creep of Belt, Length of open Belt, length of cross belt, power transmission by belt, Maximum tension in the belt. Types of V belt and Pulleys, advantages and disadvantages of V belt over Flat Belt, Ratio of Driving tensions for V belt, Rope drives. Chain drives, advantages and disadvantages of Chain drives.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE

# HEAT & MASS TRANSFER

**Course Code: MAE2502**

**Credit Units: 04**

## **Course Objective:**

The main objective of the course to understand the behaviour of thermal systems. To illustrate the development of the governing differential, algebraic and finite difference equations associated with thermal systems. To introduce the possible methods of solution to the governing equation. To investigate the influences of boundary and initial conditions and system parameters on the resulting steady or transient response of the system. To provide the basic tools those are used in thermal system design. To expose students to heat transfer applications in industry.

## **Course Contents:**

### **Module I**

One-dimensional steady-state conduction through homogeneous and composite plane walls, cylinders and spheres, critical thickness of insulation; heat transfer from fins of uniform cross section.

### **Module II**

Concept of hydrodynamic and thermal boundary layers, momentum and energy equation for boundary layers on a flat plate application of dimensional analysis to free and forced convection; important dimensionless number.

### **Module III**

Thermal radiation; Kirchhoff's law; Planck's distribution law, Wien's displacement law; Stefan-Boltzmann's relation, Configuration factors; radiant interchange between black and grey surfaces; radiation shielding solar radiation.

### **Module IV**

Combined heat transfer analysis; overall heat transfer co-efficient; types of heat exchangers; LMTD methods of heat exchanger design; simple heat exchanger calculations.

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

# METROLOGY

Course Code: MAE2551

Credit Units: 03

## Course Objective:

The main objective of this course is to give the student: a basic understanding of the physical loss governing metrology and tolerance design. Gain and appreciation for the capabilities and applications of metrology through hands own experiences.

## Course Contents:

### Module I: Principles of measurement

Definition of Metrology, difference between precision and accuracy. Sources of errors: Controllable and Random Errors, Effects of Environment and Temperature, Effects of support, alignment errors.

**Length Standards:** Line standards, end standards and wavelength standards, transfer from line standards to end standards. Numerical based on line standards. Slip gauges – its use and care, methods of building different heights using different sets of slip gauges.

**Limits, fits and tolerances:** Various definitions, different types of fits and methods to provide these fits. Numerical to calculate the limits, fits and tolerances, ISO system of limits and fits; Gauges and its types, limit gauges – plug and ring gauges. Gauge Design – Taylor's Principle, wear allowance on gauges.

### Module II: Comparators

Principles and working of Mechanical, Electrical, Optical and Pneumatic Comparators.

**Angular Measurement:** Sine Bar – different types of sine bars, use of sine bars in conjunction with slip gauges, Use of angle gauges, spirit level, errors in use of sine bars. Numericals. Principle and working of autocollimator.

### Module III: Straightness and flatness

Definition of Straightness and Flatness error. Numericals based on determination of straightness error of straight edge with the help of spirit level and auto collimator

**Screw Thread Measurement:** Errors in threads, Measurement of elements of screw threads –major diameter, minor diameter, pitch, flank angle and effective diameter (Two and three wire methods). Effect of errors in pitch and flank angles

**Gear Measurement:** Measurement of tooth thickness – Gear tooth vernier caliper, Constant chord method, base tangent method and derivation of mathematical formulae for each method. Parkinson Gear Tester.

### Module IV

**Machine Tool Alignment:** Machine tool tests and alignment tests on lathe. Alignment tests on milling machine. Alignment tests on a radial drilling machine, Interferometry.

**Surface texture:** Introduction, types of irregularities, Elements of surface Texture, Measurement of surface finish, Examination of surface Roughness.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# MACHINE DESIGN LAB-I

**Course Code: MAE2504**

**Credit Units: 01**

## **Course Contents:**

### **Design of:**

- (i) Cotter Joint
- (ii) Knuckle Joint
- (iii) Pipe Joint
- (iv) Screw Jack
- (v) Rigid and Flexible coupling
- (vi) Spur Gear Train

## **Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# METROLOGY LAB

Course Code: MAE2505

Credit Units: 01

## Course Contents:

### Name of Experiments:

- 1 Set up a dimension by slip gauges (example 36.936; 14.727.....) Measure this set up by micrometer (least count 0.01) several times and read dimensions. Find statistical mean and record the expected variation between the actual dimension and dimension measured by micrometer.
- 2 To check the roundness of a circular bar with the help of dial gauge.
- 3 Mill a component to dimension (23, 57.6,...). Set up a comparator by slip gauge set to this dimension. Check component deviation by the comparator and record the deviation. Measure several times and obtain the mean value.
- 4 Check the bore in a component by a bore-indicator. Set the bore indicator by micrometer and measure the deviation in the bore. Measure several times and obtain the mean value at three positions along the length of the bore.
- 5 Set – up a sine bar for measuring the angle of an inclined surface (of a bracket, milling cutter arbor with 7/24 taper, ....). Measure the angle several times and record the mean value. Use height gauge wherever necessary.
- 6 Check angular dimension of a dovetail guide way by measuring across rollers. Check the included angle of a V – block (90°, 60°, ...) / or a machined groove by measuring over a roller using height gauge and parallel blocks/slip gauges.
- 7 Measure the straightness of a surface (surface plate; guide way of machine tool) by using straight edge and dial gauge and dial gauge stand. Set up straight edge on jacks such that dial reading at each end coincide. Move the dial stand along the straight edge. Record readings at 50 mm interval and draw a plot. Obtain maximum deviation which is the straightness.
- 8 Measure straightness using a spirit level. Place spirit level at an initial position and note level reading. Move the level on a straight line and take readings at 50 mm intervals. Plot the difference from the original reading and obtain the straightness value.
- 9 Draw a trapezoidal and any other profile in AutoCAD to 1:1 scale. On a steel plate make the profile by fitting and filing. Set up the drawing on profile projector. Check the component and note deviations. Correct the profile and recheck. Make the profile as close to the required one.
- 10 To machine a given surface and study its roughness characteristics
- 11 To measure the geometry of a screw using profile projector
- 12 To study the cutting tool geometry using tool makers microscope

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## HEAT & MASS TRANSFER LAB

Course Code: MAE2507

Credit Units: 01

### Experiments to be Performed (Minimum 10 Numbers)

1. To Determine Thermal Conductivity of Insulating Powders.
2. To Determine Thermal Conductivity of a Good Conductor of Heat (Metal Rod).
3. To Measure the thermal Conductivity of Liquid.
4. To determine the transfer Rate and Temperature Distribution for a Pin Fin.
5. To Measure the Emissivity of the Test plate Surface.
6. To Determine Stefan Boltzmann Constant of Radiation Heat Transfer.
7. To Determine the Surface Heat Transfer Coefficient For Heated Vertical Cylinder in Natural Convection.
8. Determination of Heat Transfer Coefficient in Drop Wise and Film Wise condensation.
9. To Determine Critical Heat Flux in Saturated Pool Boiling.
10. To Study Performance of Simple Heat Pipes.
11. To Study and Compare LMTD and Effectiveness in Parallel and Counter Flow Heat Exchangers.
12. To Find the Heat transfer Coefficient in Forced Convection in a tube.
13. To determine the total thermal conductivity and thermal resistance of the given compound resistance in series.
14. To find out the thermal conductivity of given slab material.
15. To determine the individual thermal conductivity of different lagging in a lagged pipe.
16. To study the rates of heat transfer for different materials and geometries
17. To understand the importance and validity of engineering assumptions through the lumped heat capacity method.
18. Testing and performance of different heat insulators.

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# SUMMER INTERNSHIP EVALUATION-I

Course Code: MAE2535

Credit Units: 03

## Objective:

There are certain phases of every Intern's professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship program can best be described as an attempt to institutionalize efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal classroom situations. These attributes are intellectual ability, professional judgment and decision-making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility etc.

## Guidelines

In order to achieve these objectives:

- **Each student will be allotted a supervisor** for proper guidance.
- **Student will first submit details of company, external guide, project title to coordinator/supervisor as per given schedule.**
- For internal assessment purpose, students will submit an industry feedback and a progress report.
- Student will maintain a file (**Internship File/Project Report**) which he/she will submit after completion of internship. **Further, coordinator will provide NTCC project guidelines and sample to help in preparation of file.** The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development. The File will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

The **layout guidelines** for the Project Report

### 1. File should be in the following specification

- A4 size paper
- Spiral Binding
- **Font**

For normal text Font Type and Size must be- Times New Roman, 12 pt. The minimum font size of materials within a table or a figure can be 10 point.

- **Margins**

A margin of 3.75 cm (1½ inch) is to be given on the binding edge while on the other sides it is to be 2.5 cm (1 inch). The text of the report, including headings, figures, tables, and notes, but excluding page numbers, must be accommodated within the page area.

- **Line Spacing**

The line spacing in the main text must be between one-and-a-half (1.5). Single line spacing should be given for figure captions, table titles, figure legends, and footnotes. Equations, tables, figures, and quotations should be set off from the main text with adequate space (not less than the normal line spacing adopted for the main text). Two consecutive paragraphs should be separated by a spacing which must be larger than the line spacing adopted for the text.

- **Tables and Figures**

Each sketch, drawing, graph and photograph should have a figure number and title below the figure etc. Numbering should be sequential, chapter wise. For instance, if there are 24 figures chapter 3 spread over all of its sections the figure numbers run from Figure 3.1 through Figure 3.24. In figures experimental data should typically be represented by centered symbols, and theoretical data by continuous curves.

Each table should have a table number and caption above the table. Numbering should be sequential, chapter wise, as in the case of Figure numbers. For instance, if there are 18 tables in chapter 3 the table numbers run from Figure 3.1 through Figure 3.18.

Make sure that figures and tables are complete in other respects such as legends, references (if any) and coordinate labels with units. Each figure and table must be explicitly referred to in the text and located where its first reference occurs, preferably after the reference.

- **Drawings**

All engineering drawings must conform to relevant Standards and should include a title block. If drawings are large they should be included at the back of the report in a separate pocket. In case drawings are made using CAD packages, a CD ROM should be included which contains all the files and details of the packages used.

- **Equations**

The numbering of equations should be sequential, chapter wise. Numbered equations must be explicitly referred to in the text.

**2. Report Size:** The maximum number of pages of the Report should be preferably between 50-80 pages.

**3. Report Layout:** The report should contain the following components

Front Page  
Declaration  
Student Certificate (University)  
Certificate (Company)  
Acknowledgement  
Abstract  
Contents  
List of Figures  
List of Tables  
Company Profile (optional)  
Chapters  
Appendices(optional)  
References / Bibliography

The above components are described below:

1. **The Title Page**-- Format will be given by coordinator/supervisor.
2. **Declaration by the Students**--This is page number (i), the beginning of the small case Roman numeral page numbers. The student has to give a declaration to the effect that the data used for the work, the work depicted in the report, and the written material contained in the report are not copied from others and that due permission has been taken from, and due credit has been given to, the sources whenever they are used.
3. **Certificate**--This is page number (ii). It is given by the Institute. The certificate will be signed by the Faculty Supervisor(s) before the viva-voce after verifying the format and by the Head of the Department after review with the Supervisor(s).
4. **Company Certificate:** This is a certificate, which the company gives to the students.

**5. Contents**-This is page number (iii). The table of Contents should be titled just Contents (not Table of Contents). Try to fit it into one or two pages.

**6. Acknowledgement**-This is page number (iv). Keep this brief and avoid using informal language. This page must be signed by the candidate.

**7. Abstract and Keywords**-This is page number (v). The abstract (preferably one page) should contain the context/relevance of the problem at hand, a description of what was done and a gist of the significant observations/results.

The keywords (maximum 6) are a hint that what is contained in the report.

**8. Company Profile:** A Company Profile corresponds to a file with company-specific data. Company data can be stored there and included in a booking when needed.

**9. Chapters**—Introduction, Literature Review/Background Study etc. as given by coordinator/supervisor.

**10. References / Bibliography** --This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

## **ASSESSMENT OF THE INTERNSHIP FILE**

Continuous Internal Assessment consists of topic relevance, progress report and industry feedback on company letterhead. Final Assessment includes viva, presentation, execution and report marks.

### **Examination Scheme:**

<b>Components</b>	<b>IF</b>	<b>PR</b>	<b>R</b>	<b>E</b>	<b>V</b>	<b>FP</b>
<b>Weightage (%)</b>	20	20	15	15	15	15

V – Viva, IF – Industry Feedback, FP – Final Presentation, R – Report, PR-Progress Report, E-Execution

# OPTIMIZATION TECHNIQUES

**Course Code: MAE2508**

**Credit Units: 03**

## **Course Contents:**

Introduction & history of optimization, Classification & application of optimization technique. Classical optimization techniques for unconstrained optimization. Karush-Kuhn-Tucker conditions. Sensitivity analysis for linear programming problems. Non-linear programming. Penalty function methods. Sequential linear programming. Feasible direction methods. Quadratic programming. Geometric programming. Integer programming.

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

## **Books:-**

- Optimization Concepts and Applications in Engineering by Ashok D. Belegundu, Tirupathi R. Chandrupatla, Cambridge University Press, 2011
- Theory and Techniques of Optimization for Practicing Engineers by Raymond L. Zahradnik , Barnes & Noble, 1971

# OPERATIONS RESEARCH

**Course Code: MAE2511**

**Credit Units: 03**

## **Course Objective:**

In a rapidly changing environment an understanding is sought which will facilitate the choice and the implementation of more effective solutions, which, typically, may involve complex interactions among people, materials and money. Organizations may seek a very wide range of operational improvements - for example, greater efficiency, better customer service, higher quality or lower cost. Whatever the business, engineering aim, Operation Research can offer the flexibility and adaptability to provide objective help. This course introduces students to the principles of operational research.

## **Course Contents:**

### **Module I: Linear Programming**

Formulation of problem. Graphical and simplex method for maximization and minimization. Duality theory and sensitivity analysis

### **Module II:Transportation Models**

Stepping stone algorithm, MODI method and Vogel's Approximation Method (VAM) for selfing balanced, unbalanced transportation problems and problems of degeneracy and maximization.

### **Module III:Assignment Models**

Assignment model for maximization and traveling salesman problems, Industrial Problems

### **Module IV:Queuing Theory**

Basic structured, Terminology, classification. Birth and death process. Sequencing: Processing in jobs through machines with the same processing order. Processing of 2 jobs through machines with each having different processing order.

### **Module V:Network Models**

Introduction to PERT and CPM. Fundamental concept of Network models and construction of network diagrams. PERT activity, time estimate. Critical path and project time duration. Probability of completing the project on or before specified time. Float of a activity.

### **Module VI:Games Theory**

Zero Sum two person competitive games, Minimax and maximini principle Arithmetic, algebraic, matrix algebra method,. Solution by dominance, sub game, Graphical and linear programming method.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# ADVANCED THERMODYNAMICS

**Course Code: MAE2512**

**Credit Units: 03**

**Course Objective:** To familiarize the students to understand the fundamentals of thermodynamics and to perform thermal analysis on their behavior and performance.

## **Course Contents:**

### **Module-I: Preliminaries and the Zeroth-Law of Thermodynamics**

Basic Concepts: Macroscopic and Microscopic Approaches, Thermodynamic Systems, Surrounding and Boundary, Thermodynamic Property – Intensive and Extensive, Thermodynamic Equilibrium, State, Path, Process and Cycle, Quasi-static, Reversible and Irreversible Processes, Working Substance. Concept of Thermodynamic Work and Heat, Equality of Temperature, Zeroth Law of Thermodynamic and its utility, Problems.

### **Module-II: First-Law of Thermodynamics**

First Law of Thermodynamics: Energy and its Forms, Energy and 1<sup>st</sup> law of Thermodynamics, Internal Energy and Enthalpy, PMMFK, Steady flow energy equation, 1<sup>st</sup> Law Applied to Non- flow process, Steady Flow Process and Transient Flow Process, Throttling Process and Free Expansion Process. Problems.

### **Module-III: Second Law of Thermodynamics**

Second Law of Thermodynamics: Limitations of First Law, Thermal Reservoir, Heat Source and Heat Sink, Heat Engine, Refrigerator and Heat Pump, Kelvin- Planck and Clausius Statements and their Equivalence, PMMSK. Carnot Cycle, Carnot Heat Engine and Carnot Heat Pump, Carnot Theorem and its Corollaries, Thermodynamic Temperature Scale. Entropy, Clausius Inequality, Principle of Entropy Increase, Temperature Entropy Plot, Entropy Change in Different Processes, Introduction to Third Law of Thermodynamics. Problems.

### **Module-IV: Availability & Irreversibility**

Availability and Irreversibility: High and Low Grade Energy, Availability and Unavailable Energy, Loss of Available Energy Due to Heat Transfer Through a Finite Temperature Difference, Dead state of a system, Availability of a Non-Flow or Closed System, Availability of a Steady Flow System, Helmholtz and Gibb's Functions, Irreversibility

### **Module-V: Thermodynamic Properties of Pure Substances**

Pure Substance: Pure Substance and its Properties, Phase and Phase Transformation, Vaporization, Evaporation and Boiling, Saturated and Superheat Steam, Solid – Liquid – Vapour Equilibrium, T-V, P-V and P-T Plots During Steam Formation, Properties of Dry, Wet and Superheated Steam, Property Changes During Steam Processes, Temperature – Entropy (T-S) and Enthalpy – Entropy (H-S) Diagrams, Throttling and Measurement of Dryness Fraction of Steam. Problems.

### **Module-VI: Gas Vapor Mixtures**

Ideal and Real Gases: Concept of an Ideal Gas, Basic Gas Laws, Characteristic Gas Equation, Avogadro's law and Universal Gas Constant, P-V-T surface of an Ideal Gas. Vander Waal's Equation of state, Mixture of Gases, Mass, Mole and Volume Fraction

### **Module-VII: Thermodynamic Relations**

Thermodynamic Relations: Maxwell Relations, Clapeyron Equation, Relations for changes in Enthalpy and Internal Energy & Entropy, Specific Heat Capacity Relations, Joule Thomson coefficient & inversion curve.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

**Text Books:**

- **Thermodynamics: an Engineering Approach**, Y.A.Cengal and M.A.Boles, McGraw Hill (Fifth edition).
- Engineering Thermodynamics – Jones and Dugan, PHI, New Delhi.
- Fundamentals of Engineering Thermodynamics – E. Radhakrishnan, PHI, New Delhi.

**Reference Books:**

- Theory and Problems of Thermodynamics – Y. V.C. Rao, Wiley Eastern Ltd., New Delhi.
- Engineering Thermodynamics – C P Arora, Tata McGraw Hill
- Basics of Mechanical Engineering – Vineet Jain, Dhanpat Rai Publication
- Engineering Thermodynamics – P K Nag, Tata McGraw Hill

# Syllabus - Sixth Semester

## MACHINE DESIGN-II

Course Code: MAE2602

Credit Units: 03

### Course Objective:

The course aims at developing concepts as to how to analyze mechanical systems and select proper machine elements (bearing, gears, belts, chains). It prepares the students how to design machine element by specifying their type, geometry, material and how to integrate these elements to build a mechanical systems.

### Course Contents:

#### Module I: Mechanical Drives

Selection of transmission, helical, bevel and worm gears, belt and chain drives.

#### Module II: Friction Clutches & Brakes

Common friction materials, shoe, band, cone and disc brake their characteristics and design, friction clutches.

#### Module III: Bearings and Lubrication

Types of sliding bearing, materials, type of lubrication, design of sliding bearing, selection and application of rolling bearing, seals.

#### Module IV

Design of spring, helical spring, Leaf spring

#### Module V: Engine parts

Piston, connecting rod and crankshaft.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# FLUID MACHINES

**Course Code: MAE2611**

**Credit Units: 03**

## **Course Objective:**

Fluid power systems cover generation, transmission, and control applications of power by using pressurized fluids. This course imparts the knowledge of different fluid power systems (pneumatic and hydraulic) which are used in industries and hydropower plants.

## **Course Contents:**

### **Module I: Introduction**

Euler's equations for turbo machines; impulse and reaction forces due to fluid systems on stationary and moving system of vanes; jet propulsion.

### **Module II: Water Turbines**

Classification: Pelton, Francis, Propeller and Kaplan turbines; velocity triangles; efficiency; draft tubes, governing.

### **Module III: Pumps**

Centrifugal pumps, velocity triangles, efficiency, turbine pumps, axial and mixed flow pumps.

### **Module IV: Performance of Fluid Machines**

Similarity laws applied to rotodynamic machines; specific speed, unit quantities; characteristic curves; use of models; cavitations and attendant problems in turbo machines; selection of turbines hydroelectric plants.

### **Module V: Hydraulic Power Transmission**

Transmission of hydraulic power through pipe lines; water hammer; precautions against water hammer in turbine and pump installations: hydraulic ram.

### **Module VI: Power Hydraulics**

Positive pumps: gear, vane, screw, pump, variable delivery valves: flow control, pressure control, direction control, solenoid operated valve, hydraulic circuits, fluid coupling and torque converter.

Pneumatic Power: Basic principles, comparison of pneumatic and hydraulic Systems.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# INTERNAL COMBUSTION ENGINES

**Course Code: MAE2612**

**Credit Units: 03**

## **Course Objective:**

This course provides an in-depth knowledge of the functioning of IC Engine & Gas Turbine, and also deals with the combustion techniques used for various fuels. This course finds immense application in automobile industry and gas-operated power plants.

## **Course Contents:**

### **Module I: Fundamentals**

Development of IC engine, Classification, Working Cycles, Indicator diagram, comparison of SI Engine and CI Engine, two stroke and four-stroke engine, Valve timing diagram of SI and CI engine.

### **Module II: Air Standard Cycle**

Assumptions in air standard cycle & fuel-air cycle, fuel-air cycle calculations, factors influencing fuel-air cycle, effects of variable specific heats, dissociation.

### **Module III: Fuel and Combustion**

Combustion of SI engine, ignition limits, normal combustion, abnormal combustion, effect of engine Variable in ignition lag, spark advance and factors affecting ignition timing, pre-ignition, theory, and factors affecting detonation, PN, HUCR. Combustion in CI engine, fundamentals of combustion process in Diesel engine, delay period, diesel knock, and cold starting of CI engine. IC engine Fuel, combustion equations, theoretical air and excess air, stoichiometric air fuel ratio, desirable Properties of good IC engine fuels knock rating of SI engine fuel.

### **Module IV: Performance & Testing**

Testing and performance of IC engine, performance parameters, basic measurement, engine Performance curve, fuel consumption, load outputs, engine power, heat balance.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

## MACHINE DESIGN LAB-II

**Course Code: MAE2604**

**Credit Units: 01**

**Course Contents:**

Design and drawing based upon the course Machine Design II such as automotive transmission, brakes, clutches connecting rod, I.C. engine piston, connecting rod, hydraulic rivet, mechanical hoist etc.

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## FLUID MACHINES LAB

**Course Code: MAE2613**

**Credit Units: 01**

### **Course Contents:**

### **Name of Experiments:**

1. To conduct a test on Centrifugal Pump and plot its characteristics
2. To Plot the characteristics of Pelton turbine.
3. To conducts an experiment on Francis turbine.
4. To study the effect of a draft tube on reaction turbines.
5. To find the friction factor for flow through pipes
6. To study the hydraulic controls rig.
7. To conduct an experiment for verifying model laws.
8. To study the cavitations phenomenon in turbines.
9. Study of hydraulic couplings and torque converters.

### **Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

## INTERNAL COMBUSTION ENGINES LAB

Course Code: MAE2614

Credit Units: 01

### LIST OF EXPERIMENTS

S.No.	Name of the Experiment
1.	To study the constructional details & working principles of two-stroke petrol/ four-stroke petrol Engine.
2.	To study the constructional details & working principles of two-stroke Diesel / four-stroke Diesel Engine.
3.	Analysis of exhausts gases from single-cylinder/ multi- cylinder/ petrol engine by Orsat apparatus.
4.	To prepare heat balance sheet on multi-cylinder diesel engine / petrol engine.
5.	To find the indicated horse power (IHP) on multi-cylinder diesel engine / petrol engine by Morse test.
6.	To prepare variable speed performance test of a multi- cylinder /single-cylinder petrol engine / diesel engine and prepare the curve (i) bhp, ihp, fhp Vs Speed (ii) Volumetric efficiency & indicated specific fuel consumption VsSpeed.
7.	To find fhp of multi cylinder diesel engine / petrol engine by Willian's Line Method & MotoringMethod.
8.	To perform constant speed performance test on a single- cylinder/ multi-cylinder diesel engine & draw curves of (i) bhp Vs fuel rate, air rate and A/F and (ii) bhp Vs mep, mechanical efficiency & s.f.c.
9.	To study and determine the effect of A/F ratio on the performance of the two stroke, single – cylinder petrol engine.
10.	To study and draw the valve timing diagram four stroke, single – cylinder diesel engine.

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# VIBRATION ENGINEERING

Course Code: MAE2615

Credit Units: 02

## Course Contents

**Module-I: Scope of Vibration:** Important terminology and classification, Degrees of freedom, Harmonic motion, vectorial representation, complex number representation, addition, Derivation of equation of motion for one dimensional longitudinal, transverse and torsional vibrations without damping using Newton's second law, D'Alembert's principle and Principle of conservation of energy, Compound pendulum and centre of percussion, Damped vibrations of single degree of freedom systems, Viscous damping, underdamped, critically damped and overdamped systems, Logarithmic decrement, Vibration characteristics of Coulomb damped and Hysteretic damped systems.

**Module-II: Forced Vibrations of Single Degree of Freedom Systems:** Forced vibration with constant harmonic excitation, Steady state and transient parts, Frequency response curves and phase angle plot, Forced vibration due to excitation of support.

**Module-III: Vibration Isolation and Transmissibility:** Force transmissibility, Motion transmissibility, Forced vibration with rotating and reciprocating unbalance, Materials used in vibration isolation.

**Module-IV: System with Two Degrees of Freedom:** principle mode of vibration, Mode shapes, Undamped forced vibrations of two degrees of freedom system with harmonic excitation, Vibration Absorber, Undamped dynamic vibration absorber and centrifugal pendulum absorber

**Module-V: Many Degrees of Freedom Systems:** exact analysis.

**Many Degrees of Freedom Systems:** approximate methods, Rayleigh's, Dunkerley's, Stodola's and Holzer's methods, Vibrations of continuous systems, Transverse vibration of a string, Longitudinal vibration of a bar, Torsional vibration of a shaft.

## List of Recommended Books

- Mechanical Vibrations, Rao S.S., Pearson Education.
- Mechanical Vibrations and Noise Engineering, Ambekar A.G., Prentice Hall India.
- Mechanical Vibrations, Grover G.K., Nem Chand and Brothers.
- Theory of Vibrations with Application, Thomson and Dahleh, Pearson Education.
- Elements of Vibration Analysis, Leonard Meirovitch, Tata McGraw-Hill, New Delhi.
- Principles of Vibration, Benson H. Tongue, Oxford Publication

## **VIBRATION ENGINEERING LAB**

**Course Code: MAE2616**

**Credit Units: 01**

### **List of Experiments**

**To perform any 8 of the following experiments:**

1. To find the viscosity of the given fluid using the concept of vibrations.
2. To determine the co-efficient of friction between two materials using the method vibrations and also draw a graph between the co-efficient of friction and the speed of the rollers.
3. Investigation of the node and anti-node position for the cantilever.
4. Investigation of the node and anti-node position for simply supported beam.
5. Investigation of the node and anti-node position for a fixed end beam.
6. Determine experimentally the load on a beam with different end conditions and compare it with actual load and discuss the results.
7. Test the given structure for its vibrational stability.
8. Determine experimentally the spring stiffness and dampers required structure to a specific degree from the given vibrating body and test it experimentally.
9. To determine experimentally the whirling speed of shaft for a given system.

# COMPUTER INTEGRATED MANUFACTURING SYSTEM

**Course Code: MAE2608**

**Credit Units: 02**

## **Course Contents**

### **Module-I:**

Evolving manufacturing environment, New competitive challenges, Evolving Role of Information Technology

### **Module-II:**

CIM Systems: Flexibility, Integration and Automation Opportunities, Automation of information and manufacturing systems, Automation strategies, Towards Flexible Automation,

### **Module-III:**

Islands of automation, Evolution Towards CIM systems, Computer based integration between various functions- manufacturing, sales, design, materials etc

### **Module-IV:**

Flexible Manufacturing Systems (FMS) as mini CIM, Computer Integrated Production Management, ERP, Group technology,

### **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

# COMPUTER INTEGRATED MANUFACTURING SYSTEMS LAB

Course Code: MAE2617

Credit Units: 01

## Course Objectives

The objective of this course is to

1. To equip the students about the computer integration in manufacturing.
2. To provide sound knowledge of CIMS, FMS, GT and ERP.

## List of experiments

1. To study Computer Integrated Manufacturing System(CIMS) and its importance in manufacturing environment.
2. To study a CIM model of any industry.
3. Introduction to CAD software's.
4. Introduction to CAM software's.
5. To study Computer aided process planning (CAPP) with suitable example.
6. To describe Computer aided quality control.
7. To study Flexible manufacturing system (FMS).
8. To study flexibility in FMS and its measurements.
9. To study Group Technology(GT)with suitable example.
10. To study part family forming using different method in GT.
11. Do an exercise of Part Coding onGroup Technology.
12. Study of Enterprise resource planning (ERP) and its applications.

## Examination Scheme:

# COMPUTER AIDED DESIGNING

**Course Code: MAE2618**

**Credit Units: 02**

## **Course Objective:**

The objective of this course is to impart students an in-depth exposure to methods in geometric modeling and its applications in CAD/CAM. This course introduces integrated approach to CAD including: Overview of CAD, numerical techniques for CAD, Computer graphics and design, Principle and management of design data base system, finite element analysis and CAD, Design optimization. Along with the theoretical presentations, commercial CAD software are also introduced and applied to create Engineering components and assemblies.

## **Course Contents:**

### **Module I**

Introduction to CAD. Design process, Introduction to solid modeling and aided design of some elements/ components, hardware requirements, concurrent engineering.

### **Module II**

Elementary Computer Graphics. Transformations, Mappings, Projections – orthographic, isometric, perspective.

### **Module III**

Representation of surfaces. Plane surfaces, Ruled surfaces, Surfaces of revolution, Sweep surfaces, Bezier surface, Bicubic surface patch, Approximation B – spline surface, composite surfaces.

### **Module IV: Solid Modeling**

Set theory, Graph theory, Regularized Boolean operations, B-rep modeling, Sweep representations, Spatial occupancy enumeration.

### **Module V: Advanced CAD**

Mechanical assembly, Geometric property formulation- curve length, surface area calculations, volume calculation, centroid calculation, Tolerances representations, Animation, Simulation, Strategic factors in product design, Robust design for product, Introduction to Finite element modeling and analysis.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;

# COMPUTER AIDED DESIGNING LAB

**Course Code: MAE2619**

**Credit Units: 01**

## **Course Contents:**

### **List of Experiments:**

1. Analysis and design using ANSYS/Pro-E software for:
2. Flange Coupling.
3. Design Shaft.
4. Design for Key.
5. Design for Spur Gear.
6. Design for Helical Gear.
7. Parts of Thin Cylinder Pressure Vessels.

### **Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva

# Syllabus - Seventh Semester

## COMPUTER AIDED MANUFACTURING

**Course Code: MAE2701**

**Credit Units: 03**

### Course Objective:

The aim of the course is to impart the students the basic and essential concepts in using Computer Assisted Manufacturing (CAM) and Computer Numerical Control (CNC) machines. Students will learn the basic concepts of manufacturing planning and control. They will be offered hands on experience in using CAM software to design, simulate and write CNC programs.

### Course Contents:

#### Module I

Introduction to Numerical control. Programmed automation. Nomenclature, type and features of NC machines tools. Axes designation. Point to point, straight and continuous control systems.

#### Module II

Machining centre and Turning centre, Automatic tool changer, Machine Tool beds and automated pallet changers.

#### Module III

Machine Control Unit, Actuation Systems, open and close loop systems, transducers for NC Systems, revolves, encoders and inductosyn.

#### Module IV

Manual Part Programming: Processes planning, G&M codes. Interpolation Cycles. Tool compensation, Subroutines, Introduction to Computer Aided Part Programming.

#### Module V

Tooling and tool presetting. Computer Aided inspection - Contact Inspection (Coordinate Measuring Machine) & Non Contact Inspection.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# AUTOMOTIVE ENGINEERING

**Course Code: MAE2707**

**Credit Units: 03**

## **Course Objective:**

This course emphasizes on constructional details of automotive vehicles which includes – Basic structure, engine, transmission systems, suspension systems, steering system, braking systems and wheels & tyres..

## **Course Contents:**

### **Module I**

Introduction, Components of an automobile, basic engine terminology, engine cycles, working of an IC engine. Basic engine design considerations, constructional details of C.I. and S.I. engines. crank shafts, connecting rod, piston, valves, cams, manifolds, air cleaners, mufflers, radiators, and oil filters.

### **Module II: Transmission System**

Description and working of manually operated gearboxes like sliding mesh, constant mesh, synchromesh and epicycle; hydraulic torque convertor and its construction working and performance, sem-automatic and fully automatic transmission, Hydramatic transmission, analysis of differentials, live axles, construction working and requirements of overdrive.

### **Module III: Steering System**

Introduction, Front axle, wheel alignment, Steering geometry, steering mechanisms, Ackerman steering, center point steering, power steering.

### **Module IV: Suspension**

Objective, requirement, function, types Shock absorbers, Independent suspension, Stabilizer, air suspension, Hydroelastic suspension, Hydragas interconnected suspension.

### **Module V**

Principle, braking requirements, brake efficiency, fading of brakes, types of brakes, bleeding of brakes, brake fluid.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# COMPUTER AIDED MANUFACTURING LAB

**Course Code: MAE2703**

**Credit Units: 01**

## **Course Contents:**

### **Name of Experiments:**

1. Make a sketch of CNC lathe showing major assemblies and indicate the CNC axes with designations. Make a sketch of the conventional lathe and, if it is considered as a CNC lathe, show the axes with designations.
2. Make a Kinematics diagram of CNC Lathe showing all machine sub-assemblies. Indicate bearing arrangements, ball screw arrangements with sizes, wherever available.
3. Repeat (1) on CNC machining centre and conventional milling machine.
4. Repeat (2) for CNC machining centre.
5. Study the CNC lathe. Prepare a block diagram of controls. Identify location and type of transducers and indicate on an outline of the machine. Describe how they function.
6. Repeat (5) on machining centre.
7. Study the work holding and tool holding devices in the CNC lathe and machining centre and draw up their specifications and capacities.
8. Prepare part programs for 2 specified components for CNC lathe by manual part programming. First write the machining technology in full; then prepare part program and then enter in the machine.  
Test the program in dry run and by tool path graphic simulation.  
Machine the component.
9. Do the above work for machining centre.

### **Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## **AUTOMOTIVE ENGINEERING LAB**

**Course Code: MAE2708**

**Credit Units: 01**

### **Course Contents:**

#### **List of Experiments:**

1. Drawing Valve Timing Diagram
2. Determination of Firing Order of engine
3. Specification of engine
4. Study of different parts of engine
5. Study of Clutch
6. Study of Hydraulic Brake System
7. Study of Carburetor
8. Study of various parts of Auxiliary systems
9. Study of Wheel
10. Study of emission system
11. Study of steering system

#### **Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva

# SUMMER INTERNSHIP EVALUATION-II

Course Code: MAE2735

Credit Units: 03

## Objective:

There are certain phases of every Intern's professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship program can best be described as an attempt to institutionalize efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal classroom situations. These attributes are intellectual ability, professional judgment and decision-making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility etc.

## Guidelines

In order to achieve these objectives:

- **Each student will be allotted a supervisor** for proper guidance.
- **Student will first submit details of company, external guide, project title to coordinator/supervisor as per given schedule.**
- For internal assessment purpose, students will submit an industry feedback and a progress report.
- Student will maintain a file (**Internship File/Project Report**) which he/she will submit after completion of internship. **Further, coordinator will provide NTCC project guidelines and sample to help in preparation of file.** The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development. The File will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

The **layout guidelines** for the Project Report

### 1. File should be in the following specification

- A4 size paper
- Spiral Binding
- **Font**

For normal text Font Type and Size must be- Times New Roman, 12 pt. The minimum font size of materials within a table or a figure can be 10 point.

- **Margins**

A margin of 3.75 cm (1½ inch) is to be given on the binding edge while on the other sides it is to be 2.5 cm (1 inch). The text of the report, including headings, figures, tables, and notes, but excluding page numbers, must be accommodated within the page area.

- **Line Spacing**

The line spacing in the main text must be between one-and-a-half (1.5). Single line spacing should be given for figure captions, table titles, figure legends, and footnotes. Equations, tables, figures, and quotations should be set off from the main text with adequate space (not less than the normal line spacing adopted for the main text). Two consecutive paragraphs should be separated by a spacing which must be larger than the line spacing adopted for the text.

- **Tables and Figures**

Each sketch, drawing, graph and photograph should have a figure number and title below the figure etc. Numbering should be sequential, chapter wise. For instance, if there are 24 figures chapter 3 spread over all of its sections the figure numbers run from Figure 3.1 through Figure 3.24. In figures

experimental data should typically be represented by centered symbols, and theoretical data by continuous curves.

Each table should have a table number and caption above the table. Numbering should be sequential, chapter wise, as in the case of Figure numbers. For instance, if there are 18 tables in chapter 3 the table numbers run from Figure 3.1 through Figure 3.18.

Make sure that figures and tables are complete in other respects such as legends, references (if any) and coordinate labels with units. Each figure and table must be explicitly referred to in the text and located where its first reference occurs, preferably after the reference.

- **Drawings**

All engineering drawings must conform to relevant Standards and should include a title block. If drawings are large they should be included at the back of the report in a separate pocket. In case drawings are made using CAD packages, a CD ROM should be included which contains all the files and details of the packages used.

- **Equations**

The numbering of equations should be sequential, chapter wise. Numbered equations must be explicitly referred to in the text.

**2. Report Size:** The maximum number of pages of the Report should be preferably between 50-80 pages.

**3. Report Layout:** The report should contain the following components

Front Page

Declaration

Student Certificate (University)

Certificate (Company)

Acknowledgement

Abstract

Contents

List of Figures

List of Tables

Company Profile (optional)

Chapters

Appendices(optional)

References / Bibliography

The above components are described below:

1. **The Title Page**-- Format will be given by coordinator/supervisor.

2. **Declaration by the Students**--This is page number (i), the beginning of the small case Roman numeral page numbers. The student has to give a declaration to the effect that the data used for the work, the work depicted in the report, and the written material contained in the report are not copied from others and that due permission has been taken from, and due credit has been given to, the sources whenever they are used.

3. **Certificate**--This is page number (ii). It is given by the Institute. The certificate will be signed by the Faculty Supervisor(s) before the viva-voce after verifying the format and by the Head of the Department after review with the Supervisor(s).

4. **Company Certificate**: This is a certificate, which the company gives to the students.

5. **Contents**--This is page number (iii). The table of Contents should be titled just Contents (not Table of Contents). Try to fit it into one or two pages.

6. **Acknowledgement**--This is page number (iv). Keep this brief and avoid using informal language. This page must be signed by the candidate.

7. **Abstract and Keywords**--This is page number (v). The abstract (preferably one page) should contain the context/relevance of the problem at hand, a description of what was done and a gist of the significant observations/results.

The keywords (maximum 6) are a hint that what is contained in the report.

8. **Company Profile**: A Company Profile corresponds to a file with company-specific data. Company data can be stored there and included in a booking when needed.

9. **Chapters**—Introduction, Literature Review/Background Study etc. as given by coordinator/supervisor.

10. **References / Bibliography** --This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals

preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

## **ASSESSMENT OF THE INTERNSHIP FILE**

Continuous Internal Assessment consists of topic relevance, progress report and industry feedback on company letterhead. Final Assessment includes viva, presentation, execution and report marks.

### **Examination Scheme:**

<b>Components</b>	<b>IF</b>	<b>PR</b>	<b>R</b>	<b>E</b>	<b>V</b>	<b>FP</b>
<b>Weightage</b>	20	20	15	15	15	15

V – Viva, IF – Industry Feedback, FP – Final Presentation, R – Report, PR-Progress Report, E-Execution

## **INDEPENDENT STUDY**

**Course Code: MAE2712**

**Credit Units: 02**

This is an elective, self-directed course to investigate emerging areas of IT and Computer Science like Mobile Operating System, Cloud Computing, or from Current Research Areas etc. The primary goal of the course is to provide students with research exploration of a specific topic of interest to the individual student under the advisement of an instructor who will monitor and critique the student's progress.

Independent study provides students with the opportunity to work one-on-one with a Faculty on a particular topic. The student and faculty should discuss the aims and content of the study and present the proposal to Head of Department. The independent study proposal should include the study's title, theme, readings, work to be submitted, and syllabus. Faculty and student should meet for a minimum number of 2 hours per week. Student will give a seminar after completion of study.

# TERM PAPER

**Course Code: MAE2731**

**Credit Units: 02**

A term (or research) paper is primarily a record of intelligent reading in several sources on a particular subject. The students will choose the topic at the beginning of the session in consultation with the faculty assigned. The progress of the paper will be monitored regularly by the faculty. At the end of the semester the detailed paper on the topic will be submitted to the faculty assigned. The evaluation will be done by Board of examiners comprising of the faculties.

## **Guidelines for Term Paper**

The procedure for writing a term paper may consist of the following steps:

1. Choosing a subject
2. Finding sources of materials
3. Collecting the notes
4. Outlining the paper
5. Writing the first draft
6. Editing & preparing the final paper

### **1. Choosing a Subject**

The subject chosen should not be too general.

### **2. Finding Sources of Materials**

- a) The material sources should be not more than 10 years old unless the nature of the paper is such that it involves examining older writings from a historical point of view.
- b) Begin by making a list of subject-headings under which you might expect the subject to be listed.
- c) The sources could be books and magazine articles, news stories, periodicals, scientific journals etc.

### **3. Collecting the Notes**

Skim through sources, locating the useful material, then make good notes of it, including quotes and information for footnotes.

- a) Get facts, not just opinions. Compare the facts with author's conclusion.
- b) In research studies, notice the methods and procedures, results & conclusions.
- c) Check cross references.

### **4. Outlining the Paper**

- a) Review notes to find main sub-divisions of the subject.
- b) Sort the collected material again under each main division to find sub-sections for outline so that it begins to look more coherent and takes on a definite structure. If it does not, try going back and sorting again for main divisions, to see if another general pattern is possible.

### **5. Writing the First Draft**

Write the paper around the outline, being sure that you indicate in the first part of the paper what its purpose is. You may follow the following:

- a) statement of purpose
- b) main body of the paper
- c) statement of summary and conclusion

Avoid short, bumpy sentences and long straggling sentences with more than one main idea.

### **6. Editing & Preparing the Final Paper**

- a) Before writing a term paper, you should ensure you have a question which you attempt to answer in your paper. This question should be kept in mind throughout the paper. Include only information/ details/ analyses of relevance to the question at hand. Sometimes, the relevance of a particular section may be clear to you but not to your readers. To avoid this, ensure you briefly explain the relevance of every section.
- b) Read the paper to ensure that the language is not awkward, and that it "flows" properly.
- c) Check for proper spelling, phrasing and sentence construction.
- d) Check for proper form on footnotes, quotes, and punctuation.
- e) Check to see that quotations serve one of the following purposes:
  - (i) Show evidence of what an author has said.
  - (ii) Avoid misrepresentation through restatement.
  - (iii) Save unnecessary writing when ideas have been well expressed by the original author.
- f) Check for proper form on tables and graphs. Be certain that any table or graph is self-explanatory.

Term papers should be composed of the following sections:

- 1) Title page
- 2) Table of contents
- 3) Introduction
- 4) Review
- 5) Discussion&Conclusion
- 6) Bibliography
- 7) Appendix

Generally, the introduction, discussion, conclusion and bibliography part should account for a third of the paper and the review part should be two thirds of the paper.

### **Discussion**

The discussion section either follows the results or may alternatively be integrated in the results section. The section should consist of a discussion of the results of the study focusing on the question posed in the research paper.

### **Conclusion**

The conclusion is often thought of as the easiest part of the paper but should by no means be disregarded. There are a number of key components which should not be omitted. These include:

- a) summary of question posed
- b) summary of findings
- c) summary of main limitations of the study at hand
- d) details of possibilities for related future research

### **Bibliography**

From the very beginning of a research project, you should be careful to note all details of articles gathered. The bibliography should contain ALL references included in the paper. References not included in the text in any form should NOT be included in the bibliography. The key to a good bibliography is consistency. Choose a particular convention and stick to this.

### **Bibliographical Conventions:**

#### **Monographs**

Crystal, D. (2001), *Language and the internet*, Cambridge: Cambridge University Press

#### **Edited Volumes**

Gass, S./Neu, J. (eds.) (1996), *Speech acts across cultures, Challenges to communication in a second language*, Berlin/ NY: Mouton de Gruyter.

[(eds.) is used when there is more than one editor; and (ed.) where there is only one editor. In German the abbreviation used is (Hrsg.) for Herausgeber].

#### **Edited Articles**

### **Appendix**

The appendix should be used for data collected (e.g. questionnaires, transcripts, etc.) and for tables and graphs not included in the main text due to their subsidiary nature or to space constraints in the main text.

### **Examination Scheme:**

Dissertation:	75
Viva voce	25
<b>Total:</b>	<b>100</b>

# PROJECT

**Course Code: MAE2732**

**Credit Units: 02**

## **Methodology**

Topics of project are to be based on the latest trends, verifying engineering concepts /principals and should involve elementary research work. The projects may involve design, fabrications, testing, computer modeling, and analysis of any engineering problem. On completion of the practical training the students are to present a report covering various aspects learnt by them and give a presentation on same.

## **Guidelines for Project File**

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critically analyzed by the faculty guide and corrected by the student at each stage.

## **Project File**

The Project File may be a very useful tool for undertaking an assignment along-with a normal semester, an exploratory study, sponsored projects, a project undertaken during summer period or any other period where the researcher is not working with a company/organization. The project/ assignment may also be a part of the bigger research agenda being pursued by a faculty/ institution/ department

The project file is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation. This file may be considered in continuous assessment.

### **In general, the file should be comprehensive and includes:**

- A short account of the activities that were undertaken as part of the project;
- A statement about the extent to which the project has achieved its stated objectives;
- A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;
- Any activities planned but not yet completed as part of the project, or as a future initiative directly resulting from the project;
- Any problems that have arisen and may be useful to document for future reference.

### **Layout Guidelines for the Project File**

- A4 size Paper
- Font: Arial (10 points) or Times New Roman (12 points)
- Line spacing: 1.5
- Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

### **Assessment of the Project File**

Essentially, the assessment will be based on the quality of the report, the technical merit of the project and the project execution. Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project. Project execution is concerned with assessing how much work has been put in.

The Project should fulfill the following assessment objectives:

- Range of research methods used to gain information
- Execution of research
- Data analysis (Analyse Quantitative/ Qualitative information)
- Quality Control
- Conclusions

**Assessment Scheme:****Continuous Evaluation:**

40% (Based on punctuality, regularity of work, adherence to plan and methodology, refinements/ mid-course corrections etc. as reflected in the Project File.)

**Final Evaluation:**

60% (Based on the documentation in the file, final report layout, analysis and results, achievement of objectives, presentation/ viva)

# Syllabus - Eighth Semester

## REFRIGERATION AND AIR CONDITIONING

**Course Code: MAE2801**

**Credit Units: 03**

### Course Objective:

The aim of this course is to provide the students with the understanding of the basic principles of Refrigeration and Air Conditioning such that they could build simple mathematical models representing the conditioned space and its components used to control environmental conditions. The application of thermodynamics, heat transfer, and fluid mechanics includes an understanding of refrigerants and refrigeration systems, psychometrics, human comfort and air quality, calculation of heating and cooling loads, and heat and mass transfer processes and associated R & AC components and systems.

### Course Contents:

#### Module I: Refrigeration

Air refrigeration systems, air cycle refrigeration of aircraft, various compression refrigeration cycles, basic components of the plant.

#### Module II

Properties and choice of refrigerants, Eco-friendly refrigerants multiple compression and evaporation system, cascading.

#### Module III

Vapour absorption cycle, electrolux system steam jet refrigeration, vortex tube, application of refrigeration systems cascading, vapour absorption cycle

#### Module IV: Air-conditioning

Psychometric processes, applied psychometric, comfort air-conditioning, ventilation requirements, cooling and dehumidification system, estimation of cooling and heating loads, air handling, air distribution, duct design, industrial air conditioning.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

### Text & References:

- Manohar Prasad, Refrigeration and Conditioning , Wiley Eastern Limited
- Jordan and Priester, Refrigeration and Conditioning, Prentice Hall of India
- WF Stoecker, Refrigeration and Conditioning, McGraw Hill.

## REFRIGERATION AND AIR-CONDITIONING LAB

**Course Code: MAE2802**

**Credit Units: 01**

### **Course Contents:**

#### **List of Experiments:**

1. Study of refrigeration testing.
2. Study of Air-Conditioning testing.
3. To calculate the COP of Refrigerator.
4. Study of effect of superheating.
5. To calculate the efficiency of Compressor.
6. To calculate total Heat Load for Air-Conditioning unit.
7. To calculate the COP of Heat Pump.

#### **Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# PROJECT-DISSERTATION

Course Code: MAE2837

Credit Units: 08

## Methodology

Topics of project are to be based on the latest trends, verifying engineering concepts /principals and should involve elementary research work. The projects may involve design, fabrications, testing, computer modeling, and analysis of any engineering problem. On completion of the practical training the students are to present a report covering various aspects learnt by them and give a presentation on same.

## Guidelines for Project File and Project Report

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critically analyzed by the faculty guide and corrected by the student at each stage.

## Project File

The Project File may be a very useful tool for undertaking an assignment along-with a normal semester, an exploratory study, sponsored projects, a project undertaken during summer period or any other period where the researcher is not working with a company/organization. The project/ assignment may also be a part of the bigger research agenda being pursued by a faculty/ institution/ department

The Project File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation. This file may be considered in continuous assessment.

## In general, the File should be comprehensive and include

- A short account of the activities that were undertaken as part of the project;
- A statement about the extent to which the project has achieved its stated objectives;
- A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;
- Any activities planned but not yet completed as part of the project, or as a future initiative directly resulting from the project;
- Any problems that have arisen and may be useful to document for future reference.

## Project Report

The Project Report is the final research report that the student prepares on the project assigned to him. In case of sponsored project the lay out of the project could be as prescribed by the sponsoring organization. However, in other cases the following components should be included in the project report:

### ➤ Title or Cover Page

The title page should contain Project Title; Student's Name; Programme; Year and Semester and Name of the Faculty Guide.

### ➤ Acknowledgement(s)

Acknowledgment to any advisory or financial assistance received in the course of work may be given. It is incomplete without student's signature.

### ➤ Abstract

A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project. It should not exceed more than 1000 words.

### ➤ Table of Contents

Titles and subtitles are to correspond exactly with those in the text.

➤ **Introduction**

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

➤ **Materials and Methods**

This section should aim at experimental designs, materials used (wherever applicable). Methodology should be mentioned in details including modifications undertaken, if any. It includes organization site(s), sample, instruments used with its validation, procedures followed and precautions.

➤ **Results and Discussion**

Present results, discuss and compare these with those from other workers, etc. In writing this section, emphasis should be laid on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary, do not write in "point" form.

While presenting the results, write at length about the various statistical tools used in the data interpretation. The result interpretation should be simple but full of data and statistical analysis. This data interpretation should be in congruence with the written objectives and the inferences should be drawn on data and not on impression. Avoid writing straight forward conclusion rather, it should lead to generalization of data on the chosen sample.

Results and its discussion should be supporting/contradicting with the previous research work in the given area. Usually one should not use more than two researches in either case of supporting or contradicting the present case of research.

➤ **Conclusion(s) & Recommendations**

A conclusion should be the final section in which the outcome of the work is mentioned briefly.

Check that your work answers the following questions:

- Did the research project meet its aims (check back to introduction for stated aims)?
- What are the main findings of the research?
- Are there any recommendations?
- Do you have any conclusion on the research process itself?

➤ **Implications for Future Research**

This should bring out further prospects for the study either thrown open by the present work or with the purpose of making it more comprehensive.

➤ **Appendices**

The Appendices contain material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

➤ **References**

References should include papers, books etc. referred to in the body of the report. These should be written in the alphabetical order of the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

**Examples**

For research article

Voravuthikunchai SP, Lortheeranuwat A, Ninrprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichia coli* O157: H7. *Clin Microbiol Infect*, **8** (suppl 1): 116–117.

**For book**

Kowalski, M. (1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), **7**: 63-67

**Layout Guidelines for the Project File & Project Report**

- A4 size Paper
- Font: Arial (10 points) or Times New Roman (12 points)
- Line spacing: 1.5
- Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

**Assessment of the Project File and the Project Report**

Essentially, the assessment will be based on the quality of the report, the technical merit of the project and the project execution. Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project. Project execution is concerned with assessing how much work has been put in.

The Project should fulfill the following assessment objectives:

- Range of Research Methods used to oASEin information
- Execution of Research
- Data Analyses (Analyse Quantitative/ Qualitative information)
- Quality Control
- Conclusions

**Assessment Scheme:****Continuous Evaluation:**

40% (Based on punctuality, regularity of work, adherence to plan and methodology, refinements/ mid-course corrections etc. as reflected in the Project File.)

**Final Evaluation:**

60% (Based on the Documentation in the file, Final report layout, analysis and results, achievement of objectives, presentation/ viva)

# ARTIFICIAL INTELLIGENCE AND ROBOTICS

Course Code: MAE2805

Credit Units: 02

## Course Objective:

To develop semantic-based and context-aware systems to acquire, organise, process, share and use the knowledge embedded in multimedia content. Research will aim to maximise automation of the complete knowledge lifecycle and achieve semantic interoperability between Web resources and services. The field of Robotics is a multi disciplinary as robots are amazingly complex system comprising mechanical, electrical, electronic H/W and S/W and issues germane to all these.

## Course Contents:

### Module I: Scope of AI

Games, theorem proving, natural language processing, vision and speech processing, robotics, expert systems, AI techniques- search knowledge, abstraction.

#### *Problem solving*

State space search; Production systems, search space control: depth-first, breadth-first search, heuristic search - Hill climbing, best-first search, branch and bound. Problem Reduction, Constraint Satisfaction End, Means-End Analysis

### Module II: Knowledge Representation

Predicate Logic: Unification, modus ponens, resolution, dependency directed backtracking. Rule based Systems: Forward reasoning: conflict resolution, backward reasoning: use of no backtracks.

**Structured Knowledge Representation: Semantic Nets: slots, exceptions and default frames, conceptual dependency, scripts.**

Expert Systems

Need and justification for expert systems, knowledge acquisition, Case studies: MYCIN, RI.

Learning: Concept of learning, learning automation, genetic algorithm, learning by inductions, neural nets.

### Module III: Manipulator kinematics

Kinematics: Introduction, solvability, algebraic solution by reduction to polynomial, standard frames, repeatability and accuracy, computational considerations.

### Module IV: Manipulator dynamics

Introduction, acceleration of rigid body, mass distribution, Newton's equation, Euler's equation, Iterative Newton-Euler dynamic formulation, closed dynamic equation, Lagrangian formulation of manipulator dynamics, dynamic simulation, computational consideration.

### Module V: Trajectory Generation

Introduction, general considerations in path description and generation, joint space schemes, Cartesian space schemes, Path generation in runtime, Planning path using dynamic model.

### Module VI: Linear control of manipulators

Introduction, feedback and closed loop control, second order linear systems, control of second-order systems, Trajectory following control, modeling and control of a single joint, sensor and vision system.

Robot Programming languages & systems: Introduction, the three level of robot programming, requirements of a robot programming language, problems peculiar to robot programming languages.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# ARTIFICIAL INTELLIGENCE AND ROBOTICS LAB

**Course Code: MAE2808**

**Credit Units: 01**

## **Course Contents:**

### **Name of Experiments:**

1. Robot Arm (Model 1055)
2. Write a prolog program to define a relations knowledge base as follows : Assume the following in the kbase :  
Male (person), female (person), husband (person, person0, wife(person, person), father (person, person), mother (person, person). Define the predicates for  
Parent  
Brother  
Sister  
Grandfather  
Ancestor
3. Write a prolog program to simulate a non deterministic finite automation (NFA)
4. A computer system accepts a user's name and password which are stored as facts in the kbase. Validate this information through a predicate login. If not valid, display a suitable message.
5. Write prolog predicates to perform list manipulation as follows :  
List membership relation  
Length of a list  
Concatenate 2 list to produce a third list  
Reverse a list  
Subset of a list  
Appending an element to a list  
Summing the element of a list
6. Write a prolog program to implement Depth first search algorithm.
7. Write a prolog program to simulate the Towers of Hanoi problem.
8. There is a gold treasure hidden inside a cave. The cave is a maze of galleries connecting different rooms in which there are dangerous beings like monsters and robbers. The gold treasure is all in one room. Determine a route by which a person can get to the treasure and escape with it unhurt. Enclosed is a photocopy of the cave lay out. Write the corresponding prolog program.
9. Write a prolog program to simulate the xor logic circuit. In this program make use of the predicate definitions for AND, NOT and OR gate.
10. A hungry monkey finds himself in a room in which a bunch of bananas is hanging from the ceiling. The monkey cannot reach the bananas. In the room there is a chair and a stick. The ceiling is just the right height so that a monkey standing on a chair could knock the bananas down with the stick. The monkey knows how to move around, carry other things around, reach for the bananas and wave a stick in the air. Write prolog predicate that define the monkey's legal moves, the different legal states and enable the monkey to got to the bananas.
11. In the block world problem, assure a sequence of 3 blocks a, b, c on a table. Write prolog predicates to define valid states in the blocks world domain and also to define valid legal moves in the system.

# COMPUTATIONAL FLUID DYNAMICS

Course Code: MAE2809

Credit Units: 02

## Course Contents:

### Module-I: Introduction

Introduction to CFD, description about CFD, History and early view points on CFD, Fluid Mechanics Preliminaries, Mathematical preliminaries, Reynold's transport theorem, Equations of mass, momentum and energy conservation in integral and difference forms.

### Module-II: Discretization methods

Basics of discretization in CFD, Finite difference formulation with introduction to - Consistency, Stability and Order of accuracy. Understanding discretization techniques using Linear Convection Equation.

### Module-III: Finite volume method

Finite volume formulation, Finite volume state update formulae in 1D and 2D, Higher order procedures. Spatial Discretization Convective and diffusive fluxes Euler backward/forward time integration Characteristics and Eigenvalues

### Module-IV: Heat conduction problem

Solution of One dimensional heat conduction through a pin fin by F.D.M solution of two dimensional heat conduction in a plate by F.D.M. Control volume formulation of the heat conduction problem and its solution.

### Module-V: Turbulence Modeling

Introduction to turbulence, Reynold's averaged Navier-Stokes equations and closure problem, Prandtl's mixing length theory and eddy viscosity, Turbulence models - k-epsilon model, k-omega model.

### Module-VI: Fluid flow problem

Practical aspects of CFD, Grid generation: Introduction to structured, unstructured, Cartesian meshes: A case study on CFD technology readiness for an industrial application.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

### Books recommended;

- Computational fluid dynamics by John.d.Anderson, Jr
- Introduction to Computational fluid dynamics by Anil .W. Date
- Numerical heat transfer and fluid flow by suhas. V. patankar
- An Introduction to Computational Fluid Dynamics by H.K. Versteeg and W. Malalasekera
- Computational Fluid Dynamics by Klaus A. Hoffmann, Steve T. Chiang

# COMPUTATIONAL FLUID DYNAMICSLAB

**Course Code: MAE2810**

**Credit Units: 01**

1. To perform the experiment on Geometry import, Geometry clean up, Building computational domain, Edge meshing, Surface meshing, Quality check for surface mesh, Volume meshing, Quality check for volume mesh, setting boundary conditions, Volume Mesh export.
2. Inviscid unstructured mesh generation for NACA 0012 airfoil
3. 3 Viscous unstructured mesh generation for NACA 0012 airfoil
4. Inviscid unstructured mesh generation for a convergent divergent nozzle
5. Viscous unstructured mesh generation for a convergent divergent nozzle
6. To make and validate a computer programme for the one dimensional pin fin steady state heat conduction.
7. To make and validate a computer programme for the fully developed laminar flow in circular pipe.
8. To make and validate a computer programme for the plate in two dimensions in steady state conduction.

# POWER PLANT PRACTICES

**Course Code: MAE2811**

**Credit Units: 03**

## **Course Objective:**

The objective of this course is that the students come to know different ways of producing energy such as thermal energy from gas and steam, hydraulic energy nuclear energy, non conventional source of energy from wind, solar and tidal. And their different uses in productive works.

## **Course Contents:**

### **Module I: Steam Generator Plant**

Fuel handling systems, Indian coals, combustion of coal in furnaces; fluidized bed combustion; High pressure heavy duty boilers, Super critical and once through boilers influence of operating conditions on layout of evaporator, superheated, reheated and economizer; dust collectors; ash disposal, fans and draft systems.

### **Module II: Turbine Plant**

Layout of turbine plant room, corrosion in condensers and boilers, feed water treatment; feed heating and de aeration system; cooling water systems and cooling towers.

### **Module III: Control**

Important instruments on steam generator and turbine; drum water level control, combustion control and super heat temperature control; testing of power plants and heat balance.

### **Module IV: Other Power Plant**

General layout of I.C. Engines and turbine power plants, types, gas turbine plants, fields of application, Nuclear power plants, power reactors and nuclear steam turbines; handling of nuclear waste and safety measures, peak load power generation methods.

### **Module V: Economics**

Planning for power generation in India, super thermal power plants, estimation of cost of power generation; choice of plant site.

## **Examination Scheme:**

## ENGINEERING MATHEMATICS-I

**Course Code: CSC2110**

**Credit Units : 04**

### **Course Objective:**

The knowledge of Mathematics is necessary for a better understanding of almost all the Engineering and Science subjects. Here our intention is to make the students acquainted with the concept of basic topics from Mathematics, which they need to pursue their Engineering degree in different disciplines.

### **Course Contents:**

#### **Module I: Differential Calculus**

Successive differentiation, Leibnitz's theorem (without proof), Mean value theorem, Taylor's theorem (proof), Remainder terms, Asymptote & Curvature, Partial derivatives, Chain rule, Differentiation of Implicit functions, Exact differentials, Tangents and Normals, Maxima, Approximations, Differentiation under integral sign, Jacobians and transformations of coordinates.

#### **Module II: Integral Calculus**

Fundamental theorems, Reduction formulae, Properties of definite integrals, Applications to length, area, volume, surface of revolution, improper integrals, Multiple Integrals-Double integrals, Applications to areas, volumes.

#### **Module III: Ordinary Differential Equations**

Formation of ODEs, Definition of order, degree & solutions, ODE of first order: Method of separation of variables, homogeneous and non homogeneous equations, Exactness & integrating factors, Linear equations & Bernoulli equations, General linear ODE of  $n^{\text{th}}$  order, Solution of homogeneous equations, Operator method, Method of undetermined coefficients, Solution of simple simultaneous ODE.

#### **Module IV: Vector Calculus**

Scalar and Vector Field, Derivative of a Vector, Gradient, Directional Derivative, Divergence and Curl and their Physical Significance, Arc Length, Tangent, Directional Derivative, Evaluation of Line Integral, Green's Theorem in Plane (without proof), Representation of Surfaces, Tangent Plane and Surface Normal, Surface Integral, Stoke's Theorem (without proof), Gauss Divergence Theorem (without proof).

### **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;

# ENGINEERING PHYSICS

Course Code: CSC2111

Credit Units : 03

## Course Objective:

Aim of this course is to introduce the students to fundamentals of graduate level physics, which form the basis of all applied science and engineering

## Course Contents:

### Module I: Oscillations & Waves

**Oscillations:** Introduction to S.H.M. Damped Oscillations: Differential Equation and its solution, logarithmic decrement, Quality Factor, Different conditions of damping of harmonic oscillations. Forced oscillations: Amplitude and Frequency Response, Resonance, Sharpness of Resonance

**Plane Progressive Waves:** Differential Equation and Solution, Superposition of Progressive Waves stationary waves.

**Ultrasonics:** Generation and application of ultrasonic waves.

### Module II: Wave Nature of Light

Interference: Coherent Sources, Conditions of interference, Interference due to division of wavefront, Fresnel's biprism Interference due to division of amplitude, Newton's rings, Interference due to thin films, .

Diffraction: Fresnel and Fraunhofer diffraction, Fraunhofer diffraction at a single slit, double slit, N Slits, Transmission grating, Rayleigh criterion and Resolving power of grating.

Polarization: Birefringence, Nicol prism, Production and analysis of plane, circularly and elliptically polarized light, Half and quarter wave plates, Optical rotation, Polarimeter.

### Module III: Electromagnetics

Scalar and vector fields, gradient of a scalar field, physical significance of gradient, equipotential surface. Line, surface and volume integrals, Divergence and curl of vector field and mathematical analysis physical significance, Electric flux, Gauss' law, Proof and Applications, Gauss divergence and Stokes theorems.

Differential form of Gauss' Law, Amperes' Law, Displacement current, Faradays Law, Maxwell equations in free space & isotropic media (Integral form & differential form), EM wave propagation in free space, Poynting vector.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# ENGINEERING MECHANICS

**Course Code: CSC2103**

**Credit Units : 03**

## **Course Objective:**

Objective of this course is to provide fundamental knowledge of force system and its effect on the behaviour of the bodies that may be in dynamic or in static state. It includes the equilibrium of different structures like beams, frames, truss etc and the force transfer mechanism in the different components of a body under given loading condition.

## **Course Contents:**

### **Module I: Force system & Structure**

Free body diagram, Equilibrium equations and applications. Plane truss, perfect and imperfect truss, assumption in the truss analysis, analysis of perfect plane trusses by the method of joints, method of section.

### **Module II:Friction**

Static and Kinetic friction, laws of dry friction, co-efficient of friction, angle of friction, angle of repose, cone of friction, friction lock, efficiency of screw jack, transmission of power through belt

### **Module III: Distributed Force**

Determination of center of gravity, center of mass and centroid by direct integration and by the method of composite bodies, mass moment of inertia and area moment of inertia by direct integration and composite bodies method, radius of gyration, parallel axis theorem, Pappus theorems and its application, polar moment of inertia.

### **Module IV: Work -Energy**

Work energy equation, conservation of energy, Virtual work, impulse, momentum conservation, impact of bodies, co-efficient of restitution, loss of energy during impact, D'Alembert principle

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;

# INTRODUCTION TO COMPUTERS AND PROGRAMMING IN C

Course Code: CSC2104

Credit Units : 03

## Course Objective:

The objective of this course module is to acquaint the students with the basics of computers system, its components, data representation inside computer and to get them familiar with various important features of procedure oriented programming language i.e. C.

## Course Contents:

### Module I: Introduction

Introduction to computer, history, von-Neumann architecture, memory system (hierarchy, characteristics and types), H/W concepts (I/O Devices), S/W concepts (System S/W & Application S/W, utilities). Data Representation: Number systems, character representation codes, Binary, octal, hexadecimal and their interconversions. Binary arithmetic, floating point arithmetic, signed and unsigned numbers, Memory storage unit.

### Module II: Programming in C

History of C, Introduction of C, Basic structure of C program, Concept of variables, constants and data types in C, Operators and expressions: Introduction, arithmetic, relational, Logical, Assignment, Increment and decrement operator, Conditional, bitwise operators, Expressions, Operator precedence and associativity. Managing Input and output Operation, formatting I/O.

### Module III: Fundamental Features in C

C Statements, conditional executing using if, else, nesting of if, switch and break Concepts of loops, example of loops in C using for, while and do-while, continue and break. Storage types (automatic, register etc.), predefined processor, Command Line Argument.

### Module IV: Arrays and Functions

One dimensional arrays and example of iterative programs using arrays, 2-D arrays Use in matrix computations.

Concept of Sub-programming, functions Example of user defined functions. Function prototype, Return values and their types, calling function, function argument, function with variable number of argument, recursion.

### Module V: Advanced features in C

Pointers, relationship between arrays and pointers Argument passing using pointers, Array of pointers. Passing arrays as arguments.

Strings and C string library.

Structure and Union. Defining C structures, Giving values to members, Array of structure, Nested structure, passing strings as arguments.

File Handling.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# PROGRAMMING IN C LAB

**Course Code: CSC2107**

**Credit Units : 01**

**Software Required:** Turbo C

## **Course Contents:**

- C program involving problems like finding the nth value of cosine series, Fibonacci series. Etc.
- C programs including user defined function calls
- C programs involving pointers, and solving various problems with the help of those.
- File handling

## **Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# ENGINEERING MECHANICS LAB

Course Code: CSC2109

Credit Units : 01

## Engineering Mechanics:

1. To verify the law of Force Polygon
2. To verify the law of Moments using Parallel Force apparatus. (Simply supported type)
3. To determine the co-efficient of friction between wood and various surface (like
4. Leather, Wood, Aluminum) on an inclined plane.
5. To find the forces in the members of Jib Crane.
6. To determine the mechanical advantage, Velocity ratio and efficiency of a screw jack.
7. To determine the mechanical advantage, Velocity ratio and Mechanical efficiency of the
8. Wheel and Axle
9. To determine the MA, VR,  $\eta$  of Worm Wheel (2-start)
10. Verification of force transmitted by members of given truss.
11. To verify the law of moments using Bell crank lever
12. To find CG and moment of Inertia of an irregular body using Computation method

## Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# ENGINEERING PHYSICS LAB

Course Code: CSC2112

Credit Units : 01

## List of Experiments:

1. To determine the wavelength of sodium light by Newton's rings method.
2. To determine the dispersive power of the material of prism with the help of a spectrometer.
3. To determine the specific rotation of sugar by Bi-quartz or Laurent half shade polarimeter.
4. To determine the speed of ultrasonic waves in liquid by diffraction method.
5. To determine the width of a narrow slit using diffraction phenomena.
6. To determine the temperature coefficient of platinum wire, using a platinum resistance thermometer and a Callender & Griffith's bridge.
7. To determine the value of specific charge (ratio of  $e/m$ ) of an electron by Thomson method.
8. To determine the internal resistance of Leclanche cell with the help of Potentiometer.
9. To determine the resistance per unit length of a Carey Foster's bridge wire and also to find out the specific resistance of a given wire.
10. To plot graph showing the variation of magnetic field with distance along the axis of a circular coil carrying current, and hence estimate the radius of the coil.
11. To determine the value of acceleration due to gravity (' $g$ ') in the laboratory using bar pendulum.
12. To determine the moment of inertia of a flywheel about its own axis of rotation.
13. To determine the density of material of the given wire with the help of sonometer.

## Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# ENGINEERING GRAPHICS LAB

**Course Code: CSC2113**

**Credit Units : 01**

## **Course Objective:**

This course will provide students concepts on the drawings of different curves like straight line, parabola, ellipse etc. After completion of this course, students will be able to draw different figures manually and will be capable of using various instruments involved in drawings.

## **Course Contents:**

### **Module I: General**

Importance, Significance and scope of engineering drawing, Lettering, Dimensioning, Scales, Sense of proportioning, Different types of projections, Orthographic Projection, B.I.S. Specifications.

### **Module II: Projections of Point and Lines**

Introduction of planes of projection, Reference and auxiliary planes, projections of points and Lines in different quadrants, traces, inclinations, and true lengths of the lines, projections on Auxiliary planes, shortest distance, intersecting and non-intersecting lines.

### **Module III: Planes other than the Reference Planes**

Introduction of other planes (perpendicular and oblique), their traces, inclinations etc., Projections of points and lines lying in the planes, conversion of oblique plane into auxiliary Plane and solution of related problems.

### **Module IV: Projections of Plane Figures**

Different cases of plane figures (of different shapes) making different angles with one or both reference planes and lines lying in the plane figures making different given angles (with one of both reference planes). Obtaining true shape of the plane figure by projection.

### **Module V: Projection of Solids**

Simple cases when solid is placed in different positions, Axis faces and lines lying in the faces of the solid making given angles.

### **Module VI: Development of Surface**

Development of simple objects with and without sectioning. Isometric Projection

## **Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# Syllabus - Second Semester

## ENGINEERING MATHEMATICS-II

Course Code: CSC2211

Credit Units : 04

### Course Objective:

The knowledge of Mathematics is necessary for a better understanding of almost all the Engineering and Science subjects. Here our intention is to make the students acquainted with the concept of basic topics from Mathematics, which they need to pursue their Engineering degree in different disciplines.

### Course Contents:

#### Module I: Linear Algebra

Hermitian and Skew Hermitian Matrix, Unitary Matrix, Orthogonal Matrix, Elementary Row Transformation, Reduction of a Matrix to Row Echelon Form, Rank of a Matrix, Consistency of Linear Simultaneous Equations, Gauss Elimination Method, Gauss-Jordan Method, Eigen Values and Eigen Vectors of a Matrix, Caley-Hamilton Theorem, Diagonalization of a Matrix, Vector Space, Linear Independence and Dependence of Vectors, Linear Transformations.

#### Module II: Infinite Series

Definition of Sequence, Bounded Sequence, Limit of a Sequence, Series, Finite and Infinite Series, Convergence and Divergence of Infinite series, Cauchy's Principle of Convergence, Positive Term Infinite Series, Comparison test, D'Alembert's Ratio test, Raabe's Test, Cauchy's nth root Test, Logarithmic Test, Alternating Series, Leibnitz's Test, Absolute and conditional convergence, Uniform Convergence, Power Series and its Interval of Convergence.

#### Module III: Complex Analysis

De Moivre's Theorem and Roots of Complex Numbers, Logarithmic Functions, Circular, Hyperbolic Functions and their Inverses.

Functions of a Complex Variables, Limits, Continuity and Derivatives, Analytic Function, Cauchy-Riemann Equations (without proof), Harmonic Function, Harmonic Conjugates, Conformal Mapping, Bilinear Transformations, Complex Line Integral, Cauchy Integral Theorem, Cauchy Integral Formula, Derivative of Analytic Function, Power Series, Taylor Series, Laurent Series, Zeros and

Singularities, Residues, Residue Theorem, Evaluation of Real Integrals of the Form  $\int_{-\infty}^{\infty} \frac{f(x)}{F(x)} dx$ .

#### Module IV: Statistics and Probability

Moments, Skewness, Kurtosis, Random Variables and Probability Distribution, Mean and Variance of a Probability Distribution, Binomial Distribution, Poisson Distribution and Normal Distribution.

### Examination Scheme:

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	15	20	20	20	5

C – Project + Presentation

I – Interaction/Conversation Practice

# ENGINEERING CHEMISTRY

Course Code: CSC2212

Credit Units : 02

## Course Objective:

Four basic sciences, Physics, Chemistry, Mathematics and Biology are the building blocks in engineering and technology. Chemistry is essential to develop analytical capabilities of students, so that they can characterize, transform and use materials in engineering and apply knowledge in their field. All engineering fields have unique bonds with chemistry whether it is Aerospace, Mechanical, Environmental and other fields the makeup of substances is always a key factor, which must be known. For electronics and computer science engineering, apart from the material, computer modeling and simulation knowledge can be inherited from the molecule designing. The upcoming field of technology like Nanotechnology and Biotechnology depends fully on the knowledge of basic chemistry. With this versatile need in view, course has been designed in such a way so that the student should get an overview of the whole subject.

## Course Contents:

### Module I: Water Technology

Introduction and specifications of water,

Hardness and its determination (EDTA method only), Alkalinity,

Boiler feed water, boiler problems – scale, sludge, priming & foaming: causes & prevention, Boiler problems – caustic embrittlement & corrosion: causes & prevention,

Carbonate & phosphate conditioning, colloidal conditioning & calgon treatment

Water softening processes: Lime – soda process, Ion exchange method, Water for domestic use.

### Module II: Fuels

Classification, calorific value of fuel, (gross and net), Determination of calorific value of fuels, bomb calorimeter, Solid fuels - Proximate and ultimate analysis, Octane & Cetane No. and its significance.

Numericals on combustion

### Module III: Instrumental Methods of analysis

Introduction; Principles of spectroscopy; Laws of absorbance

IR: Principle, Instrumentation, Application

UV: Principle, Instrumentation, Application

NMR: Principle, Instrumentation, Application

### Module IV: Lubricants

Introduction; Mechanism of Lubrication; Types of Lubricants; Chemical structure related to Lubrication;

Properties of lubricants; Viscosity and Viscosity Index; Iodine Value; Aniline Point; Emulsion number; Flash Point; Fire Point; Drop Point; Cloud Point; Pour Point.

Selection of Lubricants.

### Module V: Corrosion

Introduction, Mechanism of dry and wet corrosion,

Types of corrosion-Galvanic, Concentration cell, soil, pitting, intergranular, waterline. Passivity.

