1. Have knowledge of basic SW engineering methods and practices, and their appropriate application.
2. Describe software engineering layered technology and Process framework.
3. give a general understanding of software process models such as the waterfall and evolutionary models.
4. Understanding of the role of project management including planning, scheduling, risk management, etc.
5. Understanding on quality control and how to ensure good quality software.

Course Outcomes

On completion of this course, the students will have

- CO1. Basic knowledge and understanding of the analysis and design of complex systems.
CO 2. Ability to apply software engineering principles and techniques.
CO 3. Ability to develop, maintain and evaluate large-scale software systems.
CO 4. Knowledge to produce efficient, reliable, robust and cost-effective software solutions.
CO 5. Ability to work as an effective member or leader of software engineering teams.

Modules	Blooms level*	Number of hours
MODULE 1: Software Development Life Cycle Evolution of Software Engineering, Software Problems, Issues Involved in Software Engineering, Fundamental Qualities of a Software Product, Approaches to Software Engineering, Planning the development Process, Development/Product Life-Cycle Model, Kinds of Software Life-Cycle Model	L1, L2 and L3	8
MODULE 2: Project Management Project Management Concepts, Project Management Activities, Size Metrics. Software Requirement analysis and Specification, Cost Models.	L2, L3 and L6	10
MODULE 3: System Design Design Objectives, Design Principles, Effective Modular Design (Functional Independence, Coupling, and Cohesion), Design Tools and Techniques, Prototyping, Structured Programming.	L1, L3 and L4	10

MODULE 4: Coding Programming Practices, Verification, Monitoring and Control.	L1, L3 and L4	10
MODULE 5: Software Testing Testing Fundamentals, Test case design, Functional Testing, Structural Testing, Test Plan, Activities during testing, Unit System, Integration Testing, Software Maintenance.	L3, L4 and L6	10
MODULE 6: Software Reliability Concept of Software Reliability, Software Repair and Availability, Software Errors, Failure and Faults.	L3,L4,L6	05

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

IFT2321	FUZZY LOGIC	L	T	P	C
Version 2017.1	Date of Approval: 14 th June 2017	3	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

This course introduces the student to intelligent control theory, introduce Machine Intelligence and to understand Fuzzy Logic. Fuzzy logic is a tool that can be applied to ambiguous, complicated, complex or non-linear systems or problems which cannot be easily solved by classical techniques. This course discusses the fundamentals of fuzzy sets theory and fuzzy logic. In addition this course also introduces applications of fuzzy logic in several areas such as fuzzy control and fuzzy decision making.

Course Objectives

The objective of this course is:

1. To provide an overview of Fuzzy Set Theory and Fuzzy Logic.
2. To understand how Fuzzy Logic can help in solving Non Linear Problems

Course Outcomes

On completion of this course, the students will be able to

CO 1: Explain the concept of Crisp Sets and Fuzzy Sets. Apply the knowledge to solve various problems.

CO 2: Distinguish between Fuzzification and Defuzzification. Demonstrate various problems using Fuzzy Logic Methodology

CO 3: Distinguish between various properties of Classical and Fuzzy Sets and apply the concepts to prove the properties using numerical problems

CO 4: Explain the concepts of Fuzzy Operations and Fuzzy Arithmetic and solve various mathematical problem based on that

CO 5: Define and Summarize various applications if Fuzzy Logic in real world problem solving.

Modules	Blooms level*	Number of hours
Module I: Introduction Crisp sets: Overview, Fuzzy sets : Basic types and concepts,Characterstics and significance of paradigm shift, Fuzzy sets vs Crisp sets, Representation of fuzzy sets, Applications of fuzzy logic.	L1, L2 & L3	7
Module II: Fuzzy Logic Fuzzy logic introduction, basic concepts of fuzzy logic, linguistic variable, possibility distributions, fuzzy rules, fuzzy rule based inference system, fuzzy inference systems, defuzzification.	L1, L2 & L3	7
Module III: Fuzzy Sets Classical sets, set operation, fuzzy sets, representation of fuzzy sets, types of membership functions, designing membership functions, basic operations in fuzzy sets, introduction & features of membership functions, hedges, operations of fuzzy sets, properties of fuzzy sets.	L2, L3	8
Module IV: Fuzzy operations and Fuzzy arithmetic Types of operations, Fuzzy complements, Fuzzy intersection:t-norms, Fuzzy union:t-conorms,Combination of operations, Aggregation operation, Fuzzy	L2, L3	8

numbers , Linguistic variables,Airthmetic operations on intervals, Airthmetic operations on Fuzzy numbers, Lattice of Fuzzy numbers, Fuzzy equation.		
Module V : Applications Pattern recognition in fuzzy logic, Database and information retrieval in fuzzy logic, decision making in fuzzy logic, engineering applications and fuzzy logic, Fuzzy logic in Medicine and Economics.	L1, L2	6

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5:Synthesis, L6:Evaluation

IFT2323	ACCOUNTING AND FINANCIAL MANAGEMENT	L	T	P	C
Version 2017.1	Date of Approval: 14 th June 2017	3	0	0	3
Pre-requisites/ Exposure	Attitude and Aptitude for the accounts				
Co-requisites	General Awareness and reading of the financial statements and regular newspapers.				

Catalog Description

This course will be learnt by student of B.Sc - IT discipline is more useful who has a passion for seeking knowledge in financial accounting business and its related areas and may be in future work on accounting software's and the financial environment.

To develop intellectual formation on Accounting and Financial domain Environment - concept, significance, objectives, concepts and conventions of accounting which makes the accounting base, through the golden rules of the accounting and accounts.

The study of Journal and Ledger includes double entry system, recording of the transactions into books and creating Journal, cash books and posting the entries into the ledger. Understanding the various financial books such as purchase books, return book, sales books etc..used into day to day business transactions.

The importance of Preparation of Trial balance, Final Accounts including adjustments Trading account, Profit and Loss account. is analyzed from the perspective of a business firm. Other important dimensions which are into business environment are also studied in detail roles of Balance sheet and its assessment to make the accounts settled.

The role of banking and its instruments such as Cheque / Passbook/Deposit Sips etc along with the different types of bank's accounts and being make familiar to the student. The requirements of the reconciliations of bank statements are also explained.

The next domain of the subject includes in the accounting side is day to day operating fund's – Working Capital and its management. Various types and determinants of the working capital is important for the understanding of managing the operating funds.

Further to this, overview on the topics such as Cash management, Receivable management and capital budgeting along with its principles and techniques are been taught to students to make them familiar on the domain.

Finally, the impact of Financial Statements and the role of Ratio analysis in the accounting environment of a business firm is analyzed by understanding the importance of types of ratios and applying the concept to analyze the financial position of the statement.

Course Objectives

The objective of this course is :

- Develop the ability to use accounting concepts, principles, and frameworks to analyze and effectively communicate information to a variety of audiences. Outfit the students with the ability to study of basic accounting system by creating, recording and summarizing the accounting entries and converting them into the accounting statements..
- Furnish student the knowledge on financial acquaintance's and tools that are in direct connect with the Indian banking business operations.
- Prepare the student on accounting management tools by making them familiar of the various ways to analyze the effect of business transactions on an organization's accounting records and financial statements.
- Equip the students with the theoretical framework on the concept of financial statements in relationship to decision making using the financial tools and concepts for which data needed to solve a mixture of financial decision troubles. Develop the ability to use accounting information to solve a variety of business problems.

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Course Outcomes

On completion of this course, the students will be able to :-

- CO1:** *Outline* and *distinguish* various types of Account and Accounting related to general Business, *interpret* and *describe* the golden rules of the accounting on which process off accounting directly or indirectly depends on the accounting process, and able to *determine* and *predict* and develop the skill of recording financial transactions and preparation of reports in accordance with GAAP of business accounting records by *analyzing* the factors affecting at, which will help to *judge* and make *contrast* the various types of accounting books by *relating* with conceptual knowledge.
- CO2:** *Identify* the various entries that need to be recorded in the accounting records and their posting, *estimate* the impact of them on the business growth, in the form of either Gross /Net – Profit/Loss and the capability to *interpret* various business financial entireties and problem and challenges into domains accounting environment and *demonstrate* the skill to handle the issues related to trading account, manufacturing account, profit and loss account by *analyzing* and *summarizing* using principles and formats studied and generating the balance sheets to final positions of the company at that moment of time.
- CO3:** Acquire the knowledge of Indian Banking system associated into Indian business environment by *defining* and *describing* various banking terms. Able to *distinguish* between various banking instruments. *Explain* the importance of banking reconciliation statements. Recognize circumstances providing for increased exposure to errors and frauds
- CO4:** Identify and outline the needs and outcomes of the various accounting management tools by predicting and judging their scope for the financial business scenario. The knowledge of the Working capital also able to criticize and distinguish between various types of working capital, further able to determine and relate cash management process and receivable management which acts as major accounting tools for day to day operations of the organization. Capital Budgeting, the scope and various ways and interpreting the challenges attached with them.
- CO5:** Define and explain importance of Ratio analysis and its advantages and limitations to summarize the usefulness and functions of them and state the applications and advantages attached with them by analyzing the financial statements.

Modules	Blooms level*	Number of hours
MODULE 1: Overview of Accounting – Definition of Accounting, Its Objectives, Advantages and Limitation. Principles, Concepts and Conventions of Accounting, Double entry system, Recording of Transactions in subsidiary Books – Journal, Cash Book, sales Book, Purchase Book and Return Book. Posting into Ledger accounts	L1, L2, L3, L4 and L6	8
MODULE 2: Final Accounts Preparation of Trial balance, Final Accounts including adjustments Trading account, Profit and Loss account, Balance Sheet.	L1, L2, L3 and L4	8
Module 3: Banking Opening of different types of Banks Accounts, Cheque Book, Pass Book, Deposit slips, Bank Reconciliation Statements	L1 and L2	4
Module IV: Management Accounting Tools Definition of working Capital, Types of Working Capital, Determinants of working Capital, Cash Management and Receivables Management. Capital Budgeting: Principles and Techniques.	L1, L2, L3 and L5, L6	9
Module V: Analysis of Financial statements Ratio Analysis: Meaning, Advantages, limitations, types of ratios and their usefulness Statements of charges in the Financial Position on Cash basis.	L1 and L2	7

***Bloom's Level:**

L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5:Synthesis, L6:Evaluation

IFT2315	OBJECT ORIENTED PROGRAMMING WITH C++ LAB	L	T	P	C
Version 2017.1	Date of Approval: 14 June,2017	0	0	2	1
Pre-requisites/Exposure	Hands on knowledge of C Programming				
Co-requisites	Basic concepts of C Programming				

Catalog Description

In this Lab course the object oriented programming using C++ is implemented and demonstrated. Concepts covered would enable them to create complex applications related to object oriented programming. The objective of this course is to explore and implement the various features of OOP such as inheritance, polymorphism, Exceptional handling using programming language C++.

Course Objectives

The objective of this course is to

1. Perform object oriented programming to develop solutions to problems demonstrating usage of control structures, modularity, I/O. and other standard language constructs.
2. Demonstrate the application of object oriented programming in developing solutions to problems demonstrating usage of data abstraction, encapsulation, and inheritance.
3. Demonstrate ability to implement one or more patterns involving realization of an abstract interface and utilization of polymorphism in the solution of problems which can take advantage of dynamic dispatching, syntax and features.

Course Outcomes

On completion of this course, the students will be able to

CO 1: Demonstrate the basic programming structure of C++ program;

CO 2: Illustrate the different ways to write a program for member function inline and explain how the private members of a class can be accessed. Demonstrate how the objects can be instantiated and destroyed with static data member?

CO 3: Demonstrate the concept of inheritance, types and implementation with suitable examples; find out ambiguity problem in inheritance; use the concept of overriding and constructors in inheritance.

CO 4: Demonstrate polymorphism in detail and implement the concept of overloading in functions as well as in operators. Write the programs for virtual function and pointer with objects.

CO 5: Demonstrate the exception handling mechanism. Compare and contrast various formatted and unformatted i/o function in file handling.

Modules/Topics Covered**	Blooms level*	Number of hours
1. Sample Programs for basic structure of program in C++ using Cout and Cin. a) WAP to print Fibonacci series of 'n' numbers, where n is given by the programmer. b) WAP to read a set of numbers in an array and to find the largest of them. c) WAP to sort a list of names in ascending order. d) WAP to sort an array of integers using functions. e) WAP to exchange contents of two variables using call by value and call by reference.	L3, L5	6
2. Sample Programs using concept of class and object. (a) WAP to maintain the student record which contains Roll number, Name, Marks1, Marks2, Marks3 as data member and getdata(), display() and	L3, L5	4

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

setdata() as member functions. (b) WAP to add two complex numbers using friend function. (c) Write a program to exchange values between two classes using friend function. (d) Calculate area of different geometrical figures (circle, rectangle, square, triangle) using function overloading. (e) Create a class Complex for performing all arithmetic operations with complex numbers using inline function. (f) Write a class bank, containing data member: Name of Depositor, A/c type, Type of A/c, Balance amount. Member function: To assign initial value, To deposit an amount, to withdraw an amount after checking the balance (which should be greater than Rs. 500), To display name & balance.		
3. Sample Programs using inheritance. (a) Declare a class of vehicle. Derived classes are two-wheeler, three-wheeler & four-wheeler. Display the properties of each type of vehicle using member functions of classes. (b) Create two classes namely Employee and Qualification. Using multiple inheritance derive two classes Scientist and Manager. Take suitable attributes & operations. WAP to implement this class hierarchy. (c) Consider an example of book shop which sells books and video tapes. These two classes are inherited from base class called media. The media class has command data members such as title and publication. The Book class has data members for storing number of pages in a book and tape class has playing time in a tape. Each class will have member functions such as read() and show(). In the base class, these members have to be defined as virtual functions. Write a program to model the class hierarchy for book shop and process objects of these classes using pointers to base class.	L3, L5	6
4. Sample Programs using concepts of polymorphism. operator overloading (a) Write a program to Subtract two Complex numbers using operator overloading. (b) Write a program to add and multiply two time values by overloading + and * operators respectively. (c) Write a class string to compare two strings, overload (=) operator. (d) Write a program to compare age of two persons using this pointer. (e) write a program to implement the concept of pointer to object and pointer to derived class.	L3, L5	5
5. Sample Programs using exception handling and file handling. (a) Demonstrate the concept of exception handling for simple try catch block and multiple catch. (b) Write the programs using file handling.	L3, L5	4

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

**** Sample Programs provided are not limited to these only, can include others as desired.**

IFT2320	OPERATING SYSTEM LAB	L	T	P	C
Version 2017.1	Date of Approval: 14 June, 2017	0	0	2	1
Pre-requisites/Exposure	Basic knowledge of Operating System				
Co-requisites					

Catalog Description

This course introduces the UNIX operating system commands, shell programming. Explores the use of operating system utilities such as vi text editors, filters, process handling etc.

Course Objectives

The objective of this course is to

1. Provide knowledge of working on Unix OS.
2. Provide sound foundation of writing Shell scripts.
3. Implement features like piping, filters and redirection.

Course Outcomes

On completion of this course, the students will be able to

CO1: To implement various UNIX commands.

CO2: To demonstrate the use of Vi Editor and other editors of UNIX.

CO3: To write simple Shell scripts.

Modules	Blooms level*	Number of hours
1. UNIX structure, history, basic commands.	L1,L3	4
2. Working of Vi Editor and its commands.	L1,L3	4
Shell Script 1. Write a Shell Script that takes a search string and filename from the terminal & displays the results. 2. Write a Shell Script that takes pattern and filename as command line arguments and displays the results appropriately i.e. pattern found/pattern not found. 3. Write a Shell Script that accepts only three arguments from the command line. The first argument is the pattern string, the second argument is the filename in which the pattern is to be searched and the third argument is the filename in which the result is to be stored. 4. Write a Shell Script which creates the following menu and prompts for choice from user and runs the chosen command. Today's date Process of user List of files Quit to UNIX 5. Write a Shell Script that computes the factorial of a given number 6. Write a Shell Script that changes the extension of a group of files from txt to doc 7. Write a Shell Script that accepts both filename and a set of patterns as positional parameters to a script. 8. Write a Shell Script which will redirect the output of the date command without the time into a file.	L1,L3	16

<p>9. Write a Shell Script (using while loop) to execute endlessly (until terminated by user) a loop which displays contents of current directory, disk space status, sleep for 30 seconds and display the users currently logged in on the screen.</p> <p>10. Write a Shell Script that receives two filenames as arguments. It should check whether content of the two files is same or not. If they are same, second file should be deleted.</p> <p>11. If a number is input through the keyboard, WASS to calculate sum of its digits.</p> <p>12. Write a Shell Script which takes a command line argument of Kms and by default converts that number into meters. Also provide options to convert km to dm and km to cm.</p> <p>13. Write a Shell Script using for loop, which displays the message "Welcome to the UNIX System"</p> <p>14. Write a Shell Script to change the filename of all files in a directory from lower-case to upper-case.</p> <p>15. Write a Shell Script that examines each file in the current directory. Files whose names end in old are moved to a directory named old files and files whose names end in .c are moved to directory named cprograms.</p> <p>16. Write a Shell Script which searches all files in the given directory (to be taken as command line argument) for the file having the title (to be taken as command line argument), as the first line in the file.</p> <p>a) Display the contents of the searched file.</p> <p>b) In the end, print the file is ###, where ### is small-sized if total no. of lines is <50 ### is medium-sized if total no. of lines between 50&100 ### is large-sized.</p> <p>17. Write a shell script which reports names and sizes of all files in a directory (directory would be supplied as an argument to the shell script) whose size is exceeding 1000 bytes. The filenames should be printed in descending order of their sizes. The total number of such files should also be reported.</p> <p>18. Write a shell script to calculate and print the first m Fibonacci numbers.</p> <p>19. Write a shell script to compute the GCD and LCM of two numbers.</p> <p>20. Write a shell script to generate all combinations of 1, 2 and 3 using for loop.</p>

IFT2335	SUMMER INTERNSHIP EVALUATION-I	L	T	P	C
Version: 2017.1	Date of Approval: June 2017	0	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

The objective of this course is to provide practical training on some live projects that will increase capability to work on actual problem in industry. This training may undergo in an industrial environment or may be an in-house training on some latest software which is in high demand in market. This training will be designed such that it will useful for their future employment in industry.

Course Objectives

The objective of this course is to

1. Provide practical training on live projects
2. Increase technical capabilities on solving real life problems in company environment

Course Outcomes

On completion of this summer internship, the students will be able to:

CO1: Develop communication, interpersonal and other critical skills in the job interview process.

CO2: Design and develop software and hardware projects

CO3: Assess interests and abilities in their field of study.

CO4: Demonstrate excellent technical and communication skills to acquire employment contacts leading directly to a full-time job following graduation from college.

Text Books

As per topic of summer internship project is chosen and discussion with guide.

Reference Books

As per topic of summer internship project is chosen and discussion with guide.

IFT2413	DESIGN & ANALYSIS OF ALGORITHM	L	T	P	C
Version 2017.1	Date of Approval: 14 June, 2017	3	0	0	3
Pre-requisites/Exposure	Basic knowledge of Data Structure				
Co-requisites	Nil				

Catalog Description

The designing of algorithm is an important component of computer science. The objective of this course is to make students aware of various techniques used to evaluate the efficiency of a particular algorithm. Students eventually should learn to design efficient algorithm for a particular problem.

Course Objectives

The objective of this course is to

1. Analyze the asymptotic performance of algorithms.
2. Demonstrate a familiarity with major algorithms and data structures.
3. Apply important algorithmic design paradigms and methods of analysis.
4. Synthesize efficient algorithms in technical design situations.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain use of asymptotic notations and principles of Divide and Conquer algorithms and solve various problems using that strategy.

CO2: Explain principles of Greedy Algorithms and Dynamic Programming and apply the strategy to solve various problems.

CO3: Explain basic concepts of graphs and apply various design strategies to solve graph related problems.

CO4: Apply the various algorithms indifferent areas of Computer Science.

Modules	Blooms level*	Number of hours
Module I: Introduction Algorithm Design paradigms - motivation, concept of algorithmic efficiency, concept of running time, analysis of algorithms, Growth of Functions, Asymptotic Notations, Structure of divide-and-conquer algorithms, analysis of divide-and-conquer algorithms, example algorithms - Quick Sort, Merge Sort, Strassen Multiplication, Recurrences- Substitution Method, Recursion Tree Method, Iteration Method, Master's Method.	L1, L2 and L3	8
Module II: Advanced Design Techniques Greedy Algorithms - Introduction, elements of greedy strategy, Fractional Knapsack Problem, activity selection problem, Dynamic Programming - Overview, difference between dynamic programming and divide and conquer, Matrix Chain Multiplication, Longest Common Sub-sequence, 0/1 - Knapsack Problem. Difference between Greedy and Dynamic Programming Approach.	L2, L3 and L4	10
Module III: Graph Algorithms Representation of Graphs, Graph Traversal - BFS and DFS, Topological Sort, Strongly Connected Components.	L2, L3 and L4	10

Minimum Spanning Tree, Kruskal's Algorithm, Prim's Algorithm, , Single Source Shortest Paths, Dijkstra's Algorithm, Bellmanford Algorithm, All Pair Shortest Path Problem, Floyd Warshall's Algorithm.		
Module IV: Selected Topics Back tracking - Introduction, n-Queens Problem, NP-Completeness – Definition and examples of Class P, NP, NP-Hard and NP Complete, Polynomial reduction. Approximation Algorithms – Introduction, Performance Bounds, Example Problems – Vertex Cover Problem, Travelling Salesperson Problem. Randomized Algorithms. Application of algorithms in different areas of Computer Science.	L2, L3 and L4	8

**Bloom's Level:*

IFT2424	MULTIMEDIA & ITS APPLICATIONS	L	T	P	C
Version 2019.1	Date of Approval: 15 May, 2019	3	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

This course is intended to describe technical characteristics and performance of multimedia system and terminals. It will help in designing creative approach in application of multimedia devices, equipment and systems. . Also provide students to interpret and analyze measurement results obtained on the multimedia system and components. It provides to test multimedia communication systems and equipment in real conditions.

Course Objectives

The objective of the course is

1. to provide an overview of different multimedia technologies like audio and video including multimedia devices.
2. to include some practical sessions on these technologies.

Course Outcomes

After the completion of course, the students will be able to,

- CO1. Identify and Describe basic principles of multimedia communication systems and its application.
- CO2. Identify and define concepts of digital audio representation and processing using computer techniques and tools for creating and editing the Interactive multimedia applications.
- CO3. Identify and describe video technology including Raster Scanning Principles.
- CO4. Identify and describe video technology including Raster Scanning Principles, Sensors for T.V.Cameras, Color Fundamentals, color Video, Video Equipments and Worldwide Television Standards.
- CO5. Identify and describe Multimedia Devices, Presentation Services and the User Interface. Apply multimedia in different field of life.

Modules	Blooms level*	Number of hours
Module I: Introduction Introduction: Objectives – History of Multimedia – Its market – Content copyright – Resources for multimedia developers – Types of produces – Evaluation – Hardware Architecture – OS and Software – Multimedia Architecture – Software library – Drivers.	L1, L2 and L3	8
Module II: Digital Audio Representation and Processing Uses of audio in computer applications, digital representation of sound, transmission of digital sound, digital audio signal processing, digital audio and the computer.	L2 and L3	7
Module III: Video Technology Raster scanning principles, sensors for T.V. cameras, color fundamentals, color video, video equipment, worldwide television standards.	L4 and L5	7
Module IV: Digital Video and Image Compression Evaluating a compression system, redundancy and visibility, video compression techniques, the JPEG image compression standards, the MPEG motion video compression standard, DVI technologies, Time Based Media Representation and Delivery.	L4 and L5	5
Module V: Multimedia Devices, Presentation Services and the User Interface-		5

Introduction .Multimedia services and Window systems, client control of continuous media, device control, temporal co ordination and composition, hyper application.	L3 and L4	
Module VI: Application of Multimedia Intelligent multimedia system, desktop virtual reality, multimedia conferencing.	L3 and L4	4

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation

IFT2418	DATA COMMUNICATION AND COMPUTER NETWORKS	L	T	P	C
Version 2017.1	Date of Approval:14 June, 2017	3	0	-	3
Pre-requisites/Exposure	Basics of Computers				
Co-requisites					

Catalog Description

The goal is to acquaint the students with the basics of data communication and networking. A structured approach to explain how networks work from the inside out is being covered. The physical layer of networking, computer hardware and transmission systems have been explained. In-depth includes routing process, error detection techniques, noisy protocols and various applications of layers of OSI model.

Course Objectives

The objective of this course is to

1. To provide an overview of data communication and computer networks, network specific protocols, networking devices, OSI /TCP-IP Layer concepts.
2. To serve as a foundation for the study of advanced networking concepts.

Course Outcomes

On completion of this course, the students will be able to

CO1. State the functions of data component in communication, networking devices, characteristics of topologies and describe the functionality of layers in OSI model.

CO2. Explain parallel and serial transmission; Differentiate between periodic and aperiodic signals including data encoding techniques.

CO3. Illustrate the working and applications of guided and unguided media. Explain working of ISDN.

CO4. Explain flow control and error control protocols.

CO5. Compare and Contrast different routing algorithms; discuss the frame format of IPv4 and IPv6 with working of TCP protocol.

Modules	Blooms level*	Number of hours
MODULE 1: Introduction to Data Communication, Networks-protocols, advantages, disadvantages & applications, Line Configuration, topology, Transmission mode, Classification of networks. OSI Model, functionality of layers in OSI model, Protocols at each layer, encapsulation, peer-to-peer communication.	L1, L2	8
MODULE 2: Parallel & Serial Transmissions, Analog& Digital Signals, Periodic & Aperiodic Signals, Data encoding techniques-Digital data-digital signals, Digital data-Analog signals, Analog data- Digital signals, Analog data-Analog signals, Multiplexing.	L2, L3 and L4	8
MODULE 3: Transmission Media-Twisted Pair Cable, Coaxial Cable, Fiber-Optics Cable, Radio frequency Allocation, Terrestrial Microwave, Infrared rays, Satellite Communication, Cellular Telephony. Introduction to ISDN.	L3 and L4	6

MODULE 4: Framing, Switching, Types of Errors, Error Detection & Correction (VRC, LRC, CRC, Checksum, Hamming Code), Flow Control (Stop-and-wait & Sliding Window), Error Control (Stop & Wait ARQ, Sliding Window ARQ using Go-back n method and Selective-Reject), IEEE Standards-802.3, Token Bus (802.4), Token Ring (802.5), FDDI.	L2, L3 and L4	6
MODULE 5: Routing process, Routing Algorithms-Shortest Path Routing, Flooding, Distance Vector Routing, Link State Routing, Addressing-IPv4, IPv6, Internetworking, Connection-oriented Vs Connectionless protocols-TCP,UDP.	L2, L3 and L4	10

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation

IFT2422	COMPUTER GRAPHICS	L	T	P	C
Version 2017.1	Date of Approval:14 June, 2017	3	-	-	3
Pre-requisites/Exposure	Basic Knowledge of C Programming				
Co-requisites	Nil				

Catalog Description

This course presents basic principles for the design, use and understanding of computer graphics systems. This course includes various standard algorithms and their complexity to draw graphics objects. This course also teaches the students about different algorithms for 2D /3D transformation, clipping operations on objects, hidden surface removal and detection.

Course Objectives

The objective of this course is to

1. Equip the students with mathematical concepts of graphics algorithms to draw Graphics objects using C language and standard algorithms.
2. Provide an overview of various 2D & 3D transformation, clipping operations, algorithms related to hidden surface detection and elimination and their implementation.

Course Outcomes

On completion of this course, the students will be able to

CO 1: Define various standards and components in development of computer graphics.

CO 2: Explain generation of graphics primitives and analyze their problems and solutions.

CO 3: Demonstrate solid filling using polygon fill algorithm with interior region testing methods.

CO 4: Apply 2D geometric transformations on 2D graphics objects with their practical implementation.

CO 5: Illustrate use of coordinate mapping and their transformation and analyze use of line and polygon clipping algorithms.

CO 6: Apply 3D geometric transformations on 3D objects with their practical implementation and assess logic behind visible surface detection algorithms with practical implementation of 3D transformations.

Modules	Blooms level*	Number of hours
Module I: Introduction of Graphics Development of Computer Graphics, Basic Graphics System and Standards. Graphics Devices: Raster and Random Scan Devices, Continual Refresh and Storage Displays, Display Processor, Color Display Techniques, Frame Buffer, Concepts in Raster Graphics and color generation.	L1, L2 and L3	6
Module II: Graphics Primitives Points, Pixels, Scan Conversion, Line Drawing Algorithms, Circle Drawing Algorithms, Anti-aliasing Technique, Methods of Character generator. Polygon Polygon representation, Polygon Filling algorithm, Inside/Outside Testing .	L1, L2 and L3	7
Module III: Transformation Scaling, Translation, Rotation, Composite Transformation , Fix point scaling , Rotation about arbitrary point, Reflection, Shears, Composite Transformation, Modeling and Coordinate Transformation	L2, L3 and L4	7

IFT2420	DATA COMMUNICATION AND COMPUTER NETWORKS LAB	L	T	P	C
Version 2017.1	Date of Approval :14 June, 2017	-	-	2	1
Pre-requisites/Exposure	Basics of CISCO router				
Co-requisites	NIL				

Catalog Description

The course familiarizes with the equipment applications and protocols installed in enterprise networks, with a focus on switched networks, IP Telephony requirements, and security. It also introduces advanced routing protocols such as Enhanced Interior Gateway Routing Protocol (EIGRP) and Open Shortest Path First (OSPF) Protocol. Hands-on exercises include configuration, installation, and troubleshooting.

Course Objectives

The objective of this course is to

1. Make the students understand configuration of routing protocols.
2. Provide a demonstration of troubleshooting of different protocols.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Apply the knowledge of CISCO router to understand its basic configuration, Enterprise network and implement inter -VLAN routing.
- CO2. Demonstrate the configuration of OSPF and RIP protocol.
- CO3. Demonstrate the configuration of EIGRP and BGP protocol.
- CO4. Apply the knowledge of basic WAN connections using HDLC and PPP protocol.
- CO5. Demonstrate the standard and extended ACL on router.

Modules	Blooms level*	Number of hours
1. Drawing an Enterprise Network for Amity University showing its different campuses across the country. 2. Configuring all the devices (PCs, Servers, Switches) to create a LAN within campuses of the Enterprise Network. 3. Configuring Virtual LANs (VLANs) in an Enterprise Network. 4. Configuring Trunking and Inter-VLAN Routing in an Enterprise Network.	L3, L5	4
5.Implementing RIP (Routing Information Protocol) to enable communication between different LANs. 6. Implementing OSPF (Open Shortest Path First) to enable communication between different LANs.	L3, L5	2
7.Implement EIGRP (Interior Routing Protocol) to establish connectivity	L3, L5	2

Version 2017.1	Date of Approval: 14 June, 2017	0	0	2	1
Pre-requisites/Exposure	C Programming				
Co-requisites	Basic knowledge of Data Structure				

Catalog Description

This course is intended to implement the various algorithm strategies for solving the problems using programming language.

Course Objectives

The objective of this course is to

1. equip the students with implementation of various algorithms.
2. provide sound foundation of design strategies for problem solving.
3. measure and compare the performance of different algorithms.

Course Outcomes

On completion of this course, the students will be able to

CO1: Implement the concept of Divide and Conquer algorithms to solve various problems.

CO2: Demonstrate the use of Greedy Algorithms to solve various problems.

CO3: Apply the principle of Dynamic Programming to solve various problems.

CO4: Apply various design strategies to solve graph related problems.

