- Apply the knowledge of information and communication technology in public health promotion.
- Utilize the functionalities of Nursing Information System (NIS) system in nursing.
- Demonstrate the skills of using data in management of healthcare.
- Apply the knowledge of the principles of digital ethical and legal issues in clinical practice.
- Utilize evidence-based practices in informatics and technology for providing quality patient care.
- Update and utilize evidence-based practices in nursing education, administration, and practice.

APPLIED MICROBIOLOGY AND INFECTION CONTROL INCLUDING SAFETY

PLACEMENT: III SEMESTER

THEORY: 2 Credits (40 hours)

PRACTICAL: 1 Credit (40 hours) (Lab/Experiential Learning –L/E)

SECTION A: APPLIED MICROBIOLOGY

THEORY: 20 hours

PRACTICAL: 20 hours (Lab/Experiential Learning –L/E)

DESCRIPTION: This course is designed to enable students to acquire understanding of fundamentals of Microbiology, compare and contrast different microbes and comprehend the means of transmission and control of spread by various microorganisms. It also provides opportunities for practicing infection control measures in hospital and community settings.

COMPETENCIES: On completion of the course, the students will be able to:

- Identify the ubiquity and diversity of microorganisms in the human body and the environment.
- Classify and explain the morphology and growth of microbes.
- Identify various types of microorganisms.
- Explore mechanisms by which microorganisms caused disease.
- Develop understanding of how the human immune system counteracts infection by specific and non-specific mechanisms.
- Apply the principles of preparation and use of vaccines in immunization.
- Identify the contribution of the microbiologist and the microbiology laboratory to the diagnosis of infection.

SECTION B: INFECTION CONTROL & SAFETY

THEORY: 20 hours

PRACTICAL/LAB: 20 hours (Lab/Experiential Learning–L/E)

DESCRIPTION: This course is designed to help students to acquire knowledge and develop competencies required for fundamental patient safety and infection control in delivering patient care. It also focuses on identifying patient safety indicators, preventing and managing hospital-acquired infections, and following universal precautions.

COMPETENCIES: The students will be able to:

- Develop knowledge and understanding of Hospital-acquired Infections (HAI) and effective practices for prevention.
- Integrate the knowledge of isolation (Barrier and reverse barrier) techniques in implementing various precautions.
- Demonstrate and practice steps in Hand washing and appropriate use of different types of PPE.
- Illustrate various disinfection and sterilization methods and techniques.
- Demonstrate knowledge and skills in specimen collection, handling and transport to optimize the diagnosis for treatment.
- Incorporate the principles and guidelines of Bio-Medical waste management.
- Apply the principles of Antibiotic stewardship in performing the nurses' role.
- Identify patient safety indicators and perform the role of nurse in the patient safety audit process.
- Apply the knowledge of International Patient Safety Goals (IPSG) in the patient care settings.
- Identify employee safety indicators and risk of occupational hazards.
- Develop understanding of the various safety protocols and adhere to those protocols.

*Experiential Learning:

Experiential learning is the process by which knowledge is created through the process of experience in the clinical field. Knowledge results from the combination of grasping

transforming experience. (Kolb, 1984). The experiential learning cycle begins with an experience that the student has had, followed by an opportunity to reflect on that experience. Then students may conceptualize and draw conclusions about what they experienced and observed, leading to future actions in which the student experiments with different behaviors. This begins the new cycle as the students have new experiences based on their experimentation. These steps may occur in nearly any order as the learning progresses. As

the need of the learner, the concrete components and conceptual components can be in different order as they may require a variety of cognitive and affective behaviors.

PHARMACOLOGY-I

PLACEMENT: III SEMESTER

THEORY: I Credit (20 hours)

DESCRIPTION: This course is designed to enable students to acquire understanding of Pharmacodynamics, Pharmacokinetics, principles of therapeutics and nursing implications.

COMPETENCIES: On completion of the course, the students will be able to

1. Describe pharmacodynamics and pharmacokinetics.
2. Review the principles of drug calculation and administration.
3. Explain the commonly used antiseptics and disinfectants.
4. Describe the pharmacology of drugs acting on the GI system.
5. Describe the pharmacology of drugs acting on the respiratory system.
6. Describe drugs used in the treatment of cardiovascular and blood disorders.
7. Explain the drugs used in the treatment of endocrine system disorders.
8. Describe the drugs acting on skin and drugs used to treat communicable diseases.

PATHOLOGY -I

PLACEMENT: III SEMESTER

THEORY: 1 Credit (20 hours) (includes lab hours also)

DESCRIPTION: This course is designed to enable students to acquire knowledge of pathology of various disease conditions, understanding of genetics, its role in causation and management of defects and diseases and to apply this knowledge in practice of nursing.

COMPETENCIES: On completion of the course, the students will be able to

1. Apply the knowledge of pathology in understanding the deviations from normal to abnormal pathology.
2. Rationalize the various laboratory investigations in diagnosing pathological disorders.
3. Demonstrate the understanding of the methods of collection of blood, body cavity fluids, urine and feces for various tests.

Prof. (Dr.) Anil Kumar
Deputy Head Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar

ADULT HEALTH NURSING-

WITH INTEGRATED PATHOPHYSIOLOGY (including BCLS module) PLACEMENT: III SEMESTER

THEORY: 7 Credits (140 hours)

PRACTICUM: Lab/Skill Lab (SL) – 1 Credit (40 hours) Clinical – 6 Credits (480 hours)

DESCRIPTION: This course is designed to equip the students to review and apply their knowledge of Anatomy, Physiology, Biochemistry and Behavioral sciences in caring for adult patients with Medical/Surgical disorders using nursing process approach and critical thinking. It also intends to develop competencies required for assessment, diagnosis, treatment, nursing management, and supportive/palliative care to patients with various Medical/Surgical disorders.

COMPETENCIES: On completion of Medical/Surgical Nursing course, students will be able to

1. Explain the etiology, pathophysiology, manifestations, diagnostic studies, treatments and complications of common medical and surgical disorders.
2. Perform complete health assessment to establish a database for providing quality patient care and integrate the knowledge of anatomy, physiology and diagnostic tests in the process of data collection.
3. Identify nursing diagnoses, list them according to priority and formulate nursing care plan.
4. Perform nursing procedures skillfully and apply scientific principles while giving comprehensive nursing care to patients.
5. Integrate knowledge of pathology, nutrition and pharmacology in caring for patients experiencing various medical and surgical disorders.
6. Identify common diagnostic measures related to the health problems with emphasis on nursing assessment and responsibilities.
7. Demonstrate skill in assisting/performing diagnostic and therapeutic procedures.
8. Demonstrate competencies/skills to patients undergoing treatment for medical/surgical disorders.
9. Identify the drugs used in treating patients with medical/surgical conditions.
10. Plan and give relevant individual and group education on significant medical/surgical topics.
11. Maintain a safe environment for patients and the health care personnel in the hospital.
12. Integrate evidence-based information while giving nursing care to patients.

CLINICAL PRACTICUM

CLINICAL PRACTICUM: 6 Credits (480 hours) - 18 weeks × 27 hours

PRACTICE COMPETENCIES: On completion of the clinical practicum, the students will be able to apply nursing process and critical thinking in delivering holistic nursing care including rehabilitation to the adult patients undergoing surgery, with shock and fluid and electrolyte imbalance and with selected medical & surgical conditions i.e., Gastrointestinal, Respiratory, Endocrine, Orthopedic, Dermatology and Cardiovascular disorders.

The students will be competent to:

- Utilize the nursing process in providing care to the sick adults in the hospital:
 - Perform complete health assessment to establish a database for providing quality patient care.
 - Integrate the knowledge of diagnostic tests in the process of data collection.
 - Identify nursing diagnoses and list them according to priority.
 - Formulate nursing care plan, using problem-solving approach.
 - Apply scientific principles while giving nursing care to patients.
 - Perform nursing procedures skillfully on patients.
 - Establish/develop interpersonal relationship with patients and family members.
 - Evaluate the expected outcomes and modify the plan according to the patient needs.
- Provide comfort and safety to adult patients in the hospital.
- Maintain a safe environment for patients during hospitalization.
- Explain nursing actions appropriately to the patients and family members.
- Ensure patient safety while providing nursing procedures.
- Assess the educational needs of the patient and their family related to medical and surgical disorders and provide appropriate health education to patients.
- Provide pre, intra and post-operative care to patients undergoing surgery.
- Integrate knowledge of pathology, nutrition and pharmacology for patients experiencing various medical and surgical disorders.
- Integrate evidence-based information while giving nursing care to patients.
- Demonstrate the awareness of legal and ethical issues in nursing practice.

I. NURSING MANAGEMENT OF PATIENTS WITH MEDICAL CONDITIONS

VII. NURSING MANAGEMENT OF PATIENTS IN THE OPERATING ROOMS

A. Skill Lab

Use of manikins and simulators

- Scrubbing, gowning and gloving
- Orientation to instruments for common surgeries
- Orientation to suture materials
- Positioning

B. Clinical Postings

Clinical area/unit	Duration (Weeks)	Learning Outcomes	Procedural Competencies/ Clinical Skills	Clinical Requirements	Assessment Methods
Operation theatre	4	Develop skill in caring for intraoperative patients	• Position and draping • Preparation of operation table • Setup of trolley with instrument • Assisting in major and minor operation • Disinfection and sterilization of equipment • Scrubbing procedures – Gowning, masking and gloving • Intraoperative monitoring	• Assist as • Clinical circulatory nurse – 4 • Positioning & draping – 5 • Assist as scrub nurse in major surgeries – 4	nurse – evaluation • OSCE

PHARMACOLOGY-II

including Fundamentals of Prescribing Module

PLACEMENT: IV SEMESTER

THEORY: 3 Credits (60 hours)

DESCRIPTION: This course is designed to enable students to acquire understanding of Pharmacodynamics, Pharmacokinetics, principles of therapeutics & nursing implications. Further it develops understanding of fundamental principles of prescribing in students.

COMPETENCIES: On completion of the course, the students will be able to

1. Explain the drugs used in the treatment of ear, nose, throat and eye disorders.
2. Explain the drugs used in the treatment of urinary system disorders.
3. Describe the drugs used in the treatment of nervous system disorders.
4. Explain the drugs used for hormonal replacement and for the pregnant women during antenatal, intra natal and postnatal period.
5. Explain the drugs used to treat emergency conditions and immuned disorders.
6. Discuss the role and responsibilities of nurse towards safe administration of drugs used to treat disorders of various systems with basic understanding of pharmacology.
7. Demonstrate understanding about the drugs used in an alternative system of medicine.
8. Demonstrate understanding about the fundamental principles of prescribing.

PATHOLOGY-II AND GENETICS

PLACEMENT: IV SEMESTER

THEORY: 1 Credit (20 hours) (Includes lab hours also)

DESCRIPTION: This course is designed to enable students to acquire knowledge of pathology of various disease conditions, understanding of genetics, its role in causation and management of defects and diseases and to apply this knowledge in practice of nursing.

COMPETENCIES: On completion of the course, the students will be able to

1. Apply the knowledge of pathology in understanding the deviations from normal to abnormal pathology
2. Rationalize the various laboratory investigations in diagnosing pathological disorders
3. Demonstrate the understanding of the methods of collection of blood, body cavity fluids, urine and feces for various tests
4. Apply the knowledge of genetics in understanding the various pathological disorders
5. Appreciate the various manifestations in patients with diagnosed genetic abnormalities
6. Rationalize the specific diagnostic tests in the detection of genetic abnormalities.
7. Demonstrate the understanding of various services related to genetics.

ADULT HEALTH NURSING - II WITH INTEGRATED PATHOPHYSIOLOGY including Geriatric Nursing AND PALLIATIVE CARE MODULE

PLACEMENT: IV SEMESTER

THEORY: 7 Credits (140 hours)

PRACTICUM: Lab/Skill Lab (SL): 1 Credit (40 hours) Clinical: 6 Credits (480 hours)

DESCRIPTION: This course is designed to equip the student to review and apply their knowledge of Anatomy, Physiology, Biochemistry and Behavioral sciences in caring for adult patients with Medical/Surgical disorders – using nursing process approach. It also intends to develop competencies required for assessment, diagnosis, treatment, nursing management, and supportive/palliative and rehabilitative care to adult patients with various Medical/Surgical disorders.

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

COMPETENCIES: On completion of the course the students will apply nursing process and critical thinking in delivering holistic nursing care with selected Medical and Surgical conditions.

At the completion of Adult Health Nursing II course, students will

1. Explain the etiology, pathophysiology, manifestations, diagnostic studies, treatments and complications of selected common medical and surgical disorders.
2. Perform complete health assessment to establish a database for providing quality patient care and integrate the knowledge of diagnostic test in the process of data collection.
3. Identify diagnoses, list them according to priority and formulate nursing care plan.
4. Perform nursing procedure skillfully and apply scientific principles while giving comprehensive nursing care to patients.
5. Integrate knowledge of anatomy, physiology, pathology, nutrition and pharmacology in caring for patients experiencing various medical and surgical disorders.
6. Identify common diagnostic measures related to the health problems with emphasis on nursing assessment and responsibilities.
7. Demonstrate skill in assisting/performing diagnostic and therapeutic procedures.
8. Demonstrate competencies/skill to patients undergoing treatment for medical surgical disorders.
9. Identify the drugs used in treating patients with selected medical surgical conditions.
10. Plan and provide relevant individual and group education on significant medical surgical topics.
11. Maintain a safe environment for patients and the health care personnel in the hospital.

COURSE OUTLINE

CLINICAL PRACTICUM

CLINICAL PRACTICUM: 6 Credits (480 Hours) – 20 weeks × 24 hours

PRACTICE COMPETENCIES: On completion of the clinical practicum, the students will develop proficiency in applying nursing process and critical thinking in rendering holistic nursing care including rehabilitation to the adult/geriatric patients admitted in Critical Care Units, undergoing cosmetic and reconstructive surgery and with selected medical & surgical disorders of ear, nose, throat, eye, Genitourinary, reproductive, immunologic, nervous systems and in emergency/disaster conditions.

The students will become competent to

1. Utilize the nursing process in providing care to the sick adults in the hospital
 - a. Perform complete health assessment to establish a database for providing quality patient care.
 - b. Integrate the knowledge of diagnostic tests in patient assignment.
 - c. Identify nursing diagnoses and list them according to priority.
 - d. Formulate nursing care plan, using problem-solving approach.
 - e. Apply scientific principles while giving nursing care to patients.
 - f. Develop skill in performing nursing procedures applying scientific principle.
 - g. Establish/develop interpersonal relationship with patients and family members.
 - h. Evaluate the expected outcomes and modify the plan according to the patient needs.
2. Provide comfort and safety to adult patients in the hospital.
3. Maintain a safe environment for patients during hospitalization.
4. Explain nursing actions appropriately to the patients and family members.
5. Ensure patient safety while providing nursing procedures.
6. Assess the educational needs of the patient and their family related to medical and surgical disorders and provide appropriate health education to patients.

Manesar Gurgaon-122413

7. Provide pre, intra and post-operative care to patients undergoing surgery.
8. Integrate knowledge of pathology, nutrition and pharmacology for patients experiencing selected medical and surgical disorders.
9. Integrate evidence-based information while giving nursing care to patients.
10. Demonstrate the awareness of legal and ethical issues in nursing practice.

I. Nursing Management of Patients with ENT Disorders

A. Skill Lab

Use of manikins and simulators

- Tracheostomy care
- Instilling Ear and Nasal medications
- Bandage application

B. Clinical Postings

Clinical	Duration Learning area/unit (weeks)	Outcomes	Procedural Competencies/Clinical Skills	Clinical Requirements	Assessment Methods
ENT Ward care and OPD	2	Provide topatients with Educate the patients and their family	<ul style="list-style-type: none"> • Examination of ear, nose, throat and History taking • Applying bandages to Ear, Nose • Tracheostomy care • Preparation of patient, assisting and monitoring of patients undergoing diagnostic procedures <ul style="list-style-type: none"> ◦ Auditory screening tests ◦ Audiometric tests • Preparing the patient and assisting in special procedures like Anterior/posterior nasal packing, Ear Packing and Syringing • Preparation and after care of patients undergoing ENT surgical procedures 	<ul style="list-style-type: none"> • ENT assessment –1 • Case study/Clinical presentation –1 	<ul style="list-style-type: none"> • Clinical evaluation • OSCE • Case report study/ Clinical presentation

II. Nursing Management of Patients with Eye Conditions

A. Skill Lab

V. Nursing Management of Patients with neurological disorders

A. Skill Lab

Use of manikins and simulators

- Range of motion exercises
- Muscle strengthening exercises
- Crutch walking

B. Clinical Postings

Clinical area/unit	Duration	Learning Outcomes	Procedural Competencies/Clinical Skills	Clinical Requirements	Assessment Methods
Neurology-medical/ Surgery wards	3	Develop skill in Management of patients with Neurological problems	<ul style="list-style-type: none">History taking; Neurological ExaminationPatient monitoringPrepare and assist for various invasive and non-invasive diagnostic proceduresRange of motion exercises, muscle strengtheningCare of medical, surgical and rehabilitative patients	<ul style="list-style-type: none">Neuro-assessment-1Case study/case presentation-1Drug	<ul style="list-style-type: none">Clinical evaluationNeuroassessmentOSCECase report/presentation

VI. Nursing Management of Patients with Immunological Disorders

A. Skill Lab

- Barrier Nursing
- Reverse Barrier Nursing

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

B. Clinical Postings

Clinical area/unit	Duration (weeks)	Learning Outcomes	Procedural Competencies/ Clinical Skills	Clinical Requirements	Assessment Methods
Isolation ward/Medical ward	1	Develop skill in • Management of patients with immunological disorders	• History taking the • Immunological status assessment (e.g. HIV) and Interpretation of specific tests • Caring of patients with low immunity • Practicing of standard safety measures, precautions/barrier nursing/reverse barrier/isolation	• Assessment of immune status • Teaching of isolation to patient and family • Nutritional management • Care Note-1	• Care note • Quiz • Health Teaching

VII. Nursing Management of Patients with disorders of Oncological conditions**A. Skill Lab****Use of manikins and simulators**

- Application of topical medication
- Administration of chemotherapy

B. Clinical Postings

Clinical area/unit	Duration (weeks)	Learning Outcomes	Procedural Competencies/ Clinical Skills	Clinical Requirements	Assessment Methods
Oncology wards (including day care radiotherapy unit)	3	Develop skill in • providing care to patients with oncological disorders	• History taking & physical examination of cancer patients • Screening for common cancers: TNM classification • Preparation, assisting and after care patients undergoing diagnostic procedures – Biopsies/FNAC – Papsmear – Bone-marrow aspiration • Various modalities of treatment – Chemotherapy – Radiotherapy – Pain management – Stomach therapy – Hormonal therapy – Immunotherapy – Gene therapy – Alternative therapy • Stomach care and feeding • Caring of patients treated with nuclear medicine • Rehabilitation	• Assessment-1 • Care study/clinical presentation-1 • Pre and post-operative care of patient with various modes of cancer treatment • Teaching on BSE to family members • Visit to palliative care unit	• Clinical evaluation • Care study • Quiz • Drug book

VIII. Nursing Management of Patients in emergency conditions

A. Skill Lab

Use of manikins and simulators

- Assessment: primary and secondary survey
- Trauma care: bandaging, wound care, splinting, positions

B. Clinical Postings

Clinical area/unit	Duration Skills (weeks)	Learning Outcomes	Procedural Competencies/ Clinical Outcomes	Clinical Requirements	Assessment Methods
Emergency room/Emergency unit	2	Develop skill in providing care to patients with emergency health problems	<ul style="list-style-type: none"> • Practicing triage in emergency • Primary and secondary survey in emergency • Examination, investigations & their interpretations in emergency & disaster situations • Emergency care of medical and traumatic injury patients • Documentations, assisting in legal procedures in emergency unit • Managing crowd • Counseling the patient and family in dealing with grieving & bereavement 	<ul style="list-style-type: none"> • Triage • Immediate care • Use of emergency • Quiz 	<ul style="list-style-type: none"> • Clinical evaluation

IX. Nursing Management of geriatric patients

A. Skill Lab

Use of manikins and simulators

- Use of assistive safety devices

B. Clinical Postings

Clinical area/unit	Duration (weeks)	Learning Outcomes	Procedural Competencies/ Clinical Skills	Clinical Requirements	Assessment Methods
Geriatric ward	1	Develop skill in taking geriatric assessment and providing care to Geriatric patients with	<ul style="list-style-type: none"> • History and assessment of 	<ul style="list-style-type: none"> • Geriatric assessment-1 • Care of normal and geriatric patient with illness • Fall risk assessment-1 • Functional status assessment-1 	<ul style="list-style-type: none"> • Clinical evaluation • Care plan

X. Nursing Management of Patients in critical care units

A. Skill Lab

Use of manikins and simulators

- Assessment critically ill
- ET tube setup-suction
- TT suction
- Ventilator setup
- Chest drainage
- Bag mask ventilation

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram

Manesar Gurgaon-122413

- Central & Peripheral line
- Pacemaker

B. Clinical Postings

Clinical area/unit	Duration (weeks)	Learning Outcomes	Procedural Competencies/Clinical Skills	Clinical Requirements	Assessment Methods
Critical Care Unit	2	Develop skill in assessment of critically ill and providing care to patients with critical health conditions	<ul style="list-style-type: none"> • Assessment of critically ill patients • Assisting in arterial puncture, ET tube intubation & extubation • ABG analysis & interpretation - respiratory acidosis, respiratory alkalosis, metabolic acidosis, metabolic alkalosis • Setting up of Ventilator modes and settings and care of patient on a ventilator • Setup of trolley with instruments • Monitoring and maintenance of Chest drainage system • Bag and mask ventilation • Assisting and maintenance of Central and peripheral lines invasive • Setting up of infusion pump, defibrillator, • Drug administration - infusion, intracardiac, intrathecal, epidural, • Monitoring pacemaker • ICU care bundle • Management of the dying patient in the ICU 	<ul style="list-style-type: none"> • Hemodynamic monitoring • Different scales used in ICU • Communicating with critically ill patients 	<ul style="list-style-type: none"> • Clinical evaluation • OSCE • RASS scale assessment • Use of VAE bundle VAP, CAUTI, BSI • Case Presentation

PROFESSIONALISM, PROFESSIONAL VALUES & ETHICS INCLUDING BIOETHICS PLACEMENT:

IV SEMESTER

THEORY: 1 Credit (20 hours)

DESCRIPTION: This course is designed to help students to develop an understanding of professionalism and demonstrate professional behavior in their workplace with ethics and professional values. Further the students will be able to identify ethical issues in nursing practice and participate effectively in ethical decision making along with health team members.

COMPETENCIES: On completion of this course, the students will be able to

1. Describe profession and professionalism.
2. Identify the challenges of professionalism.
3. Maintain respectful communication and relationship with other health team members, patients and society.
4. Demonstrate professional conduct.
5. Describe various regulatory bodies and professional organizations related to nursing.
6. Discuss the importance of professional values in patient care.
7. Explain the professional values and demonstrate appropriate professional values in nursing practice.
8. Demonstrate and reflect on the role and responsibilities in providing compassionate care in the healthcare setting.
9. Demonstrate respect, human dignity and privacy and confidentiality to self, patients and their caregivers and other health team members.
10. Advocate for patients' wellbeing, professional growth and advancing the profession.
11. Identify ethical and bioethical concerns, issues and dilemmas in nursing and healthcare.
12. Apply knowledge of ethics and bioethics in ethical decision making along with health team members.
13. Protect and respect patient's rights.

CHILD HEALTH NURSING-I

PLACEMENT: V SEMESTER

THEORY: 3 Credits (60 hours)

PRACTICUM: Lab/Skill Lab: 1 Credit (40 hours) Clinical: 2 Credits (160 hours)

DESCRIPTION: This course is designed for developing an understanding of the modern approach to child-care, identification, prevention and nursing management of common health problems of neonates and children.

COMPETENCIES: On completion of the course, the students will be able to

1. Develop understanding of the history and modern concepts of child health and child-care.
2. Explore the national child welfare services, national programs and legislation in the light of National Health Policy 2017.
3. Describe the role of preventive pediatrics and perform preventive measures towards accidents.
4. Participate in national immunization programs/Universal Immunization Program (UIP).
5. Identify the developmental needs of children and provide parental guidance.
6. Describe the principles of child health nursing and perform child health nursing procedures.
7. Demonstrate competencies in newborn assessment, planning and implementation of care to normal and high-risk newborn including neonatal resuscitation.
8. Apply the principles and strategies of Integrated management of neonatal and childhood illness (IMNCI).
9. Apply the knowledge of pathophysiology and provide nursing care to children with respiratory system disorders.
10. Identify and meet childhood emergencies and perform child CPR.

MENTAL HEALTH NURSING -I

PLACEMENT: V SEMESTER

THEORY: 3 Credits (60 hours)

PRACTICUM: Clinical: 1 Credit (80 hours)

DESCRIPTION: This course is designed to develop basic understanding of the principles and standards of mental health nursing and skill in application of nursing process in assessment and care of patients with mental health disorders.

COMPETENCIES: On completion of the course, the students will be competent to

1. Trace the historical development of mental health nursing and discuss its scope.
2. Identify the classification of the mental disorders.
3. Develop basic understanding of the principles and concepts of mental health nursing.

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

4. Apply the Indian Nursing Council practice standards for psychiatric mental health nursing in supervised clinical settings.
5. Conduct mental health assessment.
6. Identify and maintain therapeutic communication and nurse-patient relationship.
7. Demonstrate knowledge of the various treatment modalities and therapies used in mental disorders.
8. Apply nursing process in delivering care to patients with mental disorders.
9. Provide nursing care to patients with schizophrenia and other psychotic disorders based on assessment findings and treatment/therapies used.
10. Provide nursing care to patients with mood disorders based on assessment findings and treatment/therapies used.
11. Provide nursing care to patients with neurotic disorders based on assessment findings and treatment/therapies used.

COMMUNITY HEALTH NURSING-I including Environmental Science & Epidemiology

PLACEMENT: V SEMESTER

THEORY: 5 Credits (100 hours) includes Lab hours also

PRACTICUM: Clinical: 2 Credits (160 hours)

DESCRIPTION: This course is designed to help students develop broad perspectives of health, its determinants, about community health nursing and understanding about the health care delivery services, health care policies and regulations in India. It helps the students to develop knowledge and understanding of environmental science. It further helps them to apply the principles and concepts of BCC and health education for health promotion and maintenance of health within the community in wellness and illness continuum. It helps students to practice Community Health Nursing for the individuals, family and groups at rural, urban and tribal settings by applying principles of community health nursing and epidemiological approach. It also helps the students to develop knowledge and competencies required to screen, assess, diagnose, manage and refer clients appropriately in various health care settings. It prepares the students to provide primary health care to clients of all ages in the community, DH, PHC, CHC, SC/HWC and develop beginning skills in participating in all the National Health Programs.

Prof. (Dr.) Anand
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

COMPETENCIES: On completion of the course, the students will be able to

1. Explore the evolution of public health in India and community health nursing
2. Explain the concepts and determinants of health
3. Identify the level of prevention and health problems of India
4. Develop basic understanding about the health care planning and the present health care delivery system in India at various levels
5. Locate the significance of primary health care and comprehensive primary health care as part of current health care delivery system focus
6. Discuss health care policies and regulations in India
7. Demonstrate understanding about an overview of environmental science, environmental health and sanitation
8. Demonstrate skill in nutritional assessment for different age groups in the community and provide appropriate nutritional counseling
9. Provide health education to individuals and families applying the principles and techniques of behavior change appropriate to community settings
10. Describe community health nursing approaches and concepts
11. Describe the role and responsibilities of community health nursing personnel
12. Utilize the knowledge and skills in providing comprehensive primary health care across the life span at various settings
13. Make effective home visits applying principles and methods used for home visiting
14. Use epidemiological approach in community diagnosis
15. Utilize the knowledge of epidemiology, epidemiological approaches in caring for people with communicable and non-communicable diseases
16. Investigate an epidemic of communicable diseases
17. Assess, diagnose, manage and refer clients for various communicable and non-communicable diseases appropriately at the primary health care level
18. Identify and perform the roles and responsibilities of nurses in implementing various national health programs in the community for the prevention, control and management of communicable and non-communicable diseases particularly in screening, identification, primary management and referral to a health facility/First Referral Unit (FRU)

EDUCATIONAL TECHNOLOGY/NURSING

EDUCATION PLACEMENT: V SEMESTER

THEORY: 2 Credits (40 hours)

PRACTICUM: Lab/Practical: 1 Credit (40 hours)

DESCRIPTION: This course is designed to help the students to develop knowledge, attitude and beginning competencies essential for applying basic principles of teaching and learning among individuals and groups both in educational and clinical settings. It also introduces basics of curriculum planning and organization. It further enables students to participate actively in team and collaborative learning.

COMPETENCIES: On completion of the course, the students will become competent to

- Develop basic understanding of theoretical foundations and principles of teaching and learning
- Identify the latest approaches to education and learning
- Initiate self-assessment to identify one's own learning styles
- Demonstrate understanding of various teaching styles that can be used, based on the learners' readiness and generational needs
- Develop understanding of basics of curriculum planning, and organizing
- Analyze and use different teaching methods effectively that are relevant to student population and settings
- Make appropriate decisions in selection of teaching learning activities integrating basic principles

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

8. Utilize active learning strategies that enhance critical thinking, team learning and collaboration
9. Engage in team learning and collaboration through interprofessional education
10. Integrate the principles of teaching and learning in selection and use of educational media/technology
11. Apply the principles of assessment in selection and use of assessment and evaluation strategies
12. Construct simple assessment tools/tests integrating cognitive, psychomotor and affective domains of learning that can measure knowledge and competence of students
13. Develop basic understanding of student guidance through mentoring and academic advising
14. Identify difficult situations, crisis and disciplinary/grievance issues experienced by students and provide appropriate counseling
15. Engage in ethical practice in educational as well as clinical settings based on values, principles and ethical standards
16. Develop basic understanding of evidence-based teaching practices

INTRODUCTION TO FORENSIC NURSING AND INDIAN

LAWSPACEMENT: V SEMESTER

THEORY: 1 Credit (20 hours)

DESCRIPTION: This course is designed to help students to know the importance of forensic science in total patient care and to recognize forensic nursing as a specialty discipline in professional nursing practice.

COMPETENCIES: On completion of the course, the students will be able to

1. Identify forensic nursing as an emerging specialty in health care and nursing practice
2. Explore the history and scope of forensic nursing practice
3. Identify forensic team, role and responsibilities of forensic nurse in total care of victim of violence and in preservation of evidence
4. Develop basic understanding of the Indian judicial system and legal procedures

CHILD HEALTH NURSING -II

PLACEMENT: VISEMESTER

THEORY: 2 Credits (40 hours)

PRACTICUM: Clinical: 1 Credit (80 hours)

DESCRIPTION: This course is designed for developing an understanding of the modern approach to child-care, identification, prevention and nursing management of common health problems of neonates and children.

COMPETENCIES: On completion of the course, the students will be able to

1. Apply the knowledge of pathophysiology and provide nursing care to children with Cardiovascular, GI, genitourinary, nervous system disorders, orthopedic disorders, eye, ear and skin disorders and communicable diseases
2. Provide care to children with common behavioural, social and psychiatric problems
3. Manage challenged children
4. Identify the social and welfare services for challenged children

Given under Child Health Nursing-I as I & II

MENTAL HEALTH NURSING-II

PLACEMENT: VISEMESTER

THEORY: 1 Credit (40 Hours)

PRACTICUM: Clinical: 2 Credits (160 Hours)

DESCRIPTION: This course is designed to provide the students with basic understanding and skills essential to meet psychiatric emergencies and perform the role of community mental health nurse.

COMPETENCIES: On completion of the course, the students will be able to

1. Apply nursing process in providing care to patients with substance use disorders, and personality and sexual disorders.
2. Apply nursing process in providing care to patients with behavioural and emotional disorders occurring during childhood and adolescence.
3. Apply nursing process in providing care to patients with organic brain disorders.
4. Identify and respond to psychiatric emergencies.
5. Carry out crisis interventions during emergencies under supervision.
6. Perform admission and discharge procedures as per MHCA 2017.
7. Explore the roles and responsibilities of community mental health nurse in delivering community mental health services.

Practicum NURSING MANAGEMENT AND LEADERSHIP

PLACEMENT: VI Semester

THEORY: 3 Credits (60 hours) includes Lab/Skill Lab hours also

PRACTICUM: Clinical: 1 Credit (80 hours)

DESCRIPTION: This course is designed to enable students to acquire knowledge and competencies in areas of administration, and management of nursing services and education. Further prepares the students to develop leadership competencies and perform their role as effective leaders in an organization.

COMPETENCIES: On completion of the course, the students will be able to

1. Analyze the health care trends influencing development of nursing services and education in India.
2. Describe the principles, functions and process of management applied to nursing.
3. Develop basic understanding and beginning competencies in planning and organizing nursing services in a hospital.
4. Apply the concept of human resource management and identify the job description for all categories of nursing personnel including in service education.
5. Discuss the principles and methods of staffing and scheduling in an individual hospital/nursing unit.
6. Develop skill in management of materials and supplies including inventory control.
7. Develop team working and interprofessional collaboration competencies.
8. Identify effective leadership styles and develop leadership competencies.
9. Utilize the knowledge of principles and line of control and participate in quality management and evaluation activities.
10. Utilize the knowledge related to financial planning in nursing services and education during budgetary process.

Prof. (Dr.) Anil Kumar

Note: Less than 1 credit lab hours are not specified

CLINICAL PRACTICUM

Clinical: 2 Credits (80 hours) 2 weeks × 40 hours per week = 80 hours

Practice Competencies:

Hospital

1. Prepare organizational chart of hospital/Nursing services/nursing department
2. Calculate staffing requirements for a particular nursing unit/ward
3. Formulate Job description at different levels of care
4. Prepare duty roster for staff/students at different levels
5. Participate in procuring/purchase of equipment & supplies
6. Prepare logbook/MMF for specific equipment/materials
7. Maintain and store inventory and keep daily records
8. Prepare and maintain various records & reports of the settings – incident reports/adverse reports/audit reports
9. Prepare and implement protocols & manuals
10. Participate in supervision, evaluation and conducting in-service education for the staff

College & Hostel

1. Prepare organizational chart of college
2. Formulate job description for tutors
3. Prepare Master plan, timetable and clinical rotation
4. Prepare student anecdotes
5. Participate in planning, conducting and evaluation of clinical teaching

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

6. Participate in evaluation of students' clinical experience
7. Participate in planning and conducting practical examination OSCE – end of posting

CLINICAL POSTING: Management experience in hospital & college.

MIDWIFERY/OBSTETRICS AND GYNECOLOGY (OBG) NURSING-I including SB module

PLACEMENT: VISEMESTER

THEORY: 3 Credits (60 hours)

PRACTICUM: Skill Lab: 1 Credit (40 hours); Clinical: 3 Credits (240 hours)

DESCRIPTION: This course is designed for students to develop knowledge and competencies on the concepts and principles of midwifery. It helps them to acquire knowledge and skills in rendering respectful maternity care to women during antenatal, intranatal and postnatal periods in hospitals and community settings. It further helps to develop skills in managing normal neonates and participate in family welfare programs.

COMPETENCIES: On completion of the program, the students will be able to

1. Demonstrate professional accountability for the delivery of nursing care as per INC standards/ICM competencies that are consistent with moral, altruistic, legal, ethical, regulatory and humanistic principles in midwifery practice.
2. Communicate effectively with individuals, families and professional colleagues fostering mutual respect and shared decision making to enhance health outcomes.
3. Recognize the trends and issues in midwifery and obstetrical nursing.
4. Review and describe the anatomy and physiology of human reproductive system and conception.
5. Describe and apply physiology in the management of normal pregnancy, birth and puerperium.
6. Demonstrate competency in providing respectful and evidence-based maternity care for women during the antenatal, intranatal and postnatal period.
7. Uphold the fundamental human rights of individuals when providing midwifery care.
8. Promote physiologic labour and birth, and conduct normal child birth.
9. Provide evidence-based essential newborn care.
10. Apply nursing process approach in caring for women and their families.
11. Describe the methods of contraception and role of nurse/midwife in family welfare services.
12. Recognize the importance of and actively participate in family welfare programs.
13. Provide youth friendly health services and care for women affected by gender-based violence.

COURSE OUTLINE

T–Theory, SL/L–Skill Lab/Lab, C–Clinical

PRACTICUM

PLACEMENT: VI & VII SEMESTER

VI SEMESTER: MIDWIFERY/OBSTETRICS AND GYNECOLOGY (OBG) NURSING-I

SKILL LAB & CLINICAL: Skill Lab–1 Credit (40 hours); Clinical–3 Credits (240 hours)

PRACTICE COMPETENCIES: On completion of the course, the students will be able to:

1. Counsel women and their families on pre-conception care
2. Demonstrate lab test sex urine pregnancy test
3. Perform antenatal assessment of pregnant women
4. Assess and care for normal antenatal mothers
5. Assist and perform specific investigations for antenatal mothers
6. Counsel mothers and their families on antenatal care and preparation for parenthood
7. Conduct child birth education classes
8. Organize labour room
9. Prepare and provide respectful maternity care for mothers in labour
10. Perform per-vaginal examination for a woman in labour if indicated
11. Conduct normal child birth with essential newborn care
12. Demonstrate skills in resuscitating the newborn
13. Assist women in the transition to motherhood
14. Perform postnatal and newborn assessment
15. Provide care for postnatal mothers and their newborn
16. Counsel mothers on postnatal and newborn care
17. Perform PPIUCD insertion and removal
18. Counsel women on family planning and participate in family welfare services
19. Provide youth friendly health services
20. Identify, assess, care and refer women affected with gender based violence

SKILL LAB: Procedures/Skills for demonstration and return demonstration:

1. Urine pregnancy test
2. Calculation of EDD, Obstetrical score, gestational weeks
3. Antenatal assessment
4. Counseling antenatal mothers
5. Micro birth planning
6. PV examination
7. Monitoring during first stage of labour–Plotting and interpretation of partograph
8. Preparation for delivery–setting up labour room, articles, equipment
9. Mechanism of labour –normal
10. Conduction of normal child birth with essential newborn care
11. Active management of third stage of labour
12. Placental examination
13. Newborn resuscitation
14. Monitoring during fourth stage of labour
15. Postnatal assessment

VII SEMESTER

MIDWIFERY/OBSTETRICS AND GYNECOLOGY (OBG) NURSING - II PRACTICUM

SKILL LAB & CLINICAL: Skill Lab – 1 Credit (40 hours); Clinical – 4 Credits (320 hours)

PRACTICE COMPETENCIES: On completion of the course, the students will be able to:

1. Identify, stabilize and refer antenatal women with complications
2. Provide care to antenatal women with complications
3. Provide post-abortion care & counseling
4. Assist in the conduction of abnormal vaginal deliveries and caesarean section.
5. Demonstrate skills in resuscitating the newborn
6. Assist and manage complications during labour
7. Identify postnatal and neonatal complications, stabilize and refer them
8. Provide care for high risk antenatal, intranatal and postnatal women and their families using nursing process approach
9. Provide care for high risk newborn
10. Assist in advanced clinical procedures in midwifery and obstetric nursing
11. Provide care for women during their non-child bearing period.
12. Assess and care for women with gynecological disorders
13. Demonstrate skills in performing and assisting in specific gynecological procedures
14. Counsel and care for couples with infertility

SKILL LAB: Procedures/Skills for demonstration and return demonstration:

1. Antenatal assessment and identification of complications
2. Post-abortion care & counseling
3. Counseling antenatal women for complication readiness
4. Mechanism of labour – abnormal
5. Assisting in the conduction of abnormal vaginal deliveries and caesarean section.
6. Management of complications during pregnancy/labour/postpartum (case studies/simulated scenarios)
7. Administration of Inj. Magnesium sulphate
8. Starting and maintaining an oxytocin drip for PPH
9. Management of PPH – Bimanual compression of uterus
10. Management of PPH – Balloon tamponade
11. Instruments used in obstetrics and gynecology
12. Visual inspection of cervix with acetic acid
13. Cervical biopsy
14. Breast examination
15. Counseling of infertile couples

COMMUNITY HEALTH NURSING–II

PLACEMENT: VII SEMESTER

THEORY: 5 Credits (100 hours) – includes lab hours also

PRACTICUM: Clinical: 2 Credit (160 hours)

DESCRIPTION: This course is designed to help students gain broad perspective of specialized roles and responsibilities of community health nurses and to practice in various specialized health care settings. It helps students to develop knowledge and competencies required for assessment, diagnosis, treatment, and nursing management of individuals and families within the community in wellness and illness continuum.

COMPETENCIES: On completion of the course, the students will be able to

1. Demonstrate beginning practice competencies/skills relevant to provide comprehensive primary health care/community-based care to clients with common diseases and disorders including emergency and first aid care at home/clinics/centres as per predetermined protocols/drug standing orders approved by MOH & FW
2. Provide maternal, newborn and child care, and reproductive health including adolescent care in the urban and rural health care settings
3. Describe the methods of collection and interpretation of demographic data
4. Explain population control and its impact on the society and describe the approaches towards limiting family size
5. Describe occupational health hazards, occupational diseases and the role of nurses in occupational health programs
6. Identify health problems of older adults and provide primary care, counseling and supportive health services
7. Participate in screening for mental health problems in the community and providing appropriate referral services
8. Discuss the methods of data collection for HMIS, analysis and interpretation of data
9. Discuss about effective management of health information in community diagnosis and intervention
10. Describe the management system of delivery of community health services in rural and urban areas
11. Describe the leadership role in guiding, supervising, and monitoring the health services and the personnel at the PHCs, SCs and community level including financial management and maintenance of records & reports
12. Describe the roles and responsibilities of Mid-Level Health Care Providers (MHCPs) in Health Wellness Centers (HWCs)
13. Identify the roles and responsibilities of health team members and explain their job description
14. Demonstrate initiative in preparing themselves and the community for disaster preparedness and management
15. Demonstrate skills in proper bio-medical waste management as per protocols
16. Explain the roles and functions of various national and international health agencies

NURSING RESEARCH AND STATISTICS

PLACEMENT: VII SEMESTER

THEORY: 2 Credits (40 hours)

PRACTICUM: Lab/Skill Lab: 1 Credit (40 hours) Clinical Project: 40 hours

DESCRIPTION: The Course is designed to enable students to develop an understanding of basic concepts of research, research process and statistics. It is further, structured to conduct/ participate in need-based research studies in various settings and utilize the research findings to provide quality nursing care. The hours for practical will be utilized for conducting individual/group research project.

COMPETENCIES: On completion of the course, students will become competent to

1. Identify research priority areas
2. Formulate research questions/problem statement/hypotheses
3. Review related literature on selected research problem and prepare annotated bibliography
4. Prepare sample data collection tool
5. Analyze and interpret the given data
6. Practice computing, descriptive statistics and correlation
7. Draw figures and types of graphs on given select data
8. Develop research proposal
9. Plan and conduct a group/individual research project

COURSE OUTLINE

T – Theory, P – Practicum

Unit	Time (Hrs.)		Learning Outcomes	Content	Teaching/ Learning Activities	Assessment Methods
	T	P				
I	6		Describe the concept of research, terms, need and areas of research in nursing Explain the steps of research process State the purposes and steps of Evidence Based Practice	Research and Research Process • Introduction and need for nursing research • Definition of Research & nursing research • Steps of scientific method • Characteristics of good research • Steps of Research process – overview • Evidence Based Practice – Concept, Meaning, Purposes, Steps of EBPP process and Barriers	• Lecture cum Discussion • Narrate steps of research process followed from examples of published studies • Identify research priorities on a given area/specialty • List examples of Evidence Based Practice	• Short answer • Objective type
II	2	8	Identify and state the research problem and objectives	Research Problem/Question • Identification of problem area • Problem statement • Criteria of a good research problem • Writing objectives and hypotheses	• Lecture cum Discussion • Exercise on writing statement of problem and objectives	• Short answer • Objective type • Formulation of research questions/objectives/hypothesis

MIDWIFERY/OBSTETRIC AND GYNECOLOGY NURSING-II including Safe Delivery App Module

PLACEMENT: VI SEMESTER

THEORY: 3 Credits (60 hours)

PRACTICUM: Skill Lab: 1 Credit (40 Hours) Clinical: 4 Credits (320 Hours)

DESCRIPTION: This course is designed for students to develop knowledge and competencies on the concepts and principles of obstetric and gynecology nursing. It helps them to acquire knowledge and skills in rendering respectful maternity care to high risk woman during antenatal, natal and postnatal periods in hospitals and community settings and help to develop skills in initial management and referral of high risk neonates. It would also help students to gain knowledge, attitude and skills in caring for women with gynecological disorders.

COMPETENCIES: On completion of the course, the students will be able to:

1. Describe the assessment, initial management, referral and respectful maternity care of women with high risk pregnancy.
2. Demonstrate competency in identifying deviation from normal pregnancy.
3. Describe the assessment, initial management, referral and nursing care of women with high risk labour.
4. Assist in the conduction of abnormal vaginal deliveries and caesarean section.
5. Describe the assessment, initial management, referral and nursing care of women with abnormal postnatal conditions.
6. Demonstrate competency in the initial management of complications during the postnatal period.
7. Demonstrate competency in providing care for high risk newborn.
8. Apply nursing process in caring for high risk women and their families.

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

10. Demonstrates skills in performing and assisting in specific gynecological procedures.
11. Describes drugs used in obstetrics and gynecology.
12. Counsel and care for couples with infertility.
13. Describe artificial reproductive technology.

COURSE OUTLINE

T–Theory, SL/L–Skill Lab, C–Clinical

	Unit Time	Learning Outcomes	Content	Teaching/ Learning Activities	Assessment Methods
I	(Hrs.) 12(T) 10(L) 80(C)	Describe the assessment, initial management, and referral of women with problems during pregnancy Support women with complicated pregnancy and facilitate a safe and positive birthing outcome	Recognition and Management of problems during Pregnancy <ul style="list-style-type: none"> • Assessment of high-risk pregnancy Problems/Complications of Pregnancy <ul style="list-style-type: none"> • Hyper-emesis gravidarum, • Bleeding in early pregnancy – abortion, ectopic pregnancy, vesicular mole • Unintended or mistimed pregnancy • Post-abortion care & counseling • Bleeding in late pregnancy: placenta previa, abruption placenta, trauma • Medical conditions complicating pregnancy – Anemia, PIH/Pre-eclampsia, Eclampsia, GDM, cardiac disease, pulmonary disease, thyrotoxicosis, STDs, HIV, Rh incompatibility • Infections in pregnancy – urinary tract infection, bacterial, viral, protozoal, fungal, malaria in pregnancy • Surgical conditions complicating pregnancy – appendicitis, acute abdomen • COVID-19 & pregnancy and children • Hydramnios • Multiple pregnancy • Abnormalities of placenta and cord • Intrauterine growth restriction • Intrauterine fetal death • Gynaecological conditions complicating pregnancy • Mental health issues during pregnancy • Adolescent pregnancy • Elderly primi, grand multiparity • Management and care of conditions as per the GoI protocol • Policy for the referral services 	<ul style="list-style-type: none"> • Lecture • Discussion • Demonstration • Video & films • Scan reports • Case discussion • Case presentation • Drug presentation • Health talk • Simulation • Roleplay • Supervised Clinical practice • WHO midwifery toolkit • GoI guideline – screening for hypothyroidism, screening for syphilis, deworming during pregnancy, diagnosis and management of GDM 	<ul style="list-style-type: none"> • Essay • Short answer • Objective type • Assessment of skills with checklist • OSCE

APPENDIX 2
INTERNAL ASSESSMENT GUIDELINES
THEORY

I. CONTINUOUS ASSESSMENT: 10 marks

1. Attendance – **2 marks** (95-100%: 2 marks, 90-94: 1.5 marks, 85-89: 1 mark, 80-84: 0.5 mark, <80: 0)
2. Written assignments (Two) – **10 marks**
3. Seminar/microteaching/individual presentation (Two) – **12 marks**
4. Group project/work/report – **6**

marks Total = 30/3 = 10

If there is a mandatory module in that semester, marks obtained by student out of 10 can be added to 30 totaling 40 marks

Total = 40/4 = 10 marks

II. SESSIONAL EXAMINATIONS: 15 marks

Two sessional exams per course

Exam pattern:

MCQ – 4 × 1 = 4

Essay – 1 × 10 = 10

Short – 2 × 5 = 10

Very Short – 3 × 2 = 6

30 marks × 2 = 60/4 = 15

PRACTICAL

I. CONTINUOUS ASSESSMENT: 10 marks

1. Attendance – **2 marks** (95-100%: 2 marks, 90-94: 1.5 marks, 85-89: 1 mark, 80-84: 0.5 mark, <80: 0)
2. Clinical assignments – **10 marks**
(Clinical presentation – 3, drug presentation & report – 2, case study report – 5)
3. Continuous evaluation of clinical performance – **10 marks**
4. End of posting OSCE – **5 marks**
5. Completion of procedures and clinical requirements – **3**

marks Total = 30/3 = 10

II. SESSIONAL EXAMINATIONS: 15

marks Exam pattern:

OSCE – 10 marks (2-3 hours)

DOP – 20 marks (4-5 hours)

{DOP – Directly observed practical in the clinical setting}

Total = 30/2 = 15

Note: For Adult Health Nursing I, Adult Health Nursing II, Community Health Nursing I & Community Health Nursing II, the marks can be calculated as per weightage. Double the weightage as 20 marks for continuous assessment and 30 for sessional exams.

Manesar Gurgaon-122413

COMPETENCY ASSESSMENT: (VIII SEMESTER)

Internal assessment

Clinical performance evaluation – 10×5 specialty = 50

marks OSCE = 10×5 specialty = 50 marks

Total = 5 specialty \times 20 marks = 100

APPENDIX 3

I. UNIVERSITY THEORY QUESTION PAPER PATTERN (For 75 marks)

1. Section A – 37 marks and Section B – 38 marks

- Applied Anatomy & Applied Physiology:** Applied Anatomy – Section A and Applied Physiology – Section B,
- Applied Sociology & Applied Psychology:** Applied Sociology – Section A and Applied Psychology – Section B
- Applied Microbiology & Infection Control including Safety:** Applied Microbiology – Section A and Infection Control including Safety – Section B

Section A (37 marks)

MCQ – $6 \times 1 = 6$

Essay – $1 \times 10 = 10$

Short – $3 \times 5 = 15$

Very Short – $3 \times 2 =$

6 Section B (38

marks) MCQ – 7×1

= 7

Essay – $1 \times 10 = 10$

Short – $3 \times 5 = 15$

Very Short – $3 \times 2 = 6$

2. Section A – 25 marks and Section B – 50 marks

Applied Biochemistry & Nutrition & Dietetics: Applied Biochemistry – Section A and Applied Nutrition & Dietetics – Section B

Section A (25 marks)

MCQ – $4 \times 1 = 4$

Short – $3 \times 5 = 15$

Very Short – $3 \times 2 =$

6 Section B (50

marks) MCQ – 8×1

= 8

Essay/situation type – $1 \times 10 = 10$

Short – $4 \times 5 = 20$

Very Short – $6 \times 2 = 12$

3. Section A – 38 marks, Section B – 25 marks and Section C – 12 marks

Pharmacology, Pathology and Genetics: Pharmacology – Section A, Pathology – Section B and Genetics – Section C

Section A (38 marks)

MCQ – $7 \times 1 = 7$

Essay – $1 \times 10 = 10$

Short – $3 \times 5 = 15$

Prof. (Dr.) Anil Kumar

Section B (25

marks)MCQ– 4×1

=4

Short– $3 \times 5 = 15$

Very Short – $3 \times 2 =$

Section C (12

marks)MCQ– 3×1

=3

Short– $1 \times 5 = 5$

VeryShort – $2 \times 2 = 4$

4. SectionA–55marksandSectionB–20marks

ResearchandStatistics:Research–SectionAandStatistics–SectionB

SectionA(55marks)

MCQ– $9 \times 1 = 9$

Essay/situationtype– $2 \times 15 = 30$

Short– $2 \times 5 = 10$

Very Short – $3 \times 2 =$

Section B (20

marks)MCQ– 4×1

=4

Short– $2 \times 5 = 10$

VeryShort – $3 \times 2 = 6$

5. Marks75(Forallotheruniversityexamswith75marks)

MCQ– $12 \times 1 = 12$

Essay/situationtype– $2 \times 15 = 30$

Short– $5 \times 5 = 25$

VeryShort – $4 \times 2 = 8$

6. CollegeExam(EndofSemester)–50marks(50/2=25marks)

MCQ– $8 \times 1 = 8$

Essay/situationtype– $1 \times 10 = 10$

Short– $4 \times 5 = 20$

VeryShort – $6 \times 2 = 12$

II. UNIVERSITY PRACTICAL EXAMINATION – 50

marksOSCE– 15 marks

VIII SEMESTER (INTERNSHIP)						

Note: Maximum of 30% of all skills/procedures can be performed by students in skill lab/simulation lab for all clinical nursing Courses except Community Health Nursing and Mental Health Nursing in which the percentage allowed is only 10%

*—When the student is found competent to perform the skill, it will be signed by the faculty/tutor.

Students: Students are expected to perform the listed skills/competencies many times until they reach level 3 competency, after which the preceptor signs against each competency.

Preceptors/faculty: Must ensure that the signature is given for each competency only after they reach level 3.

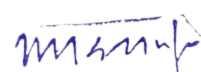

- Level 3 competency denotes that the student is able to perform that competency without supervision
- Level 2 Competency denotes that the student is able to perform each competency with supervision
- Level 1 competency denotes that the student is not able to perform that competency/skill even with supervision

NUR4102	Nursing Education (Practical)	L	T	P	C
Pre-requisites/Exposure				15	8
Co-requisite					

Course Description:

This course is designed to assist students in developing expertise and in - depth knowledge in the field of neurology and neurosurgical Nursing. It will help students to develop advanced skills for nursing intervention in caring for patients with neurological and neurosurgical disorders. It will enable the student to function as neuroscience nurse practitioner/ specialist. It will further enable the student to function as educator, manager and researcher in the field of neurology and neurosurgical Nursing.

Course Outcomes:

At the end of the course the students will be able to perform the following activities (Practical):

CO1- Framing philosophy, aims and objectives.

CO2-Lesson Planning.

CO3-Micro teaching-2.

CO4-Conduct practice teachings using different teaching strategies -10 (like lecture cum discussion, demonstration- lab method, field trips, seminars, project, role play, panel discussion, clinical methods etc)

CO5-Preparation and utilization of instructional Aids using different media.

CO6-Develop course plans, unit plans, rotation plans.

CO7-Conduct a continuing education workshop.

CO8-Annotated bibliography.

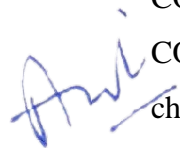

CO9-Critical evaluation of any nursing education program offered by a selected institution.

CO10-Planning and Organizing field visits.

CO11-Educational visits.

CO12-Field visits (INC/SNRC) to get familiar with recognition/registration process.

CO13-Construct, administer and evaluate tools (objective & essay type test, observation checklist, rating scale etc)

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana

NUR4201	Advance Nursing Practice	L	T	P	C
Version 1.1	Date of Approval: November 2011	15	12**		21
Pre-requisites/Exposure	NIL				
Co-requisites	NIL				

Course Catalogue: This course is aimed at developing a holistic approach in rendering nursing care to the patients/clients in the hospital as well as in the community respectively by implementing modern trends & methods in nursing profession for the specific protection, promotion, prevention and rehabilitation of the patients/clients.

Course Objectives:

The course is designed to develop an understanding of concepts and constructs of theoretical basis of advance nursing practice and critically analyze different theories of nursing and other disciplines.

Course Outcomes:

On completion of this course students will be able to:

CO1: Describe the History of development of nursing profession, characteristics, criteria of the profession, perspective of nursing profession-national, global

CO2: Explain the Health care delivery system- national, state, district as well as at local level.

CO3: Discuss the Approaches to common genetic disorders

CO4: Describe the Application of epidemiology in health care delivery, Health surveillance and health informatics

CO5: Explain the Bio-Psycho social pathology

CO6: Describe the Philosophy as well as Theories of Nursing along with its implication in health care delivery system.

CO7: Explain Nursing process approach for the individual, family as well as community

CO8: Discuss Psychological aspects and Human relations

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

CO9: Describe the Extended and expanded role of the Nurse in promotive, preventive, curative as well as restorative health care delivery system in community and institutions

CO10: Explain the Computer applications for patient care delivery system as well as in Nursing Practice

Modules	Blooms level*	Number of hours
<p>MODULE 1:</p> <p>Nursing as a Profession</p> <ul style="list-style-type: none"> History of development of nursing profession, characteristics, criteria of the profession, perspective of nursing profession-national, global Code of ethics(INC), code of professional conduct(INC), autonomy and accountability, assertiveness, visibility of nurses, legal considerations Role of regulatory bodies Professional organizations and unions-self defense, individual and collective bargaining Educational preparations, continuing education, career opportunities, professional advancement & role and scope of nursing education. Role of research, leadership and management. Quality assurance in nursing (INC). Futuristic nursing. 	L1, and L2	10
<p>MODULE 2:</p> <p>Health care delivery</p> <ul style="list-style-type: none"> Health care environment, economics, constraints, planning process, policies, political process vis a vis nursing profession. Health care delivery system- national, state, district and local level. 	L1,L2, and L3	10

<ul style="list-style-type: none"> Major stakeholders in the health care system-Government, non-govt, Industry and other professionals. Patterns of nursing care delivery in India. Health care delivery concerns, national health and family welfare programs, inter-sectoral coordination, role of nongovernmental agencies. Information, education and communication (IEC). Tele-medicine. 		
MODULE 3: Genetics <ul style="list-style-type: none"> Review of cellular division, mutation and law of inheritance, human genome project ,The Genomic era. Basic concepts of Genes, Chromosomes & DNA. Approaches to common genetic disorders. Genetic testing – basis of genetic diagnosis, Pre symptomatic and predisposition testing, Prenatal diagnosis & screening, Ethical, legal & psychosocial issues in genetic testing. Genetic counselling. Practical application of genetics in nursing. 	L1,L2, L3 and L4	15
MODULE 4: Epidemiology <ul style="list-style-type: none"> Scope, epidemiological approach and methods, Morbidity, mortality, Concepts of causation of diseases and their screening, Application of epidemiology in health care delivery, Health surveillance and health informatics Role of nurse 	L1,L2, and L3	15
MODULE 5:	L1,L2	15

<p>Bio-Psycho social pathology</p> <ul style="list-style-type: none"> • Pathophysiology and Psychodynamics of disease causation. • Life processes, homeostatic mechanism, biological and psycho-social dynamics in causation of disease, life style. • Common problems: Oxygen insufficiency, fluid and electrolyte imbalance, nutritional problems, hemorrhage and shock, altered body temperature, unconsciousness, sleep pattern and its disturbances, pain, sensory deprivation. • Treatment aspects: pharmacological and pre- post operative care aspects, • Cardio pulmonary resuscitation. • End of life Care • Infection prevention (including HIV) and standard safety measures, bio-medical waste management. • Role of Nurse- Evidence based Nursing practice; Best practices • Innovations in Nursing. 	and L3	
<p>MODULE 6:</p> <p>Philosophy and Theories of Nursing</p> <ul style="list-style-type: none"> • Values, Conceptual Models, Approaches. • Nursing theories: Nightingale's, Henderson's, Roger's, Peplau's, Abdella's, Lewine's, Orem's, Johnson's, King's, Neuman's, Roy's, Watson Parsce, etc and their applications, • Health belief models, communication and management, etc • Concept of Self health. • Evidence based practice model. 	L1, L2,L3 and L5	15
<p>MODULE 7:</p> <p>Nursing process approach</p> <ul style="list-style-type: none"> • Health Assessment- illness status of patients/clients (Individuals, family, community), Identification of health illness problems, 	L1,L2, and L3	10

<p>health behaviors, signs and symptoms of clients.</p> <ul style="list-style-type: none"> • Methods of collection, analysis and utilization of data relevant to Nursing Process. Formulation of nursing care plans, health goals, implementation, modification and evaluation of care. 		
<p>MODULE 8:</p> <p>Psychological aspects and Human relations</p> <ul style="list-style-type: none"> • Human behavior, Life processes & growth and development, personality development, defense mechanisms, • Communication, interpersonal relationships, individual and group, group dynamics, and organizational behavior, • Basic human needs, Growth and development, (Conception through preschool, School age through adolescence, Young & middle adult, and Older adult) • Sexuality and sexual health. • Stress and adaptation, crisis and its intervention, Coping with loss, death and grieving, • Principles and techniques of Counseling. 	L1,L2, and L5	15
<p>MODULE 9:</p> <p>Nursing practice</p> <ul style="list-style-type: none"> • Framework, scope and trends. • Alternative modalities of care, alternative systems of health and complimentary therapies. • Extended and expanded role of the Nurse, in promotive, preventive, curative and restorative health care delivery system in community and institutions. • Health promotion and primary health care. • Independent practice issues: - Independent Nurse-midwifery practitioner. • Collaboration issues and models-within and outside Nursing. 	L1,L2, and L3	15

<ul style="list-style-type: none"> • Models of Prevention, • Family Nursing, Home Nursing, • Gender sensitive issues and women empowerment. • Disaster Nursing. • Geriatric considerations in Nursing. • Evidence based Nursing practice- best practices • Trans-cultural Nursing. 		
MODULE 10: Computer applications for patient care delivery system and Nursing Practice <ul style="list-style-type: none"> • Use of computers in teaching, learning, research and Nursing practice. • Windows, MS office: Word, Excel, Power Point, • Internet, literature search, • Statistical packages, • Hospital management information system: software. NUR4202	Nursing Research and Statistics	L	T	P	C
Version 1.1	Date of Approval: November 2011	15	6		18
Pre-requisites/Exposure	NIL				
Co-requisites	NIL				

Catalog Description

The course is designed to assist the students to acquire an understanding of the research methodology and statistical methods as a basis for identifying research problem, planning and implementing a research plan. It also enables the students to evaluate research studies and utilize research findings to improve quality of Nursing practice, education and management. It will further enable the students to develop an understanding of the statistical methods and apply them in conducting research studies in Nursing.

Course Objectives

The objective of this course is to

1. to acquire an understanding of the research methodology and statistical methods as a basis for identifying research problem, planning and implementing a research plan.
2. enable the students to evaluate research studies and utilize research findings to improve quality of Nursing practice, education and management.
3. enable the students to develop an understanding of the statistical methods and apply them in conducting research studies in Nursing.

Course Outcomes:

At the end of the course the students will be able to:

CO1. Define the terms used in research

CO 2. Describe concepts of scientific inquiry

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

-
- CO 3. Describe research methodology
- CO 4. Critically analyze research studies
- CO 5. Develop acceptable research proposal
- CO 6. Demonstrate initial competency to conduct health related research
- CO 7. Write, present, interpret and utilize health related research
- CO 8. Write scientific paper for publication
- CO 9. Explain basic concepts related to statistics
- CO 10. Identify scope of statistics
- CO 11. Organize and tabulate the data and present it
- CO 12. Use descriptive and inferential statistics to predict the results
- CO 13. Apply & interpret measures of central tendency & measures of variance
- CO 14. Identify concepts related to probability
- CO 15. Use parametric and non- parametric statistical methods.
- CO 16. Draw conclusions of the study and to predict statistical significance of the results
- CO 17. Describe vital and health statistics and their use

Course Content

Modules	Blooms level*	Number of hours
Unit I: Introduction Methods of acquiring knowledge – problem solving and scientific method. Research – Definition, characteristics, purposes, kinds	L1, L2,L3 and L4	10

of research, Historical Evolution of research in Nursing, Basic research terms, Scope of Nursing research: areas, problems in Nursing, health and social research, Concept of evidence based practice, Ethics in research, Overview of Research process.		
Unit II Review of Literature Importance, purposes, sources, criteria for selection of resources and steps in reviewing literature.	L1,L2, L3 and L5	5
Unit III Research Approaches and designs Type: Quantitative and Qualitative, Historical, survey and experimental –Characteristics, types advantages and disadvantages, Qualitative: Phenomenology, grounded theory, ethnography	L2, L3 and L4	12
Unit IV: Research problem: Identification of research problem, Formulation of problem statement and research Objectives:, Definition of terms, Assumptions and delimitations, Identification of variables, Hypothesis – definition, formulation and types.	L1,L2, L3, L4 and L5	10
Unit V: Developing theoretical/conceptual framework <ul style="list-style-type: none"> Theories: Nature, characteristics, Purpose and uses Using, testing and developing conceptual framework, models and 	L1,L2 and L4	5

theories.		
Unit VI –Sampling <ul style="list-style-type: none"> Population and sample Factors influencing sampling Sampling techniques Sample size Probability and sampling error Problems of sampling 	L1,L2, L3, L4 and L5	6
Unit VII Tools and methods of Data collection: <ul style="list-style-type: none"> Concepts of data collection Data sources, methods/techniques quantitative and qualitative. Tools for data collection – types, characteristics and their development Validity and reliability of tools Procedure for data collection	L1,L2, L3, L4 and L5	20
Unit VIII Implementing research plan <ul style="list-style-type: none"> Pilot Study, review research plan (design), planning for data collection, Administration of tool /interventions, collection of data 	L1,L2, L3, L4 and L5	5
Unit IX Analysis and interpretation of data <ul style="list-style-type: none"> Plan for data analysis: quantitative and qualitative 	L1,L2, L3, L4 and L5	10

<ul style="list-style-type: none"> Preparing data for computer analysis and presentation. Statistical analysis Interpretation of data Conclusion and generalizations Summary and discussion 		
Unit X Reporting and utilizing research findings: <ul style="list-style-type: none"> Communication of research results; oral and written Writing research report purposes, methods and style Vancouver, American Psychological Association (APA), Campbell etc. Writing scientific articles for publication: purposes & style 	L1,L2, L3, L4 and L5	10
Unit XI Critical analysis of research reports and articles	L1,L2, L3, L4 and L5	3
Unit XII <ul style="list-style-type: none"> Developing and presenting a research proposal 	L1,L2, L3, L4 and L5	4
STATISTICS		
Unit I – Introduction: <p style="text-align: center;">Concepts, types, significance and scope of statistics, meaning of data,</p> <ul style="list-style-type: none"> Sample, parameter Type and levels of data and their measurement 	L1,L2, L3, L4 and L5	7

<ul style="list-style-type: none"> • Organization and presentation of data – Tabulation of data; • Frequency distribution • Graphical and tabular presentations. 		
Unit II - Measures of central tendency: <ul style="list-style-type: none"> • Mean, Median, Mode 	L1,L2, L3, L4 and L5	4
Unit III Measures of variability; <ul style="list-style-type: none"> • Range, Percentiles, average deviation, quartile deviation, standard deviation 	L1,L2, L3, L4 and L5	4
Unit V Measures of relationship: <ul style="list-style-type: none"> • Correlation – need and meaning • Rank order correlation • Scatter diagram method • Product moment correlation • Simple linear regression analysis and prediction. 	L1,L2, L3, L4 and L5	6
Unit VI Designs and meaning: <ul style="list-style-type: none"> • Experimental designs • Comparison in pairs, randomized block design, Latin squares. 	L1,L2, L3, L4 and L5	5

Unit VII Significance of Statistic and Significance of difference between two Statistics (Testing hypothesis) <ul style="list-style-type: none"> Non parametric test – Chi-square test, Sign, median test, Mann Whitney test. Parametric test – ‘t’ test, ANOVA, MANOVA, ANCOVA 	L1,L2, L3, L4 and L5	8
Unit VIII Use of statistical methods in psychology and education: <ul style="list-style-type: none"> Scaling – Z score, Z Scaling Standard Score and T Score Reliability of test Scores: test-retest method, parallel forms, split half method. 	L1,L2, L3, L4 and L5	5
Unit IX Application of statistics in health: <ul style="list-style-type: none"> Ratios, Rates, Trends Vital health statistics – Birth and death rates. Measures related to fertility, morbidity and mortality 	L1,L2, L3, L4 and L5	4
Unit X Use of Computers for data analysis <ul style="list-style-type: none"> Use of statistical package. 	L1,L2, L3, L4 and L5	4

Course Outcomes Assessment

This course contributes towards the learning outcomes, **‘nursing research and statistics**. The outcome will be measured by the performance of students in various class tests/assignments in addition to the End Semester Examination (ESE) that contains significant number of questions on problems related to the **nursing research and statistics**.

Relationship between the course outcomes (COs), programme Outcomes (PO) and learning outcomes (Los)

MSN4203	Medical Surgical Nursing CS I & II Practical	L	T	P	C
Version 1.1	Date of Approval:				22
Pre-requisites/Exposure	NIL				
Co-requisites	NIL				

Course Catalogue: The course is designed to enable students to develop expertise in the field of medical surgical nursing procedures.

Course Description: It will help students to appreciate the adults as a holistic individual and develop skill to function as a Medical Surgical Nurse specialist.

Course Outcomes:

On completion of this course students will be able to:

CO1: Apply concepts & theories related to health promotion.

CO2: Appreciate the client as a holistic individual.

CO3: Perform physical, psychosocial assessment of Medical – Surgical patients.

CO4: Apply Nursing process in providing care to patients.

CO5: Integrate the concept of family centered nursing care with associated disorder such as genetic, congenital and long-term illness.

CO6: Recognize and manage emergencies with Medical- Surgical patients.

CO7: Describe various recent technologies & treatment modalities in the management of critically ill patients.

CO8: : Recognize the role of Nurse practitioner as a member of the Medical – Surgical health team

CO9: Prepare a design for layout and management of Medical – Surgical Units.

PROGRAMME SPECIFIC OUTCOMES:-

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

On completion of M.Sc. Nursing programme the post graduates will be able to:

PSO1 : Assess the health status, identify nursing needs, plan, implement and evaluate nursing care for patients/client that contribute to health of individuals, families and communities.

PSO2: Demonstrate competency in techniques of nursing skills based on concepts and principles from specialized areas of nursing, physical, biological and behavioral sciences. And Participate as member of health care team in the promotive, preventive, curative and restorative health care delivery system of the country.

PSO3: Demonstrate leadership, managerial skills, qualities and decision-making abilities, teaching and communication skills in clinical/ community health settings.

PSO4: Participation in research activities towards continued learning for personal and professional development, practice ethical values and utilize the research findings to improve the quality of care.

Version 1.1	Date of Approval:				22
Pre-requisites/Exposure	NIL				
Co-requisites	NIL				

Course Catalogue: The course is designed to enable students to develop expertise in the field of child health nursing procedures.

Course Description: It will help students to appreciate the child as a holistic individual and develop skill to function as a Pediatric Nurse specialist.

Course Outcomes:

On completion of this course students will be able to:

CO1. Elicit the history and perform physical examination of children

CO2. Apply the concepts of growth and development in providing care to the pediatric clients and their families.

CO3. Perform developmental, family and nutritional assessment of pediatric clients

CO4. Apply nursing process in providing nursing care to neonates & children

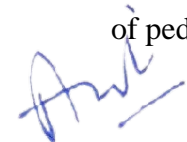

CO5. Integrate the concept of family centered pediatric nursing care with related areas such as genetic disorders, congenital malformations and long term illness.

CO6. Recognize and manage emergencies in neonates

CO7. Implement care using recent technologies and treatment modalities in the management of high risk neonates

CO8. Prepare a design for layout and management of neonatal units

CO9. Incorporate evidence based nursing practice and identify the areas of research in the field of pediatric/neonatal nursing

CHN4402	<u>Community Health Nursing Practical</u>	L	T	P	C
Version 1.1	Date of Approval:		28**		32
Pre-requisites/Exposure	NIL				
Co-requisites	NIL				

Course Catalogue: The course is designed to enable students to develop expertise in the field of Community health nursing procedures.

Course Outcomes: The course is designed to assist students in developing expertise and in depth understanding in the field of Community Health Nursing. It would help students to appreciate holistic life style of individuals, families & groups and develop skills to function as Community Health Nurse specialist/practitioner. It would further enable student to function as an educator, manager, care giver and researcher in the field of Community Health Nursing. Each student is required to participate in following activities during the community posting in urban as well as rural area

On completion of this course students will be able to:

CO1. Apply the nursing process in the care of geriatric patients in old age home and community

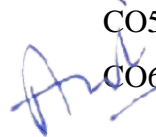

CO2. Demonstrate advanced skills/competence in nursing management of children with Communicable problems

CO3. Recognize and manage emergencies in deaddiction centres and mental health centres

CO4. Utilize the recent technology and various treatment modalities in the management of high risk children

CO5. Prepare a design for layout and describe standards for National health services

CO6. Identify areas of research in the field of community health nursing

PSN4402	Psychiatric Nursing CS-III & IV Practical	L	T	P	C
Version 1.1	Date of Approval:		28**		32
Pre-requisites/Exposure	NIL				
Co-requisites	NIL				

Catalog Catalogue:

This course is designed to assist students in developing expertise and in depth understanding in the field of Psychiatric Nursing. It will help students to develop advanced skills for nursing intervention in various Psychiatric conditions. It will enable the student to function as Psychiatric Nurse practitioner/specialist. It will further enable the student to function as educator, manager, and researcher in the field of Psychiatric Nursing

Course Objectives: On completion of the two year M.Sc. Nursing (Psychiatry) programme, the Post Graduate Nurse will be able to provide comprehensive nursing care to patients with psychiatric problems in preventive, curative and rehabilitation aspects.

Course Outcomes

At the end of the course the students will be able to:

1. Apply the nursing process in the care of patients with mental disorders in hospital and community
2. Demonstrate advanced skills/competence in nursing management of patients with mental disorders
3. Identify and care for special groups like children, adolescents, women, elderly, abused and neglected, people living with HIV/AIDS.
4. Identify and manage psychiatric emergencies.

NUTRITION AND DIETETICS

Course Code: NUR2106

Credit Unit-04

Course Description: This course is designed to provide the students with a wide knowledge of dietetics in Indian setting, that the practices of teaching optimum and realistic dietary planning can become an integral part of Nursing Practices.

OBJECTIVES

At the end of the course, the student will:

1. Explain the principles and practices of nutrition and dietetics.
2. Plan therapeutic diets in different settings.
3. Identify nutritional needs of different age groups and plan diet accordingly.
4. Prepare meals using different methods utilizing cookery rules.
5. Prepare recommended meals according to the disease conditions of the patients.

Course Contents

Module I

- Introduction to nutrition and dietetics.
- Balanced diet, factors on which it depends.
- Factors to be considered in planning.
- Guides available for planning.
- Food hygiene, preparation and preservation.
- Review of nutrients – micro & macro.

Module II

- Introduction to diet therapy.
- Routine hospital diets.
- Therapeutic diet under each Module i.e. Cardiovascular diseases, gastrointestinal diseases, renal disorders, endocrine and metabolic disorders, allergy, infections and fevers, pre and post operative stages, deficiency diseases and malnutrition, overweight and underweight.

Module III

- Infant and child nutrition.
- Feeding of normal infants: factors to be considered in planning nutritional requirements.
- Feeding of premature infants: factors to be considered in planning nutritional requirements.
- Supplementary feeding of infants: Advantage and method of introduction.
- Weaning, effects on mother and child.
- Psychology of infant and child feeding.
- Feeding the sick child. Diet in diseases of infancy and childhood.
- Deficiency status – Malnutrition and under nutrition.
- Feeding pre-school child: Nutritional needs, factors to be considered in planning diets. Problems in feeding.
- School lunch programme: Advantage, need in India.

Module IV

- Community nutrition: need for Community nutrition programme.
- Nutritional needs for special groups: Infant, child, adolescent, pregnant woman, lactating mother and old people.
- Substitutes for non-vegetarian foods.
- Selection of cheap and nutritious foods. Nutrition education needs and methods.
- Methods of assessing nutritional status of individual / group / Community.
- Current nutritional problems and national programmes.

PRACTICUM

I. *Methods of cooking and cookery rules.*

1. Simple preparation of beverages, soups, cereals and pulses, eggs, vegetables, meat.
2. Menu plans.

II. *Preparation of supplementary food for infants.*

1. Foods for toddlers.
2. Low cost nutritious dishes for vulnerable groups.
3. Dietary case study of patient on special diet planning of low cost dietary instructions for home adaptations.
4. Planning of therapeutic diets.

Examination Scheme:

MEDICAL SURGICAL NURSING

Course Code: NUR2108

Credit Unit-08

Course Description: The purpose of this course is to widen the students' knowledge and develop proficiency in caring for patients with medical surgical problems. This course includes review of relevant Anatomy and Physiology, Pathophysiology in Medical-Surgical disorders and Nursing management of these conditions.

OBJECTIVES

At the end of the course, the student will:

1. Explain relevant Anatomy and Physiology of various systems of the body.
2. Explain Pathophysiology of various disorders.
3. Explain the actions, side effects and Nursing implications in administering drugs for various disorders.
4. Discuss the recent advancement in the treatment and care of patients with medical surgical conditions.
5. Develop skill in giving comprehensive Nursing care to patients following the steps of Nursing process.
6. Assist the patients and their families in identifying and meeting their own health needs.
7. Appreciate the role of the nurse in the medical surgical health term.

Course Contents

Module I

- Introduction to Medical Surgical Nursing.
- Review of concepts of comprehensive Nursing care in medical surgical conditions.
- Nurse, patient and his/ her family.
- Functions of Nurse in the Outpatient Department.
- Intensive care Module.

Module II

- Nursing management of patient with specific problems:
 - Fluid and electrolyte imbalance.
 - Dyspnea and cough, Respiratory obstruction
 - Fever
 - Shock
 - Unconsciousness
 - Pain
 - Acute illness
 - Chronic illness
 - Terminal illness
 - Age related illness
 - Patient undergoing surgery
 - Incontinence.

Module III

- Nursing management of patient with Neurological and Neurosurgical conditions.

- Review of Anatomy and Physiology of the Nervous System.
- Pathophysiology, diagnostic procedures and management of-
 - Cerebra-vascular accident.
 - Cranial spinal and peripheral Neuropathies.
 - Headache and intractable pain.
 - Epilepsy.
 - Infectious and inflammatory diseases and trauma of the Nervous System.
 - Common disorders of the system.
 - Recent advances in diagnostic and treatment modalities.
 - Drugs used in these disorders.
 - Tumors of brain & Spinal cord, congenital malformations, degenerative diseases.

Module IV

- Nursing management of patient with Cardiovascular problems.
- Review of relevant Anatomy and Physiology of Cardiovascular system.
- Pathophysiology, diagnostic procedures and management of:
 - Ischemic Heart diseases
 - Cardiac arrhythmias
 - Congestive heart failure
 - Rheumatic and other valvular heart diseases
 - Endocarditis, cardiomyopathies, congenital heart diseases, hypertension, heart block
 - Cardiac emergencies: Cardiac Arrest, acute pulmonary oedema, cardiac tamponade, cardiogenic shock, aneurysms and peripherovascular disorders, recent advancement in cardiology.

Module V

- Nursing management of patient with respiratory problems.
- Review of Anatomy and Physiology of respiratory system Pathophysiology, diagnostic procedures and management of upper respiratory tract infections:
 - Bronchitis
 - Asthma
 - Emphysema, Empyema, Atelectasis, COPD
 - Bronchiectasis
 - Pneumonia
 - Pulmonary tuberculosis
 - Lung abscess
 - Pleural effusion
 - Tumours and cysts
 - Chest injuries
 - Respiratory arrest and insufficiency
 - Pulmonary embolism
 - Drugs used in the management of these patients
 - Special respiratory therapies.

Module VI

- Nursing management of patient with Genito-urinary problems.
- Review of Anatomy and Physiology of the Genito-urinary System
 - Nephritis
 - Renal calculus
 - Acute renal failure
 - Chronic renal failure
 - End stage renal disease.
- Special procedures, dialysis, renal transplant.
- Drugs used in management of these patients.
- Congenital disorders, urinary infections.
- Benign prostate hypertrophy.

Module VII

- Nursing management of patients with problems of the digestive systems.
- Review of Anatomy and Physiology of gastrointestinal system and accessory organs.
- Pathophysiology, diagnostic procedures and management of :
 - G.I. Bleeding
 - Peptic ulcer
 - Infections
 - Acute abdomen
 - Colitis, diarrhea, dysentery & mal-absorption syndrome.
 - Cholecystitis
 - Hepatitis, hepatic coma and cirrhosis of liver
 - Portal hypertension
 - Pancreatitis
 - Tumors, Hernias, Fistulas, Fissures, Hemorrhoids.
- Drug used in the management of these patients.

Module VIII

- Nursing management of patients with endocrine problems.
- Review of Anatomy, Physiology and Pathophysiology of patient with:
 - Thyroid disorders
 - Diabetes mellitus
 - Diabetes insipidus
 - Adrenal tumour
 - Pituitary disorders
 - Diagnostic procedures.
- Nursing management of patient with above problems.
- Drug used in Endocrine problems.

Module IX

- Nursing management of patient with musculoskeletal problems.
- Review of anatomy, Physiology and Pathophysiology:
 - Arthritis Osteomyelitis, Bursitis
 - Fractures, dislocation and trauma

- Prolapsed disc
- Osteomalacia and osteoporosis
- Tumor
- Amputation.
- Diagnostic procedures
- Nursing management of patient with above problems.
- Prosthesis and Rehabilitation.
- Transplant & replacement surgeries.

Module X

- Nursing management of patient with disorders of female reproductive tract.
- Disorder of menstruation.
- Infections of the genital tract.
- Benign and malignant tumors of the genital tract.
- R.V.F., V.V.F.
- Climacteric changes and associated problems.

Module XI

- Nursing management of patient with Oncological disorders.
- Types of Neoplasms and related Pathophysiology.
- Diagnostic procedures.
- Modalities of treatment and nurse's role.
- Special therapies – Chemotherapy and Radiotherapy
- Preventive measures, other therapies.

Module XII

- Nursing management of patient with burns.
- Nursing management of patient with reconstructive surgeries.

Module XIII

- Nursing management of patient with common communicable diseases & STD'S.
- Nursing management of patient with immunological disorders including HIV/AIDS.

Module XIV

- Nursing management of patient with diseases of eye, ear, nose, throat & skin.

Module XV

- Nursing management of patient with blood disorders
- Review of Anatomy & Physiology of Blood & Blood products.
- Pathophysiology, diagnostic procedures and management of blood disorders:
 - Anemia
 - Leukemia
 - Bleeding disorders
 - Hemophilia
 - Purpura etc.
- Blood transfusion, safety checks, procedure and requirements. Management of adverse transfusion reaction, records for blood transfusion.

- Management and counseling of blood donors, phlebotomy procedure, and post donation management.
- Blood bank functioning and hospital transfusion committee
- Bio-safety and waste management in relation to blood transfusion.

Module XVI

- Nursing in emergencies.
- Cardiac emergencies.
- Trauma.
- Poisoning.
- Crisis management: Thyroid crisis, Hypertensive crisis and Adrenal crisis.

Examination Scheme:

Components	ATT	HA	CT	SE	P/S	EE
Weightage (%)	5	5	5	5	5	75

**ATT-Attendance; HA-Home Assignment; CT-Class Test; SE-Sessional Examination;
P/S-Presentation/Seminar; EE- End Semester Examination**

MEDICAL SURGICAL NURSING (PRACTICAL)

Course Code: NUR2110

Credit Unit-11

This Course is based on Course Code NUR2108

Guidelines

1. Students should be rotated in the selected medical & surgical areas, like Cardio Thoracic, Neurology, Urology, Orthopedics, Gynecology, Oncology, and Burns and Reconstructive surgical Modules.
2. The students should be given patient assignment. They have practices patient centered comprehensive Nursing.
3. Each student is requested to give planned health teachings, conduct clinical teaching, case presentation and drug study.

Examination Scheme:

Components	P/S	NCS	NCP	HE	CE	SPE	EPE
Weightage (%)	20	15	30	5	20	10	100

P/S-Presentation/Seminar; NCS-Nursing Case Study; NCP- Nursing Care plan; HE- Health Education; CE-Clinical Evaluation; SPE-Sessional Practical Examination; EE- External Practical Examination

MATERNAL NURSING

Course Code: NUR2208

Credit Unit-05

Course Description: This course is designed to widen the student's knowledge of obstetrics during pregnancy, labour and puerperium. It also helps to acquire knowledge and develop skill in rendering optimum Nursing care to a child bearing mother in a hospital or Community and help in the management of common gynecological problems.

OBJECTIVES

At end of the course, the student will:

1. Describe the Physiology of pregnancy, labour and puerperium.
2. Manage normal pregnancy, labour and puerperium.
3. Explain the Physiology of lactation and advice on management of breast feeding.
4. Be skilled in providing pre and post operative Nursing care in obstetric conditions.
5. Identify and manage high risk pregnancy including appropriate referrals.
6. Propagate the concept and motivate acceptance of family planning methods.
7. Teach, guide and supervise auxiliary midwifery personnel.

Course Contents

Module I

- Introduction and historical review.
- Planned Parenthood.
- Maternal morbidity and mortality rates.
- Legislations related to maternity benefits, MTP acts, incentives for family planning etc.

Module II

- Review of the Anatomy and Physiology of female reproductive system.
- Female pelvis (normal and contracted).
- Review of Foetal development.

Module III

- Physiology and management of pregnancy, labour and puerperium.
- Signs and symptoms and diagnosis of pregnancy.
- Antenatal care.
- Pregnant woman with HIV/ AIDS.
- Management of common Gynecological problems.

Module IV

- The new born baby.
- Care of the baby at birth including resuscitation.
- Essential newborn care:
 - Feeding
 - Jaundice and infection
 - Small & large for date babies.
 - Intensive care of the new born
 - Trauma and hemorrhage.

Module V

- Management of abnormal pregnancy, labour and puerperium.
- Abortion, ectopic pregnancy and vesicular mole.
- Pregnancy induced hypertension, gestational diabetes, anaemia, heart disease.

- Urinary infection, Antepartum haemorrhage.
- Abnormal labour (malposition & malpresentation):
 - Uterine inertia
 - Disorders of puerperium
 - Management of engorged breast, cracked nipples, breast abscess and mastitis
 - Puerperal sepsis
 - Post partum haemorrhage
 - Inversion and prolapsed of uterus, obstetrical emergencies
 - Obstetrical operation i.e. forceps, vacuum, episiotomy, caesarean section.

Module VI

- Drugs in obstetrics.
- Effects of drugs during pregnancy, labour and puerperium on mother & body.

Module VII

- National Welfare Programmes for Women.
- National Family Welfare Programme.
- Infertile Family.
- Problems associated with unwanted pregnancy.
- Unwed mothers.

Examination Scheme:

Components	ATT	HA	CT	SE	P/S	EE
Weightage (%)	5	5	5	5	5	75

**ATT-Attendance; HA-Home Assignment; CT-Class Test; SE-Sessional Examination;
P/S-Presentation/Seminar; EE- End Semester Examination**

PAEDIATRIC NURSING

Course Code: NUR2209

Credit Unit-05

Course Description: This course is aimed at developing an understanding of the modern approach to child care, the common health problems of children and neonates in health and sickness.

OBJECTIVES

At the end of the course, the student will:

1. Explain the modern concept of child care and the principles of Paediatric Nursing.
2. Describe the normal growth and development of children at different ages.
3. Manage sick as well as healthy neonates and children.
4. Identify various aspects of preventive Paediatric Nursing and apply them in providing Nursing care to children in hospital and Community.

Course Contents

Module I

- Introduction.
- Modern concept of child care.
- Internationally accepted rights of the child.
- National policy and legislations in relation to child health and welfare.
- National programmes related to child health and welfare.
- Changing trends in hospital care, preventive, promotive and curative aspects of child health.
- Child morbidity and mortality rates.
- Differences between an adult and child.
- Hospital environment for a sick child.
- The role of a Paediatric Nurse in caring for a hospitalized child.
- Principles of Pre and Post operative care of infants and children.
- Paediatric Nursing procedures.

Module II

- The healthy child.
- Growth and development from birth to adolescence.
- The needs of normal children through the stages of development and parental guidance.
- Nutritional needs of children & infants breast- feeding, supplementary/ artificial feeding and weaning.
- Accidents, causes and prevention.
- Value of play selection of play material.
- Preventive immunization.

Module III

- Nursing care of a neonate.
- Nursing care of a normal newborn.
- Neonatal resuscitation.
- Nursing management of a low birth weight body.
- Nursing management of common neonatal disorders.
- Organization of neonatal Module. Preventive of infections in the nursery.

Module IV

- Nursing management in common childhood diseases.
- Nutritional deficiency disorders.
- Reparatory disorders and infections.

- Gastrointestinal infections, infections and congenital disorders.
- Cardio vascular problem-congenital defects and rheumatic fever.
- Genito-urinary disorder – Nephritic syndrome, Wilms’ tumor, infection and congenital disorders.
- Neurological infections and disorders- convulsions, epilepsy, meningitis, hydrocephalus, spinabifida.
- Hematological disorders – Anemias, Thalassemia, ITP, Leukemia, hemophilia.
- Endocrine disorders – Juvenile Diabetes Mellitus.
- Orthopedic disorders – club feet, hip dislocation and fracture.
- Disorders of skin eye and ears.
- Common Communicable Diseases in children, their identification, Nursing management in hospital and home and prevention.
- Paediatric emergencies – poisoning, foreign bodies, haemorrhage, burns and drowning.

Module V

- Management of behavioral disorders in children.
- Management of challenged children:
 - Mentally challenged
 - Physically challenged
 - Socially challenged.

Examination Scheme:

Components	ATT	HA	CT	SE	P/S	EE
Weightage (%)	5	5	5	5	5	75

ATT-Attendance; HA-Home Assignment; CT-Class Test; SE-Sessional Examination;
P/S-Presentation/Seminar; EE- End Semester Examination

MATERNAL NURSING (PRACTICAL)

Course Code: NUR2211

Credit Unit-10

This Course is based on Course Code NUR2208

Guidelines

1. The student will:
 - a. Be posted in antenatal Clinic, MCH clinic, antenatal ward, labour room, postnatal ward, maternity OT, MTP room.
 - b. Visit welfare agencies for woman and write observation report.
 - c. Follow Nursing process in providing care to 3-6 patients.
 - d. Write at least two Nursing care studies and do a presentation.
 - e. Give at least one planned health teaching to a group of mothers.
2. Practices following Nursing procedures -
 - a. Antenatal & Post natal examination, per vaginal exam.
 - b. Conduct normal delivery, stitching of episiotomy, (for male candidate minimum conduct of 5 deliveries)
 - c. Motivation of family for adopting family planning methods.
 - d. Motivate family for Planned Parenthood.
 - e. Assist in various diagnostic and therapeutic procedures including IUD insertion and removal.

Examination Scheme:

Components	ANC	NCP (PNC)	P/S	HE	NCS	CE	SPE	EPE
Weightage (%)	10	10	10	10	10	40	10	100

ANC-Antenatal case; NCP- Nursing Care plan; PNC-Post natal case; P/S- Presentation//Seminar; HE-Health Education; NCS- Nursing Case Study; CE- Clinical Evaluation; SPE- Sessional Practical Examination; EPE-External Practical Exam

PAEDIATRIC NURSING (PRACTICAL)

Course Code: NUR2212

Credit Unit-10

This Course is based on Course Code NUR2209

Guidelines

The student will:

1. Be posted in Pediatric Medical and Surgical wards, OPD in hospital, health centre and neonatal unit.
2. Visit a centre for handicapped children and child welfare centre and write observation report.
3. Write an observational study of normal children of various age groups in home/ nursery school/ crèche.
4. Follow Nursing process in providing care to 3-6 children.
5. Write at least two Nursing care studies and do a presentation.
6. Give two planned health teachings, one in hospital and one in OPD / health centre.
7. Practice the following Nursing procedures:
 - Taking pediatric history
 - Physical assessment of children
 - Baby bath
 - Feeding
 - Restraining.
8. Calculation of dosage of drugs and administration of medications and injections.
9. Collection of specimens.
10. Enema, bowel wash, colostomy irrigation.
11. Steam and oxygen inhalation.
12. Preparation to assist with diagnostic tests and operations.
13. Examination / Assessment of a newborn.
14. Neonatal resuscitation.
15. Care of a baby in incubator and on ventilator.
16. Photo Therapy.
17. Assist in exchange transfusion and other therapeutic procedures.

Examination Scheme:

Components	NCP	HE	NCS/P	GDA	CE	SPE	EPE
Weightage (%)	10	10	20	10	30	20	100

NCP-Nursing Care Plan; HE- Health Education; NCS/P-Nursing Case Study/Presentation; GDA-Growth & Development Assessment; SPE-Sessional Practical Examination; CE- Clinical Evaluation; EPE- End Semester Practical Examination

COMMUNITY HEALTH NURSING (PRACTICAL)

Course Code: NUR2308

Credit Unit-10

This Course is based on Course Code NUR2306

Guidelines

1. Each student will prepare a Community profile.
2. The student will be allotted families for gaining experience in identifying family health needs, health counseling and guidance and family budgeting for optimum health.
3. The student will participate in the activities of primary health centre.
4. Sub-centre, MCH centre.
5. Visits will be made to selected health and welfare agencies, water purification plant and sewage disposal plant, infectious disease hospital, child welfare centre, old aged homes, orphanages and handicapped hospitals.
6. Conduct health educational programmes for individual/ groups/ Community.

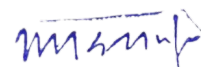

Examination Scheme:

Components	CHP	CP	FCS	OR	HE	EPE
Weightage (%)	20	10	30	10	30	100

CHP- Community Health project; CP-Community Profile; FCS-Family Case Study; OR- Observation Report; HE-Health Education; EPE-External Practical Exam

INTRODUCTION TO NURSING RESEARCH AND STATISTICS

Course Code: NUR2407

Credit Unit-04

Course Description: The course is designed to assist the students to develop an understanding of basic concepts of Research and Statistics, use the findings of Nursing Research in nursing practices, apply the knowledge in conducting project(S) and solve problems related to nursing using scientific method.

OBJECTIVES

At the end of the course, the students will:

1. Define the terms and concepts of Nursing Research.
2. Identify needs and scope of Nursing Research
3. Identify and define a Research problem
4. Locate and list sources of literature for a specific study
5. Describe different Research approaches, methods of data collection and sampling techniques with a special reference to survey method.
6. Develop tool for data collection.
7. Enumerate steps of data analysis and present data summary in tabular form.
8. Use descriptive and co-relational statistics in data analysis.
9. Conduct a group Research project.

Course Contents

A. INTRODUCTION TO RESEARCH METHODOLOGY

Module I

- Steps of scientific methods.
- Definition of Research.
- Need for Nursing Research.
- Characteristics of good research. Research process.

Module II

- Statement of Research problem.
- Statement of purpose and objectives.
- Definition of Research terms.
- Review of literature.

Module III

- Research approaches: historical, survey and experimental.

Module IV

- Sampling techniques and methods of data collection.
- Sampling.
- Instrument-questionnaire, Interview.
- Observation schedule, records, measurements.
- Reliability and validity of instruments.

Module V

- Analysis of Data, Tabulation:
 - Classification and summarization
 - Presentation

- Interpretation of data.

Module VI

- Communication of research findings.
- Writing report:
 - Organizing materials for writing
 - Format of the report
 - Use of computers.

B. INTRODUCTION TO STATISTICS

Module VII

- Descriptive Statistics.
- Frequency Distribution – Types of measure - frequencies, class interval, graphic methods of describing frequency.
- Measures of Central Tendency – Mode, Median, Mean.
- Measures of variability: Range, Standard deviation
- Introduction to normal probability.

Module VIII

- Correlation.
- Computation by rank difference methods.
- Uses of correlation co-efficient.

Module IX

- Biostatistics: Crude rates and standardized rates, ratio and estimation of the trends.

Module X

- Introduction to computers in Nursing.
- Introduction to Computer and disk – operating system
- Introduction to word processing
- Introduction to data base
- Window application: Word, Excel, Power point, Multimedia.
- Use of statistical packages.
- Introduction to internet & use of electronic mail.
- Computer aided teaching & testing.

Examination Scheme:

Components	ATT	HA	CT	SE	EE
Weightage (%)	5	10	5	5	75

ATT-Attendance; HA-Home Assignment; CT-Class Test; SE-Sessional Examination;
EE- End Semester Examination

PSYCHIATRIC NURSING (PRACTICAL)

Course Code: NUR2408

Credit Unit-10

This Course is based on Course Code NUR2405

Guidelines

The student will be provided opportunity to:

1. Observe, Record and Report the behavior of their selected patients.
2. Record the process of interaction.
3. Assess the Nursing needs of their selected patients, plan and implement the Nursing intervention.
4. Counsel the attendant and family members of patient.
5. Participate in the activities of Psychiatric team.
6. Write observation report after a field visit to the following places:
 - Child guidance clinic.
 - School / Special Schools (For mentally subnormal)
 - Mental Hospital,
 - Community Mental Health Centers.
 - De-addiction and Rehabilitation Centers.

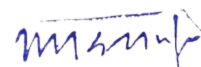

Examination Scheme:

Components	PR	NCP	NCS	MSE	HE	CE	EPE
Weightage (%)	20	20	20	10	10	20	100

PR-Process Recording; NCP-Nursing Care Plan; NCS-Nursing Case Study; MSE- Mental status Examination; HE- Health Education; CE-Clinical Evaluation; EPE-End Term Practical Examination.

DISSERTATION (NURSING RESEARCH)

Course Code: NUR2437

Credit Unit-10

Objectives: During the training the students are expected to learn about research problem, research methodology, research plan, implementation and statistical methods. The knowledge will be utilized for improving the quality of nursing practice and education.

Research Project

Students will conduct research project in selected areas of nursing and submit a report. The studies may include exploring existing health practices, improved practices of nursing procedures, health records, patient records and survey of nursing literature.

Guidelines:

- During the clinical training a student will write a research project work related to the profession of nursing, based on his/her interest.
- Project work would be under the supervision of internal faculty (assigned for guiding the project) appointed by the Principal/Director of college of nursing.
- The research project would be completed and submitted before the completion of fourth semester of the course.
- Before the submission of project the student will be required to make a presentation before the research committee through power point presentation.
- The assessment of performance of student will be totally internal and the research committee will assess the student on the basis of his/her performance.
- There would be mid-term review of the progress of the project before three members of the research committee appointed by the Principal/Director of college of nursing.
- The research project work should cover the following area.
 - Review of literature on the selected topic and reporting
 - Formulation of problem statement, objectives.
 - Research methodology
 - Analysis and interpretation
 - Summary & Conclusion.

Examination Scheme

Components	PP	TP	DAP	GE	Pr R/V (EE)
Weightage (%)	10	10	15	15	50

PP -Proposal Presentation; TP- Tool Presentation; DAP- Data Analysis Presentation; GE- Guides' Evaluation; Pr R/V (EE)-Project Report/Viva (External Examination)

PHARMACEUTICAL ANALYSIS

Course Code : BP102T

Credit Units: 04

Course Objective : This course deals with the fundamentals of analytical chemistry and principles of electrochemical analysis of drugs. Upon completion of the course student shall be able to understand the principles of volumetric and electro chemical analysis, carryout various volumetric and electrochemical titrations & develop analytical skills.

Course Contents :

Module-I

(a) Pharmaceutical analysis- Definition and scope

i) Different techniques of analysis

ii) Methods of expressing concentration

iii) Primary and secondary standards.

iv) Preparation and standardization of various molar and normal solutions-

Oxalic acid, sodium hydroxide, hydrochloric acid, sodium thiosulphate, sulphuric acid, potassium permanganate and ceric ammonium sulphate

(b) Errors: Sources of errors, types of errors, methods of minimizing errors, accuracy, precision and significant figures

(c) Pharmacopoeia, Sources of impurities in medicinal agents, limit tests.

Module-II

Acid base titration: Theories of acid base indicators, classification of acid base titrations and theory involved in titrations of strong, weak, and very weak acids and bases, neutralization curves

Non aqueous titration: Solvents, acidimetry and alkalimetry titration and estimation of Sodium benzoate and Ephedrine HCl

Module-III

Precipitation titrations: Mohr's method, Volhard's, Modified Volhard's, Fajans method, estimation of sodium chloride.

Complexometric titration: Classification, metal ion indicators, masking and demasking reagents, estimation of Magnesium sulphate, and calcium gluconate.

Gravimetry: Principle and steps involved in gravimetric analysis. Purity of the precipitate: coprecipitation and post precipitation, Estimation of barium sulphate.

Basic Principles, methods and application of diazotisation titration.

Module-IV

Redox titrations

(a) Concepts of oxidation and reduction

(b) Types of redox titrations (Principles and applications)

Cerimetry, Iodimetry, Iodometry, Bromatometry, Dichrometry, Titration with potassium iodate

Module-V

Electrochemical methods of analysis

Conductometry: Introduction, Conductivity cell, Conductometric titrations, applications.

Potentiometry - Electrochemical cell, construction and working of reference (Standard hydrogen, silver chloride electrode and calomel electrode) and indicator electrodes (metal electrodes and glass electrode), methods to determine end point of potentiometric titration and applications.

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

COMMUNICATION SKILLS

Course Code : BP105T

Credit Units: 02

Course Objectives:

This course will prepare the young pharmacy student to interact effectively with doctors, nurses, dentists, physiotherapists and other health workers. At the end of this course the student will get the soft skills set to work cohesively with the team as a team player and will add value to the pharmaceutical business.

Course Contents:

Module-I

Communication Skills: Introduction, Definition, The Importance of Communication, The Communication Process – Source, Message, Encoding, Channel, Decoding, Receiver, Feedback, Context

Barriers to communication: Physiological Barriers, Physical Barriers, Cultural Barriers, Language Barriers, Gender Barriers, Interpersonal Barriers, Psychological Barriers, Emotional barriers

Perspectives in Communication: Introduction, Visual Perception, Language, Other factors affecting our perspective - Past Experiences, Prejudices, Feelings, Environment

Module-II

Elements of Communication: Introduction, Face to Face Communication - Tone of Voice, Body Language (Non-verbal communication), Verbal Communication, Physical Communication

Communication Styles: Introduction, The Communication Styles Matrix with example for each -Direct Communication Style, Spirited Communication Style, Systematic Communication Style, Considerate Communication Style

Module-III

Basic Listening Skills: Introduction, Self-Awareness, Active Listening, Becoming an Active Listener, Listening in Difficult Situations

Effective Written Communication: Introduction, When and When Not to Use Written Communication - Complexity of the Topic, Amount of Discussion Required, Shades of Meaning, Formal Communication

Writing Effectively: Subject Lines, Put the Main Point First, Know Your Audience, Organization of the Message

Module-IV

Interview Skills: Purpose of an interview, Do's and Dont's of an interview

Giving Presentations: Dealing with Fears, Planning your Presentation, Structuring Your Presentation, Delivering Your Presentation, Techniques of Delivery

Module-V

Group Discussion: Introduction, Communication skills in group discussion, Do's and Dont's of group discussion

Examination Scheme:

Components	CT	HA	S/V/Q	ATTD	EE
Weightage(%)	10	2	1	2	35

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, ATTD: Attendance

EE: End Semester Examination

HUMAN ANATOMY AND PHYSIOLOGY PRACTICAL-I

Course Code : BP107P

Credit Units: 02

Course Objective:

Practical physiology is complimentary to the theoretical discussions in physiology. Practicals allow the verification of physiological processes discussed in theory classes through experiments on living tissue, intact animals or normal human beings. This is helpful for developing an insight on the subject.

Course Contents:

List of experiments :

1. Study of compound microscope.
2. Microscopic study of epithelial and connective tissue
3. Microscopic study of muscular and nervous tissue
4. Identification of axial bones
5. Identification of appendicular bones
6. Introduction to hemocytometry.
7. Enumeration of white blood cell (WBC) count
8. Enumeration of total red blood corpuscles (RBC) count
9. Determination of bleeding time
10. Determination of clotting time
11. Estimation of hemoglobin content
12. Determination of blood group.
13. Determination of erythrocyte sedimentation rate (ESR).
14. Determination of heart rate and pulse rate.
15. Recording of blood pressure.

Examination Scheme :

IA				EE	
A	PR	LR	V	PR	V
02	05	03	05	25	10

Note: A-Attendance, IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

PHARMACEUTICAL ANALYSIS PRACTICAL

Course Code : BP108P

Credit Units: 02

List of experiments:

Limit Test of the following

- (1) Chloride
- (2) Sulphate
- (3) Iron
- (4) Arsenic

II Preparation and standardization of

- (1) Sodium hydroxide
- (2) Sulphuric acid
- (3) Sodium thiosulfate
- (4) Potassium permanganate
- (5) Ceric ammonium sulphate

III Assay of the following compounds along with Standardization of Titrant

- (1) Ammonium chloride by acid base titration
- (2) Ferrous sulphate by Cerimetry
- (3) Copper sulphate by Iodometry
- (4) Calcium gluconate by complexometry
- (5) Hydrogen peroxide by Permanganometry
- (6) Sodium benzoate by non-aqueous titration
- (7) Sodium Chloride by precipitation titration

IV Determination of Normality by electro-analytical methods

- (1) Conductometric titration of strong acid against strong base
- (2) Conductometric titration of strong acid and weak acid against strong base
- (3) Potentiometric titration of strong acid against strong base

Examination Scheme :

IA				EE	
A	PR	LR	V	PR	V
02	05	03	05	25	10

Note: A-Attendance, IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

PHARMACEUTICS PRACTICAL

Course Code : BP109P

Credit Units: 02

List of experiments :

1. Syrups

- a) Syrup IP'66
- b) Compound syrup of Ferrous Phosphate BPC'68

3 Hours / week

2. Elixirs

- a) Piperazine citrate elixir
- b) Paracetamol pediatric elixir

3. Linctus

- a) Terpin Hydrate Linctus IP'66

4. Solutions

- b) Iodine Throat Paint (Mandles Paint)
- a) Strong solution of ammonium acetate
- b) Cresol with soap solution
- c) Lugol's solution

5. Suspensions

- a) Calamine lotion
- b) Magnesium Hydroxide mixture
- c) Aluminium Hydroxide gel

6. Emulsions

- a) Turpentine Liniment
- b) Liquid paraffin emulsion

7. Powders and Granules

- a) ORS powder (WHO)
- b) Effervescent granules
- c) Dusting powder
- d) Divided powders

8. Suppositories

- a) Glycero gelatin suppository
- b) Cocoa butter suppository
- c) Zinc Oxide suppository

8. Semisolids

- a) Sulphur ointment
- b) Non staining-iodine ointment with methyl salicylate
- c) Carbopal gel

9. Gargles and Mouthwashes

- a) Iodine gargle
- b) Chlorhexidine mouthwash

Examination Scheme :

IA				EE	
A	PR	LR	V	PR	V

PHARMACEUTICAL INORGANIC CHEMISTRY PRACTICAL

Course Code : BP110P

Credit Units: 02

List of experiments:

I Limit tests for following ions

Limit test for Chlorides and Sulphates
Modified limit test for Chlorides and Sulphates
Limit test for Iron
Limit test for Heavy metals
Limit test for Lead
Limit test for Arsenic

II Identification test

Magnesium hydroxide
Ferrous sulphate
Sodium bicarbonate
Calcium gluconate
Copper sulphate

III Test for purity

Swelling power of Bentonite
Neutralizing capacity of aluminum hydroxide gel
Determination of potassium iodate and iodine in potassium Iodide

IV Preparation of inorganic pharmaceuticals

Boric acid
Potash alum
Ferrous sulphate

Examination Scheme :

IA				EE	
A	PR	LR	V	PR	V

COMMUNICATION SKILLS PRACTICAL

Course Code : BP111P

Credit Units: 01

The following learning modules are to be conducted using words worth® English language lab software

Basic communication covering the following topics

Meeting People
Asking Questions
Making Friends
What did you do?
Do's and Dont's

Pronunciations covering the following topics

Pronunciation (Consonant Sounds)
Pronunciation and Nouns
Pronunciation (Vowel Sounds)

Advanced Learning

Listening Comprehension / Direct and Indirect Speech
Figures of Speech
Effective Communication
Writing Skills
Effective Writing
Interview Handling Skills
E-Mail etiquette
Presentation Skills

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
02	03	02	03	5	10

Note: A-Attendance, IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

REMEDIAL BIOLOGY PRACTICAL

Course Code: BP112RBP

Credit Units: 01

List of Experiments :

1. Introduction to experiments in biology
 - a) Study of Microscope
 - b) Section cutting techniques
 - c) Mounting and staining
 - d) Permanent slide preparation
2. Study of cell and its inclusions
3. Study of Stem, Root, Leaf, seed, fruit, flower and their modifications
4. Detailed study of frog by using computer models
5. Microscopic study and identification of tissues pertinent to Stem, Root Leaf, seed, fruit and flower
6. Identification of bones
7. Determination of blood group
8. Determination of blood pressure
9. Determination of tidal volume

Examination Scheme:

COMPUTER APPLICATIONS IN PHARMACY

Course Code : BP205T

Credit Units: 03

Course Objectives: This subject deals with the introduction Database, Database Management system, computer application in clinical studies and use of databases.

Course Contents:

Module-I

Number System: Binary number system, Decimal number system, Octal number system, Hexadecimal number systems, conversion decimal to binary, binary to decimal, octal to binary etc, binary addition, binary subtraction – One's complement, Two's complement method, binary multiplication, binary division

Concept of Information Systems and Software : Information gathering, requirement and feasibility analysis, data flow diagrams, process specifications, input/output design, process life cycle, planning and managing the project

Module-II

Web technologies: Introduction to HTML, XML, CSS and Programming languages, introduction to web servers and Server Products Introduction to databases, MYSQL, MS ACCESS, Pharmacy Drug database

Module-III: Application of computers in Pharmacy - Drug information storage and retrieval, Pharmacokinetics, Mathematical model in Drug design, Hospital and Clinical Pharmacy, Electronic Prescribing and discharge (EP) systems, barcode medicine identification and automated dispensing of drugs, mobile technology and adherence monitoring Diagnostic System, Lab-diagnostic System, Patient Monitoring System, Pharma Information System

Module-IV

Bioinformatics: Introduction, Objective of Bioinformatics, Bioinformatics Databases, Concept of Bioinformatics, Impact of Bioinformatics in Vaccine Discovery

Module-V

Computers as data analysis in Preclinical development: Chromatographic data analysis(CDS), Laboratory Information management System (LIMS) and Text Information Management System (TIMS)

Examination Scheme:

Components	CT	HA	S/V/Q	ATTD	EE
Weightage(%)	15	3	3	4	50

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, ATTD: Attendance

EE: End Semester Examination

ENVIRONMENTAL SCIENCES

Course Code : BP206T

Credit Units: 03

Course Objectives: Environmental Sciences is the scientific study of the environmental system and the status of its inherent or induced changes on organisms. It includes not only the study of physical and biological characters of the environment but also the social and cultural factors and the impact of man on environment.

Course Contents:

Module-I: The Multidisciplinary nature of environmental studies Natural Resources Renewable and non-renewable resources:

Natural resources and associated problems a) Forest resources; b) Water resources; c) Mineral resources; d) Food resources; e) Energy resources; f) Land resources: Role of an individual in conservation of natural resources.

Module-II

Ecosystems Concept of an ecosystem. Structure and function of an ecosystem. Introduction, types, characteristic features, structure and function of the ecosystems: Forest ecosystem; Grassland ecosystem; Desert ecosystem; Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries)

Module-III

Environmental Pollution: Air pollution; Water pollution; Soil pollution

Examination Scheme:

Components	CT	HA	S/V/Q	ATTD	EE
Weightage(%)	15	3	3	4	50

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, ATTD: Attendance

HUMAN ANATOMY AND PHYSIOLOGY PRACTICAL-II

Course Code: BP207P

Credit Units: 02

Practical physiology is complimentary to the theoretical discussions in physiology. Practicals allow the verification of physiological processes discussed in theory classes through experiments on living tissue, intact animals or normal human beings. This is helpful for developing an insight on the subject.

List of Experiments

1. To study the integumentary and special senses using specimen, models, etc.,
2. To study the nervous system using specimen, models, etc.,
3. To study the endocrine system using specimen, models, etc
4. To demonstrate the general neurological examination
5. To demonstrate the function of olfactory nerve
6. To examine the different types of taste.
7. To demonstrate the visual acuity
8. To demonstrate the reflex activity
9. Recording of body temperature
10. To demonstrate positive and negative feedback mechanism.
11. Determination of tidal volume and vital capacity.
12. Study of digestive, respiratory, cardiovascular systems, urinary and reproductive systems with the help of models, charts and specimens.
13. Recording of basal mass index .
14. Study of family planning devices and pregnancy diagnosis test.
15. Demonstration of total blood count by cell analyser
16. Permanent slides of vital organs and gonads.

Examination Scheme :

PHARMACEUTICAL ORGANIC CHEMISTRY PRACTICAL-I

Course Code : BP208P

Credit Units: 02

List of experiments

A. Systematic qualitative analysis of unknown organic compounds like

1. Preliminary test: Color, odour, aliphatic/aromatic compounds, saturation and unsaturation, etc.
2. Detection of elements like Nitrogen, Sulphur and Halogen by Lassaigne's test
3. Solubility test
4. Functional group test like Phenols, Amides/ Urea, Carbohydrates, Amines, Carboxylic acids, Aldehydes and Ketones, Alcohols, Esters, Aromatic and Halogenated Hydrocarbons, Nitro compounds and Anilides.
5. Melting point/Boiling point of organic compounds
6. Identification of the unknown compound from the literature using melting point/ boiling point.
7. Preparation of the derivatives and confirmation of the unknown compound by melting point/ boiling point.
8. Minimum 5 unknown organic compounds to be analysed systematically.

B. Preparation of suitable solid derivatives from organic compounds

C. Construction of molecular models

Examination Scheme :

IA				EE	
A	PR	LR	V	PR	V
02	05	03	05	25	10

BIOCHEMISTRY PRACTICAL

Course Code : BP209P

Credit Units: 02

List of experiments

1. Qualitative analysis of carbohydrates (Glucose, Fructose, Lactose, Maltose, Sucrose and starch)
2. Identification tests for Proteins (albumin and Casein)
3. Quantitative analysis of reducing sugars (DNSA method) and Proteins (Biuret method)
4. Qualitative analysis of urine for abnormal constituents
5. Determination of blood creatinine
6. Determination of blood sugar
7. Determination of serum total cholesterol
8. Preparation of buffer solution and measurement of pH
9. Study of enzymatic hydrolysis of starch
10. Determination of Salivary amylase activity
11. Study the effect of Temperature on Salivary amylase activity.
12. Study the effect of substrate concentration on salivary amylase activity.

Examination Scheme :

IA				EE

COMPUTER APPLICATIONS IN PHARMACY PRACTICAL

Course Code : BP210P

Credit Units: 01

List of experiments

1. Design a questionnaire using a word processing package to gather information about a particular disease.
2. Create a HTML web page to show personal information.
- 3 Retrieve the information of a drug and its adverse effects using online tools
- 4 Creating mailing labels Using Label Wizard , generating label in MS WORD
- 5 Create a database in MS Access to store the patient information with the required fields Using access
6. Design a form in MS Access to view, add, delete and modify the patient record in the database
7. Generating report and printing the report from patient database
8. Creating invoice table using – MS Access
9. Drug information storage and retrieval using MS Access
10. Creating and working with queries in MS Access
11. Exporting Tables, Queries, Forms and Reports to web pages
12. Exporting Tables, Queries, Forms and Reports to XML pages

PHARMACEUTICAL MICROBIOLOGY

Course Code : BP303T

Credit Units: 04

Course Objectives: Study of all categories of microorganisms especially for the production of alcohol antibiotics, vaccines, vitamins enzymes etc..

Course Content:

Module-I

Introduction, history of microbiology, its branches, scope and its importance. Introduction to Prokaryotes and Eukaryotes. Study of ultra-structure and morphological classification of bacteria, nutritional requirements, raw materials used for culture media and physical parameters for growth, growth curve, isolation and preservation methods for pure cultures, cultivation of anaerobes, quantitative measurement of bacterial growth (total & viable count). Study of different types of phase contrast microscopy, dark field microscopy and electron microscopy.

Module-II

Identification of bacteria using staining techniques (simple, Gram's & Acid fast staining) and biochemical tests (IMViC). Study of principle, procedure, merits, demerits and applications of physical, chemical gaseous, radiation and mechanical method of sterilization. Evaluation of the efficiency of sterilization methods. Equipments employed in large scale sterilization. Sterility indicators.

Module-III

Study of morphology, classification, reproduction/replication and cultivation of Fungi and Viruses. Classification and mode of action of disinfectants Factors influencing disinfection, antiseptics and their evaluation. For bacteriostatic and bactericidal actions Evaluation of bactericidal & Bacteriostatic. Sterility testing of products (solids, liquids, ophthalmic and other sterile products) according to IP, BP and USP.

Module-IV

Designing of aseptic area, laminar flow equipments; study of different sources of contamination in an aseptic area and methods of prevention, clean area classification. Principles and methods of different microbiological assay. Methods for standardization of antibiotics, vitamins and amino acids. Assessment of a new antibiotic.

Module-V

Types of spoilage, factors affecting the microbial spoilage of pharmaceutical products, sources and types of microbial contaminants, assessment of microbial contamination and spoilage. Preservation of pharmaceutical products using antimicrobial agents, evaluation of microbial stability of formulations. Growth of animal cells in culture, general procedure for cell culture, Primary, established and transformed cell cultures. Application of cell cultures in pharmaceutical industry and research.

PHARMACEUTICAL ENGINEERING

Course Code : BP304T

Credit Units: 04

Course Objectives: This course is designed to impart a fundamental knowledge on the art and science of various Module operations used in pharmaceutical industry.

Course Content:

Module-I

Flow of fluids: Types of manometers, Reynolds number and its significance, Bernoulli's theorem and its applications, Energy losses, Orifice meter, Venturimeter, Pitot tube and Rotometer.

Size Reduction: Objectives, Mechanisms & Laws governing size reduction, factors affecting size reduction, principles, construction, working, uses, merits and demerits of Hammer mill, ball mill, fluid energy mill, Edge runner mill & end runner mill.

Size Separation: Objectives, applications & mechanism of size separation, official standards of powders, sieves, size separation Principles, construction, working, uses, merits and demerits of Sieve shaker, cyclone separator, Air separator, Bag filter & elutriation tank.

Module-II

Heat Transfer: Objectives, applications & Heat transfer mechanisms. Fourier's law, Heat transfer by conduction, convection & radiation. Heat interchangers & heat exchangers.

Evaporation: Objectives, applications and factors influencing evaporation, differences between evaporation and other heat process. principles, construction, working, uses, merits and demerits of Steam jacketed kettle, horizontal tube evaporator, climbing film evaporator, forced circulation evaporator, multiple effect evaporator & Economy of multiple effect evaporator.

Distillation: Basic Principles and methodology of simple distillation, flash distillation, fractional distillation, distillation under reduced pressure, steam distillation & molecular distillation

Module-III

Drying: Objectives, applications & mechanism of drying process, measurements & applications of Equilibrium Moisture content, rate of drying curve. principles, construction, working, uses, merits and demerits of Tray dryer, drum dryer spray dryer, fluidized bed dryer, vacuum dryer, freeze dryer.

Mixing: Objectives, applications & factors affecting mixing, Difference between solid and liquid mixing, mechanism of solid mixing, liquids mixing and semisolids mixing. Principles, Construction, Working, uses, Merits and Demerits of Double cone blender, twin shell blender, ribbon blender, Sigma blade mixer, planetary mixers, Propellers, Turbines, Paddles & Silverson Emulsifier,

Module-IV

Filtration: Objectives, applications, Theories & Factors influencing filtration, filter aids, filter medias. Principle, Construction, Working, Uses, Merits and demerits of plate & frame filter, filter leaf, rotary drum filter, Meta filter & Cartridge filter, membrane filters and Seidtz filter.

Centrifugation: Objectives, principle & applications of Centrifugation, principles, construction, working, uses, merits and demerits of Perforated basket centrifuge, Non-perforated basket centrifuge, semi continuous centrifuge & super centrifuge.

Module-V

Materials of pharmaceutical plant construction, Corrosion and its prevention: Factors affecting during materials selected for Pharmaceutical plant construction, Theories of corrosion, types of corrosion

and there prevention. Ferrous and nonferrous metals, inorganic and organic non metals, basic of material handling systems.

PHARMACEUTICAL ORGANIC CHEMISTRY PRACTICAL-II

Course Code : BP305P

Credit Units: 02

List of experiments

I Experiments involving laboratory techniques

Recrystallization

Steam distillation

II Determination of following oil values (including standardization of reagents)

Acid value

Saponification value

Iodine value

III Preparation of compounds

Benzanilide/Phenyl benzoate/Acetanilide from Aniline/ Phenol /Aniline by acylation reaction.