Factors influencing corrosion. Corrosion control.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# ELECTRICAL SCIENCE

**Course Code: CSC2213**

**Credit Units : 03**

## **Course Objective:**

The objective of the course is to provide a brief knowledge of Electrical Engineering to students of all disciplines. This Course includes some theorems related to electrical, some law's related to flow of current, voltages, basic knowledge of Transformer, basic knowledge of electromagnetism, basic knowledge of electrical network.

## **Course Contents:**

### **Module I: Basic Electrical Quantities**

Basic Electrical definitions-Energy, Power, Charge, Current, Voltage, Electric Field Strength, Magnetic Flux Density, etc., Resistance, Inductance and Capacitance. Ideal Source, Independent Source and Controlled Source

### **Module II: Network Analysis Techniques & Theorems**

Circuit Principles: Ohm's Law, Kirchoff's Current Law, Kirchoff's Voltage Law Network Reduction: Star-Delta Transformation, Source Transformation, Nodal Analysis, Loop analysis. Superposition theorem, Thevenin's Theorem, Norton's theorem and Reciprocity theorem.

### **Module III: Alternating Current Circuits**

Peak, Average and RMS values for alternating currents, Power calculation: reactive power, active power, Complex power, power factor, impedance, reactance, conductance, susceptance Resonance: series Resonance, parallel resonance, basic definition of Q factor & Bandwidth.

### **Module IV: Transformers**

Basic Transformer Operation principle, Construction, Voltage relations, current relations, Linear circuit models, open circuit test, short circuit test, Transformer Efficiency.

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

# OBJECT ORIENTED PROGRAMMING USING C++

**Course Code: CSC2204**

**Credit Units: 03**

## **Course Objective:**

The objective of this module is to introduce object oriented programming. To explore and implement the various features of OOP such as inheritance, polymorphism, Exceptional handling using programming language C++. After completing this course student can easily identify the basic difference between the programming approaches like procedural and object oriented.

## **Course Contents:**

### **Module I: Introduction**

Review of C, Difference between C and C++, Procedure Oriented and Object Oriented Approach. Basic Concepts: Objects, classes, Principles like Abstraction, Encapsulation, Inheritance and Polymorphism. Dynamic Binding, Message Passing. Characteristics of Object-Oriented Languages. Introduction to Object-Oriented Modeling techniques (Object, Functional and Dynamic Modeling).

### **Module II: Classes and Objects**

Abstract data types, Object & classes, attributes, methods, C++ class declaration, Local Class and Global Class, State identity and behaviour of an object, Local Object and Global Object, Scope resolution operator, Friend Functions, Inline functions, Constructors and destructors, instantiation of objects, Types of Constructors, Static Class Data, Array of Objects, Constant member functions and Objects, Memory management Operators.

### **Module III: Inheritance**

Inheritance, Types of Inheritance, access modes – public, private & protected, Abstract Classes, Ambiguity resolution using scope resolution operator and Virtual base class, Aggregation, composition vs classification hierarchies, Overriding inheritance methods, Constructors in derived classes, Nesting of Classes.

### **Module IV: Polymorphism**

Polymorphism, Type of Polymorphism – Compile time and runtime, Function Overloading, Operator Overloading (Unary and Binary) Polymorphism by parameter, Pointer to objects, this pointer, Virtual Functions, pure virtual functions.

### **Module V: Strings, Files and Exception Handling**

Manipulating strings, Streams and files handling, formatted and Unformatted Input output. Exception handling, Generic Programming – function template, class Template Standard Template Library: Standard Template Library, Overview of Standard Template Library, Containers, Algorithms, Iterators, Other STL Elements, The Container Classes, General Theory of Operation, Vectors.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# ELEMENTS OF MECHANICAL ENGINEERING

**Course Code: CSC2205**

**Credit Units: 02**

## **Course Objective:**

The objective of this course is to impart the basic knowledge of thermodynamics, stress- strain, materials & their properties and various manufacturing processes to the students of all engineering discipline.

## **Course Contents:**

### **Module I: Fundamental Concepts**

Definition of thermodynamics, system, surrounding and universe, phase, concept of continuum, macroscopic & microscopic point of view, Thermodynamic equilibrium, property, state, path, process, cyclic process, Zeroth, first and second law of thermodynamics, Carnot Cycle, Introduction to I.C. Engines-two & four stroke S.I. and C.I. engines. Otto cycle. Diesel cycle.

### **Module II: Stress And Strain Analysis**

Simple stress and strain: introduction, normal shear, and stresses-strain diagrams for ductile and brittle materials. Elastic constants, one-dimensional loadings of members of varying cross-section, Strain Energy, Properties of material-strength, elasticity, stiffness, malleability, ductility, brittleness, hardness and plasticity etc; Concept of stress and strain stress strain diagram, tensile test, impact test and hardness test.

### **Module III: Casting & Forging**

Introduction of casting, pattern, mould making procedures, sand mould casting, casting defects, allowances of pattern. Forging-introduction, upsetting & drawing out, drop forging, press forging & m/c forging

### **Module IV: Welding & Sheet metal working:**

Introduction of welding processes, classification, gas welding, arc welding, resistance welding. Introduction to sheet metal shop, Shearing, trimming, blanking, piercing, shaving, notching, stretch forming, nibbling coining, embossing and drawing.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# OBJECT ORIENTED PROGRAMMING USING C++ LAB

**Course Code: CSC2208**

**Credit Units: 01**

**Software Required:** Turbo C++

## Course Contents:

- Creation of objects in programs and solving problems through them.
- Different use of private, public member variables and functions and friend functions.
- Use of constructors and destructors.
- Operator overloading
- Use of inheritance in and accessing objects of different derived classes.
- Polymorphism and virtual functions (using pointers).
- File handling.

## Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab

# ELEMENTS OF MECHANICAL ENGINEERING LAB

Course Code: CSC2209

Credit Units: 01

## Course Contents:

1. Welding
  - (a) Arc Welding
    - Butt Joint
    - Lap Joint
    - T Joint
  - (b) Gas Welding
    - Butt Joint
    - Lap Joint
    - Brazing of Broken pieces
2. Foundry
  - Sand mould casting by single piece pattern & Split pattern bracket with cores
3. Sheet Metal
  - Dust Bin
  - Mug
  - Funnel
  - Cylindrical Mug with handle-Rectangular
4. Fitting Shop
  - Male – Female Joint
  - Rectangular piece
  - Filing the job

## Examination Scheme:

5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# ELECTRICAL SCIENCE LAB

Course Code: CSC2214

Credit Units: 01

## List of Experiments:

1. To verify KVL & KCL in the given network.
2. To verify Superposition Theorem.
3. To verify Maximum Power Transfer Theorem.
4. To verify Reciprocity Theorem.
5. To determine and verify  $R_{Th}$ ,  $V_{Th}$ ,  $R_N$ ,  $I_N$  in a given network.
6. To perform open circuit & short circuit test on a single-phase transformer.
7. To study transient response of a given RLC Circuit.
8. To perform regulation, ratio & polarity test on a single-phase transformer.
9. To measure power & power factor in a three phase circuit by two wattmeter method.
10. To measure power & power factor in a three phase load using three ammeter & three voltmeter method.

## Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# ENGINEERING CHEMISTRY LAB

Course Code: CSC2215

Credit Units: 01

## Course Contents:

### List of Experiments:

(Any 10 Experiments)

1. To determine the ion exchange capacity of a given cation exchanger.
2. To determine the temporary, permanent and total hardness of a sample of water by complexometric titration method.
3. To determine the type and extent of alkalinity of given water sample.
4. To determine the number of water molecules of crystallization in Mohr's salt (ferrous ammonium sulphate) provided standard potassium dichromate solution (0.1N) using diphenylamine as internal indicator.
5. To determine the ferrous content in the supplied sample of iron ore by titrimetric analysis against standard  $K_2Cr_2O_7$  solution using potassium ferricyanide  $[K_3Fe(CN)_6]$  as external indicator.
6. (a) To determine the surface tension of a given liquid by drop number method.  
(b) To determine the composition of a liquid mixture A and B (acetic acid and water) by surface tension method.
7. To prepare and describe a titration curve for phosphoric acid – sodium hydroxide titration using pH-meter.
8. (a) To find the cell constant of conductivity cell.  
(b) Determine the strength of hydrochloric acid solution by titrating it against standard sodium hydroxide solution conductometrically
9. Determination of Dissolved oxygen in the given water sample.
- 10 To determine the total residual chlorine in water.
- 11 Determination of amount of oxalic acid and  $H_2SO_4$  in 1 L of solution using N/10 NaOH and N/10  $KMnO_4$  solution.
- 12 Determination of viscosity of given oil by means of Redwood viscometer I.
- 13 To determine flash point and fire point of an oil by Pensky Martin's Apparatus
- 14 To determine the Iodine value of the oil.

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# Syllabus - Third Semester

## DATA COMMUNICATION AND COMPUTER NETWORKS

**Course Code: CSC2301**

**Credit Units: 03**

### Course Objective:

The objective is to acquaint the students with the basics of data communication and networking. A structured approach to explain how networks work from the inside out is being covered. The physical layer of networking, computer hardware and transmission systems have been explained. In-depth application coverage includes email, the domain name system; the World Wide Web (both client- and server-side); and multimedia (including voice over IP).

### Course Contents:

#### Module I: Introduction

Introduction to computer networks, evolution of computer networks and its uses, reference models, example networks

The physical layer: Theoretical basis for data communication, transmission media, wireless transmission, telecom infrastructure, PSTN, communication satellites, mobile telephone system

#### Module II: The data link layer

Data link layer design issues, error detection and correction, data link protocols, sliding window protocols, example of data link protocols- HDLC, PPP Access

#### Module III: Medium access layer

Channel allocation problem, multiple access protocols, ALOHA, CSMA/CD, CSMA/CA, IEEE Standard 802 for LAN and MAN, Bridges, Wireless LANs. Introduction to wireless WANs: Cellular Telephone and Satellite Networks, SONET/SDH, Virtual-Circuit Networks: Frame Relay and ATM.

#### Module IV: The network layer

Network layer concepts, design issues, static and dynamic routing algorithms, shortest path routing, flooding, distance vector routing, link state routing, distance vector routing, multicast routing, congestion control and quality of service, internetworking, Ipv4

#### Module V: The transport layer

The transport services, elements of transport protocols, TCP and UDP

The application layer: Brief introduction to presentation and session layer, DNS, E-mail, WWW

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# DATABASE MANAGEMENT SYSTEMS

**Course Code: CSC2302**

**Credit Units: 04**

## **Course Objective:**

The objective of this course is to get students familiar with Databases and their use. They can identify different types of available database model, concurrency techniques and new applications of the DBMS.

## **Course Contents:**

### **Module I: Introduction**

Concept and goals of DBMS, DBMS Architecture, Database Languages, Database Users, Database Abstraction.

Basic Concepts of ER Model: Entity Type, Entity Set, Relationship type, Relationship sets, Constraints: Cardinality Ratio and Participation Constraint, Keys, Mapping, Design of ER Model

### **Module II: Hierarchical model & Network Model**

Concepts, Data definition, Data manipulation and implementation.

Network Data Model, DBTG Set Constructs, and Implementation

### **Module III: Relational Model**

Relational database, Relational Algebra, Relational Calculus, Tuple Calculus.

### **Module IV: Relational Database Design and Query Language**

SQL, QUEL, QBE, Normalization using Functional Dependency, 1NF, 2NF, 3NF, BCNF, Multivalued dependency and Join dependency.

### **Module V: Concurrency Control and New Applications**

Transaction basics: ACID property, Lifecycle of Transaction, Why Concurrency Control, Schedule, Serializability, Lock Based Protocols, Time Stamped Based Protocols, Deadlock Handling, Crash Recovery. Distributed Database, Objective Oriented Database, Multimedia Database, Data Mining, Digital Libraries.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# OPERATING SYSTEMS

**Course Code: CSC2303**

**Credit Units: 03**

## **Course Objective:**

Operating Systems serve as one of the most important courses for undergraduate students, since it provides the students with a new sight to envision every computerized systems especially general purpose computers. Therefore, the students are supposed to study, practice and discuss on the major fields discussed in the course to ensure the success of the education process. The outcome of this course implicitly and explicitly affects the abilities the students to understand, analyze and overcome the challenges they face with in the other courses and the real world.

## **Course Contents:**

### **Module I: Introduction to operating system**

Operating system and function, Evolution of operating system, Batch, Interactive, multiprogramming, Time Sharing and Real Time System, multiprocessor system, Distributed system, System protection. Operating System structure, Operating System Services, System Program and calls.

### **Module II: Process Management**

Process concept, State model, process scheduling, job and process synchronization, structure of process management, Threads

Interprocess Communication and Synchronization:

Principle of Concurrency, Producer Consumer Problem, Critical Section problem, Semaphores, Hardware Synchronization, Critical Regions, Conditional critical region, Monitor, Inter Process Communication.

CPU Scheduling:

Job scheduling functions, Process scheduling, Scheduling Algorithms, Non Preemptive and preemptive Strategies, Algorithm Evaluation, Multiprocessor Scheduling.

Deadlock:

System Deadlock Model, Deadlock Characterization, Methods for handling deadlock, Prevention strategies, Avoidance and Detection, Recovery from deadlock combined approach.

### **Module III: Memory Management**

Single Contiguous Allocation: H/W support, S/W support, Advantages and disadvantages, Fragmentation, Paging, Segmentation, Virtual memory concept, Demand paging, Performance, Paged replaced algorithm, Allocation of frames, Thrashing, Cache memory, Swapping, Overlays

### **Module IV: Device management**

Principles of I/O hardware, Device controller, Device Drivers, Memory mapped I/O, Direct Access Memory, Interrupts, Interrupt Handlers, Application I/O interface, I/O Scheduling, Buffering, Caching, Spooling,

Disk organization, Disk space management, Disk allocation Method, Disk Scheduling, Disk storage.

### **Module V: File System and Protection and security**

File Concept, File Organization and Access Mechanism, File Directories, Basic file system, File Sharing, Allocation method, Free space management.

Policy Mechanism, Authentication, Internal excess Authorization.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# DATA STRUCTURES USING C

Course Code: CSC2304

Credit Units: 04

## Course Objective:

Data structure deals with organizing large amount of data in order to reduce space complexity and time requirement. This course gives knowledge of algorithms, different types of data structures and the estimation space and time complexity.

## Course Contents:

### Module I: Introduction to Data structures

**Data structures:** Definition, Types. Algorithm design, Complexity, Time-Space Trade offs. Use of pointers in data structures.

Array Definition and Analysis, Representation of Linear Arrays in Memory, Traversing of Linear Arrays, Insertion And Deletion, Single Dimensional Arrays, Two Dimensional Arrays, Multidimensional Arrays, Function Associated with Arrays, Character String in C, Character String Operations, Arrays as parameters, Implementing One Dimensional Array, Sparse matrix.

### Module II: Introduction to Stacks and queue

**Stack:** Definition, Array representation of stacks, Operations Associated with Stacks- Push & Pop, Polish expressions, Conversion of infix to postfix, infix to prefix (and vice versa), Application of stacks recursion, polish expression and their compilation, conversion of infix expression to prefix and postfix expression, Tower of Hanoi problem.

**Queue:** Definition, Representation of Queues, Operations of queues- QInsert, QDelete, Priority Queues, Circular Queue, Dequeue.

### Module III: Dynamic Data Structure

**Linked list:** Introduction to Singly linked lists: Representation of linked lists in memory, Traversing, Searching, Insertion into, Deletion from linked list, doubly linked list, circular linked list, generalized list. Applications of Linked List-Polynomial representation using linked list and basic operation. Stack and queue implementation using linked list.

### Module IV: Trees and Graphs

**Trees:** Basic Terminology, Binary Trees and their representation, expression evaluation, Complete Binary trees, extended binary trees, Traversing binary trees, Searching, Insertion and Deletion in binary search trees, General trees, AVL trees, Threaded trees, B trees.

**Graphs:** Terminology and Representations, Graphs & Multigraphs, Directed Graphs, Sequential representation of graphs, Adjacency matrices, Transversal Connected Component and Spanning trees.

### Module V: Sorting and Searching and file structures

**Sorting:** Insertion Sort, Bubble sort, Selection sort, Quick sort, two-way Merge sort, Heap sort, Partition exchange sort, Shell sort, Sorting on different keys, External sorting.

**Searching:** Linear search, Binary search

**File structures:** Physical storage media, File Organization, Linked organization of file, Inverted file, Organization records into blocks, Sequential blocks, Hash function, Indexing & Hashing, Multilevel indexing, Tree Index, Random file, Primary Indices, Secondary Indices, B tree index files.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# DATA STRUCTURES USING C LAB

**Course Code: CSC2305**

**Credit Units: 01**

**Software Required:** Turbo C++

**Assignment will be provided for following:**

- Practical application of sorting and searching algorithm.
- Practical application of various data structure like linked list, queue, stack, tree

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# DATA COMMUNICATION AND COMPUTER NETWORKS LAB

**Course Code: CSC2306**

**Credit Units: 01**

## **Equipments Required:**

Switch Network Cables, Patch Chord- Fiber optical and twisted pair cable, LAN cards, RJ-45 connectors etc. Platforms required: Linux Server

## **Course Contents:**

- Introduction and Installation of Linux
- Administrating Linux
- Setting up a Local Area Network
- Connecting to the Internet
- Setting up Print Server
- Setting up File Server
- Setting up Mail Server
- Setting up FTP Server
- Setting up Web Server
- Setting up MySQL Database Server

## **Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# DATABASE MANAGEMENT SYSTEMS LAB

**Course Code: CSC2307**

**Credit Units: 01**

**Software Required:** Oracle 9i

**Topics covered in lab will include:**

- Database Design
- Data Definition (SQL)
- Data Retrieval (SQL)
- Data Modification (SQL)
- Views
- Triggers and Procedures
- PL\SQL

**Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# UNIX PROGRAMMING LAB

**Course Code: CSC2308**

**Credit Units: 01**

**Software Required:UNIX SCO**

**Assignments will be provided for the following**

- Introduction to UNIX Commands
- Introduction to vi editor
- Programming in shell script
- Introduction to programming in C Shell

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# ELECTRONIC DEVICES & CIRCUITS

**Course Code: CSC2310**

**Credit Units: 02**

## **Course Objective:**

This course builds from basic knowledge of Semiconductor Physics to an understanding of basic devices and their models. This course builds a foundation for courses on VLSI design and analog CMOS IC Design.

## **Course Contents:**

**Module I:** Semiconductor physics: Mobility & conductivity, Charge densities in a semiconductor, Fermi dirac distribution, carrier concentration and Fermi levels in semiconductor, generation and recombination of charges, diffuse and continuity equations, Hall effect.

### **Module II: Semiconductor Diode and Diode Circuits**

Junction diode, Diode as circuit element, Different types of diodes: Zener, Schottky, LED. Zener as voltage regulator, Diffusion capacitance, Drift capacitance, the load line concept, half wave, full wave rectifiers, clipping and clamping circuits.

### **Module III: Bipolar Junction Transistor**

Bipolar junction transistor: Introduction, Transistor, construction, transistor operations, BJT characteristics, load line, operating point, leakage currents, saturation and cut off mode of operations. Bias stabilization: Need for stabilization, fixed Bias, emitter bias, self bias, bias stability with respect to variations in  $I_{co}$ ,  $V_{BE}$  &  $\beta$ , Stabilization factors, thermal stability.

### **Module IV: Small signal Analysis of transistor and Multistage Amplifier**

Hybrid model for transistors at low frequencies, Analysis of transistor amplifier using h parameters, emitter follower, Miller's theorem, THE CE amplifier with an emitter resistance, Hybrid  $\pi$  model, Hybrid  $\pi$  Conductances and Capacitances, CE short circuit current gain, CE short circuit current gain with  $R_L$  Multistage amplifier: Cascading of Amplifiers, Coupling schemes(RC coupling and Transformer coupling)

### **Module V: Field Effect Transistors**

Field effect transistor (JFET, MOSFET): volt-ampere characteristics, small signal model –common drain, common source, common gate, operating point, MOSFET, enhancement and -depletion mode, Common source amplifier, Source follower

### **Module VI: Feedback Amplifiers**

Feedback concept, Classification of Feedback amplifiers, Properties of negative Feedback amplifiers, Impedance considerations in different Configurations, Examples of analysis of feedback Amplifiers.

### **Module VII: Power Amplifiers**

Power dissipation in transistors, difference with voltage amplifiers, Amplifier classification (Class A, Class B, Class C, ClassAB) class AB push pull amplifier, collector efficiency of each, cross over distortion.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# **ELECTRONIC DEVICES & CIRCUITS LAB**

**Course Code: CSC2311**

**Credit Units: 01**

## **Course Contents:**

1. To study and plot the characteristics of a junction diode.
2. To study Zener diode as a voltage regulator.
3. To study diode based clipping and clamping circuits.
4. To study half wave, full wave and bridge rectifier with filters.
5. To study the input and output characteristics of a transistor in its various configurations.
6. To study and plot the characteristics of a JFET in its various configurations.
7. To study and plot the characteristics of a MOSFET in its various configurations.
8. To study various types of Bias Stabilization for a transistor.
9. To study the gain and plot the frequency response of a single stage transistor amplifier.
10. To measure gain and plot the frequency response of double stage RC coupled amplifier.

## **Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# E-COMMERCE AND ERP

**Course Code: CSC2312**

**Credit Units: 03**

## **Course Objective:**

This course examines the evolution of enterprise resource planning (ERP) systems - from internally focused client/server systems to externally focused e-business. This class studies the types of issues that managers will need to consider in implementing cross-functional integrated ERP systems. The objective of this course is to make students aware of the potential and limitations of ERP systems. This objective will be reached through hands-on experience, case studies, lectures, guest speakers and a group project. The course would equip students with the basics of E-Commerce, technologies involved with it and various issues associated with.

## **Course Contents:**

### **Module I: Introduction E-commerce and ERP**

E-commerce and its types, EDI and its basics, Digital payment systems, Enterprise-An Overview, Benefits of ERP, ERP and Related Technologies-Business Process Reengineering (BPR), Data Warehousing, Data Mining, On-line Analytical Processing (OLAP), Supply Chain Management, Management Information systems (MIS), Decision support system (DSS), Executive Information systems (EIS). ERP – A Manufacturing Perspective Materials Requirement Planning (MRP), Bill of Material (Bom), Distribution Requirements Planning (DRP), JIT & Kanban, CAD/CAM, Product Data Management (PDM), Benefits of PDM, MTO, MTS, ATO, ETO, CTO.

### **Module II: ERP Modules**

Business Modules in an ERP Packag- Finance, Manufacturing (Production), Human Resources, Plant Maintenance, Materials Management, Quality Management, Sales and Distribution.

### **Module III: Benefits of ERP**

Time Reduction, On time shipment, Improved Resource Utilization, Performance, Customer Satisfaction, Flexibility, information accuracy and decision making capability, reduction in quality costs, Accuracy.

### **Module IV: ERP Implementation**

ERP Implementation Lifecycle, Implementation Methodology, In-house implementation-Pros and cons, Vendors, Consultants and Users and their roles, Project Management and Monitoring after ERP Implementation.

### **Module V: The ERP Market and Future Directions**

ERP Market Place- SAP AG, PeopleSoft, Baan Company, JD Edwards World Solutions Company, Oracle Corporation, QAD, System Software Associates, Inc. (SSA).Future directions in ERP.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# INTRODUCTION TO IOT

**Course Code: CSC2313**

**Credit Units: 03**

## Course Objective:

The Internet is evolving to connect people to physical things and also physical things to other physical things all in real time. It's becoming the Internet of Things (IoT). The course enables student to understand the basics of Internet of things and protocols. It introduces some of the application areas where Internet of Things can be applied. Students will learn about the working of Internet of Things. To understand the concepts of Web of Things.

## Course Contents:

**Module I: IOT** - What is the IoT and why is it important? Elements of an IoT ecosystem, Technology drivers, Business drivers, Trends and implications, Overview of Governance, Privacy and Security Issues.

**Module II: IOT PROTOCOLS** - Protocol Standardization for IoT – Efforts – M2M and WSN Protocols – SCADA and RFID Protocols – Issues with IoT Standardization – Unified Data Standards – Protocols – IEEE802.15.4–BACNet Protocol– Modbus – KNX – Zigbee– Network layer – APS layer – Security

**Module III: IOT ARCHITECTURE** - IoT Open source architecture (OIC)- OIC Architecture & Design principles- IoT Devices and deployment models- IoTivity : An Open source IoT stack - Overview- IoTivity stack architecture- Resource model and Abstraction, IoT and Big Data.

**Module IV: WEB OF THINGS** - Web of Things versus Internet of Things – Two Pillars of the Web – Architecture Standardization for WoT– Platform Middleware for WoT – Unified Multitier WoT Architecture – WoT Portals and Business Intelligence.

**Module V: IOT APPLICATIONS** - IoT applications for industry: Future Factory Concepts, Brownfield IoT, Smart Objects, Smart Applications. Study of existing IoT platforms /middleware, IoT- A, Hydra etc., Introduction to Fog Computing.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# Syllabus - Fourth Semester

## THEORY OF AUTOMATA AND COMPUTATION

Course Code: CSC2401

Credit Units: 04

### Course Objective:

The course begins with the basic mathematical preliminaries and goes on to discuss the general theory of automata, properties of regular sets and regular expressions, and the basics of formal languages. Besides, sufficient attention is devoted to such topics as pushdown automata and its relation with context free languages, Turing machines and linear bounded automata, the basic concepts of computability such as primitive recursive functions and partial recursive functions.

### Course Contents:

#### Module I: Introduction to Languages and Automata

Formal Grammars and Chomsky Hierarchy, Regular Expression Deterministic and Nondeterministic Finite Automata, Regular Expression, Two way Finite Automata, Finite Automata with output, Properties of regular sets, pumping lemma for regular sets, My-Hill-Nerode Theorem.

#### Module II: Context Free Grammars and Pushdown Automata

CFG: Formal Definition, Derivation and Syntax trees, E-removal, Ambiguous Grammar, Properties of CFL, Normal Forms (CNF and GNF)

Pushdown Automata: Definitions, Relationship between PDA and context free language, Decision Algorithms

#### Module III: Turing Machine

The Turing Machine Model, Language acceptability of Turing Machine, Design of TM, Universal TM, Church's Machine.

Recursive and recursively enumerable language, unrestricted grammars, Context Sensitive Language, Linear Bounded Automata (LBA).

#### Module IV: Undecidability

Turing machine halting Problem, undecidable problems for recursive enumerable language, Post correspondence problems (PCP) and Modified Post correspondence problems, Undecidable problems for CFL.

#### Module V: Computability

Partial and Total Functions, Primitive Recursive functions, Recursive functions.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination, Att: Attendance

# DIGITAL ELECTRONICS

**Course Code: CSC2402**

**Credit Units: 02**

## **Course Objective:**

This course is an introduction to the basic principles of digital electronics. At the conclusion of this course, the student will be able to quantitatively identify the fundamentals of computers, including number systems, logic gates, logic and arithmetic subsystems, and integrated circuits. They will gain the practical skills necessary to work with digital circuits through problem solving and hands on laboratory experience with logic gates, encoders, flip-flops, counters, shift registers, adders, etc. The student will be able to analyze and design simple logic circuits using tools such as Boolean Algebra and Karnaugh Mapping, and will be able to draw logic diagrams.

## **Course Contents:**

### **Module I: Boolean Functions**

Analog & digital signals, AND, OR, NOT, NAND, NOR & XOR gates, Boolean algebra, Standard representation of logical functions, K-map representation and simplification of logical function, don't care conditions, XOR & XNOR simplifications of K-maps, Tabulation method.

### **Module II: Combinational Circuits**

Adders, Subtractors, Multiplexer, de-multiplexer, decoder & encoder, code converters, Comparators, decoder / driver for display devices, Implementation of logic functions using multiplexer / de-multiplexer,.

### **Module III: Sequential Circuits**

Flip-flops: SR, JK, D & T flip flops – Truth table, Excitation table, Conversion of flip-flops, race around condition, Master Slave flip flop, Shift registers: SIPO, PISO, PIPO, SIPO, Bi-directional; Counters: ripple & synchronous counters – up / down; Synchronous Sequential circuit: design procedure.

### **Module IV: Logic families**

Logic families: RTL, DTL, TTL, ECL

### **Module V: Data Converters**

Data converters: ADC – successive approximation, linear ramp, dual slope; DAC – Binary Weighted, R-2R ladder type

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

## **Text & References:**

# DISCRETE MATHEMATICS

Course Code: CSC2403

Credit Units: 04

## Course Objective:

This subject provides students with an in-depth education in the conceptual foundations of computer science and in engineering complex software and hardware systems. It allows them to explore the connections between computer science and a variety of other disciplines in engineering and outside. Combined with a strong education in mathematics, sciences, and the liberal arts it prepares students to be leaders in computer science practice, applications to other disciplines, and research.

## Course Contents:

### Module I: Formal Logic

Statement, Symbolic Representation and Tautologies, Quantifiers, Predicator and validity, Normal form. Propositional Logic, Predicate Logic, First Order Logic.

### Module II: Proof & Relation

Techniques for theorem proving: Direct Proof, Proof by Contra position, Proof by exhausting cares and proof by contradiction, principle of mathematical induction, principle of complete induction. Recursive definitions, solution methods for linear, first-order recurrence relations with constant coefficients.

### Module III: Sets and Combinations

Sets, Subtracts, power sets, binary and unary operations on a set, set operations/set identities, fundamental country principles, principle of inclusion, exclusion and pigeonhole principle, permutation and combination, Pascal's triangles, Comparing rates of growth: big theta, little oh, big oh and big omega.

### Module IV: Relation/function and matrices

Relation/function and matrices: Relation, properties of binary relation, operation on binary relation, closures, partial ordering, equivalence relation, Function, properties of function, composition of function, inverse, binary and n-ary operations, characteristic function, Permutation function, composition of cycles, Boolean matrices, Boolean matrices multiplication.

### Module V: Lattices & Boolean Algebra

Lattices: definition, sub lattices, direct product, homomorphism Boolean algebra: definition, properties, isomorphic structures (in particulars, structures with binary operations) sub algebra, direct product and homo-morphism, Boolean function, Boolean expression, representation & minimization of Boolean function.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# ARTIFICIAL INTELLIGENCE

**Course Code: CSC2412**

**Credit Units: 03**

## **Course Objective:**

To develop semantic-based and context-aware systems to acquire, organize process, share and use the knowledge embedded in multimedia content. Research will aim to maximize automation of the complete knowledge lifecycle and achieve semantic interoperability between Web resources and services. The field of Robotics is a multi disciplinary as robots are amazingly complex system comprising mechanical, electrical, electronic H/W and S/W and issues germane to all these.

## **Course Contents:**

### **Module I: Problem solving and Scope of AI**

Introduction to Artificial Intelligence. Applications- Games, theorem proving, natural language processing, vision and speech processing, robotics, expert systems. AI techniques- search knowledge, abstraction.

#### **Problem Solving**

State space search; Production systems, search space control: depth-first, breadth-first search.

Heuristic search - Hill climbing, best-first search, branch and bound. Problem Reduction, Constraint Satisfaction End, Means-End Analysis. LA\* Algorithm, L(AO\*) Algorithm.

### **Module II: Knowledge Representation**

Knowledge Representation issues, first order predicate calculus, Horn Clauses, Resolution, Semantic Nets, Frames, Partitioned Nets, Procedural Vs Declarative knowledge, Forward Vs Backward Reasoning.

### **Module III: Understanding Natural Languages**

Introduction to NLP, Basics of Syntactic Processing, Basics of Semantic Analysis, Basics of Parsing techniques, context free and transformational grammars, transition nets, augmented transition nets, Shanks Conceptual Dependency, Scripts ,Basics of grammar free analyzers, Basics of sentence generation, and Basics of translation..

### **Module IV**

**Expert System:** Need and justification for expert systems, knowledge acquisition, Case studies: MYCIN, R1

**Learning:** Concept of learning, learning automation, genetic algorithm, learning by inductions, neural nets. **Programming Language:** Introduction to programming Language, LISP and PROLOG.

**Handling Uncertainties:** Non-monotonic reasoning, Probabilistic reasoning, use of certainty factors, Fuzzy logic.

### **Module V: Introduction to Robotics**

Fundamentals of Robotics, Robot Kinematics: Position Analysis, Dynamic Analysis and Forces, Robot Programming languages & systems: Introduction, the three levels of robot programming, requirements of a robot programming language, problems peculiar to robot programming languages.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# DIGITAL ELECTRONICS LAB

Course Code: CSC2405

Credit Units: 01

## List of Experiments:

1. To verify the truth tables of OR, AND, NOR, NAND, EX-OR, EX-NOR gates.
2. To obtain half adder, full adder and subtractor using gates and verify their truth tables.
3. To verify the truth tables of RS, JK and D flip- flops.
4. To design and study a binary counter.
5. To design and study synchronous counter.
6. To design and study ripple counter.
7. To convert BCD number into excess 3 form
8. To design and study a decade counter.
9. To design and study a sequence detector.
10. To implement control circuit using multiplexer.

## Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# ARTIFICIAL INTELLIGENCE LAB

**Course Code: CSC2413**

**Credit Units: 01**

## **Course Contents:**

Assignments will be provided for the following:

- Programming in Prolog
- Programming for Robotics

## **Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>

# COMMUNICATION SYSTEMS

**Course Code: CSC2414**

**Credit Units: 02**

## **Course Objective:**

The purpose of this course is to provide a thorough introduction to analog and digital communications with an in depth study of various modulation techniques, Random processes are discussed, and information theory is introduced.

## **Course Contents:**

### **Module I: Introduction**

Communication Process, Source of Information, Communication channels, base-band and pass-band signals, Review of Fourier transforms, Random variables, different types of PDF, need of modulation process, primary communication resources, analog versus digital communications

### **Module II: Amplitude modulation**

Amplitude modulation with full carrier, suppressed carrier systems, single side band transmission, switching modulators, synchronous detection, envelope detection, effect of frequency and phase errors in synchronous detection, comparison of various AM systems, vestigial side band transmission.

### **Module III: Angle Modulation**

Narrow and wide band FM, BW calculations using Carlson rule, Direct & Indirect FM generations, phase modulation, Demodulation of FM signals, noise reduction using pre & de-emphasis.

### **Module IV: Pulse Modulation**

Pulse amplitude, width & position modulation, generation & detection of PAM, PWM & PPM, Comparison of frequency division and time division multiplexed systems, Basics of digital communications: ASK, PSK, FSK, QPSK basics & waveform with brief mathematical introduction

### **Module V: Noise**

Different types of noise, noise calculations, equivalent noise band width, noise figures, effective noise temperature, noise figure.

### **Module VI: Introduction to Information Theory**

Measurement of Information, mutual, Shannon's theorem, Source coding, channel coding and channel capacity theorem, Huffman code

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# COMMUNICATION SYSTEMS LAB

**Course Code: CSC2415**

**Credit Units: 01**

## **List of Experiments:**

1. To study the sampling and reconstruction of a given signal.
2. To study amplitude modulation and demodulation.
3. To study frequency modulation and demodulation.
4. To study time division multiplexing.
5. To study pulse amplitude modulation.
6. To study delta and adaptive delta modulation and demodulation.
7. To study carrier modulation techniques using amplitude shift keying and Frequency shift keying.
8. To study carrier modulation techniques using binary phase shift keying and differential shift keying.
9. To study pulse code modulation & differential pulse code modulation as well as relevant demodulations.
10. To study quadrature phase shift keying & quadrature amplitude modulation.

# INTRODUCTION TO OPEN SOURCE TECHNOLOGIES (PHP and MySql)

**Course Code: CSC2416**

**Credit Units: 02**

## **Course Objective:**

This course is aimed to provide a fundamental understanding of dynamic web site creation. PHP is the language used for development of most common web sites. Syllabus includes basic and advanced features of PHP which includes detailed introduction of PHP and MYSQL, Arrays, Loops and variables etc. It also gives an overview open source framework like JOOMLA, ZEND etc.

## **Course Contents:**

### **Module I: Introduction to Open Source and PHP programming**

Introduction to Open Sources Technologies, Introduction to PHP, installation and configuration, Advantages and Disadvantages of PHP, Client Side Scripting, Server Side Scripting, Variables, data types, various types of function, creating your own function, Strings in PHP, String Functions.

### **Module II: Operator, Loops, Array, Exception and Error Handling**

Operators, Conditions, Loops, Using for each, Creating and Using Arrays, Multidimensional Array, Associative Array.

Error Handling in PHP, Errors and Exceptions, Exception class, try/catch block, throwing an exception, defining your own Exception subclass.

### **Module III: Classes, File system, Passing Information between pages**

Object oriented programming with Php, Working with Datetime, code re-use, require (), include(), and the include\_path; Understanding PHP file permissions, File reading and writing functions, File system functions, File uploads, Sending mail & use of email server.

HTTP, GET arguments, POST arguments, Using Session in PHP, cookies, The setcookie() function, Deleting Cookies and Reading Cookies.

### **Module IV: Working with database**

HTML Tables and Database tables, Database manipulation (Select, Insert, Update, Delete), validating User Input using Javascript.

MYSQL, Introducing MySQL; database design concepts; the Structured Query Language (SQL); communicating with a MySQL backend via the PHP, MySQL API Building Database Applications, Developing PHP scripts for dynamic web page like feedback form, online admission form and online test.

### **Module V: Working with Frameworks**

Working with Mambo, Working with Joomla, Working with framework. Working with wordpress, Working with drupal, Use of Joomla in rapid development of website. Developing of simple website using Joomla.

## **Examination Scheme:**

Components	CT1	A/C/Q	ATTD.	EE
Weightage (%)	15	10	5	70

## **Text & References:**

### **Text:**

- Beginning PHP, Apache, MySQL Web Development, Michael K. Glass, Yann Le Scouarnec, Elizabeth Narnmore, Gary Mailer, Jeremy Stolz, Jason Gerner, published by Wiley, wrox
- PHP, MySQL and Apache Julie C Meloni Pearson Education ISBN : 81-297-0443-9

# INTRODUCTION TO OPEN SOURCE TECHNOLOGIES (PHP and MySql) LAB

**Course Code: CSC2417**

**Credit Units: 01**

## **Course Contents:**

1. Write the process of installation of web server.
2. Write programs to print all details of your php server. Use phpinfo().
3. Write a program to give demo of ECHO and PRINT command.
4. Write a program to implement the string functions.
5. Write a program to print Fibonacci series upto a given number using recursion.
6. Write a menu driven program to implement a calculator which performs only addition, subtraction, multiplication and division. The operation should happen based on user choice.
7. Write a program sort ten number by using array.
8. Write a program to demonstrate the concept of associative array.
9. Write a program to demonstrate the concept of multidimensional array.
10. Write a program to demonstrate the concept of Classes & objects.
11. Create a login form with two text fields called "login" and "password". When user enters "Amity" as a user name and "university" as a password it should be redirected to a Welcome.HTML page or to Sorry.HTML in case of wrong username/password.
12. How to work with sessions in PHP?
13. Introduction to Mysql creating databases, tables, using command line and gui interface, phpmyadmin
14. How to connect to MySQL using PHP ? Write programs for insertion, deletion updates and other sql queries. Design front end using html, css and write php scripts for processing of data. Try all different methods of connecting from php to MySQL
15. Make a small project with mysql and php to perform CRUD operations. Use Session also.
16. Create a form with a text box asking to enter your favorite city with a submit button when the user enters the city and clicks the submit button another php page should be opened displaying "Welcometo the city".
17. Write a program to design login form in which find the greatest number amongst three numbers.
18. WAP for Marksheet generation.
19. Design a webpage for entering the student details with all the validations applied on it.
20. Write a php script to print current date and time.
21. Write a pp script to use include and require functions.
22. Write a php script including all the file handling functions.
23. Design a website using Wordpress /Joomla/Drupal
24. Introduction to Laravel frame work and one simple project.

## **Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# ARTIFICIAL NEURAL NETWORKS

**Course Code: CSC2410**

**Credit Units: 02**

## **Course Objective:**

Aim of this course is to introduce the students fundamentals concepts of Neural network and its various application in computer science.

## **Course Contents:**

### **Module I:-**

Artificial Neural Networks (ANN) and biological neural networks, supervised and unsupervised learning rules, neural network applications.

### **Module II:-**

Unsupervised learning:- Hebbian learning and competitive learning. Supervised learning:- Back propagation algorithms,

Learning rule:-

Delta learning rule, Widrow-Hoff learning rule, Winner-Take-All learning rule.

### **Module III:-**

Feed forward neural network, feed backward neural network, Perceptron and its learning law, single-layer perceptron, multi-layer perceptron.

### **Module IV:-**

Self organizing networks: Kohonen algorithm, Hopfield Networks: Hopfield network algorithm, Adaptive resonance theory: Network and learning rules.

### **Module V:-**

Associative memory, auto-associative memory, bi-directional associative memory.

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

## **Text Book:**

- Kenji Suzuki (ed.) - InTech , 2013
- Todd Troyer - University of Texas at San Antonio , 2005

# ARTIFICIAL NEURAL NETWORKS LAB

**Course Code: CSC2411**

**Credit Units: 01**

## **Course Objective**

The aim of this lab to gain the practical knowledge of basic neuron models and learning algorithms.

## **Lab Assignment**

To study some basic neuron models and learning algorithms by using Matlab's neural network toolbox

## **Examination Scheme**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# Syllabus - Fifth Semester

## SOFTWARE ENGINEERING

**Course Code: CSC2501**

**Credit Units: 03**

### **Course Objective:**

The basic objective of Software Engineering is to develop methods and procedures for software development that can scale up for large systems and that can be used to consistently produce high-quality software at low cost and with a small cycle time. Software Engineering is the systematic approach to the development, operation, maintenance, and retirement of software. The course provides a thorough introduction to the fundamentals principles of software engineering. The organization broadly be based on the classical analysis-design-implementation framework.

### **Course Contents:**

#### **Module I: Introduction**

Software life cycle models: Waterfall, Prototype, Evolutionary and Spiral models, Overview of Quality Standards like ISO 9001, SEI-CMM

#### **Module II: Software Metrics and Project Planning**

Size Metrics like LOC, Token Count, Function Count, Design Metrics, Data Structure Metrics, Information Flow Metrics. Cost estimation, static, Single and multivariate models, COCOMO model, Putnam Resource Allocation Model, Risk management.

#### **Module III: Software Requirement Analysis, design and coding**

Problem Analysis, Software Requirement and Specifications, Behavioural and non-behavioural requirements, Software Prototyping Cohesion & Coupling, Classification of Cohesiveness & Coupling, Function Oriented Design, Object Oriented Design, User Interface Design Top-down and bottom-up Structured programming, Information hiding,

#### **Module IV: Software Reliability, Testing and Maintenance**

Failure and Faults, Reliability Models: Basic Model, Logarithmic Poisson Model, Software process, Functional testing: Boundary value analysis, Equivalence class testing, Structural testing: path testing, Data flow and mutation testing, unit testing, integration and system testing, Debugging, Testing Tools, & Standards. Management of maintenance, Maintenance Process, Maintenance Models, Reverse Engineering, Software RE-engineering

#### **Module V: UML**

Introduction to UML, Use Case Diagrams, Class Diagram: State Diagram in UML Activity Diagram in UML Sequence Diagram in UML Collaboration Diagram in UML, Domain, Component Diagram and Deployment Diagram

### **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# COMPUTER ARCHITECTURE

**Course Code: CSC2502**

**Credit Units: 04**

## **Course Objective:**

This course deals with computer architecture as well as computer organization and design. Computer architecture is concerned with the structure and behaviour of the various functional modules of the computer and how they interact to provide the processing needs of the user. Computer organization is concerned with the way the hardware components are connected together to form a computer system. Computer design is concerned with the development of the hardware for the computer taking into consideration a given set of specifications.

## **Course Contents:**

### **Module I: Register Transfer Language**

Register Transfer, Bus and Memory Transfers, Arithmetic Micro-operations, Logic Micro-operations, Shift Micro-operations, Arithmetic Logic shift Unit.

### **Module II: Basic Computer Organizations and Design**

Instruction Codes, Computer Registers, Computer Instructions, Timing and Control, Instruction Cycle, Memory-Reference Instructions, Input-Output and Interrupt, Design of Accumulator Logic. Hardwired and Microprogrammed control: Control Memory, Address Sequencing, Design of Control Unit

### **Module III: Central Processing Unit**

Introduction, General Register Organization, Stack Organization, Instruction representation, Instruction Formats, Instruction type, Addressing Modes, Data Transfer and Manipulation, Program Control, Reduced Instruction Set Computer RISC and CISC

Computer Arithmetic: Introduction, Addition and Subtraction Algorithm, Multiplication Algorithms, Booth Multiplication, Division Algorithms, Floating-Point Arithmetic Operations

### **Module IV: Memory and Intrasystem Communication and Input output organisation**

**Memory:** Memory types and organization Memory Hierarchy, Main Memory, Auxiliary Memory, Associative Memory, Cache Memory with mapping techniques, Virtual Memory, Memory Management Hardware

**Intrasystem communication and I/O:** Peripheral Devices, Input-Output

Controller and I/O driver, IDE for hard disk, I/O port and Bus concept, Bus cycle, Synchronous and asynchronous transfer, Modes of Transfer, DMA, DMA Transfer, DMA Controller, I/O Processor, CPU-IOP Communication

### **Module V: Introduction to Pipelining and MultiProcessor**

Parallel Processing, Pipelining, Arithmetic Pipeline, Instruction Pipeline, RISC Pipeline

Multiprocessors: Characteristics of Multiprocessors

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# JAVA PROGRAMMING

**Course Code: CSC2503**

**Credit Units: 03**

## **Course Objective:**

The objective is to impart programming skills used in this object oriented language java.

The course explores all the basic concepts of core java programming. The students are expected to learn it enough so that they can develop the web solutions like creating applets etc.

## **Course Contents:**

### **Module I: Java Basics**

Concepts of OOP, Features of Java, How Java is different from C++, Environmental setup, Basic syntax, Objects and classes, Basic Data Types, Variable Types, Modifier Types, Basic operators, Loop Control, Decision Making, Strings and Arrays, Methods, I/O.

### **Module II: Java Object Oriented**

Inheritance, Overriding, Polymorphism, Abstraction, Encapsulation, Interfaces, Packages, Exploring java.util package.

### **Module III: Exception Handling and Threading**

Exception Hierarchy, Exception Methods, Catching Exceptions, Multiple catch Clauses, Uncaught Exceptions Java's Built-in Exception.

Creating, Implementing and Extending thread, thread priorities, synchronization suspending, resuming and stopping Threads, Multi-threading.

### **Module IV : Event Handling And AWT**

Event handling Mechanism, Event Model, Event Classes, Sources of Events, Event Listener Interfaces

AWT: Working with Windows, AWT Controls, Layout Managers

### **Module V: Java Advanced**

AppletClass, Architecture, Skeleton, Display Methods.

Swings: Japplet, Icons, labels, Text Fields, Buttons, Combo Boxes.

Socket Programming: Socket methods, Server Socket methods, Socket Client and Socket Server examples.

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# ANALYSIS AND DESIGN OF ALGORITHM

**Course Code: CSC2511**

**Credit Units: 03**

## **Course Objective:**

The designing of algorithm is an important component of computer science. The objective of this course is to make students aware of various techniques used to evaluate the efficiency of a particular algorithm. Students eventually should learn to design efficient algorithm for a particular program

## **Course Contents:**

### **Module I: Introduction**

Algorithm Design paradigms - motivation, concept of algorithmic efficiency, run time analysis of algorithms, Asymptotic Notations. Recurrences- substitution method, recursion tree method, master method

### **Module II: Divide and conquer**

Structure of divide-and-conquer algorithms: examples; Binary search, quick sort, Merge sort, Strassen Multiplication; Analysis of divide and conquer run time recurrence relations.

#### **Greedy Method**

Overview of the greedy paradigm examples of exact optimization solution (minimum cost spanning tree), Approximate solution (Knapsack problem), Single source shortest paths, traveling salesman

### **Module III: Dynamic programming**

Overview, difference between dynamic programming and divide and conquer, Applications: Shortest path in graph, chain Matrix multiplication, Traveling salesman Problem, longest Common sequence, knapsack problem

### **Module IV: Graph searching and Traversal**

Overview, Representation of graphs, strongly connected components, Traversal methods (depth first and breadth first search)

#### **Back tracking**

Overview, 8-queen problem, and Knapsack problem

#### **Brach and bound**

LC searching Bounding, FIFO branch and bound, LC branch and bound application: 0/1 Knapsack problem, Traveling Salesman Problem

### **Module V: Computational Complexity**

Complexity measures, Polynomial Vs non-polynomial time complexity; NP-hard and NP-complete classes, examples.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# SOFTWARE ENGINEERING LAB

**Course Code: CSC2504**

**Credit Units: 01**

**Software Required:** Rational Rose

**Assignments will be provided for the following:**

- Use of Rational Rose for visual modeling.
- Creating various UML diagrams such as use case, sequence, collaboration, activity, state diagram, and class diagrams.

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# JAVA PROGRAMMING LAB

**Course Code: CSC2505**

**Credit Units: 01**

**Software Required: JDK1.3**

**Assignments will be provided for the following:**

- Java programs using classes & objects and various control constructs such as loops etc, and data structures such as arrays, structures and functions
- Java programs for creating Applets for display of images and texts.
- Programs related to Interfaces & Packages.
- Input/Output and random files programs in Java.
- Java programs using Event driven concept.
- Programs related to network programming.

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# ANALYSIS AND DESIGN OF ALGORITHM LAB

**Course Code: CSC2512**

**Credit Units: 01**

**Lab assignment will be based on the following:**

Programs for binary search and Quick sort by using divide and conquer techniques.

Programs on algorithm based on greedy method.

Programs on algorithm based on Dynamic programming.

Programs on Depth First and Breadth Search traversals of graphs.

Programs on algorithm based on backtracking.

Programs on algorithm based on Brach and Bound.

**Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# SUMMER INTERNSHIP EVALUATION-I

**Course Code: CSC2535**

**Credit Units: 03**

## **Course Objective:**

The objective of this course is to provide practical training on some live projects that will increase capability to work on actual problem in industry. This training may undergo in an industrial environment or may be an in house training on some latest software which is in high demand in market. This training will be designed such that it will useful for their future employment in industry.

## **Examination Scheme:**

Feedback from industry/work place	20
Training Report	40
Viva	15
Presentation	25
<b>Total</b>	<b>100</b>

# VHDL PROGRAMMING

**Course Code: CSC2506**

**Credit Units: 02**

## **Course Objective:**

VHDL is commonly used as a design-entry language for field-programmable gate arrays and application-specific integrated circuits in electronic design automation of digital circuits. The course aims to discuss the syntax of the language to model a digital system.

## **Course Contents:**

### **Module I**

Fundamental VHDL Units, LIBRARY Declarations, ENTITY, ARCHITECTURE, Introductory Examples, Specification of combinational systems using VHDL, Introduction to VHDL, Basic language element of VHDL, Behavioural Modeling, Data flow modeling, Structural modeling, Subprograms and overloading, VHDL description of gates.

### **Module II**

Data Types; Pre-Defined Data Types, User-Defined Data Types, Subtypes, Arrays, Port Array, Records, Signed and Unsigned Data Types, Data Conversion

### **Module III: Sequential codes**

PROCESS: Signals and Variables, IF, WAIT, CASE, LOOP, CASE versus IF, CASE versus WHEN, Bad Clocking, Using Sequential Code to Design Combinational Circuits  
Description and design of sequential circuits using VHDL,

### **Module IV**

Standard combinational modules, Design of a Serial Adder with Accumulator, State Graph for Control Network, design of a Binary Multiplier, Multiplication of a Signed Binary Number, Design of a Binary Divider.

### **Module V**

Micro programmed Controller, Structure of a micro programmed controller, Basic component of a micro system, memory subsystem. Overview of PAL, PLA, FPGA, CPLD.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# VHDL PROGRAMMING LAB

**Course Code: CSC2507**

**Credit Units: 01**

**Software Required:** Mentor Graphics

**Topics covered in lab will include:**

- Designing Basic Gates.
- Designing Combinational circuits like adder, multiplexer, PLA
- Designing Sequential Circuits like flip-flops, counters, registers.

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# DISTRIBUTED OPERATING SYSTEM

Course Code: CSC2513

Credit Units: 03

## Course Objective:

This Subject provides students with an in-depth knowledge about the operating system. The former treats the standard principles of single processor system, including processes, synchronization, I/O, deadlocks, mutual exclusion, fault tolerance, Memory Management, File Management systems, security and so on. This subject covers distributed operating system in detail, including communication process, file system and memory management synchronization and so on but this time in the context of distributed systems

## Course Contents:

### Module I: Introduction

Functions of an Operating System, Design Approaches, Review of Network Operating System and Distributed Operating System, Issue in the design of Distributed Operating System, Overview of Computer Networks, Modes of communication, System Process, Interrupt Handling, Handling Systems calls, Protection of resources, Micro-Kernel Operating System, client server architecture.

### Module II: Distributed Mutual Exclusion

Lamport's Algorithm, The Critical Section Problem, Other Synchronization Problems, Language Mechanisms for Synchronization, Axiomatic Verification of Parallel Programs, Inter process communication (Linux IPC Mechanism), Remote Procedure calls, RPC exception handling, security issues, RPC in Heterogeneous Environment, Case studies.

### Module III: Synchronization in Distributed System

Deadlocks in Distributed Systems, Centralized Deadlock- Detection Algorithms, Distributed Deadlock Detection Algorithm' Path Pushing Algorithm, Edge Chasing Algorithm, Diffusion Computation Based Algorithm.

Clock Synchronization: Logical clocks, Physical clocks, Vector Clock, clock synchronization algorithms, Mutual Exclusion, Non-Token Based Algorithms – Lamport's Algorithm, Token-Based Algorithms, Suzuki-Kasami's Broadcast Algorithm, Election Algorithms,

### Module IV: Distributed Shared Memory

Introduction, Architecture & Motivation Algorithms for Implementing DSM: The Central – Server Algorithms, The Migration Algorithms, The Read – Replication Algorithms, The Full- Replication Algorithms. Memory Coherence, Coherence Protocols: Write Invalidate Protocol, Write Update Protocol, Design Issues: Granularity, Page Replacement

### Module V: Concurrency Control Algorithms

Basic Synchronization Primitives, Two –Phase Locking Protocol, Timestamp Based Algorithms, Two –Phase Commit Protocol. Voting Protocols: Static Voting, Majority Based Dynamic Voting Protocol.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# FUZZY LOGIC& GENETIC ALGORITHM

Course Code: CSC2514

Credit Units: 03

## Course Objective:

This course is intended to mathematical introduction to the analysis, synthesis, and design of control systems using fuzzy logic and Genetic Algorithm. A study of the fundamentals of fuzzy sets, operations on these sets, and their geometrical interpretations. Methodologies to design fuzzy models and feedback controllers for dynamical systems, Various applications and case studies.

fuzzy inference systems, fuzzy logic control, parallel processors, multilevel optimization- real life problem and other machine intelligence applications of fuzzy logic and Genetic Algorithm.

## Course Contents:

### Module I: Introduction

Crisp sets: Overview, Fuzzy sets : Basic types and concepts, Characteristics and significance of paradigm shift, Fuzzy sets vs Crisp sets, Representation of fuzzy sets

### Module II: Fuzzy operations and Fuzzy arithmetic

Types of operations, Fuzzy complements, Fuzzy intersection: t-norms, Fuzzy union: t-conorms, Combination of operations, Aggregation operation, Fuzzy numbers, Linguistic variables, Arithmetic operations on intervals, Arithmetic operations on Fuzzy numbers, Lattice of Fuzzy numbers, Fuzzy equation.

### Module III: Fuzzy systems And Applications

General discussion, Fuzzy controller: Overview and example, Fuzzy systems and neural networks, Fuzzy neural network, Fuzzy automata. Pattern recognition in fuzzy logic, Database and information retrieval in fuzzy logic, decision making in fuzzy logic, engineering applications and fuzzy logic, Fuzzy logic in Medicine and Economics

### Module- IV: Introduction to Genetic Algorithm

Fundamentals of genetic algorithm: A brief history of evolutionary computation, biological terminology, search space encoding, reproduction elements of genetic algorithm genetic modeling, comparison of GA and traditional search methods. The Fundamental Theorem, Schema Processing at work, Two-armed and k-armed Bandit problem, The Building block hypothesis.

### Module-V: Genetic Technology

Genetic technology:- steady state algorithm, fitness scaling, inversion. Genetic programming:- Genetic Algorithm in problem solving, Implementing a Genetic Algorithm:- computer implementation, operator (reproduction, crossover and Mutation, Fitness Scaling, Coding, Discretization). Knowledge based techniques in Genetic Algorithm. Advanced operators and techniques in genetic search:- Dominance, Diploidy and Abeyance. Inversion and other reordering operators, Niche and speciation.

### Module- VI: Applications

5 lecture hours

Genetic Algorithm in engineering and optimization-natural evolution –Simulated annealing and Tabu search -Genetic Algorithm in scientific models and theoretical foundations. Applications of Genetic based machine learning-Genetic Algorithm and parallel processors- composite laminates- constraint optimization- multilevel optimization- real life problem.

## Modes of Evaluation: Quiz/Assignment/ Seminar/Written Examination

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination, Att: Attendance

# Syllabus - Sixth Semester

## MICROPROCESSOR

**Course Code: CSC2601**

**Credit Units: 03**

### Course Objective:

This course deals with the systematic study of the Architecture and programming issues of 8085-microprocessor family. The aim of this course is to give the students basic knowledge of the above microprocessor needed to develop the systems using it.

### Course Contents:

#### Module I: Introduction to Microcomputer Systems

Introduction to Microprocessors and microcomputers, Study of 8 bit Microprocessor, 8085 pin configuration, Internal Architecture and operations, interrupts, Stacks and subroutines, various data transfer schemes.

#### Module II: ALP and timing diagrams

Introduction to 8085 instruction set, advance 8085 programming, Addressing modes, Counters and time Delays, Instruction cycle, machine cycle, T-states, timing diagram for 8085 instruction.

#### Module III: Memory System Design & I/O Interfacing

Interfacing with 8085. Interfacing with input/output devices (memory mapped, peripheral I/O), Cache memory system. Study of following peripheral devices 8255, 8253, 8257, 8255, 8251.

#### Module IV: Architecture of 16-Bit Microprocessor

Difference between 8085 and 8086, Block diagram and architecture of 8086 family, pin configuration of 8086, Minimum mode & Maximum mode Operation. Internal architecture of 8086, Bus Interface Unit, Register Organization, Instruction Pointer, Stack & Stack pointer, merits of memory segmentation, Execution Unit, Register Organization.

#### Module V: Pentium Processors

Internal architecture of 8087, Operational overview of 8087, Introduction to 80186, 80286, 80386 & 80486 processors, Pentium processor.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# SYSTEM PROGRAMMING AND COMPILER CONSTRUCTION

Course Code: CSC2602

Credit Units: 03

## Course Objective:

The objective is to make aware students the concepts of compiler designing. It is expected students have should knowledge on automata theory. This course includes various Lexical Analysis, parsing techniques and syntax directed translation.

## Course Contents:

### Module I: Introduction

Phases , FSM & RE's and their application to Lexical Analysis, Implementation of Lexical Analyzers, The Syntactic specification of Languages: CFG, Derivation and Parse Trees, Capabilities of CFG.

### Module II : System Programming

Editors: Introduction to system Programming Line editor, Full screen editor and multi window editor , First pass and second pass of assembler and their algorithms. Assemblers for CISC Machines: case study x85 & x86 machines. Bootstrapping for compilers, Introduction to. Design of a compiler in C++ as Prototype. Basic Macro Processor functions- Macro definition & expansion – Macro Processor Algorithm & Data Structures, conditional – Macro Expansion, Keyword Macro Parameters, Macro with in Macro Implementation, Linkers and Loaders Concept of linking. Case study of Linker in x86 machines. Loading of various loading schemes. Booting techniques and sub-routines.

### Module III: Basic Parsing Techniques

Parsers, Shift Reduce Parsing, Operator precedence parsing, topdown Parsing, Predictive Parsers.

### Module IV: Automatic Construction of efficient Parsers

LR Parsers, the canonical collection of LR(0) items, constructing SLR Parsing Tables, Constructing canonical LR Parsing tables and LALR parsing tables, An Automatic Parser Generator, Implementation of LR parsingTables, Constructing LALR sets of items.

### Module V: Syntax Directed Translation

Syntax directed Translation Schemes, Implementation of Syntax directed translators, Intermediate Code, Postfix notation, Parse Trees and Syntax Trees, Three address Code, Quadruple & Triples, Translation of Assignment Statements, Postfix Translation.

### Module VI: Error detection and Recovery

Lexical phase errors, syntax phase errors, semantic errors Code Optimization: Loop optimization, the DAG representation of basic blocks, value numbers and Algebraic Laws, Global Data – Flow Analysis.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# ADVANCED JAVA PROGRAMMING

**Course Code: CSC2604**

**Credit Units: 03**

## **Course Objective:**

The objective is to equip the students with the advanced feature of contemporary java which would enable them to handle complex programs relating to managing data and processes over the network. The major objective of this course is to provide a sound foundation to the students on the concepts, precepts and practices, in a field that is of immense concern to the industry and business.

## **Course Contents:**

### **Module I : Distributed Computing**

Introduction to Java RMI, RMI services, RMI client, Running client and server, Introduction of Swing, Swing Components, Look and Feel for Swing Components, Introduction to Multimedia Programming.

### **Module II : Database Connectivity**

ODBC and JDBC Drivers, Connecting to Database with the java.sql Package, Using JDBC Terminology, JDBC with mysql, postgresql.

### **Module III : Servlet Programming**

Introduction to Servlets, Servlet Life Cycle, Servlet based Applications, Servlet and HTML.Filters, jdbc with servelets, session Management techniques in detail.

### **Module IV: JSP Programming**

JSP: Introduction to JSP, JSP implicit objects, JSP based Applications, Java. Net. Login & Logout Example, jdbc with jsp.

### **Module V: JEE Web Appliaction**

The Model-View-Controller Architecture What is Struts, Struts Tags, Creating Beans, Other Bean Tags, Bean Output, Creating HTML Forms, The Action Form class The Action class, Simple Struts: a simple Struts application;Introduction to EJB.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# MICROPROCESSOR LAB

**Course Code: CSC2605**

**Credit Units: 01**

## **Course Contents:**

1. To load the numbers 49H and 53H in the memory location 9510 and 9511
2. respectively and add the contents of memory location 9601
3. To write assembly language programming for 8 bit addition with and without carry.
4. To write assembly language programming for 8 bit subtraction with and without borrow.
5. To write assembly language programming for 8 bit multiplication and division.
6. To write assembly language programming for sorting an array of numbers in ascending and descending order.
7. To write assembly language programming with additional instructions.
8. To write and execute a program using stacks.
9. To study and program the programmable peripheral interface (8255) board.
10. To study and program the programmable interval timer (8253) board.
11. To study and program the programmable DMA controller (8257) board.
12. To study and program the programmable interrupt controller (8259) board.

## **Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# SYSTEM PROGRAMMING & COMPILER CONSTRUCTION LAB

**Course Code: CSC2606**

**Credit Units: 01**

**Software Required:** Turbo C++

**Assignment will be provided for following:**

List of Programs:

1. WAP to check whether string is accepted or not for entered grammar.
2. WAP to convert Infix to Postfix notation.
3. WAP to convert Infix to Prefix notation.
4. WAP to find no of Tokens in an expression.
5. WAP to convert Regular Expression to NFA.
6. WAP to convert NFA to DFA.
7. Write a program to implement Text Editor.
8. WAP calculate FIRST and FOLLOW of a grammar.
9. WAP to implement shift reduce parser.
10. WAP to implement symbol table .

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# ADVANCED JAVA PROGRAMMING LAB

Course Code: CSC2608

Credit Units: 01

Programming Language: Java

1. WAP to display label on a frame with the help of JFrame
2. WAP to display six buttons on a panel using JFrame.
3. WAP. To display an image and a string in a label on the JFrame.
4. WAP that implement a JApplet that display a simple label
5. WAP that implement a JApplet and display the following frame
  - a. Customer name
  - b. Customer number
  - c. Age
  - d. Address
6. WAP to access a table Product Master from MS-Access using Java code.
7. WAP that implement a simple servlet program.
8. WAP for authentication, which validate the login-id and password by the servlet code.
9. WAP to connecting a database using user-id and password.
10. WAP to insert data into the database using the prepared statement.
11. WAP to read data from the database using the ResultSet.
12. WAP to read data send by the client (HTML page) using servlet.
13. WAP to include a HTML page into a JSP page.
14. WAP to handle the JSPEException.
15. WAP to read data send by a client (HTML page) using JSP.

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# CRYPTOGRAPHY AND NETWORK SECURITY

**Course Code: CSC2603**

**Credit Units: 03**

## **Course Objective:**

Network Security was always important, but has gained significance with the increase of application of Internet associated e-commerce. Threat and compromise /Breach potentially increased with the introduction of the end user involvement, communication and networking. Thus the course is introduced to make the student acquainted with the concepts and practices to make the network environment secure.

## **Course Contents:**

### **Module I**

Introduction to security attacks, services and mechanism, Classical encryption techniques: substitution ciphers and transposition ciphers, cryptanalysis, steganography, Stream and block ciphers. Modern Block Ciphers: Block ciphers principles, Shannon's theory of confusion and diffusion, feistel structure, Data encryption standard (DES), Strength of DES, Idea of differential cryptanalysis, block cipher modes of operations, Triple DES

### **Module II**

Introduction to group, field, finite field of the form  $GF(p)$ , modular arithmetic, prime and relative prime numbers, Extended Euclidean Algorithm, Advanced Encryption Standard (AES) encryption and decryption, Fermat's and Euler's theorem, Primality testing, Chinese Remainder theorem, Discrete Logarithmic Problem, Principles of public key crypto systems, RSA algorithm, security of RSA.

### **Module III**

Message Authentication Codes: Authentication requirements, authentication functions, message authentication code, hash functions, birthday attacks, security of hash functions, Secure hash algorithm (SHA) Digital Signatures: Digital Signatures, Elgamal Digital Signature Techniques, Digital signature standards (DSS).

### **Module IV**

Key Management and distribution: Symmetric key distribution, Diffie-Hellman Key Exchange, Public key distribution, X.509 Certificates, Public key Infrastructure. Authentication Applications: Kerberos

### **Module V**

IP Security: Architecture, Authentication header, Encapsulating security payloads, combining security associations, key management. Introduction to Secure Socket Layer, Secure electronic transaction (SET). Viruses and related threats, Firewalls.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# SOFTWARE TESTING AND QUALITY ASSURANCE

**Course Code: CSC2612**

**Credit Units: 03**

## **Course Objective:**

To apply all the testing skills of software testing in such a way that it can provide and improve the software development methodology. Basic objective of Software Testing is to develop methods and procedures that can scale up for large systems and that can be used to consistently produce high-quality software at low cost and with a small cycle for the development.

## **Course Contents:**

### **Module I**

Software Testing Fundamentals - Software Testing Definition, Importance, objectives, why is it too hard? Errors, faults and failure. Testing process, STLC, QA and QC, Verification and Validation, Inspections and walkthroughs, Test Plan, test cases, drivers, stubs, Validation checks.

### **Module II**

Black box testing - Definition, Equivalence Class, Boundary Value Analysis, Documentation testing, state based testing, White box testing – Definition, Difference between black box testing and white box testing, Path testing, Cyclomatic complexity, graph metrics, mutation testing.

### **Module III**

Levels of testing- Low level testing- Unit testing and Integration testing. High level testing- System testing, performance testing, stress testing, load testing, volume testing, smoke and sanity testing, Installation testing, usability testing, website testing, security testing, recovery testing, Domain testing, Static testing and dynamic testing,

### **Module IV**

Test cases– Designing, Execution. Reducing number of test cases- Prioritization guidelines, priority category, scheme, risk analysis, regression testing. Designing scripts, RTM, TRS.

### **Module V**

Cohesion and coupling in class testing, GUI testing, integration and system testing, Automated Testing tools - Manual vs. Automated testing, Static and Dynamic Testing tools, Characteristics: Rational tools, Quality Standards- CMM, ISO, Six sigma, McCall's Quality Factors and Criteria, Quality Metrics

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# VLSI DESIGN

**Course Code: CSC2610**

**Credit Units: 02**

## **Course Objective:**

In the recent years, IC manufacturing technology has gone through dramatic evolution and changes, continuously scaling to ever smaller dimensions. This scaling has a double impact on the design of ICs. First, the complexity of the designs that can be put on a single die has increased dramatically which led to new design methodologies. At the same time, this plunge into deep submicron space causes devices to behave differently and brings challenging issues to forefront. This course along with the course of Digital Circuits and Systems II and Analog CMOS IC design will give you many of the basic essentials to work in the area of Circuit Design. Since this course takes the latest trends in the industry into account, you will find yourself at a definite edge.

## **Course Contents:**

### **Module I: Devices and the wire**

Diode, dynamic and transient behaviour-diffusion capacitance, SPICE diode model.

MOSFET STATIC BEHAVIOUR: Threshold voltage and its dependence on  $V_{SB}$  MOSFET Operation in resistive and saturation region, channel length modulation, Velocity saturation and its impact on sub micron devices, sub threshold conduction, Model for manual analysis, Equivalent resistance for MOSFET in (velocity) saturated region, comparison of equations for PMOS and NMOS, depletion and enhancement device

DYNAMIC BEHAVIOUR: Channel capacitance in different regions of operation, junction capacitance, Level 1 SPICE MODELS for MOS transistors

The Wire: Interconnect parameters: resistance, capacitance and Inductance, Lumped RC model, Elmore Delay

### **Module II: CMOS Inverter**

VTC of an ideal inverter, Switching Model of the CMOS inverter: nMOS /pMOS discharge and charge, VTC of CMOS inverter: PMOS AND NMOS operation in various regions including velocity saturation, Switching threshold,  $(W/L)_p/(W/L)_n$  ratio for setting desired  $V_M$  with and without velocity saturation, Noise Margins, buffer

Ratioed logic: Pseudo NMOS inverter and PMOS to NMOS ratio for performance, tristate inverter, Resistive load inverter.

Load Capacitance calculations: fan out capacitance, self capacitance calculations: Miller effect, wire capacitance; Improving delay calculation with input slope, Propagation delay: first order analysis, analysis from a design perspective, sizing a chain of inverters for minimum delay, choosing optimum number of stages

Power, Energy and Energy Delay: Dynamic power consumption, Static power, Glitches and power dissipation due to direct path currents, power and delay trade off, Transistor sizing for energy minimization

### **Module III: Combinational circuits**

CMOS LOGIC: Good 0 and poor 0, Good 1 and poor 1, series and parallel N and P switches, 2 and Higher input NAND and NOR gates, Functions of the type  $(AB+C(D+E))$  and their complements, XOR and XNOR gates, 2 input Multiplexer, Full Adder; Transistor sizing in CMOS logic for optimal delay,

Pseudo NMOS NAND NOR and other gates and the transistor sizing, Introduction to DSVCL logic, CPL AND/NAND, OR/NOR, XOR/XNOR gates

Logical effort, Electrical Effort, Branching effort, Examples of sizing Combinational logic chains for minimum delay. Pass-transistor logic, pass gate configurations for nmos and pmos, 2 input and 4 input MUX, XOR, XNOR and implementation of general functions like  $AB+AB*C+A*C^*$ , Robust and Efficient PTL Design, Delay of Transmission Gate chain

Dynamic CMOS design: Precharge and Evaluation, charge leakage, bootstrapping, charge sharing, Cascading Dynamic Gates, DOMINO Logic, Optimization of Domino Logic Gates, simple example circuit implementations of DOMINO logic

**Module IV: Sequential Logic circuits**

Principle of Bistability, NAND and NOR based SR latch, and clocked SR Latch, JK latch, example of master slave flip flop, CMOS D latch, MUX based Latches, master slave edge triggered register, non ideal clocks, clock overlap, C2MOS register, TSPCR Register, Schmitt Trigger, Pipelining and NORA CMOS

**Module V: Layout Design Rules**

Introduction to CMOS Process technology, Layout of CMOS inverter, CMOS NAND and NOR gates, Concept of Euler path, and stick diagrams for functions like  $(AB+E+CD)^*$

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# VLSI DESIGN LAB

**Course Code: CSC2611**

**Credit Units: 01**

## **Course Contents:**

1. Using Design architect and simulate V vs time for CMOS inverter using same W/L ratio for PMOS and NMOS.
2. Design and simulate again by Sizing PMOS to NMOS appropriately and repeat experiment 1
3. Design and simulate V vs t for 2 input NAND and Nor gates.
4. Design and Simulation for general CMOS functions
5. One bit full adder simulation
6. 2:1 MUX using pass transistor logic
7. Other functions using pass transistor logic
8. Layout of CMOS inverter
9. Layout of NAND and NOR gates
10. Design and Simulation SR latch using NAND and NOR representations
11. Design and simulate D flip flop

## **Examination Scheme:**

<b>IA</b>				<b>EE</b>

5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# Syllabus - Seventh Semester

## DATAWAREHOUSING & DATA MINING

**Course Code: CSC2701**

**Credit Units: 03**

### **Course Objective:**

The objective of this course is to introduce students to Data Warehousing & Data mining technologies that will help to Inspect, Control and Secure Information through Databases.

### **Course Contents:**

#### **Module I: Introduction to Data Warehousing**

Data Warehouse definition & Characteristics, The need for data ware housing, Operational and Informational Data Stores, Difference between Data warehouse and DBMS, Benefits of Data warehousing, Data mart, Meta Data, Conceptual Modeling of Data Warehouses: star schemas, Snowflake, Fact Constellations with example each.

#### **Module II: Data Warehousing Components & Architecture**

Data Warehouse Architecture, Components of Data Warehouse Architecture, Data Warehousing Topologies, Meta Data, Components of Meta data, Mapping Meta Data. Challenges with Data Warehousing.

#### **Module III: On Line Analytical Processing (OLAP)**

Definition: OLAP, Difference between OLTP and OLAP, OLAP Server Architecture, OLAP Operations, Multi Relational & Multi Dimensional: MOLAP, ROLAP, OLAP Tools, Metadata Repository, Data Warehouse Back-End Tools and Utilities.

#### **Module IV: Data Mining**

Introduction to Data Mining, Applications, Limitations, Techniques, Association Rules: Priori Algorithm, Direct Hashing and Pruning (DHP), Classification: Decision Tree, Split Algorithm based on Information Theory, Bayes Method.

#### **Module V: Cluster Analysis: Concepts and Methods**

Cluster Analysis: Features, Types of Cluster Analysis Methods: Partitional, Hierarchical, Density Based, Grid based Methods, , Web Data Mining, Search Engine, Case Study, Limitations.

### **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# COMPUTER GRAPHICS

**Course Code: CSC2710**

**Credit Units: 03**

## **Course Objective:**

The objective of the course is to provide the understanding of the fundamental graphical operations and the implementation on computer, the mathematics behind computer graphics, including the use of spline curves and surfaces. It gives the glimpse of recent advances in computer graphics, user interface issues that make the computer easy, for the novice to use.

## **Course Contents:**

### **Module I: Introduction to Graphics and Graphics Hardware System**

Application of computer graphics, Video Display Devices, Raster Scan Display, Random Scan Display, Input Devices, Graphic Software and graphics standards, Numerical based on Raster and Random scan display, Frame buffer, Display processor.

### **Module II: Output Primitives and Clipping operations**

Algorithms for drawing 2D Primitives lines (DDA and Bresenham's line algorithm), circles (Bresenham's and midpoint circle algorithm), Antialiasing and filtering techniques. Line clipping (cohen-sutherland algorithm), Curve clipping algorithm, and polygon clipping with Sutherland Hodgeman algorithm, Area fill algorithms for various graphics primitives: Scanline fill algorithm, boundary fill algorithm, flood fill algorithm, Polygon representation, various method of Polygon Inside test: Even-Odd method, winding number method, Character generation techniques.

### **Module III: 2D Geometric transformation**

2D Transformation: Basic transformation, Translation, Rotation, Rotation relative to an arbitrary point, scaling, Matrix Representations and Homogeneous coordinates, window to viewport transformation.

### **Module IV: 3D Geometric transformation**

3D Concepts: Parallel projection and Perspective projection, 3D Transformations, composite 3D transformation, co-ordinate transformation, Inverse transformation

### **Module V: object modeling and Visible Surface detection**

fractal geometry methods, fractal dimensions, Geometric construction of deterministic self-similar fractals, Iterated function system to generate fractals. Bezier curves and Bezier surfaces, Bspline curves and surfaces, Visible surface detection method: Basic illumination, diffuse reflection, specular reflection, shadows. Ray tracing method, Depth-buffer method, A-buffer method, Depth-sorting method (painter's algorithm), Binary search partition method, Scan line method,

### **Module VI: Introduction to multimedia**

Design of animation sequences, Computer Animation languages, Elementary filtering techniques and elementary Image Processing techniques, graphics library functions used in animation design

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# ADVANCED COMPUTER ARCHITECTURE

Course Code: CSC2711

Credit Units: 03

## Course Objective:

With increase in availability of system resources, concept of parallel architecture has obtained immense popularity. This course provides a comprehensive study of scalable and parallel computer architectures for achieving a proportional increase in performance with increasing system resources. In this course we have discussed the theory, technology, architecture (hardware) and software aspects of parallel computer and Vector computers.