Modules	Blooms level*	Number of hours

<p>Module II: Graphics Primitives</p> <ol style="list-style-type: none"> 1. Demonstrate the use of DDA line drawing algorithm to draw line on the screen when $m \leq 1$ and $m > 1$. 2. Demonstrate the use of DDA line drawing algorithm to draw line on the screen when $m \leq 1$ and $m > 1$. 3. Demonstrate the use of Bresenham's line drawing algorithm to draw line on the screen when $m \leq 1$ and $m > 1$. 4. Demonstrate the use of circle drawing algorithm to draw circle on the screen. 5. Write a program to draw characters on screen using bitmap character generation method. 6. Write a program to fill a polygon using boundary fill algorithm. 7. Write a program to fill a polygon using flood fill algorithm. 	L3,L5	6
<p>Module III: Transformation</p> <ol style="list-style-type: none"> 1. Write a program to translate a triangle where translation factors are $t_x=20$ and $t_y=30$. 2. Write a program to rotate a triangle in clock-wise and anti-clock-wise direction where rotation angle is 300. 3. Write a program to scale a square where scaling factors are $S_x=2$ and $S_y=3$. 4. Write a program to reflect a triangle about X axis. 5. Demonstrate combine 2D transformation after applying translation, rotation and scaling transformations. 6. Write a program to demonstrate fix point scaling where scaling factors are $S_x=2$ and $S_y=3$. 	L3,L5	6
<p>Module IV: Segment</p> <ol style="list-style-type: none"> 1. Write a program to demonstrate line clipping algorithm to clip a line where line slop is $m \leq 1$. 2. Write a program to demonstrate window to viewport transformation and liner mapping of the object coordinates in viewport where size of viewport is half to the size of window. 3. Write a program to clip a polygon using Sutherland hodgeman polygon clipping algorithm. 	L3,L5	4
<p>Module V: 3-D Transformation and Visible surface detection</p> <ol style="list-style-type: none"> 1. Write a program to translate a 3D triangle where translation factors are $t_x=20$ and $t_y=30$. 2. Write a program to rotate a 3D triangle in clock-wise and anti-clock-wise direction where rotation angle is 300. 3. Write a program to scale a 3D square where scaling factors are $S_x=2$ and $S_y=3$. 4. Demonstrate combine 3D transformation after applying translation, rotation and scaling transformations. 5. Write a program to draw Bezier curve and spline curve on the screen with 4 control points. 6. Write a program to generate fractals using iterated function system. 	L3,L5	6

IFT2510	JAVA PROGRAMMING	L	T	P	C
Version 2017.1	Date of Approval: 14 June, 2017	3	0	0	3
Pre-requisites/Exposure	Basics of Programming				
Co-requisites	NIL				

Catalog Description

The objective is to impart programming skills used in this object oriented language java. The course explores all the basic concepts of core java programming like object, classes, data types, features, operators, control structures, interfaces, packages, applets, awt, swings and socket programming. The students are expected to learn it enough so that they can develop the basic applications as well as web solutions like creating applets etc.

Course Objectives

The objective of this course is to

1. Equip the students with the basic feature of contemporary java required in solving complex problems.
2. Provide a practical knowhow and implementation of java programming concepts like classes, objects, packages, swings, socket programming

Course Outcomes

On completion of this course, the students will be able to

- CO1: Define and explain concept of byte code and platform independence, demonstrate basic java based application development using operators, if-else, loops and arrays.
- CO2: Distinguish between various types of inheritances, polymorphisms and other concepts and able to solve complex programming problems involving class objects, inheritances, and packages
- CO3: Describe hierarchy of exception classes and thread life cycle along with demonstrate and design solutions for some simple and complex applications using exception and multithreading concepts.
- CO4: Explain event delegation model and describe AWT class hierarchy; Apply knowledge of event handling and AWT controls create some new dynamic graphical applications.
- CO5: Explain the architecture of applet and concept of swing package. Demonstrate applications based on java applets and swings.

Modules	Blooms level*	Number of hours
Module I: Java Basics Concepts of OOP, Features of Java, How Java is different from C++, Environmental setup, Basic syntax, Objects and classes, Basic Data Types, Variable Types, Modifier Types, Basic operators, Loop Control, Decision Making, Strings and Arrays, Methods, I/O.	L1, L2 and L3	6
Module II: Java Object Oriented Inheritance, Overriding, Polymorphism, Abstraction, Encapsulation, Interfaces, Packages, Exploring java.util package.	L2 and L3	7
Module III: Exception Handling and Threading Exception Hierarchy, Exception Methods, Catching Exceptions, Multiple catch Clauses, Uncaught Exceptions Java's Built-in Exception. Creating, Implementing and Extending thread, thread priorities, synchronization suspending, resuming and stopping Threads, Multi-threading.	L2, L3 and L5	8

COMPUTER ORIENTED NUMERICAL METHODS

Course Code: IFT2517

Credit Units: 03

Course Objective:

The objective of this course is to provide conceptual understanding of various numerical methods, in particular, with reference to numerical solution of non linear equations and system of linear equations, interpolation, numerical differentiation and integration and numerical solution of ordinary differential equations. Important theorems and different formulae for various numerical methods to be covered with an aim of helping the students to understand the fundamentals, concepts and practical use of these methods in the field of computer sciences and applications.

Course Contents:

Module I: Numeric Computation

Computer Arithmetic- Floating point numbers-operations, Normalization and their Consequences, Absolute, Relative and Percent Error.

Iterative Methods:- Zeros of a single Transcendental equations and Zeros of Polynomial Equations using Bisection, False Position, Newton-Raphson Methods, Convergence of Solution.

Module II: Simultaneous Linear Equations

Solution of Simultaneous Linear Equations. Direct Methods:- Gauss elimination method, Pivoting, Gauss-Jordan Method. Iterative methods:-Jacobi's Methods, Gauss-Seidal Method.

Module III: Polynomial Interpolation

Newtons divided difference, Forward and backward difference Formulae, Difference Tables, Lagrange's Method.

Module IV: Numerical Differentiation and Integration

Formula for first and second order derivatives using newton's- Forward and Backward formula, Numerical Integration, Newton-Cotes Formula: Trapezoidal rule, Simpson's 1/3rd rule, Simpson's 3/8th rule, Weddle's rule.

Module V: Numerical Solution of Differential Equations

Basic Terminology of Differential Equations, Picard's Method, Euler's method, Taylor's Series method, Runge-Kutta Methods, Predictor –Connector Method.

Examination Scheme:

Components	CT1	A/C/Q	Attd	EE
Weightage (%)	15	10	5	70

IFT2525	BASICS OF CLOUD COMPUTING	L	T	P	C
Version 2019.1	Date of Approval: 15 May, 2019	3	1	0	4
Pre-requisites/Exposure	General Networking and basics of virtualization				
Co-requisites	Nil				

Catalog Description

The course introduces the basic concepts and methods of Cloud computing and develops the concepts and skills necessary to build applications in Cloud environments. The course starts by explaining the concepts of cloud computing, cloud architecture, model and the concepts of Virtualization. It then explains how such ideas form the basis for creating Computing Clouds where the concept of resources is virtualized. Case studies are used to show how applications can be run in a Cloud and the principles of creating images to run in Clouds are explained. The programming skills for business models that underlie Cloud Computing are also presented.

Course Objectives

The objective of this course is to

1. Equip the students with concepts virtualization and Cloud
2. Provide an overview of security issues and various tools available in Cloud

Course Outcomes

On completion of this course, the students will be able to

- CO1: Explain and differentiate between different types of computing and also determine them with the upcoming Cloud Computing environment.
- CO 2: Identify the different layers in the architecture of Cloud and explain the different services, deployment models and types of virtualization available.
- CO 3: Explain the power of scalability and fault tolerant system and other features of cloud, analyzing the management of cloud in business.
- CO 4: Explain, apply and compare the various security issues and their solutions and policies for security in Cloud environment.
- CO 5: Analyze programming Models, its workings and comparing them with each other.

Modules	Blooms level*	Number of hours
MODULE 1: Overview of Client/Server Computing, Peer to Peer Computing, Distributed Computing, Col-laborative Computing, Cloud Computing; Behaviour of Cloud Computing; Pros and Cons of Cloud Computing.	L1, L2 ,L3	8
MODULE 2: Understanding of Cloud Architecture, Cloud Storage, Cloud Services; Types of Cloud service development; Software as a Service, Platform as a Service, Web Services, On Demand Com-puting; Virtualization: Fundamental concepts of compute storage, Network virtualization; Pros and Cons of Cloud Service Development; Case study with Cloud Services Development Service and Tools.	L1,L2, L3	8
MODULE 3: Introduction to Scalability and Fault Tolerance with Cloud Computing; Cloud	L1, L2 and L4	6

IFT2522	LINUX	L	T	P	C
Version 2017.1	Date of Approval: 14 June 2017	2	0	0	2
Pre-requisites/Exposure	Basics of OS				
Co-requisites	Nil				

Catalog Description

The Objective of this course is to explore the idea of Linux platform to graduate students. The fundamentals concepts of Linux Operating System, commands and Shell Programming will be prepared by the students to work on Linux platform, which is the requirement of each industry and in academic. The syllabus will cover the study of scripting languages such as PERL, TCL/TK and BASH. Creation of programs in the Linux environment, the principles of scripting languages and usage of scripting languages in IC design flow.

Course Objectives

The objective of this course is

1. Ability to create and run scripts using Perl / TCL.
2. Ability to use Linux environment and write programs.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Outline basics of UNIX OS and Linux security system.
- CO2. Describe Linux file system and related commands.
- CO3. Illustrate implementation of Linux networking concepts.
- CO4. Demonstrate Perl and Tcl/tk scripts.

Modules	Blooms level*	Number of hours
Module I: Introduction History of Operating System, Types of Operating Systems, History of Linux and Unix, UNIX Family, Unix System Architecture, Kernel, Shell: Types of shells, Files and Directories, Absolute Path and Relative Path, root and hierarchical file structure of Unix, telnet, Introduction to Linux server security and administration.	L1 and L2	6
Module II: Linux Basics Introduction to Linux, File System of the Linux, General usage of Linux kernel & basic commands, Linux users and group, Permissions for file, directory and users, Searching a file & directory, zipping and unzipping concepts.	L2 and L3	6
Module III: Linux Networking Introduction to Networking in Linux, Network basics & tools, File transfer protocol in Linux, Network file system, Domain Naming Services, Dynamic hosting configuration Protocol & Network information Services.	L1 and L3	6
Module IV: Perl Scripting and Tcl/tk Scripting Introduction to Perl Scripting, working with Simple Values, Lists and Hashes, Loops and Decisions, Regular Expressions; Data Structures, Control Flow Commands, Procedures and Scope, Eval, Working With UNIX, Reflection and Debugging, Script Libraries, Tk Fundamentals, Tk by Examples, The Pack Geometry Manager, Binding Commands to XEvents, Buttons and Menus, Simple Tk Widgets, Entry and Listbox Widgets Focus, Grabs and	L2, L3 and L4	6

IFT2511	JAVA PROGRAMMING LAB	L	T	P	C
Version 2017.1	Date of Approval: June, 2017	0	0	2	1
Pre-requisites/Exposure	Basics of Programming				
Co-requisites	NIL				

Catalog Description

In this Lab course the basic features of contemporary java are implemented and demonstrated. Problems or programs will be related to concepts of classes, objects, threads, packages, exception handling, applets, AWT control, swings and socket programming. Concepts covered would enable them to create basic and complex console and graphical based applications for desktop and Internet.

Course Objectives

The objective of this course is to

1. Equip the students to apply knowledge of various basic java features required in solving basic and complex problems.
2. Provide a demonstration of basic java programming concepts like classes, objects, threads, packages, exception handling, applets, AWT control, swings and socket programming

Course Outcomes

On completion of this course, the students will be able to

CO1: Apply the concepts learned of operators, if-else, loops and arrays to java based application development.

CO2: Demonstrate the use of various types of inheritances, polymorphisms, class objects, inheritances, packages and other concepts to basic and complex java programming problems.

CO3: Apply the knowledge of exception handling and multithreading concepts for some simple and complex applications.

CO4: Apply knowledge of event handling and AWT controls to create some new dynamic graphical applications.

CO5: Demonstrate graphical applications based on java applets, swings and event handling.

Modules/Topics Covered**	Blooms level*	Number of hours
Sample Programs using Objects and classes, Variable Types, Modifier Types, operators, Loops Decision Making, Strings and Arrays, 1. WAP to display "Hello, it's a first program in java". 2. WAP to find sum of two integers taken as input from user at runtime. 3. WAP to find sum of two float numbers taken as command line arguments 4. WAP to find changed case of entered character. 5. WAP to find maximum of 3 integer numbers taken as input from user at runtime. 6. WAP in java to find out the greatest out of ten numbers stored using arrays. 7. WAP to create class with "name" as String and "age" as integer data members. The class should have two methods to take input from user and display the data. 8. WAP to find factorial of a number using class and object.	L3, L5	6
Sample Programs using Inheritance, Overriding, Polymorphism, Interfaces,	L3, L5	4

Packages 1. WAP in java to illustrate the concept of interfaces. 2. WAP to create a package as MyPack having a class with three methods: max, fact and show. Use it in other folder with setting classpath and without setting class path. 3. Write a program in java to showcase uses of super keyword		
Sample Programs using exception handling and threads 1. Write a program to demonstrate the use of nesting of try-catch block 2. WAP in java to illustrate the concept of using multiple catch clauses to handle different types of exceptions. 3. WAP in java to create a user defined Exception and throw it explicitly. 4. Demonstrate thread using Thread class and Runnable interface 5. Demonstrate various thread methods using a program	L3, L5	6
Sample Programs using event handling and AWT controls 1. Write a program to display “hello” in different color where user clicks left mouse button and “world” where right mouse button is clicked. Use black background. 2. WAP in java to create a Frame and handle window-closing event implementing the WindowListener interface. 3. WAP to create an Applet having various different buttons, recognizing them using action command string method and handling click event generated by them. 4. WAP to create a frame and illustrate the concept of using an adapter class in place of interfaces for handling various mouse events generated over frame window. 5. WAP in java to create a frame with AWT controls (like label, push buttons, Checkbox, Checkbox Group) and handle various events generated by them. 6. WAP in java to create a frame with various AWT controls (like choice, list, TextField and Buttons) and handle the events thrown by them.	L3, L5	6
Sample Programs using applets, swings and stream socket 1. Write an applet which will display “HAPPY” and “DEEPAVALI” as: The word “HAPPY” will roll from top to bottom and “DEEPAVLI” from bottom to “top”. Both will run at the same speed and stop simultaneously at the center of the applet. 2. Write an applet to display last 32 shades of red, green and blue in equal sized square grid accompanied by appropriate labels like” Last 32 shades of Red/Green/Blue color”. Make use of BorderFactory to apply border for each individual shade. 3. Create an applet with one single button with caption “Click”. On clicking the button will open a new Frame with title “Factorial”. The frame will have two three controls :TextField, Label and button. On clicking button calculate the factorial entered in TextField control. 4. Create Java programs to demonstrate day time client and server. 5. Create java programs to create echo client and server	L3, L5	2

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

** Sample Programs provided are not limited to these only, can include others as desired.

Version 2017.1	Date of Approval: 14 June 2017	0	0	2	1
Pre-requisites/Exposure	Basic Concepts of OS				
Co-requisites					

Catalog Description

This course is designed to get students familiar with the advance concepts of Linux. The course provides familiarity to concepts like C Programming in Linux, Perl and TCL scripting. Students will learn practical on Linux and hence can work on any application based on Linux advanced concepts.

Course Objectives

The objective of this course is

1. To make students familiar with the advance concepts and working of Linux.
2. Provide an overview of Perl and TCL scripting.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Illustrate Linux basic concepts like shell scripts and working.
CO2. Explain concepts of C programming in Linux and apply them in real applications.
CO3. Design and implement various Perl scripts for a given problem.
CO4. Work on TCL scripts.

Modules	Blooms level*	Number of hours
Lab Session 1-2 Review of UNIX Commands, Redirection, Piping and shell programming.	L1 and L2	4
Lab Session 3-5 Writing shell scripts.	L1 and L3	6
Lab Session 6-8 Writing Perl Script.	L1 and L3	6
Lab Session 9-10 To prepare C programs in Linux	L1 and L3	4
Lab Session 11-12 Working with Foreign Key and Check Constraint.	L1 and L3	4

IFT2535	SUMMER INTERNSHIP EVALUATION-II	L	T	P	C
Version: 2017.1	Date of Approval: June 2017	0	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

The objective of this course is to provide practical training on some live projects that will increase capability to work on actual problem in industry. This training may undergo in an industrial environment or may be an in-house training on some latest software which is in high demand in market. This training will be designed such that it will useful for their future employment in industry.

Course Objectives

The objective of this course is to

1. Provide practical training on live projects
2. Increase technical capabilities on solving real life problems in company environment

Course Outcomes

On completion of this summer internship, the students will be able to:

CO1: Develop communication, interpersonal and other critical skills in the job interview process.

CO2: Design and develop software and hardware projects

CO3: Assess interests and abilities in their field of study.

CO4: Demonstrate excellent technical and communication skills to acquire employment contacts leading directly to a full-time job following graduation from college.

Text Books

As per topic of summer internship project is chosen and discussion with guide.

Reference Books

As per topic of summer internship project is chosen and discussion with guide.

Modes of Evaluation: Quiz/Assignment/ Seminar/Written Examination

IFT2622	INTERNET OF THINGS	L	T	P	C
Version 2019.1	Date of Approval: 15 May, 2019	3	1	0	4
Pre-requisites/Exposure	Basic Networking Concepts				
Co-requisites	Nil				

Catalog Description

The Internet is evolving to connect people to physical things and also physical things to other physical things all in real time. It's becoming the Internet of Things (IoT). The course enables student to understand the basics of Internet of things and protocols. It introduces some of the application areas where Internet of Things can be applied. Students will learn about the working of Internet of Things.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of internet-of-things
2. Provide an overview of designing iot devices

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain key terms and trends around the Internet of Things along with its physical and logical design

CO2: Understand the potential and value of the Internet of Things and Smart Services.

CO3: Describe the technologies used for the Internet of Things and mobile devices, including (passive and active) sensors, the physical communications layer, communications protocols, programming frameworks,.

CO4: Design python programs and have hands on experience on python programming

CO5: Develop IoT application of moderate complexity for a well-used mobile platform.using python, raspberry Pi and arduino programming

Modules	Blooms level*	Number of hours
Module I: Introduction to Internet of Things Definition & characteristics of IoT, physical design of IoT-things in IoT, IoT protocols, logical design of IoT- IoT functional block, IoT communication models, IoT communication APIs, IoT enabling technologies-wireless sensor networks, cloud computing, big data analytics, communication protocols, embedded systems, IoT levels and deployment templates, IoT application	L1, L2	8
MODULE 2: IoT and M2M Introduction to M2M , difference between IoT and M2M, SDN (software defined networking) and NFV (Network Function Virtualization) and their applications for IoT.	L2, L3 and L4	8
MODULE 3: IoT system management with NETCONF-YANG Need for IoT systems management, SNMP and its limitations, Network Operator Requirements, Introduction to NETCONF and YANG.	L2, L3 and L4	8
MODULE 4: Developing Internet of Things IoT Design Methodology, Logical design using Python- Python data types & data structures, control flow, functions, modules, packages, classes, file handling, Python packages for IoTJSON, XML, HTTPLib, URLLib, SMTPLib, IoT end devices-building blocks, Introduction to Raspberry Pi.	L2, L3 and L4	12

COMPUTER ORIENTED STATISTICAL & OPTIMIZATION METHODS

Course Code: IFT2616

Credit Units: 03

Course Objective:

The objective of this course is to expose students to the fundamentals and concepts of statistical and optimization methods, in particular, with reference to frequency distribution and measures of central tendency, measures of dispersion, skewness and kurtosis, theory of probability, linear programming problems, transportation, assignment and game problems. This course is designed with an aim of helping the students to understand important theorems, different formulae and practical applications of these statistical and optimization methods in the field of Computer Sciences and Applications.

Course Contents:

Module I

Collection of Data, Sampling and Sampling Designs, Classification and Tabulation of Data, Graphical representation of Data, Measures of Central Value, Measures of Dispersion. Moments, Skewness, Kurtosis, Correlation and Regression.

Module II: Probability

Classical Definition of Probability, Algebra of Events, Probability Axioms, Conditional Probability.

Probability Distributions: Discrete and Continuous Distributions, Binomial Distribution, Poisson distribution, Normal Distribution.

Module III: Linear Programming

Mathematical Formulation of Linear Programming models and its Graphical Solutions, Simplex Method, Charne's Big M method, Two Phase Method.

Module IV: Transportation Problem

General Transportation model, Starting basic Solutions:-North west Corner Method, Least Cost Method, Vogel's Approximation Method, Test of optimality, unbalanced Problem. Assignment Problems

Module V: Game Theory

Two-Person Zero Sum Games, Maximin-Minimax Principal, Pure Strategies, Mixed Strategies, Expected Pay off, Concept of Dominance, Graphical Solution of $m \times 2$ and $2 \times n$ Games.

Examination Scheme:

Components	CT1	A/C/Q	Attd	EE
Weightage (%)	15	10	5	70

IFT2618	INTRODUCTION TO OPEN SOURCE TECHNOLOGIES (PHP, MYSQL)	L	T	P	C
Version 2017.1	Date of Approval: 14 th June 2017	3	0	0	3
Pre-requisites/Exposure	Basic Knowledge of HTML				
Co-requisites	Nil				

Catalog Description

The course includes the content about PHP and its Programming Concepts. It includes basic architecture of running a PHP Script. It also includes the concepts about Conditional, Control Statements, Array, Associative Array, String Functions and Concepts of Functions: Call by Value and Reference. The course also includes concepts related to Object Oriented Programming in PHP and website design support along with Database Support concepts which will be useful to design Backend for the website.

Course Objectives

The objective of this course is:

1. To provide a fundamental understanding of Dynamic Website Design in PHP.
2. To provide knowledge about various Frameworks build for Website Designing.

Course Outcomes

On completion of this course, the students will be able to

After completing the course, the students will be able to,

CO 1: Explain the basic concepts of PHP programming and apply it to rewrite PHP scripts using Strings and Functions

CO 2: Distinguish between various Conditional and Control Statements and rewrite PHP scripts based on the concepts

CO 3: Apply Object Oriented and Web Design concepts of PHP in order to prepare responsive web pages and websites

CO 4: Apply the concepts of Database and Database connectivity to prepare backend support for website.

CO 5: Compare and Contrast the behavior of various PHP frameworks and apply them to construct webpages and websites

Modules	Blooms level*	Number of hours
Module I: Introduction to Open Source and PHP programming Introduction to Open Sources Technologies, Introduction to PHP, installation and configuration, Advantages and Disadvantages of PHP, Client Side Scripting, Server Side Scripting, Variables, data types, various types of function, creating your own function, Strings in PHP, String Functions.	L1, L2	4
Module II: Operators, Loops, Array, Exception and Error Handling Operators, Conditions, Loops, Using for each, Creating and Using Arrays, Multidimensional Array, Associative Array. Error Handling in PHP, Errors and Exceptions, Exception class, try/catch block, throwing an exception, defining your own Exception subclass.	L1, L2	5
Module III: Classes, File system, Passing Information between pages Object oriented programming with Php, Working with Datetime, code re-use,	L2, L3	7

require (), include(), and the include_path; Understanding PHP file permissions, File reading and writing functions, File system functions, File uploads, Sending mail & use of email server. HTTP, GET arguments, POST arguments, Using Session in PHP, cookies, The setcookie() function, Deleting Cookies and Reading Cookies.		
Module IV: Working with database HTML Tables and Database tables, Databasemanipulation(Select, Insert, Update, Delete), validating User Input using Javascript. MYSQL, Introducing MySQL; database design concepts; the Structured Query Language (SQL); communicating with a MySQL backend via the PHP, MySQL API Building Database Applications, Developing PHP scripts for dynamic web page like feedback form, online admission form and online test.	L2, L3	5
Module V: Working with Frameworks Working with Mambo, Working with Joomla, Working with framework. Working with wordpress, Working with drupal, Use of Joomla in rapid development of website. Developing of simple website using joomla.	L2, L3 and L4	3

IFT2620	INTRODUCTION TO OPEN SOURCE TECHNOLOGIES (PHP, MYSQL) LAB	L	T	P	C
Version 2017.1	Date of Approval: 14 th June 2017	0	0	2	1
Pre-requisites/Exposure	Basic Knowledge of HTML				
Co-requisites	Nil				

Catalog Description

The course includes PHP Programming Concepts. Conditional, Control Statements, Array, Associative Array, String Functions and Concepts of Functions: Call by Value and Reference are implemented. The course also includes concepts related to Object Oriented Programming in PHP and website design support along with Database Support concepts which will be useful to design Backend for the website.

Course Objectives

The objective of this course is:

1. To provide a fundamental understanding of Dynamic Website Design in PHP.
2. To provide knowledge about various Frameworks build for Website Designing.

Course Outcomes

On completion of this course, the students will be able to

- CO 1: Apply the basic concepts of PHP programming to rewrite PHP scripts using Strings and Functions
- CO 2: Demonstrate the concept of Conditional & Control Statements and 1 D, 2 D & Associative Array using PHP scripts
- CO 3: Apply Object Oriented and Web Design concepts of PHP in order to prepare responsive web pages and websites
- CO 4: Apply the concepts of Database and Database connectivity to prepare backend support for website.

Lab Sessions	Blooms level*	Number of hours
1. PHP Scripts on Basic Concepts <ul style="list-style-type: none"> • Write the process of installation of web server. • Write programs to print all details of your php server. Use phpinfo(). • Write a program to give demo of ECHO and PRINT command. • Write a program to implement the string functions. 	L1,L3	2
2. PHP Script on Conditional and Control Statements <ul style="list-style-type: none"> • Write a script to print Fibonacci series upto a given number. • Write a menu driven program to implement a calculator which performs only addition, subtraction, multiplication and division. The operation should happen based on user choice. • Write a script to calculate Factorial of a given number 	L1,L3	4
3. PHP Scripts on Arrays : 1D, 2D, Associative <ul style="list-style-type: none"> • Write a program sort ten number by using array. • Write a program to demonstrate the concept of associative array. 	L1,L3	4

<ul style="list-style-type: none"> Write a program to demonstrate the concept of multidimensional array. 		
4. PHP Scripts on Object Oriented Programming and File Handling Concepts <ul style="list-style-type: none"> Write a program to demonstrate the concept of Classes & objects. Write a php script including all the file handling functions. 	L1,L3	2
<ul style="list-style-type: none"> PHP Scripts on Webpage and Website Design Concepts Create a login form with two text fields called “login” and “password”. When user enters “Amity” as a user name and “university” as a password it should be redirected to a Welcome.HTML page or to Sorry.HTML in case of wrong username/password. Write a program to design login form in which find the greatest number amongst three numbers. WAP for Marksheet generation. Design a webpage for entering the student details with all the validations applied on it. Create a form with a text box asking to enter your favorite city with a submit button when the user enters the city and clicks the submit button another php page should be opened displaying “Welcometo the city”. 	L1,L3	6
5. PHP Scripts on Database Creation an Connectivity <ul style="list-style-type: none"> Create a database in MySql and connect that database from PHP. Write a program to Update, insert and delete the values of table in database. 	L1,L3	4

IFT2604	DATA WAREHOUSING AND DATA MINING	L	T	P	C
Version 2017.1	Date of Approval: 14 June, 2017	3	0	0	3
Pre-requisites/Exposure	Introduction to Database Management System				
Co-requisites	Nil				

Catalog Description

In this course the concepts of Data warehouse and Data Mining are discussed in detail. The different data mining techniques such as clustering, classification, association are introduced. As a precursor to the study of data warehouse its architecture, types of OLAP Servers, and usage of OLAP are studied in detail. The concepts further enhances the concept of different attributes supported by data mining process, application of data mining in marketing, banking, retail sector and other areas are analyzed. .

Course Objectives

The objective of this course is to

1. Equip the students with concepts of data mining techniques namely classification, clustering and association.
2. Provide an overview of data warehouse which include the usage of OLAP ,its characteristics, OLAP architecture.

Course Outcomes

On completion of this course, the students will be able to

- CO1: Explain the concept of Datawarehouse,its characteristics,Metadata concepts and its importance, The schemas of Data warehouse with their application areas.
- CO2: Explain the architectural components of data warehouse and the challenges the data warehousing is facing.
- CO3: Explain the indexing of OLAP, the different OLAP operations performed on the data cube.
- CO4: Explain the concept of Data mining, its application and advantages
- CO5: Explain the concept of different data mining techniques like association, clustering and classification. The implement of these techniques on the different data sets.

Modules	Blooms level*	Number of hours
MODULE 1: Data Warehousing: Data Warehouse definition & Characteristics, The need for data ware housing, Operational and Informational Data Stores, Difference between Data warehouse and DBMS, Benefits of Data warehousing,Data mart, Meta Data, Conceptual Modeling of Data Warehouses: star schemas, Snowflake, Fact Constellations with example each.	L1 and L2	8
MODULE 2: Data Warehousing Components& Architecture Data Warehouse Architecture, Components of Data Warehouse Architecture, Data Warehousing Topologies, Meta Data, Components of Meta data, Mapping Meta Data. Challenges with Data Warehousing.	L2, L3 and L4	8
MODULE 3: On Line Analytical Processing (OLAP) Definition: OLAP, Difference between OLTP and OLAP, OLAP Server Architecture, OLAP Operations, Multi Relational &Multi Dimensional: MOLAP, ROLAP, OLAP Tools, Metadata Repository, Data Warehouse Back-End Tools and Utilities.	L2 and L3	10

MODULE 4: Data Mining Introduction to Data Mining, Applications, Limitations, Techniques, Association Rules: Apriori Algorithm, Classification: Decision Tree Cluster Analysis: Features, Types of Cluster Analysis Methods: Partitional, Hierarchical, Density Based, Grid based Methods, , Web Data Mining, Search Engine, Case Study, Limitations	L2, L3 and L4	10

IFT2611	MOBILE COMPUTING	L	T	P	C
Version 2017.1	Date of Approval: 14 th June 2017	3	0	0	3
Pre-requisites/Exposure	Basic knowledge of Computer Networks				
Co-requisites	Nil				

Catalog Description

The objective of this consortium is to shape and expand a full-scale and sound mobile computing system market. To achieve this, cooperation is required of interests related to communication (network), computer hardware/software, system integrators (including service providers), and the media.

Course Objectives

The objective of this course is to

1. Give a general overview of the cellular technology and the associated terms and discuss the generations of the mobile technologies starting from 1G to 3G techniques.
2. Illustrate the GPRS and WAP model for 2G internet connectivity in detail.
3. Elaborate the third-generation mobile services
4. Describe the Global Mobile Satellite Systems in detail and basic architecture of Bluetooth technology and advanced topics in mobile computing.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain the basic concepts mobile technology, computing and basic architecture of PCS and GSM.

CO2: Describe the mobile networking Infrastructure through 2G technologies (GSM, GPRS, WAP).

CO3: Explain the basic concepts of 3G technologies (WCDMA, CDMA 2000) and WLL.

CO4: Discuss the working of mobile satellite systems like IRIDIUM and GLOBALSTAR.

CO5: Explain the concepts of Bluetooth technology, its working and protocols, virtual networks and enterprise networks.

Modules	Blooms level*	Number of hours
Module I: Introduction to Personal Communications Services (PCS) PCS Architecture, Mobility management, Networks signaling. Global System for Mobile Communication (GSM) system overview: GSM Architecture, Mobility management, Network signaling.	L1, L2 and L3	8
Module II: General Packet Radio Services (GPRS) & Wireless Application Protocol (WAP) GPRS Architecture, GPRS Network Nodes. Mobile Data Communication: WLANs (Wireless LANs) IEEE 802.11 standard, Mobile IP. Wireless Application Protocol (WAP): The Mobile Internet standard, WAP Gateway and Protocols, wireless mark up Languages (WML).	L1 and L2	10
Module III: Third Generation (3G) Mobile Services Introduction to International Mobile Telecommunications 2000 (IMT 2000) vision, Wideband Code Division Multiple Access (W-CDMA), and CDMA 2000, Quality of services in 3G.	L1 and L2	7

Co-requisites	Nil				

Catalog Description

This course examines the evolution of enterprise resource planning (ERP) systems - from internally focused client/server systems to externally focused e-business. This class studies the types of issues that managers will need to consider in implementing cross-functional integrated ERP systems. The objective of this course is to make students aware of the potential and limitations of ERP systems. This objective will be reached through hands-on experience, case studies, lectures, guest speakers and a group project. The course would equip students with the basics of E-Commerce, technologies involved with it and various issues associated with.

Course Objectives

The objective of this course is to

1. Understand the students with the role of consultants, vendors and employees.
2. Provide an overview of various phases in ERP implementation and identify various technologies used in ERP.

Course Outcomes

On completion of this course, the students will be able to

- CO1: Describe the key features of Internet, Intranets and Extranets and explain how they relate to each other. Demonstrate an understanding of the foundations and importance of E-commerce and assess electronic payment systems.
- CO2: Understand concepts of reengineering, data mining, data warehousing and how they relate to ERP system implementations.
- CO3: Explain the challenges associated with implementing enterprise systems and their impacts on organizations.
- CO4: Describe the selection, acquisition and implementation of enterprise systems and demonstrate an ability to work independently and in a group.
- CO5: Identify and describe typical functionality in an ERP system.
- CO 6: Analyze the strategic options for ERP identification and adoption.