2,4,6-Tribromo aniline/Para bromo acetanilide from Aniline/ Acetanilide by halogenation (Bromination) reaction.

5-Nitro salicylic acid/Meta di nitro benzene from Salicylic acid / Nitro benzene by nitration reaction.

Benzoic acid from Benzyl chloride by oxidation reaction.

Benzoic acid/ Salicylic acid from alkyl benzoate/ alkyl salicylate by hydrolysis reaction.

1-Phenyl azo-2-naphthol from Aniline by diazotization and coupling reactions.

Benzil from Benzoin by oxidation reaction.

Dibenzal acetone from Benzaldehyde by Claisen Schmidt reaction

Cinnamic acid from Benzaldehyde by Perkin reaction

P-Iodo benzoic acid from *P*-amino benzoic acid

PHYSICAL PHARMACEUTICS PRACTICAL-I

Course Code : BP306P

Credit Units: 02

List of Experiments

1. Determination the solubility of drug at room temperature
2. Determination of pKa value by Half Neutralization/ Henderson Hasselbalch equation.
3. Determination of Partition co- efficient of benzoic acid in benzene and water
4. Determination of Partition co- efficient of Iodine in CCl₄ and water
5. Determination of % composition of NaCl in a solution using phenol-water system by CST method
6. Determination of surface tension of given liquids by drop count and drop weight method
7. Determination of HLB number of a surfactant by saponification method
8. Determination of Freundlich and Langmuir constants using activated char coal
9. Determination of critical micellar concentration of surfactants
10. Determination of stability constant and donor acceptor ratio of PABA-Caffeine complex by solubility method
11. Determination of stability constant and donor acceptor ratio of Cupric-Glycine complex by pH titration method

PHARMACEUTICAL MICROBIOLOGY PRACTICAL

Course Code : BP307P

Credit Units: 02

List of experiments

1. Introduction and study of different equipments and processing, e.g., B.O.D. incubator, laminar flow, aseptic hood, autoclave, hot air sterilizer, deep freezer, refrigerator, microscopes used in experimental microbiology.
2. Sterilization of glassware, preparation and sterilization of media.
3. Sub culturing of bacteria and fungus. Nutrient stabs and slants preparations.
4. Staining methods- Simple, Grams staining and acid fast staining (Demonstration with practical).
5. Isolation of pure culture of micro-organisms by multiple streak plate technique and other techniques.
6. Microbiological assay of antibiotics by cup plate method and other methods
7. Motility determination by Hanging drop method.
8. Sterility testing of pharmaceuticals.
9. Bacteriological analysis of water
10. Biochemical test.

Examination Scheme :

PHARMACEUTICAL ENGINEERING PRACTICAL

Course Code : BP308P

Credit Units: 02

List of Experiments

- I. Determination of radiation constant of brass, iron, unpainted and painted glass.
- II. Steam distillation – To calculate the efficiency of steam distillation.
- III. To determine the overall heat transfer coefficient by heat exchanger.
- IV. Construction of drying curves (for calcium carbonate and starch).
- V. Determination of moisture content and loss on drying.
- VI. Determination of humidity of air – i) From wet and dry bulb temperatures –use of Dew point method.
- VII. Description of Construction working and application of Pharmaceutical Machinery such as rotary tablet machine, fluidized bed coater, fluid energy mill, de humidifier.
- VIII. Size analysis by sieving – To evaluate size distribution of tablet granulations – Construction of various size frequency curves including arithmetic and logarithmic probability plots.
- IX. Size reduction: To verify the laws of size reduction using ball mill and determining Kicks, Rittinger's, Bond's coefficients, power requirement and critical speed of Ball Mill.
- X. Demonstration of colloid mill, planetary mixer, fluidized bed dryer, freeze dryer and such other major equipment.
- XI. Factors affecting Rate of Filtration and Evaporation (Surface area, Concentration and Thickness/ viscosity
- XII. To study the effect of time on the Rate of Crystallization.
- XIII. To calculate the uniformity Index for given sample by using Double Cone Blender.

Examination Scheme :

IA				EE

MEDICINAL CHEMISTRY PRACTICAL-I

Course Code : BP406P

Credit Units: 02

List of experiments

I Preparation of drugs/ intermediates

- 1,3-pyrazole
- 1,3-oxazole
- Benzimidazole
- Benzotriazole
- 2,3- diphenyl quinoxaline
- Benzocaine
- Phenytoin
- Phenothiazine
- Barbiturate

II Assay of drugs

- Chlorpromazine
- Phenobarbitone
- Atropine
- Ibuprofen
- Aspirin
- Furosemide

III Determination of Partition coefficient for any two drugs

Examination Scheme :

IA				EE

PHYSICAL PHARMACEUTICS PRACTICAL-II

Course Code : BP407P

Credit Units: 02

List of experiments

1. Determination of particle size, particle size distribution using sieving method
2. Determination of particle size, particle size distribution using Microscopic method
3. Determination of bulk density, true density and porosity
4. Determine the angle of repose and influence of lubricant on angle of repose
5. Determination of viscosity of liquid using Ostwald's viscometer
6. Determination sedimentation volume with effect of different suspending agent
7. Determination sedimentation volume with effect of different concentration of single suspending agent
8. Determination of viscosity of semisolid by using Brookfield viscometer
9. Determination of reaction rate constant first order.
10. Determination of reaction rate constant second order
11. Accelerated stability studies

Examination Scheme :

PHARMACOLOGY PRACTICAL-I

Course Code : BP408P

Credit Units: 02

List of experiments

1. Introduction to experimental pharmacology.
2. Commonly used instruments in experimental pharmacology.
3. Study of common laboratory animals.
4. Maintenance of laboratory animals as per CPCSEA guidelines.
5. Common laboratory techniques. Blood withdrawal, serum and plasma separation, anesthetics and euthanasia used for animal studies.
6. Study of different routes of drugs administration in mice/rats.
7. Study of effect of hepatic microsomal enzyme inducers on the phenobarbitone sleeping time in mice.
8. Effect of drugs on ciliary motility of frog oesophagus
9. Effect of drugs on rabbit eye.
10. Effects of skeletal muscle relaxants using rota-rod apparatus.
11. Effect of drugs on locomotor activity using actophotometer.
12. Anticonvulsant effect of drugs by MES and PTZ method.
13. Study of stereotype and anti-catatonic activity of drugs on rats/mice.
14. Study of anxiolytic activity of drugs using rats/mice.
15. Study of local anesthetics by different methods

Note: All laboratory techniques and animal experiments are demonstrated by simulated experiments by softwares and videos

PHARMACOGNOSY AND PHYTOCHEMISTRY PRACTICAL-I

Course Code : BP409P

Credit Units: 02

List of experiments

1. Analysis of crude drugs by chemical tests: (i) Tragacanth (ii) Acacia (iii) Agar (iv) Gelatin (v) starch (vi) Honey (vii) Castor oil
2. Determination of stomatal number and index
3. Determination of vein islet number, vein islet termination and palisade ratio.
4. Determination of size of starch grains, calcium oxalate crystals by eye piece micrometer
5. Determination of Fiber length and width
6. Determination of number of starch grains by Lycopodium spore method
7. Determination of Ash value
8. Determination of Extractive values of crude drugs
9. Determination of moisture content of crude drugs
10. Determination of swelling index and foaming

INDUSTRIAL PHARMACY-I

Course Code : BP502T

Credit Units: 04

Course Objectives: Course enables the student to understand and appreciate the influence of pharmaceutical additives and various pharmaceutical dosage forms on the performance of the drug product.

Course content:

Module-I

Preformulation Studies: Introduction to preformulation, goals and objectives, study of physicochemical characteristics of drug substances.

a. Physical properties: Physical form (crystal & amorphous), particle size, shape, flow properties, solubility profile (pKa, pH, partition coefficient), polymorphism

b. Chemical Properties: Hydrolysis, oxidation, reduction, racemisation, polymerization BCS classification of drugs & its significant. Application of preformulation considerations in the development of solid, liquid oral and parenteral dosage forms and its impact on stability of dosage forms.

Module-II

Tablets:

a. Introduction, ideal characteristics of tablets, classification of tablets. Excipients, Formulation of tablets, granulation methods, compression and processing problems. Equipments and tablet tooling.

b. Tablet coating: Types of coating, coating materials, formulation of coating composition, methods of coating, equipment employed and defects in coating.

c. Quality control tests: In process and finished product tests

Liquid orals: Formulation and manufacturing consideration of syrups and elixirs suspensions and emulsions; Filling and packaging; evaluation of liquid orals official in pharmacopoeia

Module-III

Capsules:

a. **Hard gelatin capsules:** Introduction, Production of hard gelatin capsule shells. Size of capsules, Filling, finishing and special techniques of formulation of hard gelatin capsules, manufacturing defects. In process and final product quality control tests for capsules.

b. **Soft gelatin capsules:** Nature of shell and capsule content, size of capsules, importance of base adsorption and minim/gram factors, production, in process and final product quality control tests. Packing, storage and stability testing of soft gelatin capsules and their applications.

Pellets: Introduction, formulation requirements, pelletization process, equipments for manufacture of pellets

Module-IV

Parenteral Products:

a. Definition, types, advantages and limitations. Preformulation factors and essential requirements, vehicles, additives, importance of isotonicity

b. Production procedure, production facilities and controls, aseptic processing

c. Formulation of injections, sterile powders, large volume parenterals and lyophilized products.

d. Containers and closures selection, filling and sealing of ampoules, vials and infusion fluids. Quality control tests of parenteral products.

Ophthalmic Preparations: Introduction, formulation considerations; formulation of eye drops, eye ointments and eye lotions; methods of preparation; labeling, containers; evaluation of ophthalmic preparations

Module-V

Cosmetics: Formulation and preparation of the following cosmetic preparations: lipsticks, shampoos, cold cream and vanishing cream, tooth pastes, hair dyes and sunscreens.

Pharmaceutical Aerosols: Definition, propellants, containers, valves, types of aerosol systems; formulation and manufacture of aerosols; Evaluation of aerosols; Quality control and stability studies.

Packaging Materials Science: Materials used for packaging of pharmaceutical products, factors influencing choice of containers, legal and official requirements for containers, stability aspects of packaging materials, quality control tests.

Examination Scheme :

Components	CT	HA	S/V/Q	ATTD	EE
Weightage(%)	15	3	3	4	75

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, ATTD: Attendance EE: End Semester Examination

PHARMACEUTICAL JURISPRUDENCE

Course Code : BP505T

Credit Units: 04

Course Objectives: This course is designed to impart basic knowledge on important legislations related to the profession of pharmacy in India.

Course Content:

Module-I

Drugs and Cosmetics Act, 1940 and its rules 1945:

Objectives, Definitions, Legal definitions of schedules to the Act and Rules

Import of drugs – Classes of drugs and cosmetics prohibited from import, Import under license or permit. Offences and penalties.

Manufacture of drugs – Prohibition of manufacture and sale of certain drugs,

Conditions for grant of license and conditions of license for manufacture of drugs,

Manufacture of drugs for test, examination and analysis, manufacture of new drug, loan license and repacking license.

Module-II

Drugs and Cosmetics Act, 1940 and its rules 1945.

Detailed study of Schedule G, H, M, N, P, T, U, V, X, Y, Part XII B, Sch F & DMR (OA)

Sale of Drugs – Wholesale, Retail sale and Restricted license. Offences and penalties

Labeling & Packing of drugs- General labeling requirements and specimen labels for drugs and cosmetics, List of permitted colors. Offences and penalties.

Administration of the Act and Rules – Drugs Technical Advisory Board, Central drugs

Laboratory, Drugs Consultative Committee, Government drug analysts, Licensing authorities, controlling authorities, Drugs Inspectors

Module-III

Pharmacy Act –1948: Objectives, Definitions, Pharmacy Council of India; its constitution and functions, Education Regulations, State and Joint state pharmacy councils; constitution and functions, Registration of Pharmacists, Offences and Penalties

Medicinal and Toilet Preparation Act –1955: Objectives, Definitions, Licensing,

Manufacture In bond and Outside bond, Export of alcoholic preparations,

Manufacture of Ayurvedic, Homeopathic, Patent & Proprietary Preparations.

Offences and Penalties.

Narcotic Drugs and Psychotropic substances Act-1985 and Rules: Objectives, Definitions, Authorities and Officers, Constitution and Functions of narcotic & Psychotropic Consultative Committee, National Fund for Controlling the Drug Abuse, Prohibition, Control and Regulation, opium poppy cultivation and production of poppy straw, manufacture, sale and export of opium, Offences and Penalties

Module -IV

Study of Salient Features of Drugs and Magic Remedies Act and its rules: Objectives, Definitions, Prohibition of certain advertisements, Classes of Exempted advertisements, Offences and Penalties

Prevention of Cruelty to animals Act-1960: Objectives, Definitions, Institutional Animal Ethics Committee, CPCSEA guidelines for Breeding and Stocking of Animals, Performance of Experiments, Transfer and acquisition of animals for experiment, Records, Power to suspend or revoke registration, Offences and Penalties

National Pharmaceutical Pricing Authority: Drugs Price Control Order (DPCO)- 2013. Objectives, Definitions, Sale prices of bulk drugs, Retail price of formulations, Retail price and ceiling price of scheduled formulations, National List of Essential Medicines (NLEM)

Module-V

Pharmaceutical Legislations – A brief review, Introduction, Study of drugs enquiry committee, Health survey and development committee, Hathi committee and Mudaliar committee

Code of Pharmaceutical ethics Definition, Pharmacist in relation to his job, trade, medical profession and his profession, Pharmacist's oath

Medical Termination of Pregnancy Act

Right to Information Act

Introduction to Intellectual Property Rights (IPR)

Examination Scheme :

Components	CT	HA	S/V/Q	ATTD	EE

INDUSTRIAL PHARMACY PRACTICAL-I

Course Code : BP506P

Credit Units: 02

List of experiments

1. Preformulation studies on paracetamol/asparin/or any other drug
2. Preparation and evaluation of Paracetamol tablets
3. Preparation and evaluation of Aspirin tablets
4. Coating of tablets- film coating of tables/granules
5. Preparation and evaluation of Tetracycline capsules
6. Preparation of Calcium Gluconate injection
7. Preparation of Ascorbic Acid injection
8. Qulaity control test of (as per IP) marketed tablets and capsules
9. Preparation of Eye drops/ and Eye ointments
10. Preparation of Creams (cold / vanishing cream)
11. Evaluation of Glass containers (as per IP)

Examination Scheme :

PHARMACOLOGY PRACTICAL-II

Course Code : BP507P

Credit Units: 02

List of experiments

1. Introduction to *in-vitro* pharmacology and physiological salt solutions.
2. Effect of drugs on isolated frog heart.
3. Effect of drugs on blood pressure and heart rate of dog.
4. Study of diuretic activity of drugs using rats/mice.
5. DRC of acetylcholine using frog rectus abdominis muscle.
6. Effect of physostigmine and atropine on DRC of acetylcholine using frog rectus abdominis muscle and rat ileum respectively.
7. Bioassay of histamine using guinea pig ileum by matching method.
8. Bioassay of oxytocin using rat uterine horn by interpolation method.
9. Bioassay of serotonin using rat fundus strip by three point bioassay.
10. Bioassay of acetylcholine using rat ileum/colon by four point bioassay.
11. Determination of PA₂ value of prazosin using rat anococcygeus muscle (by Schilds plot method).
12. Determination of PD₂ value using guinea pig ileum.
13. Effect of spasmogens and spasmolytics using rabbit jejunum.
14. Anti-inflammatory activity of drugs using carrageenan induced paw-edema model.
15. Analgesic activity of drug using central and peripheral methods

Note: All laboratory techniques and animal experiments are demonstrated by simulated experiments by softwares and videos

PHARMACOGNOSY AND PHYTOCHEMISTRY PRACTICAL-II

Course Code : BP508P

Credit Units: 02

List of Experiments

1. Morphology, histology and powder characteristics & extraction & detection of: Cinchona, Cinnamon, Senna, Clove, Ephedra, Fennel and Coriander
2. Exercise involving isolation & detection of active principles
 - a. Caffeine - from tea dust.
 - b. Diosgenin from Dioscorea
 - c. Atropine from Belladonna
 - d. Sennosides from Senna
3. Separation of sugars by Paper chromatography
4. TLC of herbal extract
5. Distillation of volatile oils and detection of phytoconstituents by TLC
6. Analysis of crude drugs by chemical tests: (i) Asafoetida (ii) Benzoin (iii) Colophony (iv) Aloes (v) Myrrh

Examination Scheme :

HERBAL DRUG TECHNOLOGY

Course Code : BP603T

Credit Units: 04

Course Objectives: This subject gives the student the knowledge of basic understanding of herbal drug industry, the quality of raw material, guidelines for quality of herbal drugs, herbal cosmetics, natural sweeteners, nutraceutical etc. The subject also emphasizes on Good Manufacturing Practices (GMP), patenting and regulatory issues of herbal drugs

Course Content:

Module-I

Herbs as raw materials: Definition of herb, herbal medicine, herbal medicinal product, herbal drug preparation. Source of Herbs. Selection, identification and authentication of herbal materials. Processing of herbal raw material

Biodynamic Agriculture: Good agricultural practices in cultivation of medicinal plants including Organic farming. Pest and Pest management in medicinal plants: Biopesticides/Bioinsecticides.

Indian Systems of Medicine

- a) Basic principles involved in Ayurveda, Siddha, Unani and Homeopathy
- b) Preparation and standardization of Ayurvedic formulations viz Aristas and Asawas, Ghutika, Churna, Lehya and Bhasma.

Module-II

Nutraceuticals: General aspects, Market, growth, scope and types of products available in the market. Health benefits and role of Nutraceuticals in ailments like Diabetes, CVS diseases, Cancer, Irritable bowel syndrome and various Gastro intestinal diseases. Study of following herbs as health food: Alfaalfa, Chicory, Ginger, Fenugreek, Garlic, Honey, Amla, Ginseng, Ashwagandha, Spirulina

Herbal-Drug and Herb-Food Interactions: General introduction to interaction and classification. Study of following drugs and their possible side effects and interactions: Hypercium, kava-kava, Ginkobiloba, Ginseng, Garlic, Pepper & Ephedra.

Module-III

Herbal Cosmetics

Sources and description of raw materials of herbal origin used via, fixed oils, waxes, gums colours, perfumes, protective agents, bleaching agents, antioxidants in products such as skin care, hair care and oral hygiene products.

Herbal excipients:

Herbal Excipients – Significance of substances of natural origin as excipients – colorants, sweeteners, binders, diluents, viscosity builders, disintegrants, flavors & perfumes.

Herbal formulations :

Conventional herbal formulations like syrups, mixtures and tablets and Novel dosage forms like phytosomes

Module-IV

Evaluation of Drugs WHO & ICH guidelines for the assessment of herbal drugs Stability testing of herbal drugs.

Patenting and Regulatory requirements of natural products:

- a) Definition of the terms: Patent, IPR, Farmers right, Breeder's right, Bioprospecting and Biopiracy
- b) Patenting aspects of Traditional Knowledge and Natural Products. Case study of Curcuma & Neem.

Regulatory Issues - Regulations in India (ASU DTAB, ASU DCC), Regulation of manufacture of ASU drugs - Schedule Z of Drugs & Cosmetics Act for ASU drugs.

Module-V

General Introduction to Herbal Industry: Herbal drugs industry: Present scope and future prospects. A brief account of plant based industries and institutions involved in work on medicinal and aromatic plants in India.

Schedule T – Good Manufacturing Practice of Indian systems of medicine

Components of GMP (Schedule – T) and its objectives

Infrastructural requirements, working space, storage area, machinery and equipments, standard operating procedures, health and hygiene, documentation and records.

Examination Scheme :

Components	CT	HA	S/V/Q	ATTD	EE
Weightage(%)	15	3	3	4	75

PHARMACEUTICAL QUALITY ASSURANCE

Course Code : BP606T

Credit Units: 04

Course Objectives: This course deals with the various aspects of quality control and quality assurance aspects of pharmaceutical industries. It deals with the important aspects like cGMP, QC tests, documentation, quality certifications and regulatory affairs.

Course Content:

Module-I

Quality Assurance and Quality Management concepts: Definition and concept of Quality control, Quality assurance and GMP

Total Quality Management (TQM): Definition, elements, philosophies

ICH Guidelines: purpose, participants, process of harmonization, Brief overview of QSEM, with special emphasis on Q-series guidelines, ICH stability testing guidelines

Quality by design (QbD): Definition, overview, elements of QbD program, tools

ISO 9000 & ISO14000: Overview, Benefits, Elements, steps for registration

NABL accreditation : Principles and procedures

Module-II

Organization and personnel: Personnel responsibilities, training, hygiene and personal records.

Premises: Design, construction and plant layout, maintenance, sanitation, environmental control, utilities and maintenance of sterile areas, control of contamination.

Equipments and raw materials: Equipment selection, purchase specifications, maintenance, purchase specifications and maintenance of stores for raw materials.

Module-III

Quality Control: Quality control test for containers, rubber closures and secondary packing materials.

Good Laboratory Practices: General Provisions, Organization and Personnel, Facilities, Equipment, Testing Facilities Operation, Test and Control Articles, Protocol for Conduct of a Nonclinical Laboratory Study, Records and Reports, Disqualification of Testing Facilities

Module-IV

Complaints: Complaints and evaluation of complaints, Handling of return good, recalling and waste disposal.

Document maintenance in pharmaceutical industry: Batch Formula Record, Master Formula Record, SOP, Quality audit, Quality Review and Quality documentation, Reports and documents, distribution records.

Module-V

Calibration and Validation: Introduction, definition and general principles of calibration, qualification and validation, importance and scope of validation, types of validation, validation master plan. Calibration of pH meter, Qualification of UV-Visible spectrophotometer, General principles of Analytical method Validation.

Warehousing: Good warehousing practice, materials management

MEDICINAL CHEMISTRY PRACTICAL-III

Course Code : BP607P

Credit Units: 02

List of experiments

I Preparation of drugs and intermediates

- 1 Sulphanilamide
- 2 7-Hydroxy, 4-methyl coumarin
- 3 Chlorobutanol
- 4 Triphenyl imidazole
- 5 Tolbutamide
- 6 Hexamine

II Assay of drugs

- 1 Isonicotinic acid hydrazide
- 2 Chloroquine
- 3 Metronidazole
- 4 Dapsone
- 5 Chlorpheniramine maleate
- 6 Benzyl penicillin

III Preparation of medicinally important compounds or intermediates by Microwave irradiation technique

IV Drawing structures and reactions using chem draw®

V Determination of physicochemical properties such as logP, clogP, MR, Molecular weight, Hydrogen bond donors and acceptors for class of drugs course content using drug design software Drug likeliness screening (Lipinskies RO5)

PHARMACOLOGY PRACTICAL-III

Course Code : BP608P

Credit Units: 02

List of experiments

1. Dose calculation in pharmacological experiments
2. Antiallergic activity by mast cell stabilization assay
3. Study of anti-ulcer activity of a drug using pylorus ligand (SHAY) rat model and NSAIDS induced ulcer model.
4. Study of effect of drugs on gastrointestinal motility
5. Effect of agonist and antagonists on guinea pig ileum
6. Estimation of serum biochemical parameters by using semi- autoanalyser
7. Effect of saline purgative on frog intestine
8. Insulin hypoglycemic effect in rabbit
9. Test for pyrogens (rabbit method)
10. Determination of acute oral toxicity (LD50) of a drug from a given data
11. Determination of acute skin irritation / corrosion of a test substance
12. Determination of acute eye irritation / corrosion of a test substance
13. Calculation of pharmacokinetic parameters from a given data
14. Biostatistics methods in experimental pharmacology(student's t test, ANOVA)
15. Biostatistics methods in experimental pharmacology (Chi square test, Wilcoxon Signed Rank test)

**Experiments are demonstrated by simulated experiments/videos*

HERBAL DRUG TECHNOLOGY PRACTICAL

Course Code : BP609P

Credit Units: 02

List of experiments

1. To perform preliminary phytochemical screening of crude drugs.
2. Determination of the alcohol content of Asava and Arista
3. Evaluation of excipients of natural origin
4. Incorporation of prepared and standardized extract in cosmetic formulations like creams, lotions and shampoos and their evaluation.
5. Incorporation of prepared and standardized extract in formulations like syrups, mixtures and tablets and their evaluation as per Pharmacopoeial requirements.
6. Monograph analysis of herbal drugs from recent Pharmacopoeias
7. Determination of Aldehyde content
8. Determination of Phenol content
9. Determination of total alkaloids

Examination Scheme :

INDUSTRIAL PHARMACY-II

Course Code : BP702T

Credit Units: 04

Course Objectives: This course is designed to impart fundamental knowledge on pharmaceutical product development and translation from laboratory to market

Course Content:

Module-I

Pilot plant scale up techniques: General considerations - including significance of personnel requirements, space requirements, raw materials, Pilot plant scale up considerations for solids, liquid orals, semi solids and relevant documentation, SUPAC guidelines, Introduction to platform technology

Module-II

Technology development and transfer: WHO guidelines for Technology Transfer(TT): Terminology, Technology transfer protocol, Quality risk management, Transfer from R & D to production (Process, packaging and cleaning), Granularity of TT Process (API, excipients, finished products, packaging materials) Documentation, Premises and equipments, qualification and validation, quality control, analytical method transfer, Approved regulatory bodies and agencies, Commercialization - practical aspects and problems (case studies), TT agencies in India - APCTD, NRDC, TIFAC, BCIL, TBSE / SIDBI; TT related documentation - confidentiality agreement, licensing, MoUs, legal issues

Module-III

Regulatory affairs: Introduction, Historical overview of Regulatory Affairs, Regulatory authorities, Role of Regulatory affairs department, Responsibility of Regulatory Affairs Professionals

Regulatory requirements for drug approval: Drug Development Teams, Non-Clinical Drug Development, Pharmacology, Drug Metabolism and Toxicology, General considerations of Investigational New Drug (IND) Application, Investigator's Brochure (IB) and New Drug Application (NDA), Clinical research / BE studies, Clinical Research Protocols, Biostatistics in Pharmaceutical Product Development, Data Presentation for FDA Submissions, Management of Clinical Studies.

Module-IV

Quality Management Systems: Quality management & Certifications: Concept of Quality, Total Quality Management, Quality by Design (QbD), Six Sigma concept, Out of Specifications (OOS), Change control, Introduction to ISO 9000 series of quality systems standards, ISO 14000, NABL, GLP

Module-V

Indian Regulatory Requirements: Central Drug Standard Control Organization (CDSCO) and State Licensing Authority: Organization, Responsibilities, Certificate of Pharmaceutical Product (COPP), Regulatory requirements and approval procedures for New Drugs.

Examination Scheme :

Components	CT	HA	S/V/Q	ATTD	EE
Weightage(%)	15	3	3	4	75

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, ATTD: Attendance EE: End Semester Examination

PHARMACY PRACTICE

Course Code : BP703T

Credit Units: 04

Course Objectives: In the changing scenario of pharmacy practice in India, for successful practice of Hospital Pharmacy, the students are required to learn various skills like drug distribution, drug information, and therapeutic drug monitoring for improved patient care. In commModuley pharmacy, students will be learning various skills such as dispensing of drugs, responding to minor ailments by providing suitable safe medication, patient counselling for improved patient care in the commModuley set up.

Course Contents:

Module-I

a) Hospital and it's organization: Definition, Classification of hospital- Primary, Secondary and Tertiary hospitals, Classification based on clinical and non- clinical basis, Organization Structure of a Hospital, and Medical staffs involved in the hospital and their functions.

b) Hospital pharmacy and its organization: Definition, functions of hospital pharmacy, Organization structure, Location, Layout and staff requirements, and Responsibilities and functions of hospital pharmacists.

c) Adverse drug reaction: Classifications - Excessive pharmacological effects, secondary pharmacological effects, idiosyncrasy, allergic drug reactions, genetically determined toxicity, toxicity following sudden withdrawal of drugs, Drug interaction- beneficial interactions, adverse interactions, and pharmacokinetic drug interactions, Methods for detecting drug interactions, spontaneous case reports and record linkage studies, and Adverse drug reaction reporting and management.

d) CommModuley Pharmacy: Organization and structure of retail and wholesale drug store, types and design, Legal requirements for establishment and maintenance of a drug store, Dispensing of proprietary products, maintenance of records of retail and wholesale drug store.

Module-II

a) Drug distribution system in a hospital: Dispensing of drugs to inpatients, types of drug distribution systems, charging policy and labelling, Dispensing of drugs to ambulatory patients, and Dispensing of controlled drugs.

b) Hospital formulary: Definition, contents of hospital formulary, Differentiation of hospital formulary and Drug list, preparation and revision, and addition and deletion of drug from hospital formulary.

c) Therapeutic drug monitoring: Need for Therapeutic Drug Monitoring, Factors to be considered during the Therapeutic Drug Monitoring, and Indian scenario for Therapeutic Drug Monitoring.

d) Medication adherence: Causes of medication non-adherence, pharmacist role in the medication adherence, and monitoring of patient medication adherence.

e) Patient medication history interview: Need for the patient medication history interview, medication interview forms.

f) CommModuley pharmacy management: Financial, materials, staff, and infrastructure requirements.

Module-III

a) Pharmacy and therapeutic committee: Organization, functions, Policies of the pharmacy and therapeutic committee in including drugs into formulary, inpatient and outpatient prescription, automatic stop order, and emergency drug list preparation.

b) Drug information services: Drug and Poison information centre, Sources of drug information, Computerised services, and storage and retrieval of information.

c) Patient counseling: Definition of patient counseling; steps involved in patient counseling, and Special

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

cases that require the pharmacist

d) Education and training program in the hospital: Role of pharmacist in the education and training program, Internal and external training program, Services to the nursing homes/clinics, Code of ethics for commModuley pharmacy, and Role of pharmacist in the interdepartmental communication and commModuley health education.

e) Prescribed medication order and communication skills: Prescribed medication order- interpretation and legal requirements, and Communication skills- communication with prescribers and patients.

Module-IV

a) Budget preparation and implementation: Budget preparation and implementation

b) Clinical Pharmacy: Introduction to Clinical Pharmacy, Concept of clinical pharmacy, functions and responsibilities of clinical pharmacist, Drug therapy monitoring - medication chart review, clinical review, pharmacist intervention, Ward round participation, Medication history and Pharmaceutical care. Dosing pattern and drug therapy based on Pharmacokinetic & disease pattern.

c) Over the counter (OTC) sales: Introduction and sale of over the counter, and Rational use of common over the counter medications.

Module-V

a) Drug store management and inventory control: Organisation of drug store, types of materials stocked and storage conditions, Purchase and inventory control: principles, purchase procedure, purchase order, procurement and stocking, Economic order quantity, Reorder quantity level, and Methods used for the analysis of the drug expenditure

b) Investigational use of drugs: Description, principles involved, classification, control, identification, role of hospital pharmacist, advisory committee.

c) Interpretation of Clinical Laboratory Tests: Blood chemistry, hematology, and urinalysis

Examination Scheme :

Components	CT	HA	S/V/Q	ATTD	EE
Weightage(%)	15	3	3	4	75

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, ATTD: Attendance EE: End Semester Examination

NOVEL DRUG DELIVERY SYSTEMS

Course Code : BP704T

Credit Units: 04

Course Objectives: This subject is designed to impart basic knowledge on the area of novel drug delivery systems.

Course Content:

Module-I

Controlled drug delivery systems: Introduction, terminology/definitions and rationale, advantages, disadvantages, selection of drug candidates. Approaches to design controlled release formulations based on diffusion, dissolution and ion exchange principles. Physicochemical and biological properties of drugs relevant to controlled release formulations

Polymers: Introduction, classification, properties, advantages and application of polymers in formulation of controlled release drug delivery systems.

Module-II

Microencapsulation: Definition, advantages and disadvantages, microspheres /microcapsules, microparticles, methods of microencapsulation, applications

Mucosal Drug Delivery system: Introduction, Principles of bioadhesion / mucoadhesion, concepts, advantages and disadvantages, transmucosal permeability and formulation considerations of buccal delivery systems

Implantable Drug Delivery Systems: Introduction, advantages and disadvantages, concept of implants and osmotic pump

Module-III

Transdermal Drug Delivery Systems: Introduction, Permeation through skin, factors affecting permeation, permeation enhancers, basic components of TDDS, formulation approaches

Gastroretentive drug delivery systems: Introduction, advantages, disadvantages, approaches for GRDDS – Floating, high density systems, inflatable and gastroadhesive systems and their applications

Nasopulmonary drug delivery system: Introduction to Nasal and Pulmonary routes of drug delivery, Formulation of Inhalers (dry powder and metered dose), nasal sprays, nebulizers

Module-IV

Targeted drug Delivery: Concepts and approaches advantages and disadvantages, introduction to liposomes, niosomes, nanoparticles, monoclonal antibodies and their applications

Module-V

Ocular Drug Delivery Systems: Introduction, intra ocular barriers and methods to overcome – Preliminary study, ocular formulations and ocuserts

Intrauterine Drug Delivery Systems: Introduction, advantages and disadvantages, development of intra uterine devices (IUDs) and applications

Examination Scheme :

Components	CT	HA	S/V/Q	ATTD	EE
Weightage(%)	15	3	3	4	75

INSTRUMENTAL METHODS OF ANALYSIS PRACTICAL

Course Code : BP705P

Credit Units: 02

List of experiments

- 1 Determination of absorption maxima and effect of solvents on absorption maxima of organic compounds
- 2 Estimation of dextrose by colorimetry
- 3 Estimation of sulfanilamide by colorimetry
- 4 Simultaneous estimation of ibuprofen and paracetamol by UV spectroscopy
- 5 Assay of paracetamol by UV- Spectrophotometry
- 6 Estimation of quinine sulfate by fluorimetry
- 7 Study of quenching of fluorescence
- 8 Determination of sodium by flame photometry
- 9 Determination of potassium by flame photometry
- 10 Determination of chlorides and sulphates by nephelo turbidometry
- 11 Separation of amino acids by paper chromatography
- 12 Separation of sugars by thin layer chromatography
- 13 Separation of plant pigments by column chromatography
- 14 Demonstration experiment on HPLC
- 15 Demonstration experiment on Gas Chromatography

PRACTICE SCHOOL

Course Code: BP706PS

Credit Units: 06

Objectives: Every candidate shall undergo practice school for a period of 150 hours evenly distributed throughout the semester. The student shall opt any one of the domains for practice school declared by the program committee from time to time. At the end of the practice school, every student shall submit a printed report (in triplicate) on the practice school he/she attended (not more than 25 pages). Along with the exams of Semester VII, the report submitted by the student, knowledge and skills acquired by the student through practice school shall be evaluated by the subject experts at college level and grade point shall be awarded.

Examination Scheme:

Total: 150 marks

Internal Marks : 25

Continuous Mode :

Assignment	Periodic report
10	15

External Marks : 125

Objective(s) of the work done	15 Marks
Learning Outcomes	30 Marks
Presentation of Work	30 Marks
Communication skills	20 Marks
Question and answer skills	30 Marks

Total = 125 Marks

BIOSTATISTICS AND RESEARCH METHODOLOGY

Course Code : BP801T

Credit Units: 04

Course Objectives: To understand the applications of Biostatistics in Pharmacy. This subject deals with descriptive statistics, Graphics, Correlation, Regression, logistic regression Probability theory, Sampling technique, Parametric tests, Non Parametric tests, ANOVA, Introduction to Design of Experiments, Phases of Clinical trials and Observational and Experimental studies, SPSS, R and MINITAB statistical software's, analyzing the statistical data using Excel.

Course Content:

Module-I

Introduction: Statistics, Biostatistics, Frequency distribution

Measures of central tendency: Mean, Median, Mode- Pharmaceutical examples

Measures of dispersion: Dispersion, Range, standard deviation, Pharmaceutical problems

Correlation: Definition, Karl Pearson's coefficient of correlation, Multiple correlation - Pharmaceuticals examples

Module-II

Regression: Curve fitting by the method of least squares, fitting the lines $y = a + bx$ and $x = a + by$, Multiple regression, standard error of regression- Pharmaceutical Examples

Probability: Definition of probability, Binomial distribution, Normal distribution, Poisson's distribution, properties - problems

Sample, Population, large sample, small sample, Null hypothesis, alternative hypothesis, sampling, essence of sampling, types of sampling, Error-I type, Error-II type, Standard error of mean (SEM) - Pharmaceutical examples

Parametric test: t-test (Sample, Pooled or Unpaired and Paired) , ANOVA, (One way and Two way), Least Significance difference

Module-III

Non Parametric tests: Wilcoxon Rank Sum Test, Mann-Whitney U test, Kruskal-Wallis test, Friedman Test

Introduction to Research: Need for research, Need for design of Experiments, Experimental Design Technique, plagiarism

Graphs: Histogram, Pie Chart, Cubic Graph, response surface plot, Counter Plot graph

Designing the methodology: Sample size determination and Power of a study, Report writing and presentation of data, Protocol, Cohorts studies, Observational studies, Experimental studies, Designing clinical trial, various phases.

Module-IV

Blocking and confounding system for Two-level factorials

Regression modeling: Hypothesis testing in Simple and Multiple regression models

Introduction to Practical components of Industrial and Clinical Trials Problems: Statistical Analysis Using Excel, SPSS, MINITAB®, DESIGN OF EXPERIMENTS, R - Online Statistical Software's to Industrial and Clinical trial approach

Module-V

Design and Analysis of experiments:

Factorial Design: Definition, 2², 2³ design. Advantage of factorial design

Response Surface methodology: Central composite design, Historical design, Optimization Techniques

SOCIAL AND PREVENTIVE PHARMACY

Course Code : BP802T

Credit Units: 04

Course Objectives: The purpose of this course is to introduce to students a number of health issues and their challenges. This course also introduced a number of national health programmes. The roles of the pharmacist in these contexts are also discussed.

Course Content:

Module-I:

Concept of health and disease: Definition, concepts and evaluation of public health. Understanding the concept of prevention and control of disease, social causes of diseases and social problems of the sick.

Social and health education: Food in relation to nutrition and health, Balanced diet, Nutritional deficiencies, Vitamin deficiencies, Malnutrition and its prevention.

Sociology and health: Socio cultural factors related to health and disease, Impact of urbanization on health and disease, Poverty and health

Hygiene and health: personal hygiene and health care; avoidable habits

Module-II:

Preventive medicine: General principles of prevention and control of diseases such as cholera, SARS, Ebola virus, influenza, acute respiratory infections, malaria, chicken guinea, dengue, lymphatic filariasis, pneumonia, hypertension, diabetes mellitus, cancer, drug addiction-drug substance abuse

Module-III:

National health programs, its objectives, functioning and outcome of the following: HIV AND AIDS control programme, TB, Integrated disease surveillance program (IDSP), National leprosy control programme, National mental health program, National programme for prevention and control of deafness, Universal immunization programme, National programme for control of blindness, Pulse polio programme.

Module-IV:

National health intervention programme for mother and child, National family welfare programme, National tobacco control programme, National Malaria Prevention Program, National programme for the health care for the elderly, Social health programme; role of WHO in Indian national program

Module-V:

CommModuley services in rural, urban and school health: Functions of PHC, Improvement in rural sanitation, national urban health mission, Health promotion and education in school.

Examination Scheme :

Components	CT	HA	S/V/Q	ATTD	EE

QUALITY CONTROL AND STANDARDIZATION OF HERBALS

Course Code : BP806ET

Credit Units: 04

Course Objectives: In this subject the student learns about the various methods and guidelines for evaluation and standardization of herbs and herbal drugs. The subject also provides an opportunity for the student to learn cGMP, GAP and GLP in traditional system of medicines.

Course Contents:

Module-I

Basic tests for drugs – Pharmaceutical substances, Medicinal plants materials and dosage
Forms WHO guidelines for quality control of herbal drugs.
Evaluation of commercial crude drugs intended for use

Module-II

Quality assurance in herbal drug industry of cGMP, GAP, GMP and GLP in traditional system of medicine.
WHO Guidelines on current good manufacturing Practices (cGMP) for Herbal Medicines
WHO Guidelines on GACP for Medicinal Plants.

Module-III

EU and ICH guidelines for quality control of herbal drugs.
Research Guidelines for Evaluating the Safety and Efficacy of Herbal Medicines

Module-IV

Stability testing of herbal medicines. Application of various chromatographic techniques in standardization of herbal products.
Preparation of documents for new drug application and export registration
GMP requirements and Drugs & Cosmetics Act provisions.

Module-V

Regulatory requirements for herbal medicines.
WHO guidelines on safety monitoring of herbal medicines in pharmacovigilance systems
Comparison of various Herbal Pharmacopoeias.
Role of chemical and biological markers in standardization of herbal products

Examination Scheme :

Components	CT	HA	S/V/Q	ATTD	EE

COMPUTER AIDED DRUG DESIGN

Course Code : BP807ET

Credit Units: 04

Course Objectives: This subject is designed to provide detailed knowledge of rational drug design process and various techniques used in rational drug design process.

Course Content:

Module-I

Introduction to Drug Discovery and Development

Stages of drug discovery and development

Lead discovery and Analog Based Drug Design

Rational approaches to lead discovery based on traditional medicine,

Random screening, Non-random screening, serendipitous drug discovery, lead discovery based on drug metabolism, lead discovery based on clinical observation.

Analog Based Drug Design: Bioisosterism, Classification, Bioisosteric replacement. Any three case studies

Module-II

Quantitative Structure Activity Relationship (QSAR): SAR versus QSAR, History and development of QSAR, Types of physicochemical parameters, experimental and theoretical approaches for the determination of physicochemical parameters such as Partition coefficient, Hammett's substituent constant and Tafts steric constant. Hansch analysis, Free Wilson analysis, 3D-QSAR approaches like COMFA and COMSIA.

Module-III

Molecular Modeling and virtual screening techniques

Virtual Screening techniques: Drug likeness screening, Concept of pharmacophore mapping and pharmacophore based Screening,

Molecular docking: Rigid docking, flexible docking, manual docking, Docking based screening. *De novo* drug design.

Module-IV

Informatics & Methods in drug design: Introduction to Bioinformatics, chemoinformatics. ADME databases, chemical, biochemical and pharmaceutical databases.

Module-V

Molecular Modeling: Introduction to molecular mechanics and quantum mechanics. Energy Minimization methods and Conformational Analysis, global conformational minima determination.

Examination Scheme :

COSMETIC SCIENCE

Course Code : BP809ET

Credit Units: 04

Course Contents :

Module-I

Classification of cosmetic and cosmeceutical products

Definition of cosmetics as per Indian and EU regulations, Evolution of cosmeceuticals from cosmetics, cosmetics as quasi and OTC drugs

Cosmetic excipients: Surfactants, rheologymodifiers, humectants, emollients, preservatives. Classification and application

Skin: Basic structure and function of skin.

Hair: Basic structure of hair. Hair growth cycle.

Oral Cavity: Common problem associated with teeth and gums.

Module-II

Principles of formulation and building blocks of skin care products: Face wash, Moisturizing cream, Cold Cream, Vanishing cream and their advantages and disadvantages. Application of these products in formulation of cosmeceuticals.

Antiperspirants & deodorants- Actives & mechanism of action.

Principles of formulation and building blocks of Hair care products: Conditioning shampoo, Hair conditioner, anti-dandruff shampoo. Hair oils. Chemistry and formulation of Para-phenylene diamine based hair dye. Principles of formulation and building blocks of oral care products: Toothpaste for bleeding gums, sensitive teeth. Teeth whitening, Mouthwash.

Module-III

Sun protection, Classification of Sunscreens and SPF.

Role of herbs in cosmetics:

Skin Care: Aloe and turmeric

Hair care: Henna and amla.

Oral care: Neem and clove

Analytical cosmetics: BIS specification and analytical methods for shampoo, skincream and toothpaste.

Module-IV

Principles of Cosmetic Evaluation: Principles of sebumeter, corneometer. Measurement of TEWL, Skin Color, Hair tensile strength, Hair combing properties. Soaps, and syndet bars. Evolution and skin benefits.

Module-V

Oily and dry skin, causes leading to dry skin, skin moisturisation. Basic understanding of the terms Comedogenic, dermatitis. Cosmetic problems associated with Hair and scalp: Dandruff, Hair fall causes. Cosmetic problems associated with skin: blemishes, wrinkles, acne, prickly heat and body odor. Antiperspirants and Deodorants- Actives and mechanism of action

Course Code : BP810ET

Credit Units: 04

Course Objectives:

This subject is designed to impart the basic knowledge of preclinical studies in experimental animals including design, conduct and interpretations of results.

Course Contents:

Module-I

Laboratory Animals:

Study of CPCSEA and OECD guidelines for maintenance, breeding and conduct of experiments on laboratory animals, Common lab animals: Description and applications of different species and strains of animals. Popular transgenic and mutant animals. Techniques for collection of blood and common routes of drug administration in laboratory animals, Techniques of blood collection and euthanasia.

Module-II

Preclinical screening models

a. Introduction: Dose selection, calculation and conversions, preparation of drug solution/suspensions, grouping of animals and importance of sham negative and positive control groups. Rationale for selection of animal species and sex for the study.

b. **Study of screening animal models for:** Diuretics, nootropics, anti-Parkinson's, antiasthmatics,

Preclinical screening models: for CNS activity- analgesic, antipyretic, anti-inflammatory, general anaesthetics, sedative and hypnotics, antipsychotic, antidepressant, antiepileptic, antiparkinsonism, alzheimer's disease

Module-III

Preclinical Screening Models: for ANS activity, sympathomimetics, sympatholytics, parasympathomimetics, parasympatholytics, skeletal muscle relaxants, drugs acting on eye, local anaesthetics

Module-IV

Preclinical screening models: for CVS activity- antihypertensives, diuretics, antiarrhythmic, antidyslipidemic, anti aggregatory, coagulants, and anticoagulants. Preclinical screening models for other important drugs like antiulcer, antidiabetic, anticancer and antiasthmatics.

Research methodology and Bio-statistics: Selection of research topic, review of literature, research hypothesis and study design Pre-clinical data analysis and interpretation using Students 't' test and One-way ANOVA. Graphical representation of data

Examination Scheme :

Components	CT	HA	S/V/Q	ATTD	EE
Weightage(%)	15	3	3	4	75

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, ATTD: Attendance EE: End Semester Examination

ADVANCED INSTRUMENTATION TECHNIQUES

Course Code : BP811ET

Credit Units : 04

Course Objectives: This subject deals with the application of instrumental methods in qualitative and quantitative analysis of drugs. This subject is designed to impart advanced knowledge on the principles and instrumentation of spectroscopic and chromatographic hyphenated techniques. This also emphasizes on theoretical and practical knowledge on modern analytical instruments that are used for drug testing.

Course Content:

Module-I

Nuclear Magnetic Resonance spectroscopy: Principles of H-NMR and C-NMR, chemical shift, factors affecting chemical shift, coupling constant, Spin - spin coupling, relaxation, instrumentation and applications

Mass Spectrometry- Principles, Fragmentation, Ionization techniques – Electron impact, chemical ionization, MALDI, FAB, Analyzers-Time of flight and Quadrupole, instrumentation, applications

Module-II

Thermal Methods of Analysis: Principles, instrumentation and applications of Thermogravimetric Analysis (TGA), Differential Thermal Analysis (DTA), Differential Scanning Calorimetry (DSC)

X-Ray Diffraction Methods: Origin of X-rays, basic aspects of crystals, X-ray Crystallography, rotating crystal technique, single crystal diffraction, powder diffraction, structural elucidation and applications.

Module-III

Calibration and validation-as per ICH and USFDA guidelines

Calibration of following Instruments: Electronic balance, UV-Visible spectrophotometer, IR spectrophotometer, Fluorimeter, Flame Photometer, HPLC and GC

Module-IV

Radio immune assay: Importance, various components, Principle, different methods, Limitation and Applications of Radio immuno assay

Extraction techniques: General principle and procedure involved in the solid phase extraction and liquid-liquid extraction

Module-V

Hyphenated techniques-LC-MS/MS, GC-MS/MS, HPTLC-MS.

Examination Scheme :

Components	CT	HA	S/V/Q	ATTD	EE

PROJECT WORK

Course Code: BP813PW

Credit Units: 06

Objectives:

The aim of the project work is to provide student with an opportunity to further intellectual and personal development in chosen field by undertaking a significant practical unit of activity, having an educational value at a level commensurate with the award of the degree. The project work can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

The area of the project shall directly relate any one of the elective subject opted by the student in semester VIII. The project shall be carried out in group not exceeding 5 in number. The project report shall be submitted in triplicate (typed & bound copy not less than 25 pages).

THE COMPONENTS OF A PROJECT REPORT

The outcome of Project Work is the Project Report. A project report should have the following components:

1) Cover Page: This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.

2) Acknowledgement: Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.

3) Table of Content: Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.

4) Body of the Report: The body of the report should have these four logical divisions

- Introduction:* This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, and method of analysis), Limitations of the Study, and Chapter Planning.
- Conceptual Framework / National and International Scenario:* (relating to the topic of the Project).
- Presentation of Data, Analysis and Findings:* (using the tools and techniques mentioned in the methodology).
- Conclusion and Recommendations:* In this section, the concluding observations based on the main findings and suggestions are to be provided.

5) Bibliography or References: This section will include the list of books and articles which have been used in the project work, and in writing a project report.

6) Annexures: Questionnaires (if any), relevant reports, etc.

(The main text of the Project should normally be in the range of 5000 words. However, there may be annexure in addition to the main text)

THE STEPS OF PROJECT WORK

STEP I : Selection of the topic for the project by taking following points into consideration:

- Suitability of the topic.
- Relevance of the topic
- Time available at the disposal.
- Feasibility of data collection within the given time limit.
- Challenges involved in the data collection (time & cost involved in the data collection, possibility of getting responses, etc.)

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

STEP II : Finalisation of the Topic and preparation of Project Proposal in consultation with the Supervisor.

STEP III : Collection of information and data relating to the topic and analysis of the same.

STEP IV : Writing the report dividing it into suitable chapters, viz.,

Chapter 1: Introduction,

Chapter 2: Conceptual Framework / National & International Scenario,

Chapter 3: Analysis & Findings

Chapter 4: Conclusion and Recommendations.

STEP V : The following documents are to be attached with the Final Project Report.

1) Approval letter from the supervisor (Annexure-IA)

2) Student's declaration (Annexure-IB)

3) Certificate from the Competent Authority of the Organisation / Institution, if the student undertakes the Project Work in any Organisation / Institution.

Annexures, References / Bibliography

Guidelines for Evaluation:

- Each of the students has to undertake a Project individually under the supervision of a teacher and to submit the same following the guidelines stated below.
- Language of Project Report and Viva-Voce Examination may be English. The Project Report must be typed and hard bound.
- Failure to submit the Project Report or failure to appear at the Viva-voce Examination will be treated as "Absent" in the Examination. He /she has to submit the Project Report and appear at the Viva-Voce Examination in the subsequent years (within the time period as per University Rules).
- No marks will be allotted on the Project Report unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her Project Report.
- Evaluation of the Project Work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate.
- A candidate has to qualify in the Project Work separately, obtaining minimum marks of 80 (Dissertation Book and Presentation taken together).

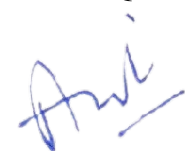

Examination Scheme: Total-150 marks

Evaluation of Dissertation Book:

Objective(s) of the work done	15 Marks
Methodology adopted	20 Marks
Results and Discussions	20 Marks
Conclusions and Outcomes	20 Marks
Total-75 Marks	

Evaluation of Presentation:

Presentation of work	25 Marks
Communication skills	20 Marks
Question and answer skills	30 Marks
Total-75 Marks

HEMATOLOGY-I

Course Code: MLT2108

Credit Units: 03

Course Objectives:

- To impart the knowledge about the blood and blood formation in bone marrow.
- To provide the knowledge about handling of haematological apparatus.
- To impart the knowledge of routine haematology tests.
- To develop the understanding of advanced haematological techniques.

Course Contents:

Module-I

Hematology: Introduction and importance of hematology.

Blood: Definition, composition, functions of blood.

Blood cells: Shape, size, structure and functions of blood cells.

Haemopoiesis: Erythropoiesis, leucopoiesis and thrombopoiesis.

Module-II

Instruments and apparatus used in hematology laboratory: Neubauer chamber, pipettes, colorimeter, cell counter.

Hemoglobin: Formation, Degradation, types and functions.

Haemoglobinometry: Methods, principle, procedure, application and error analysis.

Anticoagulants and preservatives: Mode of action, composition, merits and demerits of EDTA, citrate, oxalate, heparin and sodium fluoride.

Blood collection: Capillary, venous and arterial method, order of blood draw, preservation of blood sample; Changes during blood storage.

Module-III

Blood cells count: Red blood cell, white blood cells, platelets, eosinophil and reticulocyte count.

ESR: Mechanism, methods, factors influencing and clinical significance.

PCV: Methods, principle, factors influencing and clinical significance.

Buffy coat: Preparation of buffy coat and its application.

Peripheral blood smear: Methods of preparation, importance and error analysis.

Staining: Methods, principle, composition and staining procedure and error analysis

Module-IV

Hemocytometer: Principle, procedure, application, precautions and clinical significance.

Red cell indices: Different parameters, calculations, color index and maturation index and clinical significance.

Automated cell counter: Principle, application and procedures.

GENERAL MICROBIOLOGY

Course Code: MLT2109

Credit Units: 03

Course Objective:

- To provide the understanding of relationship between microorganisms and human health.
- To impart the knowledge about microbial pathogenicity, aseptic methods, cultivation and identification techniques in microbiology.

Course Contents:

Module-I

Microbiology: Introduction, importance and scopes, contribution of Antony Van Leeuwenhoek, Edward Jenner, Louis Pasteur, Robert Koch and Joseph Lister; golden era of microbiology; safety measures in microbiology.

Microorganisms: Classification and taxonomy; Classification and morphological characteristics of bacteria, viruses, fungi, protozoa and helminthes.

Module-II

Microscopy: Principle, parts, working, care and maintenance of compound, dark ground, fluorescent, phase contrast and electron microscope.

Normal micro flora: Importance of normal flora in human body

Microbial Pathogenicity: Virulence factors - antigenicity, toxicity, bacterial enzymes, **Infection:** Classification, sources, mode of transmission and portal of entry.

Module-III

Basic terminology: Antibacterial, bactericidal, bacteriostatic and germicide agents.

Sterilization: Definition and classification; Parts, working, care and handling of autoclave, hot air oven and laminar air flow; Sterilization indicators and calibration of equipments.

Disinfection: Definition, types, mode of action, properties and use of disinfectants and antiseptics, efficiency testing of disinfectants.

Module-IV

Culture media: Composition of culture media and broth, basal media, enriched media, enrichment media, selective media, differential media, transport media, anaerobic media.

Inoculation: Pouring, spreading, streaking, stroke, stab, slant and anaerobic culture methods; Colony characteristics.

ANATOMY AND PHYSIOLOGY LAB-I

Course Code: MLT2110

Credit Units: 01

Course objectives:

- To provide the basic understanding of human organ systems.
- To impart the basic knowledge about the microscopic structure of different tissues and muscles.

List of experiments:

- Demonstration of human anatomy with the help of chart.
- Demonstration of different tissues with the help of permanent mounted slides.
- Demonstration of human digestive system with the help of model or chart.
- Demonstration of structural differences between skeletal, smooth and cardiac muscles using permanent mounts.
- Demonstration of various parts of circulatory system using models or chart.
- Demonstration of human bones and joints.
- Estimation of blood pressure with the help of BP apparatus
- Demonstration of pulse rate.
- Demonstration of heart rate.
- Demonstration of body temperature.

HEMATOLOGY LAB-I

Course Code: MLT2111

Credit Units: 01

Course objectives:

- To impart the basic knowledge of principles, techniques and clinical importance of routine and selected laboratory procedures.
- To familiarize with basic knowledge of instruments commonly utilized in the clinical hematology laboratory.

List of experiments:

1. Preparation of anticoagulants vials.
2. Collection of Blood by various methods.
3. Estimation of hemoglobin.
4. To perform RBC count.
5. To perform WBC count.
6. To perform Platelets count.
7. To perform ESR and PCV.
8. Preparation of Romanosky stain.
9. Preparation and staining of peripheral blood smear.
10. Examination of blood cells morphology.

CLINICAL TRAINING-I

Course Code: MLT2112

Credit Units: 2

Course Objective: The purpose of a Clinical training is to provide hands on practical experience in relevant sections of diagnostic labs as per the need of healthcare system. Students will participate in samples collection, documentation, transportation, receiving, processing and dispatch of reports. Students will help in the performance of clinical protocols, quality maintenance and laboratory research. In some cases, students may be deputed in community services or assist in organizing camps like blood testing or blood donation camp.

Students will be sent to diagnostic laboratory or hospital once a week outside campus or may be within the campus if facility available.

Plan for clinical training:

1. Hematology Lab
2. Microbiology Lab

Note: Students must submit training report during examination and the same would be evaluated through Viva voice and presentation.

HEMATOLOGY-II

Course Code: MLT2208

Credit Units: 03

Course Objectives:

- To impart the knowledge about disorders of blood cells.
- To familiarize students about pathogenesis and laboratory diagnosis of various anemia.

Course Contents:

Module-I

Blood cell disorders: Morphological disorders of Blood cells; Physiological variation of erythrocytes, leucocytes and thrombocytes.

Bone Marrow: Introduction, collection, processing, indications and significance.

Module-II

Anemia: Introduction, causes, sign and symptoms, classification and laboratory diagnosis of anemia; Pathogenesis and laboratory diagnosis of iron deficiency anemia, pernicious anemia, megaloblastic anemia, aplastic anemia, sideroblastic anemia; anemia due to chronic renal failure and liver disease.

Module-III

Hemolytic Anemia: Pathogenesis and laboratory diagnosis of hereditary spherocytosis, hereditary elliptocytosis, thalassemia and sickle cell anaemia; other types of anemia- Glucose -6-phosphate dehydrogenase deficiency, pyruvate kinase deficiency, paroxysmal nocturnal haemoglobinuria, warm antibody type, cold antibody type, incompatible blood transfusion, hemolytic disease of new born.

Module-IV

Leukemia: Introduction, causes, sign & symptoms, classification and laboratory diagnosis; myeloid and lymphoid leukemia.

Examination Scheme

CLINICAL BACTERIOLOGY

Course Code: MLT2209

Credit Units: 03

Course Objective:

- To impart the knowledge of morphology, culture characteristics, pathogenicity, lab diagnosis and prophylaxis of major bacterial pathogens.
- To provide the understanding of special laboratory techniques.

Course Contents:

Module-I

Bacteriology: Introduction, bacterial reproduction, bacterial growth curve and factors effecting bacterial growth; Bacterial genetics- plasmid, mutation, transformation, transduction and conjugation.

Module-II

Gram negative bacteria: Morphology, pathogenicity, lab diagnosis and prophylaxis of: Neisseria gonorrhoeae, Neisseria meningitides, Escherichia coli, Shigella, Klebsiella, Proteus, Yersinia, Salmonella, Vibrio, Aeromonas, Pseudomonas, Campylobacter, Bacteroides, Fusobacterium, Brucella, Haemophilus, Bordetella and Helicobacter pylori.

Module-III

Gram positive bacteria: Morphology, pathogenicity, lab diagnosis and prophylaxis of: Staphylococci, Streptococci, Pneumococcus, Enterococcus, Bacillus, Corynebacterium, Clostridia, Mycobacterium, Actinomycetes and Listeria.

Miscellaneous bacteria: Morphology, pathogenicity, lab diagnosis and prophylaxis of: Spirochetes, Rickettsiae, Chlamydia and Mycoplasma.

Module-IV

Staining: Gram stain, AFB stain, Albert's stain and special stains for spore, capsule and flagella.

Biochemical test: Catalase, coagulase, oxidase, indole, MR, VP, citrate, urease and triple sugar iron agar.

Special laboratory techniques: Antimicrobial susceptibility testing; Bacteriological examination of water, milk and air.

NUTRITION

Course Code: MLT2205

Credit Units: 03

Course Objective: At the end of the course student would have gained the knowledge of the following: Balanced diet, protein, carbohydrates, vitamins, minerals, carotenoids and eye nutrition, Ocular aging and adverse effects of ocular nutritional supplements.

Course Contents:

Module I:

Introduction to Nutrition and Food Science, Food Groups and Food Pyramid; Balanced diet for different age groups and recommended dietary Allowances

Module II:

Assessment of Nutritional Status; Energy – Units, Metabolisms, Energy expenditure, and Energy imbalance; Digestion, absorption and transport of Food

Module III:

Proteins and eye; Lipids and eye; Carbohydrates and eye; Vitamins and eye; Minerals and trace elements and eye; Carotenoids and eye; Oxidative stress and the eye

Module IV:

Vitamin A, C and E deficiency; Nutrition and ocular aging; Contraindications, Adverse reactions and ocular nutritional supplements

Examination Scheme:

Components	A	HA	CT	P	EE
Weightage (%)	5	5	10	10	70

(CT-Class Test; HA - Home Assignment; P-Practical; A- Attendance; EE-End Semester Examination)

Recommended books:

- M Swaminathan, Hand book of Food and Nutrition, fifth edition, Bangalore printing & publishing Co. Ltd, Bangalore, 2004.
- C Gopalan, BV Rama Sastri, SC Balasubramanian, Nutritive Value of Indian Foods, National Institute of Nutrition, ICMR, Hyderabad, 2004.
- Frank Eperjesi & Stephen Beatty, Nutrition and The Eye, A Practical Approach, Elsevier Butterworth – Heinemann, USA, 2006.

MEDICAL TERMINOLOGY

Course Code: MLT2206

Credit Units: 03

Course Objectives: To use medical terms and abbreviations correctly related to medicine and health.

Course Contents:

Module-I

Introduction to Medical terminology: Origin of terms; Body structure & organization; Anatomical planes; Diseases & disorder terms; Diagnostic tests & equipments; Surgical procedural terms; Area of study & specialists; Signs, symptoms & related terms; Medical abbreviations.

Module-II

Medical Records & their utility: Definition and characteristics of 'Good' medical record; Required characteristics of entries in medical records and responsibility for medical record quality; Medical record forms and their content; Incomplete record control; Utility & functions of medical records in health care delivery system; Organizations & management of medical records department; Role of medical technologists in medical record keeping; Reports & returns in medical record system.

Module-III

Medico-Legal Aspects of Medical Records: Basic knowledge of legal aspects of Medical Records including Factories Act - Workmen compensation act, consumer protection act; Procedures of medical auditing & its importance in brief.

Examination Scheme:

Components	CD	CT1	SA	A	EE
Weightage (%)	5	10	10	5	70

Recommended books:

- Quick Medical Terminology: A self teaching guide. Shirley Soltesz Steiner, Natalie Pate Capps 5th Edition.
- Medical Terminology: A Living Language (5th Edition)," by Bonnie F. Fremgen and Suzanne S. Frucht.
- Basic Medical Terminology Concepts (2nd Edition) by Marilyn White Wilson.

IMMUNOLOGY & SEROLOGY

Course Code: MLT2307

Credit Units: 03

Course Objectives:

- To impart the basic knowledge of human immune system.
- To familiarize with various methods of antigen-antibody reactions.

Course Contents:

Module-I:

Immunity: Definition, types - Innate, acquired, local and herd immunity, opsonization and phagocytosis, relationship between innate and acquired immunity, vaccine and immunization.

Antigen: Antigen properties, structure and types; Adjuvant.

Antibody: Immunoglobulin – structure, classes, properties and function; Monoclonal and polyclonal antibody.

Module-II:

Immune Response: Humoral and cellular immune response; Major histocompatibility complex.

Cell and Organs of Immune System: Primary lymphoid organ, secondary lymphoid organ, T-lymphocytes, B-lymphocytes, cytokines.

Complement system: General properties and pathways.

Module-III:

Hypersensitivity: Definition and classification- Type-I, Type-II, Type-III and Type-IV.

Immunodeficiency Disorders: Definition and classification, humoral immunodeficiency, cellular immunodeficiency, disorders of phagocytosis and complement system.

Module-IV:

Antigen Antibody Reaction: General properties and types of antigen antibody reaction, precipitation reaction, agglutination reaction, complement fixation test, neutralization test, radio immuno assay, enzyme-linked immune-sorbent assay and immunofluorescence assay.

Examination Scheme

Components	CA	A	ME	EE

HAEMATOLOGY-III

Course Code: MLT2308

Credit Units: 03

Course Objectives:

- To familiarize students about mechanism of haemostasis and related disorders.
- To impart the knowledge of investigation required in coagulation study.
- To impart the understanding of pathogenesis, lab diagnosis and prevention of multiple myeloma and lymphoma.

Course Contents:

Module-I

Hemostasis: Introduction and mechanism of hemostasis, role of platelets in hemostasis, clotting factors and coagulation cascade- intrinsic, extrinsic and common pathway; Fibrinolytic system.

Module-II

Hemostatic disorders: Hemophilia, von Willebrand's syndrome, disseminated intravascular coagulation and other coagulation factor deficiencies, vitamin K deficiency, anticoagulant therapy, liver diseases, platelets disorders.

Module-III

Laboratory diagnosis: Principle, procedure, reference values and significance of – Bleeding Time, Clotting Time, Prothrombin Time, Activated Partial Prothrombin Time, Thrombin Time, Hess Test, Clot Retraction Time, Fibrinogen Degradation Product and assays for coagulation factors.

Coagulometer: Principle, working and applications.

Module-IV

Lymphoma and Multiple Myeloma: Introduction, Classification and pathogenesis, laboratory diagnosis, prevention and control.

LE cell: LE cell phenomena, various methods for diagnosis and clinical significance.

Examination Scheme

Components	CA	A	ME	EE
Weightage (%)	15	5	10	70

Recommended books:

- Shrish M. Kawthalkar, Essential Hematology, 2nd Edition 2013, Jaypee Publication.

CLINICAL PARASITOLOGY

Course Code: MLT2309

Credit Units: 03

Course Objectives:

- To impart knowledge about detrimental effects of parasites on human health.
- To develop understanding of life cycle, transmission, pathogenicity, and control strategies of clinically important parasites.
- To familiarize with techniques of sample collection and processing to diagnose parasitic infection.

Course Contents:

Module-I

Introduction of Parasitology: Introduction to clinical parasitology, general characteristics, morphology and classification of parasites, classification of hosts and vectors, relationship between parasites and host, mode of transmission of parasitic infections.

Module-II

Protozoology: Morphology, life cycle, pathogenicity, prevention and lab diagnosis of Entamoeba, Dientamoeba, Iodamoeba, Trichomonas, Trypanosomes, Leishmania, Giardia, Plasmodium, Isospora, Balantidium and Toxoplasma.

Module-III

Helminthology: Morphology, life cycle, pathogenicity, prevention and lab diagnosis of-

i) Platyhelminthes: Diphylobothrium, Taenia, Echinococcus, Hymenolepis, Schistosoma, Fasciola, Fasciolopsis, Clonorchis, Peragonimus.

ii) Nematelminthes: Ascaris, Ancylostoma, Necator, Strongyloides, Trichinella, Enterobius, Trichurias, Wucheria, Brugia, Loa loa, Onchocerca, Dracunculus.

Module-IV

Diagnostic Methods: Collection, transportation, processing of different clinical specimens for parasitological examination, concentration techniques, rapid diagnostic techniques and permanent smears preparation techniques.

Examination Scheme

Components	CA	A	ME	EE
Weightage (%)	15	5	10	70

Recommended books:

- Arora & Arora, Text book of Medical parasitology, 4th Edition 2015, CBS Publishers.

HAEMATOLOGY LAB-III

Course Code: MLT2311

Credit Units: 01

Course Objectives:

- To impart the basic knowledge of principles, techniques and clinical importance of routine and selected laboratory procedures.
- To familiarize with basic knowledge of instruments commonly utilized in the clinical hematology laboratory.

List of Experiments:

1. To perform bleeding time.
2. To perform clotting time.
3. To perform prothrombin time.
4. To perform activated partial prothrombin time.
5. To perform thrombin time.
6. To perform Hess's test.
7. To perform clot retraction time.
8. To study LE cell phenomena.
9. To perform osmotic fragility test.
10. To perform reticulocyte counts.

Examination Scheme:

Components	Internal Assessment	Attendance	Record	EE
Weightage (%)	20	5	5	70

CLINICAL BIOCHEMISTRY LAB

Course Code: MLT2312

Credit Units: 01

Course Objectives:

- To impart the basic knowledge of principles, techniques and clinical importance of routine and selected laboratory procedures.
- To familiarize with basic knowledge of instruments commonly utilized in the clinical biochemistry laboratory.

List of Experiments:

1. To perform blood glucose.
2. To perform blood urea.
3. To perform total bilirubin.
4. To perform total plasma protein.
5. To perform serum creatinine.
6. Estimation of serum calcium ion.
7. Estimation of serum uric acid.
8. To perform blood urea nitrogen.
9. Estimation of serum phosphate.
10. Estimation of serum phosphorus.

Examination Scheme:

Components	Internal Assessment	Attendance	Record	EE
Weightage (%)	20	5	5	70

Recommended books:

- J. Ochei and A. Kolhatkar, Medical Laboratory Science- Theory and Practice, 1st Edition 2000, Tata McGraw Hill Publishing Co Ltd.

CLINICAL TRAINING-III

Course Code: MLT2313

Credit Units: 2

Course Objective: The purpose of a Clinical training is to provide hands on practical experience in relevant sections of diagnostic labs as per the need of healthcare system. Students will participate in samples collection, documentation, transportation, receiving, processing and dispatch of reports. Students will help in the performance of clinical protocols, quality maintenance and laboratory research. In some cases, students may be deputed in community services or assist in organizing camps like blood testing or blood donation camp.

Students will be sent to diagnostic laboratory or hospital once a week outside campus or may be within the campus if facility available.

Plan for clinical training:

1. Serology Lab
2. Parasitology Lab
3. Biochemistry Lab
4. Hematology Lab

Note: Students must submit training report during examination and the same would be evaluated through Viva voice and presentation.

Examination Scheme

Components	Viva	A	ME	EE
Weightage (%)	10	5	15	70

HOSPITAL ADMINISTRATION

Course Code: MLT2305

Credit Units: 03

Course Objective: To develop understanding about the norms and standards for accreditation of the healthcare organization and adopt continuous evaluation to improve the quality of health care settings.

Course Contents:

Module-I

Hospital Organization: History & development of hospitals, types & sizes of hospitals, role & functions of hospital administrator and hospital information system.

Module-II

Financial Aspects: Cost & its classification; Theory of supply & demand; Break even analysis.

Module-III

Hospital Material Management: Types of stores in hospitals; Material cycle; Location & Layout of store premises.

Module-IV

Legal Aspects: Statutory obligations; Medical negligence; Prevention against litigation.

Module-V

Clinical services: OPD, IPD, OT, ICU and emergency services.

Support services: Laboratory, Radiology, Blood bank and CSSD.

Utility services: MRD, engineering and pharmacy etc.

Examination Scheme:

Components	CPA	TP	Q/S	A	ME	EE
Weightage (%)	5	5	5	5	10	70

Recommended Books:

- Yashpal Sharma, R. K. Sharma and L A Gomas. Hospital administration principles and practice, 1st edition 2013, Jaypee brothers publication.

LAB MANAGEMENT & SAFETY PROCESS

Course Code: MLT2306

Credit Units: 03

Course Objective: The students will aware about the ethics of a clinical laboratory and learn about good laboratory practice, safety measures and quality management in a clinical laboratory.

Course Contents:

Module-I

Quality control: Introduction to quality control, total quality management framework, quality laboratory processes, quality assurance, quality assessment, quality control, quality planning and quality improvement, costs of conformance and non conformance, appraisal costs, prevention costs, internal quality control, basic steps, sources of error and their correction methods, CAPA - corrective action & preventive action and sources of variation in laboratory results.

Module-II

External quality control: Quality control charts, Levy- Jennings and Cusum charts, external quality control, quality control programme, intrinsic and extrinsic and random errors, current trends in laboratory accreditation, ISO certificate, West guard rules and demonstration of various methods of quality control.

Module-III

Laboratory ethics: Ethical Principles and standards for a clinical laboratory professional – Duty to the patient, colleagues, other professionals and the society.

Laboratory accreditation: Good Laboratory Practice (GLP) Regulations and Accreditation – Introduction, aims and advantages of GLP and accreditation.

Module-IV

Laboratory safety measures: Awareness / Safety in a clinical laboratory, general safety precautions; HIV – pre and post-exposure guidelines; Hepatitis B & C – pre and Post-exposure guidelines; Drug resistant tuberculosis; Patient management for clinical samples collection, transportation and preservation of sample; Sample, purpose and methods of accountability.

Examination Scheme

Components	P	A	ME	EE
Weightage (%)	15	5	10	70

Recommended books:

CLINICAL PATHOLOGY & CYTOLOGY

Course Code: MLT2405

Credit Units: 03

Course Objectives:

- To develop the knowledge about physical, chemical and microscopic examination of various clinical sample.
- To provide the understanding of collection, processing and clinical aspects of various body fluids.
- To develop the knowledge about various stains used in cytology.

Course Contents:

Module-I

Urine Analysis: Introduction, collection, handling, transportation, preservation and storage of urine; Physical, chemical and microscopic examinations with clinical significance; other specific tests and 24 hrs urine analysis.

Module-II

Stool analysis: Introduction, collection, preservation, transportation and clinical aspects of stool sample; Physical, chemical and microscopic examination with clinical significance.

Semen analysis: Introduction, composition and clinical aspects of semen, collection, preservation and transportation of semen sample; Physical, chemical and microscopic examinations with clinical significance.

Module-III

CSF analysis: Introduction, collection, transportation, processing and clinical indications of CSF analysis.

Synovial fluid analysis: Introduction, collection, transportation, processing and clinical indications of synovial fluid analysis.

Serous fluids analysis: Introduction, collection, transportation, processing and clinical indications of pleural, pericardial and peritoneal fluids analysis.

Module-IV

Cytology: Introduction to cytology and exfoliative cytology and clinical importance; Collection, preservation, transportation and processing of cytological specimens (Sputum, Bronchial brush, Esophageal and gastric brush, oral scraping, Breast aspiration and Nipple discharge, Cervical and vaginal specimens).

Cytological stains: Introduction, composition and preparation of cytological stains; Staining procedure - Giemsa stain, Papanicolaou stain, PAS stain, Haematoxylin and eosin stain, Masson's trichrome stain and Ziehl-Neelsen stain.

Examination Scheme

Components	CA	A	ME	EE

CLINICAL VIROLOGY AND MYCOLOGY

Course Code: MLT2406

Credit Units: 03

Course Objectives:

- To impart knowledge of diagnosis of viral diseases.
- To impart knowledge of diagnosis of fungal disease.
- To provide understanding of molecular method of diseases diagnosis.

Course Contents:

Module-I

Virology: General properties of viruses; Collection, transportation and storage of clinical samples; Cultivation of viruses; Molecular methods for virus diagnosis.

Module-II

Clinically important virus: Human immunodeficiency viruses, viral hepatitis, rabies virus, herpes viruses, influenza viruses, rubella, mumps, measles, rota virus, poliomyelitis, japanese encephalitis, dengue, chikungunya, human onocogenic viruses and kysanur forest disease.

Module-III

Mycology: General properties, morphology, classification and cultivation of fungi; Types of mycoses; Lab diagnosis of fungal infections.

Module-IV

Common fungal infections: Dermatophytes, candidiasis, mycetoma, rhinosporidium, sporotrichosis, histoplasmosis, blastomycosis, coccidioidosis, paracoccidioidosis, cryptococcosis, aspergillosis, pencillosis, zygomycosis and pneumocystis.

DIAGNOSTIC BIOCHEMISTRY LAB-I

Course Code: MLT2408

Credit Units: 01

Course Objectives:

- To impart the basic knowledge of principles, techniques and clinical importance of routine and selected laboratory procedures.
- To familiarize with basic knowledge of instruments commonly utilized in the clinical biochemistry laboratory.

List of experiments:

1. To perform serum albumin and A: G ratio.
2. To perform serum ALP.
3. To perform SGPT.
4. To perform SGOT.
5. To perform serum amylase
6. To perform serum lipase.
7. To perform triiodothyronine hormone.
8. To perform tetraiodothyronine hormone.
9. To perform OGTT.
10. To perform HbA_{1c}.

BASICS IN COMPUTER & PC PACKAGE

Course Code: MLT2410

Credit Units: 03

Course Objective:

This course aims at preparing the students to handle personal computers, learn basics of the current hardware, software and windows operating systems being used.

Course Contents:

Module-I

Computer Basics: History of computers, Definition of computers, Input Devices, storage devices, types of memory, and units of measurement, range of computers, generations of computers and characteristics of computers.

Module-II

System: Hardware, Software, system definition, fundamentals of networking, internet, performing searches and working with search engines, types of software and its applications.

Module-III

Office Application Suite: Word Processor, spread sheet, presentations, other utility tools Fundamentals of Linux /windows operating system, functions, interfaces and basic commands.

Module-IV

Special Applications: Use of database software for clinic records; Use of specialized software for optometric use.

List of practical:

- Various browsers, Search engines, E-mail
- Text document with multiple formatting option using specific office package
- Spread sheet using a specified office package
- Presentation on a specified topic using a specified office package.

HISTOPATHOLOGY

Course Code: MLT2507

Credit Units : 04

Course Objectives:

- To impart the knowledge of fixatives and tissue processing for histopathological examination.
- To impart the knowledge of microtomy and staining technique in histopathology laboratory.

Course Contents:

Module-I

Grossing: Introduction, histological specimens, labeling and reporting.

Fixation: Definition, classification, properties, composition, advantages and disadvantages of fixatives; Post chroming.

Decalcification: Importance, decalcifying agent, composition, advantages and disadvantages.

Module-II:

Tissue processing: Definition, importance, steps, dehydrating agents and dehydration process, clearing agents and clearing process.

Embedding: Embedding media, water soluble embedding media;

Module-III:

Microtome: Definition, types, care and use of microtome; Microtome knife, honing and stropping; Technique for sectioning, paraffin embedded tissue, frozen section; Errors in sectioning and remedies.

Mounting: Mounting media, advantages and disadvantages.

Module-IV:

Staining: Hematoxylin and eosin staining; Specific stain for collagen, reticulin, elastin, fat, amyloid, glycogen, mucin, iron and neuron.

IMMUNOHEMATOLOGY AND BLOOD TRANSFUSION

Course Code: MLT2508

Credit Units: 03

Course objectives:

- To impart the basic knowledge of blood group antigens and antibodies.
- To provide the concepts of donor screening and blood transfusion reactions.

Course Contents:

Module-I

Blood group system: Introduction and history of blood group systems, ABO blood group system and Rh system, blood group antigens and antibody, Sub groups, Bombay group, Red cell membrane structure,

Module-II

Phlebotomy and blood storage: blood bags and preservatives, donor selection criteria, blood collection procedure, component separation, cryoprecipitate, screening and storage of blood.

Pre-transfusion testing: blood grouping and typing, compatibility testing, coomb's test, D^u test and HLA type.

Module-III

Blood transfusion: Indication, types, apheresis, transfusion reactions, erythroblastosis fetalis, investigation of transfusion reaction.

Artificial blood: Clinical trials, blood substitutes and uses.

Module-IV

Blood banking: Organization, operation and administration of blood bank and blood donation camp; quality control in blood banking.

Advances in transfusion medicine: Cord blood bank, Automation, blood collection machine.

BIOSTATISTICS AND QUALITY ASSURANCE

Course Code: MLT2509

Credit Units: 03

Course Objectives:

- To enable the student to understand the applications of statistics in diagnostic research.
- To impart the knowledge of hypotheses to estimate the possible risk factors of a disease.
- To enable to address public health and clinical problems in statistics forms.

Course Contents:

Module-I

Basic Biostatistics: Introduction, basic concept and clinical importance of biostatistics; Data classification, source of data, variables; Central tendency – mean, median, mode; Mode of dispersion – standard deviation, variance; Standard error, coefficient of variation and their importance; Normal distribution and t- test and its application.

Module-II

Sampling: Introduction: various methods, errors and distribution of sampling.

Hypothesis: Introduction, basic concept and importance of null hypothesis and alternate hypothesis.

Quality assurance system: Introduction and its application; Internal quality assurance and external quality assurance.

Module-III

Quality control: Introduction, basic concept and importance of quality control; Internal quality control and external quality control; Preparation quality control charts; Introduction, basic concept and application of Westguard rules; Biostatistics and its relation with laboratory quality control; Basic terminology- accuracy, precision, error, bias, sensitivity, specificity.

Module-IV

Automation: Introduction, basic principle and importance of automation; Phases of automation – pre-analytical, analytical and post analytical.

Examination Scheme

DIAGNOSTIC BIOCHEMISTRY-II

Course Code: MLT2510

Credit Units: 04

Course Objectives:

- To enhance the knowledge about the bio molecules and their role in human health.
- To impart the knowledge of analysis of biochemical parameters in metabolic disorders.
- To impart the knowledge of principles of biochemical tests and their clinical significance.

Course Contents:

Module-I

Renal function test: Glomerular Filtration Tests, tests for renal blood flow, tests of tubular function, other miscellaneous tests to assess renal function.

Lipoproteins: Formation of HDL, LDL, VLDL, circulation of lipoproteins, role in atherosclerosis, hyper and hypolipoproteinemia.

Module-II

Gastric function test: Patient preparation, principle and procedure of gastric analysis, fasting gastric juice analysis, post meal gastric analysis, post stimulation gastric analysis, clinical significance.

Intestinal malabsorption analysis: Principle, procedure of xylose absorption test, clinical significance of xylose absorption test.

Module-III

Acid base balance test: Buffer systems, acidosis and its pathophysiology, alkalosis and its pathophysiology, arterial blood gas test, metabolic panel, pulmonary function test.

Blood electrolytes: Sodium, potassium, magnesium, chloride and calcium.

Module-IV

Tumour markers: Biochemical changes in cancer, etiology of cancer, tumor markers, apoptosis and its role in carcinogens.

Toxicology: Drug abuse, lead, mercury, salicylates, aspirin, alcohol, illegal drugs, barbiturates.

DIAGNOSTIC BIOCHEMISTRY LAB-II

Course Code: MLT2511

Credit Units: 01

Course Objectives:

- To impart the basic knowledge of principles, techniques and clinical importance of routine and selected laboratory procedures.
- To familiarize with basic knowledge of instruments commonly utilized in the clinical biochemistry laboratory.

List of Experiments:

1. To perform serum total cholesterol.
2. To perform serum triglyceride.
3. To perform serum HDL, LDL and VLDL.
4. Determination of Acid Phosphatase.
5. To perform urea clearance test.
6. To perform creatinine clearance test.
7. Estimation of Lactate dehydrogenase .
8. Estimation of serum sodium.
9. Estimation of serum potassium.
10. To perform serum chloride.

CLINICAL TRAINING-V

Course Code: MLT2512

Credit Units: 2

Course Objective: The purpose of a Clinical training is to provide hands on practical experience in relevant sections of diagnostic labs as per the need of healthcare system. Students will participate in samples collection, documentation, transportation, receiving, processing and dispatch of reports. Students will help in the performance of clinical protocols, quality maintenance and laboratory research. In some cases, students may be deputed in community services or assist in organizing camps like blood testing or blood donation camp.

Students will be sent to diagnostic laboratory or hospital once a week outside campus or may be within the campus if facility available.

Plan for clinical training:

1. Histopathology Lab
2. Immunohematology and Blood Transfusion Lab
3. Biochemistry Lab

Note: Students must submit training report during examination and the same would be evaluated through Viva voice and presentation.

PREVENTIVE & SOCIAL MEDICINE

Course Code: MLT2505

Credit Units: 03

Course objective:

- To sensitize the students with the awareness of communicable and non – communicable diseases.
- To make the students capable of investigating and managing possible outbreaks or epidemics.

Course Contents:

Module-I

Health and Disease: Determinants of health, multi – factorial causation of disease host, agent, environment relationship primary, secondary and tertiary levels of prevention with examples related to few diseases of national importance; Natural history of disease; Mode of transmission of disease; Air – borne, vector and vehicle transmission; Methods of control with examples for control of each mode.

Disinfection: Introduction, disinfection of the infective materials received in the Laboratory by using the appropriate disinfection methods at the health centre level.

Module-II

Health services: Brief description of organization of health services at the centre and state levels; Primary health care – Definition, components and principles of primary health care, health for all indicators; Primary health centre – The functions, staffing pattern and the role of laboratory technicians in primary health centre, laboratory tests for use in health centre(see annexure for description).

Health Programmes: Family welfare programme; National programme for water supply and sanitation; Nutritional programmes; Immunization and universal immunization programme; National programmes of health and disease eradication /control; Disease eradication programme: leprosy & guinea worm; Disease control programmes – tuberculosis, malaria, filaria, S.T.D, goitre, cholera and other diarrhoeal diseases and national programme for prevention of blindness including trachoma.

Module-III

Demography & Population control: Introduction; The factors influencing population growth, death rate, birth rate and methods of contraception.

Environmental sanitation: Methods of water purification and disinfection, collection of water samples, their transport and bacteriological analysis; Methods of excreta disposal.

Examination Scheme:

Weightage (%)	5	5	5	5	10	70

Recommended books:

- Park's Textbook of Preventive and Social Medicine, by K. Park, 24th edition, Banarsidas Bhanot Publishers.

PROJECT

Course code: MLT2532

Credit Units: 03

Course objective:

The aim of the project is to provide the students with an opportunity to further their intellectual and personal development in the chosen field by undertaking a significant practical unit of activity. The project can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

Chapter Scheme and distribution of marks:

Chapter 1: Introduction – 10 marks

Chapter 2: Conceptual Framework/ National/International Scenario – 25 marks

Chapter 3: Presentation, Analysis & Findings -- 25 marks

Chapter 4: Conclusion & Recommendations -- 10 marks

Chapter 5: Bibliography -- 05 marks

Examination scheme:

Project Report	Power Point Presentation & Viva
75 marks	25 marks

Components of a Project Report

The outcome of Project Work is the Project Report. A project report should have the following components:

- 1) **Cover Page:** This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.
- 2) **Acknowledgement:** Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.
- 3) **Table of Content:** Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.
- 4) **Abstract:** The body of the report should have summary of the project.
 - a) **Introduction:** This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, inclusion & exclusion criteria and method of analysis), Limitations of the Study, and Planning.
 - b) **Conceptual Framework / National and International Scenario:** (relating to the topic of the Project).
 - c) **Presentation of Data, Analysis and Findings.**
 - d) **Conclusion and Recommendations:** In this section, the concluding observations based on the main findings and suggestions are to be provided.
- 5) **Bibliography or References:** This section will include the list of books and articles which have been used in the project work, and in writing a project report.
- 6) **Annexure:** Questionnaires (if any), relevant reports, etc.
(The main text of the Project should normally be in the range of 5000 words. However, there may be annexure in addition to the main text)

The Steps of a Project Report

Step I: Selection of the topic for the project by taking following points into consideration:

- Suitability of the topic.
- Relevance of the topic
- Time available at the disposal.
- Feasibility of data collection within the given time limit.
- Challenges involved in the data collection (time & cost involved in the data collection, possibility of getting responses, etc.)

Step II: Finalisation of the Topic and preparation of Project Proposal in consultation with the Supervisor.

Step III: Collection of information and data relating to the topic and analysis of the same.

Step IV: Writing the report dividing it into suitable chapters, viz.,

Chapter 1: Introduction,

Chapter 2: Methodology,

Chapter 3: Analysis & Findings

Chapter 4: Conclusion and Recommendations.

Step V: The following documents are to be attached with the Final Project Report.

1) Approval letter from the supervisor (Annexure-IA)

2) Student's declaration (Annexure-IB)

3) Certificate from the Competent Authority of the Organisation / Institution, if the student undertakes the Project Work in any Organisation / Institution.

Guidelines for Evaluation:

- Each of the students has to undertake a Project individually under the supervision of a teacher and to submit the same following the guidelines stated below.
- Language of Project Report and Viva-Voce Examination may be English. The Project Report must be typed and hard bound.
- Failure to submit the Project Report or failure to appear at the Viva-voce Examination will be treated as "Absent" in the Examination. He /she has to submit the Project Report and appear at the Viva-Voce Examination in the subsequent years (within the time period as per University Rules).
- No marks will be allotted on the Project Report unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her Project Report.
- Evaluation of the Project Work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate.

INTERNSHIP

Course Code: MLT2637

Credit Units: 15

Course Objectives:

The basic objective of internship is to provide first hand practical exposure of the medical laboratory and to acquaint students with the culture of medical lab. The internship training will also provide an opportunity to the students to apply their theoretical understanding while working on the concerned project in the laboratory. Thus, this internship programme is an attempt to bridge the gap between theory and practice. This will also enhance the student's intellectual ability and attributes related to data handling, decision making, report writing, oral presentation and imbibing an interdisciplinary approach.

General guidelines:

Every student of under graduate courses will be required to undergo a practical training in a medical laboratory organization approved by the Institute for four months, after the end of the 5th semester examinations. The candidates shall be required to undergo training in the various areas like clinical pathology, clinical hematology, clinical microbiology, clinical biochemistry and blood banking labs of the concerned organization. The organization may assign a specific project to the student, which will be completed by him/her during the period of training. The work done by the student during the training period shall be submitted in the form of a report as per the guidelines provided by the department.

Chapter scheme for the internship project report:

Chapter I: Introduction	- 20 marks
Chapter II: Conceptual Framework/National/International Scenario	- 5 marks
Chapter III: Presentation, Analysis and Findings	- 35 marks
Chapter IV: Conclusion and Recommendations	- 15 marks

The report has to be written in font style – Times New Roman, font size – 12, line spacing on both sides of the paper – 1.5 and should be spiral bound. The report should comprise of a maximum of 70 pages and has to be submitted in two copies.

The components of internship project report:

The outcome of internship training is the project report. A project report should have the following components:

- 1) **Cover Page:** This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the student, name of the supervisor, year of submission of the project work and name of the University.
- 2) **Acknowledgement:** Various laboratory organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.
- 3) **Table of Content:** Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.
- 4) **Body of the Report:** The body of the report should have these four logical divisions
 - a. **Introduction:** This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, and method of analysis), limitations of the study, and chapter planning.
 - b. **Conceptual framework / national and international scenario:** (relating to the topic of the project).
 - c. **Presentation of data, analysis and findings:** (using the tools and techniques mentioned in the methodology).
 - d. **Conclusion and Recommendations:** In this section, the concluding observations based on the main findings and suggestions are to be provided.
- 5) **Bibliography or References:** This section will include the list of books and articles which have been used in the project work, and in writing a project report.

6) Annexure: Questionnaires (if any), relevant reports, etc.

Guidelines for evaluation:

1. Each of the students has to undertake a project individually under the supervision of a teacher and to submit the same following the guidelines stated below.
2. Language of project report and viva-voce examination should be in English. The project report must be typed and hard (spiral) bound.
3. Failure to submit the project report or failure to appear at the viva-voce examination will be treated as "Absent" in the examination. He /she have to submit the project report and appear at the viva-voce examination in the subsequent years (within the time period as per university rules).
4. No marks will be allotted on the project report unless a candidate appears at the viva-voice examination. Similarly, no marks will be allotted on viva-voce examination unless a candidate submits his/her project report.
5. Evaluation of the project work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate.
6. A candidate has to qualify in the project work separately, obtaining minimum marks of 40 (project report and viva-voce taken together).

BIOTECHNIQUES & INSTRUMENTATION

Course Code: SCT2105

Credit Units: 02

Course Objective:

Students will learn about safe laboratory practices, bio-analytical instruments, principles of their proper functioning, and analysis methods applied to biological data obtained in experimental techniques.

Course Contents:

Module I

Sampling and sample preparation: Sample fixing for various analytical applications and sample processing. Principles of microscopy, Light, dark field, fluorescence microscope, confocal microscope, transmission and Scanning electron microscopy, microtomy and analysis and measurement of image. Fluorescence activated cell sorter (FACS) basic principles and applications.

Module II

Electrophoresis of DNA, RNA and proteins. Capillary electrophoresis, Two-dimensional electrophoresis, Southern blotting, Northern blotting, Immunoprecipitation, Western blotting. Sequencing, Next Generation Sequencing, RNA-Seq. etc.

Module III:

Centrifugation techniques: Introduction, Basic principle of sedimentation, centrifuges and their uses, Density gradient and analytical centrifugation.

Spectroscopy techniques: UV and visible spectroscopy, infrared and atomic absorption spectroscopy, fluorescence spectroscopy, mass spectrometry, MALDITOF, nuclear magnetic resonance and electron spin resonance spectroscopy.

Module IV:

Chromatography: Theoretical basis of chromatographic separations. Column, Thin layer, Paper, Normal phase and reverse phase chromatography, Ion-exchange, Affinity and Gas Chromatography, High performance liquid chromatography (HPLC) and GLC.

Module V

Principles of X-ray diffraction and X-ray Crystallography. Theory and application of UV-VIS, IR, NMR, Fluorescence, Atomic absorption spectroscopy; X-ray diffraction. Introduction to mass spectroscopy
Radioisotopic techniques: Introduction to radioisotopes, detection, measurement and uses of radioisotopes, counting efficiency and autoradiography, biotechnological applications

CELL & MOLECULAR BIOLOGY LAB

Course Code: SCT2107

Credit Units: 01

Course Contents:

Module I

Microscopy: Light microscopy, Bright field, Phase contrast.

BSL I, BSLII, BSLIII laboratory facility development: design and regulatory requirements.

Module II

Cell culture: aseptic suspension and adherent cell culture techniques. Cell number enumeration and cell passage methods, and methods for characterization of cells in culture and cell proliferation.

Module III

Cell mounting techniques, and study of permanent slides of different types of cancer. Induction and characterization of apoptosis and necrosis. Cell mitosis and meiosis and karyotyping techniques.

Module IV

Bacterial culture techniques, bacterial transformation and transduction techniques, single cell clone isolation.

Module V

Study of physical and chemical mutagens on growth of *E. coli*, PTC test.

BIOCHEMISTRY LAB

Course Code: SCT2108

Credit Units: 01

Course Contents

Module I

Preparation of solutions: Percentage solutions, Molar solutions, Normal solutions, Standardization of pH meter, preparation of buffers, emulsions. Spectroscopy: determination of absorption maxima (λ_{max}) of a given solution. Colorimetric determination of pK and sugars (Molischs test, iodine test, Saliwanoff test, Fehlings test, Benedicts test, Bials test). Titration of weak acid-weak base.

Module II

Biochemical estimation: Cholestrol, free fatty acids, iodine number. Quantitative estimation of carbohydrates. Distinguish reducing and non-reducing sugars. Quantitative estimation of proteins. Estimation of nucleic acids

Module III

Biochemical estimation of proteins (Ninhydrin test, Biuret test, Xanthoprotein test). Isoelectric precipitation. Separation of sugars, fatty acids and amino acids by paper chromatography. Extraction of lipids from plant material Thin layer chromatography. Gel electrophoresis

Module IV

Biochemical estimation of DNA and RNA. Quantitative estimation of DNA and RNA by UV spectrophotometer. Determination of melting temperature of DNA from thermal denaturation characteristics.

TERM PAPER

Course Code: SCT2131

Credit Units: 01

METHODOLOGY

A term (or research) paper is primarily a record of intelligent reading in several sources on a particular subject.

The students will choose the topic at the beginning of the session in consultation with the faculty assigned. The progress of the paper will be monitored regularly by the faculty. At the end of the semester the detailed paper on the topic will be submitted to the faculty assigned. The evaluation will be done by Board of examiners comprising of the faculties.

GUIDELINES FOR TERM PAPER

The procedure for writing a term paper may consists of the following steps:

1. Choosing a subject
2. Finding sources of materials
3. Collecting the notes
4. Outlining the paper
5. Writing the first draft
6. Editing & preparing the final paper

1. Choosing a Subject

The subject chosen should not be too general.

2. Finding Sources of materials

- a) The material sources should be not more than 10 years old unless the nature of the paper is such that it involves examining older writings from a historical point of view.
- b) Begin by making a list of subject-headings under which you might expect the subject to be listed.
- c) The sources could be books and magazines articles, news stories, periodicals, scientific journals etc.

3. Collecting the notes

Skim through sources, locating the useful material, then make good notes of it, including quotes and information for footnotes.

- a) Get facts, not just opinions. Compare the facts with author's conclusion.
- b) In research studies, notice the methods and procedures, results & conclusions.
- c) Check cross references.

4. Outlining the paper

- a) Review notes to find main subdivisions of the subject.
- b) Sort the collected material again under each main division to find sub-sections for outline so that it begins to look more coherent and takes on a definite structure. If it does not, try going back and sorting again for main divisions, to see if another general pattern is possible.

5. Writing the first draft

Write the paper around the outline, being sure that you indicate in the first part of the paper what its purpose is. You may follow the following:

- a) statement of purpose
- b) main body of the paper
- c) statement of summary and conclusion

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Avoid short, bumpy sentences and long straggling sentences with more than one main ideas.

6. Editing & Preparing the final Paper

- a) Before writing a term paper, you should ensure you have a question which you attempt to answer in your paper. This question should be kept in mind throughout the paper. Include only information/ details/ analyses of relevance to the question at hand. Sometimes, the relevance of a particular section may be clear to you but not to your readers. To avoid this, ensure you briefly explain the relevance of every section.
- b) Read the paper to ensure that the language is not awkward, and that it "flows" properly.
- c) Check for proper spelling, phrasing and sentence construction.
- d) Check for proper form on footnotes, quotes, and punctuation.
- e) Check to see that quotations serve one of the following purposes:
 - (i) Show evidence of what an author has said.
 - (ii) Avoid misrepresentation through restatement.
 - (iii) Save unnecessary writing when ideas have been well expressed by the original author.
- f) Check for proper form on tables and graphs. Be certain that any table or graph is self-explanatory.

Term papers should be composed of the following sections:

- 1) Title page
- 2) Table of contents
- 3) Introduction
- 4) Review
- 5) Discussion & Conclusion
- 6) References
- 7) Appendix

Generally, the introduction, discussion, conclusion and bibliography part should account for a third of the paper and the review part should be two thirds of the paper.

Discussion

The discussion section either follows the results or may alternatively be integrated in the results section. The section should consist of a discussion of the results of the study focusing on the question posed in the research paper.

Conclusion

The conclusion is often thought of as the easiest part of the paper but should by no means be disregarded. There are a number of key components which should not be omitted. These include:

- a) summary of question posed
- b) summary of findings
- c) summary of main limitations of the study at hand
- d) details of possibilities for related future research

References

From the very beginning of a research project, you should be careful to note all details of articles gathered.

The bibliography should contain ALL references included in the paper. References not included in the text in any form should NOT be included in the bibliography.

The key to a good bibliography is consistency. Choose a particular convention and stick to this.

Bibliographical conventions

Monographs

Crystal, D. (2001), *Language and the internet*. Cambridge: Cambridge University Press.

Edited Volumes

Gass, S./Neu, J. (eds.) (1996), *Speech acts across cultures. Challenges to communication in a second language*. Berlin/ NY: Mouton de Gruyter.

[(eds.) is used when there is more than one editor; and (ed.) where there is only one editor. In German the abbreviation used is (Hrsg.) for Herausgeber].

Edited Articles

Schmidt, R./Shimura, A./Wang, Z./Jeong, H. (1996), *Suggestions to buy: Television commercials from the U.S., Japan, China, and Korea*. In: Gass, S./Neu, J. (eds.) (1996), *Speech acts across cultures. Challenges to communication in a second language*. Berlin/ NY: Mouton de Gruyter: 285-316.

Appendix

The appendix should be used for data collected (e.g. questionnaires, transcripts,...) and for tables and graphs not included in the main text due to their subsidiary nature or to space constraints in the main text.

Assessment Scheme:

Continuous Evaluation:

40%

(Based on abstract writing, interim draft, general approach, research orientation, readings undertaken etc.)

Final Evaluation:

60%

(Based on the organization of the paper, objectives/ problem profile/ issue outlining, comprehensiveness of the research, flow of the idea/ ideas, relevance of material used/ presented, outcomes vs. objectives, presentation/ viva etc.)

IMMUNOLOGY-I

Course Code: SCT2202

Credit Units: 02

Course Objective:

The will learn about the innate and adaptive immune responses; antigens, major histocompatibility complexes and their role in generation of immune response and transplant rejection; generation and regulation of immune system, and cell-mediated cytotoxicity.

Course Contents:

Module I:

Types of immunity: innate, acquired, active and passive; clonal nature of immune response; lymphoid organs; Nature and Biology of antigens and superantigens; types, structure and function of antibodies.

Module II:

Major histocompatibility complexes (MHC) and their role in immune response generation and transplant immunology; B cell receptor (BCR) and T cell receptor (TCR); antibody diversity and mechanisms of antibody diversity generation; complement system.

Module III:

Cells of the immune system: Hematopoiesis and differentiation; lymphocyte trafficking, B-and T-Lymphocytes; innate lymphoid cells; macrophages, dendritic cells, natural killer, lymphokines and lymphokine activated killer cells, eosinophils, neutrophils and mast cells

Module IV:

Regulation of immune response: Antigen processing and presentation, activation of B and T lymphocytes, cytokines and their role in immune regulation, T cell regulation and MHC restriction, immunological tolerance

Module V:

Cell mediated toxicity: Mechanism of T cell and NK cell mediated lysis and macrophage mediated cytotoxicity.

Immunological methods and Techniques: Immuno-diffusion, immuno-electrophoresis, Cross reactivity, Precipitation and Agglutination reaction; ELISA, RIA, fluorescence activated cell sorter.

Examination Scheme:

BIOSTATISTICS

Course Code: SCT2205

Credit Units: 03

Course Objective:

Students will learn about the statistical methods and application of statistical methods applied to biological data obtained in experimental techniques.

Course Contents:

Module I

Preliminary concepts of Statistics and Biostatistics; Measures of Central Tendency: Mean, Median, Mode
Measures of Dispersion: Range, Standard deviation, Variance

Module II:

Probability: Random Experiments, Trial and Event, Sample Space, Mutually Exclusive or Disjoint Events, Mutually Exhaustive Events, Equally Probable Events, Complementary Event, Classical definition of Probability, Statistical definition of Probability, Axiomatic definition of Probability, Addition theorem, Multiplication theorem, Conditional Probability, Bayes' Theorem. Expectation.

Module III:

Types of Probability Distributions: Introduction to Normal Distribution, Bernoulli Distribution, Uniform Distribution, Binomial Distribution, Poisson distribution, Exponential Distribution

Module IV:

Correlation & Regression: Bivariate distribution Correlation, Types of Correlation, Simple Correlation Coefficient for ungrouped data, Properties and Interpretation of Correlation Coefficient, Coefficient of determination, Scatter diagram, Standard Error, Probable error of Correlation Coefficient. Rank correlation, Some examples. Regression lines and Regression Coefficients, Properties of Regression Coefficients, Some examples. Method of least square: Fitting of straight line

Module V:

Hypothesis Testing: Parameter, Statistic, Null hypothesis, Alternative hypothesis, Critical region, Type I Error, Type II Error, Level of significance, P-value and its applications. One sample t-test, Paired t-test, Degrees of freedom for t-test, F test for equality of Population variances, Degrees of freedom for F-test. Normal test for sample mean and population mean, Normal test for two sample means. Chi-square Test: Test of goodness of fit, Test of Independence of attributes, Degrees of freedom for Chi-square test, Coefficient of contingency, Yates' correction for continuity. Analysis of Variance: One way and Two-way (only Examples)

MOLECULAR BIOLOGY LAB

Course Code: SCT2207

Credit Units: 01

Course Contents:

1. Genomic DNA isolation from plant and animal cells.
2. RNA isolation.
3. Whole cell protein isolation and analysis on SDS-PAGE.
4. DNA, RNA and protein quantification by spectrophotometric analysis.
5. Restriction mapping and analysis on native-PAGE.
6. Studies of gene regulation.
7. Induction of gene.
8. PCR, RT-PCR, Real time PCR.

MICROBIOLOGY & VIROLOGY LAB

Course Code: SCT2208

Credit Units: 01

Course Contents:

1. Preparation of solid and liquid media.
2. Isolation and maintenance of organisms by plating, streaking and serial dilution.
3. Preparation of slant cultures.
4. Growth curve measurement of bacterial population by turbidometry.
5. Measurement of bacterial population by dilution method. Techniques for isolation of pure cultures.
6. Isolation of heterotrophs and autotrophs, isolation and enumeration of microbial population in soil and water.
7. Effect of temperature, pH, carbon and nitrogen sources on growth of bacteria.
8. Microscopic examination of bacteria by gram staining.

BIOINFORMATICS-II LAB

Course Code: SCT2210

Credit Units: 01

Course Contents:

Module I

Database creation using DDL and DML. Defining the primary and secondary keys. Implementation of selection, projection and joins (internal and external) with MySQL

Module II

Introduction to Linux Shell Programming, Running BioJava Scripts

Module III

Running BioPerl and BioPython Scripts

Module IV

Programming in R basic scripts

Module V

R/Bioconductor programming for DEGs, Visualization and annotation.

IMMUNOLOGY-II

Course Code: SCT2303

Credit Units: 02

Course Objective:

Role of antibody engineering in biomedical applications and the importance of immune-genetics in disease processes, tissue transplantation and immune regulation are some of the areas of attributes of this course which can help the students to understand the biotechnology related to human kind.

Course Contents:

Module I: Antigen, antibody definitions, properties and utility

Antigens and Antibodies: Factors responsible for immunogenicity, Epitopes, Adjuvants, superantigens, Antigen Presentation and processing, Structure and function of antibody, Antibody classes, Passive antibody therapy, Monoclonal antibody, Antibody engineering, Generation of antibody diversity

Module II: Autoimmunity, Hypersensitivity and Immunodeficiency

Tolerance and Autoimmunity, Types and mechanism of autoimmune diseases, Hypersensitive reactions, Transplantation types, Immunological basis of graft rejection. Primary and secondary immunodeficiency, AIDS

Module III: Tumor immunology, Immunity to infectious agents

Immune response to viral infections, Tumor immunity and Tumor antigens, Immunodiagnostics (diagnosis of infectious diseases)

Module IV: vaccines

General consideration, idotype network hypothesis, Synthetic vaccines: Active and passive immunization, Vaccine types (Live but attenuated, Killed, Subunit, Recombinant, DNA and Peptide).

Module V: Hybridoma technology and its applications

Fusion of myeloma cells with lymphocytes

Examination Scheme:

RECOMBINANT DNA TECHNOLOGY

Course Code: SCT2304

Credit Units: 02

Course Objective:

A complete understanding of molecular techniques like DNA sequencing, restriction mapping, PCR for the cloning and expression of genes can be obtained through the course.

Course Contents:

Module I

Purification of DNA from bacterial, plant and animal cells, manipulation of purified DNA. Introduction of DNA into living cells, transformation, transduction, electroporation, micro-injection.

Module II

Introduction to gene cloning and its uses, tools and techniques: plasmids, cosmids, transposons and other vectors, DNA, RNA, cDNA, viral and non-viral vectors.

Module III

Clinical applications of recombinant technology; Erythropoietin; Insulin analogs and its role in diabetes; Recombinant human growth hormone; Streptokinase and urokinase in thrombosis; Recombinant coagulation factors, Monoclonal antibodies and their role in cancer; Role of recombinant interferons; Immunostimulants; Immuno-suppressors in organ transplants; Role of cytokine therapy in cancers.

Module IV

Analysis of DNA by Southern blotting, Analysis of RNA by Northern blotting, Analysis of proteins by Western blot techniques, Dot blots and slot blots, RFLP, AFLP.

PCR: Basic principles and its modification application and uses.

Examination Scheme:

IMMUNOLOGY-II LAB

Course Code: SCT2307

Credit Units: 01

Course Contents:

Module I

Identification of blood group. Blood film preparation and identification of cells.

Module II

Isolation of serum. Purification of IgG through affinity chromatography

Module III

Immunohistochemistry. Lymphoid organs and their microscopic organization.

Module IV

WIDAL Test

Module V

Radial Immuno-diffusion Test. Ouchterlony Double diffusion Test. DOT, Sandwich ELISA.

RECOMBINANT DNA TECHNOLOGY LAB

Course Code: SCT2308

Credit Units: 01

Course Objective:

The laboratory experiments in Recombinant DNA Technology would certainly help to comprehend the theoretical aspects of the subject.

Course Contents:

Module I

Study of cloning (GFP cloning)

Module II

Design and execution of PCR, RT-PCR, quantitative RT-PCR

Module III

Study of Southern hybridisation

Module IV

Study of RAPD

Module V

Site directed mutagenesis

GENOMICS & PROTEOMIC ALGORITHMS LAB

Course Code: SCT2309

Credit Units: 01

Course Contents:

Module I

Three dimensional Structures – In silico study – large molecular complexes RNA polymerase II, ribosome, unstructured proteins

Module II

Microarray and Microarray data analysis, DNA sequencing methods, next generation sequencing.

Module III

Comparison of two given genomes

Module IV

Inference of protein function from structure

Module V

Gene finding tools and Genome annotation.

NANO-BIOTECHNOLOGY & NANO-MEDICINE LAB

Course Code: SCT2310

Credit Units: 01

Course Objective:

This course offers understanding of generation of nano particles, their characterization and applications.

Course Contents:

1. Demonstration about occupational health and safety (OHS) and workplace health and safety (WHS) in nanotechnology.
2. Preparation of aqua regia, its handling and role in washing glass-ware for metal nanoparticles synthesis.
3. Optimization of temperature for metal nanoparticle preparations using biological materials.
4. Synthesis of silver nanoparticles and analysis of their surface Plasmon resonance (SPR) properties.
5. Neem extract mediated silver nanoparticle synthesis and analysis of their optical properties.
6. Dye degradation using silver nanoparticles synthesized in experiments 4 and 5.
7. Preparation of metal oxide nanoparticles and their characterization.
8. Interactions of silver nanoparticles with red blood cells.
9. Interaction of silver nanoparticles with bacterium and their antimicrobial properties.
10. Preparation of nanoparticles containing polymeric films.

PLANT BIOTECHNOLOGY AND ITS APPLICATIONS IN MOLECULAR MEDICINE

Course Code: SCT2405

Credit Units: 02

Course Objective:

The application of Plant Biotechnology covers major areas related to commercial applications. Regeneration of plants through *in vitro* techniques offers a practical strategy for micro propagation. Importance will also be given to areas like *in vitro* fertilization, animal cell and tissue culture, hormone vaccine and important enzyme production through animal biotechnology.

Course Contents:

Module I

Historical perspective of plant tissue culture.
Tissue culture lab and organization
Sterilisation techniques
Types of nutrient media and media composition
Plant regeneration pathways
Role of phytohormones
Cell culture techniques- cell, tissue, organ cultures, callus culture, suspension culture
Culture techniques Callus culture, cell culture and protoplast cultures.

Module II

Organogenesis and somatic embryogenesis.
Applications of plant tissue and cell culture.
Micropropagation, pathogen free plants. production haploids,
Somaclonal variation.preservation of germplasm.

Module III

Genetic engineering in plants, - transformation vectors
Gene transfer techniques-vector mediated and vector less gene transfer.
Transgenic plants transgene integration and expression

Module IV

Transgenic crop with new traits-herbicide tolerance, insect and disease resistance,
Therapeutic proteins and compounds
Oral vaccines
Production of secondary metabolites via tissue culture
Bioethics of plant genetic engineering.

MOLECULAR IMMUNOLOGY LAB

Course Code: SCT2406

Credit Units: 01

Course Objective:

Students will learn methods for isolation, culture and maintenance of immune cells, for example T cell lines, human primary T cells and antigen presenting cells. Students will also learn nuances of antigen-specific immune response generation, antigen processing and presentation, cell phenotype analysis, cell proliferation, cell death and cytotoxicity assays.

Course Contents:

1. Culture of immortalized immune cell lines, for example Jurkat, T2-A2 etc.
2. Isolation of CD4 and CD8+ T cells from human peripheral blood.
3. Cell phenotype analysis, calculation of CD4:CD8 ratio in normal healthy individual blood.
4. Isolation and characterization of antigen presenting cells.
5. Activation of T cells by non-specific stimulus as well as by engaging their T cell receptor (TCR).
6. Cell proliferation assay.
8. Generation, and phenotypic and functional characterization of antigen-specific T cell response.
9. B cell culture and hybridoma technology.

MOLECULAR MODELING & DRUG DEVELOPMENT LAB

Course Code: SCT2407

Credit Units: 01

Course Objective:

The above course will enable the student to handle in silico drug designing , docking , modeling and simulation using various software such as Schrodinger Biologics Suite, Spdbviewer, Modeller, Desmond and few other online resources. The students gains insights into the life cycle of drug development.

Course Contents:

1. Protein Structural Visualization
2. Homology Modeling
3. Drug Docking
4. Pharmacophore Designing
5. QSAR studies
6. Basics of molecular simulation studies

WORKSHOP / CERTIFICATION

Objectives

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two way. The trainer has to make sure that the aspect covered are practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

Major Themes for Workshop

The workshop may be conducted on any of the following major themes:

Accounting
Finance
Human Resources
Marketing
Economics
Operations
Supply Chain Management

These themes are merely indicative and other recent and relevant topics of study may be included.

Guidelines for Workshop

The procedure for earning credits from workshop consists of the following steps:

Relevant study material and references will be provided by the trainer in advance.

The participants are expected to explore the topic in advance and take active part in the discussions held

Attending and Participating in all activities of the workshop

Group Activities have to be undertaken by students as guided by the trainer.

Evaluation of workshop activities would be done through test and quiz at the end of the workshop.

Submitting a write up of at least 500 words about the learning outcome from the workshop.

Methodology

The methodology followed at the workshop could be based on any one or more of the following methods:

Prof. (Dr.) Anil Kumar
Deputy Dean Academics

ETHICS OF BIOMEDICAL RESEARCH, INTELLECTUAL PROPERTY (IP), IP RIGHTS (IPR)

Course Code: SCT2503

Credit Units: 03

Course Objective

The aim of this course is to develop the understanding of relevance, business Impact and protection of Intellectual Property along with the types of Intellectual Property Rights: Patents, Trademarks, Copyrights, Industrial Designs, Geographical Indications and International Conventions, Biosafety and Bioethics

Course Contents

Module I: Basic Principles and Acquisition of Intellectual Property Rights

Basic Principles of Patent Law, Patent Application procedure, Drafting of a Patent Specification, Understanding Copyright Law, Basic Principles of Trade Mark and Design Rights, International Background of Intellectual Property

Module II: Ownership and Enforcement of Intellectual Property Rights

Patents-Objectives, Rights, Assignments, Defences in case of Infringement. Copyright-Objectives, Rights, Transfer of Copyright, work of employment Infringement, Defences for infringement. Trademarks-Objectives, Rights, Protection of goodwill, Infringement, Passing off, Defences. Designs-Objectives, Rights, Assignments, Infringements, Defences of Design Infringement, Enforcement of Intellectual Property Rights - Civil Remedies, Criminal Remedies, Border Security measures, Practical Aspects of Licensing - Benefits, Determinative factors, important clauses, licensing clauses.

Module III: Biotechnology and Intellectual Property Rights

Objective, Evolution, Basic Structure of Gene Techniques, Applications, Commercial Potential of Biotech Inventions, Rationale for Intellectual Property Protection. Patenting Biotechnology Inventions-Objective, Concept of Novelty, Concept of inventive step, Microorganisms, Moral Issues in Patenting Biotechnological inventions. Plant Varieties Protection-Objectives, Justification, International Position, Plant Varieties Protection in India Protection of Geographical Indications Objectives, Justification, International Position, Multilateral Treaties, National Level, Indian Position.

Module IV

Biosafety and Bioethics Management-Key to environmentally responsible use of biotechnology. Cartagena Protocol on Biosafety, Ethical implications of Biotechnological products and techniques. Biosafety: History, evolution and concept of biosafety; need and application of biosafety in laboratories and industries; biosafety guidelines and regulations, international and national norms of biosafety; Implementation of biosafety guidelines; Classification and Description of Biosafety levels. Good laboratory practice (GLP) and Good manufacturing practice (GMP), Use of GMO's and their release, GM products, issues in use of GMO's, risk for animal/human/agriculture and environment owing to GMOs. Bioethics: Introduction and need of bioethics, its relation with other branches, types of risk associated with genetically modified microorganisms, Ethical Issues involving GMOs; ethics related to human cloning, human genome project, prenatal diagnosis, agriculture and animal rights, data privacy of citizens health; ethical issues in India and abroad through case studies.

STEM CELLS AND REGENERATIVE MEDICINE LAB

Course Code: SCT2505

Credit Units: 01

Course Contents:

Module-I:

Stem cell isolation and characterization.

Module-II:

Generation of iPSC lines and characterization of their pluripotency profile and genome stability (Stem Cell Karyotype analysis).

Module-III:

Differentiation of iPSC into somatic cell lineages and characterization of stem cell-derived somatic cell populations.

Module-IV:

Functional characterization of stem cell-derived somatic cell populations.

Module-V:

Recent advances in stem cell therapeutics and stem cell-based drug discovery.

Examination Scheme:

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spo tting	Practic al Record	Viva

SUMMER INTERNSHIP EVALUATION

Course Code: SCT2535

Credit Units: 06

GUIDELINES FOR PROJECT FILE

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critiqued by the faculty guide and corrected by the student at each stage.

The File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation.

Methodology

The students will be sent to various industries and institutes where they will undergo short term training. After the completion of the training the students will be required to submit project report which shall then be evaluated by two internal examiners. The students will then have to appear for a Viva Voce examination to be conducted by an external evaluator at the end of the semester.

In general, the File should be comprehensive and include

- A short account of the activities that were undertaken as part of the project;
- A statement about the extent to which the project has achieved its stated goals.
- A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;
- Any activities planned but not yet completed as part of the project, or as a future initiative directly resulting from the project;
- Any problems that have arisen that may be useful to document for future reference.

Report Layout

The report should contain the following components:

➤ Title or Cover Page

The title page should contain the following information: Project Title; Student's Name; Course; Year; Supervisor's Name.

➤ Acknowledgements (optional)

Acknowledgment to any advisory or financial assistance received in the course of work may be given.

➤ Abstract

A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project

➤ Table of Contents

Titles and subtitles are to correspond exactly with those in the text.

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

➤ **Introduction**

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

➤ **Materials and Methods**

This section should aim at experimental designs, materials used. Methodology should be mentioned in details including modifications if any.

➤ **Results and Discussion**

Present results, discuss and compare these with those from other workers, etc. In writing these section, emphasis should be given on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary never write in “point” form.

➤ **Conclusion**

A conclusion should be the final section in which the outcome of the work is mentioned briefly.

➤ **Future prospects**

➤ **Appendices**

The Appendix contains material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

➤ **References / Bibliography**

This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

Examples

For research article

Voravuthikunchai SP, Lortheeranuwat A, Ninrprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichia coli* O157: H7. *Clin Microbiol Infec*, **8** (suppl 1): 116–117.

For book

Kowalski, M. (1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), **7**: 63-67

ASSESSMENT OF THE PROJECT FILE

Essentially, marking will be based on the following criteria: the quality of the report, the technical merit of the project and the project execution.

Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project

Project execution is concerned with assessing how much work has been put in.
The File should fulfill the following *assessment objectives*:

Range of Research Methods used to obtain information

Execution of Research

Data Analysis

Analyse Quantitative/ Qualitative information
Control Quality

Draw Conclusions

Examination Scheme:

Project Report	50
Viva Voce	50
Total	100

Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

TERM PAPER

Course Code: SCT2531

Credit Units: 01

METHODOLOGY

A term (or research) paper is primarily a record of intelligent reading in several sources on a particular subject.

The students will choose the topic at the beginning of the session in consultation with the faculty assigned. The progress of the paper will be monitored regularly by the faculty. At the end of the semester the detailed paper on the topic will be submitted to the faculty assigned. The evaluation will be done by Board of examiners comprising of the faculties.

GUIDELINES FOR TERM PAPER

The procedure for writing a term paper may consists of the following steps:

- Choosing a subject
- Finding sources of materials
- Collecting the notes
- Outlining the paper
- Writing the first draft
- Editing & preparing the final paper

1. Choosing a Subject

The subject chosen should not be too general.

2. Finding Sources of materials

- d) The material sources should be not more than 10 years old unless the nature of the paper is such that it involves examining older writings from a historical point of view.
- e) Begin by making a list of subject-headings under which you might expect the subject to be listed.
- f) The sources could be books and magazines articles, news stories, periodicals, scientific journals etc.

3. Collecting the notes

Skim through sources, locating the useful material, then make good notes of it, including quotes and information for footnotes.

- d) Get facts, not just opinions. Compare the facts with author's conclusion.
- e) In research studies, notice the methods and procedures, results & conclusions.
- f) Check cross references.