## Course Contents:

### Module I: Parallel computer models

The state of computing, Multiprocessors and multicomputers, Multivector and SIMD computers, Architectural development tracks

Program and network properties: Conditions of parallelism, Data and resource dependences, Hardware and software parallelism, Program partitioning and scheduling, Grain size and latency, Program flow mechanisms, Control flow versus data flow, Data flow architecture, Demand driven mechanisms, Comparisons of flow mechanisms

### Module II: System Interconnect Architectures

Network properties and routing, Static interconnection networks, Dynamic interconnection Networks, Multiprocessor system interconnects, Hierarchical bus systems, Crossbar switch and multiport memory, Multistage and combining network.

### Module III: Processors and Memory Hierarchy

Advanced processor technology, Instruction-set Architectures, CISC Scalar Processors, RISC Scalar Processors, Superscalar Processors, VLIW Architectures, Vector and Symbolic processors

Memory Technology: Hierarchical memory technology, Inclusion, Coherence and Locality, Memory capacity planning, Virtual Memory Technology

### Module IV: Backplane Bus System

Backplane bus specification, Addressing and timing protocols, Arbitration transaction and interrupt, Pipelining: Linear pipeline processor, Nonlinear pipeline processor, Instruction pipeline design, Mechanisms for instruction pipelining, Dynamic instruction scheduling, Branch handling techniques, Arithmetic Pipeline Design, Computer arithmetic principles.

### Module V: Vector Processing Principles

Vector instruction types, Vector-access memory schemes.

Synchronous Parallel Processing: SIMD Architecture and Programming Principles, SIMD Parallel Algorithms

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# DATAWARE HOUSING & DATA MINING LAB

**Course Code: CSC2704**

**Credit Units: 01**

## **Course Contents:**

**Programming Language: Weka 3.6**

## **List of Experiments/Programs:**

1. Defining Weather relation for different attributes
2. Defining employee relation for different attributes
3. Defining labor relation for different attributes
4. Defining student relation for different attributes
5. Exploring weather relation using experimenter and obtaining results in various schemes
6. Exploring employee relation using experimenter
7. Exploring labor relation using experimenter
8. Exploring student relation using experimenter
9. Setting up a flow to load an arff file (batch mode) and perform a cross validation using J48
10. Design a knowledge flow layout, to load attribute selection normalize the attributes and to store the result in a csv saver.

## **Examination Scheme:**

<b>IA</b>				<b>EE</b>

5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# SUMMER INTERNSHIP EVALUATION-II

Course Code: CSC2735

Credit Units: 03

## Guidelines:

There are certain phases of every Intern's professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship program can best be described as an attempt to institutionalize efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal classroom situations. These attributes are intellectual ability, professional judgment and decision-making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility etc.

In order to achieve these objectives, each student will maintain a file (**Internship File**). The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development.

The File will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

The **layout guidelines** for the Project & Seminar Report:

### 1. File should be in the following specification:

A4 size paper

Font: Arial (10 points) or Times New Roman (12 points)

Line spacing: 1.5

Top & bottom margins: 1 inch/ 2.5 cm

Left & right margins: 1.25 inches/ 3 cm

### 2. Report Layout: The report should contain the following components:

Front Page

Table of Content

Acknowledgement

Student Certificate

Company Profile (optional)

Introduction

Main Body

References / Bibliography

The File will include **five sections** in the order described below. The content and comprehensiveness of the main body and appendices of the report should include the following:

1. **The Title Page**--Title - An Internship Experience Report For (Your Name), name of internship organization, name of the Supervisor/Guide and his/her designation, date started and completed, and number of credits for which the report is submitted.
2. **Table of Content**--an outline of the contents by topics and subtopics with the page number and location of each section.
3. **Introduction**--short, but should include how and why you obtained the internship experience position and the relationship it has to your professional and career goals.
4. **Main Body**--should include but not be limited to daily tasks performed. Major projects contributed to, dates, hours on task, observations and feelings, meetings attended and their purposes, listing of tools and materials and their suppliers, and photographs if possible of projects, buildings and co-workers.

**5. References / Bibliography** --This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system

## **ASSESSMENT OF THE INTERNSHIP FILE**

The student will be provided with the Student Assessment Record (SAR) to be placed in front of the Internship File. Each item in the SAR is ticked off when it is completed successfully. The faculty will also assess each item as it is completed. The SAR will be signed by the student and by the faculty to indicate that the File is the student's own work. It will also ensure regularity and meeting the deadlines.

### **STUDENT ASSESSMENT RECORD (SAR)**

#### **1. Range of Research Methods used to obtain information**

#### **2. Execution of Research**

#### **3. Data Analysis**

- Analyse Quantitative/ Qualitative information
- Control Quality

#### **4. Draw Conclusions**

#### **Examination Scheme:**

<b>Components</b>	<b>V</b>	<b>S</b>	<b>R</b>	<b>FP</b>
<b>Weightage (%)</b>	20	20	20	40

V – Viva, S – Synopsis, FP – Final Presentation, R - Report

# SOFT COMPUTING

**Course Code: CSC2751**

**Credit Units: 03**

## **Course Objective:**

To develop semantic-based and context-aware systems to acquire, organise, process, share and use the knowledge embedded in multimedia content. Research will aim to maximise automation of the complete knowledge lifecycle and achieve semantic interoperability between Web resources and services.

## **Course Contents:**

### **Module I: Soft Computing**

Introduction of soft computing, soft computing vs. hard computing, various types of soft computing techniques, applications of soft computing.

### **Module II: Neural Network**

Structure and Function of a single neuron: Biological neuron, artificial neuron, definition of ANN, Taxonomy of neural net, Difference between ANN and human brain, characteristics and applications of ANN, single layer network, Perceptron training algorithm, Linear separability, Widrow & Hebb's learning rule/Delta rule, ADALINE, MADALINE, AI v/s ANN. Introduction of MLP, different activation functions, Error back propagation algorithm, derivation of BBPA, momentum, limitation, characteristics and application of EBPA

### **Module III**

Counter propagation network, architecture, functioning & characteristics of counter Propagation network, Hopfield/ Recurrent network, configuration, stability constraints, associative memory, and characteristics, limitations and applications. Hopfield v/s Boltzman machine. Adaptive Resonance Theory: Architecture, classifications, Implementation and training. Associative Memory.

### **Module IV: Fuzzy Logic**

Fuzzy set theory, Fuzzy set versus crisp set, Crisp relation & fuzzy relations, Fuzzy systems: crisp logic, fuzzy logic, introduction & features of membership functions, Fuzzy rule base system : fuzzy propositions, formation, decomposition & aggregation of fuzzy rules, fuzzy reasoning, fuzzy inference systems, fuzzy decision making & Applications of fuzzy logic.

### **Module V: Genetic algorithm**

Fundamentals, basic concepts, working principle, encoding, fitness function, reproduction, Genetic modeling: Inheritance operator, cross over, inversion & deletion, mutation operator, Bitwise operator, Generational Cycle, Convergence of GA, Applications & advances in GA, Differences & similarities between GA & other traditional methods.

## **Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>H</b>	<b>V/S/O</b>	<b>AT</b>	<b>EE</b>
<b>Weightage (%)</b>	10	8	7	5	70

# MOBILE COMPUTING

**Course Code: CSC2707**

**Credit Units: 03**

## **Course Objective:**

The objective of this consortium is to shape and expand a full-scale and sound mobile computing system market. To achieve this, cooperation is required of interests related to communication (network), computer hardware/software, system integrators (including service providers), and the media.

## **Course Contents:**

### **Module I: Introduction to Personal Communications Services (PCS)**

PCS Architecture, Mobility management, Networks signaling.

Global System for Mobile Communication (GSM) system overview: GSM Architecture, Mobility management, Network signaling.

### **Module II: General Packet Radio Services (GPRS) & Wireless Application Protocol (WAP)**

GPRS Architecture, GPRS Network Nodes.

Mobile Data Communication: WLANs (Wireless LANs) IEEE 802.11 standard, Mobile IP.

Wireless Application Protocol (WAP): The Mobile Internet standard, WAP Gateway and Protocols, wireless mark up Languages (WML).

### **Module III: Third Generation (3G) Mobile Services**

Introduction to International Mobile Telecommunications 2000 (IMT 2000) vision, Wideband Code Division Multiple Access (W-CDMA), and CDMA 2000, Quality of services in 3G.

Wireless Local Loop(WLL): Introduction to WLL Architecture, wireless Local Loop Technologies.

### **Module IV: Global Mobile Satellite Systems**

Global Mobile Satellite Systems; case studies of the IRIDIUM and GLOBALSTAR systems.

### **Module V: Enterprise Networks**

Introduction to Virtual Networks, Blue tooth technology, Blue tooth Protocols. Advanced techniques in mobile computing.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# GRID COMPUTING

**Course Code: CSC2709**

**Credit Units: 03**

## **Course Objective:**

Grid computing (or the use of a *computational grid*) is applying the resources of many computers in a network to a single problem at the same time - usually to a scientific or technical problem that requires a great number of computer processing cycles or access to large amounts of data. The major objective of this course is to provide a sound foundation to the students on the concepts, percepts and practices in a field that is of immense concern to the industry and business.

## **Course Contents:**

### **Module I: Introduction-Cluster to grid computing**

Cluster computing models, Grid models, Mobile grid models, Applications.

**Parset: System independent parallel programming on distributed systems:** Motivation and introduction, Semantics of the parset construct, Expressing parallelism through parsets, Implementing parsets on a loosely coupled distributed system.

**Anonymous remote computing model:** Introduction, Issues in parallel computing on interconnected workstations, Existing distributed programming approaches, The arc model of computation, The two tired arc language constructs, Implementation

### **Module II: Integrating task parallelism with data parallelism**

Introduction and motivation, A model for integrating task parallelism into data parallel programming platforms, Integration of the model into ARC, Design and implementation applications, performance analysis, guidelines for composing user programs, related work

**Anonymous remote computing and communication model:** Introduction, Location in dependent inter task communication with DP, DP model of iterative grid computations, Design and implementation of distributed pipes, Case study, and Performance analysis.

### **Module III: Parallel programming model on CORBA**

Introduction, Existing works, notion of concurrency, system support implementation performance, suitability of CORBA: introspection.

**Grid computing model:** Introduction, a parallel computing model over grids, Design and implementation of the model, Performance studies, Related work.

### **Module IV: Introducing mobility into anonymous remote computing and communication model**

Introduction, issues in mobile clusters and parallel computing on mobile clusters, model overview, model computation model, implementation, performance.

### **Module V: Parallel Simulated Annealing algorithms**

Introduction, Simulated annealing (SA) Technique, Clustering algorithm for simulated annealing (SA), Combination of genetic algorithm and simulated annealing (SA) algorithm

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# TERM PAPER

**Course Code: CSC2731**

**Credit Units: 02**

A term (or research) paper is primarily a record of intelligent reading in several sources on a particular subject.

The students will choose the topic at the beginning of the session in consultation with the faculty assigned. The progress of the paper will be monitored regularly by the faculty. At the end of the semester the detailed paper on the topic will be submitted to the faculty assigned. The evaluation will be done by Board of examiners comprising of the faculties.

## GUIDELINES FOR TERM PAPER

The procedure for writing a term paper may consist of the following steps:

1. Choosing a subject
2. Finding sources of materials
3. Collecting the notes
4. Outlining the paper
5. Writing the first draft
6. Editing & preparing the final paper

### 1. Choosing a Subject

The subject chosen should not be too general.

### 2. Finding Sources of Materials

- a) The material sources should be not more than 10 years old unless the nature of the paper is such that it involves examining older writings from a historical point of view.
- b) Begin by making a list of subject-headings under which you might expect the subject to be listed.
- c) The sources could be books and magazine articles, news stories, periodicals, scientific journals etc.

### 3. Collecting the Notes

Skim through sources, locating the useful material, then make good notes of it, including quotes and information for footnotes.

- a) Get facts, not just opinions. Compare the facts with author's conclusion.
- b) In research studies, notice the methods and procedures, results & conclusions.
- c) Check cross references.

### 4. Outlining the paper

- a) Review notes to find main sub-divisions of the subject.
- b) Sort the collected material again under each main division to find sub-sections for outline so that it begins to look more coherent and takes on a definite structure. If it does not, try going back and sorting again for main divisions, to see if another general pattern is possible.

### 5. Writing the first draft

Write the paper around the outline, being sure that you indicate in the first part of the paper what its purpose is. You may follow the following:

- a) statement of purpose
- b) main body of the paper
- c) statement of summary and conclusion

Avoid short, bumpy sentences and long straggling sentences with more than one main idea.

### 6. Editing & Preparing the final Paper

- a) Before writing a term paper, you should ensure you have a question which you attempt to answer in your paper. This question should be kept in mind throughout the paper. Include only information/ details/ analyses of relevance to the question at hand. Sometimes, the relevance of a particular section may be clear to you but not to your readers. To avoid this, ensure you briefly explain the relevance of every section.
- b) Read the paper to ensure that the language is not awkward, and that it "flows" properly.
- c) Check for proper spelling, phrasing and sentence construction.

- d) Check for proper form on footnotes, quotes, and punctuation.
- e) Check to see that quotations serve one of the following purposes:
  - (i) Show evidence of what an author has said.
  - (ii) Avoid misrepresentation through restatement.
  - (iii) Save unnecessary writing when ideas have been well expressed by the original author.
- f) Check for proper form on tables and graphs. Be certain that any table or graph is self-explanatory.

Term papers should be composed of the following sections:

- 1) Title page
- 2) Table of contents
- 3) Introduction
- 4) Review
- 5) Discussion & Conclusion
- 6) References
- 7) Appendix

Generally, the introduction, discussion, conclusion and bibliography part should account for a third of the paper and the review part should be two thirds of the paper.

### **Discussion**

The discussion section either follows the results or may alternatively be integrated in the results section. The section should consist of a discussion of the results of the study focusing on the question posed in the research paper.

### **Conclusion**

The conclusion is often thought of as the easiest part of the paper but should by no means be disregarded. There are a number of key components which should not be omitted. These include:

- a) summary of question posed
- b) summary of findings
- c) summary of main limitations of the study at hand
- d) details of possibilities for related future research

### **Reference**

From the very beginning of a research project, you should be careful to note all details of articles gathered.

The bibliography should contain ALL references included in the paper. References not included in the text in any form should NOT be included in the bibliography.

The key to a good bibliography is consistency. Choose a particular convention and stick to this.

### **Conventions**

Monographs

Crystal, D. (2001), *Language and the internet*. Cambridge: Cambridge University Press.

### **Edited volumes**

Gass, S./Neu, J. (eds.) (1996), *Speech acts across cultures. Challenges to communication in a second language*. Berlin/ NY: Mouton de Gruyter.

[(eds.) is used when there is more than one editor; and (ed.) where there is only one editor. In German the abbreviation used is (Hrsg.) for Herausgeber].

### **Edited articles**

Schmidt, R./Shimura, A./Wang, Z./Jeong, H. (1996), *Suggestions to buy: Television commercials from the U.S., Japan, China, and Korea*. In: Gass, S./Neu, J. (eds.) (1996), *Speech acts across cultures. Challenges to communication in a second language*. Berlin/ NY: Mouton de Gruyter: 285-316.

### **Journal articles**

McQuarrie, E.F./Mick, D.G. (1992), *On resonance: A critical pluralistic inquiry into advertising rhetoric*. *Journal of consumer research* 19, 180-197.

### **Electronic book**

Chandler, D. (1994), *Semiotics for beginners* [HTML document]. Retrieved [5.10.'01] from the World

Wide Web, <http://www.aber.ac.uk/media/Documents/S4B/>.

### **Electronic journal articles**

Watts, S. (2000) Teaching talk: Should students learn 'real German'? [HTML document]. German as a Foreign Language Journal [online] 1. Retrieved [12.09.'00] from the World Wide Web, <http://www.gfl-journal.com/>.

### **Other websites**

Verterhus, S.A. (n.y.), Anglicisms in German car advertising. The problem of gender assignment [HTML document]. Retrieved [13.10.'01] from the World Wide Web, <http://olaf.hiof.no/~sverrev/eng.html>.

### **Unpublished papers**

Takahashi, S./DuFon, M.A. (1989), Cross-linguistic influence in indirectness: The case of English directives performed by native Japanese speakers. Unpublished paper, Department of English as a Second Language, University of Hawai'i at Manoa, Honolulu.

### **Unpublished theses/ dissertations**

Möhl, S. (1996), Alltagssituationen im interkulturellen Vergleich: Realisierung von Kritik und Ablehnung im Deutschen und Englischen. Unpublished MA thesis, University of Hamburg.

Walsh, R. (1995), Language development and the year abroad: A study of oral grammatical accuracy amongst adult learners of German as a foreign language. Unpublished PhD dissertation, University College Dublin.

### **Appendix**

The appendix should be used for data collected (e.g. questionnaires, transcripts, ...) and for tables and graphs not included in the main text due to their subsidiary nature or to space constraints in the main text.

### **Assessment Scheme:**

#### **Continuous Evaluation:**

40%

(Based on abstract writing, interim draft, general approach, research orientation, readings undertaken etc.)

#### **Final Evaluation:**

60%

(Based on the organization of the paper, objectives/ problem profile/ issue outlining, comprehensiveness of the research, flow of the idea/ ideas, relevance of material used/ presented, outcomes vs. objectives, presentation/ viva etc.)

# PROJECT

**Course Code: CSC2732**

**Credit Units: 02**

## **Course Objective:**

The objective of this course is to provide practical training on some live/demo projects that will increase capability to work on actual problem in industry. It will be an in house training on some latest software which is in high demand in market. This training will be designed such that it will be useful for their future employment in industry.

## **STUDENT ASSESSMENT RECORD (SAR)**

Record to be maintained by project guide.

- 1. Project Tools (Hardware/ Software) used for implementation.**
- 2. Project Evaluation & Execution.**

## **Examination Scheme:**

<b>Components</b>	<b>V</b>	<b>S</b>	<b>R</b>	<b>FP</b>
<b>Weightage (%)</b>	20	20	20	40

V – Viva, S – Synopsis, FP – Final Presentation, R - Report

## **WORKSHOP/ INDEPENDENT STUDY**

**Course Code: CSC2733**

**Credit Units: 02**

This is an elective, self-directed course to investigate emerging areas of IT and Computer Science like Mobile Operating System, Cloud Computing, or from Current Research Areas etc. The primary goal of the course is to provide students with research exploration of a specific topic of interest to the individual student under the advisement of an instructor who will monitor and critique the student's progress.

Independent study provides students with the opportunity to work one-on-one with a Faculty on a particular topic. The student and faculty should discuss the aims and content of the study and present the proposal to Head of Department. The independent study proposal should include the study's title, theme, readings, work to be submitted, and syllabus. Faculty and student should meet for a minimum number of 2 hours per week. Student will give a seminar after completion of study.

# Syllabus - Eighth Semester

## PROJECT-DISSERTATION

**Course Code: CSC2837**

**Credit Units: 08**

### **GUIDELINES FOR PROJECT FILE**

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critiqued by the faculty guide and corrected by the student at each stage.

The File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation.

### **In general, the File should be comprehensive and include**

A short account of the activities that were undertaken as part of the project;

A statement about the extent to which the project has achieved its stated goals.

A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;

Any activities planned but not yet completed as part of the project, or as a future initiative directly resulting from the project;

Any problems that have arisen that may be useful to document for future reference.

### ➤ **Report Layout**

The report should contain the following components:

### ➤ **Title or Cover Page**

The title page should contain the following information: Project Title; Student's Name; Course; Year; Supervisor's Name.

### ➤ **Acknowledgements(optional)**

Acknowledgment to any advisory or financial assistance received in the course of work may be given.

### ➤ **Abstract**

A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project

### ➤ **Table of Contents**

Titles and subtitles are to correspond exactly with those in the text.

### ➤ **Introduction**

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

### ➤ **Materials and Methods**

This section should aim at experimental designs, materials used. Methodology should be mentioned in details including modifications if any.

### ➤ **Results and Discussion**

Present results, discuss and compare these with those from other workers, etc. In writing these section, emphasis should be given on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary never write in “point” form.

### ➤ **Conclusion**

A conclusion should be the final section in which the outcome of the work is mentioned briefly.

### ➤ **Future prospects**

### ➤ **Appendices**

The Appendix contains material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

### ➤ **References / Bibliography**

This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

## **Examples**

### **For research article**

Voravuthikunchai SP, Lortheeranuwat A, Ninrprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichia coli* O157: H7. *Clin Microbiol Infect*, **8** (suppl 1): 116–117.

### **For book**

Kowalski, M. (1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), **7**: 63-67

## **ASSESSMENT OF THE PROJECT FILE**

Essentially, marking will be based on the following criteria: the quality of the report, the technical merit of the project and the project execution.

Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project.

Project execution is concerned with assessing how much work has been put in.

The File should fulfill the following *assessment objectives*:

## **Range of Research Methods used to obtain information**

### **Execution of Research**

#### **Data Analysis**

Analyse Quantitative/ Qualitative information

Control Quality

### **Draw Conclusions**

### **Examination Scheme:**

Dissertation	50
Viva Voce	50
<b>Total</b>	<b>100</b>

# DIGITAL IMAGE PROCESSING

Course Code: CSC2803

Credit Units: 02

## Course Objective:

Processing color and grayscale images or other two-dimensional signals has become an important tool for research and investigation in many areas of science and engineering. *Digital Image Processing* is designed to give professionals and students a powerful collection of fundamental and advanced image processing tools on the desktop. Digital Image Processing takes full advantage of the computational technology of Mathematica.

## Course Contents:

### Module I: Introduction and Digital Image Fundamentals

The origins of Digital Image Processing, Examples of Fields that Use Digital Image Processing, Fundamentals Steps in Image Processing, Elements of Digital Image Processing Systems, Image Sampling and Quantization, Some basic relationships like Neighbours, Connectivity, Distance Measures between pixels, Linear and Non Linear Operations.

### Module II: Image Enhancement in the Spatial Domain

Some basic Gray Level Transformations, Histogram Processing, Enhancement Using Arithmetic and Logic operations, Basics of Spatial Filters, Smoothing and Sharpening Spatial Filters, Combining Spatial Enhancement Methods.

### Module III: Image Enhancement in the Frequency Domain:

Introduction to Fourier Transform and the frequency Domain, Smoothing and Sharpening Frequency Domain Filters, Homomorphic Filtering.

### Image Restoration

A model of The Image Degradation / Restoration Process, Noise Models, Restoration in the presence of Noise Only Spatial Filtering, Periodic Noise Reduction by Frequency Domain Filtering, Linear Position-Invariant Degrations, Estimation of Degradation Function, Inverse filtering, Wiener filtering, Constrained Least Square Filtering, Geometric Mean Filter, Geometric Transformations.

### Module IV: Image Compression

Coding, Interpixel and Psychovisual Redundancy, Image Compression models, Elements of Information Theory, Error free comparison, Lossy compression, Image compression standards.

### Image Segmentation

Detection of Discontinuities, Edge linking and boundary detection, Threshold, Region Oriented Segmentation, Motion based segmentation.

### Module V: Representation and Description

Representation, Boundary Descriptors, Regional Descriptors, Use of Principal Components for Description, Introduction to Morphology, Some basic Morphological Algorithms.

### Object Recognition

Patterns and Pattern Classes, Decision-Theoretic Methods, Structural Methods.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

## Text & References:

## DIGITAL IMAGE PROCESSING LAB

**Course Code: CSC2805**

**Credit Units: 01**

**Software Required:**Java

**List of Assignments:**

Experiments will be based on Image Representation, Image transformation, Image Enhancements, Edge Detection, Morphological Image processing and Segmentation.

**Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# DOT NET PROGRAMMING

**Course Code: CSC2804**

**Credit Units: 02**

## **Course Objective:**

To create web based applications using ASP.NET.

## **Course Contents:**

### **Module I: Introduction to .NET technologies**

Features of .NET, .NET Framework, CLR, What is ASP.NET? Difference between ASP and ASP.NET.

Design View, HTML View, Default Files used in ASP.NET. Concept of Master pages, Intrinsic Objects of ASP.Net, Structure of ASP.NET page, Cascading Style Sheet: Embedded, Inline, External.

### **Module II: Controls in ASP.NET**

Overview of Dynamic Web page, Understanding ASP.NET Controls, Applications, Web servers, Installation of IIS. Web forms, web form controls -server controls, client controls. Adding controls to a web form, Buttons, Text Box, Labels, Checkbox, Radio Buttons, List Box. Adding controls at runtime. Running a web Application, creating a multiform web project. Form Validation: Client side validation, server Side validation, validation Controls: Required Field Comparison Range. Calendarcontrol, Ad rotator Control, Internet Explorer Control.

### **Module III: Overview of ADO.NET and XML**

What is ADO.NET, from ADO to ADO.NET. ADO.NET architecture, Accessing Data using Data Adapters and Datasets, using Command & Data Reader, binding data to data bind Controls, displaying data in data grid, XML basics, attributes, fundamental XML classes: Document, text writer, text reader. XML validations, XML in ADO.NET, The XML Data Document, Data Binding and its types.

### **Module IV: ASP.NET Applications**

Creating, tracking, caching, error handling, Securing ASP.NET applications- form based applications, window based application.

### **Module V: Web services**

Introduction, State management- View state, Session state, Application state, Building ASP.NET web services, working with ASP.NET applications, creating custom controls, Invoking COM/COM+, Activ X Components

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;

# SIMULATION & MODELING

**Course Code: CSC2807**

**Credit Units: 02**

## **Course Objective:**

The goal is to introduce students to basic simulation methods and tools for modelling and simulation of continuous, discrete and combined systems. The objective is to impart knowledge of simulation principles. The ability to create simulation models of various types.

## **Course Contents:**

### **Module I: Linear Programming**

Linear Programming: Formulation, Graphical solution, standard and matrix form of linear programming problems, Simplex method and its Algorithm, Two-phase Simplex method.

### **Module II: Integer Programming**

Integer Programming: Importance, Need and importance of Integer Programming, Gomory's All Integer Programming Problem technique and its algorithm.

### **Module III: Modeling & Simulation Concepts and Random Numbers**

Modeling & Simulation Concepts: System Concepts, What is a Model?, Type of Models, Modeling & Simulation, Continuous vs. Discrete System Simulation, Numerical Integration vs. Continuous Simulation, Analog vs. Digital Simulation, Simulation vs. Monte- Carlo Simulation, Nature of Computer Modeling and Simulation, When to Use Simulation?, Limitations of Simulation, Validation, and Simulation Languages.

Random Numbers: Pseudo-random generators, Testing of Pseudo-random number generators, Generation of non-uniformly distributed random numbers.

### **Module IV: Simulation Experiments and Design of Application Simulators**

Simulation Experiments: Run length of Static and Dynamic Stochastic Simulation Experiments, Minimizing variability in simulators without increasing Number of simulation Runs.

**Module V: Design of Application Simulators** Design of Application Simulators – for Multi-server Queuing System, PERT, Optimizing Inventory Policy and Cost in Business environment.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

## SIMULATION AND MODELLING LAB

**Course Code: CSC2811**

**Credit Units: 01**

1. Basic Concepts of Simulation and Modeling and SIGMA (An Introduction).
2. Exploring the Car Wash Model. (Single queue single server)
3. The Car Wash Model (Single Queue two Servers)
4. Implementation of Buffered Queue Model
5. To Design Airport Model. (One queue multiple servers)
6. To Design a superstore model (Two queue and two servers)
7. To Design a Billing System (Two queues one Server)

# Syllabus - First Semester

## ENGINEERING MATHEMATICS-I

**Course Code: CSE2110**

**Credit Units : 04**

### Course Objective:

The knowledge of Mathematics is necessary for a better understanding of almost all the Engineering and Science subjects. Here our intention is to make the students acquainted with the concept of basic topics from Mathematics, which they need to pursue their Engineering degree in different disciplines.

### Course Contents:

#### Module I: Differential Calculus

Successive differentiation, Leibnitz's theorem (without proof), Mean value theorem, Taylor's theorem (proof), Remainder terms, Asymptote & Curvature, Partial derivatives, Chain rule, Differentiation of Implicit functions, Exact differentials, Tangents and Normals, Maxima, Approximations, Differentiation under integral sign, Jacobians and transformations of coordinates.

#### Module II: Integral Calculus

Fundamental theorems, Reduction formulae, Properties of definite integrals, Applications to length, area, volume, surface of revolution, improper integrals, Multiple Integrals-Double integrals, Applications to areas, volumes.

#### Module III: Ordinary Differential Equations

Formation of ODEs, Definition of order, degree & solutions, ODE of first order: Method of separation of variables, homogeneous and non homogeneous equations, Exactness & integrating factors, Linear equations & Bernoulli equations, General linear ODE of  $n^{\text{th}}$  order, Solution of homogeneous equations, Operator method, Method of undetermined coefficients, Solution of simple simultaneous ODE.

#### Module IV: Vector Calculus

Scalar and Vector Field, Derivative of a Vector, Gradient, Directional Derivative, Divergence and Curl and their Physical Significance, Arc Length, Tangent, Directional Derivative, Evaluation of Line Integral, Green's Theorem in Plane (without proof), Representation of Surfaces, Tangent Plane and Surface Normal, Surface Integral, Stoke's Theorem (without proof), Gauss Divergence Theorem (without proof).

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE

# ENGINEERING PHYSICS

**Course Code: CSE2111**

**Credit Units : 03**

## **Course Objective:**

Aim of this course is to introduce the students to fundamentals of graduate level physics, which form the basis of all applied science and engineering

## **Course Contents:**

### **Module I: Oscillations & Waves**

**Oscillations:** Introduction to S.H.M. Damped Oscillations: Differential Equation and its solution, logarithmic decrement, Quality Factor, Different conditions of damping of harmonic oscillations. Forced oscillations: Amplitude and Frequency Response, Resonance, Sharpness of Resonance

**Plane Progressive Waves:** Differential Equation and Solution, Superposition of Progressive Waves stationary waves.

**Ultrasonics:** Generation and application of ultrasonic waves.

### **Module II: Wave Nature of Light**

Interference: Coherent Sources, Conditions of interference, Interference due to division of wavefront, Fresnel's biprism Interference due to division of amplitude, Newton's rings, Interference due to thin films, .

Diffraction: Fresnel and Fraunhofer diffraction, Fraunhofer diffraction at a single slit, double slit, N Slits, Transmission grating, Rayleigh criterion and Resolving power of grating.

Polarization: Birefringence, Nicol prism, Production and analysis of plane, circularly and elliptically polarized light, Half and quarter wave plates, Optical rotation, Polarimeter.

### **Module III: Electromagnetics**

Scalar and vector fields, gradient of a scalar field, physical significance of gradient, equipotential surface. Line, surface and volume integrals, Divergence and curl of vector field and mathematical analysis physical significance, Electric flux, Gauss' law, Proof and Applications, Gauss divergence and Stokes theorems.

Differential form of Gauss' Law, Amperes' Law, Displacement current, Faradays Law, Maxwell equations in free space & isotropic media (Integral form & differential form), EM wave propagation in free space, Poynting vector.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# ENGINEERING MECHANICS

**Course Code: CSE2103**

**Credit Units : 03**

## **Course Objective:**

Objective of this course is to provide fundamental knowledge of force system and its effect on the behaviour of the bodies that may be in dynamic or in static state. It includes the equilibrium of different structures like beams, frames, truss etc and the force transfer mechanism in the different components of a body under given loading condition.

## **Course Contents:**

### **Module I: Force system & Structure**

Free body diagram, Equilibrium equations and applications. Plane truss, perfect and imperfect truss, assumption in the truss analysis, analysis of perfect plane trusses by the method of joints, method of section.

### **Module II:Friction**

Static and Kinetic friction, laws of dry friction, co-efficient of friction, angle of friction, angle of repose, cone of friction, friction lock, efficiency of screw jack, transmission of power through belt

### **Module III: Distributed Force**

Determination of center of gravity, center of mass and centroid by direct integration and by the method of composite bodies, mass moment of inertia and area moment of inertia by direct integration and composite bodies method, radius of gyration, parallel axis theorem, Pappus theorems and its application, polar moment of inertia.

### **Module IV: Work -Energy**

Work energy equation, conservation of energy, Virtual work, impulse, momentum conservation, impact of bodies, co-efficient of restitution, loss of energy during impact, D'Alembert principle

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;

# INTRODUCTION TO COMPUTERS AND PROGRAMMING IN C

Course Code: CSE2104

Credit Units : 03

## Course Objective:

The objective of this course module is to acquaint the students with the basics of computers system, its components, data representation inside computer and to get them familiar with various important features of procedure oriented programming language i.e. C.

## Course Contents:

### Module I: Introduction

Introduction to computer, history, von-Neumann architecture, memory system (hierarchy, characteristics and types), H/W concepts (I/O Devices), S/W concepts (System S/W & Application S/W, utilities). Data Representation: Number systems, character representation codes, Binary, octal, hexadecimal and their interconversions. Binary arithmetic, floating point arithmetic, signed and unsigned numbers, Memory storage unit.

### Module II: Programming in C

History of C, Introduction of C, Basic structure of C program, Concept of variables, constants and data types in C, Operators and expressions: Introduction, arithmetic, relational, Logical, Assignment, Increment and decrement operator, Conditional, bitwise operators, Expressions, Operator precedence and associativity. Managing Input and output Operation, formatting I/O.

### Module III: Fundamental Features in C

C Statements, conditional executing using if, else, nesting of if, switch and break Concepts of loops, example of loops in C using for, while and do-while, continue and break. Storage types (automatic, register etc.), predefined processor, Command Line Argument.

### Module IV: Arrays and Functions

One dimensional arrays and example of iterative programs using arrays, 2-D arrays Use in matrix computations.

Concept of Sub-programming, functions Example of user defined functions. Function prototype, Return values and their types, calling function, function argument, function with variable number of argument, recursion.

### Module V: Advanced features in C

Pointers, relationship between arrays and pointers Argument passing using pointers, Array of pointers. Passing arrays as arguments.

Strings and C string library.

Structure and Union. Defining C structures, Giving values to members, Array of structure, Nested structure, passing strings as arguments.

File Handling.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# PROGRAMMING IN C LAB

**Course Code: CSE2107**

**Credit Units : 01**

**Software Required:** Turbo C

## **Course Contents:**

- C program involving problems like finding the nth value of cosine series, Fibonacci series. Etc.
- C programs including user defined function calls
- C programs involving pointers, and solving various problems with the help of those.
- File handling

## **Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# ENGINEERING MECHANICS LAB

Course Code: CSE2109

Credit Units : 01

## Engineering Mechanics:

1. To verify the law of Force Polygon
2. To verify the law of Moments using Parallel Force apparatus. (Simply supported type)
3. To determine the co-efficient of friction between wood and various surface (like
4. Leather, Wood, Aluminum) on an inclined plane.
5. To find the forces in the members of Jib Crane.
6. To determine the mechanical advantage, Velocity ratio and efficiency of a screw jack.
7. To determine the mechanical advantage, Velocity ratio and Mechanical efficiency of the
8. Wheel and Axle
9. To determine the MA, VR,  $\eta$  of Worm Wheel (2-start)
10. Verification of force transmitted by members of given truss.
11. To verify the law of moments using Bell crank lever
12. To find CG and moment of Inertia of an irregular body using Computation method

## Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# ENGINEERING PHYSICS LAB

Course Code: CSE2112

Credit Units : 01

## List of Experiments:

1. To determine the wavelength of sodium light by Newton's rings method.
2. To determine the dispersive power of the material of prism with the help of a spectrometer.
3. To determine the specific rotation of sugar by Bi-quartz or Laurent half shade polarimeter.
4. To determine the speed of ultrasonic waves in liquid by diffraction method.
5. To determine the width of a narrow slit using diffraction phenomena.
6. To determine the temperature coefficient of platinum wire, using a platinum resistance thermometer and a Callender & Griffith's bridge.
7. To determine the value of specific charge (ratio of  $e/m$ ) of an electron by Thomson method.
8. To determine the internal resistance of Leclanche cell with the help of Potentiometer.
9. To determine the resistance per unit length of a Carey Foster's bridge wire and also to find out the specific resistance of a given wire.
10. To plot graph showing the variation of magnetic field with distance along the axis of a circular coil carrying current, and hence estimate the radius of the coil.
11. To determine the value of acceleration due to gravity (' $g$ ') in the laboratory using bar pendulum.
12. To determine the moment of inertia of a flywheel about its own axis of rotation.
13. To determine the density of material of the given wire with the help of sonometer.

## Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# ENGINEERING GRAPHICS LAB

**Course Code: CSE2113**

**Credit Units : 01**

## **Course Objective:**

This course will provide students concepts on the drawings of different curves like straight line, parabola, ellipse etc. After completion of this course, students will be able to draw different figures manually and will be capable of using various instruments involved in drawings.

## **Course Contents:**

### **Module I: General**

Importance, Significance and scope of engineering drawing, Lettering, Dimensioning, Scales, Sense of proportioning, Different types of projections, Orthographic Projection, B.I.S. Specifications.

### **Module II: Projections of Point and Lines**

Introduction of planes of projection, Reference and auxiliary planes, projections of points and Lines in different quadrants, traces, inclinations, and true lengths of the lines, projections on Auxiliary planes, shortest distance, intersecting and non-intersecting lines.

### **Module III: Planes other than the Reference Planes**

Introduction of other planes (perpendicular and oblique), their traces, inclinations etc., Projections of points and lines lying in the planes, conversion of oblique plane into auxiliary Plane and solution of related problems.

### **Module IV: Projections of Plane Figures**

Different cases of plane figures (of different shapes) making different angles with one or both reference planes and lines lying in the plane figures making different given angles (with one of both reference planes). Obtaining true shape of the plane figure by projection.

### **Module V: Projection of Solids**

Simple cases when solid is placed in different positions, Axis faces and lines lying in the faces of the solid making given angles.

### **Module VI: Development of Surface**

Development of simple objects with and without sectioning. Isometric Projection

## **Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

# Syllabus - Second Semester

## ENGINEERING MATHEMATICS-II

Course Code: CSE2211

Credit Units : 04

### Course Objective:

The knowledge of Mathematics is necessary for a better understanding of almost all the Engineering and Science subjects. Here our intention is to make the students acquainted with the concept of basic topics from Mathematics, which they need to pursue their Engineering degree in different disciplines.

### Course Contents:

#### Module I: Linear Algebra

Hermitian and Skew Hermitian Matrix, Unitary Matrix, Orthogonal Matrix, Elementary Row Transformation, Reduction of a Matrix to Row Echelon Form, Rank of a Matrix, Consistency of Linear Simultaneous Equations, Gauss Elimination Method, Gauss-Jordan Method, Eigen Values and Eigen Vectors of a Matrix, Caley-Hamilton Theorem, Diagonalization of a Matrix, Vector Space, Linear Independence and Dependence of Vectors, Linear Transformations.

#### Module II: Infinite Series

Definition of Sequence, Bounded Sequence, Limit of a Sequence, Series, Finite and Infinite Series, Convergence and Divergence of Infinite series, Cauchy's Principle of Convergence, Positive Term Infinite Series, Comparison test, D'Alembert's Ratio test, Raabe's Test, Cauchy's nth root Test, Logarithmic Test, Alternating Series, Leibnitz's Test, Absolute and conditional convergence, Uniform Convergence, Power Series and its Interval of Convergence.

#### Module III: Complex Analysis

De Moivre's Theorem and Roots of Complex Numbers, Logarithmic Functions, Circular, Hyperbolic Functions and their Inverses.

Functions of a Complex Variables, Limits, Continuity and Derivatives, Analytic Function, Cauchy-Riemann Equations (without proof), Harmonic Function, Harmonic Conjugates, Conformal Mapping, Bilinear Transformations, Complex Line Integral, Cauchy Integral Theorem, Cauchy Integral Formula, Derivative of Analytic Function, Power Series, Taylor Series, Laurent Series, Zeros and

Singularities, Residues, Residue Theorem, Evaluation of Real Integrals of the Form  $\int_{-\infty}^{\infty} \frac{f(x)}{F(x)} dx$ .

#### Module IV: Statistics and Probability

Moments, Skewness, Kurtosis, Random Variables and Probability Distribution, Mean and Variance of a Probability Distribution, Binomial Distribution, Poisson Distribution and Normal Distribution.

### Examination Scheme:

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	15	20	20	20	5

C – Project + Presentation

I – Interaction/Conversation Practice

# ENGINEERING CHEMISTRY

Course Code: CSE2212

Credit Units : 02

## Course Objective:

Four basic sciences, Physics, Chemistry, Mathematics and Biology are the building blocks in engineering and technology. Chemistry is essential to develop analytical capabilities of students, so that they can characterize, transform and use materials in engineering and apply knowledge in their field. All engineering fields have unique bonds with chemistry whether it is Aerospace, Mechanical, Environmental and other fields the makeup of substances is always a key factor, which must be known. For electronics and computer science engineering, apart from the material, computer modeling and simulation knowledge can be inherited from the molecule designing. The upcoming field of technology like Nanotechnology and Biotechnology depends fully on the knowledge of basic chemistry. With this versatile need in view, course has been designed in such a way so that the student should get an overview of the whole subject.

## Course Contents:

### Module I: Water Technology

Introduction and specifications of water,

Hardness and its determination (EDTA method only), Alkalinity,

Boiler feed water, boiler problems – scale, sludge, priming & foaming: causes & prevention, Boiler problems – caustic embrittlement & corrosion: causes & prevention,

Carbonate & phosphate conditioning, colloidal conditioning & calgon treatment

Water softening processes: Lime – soda process, Ion exchange method, Water for domestic use.

### Module II: Fuels

Classification, calorific value of fuel, (gross and net), Determination of calorific value of fuels, bomb calorimeter, Solid fuels - Proximate and ultimate analysis, Octane & Cetane No. and its significance.

Numericals on combustion

### Module III: Instrumental Methods of analysis

Introduction; Principles of spectroscopy; Laws of absorbance

IR: Principle, Instrumentation, Application

UV: Principle, Instrumentation, Application

NMR: Principle, Instrumentation, Application

### Module IV: Lubricants

Introduction; Mechanism of Lubrication; Types of Lubricants; Chemical structure related to Lubrication;

Properties of lubricants; Viscosity and Viscosity Index; Iodine Value; Aniline Point; Emulsion number; Flash Point; Fire Point; Drop Point; Cloud Point; Pour Point.

Selection of Lubricants.

### Module V: Corrosion

Introduction, Mechanism of dry and wet corrosion,

Types of corrosion-Galvanic, Concentration cell, soil, pitting, intergranular, waterline. Passivity.

Factors influencing corrosion. Corrosion control.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# ELECTRICAL SCIENCE

**Course Code: CSE2213**

**Credit Units : 03**

## **Course Objective:**

The objective of the course is to provide a brief knowledge of Electrical Engineering to students of all disciplines. This Course includes some theorems related to electrical, some law's related to flow of current, voltages, basic knowledge of Transformer, basic knowledge of electromagnetism, basic knowledge of electrical network.

## **Course Contents:**

### **Module I: Basic Electrical Quantities**

Basic Electrical definitions-Energy, Power, Charge, Current, Voltage, Electric Field Strength, Magnetic Flux Density, etc., Resistance, Inductance and Capacitance. Ideal Source, Independent Source and Controlled Source

### **Module II: Network Analysis Techniques & Theorems**

Circuit Principles: Ohm's Law, Kirchoff's Current Law, Kirchoff's Voltage Law Network Reduction: Star-Delta Transformation, Source Transformation, Nodal Analysis, Loop analysis. Superposition theorem, Thevenin's Theorem, Norton's theorem and Reciprocity theorem.

### **Module III: Alternating Current Circuits**

Peak, Average and RMS values for alternating currents, Power calculation: reactive power, active power, Complex power, power factor, impedance, reactance, conductance, susceptance Resonance: series Resonance, parallel resonance, basic definition of Q factor & Bandwidth.

### **Module IV: Transformers**

Basic Transformer Operation principle, Construction, Voltage relations, current relations, Linear circuit models, open circuit test, short circuit test, Transformer Efficiency.

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>

# OBJECT ORIENTED PROGRAMMING USING C++

**Course Code: CSE2204**

**Credit Units: 03**

## **Course Objective:**

The objective of this module is to introduce object oriented programming. To explore and implement the various features of OOP such as inheritance, polymorphism, Exceptional handling using programming language C++. After completing this course student can easily identify the basic difference between the programming approaches like procedural and object oriented.

## **Course Contents:**

### **Module I: Introduction**

Review of C, Difference between C and C++, Procedure Oriented and Object Oriented Approach. Basic Concepts: Objects, classes, Principles like Abstraction, Encapsulation, Inheritance and Polymorphism. Dynamic Binding, Message Passing. Characteristics of Object-Oriented Languages. Introduction to Object-Oriented Modeling techniques (Object, Functional and Dynamic Modeling).

### **Module II: Classes and Objects**

Abstract data types, Object & classes, attributes, methods, C++ class declaration, Local Class and Global Class, State identity and behaviour of an object, Local Object and Global Object, Scope resolution operator, Friend Functions, Inline functions, Constructors and destructors, instantiation of objects, Types of Constructors, Static Class Data, Array of Objects, Constant member functions and Objects, Memory management Operators.

### **Module III: Inheritance**

Inheritance, Types of Inheritance, access modes – public, private & protected, Abstract Classes, Ambiguity resolution using scope resolution operator and Virtual base class, Aggregation, composition vs classification hierarchies, Overriding inheritance methods, Constructors in derived classes, Nesting of Classes.

### **Module IV: Polymorphism**

Polymorphism, Type of Polymorphism – Compile time and runtime, Function Overloading, Operator Overloading (Unary and Binary) Polymorphism by parameter, Pointer to objects, this pointer, Virtual Functions, pure virtual functions.

### **Module V: Strings, Files and Exception Handling**

Manipulating strings, Streams and files handling, formatted and Unformatted Input output. Exception handling, Generic Programming – function template, class Template Standard Template Library: Standard Template Library, Overview of Standard Template Library, Containers, Algorithms, Iterators, Other STL Elements, The Container Classes, General Theory of Operation, Vectors.

# ELEMENTS OF MECHANICAL ENGINEERING

**Course Code: CSE2205**

**Credit Units: 02**

## **Course Objective:**

The objective of this course is to impart the basic knowledge of thermodynamics, stress- strain, materials & their properties and various manufacturing processes to the students of all engineering discipline.

## **Course Contents:**

### **Module I: Fundamental Concepts**

Definition of thermodynamics, system, surrounding and universe, phase, concept of continuum, macroscopic & microscopic point of view, Thermodynamic equilibrium, property, state, path, process, cyclic process, Zeroth, first and second law of thermodynamics, Carnot Cycle, Introduction to I.C. Engines-two & four stroke S.I. and C.I. engines. Otto cycle. Diesel cycle.

### **Module II: Stress And Strain Analysis**

Simple stress and strain: introduction, normal shear, and stresses-strain diagrams for ductile and brittle materials. Elastic constants, one-dimensional loadings of members of varying cross-section, Strain Energy, Properties of material-strength, elasticity, stiffness, malleability, ductility, brittleness, hardness and plasticity etc; Concept of stress and strain stress strain diagram, tensile test, impact test and hardness test.

### **Module III: Casting & Forging**

Introduction of casting, pattern, mould making procedures, sand mould casting, casting defects, allowances of pattern. Forging-introduction, upsetting & drawing out, drop forging, press forging & m/c forging

### **Module IV: Welding & Sheet metal working:**

Introduction of welding processes, classification, gas welding, arc welding, resistance welding. Introduction to sheet metal shop, Shearing, trimming, blanking, piercing, shaving, notching, stretch forming, nibbling coining, embossing and drawing.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# OBJECT ORIENTED PROGRAMMING USING C++ LAB

**Course Code: CSE2208**

**Credit Units: 01**

**Software Required:** Turbo C++

## Course Contents:

- Creation of objects in programs and solving problems through them.
- Different use of private, public member variables and functions and friend functions.
- Use of constructors and destructors.
- Operator overloading
- Use of inheritance in and accessing objects of different derived classes.
- Polymorphism and virtual functions (using pointers).
- File handling.

## Examination Scheme:

# ELEMENTS OF MECHANICAL ENGINEERING LAB

Course Code: CSE2209

Credit Units: 01

## Course Contents:

1. Welding
  - (a) Arc Welding
    - Butt Joint
    - Lap Joint
    - T Joint
  - (b) Gas Welding
    - Butt Joint
    - Lap Joint
    - Brazing of Broken pieces
2. Foundry
  - Sand mould casting by single piece pattern & Split pattern bracket with cores
3. Sheet Metal
  - Dust Bin
  - Mug
  - Funnel
  - Cylindrical Mug with handle-Rectangular
4. Fitting Shop
  - Male – Female Joint
  - Rectangular piece
  - Filing the job

## Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# ELECTRICAL SCIENCE LAB

Course Code: CSE2214

Credit Units: 01

## List of Experiments:

1. To verify KVL & KCL in the given network.
2. To verify Superposition Theorem.
3. To verify Maximum Power Transfer Theorem.
4. To verify Reciprocity Theorem.
5. To determine and verify  $R_{Th}$ ,  $V_{Th}$ ,  $R_N$ ,  $I_N$  in a given network.
6. To perform open circuit & short circuit test on a single-phase transformer.
7. To study transient response of a given RLC Circuit.
8. To perform regulation, ratio & polarity test on a single-phase transformer.
9. To measure power & power factor in a three phase circuit by two wattmeter method.
10. To measure power & power factor in a three phase load using three ammeter & three voltmeter method.

## Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# ENGINEERING CHEMISTRY LAB

Course Code: CSE2215

Credit Units: 01

## Course Contents:

### List of Experiments:

(Any 10 Experiments)

1. To determine the ion exchange capacity of a given cation exchanger.
2. To determine the temporary, permanent and total hardness of a sample of water by complexometric titration method.
3. To determine the type and extent of alkalinity of given water sample.
4. To determine the number of water molecules of crystallization in Mohr's salt (ferrous ammonium sulphate) provided standard potassium dichromate solution (0.1N) using diphenylamine as internal indicator.
5. To determine the ferrous content in the supplied sample of iron ore by titrimetric analysis against standard  $K_2Cr_2O_7$  solution using potassium ferricyanide  $[K_3Fe(CN)_6]$  as external indicator.
6. (a) To determine the surface tension of a given liquid by drop number method.  
(b) To determine the composition of a liquid mixture A and B (acetic acid and water) by surface tension method.
7. To prepare and describe a titration curve for phosphoric acid – sodium hydroxide titration using pH-meter.
8. (a) To find the cell constant of conductivity cell.  
(b) Determine the strength of hydrochloric acid solution by titrating it against standard sodium hydroxide solution conductometrically
9. Determination of Dissolved oxygen in the given water sample.
- 10 To determine the total residual chlorine in water.
- 11 Determination of amount of oxalic acid and  $H_2SO_4$  in 1 L of solution using N/10 NaOH and N/10  $KMnO_4$  solution.
- 12 Determination of viscosity of given oil by means of Redwood viscometer I.
- 13 To determine flash point and fire point of an oil by Pensky Martin's Apparatus
- 14 To determine the Iodine value of the oil.

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# Syllabus - Third Semester

## DATA COMMUNICATION AND COMPUTER NETWORKS

**Course Code: CSE2301**

**Credit Units: 03**

### Course Objective:

The objective is to acquaint the students with the basics of data communication and networking. A structured approach to explain how networks work from the inside out is being covered. The physical layer of networking, computer hardware and transmission systems have been explained. In-depth application coverage includes email, the domain name system; the World Wide Web (both client- and server-side); and multimedia (including voice over IP).

### Course Contents:

#### Module I: Introduction

Introduction to computer networks, evolution of computer networks and its uses, reference models, example networks

The physical layer: Theoretical basis for data communication, transmission media, wireless transmission, telecom infrastructure, PSTN, communication satellites, mobile telephone system

#### Module II: The data link layer

Data link layer design issues, error detection and correction, data link protocols, sliding window protocols, example of data link protocols- HDLC, PPP Access

#### Module III: Medium access layer

Channel allocation problem, multiple access protocols, ALOHA, CSMA/CD, CSMA/CA, IEEE Standard 802 for LAN and MAN, Bridges, Wireless LANs. Introduction to wireless WANs: Cellular Telephone and Satellite Networks, SONET/SDH, Virtual-Circuit Networks: Frame Relay and ATM.

#### Module IV: The network layer

Network layer concepts, design issues, static and dynamic routing algorithms, shortest path routing, flooding, distance vector routing, link state routing, distance vector routing, multicast routing, congestion control and quality of service, internetworking, Ipv4

#### Module V: The transport layer

The transport services, elements of transport protocols, TCP and UDP

The application layer: Brief introduction to presentation and session layer, DNS, E-mail, WWW

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# DATABASE MANAGEMENT SYSTEMS

**Course Code: CSE2302**

**Credit Units: 04**

## **Course Objective:**

The objective of this course is to get students familiar with Databases and their use. They can identify different types of available database model, concurrency techniques and new applications of the DBMS.

## **Course Contents:**

### **Module I: Introduction**

Concept and goals of DBMS, DBMS Architecture, Database Languages, Database Users, Database Abstraction.

Basic Concepts of ER Model: Entity Type, Entity Set, Relationship type, Relationship sets, Constraints: Cardinality Ratio and Participation Constraint, Keys, Mapping, Design of ER Model

### **Module II: Hierarchical model & Network Model**

Concepts, Data definition, Data manipulation and implementation.

Network Data Model, DBTG Set Constructs, and Implementation

### **Module III: Relational Model**

Relational database, Relational Algebra, Relational Calculus, Tuple Calculus.

### **Module IV: Relational Database Design and Query Language**

SQL, QUEL, QBE, Normalization using Functional Dependency, 1NF, 2NF, 3NF, BCNF, Multivalued dependency and Join dependency.

### **Module V: Concurrency Control and New Applications**

Transaction basics: ACID property, Lifecycle of Transaction, Why Concurrency Control, Schedule, Serializability, Lock Based Protocols, Time Stamped Based Protocols, Deadlock Handling, Crash Recovery. Distributed Database, Objective Oriented Database, Multimedia Database, Data Mining, Digital Libraries.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# OPERATING SYSTEMS

**Course Code: CSE2303**

**Credit Units: 03**

## **Course Objective:**

Operating Systems serve as one of the most important courses for undergraduate students, since it provides the students with a new sight to envision every computerized systems especially general purpose computers. Therefore, the students are supposed to study, practice and discuss on the major fields discussed in the course to ensure the success of the education process. The outcome of this course implicitly and explicitly affects the abilities the students to understand, analyze and overcome the challenges they face with in the other courses and the real world.

## **Course Contents:**

### **Module I: Introduction to operating system**

Operating system and function, Evolution of operating system, Batch, Interactive, multiprogramming, Time Sharing and Real Time System, multiprocessor system, Distributed system, System protection. Operating System structure, Operating System Services, System Program and calls.

### **Module II: Process Management**

Process concept, State model, process scheduling, job and process synchronization, structure of process management, Threads

Interprocess Communication and Synchronization:

Principle of Concurrency, Producer Consumer Problem, Critical Section problem, Semaphores, Hardware Synchronization, Critical Regions, Conditional critical region, Monitor, Inter Process Communication.

CPU Scheduling:

Job scheduling functions, Process scheduling, Scheduling Algorithms, Non Preemptive and preemptive Strategies, Algorithm Evaluation, Multiprocessor Scheduling.

Deadlock:

System Deadlock Model, Deadlock Characterization, Methods for handling deadlock, Prevention strategies, Avoidance and Detection, Recovery from deadlock combined approach.

### **Module III: Memory Management**

Single Contiguous Allocation: H/W support, S/W support, Advantages and disadvantages, Fragmentation, Paging, Segmentation, Virtual memory concept, Demand paging, Performance, Paged replaced algorithm, Allocation of frames, Thrashing, Cache memory, Swapping, Overlays

### **Module IV: Device management**

Principles of I/O hardware, Device controller, Device Drivers, Memory mapped I/O, Direct Access Memory, Interrupts, Interrupt Handlers, Application I/O interface, I/O Scheduling, Buffering, Caching, Spooling,

Disk organization, Disk space management, Disk allocation Method, Disk Scheduling, Disk storage.

### **Module V: File System and Protection and security**

File Concept, File Organization and Access Mechanism, File Directories, Basic file system, File Sharing, Allocation method, Free space management.

Policy Mechanism, Authentication, Internal excess Authorization.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# DATA STRUCTURES USING C

Course Code: CSE2304

Credit Units: 04

## Course Objective:

Data structure deals with organizing large amount of data in order to reduce space complexity and time requirement. This course gives knowledge of algorithms, different types of data structures and the estimation space and time complexity.

## Course Contents:

### Module I: Introduction to Data structures

**Data structures:** Definition, Types. Algorithm design, Complexity, Time-Space Trade offs. Use of pointers in data structures.

Array Definition and Analysis, Representation of Linear Arrays in Memory, Traversing of Linear Arrays, Insertion And Deletion, Single Dimensional Arrays, Two Dimensional Arrays, Multidimensional Arrays, Function Associated with Arrays, Character String in C, Character String Operations, Arrays as parameters, Implementing One Dimensional Array, Sparse matrix.

### Module II: Introduction to Stacks and queue

**Stack:** Definition, Array representation of stacks, Operations Associated with Stacks- Push & Pop, Polish expressions, Conversion of infix to postfix, infix to prefix (and vice versa), Application of stacks recursion, polish expression and their compilation, conversion of infix expression to prefix and postfix expression, Tower of Hanoi problem.

**Queue:** Definition, Representation of Queues, Operations of queues- QInsert, QDelete, Priority Queues, Circular Queue, Dequeue.

### Module III: Dynamic Data Structure

**Linked list:** Introduction to Singly linked lists: Representation of linked lists in memory, Traversing, Searching, Insertion into, Deletion from linked list, doubly linked list, circular linked list, generalized list. Applications of Linked List-Polynomial representation using linked list and basic operation. Stack and queue implementation using linked list.

### Module IV: Trees and Graphs

**Trees:** Basic Terminology, Binary Trees and their representation, expression evaluation, Complete Binary trees, extended binary trees, Traversing binary trees, Searching, Insertion and Deletion in binary search trees, General trees, AVL trees, Threaded trees, B trees.

**Graphs:** Terminology and Representations, Graphs & Multigraphs, Directed Graphs, Sequential representation of graphs, Adjacency matrices, Transversal Connected Component and Spanning trees.

### Module V: Sorting and Searching and file structures

**Sorting:** Insertion Sort, Bubble sort, Selection sort, Quick sort, two-way Merge sort, Heap sort, Partition exchange sort, Shell sort, Sorting on different keys, External sorting.

**Searching:** Linear search, Binary search

**File structures:** Physical storage media, File Organization, Linked organization of file, Inverted file, Organization records into blocks, Sequential blocks, Hash function, Indexing & Hashing, Multilevel indexing, Tree Index, Random file, Primary Indices, Secondary Indices, B tree index files.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# DATA STRUCTURES USING C LAB

**Course Code: CSE2305**

**Credit Units: 01**

**Software Required:** Turbo C++

**Assignment will be provided for following:**

- Practical application of sorting and searching algorithm.
- Practical application of various data structure like linked list, queue, stack, tree

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# DATA COMMUNICATION AND COMPUTER NETWORKS LAB

**Course Code: CSE2306**

**Credit Units: 01**

## **Equipments Required:**

Switch Network Cables, Patch Chord- Fiber optical and twisted pair cable, LAN cards, RJ-45 connectors etc. Platforms required: Linux Server

## **Course Contents:**

- Introduction and Installation of Linux
- Administrating Linux
- Setting up a Local Area Network
- Connecting to the Internet
- Setting up Print Server
- Setting up File Server
- Setting up Mail Server
- Setting up FTP Server
- Setting up Web Server
- Setting up MySQL Database Server

## **Examination Scheme:**

<b>IA</b>				<b>EE</b>

5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# DATABASE MANAGEMENT SYSTEMS LAB

**Course Code: CSE2307**

**Credit Units: 01**

**Software Required:** Oracle 9i

**Topics covered in lab will include:**

- Database Design
- Data Definition (SQL)
- Data Retrieval (SQL)
- Data Modification (SQL)
- Views
- Triggers and Procedures
- PL\SQL

**Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# UNIX PROGRAMMING LAB

**Course Code: CSE2308**

**Credit Units: 01**

**Software Required:UNIX SCO**

**Assignments will be provided for the following**

- Introduction to UNIX Commands
- Introduction to vi editor
- Programming in shell script
- Introduction to programming in C Shell

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# ELECTRONIC DEVICES & CIRCUITS

**Course Code: CSE2310**

**Credit Units: 02**

## **Course Objective:**

This course builds from basic knowledge of Semiconductor Physics to an understanding of basic devices and their models. This course builds a foundation for courses on VLSI design and analog CMOS IC Design.

## **Course Contents:**

**Module I:** Semiconductor physics: Mobility & conductivity, Charge densities in a semiconductor, Fermi dirac distribution, carrier concentration and Fermi levels in semiconductor, generation and recombination of charges, diffuse and continuity equations, Hall effect.

### **Module II: Semiconductor Diode and Diode Circuits**

Junction diode, Diode as circuit element, Different types of diodes: Zener, Schottky, LED. Zener as voltage regulator, Diffusion capacitance, Drift capacitance, the load line concept, half wave, full wave rectifiers, clipping and clamping circuits.

### **Module III: Bipolar Junction Transistor**

Bipolar junction transistor: Introduction, Transistor, construction, transistor operations, BJT characteristics, load line, operating point, leakage currents, saturation and cut off mode of operations. Bias stabilization: Need for stabilization, fixed Bias, emitter bias, self bias, bias stability with respect to variations in  $I_{co}$ ,  $V_{BE}$  &  $\beta$ , Stabilization factors, thermal stability.

### **Module IV: Small signal Analysis of transistor and Multistage Amplifier**

Hybrid model for transistors at low frequencies, Analysis of transistor amplifier using h parameters, emitter follower, Miller's theorem, THE CE amplifier with an emitter resistance, Hybrid  $\pi$  model, Hybrid  $\pi$  Conductances and Capacitances, CE short circuit current gain, CE short circuit current gain with  $R_L$  Multistage amplifier: Cascading of Amplifiers, Coupling schemes(RC coupling and Transformer coupling)

### **Module V: Field Effect Transistors**

Field effect transistor (JFET, MOSFET): volt-ampere characteristics, small signal model –common drain, common source, common gate, operating point, MOSFET, enhancement and -depletion mode, Common source amplifier, Source follower

### **Module VI: Feedback Amplifiers**

Feedback concept, Classification of Feedback amplifiers, Properties of negative Feedback amplifiers, Impedance considerations in different Configurations, Examples of analysis of feedback Amplifiers.

### **Module VII: Power Amplifiers**

Power dissipation in transistors, difference with voltage amplifiers, Amplifier classification (Class A, Class B, Class C, ClassAB) class AB push pull amplifier, collector efficiency of each, cross over distortion.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# ELECTRONIC DEVICES & CIRCUITS LAB

**Course Code: CSE2311**

**Credit Units: 01**

## **Course Contents:**

1. To study and plot the characteristics of a junction diode.
2. To study Zener diode as a voltage regulator.
3. To study diode based clipping and clamping circuits.
4. To study half wave, full wave and bridge rectifier with filters.
5. To study the input and output characteristics of a transistor in its various configurations.
6. To study and plot the characteristics of a JFET in its various configurations.
7. To study and plot the characteristics of a MOSFET in its various configurations.
8. To study various types of Bias Stabilization for a transistor.
9. To study the gain and plot the frequency response of a single stage transistor amplifier.
10. To measure gain and plot the frequency response of double stage RC coupled amplifier.

## **Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# E-COMMERCE AND ERP

**Course Code: CSE2312**

**Credit Units: 03**

## **Course Objective:**

This course examines the evolution of enterprise resource planning (ERP) systems - from internally focused client/server systems to externally focused e-business. This class studies the types of issues that managers will need to consider in implementing cross-functional integrated ERP systems. The objective of this course is to make students aware of the potential and limitations of ERP systems. This objective will be reached through hands-on experience, case studies, lectures, guest speakers and a group project. The course would equip students with the basics of E-Commerce, technologies involved with it and various issues associated with.

## **Course Contents:**

### **Module I: Introduction E-commerce and ERP**

E-commerce and its types, EDI and its basics, Digital payment systems, Enterprise-An Overview, Benefits of ERP, ERP and Related Technologies-Business Process Reengineering (BPR), Data Warehousing, Data Mining, On-line Analytical Processing (OLAP), Supply Chain Management, Management Information systems (MIS), Decision support system (DSS), Executive Information systems (EIS). ERP – A Manufacturing Perspective Materials Requirement Planning (MRP), Bill of Material (Bom), Distribution Requirements Planning (DRP), JIT & Kanban, CAD/CAM, Product Data Management (PDM), Benefits of PDM, MTO, MTS, ATO, ETO, CTO.

### **Module II: ERP Modules**

Business Modules in an ERP Packag- Finance, Manufacturing (Production), Human Resources, Plant Maintenance, Materials Management, Quality Management, Sales and Distribution.

### **Module III: Benefits of ERP**

Time Reduction, On time shipment, Improved Resource Utilization, Performance, Customer Satisfaction, Flexibility, information accuracy and decision making capability, reduction in quality costs, Accuracy.

### **Module IV: ERP Implementation**

ERP Implementation Lifecycle, Implementation Methodology, In-house implementation-Pros and cons, Vendors, Consultants and Users and their roles, Project Management and Monitoring after ERP Implementation.

### **Module V: The ERP Market and Future Directions**

ERP Market Place- SAP AG, PeopleSoft, Baan Company, JD Edwards World Solutions Company, Oracle Corporation, QAD, System Software Associates, Inc. (SSA).Future directions in ERP.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# INTRODUCTION TO IOT

**Course Code: CSE2313**

**Credit Units: 03**

## Course Objective:

The Internet is evolving to connect people to physical things and also physical things to other physical things all in real time. It's becoming the Internet of Things (IoT). The course enables student to understand the basics of Internet of things and protocols. It introduces some of the application areas where Internet of Things can be applied. Students will learn about the working of Internet of Things. To understand the concepts of Web of Things.

## Course Contents:

**Module I: IOT** - What is the IoT and why is it important? Elements of an IoT ecosystem, Technology drivers, Business drivers, Trends and implications, Overview of Governance, Privacy and Security Issues.

**Module II: IOT PROTOCOLS** - Protocol Standardization for IoT – Efforts – M2M and WSN Protocols – SCADA and RFID Protocols – Issues with IoT Standardization – Unified Data Standards – Protocols – IEEE802.15.4–BACNet Protocol– Modbus – KNX – Zigbee– Network layer – APS layer – Security

**Module III: IOT ARCHITECTURE** - IoT Open source architecture (OIC)- OIC Architecture & Design principles- IoT Devices and deployment models- IoTivity : An Open source IoT stack - Overview- IoTivity stack architecture- Resource model and Abstraction, IoT and Big Data.

**Module IV: WEB OF THINGS** - Web of Things versus Internet of Things – Two Pillars of the Web – Architecture Standardization for WoT– Platform Middleware for WoT – Unified Multitier WoT Architecture – WoT Portals and Business Intelligence.

**Module V: IOT APPLICATIONS** - IoT applications for industry: Future Factory Concepts, Brownfield IoT, Smart Objects, Smart Applications. Study of existing IoT platforms /middleware, IoT- A, Hydra etc., Introduction to Fog Computing.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# Syllabus - Fourth Semester

## THEORY OF AUTOMATA AND COMPUTATION

Course Code: CSE2401

Credit Units: 04

### Course Objective:

The course begins with the basic mathematical preliminaries and goes on to discuss the general theory of automata, properties of regular sets and regular expressions, and the basics of formal languages. Besides, sufficient attention is devoted to such topics as pushdown automata and its relation with context free languages, Turing machines and linear bounded automata, the basic concepts of computability such as primitive recursive functions and partial recursive functions.

### Course Contents:

#### Module I: Introduction to Languages and Automata

Formal Grammars and Chomsky Hierarchy, Regular Expression Deterministic and Nondeterministic Finite Automata, Regular Expression, Two way Finite Automata, Finite Automata with output, Properties of regular sets, pumping lemma for regular sets, My-Hill-Nerode Theorem.

#### Module II: Context Free Grammars and Pushdown Automata

CFG: Formal Definition, Derivation and Syntax trees, E-removal, Ambiguous Grammar, Properties of CFL, Normal Forms (CNF and GNF)

Pushdown Automata: Definitions, Relationship between PDA and context free language, Decision Algorithms

#### Module III: Turing Machine

The Turing Machine Model, Language acceptability of Turing Machine, Design of TM, Universal TM, Church's Machine.

Recursive and recursively enumerable language, unrestricted grammars, Context Sensitive Language, Linear Bounded Automata (LBA).

#### Module IV: Undecidability

Turing machine halting Problem, undecidable problems for recursive enumerable language, Post correspondence problems (PCP) and Modified Post correspondence problems, Undecidable problems for CFL.

#### Module V: Computability

Partial and Total Functions, Primitive Recursive functions, Recursive functions.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination, Att: Attendance

# DIGITAL ELECTRONICS

**Course Code: CSE2402**

**Credit Units: 02**

## **Course Objective:**

This course is an introduction to the basic principles of digital electronics. At the conclusion of this course, the student will be able to quantitatively identify the fundamentals of computers, including number systems, logic gates, logic and arithmetic subsystems, and integrated circuits. They will gain the practical skills necessary to work with digital circuits through problem solving and hands on laboratory experience with logic gates, encoders, flip-flops, counters, shift registers, adders, etc. The student will be able to analyze and design simple logic circuits using tools such as Boolean Algebra and Karnaugh Mapping, and will be able to draw logic diagrams.

## **Course Contents:**

### **Module I: Boolean Functions**

Analog & digital signals, AND, OR, NOT, NAND, NOR & XOR gates, Boolean algebra, Standard representation of logical functions, K-map representation and simplification of logical function, don't care conditions, XOR & XNOR simplifications of K-maps, Tabulation method.

### **Module II: Combinational Circuits**

Adders, Subtractors, Multiplexer, de-multiplexer, decoder & encoder, code converters, Comparators, decoder / driver for display devices, Implementation of logic functions using multiplexer / de-multiplexer,.

### **Module III: Sequential Circuits**

Flip-flops: SR, JK, D & T flip flops – Truth table, Excitation table, Conversion of flip-flops, race around condition, Master Slave flip flop, Shift registers: SIPO, PISO, PIPO, SIPO, Bi-directional; Counters: ripple & synchronous counters – up / down; Synchronous Sequential circuit: design procedure.

### **Module IV: Logic families**

Logic families: RTL, DTL, TTL, ECL

### **Module V: Data Converters**

Data converters: ADC – successive approximation, linear ramp, dual slope; DAC – Binary Weighted, R-2R ladder type

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# DISCRETE MATHEMATICS

Course Code: CSE2403

Credit Units: 04

## Course Objective:

This subject provides students with an in-depth education in the conceptual foundations of computer science and in engineering complex software and hardware systems. It allows them to explore the connections between computer science and a variety of other disciplines in engineering and outside. Combined with a strong education in mathematics, sciences, and the liberal arts it prepares students to be leaders in computer science practice, applications to other disciplines, and research.

## Course Contents:

### Module I: Formal Logic

Statement, Symbolic Representation and Tautologies, Quantifiers, Predicator and validity, Normal form. Propositional Logic, Predicate Logic, First Order Logic.

### Module II: Proof & Relation

Techniques for theorem proving: Direct Proof, Proof by Contra position, Proof by exhausting cares and proof by contradiction, principle of mathematical induction, principle of complete induction. Recursive definitions, solution methods for linear, first-order recurrence relations with constant coefficients.

### Module III: Sets and Combinations

Sets, Subtracts, power sets, binary and unary operations on a set, set operations/set identities, fundamental country principles, principle of inclusion, exclusion and pigeonhole principle, permutation and combination, Pascal's triangles, Comparing rates of growth: big theta, little oh, big oh and big omega.

### Module IV: Relation/function and matrices

Relation/function and matrices: Relation, properties of binary relation, operation on binary relation, closures, partial ordering, equivalence relation, Function, properties of function, composition of function, inverse, binary and n-ary operations, characteristic function, Permutation function, composition of cycles, Boolean matrices, Boolean matrices multiplication.

### Module V: Lattices & Boolean Algebra

Lattices: definition, sub lattices, direct product, homomorphism Boolean algebra: definition, properties, isomorphic structures (in particulars, structures with binary operations) sub algebra, direct product and homo-morphism, Boolean function, Boolean expression, representation & minimization of Boolean function.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# ARTIFICIAL INTELLIGENCE

**Course Code: CSE2412**

**Credit Units: 03**

## **Course Objective:**

To develop semantic-based and context-aware systems to acquire, organize process, share and use the knowledge embedded in multimedia content. Research will aim to maximize automation of the complete knowledge lifecycle and achieve semantic interoperability between Web resources and services. The field of Robotics is a multi disciplinary as robots are amazingly complex system comprising mechanical, electrical, electronic H/W and S/W and issues germane to all these.

## **Course Contents:**

### **Module I: Problem solving and Scope of AI**

Introduction to Artificial Intelligence. Applications- Games, theorem proving, natural language processing, vision and speech processing, robotics, expert systems. AI techniques- search knowledge, abstraction.

#### **Problem Solving**

State space search; Production systems, search space control: depth-first, breadth-first search.

Heuristic search - Hill climbing, best-first search, branch and bound. Problem Reduction, Constraint Satisfaction End, Means-End Analysis. LA\* Algorithm, L(AO\*) Algorithm.

### **Module II: Knowledge Representation**

Knowledge Representation issues, first order predicate calculus, Horn Clauses, Resolution, Semantic Nets, Frames, Partitioned Nets, Procedural Vs Declarative knowledge, Forward Vs Backward Reasoning.

### **Module III: Understanding Natural Languages**

Introduction to NLP, Basics of Syntactic Processing, Basics of Semantic Analysis, Basics of Parsing techniques, context free and transformational grammars, transition nets, augmented transition nets, Shanks Conceptual Dependency, Scripts ,Basics of grammar free analyzers, Basics of sentence generation, and Basics of translation..

### **Module IV**

**Expert System:** Need and justification for expert systems, knowledge acquisition, Case studies: MYCIN, R1

**Learning:** Concept of learning, learning automation, genetic algorithm, learning by inductions, neural nets. **Programming Language:** Introduction to programming Language, LISP and PROLOG.

**Handling Uncertainties:** Non-monotonic reasoning, Probabilistic reasoning, use of certainty factors, Fuzzy logic.

### **Module V: Introduction to Robotics**

Fundamentals of Robotics, Robot Kinematics: Position Analysis, Dynamic Analysis and Forces, Robot Programming languages & systems: Introduction, the three levels of robot programming, requirements of a robot programming language, problems peculiar to robot programming languages.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# DIGITAL ELECTRONICS LAB

Course Code: CSE2405

Credit Units: 01

## List of Experiments:

1. To verify the truth tables of OR, AND, NOR, NAND, EX-OR, EX-NOR gates.
2. To obtain half adder, full adder and subtractor using gates and verify their truth tables.
3. To verify the truth tables of RS, JK and D flip- flops.
4. To design and study a binary counter.
5. To design and study synchronous counter.
6. To design and study ripple counter.
7. To convert BCD number into excess 3 form
8. To design and study a decade counter.
9. To design and study a sequence detector.
10. To implement control circuit using multiplexer.

## Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# ARTIFICIAL INTELLIGENCE LAB

**Course Code: CSE2413**

**Credit Units: 01**

## **Course Contents:**

Assignments will be provided for the following:

- Programming in Prolog
- Programming for Robotics

## **Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# COMMUNICATION SYSTEMS

**Course Code: CSE2414**

**Credit Units: 02**

## **Course Objective:**

The purpose of this course is to provide a thorough introduction to analog and digital communications with an in depth study of various modulation techniques, Random processes are discussed, and information theory is introduced.

## **Course Contents:**

### **Module I: Introduction**

Communication Process, Source of Information, Communication channels, base-band and pass-band signals, Review of Fourier transforms, Random variables, different types of PDF, need of modulation process, primary communication resources, analog versus digital communications

### **Module II: Amplitude modulation**

Amplitude modulation with full carrier, suppressed carrier systems, single side band transmission, switching modulators, synchronous detection, envelope detection, effect of frequency and phase errors in synchronous detection, comparison of various AM systems, vestigial side band transmission.

### **Module III: Angle Modulation**

Narrow and wide band FM, BW calculations using Carlson rule, Direct & Indirect FM generations, phase modulation, Demodulation of FM signals, noise reduction using pre & de-emphasis.

### **Module IV: Pulse Modulation**

Pulse amplitude, width & position modulation, generation & detection of PAM, PWM & PPM, Comparison of frequency division and time division multiplexed systems, Basics of digital communications: ASK, PSK, FSK, QPSK basics & waveform with brief mathematical introduction

### **Module V: Noise**

Different types of noise, noise calculations, equivalent noise band width, noise figures, effective noise temperature, noise figure.