Modules	Blooms level*	Number of hours
MODULE 1: INTRODUCTION AND CONCEPTS: Networks and commercial transactions - Internet and other novelties; Networks and electronic transactions today, Model for commercial transactions; Internet environment - internet advantage, world wide web and other internet sales venues; Online commerce solutions. Security Technologies: Why is internet insecure? A brief introduction to Cryptography; Public key solution. Digital payment systems; First virtual internet payment system; cyber cash model Operational process of Digicash, Ecash Trail; Using Ecash; Smart cards; Electronic Data Interchange: Its basics; EDI versus Internet and EDI over Internet.	L1, L2 and L3	8
MODULE 2:	L1,L2	10

IFT2621	CRYPTOGRAPHY & NETWORK SECURITY	L	T	P	C
Version 2017.1	Date of Approval: 14 June,2017	3	-	-	3
Pre-requisites/Exposure	Basic Mathematics				
Co-requisites	Nil				

Catalog Description

In this course the concepts of cryptography and network security are discussed in detail. Substitution and transposition techniques, symmetric and asymmetric cryptographic algorithms, their applications, differences will be introduced. As a precursor to the study of cryptography studies will be made on impact of various network and web security protocols. The concepts learnt in the studies of cryptography & network security will be applied in the studies and analysis of authentication, integrity and security related protocols.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of cryptography & network security through problem solving and analytical approach.
2. Provide an overview of various network attacks and related security mechanism, various algorithms for modular arithmetic, symmetric and asymmetric cryptography and web and network security

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain, describe and distinguish various security attacks; Describe and solve block and stream ciphers and its applications in cryptography; Solve problems based on substitution and transposition ciphers.

CO2: Explain the basic mathematics of cryptography; Solve problems of groups, modular arithmetic, gcd and inverse algorithm, chinese remainder theorem and its application in cryptography; Applying algorithms for solving problems in cryptography

CO3: Describing the concept of public key cryptosystems and its related algorithm; Explain and solve problems related to hash functions, digital signature and its applications in cryptography; Compare symmetric and asymmetric key cryptography.

CO4: Explain management, distribution, secure exchange of keys and authentication certificate and its applications in real life. Explain, compare various authentication protocols used in cryptography and network security, also solve problems based on these protocols.

CO5: Explain various security protocols: IPSec, SSL, TLS, SET; Describing malicious softwares and illustrating various design approaches to Firewall

Modules	Blooms level*	Number of hours
MODULE 1: Introduction to security attacks, services and mechanism, Classical encryption techniques: substitution ciphers and transposition ciphers, cryptanalysis, steganography, Stream and block ciphers. Modern Block Ciphers: Block ciphers principles, Shannon's theory of confusion and diffusion, fiestal structure, Data encryption standard (DES), Strength of DES, Idea of differential cryptanalysis, block cipher modes of operations, Triple DES	L1, L2 and L3	7
MODULE 2: Introduction to group, field, finite field of the form GF(p), modular arithmetic,	L1, L2, L3	6

Prof. (Dr.) Anil Kumar
Deputy Dean Academics

prime and relative prime numbers, Extended Euclidean Algorithm, Advanced Encryption Standard (AES) encryption and decryption, Fermat's and Euler's theorem, Primality testing, Chinese Remainder theorem, Discrete Logarithmic Problem, Principles of public key crypto systems, RSA algorithm, security of RSA.		
MODULE 3: Message Authentication Codes: Authentication requirements, authentication functions, message authentication code, hash functions, birthday attacks, security of hash functions, Secure hash algorithm (SHA) Digital Signatures: Digital Signatures, Elgamal Digital Signature Techniques, Digital signature standards (DSS).	L1, L2, L3 and L5	7
MODULE 4: Key Management and distribution: Symmetric key distribution, Diffie-Hellman Key Exchange, Public key distribution, X.509 Certificates, Public key Infrastructure. Authentication Applications: Kerberos	L1, L2 and L3	7
MODULE 5: IP Security: Architecture, Authentication header, Encapsulating security payloads, combining security associations, key management. Viruses and related threats, Firewalls	L1, L2	9

**Bloom's Level:*

Version: 2017.1	Date of Approval: 14 June, 2017	0	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

The objective of this course is to provide practical training on some live/demo projects that will increase capability to work on actual problem in industry. It will be an in house training on some latest software which is in high demand in market. This training will be designed such that it will be useful for their future employment in industry.

Course Objectives

The objective of this course is to

1. Provide practical training on live projects
2. Increase technical capabilities on solving real life problems in company environment

Course Outcomes

On completion of this summer internship, the students will be able to:

CO1: Demonstrate a sound technical knowledge of their selected project topic.

CO2: Design and develop engineering solutions to complex problems utilising a systems approach.

CO3: Analyse various approaches for solving a complex engineering problem using different tools and techniques

CO4: Demonstrate the knowledge, skills and attitudes of a professional engineer.

CO5: Apply technical skills and knowledge in completing the project.

AIE6104	INTRODUCTION TO COMPUTERS AND PROGRAMMING IN C	L	T	P	C
Version: 2020.1	Date of Approval: July 2020	2	1	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

The objective of this course module is to acquaint the students with the basics of computers system, its components, data representation inside computer and to get them familiar with various important features of procedure-oriented programming language i.e. C.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of Programming through C Language
2. Provide an overview of advanced programming concepts like Structure, Union and File Handling

Course Outcomes

On completion of this course, the students will be able to

After the completion of course, the students will be able to,

- CO 1: Define the purpose and structure of C Program for programming; identify and distinguish various datatypes and operators; conditional and control statement; Apply if-else, Switch and loops to rewrite basic C program for problem solving.
- CO 2: Compare and contrast various Array types, its declaration and implementation; differentiate between Call by Value and Reference if Functions; apply the concepts to rewrite C Programs
- CO 3: Differentiate between various String Handling Functions; describe the concept of Pointers in C Language
- CO 4: Explain the concept of Structure and Union; apply the concept of File Handling to provide data storage support to the programs.
- CO 5: Apply the concept of Computer Graphics using C programming concepts for implementing line drawing, circle drawing algorithms.

Modules	Blooms level*	Number of hours
Module I: Introduction Introduction to computer, history, von-Neumann architecture, memory system (hierarchy, characteristics, and types), H/W concepts (I/O Devices), S/W concepts (System S/W & Application S/W, utilities). Data Representation: Number systems, character representation codes, Binary, octal, hexadecimal and their interconversions. Binary arithmetic, floating point arithmetic, signed and unsigned numbers, Memory storage unit.	L1, L2 and L3	7
Module II: Programming in C History of C, Introduction of C, Basic structure of C program, Concept of variables, constants and data types in C, Operators and expressions: Introduction, arithmetic, relational, Logical, Assignment, Increment and decrement operator, Conditional, bitwise operators, Expressions, Operator precedence and associativity. Managing Input and output Operation, formatting I/O.	L2, L3 and L4	7

Prof. (Dr.) Anil Kumar
 Deputy Dean Academics
 Amity University Haryana
 Manesar, Gurugram
 Haryana-122413

Registrar
 Amity University Haryana
 Manesar Gurgaon-122413

Module III: Fundamental Features in C C Statements, conditional executing using if, else, nesting of if, switch and break Concepts of loops, example of loops in C using for, while and do-while, continue and break. Storage types (automatic, register etc.), predefined processor, Command Line Argument.	L2, L3 and L4	7
Module IV: Arrays and Functions One dimensional arrays and example of iterative programs using arrays, 2-D arrays Use in matrix computations. Concept of Sub-programming, functions Example of user defined functions. Function prototype, Return values and their types, calling function, function argument, function with variable number of argument, recursion.	L2 and L3	7
Module V: Advanced features in C Pointers, relationship between arrays and pointers Argument passing using pointers, Array of pointers. Passing arrays as arguments. Strings and C string library. Structure and Union. Defining C structures, Giving values to members, Array of structure, Nested structure, passing strings as arguments. File Handling.	L2, L3 and L4	8

AIE6106	PROGRAMMING IN C LAB	L	T	P	C
Version 2020.1	Date of Approval: July, 2020	0	0	2	1
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

The primary objective of this course is to understand all the components of C, including the C language, the C Preprocessor, and the C Standard Library. An understanding of some advanced practical issues, including memory management, testing, and debugging, complex declarations and expression evaluation, building and using libraries, and evaluating tradeoffs, such as size vs. speed and speed vs. complexity. The ability to write C code and create and manipulate logical programs.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of Programming through C Language
2. Provide an overview of advanced programming concepts like Structure, Union and File Handling.

Course Outcomes

After the completion of course, the students will be able to,

CO 1: Demonstrate the use of various data types and operators in C programs; Solve various problems using conditional control statements (if-else, Switch case).

CO 2: Construct C programs related to problems involving the usage of loops, arrays and functions.

CO 3: Apply the concept of Pointers for efficient memory management and construct C programs using string handling functions.

CO 4: Demonstrate the use of Structure, Union and concept of File Handling to provide data storage support to the programs.

Modules	Blooms level*	Number of hours
LABORATORY SESSSION 1 OPERATORS, EXPRESSIONS and DECISION MAKING <ol style="list-style-type: none"> 1. Write a program to calculate simple interest and amount. 2. Write a program to swap two numbers using third variable. 3. Write a program to demonstrate Greatest of 3 nos and to print the given no in ascending order. 4. Write a program to check if the number is even or odd. 5. Write a program to perform arithmetic operations using Switch Case statement. 6. Write a program to calculate area of circle, rectangle, square and triangle using Switch Case statement. 	L3	5
LABORATORY SESSSION 2 LOOPING <ol style="list-style-type: none"> 1. Write a program to find factorial of given no using do while statement. 2. Write a program to print prime numbers up to 'n'. 3. AIE6204	OBJECT ORIENTED PROGRAMMING USING C++	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	2	1	0	3
Pre-requisites/Exposure	Hands on knowledge of C Programming				
Co-requisites	Basic concepts of C Programming				

Catalog Description

The objective of this course is to introduce object-oriented programming. To explore and implement the various features of OOP such as inheritance, polymorphism, Exceptional handling using programming language C++. After completing this course student can easily identify the basic difference between the programming approaches like procedural and object oriented.

Course Objectives

The objective of this course is

1. Equip the students with the basic features of C++ supporting object-oriented programming. Perform object oriented programming to develop solutions to problems demonstrating usage of control structures, modularity, I/O. and other standard language constructs.
2. Provide the overview of major object-oriented concepts to implement object oriented programs in C++ like encapsulation, inheritance and polymorphism, stream I/O, templates and operator overloading

Course Outcomes

On completion of this course, the students will be able to

- CO 1: Explain the basic principles of object-oriented programming approach; Differentiate it with procedural programming approach and also discuss difference between C and C++.
- CO 2: Illustrate the different ways to define a member function inline and explain how the private members of a class can be accessed. Explain how the objects can be instantiated and destroyed with static data member?
- CO 3: Explain the concept of inheritance, types and implementation with suitable examples; find out ambiguity problem in inheritance; use the concept of overriding and constructors in inheritance.
- CO 4: Explain polymorphism in detail and implement the concept of overloading in functions as well as in operators. Write the programs for virtual function and pointer with objects.
- CO 5: Explain the exception handling mechanism. Design the programs for class and function Template. Compare and contrast various formatted and unformatted i/o function in file handling.

Modules	Blooms level*	Number of hours
MODULE 1: INTRODUCTION Review of C, Difference between C and C++, Procedure Oriented and Object Oriented Approach. Basic Concepts: Objects, classes, Principles like Abstraction, Encapsulation, Inheritance and Polymorphism. Dynamic Binding, Message Passing. Characteristics of Object-Oriented Languages. Introduction to Object-Oriented Modeling techniques (Object, Functional and Dynamic Modeling).	L1 and L2	5
MODULE 2: CLASSES AND OBJECTS Abstract data types, Object & classes, attributes, methods, C++ class declaration, Local Class and Global Class, State identity and behaviour of an	L1, L2 and L3	7

object, Local Object and Global Object, Scope resolution operator, Friend Functions, Inline functions, Constructors and destructors, instantiation of objects, Types of Constructors, Static Class Data, Array of Objects, Constant member functions and Objects, Memory management Operators.		
MODULE 3: INHERITANCE Inheritance, Types of Inheritance, access modes – public, private & protected, Abstract Classes, Ambiguity resolution using scope resolution operator and Virtual base class, Aggregation, composition vs classification hierarchies, Overriding inheritance methods, Constructors in derived classes, Nesting of Classes	L2, L3 and L4	8
MODULE 4: POLYMORPHISM Polymorphism, Type of Polymorphism – Compile time and runtime, Function Overloading, Operator Overloading (Unary and Binary) Polymorphism by parameter, Pointer to objects, this pointer, Virtual Functions, pure virtual functions.	L2, L3 and L4	8
MODULE 5: STRINGS, FILES AND EXCEPTION HANDLING Manipulating strings, Streams and files handling, formatted and Unformatted Input output. Exception handling, Generic Programming – function template, class Template Standard Template Library: Standard Template Library, Overview of Standard Template Library, Containers, Algorithms, Iterators, Other STL Elements, The Container Classes, General Theory of Operation, Vectors.	L2, L3 and L4	8

AIE6208	OBJECT ORIENTED PROGRAMMING USING C++ LAB	L	T	P	C
Version 2020.1	Date of Approval: JULY, 2020	0	0	1	1
Pre-requisites/Exposure	Turbo C++				
Co-requisites	NIL				

Catalog Description

The objective of this course is to introduce object-oriented programming. To explore and implement the various features of OOP such as inheritance, polymorphism, Exceptional handling using programming language C++. After completing this course student can easily identify the basic difference between the programming approaches like procedural and object oriented.

Course Objectives

The objective of this course is

1. Perform object-oriented programming to develop solutions to problems demonstrating usage of control structures, modularity, I/O. and other standard language constructs.
2. Demonstrate adeptness of object-oriented programming in developing solutions to problems demonstrating usage of data abstraction, encapsulation, and inheritance.
3. Demonstrate ability to implement one or more patterns involving realization of an abstract interface and utilization of polymorphism in the solution of problems which can take advantage of dynamic dispatching, syntax, features of, and how to utilize the Standard Template Library.

Course Outcomes

On completion of this course, the students will be able to

- CO 1: Define and identify the basic principles of object-oriented programming approach; Differentiate it with procedural programming approach.
- CO 2: Determine the different ways to define a member function inline and explain how the private members of a class can be accessed. Solve how the objects can be instantiated and destroyed with static data member?
- CO 3: Apply the concept of inheritance, types and implementation with suitable examples; find out ambiguity problem in inheritance; use the concept of overriding and constructors in inheritance.
- CO 4: Relate the concept polymorphism with overloading in detail and implement the concept of overloading in functions as well as in operators. Write the programs for virtual function and pointer with objects.
- CO 5: Determine the exception handling mechanism. Design the programs for class and function Template. Compare and contrast various formatted and unformatted i/o function in file handling.

Modules/Topics Covered**	Blooms level*	Number of hours
1. Sample Programs using objects and classes (a) Write a program to illustrate the concept of one class with two objects by taking student data. (b) Write a program to show the relationship of class and object to display roll no., grade and fee paid by student.	L1, L3, L5	4
2. Sample Programs for different use of private, public member variables and functions and friend functions (a) Write a program to define the member function outside and inside the class. (b) Write a program to read and display the information of N persons to illustrate the concept of array of objects.	L1, L3, L5	4

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

(c) Write a program to add two numbers to illustrate the use of friend function.		
3. Sample Programs using constructors and destructors (a) Write a program to assign and copy values to illustrate the concept of parametrized and copy constructor. (b) Write a program to show the order of constructor and destructor.	L1, L3, L5	4
4. Sample Programs using operator overloading (a) Write a program to add two numbers using binary operator overloading. (b) Write a program to illustrate the assignment operator overloading.	L1, L3, L5	4
5. Sample Programs using inheritance in and accessing objects of different derived classes (a) Write a program to compute the marks explaining the concept of multiple inheritance. (b) Write a program to find the factorial of a number using inheritance.	L1, L3, L5	4
6. Sample Programs using polymorphism and virtual functions (using pointers) and File Handling (a) Write a program to find the volume of cylinder and cuboid using function overloading. (b) Write a program to reverse a string using pointers. (c) Write a program to explain the relationship of inheritance and virtual function. (d) Write a program to read the student name and fee paid using read() function from the file.	L1, L3, L4, L5	4

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

**** Sample Programs provided are not limited to these only, can include others as desired.**

AIE6211	ENGINEERING GRAPHICS LAB	L	T	P	C
Version 2019.1	Date of Approval: July 14, 2019	0	0	4	2
Pre-requisites/Exposure	Concepts Mathematics (especially Trigonometry and Geometry)				
Co-requisites	Machine Drawing & CAD				

Catalog Description:

A freshman level course which provides the undergraduate engineering students with a background in descriptive geometry, orthographic projection, engineering drawing standards and annotation, computer-aided engineering graphics. The concepts of point, line and plane relationships in projection, multi-view engineering drawings, auxiliary and section views, basic dimensioning and annotation, engineering applications of drawings are also discussed.

Course Objective:

The objective of this course is to

- Equip the students with the in-depth knowledge of drawings of points, straight line, planes, cylinders, prisms, pyramids, parabola, ellipse etc.
- Draw different figures manually and will be capable of using various instruments involved in drawings.

Course Outcomes (COs):

At the end of the course, the student shall be able to:

CO 1 - Define and explain basic principles of projections of points and lines.

CO 2 - Define, describe and construct the different orientations and projections of planes.

CO 3 – Explain and construct the projections of solids and sectioning of solids in different orientations.

CO 4 - State and draw the concepts of development of surfaces and introduction to auto CAD.

CO 5 – Define and construct orthographic and isometric view of an object.

Modules	Blooms level*	Number of hours
Module I: Introduction Importance, significance and scope of engineering drawing, drawing instruments and their use, lettering, dimensioning, scales, sense of proportioning, different types of projections, B.I.S. Specifications.	L1 and L2	8

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Module II: Projection of points, lines and plane surface Principal planes, principles of orthographic projections, Projection of points in all quadrants, Projection methods - First angle & third angle projection, Projections of straight lines (first angle projection) inclined to both the planes, true lengths and traces, projection of planes, projection of planes in simple position and inclined to both the principal planes, auxiliary planes and views	L1, L2 and L3	12
Module III: Projection of solids & section of solids Projection of simple solids like prisms, pyramids, cylinder, cone and truncated solids when the axis is inclined to both of the principal planes, Sectioning of above solids in simple vertical position when the cutting plane is inclined to the one of the principal planes and perpendicular to the other, obtaining true shape of section	L1, L2 and L3	12
Module IV: Development of surfaces & Isometric projections Development of surfaces of simple and sectioned solids – Prisms, pyramids cylinders and cones, Principles of isometric projection, isometric scale, Isometric projections of simple solids and truncated solids, Prisms, pyramids, cylinders, cones, Conversion of Orthographic Views to Isometric Views and Vice-versa.	L1, L2 and L3	8
Module V: Introduction to CAD Introduction to CAD and use of its commands, practice of some 2D figures using CAD.	L1, L2 and L3	8

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

AIE6213	BASIC ELECTRICAL AND ELECTRONICS ENGINEERING LAB	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	0	0	2	1
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

In this course, students will become familiar with basic electrical circuits. The students will learn practical aspects and implementation of theorems related to electrical circuits, law's related to flow of current, voltages, transformer and transistors.

Course Objectives

The objective of this course is to:

- Provide the overview of concept of flow of current/voltage of electrical circuits.
- Provide the basic knowledge about the concepts of electrical circuits and BJTs.

Course Outcomes

On completion of this course, the students will be able to:

- CO1. Explain the fundamental theorems and laws related to the electrical circuits and experimentally verify the basic circuit theorems
- CO2. Explain the working principle and estimate the performance of single phase transformers.
- CO3. Understand 3 phase balanced and unbalanced, star and delta connected supply and load and to measure power in 3 phase circuits
- CO4. Able to design circuit with Bipolar Junction Transistor in CB, CE & CC configurations

Modules	Blooms level*	Number of hours
Lab Session 1: Network Analysis Techniques & Theorems <ol style="list-style-type: none"> To verify KVL & KCL in the given network. To verify Superposition Theorem. To verify Maximum Power Transfer Theorem. To verify Reciprocity Theorem. To determine and verify R_{Th}, V_{Th}, R_N, I_N in a given network. 	L1, L2 and L3	6
Lab session II: Transformers and transistors <ol style="list-style-type: none"> To perform open circuit & short circuit test on a single-phase transformer. To perform regulation, ratio & polarity test on a single-phase transformer. To obtain the characteristics of a transistor under common base (CB) and common emitter (CE) configuration. 	L1, L2 and L3	3
Lab session III: Alternating Current Circuits <ol style="list-style-type: none"> To study transient response of a given RLC Circuit. To measure power & power factor in a three phase circuit by two wattmeter method. To measure power & power factor in a three phase load using three ammeter & three voltmeter method. 	L1, L2 and L3	3

AIE6302	DATABASE MANAGEMENT SYSTEMS	L	T	P	C
Version 2020.1	Date of Approval: July, 2020	3	1	0	4
Pre-requisites/Exposure	Computer Fundamentals and Mathematics Set Theory				
Co-requisites	Nil				

Catalog Description

This course is design to get students familiar with the fundamentals & basic concepts in Data Base Management Systems and their use. This course discusses architecture of Database Systems with concept of different types of available database model, concurrency techniques and new applications of the DBMS. The techniques for database design, normalization, database recovery and protection will enable students to work easily and efficiently on real databases.

Course Objectives

The objective of this course is

1. To make students familiar with the fundamental and necessary concepts of DBMS.
2. Provide an overview of normalization, concurrency techniques and database recovery with examples.

Course Outcomes

On completion of this course, the students will be able to

CO1. Differentiate between traditional data processing system and database management system and understand characteristics and applications of DBMS in real world.

CO2. Explain and use different data models such as Entity Relationship Model, Network, and Relational Model etc.

CO3. Solve queries using relational algebra, relational calculus and SQL.

CO4. Illustrate normalization concepts and apply them in real database applications.

CO5. Explain database concurrency techniques and recovery mechanisms.

Modules	Blooms level*	Number of hours
Module I: Introduction Concept and goals of DBMS, Database Languages, Database Users, Database Abstraction. Basic Concepts of ER Model, Relationship sets, Keys, Mapping, Design of ER Model.	L1, L2 and L6	9
Module II: Hierarchical model & Network Model Concepts, Data definition, Data manipulation and implementation. Network Data Model, DBTG Set Constructs, and Implementation	L1 and L2	9
Module III: Relational Model Relational database, Relational Algebra, Relational & Tuple Calculus.	L1 and L3	10
Module IV: Relational Database Design and Query Language SQL, QUEL, QBE, Normalization using Functional Dependency, Multivalued dependency and Join dependency.	L2, L3 and L4	10
Module V: Concurrency Control and New Applications Transaction basics: ACID property, Lifecycle of Transaction, Why Concurrency Control, Schedule, Serializability, Lock Based Protocols, Time	L2, L3 and L4	10

Stamped Based Protocols, Deadlock Handling, Crash Recovery. Distributed Database, Objective Oriented Database, Multimedia Database, Data Mining, Digital Libraries.

AIE6307	DATABASE MANAGEMENT SYSTEMS LAB	L	T	P	C
Version 2020.1	Date of Approval: July, 2020	0	0	2	1
Pre-requisites/Exposure	Basic Concepts of DBMS				
Co-requisites	Relational Algebra and Relational Calculus				

Catalog Description

This course is designed to get students familiar with the basic concepts of SQL including DDL, DML and DCL statements. The course also explains the basic concepts of PL/SQL. Students will learn practical on Oracle software and hence can work on any RDBMS software in future.

Course Objectives

The objective of this course is

1. To make students familiar with the concepts and working of SQL.
2. Provide an overview of PL/SQL.

Course Outcomes

On completion of this course, the students will be able to

CO1. Illustrate SQL basic concepts like languages DDL, DML etc., data types and working.

CO2. Explain concepts of database creation, manipulation of data and data retrieval and apply them in real database applications.

CO3. Design and implement various data constraints on a database for a given problem.

CO4. Solve queries using concepts like joins, subqueries, aggregate functions, triggers etc.

CO5. Prepare PL/SQL blocks.

Modules	Blooms level*	Number of hours
Lab Session 1 Introduction of RDBMS, Oracle, SQL and data types.	L1 and L2	2
Lab Session 2 Basic concept of database creation and manipulation of data.	L1 and L3	2
Lab Session 3 Working with SELECT query.	L1 and L3	2
Lab Session 4 To apply data constraints on a table-Primary Key, Not Null, Unique.	L1 and L3	2
Lab Session 5 Working with Foreign Key and Check Constraint.	L1 and L3	2
Lab Session 6 To implement the basic concept of Aggregate and Grouping Functions.	L1 and L3	2
Lab Session 7 To apply various set operators on data.	L1 and L3	2
Lab Session 8 Concept of Nested queries in database and its application in database.	L1 and L3	2
Lab Session 9 Implementation different types of JOINS in database.	L1 and L3	2

AIE6303	OPERATING SYSTEMS	L	T	P	C
Version 2020.1	Date of Approval: July 2020	3	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

In this course Operating System, its generic types, characteristics and functions are discussed in detail. Concepts covered would enable students to identify various categories of operating systems, with details about concepts of process management and scheduling. Contents will be helpful in identifying deadlocks in the system and designated approaches used to prevent, handle or recover from them. Further it covers the concepts of managing memory, devices and mechanisms for providing security to system and files using operating system.

Course Objectives

The objective of this course is to

1. Equip the students with the knowledge about categories of operating systems and their functions.
2. Provide detailed knowhow about functions of operating system like process, memory and device management along with file system security and protection.

Course Outcomes

On completion of this course, the students will be able to

- CO1: Define and explain operating systems and their evolution, also differentiate among its various types.
- CO2: Explain concepts of process and inter-process communication and synchronization. Identify solutions to detect, prevent and handle deadlocks occurring in the operating systems. Solve synchronization and CPU scheduling problems related to processes.
- CO3: Define and explain concepts of memory management like fragmentation, paging and segmentation. Solve problems related to memory management using page replacement algorithms.
- CO4: Describe the concepts of device management and list various disk allocation methods. Determine solutions for disk scheduling problems using available disk scheduling algorithms.
- CO5: State the concept of file and file system security, also distinguish among various file allocation methods.

Modules	Blooms level*	Number of hours
MODULE 1: INTRODUCTION TO OPERATING SYSTEM Operating system and function, Evolution of operating system, Batch, Interactive, multiprogramming, Time Sharing and Real Time System, multiprocessor system, Distributed system, System protection. Operating System structure, Operating System Services, System Program and calls	L1, L2 and L4	6
MODULE 2: PROCESS MANAGEMENT Process concept, State model, process scheduling, job and process synchronization, structure of process management, Threads Interprocess Communication and Synchronization: Principle of Concurrency, Producer Consumer Problem, Critical Section problem, Semaphores, Hardware Synchronization, Critical Regions, Conditional critical region,	L1, L2 and L3	12

Monitor, Inter Process Communication. CPU Scheduling: Job scheduling functions, Process scheduling, Scheduling Algorithms, Non-Preemptive and preemptive Strategies, Algorithm Evaluation, Multiprocessor Scheduling. Deadlock: System Deadlock Model, Deadlock Characterization, Methods for handling deadlock, Prevention strategies, Avoidance and Detection, Recovery from deadlock combined approach		
MODULE 3: MEMORY MANAGEMENT Single Contiguous Allocation: H/W support, S/W support, Advantages and disadvantages, Fragmentation, Paging, Segmentation, Virtual memory concept, Demand paging, Performance, Paged replaced algorithm, Allocation of frames, Thrashing, Cache memory, Swapping, Overlays	L1, L2 and L3	7
MODULE 4: DEVICE MANAGEMENT Principles of I/O hardware, Device controller, Device Drivers, Memory mapped I/O, Direct Access Memory, Interrupts, Interrupt Handlers, Application I/O interface, I/O Scheduling, Buffering, Caching, Spooling, Disk organization, Disk space management, Disk allocation Method, Disk Scheduling, Disk storage	L1, L2 and L3	7
MODULE 5: FILE SYSTEM AND PROTECTION AND SECURITY File Concept, File Organization and Access Mechanism, File Directories, Basic file system, File Sharing, Allocation method, Free space management. Policy Mechanism, Authentication, Internal excess Authorization	L1 and L2	4

AIE6308	UNIX PROGRAMMING LAB	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	0	0	2	1
Pre-requisites/Exposure	Basic knowledge of Operating System				
Co-requisites					

Catalog Description

This course introduces the UNIX operating system commands, shell programming. Explores the use of operating system utilities such as vi text editors, filters, process handling etc.

Course Objectives

The objective of this course is to

1. Provide knowledge of working on Unix.
2. Provide sound foundation of writing Shell scripts.
3. Implement features like piping, filters and redirection.

Course Outcomes

On completion of this course, the students will be able to

CO1: To implement various Unix commands.

CO2: To demonstrate the use of Vi Editor and other editors of UNIX.

CO3: To write simple Shell scripts.

Modules	Blooms level*	Number of hours
1. UNIX structure, history, basic commands.	L1,L3	10
2. Working of Vi Editor and its commands.	L1,L3	4
3. Shell Script <ol style="list-style-type: none"> Write shell script to find largest among three numbers. Write shell script to print multiplication table of any number. Write a shell script that copies multiple files into directory. Write a shell script to find number of words and characters in a given file. Write a shell script to find the sum, the average and the product of the four integers entered. Write a shell script to calculate the factorial of a number. Write a shell script to generate Fibonacci series. Write a shell script that computes the gross salary of employee. Write a shell script that takes a command –line argument and reports on whether it is directory, a file, or something else. Write a shell script which receives two file names as arguments. It should check whether the two file contents are same or not. If they are same then second file should be deleted. Write a shell script to calculate gcd of two numbers. Write a shell script to concatenate two strings and find the length of the resultant string. 	L1,L3	10

AIE6304	DATA STRUCTURES USING C	L	T	P	C
Version:2020.1	Date of Approval: JULY, 2020	3	1	0	4
Pre-requisites/Exposure	Basic Knowledge of C++ Programming				
Co-requisites	Nil				

Catalog Description

This course covers the design, analysis, and implementation of data structures and algorithms to solve engineering problems using C programming language. Topics include elementary data structures, (including arrays, stacks, queues, and lists), advanced data structures (including trees and graphs), the algorithms used to manipulate these structures, and their application to solving practical engineering problems. At the end of this course student will gain knowledge about different kinds of file structures and their related operations.

Course Objectives

The objective of this course is to

1. Equip the students with knowledge of algorithms, different types of data structures and analysis of space and time complexity.
2. Provide an overview of various algorithms of data structures like stack and queues and related operations and implementation.
3. Provide an overview of dynamic Data Structure like linked list and its related operations, algorithms and programs. Demonstrate practical use of dynamic data structure to solve engineering problems.
4. Equip the students with knowledge of algorithms and operations related to tree and graph data structures and their practical applications.
5. Provide an overview of Sorting, Searching and file structures and its related algorithms and techniques.

Course Outcomes

On completion of this course, the students will be able to

CO 1:Identify operations on array, multidimensional, string and their implementation and analyze space and time complexity of algorithms.

CO 2: Explain various algorithms and operations of data structures like stack and queues and analyze complexity of each operation.

CO 3: Explain dynamic data structures and various algorithms and operations of data structures like linked list and their applications in computer science.

CO 4: Illustrate the algorithms and operations related to tree and graph data structures, their practical applications and analyze complexity of algorithm associated with each operations.

CO5: Explain Sorting, Searching and file organization and its related techniques.