4. Outlining the paper

- c) Review notes to find main sub-divisions of the subject.
- d) Sort the collected material again under each main division to find sub-sections for outline so that it begins to look more coherent and takes on a definite structure. If it does not, try going back and sorting again for main divisions, to see if another general pattern is possible.

5. Writing the first draft

Write the paper around the outline, being sure that you indicate in the first part of the paper what its purpose is. You may follow the following:

- a) statement of purpose
- b) main body of the paper

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- c) statement of summary and conclusion

Avoid short, bumpy sentences and long straggling sentences with more than one main ideas.

6. Editing & Preparing the final Paper

- g) Before writing a term paper, you should ensure you have a question which you attempt to answer in your paper. This question should be kept in mind throughout the paper. Include only information/ details/ analyses of relevance to the question at hand. Sometimes, the relevance of a particular section may be clear to you but not to your readers. To avoid this, ensure you briefly explain the relevance of every section.
- h) Read the paper to ensure that the language is not awkward, and that it "flows" properly.
- i) Check for proper spelling, phrasing and sentence construction.
- j) Check for proper form on footnotes, quotes, and punctuation.
- k) Check to see that quotations serve one of the following purposes:
- (iv) Show evidence of what an author has said.
 - (v) Avoid misrepresentation through restatement.
 - (vi) Save unnecessary writing when ideas have been well expressed by the original author.
- l) Check for proper form on tables and graphs. Be certain that any table or graph is self-explanatory.

Term papers should be composed of the following sections:

- 8) Title page
- 9) Table of contents
- 10) Introduction
- 11) Review
- 12) Discussion & Conclusion
- 13) References
- 14) Appendix

Generally, the introduction, discussion, conclusion and bibliography part should account for a third of the paper and the review part should be two thirds of the paper.

Discussion

The discussion section either follows the results or may alternatively be integrated in the results section. The section should consist of a discussion of the results of the study focusing on the question posed in the research paper.

Conclusion

The conclusion is often thought of as the easiest part of the paper but should by no means be disregarded. There are a number of key components which should not be omitted. These include:

- e) summary of question posed
- f) summary of findings
- g) summary of main limitations of the study at hand
- h) details of possibilities for related future research

References

From the very beginning of a research project, you should be careful to note all details of articles gathered.

The bibliography should contain ALL references included in the paper. References not included in the text in any form should NOT be included in the bibliography.

The key to a good bibliography is consistency. Choose a particular convention and stick to this.

Bibliographical conventions

MEDICAL WRITING

Course Code: SCT2507

Credit Units: 01

Course Objective

To develop understanding of information and library science research issues in the domain of bioinformatics through review of journal articles, invited talks, and critical group discussions of methods. The main objectives for this course are to develop: familiarity with information and library science-oriented problems in the biomedical sciences, an understanding of research methods in the biomedical domain, critical thinking and evaluation skills and presentation and summarization skills.

Course Contents

Module I

Introduction: Science, Scientific Field and Biological research. Role of a researcher in different stages of a project, Routes to research funding (academic and commercial)

Module II

Research – Definition – Importance and Meaning of research – Characteristics of research – Types of Research – Steps in research – Identification, Selection and formulation of research problem – Research questions – Research design – Formulation of Hypothesis – Review of Literature.

Module III: Sampling techniques

Sampling theory – types of sampling – Steps in sampling – Sampling and Non-sampling error – Sample size – Advantages and limitations of sampling. Collection of Data: Primary Data – Meaning – Data Collection methods – Secondary data – Meaning - Relevance's, Limitations and cautions. Statistics in Research.

Module IV

Type of Articles (review, letters etc). Scientific paper format (Abstract, Introduction, Materials and Methods, Results, Discussion). Writing, evaluating, presenting and publishing the results of scientific research in the academic press (journals, conferences etc). Choosing the appropriate journal (Sources, Information, Instructions to authors, peer review system, journal evaluation)

Module V

Case studies of areas of current research. Formulating a research plan and its presentation

Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

PROJECT/ DISSERTATION

Course Code: SCT2637

Credit Units: 12

Course Objective:

The students are expected to utilize their scheduled periods by undertaking the project that would be completed during the semester

Every student shall undertake a major Project. The major Project shall be undertaken in some biotechnology industry or laboratory of repute. Each student shall be assigned to a faculty who shall continuously monitor the progress of the Project in the concerned laboratory or industry. The faculty, in consultation with the concerned scientist of the industry/laboratory, shall decide the topic of the project. At the conclusion of the project the student shall submit a seminar and a dissertation. The dissertation shall be evaluated by the internal faculty/examiner. The student then shall have to appear for the viva voce examination.

GUIDELINES FOR PROJECT FILE

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critiqued by the faculty guide and corrected by the student at each stage.

The File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation.

In general, the File should be comprehensive and include

Course Code: DAN2103

Credit Units: 02

Note: One recipe in each food group indicating best method of cooking

Food group Grouping of foods, discussion on nutritive value,

Sensory Evaluation

1. Cereals:

a) Microscopic study of different starches.

b) Methods of combining starch and boiling water.

C) Study of effects of moist heat on starch.

d) Preparation of white sauces and soups.

e) Gluten formation.

2. Pulses -

Effect of hard water, soft water, alkali, papaya on texture and cooking time of grams and dhals.

3. Vegetables -

Effect of shredding, dicing, acids, alkali, covering, steaming and pressure cooking on the different pigments and acceptability of vegetables.

4. Fruits -

Study of different methods of preventing enzymatic browning of fruits. Pectin content of fruits.

3. Qualitative tests for proteins.
4. Qualitative tests for minerals.
5. Quantitative estimation of Calcium.
6. Quantitative estimation of Phosphorous.
7. Quantitative estimation of Vitamin-C.
8. Deamination Experiments
9. Estimation of total nitrogen in foods (Micro or Macro Kjeldahl methods)
10. Lipid extraction
11. Determination of Iodine value.
12. Estimation of Iron.

Food Microbiology

Course Code: DAN2202

Credit Units: 04

Module I

Introduction and History of Microbiology - The theory of spontaneous generation, gene theory of disease, Louis pasteur's experiment. Different terminology of Heterotrophic nutrition, autotrophic nutrition, saprophytic, holozoic, host, culture, parasite.

Bacteria - Morphology, reproduction, growth curve, nomenclature, genera of bacteria important in food microbiology. Observation of motility of bacteria in bottle milk.

Mold - Morphology, reproduction, physiology and nutrition, genera of mold important in foods.

Demonstration of mold growth in bread.

Module II

Yeast - Morphology, reproduction, classification, physiology and nutrition, process of hybridization, importance of yeast in food. Observation of yeast cells

Virus - Occurrence, morphology, reproduction, human viral disease caused by virus.

Algae - Occurrence, morphology, reproduction, importance of algae.

General principles underlying spoilage- fitness and unfitness of food for consumption, causes for spoilage, factors affecting kinds and number of micro organism in food, factors affecting the growth of micro organism in food.

Module III

Contamination and kinds of micro organisms causing spoilage of Cereal products- grains, flour, baked products and cake.

Fruits and vegetables and their products- fruit juice, pickles.

Fleshy foods- meats, poultry and fish. Observation of milk spoilage.

Module IV

Contamination and kinds of micro organisms causing spoilage of

Eggs and milk and milk products- cream, milk frozen desserts and butter.

Fats and oils, bottled beverages, spices and condiments.

Food poisoning, food infection and food borne diseases.

Micro organism in air, air borne diseases.

Module V

Micro-organisms in Water - sources, bacteriological examinations, total count, test of E.Coli, purification of water, water borne diseases.

Micro organisms in sewage and sewage disposal.

Destruction of bacteria- sterilization, physical agents, light, desiccators, electricity, heat and chemical agents. Visit to micro lab to learn most probable number.

Food Science II-Lab

Course Code: DAN2203

Credit Units: 02

1. **Eggs** -
Coagulation of egg protein - factors, Egg white foam, effects of beating, sugar, acid and temperature
2. **Milk** cookery
Coagulation of milk protein, panneer, cooking of vegetables in milk.
3. **Fats and Oils** -
Comparison of smoking temperature of some fats and oils.
4. **Sugar** and Jaggery -
Different stages of crystallisation of sugar.
5. Experience in Baking (Group work) Cakes and biscuits.
6. Experience in preservation of foods (Group work) salting, pickling, preservation with sugar, jams, jellies, marmalades, squash, sauces and ketchup.
7. **Food adulteration** - Identification of common adulterants - Demonstration.

Quantity Food Service

Course Code: DAN2301

Credit Units: 04

Module - I

Floor planning and layout – characteristics of typical food service facilities. Floor plan physical planning, space allocation for the various areas and flow of traffic through receiving, storage, preparation, service and dish washing areas. Working heights and dimensions of work centers, lighting, ventilation and pest – rodent control.

Module - II

Materials - Basic materials used in the manufacture of equipment, finishes and insulation. Strength and limitation of materials.

Module - III

Equipment - Equipment required for quantity food service-major and minor equipment with reference to food storage, preparation, service and cleaning. Factors influencing their selection and purchase. Arrangement of equipment in work centers, use, care and maintenance of equipment. Transition from traditional to modern equipment.

Module - IV

Meal Planning - Menu-principles involved in planning menu, types of menu.

Fuel: Cooking fuels-selection, advantages, limitations, safety measures and fuel saving techniques.

Module - V

Quantity food preparation – Selection, purchasing and storage of foods, standardization of recipe, portion control, utilization of left over foods.

Marketing of foods –Importance and need for advertisement.

Research Paper Writing

Course Code: DAN2331

Credit Units: 02

The students will be asked to do meta- analysis in brief(Article writing)

A **meta-analysis** refers to methods focused on contrasting and combining results from different studies, in the hope of identifying patterns among study results, sources of disagreement among those results, or other interesting relationships that may come to light in the context of multiple studies. In its simplest form, this is normally by identification of a common measure of effect size, of which a weighted average might be the output of a meta-analysis. The weighting might be related to sample sizes within the individual studies. More generally there are other differences between the studies that need to be allowed for, but the general aim of a meta-analysis is to more powerfully estimate the true effect size as opposed to a less precise effect size derived in a single study under a given single set of assumptions and conditions.

Project

Course Code: DAN2332

Credit Units: 03

Every student shall be allotted a project supervisor. The project supervisor shall be from the Department of Dietetics & Applied Nutrition.

The allotment of the project supervisor will be done during the semester. The topic of project will be finalized by the project supervisor. It is the responsibility of the project supervisor that the student is making the required progress in work.

The project must be completed and submitted in the form of a report by the end of the semester.

1. Individual Project
2. Any one diseases (Infection & fever, allergy, deficiency diseases, obesity)
3. Minimum five clinical cases
4. To present a report furnishing the following data
 - a) Hospital - lay out and organization
 - b) Medical profile
 - a. general details
 - b. family history, associated complications, drugs
 - c. anthropometry and clinical status
 - d. biochemical status
 - e. biophysical status
 - f. progress chart
 - c) Diet therapy

Workshop

Course Code: DAN2333

Credit Units: 01

It aims to provide a detailed insight on the simple practical aspects of the chosen topic by organising lectures followed by the group assignments .focus group discussion,Quiz ,debates and various modes of interactions .The registered participants will get participation certificate and one credit point.

Objectives

Potential trainers / participants will be able

Plan any low cost Nutritious recipe/Food product development

To plan general intervention strategies(action in order to improve eating habits)

Gather information on sensory evaluation or satisfaction level of the visitors/audience

Implementation:

This would be approximately 2 hours long after the completion of lectures. The student will ask the visitors to complete a form with details of their planned recipe including cost, nutritive value etc and its sensory evaluation. This information is necessary as it is important to have a complete idea of the acceptability to make their product better. They would be asked to fill the satisfaction scales/Feedback.This activity would be discussed in further depth during the workshop.

Food Processing

Course Code: DAN2304

Credit Units: 03

Module I

Cereals and Pulses

Milling of wheat - extraction of flour, refined wheat flour and pasta products

Milling of rice – parboiled rice, rice based instant food

Processing of corn, barley and millets – pearling, flaking and puffing, corn starch products, Malting

Pulses – Red gram, Bengal gram, black gram, green gram, soy based products, Decortication and dhal milling, elimination of toxic factors, fermentation and germination

Module II

Milk and Milk products

Collection, Standardization, pasteurization, homogenization, UHT processing, manufacture of paneer, khoa, curd, yogurt, cream, butter, cheese, ghee, flavoured milk, ice creams, dehydrated milk products

Module III

Fruits and vegetables

Harvesting, physiological and bio chemical changes during ripening, handling and storage, general methods of processing - extraction and pulping, raw material and product specifications and standards.

Module IV

Meat, poultry, fish and egg:

Ageing and tenderizing, curing, smoking and freezing of meat, fresh storage of meat. Meat based products: sausages, salaami, bacon. Fish processing and storage, pickling.

Egg: storage, frozen egg, dehydrated egg powder.

Others

Module V

a. nuts and oil seeds – pressing, solvent extraction, purification – degumming, refining, bleaching, deodourizing. Hydrogenation – margarines, shortenings

b. Spices – processing and extraction of essential oils and colours, storage and preservation

c. Tea, coffee and coco – Processing and storage

Examination Scheme:

ADVANCED DIETETICS

Course code: DAN 2451

Credit: 03

MODULE I

Objectives of diet therapy - Role of a dietitian. Principles of diet preparation and counseling.

Normal diet in the hospitals –regular diet, liquid, semi liquid, light, soft diet, and bland diet.

Different types of Feeding - Basic concepts of oral feeding, tube feeding, IV feeding, gastrostomy feeding.

MODULE II

Therapeutic diets for the following disorders:

- Under weight - definition, etiology, treatment
- Obesity - definition, etiology, treatment.
- Diseases of the gastro intestinal tract-Peptic ulcer and duodenal ulcer, Dumping syndrome, constipation
- Acute and chronic diarrhea -rehydration therapy.

MODULE III

Diseases of the liver and gall bladder (risk factors and diet therapy)

- jaundice
- hepatitis
- cirrhosis
- fatty liver and diet therapy

Diseases of the cardio vascular system (risk factors and diet therapy)

- atherosclerosis
- arteriosclerosis
- hypertension
- congestive heart failure

MODULE IV

Diabetes mellitus – causes, symptoms, bio-chemical changes, insulin, hypo-glycemic drugs, changes in the metabolism of carbohydrate, fat and protein, food exchange list, dietary management

Diseases of the kidney and urinary tract

- Acute and chronic nephritis
- Nephrotic syndrome
- Renal failure
- Urinary calculi
- Uremia

Causes and dietary treatment of kidney diseases and dialysis.

Nutrition and cancer - Dietary guidelines for management.

MODULE V

Diet in Allergy - Definition, classification, common food allergy, test of allergy, diet therapy. Pre operative and post operative diets.

Diet in febrile conditions - Short duration e.g. Typhoid, Long duration e.g. Tuberculosis. Dietetic management of gout and phenyl ketonuria.

Diet in relation to deficiency diseases-Protein calorie deficiency, vitamin A deficiency and anemia.

WORKSHOP

Course code: DAN2433

Credit : 01

- To understand the basic concept of data collection on Nutrition based studies.i.e Nutritional Assessment including anthropometrical measurements, food diaries & 24 dietary recall method etc
- To present and facilitate with support of more experienced trainers as per the contents
- To practice facilitation and Counseling techniques and know about basic Communication with regard to Diet consultation

Implementation:

This would be approximately 2 hours long after the completion of lectures. The student will be asked to complete a form with details of their health goals, and previous and current health history. This information is necessary as it is important to have a complete health picture before making nutritional recommendations. They would be asked to fill the 24 dietary recall/Food Frequency/3 day food Dairy. This information is discussed in further depth during the workshop. Relevant Physical Parameters/ measurements would also be recorded. These include blood pressure, Height, Weight & BMI etc. The final part would comprise of discussing the recommended dietary and lifestyle changes that will help the students to achieve their health goal(s). Supplementation with specific nutrients may be recommended if necessary.

NUTRITION FOR HEALTH & FITNESS

Course code: DAN2501

Course credits: 05

MODULE-I

Definition components of specific fitness and health status. Energy input & output , diet & Exercise .Nutrition exercise ,physical fitness & health inter-relationship.

MODULE-II

Review of different energy systems for endurance and power activity shifts in carbohydrate and fat metabolism. Mobilization of fat stores during exercise.

MODULE- III

Nutrition in sports: sports specific requirements. Diet manipulation, pre-game & Post game meal . Life style and dietary management of stress.

MODULE-IV

Significance of Physical fitness, nutrition and prevention of weight control, obesity, CV disorder and diabetes.

MODULE- V

Alternative systems for health and fitness like Yoga, meditation.

BAKERY

Course code: DAN2502

Credit: 04

MODULE I

Baking - Definition, Principles of baking, classification of baked foods. Types of equipments in baking industry, cleaning and sanitizing methods of baking equipments, baking temperature of different products, operation techniques of different baking equipments.

MODULE II

Ingredients and Their Role in Baking - Flour, Yeast, sugar, egg, butter, salt, baking powder, colouring, flavouring agents. List of standard colouring and flavouring agents.

MODULE III

Preparation of baked foods - Quick breads, cakes and its varieties, different types of biscuits, cookies and pastries.

MODULE IV

Decoration of baked foods - Icing- Types of Icing used in different bakery product. Role of other ingredients used in icing.

MODULE V

Baking unit/ plant layout & design of a baking unit sanitation and hygiene. Types of packaging materials used for bakery products, method of packaging.

FOOD QUALITY CONTROL LAB

Course Code: DAN2505

Credits:02

Course Content:

MODULE I

Organizing, preparing and serving food for three different meals for 50 members or more (list attached)

Setting up the restaurant - laying of table cloth changing, setting up the silver and other table arrangements.

Folding of serviettes correct use of waiter's cloth. Preparation for customers.

MODULE II

Serving and clearing practice, French and English service.

Service of beverages tea, coffee, juices and alcoholic beverages.

Laying for breakfast.

MODULE III

Tray service

Order taking, making out checks bills presentation of bills

Up keep and cleaning of cutlery, crockery, other equipment.

CLINICAL & THERAPEUTIC NUTRITION

Course code: DAN2602

Credits: 04

MODULE I

Carbohydrates : Review of digestion, absorption and metabolism of carbohydrates, aerobic and anaerobic glycolysis, storage and utilisation of carbohydrates as energy source for physical activity.

MODULE II

Lipids : Review of digestion absorption and metabolism of fats and fatty acids, energy yield from dietary fats, storage, mobilisation of fat stores during exercises, production of Ketone bodies, Ketogenic diets.

MODULE III

Energy Metabolism : BMR, energy requirements for physical activity, relative body weight and influence of physical exercise on changes in body fat and body composition, utilization of energy by muscle tissue, shifts in lipid and carbohydrate, utilisation, in relation to exercise type, intensity and duration.

MODULE IV

Water and electrolyte balance : Water & electrolyte lossess and their replenishment; effect of dehydration.

MODULE V

Nutrient and Drug Interactions: Effect of drug therapy on absorption and utilisation onutrients.

MODULE VI

Diseases of the gastro - intestinal tract : Effect on digestion, absorption and nutritional status. **Implications for diet therapy**

- Diarrhoea, Constipation
- Gastritis and Ulcers.
- Colitis.
- Malabsorption syndromes.

MODULE VII

Liver Gallbladder & Pancreas: Etiology, symptoms, Metabolic and Nutritional Implications

- Hepatitis, Cirrhoses, Hepatic Coma
- Pancreatic
- Cholecystitis, Cholelithiasis

8. Renal System: Etiology, Symptoms, Metabolic and Nutritional Implications

ANATOMY AND PHYSIOLOGY OF SPEECH AND HEARING

Course Code: ASL2107

Credit Units: 05

Course Objectives: After completing this course, the student will be able to understand the

- anatomy of the auditory system
- anatomy of the speech mechanism
- physiology of hearing mechanism
- functioning of speech and swallowing mechanism

Course Contents:

Module-I: Introduction

- a) General anatomical terms
- b) Anatomical positions and planes of reference
- c) Cells, tissues and muscles
- d) Muscle connection and joints
- e) Tissue - vascular and neural

Module-II: Embryology

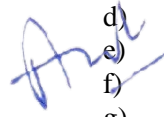

- a) Basic terminologies related to embryology
- b) Development of external ear
- c) Development of middle ear
- d) Development of Inner ear and the auditory system
- e) Five examples of embryonic anomalies affecting speech-language & hearing
- f) Development of respiratory structures
- g) Development of larynx
- h) Development of facial region and palate
- i) Development of tongue and teeth

Module-III: Anatomy and physiology of speech production systems and swallowing

- a) Mechanisms of breathing with emphasis on speech breathing
- b) Supportive frame work of larynx
- c) Anatomy of larynx
- d) Anatomy of oesophagus
- e) Brief mechanisms of swallowing
- f) Mechanisms of phonation
- g) Anatomy of articulators and associated structures
- h) Contribution of articulatory structures to speech production
- i) Anatomy of resonatory mechanisms
- j) Contribution of resonatory mechanisms to speech production

Module-IV: Anatomy and physiology of external and middle ear

- a) Anatomy of the external ear
- b) Physiology of external ear including localization
- c) Head shadow effect, inter-aural intensity and time differences
- d) Brief anatomy of temporal bone
- e) Anatomy of tympanic membrane and associate structures
- f) Anatomy of middle ear and ossicles
- g) Anatomy of Eustachian tube and middle ear muscles

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- h) Physiology of Eustachian tube
- i) Middle ear transformer action
- j) Physiology of middle ear muscles

Module-V: Anatomy and physiology of labyrinth

- a) Anatomy of bony and membranous labyrinth
- b) Macro anatomy of cochlea
- c) Micro anatomy of cochlea
- d) Innervations and blood supply to cochlea
- e) Overview of theories of hearing
- f) Physiology of cochlea
- g) Electrical potentials of the cochlea
- h) Physiology of hearing through bone conduction
- i) Overview to physiology of balancing mechanisms
- j) Overview to anatomy of central auditory pathway
- k) Overview to central auditory mechanism

Examination Scheme:

Components	CRW	PTB	CT	A	EE
Weightage (%)	5	5	15	5	70

CRW- Clinical record writing, PTB- Proficiency in using test batteries, CT- Class test, A- Attendance, EE- End semester examination

CLINICAL PSYCHOLOGY

Course Code: ASL2108

Credit Units: 05

Course Objectives: After completing this course, the student will be able to understand the

- scope of clinical psychology and its significance for speech and hearing
- concept of normality, abnormality and classification of abnormal behavior
- cognitive, motor, emotional and social development
- theories of learning and therapy techniques based on learning principles
- neuropsychological assessment and rehabilitation
- application of neuropsychology in the field of speech and hearing
- basics of counselling

Course Contents:

Module-I: Introduction to psychology

- a) Introduction to psychology: definition, history and schools of psychology
- b) Scope of psychology
- c) Meaning and definition of clinical psychology
- d) Historical development, modern clinical psychology
- e) Significance of clinical psychology in health sciences
- f) Role of clinical psychology in speech and hearing
- g) Concept of normality
- h) Concept of abnormality
- i) Models of mental disorders: biological, psychological social models

Module-II: Assessment procedures in clinical psychology

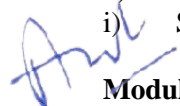

- a) Methods in clinical psychology: case history, clinical interviewing, clinical observation, definition and types of psychological testing
- b) Assessment of cognitive functions
- c) Adaptive functions,
- d) Personality
- e) Behavioural assessment
- f) Classification of abnormal behavior
- g) History, need & rationale of classification
- h) Current classificatory system: DSM, ICD

Module-III: Developmental psychology

- a) Child and developmental psychology: meaning, definition and scope
- b) Meaning of growth, development & maturation
- c) Principles of child development
- d) Motor development: general principals of motor development
- e) Stages in motor development: early motor development, motor development during later childhood and adolescence, decline with age
- f) Cognitive development: growth from early childhood to adolescence
- g) Piaget's theory of cognitive development
- h) Emotional development
- i) Social development

Module-IV: Principles of learning and behaviour modification

- a) Learning: meaning, definition and characteristics

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- b) Theories of learning: introduction
- c) Pavlov's classical conditioning: experiments and principles
- d) Skinner's operant conditioning: experiments and principles
- e) Therapeutic techniques based on learning principles
- f) Skill behavior techniques
- g) Problem behavior techniques

Module-V: Neuropsychology and its relevance to study of speech

- a) Neuropsychology: introduction and definition
- b) Neuropsychological assessment
- c) Neuropsychological rehabilitation
- d) Application of neuropsychology in the field of speech and hearing
- e) Counselling: introduction and definition
- f) Types of counselling: directive and non- directive
- g) Characteristics of a good counsellor

Examination Scheme:

Components	CRW	PTB	CT	A	EE
Weightage (%)	5	5	15	5	70

CRW- Clinical record writing, PTB- Proficiency in using test batteries, CT- Class test, A- Attendance, EE- End semester examination

LINGUISTICS AND PHONETICS

Course Code: ASL2109

Credit Units: 05

Course Objectives: After completing this course, the student will be able to understand

- different branches and aspects of linguistics
- characteristics and functions of language
- different branches of phonetics, applied linguistics, and phonology
- morphology, syntax, semantics, pragmatics
- acquisition of language and factors affecting it
- bi/multilingualism and related issues

Course Contents:

Module-I: Linguistics

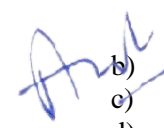

- Introduction to linguistics and different branches of linguistics: applied linguistics, sociolinguistics, psycholinguistics, metalinguistics, neurolinguistics and clinical linguistics
- Language characteristics and functions, difference between animal communication systems and human language
- Morphology – concepts of morph, allomorph, morpheme, bound free and compound forms, roots etc.
- Processes of word formation, content and function words
- Endocentric and exocentric constructions, form classes, grammatical categories
- Inflection and derivation, paradigmatic and syntagmatic relationship
- Principles and practices of morphemic analysis
- Langue versus parole
- Competence vs. performance

Module-II: Phonetics and Phonology

- Introduction to phonetics
- Articulatory, acoustic, auditory and experimental phonetics – an introduction
- Articulatory classification of sounds – segmental and supra-segmental
- Classification description and recognition of vowels and consonants
- Pathological aspects of speech sound production
- Transcription systems with special emphasis on IPA. Transcription of samples of normal and disordered speech
- Introduction to phonology, classification of speech sounds on the basis of distinctive features and phonotactics
- Application of distinctive feature theory to speech pathology and speech therapy, phonotactics, phonotactic patterns of English and Indian languages
- Phonemic analysis – Principles and practices; their practical implications for speech pathologists
- Common phonological processes - assimilation, dissimilation, metathesis, haplology, epenthesis, spoonerism, vowel harmony, nasalization, neutralization

Module-III: Morphology, syntax, semantics and applied linguistics

- Morphology – concepts of morph, allomorph, morpheme, roots, compound forms - endocentric and exocentric constructions, free and bound morphemes, inflection and derivation, principles and practices of morphemic analysis
- Syntax – different methods of syntactic analysis
- IC analysis, phrase structure, grammar, transformational generative grammar
- Introduction to the major types of transformations

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- e) Sentence types, notions about competence versus performance
- f) Deep structure versus surface structure
- g) Acceptability versus grammaticality language versus parole etc.
- h) A brief introduction to semantics – semantic feature theory, pragmatics
- i) Processes of word formation, content and function words, form classes, grammatical categories
- j) Syntax – concepts of phrases and clauses, sentence and its types
- k) Different methods of syntactic analysis – Immediate constituent analysis, Phrase structure, grammar, transformational generative grammar– deep structure versus surface structure, acceptability versus grammaticality; Introduction to the major types of transformations
- l) Usefulness of morphemic and syntactic analysis in planning speech and language therapy
- m) A brief introduction to semantics, semantic relations, semantic feature theory
- n) A brief introduction to pragmatics and discourse.

Module-IV: Language acquisition

- a) Issues in first language acquisition
- b) Pre-linguistic stages, linguistic stages
- c) Acquisition of phonology, morphology, syntax, semantics, and pragmatics
- d) Language and cognition
- e) A brief introduction to theories and models of language acquisition
- f) Biological maturation theory, linguistic theory, behavioral theory, information processing theory, social interaction theory
- g) An integrated approach to theories communicative competence and its development
- h) Applied linguistics with special reference to communication disorders
- i) Usefulness of morphemic and syntactic analysis in planning speech and language therapy

Module-V: Bi/multilingualism

- a) Introduction to the language families of the world and India
- b) Issues related to second language acquisition & factors influencing it
- c) Inter-language theory, language transfer and linguistic interference
- d) Differences between first and second language acquisition/learning
- e) Bilingualism/Multilingualism
- f) Metaphonology
- g) Writing systems – types of writing
- h) History of writing systems
- i) Indian writing systems

Examination Scheme:

Components	CRW	PTB	CT	A	EE
Weightage (%)	5	5	15	5	70

CRW- Clinical record writing, PTB- Proficiency in using test batteries, CT- Class test, A- Attendance, EE- End semester examination

ELECTRONICS AND ACOUSTICS

Course Code: ASL2110

Credit Units: 05

Course Objectives: After completing this course, the student will be able to understand the

- concept and types of power supply for biomedical instruments
- basic aspects of digital signal processing
- theoretical basis of acoustics required for audiologists
- functioning of computers and computing systems

Course Contents:

Module-I: Electronic components and power supply

- Resistors, capacitors, inductors
- Transformers and potentiometers,
- Semiconductor diodes and transistors
- Light emitting devices, seven segment displays, Liquid crystal displays
- Principles of operations and working of Field Effect Transistors, Uni-junction transistors and thyristors
- Introduction to linear and digital integrated circuits
- Block diagram of a DC power supply
- Linear regulated power supplies, line regulation and load regulation, specifications of a DC power supply unit, Switched Mode Power Supply
- AC power supply, stabilizers, Uninterrupted Power Supply, and inverters
- Basic electronic concepts such as Polarity, Grounding

Module-II: Introduction to acoustics

- Vibrations and their characteristics
- Sound - generation and propagation
- Characteristics of sound
- Amplitude, frequency and phase of pure tones
- Amplitude, frequency and phase of complex tones (FFT and spectrum, relationship between time waveform, FFT and impulse response)
- Reflection and absorption, acoustic impedance, reverberation
- Impedance and admittance
- Electro-mechano-acoustic transformers

Module-III: Acoustical treatment, transducers and basics of computers

- Introduction to audiometric rooms
- Absorption coefficient, Sabine's formula
- Materials for construction of audiometric rooms
- Lighting, grounding and other miscellaneous issues related to audiometric rooms
- Evaluation of efficiency of sound proofing in the audiometric rooms
- Amplifiers
- Microphones, loudspeakers - types and function
- Fundamentals of digital electronics, binary number system, Hex code, bit, byte, logic gates, counters, flip-flops etc.
- Introduction to computers
- Operating systems, hard ware, software, memory devices and other peripherals, care and preventive maintenance of computers

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Module-IV: Digital signal processing

- Digital signal processing –introduction and need
- Analog to digital converters, sampling and quantization
- Fundamentals of digital filtering
- Infinite impulse response and finite impulse response filters
- Time domain methods of speech processing
- Frequency domain methods of speech processing
- Linear predictive analysis of speech signals
- Digital coding of speech signals
- Automatic speech recognition
- Speech synthesis

Module-V: Instrumentation in speech and hearing

- Introduction to electronic instrumentation in speech and hearing
- Electrodes, filters and preamplifiers
- Principle of operations, block diagram, calibration, maintenance and troubleshooting of audiometers, immittance meters, oto-acoustic emissions, hearing aids, evoked potential system, speech and voice analyses systems, artificial larynx, electroglottograph

Examination Scheme:

Components	CRW	PTB	CT	A	EE
Weightage (%)	5	5	15	5	70

RESEARCH METHODS AND STATISTICS

Course Code: ASL2111

Credit Units: 05

Course Objectives: After completing this course, the student will be able to understand the

- basic concept of research in the field of audiology and speech-language pathology
- design and execution of research
- ethical guidelines for conducting research

Course Contents:

Part-A: Research Methods

Module-I: Introduction to research methods

- a) Meaning and purpose of research: meaning
- b) Need for research in audiology and speech-language pathology
- c) Funds/grants for research
- d) Steps in research: identification, selection
- e) Formulation of research questions: aims, objectives, statement of problem, hypothesis
- f) Types of variables; types of sampling procedures (random and non-random);
- g) Types/ methods of data collection and their advantages and disadvantages
- h) Reliability and validity (internal and external validity)

Module-II: Research design in audiology and speech-language pathology

- a) Types of research: survey, ex-post facto research, normative research, standard-group comparison
- b) Experimental and quasi experimental research: group design & single subject design
- c) Internal and external validity of research
- d) Between groups vs. repeated measures design
- e) Documentation of research: scientific report writing, different formats or styles (APA, AMA and MLA),
- f) Ethics of research

Part-B: Statistics

Module-III: Introduction to statistics and data collection

- a) Application of statistics in the field of Audiology and speech-language pathology.
- b) Scales of measurement: nominal, ordinal, interval, ratio
- c) Classification of data: class intervals, continuous and discrete measurement
- d) Normal distribution: general properties of normal distribution, theory of probability, area under normal probability curve
- e) Variants from the normal distribution: skewness and kurtosis
- f) Measure of central tendency: mean, median, mode
- g) Measures of variability: range, deviation (average and standard deviation), variance

Module-IV: Statistics and research designs

- a) Choosing statistics for different research designs
- b) Correlational techniques: Pearson's Product Moment Correlation Coefficient; Spearman's Rank order correlation coefficient
- c) Statistical inference: concept of standard error and its use; the significance of statistical measures; testing the significance of difference between two means z-test, t-test; analysis of variance, post hoc tests,

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- d) Non-parametric tests: Chi-square test, Wilcoxon test, Mann-Whitney U test,
- e) Reliability and validity of test scores: reliability and validity, Item analysis
- f) Analysis of qualitative data
- g) Software for statistical analysis

Module-V: Epidemiology

- a) Basic epidemiologic concepts and principles
- b) Epidemiologic data sources and measurements
- c) Epidemiologic methods – questionnaire survey, screening, personal survey, testing
- d) Media - their advantages and disadvantages
- e) Incidence and prevalence of hearing, speech, language disorders as per different census (NSSO, WHO)

Examination Scheme:

Components	CRW	PTB	CT	A	EE
Weightage (%)	5	5	15	5	70

CRW- Clinical record writing, PTB- Proficiency in using test batteries, CT- Class test, A- Attendance, EE- End semester examination

SPEECH-LANGUAGE PATHOLOGY

Course Code: ASL2208

Credit Units: 05

Course Objectives: After completing this course, the student will be able to understand the

- different speech and language disorders
- basic concepts and tools required for diagnosing speech and language disorders
- basics of assessment procedures for speech and language disorders
- basic principles and intervention procedures for speech and language disorders
- clinical requirements to practice,
- different laws, social-cultural and ethical issues
- identification and prevention of speech and language disorders
- basic principles of providing counselling and guidance to clients and caregivers

Course Contents:

Module-I: Basic concepts and methods of diagnostics

- Introduction to Speech Language Disorders
- Definition and descriptions of delay, deviancy and disorders; impairment, disability and handicap
- Incidence and prevalence of speech and language disorders
- Causes of speech and language disorders
- Basic principles in assessment, evaluation and appraisal
- Tools for diagnosis- case history, interview, self-reports, questionnaire & observations
- Diagnostic models – SLPM, Wepman, Bloom and Lahey
- Types of diagnoses – Clinical diagnosis, direct diagnosis, differential diagnosis, diagnosis by treatment, diagnosis by exclusion, team diagnosis, instrumental diagnosis, provocative diagnosis, tentative diagnosis advantage/disadvantages
- Characteristics of a diagnostic clinician
- Organization and basic requirements for clinical set up and team approach
- DSM, ICD classification and ICF

Module-II: Basic concepts and methods of therapeutics

- Basic concepts and terminologies in speech therapeutics
- General principles of speech and language therapy
- Speech therapy set-up
- Individual and group therapy
- Procedures and types of for speech-language therapy
- Approaches to speech and language therapy – formal, informal and eclectic approaches
- Planning for speech and language therapy – goals, steps, procedures and activities
- Importance of reinforcement principles and strategies in speech and language therapy, types and schedules of rewards and punishment
- Individual and group therapy
- AAC and other nonverbal methods of therapy

Module-III: Overview of basic assessment and management of speech disorders

- Causes of speech disorders
- Overview of assessment procedures for voice disorders; articulation and phonological disorders; and fluency disorders
- Overview of management procedures for voice disorders; articulation and phonological disorders; and fluency disorders
- Early identification and prevention of speech disorders

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- e) Basic concepts in assessment and management of swallowing disorders

Module-IV: Overview of basic assessment and management of language disorders

- Types, characteristics and classification of language disorders
- Causes of language disorders
- Overview of assessment procedures for child language disorders; adult language disorders; and neurogenic language disorders
- Overview of management procedures for child language disorders; adult language disorders; and neurogenic language disorders
- Early identification and prevention of language disorders
- Issues related to bi- /multilingualism

Module-V: Other issues in practice as a speech - language pathologist

- Professional code of conduct – social, cultural and other ethical issues
- Scope of practice –different set ups and prerequisites
- Documentation of diagnostic, therapeutic and referral reports
- Counselling, guidance, facilitation of parent participation and transfer of skills
- Evaluation of therapy outcome and follow up
- Evidence based practice
- Community based rehabilitation
- Role of itinerant speech therapist, Anganwadis, resource teachers etc.
- PWD act, National Trust, Consumer protection Act, noise pollution Act and other public laws, RCI, ISHA and other organizations controlling the field
- Facilities and concessions available for speech and hearing disabled

Examination Scheme:

Components	CRW	PTB	CT	A	EE

AUDIOLOGY

Course Code: ASL2209

Credit Units: 05

Course Objectives: After completing this course, the student will be able to

- understand and carryout experiments to measure differential sensitivity loudness and pitch
- take case history, administer the tuning fork tests and interpret the results
- administer pure tone audiometry including masking on clinical population and appreciate the theoretical back ground of it
- carryout different tests involved in speech audiometry appreciate the theoretical back ground
- carryout subjective calibration and daily listening checks of the audiometer
- get adequate theoretical information necessary to understand concepts involved in objective calibration

Course Contents:

Module-I: Differential sensitivity

- a) Concept of differential sensitivity, just noticeable difference
- b) Weber's fraction
- c) Intensity discrimination
- d) Frequency discrimination
- e) Duration discrimination and temporal resolution
- f) Applications of jnd's
- g) Magnitude estimation and production
- h) Loudness – equal loudness level contours and its application
- i) Loudness scales - sone, phone, Steven's power law
- j) Pitch- scales of pitch

Module-II: Case history and tuning fork tests

- a) Need for case history
- b) Basics of history taking
- c) Essential factors to be included in case history for adults
- d) Essential factors to be included in case history for children
- e) Interpretation of case history
- f) Audiological evaluation – rationale and purpose
- g) Principles, procedure, interpretation, advantages and disadvantages of Rinne and Schwabach tuning fork test
- h) Principles, procedure, interpretation, advantages and disadvantages of Weber and Bing tuning fork test
- i) Audiometric version of Weber and Bing test

Module-III: Pure tone audiometry

- a) Classification of audiometers, Parts of an audiometer, characteristics and specifications of transducers used (earphones, bone vibrators, loud speakers)
- b) Audiogram- concept and symbols used
- c) Clinical method of threshold estimation
- d) Factors affecting air conduction threshold
- e) Bone conduction thresholds- measurements, factors effecting
- f) Permissible noise levels in the audiometric room

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Module-IV: Speech audiometry

- Importance and purpose
- Different types of stimuli used in speech audiometry
- Concept of phonetically and phonemically balanced
- Speech detection thresholds – procedure and application
- Speech reception thresholds – procedures and application
- Word recognition scores – procedure and applications
- PIPB function – procedure and applications
- Factors affecting speech audiometry
- BC speech audiometry – procedure and its application
- Test materials available in various languages

Module-V: Clinical masking and instrumental calibration

- Definition and different terminologies
- Purpose and rationale of clinical masking
- Different types of stimulus employed in clinical masking
- Interaural attenuation and factors affecting interaural attenuation
- When to mask and how much to mask – importance of adequate noise levels
- Different procedures for masking
- Masking for speech audiometry
- Calibration definition and purpose
- Daily listening checks and subjective calibration
- Objective calibration of air conduction transducers
- Objective calibration of bone conduction transducers
- Frequency calibration

Examination Scheme:

Components	CRW	PTB	CT	A	EE
Weightage (%)	5	5	15	5	70

CRW- Clinical record writing, PTB- Proficiency in using test batteries, CT- Class test, A- Attendance, EE- End semester examination

PRACTICALS IN SPEECH-LANGUAGE PATHOLOGY

Course Code: ASL2210

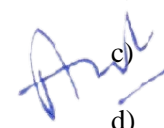

Credit Units: 07

Practicals

- a) Demonstrate normal aspects of speech and analyse perceptually variations in voice, articulation and fluency in different recorded speech samples of typical individuals at different age groups (children, adults and older adults) and sex.
- b) Demonstrate normal aspects of language and analyse perceptually variations in language in different recorded samples of typical individuals at different age groups (children, adults and older adults) and sex.
- c) Demonstrate stress, rhythm and intonation and variations in rate of speech and analyse perceptually variations in prosody in different recorded samples of typical individuals at different age groups (children, adults and older adults) and sex.
- d) Use IPA to transcribe spoken words.
- e) Record a standard passage, count number of syllables and words, identify syllable structure, syntactic structures in the passage.
- f) Oral mechanism examination on 5 normal children and 5 normal adults.
- g) Prepare a chart and show the developmental stages of speech and language behavior.
- h) Administer standardized tests for assessment of delayed speech and language development such as REEL, SECS, LAT, 3DLAT, ALD each on any 2 children.
- i) Study the available normative data (Indian/Western) of speech such as respiratory, phonatory, resonatory and articulatory parameters.
- j) Measure the following in 5 normal subjects: (a) Habitual frequency (b) Frequency range (c) Intensity (d) Intensity range (e) Phonation duration (f) rate of speech (g) Alternate Motion Rates and Sequential Motion Rates (h) s/z ratio.
- k) Study the available normative data (Indian/Western) of language such as phonology, semantics, syntax, morphology and pragmatic measures.
- l) Perceptual analysis of speech and language parameters in normal (2 children and 2 adults and persons with speech disorders (3 adults + 3 children).
- m) Prepare a model diagnostic report of a patient with speech and language disorder.
- n) Prepare a diagnostic and therapy kit.
- o) Make a list of speech language stimulation techniques and other therapy techniques for various speech disorders.
- p) Familiarize with the sources for referral and parent counseling procedures.
- q) Prepare a report on the available audiovisual material and printed material/pamphlets relating to speech-language pathology, public education of communication and hearing disorders, etc.
- r) Prepare a report on the available clinical facilities and clinical activities of the institute.

Clinical Practicum

- a) Observe the evaluation process and counselling of at least 5 different speech and language disorders in children.
- b) Observe the evaluation process and counselling of at least 5 different speech and language disorders in adults.
- c) Take case history of a minimum of 10 individuals (5 normal & 5 clients with complaints of speech-language problems).
- d) Observation of diagnostic procedures.

Prof. (Dr.) Anil Kumar

PRACTICALS IN AUDIOLOGY

Course Code: ASL2211

Credit Units: 07

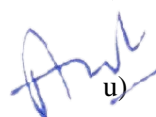

Practicals

Calculate/derive the answers for following

- Calculate the relative intensities with different reference intensities.
- Calculate decibels when sound intensities are doubled, increased by 4 times
- Add decibels when two sounds with different intensities are produced simultaneously
- Collect pictures of audiometers that existed between 1920 and 1990.

Perform the following experiments

- Calculate reference equivalent sound pressure levels (RETSPL) for head phones and bone vibrator for any two frequencies using 30 participants.
- Measure most comfortable level on 10 participants with normal hearing sensitivity.
- Measure uncomfortable levels on 10 participants with normal hearing sensitivity.
- Calculate the sensation levels of MCL and UCLs in above 10 participants.
- Measure difference limen of intensity, frequency and duration on 10 normal hearing adults and plot it in graphical form and interpret the results.
- Measure equal loudness level contours at minimum level, 40 dB SPL, 70 dB SPL (1 kHz) in 5 normal hearing adults.
- Measure sone and mel in 5 normal hearing adults using scaling techniques.
- Take case history on 5 adults and 5 children with hearing problem and correlate the information from case history to results of pure tone audiometry.
- Administer different tuning fork tests on 5 simulated conductive and 5 sensori neural hearing loss individuals.
- Carry out pure tone and speech audiometry on 10 normal hearing individuals.
- Carry out clinical masking on 10 normal hearing individuals with simulated conductive hearing loss and carry out clinical masking on 5 individuals with conductive hearing loss and 5 individuals with sensori-neural hearing loss.
- Carryout daily listening checks and subjective calibrations 20 times and observe objective calibration once
- Perform otoscopy and draw the tympanic membrane of 10 healthy normal individuals
- Measure difference limen of intensity, frequency and duration on 10 normal hearing adults and plot it in graphical form and interpret the results
- Measure equal loudness level contours at minimum level, 40 dB SPL, 70 dB SPL (1 kHz) in 5 normal hearing adults
- Measure sone and mel in 5 normal hearing adults using scaling techniques
- Take case history on 5 adults and 5 children with hearing problem and correlate the information from case history to results of pure tone audiometry
- Administer different tuning fork tests on 5 simulated conductive and 5 sensori neural hearing loss individuals
- Carry out pure tone and speech audiometry on 10 normal hearing individuals.
- Carry out clinical masking on 10 normal hearing individuals with simulated conductive hearing loss and carry out clinical masking on 5 individuals with conductive hearing loss and 5 individuals with sensori-neural hearing loss
- Carryout daily listening checks and subjective calibration 20 times and observe objective calibration once

Prof. (Dr.) Anil Kumar

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Clinical Practicum

- Observe case history being taken on 5 adults and 5 children with hearing problem and correlate the information from case history to results of pure tone audiometry.
- Administer different tuning fork tests on 5 conductive and 5 sensori neural hearing loss individuals.
- Observe the pure tone audiometry being carried out on 30 clients.
- Plot the audiogram, calculate the pure tone average and write the provisional diagnosis of observed clients.
- Perform otoscopy (under supervision) on at least 1 client with following conditions: Tympanic membrane perforation, SOM, CSOM

Examination scheme:

Components	CRW	C/P/A	CT	A	Viva
Weightage (%)	15	15	15	5	50

VOICE AND ITS DISORDERS

Course Code: ASL2307

Credit Units: 05

Course Objectives: After completing this course, the student will be able to

- describe characteristics of normal voice and identify voice disorders
- explain etiology related to voice problems, and its pathophysiology
- assess voice disorders
- provide counselling and therapy to individuals with voice disorders

Course Contents:

Module-I: Basic concepts in voice and its production

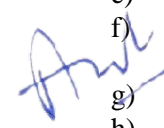

- a) Definition and functions of voice – biological and non-biological
- b) Parameters of voice
- c) Structures and function of respiratory system for the purpose of phonation
- d) Laryngeal anatomy – Structural support of larynx, muscles, vocal fold microstructure, blood supply, and innervations
- e) Vocal tract resonance and voice quality
- f) Development of voice: Birth to senescence; structural and voice related changes
- g) Aerodynamic myo-elastic theory of voice production
- h) Voice mechanics – Physiologic, acoustic and aerodynamic correlates of voice
- i) Pitch and loudness changing mechanism, voice registers and voice quality
- j) Description of normal and abnormal voice: Parametric, pathologic/perceptual, social

Module-II: Characteristics and pathophysiology of voice disorders

- a) Pathologies of the laryngeal mechanism: classification of voice disorders, incidence, and prevalence
- b) Etiology of voice disorders: voice misuse and abuse, medical related etiologies, primary disorder etiologies and personality related etiologies
- c) Pathologies of vocal fold cover (infective and trauma related secondary conditions) and muscular dysfunction
- d) Non-organic voice disorders: functional disorders, psychosomatic- functional aphonia and physiological- voice abuse, puberphonia)
- e) Congenital voice disorders
- f) Neurological voice disorders
- g) Voice problems in systemic illnesses and endocrine disorders
- h) Voice problems in transgenders
- i) Voice problems in the elderly
- j) Voice problems in professional voice users: teachers and singers

Module-III: Assessment of voice

- a) Referral sources, medical examination and team approach
- b) Protocol for voice assessment: components and philosophies (ICF, ICD)
- c) Clinical voice laboratory: principles of instrumental measurements – electrical error, electrical safety, hygiene safety; recording of data; storage; patented softwares, free wares
- d) Perceptual evaluation of voice: GRBAS, CAPE -V
- e) Visualization procedures- indirect laryngoscopy, video laryngoscopy & stroboscopy
- f) Acoustic analysis of voice: F0 related measures, intensity related measures, quality related measures, phonetogram, DSI
- g) Electroglottography and inverse filtering procedures
- h) Aerodynamic analysis of voice: static & dynamic measures

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- i) Self-evaluation of voice : PROM, VHI, V-DOP
- j) Reporting of voice findings, normative comparisons, differential diagnosis

Module-IV: Management of voice

- a) Voice therapy orientation: basic principles, goal setting and approaches
- b) Vocal hygiene and preventive counselling
- c) Symptomatic voice therapy – voice facilitation techniques
- d) Psychological approaches to voice therapy – psychoanalysis, rational emotive therapy and cognitive behavior therapy
- e) Physiological approach – breathing and postural techniques
- f) Holistic voice therapy approaches -1: accent therapy, confidential voice therapy,
- g) Holistic voice therapy approaches - 2: vocal function exercises, resonant voice therapy, Lee Silverman voice therapy
- h) Medical and surgical procedures in the treatment of benign vocal fold lesions: pharmaceutical effects on voice, phono surgery : re-innervation techniques, laryngeal framework surgeries, micro laryngeal excision
- i) Professional voice care

Module-V: Intervention strategies for voice disorders

- a) Vocal trauma related disorders
- b) Functional voice disorders – inappropriate vocal components
- c) Functional aphonia
- d) Puberphonia/mutational falsetto
- e) Muscle tension dysphonia
- f) Sulcus vocalis
- g) Vocal fold palsy
- h) Spasmodic dysphonia
- i) GERD/LPR
- j) Benign vocal fold lesions requiring surgical intervention
- k) Post-operative care for benign vocal fold lesions disorders
- l) Documenting voice therapy outcomes

Practicals

- a) Record phonation and speaking samples (counting numbers) from five children, adult men, adult women, geriatric men and geriatric women. Note recording parameters and differences in material.
- b) Make inferences on age and sex differences across the samples obtained in the previous experiment using perceptual voice profiling. Make a note of differences in pitch, loudness, quality and voice control. Explain how voice reflects ones personality and other social needs.
- c) Perform an acoustic voice analysis on phonation sample and generate a voice report based on acoustic findings. Compare findings between men & women.
- d) Perform MPT and s/z ratio. Infer differences across age and sex.
- e) Perform spirometry or any other appropriate aerodynamic procedure. Infer differences across age and sex.
- f) Perform acoustic analysis on five abnormal voice samples.
- g) Observe and document findings from five laryngeal examinations (pre-recorded or live) such as VLS, stroboscopy or any other relevant.
- h) Administer a PROM on five individuals.
- i) Prepare a vocal hygiene checklist.
- j) Demonstrate therapy techniques such as vocal function exercise, resonant voice therapy, digital

manipulation, push pull, relaxation exercises.

Examination Scheme:

Components	CRW	PTB	CT	A	EE
Weightage (%)	5	5	15	5	70

CRW- Clinical record writing, PTB- Proficiency in using test batteries, CT- Class test, A- Attendance, EE- End semester examination

SPEECH SOUND DISORDERS

Course Code: ASL2308

Credit Units: 05

Course Objectives: After completing this course, the student will be able to

- describe normal speech sound development and characterization of individuals with speech sound disorders.
- perform phonological analysis and assessment of speech sound disorders.
- plan intervention for individuals with speech sound disorders.

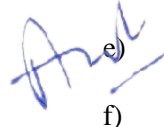

Course Contents:

Module-I: Speech sound acquisition and development

- a) Fundamentals of articulatory phonetics - phonetic description of vowels & consonants.
- b) Phonology & phonological theories – generative phonology, natural phonology.
- c) Phonology & phonological theories – non-linear phonology, optimality theory.
- d) Methods to study speech sound acquisition – diary studies, cross sectional studies and longitudinal studies.
- e) Speech sound acquisition
 - i. birth to one year (development of infant speech perception, early speech production).
 - ii. one to two years (consonant inventories, influence of phonological knowledge on vocabulary acquisition).
 - iii. two to five years (growth of phonetic, phonemic, phonotactic inventory – consonants, clusters, phonological patterns).
 - iv. above five years (speech sound mastery and development of literacy – phonological awareness).
 - v. Factors influencing speech sound acquisition
- f) Acoustics of speech sounds
- g) Speech intelligibility, factors affecting speech intelligibility, assessment of speech intelligibility
- h) Co articulation: types and effects
- i) Phonological development in bilingual children.
- j) Phonological development in Indian languages.

Module-II: Assessment of speech sound disorders - I

- a) Current concepts in terminology and classification of speech sound disorders
 - i. Organically-based speech sound disorders, childhood apraxia of speech.
 - ii. Speech sound disorders of unknown origin, classification by symptomatology.
- b) Factors related to speech sound disorders
 - i. structure and function of speech & hearing and oro-sensory mechanisms.
 - ii. cognitive – linguistic, psychosocial and social factors.
 - iii. metalinguistic factors related to speech sound disorders.
- c) Introduction to assessment procedures: aims of assessment, screening and comprehensive assessment.
- d) Speech sound sampling procedures - issues related to single word and connected speech samples; imitation and spontaneous speech samples, contextual testing, recording of speech samples.
- e) Review of tests in English and other Indian languages - Single word articulation tests, deep articulation of articulation, and computerized tests of phonology.
- f) Influence of language and dialectal variations in assessment.

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- g) Transcription of speech sample - transcription methods –IPA and extension of IPA; broad and narrow transcription.

Module-III: Assessment of speech sound disorders - II

- a) Introduction to independent and relational analysis.
- b) Independent analyses – phonetic inventory, phonemic inventory and phonotactic inventory (utility of independent analysis for analysis of speech of young children and children with severe speech sound disorders).
- c) Relational analyses – SODA, pattern analysis, (distinctive features, phonological process analysis).
- d) Phonological processes analyses - language specific issues, identification and classification of errors.
- e) Assessment of oral peripheral mechanism.
- f) Speech sound discrimination assessment, phonological contrast testing.
- g) Stimulability testing.
- h) Determining the need for intervention – speech intelligibility and speech severity assessment.
- i) Factors influencing target selection – stimulability, frequency of occurrence, developmental appropriateness, contextual testing, and phonological process analysis.
- j) Case study – Documenting the assessment findings and determining the need for intervention.

Module-IV: Management – I

- a) Basic considerations in therapy – target selection, basic framework for therapy, goal-attack strategies, organizing therapy sessions, individual vs. group therapy.
- b) Treatment continuum – establishment, generalization and maintenance; measuring clinical change.
- c) Facilitation of generalization.
- d) Maintenance and termination from therapy.
- e) Motor-based treatment approaches – Principles of motor learning.
- f) Discrimination/ear training and sound contrast training.
- g) Establishing production of target sound – imitation, phonetic placement, successive approximation, context utilization.
- h) Traditional approach, contextual/sensory-motor approaches.
- i) General guidelines for motor-based treatment approaches.
- j) Use of technology in articulation correction.

Module-V: Management – II

- a) Core vocabulary approach.
- b) Introduction to linguistically-based treatment approaches- Distinctive feature therapy.
- c) Minimal pair contrasts therapy.
- d) Metaphon therapy, Cycles approach.
- e) Broad-based language approaches.
- f) General guidelines for linguistically-based approaches.
- g) Phonological awareness and phonological disorders.
- h) Phonological awareness intervention for preschool children.
- i) Adapting intervention approaches to individuals from culturally and linguistically diverse backgrounds.
- j) Role of family in intervention for speech sound disorders.

Practicals

- a) List the vowels and consonants in your primary language and provide phonetic and acoustic descriptions for the speech sounds.
- b) Identify the vowels and consonants of your language on the IPA chart and practice the IPA symbols by transcribing 25 words.

- c) Make a list of minimal pairs (pairs of words which differ by only one phoneme) in English.
- d) Make a list of minimal pairs in any language other than English.
- e) Identify the stages of speech sound acquisition by observations from videos of children from birth to 5 years of age.
- f) Record the speech of a two year old typically developing child, transcribe and analyze the speech sample.
- g) Record the speech of one typically developing child from 3-5 years of age (include single word and connected speech samples), transcribe the sample, and perform phonological assessment.
- h) Analyze transcribed speech samples of typically developing children – practice independent and relational analysis.
- i) Practice instructions for phonetic placement of selected sounds.
- j) Develop a home plan with activities for any one section of phonological awareness in English and in one Indian language.

Examination Scheme:

Components	CRW	PTB	CT	A	EE

DIAGNOSTIC AUDIOLOGY: BEHAVIOURAL TESTS

Course Code: ASL2309

Credit Units: 05

Course Objectives: After completing this course, the student will be able to

- choose individualized test battery for assessing cochlear pathology, retro cochlear pathology, functional hearing loss, CAPD, vestibular dysfunctions, tinnitus and hyperacusis
- independently run the tests and interpret the results to identify the above conditions and also use the information for differential diagnosis
- make adjustments in the test parameters to improve sensitivity and specificity of tests.
- make appropriate diagnosis based on the test results and suggest referrals.

Course Contents:

Module-I: Introduction to diagnostic audiology

- a) Characteristics of a diagnostic test, difference between screening and diagnostic test, functions of a diagnostic test in Audiology
- b) Need for test battery approach in auditory diagnosis and integration of results of audiological tests, cross-check principle
- c) Concept of sensitivity, specificity, true positive, true negative, false positive, false negative, hit rate
- d) Definition of behavioural and physiological tests and their characteristics in diagnostic audiology
- e) Theories and physiological bases of recruitment
- f) Theories and physiological bases of adaptation
- g) Clinical indications for cochlear pathology, retro-cochlear pathology, central auditory processing disorders, functional hearing loss, vestibular disorders

Module-II: Tests to identify cochlear and retro cochlear pathology

- a) ABLB, MLB and SISI tests
- b) Behavioural tests of adaptation
- c) Bekesy audiometry
- d) Brief tone audiometry
- e) PIPB function
- f) Glycerol test
- g) Test to identify dead regions of cochlea

Module-III: Tests to diagnose functional hearing loss

- a) Behavioural and clinical indicators of functional hearing loss
- b) Pure tone tests including tone in noise test, Stenger test, BADGE, puretone DAF
- c) Speech tests including Lombard test, Stenger test, lip-reading test, Doerfler-Stewart test, Low level PB word test, Yes-No test, DAF test
- d) Identification of functional hearing loss in children: Swinging story test, Pulse tone methods

Module-IV: Assessment of central auditory processing

- a) Definition, different behavioral processes
- b) Behavioral and clinical indicators of central auditory processing disorders
- c) Bottle neck and subtlety principles and their implications in
- d) Tests to detect central auditory processing disorders
- e) Monaural low redundancy tests - filtered speech tests, time compressed speech test, speech-in-noise test, SSI with ICM, other monaural low redundancy tests.
- f) Dichotic speech tests – Dichotic digit test, Staggered spondaic word test, Dichotic CV test, SSI with CCM, Competing sentence test, other dichotic speech tests.

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- g) Binaural interaction tests – RASP, BFT, MLD, other binaural interaction tests
- h) Tests of Temporal processing – pitch pattern test, duration pattern tests, other temporal ordering tests, gap detection test, TMTF
- i) Variables influencing the assessment of central auditory processing: Procedural and subject variables
- j) Test findings of important tests in subjects with central auditory disorders: brainstem lesion, cortical, CAPD in children.

Module-V: Assessment of persons with vestibular disorder, tinnitus, hyperacusis

- a) Introduction to structure and function of vestibular system
- b) Vestibular ocular reflex and vestibulo spinal reflex
- c) Overview on other systems involved in balance
- d) Signs and Symptoms of vestibular disorders
- e) Team in the assessment and management of vestibular disorders
- f) Behavioral tests to assess vestibular functioning: Fukuda stepping test, tandem gait test, finger nose pointing, Romberg test, Sharpened Romberg test, Dix-Hallpike test, Log-roll test
- g) Overview of tinnitus and hyperacusis and tests for assessment
- h) Pitch matching, loudness matching, residual inhibition, Feldman masking curves
- i) Johnson Hyperacusis Dynamic Range Quotient

Practicals

- a) Administer ABLB, MLB and prepare ladder gram (ABLB to be administered by blocking one ear with impression material)
- b) Administer classical SISI on 3 individuals and note down the scores
- c) Administer tone decay tests (classical and its modifications) and note down the results (at least 3 individuals)
- d) Administer Bekesy audiometry
- e) Administer Brief tone audiometry
- f) Plot PIPB function using standardized lists in any 5 individuals
- g) Administer the tests of functional hearing loss (both tone based and speech based) by asking subject to malingering and having a yardstick of loudness.
- g) Administer CAPD test battery to assess different processes on 3 individuals and note down the scores
- h) Administer Fukuda stepping test, Tandem gait test, Finger nose pointing, Romberg test, Sharpened Romberg test, Dix-Hallpike test, Log-roll test on 5 of the individuals each and note down the observations.
- i) Estimate the pitch and loudness of tinnitus in 2 persons with tinnitus (under supervision). Assess the residual inhibition in them.
- j) Plot Feldman masking curves for a hypothetical case
- k) Administer Johnson Hyperacusis Dynamic Range Quotient on any 2 of the individuals and note down the scores.

Examination Scheme:

Components	CRW	PTB	CT	A	EE
Weightage (%)	5	5	15	5	70

AMPLIFICATION DEVICES

Course Code: ASL2310

Credit Units: 05

Course Objectives: After completing this course, students will be able to

- assess the candidacy for hearing aids and counsel accordingly
- evaluate the listening needs and select the appropriate hearing aid
- independently program digital hearing aids as per the listening needs of the client
- independently assess the benefit from the hearing aid using subjective and objective methods
- make all types of ear molds
- counsel the parents/care givers at all stages

Course Contents:

Module-I: Types of hearing aids

- a) Historical development of hearing aids: development of concept of amplification, development of different types of amplification devices
- b) Review of basic elements of hearing aids: Microphone, Amplifier, Receiver/vibrator, Cords, Batteries.
- c) Classification and Types of hearing aids
 - Body level, ear level, in the ear, ITC, invisible in the canal, CIC
 - Binaural, pseudo binaural, monaural
 - Programmable, trimmer digital and digital hearing aids
 - Directional hearing aids, modular hearing aids
 - RIC hearing aids
 - Implantable hearing aids
 - Master hearing aids
 - CROS hearing aids
- d) Group amplification – hard wired, induction loop, FM, infrared
- e) Assistive listening devices – types and selection (Telephones, Television, typing technology)

Module-II: Technological aspects in hearing aids

- a) Routing of signals, head shadow/baffle/diffraction effects
- b) Output limiting and issues related to them: peak clipping, compression
- c) Concept and use of compression in hearing aids: BILL, TILL, PILL, Wide Dynamic Range Compression, Syllabic Compression, Dual Compression
- d) Signal processing in hearing aids – BILL, TILL, PILL
- e) Signal enhancing technology
- f) Noise reduction algorithms
- g) Extended low frequency amplification, frequency lowering technology (transposition, compression)
- h) Recent advances in hearing aids

Module-III: Electro-acoustic measurements for hearing aids

- a) Purpose and Parameters to be considered: OSPL90, SSPL90, HFA SSPL90, Gain, Full on Gain, HFA Full on Gain, Reference test Gain, Basic Frequency Response, Total Harmonic distortion, Intermodulation Distortion, input Output functions, instrumentation, procedure, variables affecting EAM
- b) Electro-acoustic measurements, BIS, IEC and ANSI standards
- c) Environmental tests.
- d) Care, maintenance and troubleshooting of hearing aids
- e) Counselling and orienting the hearing aid user (Client and significant others)

Amity University Haryana
Manesar Gurgaon-122413

Module-IV: Selection of hearing aids

- Pre-selection factors; Prescriptive and comparative procedures; Functional gain and insertion gain methods; Use of impedance, OAEs and AEPs audiometry; Hearing aids for conductive hearing loss; Hearing aids for children; Hearing aids for elderly; Selection of non-linear programmable and digital hearing aids
- Hearing aid programming
- Methods for assessing hearing aid benefit
- Real ear insertion measurements for verification of hearing aid benefit: REIG, REUR, REAR, REOR, RESR, REIG, REAG, RECD
- Acoustic feedback in hearing aids

Module-V: Mechano-acoustic couplers (Ear molds)

- Different types of molds
- Procedure for hard molds and soft mold
- UV curing methods
- Special modifications in the ear molds: Vents (diagonal and parallel), deep canal molds, short canal, horns, Libby horn, reverse horn, acoustic modifier
- Effects of mechano-acoustic couplers on the hearing aid output

Practicals

- Listen to the output of different types and classes of hearing aids (monaural, binaural, analog, digital hearing aids), in different settings
- Troubleshoot hearing aids: Check the continuity of the receiver cord using multi meter, measure the voltage of different sized batteries using multi meter, Check voltage of batteries different types and sizes
- Carry out electroacoustic measurements for the body level and ear level hearing aids
- Program the hearing aid for different configuration and degrees of hearing loss (at least 5 different audiograms) using different prescriptive formulae
- Program the hearing aid for different listening situations (at least 3 different situations)
- Vary the compression settings in a digital hearing aid and note down the differences in the output
- Perform real ear insertion measurements using different hearing aids (body level and ear level, hearing aids of different gains)
- Compare speech perception through conventional BTE and RIC hearing aids using a rating scale
- Observe assistive listening devices such as telephone amplifier, vibro-tactile alarms, note down the candidacy and their utility.
- Administer a questionnaire to assess hearing aid benefit on 2 persons using hearing aids.
- Carry out a role play activity of counselling a hearing aid user
- Ear Molds
 - Take impression for the ear mold using different techniques, different methods and using different materials
 - Make hard mold for any 2 ears
 - Make soft mold for any 2 ears
 - Make vent in hard molds you made

Examination Scheme:

Components	CRW	PTB	CT	A	EE
Weightage (%)	5	5	15	5	70

CRW- Clinical record writing, PTB- Proficiency in using test batteries, CT- Class test, A- Attendance, EE- End semester examination

CLINICALS IN SPEECH LANGUAGE PATHOLOGY-I

Course Code: ASL2311

Credit Units: 07

General considerations:

- Exposure is primarily aimed to be linked to the theory courses covered in the semester.
- After completion of clinical postings in Speech –language diagnostics, the student will know (concepts), know how (ability to apply), show (demonstrate in a clinical diary/log book based on clinical reports/recordings, etc), and do (perform on patients/ client contacts) the following:

Know:

1. Procedures to obtain a speech language sample for speech & language assessment from children of different age groups such as, pre schoolers, kindergarten, primary school and older age groups.
2. Methods to examine the structures of the oral cavity/organs of speech.
3. The tools to assess language abilities in children (with hearing impairment, specific language impairment & mixed receptive language disorder).
4. Development of speech sounds in vernacular and linguistic nuances of the language.

Know-how:

1. To evaluate speech and language components using informal assessment methods.
2. To administer at least two standard tests for childhood language disorders.
3. To administer at least two standard tests of articulation/ speech sounds.
4. To assess speech intelligibility.

Show:

1. Analysis of language components – Form, content & use – minimum of 2 samples.
2. Analysis of speech sounds at different linguistic levels including phonological processes – minimum of 2 samples.
3. Transcription of speech language samples – minimum of 2 samples.
4. Analyse differences in dialects of the local language.

Do:

1. Case history - minimum of 5 individuals with speech & language disorders.
2. Oral peripheral examination - minimum of 5 individuals.
3. Language evaluation report – minimum of 5.
4. Speech sound evaluation report – minimum of 5.

Evaluation:

- Internal evaluation shall be based on attendance, clinical diary, log book and learning conference.
- External evaluation: Spot test, OSCE, Record, Viva-voce, case work

Examination scheme:

Components	CRW	C/P/A	CT	A	Viva
Weightage (%)	15	15	15	5	50

CRW- Clinical record writing, C/P/A- Case discussion/presentation/analysis, CT- Class test, A- Attendance, Viva- Internal/External

CLINICALS IN AUDIOLOGY-I

Course Code: ASL2312

Credit Units: 07

General considerations:

- Exposure is primarily aimed to be linked to the theory courses covered in the semester, however, not just limited to these areas.
- After completion of clinical postings in auditory diagnostics and auditory rehabilitation, the student will Know (concept), know how (ability to apply), show (demonstrate in a clinical diary/log book), and do (perform on patients/ client contacts) the following:

Know:

1. Methods to calibrate audiometer.
2. Materials commonly employed in speech audiometry.
3. Calculation pure tone average, % of hearing loss, minimum and maximum masking levels.
4. Different types of hearing loss and its common causes

Know-how:

1. To obtain detailed case history from clients or parents/guardians.
2. To carryout commonly used tuning fork tests.
3. To administer pure tone audiometry including appropriate masking techniques on adults using at least techniques
4. To administer tests to find out speech reception threshold, speech identification scores, most comfortable and uncomfortable levels on adults.

Show:

1. Plotting of audiograms with different degree and type with appropriate symbols – 2 audiograms per degree and type
2. Detailed case history taken and its analysis
3. Calculation degree, type and percentage of hearing loss on 5 sample conditions

Do:

1. Case history on at least 5 adults and 3 children with hearing disorders
2. Tuning fork test on at least 2 individuals with conductive and 2 individuals with sensori-neural hearing loss
3. Pure tone audiometry with appropriate masking on 5 individuals with conductive, 5 individuals SN hearing loss and 3 individuals with unilateral/asymmetric hearing loss – 5

Evaluation:

- Internal evaluation shall be based on attendance, clinical diary, log book and learning conference.
- External evaluation: Spot test, OSCE, Record, Viva-voce, case work

Examination scheme:

Components	CRW	C/P/A	CT	A	Viva
Weightage (%)	15	15	15	5	50

CRW- Clinical record writing, C/P/A- Case discussion/presentation/analysis, CT- Class test, A- Attendance, Viva- Internal/External

MOTOR SPEECH DISORDERS IN CHILDREN

Course Code: ASL2402

Credit Units: 05

Course Objectives: After completing this course, the student will be able to

- describe the characteristics of motor speech disorders in children such as cerebral palsy, childhood apraxia of speech and other childhood dysarthrias
- assess the speech and non-speech aspects associated with the above conditions
- plan and execute therapy strategies for children with motor speech disorders

Course Contents:

Module-I: Neuro-developmental processes in speech production and motor speech disorders

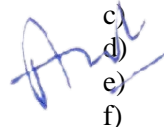

- a) Review of neuro-anatomy (cerebral cortex, sub-cortical structures, brainstem, cerebellum, spinal cord & cranial nerves, pyramidal and extra-pyramidal systems)
- b) Sensory-motor integration (spatial temporal planning, motor planning and feedback)
- c) Anatomic development of speech production systems
- d) Development of neural pathways of speech motor control (brain maturation, reflexes, sensory and motor)
- e) Dysarthria in children – cerebral palsy – disorders of tone (spastic, flaccid): definition, etiology, characteristics and associated problems
- f) Dysarthria in children – cerebral palsy – disorders of movement (hyperkinetic, hypokinetic) and disorder of balance (ataxia): definition, etiology, characteristics and associated problems
- g) Dysarthria in children – lower motor neuron and other syndromes with motor speech disorders
- h) Childhood apraxia of speech and nonverbal oral apraxia: definition, characteristics and classification

Module-II: Assessment of motor speech disorders in children

- a) Case history and developmental neurological evaluation – primitive postural and oro-pharyngeal reflexes, cranial nerve examination
- b) Assessment of oral sensory and motor capacity – Oral peripheral mechanism examination, neuro-muscular status
- c) Assessment of speech sub-systems – quantitative and qualitative
- d) Assessment of speech intelligibility and comprehensibility
- e) Assessment of associated problem
- f) Speech assessment with specific reference to childhood apraxia of speech – Phonetic and phonemic inventory, phonotactics and syllable sequencing, variability of errors, speech intelligibility, fluency and prosody
- g) Test materials – checklist for childhood apraxia of speech, screening test for developmental apraxia of speech
- h) Protocols for non-verbal and verbal praxis specific to Indian languages
- i) Differential diagnosis- dysarthria and other developmental disorders
- j) Differential diagnosis - childhood apraxia of speech and other developmental disorders

Module-III: Management of childhood dysarthria

- a) Team approach in rehabilitation of motor speech disorders in children
- b) Neuro-developmental therapy
- c) Non speech oral-motor exercises: its application for children with dysarthria
- d) Management of drooling
- e) Behavioral management of respiratory, phonatory, resonatory and articulatory subsystems
- f) Prosthetic appliances in treatment of childhood dysarthria

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- g) AAC in management of motor speech disorders- role of devices, AAC team, candidacy and pre-requisites, symbol selection, techniques, assessment for AAC, effective use of AAC
- h) Case studies: Planning intervention for children with dysarthria

Module-IV: Management of childhood apraxia of speech

- a) Principles of motor learning
- b) Integral stimulation – dynamic temporal cueing
- c) Multisensory and tactile cueing techniques (motor kinesthetic speech training, sensory motor approach, PROMPTS, Touch cue method & speech facilitation)
- d) Gestural cueing techniques (signed target phoneme therapy, adapted cueing techniques, cued speech, visual phonics, & Jordon's gestures)
- e) Miscellaneous techniques (melodic intonation therapy, multiple phonemic approach, & instrumental feedback)
- f) Cognitive/conceptual/ linguistic /phonological remedial approaches - phonotactics
- g) Other approaches: Vowel and diphthong remediation techniques (Northampton (Yale) vowel chart and Alcorn symbols), Nancy Kauffman's speech praxis treatment kit
- h) Use of AAC in childhood apraxia of speech
- i) Evidence-based practice in intervention for childhood apraxia of speech
- j) Case studies: Planning intervention for childhood apraxia of speech

Module-V: Feeding and swallowing disorders in children

- a) Embryology- periods and structures of development
- b) Anatomical structures of swallowing- upper aero digestive system, anatomic difference between adults and children
- c) Physiology of swallowing- swallow phases, neural control of swallowing, reflexes related to swallowing, suckling and sucking, airway and swallowing
- d) Terms involved in dysphagia and development of feeding skills
- e) Causes of dysphagia in children
- f) Signs and symptoms of dysphagia in children
- g) Assessment – inferences from neural developmental assessment, cranial nerve examination, assessment scales, nutritive and non-nutritive assessment, instrumental assessment (VFS, cervical auscultation), gastrointestinal evaluation
- h) Management: positioning, oral- motor treatment, team approach, non oral feeding, transitional feeding, modifications in feeding
- i) Role of speech-language pathologist in neonatal intensive care with reference to feeding and swallowing

Practicals

- a) With the help of models, charts and software, identify the motor control centers in the brain.
- b) Perform oro-motor examination in five children and adults and compare
- c) Identify oro-motor reflexes (rooting, suckling, & phase bite) in 5 infants.
- d) Demonstrate normal posture and breathing patterns required for varied speech tasks. Alter the postures and breathing patterns and notice changes in speech patterns.
- e) Assess DDK rate in five typically developing children.
- f) Rate intelligibility of speech in five typically developing children. Discuss factors that influenced speech intelligibility and their ratings.
- g) Observe and record (a) physical status, (b) oral sensory motor abilities and vegetative skills, (c) respiration, (d) phonation, (e) resonance, (f) articulation and (g) language abilities in five typically developing children. Compare these with observations made from children with motor speech disorders.

- h) Perform oro-motor exercises – isotonic and isometric. Discuss strategies to modify exercises for children.
- i) Identify from video the AAC system such as low technology vs high technology systems and different symbol system, that is, Bliss symbols, IICP symbols and different signing systems – Makaton.
- j) Observe feeding and swallowing skills in different age groups of children: 2 newborns; 2 infants, 2 toddlers, and 2 older children. Identify the differences in feeding methods, food consistencies, texture, quantity, feeding habits, feeding appliances used by these children.

Examination Scheme:

Components	CRW	PTB	CT	A	EE
Weightage (%)	5	5	15	5	70

CRW- Clinical record writing, PTB- Proficiency in using test batteries, CT- Class test, A- Attendance, EE- End semester examination

DIAGNOSTIC AUDIOLOGY: PHYSIOLOGICAL TESTS

Course Code: ASL2407

Credit Units: 05

Course Objectives: After completing this course, the students will be able to

- justify the need for using the different physiological tests in the audiological assessment
- independently run the tests and interpret the results to detect the middle ear, cochlear and retro cochlear pathologies and also differentially diagnose
- design tailor-made test protocols in immittance, AEPs and OAEs as per the clinical need
- make appropriate diagnosis based on the test results and suggest referrals.

Course Contents:

Module-I: Immittance Evaluation

- a) Clinical significance of physiological tests in audiology
- b) Immittance evaluation: Principle of immittance evaluation: Concept of impedance and admittance, their components,
- c) Tympanometry: definition, measurement procedure, response parameters, their measurement and normative, classification of tympanogram, clinical significance of tympanometry
- d) Eustachian tube functioning tests of tympanometry: basics of pressure equalization function of ET, Valsalva, Toynbee, William's pressure swallow, inflation-deflation test.
- e) Overview on multicomponent and multi-frequency tympanometry
- f) Overview on wide band reflectance and wide band tympanometry
- g) Reflexometry: definition, acoustic reflex pathway, measurement procedure, clinical applications of acoustic reflexes, special tests

Module-II: Auditory evoked potentials (AEPs): Auditory brainstem response (ABR)

- a) Introduction and classification of AEPs
- b) Instrumentation
- c) Principles of AEP recording techniques:
- d) Auditory brainstem response generators
- e) Protocol and procedure of recording auditory brainstem response
- f) Factors affecting auditory brainstem responses
- g) Clinical applications of ABR
- h) ABR in the paediatric population
- i) Role of ABR in infant hearing screening

Module-III: Overview of other AEPs

- a) ECochG
- b) Auditory Middle Latency Responses (AMLR) and their clinical applications
- c) Auditory Long Latency Responses (Obligatory responses) and their clinical applications
- d) Other long latency potentials such as P300, MMN, P600, N400, T-complex, CNV) and their clinical applications
- e) ASSR: Instrumentation, recording and clinical applications
- f) Brainstem responses to speech and other complex signals

Module-IV: Otoacoustic emissions

- Introduction to otoacoustic emissions
- Origin and classification of OAEs
- Instrumentation
- Procedure of OAE measurement: SOAE, TEOAEs, and DPOAEs

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- Interpretation of results: SOAE, TEOAEs, and DPOAEs
- Clinical applications of OAEs: SOAE, TEOAEs, and DPOAEs
- Contralateral suppression of OAEs and its clinical implications

Module-V: Physiological tests for assessment of vestibular system

- Electronystagmography: procedure, interpretation, clinical applications
- Videonystagmography, videoocculograph
- Vestibular Evoked Myogenic Potentials
- Overview of Rotatory chair test, video Head Impulse Test,
- Overview of Dynamic Posturography

Practicals

- Measure admittance in the calibration cavities of various volumes and note down the observations
- Calculate Equivalent ear canal volume by measuring static admittance in an uncompensated tympanogram (10 ears)
- Do tympanogram in the manual mode and measure peak pressure, peak admittance and ear canal volume manually using cursor (10 ears).
- Measure gradient of the tympanogram (10 ears)
- Administer Valsalva and Toynbee and William's pressure swallow test(5 ears)
- Record acoustic reflex thresholds in the ipsi and contra modes, (10 ears)
- Plot Jerger box pattern for various hypothetical conditions that affect acoustic reflexes and interpret the pattern and the corresponding condition.
- Carry out Acoustic reflex decay test and quantify the decay manually using cursor (5 individuals).
- Trace threshold of ABR (in 5 dB nHL steps near the threshold) for clicks and tone bursts of different frequencies (2 persons) and draw latency intensity function.
- Record ABR using single versus dual channels and, note down the differences
- Record ABR at different repetition rates in 10/sec step beginning with 10.1/11.1 per second. Latency-repetition rate function needs to be drawn.
- Record with each of three transducers (HP, insert phones and bone vibrator) and polarities and draw a comparative table of the same. Students should also record with different transducers without changing in the protocol in the instrument and calculate the correction factor required.
- Record ASSR for stimuli of different frequencies and estimate the thresholds
- Record TEOAEs and note down the amplitude, SNR, noise floor and reproducibility at octave and mid-octave frequencies. Note down the stimulus stability and the overall SNR (10 ears).
- Record DPOAEs and note down the amplitude, SNR, noise floor and reproducibility at octave and mid-octave frequencies (10 ears)

Examination Scheme:

Components	CRW	PTB	CT	A	EE
Weightage (%)	5	5	15	5	70

CRW- Clinical record writing, PTB- Proficiency in using test batteries, CT- Class test, A- Attendance, EE- End semester examination

IMPLANTABLE HEARING DEVICES

Course Code: ASL2408

Credit Units: 05

Course Objectives: After completing this course, the students will be able to

- assess candidacy for bone anchored hearing devices, middle ear implants, cochlear implants, and ABI
- select the appropriate device depending on the audiological and non-audiological findings
- handle post-implantation audiological management
- assess the benefit derived from implantation, and
- counsel the parents/care givers during different stages of implantation

Course Contents:

Module-I: Implantable hearing devices – basics

- a) Need for implantable hearing devices
- b) History of implantable hearing devices (bone anchored hearing devices, middle ear implants, cochlear implants, auditory brainstem implants and midbrain implants)
- c) Candidacy for implantable hearing devices
- d) Team involved in implantable hearing devices
- e) Pre-implant counseling, Informed consent

Module-II: Bone anchored hearing devices and middle ear implants

- a) Types, components
- b) Surgical approaches, risks, complications
- c) Audiological evaluations for candidacy, contraindications
- d) Assessment of benefits

Module-III: Cochlear implant and brain stem implants – basics

- a) Terminology, types, components and features
- b) Bilateral, bimodal and hybrid cochlear implants
- c) Factors related to selection of the device, funding sources
- d) Surgical approaches, risks, complications
- e) Audiological and non-audiological candidacy criteria, contraindications

Module-IV: Cochlear implants and brainstem implants

- a) Signal coding strategies, classification, types
- b) Intraoperative monitoring by audiologists
- c) Objective measures: ESRT, ECAP, prom stim, EABR, aided cortical potentials
- d) Post implant Mapping: schedule, pre-requisites, switch-on, mapping parameters, impedance, compliance, role of objective and subjective measures in mapping,
- e) post mapping audiological evaluation
- f) Assessment of benefits
- g) Optimization of hearing aid on contralateral ear

Module-V: Implantable hearing devices - Counselling and troubleshooting; Rehabilitation

- a) Post implant Counselling on care and maintenance and trouble shooting of the device
- b) Overview of post implant rehabilitation including AVT
- c) Factors affecting outcome of implantable devices in adults and children

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Practicals

- Watch videos of BAHA, middle ear implant, cochlear implant
- Create hypothetical cases (at least 5 different cases) who are candidates for cochlear implantation. Make protocol for recording an EABR
- List down the technological differences across different models of cochlear implants from different companies, their cost
- Observation of mapping
- Watching of videos on AVT
- Watch video on cochlear implant surgery

Examination Scheme:

Components	CRW	PTB	CT	A	EE
Weightage (%)	5	5	15	5	70

CRW- Clinical record writing, PTB- Proficiency in using test batteries, CT- Class test, A- Attendance, EE- End semester examination

CLINICALS IN SPEECH-LANGUAGE PATHOLOGY-II

Course Code: ASL2409

Credit Units: 07

General considerations:

- Exposure is primarily aimed to be linked to the theory courses covered in the semester.
- After completion of clinical postings in Speech –language diagnostics, the student will know (concepts), know how (ability to apply), show (demonstrate in a clinical diary/log book based on clinical reports/recordings, etc), and do (perform on patients/ client contacts) the following:

Know:

1. Speech & language stimulation techniques.
2. Different samples /procedures required to analyse voice production mechanism. (acoustic/ aerodynamic methods / visual examination of larynx/ self evaluation)
3. Different samples /procedures required to analyse speech production mechanism in children with motor speech disorders.

Know-how:

1. To administer at least two more (in addition to earlier semester) standard tests for childhood language disorders.
2. To administer at least two more (in addition to earlier semester) standard tests of articulation/ speech sounds.
3. To set goals for therapy (including AAC) based on assessment/test results for children with language and speech sound disorders.
4. To record a voice sample for acoustic and perceptual analysis.
5. To assess parameters of voice and breathing for speech.
6. Assessment protocol for children with motor speech disorders including reflex profile and swallow skills.
7. Counselling for children with speech-language disorders.

Show:

1. Acoustic analysis of voice – minimum of 2 individuals with voice disorders.
2. Simple aerodynamic analysis - minimum of 2 individuals with voice disorders.
3. Self evaluation of voice – minimum of 2 individuals with voice disorders.
4. Informal assessment of swallowing – minimum of 2 children.
5. Assessment of reflexes and pre linguistic skills - minimum of 2 children.
6. Pre –therapy assessment and lesson plan for children with language and speech sound disorders - minimum of 2 children each.

Do:

1. Case history - minimum of 2 individuals with voice disorders.
2. Case history - minimum of 2 children with motor speech disorders
3. Oral peripheral examination- minimum of 5 children
4. Apply speech language stimulation/therapy techniques on 5 children with language disorders (with hearing impairment, specific language impairment & mixed receptive language disorder)/speech sound disorders – minimum of 5 sessions of therapy for each child.
5. Exit interview and counselling - minimum of 2 individuals with speech language disorders.

CLINICALS IN AUDIOLOGY-II

Course Code: ASL2410

Credit Units: 07

General considerations:

- Exposure is primarily aimed to be linked to the theory courses covered in the semester, however, not just limited to these areas.
- After completion of clinical postings in auditory diagnostics and auditory rehabilitation, the student will Know (concept), know how (ability to apply), show (demonstrate in a clinical diary/log book), and do (perform on patients/ client contacts) the following:

Know:

- Indications to administer special tests
- Procedures to assess the listening needs
- National and international standards regarding electroacoustic characteristics of hearing aids

Know-how:

- To administer at least 1 test for adaptation, recruitment and functional hearing loss.
- Counsel hearing aid user regarding the use and maintenance hearing aids
- To troubleshoot common problems with the hearing aids
- To select test battery for detection of central auditory processing disorders.
- Select different types of ear moulds depending on type of hearing aid, client, degree, type and configuration of hearing loss

Show:

- Electroacoustic measurement as per BIS standard on at least 2 hearing aids
- How to process 2 hard and 2 soft moulds
- How to preselect hearing aid depending on listening needs and audiological findings on at least 5 clinical situations (case files)
- How select test battery depending on case history and basic audiological information – 3 situations

Do:

- Tone decay test – 2 individuals with sensori-neural hearing loss
- Strenger test – 2 individuals with unilateral/asymmetrical hearing loss
- Dichotic CV/digit, Gap detection test – 2 individuals with learning difficulty or problem in hearing in noise
- Hearing aid fitment for at least 5 individuals with mild to moderate and 3 individuals with moderate to profound
- Hearing aid selection with real ear measurement system on 3 individuals with hearing impairment

Evaluation:

- Internal evaluation shall be based on attendance, clinical diary, log book and learning conference.
- External evaluation: Spot test, OSCE, Record, Viva-voce, case work

Examination scheme:

Components	CRW	C/P/A	CT	A	Viva
Weightage (%)	15	15	15	5	50

CRW- Clinical record writing, C/P/A- Case discussion/presentation/analysis, CT- Class test, A- Attendance, Viva- Internal/External

FLUENCY AND ITS DISORDERS

Course Code: ASL2501

Credit Units: 05

Course Objectives: After completion of the course, the student will be able to

- understand the characteristics of fluency and its disorders
- evaluate and diagnose fluency disorders
- learn about the techniques for the management of fluency disorders

Course Contents:

Module-I: Fluency

- a) Scope and definition of fluency
- b) Factors influencing fluency
- c) Definition and characteristics of features of suprasegmentals in speech: rate of speech, intonation, rhythm, stress and pause
- d) Suprasegmental features in typical speech
- e) Suprasegmental features in the speech of persons with fluency disorders
- f) Developmental aspects of suprasegmentals of speech
- g) Normal non-fluency

Module-II: Stuttering and other fluency disorders

- a) Stuttering: Definition and causes for stuttering
- b) Characteristics of stuttering: core and peripheral characteristics, primary and secondary stuttering, effect of adaptation and situation
- c) Development of stuttering
- d) Normal non fluency: characteristics and differential diagnosis
- e) Theories of stuttering: organic, functional, neurogenic, diagnosogenic and learning
- f) Cluttering: Definition, causes and characteristics
- g) Neurogenic stuttering: Definition, causes and characteristics

Module-III: Assessment and differential diagnosis

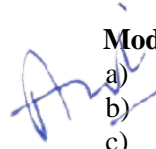

- a) Assessment of fluency disorders: stuttering, cluttering, neurogenic stuttering and normal non fluency:
- b) Subjective methods: protocols and tests
- c) Objective methods
- d) Qualitative and quantitative assessment
- e) Differential diagnosis of fluency disorders

Module-IV: Management of stuttering

- a) Approaches to management
- b) Changing scenario in management of stuttering
- c) Different techniques and strategies used in management with their rationale
- d) Relapse and recovery from stuttering
- e) Issues of speech naturalness in stuttering

Module-V: Management of fluency-related entities

- a) Management of cluttering: rationale, techniques and strategies
- b) Management of neurogenic stuttering: rationale, techniques and strategies
- c) Management of normal non-fluency: rationale, techniques and strategies

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- d) Relapse and recovery in cluttering and neurogenic stuttering. Changes in normal non-fluency
- e) Prevention and early identification of stuttering, and cluttering

Practicals

- a) Assess the rate of speech in 5 normal adults.
- b) Record and analyse the supra segmental features in typically developing children between 2 and 5 years.
- c) Record audio visual sample of 5 typically developing children and 5 adults for fluency analysis.
- d) Listen/see samples of normal non fluency and stuttering in children and document the differences.
- e) Identify the types of dysfluencies in the recorded samples of adults with stuttering.
- f) Instruct and demonstrate the following techniques: Airflow, prolongation, easy onset shadowing techniques.
- g) Record 5 speech samples with various delays in auditory feedback and analyse the differences.
- h) Administer SPI on 5 typically developing children.
- i) Administer SSI on 5 adults with normal fluency.
- j) Administer self-rating scale on 10 adults with normal fluency.

Examination Scheme:

Components	CRW	PTB	CT	A	EE
Weightage (%)	5	5	15	5	70

CRW- Clinical record writing, PTB- Proficiency in using test batteries, CT- Class test, A- Attendance, EE- End semester examination

STRUCTURAL ANOMALIES AND SPEECH DISORDERS

Course Code: ASL2507

Credit Units: 05

Course Objectives: After completing the course, the student will be able to

- understand the characteristics of disorders with structural anomalies including speech
- evaluate and diagnose the speech characteristics seen in these disorders
- learn about the techniques for the management of speech disorders in these conditions

Course Contents:

Module-I: Speech characteristics of persons with cleft lip and palate

- a) Types, characteristics and classification of cleft lip and palate
- b) Causes of cleft lip and palate: genetic, syndrome and others
- c) Velopharyngeal inadequacy: types, causes and classification
- d) Associated problems in persons with cleft lip and palate: speech, language, feeding, dental and occlusion, hearing, psychological

Module-II: Assessment and management of cleft lip and palate speech

- a) Team of professionals in the management of persons with cleft lip and palate: their roles in diagnosis and management.
- b) Assessment of persons with cleft lip and palate for speech language functions:
- c) Subjective assessment of speech characteristics and speech intelligibility: proforma, tests, scales and others.
- d) Objective assessment of phonatory, resonatory and articulatory features
- e) Diagnosis and differential diagnosis of speech related functions
- f) Subjective assessment of language and communication functions
- g) Reporting test results using Universal Parameters
- h) Management of persons with cleft lip and palate
- i) Surgical and prosthetic management
- j) Techniques and strategies to correct speech sound disorders
- k) Techniques and strategies to improve feeding
- l) Counselling and guidance

Module-III: Structural anomalies of tongue and mandible - Characteristics, assessment and management

- a) Types, classification and characteristics of structural anomalies of tongue and mandible
- b) Causes for structural anomalies of tongue and mandible
- c) Team of professionals in the management of persons with structural anomalies of tongue and mandible and their roles.
- d) Associated problems in persons with structural anomalies of tongue and mandible:
 - Speech
 - Feeding
 - Dental and occlusion
 - Psychological and others
- e) Management of persons with structural anomalies of tongue and mandible
 - Surgical and prosthetic management
 - Techniques and strategies to improve speech intelligibility
 - Techniques and strategies to improve feeding
 - Counselling and guidance for persons with glossectomy and mandibulectomy

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Module-IV: Characteristics & assessment of laryngectomy

- Causes, symptoms and classifications of laryngeal cancers
- Team of professionals in the management of persons with laryngeal cancer
- Surgery for laryngeal cancers: types and outcome
- Associated problems in laryngectomy individuals
- Assessment of speech and communication skills of laryngectomy individuals: Pre and post-operative considerations

Module-V: Management of speech and communication in laryngectomies

- Esophageal speech: candidacy, types of air intake procedures, speech characteristics and its modification through techniques and strategies, complications and contraindications.
- Tracheo-esophageal speech: candidacy, types of TEP, fitting of prosthesis, speech characteristics and its modification through techniques and strategies, complications and contraindications.
- Artificial larynx: types, factors for selection, output characteristics, techniques for efficient use of artificial larynx, complications and contraindications.
- Other remedial procedures: Pharyngeal speech, buccal speech, ASAI speech, gastric speech.

Practicals

- Identify the different types of cleft lip and palate by looking at illustrations and images
- Listen to 10 speech samples of children with cleft lip and palate and rate their nasality/ speech (articulation and cleft type errors) based on universal reporting parameters.
- Identify the type of closure of velopharyngeal port for 5 normal individuals and 5 individuals with cleft lip and palate using videos of nasoendoscopy/ videofluoroscopy.
- Perform oral peripheral mechanism examination on 10 individuals and document the structure and functions of the articulators.
- Analyse the different types of occlusion in 10 individuals.
- Identify the type of glossectomy by looking at pictures/illustrations.
- Identify the different types of prosthesis in the management of head and neck cancer.
- Analyse the speech profile of 5 individuals with laryngectomy.
- Identify parts of an artificial larynx and explore its use.
- Prepare a checklist / pamphlet illustrating care of the stoma and T- tubes in vernacular.

Examination Scheme:

Components	CRW	PTB	CT	A	EE
Weightage (%)	5	5	15	5	70

CRW- Clinical record writing, PTB- Proficiency in using test batteries, CT- Class test, A- Attendance, EE- End semester examination

PEDIATRIC AUDIOLOGY

Course Code: ASL2508

Credit Units: 05

Course Objectives: After completing this course, the student will be able to

- describe auditory development
- list etiologies and relate them to different types of auditory disorders that may arise
- explain different hearing screening/identification procedures and their application
- elaborate on different aspects of paediatric behavioral and physiological / electrophysiological evaluation

Course Contents:

Module-I: Auditory development

- a) Review of Embryology of the ear
- b) Development of auditory system from periphery to cortex
- c) Neuroplasticity
- d) Prenatal hearing
- e) Normal auditory development from 0-2 years
- f) Infant speech perception
- g) Incidence and prevalence of auditory disorders in children

Module-II: Auditory disorders

- a) Congenital and acquired hearing loss in children
- b) Permanent minimal and mild bilateral hearing loss
- c) Impact on auditory skills, speech-language, educational and socio-emotional abilities
- d) Moderate to profound sensorineural hearing loss
- e) Unilateral hearing loss
- f) Auditory Neuropathy Spectrum Disorders
- g) Central auditory processing disorders
- h) Pseudohypacusis
- i) Auditory disorders in special population and multiple handicap

Module-III: Early identification of hearing loss

- a) Principles of early hearing detection and intervention programs
- b) Principles and history of hearing screening
- c) Joint Committee on Infant Hearing position statement (2000, 2007,2013)
- d) High risk register/ checklists for screening
- e) Sensitivity and specificity of screening tests
- f) Hearing screening in infants and toddlers: Indian and Global context
- g) Hearing screening in preschool children: Indian and Global context
- h) Hearing screening in school-age children (including screening for CAPD): Indian and Global context

Module-IV: Paediatric assessment I

- a) Behavioral observation audiometry
- b) Conditioned orientation reflex audiometry
- c) Visual reinforcement audiometry, TROCA, play audiometry
- d) Pure tone audiometry in children: Test stimuli, response requirement and reinforcement
- e) Speech audiometry (SRT, SDT); Speech recognition and speech perception tests developed in India)

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- f) Bone conduction speech audiometry
- g) Immittance evaluation in paediatric population
- h) Central auditory processing disorders assessment

Module-V: Paediatric assessment II

- a) Recording and interpretation of OAE in paediatric population
- b) Factors affecting OAE in paediatric population
- c) Recording and interpretation of click evoked and tone burst evoked ABR in paediatric population
- d) Factors affecting ABR in paediatric population
- e) Recording ASSR in paediatric population
- f) Recording AMLR, ALLR in paediatric population
- g) Assessment of hearing loss in special population
- h) Diagnostic test battery for different age groups
- i) Diagnosis and differential diagnosis

Practicals

- a) Observe a child with normal hearing (0-2 years) in natural settings. Write a report on his/her responses to sound.
- b) Observe a child with hearing impairment (0-2 years) in natural settings. Write a report on his/her responses to sound with and without his amplification device
- c) Administer HRR on at least 3 newborns and interpret responses
- d) Based on the case history, reflect on the possible etiology, type and degree of hearing loss the child may have.
- e) Compare ABR wave forms in children of varying ages from birth to 24 months.
- f) Observe live or video of BOA/VRA of a child with normal hearing and hearing loss and write a report on the instrumentation, instructions, stimuli used, procedure and interpretation.
- g) Observe OAE in a child with normal hearing and a child with hearing loss. Write a report on the instrumentation, protocol used and interpretation
- h) Observe ABR in a child with normal hearing and a child with hearing loss. Write down a report on the instrumentation, protocol used and interpretation
- i) Observe immittance evaluation in a child with normal hearing and a child with hearing loss. Write a report on the instrumentation, protocol used and interpretation
- j) Using role play demonstrate how the results of audiological assessment are explained to caregiver in children with the following conditions
 - Child referred in screening and has high risk factors in his history
 - Child with chronic middle ear disease
 - Child with CAPD
 - Child with severe bilateral hearing impairment

Examination Scheme:

Components	CRW	PTB	CT	A	EE
Weightage (%)	5	5	15	5	70

CRW- Clinical record writing, PTB- Proficiency in using test batteries, CT- Class test, A- Attendance, EE- End semester examination

AURAL REHABILITATION IN CHILDREN

Course Code: ASL2509

Credit Units: 05

Course Objectives: After completing this course the student will be able to

- describe the different communication options available for young children with hearing impairment
- explain the impact of hearing impairment on auditory development and spoken language communication
- describe factors that effect of acoustic accessibility and strategies to manage them at home and in classroom
- design activities for auditory learning at different levels
- enumerate how the needs of individuals with hearing impairment using sign language and spoken language as form of communication in India are being met

Course Contents:

Module-I: Auditory development, spoken communication and acoustic accessibility

- a) Sensitivity period for auditory development
- b) Impact of hearing impairment on auditory development, spoken language acquisition, parent child communication
- c) Factors affecting auditory development
- d) Hearing loss implications for speech perception: acoustics of speech
- e) Optimizing hearing potential through hearing aids
- f) Optimizing hearing potential through cochlear implants
- g) Barriers to acoustic accessibility: distance, signal to noise ratio, reverberation
- h) Managing the listening environment for infants, toddlers schools
- i) Signal to noise ratio enhancing technologies personal FM, loop systems, desktop group systems, blue tooth connectivity

Module-II: Communication options

- a) Detecting and confirming hearing loss
- b) Parent support counselling, individual family service plan
- c) Choosing communication options
- d) Auditory oral approach
- e) Auditory verbal therapy
- f) Manual/sign language: Indian and Global context
- g) Cued speech and total communication
- h) Listening devices hearing aid/cochlear implant
- i) Early intervention programs

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Module-III: Optimal listening and learning environments infancy and early childhood

- a) Involvement of family
- b) Factors impacting family involvement, supporting families through information and education
- c) Creating optimum listening and learning environment
- d) Intervention: Assessment, auditory learning, listening and language facilitation techniques in infancy and early childhood
- e) Issues with children with mild hearing loss, unilateral hearing loss,
- f) Children with hearing loss, ANSD or APD: Children are intervened late
- g) Children with hearing loss and other special needs
- h) Listening and spoken language in school age: benefits of inclusion
- i) Intervention at school age: Functional hearing assessment, communication assessment and intervention to integrate with academic targets

Module-IV: Auditory - speech reading training and literacy

- a) Candidacy for auditory training and speech reading
- b) Auditory training/learning four design principles skill, stimuli, activity, and difficulty level
- c) Early training Objectives
- d) Analytic and Synthetic training Objectives
- e) Formal and informal training
- f) Auditory training for infants and very young children
- g) Outcomes of training
- h) Speech and language and literacy characteristics
- i) Speech language and literacy evaluation assessment
- j) Speech language therapy

Module-V: Indian perspectives

- a) Prevalence of hearing impairment in children
- b) Education of the deaf in India historical perspectives
- c) Available resources for education of the hearing impaired
- d) Early intervention programs and centers
- e) Schools for the hearing impaired; day schools, residential schools
- f) Beyond school: college and vocational training
- g) Training manpower resources for service delivery
- h) Indian sign language
- i) Training sign language interpreters
- j) Cued speech in India
- k) Assessment and therapy tools developed for individuals with hearing impairment in India.

Practicals

- a) Watch documentaries such as “Sound and Fury” (2001). Write a reflection of why parents made communication choices for their children
- b) Follow on links to the above film that shows the status of the children with hearing impairment after a few years.
- c) Learn at least 50 signs across different categories of Indian sign language. Make a video of you signing 10 sentences. Have a class mate interpret them.
- d) Interview a parent of a child with hearing impairment on how they adapted their child to wear the hearing aids and /or implant. What were the first responses to sound they observed and how language and speech develop?
- e) Complete a functional auditory evaluation on one child with hearing loss. Do a speech and language evaluation and also write a report on the child strengths and weakness.

- f) Design and demonstrate auditory learning activities at the four levels awareness, discrimination, identification and comprehension. Ensure that the activities encompass different skill level and difficulty levels.
- g) Develop a short audio/film/pamphlet for parents in your local language on one of the following: teaching parent to trouble shooting the hearing aid/cochlear implant, establishing consistent use of listening device, activities to facilitate language across different age groups
- h) Visit a school for the deaf. Document your observation about the acoustic environment in the class, strategies used by the teacher to promote listening and spoken language

Examination Scheme:

Components	CRW	PTB	CT	A	EE
Weightage (%)	5	5	15	5	70

CRW- Clinical record writing, PTB- Proficiency in using test batteries, CT- Class test, A- Attendance, EE- End semester examination

CLINICALS IN SPEECH LANGUAGE PATHOLOGY-III

Course Code: ASL2510

Credit Units: 07

General considerations:

- Exposure is primarily aimed to be linked to the theory courses covered in the semester.
- After completion of clinical postings in Speech –language diagnostics, the student will know (concepts), know how (ability to apply), show (demonstrate in a clinical diary/log book based on clinical reports/recordings, etc.), and do (perform on patients/ client contacts) the following:

Know:

1. Procedures to assess speech fluency and its parameters using standardized tests for children and adults.
2. Differential diagnosis of motor speech disorders in children.
3. Procedures to assess individuals with cleft lip and palate, and other oro-facial structural abnormalities.
4. Procedures to assess laryngectomy and provide management options.

Know-how:

1. To administer at least two more (in addition to earlier semesters) standard tests for childhood language disorders.
2. To record a speech sample for analysis of fluency skills (including blocks & its frequency, rate of speech, prosody, etc.).
3. To assess posture and breathing for speech in children with motor speech disorders.
4. To consult with inter-disciplinary medical/rehabilitation team and counsel the individual/family regarding management options and prognosis.

Show:

1. Rating of cleft, speech intelligibility and nasality – minimum of 2 individuals with cleft lip and palate.
2. Language assessment - minimum of 2 individuals with cleft lip and palate.
3. Transcription of speech sample and assessment of percentage dis/dysfluency– minimum of 2 individuals with stuttering.
4. Assessment of rate of speech on various speech tasks – at least on 2 children & adults.

Do:

1. Voice assessment report - minimum of 2 individuals with voice disorders.
2. Fluency assessment report - minimum of 2 individuals with fluency disorders.
3. Oral peripheral examination on minimum of 2 individuals with cleft lip and palate.
4. Apply speech language stimulation/therapy techniques on 5 children with language disorders/speech sound disorders/ motor speech disorders – minimum 5 sessions of therapy for each child.

Evaluation:

- Internal evaluation shall be based on attendance, clinical diary, log book and learning conference.
- External evaluation: Spot test, OSCE, Record, Viva-voce, case work.

CLINICALS IN AUDIOLOGY-III

Course Code: ASL2511

Credit Units: 07

General considerations:

- Exposure is primarily aimed to be linked to the theory courses covered in the semester, however, not just limited to these areas.
- After completion of clinical postings in auditory diagnostics and auditory rehabilitation, the student will Know (concept), know how (ability to apply), show (demonstrate in a clinical diary/log book), and do (perform on patients/ client contacts) the following:

Know:

- Different protocols in tympanometry and reflexometry.
- Different protocols used in auditory brainstem responses
- Protocols for screening and diagnostic otoacoustic emissions
- Tests to assess vestibular system
- Different indications for selecting implantable hearing devices
- Various speech stimulation and auditory training techniques

Know-how:

- To administer auditory brainstem responses for the purpose of threshold estimation and site of lesion testing
- To administer high frequency tympanometry and calculate resonance frequency
- To administer high risk register
- To modify the given environment to suit the needs of hearing impairment

Show:

- Analysis of ABR waveforms – threshold estimation 5 and site of lesion 5
- Analysis of immittance audiometry and relating to other tests – 5 individuals with conductive and 5 individuals with sensori-neural hearing loss
- How to formulate select appropriate auditory training technique based on audiological evaluation

Do:

- Threshold estimation on 5 infants (< 2 years)
- TEOAE and DPOAE on 5 infants (<2 years)
- BOA on 5 infants (<2 years)
- VRA on 2 infants (6 month – 3 year)
- Conditioned play audiometry – 3 children (3-6 years)
- Hearing aid fitment on 1 infant (< 3 years) 2 children (3-6 years)
- Listening age of 3 children with hearing impairment
- Appropriate auditory training on 5 children with hearing loss

Evaluation:

- Internal evaluation shall be based on attendance, clinical diary, log book and learning conference.
- External evaluation: Spot test, OSCE, Record, Viva-voce, case work

MOTOR SPEECH DISORDERS IN ADULTS

Course Code: ASL2606

Credit Units: 05

Course Objectives: After completing the course, the student will be able to

- understand the characteristics of acquired motor speech disorders in adults
- evaluate and diagnose speech characteristics in acquired motor speech disorders
- learn about the techniques for the management of speech and related errors in acquired motor speech disorders

Course Contents:

Module-I: Causes & Characteristics of dysarthria

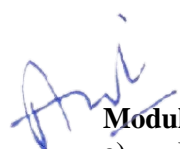

- a) Definition, etiology and classification of acquired dysarthria
- b) General, speech and feeding related characteristics of acquired dysarthria with and without genetic underpinnings:
- c) Vascular lesions: dysarthria following stroke/CVA, cranial and peripheral nerve palsies
- d) Infectious condition of the nervous system: dysarthria following meningitis, encephalitis, polyneuritis, poliomyelitis, neurosyphilis.
- e) Traumatic lesions: Dysarthria following TBI.
- f) Toxic conditions of the nervous system: Dysarthria following exogenic and endogenic toxic conditions of the nervous system.
- g) Anoxia of the nervous system: Dysarthria following anoxic conditions
- h) Metabolic disorders affecting nervous system: Dysarthria following metabolic conditions that affect the nervous system, Wilson's disease etc.
- i) Idiopathic causes: Dysarthria following idiopathic causes
- j) Neoplastic lesions of nervous system: Dysarthria following neoplastic lesions in the nervous system
- k) Demyelinating and degenerative conditions: Huntington's Chorea, Parkinson's, Multiple Sclerosis, Motor Neuron Diseases

Module-II: Assessment and diagnosis of dysarthria

- a) Subjective assessment of dysarthria:
 - Assessment of respiratory, phonatory, resonatory, articulatory errors
 - Assessment of prosodic features
 - Assessment of speech intelligibility
 - Scales, protocols and tests used for subjective assessment of dysarthria
- b) Instrumental analysis of speech in dysarthria: Acoustic, kinematic and physiological
- c) Advantages and disadvantages of subjective and instrumental procedures in the assessment of dysarthria in adults
 - Differential diagnosis of acquired motor speech disorders in adults:
 - Dysarthria and verbal apraxia
 - Dysarthria and functional articulation disorders
 - Dysarthria and aphasia
 - Apraxia of speech and aphasia
 - Dysarthria from other allied disorders such as agnosia, alexia, agraphia etc.
 - Apraxia from other allied disorders such as agnosia, alexia, agraphia etc.
 - Assessment of feeding, swallowing and related issues in persons with dysarthria

Module-III: Management of dysarthria

- a) Management of acquired dysarthria

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- b) General principles in the management of dysarthria
- c) Influence of medical, prosthetic and surgical procedures on the speech in persons with acquired dysarthria.
- d) Facilitative approach: vegetative, sensorimotor and reflex based.
- e) Systems approach: correction of respiratory, phonatory, resonatory, articulatory and prosodic errors.
- f) Strategies to improve speech intelligibility and speech enhancement techniques
- g) Strategies to improve feeding, swallowing behavior in persons with acquired dysarthria

Module-IV: Assessment and management of apraxia in adults

- a) Definition, etiology and classification of acquired apraxia
- b) Characteristics of nonverbal apraxia's in adults
- c) Characteristics of verbal apraxia's in adults
- d) Subjective assessment strategies: standard tests and scales, protocols and behavioral profiles
- e) Instrumental analysis of the speech of apraxia in adults: Acoustic, Kinematic and Physiological
- f) Management Approaches for verbal & nonverbal apraxia: principles and strategies

Module-V: Management related issues in motor speech disorders

- a) Team involved in the management of persons with acquired dysarthria and apraxia
- b) Issues related to maintenance and generalization of speech in dysarthria and apraxia
- c) Counselling and guidance for persons with acquired dysarthria and apraxia
- d) Augmentative and alternative strategies for persons with acquired dysarthria and apraxia

Practicals

- a) Identify the cranial nerves and mention its origin and insertion from a picture/ model. Demonstrate methods to assess the cranial nerves.
- b) Assess the respiratory system using speech and non-speech tasks in 10 healthy adults.
- c) Assess the phonatory system using subjective and acoustic analysis in 10 healthy adults.
- d) Looking at a video identify the clinical signs and symptoms of different neurological conditions resulting in Dysarthria.
- e) Record the speech sample of 5 normal adults and compare with the audio sample of individuals with Dysarthria.
- f) Administer Duffy's intelligibility rating scale on 5 healthy adults.
- g) Administer Frenchay's Dysarthria Assessment on 5 healthy adults.
- h) Demonstrate activities to improve the functions of speech subsystem.
- i) Identify the signs of UMN and LMN based on a video.
- j) Prepare a low tech AAC for functional communication for an individual with apraxia.

Examination Scheme:

Components	CRW	PTB	CT	A	EE
Weightage (%)	5	5	15	5	70

CRW- Clinical record writing, PTB- Proficiency in using test batteries, CT- Class test, A- Attendance, EE- End semester examination

AUDIOLOGY IN PRACTICE

Course Code: ASL2609

Credit Units: 05

Course Objectives: After completing the course, the student will be able to

- list and describe the highlights of legislations relating to hearing impairment and other disabilities
- incorporate ethical practices in professional service delivery.
- provide information on welfare measures, policies of government when needed
- describe different strategies to create awareness of hearing impairment and programs to address them
- explain the different clinical practice settings in audiology with reference to their requirement, protocols and role and responsibility of audiologist
- describe methods to measure the impact of noise on humans and strategies to address excessive noise exposure in industries and the community.
- describe terminology, technology and methods used in tele practice, and their application in audiological service delivery

Course Contents:

Module-I: Scope, legislation and ethics in audiology

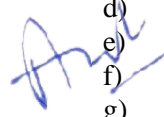

- a) Scope of practice in audiology (National – ISHA & International body - AAA)
- b) Professional ethics (ISHA)
- c) Legislations and conventions relating to disability: need and historical aspects
- d) Classification of hearing impairment and disability certification,
- e) Rehabilitation Council of India Act (1992) and its amendments
- f) Person with Disability Act (1995)
- g) National Trust Act (1999)
- h) Right to Education (2012)
- i) Biwako Millennium framework (2003) and Salamanca Statement 1994
- j) UNCRPD
- k) Concept of barrier free access and universal design relating to individuals with hearing impairment

Module-II: Hearing health and strategies for prevention of hearing impairment

- a) Epidemiology of hearing disorders
- b) ICD and ICF
- c) Levels of prevention: Primary, secondary and tertiary
- d) National programs and efforts national institutes
- e) Welfare measures by Government,
- f) Camps (planning, purpose, organizing and providing remedial measures)
- g) Public education and information (media, radio broadcasts, street plays)
- h) Hearing health and prevention programs (hearing help line, dangerous decibels, online hearing tests etc.)

Module-III: Audiological practice in different settings

- a) Audiological Private practice
- b) ENT clinics
- c) Paediatric / neonatology clinic/departments
- d) Neurology departments
- e) Factories and Industry
- f) Hearing aid dispensing centre/hearing aid industry
- g) Rehabilitation centres such as DRC/CRCs

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- h) Schools for the hearing impaired
- i) Cochlear implant clinics
- j) Multiple handicap habilitation centre and others

Module-IV: Noise and hearing conservation in industry and community

- a) Introduction to noise, types
- b) Sources of noise in the industry and community
- c) Effects of noise in the auditory system (outer, middle and inner ear)
- d) Temporary threshold shift, permanent threshold shift, factors increasing the risk of NIHL
- e) Non auditory effects of noise (physiological, psychological, stress, sleep, job productivity and accidents)
- f) Legislations related to noise, permissible noise exposure levels, workers compensation, OSHA standards, Indian legislations related to noise
- g) Instrumentation, measurement and procedure for measuring noise in industry
- h) Instrumentation, measurement and procedure for measuring noise in community
- i) Hearing conservation program (HCP), steps, record keeping,
- j) Ear protective devices

Module-V: Scope and practice of tele audiology

- a) Introduction to tele-health: definition, history of tele-health
- b) Terminologies-tele-health, tele medicine, tele practice
- c) Connectivity: internet, satellite, mobile data
- d) Methods of tele-practice-store and forward and real time
- e) Ethics and Regulations for tele-audiology
- f) Requirements/Technology for tele- audiology: Web based platforms, Video conferencing, infrastructure
- g) Manpower at remote end and audiologist end, training assistants for tele-audiology
- h) Audiological screening using tele-technology : new born hearing screening, school screening, community screening, counselling
- i) Diagnostic audiological services using tele-technology : video otoscopy, pure tone audiometry, speech audiometry, oto acoustic emission, tympanometry, auditory brainstem response. Intervention / aural rehabilitation using tele-technology :hearing aid counselling and troubleshooting, tinnitus, counselling, aural rehabilitation services, AVT, and counselling

Practicals

- a) Undertake the activities such as ‘Dangerous decibel’ program (www.dangerousdecibels.org)
- b) Noise measurement and attenuation measurement of ear protection devices.
- c) Sound level meter measurement in different areas (generator room, audio rooms)
- d) Speech in noise assessment for 10 subjects
- e) Visit an audiologist in different practice settings and provide a report
- f) Administer ICF protocols for patients with different disorders
- g) Explore websites of national institutes, hearing aid companied, NGOs in disability field and describe the accessibility features and information provided
- h) Remote control a PC based audiology equipment connected to internet using any authorized desktop sharing software
- i) Develop one pamphlet/poster/ in local language that would address some aspect of audiology practice
- j) Perform Accessibility ability of your institute/center and prepare a report

CLINICALS IN SPEECH-LANGUAGE PATHOLOGY-IV

Course Code: ASL2610

Credit Units: 07

General considerations:

- Exposure is primarily aimed to be linked to the theory courses covered in the semester.
- After completion of clinical postings in Speech-language diagnostics, the student will know (concepts), know how (ability to apply), show (demonstrate in a clinical diary/log book based on clinical reports/recordings, etc.), and do (perform on patients/ client contacts) the following:

Know:

1. Procedures to assess motor speech disorders in adults.
2. Differential diagnosis of motor speech disorders in adults.
3. Procedures to assess individuals with adult language disorders, and other related abnormalities.

Know-how:

1. To administer at least two standard tests for adult language disorders.
2. To administer at least two standard tests/protocols for motor speech disorders in adults.
3. To record a sample for analysis of language and speech skills in adults with neuro-communication disorders.
4. To assess posture, breathing, speech and swallowing in adults with motor speech disorders.
5. To consult with inter-disciplinary medical/rehabilitation team and counsel the individual/family regarding management options and prognosis.

Show:

1. Language assessment - minimum of 2 individuals after stroke.
2. Associated problems in individuals after stroke and its evaluation.
3. Dysphagia assessment – minimum of 2 children & adults.
4. Goals and activities for therapy (including AAC) based on assessment/test results for adults with neuro-communication disorders.

Do:

1. Voice therapy - Minimum of 2 individuals with voice disorders.
2. Fluency therapy - Minimum of 2 individuals with fluency disorders.
3. Bed side evaluation of individuals with neuro-communication disorders – Minimum of 2 individuals.
4. Apply speech language stimulation/therapy techniques on 5 children with language disorders/speech sound disorders/ motor speech disorders – minimum 5 sessions of therapy for each child.

Evaluation:

- Internal evaluation shall be based on attendance, clinical diary, log book and learning conference.
- External evaluation: Spot test, OSCE, Record, Viva-voce, case work

Examination scheme:

Components	CRW	C/P/A	CT	A	Viva
Weightage (%)	15	15	15	5	50

CRW- Clinical record writing, C/P/A- Case discussion/presentation/analysis, CT- Class test, A- Attendance, Viva- Internal/External

CLINICALS IN AUDIOLOGY-IV

Course Code: ASL2611

Credit Units: 07

General considerations:

- Exposure is primarily aimed to be linked to the theory courses covered in the semester, however, not just limited to these areas.
- After completion of clinical postings in auditory diagnostics and auditory rehabilitation, the student will Know (concept), know how (ability to apply), show (demonstrate in a clinical diary/log book), and do (perform on patients/ client contacts) the following:

Know:

1. National and international standards related to noise exposure.
2. Recommend appropriate treatment options such as speech reading, AVT, combined approaches etc.

Know-how:

1. To carryout noise survey in Industry and community
2. To carryout mapping of cochlear implant in infants and children using both objective and subjective procedures
3. To trouble shoot cochlear implant

Show:

1. Analysis of objective responses like compound action potential, stapedial reflexes on at least 3 samples
2. Comprehensive hearing conservation program for at least 1 situation

Do:

1. AVT on at least 1 child with hearing impairment
2. Trouble shooting and fine tuning of hearing aids on at least 5 geriatric clients
3. At least one activity for different stages involved in auditory training

Evaluation:

- Internal evaluation shall be based on attendance, clinical diary, log book and learning conference.
- External evaluation: Spot test, OSCE, Record, Viva-voce, case work

Examination scheme:

Components	CRW	C/P/A	CT	A	Viva
Weightage (%)	15	15	15	5	50

CLINICALS IN SPEECH-LANGUAGE PATHOLOGY AND AUDIOLOGY-I

Course Code: ASL2701

Credit Units: 24

CLINICALS IN SPEECH LANGUAGE PATHOLOGY

General: Clinical internship aims to provide clinical exposure and experience in different set ups. The students would not only carry out greater quantum of work, but also work varied clinical populations and in different contexts. Internship will provide greater opportunity for the students to liaise with professionals from allied fields. The intern is expected to demonstrate competence and independence in carrying out the following, among others:

- 1) Diagnosis and management of speech, language, and swallowing disorders across life span.
- 2) Report evaluation findings, counsel and make appropriate referrals.
- 3) Plan and execute intervention and rehabilitation programs for persons with speech language, communication, and swallowing disorders
- 4) Develop and maintain records related to persons with speech-language, communication, and swallowing disorders

CLINICALS IN AUDIOLOGY

PHYSICAL OPTICS

Course Code: OPT2104

Credit Units: 03

Course Objectives: The objective of this course is to equip the students with a thorough knowledge of properties of light. At the end of this course, students will be able to predict the distribution of light under various conditions.