### **Module VI: Introduction to Information Theory**

Measurement of Information, mutual, Shannon's theorem, Source coding, channel coding and channel capacity theorem, Huffman code

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# COMMUNICATION SYSTEMS LAB

Course Code: CSE2415

Credit Units: 01

## List of Experiments:

1. To study the sampling and reconstruction of a given signal.
2. To study amplitude modulation and demodulation.
3. To study frequency modulation and demodulation.
4. To study time division multiplexing.
5. To study pulse amplitude modulation.
6. To study delta and adaptive delta modulation and demodulation.
7. To study carrier modulation techniques using amplitude shift keying and Frequency shift keying.
8. To study carrier modulation techniques using binary phase shift keying and differential shift keying.
9. To study pulse code modulation & differential pulse code modulation as well as relevant demodulations.
10. To study quadrature phase shift keying & quadrature amplitude modulation.

## Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# INTRODUCTION TO OPEN SOURCE TECHNOLOGIES (PHP and MySql)

**Course Code: CSE2416**

**Credit Units: 02**

## **Course Objective:**

This course is aimed to provide a fundamental understanding of dynamic web site creation. PHP is the language used for development of most common web sites. Syllabus includes basic and advanced features of PHP which includes detailed introduction of PHP and MYSQL, Arrays, Loops and variables etc. It also gives an overview open source framework like JOOMLA, ZEND etc.

## **Course Contents:**

### **Module I: Introduction to Open Source and PHP programming**

Introduction to Open Sources Technologies, Introduction to PHP, installation and configuration, Advantages and Disadvantages of PHP, Client Side Scripting, Server Side Scripting, Variables, data types, various types of function, creating your own function, Strings in PHP, String Functions.

### **Module II: Operator, Loops, Array, Exception and Error Handling**

Operators, Conditions, Loops, Using for each, Creating and Using Arrays, Multidimensional Array, Associative Array.

Error Handling in PHP, Errors and Exceptions, Exception class, try/catch block, throwing an exception, defining your own Exception subclass.

### **Module III: Classes, File system, Passing Information between pages**

Object oriented programming with Php, Working with Datetime, code re-use, require (), include(), and the include\_path; Understanding PHP file permissions, File reading and writing functions, File system functions, File uploads, Sending mail & use of email server.

HTTP, GET arguments, POST arguments, Using Session in PHP, cookies, The setcookie() function, Deleting Cookies and Reading Cookies.

### **Module IV: Working with database**

HTML Tables and Database tables, Database manipulation (Select, Insert, Update, Delete), validating User Input using Javascript.

MYSQL, Introducing MySQL; database design concepts; the Structured Query Language (SQL); communicating with a MySQL backend via the PHP, MySQL API Building Database Applications, Developing PHP scripts for dynamic web page like feedback form, online admission form and online test.

### **Module V: Working with Frameworks**

Working with Mambo, Working with Joomla, Working with framework. Working with wordpress, Working with drupal, Use of Joomla in rapid development of website. Developing of simple website using Joomla.

## **Examination Scheme:**

Components	CT1	A/C/Q	ATTD.	EE
Weightage (%)	15	10	5	70

## **Text & References:**

### **Text:**

- Beginning PHP, Apache, MySQL Web Development, Michael K. Glass, Yann Le Scouarnec, Elizabeth Naramore, Gary Mailer, Jeremy Stolz, Jason Gerner, published by Wiley, wrox

# INTRODUCTION TO OPEN SOURCE TECHNOLOGIES (PHP and MySql) LAB

**Course Code: CSE2417**

**Credit Units: 01**

## **Course Contents:**

1. Write the process of installation of web server.
2. Write programs to print all details of your php server. Use phpinfo().
3. Write a program to give demo of ECHO and PRINT command.
4. Write a program to implement the string functions.
5. Write a program to print Fibonacci series upto a given number using recursion.
6. Write a menu driven program to implement a calculator which performs only addition, subtraction, multiplication and division. The operation should happen based on user choice.
7. Write a program sort ten number by using array.
8. Write a program to demonstrate the concept of associative array.
9. Write a program to demonstrate the concept of multidimensional array.
10. Write a program to demonstrate the concept of Classes & objects.
11. Create a login form with two text fields called "login" and "password". When user enters "Amity" as a user name and "university" as a password it should be redirected to a Welcome.HTML page or to Sorry.HTML in case of wrong username/password.
12. How to work with sessions in PHP?
13. Introduction to Mysql creating databases, tables, using command line and gui interface, phpmyadmin
14. How to connect to MySQL using PHP ? Write programs for insertion, deletion updates and other sql queries. Design front end using html, css and write php scripts for processing of data. Try all different methods of connecting from php to MySQL
15. Make a small project with mysql and php to perform CRUD operations. Use Session also.
16. Create a form with a text box asking to enter your favorite city with a submit button when the user enters the city and clicks the submit button another php page should be opened displaying "Welcometo the city".
17. Write a program to design login form in which find the greatest number amongst three numbers.
18. WAP for Marksheet generation.
19. Design a webpage for entering the student details with all the validations applied on it.
20. Write a php script to print current date and time.
21. Write a pp script to use include and require functions.
22. Write a php script including all the file handling functions.
23. Design a website using Wordpress /Joomla/Drupal
24. Introduction to Laravel frame work and one simple project.

## **Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# ARTIFICIAL NEURAL NETWORKS

**Course Code: CSE2410**

**Credit Units: 02**

## **Course Objective:**

Aim of this course is to introduce the students fundamentals concepts of Neural network and its various application in computer science.

## **Course Contents:**

### **Module I:-**

Artificial Neural Networks (ANN) and biological neural networks, supervised and unsupervised learning rules, neural network applications.

### **Module II:-**

Unsupervised learning:- Hebbian learning and competitive learning. Supervised learning:- Back propagation algorithms,

Learning rule:-

Delta learning rule, Widrow-Hoff learning rule, Winner-Take-All learning rule.

### **Module III:-**

Feed forward neural network, feed backward neural network, Perceptron and its learning law, single-layer perceptron, multi-layer perceptron.

### **Module IV:-**

Self organizing networks: Kohonen algorithm, Hopfield Networks: Hopfield network algorithm, Adaptive resonance theory: Network and learning rules.

### **Module V:-**

Associative memory, auto-associative memory, bi-directional associative memory.

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

## **Text Book:**

# ARTIFICIAL NEURAL NETWORKS LAB

**Course Code: CSE2411**

**Credit Units: 01**

## Course Objective

The aim of this lab to gain the practical knowledge of basic neuron models and learning algorithms.

## Lab Assignment

To study some basic neuron models and learning algorithms by using Matlab's neural network toolbox

## Examination Scheme

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# Syllabus - Fifth Semester

## SOFTWARE ENGINEERING

**Course Code: CSE2501**

**Credit Units: 03**

### **Course Objective:**

The basic objective of Software Engineering is to develop methods and procedures for software development that can scale up for large systems and that can be used to consistently produce high-quality software at low cost and with a small cycle time. Software Engineering is the systematic approach to the development, operation, maintenance, and retirement of software. The course provides a thorough introduction to the fundamentals principles of software engineering. The organization broadly be based on the classical analysis-design-implementation framework.

### **Course Contents:**

#### **Module I: Introduction**

Software life cycle models: Waterfall, Prototype, Evolutionary and Spiral models, Overview of Quality Standards like ISO 9001, SEI-CMM

#### **Module II: Software Metrics and Project Planning**

Size Metrics like LOC, Token Count, Function Count, Design Metrics, Data Structure Metrics, Information Flow Metrics. Cost estimation, static, Single and multivariate models, COCOMO model, Putnam Resource Allocation Model, Risk management.

#### **Module III: Software Requirement Analysis, design and coding**

Problem Analysis, Software Requirement and Specifications, Behavioural and non-behavioural requirements, Software Prototyping Cohesion & Coupling, Classification of Cohesiveness & Coupling, Function Oriented Design, Object Oriented Design, User Interface Design Top-down and bottom-up Structured programming, Information hiding,

#### **Module IV: Software Reliability, Testing and Maintenance**

Failure and Faults, Reliability Models: Basic Model, Logarithmic Poisson Model, Software process, Functional testing: Boundary value analysis, Equivalence class testing, Structural testing: path testing, Data flow and mutation testing, unit testing, integration and system testing, Debugging, Testing Tools, & Standards. Management of maintenance, Maintenance Process, Maintenance Models, Reverse Engineering, Software RE-engineering

#### **Module V: UML**

Introduction to UML, Use Case Diagrams, Class Diagram: State Diagram in UML Activity Diagram in UML Sequence Diagram in UML Collaboration Diagram in UML, Domain, Component Diagram and Deployment Diagram

### **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# COMPUTER ARCHITECTURE

**Course Code: CSE2502**

**Credit Units: 04**

## **Course Objective:**

This course deals with computer architecture as well as computer organization and design. Computer architecture is concerned with the structure and behaviour of the various functional modules of the computer and how they interact to provide the processing needs of the user. Computer organization is concerned with the way the hardware components are connected together to form a computer system. Computer design is concerned with the development of the hardware for the computer taking into consideration a given set of specifications.

## **Course Contents:**

### **Module I: Register Transfer Language**

Register Transfer, Bus and Memory Transfers, Arithmetic Micro-operations, Logic Micro-operations, Shift Micro-operations, Arithmetic Logic shift Unit.

### **Module II: Basic Computer Organizations and Design**

Instruction Codes, Computer Registers, Computer Instructions, Timing and Control, Instruction Cycle, Memory-Reference Instructions, Input-Output and Interrupt, Design of Accumulator Logic. Hardwired and Microprogrammed control: Control Memory, Address Sequencing, Design of Control Unit

### **Module III: Central Processing Unit**

Introduction, General Register Organization, Stack Organization, Instruction representation, Instruction Formats, Instruction type, Addressing Modes, Data Transfer and Manipulation, Program Control, Reduced Instruction Set Computer RISC and CISC

Computer Arithmetic: Introduction, Addition and Subtraction Algorithm, Multiplication Algorithms, Booth Multiplication, Division Algorithms, Floating-Point Arithmetic Operations

### **Module IV: Memory and Intrasystem Communication and Input output organisation**

**Memory:** Memory types and organization Memory Hierarchy, Main Memory, Auxiliary Memory, Associative Memory, Cache Memory with mapping techniques, Virtual Memory, Memory Management Hardware

**Intrasystem communication and I/O:** Peripheral Devices, Input-Output

Controller and I/O driver, IDE for hard disk, I/O port and Bus concept, Bus cycle, Synchronous and asynchronous transfer, Modes of Transfer, DMA, DMA Transfer, DMA Controller, I/O Processor, CPU-IOP Communication

### **Module V: Introduction to Pipelining and MultiProcessor**

Parallel Processing, Pipelining, Arithmetic Pipeline, Instruction Pipeline, RISC Pipeline

Multiprocessors: Characteristics of Multiprocessors

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# JAVA PROGRAMMING

**Course Code: CSE2503**

**Credit Units: 03**

## **Course Objective:**

The objective is to impart programming skills used in this object oriented language java.

The course explores all the basic concepts of core java programming. The students are expected to learn it enough so that they can develop the web solutions like creating applets etc.

## **Course Contents:**

### **Module I: Java Basics**

Concepts of OOP, Features of Java, How Java is different from C++, Environmental setup, Basic syntax, Objects and classes, Basic Data Types, Variable Types, Modifier Types, Basic operators, Loop Control, Decision Making, Strings and Arrays, Methods, I/O.

### **Module II: Java Object Oriented**

Inheritance, Overriding, Polymorphism, Abstraction, Encapsulation, Interfaces, Packages, Exploring java.util package.

### **Module III: Exception Handling and Threading**

Exception Hierarchy, Exception Methods, Catching Exceptions, Multiple catch Clauses, Uncaught Exceptions Java's Built-in Exception.

Creating, Implementing and Extending thread, thread priorities, synchronization suspending, resuming and stopping Threads, Multi-threading.

### **Module IV : Event Handling And AWT**

Event handling Mechanism, Event Model, Event Classes, Sources of Events, Event Listener Interfaces

AWT: Working with Windows, AWT Controls, Layout Managers

### **Module V: Java Advanced**

AppletClass, Architecture, Skeleton, Display Methods.

Swings: Japplet, Icons, labels, Text Fields, Buttons, Combo Boxes.

Socket Programming: Socket methods, Server Socket methods, Socket Client and Socket Server examples.

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# ANALYSIS AND DESIGN OF ALGORITHM

**Course Code: CSE2511**

**Credit Units: 03**

## **Course Objective:**

The designing of algorithm is an important component of computer science. The objective of this course is to make students aware of various techniques used to evaluate the efficiency of a particular algorithm. Students eventually should learn to design efficient algorithm for a particular program

## **Course Contents:**

### **Module I: Introduction**

Algorithm Design paradigms - motivation, concept of algorithmic efficiency, run time analysis of algorithms, Asymptotic Notations. Recurrences- substitution method, recursion tree method, master method

### **Module II: Divide and conquer**

Structure of divide-and-conquer algorithms: examples; Binary search, quick sort, Merge sort, Strassen Multiplication; Analysis of divide and conquer run time recurrence relations.

#### **Greedy Method**

Overview of the greedy paradigm examples of exact optimization solution (minimum cost spanning tree), Approximate solution (Knapsack problem), Single source shortest paths, traveling salesman

### **Module III: Dynamic programming**

Overview, difference between dynamic programming and divide and conquer, Applications: Shortest path in graph, chain Matrix multiplication, Traveling salesman Problem, longest Common sequence, knapsack problem

### **Module IV: Graph searching and Traversal**

Overview, Representation of graphs, strongly connected components, Traversal methods (depth first and breadth first search)

#### **Back tracking**

Overview, 8-queen problem, and Knapsack problem

#### **Brach and bound**

LC searching Bounding, FIFO branch and bound, LC branch and bound application: 0/1 Knapsack problem, Traveling Salesman Problem

### **Module V: Computational Complexity**

Complexity measures, Polynomial Vs non-polynomial time complexity; NP-hard and NP-complete classes, examples.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# SOFTWARE ENGINEERING LAB

**Course Code: CSE2504**

**Credit Units: 01**

**Software Required:** Rational Rose

**Assignments will be provided for the following:**

- Use of Rational Rose for visual modeling.
- Creating various UML diagrams such as use case, sequence, collaboration, activity, state diagram, and class diagrams.

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# JAVA PROGRAMMING LAB

**Course Code: CSE2505**

**Credit Units: 01**

**Software Required:** JDK1.3

**Assignments will be provided for the following:**

- Java programs using classes & objects and various control constructs such as loops etc, and data structures such as arrays, structures and functions
- Java programs for creating Applets for display of images and texts.
- Programs related to Interfaces & Packages.
- Input/Output and random files programs in Java.
- Java programs using Event driven concept.
- Programs related to network programming.

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# ANALYSIS AND DESIGN OF ALGORITHM LAB

**Course Code: CSE2512**

**Credit Units: 01**

**Lab assignment will be based on the following:**

Programs for binary search and Quick sort by using divide and conquer techniques.

Programs on algorithm based on greedy method.

Programs on algorithm based on Dynamic programming.

Programs on Depth First and Breadth Search traversals of graphs.

Programs on algorithm based on backtracking.

Programs on algorithm based on Brach and Bound.

**Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# SUMMER INTERNSHIP EVALUATION-I

**Course Code: CSE2535**

**Credit Units: 03**

## **Course Objective:**

The objective of this course is to provide practical training on some live projects that will increase capability to work on actual problem in industry. This training may undergo in an industrial environment or may be an in house training on some latest software which is in high demand in market. This training will be designed such that it will useful for their future employment in industry.

## **Examination Scheme:**

Feedback from industry/work place	20
Training Report	40
Viva	15
Presentation	25
<b>Total</b>	<b>100</b>

# VHDL PROGRAMMING

**Course Code: CSE2506**

**Credit Units: 02**

## **Course Objective:**

VHDL is commonly used as a design-entry language for field-programmable gate arrays and application-specific integrated circuits in electronic design automation of digital circuits. The course aims to discuss the syntax of the language to model a digital system.

## **Course Contents:**

### **Module I**

Fundamental VHDL Units, LIBRARY Declarations, ENTITY, ARCHITECTURE, Introductory Examples, Specification of combinational systems using VHDL, Introduction to VHDL, Basic language element of VHDL, Behavioural Modeling, Data flow modeling, Structural modeling, Subprograms and overloading, VHDL description of gates.

### **Module II**

Data Types; Pre-Defined Data Types, User-Defined Data Types, Subtypes, Arrays, Port Array, Records, Signed and Unsigned Data Types, Data Conversion

### **Module III: Sequential codes**

PROCESS: Signals and Variables, IF, WAIT, CASE, LOOP, CASE versus IF, CASE versus WHEN, Bad Clocking, Using Sequential Code to Design Combinational Circuits  
Description and design of sequential circuits using VHDL,

### **Module IV**

Standard combinational modules, Design of a Serial Adder with Accumulator, State Graph for Control Network, design of a Binary Multiplier, Multiplication of a Signed Binary Number, Design of a Binary Divider.

### **Module V**

Micro programmed Controller, Structure of a micro programmed controller, Basic component of a micro system, memory subsystem. Overview of PAL, PLA, FPGA, CPLD.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# VHDL PROGRAMMING LAB

**Course Code: CSE2507**

**Credit Units: 01**

**Software Required:** Mentor Graphics

**Topics covered in lab will include:**

- Designing Basic Gates.
- Designing Combinational circuits like adder, multiplexer, PLA
- Designing Sequential Circuits like flip-flops, counters, registers.

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# DISTRIBUTED OPERATING SYSTEM

Course Code: CSE2513

Credit Units: 03

## Course Objective:

This Subject provides students with an in-depth knowledge about the operating system. The former treats the standard principles of single processor system, including processes, synchronization, I/O, deadlocks, mutual exclusion, fault tolerance, Memory Management, File Management systems, security and so on. This subject covers distributed operating system in detail, including communication process, file system and memory management synchronization and so on but this time in the context of distributed systems

## Course Contents:

### Module I: Introduction

Functions of an Operating System, Design Approaches, Review of Network Operating System and Distributed Operating System, Issue in the design of Distributed Operating System, Overview of Computer Networks, Modes of communication, System Process, Interrupt Handling, Handling Systems calls, Protection of resources, Micro-Kernel Operating System, client server architecture.

### Module II: Distributed Mutual Exclusion

Lamport's Algorithm, The Critical Section Problem, Other Synchronization Problems, Language Mechanisms for Synchronization, Axiomatic Verification of Parallel Programs, Inter process communication (Linux IPC Mechanism), Remote Procedure calls, RPC exception handling, security issues, RPC in Heterogeneous Environment, Case studies.

### Module III: Synchronization in Distributed System

Deadlocks in Distributed Systems, Centralized Deadlock- Detection Algorithms, Distributed Deadlock Detection Algorithm' Path Pushing Algorithm, Edge Chasing Algorithm, Diffusion Computation Based Algorithm.

Clock Synchronization: Logical clocks, Physical clocks, Vector Clock, clock synchronization algorithms, Mutual Exclusion, Non-Token Based Algorithms – Lamport's Algorithm, Token-Based Algorithms, Suzuki-Kasami's Broadcast Algorithm, Election Algorithms,

### Module IV: Distributed Shared Memory

Introduction, Architecture & Motivation Algorithms for Implementing DSM: The Central – Server Algorithms, The Migration Algorithms, The Read – Replication Algorithms, The Full- Replication Algorithms. Memory Coherence, Coherence Protocols: Write Invalidate Protocol, Write Update Protocol, Design Issues: Granularity, Page Replacement

### Module V: Concurrency Control Algorithms

Basic Synchronization Primitives, Two –Phase Locking Protocol, Timestamp Based Algorithms, Two –Phase Commit Protocol. Voting Protocols: Static Voting, Majority Based Dynamic Voting Protocol.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# FUZZY LOGIC& GENETIC ALGORITHM

Course Code: CSE2514

Credit Units: 03

## Course Objective:

This course is intended to mathematical introduction to the analysis, synthesis, and design of control systems using fuzzy logic and Genetic Algorithm. A study of the fundamentals of fuzzy sets, operations on these sets, and their geometrical interpretations. Methodologies to design fuzzy models and feedback controllers for dynamical systems, Various applications and case studies.

fuzzy inference systems, fuzzy logic control, parallel processors, multilevel optimization- real life problem and other machine intelligence applications of fuzzy logic and Genetic Algorithm.

## Course Contents:

### Module I: Introduction

Crisp sets: Overview, Fuzzy sets : Basic types and concepts, Characteristics and significance of paradigm shift, Fuzzy sets vs Crisp sets, Representation of fuzzy sets

### Module II: Fuzzy operations and Fuzzy arithmetic

Types of operations, Fuzzy complements, Fuzzy intersection: t-norms, Fuzzy union: t-conorms, Combination of operations, Aggregation operation, Fuzzy numbers, Linguistic variables, Arithmetic operations on intervals, Arithmetic operations on Fuzzy numbers, Lattice of Fuzzy numbers, Fuzzy equation.

### Module III: Fuzzy systems And Applications

General discussion, Fuzzy controller: Overview and example, Fuzzy systems and neural networks, Fuzzy neural network, Fuzzy automata. Pattern recognition in fuzzy logic, Database and information retrieval in fuzzy logic, decision making in fuzzy logic, engineering applications and fuzzy logic, Fuzzy logic in Medicine and Economics

### Module- IV: Introduction to Genetic Algorithm

Fundamentals of genetic algorithm: A brief history of evolutionary computation, biological terminology, search space encoding, reproduction elements of genetic algorithm genetic modeling, comparison of GA and traditional search methods. The Fundamental Theorem, Schema Processing at work, Two-armed and k-armed Bandit problem, The Building block hypothesis.

### Module-V: Genetic Technology

Genetic technology:- steady state algorithm, fitness scaling, inversion. Genetic programming:- Genetic Algorithm in problem solving, Implementing a Genetic Algorithm:- computer implementation, operator (reproduction, crossover and Mutation, Fitness Scaling, Coding, Discretization). Knowledge based techniques in Genetic Algorithm. Advanced operators and techniques in genetic search:- Dominance, Diploidy and Abeyance. Inversion and other reordering operators, Niche and speciation.

### Module- VI: Applications

5 lecture hours

Genetic Algorithm in engineering and optimization-natural evolution –Simulated annealing and Tabu search -Genetic Algorithm in scientific models and theoretical foundations. Applications of Genetic based machine learning-Genetic Algorithm and parallel processors- composite laminates- constraint optimization- multilevel optimization- real life problem.

## Modes of Evaluation: Quiz/Assignment/ Seminar/Written Examination

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# Syllabus - Sixth Semester

## MICROPROCESSOR

**Course Code: CSE2601**

**Credit Units: 03**

**Course Objective:**

This course deals with the systematic study of the Architecture and programming issues of 8085-microprocessor family. The aim of this course is to give the students basic knowledge of the above microprocessor needed to develop the systems using it.

**Course Contents:**

**Module I: Introduction to Microcomputer Systems**

Introduction to Microprocessors and microcomputers, Study of 8 bit Microprocessor, 8085 pin configuration, Internal Architecture and operations, interrupts, Stacks and subroutines, various data transfer schemes.

**Module II: ALP and timing diagrams**

Introduction to 8085 instruction set, advance 8085 programming, Addressing modes, Counters and time Delays, Instruction cycle, machine cycle, T-states, timing diagram for 8085 instruction.

**Module III: Memory System Design & I/O Interfacing**

Interfacing with 8085. Interfacing with input/output devices (memory mapped, peripheral I/O), Cache memory system. Study of following peripheral devices 8255, 8253, 8257, 8255, 8251.

**Module IV: Architecture of 16-Bit Microprocessor**

Difference between 8085 and 8086, Block diagram and architecture of 8086 family, pin configuration of 8086, Minimum mode & Maximum mode Operation. Internal architecture of 8086, Bus Interface Unit, Register Organization, Instruction Pointer, Stack & Stack pointer, merits of memory segmentation, Execution Unit, Register Organization.

**Module V: Pentium Processors**

Internal architecture of 8087, Operational overview of 8087, Introduction to 80186, 80286, 80386 & 80486 processors, Pentium processor.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# SYSTEM PROGRAMMING AND COMPILER CONSTRUCTION

**Course Code: CSE2602**

**Credit Units: 03**

## **Course Objective:**

The objective is to make aware students the concepts of compiler designing. It is expected students have should knowledge on automata theory. This course includes various Lexical Analysis, parsing techniques and syntax directed translation.

## **Course Contents:**

### **Module I: Introduction**

Phases , FSM & RE's and their application to Lexical Analysis, Implementation of Lexical Analyzers, The Syntactic specification of Languages: CFG, Derivation and Parse Trees, Capabilities of CFG.

### **Module II : System Programming**

Editors: Introduction to system Programming Line editor, Full screen editor and multi window editor , First pass and second pass of assembler and their algorithms. Assemblers for CISC Machines: case study x85 & x86 machines. Bootstrapping for compilers, Introduction to. Design of a compiler in C++ as Prototype. Basic Macro Processor functions- Macro definition & expansion – Macro Processor Algorithm & Data Structures, conditional – Macro Expansion, Keyword Macro Parameters, Macro with in Macro Implementation, Linkers and Loaders Concept of linking. Case study of Linker in x86 machines. Loading of various loading schemes. Booting techniques and sub-routines.

### **Module III: Basic Parsing Techniques**

Parsers, Shift Reduce Parsing, Operator precedence parsing, topdown Parsing, Predictive Parsers.

### **Module IV: Automatic Construction of efficient Parsers**

LR Parsers, the canonical collection of LR(0) items, constructing SLR Parsing Tables, Constructing canonical LR Parsing tables and LALR parsing tables, An Automatic Parser Generator, Implementation of LR parsingTables, Constructing LALR sets of items.

### **Module V: Syntax Directed Translation**

Syntax directed Translation Schemes, Implementation of Syntax directed translators, Intermediate Code, Postfix notation, Parse Trees and Syntax Trees, Three address Code, Quadruple & Triples, Translation of Assignment Statements, Postfix Translation.

### **Module VI: Error detection and Recovery**

Lexical phase errors, syntax phase errors, semantic errors Code Optimization: Loop optimization, the DAG representation of basic blocks, value numbers and Algebraic Laws, Global Data – Flow Analysis.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# ADVANCED JAVA PROGRAMMING

**Course Code: CSE2604**

**Credit Units: 03**

## **Course Objective:**

The objective is to equip the students with the advanced feature of contemporary java which would enable them to handle complex programs relating to managing data and processes over the network. The major objective of this course is to provide a sound foundation to the students on the concepts, precepts and practices, in a field that is of immense concern to the industry and business.

## **Course Contents:**

### **Module I : Distributed Computing**

Introduction to Java RMI, RMI services, RMI client, Running client and server, Introduction of Swing, Swing Components, Look and Feel for Swing Components, Introduction to Multimedia Programming.

### **Module II : Database Connectivity**

ODBC and JDBC Drivers, Connecting to Database with the java.sql Package, Using JDBC Terminology, JDBC with mysql, postgresql.

### **Module III : Servlet Programming**

Introduction to Servlets, Servlet Life Cycle, Servlet based Applications, Servlet and HTML.Filters, jdbc with servelets, session Management techniques in detail.

### **Module IV: JSP Programming**

JSP: Introduction to JSP, JSP implicit objects, JSP based Applications, Java. Net. Login & Logout Example, jdbc with jsp.

### **Module V: JEE Web Application**

The Model-View-Controller Architecture What is Struts, Struts Tags, Creating Beans, Other Bean Tags, Bean Output, Creating HTML Forms, The Action Form class The Action class, Simple Struts: a simple Struts application;Introduction to EJB.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# MICROPROCESSOR LAB

**Course Code: CSE2605**

**Credit Units: 01**

## Course Contents:

1. To load the numbers 49H and 53H in the memory location 9510 and 9511
2. respectively and add the contents of memory location 9601
3. To write assembly language programming for 8 bit addition with and without carry.
4. To write assembly language programming for 8 bit subtraction with and without borrow.
5. To write assembly language programming for 8 bit multiplication and division.
6. To write assembly language programming for sorting an array of numbers in ascending and descending order.
7. To write assembly language programming with additional instructions.
8. To write and execute a program using stacks.
9. To study and program the programmable peripheral interface (8255) board.
10. To study and program the programmable interval timer (8253) board.
11. To study and program the programmable DMA controller (8257) board.
12. To study and program the programmable interrupt controller (8259) board.

## Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# SYSTEM PROGRAMMING & COMPILER CONSTRUCTION LAB

**Course Code: CSE2606**

**Credit Units: 01**

**Software Required:** Turbo C++

**Assignment will be provided for following:**

List of Programs:

1. WAP to check whether string is accepted or not for entered grammar.
2. WAP to convert Infix to Postfix notation.
3. WAP to convert Infix to Prefix notation.
4. WAP to find no of Tokens in an expression.
5. WAP to convert Regular Expression to NFA.
6. WAP to convert NFA to DFA.
7. Write a program to implement Text Editor.
8. WAP calculate FIRST and FOLLOW of a grammar.
9. WAP to implement shift reduce parser.
10. WAP to implement symbol table .

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# ADVANCED JAVA PROGRAMMING LAB

Course Code: CSE2608

Credit Units: 01

Programming Language: Java

1. WAP to display label on a frame with the help of JFrame
2. WAP to display six buttons on a panel using JFrame.
3. WAP. To display an image and a string in a label on the JFrame.
4. WAP that implement a JApplet that display a simple label
5. WAP that implement a JApplet and display the following frame
  - a. Customer name
  - b. Customer number
  - c. Age
  - d. Address
6. WAP to access a table Product Master from MS-Access using Java code.
7. WAP that implement a simple servlet program.
8. WAP for authentication, which validate the login-id and password by the servlet code.
9. WAP to connecting a database using user-id and password.
10. WAP to insert data into the database using the prepared statement.
11. WAP to read data from the database using the ResultSet.
12. WAP to read data send by the client (HTML page) using servlet.
13. WAP to include a HTML page into a JSP page.
14. WAP to handle the JSPEException.
15. WAP to read data send by a client (HTML page) using JSP.

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# CRYPTOGRAPHY AND NETWORK SECURITY

**Course Code: CSE2603**

**Credit Units: 03**

## **Course Objective:**

Network Security was always important, but has gained significance with the increase of application of Internet associated e-commerce. Threat and compromise /Breach potentially increased with the introduction of the end user involvement, communication and networking. Thus the course is introduced to make the student acquainted with the concepts and practices to make the network environment secure.

## **Course Contents:**

### **Module I**

Introduction to security attacks, services and mechanism, Classical encryption techniques: substitution ciphers and transposition ciphers, cryptanalysis, steganography, Stream and block ciphers. Modern Block Ciphers: Block ciphers principles, Shannon's theory of confusion and diffusion, feistel structure, Data encryption standard (DES), Strength of DES, Idea of differential cryptanalysis, block cipher modes of operations, Triple DES

### **Module II**

Introduction to group, field, finite field of the form  $GF(p)$ , modular arithmetic, prime and relative prime numbers, Extended Euclidean Algorithm, Advanced Encryption Standard (AES) encryption and decryption, Fermat's and Euler's theorem, Primality testing, Chinese Remainder theorem, Discrete Logarithmic Problem, Principles of public key crypto systems, RSA algorithm, security of RSA.

### **Module III**

Message Authentication Codes: Authentication requirements, authentication functions, message authentication code, hash functions, birthday attacks, security of hash functions, Secure hash algorithm (SHA) Digital Signatures: Digital Signatures, Elgamal Digital Signature Techniques, Digital signature standards (DSS).

### **Module IV**

Key Management and distribution: Symmetric key distribution, Diffie-Hellman Key Exchange, Public key distribution, X.509 Certificates, Public key Infrastructure. Authentication Applications: Kerberos

### **Module V**

IP Security: Architecture, Authentication header, Encapsulating security payloads, combining security associations, key management. Introduction to Secure Socket Layer, Secure electronic transaction (SET). Viruses and related threats, Firewalls.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# SOFTWARE TESTING AND QUALITY ASSURANCE

**Course Code: CSE2612**

**Credit Units: 03**

## **Course Objective:**

To apply all the testing skills of software testing in such a way that it can provide and improve the software development methodology. Basic objective of Software Testing is to develop methods and procedures that can scale up for large systems and that can be used to consistently produce high-quality software at low cost and with a small cycle for the development.

## **Course Contents:**

### **Module I**

Software Testing Fundamentals - Software Testing Definition, Importance, objectives, why is it too hard? Errors, faults and failure. Testing process, STLC, QA and QC, Verification and Validation, Inspections and walkthroughs, Test Plan, test cases, drivers, stubs, Validation checks.

### **Module II**

Black box testing - Definition, Equivalence Class, Boundary Value Analysis, Documentation testing, state based testing, White box testing – Definition, Difference between black box testing and white box testing, Path testing, Cyclomatic complexity, graph metrics, mutation testing.

### **Module III**

Levels of testing- Low level testing- Unit testing and Integration testing. High level testing- System testing, performance testing, stress testing, load testing, volume testing, smoke and sanity testing, Installation testing, usability testing, website testing, security testing, recovery testing, Domain testing, Static testing and dynamic testing,

### **Module IV**

Test cases– Designing, Execution. Reducing number of test cases- Prioritization guidelines, priority category, scheme, risk analysis, regression testing. Designing scripts, RTM, TRS.

### **Module V**

Cohesion and coupling in class testing, GUI testing, integration and system testing, Automated Testing tools - Manual vs. Automated testing, Static and Dynamic Testing tools, Characteristics: Rational tools, Quality Standards- CMM, ISO, Six sigma, McCall's Quality Factors and Criteria, Quality Metrics

## **Examination Scheme:**

# VLSI DESIGN

**Course Code: CSE2610**

**Credit Units: 02**

## **Course Objective:**

In the recent years, IC manufacturing technology has gone through dramatic evolution and changes, continuously scaling to ever smaller dimensions. This scaling has a double impact on the design of ICs. First, the complexity of the designs that can be put on a single die has increased dramatically which led to new design methodologies. At the same time, this plunge into deep submicron space causes devices to behave differently and brings challenging issues to forefront. This course along with the course of Digital Circuits and Systems II and Analog CMOS IC design will give you many of the basic essentials to work in the area of Circuit Design. Since this course takes the latest trends in the industry into account, you will find yourself at a definite edge.

## **Course Contents:**

### **Module I: Devices and the wire**

Diode, dynamic and transient behaviour-diffusion capacitance, SPICE diode model.

MOSFET STATIC BEHAVIOUR: Threshold voltage and its dependence on  $V_{SB}$  MOSFET Operation in resistive and saturation region, channel length modulation, Velocity saturation and its impact on sub micron devices, sub threshold conduction, Model for manual analysis, Equivalent resistance for MOSFET in (velocity) saturated region, comparison of equations for PMOS and NMOS, depletion and enhancement device

DYNAMIC BEHAVIOUR: Channel capacitance in different regions of operation, junction capacitance, Level 1 SPICE MODELS for MOS transistors

The Wire: Interconnect parameters: resistance, capacitance and Inductance, Lumped RC model, Elmore Delay

### **Module II: CMOS Inverter**

VTC of an ideal inverter, Switching Model of the CMOS inverter: nMOS /pMOS discharge and charge, VTC of CMOS inverter: PMOS AND NMOS operation in various regions including velocity saturation, Switching threshold,  $(W/L)_p/(W/L)_n$  ratio for setting desired  $V_M$  with and without velocity saturation, Noise Margins, buffer

Ratioed logic: Pseudo NMOS inverter and PMOS to NMOS ratio for performance, tristate inverter, Resistive load inverter.

Load Capacitance calculations: fan out capacitance, self capacitance calculations: Miller effect, wire capacitance; Improving delay calculation with input slope, Propagation delay: first order analysis, analysis from a design perspective, sizing a chain of inverters for minimum delay, choosing optimum number of stages

Power, Energy and Energy Delay: Dynamic power consumption, Static power, Glitches and power dissipation due to direct path currents, power and delay trade off, Transistor sizing for energy minimization

### **Module III: Combinational circuits**

CMOS LOGIC: Good 0 and poor 0, Good 1 and poor 1, series and parallel N and P switches, 2 and Higher input NAND and NOR gates, Functions of the type  $(AB+C(D+E))$  and their complements, XOR and XNOR gates, 2 input Multiplexer, Full Adder; Transistor sizing in CMOS logic for optimal delay,

Pseudo NMOS NAND NOR and other gates and the transistor sizing, Introduction to DSVCL logic, CPL AND/NAND, OR/NOR, XOR/XNOR gates

Logical effort, Electrical Effort, Branching effort, Examples of sizing Combinational logic chains for minimum delay. Pass-transistor logic, pass gate configurations for nmos and pmos, 2 input and 4 input MUX, XOR, XNOR and implementation of general functions like  $AB+AB*C+A*C^*$ , Robust and Efficient PTL Design, Delay of Transmission Gate chain

Dynamic CMOS design: Precharge and Evaluation, charge leakage, bootstrapping, charge sharing, Cascading Dynamic Gates, DOMINO Logic, Optimization of Domino Logic Gates, simple example circuit implementations of DOMINO logic

**Module IV: Sequential Logic circuits**

Principle of Bistability, NAND and NOR based SR latch, and clocked SR Latch, JK latch, example of master slave flip flop, CMOS D latch, MUX based Latches, master slave edge triggered register, non ideal clocks, clock overlap, C2MOS register, TSPCR Register, Schmitt Trigger, Pipelining and NORA CMOS

**Module V: Layout Design Rules**

Introduction to CMOS Process technology, Layout of CMOS inverter, CMOS NAND and NOR gates, Concept of Euler path, and stick diagrams for functions like  $(AB+E+CD)^*$

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;

# VLSI DESIGN LAB

**Course Code: CSE2611**

**Credit Units: 01**

## **Course Contents:**

1. Using Design architect and simulate V vs time for CMOS inverter using same W/L ratio for PMOS and NMOS.
2. Design and simulate again by Sizing PMOS to NMOS appropriately and repeat experiment 1
3. Design and simulate V vs t for 2 input NAND and Nor gates.
4. Design and Simulation for general CMOS functions
5. One bit full adder simulation
6. 2:1 MUX using pass transistor logic
7. Other functions using pass transistor logic
8. Layout of CMOS inverter
9. Layout of NAND and NOR gates
10. Design and Simulation SR latch using NAND and NOR representations
11. Design and simulate D flip flop

## **Examination Scheme:**

# Syllabus - Seventh Semester

## DATAWAREHOUSING & DATA MINING

**Course Code: CSE2701**

**Credit Units: 03**

### **Course Objective:**

The objective of this course is to introduce students to Data Warehousing & Data mining technologies that will help to Inspect, Control and Secure Information through Databases.

### **Course Contents:**

#### **Module I: Introduction to Data Warehousing**

Data Warehouse definition & Characteristics, The need for data ware housing, Operational and Informational Data Stores, Difference between Data warehouse and DBMS, Benefits of Data warehousing, Data mart, Meta Data, Conceptual Modeling of Data Warehouses: star schemas, Snowflake, Fact Constellations with example each.

#### **Module II: Data Warehousing Components & Architecture**

Data Warehouse Architecture, Components of Data Warehouse Architecture, Data Warehousing Topologies, Meta Data, Components of Meta data, Mapping Meta Data. Challenges with Data Warehousing.

#### **Module III: On Line Analytical Processing (OLAP)**

Definition: OLAP, Difference between OLTP and OLAP, OLAP Server Architecture, OLAP Operations, Multi Relational & Multi Dimensional: MOLAP, ROLAP, OLAP Tools, Metadata Repository, Data Warehouse Back-End Tools and Utilities.

#### **Module IV: Data Mining**

Introduction to Data Mining, Applications, Limitations, Techniques, Association Rules: Priori Algorithm, Direct Hashing and Pruning (DHP), Classification: Decision Tree, Split Algorithm based on Information Theory, Bayes Method.

#### **Module V: Cluster Analysis: Concepts and Methods**

Cluster Analysis: Features, Types of Cluster Analysis Methods: Partitional, Hierarchical, Density Based, Grid based Methods, , Web Data Mining, Search Engine, Case Study, Limitations.

### **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

### **Text & References:**

- Alex Berson, Data Warehousing, Data Mining, and Olap, Tata McGraw Hill.
- George M Marakas, Modern Data Warehousing, Mining & Visualization Core Concepts, Pearson Education.
- (Berry, Michael)Data Mining Techniques.
- (Sharma, Gajendra)Data Mining, Data Warehousing and OLAP.

- (Han & Kamber)Data Mining: Concepts and Techniques.
- (Paulraj Ponniah) Datawarehousing Fundamentals.

# COMPUTER GRAPHICS

**Course Code: CSE2710**

**Credit Units: 03**

## **Course Objective:**

The objective of the course is to provide the understanding of the fundamental graphical operations and the implementation on computer, the mathematics behind computer graphics, including the use of spline curves and surfaces. It gives the glimpse of recent advances in computer graphics, user interface issues that make the computer easy, for the novice to use.

## **Course Contents:**

### **Module I: Introduction to Graphics and Graphics Hardware System**

Application of computer graphics, Video Display Devices, Raster Scan Display, Random Scan Display, Input Devices, Graphic Software and graphics standards, Numerical based on Raster and Random scan display, Frame buffer, Display processor.

### **Module II: Output Primitives and Clipping operations**

Algorithms for drawing 2D Primitives lines (DDA and Bresenham's line algorithm), circles (Bresenham's and midpoint circle algorithm), Antialiasing and filtering techniques. Line clipping (cohen-sutherland algorithm), Curve clipping algorithm, and polygon clipping with Sutherland Hodgeman algorithm, Area fill algorithms for various graphics primitives: Scanline fill algorithm, boundary fill algorithm, flood fill algorithm, Polygon representation, various method of Polygon Inside test: Even-Odd method, winding number method, Character generation techniques.

### **Module III: 2D Geometric transformation**

2D Transformation: Basic transformation, Translation, Rotation, Rotation relative to an arbitrary point, scaling, Matrix Representations and Homogeneous coordinates, window to viewport transformation.

### **Module IV: 3D Geometric transformation**

3D Concepts: Parallel projection and Perspective projection, 3D Transformations, composite 3D transformation, co-ordinate transformation, Inverse transformation

### **Module V: object modeling and Visible Surface detection**

fractal geometry methods, fractal dimensions, Geometric construction of deterministic self-similar fractals, Iterated function system to generate fractals. Bezier curves and Bezier surfaces, Bspline curves and surfaces, Visible surface detection method: Basic illumination, diffuse reflection, specular reflection, shadows. Ray tracing method, Depth-buffer method, A-buffer method, Depth-sorting method (painter's algorithm), Binary search partition method, Scan line method,

### **Module VI: Introduction to multimedia**

Design of animation sequences, Computer Animation languages, Elementary filtering techniques and elementary Image Processing techniques, graphics library functions used in animation design

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# ADVANCED COMPUTER ARCHITECTURE

Course Code: CSE2711

Credit Units: 03

## Course Objective:

With increase in availability of system resources, concept of parallel architecture has obtained immense popularity. This course provides a comprehensive study of scalable and parallel computer architectures for achieving a proportional increase in performance with increasing system resources. In this course we have discussed the theory, technology, architecture (hardware) and software aspects of parallel computer and Vector computers.

## Course Contents:

### Module I: Parallel computer models

The state of computing, Multiprocessors and multicomputers, Multivector and SIMD computers, Architectural development tracks

Program and network properties: Conditions of parallelism, Data and resource dependences, Hardware and software parallelism, Program partitioning and scheduling, Grain size and latency, Program flow mechanisms, Control flow versus data flow, Data flow architecture, Demand driven mechanisms, Comparisons of flow mechanisms

### Module II: System Interconnect Architectures

Network properties and routing, Static interconnection networks, Dynamic interconnection Networks, Multiprocessor system interconnects, Hierarchical bus systems, Crossbar switch and multiport memory, Multistage and combining network.

### Module III: Processors and Memory Hierarchy

Advanced processor technology, Instruction-set Architectures, CISC Scalar Processors, RISC Scalar Processors, Superscalar Processors, VLIW Architectures, Vector and Symbolic processors

Memory Technology: Hierarchical memory technology, Inclusion, Coherence and Locality, Memory capacity planning, Virtual Memory Technology

### Module IV: Backplane Bus System

Backplane bus specification, Addressing and timing protocols, Arbitration transaction and interrupt, Pipelining: Linear pipeline processor, Nonlinear pipeline processor, Instruction pipeline design, Mechanisms for instruction pipelining, Dynamic instruction scheduling, Branch handling techniques, Arithmetic Pipeline Design, Computer arithmetic principles.

### Module V: Vector Processing Principles

Vector instruction types, Vector-access memory schemes.

Synchronous Parallel Processing: SIMD Architecture and Programming Principles, SIMD Parallel Algorithms

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# DATAWARE HOUSING & DATA MINING LAB

**Course Code: CSE2704**

**Credit Units: 01**

## **Course Contents:**

**Programming Language: Weka 3.6**

## **List of Experiments/Programs:**

1. Defining Weather relation for different attributes
2. Defining employee relation for different attributes
3. Defining labor relation for different attributes
4. Defining student relation for different attributes
5. Exploring weather relation using experimenter and obtaining results in various schemes
6. Exploring employee relation using experimenter
7. Exploring labor relation using experimenter
8. Exploring student relation using experimenter
9. Setting up a flow to load an arff file (batch mode) and perform a cross validation using J48
10. Design a knowledge flow layout, to load attribute selection normalize the attributes and to store the result in a csv saver.

## **Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# COMPUTER GRAPHICS LAB

**Course Code: CSE2712**

**Credit Units: 01**

**Software Required:** Turbo C++

**Course Contents:**

**Assignments will be provided for the following:**

- Geometrical shapes based on graphics algorithms
- 2D Geometric transformation translation, rotation, scaling, reflection.
- Clipping
- Animation

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# SUMMER INTERNSHIP EVALUATION-II

Course Code: CSE2735

Credit Units: 03

## Guidelines:

There are certain phases of every Intern's professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship program can best be described as an attempt to institutionalize efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal classroom situations. These attributes are intellectual ability, professional judgment and decision-making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility etc.

In order to achieve these objectives, each student will maintain a file (**Internship File**). The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development.

The File will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

The **layout guidelines** for the Project & Seminar Report:

### 1. File should be in the following specification:

A4 size paper

Font: Arial (10 points) or Times New Roman (12 points)

Line spacing: 1.5

Top & bottom margins: 1 inch/ 2.5 cm

Left & right margins: 1.25 inches/ 3 cm

### 2. Report Layout: The report should contain the following components:

Front Page

Table of Content

Acknowledgement

Student Certificate

Company Profile (optional)

Introduction

Main Body

References / Bibliography

The File will include **five sections** in the order described below. The content and comprehensiveness of the main body and appendices of the report should include the following:

1. **The Title Page**--Title - An Internship Experience Report For (Your Name), name of internship organization, name of the Supervisor/Guide and his/her designation, date started and completed, and number of credits for which the report is submitted.
2. **Table of Content**--an outline of the contents by topics and subtopics with the page number and location of each section.
3. **Introduction**--short, but should include how and why you obtained the internship experience position and the relationship it has to your professional and career goals.
4. **Main Body**--should include but not be limited to daily tasks performed. Major projects contributed to, dates, hours on task, observations and feelings, meetings attended and their purposes, listing of tools and materials and their suppliers, and photographs if possible of projects, buildings and co-workers.

**5. References / Bibliography** --This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system

## **ASSESSMENT OF THE INTERNSHIP FILE**

The student will be provided with the Student Assessment Record (SAR) to be placed in front of the Internship File. Each item in the SAR is ticked off when it is completed successfully. The faculty will also assess each item as it is completed. The SAR will be signed by the student and by the faculty to indicate that the File is the student's own work. It will also ensure regularity and meeting the deadlines.

### **STUDENT ASSESSMENT RECORD (SAR)**

#### **1. Range of Research Methods used to obtain information**

#### **2. Execution of Research**

#### **3. Data Analysis**

- Analyse Quantitative/ Qualitative information
- Control Quality

#### **4. Draw Conclusions**

#### **Examination Scheme:**

<b>Components</b>	<b>V</b>	<b>S</b>	<b>R</b>	<b>FP</b>
<b>Weightage (%)</b>	20	20	20	40

V – Viva, S – Synopsis, FP – Final Presentation, R - Report

# SOFT COMPUTING

**Course Code: CSE2751**

**Credit Units: 03**

## **Course Objective:**

To develop semantic-based and context-aware systems to acquire, organise, process, share and use the knowledge embedded in multimedia content. Research will aim to maximise automation of the complete knowledge lifecycle and achieve semantic interoperability between Web resources and services.

## **Course Contents:**

### **Module I: Soft Computing**

Introduction of soft computing, soft computing vs. hard computing, various types of soft computing techniques, applications of soft computing.

### **Module II: Neural Network**

Structure and Function of a single neuron: Biological neuron, artificial neuron, definition of ANN, Taxonomy of neural net, Difference between ANN and human brain, characteristics and applications of ANN, single layer network, Perceptron training algorithm, Linear separability, Widrow & Hebb's learning rule/Delta rule, ADALINE, MADALINE, AI v/s ANN. Introduction of MLP, different activation functions, Error back propagation algorithm, derivation of BBPA, momentum, limitation, characteristics and application of EBPA

### **Module III**

Counter propagation network, architecture, functioning & characteristics of counter Propagation network, Hopfield/ Recurrent network, configuration, stability constraints, associative memory, and characteristics, limitations and applications. Hopfield v/s Boltzman machine. Adaptive Resonance Theory: Architecture, classifications, Implementation and training. Associative Memory.

### **Module IV: Fuzzy Logic**

Fuzzy set theory, Fuzzy set versus crisp set, Crisp relation & fuzzy relations, Fuzzy systems: crisp logic, fuzzy logic, introduction & features of membership functions, Fuzzy rule base system : fuzzy propositions, formation, decomposition & aggregation of fuzzy rules, fuzzy reasoning, fuzzy inference systems, fuzzy decision making & Applications of fuzzy logic.

### **Module V: Genetic algorithm**

Fundamentals, basic concepts, working principle, encoding, fitness function, reproduction, Genetic modeling: Inheritance operator, cross over, inversion & deletion, mutation operator, Bitwise operator, Generational Cycle, Convergence of GA, Applications & advances in GA, Differences & similarities between GA & other traditional methods.

## **Examination Scheme:**

<b>Components</b>	<b>CT</b>	<b>H</b>	<b>V/S/O</b>	<b>AT</b>	<b>EE</b>
<b>Weightage (%)</b>	10	8	7	5	70

## **Text & References:**

# MOBILE COMPUTING

**Course Code: CSE2707**

**Credit Units: 03**

## **Course Objective:**

The objective of this consortium is to shape and expand a full-scale and sound mobile computing system market. To achieve this, cooperation is required of interests related to communication (network), computer hardware/software, system integrators (including service providers), and the media.

## **Course Contents:**

### **Module I: Introduction to Personal Communications Services (PCS)**

PCS Architecture, Mobility management, Networks signaling.

Global System for Mobile Communication (GSM) system overview: GSM Architecture, Mobility management, Network signaling.

### **Module II: General Packet Radio Services (GPRS) & Wireless Application Protocol (WAP)**

GPRS Architecture, GPRS Network Nodes.

Mobile Data Communication: WLANs (Wireless LANs) IEEE 802.11 standard, Mobile IP.

Wireless Application Protocol (WAP): The Mobile Internet standard, WAP Gateway and Protocols, wireless mark up Languages (WML).

### **Module III: Third Generation (3G) Mobile Services**

Introduction to International Mobile Telecommunications 2000 (IMT 2000) vision, Wideband Code Division Multiple Access (W-CDMA), and CDMA 2000, Quality of services in 3G.

Wireless Local Loop(WLL): Introduction to WLL Architecture, wireless Local Loop Technologies.

### **Module IV: Global Mobile Satellite Systems**

Global Mobile Satellite Systems; case studies of the IRIDIUM and GLOBALSTAR systems.

### **Module V: Enterprise Networks**

Introduction to Virtual Networks, Blue tooth technology, Blue tooth Protocols. Advanced techniques in mobile computing.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# GRID COMPUTING

**Course Code: CSE2709**

**Credit Units: 03**

## **Course Objective:**

Grid computing (or the use of a *computational grid*) is applying the resources of many computers in a network to a single problem at the same time - usually to a scientific or technical problem that requires a great number of computer processing cycles or access to large amounts of data. The major objective of this course is to provide a sound foundation to the students on the concepts, percepts and practices in a field that is of immense concern to the industry and business.

## **Course Contents:**

### **Module I: Introduction-Cluster to grid computing**

Cluster computing models, Grid models, Mobile grid models, Applications.

**Parset: System independent parallel programming on distributed systems:** Motivation and introduction, Semantics of the parset construct, Expressing parallelism through parsets, Implementing parsets on a loosely coupled distributed system.

**Anonymous remote computing model:** Introduction, Issues in parallel computing on interconnected workstations, Existing distributed programming approaches, The arc model of computation, The two tired arc language constructs, Implementation

### **Module II: Integrating task parallelism with data parallelism**

Introduction and motivation, A model for integrating task parallelism into data parallel programming platforms, Integration of the model into ARC, Design and implementation applications, performance analysis, guidelines for composing user programs, related work

**Anonymous remote computing and communication model:** Introduction, Location in dependent inter task communication with DP, DP model of iterative grid computations, Design and implementation of distributed pipes, Case study, and Performance analysis.

### **Module III: Parallel programming model on CORBA**

Introduction, Existing works, notion of concurrency, system support implementation performance, suitability of CORBA: introspection.

**Grid computing model:** Introduction, a parallel computing model over grids, Design and implementation of the model, Performance studies, Related work.

### **Module IV: Introducing mobility into anonymous remote computing and communication model**

Introduction, issues in mobile clusters and parallel computing on mobile clusters, model overview, model computation model, implementation, performance.

### **Module V: Parallel Simulated Annealing algorithms**

Introduction, Simulated annealing (SA) Technique, Clustering algorithm for simulated annealing (SA), Combination of genetic algorithm and simulated annealing (SA) algorithm

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# TERM PAPER

**Course Code: CSE2731**

**Credit Units: 02**

A term (or research) paper is primarily a record of intelligent reading in several sources on a particular subject.

The students will choose the topic at the beginning of the session in consultation with the faculty assigned. The progress of the paper will be monitored regularly by the faculty. At the end of the semester the detailed paper on the topic will be submitted to the faculty assigned. The evaluation will be done by Board of examiners comprising of the faculties.

## GUIDELINES FOR TERM PAPER

The procedure for writing a term paper may consist of the following steps:

1. Choosing a subject
2. Finding sources of materials
3. Collecting the notes
4. Outlining the paper
5. Writing the first draft
6. Editing & preparing the final paper

### 1. Choosing a Subject

The subject chosen should not be too general.

### 2. Finding Sources of Materials

- a) The material sources should be not more than 10 years old unless the nature of the paper is such that it involves examining older writings from a historical point of view.
- b) Begin by making a list of subject-headings under which you might expect the subject to be listed.
- c) The sources could be books and magazine articles, news stories, periodicals, scientific journals etc.

### 3. Collecting the Notes

Skim through sources, locating the useful material, then make good notes of it, including quotes and information for footnotes.

- a) Get facts, not just opinions. Compare the facts with author's conclusion.
- b) In research studies, notice the methods and procedures, results & conclusions.
- c) Check cross references.

### 4. Outlining the paper

- a) Review notes to find main sub-divisions of the subject.
- b) Sort the collected material again under each main division to find sub-sections for outline so that it begins to look more coherent and takes on a definite structure. If it does not, try going back and sorting again for main divisions, to see if another general pattern is possible.

### 5. Writing the first draft

Write the paper around the outline, being sure that you indicate in the first part of the paper what its purpose is. You may follow the following:

- a) statement of purpose
- b) main body of the paper
- c) statement of summary and conclusion

Avoid short, bumpy sentences and long straggling sentences with more than one main idea.

### 6. Editing & Preparing the final Paper

- a) Before writing a term paper, you should ensure you have a question which you attempt to answer in your paper. This question should be kept in mind throughout the paper. Include only information/ details/ analyses of relevance to the question at hand. Sometimes, the relevance of a particular section may be clear to you but not to your readers. To avoid this, ensure you briefly explain the relevance of every section.
- b) Read the paper to ensure that the language is not awkward, and that it "flows" properly.
- c) Check for proper spelling, phrasing and sentence construction.

- d) Check for proper form on footnotes, quotes, and punctuation.
- e) Check to see that quotations serve one of the following purposes:
  - (i) Show evidence of what an author has said.
  - (ii) Avoid misrepresentation through restatement.
  - (iii) Save unnecessary writing when ideas have been well expressed by the original author.
- f) Check for proper form on tables and graphs. Be certain that any table or graph is self-explanatory.

Term papers should be composed of the following sections:

- 1) Title page
- 2) Table of contents
- 3) Introduction
- 4) Review
- 5) Discussion & Conclusion
- 6) References
- 7) Appendix

Generally, the introduction, discussion, conclusion and bibliography part should account for a third of the paper and the review part should be two thirds of the paper.

### **Discussion**

The discussion section either follows the results or may alternatively be integrated in the results section. The section should consist of a discussion of the results of the study focusing on the question posed in the research paper.

### **Conclusion**

The conclusion is often thought of as the easiest part of the paper but should by no means be disregarded. There are a number of key components which should not be omitted. These include:

- a) summary of question posed
- b) summary of findings
- c) summary of main limitations of the study at hand
- d) details of possibilities for related future research

### **Reference**

From the very beginning of a research project, you should be careful to note all details of articles gathered.

The bibliography should contain ALL references included in the paper. References not included in the text in any form should NOT be included in the bibliography.

The key to a good bibliography is consistency. Choose a particular convention and stick to this.

### **Conventions**

Monographs

Crystal, D. (2001), *Language and the internet*. Cambridge: Cambridge University Press.

### **Edited volumes**

Gass, S./Neu, J. (eds.) (1996), *Speech acts across cultures. Challenges to communication in a second language*. Berlin/ NY: Mouton de Gruyter.

[(eds.) is used when there is more than one editor; and (ed.) where there is only one editor. In German the abbreviation used is (Hrsg.) for Herausgeber].

### **Edited articles**

Schmidt, R./Shimura, A./Wang, Z./Jeong, H. (1996), *Suggestions to buy: Television commercials from the U.S., Japan, China, and Korea*. In: Gass, S./Neu, J. (eds.) (1996), *Speech acts across cultures. Challenges to communication in a second language*. Berlin/ NY: Mouton de Gruyter: 285-316.

### **Journal articles**

McQuarrie, E.F./Mick, D.G. (1992), *On resonance: A critical pluralistic inquiry into advertising rhetoric*. *Journal of consumer research* 19, 180-197.

### **Electronic book**

Chandler, D. (1994), *Semiotics for beginners* [HTML document]. Retrieved [5.10.'01] from the World

Wide Web, <http://www.aber.ac.uk/media/Documents/S4B/>.

### **Electronic journal articles**

Watts, S. (2000) Teaching talk: Should students learn 'real German'? [HTML document]. German as a Foreign Language Journal [online] 1. Retrieved [12.09.'00] from the World Wide Web, <http://www.gfl-journal.com/>.

### **Other websites**

Verterhus, S.A. (n.y.), Anglicisms in German car advertising. The problem of gender assignment [HTML document]. Retrieved [13.10.'01] from the World Wide Web, <http://olaf.hiof.no/~sverrev/eng.html>.

### **Unpublished papers**

Takahashi, S./DuFon, M.A. (1989), Cross-linguistic influence in indirectness: The case of English directives performed by native Japanese speakers. Unpublished paper, Department of English as a Second Language, University of Hawai'i at Manoa, Honolulu.

### **Unpublished theses/ dissertations**

Möhl, S. (1996), Alltagssituationen im interkulturellen Vergleich: Realisierung von Kritik und Ablehnung im Deutschen und Englischen. Unpublished MA thesis, University of Hamburg.

Walsh, R. (1995), Language development and the year abroad: A study of oral grammatical accuracy amongst adult learners of German as a foreign language. Unpublished PhD dissertation, University College Dublin.

### **Appendix**

The appendix should be used for data collected (e.g. questionnaires, transcripts, ...) and for tables and graphs not included in the main text due to their subsidiary nature or to space constraints in the main text.

### **Assessment Scheme:**

#### **Continuous Evaluation:**

40%

(Based on abstract writing, interim draft, general approach, research orientation, readings undertaken etc.)

#### **Final Evaluation:**

60%

(Based on the organization of the paper, objectives/ problem profile/ issue outlining, comprehensiveness of the research, flow of the idea/ ideas, relevance of material used/ presented, outcomes vs. objectives, presentation/ viva etc.)

# PROJECT

**Course Code: CSE2732**

**Credit Units: 02**

## **Course Objective:**

The objective of this course is to provide practical training on some live/demo projects that will increase capability to work on actual problem in industry. It will be an in house training on some latest software which is in high demand in market. This training will be designed such that it will be useful for their future employment in industry.

## **STUDENT ASSESSMENT RECORD (SAR)**

Record to be maintained by project guide.

- 1. Project Tools (Hardware/ Software) used for implementation.**
- 2. Project Evaluation & Execution.**

## **Examination Scheme:**

<b>Components</b>	<b>V</b>	<b>S</b>	<b>R</b>	<b>FP</b>
<b>Weightage (%)</b>	20	20	20	40

V – Viva, S – Synopsis, FP – Final Presentation, R - Report

## **WORKSHOP/ INDEPENDENT STUDY**

**Course Code: CSE2733**

**Credit Units: 02**

This is an elective, self-directed course to investigate emerging areas of IT and Computer Science like Mobile Operating System, Cloud Computing, or from Current Research Areas etc. The primary goal of the course is to provide students with research exploration of a specific topic of interest to the individual student under the advisement of an instructor who will monitor and critique the student's progress.

Independent study provides students with the opportunity to work one-on-one with a Faculty on a particular topic. The student and faculty should discuss the aims and content of the study and present the proposal to Head of Department. The independent study proposal should include the study's title, theme, readings, work to be submitted, and syllabus. Faculty and student should meet for a minimum number of 2 hours per week. Student will give a seminar after completion of study.

# Syllabus - Eighth Semester

## PROJECT-DISSERTATION

**Course Code: CSE2837**

**Credit Units: 08**

### **GUIDELINES FOR PROJECT FILE**

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critiqued by the faculty guide and corrected by the student at each stage.

The File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation.

### **In general, the File should be comprehensive and include**

A short account of the activities that were undertaken as part of the project;

A statement about the extent to which the project has achieved its stated goals.

A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;

Any activities planned but not yet completed as part of the project, or as a future initiative directly resulting from the project;

Any problems that have arisen that may be useful to document for future reference.

### ➤ **Report Layout**

The report should contain the following components:

### ➤ **Title or Cover Page**

The title page should contain the following information: Project Title; Student's Name; Course; Year; Supervisor's Name.

### ➤ **Acknowledgements(optional)**

Acknowledgment to any advisory or financial assistance received in the course of work may be given.

### ➤ **Abstract**

A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project

### ➤ **Table of Contents**

Titles and subtitles are to correspond exactly with those in the text.

### ➤ **Introduction**

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

### ➤ **Materials and Methods**

This section should aim at experimental designs, materials used. Methodology should be mentioned in details including modifications if any.

### ➤ **Results and Discussion**

Present results, discuss and compare these with those from other workers, etc. In writing these section, emphasis should be given on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary never write in “point” form.

### ➤ **Conclusion**

A conclusion should be the final section in which the outcome of the work is mentioned briefly.

### ➤ **Future prospects**

### ➤ **Appendices**

The Appendix contains material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

### ➤ **References / Bibliography**

This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

## **Examples**

### **For research article**

Voravuthikunchai SP, Lortheeranuwat A, Ninrprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichia coli* O157: H7. *Clin Microbiol Infect*, **8** (suppl 1): 116–117.

### **For book**

Kowalski, M. (1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), **7**: 63-67

## **ASSESSMENT OF THE PROJECT FILE**

Essentially, marking will be based on the following criteria: the quality of the report, the technical merit of the project and the project execution.

Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project.

Project execution is concerned with assessing how much work has been put in.

The File should fulfill the following *assessment objectives*:

## **Range of Research Methods used to obtain information**

### **Execution of Research**

#### **Data Analysis**

Analyse Quantitative/ Qualitative information

Control Quality

### **Draw Conclusions**

### **Examination Scheme:**

Dissertation	50
Viva Voce	50
<b>Total</b>	<b>100</b>

# DIGITAL IMAGE PROCESSING

Course Code: CSE2803

Credit Units: 02

## Course Objective:

Processing color and grayscale images or other two-dimensional signals has become an important tool for research and investigation in many areas of science and engineering. *Digital Image Processing* is designed to give professionals and students a powerful collection of fundamental and advanced image processing tools on the desktop. Digital Image Processing takes full advantage of the computational technology of Mathematica.

## Course Contents:

### Module I: Introduction and Digital Image Fundamentals

The origins of Digital Image Processing, Examples of Fields that Use Digital Image Processing, Fundamentals Steps in Image Processing, Elements of Digital Image Processing Systems, Image Sampling and Quantization, Some basic relationships like Neighbours, Connectivity, Distance Measures between pixels, Linear and Non Linear Operations.

### Module II: Image Enhancement in the Spatial Domain

Some basic Gray Level Transformations, Histogram Processing, Enhancement Using Arithmetic and Logic operations, Basics of Spatial Filters, Smoothing and Sharpening Spatial Filters, Combining Spatial Enhancement Methods.

### Module III: Image Enhancement in the Frequency Domain:

Introduction to Fourier Transform and the frequency Domain, Smoothing and Sharpening Frequency Domain Filters, Homomorphic Filtering.

### Image Restoration

A model of The Image Degradation / Restoration Process, Noise Models, Restoration in the presence of Noise Only Spatial Filtering, Periodic Noise Reduction by Frequency Domain Filtering, Linear Position-Invariant Degrations, Estimation of Degradation Function, Inverse filtering, Wiener filtering, Constrained Least Square Filtering, Geometric Mean Filter, Geometric Transformations.

### Module IV: Image Compression

Coding, Interpixel and Psychovisual Redundancy, Image Compression models, Elements of Information Theory, Error free comparison, Lossy compression, Image compression standards.

### Image Segmentation

Detection of Discontinuities, Edge linking and boundary detection, Threshold, Region Oriented Segmentation, Motion based segmentation.

### Module V: Representation and Description

Representation, Boundary Descriptors, Regional Descriptors, Use of Principal Components for Description, Introduction to Morphology, Some basic Morphological Algorithms.

### Object Recognition

Patterns and Pattern Classes, Decision-Theoretic Methods, Structural Methods.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

## DIGITAL IMAGE PROCESSING LAB

**Course Code: CSE2805**

**Credit Units: 01**

**Software Required:**Java

**List of Assignments:**

Experiments will be based on Image Representation, Image transformation, Image Enhancements, Edge Detection, Morphological Image processing and Segmentation.

**Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# DOT NET PROGRAMMING

**Course Code: CSE2804**

**Credit Units: 02**

## **Course Objective:**

To create web based applications using ASP.NET.

## **Course Contents:**

### **Module I: Introduction to .NET technologies**

Features of .NET, .NET Framework, CLR, What is ASP.NET? Difference between ASP and ASP.NET.

Design View, HTML View, Default Files used in ASP.NET. Concept of Master pages, Intrinsic Objects of ASP.Net, Structure of ASP.NET page, Cascading Style Sheet: Embedded, Inline, External.

### **Module II: Controls in ASP.NET**

Overview of Dynamic Web page, Understanding ASP.NET Controls, Applications, Web servers, Installation of IIS. Web forms, web form controls -server controls, client controls. Adding controls to a web form, Buttons, Text Box, Labels, Checkbox, Radio Buttons, List Box. Adding controls at runtime. Running a web Application, creating a multiform web project. Form Validation: Client side validation, server Side validation, validation Controls: Required Field Comparison Range. Calendarcontrol, Ad rotator Control, Internet Explorer Control.

### **Module III: Overview of ADO.NET and XML**

What is ADO.NET, from ADO to ADO.NET. ADO.NET architecture, Accessing Data using Data Adapters and Datasets, using Command & Data Reader, binding data to data bind Controls, displaying data in data grid, XML basics, attributes, fundamental XML classes: Document, text writer, text reader. XML validations, XML in ADO.NET, The XML Data Document, Data Binding and its types.

### **Module IV: ASP.NET Applications**

Creating, tracking, caching, error handling, Securing ASP.NET applications- form based applications, window based application.

### **Module V: Web services**

Introduction, State management- View state, Session state, Application state, Building ASP.NET web services, working with ASP.NET applications, creating custom controls, Invoking COM/COM+, Activ X Components

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# SIMULATION & MODELING

**Course Code: CSE2807**

**Credit Units: 02**

## **Course Objective:**

The goal is to introduce students to basic simulation methods and tools for modelling and simulation of continuous, discrete and combined systems. The objective is to impart knowledge of simulation principles. The ability to create simulation models of various types.

## **Course Contents:**

### **Module I: Linear Programming**

Linear Programming: Formulation, Graphical solution, standard and matrix form of linear programming problems, Simplex method and its Algorithm, Two-phase Simplex method.

### **Module II: Integer Programming**

Integer Programming: Importance, Need and importance of Integer Programming, Gomory's All Integer Programming Problem technique and its algorithm.

### **Module III: Modeling & Simulation Concepts and Random Numbers**

Modeling & Simulation Concepts: System Concepts, What is a Model?, Type of Models, Modeling & Simulation, Continuous vs. Discrete System Simulation, Numerical Integration vs. Continuous Simulation, Analog vs. Digital Simulation, Simulation vs. Monte- Carlo Simulation, Nature of Computer Modeling and Simulation, When to Use Simulation?, Limitations of Simulation, Validation, and Simulation Languages.

Random Numbers: Pseudo-random generators, Testing of Pseudo-random number generators, Generation of non-uniformly distributed random numbers.

### **Module IV: Simulation Experiments and Design of Application Simulators**

Simulation Experiments: Run length of Static and Dynamic Stochastic Simulation Experiments, Minimizing variability in simulators without increasing Number of simulation Runs.

**Module V: Design of Application Simulators** Design of Application Simulators – for Multi-server Queuing System, PERT, Optimizing Inventory Policy and Cost in Business environment.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

## SIMULATION AND MODELLING LAB

**Course Code: CSE2811**

**Credit Units: 01**

1. Basic Concepts of Simulation and Modeling and SIGMA (An Introduction).
2. Exploring the Car Wash Model. (Single queue single server)
3. The Car Wash Model (Single Queue two Servers)
4. Implementation of Buffered Queue Model
5. To Design Airport Model. (One queue multiple servers)
6. To Design a superstore model (Two queue and two servers)
7. To Design a Billing System (Two queues one Server)

**2020**

**AMITY UNIVERSITY HARYANA**

**GURUGRAM**

# Syllabus - First Semester

## ENGINEERING MATHEMATICS-I

**Course Code: CIV2113**

**Credit Units: 04**

### Course Objective:

The knowledge of Mathematics is necessary for a better understanding of almost all the Engineering and Science subjects. Here our intention is to make the students acquainted with the concept of basic topics from Mathematics, which they need to pursue their Engineering degree in different disciplines.

### Course Contents:

#### Module I: Differential Calculus

Successive differentiation, Leibnitz's theorem (without proof), Mean value theorem, Taylor's theorem (proof), Remainder terms, Asymptote & Curvature, Partial derivatives, Chain rule, Differentiation of Implicit functions, Exact differentials, Tangents and Normals, Maxima, Approximations, Differentiation under integral sign, Jacobians and transformations of coordinates.

#### Module II: Integral Calculus

Fundamental theorems, Reduction formulae, Properties of definite integrals, Applications to length, area, volume, surface of revolution, improper integrals, Multiple Integrals-Double integrals, Applications to areas, volumes.

#### Module III: Ordinary Differential Equations

Formation of ODEs, Definition of order, degree & solutions, ODE of first order: Method of separation of variables, homogeneous and non homogeneous equations, Exactness & integrating factors, Linear equations & Bernoulli equations, General linear ODE of  $n^{\text{th}}$  order, Solution of homogeneous equations, Operator method, Method of undetermined coefficients, Solution of simple simultaneous ODE.

#### Module IV: Vector Calculus

Scalar and Vector Field, Derivative of a Vector, Gradient, Directional Derivative, Divergence and Curl and their Physical Significance, Arc Length, Tangent, Directional Derivative, Evaluation of Line Integral, Green's Theorem in Plane (without proof), Representation of Surfaces, Tangent Plane and Surface Normal, Surface Integral, Stoke's Theorem (without proof), Gauss Divergence Theorem (without proof).

# ENGINEERING CHEMISTRY

Course Code: CIV2114

Credit Units: 02

## Course Objective:

Four basic sciences, Physics, Chemistry, Mathematics and Biology are the building blocks in engineering and technology. Chemistry is essential to develop analytical capabilities of students, so that they can characterize, transform and use materials in engineering and apply knowledge in their field. All engineering fields have unique bonds with chemistry whether it is Aerospace, Mechanical, Environmental and other fields the makeup of substances is always a key factor, which must be known. For electronics and computer science engineering, apart from the material, computer modeling and simulation knowledge can be inherited from the molecule designing. The upcoming field of technology like Nanotechnology and Biotechnology depends fully on the knowledge of basic chemistry. With this versatile need in view, course has been designed in such a way so that the student should get an overview of the whole subject.

## Course Contents:

### Module I: Water Technology

Introduction and specifications of water,  
Hardness and its determination (EDTA method only), Alkalinity,  
Boiler feed water, boiler problems – scale, sludge, priming & foaming: causes & prevention, Boiler problems – caustic embrittlement & corrosion: causes & prevention,  
Carbonate & phosphate conditioning, colloidal conditioning & calgon treatment  
Water softening processes: Lime – soda process, Ion exchange method, Water for domestic use.

### Module II: Fuels

Classification, calorific value of fuel, (gross and net), Determination of calorific value of fuels, bomb calorimeter, Solid fuels - Proximate and ultimate analysis, Octane & Cetane No. and its significance.  
Numericals on combustion

### Module III: Instrumental Methods of analysis

Introduction; Principles of spectroscopy; Laws of absorbance  
IR: Principle, Instrumentation, Application  
UV: Principle, Instrumentation, Application  
NMR: Principle, Instrumentation, Application

### Module IV: Lubricants

Introduction; Mechanism of Lubrication; Types of Lubricants; Chemical structure related to Lubrication;  
Properties of lubricants; Viscosity and Viscosity Index; Iodine Value; Aniline Point; Emulsion number; Flash Point; Fire Point; Drop Point; Cloud Point; Pour Point.  
Selection of Lubricants.

### Module V: Corrosion

Introduction, Mechanism of dry and wet corrosion,  
Types of corrosion-Galvanic, Concentration cell, soil, pitting, intergranular, waterline. Passivity.  
Factors influencing corrosion. Corrosion control.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE

# ELEMENTS OF MECHANICAL ENGINEERING

**Course Code: CIV2104**

**Credit Units: 02**

## **Course Objective:**

The objective of this course is to impart the basic knowledge of thermodynamics, stress- strain, materials & their properties and various manufacturing processes to the students of all engineering discipline.

## **Course Contents:**

### **Module I: Fundamental Concepts**

Definition of thermodynamics, system, surrounding and universe, phase, concept of continuum, macroscopic & microscopic point of view, Thermodynamic equilibrium, property, state, path, process, cyclic process, Zeroth, first and second law of thermodynamics, Carnot Cycle, Introduction to I.C. Engines-two & four stroke S.I. and C.I. engines. Otto cycle. Diesel cycle.

### **Module II: Stress And Strain Analysis**

Simple stress and strain: introduction, normal shear, and stresses-strain diagrams for ductile and brittle materials. Elastic constants, one-dimensional loadings of members of varying cross-section, Strain Energy, Properties of material-strength, elasticity, stiffness, malleability, ductility, brittleness, hardness and plasticity etc; Concept of stress and strain stress strain diagram, tensile test, impact test and hardness test.

### **Module III: Casting & Forging**

Introduction of casting, pattern, mould making procedures, sand mould casting, casting defects, allowances of pattern. Forging-introduction, upsetting & drawing out, drop forging, press forging & m/c forging

### **Module IV: Welding & Sheet metal working:**

Introduction of welding processes, classification, gas welding, arc welding, resistance welding. Introduction to sheet metal shop, Shearing, trimming, blanking, piercing, shaving, notching, stretch forming, nibbling coining, embossing and drawing.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# INTRODUCTION TO COMPUTERS AND PROGRAMMING IN C

**Course Code: CIV2105**

**Credit Units: 03**

## **Course Objective:**

The objective of this course module is to acquaint the students with the basics of computers system, its components, data representation inside computer and to get them familiar with various important features of procedure oriented programming language i.e. C.