Modules	Blooms level*	Number of hours
Module I: Introduction to Data structures Data structures: Definition, Types. Algorithm design, Complexity, Time-Space Tradeoffs. Use of pointers in data structures. Array Definition and Analysis, Representation of Linear Arrays in Memory, Traversing of Linear Arrays, Insertion and Deletion, Single Dimensional Arrays, Two Dimensional Arrays, Multidimensional Arrays, Function Associated with Arrays, Character String in C, Character String Operations, Arrays as parameters, Implementing One Dimensional Array, Sparse matrix.	L1, L2	7
Module II: Introduction to Stacks and queue Stack: Definition, Array representation of stacks, Operations Associated with Stacks- Push & Pop, Polish expressions, Conversion of infix to postfix, infix to prefix (and vice versa), Application of stacks recursion, polish expression and their compilation, conversion of infix expression to prefix and postfix expression, Tower of Hanoi problem. Queue: Definition, Representation of Queues, Operations of queues- QInsert, QDelete, Priority Queues, Circular Queue, Deque.	L1, L2, L3, L4	8
Module III: Dynamic Data Structure Linked list: Introduction to Singly linked lists: Representation of linked lists in memory, Traversing, Searching, Insertion into, Deletion from linked list, doubly linked list, circular linked list, generalized list. Applications of Linked List-Polynomial representation using linked list and basic operation. Stack and queue implementation using linked list.	L1, L3 and L4	7
Module IV: Trees and Graphs Trees: Basic Terminology, Binary Trees and their representation, expression evaluation, Complete Binary trees, extended binary trees, Traversing binary trees, Searching, Insertion and Deletion in binary search trees, General trees, AVL trees, Threaded trees, B trees. Graphs: Terminology and Representations, Graphs & Multigraphs, Directed Graphs, Sequential representation of graphs, Adjacency matrices, Transversal Connected Component and Spanning trees.	L1, L3 and L5	7
Module V: Sorting and Searching and file structures Sorting: Insertion Sort, Bubble sort, Selection sort, Quick sort, two-way Merge sort, Heap sort, Partition exchange sort, Shell sort, Sorting on different keys, External sorting. Searching: Linear search, Binary search File structures: Physical storage media, File Organization, Linked organization of file, Inverted file, Organization records into blocks, Sequential blocks, Hash function, Indexing & Hashing, Multilevel indexing, Tree Index, Random file, Primary Indices, Secondary Indices, B tree index files.	L1, L4, L5	7

AIE6313	DIGITAL ELECTRONICS	L	T	P	C
Version 2020.1	Date of Approval: JULY, 2020	2	0	0	2
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

This course explores the theory and operation of the basic building blocks of digital electronics which includes combinational and sequential circuits. This course also explains the logic families and data convertors. The concepts learnt in the studies of sequential circuits will be applied in the design and analysis of Melay and Moore machines.

Course Objectives

The objective of this course is to

1. Provide the basic knowledge of digital logic levels and application of knowledge to understand combinational and sequential circuits.
2. Explain the operation of logic family and data convertors.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain the difference between analog and digital signal; Describe the Boolean algebra; Analyze the SOP & POS form of Boolean function; Solve k-map and tabulation method to simplify the logical function; Apply universal gates to implement the given logic.

CO2: Define the multiplexer and decoder; Explain the adder & subtractor; Apply multiplexer to design Boolean function; Analyze the difference between decoder and encoder.

CO3: Define flip flops; Compare combinational and sequential circuits; Describe shift registers; Design counters and synchronous sequential circuits.

CO4: Explain the logic families; Compare the RTL, DTL, TTL and ECL logic families.

CO5: Define data convertors; Explain analog to digital convertor and digital to analog convertor.

Modules	Blooms level*	Number of hours
MODULE 1: BOOLEAN FUNCTIONS Analog & digital signals, AND, OR, NOT, NAND, NOR & XOR gates, Boolean algebra, Standard representation of logical functions, K-map representation and simplification of logical function, don't care conditions, XOR & XNOR simplifications of K-maps, Tabulation method.	L1,L2 and L3	6
MODULE 2: COMBINATIONAL CIRCUITS Adders, Subtractors, Multiplexer, de-multiplexer, decoder & encoder, code converters, Comparators, decoder / driver for display devices, Implementation of logic functions using multiplexer / de-multiplexer.	L1, L2,L3 and L4	6
MODULE 3: SEQUENTIAL CIRCUITS Flip-flops: SR, JK, D & T flip flops – Truth table, Excitation table, Conversion of flip-flops, race around condition, Master Slave flip flop, Shift registers: SIPO, PISO, PIPO, SIPO, Bi-directional; Counters: ripple & synchronous counters – up / down; Synchronous Sequential circuit: design procedure.	L1, L2,L4 and L5	8

MODULE 4: LOGIC FAMILIES RTL, DTL, TTL, ECL.	L2 and L4	2
MODULE 5: DATA CONVERTERS ADC – successive approximation, linear ramp, dual slope; DAC – Binary Weighted, R-2R ladder type.	L1 and L2	2

**Bloom's Level:*

AIE6314	DIGITAL ELECTRONICS LAB	L	T	P	C
Version 2020.1	Date of Approval: July 2020	0	0	2	1
Pre-requisites/Exposure					
Co-requisites					

Catalog Description

In this Lab course the combination and sequential circuits are designed, and their functionality is verified using truth table. Concepts covered would enable them to create complex circuits related to digital design. The objective of this course is to explore and implement the various features of digital logic using basic logic gates.

Course Objectives

The objective of this course is to

1. Provide a basic knowledge of digital logic levels and application of knowledge to understand digital electronics circuits.
2. Equip with understanding of different combinational and sequential circuits.

Course Outcomes

On completion of this course, the students will be able to

- CO 1: Demonstrate the basic concept of logic gates;
CO 2: Illustrate the adder and subtractors.
CO 3: Demonstrate the code convertors.
CO 4: Demonstrate the combinational and sequential circuits.

Modules/Topics Covered**	Blooms level*	Number of hours
1. To verify the truth tables of NOT, OR, AND, NOR, NAND, XOR, XNOR gates.	L3, L5	2
2. To obtain half adder, full adder using gates and verify their truth tables.	L3, L5	2
3. To obtain half subtractor, full subtractor using gates and verify their truth tables.	L3, L5	2
4. To implement control circuit using multiplexer.	L3, L5	2
5. To convert BCD code into excess 3 code and verify the truth table.	L3, L5	2
6. To verify the truth tables of RS, D, JK and T flip- flops.	L3, L5	2
7. To implement and verify 3-bit bi-directional shift register.	L3, L5	2
8. To design and study asynchronous/ripple counter.	L3, L5	2
9. To design and study synchronous counter.	L3, L5	2
10. To design and study a sequence detector.	L3, L5	2

AIE6311	ELECTRONIC DEVICES & CIRCUITS	L	T	P	C
Version:2020.1	Date of Approval: July 2020	2	0	0	2
Pre-requisites/Exposure	Elementary Resistive Circuit, Theorems and Analysis Techniques: KCL, KVL, Nodal & Mesh Analysis, Thevenin & Norton Equivalents, Maximum Power Transfer.				
Co-requisites	Semiconductor Physics				

Catalog Description

This is the first course in Electronics and Communication Engineering, to educate and explain the methods used for biasing circuits in a graphical analysis of non-linear electronic circuits and also includes small signal transistor models, parameters and their frequency responses. Following this, analyzing different types of feedback amplifiers, and power amplifiers using transistor and designing of different electronic circuits are included in the course. This course also considers the mathematical modeling of active solid state devices their analysis and design of single state circuits. Topics covered include the study of device characteristics and applications of p-n-junction diodes, bipolar junction transistors, and field effect transistors.

Course Objectives

The objective of this course is to

1. build from basic knowledge of Semiconductor Physics to an understanding of basic devices and their models
2. familiarize the student with the analysis and design of basic transistor amplifier circuits, feedback amplifiers and wave shaping circuits
3. build a foundation for Analog Electronics-II, Digital Circuits and Systems I & II, VLSI design and analog CMOS IC Design.

Course Outcomes

On completion of this course, the students will be able to

- CO1. explain different types of diodes and demonstrate wave shaping circuits
CO2. explain operating principal of Bipolar Junction Transistor, its properties, biasing techniques and stability
CO3. describe low and high frequency transistor amplifiers along with single and multi-stage amplifier
CO4. explain operating principal of JFET, MOSFET, its properties, and biasing techniques
CO5. solve and analyse different negative feedback amplifiers configurations
CO6. describe and outline power amplifiers and their application.

Modules	Blooms level*	Number of hours
Module I: Semiconductor Diode and Diode Circuits		
Different types of diodes: Zener, Schottky, LED. Zener as voltage regulator, Diffusion capacitance, Drift capacitance, the load line concept, half wave, full wave rectifiers, clipping and clamping circuits.	L1 L2 & L3	6
Module II: Bipolar Junction Transistor		
Bipolar junction transistor: Introduction, Transistor, construction, transistor operations, BJT characteristics, load line, operating point, leakage currents, saturation and cut off mode of operations. Bias stabilization: Need for stabilization, fixed Bias, emitter bias, self bias, bias stability with respect to variations in I_{CO} , V_{BE} & β , Stabilization factors, thermal stability.	L1 L2 & L3	9

Module III: Small signal Analysis of transistor and Multistage Amplifier Hybrid model for transistors at low frequencies, Analysis of transistor amplifier using h parameters, emitter follower, Miller's theorem, THE CE amplifier with an emitter resistance, Hybrid π model, Hybrid π Conductances and Capacitances, CE short circuit current gain, CE short circuit current gain with R_L Multistage amplifier: Cascading of Amplifiers, Coupling schemes(RC coupling and Transformer coupling)	L2 & L3	6
Module IV: Field Effect Transistors Field effect transistor (JFET, MOSFET): volt-ampere characteristics, small signal model –common drain, common source, common gate, operating point, MOSFET, enhancement and -depletion mode, Common source amplifier, Source follower	L1, L2 & L3	5
Module V: Feedback Amplifiers Feedback concept, Classification of Feedback amplifiers, Properties of negative Feedback amplifiers, Impedance considerations in different Configurations, Examples of analysis of feedback Amplifiers.	L1, L2, L3 & L4	6
Module VI: Power amplifiers Power dissipation in transistors, difference with voltage amplifiers, Amplifier classification (Class A, Class B, Class C, Class AB) class AB push pull amplifier, collector efficiency of each, cross over distortion.	L1 & L2	4

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

AIE6310	E-COMMERCE AND ERP	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Knowledge of basic computer				
Co-requisites	Nil				

Catalog Description

This course examines the evolution of enterprise resource planning (ERP) systems - from internally focused client/server systems to externally focused e-business. This class studies the types of issues that managers will need to consider in implementing cross-functional integrated ERP systems. The objective of this course is to make students aware of the potential and limitations of ERP systems. This objective will be reached through hands-on experience, case studies, lectures, guest speakers and a group project. The course would equip students with the basics of E-Commerce, technologies involved with it and various issues associated with.

Course Objectives

The objective of this course is to

1. Understand the students with the role of consultants, vendors and employees.
2. Provide an overview of various phases in ERP implementation and identify various technologies used in ERP.

Course Outcomes

On completion of this course, the students will be able to

- CO1: Describe the key features of Internet, Intranets and Extranets and explain how they relate to each other. Demonstrate an understanding of the foundations and importance of E-commerce and assess electronic payment systems.
- CO2: Understand concepts of reengineering, data mining, data warehousing and how they relate to ERP system implementations.
- CO3: Explain the challenges associated with implementing enterprise systems and their impacts on organizations.
- CO4: Describe the selection, acquisition and implementation of enterprise systems and demonstrate an ability to work independently and in a group.
- CO5: Identify and describe typical functionality in an ERP system.
- CO 6: Analyze the strategic options for ERP identification and adoption.

Modules	Blooms level*	Number of hours
MODULE 1: INTRODUCTION AND CONCEPTS: Networks and commercial transactions - Internet and other novelties; Networks and electronic transactions today, Model for commercial transactions; Internet environment - internet advantage, world wide web and other internet sales venues; Online commerce solutions. Security Technologies: Why is internet insecure? A brief introduction to Cryptography; Public key solution. Digital payment systems; First virtual internet payment system; cyber cash model Operational process of Digicash, Ecash Trail; Using Ecash; Smart cards; Electronic Data Interchange: Its basics; EDI versus Internet and EDI over Internet.	L1, L2 and L3	8

AIE6404	ARTIFICIAL INTELLIGENCE	L	T	P	C
Version 2020.1	Date of Approval: July 2020	3	0	0	3
Pre-requisites/Exposure	Exposure to data structure and programming and an ability to discuss algorithms is the only pre-requisite.				
Co-requisites	Nil				

Catalog Description

Introduction to computational models of thought and construction of intelligent information systems. Topics include search algorithms, data dependencies and truth-maintenance systems, approaches to knowledge representation, automated deduction, reasoning under uncertainty, and machine learning. The field of Robotics is a multi-disciplinary as robots are amazingly complex system comprising mechanical, electrical, electronic H/W and S/W and issues germane to all these.

Course Objectives

The objective of this course is to

1. Provide an overview of problem solving skills methods using Artificial Intelligence.
2. Equip the students with the study of programming languages that is used to develop an Intelligence System.

Course Outcomes

On completion of this course, the students will be able to

- CO1: Explain how Artificial Intelligence enables capabilities that are beyond conventional technology, for example, chess-playing computers, self-driving cars, robotic vacuum cleaners and Understand the various searching techniques.
- CO2: Attain the capability to represent various real life problem domains using logic based techniques and use this to perform inference or planning.
- CO3: Acquire the knowledge of real world Knowledge representation. Apply concept Natural Language processing to problems leading to understanding of cognitive computing.
- CO4: Use different machine learning techniques to design AI machine and Write algorithms and implement programs in 'Prolog' language.
- CO5: Explain some of the more advanced topics of AI such as Robotics and Explain what constitutes "Artificial" Intelligence and how to identify systems with Artificial Intelligence.

Modules	Blooms level*	Number of hours
MODULE 1: PROBLEM SOLVING AND SCOPE OF AI Introduction to Artificial Intelligence. Applications- Games, theorem proving, natural language processing, vision and speech processing, robotics, expert systems. AI techniques- search knowledge, abstraction. PROBLEM SOLVING State space search; Production systems, search space control: depth-first, breadth-first search. Heuristic search - Hill climbing, best-first search, branch and bound. Problem Reduction, Constraint Satisfaction End, Means-End Analysis. LA* Algorithm, L(AO*) Algorithm.	L1, L2, L3 and L4	10
MODULE 2:	L1, L2	6

AIE6406	ARTIFICIAL INTELLIGENCE LAB	L	T	P	C
Version 2020.1	Date of Approval: July, 2020	0	0	2	1
Pre-requisites/Exposure	Basic Concepts of C and C++				
Co-requisites	Nil				

Catalog Description

PROLOG programs tell the computer what to do (declarative programming) rather than how to do it (procedural programming). PROLOG does this by making deductions and derivations, instigated by user-defined queries, from facts and rules stored in a database. The module teaches PROLOG as a practical programming tool, useful in solving various interesting problems especially in the Artificial Intelligence domain.

Course Objectives

The objective of this course is to

1. Provide an overview of a programming paradigm: programming by means of logic (also known as logic programming)
2. Provide an experience with development of AI application using PROLOG.

Course Outcomes

On completion of this course, the students will be able to

CO1: Use the basic knowledge of PROLOG programming in order to write simple PROLOG programs and explore more sophisticated PROLOG code on their own.

CO2: Use Prolog for developing artificial intelligence applications.

Modules/Topics Covered**	Blooms level*	Number of hours
1: INTRODUCTION TO PROLOG- SIMPLE FACTS, FACTS WITH ARGUMENTS. PROBLEM STATEMENT 1: <ul style="list-style-type: none"> Convert the following into Prolog Equivalent: It is raining. This is a book. PROBLEM STATEMENT 2: <ul style="list-style-type: none"> Convert the following into Prolog Equivalent: <ol style="list-style-type: none"> 1. The cakes are delicious. 2. Priya relishes coffee. 3. Edwin plays badminton. 	L1 and L3	4
2: DEFINING VARIABLES, MATCHING AND BACKTRACKING. PROBLEM STATEMENT 3: <ul style="list-style-type: none"> Convert the sentences into Prolog Equivalent and answer the following questions: <ol style="list-style-type: none"> 1. Sun rises in east. 2. Dovey is a good girl. 3. Dora likes books. 4. Chin is an intelligent student? Query 1: Who is a good girl? Query 2: Dora likes What? PROBLEM STATEMENT 4: <ul style="list-style-type: none"> Consider the following facts: 	L1, L3 and L5	4

1. parent (pam, bob). 2. parent (tom, bob). 3. parent (bob, ann). 4. parent (tom, liz). Query: Who is the parent of Whom? Or Find X and Y such that X is the parent of Y.		
3: RULES. PROBLEM STATEMENT 5: <ul style="list-style-type: none"> Consider the given knowledge. Represent the knowledge into the PROLOG equivalence and answer the question using rules. Joy is father of Jay. Jay is father of Sam. Sam is brother of Sue. Alvin is father of Ali. Sim is mother of Sam. Sis is mother of Alvin. Question: Who are Sue's parent?	L1, L3 and L5	2
4: INPUT AND OUTPUT PREDICATES. PROBLEM STATEMENT 6: <ul style="list-style-type: none"> Write a code to print a message on the screen. Write a program to perform addition of two numbers. 	L1 and L3	2
5: CONTROL STRUCTURES AND RECURSION. PROBLEM STATEMENT 7: <ul style="list-style-type: none"> Write a code in PROLOG to design a calculator. PROBLEM STATEMENT 8: <ul style="list-style-type: none"> Write a code in PROLOG to find the largest number among two numbers. Write a code in PROLOG to find the largest number among three numbers. PROBLEM STATEMENT 9: <ul style="list-style-type: none"> Write a code in PROLOG to find the factorial of a number. PROBLEM STATEMENT 10: <ul style="list-style-type: none"> Write a code in PROLOG to print the Fibonacci series. 	L1, L3 and L5	8
6: Data Structure and Operations. PROBLEM STATEMENT 11: <ul style="list-style-type: none"> Create a LIST of 10 elements and print Head and Tail. Write a code in PROLOG to concatenate two strings. PROBLEM STATEMENT 12: <ul style="list-style-type: none"> Write a code in PROLOG to search an item from a given LIST. 	L1 and L3	4

AIE6414	DATA COMMUNICATION & COMPUTER NETWORKS	L	T	P	C
Version : 2020.1	Date of Approval: July 2020	3	0	0	3
Pre-requisites/Exposure	Basics of Computers				
Co-requisites	NIL				

Catalog Description

The objective is to acquaint the students with the basics of data communication and networking. A structured approach to explain how networks work from the inside out is being covered. The physical layer of networking, computer hardware and transmission systems have been explained. In-depth application coverage includes email, the domain name system; the World Wide Web (both client- and server-side); and multimedia (including voice over IP).

Course Objectives

The objective of this course is to

1. To provide an overview of data communication and computer networks, network specific protocols, networking devices, OSI /TCP-IP Layer concepts.
2. To familiarize with the basic taxonomy and terminology of computer networking area.
3. To experience the designing and managing of communication protocols while getting a good exposure to the TCP/IP protocol suite.

Course Outcomes

On completion of this course, the students will be able to

CO1. State the functions of data component in communication, networking devices, characteristics of topologies and describe the functionality of layers in OSI model.

CO2. Explain Error correction and detection techniques; Differentiate between different type of protocols used at data link layer.

CO3. Describe channel allocation problem and illustrate the working and applications of different wireless LANs and WANs standards

CO4. Compare and Contrast different routing algorithms; discuss the frame format of IPv4 and IPv6

CO5. Compare and contrast different transport layer protocols and explain various protocols used at application layer.

AIE6415	DATA COMMUNICATION AND COMPUTER NETWORKS LAB	L	T	P	C
Version 2020.1	Date of Approval: July 2020	0	0	2	1
Pre-requisites/Exposure					
Co-requisites	Nil				

Catalog Description

The objective is to acquaint the students with the basics of data communication and networking. A structured approach to explain how networks work from the inside out is being covered. The physical layer of networking, computer hardware and transmission systems have been explained. In-depth application coverage includes email, the domain name system; the World Wide Web (both client- and server-side), routing protocols and data link layer protocols.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of data communication and networking.
2. Provide an overview of various protocols and their configurations using networking devices and servers.

Course Outcomes

On completion of this course, the students will be able to

CO 1: Demonstrate the use of Command Line Interface (CLI) and other features and Cisco Packet Tracer; describe and distinguish networking devices and transmission media.

CO 2: Apply various application layer protocols capability on server device including DNS, DHCP, HTTP, SMTP and POP.

CO 3: Construct network topology and operate routing protocols (RIP, OSPF and EIGRP) for end-to-end connectivity.

CO 4: Illustrate the use of data link protocols-HDLC and PPP; determine network connectivity issues and fix them.

Modules	Blooms level*	Number of hours
LABORATORY SESSION 1 THE PHYSICAL LAYER 1. Introduction to different types of transmission media and cables. 2. Introduction to various networking devices and equipment. 3. Construct network topology and understand configuration of devices using Cisco Packet Tracer (tool).	L2, L3	6
LABORATORY SESSION 2 THE APPLICATION LAYER 1. Configuration of Domain Name System (DNS) server using Cisco Packet Tracer. 2. Configuration of Dynamic Host Configuration Protocol (DHCP) server using Cisco Packet Tracer. 3. Configuration of mail server using Cisco Packet Tracer. 4. Configuration of web server using Cisco Packet Tracer.	L3	6
LABORATORY SESSION 3		

Prof. (Dr.) Anil Kumar
Deputy Dean Academics

Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

THE NETWORK LAYER 1. Configure Routing Information Protocol (RIP) using Cisco Packet Tracer. 2. Configure Open Shortest Path First (OSPF) routing protocol using Cisco Packet Tracer. 3. Configure Enhanced Interior Gateway Routing Protocol (EIGRP) using Cisco Packet Tracer.	L3	6
LABORATORY SESSION 4 DATA LINK LAYER 1. Configure and Analyze the working of data link control protocols-HDLC and PPP access. 2. Configure PPP security protocols-PAP and CHAP using Cisco Packet Tracer. 3. Determine various issues in network connectivity and communication using troubleshooting commands.	L3,L4	6

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

AIE6411	ARTIFICIAL NEURAL NETWORK	L	T	P	C
Version 2020.1	Date of Approval: July 2020	2	-	-	2
Pre-requisites/Exposure	Basic Knowledge of Brain functioning				
Co-requisites	Nil				

Catalog Description

The course provides introduction to neural network and a deep insight into the basics of brain & its functioning basics of various neural models & neural schema used for learning. With this course students would be able to know the basics of each introductory feature of human brain and its features which would prove to be very helpful throughout their degree and would prove helpful in understanding other related subjects also.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of learning of brain problem solving techniques and develop proficiency in creating neural structures using the MATLAB.
2. Provide an overview of various control statements, data structures, packages related to image addition, graphics, different types of neural models.

Course Outcome

On completion of this course, the students will be able to

CO 1: Define Artificial Neural Network & its similarity to biological neural network and explain its application in our day to day life.

CO 2: Analyze ANN learning, Error correction learning, Hebbian learning, Competitive learning and Boltzman Learning.

CO 3: Implement simple perceptron, Perceptron Learning rule, modified perceptron learning rule, feed forward neural network & feedback Neural Network.

CO 4: Explain self-organizing Map, Hopfield network, Adaptive resonance theory and its various learning rules.

CO 5: Analyze memory-based learning, Associative learning, Bi-directional learning and Auto associative learning.

Modules	Blooms level*	Number of hours
Module-I Artificial Neural Networks (ANN) and biological neural networks, supervised and unsupervised learning rules, neural network applications	L1, L2 and L3	6
Module-II Unsupervised learning:- Hebbian learning and competitive learning. Supervised learning:- Back propagation algorithms, Learning rule:- Delta learning rule, Widrow-Hoff learning rule, Winner-Take-All learning rule	L1, L2 and L3	6
Module-III Feed forward neural network, feed backward neural network, Perceptron and its learning law, single-layer perceptron, multi-layer perceptron.	L2, L3 and L4	6
Module-IV Self organizing networks: Kohonen algorithm, Hopfield Networks: Hopfield network algorithm, Adaptive resonance theory: Network and learning rules.	L2, L3 and L4	6

AIE6412	ARTIFICIAL NEURAL NETWORK LAB	L	T	P	C
Version 2020.1	Date of Approval: July 2020	0	0	1	1
Pre-requisites/Exposure	Basics of MATLAB				
Co-requisites	NIL				

Catalog Description

In this Lab course first student should learn about advanced level of software used for easy calculation and toolbox used for software like MATLAB.

Course Objectives

The objective of this course is to

1. Make the students apply knowledge of various neural models required for solving complex problems.
2. Provide a demonstration of different types of image processing techniques through MATLAB toolbox.

Course Outcomes

On completion of this course, the students will be able to

CO1: Acquiring knowledge of Basics of High-end calculation software and need in Computer Science & engineering

CO2: Demonstrate the All preliminary functions in MATLAB

CO3: Apply the knowledge of all the basics function and toolbox knowledge of MATLAB

CO4: Demonstrate the Neural Network model in MATLAB

CO5: Demonstrate usage of applications involving with Image processing & Its Toolbox used by MATLAB

Modules/Topics Covered**	Blooms level*	Number of hours
1. Introduction of MATLAB (a) Basic Variable declaration & its operation (b) Function use & its application	L3, L5	4
2. Sample Programs in MATLAB (a) Basic use of Matrix and Graph Plotting (b) Different type of graph plotting with use of different -2 type of data	L3, L5	6
3. Sample Programs using MATLAB functions (a) Create a basic program MATLAB using functions (b) Use of basic function Image processing (c) Practice on Basic function of Image processing tool box.	L3, L5	6
4. Sample programs of ANN functions (a) Practice on ANN toolbox function in MATLAB (b) Write a program for training a small network in MATLAB	L3, L5	6
5. Sample Programs using ANN tool box & Image processing toolbox (a) Demonstrate the use of ANN tool box & Image processing toolbox and write a program after combining it.	L3, L5	2

*Bloom's Level:

L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation

** Sample Programs provided are not limited to these only, can include others as desired.

AIE6407	COMMUNICATION SYSTEM	L	T	P	C
Version 2020.1	Date of Approval: July, 2020	2	0	0	2
Pre-requisites/Exposure	Signal and System				
Co-requisites					

Catalog Description

The purpose of this course is to introduce students to the basic principles of the design and analysis of modern communication systems. It will provide a thorough study of both analog and digital modulation and demodulation schemes. The performance analysis of various techniques based on requirements of noise and bandwidth will also be explained. It also introduces the students to the information theory and coding for basic understanding of mobile communication system.

Course Objectives

The objective of this course is to

1. Provide a thorough introduction to analog and digital communications
2. Provide in depth study of various modulation and demodulation techniques.
3. Introduce students to basics of information theory and coding for applications in mobile communication.

Course Outcomes

On completion of this course, the students will be able to

CO1. Define and Distinguish analog and digital communication systems.

CO2. Differentiate modulation and demodulation techniques of AM and FM systems and compare them in terms of Bandwidth and noise.

CO3. Distinguish and categorize various digital modulation techniques.

CO4. Describe Information theory and coding for applications in mobile communication system by solving different encoding problems.

Modules	Blooms level*	Number of hours
MODULE I: INTRODUCTION Communication Process, Source of Information, base-band and pass-band signals, Review of Fourier transforms, Random variables, different types of PDF, need of modulation process, analog versus digital communications	L1 and L2	4
MODULE II: AMPLITUDE MODULATION Amplitude modulation with full carrier, suppressed carrier systems, single side band transmission, switching modulators, synchronous detection, envelope detection, effect of frequency and phase errors in synchronous detection, comparison of various AM systems, vestigial side band transmission.	L1, L2, L3 and L4	8
MODULE III: ANGLE MODULATION Narrow and wide band FM, BW calculations using Carson rule, Direct & Indirect FM generations, phase modulation, Demodulation of FM signals,	L1, L2, L3 and L4	9

noise reduction using pre & de-emphasis.		
MODULE IV: PULSE MODULATION Pulse amplitude, width & position modulation, generation & detection of PAM, PWM & PPM, Comparison of frequency division and time division multiplexed systems. Basics of Digital Communications: ASK, PSK, FSK, QPSK basics & waveform with brief mathematical introduction	L1, L2, L3 and L4	6
MODULE V: NOISE Different types of noise, noise calculations, equivalent noise band width, noise figures, effective noise temperature, noise figure.	L1 and L2	4
MODULE VI: INTRODUCTION TO INFORMATION THEORY Measurement of Information, mutual, Shannon's theorem, Source coding, channel coding and channel capacity theorem, Huffman code	L1, L2 and L3	5

AIE6408	COMMUNICATION SYSTEMS LAB	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	0	0	2	1
Pre-requisites/Exposure	Signal and System				
Co-requisites	Nil				

Catalog Description

To impart knowledge on Amplitude Modulation and Angle modulation principles, generation, and its types. Also, to understand the basic concepts of pulse modulation techniques like PCM and PSK.

Course Objectives

The objective of this course is to

1. To provide the basic skills required to understand, develop, and design of various engineering applications involving analog communication theory. To provide basic laboratory exposures for communication principles and applications.

Course Outcomes

On completion of this course, the students will be able to

CO1: Study the carrier modulation techniques like AM and FM modulation.

CO2: Study digital carrier modulation techniques using amplitude shift keying and Frequency shift keying.

CO3: Demonstrate various pulse modulation techniques (PCM), DM, ASK, DPSK and QPSK.

List of Experiments:

Modules	Blooms level*	Number of hours
1. To study the sampling and reconstruction of a given signal. 2. To study amplitude modulation and demodulation. 3. To study frequency modulation and demodulation. 4. To study time division multiplexing.	L1, L2	8
5. To study pulse amplitude modulation. 6. To study delta and adaptive delta modulation and demodulation. 7. To study carrier modulation techniques using amplitude shift keying and Frequency shift keying.	L3 and L4	10
8. To study carrier modulation techniques using binary phase shift keying and differential shift keying. 9. To study pulse code modulation & differential pulse code modulation as well as relevant demodulations. 10. To study quadrature phase shift keying & quadrature amplitude modulation.	L2, L4	10

Examination Scheme:

AIE6417	WEB DESIGNING TECHNOLOGIES	L	T	P	C
Version: 2020.1	Date of Approval: JULY 2020	2	0	0	2
Pre-requisites/Exposure	knowledge of Internet fundamentals				
Co-requisites	NIL				

Catalog Description

The objective of this course is to introduce the basic concepts of HTML5 and CSS3. To explore and implement the various concepts of website design using HTML with the concept of the tags, script, and code that create web pages. To understand how the web and web pages work and web pages styles using CSS3. After completing this course students can easily develop static web sites and style them using CSS3.

Course Objectives

The objective of this course is

1. Understand the advanced features of HTML5 which includes images, links, tables, frames and forms etc and gives an overview of CSS3 which is used to add style to the web pages.
2. Demonstrate the application of HTML5 in developing solutions to web site creation and understanding how CSS will affect web page creation.
3. Design a responsive web site using HTML5 and CSS3.

Course Outcomes

On completion of this course, the students will be able to

CO 1: Explain the basic concepts of HTML, structure of HTML. Apply the different tags for images, hypertext and lists in web pages.

CO 2: Illustrate the different ways to use styles in web pages using CSS? Apply CSS style sheets for formatting text in web pages.

CO 3: Explain the layout of CSS style and describe how to add audio and video in html web pages.

CO 4: Demonstrate the use of Table and frames in web pages and setting properties for tables and frames.

CO 5: Explain the writing scripts in web pages and publishing Webpages on web.

Modules	Blooms level*	Number of hours
Module I History of HTML, Basic HTML Structure, Creating title, Creating header and footer, Adding Comments, Formatting Text, Specifying time, Indicating citations/references, quotes, abbreviations, pre-formatted text, Inserting Images, Creating Image Links, Scaling images with the browser, setting icons for web page, Creating hypertext, anchor tag, Creating List, Creating Definition List, Creating Hyper Text Links, Creating Link Lists.	L2 and L3	8

Prof. (Dr.) Anil Kumar
Deputy Dean Academics

Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Module II CSS building blocks, working with style sheets, Creating different types of style sheets- External , embedded and inline style sheets, defining selectors , Selecting on basis of class and id, selecting elements based on the attributes, combining selectors, Formatting text with styles, setting font properties.	L3 and L4	7
Module III CSS: Layout with style, changing the background color, setting border, changing the cursor, style sheets for mobile to desktop, working with web fonts, creating forms, organizing the form elements. Adding audio , video and other multi-media .	L2 and L3	7
Module IV Tables and frames, Creating Tables, Table Element, Adding Border, Adding Column Headings, Adding Spacing and Padding, Adding a Caption, Setting the table Width and Height, Add Row Headings, Aligning Cell contents, Setting Column Width, Centering a Table, Inserting and Image, Spanning Columns, Spanning Rows Assigning Background Colors, Frame Elements, Creation of Frame Based Pages.	L3	7
Module V: Working with scripts : Loading an external script, testing & debugging web pages, publishing your web page on the web.	L2	7

AIE6502	COMPUTER ARCHITECTURE	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Logic Gates				
Co-requisites	nil				

Catalog Description

Computer architecture is concerned with the structure and behavior of the various functional modules of the computer and how they interact to provide the processing needs of the user. It includes basic register transfer language and computer organization and design. Complete insight on the working of CPU, Memory and I/O communication will be provided. Pipelining and related topics will also be discussed.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of computer architectures and their modules.
2. Provide an overview of various algorithms used and hardware implementation computer.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Explain about Register transfer language and various micro operations of arithmetic logic unit.
CO2. Explain about the organization of computer modules and their details.
CO3. Explain in details of central processing unit like general purpose register, accumulator etc. and computer arithmetic.
CO4. Explain memory organization of computer and their interconnections. Details of direct memory access.
CO5. Explain parallel processing and pipeline techniques.