Course Contents:

Module-I: Nature of light

Light as electromagnetic oscillation – wave equation, Sources of light; Electromagnetic Spectrum, Polarized light; Intensity of polarized light; Malus' Law; polarizers and analyzers.

Module-II: Birefringence; ordinary and extraordinary rays.

Relationship between amplitude and intensity, Coherence; interference; constructive interference, destructive interference; fringes; fringe width, Double slits, multiple slits, gratings, Diffraction; diffraction by a circular aperture;

Module-III: Resolution of an instrument

Raleigh's criterion, Scattering; Raleigh's scattering; Tyndall effect, Fluorescence and Phosphorescence

Module-IV: Basics of Lasers

Coherence; population inversion; spontaneous emission; Einstein's theory of lasers.

Module-V: Radiometry

radiometric units; photopic and scotopic luminous efficiency and efficacy curves; photometric units, Inverse square law of photometry; Lambert's law, other units of light measurement; retinal illumination; Trolands

Practicals:

Determination of wavelengths of light from Mercury vapour lamp, Measurement of the resolving power of telescopes;; Demonstration of fluorescence and phosphorescence using crystals and paints.

Examination Scheme:

Components	CT	HA	P	A	EE
Weightage (%)	10	5	10	5	70

(CT-Class Test; HA - Home Assignment-,P-Practical; A- Attendance; EE-End Semester Examination)

GEOMETRICAL OPTICS-I

Course Code: OPT2105

Credit Units: 03

Course Objectives: The objective of this course is to equip the students with a thorough knowledge of mirrors and lenses. At the end of this course, students will be able to predict the basic properties of the images formed on the retina by the optics of the eye.

Course Contents:

Module-I: Nature of light

Light as electromagnetic oscillation; ideas of sinusoidal oscillations; amplitude and phase; speed of light in vacuum and other media; refractive index; Wavefronts – spherical, elliptical and plane; Curvature and vergence; rays; convergence and divergence in terms of rays and vergence; vergence at a distance; Refractive index; its dependence on wavelength

Module-II: Mirrors

Fermat's and Huygen's Principle – Derivation of laws of reflection and refraction (Snell's law) from these principles; Plane mirrors – height of the mirror; rotation of the mirror; Reflection by a spherical mirror – paraxial approximation; sign convention; derivation of vergence equation; Imaging by concave mirror & convex mirror; Reflectivity; transmittivity; Snell's Law; refraction at a plane surface; Glass slab; displacement without deviation; displacement without dispersion.

Module-III: Refraction

Thick prisms; angle of prism; deviation produced by a prism; refractive index of the prism; angular dispersion; dispersive power; Abbe's number, definition of crown and flint glasses; materials of high refractive index; Thin prism – definition; definition of Prism diopter; deviation produced by a thin prism; its dependence on refractive index; Refraction by a spherical surface; sign convention; introduction to spherical aberration using image formed by a spherical surface of a distance object; sag formula; Paraxial approximation; derivation of vergence equation; Imaging by a positive powered surface; Imaging by a negative powered surface.

Module-IV: Effectivity

Vergence at a distance formula; effectivity of a refracting surface; Definition of a lens as a combination of two surfaces; different types of lens shapes; Image formation by a lens by application of vergence at a distance formula; definitions of front and back vertex powers; equivalent power; first and second principal planes/points; primary and secondary focal planes/points; primary and secondary focal lengths; Newton's formula; linear magnification; angular magnification; Nodal Planes.

Module-V: Lenses

Thin lens as a special case of thick lens; review of sign convention; Imaging by a thin convex lens; image properties (real/virtual; erect/inverted; magnified/minified) for various object positions; Imaging by a thin concave lens; image properties (real/virtual; erect/inverted; magnified/minified) for various object positions; Prentice's Rule; System of two thin lenses; review of front and back vertex powers and equivalent power, review of six cardinal points; System of more than two thin lenses; calculation of equivalent power using magnification formula

Practical:

Thick Prism – determination of prism angle and dispersive power; calculation of the refractive index; Thin Prism – measurement of deviation; calculation of the prism diopter; Image formation by spherical mirrors; Convex lens - power determination using lens gauge, power determination using distant object

method; power determination using the vergence formula; Concave lens – in combination with a convex lens – power determination; Construction of a tabletop telescope – all three types of telescopes; Construction of a tabletop microscope.

Examination Scheme:

Components	CT	HA	P	A	EE
Weightage (%)	10	5	10	5	70

(CT-Class Test ; HA - Home Assignment-,P-Practical; A- Attendance; EE-End Semester Examination)

OPTOMETRIC PROCEDURES-I

Course Code: OPT2106

Credit Units: 01

Course Objectives: At the end of the course the students will be equipped with the introduction to certain concepts that would lay the foundation of the program

Course Content:

Module-I: Introduction to Optometry

Introduction to structure of eye.

Torch examination

Module-II: Scope of optometry

History of Optometry

Visit to Hospital / clinics

Introduction to various eye examination procedures

Module-III:

Visual Acuity

Refractive errors

Spectacle lenses and types

Module-IV:

History Taking;

Basic Eye Examination

Examination Scheme:

Components	A	P	HA	V	EE
Weightage (%)	5	20	25	20	30

(CT-Class Test ; V-Viva; P-Practical; A- Attendance; EE-End Semester Examination, HA= assignments)

BASICS IN COMPUTER & PC PACKAGE

Course Code: OPT2107

Credit Units: 02

Course objective: This course aims at preparing the students to handle personal computers, Learn Basics of the current hardware and software being used .the student should be able to complete his optometry and other professional assignment like project work ,thesis presentation etc. he should be well versed in using e-mail, and internet .

Course Contents:

Module-I: Computer Basics

History of computers, Definition of computers, Input Devices, storage devices, types of memory, and units of measurement, range of computers, generations of computers. Characteristics of computers.

Module-II: System

Hardware, Software,, system definition, fundamentals of networking, internet, performing searches and working with search engines ,types of software and its applications

Module-III: Office Application Suite

Word Processor, spread sheet, presentations, other utility tools Fundamentals of Linux /windows operating system, functions, interfaces, basic commands.

Module-IV: Special Applications

Use of database software for clinic records

Use of specialised software for optometric use

Practical:

Various browsers, Search engines, E-mail

Text document with multiple formatting option using specific office package

Spread sheet using a specified office package

Presentation on a specified topic using a specified office package

Examination Scheme:

Components	A	HA	(CT)	VIVA	PRACTICAL
Weightage (%)	20	20	20	20	20

(CT-Class Test; V-Viva; HA - Home Assignment; P-Practical; A- Attendance; EE-End Semester Examination)

GEOMETRICAL OPTICS-II

Course Code: OPT2204

Credit Units: 04

Course Objectives: The objective of this course is to equip the students with a thorough knowledge of mirrors and lenses used in spectacle lenses. At the end of this course, students will be able to predict the basic properties of the images formed on the retina by the optics of the eye.

Course Contents:

Module-I: Cylindrical Lenses

Image formation; relation between cylinder axis and line image orientation; Imaging due to two cylinders in contact with axes parallel; Two cylinders in contact with axes perpendicular; line images and their orientations to the cylinders' powers; interval of Sturm; circle of least confusion (CLC); spherical equivalent; position of CLC; Spherical lens and a cylindrical lens in contact; spherical equivalent; interval of Sturm and CLC; Spherocylindrical lens notations – plus/minus cylinder form, cross cylinder/meridian form; transformations between them; depth of focus; depth of field;

Module-II: Aberrations

Chromatic Aberrations; methods of removing chromatic aberrations; Abbe number; Monochromatic Aberrations – deviation from paraxial approximation; difference between ray aberrations and wavefront aberrations; Third order aberrations – spherical aberrations; coma; astigmatism; distortion and curvature of fields; Ways of minimizing spherical aberrations – pupil size, bending of lens, shape factor; Lens tilt – astigmatism; Higher order aberrations; introduction to Zernike Polynomials

Module-III: Telescopes & Microscopes

Telescopes – Keplerian, Galilean and Newtonian; position of cardinal points, entrance and exit pupils; magnifications; advantages and disadvantages; Microscopes – magnification; tube length.

Module-IV: Gullstrand's Schematic Eye (GSE)

Calculation of the power of the cornea, the lens and the eye; axial length; calculation of the position of the cardinal points; magnification; Purkinje images and their reflectances; Entrance and exit pupils for a 3mm pupil; ocular aberrations – spherical aberrations and coma; chromatic aberrations; Introduction to refractive errors - myopia and hyperopia; corneal curvature; axial length; far point; blur size calculations; corrections; astigmatism; blur size; circle of least confusion; correction; Object closer than at infinity; introduction to accommodation; far point; near point; presbyopia; spectacle and contact Lens corrections - comparison of magnification.

Practical- Demonstration:

Imaging by a cylindrical lens – relationship between cylinder axis and image orientation; Imaging by two cylinders in contact – determination of the position of CLC; verification of CLC using a spherical lens with power equal to the spherical equivalent; orientations and position of the line images and their relation to the cylinders' powers and orientations; Imaging by a spherocylindrical lens – sphere and cylinder in contact – determination of the position of CLC; verification of CLC using a spherical lens with power equal to the spherical equivalent; orientations and position of the line images and their relation to the cylinder's power and orientation

OPTOMETRIC PROCEDURES-II

Course Code: OPT2205

Credit Units: 02

Course Objectives: At the end of the course the students will be equipped with the basics knowledge about certain concepts, which would lay the foundation for their courses in the next semester

Course Content:

Module-I: Objective refraction

Principles of Retinoscopy, instrumentation brief and purpose; Retinoscopy demonstration and practical on model eyes.

Module-II: Examination of the anterior segment

Pupillary reflex test; Anterior segment examination with torch light – Slit lamp examination – demo, Tonometry.

Module-III: Examination of the posterior segment

Fundus demonstration by ophthalmoscopy, direct & indirect

Module-IV: Adjunct tests

Near point of convergence; cover test; Motilities; Visual field testing; Colour vision; IPD; Stereopsis; Contrast visual acuity

Examination Scheme:

Components	A	CT	PL	V	P	EE
Weightage	5	15	20	20	10	30

(CT-Class Test; A- Attendance; PL- Practical Lab Record; V- Viva; P- Performance; EE-End Semester Examination)

CLINICS-I

Course Code: OPT2206

Credit Units: 01

Course Objective: This course aims to give student the basic knowledge of the theory and practical behind the basic clinical procedures. After completion, of course the student should have standard eye examination. Learn to write formal records and understand the preliminary eye testing

Course Content:

The practical will involve rotation in campus clinics, observation in eye hospitals and screening camps.

Unit of Competency:

Methods of ocular Examination-I

The ability to communicate effectively with a diverse group of patients with arrange of optometric conditions and needs.

The ability to use techniques in ocular examination and to understand the implication of findings in terms of subsequent examination techniques

History taking of an Ophthalmic care

Visual acuity testing – Distance, Near

Basic of eye examination

History Taking

Visual Acuity Estimation

Torch light Examination

Pupil Examination

Near point of accommodation

Near point of convergence

Extra ocular Motility and cover/ uncover test

Tear function test

Slit lamp examination – Demo

Retinoscopy procedure on model eyes

IPD

90 % attendance is compulsory in clinics .In case of any miss out the student will have to complete the clinical hours to be allowed for the end term exam

Examination Scheme:

Components	Attd.	Record File	Multiple Choice Questions/ Quiz	Viva	Practical	Total
Weightage	5	15	15	15	50	100

NUTRITION

Course Code: OPT2207

Credit Units: 03

Course Objective: At the end of the course student would have gained the knowledge of the following: Balanced diet. Protein, carbohydrates, vitamins, Minerals, carotenoids and eye, Nutrition and Ocular aging and adverse effects of ocular nutritional supplements.

Course Contents:

Module-I:

Introduction to Nutrition and Food Science, Food Groups and Food Pyramid; Balanced diet for different age groups, recommended dietary Allowances

Module-II:

Assessment of Nutritional Status; Energy – Units, Metabolisms, Energy expenditure, and Energy imbalance; Digestion, absorption and transport of Food

Module-III:

Proteins and eye; Lipids and eye; Carbohydrates and eye; Vitamins and eye; Minerals and trace elements and eye; Carotenoids and eye; Oxidative stress and the eye

Module-IV:

Vitamin A, C and E deficiency; Nutrition and ocular aging; Contraindications, Adverse reactions and ocular nutritional supplements
Ocular complications to nutritional deficiencies

Examination Scheme:

Components	A	HA	CT	P	EE
Weightage	5	5	10	10	70

(CT-Class Test; HA - Home Assignment; P-Practical; A- Attendance; EE-End Semester Examination)

PROJECT

Course code: OPT2232

Credit Units: 03

Course Objectives:

The aim of the project is to provide the students with an opportunity to further their intellectual and personal development in the chosen field by undertaking a significant practical unit of activity.

The basics of Research methodology need to be understood

The project can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

Course Contents:

Module-I:

Introduction to research methods, Variables in research, Reliability and validity in research, Conducting a literature review, Formulation of research problems and writing research questions, Hypothesis, Null and Research Hypothesis, Type I and Type II errors in hypothesis testing

Module-II:

Experimental and non experimental research designs, Sampling methods, Data collection methods- Observation method, Interview method, Questionnaires and schedules Construction

Module-III

Ethical Issues in Research, Principles and Concepts in research ethics – confidentiality and privacy, informed consent

Module-IV:

Writing Research proposals, Development of conceptual framework in research

Module-V:

Basics of statistics in Research

Standard deviation, variance, T test, Regression, correlation

Examination Scheme:

Components	CP	V	A	ME	CT
Weightage	5	10	5	30	50

(CP – Class Performance; V-Viva; A- Attendance; ME- Mid-Term Exam, CT-Class Test)

OCULAR MICROBIOLOGY

Course Code: OPT2301

Credit Units: 02

Course Objectives: The objectives of the course are:

- to prepare the students to gain essential knowledge about the characteristics of bacteria, viruses, fungi and parasites;
- to acquire knowledge of the principles of sterilisation and disinfection in hospital and ophthalmic practice;
- to understand the pathogenesis of the diseases caused by the organisms in the human body with particular reference to the eye infections and
- To understand basic principles of diagnostic ocular Microbiology.

Course Contents:

Module-I:

Introduction to Microbiology; Types of Microorganisms; Physiology of Microorganisms – Nutrition, Enzymes, Metabolism and energy, Microbial Growth

Module-II:

Sterilization and disinfection in the laboratory; Control of Microbial Growth; Microbes versus Humans- The development of Infection, the disease process, pathogenicity and virulence

Module-III:

Ocular Bacteriology - Gram positive, (Staphylococcus aureus, Staphylococcus epidermidis, Streptococcus, propionibacterium, actinomyces, Nocardia) Bacteria including acid fast bacilli (Mycobacterium tuberculosis, Mycobacterium leprae); Ocular Bacteriology - Gram negative Bacteria (pseudomonas, haemophilus, Brucella, Neisseria, Moraxella); Spirochetes (Treponema, Leptospiraceae)

Module-IV:

Virology: Classification of Viruses in Ocular Disease, Rubella, Adenovirus, Oncogenic Viruses (HPV, HBV, EBV, Retroviruses), HIV.; Fungi : Yeasts, Filamentous, Dimorphic; Intracellular parasites - Chlamydia, Protozoa (Toxoplasmosis, Acanthamoeba); Helminths (Toxocariasis, Filariasis, Onchocerciasis, Trematodes)

Practical:

Students will visit the microbiology lab identify various microorganism; Practical demo of various culture media preparations and growth of microorganism on culture medias; Culture sensitivity test

Examination Scheme:

Components	A	HA	CT	P	EE
Weightage	5	5	10	10	70

(CT-Class Test; HA- Home Assignment; P-Practical/ record file ; A- Attendance; EE-End Semester Examination)

APPLIED OPTICS-I (Optometric Optics)

Course Code: OPT2302

Credit Units: 03

Course Objectives: Skills/knowledge to be acquired at the end of this course:

Measurement of lens power, lens centration using conventional techniques

Transposition of various types of lenses

Knowledge to identify different forms of lenses (equi-convex, planoconvex, periscopic, etc.)

Knowledge to select the tool power for grinding process.

Measurement of surface powers using lens measure.

Method of laying off the lens for glazing process.

Ophthalmic prism knowledge – effects, units, base-apex notation, compounding and resolving prisms.

Knowledge of prism and decentration in ophthalmic lenses

Knowledge of different types of materials used to make lenses and its characteristics

Knowledge lens designs – single vision, bifocals, progressive lens

Knowledge on tinted and protective lenses

Knowledge on special lenses like isekonic, spectacle magnifiers.

Knowledge on spectacle frames – manufacture, materials

Course Contents:

Module-I: Revision of Basics

Introduction – Light, Mirror, Reflection, Refraction and Absorption; Prisms – Definition, properties, Refraction through prisms, Thickness difference, Base-apex notation, uses, nomenclature and units, Sign Conventions, Fresnel's prisms, rotary prisms

Module-II:

Lenses – Definition, units, terminology used to describe, form of lenses; Vertex distance and vertex power, Effectivity calculations; Lens shape, size and types i.e. spherical, cylindrical and Sphero-cylindrical; Transpositions – Simple, Toric and Spherical equivalent; Prismatic effect, centration, decentration and Prentice rule, Prismatic effect of Plano-cylinder and Sphero-cylinder lenses

Module-III:

Spherometer & Sag formula, Edge thickness calculations; Magnification in high plus lenses, Minification in high minus lenses; Tilt induced power in spectacles; Aberration in Ophthalmic Lenses

Module-IV:

The characteristics of Ophthalmic lens material properties (Refractive index, Specific gravity, UV Cutoff, Impact resistance-Drop ball test, Abbe value, Center thickness) :Power Specification (Measurement of Lens power) including Lensometry:Types of Ophthalmic Lenses

Module-V:

Spectacle Frame Nomenclature, Lens surfacing: Identification of Optical center of the given Lens: Marking Datum line for spherical and cylindrical lenses: Glazing of spectacle lenses (Fitting)

Practicals: Based on theory lectures

Unit of competency: Lens Identification and Centration.

The ability to interpret different types of lenses, Facial and frame measurements.

The ability to measure the lens power by different methods

Elements of competence:

- A) Lens Identification: Biconvex, biconcave, Meniscus, Plano Convex and plano concave.
- B) Geneva lens measure for surface power calculation
- C) Lensometry and Hand neutralization
- D) Identification of optical centre and datum line marks for spherical lens
- E) Prism Power measurement with Lensometer
- F) Lens Material Identification
- G) Identification of different types of bifocal
- H) IPD measurement (Monocular and binocular)

Examination Scheme:

Components	A	HA	CT	P	EE
Weightage	5	5	10	10	70

CT-Class Test; HA-Home Assignment; P-Practical; A- Attendance; EE-End Semester Examination)

VISUAL OPTICS-I

Course Code: OPT2303

Credit Units: 04

Course Objectives:

To understand the fundamentals of optical components of the eye

Upon completion of the course, the student should be able:

1. To understand the fundamentals of optical components of the eye
2. To gain theoretical knowledge and practical skill on visual acuity measurement, colour vision and history taking

Course Contents:

Module-I: Review of Geometric Optics

Vergence and power, Object space and image space, Sign convention, Cardinal points, Magnification, Aberrations

Module-II: Optics of Ocular Structures

Cornea and aqueous, crystalline lens, Vitreous, Schematic and Reduced Eye

Module-III: Measurement of the optical constants of the eye

Curvature of cornea, Curvature of the lens, Measurement of Axial length, Axes of the eye

Module-IV: Basic Optometric Procedures

History taking in various cases, Visual Acuity, Color Vision, Maddox rod, filters,

Module-V: Refractive anomalies and their causes

Etiology of refractive anomalies, populating distributions of anomalies, Optical component measurements, Growth of the eye in relation to refractive errors

Practicals:

History taking

Visual acuity measurement

Measurement of corneal curvature

Study of Purkinje Images

Effects of lenses

Colour Vision Measurement,

Pinhole

Examination Scheme:

Components	A	HA	CT	P	EE
Weightage	5	5	10	10	70

CT-Class Test; HA - Home Assignment; A- Attendance; P-Practicals, EE-End Semester Examination

CLINICAL OPTOMETRIC PROCEDURES

Course Code: OPT2306

Credit Units: 03

Course Objectives: At the end of the course the students will be skilled in knowing the purpose, set-up and devices required for the test, indications and contraindications of the test, step-by-step procedures, documentation of the findings, and interpretation of the findings of the various clinical optometry procedures.

Course Contents: Revision of skills and enhanced knowledge on skills as discussed in previous courses OP 1 and OP 2

Module-I: Case History

Case History Script

Module-II: Entrance Tests

Visual acuity and its estimation

Colour vision

cover test, Extraocular motility

Hirschberg test,

Near point of accommodation, Near point of convergence

Stereopsis

WFDT

Pupils Examination

Visual field test-Confrontation, Amsler' grid

IPD

Module-III: Ocular Health Assessment

External examination of the eye, Lid Eversion

Tear function test-Schirmer's, TBUT, tear meniscus level, NITBUT (keratometer),

Anterior segment examination with torch light – Slit lamp examination – demo

Photostress test

Corneal Sensitivity

Module-IV: Functional Test

Contrast acuity

Examination Scheme:

Components	A	HA	CT	P	EE
Weightage	5	5	10	10	70

CT-Class Test; HA - Home Assignment, P-Practical; A- Attendance; EE-End Semester Examination)

CLINICS-II

Course Code: OPT2307

Credit Units: 01

Course Objective: This course aims to give student the basic knowledge of the theory and practical behind the basic clinical procedures. After completion, of course the student should have standard eye examination. Learn to write formal records and understand the preliminary eye testing

Unit of Competency:

Methods of ocular Examination Part 2

The ability to communicate effectively with a diverse group of patients with arrange of optometric conditions and needs.

The ability to use techniques in ocular examination and to understand the implication of findings in terms of subsequent examination techniques

Elements of competence:

Module-I: Basic Eye examination and finding the refractive error.

History taking,

Visual acuity estimation

Retinoscopy on model eye.

Retinoscopy on human eye and neutralization.

Module-II: Anterior segment examination

External examination of the eye, Lid Eversion

Schirmer's, TBUT, tear meniscus level, NITBUT (keratometer)

Pupillary reflex test

Slit lamp techniques.

Anterior segment examination with torch light

Slit lamp examination on live eye – demo

Corneal Sensitivity, HVID, Keratometry

Module-III: Visual field examination.

Visual field testing

Confrontation test, Amsler' grid

Module-IV: Miscellaneous test

Photostress test,

Colour vision

Direct Ophthalmoscopy

Examination Scheme:

MEDICAL LAWS AND ETHICS

Course Code: OPT2310

Credit Units: 02

Course Objective: The course not only aims at training students to gain knowledge in the fields related to Legal and ethical considerations are firmly believed to be an integral part of medical practice in planning patient care. Advances in medical sciences, growing sophistication of the modern society's legal framework, increasing awareness of human rights and changing moral principles of the community at large, now result in frequent occurrences of healthcare professionals being caught in dilemmas over aspects arising from daily practice.

Medical ethics has developed into a well based discipline which acts as a "bridge" between theoretical bioethics and the bedside. The goal is "to improve the quality of patient care by identifying, analyzing, and attempting to resolve the ethical problems that arise in practice". Doctors are bound by, not just moral obligations, but also by laws and official regulations that form the legal framework to regulate medical practice. Hence, it is now a universal consensus that legal and ethical considerations are inherent and inseparable parts of good medical practice across the whole spectrum.

Course Contents:

Few of the important and relevant topics that need to focus on are as follows:

1. Medical ethics - Definition - Goal - Scope b
2. Introduction to Code of conduct
3. Basic principles of medical ethics –Confidentiality
4. Malpractice and negligence - Rational and irrational drug therapy
5. Autonomy and informed consent - Right of patients
6. Care of the terminally ill- Euthanasia
7. Organ transplantation
8. Medico legal aspects of medical records –Medico legal case and type- Records and document related to MLC - ownership of medical records - Confidentiality Privilege communication - Release of medical information - Unauthorized disclosure - retention of medical records - other various aspects.
9. Professional Indemnity insurance policy
10. Development of standardized protocol to avoid near miss or sentinel events
11. Obtaining an informed consent.

Examination Scheme:

Components	A	ASG	CT1	CT2	EE
Weightage	5	15	15	15	50

(CT-Class Test; ASG-Assignment; A- Attendance; EE-End Semester Examination)

TERM PAPER

Course Code: OPT2331

Credit Units: 02

Course Objective:

The objective of this course is to judge the understanding as well as application of the knowledge gained by the students. The aim of the term paper is to provide the students with an opportunity to further enhance their knowledge in a sector of their choice by undertaking a significant practical unit of examining and analyzing various aspects of Clinical Optometry at a level commensurate with the learning outcomes of the various courses taken up them in the ongoing semester.

A term paper is primarily a record of intelligent reading in several sources on a particular subject. The students will choose the topic at the beginning of the session in consultation with the faculty assigned. At least one middle level or senior level person of a company from the chosen sector may be interviewed face to face.

Guidelines:

1. The term paper will be related to the contemporary Optometry topic and it will be given by the department.
2. The presentation of the term paper is scheduled to be held before the commencement of Semester examinations.
3. The paper will carry 100 marks that will be marked on the basis of understanding and organization of content based on the literature review. The Bibliography shall form an important part of the paper.

Examination Scheme:

Components	Organization & relevance of content	Literature Review	Bibliography	Total
Weightage	40	40	20	100

PROJECT

Course Code: OPT2332

Credit Units: 02

Course Objectives:

The objective of this module is to help the students understand the basic principles of research and methods applied to draw inferences from the research findings.

Course Contents:

Module-I and II: Research Methodology

1. Introduction to research methods
2. Identifying research problem
3. Ethical issues in research
4. Research design
5. Types of Data
6. Research tools and Data collection methods
7. Sampling methods
8. Developing a research proposal

Module-III and IV: Biostatistics

1. Basics of Biostatistics
 - 1.1 Introduction of Biostatistics
 - 1.2 Measures of Morality
 - 1.3 Sampling
 - 1.4 Statistical significance
 - 1.5 Correlation
 - 1.6 Sample size determination.
 - 1.7 Statistics –Collection of Data - presentation including classification and diagrammatic representation –frequency distribution. Measures of central tendency; measures of dispersion.
 - 1.8 Theoretical distributions.
 - 1.8.1 Binomial
 - 1.8.2 Normal
 - 1.8.3 Sampling –necessity of methods and techniques.
 - 1.8.4 Chi. Square test (2 x 2)
2. Hospital Statistics
3. Use of computerized software for statistics

Examination Scheme:

Components	A	ASG	CT1	CT2	EE
Weightage	5	15	15	15	50

(CT-Class Test; ASG-Assignment; A- Attendance; EE-End Semester Examination)

WORKSHOP

Course Code: OPT2333

Credit Units: 01

Course Objective:

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two ways. The trainer has to make sure that the aspects covered are practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

Major Themes for Workshop:

The workshop may be conducted on any of the major themes

The department may choose any recent and relevant topic of study.

Guidelines for Workshop:

The procedure for earning credits from workshop consists of the following steps:

Relevant study material and references will be provided by the department in advance.

The participants are expected to explore the topic in advance and take active part in the discussions held

Attending and Participating in all activities of the workshop

Group Activities have to be undertaken by students as guided by the department.

Evaluation of workshop activities would be done through test and quiz at the end of the workshop.

Submitting a write up of atleast 500 words about the learning outcome from the workshop.

Methodology:

The methodology followed at the workshop could be based on any one or more of the following methods:

Case Study

Hands on training

Simulation

Group Activity

Role Play

Quiz

Evaluation Scheme:

Attendance	Active Participation	Multiple Choice Questions/ Quiz	Solving the case/ Assignment/ Write up	Total
10	30	30	30	100

APPLIED OPTICS-II (Dispensing optics)

Course Code: OPT2401

Credit Units: 04

Course Objectives: Skills/knowledge to be acquired at the end of this course:

Measurement of lens power, lens centration using conventional techniques

Ophthalmic prism knowledge – effects, units, base-apex notation, compounding and resolving prisms.

Method of laying off the lens for glazing process.

Knowledge of prism and decentration in ophthalmic lenses

Knowledge of different types of materials used to make lenses and its characteristics

Knowledge lens designs – Bifocals and Progressive lens

Knowledge on tinted and protective lenses

Knowledge on special lenses like isekonic, spectacle magnifiers.

Knowledge on spectacle frames – manufacture, materials

Course Contents:

Module-I

The characteristics of lens material properties (Refractive index, specific gravity, UV cut off, impact resistance – include drop ball test, abbe value, Center thickness); Measurement of lens power; Quality control. Lens enhancements (Scratch resistant coatings – spin/dip, Anti-reflection coating, UV coating, Hydrophobic coating, anti-static coating)

Module-II

Lens types single vision; Lens types bifocal / multifocal; Lens notation; Lens power and thick lenses; Effectivity and high power lenses; Aberrations and lens design; Lens thickness.

Module-III

Ophthalmic prism; Absorptive lenses and lens coatings; Frames types and materials; Frame standard alignment and repairs done; Prescribing ophthalmic lenses; Facial Measurements; Frame Adjustment; Spectacle Delivery - on eye verification

Module-IV

Progressive lenses history and development; Prescribing PALs; Customized PAL designs; Dispensing PALs; Delivery of PALs; Troubleshooting PALs

Module-V

Pediatric Dispensing; Low Vision Aids; Lens enhancements (Scratch resistant coatings – spin/dip, Anti-reflection coating, UV coating, Hydrophobic coating, anti-static coating)

Practical to be conducted along with theory lectures

Lab visit will be undertaken to demonstrate different lab procedures.

Glazing and edging Hands on; A collection of different lens types and frames types should be done by students; Lens verification; Project report : lens and spectacle frames available in Indian market

VISUAL OPTICS-II

Course Code: OPT2402

Credit Units: 03

Course Objectives: To acquire a comprehensive theoretical understanding to the Optometric diagnostic procedures and the refractive conditions of the eye.

Course Outcome: Upon completion of the course, the student should be able:

1. To understand the fundamentals of optical components of the eye
2. To gain theoretical knowledge and practical skill on visual acuity measurement, objective and subjective clinical refraction

Course Contents:

Module-I: Refractive conditions

Myopia
Hyperopia
Astigmatism
Anisometropia and Anisekonion
Presbyopia
Aphakia and Pseudophakia
Correction and Management of Amblyopia

Module-II: Accommodation

Far and near point of accommodation
Range and amplitude of accommodation,
Anomalies of accommodation
Relationship between accommodation and convergence; A/c ratio

Module-III: Objective Refraction

Retinoscopy – principles and methods
Retinoscopy – speed of reflex and optimum condition
Retinoscopy – dynamic/static
Review of objective refractive methods

Module-IV: Subjective Refraction

Subjective refractive methods
Cross cylinder method for astigmatism, Astigmatic Fan test
Duochrome, Transposition of lenses
Spherical equivalent
Prescribing prisms
Binocular balancing & refraction

Module-V: Effective power of spectacles; vertex distance effects

Ocular refraction versus spectacle refraction
Ocular accommodation versus spectacle accommodation
Spectacle magnification and relative spectacle magnification
Retinal image blur; depth of focus and depth of field

Tutorials: Case discussion on difficult situations on Retinoscopy

Practicals

I- History taking

II - Visual acuity measurement

III - Objective Refraction

Students are to neutralize 10 cases (2 low myope, 2 low hyperope, 2 high myope, 2 Aphake, 2 astigmats with or without spherical errors). An initial practice session would be given and the students are to exhibit their competency in neutralizing to the nearest power. In case of gross errors the lab would be repeated. The students are to submit the report of their cases duly signed by their supervisor

IV - Subjective refraction

Students should perform fogging technique, Duochrome, cyclodamia, JCC, Binocular balancing and binocular refraction to determine the end point of refraction.

V - Measurement of accommodation

Students need to measure the far point, near point, range and amplitude of accommodation using various methods for 10 cases. Also needs to measure the negative and positive relative accommodation compare the values between the normals.

VI - Measurement of convergence

Students need to measure the near point of convergence, AC/A ratio for 10 patients

Examination Scheme:

Components	A	HA	CT	P	EE
Weightage	5	5	10	10	70

(CT-Class Test; HA - Home Assignment; A- Attendance; P-Practicals, EE-End Semester Examination)

OCULAR DISEASES-II

Course Code: OPT2403

Credit Units: 04

Course Objective: At the end of the course the students will be knowledgeable in the following aspects of ocular diseases: knowledge on the etiology, epidemiology, symptoms, signs, course sequelae of ocular disease, diagnostic approach, and Management of the ocular diseases.

Course Contents:

Module-I: Retina and Vitreous:

Applied Anatomy; Congenital and Developmental Disorders (Optic Disc: Coloboma, Drusen, Hypoplasia, Medullated nerve fibers; Persistent Hyaloid Artery) ; Inflammatory disorders (Retinitis: Acute purulent , Bacterial, Virus, mycotic); Retinal Vasculitis (Eales's); Retinal Artery Occlusion (Central retinal Artery occlusion); Retinal Vein occlusion (Ischaemic, Non Ischaemic , Branch retinal vein occlusion); Retinal degenerations : Retinitis Pigmentosa, Lattice degenerations; Macular disorders: Solar retinopathy, central serous retinopathy, cystoid macular oedema, Age related macular degeneration; Retinal Detachment: Rhegmatogenous, Tractional, Exudative); Retinoblastoma; LASERS in Ophthalmology; Fluorescein angiography; OCT

Module-II: Ocular Injuries:

Terminology: Closed globe injury (contusion, lamellar laceration) Open globe injury (rupture, laceration, penetrating injury, perforating injury); Mechanical injuries (Extraocular foreign body, blunt trauma, perforating injury, sympathetic ophthalmitis); Non Mechanical Injuries (Chemical injuries, Thermal, Electrical, Radiational); Clinical approach towards ocular injury patients

Module-III: Uveal Tract & Sclera

Applied Anatomy; Classification of uveitis; Etiology; Pathology ; Anterior Uveitis; Posterior Uveitis; Purulent Uveitis; Endophthalmitis; Panophthalmitis; Pars Planitis; Tumors of uveal tract(Melanoma); Episcleritis and scleritis; Clinical examination of Uveitis and Scleritis

Module-IV: Clinical Neuro-ophthalmology

Anatomy of visual pathway; Lesions of the visual pathway; Pupillary reflexes and abnormalities; Amaurotic light reflex, Efferent pathway defect, Wernicke's hemianopic pupil, Marcus gunn pupil. Argyll Robertson pupil, Adie's tonic pupil); Optic neuritis, Anterior Ischemic optic neuropathy, Pappilloedema, optic atrophy; Cortical blindness; Malingering; Nystagmus; Clinical examination

Module-V: Glaucoma

Applied anatomy and physiology of anterior segment; Clinical Examination; Definitions and classification of glaucoma; Pathogenesis of glaucomatous ocular damage; Congenital glaucomas; Primary open angle glaucoma; Ocular hypertension; Normal Tension Glaucoma; Primary angle closure glaucoma (Primary angle closure suspect, Intermittent glaucoma, acute congestive, chronic angle closure); Secondary Glaucomas; Management : common medications, laser intervention and surgical techniques; Glaucoma investigations and procedures; Confrontation Amsler grid; Tonometry-Appplanation Schiotz; Visual fields-; GTX, HRT; Provocative test; OCT

Practicals:

Students will visit OPD clinic and record pathologies seen during the posting [under supervision of faculty]; Record file of ocular pathologies to be prepared [Faculty to decide]; Atleast two Case presentations of pathologies seen during clinical posting

Examination Scheme:

Components	A	HA	CT	P	EE
Weightage	5	5	10	10	70

CT-Class Test; HA- Home Assignment; P-Practical; A- Attendance; EE-End Semester Examination)

CLINICS-III

Course Code: OPT2406

Credit Units: 03

Course Contents:

Module-I:

Unit of competency: Refraction

An understanding of methods of assessing vision, Refraction in all Patients

The ability to relate facial anatomy to the fitting of optical appliances.

Elements of competence:

1. Recording VA
2. Practice of Streak Retinoscopy and dynamic retinoscopy.
3. Subjective refraction –
4. Initial sphere check.: fogging
5. Cylinder axis and power refinement: clockdial, fan, JCC,
6. Second sphere check, Duochrome or bichrome test,
7. Binocular balance :prism balance, TIB,
8. cyclodeimia,
9. Slit refraction.
10. Presbyopic add determination
11. Writing prescription
12. Overview of the use of cycloplegic drugs.

Module-II

Unit of competency: Applied Optics:

The ability to dispensing appropriate appliances

The ability to interpret and dispense a prescription using appropriate lenses and facial frame measurements.

Elements of competence:

1. Frame types and nomenclature of frames. Know about special frame features and handling the frames.
2. Relationship between frame ,lenses and face
3. IPD measurement (with Scale and IPD ruler , Pupilometer)
4. Recommends and dispenses special optical appliances where appropriate(e.g. VDU users, Sports, safety, pediatric frames, recumbent, reversible, flips, trigeminal spectacles etc.)
5. Identification of tints & Coating on lens surface and its application ,associated advantage and disadvantages.
6. Taking and recording children's facial and frame measurement
7. Awareness of the dermatological effects of the materials to be able to advise patient accordingly.
8. Identifies possible errors in prescription and follows the appropriate course of action.
9. Identification of incomplete, inaccurate and ambiguous prescription.
10. when to modify and when to refer a new prescription

Module-III

Unit of competency: Progressive addition lens

Brief overview of PAL'S and clinical decision making.

An understanding of refractive prescribing and management decisions

Elements of competence:

1. Know Basic construction of progressive addition lens.
2. Frame selection for Progressive

3. Familiarity of different types of progressive lens design and clinical relevance .advantages and disadvantages of different types of lens.
4. Choosing the right type of progressive lens
5. Progressive lens fitting measurement
6. Progressive lens verification.
7. Progressive dispensing
8. Trouble shooting of progressive.
- 9.Familiarity of different brands of PAL's.

Module-IV:

Unit of competency: Comprehensive eye care:

The ability to identify and manage ocular abnormalities

The ability to identify sight threatening eye diseases

Recognizes common ocular abnormalities referred when appropriate

Recognizes adverse ocular reactions to medication

Assess symptoms and signs of neurological significance

Elements of competences:

- 1.Understands the risk factors for developing common ocular conditions including: Glaucoma, cataract, diabetic retinopathy and ARMD .
2. Recognizes, using appropriate technique/s, all of the following: Cataract, Glaucoma or glaucoma suspects ,Anterior eye disorders e.g. blepharitis, dry eye, meibomian gland dysfunction, lid lesions AMD and macular abnormalities and Manages appropriately.
3. Manages patients presenting with cataract.
4. Evaluates glaucoma risk factors, to detect glaucoma and refer accordingly.
5. Recognize the patients presenting with macular degeneration .
6. Recognizes, evaluates and manages diabetic eye disease and refers accordingly.
- 7.Evaluates and manages patients presenting with symptoms of retinal detachment.
8. Recognizes ocular manifestations of systemic disease
9. Assesses symptoms and signs of neurological significance
10. Recognizes adverse ocular reactions to medication.

Module-V

Unit of competency: Ocular diseases 1.

The ability to identify and manage ocular abnormalities

The ability to identify sight threatening eye diseases

Recognizes common ocular abnormalities referred when appropriate

Recognizes adverse ocular reactions to medication

Elements of competences:

1. Interprets and investigates the presenting symptoms and sign of the patient.
2. Identifies external pathology and offers appropriate advice to patients not requiring referral.
 - External eye and ocular surfaces : Lids, lashes, lumps/bumps and red eye
 - Gives the correct advice /treatment and review period
 - Aware of pharmaceutical agents available (legal status, indications, contraindications and side effects and uses appropriate sources of medicines information)
 - Explains clearly to the patient and checks their understanding
3. Recognizes common ocular abnormalities
4. Understanding of symptoms associated with internal eye disease.
5. Manage patient presenting with Red eyes.

Examination Scheme:

Components	Attd.	Record File	Multiple Choice Questions/ Quiz	Viva	Practical	Total
Weightage	5	15	15	15	50	100

OPHTHALMIC ELECTRODIAGNOSTIC PROCEDURES

Course Code: OPT2408

Credit Units: 03

Course Objective: The objective of the course is to familiarize the student with the Electrophysiology Laboratory which performs several clinical tests, including the electroretinogram (ERG), electro-oculogram (EOG), visual evoked response (VER), color vision testing (CVT) and dark adaptometry (DA)

Course Contents:

Module-I: Electrophysiological investigations

Electro-oculogram (EOG) Measurement of retinal function with standardised eye movements.

Electroretinogram (ERG)

Macular or Focal Electroretinogram

Pattern Electroretinogram (PERG)

Flash Visually Evoked Cortical Potential (Flash VEP)

Pattern Appearance Visually Evoked Cortical Potential

Other non-standard procedures for recording VEP and ERG e. g., measurement of interocular beat frequencies, flicker and sweep VEPs, multi-focal ERG, fast oscillation.

Electromyogram (EMG)

Electro-nystagmography. For measurement of nystagmus and eye movements.

Module-II: Indications for Patient Referral

Tests Available

Patterns of Referral

Indications for Specific Tests

Standardised Electroretinogram, Electro-Oculogram and Visually, Evoked Potential

Evaluation Scheme:

Attendance	Record file	Multiple Choice Questions/ Quiz	Viva	Practical skills /performance	Total
5	15	15	15	50	100

PERIMETRY

Course Code: OPT2409

Credit Units: 03

Course Objective: The aim of this course is to acquire skills in the visual field examination of the eye. This course deals almost exclusively with manual and automated perimetry. Emphasis is on technical aspects of administering the automated test with skill; as well as on skillful interpretation of the result based on an understanding of the text.

Course Contents:

Module-I:

The field of vision
Normal field of vision
Retinal nerve fiber paths and the field of vision
Characteristics of visual field loss in glaucoma

Module-II:

Perimetric Parameters
Manual vs. Automated Perimetry
Advantages of Automated Perimetry
Static vs. Dynamic Perimetry
Target size and luminance
Testing Algorithms

Module-III:

Monitoring Fixation
Monocular vs. Binocular testing
Alternative perimetric targets
Interpretation of SAP
Patient and Test details
Displays of sensitivities across the visual field

Module-IV:

Summary measures of visual field performance
Establishing reliability of results
Identifying Glaucomatous VF Loss on SAP
Common perimetric errors

Evaluation Scheme:

Attendance	Record file	Multiple Choice Questions/ Quiz	Viva	Practical skills /performance	Total
5	15	15	15	50	100

TERM PAPER

Course Code: OPT2431

Credit Units: 02

Course Objective:

The objective of this course is to judge the understanding as well as application of the knowledge gained by the students. The aim of the term paper is to provide the students with an opportunity to further enhance their knowledge in a sector of their choice by undertaking a significant practical unit of examining and analyzing various aspects of Clinical Optometry at a level commensurate with the learning outcomes of the various courses taken up them in the ongoing semester.

A term paper is primarily a record of intelligent reading in several sources on a particular subject. The students will choose the topic at the beginning of the session in consultation with the faculty assigned. At least one middle level or senior level person of a company from the chosen sector may be interviewed face to face.

Guidelines:

1. The term paper will be related to the contemporary Optometry topic and it will be given by the department.
2. The presentation of the term paper is scheduled to be held before the commencement of Semester examinations.
3. The paper will carry 100 marks that will be marked on the basis of understanding and organization of content based on the literature review. The Bibliography shall form an important part of the paper.

Evaluation Scheme:

Organisation and relevance of content	Literature Review	Bibliography	Total
40	40	20	100

PROJECT

Course code: OPT2432

Credit Units: 03

Course Objectives:

The objective of this module is to help the students understand the basic principles of research and methods applied to draw inferences from the research findings.

Course Contents:

Module-I and II: Research Methodology

1. Introduction to research methods
2. Identifying research problem
3. Ethical issues in research
4. Research design
5. Types of Data
6. Research tools and Data collection methods
7. Sampling methods
8. Developing a research proposal

Module-III and IV: Biostatistics

1. Basics of Biostatistics
 - 1.1 Introduction of Biostatistics
 - 1.2 Measures of Morality
 - 1.3 Sampling
 - 1.4 Statistical significance
 - 1.5 Correlation
 - 1.6 Sample size determination.
 - 1.7 Statistics –Collection of Data - presentation including classification and diagrammatic representation –frequency distribution. Measures of central tendency; measures of dispersion.
 - 1.8 Theoretical distributions.
 - 1.8.1 Binomial
 - 1.8.2 Normal
 - 1.8.3 Sampling –necessity of methods and techniques.
 - 1.8.4 Chi. Square test (2 x 2)
2. Hospital Statistics
3. Use of computerized software for statistics

Evaluation Scheme:

Attendance	Assignment	CT1	CT 2	End-Term Evaluation	Total
5	15	15	15	50	100

WORKSHOP

Course Code: OPT2433

Credit Units: 01

Course Objective:

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two ways. The department has to make sure that the aspects covered are practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

Major Themes for Workshop:

The workshop may be conducted on any of the various major themes: These themes are merely indicative and the department may choose any recent and relevant topic of study.

Guidelines for Workshop:

The procedure for earning credits from workshop consists of the following steps:

Relevant study material and references will be provided by the department in advance.

The participants are expected to explore the topic in advance and take active part in the discussions held

Attending and Participating in all activities of the workshop

Group Activities have to be undertaken by students as guided by the department .

Evaluation of workshop activities would be done through test and quiz at the end of the workshop.

Submitting a write up of atleast 500 words about the learning outcome from the workshop.

Methodology:

The methodology followed at the workshop could be based on any one or more of the following methods:

Case Study

Hands on training

Simulation

Group Activity

Role Play

Quiz

Evaluation Scheme:

Attendance	Active Participation	Multiple Choice Questions/ Quiz	Solving the case/ Assignment/ Write up	Total
10	30	30	30	100

CONTACT LENS-I

Course Code: OPT2501

Credit Units -03

Course Objectives: Upon completion of the course, the student should be able to:

- Understand the basics of contact lenses
- List the important properties of contact lenses
- Finalise the CL design for various kinds patients
- Recognize various types of fitting
- Explain all the procedures to patient
- Identify and manage the adverse effects of contact lens

Course Contents:

Module-I

Anatomy and physiology of anterior segment, History of contact lenses, Optics of contact lenses, comparison spectacles, Contact lens designs, Corneal oxygenation in contact lens wear

Module-II

Contact lens fabrication, Manufacturing of Rigid and soft Contact Lenses –Various methods
Pre fitting examination-steps, significance, recording of results, Instruments used for examination, Special investigation in pre-fitting examinations., Keratometry and corneal topography, Slit lamp examination, Discussion with patient, choice of lens type

Module-III

Examining the Prospective Contact Lens Patient, Selecting Lens Type, Wear Mode and Replacement Rate, Fitting Spherical GP Contact Lenses, Fitting Spherical Soft Contact Lenses, Correcting Astigmatism with Contact Lenses

Module-IV

Calculation and finalizing of contact lens parameters, Ordering contact lenses – writing a prescription to the laboratory, Checking and verifying contact lenses from laboratory, Modifications possible with rigid lenses

Practical:

History Taking role plays, Pre fitting evaluation, RGP CL insertion & Removal, Fitting assessment
Over refraction, Follow up examination, Patient instructions, Contact Lenses Do's and don'ts, Instructions for care and maintenance

Practical:

History Taking role plays; Pre fitting evaluation; RGP CL insertion & Removal; Fitting assessment; Over refraction; Follow up examination; Patient instructions; Contact Lenses Do's and don'ts ; Instructions for care and maintenance.

LOW VISION CARE

Course Code: OPT2502

Credit Units: 03

Course Objectives: At the end of the course, the student will be knowledgeable in the following:

- Definition and epidemiology of Low Vision
- Clinical examination of Low vision subjects
- Optical, Non-Optical, Electronic, and Assistive devices.
- Training for Low Vision subjects with Low vision devices
- Referrals and follow-up

Course Contents:

Module-I

Definitions & classification of Low vision; Epidemiology of low vision [magnitude]

Module-II

Pre-clinical evaluation of low vision patients, functional needs assessment; Types of low vision aids – optical aids, non-optical aids & electronic devices ,Assistive technologies devices; Optics of low vision aids

Module-III

Clinical evaluation – assessment of visual acuity, visual field, selection of low vision aids, instruction & training; Paediatric Low Vision care

Module-IV

Low vision aids – dispensing & prescribing aspects; Visual rehabilitation & counselling prognostic & psychological factors; psycho-social impact of low vision; Legal aspects of Low vision in India; Eye Disorders & Low vision; Case Analysis

Practical:

Attending in low vision care clinic and history taking; Determining the type of telescope and its magnification (Direct comparison method & calculated method); Determining the change in field of view with different magnification and different eye to lens distances with telescopes and magnifiers; Inducing visual impairment and prescribing magnification; Determining reading speed with different types of low vision aids with same magnification; Evaluation of low vision patient; Prescribing optical devices [How to use]; Prescribing of non-optical devices [how to use them]; Visit to blind school and rehabilitation centers; Establishing a low vision in clinic; Report on disability networks in India; Visit to clinics and prepare report on low vision patients

VISUAL REHABILITATION:

Module-I: Rehabilitation

History of Rehabilitation Optometry; Definition and Principles of Rehabilitation; Psychology in Optometric Rehabilitation; Pain and Suffering; Adaptation and Compensatory Adjustment; Human Motivation; Psychological Disturbance and Psychotherapy; Symptomatology of Visual Disorders

Module-II: Introduction to Optometry rehabilitation Practice

A Basis for Practice; Roles in Daily Life and Professional Practice

Module-III: Clinical Presentation and Case

BINOCULAR VISION-I

Course Code: OPT2504

Credit Units: 03

Course Objectives: On successful completion of this module, a student will be expected to be able to:-

- Demonstrate an in-depth knowledge of the gross anatomy and physiology relating to the extraocular muscles.
- Provide a detailed explanation of, and differentiate between the aetiology, investigation and management of binocular vision anomalies.
- Adapt skills and interpret clinical results following investigation of binocular vision anomalies appropriately and safely.

Course Contents:

Module-I

Binocular Vision and Space perception; Relative subjective visual direction; Retino motor value; Grades of BSV; SMP and Cyclopean Eye; correspondence, Fusion, Diplopia, Retinal rivalry; Horopter; Physiological Diplopia and Suppression; Stereopsis, Panum's area, BSV

Module-II

Revision: Anatomy of Extra Ocular Muscles; Physiology of Ocular movements; Center of rotation, Axes of Fick; Action of individual muscles

Module-III

Laws of ocular motility; Donder's and Listing's law; Sherrington's law; Hering's law; Uniocular& Binocular movements - fixation, saccadic & pursuits; Version & Vergence; Fixation & field of fixation

Module-IV

Near Vision Complex; Accommodation: Definition and mechanism (process), Methods of measurement, Stimulus and innervation, Types of accommodation, Anomalies of accommodation – aetiology and management; Convergence: Definition and mechanism, Methods of measurement, Types and components of convergence - Tonic, accommodative, fusional, proximal, Anomalies of Convergence – aetiology and management.

Module-V

Sensory adaptations: Confusion, Suppression, Investigations, Management, Blind spot syndrome; Abnormal Retinal Correspondence, Investigation and management; Eccentric Fixation, Investigation and management; Amblyopia: Classification and management

Practicals:

Binocular vision assessment, Stereopsis evaluation, Measurement of NPC and NPA, Measurement of AC/A Ratio, Measurement of convergence, Convergence insufficiency and management of cases, ARC-case discussion, Eccentric fixation –Diagnosis and discussion, Amblyopia management –case presentation

Examination Scheme:

Components	A	HA	CT	P	EE
Weightage	5	5	10	10	70

(CT-Class Test; HA- Home Assignment; P-Practical; A- Attendance; EE-End Semester Examination)

DISEASE OF EYE AND CLINICAL MEDICINE

Course Code: OPT2505

Credit Units: 02

Course Objectives: At the end of the course, students should get acquainted with the following:

Common Systemic conditions: Definition, diagnostic approach, complications and management options

Ocular findings of the systemic conditions

First Aid knowledge

Course Contents:

Module-I

Hypertension – Definition, classification, Epidemiology, clinical examination, complications, and management. Hypertensive retinopathy; Diabetes Mellitus – Classification, pathophysiology, clinical presentations, diagnosis, and management, Complications, Diabetic Retinopathy; Thyroid Disease Physiology, testing for thyroid disease, Hyperthyroidism, Hypothyroidism, Thyroiditis, Thyroid tumors, Grave's Ophthalmopathy; Acquired Heart Disease : Ischemic Heart Disease, Congestive heart failure, Disorders of cardiac rhythm, Ophthalmic considerations

Module-II

Cancer; Connective Tissue Disease; Rheumatic arthritis; Systemic lupus erythematosus; Sjogren syndrome Behcet's syndrome; Tuberculosis – Aetiology, pathology, clinical features, pulmonary tuberculosis, diagnosis, complications, treatment tuberculosis and the eye.

Module-III

Herpes virus (HERPES AND EYE); Hepatitis (Hepatitis A, B, C); Acquired Immunodeficiency Syndrome

Module-IV

Anaemia (Diagnosis, clinical evaluation, consequences, Sickle cell disease, treatment, Ophthalmologic considerations); Common Tropical Medical Ailments; Nutritional and Metabolic disorders: Myasthenia Gravis, Marfan's Syndrome

Practical: Visit to Hospital Medicine O.P.D / Ward, Neurology

Examination Scheme:

Components	A	HA	CT	P	EE
Weightage	5	5	10	10	70

(CT-Class Test; HA- Home Assignment; P-Practical; A- Attendance; EE-End Semester Examination)

CLINICS-IV

Course Code: OPT2507

Credit Units: 03

Module-I

Unit Of competency: Contact lens -1.

The ability to select and fit the most appropriate lens for the planned use

The ability to Identify and manage after care

Elements of competence:

1. Recognize Contact lens types and material.
2. Pre fitting evaluation
3. Demonstrates an understanding of the range of rigid lens material and designs available
4. Appropriate choice of rigid lens parameter.
5. Fitting philosophies of rigid lens and fitting assessment.
6. Demonstrates an understanding of the type of astigmatism which require correction.
7. RGP lens adaptation
8. RGP lens wear and care including use of RGP lens care product.
9. Demonstrates an understanding of the range of soft lens materials and design available.
10. appropriate choices of soft lens , Fitting philosophies and fitting assessment.
11. Write appropriate order form for RGP and soft lenses
12. Instruct patient the technique of RGP, soft lens insertion, removal and other relevant handling instructions.

Module-II

Unit Of competency: Assessment of Binocular vision

The ability to assess the patient with anomalies of binocular vision

The ability to assess binocular status using objective and subjective means

Elements of competence:

1. Understand the different objective test available to assess deviation. E.g. cover & motility test
2. Different subjective test available to assess subjective deviation. E.g. fixation disparity
3. Identification of phoria and tropia
4. Measurement of fusional vergence range dist and near
5. Measurement of accommodative facility
6. Measurement of stereopsis
7. AC/A ratio (heterophoria and gradient method)
8. Synoptophore:
Measurement of SMP, FUSION And stereopsis
Angle of anomaly
ARC

Module-III:

Unit of competency: Low vision and rehabilitation:

The ability to assess a patient with low vision

The ability to advice, refer and provide after care to low vision patients

The ability to refer low vision Patients to other agencies where appropriate

Elements of competence:

1. Distance and near vision chart used for low vision
2. Assessment of visual function, including the use of Log MAR and other specialist charts, effects of illumination, contrast and glare.
3. Assessment of visual field of patient with reduced vision.

4. VA criteria for visual impairment, Low vision and visually handicap
5. Indication of binocular low vision aids
6. Knowledge of Optical and non optical devices
7. Identification of patients visual needs
8. Sign and symptoms of ocular and systemic pathologies.
9. Assessment of magnification for distance and near vision
10. Selection of Optical aids for distance and near.
11. Advises on the use of, and dispenses simple low vision aids :
Identifies which patients would benefit from low vision aids and advice ,
Understands the principles of magnification,
Field of view and working distance in relation to different aids Provides advice on the advantages and disadvantages of different types of simple low vision aids ,
Understands the mechanisms of prescribing magnification including acuity reserve ,
Gives correct instruction to a patient in the use of various aids, to include: Which specs to use with aid,
Lighting required, Appropriate working distance
12. Training in use of aids
13. Low vision rehabilitation

Module-IV:

Unit of competency: Community Visit.

The ability to screen refractive error and knowledge of eye health disorders in community

The ability to impart information in a manner which is appropriate to the recipients.

Elements of competence:

1. School screening
2. Industrial Eye screening
3. Community eye services.

Evaluation Scheme:

Attendance	Record file	Written test	Viva	Practical	Total
5	15	30	30	20	100

SUMMER INTERSHIP EVALUATION-I

Course Code: OPT2535

Credit Units: 02

Objective:

The basic objective of a Summer Internship is to refine the practical exposure. This summer training will provide an opportunity to the students to apply their theoretical understanding while working on the concerned project in the hospital / corporates. Thus this summer internship programme is an attempt to bridge the gap between theory and practice. This will also enhance the students' intellectual ability and attributes related to data handling, decision making, report writing, oral presentation and imbibing an interdisciplinary approach.

General Guidelines:

Every student of Boptom shall be required to undergo a practical training in a organization approved by the Institute for minimum of four weeks, normally in the Summer Vacation, after the end of the fourth semester examinations. The candidates shall be required to undergo training in the various areas of the organization concerned. The organization may assign a specific tasks to the candidate, which will be completed by him/her during the period of training. The work done by the candidate during the training period shall be submitted in form of a training report.

The last date for the receipt of training report AND CASE SHEETS in the department shall be one month after the date of completion of training, i.e. at the beginning of the fifth semester.

Evaluation Scheme:

Attendance	Overall Performance: grading by centre	Viva	Attendance	LOG book Report	Total
5	30	30	10	30	100

OCULAR PROSTHESIS

Course Code: OPT2508

Credit Units: 03

Course Objective:

This course aims at making the students equipped with the basics of Prosthesis and the various conditions where they are applied.

Course Contents:

- Basics on Prosthesis,
- Types of Prosthesis
- Indications,
- Techniques employed,
- Complications,
- Advancements and Results

Evaluation Scheme:

Attendance	Record file	Multiple Choice Questions/ Quiz	Viva	Practical skills /performance	Total
5	15	15	15	50	100

Reference Book

REFRACTIVE SURGERY

Course Code: OPT2509

Credit Units: 03

Course Objectives:

- Provide patients with unbiased, up-to-date advice concerning refractive surgery techniques
- Recognise the most appropriate tests for investigating suitable candidates pre-operatively and assessing visual performance post-operatively
- Recognise post-operative complications
- Appreciate the most appropriate management strategy for a given refractive surgery patient, communicating effectively with the patient and their surgeon
- Interpret and critically review research pertaining to refractive surgery.

Course Contents:

Module-I: Background – History of Refractive Surgery, Radial Keratotomy, Excimer Laser Photorefractive Keratectomy, Automated Lamellar Keratoplasty, Laser In Situ Keratoplasty, newer advances

Module-II: Refractive surgery Measurement – Peripheral Keratometry, Photokeratoscopy, Videokeratoscopy, Evaluation of Videokeratoscopy, Applications of Videokeratoscopy, Corneal topography reports, Corneal tomography reports.

Module-III: Principles of Microkeratomes- Types of Microkeratomes, Achieving the Optimal Flap, Risks & Complications, Flap Creation Using Femtosecond Laser, Advantages & Disadvantages of Femtosecond Laser Customized Ablation Procedures - Why Use Customized Ablation?, Technology Used for Customised Ablation, Customized Ablation Methods, Guidelines

Module-IV: Complications of Refractive Procedures- Microkeratome related complication, Laser Ablation related complications, Postoperative Complications, Management.

Module-V: Introduction to Phakic IOLs-and Types of Corneal Rings- Preoperative Evaluation & Inclusion Criteria, Surgical Procedures, Overview of Refractive Lens Exchange (RLE), Deciding to perform RLE, Retinal Risks of RLE, Avoiding Retinal Detachment, Informing Patient of Risks, Postoperative Issues, Problems of Phakic IOLs

Evaluation Scheme:

Attendance	Record file	Multiple Choice Questions/ Quiz	Viva	Practical skills /performance	Total
5	15	15	15	50	100

TERM PAPER

Course Code: OPT2531

Credit Units: 02

Course Objective:

The objective of this course is to judge the understanding as well as application of the knowledge gained by the students. The aim of the term paper is to provide the students with an opportunity to further enhance their knowledge in a sector of their choice by undertaking a significant practical unit of examining and analyzing various aspects of Clinical Optometry at a level commensurate with the learning outcomes of the various courses taken up them in the ongoing semester.

A term paper is primarily a record of intelligent reading in several sources on a particular subject. The students will choose the topic at the beginning of the session in consultation with the faculty assigned. At least one middle level or senior level person of a company from the chosen sector may be interviewed face to face.

Guidelines:

1. The term paper will be related to the contemporary Optometry topic and it will be given by the department.
2. The presentation of the term paper is scheduled to be held before the commencement of Semester examinations.
3. The paper will carry 100 marks that will be marked on the basis of understanding and organization of content based on the literature review. The Bibliography shall form an important part of the paper.

Evaluation Scheme:

Organisation and relevance of content	Literature Review	Bibliography	Total
40	40	20	100

PROJECT

Course code: OPT2532

Credit Units: 03

Objectives:

The aim of the project is to provide the students with an opportunity to further their intellectual and personal development in the chosen field by undertaking a significant practical unit of activity. The project can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

Chapter Scheme and distribution of marks:

Chapter 1: Introduction – 10 marks

Chapter 2: Conceptual Framework/ National/International Scenario – 25 marks

Chapter 3: Presentation, Analysis & Findings -- 25 marks

Chapter 4: Conclusion & Recommendations -- 10 marks

Chapter 5: Bibliography -- 05 marks

Project Report	Power Point Presentation & Viva
75 marks	25 marks

Components of a Project Report

The outcome of Project Work is the Project Report. A project report should have the following components:

- 1) Cover Page: This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.
 - 2) Acknowledgement: Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.
 - 3) Table of Content: Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.
 - 4) Abstract: The body of the report should have summary of the project.
 - a) Introduction: This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, inclusion & exclusion criteria and method of analysis), Limitations of the Study, and Planning.
 - b) Conceptual Framework / National and International Scenario: (relating to the topic of the Project).
 - c) Presentation of Data, Analysis and Findings
 - d) Conclusion and Recommendations: In this section, the concluding observations based on the main findings and suggestions are to be provided.
 - 5) Bibliography or References: This section will include the list of books and articles which have been used in the project work, and in writing a project report.
 - 6) Annexure: Questionnaires (if any), relevant reports, etc.
- (The main text of the Project should normally be in the range of 5000 words. However, there may be annexure in addition to the main text)

The Steps of a Project Report

Step I: Selection of the topic for the project by taking following points into consideration:

Suitability of the topic.

Relevance of the topic

Time available at the disposal.

Feasibility of data collection within the given time limit.

Challenges involved in the data collection (time & cost involved in the data collection, possibility of getting responses, etc.)

Step II: Finalisation of the Topic and preparation of Project Proposal in consultation with the Supervisor.

Step III: Collection of information and data relating to the topic and analysis of the same.

Step IV: Writing the report dividing it into suitable chapters, viz.,

Chapter 1: Introduction,

Chapter 2: Methodology,

Chapter 3: Analysis & Findings

Chapter 4: Conclusion and Recommendations.

Step V: The following documents are to be attached with the Final Project Report.

1) Approval letter from the supervisor

2) Student's declaration

3) Certificate from the Competent Authority of the Organisation / Institution, if the student undertakes the Project Work in any Organisation / Institution.

Guidelines for Evaluation:

Each of the students has to undertake a Project individually under the supervision of a teacher and to submit the same following the guidelines stated below.

Language of Project Report and Viva-Voce Examination may be English. The Project Report must be typed and hard bound.

Failure to submit the Project Report or failure to appear at the Viva-voce Examination will be treated as "Absent" in the Examination. He /she has to submit the Project Report and appear at the Viva-Voce Examination in the subsequent years (within the time period as per University Rules).

No marks will be allotted on the Project Report unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her Project Report.

Evaluation of the Project Work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate.

WORKSHOP

Course Code: OPT2533

Credit Units: 01

Course Objective:

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two ways. The department has to make sure that the aspects covered are practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

Major Themes for Workshop:

The workshop may be conducted on any of the major themes: These themes are merely indicative and the department may choose any recent and relevant topic of study.

Guidelines for Workshop:

The procedure for earning credits from workshop consists of the following steps:

Relevant study material and references will be provided by the department in advance.

The participants are expected to explore the topic in advance and take active part in the discussions held

Attending and Participating in all activities of the workshop

Group Activities have to be undertaken by students as guided by the department .

Evaluation of workshop activities would be done through test and quiz at the end of the workshop.

Submitting a write up of atleast 500 words about the learning outcome from the workshop.

Methodology:

The methodology followed at the workshop could be based on any one or more of the following methods:

Case Presentation

Hands on training

Simulation

Group Activity

Role Play

Quiz

Evaluation Scheme:

Attendance	Active Participation	Multiple Choice Questions/ Quiz	Solving the case/ Assignment/ Write up	Total
10	30	30	30	100

CONTACT LENS-II

Course Code: OPT2601

Credit Units: 04

Course Objectives: Upon completion of the course, the student should be able to:

- Review the basics of contact lenses
- List the important properties of contact lenses
- Finalise the CL design for various kinds patients
- Recognize various types of fitting
- Explain all the procedures to patient
- Identify and manage the adverse effects of contact lens

Course Contents:

Module-I: Prefitting examination

Review of Basics; Patient Selection; Pre screening for contact lens wear; Slit Lamp examination; Assessment of Cornea; Assessment of Tear film

Module-II: Contact lens fitting

Soft contact lens fitting; Soft Toric Contact Lens fitting; Rigid Contact lens fitting; Managing the Presbyope

Module-III: Extended wear contact lens

Cornea and Oxygen; Extended Wear and Silicone Hydrogel Lenses

Module-IV: Contact lens care

Contact lens After Care; Contact lens Care System

Module-V: Speciality contact lens

Therapeutic and Prosthetic contact lenses; Overview of Special considerations for fitting contact lenses; Business Aspects of Contact lens practice; Setting up a Contact lens clinics

Assignment: The student should consult all the manufacturers of RGP lenses and soft lenses and list down various products (Lenses, care products and accessories) available with them. Detailed parameters along with manufacturer recommendation should be noted. Also students will be encouraged to read books and journals and submit a report to the faculty. The topics of the same can be decided by the faculty.

Practical

Pre fitting evaluation; SCL insertion & Removal; Fitting assessment; Over refraction; Follow-up Examination; Toric contact lens fitting and assessment; Cosmetic contact lens fitting and assessment; Do's and don'ts for contact lenses; Care and maintenance; Special instructions for silicone hydrogels; Demonstration for bifocal ,multifocal lenses, scleral lenses, Orthokeratology; Patient communication workshop / role plays; Visit to contact lens manufacturing unit, Case Presentations (components of Practical exam); Video preparations (components of Practical exam)

Examination Scheme:

Components	A	HA	CT	P	EE
Weightage	5	5	10	10	70

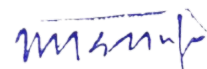

(CT-Class Test; HA- Home Assignment; P-Practical; A- Attendance; EE-End Semester Examination)

BINOCULAR VISION-II

Course Code: OPT2602

Credit Units: 04

Course Objective: The objective of this course is to inculcate the student with the knowledge of different types of strabismus its etiology signs and symptoms, necessary investigations and also management. The student on completion of the course should be able to independently investigate and diagnose case of strabismus with comments in respect to retinal correspondence and binocular single vision. The student should be able to perform all the investigations to check retinal correspondence, state of Binocular Single Vision, angle of deviation and special investigations for paralytic strabismus.

Course Contents:

Module-I:

Strabismus - Definition, Classification and etiology; Development of squint or ocular deviation; Adaptation to development of ocular deviation; Orthoptic instruments and their uses; Methods of examination

Module-II:

Anomalous Retinal Correspondence (ARC); Suppression; Amblyopia and eccentric fixation; Definition & Classification; Investigations; Management

Module-III:

Latent Strabismus (Heterophoria); Esotropia; Accommodative esotropia; Partially accommodative esotropia; Non accommodative esotropia; Microtropia; Recurrent esotropia; Secondary esotropia; Management of esotropia; esotropia associated with vertical deviation; Exotropia; Classification and etiology; Primary exodeviation; Dissociated exodeviation; Secondary exodeviation; Cyclo - Vertical Deviation; Comitant hyper deviation; Dissociated vertical deviation; Dissociated horizontal deviation; Elevation in adduction; Depression in adduction; Cyclodeviation

Module-IV:

A and V pattern; Paralytic Strabismus; Genetics and occurrence of squint and binocular vision problems; Special Forms of Strabismus; Retraction syndrome (Duane syndrome); Brown syndrome; Adherence syndrome; Strabismus fixus; Strabismus in high myopes; Fibrosis of extra ocular muscles; Graves' Endocrine ophthalmopathy; Acute orbital myositis; Cyclic heterotropia; Acquired motor fusion deficiency; Fracture of orbital floor; Fracture of medial orbital floor; Ocular Myasthenia gravis; Chronic progressive external ophthalmoplegia (Ocular myopathy of Von Graefe)

Module-V:

Nystagmus; Principle of non surgical treatment; Optical treatment; Pharmacological treatment; Orthoptics; Chemodenervation of extra ocular muscles – Botulinum Toxin; Principle of surgical treatment; Vision Training Programme (VTP)

Practicals:

History taking –Role play; Cover test; ocular motility demonstration and hands on various orthoptic instruments and procedures; Case discussion different types of strabismus; Visit to clinic and record cases

CLINIC-V

Course Code: OPT2605

Credit Units: 03

Course Contents:

Module-I

Unit of competency: Contact lens II

The ability to select and fit the most appropriate lens for the planned use

The ability to Identify and manage after care

The ability to understand the techniques used in fitting complex contact lenses and advises patients requiring complex visual corrections.

Module-II

Unit of competency: Pediatric and geriatric optometry:

Pediatric:

Assess ocular health and systemic health conditions.

Identify risk factor of systemic diseases based on ocular findings.

Assess VA, ocular motility, pupil, Objective and subjective refraction.

Pediatric prescribing decision and their purpose. E.g. early onset myopia

investigation and management of children presenting with anomalies of binocular vision.

Geriatric:

Evaluate the functional status of the eye, vision system and account special demands and needs.

Assess ocular health and systemic health conditions.

Detect and diagnose ocular abnormalities and disease

Counsel and educate the patients regarding their visual, ocular and related systemic health care status including recommendations for treatment, management and future care.

Module-III:

Unit of competency: Squint Evaluation:

The ability to assess binocular status using objective and subjective tests

The ability to investigate and manage a patient presenting with heterophoria or heterotropia.

The ability to manage a patient presenting with an incomitant deviations

Demonstration of following Orthoptic instruments/methods and their uses –

Orthoptic Investigative & Therapeutic Procedure.

Cover and uncover test: Differentiate from phoria and tropia.

Measurement of angle of deviation: Subjectively (Synoptophore) and objectively (PBCT/ Modified Krinsky)

Module-IV: Vision Therapy:

The ability to understand different eye exercise procedure

Restoration of vision and maintain ocular alignments by means of different eye exercise

Module-V: Comprehensive eye examination

VISUAL REHABILITATION

Course Code: OPT2606

Credit Units: 03

Course Objective:

Its aim is develop skills for those who want to work in a professional setting assisting adult populations who are blind/visually impaired and integrate compensatory skills and assistive technology that will enable them to live safe, productive, and independent lives.

Competencies acquired

Specific areas of instruction learned by Vision Rehabilitation Therapists will include:

Communication Systems (Braille, handwriting, recording skills, use of electronic reading systems, use of assistive technology and computer access technology, etc.).

Personal Management (grooming, hygiene, clothing organization, medical measurement, socialization skills, etc.)

Home Management (organization and labeling, repair and home maintenance, budgeting and record keeping, etc.)

Activities of Daily Living (cooking, cleaning, shopping, safety, money organization and management, etc.)

Leisure and Recreation (hobbies, woodworking, crafts, sports, etc.)

Psychosocial Aspects of Blindness and Vision Loss

Medical Management (assessment and instruction and training of adaptive medical equipment)

Basic Orientation and Mobility Skills (sighted guide, safety techniques, etc.)

Evaluation Scheme:

Attendance	Record file	Multiple Choice Questions/ Quiz	Viva	Practical skills /performance	Total

VISION THERAPY AND LEARNING DISABILITIES

Course Code: OPT2607

Credit Units: 03

Course Objective: Its aim is develop skills for those who want to work as a professional Vision therapist
--The course on learning disabilities, vision therapy is specifically directed toward resolving visual problems which interfere with reading, learning and educational instruction.

Competencies acquired

Overview of Normal Child Development
The Relationship between Vision and Learning General Issues
Visual Efficiency Problems
Management of Visual Information Processing Problems
Vision Therapy Procedures for Developmental Visual Information Processing Problems
Interdisciplinary Management of Learning Problems Case Studies
The Role of the Optometrist in the Management of Learning Related Vision Problems
Optometric Assessment Case History
Optometric Assessment Visual Efficiency Problems
Optometric Assessment Visual Information Processing Problems
Various techniques used in management of anomalies

Evaluation Scheme:

Credit Units: 03

Course Objective:

To familiarise the students with various methods of eye banking and the various procedures involved in tissue preservation, transport and storage.

Course Contents:

Module-I: Quality Assurance and Control

EB Medical Standards
EB Standardized Procedures
Sterilization
Refrigeration and Temperature Recording
Instrument Inspection, Cleaning, and Handling
Quality Assurance Monitoring
Record Keeping and Documentation
Professional Standards
Adverse Reaction Reports
Consent Informed Consent Procedures and Documentation
Donor History, Screening, and Evaluation
Determination of Suitability
Donation
Transplant
Legislation and Regulatory Requirements

Module-II: Tissue Related Procedures

Preservation of Tissue
Procedures and Methods
Preservation Media
Transport and Storage of Tissue
Packaging and Labeling
Documentation Requirements
Distribution of Tissue
Storage
Examination and Evaluation of Tissue
Slit Lamp Biomicroscopy
Specular Microscopy
Other
Surgical Procedures
Penetrating Keratoplasty
Lamellar Keratoplasty
Epikeratoplasty
Patch Graft

Module-III: Technical Procedures

Whole Eye Enucleations
Preparation
Equipment and Instrumentation

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Procedure
Corneal Excisions
Preparation
Equipment and Instrumentation
Procedure

Evaluation Scheme:

PROJECT

Course code: OPT2632

Credit Units: 03

Objectives:

The aim of the project is to provide the students with an opportunity to further their intellectual and personal development in the chosen field by undertaking a significant practical unit of activity. The project can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

Chapter Scheme and distribution of marks:

Chapter 1: Introduction – 10 marks

Chapter 2: Conceptual Framework/ National/International Scenario – 25 marks

Chapter 3: Presentation, Analysis & Findings -- 25 marks

Chapter 4: Conclusion & Recommendations -- 10 marks

Chapter 5: Bibliography -- 05 marks

Project Report	Power Point Presentation & Viva
75 marks	25 marks

Components of a Project Report

The outcome of Project Work is the Project Report. A project report should have the following components:

- 1) Cover Page: This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.
 - 2) Acknowledgement: Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.
 - 3) Table of Content: Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.
 - 4) Abstract: The body of the report should have summary of the project.
 - a) Introduction: This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, inclusion & exclusion criteria and method of analysis), Limitations of the Study, and Planning.
 - b) Conceptual Framework / National and International Scenario: (relating to the topic of the Project).
 - c) Presentation of Data, Analysis and Findings
 - d) Conclusion and Recommendations: In this section, the concluding observations based on the main findings and suggestions are to be provided.
 - 5) Bibliography or References: This section will include the list of books and articles which have been used in the project work, and in writing a project report.
 - 6) Annexure: Questionnaires (if any), relevant reports, etc.
- (The main text of the Project should normally be in the range of 5000 words. However, there may be annexure in addition to the main text)

The Steps of a Project Report

Step I: Selection of the topic for the project by taking following points into consideration:

Suitability of the topic.

Relevance of the topic

Time available at the disposal.

Feasibility of data collection within the given time limit.

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Challenges involved in the data collection (time & cost involved in the data collection, possibility of getting responses, etc.)

Step II: Finalisation of the Topic and preparation of Project Proposal in consultation with the Supervisor.

Step III: Collection of information and data relating to the topic and analysis of the same.

Step IV: Writing the report dividing it into suitable chapters, viz.,

Chapter 1: Introduction,

Chapter 2: Methodology,

Chapter 3: Analysis & Findings

Chapter 4: Conclusion and Recommendations.

Step V: The following documents are to be attached with the Final Project Report.

1) Approval letter from the supervisor (Annexure-IA)

2) Student's declaration (Annexure-IB)

3) Certificate from the Competent Authority of the Organisation / Institution, if the student undertakes the Project Work in any Organisation / Institution.

Guidelines for Evaluation:

Each of the students has to undertake a Project individually under the supervision of a teacher and to submit the same following the guidelines stated below.

Language of Project Report and Viva-Voce Examination may be English. The Project Report must be typed and hard bound.

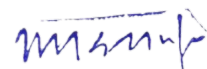

Failure to submit the Project Report or failure to appear at the Viva-voce Examination will be treated as "Absent" in the Examination. He /she has to submit the Project Report and appear at the Viva-Voce Examination in the subsequent years (within the time period as per University Rules).

No marks will be allotted on the Project Report unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her Project Report.

Evaluation of the Project Work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate.

Manesar Gurgaon-122413

(CLINIC-VI A – INTERNSHIP) RETINA, GLAUCOMA, LOW VISION

Course Code: OPT2701

Credit Units: 03

Course Objectives:

At the end of the course, the student will be knowledgeable in the following:

- Examination diagnose and manage various conditions of retina
- Examine, Diagnose and manage various conditions of glaucoma
- Examine manage patients with low vision
- Prescribe and train patient for use of low vision devices

Course Contents:

Module-I: Retina and Vitreous: student should be learning following

- Assess pupil reactions
- Interpret and investigate the presenting symptoms of the patient.
- Examine fundus using direct and indirect techniques
- Identify external pathology and offer appropriate advice to patients not needing referral,
- Understand of risk factors for common ocular conditions.
- Recognise common ocular abnormalities and to refer when appropriate.
- Develop a management plan for the investigation of the patient
- Manage a patient presenting with reduced vision.
- Manage a patient presenting with macular degeneration
- Recognize, evaluate and manage diabetic eye disease and refer accordingly.
- Evaluate and manage a patient presenting with symptoms suggestive of retinal detachment.
- An understanding of the treatment of a range of common retinal diseases.
- Recognise ocular manifestations of systemic disease.
- Assess symptoms and signs of neurological significance.
- Manage patients presenting with sight- threatening eye disease.
- Recognise adverse ocular reactions to medication.
- Help ophthalmologist in performing Retinal LASERS
- Perform and analyse Fluorescein angiography
- Perform and interpret test results of OCT

Module-II: Glaucoma

The ability to perform an examination of the eye and related structures use instruments in ocular examination and to understand the implications of the findings in terms of subsequent examination techniques. Use a contact tonometer to measure intraocular pressure and analyse and interpret the results of Tonometry- Applanation Schiotz

Amsler grid

Assess visual fields of patients with reduced visual acuity.

Interpret and investigate the presenting symptoms of the patient.

Understanding of risk factors for Glaucoma

Investigate visual fields and to analyse and interpret the results.

Visual fields- confrontations, automated, tangent screen, bernels perimeter

Manage a patient presenting with a red eye.

Manage a patient presenting with reduced vision.

Evaluate glaucoma risk factors, to detect glaucoma and refer accordingly.

Understanding of the role of optometrists in shared care

Recognise adverse ocular reactions to medication.

Management : common medications, laser intervention and surgical techniques

Glaucoma investigations and procedures

GTX,HRT,

Provocative test

OCT

Module-III: Low Vision

Clinical examination of Low vision subjects

Optical, Non-Optical, Electronic, and Assistive devices.

Training for Low Vision subjects with Low vision devices

Deciding management plan for Referrals and follow-up

Visual rehabilitation

Examination Scheme

(CLINIC-VI B) PEDIATRIC & BINOCULAR VISION

Course Code: OPT2702

Credit Units: 03

Course Objective:

To inculcate in a student the

Ability to take an appropriate binocular vision history

Ability to assess eye alignment and eye movements.

Ability to assess sensory fusion and stereopsis.

Ability to assess oculomotor function.

Ability to assess accommodation.

Also to make the student able

To develop an appropriate timetable for eye and vision examinations for pediatric patients

To select appropriate examination procedures for all pediatric patients

To examine the eye health and visual status of pediatric patients effectively

To minimize or avoid the adverse effects of eye and vision problems in children through early identification, education, treatment, and prevention

To inform and educate patients, parents/caregivers, and other health care providers about the importance and frequency of pediatric eye and vision examinations

Evaluation:

Evaluation will be based on the following competencies:

Assesses binocular status using objective and subjective means.

Understands the management of patients with an anomaly of binocular vision.

Investigates and manages adult patients presenting with heterophoria

Manages adult patients with heterotropia.

Manages children at risk of developing an anomaly of binocular vision.

Manages children presenting with an anomaly of binocular vision.

Manages patients presenting with an incommittant deviation.

Examination Scheme:

(CLINIC-VI C) CORNEA & CONTACT LENS

Course Code: OPT2703

Credit Units: 03

Course Objectives: At the end of the course the student will be able to:

- Examine the anterior segment of the eye with the help of advanced diagnostic instrument.
- Access the ocular health and clinical decision making of types of contact lens is appropriate
- Instruct a patient in the techniques of soft & RGP lens insertion, removal and other relevant handling instructions and Instruct a patient on the principles of lens wear and care including lens care products.

Course Contents:

Module-I: Examination of anterior segment:

Anatomy & physiology of the anterior segment
Corneal topography: Measurement and significance
Keratometry: interpretation of keratometry result.
Slit lamp bio microscopy procedure
Tear function test
Corneal staining
Corneal sensation test
Specular microscopy: interpretation of test result

Module-II: RGP lens

Pre-fitting evaluation
Nomenclature and lens design
RGP contact lens fitting
Correction of astigmatism with rigid lens
Market availability of different types of RGP contact lens and lens material

Module-III: Soft contact lens

Nomenclature, design, Material properties and manufacturing techniques.
Soft contact lens fitting
Disposable, extended wear and frequent replacement soft contact lens
Correction of astigmatism with soft contact lens
Silicon hydrogel lens
Market availability of different types of soft CL and

Module-IV: Speciality contact lens

Presbyopic lenses
Rose k Lenses
Scleral lenses
Lenses for irregular cornea
Orthokeratology
Myopia control lenses .
Contact lens fitting in high myopia and hyperopia.

Module-V: Care & Maintenance

Preservation and disinfection
Contact lens cleaning and disinfection

(CLINIC-VI D) PRIMARY EYE CARE

Course Code: OPT2704

Credit Units: 03

Objectives:

- It is expected that upon completion the student will be able to carry out the standard clinical procedures safely and efficient
- Upon completion of the course the student must be able to achieve these skills

Module-I: Take down a comprehensive history –

Must be able to take a structured, accurate history of symptoms from patients with a range of ophthalmic problems and needs

Must be able to produce comprehensive, legible and organized record keeping

Module-II: Do a complete and proper refraction

Visual acuity estimation

Must be able to measure and assess visual function of patients of any age with appropriate tests and techniques like

Lensometry

Retinoscopy

Refraction procedures

Must be able to use subjective and objective techniques to identify and quantify ametropia

Module-III: Do a torch light examination.

Hirschberg test

Module-IV: Do a binocular vision assessment

Ocular motility, cover test

Must be able to assess eye alignment and eye movements

Near point of accommodation, Near point of convergence

Do a detailed binocular vision assessment if required in particular cases

Module-V: Use a slit lamp to do a complete anterior segment examination and posterior segment as required

Must be able to examine for abnormalities in eye and adnexa especially eyelid, conjunctiva, cornea, anterior chamber, lens and fundus using appropriate instruments and techniques

Must be able to interpret signs and symptoms of ocular abnormality

Must be able to perform applanation tonometry and non contact tonometry

Must be able to take the decision to dilate the eye as per need

Must be able take the decision to use appropriate ocular drugs diagnostically and to aid refraction and fundus examination in consultation with the ophthalmologist.

Module-VI: Must be able to give a preliminary diagnosis

During management the student must be able to advice on the most suitable form of optical correction

Examination Scheme:

Components	A	Case Discussion	Log book	Viva /CT	EE Practical
Weightage (%)	5	10	10	25	50

SUMMER INTERNSHIP EVALUATION-II

Course Code: OPT2735

Credit Units: 06

Course Objectives:

The basic objective of a Summer Internship is to refine the practical exposure. This summer training will provide an opportunity to the students to apply their theoretical understanding while working on the concerned project in the hospital / corporate. Thus this summer internship programme is an attempt to bridge the gap between theory and practice. This will also enhance the students' intellectual ability and attributes related to data handling, decision making, report writing, oral presentation and imbibing an interdisciplinary approach.

General Guidelines:

Every student of Boptom shall be required to undergo a practical training in a organization approved by the Institute for minimum of four weeks, normally in the Summer Vacation, after the end of the fourth semester examinations. The candidates shall be required to undergo training in the various areas of the organization concerned. The organization may assign a specific tasks to the candidate, which will be completed by him/her during the period of training. The work done by the candidate during the training period shall be submitted in form of a training report.

The last date for the receipt of training report AND CASE SHEETS in the department shall be one month after the date of completion of training, i.e. at the beginning of the next semester.

Evaluation Scheme:

Attendance	Overall Performance: grading by centre	Viva	Attendance	LOG book Report	Total

RESEARCH PROJECT (MID TERM EVALUATION)

Objectives: Midterm review of the final year project will be done this semester. The student is required to submit the following during this semester end

Chapter Scheme and distribution of marks:

Chapter 1: Introduction

Chapter 2: Literature review

Chapter 3 : methodology

Chapter 4 : data and its analysis

Pre conclusion and results

Project Report	Viva
75 marks	25 marks

Components of a Project Report

The outcome of Project Work is the Project Report. A project report should have the following components:

- 1) Cover Page: This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.
- 2) Acknowledgement: Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.
- 3) Table of Content: Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.
- 4) Abstract: The body of the report should have summary of the project.
 - a) Introduction: This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, inclusion & exclusion criteria and method of analysis), Limitations of the Study, and Planning.
 - b) Conceptual Framework / National and International Scenario: (relating to the topic of the Project).
 - c) Presentation of Data, Analysis and Findings
 - d) Conclusion and Recommendations: In this section, the concluding observations based on the main findings and suggestions are to be provided.
- 5) Bibliography or References: This section will include the list of books and articles which have been used in the project work, and in writing a project report.
- 6) Annexure: Questionnaires (if any), relevant reports, etc.
(The main text of the Project should normally be in the range of 5000 words. However, there may be annexure in addition to the main text)

The Steps of a Project Report

Step I: Selection of the topic for the project by taking following points into consideration:

Suitability of the topic.

Relevance of the topic

Time available at the disposal.

Feasibility of data collection within the given time limit.

Challenges involved in the data collection (time & cost involved in the data collection, possibility of getting responses, etc.)

Step II: Finalisation of the Topic and preparation of Project Proposal in consultation with the Supervisor.

Step III: Collection of information and data relating to the topic and analysis of the same.

Step IV: Writing the report dividing it into suitable chapters, viz.,

Chapter 1: Introduction,
Chapter 2: Methodology,
Chapter 3: Analysis & Findings
Chapter 4: Conclusion and Recommendations.

Step V: The following documents are to be attached with the Final Project Report.

- 1) Approval letter from the supervisor (Annexure-IA)
- 2) Student's declaration (Annexure-IB)
- 3) Certificate from the Competent Authority of the Organisation / Institution, if the student undertakes the Project Work in any Organisation / Institution.

Guidelines for Evaluation:

Each of the students has to undertake a Project individually under the supervision of a teacher and to submit the same following the guidelines stated below.

Language of Project Report and Viva-Voce Examination may be English. The Project Report must be typed and hard bound.

Failure to submit the Project Report or failure to appear at the Viva-voce Examination will be treated as "Absent" in the Examination. He /she has to submit the Project Report and appear at the Viva-Voce Examination in the subsequent years (within the time period as per University Rules).

No marks will be allotted on the Project Report unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her Project Report.

Evaluation of the Project Work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate.

INTERNSHIP-II

(CLINIC-VII) COMPREHENSIVE EYE CARE & REFRACTION

Course Code: OPT2801

Credit Units: 05

Objectives: It is expected that upon completion the student will be able to carry out the standard clinical procedures especially refraction efficiently and safely.

Course Contents:

Upon completion of the course the student must be able to

Module-I: Take down a comprehensive history –

Must be able to communicate effectively with the patient, taking into account his/her physical, emotional, intellectual and cultural background – building a rapport

Must be able to take a structured, efficient, accurate history and symptoms from patients with a range of ophthalmic problems and needs

Must be able to produce comprehensive, legible and organised record keeping with appropriate detail and grading

Must be able to interpret and respond appropriately to patient records and other relevant information

Module-II: Do a complete and proper refraction

Visual acuity estimation.

Must be able to measure visual function of patients of any age with appropriate tests and techniques

Must be able to assess visual function in patients with visual impairment

Lensometry

Retinoscopy

Refraction procedures

Must be able to use subjective and objective techniques to identify and quantify ametropia

Module-III: Do a torch light examination.

Hirschberg test

Module-IV: Do a binocular vision assessment

Ocular motility, cover test

Must be able to assess eye alignment and eye movements

Near point of accommodation, Near point of convergence

Module-V: Do a detailed binocular vision assessment if required in particular cases as per the format given in binocular vision syllabus

Module-VI: Do a pupil evaluation with torch light

Module-VII: Use a slit lamp to do a complete anterior segment examination and posterior segment as required

Must be able to examine for abnormalities in eye and adnexa especially eyelid, conjunctiva, cornea, anterior chamber, lens and fundus using appropriate instruments and techniques

Must be able to interpret signs and symptoms of ocular abnormality

Must be able to perform applanation tonometry and non contact tonometry

8. Must be able to take the decision to dilate the eye as per need

Must be able take the decision to use appropriate ocular drugs diagnostically and to aid refraction and fundus examination.

Must be able to give a preliminary diagnosis

During management the student must be able to advice on, order and be able to dispense the most suitable form of optical correction taking into account durability, comfort, cosmetic appearance, age and lifestyle.

Evaluation Scheme:

Attendance	Record file Log book	Case discussion- I	Case discussion- II	EE Practical	Total
10	20	20	20	30	100

The final evaluation is based on the Clinical skill evaluation practical exam the candidate will be asked to examine a patient with all details. This examination will primarily measures skills, it contains an assessment, management and communication skills, as well as some interpretation of clinical findings.

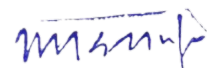

The study centre will form an integral part of the evaluation and will be based on the regular performance and participation in grand rounds .discussions and presentations.

(CLINIC-VII) OPTOMETRIC PROCEDURES & INSTRUMENTS

Course Code: OPT2802

Credit Units: 05

Course Objective:

This course deals with complete theory and practical experience in all basic tests, instrumentation and procedures necessary to evaluate the ocular health status of a patient. The topics include complete optometric procedures and instruments taught in the previous semesters like case history, gross external examination of the eye and adnexa, pupil and muscle functions, anterior and posterior segment examination, tonometry, visual acuity, and visual fields assessment and so on .

The objective of this course is to apply all theoretical knowledge into examination and optometric management of the patient with ocular problems.

The student should learn to operate all instruments and be able to carry out all ophthalmic procedures.

Evaluation Scheme:

The final evaluation is based on the Clinical skill evaluation practical exam the candidate will be asked to examine a patient with all details. This examination will primarily measures skills, it contains an assessment, management and communication skills, as well as some interpretation of clinical findings. It will be assessing the competence of individual optometrists in the practice of optometry

Evaluation Scheme:

Attendance	Record file Log book	Practical	Written test	Viva	Total
10	20	30	30	20	100

The study centre will form an integral part of the evaluation and will be based on the regular performance and participation in grand rounds .discussions and presentations.

INTEGRATIVE SEMINAR DURING THE INTERNSHIP

It serves to teach optometry students how the material in the curriculum relates to their role as optometrist. This will be achieved through a synthesis of lecture, clinical observation, case-based learning and small-group discussion. Once a week, the entire class will attend a one-hour lecture with topics reflective of the ongoing course material being presented in other courses. For two additional hours per week, small seminar group observation and discussion will take place. The seminar meetings will reinforce the lecture concepts through clinical observation and case discussions relating to those observations. Lecture and small-group discussions will include the participation of both basic and clinical science faculty in order to promote integration of the curricular material and to show how the care provided is related to what is currently being learned. This will enable the future clinician to make informed clinical decisions, encourage critical thinking and promote lifelong independent learning.

INTEGRATIVE SEMINAR

Is designed to facilitate the student's transition into clinical internship by using an integrative approach. The course builds upon past Integrative Seminars, providing the student with an environment leading to the development of informed clinical decision making, critical thinking and lifelong independent learning. The student gains a foundation for optometric practice by learning to employ scientific knowledge, utilization of informational resources, doctor-patient interactive skills and clinic participation to form the basis of an individualized patient evaluation, assessment and plan. This will be achieved through a synthesis of group teaching, case-based learning, small-group discussion and clinical experience. Group discussions will include the participation of both basic and clinical science faculty to foster integration of curricular material. As a means of entry into clinical practice, the highest standards of professional conduct and responsibility will be emphasized throughout the course.

The interns are required to complete one quarter of senior seminar.

The seminar meets over four hours each week to provide a small group-learning environment focused on clinical case presentations derived from the participants' clinical experience.

This grand-rounds format will provide a basis for integration and critical analysis of current clinical research with the goal of increasing the participants' understanding, use and communication of evidence-based clinical information.

DIETETICS & NUTRITION

Syllabus - Semester First

PRINCIPLES OF NUTRITION

Course Code: DAN2151

Credit Units: 03

Course Objective

This Course is designed to enable students

1. Understand the vital link between nutrition and health
2. Gain knowledge on functions, metabolism and effects of deficiency of nutrients

Course Contents:

Module -I

Nutrition - General introduction, Classification of nutrients, Functions of food, social function of food, psychological functions of food.

Energy - Definition of Kilocalories, Joule, energy value of foods, determination, physiological fuel values, SDA of foods, determination of energy requirements of body, basal metabolic rate determination, factors influencing BMR, Recommended Dietary Allowances for energy.

Carbohydrates - Classification, functions, source, digestion, absorption and utilization, dietary fiber and health.

Module -II

Protein - Classification, functions, sources and requirements, digestion, absorption and Utilization, Protein quality - Definition of biological value, NPU, digestibility coefficient, PER definition and measurement. Deficiency due to shortage of protein and energy – PCM, kwashiorkor. Reference protein, essential amino acids and mutual supplementation of dietary protein.

Fats and Lipids - Classification, functions, sources, requirement, digestion, absorption and utilization, importance of essential fatty acids, their requirements and deficiency.

Module -III

Vitamins – Fat soluble vitamins –A, D, E and K- functions, source, requirements, deficiency disorders. Water soluble vitamins –The B-complex vitamins – Thiamine, Riboflavin, Niacin, Folic acid, Biotin, Pantothenic acid and Vitamin C - functions, source, requirements and deficiency disorders.

Module -IV

Minerals - General functions in the body, classification- macro and micro minerals.

Micro minerals – Iron, Fluorine, Zinc, copper, Iodine -functions, absorption, utilization, requirements, deficiency and toxicity. Macro minerals – Calcium & phosphorus - functions, absorption, utilization, requirements, deficiency and toxicity.

Module -V

Water Balance – Functions of water, water distribution, maintenance of water and electrolyte balance, regulation of acid-base balance in the body.

Syllabus - Semester Second

FAMILY MEAL MANAGEMENT

Course Code: DAN2251

Credit Units: 03

Course Objectives: To enable the students

1. Understand the nutritional demands in various stages of life cycle.
2. Acquire skills in planning adequate meals in different stages of life cycle.

Course Contents:

Module I

Basic Principles of Meal Planning - Basic meal pattern and its need to suit different income levels age and physiological stages. Recommended allowance-RDA for Indians, basis for requirement, energy allowance for different growth pattern of children, energy allowance for various activities.

Module II

Nutritional Needs during Pregnancy - Normal growth and weight change. Nutritional requirements, complications during various stages of pregnancy – hyper emesis gravidarum, preeclampsia and eclampsia and their management at family level.

Nutrition during Lactation - Function of breast, physiology of lactation, hormonal control and relaxation, Milk output and factors affecting it, frequency of nursing- supply and demand, nutritional components of colostrum and mature milk. Nutritional requirements of lactating women.

Module III

Nutrition during Infancy - Growth and development, factors influencing growth, Advantages of breast feeding, difference between breast feeding and bottle feeding, factors to be considered in bottle feeding. Different types of milk formulae.

Weaning Foods - Weaning foods and commercially prepared baby foods. Uses of growth chart to monitor growth & development. Nutritional requirements of infants' upto one year. Weaning foods developed by different organizations. Problems of feeding in normal and premature infants.

Module IV

Nutritional needs of pre-school children (1-5 year) - Nutritional and food requirements of preschool children. Factors to be considered while planning meals for pre-school children. Eating problems of children and their management, preparation of supplementary foods using available low cost foods.

Nutrition for School children - Nutritional requirement, meal planning for school children, dental caries and packed lunch.

Module-V

Nutrition during Adolescence - Physical Growth- changes and factors affecting height and weight, increments during menarche, Nutritional requirement. Nutritional problems in adolescence- Iron deficiency anemia, obesity, anorexia nervosa and bulimia nervosa.

Nutritional needs of adults (men and women) – Nutrition and work efficiency. Menopausal and post menopausal women, hormonal changes, nutritional requirement of the adult in relation to occupation.

Nutrition During Old Age - Physiological changes in ageing- psycho-social and economic factors affecting eating behavior. Nutritional problems of aged and their management.

Syllabus - Semester Third

BASIC DIETETICS

Course Code: DAN2351

Credit Units: 03

Course Objectives:

- To understand the modifications in nutrients and dietary requirements for various diseases.
- To acquire the ability to plan and prepare diets for various diseases.

Course Contents:

Module I

1. Role of Dietician-hospital and community
2. Basic concepts in Diet Therapy
3. Therapeutic Adaptation of the normal diet
4. Routine Hospital Diets- Regular diet, light diet, soft diet, full liquid diet and tube feeding.
5. Modifications of Diet -Febrile conditions, infections & surgical conditions.

Module II

6. Diets of gastro intestinal disorders, renal diseases, liver diseases, obesity, cardio vascular disorders and diabetes mellitus.
7. Geriatrics - Role of diet.
8. Feeding infants & children - problems in feeding children in the hospital.
9. Feeding the patient - psychology of feeding the patient, assessment of patients needs.
10. Nutrition & Diet Clinics - Patients check up and dietary counseling, education of the patient and follow up.

Examination Scheme:

Components	ATT	P	HA	CT	EE
Weightage (%)	5	5	5	15	70

(ATT-Attendance; P-Project; HA-Home Assignment; CT-Class Test; EE-End Semester Examination)

Syllabus - Semester Fourth

ADVANCED DIETETICS

Course Code: DAN2451

Credit Units: 03

Course Objectives: To enable students

1. Gain knowledge about principles of diet therapy and different therapeutic diets.
2. Develop aptitude for taking up dietetics as a profession.

Course Contents:

Module-I

Objectives of diet therapy - Role of a dietitian. Principles of diet preparation and counselling.

Normal diet in the hospitals –regular diet, liquid ,semi liquid, light , soft diet, and bland diet.

Different types of Feeding - Basic concepts of oral feeding, tube feeding, IV feeding, gastrostomy feeding.

Module-II

Therapeutic diets for the following disorders:

- a. Under weight - definition, etiology, treatment
- b. Obesity - definition, etiology, treatment.
- c. Diseases of the gastro intestinal tract-Peptic ulcer and duodenal ulcer, Dumping syndrome, constipation
- d. Acute and chronic diarrhea -rehydration therapy.

Module-III

Diseases of the liver and gall bladder (risk factors and diet therapy)

- a) jaundice b) hepatitis c) cirrhosis d) fatty liver and diet therapy

Diseases of the cardio vascular system (risk factors and diet therapy)

- a) atherosclerosis b) arteriosclerosis c) hypertension d) congestive heart failure

Module-IV

Diabetes mellitus – causes, symptoms, bio-chemical changes, insulin, hypo- glycemic drugs, changes in the metabolism of carbohydrate, fat and protein, food exchange list, dietary management

Diseases of the kidney and urinary tract

- a. Acute and chronic nephritis
- b. Nephrotic syndrome
- c. Renal failure
- d. Urinary calculi
- e. Uremia

Causes and dietary treatment of kidney diseases and dialysis.

Nutrition and cancer - Dietary guidelines for management.

Module-V

Diet in Allergy - Definition, classification, common food allergy, test of allergy, diet therapy. Pre operative and post operative diets.

Diet in febrile conditions - Short duration e.g. Typhoid, Long duration e.g. Tuberculosis. Dietetic management of gout and phenyl ketonuria.

Diet in relation to deficiency diseases-Protein calorie deficiency, vitamin A deficiency and anemia.

Syllabus - Semester Fifth

COMMUNITY NUTRITION

Course Code: DAN2551

Credit Units: 03

Course Objectives: To enable the students

1. Know about the application of basics of nutrition in the community
2. Gain knowledge of community nutrition programmes of national and international organization

Course Contents :

Module-I

Definition - Community, family, village and block

Meaning of Optimum Nutrition, Malnutrition- Under nutrition and over nutrition..

Characteristics of community- Demography, Vital statistics, IMR, MMR, morbidity. Causes of **malnutrition**-Factors contributing to malnutrition in the community - food habits, customs and practices, availability of food, Socio-economic factors, Housing and hygienic conditions, population explosion.

Module-II

Assessment of the nutritional status of the community -direct and indirect methods - Anthropometry, Clinical and Biochemical, Diet Surveys.

Nutritional problems of women and men- Anemia, Vitamin A deficiency, B-complex deficiency.

Nutritional problems of infants and children- PEM-Marasmus and Kwashiorkor, Vitamin A deficiency, B-complex deficiency diseases, anemia-incidence, prevalence, epidemiology and prevention , other problems- Goitre, fluorosis and Lathyrism- prevalence, causes and symptoms and programmes to control.

Module-III

Nutrition intervention programmes - ICDS: Objectives and services, Noon meal programme, TINP, SNP, Vitamin A prophylaxis.

National Organization- Role of ICMR, NIN, NNMB & ICAR

International organization- WHO, FAO , UNICEF, DANIDA & World Bank.

Module-IV

Home Science- Meaning and Objectives. Role of Home-Scientists in rural development-with reference to ongoing programmers like Family Welfare Programme, Adult Education for community-different methods, advantages and disadvantages. Nutrition education- merits and demerits of different methods, Concept of nutrition garden.

Module-V

Communication- Principles, methods and classification. Advantages and limitations of different methods.

Audio-visual aids- Types, advantages and limitations.

Health care- delivery, challenges & strategies. Set up of PHC, school health services and employees state insurance.

Syllabus - Semester Sixth

FOOD CHEMISTRY

Course Code: DAN2651

Credit Units: 03

Course Contents:

Module-I

Study of various cooking methods - Boiling, steaming, stewing, frying, baking, roasting, broiling, cooking under pressure. Stages of sugar cookery, crystallization and factors affecting crystallization.

Module-II

Cereals - Structure, composition of rice, wheat, effects of cooking on parboiled and raw rice, principles of starch cookery, gelatinization, flours-types, formation of dough and batter

Pulses and Legumes – Varieties of pulses & legumes, composition, nutritive value, cooking quality of pulses, germination and its effect.

Module III

Vegetables - Classification, composition, nutritive value, selection and preparation for cooking

Fruits - Classification, composition, nutritive value, changes during ripening, methods and effects of cooking, enzymatic browning

Module IV

Milk - Composition, nutritive value, kinds of milk, pasteurization and homogenization of milk, changes in milk during heat processing, preparation of cheese and milk powder.

Module V

Egg - Structure, composition, selection, nutritive value, uses of egg in cookery

Fleshy foods - meat structure, composition, nutritive value, selection of meat, post mortem changes in meat, aging, methods of cooking meat

a) Poultry – types, composition, nutritive value, selection

b) Fish - Structure, composition, nutritive value selection of fish

Module VI

Fats and Oils - Types of oils, function of fats and oils, shortening effects of oil, smoking point of oil

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

STATISTICS FOR CLINICAL RESEARCH

Course Code: CLR4103

Credit Units: 04

Course Objective:

To enrich the understanding of biostatistician procedure in clinical research which sponsor, CRO and Hospital use in clinical trials. To know the importance of biostatistics in clinical trials.

Course Contents:

Module 1:

Introduction and basic concepts ,Overview of the drug development process, bias, randomization, blinding, choice of control group. Organization and display of data, Types of data, graphical diagrammatic representation of data. Role of biostatisticians in clinical research, ANOVA –Survival analysis, measurement scales and variables, sampling, degree and meaning of correlation, and its types , karl Pearson and spearman correlation coefficient ,difference b/w correlation and regression.

Module 2:

Measures of Central tendency ,Mean, median, mode, measure of dispersion ,Standard Deviation, Standard Error, Variance, range, Coefficient of Variation. Skegness & Kurtosis.

Module3: Correlation and Regression

Correlation:, types of data required, assumptions, correlation coefficient, significance of correlation, meaningfulness of correlation coefficient. **Regression:-**, Simple linear regression.

Module 4:

Probability and probability distributions, Definitions, probability distribution curves. Continuous probability distribution-Normal distribution, properties and applications.Discrete probability distribution-Binomial & Poisson distribution, properties and applications. Test of significance-F –test, t-test & chi-square test. Statistical input during protocol design, Demonstration of sample size calculation: comparing two means, Sample size computation

Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

BASICS OF PHARMACY, DRUG DISCOVERY AND DEVELOPMENT

Course Code: CLR4104

Credit Units: 05

Course Objective:

To enrich the understanding of pharmacology, drug discovery procedure in clinical research which sponsor, CRO and Hospital use for patient protection. To know the importance of drug discovery in clinical trials.

Course Contents:

Module-1:

History of Pharmacy, Indian Pharmaceutical industry, Drugs-sources, nomenclature, classification, Pharmacopoeias, Formulary, Codex. Branches of Pharmacy: Pharmacognosy, Pharmaceutical chemistry, Quality Assurance, Pharmaceutics, Pharmacology, Pharmacy Management and Pharmacy Practice. Pharmaceutical Manufacturing-Quality Assurance and Quality Control.

Module-2:

Drug Regulatory Environment-Pharmaceutical Legislation in India, Drug regulatory authorities, International Conference on Harmonization, Good Practices and Quality Management, Drug Master File.

Module-3:

Drug Discovery & Development. History of drug development, Drug Discovery Pipeline, Drug Discovery Process. Approaches to Drug Discovery: Synthetic/medicinal chemistry, combinatorial synthesis, Natural Product, In Silicon approach or CADD, QSAR, Discovery Genomics.

Module-4:

Personalized medicines, High throughput screening. Manufacturing and packaging Manufacturing-Multitasking machines Packaging-cGMP, USP requirements on containers and closures, Quality Control, Inhalation drug products, drug products for injection, drug products for ophthalmic, liquid based oral and topical drug products, post approval packaging changes.

Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

PRE-CLINICAL STUDIES AND SAFETY

Course Code: CLR4201

Credit Units: 05

Course Objective:

To enrich the understanding of pre-clinical drug discovery procedure in clinical research.
To know the importance of Preclinical studies and various procedure used in clinical trials.

Course Contents:

Module-I:

Experimental animals used, Equipments used in ATC, Sterilization techniques, media for animal cell culture. Cell culture and cell lines, concepts in mammalian and non-mammalian culture, applications of cell culture, Assessment of preclinical data, assessment of cost benefit and risk ratio.

Module-II:

History of toxicity, relationship between dose and toxicity, types of toxicity, factors influencing toxicity, toxins, toxicity studies, special toxicity studies, in vitro models, in situ methods, in vivo models.

Module III:

Good Laboratory Practices, ICMR-GLP guidelines, FDA-GLP guidelines, Organization and personnel, facilities, equipment, testing facilities operation, test and control studies, protocol for and conduct of a non-clinical laboratory study, records and reports, disqualification of testing facilities, OECD-GLP guidelines, quality assurance program, facilities, test systems, test and reference items, Standard Operating Procedures, Performance of the study, reporting of study results, storage and retention of records and materials.

Module-IV:

Drug action, mechanism of drug action, dose-response relationship, therapeutic index, undesirable effects, disease modeling—hypertension, asthma, acidity, arthritis, cancer, addiction, autoimmune diseases, pain, epilepsy, inflammation.

Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

IPR & DATA EXCLUSIVITY, BIOETHICS IN CLINICAL RESEARCH

Course Code: CLR4202

Credit Units: 05

Course Objective:

To enrich the understanding of IPR and bioethics procedure in clinical research which sponsor, CRO and Hospital use for patient protection .To know the importance of ethics and IPR law used in clinical trials.

Course Contents:

Module-1:

Intellectual property rights, Laws of IPR, patents, The World Trade Organization and the TRIPS agreement, copy rights, the rationale for IP protection, the evidence about the impact of IP, Technology Transfer, Contracts and Agreements ,CIOMS , Insurance for research injuries, contractual agreement.

Module-2:

The Data Protection Act & data mining, data and disclosure, data exclusivity, data exclusivity as a governmental function, commercial and economical rationale for test data, confidentiality, current state of data protection.

Module-3:

Introduction to bioethics, ethical issues in preclinical (animal) studies, & clinical studies-Ethical principles, Institutional Review Board, Special issues in research. Ethical Guidelines-ICMR, Institutional Ethics Committees, Institutional Review Board, Ethics-SOPs Ethical issues based on methodology of clinical Research. The ethics of clinical research in developing countries.

Module-4:

Basic philosophies of animal ethics: (3 'R's), Animal Ethics Committee, executive, meetings, confidentiality and indemnity, period of approval, joint animal ethics committee, process to establish an AEC, guidelines for ethical conduct in the care and use of animals. Social responsibility for clinical researcher.

Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

REGULATORY AFFAIRS

Course Code: CLR4204

Credit Units: 05

Course Objective:

To enrich the understanding of Regulatory Affairs procedure in clinical research for global business purposes. To know the procedure of regulatory submission from CRO, Sponsor.

Course Contents:

Module-1: Introduction regulatory affairs:

Overview of judicial system in India, Medical Evidence, Privileged Communication and Professional Secrets, The Rights and Obligations of a Medical Professional to Patient, Medical Malpractice, Code of Medical Ethics.

Module-2: Drugs and Cosmetics Act & Schedule Y:

Introduction to Drugs and Cosmetics Act, Aims and Objectives, Definitions, Administrative bodies, Schedules to Drug Rules, Import of drugs, Manufacture of drugs, Sale of drugs, penalties for offence regarding sale of drugs, labelling and packaging of drugs . Schedule Y, Clinical trials, Studies in special populations, Post Marketing Surveillance, special studies. Bioavailability and Bioequivalence studies, Amendment of Schedule Y.

Module-3: Regulatory authorities & ICH:

Regulatory authorities in India- Indian FDA, DCGI, Schedule Y, ICMR, GEAC, AERB, DGFT, DTAB, DBT Guidelines and other important provisions, Indian regulatory approval process, regulatory timelines, approval timeline, approval letter. ICH and Process of Harmonization: History and structure of ICH, Process of Harmonization ICH Guidelines, Categories of ICH guidelines, Quality, Safety, and Efficacy Guidelines.

Module-4: International Regulatory bodies and Guidelines:

US Food and Drug Administration (USFDA): The FDA and Food Drug and Cosmetics Act, New drug development and approval : the principal steps.

India: Regulatory laws, Schedule Y, registration of new drugs, requirements for registration, regulatory environment and practices.

Medicines and Healthcare Products Regulatory Agency (MHRA): Overview of regulatory environment/ background, regulatory authorities, regulatory requirements and procedures.

European Agency for Evaluation of medicinal Products(EMEA): National registration , the decentralized procedures, mutual recognition procedures.

Module-5: Regulatory Requirements of Clinical Trial Application

Investigational New drug (IND): Classifications, IND application process

New Drug Application (NDA): Pre NDA meeting, NDA submission Check list, FDA NDA review

Abbreviated New drug Application (ANDA): ANDA content, ANDA Submission check list, FDA ANDA review check list, ANDA process for generic drugs, guidance documents for ANDAs

Examination Scheme:

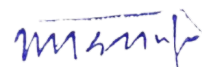

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

Text & References:

- A guide book for regulatory submission: Sandy Weinberg.
- A guide to clinical drug research: A.Cohen& J. Posner.

AUDIT AND INSPECTION

Course Code: CLR4206

Credit Units: 05

Course Objective:

To enrich the understanding of Audit and inspection procedure in clinical research for global business purposes. To know the importance of Audit and inspection for CRO, Sponsor and Hospital.

Course Contents:

Module 1: Introduction to Audits and Quality Assurance:

Quality Assurance, Definition, Quality system, The Quality Plan, Quality Assurance (QA), Quality Control (QC), Differentiating quality control and quality assurance, Structuring the quality assurance function, Critical Issues For Organizing The Quality Assurance Function, Overview Of QA Activities Audits: Definition of audit, Quality Assurance Audits In Clinical Research, Motives For Process Audit, Objectives Of Process Audit, Auditors, Conducting A Clinical Research Department Process Audit, Audit findings, Research Fraud and misconduct, site audits, FDA inspections, PL 483 warning letters, Auditing clinical data management function.

Module 2: Site Audits, Fraud and Misconduct:

Definition of audits as per ICH GCP, Goals and objectives of study site audits, Types of clinical trial site audits, Criteria for onsite audits, The audit process, Audit preparation activities, Common audit findings.

Module 3: FDA Inspections, PL 483, and Warning Letters:

Definitions, Differentiating inspection from audits, Types of inspections, Purpose of regulatory inspections, The process of inspection, forms, warning letters, Selection of the study site for inspection, Forms, warning letters.

Module 4: Clinical Data Management and Auditing CDM function:

Introduction to CDM, Computer system validation (CSV), Clinical Data Management flow.

Data Entry/Remote data entry: First data entry, Second data entry, heads up and heads down data entry, audit trail, , computerized system in clinical trials,

Data Capture: Definition, paper based and electronic data capture, dataflow in paper CRFs and e-CRFs, tools for data capture, advantages and disadvantages of paper CRF/ e-CRF

Data cleaning/validation: Definition, Discrepancy management system, Data Management team, Roles and responsibilities of key team members and sponsor, Introduction to data base design and build, data base validation, Clinical data entry process, data entry process, data entering. Electronic clinical trials, Clinical Trial registry of India (CTRI), Types of audits in CDM, Audit process, Activity-specific audits, Protocol audit, CRF audit, Common findings during a data management audit.

Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

Text & Reference:

- Clinical trials audit-David machin
- Introduction to Audit & inspection-DJ Cockbuern
- Clinical trials audit preparation: a guide for good clinical practice inspection: Vera mihajlovic & madzarevic.

REPORTING AND MEDICAL WRITING

Course Code: CLR4303

Credit Units: 05

Course Objective :

To enrich the student role and responsibility of medical writer in clinical trials. To know the importance of medical writer in clinical research.

Course Contents:

Module-1:

Fundamentals of Medical Writing & Data interpretation and presentation:

The Scope of Medical Writing, Qualities of effective medical writer, role and responsibilities of medical writer in clinical research,

Essential Documents prepared by medical writer-Importance of Essential Documents

Pre Study Document: Investigators Brochure, Financial aspects of the trial, Approval letter from the IRB, IRB Composition etc.

During the Study Documents: Updates on medical/laboratory/technical procedure tests, Subject enrolling log, Investigational product accountability at site, , Audit certificate etc

Post Study Documents: Final report by investigator to IRB, Final report by investigator to regulatory authorities, Clinical study report to document results and interpretation etc, Study Completion documents, Study Termination/closure documents

Module-2:

Study Protocol - The contents of a trial protocol should generally include the topics: General Information, Background Information, Trial Objectives and Purpose. Trial Design, Selection and Withdrawal of Subjects, Treatment of Subjects, Assessment of Efficacy, Assessment of Safety, Biostatistics, Direct Access to Source Data/Documents, Quality Control and Quality Assurance, Ethics, Data Handling and Record Keeping, Financing and Insurance, Publication Policy, Supplements, Annexure.

Case Report Forms (CRF) & e-CRF- Study Title, Inclusion Criteria, Exclusion Criteria, Patient Screening, Admission /discharge procedure, Visit wise, Period wise, Laboratory Analysis, Vital signs, Diet restriction, Concomitant medication, withdrawal/drop out details, Adverse Events Form, Serious Adverse Event Form.

Module-3:

Informed Consent Form/Assent Form- Study title, What is the purpose of research, The study design, Study Procedures, Women of childbearing potential, Possible risks , Possible benefits, Compensation, Possible benefits to other people, The alternatives you have, Cost to the participant, Confidentiality of the information of subject/patient, decision to participate/ not participate, Withdrawal of the consent, Right to new information, Contact persons, Patient consent form, Patient Information Sheet, Patient visit diary

Standard Operating Procedures (SOP) in Clinical Trials - Need of SOPs, What is SOPs, Benefits of SOPs, different types of SOPs, SOP Writing SOPs and Guideline, Implementation and monitoring of SOPs, Change control.

Module-4:

The Clinical Study Report

Structure of CSR and possible modifications, study patients, efficacy evaluation, safety evaluation, discussion and overall conclusions, tables, figures and graphs referred to but not included in the text, reference list, appendices. Reference ranges (normal ranges), Interpretation of normal values, Units of measurement, Factors Affecting interpretation of test.

PHARMACOGENOMICS

Course Code: CLR4304

Credit Units: 04

Course Objective:

To enrich the student important role of pharmacogenomics in drug discovery in clinical trials
To know the importance of pharmacogenomics in clinical research

Course Contents:

Module 1: Introduction to pharmacogenomics:

History, Chronology of Events, Pharmacogenetics and Pharmacogenomics: The Difference, Benefits of Pharmacogenetics, Pharmacogenetics in Practice, Promise of Pharmacogenomics, Limitations, Pharmacogenomics drugs in the market, Future of Pharmacogenomics

Module 2: Determinants of drug response & Bioinformatics tools for pharmacogenomics:

Pharmacokinetics and pharmacodynamics of drug, drug properties that influence its pharmacokinetics and pharmacodynamics .Bioinformatics, Divisions of Bioinformatics, Fields Related to Bioinformatics, Application of Bioinformatics in various disciplines/fields, Major categories of Bioinformatics Tools with examples

Module 3: Pharmacogenetics of enzymes and transporters:

Xenobiotic -Phase I and II reactions Drug transporters-Structure and model of drug transporters, transport mechanisms, polarized expression of drug transporters, drug transporters in barrier epithelium, classification of drug transporters, ABC and SLC transporters, genetic variation and drug response, genetic variation in membrane transporters

Module 4: Clinical pharmacogenomics and clinical trials:

Pharmacogenomics in clinical practice, the role of drug metabolizing enzymes in cardiovascular pharmacology, Pharmacogenetics and clinical trials-Issues in clinical trials ethical implications of pharmacogenomics research, guidance on pharmacogenomics data.

Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

PRACTICAL DEMONSTRATION (DRY LAB)

1. To navigate different component of NCBI including PUBMED
2. To search literature in NCBI-PUBMED using Bollean operators
3. To find out the details on a given molecule including gene, gene symbol, OMIM, chromosome location

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

4. To find out the details on a given molecule including protein, HPRD architecture, localization in human protein atlas, proteins sequence,
5. To study drug-drug interaction to find out if there is synergism, antagonism, or additive outcome using COMPUSYN software
6. To count cells in a given sample for cell viability using trypan blue assay (Virtual)
7. To separate different cell types from blood samples and their segregation using surface markers
8. To perform BLAST to know if your sequence aligned with existing sequence or not using BLAST alignment tool
9. To perform in silico PCR using primer sequence to know the output with coding along or coding and non-coding sequences
10. To predict ORF to know if a sequence has potential to code for a protein
11. To determine which sequence in pool of DNA sequences is more or less stable based on Nitrogenous base content

PROJECT MANAGEMENT AND PHARMACOVIGILANCE

Course Code: CLR4306

Credit Units: 05

Course Objective:

- To enrich the student role and responsibility of Project manager in clinical trials.
- To enrich the student role and responsibility of Pharmacovigilance and various safety monitoring's in clinical trials.
- To know the importance of Pharmacovigilance in clinical research.