## **Course Contents:**

### **Module I: Introduction**

Introduction to computer, history, von-Neumann architecture, memory system (hierarchy, characteristics and types), H/W concepts (I/O Devices), S/W concepts (System S/W & Application S/W, utilities). Data Representation: Number systems, character representation codes, Binary, octal, hexadecimal and their interconversions. Binary arithmetic, floating point arithmetic, signed and unsigned numbers, Memory storage unit.

### **Module II: Programming in C**

History of C, Introduction of C, Basic structure of C program, Concept of variables, constants and data types in C, Operators and expressions: Introduction, arithmetic, relational, Logical, Assignment, Increment and decrement operator, Conditional, bitwise operators, Expressions, Operator precedence and associativity. Managing Input and output Operation, formatting I/O.

### **Module III: Fundamental Features in C**

C Statements, conditional executing using if, else, nesting of if, switch and break Concepts of loops, example of loops in C using for, while and do-while, continue and break. Storage types (automatic, register etc.), predefined processor, Command Line Argument.

### **Module IV: Arrays and Functions**

One dimensional arrays and example of iterative programs using arrays, 2-D arrays Use in matrix computations.

Concept of Sub-programming, functions Example of user defined functions. Function prototype, Return values and their types, calling function, function argument, function with variable number of argument, recursion.

### **Module V: Advanced features in C**

Pointers, relationship between arrays and pointers Argument passing using pointers, Array of pointers. Passing arrays as arguments.

Strings and C string library.

Structure and Union. Defining C structures, Giving values to members, Array of structure, Nested structure, passing strings as arguments.

File Handling.

## **Examination Scheme:**

# ELECTRICAL SCIENCE

**Course Code: CIV2106**

**Credit Units: 03**

## **Course Objective:**

The objective of the course is to provide a brief knowledge of Electrical Engineering to students of all disciplines. This Course includes some theorems related to electrical, some law's related to flow of current, voltages, basic knowledge of Transformer, basic knowledge of electromagnetism, basic knowledge of electrical network.

## **Course Contents:**

### **Module I: Basic Electrical Quantities**

Basic Electrical definitions-Energy, Power, Charge, Current, Voltage, Electric Field Strength, Magnetic Flux Density, etc., Resistance, Inductance and Capacitance. Ideal Source, Independent Source and Controlled Source

### **Module II: Network Analysis Techniques & Theorems**

Circuit Principles: Ohm's Law, Kirchoff's Current Law, Kirchoff's Voltage Law Network Reduction: Star-Delta Transformation, Source Transformation, Nodal Analysis, Loop analysis. Superposition theorem, Thevenin's Theorem, Norton's theorem and Reciprocity theorem.

### **Module III: Alternating Current Circuits**

Peak, Average and RMS values for alternating currents, Power calculation: reactive power, active power, Complex power, power factor, impedance, reactance, conductance, susceptance Resonance: series Resonance, parallel resonance, basic definition of Q factor & Bandwidth.

### **Module IV: Transformers**

Basic Transformer Operation principle, Construction, Voltage relations, current relations, Linear circuit models, open circuit test, short circuit test, Transformer Efficiency.

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

# ELEMENTS OF MECHANICAL ENGINEERING LAB

Course Code: CIV2109

Credit Units: 01

## Course Contents:

1. Welding
  - (a) Arc Welding
    - Butt Joint
    - Lap Joint
    - T Joint
  - (b) Gas Welding
    - Butt Joint
    - Lap Joint
    - Brazing of Broken pieces
2. Foundry
  - Sand mould casting by single piece pattern & Split pattern bracket with cores
3. Sheet Metal
  - Dust Bin
  - Mug
  - Funnel
  - Cylindrical Mug with handle-Rectangular
4. Fitting Shop
  - Male – Female Joint
  - Rectangular piece
  - Filing the job

## Examination Scheme:

A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## PROGRAMMING IN C LAB

**Course Code: CIV2110**

**Credit Units: 01**

**Software Required:** Turbo C

### Course Contents:

- C program involving problems like finding the nth value of cosine series, Fibonacci series. Etc.
- C programs including user defined function calls
- C programs involving pointers, and solving various problems with the help of those.
- File handling

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# ELECTRICAL SCIENCE LAB

Course Code: CIV2111

Credit Units: 01

## List of Experiments:

1. To verify KVL & KCL in the given network.
2. To verify Superposition Theorem.
3. To verify Maximum Power Transfer Theorem.
4. To verify Reciprocity Theorem.
5. To determine and verify  $R_{Th}$ ,  $V_{Th}$ ,  $R_N$ ,  $I_N$  in a given network.
6. To perform open circuit & short circuit test on a single-phase transformer.
7. To study transient response of a given RLC Circuit.
8. To perform regulation, ratio & polarity test on a single-phase transformer.
9. To measure power & power factor in a three phase circuit by two wattmeter method.
10. To measure power & power factor in a three phase load using three ammeter & three voltmeter method.

## Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# ENGINEERING GRAPHICS LAB

**Course Code: CIV2112**

**Credit Units: 01**

## **Course Objective:**

This course will provide students concepts on the drawings of different curves like straight line, parabola, ellipse etc. After completion of this course, students will be able to draw different figures manually and will be capable of using various instruments involved in drawings.

## **Course Contents:**

### **Module I: General**

Importance, Significance and scope of engineering drawing, Lettering, Dimensioning, Scales, Sense of proportioning, Different types of projections, Orthographic Projection, B.I.S. Specifications.

### **Module II: Projections of Point and Lines**

Introduction of planes of projection, Reference and auxiliary planes, projections of points and Lines in different quadrants, traces, inclinations, and true lengths of the lines, projections on Auxiliary planes, shortest distance, intersecting and non-intersecting lines.

### **Module III: Planes other than the Reference Planes**

Introduction of other planes (perpendicular and oblique), their traces, inclinations etc., Projections of points and lines lying in the planes, conversion of oblique plane into auxiliary Plane and solution of related problems.

### **Module IV: Projections of Plane Figures**

Different cases of plane figures (of different shapes) making different angles with one or both reference planes and lines lying in the plane figures making different given angles (with one of both reference planes). Obtaining true shape of the plane figure by projection.

### **Module V: Projection of Solids**

Simple cases when solid is placed in different positions, Axis faces and lines lying in the faces of the solid making given angles.

### **Module VI: Development of Surface**

Development of simple objects with and without sectioning. Isometric Projection

## **Examination Scheme:**

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## Course Contents:

### List of Experiments:

(Any 10 Experiments)

1. To determine the ion exchange capacity of a given cation exchanger.
2. To determine the temporary, permanent and total hardness of a sample of water by complexometric titration method.
3. To determine the type and extent of alkalinity of given water sample.
4. To determine the number of water molecules of crystallization in Mohr's salt (ferrous ammonium sulphate) provided standard potassium dichromate solution (0.1N) using diphenylamine as internal indicator.
5. To determine the ferrous content in the supplied sample of iron ore by titrimetric analysis against standard  $K_2Cr_2O_7$  solution using potassium ferricyanide  $[K_3Fe(CN)_6]$  as external indicator.
6. (a) To determine the surface tension of a given liquid by drop number method.  
(b) To determine the composition of a liquid mixture A and B (acetic acid and water) by surface tension method.
7. To prepare and describe a titration curve for phosphoric acid – sodium hydroxide titration using pH-meter.
8. (a) To find the cell constant of conductivity cell.  
(b) Determine the strength of hydrochloric acid solution by titrating it against standard sodium hydroxide solution conductometrically
9. Determination of Dissolved oxygen in the given water sample.
- 10 To determine the total residual chlorine in water.
- 11 Determination of amount of oxalic acid and  $H_2SO_4$  in 1 L of solution using N/10 NaOH and N/10  $KMnO_4$  solution.
- 12 Determination of viscosity of given oil by means of Redwood viscometer I.
- 13 To determine flash point and fire point of an oil by Pensky Martin's Apparatus
- 14 To determine the Iodine value of the oil.

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# Syllabus - Second Semester

## ENGINEERING MATHEMATICS-II

Course Code: CIV2208

Credit Units: 04

### Course Objective:

The knowledge of Mathematics is necessary for a better understanding of almost all the Engineering and Science subjects. Here our intention is to make the students acquainted with the concept of basic topics from Mathematics, which they need to pursue their Engineering degree in different disciplines.

### Course Contents:

#### Module I: Linear Algebra

Hermitian and Skew Hermitian Matrix, Unitary Matrix, Orthogonal Matrix, Elementary Row Transformation, Reduction of a Matrix to Row Echelon Form, Rank of a Matrix, Consistency of Linear Simultaneous Equations, Gauss Elimination Method, Gauss-Jordan Method, Eigen Values and Eigen Vectors of a Matrix, Caley-Hamilton Theorem, Diagonalization of a Matrix, Vector Space, Linear Independence and Dependence of Vectors, Linear Transformations.

#### Module II: Infinite Series

Definition of Sequence, Bounded Sequence, Limit of a Sequence, Series, Finite and Infinite Series, Convergence and Divergence of Infinite series, Cauchy's Principle of Convergence, Positive Term Infinite Series, Comparison test, D'Alembert's Ratio test, Raabe's Test, Cauchy's nth root Test, Logarithmic Test, Alternating Series, Leibnitz's Test, Absolute and conditional convergence, Uniform Convergence, Power Series and its Interval of Convergence.

#### Module III: Complex Analysis

De Moivre's Theorem and Roots of Complex Numbers, Logarithmic Functions, Circular, Hyperbolic Functions and their Inverses.

Functions of a Complex Variables, Limits, Continuity and Derivatives, Analytic Function, Cauchy-Riemann Equations (without proof), Harmonic Function, Harmonic Conjugates, Conformal Mapping, Bilinear Transformations, Complex Line Integral, Cauchy Integral Theorem, Cauchy Integral Formula, Derivative of Analytic Function, Power Series, Taylor Series, Laurent Series, Zeros and

Singularities, Residues, Residue Theorem, Evaluation of Real Integrals of the Form  $\int_{-\infty}^{\infty} \frac{f(x)}{F(x)} dx$ .

#### Module IV: Statistics and Probability

Moments, Skewness, Kurtosis, Random Variables and Probability Distribution, Mean and Variance of a Probability Distribution, Binomial Distribution, Poisson Distribution and Normal Distribution.

### Examination Scheme:

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	15	20	20	20	5

C – Project + Presentation

I – Interaction/Conversation Practice

# ENGINEERING PHYSICS

Course Code: CIV2209

Credit Units: 03

## Course Objective:

Aim of this course is to introduce the students to fundamentals of graduate level physics, which form the basis of all applied science and engineering

## Course Contents:

### Module I: Oscillations & Waves

**Oscillations:** Introduction to S.H.M. Damped Oscillations: Differential Equation and its solution, logarithmic decrement, Quality Factor, Different conditions of damping of harmonic oscillations. Forced oscillations: Amplitude and Frequency Response, Resonance, Sharpness of Resonance

**Plane Progressive Waves:** Differential Equation and Solution, Superposition of Progressive Waves stationary waves.

**Ultrasonics:** Generation and application of ultrasonic waves.

### Module II: Wave Nature of Light

**Interference:** Coherent Sources, Conditions of interference, Interference due to division of wavefront, Fresnel's biprism Interference due to division of amplitude, Newton's rings, Interference due to thin films, .

**Diffraction:** Fresnel and Fraunhofer diffraction, Fraunhofer diffraction at a single slit, double slit, N Slits, Transmission grating, Rayleigh criterion and Resolving power of grating.

**Polarization:** Birefringence, Nicol prism, Production and analysis of plane, circularly and elliptically polarized light, Half and quarter wave plates, Optical rotation, Polarimeter.

### Module III: Electromagnetism

Scalar and vector fields, gradient of a scalar field, physical significance of gradient, equipotential surface. Line, surface and volume integrals, Divergence and curl of vector field and mathematical analysis physical significance, Electric flux, Gauss' law, Proof and Applications, Gauss divergence and Stokes theorems.

Differential form of Gauss' Law, Amperes' Law, Displacement current, Faraday's Law, Maxwell equations in free space & isotropic media (Integral form & differential form), EM wave propagation in free space, Poynting vector.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# OBJECT ORIENTED PROGRAMMING IN C++

Course Code: CIV2203

Credit Units: 02

## Course Objective:

The objective of this module is to introduce object oriented programming. To explore and implement the various features of OOP such as inheritance, polymorphism, Exceptional handling using programming language C++. After completing this course student can easily identify the basic difference between the programming approaches like procedural and object oriented.

## Course Contents:

### Module I: Introduction

Review of C, Difference between C and C++, Procedure Oriented and Object Oriented Approach. Basic Concepts: Objects, classes, Principals like Abstraction, Encapsulation, Inheritance and Polymorphism. Dynamic Binding, Message Passing. Characteristics of Object-Oriented Languages. Introduction to Object-Oriented Modeling techniques (Object, Functional and Dynamic Modeling).

### Module II: Classes and Objects

Abstract data types, Object & classes, attributes, methods, C++ class declaration, Local Class and Global Class, State identity and behaviour of an object, Local Object and Global Object, Scope resolution operator, Friend Functions, Inline functions, Constructors and destructors, instantiation of objects, Types of Constructors, Static Class Data, Array of Objects, Constant member functions and Objects, Memory management Operators.

### Module III: Inheritance

Inheritance, Types of Inheritance, access modes – public, private & protected, Abstract Classes, Ambiguity resolution using scope resolution operator and Virtual base class, Aggregation, composition vs classification hierarchies, Overriding inheritance methods, Constructors in derived classes, Nesting of Classes.

### Module IV: Polymorphism

Polymorphism, Type of Polymorphism – Compile time and runtime, Function Overloading, Operator Overloading (Unary and Binary) Polymorphism by parameter, Pointer to objects, this pointer, Virtual Functions, pure virtual functions.

### Module V: Strings, Files and Exception Handling

Manipulating strings, Streams and files handling, formatted and Unformatted Input output. Exception handling, Generic Programming – function template, class Template Standard Template Library: Standard Template Library, Overview of Standard Template Library, Containers, Algorithms, Iterators, Other STL Elements, The Container Classes, General Theory of Operation, Vectors.

# ENGINEERING MECHANICS

Course Code: CIV2204

Credit Units: 03

## Course Objective:

Objective of this course is to provide fundamental knowledge of force system and its effect on the behaviour of the bodies that may be in dynamic or in static state. It includes the equilibrium of different structures like beams, frames, truss etc and the force transfer mechanism in the different components of a body under given loading condition.

## Course Contents:

### Module I: Force system & Structure

Free body diagram, Equilibrium equations and applications. Plane truss, perfect and imperfect truss, assumption in the truss analysis, analysis of perfect plane trusses by the method of joints, method of section.

### Module II: Friction

Static and Kinetic friction, laws of dry friction, co-efficient of friction, angle of friction, angle of repose, cone of friction, friction lock, efficiency of screw jack, transmission of power through belt

### Module III: Distributed Force

Determination of center of gravity, center of mass and centroid by direct integration and by the method of composite bodies, mass moment of inertia and area moment of inertia by direct integration and composite bodies method, radius of gyration, parallel axis theorem, Pappus theorems and its application, polar moment of inertia.

### Module IV: Work -Energy

Work energy equation, conservation of energy, Virtual work, impulse, momentum conservation, impact of bodies, co-efficient of restitution, loss of energy during impact, D'Alembert principle

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

## OBJECT ORIENTED PROGRAMMING IN C++ LAB

**Course Code: CIV2206**

**Credit Units: 01**

**Software Required:** Turbo C++

### Course Contents:

- Creation of objects in programs and solving problems through them.
- Different use of private, public member variables and functions and friend functions.
- Use of constructors and destructors.
- Operator overloading
- Use of inheritance in and accessing objects of different derived classes.
- Polymorphism and virtual functions (using pointers).
- File handling.

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab

# ENGINEERING MECHANICS LAB

Course Code: CIV2207

Credit Units: 01

## Engineering Mechanics:

1. To verify the law of Force Polygon
2. To verify the law of Moments using Parallel Force apparatus. (Simply supported type)
3. To determine the co-efficient of friction between wood and various surface (like
4. Leather, Wood, Aluminum) on an inclined plane.
5. To find the forces in the members of Jib Crane.
6. To determine the mechanical advantage, Velocity ratio and efficiency of a screw jack.
7. To determine the mechanical advantage, Velocity ratio and Mechanical efficiency of the
8. Wheel and Axle
9. To determine the MA, VR,  $\eta$  of Worm Wheel (2-start)
10. Verification of force transmitted by members of given truss.
11. To verify the law of moments using Bell crank lever
12. To find CG and moment of Inertia of an irregular body using Computation method

## Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# ENGINEERING PHYSICS LAB

Course Code: CIV2210

Credit Units: 01

## List of Experiments:

1. To determine the wavelength of sodium light by Newton's rings method.
2. To determine the dispersive power of the material of prism with the help of a spectrometer.
3. To determine the specific rotation of sugar by Bi-quartz or Laurent half shade polarimeter.
4. To determine the speed of ultrasonic waves in liquid by diffraction method.
5. To determine the width of a narrow slit using diffraction phenomena.
6. To determine the temperature coefficient of platinum wire, using a platinum resistance thermometer and a Callender & Griffith's bridge.
7. To determine the value of specific charge (ratio of  $e/m$ ) of an electron by Thomson method.
8. To determine the internal resistance of Leclanche cell with the help of Potentiometer.
9. To determine the resistance per unit length of a Carey Foster's bridge wire and also to find out the specific resistance of a given wire.
10. To plot graph showing the variation of magnetic field with distance along the axis of a circular coil carrying current, and hence estimate the radius of the coil.
11. To determine the value of acceleration due to gravity (' $g$ ') in the laboratory using bar pendulum.
12. To determine the moment of inertia of a flywheel about its own axis of rotation.
13. To determine the density of material of the given wire with the help of sonometer.

## Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# Syllabus - Third Semester

## BUILDING TECHNOLOGY

**Course Code: CIV2304**

**Credit Units: 02**

### Course Objective:

The course covers building materials and their testing, cement and its applications foundation and structural members of building. Different areas and utilities of building like floors, doors etc.

### Course Contents:

#### Module I

Building stones - Classification of rocks - Quarrying - Dressing - Properties and uses of common type of stones; Timber - Defects - Seasoning - Decay - Preservation - Plywood, fibre board, particle board; Clay products - Bricks - Manufacture - IS classifications - Properties and testing - Types of bricks - Tiles - Manufacture, properties and uses - Types of tiles; Ceramic products - Lime - Classification - Manufacture, properties and uses.

#### Module II

Cement - Ingredients - Manufacture - Types of cement - Properties and testing - Uses; Mortar - Sand - Properties - Types of mortar and uses; Concrete - Properties of fresh concrete and tests - Proportioning of concrete mixes - Properties of hardened concrete and tests – Recent developments in concrete; Iron and steel - Structural sections - Properties and uses of structural steel - Recent developments; Miscellaneous materials - Glass - Plastics -A.C.sheets – Thermocole.

#### Module III

Foundation - Timbering of foundation trenches - Bearing capacity of soils - Improvement of bearing capacity - Settlement of foundation - Description of spread, grillage, raft and pile foundations; Brick and stone masonry - Bonds in brick work - Types of stone masonry -Cavity walls - Lintels and arches; concrete construction - Batching, mixing, placing, compacting and curing of concrete - form work - Precast concrete - Prestressed concrete - Recent developments in concreting; Partition walls - Types and features.

#### Module IV

Floors and flooring – Different types and applications; Doors, windows and ventilators - Different types; Finishing works; Building Failures - Concrete failure - Steel failure -Foundation failure - Other types of failures – Causes and Remedial measures – Building repairs - Shoring - Underpinning – Scaffolding; Tall buildings - Framed structures - Steel and concrete frames – Joints in steel and concrete frames - Introduction to prefabrication – Slip form and lift slab constructions; Fire proof construction - Fire load - Fire resisting properties of building materials – Fire extinguishing methods – Fire proof construction methods.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# SURVEYING-I

**Course Code: CIV2305**

**Credit Units: 02**

## **Course Objective:**

Surveying is the basic element of mapping areas for civil engineering construction. Methods of surveying including leveling, and leveling methods, contours, estimation of volumes etc are covered.

## **Course Contents:**

### **Module I**

Introduction - classification of surveys - plane surveying - geodetic surveying – topographic surveying - reconnaissance - principle of working from whole to part - provision of control -conventional signs - chain survey - instruments - principles of chain survey - field book - plotting - tie line and check line - chaining and ranging - obstacles - chaining on sloping ground - errors in chain survey - uses of cross staff and optical square

### **Module II**

Compass survey - prismatic compass - surveyor's compass - whole circle and reduced bearing- true and magnetic bearing - dip and declination - local attraction - traversing - plotting - error of closure - graphical and analytical adjustments - plane table survey - instruments and accessories - different methods - orientation - advantages and disadvantages of plane tabling -two point problem - three point problem - errors in plane tabling - minor instruments – hand levels - clinometer - Ceylon ghat tracer - hypsometer - pantagraph -ediograph - box sextant -telescopic alidade

### **Module III**

Levelling - definition of level surfaces - mean sea level - reduced level - bench marks - levelling instruments - temporary and permanent adjustments - fly leveling - booking - reduction of levels - corrections for refraction and curvature - reciprocal leveling - longitudinal levelling and cross sectioning - contour survey - definition - characteristics of contour - uses of contour - methods of contouring - direct and indirect interpolation – plotting - areas and volumes - trapezoidal rule - Simpson's rule - area from latitude and departure - uses of planimeter - volumes - trapezoidal and prismoidal formula

### **Module IV**

Total Station – introduction – EDM- measurement of horizontal & vertical angles – traversing – trigonometric leveling. Theodolite surveying - study of theodolite - temporary and permanent adjustments -measurement of horizontal angles - method of repetition and reiteration - measurement of vertical angles - theodolite traverse - calculation of co ordinates - corrections - traverse table - omitted measurements - tacheometric surveying - stadia system - fixed and movable hair methods - staff held vertical and normal - instrument constants - analytic lens – tangential system - direct reading tacheometer - subtense bar – trigonometric leveling

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# STRENGTH OF MATERIALS

Course Code: CIV2312

Credit Units: 04

## Course Objective:

The objective of this course is to make the students understand the concept of stress and strain in different types of structure/machine under different loading conditions. The course also covers the simple and compound stresses due to forces, stresses and deflection in beams due to bending, torsion in circular section, strain energy, different theories of failure, stress in thin cylinder thick cylinder and spheres due to external and internal pressure.

## Course Contents:

### Module I: Simple stresses and strains

Concept of stress and strain; Hooke's law, Young's modulus, Poisson ratio, stress at a point, stress and strains in bars subjected to axial loading. Modulus of elasticity, stress produced in compound bars subject to axial loading. Temperature stress and strain calculations due to applications of axial loads and variation of temperature in single and compound walls.

### Module II: Compound stress and strains

The two dimensional system; stress at a point on a plane, principal stresses and principal planes; Mohr's circle of stress. Graphical and Analytical methods for stresses on oblique section of body. Shear force and bending moment diagrams for cantilever, simply supported and overhanging beams.

### Module III: Bending Stress

Theory of bending stresses in beams due to bending, assumptions in the simple bending theory, derivation of formula: its application to beams of rectangular, circular and channel sections, composite / flitched beams, bending and shear stresses in composite beams.

### Module IV: Torsion

Derivation of torsion equation and its assumptions. Applications of the equation of the hollow and solid circular shafts torsional rigidity, combined torsion and bending of circular shafts principal stress and maximum shear stresses under combined loading of bending and torsion, analysis of close-coiled-helical springs.

### Module V: Thin cylinders and spheres

Derivation of formulae and calculation of hoop stress, longitudinal stress in a cylinder and sphere subjected to internal pressure.

### Module VI: Columns and struts

Columns and failure of columns, Euler's formulas; Rankine-Gordon's formula, Johnson's empirical formula for axially loaded columns and their applications.

### Module VII: Slope and deflection

Relationship between moment, slope and deflection, Mohr's theorem; Moment area method; method of integration; Macaulay's method: Use of all these methods to calculate slope and deflection for the following:

- a) Cantilevers
- b) Simply supported beams with or without overhang
- c) Under concentrated loads, uniformly distributed loads or combination of concentrated and uniformly distributed loads

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# CONCRETE TECHNOLOGY

**Course Code: CIV2313**

**Credit Units: 03**

**Course Objective:** The students will be able to learn about the concrete making material materials, their significance and use. This will also enable the students to understand the manufacturing process of concrete and the precautions, various properties of concrete and different types of concrete and their application.

## **Course Contents:**

### **Module I: Materials**

Materials: cement - different types - chemical composition and physical properties - tests on cement - I.S. specifications - aggregates - classification - mechanical properties and tests as per I.S. - alkali aggregate reaction - grading requirements - heavy weight - light weight - normal weight - aggregate - sampling of aggregate - water - quality of water - permissible impurities as per I.S - admixtures - accelerators - retarders - water reducing agents – super plasticizers- use of silica fumes.

### **Module II: Manufacture**

Manufacture of concrete - measurement of materials - storage and handling - batching plant and equipment - mixing - types of mixers - transportation of concrete - pumping of concrete - placing of concrete - under water concreting - compaction of concrete - curing of concrete - ready mixed concrete - mix design - nominal mixes - design mixes - factors influencing mix design - A.C.I method - I.S method - design for high strength mixes.

### **Module III: Properties of Concrete**

Properties of concrete - fresh concrete - workability - factors affecting workability - tests for workability - segregation and bleeding - hardened concrete - factors affecting strength of concrete - strength of concrete in compression, tension and flexure - stress- strain characteristics and elastic properties - shrinkage and creep - durability of concrete - permeability - chemical attack - sulphate attack - resistance to abrasion and cavitation - resistance to freezing and thawing - resistance to fire - marine atmosphere - quality control - frequency of sampling - test specimens - statistical analysis of test results - standard deviation - acceptance criteria

### **Module IV: Special Concretes**

Special concrete - light weight concrete - high density concrete - vacuum concrete - shotcrete - Fibre reinforced concrete-polymer concrete - ferrocement - high performance concrete - self compacting concrete - types of failure - diagnosis of distress in concrete - crack control - leak proofing - guniting and jacketing techniques.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# ENGINEERING MATHEMATICS-III

Course Code: CIV2311

Credit Units: 04

## Course Objective:

The knowledge of Mathematics is necessary for a better understanding of almost all the Engineering and Science subjects. Here our intention is to make the students acquainted with the concept of basic topics from Mathematics, which they need to pursue their Engineering degree in different disciplines.

## Course Contents:

### Module I: Partial Differential Equations

Formation of PDE, Equations solvable by direct integration, Linear equations of the first order, Non-linear equations of the first order, Charpit's method, Homogeneous linear equations with constant coefficients, Non homogeneous linear equation

### Module II: Fourier Series

Periodic Functions, Fourier Series, Functions having points of discontinuity, Even or Odd Functions, Change of Interval, Half-range series, Parseval's Formula, Complex form of Fourier series, Practical Harmonic Analysis, Fourier Transforms, Sine and Cosine Transforms

### Module III: Laplace Transformation

Definition, Transforms of elementary functions, Properties of Laplace transforms, Existence conditions, Transforms of derivatives, Transforms of integrals, Evaluation of integrals by Laplace transform, Inverse transforms, Other methods of finding inverse transforms, Convolution theorem, Application to differential equations, Simultaneous linear equations with constant coefficients, Unit step functions, Periodic functions

### Module IV: Linear Programming

Formulation of the problem, Graphical method, Canonical and Standard forms of L.P.P. Simplex Method, Artificial variable Techniques-M-method, Two phase method, Degeneracy, Dual simplex method

# BASICS OF NATURAL RESOURCES MANAGEMENT

**Course Code: CIV2315**

**Credit Units: 03**

**Course Objectives:** students shall have a basic understanding of development problems associated with natural resource management, be able to explain and use basic concepts, such as water and nutrient balances, and to use GIS methods to visualise and analyse spatial data related to natural resource management.

## **Course Contents:**

### **Module I**

Introduction to Natural Resource Bases: Concept of resource, classification of natural resources. Factors influencing resource availability, distribution and uses. Interrelationships among different types of natural resources. Concern on Productivity issues. Ecological, social and economic dimension of resource management.

### **Module II**

Forest resources: forest vegetation, status and distribution, major forest types and their characteristics. Use and over-exploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forest and tribal people, forest management. Developing and developed world strategies for forestry. Land resources: Land as a resource. Dry land, land use classification, land degradation, man induced landslides, soil erosion and desertification. Landscape impact analysis, wetland ecology & management. Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems. Water ecology and management. Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources. Case studies Food resources: World food problems, changes caused by agriculture and over-grazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case-studies. Fish and other marine resources: Production, status, dependence on fish resource, unsustainable harvesting, issues and challenges for resource supply, new prospects.

### **Module III**

Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies. Resource Management Paradigms: Resource management the evolution and history of resource management paradigms. Resource conflicts: Resource extraction, access and control system. Approaches in Resource Management: Ecological approach; economic approach; ethnological approach; implications of the approaches; integrated resource management strategies. Poverty and implications in Resource Management in developing countries – Poverty in developing countries, causes and link with resources scarcity and poverty.

### **Module IV**

Management of Common International Resources: Ocean, climate, International fisheries and management commissions; Antarctica: the evolution of an international resource management regime. Case Studies: 8

1. Resource management in mountain ecosystem
2. Dry-land ecosystem
3. The management of marine and coastal resources
4. Case study of shifting cultivation
5. Mangrove ecosystem and their management

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# DISASTER MANAGEMENT & MITIGATION

**Course Code: CIV2316**

**Credit Units: 03**

## **Course Contents:**

### **Module I:**

Understanding Disasters: Meaning, nature, characteristics and types of Disasters, Causes and effects, Disaster: A Global View

### **Module II:**

Introduction to disaster Preparedness, Disaster Management: Prevention, Preparedness and Mitigation, Disaster Preparedness: Concept & Nature, Disaster Preparedness Plan, Disaster Preparedness for People and Infrastructure, Community based Disaster Preparedness Plan.

### **Module III:**

Disaster Mitigation, Disaster Mitigation: meaning and concept, Disaster Mitigation Strategies, Emerging Trends in Disaster Mitigation, Mitigation management, Role of Team and Coordination.

### **Module IV:**

Technologies for Disaster Management, Role of IT in Disaster Preparedness, Remote Sensing, GIS and GPS, Use and Application of Emerging Technologies, Application of Modern Technologies for the Emergency communication, Application and use of ICST for different disasters.

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# ENGINEERING ECONOMICS AND MANAGEMENT

**Course Code: CIV2317**

**Credit Units: 03**

**Course Objective:** This course will enable the students to understand the basics concepts of organizations' economic environment, macroeconomics, financial and inventory management.

## **Course Contents:**

### **Module I: Organizations and their Economic Environment**

Definition of Economics and Managerial Economics – Nature and Scope – Definition and Concept of Good, Want, Value, Wealth, Utility – Utility and Demand – Law of Diminishing Marginal Utility – Assumptions and Importance. Demand and Supply – Law of Demand and Law of Supply. Market price and natural price. Standard market forms- Monopoly, Perfect competition. Organisational forms- Proprietorship, partnership, Joint Stock Company – Cooperative organisation.

### **Module II: Macroeconomics**

Money- nature and functions – Inflation and Deflation – Kinds of Banking – commercial banks – Central banking – Credit instrument - Monetary Policy – International trade – Balance of trade and Balance of Payments – taxation – Direct and Indirect taxes – GST- Impact and Incidence of tax- Concept of National Income – Features with reference to developing countries.

### **Module III: Introduction to Management**

Management Theory- Characteristics of management – Systems Approach to management – Concepts of goal, objective, strategies, programmes. Decision making under certainty, uncertainty and risk – Introduction to functional areas of management – Operations management, Human resources management, marketing management.

### **Module IV: Financial and Inventory Management**

Need for Financial Management – Types of financing (Short term and long term ) - Borrowing – Equity financing – Analysis of Financial Statement – balance sheet – Profit and Loss account – Fund flow statement – Ratio Analysis . Functions and objectives of Inventory management – Decision models – Economic Order Quantity (EOQ) model – sensitivity analysis of EOQ model - inventory model with planned shortages – Periodic order quantity – single period Inventory models

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# Syllabus - Fourth Semester

## NUMERICAL ANALYSIS AND PROGRAMMING

Course Code: CIV2401

Credit Units: 03

### Course Objective:

This course deals with the techniques of numerical analysis, which gives the solution to applied problem when ordinary analytical method fails. Emphasis is given on computer programming also so that the given techniques can be used in design of engineering and scientific problems.

### Course Contents:

#### Module I

##### Solution of Algebraic and Transcendental Equation

Error in a series approximation, Bisection Method, Iteration method, Method of false position, Newton-Raphson method

##### Solutions of Simultaneous equation

Gauss elimination method, Jacobi iteration method, Gauss Seidal method

#### Module II: Interpolation

Finite Differences, Difference tables

Polynomial Interpolation: Newton's forward and backward formula

Central Difference Formulae: Gauss forward and backward formula.

Interpolation with unequal intervals: Lagrange's Interpolation, Newton Divided difference formula

#### Module III: Numerical Integration and Differentiation

Introduction, Numerical differentiation Numerical Integration: Trapezoidal rule, Simpson's 1/3 and 3/8 rules.

#### Module IV: Solution of differential Equations

Euler's Method, Runge-Kutta Methods.

#### Module V: Statistical Computation

Frequency chart, Curve fitting by method of least squares, fitting of straight lines, polynomials, exponential curves etc, Data fitting with Cubic splines.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# STRUCTURAL ANALYSIS-I

Course Code: CIV2402

Credit Units: 04

## Course Objective:

Structural Analysis, being the critical part in designing building and other structures, is important. Elastic theorems fixed and continuous beams, circular beams over simple support and theory of columns are covered in this course.

## Course Contents:

### Module I: Deflection of beams

Differential equation of the elastic curve - slope and deflection of beams by method of successive integration - Macaulay's method - Moment area method - Conjugate beam method - Deflection due to shear.

### Module II: Elastic theorems and energy principles

Strain energy and complementary energy - review of strain energy due to axial load - bending, shear and torsion - principle of superposition - principle of virtual work - Castigliano's theorem for deflection - theorem of complementary energy - Betti's theorem - Maxwell's law of reciprocal deflections - principle of least work - application of method of virtual work (unit load method) and strain energy method for determination of deflections of statically determinate beams - pin-jointed trusses and rigid frames - temperature effects.

### Module III: Fixed and continuous beams

Statically indeterminate structures - degree of static and kinematic indeterminacies - brief introduction to force and displacement methods - fixed and continuous beams - force method - analysis by consistent deformation method - application of moment area and conjugate beam methods for fixed beams - theorem of three moments for continuous beams - shear force and bending moment diagrams - deflection and support settlement.

### Module IV: Beams curved in plan

Analysis of cantilever beam curved in plan - analysis of circular beams over simple supports

### Theory of columns

Axial loading of short strut - long columns - Euler's Formula - Rankine Formula - Secant Formula - eccentric loading - direct and bending stresses - Buckling Load as an eigen value problem.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# TRANSPORTATION ENGINEERING-I

**Course Code: CIV2404**

**Credit Units: 03**

## **Course Objective:**

Modern road design and construction are covered in the syllabus.

## **Course Contents:**

### **Module I: Highway Classification, Alignment and Geometrical Design**

Introduction – Highway development in India - Classification of roads - Typical cross sections of roads in urban and rural area - Requirements and factors controlling alignment of roads - Engineering surveys for highway location - Pavement surface characteristics - Camber and width requirements – Sight distances - stopping and overtaking sight distances, overtaking zone requirements - Design of horizontal alignment - speed, radius, super elevation, methods of providing super elevation, extra widening of pavements, transition curves - Design of vertical alignment - gradient, grade compensation, summit curves and valley curves - worked out problems on all the above topics.

### **Module II: Traffic engineering**

Introduction - Road user, vehicle and traffic characteristics - Speed and volume studies - Simple worked out problems - Principles of design of at-grade intersections -Simple layouts - Objectives, classification and uses of traffic signs and markings - Design of isolated signals by Webster's method.

### **Module III: Pavement Materials and Design**

Desirable properties and testing of highway materials: road aggregates, bituminous materials and subgrade soil - Factors influencing the design of pavements - CBR method and IRC guidelines of flexible pavements design - Design of rigid pavements using IRC charts - worked out problems.

### **Module IV: Pavement Construction and Maintenance**

Historical development of road construction -Construction of earth roads, WBM roads, stabilized roads, bituminous pavements, cement concrete roads and joints in cement concrete roads - Types and causes of failures in flexible & rigid pavements.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# SURVEYING-II

**Course Code: CIV2411**

**Credit Units: 02**

## **Course Objective:**

Geoinformatics is an important data system for all civil engineering activities including construction of structures, dams, water systems etc. Correct and reliable information and geographical data are a requirement today. The course thus addresses this issue.

## **Course Contents:**

### **Module I**

Triangulation - principle - reconnaissance - selection of site for base line - selection of stations - orders of triangulation - triangulation figures - scaffolds and signals - marking of stations - intervisibility and heights of stations - satellite stations - base line measurement - equipment and corrections - adjustment of observations.

### **Module II**

Survey adjustments and theory of errors – introduction – laws of accidental errors – probability curve – principle of least squares – laws of weights – probable error – normal equation – most probable value – method of correlates – angle adjustment – station adjustment – figure adjustment – adjustment of triangles.

### **Module III**

Curves - types of curves - elements of a curve - simple curves - different methods of setting out – introduction to compound curves - reverse curves, transition curves, vertical curves.

### **Module IV**

Photogrammetry – terrestrial and aerial photogrammetry – heights and distances from Photographs – flight planning – photo mosaic – photo interpretation – applications of photogrammetry. GNSS – GPS – differential GPS.

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# FLUID MECHANICS

Course Code: CIV2412

Credit Units: 04

## Course Objective:

The objective of Fluid Mechanics subject is that students should understand the, properties of fluids, pressure measurement devices, hydraulic forces on surfaces, buoyancy and flotation in fluids, kinematics and static behaviour of fluids, dimension and model analysis, laminar and turbulent flow, flow through pipes and orifices, boundary layer theory.

## Course Contents:

### Module I: Fluid Properties and Fluid Statics

Newtonian and Non-Newtonian Fluids; Viscosity; Incompressible and compressible fluids, compressibility. Forces on plane surfaces, forces on curved surfaces, buoyant forces, and stability of floating bodies, metacentre and metacentre height.

### Module II: Kinematics of Fluid Motion

Steady and unsteady flow; uniform and non-uniform flow; Laminar and turbulent flow; streamline, path line and streak line; continuity equation, irrotational and rotational flow, velocity potential and stream function, vortex flow, free and forced vortex.

### Module III: Dynamics of Fluid Flow

Euler's equation of motion and its integration to yield Bernoulli's equation, its practical applications – Pilot tube, Venturi meter; steady flow momentum equation, force exerted on a pipe bend.

### Module IV: Dimensional Analysis and Principles of Similarity

Buckingham  $\pi$ -Theorem and its applications, Geometric, Kinematics and Dynamic similarity; Dimensionless numbers-Reynolds, Froude, Euler, Mach, Weber Number and their significance.

### Module V: Laminar and Turbulent Flow

Reynold's experiment, critical velocity, steady laminar flow through a circular tube, flow between parallel plates. Transition from laminar to turbulent flow, courses of turbulence, velocity distribution law near a solid boundary, velocity distribution in rough pipes, Hazen – Williams's formula.

### Module VI: Analysis of Pipe Flow

Energy losses, minor losses in pipe lines, concept of equivalent length, flow between two reservoirs, and multiple pipe systems – in series and parallel, siphon.

### Module VII: Flow Measurements

Measurement of flow using Venturi meter, orifice meter, Pitot tube, measurement of flow in open channels – rectangular, triangular, trapezoidal weir, Cipolletti weir.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# NUMERICAL ANALYSIS AND PROGRAMMING LAB

**Course Code: CIV2405**

**Credit Units: 01**

## **Course Contents:**

**Assignments will be provided for the following:**

- Analysis of various numerical and statistical techniques

## **Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# SURVEYING PRACTICAL

**Course Code: CIV2407**

**Credit Units: 01**

## **Course Contents:**

### ***List of Exercises:***

1. Introduction to Total Station including the settings etc.
2. Measurement of horizontal distance using Total Station.
3. Introduction to Measurement of Horizontal and Vertical angles by the use of Total Station.
4. Traversing by use of Total Station.
5. Setting out of Simple Curves – Linear Method.
6. Setting out of Simple Curves – Angular Method.
7. Setting out of Transition Curve.
8. Layout of a building.

### **Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## FLUID MECHANICS LAB

**Course Code: CIV2413**

**Credit Units: 01**

### **Course Contents:**

- 1.Verification of Bernoulli's Theorem
- 2.Experiment using Venturimeter
- 3.Determination of coefficient of Discharge  $C_d$ ,  $C_c$ ,  $C_l$  Using
- 4.Circular/triangular/rectangular orifice
- 5.To find major head losses in a pipe line
- 6.To find minor head losses in a pipe line (sudden expansion/contraction/bend)

### **Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# FLUID MACHINERY

**Course Code: CIV2414**

**Credit Units: 03**

## **Course Objective:**

Fluid power systems cover generation, transmission, and control applications of power by using pressurized fluids. This course imparts the knowledge of different fluid power systems (pneumatic and hydraulic) which are used in industries and hydropower plants.

## **Course Contents:**

### **Module I: Introduction**

Euler's equations for turbo machines; impulse and reaction forces due to fluid systems on stationary and moving system of vanes; jet propulsion.

### **Module II: Water Turbines**

Classification: Pelton, Francis, Propeller and Kaplan turbines; velocity triangles; efficiency; draft tubes, governing.

### **Module III: Pumps**

Centrifugal pumps, velocity triangles, efficiency, turbine pumps, axial and mixed flow pumps.

### **Module IV: Performance of Fluid Machines**

Similarity laws applied to rotodynamic machines; specific speed, unit quantities; characteristic curves; use of models; cavitations and attendant problems in turbo machines; selection of turbines hydroelectric plants.

### **Module V: Hydraulic Power Transmission**

Transmission of hydraulic power through pipe lines; water hammer; precautions against water hammer in turbine and pump installations: hydraulic ram.

### **Module VI: Power Hydraulics**

Positive pumps: gear, vane, screw, pump, variable delivery valves: flow control, pressure control, direction control, solenoid operated valve, hydraulic circuits, fluid coupling and torque converter.

Pneumatic Power: Basic principles, comparison of pneumatic and hydraulic Systems.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# HYDROLOGY AND FLOOD CONTROL

**Course Code: CIV2415**

**Credit Units: 03**

## **Course Objective:**

This course deals with advanced concept of hydrology.

## **Course Contents:**

### **Module I**

Introduction hydrologic cycle, water budget equations, world water balance, application in engineering. Precipitation: Forms of precipitation, measurement, depth-area-duration & intensity-duration- frequency relationships, probable maximum precipitation.

### **Module II**

Abstraction from Precipitation: Evaporation – process, measurement and estimation; Evapotranspiration- measurement and estimation; Initial Losses- Interception & Depression storage; Infiltration- process, capacities, indices, measurement & estimation

### **Module III: Runoff and Hydrographs**

Hydrograph, runoff characteristics of stream, Yield, Rainfall-runoff correlations, flow duration curve, mass curve, droughts and floods. Factors affecting flood hydrographs, unit hydrograph and its analysis, s-curve hydrograph, synthetic and instantaneous unit hydrographs.

### **Module IV: Flood**

Rational method, empirical formulae, unit hydrograph method, flood frequency studies, statistical analysis, regional flood frequency analysis, design storm & design flood, risk/reliability and safety factor; Flood Routing: Basic equation, hydrologic storage routing & attenuation, hydrologic channel routing, flood forecasting & control, hydraulic method of flood routing.

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# REMOTE SENSING AND GEOGRAPHIC INFORMATION SYSTEMS

Course Code: CIV2416

Credit Units: 03

## Course Objective:

This course deals with remote sensing and geographic information systems.

## Course Contents:

### Module I

Concepts and foundations of remote sensing- electromagnetic spectrum, energy sources and radiation principles, energy interactions in the atmosphere and with earth surface features, data acquisition and interpretation, reference data, ideal remote sensing systems, characteristics of real remote sensing systems. Classification of maps, map scale, spatial reference system, map projections, grid systems, linkage of GIS to remote sensing. Radar principle- Factors affecting microwave measurements, radar wavebands, SLAR systems, interaction between microwaves and earth's surface. Basic principles of photogrammetry – geometrical characteristics of aerial photographs, photographic scale, ground coverage, area measurement, relief displacement of vertical features, image parallax, ground control, mapping.

### Module II

Remote sensing platforms and sensors - Satellite system parameters, sensor parameters, imaging sensor systems, earth resources and meteorological satellites with microwave sensors, scanners, radiometers. The Indian Remote Sensing Program. Data types and format, scale and legend.

Visual Image Interpretation - Digital Image Processing - Basic character of a digital image, image rectification & restoration, preprocessing, registration, enhancement, contrast, spatial feature and multi image manipulation, spatial filtering, image transformations, image classification, performance analysis, data merging and GIS integration.

### Module III

GIS overview – what is GIS, components, definitions & terminology, uses, GIS queries & architecture, theoretical models & framework, GIS technology trends, data sources, collection, and entry, data formats & standards, types of analysis, spatial data modeling, GIS data management, database models, storage of data, object based GIS models, data input & editing, data quality issues. Data analysis & modeling – Integration of remote sensing & GIS.

### Module IV

Application of Remote Sensing& GIS in natural resources management with specific reference to impact of mining activities on environment, biodiversity, coastal zone protection, flood management, forest protection, monitoring urban growth, managing watersheds & water resources, hydrologic modeling, preventing natural disasters etc.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# Syllabus - Fifth Semester

## STRUCTURAL ANALYSIS-II

**Course Code: CIV2501**

**Credit Units: 03**

**Course Objective:**

The course builds upon the earlier course of Structural Analysis I and deals with more advanced methods.

**Course Contents:**

**Module I: Force method of analysis of indeterminate structures** Analysis of rigid frames of different geometry by consistent deformation method – settlement effects - analysis of pin-jointed trusses by consistent deformation method - externally and internally redundant trusses - effects of settlement and prestrains.

**Module II: Displacement method of analysis of indeterminate structures** Slope deflection method - analysis of continuous beams - beams with overhang - analysis of rigid frames - frames with sloping legs - gabled frames - frames without sway and with sway - settlement effects - moment distribution method as successive approximation of slope deflection equations - analysis of beams and frames - non-sway and sway analyses - Kani's method as iterative method of analysis of frames (outline only)

**Module III: Moving Loads & Influence Lines**

Introduction to moving loads - concept of influence lines - influence lines for reaction, shear force and bending moment in simply supported beams - influence lines for forces in trusses – analysis for different types of moving loads - single concentrated load - several concentrated loads - uniformly distributed load shorter and longer than the span.

**Module IV: Cables, suspension bridges and arches**

Analysis of forces in cables - suspension bridges with three-hinged and two-hinged stiffening girders - theory of arches - Eddy's theorem - analysis of three-hinged and two-hinged arches - settlement and temperature effects.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# PRINCIPLES OF STRUCTURAL DESIGN

**Course Code: CIV2502**

**Credit Units: 03**

## **Course Objective:**

Based on the course Structural Analysis the student should be able to start design of structures using various types of materials.

## **Course Contents:**

### **Module I: Design Philosophy**

Introduction –Structures and structural systems– Introduction – materials – mix design by IS method – basic properties of concrete and reinforcement, testing of concrete , Introduction to Various Design Philosophies– design considerations – loading standards – working stress method(WSM) – ultimate load method – probabilistic analysis and design – uncertainties in design –limit state method(LSM) – limit states – multiple safety factor formats – load and resistance factor design format – partial safety factor format.

### **Module II: Design of RC Beams**

Basic design concepts of working stress method (WSM) – analysis of sections by WSM – Design of Rectangular Singly and Doubly Reinforced Sections by Working Stress Method. Assumptions in Limit State Design Method, Design of Rectangular Singly and Doubly Reinforced beams, T-beams, L-beams by Limit State Design Method.

### **Module III: Shear and Torsion**

Behaviour of RC beam in Shear, Shear Strength of beams with and without shear reinforcement, Minimum and Maximum shear reinforcement, design of beam in shear, Introduction to development length, Anchorage bond, flexural bond. (Detailed Examples by Limit State Design Method), Failure of beam under shear, Concept of Equivalent Shear and Moments.

### **Module IV: Design of Slabs**

Design of one way and two way solid slabs by Limit State Design Method, Serviceability Limit States, Control of deflection, cracking and vibrations.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# TRANSPORTATION ENGINEERING-II

**Course Code: CIV2503**

**Credit Units: 03**

## **Course Objective:**

This course deals with the design concept of railways, airport and tunnel.

## **Course Contents:**

### **Module I: Components & Geometric Design of Railways**

Introduction. Typical cross-sections. Various gauges. Coning of wheels and tilting of rails. Functions and requirements of component parts of a railway track. Creep of rails. Geometrical design of railway track. Horizontal curves, radius, superelevation, cant deficiency, transition curves, safe speed on curves, different types of gradients, grade compensation. Worked out problems.

### **Module II: Railway Operation and Control**

Points and crossings and their design. Track junctions and simple track layouts. Details of different types of stations and yards. Signaling and interlocking. Control of train movements. Absolute block. Automatic block system and CTC system. Railway Construction and Maintenance: Construction of railway track: earthwork, plate laying and packing. Maintenance of track-alignment, gauge, renewal of component parts and drainage, modern methods of track maintenance.

### **Module III: Tunneling**

Tunnel alignment and grade. Size and shape of a tunnel. Methods of tunneling in hard rocks. Full face method, heading and bench method, drift method. Methods of tunneling in soft soils. Compressed air and shield tunneling. Shafts in tunnels. Ventilation of tunnel and various methods. Lining of tunnels. Drainage and lighting of. Micro Tunneling. Trenchless technology.

### **Module IV: Airport planning and Design**

Introduction. Aircraft characteristics and their influence on planning of airports. Airport obstructions and zoning. Component parts of airport and site selection. Runway design. Orientation, basic runway length, corrections and geometric. Design of taxiways and aprons - Terminal area planning. Facilities in terminal area and their planning concepts, aircraft parking configurations. Airport drainage system. Surface and subsurface drainage systems and their design.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# GEOTECHNICAL ENGINEERING-I

Course Code: CIV2551

Credit Units: 03

## Course Objective:

Soil mechanics and related topics are important areas in Civil Engineering and the first part of Geotechnical Engineering deals with soils and their characteristics.

## Course Contents:

### Module I: Nature of soil and functional relationships

Soil type -Concepts of single grained, honey combed and flocculent structure and their effects on the basic soil properties - 3 phase system - void ratio - specific gravity - dry density - porosity - water content - saturated unit weight - submerged unit weight - degree of saturation. Laboratory and field identification of soils: Determination of water content by oven drying -Specific gravity using pycnometer and specific gravity bottle - Grain size analysis by sieve analysis, hydrometer analysis and pipette analysis - Atterberg limits and indices – Visual identification by simple field tests - Field density by core cutter, sand replacement and wax coating methods. Classification of soils: Necessity - Principles of classification - I.S. classification – Plasticity charts - Group index.

### Module II: Soil Water, Permeability and Stress Distribution

Soil water: Types - Effective stress - Total stress - Pore pressure - Pressure diagrams. Permeability: Definition - Darcy's law - Factors affecting permeability – Laboratory determination - Stratified soils: average permeability. Stress distribution: Boussinesq's equations for vertical pressure due to point loads- Assumptions and limitations - pressure bulb – Influence diagram - Vertical pressure due to uniformly distributed loads, line loads and strip loads - Newmark charts and their use - Westergaard's solution.

### Module III: Consolidation and Compaction

Consolidation: Definition - Concepts of coefficient of compressibility - Coefficient of volume change and compression index -  $e$ -log  $p$  curves - Terzaghi's theory of one dimensional consolidation – Determination of coefficient of consolidation- pre-consolidation pressure difference between consolidation and compaction. Compaction: Definition and objectives of compaction - Proctor test and modified proctor test - Concept of OMC and maximum dry density - Zero air voids line -Factors influencing compaction.- Effect of compaction on soil properties - Field compaction methods - Proctor needle for field control.

### Module IV: Shear Strength and Stability of Slopes

Shear Strength: Definition - Mohr's strength and stress circles - origin of planes - Mohr's envelope - Mohr-Coulomb strength theory -Direct, triaxial and UCC tests - Drainage conditions - Measurement of pore pressure - Vane shear tests -Total and effective stress -strength parameters – Stress path, Liquefaction of sand - Choice of test conditions for field problems. Stability of slopes: Slope failure, base failure and toe failure - Swedish circle method -  $\phi=0$  analysis and  $c=0$  analysis - Friction circle method - Taylor's stability number -Stability charts - Sliding block analysis.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# MATERIAL TESTING LAB

**Course Code: CIV2504**

**Credit Units: 01**

## List of Exercises

1. Concrete:  
(a) Slump Test of Concrete (b) Compaction Factor Test of Concrete (c) Vee-Bee Test of Concrete (d) Compressive Strength.
2. Fine Aggregate:  
(a) Fineness Modulus (b) % of material less than 75 micron (c) Silt Content.
3. Flakiness Index.
4. Elongation Index.
5. Rebound Hammer Test.
6. Ultrasonic Pulse Velocity Meter
7. Bending test on steel beams.

## Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# TRANSPORTATION ENGINEERING LABORATORY

**Course Code: CIV2509**

**Credit Units: 01**

## LIST OF EXPERIMENTS

Course objective: The students will learn different tests on aggregates and bitumen. They will also learn about the significance of these tests.

1. Impact test and Abrasion test of aggregate
2. Elongation and Flakiness index of aggregate
3. Water absorption test of aggregate
4. CBR test for subgrade
5. Determination of Flash and Fire test of bitumen
6. Determine the specific gravity of bitumen
7. Determination of penetration value of bitumen.
8. Determination of softening point test.
9. Determination of ductility of bitumen.
10. Determination of viscosity.
11. Determination of bitumen by centrifuge extractor.
12. Pavement evaluation and maintenance test.

## Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

## Text book & Reference:

- Relevant IRC and AASHTO codes

## SUMMER INTERNSHIP EVALUATION-I

**Course Code: CIV2535**

**Credit Units: 03**

### **Methodology:**

Practical training is based on the theoretical subjects studied by students. An industry visit will be planned for each student and on-site practical training will be imparted with the help of the industry guide. The students are to learn various industrial, technical and administrative processes followed in the industry. On completion of the practical training the students are to present a report covering various aspects learnt by them and give a presentation on same.

### **Examination Scheme:**

Feedback from industry/work place	20
Training Report	40
Viva	15
Presentation	25

# SUSTAINABLE DEVELOPMENT IN CIVIL ENGINEERING

Course Code: CIV2510

Credit Units: 03

**Course Objectives:** Learn about the principles, indicators and general concept of sustainability. Apprehend the local, regional and global impacts of unsustainable designs, products and processes. Student shall be able to apply the sustainability concepts in engineering. Know built environment frameworks and their use. Understand how building and design is judged and valued by clients and stakeholders and how to implement sustainability.

## Course Contents:

### Module-I

Introduction: Sustainability - Introduction, Need and concept of sustainability, Social-environmental and economic sustainability concepts. Sustainable development, Nexus between Technology and Sustainable development, Challenges for Sustainable Development. Multilateral environmental agreements and Protocols - Clean Development Mechanism (CDM), Environmental legislations in India - Water Act, Air Act.

### Module-II

Global Environmental Issue: Resource degradation, Climate change, Regional and Local Environmental Issues. Carbon credits and carbon trading, carbon foot print Carbon sequestration – Carbon capture and storage (CCS). Environmental management standards, ISO 14000 series, Life Cycle Analysis (LCA) - Scope and Goal, Bio-mimicking

### Module-III

Sustainable Design: Basic concepts of sustainable habitat, Green buildings, green materials for building construction, material selection for sustainable design, green building certification- GRIHA & IGBC Certification for buildings, Energy efficient building design- Passive solar design technique, Thermal storage, Cooling strategies, high performance insulation. Sustainable cities, Sustainable transport.

### Module-IV

Clean Technology and Energy: Energy sources: Basic concepts-Conventional and non-conventional, solar energy, Fuel cells, Wind energy, Small hydro plants, bio-fuels, Energy derived from oceans, Geothermal energy. Rainwater harvesting

### Module-V

Green Engineering: Green Engineering concepts, Sustainable Urbanization, industrialization and poverty reduction; Social and technological change, Industrial Processes: Material selection, Pollution Prevention, Industrial Ecology, Industrial symbiosis.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# AIR AND WATER POLLUTION CONTROL ENGINEERING

Course Code: CIV2511

Credit Units: 03

## Course Objectives:

- To impart knowledge on the principles and design of control of indoor/ particulate / gaseous air pollutant and its emerging trends.
- To introduce the fundamentals of mathematical models for water quality and the importance of model building.

## Course Contents:

### MODULE-I: INTRODUCTION TO AIR POLLUTION

Structure and composition of Atmosphere – Sources and classification of air pollutants - Effects of air pollutants on human health, vegetation & animals, Materials & Structures – Effects of air Pollutants on the atmosphere, Soil & Water bodies – Long- term effects on the planet – Global Climate Change, Ozone Holes – Ambient Air Quality and Emission Standards – Air Pollution Indices – Emission Inventories.

### MODULE-II: AIR QUALITY MONITORING AND MODELLING

Ambient and Stack Sampling and Analysis of Particulate and Gaseous Pollutants -Effects of meteorology on Air Pollution - Fundamentals, Atmospheric stability, Inversion, Wind profiles and stack plume patterns- Transport & Dispersion of Air Pollutants - Introduction to Air Quality Modeling. Necessity, application and limitation of air quality modelling. Introduction to Dispersion Modeling, Photochemical Modeling and Receptor Modeling. Different air quality Dispersion models and their limitations.

### MODULE-III: CONTROL OF AIR POLLUTANTS

Primary considerations in designing effective control strategy: Environmental, Engineering and Economic Factor - Factors to be considered while selecting control equipments - Various mechanisms to control gaseous pollutants and particulate matter. Control Equipment design for particulate matter: Gravity chamber, Cyclone separator, Electrostatic precipitator, fabric filter, bag filter, Wet scrubber, Venturi scrubber and absorption towers. Control Equipment design for gaseous pollutants: Absorption, Adsorption, Condensation and Incineration.

### MODULE-IV: SURFACE AND SUB-SURFACE WATER QUALITY MODELLING

Water quality modeling of Streams, Lakes and impoundments and Estuaries – Water quality– model sensitivity – assessing model performance; Models for dissolved oxygen, pathogens and BOD- Streeter Phelps model for point and distributed sources - Modified Streeter Phelps equations -Toxicant modeling in flowing water - Groundwater flow and mass transport of solutes, Degradation of organic compounds, application of concepts to predict groundwater contaminant movement, seawater intrusion – basic concepts and modeling.

### MODULE-V: AIR AND WATER QUALITY MODELLING SOFTWARES

Exposure to computer models for surface water quality, groundwater quality and air quality - Introduction to commonly used air quality models such as AERMOD, CALPUFF, ISCST3 and CALINE4 etc.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# COMPUTER APPLICATION IN HYDRO ENGINEERING

**Course Code: CIV2512**

**Credit Units: 03**

## **Course Objective:**

This course deals with computer application in hydro engineering.

## **Course Contents:**

### **Module I**

Review of Basic Hydraulic Principles – General flow characteristics, Energy and momentum principles and Equations, Pressure and free surface flows, HGL and TEL, Major and minor losses, Computer applications to simple flow problems, Introduction to SAP.

Storm Sewer Design and Gravity Piping Systems – Review of basic hydrologic principles, Gradually varied flow, Mixed flow profiles, Storm Sewer Applications.

### **Module II**

Drainage Inlet Design, Culvert Hydraulics and Design.

Pressure Piping Systems & Water Quality Analysis – Analysis and design of water distribution systems

Introduction to Some Packages such as Flow Master, Storm CAD, Culvert Master, Water CAD, and Sewer CAD and EPANET.

### **Module III**

Flow Routing - Hydrologic and hydraulic methods of routing, Sanitary sewer design including extended period simulation and routing.

Watershed modeling – Basic principles – Introduction to SWMM

### **Module IV**

Water quality modeling in streams- Basic models, Introduction to software packages.

Ground water quality modeling

Introduction to remote sensing and GIS applications and web based applications

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>

# Syllabus - Sixth Semester

## ENVIRONMENTAL ENGINEERING-I

**Course Code: CIV2601**

**Credit Units: 03**

**Course Objective:**

Based on course Environmental studies, the water resources and their management for environmental suitability are studied in this course.

**Course Contents:**

**Module I: Scope of Environmental Engineering**

Water Supply Engineering. Quantity of water. Types of water demand. Fluctuation in demand. Factors affecting consumption. Forecasting population. Design period.

**Module II: Sources of water**

Surface water sources. Intakes. Ground water Sources. Estimation of yield from various ground water sources. Quality of water. Drinking water standards – Water quality parameters- effects on human health- Methods of Physical, Chemical and Bacteriological analysis of water.

**Module III: Treatment of water**

Process details and design considerations. Aeration. Coagulation. Flocculation. Sedimentation. Filtration. Disinfection. Miscellaneous and advanced treatments. Iron and manganese removal. Fluoridation and defluoridation. Water Softening. Arsenic removal. Desalination. Membrane filtration.

**Module IV: Water supply schemes**

Gravitational, pumping and combined schemes. Pumps. Pumping stations. Transmission of water. Materials of water supply pipes. Design of gravity and pumping main. Distribution systems. Different layout of pipe networks. House connection from mains. Different valves, meters and hydrants. Storage reservoirs. Balancing reservoir. Detection and prevention of leaks in the distribution systems. Maintenance of distribution systems.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;

# STRUCTURAL CONCRETE DESIGN

**Course Code: CIV2602**

**Credit Units: 03**

## **Course Objective:**

This course deals with the design concept of designing concrete structure. As a prerequisite the students should have knowledge of principal of structural design.

## **Course Contents:**

### **Module I: Design of Columns**

Design of Columns by Limit State Design Method- Effective height of columns, Assumptions, Minimum eccentricity, Short column under axial compression, requirements for reinforcement, Column with helical reinforcement, Short column under axial load and uni-axial bending, Design of columns under bi-axial loading by Design Charts

**Note: All designs shall be conforming to IS : 456 – 2000**

### **Module II: Design of Footing**

Analysis and design of beam curved in plan. 2 Structural behavior of footings, design of footing for a wall and a single column, combined rectangular and trapezoidal footings, Design of strap footing.

### **Module III: Design of Tank**

Design criteria, material specifications and permissible stresses for tanks, design concept of circular and rectangular tanks situated on the ground / underground, design of overhead tanks.

### **Module IV: Design of Retaining Wall**

Structural behavior of retaining wall, stability of retaining wall against overturning and sliding, Design of T-shaped retaining wall, Concept of Counter fort retaining wall. Loads, forces and I.R.C. bridge loadings, Design of R.C. slab culvert.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# WATER RESOURCE ENGINEERING-I

**Course Code: CIV2610**

**Credit Units: 03**

## **Course Objective:**

This course deals with various concepts of water resources engineering. The course introduces the concept of hydrology, ground water and then deals with irrigation engineering. It also deals with design of dam.

## **Course Contents:**

### **Module I: Hydrology**

Hydrologic cycle- Precipitation, rainfall variations, measurement, presentation of RF data, Mean precipitation, Abstractions from precipitation- Runoff-Long term runoff, empirical formulae, short term runoff- hydrograph analysis. Flood-Rational and Empirical methods for prediction - Design floods. Ground water- Aquifer types-flow of ground water – Well hydraulics-Types of wells-Other sources of ground water.

### **Module II: Irrigation**

Necessity of irrigation and type of irrigation systems.-Total planning concept-Water requirements of crops-Command area-duty-delta. Consumptive use of water –Irrigation efficiency-Irrigation requirement of crops-Reservoir planning-Site investigation-Zones of storage-Reservoir yield-Reservoir losses and Control-Life of reservoir

### **Module III**

Diversion head works-Location – Essential components of Weir and Barrage-Weirs on permeable foundations-Blighs and Khosla's seepage theories - Design procedure.

Dams - Types of dams and their selection-Gravity dam-Analysis and design.

Spillways-Different types and suitability.

### **Module IV**

Regulation and control of canal system-Purpose, Types of canal regulation works and their functional aspects. Irrigation Outlets-Requirements, types, non-modular, semi-module and rigid module, selection criterion. River Training - Objective and need, classification of rivers, and river training works, meandering, stages, methods of river training, bank protection, Methods for measurement of discharge.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE

# GEOTECHNICAL ENGINEERING-II

Course Code: CIV2651

Credit Units: 03

## Course Objective:

Advanced topics of soil mechanics and the design of foundations are covered in this course.

## Course Contents:

### Module I: Earth pressure

Earth pressure at rest. Active and passive earth pressure for cohesionless and cohesive soils. Coulomb's and Rankine's theories. Point of application of earth pressure for cases of with and without surcharge in cohesionless and cohesive soils. Culmann's and Rebhan's graphical construction for active earth pressure. Friction circle method for active earth pressure. **Site investigation and soil exploration:** Objectives. Planning. Reconnaissance. Depth of exploration. Methods of subsurface exploration. Test pits. Auger borings. Wash boring. Rotary drilling. Percussion drilling. Core drilling. Sampling. Types of soil samples. Split spoon sampler. Thin walled sampler. Piston sampler. Denison sampler. Hand cut samples. Location of water table. S.P.T. Field vane shear test. Introduction to geophysical methods. Boring log. Soil profile.

### Module II: Bearing capacity

Ultimate and allowable bearing capacity. Terzaghi's equation for bearing capacity for continuous circular and square footings. Types of shear failures. Bearing capacity factors and charts. Effect of water table on bearing capacity. Meyerhoff's bearing capacity theory. Skempton's formulae. Bearing capacity from field tests. Bearing capacity from building codes. Net bearing pressure. Methods of improvement of soil bearing capacity: vibro flotation and sand drains.

**Settlement analysis:** Distribution of contact pressure. Immediate and consolidation settlement. Estimation of initial and final settlement under building loads. Limitations in settlement computation. Causes of . Permissible, total and differential settlements. Cracks and effects of settlement.

### Module III: Foundations

General considerations: Functions of foundations. Requisites of satisfactory foundations. Different types of foundations. Definition of shallow and deep foundation. Selection of type of foundation. Advantages and limitations of various types of foundations. Design considerations . Footings subjected to eccentric loading. Conventional procedure for proportioning footings for equal settlements.

**Open excavation:** Open foundation excavations with unsupported slopes. Supports for shallow and deep excavations. Stress distribution in sheeting and bracing of shallow and deep excavations. Stability of bottom of excavations. **Raft foundations:** Bearing capacity equations. Design considerations. Conventional design procedure for rigid mat. Uplift pressures. Methods of resisting uplift. Floating foundations.

### Module IV: Pile foundations

Uses of piles. Classification of piles based on purpose and material. Determination of type and length of piles. Determination of bearing capacity of axially loaded. Single vertical pile. Static and dynamic formulae. Determination of bearing capacity by penetration tests and pile load tests (IS methods). Negative skin friction. Group action and pile spacing. Analysis of pile groups. Load distribution by Culmann's method. **Caissons and piers:** Open (well) caissons. Box (floating) caissons. Pneumatic caissons. Construction details and design considerations of well foundations. Drilled piers and their construction details.

## Examination Scheme:

# PRESTRESSED CONCRETE

**Course Code: CIV2607**

**Credit Units: 03**

## **Course Objective:**

This course deals with advanced concept of structural concrete design.

## **Course Contents:**

### **Module I: Materials for prestressed concrete and prestressing systems**

High strength concrete and high tensile steel – tensioning devices – pretensioning systems – post tensioning systems.

### **Module II: Analysis of prestress and bending stresses**

Analysis of prestress – resultant stresses at a sector – pressure line or thrust line and internal resisting couple – concept of load balancing – losses of prestress – deflection of beams.

### **Module III: Strength of prestressed concrete sections in flexure, shear and torsion**

Types of flexural failure – strain compatibility method – IS code procedure – design for limit state of shear and torsion.

### **Module IV: Design of prestressed concrete beams and slabs**

Transfer of prestress in pre tensioned and post tensioned members – design of anchorage zone reinforcement – design of simple beams – cable profiles – design of slabs.

A design project for the design and detailing of a large span beam is envisaged at this stage.

## **Examination Scheme:**

# TRAFFIC ENGINEERING AND MANAGEMENT

**Course Code: CIV2608**

**Credit Units: 03**

## **Course Objective:**

The students acquire comprehensive knowledge of traffic surveys and studies such as 'Volume Count', 'Speed and delay', 'Origin and destination', 'Parking', 'Pedestrian' and 'Accident surveys'. They achieve knowledge on design of 'at grade' and 'grade separated' intersections. They also become familiar with various traffic control and traffic management measures.

## **Course Contents:**

### **Module I: Introduction**

Significance and scope, Characteristics of Vehicles and Road Users, Skid Resistance and Braking Efficiency (Problems), Components of Traffic Engineering- Road, Traffic and Land Use Characteristics

### **Module II: Traffic Surveys and Analysis**

Surveys and Analysis - Volume, Capacity, Speed and Delays, Origin and Destination, Parking, Pedestrian Studies, Accident Studies and Safety Level of Services- Basic principles of Traffic Flow.

### **Module III: Traffic Control**

Traffic signs, Road markings, Design of Traffic signals and Signal co-ordination (Problems), Traffic control aids and Street furniture, Street Lighting, Computer applications in Signal design

### **Module IV: Geometric Design of Intersections**

Conflicts at Intersections, Classification of 'At Grade Intersections, - Channallised Intersections - Principles of Intersection Design, Elements of Intersection Design, Rotary design, Grade Separation and interchanges - Design principles.

### **Module V: Traffic Management**

Traffic Management- Transportation System Management (TSM) - Travel Demand Management (TDM), Traffic Forecasting techniques, Restrictions on turning movements, Oneway Streets, Traffic Segregation, Traffic Calming, Tidal flow operations, Exclusive Bus Lanes, Introduction to Intelligent Transportation System (ITS).

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# BASICS OF OPTIMIZATION TECHNIQUES AND MATHEMATICAL MODELING

**Course Code: CIV2611**

**Credit Units: 03**

**Course Objectives:** Optimization is the process of obtaining the best result under given circumstances. In design, construction and maintenance of any engineering system, engineers have to take many technological and managerial decisions at several stages. The ultimate goal of all such decisions is either to minimize the effort required or to maximize the desired benefit. A number of optimization methods have been developed for solving different types of optimization problems. In this course, after discussing about the optimization problem formulation, Linear Programming, Non Linear Programming, Dynamic Programming techniques are explained in detail along with number of applications in civil engineering.

## **Course Contents:**

### **MODULE-I**

Introduction and Basic Concepts: Historical Development; Engineering applications of Optimization; Art of Modeling Objective function; Constraints and Constraint surface; Formulation of design problems as mathematical programming problems Classification of optimization problems Optimization techniques – classical and advanced techniques.

### **MODULE-II**

Optimization using Calculus: Stationary points; Functions of single and two variables; Global Optimum Convexity and concavity of functions of one and two variables Optimization of function of one variable and multiple variables; Gradient vectors; Examples Optimization of function of multiple variables subject to equality constraints; Lagrangian function Optimization of function of multiple variables subject to equality constraints; Hessian matrix formulation; Eigen values Kuhn-Tucker Conditions; Examples.

### **MODULE-III**

Linear Programming: Standard form of linear programming (LP) problem; Canonical form of LP problem; Assumptions in LP Models; Elementary operations Graphical method for two variable optimization problem; Examples Motivation of simplex method, Simplex algorithm and construction of simplex tableau; Simplex criterion; Minimization versus maximization problems Revised simplex method; Duality in LP; Primaldual relations; Dual Simplex method; Sensitivity or post optimality analysis Other algorithms for solving LP problems – Karmarkar's projective scaling method

### **MODULE-IV**

Linear Programming Applications: Use of software for solving linear optimization problems using graphical and simplex methods Examples for transportation, assignment, water resources, structural and other optimization problems. Dynamic Programming, Dynamic Programming Applications Advanced Topics in Optimization

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# Syllabus - Seventh Semester

## STRUCTURAL STEEL DESIGN

**Course Code: CIV2701**

**Credit Units: 03**

**Course Objective:**

This course deals with design of various steel structures. The prerequisite of this course is that the students should have good understanding of principles of structural design.

**Course Contents:**

**Module-I: General Considerations**

Introduction, Advantages of Steel as a Structural Material, Disadvantages of Steel as a Structural Material, Structural Steel, Stress Strain Curve for Mild Steel, Rolled Steel Sections, Convention for Member Axes, Loads, Dead Load, Live Loads, Environmental Loads, Seismic Forces, Snow and Rain Loads, Erection Loads, Basis for Design, Design Philosophies, Local Buckling of Plate Elements. Introduction to Limit State Design Introduction, Limit States for Steel Design, Limit States of Strength, Limit States of Serviceability, Actions (Loads), Probabilistic Basis for Design, Design Criteria

**Module-II: Simple Connections**

Riveted, Bolted and Pinned Connections Introduction, Riveted Connections, Patterns of Riveted Joints, Bolted Connections, Types of Bolts, Types of Bolted Joints, Load Transfer Mechanism, Failure of Bolted Joints, Specification for Bolted Joints, Bearing- Type Connections, Prying Action, Tensile Strength of plate, Efficiency of the Joint, Combined Shear and Tension, Slip- Critical Connections, Combined Shear and Tension for Slip- Critical Connections, Working Load Design, Pin Connections

**Simple Welded Connections**

Introduction, Types, Symbols, Welding Process, Weld Defects, Inspection of Welds, Assumptions in the Analysis of Welded Joints, Design of Groove Welds, Design of Fillet Welds, Fillet Weld Applied to the Edge of A Plate or Section, Fillet Weld for Truss Members, Design of Intermittent Fillet Welds, Plug and Slot Welds, Stresses Due To Individual Forces, Combination of Stresses, Failure of Welds, Distortion of Welded Parts, Fillet Weld Vs Butt Weld, Welded Joints Vs Bolted and Riveted Joints, Selection of Fasteners, Working Load Design

**Module-III: Tension Members**

Introduction, Types of Tension Members, Net Sectional Area, Effective Net Area, Types of Failure, Design Strength of Tension Members, Slenderness Ratio ( $\lambda$ ), Displacement, Design of Tension Member, Lug Angles, Splices, Gusset Plate, Working Load Design

**Module-IV: Compression Members**

Introduction, Effective Length, Slenderness Ratio ( $\lambda$ ), Types of Sections, Types of Buckling, Classification of cross Sections, Column Formula, Design Strength, Design of Axially Loaded Compression Members, Built Up Columns (Latticed Columns), Lacing, Batten, Compression Member Composed of Two Components Back to Back, Encased Column, Splices, Design of Column Bases

**Module-V: Beams**

Introduction, Types of Sections, Behaviour of Beam in Flexure, Section Classification, Lateral Stability of Beams, Lateral Torsional Buckling, Bending Strength of Beams, Laterally Supported Beams, Laterally Unsupported Beams, Shear Strength of Beams, Web Buckling, Bearing Strength, Web Crippling, Deflection, Design Procedure of Rolled Beams, Built Up Beams (Plated Beams), Lintels, Purlins, Beam Bearing Plates, Castellated Beam, Effect of Holes in Beam, Introduction to Plate Girder, Introduction to Gantry Girder.

**Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

# ENVIRONMENTAL ENGINEERING-II

**Course Code: CIV2702**

**Credit Units: 03**

## **Course Objective:**

This course deals with advanced environmental engineering concepts. It explains the design of various plumbing, treatment plant and solid waste management.

## **Course Contents:**

### **Module I**

Sanitary plumbing – sanitary fixtures – systems of piping – house drainage– connection of house drains and street sewers. Systems of sewerage– Dry weather flow and wet weather flow– sewers and sewer appurtenances – sewage pumping – maintenance of sewers.

### **Module II**

Waste water- Characteristics– sampling – population equivalent — preliminary treatment of waste water – screens – grit chamber – detritus tank – Sedimentation tank.

Biological treatment (process details and design considerations) - Aerobic- Activated Sludge Process- Trickling Filter- Oxidation Ponds

### **Module III**

Anaerobic treatment- Anaerobic digesters- Septic Tanks- Soak pits

Waste water disposal – disposal into stream –fundamentals of stream sanitation- disposal by irrigation – sludge treatment and disposal

### **Module IV**

Solid waste management: Generation- on site handling and storage- transfer and transportprocessing-resource recovery- treatment and disposal.

Air pollution and control – sources –pollutants and their health effects– particulate and gaseous pollution control devices (fundamentals)-Settling chambers- Electrostatic precipitators- Cyclones- Wet Collectors-Gas absorption by tray and packed towers

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# WATER RESOURCE ENGINEERING-II

Course Code: CIV2711

Credit Units: 03

**Course Objectives:** To study the different aspects of design of hydraulic structures. To provide knowledge on various hydraulic structures such as energy dissipaters, head and cross regulators, canal falls and structures involved in cross drainage works

**Course Contents:**

## MODULE-I:

Head Works: Types of head works, Functions and investigations of a diversion head work: component parts of a diversion head work and their design considerations, silt control devices.