Modules	Blooms level*	Number of hours
Module I: Register Transfer Language Register Transfer, Bus and Memory Transfers, Arithmetic Micro-operations, Logic Micro-operations, Shift Micro-operations, Arithmetic Logic shift Unit.	L1, L2 and L3	10
Module II: Basic Computer Organizations and Design Instruction Codes, Computer Registers, Computer Instructions, Timing and Control, Instruction Cycle, Memory-Reference Instructions, Input-Output and Interrupt, Design of Accumulator Logic. Hardwired and Microprogrammed control: Control Memory, Address Sequencing, Design of Control Unit	L1,L2	9
Module III: Central Processing Unit Introduction, General Register Organization, Stack Organization, Instruction representation, Instruction Formats, Instruction type, Addressing Modes, Data Transfer and Manipulation, Program Control, Reduced Instruction Set Computer RISC and CISC Computer Arithmetic: Introduction, Addition and Subtraction Algorithm, Multiplication Algorithms, Booth Multiplication, Division Algorithms, Floating-Point Arithmetic Operations	L1,L2, L3	10
Module IV: Memory and Intersystem Communication and Input output organisation	L1,L2, L3.	10

AIE6503	JAVA PROGRAMMING	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Basics of Programming				
Co-requisites	NIL				

Catalog Description

The objective is to impart programming skills used in this object-oriented language java. The course explores all the basic concepts of core java programming like object, classes, data types, features, operators, control structures, interfaces, packages, applets, awt, swings and socket programming. The students are expected to learn it enough so that they can develop the basic applications as well as web solutions like creating applets etc.

Course Objectives

The objective of this course is to

1. Equip the students with the basic feature of contemporary java required in solving complex problems.
2. Provide a practical knowhow and implementation of java programming concepts like classes, objects, packages, swings, socket programming.

Course Outcomes

On completion of this course, the students will be able to

- CO1: Define and explain concept of byte code and platform independence, demonstrate basic java-based application development using operators, if-else, loops and arrays.
- CO2: Distinguish between various types of inheritances, polymorphisms and other concepts and able to solve complex programming problems involving class objects, inheritances, and packages.
- CO3: Describe hierarchy of exception classes and thread life cycle along with demonstrate and design solutions for some simple and complex applications using exception and multithreading concepts.
- CO4: Explain event delegation model and describe AWT class hierarchy; Apply knowledge of event handling and AWT controls create some new dynamic graphical applications.
- CO5: Explain the architecture of applet and concept of swing package. Demonstrate applications based on java applets and swings.

Modules	Blooms level*	Number of hours
Module I: Java Basics Concepts of OOP, Features of Java, How Java is different from C++, Environmental setup, Basic syntax, Objects and classes, Basic Data Types, Variable Types, Modifier Types, Basic operators, Loop Control, Decision Making, Strings and Arrays, Methods, I/O.	L1, L2 and L3	6
Module II: Java Object Oriented Inheritance, Overriding, Polymorphism, Abstraction, Encapsulation, Interfaces, Packages, Exploring java.util package.	L2 and L3	7
Module III: Exception Handling and Threading Exception Hierarchy, Exception Methods, Catching Exceptions, Multiple catch Clauses, Uncaught Exceptions Java's Built-in Exception. Creating, Implementing and Extending thread, thread priorities, synchronization suspending, resuming and stopping Threads, Multi-threading.	L2, L3 and L5	8

AIE6507	JAVA PROGRAMMING LAB	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	0	0	2	1
Pre-requisites/Exposure	Basics of Programming				
Co-requisites	NIL				

Catalog Description

In this Lab course the basic features of contemporary java are implemented and demonstrated. Problems or programs will be related to concepts of classes, objects, threads, packages, exception handling, applets, AWT control, swings and socket programming. Concepts covered would enable them to create basic and complex console and graphical based applications for desktop and Internet

Course Objectives

The objective of this course is to

1. Equip the students to apply knowledge of various basic java features required in solving basic and complex problems.
2. Provide a demonstration of basic java programming concepts like classes, objects, threads, packages, exception handling, applets, AWT control, swings and socket programming

Course Outcomes

On completion of this course, the students will be able to

- CO1: Apply the concepts learned of operators, if-else, loops and arrays to java based application development.
- CO2: Demonstrate the use of various types of inheritances, polymorphisms, class objects, inheritances, packages and other concepts to basic and complex java programming problems.
- CO3: Apply the knowledge of exception handling and multithreading concepts for some simple and complex applications.
- CO4: Apply knowledge of event handling and AWT controls to create some new dynamic graphical applications.
- CO5: Demonstrate graphical applications based on java applets, swings and event handling.

Modules/Topics Covered**	Blooms level*	Number of hours
5. Sample Programs using Objects and classes, Variable Types, Modifier Types, operators, Loops Decision Making, Strings and Arrays, (a) WAP to display "Hello, it's a first program in java". (b) WAP to find sum of two integers taken as input from user at runtime. (c) WAP to find sum of two float numbers taken as command line arguments (d) WAP to find changed case of entered character. (e) WAP to find maximum of 3 integer numbers taken as input from user at runtime. (f) WAP in java to find out the greatest out of ten numbers stored using arrays. (g) WAP to create class with "name" as String and "age" as integer data members. The class should have two methods to take input from user and display the data. (h) WAP to find factorial of a number using class and object.	L3, L5	6

6. Sample Programs using Inheritance, Overriding, Polymorphism, Interfaces, Packages a. WAP in java to illustrate the concept of interfaces. b. WAP to create a package as MyPack having a class with three methods: max, fact and show. Use it in other folder with setting classpath and without setting class path. c. Write a program in java to showcase uses of super keyword	L3, L5	4
1. Sample Programs using exception handling and threads a) Write a program to demonstrate the use of nesting of try-catch block b) WAP in java to illustrate the concept of using multiple catch clauses to handle different types of exceptions. c) WAP in java to create a user defined Exception and throw it explicitly. d) Demonstrate thread using Thread class and Runnable interface e) Demonstrate various thread methods using a program	L3, L5	6
(a) Sample Programs using event handling and AWT controls (b) Write a program to display "hello" in different color where user clicks left mouse button and "world" where right mouse button is clicked. Use black background. (c) WAP in java to create a Frame and handle window-closing event implementing the WindowListener interface. (d) WAP to create an Applet having various different buttons, recognizing them using action command string method and handling click event generated by them. (e) WAP to create a frame and illustrate the concept of using an adapter class in place of interfaces for handling various mouse events generated over frame window. (f) WAP in java to create a frame with AWT controls (like label, push buttons, Checkbox, Checkbox Group) and handle various events generated by them. (g) WAP in java to create a frame with various AWT controls (like choice, list, TextField and Buttons) and handle the events thrown by them.	L3, L5	6
7. Sample Programs using applets, swings and stream socket a) . Write an applet which will display "HAPPY" and "DEEPAVALI" as: The word "HAPPY" will roll from top to bottom and "DEEPAVALI" from bottom to "top" . Both will run at the same speed and stop simultaneously at the center of the applet. b) Write an applet to display last 32 shades of red, green and blue in equal sized square grid accompanied by appropriate labels like "Last 32 shades of Red/Green/Blue color". Make use of BorderLayout to apply border for each individual shade. c) Create an applet with one single button with caption "Click". On clicking the button will open a new Frame with title "Factorial". The frame will have two three controls :TextField, Label and button. On clicking button calculate the factorial entered in TextField control. d) Create Java programs to demonstrate day time client and server e) Create java programs to create echo client and server	L3, L5	2

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

** Sample Programs provided are not limited to these only, can include others as desired.

AIE6509	ADVANCED DATA STRUCTURES & ALGORITHMS LAB	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	0	0	2	1
Pre-requisites/Exposure	Application of Data Structures				
Co-requisites	Nil				

Catalog Description

Designing an algorithm is an important component of computer science. The objective of this course is to make students aware of various techniques used to evaluate the efficiency of a particular algorithm. Students eventually should learn to design efficient algorithm for a particular program.

Course Objectives

The objective of this course is to

1. Equip the students with the concepts of complexity and analysis of algorithms.
2. Provide an understanding of different techniques used in designing algorithms for a variety of problems.
3. Equip the students with the concepts of complexity classes of different problems.

Course Outcomes

On completion of this course, the students will be able to

CO1: State and explain the meaning of algorithm, analysis and design; apply the algorithmic concepts to analyze a given algorithm and compute its time complexity.

CO2: Explain and apply the concept of Divide and Conquer approach in designing algorithms; analyze a divide and conquer algorithm; explain and apply the concept of Greedy approach in designing algorithms for optimization problems.

CO3: Explain and apply the concept of Dynamic Programming in designing algorithms for optimization problems; compare and contrast the Dynamic Programming with Greedy approach and Divide and Conquer approach.

CO4: State and explain Elementary Graph Algorithms; explain and apply the concept of Branch & Bound and Backtracking in designing algorithms for different problems.

CO5: Define and explain the concept of computational complexity, Polynomially Bounded Algorithms, Class NP, Class NP Hard and Class NP Complete.

Modules	Blooms level*	Number of hours

AIE6515	MICROPROCESSOR	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	2	1	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

This course deals with the systematic study of the architecture and programming issues of 8085-microprocessor family. Explanation of microprocessor in terms of ALP and timing diagrams, Memory System Design & I/O Interfacing, peripheral devices and advance Pentium Processors.

Course Objectives

The objective of this course is to

1. Equip with concepts of microprocessor and interfacing with peripheral devices.
2. Provide an overview of advance microprocessors.

Course Outcomes

On completion of this course, the students will be able to

CO1: Describe the architecture of 8085 microprocessor.

CO2: Describe assembly language programming and show timing diagram for 8085 microprocessors.

CO3: Explain the input output interfacing with peripheral devices and design of memory system for 8085 microprocessors.

CO4: Describe the architecture of 8086 microprocessor and compare with 8085 microprocessors.

CO5: Explain the working principles and architecture of 8087, 80x86 and Pentium processors.

Modules	Blooms level*	Number of hours
Module I: Introduction to Microcomputer Systems Introduction to Microprocessors and microcomputers, Study of 8-bit Microprocessor, 8085 pin configuration, Internal Architecture and operations, interrupts, Stacks and subroutines, various data transfer schemes.	L1 and L2	8
Module II: ALP and timing diagrams Introduction to 8085 instruction set, advance 8085 programming, Addressing modes, Counters and time Delays, Instruction cycle, machine cycle, T-states, timing diagram for 8085 instruction.	L2 and L3	10
Module III: Memory System Design & I/O Interfacing Interfacing with 8085. Interfacing with input/output devices (memory mapped, peripheral I/O), Cache memory system. Study of following peripheral devices 8255, 8253, 8257, 8255, 8251.	L1 and L5	10
Module IV: Architecture of 16-Bit Microprocessor Difference between 8085 and 8086, Block diagram and architecture of 8086 family, pin configuration of 8086, Minimum mode & Maximum mode Operation. Internal architecture of 8086, Bus Interface Unit, Register Organization, Instruction Pointer, Stack & Stack pointer, merits of memory segmentation, Execution Unit, Register Organization. AIE6517	MICROPROCESSOR LAB	L	T	P	C
Version: 2020.1	Date of Approval: JULY 2020	0	0	2	1
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

This course focuses on the systematic study of the Architecture and programming of microprocessor family and its applications. The objectives of this course are:

1. To introduce students with the architecture operation and instruction set of 8085 and 8086 microprocessors.
2. To familiarize the students with the programming and interfacing of 8085 and 8086 microprocessors.
3. To provide the basic knowledge of the microprocessor needed to develop the embedded system based products as a solution to real time problems.

Course Outcomes

On completion of this course, the students will be able to

CO1. Set up programming strategies and select proper mnemonics and run their program on the training boards

CO2. Develop assembly language programs for various problems keeping in mind technical issues and evaluate possible causes of discrepancy in practical experimental observations in comparison.

CO3. Understand the concepts related to I/O and memory interfacing and design interfacing circuits with 8085 by making use of different peripheral devices.

Modules	Blooms level*	Number of hours
Lab Session 1: ALP using 8085: <ol style="list-style-type: none"> 1. Write at least three different programs for addition of two 8 bit numbers assuming carry may or may not be generated. 2. Write at least three different programs for subtraction of two 8 bit numbers assuming borrow may or may not be generated. 3. Write two different programs for 16 bit addition, one using instruction DAD and another without using instruction DAD. 4. Write assembly language program for 8 bit multiplication and division. 	L2, L3, L4	4
Lab Session II: To study, understand, interface and two peripheral devices with 8085.	L4, L5, L6	2
Lab session III: Any three programs using 8085 based on block of data.	L4	1
Lab session IV: ALP using 8086: <ol style="list-style-type: none"> 1. Write an ALP to add list of 10 given numbers. 2. Write an ALP to sum the numbers from 1-100. 3. Write an ALP to count negative numbers from a given list of 10 numbers. 4. Write an ALP to check number of vowels in a given string. 	L2, L3, L4	5

AIE6508	PYTHON PROGRAMMING LAB	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	0	0	2	1
Pre-requisites/Exposure	Hands on knowledge of C and C++ Programming				
Co-requisites	Basic concepts of OOP Programming				

Catalog Description

The course is designed to provide an introduction to the Python programming language. The focus of the course is to provide students with an introduction to programming, I/O, and visualization using the Python programming language.

Course Objectives

The objective of this course is

1. Equip the students with the basic feature of python required in solving complex problems and build GUI applications
2. Provide a practical knowledge of implementation/demonstration of python programming concepts like of lists, tuples, dictionaries, Object Oriented Programming concepts in Python, Strings and Files in Python.

Course Outcomes

On completion of this course, the students will be able to

- CO 1: Demonstrate the basics of python programming using if-else, loops and List, Dictionary, tuples.
- CO 2: Demonstrate the concept of inheritances, polymorphisms and other concepts and able to solve complex programming problems involving class objects.
- CO 3: Demonstrate the ability to write database applications in Python
- CO 4: Demonstrate Files Handling in Python.
- CO 5: Demonstrate database operation and GUI applications in python.

Modules	Blooms level*	Number of hours
<ol style="list-style-type: none"> 1. Write a program which will find all such numbers which are divisible by 7 but are not a multiple of 5, between 2000 and 3200 (both included). The numbers obtained should be printed in a comma-separated sequence on a single line. 2. Create a program that asks the user to enter their name and their age. Print out a message addressed to them that tells them the year that they will turn 100 years old. 3. Define a function max() that takes two numbers as arguments and returns the largest of them. Use the if-then-else construct available in Python. (It is true that Python has the max() function built in, but writing it yourself is nevertheless a good exercise.) 4. Define a function max_of_three() that takes three numbers as arguments and returns the largest of them. 	L1, L2 and L3	4
<ol style="list-style-type: none"> 5. Define a function that computes the length of a given list or string. (It is true that Python has the len() function built in, but writing it yourself is nevertheless a good exercise.) 6. Write a function that takes a character (i.e. a string of length 1) and returns True if it is a vowel, False otherwise. 7. Write a function translate() that will translate a text into "rövarspråket" (Swedish for "robber's language"). That is, double every consonant and place an occurrence of "o" in between. For 	L2 and L3	6

<p>example, <code>translate("this is fun")</code> should return the string "tothohisosisosfofunon".</p> <p>8. Define a function <code>sum()</code> and a function <code>multiply()</code> that sums and multiplies (respectively) all the numbers in a list of numbers. For example, <code>sum([1, 2, 3, 4])</code> should return 10, and <code>multiply([1, 2, 3, 4])</code> should return 24.</p> <p>9. Define a function <code>reverse()</code> that computes the reversal of a string. For example, <code>reverse("I am testing")</code> should return the string "gnitset ma I".</p>		
<p>10. Ask the user for a number. Depending on whether the number is even or odd, print out an appropriate message to the user</p> <p>11. Take a list, say for example this one: <code>a = [1, 1, 2, 3, 5, 8, 13, 21, 34, 55, 89]</code> and write a program that prints out all the elements of the list that are less than 5.</p> <p>12. Create a program that asks the user for a number and then prints out a list of all the divisors of that number. (If you don't know what a divisor is, it is a number that divides evenly into another number. For example, 13 is a divisor of 26 because $26 / 13$ has no remainder.)</p> <p>13. Take two lists, say for example these two: <code>a = [1, 1, 2, 3, 5, 8, 13, 21, 34, 55, 89]</code> <code>b = [1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13]</code> and write a program that returns a list that contains only the elements that are common between the lists (without duplicates). Make sure your program works on two lists of different sizes.</p>	L2, L3, L4 and L5	4
<p>14. Ask the user for a string and print out whether this string is a palindrome or not. (A palindrome is a string that reads the same forwards and backwards.)</p> <p>15. Let's say I give you a list saved in a variable: <code>a = [1, 4, 9, 16, 25, 36, 49, 64, 81, 100]</code>. Write one line of Python that takes this list <code>a</code> and makes a new list that has only the even elements of this list in it.</p> <p>16. Make a two-player Rock-Paper-Scissors game. (Hint: Ask for player plays (using input), compare them, print out a message of congratulations to the winner, and ask if the players want to start a new game)</p> <p>Remember the rules:</p> <ul style="list-style-type: none"> • Rock beats scissors • Scissors beats paper • Paper beats rock 	L2, L3 and L4	4
<p>14. Write a program that asks the user how many Fibonacci numbers to generate and then generates them. Take this opportunity to think about how you can use functions. Make sure to ask the user to enter the number of numbers in the sequence to generate. (Hint: The Fibonacci sequence is a sequence of numbers where the next number in the sequence is the sum of the previous two numbers in the sequence. The sequence looks like this: 1, 1, 2, 3, 5, 8, 13, ...)</p> <p>15. Write a program (function!) that takes a list and returns a new list that contains all the elements of the first list minus all the duplicates.</p> <p>16. Write a function that takes an ordered list of numbers (a list where the elements are in order from smallest to largest) and another number. The function decides whether or not the given number is inside the list and returns (then prints) an appropriate boolean.</p>	L2, L3 and L4	1

AIE6535	SUMMER INTERNSHIP EVALUATION-I	L	T	P	C
Version: 2020.1	Date of Approval: JULY 2020	0	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

The objective of this course is to provide practical training on some live projects that will increase capability to work on actual problem in industry. This training may undergo in an industrial environment or may be an in-house training on some latest software which is in high demand in market. This training will be designed such that it will useful for their future employment in industry.

Course Objectives

The objective of this course is to

1. Provide practical training on live projects
2. Increase technical capabilities on solving real life problems in company environment

Course Outcomes

On completion of this summer internship, the students will be able to:

CO1: Develop communication, interpersonal and other critical skills in the job interview process.

CO2: Design and develop software and hardware projects

CO3: Assess interests and abilities in their field of study.

CO4: Demonstrate excellent technical and communication skills to acquire employment contacts leading directly to a full-time job following graduation from college.

VHDL PROGRAMMING

Course Code: AIE6512

Credit Units: 02

Course Objective:

VHDL is commonly used as a design-entry language for field-programmable gate arrays and application-specific integrated circuits in electronic design automation of digital circuits. The course aims to discuss the syntax of the language to model a digital system.

Course Contents:

Module I

Fundamental VHDL Units, LIBRARY Declarations, ENTITY, ARCHITECTURE, Introductory Examples, Specification of combinational systems using VHDL, Introduction to VHDL, Basic language element of VHDL, Behavioural Modeling, Data flow modeling, Structural modeling, Subprograms and overloading, VHDL description of gates.

Module II

Data Types; Pre-Defined Data Types, User-Defined Data Types, Subtypes, Arrays, Port Array, Records, Signed and Unsigned Data Types, Data Conversion

Module III: Sequential codes

PROCESS: Signals and Variables, IF, WAIT, CASE, LOOP, CASE versus IF, CASE versus WHEN, Bad Clocking, Using Sequential Code to Design Combinational Circuits
Description and design of sequential circuits using VHDL,

Module IV

Standard combinational modules, Design of a Serial Adder with Accumulator, State Graph for Control Network, design of a Binary Multiplier, Multiplication of a Signed Binary Number, Design of a Binary Divider.

Module V

Micro programmed Controller, Structure of a micro programmed controller, Basic component of a micro system, memory subsystem. Overview of PAL, PLA, FPGA, CPLD.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;
Att: Attendance

VHDL PROGRAMMING LAB

Course Code: AIE6513

Credit Units : 01

Software Required: Mentor Graphics

Topics covered in lab will include:

- Designing Basic Gates.
- Designing Combinational circuits like adder, multiplexer, PLA
- Designing Sequential Circuits like flip-flops, counters, registers.

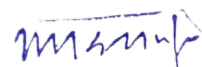

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

AIE6518	ADVANCED WEB DESIGNING TECHNOLOGIES	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	0	0	2	1
Pre-requisites/Exposure	Knowledge of Internet fundamentals				
Co-requisites	NIL				

Catalog Description

This course is aimed to provide a fundamental understanding of JavaScript and two of its related library: Bootstrap and React for dynamic web site client side scripting. Javascript is a famous scripting language for client side. The bootstrap and react libraries are rich API for creating dynamic websites. The course builds strong foundation for client-side scripting for creating dynamic websites

Course Objectives

The objective of this course is

1. Equip the students with basic and advanced features of javascript and bootstrap library to create dynamic web sites
2. Provide an overview of basic features of react library to design dynamic websites.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain basic concepts of java scripts and apply them to create basic scripts

CO2: Explain the fundamentals of client side scripting ,document object model and apply them to create dynamic websites.

CO3: Apply basic APIs of bootstrap library to create dynamic websites

CO4: Demonstrate bootstrap java plugins and its use in designing sample websites.

CO5: Explain and apply react APIs in client side scripting

Modules	Blooms level*	Number of hours
Module 1: Basics Introduction to JavaScript, JavaScript Core Features—Overview, Data Types and Variables, Operators, Expressions, and Statements, Functions, Objects, Array, Date, Math, and Type-Related Objects, Regular Expressions	L2 and L3	8
Module 2: Fundamental of Client-Side JavaScript JavaScript Object Models, The Standard Document Object Model, Event Handling, Controlling Windows and Frames, Handling Documents, Form Handling, Dynamic Effects: Rollovers, Positioning, and Animation, Navigation and Site Visit Improvements, Browser and Capabilities Detection Advanced Topics: JavaScript and Embedded Objects, Remote JavaScript, JavaScript and XML	L2 and L3	7
Module 3: Introduction to Bootstrap (Part 1) Bootstrap Scaffolding: What Is Bootstrap?, Bootstrap File Structure, Basic HTML template, Global Styles Default: Grid System, Basic Grid HTML, Offsetting Columns, Nesting Column, Fluid Grid System, Container Layouts Bootstrap CSS: Typography, Code, Tables, Bootstrap Layout Components: Dropdown Menus, Button Groups, Buttons with Dropdowns, Navigation Elements, Navbar, Breadcrumbs Pagination, Labels, Badges, Typographic Elements	L2 and L3	7

Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Basics of Java Programming				
Co-requisites	NIL				

Catalog Description

In this course the advanced features of contemporary java are discussed in detail. Concepts covered would enable them to handle complex programs relating to managing data and processes over the network. Discussion will be on relating to concepts of remote method invocation to working with swings architecture. Further practical implementation of database connectivity and using them in servlet and jsp based applications will be made.

Course Objectives

The objective of this course is to

1. Equip the students with the advanced feature of contemporary java required in solving complex problems.
2. Provide a practical knowhow and implementation of advanced java programming concepts like database programming with servlets and jsp.

Course Outcomes

On completion of this course, the students will be able to

- CO1: Define and explain concept of an Remote method invocation application, demonstrate swing based application developed using concepts of remote method invocation
- CO2: Distinguish between various java and open database connectivity drivers and able to solve complex programming problems involving database interaction.
- CO3: Describe servlet and its lifecycle, along with demonstrate and design solutions for some complex dynamic web applications using servlets.
- CO4: Explain jsp scripting and Differentiate between processing of servlets and jsp scripting pages. Apply knowledge of servlets and jsp scripting to create some new dynamic web applications.
- CO5: Explain the architecture of Model View Controller and struts. Demonstrate applications based on java beans and struts.

Modules	Blooms level*	Number of hours
MODULE 1: DISTRIBUTED COMPUTING Introduction to Java RMI, RMI services, RMI client, Running client and server, Introduction of Swing, Swing Components, Look and Feel for Swing Components, Introduction to Multimedia Programming.	L1, L2 and L3	6
MODULE 2: DATABASE CONNECTIVITY ODBC and JDBC Drivers, Connecting to Database with the java.sql Package, Using JDBC Terminology, JDBC with mysql, postgresql. .	L2 and L3	7
MODULE 3: SERVLET PROGRAMMING Introduction to Servlets, Servlet Life Cycle, Servlet based Applications, Servlet and HTML.Filters, jdbc with servelets, session Management techniques in detail.	L2, L3 and L5	8

AIE6608	ADVANCED JAVA PROGRAMMING LAB	L	T	P	C
Version 2020.1	Date of Approval: JULY2020	0	0	2	1
Pre-requisites/Exposure	Basics of Java and Advanced Java Programming				
Co-requisites	NIL				

Catalog Description

In this Lab course the advanced features of contemporary java are implemented and demonstrated. Concepts covered would enable them to create complex applications related to data management. Problems or programs will be related to concepts of remote method invocation, swings, servlets, jsp and java beans.

Course Objectives

The objective of this course is to

1. Make the students apply knowledge of various advanced java features required in solving complex problems.
2. Provide a demonstration of advanced java programming concepts like database programming with servlets, jsp and creating java beans.

Course Outcomes

On completion of this course, the students will be able to

- CO1: Apply the knowledge of swings architecture and remote method invocation used to provide solution to distributed computing problems
- CO2: Demonstrate the use of JDBC connectivity along with swings based architecture, thereby handling data management.
- CO3: Apply the knowledge of servlets and server programming to construct dynamic web applications using web servers.
- CO4: Demonstrate the differences between creating and deploying dynamic web applications using jsp concepts and servlets.
- CO5: Demonstrate usage of applications involving java beans and jdbc programming to handle data management.

Modules/Topics Covered**	Blooms level*	Number of hours
1.Sample Programs using swings architecture and remote method invocation (a) Write a program using swings creating tabbed panes and menu over a frame and handle their associated events (b) Write a program using swings List control containing list of cities, allowing the user to choose any one of them and display using event handing. (c) Demonstrate an application showcasing the use of remote method invocation(RMI) for designing a distributed application. (d) Create an application using concepts of RMI to depict a client server based interaction.	L3, L5	6
2.Sample Programs using JDBC and swings (a) Create an application demonstrating the use of swings, having a menu over a frame and jdbc programming to perform insert and select operations by handling menu related events. (b) Create an application using swings, having a design providing features for iterating over a dataset performing operations like forward,	L3, L5	4

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

backward, start and end with help of jdbc programming.		
(c) Sample Programs using servlets with jdbc, html and swings 3. Create an application using servlets to perform redirection based on validating user data entered through a web form. 4. Design an application to fetch data from database using servlets and display it using its post method. 5. Demonstrate the process of writing cookies using a servlet and display a message after writing. 6. Write a program to create a session object for the username fetched from user using a servlet, further access that session value on another servlet invoked by redirection.	L3, L5	6
7. Sample Programs using JSP with jdbc, html and swings (a) Write a program using jsp to demonstrate the features of jsp elements used to declare, define and display sum of two integers. (b) Create an application using jsp to calculate and display the greatest out of two integers using if else statements. Integer numbers should be entered using a web form. (c) Demonstrate with a jsp program mechanism to retrieve checkbox data accessed using multiple value parameters fetching approach. (d) Write a program to demonstrate the use of jsp forward action tag used with parameters and processed using another jsp page.	L3, L5	6
8. Sample Programs using jsp, java beans and swings (a) Demonstrate the use of jsp include action tag for including an html and another jsp page in initial jsp resource. (b) Write a program creating Java bean class and setting its properties using required jsp action tags. Output should also display the retrieved property values.	L3, L5	2

AIE6604	ADVANCE DATABASE MANAGEMENT SYSTEM	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Basic knowledge of DBMS				
Co-requisites	NIL				

Catalog Description

The objective of this course is to expose the students to the implementation techniques of database system. This course explains techniques for query processing and optimization with transaction and concurrency control techniques.

Course Objectives

The objective of this course is to

- To understand the basic concepts and terminology related to DBMS and Relational Database Design
- To design and understand Distributed, parallel and object oriented Databases.
- To understand advanced DBMS techniques to handle and optimize queries in database.

Course Outcomes

On completion of this course, the students will be able to

CO1. Understand the basics of database management system and implementation of relational database.

CO2. Knowhow of the file organization, Query Optimization, Transaction management, and database administration techniques.

CO3. Understand and design Distributed, parallel and object oriented Databases models and possible methods of proving them.

Modules	Blooms level*	Number of hours
MODULE 1: Relational Database Integrity Constraints revisited, Extended ER diagram, Relational Algebra & Calculus, Functional, Multivalued and Join Dependency, Normal Forms, Rules about functional dependencies.	L1, L2 and L3	8
MODULE 2: Query Processing and Optimization Valuation of Relational Operations, Transformation of Relational Expressions, Indexing and Query Optimization, Limitations of Relational Data Model, Null Values and Partial Information. Objected Oriented and Object Relational Databases Modeling Complex Data Semantics, Specialization, Generalization, Aggregation and Association, Objects, Object Identity, Equality and Object Reference, Architecture of Object Oriented and Object Relational Databases	L1,L2,L3	9
MODULE 3: Parallel and Distributed Databases Distributed Data Storage – Fragmentation & Replication, Location and Fragment Transparency Distributed Query Processing and Optimization, Distributed Transaction Modeling and concurrency Control, Distributed	L1, L2 and L3	10

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana

AIE6609	ADVANCE DATABASE MANAGEMENT SYSTEM LAB	L	T	P	C
Version 2020.1	Date of Approval: JULY2020	0	0	1	1
Pre-requisites/Exposure	Basic knowledge of DBMS				
Co-requisites	Nil				

Catalog Description

The objective of this course is to expose the students to the implementation techniques of database system. This course explains techniques for query processing and optimization with transaction and concurrency control techniques.

Course Objectives

The objective of this course is

1. Equip the students with the different issues involved in the design and implementation of a database system.
2. Provide a practical knowledge of implementation/demonstration of data manipulation language to query, update, and manage a database.

Course Outcomes

On completion of this course, the students will be able to

CO1. Demonstrate and analyze and apply common SQL statements including DDL, DML and DCL statements to perform different operations.

CO2. Demonstrate and Apply different types of constraints on the database.

CO3. Design different views of tables for different users and to apply embedded and nested queries.

CO4. Design and implement a database for a given problem according to well known design principles that balance data retrieval performance with data consistency.

Modules	Blooms level*	Number of hours
Module1: 1. Introduction to SQL and understand basic commands 2. Understand various DDL and DML commands. 3. To understand joins in SQL.	L1,L2 and L3	4
Module 2: 1. To understand constraints SQL 2. Wild cards and aggregate functions in SQL 3. To understand and execute procedures and views in SQL	L2 and L3	6
Module 3: 1. To understand and execute triggers in SQL 2. To develop a database application to demonstrate the representation of multi valued attributes and use of nested tables to represent complex objects. Write suitable queries	L2, L3, L4 and L5	4
Module 4: 1. To understand and execute Indexes in SQL	L2, L3 and L4	4
Module 5: 1. To understand the concept of Exception handling in SQL 2. Query Evaluation Plans 3. Concurrency and Transactions	L2, L3 and L4	1

AIE6605	DIGITAL COMPUTER ORGANIZATION	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

The Objective of this course is to expose the students to the fundamentals and the concepts of Digital & Computer Organization and Representation of Information and Basic Building Blocks, Basic Organization, Memory Organization, Input-Output Organization, Processor Organization etc. This course is designed to understand the concepts of Computer Organization for Research & Development as well as for application.