Course Contents:

Module 1: Project Management Process & Project Development Plan in clinical research:

The triple constraints in Project Management, Project management activities, Project objectives, Project management Documents, Project control variables, Project Management & Clinical Trials, Role of Project Management in Clinical Trials, Major Roles of a Project Manager in a CRO, Ensuring Project Success. Initiating, Planning, Executing, Monitoring & Controlling, Closing .Preparation of Clinical Project Development Plan, Contents of Clinical Project Development, Plan, Review and Approval of CPDP.

Module 2: Clinical Research outsourcing & Services Offered by CROs:

Outsourcing in Clinical Research, Reasons for outsourcing to contract research organizations, Benefits of outsourcing, Out/In-Sourcing of Clinical Services, Scope and Future of CRO, List of Clinical Research Organizations in India, List of IT companies offering services in Clinical Research, Outsourcing in Clinical Trial Management, Clinical Trial Monitoring, Pharmacovigilance - Drug Safety, Data Management, Regulatory Affairs, Protocol Development, Site Management, Clinical Trial Supplies, Centralized Lab Management, Centralized ECG reading services, Centralized Imaging Services.

Module 3: Introduction to Pharmacovigilance and safety signals :

Introduction, Definition, requirement of Pharmacovigilance needed, Objectives of Pharmacovigilance, and Agencies concerned with Pharmacovigilance, Reporting ADRs, Methods involved in Pharmacovigilance, Scope of Pharmacovigilance, Adverse Event (AE), Adverse Drug Reaction(ADR), Serious Adverse Drug Reaction (SAE), Unexpected Adverse Reaction, Suspected-unexpected serious Adverse reaction (SUSAR), Reporting of AE & SAE. Risk management process, Signals, and Detection of Signal, Causality assessment.

Module 4: Pharmacovigilance regulations and Periodic safety update reports

Pharmacovigilance in India: Pharmacovigilance centers in India, CDSCO Indian PV guidelines National Pharmacovigilance Program (NPP)

Global Pharmacovigilance& safety standards- Pharmacovigilance activity in USA, Australia, WHO Monitoring of safety aspects – Uppsala Monitoring Center.

Adverse Event reporting form: MEDWATCH, CDSCO Adverse Event Reporting Form, CIOMS form for Serious Adverse event reporting, Medication errors reporting

Periodic safety update reports (PSUR) for marketed drugs : Brief Introduction and Purpose of Periodic safety Update Report, PSUR Content, PSUR Process, Various Regulatory Requirement for PSUR.

Module 5: Pharmacoepidemiology

Pharmacoepidemiology, Guidelines for Good Pharmacoepidemiology Practices (GPP), Registries, Surveys.

Concepts and uses of epidemiology, Components of epidemiological studies – frequency distribution and determinants of diseases, Methods to measure and describe health of population, epidemiological triad.

Natural history of disease, Disease spectrum, Modes of transmission, Levels of prevention. Epidemiological principles of Intervention in prevention and control of disease, Measurement of morbidity and mortality, incidence, prevalence, age adjustment, standardization and Risk Measurement.

Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

DIAGNOSTICS IN CLINICAL RESEARCH

Course Code: CLR4307

Credit Units: 04

Course Objective: To make the students understand the basics of diagnosis and related tests and clinical significance in the field of clinical research.

Course Contents:

Module-1:

Diagnosis in clinical research: Definition of diagnosis, types, different parameters used in diagnosis and its related basic tests.

Diabetes Profile: Diabetes mellitus; Blood glucose; Glucose tolerance test; Glycosylated hemoglobin; urine sugar.

Kidney Profile: Serum total protein; albumin; creatinine; urea; blood urea nitrogen; clearance test; Sodium and Potassium

Module-2:

Pancreatic Function Test: Serum amylase; lipase; secretin stimulation test; serum trypsinogen.

Liver Function Test: SGOT, SGPT, phosphatase, serum bilirubin; albumin; globulins; A/G ratio; gamma-glutamyltranspeptidase .

Module-3:

Cardiac Function Test: SGOT, SGPT, LDH, CK-MB, Troponins and heart-type fatty acid binding protein (H-FABP); Myoglobin; Brain type natriuretic peptide (BNP).

Lipid Profile: Total serum lipids; total serum cholesterol; triglyceride; HDL; LDL; VLDL; Apo 1 and Apo 2

Module-4:

Gastric and Intestinal Function Test: Examination of resting contents; fractional gastric analysis; serum pepsinogen; tubeless gastric analysis; Zollinger-Elison syndrome; lactose intolerance; xylose absorption test; inulin absorption test.

Enzymes in the diagnosis and clinical interpretation: Diagnosis, prognosis and assessment of myocardial infarction, hepatitis, jaundice, pancreatitis, cancer, neurodegenerative disorders.

Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

PATHOPHYSIOLOGY AND THERAPEUTICS

Course Code: CLR4308

Credit Units: 04

Course Objective:

- To empower the students' knowledge with the understanding of pathophysiology of diseases.
- To develop professional interests in the field of diseases therapeutics and its significance in clinical research.

Course Contents:

Module-1:

Fundamentals of Pathophysiology: Definition, terminology, pathology of diseases including etiology, risk factors, signs and symptoms, Systemic pathology of blood vessels and lymphatic's, liver, exocrine pancreas, kidney, endocrine system, musculoskeletal system, nervous system, system associated diseases, communicable and non-communicable diseases overview of diagnosis of the disease and treatment.

Module-2:

Diseases and therapeutics: Etiologic and diseases management of Fever (Acute and chronic), Allergy, Stress, Burns, Obesity, HTN, Diabetes, CVD, Gout, Osteopenia, Osteoporosis, Peptic ulcer, diarrhoea, constipation, mal-absorption syndrome – carbohydrates, fat and lactose intolerance, and celiac disease. Inborn errors of metabolism, Phenylketonuria, Galactosemia, Alkaptonuria, Glomerulonephritis, Nephrotic syndrome, Acute and chronic renal failure, TB, AIDS, Hepatitis, cirrhosis, hepatic failure, pancreatitis, rheumatoid arthritis, schizophrenia, depression, migraine, anxiety, insomnia, thyroid and metabolic disorders and infectious diseases.

Module-3:

Cancer: Types of Cancer-Benign and malignant cancer; Cancer markers -CA15-3, CA19-9, CA-125, PSA, CEA, alpha fetoprotein, beta-HCG and other markers, cancer pathophysiology, therapeutics and research.

Module-4:

Advance laboratory diagnosis, clinical interpretation and research : Assessment of enzymes and hormones-T3, T4, TSH, Testosterone, Estrogens, Progesterone, Prolactin, FSH, ADH, Insulin and Glucagon, Lab testing and clinical interpretation of communicable and non-communicable diseases and latest advancements.

Examination Scheme:

Components	CT	HA	S/V/Q	ATTD	EE
Weightage (%)	15	5	5	5	70

SUMMER INTERNSHIP EVALUATION

Course Code: CLR4335

Credit Units: 06

GUIDELINES FOR SUMMER TRAINING

The main objective of summer training is to familiarize students to laboratory environment and make them learn to handle equipments and softwares, design experiments and analyze the results. The student will be supervised by one or more faculty members and he or she will be required to submit a synopsis. While writing a synopsis emphasis should be given to make it publishable. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student. Initial drafts should be critiqued by the faculty guide and corrected by the student at each stage.

The File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation.

In general, the File should be comprehensive and include

- A short account of the activities that were undertaken as part of the project;
- A statement about the extent to which the project has achieved its stated goals.
- A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;
- Any activities planned but not yet completed as part of the project, or as a future initiative directly resulting from the project;
- Any problems that have arisen that may be useful to document for future reference.

Report Layout

The report should contain the following components:

- TITLE PAGE
- CERTIFICATE
- ACKNOWLEDGEMENT
- ABBREVIATIONS
- CONTENTS WITH PAGE NUMBERS
- CHAPTER –
 - a. INTRODUCTION
 - b. REVIEW OF LITERATURE
 - c. MATERIALS & METHODS
 - d. RESULTS & DISCUSSION
 - e. SUMMARY AND CONCLUSION
 - f. REFERENCES
 - g. APPENDIX (OPTIONAL)
- 1 inch Margin on left side & 1" each on other sides.
- Single side of the paper to be used.
- Times New Roman.

Font Size

- 12 (Bold for headings)
- 12 (Normal for Matter)
- 14 (for Chapter Names)
- 1.5 line spacing
- Numbering on the right hand Top of the page
- Numbers on pages before chapters to be done in Roman at the bottom of the page

References

This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

Examples

For research article

Voravuthikunchai SP, Lortheeranuwat A, Ninrprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichia coli* O157: H7. *Clin Microbiol Infect*, **8** (suppl 1): 116–117.

For Book

Kowalski, M. (1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), 7: 63-67

- Scientific names in Italics
- Cover Page containing - Title, Students Name, Supervisors Name, University, Name (along with logo), Course name & year of Submission in the prescribed format
- 2 copies to be submitted

ASSESSMENT OF THE PROJECT FILE

Essentially, marking will be based on the following criteria: the quality of the report, the technical merit of the project and the project execution.. Evaluation will compose of two components - Project report assessment and Viva - voce. Project report assessment will be done by the two internal faculty members in respective fields. A committee of three faculty members will conduct Viva-voce. Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project will be assessed as per evaluation format.

Examination Scheme:

Project Report	50
Viva Voce	50
Total	100

Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

DISSERTATION

Course Code: CLR4437

Credit Units: 20

GUIDELINES FOR PROJECT FILE

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critiqued by the faculty guide and corrected by the student at each stage.

The File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation.

In general, the File should be comprehensive and include

- A short account of the activities that were undertaken as part of the project;
- A statement about the extent to which the project has achieved its stated goals.
- A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;
- Any activities planned but not yet completed as part of the project, or as a future initiative directly resulting from the project;
- Any problems that have arisen that may be useful to document for future reference.

Report Layout

The report should contain the following components:

➤ Title or Cover Page

The title page should contain the following information: Project Title; Student's Name; Course; Year; Supervisor's Name.

➤ Acknowledgements (optional)

Acknowledgment to any advisory or financial assistance received in the course of work may be given.

➤ Abstract

A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project

➤ Table of Contents

Titles and subtitles are to correspond exactly with those in the text.

➤ Introduction

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

➤ Materials and Methods

This section should aim at experimental designs, materials used. Methodology should be mentioned in details including modifications if any.

➤ **Results and Discussion**

Present results, discuss and compare these with those from other workers, etc. In writing these section, emphasis should be given on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary never write in “point” form.

➤ **Conclusion**

A conclusion should be the final section in which the outcome of the work is mentioned briefly.

➤ **Future prospects**

➤ **Appendices**

The Appendix contains material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

➤ **References/ Bibliography**

This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

Examples

For research article

Voravuthikunchai SP, Lortheeranuwat A, Ninrprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichia coli* O157: H7. *Clin Microbiol Infect*, 8(suppl 1): 116–117.

For book

Kowalski, M. (1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), 7: 63-67

ASSESSMENT OF THE PROJECT FILE

Essentially, marking will be based on the following criteria: the quality of the report, the technical merit of the project and the project execution.

Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project.

Project execution is concerned with assessing how much work has been put in.

The File should fulfill the following **assessment objectives**:

Range of Research Methods used to obtain information

Execution of Research

Data Analysis

Analyse Quantitative/ Qualitative information

Control Quality

Draw Conclusions

MICROBIOLOGY & VIROLOGY

Course Code: SCT4102

Credit Units: 03

Course Objective:

The course will offer thorough understanding of the biology of different forms of bacteria, fungi, protozoa and viruses, their role in disease development as well as in useful applications in biotechnology.

Course Contents:

Module I

Introduction and historical perspective: Discovery of the microbial world, role of microorganisms in transformation of organic matter and in the causation of diseases, development of pure culture methods. Methods in Microbiology: Principles of microbial nutrition, culture media, theory and practice of sterilization, pure culture techniques.

Module II

Prokaryotic structure and function: functional anatomy of bacteria, cell envelope, cell wall, cytoplasmic membrane, capsule, surface appendages, cytoplasm and cytoplasmic inclusions. Growth: Definition of growth, mathematical expression of growth, growth curve, measurement of growth, synchronous growth, continuous culture, culture collection and maintenance of cultures. Systematics and taxonomy: new approaches to bacterial taxonomy, classification including ribotyping, ribosomal RNA sequencing, characteristics of primary domains, taxonomy, nomenclature and Bergey's manual.

Module III

Metabolic diversity among microorganisms: photosynthesis in microorganisms, role of bacteriochlorophylls, carotenoids and phycobilins, Chemolithotrophy, hydrogen-iron-nitrite-oxidizing bacteria, nitrate and sulphate reduction, methanogenesis and acetogenesis, Fermentations, nitrogen fixation, plant microbe interactions (mycorrhizae).

Module IV:

Archaea as earliest life forms, thermophiles, psychrophiles, halophiles, alkalophiles, acidophiles, hyperthermophiles. Viruses: Bacterial, animal; structure of viruses; Reproduction and life cycle of RNA and DNA viruses; Viroids and prions. Algae and Fungi: Classification and Reproduction. Host-parasite relationship: Normal micro flora of skin, oral cavity, gastrointestinal tract, Respiratory infections; entry of pathogens into the host, types of toxins (Exo, endo, entero) and their mode of actions, Microbial pathogenesis: Disease reservoirs; Epidemiological terminologies; Infectious disease transmission; Sexually transmitted disease including AIDS, Food and water-borne diseases; pathogenic fungi.

Module V

Chemotherapy/antibiotics: Antimicrobial agents, sulfa drugs, antibiotics, penicillin and cephalosporins, broad spectrum antibiotics, antifungal antibiotics; mode of action.

Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

MOLECULAR BIOLOGY & rDNA TECHNOLOGY

Course Code: SCT4103

Credit Units: 02

Course Objective:

A complete understanding of molecular techniques like DNA sequencing, restriction mapping, PCR for the cloning and expression of genes can be obtained through the course.

Course Contents:

Module I

Purification of DNA from bacterial, plant and animal cells, manipulation of purified DNA. Introduction of DNA into living cells, transformation, transduction, electroporation, micro-injection.

Module II

Introduction to gene cloning and its uses, tools and techniques: plasmids, cosmids, transposons and other vectors, DNA, RNA, cDNA, viral and non-viral vectors.

Module III

Clinical applications of recombinant technology; Erythropoietin; Insulin analogs and its role in diabetes; Recombinant human growth hormone; Streptokinase and urokinase in thrombosis; Recombinant coagulation factors, Monoclonal antibodies and their role in cancer; Role of recombinant interferons; Immunostimulants; Immune-suppressors in organ transplants; Role of cytokine therapy in cancers.

Module IV

Analysis of DNA by Southern blotting, Analysis of RNA by Northern blotting, Analysis of proteins by Western blot techniques, Dot blots and slot blots, RFLP, AFLP.

PCR: Basic principles and its modification application and uses.

Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE

BIOANALYTICAL TECHNOLOGIES & INSTRUMENTATION

Course Code: SCT4105

Credit Units: 02

Course Objective:

The course aims to educate students about bio-analytical instruments, principles of their proper functioning, and analysis methods applied to biological data obtained in experimental techniques, methodology and the safe laboratory practice.

Course Contents:

Module I

BSL I, BSLII, BSLIII laboratory facility development: design and regulatory requirements. Sampling and sample preparation: Sample fixing for various analytical applications and sample processing. Principles of microscopy, Light, dark field, fluorescence microscope, confocal microscope, transmission and Scanning electron microscopy, microtomy and analysis and measurement of image. Fluorescence activated cell sorter (FACS) basic principles and applications.

Module II

Electrophoresis of DNA, RNA and proteins. Capillary electrophoresis, Two-dimensional electrophoresis, Southern blotting, Northern blotting, Immunoprecipitation, Western blotting. Sequencing, Next Generation Sequencing, RNA-Seq. etc.

Module III: Centrifugation and Spectroscopy

Centrifugation techniques: Introduction, Basic principle of sedimentation, centrifuges and their uses, Density gradient and analytical centrifugation.

UV and visible spectroscopy, infrared and atomic absorption spectroscopy, fluorescence spectroscopy, mass spectrometry, MALDITOF, nuclear magnetic resonance and electron spin resonance spectroscopy.

Module IV: Chromatography

Introduction to chromatographic techniques: Theoretical basis of chromatographic separations. Column, Thin layer, Paper, Normal phase and reverse phase chromatography, Ion-exchange, Affinity and Gas Chromatography, High performance liquid chromatography (HPLC) and GLC.

Module V

Principles of X-ray diffraction and X-ray Crystallography. Theory and application of UV-VIS, IR, NMR, Fluorescence, Atomic absorption spectroscopy; X-ray diffraction. Introduction to mass spectroscopy Radioisotopic techniques: Introduction to radioisotopes, detection, measurement and uses of radioisotopes, counting efficiency and autoradiography, biotechnological applications

Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

BIOSTATISTICS

Course Code: SCT4106

Credit Units: 03

Course Objective:

The course aims to develop competency and expertise in the application of statistical methods applied to biological data obtained in experimental techniques, methodology and the safe laboratory practice.

Course Contents:

Module I

Statistics and Biostatistics: Preliminary concepts; Measures of Central Tendency: Mean, Median, Mode
Measures of Dispersion: Range, Standard deviation, Variance

Module II: Probability

Random Experiments, Trial and Event, Sample Space, Mutually Exclusive or Disjoint Events, Mutually Exhaustive Events, Equally Probable Events, Complementary Event, Classical definition of Probability, Statistical definition of Probability, Axiomatic definition of Probability, Addition theorem, Multiplication theorem, Conditional Probability, Bayes' Theorem. Expectation.

Module III: Types of Probability Distributions

Introduction to Normal Distribution, Bernoulli Distribution, Uniform Distribution, Binomial Distribution, Poisson distribution, Exponential Distribution

Module IV: Correlation & Regression

Bivariate distribution Correlation, Types of Correlation, Simple Correlation Coefficient for ungrouped data, Properties and Interpretation of Correlation Coefficient, Coefficient of determination, Scatter diagram, Standard Error, Probable error of Correlation Coefficient. Rank correlation, Some examples. Regression lines and Regression Coefficients, Properties of Regression Coefficients, Some examples. Method of least square: Fitting of straight line

Module V: Hypothesis Testing

Parameter, Statistic, Null hypothesis, Alternative hypothesis, Critical region, Type I Error, Type II Error, Level of significance, P-value and its applications. One sample t-test, Paired t-test, Degrees of freedom for t-test, F test for equality of Population variances, Degrees of freedom for F-test. Normal test for sample mean and population mean, Normal test for two sample means. Chi-square Test: Test of goodness of fit, Test of Independence of attributes, Degrees of freedom for Chi-square test, Coefficient of contingency, Yates' correction for continuity. Analysis of Variance: One way and Two-way (only Examples)

BIOLOGICAL PROGRAMMING (BIOINFORMATICS)-I

Course Code: SCT4107

Credit Units: 01

Course Objective:

The course offers a basic understanding of bioinformatics tools and technologies for understanding different biological pathways at systems level as well as for characterizing cross-talks between different pathways.

Course Contents:

Module I: Introduction and overview

The NCBI data model; sequence databases, sequence retrieval, sequence file formats, submitting DNA and protein sequences; classification of biological databases. Sequence databases (EMBL, GenBank, DDBJ, -UNIPROT, PIR, TrEMBL),

Module II: Sequence alignment

Global and local alignments, statistical significance of alignments, scoring matrices and gap penalties, position specific scoring matrices, programs and methods for Pairwise and multiple alignment, pattern searching programs, family and superfamily representation - Pfam, hidden Markov models.

Module III: Predictive methods using DNA and protein sequences

ESTs: construction, databases, clustering, gene discovery and identification, and functional classification. Protein family/domain databases (PROSITE, PRINTS, Pfam, BLOCK, etc), Cluster databases-An Introduction, Specialised databases (KEGG, etc), Database technologies (Flat-file), Protein identification tools, physical properties, motifs and patterns

Module IV: Structure databases

Structural databases - PDB and MMDB, structure file formats, Secondary and tertiary structure prediction methods in proteins, Internal and external coordinate system, software to visualize secondary and tertiary structural information in protein.folding classes, structure classification databases – SCOP and CATH;

Module V: Comparative genome analysis

Phylogenetic analysis, Evolutionary Models, Character and distance based Tree building methods; tree evaluation, phylogenetic analysis, parsimony, maximum likelihood trees; Trees-splits and metrics on trees, tree interpretation, Distance – additive, ultrametric and nonadditive distances.

CELL & MOLECULAR BIOLOGY LAB

Course Code: SCT4108

Credit Units: 01

Course Contents

Module I

Microscopy: Light microscopy, Bright field, Phase contrast.

Module II

Cell culture: aseptic suspension and adherent cell culture techniques. Cell number enumeration and cell passage methods, and methods for characterization of cells in culture and cell proliferation.

Module III

Induction and characterization of apoptosis and necrosis. Cell mitosis and meiosis and karyotyping techniques. Cell mounting techniques, and study of permanent slides of different types of cancer.

Module IV

Bacterial culture techniques, single cell clone isolation, bacterial transformation and transduction techniques.

Module V

Study of physical and chemical mutagens on growth of *E. coli*; PTC test.

Examination Scheme:

MOLECULAR BIOLOGY & rDNA TECHNOLOGY LAB

Course Code: SCT4109

Credit Units: 01

Course Objective:

The laboratory experiments in Recombinant DNA Technology would certainly help to comprehend the theoretical aspects of the subject.

Course Contents:

Module I

Study of cloning (GFP cloning)

Module II

Design and execution of PCR, RT-PCR, quantitative RT-PCR

Module III

Study of Southern hybridization

Module IV

Study of RAPD

Module V

Site directed mutagenesis

Examination Scheme:

BIOANALYTICAL TECHNOLOGIES & INSTRUMENTATION LAB

Course Code: SCT4110

Credit Units: 01

Course Contents:

Module I

Cell disruption techniques

Module II

Centrifugation – low speed and high speed.

Module III

Spectrophotometer techniques

Module IV

Chromatography –Paper Chromatography and Thin Layer Chromatography

Module V

Electrophoresis –SDS Page and Agarose gel electrophoresis.

TERM PAPER

Course Code: SCT4131

Credit Units: 01

METHODOLOGY

A term (or research) paper is primarily a record of intelligent reading in several sources on a particular subject.

The students will choose the topic at the beginning of the session in consultation with the faculty assigned. The progress of the paper will be monitored regularly by the faculty. At the end of the semester the detailed paper on the topic will be submitted to the faculty assigned. The evaluation will be done by Board of examiners comprising of the faculties.

GUIDELINES FOR TERM PAPER

The procedure for writing a term paper may consists of the following steps:

1. Choosing a subject
2. Finding sources of materials
3. Collecting the notes
4. Outlining the paper
5. Writing the first draft
6. Editing & preparing the final paper

1. Choosing a Subject

The subject chosen should not be too general.

2. Finding Sources of materials

- a) The material sources should be not more than 10 years old unless the nature of the paper is such that it involves examining older writings from a historical point of view.
- b) Begin by making a list of subject-headings under which you might expect the subject to be listed.
- c) The sources could be books and magazines articles, news stories, periodicals, scientific journals etc.

3. Collecting the notes

Skim through sources, locating the useful material, then make good notes of it, including quotes and information for footnotes.

- a) Get facts, not just opinions. Compare the facts with author's conclusion.
- b) In research studies, notice the methods and procedures, results & conclusions.
- c) Check cross references.

4. Outlining the paper

- a) Review notes to find main subdivisions of the subject.
- b) Sort the collected material again under each main division to find sub-sections for outline so that it begins to look more coherent and takes on a definite structure. If it does not, try going back and sorting again for main divisions, to see if another general pattern is possible.

5. Writing the first draft

Write the paper around the outline, being sure that you indicate in the first part of the paper what its purpose is. You may follow the following:

- a) statement of purpose
- b) main body of the paper
- c) statement of summary and conclusion

Avoid short, bumpy sentences and long straggling sentences with more than one main ideas.

6. Editing & Preparing the final Paper

- a) Before writing a term paper, you should ensure you have a question which you attempt to answer in your paper. This question should be kept in mind throughout the paper. Include only information/ details/ analyses of relevance to the question at hand. Sometimes, the relevance of a particular section may be clear to you but not to your readers. To avoid this, ensure you briefly explain the relevance of every section.
- b) Read the paper to ensure that the language is not awkward, and that it "flows" properly.
- c) Check for proper spelling, phrasing and sentence construction.
- d) Check for proper form on footnotes, quotes, and punctuation.
- e) Check to see that quotations serve one of the following purposes:
 - (i) Show evidence of what an author has said.
 - (ii) Avoid misrepresentation through restatement.
 - (iii) Save unnecessary writing when ideas have been well expressed by the original author.
- f) Check for proper form on tables and graphs. Be certain that any table or graph is self-explanatory.

Term papers should be composed of the following sections:

- 1) Title page
- 2) Table of contents
- 3) Introduction
- 4) Review
- 5) Discussion & Conclusion
- 6) References
- 7) Appendix

Generally, the introduction, discussion, conclusion and bibliography part should account for a third of the paper and the review part should be two thirds of the paper.

Discussion

The discussion section either follows the results or may alternatively be integrated in the results section. The section should consist of a discussion of the results of the study focusing on the question posed in the research paper.

Conclusion

The conclusion is often thought of as the easiest part of the paper but should by no means be disregarded. There are a number of key components which should not be omitted. These include:

- a) summary of question posed
- b) summary of findings
- c) summary of main limitations of the study at hand
- d) details of possibilities for related future research

References

From the very beginning of a research project, you should be careful to note all details of articles gathered.

The bibliography should contain ALL references included in the paper. References not included in the text in any form should NOT be included in the bibliography.

The key to a good bibliography is consistency. Choose a particular convention and stick to this.

Bibliographical conventions

Monographs

Crystal, D. (2001), Language and the internet. Cambridge: Cambridge University Press.

Edited Volumes

Gass, S./Neu, J. (eds.) (1996), Speech acts across cultures. Challenges to communication in a second language. Berlin/ NY: Mouton de Gruyter.

[(eds.) is used when there is more than one editor; and (ed.) where there is only one editor. In German the abbreviation used is (Hrsg.) for Herausgeber].

Edited Articles

STEM CELL TECHNOLOGY

Course Code: SCT4201

Credit Units: 02

Course Objective: The objective of this paper is to familiarize the students with stem cell technology and its applications for betterment of the society. The course is designed to give a broad view of mammalian stem cells, reviewing where they are found in the body, the different types and how they are cultured. The topics will cover the basic biology of these stem cells as well as bioengineering and application of these stem cells to potential treatments of human diseases.

Course Contents:

Module I: Introduction to stem cells

Definition, properties, proliferation and, culture of stem cells, medical applications of stem cells, ethical and legal issues in use of stem cells.

Module II: Types of stem cells.

Stem Cell biology and therapy, types embryonic stem cell, Adult stem cell, Stem Cell Biology and Therapy, Embryonic Stem Cells, culture and the potential benefits of stem cell technology

Module III: Gene Therapy

Gene Therapy: Introduction, history and evolution of Gene therapy, optimal disease targets. Genetic perspectives for Gene Therapy, Gene Delivery methods: Viral vectors and Non-viral Vectors. Failures and successes of gene therapy. Future prospects of gene therapy.

Module IV: Therapeutic applications of stem cells

Applications of stem cells in cell replacement and gene therapy approaches. Stem cells in drug discovery.

Module V: Ethical Issues associated with stem cell-based regenerative medicine field

Regulatory and ethical considerations of stem cell and gene therapy. Assessing human stem cell safety, use of genetically modified stem cells in experimental gene therapies.

Examination Scheme:

BIOLOGICAL PROGRAMMING (BIOINFORMATICS)-II

Course Code: SCT4204

Credit Units: 01

Course Objective:

It enables the students to access biological information networks and databases in order to understand the different techniques of biotechnology to build detection systems especially in the prevention and treatment of human diseases.

Course Contents:

Module I: Data Models and Database Management Systems

File systems vs. DBMS, advantages of DBMS, Levels of abstraction and data independence; Data models and their comparison; Entity relationship model -concepts, design, keys and features; Relational model - introduction, structure of the relational databases, integrity constraints, Relational algebra and calculus - selection and projection, set operations, renaming, Joins, Division etc.

Module II: Introduction to Biological scripting languages: BioJava

BioJava modules for sequence alignment, data mining, structure alignment.

Module III: BioPerl & BioPython

BioPerl & BioPython modules for sequence alignment, data mining, structure alignment,

Module IV: Introduction to R Programming

Introduction to R Programming R basics; Data structures in R; R programming fundamentals; Working with data in R; Strings and Dates in R;

Module V: R/Bioconductor for advanced biological data analysis

Overview of the Bioconductor; Pre-processing microarray data; Differential gene expression; Distances, prediction, and cluster analysis; Annotation and metadata Visualization; GO;

MOLECULAR MEDICINE: PRINCIPLES AND APPLICATIONS

Course Code: SCT4205

Credit Units: 03

Course Objective

The students will be exposed to basic concepts related with human health development of different types of infectious and non-infectious diseases.

Course Contents

Module I: Medical Biotechnology

History and scope of medical biotechnology, current status and future prospects.

Module II: Classification of genetic diseases

Chromosomal disorders – Numerical disorders e.g. trisomies & monosomies, Structural disorders e.g. deletions, duplications, translocations & inversions, Chromosomal instability syndromes. Gene controlled diseases – Autosomal and X-linked disorders, Mitochondrial disorders.

Module III: Molecular basis of human diseases

Mechanism of disease development, Genetic susceptibility, Identification of targets for diagnosis and therapy: Acquired diseases, cardiovascular diseases, Neurological diseases, Hematology, Cancer. Pathogenic mutations: Gain of function mutations: Oncogenes, Huntingtons Disease, Pittsburg variant of alpha 1 antitrypsin. Loss of function: Tumour Suppressor. Dynamic Mutations - Fragile- X syndrome, Myotonic dystrophy. Mitochondrial diseases.

Module IV: Traditional and Modern Tools for Detection of Genomic Abnormalities

Classical gene mapping techniques, next generation sequencing technology.

Module V: Nucleic acid based Therapy

Gene silencing technology, siRNA, Aptamers, antisense oligodeoxynucleotides (AS-ODN), Ribozymes, Peptide Nucleic Acids

NANO-MEDICINE AND TECHNOLOGIES

Course Code: SCT4206

Credit Units: 03

Course Objective:

Nanotechnology is the branch of biotechnology that utilizes nanomaterials for biological applications to develop novel solutions to different scientific and medical problems. Students will learn basic concepts, techniques and technologies and applications of nanomaterials for biotechnology and medical applications.

Course Contents:

Module I: Introduction to Nanotechnology

Historical perspective of the developments in the field of nanotechnology. Classification of nanostructured materials, physical environment regulations governing nanomaterials, and rules governing health and safety regulations for chemicals and nanomaterials.

Module II: Investigation and manipulation of nanomaterials

Principal and applications of electron microscope, scanning probe microscope, optical microscope, Fourier transform Infrared spectroscopy, X-ray photoelectron spectroscopy, and X-ray diffraction for nanoscience and technology.

Module III: Nanostructures for medicinal applications and toxicity

Introduction to nanomedicine and nanobiotechnology materials, their applications and therapeutic and commercial implications. Micro- and nanoscale control of cellular environment for tissue engineering. Nanoparticle contrast agents for molecular magnetic resonance imaging. Nano-material-based cancer therapeutics.

Module IV: Safety and regulatory issues associated with nanomaterials

Nanomaterials and toxicity evaluation: cytotoxicity, genotoxicity, in-vivo-tests and assays. Biological barriers to nanocarrier-mediated delivery of therapeutic and imaging agents.

Module V: Societal implications of nanoscience

From first industrial revolution to nano-revolution. Implications of nanoscience and nanotechnology for society, nano policies, nano arms race, public perception and public involvement in nano discourse. Harnessing nanotechnology for economical and social development

FERMENTATION TECHNOLOGY AND ITS APPLICATIONS IN MOLECULAR MEDICINE

Course Code: SCT4207

Credit Units: 03

The course will educate students about use microorganism to produce various compounds of commercial interest. The student will be exposed to various techniques available for large scale cultivation of microorganisms.

Course Contents:

Module I

Introduction to fermentation process, Batch and Continuous production systems of cultivation, Solid-state fermentation process.

Module II

Selection of industrial microorganisms, media for fermentation, aeration, pH, temperature and other requirements during fermentation, downstream processing and product recovery, food industry waste as fermentation substrate.

Module III

Production of compounds like, antibiotics, enzymes, organic acids, solvents, beverages, SCP.

Module IV

Production of fermented dairy products

Module V

Immobilized enzymes systems, production and applications.

Examination Scheme:

STEM CELL TECHNOLOGY LAB

Course Code: SCT4208

Credit Units: 01

Course Contents:

Module-I:

Stem cell isolation and characterization.

Module-II:

Generation of iPSC lines and characterization of their pluripotency profile and genome stability (Stem Cell Karyotype analysis).

Module-III:

Differentiation of iPSC into somatic cell lineages and characterization of stem cell-derived somatic cell populations.

Module-IV:

Functional characterization of stem cell-derived somatic cell populations.

Module-V:

Recent advances in stem cell therapeutics and stem cell-based drug discovery.

NANO-MEDICINES AND TECHNOLOGIES LAB

Course Code: SCT4209

Credit Units: 01

Course Objective:

This course offers understanding of generation of nano particles, their characterization and applications.

Course Contents:

1. Demonstration about occupational health and safety (OHS) and workplace health and safety (WHS) in nanotechnology.
2. Preparation of aqua regia, its handling and role in washing glass-ware for metal nanoparticles synthesis.
3. Optimization of temperature for metal nanoparticle preparations using biological materials.
4. Synthesis of silver nanoparticles and analysis of their surface Plasmon resonance (SPR) properties.
5. Neem extract mediated silver nanoparticle synthesis and analysis of their optical properties.
6. Dye degradation using silver nanoparticles synthesized in experiments 4 and 5.
7. Preparation of metal oxide nanoparticles and their characterization.
8. Interactions of silver nanoparticles with red blood cells.
9. Interaction of silver nanoparticles with bacterium and their antimicrobial properties.
10. Preparation of nanoparticles containing polymeric films.

Examination Scheme:

FUNDAMENTAL IMMUNOLOGY-I LAB

Course Code: SCT4210

Credit Units: 01

Course Contents:

1. Blood film preparation and identification of cells.
2. Immuno-diffusion.
3. Hemagglutination, Agglutination inhibition.
4. Rocket immune-electrophoresis.
5. Western blotting, ELISA.
6. Epitope prediction using Immuno-informatics tool.
7. Isolation of Peripheral blood mononuclear cells.
8. Phenotype analysis.

Examination Scheme:

BIOLOGICAL PROGRAMMING (BIOINFORMATICS)-II LAB

Course Code: SCT4211

Credit Units: 01

Course Contents:

Module I

Database creation using DDL and DML. Defining the primary and secondary keys. Implementation of selection, projection and joins (internal and external) with MySQL

Module II

Introduction to Linux Shell Programming, Running BioJava Scripts

Module III

Running BioPerl and BioPython Scripts

Module IV

Programming in R basic scripts

Module V

R/Bioconductor programming for DEGs, Visualization and annotation.

Examination Scheme:

CANCER BIOLOGY & CANCER THERAPEUTICS (T CELL AND ANTIBODY-BASED THERAPEUTICS)

Course Code: SCT4301

Credit Units: 03

Course Objective: The objective of this paper is to provide students greater understanding of different approaches for T cell-based and antibody-based cancer immunotherapy approaches.

Course Contents:

Module I

Biology and mechanism of cancer development. Chemotherapy, radiation therapy, immunotherapy of cancer.

Module II

History of Vaccine Development, Definition of Vaccine, Evolution of Vaccines, Process development for vaccines, Manufacturing of vaccines, Various aspects of vaccines, process development and manufacturing.

Module III

Clinical development of vaccines, Clinical end-point: Evolution of vaccines, General specifications and pharmaceuticals release criteria for the existing vaccines, Cold chain management of vaccines, Current vaccine research: Immune checkpoint strategies in cancer immunotherapy.

Module IV

Engineered anti-tumor immunity: T cell receptor (TCR) and chimeric antigen receptor technology development and TCR/CAR-engineered anti-tumor immunity.

Module V

Antibody-based cancer immunotherapy. Antibodies as drug carriers.

Examination Scheme:

VACCINES AND PRECLINICAL ANIMAL MODELS

Course Code: SCT4303

Credit Units: 02

Course Objective:

The application of Animal Biotechnology covers major areas related to commercial applications. Importance will also be given to areas like *in vitro* fertilization, animal cell and tissue culture, hormone vaccine and important enzyme production through animal biotechnology.

Course Contents:

Module I

Historical perspectives, sterilization methods, organ culture - culture techniques, plasma clot, raft methods, agar gel, grid method, organ engineering. Cell culture substrates, cultural media, natural and artificial media, initiation and maintenance of cell cultures, cell culture products, cryopreservation techniques, immobilized cultures

Module II

In vitro fertilization and embryo transfer

Module III

Somatic cell hybridization, hybridoma technology. Animal genetic engineering, vectors, gene transfer methods: microinjection, virus mediated and other methods of gene transfer

Module IV

Transgenic animals with new traits, transgenic animals as bioreactors for producing pharmaceutically important compounds and therapeutics. Animal models for cancer research.

Module V

Bioethical issues related to utilization of animals in ,

Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

ETHICS OF BIOMEDICAL RESEARCH, INTELLECTUAL PROPERTY (IP), IP RIGHTS (IPR)

Course Code: SCT4306

Credit Units: 02

Course Objective

The aim of this course is to develop the understanding of relevance, business Impact and protection of Intellectual Property along with the types of Intellectual Property Rights: Patents, Trademarks, Copyrights, Industrial Designs, Geographical Indications and International Conventions, Biosafety and Bioethics

Course Contents

Module I: Basic Principles and Acquisition of Intellectual Property Rights

Basic Principles of Patent Law, Patent Application procedure, Drafting of a Patent Specification, Understanding Copyright Law, Basic Principles of Trade Mark and Design Rights, International Background of Intellectual Property

Module II: Ownership and Enforcement of Intellectual Property Rights

Patents-Objectives, Rights, Assignments, Defences in case of Infringement. Copyright-Objectives, Rights, Transfer of Copyright, work of employment Infringement, Defences for infringement. Trademarks-Objectives, Rights, Protection of goodwill, Infringement, Passing off, Defences. Designs-Objectives, Rights, Assignments, Infringements, Defences of Design Infringement, Enforcement of Intellectual Property Rights - Civil Remedies, Criminal Remedies, Border Security measures, Practical Aspects of Licensing - Benefits, Determinative factors, important clauses, licensing clauses.

Module III: Biotechnology and Intellectual Property Rights

Objective, Evolution, Basic Structure of Gene Techniques, Applications, Commercial Potential of Biotech Inventions, Rationale for Intellectual Property Protection. Patenting Biotechnology Inventions-Objective, Concept of Novelty, Concept of inventive step, Microorganisms, Moral Issues in Patenting Biotechnological inventions. Plant Varieties Protection-Objectives, Justification, International Position, Plant Varieties Protection in India Protection of Geographical Indications Objectives, Justification, International Position, Multilateral Treaties, National Level, Indian Position.

Module IV

Biosafety and Bioethics Management-Key to environmentally responsible use of biotechnology. Cartagena Protocol on Biosafety, Ethical implications of Biotechnological products and techniques. Biosafety: History, evolution and concept of biosafety; need and application of biosafety in laboratories and industries; biosafety guidelines and regulations, international and national norms of biosafety; Implementation of biosafety guidelines; Classification and Description of Biosafety levels. Good laboratory practice (GLP) and Good manufacturing practice (GMP), Use of GMO's and their release, GM products, issues in use of GMO's, risk for animal/human/agriculture and environment owing to GMOs. Bioethics: Introduction and need of bioethics, its relation with other branches, types of risk associated with genetically modified microorganisms, Ethical Issues involving GMOs; ethics related to human cloning, human genome project, prenatal diagnosis, agriculture and animal rights, data privacy of citizens health; ethical issues in India and abroad through case studies.

PLANT BIOTECHNOLOGY AND ITS APPLICATIONS IN MOLECULAR MEDICINE

Course Code: SCT4307

Credit Units: 02

Course Objective:

The application of Plant Biotechnology covers major areas related to commercial applications. Regeneration of plants through *in vitro* techniques offers a practical strategy for micro propagation. Importance will also be given to areas like *in vitro* fertilization, animal cell and tissue culture, hormone vaccine and important enzyme production through animal biotechnology.

Course Contents:

Module I

Historical perspective of plant tissue culture.
Tissue culture lab and organization
Sterilisation techniques
Types of nutrient media and media composition
Plant regeneration pathways
Role of phytohormones
Cell culture techniques- cell, tissue, organ cultures, callus culture, suspension culture
Culture techniques Callus culture, cell culture and protoplast cultures.

Module II

Organogenesis and somatic embryogenesis.
Applications of plant tissue and cell culture.
Micropropagation, pathogen free plants. production haploids,
Somaclonal variation.preservation of germplasm.

Module III

Genetic engineering in plants, - transformation vectors
Gene transfer techniques-vector mediated and vector less gene transfer.
Transgenic plants transgene integration and expression

Module IV

Transgenic crop with new traits-herbicide tolerance, insect and disease resistance,
Therapeutic proteins and compounds
Oral vaccines
Production of secondary metabolites via tissue culture
Bioethics of plant genetic engineering.

FUNDAMENTAL IMMUNOLOGY-II LAB

Course Code: SCT4308

Credit Units: 01

Course Contents:

Module I

Blood film preparation and identification of cells. Identification of blood groups.

Module II

Isolation of serum. Purification of IgG through affinity chromatography

Module III

Immunohistochemistry. Lymphoid organs and their microscopic organization.

Module IV

WIDAL Test

Module V

Radial Immuno-diffusion Test. Ouchterlony Double diffusion Test. DOT, Sandwich ELISA.

GENOMICS & PROTEOMICS LAB

Course Code: SCT4309

Credit Units: 01

Course Contents:

Module I

Three dimensional Structures – In silico study – large molecular complexes RNA polymerase II, ribosome, unstructured proteins

Module II

Microarray and Microarray data analysis, DNA sequencing methods, next generation sequencing.

Module III

Comparison of two given genomes

Module IV

Inference of protein function from structure

Module V

Gene finding tools and Genome annotation.

STEM CELL CULTURE LAB

Course Code: SCT4310

Credit Units: 01

Course Objective:

Students will learn methods for isolation, culture and maintenance of immune cells, for example T cell lines, human primary T cells and antigen presenting cells. Students will also learn nuances of antigen-specific immune response generation, antigen processing and presentation, cell phenotype analysis, cell proliferation, cell death and cytotoxicity assays.

Course Contents:

1. Culture of immortalized immune cell lines, for example Jurkat, T2-A2 etc.
2. Isolation of CD4 and CD8+ T cells from human peripheral blood.
3. Cell phenotype analysis, calculation of CD4:CD8 ratio in normal healthy individual blood.
4. Isolation and characterization of antigen presenting cells.
5. Activation of T cells by non-specific stimulus as well as by engaging their T cell receptor (TCR).
6. Cell proliferation assay.
8. Generation, and phenotypic and functional characterization of antigen-specific T cell response.
9. B cell culture and hybridoma technology.

SUMMER INTERNSHIP EVALUATION

Course Code: SCT4335

Credit Units: 03

GUIDELINES FOR PROJECT FILE

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critiqued by the faculty guide and corrected by the student at each stage.

The File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation.

Methodology

The students will be sent to various industries and institutes where they will undergo short term training. After the completion of the training the students will be required to submit project report which shall then be evaluated by two internal examiners. The students will then have to appear for a Viva Voce examination to be conducted by an external evaluator at the end of the semester.

In general, the File should be comprehensive and include

- A short account of the activities that were undertaken as part of the project;
- A statement about the extent to which the project has achieved its stated goals.
- A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;
- Any activities planned but not yet completed as part of the project, or as a future initiative directly resulting from the project;
- Any problems that have arisen that may be useful to document for future reference.

Report Layout

The report should contain the following components:

➤ Title or Cover Page

The title page should contain the following information: Project Title; Student's Name; Course; Year; Supervisor's Name.

➤ Acknowledgements (optional)

Acknowledgment to any advisory or financial assistance received in the course of work may be given.

➤ Abstract

A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project

➤ Table of Contents

Titles and subtitles are to correspond exactly with those in the text.

➤ **Introduction**

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

➤ **Materials and Methods**

This section should aim at experimental designs, materials used. Methodology should be mentioned in details including modifications if any.

➤ **Results and Discussion**

Present results, discuss and compare these with those from other workers, etc. In writing these section, emphasis should be given on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in textbooks. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations

should also be numbered and unless it is really necessary never write in “point” form.

➤ **Conclusion**

A conclusion should be the final section in which the outcome of the work is mentioned briefly.

➤ **Future prospects**

➤ **Appendices**

The Appendix contains material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

➤ **References / Bibliography**

This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

Examples

For research article

Voravuthikunchai SP, Lortheeranuwat A, Ninrpm T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichia coli* O157: H7. *Clin Microbiol Infec*, **8** (suppl 1): 116–117.

For book

Kowalski, M. (1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), **7**: 63-67

ASSESSMENT OF THE PROJECT FILE

Essentially, marking will be based on the following criteria: the quality of the report, the technical merit of the project and the project execution.

Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project. Project execution is concerned with assessing how much work has been put in. The File should fulfill the following *assessment objectives*:

Range of Research Methods used to obtain information

Execution of Research

Data Analysis

Analyse Quantitative/ Qualitative information

Control Quality

Draw Conclusions

Examination Scheme:

TERM PAPER

Course Code: SCT4331

Credit Units: 02

METHODOLOGY

A term (or research) paper is primarily a record of intelligent reading in several sources on a particular subject.

The students will choose the topic at the beginning of the session in consultation with the faculty assigned. The progress of the paper will be monitored regularly by the faculty. At the end of the semester the detailed paper on the topic will be submitted to the faculty assigned. The evaluation will be done by Board of examiners comprising of the faculties.

GUIDELINES FOR TERM PAPER

The procedure for writing a term paper may consists of the following steps:

- Choosing a subject
- Finding sources of materials
- Collecting the notes
- Outlining the paper
- Writing the first draft
- Editing & preparing the final paper

1. Choosing a Subject

The subject chosen should not be too general.

2. Finding Sources of materials

- d) The material sources should be not more than 10 years old unless the nature of the paper is such that it involves examining older writings from a historical point of view.
- e) Begin by making a list of subject-headings under which you might expect the subject to be listed.
- f) The sources could be books and magazines articles, news stories, periodicals, scientific journals etc.

3. Collecting the notes

Skim through sources, locating the useful material, then make good notes of it, including quotes and information for footnotes.

- d) Get facts, not just opinions. Compare the facts with author's conclusion.
- e) In research studies, notice the methods and procedures, results & conclusions.
- f) Check cross references.

4. Outlining the paper

- c) Review notes to find main sub-divisions of the subject.
- d) Sort the collected material again under each main division to find sub-sections for outline so that it begins to look more coherent and takes on a definite structure. If it does not, try going back and sorting again for main divisions, to see if another general pattern is possible.

5. Writing the first draft

Write the paper around the outline, being sure that you indicate in the first part of the paper what its purpose is. You may follow the following:

- a) statement of purpose
- b) main body of the paper
- c) statement of summary and conclusion

Avoid short, bumpy sentences and long straggling sentences with more than one main ideas.

6. Editing & Preparing the final Paper

- g) Before writing a term paper, you should ensure you have a question which you attempt to answer in your paper. This question should be kept in mind throughout the paper. Include only information/details/ analyses of relevance to the question at hand. Sometimes, the relevance of a particular section may be clear to you but not to your readers. To avoid this, ensure you briefly explain the relevance of every section.
- h) Read the paper to ensure that the language is not awkward, and that it "flows" properly.
- i) Check for proper spelling, phrasing and sentence construction.
- j) Check for proper form on footnotes, quotes, and punctuation.
- k) Check to see that quotations serve one of the following purposes:
 - (iv) Show evidence of what an author has said.
 - (v) Avoid misrepresentation through restatement.
 - (vi) Save unnecessary writing when ideas have been well expressed by the original author.
- l) Check for proper form on tables and graphs. Be certain that any table or graph is self-explanatory.

Term papers should be composed of the following sections:

- Title page
- Table of contents
- Introduction
- Review
- Discussion & Conclusion
- References
- Appendix

Generally, the introduction, discussion, conclusion and bibliography part should account for a third of the paper and the review part should be two thirds of the paper.

Discussion

The discussion section either follows the results or may alternatively be integrated in the results section. The section should consist of a discussion of the results of the study focusing on the question posed in the research paper.

Conclusion

The conclusion is often thought of as the easiest part of the paper but should by no means be disregarded. There are a number of key components which should not be omitted. These include:

- summary of question posed
- summary of findings
- summary of main limitations of the study at hand
- details of possibilities for related future research

References

From the very beginning of a research project, you should be careful to note all details of articles gathered.

The bibliography should contain ALL references included in the paper. References not included in the text in any form should NOT be included in the bibliography.

The key to a good bibliography is consistency. Choose a particular convention and stick to this.

Bibliographical conventions

Monographs

PROJECT/ DISSERTATION

Course Code: SCT4437

Credit Units: 18

Course Objective:

The students are expected to utilize their scheduled periods by undertaking the project that would be completed during the semester

Every student shall undertake a major Project. The major Project shall be undertaken in some biotechnology industry or laboratory of repute. Each student shall be assigned to a faculty who shall continuously monitor the progress of the Project in the concerned laboratory or industry. The faculty, in consultation with the concerned scientist of the industry/laboratory, shall decide the topic of the project. At the conclusion of the project the student shall submit a seminar and a dissertation. The dissertation shall be evaluated by the internal faculty/examiner. The student then shall have to appear for the viva voce examination.

GUIDELINES FOR PROJECT FILE

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critiqued by the faculty guide and corrected by the student at each stage.

The File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation.

In general, the File should be comprehensive and include

- A short account of the activities that were undertaken as part of the project;
- A statement about the extent to which the project has achieved its stated goals.
- A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;
- Any activities planned but not yet completed as part of the project, or as a future initiative directly resulting from the project;
- Any problems that have arisen that may be useful to document for future reference.

Report Layout

The report should contain the following components:

➤ Title or Cover Page

The title page should contain the following information: Project Title; Student's Name; Course; Year; Supervisor's Name.

➤ Acknowledgements (optional)

Acknowledgment to any advisory or financial assistance received in the course of work may be given.

➤ **Abstract**

A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project

➤ **Table of Contents**

Titles and subtitles are to correspond exactly with those in the text.

➤ **Introduction**

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

➤ **Materials and Methods**

This section should aim at experimental designs, materials used. Methodology should be mentioned in details including modifications if any.

➤ **Results and Discussion**

Present results, discuss and compare these with those from other workers, etc. In writing these section, emphasis should be given on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

➤ Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary never write in "point" form.

➤ **Conclusion**

A conclusion should be the final section in which the outcome of the work is mentioned briefly.

➤ **Future prospects**

➤ **Appendices**

The Appendix contains material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

➤ **References / Bibliography**

This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

Examples

ASSESSMENT OF THE PROJECT FILE

Essentially, marking will be based on the following criteria: the quality of the report, the technical merit of the project and the project execution.

Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project.

Project execution is concerned with assessing how much work has been put in.

The File should fulfill the following *assessment objectives*:

Range of Research Methods used to obtain information

Execution of Research

Data Analysis

Analyse Quantitative/ Qualitative information

Control Quality

Draw Conclusions

Examination Scheme:

Dissertation: 50

Viva Voce: 50

Total: 100

RESEARCH METHODS, EPIDEMIOLOGY AND STATISTICS

Course Code: SLP4101

Credit Units: 05

Objectives: After completing this course, the student will be able to understand

- a) clinical research designs and statistical methods,
- b) epidemiological issues and its relevance in speech-language research,
- c) evidence based practice in speech and language pathology, and
- d) ethical practices in research

Course Contents:

Module-1: Experimental Designs and Their Applicability in Speech-language Research

- a) Types of research- post facto research, normative research, standard group comparison, experimental research, clinical and applied research, sample surveys, evaluation research
- b) Methods of observation and measurement, strategies and designs in research
- c) Experimental designs, single subject designs and group designs
- d) Critical analysis of the research methods employed in Speech-language Pathology.
- e) Documentation and research writing
- f) Ethical considerations in research – National and international guidelines

Module-2: Epidemiology

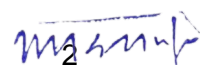

- a) Epidemiology: Definition, basic concepts – scope and function of epidemiology
- b) Study designs in epidemiology: Cohort studies, case-control studies, cross-sectional studies, clinical trials
- c) Measures in epidemiology – Ratios, proportions, rates, relative risk, odds ratio
- c) Identify biases and their consequences in published literature.
- d) Describe criteria for characterizing the causality of associations.
- e) Application of epidemiology in evaluation and screening procedures employed in Speech-language Pathology
- f) Application and impact of epidemiology on national and local policy; influence of epidemiology on ethical and professional issues

Module-3: Statistical Measures and their Features

- a) Review of data description and exploratory data analysis (Numerical summaries and graphical summaries)
- b) Probability concepts and models
- c) Statistical Inference – Estimation Confidence Intervals
- d) Statistical Inference – Basic concepts related to hypothesis testing –null hypothesis, alternative hypothesis, significance level, statistically significant, critical value,

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

acceptance / rejection region, p-value, power, types of errors: Type I (α), Type II (β), one-sided (one-tailed) test, Two-sided (two-tailed) test

- e) Parametric and non-parametric approaches to hypothesis testing
- f) Categorical data analysis - contingency tables, Chi-square test for independence of attributes,
- g) Measures of association (Contingency coefficient, Cramer's V), Kappa coefficient

Module-4: Regression, Univariate and Multivariate Analysis

- a) Correlation, regression analysis and prediction including multiple regression; logistic regression; path analysis
- b) Analysis of Variance (ANOVA)- Basic models, assumptions, one way and two way ANOVA; Consequence of failure of assumptions underlying ANOVA; Tests for additivity, homogeneity, transformation; Post – hoc tests; Analysis of Covariance (ANOCOVA); Repeated measure ANOVA
- c) Multivariate analysis: Need for multivariate analysis, various methods including MANOVA, MANCOVA
- d) Introduction to principal component analysis, factor analysis, discriminate function, multidimensional scaling
- e) Evaluation of application of statistics to different research designs used in different publications
- f) Critical analysis of research articles in the field: Analysis of research designs in different areas of Speech-language Pathology

Module-5: Evidence Based Practice

- a) Introduction to Evidence Based Practice (EBP) and Steps to EBP from formulating foreground question, finding best current evidence, critical appraisal of best current evidence, summarizing evidence, integrating evidence and tracking progress.
- b) Concepts related to practical significance (effect size) vs. statistical significance, precision of measurement (confidence intervals)
- c) Levels of evidence: For experimental and non-experimental designs; treatment efficacy-randomized control study, quasi experimental study, correlation and case study, single subject designs, expert committee report, consensus conference
- d) Measures of diagnostic accuracy – positive and negative likelihood ratios; positive predictive value, negative predictive value, diagnostic odds ratio
- e) Concepts related to randomized control trials: Comparative groups- allocation concealment / random allocation; importance of participation and follow up in understanding, evaluating and applying randomized controlled trial results
- e) Methods of carrying out therapy trials; execution, indexing and reporting of therapy trials –efficacy studies; Conventions to study outcomes - i) Absolute risk reduction, ii) Absolute benefit increase, iii) Absolute risk increase, and iv) Absolute benefit reduction
- f) Systematic review and meta-analysis; importance of research publications in terms of systematic review, meta-analysis, clinical practice guidelines, health technology assessments.
- g) Challenges in implementation of EBP in Speech-language Pathology in India and future directions

SPEECH SCIENCE AND SPEECH PRODUCTION

Course Code: SLP4102

Credit Units: 05

Objectives: At the end of the course, the students will be able to

- a) describe the physiology of speech production,
- b) discuss acoustic theories of speech production,
- c) describe the acoustic characteristics of speech sounds, and
- d) know the application of acoustic analysis and speech synthesis.

Course Contents:

Module-1: Introduction to the Study of Speech Physiology

- a) Physiological aspects of speech production (respiration, laryngeal and articulator subsystem)
- b) Aerodynamics of speech: mechanics of airflow – laminar, orifice and turbulent flow: maintenance of airway pressure for speech
- c) Speech breathing
- d) Lower air way dynamics: anatomy, laryngeal and lung activity in speech: conversational speech and loud speech; glottal activity in the production of speech sounds and whisper
- e) Upper airway dynamics: constrictors in upper airway; aerodynamics of speech sounds
- f) Measures of respiratory analysis and instrumentation: intraoral and sub glottal pressure; instrumentation

Module-2 : Theories of Speech Production

- a) Acoustic theory of speech production: source and filter characteristics; output speech and its characteristics
- b) Critical evaluation of acoustic theory of speech production
- c) Aspects of speech acoustics
- d) Aspects of prosody and their realization
- e) Characteristics and production of vocal music: Contrast with speech production

Module-3: Instrumentation for Studying Speech

- a) Acoustic analysis of speech - techniques of digital signal processing, Long Term Average Spectrum
- b) Software for acquisition and acoustic analysis – freeware and patented software
- c) Spectrogram: Identification of sounds and their acoustic features through spectrogram
- d) Physiological measurements: Techniques and instrumentation like Electromyography, Stroboscope, Electroglottography, Ultrasound, EMMA, evoked potentials, FMRI, PET

Module-4 : Acoustic and Aerodynamic Characteristics of Speech Sounds

- a) vowels and diphthongs
- b) plosives
- c) nasal consonants
- d) fricatives
- e) other consonants - affricates, glides and liquids
- f) effects of context and speaker

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Module-5: Application of Acoustic Analysis and Speech Synthesis

- a) Applications of acoustic analysis in speech disorders.
- b) Forensic applications: semiautomatic and automatic methods.
- c) Infant cry analysis- characteristics of normal and abnormal cries, models, infant cry as a tool for early identification of high-risk babies
- d) Speech synthesis and its applications: articulator, parametric synthesis and analysis by synthesis

Examination Scheme:

CLINICAL (INTERNAL)

Course Code: SLP4106

Credit Units: 10

Know how

- a) Perform acoustic analysis of speech including FFT, LPC, cepstrum and inverse filtering; acoustic analysis of vowels, diphthongs, plosives, nasals, fricatives, Affricates and other speech sounds using spectrograms on PRAAT
- b) Vowel synthesis using parametric and analysis by synthesis; demonstration of articulator synthesis
- c) Observation of stroboscopic evaluation of persons with voice disorders as part of team assessment
- d) Observation of endoscopic examination of persons with cleft lip and palate as part of team assessment
- e) Differential diagnosis of conditions relevant to speech and hearing as per DSM-V and ICD 10 classifications

Demonstrate

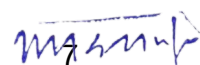

- a) Measurement of aerodynamic parameters using pyrometers and instrumentation for aerodynamic analysis
- b) Record language samples of 5 typically developing children and 5 children with language disorders, transcribe the samples using International Phonetic Alphabet (IPA) and perform analysis of language in terms of different components of language
- c) Carry out and interpret the acoustic measures of voice on two recorded samples and correlate with the perceptual analysis
- d) Complete perceptual analysis of speech samples of persons with CLP.
- e) Demonstration of therapy techniques for disorders of speech sound, voice, and fluency.
- f) Practice and learn to use the strategies of direct selection, scanning, encoding and word prediction in a communication board/book or aided AAC system in simulated situation
- g) Practice and learn to use finger spelling and signs for functional vocabulary
- h) Learn to operate AAC devices, aids and software

Do

- a) Complete evaluation, write detailed evaluation report, counsel persons with communication disorder and their families as required for the following:
 - 1) Five children with language disorders using appropriate tests/protocols: Autism Spectrum Disorders, Attention Deficit Hyperactivity Disorder (ADHD), cognitive impairment and global developmental delay.
 - 2) Five persons with stuttering using standardized tests (SSI, SPI etc.), including assessment of rate of speech, type, percent of dysfluencies, and quality of life measures.
 - 3) Five persons with voice disorders including perceptual assessment using different scales, acoustic analysis of voice and patient reported outcome measurement.
 - 4) Five children with speech sound disorders – record and transcribe speech samples (word and connected speech), carry out error analysis – pattern analysis, calculate percentage consonant correct, mean length of utterance.
- b) Plan and carry out appropriate intervention program for children and adults with voice and fluency disorders, children with language disorders and children with speech sound disorders.
- c) Plan and carry out intervention program for a child with language disorder using AAC

ADVANCED IN SPEECH SOUND DISORDER

Course Code: SLP4201

Credit Units: 05

Objectives: At the end of the course, the students will be able to

- a) describe recent theories and concepts related to phonological development and its disorders,
- b) diagnose and manage children with speech sound disorders,
- c) provide comprehensive care including speech therapy for persons with CLP as a member of the cleft palate team, and
- d) guide and counsel families of children with CLP.

Course Contents:

Module-1: Phonological Development and Disorders

- a) Recent concepts in theories of phonological development: Generative phonology, natural phonology, non-linear phonology, optimality theory
- b) Application of phonological theories in evaluation and management of phonological disorders
- c) Co-articulation – Types (anticipatory, carryover); Models of co-articulation - feature based, syllabic, allophonic, target, physiological and degree of articulator constriction models); Physiological / Acoustical / Perceptual studies in co-articulation
- d) Current concepts in taxonomy of speech sound disorders in children

Module-2: Assessment and Management of Children with Phonological Disorders

- a) Comprehensive phonological assessment procedures – Formal and informal; Independent and relational analyses; dynamic assessment
- b) Assessment of phonological awareness and phonological processing in children with speech sound disorders
- c) Critical appraisal of test material in Indian context - Specific issues in phonological assessment in multilingual environments
- d) Determining need for intervention and intervention decisions

Module-3: Management of Children with Speech Sound Disorders

- a) Evidence based approaches to intervention – Motor based approaches, linguistic based approaches; use of non-speech oro-motor activities
- b) Motor learning principles – applications to interventions
- c) Considerations in intervention: methods to measure clinical change and determining progress in therapy and generalization
- d) Specific considerations in intervention within multilingual contexts.
- e) Use of software applications (Apps) in intervention; Use of tele-health for intervention of speech sound disorders

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Module-4: Cleft Lip and Palate

- a) Phonological development in children with CLP
- b) Development of other language attributes (morphology, semantics, syntax, pragmatics)
- c) Velopharyngeal Closure- normal physiology, parameters affecting velopharyngeal closure and nature of velopharyngeal dysfunction in persons with CLP
- d) Perceptual assessment protocols for speech characteristics in children with repaired CLP
- e) Instrumental assessment of velopharyngeal closure- Imaging techniques, acoustic measurements, aerodynamic measurements

Module-5: Management of Persons with CLP

- a) Surgical, orthodontic and prosthodontic management in CLP.
- b) Early intervention for children with CLP – Methods and studies related to efficacy
- c) Speech and language therapy for persons with velopharyngeal dysfunction
- d) Current evidence based practices in assessment and management of CLP

Examination Scheme:

VOICE SCIENCE AND DISORDER

Course Code: SLP4202

Credit Units: 05

Objectives: At the end of the course, the student will be able to

- a) understand the bio-mechanics of voice production in normal individuals and in those with voice disorders,
- b) explain and assess the roles of breathing mechanism, vocal fold vibration, vocal tract resonance and enunciation in voice production,
- c) delineate the varying roles and responsibilities of a SLP in a trans-disciplinary (medical) team to assess and treat voice disorders in children, adults, geriatrics and specific population including professional voice users, and
- d) appraise different service delivery models and procedures to run a voice clinic

Course Contents:

Module-1: Voice Science

- a) Vocology – scope and objectives
- b) Breathing and voicing: lungs and airways, breathing mechanism as an interactive sound generating system: breathing oscillator & voicing oscillator, combining the breathing and voicing oscillators with voicing
- c) Vocal folds and voice: Biology of vocal fold tissue and lamina propria, muscular properties and vocal behaviors, biomechanics and voice control/modulation, voice fatigue, vocal injury and recovery, wound healing
- d) Resonance and voice: concepts of acoustic impedance, reactance, inertance, and compliance, acoustic impedance of the vocal tract, the effect of vocal tract reactance on self-sustained vocal fold oscillation, idealized vocal tract shapes and voice quality, modulating phonation with articulation and prosody

Module-2: Voice Assessment and Voice Disorders

- a) Vocometry: assessing vocal ability: principles, methods and procedures: General assessment principles, evaluation procedures, tools of measurement, purpose of measurement, measurement scales, auditory perceptual evaluation- speech breathing, voice quality, resonance, and overview of instrumentation for voice assessment: visualization techniques, acoustic analysis, aerodynamic analysis, glottography, nasometry and electromyography
- b) Voice disorders: issues in definition, incidence and prevalence, occupational risks and voice disorders
- c) Classification of voice pathologies, characteristics and path physiology: Structural, neuropathology, idiopathic, functional/behavioral - pathologies related to mechanical stress, tissue elasticity, fluid transport, airway environment and abnormal muscle activation
- d) Voice disorders in specific populations: Laryngectomy, pediatric voice disorders, aging voice, professional voice, vocal cord dysfunction/paradoxical vocal fold motion, transgender and transsexual voice

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Module-3: Voice Habilitation

- a) Voice management team, roles and functions
- b) Pharmacological and surgical effects on voice: Current trend in medical and surgical management: Medications for bacterial and other infections, allergies, edema, pain, asthma, cough, gastric and laryngopharyngeal reflux, stage fright, spasmodic dysphonic, mood conditions, sleep disturbance, hormone imbalances, etc. Voice surgeries – pre-operative and post-operative care and precautions
- c) Voice habilitation: Current views and approaches; EBP for voice and its disorders; Voice therapy methods for children and adults.
- d) Voice exercise principles and procedures: Physiological voice therapy methods Vs. Behavioral voice therapy methods, role of vocal hygiene and voice rest, basics of exercise physiology, general principles, types of exercises, exercise prescription and progress, vocal exercise techniques – vocal function exercises, resonant voice exercise, confidential voice therapy, and other voice exercises including psychological approaches, relapse and restoration
- e) Habilitation of persons with laryngectomy: Speech and medical considerations in laryngectomy, voice restoration in laryngectomees, counseling and quality of life

Module-4: Voice Needs and Problems in Professional Voice Users

- a) Vocal professionals and voice disorders: classification, pathologies affecting voice – frequency, personal and social impacts, occupational hazards and issues, nature of voice problems: repetitive strain injuries, acute injuries and chronic problems – presentation, assessment and treatment
- b) Laryngeal rest, modified voice rest/conservative voice use, vocal hygiene; laryngeal rest versus exercise: effects on wound healing, general wound healing processes
- c) Voice habilitation for singers and other elite vocal users: Demands on voice, nature of vocal training and use, voice fatigue and assessment, basic principles of motor learning, awareness training, and vocal exercises, concept of professional voice care team – role of medical and non-medical team players
- d) Voice habilitation for teachers: voice problems in teachers: nature and manifestation, use of voice in classroom and factors influencing, vocal loading and assessment, vocal fatigue, techniques to improve the speaking voice and delivery, voice projection techniques, vocal education and counseling

Module-5: Service Delivery and Other Professional Issues

- a) Scope of practice in the area of voice – training in endoscopy, documentation, tele practice – trends across globe and in India (practice guidelines, technical reports, position statements, knowledge and skills document relevant to voice as per RCI, ASHA, European Laryngological Society, and other relevant professional/statutory body). Issues in adopting and implementing the same in India.
- b) Patient compliance and concordance to voice management: Relevance of voice problems/voice problems as a public health concern, measuring severity of voice condition, measurement of compliance to management options, treatment variables and effects, patient-clinician interactions, socio cultural and economic considerations
- c) Voice clinics: SLP led clinics Vs. SLP in a medical team, space and other infrastructural requirements, specialty clinics considering needs of specific population such as singers, transgender, transsexuals, non-native speakers, broad casters, etc.

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- d) Research and ethics in clinical practice: overview of basic and applied research in voice, ethics in clinical research, informed consent, clinical trials, methods to popularize services- roles of associations, conferences, working groups, awareness movements/drives like world voice day, camps, public awareness programs, role of media, prevention of voice problems.

Examination Scheme:

Components	CD	CA	MSE	A	EE
Weightage (%)	5	5	15	5	70

DISORDER OF FLUENCY

Course Code: SLP4203

Credit Units: 05

Objectives: At the end of the course, the students will be able

- a) explain the nature, types and bases of fluency and its disorders,
- b) discuss the theories and models of stuttering,
- c) describe, diagnose and manage persons with different types of fluency disorders,
- d) implement a team of professional for evaluation and management of fluency disorders,
- e) counsel the clinical clientele, their family members and others to manage the problem, and
- f) evaluate research output in the area of fluency and its disorders

Course Contents:

Module-1: Overview of Fluency and its Disorders

- a) Dimensions of fluency disorders- recent advances; Suprasegment
- b) Development of fluent speech: Factors affecting fluency of speech
- c) Theories of stuttering - linguistic, articulator, audiological, laryngeal and genetic predisposition
- d) Neuro anatomical, neuro-physiological bases of fluency disorders
- e) Cortical activation patterns in stuttering – neuromotor problem
- f) Stuttering as a timing disorder
- g) Feedback and feed-forward models of stuttering.

Module-2: Types of Non-fluencies and Dysfluencies

- a) Normal non-fluency and developmental stuttering
- b) Cluttering- causes and characteristics
- c) Neurogenic, Psychogenic and other types of fluency disorders
- d) Stuttering in persons with multiple disability

Module-3: Assessment of Fluency and Dysfluency

- a) Objective tools for assessment of fluency and its disorders
- b) Subjective and perceptual assessment
- c) Electrophysiology in the evaluation of fluency disorders
- d) Functional radiological studies of stuttering
- e) Cognitive dimension of stuttering
- f) Diagnosis and differential diagnosis

Module-4: Management of Disorders of Fluency

- a) Spontaneous recovery and relapse
- b) Principles of therapy; skill training
- c) Approaches to management of fluency disorders in adults and children
- d) Group therapy
- e) Input from allied professionals in the management of fluency disorders
- f) Behavioral and work-place management

- g) Counseling - including parents and teachers
- h) Social help and advocacy groups
- i) Apps based and other innovative modes including tele mode.

Module-5: Recovery and Related Issues

- a) Relapse and recovery pattern in fluency disorders
- b) Efficacy and outcome measures of fluency therapy
- c) Evidence based practice
- d) Bilingualism / multilingualism relating to stuttering and cultural sensitivity
- e) Ethics in research and management of stuttering

Examination Scheme:

Components	CD	CA	MSE	A	EE

CLINICAL (EXTERNAL)

Course Code: SLP4205

Credit Units: 10

Know how

- f) Perform acoustic analysis of speech including FFT, LPC, cepstrum and inverse filtering; acoustic analysis of vowels, diphthongs, plosives, nasals, fricatives, Affricates and other speech sounds using spectrograms on PRAAT
- g) Vowel synthesis using parametric and analysis by synthesis; demonstration of articulatory synthesis
- h) Observation of stroboscopic evaluation of persons with voice disorders as part of team assessment
- i) Observation of endoscopic examination of persons with cleft lip and palate as part of team assessment
- j) Differential diagnosis of conditions relevant to speech and hearing as per DSM-V and ICD 10 classifications

Demonstrate

- i) Measurement of aerodynamic parameters using spirometer and instrumentation for aerodynamic analysis
- j) Record language samples of 5 typically developing children and 5 children with language disorders, transcribe the samples using International Phonetic Alphabet (IPA) and perform analysis of language in terms of different components of language
- k) Carry out and interpret the acoustic measures of voice on two recorded samples and correlate with the perceptual analysis
- l) Complete perceptual analysis of speech samples of persons with CLP.
- m) Demonstration of therapy techniques for disorders of speech sound, voice, and fluency.
- n) Practice and learn to use the strategies of direct selection, scanning, encoding and word prediction in a communication board/book or aided AAC system in simulated situation
- o) Practice and learn to use finger spelling and signs for functional vocabulary
- p) Learn to operate AAC devices, aids and software

Do

- d) Complete evaluation, write detailed evaluation report, counsel persons with communication disorder and their families as required for the following:
 - 1) Five children with language disorders using appropriate tests/protocols: Autism Spectrum Disorders, Attention Deficit Hyperactivity Disorder (ADHD), cognitive impairment and global developmental delay.
 - 2) Five persons with stuttering using standardized tests (SSI, SPI etc.), including assessment of rate of speech, type, percent of dysfluencies, and quality of life measures.
 - 3) Five persons with voice disorders including perceptual assessment using different scales, acoustic analysis of voice and patient reported outcome measurement.
 - 4) Five children with speech sound disorders – record and transcribe speech samples (word and connected speech), carry out error analysis – pattern analysis, calculate percentage consonant correct, mean length of utterance.
- e) Plan and carry out appropriate intervention program for children and adults with voice and fluency disorders, children with language disorders and children with speech sound disorders.
- f) Plan and carry out intervention program for a child with language disorder using AAC

Examination Scheme:

Components	CRW	C/P/A	CT	A	VIVA
Weightage (%)	15	15	15	5	50

CRW- Clinical record writing, CPA- Case discussion/presentation/analysis, CT- Class test A- Attendance, Viva –External

NEUROGENIC SPEECH DISORDER

Course Code: SLP4301

Credit Units: 05

Objectives: At the end of the course, the student will be able to

- a) describe the neuroanatomical bases of speech motor control,
- b) explain the models relevant to speech motor control, and
- c) know the methods for assessment and management of neuromotor speech disorders.

Course Contents:

Module-1: Neuroanatomical and Physiological Substrates of Speech Motor Control

- a) Review of neuroanatomical substrates of speech motor control- motor and sensory cortex, sub cortical, cerebella and brain stem structures and their pathways; cranial nerves and peripheral nervous system, types of mechanoreceptors and their topography in speech
- b) Early models of speech motor control: Closed Loop, Open Loop, Associative Chain and Serial Order Model, Schema Theory, Task Dynamic Model, Mackay's Model, Gracco's Model,
- C) Recent Models of Speech Motor Control: DIVA Model
- d) Other speech control models related to development of speech motor control in children
- e) Age related changes in speech motor control

Module-2: Assessment and Management of Dysarthria in Adults

- a) Perceptual methods: Rating scales and tests for speech parameters, prosody, speech intelligibility, and comprehensibility and naturalness.
- b) Recent advances in use of aerodynamic and acoustic analysis of speech among persons with dysarthria
- c) Other physiological analyses of speech subsystems in persons with dysarthria
- d) Behavioral approaches for treatment of speech subsystems affected in persons with dysarthria
- e) Evidence based practice guidelines for management of dysarthria in adults

Module-3: Assessment and Management of Dysarthria in Children

- a) Behavioral approaches to correct posture, tone, and strength and sensori-motor treatment techniques
- b) Specific behavioral approaches in developmental dysarthria: McDonald's Approach and Hardy's Approach
- c) Application of facilitator approaches (neurodevelopment approach and methods for reflex inhibition) in the management of developmental dysarthrias– evidence base for facilitator approaches

Module-4: Assessment and Management of Apraxia of Speech (AOS) in Adults

- a) Assessment for suspected apraxia of speech, apraxia of speech and non-speech apraxia: Perceptual assessment protocols; physiological assessment of speech in adults with AOS
- b) Intervention methods for non-verbal apraxia

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- c) Intervention for AOS in adults: specific, programmed and nonspecific approaches– Evidence based practice
- d) Motor learning principles – applications in intervention of AOS

Module-5: Assessment and Management of Childhood Apraxia of Speech (CAS)

- a) Current status of nature of CAS as primary disorder and CAS as co-morbid condition in other neurodevelopmental disorders
- b) Assessment protocols for CAS and differential diagnosis from other speech sound disorders
- c) Intervention approaches for CAS – Evidence based practice
- d) Motor learning principles – applications in intervention of CAS

Examination Scheme:

Components	CD	CA	MSE	A	EE
Weightage (%)	5	5	15	5	70

CD- Class discussion, CA- Class assignment, MSE – Midterm seasonal exam,
A- Attendance, EE- End semester examination

LANGUAGE AND LITERACY DISORDER

Course Code: SLP4304

Credit Units: 05

Objectives: At the end of the course, the student will be able to

- a) explain the relationships among language, literacy, and cognition and specifically the role of oral language in acquisition of literacy skills,
- b) discuss the development and related disorders pertaining to language and literacy among children,
- c) discuss evidence based assessments of language and literacy skills, and
- d) plan evidence based intervention for children with a focus on oral language based interventions

Course Contents:

Module-1: Reading: Development and Relationship with Language

- a) Concepts related to reading and its acquisition – Decoding, reading accuracy, reading fluency, reading comprehension;
- b) Differences among writing systems for languages; Importance of phoneme-grapheme correspondence for reading
- c) Foundations for development of reading in languages with different writing systems (Phonological processing, phonological awareness, orthographic skills, visual processing skills, oral language skills);
- a) Role of oral language in the acquisition of literacy – Aspects of oral language contributing to decoding (e.g., vocabulary and morphosyntax) and reading comprehension (e.g., syntax, syntactic awareness etc.) and spelling (e.g., morphological awareness)
- b) Stages of reading and writing development – emergent literacy to proficient reading comprehension; Models of reading development in English /alphabetic script and other writing systems.

Module-2: Disorders Related Language and Literacy

- a) Definition and differences among underachievement in school, learning disability, reading disability, dyslexia, dysgraphia, dyscalculia, language learning disability, language impairment/ specific language impairment; DSM V and ICD 10 classifications; challenges in use of classifications.
- b) Linguistic characteristics of students with reading/language/learning disabilities
- c) Issues related to co-morbidity and overlap among phonological disorders, specific language disorders, reading disability and auditory processing disorders with relation to development of reading
- d) Genetics of literacy disorders (family risk, molecular genetics etc.).

Module-3: Assessment

- a) Screening of children for language disorders in schools; Standardized tests to assess language and (English and other languages) in children 5-18years
- b) Other forms of assessments to identify children with language/learning disabilities - Criterion referenced assessments, language sampling, portfolio, dynamic assessment, curriculum-based assessment etc.
- c) Specific assessment tools for learning disability in India (e.g., NIMHANS battery, Dyslexia Assessment for Languages in India and other published tests)

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- d) informal assessment of different domains – Tasks and stimuli in specific languages for phonological awareness, orthographic skills, phonological processing, oral language skills etc.
- e) Brief overview of assessment of associated areas (auditory processing, visual processing, memory etc.)

Module-4: Evidence based Intervention for Literacy Development

- a) Intervention approaches to promote emergent literacy
- b) Intervention approaches to promote decoding and early reading skills
- c) Intervention approaches to promote development of reading comprehension
- d) Intervention approaches to promote spelling and written language output
- e) Research on cross-linguistics issues in intervention; intervention for children with Bilingual / multilingual background and reading intervention

Module-5: Issues related to Service Delivery and Related Laws/Policies

- a) Modes of service delivery for school-aged children (clinical, consultative, collaborative, language-based classroom, peer-mediated)
- b) Team members working children with literacy disorders; Response to Intervention– tiers and their role in instruction for poor readers; role of SLP in Response to Intervention
- c) Acts, regulations and policies relevant to education and children with special needs in India (e.g., Right to Education Act, Sarva Shiksha Abhiyan, regulations related to language exemption in examination, National Open School system).
- d) Dyslexia associations/groups in India

Examination Scheme:

Components	CD	CA	MSE	A	EE
Weightage (%)	5	5	15	5	70

CD- Class discussion, CA- Class assignment, MSE – Midterm seasonal exam,

A- Attendance, EE- End semester examination

COGNITIVE COMMUNICATION DISORDER

Course Code: SLP4305

Credit Units: 05

Objectives: At the end of the course, the student will be able to

- a) describe various conditions in adults leading to cognitive communication disorders,
- b) acquire skills in issues related to assessment of cognitive communication disorders,
- c) acquire skills in management of cognitive communication disorders, and
- d) critically evaluate research articles related to cognitive communication disorders.

Course Contents:

Module-1: An Overview of Cognitive Communication Disorders - Aphasia Related, Traumatic Brain Injury (TBI) and Right Hemisphere Damage (RHD)

- a) Cognition- description of cognitive processes, mapping, mechanisms, concept, schema and properties
- b) Models of memory, cognitive-linguistic processes
- c) Cognitive communication disorders associated with TBI, disability following TBI-WHO-ICF classification, assessment and principles of cognitive rehabilitation of TBI
- e) Nature, assessment and management of various cognitive communication deficits in RHD

Module-2: Dementia and Related Cognitive Disorders

- a) Neuropathology in Alzheimer's Disease (AD), evaluation and intervention of cognitive communication disorders in AD and other dementias
- b) Cognitive communicative aspects in primary progressive aphasia (PPA), evaluation and management of PPA
- c) Role of speech-language pathologist working with persons with dementia

Module-3: Alcohol Induced Language Disorders and Metabolic Disorders of Language

- a) Cognitive communication deficits in alcohol induced and metabolic language disorders
- c) Assessment and management of body structure and function: quantifying and qualifying cognitive communication disorders of alcohol induced and metabolic disorders
- d) Assessment of swallowing in persons with cognitive communication disorders
- e) Differential diagnosis of cognitive communication disorders in adults

Module-4: Physiology, Pathology and Cognitive Communication Changes in young ageing with Aging

- a) Theories aging, and age related changes of the organ system, and cognition
- b) Psychological- death and bereavement, personality development and quality of life
- c) Physical changes and performance- range of motion, strength, endurance praxis, performance work
- d) Aging speech- voice, resonance and articulation and swallowing
- e) Language and cognitive aging: primary, secondary and tertiary aging factors

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Module-5: Ethno-Cultural Dynamics in Cognitive Communication Disorders and Cognitive Communication Approaches.

- a) Language as socio-cultural phenomena in aging
- b) Role of supportive relationships in cognitive communication disorders
- c) Cognitive communication approaches in rehabilitation
- d) Role of AAC in the intervention of cognitive communication disorders
- e) Team and partnerships in cognitive communication disorders
- f) Rights of persons with cognitive communication disorders

Examination Scheme:

Components	CD	CA	MSE	A	EE
Weightage (%)	5	5	15	5	70

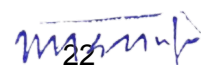

CD- Class discussion, CA- Class assignment, MSE – Midterm seasonal exam,
A- Attendance, EE- End semester examination

CLINICAL (INTERNAL)

Course Code: SLP4306

Credit Units: 10

Know how

- Observation of modified barium swallow and/or flexible endoscopic examination of swallowing as part of team assessment
- Observe and identify reports of persons with neurogenic communication disorders in tests such as EEG, CT Scan, MRI etc.
- Reversible and irreversible conditions that cause neurogenic communication disorders.
- Certification procedures
- Rights and privileges of persons with communication disorder
- Ethics in clinical practice

Demonstrate

- Perform assessment of typically developing child using assessment protocols for learning disability
- Demonstrate process of differential diagnosis for persons with adult language and cognitive communication disorders.
- Use of AAC for adults with communication disorders (e.g., alphabet supplementation board, software applications)
- Perform assessment of phonological awareness, visuospatial skills, orthographic skills on typically developing children.

Do

- Complete evaluation, write detailed evaluation report, counsel persons with communication disorder and their families as required for the following:
 - Three persons with aphasia using appropriate screening, diagnostic (WAB/ BDAE etc.) and performance tool
 - Bed side screening for five adults with communication disorders.
 - Three persons with adult cognition communication disorders using appropriate screening (ACE/MMSE/CLQT etc.), diagnostic (ABCD/CLAP etc.) and performance tool
 - Three persons with motor speech disorders including perceptual evaluation of speech subsystems, speech intelligibility assessment, instrumental assessments for respiration or phonology and quality of life assessment
 - Clinical swallow examination for five persons with concerns in swallowing
 - Three children at risk for language learning disability
- Plan and carry out intervention program for adults with neurogenic speech disorders, aphasia, cognitive communication disorders and dysphagia

Prepare a report for persons with communication disorders for medico-legal purposes

Examination Scheme:

Components	CRW	C/P/A	CT	A	VIVA
Weightage (%)	15	15	15	5	50

PRACTICES IN SPEECH-LANGUAGE PATHOLOGY

Course Code: SLP4401

Credit Units: 05

Objectives: At the end of the course, the students should be able

- a) know the role of an speech-language pathologist in different set-ups.
- b) liaise with other professionals in setting-up an speech-language clinic.
- c) audit speech-language practices in existing set-ups.
- d) implement acts and legislations relating to persons with speech-language impairment,
- e) advise Governments and other agencies on the formulation of policies and legislative acts relating to speech-language disability
- f) understand the legal implications of practice in speech-language pathology.

Course Contents:

Module-1: Scope of Practice, Laws, Regulations and Professional Ethics

- a) Scope of practice in global and Indian scenario
- b) Professional ethics-
- c) Existing acts, legislations, policies related to persons with communication impairment
- d) Role of speech-language pathologists in the formulation of acts, regulations and policies
- e) Implementation of acts, legislations, policies and welfare measures relating to persons with speech-language impairment
- f) Advocacy groups, NGOs
- g) Rights of citizens
- h) National and international standards related to Speech-language pathology

Module-2: Specialized Programs in Speech-language Pathology

- a) Need for specialized programs in Speech-language pathology: Geriatric and persons with multiple handicaps
- b) Other specializations (medical speech language pathology, forensic speech science)
- b) Health, wellness, and health care - Health promotion and disease prevention, quality of life and healthcare finances
- c) Disability-friendly environment including public education
- e) Culture and religion sensitive practice in speech-language practice
- e) Multilingual and multicultural sensitivity in therapeutics and management
- f) Prevention and early identification programs including societal participation

Module-3: Service Delivery Models in Speech-language Pathology

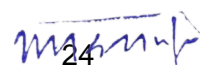

- a) Services in different medical / rehabilitation/ research /educational setups
- b) School based services pertaining to regular and special schools
- c) Community based practice in rural and urban areas
- d) Family empowerment program
- e) Home based delivery of services
- f) Autonomous practice in speech-language pathology
- g) Services for other groups of professionals (professional voice users)

Module-4: Tele-practice in Speech-language Pathology

- a) Information and communication technology in speech-language pathology practice

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- Infrastructure for video-conferencing and tele-practice in Speech-language Pathology
- Techniques/principles of remote testing for screening and diagnostic assessment for speech-language, intervention and counseling
- Challenges and limitations of tele-practice in Speech-language Pathology in screening, assessment and evaluation, selection of aids and appliances, therapeutics and counseling.

Module-5: Issues in Speech-Language Pathology Practice

- Entrepreneurship and planning to set up private practice/clinic for speech-language pathology practice: Clinical ethics
- Documentation in speech-language pathology practice: clinical / demographic data, database management and storage
- ICF framework for documentation /reports
- Quality control and auditing in speech-language pathology practice
- Documenting and implementing evidence based practice in speech-language pathology
- Understanding team approach: Work in cohesion with other professionals
- Information resources in speech-language pathology including books and journals, both electronic and print - Databases - Evidence based practice: Change scenario

Examination Scheme:

Components	CD	CA	MSE	A	EE
Weightage (%)	5	5	15	5	70

CD- Class discussion, CA- Class assignment, MSE – Midterm seasonal exam,
A- Attendance, EE- End semester examination

NUTRITIONAL BIOCHEMISTRY-I

Course Code: DAN4102

Credit Units: 04

Course Objectives

1. This subject makes students understand about the basic concepts of biochemistry like cell and the various processes involved in it like the release of energy.
2. Students are made to know about the various enzymes involved in the various biochemical reactions taking place in the human body.
3. The subject involves understanding of various nutrients and their involvement in the processes occurring in our body.
4. Biochemical structures, various acids, their classification are being learnt by the students.

Module – I :

Principles of Bioenergetics- Concept of free energy, Oxidation and reduction, concept of cell, high energy compounds (ATP, PEP, and Phosphagens), role of ATP/ADP cycle in transfer of high energy phosphates, concept of coupled reactions.

Module – II :

Carbohydrates-

Definition, classification.

Monosaccharides Classification, occurrence, structure, stereoisomerism (DL and RS systems) and Properties, derivatives of Monosaccharides- deoxy sugars and amino sugars. **Disaccharides** of nutritional importance (sucrose, maltose, lactose),

Polysaccharides Homopolysaccharides- starch, glycogen, cellulose, Heteropolysaccharides - glycoprotein, Proteoglycans, mucopolysaccharides, pectins.

Module – III :

Lipids : Definition, classification. Structure and functions of fatty acids (including essential fatty acids) Trans fatty acids, prostaglandins acylglycerols, phospholipids, sphingolipids, glycolipids, steroids (including role of cholesterol). Characterization of fats- saponification, iodine, acid, acetyl and peroxide value.

Module – IV :

Amino acids and Proteins: Common structural features, classification based on the nature of R group, non-protein amino acids, essential amino acids and titration curves of monoamino-monocarboxylic, monoamino-dicarboxylic and diamino-monocarboxylic acids. peptide bond, biological role of proteins, classification of proteins, levels of protein structure- primary, secondary (super secondary elements in brief), tertiary and quaternary structure, forces stabilizing protein structure, denaturation of proteins.

Module – V :

Enzymology: General Characteristics, classification and nomenclature, coenzyme, cofactor, prosthetic group, concept of holoenzyme and apoenzyme, units of enzyme activity, Enzyme kinetics- Michaelis-Menten and Lineweaver-Burk equation for monosubstrate reactions (turnover number), bisubstrate reactions.

Module – VI :

Nucleic acids: Nitrogenous bases, experimental proof of DNA and RNA as genetic material, Chargaff's rules, double helical model of DNA (A, B and Z), DNA packaging, types of RNA and their functions.

FOOD SCIENCE – I

Course Code: DAN4104

Credit Units: 04

Course Objectives:

1. Students learn about the various food groups and their structure and composition
2. Properties of all food groups are included in the subject to make students aware about the various processes
3. Cooking methods involved for making varieties of foods are being known by the students.
4. Various adulterants and their tests of presence are learnt by the students which they can utilize for doing quality check.
5. Evaluating the various foods on different measures is included to make students know about those measures and their use.

Course Contents:

Module – I

Physical & Physiological changes in food.

- a) Colloidal Chemistry as related to food emulsions, foams, sols & gels, osmotic pressure. b) Enzymatic browning immobilized enzymes & enzymes in food Processing.. c) Denaturation of Protein.

Module – II :Cereal and cereal Products:

(A) Cereal grains, structure & composition , Cereal products, Breakfast Cereals. Leavening agents and products.

Module – III :Sugar and Sugar Products

Manufacturing Process of Sugar Stages of sugar Cookery. Starch Structure , gelatinization, Modified Food Starches.

Module – IV :Fruits & Vegetables:

Pigments and colour in Food.

Module – V :Milk & Milk Products:

Composition and properties of milk. Dairy Products: Cultured milk , Yoghurt, butter, Whey, cheese etc.

Module – VI :

Meat , Poultry & Egg: Postmortem changes in meat, tenderizing meat, heat induced changes in meat, meat substitutes.

Egg: Structure & composition , changes during storage, functional properties of egg, egg substitutes.

Module – VII :Food Additives

- a) Meaning, need of food additives.
- b) Antioxidants, chelating agents, coloring agents, curing agents.
- c) Nutrient supplements, Non nutritive sweeteners, pH control agents.
- d) Preservatives, stabilizers and thickeners, Other Additives.
- e) Additives & Food Safety.

Module – VIII :Food Adulteration and Sensory evaluation

Definition, meaning and various tests used in Sensory evaluation & food product development.

NUTRITIONAL BICHEMISTRY LAB

Course Code: DAN4106

Credit Units: 01

Course Objectives:

1. Students learn the process to identify the presence of one or more component present in food.
2. Practical teaches them about the preparation of solutions and buffers.
3. Qualitative and quantitative estimation of nutrients is learnt by the students.
4. The change in activity of certain foods on adding chemicals and observing them.

Course Content:

1. Preparation of standard solutions.
2. Preparation of buffers using buffer tables and verify pH
3. Extraction and quantitative estimation of total sugars and reducing sugar from food stuffs.
4. Isolation and estimation of casein from milk.
5. Quantitative estimation of proteins by kjeldahl's, Biuret and lowary's method (any two methods).
6. Effect of pH, concentration, time and temperature of incubation on enzyme activity.
7. Estimation of activity of alkaline phosphatase in Moong been seeds.

Examination Scheme:

FOOD SCIENCE – I LAB

Course Code: DAN4107

Credit Units: 01

Course Objectives:

1. This practical aims at making students learn about the presence and absence of adulterants in foods.
2. Various experiments to check the purity and quality of foods are included to make students know about them and their use in future.
3. Students learn about the sensory evaluation and the various types and its uses to check the quality of food.
4. Students are made to think about innovative recipes by focussing on new product development and then checking its acceptability.

Assessment of purity and quality of different food

- 1 Detection of metanil yellow in a given food sample .
- 2 Check the presence of rhodamine B in the given food sample.
- 3 Test the presence of sugar in honey.
- 4 Detection of NaHCO₃ in flour.
- 5 Check for the presence of vanaspati and rancidity in the ghee.
- 6 Check the milk for presence of protein, urea, sugar and starch.
7. Check the presence of mineral oil in the edible oil sample.

Sensory Evaluation of Foods\

- 1 Design of sensory experiment – selection of panel, types of panel, training of panel, development of score card , data analysis and interpretation of results.
- 2 Determination of test threshold for the different sensations sweet, salty, sour.
3. Conduct test to know the acceptability of a new product using rating test.

Examination Scheme:

THERAPEUTICS NUTRITION – I LAB

Course Code: DAN4108

Credit Units: 01

Course Objectives:

1. This practical aims to make students learn and make use of the various cooking methods.
2. Students learn to plan about the various diets of various diseases they have learnt in theory.
3. Calculation of nutritive values, the preparation of the planned recipe, its presentation and its evaluation is known by the students.
4. Including the correct choices of foods and the correct method of preparation is being learnt by the students.
5. Students learn the way of presenting a recipe to the person or patient.

Course Content:

Planning, Calculation, Preparation, serving and evaluation of therapeutic diets for diseases covered in theory

Examination Scheme:

IA				EE		
A	PR	LR	V	PR	WT	V
5	10	10	5	25	25	20

ADVANCED NUTRITION-II

Course Code: DAN4201

Credit Units: 03

Course Objectives:

1. To understand about the digestion, absorption and transport of proteins, vitamins and minerals
2. To understand the role of nutrient interaction and drug-nutrient interaction in our body
3. To learn about the practical knowledge of various nutrients.
4. To learn about the physiological, pharmacological and therapeutic effects, toxicity and deficiency of vitamins.

Course Contents:

Module – I

Proteins: Classification, digestion, absorption and transport - review. Protein quality, methods of evaluating protein quality. Protein and amino acid requirements. Therapeutic applications of specific amino acids: Branched chain, glutamine arginine, homocysteine, cysteine, taurine.

Module – II :

Vitamins : Historical background, food sources, absorption and transport, biochemical function. Interactions with other nutrients. Physiological, pharmacological and therapeutic effects, toxicity and deficiency with respect to the following

- a) Fat soluble: Vitamins A, D, E & K.
- b) Water soluble: Thiamine, riboflavin, niacin, biotin, pyridoxine, folic acid, pantothenic acid, ascorbic acid, cyanocobalamin, choline, inositol.

Module – III :

Minerals

(Note: For each nutrient sources, bioavailability, function requirements, RDI/ESADDI, deficiency and toxicity, interactions with other nutrients are to be discussed)

Macro minerals: calcium, phosphorus, magnesium sodium, potassium and chloride.

Micro minerals: Iron, copper, zinc, manganese, iodine, fluoride.

Trace minerals: Selenium, cobalt, chromium, vanadium, silicon, boron, nickel.

Module – IV :Nutrient

Nutrient interaction, drug-nutrient interaction.

Examination Scheme:

NUTRITIONAL BIOCHEMISTRY-II

Course Code: DAN4202

Credit Units: 04

Course Objectives:

1. To understand the metabolism of carbohydrate, amino acid, lipid metabolism and nucleotide.
2. To learn the mechanism of enzyme action and role of enzymes in medicine and food industry.
3. To understand the different bio physical techniques with their applications.
4. To learn about the regulation of metabolic pathways in our body.

Course Contents:

Module – I :

Metabolism of Carbohydrates: Review of glycolysis, fate of pyruvate: alcoholic and homolactic fermentation, Cori cycle, Citric acid cycle. Hexose monophosphate shunt, glycogenesis, glycogenolysis, gluconeogenesis, glyoxalate cycle. Regulation of blood glucose level.

Module – II :

Amino Acid Metabolism: Transamination, deamination, urea cycle, amino acids as biosynthetic precursors- biosynthesis of heme, biologically active amines and glutathione.

Module – III

Lipid Metabolism: Beta-oxidation of saturated and unsaturated fatty acids (including brief account of minor pathways of fatty acid oxidation), biosynthesis of fatty acids, triacylglycerols, Phospholipids, ketone body formation and their utilization, prostaglandins. Major alterations in carbohydrates, protein and fat metabolism in chronic nutrition related degenerative diseases.

Module – III :

Nucleotide Metabolism :Biosynthesis of purines and pyrimidines, DNA replication, transcription, translation, regulation of gene expression (Prokaryotes), mutagenesis and DNA repair, recombinant DNA technology and genetically modified foods.

Module – IV :

Enzymology :Mechanism of enzyme action (acid base catalysis, covalent catalysis, metal ion catalysis, electrostatic catalysis, proximity and orientation effect, preferential binding of the transition state complex, strain and distortion theory) Enzyme inhibition – irreversible(non-competitive, uncompetitive), reversible(competitive), feed back and product inhibition, regulation of enzyme activity by covalent modification, allosteric modification, isoenzymes, applications of enzymes in medicine and food industry

Module – V :

Biophysical Techniques: Chromatography- Column, Thin layer, Paper, Ionexchange, Affinity, Molecular exclusion, GLC and HPLC.

Electrophoresis- cellulose acetate and gel electrophoresis, isoelectric focusing. Spectrophotometry- Beer Lambert's Law, determination and application of extinction coefficient.

Centrifugation- sedimentation velocity and analytical methods, ultracentrifugation. Immunochemical Methods – RIA, ELISA. Use of Isotopes in biochemistry. *Regulation of metabolic pathways should be discussed along with.

RESEARCH MEHODOLOGY

Course Code: DAN4203

Credit Units: 04

Course Objectives:

1. To understand the scientific approaches to research.
2. To appreciate the importance of scientific writing and develop competence in writing skills.
3. To identify the sources of variability and uncertainty in research.
4. To learn about the different methods of research.

Course Contents:

Module – I :

Nature of research in Home Science, scientific approach. Types of Research: Experimental, Field studies, Case study, and Survey research.

Designing research: Problem, hypothesis, concept and types of variables (dependent, independent, random, discrete, continuous, qualitative and quantitative).

Module – II

Methods of data collection: Interview, observation, questionnaire, rating scales. Research Designs: randomized groups, matched groups, pre and post test and factorial.

Sampling: Meaning, importance and types; random (simple, stratified, cluster), Non random (incidental, purposive, quota)

Module – III :

Statistics: Meaning, primary data, array, frequency, frequency distribution and its types.

Measures of central tendency: Mean, Median, Mode; Measures of dispersion: range, mean deviation, standard deviation, root mean square deviation, variance, moments about origin and moments about mean, Binomial and Normal distribution, Skewness and Kurtosis. Case studies of areas of current research. Formulating a research plan and its presentation

Module – IV :

Type of Articles (review, letters etc). Scientific paper format (Abstract, Introduction, Materials and Methods, Results, Discussion). Writing, evaluating, presenting and publishing the results of scientific research in the academic press (journals, conferences etc). Choosing the appropriate journal (Sources, Information, Instructions to authors, peer review system, journal evaluation)

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

A – Attendance , CT- Class Test , S- Seminar , V- Viva , Q –Quiz , HA – Home Assignment , EE – End Term Exam

DIETETIC TECHNIQUES AND PATIENT COUNSELING

Course Code: DAN4205

Credit Units: 03

Course Objectives:

1. To understand the knowledge about the disease like gastrointestinal disorders, renal disease, liver diseases etc.
2. To familiarize the students with the layout and organization of the hospital.
3. To assess the medical profile of the patient like general details, family history, and associated complications, anthropometry, clinical status, biochemical and biophysical status.
4. To suggest the diet for the particular diseased condition.

Module I

Dietitian as part of the Medical Team and Outreach Services.

Clinical Information - Medical History and Patient Profile Techniques of obtaining relevant information, Retrospective information, Dietary Diagnosis, Assessing food and nutrient intakes, Lifestyles, Physical activity, Stress, Nutritional Status. Correlating Relevant Information and identifying areas of need.

The Care Process - Setting goals and objectives short term and long term, Counselling and Patient Education, Dietary Prescription.

Module II

Motivating Patients. Working with -

B. Hospitalized patients (adults, pediatric, elderly, and handicapped), adjusting and adopting to individual needs.

C. Outpatients (adults, pediatric, elderly, handicapped), patients' education, techniques and modes.

Follow up, Monitoring and Evaluation of outcome, Home visits

Module III

Teaching aids used by dietitians- charts, leaflets, posters etc., preparation of teaching material for patients suffering from Digestive disorders, Hypertension, Diabetes, Atherosclerosis & Hepatitis and cirrhosis.

Module IV

Maintaining records, Reporting findings, Applying findings, Resources and Aids for education and counselling, Terminating counselling, Education for individual patients, Use of regional language, linguistics in communication process, Counselling and education.

NUTRITIONAL BIOCHEMISTRY-II LAB

Course Code: DAN4206

Credit Units: 01

Course Objectives:

1. To understand the use of instruments like chromatography, calorimeter, etc. in biochemical estimation .
2. To detect the purity of sample by using biochemical techniques.

Course Content:

1. Extraction and quantitative estimation of ascorbic acid.
- 2 Isolation and quantitative estimation of B1, B2 vitamins in various food stuffs.
- 3 Estimation of Moisture, Crude Fat, crude fiber and ash in the food stuffs.
- 4 Determination of energy value of foods using bomb calorie meter.
- 5 Determination of iodine value of given fat sample.
- 6 Determination of Sodium & Potassium of food /drinks through Flame Ph Meter
- 7 Separation of amino acids by paper chromatography, TLC.
8. Separation of proteins by gel electrophoresis

ADVANCED NUTRITION-II LAB

Course Code: DAN4207

Credit Units: 01

Course Objectives:

1. To develop the new food product from different food groups.
2. To understand the knowledge about sensory evaluation of the food product

Course content:

1. Market and consumer survey to identify new products
2. Product development from different food groups and their sensory evaluation by different methods.
3. Two Visit to Food Industry

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana

THERAPEUTICS NUTRITION – II LAB

Course Code: DAN4208

Credit Units: 02

Course objectives:

1. Plan and prepare suitable therapeutic diets based on patient needs for various diseased condition.
2. To provide nutritional counseling for the prevention/ treatment of various disease in hospitals.
3. Prepare special therapeutic diets.

Course Contents:

- 1 Planning, Calculation, Preparation, serving and evaluation of therapeutic diets for diseases covered in theory
- 2 Study of the management of food services in selected Hospitals.
- 3 Visits to dietetic clinics in hospitals- case study of patients needing specific therapeutic diets.

INSTITUTIONAL FOOD ADMINISTRATION

Course Code: DAN4302

Credit Units: 04

Course Objectives:

1. To understand management aspects related to food services and its application
2. Develop general knowledge on the origins and development of food service systems in hotels, restaurants, and institutions.
3. To identify variety of managerial, production, and service areas that is typical of the food service industry.
4. To understand managerial responsibilities as they relate to food service functions including menu planning, purchasing, storing, preparation, and recipe development.
5. To understand role of food safety, food budgeting and food standards.

Course Contents:

Module I :

Food service system and management

- (i) Introduction to food service system
- (ii) Evaluation of the food service industry
- (iii) Characteristics of the various types of food service units – commercial, institutional, hospital, military, any other
- (iv) Scope and development of food service institution in India
- (v) Effects of environmental changes on different types of establishments

Module II :

Food service management

- (a) Definitions, principles and functions of Management
- (b) Approaches to management – traditional, system approach, management by objectives
- (c) Financial management – (i) Definition, application of management accounting to catering operations
- (ii) Budgeting, determining the financial needs sources
- (iii) Book- keeping and accounting

Module III : Food service organization

- (a) Definition and types of organization in food
- (b) Tools of organization Chart, job description, job specification, work schedule and communication
- (c) Recruitment, induction, training, motivation and performance appraisal of personnel
- (d) Administrative leadership

Module IV: Planning and service of food

- (a) Menu planning
- (i) Types of menu structure
- (ii) Factors affecting menu planning
- (iii) Menu evaluation

Module V :Delivery and service of food

- (a) Food service system Conventional, commissary, assembly service
- (b) Service of food: Self-service, tray service, waiter service, portable meals, banquets
- (c) Food service in selected types of organizations Hospitals, schools, colleges, industrial canteens, airlines and space
- (d) Customer relationships

Module VI :

Quality and Quantity control

- (a) Construction and selection of recipes by quantity cooking

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- (b) Standardization of recipe, recipe format and adjustment
- (c) Product standard and production control

Module VII:

Food cost accounting / Analysis

- (a) Importance of costing and food cost control
- (b) Methods of costing
- (c) Cost classification into materials, labor and overheads and their percentage analysis
- (d) Reports and trend analysis

Food purchasing, selection and storage

- (a) Purchasing –
 - (i) Forecasting, product selection, purchasing , specification
 - (ii) Methods and procedure of purchasing
- (i) Elements of receiving process
- (ii) Inventory control
- (c) Storage -
 - (i) Dry
 - (ii) Refrigerated and cold storage

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

A – Attendance , CT- Class Test , S- Seminar , V- Viva , Q –Quiz , HA – Home Assignment , EE – End Term Exam

COMMUNITY NUTRITION LAB

Course Code: DAN4305

Credit Units: 01

Course Objectives:

1. To learn method of socio-economic survey.
2. To perform dietary survey.
3. To study clinical examination to assess nutrient deficiencies.
4. To plan and conduct nutrition education program.

Course Content:

Conduct of socio - economic survey

Conduct of Diet survey

Conduct of Clinical Examination

Planning, conducting and Evaluating Nutrition Education Programme.

Examination Scheme:

FOOD SCIENCE-II LAB

Course Code: DAN4306

Credit Units: 02

Course Objectives:

1. To conduct appropriate experiments of food science and interpret the results.
2. To study effect of various treatments on food.
3. To learn basic culinary skills in various food groups.
3. To plan and perform nutrient rich recipes.

Course content:

Practical related to theory papers i.e : Effect of various treatments on the foods mentioned in syllabi

Examination Scheme:

FOOD MICROBIOLOGY- II LAB

Course Code: DAN4307

Credit Units: 02

1. To learn basic microbiological apparatus and equipments used in the laboratory.
2. To study and perform sterilization techniques used in microbiology.
3. To study and perform staining of bacteria and microscopic examination.
4. To perform isolation and culture techniques used in food microbiology.
5. To demonstrate RIA and ELISA

Course content:

1. Microbiological apparatus and equipments-a basic introduction, instruments needed for isolation, cultivation and maintenance of microbes, tools needed in microbiology laboratory for inoculation and culturing
2. Cleaning and sterilization procedures for glassware.
3. Preparation and sterilization of laboratory media.
4. Staining of bacteria- gram's staining, use of oil immersion lens, micrometry, and microscopic enumeration.
5. Spread plating, pour plating, streaking techniques.
6. Enrichment of isolated cultures, SPC, MPC. Coli count and coli confirmations.
7. Study of biochemical characteristics of isolated cultures-
 - Fermentation reaction · Starch cultures
 - IMVIC Tests · Catalase test
 - Oxidase test · Urease test
 - H₂S test · Coagulase test
8. Microbiological analysis of milk- raw, boiled and pasteurized - MBRT Test.
9. Demonstration of Techniques of
 - Radio immune Assay (RIA)
 - Enzyme Linked Immuno Sorbent Assay (ELISA)

SUMMER INTERNSHIP

Course Code: DAN4335

Credit Units: 06

Objectives:

Summer internships are usually eight weeks long and it is full time. The students are required to do internships during the summer than during any other time of the year. These short term experiences provide a real insight into what it's actually like working in a particular job or career field. There's ample time to get into a regular work routine and gain valuable knowledge and skills. Internship objectives include:

- Developing personally and professionally while gaining confidence and real-world experience
- Meeting and networking with practitioners in one's area of interest
- Mentoring and performance feedback from the site supervisor
- Earning academic credit while getting paid or non paid.

General Guidelines:

Every student of post graduate courses will be required to undergo a practical training in an organization approved by the Institute for eight weeks, normally in the Summer Vacation, after the end of the fourth semester examinations. The candidates shall be required to undergo training in the various areas of the organization concerned. The organization may assign a specific project to the candidate, which will be completed by him/her during the period of training. The work done by the candidate during the training period shall be submitted in the form of a report as per the guidelines provided by the Department.

Chapter Scheme for the SIP Report:

Chapter I: Introduction	- 10 marks
Chapter II: Conceptual Framework/National/International Scenario	- 05 marks
Chapter III: Presentation, Analysis and Findings / Case Studies	- 20 marks
Chapter IV: Conclusion and Recommendations	- 10 marks
Hospital Chief Dietitian Marking	-30 marks

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

The Chief Dietitian is asked to evaluate the student based on his/her performance as well as their conduct. The report has to be written in font Times New Roman, 12 points, 1.5 line spacing on both sides of the paper, Spiral Bound. The report should comprise of a maximum of 70 pages and has to be submitted in two copies.

THE COMPONENTS OF A SIP REPORT

The outcome of Summer Internship is the Project Report. A project report should have the following components:

- 1) Cover Page: This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.
- 2) Acknowledgement: Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.
- 3) Table of Content: Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.
- 4) Body of the Report: The body of the report should have these four logical divisions
 - a. *Introduction*: This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, and method of analysis), Limitations of the Study, and Chapter Planning.
 - b. *Conceptual Framework / National and International Scenario*: (relating to the topic of the Project).
 - c. *Presentation of Data, Analysis and Findings / Case studies* : (using the tools and techniques mentioned in the methodology).
 - d. *Conclusion and Recommendations*: In this section, the concluding observations based on the main findings and suggestions are to be provided.
- 5) Bibliography or References: This section will include the list of books and articles which have been used in the project work, and in writing a project report.
- 6) Annexure: Questionnaires (if any), relevant reports, etc.

Evaluation Scheme:

SIP Report	Power Point Presentation & Viva
75 marks	25 marks

FOOD PROCESSING & TECHNOLOGY

Course Code: DAN4402

Credit Units: 03

Course objectives:

1. To understand principles of food preservation and its application of the different food.
2. To impart systematic knowledge of basic and applied aspects food processing and technology
3. To gain in depth knowledge about processing and preservation techniques of milk and milk product technology and fruits and vegetable technology.
4. To gain knowledge about industrial processing of legumes and oil seeds.

Module I:

Processing technology of foods & nutritional implications for the following:

- Cereals & Pulses- Wheat grain characteristics and products, Rice processing, Pulses Processing & their elimination of toxic factors. Fermentation & Germination Nuts & Oilseeds- Nuts Oilseeds Processing, solvent extraction purification, hydrogenation and tempering products - butter, margarine etc
- Flesh Foods: Processing & Their Products.

Module II:

Milk and Milk Products:- Classification and standardization, Pasteurization, homogenization, packing of milk. Milk Products- Fortified milk, Skim milk, Concentrated milks, Cream, Butter, Cheese, Ice cream and Indigenous milk products: Khoa, Paneer, Curd, Yoghurt, Ghee.

Module III:

- Fruits & Vegetables: Physiological and biochemical changes during ripening, handling & storage & fruit processing. Processing of vegetables, canning, freezing, dehydration, pickles & chutneys. Beverages & Appetizers : Classification, Coffee, Tea, coco chocolates, Fruit beverages, soups, Vegetable Beverages, Carbonated & Noncarbonated beverages, Alcoholic beverages.

Module IV:

- a). Physical principles in Food Processing Operations:
 - b). Food Deterioration, Methods of Preservation and Processing: Thermal Processing, Refrigeration, Freezing, Dehydration, Ionizing radiations, Fermentation, concentration.
 - c). Chemical Principles of Food Processing:
 - d). Preservation/processing by sugar, salt, smoke, acid and chemicals.
 - e). Chemical & biochemical reactions affecting food quality & safety.
- Some Recent concepts in Food Technology -
- Biotechnology in food.
 - Algae as food - Spirulina
 - Low cost nutrient supplement.
 - Packaging of foods.

Examination Scheme:

NUTRITION FOR HEALTH & FITNESS

Course Code: DAN4403

Credit Units: 03

Course objectives:

1. Students learn about the meaning and importance of general health and fitness.
2. Detailed study of various sports and the diet involved for best outcome is being included.
3. Subject aims to make students understand how nutrition is important pre and post games and how it makes an influence on the performance of the player.
4. Nutrition and diet of injured athletes, specially abled athletes, along with the influence of environmental conditions are being learnt by the students.

Module I:

Physical Fitness and health status: meaning, concept, assessment criteria and management
Healthy life style: Strategies, factors that promote life style changes, self management skills. Body composition in exercise and sport

Module II:

Physical Activity: need, principles of physical activity Energy input and output: Different energy systems for endurance and power activity, Fuels and nutrients to support physical activity.

Module III:

Nutrition in Sports: Sports specific requirement, Diet manipulation, Pre-game, during and post-game meals. Diets for athletes with high energy requirements, stress, fracture and injury
Water and electrolyte balance: Losses and their replenishment during exercise and sports events, effect of dehydration, sports drinks.

Module IV:

Special Nutrition considerations for female, older and disabled athletes. Nutrition of athletes in hot, cold and high altitude environments
Nutrition education of athletes and coaches.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

Books Recommended

- Ira Walinaky, (1998) Nutrition in Exercise and sport
- Charles B. Corbin, Ruth Lindsey and grey walk (2000) Concepts of fitness and wellness
- Robert A. Robergers and Scott O. Roberts (2000) exercise physiology.

COMMUNITY NUTRITION-II LAB

Course Code: DAN4404

Credit Units: 02

Course Objectives:

1. To conduct socio-economic and dietary survey in detail.
2. To conduct of clinical examination with ICMR score card.
3. To design, perform, interpret and evaluate nutrition education program.
4. To critically review various nutritional programs conducted in villages
5. To cook recipes for various socio-economic groups: LIG, MIG, HIG.

Course content:

1. Conduct of socio - economic survey with Nutritional status parameters
2. Conduct of Dietary survey with detail calculations
3. Conduct of Clinical Examination with ICMR score card.
4. Planning, conducting and Evaluating Nutrition Education Programme.
5. Evaluation of various nutritional programmes conducted in villages.
6. Cooking of recipes for Low income group , Middle income group and High Income group.

FOOD PROCESSING AND TECHNOLOGY LAB

Course Code: DAN4405

Credit Units: 01

Course Objectives:

1. To study physical dimensions of grains and other properties.
2. To determine pectin strength in various fruits and vegetables.
3. To study various food adulterants present in common foods.
4. To study tests used in sensory appraisal.
5. To prepare culture media of various microorganisms.

Course content:

1. Determination of physical dimensions of grains (Length, Breadth, Thickness and Bulk density)
2. Determination of wet and dry gluten content of flours.
3. Testing the pectin strength of different fruits and vegetables.
4. Determination of PH and titrable acidity of a food sample.
5. Determination of Total solids as soluble and insoluble in foods
6. Test for adulterants
7. Food Evaluation using different sensory tests
8. Total microbial count
9. Determination of pasteurization effect in milk by MBRT
10. Preparation of culture media for different organisms

DISSERTATION

Course Code: DAN4437

Credit Units: 06

Course Objectives:

1. To understand comprehensive knowledge of the literature in the field of nutrition.
2. To conduct and apply appropriate research methods, collect & interpret data systematically; to conduct research ethically.
3. To learn importance of scientific writing and develop competence in writing skills.
4. To do research work and submit dissertation at the end of semester.

GUIDELINES FOR PROJECT FILE AND PROJECT REPORT

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critically analyzed by the faculty guide and corrected by the student at each stage.

PROJECT FILE

The Project File may be a very useful tool for undertaking an assignment along-with a normal semester, an exploratory study, sponsored projects, a project undertaken during summer period or any other period as per curricula where the researcher is working with a company/organization. The project/ assignment may also be a part of the bigger research agenda being pursued by a faculty/ institution/ department

The Project File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation. This file may be considered in continuous assessment.

In general, the File should be comprehensive and include:

- A short account of the activities that were undertaken as part of the project;
- A statement about the extent to which the project has achieved its stated objectives;
- A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;
- Any activities planned but not yet completed as part of the project, or as a future initiative directly resulting from the project;
- Any problems that have arisen and may be useful to document for future reference.

PROJECT REPORT

The Project Report is the final research report that the student prepares on the project assigned to him. In case of sponsored project the lay out of the project could be as prescribed by the sponsoring organization. However, in other cases the following components should be included in the project report:

Title or Cover Page

The title page should contain Project Title; Student's Name; Programme; Year and Semester and Name of the Faculty Guide.

Acknowledgement(s)

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Acknowledgment to any advisory or financial assistance received in the course of work may be given. It is incomplete without student's signature.

Abstract

A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project. It should not exceed more than 1000 words.

Table of Contents

Titles and subtitles are to correspond exactly with those in the text.

Introduction

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

Materials and Methods

This section should aim at experimental designs, materials used (wherever applicable). Methodology should be mentioned in details including modifications undertaken, if any. It includes organization site(s), sample, instruments used with its validation, procedures followed and precautions.

Results and Discussion

Present results, discuss and compare these with those from other workers, etc. In writing this section, emphasis should be laid on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary, do not write in "point" form.

While presenting the results, write at length about the the various statistical tools used in the data interpretation. The result interpretation should be simple but full of data and statistical analysis. This data interpretation should be in congruence with the written objectives and the inferences should be drawn on data and not on impression. Avoid writing straight forward conclusion rather, it should lead to generalization of data on the chosen sample.

Results and its discussion should be supporting/contradicting with the previous research work in the given area. Usually one should not use more than two researches in either case of supporting or contradicting the present case of research.

Conclusion(s) & Recommendations

A conclusion should be the final section in which the outcome of the work is mentioned briefly.

Check that your work answers the following questions:

- Did the research project meet its aims (check back to introduction for stated aims)?
- What are the main findings of the research?
- Are there any recommendations?
- Do you have any conclusion on the research process itself?

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Implications for Future Research

Registrar
Amity University Haryana
Manesar Gurgaon-122413

This should bring out further prospects for the study either thrown open by the present work or with the purpose of making it more comprehensive.

Appendices

The Appendices contain material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

References

References should include papers, books etc. referred to in the body of the report. These should be written in the alphabetical order of the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

Examples:

For research article:

Voravuthikunchai SP, Lortheeranuwat A, Ninrprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichia coli* O157: H7. *Clin Microbiol Infect* , **8** (suppl 1): 116–117.

For book:

Kowalski,M.(1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), **7**: 63-67

The Layout Guidelines for the Project File & Project Report:

- A4 size Paper
 - Font: Arial (10 points) or Times New Roman (12 points)
 - Line spacing: 1.5
 - Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

ASSESSMENT OF THE PROJECT FILE AND THE PROJECT REPORT

Essentially, the assessment will be based on the quality of the report, the technical merit of the project and the project execution. Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project. Project execution is concerned with assessing how much work has been put in.

The Project should fulfill the following *assessment objectives*:

- Range of Research Methods used to obtain information
- Execution of Research
- Data Analysis (Analyze Quantitative/ Qualitative information)
- Quality Control
- Conclusions

Assessment Scheme:

Continuous Evaluation: 40% (Based on punctuality, regularity of work, adherence to plan and methodology, refinements/ mid-course corrections etc. as reflected in the Project File.)