Theories of Seepage: Seepage force and exit gradient, assumptions and salient features of Bligh's Creep theory, Limitations of Bligh's Creep theory, salient features of Lane's weighted Creep theory and Khosla's theory, Comparison of Bligh's Creep theory and Khosla's theory, Determination of uplift pressures and floor thickness.

## MODULE-II:

Design of Weirs: Weirs versus barrage, types of weirs, main components of weir, causes of failure of weir and design considerations with respect to surface flow, hydraulic jump and seepage flow. Design of barrage or weir. Energy Dissipation Devices: Use of hydraulic jump in energy dissipation, Factors affecting design, Types of energy dissipators and their hydraulic design.

## MODULE-III:

Canal Regulators: Offtake alignment, cross-regulators – their functions and design, Distributory head regulators, their design, canal escape. Canal Falls: Necessity and location, types of falls and their description, selection of type of falls, Principles of design, Design of Sarda type, straight glacis and Inglis or baffle wall falls. Canal Out-lets : Essential requirements, classifications, criteria for outlet behaviours, flexibility, proportionality, sensitivity, sensitiveness, etc. Details and design of nonmodular, semi-modular and modular outlets.

## MODULE-IV:

Cross-Drainage works : Definitions, choice of type, Hydraulic design consideration, Aqueducts their types and design, siphon aqueducts – their types and design considerations, super passages, canal siphons and level crossing.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

## ENVIRONMENTAL ENGINEERING LAB

**Course Code: CIV2704**

**Credit Units: 01**

### **Course Contents:**

1. Determination of solids (total, dissolved, organic, inorganic and settleable) in water
2. Determination of turbidity and the optimum coagulant dose
3. Determination of alkalinity and pH of water
4. Determination of hardness and chlorides in water
5. Determination of iron and manganese in water
6. Determination of sulphates and sulphides in water
7. Determination of D.O and B.O.D of waste water
8. Determination of available chlorine in bleaching powder and the chlorine dose required to treat the given water sample
9. Determination of coliforms in water
10. Demonstration of Instrumental methods of pollutant analysis

### **Examination Scheme:**

<b>IA</b>				<b>EE</b>	
<b>A</b>	<b>PR</b>	<b>LR</b>	<b>V</b>	<b>PR</b>	<b>V</b>
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

# SUMMER INTERNSHIP EVALUATION-II

Course Code: CIV2735

Credit Units: 03

## Objective:

There are certain phases of every Intern's professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship program can best be described as an attempt to institutionalize efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal classroom situations. These attributes are intellectual ability, professional judgment and decision-making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility etc.

## Guidelines

In order to achieve these objectives:

- **Each student will be allotted a supervisor** for proper guidance.
- **Student will first submit details of company, external guide, project title to coordinator/supervisor as per given schedule.**
- For internal assessment purpose, students will submit an industry feedback and a progress report.
- Student will maintain a file (**Internship File/Project Report**) which he/she will submit after completion of internship. **Further, coordinator will provide NTCC project guidelines and sample to help in preparation of file.** The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development. The File will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

The **layout guidelines** for the Project Report

### 1. File should be in the following specification

- A4 size paper
- Spiral Binding
- **Font**

For normal text Font Type and Size must be- Times New Roman, 12 pt. The minimum font size of materials within a table or a figure can be 10 point.

- **Margins**

A margin of 3.75 cm (1½ inch) is to be given on the binding edge while on the other sides it is to be 2.5 cm (1 inch). The text of the report, including headings, figures, tables, and notes, but excluding page numbers, must be accommodated within the page area.

- **Line Spacing**

The line spacing in the main text must be between one-and-a-half (1.5). Single line spacing should be given for figure captions, table titles, figure legends, and footnotes. Equations, tables, figures, and quotations should be set off from the main text with adequate space (not less than the normal line spacing adopted for the main text). Two consecutive paragraphs should be separated by a spacing which must be larger than the line spacing adopted for the text.

- **Tables and Figures**

Each sketch, drawing, graph and photograph should have a figure number and title below the figure etc. Numbering should be sequential, chapter wise. For instance, if there are 24 figures chapter 3 spread over all of its sections the figure numbers run from Figure 3.1 through Figure 3.24. In figures experimental data should typically be represented by centered symbols, and theoretical data by continuous curves.

Each table should have a table number and caption above the table. Numbering should be sequential, chapter wise, as in the case of Figure numbers. For instance, if there are 18 tables in chapter 3 the table numbers run from Figure 3.1 through Figure 3.18.

Make sure that figures and tables are complete in other respects such as legends, references (if any) and coordinate labels with units. Each figure and table must be explicitly referred to in the text and located where its first reference occurs, preferably after the reference.

- **Drawings**

All engineering drawings must conform to relevant Standards and should include a title block. If drawings are large they should be included at the back of the report in a separate pocket. In case drawings are made using CAD packages, a CD ROM should be included which contains all the files and details of the packages used.

- **Equations**

The numbering of equations should be sequential, chapter wise. Numbered equations must be explicitly referred to in the text.

**2. Report Size:** The maximum number of pages of the Report should be preferably between 50-80 pages.

**3. Report Layout:** The report should contain the following components

Front Page  
Declaration  
Student Certificate (University)  
Certificate (Company)  
Acknowledgement  
Abstract  
Contents  
List of Figures  
List of Tables  
Company Profile (optional)  
Chapters  
Appendices(optional)  
References / Bibliography

The above components are described below:

1. **The Title Page**-- Format will be given by coordinator/supervisor.
2. **Declaration by the Students**--This is page number (i), the beginning of the small case Roman numeral page numbers. The student has to give a declaration to the effect that the data used for the work, the work depicted in the report, and the written material contained in the report are not copied from others and that due permission has been taken from, and due credit has been given to, the sources whenever they are used.
3. **Certificate**--This is page number (ii). It is given by the Institute. The certificate will be signed by the Faculty Supervisor(s) before the viva-voce after verifying the format and by the Head of the Department after review with the Supervisor(s).
4. **Company Certificate**: This is a certificate, which the company gives to the students.
5. **Contents**--This is page number (iii). The table of Contents should be titled just Contents (not Table of Contents). Try to fit it into one or two pages.
6. **Acknowledgement**--This is page number (iv). Keep this brief and avoid using informal language. This page must be signed by the candidate.
7. **Abstract and Keywords**--This is page number (v). The abstract (preferably one page) should contain the context/relevance of the problem at hand, a description of what was done and a gist of the significant observations/results.

The keywords (maximum 6) are a hint that what is contained in the report.

**8. Company Profile:** A Company Profile corresponds to a file with company-specific data. Company data can be stored there and included in a booking when needed.

**9. Chapters**—Introduction, Literature Review/Background Study etc. as given by coordinator/supervisor.

**10. References / Bibliography** --This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

## **ASSESSMENT OF THE INTERNSHIP FILE**

Continuous Internal Assessment consists of topic relevance, progress report and industry feedback on company letterhead. Final Assessment includes viva, presentation, execution and report marks.

### **Examination Scheme:**

<b>Components</b>	<b>IF</b>	<b>PR</b>	<b>R</b>	<b>E</b>	<b>V</b>	<b>FP</b>
<b>Weightage (%)</b>	20	20	15	15	15	15

V – Viva, IF – Industry Feedback, FP – Final Presentation, R – Report, PR-Progress Report, E-Execution

## **INDEPENDENT STUDY**

**Course Code: CIV2712**

**Credit Units: 02**

This is an elective, self-directed course to investigate emerging areas of IT and Computer Science like Mobile Operating System, Cloud Computing, or from Current Research Areas etc. The primary goal of the course is to provide students with research exploration of a specific topic of interest to the individual student under the advisement of an instructor who will monitor and critique the student's progress.

Independent study provides students with the opportunity to work one-on-one with a Faculty on a particular topic. The student and faculty should discuss the aims and content of the study and present the proposal to Head of Department. The independent study proposal should include the study's title, theme, readings, work to be submitted, and syllabus. Faculty and student should meet for a minimum number of 2 hours per week. Student will give a seminar after completion of study.

# TERM PAPER

**Course Code: CIV2731**

**Credit Units: 02**

A term (or research) paper is primarily a record of intelligent reading in several sources on a particular subject. The students will choose the topic at the beginning of the session in consultation with the faculty assigned. The progress of the paper will be monitored regularly by the faculty. At the end of the semester the detailed paper on the topic will be submitted to the faculty assigned. The evaluation will be done by Board of examiners comprising of the faculties.

## **Guidelines for Term Paper**

The procedure for writing a term paper may consist of the following steps:

1. Choosing a subject
2. Finding sources of materials
3. Collecting the notes
4. Outlining the paper
5. Writing the first draft
6. Editing & preparing the final paper

### **1. Choosing a Subject**

The subject chosen should not be too general.

### **2. Finding Sources of Materials**

- a) The material sources should be not more than 10 years old unless the nature of the paper is such that it involves examining older writings from a historical point of view.
- b) Begin by making a list of subject-headings under which you might expect the subject to be listed.
- c) The sources could be books and magazine articles, news stories, periodicals, scientific journals etc.

### **3. Collecting the Notes**

Skim through sources, locating the useful material, then make good notes of it, including quotes and information for footnotes.

- a) Get facts, not just opinions. Compare the facts with author's conclusion.
- b) In research studies, notice the methods and procedures, results & conclusions.
- c) Check cross references.

### **4. Outlining the Paper**

- a) Review notes to find main sub-divisions of the subject.
- b) Sort the collected material again under each main division to find sub-sections for outline so that it begins to look more coherent and takes on a definite structure. If it does not, try going back and sorting again for main divisions, to see if another general pattern is possible.

### **5. Writing the First Draft**

Write the paper around the outline, being sure that you indicate in the first part of the paper what its purpose is. You may follow the following:

- a) statement of purpose
- b) main body of the paper
- c) statement of summary and conclusion

Avoid short, bumpy sentences and long straggling sentences with more than one main idea.

### **6. Editing &Preparing the Final Paper**

- a) Before writing a term paper, you should ensure you have a question which you attempt to answer in your paper. This question should be kept in mind throughout the paper. Include only information/ details/ analyses of relevance to the question at hand. Sometimes, the relevance of a particular section may be clear to you but not to your readers. To avoid this, ensure you briefly explain the relevance of every section.
- b) Read the paper to ensure that the language is not awkward, and that it "flows" properly.
- c) Check for proper spelling, phrasing and sentence construction.
- d) Check for proper form on footnotes, quotes, and punctuation.
- e) Check to see that quotations serve one of the following purposes:
  - (i) Show evidence of what an author has said.
  - (ii) Avoid misrepresentation through restatement.
  - (iii) Save unnecessary writing when ideas have been well expressed by the original author.

- f) Check for proper form on tables and graphs. Be certain that any table or graph is self-explanatory.

Term papers should be composed of the following sections:

- 1) Title page
- 2) Table of contents
- 3) Introduction
- 4) Review
- 5) Discussion&Conclusion
- 6) Bibliography
- 7) Appendix

Generally, the introduction, discussion, conclusion and bibliography part should account for a third of the paper and the review part should be two thirds of the paper.

### **Discussion**

The discussion section either follows the results or may alternatively be integrated in the results section. The section should consist of a discussion of the results of the study focusing on the question posed in the research paper.

### **Conclusion**

The conclusion is often thought of as the easiest part of the paper but should by no means be disregarded. There are a number of key components which should not be omitted. These include:

- a) summary of question posed
- b) summary of findings
- c) summary of main limitations of the study at hand
- d) details of possibilities for related future research

### **Bibliography**

From the very beginning of a research project, you should be careful to note all details of articles gathered. The bibliography should contain ALL references included in the paper. References not included in the text in any form should NOT be included in the bibliography. The key to a good bibliography is consistency. Choose a particular convention and stick to this.

### **Bibliographical Conventions:**

#### **Monographs**

Crystal, D. (2001), *Language and the internet*, Cambridge: Cambridge University Press

#### **Edited Volumes**

Gass, S./Neu, J. (eds.) (1996), *Speech acts across cultures, Challenges to communication in a second language*, Berlin/ NY: Mouton de Gruyter.

[(eds.) is used when there is more than one editor; and (ed.) where there is only one editor. In German the abbreviation used is (Hrsg.) for Herausgeber].

#### **Edited Articles**

Viva voce	25
<b>Total:</b>	<b>100</b>

# PROJECT

**Course Code: CIV2732**

**Credit Units: 02**

## **Methodology**

Topics of project are to be based on the latest trends, verifying engineering concepts /principals and should involve elementary research work. The projects may involve design, fabrications, testing, computer modeling, and analysis of any engineering problem. On completion of the practical training the students are to present a report covering various aspects learnt by them and give a presentation on same.

## **Guidelines for Project File**

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critically analyzed by the faculty guide and corrected by the student at each stage.

## **Project File**

The Project File may be a very useful tool for undertaking an assignment along-with a normal semester, an exploratory study, sponsored projects, a project undertaken during summer period or any other period where the researcher is not working with a company/organization. The project/ assignment may also be a part of the bigger research agenda being pursued by a faculty/ institution/ department

The project file is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation. This file may be considered in continuous assessment.

### **In general, the file should be comprehensive and includes:**

- A short account of the activities that were undertaken as part of the project;
- A statement about the extent to which the project has achieved its stated objectives;
- A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;
- Any activities planned but not yet completed as part of the project, or as a future initiative directly resulting from the project;
- Any problems that have arisen and may be useful to document for future reference.

### **Layout Guidelines for the Project File**

- A4 size Paper
- Font: Arial (10 points) or Times New Roman (12 points)
- Line spacing: 1.5
- Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

### **Assessment of the Project File**

Essentially, the assessment will be based on the quality of the report, the technical merit of the project and the project execution. Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project. Project execution is concerned with assessing how much work has been put in.

The Project should fulfill the following assessment objectives:

- Range of research methods used to gain information
- Execution of research
- Data analysis (Analyse Quantitative/ Qualitative information)
- Quality Control
- Conclusions

**Assessment Scheme:****Continuous Evaluation:**

40% (Based on punctuality, regularity of work, adherence to plan and methodology, refinements/ mid-course corrections etc. as reflected in the Project File.)

**Final Evaluation:**

60% (Based on the documentation in the file, final report layout, analysis and results, achievement of objectives, presentation/ viva)

## Syllabus - Eighth Semester

### CONSTRUCTION MANAGEMENT AND QUANTITY SURVEYING

Course Code: CIV2801

Credit Units: 03

**Course Objective:**

The main objective of this course is to train the student construction management and quantity surveying

**Course Contents:**

**Module I**

**Construction Management** – Network techniques – introduction – Bar charts – use of CPM and PERT for planning – time estimates – critical path – updating – crashing – resource smoothing – resource leveling – computer applications

**Construction planning:** Preparation of job layout – labour schedule – material schedule – equipment schedule

**Module II:**

Project Implementation – Tender – earnest money deposit – security deposit – contract – contract documents – measurements – completion certificate – inspection and quality control – standardization – organisations at national and international level (BIS & ISO) – role of certification

**Module III**

**Quantity surveying** - preparation of detailed estimates for: buildings - reinforced concrete structures - sanitary and water supply works

**Module IV**

Preparation of specification for common materials of construction and items of work as per IS - analysis of rates and preparation of abstract of estimate

Introduction to valuation of real properties: Depreciation – Sinking fund – methods of valuation

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;  
Att: Attendance

# DISSERTATION

Course Code: CIV2837

Credit Units: 08

## Methodology

Topics of project are to be based on the latest trends, verifying engineering concepts /principals and should involve elementary research work. The projects may involve design, fabrications, testing, computer modeling, and analysis of any engineering problem. On completion of the practical training the students are to present a report covering various aspects learnt by them and give a presentation on same.

## Guidelines for Project File and Project Report

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critically analyzed by the faculty guide and corrected by the student at each stage.

## Project File

The Project File may be a very useful tool for undertaking an assignment along-with a normal semester, an exploratory study, sponsored projects, a project undertaken during summer period or any other period where the researcher is not working with a company/organization. The project/ assignment may also be a part of the bigger research agenda being pursued by a faculty/ institution/ department

The Project File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation. This file may be considered in continuous assessment.

## In general, the File should be comprehensive and include

- A short account of the activities that were undertaken as part of the project;
- A statement about the extent to which the project has achieved its stated objectives;
- A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;
- Any activities planned but not yet completed as part of the project, or as a future initiative directly resulting from the project;
- Any problems that have arisen and may be useful to document for future reference.

## Project Report

The Project Report is the final research report that the student prepares on the project assigned to him. In case of sponsored project the lay out of the project could be as prescribed by the sponsoring organization. However, in other cases the following components should be included in the project report:

### ➤ Title or Cover Page

The title page should contain Project Title; Student's Name; Programme; Year and Semester and Name of the Faculty Guide.

### ➤ Acknowledgement(s)

Acknowledgment to any advisory or financial assistance received in the course of work may be given. It is incomplete without student's signature.

### ➤ Abstract

A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project. It should not exceed more than 1000 words.

### ➤ Table of Contents

Titles and subtitles are to correspond exactly with those in the text.

➤ **Introduction**

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

➤ **Materials and Methods**

This section should aim at experimental designs, materials used (wherever applicable). Methodology should be mentioned in details including modifications undertaken, if any. It includes organization site(s), sample, instruments used with its validation, procedures followed and precautions.

➤ **Results and Discussion**

Present results, discuss and compare these with those from other workers, etc. In writing this section, emphasis should be laid on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary, do not write in "point" form.

While presenting the results, write at length about the various statistical tools used in the data interpretation. The result interpretation should be simple but full of data and statistical analysis. This data interpretation should be in congruence with the written objectives and the inferences should be drawn on data and not on impression. Avoid writing straight forward conclusion rather, it should lead to generalization of data on the chosen sample.

Results and its discussion should be supporting/contradicting with the previous research work in the given area. Usually one should not use more than two researches in either case of supporting or contradicting the present case of research.

➤ **Conclusion(s) & Recommendations**

A conclusion should be the final section in which the outcome of the work is mentioned briefly. Check that your work answers the following questions:

- Did the research project meet its aims (check back to introduction for stated aims)?
- What are the main findings of the research?
- Are there any recommendations?
- Do you have any conclusion on the research process itself?

➤ **Implications for Future Research**

This should bring out further prospects for the study either thrown open by the present work or with the purpose of making it more comprehensive.

➤ **Appendices**

The Appendices contain material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

➤ **References**

References should include papers, books etc. referred to in the body of the report. These should be written in the alphabetical order of the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

**Examples**

For research article

Voravuthikunchai SP, Lortheeranuwat A, Ninrprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichia coli* O157: H7. *Clin Microbiol Infect*, **8** (suppl 1): 116–117.

**For book**

Kowalski, M. (1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), **7**: 63-67

**Layout Guidelines for the Project File & Project Report**

- A4 size Paper
- Font: Arial (10 points) or Times New Roman (12 points)
- Line spacing: 1.5
- Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

**Assessment of the Project File and the Project Report**

Essentially, the assessment will be based on the quality of the report, the technical merit of the project and the project execution. Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project. Project execution is concerned with assessing how much work has been put in.

The Project should fulfill the following assessment objectives:

- Range of Research Methods used to oASEin information
- Execution of Research
- Data Analyses (Analyse Quantitative/ Qualitative information)
- Quality Control
- Conclusions

**Assessment Scheme:****Continuous Evaluation:**

40% (Based on punctuality, regularity of work, adherence to plan and methodology, refinements/ mid-course corrections etc. as reflected in the Project File.)

**Final Evaluation:**

60% (Based on the Documentation in the file, Final report layout, analysis and results, achievement of objectives, presentation/ viva)

# INDUSTRIAL WASTE ENGINEERING

Course Code: CIV2803

Credit Units: 03

## Course Objective:

To provide the knowledge on the wastewater characteristics from industry, Define the Principles of pollution prevention and mechanism of industrial processes, and Suggest the suitable technologies for the treatment of wastewater.

## Course Contents:

### Module I

Industrial waste types and characteristics; levels of environmental pollution due to industrial wastes; health issues due to industrial wastes; ecological and human health risk assessment due to industrial wastes; waste characterization methods; treatment methods-conventional and recent trends. Industrial scenario in India– Industrial activity and Environment - Uses of Water by industry – Sources and types of industrial wastewater – Nature and Origin of Pollutants – Industrial wastewater and environmental impacts – Regulatory requirements for treatment of industrial wastewater – Industrial waste survey – Industrial wastewater monitoring and sampling - generation rates, characterization and variables –Toxicity of industrial effluents and Bioassay tests – Major issues on water quality management.

### Module II

Waste management Hierarchy - Source reduction techniques – Periodic Waste Minimisation Assessments – Evaluation of Pollution Prevention Options – Cost benefit analysis – Pay-back period – Implementing & Promoting Pollution Prevention Programs in Industries.

### Module III

Flow and Load Equalisation – Solids Separation – Removal of Fats, Oil & Grease- Neutralisation – Removal of Inorganic Constituents – Precipitation, Heavy metal removal, Nitrogen & Phosphorous removal, Ion exchange, Adsorption, Membrane Filtration, Eletrodialysis & Evaporation – Removal of Organic Constituents – Biological treatment Processes, Chemical Oxidation Processes, Advanced Oxidation processes – Treatability Studies.

### Module IV

Individual and Common Effluent Treatment Plants – Joint treatment of industrial and domestic wastewater - Zero effluent discharge systems - Quality requirements for Wastewater reuse – Industrial reuse , Present status and issues - Disposal on water and land – Residuals of industrial wastewater treatment – Quantification and characteristics of Sludge – Thickening, digestion, conditioning, dewatering and disposal of sludge – Management of RO rejects.

### Module V

Industrial manufacturing process description, wastewater characteristics, source reduction options and waste treatment flow sheet for Textiles – Tanneries – Pulp and paper – metal finishing – Oil Refining–Pharmaceuticals–Sugar and Distilleries.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

# SOLID WASTE MANAGEMENT AND RECYCLING

**Course Code: CIV2808**

**Credit Units: 03**

**Course objective:** To provide information regarding different elements of Environmental pollution, their origin, characteristics and treatment.

## **Course Contents:**

### **MODULE-I**

Definition of solid waste-waste generation in a technological society- major legislation, monitoring responsibilities, sources and types of solid waste- sampling and characterization- Determination of composition of MSW- storage and handling of solid waste- Future changes in waste composition.

### **MODULE-II**

Collection and transport of solid waste: Collection of Solid waste: type of waste collection systems, analysis of collection system- alternative techniques for collection system. Separation and Processing and Transformation of Solid Waste: unit operations used for separation and processing, Materials Recovery facilities, Waste transformation through combustion and anaerobic composting, anaerobic methods for materials recovery and treatment.

### **MODULE-III**

Recycling of plastic materials and metals. Energy recovery – Incinerators. Transfer and Transport: need for transfer operation, transport means and methods, transfer station types and design requirements. Landfills: Site selection, design and operation, drainage and leachate collection systems – requirements and technical solutions, designated waste landfill remediation – Integrated waste management facilities.

## **Examination Scheme:**

# BASICS OF FINITE ELEMENT METHOD

**Course Code: CIV2809**

**Credit Units: 03**

**Course Objective:** This will enable the student to have a basic knowledge of finite element method and shall be able to appreciate and analyze linear elastic structures using finite element method.

## Course Contents:

**Module I:** Introduction to FEM. Basic idea of FEM. Applications and importance of FEM. Differential equilibrium equations - strain displacement relation - linear constitutive relation - special cases- Principle of stationary potential energy - application to finite element methods. Some numerical techniques in finite element Analysis

## Module II:

Displacement models - convergence requirements. Natural coordinate systems – Shape function. Interpolation function- Linear and quadratic elements - Lagrange & Serendipity elements- Strain displacement matrix - element stiffness matrix and nodal load vector. Coordinate Transformation: Transformation of vectors and tensors, transformation of stiffness matrices, degree of freedom within elements, condensation, condensation and recovery algorithm, substructuring, structural symmetry.

## Module III:

Two dimensional isoparametric elements - Four noded quadrilateral elements – triangular elements- Computation of stiffness matrix for isoparametric elements - numerical integration, (Gauss quadrature) -Convergence criteria for isoparametric elements.

## Module IV:

Assemblage of elements – Direct stiffness method- Special characteristics of stiffness matrix - Boundary condition & reaction - Gauss elimination and LDLT decomposition- Basic steps in finite element analysis, Introduction to Softwares based on FEM analysis.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# ENGINEERING MATHEMATICS - I

**Course Code: ASE2113**

**L-T-P : 3-1-0**

**CreditUnits: 04**

## **Course Objective:**

The knowledge of Mathematics is necessary for a better understanding of almost all the Engineering and Science subjects. Here our intention is to make the students acquainted with the concept of basic topics from Mathematics, which they need to pursue their Engineering degree in different disciplines.

## **Course Contents:**

### **Module I: Differential Calculus**

Successive differentiation, Leibnitz's theorem (without proof), Mean value theorem, Taylor's theorem (proof), Remainder terms, Asymptote & Curvature, Partial derivatives, Chain rule, Differentiation of Implicit functions, Exact differentials, Tangents and Normals, Maxima, Approximations, Differentiation under integral sign, Jacobians and transformations of coordinates.

### **Module II: Integral Calculus**

Fundamental theorems, Reduction formulae, Properties of definite integrals, Applications to length, area, volume, surface of revolution, improper integrals, Multiple Integrals-Double integrals, Applications to areas, volumes.

### **Module III: Ordinary Differential Equations**

Formation of ODEs, Definition of order, degree & solutions, ODE of first order: Method of separation of variables, homogeneous and non homogeneous equations, Exactness & integrating factors, Linear equations & Bernoulli equations, General linear ODE of  $n^{\text{th}}$  order, Solution of homogeneous equations, Operator method, Method of undetermined coefficients, Solution of simple simultaneous ODE.

### **Module IV: Vector Calculus**

Scalar and Vector Field, Derivative of a Vector, Gradient, Directional Derivative, Divergence and Curl and their Physical Significance, Arc Length, Tangent, Directional Derivative, Evaluation of Line Integral, Green's Theorem in Plane (without proof), Representation of Surfaces, Tangent Plane and Surface Normal, Surface Integral, Stoke's Theorem (without proof), Gauss Divergence Theorem (without proof).

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE

## ENGINEERING CHEMISTRY

**Course Code:** ASE2115

**L-T-P : 2-0-0**

**Credit Units: 02**

### **Course Objective:**

Four basic sciences, Physics, Chemistry, Mathematics and Biology are the building blocks in engineering and technology. Chemistry is essential to develop analytical capabilities of students, so that they can characterize, transform and use materials in engineering and apply knowledge in their field. All engineering fields have unique bonds with chemistry whether it is Aerospace, Mechanical, Environmental and other fields the makeup of substances is always a key factor, which must be known. For electronics and computer science engineering, apart from the material, computer modeling and simulation knowledge can be inherited from the molecule designing. The upcoming field of technology like Nanotechnology and Biotechnology depends fully on the knowledge of basic chemistry. With this versatile need in view, course has been designed in such a way so that the student should get an overview of the whole subject.

### **Course Contents:**

#### **Module I: Water Technology**

Introduction and specifications of water,  
Hardness and its determination (EDTA method only), Alkalinity,  
Boiler feed water, boiler problems – scale, sludge, priming & foaming: causes & prevention,  
Boiler problems – caustic embrittlement & corrosion: causes & prevention,  
Carbonate & phosphate conditioning, colloidal conditioning & calgon treatment  
Water softening processes: Lime – soda process, Ion exchange method, Water for domestic use.

#### **Module II: Fuels**

Classification, calorific value of fuel, (gross and net), Determination of calorific value of fuels, bomb calorimeter, Solid fuels - Proximate and ultimate analysis, Octane & Cetane No. and its significance.  
Numericals on combustion

#### **Module III: Instrumental Methods of analysis**

Introduction; Principles of spectroscopy; Laws of absorbance  
IR: Principle, Instrumentation, Application  
UV: Principle, Instrumentation, Application  
NMR: Principle, Instrumentation, Application

#### **Module III: Lubricants**

Introduction; Mechanism of Lubrication; Types of Lubricants; Chemical structure related to Lubrication;  
Properties of lubricants; Viscosity and Viscosity Index; Iodine Value; Aniline Point; Emulsion number; Flash Point; Fire Point; Drop Point; Cloud Point; Pour Point.  
Selection of Lubricants.

#### **Module VI: Corrosion**

Introduction, Mechanism of dry and wet corrosion,

Types of corrosion-Galvanic, Concentration cell, soil, pitting, intergranular, waterline. Passivity.

Factors influencing corrosion. Corrosion control.

**Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>

<b>ASE2120</b>	<b>ELEMENTS OF MECHANICAL ENGINEERING</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2019.1	Date of Approval: May 21, 2019	3	0	0	3
Pre-requisites/Exposure	NIL				
Co-requisites	NIL				

### **Catalog Description**

In this course the concepts of various prime movers like I C Engine, Gas Turbine, Steam Turbine, and Hydraulic Turbine are discussed in detail. Concept of power absorbing devices and power transmission devices are discussed in detail. Elementary concept of mechanics of material and machine tool also discussed in detail. The aim of this course is to make the students familiar with the basic mechanical engineering.

### **Course Objectives**

The objective of this course is to

1. Equip the students with concept of heat engine, steam, boiler, steam turbine, hydraulic turbine, hydraulic pumps, stress and strain, power transmission.
2. Provide an overview of machine tool and manufacturing system.

### **Course Outcomes**

On completion of this course, the students will be able to

- CO1: Explain working of I C engine, Gas turbine, Air standard efficiency of Otto Cycle & Diesel Cycle and Boilers.
- CO2: Explain working of Steam Turbine, Hydraulic Turbine and Hydraulic Pumps.
- CO3: Describe the stress strain diagram, Elastic constants and Transmission system.
- CO4: Discuss the metal cutting and working of machine tool with manufacturing system.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<p>MODULE 1: Prime Mover (I. C. Engine)</p> <p>Internal Combustion Engine: Introduction to I.C. Engines-two &amp; four stroke S.I. and C.I. engines. Otto cycle. Diesel cycle. Working principle of gas turbine, Constant pressure gas turbine cycle.</p>	L1, L2 and L3	7
<p>MODULE 2: Prime Mover (Turbine)</p> <p>Steam Turbine: Classification of boilers, Classification of steam turbines, Working principle of impulse and reaction.</p> <p>Hydraulic Turbine: Classification of hydraulic turbine, Construction details and working of Pelton, Francis and Kaplan turbines.</p>	L1, L2 and L3	8
<p>MODULE 3: Power Absorbing machine</p> <p>Power absorbing devices:</p> <p>Hydraulic Pumps: Classification of hydraulic pumps, Working of Reciprocating and centrifugal pumps.</p> <p>Power transmission devices: Introduction to Power transmission, Belt drive, Rope drive, Chain drive, Gear drive, Gear train.</p>		7
<p>MODULE 4: Mechanics of Material</p> <p>Stress &amp; Strain: Introduction, Concept &amp; types of Stresses and strains, Poison's ratio, Stress-strain diagrams, Hooks law, Elastic constants &amp; their relationships, Stresses and strains in simple and compound bars under axial loading, Properties of material-strength, elasticity, stiffness, malleability, ductility, brittleness, hardness and plasticity etc.</p>	L1, L2 and L3	6
<p>MODULE 5: Machine Tool</p> <p>Machine Tool: Introduction to Metal Cutting, Classification of machine tool, working and operations of Lathe, Shaper, Milling, Drilling machines.</p> <p>Manufacturing system: Component of Manufacturing Systems, Fundamentals of Numerical Control (NC), Advantage of NC systems, Classifications of NC, Computer Numerical control, Comparison of NC and CNC. Comparison between conventional and NC machines.</p>	L1, L2 and L3	8

### **Catalog Description**

The objective of this course module is to acquaint the students with the basics of computers system, its components, data representation inside computer and to get them familiar with various important features of procedure-oriented programming language i.e. C.

### **Course Objectives**

The objective of this course is to

1. Equip the students with concepts of Programming through C Language
2. Provide an overview of advanced programming concepts like Structure, Union and File Handling

### **Course Outcomes**

On completion of this course, the students will be able to

After the completion of course, the students will be able to,

- CO 1: Define the purpose and structure of C Program for programming; identify and distinguish various data types and operators; conditional and control statement; Apply if-else, Switch and loops to rewrite basic C program for problem solving.
- CO 2: Compare and contrast various Array types, its declaration and implementation; differentiate between Call by Value and Reference if Functions; apply the concepts to rewrite C Programs
- CO 3: Differentiate between various String Handling Functions; describe the concept of Pointers in C Language
- CO 4: Explain the concept of Structure and Union; apply the concept of File Handling to provide data storage support to the programs.
- CO 5: Apply the concept of Computer Graphics using C programming concepts for implementing line drawing, circle drawing algorithms.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Introduction</b> Introduction to computer, history, von-Neumann architecture, memory system (hierarchy, characteristics and types), H/W concepts (I/O Devices), S/W concepts (System S/W & Application S/W, utilities). Data Representation: Number systems, character representation codes, Binary, octal, hexadecimal and their interconversions. Binary arithmetic, floating point arithmetic, signed and unsigned numbers, Memory storage unit.	L1, L2 and L3	7
<b>Module II: Programming in C</b> History of C, Introduction of C, Basic structure of C program, Concept of variables, constants and data types in C, Operators and expressions: Introduction, arithmetic, relational, Logical, Assignment, Increment and decrement operator, Conditional, bitwise operators, Expressions, Operator precedence and associativity. Managing Input and output Operation, formatting I/O.	L2, L3 and L4	7
<b>Module III: Fundamental Features in C</b> C Statements, conditional executing using if, else, nesting of if, switch and break Concepts of loops, example of loops in C using for, while and do-while, continue and break. Storage types (automatic, register etc.), predefined processor, Command Line Argument.	L2, L3 and L4	7
<b>Module IV: Arrays and Functions</b> One dimensional arrays and example of iterative programs using arrays, 2-D arrays Use in matrix computations. Concept of Sub-programming, functions Example of user defined functions. Function prototype, Return values and their types, calling function, function argument, function with variable number of argument, recursion.	L2 and L3	7
<b>Module V: Advanced features in C</b> Pointers, relationship between arrays and pointers Argument passing using pointers, Array of pointers. Passing arrays as arguments. Strings and C string library. Structure and Union. Defining C structures, Giving values to members, Array of structure, Nested structure, passing strings as arguments. File Handling.	L2, L3 and L4	8

## Catalog Description

In this course the concepts of electricity and electrical circuits are discussed in detail. Theorems related to electrical circuits, law's related to flow of current, voltages, basic knowledge of Transformer, basic knowledge of electromagnetism, basic knowledge of electrical network will be introduced.

## Course Objectives

The objective of this course is to:

1. Provide the overview of concept of flow of current/voltage of electrical circuits.
2. Provide the basic knowledge about the concepts of electrical circuits.

## Course Outcomes

On completion of this course, the students will be able to:

CO1. Explain the fundamental theorems and laws related to the electrical circuits.

CO2. Derive equations and solve problems related to network theorems.

CO3. Draw phasor diagrams for different alternating current waveforms and Explain the working principle and estimate the performance of single phase transformers.

CO4. Explain the operation, characteristic and application of PN Junction Diode, Rectifiers, Zener Diode and Bipolar Junction Transistor.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I:</b>  <b>Direct Current Circuits:</b> Ohm's Law, Kirchhoff's Current Law, Kirchhoff's Voltage Law Network Reduction: Star-Delta Transformation, Source Transformation, Nodal Analysis, Mesh analysis, Superposition theorem, Thevenin's Theorem, Norton's theorem and Reciprocity theorem, Maximum Power transfer theorem.	L1 and L2	9
<b>Module II:</b>  <b>Alternating Current Circuits:</b> Peak, Average and RMS values for	L1, L2 and L3	8

alternating currents, Power calculation: reactive power, active power, Complex power, power factor, impedance, reactance, conductance, susceptance Resonance: series Resonance, parallel resonance, basic definition of Q factor & Band-width.		
<b>Module III:</b>  <b>Transformer:</b> Basic Transformer Operation principle, Construction, Voltage relations, current relations, Linear circuit models, open circuit test, short circuit test, Transformer Efficiency.	L1, L2 and L3	6
<b>Module IV:</b>  <b>Rotating Electrical Machines:</b> D.C. machines (motors and generators), Induction motor, Synchronous machines (motors and generators): construction, working principle, classification and applications.	L1, L2 and L3	6
<b>Module V:</b>  <b>Semiconductor Devices:</b> Principle of operation characteristic and application of PN Junction Diode, Rectifiers, Zener Diode, Principle of operation, characteristic and application of Bipolar Junction Transistor, Regulated Power Supply.	L1, L2 and L3	7

### Course Contents:

### List of Experiments:

(Any 10 Experiments)

1. To determine the ion exchange capacity of a given cation exchanger.
2. To determine the temporary, permanent and total hardness of a sample of water by complexometric titration method.
3. To determine the type and extent of alkalinity of given water sample.
4. To determine the number of water molecules of crystallization in Mohr's salt (ferrous ammonium sulphate) provided standard potassium dichromate solution (0.1N) using diphenylamine as internal indicator.
5. To determine the ferrous content in the supplied sample of iron ore by titrimetric analysis against standard  $K_2Cr_2O_7$  solution using potassium ferricyanide  $[K_3Fe(CN)_6]$  as external indicator.
6. (a) To determine the surface tension of a given liquid by drop number method.  
(b) To determine the composition of a liquid mixture A and B (acetic acid and water) by surface tension method.
7. To prepare and describe a titration curve for phosphoric acid – sodium hydroxide titration using pH-meter.
8. (a) To find the cell constant of conductivity cell.  
(b) Determine the strength of hydrochloric acid solution by titrating it against standard sodium hydroxide solution conductometrically
9. Determination of Dissolved oxygen in the given water sample.
- 10 To determine the total residual chlorine in water.
- 11 Determination of amount of oxalic acid and  $H_2SO_4$  in 1 L of solution using N/10 NaOH and N/10  $KMnO_4$  solution.
- 12 Determination of viscosity of given oil by means of Redwood viscometer I.
- 13 To determine flash point and fire point of an oil by Pensky Martin's Apparatus
- 14 To determine the Iodine value of the oil.

### **Catalog Description**

The primary objective of this course is to understand all the components of C, including the C language, the C Preprocessor, and the C Standard Library. An understanding of some advanced practical issues, including memory management, testing and debugging, complex declarations and expression evaluation, building and using libraries, and evaluating tradeoffs, such as size vs. speed and speed vs. complexity. The ability to write C code and create and manipulate logical programs.

### **Course Objectives**

The objective of this course is to

3. Equip the students with concepts of Programming through C Language
4. Provide an overview of advanced programming concepts like Structure, Union and File Handling.

### **Course Outcomes**

After the completion of course, the students will be able to,

- CO 1: Demonstrate the use of various data types and operators in C programs; Solve various problems using conditional control statements (if-else, Switch case).
- CO 2: Construct C programs related to problems involving the usage of loops, arrays and functions.
- CO 3: Apply the concept of Pointers for efficient memory management and construct C programs using string handling functions.
- CO 4: Demonstrate the use of Structure, Union and concept of File Handling to provide data storage support to the programs.

Modules	Blooms level*	Number of hours
<b>LABORATORY SESSSION 1</b> <b>OPERATORS, EXPRESSIONS and DECISION MAKING</b> <ol style="list-style-type: none"> <li>Write a program to calculate simple interest and amount.</li> <li>Write a program to swap two numbers using third variable.</li> <li>Write a program to demonstrate Greatest of 3 nos and to print the given no in ascending order.</li> <li>Write a program to check if the number is even or odd.</li> <li>Write a program to perform arithmetic operations using Switch Case statement.</li> <li>Write a program to calculate area of circle, rectangle, square and triangle using Switch Case statement.</li> </ol>	L3	5

Version 2019.1	Date of Approval: July 14, 2019				0	0	2	1

Pre-requisites/Exposure	
Co-requisites	

**Pre –Requisite:** Elements of Mechanical Engineering

### **Catalog Description**

In this course the concepts of various prime movers like I C Engine, Gas Turbine, Steam Turbine, and Hydraulic Turbine are discussed in detail. Concept of power absorbing devices and power transmission devices are discussed in detail. Elementary concept of mechanics of material and machine tool also discussed in detail. The aim of this course is to make the students familiar with the basic mechanical engineering.

### **Course Objectives:**

The objective of this course is to

1. Equip the students with practical concepts of Boiler, Turbine, IC Engine and Machine tools.
2. Understand the elements of mechanical engineering by working models and experiments.

**Course Outcomes (COs):** After studying this course the students will be able to:

**CO 1-** Define the basics of working of boilers, Steam turbines.

**CO 2-** Explain the principle and working of two strokes and four strokes internal combustion engines.

**CO 3-** Explain the working of Pelton wheel Turbine, Francis Turbine and Kaplan Turbine.

**CO 4 -** Describe the tensile test and power transmission derives.

**CO 5-** Identify and demonstrate the machine tools and lathe operation.

List of Experiments	Blooms level*	Number of hours
1. To Study the Cochran and Babcock & Wilcox boilers.	L1, L2 and L3	2
2. To study the working of impulse and reaction steam turbines	L1, L2 and L3	2
3. To study Two-Stroke & Four-Stroke Diesel Engines.	L1, L2	2

	and L3	
4. To Study Two-Stroke & Four-Stroke Petrol Engines.	L1, L2 and L3	2
5. To study the constructional features and working of Pelton wheel Turbine, Francis Turbine and Kaplan Turbine.	L1, L2 and L3	2
6. To perform tensile test, plot the stress-strain diagram and evaluate the tensile properties of a given metallic specimen.	L1, L2 and L3	2
7. To Study the different power transmission drives.	L1, L2 and L3	2
8. To Study different types of machine tools (lathe, milling, drilling & shaper).	L1, L2 and L3	2
9. To perform the metal cutting operation on Lathe machine.	L1, L2 and L3	2

*\*Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

# ENGLISH – I

Course Code: CSS2152

L-T-P : 1-0-0

CreditUnits: 01

## Course Objective:

The course is intended to give a foundation of English Language. The literary texts are indented to help students to inculcate creative & aesthetic sensitivity and critical faculty through comprehension, appreciation and analysis of the prescribed literary texts. It will also help them to respond from different perspectives.

## Course Contents:

### Module I: Vocabulary

Use of Dictionary

Use of Words: Diminutives, Homonyms & Homophones

### Module II: Essentials of Grammar - I

Articles

Parts of Speech

Tenses

### Module III: Essentials of Grammar - II

Sentence Structure

Subject -Verb agreement

Punctuation

### Module IV: Communication

The process and importance

Principles & benefits of Effective Communication

### Module V: Spoken English Communication

Speech Drills

Pronunciation and accent

Stress and Intonation

### Module VI: Communication Skills-I

Developing listening skills

Developing speaking skills

### Module VII: Communication Skills-II

Developing Reading Skills

Developing writing Skills

### Module VIII: Written English communication

Progression of Thought/ideas

Structure of Paragraph

Structure of Essays

### Module IX: Short Stories

**Of Studies, by Francis Bacon**

**Dream Children, by Charles Lamb**

**The Necklace, by Guy de Maupassant**

**A Shadow, by R.K.Narayan**

**Glory at Twilight, Bhabani Bhattacharya**

### Module X: Poems

All the Worlds a Stage

To Autumn

O! Captain, My Captain.

Where the Mind is Without Fear

**Psalm of Life**

Shakespeare

Keats

Walt Whitman

Rabindranath Tagore

**H.W. Longfellow**

***Examination Scheme:***

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	05	15	10	70

**Text & References:**

- MadhulikaJha, Echoes, Orient Long Man
- Ramon & Prakash, Business Communication, Oxford.

- Effective Technical Communication, M. Ashraf Rizvi.

**\* 30 hrs Programme to be continued for Full year**

# **UNDERSTANDING SELF FOR EFFECTIVENESS**

**Course Code: BEH 2151**

**L-T-P : 1-0-0**

**CreditUnits: 01**

## **Course Objective:**

This course aims at imparting:  
Understanding self & process of self exploration  
Learning strategies for development of a healthy self esteem  
Importance of attitudes and its effective on personality  
Building Emotional Competence

## **Course Contents:**

### **Module I: Self: Core Competency**

Understanding of Self  
Components of Self – Self identity  
Self concept, Self confidence, Self image

### **Module II: Techniques of Self Awareness**

Exploration through Johari Window  
Mapping the key characteristics of self  
Framing a charter for self  
Stages – self awareness, self acceptance and self realization

### **Module III: Self Esteem & Effectiveness**

Meaning and Importance, Components of self esteem, High and low self esteem, Measuring your self esteem

### **Module IV: Building Positive Attitude**

Meaning and nature of attitude  
Components and Types of attitude  
Importance and relevance of attitude

### **Module V: Building Emotional Competence**

Emotional Intelligence – Meaning, components, Importance and Relevance  
Positive and Negative emotions  
Healthy and Unhealthy expression of emotions

### **Module VI:End-of-Semester Appraisal**

#### **Viva based on personal journal**

#### **Assessment of Behavioural change as a result of training**

Exit Level Rating by Self and Observer

## **Examination Scheme:**

<b>Components</b>	<b>SAP</b>	<b>A</b>	<b>Mid Term Test (CT)</b>	<b>VIVA</b>	<b>Journal for Success (JOS)</b>
<b>Weightage (%)</b>	20	05	20	30	25

# FRENCH - I

**L-T-P : 3-0-0**                      **Course Code: LAN2151**                      **CreditUnits: 03**

## Course Objective:

To familiarize the students with the French language

- with the phonetic system
- with the syntax
- with the manners
- with the cultural aspects

## Course Contents:

**Module A: pp. 01 to 37: Unités 1, 2, Unité 3 Object if 1, 2**  
**Only grammar of Unité 3: object if 3, 4 and 5**

### Contenu lexical :Unité 1 : Découvrir la langue française : (oral et écrit)

1. se présenter, présenter quelqu'un, faire la connaissance des autres, formules de politesse, rencontres
2. dire/interroger si on comprend
3. Nommer les choses

### Unité 2: Faire connaissance

1. donner/demander des informations sur une personne, premiers contacts, exprimer ses goûts et ses préférences
2. Parler de soi: parler du travail, de ses activités, de son pays, de sa ville.

### Unité 3:Organiser son temps

1. dire la date et l'heure

### Contenu grammatical :

1. organisation générale de la grammaire
2. article indéfini, défini, contracté
3. nom, adjectif, masculin, féminin, singulier et pluriel
4. négation avec « de », "moi aussi", "moi non plus"
5. interrogation : Inversion, est-ce que, qui, que, quoi, qu'est-ce que, où, quand, comment, quel(s), quelle(s)  
Interro-négatif : réponses : oui, si, non
6. pronom tonique/disjoint- pour insister après une préposition
7. futurproche

# GERMAN - I

Course Code: LAN2152

L-T-P : 3-0-0

CreditUnits: 03

## Course Objective:

To enable the students to converse, read and write in the language with the help of the basic rules of grammar, which will later help them to strengthen their language.

To give the students an insight into the culture, geography, political situation and economic opportunities available in Germany

### Course Contents:

#### Module I: Introduction

Self introduction: heissen, kommen, wohnen, lernen, arbeiten, trinken, etc.

All personal pronouns in relation to the verbs taught so far.

Greetings: Guten Morgen!, Guten Tag!, Guten Abend!, Gute Nacht!, Danke sehr!, Danke!, Vielen Dank!, (es tut mir Leid!),

Hallo, wie geht's?: Danke gut!, sehr gut!, prima!, ausgezeichnet!,  
Es geht!, nicht so gut!, so la la!, miserabel!

#### Module II: Interviewspiel

To assimilate the vocabulary learnt so far and to apply the words and phrases in short dialogues in an interview – game for self introduction.

#### Module III: Phonetics

Sound system of the language with special stress on Diphthongs

#### Module IV: Countries, nationalities and their languages

To make the students acquainted with the most widely used country names, their nationalities and the language spoken in that country.

#### Module V: Articles

The definite and indefinite articles in masculine, feminine and neuter gender. All Vegetables, Fruits, Animals, Furniture, Eatables, modes of Transport

#### Module VI: Professions

To acquaint the students with professions in both the genders with the help of the verb “sein”.

#### Module VII: Pronouns

Simple possessive pronouns, the use of my, your, etc.

The family members, family Tree with the help of the verb “to have”

#### Module VIII: Colours

All the color and color related vocabulary – colored, colorful, colorless, pale, light, dark, etc.

#### Module IX: Numbers and calculations – verb “kosten”

The counting, plural structures and simple calculation like addition, subtraction, multiplication and division to test the knowledge of numbers.

“Wieviel kostet das?”

#### Module X: Revision list of Question pronouns

W – Questions like who, what, where, when, which, how, how many, how much, etc.

### Examination Scheme:

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	20	20	20	15	5

C – Project + Presentation

I – Interaction/Conversation Practice

# SPANISH – I

Course Code: LAN2153

L-T-P : 3-0-0

CreditUnits: 03

## Course Objective:

To enable students acquire the relevance of the Spanish language in today's global context, how to greet each other. How to present / introduce each other using basic verbs and vocabulary

## Course Contents:

### Module I

A brief history of Spain, Latin America, the language, the culture...and the relevance of Spanish language in today's global context.

Introduction to alphabets

### Module II

Introduction to 'Saludos' (How to greet each other. How to present / introduce each other).

Goodbyes (despedidas)

The verb *llamarse* and practice of it.

### Module III

Concept of Gender and Number

Months of the years, days of the week, seasons. Introduction to numbers 1-100, Colors, Revision of numbers and introduction to ordinal numbers.

### Module IV

Introduction to *SER* and *ESTAR* (both of which mean To Be). Revision of 'Saludos' and 'Llamarse'. Some adjectives, nationalities, professions, physical/geographical location, the fact that Spanish adjectives have to agree with gender and number of their nouns. Exercises highlighting usage of *Ser* and *Estar*.

### Module V

Time, demonstrative pronoun (Este/esta, Aquel/aquella etc)

### Module VI

Introduction to some key AR /ER/IR ending regular verbs.

## Examination Scheme:

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	20	20	20	15	5

# RUSSIAN – I

Course Code: LAN2154

L-T-P : 3-0-0

CreditUnits: 03

## **CHINESE – I**

**L-T-P : 3-0-0**

**Course Code: LAN2155**

**CreditUnits: 03**

### **Course Objective:**

There are many dialects spoken in China, but the language which will help you through wherever you go is Mandarin, or Putonghua, as it is called in Chinese. The most widely spoken forms of Chinese are Mandarin, Cantonese, Gan, Hakka, Min, Wu and Xiang. The course aims at familiarizing the student with the basic aspects

of speaking ability of Mandarin, the language of Mainland China. The course aims at training students in practical skills and nurturing them to interact with a Chinese person.

### **Course Contents:**

#### **Module I**

Show pictures, dialogue and retell.

Getting to know each other.

Practicing chart with Initials and Finals. (CHART – The Chinese Phonetic Alphabet Called “Hanyu Pinyin” in Mandarin Chinese.)

Practicing of Tones as it is a tonal language.

Changes in 3<sup>rd</sup> tone and Neutral Tone.

#### **Module II**

Greetings

Let me Introduce

The modal particle “ne”.

Use of Please ‘qing’ – sit, have tea ..... etc.

A brief self introduction – Ni hao ma? Zaijian!

Use of “bu” negative.

#### **Module III**

Attributives showing possession

How is your Health? Thank you

Where are you from?

A few Professions like – Engineer, Businessman, Doctor, Teacher, Worker.

Are you busy with your work?

May I know your name?

#### **Module IV**

Use of “How many” – People in your family?

Use of “zhe” and “na”.

Use of interrogative particle “shenme”, “shui”, “ma” and “nar”.

How to make interrogative sentences ending with “ma”.

Structural particle “de”.

Use of “Nin” when and where to use and with whom. Use of guixing.

Use of verb “zuo” and how to make sentences with it.

#### **Module V**

Family structure and Relations.

Use of “you” – “mei you”.

Measure words

Days and Weekdays.

Numbers.

Maps, different languages and Countries.

**CreditUnits: 03**

## ENGINEERING MATHEMATICS - II

**Course Code:** ASE2209

**L-T-P : 3-1-0**

**Credit Units: 04**

### Course Objective:

The knowledge of Mathematics is necessary for a better understanding of almost all the Engineering and Science subjects. Here our intention is to make the students acquainted with the concept of basic topics from Mathematics, which they need to pursue their Engineering degree in different disciplines.

### Course Contents:

#### Module I: Linear Algebra

Hermitian and Skew Hermitian Matrix, Unitary Matrix, Orthogonal Matrix, Elementary Row Transformation, Reduction of a Matrix to Row Echelon Form, Rank of a Matrix, Consistency of Linear Simultaneous Equations, Gauss Elimination Method, Gauss-Jordan Method, Eigen Values and Eigen Vectors of a Matrix, Caley-Hamilton Theorem, Diagonalization of a Matrix, Vector Space, Linear Independence and Dependence of Vectors, Linear Transformations.

#### Module II: Infinite Series

Definition of Sequence, Bounded Sequence, Limit of a Sequence, Series, Finite and Infinite Series, Convergence and Divergence of Infinite series, Cauchy's Principle of Convergence, Positive Term Infinite Series, Comparison test, D'Alembert's Ratio test, Raabe's Test, Cauchy's nth root Test, Logarithmic Test, Alternating Series, Leibnitz's Test, Absolute and conditional convergence, Uniform Convergence, Power Series and its Interval of Convergence.

#### Module III: Complex Analysis

De Moivre's Theorem and Roots of Complex Numbers, Logarithmic Functions, Circular, Hyperbolic Functions and their Inverses.

Functions of a Complex Variables, Limits, Continuity and Derivatives, Analytic Function, Cauchy-Riemann Equations (without proof), Harmonic Function, Harmonic Conjugates, Conformal Mapping, Bilinear Transformations, Complex Line Integral, Cauchy Integral Theorem, Cauchy Integral Formula, Derivative of Analytic Function, Power Series, Taylor Series, Laurent Series, Zeros and Singularities, Residues, Residue Theorem, Evaluation of

Real Integrals of the Form  $\int_{-\infty}^{\infty} \frac{f(x)}{F(x)} dx$ .

#### Module IV: Statistics and Probability

Moments, Skewness, Kurtosis, Random Variables and Probability Distribution, Mean and Variance of a Probability Distribution, Binomial Distribution, Poisson Distribution and Normal Distribution.

<b>ASE2216</b>	<b>Engineering Mechanics</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2019.1	Date of Approval: May 21, 2019	2	1	0	3
Pre-requisites/Exposure	Basics of Mathematics, Mathematical Equations, Force systems				
Co-requisites	-				

### Catalog Description

Engineers are the ultimate problem solvers. This course introduces the principles required to solve engineering mechanics problems. It addresses the modelling and analysis of static equilibrium problems with an emphasis on real-world engineering applications and problem solving. To master this course, students should have a background in basic mathematical calculus and physics covering classical mechanics. These basic concepts of physics and mathematics will be applied to formulate problems on force systems, trusses, friction, centroid, simple lifting machines, power transmission devices and law of conservation of energy.

### Course Objectives

The objective of this course is to

- Equip the students with concepts of free body diagram, friction, centroid or center of gravity, trusses, energy, force system and its effect on the behavior of the bodies
- Provide an overview of estimation of performance of belts and simple lifting machines under various operating conditions.

### Course Outcomes

After completing the course, the students will be able to

- CO1. Explain the concept of free body diagram, classify various force system and apply equilibrium equations to solve different truss problems.
- CO2. Define and compute various terms associated with the friction, determine the efficiency of simple lifting machines and power transmission devices.
- CO3. Describe various theorems and apply them to determine centroid, centre of gravity, moment of inertia, mass moment of inertia of various bodies.
- CO4. Analyse and setting up the problems involving the concept of work, energy, impulse and momentum.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I:</b> <b><u>Force system</u></b>	L1, L2	10

Types of forces, Parallelogram law of forces, Triangle law of forces, Polygon law of forces, Free body diagram, Equilibrium equations and applications. Lami's theorem and its applications. Moment and its applications,	and L3	
<b>Module II:</b> <b><u>Determinate Structures</u></b> Plane truss, perfect and imperfect truss, assumption in solving the truss problems, method of joints, method of section.	L1, L2, and L3	8
<b>Module III:</b> <b><u>Friction</u></b> Static and Kinetic friction, laws of dry friction, co-efficient of friction, angle of friction, angle of repose, ladder friction, Screw jack & determination of its efficiency	L2 and L3	10
<b>Module IV:</b> <b><u>Distributed Force</u></b> Determination of center of gravity, center of mass and centroid by direct integration and by the method of composite bodies, mass moment of inertia and area moment of inertia by direct integration and composite bodies method, radius of gyration, perpendicular axis theorem, parallel axis theorem, and its application, polar moment of inertia.	L2, L3 and L4	8

*\*Bloom's Level:*

*L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5:Synthesis, L6:Evaluation*

## ENGINEERING PHYSICS

**Course Code:** ASE2110  
**L-T-P : 2-1-0**

**CreditUnits: 03**

### Course Objective:

Aim of this course is to introduce the students to fundamentals of graduate level physics, which form the basis of all applied science and engineering

### Course Contents:

#### Module I: Oscillations & Waves

**Oscillations:** Introduction to S.H.M. Damped Oscillations: Differential Equation and its solution, logarithmic decrement, Quality Factor, Different conditions of damping of harmonic oscillations. Forced oscillations: Amplitude and Frequency Response, Resonance, Sharpness of Resonance

**Plane Progressive Waves:** Differential Equation and Solution, Superposition of Progressive Waves stationary waves.

**Ultrasonics:** Generation and application of ultrasonic waves.

#### Module II: Wave Nature of Light

Interference: Coherent Sources, Conditions of interference, Interference due to division of wavefront, Fresnel's biprism Interference due to division of amplitude, Newton's rings, Interference due to thin films, .

Diffraction: Fresnel and Fraunhofer diffraction, Fraunhofer diffraction at a single slit, double slit, N Slits, Transmission grating, Rayleigh criterion and Resolving power of grating.

Polarization: Birefringence, Nicol prism, Production and analysis of plane, circularly and elliptically polarized light, Half and quarter wave plates, Optical rotation, Polarimeter.

#### Module III: Electromagnetics

Scalar and vector fields, gradient of a scalar field, physical significance of gradient, equipotential surface. Line, surface and volume integrals, Divergence and curl of vector field and mathematical analysis physical significance, Electric flux, Gauss' law, Proof and Applications, Gauss divergence and Stokes theorems.

Differential form of Gauss' Law, Amperes' Law, Displacement current, Faradays Law, Maxwell equations in free space & isotropic media (Integral form & differential form), EM wave propagation in free space, Poynting vector.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

## ENGINEERING PHYSICS LAB

**Course Code:** ASE2114

**L-T-P : 0-0-2**

**Credit Units: 01**

### List of Experiments:

1. To determine the wavelength of sodium light by Newton's rings method.
2. To determine the dispersive power of the material of prism with the help of a spectrometer.
3. To determine the specific rotation of sugar by Bi-quartz or Laurent half shade polarimeter.
4. To determine the speed of ultrasonic waves in liquid by diffraction method.
5. To determine the width of a narrow slit using diffraction phenomena.
6. To determine the temperature coefficient of platinum wire, using a platinum resistance thermometer and a Callender & Griffith's bridge.
7. To determine the value of specific charge (ratio of  $e/m$ ) of an electron by Thomson method.
8. To determine the internal resistance of Leclanche cell with the help of Potentiometer.
9. To determine the resistance per unit length of a Carey Foster's bridge wire and also to find out the specific resistance of a given wire.
10. To plot graph showing the variation of magnetic field with distance along the axis of a circular coil carrying current, and hence estimate the radius of the coil.
11. To determine the value of acceleration due to gravity ('g') in the laboratory using bar pendulum.
12. To determine the moment of inertia of a flywheel about its own axis of rotation.
13. To determine the density of material of the given wire with the help of sonometer.

### Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA – Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

<b>ASE2212</b>	<b>ENGINEERING GRAPHICS LAB</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2019.1	Date of Approval: July 14, 2019	0	0	4	2
Pre-requisites/Exposure	Concepts Mathematics (especially Trigonometry and Geometry)				
Co-requisites	Machine Drawing & CAD				

### Catalog Description:

A freshman level course which provides the undergraduate engineering students with a background in descriptive geometry, orthographic projection, engineering drawing standards and annotation, computer-aided engineering graphics. The concepts of point, line and plane relationships in projection, multi-view engineering drawings, auxiliary and section views, basic dimensioning and annotation, engineering applications of drawings are also discussed.

### Course Objective:

The objective of this course is to

1. Equip the students with the in-depth knowledge of drawings of points, straight line, planes, cylinders, prisms, pyramids, parabola, ellipse etc.
2. Draw different figures manually and will be capable of using various instruments involved in drawings.

### Course Outcomes (COs):

At the end of the course, the student shall be able to:

CO 1 - Define and explain basic principles of projections of points and lines.

CO 2 - Define, describe and construct the different orientations and projections of planes.

CO 3 – Explain and construct the projections of solids and sectioning of solids in different orientations.

CO 4 - State and draw the concepts of development of surfaces and introduction to auto CAD.

CO 5 – Define and construct orthographic and isometric view of an object.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Introduction</b>  Importance, significance and scope of engineering drawing, drawing instruments and their use, lettering, dimensioning, scales, sense of proportioning, different types of projections, B.I.S. Specifications.	L1 and L2	8

<b>Module II: Projection of points, lines and plane surface</b> Principal planes, principles of orthographic projections, Projection of points in all quadrants, Projection methods - First angle & third angle projection, Projections of straight lines (first angle projection) inclined to both the planes, true lengths and traces, projection of planes, projection of planes in simple position and inclined to both the principal planes, auxiliary planes and views	L1, L2 and L3	12
<b>Module III: Projection of solids &amp; section of solids</b> Projection of simple solids like prisms, pyramids, cylinder, cone and truncated solids when the axis is inclined to both of the principal planes, Sectioning of above solids in simple vertical position when the cutting plane is inclined to the one of the principal planes and perpendicular to the other, obtaining true shape of section	L1, L2 and L3	12
<b>Module IV: Development of surfaces &amp; Isometric projections</b> Development of surfaces of simple and sectioned solids – Prisms, pyramids cylinders and cones, Principles of isometric projection, isometric scale, Isometric projections of simple solids and truncated solids, Prisms, pyramids, cylinders, cones, Conversion of Orthographic Views to Isometric Views and Vice-versa.	L1, L2 and L3	8
<b>Module V: Introduction to CAD</b> Introduction to CAD and use of its commands, practice of some 2D figures using CAD.	L1, L2 and L3	8

*\*Bloom's Level:*

# ENGLISH-II

Course Code: CSS2252

L-T-P : 1-0-0

CreditUnits: 01

## Course Objective:

The course is intended to give a foundation of English Language. The literary texts are indented to help students to inculcate creative & aesthetic sensitivity and critical faculty through comprehension, appreciation and analysis of the prescribed literary texts. It will also help them to respond form different perspectives.

## Course Contents:

Module I: Vocabulary

Use of Dictionary

Use of Words: Diminutives, Homonyms & Homophones

### Module II: Essentials of Grammar - I

Articles

Parts of Speech

Tenses

### Module III: Essentials of Grammar - II

Sentence Structure

Subject -Verb agreement

Punctuation

Module IV: Communication

The process and importance

Principles & benefits of Effective Communication

Module V: Spoken English Communication

Speech Drills

Pronunciation and accent

Stress and Intonation

### Module VI: Communication Skills-I

Developing listening skills

Developing speaking skills

Module VII: Communication Skills-II

Developing Reading Skills

Developing writing Skills

Module VIII: Written English communication

Progression of Thought/ideas

Structure of Paragraph

Structure of Essays

Module IX: Short Stories

**Of Studies, by Francis Bacon**

**Dream Children, by Charles Lamb**

**The Necklace, by Guy de Maupassant**

**A Shadow, by R.K.Narayan**

**Glory at Twilight, Bhabani Bhattacharya**

### Module X: Poems

All the Worlds a Stage

To Autumn

O! Captain, My Captain.

Where the Mind is Without Fear

**Psalm of Life**

Shakespeare

Keats

Walt Whitman

Rabindranath Tagore

**H.W. Longfellow**

***Examination Scheme:***

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	05	15	10	70

# PROBLEM SOLVING AND CREATIVE THINKING

Course Code: BEH 2251

L-T-P : 1-0-0

CreditUnits: 01

## Course Objective:

To enable the students:

Understand the process of problem solving and creative thinking.

Facilitation and enhancement of skills required for decision-making.

## Course Contents:

Module I: Thinking as a tool for Problem Solving

What is thinking: The Mind/Brain/Behaviour

Critical Thinking and Learning:

Making Predictions and Reasoning

Memory and Critical Thinking

Emotions and Critical Thinking

Thinking skills

## Module II: Hindrances to Problem Solving Process

Perception

Expression

Emotion

Intellect

Work environment

## Module III: Problem Solving

Recognizing and Defining a problem

Analyzing the problem (potential causes)

Developing possible alternatives

Evaluating Solutions

Resolution of problem

Implementation

Barriers to problem solving:

Perception

Expression

Emotion

Intellect

Work environment

## Module IV: Plan of Action

Construction of POA

Monitoring

Reviewing and analyzing the outcome

## Module V: Creative Thinking

Definition and meaning of creativity

The nature of creative thinking

Convergent and Divergent thinking

Idea generation and evaluation (Brain Storming)

Image generation and evaluation

Debating

The six-phase model of Creative Thinking: ICEDIP model

## Module VI: End-of-Semester Appraisal

Viva based on personal journal

Assessment of Behavioural change as a result of training

Exit Level Rating by Self and Observer

## Examination Scheme:

Components	SAP	A	Mid Term Test (CT)	VIVA	Journal for Success (JOS)
Weightage (%)	20	05	20	30	25

# ENVIRONMENTAL STUDIES

**Course Code:** ENV 2252  
**L-T-P : 4-0-0**

**CreditUnits: 04**

## **Course Objective:**

The term environment is used to describe, in the aggregate, all the external forces, influences and conditions, which affect the life, nature, behaviour and the growth, development and maturity of living organisms. At present a great number of environment issues, have grown in size and complexity day by day, threatening the survival of mankind on earth. A study of environmental studies is quite essential in all types of environmental sciences, environmental engineering and industrial management. The objective of environmental studies is to enlighten the masses about the importance of the protection and conservation of our environment and control of human activities which has an adverse effect on the environment.

## **Course Contents:**

### **Module I: The multidisciplinary nature of environmental studies**

Definition, scope and importance

Need for public awareness

### **Module II: Natural Resources**

#### **Renewable and non-renewable resources:**

Natural resources and associated problems

Forest resources: Use and over-exploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forests and tribal people.

Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems.

Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies.

Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies.

Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources, case studies.

Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification.

- Role of an individual in conservation of natural resources.
- Equitable use of resources for sustainable lifestyles.

### **Module III: Ecosystems**

Concept of an ecosystem

Structure and function of an ecosystem

Producers, consumers and decomposers

Energy flow in the ecosystem

Ecological succession

Food chains, food webs and ecological pyramids

Introduction, types, characteristic features, structure and function of the following ecosystem:

- a. Forest ecosystem
- b. Grassland ecosystem
- c. Desert ecosystem
- d. Aquatic ecosystems (ponds, streams, lakes, rivers, ocean estuaries)

### **Module IV: Biodiversity and its conservation**

Introduction – Definition: genetic, species and ecosystem diversity

Biogeographical classification of India

Value of biodiversity: consumptive use, productive use, social, ethical aesthetic and option values

Biodiversity at global, national and local levels

India as a mega-diversity nation

Hot-spots of biodiversity

Threats to biodiversity: habitat loss, poaching of wildlife, man wildlife conflicts

Endangered and endemic species of India

Conservation of biodiversity: In-situ and Ex-situ conservation of biodiversity

### **Module V: Environmental Pollution**

Definition

- □ □ Causes, effects and control measures of:

- a. Air pollution
- b. Water pollution

# FRENCH - II

Course Code: LAN2251

L-T-P : 3-0-0

CreditUnits: 03

## Course Objective:

To enable the students to overcome the fear of speaking a foreign language and take position as a foreigner speaking French.

To make them learn the basic rules of French Grammar.

## Course Contents:

Module A : pp.38 – 47 : Unité 3: Objectif 3, 4, 5, 6

Module B: pp. 47 to 75 Unité 4, 5

### Contenu lexical: Unité 3 : Organiser son temps

1. donner/demander des informations sur un emploi du temps, un horaire  
SNCF – Imaginer un dialogue
2. rédiger un message/ une lettre pour ...
  - i) prendre un rendez-vous/ accepter et confirmer/ annuler
  - ii) inviter/accepter/refuser
3. Faire un programme d'activités  
imaginer une conversation téléphonique/un dialogue  
Propositions- interroger, répondre

### Unité 4: Découvrir son environnement

1. situer un lieu
2. s'orienter, s'informer sur un itinéraire.
3. Chercher, décrire un logement
4. connaître les rythmes de la vie

### Unité 5: s'informer

1. demander/donner des informations sur un emploi du temps passé.
2. donner une explication, exprimer le doute ou la certitude.
3. découvrir les relations entre les mots
4. savoir s'informer

- Contenu grammatical:**
1. Adjectifs démonstratifs
  2. Adjectifs possessifs/exprimer la possession à l'aide de :
    - i. « de » ii. A+nom/pronom disjoint
  3. Conjugaison pronominale – négative, interrogative -  
construction à l'infinitif
  4. Impératif/exprimer l'obligation/l'interdiction à l'aide de « il faut... »/ «il ne faut pas... »
  5. passé composé
  6. Questions directes/indirectes

## ExaminationScheme:

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	20	20	20	15	5

C – Project + Presentation

I – Interaction/Conversation Practice

## Text & References:

- le livre à suivre: Campus: Tome 1

# GERMAN – II

Course Code: LAN2252

L-T-P : 3-0-0

CreditUnits: 03

## Course Objective:

To enable the students to converse, read and write in the language with the help of the basic rules of grammar, which will later help them to strengthen their language.

To give the students an insight into the culture, geography, political situation and economic opportunities available in Germany

Introduction to Grammar to consolidate the language base learnt in Semester I

### Course Contents:

#### Module I: Everything about Time and Time periods

Time and times of the day.

Weekdays, months, seasons.

Adverbs of time and time related prepositions

#### Module II: Irregular verbs

Introduction to irregular verbs like to be, and others, to learn the conjugations of the same, (fahren, essen, lessen, schlafen, sprechen und ähnliche).

#### Module III: Separable verbs

To comprehend the change in meaning that the verbs undergo when used as such

Treatment of such verbs with separable prefixes

#### Module IV: Reading and comprehension

Reading and deciphering railway schedules/school time table

Usage of separable verbs in the above context

#### Module V: Accusative case

Accusative case with the relevant articles

Introduction to 2 different kinds of sentences – Nominative and Accusative

#### Module VI: Accusative personal pronouns

Nominative and accusative in comparison

Emphasizing on the universal applicability of the pronouns to both persons and objects

#### Module VII: Accusative prepositions

Accusative prepositions with their use

Both theoretical and figurative use

#### Module VIII: Dialogues

Dialogue reading: 'In the market place'

'At the Hotel'

### Examination Scheme:

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	20	20	20	15	5

C – Project + Presentation

I – Interaction/Conversation Practice

# SPANISH – II

Course Code: LAN2253

L-T-P : 3-0-0

CreditUnits: 03

## Course Objective:

To enable students acquire more vocabulary, grammar, Verbal Phrases to understand simple texts and start describing any person or object in Simple Present Tense.

## Course Contents:

### Module I

Revision of earlier modules.

### Module II

Some more AR/ER/IR verbs. Introduction to root changing and irregular AR/ER/IR ending verbs

### Module III

More verbal phrases (eg, Dios Mio, Que lastima etc), adverbs (*bueno/malo, muy, mucho, bastante, poco*). Simple texts based on grammar and vocabulary done in earlier modules.

### Module IV

Possessive pronouns

### Module V

Writing/speaking essays like my friend, my house, my school/institution, myself....descriptions of people, objects etc, computer/internet related vocabulary

## Examination Scheme:

Components	CT1	CT2	C	I	V	A
Weightage (%)	20	20	20	20	15	5

C – Project + Presentation

I – Interaction/Conversation Practice

**Course Code: LAN2254**

**L-T-P : 3-0-0**

**CreditUnits: 03**

# CHINESE – II

Course Code: CSE2255

L-T-P : 3-0-0

CreditUnits: 03

## Course Objective:

Chinese is a tonal language where each syllable in isolation has its definite tone (flat, falling, rising and rising/falling), and same syllables with different tones mean different things. When you say, “ma” with a third tone, it mean horse and “ma” with the first tone is Mother. The course aims at familiarizing the student with the basic aspects of speaking ability of Mandarin, the language of Mainland China. The course aims at training students in practical skills and nurturing them to interact with a Chinese person.

## Course Contents:

### Module I

Drills

Practice reading aloud

Observe Picture and answer the question.

Tone practice.

Practice using the language both by speaking and by taking notes.

Introduction of basic sentence patterns.

Measure words.

Glad to meet you.

### Module II

Where do you live?

Learning different colors.

Tones of “bu”

Buying things and how much it costs?

Dialogue on change of Money.

More sentence patterns on Days and Weekdays.

How to tell time. Saying the units of time in Chinese. Learning to say useful phrases like – 8:00, 11:25, 10:30 P.M. everyday, afternoon, evening, night, morning 3:58, one hour, to begin, to end ..... etc.

Morning, Afternoon, Evening, Night.

### Module III

Use of words of location like-li, wai hang, xia

Furniture – table, chair, bed, bookshelf,.. etc.

Description of room, house or hostel room..eg what is placed where and how many things are there in it?

Review Lessons – Preview Lessons.

Expression ‘yao’, ‘xiang’ and ‘yaoshi’ (if).

Days of week, months in a year etc.

I am learning Chinese. Is Chinese difficult?

### Module IV

Counting from 1-1000

Use of “chang-chang”.

Making an Inquiry – What time is it now? Where is the Post Office?

Days of the week. Months in a year.

Use of Preposition – “zai”, “gen”.

Use of interrogative pronoun – “duoshao” and “ji”.

“Whose”??? Sweater etc is it?

Different Games and going out for exercise in the morning.

### Module V

The verb “qu”

– Going to the library issuing a book from the library

– Going to the cinema hall, buying tickets

– Going to the post office, buying stamps

– Going to the market to buy things..etc

– Going to the buy clothes .... Etc.

Hobby. I also like swimming.

Comprehension and answer questions based on it.

**Examination Scheme:**

<b>Components</b>	<b>CT1</b>	<b>CT2</b>	<b>C</b>	<b>I</b>	<b>V</b>	<b>A</b>
<b>Weightage (%)</b>	20	20	20	20	15	5

C – Project + Presentation

## **Third Semester**

<b>ASE2313</b>	<b>Engineering Mathematics - III</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2019-1	Date of Approval: May 2019	3	1	0	4
Pre-requisites/ Exposure	Basic Mathematics				
Co-requisites					

## Course Catalog

The course is necessary for a better understanding of almost all the Engineering and Science subjects. Here our intention is to make the students acquainted with the concept of basic topics from Mathematics, which they need to pursue their Engineering degree in different disciplines.

## Course Objectives

The objective of this course is to

1. Equip the students with basic concepts of mathematics so as to explore the usage of mathematics in differential equations and its classification integral calculus.
2. Disseminate knowledge on performing mathematical functions that can be applied to solve the vector and integral problem and gaining deeper knowledge in a subject specific area through practicing different problems in solving and analyzing the problem

## Course Outcomes

On successful completion of this course, students will be able to

- CO1.** Identify, estimate, and apply the fundamental concept of mathematics such as Partial Differential Equations and its classifications, vector differentiation and integral calculus.
- CO2.** Utilize the Fourier series and Laplace transformation to analyze the problems in various domains of engineering.
- CO3.** Describe any model with multi variable using linear programming by numerous methods.
- CO4.** Identify, estimate and apply different mathematical functions to attain a solution of problem
- CO5.** Demonstrate problem-solving and critical thinking skills by practicing problem in mathematics.

## Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Partial Differential Equations</b> Formation of PDE, Equations solvable by direct integration, Linear equations of the first order, Non-linear equations of the first order, Charpit's method, Homogeneous linear equations with constant coefficients, Non homogeneous linear equations.	L1, L2, L3	14
<b>Module II: Fourier Series</b> Periodic Functions, Fourier Series, Functions having points of discontinuity, Even or Odd Functions, Change of Interval, Half-range series, Parseval's Formula, Complex form of Fourier series, Practical Harmonic Analysis, Fourier Transforms, Sine and Cosine Transforms.	L1, L2, L3, L4	10
<b>Module III: Laplace Transformation</b> Definition, Transforms of elementary functions, Properties of Laplace transforms, Existence conditions, Transforms of derivatives, Transforms of integrals, Evaluation of	L1, L2, L3	12

integrals by Laplace transform, Inverse transforms, Other methods of finding inverse transforms, Convolution theorem, Application to differential equations, Simultaneous linear equations with constant coefficients, Unit step functions, Periodic functions.		
<b>Module IV: Linear Programming</b> Formulation of the problem, Graphical method, Canonical and Standard forms of L.P.P. Simplex Method, Artificial variable Techniques-M-method, Two phase method, Degeneracy, Dual simplex method.	L1, L2, L3	12

*\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

Co-requisites					

### Course Catalog

This course provides basic understanding and knowledge of the scientific principles of thermodynamics, and heat transfer. This course helps the students to understand the application of basic fluid mechanics, thermodynamic, and heat transfer principles and techniques, including the use of empirical data, to the analysis of representative fluid and thermal energy components and systems encountered in the practice of electrical, electronic, industrial, and related disciplines of engineering. It will also help in designing any device which involves the interchange between heat and work.

### Course Objectives

The objective of this course is to

1. Equip the students with basic knowledge and governing principles of heat and work.
2. Enable students with problem solving skills related to gases, gas mixtures, gas power cycles, and vapor power cycles.

### Course Outcomes

On successful completion of this course, students will be able to

- CO1.** Identify and explain the basic science and principles of thermodynamics and apply them to thermodynamic systems.
- CO2.** Identify, and explain the basic principles of first law of thermodynamics and apply the knowledge to solve relevant engineering problems.
- CO3.** Identify, and explain the basic principles of second law of thermodynamics and apply the knowledge to solve relevant engineering problems.
- CO4.** List, explain and compare amongst the various properties of gases and gas mixtures and solve relevant engineering problems.
- CO5.** List, explain and compare amongst the various kinds of gas and vapor power cycles and solve relevant engineering problems.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1: Basic Concepts</b> Macroscopic and microscopic approaches, thermodynamic system and control volume. Thermodynamic properties, processes and cycles. Homogeneous and heterogeneous systems, Quasi-static process, Thermodynamic equilibrium, Pure substance. Zeroth Law of Thermodynamics and temperature, Measurement of	L1, L2	7

temperature and its scales, thermocouples, Ideal gas.		
<b>Module 2: First Law of Thermodynamics</b> Work and heat transfer, sign conventions. Joule's experiment, equivalence of heat and work, First law of thermodynamics, specific heats, internal energy, enthalpy, applications and limitations of first law. First law applied to flow processes; control volume, Steady flow processes, mass and energy balance.	L1, L2, L3	7
<b>Module 3: Second Law of Thermodynamics and Entropy</b> Qualitative difference between heat and work, Energy reservoir, Heat Engine, heat pump and refrigerator, Kelvin Planck's and Clausius's statements of Second Law and their equivalence, Perpetual motion machine, Reversibility and irreversibility, Carnot Cycle, Carnot's theorem and its corollary, Absolute temperature scale, Clausius's inequality, property of entropy, principle of entropy increase, concepts of availability.	L1, L2, L3	8
<b>Module 4: Properties of Gas and Gas Mixtures</b> Avogadro's law, ideal and real gas, equations of state, Dalton's law, Properties of mixture of gases; internal energy, enthalpy, specific heat and entropy, Gibb's function. Steam, saturated and superheated steam, wet steam, Use of steam tables.	L1, L2, L3, L4	7
<b>Module 5: Gas and Vapour Power Cycles</b> Carnot cycle, Otto cycle, Diesel cycle, Dual cycle, Brayton cycle, Reversed Carnot cycle, PV and TS Diagrams, Comparisons, Calculations of efficiency. Simple steam power cycle, Rankine cycle, Comparison of Rankine and Carnot cycle.	L1, L2, L3, L4	7

### Course Catalog

The objective of this course is to make the students understand the concept of stress and strain in different types of structure/machine under different loading conditions. The course also covers the simple and compound stresses due to forces, stresses and deflection in beams due to bending, torsion in circular section, strain energy, different theories of failure and stress in thin cylinder thick cylinder and spheres due to external and internal pressure.

### Course Objectives

The objective of this course is to

1. Equip the students with concept of stress and strain induced in material under various loading conditions.
2. Provide an overview of stresses induced in beam, shaft, column and deflection of beam under various loading conditions.

### Course Outcomes

On completion of this course, the students will be able to

- CO1.** Identify, explain, and apply the principles of stress and strain and relationship between elastic constant to solve complex engineering problems.
- CO2.** Identify, explain, and apply the principles of shear force and bending moment under various loads to solve complex engineering problems.
- CO3.** Identify, explain, and apply the principles of torsion and torsional stresses to solve complex engineering problems.
- CO4.** Identify, explain, and apply the methods to solve complex engineering problems related to columns and struts.
- CO5.** Identify, explain, and apply the methods to solve complex engineering problems related to slope and deflection of different bodies.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module I: Simple Stresses and Strains</b> Concept of stress and strain; Hooke's law, Young's modulus, Poisson ratio, stress at a point, stress and strains in bars subjected to axial loading. Modulus of elasticity, stress produced in compound bars subject to axial loading. Mohr Circle, problems.	L1, L2, L3	6
<b>Module II: Shear Force and Bending Moment</b> Definitions, Types of loads, Types of beams, Shear force and bending moment diagrams for cantilevers, simply supported beams, calculation of maximum	L1, L2, L3	8

bending moment & shear force. Bending Stress, assumptions in the simple bending theory, derivation of formula and its application to beams of rectangular, circular and channel sections, problems.		
<b>Module III: Torsion</b> Derivation of torsion equation and its assumptions. Applications of the equation for the hollow and solid circular shafts, torsional rigidity, combined torsion and bending of circular shafts, principal stress and maximum shear stresses under combined loading of bending and torsion, problems.	L1, L2, L3	7
<b>Module IV: Columns and Struts</b> Columns and Struts and their failure mechanism, Euler's formulas; Rankine-Gordon's formula, Johnson's empirical formula for axially loaded columns and their applications, problems.	L1, L2, L3	7
<b>Module IV: Slope and Deflection</b> Relationship between moment, slope and deflection, Mohr's theorem; Moment area method; method of integration; Macaulay's method: Use of all these methods to calculate slope and deflection for the following: a) Cantilevers b) Simply supported beams with or without overhang c) Under concentrated loads, uniformly distributed loads or combination of concentrated and uniformly distributed loads, problems.	L1, L2, L3	8

*\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

Co-requisites	Strength of Materials				

### Course Catalog

The objective of the Strength of Materials lab is to demonstrate the basic principles in the area of strength and mechanics of materials and structural analysis to the undergraduate students through a series of experiments. In this lab, the experiments are performed to measure the properties of the materials such as impact strength, tensile strength, compressive strength, hardness, ductility etc.

### Course Outcomes

At the end of the course, the student shall be able to:

- CO1.** Identify, explain, and demonstrate the procedure to conduct hardness tests using different testing techniques.
- CO2.** Identify, explain, and demonstrate the procedure to conduct compression and stiffness tests using different testing techniques.
- CO3.** Identify, explain, and demonstrate the procedure to conduct impact and tensile tests using different testing techniques.
- CO4.** Identify, explain, and demonstrate the procedure to conduct torsion tests and draw shear force and bending moment diagrams for bodies under different loading conditions.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
1. To study the Brinell hardness testing machine & perform the Brinell hardness test.	L1, L2, L3	2
2. To study the Rockwell hardness testing machine & perform the Rockwell hardness test.	L1, L2, L3	2
3. To study the Spring Compression Testing machine and perform the Spring Stiffness test.	L1, L2, L3	2
4. To study the Impact testing machine and perform the Impact tests (Izod & Charpy Test)	L1, L2, L3	2
5. To study the Universal Testing Machine and perform the tensile test on Universal Testing Machine.	L1, L2, L3	2
6. To perform compression & bending tests on UTM.	L1, L2, L3	2
7. To study the torsion testing machine and perform the torsion test.	L1, L2, L3	2
8. To draw shear Force, Bending Moment Diagrams for a simply Supported Beam under Point and Distributed Loads.	L1, L2, L3	2

*\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

### Course Catalog

This course provides basic knowledge and understanding of various kinds of flight vehicles and their classifications based on various aspects. Knowledge of basic physics is crucial to comprehend the contents of this course. This course also provides introductory knowledge to the students about various components and systems of flight vehicles which serve as a foundation for better understanding of advanced course.

### Course Objectives

The objective of this course is to

1. Provide introductory knowledge to the students regarding the basic science and principles as applicable to various flight vehicles and their structure.
2. Provide education to the students about the aerodynamics, propulsion, and systems of different types of flight vehicles.

### Course Outcomes

On completion of this course, the students will be able to

- CO1.** List, explain, and categorize amongst various kinds of flight vehicles and their design.
- CO2.** List, explain, and compare amongst various structural components of flight vehicles and loads acting on them.
- CO3.** List, explain, categorize, and apply the basic concepts of flight and properties of atmosphere.
- CO4.** List, explain, categorize, and apply the basic concepts of propulsion and propulsion systems.
- CO5.** List, explain, categorize, and apply the basic concepts of various types of aerospace systems and instrumentations.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1: Introduction to Flight Vehicles</b> History and development of flying machines. Classification of flight vehicles. V/STOL Machines, Introduction to prominent design features of; Airplanes, helicopter and other flying machines. Advancements in Aerospace.	L1, L2, L4	7
<b>Module 2: Aerospace Structure</b> Importance of strength/weight ratio of materials. Monocoque, semi-monocoque and truss type construction. Detailed description of the fuselage, wing and tail structures. Loads on different parts of the aerospace vehicles. Types of undercarriages. Aerospace Materials.	L1, L2, L4	7

<b>Module 3: Principles of Flight</b> International Standard Atmosphere, Relationship between temperature, pressure and altitude. Bernoulli's principle, Propagation of sound, Mach Number, Aerodynamic forces and moments on airfoil; Lift and drag, Roll, Pitch and yaw, Wing Planform, Control surfaces.	L1, L2, L4	7
<b>Module 4: Principles of Propulsion</b> Newton's third law of motion and its application in propulsion, Propulsive force, Air-breathing Propulsion, Types of air-breathing engines, Rocket Propulsion, Thrust Equation, Propulsive Efficiency, Propulsion system design criteria, Advancements in Aerospace Propulsion.	L1, L2, L4	8
<b>Module 5: Aerospace Systems and Instrumentation</b> Introduction to mechanical, electrical and avionics systems, conventional control, powered control, basic instruments of flying, T-arrangement, Actuation systems, Environmental control systems, Air data systems, communication systems.	L1, L2, L4	7

*\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

### Course Catalog

This course provides the basic knowledge and understanding of the properties, types, motion and forces of fluid. A student is supposed to have a basic knowledge of physics to comprehend the contents of this course. The subject will further enhance the knowledge regarding different types of flows and their practical applications in the field of aerospace. The course also includes different fluid equations like Euler's, Bernoulli's etc. and their practical applications.

### Course Objectives

The objective of this course is to

1. Provide introductory knowledge to the students about different properties of fluids and equip the students with the knowledge of basic principles and laws governing the motion of fluid.
2. Equip the students with knowledge and understanding of the different behaviors of flow past submerged bodies of different shapes and cross-sections.

### Course Outcomes

On successful completion of this course, students will be able to

- CO1.** Identify, describe, and distinguish amongst the various types and properties of fluids, hydrostatic forces and their measurement techniques.
- CO2.** Identify, describe, and distinguish amongst the various properties of Kinematics of fluid motion and solve relevant engineering problems.
- CO3.** Identify, describe, and distinguish amongst the various properties of Dynamics of fluid motion and solve relevant engineering problems using various techniques of dimensional analysis.
- CO4.** Define, and explain various forces and moments acting on fully submerged bodies and apply the basic principles to solve relevant engineering problems.
- CO5.** Identify, describe, and distinguish between various properties of internal and external laminar and turbulent flows and solve relevant engineering problems.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1: Introduction to Fluid Properties and Fluid Static</b> Physical properties of fluids, Newtonian and Non-Newtonian Fluids, Incompressible and compressible fluids. Pascal's Law, Hydrostatic law, concept of pressure and its measurement, forces on plane and curved surfaces. Buoyancy, stability of floating bodies.	L1, L2	7

<b>Module 2: Fluid Kinematics</b> Description of fluid flow; Lagrangian and Eulerian approach, Types of fluid flows, streamline, pathline and streakline, velocity potential and stream function. Source, sink, doublet, superimposed flow, vorticity and circulation, vortex flow, free and forced vortex.	L1, L2	8
<b>Module 3: Fluid Dynamics and Dimensional Analysis</b> Conservation equations, Euler's equation, Bernoulli's equation, Introduction to Navier-stokes equation, Pilot tube, Venturimeter, orificemeter, notches. Buckingham $\pi$ -Theorem, Rayleigh Theorem, Types of similarity, Dimensionless numbers and their significance.	L1, L2, L3	7
<b>Module 4: Flow past Submerged Bodies</b> Drag and Lift, Types of drag force, Drag on various bodies, circulation and lift on cylinder and airfoil, Magnus Effect, Introduction to boundary layer, Boundary layer thickness, boundary layer separation.	L1, L2, L3	7
<b>Module 5: Laminar and Turbulent Flow</b> Reynolds' experiment, critical velocity, steady laminar flow through a circular tube, flow between parallel plates, Transition from laminar to turbulent flow, velocity distribution law near a solid boundary. Flow through pipes, Energy losses, minor losses in pipe lines.	L1, L2, L3	7

*\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

### Course Catalog

The objective of the Fluid Mechanics and Dynamics lab is to familiarize the students with application of basic physics of fluids, its viscosity, and its laws of conservation of energy. It provides the students with the knowledge of laboratory methods and interpretation of results with regard to fluid engineering applications such as design and operation of water, losses it goes through while energy is being transferred.

### Course Objectives

1. Equip the students with concepts of properties of fluid flow and fluids; energy losses calculations and its measurement through different geometric cross sections.
2. Provide an outline of calculations of coefficient of discharge velocity and contraction through various flow measuring devices.

### Course Outcomes

At the end of the course, the student shall be able to:

- CO1.** Describe the working, interpret, calculate, and validate the Bernoulli's experiment.
- CO2.** Describe the working of Venturimeter and Orificemeter, determine the coefficient of discharge.
- CO3.** Describe, categorize, differentiate the various major and minor losses, and calculate the losses in the pipeline structure.
- CO4.** Describe the Reynolds's experiment and metacenter. Determine the type of the flow and interpret the conditions for a body to float.
- CO5.** State the pressure measuring devices, their working and determine the viscosity of fluid with change in the temperature.

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
1. Verification of Bernoulli's Theorem	L2, L4	1
2. To determine the coefficient of discharge of Venturimeter	L2, L3	2
3. To determination of coefficient of Discharge $C_d$ , coefficient of contraction $C_c$ and coefficient of velocity $C_v$ of an Orificemeter	L2, L3	1
4. To find major head losses in a pipe line	L2, L3 and L4	1
5. To find minor head losses in a pipe line (sudden expansion/contraction/bend)	L2, L3 and L4	1

6. To find critical Reynold's number for a pipe flow	L2, L3	1
7. To determine the metacentric height of a floating body	L2, L3	1
8. To study pressure measuring devices	L1, L2	1
9. To determine the viscosity of the fluid with the change in the temperature	L1, L2	1
10. To determine the coefficient of discharge by falling head method	L2, L3	1

*\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

### Course Catalog

This course provides basic knowledge and understanding of various tools, techniques, processes, and practices utilized in manufacturing and maintenance workshops. This course also deals with various specific processes utilized in manufacturing of aircraft structure and components. Basic understanding of engineering physics and elements of mechanical engineering is prerequisite to comprehend the contents of this course.

### Course Objectives

The objective of this course is to

1. Provide introductory knowledge to the students regarding the basic manufacturing processes, and heat treatment techniques.
2. Equip the students with knowledge of various tools, processes, and techniques used in manufacturing of aircraft and its components.

### Course Outcomes

On successful completion of this course, students will be able to

- CO1.** Identify, describe and distinguish amongst the basic tools and processes used in sheet metal and wood working.
- CO2.** Identify, describe, and distinguish between various heat treatment processes and their impacts on material properties.
- CO3.** Identify, describe, and distinguish between various types of machining tool used in manufacturing and fabrication of components.
- CO4.** Identify, describe, and distinguish between various types of jigs and fixtures used in manufacturing and fabrication of aircraft components.
- CO5.** Identify, describe, and distinguish between various processes and techniques used in manufacturing and fabrication of aircraft structure and components.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1: Introduction</b> Selection of materials. Importance of material processes. Manufacturing Processes. Sheet Metal working. Wood Working.	L1, L2	4
<b>Module 2: Heat Treatment of Steels</b> Relation between heat treatment and physical properties of steels. Critical temperatures, annealing, normalizing, tempering, case carburizing, hardening,	L1, L2	6

nitriding and other surface hardening methods. Quenching. Hardness numbers, hardness testing machines.		
<b>Module 3: Machining Tools</b> Types of lathe, lathe operations – facing, turning, threading, shapers. Types of shapers, general applications. Milling machines, types of milling machines. Work holding devices, cutter holding devices. Abrasives, bonds, grinding wheels.	L1, L2	5
<b>Module 4: Jigs and Fixtures</b> General design. Method of location of cylindrical and flat surfaces. Design principles of Wing Jig, Fuselage jig and other components.	L1, L2	4
<b>Module 5: Aircraft Manufacturing Processes</b> Profiling, hydroforming, spar milling, spark erosion, high energy rate forming. Manufacturing of honeycomb structures. General methods of construction of aircraft and engine parts.	L1, L2	5

### Course Catalog

The course is designed to equip the students with knowledge and understanding of various measurements systems generally utilized in different aerospace applications. This course enables the students to identify and utilize a particular measuring system to achieve solutions of various engineering applications.

### Course Objectives

The objective of this course is to

1. Equip the student with a basic understanding about the need and necessity of specific measurements techniques systems for aerospace applications.
2. Provide detailed knowledge to the students about the construction and operation of various measurements systems and instruments.

### Course Outcomes

On completion of this course, the students will be able to

- CO1.** List, identify, and explain the need, necessity, and fundamentals of measuring principles, techniques, and systems.
- CO2.** List, identify, and explain the construction, components, and working of motion, force and torque measurement systems.
- CO3.** List, identify, and explain the construction, components, and working of pressure and flow measurement systems.
- CO4.** List, identify, and explain the construction, components, and working of temperature and humidity measurement systems.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1: Introduction to Measurement Systems</b> Introduction, Typical Applications of measurement Systems, Functional Elements of a Measurement System, Classification of Instruments, Standards and Calibration.	L1, L2	5
<b>Module 2: Motion, Force and Torque Measurement</b> Introduction, Relative motion Measuring Devices, Electromechanical, Optical, Photoelectric, Absolute Motion Devices, Spring Mass & Force Balance Type, Hydraulic Load Cell, Pneumatic Load Cell, Elastic Force Devices, Separation of Force Components, Electro-mechanical Methods, Strain Gauge, Torque	L1, L2	7

Transducer, Torque Meter.		
<b>Module 3: Pressure and Flow Measurement</b> Introduction, Moderate Pressure Measurement, Monometers, Elastic Transducer, High Pressure Transducer, Low Pressure Measurement, Quantity Meters, Positive Displacement Meters, Flow Rate Meters, Variable Head Meters, Variable Area Meters, Rotameters, Pitot-Static Tube Meter, Drag Force Flow Meter, Hot-Wire Anemometer	L1, L2	6
<b>Module 4: Temperature and Humidity Measurement</b> Introduction, Measurement of Temperature, Non Electrical Methods – Solid Rod Thermometer, Bimetallic Thermometer, Liquid-in-Glass thermometer, Pressure Thermometer, Electrical Methods – Electrical Resistance Thermometers, Semiconductor Resistance Sensors (Thermistors), Thermo–electric Sensors, Thermocouple Materials, Radiation Methods (Pyrometry), Total Radiation Pyrometer, Selective Radiation Pyrometer, humidity measurements	L1, L2	6

### Course Catalog

The main objective of this course is to provide an understanding of the behavior of thermal systems. This course aims to provide the students essential knowledge on various modes of heat transfer and its application in solving problems related to aero-thermodynamics of rockets and launch vehicles. Specifically, this course would deal with aero-thermal design and analysis of various systems of flight vehicles.

### Course Objectives

The objective of this course is to

1. Provide a basic understanding and knowledge to the students about the various mechanism of heat transfer.
2. Equip the students with knowledge to apply and solve heat transfer related problems of the aerospace domain.

### Course Outcomes

On completion of this course, the students will be able to

- CO1.** List, and describe various principles and characteristics of conductive heat transfer for different bodies and solve relevant problems.
- CO2.** List, and describe various principles and characteristics of convective heat transfer for different bodies and solve relevant problems.
- CO3.** List, and describe various principles and characteristics of radiative heat transfer for different bodies and solve relevant problems.
- CO4.** Identify, explain and apply the various principles of heat transfer to solve problems relevant to heat transfer through various components and systems of flight vehicles.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1: Conductive Heat Transfer</b> Basic modes of heat transfer, Fourier's Law of heat conduction, thermal conductivity of materials, heat capacity, 1D steady state heat conduction with and without heat generation, for plates, cylinders and spheres, critical thickness, unsteady state.	LI, L2	6
<b>Module 2: Convective Heat Transfer</b> Introduction, Newton's law of cooling, advection, free convection in atmosphere, free convection on vertical plate. Forced convection, laminar and	LI, L2	6

turbulent convective heat transfer analysis between parallel plates, over a flat plate and in circular pipes.		
<b>Module 3: Radiative Heat Transfer</b> Introduction to physical mechanism, radiation properties, Stefan-Boltzmann's Law, radiation shape factors, Black and grey body radiation, radiation shields.	LI, L2	6
<b>Module 4: Heat Transfer Problems in Aerospace</b> High speed flow heat transfer, Heat transfer problems in gas turbine combustion chamber, rocket thrust chamber, aerodynamic heating and ablative heat transfer, cooling techniques. Heat Exchangers, overall heat transfer coefficient, NTU method of analysis.	L1, L2, L3, L4	6

*\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

### Course Catalog

This course deals with the techniques of numerical analysis, which gives the solution to applied problem when ordinary analytical method fails. The given techniques can be used in design of engineering and scientific problems. This course provides the basic knowledge and fundamentals related to the concepts of engineering mathematics, errors and approximation theory, interpolation, graph fitting and statistical computation.

### Course Objectives

The objective of this course is to

1. Provide an understanding to the students about the various numerical tools to solve problems related to formulation of algebraic equations and data interpolation.
2. Equip the students with knowledge to use various numerical tools to solve problems related to calculus, differential equations, and statistics.

### Course Outcomes

On completion of this course, the students will be able to

- CO1.** Identify, distinguish and apply the concept of errors, data interpretation and approximation theory to solve relevant problems.
- CO2.** Identify, distinguish the various methods of Interpolation, and apply the concept to solve realistic problems.
- CO3.** Distinguish and apply the various methods of numerical integration and differentiation to solve complex engineering problems.
- CO4.** Interpret and construct differential equations various different methods to solve complex engineering problems.
- CO5.** Identify, distinguish and apply various technical tools of curve fitting and their utilisation in engineering.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1: Solution of Algebraic and Transcendental Equation</b> Error in a series approximation, Bisection Method, Iteration method, Method of false position, Newton-Raphson method. Solutions of Simultaneous equation: Gauss elimination method, Jacobi iteration method, Gauss Seidal method.	L1, L2, L3	10
<b>Module 2: Interpolation</b> Finite Differences, Difference tables, Polynomial Interpolation: Newton's forward and backward formula, Central Difference Formulae: Gauss forward	L1, L2, L3	10

and backward formula. Interpolation with unequal intervals: Lagrange's Interpolation, Newton Divided difference formula.		
<b>Module 3: Numerical Integration and Differentiation</b> Introduction, Numerical differentiation Numerical Integration: Trapezoidal rule, Simpson's 1/3 and 3/8 rules.	L2, L3	5
<b>Module 4: Solution of Differential Equations</b> Euler's Method, Runge-Kutta Methods	L2, L3, L4	3
<b>Module 5: Statistical Computation</b> Frequency chart, Curve fitting by method of least squares, fitting of straight lines, polynomials, exponential curves etc., Data fitting with Cubic splines.	L1, L2, L3	8

*\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

Version 2019-1	Date of Approval: May 2019	2	0	0	2
Pre-requisites/ Exposure	Basic Physics, Introduction to Aerospace Engineering				
Co-requisites					

### Course Catalog

This course provides basic knowledge and understanding of flow over airfoils and wings. This course focuses on educating the students about various physical laws and mathematical theories that define the flow behavior over lifting and non-lifting surfaces at low Mach number. Knowledge of basic physics and fluid mechanics is crucial to comprehend the contents of this course. This course serves as a prerequisite for better understanding of advanced aerodynamic courses.

### Course Objectives

The objective of this course is to

3. Provide knowledge about the basic principles and parameters of flow motion and their measurement.
4. Educate the students about the theories and laws governing the aerodynamic behavior over airfoils and wings.

### Course Outcomes

On completion of this course, the students will be able to

- CO6.** List and explain parameters of fluid motion and derive relevant governing equations.
- CO7.** Describe and determine various aerodynamic and design parameters of different types of airfoils.
- CO8.** Explain, derive, and apply various governing equations and theories of incompressible flow over infinite wings.
- CO9.** Explain, derive, and apply various governing equations and theories of incompressible flow over finite wings.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1: Introduction</b> Introduction to incompressible flow. Continuity, momentum and energy Equation and their control volume approach. Streamline, Pathline, Streakline, Vorticity and circulation. Pitot-static tube, measurement of air-speed, pressure coefficient.	L1, L2, L3	6
<b>Module 2: Airfoil Characteristics</b> Airfoil nomenclature and characteristics. Aerodynamic force and moments, Calculations for airfoil lift and drag. Center of pressure, Aerodynamic center.	L2, L3	6

Characteristics of low speed airfoils. Finite and Infinite wings.		
<b>Module 3: Incompressible Flow over Airfoils</b> Non-lifting and lifting flow over circular cylinder. Vortex sheet Kutta sheet, Kutta-Jaukowski theorem. Generation of lift. D’alembert’s principle. Classical thin airfoil theory for symmetric and cambered airfoil. Kelvin Circulation theorem.	L2, L3, L4	6
<b>Module 4: Incompressible Flow over Finite Wings</b> Biot-Savart’s Law. Helmholtz’s theorem. Vortex filament, finite and infinite. Prandtl classical lifting line theory. Downwash and induced drag. Elliptical lift distribution. Vortex lattice method for wings. Delta wing.	L2, L3, L4	6

*\*Bloom’s Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

Co-requisites					

### Course Catalog

This course provides basic knowledge and understanding of aerospace propulsive devices as systems, with functional requirements and environmental considerations. This course provides intermediate knowledge to the students about the design, construction, and working of different types of propulsion systems and of their components and sub-systems. Knowledge of basic physics, thermodynamics, and components of flight vehicle's power plant is crucial to comprehend the contents of this course. This course serves as a prerequisite for better understanding of advanced courses related to propulsion of flight vehicles.

### Course Objectives

The objective of this course is to

1. Equip the students with basic knowledge and governing principles of jet propulsion, propulsion systems, and their components.
2. Enable students with problem solving skills related to design, construction, and performance of aircraft powerplants, their systems, and subsystems.

### Course Outcomes

On successful completion of this course, students will be able to

- CO1.** Identify and explain the basic science and principles of jet propulsion and relevant performance parameters.
- CO2.** Identify, describe and compare amongst the various types of propellers and explain the mathematical theories behind the operation of propellers.
- CO3.** List, summarize and compare amongst the construction, components, and operation of various types of air-breathing engines, their systems, and subsystems and solve relevant problems.
- CO4.** List, summarize, and compare amongst the construction, components, and operation of various types of aircraft piston engines, their systems and subsystems.
- CO5.** Outline and describe different types of fuels, their characteristics, and environmental consideration associated with their use.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1: Introduction</b>	L1, L2	7

Basics of Jet propulsion. Classification of powerplants. Propulsive efficiency, Specific fuel consumption, Thrust and power. Factors affecting thrust and power.		
<b>Module 2: Propeller Blade Theory</b> Ideal momentum theory and blade element theory. Selection of propellers, Types of propellers, Prop-fan, Shrouded propellers. Propeller power losses, Propeller performance parameters. Windmilling Effect.	L1, L2, L4	7
<b>Module 3: Air-breathing Engines</b> Gas turbine cycle. Compressor and turbine efficiencies. Compressor work and turbine work. Centrifugal and axial type of compressor and their comparative action. Combustion chambers, various arrangements and performance. Nozzles and their operation, afterburners.	L1, L2, L3, L4	6
<b>Module 4: Aircraft Piston Engines</b> S.I. and C.I. engines, 4-stroke and 2-stroke engines. Various type of arrangements, multi-cylinder engines, their merits and operational efficiencies. Intake and exhaust manifolds. Cooling and lubrication systems. Valve timing and arrangements. Combustion knock, knock rating. Carburetion and fuel injection. Ignition of the charge, ignition system. I.H.P., B.H.P and F.H.P, engine performance, effect of altitude, power required and power available. Supercharging and turbocharging	L1, L2, L4	10
<b>Module 5: Aviation Fuel and Environmental Considerations</b> Liquid fuels, hydrocarbons, gasoline, aviation turbine fuels. Fuel characteristics, vapor lock. Aircraft emission standards, environmental implications.	L1, L2	6

*\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

Co-requisites					

### Course Catalog

This course provides basic knowledge and understanding of various kinds of loads acting on aircraft structural members and their importance. This course provides knowledge and understanding to the students about the analysis of stress, strain, deflection, and torsion of a structure under varying loads using numerous methods. Knowledge of engineering mechanics and strength of materials is crucial to comprehend the contents of this course. This course serves as a prerequisite for better understanding of advanced courses related to structure of flight vehicles.

### Course Objectives

The objective of this course is to

3. Provide an overview of structural problems of beams and trusses which serves as benchmarks in analysis of structural members of flight vehicles.
4. Enable the students to understand and utilized different theorems and principles governing the structural designing of flight vehicles.

### Course Outcomes

On completion of this course, the students will be able to

- CO6. Identify, describe, and analyze structural problems of stress and strain in Cartesian and Polar coordinates using governing equations.
- CO7. Describe and determine the deflection and rotation of beams under different loads using various theorems.
- CO8. Identify, describe, and determine the forces acting on statically indeterminate structures under different loads using various theorems.
- CO9. Describe and apply the fundamental knowledge of torsion to solve relevant problems about solid bars, shells, and tubes.
- CO10. Identify, describe and compare amongst various loads acting on structure members of an aircraft.

## Course Content

Modules	Blooms level*	Number of hours
<b>Module 1: Analysis of 2D Problems</b> Plane Stress and Plane Strain. Equilibrium equations, compatibility conditions, governing equations and boundary conditions. Analysis of 2D problems, Theory of Elasticity.	L1, L2, L4	6
<b>Module 2: Structural Analysis Method</b> Energy method, strain energy due to axial, bending and torsional loads, complimentary energy. Castigliano's theorems, Maxwell's reciprocal theorem. Unit load method. Principle of virtual work and virtual displacement. Principle of superposition.	L2, L3	6
<b>Module 3: Statically Indeterminate Structures</b> Statically determinate and indeterminate structures. Analysis of plane truss: Moment distribution method, Stiffness method, Flexibility method. Analysis of frames and rings.	L1, L2, L3, L4	6
<b>Module 4: Torsion</b> Torsion of non-circular solid bars, warping, axially constrained stresses. Torsional deflection of non-circular shell. Analysis of thin and thick walled tubes. Multi-cell sections.	L2, L3	6
<b>Module 5: Structural Loads</b> Loads on flight vehicles, Aerodynamic loads, Maneuvering loads, Inertia loads, Gust loads. Velocity-load factor diagram. Factor of safety.	L1, L2, L4	6

*\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

### Course Catalog

This course deals with the techniques of numerical analysis, which gives the solution to applied problem when ordinary analytical method fails. The given techniques can be used in design of engineering and scientific problems. This course provides the basic knowledge and fundamentals related to the concepts of engineering mathematics, errors and approximation theory, interpolation, graph fitting and statistical computation.

### Course Objectives

The objective of this course is to

1. Provide an understanding to the students about the space, celestial bodies, trajectories, orbits, and orbital mechanics.
2. Equip the students with knowledge about various types of rockets, satellites and spacecraft, their crucial systems and subsystems.

### Course Outcomes

On completion of this course, the students will be able to

- CO1.** List and explain the various peculiarities and properties of space, celestial bodies, manned and unmanned spaceflight.
- CO2.** State and explain elements, principles and laws associated with the motion of orbiting bodies.
- CO3.** Define, explain and compare amongst the various elements and properties related to maneuvering of artificial satellites in orbits.
- CO4.** List, explain, distinguish and compare amongst the different types of rockets and satellites, their design and operation.
- CO5.** List, explain, distinguish and compare amongst the different systems and subsystems of spacecraft.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1: Introduction</b> Planet/Solar Systems, Use of space. History of spaceflight, Space environment, Planetary exploration. Peculiarities of space environment, effect of space environment on materials of spacecraft structure and astronauts, manned space missions.	L1, L2	7
<b>Module 2: Orbital Principles</b>	L1, L2	7

Motion of planets and satellites, history of various models. Trajectory and Orbits. Circular and elliptical orbits. Orbital elements and properties. Kepler's laws of planetary motion and proof of the laws. Newton's universal law of gravitation. Total energy of an orbiting body. Orbital Velocity.		
<b>Module 3: Orbital Maneuvers</b> Orbit Establishment. Orbital perturbations and corrections. Orbital Maneuvers. Single-impulse maneuvers, delta-V and delta-V requirements. Hohmann transfer. Simple plane changes.	L1, L2, L4	7
<b>Module 4: Rockets and Satellites</b> Rockets, Missiles, Satellite launch vehicles. PSLV, GSLV. Propellant & rocket propulsion systems. Thermal protection. Natural and artificial satellites, Different types of satellites. Communication satellites, radio wave propagation, modulation and demodulation. Remote sensing satellites.	L1, L2, L4	7
<b>Module 5: Spacecraft Systems</b> Spacecraft launch, launch vehicle and site selection. Attitude reference and control subsystem. Power subsystem. Thermal subsystem. Orbital maintenance subsystem. Propulsion subsystem. Onboard computer subsystem.	L1, L2, L4	8

### Course Catalog

The objective of this course is to provide practical knowledge and understanding to the students about the aerodynamics over bodies of different cross-sections and shapes. Knowledge of fluid mechanics and basic aerodynamics is necessary to comprehend the contents of this course. This course equips the students with necessary knowledge to design and carry out experiments, gather results and interpret them in order to observe the aerodynamic behavior of bodies.

### Course Objectives

The objective of this course is to

1. Equip the students with necessary practical understanding and skill to carry out experiments to visualize and observe the flow behavior over different bodies.
2. Provide practical skill and knowledge to carry out experiments using wind tunnel to gather results as per designed experiment.

### Course Outcomes

On completion of this course, the students will be able to

- CO1.** Explain and demonstrate the construction and procedure of operating a wind tunnel and measurement of pressure gradient along a wind tunnel.
- CO2.** Explain and demonstrate the procedure of utilizing Pitot - static tube and anemometer for flow velocity calculations.
- CO3.** Explain and demonstrate the procedure of determining pressure distribution over bodies of different cross-sections.
- CO4.** Explain and demonstrate the procedure of utilizing Hele-shaw apparatus for flow visualization over bodies of different cross-sections.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Experiment 1:</b> Wind tunnel as a tool, their classification, uses and applications.	L1, L2	2
<b>Experiment 2:</b> Measurement of pressure gradient along a wind tunnel	L1, L2	2
<b>Experiment 3:</b> Use of Pitot - static tube and Anemometer for measuring velocity	L1, L2	2

<b>Experiment 4:</b> Pressure distribution over a 2D cylinder	L1, L2	2
<b>Experiment 5:</b> Pressure distribution over an airfoil	L1, L2	2
<b>Experiment 6:</b> Flow visualization over flat plate	L1, L2	2
<b>Experiment 6:</b> Flow visualization over cylinder	L1, L2	2
<b>Experiment 7:</b> Flow visualization over an airfoil	L1, L2	2
<b>Experiment 8:</b> Experiments on potential flow Analogy (Hele-Shaw flow).	L1, L2	2
<b>Experiment 9:</b> Setting up of liquid paraffin smoke wire for flow visualization.	L1, L2	2

### Course Description

The objective of this course is to provide practical knowledge and understanding to the students about the various propulsion systems and subsystems used in aerospace applications. Knowledge of fluid mechanics, thermodynamics, and heat transfer is necessary to comprehend the contents of this course. This course equips the students with necessary knowledge to understand the construction and operation of propulsion systems.

### Course Objectives

The objective of this course is to

1. Provide practical knowledge to the students about the various types of piston engine, their construction, and operation.
2. Provide practical knowledge to the students about the various subsystems of SI and CI engines, their construction, and operation.

### Course Outcomes

On completion of this course, the students will be able to

- CO1.** List, explain, and differentiate amongst the various types of piston engines based on their construction and operation.
- CO2.** Explain and demonstrate the construction and operation of various subsystems of piston engines.
- CO3.** Explain and demonstrate the knowledge of determining different kinds of powers in a piston engine.
- CO4.** Determine and analyze the performance of nozzle and duct burner.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Experiment 1:</b> To study the construction and working of CI and SI engines having various arrangements of cylinders.	L2, L3	1
<b>Experiment 2:</b> To study the construction and working of two-stroke and four-stroke piston engines.	L2, L3	1
<b>Experiment 3:</b> To study the construction and working of a carburettor.	L2, L3	1
<b>Experiment 4:</b> To study the components and working of the fuel system of petrol and diesel engine.	L2, L3	1
<b>Experiment 5:</b> To study the components and working of the ignition system of the petrol engine.	L2, L3	1

<b>Experiment 6:</b> To determine the valve timings for a given piston-cylinder arrangement.	L2, L3	1
<b>Experiment 7:</b> To determine the IHP, BHP, and FHP of a four-stroke petrol engine.	L2, L3, L4	2
<b>Experiment 8:</b> To determine the performance of a nozzle.	L2, L3, L4	2
<b>Experiment 9:</b> To determine the performance of a duct burner.	L2, L3, L4	2

<b>ASE2422</b>	<b>Fuels and Combustion</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Introduction to Aerospace Engineering, Chemistry				
Co-requisites	Aircraft Propulsion				

### Course Description

This course provides basic understanding to the students about various types of fuels used in aviation application along with an insight to their physical and chemical parameters. This course also deals with various combustion mechanisms of fuels and enable the students in understanding the need and techniques of flame stability and fuel treatment. Basic knowledge of engineering chemistry and thermodynamics is a prerequisite to comprehend the contents of this course.

### Course Objectives

The objective of this course is to

3. Provide a basic understanding to the students about the various aviation fuels and their properties.
4. Equip the students with knowledge about combustion fundamentals and performance.

### Course Outcomes

On completion of this course, the students will be able to

- CO5.** Identify, explain, and compare amongst the various properties of fuels.
- CO6.** Identify, explain, and compare amongst the various types of alternative fuels used in aviation applications.
- CO7.** Explain, describe, and compare amongst the various fundamentals of combustion and flames.
- CO8.** Identify, explain and compare amongst the various fundamentals and techniques related to flame stabilization.
- CO9.** List, explain, and compare amongst the various methods and processes of fuel treatments.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1: Fuel and its Properties.</b> Fuels, types of fuels, relative density, molecular mass, vapor pressure, flash point, volatility point, viscosity, surface tension, freezing point, specific heat, latent heat, thermal conductivity. Combustion properties of fuels. Calorific value, enthalpy, spontaneous-ignition temperature, limits of flammability, smoke point. Pressure and temperature effects.	L1, L2	7
<b>Module 2: Alternative Fuels for Aerospace Applications</b> Alternative fuels, synthetic fuels, biofuels, biodiesels, alternative fuel properties. Combustion and emissions performance. Fuel preparation, fuel atomization.	L1, L2	7
<b>Module 3: Fundamentals of Combustion</b> Deflagration, detonation, classification of flames, physics of combustion chemistry. Flammability limits, weak mixtures, rich mixtures. Laminar and	L2, L4	8

turbulent flames, Premixed and diffusion flames, flame burning velocity. Factors influencing flame propagation speed. Stoichiometric ratio, equivalence ratio. Flame propagation in heterogeneous mixtures of fuel drops, fuel vapor, and air.		
<b>Module 4: Flame Stabilization</b> Flame stability, definition of stability performance, measurement of stability performance. Bluff-body flame holders, stabilization. Mechanisms of flame stabilization, flame stabilization in combustion chambers.	L1, L2	7
<b>Module 5: Fuel Treatment</b> Introduction to fuel treatment, removal of sulfur compounds, contaminants, asphaltenes, gum, sediment, ash, water, sodium, vanadium, additives, gum prevention, corrosion inhibition/lubricity improvers, anti-icing, antismoke. Environmental considerations.	L1, L2	7

*\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

### Course Description

This course provides basic understanding and knowledge to the students about various control systems and their utilization in aerospace applications. Basic knowledge of electronics is a prerequisite to comprehend the contents of this course. This course also deals with analysis and design of control systems and enables the students in understanding the application of control systems in automatic flying control of flight vehicles.

### Course Objectives

The objective of this course is to

1. Provide a basic understanding to the students about the control systems and their applications.
2. Equip the students with knowledge about operation, design, and analysis of control systems.

### Course Outcomes

On completion of this course, the students will be able to

- CO1.** Identify, explain, and categorize amongst the various types of control systems used in flight vehicle operation and control.
- CO2.** Explain, describe, and compare amongst the various types of open and closed loop control systems, illustrate block diagrams and signal flow graphs.
- CO3.** Explain and analyze the operation of transient and steady-state response control systems.
- CO4.** List, explain, design, and analyze different types of controllers using various approaches.
- CO5.** Describe, distinguish, and compare amongst the different types of control systems utilized in Automatic flying control systems of aircrafts.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1: Introduction to Control Systems</b> History of Automatic Control. Control Engineering Practice. Simple pneumatic, hydraulic, and thermal systems. Parallel and series systems. Analogies-mechanical and electrical components. Development of flight control systems.	L1, L2, L4	7
<b>Module 2: Open and Closed Loop Systems</b> Concept of controls. Open-loop and closed-loop systems with examples. Concepts of feedback and basic structure of feedback control system. Laplace's transform. Block diagram, representation of block diagram, reduction block diagram. Output to input ratios, signal flow graph. Requirements of an ideal control system.	L2, L3, L4	7
<b>Module 3: Transient and Steady-State Response Analysis</b> Introduction. Type and order of systems, time response specifications. Transient,	L2, L4	8

and steady state response. Input signals. First order system with unit step response, Second order system with unit step response for un-damped, critical damped, overdamped, and underdamped cases. Higher order system. Routh's – Hurwitz Criterion. Steady and transient state errors in unit feedback control systems.		
<b>Module 4: Control Systems Analysis and Design</b> Introduction. Types of controllers. Root locus plot, lead and lag compensation techniques. Bode plot: concepts and construction. Lead and lag compensation technique based on the frequency-response approach.	L1, L2, L3, L4	7
<b>Module 5: Automatic Flight Control</b> Introduction to Automatic flight control, automatic flight control system components. Autopilot, longitudinal autopilots. Brief description through block diagrams and Root locus of displacement auto pilot. Pitch orientation control system. Acceleration control system.	L2, L4	7

*\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

Co-requisites					

### Course Description

This course represents the design of computer-controlled electromechanical system. Basic knowledge of electronics and measurements systems is a prerequisite to comprehend the contents of this course. This course enables the student to design and operate a mechatronics system after integrating the principles of mechanical, computer, electrical, and controls engineering.

### Course Objectives

The objective of this course is to

1. Provide brief introduction of various components of mechatronics systems comprising electrical, mechanical and control systems along with basic knowledge of mathematical models and theories.
2. Equip the students with knowledge about different types of sensors, actuation systems and microprocessors and their applications.

### Course Outcomes

On completion of this course, the students will be able to

- CO1.** List, explain, and describe different types of mechatronics systems, their components and working.
- CO2.** Describe and represent mathematical models and blocks of mechatronic systems with various system theories.
- CO3.** Identify, describe and select appropriate sensors and transducers and design an instrumentation system for collecting information about processes.
- CO4.** Describe and distinguish between Pneumatic and hydraulic actuation systems, their design and operation.
- CO5.** Identify, describe, and design the architecture and the instruction set for a microprocessor and its language programming with various types of digital and analog interfaces.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1: Introduction</b> Introduction to mechatronics systems. Mechatronics in manufacturing, products, and design. Mechatronics system components. Measurement systems, control systems, electrical systems, mechanical systems.	L1, L2	6
<b>Module 2: System Models</b> Mathematical models. Mechanical system building blocks. Modeling dynamic systems. First order systems, second order systems.	L2, L4	6
<b>Module 3: Transducers and Sensors</b>	L1, L2,	8

Definition and classification of transducers and sensors. Principle of working and applications of light sensors, proximity sensors and Hall effect sensors. Signal conditioning, introduction to signal conditioning. Operational amplifier, protection, filtering, Wheatstone bridge. Digital signals multiplexers. Data acquisition.	L3	
<b>Module 4: Actuation Systems</b> Introduction. Need and necessity of actuation systems. Pneumatic and hydraulic actuation systems, system components, graphic representations, symbols. Directional control valves, pressure control valves, process control valves. Hydraulic power packs, pumps. Design of hydraulic circuits.	L2, L3	8
<b>Module 5: Introduction to Microprocessors</b> Evolution of Microprocessor. Organization of Microprocessors (Preliminary concepts). Basic concepts of programming of microprocessors. Review of concepts - Boolean algebra, logic gates and gate networks, binary & decimal number systems, memory representation. Conversion of real, numbers, floating point notation, representation of floating point numbers, accuracy and range, overflow and underflow, addition of floating point numbers, character representation.	L1, L2, L3	8

*\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

Co-requisites					

### Course Catalog

This course provides basic knowledge and understanding of shaft power and aircraft engines components such as inlet compressor, combustion chamber and nozzles. This course focuses on educating the students about various physical laws and mathematical theories that define the flow behavior, efficiencies and losses, i.e., performance characteristics of the components based on thermodynamics and aerodynamics. Knowledge of basic physics and fluid mechanics is crucial to comprehend the contents of this course. This course serves as a prerequisite for designing of engine components.

### Course Objectives

The objective of this course is to

5. Provide knowledge about the basic principles and parameters of gas turbine/Turbomachinery.
6. Educate the students about the theories and laws governing the aerodynamic and thermodynamics analysis of turbomachinery.

### Course Outcomes

On completion of this course, the students will be able to

- CO6.** Identify and explain various configurations of shaft power and aircraft engines.
- CO7.** Describe and analyze various components of centrifugal compressor and also describe its performance characteristics.
- CO8.** Describe and analyze various components of axial flow compressor and also describe its performance characteristics.
- CO9.** Describe and analyze various components of axial flow turbines and also describe its performance characteristics.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1: Introduction</b> Open-cycle single shaft and twin shaft arrangements, Multi spool arrangements, Closed cycles, Aircraft propulsion, Industrial applications, Marine and land transportation	L1, L2	6
<b>Module 2: Shaft power cycles</b> Ideal cycles, Methods of accounting components losses, Design point performance calculations, Comparative performance of practical cycles, Combined cycles and cogeneration schemes, Closed cycle gas turbines	L1, L2	8
<b>Module 3: Centrifugal compressor</b> Principle of operation, Work done and pressure rise, The diffuser, Non dimensional quantities for plotting compressor characteristics, compressor	L2, L4	6

characteristics.		
<b>Module 4: Axial flow compressor</b> Basic operation, Elementary theory, Factor affecting stage pressure ratio. Blockage in compressor annulus, Degree of reaction, Three dimensional Flow, Design process, Blade design, Calculations of stage performance, compressibility effects, Off design Performance, Axial compressor characteristics.	L2, L4	8
<b>Module 5: Axial Flow turbines</b> Elementary theory of axial flow turbine, vortex theory, choice of blade profile, pitch and chord, Estimation of stage performance, overall turbine performance, The cooled turbine	L2, L4	8

*\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

### Course Catalog

Course contains the basic material essential for a foundation of compressible flow aerodynamics. The course introduces the fundamental concepts and principles of compressible flow and intends to provide the necessary background for advanced studies on the subject. The course covers the general principles and essentials of compressible flow, the flow equations, one-dimensional gas dynamics, wave motion and waves in supersonic flow, flow in ducts, small-perturbation theory. The exercises included in the course are intended to demonstrate the use of the course material and to outline additional equations and results.

### Course Objectives

The objective of this course is to

1. Provide knowledge to the students about compressible flow and its applications.
2. Enable students to know about shock waves in supersonic flow and different related techniques to solve problems

### Course Outcomes

On completion of this course, the students will be able to

- CO1.** Identify and explain fundamental principles of compressible flow.
- CO2.** Describe and derive wave motion and waves in supersonic flow.
- CO3.** Explain, derive, and apply various governing equations and theories of compressible flow in ducts.
- CO4.** Explain, derive, and apply governing small perturbation theory.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1: Compressible Aerodynamics</b> Basic concepts of compressible flow continuity, energy and momentum equations. One dimensional inviscid flow; Stagnation quantities; Isentropic conditions. Speed of sound and Mach number; Isentropic relations; Area-velocity relation. Flow through constant area duct; Normal shock; Propagating Normal Shock. One dimensional linear and nonlinear wave motion.	L1, L2	9
<b>Module 2: Oblique shocks and compressible Flows through ducts</b> Oblique shock and supersonic compression by turning. Weak shocks and Mach waves; Supersonic expansion by turning. Prandtl-Meyer expansion fan; Reflection and intersection of shocks. Shock detachment and bow shock; Shock Expansion theory with application to thin airfoils. Governing equations for quasi One Dimensional Flow through converging and diverging ducts. Diffusers and supersonic Wind Tunnels.	L2, L3	9

<b>Module 3: Subsonic compressible Flow over Airfoils, Linear Theory</b> The derivation of velocity potential equation, Linearized velocity potential equation, Prandtl-Glauert compressibility correction, Critical Mach number, Whitcomb's area rule, Super critical airfoil.	L1, L2, L3	9
<b>Module 4: Linearized Supersonic Flow</b> Introduction, Derivation of Linearized supersonic Pressure Coefficient Formula, Application to supersonic Airfoils Viscous Flow Supersonic Airfoil Drag	L1, L2, L3	9

*\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

Co-requisites					

### Course Catalog

Knowledge of basic mechanics and structures-I is crucial to comprehend the contents of this course. This course provides exhaustive knowledge to the students about the buckling and post buckling behavior of columns, plates and beams, which serve as a foundation for solving critical aerospace problems.

### Course Objectives

The objective of this course is to

- Equip the students to understand the analytical study of the buckling behavior of columns and plates.
- Provide the knowledge to the students about the post buckling behavior of plates and field beams under tension.

### Course Outcomes

On successful completion of this course, the students will be able to

- CO1.** Identify, explain, apply and analyze the fundamentals of buckling of columns and plates.
- CO2.** Identify, describe and determine the buckling of open sections.
- CO3.** Identify, explain and analyze the post buckling behavior of plates.
- CO4.** Identify, explain, apply and analyze the fundamentals of buckling of columns.
- CO5.** List and explain the different types of stress & strain measurement techniques.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1: Elastic Buckling of Columns</b> Stability criteria: equilibrium approach, energy approach, imperfection approach, dynamic approach; Higher order governing equation; Large deflection of columns; Buckling of laminated composite columns; Approximate Techniques: Timoshenko's method, Rayleigh-Ritz method, Galerkin's technique; Effect of shear on buckling load; Problems.	L1, L2, L3, L4	8
<b>Module 2: Buckling of Open Sections</b> Torsional load –deformation characteristics; Equilibrium approach in Torsional Buckling & Torsional-Flexural Buckling; Energy Approach: Rayleigh-Ritz Method; Problems.	L1, L2	8
<b>Module 3: Elastic Buckling of Thin Plates</b> Introduction; Equilibrium approach; Energy Approach; Approximate Techniques: Rayleigh-Ritz method, Galerkin's Technique; Buckling of Stiffened Plates, Circular Plates & Thick Rectangular Plates; Problems.	L1, L2, L4	8

<b>Module 4: Post-Buckling Behavior of Plates</b> Introduction; Governing Equation; Energy Approach; Complete Tension Field Beams; Semi-Tension Field Beam; Angle of Diagonal Tension.	L1, L2, L3, L4	5
<b>Module 5: Inelastic Buckling of Columns</b> Double Modulus Theory; Tangent Modulus Theory; Eccentrically Loaded Columns; Empirical Relations for Short Columns.	L1, L2, L3, L4	4
<b>Module 6: Measurement of Stress &amp; Strain</b> Measurement of Strain and Stress; Techniques & principles of measurement; Strain Gauges; Photoelasticity: principle, working, applications.	L1, L2	3

*\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

Pre-requisites/ Exposure	Introduction to Aerospace Engineering, Low Speed Aerodynamics				
Co-requisites					

### Course Catalog

This course contains Fundamental characteristics of standard atmosphere which are crucial for aerodynamic characteristics of airfoil and airplane. The course is designed to make students to understand aerodynamic forces and moments in steady, accelerated flight and in maneuvers for different flight modes and conditions.

### Course Objectives

The objective of this course is to

1. Provide an insight to students about the characteristics of atmosphere.
2. Equip students about different forces on airfoil and wing due to immersion in free stream of air in flight.

### Course Outcomes

On completion of this course, the students will be able to

- CO1.** Define and explain parameters of International Standard Atmosphere.
- CO2.** State, explain and apply the physical principle in estimation of aerodynamic drag over flight vehicles.
- CO3.** Describe, apply and analyze the aerodynamic characteristics over airfoils and wings of flight vehicles.
- CO4.** Explain and apply the basic equations and principles to analyze the airplane mechanics in steady flight.
- CO5.** Explain and apply the basic equations and principles to analyze the airplane performance in accelerated flight and maneuvers.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1: Standard Atmosphere</b> Standard atmosphere, relation between Geopotential and Geometric altitudes, pressure, temperature and density altitudes, Relation for stratosphere and troposphere, Stability of atmosphere, aero-thermodynamics, Measurement of air-speed: true airspeed, indicated airspeed and equivalent airspeed, Airspeed indicator	L1, L2	7

<b>Module 2: Aerodynamic Drag</b> Drag and its effects, Types of drag and affecting factors, Drag polar, Compressibility drag, Design for minimum drag, Estimation of drag of complete airplane, Terminal velocity	L1, L2, L3	7
<b>Module 3: Aerodynamic Characteristics</b> Force and Moments coefficients dimensional analysis, Pressure distribution over 2D airfoil, Variation with angle of attack, Center of pressure, Aerodynamic center and connected problems, Lift, Drag and moment coefficients; Relations between lift and drag, Estimation of these characteristics from measured pressure distributions, Variation of aerodynamic coefficients with Reynolds Number and Mach Number, Effect of span, Aspect ratio, plan form, sweep, taper and twist on aerodynamic characteristics of a lifting surface, Delta wing aerodynamics	L2, L3, L4	7
<b>Module 4: Airplane Mechanics in Steady Flight</b> Straight and Level flight, stalling speed; Variation of drag with flight, Speed conditions for minimum drag, minimum power conditions; Power at other speeds, Gliding flight, Shallow and steep angles of glide; Sinking speed, Minimum sinking speed, Time of descent, Climbing flight at shallow angles, Correction for steep angles, Time to flight, Maximum rate of climb	L2, L3, L4	7
<b>Module 5: Airplane Performance in Accelerated Flight and Maneuvers</b> Take-off and landing, Calculations of take-off ground run, Take-off distances, Minimum ground run, assisted take-off, Calculation of landing ground run, Range and endurance and problems connected with them. Introductory comments on spins and stalls; turning flight, Maneuvers in 3D space	L2, L3, L4	8

*\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

Co-requisites					

### Course Catalog

In this course the concept of design, drafting and modeling are discussed in details using AutoCAD software. The course contents include the basic commands, 2D and 3D modeling of machine components using AutoCAD. To master this course, students should have a background in basic knowledge of Engineering graphics and design.

### Course Objectives

The objective of this course is to

3. Equip the students with the concept of basic commands and features used in AutoCAD.
4. Provide an overview to learn and apply the use of basic commands in generating the 2D sketches and 3D models of machine components.

### Course Outcomes

On completion of this course, the students will be able to

- CO1:** Construct, edit and plot drawings using basic AutoCAD commands and features.
- CO2:** Construct and edit the model of machine components such as Piston, Connecting rod.
- CO3:** Construct and edit 2D sketches of pentagon, hexagon and any 2D drawing.
- CO4:** Construct and edit 3D model of nut, bolt and gear.
- CO5:** Construct and edit the geometry of hollow cylinder containing sphere and triangle.

### Course Content

Modules	Blooms level*	Number of hours
<b>Experiment 1:</b> Basics of AutoCAD	L2, L3	2
<b>Experiment 2:</b> Modeling of machine Components such as Connecting, Rod, piston etc.	L2, L3	2
<b>Experiment 3:</b> 2D modeling for different Geometrics such as Hexagon, Pentagon etc	L2, L3	2
<b>Experiment 4:</b> 3D modeling of nut and Bolt.	L2, L3	2
<b>Experiment 5:</b> Modeling of Gear.	L2, L3	2
<b>Experiment 6:</b> Modeling of Compound Geometrics such as Hollow Cylinder containing Sphere, Triangle etc.	L2, L3	2

*\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

### Course Catalog

Knowledge of basic structures and modeling is crucial to comprehend the contents of this course. This course provides extensive knowledge to the students about various modeling and analysis tools for the designing of aircraft structures and testing them practically, leading to the development and fabrication that serve as a foundation for better and safe futuristic designs.

### Course Objectives

The objective of this course is to

1. Equip the students with the practical knowledge and applications of different types of beams and columns.
2. Provide an overview to learn and apply the FEM based tool for detailed structural analysis

### Course Outcomes

On completion of this course, the students will be able to

- CO1:** List, explain and apply the basics of FEM and structures lab.
- CO2:** Explain and apply the different theorems in finding loads and shear center over the given types of beams and sections.
- CO3:** Describe and apply the concepts of photoelasticity for visualizing the stress distribution.
- CO4:** Describe, apply and analyze the stress distribution using FEM based designing tool.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Experiment 1:</b> Introduction to FEM & Aircraft Structures Lab	L1, L2, L3	2
<b>Experiment 2:</b> To Verify the following theorems for the given beams a. Maxwell's Reciprocal Theorem b. Principle of Superposition c. Castigliano's Theorem	L2, L3	2
<b>Experiment 3:</b> To determine the shear center for Open & Closed sections	L2, L3	2
<b>Experiment 4:</b> To study the Photoelasticity apparatus and visualize the stress distribution over different sample shapes.	L2, L3	2
<b>Experiment 5:</b> To determine the stress distribution over a circular cylinder under axial compressive and tensile load using ANSYS structural workbench.	L2, L3, L4	2
<b>Experiment 6:</b> To determine the stress distribution over a rectangular plate under	L2, L3, L4	2

compressive and tensile load using ANSYS structural workbench.

### Course Catalog

The internship experience provides the student with an opportunity to explore career interests while applying knowledge and skills learned in the classroom in a work setting. The training may undergo in an industrial environment or may be an in-house training on some latest software which is in high demand in market. The experience also helps students gain a clearer sense of what they still need to learn and provides an opportunity to build professional networks. The intern develops a greater understanding about career options while more clearly defining personal career goals. Hence, the training will be useful for their future employment in industry. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university.

### Course Objectives

The objective of this course is to

1. Provide practical training on some demo or live projects that will increase the capability of the students to work in a team on actual problems in industry.
2. Provide students with capabilities to design systems, analyze results, write technical reports and engage in life-long learning practices.

### Course Outcomes

On completion of this course, the students will be able to

- CO10.** Relate and apply the acquired classroom knowledge with technical, real-time industry environment.
- CO11.** Relate and demonstrate capabilities to create and review technological solutions to complex engineering problems of relevant domains.
- CO12.** Apply the acquired knowledge to demonstrate the skills to create and compile technical reports pertaining to a given project.
- CO13.** Demonstrate the skills to work ethically and professionally in a team and engage in life-long learning.

### Course Content

#### Guidelines

In order to achieve the objectives:

- Each student will be allotted a supervisor for proper guidance.
- Student will first submit details of company, external guide, project title to coordinator/supervisor as per given schedule.
- For internal assessment purpose, students will submit an industry feedback and a progress report.

- Student will maintain a file (Internship File/Project Report) which he/she will submit after completion of internship. Further, coordinator will provide Non-Teaching Credit Course project guidelines and sample to help in preparation of file. The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development. The file will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

The **layout guidelines** for the Project Report

### **1. File should be in the following specification**

- A4 size paper
- Spiral Binding
- **Font**

For normal text Font Type and Size must be- Times New Roman, 12 pt. The minimum font size of materials within a table or a figure can be 10 point.

- **Margins**

A margin of 3.75 cm (1½ inch) is to be given on the binding edge while on the other sides it is to be 2.5 cm (1 inch). The text of the report, including headings, figures, tables, and notes, but excluding page numbers, must be accommodated within the page area.

- **Line Spacing**

The line spacing in the main text must be between one-and-a-half (1.5). Single line spacing should be given for figure captions, table titles, figure legends, and footnotes. Equations, tables, figures, and quotations should be set off from the main text with adequate space (not less than the normal line spacing adopted for the main text). Two consecutive paragraphs should be separated by a spacing which must be larger than the line spacing adopted for the text.

- **Tables and Figures**

Each sketch, drawing, graph and photograph should have a figure number and title below the figure etc. Numbering should be sequential, chapter wise. For instance, if there are 24 figures chapter 3 spread over all of its sections the figure numbers run from Figure 3.1 through Figure 3.24. In figures experimental data should typically be represented by centered symbols, and theoretical data by continuous curves.

Each table should have a table number and caption above the table. Numbering should be sequential, chapter wise, as in the case of Figure numbers. For instance, if there are 18 tables in chapter 3 the table numbers run from Figure 3.1 through Figure 3.18.

Make sure that figures and tables are complete in other respects such as legends, references (if any) and coordinate labels with units. Each figure and table must be explicitly referred to in the text and located where its first reference occurs, preferably after the reference.

- **Drawings**

All engineering drawings must conform to relevant Standards and should include a title block. If drawings are large they should be included at the back of the report in a separate pocket. In case drawings are made using CAD packages, a CD ROM should be included which contains all the files and details of the packages used.

- **Equations**

The numbering of equations should be sequential, chapter wise. Numbered equations must be explicitly referred to in the text.

**2. Report Size:** The maximum number of pages of the Report should be preferably between 40-70 pages.

**3. Report Layout:** The report should contain the following components

- Front Page
- Declaration
- Student Certificate (University)
- Certificate(Company)
- Acknowledgement
- Abstract
- Contents
- List of Figures
- List of Tables
- Company Profile (optional)
- Chapters
- Appendices(optional)
- References / Bibliography

The above components are described below:

- **Title Page** - Format will be given by coordinator/supervisor.
- **Declaration by the Students**-This is page number (i), the beginning of the small case Roman numeral page numbers. The student has to give a declaration to the effect that the data used for the work, the work depicted in the report, and the written material contained in the report are not copied from others and that due permission has been taken from, and due credit has been given to, the sources whenever they are used.
- **Certificate**-This is page number (ii). It is given by the Institute.The certificate will be signed by the Faculty Supervisor(s) before the viva-voce after verifying the format and by the Head of the Department after review with the Supervisor(s).
- **Company Certificate** -This is a certificate, which the company gives to the students.
- **Contents**-This is page number (iii). The table of Contents should be titled just *Contents* (not Table of Contents). Try to fit it into one or two pages.
- **Acknowledgement**-This is page number (iv). Keep this brief and avoid using informal language. This page must be signed by the candidate.

- **Abstract and Keywords**-This is page number (v). The abstract (preferably one page) should contain the context/relevance of the problem at hand, a description of what was done and a gist of the significant observations/results.
- The keywords (maximum 6) are a hint that what is contained in the report.
- **Company Profile** -A Company Profile corresponds to a file with company-specific data. Company data can be stored there and included in a booking when needed.
- **Chapters**-Introduction, Literature Review/Background Study etc. as given by coordinator/supervisor.
- **References / Bibliography**-This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

### Course Catalog

This course provides basic knowledge and understanding of the fundamentals of satellite communication. This course provides the students with a sound understanding of how a satellite communication system successfully transfers information from one earth station to another. It exposes them to examples of applications and tradeoffs that typically occur in engineering system design, and encourages them to apply the knowledge in satellite communication design problems.

### Course Objectives

The objective of this course is to

1. Provide introductory knowledge to the students regarding the basics of satellite communication and its segments.
2. Provide education to the students about the components and operation of various satellite communication systems and sub-systems.

### Course Outcomes

On completion of this course, the students will be able to

- CO1.** Describe, summarize, and categorize the components and operation of satellite communication system.
- CO2.** Describe and apply the principles of radio wave propagation and polarization in satellite communication.
- CO3.** Describe, summarize, and categorize the components and operation of the space and earth segment of satellite communication.
- CO4.** Describe and apply the principles of satellite communication links, budgets and planning in satellite communication.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1: Introduction to Satellite Communication</b> Historical background, Basic concepts of Satellite Communications, Communication Networks and Services, Comparison of Network Transmission technologies, Orbital and Spacecraft problems, Growth of Satellite communications	L2, L4	6
<b>Module 2: Radio Wave Propagation and Polarization</b> Introduction, Atmospheric Losses, Ionospheric Effects, Rain Attenuation, Other Propagation Impairments, Antenna Polarization, Polarization of Satellite Signals, Cross Polarization, Discrimination, Ionospheric Depolarization, Rain	L2, L3	5

Depolarization, Ice Depolarization		
<b>Module 3: The Space Segment</b> Introduction, The Power Supply, Attitude Control, Spinning satellite stabilization, Momentum wheel stabilization, Station Keeping, Thermal Control, TT&C Subsystem, Transponders, The wideband receiver, The input DE multiplexer, The power amplifier, The Antenna Subsystem	L2, L4	5
<b>Module 4: The Earth Segment</b> Introduction, Receive-Only Home TV Systems, The outdoor unit, The indoor unit for analog (FM) TV, Master Antenna TV System, Community Antenna TV System, Transmit-Receive Earth Stations	L2, L4	6
<b>Module 4: The space link</b> Introduction, equivalent isotropic radiated power, transmission losses, the link power budget equation, system noise, carrier-to-noise ratio (C/N), the uplink, the downlink, effects of rain, combined uplink and downlink C/N ratio, inter modulation noise, inter-satellite links, Interference between satellite circuits	L2, L3	6

### Course Catalog

This course provides basic knowledge and understanding of various kinds of aircraft systems and their importance based on various aspects. Knowledge of basic physics is crucial to comprehend the contents of this course. Studying this course the students will learn about various components, systems and instruments of aircrafts that serve as a foundation for better understanding of advanced course.

### Course Objectives

The objective of this course is to

1. Provide knowledge of different types of control systems used in the aircraft and their associated instruments.
2. Provide knowledge about the applications and real time problems associated with those systems.

### Course Outcomes

On completion of this course, the students will be able to

- CO1. List, explain and compare various types of flight control systems.
- CO2. Identify and describe the engine control system with applications.
- CO3. List and explain the hydraulic and environment control system.
- CO4. Outline and describe about the gyroscopic systems used in aircrafts.
- CO5. List and explain about the different types of navigational and pitot static instruments.

### Course Content

Modules	Blooms level*	Number of hours
<b>Module 1: Flight Control Systems</b> Primary and secondary flight control, Flight control linkage systems, push-pull	L1, L2, L4	6

control rod system, cable and pulley systems, High lift control surfaces, Flight control actuation, linear actuator, mechanical actuator, mechanical screw jack actuator, Direct drive actuation, fly-by-wire actuator, electro-hydrostatic actuator, electro-mechanical actuator		
<b>Module 2: Engine Control Systems</b> Engine technology and principle of operation, fuel flow control, air flow control, control systems, control system parameters, input signals, output signals, example systems, engine starting, fuel control, ignition control, engine rotation, throttle levers, starting sequence, engine oil systems.	L1, L2	6
<b>Module 3: Hydraulic and Environment Control Systems</b> Hydraulic circuit design, hydraulic actuation, hydraulic fluid, fluid pressure and temperature, fluid flow rate, hydraulic piping and pumps, need for controlled environment, heat sources, ram air cooling, fuel cooling, engine bleed, bleed flow and temperature control, air cycle refrigeration, humidity control, hypoxia, g tolerance.	L1, L2	6
<b>Module 4: Gyroscopic Systems</b> Gyroscope and its properties, Gyro horizon, Turn and bank indicator, turn coordinator, Direct reading magnetic compass, Directional gyros.	L1, L2	6
<b>Module 5: Navigational Instruments</b> Very high and ultra-high frequency radio aids, VOR, TACAN, VORTAC, VHF direction finding, instrument landing system, microwave landing system.	L1, L2	6
<b>Module 6: Pitot Static Instruments</b> Pitot static system, air speed indicator, altimeter, Mach meter, Mach /airspeed indicator, vertical speed indicator.	L1, L2	6

*\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

Version 2019-1	Date of Approval: May 2019	2	0	0	2
Pre-requisites/ Exposure	Fluid Mechanics and Dynamics, Low Speed Aerodynamics, Aircraft Propulsion				
Co-requisites					

### Course Catalog

This course provides basic knowledge and understanding about all fundamental aspects of UAVs, from design to logistics and ethical issues. It provides a comprehensive introduction to all of the elements of a complete unmanned aircraft vehicle system. It addresses the air vehicle, mission planning and control, several types of mission payloads and payload control along with safety concerns regarding the operation of UAVs.

### Course Objectives

The objective of this course is to

1. Provide introductory knowledge to the students regarding the overview of all elements of UAVs and of how they interact along with underlying concepts of key subsystems.
2. Provide education to the students about the construction, design, control and safe operation of unmanned flight vehicles.

### Course Outcomes

On completion of this course, the students will be able to

- CO1.** List, explain, and compare amongst various types and classes of UAVs.
- CO2.** List, describe, and contrast amongst the construction, controlling and piloting techniques of UAVs.
- CO3.** Describe, and distinguish amongst the various types of UAV payloads and their controlling mechanisms.
- CO4.** Outline, describe, and categorize the basic risks and safety regulations and guidelines associated with the operation of UAVs.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1: Introduction to UAVs</b> Overview of UAV Systems; Examples of UAV Systems; Very Small UAVs; Small UAVs; Medium UAVs; Large UAVs; Expendable UAVs; Classes of UAV Systems; Classification by Range and Endurance.	L1, L2, L4	6
<b>Module 2: UAV Construction and Control</b> Basic Structure and Loads; Construction Materials; Propulsion Systems for UAVs; Modes of Control; UAV Piloting; Remote Piloting; Autopilot-Assisted Control; Complete Automation.	L1, L2, L4	6
<b>Module 3: Payloads and Payload Control</b> Types of Payloads; Imaging Sensors; Target Detection, Recognition, and	L2, L4	6

Identification; Atmospheric, Radiological, and Environmental Monitoring; Armed Utility UAVs, Payload Capacity; Controlling Payloads; Signal Relay Payloads.		
<b>Module 4: Safe UAV Operation</b> Regulating Authority; General Safety Regulations and Guidelines; Restricted Airspace; Risk Assessment; Severity Classifications; Risk Mitigation; Do's and Don'ts of UAV Flying.	L1, L2, L4	6

*\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

<b>ASE2609</b>	<b>Aircraft Maintenance &amp; Quality Assurance</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Introduction to Aerospace Engineering				
Co-requisites					

### Course Catalog

This course provides basic knowledge and understanding of various kinds of aircraft maintenances and their importance based on various aspects. This course provides introductory knowledge to the students about testing of various components as well as the fabrication of FRPs that serve as a foundation for better understanding of advanced course.

### Course Objectives

The objective of this course is to

5. Provide knowledge of various types of preventive maintenance: repairs, overhauls, and calibration, rigging and testing of aircraft and its instruments and components/systems.
6. Provide knowledge about the layout of aircraft structure, corrosion of aircraft components and its prevention.

### Course Outcomes

On completion of this course, the students will be able to

- CO14.** Identify and explain the importance of aircraft maintenance and quality assurance.
- CO15.** List and explain various types of testings for aircraft materials using DTs and NDTs and the corrosion prevention methods.
- CO16.** Illustrate the fabrication and repair of FRP components and explain the quality assurance practices.
- CO17.** Explain and demonstrate the layout of an aircraft along with the assembly and rigging.
- CO18.** Explain and demonstrate their course knowledge to disciplinary as well as interdisciplinary audience.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1: Introduction to Maintenance</b> Requirement of maintenance of aircraft, its components, systems, subsystems. Types of maintenance scheduling, Inspection of aircraft components. Types of Inspections, Repair, Modifications, and Reconditioning. Role of airworthiness, Issue of C of A.	L1, L2	6
<b>Module 2: Testing of Aircraft Materials and Components</b> Testing techniques for Tension, Hardness, Bending, Impact, Crushing, Torsion, Fatigue, Hydrostatic tests. NDT Techniques: X-ray, Gamma Ray, Ultra-sonic; Magna-flux.	L1, L2	6

<b>Module 3: Layout of Aircraft Structure</b> Principle and important sub-groups, Aircraft Station numbering sub-assemblies in airframe, landing gear, Power plant and its attachment, Rotorcraft Structure.	L1, L2	6
<b>Module 4: Aircraft Assembly and Rigging</b> Aircraft Assembly, Rigging, Alignment of fixed surfaces and flight controls and systems in details, balancing, Inspection and Maintenance. Flight control system of Helicopter.	L1, L2	6
<b>Module 5: Fabrication and Repair of FRP Components</b> Development of metal bonding and composite materials, Bonding Structures, Composites: Characteristics, types, Fabrication and repair.	L1, L2	6
<b>Module 6: Quality Assurance</b> Meaning of Quality and quality improvement, need of Quality, Statistical methods for quality control, Process capability. Need of Quality Assurance, Quality Audit, Concept of Zero defect, ISO 9000 quality systems, TQM.	L1, L2	6

*\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

### Course Catalog

This course introduces the beginning graduate and advanced undergraduate students to finite difference methods as a means of solving different type of differential equations that arise in fluid dynamics. Fundamentals of numerical analysis, ordinary differential equations and partial differential equations related to fluid mechanics and heat transfer will be reviewed. Error control and stability considerations are discussed and demonstrated. The Navier-Stokes equations will be solved using a commercial software.

### Course Objectives

The objective of this course is to

7. Provide introductory knowledge to the students about a variety of computational techniques that can be used for solving engineering problems.
8. Provide education to the students about utilizing the computational software for result presentations and data visualization of engineering problems.

### Course Outcomes

On completion of this course, the students will be able to

- CO1.** Describe, and apply the various governing equations to solve engineering problems.
- CO2.** Describe, and apply various mathematical approaches to solve partial differential equations.
- CO3.** Describe, and apply the fundamental knowledge and various techniques to create computational grids.
- CO4.** Describe, and apply the fundamental knowledge and various techniques to discretize computational grids.
- CO5.** Describe, and apply the knowledge and technique of finite volume method to achieve numerical solution of problems.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1: Introduction</b> Governing Equations of Fluid Dynamics: Continuity, Momentum and Energy Equations; Derivation in Various Forms; Integral Versus Differential Form of Equations; Models of Flows; Substantial Derivative; Divergence of Velocity; Physical Boundary Conditions.	L2, L3	6
<b>Module 2: Mathematical Behaviour of Partial Differential Equations</b> Classification of Partial Differential Equations; Cramer Rule and Eigen Value Methods for Classification; Hyperbolic, Parabolic, and Elliptic Forms of Equations.	L2, L3	5
<b>Module 3: Grid Generation and Techniques</b>	L2, L3,	5

Need for Grid Generation; General Transformation of The Equations; Metrics and Jacobians; Structured Grids-Essential Features; Structured Grid Generation Techniques - Algebraic and Numerical Methods; Unstructured Grids-Essential Features; Unstructured Grid Generation Techniques- Delaunay-Voronoi Diagram; Advancing Front Method.	L5	
<b>Module 4: Discretization</b> Finite Differences Methods and Difference Equations; Explicit and Implicit Approaches; Unsteady Problem - Explicit Versus Implicit Scheme; Errors and Stability Analysis; Time Marching and Space Marching; Reflection Boundary Condition; Relaxation Techniques; Alternating Direction Implicit Method; Successive over Relaxation/Under Relaxation.	L2, L3, L5	6
<b>Module 5: Finite Volume Technique and Some Applications</b> Spatial Discretization - Cell Centered and Cell Vertex Techniques (Overlapping Control Volume, Dual Control Volume); Temporal Discretization - Explicit Time Stepping and Implicit Time Stepping; Time Step Calculation; Upwind Scheme and High Resolution Scheme; Unsteady Flows and Heat Conduction Problems.	L2, L3, L4	6

### Course Catalog

This course provides basic knowledge and understanding of various types of materials, their properties and their applications in aerospace. This course serves as a foundation for better understanding of advanced courses relevant to aircraft manufacturing, aircraft design, construction and fabrication.