Course Objectives

The objective of this course is to

- An understanding of a machine's instruction set architecture (ISA) including basic instruction fetch and execute cycles, instruction formats, control flow, and operand addressing modes.

Course Outcomes

On completion of this course, the students will be able to

CO1. Understand and Interpret the functional architecture of computing systems.

CO2. Identify, compare and assess issues related to ISA, memory, control and I/O functions.

CO3. Understand the general concepts in digital logic design, including logic elements, and their use in combinational and sequential logic circuit design.

CO4. Design and analyze solutions in the area of computer architecture.

Modules	Blooms level*	Number of hours
MODULE 1: Representation of Information and Basic Building Blocks Overview of Computer hardware generation, Number Systems, Binary, Octal, Hexadecimal, Character Codes (BCD, ASCII, EBCDIC), Logic gates, Boolean algebra, K-map Simplification, Half adder, Full adder, Decoders, Multiplexes, Binary Counters, Flip/Flops, Registers, Counters (Synchronous & Asynchronous), ALU, Micro-Operation, ALU-chip, Faster Algorithm and Implementation (multiplication & Division).	L1, L2 and L3	7
MODULE 2: Basic Organization Von Neumann Machine (IAS Computer), Operational flow chart (Fetch, Execute), Instruction Cycle, Organization of Central Processing Unit, Hardwired and Micro programmed control unit, Single Organization, General Register Organization, Stack Organization, Addressing Modes, Instruction Formats, Data transfer & Manipulation, I/O organization, Bus Architecture, Programming Registers.	L1,L2,L3	8
MODULE 3: Memory Organization Memory hierarchy, Main Memory (RAM/ROM chips), Auxiliary memory, Associative memory, Virtual memory, Cache memory, Memory management hardware, hit/miss ratio, Magnetic disk and its performance, Magnetic Tapes etc.	L1, L2 and L3	8

Prof. (Dr.) Anil Kumar
 Deputy Dean Academics

AIE6614	SOFTWARE ENGINEERING	L	T	P	C
Version 2019.1	Date of Approval: 15 May 2019	3		0	3
Pre-requisites/Exposure	Basic Knowledge of software development				
Co-requisites	Nil				

Catalog Description

In this course the concepts of Software development are discussed in detail. Various models of SDLC are introduced along with its application. Students will be able to apply these concepts in real time software project development.

Course Objectives

The objective of this course is to

1. Gain the knowledge of how Analysis, Design, Implementation, Testing and Maintenance processes are conducted in a software project.
2. Apply their foundations in software engineering to adapt to readily changing environments using the appropriate theory, principles and processes.

Course Outcomes

On completion of this course, the students will be able to

CO1: Apply current theories, models, and techniques that provide a basis for the software lifecycle.

CO2: Enable the students to apply a systematic application of scientific knowledge in creating and building cost effective software solutions to business and other types of problems.

CO3: Be able to elicit, analyze and specify software requirements through a productive working relationship with various stakeholders of a software development.

CO4: Be able to evaluate the impact of potential solutions to software engineering problems in a global society, using the knowledge of contemporary issues and emerging software engineering trends, models, tools, and techniques.

CO5: Work as an individual and as part of a multidisciplinary team to design, develop and deliver quality software.

Modules	Blooms level*	Number of hours
MODULE 1: Introduction Software life cycle models: Waterfall, Prototype, Evolutionary and Spiral models, Overview of Quality Standards like ISO 9001, SEI-CMM	L1, L2 and L4	5
MODULE 2: Software Metrics and Project Planning Size Metrics like LOC, Token Count, Function Count, Design Metrics, Data Structure Metrics, Information Flow Metrics. Cost estimation, static, Single and multivariate models, COCOMO model, Putnam Resource Allocation Model, Risk management.	L2, L3 and L6	7
MODULE 3: Software Requirement Analysis, design and coding Problem Analysis, Software Requirement and Specifications, Behavioural and non-behavioural requirements, Software Prototyping Cohesion & Coupling, Classification of Cohesiveness & Coupling, Function Oriented Design, Object Oriented Design, User Interface Design Top-down and bottom-up Structured programming, Information hiding.	L2, L3 and L5	8

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana

AIE6616	SOFTWARE ENGINEERING LAB	L	T	P	C
Version 2017.1	Date of Approval: 15 May 2019	0	0	1	1
Pre-requisites/Exposure	Basics of Software Engineering				
Co-requisites	NIL				

Catalog Description

The course provides introduction to the fundamental's principles of software engineering. The organization broadly based on the classical analysis-design-implementation framework. Software Engineering is the systematic approach to the development, operation, maintenance, and retirement of software. Rational Rose Enterprise Edition software is used to serve the objectives. Students will be able to design models according to user requirement.

Course Objectives

The objective of this course is to

1. The basic objective of Software Engineering is to develop methods and procedures for software development that can scale up for large systems and that can be used to consistently produce high-quality software at low cost and with a small cycle time.
2. Apply basic techniques of modeling computer systems.

Course Outcomes

On completion of this course, the students will be able to

CO1: collect requirements and prepare their scenarios

CO2: Construct various UML models (including use case diagrams, class diagrams, interaction diagrams, state chart diagrams, activity diagrams, and implementation diagrams) using the appropriate notation

CO3: Demonstrate the role and function of each UML model in developing objectoriented software.

CO4: Recognize the difference between various object relationships: inheritance, association, whole-part, and dependency relationships.

Modules/Topics Covered**	Blooms level*	Number of hours
1. Introduction to Rational Rose Enterprise Edition tool and SRS (c) Explain features and characteristics of Rational Rose tool along with screenshots. (d) Create Software requirement specification document for Website application of educational institute.	L1, L2	4
2. Concept of UML and Use case diagram (c) Design Use case Diagram of ATM machine (d) Show dependencies and relationships through Use case diagram of Banking Management System	L1, L3	4
3. Class Diagrams and object diagram concepts (d) Design class diagram of Flight Reservation system (e) Design class diagram of student Management system (f) Design object diagram of courier service system (g) Design object diagram of Train Reservation system	L3, L1	8
4. Sequence, Activity, Collaboration, State chart diagram concepts (h) Design Activity diagram of Library Management system	L3, L1	8

AIE6637	MINOR PROJECT-I	L	T	P	C
Version: 2019.1	Date of Approval: 15 May 2019	0	0	0	2
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

The objective of this course is to provide practical training on some live/demo projects that will increase capability to work on actual problem in industry. It will be an in house training on some latest software which is in high demand in market. This training will be designed such that it will be useful for their future employment in industry.

Course Objectives

The objective of this course is to

1. Provide practical training on live projects
2. Increase technical capabilities on solving real life problems in company environment

Course Outcomes

On completion of this minor project, the students will be able to:

CO1: Demonstrate a sound technical knowledge of their selected project topic.

CO2: Design and develop engineering solutions to complex problems utilising a systems approach.

CO3: Analyse various approaches for solving a complex engineering problem using different tools and techniques

CO4: Demonstrate the knowledge, skills and attitudes of a professional engineer.

CO5: Apply technical skills and knowledge in completing the project.

AIE6612	VLSI DESIGN	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	3	0	0	0
Pre-requisites/Exposure	Basics of semiconductor and analog electronics				
Co-requisites	Nil				

Catalog Description

This course deals with basic theories and techniques of digital VLSI design in CMOS technology. It covers the fundamental concepts and structures of designing digital VLSI systems which include CMOS devices and circuits, standard CMOS fabrication process, CMOS design rules, static and dynamic logic structures, CMOS chip layout, simulation and testing, low power techniques, design tools and methodologies and Stick Diagrams.

Course Objectives

The objective of this course is to

- Provide a deep understanding of the concepts, techniques and design of complex digital VLSI circuits.
- Apply mathematical methods and circuit analysis models to analyse CMOS digital circuits, and their logic components.

Course Outcomes

On completion of this course, the students will be able to

CO1.Explain the characteristics of Basic VLSI components.

CO2. Apply the knowledge of various CMOS inverters to compare their performance.

CO3. To design and realize basic combinational and sequential functions using CMOS logic.

CO4. Design circuit Layout and Stick diagrams of CMOS logics.

Modules	Blooms level*	Number of hours
Module I: Devices and the wire Dynamic and transient behavior of Diode, Diffusion capacitance, SPICE Diode model, MOSFET basic, depletion and enhancement device. MOSFET static behavior, Threshold voltage and its dependence on V_{SB} MOSFET Operation in resistive and saturation region, channel length modulation, Velocity saturation and its impact on sub micron devices, sub threshold conduction, Model for manual analysis, Equivalent resistance for MOSFET in (velocity) saturated region, comparison of equations for PMOS and NMOS. Dynamic behavior, Channel capacitance in different regions of operation, junction capacitance, Level 1 SPICE models for MOS transistors. The Wire, Interconnect parameters: resistance, capacitance and Inductance, Lumped RC model, Elmore Delay.	L1, L2	8
Module II: CMOS Inverter VTC of an ideal inverter, Switching Model of the CMOS inverter: NMOS /PMOS discharge and charge, VTC of CMOS inverter : PMOS and NMOS operation in various regions including velocity saturation, Switching threshold, $(W/L)_p/(W/L)_n$ ratio for setting desired V_M with and without velocity saturation, Noise Margins, buffer. Ratioed logic: Pseudo NMOS inverter and PMOS to NMOS ratio for performance, tri-state inverter, Resistive load inverter. Load Capacitance calculations: fan out capacitance, self capacitance	L3, L4	8

calculations: Miller effect, wire capacitance; Improving delay calculation with input slope, Propagation delay: first order analysis, analysis from a design perspective, sizing a chain of inverters for minimum delay, choosing optimum number of stages, Power, Energy and Energy Delay: Dynamic power consumption, Static power, Glitches and power dissipation due to direct path currents, power and delay trade off, Transistor sizing for energy minimization.		
Module III: Combinational circuits CMOS LOGIC: Good 0 and Poor 0, series and parallel N and P switches, Two and Higher input NAND and NOR gates, Functions of the type $(AB+C(D+E))$ and their complements, XOR and XNOR gates, 2 input Multiplexer, Full Adder; Transistor sizing in CMOS logic for optimal delay, Pseudo NMOS NAND NOR and other gates and the transistor sizing, Introduction to DSVCL logic, CPL AND/NAND, OR/NOR, XOR/XNOR gates, Logical effort, Electrical Effort, Branching effort, Examples of sizing Combinational logic chains for minimum delay, Pass-transistor logic, pass gate configurations for NMOS and PMOS, 2 input and 4 input MUX, XOR, XNOR and implementation of general functions like $AB+AB*C+A*C^*$, Robust and Efficient PTL Design, Delay of Transmission Gate chain. Dynamic CMOS design: Pre-charge and Evaluation, charge leakage, bootstrapping, charge sharing, Cascading Dynamic Gates, DOMINO Logic, Optimization of Domino Logic Gates, simple example circuit implementations of DOMINO logic.	L2,L3,L4	10
Module IV: Sequential Logic circuits Principle of bistability, NAND and NOR based SR latch, and clocked SR Latch, JK latch, example of master slave flip flop, CMOS D latch, , MUX based Latches, master slave edge triggered register, Static Timing Analysis – setup, hold time, clock skew, clock period, non ideal clocks, clock overlap, C2MOS register, TSPCR Register, Schmitt Trigger, Pipelining and NORA CMOS	L2,L3,L4	5
Module V: Layout Design Rules Introduction to CMOS Process technology, Latch up and its prevention Layout of CMOS inverter, CMOS NAND and NOR gates, Concept of Euler path, and stick diagrams for functions like $(AB+E+CD)^*$.	L2,L3,L4	5

AIE6613	VLSI DESIGN LAB	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	0	0	2	1
Pre-requisites/Exposure	Hands on knowledge of analog electronics				
Co-requisites	Basic concepts of Digital electronics				

Catalog Description

In this Lab course the designing of VLSI circuits using Mentor Graphics software are implemented and demonstrated. Concepts covered would enable them to create complex applications related to VLSI design. The objective of this course is to explore and implement the various features of VLSI design and analyze the dc and transient analysis.

Course Objectives

The objective of this course is to

Provide a deep understanding of CMOS logic using Mentor Graphics tool.

Analyze, design concepts of different combinational and sequential circuits and their simulation.

Course Outcomes

On completion of this course, the students will be able to

CO 1: Demonstrate the basic concept of MOSFET;

CO 2: Illustrate the static and switching characteristics of inverters using CMOS with varying capacitance, width and channel Length of CMOS using Mentor Graphics tool.

CO 3: Demonstrate and create models of moderately sized CMOS circuits that realize specified digital functions using Mentor graphics Tool.

CO 4: Demonstrate the layout and stick diagrams using Mentor graphics Tool.

CO 5: Demonstrate the power consumption during transient analysis.

Modules/Topics Covered**	Blooms level*	Number of hours
1. MOSFET characteristics with varying VGS for both pmos and nmos.	L3, L5	2
2. Effect on VTC of CMOS inverter with variation of W and L.	L3, L5	2
3. Transient analysis of CMOS inverter with varying capacitive load, W and L. Rise time, fall time power dissipation, propagation delay calculation of CMOS inverter with the variation of capacitive load, W and L.	L3, L5	4
4. NOR and NAND gate - Transient analysis	L3, L5	2
5. XOR/XNOR gate - Transient analysis	L3, L5	2
6. 2:1 MUX and XOR gate with P.T.L.- Transient analysis	L3, L5	2
7. D type latch and flip flop - Transient analysis	L3, L5	2
8. 3 input NAND gate implementation with DOMINO (precharge and evaluation).	L3, L5	2
9. 4 inverter chain to derive capacitive load.	L3, L5	2

AIE6617	OPEN SOURCE TECHNOLOGIES	L	T	P	C
Version :2020.1	Date of Approval: JULY 2020	2	0	0	2
Pre-requisites/Exposure	Basic Knowledge of HTML				
Co-requisites	Nil				

Catalog Description

The course includes the content about PHP and its Programming Concepts. It includes basic architecture of running a PHP Script. It also includes the concepts about Conditional, Control Statements, Array, Associative Array, String Functions and Concepts of Functions : Call by Value and Reference. The course also includes concepts related to Object Oriented Programming in PHP and website design support along with Database Support concepts which will be useful to design Backend for the website.

Course Objectives

The objective of this course is:

1. To provide a fundamental understanding of Dynamic Website Design in PHP.
2. To provide knowledge about various Frameworks build for Website Designing.

Course Outcomes

On completion of this course, the students will be able to

After completing the course, the students will be able to,

CO 1: Explain the basic concepts of PHP programming and write PHP scripts using Strings and functions

CO 2: Explain and write PHP scripts based on Conditional statements, control statements and Arrays.

CO 3: Apply Object Oriented and Web Design concepts of PHP in order to create responsive web pages and websites

CO 4: Apply the concepts of Database and Database connectivity in order to provide backend support to website to make them Dynamic in nature

CO 5: Demonstrate the website designing process on various PHP Frameworks.

Modules	Blooms level*	Number of hours
Module I: Introduction to Open Source and PHP programming Introduction to Open Sources Technologies, Introduction to PHP, installation and configuration, Advantages and Disadvantages of PHP, Client Side Scripting, Server Side Scripting, Variables, data types, various types of function, creating your own function, Strings in PHP, String Functions.	L1, L2 and L3	4
Module II: Operators, Loops, Array, Exception and Error Handling Operators, Conditions, Loops, Using for each, Creating and Using Arrays, Multidimensional Array, Associative Array. Error Handling in PHP, Errors and Exceptions, Exception class, try/catch block, throwing an exception, defining your own Exception subclass.	L1, L2, L3	5
Module III: Classes, File system, Passing Information between pages Object oriented programming with Php, Working with Datetime, code re-use, require (), include(), and the include_path; Understanding PHP file permissions, File reading and writing functions, File system functions, File uploads, Sending mail & use of email server.	L2, L3 and L4	7

HTTP, GET arguments, POST arguments, Using Session in PHP, cookies, The setcookie() function, Deleting Cookies and Reading Cookies.		
Module IV: Working with database HTML Tables and Database tables, Databasemanipulation(Select, Insert, Update, Delete), validating User Input using Javascript. MYSQL, Introducing MySQL; database design concepts; the Structured Query Language (SQL); communicating with a MySQL backend via the PHP, MySQL API Building Database Applications, Developing PHP scripts for dynamic web page like feedback form, online admission form and online test.	L2, L3 and L4	5
Module V: Working with Frameworks Working with Mambo, Working with Joomla, Working with framework. Working with wordpress, Working with drupal, Use of Joomla in rapid development of website. Developing of simple website using joomla.	L2, L3 and L4	3

1. To provide a fundamental understanding of Dynamic Website Design in PHP.
2. To provide knowledge about various Frameworks build for Website Designing.

Course Outcomes

On completion of this course, the students will be able to

CO 1: Apply the basic concepts of PHP programming to rewrite PHP scripts using Strings and Functions

CO 2: Demonstrate the concept of Conditional & Control Statements and 1 D, 2 D & Associative Array using PHP scripts

CO 3: Apply Object Oriented and Web Design concepts of PHP in order to prepare responsive web pages and websites

CO 4: Apply the concepts of Database and Database connectivity to prepare backend support for website.

Lab Sessions	Blooms level*	Number of hours
1. PHP Scripts on Basic Concepts <ul style="list-style-type: none"> • Write the process of installation of web server. • Write programs to print all details of your php server. Use phpinfo(). • Write a program to give demo of ECHO and PRINT command. • Write a program to implement the string functions. 	L1,L3	2
2. PHP Script on Conditional and Control Statements <ul style="list-style-type: none"> • Write a script to print Fibonacci series upto a given number. • Write a menu driven program to implement a calculator which performs only addition, subtraction, multiplication and division. The operation should happen based on user choice. • Write a script to calculate Factorial of a given number 	L1,L3	4
3. PHP Scripts on Arrays: 1D, 2D, Associative <ul style="list-style-type: none"> • Write a program sort ten number by using array. • Write a program to demonstrate the concept of associative array. • Write a program to demonstrate the concept of multidimensional array. 	L1,L3	4

4. PHP Scripts on Object Oriented Programming and File Handling Concepts <ul style="list-style-type: none"> Write a program to demonstrate the concept of Classes & objects. Write a php script including all the file handling functions. 	L1,L3	2
PHP Scripts on Webpage and Website Design Concepts <ul style="list-style-type: none"> Create a login form with two text fields called “login” and “password”. When user enters “Amity” as a user name and “university” as a password it should be redirected to a Welcome.HTML page or toSorry.HTML in case of wrong username/password. Write a program to design login form in which find the greatest number amongst three numbers. WAP for Marksheet generation. Design a webpage for entering the student details with all the validations applied on it. Create a form with a text box asking to enter your favorite city with a submit button when the user enters the city and clicks the submit button another php page should be opened displaying “Welcometo the city”. 	L1,L3	6
5. PHP Scripts on Database Creation aConnectivity <ul style="list-style-type: none"> Create a database in MySql and connect that database from PHP. Write a program to Update, insert and delete the values of table in database. 	L1,L3	4

AIE6619	DATA MINING	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Concept of Database and Data Mining				
Co-requisites	Nil				

Catalog Description

Data Mining serve as one of the most important courses for postgraduate students, since it builds computational abilities, inferential thinking, and practical skills for tackling core data scientific challenges. The students will get a comprehensive understanding of different data mining techniques that can be used for prediction and for discovering patterns, be prepared to select the right technique for a given data problem and will be able to create a general-purpose analytic process.

Course Objectives

The objective of this course is to

- Provide students with an in-depth knowledge of data mining. To introduce students to basic applications, concepts, and techniques of data mining.
- Develop skills for using recent data mining software to solve practical problems and prediction in a variety of disciplines and
- Gain experience doing independent study and research.

Course Outcomes

On completion of this course, the students will be able to

CO 1: Explain concepts of Data mining, predictive analytics and analyses architecture of data mining. Differentiate between supervised and unsupervised methods

CO 2: Apply classification techniques on different data sets and solve cost –benefit analysis numerical. Analyze decision tree methods.

CO 3: Implement various clustering algorithm on different data sets and describe these algorithms.

CO 4: Prepare data representation for market basket analysis and determine the usefulness of association rules. Interpret supervised and unsupervised learning methods.

CO 5: Predict market trends and outline different factors associated mail marketing.

Course Content

Modules	Bloom's level	Number of Hours
Module I Data Preparation An introduction to data mining and predictive analytics, Data Pre-processing Exploratory Data Analysis, Dimension- Reduction Methods.	L1, L2	8
Module II Classification k- Nearest Neighbour Algorithm, Decision Trees, Model Evaluation Technique, Cost –Benefit Analysis Using Data Driven Cost.	L1, L2, L3	7
Module III Clustering Hierarchical and k- Means Clustering, Kohonen Networks, Birch Clustering, Measuring Cluster Goodness.	L1, L2, L3, L4	8

AIE6702	COMPUTER GRAPHICS	L	T	P	C
Version: 2020.1	Date of Approval: JULY 2020	3	-	-	3
Pre-requisites/Exposure	Basic Knowledge of C++ Programming				
Co-requisites	Nil				

Catalog Description

This course covers understanding of software and hardware related to computer graphics systems. Topics include an introduction to the basic concepts, 2-D and 3-D modeling and transformations, viewing transformations, clipping, color filling, projections, rendering techniques, visible surface detection and elimination algorithms, graphical software packages and graphics systems. Students will use a standard computer graphics API to reinforce concepts and study fundamental computer graphics algorithms. Last module covers elementary image processing techniques and various library function in C to build animations.

Course Objectives

The objective of this course is to

1. Equip the students with fundamental concepts of graphics system and standards.
2. Equip the students with mathematical concepts of graphics algorithms to draw objects using C language.
3. Provide an overview of various 2D & 3D transformation, clipping operations, algorithms related to hidden surface detection and elimination and their implementation.
4. Provide an overview of various elementary image processing techniques and basic library function in C to create animation sequence.

Course Outcomes

On completion of this course, the students will be able to

- CO 1: Explain applications of computer graphics and define various standards and components in development of computer graphics.
- CO 2: Explain generation of graphics primitives and analyze their problems and solutions. Demonstrate solid filling algorithms. Demonstrate polygon clipping and line clipping algorithm and analyze their problems and solutions.
- CO 3: Apply 2D geometric transformations on 2D graphics objects with their practical implementation. Illustrate use of window to viewport transformation in computer graphics.
- CO4: Apply 3D geometric transformations on 3D objects with their practical implementation.
- CO 5: Illustrate the use of 3D object modeling, Visible Surface detection and elimination algorithm and analyze their problems and solutions.

Modules	Blooms level*	Number of hours
Module I: Introduction to Graphics and Graphics Hardware System Application of computer graphics, Video Display Devices, Raster Scan Display, Random Scan Display, Input Devices, Graphic Software and graphics standards, Numerical based on Raster and Random scan display, Frame buffer, Display processor.	L1, L2	5
Module II: Output Primitives and Clipping operations Algorithms for drawing 2D Primitives lines (DDA and Bresenham's line algorithm), circles (Bresenham's and midpoint circle algorithm), ellipses (midpoint ellipse algorithm), Antialiasing and filtering techniques. Line	L2, L3, L4	6

clipping (cohen-sutherland algorithm), Curve clipping algorithm, and polygon clipping with Sutherland Hodgeman algorithm, Area fill algorithms for various graphics primitives: Scanline fill algorithm, boundary fill algorithm, flood fill algorithm, Polygon representation, various method of Polygon Inside test: Even-Odd method, winding number method, Character generation techniques.		
Module III: 2D Geometric transformation 2D Transformation: Basic transformation, Translation, Rotation, Rotation relative to an arbitrary point, scaling, Matrix Representations and Homogeneous coordinates, window to viewport transformation.	L3 and L4	6
Module IV: 3D Geometric transformation 3D Concepts: Parallel projection and Perspective projection, 3D Transformations, composite 3D transformation, co-ordinate transformation, Inverse transformation	L3 and L5	7
Module V: object modelling and Visible Surface detection fractal geometry methods, fractal dimensions, Geometric construction of deterministic self-similar fractals, Iterated function system to generate fractals. Bezier curves and Bezier surfaces, Bspline curves and surfaces, Visible surface detection method: Basic illumination, diffuse reflection, specular reflection, shadows. Ray tracing method, Depth-buffer method, A-buffer method, Depth-sorting method (painter's algorithm), Binary search partition method, Scan line method,	L4, L5	7
Module VI: Introduction to multimedia Design of animation sequences, Computer Animation languages, Elementary filtering techniques and elementary Image Processing techniques, graphics library functions used in animation design	L2, L3, L5	5

AIE6706	COMPUTER GRAPHICS LAB	L	T	P	C
Versionn: 2020.1	Date of Approval: JULY 2020	0	0	2	1
Pre-requisites/Exposure	Basic Knowledge of C++ Programming				
Co-requisites	Nil				

Catalog Description

This course covers understanding of software and hardware related to computer graphics systems. Topics include an introduction to the basic concepts, 2-D and 3-D modeling and transformations, viewing transformations, clipping, color filling, projections, rendering techniques, visible surface detection and elimination algorithms, graphical software packages and graphics systems. Students will use a standard computer graphics API to reinforce concepts and study fundamental computer graphics algorithms. Last module covers elementary image processing techniques and various library function in C to build animations.

Course Objectives

The objective of this course is to

1. Equip the students with fundamental concepts of graphics system and standards.
2. Equip the students with mathematical concepts of graphics algorithms to draw objects using C language.
3. Provide an overview of various 2D & 3D transformation, clipping operations, algorithms related to hidden surface detection and elimination and their implementation.
4. Provide an overview of various elementary image processing techniques and basic library function in C to create animation sequence.

Course Outcomes

On completion of this course, the students will be able to

CO 1: Explain applications of computer graphics and define various standards and components in development of computer graphics.

CO 2: Explain generation of graphics primitives and analyze their problems and solutions. Demonstrate solid filling algorithms. Demonstrate polygon clipping and line clipping algorithm and analyze their problems and solutions.

CO 3: Apply 2D geometric transformations on 2D graphics objects with their practical implementation. Illustrate use of window to viewport transformation in computer graphics.

CO4: Apply 3D geometric transformations on 3D objects with their practical implementation.

CO 5: Illustrate the use of 3D object modeling, Visible Surface detection and elimination algorithms and analyze their problems and solutions.

CO 6: Explain Elementary filtering techniques and elementary Image Processing techniques. Apply C++graphics library functions to design animation sequence.

Modules	Blooms level*	Number of hours
Module I: Introduction to Graphics and Graphics Hardware System <ol style="list-style-type: none"> 1. Demonstrate the use of graphics library functions to draw various graphics objects. 2. Demonstrate the use of graphics library functions to draw pie chart. 3. Demonstrate the use of graphics library functions to draw bar chart on screen. 	L3,L5	2

Module II: Output Primitives and Clipping operations <ol style="list-style-type: none"> 1. Demonstrate the use of DDA line drawing algorithm to draw line on the screen when $m \leq 1$ and $m > 1$. 2. Demonstrate the use of DDA line drawing algorithm to draw line on the screen when $m \leq 1$ and $m > 1$. 3. Demonstrate the use of Bresenham's line drawing algorithm to draw line on the screen when $m \leq 1$ and $m > 1$. 4. Demonstrate the use of circle drawing algorithm to draw circle on the screen. 5. Write a program to draw characters on screen using bitmap character generation method. 6. Write a program to fill a polygon using boundary fill algorithm. 7. Write a program to fill a polygon using flood fill algorithm. 8. Write a program to demonstrate line clipping algorithm to clip a line where line slope is $m \leq 1$. 	L3,L5	6
Module III: 2D Geometric transformation <ol style="list-style-type: none"> 1. Write a program to translate a triangle where translation factors are $t_x=20$ and $t_y=30$. 2. Write a program to rotate a triangle in clock-wise and anti-clock-wise direction where rotation angle is 300. 3. Write a program to scale a square where scaling factors are $S_x=2$ and $S_y=3$. 4. Write a program to reflect a triangle about X axis. 5. Demonstrate combine 2D transformation after applying translation, rotation and scaling transformations. 6. Write a program to demonstrate fix point scaling where scaling factors are $S_x=2$ and $S_y=3$. 7. Write a program to demonstrate window to viewport transformation and linear mapping of the object coordinates in viewport where size of viewport is half to the size of window. 	L3,L5	6
Module IV: 3D Geometric transformation <ol style="list-style-type: none"> 1. Write a program to translate a 3D triangle where translation factors are $t_x=20$ and $t_y=30$. 2. Write a program to rotate a 3D triangle in clock-wise and anti-clock-wise direction where rotation angle is 300. 3. Write a program to scale a 3D square where scaling factors are $S_x=2$ and $S_y=3$. 4. Demonstrate combine 3D transformation after applying translation, rotation and scaling transformations. 	L3,L5	4
Module V: Object modelling and Visible Surface detection <ol style="list-style-type: none"> 1. Write a program to draw Bezier curve on the screen with 4 control points. 2. Write a program to draw spline curve on screen using 6 control points. 3. Write a program to implement fractal objects using Iterated Function System. 	L3,L5	3
Module VI: Introduction to multimedia <ol style="list-style-type: none"> 1. Create animation Sequence using C++ Graphics Library Function. 2. Write a program to generate histogram of an image. 	L3,L5	3

AIE6704	ADVANCED COMPUTER NETWORKS	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Basics of Computer Network				
Co-requisites	Nil				

Catalog Description

Advanced Computer Networks provides the knowledge of computer networks and related current research topics. This course illustrates the OSI and TCP-IP layers, services, devices, cables, protocols, network security, network performance parameters etc. This course focuses on advanced computer network concepts in theory as well as in real life applications in networking.

Course Objectives

The objective of this course is to

- Equip the students with the advanced networking concepts.
- Explain the different techniques of error detection and correction methods used at various layers.
- Provide an overview of various algorithms involved in advanced computer networks at OSI and TCP-IP Layers.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain the concept of reference model, wireless Ethernet standards, protocols and applications of networks.

CO2: Describe network Layer design issues, routing algorithms, IP addressing.

CO3: State Multicasting issues and multicast routing protocol. Describe mobile IP and its use in Multicasting.

CO4: State transport and application layers and explain services, protocols, performance parameters in these layers. Also describe DNS, Email and www with applications of each in computer network.

CO5: State network security and describe various types of computer network security, the digital signature, security algorithms. Explain the social issues related to network security and web security.

Modules	Blooms level*	Number of hours
MODULE 1: Uses computer networks, Reference Models, TCP/IP suite of protocols, MAC protocols for high-speed LANS, MANs, and wireless LANs. (For example, FDDI, DQDB, HIPPI, Gigabit Ethernet, Wireless Ethernet, etc.)Fast access technologies. (For example, ADSL, Cable Modem, etc.)	L1, L2	6
MODULE 2: Network Layer Design Issues, Routing Algorithms, Congestion Control Algorithms, Quality of Service, Internet Working, Network Layer in Internet. IPv6 basic protocol, extensions and options, support for QoS, security, etc., Changes to other protocols, Application Programming Interface for IPv6.	L2, L3	8
MODULE 3: Mobile IP, IP Multicasting. Multicast routing protocols, address assignments, session discovery, etc.	L1, L2	8
MODULE 4: The Transport Protocol: The Transport Service, Elements of transport	L1, L2, and L3	8

Prof. (Dr.) Anil Kumar

AIE6707	ADVANCED COMPUTER NETWORKS LAB	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	0	0	1	1
Pre-requisites/Exposure	Basics of Computer Networks				
Co-requisites	Nil				

Catalog Description

Advanced Computer Networks Lab provides the knowledge of various installations & connections of LAN, WAN, etc, study of Cisco Packet Tracer Tool and its implementations, simulation of flow-control protocols such as Sliding Window, Stop & Wait with help of programming languages. This course focuses on real-life applications in networking and its software implementation in the laboratory.

Course Objectives

The objective of this course is to

- Equip the students with the advanced networking concepts.
- Explain the different techniques of error detection and correction methods used at various layers.
- Provide an overview of various algorithms involved in advanced computer networks at OSI and TCP-IP Layers.

Course Outcomes

On completion of this course, the students will be able to

CO1: Understand fundamental underlying principles of computer networking

CO2: Understand details and functionality of CISCO router

CO3: Demonstrate and configure details and functionality of DHCP server

CO4: Analyze performance of various communication protocols.