Final Evaluation: 60% (Based on the Documentation in the file, Final report layout, analysis and results, achievement of objectives, presentation/ viva)

LABORATORY MANAGEMENT AND QUALITY CONTROL

Course Code: MLT4108

Credit Units: 3

Course Objective: To allow students to understand the laboratory management and quality control.

Course Contents:

Module-I: General Concept of Laboratory Management: Strategic planning; quality system management; human resource management; laboratory design and service model; regulation, accreditation and legislation; safety- biomedical hazard, chemical hazard, ergonomic hazard.

Module-II: Clinical Laboratory Informatics: Information flow (patient's registration/ID), test order, sample collection, labeling, performing test, releasing result & report, feedback. LIS selection, Implementations & management; good laboratory practice

Module-III: Quality Control: Introduction, analytical variability and calibration; calibration issue in quality control; proficiency testing; Westgard rules; quality control of the product, chemicals, reagent; good, reliable, authentic report; total quality management framework of laboratory; essential elements of quality assurance programme; quality laboratory processes, quality assurance, quality assessment, quality control, quality planning and quality improvement

Module-IV: Internal Quality control: Control of pre-analytical variables, control of analytical variables, laboratory precision, accuracy & sensitivity; validation of methods; reference materials and calibrating definitive methods; sources of variation in laboratory test results. Systemic and random errors; quality control charts: Levy-Jenning chart, Cusum chart and Gaussian curve; Internal and external factors for quality control assurance; reference values

Examination Scheme:

CLINICAL IMMUNOLOGY

Course Code: MLT4113

Credit Units: 4

Course Objective: To familiarize the students about the immune system and its role in infections, allergy and transplantation.

Course Contents:

Module-I: Introduction to Immunology: History of immunology; innate immunity; acquired immunity.

Immunoglobulin: Structure, function and types of immunoglobulin; monoclonal and polyclonal antibody; adjuvant.

Antigen: Types of antigens; antigenicity; haptens

Module-II: Immune Response: Primary and secondary immune response; phagocytosis; antigen processing and presentation; humoral and cell mediated immune response; hemolytic disease of newborn.

Complement System: Complement portions and functions; classical, alternative pathway and lectin pathway.

Hypersensitivity: Introduction, types and complications of hypersensitive reactions; allergies

Module-III: Clinical Transplantation: Types of transplant; types of donor; HLA typing; transplant rejection; ethical issues; artificial organ; laboratory-grown organ; organ trafficking;

Autoimmunity: Factor affecting autoimmunity; pathogenesis of autoimmunity; autoimmune disease; diagnosis; immunological tolerance.

Module-IV: Vaccines: Effectiveness; adverse effects; types; recombinant vaccines

Antigen and Antibody Reactions: General features; precipitation; agglutination; flocculation; complement fixation test; neutralization; opsonisation.

Examination Scheme:

ADVANCED LABORATORY TECHNIQUE

Course Code: MLT4114

Credit Units: 4

Course Objective: To enable the students to understand the working principle of latest laboratory techniques.

Course Contents:

Module-I: Principles & Application of Chromatography: Definition and types of Chromatography; Paper Chromatography; Thin Layer Chromatography; Adsorption Chromatography; Partition Chromatography; Ion-exchange Chromatography; Gel Filtration; Affinity Chromatography; Column Chromatography; High Performance liquid Chromatography (HPLC).

Module-II: Electrophoresis: Definition, General Methodology; Factors affecting migration of charged particles; Theory and applications of paper, SDS-PAGE and agarose gel electrophoresis; Isoelectric Focusing; Two Dimensional Electrophoresis; Protein purification and Evaluation; Densitometry

Module-III: Immunological Technique: Enzyme Linked immunosorbent assay; Radioimmunoassay; Immunodiffusion, Florescent immunoassay; Immunofluorescence, Immunoarray, Chemiluminosence assay.

Module-IV: Molecular Techniques: Recombinant DNA technology; Polymerase chain reaction; RT PCR; RFLP; DNA Probe; DNA finger printing; Sequencing; Eastern blot; Southern blot; Northern blot; Gel documentation, DNA microarray, FISH, RFLP.

Examination Scheme:

LAB COURSE

Course Code: MLT4105

Credit Unit: 1

Course Objective:

- To impart the basic knowledge of principles, procedure and clinical importance of laboratory various test.
- To familiarize with basic knowledge of instruments commonly utilized in the clinical laboratory.

Serology

1. HIV test.
2. HCV test.
3. HBsAg test.
4. widal test.
5. ASO test.
6. CRP test.
7. RA test.
8. VDRL and RPR test.
9. Coomb's test.

Molecular Pathology and Cytogenetics

1. To demonstrate PCR.
2. To demonstrate recombinant DNA technology.
3. To demonstrate DNA finger printing.
4. To demonstrate RT PCR and RFLP.

CLINICAL TRAINING

Course Code: MLT4112

Credits Units: 2

Course objective: The purpose of a Clinical training is to provide hands on practical experience in relevant sections of diagnostic labs as per the need of healthcare system. Students will participate in samples collection, documentation, transportation, receiving, processing and dispatch of reports. Students will help in the performance of clinical protocols, quality maintenance and laboratory research. In some cases, students may be deputed in community services or assist in organizing camps like blood testing or blood donation camp.

Students will be sent to diagnostic laboratory or hospital once a week outside campus or may be within the campus if facility available.

Second Semester:

1. Serology Lab
2. Molecular Lab

Note: Students must submit training report during examination and the same would be evaluated through Viva voice and presentation.

MOLECULAR DIAGNOSTICS

Course Code: MLT4208

Credit Units: 3

Course Objective: To enable the students to understand genetic diseases and its diagnosis.

Course Contents:

Module-I: Mendelian Disease: Autosomal recessive disorders; autosomal dominant disorders; sex linked inheritance; hemophilia; sickle-cell anaemia; phenylketonuria; cystic fibrosis; tay-sachs disease; xerodermapigmentosa; pedigree analysis; proband

Chromosomal Disorders: Normal chromosomes; Numerical disorders; Structural abnormalities; Down syndrome; Turner syndrome; Klinefelters syndrome.

Module-II: Karyotyping: Human karyogram, banding technique, applications of karyotyping; prenatal diagnosis; DNA profiling.

Nucleic acid extraction: Plasmid DNA; eukaryotic genomic DNA and Mitochondrial DNA extraction.

Module-III: Mutation: Introduction; molecular basis of mutation, mutagens.

Gene Therapy: Introduction; types and current approach and advancement

Module-IV: Molecular Diagnosis: Molecular based diagnosis of bacterial, viral, parasitic and fungal infections; ethical issues related to molecular diagnostics; future of molecular diagnostics.

Examination Scheme:

Course Code: MLT4211

Credit Units: 3

Course Objective: The course aims to promote the students to progress in research aspects in the medical diagnostic, pharmaceutical, biotechnology, and medical treatment field.

Course Contents:

Module-I: Basics of Research: Meaning and purpose; Types, (Educational, Clinical, Experimental, Historical descriptive, Basic applied and Patent oriented Research); Formulation of hypothesis; Characteristic of designing a research work.

Scientific writing: Characteristics - Logical format for writing thesis and papers; essential features of abstract, introduction, review of literature, materials and methods, and discussion; effective illustration - tables and figures; reference styles - harvard and vancouver systems.

Literature Survey- use of library, books, journals-medlines-internet, and reprints of articles as a source for literature survey.

Module-II: Biostatistics: Collection and classification of data - diagrammatic and graphic representation of data, statistical tools, its importance in data analysis; measurement of central tendency; standard deviation; normal distribution; test of significance based on large samples and small samples; student t test; correlation and regression; Chi square test for independence of attributes; ANOVA

Module-III: Patenting and ethical issues in research patenting: definition of patent; the patents system in India and present status; intellectual property rights; what may be patented? ; Who may apply for patents?; preparation of patent- proposal; registration of patents in foreign countries & vice versa; research funding agency.

Module-IV: ETHICS: Ethics in animal experimentation; cpcsea guidelines - animal care, animal husbandry, feed, bedding, water, sanitation and cleanliness, waste disposal, anesthesia and euthanasia; composition of (human) institutional ethical committee (IEC) - general ethical issues; specific principles for chemical evaluation of drugs, herbal remedies and human genetics research, ethics in food and drug safety; environmental release of microorganisms and genetically engineered organisms; ethical issues in human gene therapy and human cloning.

Examination Scheme:

Components	CT	HA	S/V/Q	ATTD	EE
Weightage(%)	15	5	5	5	70

Recommended books:

- R.A. Day. How to write a scientific paper. Cambridge University Press.
- Cooray P.G. Guide to scientific and technical writing.
- Carter V. Good and Douglas E seats Methods of Research.
- Alley, Michael. The craft of scientific writing. Englewood Cliffs. N.N. Prentice 1987.
- Sundar Rao, Jesudian Richard - An Introduction to Biostatistics. S.P. Gupta - Fundamentals of statistics, Sultan Chand.

CLINICAL NUTRITION

Course Code: MLT4213

Credit Units: 4

Course Objective: To prepare the students to understand the structure, function and properties carbohydrates, proteins and lipids.

Course Contents:

Module-I: Carbohydrate: Introduction; biomedical importance; physical and chemical properties; structure- classification- monosaccharide, disaccharide, polysaccharide; triose, tetrose, pentose and hexoses sugars; digestion and absorption of carbohydrate; quantitative & qualitative test of carbohydrate; reducing and non-reducing sugars.

Module-II: Amino acid: Introduction; importance; physical & chemical properties; essential and non-essential amino acid; glucogenic and ketogenic amino acid.

Protein: Properties; functions; structure- primary, secondary, tertiary and quaternary; albumin, globulin and fibrinogen; clinical importance; digestion and absorption of protein; qualitative and quantitative test of protein and amino acid.

Module-III: Lipid: Introduction; importance; physical & chemical properties; structure of fat and fatty acid; essential and non-essential fatty acid; triglyceride and cholesterol structure and function; glycolipids; phospholipids; lipoproteins; digestion and absorption of fat; qualitative and quantitative test of lipids.

Module-IV: Nucleic Acid: Introduction; importance; physical & chemical properties; structure; Nucleoside; nucleotide; DNA and RNA- structure, function and biomedical importance.

Vitamins: Introduction; classification; importance; source; RDA; normal range and clinical significance.

Minerals: Introduction; classification; micro and macro minerals; importance; source; RDA; normal range and clinical significance.

Examination Scheme:

Components	CT	HA	S/V/Q	ATTD	EE
Weightage (%)	15	5	5	5	70

Recommended books:

- U Satyanarayan and U Chakrapani, Text book of Biochemistry, 4th Edition 2013, Elsevier.

CLINICAL BIOCHEMISTRY LAB COURSE-I

Course Code: MLT4215

Credit Unit: 1

Course Objective

- To impart the basic knowledge of principles, procedure and clinical importance of laboratory various test.
- To familiarize with basic knowledge of instruments commonly utilized in the clinical laboratory.

Course Contents:

- 1) Carbohydrates: estimation of glucose (F, PP & R)
- 2) Protein: estimation of serum albumin, total protein and A/G ration.
- 3) Triglycerides : estimation of serum triglycerides
- 4) Cholesterol : estimation of total cholesterol
- 5) SGPT : estimation of SGPT
- 6) SGOT : estimation of SGOT
- 7) Alkaline phosphatase : estimation of alkaline phosphatase
- 8) Acid phosphatase : estimation of acid phosphatase
- 9) Bilirubin : estimation of serum bilirubin
- 10) Blood urea : estimation of blood urea in blood sample
- 11) Creatinine : estimation of serum creatinine
- 12) Calcium : estimation of serum calcium

Examination Scheme:

Components	Internal Assessment	Attendance	File	EE
Weightage(%)	20	5	5	70

Recommended books:

- Medical Laboratory Science: Theory and practice by J. Ochei, Arundhati kolhatkar, McGraw Hill Education, 1st edition (2008).
- P K Godkar, Text Book of Medical Laboratory Technology 13th edition, Bhalani Publication.

CLINICAL BIOCHEMISTRY CLINICAL TRAINING-I

Course Code: MLT4216

Credit Units: 2

Course Objective: The purpose of a Clinical training is to provide hands on practical experience in relevant sections of diagnostic labs as per the need of healthcare system. Students will participate in samples collection, documentation, transportation, receiving, processing and dispatch of reports. Students will help in the performance of clinical protocols, quality maintenance and laboratory research. In some cases, students may be deputed in community services or assist in organizing camps like blood testing or blood donation camp.

Students will be sent to diagnostic laboratory or hospital once a week outside campus or may be within the campus if facility available.

Plan for clinical training:

1. Clinical Pathology Lab
2. Instrumentation Lab

Note: Students must submit training report during examination and the same would be evaluated through Viva voice and presentation.

Examination Scheme:

Components	Viva	A	ME	EE
Weightage (%)	10	5	15	70

GENERAL MICROBIOLOGY

Course Code: MLT4217

Credit Units: 4

Course Objective:

- To provide detailed knowledge of anatomy and physiology of microorganisms.
- To become students aware about applications of microorganisms in the industry, health-care, environment and research fields.

Course Contents:

Module-I: General Microbiology: Introduction, history of microbiology; importance and scopes; safety measurements in microbiology laboratory; terminology related to microbiology.

Microorganisms: Introduction and Classification; morphological characteristics of various medically important microorganisms; microbial metabolism and reproduction; importance of normal micro-flora.

Module-II: Microbial Genetics: Introduction, principles of microbial genetics, structure and functions of genetic material, transformation; transduction, conjugation, lysogenic conversion, transposition, gene transfer by artificial methods, mutation, bacteriophages.

Module-III: Microbial Pathogenicity: Mechanism and transmission of microbial Infections, classification of infections, virulence factors affecting microbial pathogenicity, role of microorganisms in hospital acquired infections.

Module-IV: Microscopy: Introduction and types of microscopy; working, components, applications and preventive maintenance of different microscopes.

Sterilisation and Disinfection: Introduction, importance and types of sterilization; sterilization indicators; calibration and preventive maintenance of sterilizing equipments and instruments; mode of action, properties and uses of disinfectants and antiseptics, efficiency testing of disinfectants.

Examination Scheme

Components	CA	A	ME	EE
Weightage (%)	15	5	10	70

Recommended books:

- C P Baveja, Text book of Microbiology, Arya Publication.
- R. Ananthanarayan and Arti Kapil, Ananthanarayan and Paniker's Textbook of Microbiology, Orient BlackSwan.
- D.R.Arora / Brij Bala Arora, Textbook of Microbiology 4th, CBS Publishers & Distributors.
- Eds J. G. Collee, J. P. Duguid, A. G. Fraser & B. P. Marmio, Mackie and McCartney: Practical medical microbiology 13th Edition, Churchill Livingstone.

CLINICAL BACTERIOLOGY

Course Code: MLT4219

Credit Units: 4

Course Objective:

- To impart the knowledge of morphology, culture characteristics, pathogenicity, lab diagnosis and prophylaxis of major bacterial pathogens.
- To provide the understanding of special laboratory techniques.

Course Contents:

Module-I: Bacteriology: Introduction, history and importance in health care sector

Staining: Gram stain, AFB stain, Albert's stain and special stains for spore, capsule and flagella.

Biochemical test: Catalase, coagulase, oxidase, indole, MR, VP, citrate, urease and triple sugar iron agar. Identification of bacteria by conventional method, molecular method and automatic methods.

Special laboratory techniques: Bacteriological examination of water, milk and air.

Module-II: Gram positive bacteria: Morphology, pathogenicity, lab diagnosis and prophylaxis of: Staphylococci, Streptococci, Pneumococcus, Enterococcus, Bacillus, Corynebacterium, Clostridia, Mycobacterium Tuberculosis, Mycobacterium leprae, Actinomycetes and Listeria.

Module-III: Gram negative bacteria: Morphology, pathogenicity, lab diagnosis and prophylaxis of: Neisseria gonorrhoeae, Neisseria meningitidis, Escherichia coli, Shigella, Klebsiella, Proteus, Yersinia, Salmonella, Vibrio, Aeromonas.

Module-IV: Gram negative bacteria

Pseudomonas, Campylobacter, Bacteroides, Fusobacterium, Brucella, Haemophilus, Bordetella and Helicobacter pylori

Miscellaneous bacteria: Morphology, Pathogenicity, lab diagnosis and prophylaxis of: Spirochetes, Rickettsiae, Chlamydia and Mycoplasma and Ureaplasma. Bacterial Vaginosis.

Examination Scheme:

Components	CT	HA	S/V/Q	ATTD	EE
Weightage (%)	15	5	5	5	70

Recommended books:

CLINICAL MICROBIOLOGY LAB COURSE-I

Course Code: MLT4220

Credit Unit: 1

Course Objective:

- To impart the basic knowledge of principles, procedure and clinical importance of laboratory various test.
- To familiarize with basic knowledge of instruments commonly utilized in the clinical laboratory.

Course Contents:

- 1) **Preparation of culture media:** Peptone water, Nutrient broth, Selenite F broth, Thiosulfate citrate bile salt sucrose agar, Nutrient agar, Blood agar, chocolate agar, MacConkey's agar, Mueller-Hinton, Salmonella-Shigella agar, Xylose Lysine Deoxycholate agar, L J Medium, TSI agar, citrate agar, urease agar.
- 2) **Staining method:** Simple stain, Gram stain, ZN Stain, Albert stain, Negative stain,
- 3) **Culture Method:** Streak culture, Lawn Culture, Stroke Culture, Pour plate culture, Liquid culture.
- 4) **Biochemical tests:** Catalase test, Coagulase test, CAMP reaction, Bile solubility test,
- 5) Widal test
- 6) Hanging drop preparation and Satellitism.

Examination Scheme:

SUMMER PROJECT EVALUATION

Course Code: MLT4335

Credit Units: 6

Summer Project report:

The Project Report is the final research report that the student prepares on the project assigned to him. In case of sponsored project the layout of the project could be as prescribed by the sponsoring organization. However, in other cases the following components should be included in the project report:

- **Title or Cover Page:** The title page should contain Project Title; Student's Name; Programme; Year and Semester and Name of the Faculty Guide.
- **Acknowledgement(s):** Acknowledgment to any advisory or financial assistance received in the course of work may be given. It is incomplete without student's signature.
- **Abstract:** A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project. It should not exceed more than 1000 words.
- **Table of Contents:** Titles and subtitles are to correspond exactly with those in the text.
- **Introduction:** Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.
- **Materials and Methods:** This section should aim at experimental designs, materials used (wherever applicable). Methodology should be mentioned in details including modifications undertaken, if any. It includes organization site(s), sample, instruments used with its validation, procedures followed and precautions.
- **Results and Discussion:** Present results, discuss and compare these with those from other workers, etc. In writing this section, emphasis should be laid on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow. Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary, do not write in "point" form. While presenting the results, write at length about the various statistical tools used in the data interpretation. The result interpretation should be simple but full of data and statistical analysis. This data interpretation should be in congruence with the written objectives and the inferences should be drawn on data and not on impression. Avoid writing straight forward conclusion rather; it should lead to generalization of data on the chosen sample. Results and its discussion should be supporting / contradicting with the previous research work in the given area. Usually one should not use more than two researches in either case of supporting or contradicting the present case of research.
- **Conclusion(s) & Recommendations:** A conclusion should be the final section in which the outcome of the work is mentioned briefly.

Check that your work answers the following questions:

- Did the research project meet its aims (check back to introduction for stated aims)?
- What are the main findings of the research?
- Are there any recommendations?

• Do you have any conclusion on the research process itself?

- **Implications for Future Research:** This should bring out further prospects for the study either thrown open by the present work or with the purpose of making it more comprehensive.
- **Appendices:** The Appendices contain material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.
- **References:** References should include papers, books etc. referred to in the body of the report. These should be written in the alphabetical order of the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

Examples:

- For research article:

Voravuthikunchai SP, Lortheeranuwat A, Ninrprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic Escherichia coli O157: H7. Clin Microbiol Infect, 8 (suppl 1): 116–117.

- For book:

Kowalski, M. (1976) Transduction of effectiveness in Rhizobium meliloti. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), 7: 63-67

The Layout Guidelines for the Project File & Project Report:

- A4 size Paper
- Font: Arial (10 points) or Times New Roman (12 points)
- Line spacing: 1.5
- Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

ASSESSMENT OF THE PROJECT FILE AND THE PROJECT REPORT

Essentially, the assessment will be based on the quality of the report, the technical merit of the project and the project execution. Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project. Project execution is concerned with assessing how much work has been put in.

The Project should fulfil the following assessment objectives:

- Range of Research Methods used to obtain information
- Execution of Research
- Data Analysis (Analyze Quantitative/ Qualitative information)
- Quality Control
- Conclusions

Assessment Scheme:

Continuous Evaluation:

40% (Based on punctuality, regularity of work, adherence to plan and methodology, refinements/mid-course corrections etc. as reflected in the Project File.)

Final Evaluation:

60% (Based on the Documentation in the file, Final report layout, analysis and results, achievement of objectives, presentation/ viva)

It is recommended that the final evaluation should be carried out by internal supervisors.

SPECIALIZATION - CLINICAL BIOCHEMISTRY

CLINICAL ENDOCRINOLOGY

Course Code: MLT4307

Credit Units: 4

Course Objective: To make the students to understand the basics of hormones function; clinically important hormones; diagnostic procedure and clinical interpretations.

Course Contents:

Module-I: Basics of Endocrinology: Exocrine and endocrine; anatomical aspects of human endocrine system; regulation of endocrine system; chemical nature of human hormones; hormone receptors; mechanism of peptide and non-peptide hormones action; secondary messenger.

Hypothalamus: Introduction; production, secretion regulation and functions of hypothalamic hormones.

Module-II: Pituitary gland: Introduction; production, secretion regulation and functions of pituitary hormones; related disorders.

Pineal gland: Introduction; production, secretion regulation and functions of pineal hormones; related disorders.

Thyroid gland: Introduction; production, secretion regulation and functions of thyroid hormones; related disorders; thyroid function test.

Module-III: Parathyroid glands: Introduction; production, secretion regulation and functions of parathyroid hormones;

Adrenal gland: Introduction; production, secretion regulation and functions of adrenal hormones; related disorders.

Pancreas: Introduction; production, secretion regulation and functions of insulin and glucagon; somatostatin; related disorders.

Module-IV: Testes and Ovary: Introduction; production, secretion regulation and functions of testes and ovarian hormones; related disorders.

Other Biologically Important Hormones: Hormones involving contraception; calcium metabolism; renin angiotensin; urotensin; erythropoietin; anti-mullerian hormone.

Examination Scheme:

CLINICAL ENZYMOLOGY

Course Code: MLT4308

Credit Units: 4

Course Objective: To make the students to understand the basics of enzymes function; clinically important enzymes; diagnostic procedure and clinical interpretations.

Course Contents:

Module-I: Basic Enzymology: Historical perspective; general characteristics; factor affecting enzyme activity; nomenclature and IUB classification; holoenzyme; apoenzyme; co-factors; co-enzymes; prosthetic group; metallozyme; enzyme assay; units; Michaelis-Menten equation.

Module-II: Enzyme inhibition: Introduction; types; enzyme inhibitors; applications

Co-enzyme: NAD; NADP; FAD; Co-enzyme A TTP; Lipic acid; Vitamin B12; Tetrahydrofolate

Module-III: Enzymes In Clinical Medicine: Introduction; intra-cellular and extra-cellular enzymes; CPK; CK-MB; LDH; SGOT; SGPT; cholinesterase; amylase; lipase; aldolase; alkaline and acid phosphatase; Glucose-6-phosphatase; 5-nuceotidease; GGT.

Module-IV: Enzymes in the Diagnosis of Diseases: Diagnosis, prognosis and assessment of myocardial infarction, hepatitis, jaundice, pancreatitis, cancer, neurodegenerative disorders.

ADVANCED CHEMICAL PATHOLOGY

Course Code: MLT4313

Credit Units: 4

Course Objective:

- To empower the students' knowledge with the procedure to diagnose human disease.
- To develop professional interests in the field of diagnosis.

Course Contents:

Module-I: Urine chemistry: Colour, pH, bile salt and pigment, glucose, protein, ketones, nitrites, urobilinogen, casts and crystals, amylase, sodium, potassium, chloride, occult blood, Diagnostic Strip and its working principle; future aspects of urine chemistry in diagnosis.

Module-II: Cancer: Benign and malignant cancer; Cancer markers and its uses -CA15-3, CA19-9, CA-125, PSA, CEA, alpha fetoprotein, beta-HCG and other marks; common techniques.

Module-III: Advance diagnostic procedure: Separation of abnormal haemoglobin, isoenzymes, lipoproteins and serum proteins.

Module-IV: Hormone profile: Advance techniques for estimation of T3, T4, TSH, Testosterone, Oestrogen, Progesterone, Prolactin, FSH, ADH, Insulin and Glucagon

Examination Scheme:

Components	CT	HA	S/V/Q	ATTD	EE
Weightage (%)	15	5	5	5	70

Recommended books:

CLINICAL BIOCHEMISTRY LAB COURSE-II

Course Code: MLT4314

Credit Units: 1

Course Objective

- To impart the basic knowledge of principles, procedure and clinical importance of laboratory various test.
- To familiarize with basic knowledge of instruments commonly utilized in the clinical laboratory.
 - a. Lipid profile.
 - b. Liver function test
 - c. Pancreas function test
 - d. Cardiac profile
 - e. Cancer markers
 - f. Diabetic profile.
 - g. Kidney function test.
 - h. Gastric function test
 - i. To study hormonal assessment to diagnose disorders related to:
 - a. Pituitary gland
 - b. Hypothalamus
 - c. Thyroid gland
 - d. Parathyroid gland
 - e. Pancreas
 - f. Adrenal gland
 - g. Testes and ovary.

Examination Scheme:

Components	Internal Assessment	Attendance	Record	EE
Weightage (%)	20	5	5	70

Recommended books:

- DM Vasudevan, Subir Kumar Das, Practical Textbook of Biochemistry for Medical Students, Jaypee & Brothers Medical Publishers Pvt. Ltd.
- P K Godkar, Text Book of Medical Laboratory Technology 13th edition, Bhalani Publication.
- Ranjna Chawla, Practical Clinical Biochemistry: Methods and Interpretations 4th edition, Jaypee & Brothers Medical Publishers Pvt. Ltd.
- Shivaraja Shankara YM, ,ShankaraGanesh MK, Laboratory Manual for Practical Biochemistry, .Jaypee & Brothers Medical Publishers Pvt. Ltd
- Teitz, Fundamental of Clinical Chemistry and Molecular Diagnosis, Carl A Butts, David E. Bruns Elsevier.
- Medical Laboratory Science: Theory and practice by J. Ochei, Arundhati kolhatkar, McGraw Hill Education, 1st edition (2008).

CLINICAL BIOCHEMISTRY CLINICAL TRAINING-II

Course Code: MLT4315

Credit Units: 2

Course objective: The purpose of a Clinical training is to provide hands on practical experience in relevant sections of diagnostic labs as per the need of healthcare system. Students will participate in samples collection, documentation, transportation, receiving, processing and dispatch of reports. Students will help in the performance of clinical protocols, quality maintenance and laboratory research. In some cases, students may be deputed in community services or assist in organizing camps like blood testing or blood donation camp.

Students will be sent to diagnostic laboratory or hospital once a week outside campus or may be within the campus if facility available.

Plan for clinical training:

1. Clinical Biochemistry Lab
2. Collection centre

Note: Students must submit training report during examination and the same would be evaluated through Viva voice and presentation.

Examination Scheme:

Components	Viva	A	ME	EE
Weightage (%)	10	5	15	70

CLINICAL VIROLOGY

Course Code: MLT4317

Credit Units: 4

Course Objectives:

- To impart knowledge about harmful effects of virus in human health.
- To develop understanding of morphology, cultivation, transmission, Pathogenicity, and control strategies of clinically important Virus.
- To familiarize with techniques of sample collection, transport and processing to diagnose viral infection.

Course Contents:

Module-I: Virology: The nature of viruses, Classification of viruses, structure of virus, Cultivation and replication of virus, Bacteriophage, Interferon, Viral vaccines and antiviral drugs, sample collection, transport and storage of sample for viral diagnosis.

Module-II: Clinically important DNA virus: Herpes simplex virus, Varicella Zoster virus, Cytomegalovirus, Epstein-Barr virus, Poxviridae, Adenoviridae, Parvoviridae, Papillomaviridae.

Module-III: Clinically important of RNA virus: Orthomyxoviruses, Paramyxoviruses, Rubella virus, Picornaviruses, Dengue virus, Chikungunya virus, Japanese B encephalitis virus, Kyasanur Forest disease virus, Rhabdoviruses, HIV and other Retroviruses.

Module-IV: Clinically important of miscellaneous virus: Hepatitis viruses, Oncogenic viruses, Hantaviruses, Arenaviruses, Ebola virus, Coronaviruses, Slow viruses, Rotavirus. Emerging viral infections – SARS, Avian influenza, H1N1.

Examination Scheme:

Components	CT	HA	S/V/Q	ATTD	EE
Weightage (%)	15	5	5	5	70

Recommended books:

- C P Baveja, Text book of Microbiology, 4th Edition 2010, Arya Publication.

- Neal Chamberlain, Medical Microbiology: The Big Picture, 1st Edition 2008, Mc Graw Hill Medical.

CLINICAL MYCOLOGY

Course Code: MLT4318

Credit Units:4

Course Objectives:

- The subject includes the study of fungi (yeasts and moulds) which can cause infectious disease in humans.
- It discusses the present classification of fungi, modes of transmission, and infection, disease spectrum.
- Laboratory isolation and identification techniques by cultural and non cultural methods and susceptibility testing to antifungal agents will be emphasized.

Course Contents:

Module-I: Mycology: Introduction of Mycology, Characteristic of Fungi, Taxonomy of Fungi, Immunity to Fungal diseases, Fungal culture media, Fungal reagent and staining, Discuss the procedures used in properly collecting specimens for mycology; Diagnosis of fungal disease; Anti Fungal drugs.

Module-II: Superficial Mycoses: Malassezia Versicolor, Atopic Dermatitis, Malassezia Folliculitis and Systemic Malassezia infection. Tinea Nigra, White Piedra, Black Piedra, Dermatophytes, Tinea Capitis, Dermatophytid or id reaction, wood,s lamp examination.

Module-III: Subcutaneous Mycoses: Mycetoma, Sporotrichosis, Chromoblastomycosis, Phaeohyphomycosis, Rhinosporidiosis and Lobomycosis.

Module-IV: Systemic and Opportunistic Mycoses: Histoplasmosis, Blastomycosis, Coccidioidomycosis and Paracoccidioidomycosis. Candidiasis, Cryptococcosis, Pneumocystosis, Penicilliosis Marneffeii, Aspergillosis, Zygomycosis and Oppertunistic Mycoses.

Examination Scheme:

Components	CT	HA	S/V/Q	ATTD	EE

CLINICAL PARASITOLOGY

Course Code: MLT4319

Credit Units:4

Course Objectives:

- To provide advanced knowledge and understanding of medically important parasites.
- To equip students with the fundamental understanding of parasitological techniques.

Course Contents:

Module-I: Parasitology: Introduction to parasites and host, classification of parasites and hosts, relationship between parasites and host, transmission of parasitic infections, preventive measurements for parasitic infections, terminology related to parasitology.

Module-II: Protozoology: Detailed study and laboratory techniques for diagnosis of medically important protozoa such as intestinal protozoa, blood and tissue protozoa.

Module-III: Helminthology: Detailed study and laboratory techniques for diagnosis of medically important parasitic worms; for example- intestinal, blood and tissue parasitic worms.

Module-IV: Laboratory Techniques: Collection and processing of different clinical samples for parasitological investigations; laboratory techniques for intestinal parasites, blood parasites, tissue parasites; advanced diagnostic techniques and molecular laboratory techniques.

Examination Scheme

Components	CA	A	ME	EE
Weightage (%)	15	5	10	70

Recommended books:

- Arora & Arora, Text book of Medical parasitology, CBS Publishers.
- Saugata Ghosh, Paniker's text book of medical parasitology, Jaypee.
- KD Chatterjee, Protozoology and Helminthology 13th edition, CBS Publishers & Distributors pvt.
- Parasitic diseases in man by Richard Knight English Language Book Society (ELBS).
- Subhash Chandra Parija, Textbook of Medical Parasitology : Protozoology & Helminthology, 4th Edition.
- T V Rajan, Textbook of Medical Parasitology, B I Publications.
- World Health Organization, Basic laboratory methods in medical parasitology, World Health Organization.
- Lynne S. Garcia, Diagnostic Medical Parasitology 5th Edition, ASM Press.
- David T. John, William A. Petri Jr., Markell and Voge's Medical Parasitology 9th, Saunders Elseviers.
- World Health Organization, Basic laboratory methods in medical parasitology, World Health Organization.

PHARMACEUTICAL MICROBIOLOGY

Course Code: MLT4320

Credit Units: 3

Course Objective:

- A provide detailed knowledge about antimicrobial action and resistance.
- To become students aware about applications of microorganisms in the industry, health-care, environment and research fields.

Course Contents:

Module-I: Antimicrobial Agents: Introduction and types of antimicrobial agents; terminology related to pharmaceutical microbiology; history of development of antimicrobial drugs or agents, concept of R & D.

Action Mechanism: Mode of action and activity spectrum of major antibiotic classes, antifungal agents, antiviral agents, prophylactic usage and adverse reactions.

Module-II: Antibiotic and antimicrobial Resistance: introduction and importance, Mechanism of resistance- enzymatic destruction and modification, decreased permeability, promotion of antibiotic reflux, alteration and protection of target sites, bind-up antibiotics etc; molecular genetics of antibiotics resistance in bacteria- role off plasmid, transposable genetic elements, DNA integration elements.

Module-III: Multidrug Resistance: Mechanism and significance of multidrug resistance among microbes; detailed study about - multidrug resistant TB, Malaria, MRSA, VRE, MDR GNR, MDR viruses and fungus.

Module-IV: Sterilization and quality control: Microbial contamination and spoilage of microbial agents and their sterilization, FDA and govt. regulatory practices and policies, quality control.

Vaccines: Introduction, types, working mechanism and applications, adverse effects, terminology related to vaccines.

Examination Scheme

Components	CA	A	ME	EE
Weightage (%)	15	5	10	70

Recommended books:

- Quality Assurance in Microbiology by Rajesh Bhatia, Rattan Lal Ichhpujani. CBS publishers & distributors, New Delhi.
- Quniolinone antimicrobial agents- Edited by David C. Hooper, John S. Wolfson. ASM Washington DC.

CLINICAL MICROBIOLOGY LAB COURSE-II

Course Code: MLT4321

Credit Units: 1

Course Objective:

- To impart the basic knowledge of principles, procedure and clinical importance of laboratory various test.
- To familiarize with basic knowledge of instruments commonly utilized in the clinical laboratory

LIST OF PRACTICAL EXERCISES:

Virology, Mycology and Parasitology sections:

- Collection, transportation and preservation of specimens Specimen for viral diagnosis.
- Isolation and identification of viruses from specimens.
- Preparation of glassware and media for tissue culture.
- Preparation and maintenance of tissue culture.
- Virus isolation in tissue culture and identification.
- Use of chick embryo – inoculation by various routes.
- Use of laboratory animals for isolation of viruses, preparation of antisera and complement etc.
- Serological tests in virology.
- Antigen detection by various techniques.
- Collection of specimens for fungal examination.. Direct KOH examination.
- LPCB and India ink staining.
- Concentration techniques for stool and blood samples.
- Wet mount preparation of stool.
- Slide culture techniques.

Examination Scheme:

Components	Internal Assessment	Attendance	Record	EE
Weightage (%)	20	5	5	70

Recommended books:

ON JOB TRAINING

Course Code: MLT4401

Credit Units: 9

On-the-job training, also known as OJT, is teaching the skills, knowledge, and competencies that are needed to perform a specific job within the workplace and work environment. The main purpose is to correlate laboratory investigations, through case studies and laboratory tests and their correlations. Implementation of Quality controls and guidelines for implementation in accreditation programmes. Students will learn in an environment in which they will need to practice the knowledge and skills which he/she learnt in the class. On-the-job training uses the regular or existing workplace tools, machines, documents, equipment, knowledge, and necessary skills required for an employee to learn to effectively perform his or her job where ever he/she is sent for OJT.

Examination Scheme:

Components	Continuous assessment (External Supervisor-20 & Internal Supervisor-20)	Final Evaluation (Attendance >75%- 5, Viva-10, Presentation- 15 & Final report- 30)

CLINICAL RESEARCH-DISSERTATION

Course Code: MLT4437

Credit Units: 9

GUIDELINES FOR PROJECT FILE AND PROJECT REPORT

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critically analyzed by the faculty guide and corrected by the student at each stage.

PROJECT FILE

The Project File may be a very useful tool for undertaking an assignment along-with a normal semester, an exploratory study, sponsored projects, a project undertaken during summer period or any other period as per curricular where the researcher is working with a company/organization. The project/ assignment may also be a part of the bigger research agenda being pursued by a faculty/ institution/ department. The Project File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation. This file may be considered in continuous assessment.

In general, the File should be comprehensive and include:

- A short account of the activities that were undertaken as part of the project;
- A statement about the extent to which the project has achieved its stated objectives;
- A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;
- Any activities planned but not yet completed as part of the project, or as a future initiative directly resulting from the project;
- Any problems that have arisen and may be useful to document for future reference.

PROJECT REPORT

The Project Report is the final research report that the student prepares on the project assigned to him. In case of sponsored project the layout of the project could be as prescribed by the sponsoring organization. However, in other cases the following components should be included in the project report:

- **Title or Cover Page:** The title page should contain Project Title; Student's Name; Programme; Year and Semester and Name of the Faculty Guide.
- **Acknowledgement(s):** Acknowledgment to any advisory or financial assistance received in the course of work may be given. It is incomplete without student's signature.
- **Abstract:** A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project. It should not exceed more than 1000 words.
- **Table of Contents:** Titles and subtitles are to correspond exactly with those in the text.
- **Introduction:** Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- **Materials and Methods:** This section should aim at experimental designs, materials used (wherever applicable). Methodology should be mentioned in details including modifications undertaken, if any. It includes organization site(s), sample, instruments used with its validation, procedures followed and precautions.
- **Results and Discussion:** Present results, discuss and compare these with those from other workers, etc. In writing this section, emphasis should be laid on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow. Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary, do not write in “point” form. While presenting the results, write at length about the various statistical tools used in the data interpretation. The result interpretation should be simple but full of data and statistical analysis. This data interpretation should be in congruence with the written objectives and the inferences should be drawn on data and not on impression. Avoid writing straight forward conclusion rather; it should lead to generalization of data on the chosen sample. Results and its discussion should be supporting/contradicting with the previous research work in the given area. Usually one should not use more than two researches in either case of supporting or contradicting the present case of research.
- **Conclusion(s) & Recommendations:** A conclusion should be the final section in which the outcome of the work is mentioned briefly.

Check that your work answers the following questions:

- Did the research project meet its aims (check back to introduction for stated aims)?
- What are the main findings of the research?
- Are there any recommendations?
- Do you have any conclusion on the research process itself?

- **Implications for Future Research:** This should bring out further prospects for the study either thrown open by the present work or with the purpose of making it more comprehensive.
- **Appendices:** The Appendices contain material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.
- **References:** References should include papers, books etc. referred to in the body of the report. These should be written in the alphabetical order of the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

Examples:

- For research article:

Voravuthikunchai SP, Lortheeranuwat A, Ninrprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic Escherichia coli O157: H7. Clin Microbiol Infect, 8 (suppl 1): 116–117.

- For book:

Kowalski, M. (1976) Transduction of effectiveness in Rhizobium meliloti. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), 7: 63-67

The Layout Guidelines for the Project File & Project Report:

- A4 size Paper
- Font: Arial (10 points) or Times New Roman (12 points)
- Line spacing: 1.5
- Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

ASSESSMENT OF THE PROJECT FILE AND THE PROJECT REPORT

Essentially, the assessment will be based on the quality of the report, the technical merit of the project and the project execution. Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project. Project execution is concerned with assessing how much work has been put in.

The Project should fulfil the following assessment objectives:

- Range of Research Methods used to obtain information
- Execution of Research
- Data Analysis (Analyze Quantitative/ Qualitative information)
- Quality Control
- Conclusions

Assessment Scheme:**Continuous Evaluation:**

40% (Based on punctuality, regularity of work, adherence to plan and methodology, refinements/mid-course corrections etc. as reflected in the Project File.)

Final Evaluation:

60% (Based on the Documentation in the file, Final report layout, analysis and results, achievement of objectives, presentation/ viva)

It is recommended that the Final evaluation should be carried out by a panel of evaluators.

Examination Scheme:

Components	Continuous assessment (External Supervisor-20 & Internal Supervisor-20)	Final Evaluation (Attendance >75%-5, Viva-10, Presentation- 15 & Final report- 30)

DEMOGRAPHY

Course Code: MHA4102

Credit Units: 03

Course Objective:

To present students some basic techniques and concepts in population sciences.

Course Contents

Module-I: Population Fundamentals

Science of demography, Demographic cycle, Population trends and demographic indicators, Demography and Family Planning and its role in population policy of India.

Module-II: Demographic Studies

- Fundamentals of population studies and its links with health.
- Methods of demographic data collection, sources of data, population census, population composition, world population growth, growth of Indian population, morbidity, mortality, ageing, migration/urbanization, population projections life tables.

Module-III: Family Planning

Fertility and fertility factors, Family planning, Population policies & programmes and National Population Policy.

Examination Scheme:

Components	CP	V	A	ME	EE
Weightage (%)	5	5	5	15	70

BIOSTATISTICS

Course Code: MHA4105

Credit Units: 3

Course Objective: The aim of this course is to develop the understanding of various statistical tools used for decisions making and how each applies to and can be used in the Hospital environment.

Course Contents:

Module-I: Introduction

Classification of data, Source of data, data organization Method of scaling - nominal, ordinal, ratio and interval scale, building composite scales, measuring reliability and validity of scales.

Module-II: Properties of measurement & Probability distributions

- Measurement of central tendency, measurement of dispersion – Range, Mean deviation & Standard deviation.
- Concepts of probability, Probability distributions – Binomial, Poisson & Normal Probability Distribution.

Module-III: Sampling

Sampling methods, Sampling Errors; Sampling distribution.

Module-IV: Testing Hypothesis

Hypothesis Testing to compare two populations – Student's T-test, Interpretation of computer output of ANOVA, Chi – Square Test, F-test.

Module-V: Forecasting Techniques

Correlation-Karl Person, Spearman's Rank methods, Regression Analysis, least squares method, coefficient of determination, Time Series Analysis.

Module-VI: Statistical methods and application:

SPSS processing, Transformation and manipulation of SPSS file, Statistical procedures-descriptive, univariate, bivariate and multivariate statistics.

Examination Scheme:

Components	CP	V	A	ME	EE
Weightage (%)	5	5	5	15	70

INFORMATION TECHNOLOGY FOR MANAGERS

Course Code: MHA4106

Credit Units: 3

Course Objective: This course will expose students to developments in computer technology and understand the working of a computer system. It will introduce end-user computing and build skills in using IT and understanding various technologies like internet, telecom, DBMS concepts, e-commerce etc. The course will expose the students to the latest trends in computer.

Course Contents:

Module-I: Modern Computer Systems

Evolution of Computer Systems, Input, output and storage technologies, Computer Assisted Control and Automation, (e.g. Delhi Metro , Digitally Controlled Car engines etc.), Computer Controlled Biometric/RFID based Access Control , Contemporary hardware and software platforms(Open Source, Web Software etc.), Storage of Data Resources

Module-II: Data Resource Management

Introduction to DBMS, Benefits of DBMS over traditional file system, Types of DBMS, Application of DBMS using MS-ACCESS / ORACLE as a tool for understanding of DBMS concepts. SQL Query handling, Forms, Concept of Data Warehouses and Data Marts, Introduction to Data Centers. Storage Technologies and Architecture (DAT, NAS, SAN etc.). Live examples of storage strategies of companies like Google, Amazon Wal-Mart dealing with storage crisis

Module-III: Telecommunications and Computer Networks

Networked Enterprise :- Components, Types of networks, Advantages of Network Environment, Business Uses of Internet, Intranet and Extranet, Web 2.0/3.0, Distributed/Cloud/Grid Computing, GSM & CDMA, GPRS ,3G & 4G technologies, VOIP and IPTV.

Module-IV: Electronic Commerce Systems

Introduction to e-Commerce and M-Commerce, Advantages and Disadvantages of each. Concept of B2B, B2C, C2C , with examples. Concept of Internet Banking and Online Shopping, Electronic Payment Systems. Project Discussion:- Development of e-commerce store (Web Site Development, Internet Publicity, Payment Gateway, Packaging & Delivery , After Sales Support) .

Module-V: E-governance

Concept of e-governance, World Perspective, Indian Perspective, Technologies for e-governance, e-governance as an effective tool to manage the country's citizens and resources, Advantages and Disadvantage of E-governance, E-governance perspective in India. Discussion on MCA21 Project, Bhoomi etc.

Module-VI: Security Management

The Information Security, System Vulnerability and Abuse, Security Threats (Malicious Software, Hacking etc.) and counter measure. Definition of Cyber Crime and Types. Antivirus, Firewalls, Anti-Spyware, Security Audit, Discussion on Overview of IT-ACT 2000.

ESSENTIALS OF HEALTHCARE SYSTEM

Course Code: MHA4107

Credit Units: 3

Course Objective: To provide the students a basic insight into the main features of Indian health care delivery system and how it compares with the other systems of the world.

Course Contents:

Module-I: Health and Development

Concept of Health, illness, sickness and disease; Public health Indicators, Health and its determinants, Disease Burden in terms of DALY, Social context of Health – Culture, health belief model and social issues affecting health like urbanization etc; Gender and health, Nutrition and Health, Nutritional Transition.

Module-II: Healthcare Systems

Evolution of Health Planning in India, Concept and Elements of Primary Health Care, Rural Healthcare system in India – Structure & Current Scenario, Indian Public Health Standards, Organization and Management of Public Healthcare System, Issues in healthcare delivery system,

Module-III: Health Policies and Schemes

Millennium development goals, National Health Policy, Integrated Child Development Scheme, Health Sector Reforms, Five year Plans, Reproductive and Child Health Programme, Universal Immunization Coverage, National Health Mission and National Urban Health Mission.

Module-IV: NRHM

Goals & Strategies of NRHM, expected outcomes and its various components like Accredited Social Health Activists, Mobile Medical Units, JananiSurkshaYojna, JSSK, Village Health & Sanitation Committee, RogaKalyanSamiti etc.

Module-V: National Health Programmes

Management and Implementation of National Health Programmes– Revised National Tuberculosis Control Programme, National AIDS control Programme, National programme for Control of Blindness, Vector Borne Diseases Control Programme, National Leprosy Eradication Programme, National Cancer Control Programme, National Diabetes Control Programme and National Mental Health Programme.

HOSPITAL PLANNING

Course Code: MHA4203

Credit Units: 03

Course Objective

To expose the students to planning and operation of hospitals in a detailed manner which will include all facets of hospital planning activities covering every department that is involved both in clinical care as well as supportive services.

Course Contents

Module-I: Introduction to Hospital Planning

Conception of idea, formation of hospital planning team, market survey, feasibility study, selection of location, Financial planning of hospitals, Macro level planning, Conception to commissioning- site development, architects brief working drawings and specifications, engineering drawing, equipment planning, bed distribution, space allocation, interior designing and construction of building - commissioning, shake down period

Module-II: Planning for Medical and Ancillary services

Out-patient services, Emergency services, Day care services, Inpatient services and Intensive Care Units (ICU), Surgical suites, Labor and delivery suites-LDRP suites and Physical Therapy department.

Module-III: Planning for Supportive Services

Admitting department, Medical Records department, Laboratory services, blood banking & Radiological services, Pharmacy & Medical store, Medical gas system, HVAC, CSSD, Food & Beverages and Laundry & linen services.

Module-IV: Planning for Advanced facilities

Cardiac catheterization laboratory, various endoscopy units, Radiotherapy unit, IVF unit and Dialysis unit.

Module-V: Recent Advances in Hospital Planning

Green Hospitals, Energy efficiency in hospitals, Robotics in Hospitals and Geriatric Care

Examination Scheme:

Components	CP	V	A	ME	EE
Weightage (%)	5	5	5	15	70

Texts & References:

HEALTH ECONOMICS

Course Code: MHA4204

Credit Units: 3

Course Objective: To study principles of economics and its application in Hospitals.

Course Contents:

Module-I: Nature and scope of Economics

Fundamental Concepts –Scarcity & Choice, Macroeconomics & Microeconomics, Economic Agents – Consumer, Producer & government, Market – Free market mechanism and chained Market Mechanism.

Module-II: Demand and Supply Market

Law of Demand, Shift in Demand Curve, Law of Supply, Shift in Supply curve, Market Equilibrium, Concept of elasticity – Price elasticity of Demand & Supply.

Module-III: Healthcare Market

- Market Failure: Imperfect competition, Risk & uncertainty, Moral Hazard, Adverse selection, Externalities, Public Good, Asymmetric Information and concern of Equity. Market of unqualified medical care providers.
- Demand for Healthcare: Need, Want & demand, Healthcare as an investment, Determinants of demand – Price factors (opportunity cost), Patient factors & Physician factors – Supplier Induced Demand; Insurance and demand for healthcare.

Module-IV: Costs

Classification of costs on the basis of traceability, cost behavior, controllability and selection among alternatives; Total, Average and Marginal costs.

Module-V: Health Expenditure

Public Expenditure on Health, Expenditure and Allocations under Five-Year Plans, its SWOT analysis, National Health Accounts.

Examination Scheme:

Components	CP	V	A	ME	EE
Weightage (%)	5	5	5	15	70

RESEARCH METHODOLOGY

Course Code: MHA4205

Credit Units: 03

Course Objectives:

- To provide basic understanding towards research principles and methods.
- To introduce important analytical tools for research data analysis.
- To assist in the development of research proposals/reports.

Course Contents:

Module-I: Basics of Research

Definitions & uses of research in healthcare, Steps Involved in Research Process, Variables in research, Measurement scales, Formulation of research problems, writing research questions, Development of conceptual framework.

Module-II: Sampling & Research Designs

Sampling, Sampling Procedure, Various types of Sampling Techniques, Sample size determination, reliability & validity in research, Research Designs- Non-experimental & experimental research designs.

Module-III: Review of Literature & Hypothesis

Review of literature, Hypothesis- Meaning and types of hypothesis, Hypothesis testing, Type I & Type II errors in hypothesis testing.

Module-IV: Data Collection

Types of Data: Secondary and Primary, Different methods of data collection- Observation method, interview method, Questionnaire and schedule, Data Management: editing, entry and preparing data sets for analysis; Design and development of questionnaire.

Module-V: Research Reports

Structure and Components of Research Report, Types of Reports, Layout of Research Report, Method of writing a research report.

Module-VI: Research Ethics & Reference Writing

History of ethics in health research, Principles and Concepts in research ethics – confidentiality and privacy, informed consent, vulnerable subjects and special treatments, standards of care – principles, review processes etc.; Vancouver style of reference writing.

Examination Scheme:

HOSPITAL MATERIALS MANAGEMENT

Course Code: MHA4206

Credit Units: 03

Course Objective: Hospitals carry a large inventory of drugs, sophisticated and highly costly equipment besides beds, furniture and linen. The student should be conversant with Inventory and various methods of control and Purchase management.

Course Contents:

Module-I: Introduction

Definition, scope and importance of materials management; aims, objectives & principles of materials management; Material Cycle; Material Codification-advantages and types.

Module-II: Stores Management

Responsibilities and functioning of stores, types of Medical Stores, planning of hospital stores, duties of officer in-charge and storekeeper; location, lay-out planning and design of hospital stores, preservation of stores, documentation & evaluation of stores and role of computers in hospital stores management.

Module-III: Purchase Management

Objectives and elements of good purchasing system, Procurement procedure, Tendering system, modes of tenders, Purchase order and its types, types of purchasing systems.

Module-IV: Inventory Management

Inventory control, Basic inventory model, types of inventory, objectives and scope of inventory control, Lead time, Buffer stock, Re-order level, Economic order quantity (EOQ), Inventory control costs – Purchase cost, shortage cost, inventory carrying cost & inventory acquisition cost; Inventory ordering systems; Inventory control Techniques- ABC, VED, SDE, SAP, FSN, HML, XYZ, SOS, GOLF, MUSIC; and Supply chain management.

Module-V: Stock Verification, Condemnation and disposal

Process and need for stock verification, Techniques of verification, Pilferage, Stock distribution methods, criteria and procedure of stock condemnation and disposal.

Module-VI: Equipment Management

Classification of Hospital equipments, Planning and selection of equipments, factors affecting utilization of equipments, equipment failure, training & development, documentation, equipment maintenance and its types and Equipment audit.

Module-VII: Legal aspects

Role and functions of Director General of supplies and disposal, Registration and blacklisting of firms, Law of contract, Letter of credit & its types, Import & export policy & pricing of goods and Duty of customs.

HOSPITAL STUDY-I

Objective:

To have a practical exposure of various departments of a hospital. It is included in the syllabus to make the students aware of the functioning of different departments of hospital.

Training:

1. Central Sterile Supply Dept.
2. Hospital Library
3. Emergency Dept
4. Critical Care Unit
5. Medical Record
6. Operation Theatre
7. Maintenance Department
8. Bio-Medical Department

Central Sterile Supply Department (CSSD)

- 1) Location
- 2) Equipments
- 3) Items processed by Central Sterile Supply Department
- 4) Sterilization technique
 - a) Heat
 - b) Gas
 - c) Liquid
 - d) Ionizing radiation
 - e) Others
- 5) Work flow
- 6) Clean zone, dirty zone
- 7) Pooling of materials, equipments
- 8) Process of receiving and distribution of materials
- 10) Cleaning, drying and packing of sterilized materials
- 11) Segregation of Dirty zone and clean zone
- 12) Process of receiving and distribution of materials
- 13) Quality control checking of sterilization in collaboration with Micro-biology Lab.
- 14) Organization & Staffing
- 15) CSSD Committee

Emergency Dept

- 1) Location
- 2) Basic lay out of Emergency Dept
 - (a) Receiving patients
 - (b) Patient examination zone
 - (c) Patient investigation zone
 - (d) Procedure room
 - (d) Cardio Pulmonary Resuscitation Unit
 - (e) Dead bodies identification and segregation
 - (f) EMO's Office

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- (g) Nursing Station
- 3) Infrastructural facilities
- 4) Equipments
- 5) Legal procedure system
- 6) Emergency Operation Theatre
- 7) Admission procedure
- 8) Billing for day care procedure in Emergency Dept.
- 9) Staffing
- 10) Security

Critical Care Unit

- 1) Organizational structure
- 2) Bed orientation pattern
- 3) Lighting system
- 4) Monitoring system
- 5) Maintenance of sterility and general cleanliness
- 6) Administration of CCU
- 7) Workflow
- 8) Equipment maintenance
- 9) Maintenance of uninterrupted gas and power supply system
 - 1) Continuous wall flow oxygen
 - 2) Compressed air
 - 3) Suction Apparatus (Vacuum Pump)
 - 4) Uninterrupted Power Supply (UPS) line

Medical Records

- a) Assembly of records
- b) Quantitative and qualitative analysis
- c) Different classification of records
- d) Methods of deficiency check
- e) Completion of incomplete records
- f) Retrieval of medical records
- g) Coding system
- h) Indexing system
- i) Generation of statistics and analysis
- j) Reporting to various statutory authorities
- k) Methods of numbering
 - i) Serial number
 - ii) Unit number system
 - iii) Serial unit numbering
- l) Filing System
 - i) Decentralized system
 - ii) Centralized system
 - iii) Various other methods
- m) Types of forms

- 1) Location
- 2) Zoning of Operation Theatre
- 3) Infrastructural facilities
- 4) Centralized and decentralized Operation Theatres
- 5) Equipment requirement
- 6) Procurement and maintenance including annual maintenance contract
- 7) Functions and policies of Operation Theatres
- 8) Manpower requirement
- 9) Duties and responsibilities including standard operation procedures
- 10) Safety procedures
- 11) Methods of checking operating rooms for readiness to receive patient
- 12) Periodical sterilization / fumigation
- 13) Sterile supply

Maintenance Department

Observation of

- a) Location of different maintenance departments
- b) Lay out
- c) Power Generation and supply
- d) Demineralization Plant with R.O. facility for Dialysis unit
- e) Oxygen Plant
- f) Effluent Treatment Plant
- g) Air Condition Plant and distribution system
- h) Maintenance of the medical equipments, calibration
- i) Maintenance of total hospital building – civil, electrical and mechanical
- j) Organization

Bio-Medical Department

- 1) Bio Medical equipment and their function
- 2) Importance and fundamental functions of Bio-Medical Equipments
- 3) Maintenance procedures of Bio-Medical Equipments
- 4) AMC of Bio Medical Equipments

SUMMER INTERNSHIP EVALUATION

Course Code: MHA4335

Credits Units: 06

Training Objective:

To provide on the job experience, as an understudy in a hospital, to help the student understand systems and procedures and learn to make decisions considering the Hospital as an integral unit.

Duration: 2 months

Format for Report Writing

1. Abstract
2. Introduction
3. Aims & Objectives
4. Operational definitions
5. Significance of Study
6. Review of literature
7. Research methodology
8. Data Analysis
9. Results
10. Discussion
11. Conclusion
12. Recommendations
13. Limitations of study
14. Future prospects of study
15. References

Guidelines for presentation-

- Powerpoint presentation
- Time for presentation: 20 minutes
- Time for discussion: 10 minutes

Examination Scheme

OPERATIONS RESEARCH

Course Code: MHA4302

Credit Units: 03

Course Objectives:

- To provide basic OR approach to problem solving.
- To introduce important analytical tools for managerial decision making.
- To introduce concepts of resource allocation & health service planning.

Course Contents:

Module-I: Introduction

The OR approach to problem-solving and decision-making, Scope and limitations of OR in managerial decision-making.

Module-II: Introduction to OR Techniques

Linear Programming, Decision Tree Analysis, Queuing theory, PERT/CPM.

Module-III: OR Models

Replacement models, Sensitivity analysis, Assignment models, Inventory control models, Forecasting.

Module-IV: Applications of OR in Hospitals and Health Agencies

Resource allocation, Health services planning, Deployment of health human power, Materials Management, Equipment replacement, Patient scheduling.

Examination Scheme:

Components	CPA	TP	Q/S	A	ME	EE
Weightage (%)	5	5	5	5	10	70

QUALITY MANAGEMENT

Course Code: MHA4303

Credit Units: 03

Course Objective:

To understand the concept of quality and its relation to healthcare scenario

Course Contents:

Module-I: Basics of Quality Management

Definitions, principles of quality, benefits of quality management, dimensions of quality in primary healthcare and various quality frameworks

Module-II: Quality Improvement Approaches

- Quality Assurance cycle and developing standards.
- TQM Quality Gurus: Deming, Juran and Crosby principles.
- Benchmarking: Principles, types and process of benchmarking
- Medical Audit: Clinical Audit, its methodology and related statistics.

Module-III: Quality Improvement Tools and techniques:

- Tools: Brainstorming, Cause effect Analysis, Flow chart, Pareto Analysis, etc
- Lean Management: 4P model, Lean principles and its tools - 5 S technique, 3 M technique, Kaizen's theory, Jidoka & Andon, Throughput & Takt Time.
- Six Sigma: Variations in performance, DMAIC & DFSS methodology, Champions, black belts and green belts, Six sigma applications and its benefits.

Module-IV: Accreditation

Benefits of Hospital Accreditation, ISO certification, Quality Council of India (QCI), National Accreditation Board for Hospitals & Healthcare Providers (NABH) – accreditation procedure, assessment criteria and its standards; and Joint Commission International (JCI)

Module-V: Cost and Quality

Prevention cost, Appraisal Cost, Internal & External failure costs, Net & Total cost of quality.

Examination Scheme:

Components	CP	V	A	ME	EE
Weightage (%)	5	5	5	15	70

MEDICAL & HEALTH LAWS

Course Code: MHA4304

Credit Units: 03

Course Objectives:

To acquaint the students with various legal aspects concerning type and character of the health care organizations and its duties towards patients and its employees.

To familiarize the students in matters of liability of hospital medical negligence and medical malpractice in diagnosis, administration of drugs, surgery etc.

Course Contents:

Module-I: Introduction

Law pertaining to establishment of hospitals and legal requirements under Medical Council Acts.

Module-II: Hospitals as an Industry

Basic concepts of labour laws in India, Hospitals as an 'industry' - application of labour enactments, Discipline in hospitals and Trade union act

Module-III: Hospital's duties towards Patients

Essentials of Contractual obligations in hospital services, duties towards patients, Rights of patients and Code of ethics.

Module-IV: Acts pertaining to Hospitals

Legal aspects relating to Organ transplantation, MTP Act 1971, Basics of Drugs and Cosmetic Acts, Euthanasia. ESI Act, PNDT Act, Human experimentation, Clinical trials, Industrial dispute Act, Central Births & Death Registration Act.

Module-V: Legal liabilities of Hospitals

Legal liability of hospitals - criminal, civil and tortuous; Absolute liability and vicarious liability, Medical negligence, Legal remedies available to patients under contract law, tort, criminal law, Consumer protection Act and Medical Jurisprudence.

Module-VI: Medical ethics, CPA & Auditory procedures

Consumer protection act, Autopsy, Use of investigational drugs, Introduction/need & procedures for medical audit, Audit administration & Regulating committees.

Confidentiality and professional secrecy, ethics of trust and ethics of rights – autonomy and informed consent,

Medical ethics – basic issues, importance, process of developing and implementing ethics and values in an institution – codes of conduct: Hippocrates oath and declaration of Geneva – MCI regulation – professional conduct, etiquette and ethics.

Examination Scheme:

Components	CP	V	A	ME	EE
Weightage (%)	5	5	5	15	70

MANAGEMENT OF CLINICAL SERVICES

Course Code: MHA4305

Credit Units: 03

Course Objectives:

- To enable the students gain insights into various aspects like importance, functions, policies and procedures, equipping, controlling, co-ordination, communication, staffing, reporting and documentation of clinical services in a hospital.
- To understand the processes and details related to effective patient care and to further increase the satisfaction level of patients

Course Contents:

Module-I: Hospital as a system

Concept of patient care, Role of Hospital Administration towards the patient and towards the Hospital, Patient safety and patient risk management.

Module-II: Out-Patient Department

- Organization & management of OPD: Overview of the department, its functions, location and physical facilities
- Daycare services; Auxiliary, Ancillary & Domiciliary facilities in the OPD.

Module-III: Inpatient Department

- Organization & management of OPD: Overview of department, its functions, Ward design (general & specialized), Nursing Administration, Isolation unit, Janitor's closet.
- Assessment of IPD in terms of Patient Days, Bed Utilization Rate, Ward Occupancy, and Average length of stay.

Module-IV: Accident and Emergency Services

Organization & management of department, Physical facilities and Manpower planning, Triaging, Centralized Accident & Trauma services (CATS) and Observation unit.

Module-V: Operation Theatres

Organization & Management of OT complex, Pre-op & Post-op area, Zoning, ventilation & lighting, Modular systems, Methods of fumigation and OT scheduling.

Module-VI: Intensive Care Units

Organization & Management of ICUs, Types of ICUs, Staffing in ICUs, Specialized ICUs – ICCU, NICU, PICU etc, and Critical care scoring

Module-VII: Specialty Services

Rehabilitation unit, Nuclear Medicine department, Burns Unit, Obstetrics & gynecology unit, Pediatric unit, Transplantation Unit etc.

Module-VIII: Other Hospital Functional Activities

Biomedical Waste Management: segregation, collection, transportation & disposal, Nosocomial Infections & its control, Patient safety

HOSPITAL MANAGEMENT INFORMATION SYSTEM

Course Code: MHA4401

Credit Units: 02

Course Objective:

To understand the various indicators of health and health information system and health management information system in hospitals

Course Contents

Module-I: Introduction

Concept of information as a resource, understanding the principles of information systems and Classification of information in hospitals.

Module-II: Managing Hospital Information Systems

- Data generated for HIS; Functions, Benefits and applications of HIS, HIS components, various performance Indicators, HIS model and data movement.
- HIS modules: Various HIS Modules for Clinicians Access, Nursing Access, In-patient Module, Registration Module, Diagnostic services Module, Dietetics Module, OT Module and Accident & Emergency Module etc.

Module-III: Role of Information Technology in Hospitals

Computerization in Hospitals, advantages of computerized system, database interface, IT Components of HIS and various softwares available in the healthcare market.

Module-IV: Management Information System

Concept of MIS, functions of MIS, developing MIS, types of MIS, developing indicators, identifying data and developing tools of measurement and applications of MIS.

Module-V: Telemedicine

Concept of Telemedicine and its evolution, Telemedicine network in India, and Strengths & Opportunities for Telemedicine in India.

Examination Scheme:

HEALTH INSURANCE AND MEDICAL TOURISM

Course Code: MHA4402

Credit Units: 02

Course Objective:

To acquaint students to the concept of HI and various HI products, so that the students are ready for challenges of healthcare insurance which is emerging as a sector holding great promise.

Course Contents

Module-I: Introduction

History of Health Insurance, Principles of Health Insurance, Public Financing, Private Financing, Current trends in Health Insurance - International and Indian scenario, Economic and financial management of Health Insurance

Module-II: Health Insurance systems in India

- Private Health Insurance: Individual Health Plans, Mediclaim, Floaters plans, Third Party Administration, Benefits Management, Claims Management, IRDA
- Social Health Insurance: ESI, CGHS, RSBY
- Social and Community based Insurance: Microfinance

Module-III: Medical Tourism

Basic Concepts of Medical Tourism, Scope of Medical Tourism in India.

Examination Scheme:

Components	CP	V	A	CT 1	CT 2
Weightage (%)	20	15	5	30	30

DISASTER MANAGEMENT

Course Code: MHA4403

Credit Units: 02

Course Objectives:

- To learn, identify and assess disasters in the community.
- To set-forth policies and procedures for disaster preparedness and to prepare hospital disaster plan.

Course Contents

Module-I: Basics of Disaster Management

Definitions, Determining risk of disaster, Classification of disaster on the basis of origin, source, onset & anticipated response; Disaster process, Effects of Disasters – Health issues, characteristics and geography of disasters, Impact of Disasters on the Hospitals.

Module-II: Disaster Management Process

Phases of disaster management, leadership, organization of medical relief, Triage, Disaster Response – local, national & International; Disaster Management Act – 2005.

Module-III: Disaster preparedness

Hospital Disaster Plan – its pre-requisites, principles and components; Hospital disaster management committee and its role; Hospital disaster manual.

Module-IV: Fire Safety

Grades of fire and its causes; elements of fire safety, various fire extinguishers; and fire safety training.

Examination Scheme:

Components	CP	V	A	CT 1	CT 2
Weightage (%)	20	15	5	30	30

HOSPITAL STUDY-III

Objective:

To have a practical exposure of various departments of a hospital. It is included in the syllabus to make the students aware of the functioning of different departments of hospital.

Training:

1. Diagnostic Imaging
2. Dental Service
3. Dialysis Unit
4. Burn Units
5. Blood Bank
6. Mortuary
7. Telemedicine
8. Medical transcription

Diagnostic Imaging

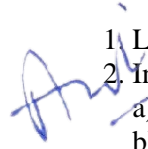

- 1) Various types of machines like;
 - a) CT
 - b) MRI
 - c) PET
 - d) USG with color Doppler
- 2) Advantages / disadvantages of different types of machine
- 3) Basic functioning and maintenance
- 4) Special licensing requirement
- 5) Special structural requirements
- 6) Staffing and manpower planning
- 7) Cost analysis and profitability
- 8) Operation and maintenance

Dental Services

- a) Location
- c) Laboratory
- d) Recovery Room
- e) Waiting Room
- f) Storage
- i) Lighting
- j) Plumbing
- k) Ventilation
- l) Equipment and maintenance

Dialysis Unit

1. Location
2. Infrastructural facility
 - a) for day care dialysis or out patient dialysis
 - b) for inpatient dialysis

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

3. Various types of dialysis units
4. Special arrangement for maintaining sterility
5. Ambulatory dialysis system
6. Procurement, installation and maintenance of various types of dialysis machines
7. Arrangement for stand-by unit

Burn Unit

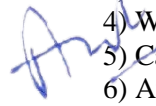

1. Location
2. Infrastructural facility
3. Special equipment requirement for Burn Unit
4. Laboratory facility
5. Communication facility
6. Maintenance of Asepsis
7. Manpower

Blood Bank

- 1) Location
- 2) Reception
- 3) Special arrangements for voluntary donors
- 4) Administrative Office
- 5) Record Keeping
- 6) Servicing rooms
- 7) Bleeding Room
- 8) Storage Room
- 9) Storage equipment
- 10) Regulatory requirement
- 11) Blood safety procedures
- 12) Receipt, storing and delivery of blood
- 13) Triple screening and check method
- 14) Record keeping
- 15) Medico-legal aspects
- 16) Physical facilities
- 17) Waiting facilities
- 18) Laboratory facilities
- 19) Issuance of Blood Donor Card
- 20) Safety devices
- 21) Liquid waste management
- 22) Procedure for discarding
- 23) Staffing

Mortuary

- 1) Location
- 2) Physical facilities
- 3) Body refrigerator
- 4) Walk in refrigerator
- 5) Capacity requirement of Mortuary
- 6) Autopsy facility

 Prof. (Dr.) Anil Kumar
 Deputy Dean Academics
 Amity University Haryana
 Manesar, Gurugram
 Haryana-122413

 Registrar
 Amity University Haryana
 Manesar Gurgaon-122413

- 7) Preservation / identification/labeling of viscera / body fluids and other materials for medicolegal purposes
- 8) Embalming procedures
- 9) Methods of long distance transportation of dead bodies
- 10) Arrangements for religious rites
- 11) Mortuary traffic control
 - a) Internal
 - b) External
- 12) Identification of bodies using triple check system
- 13) Maintenance of records
- 14) Various legal requirements
- 15) Disposal of unclaimed bodies

Telemedicine

1. Infrastructure – both end – (1) Hospital end (2) Nodal Centre
2. Requirement of:
 - a) Computer Monitors
 - b) Cameras
 - c) Internet connection
3. Observation of telemedicine techniques and practical demonstration
4. Manpower requirement

Medical Transcription

1. Observation of techniques and demonstration
2. Infrastructural requirement
3. Trained manpower
4. Transmission modes

 Prof. (Dr.) Anil Kumar
 Deputy Dean Academics
 Amity University Haryana
 Manesar, Gurugram
 Haryana-122413

DISSERTATION

Course Code: MHA4437

Credit Units: 15

Internship Objective:

To impart the practical knowledge through research methods, help formulate a rigorous research problem related to hospital on the basis of their observation, help do an independent study, and encourage working in a team.

Pedagogy

- Identifying several situations amenable to dissertation work, writing a proposal and making a presentation to the Departmental Research Committee.
- Reporting to the committee on the progress of research work periodically.
- Making use of a variety of research methods.
- Defending the inference before the Examining Committee.

Report Contents

Every student will do a detailed study on the topic selected for the dissertation, and is expected to prepare a two or three proposals which he intends to take up for the Dissertation. The Assigned guide will examine this and decide on the topic of dissertation. Report will comprise of following contents:

1. Abstract
2. Introduction
3. Aims & Objectives
4. Operational definitions
5. Significance of Study
6. Review of literature
7. Research methodology
8. Data Analysis
9. Results
10. Discussion
11. Conclusion
12. Recommendations
13. Limitations of study
14. Future prospects of study
15. References

Evaluation

The Departmental Research Committee and an expert from Hospital industry will evaluate the dissertation.

EPIDEMIOLOGY, PUBLIC HEALTH & COMMUNITY OPTOMETRY

Course Code: OPT4101

Credit Units: 03

Course Objective: To inculcate the knowledge, sensitivity and clinical exposure of community optometry. The outcomes of the course are: thorough understanding of conducting of screening for specific eye conditions, and resultant implications through theoretical and practical exposure. By the end of the course the student will be able to use the knowledge of the skills gained in promotion and preventive measures of community optometry.

Course Contents:

Module-I: Public health concepts

History of public health

History of public health optometry (including epidemiology, manpower, projections, community reimbursement mechanisms)

Organizations of health services (principles of primary, secondary and tertiary care) Health Care Delivery systems in India and determinants of health.

Detriments of health care delivery system

Planning of health services (including relevant legislation and implication to optometric practice).

Health manpower protection and in the practice of ophthalmology

Multidisciplinary and institutional practice modes

Global medicine and evolution of Public Health in India

Public Health optometry: concepts and implementation

Module-II: Levels of prevention-optometrist's role in community

Optometry's role as a primary care professional

Module-III: Health systems

Concepts of Health systems

National Health Programs

Effective delivery of eye care services

Module- IV: Global Blindness and visual impairment

Refractive error and low vision as public health issues

Socioeconomic implications of blindness and visual impairment

Vision screening

Organizing eye camps

Eye Donation and Eye Banking

Role of civil societies in blindness prevention

Vision2020 : the Right to Sight

National and International Agencies in eye Care

NPCB

DBCS

Module-V: Epidemiology

Public health and epidemiology

Prevalence ,incidence and distribution of visual impairment
Basics of Epidemiology study methods
Incidence , prevalence , risk factors , odd ratio
Childhood blindness
Refractive errors and presbyopia
Age related cataract
Low Vision
Diabetic retinopathy
Glaucoma
Age related Macular Degeneration
Trachoma
Corneal blindness

Examination Scheme:

Components	A	CT	P	HA	EE

APPLIED OPTICS

Course Code: OPT4110

Credit Units: 04

Course Objective: This course mainly deals with Optical management of refractive errors-new modalities the advanced techniques in subjective and objective refraction and Spectacle Dispensing. This course leads to a rewarding career as an optometrist, a specialist trained to dispense and to recognize basic ocular disorders. This allows students to recommend the right spectacle lens based on the condition of the eye

Course Contents:

Module-I: Ophthalmic Lens types,

Lens materials Properties of lenses (Refractive index, base curve, specific gravity, Abbe Value, UV cut off, etc)

Prism

Tints and coatings

Module-II: Bifocals/Multifocals

Module-III: Progressive addition lenses

Dispensing PAL, PAL trouble shooting, PALs in detail for Essilor, Hoya, Zeiss, Seiko, Rodenstock lenses

Module-IV: Spectacle FRAMES:

Facial fitting principles

Spectacle delivery

Dispensing problem prescriptions

Frame types and parts

Classification of spectacle frames-material, weight, temple position, coloration Frame construction

Frame Measurements and markings

Frame manipulation and repair

Facial measurements and frame choice

Measuring the interpupillary distance and pupillometer

Special purpose frames (sports, kids, reading)

Module-V: Lens Ordering

Lens edge thickness calculation Writing spectacle lens order

Facial measurements - Interpupillary distance measurement and measuring heights (single vision, multifocal, progressives)

Measurement of effective diameter minimum blank size Glazing and edging Hands on

Module-VI: Lens Verification

Lens verification and axis marking and fitting of all lens types

Final checking of finished spectacle with frame adjustments

Delivery and follow-up

Troubleshooting complaints and handling patient's questions.

Optical centre marking

Axis marking

Surface power measurement using Geneva lens measure Identify various types of Frames and mountings

CLINIC-I (GENERAL)

Course Code: OPT4105

Credit Units: 3

Course Contents:

This course includes minimum of 90 hours of supervised clinical training. The clinics involve primary care clinics and community work.

The objective of clinics in this semester is to be able to examine the eye and understand the basic eye procedures with clinical management.

A logbook is maintained and 15 case sheets with complete management and follow up are mandatory for submission. The log book needs to be signed by the supervisor.

Examination Scheme:

Components	Attd.	Log Book	Case Sheets	Viva-EE	EE-Practical
Weightage (%)	5	10	15	20	50

RESEARCH METHODOLOGY & BIOSTATISTICS-I

Course Code: OPT4106

Credit Units: 03

Research Methodology

Course Objective: This course is a brief overview about research design that is intended to cover the basics of designing and implementing a scientific study. It will provide the students the basic knowledge in Bio-statistics. At the completion of the course, the students will have the knowledge of data collection, statistical application and finally ready for research project. This will enable the student to gain understanding of different research methodologies and appropriate research design to be able to conduct research projects.

Course Contents:

Module-I:

Introduction to research methods, Variables in research, Reliability and validity in research, Formulation of research problems and writing research questions, Hypothesis, Null and Research Hypothesis, Type I and Type II errors in hypothesis testing

Module-II:

Introduction of epidemiology, Descriptive epidemiology, Experimental and non experimental research designs, Screening, Sampling methods, Biological variability, normal distribution

Module-III:

Bias and Confounding, Association and causation, Odds ratio and relative risk, sensitivity and specificity Data collection methods- Observation method, Interview method, Questionnaires and schedules Construction,

Module-IV:

Critical analysis of research papers, Conducting a literature review, Writing Research proposals, Development of conceptual framework in research

Module-V: Introduction to Biostatistics

Introduction to Statistics, Classification of data, Source of data, Method of scaling - nominal, ordinal, ratio and interval scale, measuring reliability and validity of scales, Measures of Central tendency, Measures of Dispersion, Skewness and kurtosis, Sampling, Sample size determination

Examination Scheme:

Components	CP	V	A	ME	EE
Weightage (%)	5	5	5	15	70

(CP – Class Performance; V-Viva; A- Attendance; ME- Mid-Term Exam, EE – End semester Exam)

RESEARCH METHODOLOGY & BIOSTATISTICS-II

Course Code: OPT4212

Credit Units: 03

Course Objective:

Introduction to Biostatistics and Implementing Statistical Tests and Procedures. This course is intended to provide a better understanding of data analysis and statistical issues in design of experiments, as well as the techniques and terminology commonly used to elicit and communicate evidence concerning scientific hypotheses. Students will learn to properly interpret the strength of statistical arguments made by researchers, and how to weigh statistical and clinical evidence in assessing a scientific hypothesis. Emphasis will be placed on conceptual understanding of issue. This is intended for students interested in learning how to conduct data analysis and how to interpret the output of statistical software. The implementation of these techniques through Excel and JMP will be illustrated by real datasets taken from clinical and public health studies. Students will learn where to find the relevant information from the statistical output tables generated by the software. Emphasis will be placed on application of statistical methods to real datasets.

Course Contents:

Module-I:

Introduction to SPSS

Module-II:

Concept of probability and Probability distributions – Binomial Probability distribution, Poisson Probability distribution and Normal Probability distribution

Module-III:

Data entry. Data coding and cleaning, tests for Normality, chi square test two sample tests (t test, man whitney test and wilcoxon signed rank test)

Module-IV:

Three or more sample testing (One way AND Repeated measures ANOVA, Kruskal Wallis test and Friedman test)

Module-V:

Correlation-Karl Person, Spearman's Rank correlation methods, Regression Analysis, Scientific writing (Writing research papers and thesis), Ethical Issues in Research, Principles and Concepts in research ethics – confidentiality and privacy, informed consent

Examination Scheme:

ADVANCED CONTACT LENS -I

Course Code: OPT4204

Credit Units: 4

Course Objective: Contact lenses are an essential part of optometric practice; not only for practice success, but also in the management of certain ocular conditions that require visual or therapeutic rehabilitation. This course introduces all aspects of contact lens practice to the optometry student. It begins with soft and rigid gas permeable contact lenses, and continues through toric, multifocal and specialty lenses in the next semester. This semester gives overview of contact lens related complications and their management which is discussed in detail in the next semester, A hands-on practical provides experience with the various lens types, and online materials encourage independent learning.

Course Contents:

Module-I: Introduction to Contact Lenses

History of Contact Lenses ,Contact Lens Materials and Manufacturing ,Optics of Contact Lenses, Soft & Rigid Gas Permeable Contact Lens Design ,Contact Lens Fabrication, Contact Lens Verification

Module-II: Contact Lens Fitting

Examining the Prospective Contact Lens Patient, Selecting Lens Type, Wear Mode and Replacement Rate

Fitting Spherical GP Contact Lenses, Fitting Spherical Soft Contact Lenses, Correcting Astigmatism with Contact Lenses

Module-III: Contact Lens Fitting

Fitting SiHyCLs, The Dispensing Visit and After-Care, Contact Lenses for Sports, Presbyopic Contact Lens Options

Module-IV: Care and Maintenance

Contact Lens Contamination ,CL Care and CL Care Products ,Rigid CL Care ,Hydrogel and Silicone Hydrogel CL Care

Module-V: Complications

Defending the Ocular Surface in Contact Lens Wear

Rigid Contact Lens Complications

Soft Contact Lens Complications

Dry Eye and Contact Lenses

Examination Scheme:

CLINICS-II (SPECIALITY)

Course Code: OPT4205

Credit Units: 3

The objective of clinics in this semester is to be able to examine the eye and understand the classified eye procedures with clinical management with special reference to low vision, binocular vision, pediatric care and contact lens.

An approximate of guided 150 hours needs to be completed in this semester. The students will be by rotation go to community clinics, Campus clinics, associated hospital partners and optical / optometric clinics.

The logbook has to be maintained and 30 case sheets of SELECTED speciality in the semester with complete management and follow up are mandatory for submission at the end of the semester

The log book needs to be signed by the supervisor during every visit. No case record will be considered without the supervisor's signature.

Examination Scheme:

Components	A	Log Book	Case Sheets	Viva-EE	EE-Practical
Weightage (%)	5	10	15	20	50

ADVANCED CONTACT LENS-II

Course Code: OPT4303

Credit Units: 4

Course Objective: This course gives both in-depth theoretical knowledge and clinical exposure in Contact lens at advanced level and in therapeutic conditions. It prepares student to develop competency in handling all types of specialty lenses. This course also deals with all complications related to contact lenses and its management.

Course Contents:

Module-I: Children and Contact Lenses

Module-II: Fitting Scleral and Mini-Scleral Contact Lenses, Fitting an Ocular Prosthesis

Module-III: Myopia Control and Orthokeratology

Module-IV: Special Topics

Contact Lenses for Keratoconus ,Special Applications of Contact Lenses, Advanced Techniques and Instrumentation ,The Working Environment and Contact Lenses

Module-V: Business Aspects of Contact Lens Practice

Contact lenses (CLs) in practice, Financial factors in a CL practice, Managing &marketing techniques for a CL practice, Employee management, Record Keeping
Professionalism & standards of care

Examination Scheme:

OCULAR DISEASE AND DIAGNOSTICS-II

Course Code: OPT4308

Credit Units: 04

Course Objective: In this course latest articles published in optometry and vision science journals will be discussed. Periodic Journal club presentation would be conducted. This will enable the student to develop skill on critical appraisal of publications and also help to keep abreast of latest developments in the field of optometry and vision science. The course would also provide insight on understanding and/or incorporation of scientific evidence in clinical practice.

This course examines selected areas of recent research in optometry. Current advances in methodology, specifics of research design, and impact of research findings will be emphasized. Selected topics are based on participating faculty expertise will be assigned to the students.

Students will be assigned topics of presentation during the semester and they will have to present base literature review and latest advancements.

Text & Reference books /journals:

Clinical and experimental optometry, Edited By: H. Barry Collin
Optometry & vision science ,journal of American academy of optometry
Optometry journal of American optometric association
Ophthalmic and Physiological Optics Journal of the College of Optometrists, UK

British Contact Lens Association

CLINICAL DECISION MAKING IN OPTOMETRIC CARE-I

Course Objective: Upon completing this course, the student will achieve a moderately-high level of competence with respect to a modest list of patient presentations commonly encountered by primary care optometrists. By the course's end, the student will be able to conduct a comprehensive, primary-care optometric examination, reach a diagnosis, and outline a management plan for the vast majority of patients seen during the year. The course will cover the general areas of ocular disease, refraction, functional vision analysis, and patient communication.

Course Contents: In this course, the student will begin with refreshing their basic knowledge on common eye disease of the anterior segment. The course would further orient towards clinical decision making skills, interpretation and improving their clinical skill set, clinical management of optometry. They will learn and develop skills on evidence/intuitive based management for the commonly seen eye diseases and learn appropriate referral & co management guidelines for secondary or tertiary ophthalmic care

The mode of delivery would be through cases scenarios discussion, problem based learning and seminar/workshops and Presentations. Records need to be maintained in the following pathologies.

The following common conditions will be covered in this semester:

Module-I: Lid and Adnexa:

Eyelid cysts

GPC

Hordeum

Chenosis

CLINICS-III (SPECIALITY)

Course Code: OPT4305

Credit Units: 3

The objective of clinics in this semester is to be able to examine the eye and understand the eye procedures with clinical management with special reference to complete optometric care.

A minimum of guided 240 hours need to be completed in this semester. The students will be by rotation go to community clinic, Campus clinics, associated hospital partners and optical / optometric clinics.

The logbook has to be maintained and 30 case sheets of complete case management and follow up are mandatory for submission.

The log book needs to be signed by the supervisor every time a case is recorded in it. No case will be considered without the supervisor's signature.

Examination Scheme:

Components	A	Assignment (log book)	Case Sheets	Viva-EE	EE- Practical
Weightage (%)	5	15	10	20	50

A: Attendance, EE: End Semester Exam

ENVIRONMENTAL OPTOMETRY

Course Code: OPT4306

Credit Units: 3

Course Objective: Occupational optometry is the portion of optometric practice that is concerned with the efficient and safe visual functioning of an individual within the work environment. It encompasses more than just the prevention of occupational eye injuries, although that certainly is a major component. It also includes vision assessments of workers/patients, taking into account their specific vision requirements and the demands these requirements place upon them. Optometrists provide occupational vision services at three general areas or levels: primary care, eye safety consultation, vision consultation.

After the completion of the course the student should be able to

Complete an occupational history on each adult patient

Diagnose and manage occupationally induced conditions (making referrals when necessary)

Assess his or her patients' occupational vision demands and provide appropriate treatments as necessary

Educate patients on the need to incorporate eye safety principles into their daily activities.

Performing an eye-safety workplace assessment

Overseeing the procurement of eye protection devices (both prescription and nonprescription)

Course Contents:

Module-I: Introduction

Module-II: Work place survey

Oculo visual hazard analysis

Ergonomic Factor

Work place lighting assessment

Module-III: Matching the worker to the task

Visual standards

Clinical evaluation

Personal protective strategies

Module-IV: Pitfalls of industrial consulting

Module-V: Visual Health in selected industries

Module-VI: References and standards

Examination Scheme:

Components	Attd.	Case Studies	Field Visit	Assignment	Class Test
Weightage (%)	5	30	10	5	50

INTERNSHIP

Eye care clinic: This sequence of courses gives students direct patient care experience and responsibilities in affiliated health centers, hospitals or in private practices. Clinical preceptors will evaluate and guide the student through the process of providing eye care. Students are graded on key clinical tools: technical skills, knowledge base, analytical skills, diagnostic skills, management and treatment, communication skills, efficiency, attitude, and professionalism. The clinical grade is honors, pass, remedial, or fail based on a midterm and final preceptor evaluation; on meeting documentation requirements, such as maintaining documentation; and on submitting patient logs, and site evaluations.

The AUG department of Optometry monitors the quality and quantity of patient encounters for each student. Through the clinical assignments, students will gain proficiency in full scope primary care optometry and contact lenses. All students must satisfy a minimum number of patient encounters during the course of their assignments. Some students may be assigned to specific sites in order to assure a clinical experience based on their projects. Some students may meet the contact lens requirement through affiliations set up on behalf of the students during the summer vacations with private practitioners who meet the College's program standards.

Four rotations during the final semester complete the clinical requirements, with mandatory assignments in Primary Care, Advanced Care and Specialty Care. Students choose an additional assignment in one of the mandatory categories or from a list of elective sites based on their projects. The College currently has affiliated clinical sites located around the campus and in other states.

Clinical sites that provide comprehensive eye care services for patients of all age brackets are categorized as Primary Care sites. Typically, these sites are eye care hospitals or private optometric practices. Clinical sites that provide professional specialty care are categorized as Specialty Care clinics. These include clinics specializing in visual therapy/binocular vision, contact lenses, pediatrics, geriatrics, patients with disabilities, or low vision. The rotation provides training in all of these specialty areas.

CLINICAL OPTOMETRY (GENERAL)

Course Code: OPT4401

Credit Units: 05

Objective: It is expected that upon completion the student will be able to carry out the standard clinical procedures safely and efficiently

Upon completion of the course the student must be able to

Take down a comprehensive history

Do a complete and proper refraction

Do a torch light examination

Do a binocular vision assessment

Use a slit lamp to do a complete anterior segment examination and posterior segment as required

Must be able to take the decision to dilate the eye as per need

Must be able to give a preliminary diagnosis

Each student must be able to complete 20 such examinations under supervision and maintain verified case records for the same.

Tutorial (Presentations) – Each student must also make 1 presentation on instruments and present it at the study center.

Case Presentation:

Each student must do two case discussions during the semester and of the patients. Thus each student presents 2 case discussions at a time and presents it at the study centre.

The hard copy of the presentations will have to be submitted for the term end exam.

Examination Scheme:

Components	Attd.	Case Records	Assignments	Clinical Supervisors Evaluation	Case Discussion	Practical + Viva
Weightage (%)	5	10	10	15	10	50

ADVANCE APPLIED OPTICS AND ADVANCE CORNEA & CONTACT LENS

Course Code: OPT4409 & OPT4410

Credit Units: 10 & 10

Course Contents:

MODULE I- Insert and remove contact lenses and instruct patients in these procedures.

MODULE II- Fit soft contact lenses.

MODULE III- Manage the aftercare of patients wearing soft contact lenses

MODULE IV- Advise on contact lens materials and care regimes

MODULE V- Manage the aftercare of patients wearing rigid gas permeable contact lens.

MODULE VI- Fit rigid gas permeable contact lenses.

MODULE VII- Fit contact lenses to patients with astigmatism.

MODULE VIII- Techniques used in fitting contact lenses and to advise patients requiring complex visual correction.

MODULE IX- Fit multifocal, contact Lenses

MODULE X- Fit special contact lenses e.g Rose K , Orthokeratology, Scleral

MODULE XI- Dispensing, ordering & verification of spectacle

Examination Scheme:

Components	A	Case Records	Clinical Supervisors Evaluation	EE Practical + Viva
Weightage (%)	5	10	15	70

A: Attendance, EE: End Semester Exam

CLINICAL INTERNSHIP-DISSERTATION

Course Code: OPT4437

Credit Units: 10

Course Contents:

MODULE-I: Thesis Proposal Development is an independent tutorial conducted by the student's advisor, and involves a comprehensive literature survey of the chosen research area. Through regular meetings, the student and advisor discuss this literature in detail, and the student writes a paper, reviewed by the advisor, summarizing the literature. This paper should help in the development of the thesis proposal and thesis.

MODULE-II: Thesis Proposal At the end of the Semester 2. each student must submit to the university with the signed approval of the advisor, a thesis proposal defining the thesis project, the methods and design of the experiments needed for completion, the progress to date, and plans for completion.

MODULE-III: Thesis Preparation

This is involving preparation of the thesis. The thesis must include a cover and title page, abstract, table of contents, Introduction of the thesis topic with a comprehensive review of the literature, appropriately organized methods, results, and discussion sections for the experiments performed, and a final conclusions section summarizing the outcome of the project. The student should submit a draft of the thesis to the advisor by the end of the third semester. Plans should be in place for the thesis examination to be held in the final exam.

MODULE-IV: Thesis submission

Project Work and Practical Training

A Full time student admitted to M.Optom course will have to be involved in teaching under-graduate students for lectures, demonstrations and hands-on practical sessions.

All students will have to choose ONE speciality subject at start of first year M.Optom and inform the University through School of Optometry in writing within 3 months of being admitted for the first Semester M.Optom

As a part of clinical training during the first year M.Optom every student will document minimum number of cases specified in clinically examined by them. These clinical cases will have to be submitted before end of 4th semester

Every student will have to do a dissertation thesis during the second year M.Optom for this. Every student should submit a protocol which will have to be approved and accepted by post graduate teaching faculty at School of Optometry within second semester of starting first year.

Two copies of the dissertation thesis will have to be submitted before 15th May in second year. Some post graduate students may have to work with ophthalmic and optical industry in their projects of practitioner education, research and other related activities which will be given as assignments by the School of Optometry, Amity medical school.

Examination Scheme:

Components	A	Clinical Supervisors Evaluation	EE Practical + Viva
Weightage (%)	5	25	70

Attendance, EE: End Semester Exam

Examination & Rules of passing for first and Second Year M.Optom

Format for term end examination Theory papers

Each theory examination will be of 100 marks and 3 Hours duration, 70% marks will be taken as external marks.

Each theory examination paper will have total three Sections

Examination Pattern:

Each semester examination will consists of both internal assessment and term end examination in the subjects prescribed in syllabus for each semester. The Faculty will conduct the internal assessments as per schedule prepared by school of optometry.

Amity University, Gurgaon will conduct university every term end examination

Eligibility for a student to appear in term for semester-term end Examination

Minimum 50% marks in internal assessment i.e. minimum 15marks in theory internal and minimum 25 marks in practical/Viva/Oral

Minimum 75% attendance for all course , If of these eligibility conditions have not been satisfied, the student will not be allowed to appear for semester term end examinations

Duration of examination at end for each semester term for each written/practical/clinical examination will be such as may be notified from time to time on recommendation of the Amity University, Gurgaon authorities.

Results and passing for each semester Examination:

A student will be declared to have passed in particular theory subjects provided he/she has secured not less than 50% marks out of 100(15 marks out of 30 in internal assessment and 35 marks out of 70 in term end examination) in each theory subject for every semester.

A student will be declared to have passed in a particular subject provided he/she has secured not less than 50 marks out of 100 [25 marks out of 50 in internal Assessment and 25 marks out of 50 in terms end examination] in each practical subject for every semester.

A student will be declared to have “PASSED” the complete semester Examination provided he/she has secured 50% marks individually in all theory and practical subjects of that semester.

If a student fails or does not appear for semester examination for semester I& III he/she will still be allowed to attend the theory classes and practical sessions for the semester II & IV Respectively ,which falls in same academic year.

A student who has not appeared or has failed in the semester examination for semester I& III will have to appear for the internal and external exams for only that subject along with semester exam for the current semester i.e. .II and IV respectively.

Only when the student is declared pass all subject of semester I and semester II examinations will be admitted to the second year of the course.

A student who has not appeared or has failed in the semester examination for semester I & II will not be admitted to the second year of the course. He/ She will have to get readmitted in the first year and pay the fees as prescribed by the university.

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Allowed to keep term: If the student secures minimum 50% marks in at least three subjects of first year M.Optom, he/she will be allowed to keep term for second year. However he/she will have to pass in all the subjects of first year M.Optom in order to become eligible to apply/appear for second year final M.Optom University Examinations.

Repeat term: If the student fails in four or all five subjects of first year, he/she will be asked to pay the tuition fees proportionate to the number of subjects failed and the university examination fees and then appear for the midterm external examinations in those subjects in which he/she failed earlier. But they are not required to appear for internal examinations and neither repeat project.

Second Year M.Optom Passing: The internal examination and external examination marks will be added as the final marks of that subject for each year. Only when the student secures minimum 50% marks [Internal+External=combined] in all subjects of both the years and has completed the M.Optom Course and will be eligible for post graduate degree of Master of Clinical optometry [M.Optom]

Repeat Dissertation: If the M.Optom student has failed in subject of the second year M.Optom the student will be required to either repeat the same dissertation project OR Choose different dissertation project and appear for the year end examination only.
He/she cannot take midterm examination for this subject in month of February every year.

If any student fails three times successively in the same subject at the university examinations for either first or second year M.Optom, He/She will not be allowed to continue the M.Optom course and his admission stands cancelled.

Award of the Degree:

A student who has secured 50% marks in every subject of final second year M.Optom Examination will be Eligible for conferment of Master of clinical Optometry [M.Optom] Post Graduate Degree by Amity university, Gurgaon

Award of Gold Medal:

Gold Medal will be awarded to the student who secures maximum marks in first and second ,Third& Fourth semester M.Optom added together, The candidate should have cleared each and every subject in every term in the first attempt.

Guidelines for Master research project work:

Basic reading material: Introductory reading material on research methodology, how to do a literature search and statistical methods should be provided at the beginning of the semester.

The students should read the material thoroughly and can mail their queries to their guides. a. Assignment 1: Exercises should be also given based on the reading material

The student should learn to do a through pubmed search in their area of research interest.. Read the recent research articles initially. Find out the research gaps. Based on that set up your research

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

aim. Your research aim should not be a repetition of an already done research. Substantiate the necessity (Gap in current research) for the proposed study. (Assignment II: mailed to guide)

Discuss with your peers and clinicians regarding the Originality & objective of the study, feasibility of the study and other ethical issues involved: Very important

Institutional Review Board and Ethics committee approval

Consent form certified

As they begin the research, it would be wise to also meet the statistician

Sample size estimation

Microsoft excel or access proforma design

Prepare a rough draft of the protocol (Assignment III)

Emphasize on the methodology

The final protocol should be ready by end of second semester

Update your research activities at least once in a month to your guide (Data collection proforma as excel sheet).

Data entry should be done in Excel appropriately. Consult with your local statistician for any queries and also discuss with your guide. (Assignment IV)

End of your data collections takes to Analysis: Kindly discuss with your guide and a statistician (Assignment V: on the basics of statistics pertaining to your research interest)*

In the thesis introduction, literature and methodology should be ready before the end of fourth semester.

Submission of the final thesis to the guide should be done before one month of the deadline given. So that your guide will have enough time to review and make corrections

EPIDEMIOLOGY, PUBLIC HEALTH & COMMUNITY OPTOMETRY

Course Code: OPP4101

Credit Units: 03

Course Objective: To inculcate the knowledge, sensitivity and clinical exposure of community optometry. The outcomes of the course are: thorough understanding of conducting of screening for specific eye conditions, and resultant implications through theoretical and practical exposure. By the end of the course the student will be able to use the knowledge of the skills gained in promotion and preventive measures of community optometry.

Course Contents:

Module-I: Public health concepts

History of public health, History of public health optometry (including epidemiology, manpower, projections, and community reimbursement mechanisms), Organizations of health services (principles of primary, secondary and tertiary care) Health Care Delivery systems in India and determinants of health. Detriments of health care delivery system planning of health services (including relevant legislation and implication to optometric practice). Health manpower protection and in the practice of ophthalmology Multidisciplinary and institutional practice modes Global medicine and evolution of Public Health in India, Public Health optometry: concepts and implementation

Module-II: Levels of prevention-optometrist's role in community
Optometry's role as a primary care professional, preventable blindness

Module-III: Health systems

Concepts of Health systems National Health Programs Effective delivery of eye care services,
Role of civil societies in blindness prevention:
Vision2020: the Right to Sight
National and International Agencies in eye Care, NPCB
DBCS

Module-IV: Global Blindness and visual impairment

Refractive error and low vision as public health issues
Socioeconomic implications of blindness and visual impairment
Vision screening
Organizing eye camps
Eye Donation and Eye Banking

Module-V: Epidemiology

Prevalence, incidence and distribution of visual impairment
Basics of Epidemiology study methods
Incidence, prevalence, risk factors, odd ratio
Childhood blindness
Refractive errors and presbyopia
Age related macular degeneration
Low Vision
Diabetic retinopathy
Glaucoma
Age related Macular Degeneration
Trachoma
Corneal blindness

CLINIC-I (GENERAL)

Course Code: OPP4105

Credit Units: 3

This course includes minimum of 90 hours of supervised clinical training. The clinics involve primary care clinics and community work.

The objective of clinics in this semester is to be able to examine the eye and understand the basic eye procedures with clinical management.

A logbook is maintained and case sheets with complete management and follow up are mandatory for submission.

The log book needs to be signed by the supervisor.

Examination Scheme:

Components	Attd.	Log Book	Case Sheets	Viva-EE	EE-Practical
Weightage (%)	5	10	15	20	50

RESEARCH METHODOLOGY & BIOSTATISTICS

Course Code: OPP4106

Credit Units: 04

Research Methodology

Course Objective: This course is a brief overview about research design that is intended to cover the basics of designing and implementing a scientific study. It will provide the students the basic knowledge in Bio-statistics. At the completion of the course, the students will have the knowledge of data collection, statistical application and finally ready for research project. This will enable the student to gain understanding of different research methodologies and appropriate research design to be able to conduct research projects.

Course Contents:

Module-I:

Introduction to research methods, Variables in research, Reliability and validity in research, Formulation of research problems and writing research questions, Hypothesis, Null and Research Hypothesis, Type I and Type II errors in hypothesis testing

Module-II:

Introduction of epidemiology, Descriptive epidemiology, Experimental and non experimental research designs, Screening, Sampling methods, Biological variability, normal distribution

Module-III:

Bias and Confounding, Association and causation, Odds ratio and relative risk, sensitivity and specificity Data collection methods- Observation method, Interview method, Questionnaires and schedules Construction,

Module-IV:

Critical analysis of research papers, Conducting a literature review, Writing Research proposals, Development of conceptual framework in research

Module-V: Introduction to Biostatistics

Introduction to Statistics, Classification of data, Source of data, Method of scaling - nominal, ordinal, ratio and interval scale, measuring reliability and validity of scales, Measures of Central tendency, Measures of Dispersion, Skewness and kurtosis, Sampling, Sample size determination

Examination Scheme:

Components	CP	V	A	ME	EE
Weightage (%)	5	5	5	15	70

(CP – Class Performance; V-Viva; A- Attendance; ME- Mid-Term Exam, EE – End semester Exam)

LOW VISION CARE AND GERIATRIC OPTOMETRY

Course Code: OPP4109

Credit Units: 04

Course Objectives: This course gives both in-depth theoretical knowledge and clinical exposure in Low Vision care. The outcomes of this course are: Thorough understanding of the causes of the low vision, its functional and psychosocial consequences, and rehabilitational measures through didactic lectures and clinical postings.

Course Contents:

Module-I: Introduction to Low Vision

Definition of low vision. The impact of low vision. Prevalence of low vision

Module-II: Causes and symptoms of low vision

Common causes of low vision. Low vision symptoms and conditions. Functional implication of diseases causing visual impairment. Disorder related to geriatric population and visual disability. Ocular changes with ageing.

Module-III: Clinical assessment of low vision patient

Purpose of low vision assessment, Steps of low vision assessment. Diverse types of magnification, Different methods and formulae for calculating magnification, how to determine resolution ability, predict distance required to meet resolution goal, Measure lens power, Measure equivalent viewing distance, Calculate equivalent viewing distance for different devices

Module-IV: Assistive technology in Low Vision devices

Different type of optical / non-optical low vision devices and their uses, Computer assistive Technology for low vision patient CTV, electronic magnifier, hand held electronic magnification. Mobility devices

Module-V: Non –optical low vision devices

Relative size magnification Large-print clocks, timers, calculators, remote controls, watches, books, Glare & contrast control, Posture and comfort maintenance device, Hand writing and written communication device Orientation and mobility device, Sensory substitution device Medical management device

APPLIED OPTICS

Course Code: OPP4110

Credit Units: 04

Course Objective: This course mainly deals with Optical management of refractive errors-new modalities the advanced techniques in subjective and objective refraction and Spectacle Dispensing. This course leads to a rewarding career as an optometrist, a specialist trained to dispense and to recognize basic ocular disorders. This allows students to recommend the right spectacle lens based on the condition of the eye

Course Contents:

Module-I: Ophthalmic Lens types,

Lens materials Properties of lenses (Refractive index, base curve, specific gravity, Abbe Value, UV cut off,etc)

Prism

Tints and coatings

Bifocals/Multifocals

Module-II: Progressive addition lenses

PAL design

Indication and advantages

Dispensing PAL,

PAL trouble shooting

Market availability

Module-III: Spectacle FRAMES:

Facial fitting principles

Spectacle delivery

Dispensing problem prescriptions

Frame types and parts

Classification of spectacle frames-material, weight, temple position, coloration Frame construction

Frame Measurements and markings

Frame manipulation and repair

Facial measurements and frame choice

Measuring the interpupillary distance and pupillometer

Special purpose frames (sports, kids, reading)

identify various types of Frames and mountings

Module-IV: Lens Ordering and lens verification

Lens edge thickness calculation Writing spectacle lens order

Facial measurements - Interpupillary distance measurement and measuring heights (single vision, multifocal, progressives)

Measurement of effective diameter minimum blank size Glazing and edging Hands on

Lens verification and axis marking and fitting of all lens types

Final checking of finished spectacle with frame adjustments

Delivery and follow-up

Troubleshooting complaints and handling patient's questions.

Optical centre marking

Axis marking

ADVANCED CONTACT LENS -I

Course Code: OPP4204

Credit Units: 4

Course Objective: Contact lenses are an essential part of optometric practice; not only for practice success, but also in the management of certain ocular conditions that require visual or therapeutic rehabilitation. This course introduces all aspects of contact lens practice to the optometry student. It begins with soft and rigid gas permeable contact lenses, and continues through toric, multifocal and specialty lenses in the next semester. This semester gives overview of contact lens related complications and their management which is discussed in detail in the next semester, A hands-on practical provides experience with the various lens types, and online materials encourage independent learning.

Course Contents:

Module-I: Basics of Contact Lenses

History of Contact Lenses, Contact Lens Materials and Manufacturing, Optics of Contact Lenses, Soft & Rigid Gas Permeable Contact Lens Design, Contact Lens Verification

Module-II: Contact Lens Fitting

Examining the Prospective Contact Lens Patient, Selecting Lens Type, Wear Mode and Replacement schedule

Fitting Spherical GP Contact Lenses, Fitting Spherical Soft Contact Lenses, Correcting Astigmatism with Contact Lenses

Module-III: Advanced materials and designs

Fitting Silicone Hydrogels,

The Dispensing Visit and After-Care, Contact Lenses for Sports, Presbyopia Contact Lens Options in contact lens wear

Module-IV: Care and Maintenance

Contact Lens Contamination, CL Care and CL Care Products, Rigid CL Care, Hydrogel and Silicone Hydrogel CL Care, Dry Eye and Contact Lenses

Module-V: Complications with contact lenses

Defending the Ocular Surface in Contact Lens Wear, Rigid Contact Lens Complications, Soft Contact Lens Complications

CLINICS-II (SPECIALITY)

Course Code: OPP4205

Credit Units: 3

The objective of clinics in this semester is to be able to examine the eye and understand the classified eye procedures with clinical management with special reference to low vision, binocular vision, pediatric care and contact lens.

An approximate of guided 150 hours needs to be completed in this semester. The students will be by rotation go to community clinics, Campus clinics, associated hospital partners and optical / optometric clinics.

The logbook must be maintained and 30 case sheets of SELECTED specialty in the semester with complete management and follow up are mandatory for submission at the end of the semester

The log book needs to be signed by the supervisor during every visit. No case record will be considered without the supervisor's signature.

LOW VISION CARE AND REHABILITATION

Course code: OPP4212

Credit Units: 4

Course Objectives: This course gives both in-depth theoretical knowledge and clinical exposure in Low Vision care. The outcomes of this course are: Thorough understanding of the causes of the low vision, its functional and psychosocial consequences, and rehabilitational measures through didactic lectures and clinical postings. This course introduces low vision rehabilitation and geriatrics. The course teaches the role optometrists perform in treating the level 1 low vision patient who has moderate visual impairment. The course also addresses how to refer the level 2 patient who has advanced visual impairment to comprehensive low vision care.

Course Contents:

Module-I: Orientation and mobility

Orientation and mobility skill set cane skills, sighted guide technique, using a cane
Using other senses for orientation, Dos and don'ts for orientation and mobility
Driving with Low vision, Visual functioning, how to enhance visual functioning, residual vision, classification of activities of daily living, basic step towards independent living, how to achieve independent living

Module-II: The vision related rehabilitation network

Rehabilitation services network, state rehabilitation Programs & services, Private rehabilitation programs & services, low vision practitioner's role in rehabilitation service network, building a referral network, ensuring accessibility to service, financial resources,

Module-III: Visual Disorders

The Epidemiology of Vision Impairment, Vision Impairment in the paediatric population, Children with Multiple Impairments, Dual Vision and Hearing Impairment, Diabetes Mellitus and Vision Impairment, Vision Problems associated with Multiple Sclerosis, Vision Impairment related to Acquired Brain Injury, Vision and Dementia, Low Vision and HIV infection

Module-IV: The Functional Perspective

Low Vision and Psychophysics, Visual Disorders – The Psychosocial Perspective, Vision Impairment and Cognition, Spatial orientation and Mobility of people with vision impairments, Social skills Issues in vision impairment, Communication and language: Issues and concerns, Developmental perspectives on Aging and vision loss, Vision and cognitive Functioning in old age, Interactions of Vision Impairment with other Disabilities and sensory Impairments.

The Role of psychosocial Factors in adaptation to vision Impairment and Habitation outcomes for Adults and Older adults and children, Social support and adjustment to vision Impairment across the life span, Associated Depression, Disability and rehabilitation

Module-V: The Environment and Vision Impairment:

Indian Disabilities act, Children's Environments, Environments of Older people
Outdoor environments, Lighting to enhance visual capabilities, Signage and way finding. Accessible Environments through Technology

ADVANCED CONTACT LENS-II

Course Code: OPP4303

Credit Units: 4

Course Objective: This course gives both in-depth theoretical knowledge and clinical exposure in Contact lens at advanced level and in therapeutic conditions. It prepares student to develop competency in handling all types of specialty lenses. This course also deals with all complications related to contact lenses and its management.

COURSE COMPETENCIES:

Ability to understand corneal physiology and oxygen needs
Ability to diagnose and manage complications due to contact lenses
Ability to fit specialized contact lenses
Keratoconus
Rose 'lenses
Mini scleral lenses
Handling complications

Course Contents:

Module-I: & II: Ability to fit specialized contact lenses

Keratoconus
Rose 'lenses
Mini scleral lenses
Hybrid lenses
Orthokeratology
Scleral lenses: Dry eyes, SJS, Post PK, Post C3R, Post LASIK ectasia
Ability to fit custom made ocular prosthesis
Ability to fit paediatric contact lenses

Module-III: Contact lens complications

For all types of lenses

Module-IV: Business Aspects of Contact Lens Practice

Contact lenses (CLs) in practice, Financial factors in a CL practice, Managing & marketing techniques for a CL practice, Employee management, Record Keeping, Professionalism & standards of care
Communication skill
Recent advances

CLINICS-III (SPECIALITY)

Course Code: OPP4305

Credit Units: 4

The objective of clinics in this semester is to be able to examine the eye and understand the eye procedures with clinical management with special reference to complete optometric care.

A minimum of guided 240 hours need to be completed in this semester. The students will be by rotation go to community clinic, Campus clinics, associated hospital partners and optical / optometric clinics.

The logbook has to be maintained and 30 case sheets of complete case management and follow up are mandatory for submission.

The log book needs to be signed by the supervisor every time a case is recorded in it. No case will be considered without the supervisor's signature.

Examination Scheme

Components	A	Assignment (log book)	Case sheets	EE-Viva	EE- Practical
Weightage (%)	5	15	10	20	50

ENVIRONMENTAL OPTOMETRY

Course Code: OPP4306

Credit Units: 3

Course Objective: Occupational optometry is the portion of optometric practice that is concerned with the efficient and safe visual functioning of an individual within the work environment. It encompasses more than just the prevention of occupational eye injuries, although that certainly is a major component. It also includes vision assessments of workers/patients, considering their specific vision requirements and the demands these requirements place upon them. Optometrists provide occupational vision services at three general areas or levels: primary care, eye safety consultation, vision consultation.

After the completion of the course the student should be able to

Complete an occupational history on each adult patient

Diagnose and manage occupationally induced conditions (making referrals when necessary)

Assess his or her patients' occupational vision demands and provide appropriate treatments as necessary

Educate patients on the need to incorporate eye safety principles into their daily activities.

Performing an eye-safety workplace assessment

Overseeing the procurement of eye protection devices (both prescription and nonprescription)

Course Contents:

Module-I: Introduction

Module-II: Work place survey

Oculi visual hazard analysis

Ergonomic Factor

Work place lighting assessment

Module-III: Matching the worker to the task

Visual standards

Clinical evaluation

Personal protective strategies

Module-IV: Pitfall of industrial consulting

Module-V: Visual Health in selected industries

Module-VI: References and standards

TEACHING METHODOLOGY

Course Code: OPP4307

Credit Units: 3

Course Contents:

Module-I:

Introduction, understanding how adults learn, how to enhance student learning

Module-II:

Teaching strategies to enhance Learning, how to structure your course, leaning activities

Module-III:

Effective learning and Teaching activities in eye Care,

Methods of teaching, presentation, demonstration, case studies, Role plays, group discussion

Module-IV:

Student Assessment and evaluation techniques, formative and summative assessment, marking and providing feedback

INTERNSHIP

Eye care clinic: This sequence of courses gives students direct patient care experience and responsibilities in affiliated health centers, hospitals or in private practices. Clinical preceptors will evaluate and guide the student through the process of providing eye care. Students are graded on key clinical tools: technical skills, knowledge base, analytical skills, diagnostic skills, management and treatment, communication skills, efficiency, attitude, and professionalism. The clinical grade is honors, pass, remedial, or fail based on a midterm and final preceptor evaluation; on meeting documentation requirements, such as maintaining documentation; and on submitting patient logs, and site evaluations.

The AUG department of Optometry monitors the quality and quantity of patient encounters for each student. Through the clinical assignments, students will gain proficiency in full scope primary care optometry and contact lenses. All students must satisfy a minimum number of patient encounters during their assignments. Some students may be assigned to specific sites to assure a clinical experience based on their projects. Some students may meet the contact lens requirement through affiliations set up on behalf of the students during the summer vacations with private practitioners who meet the College's program standards.

Four rotations during the final semester complete the clinical requirements, with mandatory assignments in Primary Care, Advanced Care and Specialty Care. Students choose an additional assignment in one of the mandatory categories or from a list of elective sites based on their projects. The College currently has affiliated clinical sites located around the campus and in other states.

Clinical sites that provide comprehensive eye care services for patients of all age brackets are categorized as Primary Care sites. Typically, these sites are eye care hospitals or private optometric practices. Clinical sites that provide professional specialty care are categorized as Specialty Care clinics. These include clinics specializing in visual therapy/binocular vision, contact lenses, pediatrics, geriatrics, patients with disabilities, or low vision. The rotation provides training in these specialty areas.

CLINICAL OPTOMETRY (GENERAL)

Course Code: OPP4401

Credit Units: 06

Objective: It is expected that upon completion the student will be able to carry out the standard clinical procedures safely and efficiently

PATIENT HISTORY

1.1 Communicates with the patient

1.1.1 Modes and methods of communication are employed which consider the physical, emotional, intellectual and cultural background of the patient.

1.1.2 A structured, efficient, rational and comfortable exchange of information between the optometrist and the patient takes place.

1.2 Makes general observations of patient

1.3 Obtains the case history

1.4 Obtains and interprets patient information from other professionals

2. PATIENT EXAMINATION

2.1 Formulates

2.1.1 An examination plan based on the patient history is designed to obtain the information necessary for diagnosis and management.

2.1.2 Tests and procedures appropriate to the patient's condition and abilities are selected.

2.2 Implements examination plan

2.2.1 Tests and procedures which will efficiently provide the information required for diagnosis are performed.

2.2.2 The examination plan and procedures are progressively modified based on findings.

2.3 Assesses the ocular adnexa and the eye

2.3.1 The structure and health of the ocular adnexa and their ability to function are assessed.

2.3.2 The structure and health of the anterior segment and its ability to function are assessed.

2.3.3 The structure and health of the ocular media and their ability to function are assessed.

2.3.4 The structure and health of the posterior segment and its ability to function are assessed.

2.3.5 The nature of the disease state is determined.

2.3.6 Microbiological tests are selected and ordered

2.4 Assesses central and peripheral sensory visual function and the integrity of the visual pathways

2.4.1 Vision and visual acuity are measured.

2.4.2 Visual fields are measured.

2.4.3 Colour vision is assessed.

2.4.4 Pupil function is assessed.

2.5 Assesses refractive status

2.6 Assesses oculomotor and binocular function.

2.6.1 Eye alignment and the state of fixation are assessed.

2.6.2 The quality and range of the patient's eye movements are determined.

2.6.3 The status of sensory fusion is determined.

2.6.4 The adaptability of the vergence system is determined.

2.6.5 Placement and adaptability of accommodation are assessed.

2.7 Assesses visual information processing

ADVANCE APPLIED OPTICS

Course Code: OPP4410

Credit Units: 10

Course Contents:

MODULE I- Spectacle prescription & interpretation, transposition, Add and near power relation, Prescription for various requirements. e.g intermediate uses /computer use

MODULE II- Facial measurements – IPD, Frame size, bridge size, facial wrap, Pantoscopic tilt

MODULE III-Deciding most suitable type of single vision and bifocal Lens

MODULE IV- Lens selection of Progressive addition lenses as per patient needs

MODULE V- Frame selection and recommendation as per patient needs and facial type, communication & counselling of patient regarding frame selection

MODULE VI- Dispensing, ordering & verification of spectacle

MODULE VII- latest Technology in ophthalmic lenses and frames

ADVANCE CORNEA & CONTACT LENS

Course Code: OPP4411

Credit Units: 10

Course Contents:

Insert and remove contact lenses and instruct patients in these procedures.

Fit soft contact lenses.

Manage the aftercare of patients wearing soft contact lenses

Advise on contact lens materials and care regimes

Manage the aftercare of patients wearing rigid gas permeable contact lens.

Fit rigid gas permeable contact lenses.

Fit contact lenses to patients with astigmatism.

Techniques used in fitting contact lenses and to advise patients requiring complex visual correction.

Fit multifocal, contact Lenses

- Fit special contact lenses e.g Rose K , Orthokeratology, Scleral

Dispensing, ordering & verification of spectacle

Contact lens complications

CLINICAL DISSERTATION

Course Code: OPP4437

Credit Units: 11

Course Contents:

MODULE-I: Thesis Proposal Development is an independent tutorial conducted by the student's advisor, and involves a comprehensive literature survey of the chosen research area. Through regular meetings, the student and advisor discuss this literature in detail, and the student writes a paper, reviewed by the advisor, summarizing the literature. This paper should help in the development of the thesis proposal and thesis.

MODULE-II: Thesis Proposal At the end of the Semester 2. each student must submit to the university with the signed approval of the advisor, a thesis proposal defining the thesis project, the methods and design of the experiments needed for completion, the progress to date, and plans for completion.

MODULE-III: Thesis Preparation

This is involving preparation of the thesis. The thesis must include a cover and title page, abstract, table of contents, Introduction of the thesis topic with a comprehensive review of the literature, appropriately organized methods, results, and discussion sections for the experiments performed, and a final conclusions section summarizing the outcome of the project. The student should submit a draft of the thesis to the advisor by the end of the third semester. Plans should be in place for the thesis examination to be held in the final exam.

MODULE-IV: Thesis submission

Project Work and Practical Training

A Full-time student admitted to M.Optom course will have to be involved in teaching under-graduate students for lectures, demonstrations and hands-on practical sessions.

All students will have to choose ONE specialty subject at start of first year M.Optom and inform the University through School of Optometry in writing within 3 months of being admitted for the first Semester M.Optom

As a part of clinical training during the first year M. Optom every student will document

Minimum number of cases specified in clinically examined by them. These clinical cases will have to be submitted before end of 4th semester

Every student will have to do a dissertation thesis during the second year M. Optom for this. Every student should submit a protocol which will have to be approved and accepted by post graduate teaching faculty at School of Optometry within second semester of starting first year.

Two copies of the dissertation thesis will have to be submitted before 15th May in second year.

Some post graduate students may have to work with ophthalmic and optical industry in their projects of practitioner education, research and other related activities which will be given as assignments by the School of Optometry, Amity medical school.

Examination & Rules of passing for first and Second Year M. Optom

Format for term end examination Theory papers

Each theory examination will be of 100 marks and 3 Hours duration, 70% marks will be taken as external marks.

Each theory examination paper will have total three Sections

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Examination Pattern:

Each semester examination will consist of both internal assessment and term end examination in the subjects prescribed in syllabus for each semester. The Faculty will conduct the internal assessments as per schedule prepared by school of optometry.

**Amity University, Gurgaon will conduct university every term end examination
Eligibility for a student to appear in term for semester-term end Examination**

Minimum 50% marks in internal assessment i.e. minimum 15marks in theory internal and minimum 25 marks in practical/Viva/Oral

Minimum 75% attendance for all course, if of these eligibility conditions have not been satisfied, the student will not be allowed to appear for semester term end examinations

Duration of examination at end for each semester term for each written/practical/clinical examination will be such as may be notified from time to time on recommendation of the Amity University, Gurgaon authorities.

Results and passing for each semester Examination:

A student will be declared to have passed theory subjects provided he/she has secured not less than 50% marks out of 100 (15 marks out of 30 in internal assessment and 35 marks out of 70 in term end examination) in each theory subject for every semester.