### Course Objectives

The objective of this course is to

1. Provide strong knowledge base to students in respect of various important aerospace materials used in the manufacture of aircraft.
2. Provide introductory knowledge base to students regarding different types of alloys, their heat treatment processes and applications.

### Course Outcomes

On completion of this course, the students will be able to

- CO1.** Identify and explain the fundamental of materials and their importance on flight vehicle.
- CO2.** Identify, explain and compare the properties of various aluminum and magnesium alloys and steel compositions. Also their application to aerospace vehicle vehicles.
- CO3.** Identify, describe and compare the properties of high strength and high resistance alloys along with their application to aerospace vehicle vehicles.
- CO4.** Identify and explain the corrosion and its different prevention methods for preventing aircraft components.
- CO5.** Identify and explain about the composite materials, their applications and different types.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1: Introduction To Materials</b> Properties of flight vehicle materials, Importance of strength/weight ratio of materials for Aerospace Vehicles, Importance of temperature variations, factors affecting choice of material for different parts of airplane.	L1, L2	6
<b>Module 2: Aluminum &amp; Magnesium Alloys</b> Aluminum alloys, Heat treatment, High strength and high corrosion resistant alloys, Magnesium alloys and their properties, Heat treatment. Application to Aerospace Vehicle of these alloys.	L1, L2, L4	6

<b>Module 3: Aircraft Steels</b> Classification of alloy steels, Effect of alloying elements, Carbon steels v/s Alloys steels, corrosion resistant steels, Heat treatment, Corrosion prevention methods, Selection and application of steel alloys to aircraft manufacture.	L1, L2, L4	6
<b>Module 4: High Strength And Heat Resistant Alloys</b> Classification of heat resistant materials and iron, Nickel and cobalt base alloys, Refractory materials: Ceramics, Titanium and its alloys, properties of Inconel, Monal and K-Monal, Nimonic and super alloys: Application to Aerospace vehicles.	L1, L2	6
<b>Module 5: Corrosion And Its Prevention</b> Corrosion of dissimilar metals, protection, Cleaning, Plating anodic, Oxidation, Paints. Problems of corrosion to aircraft near sea, Protective/Preventive measures.	L1, L2	6
<b>Module 5: Composite Materials</b> Classification and characteristics of Composite materials, Types of Composite materials, Matrix phase, Dispersion phase, Advantages of composite materials, FRP, MMC, PMC, CMC, and Applications of Composites in Aircrafts.	L1, L2	6

*\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

Co-requisites					

### Course Catalog

This course provides the fundamental knowledge of stability and control of an aircraft. Students will understand the importance of different components of an aircraft in providing stability and giving control to aircraft motion. This course also provides understanding of mathematics behind the designing of aircraft and its components. The content of this course serves as a foundation for advance course of aircraft designing.

### Course Objectives

The objective of this course is to

1. Provide understanding of various aspects of stability of an aircraft in flight and how geometric features of control surfaces and their proper angular movements achieve it.
2. Provide an analytical understanding of longitudinal, lateral and directional stability and measures that can be taken to control the same.

### Course Outcomes

On completion of this course, the students will be able to

- CO1.** Define, explain, apply and compare the various fundamentals and aspects of stick fixed static longitudinal stability.
- CO2.** Define, explain, apply and compare the various fundamentals and aspects of stick free static longitudinal stability.
- CO3.** Define, explain, apply and compare the various fundamentals and aspects of directional stability and control of flight vehicles.
- CO4.** Define, explain, apply and compare the various fundamentals and aspects of lateral stability and control of flight vehicles.
- CO5.** Define, explain, apply and compare the various fundamentals and aspects of dynamic stability of flight vehicles.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1: Stick Fixed Static Longitudinal Stability</b> Introduction to stability of airplane, stick fixed longitudinal stability, Neutral point, Centre of gravity limits, In flight measurement of stick fixed neutral point	L1, L2, L3, L4	8
<b>Module 2: Stick Free Static Longitudinal Stability</b> Control surface hinge moments, floating and restoring tendencies, the tab, Effect of free elevator on airplane stability, Elevator Control force, stick force	L1, L2, L3, L4	7

Version 2019-1	Date of Approval: May 2019	0	0	2	1
Pre-requisites/ Exposure	Fluid Mechanics and Dynamics, Low Speed Aerodynamics, CAD				
Co-requisites	Computational Fluid Dynamics				

### Course Description

The objective of this course is to provide knowledge and understanding to the students about the modeling, meshing and simulation of flow over aircraft and its components. Knowledge of Fluid Mechanics and Dynamics, Low Speed Aerodynamics, Computer Aided drafting is necessary to comprehend the contents of this course. This course equips the students with various approaches and tools of modeling and grid generations, also a brief knowledge is provided to the students about the numerical methods to solve numerous problems related to aerospace and mechanical systems.

### Course Objectives

The objective of this course is to

1. Provide experience in computing aerodynamic problems and understanding flow physics over flat plate, pipe, cylinder, over a wedge and flow over an airfoil.
2. Provide knowledge to estimate flow characteristics with different Mach numbers to determining the pressure coefficients over different structural objects.

### Course Outcomes

On completion of this course, the students will be able to

- CO5.** Describe and apply the engineering fundamentals and principles to model flat plate, pipe, cylinder, wedge, Nozzle, airfoil and wing in ANSYS Workbench/ AutoCAD.
- CO6.** Describe and apply the engineering fundamentals and principles to generate different types of grids with varying qualities, arrangement of nodes and topology.
- CO7.** Describe and apply the engineering fundamentals and principles to simulate the flow with varying parameters over the object with different numerical methods.
- CO8.** Compare and analyze the results of flow simulation to achieve an optimum design of the structure.

### Course Content

Modules	Blooms level*	Number of hours
<b>Experiment 1:</b> Introduction to ANSYS	L1, L2,	1
<b>Experiment 2:</b> To simulate and analyze the flow over a flat plate	L1, L2, L3, L4	1
<b>Experiment 3:</b> To simulate and analyze the flow through a pipe	L1, L2, L3, L4	1
<b>Experiment 4:</b> To simulate and analyze the flow over a circular cylinder	L1, L2, L3, L4	1
<b>Experiment 5:</b> To simulate and analyze the flow over a wedge	L1, L2,	1

	L3, L4	
<b>Experiment 6:</b> To simulate and analyze the subsonic flow through a nozzle	L1, L2, L3, L4	1
<b>Experiment 7:</b> To simulate and analyze the supersonic flow through a nozzle	L1, L2, L3, L4	1
<b>Experiment 8:</b> To simulate and analyze the flow over a symmetric aerofoil	L1, L2, L3, L4	1
<b>Experiment 9:</b> To simulate and analyze the flow over a cambered aerofoil	L1, L2, L3, L4	2
<b>Experiment 10:</b> To simulate and analyze the flow over a wing structure	L1, L2, L3, L4	2

*\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

### Course Description

The objective of this course is to provide practical knowledge and understanding to the students about the design and fabrication of models and prototypes of aircraft. Knowledge of Introduction to Aerospace Engineering, Low Speed Aerodynamics, Aircraft Propulsion, and Aircraft Structures is necessary to comprehend the contents of this course. This course equips the students with necessary knowledge to understand the construction and operation of model and prototype flight vehicles.

### Course Objectives

The objective of this course is to

5. Provide practical knowledge to the students about the design of model and prototypes of flight vehicles.
6. Provide practical knowledge to the students about the fabrication and operation of model and prototypes of flight vehicles.

### Course Outcomes

On completion of this course, the students will be able to

- CO1.** Explain and apply the engineering fundamentals and principles to design and create various types airfoils and wing planforms using basic construction materials.
- CO2.** Explain and apply the engineering fundamentals and principles to design and create unpowered and powered gliders using basic construction materials.
- CO3.** Explain and apply the engineering fundamentals and principles to design and create radio-controlled flight vehicles.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Experiment 1:</b> To design and fabricate various types of airfoils using basic raw materials (Thermocol, Balsa wood, Cardboard, etc.).	L2, L3, L5	2
<b>Experiment 2:</b> To design and fabricate various types of wing planforms using basic raw materials (Thermocol, Balsa wood, Cardboard, etc.).	L2, L3, L5	2
<b>Experiment 3:</b> To perform design calculations and fabrication of an unpowered glider aircraft.	L2, L3, L5	2
<b>Experiment 4:</b> To perform design calculations and fabrication of a powered glider aircraft.	L2, L3, L5	2
<b>Experiment 5:</b> To perform design calculations of a small-scale, radio-controlled, fixed-	L2, L3, L5	2

wing flight vehicle.		
<b>Experiment 6:</b> To fabricate and test a small-scale, radio-controlled, fixed-wing flight vehicle.	L2, L3, L5	2

*\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

### Course Catalog

The minor project provides the student with an opportunity to apply knowledge and skills learned in the classroom in carrying out a project. The minor project is an in-house training on real-time project or on latest software. The experience and skills that come with carrying out minor project build a foundation and aptitude in students to conduct meaningful research towards a practical outcome. The minor project aims to impart necessary training to the students that is a value addition for their employability.

### Course Objectives

The objective of this course is to

1. Provide practical training on small-scale projects that will increase the capability of the students to work individually or in teams on actual problems in industry.
2. Provide students with capabilities to design systems, analyze results, write technical reports and engage in life-long learning practices.

### Course Outcomes

On completion of this course, the students will be able to

- CO1.** Relate and apply the acquired classroom knowledge with technical and real-time environment.
- CO2.** Relate and demonstrate capabilities to create and review technological solutions to complex engineering problems of relevant domains.
- CO3.** Apply the acquired knowledge to demonstrate the skills to create and compile technical reports pertaining to a given project.
- CO4.** Demonstrate the skills to work ethically and professionally in a team and engage in life-long learning.

### Course Content

#### Guidelines

In order to achieve the objectives:

- Each student will be allotted a supervisor for proper guidance.
- Student will first submit details of company, external guide, project title to coordinator/supervisor as per given schedule.
- For internal assessment purpose, students will submit an industry feedback and a progress report.
- Student will maintain a file (Internship File/Project Report) which he/she will submit after completion of internship. Further, coordinator will provide Non-Teaching Credit Course project guidelines and sample to help in preparation of file. The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities

completed in the course modules and from the workplace to demonstrate learning and personal development. The file will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

The **layout guidelines** for the Project Report

### **1. File should be in the following specification**

- A4 size paper
- Spiral Binding

- **Font**

For normal text Font Type and Size must be- Times New Roman, 12 pt. The minimum font size of materials within a table or a figure can be 10 point.

- **Margins**

A margin of 3.75 cm (1½ inch) is to be given on the binding edge while on the other sides it is to be 2.5 cm (1 inch). The text of the report, including headings, figures, tables, and notes, but excluding page numbers, must be accommodated within the page area.

- **Line Spacing**

The line spacing in the main text must be between one-and-a-half (1.5). Single line spacing should be given for figure captions, table titles, figure legends, and footnotes. Equations, tables, figures, and quotations should be set off from the main text with adequate space (not less than the normal line spacing adopted for the main text). Two consecutive paragraphs should be separated by a spacing which must be larger than the line spacing adopted for the text.

- **Tables and Figures**

Each sketch, drawing, graph and photograph should have a figure number and title below the figure etc. Numbering should be sequential, chapter wise. For instance, if there are 24 figures chapter 3 spread over all of its sections the figure numbers run from Figure 3.1 through Figure 3.24. In figures experimental data should typically be represented by centered symbols, and theoretical data by continuous curves.

Each table should have a table number and caption above the table. Numbering should be sequential, chapter wise, as in the case of Figure numbers. For instance, if there are 18 tables in chapter 3 the table numbers run from Figure 3.1 through Figure 3.18.

Make sure that figures and tables are complete in other respects such as legends, references (if any) and coordinate labels with units. Each figure and table must be explicitly referred to in the text and located where its first reference occurs, preferably after the reference.

- **Drawings**

All engineering drawings must conform to relevant Standards and should include a title block. If drawings are large they should be included at the back of the report in a separate pocket. In case drawings are made using CAD packages, a CD ROM should be included which contains all the files and details of the packages used.

- **Equations**

The numbering of equations should be sequential, chapter wise. Numbered equations must be explicitly referred to in the text.

**2. Report Size:** The maximum number of pages of the Report should be preferably between 40-70 pages.

**3. Report Layout:** The report should contain the following components

- Front Page
- Declaration
- Student Certificate (University)
- Certificate(Company)
- Acknowledgement
- Abstract
- Contents
- List of Figures
- List of Tables
- Company Profile (optional)
- Chapters
- Appendices(optional)
- References / Bibliography

The above components are described below:

- **Title Page** - Format will be given by coordinator/supervisor.
- **Declaration by the Students** - This is page number (i), the beginning of the small case Roman numeral page numbers. The student has to give a declaration to the effect that the data used for the work, the work depicted in the report, and the written material contained in the report are not copied from others and that due permission has been taken from, and due credit has been given to, the sources whenever they are used.
- **Certificate** - This is page number (ii). It is given by the Institute. The certificate will be signed by the Faculty Supervisor(s) before the viva-voce after verifying the format and by the Head of the Department after review with the Supervisor(s).
- **Company Certificate** - This is a certificate, which the company gives to the students.
- **Contents** - This is page number (iii). The table of Contents should be titled just *Contents* (not Table of Contents). Try to fit it into one or two pages.
- **Acknowledgement** - This is page number (iv). Keep this brief and avoid using informal language. This page must be signed by the candidate.
- **Abstract and Keywords** - This is page number (v). The abstract (preferably one page) should contain the context/relevance of the problem at hand, a description of what was done and a gist of the significant observations/results.
- The keywords (maximum 6) are a hint that what is contained in the report.

- **Company Profile** - A Company Profile corresponds to a file with company-specific data. Company data can be stored there and included in a booking when needed.
- **Chapters** - Introduction, Literature Review/Background Study etc. as given by coordinator/supervisor.
- **References / Bibliography** - This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

**Modes of Evaluation:** Viva/Progress Report/Presentation/Final Report

Co-requisites					

### Course Catalog

This course provides basic knowledge and understanding of the role and architecture of avionics systems of the aircraft. It provides basic understanding of the avionic systems are an essential and key component of modern aircraft that control all vital functions, including navigation, flight control, data display and communications.

### Course Objectives

The objective of this course is to

1. Provide introductory knowledge to the students regarding the basic avionics systems, their need and necessity, their role and architecture.
2. Provide education to the students about the components and operation of various avionics systems and sub-systems.

### Course Outcomes

On completion of this course, the students will be able to

- CO1.** Define, explain, and summarize the role, architecture and working of various avionics systems and components.
- CO2.** List, define, explain, and categorize the various avionics systems facilitating man-machine interaction.
- CO3.** Define, describe, and apply the basic concepts of air data systems and inertial sensors.
- CO4.** Describe, and categorize the different Fly-by-wire flight control systems used in modern aircrafts.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1: Avionics Technology</b> Introduction; Technology Evolution; Avionics Computing; Digital Systems Input and Output; Analogue to Digital Process; Digital to Analogue Process; Micro-electronic Devices; Digital Data Buses; Fibre-optic Buses; Avionics Packaging	L1, L2	6
<b>Module 2: Man-Machine Interaction</b> Flight Deck Displays; Head-Up Display Visual Guidance System (HVGS); Helmet Mounted Displays; Head Down Displays; HUDs versus HMDs	L1, L2, L4	6
<b>Module 3: Air Data Systems and Inertial Sensors</b> Air Data Computer; Air Data Measurement; Use of pitot static probe, static probe to derive air data indications; Derivation of Air Data Laws and Relationships; Air Data Sensors and Computing; Position Gyros, Rate Gyros and	L1, L2, L3	6

Accelerometers.		
<b>Module 4: Fly-by-Wire Flight Control Systems</b> Basic Concepts and Features; Advantages of FBW Control; Control Laws; Redundancy and Failure Survival; Fly-by-Light Flight Control systems; Longitudinal, Lateral & Direction Autopilot.	L1, L2, L4	6

*\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

### Course Catalog

This course provides basic knowledge and understanding of the propellants used in rockets and missiles. This course aims to familiarize the students with the fundamental information about type, composition, application and performance of the propellants for rockets and missiles.

### Course Objectives

The objective of this course is to

1. Provide introductory knowledge to the students regarding the types and application criteria of different propellants in rockets and missiles.
2. Provide education to the students about the chemistry and thermodynamics of propellant gains and systems.

### Course Outcomes

On completion of this course, the students will be able to

- CO1.** List, describe, and categorize amongst various kinds of solid propellants used in aerospace propulsion and discuss their performance.
- CO2.** List, summarize, and compare amongst various kinds of liquid propellants used in aerospace propulsion and discuss their performance.
- CO3.** List, explain and compare amongst various kinds of hybrid and cryogenic propellants used in aerospace propulsion and discuss their performance.
- CO4.** Identify, distinguish and contrast amongst various kinds of green propellants used in aerospace propulsion and discuss their performance.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1: Solid Propellants</b> Introduction; Properties and Design of Solid Motors; Propellant Composition; Propellant Burning Rate; Basic Performance Relations; Propellant Grain and Grain Configuration.	L1, L2, L4	6
<b>Module 2: Liquid Propellants</b> Basic Configuration of Liquid Propellant Engine; Types of Liquid Propellants; Combustion Chamber and Nozzle; Propellant Feed System; Safety and Environmental Concerns	L1, L2, L4	6
<b>Module 3: Hybrid and Cryogenic Propellants</b> Applications and Propellants; Performance Analysis and Grain Configuration; Combustion Instability; Cryogenics; Components and Combustion Cycles;	L1, L2, L4	6

Advantages and Limitations of Cryogenic Propellants;		
<b>Module 4: Green Propellants</b> Rocket Emissions; Environmental Concerns; Manufacturing and handling Risks; Alternative Green Propellants; Green Solid Propellants; Green Liquid Propellants; Advantages and Challenges.	L1, L2, L4	6

*\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

### Course Catalog

This course provides basic knowledge and understanding of various kinds of aircraft maintenances and their importance based on various aspects. This course provides introductory knowledge to the students about testing of various components as well as the fabrication of FRPs that serve as a foundation for better understanding of advanced course.

### Course Objectives

The objective of this course is to

1. Provide knowledge of various concepts of Mathematical Modeling of Engineering Problems.
2. Provide knowledge about the basics of the Finite Element Technique, a numerical tool for the solution of different classes of problems in solid mechanics.

### Course Outcomes

On completion of this course, the students will be able to

- CO1.** Identify and explain the basics of finite elements analysis.
- CO2.** Summarize and explain various types of techniques used in the formulation of finite elements methods.
- CO3.** List, identify and describe the different elemental properties along with their applications in the FEM of plates and shells.
- CO4.** List, explain and apply the gained knowledge in related FEM domains.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1: Introduction to Finite Element Analysis</b> Introduction; Basic Concepts of Finite Element Analysis; Introduction to Elasticity; Steps in Finite Element Analysis	L1, L2	4
<b>Module 2: Finite Element Formulation Techniques</b> Virtual Work and Variational Principle; Galerkin Method; Finite Element Method: Displacement Approach; Stiffness Matrix and Boundary Conditions	L1, L2	4
<b>Module 3: Element Properties</b> Natural Coordinates; Triangular Elements; Rectangular Elements; Lagrange and Serendipity Elements; Solid Elements; Isoparametric Formulation;	L1, L2	6
<b>Module 4: FEM for Plates and Shells</b> Introduction to Plate Bending Problems; Finite Element Analysis of Thin Plate ;	L1, L2	6

Finite Element Analysis of Thick Plate; Finite Element Analysis of Skew Plate ;		
<b>Module 5: Additional Applications of FEM</b> Finite Elements for Elastic Stability; Finite Elements in Fluid Mechanics; Dynamic Analysis	L1, L2, L3	4

<b>ASE2702</b>	<b>Flight Dynamics</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Basic Mathematics, Low Speed Aerodynamics, Flight Mechanics,				
Co-requisites					

## Course Catalog

This course contains Fundamental mathematical and dynamic principles for flight dynamics. The course also provides basic knowledge and understanding of use of general equations for unsteady motion of airplane, such as force equations, momentum equations and principle of rotation. It also provides basic knowledge of small disturbance theory for aircraft stability and control.

## Course Objectives

The objective of this course is to

9. Equip students to understand the complexities of airplane and rocket dynamics
10. Equip the students about the degrees of freedom of flight trajectory and analysis of stability and control based on small disturbance theory and stability derivatives for airplane and rockets.

## Course Outcomes

On completion of this course, the students will be able to

- CO10.** Define and explain particle and rigid body kinematics for different system of frames and use of co-ordinate transformation.
- CO11.** Define, explain and apply the equations of motion of aircraft and flight simulation of powered and unpowered flight.
- CO12.** Describe, apply and analyze small disturbance theory for stability and control.
- CO13.** Describe, apply and analyze Physical significance of stability derivatives and their use.

## Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1: Introduction</b> Overview; Fundamental of Vectors; Fixed and Inertial frame of reference, Earth as a flat surface, Coriolis Effect, Longitudinal, Directional and Lateral forces and moments; Longitudinal, Directional and Lateral Stability.	L1, L2	6
<b>Module 2: Transformation</b> Coordinate Systems; Transformation from Cartesian to Cylindrical and Cylindrical to Spherical Coordinate Systems; Transformation Matrix about X, Y And Z Axis; Rotation Matrix about X, Y And Z Axis; Earth, Body, Wind and Stability Axis Systems and their Transformation.	L1, L2	6
<b>Module 3: Aircraft Equations of Motion</b> Force equations in moving frame, Moment equations in moving frame, Orientation and	L1, L2, L3	8

position of the airplane: Principle Rotation, Euler angles, Euler rates, Transformation matrix, External forces, Angular velocities equations in moving frame		
<b>Module 4: Small Disturbance Theory</b> Introduction; Assumptions, Linearized equations of aircraft motion: Control fixed longitudinal directional equations, control fixed lateral directional equations, Stability analysis of linearized equations of motion	L1, L3, L4	8
<b>Module 5: Stability Derivatives</b> Introduction, Expressions for $C_x$ , and $C_z$ . The $\alpha$ Derivatives: $C_{x_\alpha}, C_{z_\alpha}, C_{m_\alpha}$ . The $u$ Derivatives: $C_{x_u}, C_{z_u}, C_{m_u}$ . The $q$ Derivatives: $C_{z_q}, C_{m_q}$ . The $\dot{\alpha}$ Derivatives: $C_{L\dot{\alpha}}, C_{m\dot{\alpha}}$ . The $\beta$ Derivatives: $C_{y\beta}, C_{l\beta}, C_{n\beta}$ . The $p$ Derivatives: $C_{yp}, C_{lp}, C_{np}$ . The $r$ Derivatives: $C_{yr}, C_{lr}, C_{nr}$	L1, L3, L4	8

### Course Catalog

This course provides basic knowledge and understanding of various aspects and processes of aircraft design. This course provides in-depth knowledge to the students about flow process of carrying out the designing of aircraft, its associated loads and the safety requirements. Based on this course, students will be able to investigate new and emerging design aspects

### Course Objectives

The objective of this course is to

7. Provide introductory knowledge to the students regarding the fundamentals of aircraft designing and its structural analysis
8. Provide education to the students about the concepts of different structural members and various associated loads

### Course Outcomes

On successful completion of this course, the students will be able to

- CO1.** List and describe the basics of aircraft system design and aircraft structures
- CO2.** Identify, explain and analyze the applicability of design aspects and different aircraft loads.
- CO3.** Identify and explain the design considerations of wings and high lift devices.
- CO4.** Identify, correlate and apply the numerical and theoretical knowledge to investigate new and emerging design aspects

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1: Introduction</b> Aircraft design, requirements and specifications, Different design phases, Importance of each phase. Weight, its importance. Aerodynamic and structural design considerations. Classifications of airplane.	L1, L2	8
<b>Module 2: Air Loads during Flight</b> Ground Loads, Airframe loads, maneuvering loads in flight, Load factor, V-n diagram, gust loads, and estimation of gust loads.	L1, L2	6
<b>Module 3: Wing Design Consideration</b> Selection of airfoil and planform. Span wise air loads variation, BMD and SFD. Weight distribution.	L1, L2, L4	8
<b>Module 4: High Lift Systems</b> Airfoil's maximum lift coefficient, leading and trailing edge devices, effect of	L1, L2	7

sweep back. Stall and the deep stall. Effect of Re, V/STOL configurations.		
<b>Module 5: Conceptual Design of Airplane &amp; Layout</b> Preparation of 3-views and layout. Estimation of take-off, landing, climbing and cruise performance. Flight envelope.	L1, L2, L3	7

Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Introduction to Aerospace Engineering, Low Speed Aerodynamics				
Co-requisites					

### Course Catalog

The course provides the fundamental knowledge of helicopters, its various structural members and rotor controls. Students will understand the aerodynamics of rotor blades during hovering and in directional flight with various performance parameters. This course also provides the understanding of rotor designing considerations and its stress analysis. Stability and vibration concepts are also included which are essential in the designing of helicopter.

### Course Objectives

The objective of this course is to

1. Provide introductory knowledge to the students about the helicopter and its main components, aerodynamics of rotor blades, stability and control, engine power and rotor vibration.
2. Provide education to the students about design considerations for the rotor parts and calculate the performance in real engineering applications.

### Course Outcomes

On completion of this course, the students will be able to

- CO19.** Define, explain, and categorize amongst the various components, systems and subsystems of helicopters.
- CO20.** Explain and compare amongst the various aspects of flight controls of helicopters.
- CO21.** Describe, apply and analyze the fundamental concepts and principles of aerodynamics of rotor blades.
- CO22.** Describe and apply the fundamental knowledge and principles to evaluate the performance of helicopters.
- CO23.** Apply and compare the fundamental concepts and principles for rotor blade design of helicopters.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1: Introduction</b> Basic features, Layout, The Main Rotor System: Geometry of the rotor, Fully Articulated Rotor System, Semi rigid Rotor System, Rigid Rotor System, Tail Rotor, drive to main tail rotor, Rotor controls, Tandem helicopter, Coaxial helicopter, intermeshing helicopter	L1, L2, L4	6
<b>Module 2: Helicopter Flight Controls</b> Collective Pitch Control, Throttle Control, Collective Pitch / Throttle Coordination, Correlator / Governor, Cyclic Pitch Control, Anti-torque Pedals	L2, L4	5

<b>Module 3: Aerodynamics of Rotor Blades</b> Feathering and flapping, Profile Drag, Induced Drag, Parasite Drag, Rotor Blade Angles, Ground effect, Hovering Flight: Translating Tendency, Pendular Action, Coning, Coriolis Effect. Vertical Flight, Forward Flight: Advancing Blade, Retreating Blade, Dissymmetry of Lift. Translational Lift, Sideward Flight, Sideward Flight, Rearward Flight, Autorotation, state vortex ring, Blade stall, high speed limitations	L2, L3, L4	5
<b>Module 4: Flight Performance</b> Factors Affecting Performance, Momentum theory, Disk loading, power leading, Rotor efficiency, Effects of solidity, Piston engines, Gas turbines, and Gross weight of a jet helicopter, Required Power, Range and Endurance, Rate of climb, Ceiling in vertical climb	L2, L3	6
<b>Module 5: Rotor Blade Design</b> Design requirement, Design considerations: Aerofoil selection, rotor diameter, tip speed, rotor solidity, number of blades blade planform, blade twist, Tip shape, cut-out section. Design of tail rotor, Material selection	L3, L4	6

*\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

### Course Catalog

This subject will cover the fundamental concepts on the vibration of mechanical systems of one degree freedom, Lagrange's equations of motion and multiple degree of freedom systems. This course includes introduction to matrix methods, influence coefficient, forced vibration, principle mode of vibration, Rayleigh method, measuring instruments, isolation, torsional systems and balancing of machine.

### Course Objectives

The objective of this course is to

1. Provide adequate knowledge to analyse one-degree and multi-degree of freedom systems of vibrations using different methods.
2. Find out natural frequencies and amplitude responses of different systems.

### Course Outcomes

On completion of this course, the students will be able to

- CO1:** Explain, determine and apply the equation of motions for free vibration under damped and undamped condition for one degree freedom system.
- CO2:** Explain, determine and apply the equation of motion for forced vibration due to excitation of support.
- CO3:** Determine and apply the equation of motion in reciprocating and rotary balancing of machine and explain the vibration isolation.
- CO4:** Explain, determine and apply the equation of motion for two degree of freedom system and explain vibration absorber
- CO5:** Derive and apply the principle mode of vibration by matrix iteration, influence coefficient and solve the problem free and forced vibration having multi degree of freedom systems.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1: Scope of Vibration</b> Important terminology and classification, Degrees of freedom, Harmonic motion, vectorial representation, complex number representation, addition, Derivation of equation of motion for one dimensional longitudinal, transverse and torsional vibrations without damping using Newton's second law, D' Alembert's principle and Principle of conservation of energy, Compound pendulum and centre of percussion, Damped vibrations of single degree of	L1, L2, L3	6

freedom systems, Viscous damping, underdamped, critically damped and overdamped systems, Logarithmic decrement, Vibration characteristics of Coulomb damped and Hysteretic damped systems.		
<b>Module 2: Forced Vibrations of Single Degree of Freedom Systems</b> Forced vibration with constant harmonic excitation, Steady state and transient parts, Frequency response curves and phase angle plot, Forced vibration due to excitation of support.	L1, L2, L3	8
<b>Module 3: Vibration Isolation and Transmissibility</b> Force transmissibility, Motion transmissibility, Forced vibration with rotating and reciprocating unbalance, Materials used in vibration isolation.	L1, L2, L3	6
<b>Module 4: System with Two Degrees of Freedom</b> principle mode of vibration, Mode shapes, Undamped forced vibrations of two degrees of freedom system with harmonic excitation, Vibration Absorber, Undamped dynamic vibration absorber and centrifugal pendulum absorber	L1, L2, L3	8
<b>Module 5: Multi-degree of Freedom Systems</b> Undamped free vibrations, principal modes, and normal co-ordinates. Orthogonality of principal modes of vibrations. Semi-definitive systems. Systems with equal frequencies, influence coefficients, natural frequencies and principal modes by matrix iteration, damped free vibrations, forced vibrations, Rayleigh's, Dunkerley's, Stodola's and Holzer's methods. Vibrations of continuous systems, Transverse vibration of a string, longitudinal vibration of a bar, Torsional vibration of a shaft.	L1, L2, L3	8

\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

Co-requisites	Vibrations Engineering				

## Course Catalog

The vibration engineering lab will cover the fundamental concepts on the vibration of mechanical systems of free vibration of simple and compound pendulum and Torsional vibration of rotor. An Interpretation of results is to find out the natural frequency of different mechanical systems.

## Course Objectives

The objective of this course is to

1. Provide adequate knowledge to analyses one-degree and multi-degree of freedom systems of vibrations using different methods.
2. Find out natural frequencies and amplitude responses of different systems.

## Course outcomes

On completion of this course, the students will be able to

- CO1:** Explain and apply the natural frequency of simple pendulum, compound pendulum and bifilar suspension.
- CO2:** Explain and apply the equation of motion of torsional vibration and determine the damping coefficient of free vibration.
- CO3:** Explain and apply the equation of motion of longitudinal vibration and determine the natural frequency of spring mass system.
- CO4:** Explain and apply the Dunkerley's rule and determine the natural frequency of beam.
- CO5:** Determine and apply the principle mode of vibration of shaft with different end conditions.

## Course Content

Experiment	Blooms level*	Number of hours
1. To verify the relation $T = 2\pi \sqrt{\frac{L}{g}}$ for a simple pendulum.	L2, L3	1
2. To determine the radius of gyration 'k' of compound pendulum and verify the relation $T = 2\pi \sqrt{\frac{k^2 + og^2}{g(og)}}$	L2, L3	1
3. To determine the radius of gyration of bar using Bi-filar suspension.	L2, L3	1
4. To study the torsional vibration (undamped) of single rotor shaft system	L2, L3	1
5. To study the damped torsional oscillations and determine the damping coefficient	L2, L3	1
6. To study the longitudinal vibration of spring and to determine the frequency theoretically and actually by experiment	L2, L3	1

7.	To study the undamped free vibration of equivalent spring mass system.	L2, L3	1
8.	To verify the Dunkerley's rule on simply supported beam and compare it with actually by experiment.	L2, L3	1
9.	To study the forced lateral vibration of the beam for different damping	L2, L3	1
10.	To determine experimentally the whirling speed of shaft for a given system.	L2, L3	1
11.	Harmonic excitation of cantilever beam using electrodynamic shaker and determination of resonant frequencies	L2, L3	2

\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation

### **Course Catalog**

The internship experience provides the student with an opportunity to explore career interests while applying knowledge and skills learned in the classroom in a work setting. The training may undergo in an industrial environment or may be an in-house training on some latest software which is in high demand in market. The experience also helps students gain a clearer sense of what they still need to learn and provides an opportunity to build professional networks. The intern develops a greater understanding about career options while more clearly defining personal career goals. Hence, the training will be useful for their future employment in industry. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university.

### **Course Objectives**

The objective of this course is to

1. Provide practical training on some demo or live projects that will increase the capability of the students to work in a team on actual problems in industry.
2. Provide students with capabilities to design systems, analyze results, write technical reports and engage in life-long learning practices.

### **Course Outcomes**

On completion of this course, the students will be able to

- CO1.** Relate and apply the acquired classroom knowledge with technical, real-time industry environment.
- CO2.** Relate and demonstrate capabilities to create and review technological solutions to complex engineering problems of relevant domains.
- CO3.** Apply the acquired knowledge to demonstrate the skills to create and compile technical reports pertaining to a given project.
- CO4.** Demonstrate the skills to work ethically and professionally in a team and engage in life-long learning.

### **Course Content**

#### **Guidelines**

In order to achieve the objectives:

- Each student will be allotted a supervisor for proper guidance.
- Student will first submit details of company, external guide, project title to coordinator/supervisor as per given schedule.
- For internal assessment purpose, students will submit an industry feedback and a progress report.

- Student will maintain a file (Internship File/Project Report) which he/she will submit after completion of internship. Further, coordinator will provide Non-Teaching Credit Course project guidelines and sample to help in preparation of file. The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development. The file will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

The **layout guidelines** for the Project Report

### **1. File should be in the following specification**

- A4 size paper
- Spiral Binding
- **Font**

For normal text Font Type and Size must be- Times New Roman, 12 pt. The minimum font size of materials within a table or a figure can be 10 point.

- **Margins**

A margin of 3.75 cm (1½ inch) is to be given on the binding edge while on the other sides it is to be 2.5 cm (1 inch). The text of the report, including headings, figures, tables, and notes, but excluding page numbers, must be accommodated within the page area.

- **Line Spacing**

The line spacing in the main text must be between one-and-a-half (1.5). Single line spacing should be given for figure captions, table titles, figure legends, and footnotes. Equations, tables, figures, and quotations should be set off from the main text with adequate space (not less than the normal line spacing adopted for the main text). Two consecutive paragraphs should be separated by a spacing which must be larger than the line spacing adopted for the text.

- **Tables and Figures**

Each sketch, drawing, graph and photograph should have a figure number and title below the figure etc. Numbering should be sequential, chapter wise. For instance, if there are 24 figures chapter 3 spread over all of its sections the figure numbers run from Figure 3.1 through Figure 3.24. In figures experimental data should typically be represented by centered symbols, and theoretical data by continuous curves.

Each table should have a table number and caption above the table. Numbering should be sequential, chapter wise, as in the case of Figure numbers. For instance, if there are 18 tables in chapter 3 the table numbers run from Figure 3.1 through Figure 3.18.

Make sure that figures and tables are complete in other respects such as legends, references (if any) and coordinate labels with units. Each figure and table must be explicitly referred to in the text and located where its first reference occurs, preferably after the reference.

- **Drawings**

All engineering drawings must conform to relevant Standards and should include a title block. If drawings are large they should be included at the back of the report in a separate pocket. In case drawings are made using CAD packages, a CD ROM should be included which contains all the files and details of the packages used.

- **Equations**

The numbering of equations should be sequential, chapter wise. Numbered equations must be explicitly referred to in the text.

**2. Report Size:** The maximum number of pages of the Report should be preferably between 40-70 pages.

**3. Report Layout:** The report should contain the following components

- Front Page
- Declaration
- Student Certificate (University)
- Certificate(Company)
- Acknowledgement
- Abstract
- Contents
- List of Figures
- List of Tables
- Company Profile (optional)
- Chapters
- Appendices(optional)
- References / Bibliography

The above components are described below:

- **Title Page** - Format will be given by coordinator/supervisor.
- **Declaration by the Students** - This is page number (i), the beginning of the small case Roman numeral page numbers. The student has to give a declaration to the effect that the data used for the work, the work depicted in the report, and the written material contained in the report are not copied from others and that due permission has been taken from, and due credit has been given to, the sources whenever they are used.
- **Certificate** - This is page number (ii). It is given by the Institute. The certificate will be signed by the Faculty Supervisor(s) before the viva-voce after verifying the format and by the Head of the Department after review with the Supervisor(s).
- **Company Certificate** - This is a certificate, which the company gives to the students.
- **Contents** - This is page number (iii). The table of Contents should be titled just *Contents* (not Table of Contents). Try to fit it into one or two pages.
- **Acknowledgement** - This is page number (iv). Keep this brief and avoid using informal language. This page must be signed by the candidate.

- **Abstract and Keywords** - This is page number (v). The abstract (preferably one page) should contain the context/relevance of the problem at hand, a description of what was done and a gist of the significant observations/results.
- The keywords (maximum 6) are a hint that what is contained in the report.
- **Company Profile** - A Company Profile corresponds to a file with company-specific data. Company data can be stored there and included in a booking when needed.
- **Chapters** - Introduction, Literature Review/Background Study etc. as given by coordinator/supervisor.
- **References / Bibliography** - This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

**Modes of Evaluation:** Viva/Progress Report/Presentation/Final Report

### Course Catalog

The major project provides the student with an opportunity to apply knowledge and skills learned in the classroom in carrying out a project. The major project is an in-house training on real-time project or on latest software. The experience and skills that come with carrying out major project build a foundation and aptitude in students to conduct meaningful research towards achieving practical and technological outcomes for a given engineering problem. The major project aims to impart necessary training to the students that is a value addition for their employability.

### Course Objectives

The objective of this course is to

1. Provide practical training on projects that will increase the capability of the students to work individually or in teams on actual problems in industry.
2. Provide students with capabilities to design systems, analyze results, write technical reports and engage in life-long learning practices.

### Course Outcomes

On completion of this course, the students will be able to

- CO1.** Relate and apply the acquired classroom knowledge with technical and real-time environment.
- CO2.** Relate and demonstrate capabilities to create and review technological solutions to complex engineering problems of relevant domains.
- CO3.** Apply the acquired knowledge to demonstrate the skills to create and compile technical reports pertaining to a given project.
- CO4.** Demonstrate the skills to work ethically and professionally in a team and engage in life-long learning.

- **Abstract and Keywords** - This is page number (v). The abstract (preferably one page) should contain the context/relevance of the problem at hand, a description of what was done and a gist of the significant observations/results.

- The keywords (maximum 6) are a hint that what is contained in the report.
- **Company Profile** - A Company Profile corresponds to a file with company-specific data. Company data can be stored there and included in a booking when needed.
- **Chapters** - Introduction, Literature Review/Background Study etc. as given by coordinator/supervisor.
- **References / Bibliography** - This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

**Modes of Evaluation:** Viva/Progress Report/Presentation/Final Report

## **EIGHTH SEMESTER**

<b>ASE2811</b>	<b>Spacecraft Propulsion</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
Version 2019-1	Date of Approval: May 2019	3	0	0	3
Pre-requisites/ Exposure	Introduction to Aerospace Engineering, Aircraft Propulsion				
Co-requisites					

### Course Catalog

This course covers the fundamentals of spacecraft propulsion and discusses advanced concepts in space propulsion ranging from chemical to electrical engines. Topics include conventional and advanced propulsion systems, physics and engineering of spacecraft propulsion, and various schemes for accelerating propellants.

### Course Objectives

The objective of this course is to

11. Provide introductory knowledge to the students regarding the basic science and principles as applicable to various flight vehicles and their structure.
12. Provide education to the students about the aerodynamics, propulsion, and systems of different types of flight vehicles.

### Course Outcomes

On completion of this course, the students will be able to

- CO24. Define, explain, and apply the different theoretical aspects and associated mathematical principles to spacecraft propulsion.
- CO25. List, explain, and compare amongst various types, systems and subsystems of chemical propulsion.
- CO26. Outline, describe, and contrast amongst various types, systems and subsystems of electric propulsion.
- CO27. Identify, explain, and compare amongst various types, systems and subsystems of nuclear propulsion.
- CO28. List, summarize and contrast amongst the different advanced propulsion concepts for interstellar travels.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1: Introduction to Spacecraft Propulsion</b> Overview of Spacecraft Propulsion; Basic Theory of Thermal Jet/Rocket Engines; Launch Vehicle Selection; Newton's Third Law and Rocket Equation; Tsiolkovsky's Rocket Equation.	L1, L2, L3	6
<b>Module 2: Chemical Propulsion</b> Basic Configuration of -Liquid Propellant Engines, Solid Propellant Rockets, Hybrid Rocket Motors, Cryogenic Engines; Specific Impulse; Propulsive Efficiency; Combustion Stability; Thrust stability.	L1, L2, L4	6

<b>Module 3: Electric Propulsion</b> Overview of Electric Propulsion; Basics and Classification; Principles of Electric Propulsion; Electrothermal Thrusters; Electrostatic Thrusters; Electromagnetic Thrusters; Electrical Power Generation; Applications of Electric Propulsion.	L1, L2, L4	9
<b>Module 4: Nuclear Propulsion</b> Nuclear Propulsion Basics; Nuclear Fission Concept; Principle of Nuclear Thermal Propulsion; Fuel Elements; Exhaust Velocity of Nuclear Thermal Rocket; Radiation and its Management; Start-up and Shut-down; Potential Applications; Operational Issues.	L1, L2, L4	9
<b>Module 5: Advanced Concepts</b> Interstellar Distances; Energy Requirements; Propulsion Systems requirements; Improving Efficiency; Single Stage to Orbit; Air-breathing Engines.	L1, L2, L4	6

*\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

Version 2019-1	Date of Approval: May 2019	2	0	0	2
Pre-requisites/ Exposure	Introduction to Avionics				
Co-requisites					

### Course Catalog

This course provides basic knowledge and understanding of science and principles governing the navigation and communication of aerospace vehicles. Knowledge of basic physics, natural laws, interplanetary flight and flight vehicles is crucial to comprehend the contents of this course. This course provides introductory knowledge to the students about the construction, components and operation of various systems and sub-systems used for navigation, guidance and communication of interplanetary flight vehicles.

### Course Objectives

The objective of this course is to

1. Provide introductory knowledge to the students regarding the basic science and principles as applicable to navigation of interplanetary flight vehicles in atmosphere, space and around planetary bodies.
2. Provide education to the students about the various navigation, guidance and communication systems and subsystems of different types of spacecraft.

### Course Outcomes

On completion of this course, the students will be able to

- CO1.** State, explain, and summarize the basic science and principles behind the operation of Radar.
- CO2.** State and explain the physical and natural laws as applicable to the navigation of flight vehicles in atmosphere and space.
- CO3.** List, explain, and categorize various systems and sub-systems used for navigation, guidance and control of interplanetary flight vehicles.
- CO4.** List, explain, and summarize the different Fly-by-wire avionics systems used in modern aircrafts.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1: Introduction</b> Concepts of Navigation, Guidance and Control, Introduction to Basic Principles, Air Data Information, Principle of Working of Radar, MTI and Pulsed Doppler Radar, Moving Target Detector, Limitation of MTI Performance.	L1, L2	6
<b>Module 2: Navigation on Earth's Surface</b> Basic Principle of Navigation; Position Fixing; Global Positioning System; Geodetics and Basic Reference Frames; Simplified Aerospace Vehicle Equation; Fundamental of Navigation Equation; International Satellite navigation system.	L1, L2	6
<b>Module 3: Guidance of Aerospace Vehicles</b>	L1, L2	6

Introduction; Classification; Description; Guidance Phases During Flight; Categories of Homing and Command Guidance, Kinematic Equations, Missile Guidance Laws; Classification of Guidance Laws; Classical Guidance Laws; Modern Guidance Laws		
<b>Module 4: Control Systems</b> Basic Definitions; Open Loop and Closed Loop Systems; Input-Output Description; Performance Criteria; Feedback Control; Root Locus; Evan's Form; Steps to Obtain Root Locus; Root Locus Example.	L1, L2	6

*\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

## Course Catalog

The project-dissertation provides the student with an opportunity to apply knowledge and skills learned in the classroom in carrying out a project. The project-dissertation is an in-house training on real-time project or on latest software. The experience and skills that come with carrying out project-dissertation build a foundation and aptitude in students to conduct meaningful research towards achieving practical and technological outcomes for a given engineering problem. The project-dissertation aims to impart necessary training to the students that is a value addition for their employability.

## Course Objectives

The objective of this course is to

1. Provide practical training on projects that will increase the capability of the students to work individually or in teams on actual problems in industry.
2. Provide students with capabilities to design systems, analyze results, write technical reports and engage in life-long learning practices.

## Course Outcomes

On completion of this course, the students will be able to

- CO1.** Relate and apply the acquired classroom knowledge with technical and real-time environment.
- CO2.** Relate and demonstrate capabilities to create and review technological solutions to complex engineering problems of relevant domains.
- CO3.** Apply the acquired knowledge to demonstrate the skills to create and compile technical reports pertaining to a given project.
- CO4.** Demonstrate the skills to work ethically and professionally in a team and engage in life-long learning.

## Course Content

### Guidelines

In order to achieve the objectives:

- Each student will be allotted a supervisor for proper guidance.
- Student will first submit details of company, external guide, project title to coordinator/supervisor as per given schedule.
- For internal assessment purpose, students will submit an industry feedback and a progress report.
- Student will maintain a file (Internship File/Project Report) which he/she will submit after completion of internship. Further, coordinator will provide Non-Teaching Credit Course project guidelines and sample to help in preparation of file. The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be

used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development. The file will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

The **layout guidelines** for the Project Report

### **1. File should be in the following specification**

- A4 size paper
- Spiral Binding

- **Font**

For normal text Font Type and Size must be- Times New Roman, 12 pt. The minimum font size of materials within a table or a figure can be 10 point.

- **Margins**

A margin of 3.75 cm (1½ inch) is to be given on the binding edge while on the other sides it is to be 2.5 cm (1 inch). The text of the report, including headings, figures, tables, and notes, but excluding page numbers, must be accommodated within the page area.

- **Line Spacing**

The line spacing in the main text must be between one-and-a-half (1.5). Single line spacing should be given for figure captions, table titles, figure legends, and footnotes. Equations, tables, figures, and quotations should be set off from the main text with adequate space (not less than the normal line spacing adopted for the main text). Two consecutive paragraphs should be separated by a spacing which must be larger than the line spacing adopted for the text.

- **Tables and Figures**

Each sketch, drawing, graph and photograph should have a figure number and title below the figure etc. Numbering should be sequential, chapter wise. For instance, if there are 24 figures chapter 3 spread over all of its sections the figure numbers run from Figure 3.1 through Figure 3.24. In figures experimental data should typically be represented by centered symbols, and theoretical data by continuous curves.

Each table should have a table number and caption above the table. Numbering should be sequential, chapter wise, as in the case of Figure numbers. For instance, if there are 18 tables in chapter 3 the table numbers run from Figure 3.1 through Figure 3.18.

Make sure that figures and tables are complete in other respects such as legends, references (if any) and coordinate labels with units. Each figure and table must be explicitly referred to in the text and located where its first reference occurs, preferably after the reference.

- **Drawings**

All engineering drawings must conform to relevant Standards and should include a title block. If drawings are large they should be included at the back of the report in a separate pocket. In case drawings are made

using CAD packages, a CD ROM should be included which contains all the files and details of the packages used.

- **Equations**

The numbering of equations should be sequential, chapter wise. Numbered equations must be explicitly referred to in the text.

**2. Report Size:** The maximum number of pages of the Report should be preferably between 40-70 pages.

**3. Report Layout:** The report should contain the following components

- Front Page
- Declaration
- Student Certificate (University)
- Certificate(Company)
- Acknowledgement
- Abstract
- Contents
- List of Figures
- List of Tables
- Company Profile (optional)
- Chapters
- Appendices(optional)
- References / Bibliography

The above components are described below:

- **Title Page** - Format will be given by coordinator/supervisor.
- **Declaration by the Students** - This is page number (i), the beginning of the small case Roman numeral page numbers. The student has to give a declaration to the effect that the data used for the work, the work depicted in the report, and the written material contained in the report are not copied from others and that due permission has been taken from, and due credit has been given to, the sources whenever they are used.
- **Certificate** - This is page number (ii). It is given by the Institute. The certificate will be signed by the Faculty Supervisor(s) before the viva-voce after verifying the format and by the Head of the Department after review with the Supervisor(s).
- **Company Certificate** - This is a certificate, which the company gives to the students.
- **Contents** - This is page number (iii). The table of Contents should be titled just *Contents* (not Table of Contents). Try to fit it into one or two pages.
- **Acknowledgement** - This is page number (iv). Keep this brief and avoid using informal language. This page must be signed by the candidate.
- **Abstract and Keywords** - This is page number (v). The abstract (preferably one page) should contain the context/relevance of the problem at hand, a description of what was done and a gist of the significant observations/results.

- The keywords (maximum 6) are a hint that what is contained in the report.
- **Company Profile** - A Company Profile corresponds to a file with company-specific data. Company data can be stored there and included in a booking when needed.
- **Chapters** - Introduction, Literature Review/Background Study etc. as given by coordinator/supervisor.
- **References / Bibliography** - This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

Version 2019-1	Date of Approval: May 2019	2	0	0	2
Pre-requisites/ Exposure	High Speed Aerodynamics				
Co-requisites					

### Course Catalog

This course provides basic knowledge and understanding of aeroelastic phenomenon. The courses on educating students about different aeroelastic phenomenon related to aircraft and their effect on aircraft performance. This also provides mathematical strategies to solve aeroelastic problems. Knowledge of basic strength of materials and aerodynamics is crucial to comprehend the content this course. This course serves as a prerequisite for designing of engine components.

### Course Objectives

The objective of this course is to

1. Provide students knowledge about the Elastic behavior of the different parts of aircraft under loads.
2. Educate the students about the theories and laws governing the aero elasticity.
3. Provide solution of elastic phenomenon for arbitrary shaped oscillatory objects.

### Course Outcomes

On completion of this course, the students will be able to

- CO1.** Define, explain and apply about the elastic behavior of the different parts of aircraft under loads
- CO2.** Define, explain, apply and distinguishes between static and dynamic aero elastic phenomenon.
- CO3.** Define, explain, and apply phenomena of divergence of 2D wing sections and cantilever wing and their solutions in generalized co-ordinates.
- CO4.** Define and explain reversal of aileron and its consequences on longitudinal stability.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1: Introduction</b> Definition and historical background, Static and dynamic aeroelasticity phenomenon, integration of aerodynamic, elastic and inertia forces, Influence of aeroelasticity phenomenon on aircraft design	L1, L2, L3	5
<b>Module 2: Divergence of Lifting Surface</b> Phenomenon of divergence, Divergence of 2-D wing section, Divergence of an idealized cantilever wing, Solution to generalized co-ordinates, Method of successive approximation	L1, L2, L3	5
<b>Module 3: Steady State Aeroelasticity Problems in General</b> Loss and reversal of aileron control: 2D case, Aileron reversal general case, Lift distribution on a rigid and elastic wing, Effect on static longitudinal stability of aircraft	L1, L2, L3	4

<b>Module 4: Introduction to Flutter and Buffeting</b> Phenomenon of flutter, Flutter of a cantilever wing, Approximate determination of critical speed by Galerkin's Method, Buffeting and stall flutter	L1, L2, L3	5
<b>Module 5: Non - Aeroelastic Problems</b> Flow around an oscillating circular cylinder, Applications to H-shaped sections, Prevention of aero-elastic instabilities	L1, L2	5

*\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

### Course Catalog

This course provides basic knowledge and understanding of the management practices of airlines, airports and businesses related to the aerospace industry. This course is aimed to equip the students with necessary information and knowledge about the various aspects related to the design, maintenance, and production management practices of aerospace industries.

### Course Objectives

The objective of this course is to

1. Provide introductory knowledge to the students regarding the management practices of aerospace industries for the maintenance and design of flight vehicles.
2. Provide education to the students about the production, safety and quality management practices followed in aerospace industries.

### Course Outcomes

On completion of this course, the students will be able to

- CO1.** Identify, describe, and compare amongst the various management practices and principles followed by aerospace industries for maintenance of flight vehicles.
- CO2.** Identify, describe, and compare amongst the various management practices and principles followed by aerospace industries for product design.
- CO3.** Identify, describe, and compare amongst the various management practices and principles followed by aerospace industries for preferred production processes.
- CO4.** Identify, describe, and compare amongst the various management practices and principles followed by aerospace industries regarding the safety and outcome quality of carried out processes.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1: Maintenance Management</b> Maintenance Programme – Necessity, Structure, Content, Life Cycle Monitoring, Status Reporting; Reliability Managements; Aircraft Maintenance – Scheduled, Unscheduled, Line and Base Maintenance; Setup of Maintenance Organization; Planning and Controlling; Engine and Propeller Maintenance.	L1, L2, L4	6
<b>Module 2: Design Management</b> Basic Design Organization Requirements; Essential Design Organizational Structure; Specifications of Design Project; Design Classifications; Management Basics of Major Design Projects; Minor Design Changes; Component Development.	L1, L2, L4	6

<b>Module 3: Production Management</b> Production and Maintenance Planning; Technical, Organizational and Personnel Requirements; Infrastructure, Work Environment and Equipment; Selection and Monitoring of Supplies; Material Control and Handling	L1, L2, L4	6
<b>Module 4: Quality and Safety Management</b> Quality Management Systems – Basics, Purpose, Objectives and Documentation; Safety/ Risk Management Systems – Basics, Organizational Framework, Safety/ Risk Monitoring, Promoting Safety Expertise and Culture; Auditing – Internal and External.	L1, L2, L4	6

### Course Catalog

This course provides basic knowledge and understanding of various guidelines and regulations laid down by the regulating authority of India i.e. DGCA for the safe and legal operation of flight vehicles.

### Course Objectives

The objective of this course is to

1. Provide introductory knowledge to the students about the guidelines and regulations about the airworthiness of flight vehicle and its systems and equipment.
2. Provide education to the students about the licensing procedure for aircraft maintenance engineer and about the various requirements for safe operation of flight vehicles in India.

### Course Outcomes

On completion of this course, the students will be able to

- CO1.** State, and explain the guidelines and regulations associated with the airworthiness of different flight vehicles.
- CO2.** State, and explain the guidelines and regulations associated with the installation and operation of crucial aircraft instrument, equipment and accessories.
- CO3.** State, and explain the guidelines and regulations associated with the Licensing procedure and requirements of aircraft maintenance engineer.
- CO4.** State, and explain the guidelines and regulations associated with other important aspects of safe operation of flight vehicles.

### Course Content

<b>Modules</b>	<b>Blooms level*</b>	<b>Number of hours</b>
<b>Module 1: Airworthiness of Flight Vehicles</b> Registration/ Deregistration of Aircraft; Issue/Validation and Suspension of Certificate of Airworthiness; Special Flight Permits; Design, Manufacture, Registration and Operation of Micro Light Aircraft; Requirements for Manufacture, Registration and Airworthiness Control of Hot Air Balloons; Age of Aircraft to be Imported for Scheduled/Non-scheduled Including Charter; Issue/ Renewal and Suspension of Special Certificate of Airworthiness.	L1, L2	6
<b>Module 2: Aircraft Instrument, Equipment and Accessories</b> Approval of Cockpit Check List; Minimum Equipment List; Configuration Deviation List; Defect Recording, Monitoring, Investigation and Reporting; Flight Data Recorders; Cockpit Voice Recorders; Ground Proximity Warning Systems (GPWS); Installation of Airborne Collision Avoidance System; Installation of Communication, Navigation and Radar Equipment.	L1, L2	6
<b>Module 3: Aircraft Maintenance Engineer Licensing</b>	L1, L2	6

Licensing of Aircraft Maintenance Engineers; Issue of Authorization to Aircraft Maintenance Engineers; Approval of Flight Engineer Examiners and Check Flight Engineers; Procedure for Issue/ Renewal/ Extension of Student Flight Engineer/ Flight Engineer's License; Validation of Foreign Licenses of Aircraft Maintenance Engineers.		
<b>Module 4: Miscellaneous Requirements</b> Weight and Balance Control of an Aircraft; Provision of Medical Supplies in Aircraft; Flammability Requirements for Furnishing Materials to be Used in Aircraft; Aircraft Log Books; Document to be Carried on Board by Indian Registered Aircraft; Requirements for Issue of Taxi Permit.	L1, L2	6

*\*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation*

# ARTIFICIAL INTELLIGENCE

## Syllabus

### BASICS OF ARTIFICIAL INTELLIGENCE

**Course Code: CSE2351**

**Credit Units: 03**

**Course Objective:**

To develop semantic-based and context-aware systems to acquire, organize process, share and use the knowledge embedded in multimedia content. Research will aim to maximize automation of the complete knowledge lifecycle and achieve semantic interoperability between Web resources and services. The field of Robotics is a multi disciplinary as robots are amazingly complex system comprising mechanical, electrical, electronic H/W and S/W and issues germane to all these.

**MODULE- I**

AI problems, foundation of AI and history of AI intelligent agents: Agents and Environments, the concept of rationality, the nature of environments, structure of agents, problem solving agents, problem formulation.

**MODULE-II**

Searching- Searching for solutions, uniformed search strategies – Breadth first search, depth first Search. Search with partial information (Heuristic search) Hill climbing, A\* ,AO\* Algorithms, Problem reduction, Game Playing-Adversial search, Games, mini-max algorithm, optimal decisions in multiplayer games, Problem in Game playing, Alpha-Beta pruning, Evaluation functions.

**MODULE-III**

Knowledge representation issues, predicate logic- logic programming, semantic nets- frames and inheritance, constraint propagation, representing knowledge using rules, rules based deduction systems. Reasoning under uncertainty, review of probability, Baye's probabilistic interferences and dempstershafer theory.

**MODULE- IV**

First order logic. Inference in first order logic, propositional vs. first order inference, unification & lifts forward chaining, Backward chaining, Resolution, Learning from observation Inductive learning, Decision trees, Explanation based learning, Statistical Learning methods ,Reinforcement Learning.

**MODULE- V**

Expert systems:- Introduction, basic concepts, structure of expert systems, the human element in expert systems how expert systems works, problem areas addressed by expert systems, expert systems success factors, types of expert systems, expert systems and the internet interacts web, knowledge engineering, scope of knowledge, difficulties, in knowledge acquisition methods of knowledge acquisition, machine learning, intelligent agents, selecting an appropriate knowledge acquisition method, societal impacts reasoning in artificial intelligence, inference with rules, with frames: model based reasoning, case based reasoning, explanation & meta knowledge inference with uncertainty representing uncertainty.

**Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

2. David Poole, Alan Mackworth, Randy Goebel, "Computational Intelligence : a logical approach", Oxford University Press.
3. G. Luger, "Artificial Intelligence: Structures and Strategies for complex problemsolving", Fourth Edition, Pearson Education.
4. J. Nilsson, "Artificial Intelligence: A new Synthesis", Elsevier Publishers.

# ARTIFICIAL NEURAL NETWORKS

Course Code: CSE2451

Credit Units: 03

## Module-I

Artificial Neural Networks (ANN) and their biological roots and motivations. ANNs as numerical data/signal/image processing devices. a summing dendrite, synapses and their weights, pre- and post-synaptic signals, activation potential and activation function. Excitatory and inhibitory synapses. The biasing input. Types of activating functions. Encoding (training phase) and decoding (active phase). Taxonomy of neural networks:- feedforward and recurrent networks with supervised and unsupervised learning laws, static & dynamic processing systems, basic data structures: mapping of vector spaces, clusters, principal components.

## Module-II

Linear Networks:- Adaline - the adaptive linear element, Linear regression. The Wiener-Hopf equation. The Least-Mean-Square (Widrow-Hoff) learning algorithm. Method of steepest descent. Adaline as a linear adaptive filter. A sequential regression algorithm.

Multi-Layer Feedforward Neural Networks:- Multi-Layer Perceptrons. Supervised Learning. Approximation and interpolation of functions. Back-Propagation Learning law. Fast training algorithms. Applications of multilayer perceptrons: Image coding, Paint-quality inspection, Nettetalk.

## Module-III

Self-Organising Systems:- Unsupervised Learning, Pattern clustering, Topological mapping, Kohonen's self-organizing map, Local learning laws- Generalised Hebbian Algorithm. The Oja's and Sanger's rules. Principal component analysis - Karhunen-Loeve transform.

## Module-IV

Feedback neural networks:- Pattern storage and retrieval, Hopfield model, Boltzmann machine, Recurrent neural networks.

## Module-V

Radial basis function networks:- Regularization theory, RBF networks for function approximation, RBF networks for pattern classification.

Kernel methods for pattern analysis:- Statistical learning theory, Support vector machines for pattern classification, Support vector regression for function approximation, Relevance vector machines for classification and regression.

## Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

3. S. Haykin, Neural Networks – A Comprehensive Foundation, Prentice Hall.

# FUZZY LOGIC

Course Code: CSE2551

Credit Units: 03

## MODULE- I

**Introduction:** Background, Uncertainty and imprecision, Statistics and random processes, Uncertainty in information, Fuzzy sets and membership, Chance versus ambiguity, Classical sets - operations on classical sets to functions, Fuzzy sets-fuzzy set operations, Properties of fuzzy sets, sets as points in hypercube.

## MODULE-II

**Classical Relations And Fuzzy Relations:** Cartesian product, Crisp relations-cardinality of crisp relations, Operations on crisp relations, Properties of crisp relations, Compositions, Fuzzy relations-cardinality of fuzzy relations, Operations on fuzzy relations, Properties of fuzzy relations, Fuzzy Cartesian product and composition, Non interactive fuzzy sets, Tolerance and equivalence relations-crisp equivalence relation, Crisp tolerance relation, Fuzzy tolerance, Max-min Method, other similarity methods.

## MODULE-III

**Membership Functions:** Features of the membership function, Standards forms and boundaries, fuzzification, Membership value assignments-intuition, Inference, Rank ordering, Angular fuzzy sets.

## MODULE- IV

**Fuzzy-To-Crisp Conversions And Fuzzy Arithmetic:** Lambda-cuts for fuzzy sets, Lambda-cuts for fuzzy relations, Defuzzification methods. Extension principle-crisp functions, Mapping and relations, Functions of fuzzy sets-extension principle, Fuzzy transform (Mapping), Fuzzy numbers Interval analysis in Arithmetic.

## MODULE- V

**Fuzzy Logic &Fuzzy Rule-Based Systems:** Fuzzy logic, approximate reasoning, Fuzzy tautologies, Contradictions, Equivalence and logical proofs. Natural language, Linguistic hedges, Rule-based system-canonical rule forms, Decomposition of compound rules, Likelihood and truth qualification, Aggregation of fuzzy rules.

## MODULE- VI

**Fuzzy Decision Making, Classification & Hybrid formation:** Fuzzy synthetic evaluation, Fuzzy ordering, Preference and consensus, Multiobjective decision making under fuzzy states and fuzzy actions. Classification by equivalence relations-crisp relations, Fuzzy relations cluster analysis, neuro fuzzy and fuzzy genetic system, applications to engineering problems.

### Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

**Reference Books:-**

# INTRODUCTION TO GENETIC ALGORITHM

**Course Code: CSE2651**

**Credit Units: 03**

## **Module-I**

Fundamentals of genetic algorithm: A brief history of evolutionary computation, biological terminology, search space encoding, reproduction elements of genetic algorithm, genetic modeling, comparison of GA and traditional search methods. The Fundamental Theorem, Schema Processing at work, Two-armed and k-armed Bandit problem, The Building block hypothesis.

## **Module-II**

Genetic technology:- steady state algorithm, fitness scaling, inversion. Genetic programming:- Genetic Algorithm in problem solving, Implementing a Genetic Algorithm:- computer implementation, operator (reproduction, crossover and Mutation, Fitness Scaling, Coding, Discretization). Knowledge based techniques in Genetic Algorithm. Advanced operators and techniques in genetic search:- Dominance, Diploidy and Abeyance. Inversion and other reordering operators, Niche and speciation.

## **Module-III**

Genetic Algorithm in engineering and optimization-natural evolution –Simulated annealing and Tabu search -Genetic Algorithm in scientific models and theoretical foundations.

## **Module-IV**

Introduction to genetics - based machine learning: Classifier system, Rule and Message system, Apportionment of credit, Knowledge based Techniques, Genetic Algorithms and parallel processors.

## **Module-V**

Applications of Genetic based machine learning-Genetic Algorithm and parallel processors- composite laminates- constraint optimization- multilevel optimization- real life problem.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

## **Text Book:-**

# SOFT COMPUTING

**Course Code: CSE2751**

**Credit Units: 03**

## **Module-I**

Introduction of soft computing, soft computing vs. hard computing, various types of soft computing techniques, applications of soft computing. Artificial Intelligence: Introduction, Various types of production systems, characteristics of production systems, breadth first search, depth first search techniques, other Search Techniques like hill Climbing, Best first Search, A\* algorithm, AO\* Algorithms and various types of control strategies. Knowledge representation issues, Propositional and predicate logic, monotonic and non monotonic reasoning, forward Reasoning, backward reasoning, Weak & Strong Slot & filler structures, NLP.

## **Module-II**

Structure and Function of a single neuron: Biological neuron, artificial neuron, definition of ANN, Taxonomy of neural net, Difference b/w ANN and human brain, characteristic and applications of ANN, single layer network, Perceptron training algorithm, Linear separability, Delta rule. Introduction of MLP, different activation functions, Error back propagation algorithm, derivation of BBPA, momentum, limitation, characteristics and application of EBPA.

## **Module-III**

Counter propagation network: -Architecture, functioning & characteristics of counter Propagation network, Hop field/ Recurrent network, configuration, stability constraints, associative memory, and characteristics, limitations and applications.

## **Module-IV**

Fuzzy set theory, Fuzzy set versus crisp set, Crisp relation & fuzzy relations, Fuzzy systems: crisp logic, fuzzy logic, introduction & features of membership functions, Fuzzy rule base system : fuzzy propositions, formation, decomposition & aggregation of fuzzy Rules, fuzzy reasoning, fuzzy inference systems, fuzzy decision making.

## **Module-V**

Genetic algorithm: Fundamental, basic concepts, working, principle, encoding, fitness function, reproduction, Genetic modeling: Inheritance operator, cross over, inversion & deletion, mutation operator, Bitwise operator, Generational Cycle, Convergence of GA, Applications & advances in GA, Differences & similarities between GA & other traditional methods.

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

## **PROJECT (ARTIFICIAL INTELLIGENCE)**

**Course Code: CSE2851**

**Credit Units: 03**

### **Methodology**

Topics of project are to be based on the latest trends in Artificial Intelligence, verifying engineering concepts in Artificial Intelligence /principals and should involve elementary research work. The projects may involve design, fabrications, testing, computer modeling, and analysis of any engineering problem. On completion of the project, the students are to present a report covering various aspects learnt by them and give a presentation on same.

### **Examination Scheme:**

Literature study/ Fabrication/ Experimentation	40
Written Report	20
Viva	15
Presentation	25
<b>Total</b>	<b>100</b>

# AEROSPACE ENGINEERING

## Syllabus

### ELEMENTS OF AEROSPACE ENGINEERING

**Course Code: ASE2351**

**Credit Units: 03**

**Course Objective:**

Being a foundation course for aerospace students, its objective is to provide introductory knowledge about some of the topics of aerospace engineering, such as, flight vehicles, principles of flight mechanics, propulsion systems, aerospace structures, aircraft systems, passenger comfort systems, power-actuated systems, etc.

**Course Contents:**

**Module I: Introduction to Aerospace Systems**

Development of Flying Machines. Classification of flight vehicles. Introduction to prominent features of design; Airplanes, helicopter and other flying machines along with examples.

**Module II: Aircraft Systems**

Lifting and non-lifting surfaces. Lift and drag of airfoils, stalling, finite span wing, induced drag. Wing plan-form variations, forward and aft swept wings, high lift devices, use of control surfaces, elementary ideas about stability and control of airplanes.

**Module III: Principles of Aerospace Propulsion**

Classification of propulsive units and their features; Fixed and variable pitch air screws, piston prop engine, turbo prop engine, turbo jet engines and its variations, ramjet, pulse jet, rockets engines; Solid and liquid propellant engine, the concept of staging of rockets, structural features in each case, Engine starting-systems.

**Module IV: Aerospace Vehicle Structure**

Importance of strength/weight ratio, introduction to loads on different parts of the vehicle, detailed description of the fuselage, wing and tail surfaces, wing surfaces, wing fuselage jointing methods, different types of under carriages,

**Module V: Power Actuated Systems**

Hydraulic system: details and various components, selector and sequence, switches, electro-hydro-mechanical system, pneumatic system, fuel systems, etc.

**Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# ELEMENTS OF SPACE ENGINEERING

**Course Code: ASE2451**

**Credit Units: 03**

## **Course Objective:**

The knowledge of concepts of Space Systems is important for understanding the essentials of Aerospace discipline, particularly subsystems such as Rockets and Missiles; Satellite Launch Vehicles; Satellite Systems; Tracking, Telemetry and Tele-command; Control, Guidance and Navigation; Flight and Orbital Mechanics.

## **Course Contents:**

### **Module I: Introduction to Space Systems**

Evolution of Rocketry, Planet/Solar Systems, Space Exploration, Space Applications, Future Trends.

### **Module II: Elements of Rockets and Satellites**

Satellite Launch Vehicles, Missiles, Communication Satellites, Remote Sensing.

### **Module III: Orbital Mechanics and Mission Design**

Motion in Gravitational Field. Orbits, Orbital Elements, Hohmann Transfer. Delta-V Requirements. Orbit Perturbations.

### **Module IV: Ground Systems**

Ground Stations, Link Calculations, Station Keeping, Deep Space Network (DSN), VSATs, GPS, ILS, Auto Pilot and Navigation Systems.

### **Module V: Space Craft Systems**

Space Craft Types, Attitude Determination and Control, Power Systems, Thermal Control, Space Craft Propulsion, Communication Satellites, Remote Sensing Satellites.

### **Module VI: Launch Vehicles and Missiles**

PSLV, GSLV, Re-useable Vehicles, Propellant & Propulsion Systems, Thermal Protection, Control Systems, SAM, IRBM, ICBM.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# AIRCRAFT SYSTEMS

**Course Code: ASE2551**

**Credit Units: 03**

## **Module I: Flight Control Systems**

Primary and secondary flight control, flight control linkage systems, push-pull control rod system, cable and pulley systems, high lift control systems, flight control actuation, linear actuator, mechanical actuator, mechanical screw jack actuator, direct drive actuation, fly-by-wire actuator, electro-hydrostatic actuator, electro-mechanical actuator

## **Module II: Engine Control Systems**

Engine starting, engine indications, engine oil system, fuel flow control, ignition control, air flow control, engine offtakes, control system parameters, input signals, output signals, Reverse Thrust on modern civil aircraft, throttle levers, starting sequence

## **Module III: Hydraulic and Pneumatic Systems**

Hydraulic circuit design, Hydraulic actuation, Hydraulic Fluid, Fluid pressure, Fluid flow rate, Hydraulic piping, Hydraulic Pumps, Hydraulic reservoir, emergency power source, Use of bleed air, Engine bleed air control, Bleed air system indications

## **Module IV: Environment Control Systems**

Need for controlled environment, heat sources, ram air cooling, fuel cooling, engine bleed, bleed flow and temperature control, air cycle refrigeration, humidity control, hypoxia, tolerance

## **Module V: Gyroscopic Systems**

Gyroscope and its properties, gyro horizon, turn and bank indicator, turn coordinator, direct reading magnetic compass, and directional gyroscope.

## **Module VI: Emergency Systems**

Warning systems, Fire detection & suppression, emergency power source, Emergency landing, emergency system testing

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
<b>Weightage (%)</b>	5	10	8	7	70

# AIRCRAFT STABILITY AND CONTROL

**Course Code: ASE2651**

**Credit Units: 03**

## **Course Objective:**

This objective of this course is to make the students understand various aspects of stability of an aircraft in flight, both stick fixed and stick free, and how geometric features of control surfaces and their proper angular movements achieve it. Students are also given an analytical understanding of longitudinal, lateral and directional stability and measures that can be taken to control the same.

## **Course Contents:**

### **Module I: Stick Fixed Static Longitudinal Stability**

Introduction to stability of airplane, stick fixed longitudinal stability, effect of power, Neutral point, Centre of gravity limits. In flight measurement of stick fixed neutral point.

### **Module II: Control Surfaces and Aerodynamic Balancing**

Control surface hinge moments, floating and restoring tendencies, different types of tabs used on airplanes. Frise Aileron, Spoiler Controls.

### **Module III: Stick Free Static Longitudinal Stability**

Effect of free elevator on airplane stability, Elevator Control force, stick force gradients, Neutral point, Controls free center of gravity limit. In-flight measurement of stick free neutral point.

### **Module IV: Maneuvering Flight**

Effect of acceleration on airplane balancing, Elevator angle per g, and stick force per g, Maneuver margins.

### **Module V: Directional Stability and Control**

Asymmetric flight, Feather cock stability, contribution of different parts of Airplane, Rudder Fixed and Rudder free static directional stability, rudder lock.

### **Module VI: Lateral Stability and Control**

Dihedral Effect. Contribution of different parts of airplane controls in roll, aileron control power, cross coupling of lateral and directional effects.

### **Module VI: Dynamic Stability**

- (a) Longitudinal Dynamic Stability: Simple analysis of short period and phugoid modes, stick-fixed and stick-free.
- (b) Lateral and Directional Dynamic Stability: Simple analysis of roll subsidence spiral mode and Dutch roll.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# AIRCRAFT PERFORMANCE

**Course Code: ASE2751**

**Credit Units: 03**

## **Course Objective:**

In this course, aerospace students will learn the concepts and basic structural analysis of 2-D members in Cartesian and Polar coordinates using various methods. Students will also understand the analysis of torsional loads on bars, shells and walled tubes as well as the analysis of statically indeterminate structures.

## **Course Contents:**

### **Module I: Introduction to Aerospace Structure**

Importance of strength/weight ratio, introduction to loads on different parts of the vehicle, detailed description of the fuselage, wing and tail surfaces, wing surfaces, wing fuselage jointing methods, different types of under carriages,

### **Module II: Imposed Loads**

General considerations, basic flight loading conditions, Aerodynamic loads, inertia loads, Load factors for translational acceleration, load factor diagram.

### **Module III: Evaluation of Vehicle Material**

Mechanical properties, stress- strain curve, fatigue, strength-weight comparison of materials, sandwich construction and composite materials.

### **Module IV: Structural Analysis Method**

Energy Method, strain energy, complimentary energy. The two Castiglino's theorems and application to statically indeterminate system. Unit load method, principle of virtual work and virtual displacement, principle of superposition, reciprocal theorem.

### **Module V: Structural Analysis of Wing and Fuselage**

Analysis of typical semi-monocoque structures, distribution of concentrated loads in webs, loads on fuselage bulkhead, analysis of wing ribs. Shear flow in tapered webs.

## **Examination Scheme:**

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

# INTRODUCTION TO AUTOMATIC FLIGHT CONTROL

**Course Code: ASE2851**

**Credit Units: 03**

## **Course Objective:**

This course is designed to provide adequate knowledge to analyse one-degree and multi-degree of freedom systems of vibrations using different methods to find out their natural frequencies and frequency / amplitude responses.

## **Course Contents:**

### **Module I: Introduction**

Open Loop and Closed Loop (Feed Back) control systems. Types of feedback control systems. Laplace's transform.

### **Module II: Feedback Control Systems**

Transfer function of linear systems. Impulse response of linear systems, Block diagrams of feed back control systems, Multivariable systems. Block diagram algebra.

### **Module III: Analysis of Feedback Control Systems**

Typical test input signals, Time domain performance characteristics of feedback control systems. Effects of derivative and integral control. Steady State response of feedback control system-steady State error, Frequency response.

### **Module IV: System Stability**

Routh-Hurwitz Criterion, the Root Locus Method.

### **Module V: Auto-pilots**

Longitudinal Auto Pilots: Brief description through Block diagrams and Root Locus of Displacement Auto Pilot. Pitch Orientational Control System. Acceleration control system.

### **Module VI: Miscellaneous**

Fly-By-Wire control system, Instrument Landing System.

## **Examination Scheme:**

<b>Components</b>	<b>A</b>	<b>CT</b>	<b>S/V/Q</b>	<b>HA</b>	<b>EE</b>