CO5: Compare routing algorithms

Modules	Blooms level*	Number of hours
MODULE 1: 1. Configuration and logging to a CISCO Router and introduction to the basic user Interfaces. Introduction to the basic router configuration and basic commands. 2. Configuration of IP addressing for a given scenario for a given set of topologies.	L1, L2	2
MODULE 2: 1. Configure a DHCP Server to serve contiguous IP addresses to a pool of four IP devices with a default gateway and a default DNS address. Integrate the DHCP server with a BOOTP demon to automatically serve Windows and Linux OS Binaries based on client MAC address	L2, L3	2
MODULE 3: 1. Configure, implement and debug the following: Use open source tools for debugging and diagnostics. a. ARP/RARP protocols b. RIP routing protocols c. BGP routing	L1, L2	3

d. OSPF routing protocols e. Static routes (check using netstat)		
MODULE 4: <ol style="list-style-type: none"> 1. Configure DNS: Make a caching DNS client, and a DNS Proxy; implement reverse DNS and forward DNS, using TCP dump/Wireshark characterise traffic when the DNS server is up and when it is down. 2. Configure FTP Server on a Linux/Windows machine using a FTP client/SFTP client characterise file transfer rate for a cluster of small files 100k each and a video file of 700mb. Use a TFTP client and repeat the experiment 	L1, L2, and L3	3
MODULE 5: <ol style="list-style-type: none"> 1. Configure a mail server for IMAP/POP protocols and write a simple SMTP client in C/C++/Java client to send and receive mails. 2. Implement Open NMS+ SNMPD for checking Device status of devices in community MIB of a linux PC. Using yellow pages and NIS/NFS protocols implement Network Attached Storage Controller (NAS). Extend this to serve a windows client using SMB. Characterise the NAS traffic using wireshark. 	L1, L2	3

AIE6713	CRYPTOGRAPHY & NETWORK SECURITY	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	2	1	0	3
Pre-requisites/Exposure	Basic Mathematics				
Co-requisites	Nil				

Catalog Description

In this course the concepts of cryptography and network security are discussed in detail. Substitution and transposition techniques, symmetric and asymmetric cryptographic algorithms, their applications, differences will be introduced. As a precursor to the study of cryptography studies will be made on impact of various network and web security protocols. The concepts learnt in the studies of cryptography & network security will be applied in the studies and analysis of authentication, integrity and security related protocols.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of cryptography & network security through problem solving and analytical approach.
2. Provide an overview of various network attacks and related security mechanism, various algorithms for modular arithmetic, symmetric and asymmetric cryptography and web and network security

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain, describe and distinguish various security attacks; Describe and solve block and stream ciphers and its applications in cryptography; Solve problems based on substitution and transposition ciphers.

CO2: Explain the basic mathematics of cryptography; Solve problems of groups, modular arithmetic, gcd and inverse algorithm, chinese remainder theorem and its application in cryptography; Applying algorithms for solving problems in cryptography

CO3: Describing the concept of public key cryptosystems and its related algorithm; Explain and solve problems related to hash functions, digital signature and its applications in cryptography; Compare symmetric and asymmetric key cryptography.

CO4: Explain management, distribution, secure exchange of keys and authentication certificate and its applications in real life. Explain, compare various authentication protocols used in cryptography and network security, also solve problems based on these protocols.

CO5: Explain various security protocols: IPsec, SSL, TLS, SET; Describing malicious software's and illustrating various design approaches to Firewall.

Modules	Blooms level*	Number of hours
MODULE 1: Introduction to security attacks, services and mechanism, Classical encryption techniques: substitution ciphers and transposition ciphers, cryptanalysis, steganography, Stream and block ciphers. Modern Block Ciphers: Block ciphers principles, Shannon's theory of confusion and diffusion, fiestal structure, Data encryption standard (DES), Strength of DES, Idea of differential cryptanalysis, block cipher modes of operations, Triple DES	L1, L2 and L3	7
MODULE 2: Introduction to group, field, finite field of the form $GF(p)$, modular	L1, L2, L3	6

AIE6714	SYSTEM PROGRAMMING AND COMPILER CONSTRUCTION	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	3	1	0	4
Pre-requisites/Exposure	Fundamental concept of computer architecture and operating system and theory of automata				
Co-requisites	Basics of programming languages				

Catalog Description

This course includes the concept of system programming and compiler construction in which all the system applications and programming concepts will be discussed. All the phases of compiler construction will be discussed in detail with some brief description of context free grammar. Using Basic Parsing Techniques efficient Parsers can be constructed with the help of error detection and recovery techniques.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of system programming and working of system utilities.
2. Provide an overview of estimation of performance of compiler design in real time compilation with error handling techniques during compilation.

Course Outcomes

On completion of this course, the students will be able to

- CO 1: Describe the basics of compiler design and its co-relation with the subject computation theory of automation in terms of lexical analyzer.
- CO 2: Explain the working of assembler and macro processor with all the phases of it. And also describe the concept of loader and other system utilities of system software at the time of program translation.
- CO 3: Explain and differentiate the construction of parser through top-down and bottom up parsing techniques.
- CO 4: Explain and analyze the automatic construction of different parsing table which do not allow any ambiguity and backtracking in the given grammar.
- CO 5: Explain the process of syntax analyzer and identify any error occurs in this phase and also generate the three-address code the given grammar and the postfix translation.

Modules	Blooms level*	Number of hours
MODULE 1: Introduction Phases, FSM & RE's and their application to Lexical Analysis, Implementation of Lexical Analysers, The Syntactic specification of Languages: CFG, Derivation and Parse Trees, Capabilities of CFG.	L1 and L2	4
MODULE 2: System Programming Editors: Introduction to system Programming Line editor, Full screen editor and multi window editor, First pass and second pass of assembler and their algorithms. Assemblers for CISC Machines: case study x85 & x86 machines. Bootstrapping for compilers, Introduction to. Design of a compiler in C++ as Prototype. Basic Macro Processor functions- Macro definition & expansion – Macro Processor Algorithm & Data Structures, conditional – Macro Expansion, Keyword Macro Parameters, Macro with in Macro Implementation, Linkers and Loaders Concept of linking. Case study of Linker in x86 machines. Loading of various loading schemes. Booting	L1 and L2	11

techniques and sub-routines.		
MODULE 3: Basic Parsing Techniques Parsers, Shift Reduce Parsing, Operator precedence parsing, topdown Parsing, Predictive Parsers.	L2, L3 and L4	9
MODULE 4: Automatic Construction of efficient Parsers LR Parsers, the canonical collection of LR(0) items, constructing SLR Parsing Tables, Constructing canonical LR Parsing tables and LALR parsing tables, An Automatic Parser Generator, Implementation of LR parsingTables, Constructing LALR sets of items.	L2, L3 and L4	8
MODULE 5: Syntax Directed Translation Syntax directed Translation Schemes, Implementation of Syntax directed translators, Intermediate Code, Postfix notation, Parse Trees and Syntax Trees, Three address Code, Quadruple & Triples, Translation of Assignment Statements, Postfix Translation.	L2 and L3	9
MODULE 6: Error detection and Recovery Lexical phase errors, syntax phase errors, semantic errors Code Optimization: Loop optimization, the DAG representation of basic blocks, value numbers and Algebraic Laws, Global Data – Flow Analysis.	L1, L2 and L3	7

AIE6716	SYSTEM PROGRAMMING & COMPILER CONSTRUCTION LAB	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	0	0	2	1
Pre-requisites/Exposure	concept of pointer and file handling of C/C++ programming languages				
Co-requisites	NIL				

Catalog Description

In this Lab course the concept of system programming and compiler construction are implemented and demonstrated. Concepts covered would enable them to create and solve complex problems. Problems or programs will be related to concepts of assembler, macro processor, text editor and parser.

Course Objectives

The objective of this course is to

- 1.
2. Make the students apply knowledge of various system programming concepts such as assembler, macro processor and text editor.
3. Provide a demonstration of compiler concepts like parsing techniques and implementation.

Course Outcomes

On completion of this course, the students will be able to

CO1: Apply the knowledge of regular languages and context free grammar.

CO2: Demonstrate the use of lexical analyzer and concept of editors.

CO3: Apply the knowledge of compiler design to convert the given expression into acceptable form of compiler.

CO4: Demonstrate the concept of assemble and macro-processor and their calling and expansion.

CO5: Demonstrate and apply the knowledge of compiler parsing techniques to construct parse tree for the given expression.

Modules/Topics Covered**	Blooms level*	Number of hours
1. Sample Programs using the theory of computation concepts of regular language. (a) WAP to check whether string is accepted or not for entered grammar. (b) WAP to convert NFA to DFA. (c) WAP to convert Regular Expression to NFA.	L3, L5	6
2. Sample Programs using context free grammar and editors (a) WAP to find no of Tokens in an expression. (b) Write a program to implement Text Editor.	L3, L5	4
3. Sample Programs using the notation conversion and their usage in parsing. (a) WAP to convert Infix to Postfix notation. (b) WAP to convert Infix to Prefix notation.	L3, L5	2
4. Sample Programs using the concept of assemble and macro processor (a) Write a program to implement Assembler Pass one and Pass two. (b) Write a program to implement Macro-processor.	L3, L5	4
5. Sample Programs using the compiler parsing techniques (a) WAP to implement symbol table.	L3, L5	6

(b) WAP calculate FIRST and FOLLOW of a grammar.		
(c) WAP to implement shift reduce parser.		

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

*** Sample Programs provided are not limited to these only, can include others as desired.*

AIE6708	MATLAB PROGRAMMING	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	0	0	4	2
Pre-requisites/Exposure	C Programming				
Co-requisites	Basic knowledge of Programming				

Catalog Description

The objective of this course is to expose the students to the implementation techniques of Mat Lab Programming.

Course Objectives

The objective of this course is to

1. To understand the basic concepts and terminology related to Mat Lab.
2. Application of Mat Lab in field of Signal Processing and Control systems.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Understand the basics of Matlab programming environment.
- CO2. Analysis of given LTI System and verifying its physical reliability and stability properties.
- CO3. Waveform synthesis using Laplace Transforms and z-transform of a given signal and system.

Modules	Blooms level*	Number of hours
1. To write a MATLAB program to perform some basic operation on matrices such as addition, subtraction, multiplication. 2. To write a "MATLAB" Program to generate various signals and sequences, such as unit impulse, unit step, unit ramp, sinusoidal, square, saw tooth, triangular, sinc signals. 3. To performs operations on signals and sequences such as addition, multiplication, scaling, shifting, folding, computation of energy and average power. 4. Write a program for finding even and odd parts of sequences Using MATLAB Software & program for finding real and imaginary parts of sequences Using MATLAB Software.	L1, L2 and L3	8
5. Write a program to find the out put with linear convolution operation Using MATLAB Software 6. Write a program to compute auto correlation and cross correlation between signals and Sequences. 7. Write a program to compute linearity and time invariance properties of a given continuous /discrete System.	L1,L2,L3	6
8. Write a program to Unit Step And Sinusoidal Response Of The Given LTI System And Verifying Its physical reliability and stability properties. 9. Write a program to demonstrate Gibbs Phenomenon using MATLAB. 10. Write a program to obtain Fourier Transform and Inverse Fourier Transform of a given signal / sequence and to plot its Magnitude and Phase Spectra 11. Write a program to perform waveform synthesis using Laplace Transforms of a given signal.	L1, L2 and L3	8

Registrar
Amity University Haryana
Manesar Gurgaon-122413

12. Write a program to locating the zeros and poles and plotting the pole zero maps in s-plane and z-plane 13. for the given transfer function. 14. Write a program to Generate Gaussian Noise and to Compute its Mean, M.S. Values, Skew, kurtosis, 15. PS and PDF 16. Write a program to demonstrate Sampling Theorem and aliasing effect using MATLAB. 17. Write a program for removal of noise by auto correlation/cross correlation.	L1, L4	12
--	--------	----

AIE6735	SUMMER INTERNSHIP EVALUATION-II	L	T	P	C
Version: 2020.1	Date of Approval: JULY 2020	0	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

The objective of this course is to provide practical training on some live projects that will increase capability to work on actual problem in industry. This training may undergo in an industrial environment or may be an in-house training on some latest software which is in high demand in market. This training will be designed such that it will useful for their future employment in industry.

Course Objectives

The objective of this course is to

1. Provide practical training on live projects
2. Increase technical capabilities on solving real life problems in company environment

Course Outcomes

On completion of this summer internship, the students will be able to:

CO1: Develop communication, interpersonal and other critical skills in the job interview process.

CO2: Design and develop software and hardware projects

CO3: Assess interests and abilities in their field of study.

CO4: Demonstrate excellent technical and communication skills to acquire employment contacts leading directly to a full-time job following graduation from college.

AIE6737	MINOR PROJECT-II	L	T	P	C
Version: 2020.1	Date of Approval: JULY 2020	0	0	0	2
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

The objective of this course is to provide practical training on some live/demo projects that will increase capability to work on actual problem in industry. It will be an in house training on some latest software which is in high demand in market. This training will be designed such that it will be useful for their future employment in industry.

Course Objectives

The objective of this course is to

1. Provide practical training on live projects
2. Increase technical capabilities on solving real life problems in company environment

Course Outcomes

On completion of this minor project, the students will be able to:

CO1: Demonstrate a sound technical knowledge of their selected project topic.

CO2: Design and develop engineering solutions to complex problems utilising a systems approach.

CO3: Analyse various approaches for solving a complex engineering problem using different tools and techniques

CO4: Demonstrate the knowledge, skills and attitudes of a professional engineer.

CO5: Apply technical skills and knowledge in completing the project.

AIE6710	MOBILE COMPUTING	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Basic Networking				
Co-requisites	Nil				

Catalog Description

The objective of this consortium is to shape and expand a full-scale and sound mobile computing system market. To achieve this, cooperation is required of interests related to communication (network), computer hardware/software, system integrators (including service providers), and the media.

Course Objectives

The objective of this course is to

1. Give a general overview of the cellular technology and the associated terms and discuss the generations of the mobile technologies starting from 1G to 3G techniques.
2. Illustrate the GPRS and WAP model for 2G internet connectivity in detail.
3. Elaborate the third-generation mobile services
4. Describe the Global Mobile Satellite Systems in detail and basic architecture of Bluetooth technology and advanced topics in mobile computing.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain the basic concepts mobile technology, computing and basic architecture of PCS and GSM.

CO2: Describe the mobile networking Infrastructure through 2G technologies (GSM, GPRS, WAP).

CO3: Explain the basic concepts of 3G technologies (WCDMA, CDMA 2000) and WLL.

CO4: Discuss the working of mobile satellite systems like IRIDIUM and GLOBALSTAR.

CO5: Explain the concepts of Bluetooth technology, its working and protocols, virtual networks and enterprise networks.

Modules	Blooms level*	Number of hours
Module I: Introduction to Personal Communications Services (PCS) PCS Architecture, Mobility management, Networks signalling. Global System for Mobile Communication (GSM) system overview: GSM Architecture, Mobility management, Network signalling.	L1, L2 and L3	8
Module II: General Packet Radio Services (GPRS) & Wireless Application Protocol (WAP) GPRS Architecture, GPRS Network Nodes. Mobile Data Communication: WLANs (Wireless LANs) IEEE 802.11 standard, Mobile IP. Wireless Application Protocol (WAP): The Mobile Internet standard, WAP Gateway and Protocols, wireless mark up Languages (WML).	L1,L2	10
Module III: Third Generation (3G) Mobile Services Introduction to International Mobile Telecommunications 2000 (IMT 2000) vision, Wideband Code Division Multiple Access (W-CDMA), and CDMA	L1, L2	7

AIE6717	ROBOTIC PROCESS AUTOMATION DESIGN & DEVELOPMENT	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Basic Networking Concepts				
Co-requisites	Nil				

Catalog Description

This course aims at providing knowledge of basic concepts of Robotic Process Automation to University students. It further builds on these concepts and introduces key RPA Design and Development strategies and methodologies specifically in context of UiPath products. The student undergoing the course shall develop the competence to design and develop a robot for a defined process.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of robotic process automation
2. Provide an overview of designing with uipath software.

Course Outcomes

On completion of this course, the students will be able to

- CO1: Explain key terms and trends around the robotic process automation along with its physical and logical design
- CO2: Understand the potential and value of the robotic process automation .
- CO3: Describe the technologies used for the robotic process automation and mobile devices, including (passive and active) sensors, the physical communications layer, communications protocols, programming frameworks,.
- CO4: Design programs and have hands on experience on uipath software
- CO5: Develop RPA programs of moderate complexity for a well-used robotic automation process using uipath.

Modules	Bloom s level*	Numbe r of hours
Module 1: Programming Basic and Recap Programming Concepts Basics I - Understanding the application, Basic Web Concepts, Protocols, Email Clients, Data Structures, Data Tables, Algorithms, Software Processes, Software Design, SDLC. Programming Concepts Basics 2 - Scripting, Net Framework, Net Fundamentals, XML, Control structures and functions, XML, HTML, CSS, Variables& Arguments.	L1, L2	8
Module II: RPA Concepts RPA Basics - History of Automation, what is RPA, RPA vs Automation, Processes & Flowcharts, Programming Constructs in RPA, What Processes can be Automated, Types of Bots, Workloads which can be automated. RPA Advanced Concepts - Standardization of processes, RPA Development methodologies, Difference from SDLC, Robotic control flow architecture, RPA business case, RPA Team, Process Design Document/Solution Design Document, Industries best suited for RPA, Risks & Challenges with RPA, RPA and emerging ecosystem	L2, L3 and L4	8

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Module III: UiPath Introduction & Basics Introduction to UiPath- Installing UiPath Studio community edition, The User Interface, Keyboard Shortcuts, About Updating, About Automation Projects, Introduction to Automation Debugging, Managing Activation Packages, Reusing Automations Library, Installing the Chrome Extension, Installing the Firefox Extension, Connecting your project to a source control system, Activities Guide. Variables, Control Flow Data Manipulation- Data Manipulation Introduction, Scalar variables, collections and Tables, Text Manipulation, Data Manipulation, Gathering and Assembling Data. Recording and Advanced UI Interaction - Recording Introduction, Basic and Desktop Recording, Web Recording, Input/Output Methods, Screen Scraping, Data Scraping, Scraping advanced techniques. Selectors.	L2, L3 and L4	8
Module IV: UiPath Advanced Automation concepts and techniques Image, Text & Advanced Citrix Automation- Introduction to Image & Text Automation, Image based automation, Keyboard based automation, Information Retrieval, Advanced Citrix Automation challenges, Best Practices, using tab for Images, Starting Apps. Excel Data Tables & PDF - Data Tables in RPA, Excel and Data Table basics, Data Manipulation in excel, Extracting Data from PDF, extracting a single piece of data, Anchors, Using anchors in PDF. Email Automation- Email Automation, Incoming Email automation, Sending Email automation	L2, L3 and L4	12

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

AIE6718	RESPONSIVE WEB DESIGN	L	T	P	C
Version : 2020.1	Date of Approval: JULY 2020	2	0	0	2
Pre-requisites/Exposure	knowledge of website design				
Co-requisites	NIL				

Catalog Description

This course is aimed to provide a fundamental understanding of JavaScript and two of its related library: Bootstrap and React for dynamic web site client side scripting. Javascript is a famous scripting language for client side. The bootstrap and react libraries are rich API for creating dynamic websites. The course builds strong foundation for client-side scripting for creating dynamic websites

Course Objectives

The objective of this course is

1. Equip the students with basic and advanced features of javascript and bootstrap library to create dynamic web sites
2. Provide an overview of basic features of react library to design dynamic websites.

Course Outcomes

On completion of this course, the students will be able to

CO1: Define the and explain concept of responsive web design and responsive content.

CO2 Explain HTML and CSS contents for responsive websties; Design and Create responsive websites using html, css and media queries.

CO3: Explain the concept of responsive workflow and working with responsive web design tools; Creating responsive websites that work on variety of devices.

CO4: Designing responsive websites using the concepts of typography, navigation and header layout; Evaluating performance of responsive websites .

Modules	Blooms level*	Number of hours
Module 1: Foundations of responsive design What Is Responsive Design?: Just the Basics ,A Short History, Why Responsive Design Responsive Content: Content Strategy ,Managing Content, Developing Content, Content Parity, Content Governance, Adaptive Content	L2 and L3	8
Module 2: Creating Responsive Websites HTML for Responsive Sites: Working with HTML, Basic Page Structure Viewport, Structural Elements, Creating a Page, Clean and Semantic HTML CSS for Responsive Sites: How CSS Works, Versions of CSS, Where CSS Goes, The Cascade, Using the Cascade, Comments, Organizing Your Stylesheet, The Box Model, display, Positioning, float and clear, Basic Styles Media Queries: What's a Media Query? Media Query Structure, Using Media Queries in Stylesheet Links, Other Ways to Use Media Queries, What We Can Query, Browser Support, Breakpoints, Design Ranges, Designing Responsively, Using Media Queries, Two-Column Layout, Setting a Maximum Width, How to Choose Breakpoints Images: Ways to Display Images, Alt Text, Image File Formats, Optimizing Images, Content Images, Background Images Responsive Images	L2 and L3	8

Module 3: Working Responsively Responsive Workflow: Strategy and Planning, Content Before Layout Thinking About Layout, Prototypes, Visual Design, Responsive Design Tools, Selling Responsive Design, Working with Clients Mobile and Beyond: User Experience , Device-Agnostic Design, Focusing on Mobile First, Do What You Can, Types of Devices, Touch, Screen Size, Accessibility (Universal Design), Deciding Which Devices to Support Why Use Real Devices for Testing, Testing	L2 and L3	8
Module 4: Designing Responsive Websites Typography: Start with HTML, Typefaces, Using Fonts, Sizing Text, Line Length, Whitespace, Margins and Padding, Changing Typeface for Screen Size Navigation and Header Layout: Responsive Navigation , Branding, Navigation Links, Navigation Patterns, Header Performance: Why Performance Matters, Performance as Design ,How Web Pages Are Loaded and Rendered, Measuring Performance Cleaning Up Your Code, Minimizing HTTP Requests, Server Stuff JavaScript, CSS, Hosting, Conditionally Loading Content, Reflows and Repaints, RESS	L2and L3	12

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

This course is aimed to provide a fundamental understanding of JavaScript and two of its related library: Bootstrap and React for dynamic web site client side scripting. Javascript is a famous scripting language for client side. The bootstrap and react libraries are rich API for creating dynamic websites. The course builds strong foundation for client-side scripting for creating dynamic websites

Course Objectives

The objective of this course is

1. Equip the students with basic and advanced features of javascript and bootstrap library to create dynamic web sites
2. Provide an overview of basic features of react library to design dynamic websites.

Course Outcomes

On completion of this course, the students will be able to

CO1: Define the and explain concept of responsive web design and responsive content.

CO2 Explain HTML and CSS contents for responsive websties; Design and Create responsive websites using html, css and media queries.

CO3: Explain the concept of responsive workflow and working with responsive web design tools; Creating responsive websites that work on variety of devices.

CO4: Designing responsive websites using the concepts of typography, navigation and header layout; Evaluating performance of responsive websites .

Modules	Blooms level*	Number of hours
Module 1: Foundations of responsive design Programs based on: <ul style="list-style-type: none"> • Content Strategy ,Managing Content, • Developing Content, Content Parity, • Content Governance, Adaptive Content 	L2 and L3	3
Module 2: Creating Responsive Websites Programs based on: <ul style="list-style-type: none"> • Working with HTML, Basic Page Structure Viewport, Structural Elements, Creating a Page, Clean and Semantic HTML • The Cascade, Using the Cascade, Comments, Organizing Your Stylesheet, The Box Model, display, Positioning, float and clear, Basic Styles • Media Query Structure, Using Media Queries in Stylesheet Links, Other Ways to Use Media Queries, • What We Can Query, Browser Support, Breakpoints, Design Ranges, Designing Responsively, Using Media Queries, Two-Column Layout, Setting a Maximum • Width, How to Choose Breakpoints Images: Ways to Display Images, Alt Text, Image File Formats, Optimizing Images, Content 	L2 and L3	3

AIE6809	RESEARCH METHODOLOGY AND TECHNICAL REPORT WRITING	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	2	0	0	2
Pre-requisites/Exposure	NIL				
Co-requisites	NIL				

Catalogue Description

This course deals with types of research, significance and characteristics and planning a research proposal, population and sample, parameter and statistic, sampling and data collection, sampling design: steps, types, sample size, sampling methods. It deals with univariate, bivariate and multivariate analysis, measure of dispersion of data, standard deviation, variance, coefficient of variation and degree of freedom. Hypothesis testing: parametric tests and non-parametric tests, regression analysis and curve fitting, method of least-squares, explained and unexplained variations, coefficient of correlation of determination. The course also deals with technical/scientific/research report writing: referencing and bibliography and footnotes. Publication of research papers, citations, intellectual property rights and copy rights, plagiarism, patent and patent laws, commercialization and ethical issues.

Course Objectives

The objective of this course is to:

1. Deals with types of research, significance and characteristics and planning a research proposal and to enhance scientific and technical writing and research skills.
2. Impart knowledge about various stages of research process, statistical analysis and tools & their applications in decision making by hypothesis testing and regression analysis.
3. It also deals with intellectual property rights and copy rights, plagiarism, patent and patent laws, commercialization and ethical issues.

Course Outcomes

On completion of this course, the students will be able to:

- CO1. Classify different research types, explain steps in research process and planning research proposal.
- CO2. Describe sampling methods, sampling steps and design, carry out data processing and analysis.
- CO3. Explain hypothesis testing, parametric and non-parametric tests, carry out regression analysis, curve fitting.
- CO4. Demonstrate technical and scientific report writing skills, describe plagiarism, patent laws and intellectual property rights.

Course Content

Modules	Blooms level*	Number of hours
Module I: Introduction and Research Planning Introduction to research: Definition, motivation, need, objectives, significance and characteristics of research; types of research; steps in research process; planning a research proposal; literature review, web searching.	L1, L2	4
Module II: Sampling Methods Measurement scales, population and sample, parameter and statistic, sampling and data collection, sampling design: steps, types, sample size,	L1, L2, L3	5

sampling methods, data processing and analysis. Sampling surveys and questionnaire designing, primary and secondary data.		
Module III: Hypothesis Testing and Regression Analysis Univariate, bivariate and multivariate analysis, means-arithmetic, geometric and harmonic; measure of dispersion of data, standard deviation, variance, coefficient of variation and degree of freedom. Hypothesis testing: kinds errors in hypothesis testing, significance and confidence levels, parametric tests and non-parametric tests, one-tailed and two-tailed tests, analysis of variance. Regression analysis and curve fitting, method of least-squares, explained and unexplained variations, coefficient of correlation of determination.	L1, L3, L4	10
Module IV: Technical Report Writing and Plagiarism Technical/scientific/research report writing: structure and components of scientific reports, formats of dissertations, research report, report writing skills, report preparation, referencing and bibliography and footnotes. Publication of research papers, citations, making presentation-use of visual aids and PPTs. Intellectual property rights and copy rights, plagiarism, patent and patent laws, commercialization and ethical issues.	L1, L3, L4	5

AIE6837	MAJOR PROJECT	L	T	P	C
Version: 2020.1	Date of Approval: JULY 2020	0	0	0	8
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

The objective of this course is to provide practical training on some live/demo projects that will increase capability to work on actual problem in industry. It will be an in house training on some latest software which is in high demand in market. This training will be designed such that it will be useful for their future employment in industry.

Course Objectives

The objective of this course is to

1. Provide practical training on live projects
2. Increase technical capabilities on solving real life problems in company environment

Course Outcomes

On completion of this summer internship, the students will be able to:

CO1: Demonstrate a sound technical knowledge of their selected project topic.

CO2: Design and develop engineering solutions to complex problems utilising a systems approach.

CO3: Analyse various approaches for solving a complex engineering problem using different tools and techniques

CO4: Demonstrate the knowledge, skills and attitudes of a professional engineer.

CO5: Apply technical skills and knowledge in completing the project.

RBE6801	FUNDAMENTALS OF ROBOTIC SYSTEM AND ROBOT PROGRAMMING	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Basic knowledge of control system and programming				
Co-requisites	Nil				

Catalog Description

Enlighten the students about the fundamentals of robotic systems make them to understand the basics of robot, robot transformations and sensors, micro/nano robotic systems and to program them for functioning.

Course Objectives

The objective of this course is to

1. Equip the students with the basic knowledge and designing of robotics.
2. Implement their concept in robotics and design robot for various applications of engineering.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain and Understand the design and functionality of robots

CO2: Describe the control system with the help of sensor and robot transformations.

CO3: Understand and robot cell design and implement in micro/nano robotics system

CO4: Explain and Understand the robotic programming language and use in design of robot.

Modules	Blooms level*	Number of hours
MODULE 1: INTRODUCTION Robot anatomy-Definition, law of robotics, History and Terminology of Robotics-Accuracy and repeatability of Robotics-Simple problems-Specifications of Robot-Speed of Robot-Robot joints and links-Robot classifications-Architecture of robotic systems-Robot Drive systems-Hydraulic, Pneumatic and Electric system.	L1 and L2	5
MODULE 2: END EFFECTORS AND ROBOT CONTROLS Mechanical grippers-Slider crank mechanism, Screw type, Rotary actuators, cam type-Magnetic grippers-Vacuum grippers-Air operated grippers-Gripper force analysis-Gripper design-Simple problems-Robot controls-Point to point control, Continuous path control, Intelligent robot-Control system for robot joint-Control actions-Feedback devices-Encoder, Resolver, LVDT-Motion Interpolations-Adaptive control.	L1, L2 and L3	7
MODULE 3: ROBOT TRANSFORMATIONS AND SENSORS Robot kinematics-Types- 2D, 3D Transformation-Scaling, Rotation, Translation- Homogeneous coordinates, multiple transformation-Simple	L1 and L2	5

Prof. (Dr.) Anil Kumar

 Haryana-122413

Registrar
 Amity University Haryana
 Manesar Gurgaon-122413

problems. Sensors in robot – Touch sensors-Tactile sensor – Proximity and range sensors – Robotic vision sensor-Force sensor-Light sensors, Pressure sensors.		
MODULE 4: ROBOT CELL DESIGN AND MICRO/NANO ROBOTICS SYSTEM Robot work cell design and control-Sequence control, Operator interface, Safety monitoring devices in Robot-Mobile robot working principle, actuation using MATLAB, NXT Software Introductions-Robot applications- Material handling, Machine loading and unloading, assembly, Inspection, Welding, Spray painting and undersea robot. Micro/Nanorobotics system overview-Scaling effect-Top down and bottom up approach- Actuators of Micro/Nano robotics system-Nanorobot communication techniques-Fabrication of micro/nano grippers-Wall climbing micro robot working principles-Biomimetic robot-Swarm robot-Nanorobot in targeted drug delivery system.	L1, L2, L3, L4 and L5	8
MODULE 5: BASICS OF ROBOT PROGRAMMING Robot programming-Introduction-Types- Flex Pendant- Lead through programming, Coordinate systems of Robot, Robot controller- major components, functions-Wrist Mechanism-Interpolation-Interlock commands- Operating mode of robot, Jogging-Types, Robot specifications- Motion commands, end effectors and sensors commands.	L1, L2 and L3	5
MODULE 6: VAL, VAL-II, RAPID AND AML LANGUAGE Robot Languages-Classifications, Structures- VAL- language commands motion control, hand control, program control, pick and place applications, palletizing applications using VAL, Robot welding application using VAL program-WAIT, SIGNAL and DELAY command for communications using simple applications. RAPID- language basic commands- Motion Instructions-Pick and place operation using Industrial robot- manual mode, automatic mode, subroutine command based programming. Move-master command language- Introduction, syntax, simple problems. VAL-II programming-basic commands, applications- Simple problem using conditional statements-Simple pick and place applications-Production rate calculations using robot. AML Language-General description, elements and functions, Statements, constants and variables-Program control statements-Operating systems, Motion, Sensor commands-Data processing.	L1, L2 and L3	6

RBE6802	ADVANCED CONTROL SYSTEMS & DRIVES FOR ROBOTS	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Basic concepts of control system				
Co-requisites					

Catalog Description

This course provides comprehensive and insight knowledge of Digital control systems. Objective of the course is to provide the students the core knowledge of Stability theory of Digital systems and State Variable analysis of Digital System

Course Objectives

The objective of this course is to

- Equip the students with concepts of basic control system and its stability.
- Provide a thorough understanding of control system model by considering standard examples.
- Give an insight of state variable methods for control systems.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain the fundamentals of a digital control system.

CO2: Apply the standard methods to check the stability of a control system.