A student will be declared to have passed in a subject provided he/she has secured not less than 50 marks out of 100 [25 marks out of 50 in internal Assessment and 25 marks out of 50 in terms end examination] in each practical subject for every semester.

A student will be declared to have “PASSED” the complete semester Examination provided he/she has secured 50% marks individually in all theory and practical subjects of that semester.

If a student fails or does not appear for semester examination for semester I& III he/she will still be allowed to attend the theory classes and practical sessions for the semester II & IV Respectively, which falls in same academic year.

A student who has not appeared or has failed in the semester examination for semester I& III will have to appear for the internal and external exams for only that subject along with semester exam for the current semester i.e. II and IV respectively.

Only when the student is declared pass all subject of semester I and semester II examinations will be admitted to the second year of the course.

A student who has not appeared or has failed in the semester examination for semester I & II will not be admitted to the second year of the course. He/ She will have to get readmitted in the first year and pay the fees as prescribed by the university.

Allowed to keep term: If the student secures minimum 50% marks in at least three subjects of first year M. Optom, he/she will be allowed to keep term for second year. However, he/she will have to pass in all the subjects of first year M. Optom to become eligible to apply/appear for second year final M. Optom University Examinations.

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Repeat term: If the student fails in four or all five subjects of first year, he/she will be asked to pay the tuition fees proportionate to the number of subjects failed and the university examination fees and then appear for the midterm external examinations in those subjects in which he/she failed earlier. But they are not required to appear for internal examinations and neither repeat project.

Second Year M. Optom Passing: The internal examination and external examination marks will be added as the final marks of that subject for each year. Only when the student secures minimum 50% marks [Internal External=combined] in all subjects of both the years and has completed the M. Optom. Course and will be eligible for post graduate degree of Master of Clinical optometry [M. Optom]

Repeat Dissertation: If the M. Optom student has failed in subject of the second year M. Optom the student will be required to either repeat the same dissertation project OR Choose different dissertation project and appear for the year end examination only.
He/she cannot take midterm examination for this subject in month of February every year.

If any student fails three times successively in the same subject at the university examinations for either first or second year M. Optom, Hershel will not be allowed to continue the M. Optom course and his admission stands cancelled.

Award of the Degree:

A student who has secured 5.5 CGPAM. Optom Examination will be Eligible for conferment of Master of clinical Optometry [M. Optom] Post Graduate Degree by Amity university, Gurgaon

Award of Gold Medal:

Gold Medal will be awarded to the student who secures maximum marks in first and second, Third& Fourth semester M. Optom added together, the candidate should have cleared each subject in every term in the first attempt.

Guidelines for Master research project work:

Basic reading material: Introductory reading material on research methodology, how to do a literature search and statistical methods should be provided at the beginning of the semester.

The students should read the material thoroughly and can mail their queries to their guides. a. Assignment 1: Exercises should be also given based on the reading material

The student should learn to do a thorough Pub Med search in their area of research interest. Read the recent research articles initially. Find out the research gaps. Based on that set up your research aim. Your research aim should not be a repetition of an already done research. Substantiate the necessity (Gap in current research) for the proposed study. (Assignment II: mailed to guide)

Discuss with your peers and clinicians regarding the Originality & objective of the study, feasibility of the study and other ethical issues involved: Very important

Institutional Review Board and Ethics committee approval

Consent form certified

As they begin the research, it would be wise to also meet the statistician

Sample size estimation

Microsoft excel or access proforma design

Prepare a rough draft of the protocol (Assignment III)

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Emphasize on the methodology

The final protocol should be ready by end of FIRST semester

Update your research activities at least once in a month to your guide (Data collection proforma as excel sheet).

Data entry should be done in Excel appropriately. Consult with your local statistician for any queries and discuss with your guide. (Assignment IV)

End of your data collections takes to Analysis: Kindly discuss with your guide and a statistician (Assignment V: on the basics of statistics pertaining to your research interest) *

In the thesis introduction, literature and methodology should be ready before the end of fourth semester.

Submission of the final thesis to the guide should be done before one month of the deadline given. So that your guide will have enough time to review and make corrections

DEMOGRAPHY

Course Code: PUH4101

Credit Units: 03

Course Objective:

To present students some basic techniques and concepts in population sciences.

Course Contents

Module I: Population Fundamentals

Science of demography, Demographic cycle, Population trends and demographic indicators, Demography and Family Planning and its role in population policy of India.

Module II: Demographic Studies

- Fundamentals of population studies and its links with health.
- Methods of demographic data collection, sources of data, population census, population composition, world population growth, growth of Indian population, morbidity, mortality, ageing, migration/ urbanization

Module III: Family Planning

Fertility and fertility factors, Family planning, Population policies & programmes and National Population Policy, Family Planning 2020 India Commitment

Examination Scheme:

Components	P	V	A	ME	EE
Weightage (%)	10	5	5	10	70

SOCIAL & BEHAVIORAL ASPECTS OF HEALTH

Course Code: PUH4103

Credit Units: 02

Course Objective

To highlight the diseases and conditions that are of concern to a future public health professional. It highlights the social and behavioral issues in public health.

Course Contents

Module I: Introduction

Psychology and Public Health, Sociology & Public Health, Culture and Health, rural/urban migration, Urban Health

Module II: Family & Health

Inter-relationships between culture, society and environment, Ecology of health and disease, Demographic features of health and disease, interrelationship between human ecology, occupation, social changes and specific disease patterns.

Module III:

Cultural constraints to provision and utilization of healthcare, Socio-economics of health care, Socio-economic cost of disease

HEALTHCARE DELIVERY SYSTEM & POLICIES

Course Code: PUH 4104

Credit Units: 03

Course Objective:

To provide the students a basic insight into the main features of Indian health care delivery system and how it compares with the other systems of the world.

Course Contents:

Module I: Health and Development

Concept of Health, illness, sickness and disease; Public health Indicators, Health and its determinants, Disease Burden in terms of DALY, Social context of Health – Culture, health belief model and social issues affecting health like urbanization etc; Gender and health, Nutrition and Health- National Nutrition Mission and Mid-Day Meal Program

Module II: Healthcare Systems & Delivery

Millennium development goals, Sustainable Development goals, Evolution of Health Planning in India, Concept and Elements of Primary Health Care, Rural Healthcare system in India , Indian Public Health Standards, Five Year Plans

Module III: Health Policies and Schemes

National Health Policy, Integrated Child Development Scheme, Reproductive Maternal Newborn Child and adolescent Health Scheme, , Universal Immunization Program, PradhanMantriSurakshitMatritvaAbhiyan, Ayushman Bharat, RashtriyaBalSwasthyaKaryakram, Rashtriya Kishore SwasthyaKaryakram, Mission Indradhanush, RashtriyaArogyaNidhi, PradhanMantriSwasthyaSurakshaYojna and National Oral Health Program.

Module IV: National Health Mission

National Urban Health Mission (NUHM), National Rural Health Mission, National AYUSH Mission, National Nutrition Mission,

BIOSTATISTICS**Course Code: PUH4106****Credit Units: 03**

Course Objective: The aim of this course is to develop the understanding of various statistical tools used for decisions making and how each applies to and can be used in the environment.

Course Contents:**Module I: Introduction**

Classification of data, Source of data, data organization Method of scaling - nominal, ordinal, ratio and interval scale, building composite scales, measuring reliability and validity of scales.

Module II: Properties of measurement & Probability distributions

- Measurement of central tendency, measurement of dispersion – Range, Mean deviation & Standard deviation.
- Concepts of probability, Probability distributions – Binomial, Poisson & Normal Probability Distribution.

Module III: Sampling

Sampling methods, Sampling Errors; Sampling distribution.

Module IV: Testing Hypothesis

Hypothesis Testing to compare two populations – Student's T-test, Interpretation of computer output of ANOVA, Chi – Square Test, F-test.

Module V: Forecasting Techniques

Correlation-Karl Person, Spearman's Rank methods, Regression Analysis, least squares method, coefficient of determination, Time Series Analysis

Examination Scheme:

Components	CP/P	V	A	ME	EE
Weightage (%)	10	5	5	10	70

APPLIED EPIDEMIOLOGY

Course Code: PUH4201

Credit Units: 03

Course Objective

To furnish the students with knowledge and skills regarding general principles of clinical trials research including regulatory, ethical principles & guidelines and theoretical idea about the design conduct and analysis of clinical trials

Course Contents

Module I: Epidemiological Methods & Screening for disease.

Sources of epidemiological data, concepts of screening, criteria for screening, sensitivity and specificity, disease surveillance, techniques for randomization, adverse events, investigation of an epidemic and role of a healthcare facility in its control.

Module II: Epidemiology and Public Health

Epidemiology and Public Health, different epidemiological perspectives, use of epidemiological tools for health planning and making a community diagnosis,

Module III: Epidemiological Tools

Epidemiological tools for monitoring and evaluation of health programmes, epidemiological considerations in development of management information systems, epidemiological basis for formulation of health interventions, interpretation of published epidemiological studies.

Examination Scheme:

Components	CP	V	A	ME	EE
Weightage (%)	10	5	5	10	70

Text & References

ENVIRONMENTAL HEALTH & SANITATION

Course Code: PUH4204

Credit Units: 02

Course Objective

To provide the comprehensive knowledge in issues related to environment affecting health, sanitation and means of sustainable development.

Course Contents

Module I: Air, Noise and Water Pollution

- Air pollution: Pollutants and their resources, effects on human health, vegetation and climate of air pollution, ventilation, air pollution control legislation.
- Noise pollution: sources and effects, control measures
- Water pollution: sources, classification of water pollutants- organic waste, oxygen demanding waste, disease causing wastes, synthetic organic compounds. Sewage and agricultural run – off, inorganic pollutants suspended solids and sediments, radioactive materials, purification of water and waste water treatment.

Module II: Waste management

- Biomedical Waste management: classification, methods of treatment and disposal-compositing, sanitary land filling, thermal process, recycling and reuse.
- Hazardous waste management: sources, treatment and disposal.

Module III: Sustainable development and Environment

Climate change- ozone depletion, global warming, green house effect, urban problems related to energy, water conservation, rainwater harvesting, watershed management, resettlement and rehabilitation of people, waste minimization and cleaner production.

Examination Scheme:

Components	CP	V	A	ME	EE
Weightage (%)	5	5	5	15	70

Text & References:

- Moeller, D.W. *Environmental Health*, Harvard University Press, 2004

RESEARCH METHODOLOGY

Course Code: PUH4205

Credit Units: 03

Course Objectives:

- To provide basic understanding towards research principles and methods.
- To introduce important analytical tools for research data analysis.
- To assist in the development of research proposals/reports.

Course Contents:

Module I: Basics of Research

Definitions & uses of research in healthcare, Steps Involved in Research Process, Variables in research, Measurement scales, Formulation of research problems, writing research questions, Development of conceptual framework.

Module II: Sampling & Research Designs

Sampling, Sampling Procedure, Various types of Sampling Techniques, Sample size determination, reliability & validity in research, Research Designs- Non-experimental & experimental research designs.

Module III: Review of Literature & Hypothesis

Review of literature, Hypothesis- Meaning and types of hypothesis, Hypothesis testing, Type I & Type II errors in hypothesis testing.

Module III: Data Collection

Types of Data: Secondary and Primary, Different methods of data collection- Observation method, interview method, Questionnaire and schedule, Data Management: editing, entry and preparing data sets for analysis; Design and development of questionnaire.

Module IV: Research Reports

Structure and Components of Research Report, Types of Reports, Layout of Research Report, Method of writing a research report.

Module V: Research Ethics & Reference Writing

History of ethics in health research, Principles and Concepts in research ethics – confidentiality and privacy, informed consent, vulnerable subjects and special treatments, standards of care – principles, review processes etc.; Vancouver style of reference writing.

Examination Scheme:

Components	CP	V	A	ME	EE
Weightage (%)	10	5	5	10	70

NATIONAL HEALTH PROGRAMMES

Course Code: PUH4206

Credit Units: 03

Course Objective

To give an idea about the background objectives, action plan, targets, operations, achievements and constraints of various National Health Programmes

Course Contents

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Module I: Introduction

Brief outline of health situation in India, Organization network for health and family welfare services at the centre, state, district and block level.

Module III: Key Health programmes in India – 1

National Health Mission, including Reproductive Child Health, Family Planning Programme, Universal Immunization Programme, Child Survival and Safe Motherhood Programme, Integrated Child Development Scheme, National AYUSH Mission, National Nutrition Mission.

Module III: Key Health programmes in India – 2

Ayushman Bharat, Pradhan Mantri Surakshit Matritva Abhiyan, Family Planning 2020, Reproductive Maternal Newborn Child and Adolescent Health Program, Rashtriya Bal Swasthya Karyakram, Rashtriya Kishore Swasthya Program, Mission Indradhanush, Pradhan Mantri, Rashtriya Arogya Nidhi, National Oral Health Program.

Examination Scheme:

Components	CP	V	A	ME	EE
Weightage (%)	10	5	5	10	70

OPERATIONS RESEARCH

Course Code : PUH4301

Credit Units: 02

Course objectives:

- To provide basic OR approach to problem solving.
- To introduce important analytical tools for managerial decision making.

_ To introduce concepts of resource allocation & health service planning.

Course Contents:

Module I: Introduction

The OR approach to problem-solving and decision-making, Scope and limitations of OR in managerial decision-making.

Module II: Introduction to OR Techniques

Linear Programming, Decision Tree Analysis, Queuing theory, PERT/CPM.

Module III: OR Models

Replacement models, Sensitivity analysis, Assignment models, Inventory control models, Forecasting.

Module III: Applications of OR in Hospitals and Health Agencies

Resource allocation, Health services planning, Deployment of health human power, Materials Management, Equipment replacement, Patient scheduling.

Examination Scheme:

Components	CP	V	A	ME	EE
Weightage (%)	10	5	5	10	70

Text & References:

QUALITY IN HEALTH CARE

Course Code: PUH4302

Credit Units: 01

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Course Objective: To understand the concept of quality and its relation to healthcare scenario benefits of quality managements, dimensions of quality in primary healthcare and various quality frameworks

Module I: Basics of Quality Management

Definitions, principles of quality, benefits of quality management, dimensions of quality in primary healthcare and various quality frameworks

Module II: Quality Improvement Approaches

Quality assurance cycle and developing standards.

TQM Quality Gurus: Deming, Juran and Crosby principles.

Benchmarking principles: Principles, types and process of benchmarking.

Medical Audits: Clinical Audit, its methodology and related statistics.

Module III: Quality Improvement Tools and Techniques:

Tools: Brainstorming, Cause effect analysis, Flow chart, Pareto Analysis, etc.

Lean Management: 4P model, Lean principles and its tools, 5 S technique, 3M techniques,

Kaizens theory, Jidoka & Andon, Throughput & Takt Time.

Six Sigma: Variation in performance, DMAIC & DFFS methodology, Champions, black belts and green belts, Six sigma applications and its benefits

Module IV: Accreditation

Benefits of hospital Accreditation, ISO certification, Quality Council of India (QCI),

National Accreditation Board for Hospitals & Healthcare providers (NABH) – Accreditation procedure assessment criteria and its standards

Module V: Cost and Quality

Prevention cost, Appraisal Cost, Internal & external failure costs, Net & Total cost of quality.

Examination Scheme:

Components	CP	V	A	ME	EE
Weightage (%)	10	5	5	10	70

NUTRITION

Course Code: PUH4303

Credit Units: 3

Course Objective: To cover the basics of human, community nutrition and issues related to food safety.

Course Contents

Module I: Basics of Nutrition

Classification of Foods by origin, chemical composition, predominant function & by nutritive value; Nutrients: Macro & Micro nutrients, Nutritional profiles of Principle Foods, Assessment of Nutritional status.

Module II: Disease specific nutrition

Nutritional Requirements, Diet modifications during various diseased condition – diabetes, obesity, heart diseases, civil and kidney, TB, HIV etc, Deficiency disorders & dietary management – PCM, anaemia, goitre and vitamin & mineral deficiency.

Module III: Community nutrition

Nutritional problems in Public Health, Nutritional surveillance, Prevalence of under nutrition and malnutrition in India, Malnutrition infection and infestation, effect of malnutrition in infancies, pregnant and lactating mothers, Nutrition organization programmes – national, international & voluntary organizations undertaken to combat malnutrition, policy & programmes for nutrition related issues and Balanced diet for preschool going children adolescents, pregnant and lactating mothers, old age & athletes.

Module IV: Food Safety

General principles of Hygiene, importance of food borne illness, prevention of contamination, food intoxicants, food additives, food standards, importance of safe drinking water, purification methods, Food borne diseases, Prevention of Food Adulteration Act 1954 and National Nutrition Policy 1993.

Examination Scheme:

Components	CP	V	A	ME	EE
Weightage (%)	10	5	5	10	70

WOMEN & CHILD HEALTH

Course Code: PUH4304

Credit Units: 03

Course Objective

To impart an understanding of the scope of women and child health and to enable students to find and interpret relevant information on women and child health.

Course Contents

Module I: Women's Health

Concepts, definition and measures; customs, norms, attitudes and practices pertaining to various aspects of women's health including menstruation, puberty, childbirth and menopause; sexual and reproductive rights, infertility.

Module II: Adolescent Sexual Health & Family Planning

Adolescent sexual health & contraception: role and involvement of men in reproductive health, methods of family planning, contraception behavior, measurement and service delivery, quality of family planning care

Module III: Women's Health status in India

Gender, autonomy, empowerment and status of women, domestic violence in India, maternal mortality and morbidity, abortion, HIV, STIs.

Module IV: Child Health

Growth and development from infancy to childhood; Child health & morbidity; neonatal, infant & child mortality; IMR & U5MR; breastfeeding, weaning & supplementary feeding

Module V: Child Health Initiatives in India

Programmes and policies related to child health and development, health of physically and mentally challenges children, behavioral disorders, child abuse.

Examination Scheme:

HEATH PROGRAMME MANAGEMENT

Course Code: PUH4305

Credit Units: 03

Course Objective: To train the students in project management with special focus on formulation, implementation, monitoring and evaluation.

Course Contents

Module I: Introduction

Need for programme planning, Concept of programme planning, Process of planning: need assessment, community diagnosis. Micro-planning: need assessment in the community, Community involvement in planning.

Module II: Project Management Cycle

Situation analysis-SWOT, strategy formulation, Planning tools, Quality assurance in project management, activity based implementation plan, gender issues in project management, monitoring, MIS, evaluating, developing action plans, developing action plans for implementation.

Module III: System's Approach on Health Planning

Data needs for health planning, drawing national health plan, problem identification and priority setting, evolving a logical framework - setting goals, objectives and targets. Feasibility analysis and budgeting, Plan implementation, monitoring and evaluation.

Module IV: National Health Program Planning in India

Prof. (Dr.) Anil Kumar

SUMMER INTERNSHIP (EVALUTION)

Course Code: PUH4335

Credits Units: 06

Training Objective: To expose the student to various programmes/ activities in health sector and develop a comprehensive understanding of programme design, strategies and planned intervention.

Duration: 2 months

Format for Report Writing

1. Abstract
2. Introduction
3. Aims & Objectives
4. Operational definitions
5. Significance of Study
6. Review of literature
7. Research methodology
8. Data Analysis
9. Results
10. Discussion
11. Conclusion
12. Recommendations
13. Limitations of study

- 14. Future prospects of study
- 15. References

Guidelines for presentation-

- Power point presentation
- Time for presentation: 20 minutes
- Time for discussion: 10 minutes

Examination Scheme

Components	Presentation	Report submitted	Viva-voce
Weightage (%)	25	50	25

HEALTH INFORMATION SYSTEM

Course Code: PUH4401

Credit Units: 02

Course Objective

To understand the various indicators of health and health information system and health management information system in India.

Course Contents

Module I: Basics

Concept of information as a resource, understanding the principles of information system and Classification of information in health sector.

Module II: Managing Hospital Information Systems

- Data generated for HIS; Functions, Benefits and applications of HIS, HIS components, various performance Indicators, HIS model and data movement.
- HIS modules: Various HIS Modules for Clinicians Access, Nursing Access, In-patient Module, Registration Module, Diagnostic services Module, Dietetics Module, OT Module and Accident & Emergency Module etc.

- Setting strategic objectives for information systems, organizing an information systems department, Principles of systems development, Importance of security and confidentiality of data.

Module III: Role of Information Technology in Hospitals

Principles of information processing, Role of information technology in information processing, Role of database management systems, Role of communication in managing hospital information systems.

Module IV: Management Information System

Concept of Management Information System (MIS). Developing indicators, identifying data and developing tools of measurement. Use of MIS: monitoring progress and evaluation, hospital planning, monitoring employees, monitoring health development, decision making. Computerization of MIS: demonstration and critical analysis of different MIS software packages used in health projects in hospitals

Module V: Telemedicine

Concept of Telemedicine and its evolution, Telemedicine network in India, and Strengths & Opportunities for Telemedicine in India.

Examination Scheme:

Components	CP	V	A	ME	EE
Weightage (%)	10	5	5	10	70

HEALTH INSURANCE

Course Code: PUH4402

Credit Units: 01

Course Objective

To acquaint students to the concept of HI and various HI products, so that the students are ready for challenges of healthcare insurance which is emerging as a sector holding great promise.

Course Contents

Module I: Introduction

History of Health Insurance, Principles of Health Insurance, Public Financing, Private Financing, Current trends in Health Insurance - International and Indian scenario, Economic and financial management of Health Insurance

Module II Health Insurance systems in India

- Private Health Insurance: Individual Health Plans, Mediclaim, Floaters plans, Third Party Administration, Benefits Management, Claims Management, IRDA
- Social Health Insurance: ESI, CGHS, RSBY
- Social and Community based Insurance: Microfinance

Examination Scheme:

Components	CP	V	A	CT 1	CT 2

DISASTER MANAGEMENT

Course Code: PUH4403

Credit Units: 02

Course Objective

- To learn, identify and assess disasters in the community.
- To set-forth policies and procedures for disaster preparedness and to prepare disaster plan.

Course Contents

Module I: Basics of Disaster Management

Definitions, Determining risk of disaster, Classification of disaster on the basis of origin, source, onset & anticipated response; Disaster process, Effects of Disasters – Health issues, characteristics and geography of disasters, Impact of Disasters on the Hospitals

Module II: Disaster Management Process

Phases of disaster management, leadership, organization of medical relief, Triaging, Disaster Response – local, national & International; Disaster Management Act – 2005.

Module III: Disaster preparedness

Hospital Disaster Plan – its pre-requisites, principles and components; Hospital disaster management committee and its role; Hospital disaster manual.

Module IV: Fire Safety

Grades of fire and its causes; elements of fire safety, various fire extinguishers; and fire safety training.

Examination Scheme:

Components	CP	V	A	ME	EE
Weightage (%)	10	5	5	10	70

DISSERTATION

Course Code: PUH4437

Credits Units: 15

Internship Objective:

To impart the practical knowledge through research methods, help formulate a rigorous research problem related to public health sector on the basis of their observation, help do an independent study and encourage working in a team.

Pedagogy

- Identifying several situations amenable to dissertation work, writing a proposal and making a presentation to the Dissertation faculty advisory committee.
- Reporting to the committee on the progress of research work periodically.
- Making use of a variety of research methods.
- Defending the inference before the Examining Committee.

Report Contents:

Every student will do a detailed study on the topic selected for the dissertation, and is expected to prepare a two or three proposals which he intends to take up for the Dissertation. The Assigned guide will examine this and decide on the topic of dissertation. Report will comprise of following contents:

1. Abstract
2. Introduction
3. Aims & Objectives
4. Operational definitions
5. Significance of Study
6. Review of literature
7. Research methodology
8. Data Analysis
9. Results
10. Discussion
11. Conclusion
12. Recommendations
13. Limitations of study
14. Future prospects of study
15. References

STEM CELL TECHNOLOGY

Syllabus - Semester First

INTRODUCTION TO STEM CELL TECHNOLOGY

Course Code: SCT2151

Credit Units: 03

Course Objective: The objective of this paper is to familiarize the students with stem cell technology and its applications for betterment of the society. The course is designed to give a broad view of mammalian stem cells, reviewing where they are found in the body, the different types and how they are cultured. The topics will cover the basic biology of these stem cells as well as bioengineering and application of these stem cells to potential treatments of human diseases.

Course Contents:

Module I: Introduction to stem cells

Definition, properties, proliferation, culture of stem cells, medical applications of stem cells, ethical and legal issues in use of stem cells.

Module II: Types of stem cells.

Stem Cell biology and therapy, types embryonic stem cell, Adult stem cell, Stem Cell Biology and Therapy, Embryonic Stem Cells, culture and the potential benefits of stem cell technology

Module III: Therapeutic applications of stem cells

Gene Therapy: Introduction, History and evolution of Gene therapy, optimal disease targets, Failures and successes with gene therapy and future prospects, Genetic Perspectives for Gene Therapy, **Gene Delivery** methods: Viral vectors and Non-viral Vectors

Module IV: Ethical Issues associated with stem cell-based regenerative medicine field

Regulatory and Ethical Considerations of stem cell and Gene Therapy, Assessing Human Stem Cell Safety, Use of Genetically Modified Stem Cells in Experimental Gene Therapies.

Examination Scheme:

Syllabus - Semester Second

FUNDAMENTAL HUMAN EMBRYOLOGY AND DEVELOPMENTAL BIOLOGY

Course Code: SCT2251

Credit Units: 03

Course Objective: The objective of this course is to familiarize students with fundamental process of human embryology and developmental biology and progression of pluripotent stem cells through different phases of development.

Course Contents:

Module-I: Basics principles of human embryogenesis--gametogenesis, fertilization and embryo development.

Module-II:

Ectoderm, mesoderm and endoderm development and process of organogenesis during human development.

Module-III:

Molecular regulation of embryogenesis and organogenesis processes during human development.

Module-IV:

Different types of stem cells, process and mechanism of stem cell subset development and their spatial organization during human development.

Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

Syllabus - Semester Third

FUNDAMENTAL CELL BIOLOGY, HUMAN ANATOMY AND PHYSIOLOGY

Course Code: SCT2351

Credit Units: 03

Course Objective: The objective of this course is to familiarize students with basic organization of adult somatic cells, human anatomy and normal physiology. Students will learn basic principles and mechanisms that dictate maintenance of pluripotency in pluripotent stem cells and their differentiation into adult stem cells, somatic cells, tissues and organs.

Course Contents:

Module-I:

Cell anatomy, organizational components, cell division mechanisms in normal adult cells and in pluripotent stem cells.

Module-II:

Introduction to epigenetics and its role in maintenance of pluripotency and differentiation of pluripotent stem cells into different somatic cell lineages.

Module-III:

Basics of Human anatomy & physiology and role of pluripotent stem cells and adult stem cells in maintenance of normal

Module-IV:

Effect of breach in normal cellular physiology and homeostasis on human development.

Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

Syllabus - Semester Fourth

HUMAN PLURIPOTENT STEM CELL CULTURE & DIFFERENTIATION METHODS

Course Code: SCT2451

Credit Units: 03

Course Objective: The objective of this paper is to provide students greater understanding of different types of stem cells.

Course Contents:

Module-I:

Isolation of human Embryonic stem cells, generation of human induced pluripotent stem cells. History of human pluripotent stem cell development.

Module-II:

Methodologies for pluripotent stem cell culture, characterization of pluripotency and differentiation into different lineages.

Module-III:

Methods to engineer pluripotent stem cells for treatment of genetically impaired conditions/diseases.

Module-IV:

Ethical and regulatory issues affective pluripotent stem cell-based cell replacement therapies. Technological challenges towards development of pluripotent stem cell-based cell replacement therapies.

Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

Syllabus - Semester Fifth

THERAPEUTIC APPLICATIONS OF HUMAN PLURIPOTENT STEM CELLS

Course Code: SCT2551

Credit Units: 03

Course Objective: The objective of this paper is to familiarize students with different therapeutic areas that can benefit with pluripotent stem cell-based cell replacement therapies.

Course Contents:

Module-I:

Principles of cell replacement therapy and application of pluripotent stem cells in cell replacement therapy.

Module-II:

Application of pluripotent stem cells in neuronal disease management and treatment.

Module-III:

Application of pluripotent stem cells in ocular and cardiovascular diseases management and treatment.

Module-IV:

Application of pluripotent stem cells in treatment of autoimmune complications and cancer management and treatment.

Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

PLANT & ANIMAL DIVERSITY LAB

Course Code: BLS2106

Credit Units-02

Course Contents:

Module I: Algae & Fungi

Study of Algal types with the help of permanent slides and also by preparing suitable slides as prescribed in the theory course. (Chlamydomonas, Chara, Sargassum, Polysiphonia,)

Study of Fungal types with the help of permanent slides and also by preparing suitable slides as prescribed in the theory course. (Eurotium, Morchella, Agaricus)

Module II: Bryophytes & Pteridophytes

Study of Bryophytes like Riccia, Marchantia, Anthoceros pteridophytes like Selaginella, Equisetum, and Marsilea with the help of permanent slides and also by cutting sections and making suitable preparations with the help of permanent slides and also by cutting sections and making suitable preparations.

List of Practicals

- Study of the following specimens (classification and characteristics):
Amoeba, Euglena, Plasmodium, Paramecium, Sycon, Hyalonema, and Euplectella, Obelia, Physalia, Aurelia, Taenia solium, Male and female Ascaris lumbricoides, Aphrodite, Nereis, Pheretima, Hirudinaria, Palaemon, Crab, Limulus, Palamnaeus, Scolopendra, Pila, Unio, Loligo, Octopus, star fish.
- Study of the following permanent slides:
T.S. and L.S. of Sycon, Study of life history stages of Plasmodium, T.S. of Male and female Ascaris

CHEMISTRY LAB - I

Course Code: BLS2107

Credit Units: 01

Course Contents:

INORGANIC CHEMISTRY

Module I

Volumetric analysis: Oxidation-reduction titration using KMnO_4 and $\text{K}_2\text{Cr}_2\text{O}_7$

Module II

Iodometry titrations: Estimation of sodium thiosulphate & potassium dichromate.

Module III

Preparation of the following inorganic compounds: Prussian blue from iron fillings, chrome alum, cuprous chloride and potassium trioxalatochromate.

PHYSICAL CHEMISTRY

Module IV

Determination of surface tension and viscosity of liquids

Module V

Heat of neutralisation of a strong acid and a strong base.

Module VI

Solubility curve of KNO_3 or benzoic acid.

PHYSICS LAB - I

Course Code: BLS2108

Credit Units-01

Course Contents:

1. Young's modulus – non uniform bending – pin and microscope.
2. Rigidity modulus – Static Torsion Method Using Scale and Telescope.
3. Rigidity modulus – Torsional oscillation method (without symmetric masses).
4. Determination of Co-efficient of Viscosity – Graduated Burette.
5. Surface Tension and Interfacial Tension – By drop weight method.
6. Specific Heat Capacity of a liquid – by Newton's Law of Cooling.
7. Sonometer – Determining A.C. Frequency. (Screw Gauge is given).
8. Sonometer – frequency of tuning fork.
9. Newton's Rings – Radius of Curvature.
10. Air Wedge – Determination of thickness of thin wire.

Any other experiment carried out in the class.

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V

PLANT DIVERSITY LAB

Course code: BLS2206

Credit Unit: 1

Course objective:

Course objective is to provide the knowledge about plant science that should be useful to understand and apply different concepts about the diversity and complexity of plants.

Course Contents:

Module I:

Gymnosperms Study of the Gymnosperms like *Cycas*, and *Pinus* by cutting sections and making suitable temporary preparations.

Module II:

Taxonomy Detailed description and identification of locally available plants of the families as prescribed in theory course.

Module III:

Plant Anatomy Anatomy of normal dicot and monocot roots, stems & leaves.

Module IV:

Embryology Study of permanent slides of the:

- a) T.S. anther, pollen, germinating pollen
- b) L.S. ovule types
- c) Endosperm
- d) Embryos
- e) L.S. caryopsis
- f) Dissection of embryo

Module V:

Plant Pathology Examination of local diseased plants representing bacterial, viral, fungal parasites. Study of symptoms caused by parasites, study of selected diseased specimen (mentioned under theory) through specimens, temporary presentations.

Module VI:

Ecology Measurement of temperature (Soil). Demonstration of Soil texture, carbonate, sulphate, pH, soil moisture percentage. A comparative study of plants (with external and internal characters) to water availability.

Examination Scheme:

CHEMISTRY LAB-II

Course Code: BLS2207

Credit Units: 01

Module I

Qualitative analysis of inorganic mixtures, containing not more than four ionic species (excluding insoluble substances) out of the following:

Pb²⁺, Hg²⁺, Hg₂²⁺, Ag¹⁺, Bi³⁺, Cu²⁺, Cd²⁺, As³⁺, Sn²⁺, Sn⁴⁺, Fe²⁺, Fe³⁺, Al³⁺, Co²⁺, Ni²⁺, Mn²⁺, Zn²⁺, Ba²⁺, Sr²⁺, Ca²⁺, Mg²⁺, NH₄¹⁺, K¹⁺, CO₃²⁻, S²⁻, SO₃²⁻, NO₂¹⁻, CH₃COO¹⁻, F¹⁻, Cl¹⁻, Br¹⁻, I¹⁻, NO₃¹⁻, SO₄²⁻, C₂O₄²⁻, PO₄³⁻, BO₃³⁻.

Module II

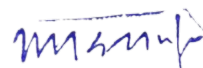

Purification of Organic compounds by crystallization (from water or alcohol) and distillation.

Examination Scheme:

PHYSICS LAB-II

Course Code: BLS2208

Credit Units: 01

Course Contents:

1. Spectrometer Grating – Minimum Deviation – Mercury Lines.
2. Spectrometer – Refractive Index of a liquid – Hollow Prism.
3. Potentiometer – Calibration of High Range Ammeter.
4. Potentiometer – Calibration of Low Range Voltmeter.
5. Determination of M and BH using Deflection Magnetometer in Tan C position and vibration magnetometer.
6. Figure of merit and voltage sensitiveness of table galvanometer.
7. Construction of AND, OR gates using diodes and NOT by transistors.
8. Zener diode – Voltage Regulation.
9. NAND / NOR as universal gate.
10. Demorgan's theorem verification.

Any other experiments can be carried out in class.

Examination Scheme:

IA				EE

ANIMAL ANATOMY LAB

Course Code: BLS2305

Credit Units : 01

Module-I

Study of permanent slides (mammalian tissues)

1. T. S. of long bone
2. Study of smooth, skeletal and cardiac muscle
3. T. S. of spleen
4. T.S. of thyroid gland
5. T. S. of pancreas
6. T.S. of adrenal gland

Module II

Preparation of stains

1. Ehrlich's Alum Haematoxylin
2. Deafield's Harmatoxylin
3. Acetocarmine
4. Eosin

Module III

Temporary mounting of buccal mucosa, skeletal muscle, blood smear.

Module IV

Histological preparation : Fixation to section cutting and staining of a suitable mammalian tissue

CELL BIOLOGY AND GENETICS LAB

Course Code: BLS2306

Credit Units : 01

Course Contents:

Module I

Cell fractionation and separation of cell organelles by ultra centrifugation

Module II

Isolation of chloroplast from spinach

Module III

Isolation of mitochondria

Module IV

1. Study of gene interaction.
2. Study of bacterial conjugation.
3. Study of bacterial transduction.
4. Study of physical and chemical mutagens on growth of E. coli.

PROJECT (WITH PRESENTATION AND EVALUATION)

Course Code: BLS2332

Credit Units: 04

Objectives:

The aim of the project is to provide the students with an opportunity to further their intellectual and personal development in the chosen field by undertaking a significant practical unit of activity. The project can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

Chapter Scheme and distribution of marks:

Chapter 1: Introduction – 10 marks

Chapter 2: Conceptual Framework/ National/International Scenario – 25 marks

Chapter 3: Presentation, Analysis & Findings -- 25 marks

Chapter 4: Conclusion & Recommendations -- 10 marks

Chapter 5: Bibliography -- 05 marks

Project Report	Power Point Presentation & Viva
75 marks	25 marks

Components of a Project Report

The outcome of Project Work is the Project Report. A project report should have the following components:

1) Cover Page: This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.

2) Acknowledgement: Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.

3) Table of Content: Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.

4) Body of the Report: The body of the report should have these four logical divisions

a) **Introduction:** This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, and method of analysis), Limitations of the Study, and Chapter Planning.

b) **Conceptual Framework / National and International Scenario:** (relating to the topic of the Project).

c) **Presentation of Data, Analysis and Findings:** (using the tools and techniques mentioned in the methodology).

d) **Conclusion and Recommendations:** In this section, the concluding observations based on the main findings and suggestions are to be provided.

5) Bibliography or References: This section will include the list of books and articles which have been used in the project work, and in writing a project report.

6) Annexures: Questionnaires (if any), relevant reports, etc.

(The main text of the Project should normally be in the range of 5000 words. However, there may be annexure in addition to the main text)

The Steps of a Project Report

Step I : Selection of the topic for the project by taking following points into consideration:

- Suitability of the topic.
- Relevance of the topic
- Time available at the disposal.
- Feasibility of data collection within the given time limit.
- Challenges involved in the data collection (time & cost involved in the data collection, possibility of getting responses, etc.)

Step II : Finalisation of the Topic and preparation of Project Proposal in consultation with the Supervisor.

Step III : Collection of information and data relating to the topic and analysis of the same.

Step IV : Writing the report dividing it into suitable chapters, viz.,

Chapter 1: Introduction,

Chapter 2: Conceptual Framework / National & International Scenario,

Chapter 3: Analysis & Findings

Chapter 4: Conclusion and Recommendations.

Step V : The following documents are to be attached with the Final Project Report.

1) Approval letter from the supervisor (Annexure-IA)

2) Student's declaration (Annexure-IB)

3) Certificate from the Competent Authority of the Organisation / Institution, if the student undertakes the Project Work in any Organisation / Institution.

Guidelines for Evaluation:

- Each of the students has to undertake a Project individually under the supervision of a teacher and to submit the same following the guidelines stated below.
- Language of Project Report and Viva-Voce Examination may be English. The Project Report must be typed and hard bound.
- Failure to submit the Project Report or failure to appear at the Viva-voce Examination will be treated as "Absent" in the Examination. He /she has to submit the Project Report and appear at the Viva-Voce Examination in the subsequent years (within the time period as per University Rules).
- No marks will be allotted on the Project Report unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her Project Report.
- Evaluation of the Project Work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate.

MICROBIOLOGY

Course Code: BLS2403

Credit Units: 03

Course Objective:

To acquaint the students about the microbiology and role of various microorganisms in different biotechnological applications, various techniques for their cultivation and control

Course Contents:

Module I: Introduction and historical perspective

Discovery of microbial world, Concept of pure culture, Theory and practice of sterilization; Isolation of microorganisms, staining methods, microscopy, preservation of microbial cultures

Module II

Microbial Physiology: cell structure and function. Microbial growth: Growth curve, Enumeration of cells by direct and indirect methods, Microbial fermentations, Microbial Stress Responses.

Module III

Evolutionary microbiology and microbial diversity: Microbial evolution and systematics, prokaryotic diversity: bacteria and archaea, eukaryotic microorganisms (structure of algae and fungi), microbial community analysis (overview), classical and molecular taxonomy.

Virology: Viruses and virions, growth and quantification, viral replication, viroids and prions, Bacterial, plant and animal viruses,

Module IV

Microbial Ecology Methods in microbial ecology (culture dependent and culture independent techniques), microbial habitats and nutrient cycling (Carbon, sulphur and nitrogen cycles), plant-microbes, animal-microbes interactions. Soil microorganisms associated with vascular plants, bioremediation and biodegradation.

Module V

Applied microbiology: Biocatalysts, microbial metabolites, wine production, single cell proteins, microbial transformation of steroids, role of microbes in food industry, production of dairy products (fermented milks and cheese), Role of microbes in Agriculture (biofertilizers, biopesticides), Waste water treatment.

Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE

BIOSTATS & BIOINFORMATICS

Course Code: BLS2404

Credit Units: 03

Course Objective:

Course objective is to provide the knowledge that should be useful to understand different concepts of molecular properties of basic life molecules like proteins nucleic acids and their relative structure and function across the genus or kingdom

Module I:

Introduction to Molecular modeling, data bases for proteins and DNA – PDB and MMDB, structure file formats, visualizing structural information, advance structure modeling, Internal and external co-ordinate system, cartesian and cylindrical polar co-ordinate system, Potential energy calculations using semiempirical potential energy function,

Module II:

Software and Programmes for sequence comparison and analysis, Phylogenetics analysis software, Molecular Structure drawing tool,

Module III:

Molecular modeling/Docking, Molecular mechanics and dynamics, Knowledge base structure prediction, Molecular Design, structure similarity searching; Secondary structure prediction in proteins, prediction of buried residues in proteins

Module IV

Application of molecular modeling & computational biology/Bioinformatics in Agriculture, Human health, Environment, Biotechnology, Molecular Biology, Neurobiology, Drug Designing, Veterinary Science.

Module V: Introduction to the following Statistical terms

Parameter, Statistic, Null hypothesis, Alternative hypothesis, Critical region, Type1 Error, Type 11 Error, Level of significance, P-value and its applications.

Test of Significance for Small samples: One sample t-test, Paired t-test, Degrees of freedom for t-test, F test for equality of Population variances, Degrees of freedom for F-test.

Test of Significance for Large samples: Normal test for sample mean and population mean, Normal test for two sample means.

Chi-square Test: Test of goodness of fit, Test of Independence of attributes, Degrees of freedom for Chisquare test, Coefficient of contingency, Yates' correction for continuity.

Analysis of Variance: One way and Two way (only Examples)

ECOLOGY & EVOLUTION

Course Code BLS2405

Credit Units : 03

Course Objective:

The term environment is used to describe, in the aggregate, all the external forces, influences and conditions, which affect the life, nature, behaviour and the growth, development and maturity of living organisms. At present a great number of environment issues, have grown in size and complexity day by day, threatening the survival of mankind on earth. A study of environmental studies is quite essential in all types of environmental sciences, environmental engineering and industrial management. The objective of environmental studies is to enlighten the masses about the importance of the protection and conservation of our environment and control of human activities which has an adverse effect on the environment.

Course Contents:

Module I: The multidisciplinary nature of environmental studies

Definition, scope and importance

Need for public awareness

Module II: Natural Resources

Renewable and non-renewable resources:

Natural resources and associated problems

Forest resources: Use and over-exploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forests and tribal people.

Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems.

Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies.

Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies.

Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources, case studies.

Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification.

- Role of an individual in conservation of natural resources.
- Equitable use of resources for sustainable lifestyles.

Module III: Ecosystems

Concept of an ecosystem

Structure and function of an ecosystem

Producers, consumers and decomposers

Energy flow in the ecosystem

Ecological succession

Food chains, food webs and ecological pyramids

Introduction, types, characteristic features, structure and function of the following ecosystem:

- a. Forest ecosystem
- b. Grassland ecosystem
- c. Desert ecosystem
- d. Aquatic ecosystems (ponds, streams, lakes, rivers, ocean estuaries)

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Module IV: Biodiversity and its conservation

Introduction – Definition: genetic, species and ecosystem diversity

Biogeographical classification of India

Value of biodiversity: consumptive use, productive use, social, ethical aesthetic and option values

Biodiversity at global, national and local levels

India as a mega-diversity nation

Hot-spots of biodiversity

Threats to biodiversity: habitat loss, poaching of wildlife, man wildlife conflicts

Endangered and endemic species of India

Conservation of biodiversity: In-situ and Ex-situ conservation of biodiversity

Module V: Environmental Pollution

Definition Causes, effects and control measures of:

- a. Air pollution
- b. Water pollution
- c. Soil pollution
- d. Marine pollution
- e. Noise pollution
- f. Thermal pollution
- g. Nuclear pollution

Solid waste management: Causes, effects and control measures of urban and industrial wastes.

Role of an individual in prevention of pollution.

Pollution case studies.

Disaster management: floods, earthquake, cyclone and landslides.

Module VI: Social Issues and the Environment

From unsustainable to sustainable development

Urban problems and related to energy

Water conservation, rain water harvesting, watershed management

Resettlement and rehabilitation of people; its problems and concerns. Case studies.

Environmental ethics: Issues and possible solutions

Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies.

Wasteland reclamation

Consumerism and waste products

Environmental Protection Act

Air (Prevention and Control of Pollution) Act

Water (Prevention and control of Pollution) Act

Wildlife Protection Act

Forest Conservation Act

Issues involved in enforcement of environmental legislation

Public awareness

Module VII: Human Population and the Environment

Population growth, variation among nations

Population explosion – Family Welfare Programmes

Environment and human health

Human Rights

Value Education

HIV / AIDS

Women and Child Welfare

Role of Information Technology in Environment and Human Health
Case Studies

Module VIII: Field Work

Visit to a local area to document environmental assets-river / forest/ grassland/ hill/ mountain.

Visit to a local polluted site – Urban / Rural / Industrial / Agricultural

Study of common plants, insects, birds

Study of simple ecosystems-pond, river, hill slopes, etc (Field work equal to 5 lecture hours)

Examination Scheme:

Components	CT	HA	S/V/Q	A	EE
Weightage (%)	15	5	5	5	70

PLANT PHYSIOLOGY LAB

Course Code: BLS2406

Credit Units: 01

Plant Physiology

- Effects of plant growth hormones on rooting and shooting.
- Estimation of salicylic acid as secondary signaling molecule in plants
- Separation of photosynthetic pigments through thin layer chromatography
- Determination of Respiration Quotient (RQ)

Examination Scheme:

IA			EE			
Class Test (Practical Based)	Mid Term Viva	Attendance	Major Experiment	Minor Experiment/Spotting	Practical Record	Viva
15	10	05	35	15	10	10

Manesar Gurgaon-122413

ANIMAL PHYSIOLOGY LAB

Course Code: BLS2406

Credit Units: 01

Animal Physiology

- Enumeration of red blood cells using hemocytometer.
- Estimation of haemoglobin using Sahli's hemoglobinometer.
- Preparation of haemin and hemochromogen crystals.
- Enumeration of total and differential count of white blood cells.
- Effect of pH on amylase activity from saliva.
- Biochemical analysis: carbohydrate, proteins and fats.
- Estimation of serum bilirubin (direct and indirect method).

Examination Scheme:

IA			EE

MICROBIOLOGY LAB

Course Code: BLS2407

Credit Units: 01

Course Contents:

- Laboratory safety and instrument handling, General rules and regulations, Aseptic techniques, preparation of culture media for cultivation of specific microorganisms.
Observation of permanent slides (*E.coli*, *Yeast*, *Sarcina*, *Streptococcus*, *Acid fast staining*)
- Isolation and enumeration of microorganisms from air, water and rhizosphere (actinomycetes, bacteria and fungi), serial dilution and viable plate counting methods, Use of differential, selective and enriched media.
- Staining techniques: Simple staining, differential Gram staining, endospore staining, lactophenol cotton blue staining for fungi
- Growth curve measurement of bacterial population by turbidometry
- Biochemical tests – Triple Sugar Iron test (TSI) , Indole test. Methyl red test. Voges proskaeur test, Citrate utilization test (IMViC), starch hydrolysis, casein hydrolysis, catalase test
- Water microbiology- presumptive, confirmed and complete test for water potability.

Examination Scheme:

MOLECULAR BIOLOGY

Course Code: BLS2501

Credit Units: 03

Course Objective:

The objective of the course is to provide a clear understanding of DNA (genetic material) so that they can manipulate it and understand basic tools and techniques involved in its manipulation. Strong foundation in molecular biology enables the students to familiarize themselves with Genetic engineering technology.

Course Contents:

Module I: DNA replication and repair

DNA structure, DNA replication; DNA repair mechanism,

Module II: Transcription of DNA

Transcription in prokaryotes and eukaryotes, RNA polymerase – Composition and function; transcription mechanism; transcription factor and their role, inhibition of RNA synthesis

Module III: Processing of RNA

Processing of ribosomal and transfer RNA's processing of mRNA-5'cap formation; 3' polyadenylation ; RNA splicing , RNA editing , RNA degradation.

Module IV: Translation

Translation mechanism in prokaryotes and eukaryotes; ribosomes, initiation of translation, elongation, termination, amino acid activation; inhibitors, post translation modification of protein

Module V: Regulation of gene expression

Regulation in prokaryotes – repressors and negative control, positive control, role of c AMP, **Amprceptor** protein, lac, tryp, His and ara operons, Regulation in Eukaryotes=promoters and enhancers, transcriptional regulatory protein, transcriptional activators, eukaryotic repressor.

Module VI: Gene Silencing

Antisense molecules; Biochemistry of ribozyme, Hammer head, hairpin ribozymes. Application of antisense and ribozymes in genetic engineering.

Examination Scheme:

IMMUNOLOGY

Corse Code: BLS2503

Credit Units: 03

Course Objective:

Role of antibody engineering in biomedical applications and the importance of immuno genetics in disease processes, tissue transplantation and immune regulation are some of the areas of attributes of this course which can help the students to understand the biotechnology related to human kind.

Course Contents:

Module I

Historical perspective of immune system and immunity; Innate and specific immunity, Humoral immunity, Cell-mediated immunity

Module II

Antibody structure in relation to function and antigen-binding; Types of antibodies and their structures: isotypes, allotypes, idiotypes; Genetic basis of antibody diversity

Module III

The organs and cells of the immune system; Histocompatibility: structure of MHC class I, II & III antigens & their mode of antigen presentation, MHC restriction; Antigens & antigenicity;

Module IV

Measurement of antigen – antibody interaction: agglutination, immunodiffusion, immuno-electrophoresis, ELISA, RIE, production of monoclonal antibodies.

Module V

Complement system; Autoimmunity; Hypersensitivity

Module VI:

Hybridoma Technology; Introduction to transplantation immunology, Introduction to Cancer immunology, Vaccines (attenuated and recombinant);

Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE

BIO-ANALYTICAL AND BIOPHYSICAL TECHNIQUES

Course Code: BLS2504

Credit Units: 02

Course Objective:

The students will be exposed to basic concepts related with techniques and instrumentation widely used in Biotechnology.

Course Contents:

Module I: Buffers & Sample preparation

Preparation of solutions, concept of pH and buffer, types of buffers and their preparation, pH meter. Cell Disruption techniques, ultra filtration, dialysis and reverse osmosis.

Module II: Centrifugation

Principle of centrifugation, rotors, different types of centrifuges, ultra centrifugation.

Module III: Microscopy

Principles of microscopy, types of microscopy Bright field, Dark field, phase contrast and fluorescence microscopy. Electron microscopy: Transmission and scanning electron microscopy.

Module IV: Radioisotope techniques

Study of radioisotopes in biological samples, proportional and GM counter, scintillation counters, autoradiography.

Module V: Electrophoresis & Chromatography

SDS-PAGE, isoelectric focusing, two-dimensional electrophoresis; Paper, TLC, gel filtration, ion-exchange chromatography, affinity chromatography, HPLC and GLC

Module VI: Spectroscopy

UV and visible spectroscopy, Infrared and Atomic absorption spectroscopy, fluorescence spectroscopy.

Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

BIOMATERIALS

Course Code: BLS2505

Credit Units : 02

Module I

Introduction to biomaterials: definition, classification, properties and requirements

Module -II

- Biomaterials used in medicine: ceramics, polymers, metals, composites
- Bone tissue engineering scaffolds

Module -III

Applications of biomaterials in medicine

- Sterilisation
- Surface modification of biomaterials
- Medical imaging
- Bioreactors
- Medical Device/ Advanced Therapy Medicinal Product
- Good Manufacturing Practice facilities

BIOCHEMISTRY AND BIOANALYTICAL LAB

Course Code: BLS2508

Credit Units: 01

Module I: Solutions and buffers

Preparation of molar, normal and % (w/v) solutions. preparation of buffers of different pH and molar strength.

Module II: Carbohydrates

Extraction and estimation of carbohydrates from given plant/animal materials: determination of total sugars by Anthrone method Separation of sugars by thin layer chromatography

Module III: Proteins

Extraction of total proteins; Estimation of proteins by Lowery/ Bradford Method; Electrophoretic (SDS-PAGE) separation of isolated proteins

Module IV: Lipids

Extraction of total lipids; estimation of phospholipids/glycolipids; thin layer chromatographic separation of lipids

Module IV: Nucleic Acid

Extraction and estimation of DNA and RNA by UV-spectrophotometer

Examination Scheme:

SUMMER INTERSHIP PROJECT (EVALUATION)

Course Code: BLS2535

Credit Units: 04

Objectives:

The aim of the project is to provide the students with an opportunity to further their intellectual and personal development in the chosen field by undertaking a significant practical unit of activity. The project can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

Chapter Scheme and distribution of marks:

Chapter 1: Introduction – 10 marks

Chapter 2: Conceptual Framework/ National/International Scenario – 25 marks

Chapter 3: Presentation, Analysis & Findings -- 25 marks

Chapter 4: Conclusion & Recommendations -- 10 marks

Chapter 5: Bibliography -- 05 marks

Project Report	Power Point Presentation & Viva
75 marks	25 marks

Components of a Project Report

The outcome of Project Work is the Project Report. A project report should have the following components:

1) Cover Page: This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.

2) Acknowledgement: Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.

3) Table of Content: Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.

4) Body of the Report: The body of the report should have these four logical divisions

a) **Introduction:** This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, and method of analysis), Limitations of the Study, and Chapter Planning.

b) **Conceptual Framework / National and International Scenario:** (relating to the topic of the Project).

c) **Presentation of Data, Analysis and Findings:** (using the tools and techniques mentioned in the methodology).

d) **Conclusion and Recommendations:** In this section, the concluding observations based on the main findings and suggestions are to be provided.

5) Bibliography or References: This section will include the list of books and articles which have been used in the project work, and in writing a project report.

6) Annexures: Questionnaires (if any), relevant reports, etc.

(The main text of the Project should normally be in the range of 5000 words. However, there may be annexure in addition to the main text)

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

The Steps of a Project Report

Step I : Selection of the topic for the project by taking following points into consideration:

- Suitability of the topic.
- Relevance of the topic
- Time available at the disposal.
- Feasibility of data collection within the given time limit.
- Challenges involved in the data collection (time & cost involved in the data collection, possibility of getting responses, etc.)

Step II : Finalisation of the Topic and preparation of Project Proposal in consultation with the Supervisor.

Step III : Collection of information and data relating to the topic and analysis of the same.

Step IV : Writing the report dividing it into suitable chapters, viz.,

Chapter 1: Introduction,

Chapter 2: Conceptual Framework / National & International Scenario,

Chapter 3: Analysis & Findings

Chapter 4: Conclusion and Recommendations.

Step V : The following documents are to be attached with the Final Project Report.

1) Approval letter from the supervisor (Annexure-IA)

2) Student's declaration (Annexure-IB)

3) Certificate from the Competent Authority of the Organisation / Institution, if the student undertakes the Project Work in any Organisation / Institution.

Guidelines for evaluation:

- Each of the students has to undertake a Project individually under the supervision of a teacher and to submit the same following the guidelines stated below.
- Language of Project Report and Viva-Voce Examination may be English. The Project Report must be typed and hard bound.
- Failure to submit the Project Report or failure to appear at the Viva-voce Examination will be treated as "Absent" in the Examination. He /she has to submit the Project Report and appear at the Viva-Voce Examination in the subsequent years (within the time period as per University Rules).
- No marks will be allotted on the Project Report unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her Project Report.
- Evaluation of the Project Work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate.

RECOMBINANT DNA TECHNOLOGY

Course Code: BLS2601

Credit Units: 03

Course Objective:

A complete understanding of molecular techniques can be obtained through the course. The successful application of biotechnology largely depends on these advanced molecular techniques.

Course Contents:

Module I

Restriction endonuclease, methyltransferase, ligase, polymerase, kinase, phosphatase, nuclease, transferase, reverse transcriptase.

Module II

Cloning vectors: Plasmids, bacteriophages (Lambda and M13), phagemids, cosmids, artificial chromosomes (YAC, BAC). expression vectors (Bacteria and yeast); Basic cloning strategy and screening clones; Gene libraries

Module III

Blotting techniques and hybridization: Southern, Northern and Western blotting techniques. Radioactive and non-radioactive probes.

Module IV

Principles of PCR, types of PCRs and its applications

Module V

DNA sequencing (Maxam Gilbert, Sanger's and automated), protein engineering.

Examination Scheme:

GENOMICS AND PROTEOMICS

Course Code: BLS2602

Credit Units: 03

Course Objective:

The course helps in developing a detailed understanding of eukaryotic genome complexity and organization. Current research on the molecular basis of the control of gene expression in eukaryotic system has developed a detailed understanding of techniques of gene diagnostics and DNA profile to acquire the fundamentals of genomics and Proteomics.

Course Contents:

GENOMICS

Module I: Genome Evolution

Origin of genomes, functional genomics. Forward genetics

Module II: Structural Genomics

Chromosome structure and Genome organization, Genome sequencing methods, Gene identification Genome annotation methods

Module III: Comparative Genomics

Phylogeny, COGS [Cluster of orthologues genes], paralogues and gene displacement.

Module IV: Functional Genomics

ESTs, SAGE, DNA Microarrays, Application of Microarrays, Real Time PCR

Module V: Genotyping Background and Applications.

Genetic and physical mapping: Introduction to molecular markers-RFLP, RAPD, AFLP, SSRs. Genetic and physical maps, FISH for genome analysis, DNA fingerprinting; Single nucleotide polymorphisms, RNA interference, antisense RNA, siRNA, miRNA, ; Human Genome Project.

PROTEOMICS

Module VI

Basics of Proteomics: Protein preparation and Separation, 2D Gel Electrophoresis, mass spectrometry, post translation modification.

Protein-Protein Interaction, Protein Microarray, Application of Microarray in proteome analysis.

IPR, BIOSAFETY AND BIOETHICS

COURSE CODE: BLS2603

Credit Units: 02

Course Objective:

The objectives of the course are to explain the biosafety and bioethics. Students will study and assess biosafety, and bioethics related to genetically engineered plant, animal and microbial products.

Course Contents:

Module I: Biotechnology and Intellectual Property Rights

Biotechnology and the Law- Objective, Evolution, Basic Structure of Gene Techniques, Applications, Commercial Potential of Biotech Inventions, Rationale for Intellectual Property Protection. Patenting Biotechnology Inventions-Objective, Concept of Novelty, Concept of inventive step, Microorganisms, Moral Issues in Patenting Biotechnological inventions. Plant Varieties Protection-Objectives, Justification, International Position, Plant Varieties Protection in India Protection of Geographical Indications Objectives, Justification, International Position, Multilateral Treaties, National Level, Indian Position.

Protection of Traditional Knowledge- Objective, Concept of Traditional Knowledge, Holders, Issues concerning, Bio-Prospecting and Bio-Piracy, Alternative ways, Protectability, need for a Sui-Generis regime, Traditional Knowledge on the International Arena, at WTO, at National level, Traditional Knowledge Digital Library.

Module II: Biosafety

Definition and requirement; biosafety in relation to human health, environment, transgenic research and applications, biosafety laws, guidelines and conventions, biosafety regulation: principles and practices in microbial and biomedical labs, guidelines for research involving DNA molecule ; Regulation bodies at National and International level

Module III: Bioethics

Definition of bioethics, importance of bioethics, Bioethics in plant, animal and microbial genetic engineering, Ethical issues in healthcare, Biopiracy and ethical conflicts Legal and socioeco'omic impact of the products and techniques in Biotechnology,

APPLIED BIOLOGY

Course Code: BLS2604

Credit Units: 03

Course Contents:

Module I

Introduction to fermentation, the fermentation industry, Production process batch and Continuous system of cultivation, Solid-state fermentation

Module II

Selection of industrial microorganisms, media for fermentation, aeration, pH, temperature and other requirements during fermentation, downstream processing and product recovery, food industry waste as fermentation substrate.

Module III

Production of compounds like, antibiotics, enzymes, organic acids, solvents, beverages, SCP.

Module IV

Production of fermented dairy products

Module V

Immobilized enzymes systems, production and applications.

COMPUTER APPLICATIONS

Course Code: BTH2103

Credit Units: 03

Course Objective:

To provide computer skills and knowledge for commerce students, and to make them complacent with the use of new tools of IT

Course Contents:

Module I

General features of a Computer. Generation of computers. Personal Computer, Workstation, Mainframe Computer and super Computers. Computer applications – data processing, information processing, Application areas of computer.

Module II

Computer organization. Central processing module. Computer memory- primary memory and secondary memory. Secondary storage devices – magnetic and optical media. Input and output modules. OMR, OCR, MICR, scanner, mouse, Modem.

Module III

Computer hardware and software. Machine language and high level language. Application software. Computer program. Operating system. Computer virus, Antivirus and Computer security, Windows OS and its features.

Computer arithmetic. Binary, octal and hexadecimal number systems. Algorithm and flowcharts. Illustrations. Elements of database and its applications.

Module IV

Introduction to MS office Packages- Ms-Word – Editing a Document – Move and Copy text – Formatting text and paragraph – Finding and Replacing text and spelling checking – Using tabs, Tables, and other features, Enhancing document – using mail merge and other features.

Introduction to Worksheet- Getting started with excel – Editing Cells and using commands and functions – Moving And Coping, Inserting and Deleting Rows and Columns – Getting help and formatting a worksheet – Printing the worksheet – Creating Charts – using formulae and functions in excel.

Introduction to Power Point Presentation

Module V

Computer Networks & Internet Technology

Examination Scheme:

Components	A	P	HA	CT	EE
Weightage (%)	5	5	5	15	70

A-Attendance; P -Project/Seminar/Quiz/Viva; HA-Home Assignment; CT-Class Test; EE-End Semester Examination

PLANT SCIENCES- I LAB

Course Code: BTH2104

Credit Units: 01

Course Contents:

Module I

Microscopic study of *Chlamydomonas*, *Volvox*, *Spirogyra*, *Chara* and *Polysiphonia* (Fresh preparations and permanent slides)

Module II

Fresh microscopic preparation of *Aspergillus* and *Agaricus*.

Module III

Microscopic study of fresh preparations of *Riccia*, *Marchantia* and *Anthoceros*.

Module IV

Microscopic study of fresh preparations of *Selaginella*, *Equisetum* and *Marsilea*.

Study algal diversity of pond water.

Module VII

Study of soil fungal diversity.

Examination Scheme:

MICROBIAL BIOTECHNOLOGY

Course Code: BTH2107

Credit Units: 03

Course Objective:

The basic knowledge of Microbiology gained in the previous semester would be applied in the various disciplines like evolution, Immunology & Industrial fermentation.

Course Contents:

Module I

Microbial nutrition and growth -The definition of growth, growth curve, measurement of growth and growth yields, synchronous growth, culture collection and maintenance of cultures.

Module II

Microbial evolution, systematics and taxonomy - new approaches to bacterial taxonomy,

Module III

Host-parasite relationship (Normal micro flora of skin, oral cavity, gastrointestinal tract), types of toxins (Exo,endo, entero) and their mode of actions,

Module IV

Microbes in extreme environments: Archae as the earliest forms, thermophiles, psychrophiles, halophiles, alkalophiles, acidophiles, hyperthermophiles.

Module V

Introduction to industrially important microbes and microbial fermentative products (Production of antibiotics with special reference to penicillin & streptomycin, enzymes, biotransformation of steroids), food products from microbes (Dairy & SCP etc)

Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

FOOD BIOTECHNOLOGY

Course Code: BTH2108

Credit Units: 03

Course Objective:

This course will provide a broad grounding in concepts, techniques and issues involved in food products and their processing.

Course Contents:

Module I: Introduction

Scope and importance of food industry; Concept of 'functional food'; Advances and trends, ethical issues, quality control, legislation, FDA & FPO (India), RDT and other technologies involved in development of food products; GM food and GM crops.

Module II: Techniques used in Food Industry

Sterilization, isolation, screening and strain improvement, cell harvesting and disruption, recovery and purification, production of organic acids – citric acid, lactic acid and acetic acid;

Module III: Dairy Biotechnology

Starter cultures, prebiotics, probiotics – their use as flavor enhancers and disease/ infection combats, applications in production of cheese, butter, ice-cream, yoghurt; Modified milk proteins.

Module IV: Microbial, Plant and Animal Biotechnology

Production of SCP (Single cell protein), production of baker's yeast, brewing industry, applications of transgenic plants in food production, transgenic fish, and transgenic poultry.

Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

AGRICULTURE BIOTECHNOLOGY

Course Code: BTH2109

Credit Units: 03

Course Objective:

The agriculture plant biotechnology course basically meant for understanding the basic techniques of plant tissue culture and genetic engineering in plants along with the latest ongoing research on the different aspects of plants and its products to redefine agriculture priorities and produce human resource with academic, scientific and technical expertise along with management or business experience.

MODULE I Plant Regeneration Technologies

Introduction and historical perspective, organ culture, cell suspension, organogenesis, somatic embryogenesis, micropropagation, anther and ovary culture-haploid production, embryo culture and rescue, protoplast culture, somatic hybridization and cybrids.

MODULE II Transgenic Plants Technology

Genetic Transformation, Methods for gene transfer in plants, Molecular mechanism of *Agrobacterium* mediated transformation. Selectable markers, Reporter gene and Promoters used in plant transformation vectors.

MODULE III Industrial and Agricultural Application

Biotic stress tolerance; insect, pest and pathogen resistance. Abiotic stress tolerance; salt, water and drought tolerance. Herbicide tolerance. Molecular farming

Examination Scheme:

Components	H/S	A	CT	EE

TERM PAPER

Course Code: BTH2131

Credit Units: 02

A term (or research) paper is primarily a record of intelligent reading in several sources on a particular subject.

The students will choose the topic at the beginning of the session in consultation with the faculty assigned. The progress of the paper will be monitored regularly by the faculty. At the end of the semester the detailed paper on the topic will be submitted to the faculty assigned. The evaluation will be done by Board of examiners comprising of the faculties.

GUIDELINES FOR TERM PAPER

The procedure for writing a term paper may consists of the following steps:

1. Choosing a subject
2. Finding sources of materials
3. Collecting the notes
4. Outlining the paper
5. Writing the first draft
6. Editing & preparing the final paper

1. Choosing a Subject

The subject chosen should not be too general.

2. Finding Sources of materials

- a) The material sources should be not more than 10 years old unless the nature of the paper is such that it involves examining older writings from a historical point of view.
- b) Begin by making a list of subject-headings under which you might expect the subject to be listed.
- c) The sources could be books and magazines articles, news stories, periodicals, scientific journals etc.

3. Collecting the notes

Skim through sources, locating the useful material, then make good notes of it, including quotes and information for footnotes.

- a) Get facts, not just opinions. Compare the facts with author's conclusion.
- b) In research studies, notice the methods and procedures, results & conclusions.
- c) Check cross references.

4. Outlining the paper

- a) Review notes to find main sub-divisions of the subject.
- b) Sort the collected material again under each main division to find sub-sections for outline so that it begins to look more coherent and takes on a definite structure. If it does not, try going back and sorting again for main divisions, to see if another general pattern is possible.

5. Writing the first draft

Write the paper around the outline, being sure that you indicate in the first part of the paper what its purpose is. You may follow the following:

- a) statement of purpose
- b) main body of the paper
- c) statement of summary and conclusion

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Avoid short, bumpy sentences and long straggling sentences with more than one main ideas.

6. Editing & preparing the final Paper

- a) Before writing a term paper, you should ensure you have a question which you attempt to answer in your paper. This question should be kept in mind throughout the paper. Include only information/ details/ analyses of relevance to the question at hand. Sometimes, the relevance of a particular section may be clear to you but not to your readers. To avoid this, ensure you briefly explain the relevance of every section.
- b) Read the paper to ensure that the language is not awkward, and that it "flows" properly.
- c) Check for proper spelling, phrasing and sentence construction.
- d) Check for proper form on footnotes, quotes, and punctuation.
- e) Check to see that quotations serve one of the following purposes:
- f) Show evidence of what an author has said.
- g) Avoid misrepresentation through restatement.
- h) Save unnecessary writing when ideas have been well expressed by the original author.
- i) Check for proper form on tables and graphs. Be certain that any table or graph is self-explanatory.

Term papers should be composed of the following sections:

- 1) Title page
- 2) Table of contents
- 3) Introduction
- 4) Review
- 5) Discussion & Conclusion
- 6) References
- 7) Appendix

Generally, the introduction, discussion, conclusion and bibliography part should account for a third of the paper and the review part should be two thirds of the paper.

Discussion

The discussion section either follows the results or may alternatively be integrated in the results section. The section should consist of a discussion of the results of the study focusing on the question posed in the research paper.

Conclusion

The conclusion is often thought of as the easiest part of the paper but should by no means be disregarded. There are a number of key components which should not be omitted. These include:

- a) summary of question posed
- b) summary of findings
- c) summary of main limitations of the study at hand
- d) details of possibilities for related future research

References

From the very beginning of a research project, you should be careful to note all details of articles gathered.

The bibliography should contain ALL references included in the paper. References not included in the text in any form should NOT be included in the bibliography.

The key to a good bibliography is consistency. Choose a particular convention and stick to this.

Conventions

Monographs

Crystal, D. (2001), Language and the internet. Cambridge: Cambridge University Press.

Edited volumes

PROJECT

Course Code: BTH2132

Credit Units: 03

Objectives:

The aim of the project is to provide the students with an opportunity to further their intellectual and personal development in the chosen field by undertaking a significant practical unit of activity. The project can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

Chapter Scheme and distribution of marks:

Chapter 1: Introduction – 10 marks

Chapter 2: Conceptual Framework/ National/International Scenario – 25 marks

Chapter 3: Presentation, Analysis & Findings -- 25 marks

Chapter 4: Conclusion & Recommendations -- 10 marks

Chapter 5: Bibliography -- 05 marks

Project Report	Power Point Presentation & Viva
75 marks	25 marks

Components of a Project Report

The outcome of Project Work is the Project Report. A project report should have the following components:

1) Cover Page: This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.

2) Acknowledgement: Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.

3) Table of Content: Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.

4) Body of the Report: The body of the report should have these four logical divisions

a) **Introduction:** This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, and method of analysis), Limitations of the Study, and Chapter Planning.

b) **Conceptual Framework / National and International Scenario:** (relating to the topic of the Project).

c) **Presentation of Data, Analysis and Findings:**(using the tools and techniques mentioned in the methodology).

d) **Conclusion and Recommendations:** In this section, the concluding observations based on the main findings and suggestions are to be provided.

5) Bibliography or References: This section will include the list of books and articles which have been used in the project work, and in writing a project report.

6) Annexures: Questionnaires (if any), relevant reports, etc.

(The main text of the Project should normally be in the range of 5000 words. However, there may be annexure in addition to the main text)

Prof. (Dr.) Anil Kumar
Deputy Dean Academics

Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

The Steps of a Project Report

Step I : Selection of the topic for the project by taking following points into consideration:

- Suitability of the topic.
- Relevance of the topic
- Time available at the disposal.
- Feasibility of data collection within the given time limit.
- Challenges involved in the data collection (time & cost involved in the data collection, possibility of getting responses, etc.)

Step II : Finalisation of the Topic and preparation of Project Proposal in consultation with the Supervisor.

Step III : Collection of information and data relating to the topic and analysis of the same.

Step IV : Writing the report dividing it into suitable chapters, viz.,

Chapter 1: Introduction,

Chapter 2: Conceptual Framework / National & International Scenario,

Chapter 3: Analysis & Findings

Chapter 4: Conclusion and Recommendations.

Step V : The following documents are to be attached with the Final Project Report.

- 1) Approval letter from the supervisor (Annexure-IA)
- 2) Student's declaration (Annexure-IB)
- 3) Certificate from the Competent Authority of the Organisation / Institution, if the student undertakes the Project Work in any Organisation / Institution.

Guidelines for Evaluation:

- Each of the students has to undertake a Project individually under the supervision of a teacher and to submit the same following the guidelines stated below.
- Language of Project Report and Viva-Voce Examination may be English. The Project Report must be typed and hard bound.
- Failure to submit the Project Report or failure to appear at the Viva-voce Examination will be treated as "Absent" in the Examination. He /she has to submit the Project Report and appear at the Viva-Voce Examination in the subsequent years (within the time period as per University Rules).
- No marks will be allotted on the Project Report unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her Project Report.
- Evaluation of the Project Work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate.

WORKSHOP / CERTIFICATION

Course Code: BTH2133

Credit Units: 01

Objectives

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two way. The trainer has to make sure that the aspect covered are practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

Major Themes for Workshop

The workshop may be conducted on any of the following major themes:

Accounting

Finance

Human Resources

Marketing

Economics

Operations

Supply Chain Management

These themes are merely indicative and other recent and relevant topics of study may be included.

Guidelines for Workshop

The procedure for earning credits from workshop consists of the following steps:

Relevant study material and references will be provided by the trainer in advance.

The participants are expected to explore the topic in advance and take active part in the discussions held

Attending and Participating in all activities of the workshop

Group Activities have to be undertaken by students as guided by the trainer.

Evaluation of workshop activities would be done through test and quiz at the end of the workshop.

Submitting a write up of atleast 500 words about the learning outcome from the workshop.

Methodology

The methodology followed at the workshop could be based on any one or more of the following methods:

Case Study

Business Game

Simulation

Group Activity

Role Play

Business Planning

Quiz

Evaluation Scheme:

Attendance	Active Participation	Multiple Choice Questions/ Quiz	Solving the case/ Assignment/ Write up	Total
10	30	30	30	100

PLANT SCIENCES-II LAB

Course code: BTH2205

Credit Units: 01

Course objective:

Course objective is to provide the knowledge about plant science that should be useful to understand and apply different concepts about the diversity and complexity of plants.

Course Contents:

Module I:

Gymnosperms Study of the Gymnosperms like *Cycas*, and *Pinus* by cutting sections and making suitable temporary preparations.

Module II:

Taxonomy Detailed description and identification of locally available plants of the families as prescribed in theory course.

Module III:

Plant Anatomy Anatomy of normal dicot and monocot roots, stems & leaves.

Module IV:

Embryology Study of permanent slides of the:

- T.S. anther, pollen, germinating pollen
- L.S. ovule types
- Endosperm
- Embryos
- L.S. caryopsis
- Dissection of embryo

Module V:

Plant Pathology Examination of local diseased plants representing bacterial, viral, fungal parasites. Study of symptoms caused by parasites, study of selected diseased specimen (mentioned under theory) through specimens, temporary presentations.

Module VI:

Ecology Measurement of temperature (Soil). Demonstration of Soil texture, carbonate, sulphate, pH., soil moisture percentage. A comparative study of plants (with external and internal characters) to water availability.

ANIMAL PHYSIOLOGY LAB

Course Code: BTH2208

Credit Units: 01

Animal Physiology

- Enumeration of red blood cells using hemo cytometer.
- Estimation of haemoglobin using Sahli's hemoglobinometer.
- Preparation of haemin and hemochromogen crystals.
- Enumeration of total and differential count of white blood cells.
- Effect of pH on amylase activity from saliva.
- Biochemical analysis: carbohydrate, proteins and fats.
- Estimation of serum bilirubin (direct and indirect method).

MOLECULAR MODELING

Course Code: BTH2209

Credit Units: 03

Course Objective:

Course objective is to provide the knowledge that should be useful to understand different concepts of molecular properties of basic life molecules like proteins nucleic acids and their relative structure and function across the genus orkingdom

Module I:

Introduction to Molecular modeling, data bases for proteins and DNA – PDB and MMDB, structure file formats, visualizing structural information, advance structure modeling, Internal and external co-ordinate system, cartesian and cylindrical polar co-ordinate system, Potential energy calculations using semiempirical potential energy function,

Module II:

Software and Programmes for sequence comparision and analysis, Phylogenetics analysis software, Molecular Structure drawing tool,

Module III:

Molecular modeling/Docking, Molecular mechanics and dynamics, Knowledge base structure prediction, Molecular Design, structure similarity searching; Secondary structure prediction in proteins, prediction of buried residues in proteins

Module IV

Application of molecular modeling & computational biology/Bioinformatics in Agriculture, Human health, Environment, Biotechnology, Molecular Biology, Neurobiology, Drug Designing, Veterinary Science.

BIO-SAFETY & BIOETHICS

Course Code: BTH2210

Credit Units: 03

Course Objective:

The objectives of the course are to explain the biosafety and bioethics. Students will study and assess biosafety, and bioethics related to genetically engineered plant, animal and microbial products.

Course Contents:

Module I: Biosafety

Definition and requirement; biosafety in relation to human health, environment, transgenic research and applications, biosafety laws, guidelines and conventions, biosafety regulation: principles and practices in microbial and biomedical labs, guidelines for research involving DNA molecule ; Regulation bodies at National and International level

Module II Bioethics

Definition of bioethics, importance of bioethics, Bioethics in plant, animal and microbial genetic engineering, Ethical issues in healthcare, Biopiracy and ethical conflicts Legal and socioeco'omic impact of the products and techniques in Biotechnology,

Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

BIOINFORMATICS

Course Code: BTH2211

Credit Units: 03

Course Objective:

The course involves a basic understanding of computer and bioinformatics tools and skills in the field of biology.

Course Contents:

Module I: Computers

General introduction (characteristics, capabilities, generations), software, hardware : organization of hardware (input devices, memory, control unit arithmetic logic unit, output devices); software : (System software; application software, languages -low level, high level), interpreter, compiler, data processing; batch, on-line, real-time (examples from bioindustries; e.g. application of computers in co-ordination of solute concentration, pH, temperature, etc., of a fermenter in operation); internet application.

Module II: Basic Bioinformatics

Introduction to Internet, Search Engines (Google, Yahoo, Entrezetc)

Module III: Biological Databases

Sequence databases (EMBL, GenBank, DDBJ, -UNIPROT, PIR, TrEMBL), Protein family/domain databases (PROSITE, PRINTS, Pfam, BLOCK, etc), Cluster databases-An Introduction, Specialised databases (KEGG, etc), Database technologies (Flat-file), Structural databases (PDB)

Module IV:

Trees-splits and metrics on trees, tree interpretation, Distance – additive, ultrametric and nonadditive distances, tree building methods, phylogenetic analysis.

Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

TERM PAPER

Course Code: BTH2231

Credit Units: 02

A term (or research) paper is primarily a record of intelligent reading in several sources on a particular subject.

The students will choose the topic at the beginning of the session in consultation with the faculty assigned. The progress of the paper will be monitored regularly by the faculty. At the end of the semester the detailed paper on the topic will be submitted to the faculty assigned. The evaluation will be done by Board of examiners comprising of the faculties.

GUIDELINES FOR TERM PAPER

The procedure for writing a term paper may consists of the following steps:

- Choosing a subject
- Finding sources of materials
- Collecting the notes
- Outlining the paper
- Writing the first draft
- Editing & preparing the final paper

1. Choosing a Subject

The subject chosen should not be too general.

2. Finding Sources of materials

- d) The material sources should be not more than 10 years old unless the nature of the paper is such that it involves examining older writings from a historical point of view.
- e) Begin by making a list of subject-headings under which you might expect the subject to be listed.
- f) The sources could be books and magazines articles, news stories, periodicals, scientific journals etc.

3. Collecting the notes

Skim through sources, locating the useful material, then make good notes of it, including quotes and information for footnotes.

- d) Get facts, not just opinions. Compare the facts with author's conclusion.
- e) In research studies, notice the methods and procedures, results & conclusions.
- f) Check cross references.

4. Outlining the paper

- c) Review notes to find main sub-divisions of the subject.
- d) Sort the collected material again under each main division to find sub-sections for outline so that it begins to look more coherent and takes on a definite structure. If it does not, try going back and sorting again for main divisions, to see if another general pattern is possible.

5. Writing the first draft

Write the paper around the outline, being sure that you indicate in the first part of the paper what its purpose is. You may follow the following:

- a) statement of purpose
- b) main body of the paper
- c) statement of summary and conclusion

Avoid short, bumpy sentences and long straggling sentences with more than one main ideas.

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

6. Editing & Preparing the final Paper

- j) Before writing a term paper, you should ensure you have a question which you attempt to answer in your paper. This question should be kept in mind throughout the paper. Include only information/ details/ analyses of relevance to the question at hand. Sometimes, the relevance of a particular section may be clear to you but not to your readers. To avoid this, ensure you briefly explain the relevance of every section.
- k) Read the paper to ensure that the language is not awkward, and that it "flows" properly.
- l) Check for proper spelling, phrasing and sentence construction.
- m) Check for proper form on footnotes, quotes, and punctuation.
- n) Check to see that quotations serve one of the following purposes:
- o) Show evidence of what an author has said.
- p) Avoid misrepresentation through restatement.
- q) Save unnecessary writing when ideas have been well expressed by the original author.
- r) Check for proper form on tables and graphs. Be certain that any table or graph is self-explanatory.

Term papers should be composed of the following sections:

- Title page
- Table of contents
- Introduction
- Review
- Discussion & Conclusion
- References
- Appendix

Generally, the introduction, discussion, conclusion and bibliography part should account for a third of the paper and the review part should be two thirds of the paper.

Discussion

The discussion section either follows the results or may alternatively be integrated in the results section. The section should consist of a discussion of the results of the study focusing on the question posed in the research paper.

Conclusion

The conclusion is often thought of as the easiest part of the paper but should by no means be disregarded. There are a number of key components which should not be omitted. These include:

- e) summary of question posed
- f) summary of findings
- g) summary of main limitations of the study at hand
- h) details of possibilities for related future research

References

From the very beginning of a research project, you should be careful to note all details of articles gathered.

The bibliography should contain ALL references included in the paper. References not included in the text in any form should NOT be included in the bibliography.

The key to a good bibliography is consistency. Choose a particular convention and stick to this.

Conventions

Monographs

Crystal, D. (2001), Language and the internet. Cambridge: Cambridge University Press.

Edited volumes

Gass, S./Neu, J. (eds.) (1996), Speech acts across cultures. Challenges to communication in a second language. Berlin/ NY: Mouton de Gruyter.

PROJECT

Course Code: BTH2232

Credit Units: 03

Objectives:

The aim of the project is to provide the students with an opportunity to further their intellectual and personal development in the chosen field by undertaking a significant practical unit of activity. The project can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

Chapter Scheme and distribution of marks:

Chapter 1: Introduction – 10 marks

Chapter 2: Conceptual Framework/ National/International Scenario – 25 marks

Chapter 3: Presentation, Analysis & Findings -- 25 marks

Chapter 4: Conclusion & Recommendations -- 10 marks

Chapter 5: Bibliography -- 05 marks

Project Report	Power Point Presentation & Viva
75 marks	25 marks

Components of a Project Report

The outcome of Project Work is the Project Report. A project report should have the following components:

1) Cover Page: This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.

2) Acknowledgement: Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.

3) Table of Content: Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.

4) Body of the Report: The body of the report should have these four logical divisions

a) **Introduction:** This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, and method of analysis), Limitations of the Study, and Chapter Planning.

b) **Conceptual Framework / National and International Scenario:** (relating to the topic of the Project).

c) **Presentation of Data, Analysis and Findings:**(using the tools and techniques mentioned in the methodology).

d) **Conclusion and Recommendations:** In this section, the concluding observations based on the main findings and suggestions are to be provided.

5) Bibliography or References: This section will include the list of books and articles which have been used in the project work, and in writing a project report.

6) Annexures: Questionnaires (if any), relevant reports, etc.

(The main text of the Project should normally be in the range of 5000 words. However, there may be annexure in addition to the main text)

Prof. (Dr.) Anil Kumar

Manesar Gurgaon-122413

The Steps of a Project Report

Step I : Selection of the topic for the project by taking following points into consideration:

- Suitability of the topic.
- Relevance of the topic
- Time available at the disposal.
- Feasibility of data collection within the given time limit.
- Challenges involved in the data collection (time & cost involved in the data collection, possibility of getting responses, etc.)

Step II : Finalisation of the Topic and preparation of Project Proposal in consultation with the Supervisor.

Step III : Collection of information and data relating to the topic and analysis of the same.

Step IV : Writing the report dividing it into suitable chapters, viz.,

Chapter 1: Introduction,

Chapter 2: Conceptual Framework / National & International Scenario,

Chapter 3: Analysis & Findings

Chapter 4: Conclusion and Recommendations.

Step V : The following documents are to be attached with the Final Project Report.

1) Approval letter from the supervisor (Annexure-IA)

2) Student's declaration (Annexure-IB)

3) Certificate from the Competent Authority of the Organisation / Institution, if the student undertakes the Project Work in any Organisation / Institution.

Guidelines for Evaluation:

- Each of the students has to undertake a Project individually under the supervision of a teacher and to submit the same following the guidelines stated below.
- Language of Project Report and Viva-Voce Examination may be English. The Project Report must be typed and hard bound.
- Failure to submit the Project Report or failure to appear at the Viva-voce Examination will be treated as "Absent" in the Examination. He /she has to submit the Project Report and appear at the Viva-Voce Examination in the subsequent years (within the time period as per University Rules).
- No marks will be allotted on the Project Report unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her Project Report.
- Evaluation of the Project Work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate.

WORKSHOP / CERTIFICATION

Course Code: BTH2233

Credit Units: 01

Objectives

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two way. The trainer has to make sure that the aspect covered are practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

Major Themes for Workshop

The workshop may be conducted on any of the following major themes:

Accounting

Finance

Human Resources

Marketing

Economics

Operations

Supply Chain Management

These themes are merely indicative and other recent and relevant topics of study may be included.

Guidelines for Workshop

The procedure for earning credits from workshop consists of the following steps:

Relevant study material and references will be provided by the trainer in advance.

The participants are expected to explore the topic in advance and take active part in the discussions held

Attending and Participating in all activities of the workshop

Group Activities have to be undertaken by students as guided by the trainer.

Evaluation of workshop activities would be done through test and quiz at the end of the workshop.

Submitting a write up of atleast 500 words about the learning outcome from the workshop.

Methodology

The methodology followed at the workshop could be based on any one or more of the following methods:

Case Study

Business Game

Simulation

Group Activity

Role Play

Business Planning

Quiz

Evaluation Scheme:

Attendance	Active Participation	Multiple Choice Questions/ Quiz	Solving the case/ Assignment/ Write up	Total
10	30	30	30	100

MICROBIOLOGY

Course Code: BTH2302

Credit Units: 03

Course Objective:

To acquaint the students about the microbiology and role of various microorganisms in different biotechnological applications, various techniques for their cultivation and control.

Course Contents:

Module I: Introduction and historical perspective

Discovery of microbial world, Concept of pure culture, Theory and practice of sterilization; Isolation of microorganisms, staining methods, microscopy, preservation of microbial cultures

Module II

Microbial Physiology: cell structure and function. Microbial growth: Growth curve, Enumeration of cells by direct and indirect methods, Microbial fermentations, Microbial Stress Responses.

Module III

Evolutionary microbiology and microbial diversity: Microbial evolution and systematics, prokaryotic diversity: bacteria and archaea, eukaryotic microorganisms (structure of algae and fungi), microbial community analysis (overview), classical and molecular taxonomy.

Virology: Viruses and virions, growth and quantification, viral replication, viroids and prions, Bacterial, plant and animal viruses,

Module IV

Microbial Ecology Methods in microbial ecology (culture dependent and culture independent techniques), microbial habitats and nutrient cycling (Carbon, sulphur and nitrogen cycles), plant-microbes, animal-microbes interactions. Soil microorganisms associated with vascular plants, bioremediation and biodegradation.

Module V

Applied microbiology: Biocatalysts, microbial metabolites, wine production, single cell proteins, microbial transformation of steroids, role of microbes in food industry, production of dairy products (fermented milks and cheese), Role of microbes in Agriculture (biofertilizers, biopesticides), Waste water treatment.

ENZYMOLGY

Course Code: BTH2303

Credit Units: 03

Course Objective:

The course aims to provide an understanding of the principles and application of proteins, secondary metabolites and enzyme biochemistry in therapeutic applications and clinical diagnosis. The theoretical understanding of biochemical systems would certainly help to interpret the results of laboratory experiments.

Course Contents:

Module I: Enzymes

Introduction and scope, Nomenclature, Mechanism of Catalysis. Specificity of enzyme action, monomeric and oligomeric enzymes, Enzyme inhibition.

Module II Enzyme Kinetics

Single substrate steady state kinetics; MichaelisMenten equation, Linear plots, Inhibitors and activators; Multisubstrate systems; Allosteric enzymes

Module III

Immobilization of Enzymes; Advantages, Carriers, adsorption, covalent coupling, cross-linking and entrapment methods, Micro-environmental effects.

Module VI: Biotechnological applications of enzymes

Large scale production and purification of enzymes, enzyme utilization in industry, enzymes and recombinant DNA technology

Examination Scheme:

BIOCHEMISTRY LAB

Course Code: BTH2305

Credit Units: 01

Course Contents:

Module I: Solutions and buffers

Preparation of molar, normal and % (w/v) solutions preparation of buffers of different pH and molar strength.

Module II: Carbohydrates

Extraction and estimation of carbohydrates from given plant/animal materials: determination of total sugars by Anthrone method Separation of sugars by thin layer chromatography

Module III: Proteins

Extraction of total proteins; Estimation of proteins by Lowery/ Bradford Method; Electrophoretic (SDS-PAGE) separation of isolated proteins

Module IV: Lipids

Extraction of total lipids; estimation of phospholipids/glycolipids; thin layer chromatographic separation of lipids

Module IV: Nucleic Acid

Extraction and estimation of DNA and RNA by UV-spectrophotometer

MICROBIOLOGY LAB

Course Code: BTH2306

Credit Units: 01

Course Contents:

- Laboratory safety and instrument handling, General rules and regulations, Aseptic techniques, preparation of culture media for cultivation of specific microorganisms.
Observation of permanent slides (*E.coli*, *Yeast*, *Sarcina*, *Streptococcus*, *Acid fast staining*)
- Isolation and enumeration of microorganisms from air, water and rhizosphere (actinomycetes, bacteria and fungi), serial dilution and viable plate counting methods, Use of differential, selective and enriched media.
- Staining techniques: Simple staining, differential Gram staining, endospore staining, lactophenol cotton blue staining for fungi
- Growth curve measurement of bacterial population by turbidometry
- Biochemical tests – Triple Sugar Iron test (TSI), Indole test, Methyl red test, Voges-Proskauer test, Citrate utilization test (IMViC), starch hydrolysis, casein hydrolysis, catalase test
- Water microbiology- presumptive, confirmed and complete test for water potability.

ENZYMOLGY LAB

Course Code: BTH2307

Credit Units: 01

Course Objective:

The laboratory will help the students to isolate enzymes from different sources, enzyme assays and studying their kinetic parameters which have immense importance in industrial processes.

Course Contents:

Module I

Isolation of enzymes from plant and microbial sources.

Module II

Enzyme assay; activity and specific activity – determination of amylase, nitrate reductase, cellulase, protease.

Module III

Purification of Enzyme by ammonium sulphate fractionation.

Module IV: Enzyme Kinetics

Effect of varying substrate concentration on enzyme activity, determination of Michaelis-Menten constant (K_m) and Maximum Velocity (V_{max}) using Lineweaver-Burk plot.

Module V

Effect of Temperature and pH on enzyme activity.

Examination Scheme:

INTELLECTUAL PROPERTY RIGHTS

Course Code: BTH2309

Credit Units: 03

Course Objective:

The aim of this course is to develop the understanding of relevance, business impact and protection of Intellectual property along with the types of Intellectual Property Rights; Patents, Copyrights, Trademarks, Industrial Designs, Geographical Indications and International Conventions, Biosafety and Bioethics

Course Contents:

Module I

General Overview of Intellectual Property Rights, WIPO, WTO, Trade Related Intellectual Property Rights.

Module II

Patent - Basic requirements of Patentability, Patentable Subject Matter, Procedure for Obtaining Patent, Provisional and Complete Specification

Module III

Copyright - Objectives of copyright, Rights conferred by registration of copyright, Infringement of copyright

Module IV

Trademarks-Basic Principles of Trademark, Rights conferred by Registration of Trademark, Infringement of Trademark

Module V

Geographical Indications-Objectives of Geographical Indications, Rights conferred, Infringement of Geographical Indications, International Position, Indian Position, Bioprospecting and Biopiracy.

Module VI

Biosafety and Bioethics Management-Key to environmentally responsible use of biotechnology. Cartagena Protocol on Biosafety, Ethical implications of Biotechnological products and techniques.

PHARMACEUTICAL BIOTECHNOLOGY

Course Code: BTH2310

Credit Units: 03

Course Objective:

The objective of this course to apply the basic concepts in the specific field of Pharmaceutical Biotechnology Industry. The student will gain insight into the working of a pharma industry, various classes of biotech products and the regulations governing production and marketing of pharmaceutical products.

Course Contents:

Module I

Introduction and History, Drug Discovery Process, Methods of Drug Discovery and development.

Module II

Physicochemical Properties, Effects of route of administration, Drug Targets, Pharmacokinetics and pharmacodynamics of drugs, Drug Toxicity.

Module III

DNA vaccines, Vaccines & Monoclonal antibody based pharmaceuticals, Antibiotics, Characterisation and Bioanalytical aspects of Recombinant proteins as pharmaceutical drugs.

Module IV

Formulation of Biotechnological Products, Drug Delivery, Examples of some Biotechnological products in clinical development

Module V: Regulations

Role of FDA, ICH Guidelines, cGMP, The Regulation of Pharmaceutical Biotechnological Products and Ethical Issues.

CLINICAL BIOTECHNOLOGY

Course Code: BTH2311

Credit Units: 03

Course Objective:

To develop an understanding of role of biochemistry and molecular biology in the diagnosis and clinical management of disease

Course Contents:

Module I

Clinical significance of biochemical tests and their role in the diagnosis and monitoring of disease, Clinical characteristic of disease. Role of clinical biochemistry in detection, diagnosis of diseases

Module II

Genetic disease, example of genetic diseases. transplantation/gene therapy.

Module III

Clinically important taxonomic grouping of bacteria, etiology, transmission; Epidemics, pandemics and endemics disease. Control measure of microbial diseases. Hygiene regulations.

Module IV

Manipulation of reproduction and development for application in medicine, agriculture, aquaculture and conservation.

Module V

Management of Clinical Data.

TERM PAPER

Course Code: BTH2331

Credit Units: 02

A term (or research) paper is primarily a record of intelligent reading in several sources on a particular subject.

The students will choose the topic at the beginning of the session in consultation with the faculty assigned. The progress of the paper will be monitored regularly by the faculty. At the end of the semester the detailed paper on the topic will be submitted to the faculty assigned. The evaluation will be done by Board of examiners comprising of the faculties.

GUIDELINES FOR TERM PAPER

The procedure for writing a term paper may consists of the following steps:

- Choosing a subject
- Finding sources of materials
- Collecting the notes
- Outlining the paper
- Writing the first draft
- Editing & preparing the final paper

1. Choosing a Subject

The subject chosen should not be too general.

2. Finding Sources of materials

- g) The material sources should be not more than 10 years old unless the nature of the paper is such that it involves examining older writings from a historical point of view.
- h) Begin by making a list of subject-headings under which you might expect the subject to be listed.
- i) The sources could be books and magazines articles, news stories, periodicals, scientific journals etc.

3. Collecting the notes

Skim through sources, locating the useful material, then make good notes of it, including quotes and information for footnotes.

- g) Get facts, not just opinions. Compare the facts with author's conclusion.
- h) In research studies, notice the methods and procedures, results & conclusions.
- i) Check cross references.

4. Outlining the paper

- e) Review notes to find main sub-divisions of the subject.
- f) Sort the collected material again under each main division to find sub-sections for outline so that it begins to look more coherent and takes on a definite structure. If it does not, try going back and sorting again for main divisions, to see if another general pattern is possible.

5. Writing the first draft

Write the paper around the outline, being sure that you indicate in the first part of the paper what its purpose is. You may follow the following:

- a) statement of purpose
- b) main body of the paper
- c) statement of summary and conclusion

Avoid short, bumpy sentences and long straggling sentences with more than one main ideas.

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

6. Editing & Preparing the final Paper

- s) Before writing a term paper, you should ensure you have a question which you attempt to answer in your paper. This question should be kept in mind throughout the paper. Include only information/ details/ analyses of relevance to the question at hand. Sometimes, the relevance of a particular section may be clear to you but not to your readers. To avoid this, ensure you briefly explain the relevance of every section.
- t) Read the paper to ensure that the language is not awkward, and that it "flows" properly.
- u) Check for proper spelling, phrasing and sentence construction.
- v) Check for proper form on footnotes, quotes, and punctuation.
- w) Check to see that quotations serve one of the following purposes:
- x) Show evidence of what an author has said.
- y) Avoid misrepresentation through restatement.
- z) Save unnecessary writing when ideas have been well expressed by the original author.
- aa) Check for proper form on tables and graphs. Be certain that any table or graph is self-explanatory.

Term papers should be composed of the following sections:

- Title page
- Table of contents
- Introduction
- Review
- Discussion & Conclusion
- References
- Appendix

Generally, the introduction, discussion, conclusion and bibliography part should account for a third of the paper and the review part should be two thirds of the paper.

Discussion

The discussion section either follows the results or may alternatively be integrated in the results section. The section should consist of a discussion of the results of the study focusing on the question posed in the research paper.

Conclusion

The conclusion is often thought of as the easiest part of the paper but should by no means be disregarded. There are a number of key components which should not be omitted. These include:

- i) summary of question posed
- j) summary of findings
- k) summary of main limitations of the study at hand
- l) details of possibilities for related future research

References

From the very beginning of a research project, you should be careful to note all details of articles gathered.

The bibliography should contain ALL references included in the paper. References not included in the text in any form should NOT be included in the bibliography.

The key to a good bibliography is consistency. Choose a particular convention and stick to this.

Conventions

Monographs

Crystal, D. (2001), *Language and the internet*. Cambridge: Cambridge University Press.

Edited volumes

Gass, S./Neu, J. (eds.) (1996), *Speech acts across cultures. Challenges to communication in a second language*. Berlin/ NY: Mouton de Gruyter.

[(eds.) is used when there is more than one editor; and (ed.) where there is only one editor. In German the abbreviation used is (Hrsg.) for Herausgeber].

Edited articles

Appendix

The appendix should be used for data collected (e.g. questionnaires, transcripts, ...) and for tables and graphs not included in the main text due to their subsidiary nature or to space constraints in the main text.

Assessment Scheme:

Continuous Evaluation:

40%

(Based on abstract writing, interim draft, general approach, research orientation, readings undertaken etc.)

Final Evaluation:

60%

(Based on the organization of the paper, objectives/ problem profile/ issue outlining, comprehensiveness of the research, flow of the idea/ ideas, relevance of material used/ presented, outcomes vs. objectives, presentation/ viva etc.)

PROJECT

Course Code: BTH2332

Credit Units: 03

Objectives:

The aim of the project is to provide the students with an opportunity to further their intellectual and personal development in the chosen field by undertaking a significant practical unit of activity. The project can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

Chapter Scheme and distribution of marks:

Chapter 1: Introduction – 10 marks

Chapter 2: Conceptual Framework/ National/International Scenario – 25 marks

Chapter 3: Presentation, Analysis & Findings -- 25 marks

Chapter 4: Conclusion & Recommendations -- 10 marks

Chapter 5: Bibliography -- 05 marks

Project Report	Power Point Presentation & Viva
75 marks	25 marks

Components of a Project Report

The outcome of Project Work is the Project Report. A project report should have the following components:

1) Cover Page: This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.

2) Acknowledgement: Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.

3) Table of Content: Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.

4) Body of the Report: The body of the report should have these four logical divisions

a) **Introduction:** This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, and method of analysis), Limitations of the Study, and Chapter Planning.

b) **Conceptual Framework / National and International Scenario:** (relating to the topic of the Project).

c) **Presentation of Data, Analysis and Findings:**(using the tools and techniques mentioned in the methodology).

d) **Conclusion and Recommendations:** In this section, the concluding observations based on the main findings and suggestions are to be provided.

5) Bibliography or References: This section will include the list of books and articles which have been used in the project work, and in writing a project report.

6) Annexures: Questionnaires (if any), relevant reports, etc.

(The main text of the Project should normally be in the range of 5000 words. However, there may be annexure in addition to the main text)

The Steps of a Project Report

Step I : Selection of the topic for the project by taking following points into consideration:

- Suitability of the topic.
- Relevance of the topic
- Time available at the disposal.
- Feasibility of data collection within the given time limit.
- Challenges involved in the data collection (time & cost involved in the data collection, possibility of getting responses, etc.)

Step II : Finalisation of the Topic and preparation of Project Proposal in consultation with the Supervisor.

Step III : Collection of information and data relating to the topic and analysis of the same.

Step IV : Writing the report dividing it into suitable chapters, viz.,

Chapter 1: Introduction,

Chapter 2: Conceptual Framework / National & International Scenario,

Chapter 3: Analysis & Findings

Chapter 4: Conclusion and Recommendations.

Step V : The following documents are to be attached with the Final Project Report.

- 1) Approval letter from the supervisor (Annexure-IA)
- 2) Student's declaration (Annexure-IB)
- 3) Certificate from the Competent Authority of the Organisation / Institution, if the student undertakes the Project Work in any Organisation / Institution.

Guidelines for Evaluation:

- Each of the students has to undertake a Project individually under the supervision of a teacher and to submit the same following the guidelines stated below.
- Language of Project Report and Viva-Voce Examination may be English. The Project Report must be typed and hard bound.
- Failure to submit the Project Report or failure to appear at the Viva-voce Examination will be treated as "Absent" in the Examination. He /she has to submit the Project Report and appear at the Viva-Voce Examination in the subsequent years (within the time period as per University Rules).
- No marks will be allotted on the Project Report unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her Project Report.
- Evaluation of the Project Work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate.

WORKSHOP / CERTIFICATION

Course Code: BTH2333

Credit Units: 01

Objectives

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two way. The trainer has to make sure that the aspect covered are practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

Major Themes for Workshop

The workshop may be conducted on any of the following major themes:

Accounting

Finance

Human Resources

Marketing

Economics

Operations

Supply Chain Management

These themes are merely indicative and other recent and relevant topics of study may be included.

Guidelines for Workshop

The procedure for earning credits from workshop consists of the following steps:

- Relevant study material and references will be provided by the trainer in advance.
- The participants are expected to explore the topic in advance and take active part in the discussions held
- Attending and Participating in all activities of the workshop
- Group Activities have to be undertaken by students as guided by the trainer.
- Evaluation of workshop activities would be done through test and quiz at the end of the workshop.
- Submitting a write up of atleast 500 words about the learning outcome from the workshop.

Methodology

The methodology followed at the workshop could be based on any one or more of the following methods:

Case Study

Business Game

Simulation

Group Activity

Role Play

Business Planning

Quiz

Evaluation Scheme:

Attendance	Active Participation	Multiple Choice Questions/ Quiz	Solving the case/ Assignment/ Write up	Total
10	30	30	30	100

INTRODUCTORY IMMUNOLOGY

Course Code: BTH2402

Credit Units: 03

Course Objective:

Role of antibody engineering in biomedical applications and the importance of immuno genetics in disease processes, tissue transplantation and immune regulation are some of the areas of attributes of this course which can help the students to understand the biotechnology related to human kind.

Course Contents:

Module I

Historical perspective of immune system and immunity; Innate and specific immunity, Humoral immunity, Cell-mediated immunity

Module II

Antibody structure in relation to function and antigen-binding; Types of antibodies and their structures: isotypes, allotypes, idiotypes; Genetic basis of antibody diversity

Module III

The organs and cells of the immune system; Histocompatibility: structure of MHC class I, II & III antigens & their mode of antigen presentation, MHC restriction; Antigens & antigenicity;

Module IV

Measurement of antigen – antibody interaction: agglutination, immunodiffusion, immuno-electrophoresis, ELISA, RIE, production of monoclonal antibodies.

Module V

Complement system; Autoimmunity; Hypersensitivity

Module VI:

Hybridoma Technology; Introduction to transplantation immunology, Introduction to Cancer immunology, Vaccines (attenuated and recombinant);

Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

INSTRUMENTATION & BIOANALYTICAL TECHNIQUES

Course Code: BTH2403

Credit Units: 02

Course Objective:

The students will be exposed to basic concepts related with techniques and instrumentation widely used in Biotechnology.

Course Contents:

Module I: Buffers & Sample preparation

Preparation of solutions, concept of pH and buffer, types of buffers and their preparation, pH meter. Cell Disruption techniques, ultra filtration, dialysis and reverse osmosis.

Module II: Centrifugation

Principle of centrifugation, rotors, different types of centrifuges, ultra centrifugation

Module III: Microscopy

Principles of microscopy, types of microscopy Bright field, Dark field, phase contrast and fluorescence microscopy. Electron microscopy: Transmission and scanning electron microscopy.

Module IV: Radioisotope techniques

Study of radioisotopes in biological samples, proportional and GM counter, scintillation counters, autoradiography.

Module V: Electrophoresis & Chromatography

SDS-PAGE, isoelectric focusing, two-dimensional electrophoresis; Paper, TLC, gel filtration, ion-exchange chromatography, affinity chromatography, HPLC and GLC

Module VI: Spectroscopy

UV and visible spectroscopy, Infrared and Atomic absorption spectroscopy, fluorescence spectroscopy.

Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

RESEARCH METHODOLOGY

Course Code: BTH2404

Credit Units: 02

Course Objective:

To develop understanding of information and library science research issues in the domain of bioinformatics through review of journal articles, invited talks, and critical group discussions of methods. The main objectives for this course are to develop: familiarity with information and library science-oriented problems in the biomedical sciences, an understanding of research methods in the biomedical domain, critical thinking and evaluation skills and presentation and summarization skills.

Course Contents:

Module I

Introduction: Science, Scientific research. Role of a researcher in different stages of a project, Routes to research funding (academic and commercial)

Module II

Research – Definition – Importance and Meaning of research – Characteristics of research – Types of Research – Steps in research – Identification, Selection and formulation of research problem – Research questions – Research design – Formulation of Hypothesis – Review of Literature.

Module III: Sampling techniques

Types of sampling, Steps in sampling; Advantages and limitations of sampling. Collection of Data;; Statistics in Research.

Module IV

Type of Articles (review, letters etc). Scientific paper format (Abstract, Introduction, Materials and Methods, Results, Discussion). Writing, evaluating, presenting and publishing the results of scientific research in the academic press (journals, conferences etc). Choosing the appropriate journal (Sources, Information, Instructions to authors, peer review system, journal evaluation)

Module V

Case studies of areas of current research. Formulating a research plan and its presentation

IN SILICO ANALYSIS OF BIOMOLECULES

Course Code: BTH2405

Credit Units: 02

Course Objective: The objective is to describe relational data models and database management systems with an emphasis on biologically important techniques to store various data on DNA sequencing structures genetic mapping etc.

Course Content:

Module I: Introduction and overview

The NCBI data model; sequence databases, sequence retrieval, sequence file formats, submitting DNA and protein sequences. Types of biological databases, Databases and rapid sequence analysis

Module II: Sequence alignment

Global and local alignments, Pairwise and multiple alignment, programs and methods for sequence alignment, pattern searching programs, family and superfamily representation, structural inference, dynamic programming algorithms, alignment by hidden Markov models,

Module III: Phylogenetic prediction

Phylogenetic analysis, parsimony, tree evaluation, maximum likelihood trees, analysis software.

Module IV: Predictive methods using DNA and protein sequences

ESTs – databases, clustering, gene discovery and identification, and functional classification. Protein identification, physical properties, motifs and patterns, structure,

NANO BIOTECHNOLOGY

Course Code: BTH2409

Credit Units: 03

Course Objective:

Nanotechnology is one of the most important emerging fields in today's scenario and holds tremendous potential in the field of Biotechnology. The objective of this course is to introduce this emerging field to the students so that they can apply this to develop new drug delivery systems and biomarkers.

Course Contents:

Module I: Introduction to Nanotechnology

Overview of nanotechnology developments, different nanostructured materials, properties related to nanostructured surfaces, atomic theory and bonding, quantum theory, electromagnetic properties of matter, molecular structure and macromolecules, intramolecular and intermolecular forces, solubility and solvation, thermodynamics and fluid behaviour.

Module II: Nanostructured Materials

Choice of nanomaterials, carbon nanotubes and nanowires, Physical characteristics of nanomaterials and nanostructured surfaces, quantum dots, nanostructured thin films, pattern surfaces, composites, magnetic nanoparticles, scaffolds, gels and drug delivery systems.

Module III: Nanobiostructure Systems – Drug Delivery

The assembly of drug delivery systems, preparation and assembly of pharmaceutical molecule into nanometric material within the parameters of GLP and health and safety standards.

Module IV: Nanobiostructure Systems - Biosensor

The functional assembling of the components of a nanostructured biosensor, putting together a bioreceptor and putting together nanometric support and a signal transduction system. Assembly and production of a nanobiosensor.

Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE

FORENSIC BIOTECHNOLOGY

Course Code: BTH2410

Credit Units: 03

Course Objective:

An introduction to forensic science and application of biotechnology in Forensic sciences can be understood by studying the various modules of this paper.

Course Contents:

Module I

History and Development of Forensic Science, Definition of Forensic Science, Scope of Forensic Science, Need of Forensic Science, Basic Principles of Forensic Science, Tools and Techniques of Forensic Science.

Module II

Organizational setup of Forensic Science Laboratories, CFSL, FSL, GEQD, FPB, NICFS, Central Detective Training School, NCRB (Maintenance of Crime Records), NPA Mobile Forensic Science Laboratory, Branch of Forensic Science,

Module III

Modus Operandi and MOB and its role in Criminal Investigation, Methods of Investigation: Narco analysis; Hypnosis etc. Limitations and legal aspects.

Brain fingerprinting, Criminal Profiling, Profile of the victim and culprit, investigative strategy, crime scene characteristics, criminal behavior on the internet, limitations.

Module IV

Education of Forensic Science, Role of Media, Human Rights & Criminal Justice System.

Ethics in Forensic Science, Duties of Forensic Scientist, History and Development of Finger Print as Science for Personal Identification, Type of Finger Prints, Classification of Finger Prints

Presentation of Expert Evidence: Data, Reports, Evidence in the Court.

Module VII:

MLP, SLP technology, PCR technology in crime detection, STR and databases, mitochondrial DNA and Y chromosome analysis in forensic science, DNA chip technology, role of molecular biology and biotechnology in crime detection.

GENETICALLY MODIFIED ORGANISM

Course Code: BTH2411

Credit Units: 03

Course Contents:

Module I

Microbial genetic engineering, genetically modified microbes of industrial importance.

Module II

Plants genetic engineering, Transgenic crop with new traits-herbicide tolerance, insect and disease resistance, Therapeutic proteins and compounds; Molecular farming of biopharmaceuticals.

Module III

Animal genetic engineering; Transgenic animals with new traits, transgenic animals as bioreactors for producing pharmaceutically important compounds and therapeutic etc.

Module IV

Detection and diagnosis of genetically modified organisms.

TERM PAPER

Course Code: BTH2431

Credit Units: 02

A term (or research) paper is primarily a record of intelligent reading in several sources on a particular subject.

The students will choose the topic at the beginning of the session in consultation with the faculty assigned. The progress of the paper will be monitored regularly by the faculty. At the end of the semester the detailed paper on the topic will be submitted to the faculty assigned. The evaluation will be done by Board of examiners comprising of the faculties.

GUIDELINES FOR TERM PAPER

The procedure for writing a term paper may consists of the following steps:

- Choosing a subject
- Finding sources of materials
- Collecting the notes
- Outlining the paper
- Writing the first draft
- Editing & preparing the final paper

1. Choosing a Subject

The subject chosen should not be too general.

2. Finding Sources of materials

- j) The material sources should be not more than 10 years old unless the nature of the paper is such that it involves examining older writings from a historical point of view.
- k) Begin by making a list of subject-headings under which you might expect the subject to be listed.
- l) The sources could be books and magazines articles, news stories, periodicals, scientific journals etc.

3. Collecting the notes

Skim through sources, locating the useful material, then make good notes of it, including quotes and information for footnotes.

- j) Get facts, not just opinions. Compare the facts with author's conclusion.
- k) In research studies, notice the methods and procedures, results & conclusions.
- l) Check cross references.

4. Outlining the paper

- g) Review notes to find main sub-divisions of the subject.
- h) Sort the collected material again under each main division to find sub-sections for outline so that it begins to look more coherent and takes on a definite structure. If it does not, try going back and sorting again for main divisions, to see if another general pattern is possible.

5. Writing the first draft

Write the paper around the outline, being sure that you indicate in the first part of the paper what its purpose is. You may follow the following:

- a) statement of purpose
- b) main body of the paper
- c) statement of summary and conclusion

Avoid short, bumpy sentences and long straggling sentences with more than one main ideas.

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

6. Editing & Preparing the final Paper

- bb) Before writing a term paper, you should ensure you have a question which you attempt to answer in your paper. This question should be kept in mind throughout the paper. Include only information/ details/ analyses of relevance to the question at hand. Sometimes, the relevance of a particular section may be clear to you but not to your readers. To avoid this, ensure you briefly explain the relevance of every section.
- cc) Read the paper to ensure that the language is not awkward, and that it "flows" properly.
- dd) Check for proper spelling, phrasing and sentence construction.
- ee) Check for proper form on footnotes, quotes, and punctuation.
- ff) Check to see that quotations serve one of the following purposes:
- gg) Show evidence of what an author has said.
- hh) Avoid misrepresentation through restatement.
- ii) Save unnecessary writing when ideas have been well expressed by the original author.
- jj) Check for proper form on tables and graphs. Be certain that any table or graph is self-explanatory.

Term papers should be composed of the following sections:

- Title page
- Table of contents
- Introduction
- Review
- Discussion&Conclusion
- References
- Appendix

Generally, the introduction, discussion, conclusion and bibliography part should account for a third of the paper and the review part should be two thirds of the paper.

Discussion

The discussion section either follows the results or may alternatively be integrated in the results section. The section should consist of a discussion of the results of the study focusing on the question posed in the research paper.

Conclusion

The conclusion is often thought of as the easiest part of the paper but should by no means be disregarded. There are a number of key components which should not be omitted. These include:

- m) summary of question posed
- n) summary of findings
- o) summary of main limitations of the study at hand
- p) details of possibilities for related future research

References

From the very beginning of a research project, you should be careful to note all details of articles gathered.

The bibliography should contain ALL references included in the paper. References not included in the text in any form should NOT be included in the bibliography.

The key to a good bibliography is consistency. Choose a particular convention and stick to this.

PROJECT

Course Code: BTH2432

Credit Units: 03

Objectives:

The aim of the project is to provide the students with an opportunity to further their intellectual and personal development in the chosen field by undertaking a significant practical unit of activity. The project can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

Chapter Scheme and distribution of marks:

Chapter 1: Introduction – 10 marks

Chapter 2: Conceptual Framework/ National/International Scenario – 25 marks

Chapter 3: Presentation, Analysis & Findings -- 25 marks

Chapter 4: Conclusion & Recommendations -- 10 marks

Chapter 5: Bibliography -- 05 marks

Project Report	Power Point Presentation & Viva
75 marks	25 marks

Components of a Project Report

The outcome of Project Work is the Project Report. A project report should have the following components:

1) Cover Page: This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.

2) Acknowledgement: Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.

3) Table of Content: Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.

4) Body of the Report: The body of the report should have these four logical divisions

a) **Introduction:** This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, and method of analysis), Limitations of the Study, and Chapter Planning.

b) **Conceptual Framework / National and International Scenario:** (relating to the topic of the Project).

c) **Presentation of Data, Analysis and Findings:**(using the tools and techniques mentioned in the methodology).

d) **Conclusion and Recommendations:** In this section, the concluding observations based on the main findings and suggestions are to be provided.

5) Bibliography or References: This section will include the list of books and articles which have been used in the project work, and in writing a project report.

6) Annexures: Questionnaires (if any), relevant reports, etc.

(The main text of the Project should normally be in the range of 5000 words. However, there may be annexure in addition to the main text)

The Steps of a Project Report

Step I : Selection of the topic for the project by taking following points into consideration:

- Suitability of the topic.
- Relevance of the topic
- Time available at the disposal.
- Feasibility of data collection within the given time limit.
- Challenges involved in the data collection (time & cost involved in the data collection, possibility of getting responses, etc.)

Step II : Finalisation of the Topic and preparation of Project Proposal in consultation with the Supervisor.

Step III : Collection of information and data relating to the topic and analysis of the same.

Step IV : Writing the report dividing it into suitable chapters, viz.,

Chapter 1: Introduction,

Chapter 2: Conceptual Framework / National & International Scenario,

Chapter 3: Analysis & Findings

Chapter 4: Conclusion and Recommendations.

Step V : The following documents are to be attached with the Final Project Report.

- 1) Approval letter from the supervisor (Annexure-IA)
- 2) Student's declaration (Annexure-IB)
- 3) Certificate from the Competent Authority of the Organisation / Institution, if the student undertakes the Project Work in any Organisation / Institution.

Guidelines for Evaluation:

- Each of the students has to undertake a Project individually under the supervision of a teacher and to submit the same following the guidelines stated below.
- Language of Project Report and Viva-Voce Examination may be English. The Project Report must be typed and hard bound.
- Failure to submit the Project Report or failure to appear at the Viva-voce Examination will be treated as "Absent" in the Examination. He /she has to submit the Project Report and appear at the Viva-Voce Examination in the subsequent years (within the time period as per University Rules).
- No marks will be allotted on the Project Report unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her Project Report.
- Evaluation of the Project Work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate.

WORKSHOP / CERTIFICATION

Course Code: BTH2433

Credit Units: 01

Objectives

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two way. The trainer has to make sure that the aspect covered are practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

Major Themes for Workshop

The workshop may be conducted on any of the following major themes:

Accounting

Finance

Human Resources

Marketing

Economics

Operations

Supply Chain Management

These themes are merely indicative and other recent and relevant topics of study may be included.

Guidelines for Workshop

The procedure for earning credits from workshop consists of the following steps:

- Relevant study material and references will be provided by the trainer in advance.
- The participants are expected to explore the topic in advance and take active part in the discussions held
- Attending and Participating in all activities of the workshop
- Group Activities have to be undertaken by students as guided by the trainer.
- Evaluation of workshop activities would be done through test and quiz at the end of the workshop.
- Submitting a write up of atleast 500 words about the learning outcome from the workshop.

Methodology

The methodology followed at the workshop could be based on any one or more of the following methods:

Case Study

Business Game

Simulation

Group Activity

Role Play

Business Planning

Quiz

Evaluation Scheme:

Attendance	Active Participation	Multiple Choice Questions/ Quiz	Solving the case/ Assignment/ Write up	Total
10	30	30	30	100

MARINE BIOTECHNOLOGY

Course Code: BTH2504

CreditUnits: 03

Course Contents:

Module I

The marine ecosystem and its functioning: intertidal, estuarine, salt marsh, mangrove, coral reef, coastal & deep sea ecosystems. Marine viruses, Bacteria and their significance Hydrothermal vents; Marine Biodiversity: defining, measurement and conservation strategies.

Module II

Nutrients cycling: carbon, nitrogen sulphur & phosphorus.

Global climate changes: impact on species diversity & productivity, oceans as a carbon sink, effects on corals bleaching. Biological rhythms.

Module III

Important Marine Products: Bioactive compounds from marine organisms, GFP, RFP characteristics and their applications; Green mussel adhesive protein, Chitosan and its applications

Module IV

Probiotic bacteria and their importance in aquaculture; Vaccines in aquaculture: Fish ,shrimps & prawns; Marine food analysis-spoilage, quality control; Techniques for identification of bacterial & viral pathogens in aquaculture and Remedies.

Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

BIOSENSORS

Course Code: BTH2505

Credit Units: 03

Course Objective:

On completion of the module students should Be able to Appreciate the basic configuration and distinction among biosensor systems, To gain an understanding of general biosensor principles and terms, To be able to design, model, simulate, fabricate, and test a biosensor, To gain an overall knowledge of biosensor types, applications, requirements, and capabilities to allow improved interaction with physicians, clinicians, and biomedical engineers, and to enable the student to conduct biomedical engineering research.

Course Contents:

Module I: Biosensors

Definition, History, Properties of biosensors, Design features of Biosensors, The Biological Component, SignalTransduction: Amperometric Biosensors, Potentiometric Biosensors, Detection of H^+ cation, Detections of NH_4^+ cation, Detection of CN^- anion, Calorimetric biosensors, Optical Biosensors, Measuring the change in light reflectance, Measuring luminescence, Pizo-electric biosensors, Immunosensors, Commercial examples of biosensors. Biosensors markets- Opportunities and obstacles.

Module II: Biomedical sensors

Sensors and transducers: an overview, measurement systems, Classification of Biomedical sensors and transducers, why do we need Biomedical sensors and Transducers? Important Design considerations and system calibration, the future of Biosensors and Transducers, Sensing Layer: The importance of computers in sensors and Transducer technology, Recent Engineering Solutions to Health care using Biosensors and Transducers, Modern health care solutions.

BIOFUEL AND GREEN BIOTECHNOLOGY

Course Code: BTH2507

Credit Units: 03

Course Objective:

This course will acquaint the students with bioenergy resources, their properties, preparation, processing alongwith the details of equipments utilized for the purpose.

Course Contents:

Module I: Biomass Sources, Characteristics & Preparation: Biomass Sources and Classification

Chemical composition and properties of different biomass materials and bio-fuels – Sugar cane molasses for fermentation ethanol; Sources and processing of oils and fats for liquid fuels- Energy plantations - Preparation of woody biomass; Drying, Storage and Handling of Biomass.

Module II: Biogas Technology

Feedstock for biogas production, biodegradable organic matter, Operating parameters for biogas production, Dry and wet fermentation

Module III: Bio-Ethanol and Bio-Diesel Technology

Production of Fuel Ethanol by Fermentation of Sugars. Trans-esterification of Oils to Produce Bio-Diesel.

Module IV: Pyrolysis and Gasification of Biomass

Thermo-chemical conversion of ligno-cellulose biomass - Pyrolysis of biomass, Thermo-chemical gasification principles

Module V: Combustion of Biomass and Cogeneration Systems

Combustion of Woody Biomass, Cogeneration in Biomass Processing Industries. Use of biogases for cogeneration.

Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

ARTIFICIAL NEURAL NETWORKS

Course Code: BTH2508

Credit Units: 03

Course Objective:

This course will enable the students to gain knowledge about a relatively newer area of science. The course is designed to model the different technical properties, applications, besides the closely related aspects of artificial neural networks.

Course Contents:

Module I

Historical background, Why is learning hard?

Module II

Memorization, generalization and function approximation, Linear Associators, Perceptrons and Capacity, Multilayer neural networks, Maximum Likelihood and Gradient Descent learning, Stochastic gradient descent for supervised learning.

Module III

The back propagation algorithm, Aspects of Learning Theory and Generalization, Bias vs. variance, Overtraining, pruning and regularization, VC dimension and how much data is enough?

Module IV

Neural networks and analog VLSI, Selected Applications

Credit Units: 03

Objectives:

The aim of the project is to provide the students with an opportunity to further their intellectual and personal development in the chosen field by undertaking a significant practical unit of activity. The project can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

Chapter Scheme and distribution of marks:

Chapter 1: Introduction – 10 marks

Chapter 2: Conceptual Framework/ National/International Scenario – 25 marks

Chapter 3: Presentation, Analysis & Findings -- 25 marks

Chapter 4: Conclusion & Recommendations -- 10 marks

Chapter 5: Bibliography -- 05 marks

Project Report	Power Point Presentation & Viva
75 marks	25 marks

Components of a Project Report

The outcome of Project Work is the Project Report. A project report should have the following components:

1) Cover Page: This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.

2) Acknowledgement: Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.

3) Table of Content: Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.

4) Body of the Report: The body of the report should have these four logical divisions

a) **Introduction:** This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, and method of analysis), Limitations of the Study, and Chapter Planning.

b) **Conceptual Framework / National and International Scenario:** (relating to the topic of the Project).

c) **Presentation of Data, Analysis and Findings:**(using the tools and techniques mentioned in the methodology).

d) **Conclusion and Recommendations:** In this section, the concluding observations based on the main findings and suggestions are to be provided.

5) Bibliography or References: This section will include the list of books and articles which have been used in the project work, and in writing a project report.

6) Annexures: Questionnaires (if any), relevant reports, etc.

(The main text of the Project should normally be in the range of 5000 words. However, there may be annexure in addition to the main text)

The Steps of a Project Report

Step I : Selection of the topic for the project by taking following points into consideration:

- Suitability of the topic.
- Relevance of the topic
- Time available at the disposal.
- Feasibility of data collection within the given time limit.
- Challenges involved in the data collection (time & cost involved in the data collection, possibility of getting responses, etc.)

Step II : Finalisation of the Topic and preparation of Project Proposal in consultation with the Supervisor.

Step III : Collection of information and data relating to the topic and analysis of the same.

Step IV : Writing the report dividing it into suitable chapters, viz.,

Chapter 1: Introduction,

Chapter 2: Conceptual Framework / National & International Scenario,

Chapter 3: Analysis & Findings

Chapter 4: Conclusion and Recommendations.

Step V : The following documents are to be attached with the Final Project Report.

- 1) Approval letter from the supervisor (Annexure-IA)
- 2) Student's declaration (Annexure-IB)
- 3) Certificate from the Competent Authority of the Organisation / Institution, if the student undertakes the Project Work in any Organisation / Institution.

Guidelines for Evaluation:

- Each of the students has to undertake a Project individually under the supervision of a teacher and to submit the same following the guidelines stated below.
- Language of Project Report and Viva-Voce Examination may be English. The Project Report must be typed and hard bound.
- Failure to submit the Project Report or failure to appear at the Viva-voce Examination will be treated as "Absent" in the Examination. He /she has to submit the Project Report and appear at the Viva-Voce Examination in the subsequent years (within the time period as per University Rules).
- No marks will be allotted on the Project Report unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her Project Report.
- Evaluation of the Project Work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate.

WORKSHOP / CERTIFICATION

Course Code: BTH2533

Credit Units: 01

Objectives

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two way. The trainer has to make sure that the aspect covered are practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

Major Themes for Workshop

The workshop may be conducted on any of the following major themes:

Accounting

Finance

Human Resources

Marketing

Economics

Operations

Supply Chain Management

These themes are merely indicative and other recent and relevant topics of study may be included.

Guidelines for Workshop

The procedure for earning credits from workshop consists of the following steps:

- Relevant study material and references will be provided by the trainer in advance.
- The participants are expected to explore the topic in advance and take active part in the discussions held
- Attending and Participating in all activities of the workshop
- Group Activities have to be undertaken by students as guided by the trainer.
- Evaluation of workshop activities would be done through test and quiz at the end of the workshop.
- Submitting a write up of atleast 500 words about the learning outcome from the workshop.

Methodology

The methodology followed at the workshop could be based on any one or more of the following methods:

Case Study

Business Game

Simulation

Group Activity

Role Play

Business Planning

Quiz

Evaluation Scheme:

Attendance	Active Participation	Multiple Choice Questions/ Quiz	Solving the case/ Assignment/ Write up	Total
10	30	30	30	100

GENOMICS AND PROTEOMICS

Course Code: BTH2602

Credit Units: 02

Course Objective:

The course helps in developing a detailed understanding of eukaryotic genome complexity and organization. Current research on the molecular basis of the control of gene expression in eukaryotic system has developed a detailed understanding of techniques of gene diagnostics and DNA profile to acquire the fundamentals of genomics and Proteomics.

Course Contents:

GENOMICS

Module I: Genome Evolution

Origin of genomes, functional genomics. Forward genetics

Module II: Structural Genomics

Chromosome structure and Genome organization, Genome sequencing methods, Gene identification Genome annotation methods

Module III: Comparative Genomics

Phylogeny, COGS [Cluster of orthologues genes], paralogues and gene displacement.

Module IV: Functional Genomics

ESTs, SAGE, DNA Microarrays, Application of Microarrays, Real Time PCR

Module V: Genotyping Background and Applications.

Genetic and physical mapping: Introduction to molecular markers-RFLP, RAPD, AFLP, SSRs. Genetic and physical maps, FISH for genome analysis, DNA fingerprinting; Single nucleotide polymorphisms, RNA interference, antisense RNA, siRNA, miRNA, ; Human Genome Project.

PROTEOMICS

Module VI

Basics of Proteomics: Protein preparation and Separation, 2D Gel Electrophoresis, mass spectrometry, post translation modification.

Protein-Protein Interaction, Protein Microarray, Application of Microarray in proteome analysis.

Examination Scheme:

INDUSTRIAL BIOTECHNOLOGY

Course Code: BTH2603

Credit Units: 03

Course Objective:

The objective of this course is to use microorganism to produce various compounds of commercial interest. The student will be exposed to various techniques available for large scale cultivation of microorganisms.

Course Contents:

Module I

Introduction to fermentation, the fermentation industry, Production process batch and Continuous system of cultivation, Solid-state fermentation

Module II

Selection of industrial microorganisms, media for fermentation, aeration, pH, temperature and other requirements during fermentation, downstream processing and product recovery, food industry waste as fermentation substrate.

Module III

Production of compounds like, antibiotics, enzymes, organic acids, solvents, beverages, SCP.

Module IV

Production of fermented dairy products

Module V

Immobilized enzymes systems, production and applications.

STRESS BIOLOGY

Course Code: BTH2604

Credit Units: 03

Course Contents:

Module I

Introduction to stress biology; Types of stresses; Molecular biology of stress responses

Module II

Microbial Stress Responses.

Module III

Biotic and abiotic stress response mechanisms in Plants

Module IV

Biotic and abiotic stress response mechanisms in Animals.

RECOMBINANT DNA TECHNOLOGY LAB

Course Code: BTH2605

Credit Units: 02

Course Objective:

The laboratory experiments in Recombinant DNA Technology would certainly help to comprehend the theoretical aspects of the subject.

Course Contents:

Module I

Study of cloning

Module II

Study of PCR

Module III

Study of Southern hybridization

Module IV

Study of RAPD

Examination Scheme:

BIOSAFETY MANAGEMENT

Course Code: BTH2606

Credit Units: 03

Course Objective:

Course addresses management and engineering design concepts required for process safety in chemical and biotechnology systems, with pharmaceutical manufacturing applications. Content focuses on sound engineering principles and practices as they apply to industrial situations, project design, risk mitigation, process and equipment integrity, and engineering codes and standards.

Course Contents:

Module I: Hazards

Chemical hazards classification. Radiation hazards and control of exposure to radiation. Types of fire and fire prevention methods. Mechanical hazards. Electrical hazards

Module II: Psychology and Hygiene

Industrial psychology Industrial hygiene. Safety in plant site selection and plant layout. Industrial lighting and ventilation. Industrial noise.

Module III: Occupational diseases and control

Occupational diseases and prevention methods. Safe housekeeping, Instrumentation for safe operation. Personal protective equipments. Safety in chemical operations and processes.

Module IV: Management

Safety organization – safety committee – safety education and training. Management process. Philosophy and need for Industrial safety. Role of Government in Industrial safety.

Module V: Laws

Factory Act. ESI Act, Environmental Act. Workmen's Compensation Act. Advantages of adopting safety laws.

Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

DRUG DESIGN AND DEVELOPMENT

Course Code: BTH2607

Credit Units: 03

Course Objective:

The above course will be aimed to identify and design drugs that could be potentially useful in the identification of the candidate drugs, which have efficacy in cell culture or animal models, and thus the most effective compounds could be employed based on the above results for being moved through preclinical studies to clinical trials.

Course Contents:

Module I: Drug targets classification

DNA, RNA, Enzymes involved in nucleic acid metabolism, Signal transduction across membrane GPCR, small molecule receptors, neuropeptide receptors, ion channels.

Module II: Target discovery and validation strategies

New target discovery, biological activity, types of screening, natural products, General overview of validation techniques.

Module III: Structure-based design

Drug design to discovery and development, drug metabolism, toxicity and pharmacokinetics, problems and drawbacks on drug discovery and development.

Module IV: Basic concepts of Drug Delivery

Basic terminologies in drug delivery and drug targeting, Concepts of Bio availability, Process of drug absorption, Drug delivery considerations for the new biotherapeutics
Introduction to routes of administration of drugs

Module V: Delivery of Genetic material

New generation technologies in genetic drug delivery, Nanotechnology, Genetically engineered cell implants in drug deliver.

Examination Scheme:

BIOPROCESS TECHNOLOGY

Course Code: BTH2608

Credit Units: 03

Course Objective:

The objective of the course is to apply the principles of biochemical engineering in large scale cultivation of microorganism for production of important products.

Course Contents:

Module I

Basic principle in bioprocess technology. Advantage of bioprocess over chemical process. Media formulation, Cell culture techniques; Inoculum development and aseptic transfers.

Module II

Process technology for the production of primary metabolites, eg. biomass, ethanol, acetone-butanol, citric acid, amino acids, polysaccharides and plastics.

Ethanol: production by batch, continuous and cell recycle adopted by various technologies practiced in Indian distilleries using molasses and grains. Computation of fermentation efficiency, distillation efficiency and overall efficiency of ethanol production, recovery, uses, glucose effect etc. Power alcohol – definition, uses, merits and demerits of various technologies for its production.

Amino Acid: Genetic Control of metabolic pathway.

Lysine: Indirect and direct fermentation – mechanism of ph of metabolic block in accumulation of L-lysine by inhibition and repression mechanism.

Biomass: Bakers and distillers yeast production using various raw materials, “bios” factors for growth, Crabtree effect, harvesting, different forms and uses.

What are mushroom, different forms of common mushroom production from agro based raw materials and uses. Biofertilizers, biocompost and biopesticides

Module III

Production of secondary metabolites – penicillin, cephalosporins, streptomycin, tetracycline etc. Metabolites from plant and animal cell culture

Penicillin: Classification, various penicillin as precursor and ‘R’ – side chain, penicillinase, 6-APA, penicillin production, harvest and recovery, uses of various forms etc.

Streptomycin: chemical structure, production, harvest and recovery, use by-product of streptomycin fermentation etc.

Tetracycline: chemical structure, production, harvest and recovery, use by-product of tetracycline fermentation etc.

Module IV

Microbial production of industrial enzymes – glucose isomerase, penicillin acylase, cellulase, amylase, lipase, protease etc.

TERM PAPER

Course Code: BTH2631

Credit Units: 02

A term (or research) paper is primarily a record of intelligent reading in several sources on a particular subject.

The students will choose the topic at the beginning of the session in consultation with the faculty assigned. The progress of the paper will be monitored regularly by the faculty. At the end of the semester the detailed paper on the topic will be submitted to the faculty assigned. The evaluation will be done by Board of examiners comprising of the faculties.

GUIDELINES FOR TERM PAPER

The procedure for writing a term paper may consists of the following steps:

- Choosing a subject
- Finding sources of materials
- Collecting the notes
- Outlining the paper
- Writing the first draft
- Editing & preparing the final paper

1. Choosing a Subject

The subject chosen should not be too general.

2. Finding Sources of materials

- The material sources should be not more than 10 years old unless the nature of the paper is such that it involves examining older writings from a historical point of view.
- Begin by making a list of subject-headings under which you might expect the subject to be listed.
- The sources could be books and magazines articles, news stories, periodicals, scientific journals etc.

3. Collecting the notes

Skim through sources, locating the useful material, then make good notes of it, including quotes and information for footnotes.

- p) Get facts, not just opinions. Compare the facts with author's conclusion.
- q) In research studies, notice the methods and procedures, results & conclusions.
- r) Check cross references.

4. Outlining the paper

- k) Review notes to find main sub-divisions of the subject.
- l) Sort the collected material again under each main division to find sub-sections for outline so that it begins to look more coherent and takes on a definite structure. If it does not, try going back and sorting again for main divisions, to see if another general pattern is possible.

5. Writing the first draft

Write the paper around the outline, being sure that you indicate in the first part of the paper what its purpose is. You may follow the following:

- a) statement of purpose
- b) main body of the paper
- c) statement of summary and conclusion

Avoid short, bumpy sentences and long straggling sentences with more than one main ideas.

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

6. Editing & preparing the final Paper

- tt) Before writing a term paper, you should ensure you have a question which you attempt to answer in your paper. This question should be kept in mind throughout the paper. Include only information/ details/ analyses of relevance to the question at hand. Sometimes, the relevance of a particular section may be clear to you but not to your readers. To avoid this, ensure you briefly explain the relevance of every section.
- uu) Read the paper to ensure that the language is not awkward, and that it "flows" properly.
- vv) Check for proper spelling, phrasing and sentence construction.
- ww) Check for proper form on footnotes, quotes, and punctuation.
- xx) Check to see that quotations serve one of the following purposes:
- yy) Show evidence of what an author has said.
- zz) Avoid misrepresentation through restatement.
- aaa) Save unnecessary writing when ideas have been well expressed by the original author.
- bbb) Check for proper form on tables and graphs. Be certain that any table or graph is self-explanatory.

Term papers should be composed of the following sections:

- Title page
- Table of contents
- Introduction
- Review
- Discussion & Conclusion
- References
- Appendix

Generally, the introduction, discussion, conclusion and bibliography part should account for a third of the paper and the review part should be two thirds of the paper.

Discussion

The discussion section either follows the results or may alternatively be integrated in the results section. The section should consist of a discussion of the results of the study focusing on the question posed in the research paper.

Conclusion

The conclusion is often thought of as the easiest part of the paper but should by no means be disregarded. There are a number of key components which should not be omitted. These include:

- u) summary of question posed
- v) summary of findings
- w) summary of main limitations of the study at hand
- x) details of possibilities for related future research

References

From the very beginning of a research project, you should be careful to note all details of articles gathered.

The bibliography should contain ALL references included in the paper. References not included in the text in any form should NOT be included in the bibliography.

The key to a good bibliography is consistency. Choose a particular convention and stick to this.

Conventions

PROJECT

Course Code: BTH2632

Credit Units: 03

Objectives:

The aim of the project is to provide the students with an opportunity to further their intellectual and personal development in the chosen field by undertaking a significant practical unit of activity. The project can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

Chapter Scheme and distribution of marks:

Chapter 1: Introduction – 10 marks

Chapter 2: Conceptual Framework/ National/International Scenario – 25 marks

Chapter 3: Presentation, Analysis & Findings -- 25 marks

Chapter 4: Conclusion & Recommendations -- 10 marks

Chapter 5: Bibliography -- 05 marks

Project Report	Power Point Presentation & Viva
75 marks	25 marks

Components of a Project Report

The outcome of Project Work is the Project Report. A project report should have the following components:

1) Cover Page: This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.

2) Acknowledgement: Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.

3) Table of Content: Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.

4) Body of the Report: The body of the report should have these four logical divisions

a) **Introduction:** This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, and method of analysis), Limitations of the Study, and Chapter Planning.

b) **Conceptual Framework / National and International Scenario:** (relating to the topic of the Project).

c) **Presentation of Data, Analysis and Findings:**(using the tools and techniques mentioned in the methodology).

d) **Conclusion and Recommendations:** In this section, the concluding observations based on the main findings and suggestions are to be provided.

5) Bibliography or References: This section will include the list of books and articles which have been used in the project work, and in writing a project report.

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

6) Annexures: Questionnaires (if any), relevant reports, etc.

(The main text of the Project should normally be in the range of 5000 words. However, there may be annexure in addition to the main text)

The Steps of a Project Report

Step I : Selection of the topic for the project by taking following points into consideration:

- Suitability of the topic.
- Relevance of the topic
- Time available at the disposal.
- Feasibility of data collection within the given time limit.
- Challenges involved in the data collection (time & cost involved in the data collection, possibility of getting responses, etc.)

Step II : Finalisation of the Topic and preparation of Project Proposal in consultation with the Supervisor.

Step III : Collection of information and data relating to the topic and analysis of the same.

Step IV : Writing the report dividing it into suitable chapters, viz.,

Chapter 1: Introduction,

Chapter 2: Conceptual Framework / National & International Scenario,

Chapter 3: Analysis & Findings

Chapter 4: Conclusion and Recommendations.

Step V : The following documents are to be attached with the Final Project Report.

1) Approval letter from the supervisor (Annexure-IA)

2) Student's declaration (Annexure-IB)

3) Certificate from the Competent Authority of the Organisation / Institution, if the student undertakes the Project Work in any Organisation / Institution.

Guidelines for Evaluation:

- Each of the students has to undertake a Project individually under the supervision of a teacher and to submit the same following the guidelines stated below.
- Language of Project Report and Viva-Voce Examination may be English. The Project Report must be typed and hard bound.
- Failure to submit the Project Report or failure to appear at the Viva-voce Examination will be treated as "Absent" in the Examination. He /she has to submit the Project Report and appear at the Viva-Voce Examination in the subsequent years (within the time period as per University Rules).
- No marks will be allotted on the Project Report unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her Project Report.
- Evaluation of the Project Work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate.

WORKSHOP / CERTIFICATION

Course Code: BTH2633

Credit Units: 01

Objectives

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two way. The trainer has to make sure that the aspect covered are practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

Major Themes for Workshop

The workshop may be conducted on any of the following major themes:

Accounting

Finance

Human Resources

Marketing

Economics

Operations

Supply Chain Management

These themes are merely indicative and other recent and relevant topics of study may be included.

Guidelines for Workshop

The procedure for earning credits from workshop consists of the following steps: Relevant study material and references will be provided by the trainer in advance. The participants are expected to explore the topic in advance and take active part in the discussions held. Attending and participating in all activities of the workshop. Group Activities have to be undertaken by students as guided by the trainer. Evaluation of workshop activities would be done through test and quiz at the end of the workshop. Submitting a write up of atleast 500 words about the learning outcome of the workshop.

Methodology

The methodology followed at the workshop could be based on any one or more of the following methods:

Case Study

Business Game

Simulation

Group Activity

Role Play

Business Planning

Quiz

Evaluation Scheme:

Attendance	Active Participation	Multiple Choice Questions/ Quiz	Solving the case/ Assignment/ Write up	Total
10	30	30	30	100

INTRODUCTION TO COMPUTERS AND PROGRAMMING IN C

Course Code: BTE2104

Credit Units: 03

Course Objective:

The objective of this course module is to acquaint the students with the basics of computers system, its components, data representation inside computer and to get them familiar with various important features of procedure oriented programming language i.e. C.

Course Contents:

Module I: Introduction

Introduction to computer, history, von-Neumann architecture, memory system (hierarchy, characteristics and types), H/W concepts (I/O Devices), S/W concepts (System S/W & Application S/W, utilities). Data Representation: Number systems, character representation codes, Binary, octal, hexadecimal and their interconversions. Binary arithmetic, floating point arithmetic, signed and unsigned numbers, Memory storage unit.

Module II: Programming in C

History of C, Introduction of C, Basic structure of C program, Concept of variables, constants and data types in C, Operators and expressions: Introduction, arithmetic, relational, Logical, Assignment, Increment and decrement operator, Conditional, bitwise operators, Expressions, Operator precedence and associativity. Managing Input and output Operation, formatting I/O.

Module III: Fundamental Features in C

C Statements, conditional executing using if, else, nesting of if, switch and break Concepts of loops, example of loops in C using for, while and do-while, continue and break. Storage types (automatic, register etc.), predefined processor, Command Line Argument.

Module IV: Arrays and Functions

One dimensional arrays and example of iterative programs using arrays, 2-D arrays Use in matrix computations.

Concept of Sub-programming, functions Example of user defined functions. Function prototype, Return values and their types, calling function, function argument, function with variable number of argument, recursion.

Module V: Advanced features in C

Pointers, relationship between arrays and pointers Argument passing using pointers, Array of pointers. Passing arrays as arguments.

Strings and C string library.

Structure and Union. Defining C structures, Giving values to members, Array of structure, Nested structure, passing strings as arguments.

File Handling.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

ELECTRICAL SCIENCE

Course Code: BTE2106

Credit Units: 03

Course Objective:

The objective of the course is to provide a brief knowledge of Electrical Engineering to students of all disciplines. This Course includes some theorems related to electrical, some law's related to flow of current, voltages, basic knowledge of Transformer, basic knowledge of electromagnetism, basic knowledge of electrical network.

Course Contents:

Module I: Basic Electrical Quantities

Basic Electrical definitions-Energy, Power, Charge, Current, Voltage, Electric Field Strength, Magnetic Flux Density, etc., Resistance, Inductance and Capacitance. Ideal Source, Independent Source and Controlled Source

Module II: Network Analysis Techniques & Theorems

Circuit Principles: Ohm's Law, Kirchoff's Current Law, Kirchoff's Voltage Law Network Reduction: Star-Delta Transformation, Source Transformation, Nodal Analysis, Loop analysis. Superposition theorem, Thevenin's Theorem, Norton's theorem and Reciprocity theorem.

Module III: Alternating Current Circuits

Peak, Average and RMS values for alternating currents, Power calculation: reactive power, active power, Complex power, power factor, impedance, reactance, conductance, susceptance Resonance: series Resonance, parallel resonance, basic definition of Q factor & Band-width.

Module IV: Transformers

Basic Transformer Operation principle, Construction, Voltage relations, current relations, Linear circuit models, open circuit test, short circuit test, Transformer Efficiency.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

PROGRAMMING IN C LAB

Course Code: BTE2108

Credit Units: 01

Software Required: Turbo C

Course Contents:

- C program involving problems like finding the nth value of cosine series, Fibonacci series. Etc.
- C programs including user defined function calls
- C programs involving pointers, and solving various problems with the help of those.
- File handling

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

ELECTRICAL SCIENCE LAB

Course Code: BTE2110

Credit Units: 01

List of Experiments:

- To verify KVL & KCL in the given network.
- To verify Superposition Theorem.
- To verify Maximum Power Transfer Theorem.
- To verify Reciprocity Theorem.
- To determine and verify R_{Th} , V_{Th} , R_N , I_N in a given network.
- To perform open circuit & short circuit test on a single-phase transformer.
- To study transient response of a given RLC Circuit.
- To perform regulation, ratio & polarity test on a single-phase transformer.
- To measure power & power factor in a three phase circuit by two wattmeter method.
- To measure power & power factor in a three phase load using three ammeter & three voltmeter method.

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V

ENGINEERING CHEMISTRY LAB

Course Code: BTE2113

Credit Units: 01

Course Contents:

List of Experiments:(Any 10 Experiments)

1. To determine the ion exchange capacity of a given cation exchanger.
2. To determine the temporary, permanent and total hardness of a sample of water by complexometric titration method.
3. To determine the type and extent of alkalinity of given water sample.
4. To determine the number of water molecules of crystallization in Mohr's salt (ferrous ammonium sulphate) provided standard potassium dichromate solution (0.1N) using diphenylamine as internal indicator.
5. To determine the ferrous content in the supplied sample of iron ore by titrimetric analysis against standard $K_2Cr_2O_7$ solution using potassium ferricyanide $[K_3Fe(CN)_6]$ as external indicator.
6. (a) To determine the surface tension of a given liquid by drop number method.
(b) To determine the composition of a liquid mixture A and B (acetic acid and water) by surface tension method.
7. To prepare and describe a titration curve for phosphoric acid – sodium hydroxide titration using pH-meter.
8. (a) To find the cell constant of conductivity cell.
(b) Determine the strength of hydrochloric acid solution by titrating it against standard sodium hydroxide solution conductometrically
9. Determination of Dissolved oxygen in the given water sample.
- 10 To determine the total residual chlorine in water.
- 11 Determination of amount of oxalic acid and H_2SO_4 in 1 L of solution using N/10 NaOH and N/10 $KMnO_4$ solution.
- 12 Determination of viscosity of given oil by means of Redwood viscometer I.
- 13 To determine flash point and fire point of an oil by Pensky Martin's Apparatus
- 14 To determine the Iodine value of the oil.

Examination Scheme:

OBJECT ORIENTED PROGRAMMING IN C++

Course Code: BTE2203

Credit Units: 03

Course Objective:

The objective of this module is to introduce object oriented programming. To explore and implement the various features of OOP such as inheritance, polymorphism, Exceptional handling using programming language C++. After completing this course student can easily identify the basic difference between the programming approaches like procedural and object oriented.

Course Contents:

Module I: Introduction

Review of C, Difference between C and C++, Procedure Oriented and Object Oriented Approach. Basic Concepts: Objects, classes, Principles like Abstraction, Encapsulation, Inheritance and Polymorphism. Dynamic Binding, Message Passing. Characteristics of Object-Oriented Languages. Introduction to Object-Oriented Modeling techniques (Object, Functional and Dynamic Modeling).

Module II: Classes and Objects

Abstract data types, Object & classes, attributes, methods, C++ class declaration, Local Class and Global Class, State identity and behaviour of an object, Local Object and Global Object, Scope resolution operator, Friend Functions, Inline functions, Constructors and destructors, instantiation of objects, Types of Constructors, Static Class Data, Array of Objects, Constant member functions and Objects, Memory management Operators.

Module III: Inheritance

Inheritance, Types of Inheritance, access modes – public, private & protected, Abstract Classes, Ambiguity resolution using scope resolution operator and Virtual base class, Aggregation, composition vs classification hierarchies, Overriding inheritance methods, Constructors in derived classes, Nesting of Classes.

Module IV: Polymorphism

Polymorphism, Type of Polymorphism – Compile time and runtime, Function Overloading, Operator Overloading (Unary and Binary) Polymorphism by parameter, Pointer to objects, this pointer, Virtual Functions, pure virtual functions.

Module V: Strings, Files and Exception Handling

Manipulating strings, Streams and files handling, formatted and Unformatted Input output. Exception handling, Generic Programming – function template, class Template Standard Template Library: Standard Template Library, Overview of Standard Template Library, Containers, Algorithms, Iterators, Other STL Elements, The Container Classes, General Theory of Operation, Vectors.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

OBJECT ORIENTED PROGRAMMING IN C++ LAB

Course Code: BTE2205

Credit Units: 01

Software Required: Turbo C++

Course Contents:

- Creation of objects in programs and solving problems through them.
- Different use of private, public member variables and functions and friend functions.
- Use of constructors and destructors.
- Operator overloading
- Use of inheritance in and accessing objects of different derived classes.
- Polymorphism and virtual functions (using pointers).
- File handling.

ENGINEERING GRAPHICS LAB

Course Code: BTE2206

Credit Units: 01

Course Objective:

This course will provide students concepts on the drawings of different curves like straight line, parabola, ellipse etc. After completion of this course, students will be able to draw different figures manually and will be capable of using various instruments involved in drawings.

Course Contents:

Module I: General

Importance, Significance and scope of engineering drawing, Lettering, Dimensioning, Scales, Sense of proportioning, Different types of projections, Orthographic Projection, B.I.S. Specifications.

Module II: Projections of Point and Lines

Introduction of planes of projection, Reference and auxiliary planes, projections of points and Lines in different quadrants, traces, inclinations, and true lengths of the lines, projections on Auxiliary planes, shortest distance, intersecting and non-intersecting lines.

Module III: Planes other than the Reference Planes

Introduction of other planes (perpendicular and oblique), their traces, inclinations etc., Projections of points and lines lying in the planes, conversion of oblique plane into auxiliary Plane and solution of related problems.

Module IV: Projections of Plane Figures

Different cases of plane figures (of different shapes) making different angles with one or both reference planes and lines lying in the plane figures making different given angles (with one of both reference planes). Obtaining true shape of the plane figure by projection.

Module V: Projection of Solids

Simple cases when solid is placed in different positions, Axis faces and lines lying in the faces of the solid making given angles.

Module VI: Development of Surface

Development of simple objects with and without sectioning. Isometric Projection

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

LIFE SCIENCES

Course Code: BTE2210

Credit Units: 03

Course Objective:

The objective of the course is to provide students an understanding of the very basic molecules of life- DNA, RNA, proteins and how these molecules, when form further complex molecules like carbohydrates, vitamins and lipids, then functioning of body takes place. Since technology is advancing in every field, emphasis is also given on the understanding of application of some biotechnological concepts used in our daily life like biofuels, biofertilizers. An introduction to the origin of earth, the environment-air, water and land, origin of life on Earth, how life evolved from a single cell, some environmental problems and measures to be taken to combat them.

Course Contents:

Module I: Cell Biology

Organization of cell (Inorganic-Water and Ions; Organic-Proteins, Lipids and Carbohydrates constituents) Physical structure of the cell-Brief introduction to the Cell Membrane, Cytoplasm and its Organelles (Nucleus, Mitochondria, Golgi, Endoplasmic Reticulum, Lysosomes, Peroxisomes, Ribosomes, Chloroplasts), Cell cycle.

Module II: Introduction to Cell Physiology

Transport of substances through the cell membrane- Osmosis, Diffusion and its types, Active transport (Sodium-potassium pump) and Passive transport, Membrane potential, Measuring Membrane Potential, Action Potential

Module III: Environmental Biotechnology

Biosensors, Biochips and Biofilms, GMO's and Biofertilizers
Biofuels
Gene Therapy, Stem cell and Nanobiomolecules
Bio Informatics- Introduction and Applications

Module IV: Ecology & Environment

Ecosystem- Structure and functions, Food chain, Food web, Energy flow, Ecological pyramids
Energy sources- Conventional (Coal, Petrol, Natural gas) and Non-conventional (Solar, Wind, Geothermal, Hydro and Biomass)
Pollution- Air, Water, Land, Thermal and Nuclear
Conferences and Protocols- Stockholm, Montreal, Rio-de-Janerio, Kyoto
Environmental issues- Green House Effect, Global Warming and Warning, El-Nino, Acid Rain, Sustainable Development, Environmental Disasters (Earthquake, Floods, Drought and Cyclones)

Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

CELL BIOLOGY & GENETICS

Course Code: BTE2301

Credit Units: 03

Course Objective

Cell biology connects different fields of biotechnology by incorporating elements of biology, maths, physics and chemistry. The objective of the course is to understand the structure and function of cellular and sub cellular components of cells and tissues. It also focuses on the understanding of basic principles of genetics, incorporating the concepts of classical, molecular and population genetics. Compilation is required for recent advances in genetic principles for strong foundation in Biotechnology.

Course Contents

Module I

Cell theory, pre-cellular evolution, prokaryotic and eukaryotic cells. Cell cycle: molecular events, cell division, mitosis and meiosis.

Module II

Cellular organelles - structure and function of cell wall, plasma membrane nucleus, Mitochondria, Chloroplast, Nucleus, lysosomes, peroxisomes, golgi bodies, and transport across membranes. Cell locomotion- cytoskeleton, structure and function of cilia and flagella.

Module III

Cellular signaling –general mechanism of signaling and structures of the various types of receptors. Types of cancer, etiology of cancer, metastasis, cytological role of p53 and p21 genes in cancer development. Apoptosis.

Module IV

Genetics: classical and molecular genetics, Mendelian principles of inheritance, human genetics. Extension of Mendelism: Allelic variations, influence of environment on expression, penetrance and expressivity, epistasis, pleiotropy. Chromosomal basis of inheritance; linkage, crossing over and chromosome mapping.

Module V

Mutation and mutagenic agents, types of mutations. Numerical and structural changes in chromosomes with emphasis on human syndromes/plant breeding and genetic counseling. Economic importance of mutation

Module VI

Classical and modern concept of gene, pseudoallelism, position effect, intragenic crossing over & complementation (cistron, recon & nutron) Benzer's work on rII locus in T₂ bacteriophage. Genetics of Population: Hardy- Weinburg Law and its deviations.

BIOSTATISTICS

Course Code: BTE2303

Credit Units: 03

Course Objective:

The course aims to develop competency and expertise in the application of statistical methods applied to biological data obtained in experimental techniques, methodology and the safe laboratory practice.

Course Contents:

Module I

Statistics and Biostatistics: Preliminary concepts; Measures of Central Tendency: Mean, Median, Mode
Measures of Dispersion: Range, Standard deviation, Variance

Module II: Probability

Random Experiments, Trial and Event, Sample Space, Mutually Exclusive or Disjoint Events, Mutually Exhaustive Events, Equally Probable Events, Complementary Event, Classical definition of Probability, Statistical definition of Probability, Axiomatic definition of Probability, Addition theorem, Multiplication theorem, Conditional Probability, Bayes' Theorem. Expectation.

Module III: Continuous Distribution

Normal Distribution, Properties of Normal distribution

Module IV: Correlation

Bivariate distribution Correlation, Types of Correlation, Simple Correlation Coefficient for ungrouped data, Properties and Interpretation of Correlation Coefficient, Coefficient of determination, Scatter diagram, Standard Error, Probable error of Correlation Coefficient. Rank correlation, Some examples.

Module V: Regression

Definition, Regression lines and Regression Coefficients, Properties of Regression Coefficients, Some examples. Method of least square: Fitting of straight line

Module VI: Introduction to the following Statistical terms

Parameter, Statistic, Null hypothesis, Alternative hypothesis, Critical region, Type I Error, Type II Error, Level of significance, P-value and its applications.

Test of Significance for Small samples: One sample t-test, Paired t-test, Degrees of freedom for t-test, F test for equality of Population variances, Degrees of freedom for F-test.

Test of Significance for Large samples: Normal test for sample mean and population mean, Normal test for two sample means.

Chi-square Test: Test of goodness of fit, Test of Independence of attributes, Degrees of freedom for Chi-square test, Coefficient of contingency, Yates' correction for continuity.

Analysis of Variance: One way and Two way (only Examples)

DATABASE MANAGEMENT SYSTEM

Course Code: BTE2304

Credit Units: 02

Course Objective:

It enables the students to access biological information networks and databases in order to understand the different techniques of biotechnology to build detection systems especially in the prevention and treatment of human diseases.

Course Contents:

Module I: Overview and historical perspective

File systems vs. DBMS, advantages of DBMS

Module II: Describing and storing data in DBMS

Levels of abstraction and data independence; Data models and their comparison; Entity relationship model -concepts, design, keys and features; Relational model -introduction, structure of the relational databases, integrity constraints, Relational algebra and calculus -selection and projection, set operations, renaming, Joins, Division etc.

Module III: SQL and Perl

Module IV: Database design

Functional dependencies, Normal forms; Concurrency control and database discovery -concept of transaction: atomicity, consistency, isolation and durability, transactions and schedules, concurrent execution of transactions, Lock based concurrency control, Database recovery

Module V: Current trends

Distributed databases and multimedia databases;

Module VI: Data warehousing and Data Mining

Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE

CELL BIOLOGY & GENETICS LAB

Course Code: BTE2307

Credit Units: 02

Course Contents

Module I

Microscopy: Light microscopy, Bright field, Phase contrast.

Module II

Study of chromoplasts, chloroplast in plant cell; Mitosis and Meiosis

Module III

Study of permanent slides of types of cancer; Study of apoptosis

Module IV

Study of gene interaction; chromosomal translocation in *Rhoeo discolor*

Module V

Study of bacterial conjugation and bacterial transduction

Module IV

Study of physical and chemical mutagens on growth of *E. coli*; PTC test

DATABASE MANAGEMENT SYSTEMS LAB

Course Code: BTE2308

Credit Units: 01

Course Contents:

Module I

Database creation using DDL and DML.

Module II

Defining the primary and secondary keys.

Module III

Implementation of selection, projection and joins (internal and external) with SQL and Perl .

Module IV

Normalization of databases with SQL and Perl

Module V

Implementation of transactions and schedules.

Module VI

Detection of association rules and knowledge recovery.

Examination Scheme:

INDUSTRIAL BIOTECHNOLOGY

Course Code: BTE2309

Credit Units: 02

Course Objective:

The objective of this course is to use microorganism to produce various compounds of commercial interest. The student will be exposed to various techniques available for large scale cultivation of microorganisms.

Course Contents:

Module I

Introduction to fermentation, the fermentation industry, Production process batch and Continuous system of cultivation, Solid-state fermentation

Module II

Selection of industrial microorganisms, media for fermentation, aeration, pH, temperature and other requirements during fermentation, downstream processing and product recovery, food industry waste as fermentation substrate.

Module III

Production of compounds like, antibiotics, enzymes, organic acids, solvents, beverages, SCP.

Module IV

Production of fermented dairy products

Module V

Immobilized enzymes systems, production and applications.

Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

Text & References:

FERMENTATION TECHNOLOGY

Course Code: BTE2310

Credit Units: 02

Objective of the course is for the acquaintance of large scale cultivation of microbes for production of industrially important products.

Course Contents

Module I: Fermentation Technology-An Overview

Development and overview of fermentation processes, strain development, media design and optimization, commercial media for fermentation

Module II: Bioproduct Production

Production of Organic acids: citric acid, acetic acid, lactic acid

Production of ethanol

Production of Antibiotics: penicillins, tetracyclins, chloramphenicol

Production of Recombinant products

Production of Industrial enzymes: cellulase, amylase, protease

Production of vitamins: B₁₂, riboflavin, fermented dairy products.

Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

DRUG DESIGN AND DEVELOPMENT

Course Code: BTE2311

Credit Units: 02

Course Objective:

The above course will be aimed to identify and design drugs that could be potentially useful in the identification of the candidate drugs, which have efficacy in cell culture or animal models, and thus the most effective compounds could be employed based on the above results for being moved through preclinical studies to clinical trials.

Course Contents:

Module I: Drug targets classification

DNA, RNA, post-translational, processing enzymes, metabolic enzymes involved in nucleic acid synthesis, G-protein coupled receptors (monomeric transmembrane proteins), small molecule receptors, neuropeptide receptors, ion channels (monomeric multi-transmembrane) proteins, ligand-gated ion channels (oligomeric transmembrane proteins), transporters (multi-transmembrane proteins).

Module II: Target discovery and validation strategies

Genomics (new target discovery), biological activity directed and other types of screening, natural products, combinatorial chemistry; General overview of validation techniques.

Module III: Structure-based design

Drug design to discovery and development, drug metabolism, toxicity and pharmacokinetics, toxicology considerations, problems and drawbacks on drug discovery and development.

'de novo' design methodologies : indirect drug design, pharmacophore development and receptor mapping, combinatorial libraries and new strategies and recent technologies in drug design.

Module IV: Basic concepts of Drug Delivery

Introductory lecture (1-2), Concepts of Bio availability, Process of drug absorption, Pharmacokinetic processes, Timing for optimal therapy, Drug delivery considerations for the new biotherapeutics

Basic terminologies in drug delivery and drug targeting, Drug release, Drug targeting, Doses forms, Various routes of administration of drugs (just introduction), Strategies for enhanced therapeutic efficacies (Basic principles)

Module V: Delivery of Genetic material

Basic principles of gene expression, Viral and nonviral vectors in gene delivery, Clinical applications of gene therapy and antisense therapy

New generation technologies in Drug delivery and targeting

Nanotechnology / Nanobiotechnology, Use of biosensors and challenge of chronopharmacology, Microchips and controlled drug delivery, genetically engineered cell implants in drug deliver.

RECOMBINANT DNA TECHNOLOGY

Course Code: BTE2312

Credit Units: 02

Course Objective:

A complete understanding of molecular techniques like DNA sequencing, restriction mapping, PCR for the cloning and expression of genes can be obtained through the course.

Course Contents:

Module I

Purification of DNA from bacterial, plant and animal cells, manipulation of purified DNA.

Module II

Introduction of DNA into living cells

Module III

Introduction to gene cloning and its uses, tools and techniques: plasmids and other vectors, DNA, RNA, cDNA.

Module IV

Production of proteins from cloned genes: gene cloning in medicine (Pharmaceutical agents such as insulin, growth hormones, recombinant vaccines), gene therapy for genetic diseases.

Module V

Analysis of DNA by Southern blotting, Analysis of RNA by Northern blotting, Analysis of proteins by Western blot techniques, Dot blots and slot blots, RFLP, AFLP.

PCR: Basic principles and its modification application and uses.

Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE

TERM PAPER

Course Code: BTE2331

Credit Units: 02

METHODOLOGY

A term (or research) paper is primarily a record of intelligent reading in several sources on a particular subject.

The students will choose the topic at the beginning of the session in consultation with the faculty assigned. The progress of the paper will be monitored regularly by the faculty. At the end of the semester the detailed paper on the topic will be submitted to the faculty assigned. The evaluation will be done by Board of examiners comprising of the faculties.

GUIDELINES FOR TERM PAPER

The procedure for writing a term paper may consists of the following steps:

1. Choosing a subject
2. Finding sources of materials
3. Collecting the notes
4. Outlining the paper
5. Writing the first draft
6. Editing & preparing the final paper

1. Choosing a Subject

The subject chosen should not be too general.

2. Finding Sources of materials

- a) The material sources should be not more than 10 years old unless the nature of the paper is such that it involves examining older writings from a historical point of view.
- b) Begin by making a list of subject-headings under which you might expect the subject to be listed.
- c) The sources could be books and magazines articles, news stories, periodicals, scientific journals etc.

3. Collecting the notes

Skim through sources, locating the useful material, then make good notes of it, including quotes and information for footnotes.

- a) Get facts, not just opinions. Compare the facts with author's conclusion.
- b) In research studies, notice the methods and procedures, results & conclusions.
- c) Check cross references.

4. Outlining the paper

- a) Review notes to find main sub-divisions of the subject.
- b) Sort the collected material again under each main division to find sub-sections for outline so that it begins to look more coherent and takes on a definite structure. If it does not, try going back and sorting again for main divisions, to see if another general pattern is possible.

5. Writing the first draft

Write the paper around the outline, being sure that you indicate in the first part of the paper what its purpose is. You may follow the following:

- a) statement of purpose
- b) main body of the paper
- c) statement of summary and conclusion

Avoid short, bumpy sentences and long straggling sentences with more than one main ideas.

6. Editing & Preparing the final Paper

- a) Before writing a term paper, you should ensure you have a question which you attempt to answer in your paper. This question should be kept in mind throughout the paper. Include only information/details/ analyses of relevance to the question at hand. Sometimes, the relevance of a particular section

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

may be clear to you but not to your readers. To avoid this, ensure you briefly explain the relevance of every section.

- b) Read the paper to ensure that the language is not awkward, and that it "flows" properly.
- c) Check for proper spelling, phrasing and sentence construction.
- d) Check for proper form on footnotes, quotes, and punctuation.
- e) Check to see that quotations serve one of the following purposes:
 - (i) Show evidence of what an author has said.
 - (ii) Avoid misrepresentation through restatement.
 - (iii) Save unnecessary writing when ideas have been well expressed by the original author.
- f) Check for proper form on tables and graphs. Be certain that any table or graph is self-explanatory.

Term papers should be composed of the following sections:

- 1) Title page
- 2) Table of contents
- 3) Introduction
- 4) Review
- 5) Discussion & Conclusion
- 6) References
- 7) Appendix

Generally, the introduction, discussion, conclusion and bibliography part should account for a third of the paper and the review part should be two thirds of the paper.

Discussion

The discussion section either follows the results or may alternatively be integrated in the results section. The section should consist of a discussion of the results of the study focusing on the question posed in the research paper.

Conclusion

The conclusion is often thought of as the easiest part of the paper but should by no means be disregarded. There are a number of key components which should not be omitted. These include:

- a) summary of question posed
- b) summary of findings
- c) summary of main limitations of the study at hand
- d) details of possibilities for related future research

References

From the very beginning of a research project, you should be careful to note all details of articles gathered.

The bibliography should contain ALL references included in the paper. References not included in the text in any form should NOT be included in the bibliography.

The key to a good bibliography is consistency. Choose a particular convention and stick to this.

Bibliographical conventions

Monographs

Crystal, D. (2001), Language and the internet. Cambridge: Cambridge University Press.

Edited Volumes

Gass, S./Neu, J. (eds.) (1996), Speech acts across cultures. Challenges to communication in a second language. Berlin/ NY: Mouton de Gruyter.

[(eds.) is used when there is more than one editor; and (ed.) where there is only one editor. In German the abbreviation used is (Hrsg.) for Herausgeber].

Edited Articles

Schmidt, R./Shimura, A./Wang, Z./Jeong, H. (1996), Suggestions to buy: Television commercials from the U.S., Japan, China, and Korea. In: Gass, S./Neu, J. (eds.) (1996), Speech acts across cultures. Challenges to communication in a second language. Berlin/ NY: Mouton de Gruyter: 285-316.

Journal Articles

PROJECT

Course Code: BTE2332

Credit Units: 02

Objectives:

The aim of the project is to provide the students with an opportunity to further their intellectual and personal development in the chosen field by undertaking a significant practical unit of activity. The project can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

Chapter Scheme and distribution of marks:

Chapter 1: Introduction – 10 marks

Chapter 2: Conceptual Framework/ National/International Scenario – 25 marks

Chapter 3: Presentation, Analysis & Findings -- 25 marks

Chapter 4: Conclusion & Recommendations -- 10 marks

Chapter 5: Bibliography -- 05 marks

Project Report	Power Point Presentation & Viva
75 marks	25 marks

Components of a Project Report

The outcome of Project Work is the Project Report. A project report should have the following components:

1) Cover Page: This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.

2) Acknowledgement: Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.

3) Table of Content: Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.

4) Body of the Report: The body of the report should have these four logical divisions

a) **Introduction:** This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, and method of analysis), Limitations of the Study, and Chapter Planning.

b) **Conceptual Framework / National and International Scenario:** (relating to the topic of the Project).

c) **Presentation of Data, Analysis and Findings:** (using the tools and techniques mentioned in the methodology).

d) **Conclusion and Recommendations:** In this section, the concluding observations based on the main findings and suggestions are to be provided.

5) Bibliography or References: This section will include the list of books and articles which have been used in the project work, and in writing a project report.

6) Annexures: Questionnaires (if any), relevant reports, etc.

(The main text of the Project should normally be in the range of 5000 words. However, there may be annexure in addition to the main text)

The Steps of a Project Report

Step 1: Selection of the topic for the project by taking following points into consideration:

- Suitability of the topic.
- Relevance of the topic

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- Time available at the disposal.
- Feasibility of data collection within the given time limit.
- Challenges involved in the data collection (time & cost involved in the data collection, possibility of getting responses, etc.)

Step II : Finalisation of the Topic and preparation of Project Proposal in consultation with the Supervisor.

Step III : Collection of information and data relating to the topic and analysis of the same.

Step IV: Writing the report dividing it into suitable chapters, viz.,

Chapter 1: Introduction,

Chapter 2: Conceptual Framework / National & International Scenario,

Chapter 3: Analysis & Findings

Chapter 4: Conclusion and Recommendations.

Step V: The following documents are to be attached with the Final Project Report.

1) Approval letter from the supervisor (Annexure-IA)

2) Student's declaration (Annexure-IB)

3) Certificate from the Competent Authority of the Organisation / Institution, if the student undertakes the Project Work in any Organisation / Institution.

Guidelines for Evaluation:

- Each of the students has to undertake a Project individually under the supervision of a teacher and to submit the same following the guidelines stated below.
- Language of Project Report and Viva-Voce Examination may be English. The Project Report must be typed and hard bound.
- Failure to submit the Project Report or failure to appear at the Viva-voce Examination will be treated as "Absent" in the Examination. He /she has to submit the Project Report and appear at the Viva-Voce Examination in the subsequent years (within the time period as per University Rules).
- No marks will be allotted on the Project Report unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her Project Report.
- Evaluation of the Project Work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate.

WORKSHOP / CERTIFICATION

Course Code: BTE2333

Credit Units: 02

Objectives

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two way. The trainer has to make sure that the aspect covered are practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

Major Themes for Workshop

The workshop may be conducted on any of the following major themes:

Accounting

Finance

Human Resources

Marketing

Economics

Operations

Supply Chain Management

These themes are merely indicative and other recent and relevant topics of study may be included.

Guidelines for Workshop

The procedure for earning credits from workshop consists of the following steps:

Relevant study material and references will be provided by the trainer in advance.

The participants are expected to explore the topic in advance and take active part in the discussions held

Attending and Participating in all activities of the workshop

Group Activities have to be undertaken by students as guided by the trainer.

Evaluation of workshop activities would be done through test and quiz at the end of the workshop.

Submitting a write up of at least 500 words about the learning outcome from the workshop.

Methodology

The methodology followed at the workshop could be based on any one or more of the following methods:

Case Study

Business Game

Simulation

Group Activity

Role Play

Business Planning

Quiz

Evaluation Scheme:

Attendance	Active Participation	Multiple Choice Questions/ Quiz	Solving the case/ Assignment/ Write up	Total
10	30	30	30	100

MICROBIOLOGY

Course Code: BTE2401

Credit Units: 03

Course Objective:

The course imparts the knowledge of different types of microorganisms that are invisible to our naked eyes. Discovery origin and evaluation of different forms of bacteria, fungi, protozoa and viruses constitute the basics of biotechnology.

Course Contents:

Module I

Introduction and historical perspective - Discovery of the microbial world, controversy over spontaneous generation, role of microorganisms in transformation of organic matter and in the causation of diseases, development of pure culture methods. Methods in Microbiology -Principles of microbial nutrition, Culture media, Theory and practice of sterilization, pure culture techniques.

Module II

Prokaryotic structure and function - functional anatomy of bacteria: cell envelope, cell wall, cytoplasmic membrane, capsule, surface appendages, cytoplasm and cytoplasmic inclusions. Growth - The definition of growth, mathematical expression of growth, growth curve, measurement of growth, synchronous growth, continuous culture, culture collection and maintenance of cultures.

Module III

Systematics and taxonomy - new approaches to bacterial taxonomy, classification including ribotyping, ribosomal RNA sequencing, characteristics of primary domains, taxonomy, nomenclature and Bergey's manual.

Module IV

Metabolic Diversity among microorganisms - photosynthesis in microorganisms, role of bacteriochlorophylls, carotenoids and phycobilins, Chemolithotrophy, hydrogen-iron-nitrite-oxidizing bacteria, nitrate and sulphate reduction, methanogenesis and acetogenesis, Fermentations, nitrogen fixation, plant microbe interactions (mycorrhizae).

Module V: Archaea

Archaea as earliest life forms, thermophiles, psychrophiles, halophiles, alkalophiles, acidophiles, hyperthermophiles Viruses: Bacterial, animal; structure of viruses; Reproduction and life cycle of RNA and DNA viruses; Viroids and prions. Algae and Fungi: Classification and Reproduction.

Module VI

Host-parasite relationship - Normal micro flora of skin, oral cavity, gastrointestinal tract, Respiratory infections; entry of pathogens into the host, types of toxins (Exo, endo, entero) and their mode of actions, Microbial pathogenesis -Disease reservoirs; Epidemiological terminologies; Infectious disease transmission; Sexually transmitted disease including AIDS, Food and water- borne diseases; pathogenic fungi.

Module VII

Chemotherapy/antibiotics -Antimicrobial agents, sulfa drugs, antibiotics -penicillin and cephalosporins, broad spectrum antibiotics, antifungal antibiotics; mode of action.

ENZYMOMOLOGY AND ENZYME TECHNOLOGY

Course Code: BTE2403

Credit Units: 03

Course Objective:

The course aims to provide an understanding of the principles and application of proteins, secondary metabolites and enzyme biochemistry in therapeutic applications and clinical diagnosis. The theoretical understanding of biochemical systems would certainly help to interpret the results of laboratory experiments.

Course Contents:

Module I: Enzymes

Introduction and scope, Nomenclature, Mechanism of Catalysis.

Module II: Enzyme Kinetics

Single substrate steady state kinetics; Michaelis Menten equation, Linear plots, King-Altman's method; Inhibitors and activators; Multisubstrate systems; ping-pong mechanism, Alberty equation, Sigmoidal kinetics and Allosteric enzymes

Module III

Immobilization of Enzymes; Advantages, Carriers, adsorption, covalent coupling, cross-linking and entrapment methods, Micro-environmental effects.

Module IV: Enzyme reactors

Reactors for batch/continuous enzymatic processing, choice of reactor type; idealized enzyme reactor systems, Mass transfer in enzyme reactors: Steady state analysis of mass transfer and biochemical reaction in enzyme reaction.

Module V: Bioprocess Design

Physical parameters, reactor operational stability, Immobilized cells.

Module VI: Challenges and future trends

Enzyme catalysis in organic media; catalytic antibodies and non protein biomolecules as catalysts, biocatalysts from extreme thermophilic and hyper thermophilic Archae and Bacteria.

CHEMICAL ENGINEERING PRINCIPLES

Course Code: BTE2404

Credit Units: 02

Course Objective:

The knowledge gained through chemical reaction engineering and material and energy balances will help the students to understand the tools and techniques of biotechnology.

Course Contents:

Module I: Material and Energy Balances

Units and dimensions, Dimensional analysis; Simple problems on material balance calculations involving unit processes and reactive systems; Available electron balances.

Basic energy concepts -enthalpy changes in chemical/biochemical reactions and in non-reactive processes, Energy balance calculations, Use of Steam tables; Heat of reaction and energy balance for microbial processes.

Module II: Chemical reaction engineering

Kinetics of homogenous reactions: Concepts of reaction rate, order of reaction and molecularity, Analysis of batch reactors for kinetic interpretation of data and isothermal reactor design for single and multiple reactions, Design equations for CSTR and plug flow reactors.

Module III: Instrumentation and process control

Principles of measurement: error, accuracy and sensitivity; Measurement of flow, pressure, temperature, level, pH, viscosity and chemical composition.

Basic concepts of feedback control, control loop and its elements, Dynamic behaviour of first, second and higher order physical systems, controller hardware, choice of controllers and settings. Introduction to advanced control systems: feed forward, cascade and ratio control.

METHODS AND INSTRUMENTATION IN BIOTECHNOLOGY

Course Code: BTE2405

Credit Units: 03

Course Objective:

The students will be exposed to techniques and instruments that are used in biotech industries.

Course Contents:

Module I: Electrophoresis

Gel electrophoresis, SDS-PAGE, isoelectric focusing, two-dimensional electrophoresis, immuno electrophoresis, capillary electrophoresis

Module II: Chromatography

Paper, TLC, gel filtration, ion-exchange chromatography, affinity chromatography, HPLC and GLC

Module III: Spectroscopy

UV and visible spectroscopy, Infrared and Atomic absorption spectroscopy, fluorescence spectroscopy, Mass Spectrometry, MALDITOF, Nuclear Magnetic Resonance and Electron Spin Resonance spectroscopy,

Module IV

X-ray diffraction and X-ray Crystallography

MICROBIOLOGY LAB

Course Code: BTE2406

Credit Units: 02

Course Contents:

1. Preparation of solid and liquid media.
2. Isolation and maintenance of organisms by plating, streaking and serial dilution.
3. Preparation of slant cultures.
4. Growth curve measurement of bacterial population by turbidometry.
5. Measurement of bacterial population by dilution method.
6. Effect of temperature, pH, carbon and nitrogen sources on growth of bacteria.
7. Microscopic examination of bacteria by gram staining.
8. Endospore staining.
9. Capsule staining.
10. Isolation and identification of Rhizobium from root nodules.

Examination Scheme:

ENZYMOLGY AND ENZYME TECHNOLOGY LAB

Course Code: BTE2408

Credit Units: 01

Course Objective:

The laboratory will help the students to isolate enzymes from different sources, enzyme assays and studying their kinetic parameters which have immense importance in industrial processes.

Course Contents:

Module I

Isolation of enzymes from plant and microbial sources.

Module II

Enzyme assay; activity and specific activity – determination of amylase, nitrate reductase, cellulase, protease.

Module III

Purification of Enzyme by ammonium sulphate fractionation.

Module IV

Enzyme Kinetics: Effect of varying substrate concentration on enzyme activity, determination of Michaelis-Menten constant (K_m) and Maximum Velocity (V_{max}) using Lineweaver-Burk plot.

Module V

Effect of Temperature and pH on enzyme activity.

Module VI

Enzyme immobilization

Examination Scheme:

METHODS AND INSTRUMENTATION IN BIOTECHNOLOGY LAB

Course Code: BTE2409

Credit Units: 01

Course Contents:

Module I

Cell disruption techniques

Module II

Centrifugation – low speed and high speed.

Module III

Spectrophotometer techniques

Module IV

Chromatography –Paper Chromatography and Thin Layer Chromatography

Module V

Electrophoresis –SDS Page and Agarose gel electrophoresis.

MARINE BIOTECHNOLOGY

Course Code: BTE2410

Credit Units: 02

Course Objective

The students will be exposed to basic concepts related to marine life. Also the subject deals with the scope and application of marine biota in biotechnology.

Course Contents

Module I

The marine ecosystem and its functioning: intertidal, estuarine, salt marsh, mangrove, coral reef, coastal & deep sea ecosystems. Marine viruses, Bacteria and their significance; Hydrothermal vents; Marine Biodiversity: defining, measurement and conservation strategies.

Module II

Nutrients cycling: carbon, nitrogen sulphur & phosphorus.

Global climate changes: impact on species diversity & productivity, oceans as a carbon sink, effects on corals bleaching. Biological rhythms.

Module III

Important Marine Products: Bioactive compounds from marine organisms, GFP, RFP characteristics and their applications; Green mussel adhesive protein, Chitosan and its applications

Module IV

Probiotic bacteria and their importance in aquaculture; Vaccines in aquaculture: Fish, shrimps & prawns; Marine food analysis-spoilage, quality control; Techniques for identification of bacterial & viral pathogens in aquaculture and Remedies.

Examination Scheme:

VACCINE DEVELOPMENT

Course Code: BTE2411

Credit Units: 02

Course Objective

The students will be exposed to basic concepts related with development of vaccines.

Course Contents

Module I

History of Vaccine Development

Definition of Vaccine

Evolution of Vaccines

Module II

Process development for vaccines

Manufacturing of vaccines

Various aspects of vaccines, process development and manufacturing

Module III

Clinical development of vaccines

Clinical end-point: Evolution of vaccines

General specifications and pharmaceuticals release criteria for the existing vaccines

Cold chain management of vaccines

Current vaccine research

Examination Scheme:

Components	H/S	A	CT	EE
Weightage (%)	10	5	15	70

AGRICULTURAL BIOTECHNOLOGY

Course code: BTE2412

Credit Units: 02

Course Objective:

This course aims to facilitate the students to meet the following learning objectives.

By the end of this course the student should be able to:

- Describe the history of crop development over the centuries by natural processes, human selection and breeding
- Explain the role of mutagenesis-based plant breeding in green revolution, and the consequences of green revolution including its impacts on global health and environment
- Understand and clearly describe the science underlying molecular breeding and marker assisted selection
- Understand and clearly describe the science underlying genetic engineering and GM crops (with focus on *Agrobacterium*-mediated and particle-bombardment methods)
- Be able to enumerate biological risks (health and environmental) of GM crops, and explain the principles & methodologies of risk assessment
- Examine the causes and effects of the public's concerns about GM technology
- Be aware of the regulatory and legal system to test and monitor release and use of GM crops.

Course Contents:

Module-I: History of crop improvement, and pre-genetic engineering plant biotechnology:

Traditional breeding; Mutagenesis-based breeding; Role of tissue culture in crop improvement, Molecular breeding and marker assisted selection.

Module-II: Genetic engineering of plants: *Agrobacterium* mediated transformation; Particle bombardment mediated transformation; Limitations of conventional transgenics and solutions offered by gene targeting and gene editing technologies.

Module-III: GM crops and the society: Biological (Environmental and Health) risks of GM; Risk assessment; Concerns and fears about GM technology; Regulatory and Legal system to test and monitor GM crops

Examination Scheme:

NATURAL PRODUCTS AND MEDICINAL CHEMISTRY

Course Code: BTE2413

Credit Units: 02

Course Objective: The students will be exposed to basic concepts related with natural products and medicinal chemistry and its biological application.

Course Contents:

Natural Products

Module I

Introductory bio-organic chemistry: enzymatic transformations, co-factors, examples from carbohydrate chemistry.

Module II

Isoprenoids, Terpenes and Flavonoids: biosynthetic origins of the group, survey of classes, electron-deficient rearrangements, chemical synthesis, steroids; Alkaloids: shikimate pathway to aromatic amino acids, pyridoxyl phosphate mediated transformations in alkaloid biosynthesis

Medicinal Chemistry

Module III

Drug processing in mammals

The molecular basis of drug action

The multiphore conceptualization of drugs

Messenger and non-messenger target systems

Examination Scheme:

Components	H/S	A	CT	EE
Weightage (%)	10	5	15	70

STEM CELL TECHNOLOGY

Course Code: BTE2414

Credit Units: 02

Course Objective: The objective of this paper is to familiarize the students with stem cell technology and its applications for betterment of the society. The course is designed to give a broad view of mammalian stem cells, reviewing where they are found in the body, the different types and how they are cultured. The topics will cover the basic biology of these stem cells as well as bioengineering and application of these stem cells to potential treatments of human diseases.

Course Contents:

Module I

Definition, properties, proliferation, culture of stem cells, medical applications of stem cells, ethical and legal issues in use of stem cells.

Module II

Stem Cell biology and therapy, types embryonic stem cell, Adult stem cell, Stem Cell Biology and Therapy, Embryonic Stem Cells, culture and the potential benefits of stem cell technology

Module III

Gene Therapy: Introduction, History and evolution of Gene therapy, optimal disease targets, Failures and successes with gene therapy and future prospects, Genetic Perspectives for Gene Therapy, **Gene Delivery** methods: Viral vectors and Non-viral Vectors

Module IV

Regulatory and Ethical Considerations of stem cell and Gene Therapy, Assessing Human Stem Cell Safety, Use of Genetically Modified Stem Cells in Experimental Gene Therapies.

TERM PAPER

Course Code: BTE2431

Credit Units: 02

METHODOLOGY

A term (or research) paper is primarily a record of intelligent reading in several sources on a particular subject.

The students will choose the topic at the beginning of the session in consultation with the faculty assigned. The progress of the paper will be monitored regularly by the faculty. At the end of the semester the detailed paper on the topic will be submitted to the faculty assigned. The evaluation will be done by Board of examiners comprising of the faculties.

GUIDELINES FOR TERM PAPER

The procedure for writing a term paper may consists of the following steps:

- Choosing a subject
- Finding sources of materials
- Collecting the notes
- Outlining the paper
- Writing the first draft
- Editing & preparing the final paper

1. Choosing a Subject

The subject chosen should not be too general.

2. Finding Sources of materials

- d) The material sources should be not more than 10 years old unless the nature of the paper is such that it involves examining older writings from a historical point of view.
- e) Begin by making a list of subject-headings under which you might expect the subject to be listed.
- f) The sources could be books and magazines articles, news stories, periodicals, scientific journals etc.

3. Collecting the notes

Skim through sources, locating the useful material, then make good notes of it, including quotes and information for footnotes.

- d) Get facts, not just opinions. Compare the facts with author's conclusion.
- e) In research studies, notice the methods and procedures, results & conclusions.
- f) Check cross references.

4. Outlining the paper

- c) Review notes to find main sub-divisions of the subject.
- d) Sort the collected material again under each main division to find sub-sections for outline so that it begins to look more coherent and takes on a definite structure. If it does not, try going back and sorting again for main divisions, to see if another general pattern is possible.

5. Writing the first draft

Write the paper around the outline, being sure that you indicate in the first part of the paper what its purpose is. You may follow the following:

- a) statement of purpose
- b) main body of the paper
- c) statement of summary and conclusion

Avoid short, bumpy sentences and long straggling sentences with more than one main ideas.

6. Editing & Preparing the final Paper

- g) Before writing a term paper, you should ensure you have a question which you attempt to answer in your paper. This question should be kept in mind throughout the paper. Include only information/

details/ analyses of relevance to the question at hand. Sometimes, the relevance of a particular section may be clear to you but not to your readers. To avoid this, ensure you briefly explain the relevance of every section.

- h) Read the paper to ensure that the language is not awkward, and that it "flows" properly.
- i) Check for proper spelling, phrasing and sentence construction.
- j) Check for proper form on footnotes, quotes, and punctuation.
- k) Check to see that quotations serve one of the following purposes:
 - (iv) Show evidence of what an author has said.
 - (v) Avoid misrepresentation through restatement.
 - (vi) Save unnecessary writing when ideas have been well expressed by the original author.
- l) Check for proper form on tables and graphs. Be certain that any table or graph is self-explanatory.

Term papers should be composed of the following sections:

- Title page
- Table of contents
- Introduction
- Review
- Discussion & Conclusion
- References
- Appendix

Generally, the introduction, discussion, conclusion and bibliography part should account for a third of the paper and the review part should be two thirds of the paper.

Discussion

The discussion section either follows the results or may alternatively be integrated in the results section. The section should consist of a discussion of the results of the study focusing on the question posed in the research paper.

Conclusion

The conclusion is often thought of as the easiest part of the paper but should by no means be disregarded. There are a number of key components which should not be omitted. These include:

- e) summary of question posed
- f) summary of findings
- g) summary of main limitations of the study at hand
- h) details of possibilities for related future research

References

From the very beginning of a research project, you should be careful to note all details of articles gathered.

The bibliography should contain ALL references included in the paper. References not included in the text in any form should NOT be included in the bibliography.

The key to a good bibliography is consistency. Choose a particular convention and stick to this.

Bibliographical conventions

Monographs

Crystal, D. (2001), Language and the internet. Cambridge: Cambridge University Press.

Edited Volumes

PROJECT

Course Code: BTE2432

Credit Units: 02

Objectives:

The aim of the project is to provide the students with an opportunity to further their intellectual and personal development in the chosen field by undertaking a significant practical unit of activity. The project can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

Chapter Scheme and distribution of marks:

Chapter 1: Introduction – 10 marks

Chapter 2: Conceptual Framework/ National/International Scenario – 25 marks

Chapter 3: Presentation, Analysis & Findings -- 25 marks

Chapter 4: Conclusion & Recommendations -- 10 marks

Chapter 5: Bibliography -- 05 marks

Project Report	Power Point Presentation & Viva
75 marks	25 marks

Components of a Project Report

The outcome of Project Work is the Project Report. A project report should have the following components:

1) Cover Page: This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.

2) Acknowledgement: Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.

3) Table of Content: Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.

4) Body of the Report: The body of the report should have these four logical divisions

a) **Introduction:** This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, and method of analysis), Limitations of the Study, and Chapter Planning.

b) **Conceptual Framework / National and International Scenario:** (relating to the topic of the Project).

c) **Presentation of Data, Analysis and Findings:** (using the tools and techniques mentioned in the methodology).

d) **Conclusion and Recommendations:** In this section, the concluding observations based on the main findings and suggestions are to be provided.

5) Bibliography or References: This section will include the list of books and articles which have been used in the project work, and in writing a project report.

6) Annexures: Questionnaires (if any), relevant reports, etc.

(The main text of the Project should normally be in the range of 5000 words. However, there may be annexure in addition to the main text)

The Steps of a Project Report

Step I: Selection of the topic for the project by taking following points into consideration:

- Suitability of the topic.
- Relevance of the topic
- Time available at the disposal.
- Feasibility of data collection within the given time limit.
- Challenges involved in the data collection (time & cost involved in the data collection, possibility of getting responses, etc.)

Step II : Finalisation of the Topic and preparation of Project Proposal in consultation with the Supervisor.

Step III : Collection of information and data relating to the topic and analysis of the same.

Step IV : Writing the report dividing it into suitable chapters, viz.,

Chapter 1: Introduction,

Chapter 2: Conceptual Framework / National & International Scenario,

Chapter 3: Analysis & Findings

Chapter 4: Conclusion and Recommendations.

Step V : The following documents are to be attached with the Final Project Report.

1) Approval letter from the supervisor (Annexure-IA)

2) Student's declaration (Annexure-IB)

3) Certificate from the Competent Authority of the Organisation / Institution, if the student undertakes the Project Work in any Organisation / Institution.

Guidelines for Evaluation:

- Each of the students has to undertake a Project individually under the supervision of a teacher and to submit the same following the guidelines stated below.
- Language of Project Report and Viva-Voce Examination may be English. The Project Report must be typed and hard bound.
- Failure to submit the Project Report or failure to appear at the Viva-voce Examination will be treated as "Absent" in the Examination. He /she has to submit the Project Report and appear at the Viva-Voce Examination in the subsequent years (within the time period as per University Rules).
- No marks will be allotted on the Project Report unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her Project Report.
- Evaluation of the Project Work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate.

WORKSHOP / CERTIFICATION

Course Code: BTE2433

Credit Units: 02

Objectives

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two way. The trainer has to make sure that the aspect covered are practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

Major Themes for Workshop

The workshop may be conducted on any of the following major themes:

Accounting

Finance

Human Resources

Marketing

Economics

Operations

Supply Chain Management

These themes are merely indicative and other recent and relevant topics of study may be included.

Guidelines for Workshop

The procedure for earning credits from workshop consists of the following steps:

Relevant study material and references will be provided by the trainer in advance.

The participants are expected to explore the topic in advance and take active part in the discussions held

Attending and Participating in all activities of the workshop

Group Activities have to be undertaken by students as guided by the trainer.

Evaluation of workshop activities would be done through test and quiz at the end of the workshop.

Submitting a write up of at least 500 words about the learning outcome from the workshop.

Methodology

The methodology followed at the workshop could be based on any one or more of the following methods:

Case Study

Business Game

Simulation

Group Activity

Role Play

Business Planning

Quiz

Evaluation Scheme:

Attendance	Active Participation	Multiple Choice Questions/ Quiz	Solving the case/ Assignment/ Write up	Total
10	30	30	30	100

MOLECULAR BIOLOGY

Course Code: BTE2501

Credit Units: 03

Course Objective:

The aim is to extend understanding of the molecular mechanisms via which genetic information is stored, expressed and transmitted among generations.

Course Contents:

Module I: DNA Replication and repair

Mechanism of Prokaryotic and Eukaryotic DNA replication, Enzymes and accessory proteins involved in DNA replication, DNA repair Mechanism.

Module II: Transcription

Prokaryotic transcription, Eukaryotic transcription, RNA polymerase, General and specific transcription factors, Regulatory elements.

Module III: Modifications in RNA

5'-cap formation, transcription termination, 3'-end processing and polyadenylation, Splicing, Editing, Nuclear export of mRNA and mRNA stability.

Module IV: Translation

Prokaryotic and Eukaryotic translation, the translation Machinery; Mechanisms of initiation, elongation and termination, regulation of translation, co- and post-translational modifications of proteins.

Module V: Regulation of Gene Expression in prokaryotic and eukaryotic systems

Lac operon, Ara operon, regulation in Eukaryotes

Module VI: Antisense and Ribozyme technology

Molecular mechanism of antisense molecules, inhibition of splicing, polyadenylation and translation, disruption of RNA structure and capping, Biochemistry of Ribozyme; Hammerhead, hairpin and other ribozymes, strategies for designing ribozymes, applications of antisense and ribozyme technologies.

BIOINFORMATICS

Course Code: BTE2504

Credit Units: 03

Course Objective:

The course involves a basic understanding of computer and bioinformatics tools and skills in the field of biology.

Course Contents:

Module I: Introduction and overview

The NCBI data model; sequence databases, sequence retrieval, sequence file formats, submitting DNA and protein sequences; classification of biological databases

Module II: Biological Databases

Sequence databases (EMBL, GenBank, DDBJ, -UNIPROT, PIR, TrEMBL), Protein family/domain databases (PROSITE, PRINTS, Pfam, BLOCK, etc), Cluster databases-An Introduction, Specialised databases (KEGG, etc), Database technologies (Flat-file), Structural databases (PDB)

Module III: Sequence alignment

Global and local alignments, statistical significance of alignments, scoring matrices and gap penalties, position specific scoring matrices, programs and methods for Pairwise and multiple alignment, pattern searching programs, family and superfamily representation - Pfam, hidden Markov models

Module IV: Phylogenetic prediction

Phylogenetic analysis, Evolutionary Models, Character and distance based Tree building methods; tree evaluation, phylogenetic analysis, parsimony, maximum likelihood trees; Trees-splits and metrics on trees, tree interpretation, Distance – additive, ultrametric and nonadditive distances.

Module V: Predictive methods using DNA and protein sequences

ESTs: construction, databases, clustering, gene discovery and identification, and functional classification. Protein identification tools, physical properties, motifs and patterns, structure, folding classes, structure classification databases – Scop and Cath;

Module VI: Structure databases

Structural databases - PDB and MMDB, structure file formats, Secondary and tertiary structure prediction methods in proteins, Internal and external co-ordinate system, software to visualize secondary and tertiary structural information in protein.

Module VII: Comparative genome analysis

Reconstruction of metabolic pathways; Genome analysis, genome anatomy, genome rearrangements with inversions, signed inversions, gene identification, gene expression, expression analysis, gene identification and functional classification.

SUMMER INTERNSHIP EVALUATION-I

Course Code: BTE2535

Credit Units: 03

GUIDELINES FOR PROJECT FILE

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critiqued by the faculty guide and corrected by the student at each stage.

The File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation.

Methodology

The students will be sent to various industries and institutes where they will undergo short term training. After the completion of the training the students will be required to submit project report which shall then be evaluated by two internal examiners. The students will then have to appear for a Viva Voce examination to be conducted by an external evaluator at the end of the semester.

In general, the File should be comprehensive and include

- A short account of the activities that were undertaken as part of the project;
- A statement about the extent to which the project has achieved its stated goals.
- A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;
- Any activities planned but not yet completed as part of the project, or as a future initiative directly resulting from the project;
- Any problems that have arisen that may be useful to document for future reference.

Report Layout

The report should contain the following components:

➤ Title or Cover Page

The title page should contain the following information: Project Title; Student's Name; Course; Year; Supervisor's Name.

➤ Acknowledgements (optional)

Acknowledgment to any advisory or financial assistance received in the course of work may be given.

➤ Abstract

A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project

➤ Table of Contents

Titles and subtitles are to correspond exactly with those in the text.

➤ Introduction

Here a brief introduction to the problem that is central to the project and an outline of the structure of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

➤ **Materials and Methods**

This section should aim at experimental designs, materials used. Methodology should be mentioned in details including modifications if any.

➤ **Results and Discussion**

Present results, discuss and compare these with those from other workers, etc. In writing these section, emphasis should be given on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary never write in "point" form.

➤ **Conclusion**

A conclusion should be the final section in which the outcome of the work is mentioned briefly.

➤ **Future prospects**

➤ **Appendices**

The Appendix contains material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

➤ **References / Bibliography**

This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

Examples

For research article

Voravuthikunchai SP, Lortheeranuwat A, Ninrprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichia coli* O157: H7. *Clin Microbiol Infec*, **8** (suppl 1): 116–117.

For book

Kowalski, M. (1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), **7**: 63-67

ASSESSMENT OF THE PROJECT FILE

Essentially, marking will be based on the following criteria: the quality of the report, the technical merit of the project and the project execution.

Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project.

Project execution is concerned with assessing how much work has been put in.

The File should fulfill the following *assessment objectives*:

Range of Research Methods used to obtain information

Execution of Research

Data Analysis

Analyse Quantitative/ Qualitative information

Control Quality

BIOFUEL AND GREEN TECHNOLOGY

Course Code: BTE2509

Credit Units: 02

Course Objective:

This course will acquaint the students with bioenergy resources, their properties, preparation, processing along with the details of equipments utilized for the purpose.

Course Contents:

Module I: Biomass Sources, Characteristics & Preparation: Biomass Sources and Classification

Chemical composition and properties of different biomass materials and bio-fuels – Sugar cane molasses for fermentation ethanol; Sources and processing of oils and fats for liquid fuels- Energy plantations - Preparation of woody biomass; Drying, Storage and Handling of Biomass.

Module II: Biogas Technology

Feedstock for biogas production, biodegradable organic matter, Operating parameters for biogas production, Dry and wet fermentation

Module III: Bio-Ethanol and Bio-Diesel Technology

Production of Fuel Ethanol by Fermentation of Sugars. Trans-esterification of Oils to Produce Bio-Diesel.

•

Module IV: Pyrolysis and Gasification of Biomass

Thermo-chemical conversion of ligno-cellulose biomass - Pyrolysis of biomass, Thermo-chemical gasification principles

Module V: Combustion of Biomass and Cogeneration Systems

Combustion of Woody Biomass, Cogeneration in Biomass Processing Industries. Use of biogases for cogeneration.

Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

STEM CELLS AND TISSUE ENGINEERING

Course Code: BTE2510

Credit Units: 02

Course Objective:

The course is designed to give a broad view of mammalian stem cells, reviewing where they are found in the body, different types and how they are cultured. The topics will cover the basic biology of these stem cells as well as bioengineering and application of these stem cells to potential treatments of human diseases.

Course Contents:

Module I

Stem Cell biology; types; embryonic stem cell, Adult stem cell and potential benefits of stem cell technology, Bone marrow transplants, Immunotherapy, Autoimmune Diseases and Promise of Stem Cell-Based Therapies, Stem Cells and Diabetes, Stem Cells and heart Repair

Module II

Gene Therapy: Introduction, History and evolution of Gene therapy, optimal disease targets, Failures and successes of gene therapy and future prospects; Gene Therapy and Immune System: Genetic Immunization, Innate and Acquired Immune Response to Gene Therapy

Module III

Gene Delivery methods; Viral vectors: Adenoviral, Adeno-associated virus (AAV), Retroviral, Lentiviral, Herpes Virus; Non-viral Vectors and Physical Methods & Combinatorial methods. Genetic perspectives for Gene Therapy, Gene Therapy for Cancer and Vascular Disorders, Nervous System.

Module IV

Regulatory and Ethical Considerations of Cell and Gene Therapy, Assessing Human Stem Cell Safety, Use of Genetically Modified Stem Cells in Experimental Gene Therapies.

JAVA-I

Course Code: BTE2511

Credit Units: 02

Course Objective:

The objective is to introduce students to a modern programming language and help them gain sufficient fluency to undertake research projects with a programming component; to lay the foundations for more advanced study of object-oriented languages

Emphasis is on to understand the basic concepts of programming; to learn the syntax and semantics of Java; to be able to use a program development environment

Course Contents:

Module I

Introduction to Java - Features, Inheritance, Strings, Packages, Interfaces; Multi- Threading, Applet Programming: AWT- Components, Menus, Layout manager, etc., Event Handling,, Java Packages - java.util, -java.io; exception handling,

Module II

Collection API - Arrays, Collection Interfaces, Concrete Collections, The Collections Framework, Legacy Collections

Module III

Swing

Module IV

- JDBC
- Introduction to Client Server Application
- Java Drivers
- java.sql Package
- Installing and setting up JDBC
- Basic JDBC Programming concepts
- Populating a database
- Executing Queries
- Scrollable and Updateable Result Sets

Examination Scheme:

TERM PAPER

Course Code: BTE2531

Credit Units: 02

METHODOLOGY

A term (or research) paper is primarily a record of intelligent reading in several sources on a particular subject.

The students will choose the topic at the beginning of the session in consultation with the faculty assigned. The progress of the paper will be monitored regularly by the faculty. At the end of the semester the detailed paper on the topic will be submitted to the faculty assigned. The evaluation will be done by Board of examiners comprising of the faculties.

GUIDELINES FOR TERM PAPER

The procedure for writing a term paper may consists of the following steps:

- Choosing a subject
- Finding sources of materials
- Collecting the notes
- Outlining the paper
- Writing the first draft
- Editing & preparing the final paper

1. Choosing a Subject

The subject chosen should not be too general.

2. Finding Sources of materials

- g) The material sources should be not more than 10 years old unless the nature of the paper is such that it involves examining older writings from a historical point of view.
- h) Begin by making a list of subject-headings under which you might expect the subject to be listed.
- i) The sources could be books and magazines articles, news stories, periodicals, scientific journals etc.

3. Collecting the notes

Skim through sources, locating the useful material, then make good notes of it, including quotes and information for footnotes.

- g) Get facts, not just opinions. Compare the facts with author's conclusion.
- h) In research studies, notice the methods and procedures, results & conclusions.
- i) Check cross references.

4. Outlining the paper

- e) Review notes to find main sub-divisions of the subject.
- f) Sort the collected material again under each main division to find sub-sections for outline so that it begins to look more coherent and takes on a definite structure. If it does not, try going back and sorting again for main divisions, to see if another general pattern is possible.

5. Writing the first draft

Write the paper around the outline, being sure that you indicate in the first part of the paper what its purpose is. You may follow the following:

- a) statement of purpose
- b) main body of the paper
- c) statement of summary and conclusion

Avoid short, bumpy sentences and long straggling sentences with more than one main ideas.

6. Editing & Preparing the final Paper

- m) Before writing a term paper, you should ensure you have a question which you attempt to answer in your paper. This question should be kept in mind throughout the paper. Include only information details/ analyses of relevance to the question at hand. Sometimes, the relevance of a particular section

may be clear to you but not to your readers. To avoid this, ensure you briefly explain the relevance of every section.

- n) Read the paper to ensure that the language is not awkward, and that it "flows" properly.
- o) Check for proper spelling, phrasing and sentence construction.
- p) Check for proper form on footnotes, quotes, and punctuation.
- q) Check to see that quotations serve one of the following purposes:
 - (vii) Show evidence of what an author has said.
 - (viii) Avoid misrepresentation through restatement.
 - (ix) Save unnecessary writing when ideas have been well expressed by the original author.
- r) Check for proper form on tables and graphs. Be certain that any table or graph is self-explanatory.

Term papers should be composed of the following sections:

- Title page
- Table of contents
- Introduction
- Review
- Discussion & Conclusion
- References
- Appendix

Generally, the introduction, discussion, conclusion and bibliography part should account for a third of the paper and the review part should be two thirds of the paper.

Discussion

The discussion section either follows the results or may alternatively be integrated in the results section. The section should consist of a discussion of the results of the study focusing on the question posed in the research paper.

Conclusion

The conclusion is often thought of as the easiest part of the paper but should by no means be disregarded. There are a number of key components which should not be omitted. These include:

- i) summary of question posed
- j) summary of findings
- k) summary of main limitations of the study at hand
- l) details of possibilities for related future research

References

From the very beginning of a research project, you should be careful to note all details of articles gathered.

The bibliography should contain ALL references included in the paper. References not included in the text in any form should NOT be included in the bibliography.

The key to a good bibliography is consistency. Choose a particular convention and stick to this.

Bibliographical conventions

PROJECT

Course Code: BTE2532

Credit Units: 02

Objectives:

The aim of the project is to provide the students with an opportunity to further their intellectual and personal development in the chosen field by undertaking a significant practical unit of activity. The project can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

Chapter Scheme and distribution of marks:

Chapter 1: Introduction – 10 marks

Chapter 2: Conceptual Framework/ National/International Scenario – 25 marks

Chapter 3: Presentation, Analysis & Findings -- 25 marks

Chapter 4: Conclusion & Recommendations -- 10 marks

Chapter 5: Bibliography -- 05 marks

Project Report	Power Point Presentation & Viva
75 marks	25 marks

Components of a Project Report

The outcome of Project Work is the Project Report. A project report should have the following components:

1) Cover Page: This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.

2) Acknowledgement: Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.

3) Table of Content: Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.

4) Body of the Report: The body of the report should have these four logical divisions

a) **Introduction:** This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, and method of analysis), Limitations of the Study, and Chapter Planning.

b) **Conceptual Framework / National and International Scenario:** (relating to the topic of the Project).

c) **Presentation of Data, Analysis and Findings:** (using the tools and techniques mentioned in the methodology).

d) **Conclusion and Recommendations:** In this section, the concluding observations based on the main findings and suggestions are to be provided.

5) Bibliography or References: This section will include the list of books and articles which have been used in the project work, and in writing a project report.

6) Annexures: Questionnaires (if any), relevant reports, etc.

(The main text of the Project should normally be in the range of 5000 words. However, there may be annexure in addition to the main text)

The Steps of a Project Report

Step I: Selection of the topic for the project by taking following points into consideration:

- Suitability of the topic.

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- Relevance of the topic
- Time available at the disposal.
- Feasibility of data collection within the given time limit.
- Challenges involved in the data collection (time & cost involved in the data collection, possibility of getting responses, etc.)

Step II : Finalisation of the Topic and preparation of Project Proposal in consultation with the Supervisor.

Step III : Collection of information and data relating to the topic and analysis of the same.

Step IV : Writing the report dividing it into suitable chapters, viz.,
 Chapter 1: Introduction,
 Chapter 2: Conceptual Framework / National & International Scenario,
 Chapter 3: Analysis & Findings
 Chapter 4: Conclusion and Recommendations.

Step V : The following documents are to be attached with the Final Project Report.

- 1) Approval letter from the supervisor (Annexure-IA)
- 2) Student's declaration (Annexure-IB)
- 3) Certificate from the Competent Authority of the Organisation / Institution, if the student undertakes the Project Work in any Organisation / Institution.

Guidelines for Evaluation:

- Each of the students has to undertake a Project individually under the supervision of a teacher and to submit the same following the guidelines stated below.
- Language of Project Report and Viva-Voce Examination may be English. The Project Report must be typed and hard bound.
- Failure to submit the Project Report or failure to appear at the Viva-voce Examination will be treated as "Absent" in the Examination. He /she has to submit the Project Report and appear at the Viva-Voce Examination in the subsequent years (within the time period as per University Rules).
- No marks will be allotted on the Project Report unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her Project Report.
- Evaluation of the Project Work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate.

WORKSHOP / CERTIFICATION

Course Code: BTE2533

Credit Units: 02

Objectives

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two way. The trainer has to make sure that the aspect covered are practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

Major Themes for Workshop

The workshop may be conducted on any of the following major themes:

Accounting

Finance

Human Resources

Marketing

Economics

Operations

Supply Chain Management

These themes are merely indicative and other recent and relevant topics of study may be included.

Guidelines for Workshop

The procedure for earning credits from workshop consists of the following steps:

Relevant study material and references will be provided by the trainer in advance.

The participants are expected to explore the topic in advance and take active part in the discussions held

Attending and Participating in all activities of the workshop

Group Activities have to be undertaken by students as guided by the trainer.

Evaluation of workshop activities would be done through test and quiz at the end of the workshop.

Submitting a write up of at least 500 words about the learning outcome from the workshop.

Methodology

The methodology followed at the workshop could be based on any one or more of the following methods:

Case Study

Business Game

Simulation

Group Activity

Role Play

Business Planning

Quiz

Evaluation Scheme:

Attendance	Active Participation	Multiple Choice Questions/ Quiz	Solving the case/ Assignment/ Write up	Total
10	30	30	30	100

RECOMBINANT DNA TECHNOLOGY

Course Code: BTE2601

Credit Units: 03

Course Objective:

A complete understanding of molecular techniques can be obtained through the course. The successful application of biotechnology largely depends on these advanced molecular techniques.

Course Contents:

Module I: Enzymes used in RDT

Restriction endonuclease, methyltransferase, ligase, polymerase, kinase, phosphatase, nuclease, transferase, reverse transcriptase.

Module II: Cloning vectors

Plasmids, bacteriophages (Lambda and M13), phagemids, cosmids, artificial chromosomes (YAC, BAC). expression vectors (Bacteria and yeast), vector engineering (fusion tags, antibiotic markers), codon optimization, host engineering

Module III: Blotting techniques and hybridization

Southern, Northern and Western blotting techniques. Radioactive and non-radioactive probes.

Module IV: Nucleic acid amplification and its applications

Principles of PCR, designing of primers

Module V: Cloning Techniques

Basic cloning experiment: Design of cloning strategy and stepwise experimental procedure, Complementation, colony and plaque hybridization, restriction, PCR, plus-minus screening, immunoscreening.

Module VI: DNA Libraries

Purpose of constructing DNA libraries. Construction of cDNA and genomic libraries.

Module VII: Sequencing of DNA

DNA sequencing (Maxam Gilbert, Sanger's and automated), protein engineering.

Examination Scheme:

BIOPROCESS TECHNOLOGY

Course Code: BTE2602

Credit Units: 03

Course Objective:

The objective of the course is to apply the principles of biochemical engineering in large scale cultivation of microorganism for production of important products.

Course Contents:

Module I

Advantage of bioprocess over chemical process. Basic principle in bioprocess technology. Media formulation, Cell culture techniques; Inoculum development and aseptic transfers. Different types of pumps, valves, and line materials, piping conventions etc. used in Biochemical Process

Module II

Process technology for the production of primary metabolites, eg. biomass, ethanol, acetone-butanol, citric acid, amino acids, polysaccharides and plastics.

Ethanol: production by batch, continuous and cell recycle adopted by various technologies practiced in Indian distilleries using molasses and grains. Computation of fermentation efficiency, distillation efficiency and overall efficiency of ethanol production, recovery, uses, glucose effect etc. Power alcohol – definition, uses, merits and demerits of various technologies for its production.

Amino Acid: Genetic Control of metabolic pathway.

Lysine: Indirect and direct fermentation – mechanism of ph of metabolic block in accumulation of L-lysine by inhibition and repression mechanism.

Biomass: Bakers and distillers yeast production using various raw materials, “bios” factors for growth, Crabtree effect, harvesting, different forms and uses.

What are mushroom, different forms of common mushroom production from agro based raw materials and uses. Biofertilizers, biocompost and biopesticides

Module III

Production of secondary metabolites – penicillin, cephalosporins, streptomycin, tetracycline etc. Metabolites from plant and animal cell culture

Penicillin: Classification, various penicillin as precursor and ‘R’ – side chain, penicillinase, 6-APA, penicillin production, harvest and recovery, uses of various forms etc.

Streptomycin: chemical structure, production, harvest and recovery, use by-product of streptomycin fermentation etc.

Tetracycline: chemical structure, production, harvest and recovery, use by-product of tetracycline fermentation etc.

Module IV

Microbial production of industrial enzymes – glucose isomerase, penicillin acylase, cellulase, amylase, lipase, protease etc.

IMMUNOLOGY AND IMMUNOTECHNOLOGY

Course Code: BTE2603

Credit Units: 03

Course Objective:

Role of antibody engineering in biomedical applications and the importance of immuno genetics in disease processes, tissue transplantation and immune regulation are some of the areas of attributes of this course which can help the students to understand the biotechnology related to human kind.

Course Contents:

Module I: Introduction

Phylogeny of Immune System, Innate and acquired immunity, clonal nature of Immune Response. Organization and structure of lymphoid organs Nature and Biology of antigens and super antigens Antibody structure and function; Types of immunity- innate, acquired, active and passive.

Module II: Major Histocompatibility

MHC, BCR and TCR, generation of antibody diversity, Complement system

Module III: Cells of the immune system

Hematopoiesis and differentiation, lymphocyte trafficking, B-Lymphocytes, T -Lymphocytes, macrophages, dendritic cells, natural killer, lymphokines and lymphokine activated killer cells, eosinophils, neutrophils and mast cells

Module IV: Regulation of immune response

Antigen processing and presentation, activation of B and T lymphocytes, cytokines and their role in immune regulation, T cell regulation and MHC restriction, immunological tolerance

Module V: Cell mediated toxicity

Mechanism of T cell and NK cell mediated lysis and macrophage mediated cytotoxicity.

Module VI: Hypersensitivity

Module VII: Autoimmunity

Module VIII: Tumor immunology, Immunity to infectious agents

Module IX: Transplantation Immunology

Module X: Synthetic vaccines

Vaccines: General consideration, idotype network hypothesis, Synthetic vaccines

Module XI: Hnmunological Techniques

Immuno diffusion, immuno-electrophoresis, ELISA, RIA, fluorescence activated cell sorter

Module XII: Hybridoma technology and its applications

Fusion of myeloma cells with lymphocytes

FUNDAMENTALS OF BIOCHEMICAL ENGINEERING

Course Code: BTE2604

Credit Units: 02

Course Objective:

The course material on the kinetics of microbial growth, substrate utilization and product formation etc. may help the students to understand the various principles involved in instrumentation and control of bioprocess.

Course Contents:

Module I

Kinetics of microbial growth, substrate utilization and product formation.

Module II

Sterilization of air and medium.

Module III

Batch, continuous, cell recycle and fed batch reactors; mass and energy balance in microbial processes, Bioreactor design, Different types of bioreactors, their parts and functions. Different types of valves.

Module IV

Mass transfer in Biological reactions; Scale-up principles; Instrumentation and control of bioprocesses.

Examination Scheme:

RECOMBINANT DNA TECHNOLOGY LAB

Course Code: BTE2605

Credit Units: 02

Course Objective:

The laboratory experiments in Recombinant DNA Technology would certainly help to comprehend the theoretical aspects of the subject.

Course Contents:

Module I

Study of cloning (GFP CLONING)

Module II

Study of PCR

Module III

Study of Southern hybridisation

Module IV

Study of RAPD

Module V

Site directed mutagenesis

Examination Scheme:

IA			EE

BIOPROCESS TECHNOLOGY LAB

Course Code: BTE2606

Credit Units: 02

Course Contents:

Module I

Isolation of industrially important micro organisms for microbial processes.

Module II

Determination of Thermal Death Point and Thermal death time of micro organisms for design of a sterilizer

Module III

Determination of growth curve of a supplied micro organism and also determine substrate degradation profile and to compute specific growth rate and growth yield from the data obtained.

Module IV

Comparative studies of ethanol production using different substrates.

Module V

Production of single cell protein

Module VI

Production and estimation of alkaline protease

Module VII

Sauer Krant fermentation

Module VIII

Use of alginate for cell immobilization

Examination Scheme:

IA			EE

IMMUNOLOGY AND IMMUNOTECHNOLOGY LAB

Course Code: BTE2607

Credit Units: 01

Course Contents:

Module I

Blood film preparation and identification of cells.

Module II

Identification of blood group.

Module III

Isolation of serum.

Module IV

Lymphoid organs and their microscopic organization.

Module V

WIDAL Test

Module VI

Radial Immuno Diffusion Test

Module VII

Ouchterlony Double diffusion Test

Module VIII: Elisa

DOT, SANDWICH

Module IX

Purification of IgG through affinity chromatography

Module X

Immunohistochemistry

PHARMACEUTICAL BIOTECHNOLOGY

Course Code: BTE2608

Credit Units: 02

Course Objective:

The main objectives are to cover representative pharmaceutical dosage forms, and general issues of formulation, production, quality requirements, validation and uses and to gain an understanding of the challenges associated with quality pharmaceutical manufacturing

Course Contents:

Module I

Introduction to Physical Pharmaceutics - Metrology and Calculations,

Module II

Molecular structure, properties and States of Matter, Solutions, Phase Equilibria, Micromeritic and Powder Rheology, Surface and Interfacial Phenomena, Dispersion Systems, Diffusion & Dissolution, Kinetics and drug stability, Viscosity & Rheology

Module III

Polymer Science and Applications, Formulations and Development, Packaging

Module IV

Introduction to Industrial Processing, Transport Phenomena (Fluid Flow, Heat Transfer and Mass Transfer)

Module V

Particulate Technology (Particle Size, Size reduction, Size Separation, Powder Flow and Compaction), Unit Operations (Mixing, Evaporation, Filtration, Centrifugation, Extraction, Distillation, and Drying)

Module VI

Materials of Pharmaceutical Plant Construction, Good Manufacturing Practice (GMP's) Guidelines

JAVA-II

Course Code: BTE2611

Credit Units: 02

Course Objective

The objective is to introduce students to a serverside programming language and help them gain sufficient fluency to undertake research projects with a programming component; to lay the foundations for study of web technologies and different tools used for the same.

Emphasis is on to understand the basic concepts of web programming; to learn the syntax and semantics of Servlet and JSP; to be able to use a server side program development environment

Course Contents

Module I

HTML and JavaScript, Creating and processing HTML forms

Module II

Java Servlets

Introduction to Server Side Application Development

Basics of Servlet Programming

Web Container

Session Tracking

Servlet Context

Module III: JSP

Advantage of JSP technology (Comparision with ASP / Servlet)

JSP Architecture, JSP Access Model

JSP Syntax Basic (Directions, Declarations, Expression, Scriptlets, Comments)

JSP Implicit Object, Object Scope

Synchronization Issue

Exception Handling

Session Management

Module IV: Java Network Programming

Connecting to a server

Implementing Servers in Java

URL Connections

Reading and Posting data

Security and the Network

Java Beans

TERM PAPER

Course Code: BTE2631

Credit Units: 02

METHODOLOGY

A term (or research) paper is primarily a record of intelligent reading in several sources on a particular subject.

The students will choose the topic at the beginning of the session in consultation with the faculty assigned. The progress of the paper will be monitored regularly by the faculty. At the end of the semester the detailed paper on the topic will be submitted to the faculty assigned. The evaluation will be done by Board of examiners comprising of the faculties.

GUIDELINES FOR TERM PAPER

The procedure for writing a term paper may consists of the following steps:

- Choosing a subject
- Finding sources of materials
- Collecting the notes
- Outlining the paper
- Writing the first draft
- Editing & preparing the final paper

1. Choosing a Subject

The subject chosen should not be too general.

2. Finding Sources of materials

- j) The material sources should be not more than 10 years old unless the nature of the paper is such that it involves examining older writings from a historical point of view.
- k) Begin by making a list of subject-headings under which you might expect the subject to be listed.
- l) The sources could be books and magazines articles, news stories, periodicals, scientific journals etc.

3. Collecting the notes

Skim through sources, locating the useful material, then make good notes of it, including quotes and information for footnotes.

- j) Get facts, not just opinions. Compare the facts with author's conclusion.
- k) In research studies, notice the methods and procedures, results & conclusions.
- l) Check cross references.

4. Outlining the paper

- g) Review notes to find main sub-divisions of the subject.
- h) Sort the collected material again under each main division to find sub-sections for outline so that it begins to look more coherent and takes on a definite structure. If it does not, try going back and sorting again for main divisions, to see if another general pattern is possible.

5. Writing the first draft

Write the paper around the outline, being sure that you indicate in the first part of the paper what its purpose is. You may follow the following:

- a) statement of purpose
- b) main body of the paper
- c) statement of summary and conclusion

Avoid short, bumpy sentences and long straggling sentences with more than one main ideas.

6. Editing & Preparing the final Paper

- s) Before writing a term paper, you should ensure you have a question which you attempt to answer in your paper. This question should be kept in mind throughout the paper. Include only information details/ analyses of relevance to the question at hand. Sometimes, the relevance of a particular section

may be clear to you but not to your readers. To avoid this, ensure you briefly explain the relevance of every section.

- t) Read the paper to ensure that the language is not awkward, and that it "flows" properly.
- u) Check for proper spelling, phrasing and sentence construction.
- v) Check for proper form on footnotes, quotes, and punctuation.
- w) Check to see that quotations serve one of the following purposes:
 - (x) Show evidence of what an author has said.
 - (xi) Avoid misrepresentation through restatement.
 - (xii) Save unnecessary writing when ideas have been well expressed by the original author.
- x) Check for proper form on tables and graphs. Be certain that any table or graph is self-explanatory.

Term papers should be composed of the following sections:

- Title page
- Table of contents
- Introduction
- Review
- Discussion & Conclusion
- References
- Appendix

Generally, the introduction, discussion, conclusion and bibliography part should account for a third of the paper and the review part should be two thirds of the paper.

Discussion

The discussion section either follows the results or may alternatively be integrated in the results section. The section should consist of a discussion of the results of the study focusing on the question posed in the research paper.

Conclusion

The conclusion is often thought of as the easiest part of the paper but should by no means be disregarded. There are a number of key components which should not be omitted. These include:

- m) summary of question posed
- n) summary of findings
- o) summary of main limitations of the study at hand
- p) details of possibilities for related future research

References

From the very beginning of a research project, you should be careful to note all details of articles gathered.

The bibliography should contain ALL references included in the paper. References not included in the text in any form should NOT be included in the bibliography.

The key to a good bibliography is consistency. Choose a particular convention and stick to this.

Bibliographical conventions

Monographs

Crystal, D. (2001), Language and the internet. Cambridge: Cambridge University Press.

Edited Volumes

Gass, S./Neu, J. (eds.) (1996), Speech acts across cultures. Challenges to communication in a second language. Berlin/ NY: Mouton de Gruyter.

[(eds.) is used when there is more than one editor; and (ed.) where there is only one editor. In German the abbreviation used is (Hrsg.) for Herausgeber].

PROJECT

Course Code: BTE2632

Credit Units: 02

Objectives:

The aim of the project is to provide the students with an opportunity to further their intellectual and personal development in the chosen field by undertaking a significant practical unit of activity. The project can be defined as a scholarly inquiry into a problem or issues, involving a systematic approach to gathering and analysis of information / data, leading to production of a structured report.

Chapter Scheme and distribution of marks:

Chapter 1: Introduction – 10 marks

Chapter 2: Conceptual Framework/ National/International Scenario – 25 marks

Chapter 3: Presentation, Analysis & Findings -- 25 marks

Chapter 4: Conclusion & Recommendations -- 10 marks

Chapter 5: Bibliography -- 05 marks

Project Report	Power Point Presentation & Viva
75 marks	25 marks

Components of a Project Report

The outcome of Project Work is the Project Report. A project report should have the following components:

1) Cover Page: This should contain the title of the project proposal, to whom it is submitted, for which degree, the name of the author, name of the supervisor, year of submission of the project work, name of the University.

2) Acknowledgement: Various organizations and individuals who might have provided assistance /co-operation during the process of carrying out the study.

3) Table of Content: Page-wise listing of the main contents in the report, i.e., different Chapters and its main Sections along with their page numbers.

4) Body of the Report: The body of the report should have these four logical divisions

a) **Introduction:** This will cover the background, rationale/ need / justification, brief review of literature, objectives, methodology (the area of the study, sample, type of study, tools for data collection, and method of analysis), Limitations of the Study, and Chapter Planning.

b) **Conceptual Framework / National and International Scenario:** (relating to the topic of the Project).

c) **Presentation of Data, Analysis and Findings:** (using the tools and techniques mentioned in the methodology).

d) **Conclusion and Recommendations:** In this section, the concluding observations based on the main findings and suggestions are to be provided.

5) Bibliography or References: This section will include the list of books and articles which have been used in the project work, and in writing a project report.

6) Annexures: Questionnaires (if any), relevant reports, etc.

(The main text of the Project should normally be in the range of 5000 words. However, there may be annexure in addition to the main text)

The Steps of a Project Report

Step 1: Selection of the topic for the project by taking following points into consideration:

- Suitability of the topic.
- Relevance of the topic

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- Time available at the disposal.
- Feasibility of data collection within the given time limit.
- Challenges involved in the data collection (time & cost involved in the data collection, possibility of getting responses, etc.)

Step II : Finalisation of the Topic and preparation of Project Proposal in consultation with the Supervisor.

Step III : Collection of information and data relating to the topic and analysis of the same.

Step IV : Writing the report dividing it into suitable chapters, viz.,

Chapter 1: Introduction,

Chapter 2: Conceptual Framework / National & International Scenario,

Chapter 3: Analysis & Findings

Chapter 4: Conclusion and Recommendations.

Step V : The following documents are to be attached with the Final Project Report.

1) Approval letter from the supervisor (Annexure-IA)

2) Student's declaration (Annexure-IB)

3) Certificate from the Competent Authority of the Organisation / Institution, if the student undertakes the Project Work in any Organisation / Institution.

Guidelines for Evaluation:

- Each of the students has to undertake a Project individually under the supervision of a teacher and to submit the same following the guidelines stated below.
- Language of Project Report and Viva-Voce Examination may be English. The Project Report must be typed and hard bound.
- Failure to submit the Project Report or failure to appear at the Viva-voce Examination will be treated as "Absent" in the Examination. He /she has to submit the Project Report and appear at the Viva-Voce Examination in the subsequent years (within the time period as per University Rules).
- No marks will be allotted on the Project Report unless a candidate appears at the Viva-Voce Examination. Similarly, no marks will be allotted on Viva-Voce Examination unless a candidate submits his/her Project Report.
- Evaluation of the Project Work to be done jointly by one internal expert and one external expert with equal weightage, i.e., average marks of the internal and external experts will be allotted to the candidate.

WORKSHOP / CERTIFICATION

Course Code: BTE2633

Credit Units: 02

Objectives

A workshop is primarily an activity based academic event that is organized to provide the students a one to one and hands on experience on any aspect of their learning. The communication in a workshop has to be necessarily two way. The trainer has to make sure that the aspect covered are practically practiced by the participants. The student will choose the option of workshop from amongst their concentration electives. The evaluation will be done by Board of examiners comprising of the faculties.

Major Themes for Workshop

The workshop may be conducted on any of the following major themes:

Accounting

Finance

Human Resources

Marketing

Economics

Operations

Supply Chain Management

These themes are merely indicative and other recent and relevant topics of study may be included.

Guidelines for Workshop

The procedure for earning credits from workshop consists of the following steps:

Relevant study material and references will be provided by the trainer in advance.

The participants are expected to explore the topic in advance and take active part in the discussions held

Attending and Participating in all activities of the workshop

Group Activities have to be undertaken by students as guided by the trainer.

Evaluation of workshop activities would be done through test and quiz at the end of the workshop.

Submitting a write up of at least 500 words about the learning outcome from the workshop.

Methodology

The methodology followed at the workshop could be based on any one or more of the following methods:

Case Study

Business Game

Simulation

Group Activity

Role Play

Business Planning

Quiz

Evaluation Scheme:

Attendance	Active Participation	Multiple Choice Questions/ Quiz	Solving the case/ Assignment/ Write up	Total
10	30	30	30	100

GENOMICS AND PROTEOMICS

Course Code: BTE2701

Credit Units: 03

Course Objective:

The course helps in developing a detailed understanding of eukaryotic genome complexity and organization. Current research on the molecular basis of the control of gene expression in eukaryotic system has developed a detailed understanding of techniques of gene diagnostics and DNA profile to acquire the fundamentals of genomics and Proteomics.

Course Contents:

Module I: Genome Evolution

Origin of genomes, Acquisition of new genes, Noncoding DNA and Genome Evolution, Human Genome Project., Forward genetics (Phenotype to gene structure) and Reverse genetics (Gene structure to phenotype). DNA sequencing – chemical and enzymatic methods

Module II: Structural Genomics

Structural Genomics: Study of 3D- Structure of Protein

Protein Structure, Basics of High Throughput Determination of Protein Structure, Protein Structure Initiative Project, Computational Protein Structure Modeling, Protein Structure and Function.

Module III: Comparative Genomics

Phylogeny, COGS [Cluster of orthologues genes], Introduction to System Biology, Metabolic Reconstruction, The Basic Principles and Methodology. Gene Identification Methods.

Module IV: Functional Genomics

cDNA Microarrays, Oligonucleotide Microarray Chips, Application of Microarrays with examples, Microarray Data Analysis; Real Time PCR.

Module V: Genotyping Background and Applications of Genomics

Genetic and physical mapping, Introduction to molecular markers, DNA fingerprinting, Single nucleotide polymorphisms, RNA interference, antisense RNA, siRNA, MiRNA.

PROTEOMICS

Module VI: Fundamentals of Proteomics

Introduction to Proteomics, 2D Gel Electrophoresis

Protein Identification and Analysis:

- Protein preparation and Separation
- Protein Identification by mass spectrometry and its applications.
- Identification of post translation modification
- Current concepts of peptide sequencing with MS-MS methods, MALDI-TOF mass spectrometry and nanospray MS

Protein Expression Mapping, Unstructured Proteins.

High-throughput cloning of ORFs, Chromatography

Protein- Protein Interaction Mapping. Its application in health and disease.

Protein Chip/Array. Experimental design and its application. Application of Microarray in proteome analysis.

IPR, BIOSAFETY & BIOETHICS

Course Code: BTE2702

Credit Units: 02

Course Objective

The aim of this course is to develop the understanding of relevance, business Impact and protection of Intellectual Property along with the types of Intellectual Property Rights: Patents, Trademarks, Copyrights, Industrial Designs, Geographical Indications and International Conventions, Biosafety and Bioethics

Course Contents

Module I: Basic Principles and Acquisition of Intellectual Property Rights

Basic Principles of Patent Law, Patent Application procedure, Drafting of a Patent Specification, Understanding Copyright Law, Basic Principles of Trade Mark and Design Rights, International Background of Intellectual Property

Module II: Ownership and Enforcement of Intellectual Property Rights

Patents-Objectives, Rights, Assignments, Defences in case of Infringement. Copyright-Objectives, Rights, Transfer of Copyright, work of employment Infringement, Defences for infringement. Trademarks-Objectives, Rights, Protection of goodwill, Infringement, Passing off, Defences. Designs-Objectives, Rights, Assignments, Infringements, Defences of Design Infringement, Enforcement of Intellectual Property Rights - Civil Remedies, Criminal Remedies, Border Security measures, Practical Aspects of Licensing - Benefits, Determinative factors, important clauses, licensing clauses.

Module III: Information Technology Related Intellectual Property Rights

Computer Software and Intellectual Property-Objective, Copyright Protection, Reproducing, Defences, Patent Protection, Database and Data Protection-Objective, Need for Protection, UK Data Protection Act, 1998, US Safe Harbor Principle, Enforcement. Protection of Semi-conductor Chips-Objectives Justification of protection, Criteria, Subject-matter of Protection, WIPO Treaty, Trips, SCPA. Domain Name Protection-Objectives, domain name and Intellectual Property, Registration of domain names, disputes under Intellectual Property Rights, Jurisdictional Issues, International Perspective.

Module IV: Biotechnology and Intellectual Property Rights

Biotechnology and the Law- Objective, Evolution, Basic Structure of Gene Techniques, Applications, Commercial Potential of Biotech Inventions, Rationale for Intellectual Property Protection. Patenting Biotechnology Inventions-Objective, Concept of Novelty, Concept of inventive step, Microorganisms, Moral Issues in Patenting Biotechnological inventions. Plant Varieties Protection-Objectives, Justification, International Position, Plant Varieties Protection in India Protection of Geographical Indications Objectives, Justification, International Position, Multilateral Treaties, National Level, Indian Position.

Module V

Protection of Traditional Knowledge- Objective, Concept of Traditional Knowledge, Holders, Issues concerning, Bio-Prospecting and Bio-Piracy, Alternative ways, Protectability, need for a Sui-Generis regime, Traditional Knowledge on the International Arena, at WTO, at National level, Traditional Knowledge Digital Library.

Module VI

Biosafety and Bioethics Management-Key to environmentally responsible use of biotechnology. Cartagena Protocol on Biosafety, Ethical implications of Biotechnological products and techniques.

RESEARCH METHODOLOGY AND REPORT WRITING

Course Code: BTE2703

Credit Units: 02

Course Objective

To develop understanding of information and library science research issues in the domain of bioinformatics through review of journal articles, invited talks, and critical group discussions of methods. The main objectives for this course are to develop: familiarity with information and library science-oriented problems in the biomedical sciences, an understanding of research methods in the biomedical domain, critical thinking and evaluation skills and presentation and summarization skills.

Course Contents

Module I

Introduction: Science, Scientific Field and Biological research. Role of a researcher in different stages of a project, Routes to research funding (academic and commercial)

Module II

Research – Definition – Importance and Meaning of research – Characteristics of research – Types of Research – Steps in research – Identification, Selection and formulation of research problem – Research questions – Research design – Formulation of Hypothesis – Review of Literature.

Module III: Sampling techniques

Sampling theory – types of sampling – Steps in sampling – Sampling and Non-sampling error – Sample size – Advantages and limitations of sampling. Collection of Data: Primary Data – Meaning – Data Collection methods – Secondary data – Meaning - Relevance's, Limitations and cautions. Statistics in Research.

Module IV

Type of Articles (review, letters etc). Scientific paper format (Abstract, Introduction, Materials and Methods, Results, Discussion). Writing, evaluating, presenting and publishing the results of scientific research in the academic press (journals, conferences etc). Choosing the appropriate journal (Sources, Information, Instructions to authors, peer review system, journal evaluation)

Module V

Case studies of areas of current research. Formulating a research plan and its presentation

Examination Scheme:

Components	CT	Attendance	Assignment/ Project/Seminar/Quiz	EE
Weightage (%)	15	5	10	70

GENOMICS AND PROTEOMICS LAB

Course Code: BTE2704

Credit Units: 02

Course Contents:

Module I

Three dimensional Structures – In silico study – large molecular complexes RNA polymerase II, ribosome, unstructured proteins

Module II

DNA sequencing methods

Module III

Gene finding tools and Genome annotation

Module IV

Comparison of two given genomes

Module V

Analysis of 2D – IEF data

Module VI

Microarray and Microarray data analysis

Module VII

Inference of protein function from structure

Module VIII

Inference of protein function and structure

Module IX

Two-hybrid methods

Examination Scheme:

SUMMER INTERNSHIP EVALUATION-II

Course Code: BTE2735

Credit Units: 03

GUIDELINES FOR PROJECT FILE

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critiqued by the faculty guide and corrected by the student at each stage.

The File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation.

Methodology

The students will be sent to various industries and institutes where they will undergo short term training. After the completion of the training the students will be required to submit project report which shall then be evaluated by two internal examiners. The students will then have to appear for a Viva Voce examination to be conducted by an external evaluator at the end of the semester.

In general, the File should be comprehensive and include

- A short account of the activities that were undertaken as part of the project;
- A statement about the extent to which the project has achieved its stated goals.
- A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;
- Any activities planned but not yet completed as part of the project, or as a future initiative directly resulting from the project;
- Any problems that have arisen that may be useful to document for future reference.

Report Layout

The report should contain the following components:

➤ Title or Cover Page

The title page should contain the following information: Project Title; Student's Name; Course; Year; Supervisor's Name.

➤ Acknowledgements (optional)

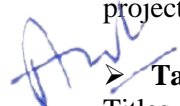

Acknowledgment to any advisory or financial assistance received in the course of work may be given.

➤ Abstract

A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project

➤ Table of Contents

Titles and subtitles are to correspond exactly with those in the text.

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

➤ Introduction

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

➤ Materials and Methods

This section should aim at experimental designs, materials used. Methodology should be mentioned in details including modifications if any.

➤ Results and Discussion

Present results, discuss and compare these with those from other workers, etc. In writing these section, emphasis should be given on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary never write in “point” form.

➤ Conclusion

A conclusion should be the final section in which the outcome of the work is mentioned briefly.

➤ Future prospects

➤ Appendices

The Appendix contains material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

➤ References / Bibliography

This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

Examples

For research article

Voravuthikunchai SP, Lortheeranuwat A, Ninrprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichia coli* O157: H7. *Clin Microbiol Infect*, **8** (suppl 1): 116–117.

For book

Kowalski, M. (1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), **7**: 63-67

ASSESSMENT OF THE PROJECT FILE

Essentially, marking will be based on the following criteria: the quality of the report, the technical merit of the project and the project execution.

Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project.

Project execution is concerned with assessing how much work has been put in.

The File should fulfill the following *assessment objectives*:

Range of Research Methods used to obtain information

Execution of Research

Data Analysis

Analyse Quantitative/ Qualitative information
Control Quality

Draw Conclusions

Examination Scheme:

Project Report	50
Viva Voce	50
Total	100

MOLECULAR MEDICINE AND DIAGNOSIS

Course Code: BTE2706

Credit Units: 02

Course Contents:

Module I

Human Health and Diseases

Module II

Human Diseases – morbidity, mortality, impact on social development

Module III

Mechanism of disease development, Genetic susceptibility, Identification of targets for diagnosis and therapy: Acquired diseases, cardiovascular diseases, Neurological diseases, Hematology, Cancer

Module IV

Epidemiology of disorders

Examination Scheme:

APPLICATIONS OF PLANT BIOTECHNOLOGY

Course Code: BTE2707

Credit Units: 02

Course Content:

Module I

Homozygous Plant Production through Ovule, Anther & Pollen Culture, Embryo Rescue & Embryo Culture, Endosperm Culture & Production of Seedless Plants, Apomixis & Experimental Polyembryony

Module II

AFLP – Variety Identification & Fingerprinting; Molecular Farming; Marker Assisted Technology; Use of Bioreactors in Plant Production & Scale-up; Basic Aspects of Application-case studies; Metabolic Engineering

Module III

Biotic & Abiotic Stress
Secondary Metabolites
Edible Vaccines and PHBV
Diagnostic Kits & Virus Indexing

BIO-ENERGY ENGINEERING

Course Code: BTE2708

Credit Units: 02

Course Objective:

The goal is to introduce students to biotechnology and tools that enable engineers and process scientists to connect innovations in industrial microorganisms and bioprocess unit operations to the engineering fundamentals, fundamentals of systems biology, and biological tools for design, modeling and evaluation of manufacturing facilities for the production of biofuels, bioproducts and biotherapeutics using a case study approach combined with computer modeling.

Course Contents:

Module I: Biomass Sources, Characteristics & Preparation

Biomass Sources and Classification. – Chemical composition and properties of different biomass materials and bio-fuels – Sugar cane molasses and other sources for fermentation ethanol-Sources and processing of oils and fats for liquid fuels- Energy plantations
-Preparation of woody biomass: Size reduction, Briquetting of loose biomass, Drying, Storage and Handling of Biomass.

Module II: Biogas, Technology

Feedstock for biogas production, Aqueous wastes containing biodegradable organic matter, animal residues-. Microbial and biochemical aspects- Operating parameters for biogas production Kinetics and mechanism - Dry and wet fermentation. Digesters for rural application-High rate digesters for industrial waste water treatment.

Module III: Bio-Ethanol and Bio-Diesel Technology

Production of Fuel Ethanol by Fermentation of Sugars. Gasohol as a Substitute for Leaded Petrol. - Trans-Esterification of Oils to Produce Bio-Diesel.

Module IV: Pyrolysis and Gasification of Biomass

Thermo-chemical conversion of ligno-cellulose biomass – Biomass processing for liquid fuel production - Pyrolysis of biomass-Pyrolysis regime, effect of particle size, temperature, and products obtained.

Thermo-chemical gasification principles: Effect of pressure, temperature and of introducing steam and oxygen. Design and operation of Fixed and Fluidized Bed Gasifiers.

Module V: Combustion of Biomass and Cogeneration Systems

Combustion of Woody Biomass: Theory, Calculations and Design of Equipments. Cogeneration in Biomass Processing Industries. Case Studies: Combustion of Rice Husk, Use of Bagasse for Cogeneration.

TERM PAPER

Course Code: BTE2731

Credit Units: 02

METHODOLOGY

A term (or research) paper is primarily a record of intelligent reading in several sources on a particular subject.