CO3: Design model for digital control system for an application with given requirements.

CO4: Analyze the analog and digital control systems using state variable method.

Modules	Blooms level*	Number of hours
Module 1: Introduction Configuration of the basic Digital Control Systems, types of sampling operations, Sample and Hold operations, Sampling theorem, Basic discrete time signals.	L1,L2,L4	12
Module 2: Stability Methods Mapping between s-plane and z-plane, stability methods: Modified Routh Criterion, Jury's method, modified Schur-Cohn criterion.	L3	6
Module 3: Models Of Digital Control Systems Digital temperature control System, Digital position control system, stepping motors and their control. Design of Digital compensator using frequency response plots.	L5	6
Module 4: Control Systems Analysis Using State Variable Methods State variable representation, conversion of state variable models to transfer function and vice-versa, Eigen values and eigen vectors, Solution of state equations, Concepts of controllability and observability.	L3	6
Module 5: State Variable Analysis Of Digital Control Systems State variable description of digital control systems, conversion of state variable models to pulse transfer function and vice versa, solution of state difference equations, controllability and observability.	L3	6

RBE6803	MICROPROCESSOR AND INTERFACING	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

This course deals with the systematic study of the Architecture and programming issues of microprocessor family and its applications. The aim of this course is

1. To introduce students with the architecture and operation of typical microprocessors.
2. To familiarize the students with the programming and interfacing of microprocessors
3. To provide expertise in designing the embedded system based products as a solution to real time problems.

Course Outcomes

On completion of this course, the students will be able to

CO1. Explain the architecture, pin configuration, addressing modes, control words of various microprocessors and Interfacing ICs

CO2. Develop the assembly language program using 8085 and 8086 using stacks & subroutines, procedures, segments, interrupts and interfacing.

CO3. Analyze assembly language programs; select appropriate assemble into machine across assembler utility of a microprocessor and solve various automation based problems of power system.

CO4. Design circuitry to the Microprocessor I/O ports in order to interface the processor to external devices so as to provide solutions real-world control problems

Modules	Blooms level*	Number of hours
Module I: Microprocessor Intel 8085 - Introduction, register structure, memory Addressing, Addressing Modes, Instruction Set, Timing Methods, CPU Pins and Associated Signals, Instruction timing and execution. programming I/O. Interrupt System, DMA, SID & SOD lines, Instruction set, 8085 based system design.	L1, L2, L3, L4	8
Module II: Intel 8086 Introduction, Architecture, Addressing modes, instruction set, memory management, assembler dependent instructions, Input/Output, system design using 8086.	L2, L3, L4	7
Module III: Pentium Processors Internal Architecture of 8087, operational overview of 8087, Introduction to 80186, 80286, 80386 & 80486 processors and Pentium Processors.	L2, L3	6
Module IV: Peripheral Interfacing Parallel versus serial transmission, synchronous and asynchronous serial data transmission. Interfacing of hexadecimal keyboard and display unit, interfacing of cassette recorders and parallel, serial interface standards. Study of Peripheral Devices 8255, 8253, 8257, 8251, 8259	L3, L4, L5, L6	7
Module V: Microprocessor applications to Power Engineering Protective Relaying: over-current, impedance, MHO, reactance, bi-directional relays. Measurements: Frequency, power angle & power factor, Voltage and	L4, L5, L6	8

Current, KVA, KW, & KVAR, maximum demand. Resistance, Reactance, Temperature Controls.

RBE6804	KINEMATICS AND DYNAMICS OF ROBOTS	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

This course deals with the systematic study of the Architecture and programming issues of robotic moments and design. The aim of this course is

1. To introduce students with the architecture and operation of robots.
2. To familiarize the students with the programming and interfacing of Robots
3. To provide expertise in designing the embedded system and kinematics of a robot based on real time problems.

Course Outcomes

On completion of this course, the students will be able to

CO1. Explain the architecture, kinematic analysis for axis in Robot Design.

CO2. Understand the Workspace, Analysis And trajectory planning

CO3. Understand the Dynamic Moments and Mathematical modeling of various forces in Moments of robotic machine

CO4. Design a robot with understanding of dynamic kinematics.

Modules	Blooms level*	Number of hours
Module I: Introduction Introduction, position and orientation of objects, objects coordinate frame Rotation matrix, Euler angles Roll, pitch and yaw angles coordinate Transformations, Joint variables and position of end effectors, Dot and cross products, coordinate frames, Rotations, Homogeneous coordinates	L1, L2, L3, L4	7
Module II: Direct Kinematics Link coordinates D-H Representation, The ARM equation. Direct kinematic analysis for Four axis, SCARA Robot and three, five and six axis Articulated Robots.	L2, L3, L4	6
Module III: Inverse Kinematics The inverse kinematics problem, General properties of solutions. Tool configuration, Inverse kinematics of four axis SCARA robot and three and five axis, Articulated robot.	L2, L3	6
Module IV: Workspace Analysis And Trajectory Planning Workspace Analysis, work envelope of a Four axis SCARA robot and five axis articulated robot workspace fixtures, the pick and place operations, Joint space technique - continuous path motion, Interpolated motion, straight line motion and Cartesian space technique in trajectory planning.	L3, L4, L5, L6	8
Module V: Manipulator Dynamics Introduction, Lagrange's equation kinetic and potential energy. Link inertia Tensor, link Jacobian Manipulator inertia tensor. Gravity, Generalized forces, Lagrange-Euler Dynamic model, Dynamic model of a Two-axis planar robot, Newton Euler formulation, Lagrange - Euler formulation, problems.	L4, L5, L6	9

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

RBE6806	FUNDAMENTAL OF ROBOTICS SYSTEM AND ROBOT PROGRAMMING LAB	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	0	0	2	1
Pre-requisites/Exposure					
Co-requisites	Nil				

Catalog Description

The objective of this course is to enlighten the students about the fundamentals of robotic systems. To understand the basics of robot, Robot Transformations and Sensors, Micro/Nano robotic systems and to program them for functioning.

Course Objectives

The objective of this course is to

1. Equip the students with the basic knowledge and designing of robotics.
2. Implement their concept in robotics and design robot for various applications of engineering.

Course Outcomes

On completion of this course, the students will be able to

CO1: Understand and be able to apply a variety of techniques to solve problems in areas such as robot control and navigation

CO2: program a robot to perform a specified task (e.g obstacle avoidance or wall following) in a target environment.

CO3: Understand how simulations of robots work, where they can be useful and where they can break down.

Modules	Blooms level*	Number of hours
Lab Session 1: Study of different types of robots based on configuration and application.	L1, L2 and L3	4
Lab Session 2: Study of different type of links and joints used in robots	L1, L2, L3 and L4	4
Lab Session 3: Study of components of robots with drive system and end effectors.	L1, L2, L3 and L4	4
Lab Session 4 Determination of maximum and minimum position of links.	L3 and L4	2
Lab Session 5 Verification of transformation (Position and orientation) with respect to gripper and world coordinate system	L3 and L4	4
Lab Session 6 Estimation of accuracy, repeatability and resolution.	L3 and L4	2
Lab Session 7 Robot programming exercises	L1, L2, L3 and L4	4

*Bloom's Level:

L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation

RBE6807	ADVANCED CONTROL SYSTEMS & DRIVES FOR ROBOTS LAB	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	0	0	2	1
Pre-requisites/Exposure	Basic Concepts of Control Systems				
Co-requisites					

Catalog Description

This course is designed to get students an understanding of the basic concepts of control systems and its major applications. The course also includes some interdisciplinary applications like digital electronics and mechanical devices. Students will perform practical on hardware kit as well as on software.

Course Objectives

The objective of this course is to

1. Make students demonstrate the concepts of control systems.
2. Apply the concepts of control systems in various applications.

Course Outcomes

On completion of this course, the students will be able to

CO1. Practically verify the theoretical concepts of control systems.

CO2. Design various digital logic gates using programmable logic controller.

CO3. Analyse and explain the response of Process Control Simulator, Magnetic amplifier, Synchros, Servomotor and compensators.

Modules	Blooms level*	Number of hours
Lab Session 1 Determination of Transfer functions of an Electrical System	L3	1
Lab Session 2 Time Response Characteristics of a Second order System (Typical RLC network).	L3 and L4	1
Lab Session 3 Characteristics of Synchros: (a) Synchro transmitter characteristics. (b) Implementation of error detector using synchro pair	L3 and L4	2
Lab Session 4 Determination of Magnetic Amplifier Characteristics with different possible connections.	L3 and L4	2
Lab Session 5 Process Control Simulator: (a) To determine the time constant and transfer function of first order process. (b) To determine the time response of closed loop second order process with Proportional Control. (c) To determine the time response of closed loop second order process with Proportional Integral Control. (d) To determine the time response of closed loop second order process with Proportional Integral-Derivative Control. (e) To determine the effect of disturbances on a process.	L3 and L4	6
Lab Session 6 To study the compensation of the second order process by using: (a) Lead Compensator. (b) Lag Compensator. (c) Lead- Lag Compensator	L3 and L4	2
Lab Session 7	L3 and	2

Realization of AND, OR, NOT gates, other derived gates and ladder logic on Programmable Logic Controller with computer interfacing.	L5	
Lab Session 8 To determination of AC servomotor Characteristics	L3 and L4	2
Lab Session 9 To study the position control of DC servomotor with P, PI control actions.	L3	2
Lab Session 10 Analog Computer: (a) To examine the operation of potentiometer and adder. (b) To examine the operation of integrator	L3	2
Lab Session 11 To solve a second order differential equation.	L3	2

RBE6808	MICROPROCESSOR & INTERFACING LAB	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	0	0	2	1
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

This course deals with the systematic study of the Architecture and programming issues of microprocessor family and its applications. The aim of this course is to give the students detailed knowledge of the above microprocessor needed to develop the systems using.

Course Objectives

The objective of this course is to

1. To expose students to the operation of typical microprocessor trainer kit.
2. Learn the design aspects of I/O and Memory Interfacing circuits.
3. To provide solid foundation on interfacing the external devices to the processor according to the user requirements to create novel products and solutions for the real time problems

Course Outcomes

On completion of this course, the students will be able to

CO1: Developing of assembly level programs and providing the basics of the processors

CO2: write programs like ASCII conversion, searching and sorting elements, reverse given string and compute nCr .

CO3: Understand the concepts related to I/O and memory interfacing

Modules	Blooms level*	Number of hours
Lab Session 1: To load the numbers 49H and 53H in memory location 9510 & 9511.	L3 and L4	2
Lab Session 2: Respectively and add the contents of memory location 9601.	L3 and L4	2
Lab Session 3: To write the Assembly Language Programming for 8 bit addition with and without carry.	L3 and L4	2
Lab Session 4 To write the Assembly Language Programming for 8 bit subtraction with and without borrow.	L1, L2, and L3	2
Lab Session 5 To write the Assembly Language Programming for 8 bit Multiplication and Division.	L1, L2, and L3	2
Lab Session 6 To write the Assembly Language Programming for sorting an array of numbers in Ascending & Decending order.	L3 and L4	2
Lab Session 7 To write the Assembly Language Programming with Additional Instructions.	L3 and L4	2
Lab Session 8 To write and execute a program using Stacks.	L3 and L4	2

RBE6809	DIGITAL IMAGE PROCESSING	L	T	P	C
Version: 2020.1	Date of Approval: JULY 2020	2	0	0	2
Pre-requisites/Exposure	Basics of Computer Graphics				
Co-requisites	NIL				

Catalog Description

This course gives students an insight into the basics of Image Processing along with visualization of real concept of Image processing. Concepts covered would enable students to define and differentiate among various types of image refinement. Further they would be able to gain insights about various Image restoration and modification technique.

Course Objectives

Processing color and grayscale images or other two-dimensional signals has become an important tool for research and investigation in many areas of science and engineering. Digital Image Processing is designed to give professionals and students a powerful collection of fundamental and advanced image processing tools on the desktop. Digital Image Processing takes full advantage of the computational technology of Mathematica.

Course Outcomes

On completion of this course, the students will be able to

CO1: Define and explain introductory part of Digital Image Processing

CO2: List out the Image Enhancement techniques in the Spatial Domain

CO3: Explain concepts of Image Enhancement in the Frequency Domain

CO4: Describe the architecture Image Compression

CO5: Explain the basics of Representation and Description

Modules	Blooms level*	Number of hours
MODULE 1: Introduction and Digital Image Fundamentals The origins of Digital Image Processing, Examples of Fields that Use Digital Image Processing, Fundamentals Steps in Image Processing, Elements of Digital Image Processing Systems, Image Sampling and Quantization, Some basic relationships like Neighbors, Connectivity, Distance Measures between pixels, Linear and Non Linear Operations.	L1 and L2	8
MODULE 2: Image Enhancement in the Spatial Domain Some basic Gray Level Transformations, Histogram Processing, Enhancement Using Arithmetic and Logic operations, Basics of Spatial Filters, Smoothing and Sharpening Spatial Filters, Combining Spatial Enhancement Methods.	L2 and L3	8
MODULE 3: Image Enhancement in the Frequency Domain Introduction to Fourier Transform and the frequency Domain, Smoothing and Sharpening Frequency Domain Filters, Homomorphism Filtering.	L1 and L2	10
MODULE 4: Image Compression	L2 and L3	12

Coding, Interpixel and Psychovisual Redundancy, Image Compression models, Elements of Information Theory, Error free comparison, Lossy compression, Image compression standards. Image Segmentation Detection of Discontinuities, Edge linking and boundary detection, Threshold, Region Oriented Segmentation, Motion based segmentation.		
MODULE 5: Representation and Description Representation, Boundary Descriptors, Regional Descriptors, Use of Principal Components for Description, Introduction to Morphology, Some basic Morphological Algorithms. Object Recognition Patterns and Pattern Classes, Decision-Theoretic Methods, Structural Methods.	L2 and L3	10

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

RBE6810	DIGITAL IMAGE PROCESSING LAB	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	0	0	2	1
Pre-requisites/Exposure	Basics of MATLAB				
Co-requisites	NIL				

Catalog Description

In this Lab course first student should learn about advanced level of software used for easy calculation and toolbox used for software like MATLAB.

Course Objectives

The objective of this course is to

1. Make the students apply knowledge of various Image processing & pattern recognition required for solving complex problems.
2. Provide a demonstration of different types of image processing techniques through MATAB toolbox.

Course Outcomes

On completion of this course, the students will be able to

CO1: Acquiring knowledge of Basics of High-end calculation software and need in Computer Science & engineering

CO2: Demonstrate the All preliminary functions in MATLAB

CO3: Apply the knowledge of all the basics function and toolbox knowledge of MATLAB

CO4: Demonstrate the Use of MATLAB in image Processing

CO5: Demonstrate usage of applications involving with Image processing & Recognition Its Toolbox used by MATLAB

Modules/Topics Covered**	Blooms level*	Number of hours
1. Introduction of MATLAB (e) Basic Variable deceleration & its operation (f) Function use & its application	L3, L5	4
2. Sample Programs in MATLAB (e) Basic use of Matrix and Graph Plotting (f) Different type of graph plotting with use of different -2 type of data	L3, L5	6
3. Sample Programs using MATLAB functions (l) Create a basic program MATLAB using functions (m) Use of basic function Image processing (n) Practice on Basic function of Image processing tool box.	L3, L5	6
4. Sample programs of ANN functions (c) Practice on Pattern Recognition functions in MATLAB (d) Write a program for training a small network in MATLAB	L3, L5	6
5. Sample Programs using ANN toolbox & Image processing toolbox (b) Demonstrate the use of ANN tool box & Image processing toolbox and write a program after combining it.	L3, L5	2

*Bloom's Level:

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

Catalog Description

This course provides knowledge regarding Creating Dynamic Web Pages with the help of ASP.NET framework. Various topics

Course Objectives

The objective of this course is to

1. Equip the students with concepts of ASP.NET web applications including State management, Web Controls and ADO.NET.
2. Provide knowledge to develop secure ASP.NET web applications using C#.NET programming language.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain the components of .NET framework and create basic ASP.NET web page.

CO2: Use various standard and advance web controls for developing ASP.NET dynamic web pages and also create custom controls.

CO3: Establish database connectivity and perform various operations on database through ASP.NET web pages.

CO4: Maintain states at client and server site both.

CO5: Develop and use web services.

Modules	Blooms level*	Number of hours

Version 2020.1	Date of Approval: JULY 2020	0	0	1	1
Pre-requisites/Exposure	C#.NET, HTML and CSS				
Co-requisites	Nil				

Catalog Description

This lab course covers development of Web applications using ASP.NET. The concepts are designed to impart the knowledge of ASP.NET framework concepts at implementation level. The major topic covered includes theme, state management, web controls and database connectivity using ADO.NET and web services.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of ASP.NET web applications including State management, Web Controls and ADO.NET.
2. Provide knowledge to develop secure ASP.NET web applications using C#.NET programming language.

Course Outcomes

On completion of this course, the students will be able to

CO1: Use various standard and advance web controls for developing ASP.NET dynamic web pages and also create custom controls.

CO2: Maintain states at client and server site both.

CO3: Establish database connectivity and perform various operations on database through ASP.NET web pages.

CO4: Develop and use web services.

Modules	Blooms level*	Number of hours
1. Basics of ASP.NET Page a) Write a program to implement C#.NET class with properties and methods. b) Design a Login Page, which displays a Welcome Page on successful Login and an error message in case of invalid Id/Password. c) Design a form and apply themes (design time and dynamically).	L1, L2	4
2. State Management a) Implement state management for Login page which move to welcome page when credentials are correct. The welcome page displays a welcome message along with the user Id. b) Implement various state management methods using a suitable web form.		2
3. Built-in Controls, Custom Controls a) Design any web form and apply various validation controls. b) Create a web form which can work in Hindi and English language both. c) Design a web form to upload an image to server. d) Design a custom control, Numeric Textbox, which should accept only integer value for a particular range. The range should be customizable.	L2, L3 and L4	6
4. ADO.NET a) Create any database table and apply basic operations (Insert/Delete/Update) on it using ASP.NET application. b) Implement various methods of execution of SQL command. c) Display data in a Grid and perform basic database operations.	L2, L3 and L4	4

RBE6813	ADVANCED ROBOTIC PROCESS AUTOMATION DESIGN & DEVELOPMENT	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Basic Networking Concepts				
Co-requisites	Nil				

Catalog Description

This course aims at providing knowledge of basic concepts of Robotic Process Automation to University students. It further builds on these concepts and introduces key RPA Design and Development strategies and methodologies specifically in context of UiPath products. The student undergoing the course shall develop the competence to design and develop a robot for a defined process.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of robotic process automation
2. Provide an overview of designing with uipath software.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain key terms and trends around the robotic process automation along with its physical and logical design

CO2: Understand the potential and value of the robotic process automation.

CO3: Describe the technologies used for the robotic process automation and mobile devices, including (passive and active) sensors, the physical communications layer, communications protocols, programming frameworks.

CO4: Design programs and have hands on experience on uipath software

CO5: Develop RPA programs of moderate complexity for a well-used robotic automation process using uipath.

Modules	Blooms level*	Number of hours
Module 1: Exception handling and Best Practices Debugging and Exception Handling- Debugging Tools, Strategies for solving issues, Catching errors. Project Organization- Concept of project organization, Best practices, Avoiding pitfalls, Invoke Activity.	L1, L2	8
Module II: Introduction to Orchestrator Orchestrator, Tenants, Authentication, Users, Roles, Robots, Environments, Queues & Transactions, Schedules.	L2, L3 and L4	8
Module III: merging and Future Trends in IT Artificial Intelligence, Machine Learning, Agent awareness, Natural Language Processing Computer Vision	L2, L3 and L4	8
Module IV: Capstone Project Real life case studies which can be used to apply the concepts learnt during the course. The projects shall test student's skills right from process transformation and documentation to the design and development of the actual robot	L2, L3 and L4	12

MLE6802	DATA MINING AND PREDICTIVE ANALYSIS	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Concept of Database and Data Mining				
Co-requisites					

Course Objectives

The objective of this course is to

- Provide students with an in-depth knowledge of data mining. To introduce students to basic applications, concepts, and techniques of data mining.
- Develop skills for using recent data mining software to solve practical problems and prediction in a variety of disciplines and
- Gain experience doing independent study and research.

Course Outcomes

On completion of this course, the students will be able to

CO 1: Explain concepts of Data mining, predictive analytics and analyses architecture of data mining. Differentiate between supervised and unsupervised methods

CO 2: Apply classification techniques on different data sets and solve cost –benefit analysis numerical. Analyze decision tree methods.

CO 3: Implement various clustering algorithm on different data sets and describe these algorithms.

CO 4: Prepare data representation for market basket analysis and determine the usefulness of association rules. Interpret supervised and unsupervised learning methods.

CO 5: Predict market trends and outline different factors associated mail marketing.

Catalog Description

Data Mining and Predictive analytics serve as one of the most important courses for postgraduate students, since it builds computational abilities, inferential thinking, and practical skills for tackling core data scientific challenges. The students will get a comprehensive understanding of different data mining techniques that can be used for prediction and for discovering patterns, be prepared to select the right technique for a given data problem and will be able to create a general-purpose analytic process.

Course Content

Modules	Bloom's level	Number of Hours
Module I Data Preparation An introduction to data mining and predictive analytics, Data Pre-processing Exploratory Data Analysis, Dimension- Reduction Methods.	L1, L2	8
Module II Classification k- Nearest Neighbour Algorithm, Decision Trees, Model Evaluation Technique, Cost –Benefit Analysis Using Data Driven Cost.	L1, L2, L3	7
Module III Clustering Hierarchical and k- Means Clustering, Kohonen Networks, Birch Clustering, Measuring Cluster Goodness.	L1, L2, L3	8

Module IV Association Rules Affinity Analysis and Market Basket Analysis, Data Representation for Market Basket Analysis, Support, Confidence, Frequent Item sets, and the a Priori Property, How Does a Priori Algorithm Work? Generating Frequent Item sets, Generating Association Rules, Extension from Flag Data to General Categorical Data, Information-Theoretic Approach: Generalized Rule Induction Method, J-Measure, Association Rules are Easy to do Badly, how can we Measure the Usefulness of Association Rules? Do Association Rules Represent Supervised or Unsupervised Learning?	L1, L2, L3	9
Module IV Case Study: Predicting Response to Direct Mail Marketing Business Understanding, Data Preparation, and Eda, Clustering and Principal Components Analysis, Modelling and Evaluation for Performance and Interpretability, Modelling and Evaluation for High Performance.	L2, L3, L4, L5	8

MLE6803	DATA WAREHOUSING AND MULTIDIMENSIONAL MODELING	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Basic Knowledge of Database				
Co-requisites	Nil				

Catalog Description

In this course the concepts of basic concepts of Multi-dimensional database are discussed in detail. As a precursor to the study of the course it provide an in depth understanding of basic concepts of data warehouse which includes its architecture, data warehouse operations, data marts, metadata. The concept further enhances the understanding of advance concepts that cover the slowly and rapidly changing dimensions, indexes in OLAP and concept hierarchies. It also include the different application of data warehouse

Course Objectives

The objective of this course is to

1. Equip the students with concepts of Multi-dimensional database, its need and various applications.
2. It provides an overview of some basic concepts in data warehouse such as its architecture, OLAP applications, and metadata. It also includes some advance concepts such as OLAP hierarchies, OLAP changing dimensions.

3. Course Outcomes

On completion of this course, the students will be able to

CO1: Explain the concept of Multi-dimensional database and its importance.

CO2: Analyse the fundamental concept of data warehouse which include OLAP operations, architecture.

CO 3: Explain the different types of dimensions that exist in data warehouse.

CO4: Explain the advance concepts of data warehouse which include OLAP indexing.

Modules	Blooms level*	Number of hours
MODULE 1: Introduction: Multidimensional Data Management, Multidimensional History, Related Terminology	L1 and L2	8
MODULE 2: Fundamental Concepts : Cubes ,Dimensions, Facts, Measures, Relational Representations, Star Schemas, Snowflake Schemas, Data Warehouses And Data Marts, Multidimensional Modelling Process, Analysis And Querying ,Roll Up, Drill Down, Drill Out, Slicing And Dicing, Drill Across, Pivot Tables, Ranking, Multi-Dimensional Querying in MDX and SQL, Graphical Querying and Visualizations .	L1, L2 and L3	8
MODULE 3: Advance Concepts Slowly Changing Dimensions, The Problem, Solutions, Other Special Kinds Of Dimensions, Mini dimensions, Outriggers, Degenerate Dimensions, Junk Dimensions, Time Dimensions, Data Quality Dimensions, Advanced Hierarchies, Parent-Child Hierarchies, Unbalanced Hierarchies, Non Covering Hierarchies , Non –Strict Hierarchies, Multiple Hierarchies And Parallel Hierarchies.	L2, L3 and L4	10

MODULE 4: Module IV: Implementation Issues Materialized Views, Indexing, Indexing Overview, Bitmap Indices, Join Indices, Query Processing, OLAP Implementations, Extract-Transform-Load.	L3, L4 and L5	10

MLE6808	R PROGRAMMING Lab	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	0	0	4	2
Pre-requisites/Exposure	Basic knowledge of statistics				
Co-requisites	Nil				

Catalog Description

This lab will provide a basic introduction to the R programming Language and the use of R to perform basic statistics and programming tasks. The main objectives of this lab is to impart the students with the knowledge of R Programming, Machine Learning using R Mining from streaming Data, Mining from Distributed Data.

Course Objectives

The objective of this course is

1. To make students familiar with R Programming Language and its concepts.
2. Equip the students with knowledge of R Programming, Machine Learning using R Mining from streaming Data, Mining from Distributed Data.

Course Outcomes

On completion of this course, the students will be able to

CO1. Install and configure R Studio and R packages.

CO2. Explain concepts of Structured Data, data types, data structures and Use R for mathematical operations

CO3. Describe the use of R functions, control statements, Loop constructs and apply to iterate functions across data.

CO4. Understand basic regular expressions graphics. Use of R for descriptive statistics and inferential statistics

CO5. Predict/Score new data using models, understand basic non-linear functions in models and how to link data, statistical methods.

Modules	Blooms level*	Number of hours
Lab Session 1 Installation & Configuration steps of R Studio. <ul style="list-style-type: none"> • use of the R interactive environment • Expand R by installing R packages • Explore and understand how to use the R documentation. 	L1 and L2	2
Lab Session 2-3 Read Structured Data into R from various sources <ul style="list-style-type: none"> • Understand the different data types in R • Understand the different data structures in R • Understand how to use dates in R • Use R for mathematical operations 	L1and L3	4
Lab Session 4-5 <ul style="list-style-type: none"> • Use of vectorised calculations • Write user-defined R functions • Use control statements • Write Loop constructs in R 	L1 and L3	4

<ul style="list-style-type: none"> Use Apply to iterate functions across data 		
Lab Session 6-8 Reshape data to support different analyses <ul style="list-style-type: none"> Understand split-apply-combine (group-wise operations) in R Deal with missing data Manipulate strings in R Understand basic regular expressions in R Understand base R graphics 	L1 and L3	6
Lab Session 9-10 Focus on GGplot2 graphics for R <ul style="list-style-type: none"> Be familiar with trellis (lattice) graphics Use R for descriptive statistics Use R for inferential statistics Write multivariate models in R 	L1 and L3	4
Lab Session 11-12 <ul style="list-style-type: none"> Understand confounding and adjustment in multivariate models Understand interaction in multivariate models Predict/Score new data using models Understand basic non-linear functions in models Understand how to link data, statistical methods, and actionable questions 	L1 and L3	6

MLE6804	BIG DATA TECHNOLOGIES	L	T	P	C
Version 2020	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Basics of DBMS and SQL				
Co-requisites	Nil				

Catalog Description

This course brings together several key big data technologies used for storage, analysis and manipulation of data. It also introduces the students the key concepts of Hadoop framework, MapReduce, Pig, Hive, and No-SQL. Students will learn to work on Hadoop platform. The concepts learnt will make students capable of working on big data projects easier.

Course Objectives

The objective of this course is

1. To make students familiar with big data technologies.
2. Provide an overview of Hadoop architecture and its working with other open source technologies.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Explain importance and applications of Big Data Analytics.
- CO2. Differentiate among analytics technologies.
- CO3. Demonstrate architecture of Hadoop and Mapreduce framework.
- CO4. Illustrate Hadoop installation process and commands.
- CO5. Introduce concepts of Hive and Pig.

Modules	Blooms level*	Number of hours
Module I: Introduction to Big Data Big Data and its Importance – Four V's of Big Data – Drivers for Big Data – Introduction to Big Data Analytics – Big Data Analytics applications.	L1 and L2	5
Module II: Big Data Technologies Hadoop's Parallel World – Data discovery – Open source technology for Big Data Analytics – cloud and Big Data – Predictive Analytics – Mobile Business Intelligence and Big Data – Crowd Sourcing Analytics – Inter- and Trans-Firewall Analytics - Information Management.	L2 and L5	4
Module III: Processing Big Data Integrating disparate data stores - Mapping data to the programming framework - Connecting and extracting data from storage - Transforming data for processing - Subdividing data in preparation for Hadoop Map Reduce.	L1 and L3	8
Module IV: Hadoop Map Reduce Employing Hadoop Map Reduce - Creating the components of Hadoop Map Reduce jobs - Distributing data processing across server farms –Executing Hadoop Map Reduce jobs - Monitoring the progress of job flows - The Building Blocks of Hadoop Map Reduce - Distinguishing Hadoop daemons - Investigating the Hadoop Distributed File System Selecting appropriate execution modes: local, pseudo-distributed, fully distributed.	L2, L3 and L4	9
Module V Big Data Tools and Techniques Installing and Running Pig – Comparison with Databases – Pig Latin – User-Define Functions – Data Processing Operators – Installing and Running Hive	L2 and L3	10

– Hive QL – Tables – Querying Data – User- Defined Functions – Oracle Big Data.

MLE6806	DATA MINING AND PREDICTIVE ANALYTICS LAB	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	0	0	2	1
Pre-requisites/Exposure	Basic knowledge of Database				
Co-requisites	NIL				

Catalog Description

Data Mining and Predictive analytics serve as one of the most important courses for postgraduate students, since it builds computational abilities, inferential thinking, and practical skills for tackling core data scientific challenges. The students will get a comprehensive understanding of different data mining techniques that can be used for prediction and for discovering patterns, be prepared to select the right technique for a given data problem and will be able to create a general-purpose analytic process.

Course Objectives

The objective of this course is to

- Provide students with an in-depth knowledge of data mining. To introduce students to basic applications, concepts, and techniques of data mining.
- Develop skills for using recent data mining software to solve practical problems and prediction in a variety of disciplines and
- Gain experience doing independent study and research.

Course Outcomes

On completion of this course, the students will be able to

CO 1: Explain concepts of Data mining, predictive analytics and analyses architecture of data mining. Differentiate between supervised and unsupervised methods

CO 2: Apply classification techniques on different data sets and solve cost –benefit analysis numerical. Analyze decision tree methods.

CO 3: Implement various clustering algorithm on different data sets and describe these algorithms.

CO 4: Prepare data representation for market basket analysis and determine the usefulness of association rules. Interpret supervised and unsupervised learning methods.

CO 5: Predict market trends and outline different factors associated mail marketing.

Modules/Topics Covered**	Blooms level*	Number of hours
1. To understand the basic features of Data Warehousing.	L1, L2	2
2. Explore WEKA Data Mining/Machine Learning Toolkit (a) Downloading and/or installation of WEKA data mining toolkit. (b) Understand the features of WEKA tool kit such as Explorer, Knowledge flow interface, Experimenter, command-line interface. (c) Navigate the options available in the WEKA (deselect attributes panel, preprocess panel, classify panel, cluster panel, associate panel and visualize). (d) Study the ARFF file format.	L2, L3, L5	2
3. To understand the working of datasets in WEKA & to perform demonstration of preprocessing on dataset weather.arff .	L3, L4, L5	2
4. To apply Numeric Transform (data preprocessing step) on Iris Dataset.	L3, L4, L5	2

5. To understand the importance of CSV data and then load student academic record (CSV format) in Weka.	L3, L4, L5	2
6. To understand the concept of discretization and to perform discretization on the dataset airline.arff.	L3, L4, L5	2
7. To create Training, Validation and Test dataset for iris.arff.	L3, L4, L5	2
8. To perform decision tree classification using J48 algorithm on weather.arff	L3, L4, L5	2
9. To apply Apriori technique on the dataset and to generate association rules.	L3, L4, L5	2
10. (a) Demonstration of classification rule process on dataset student.arff using j48 algorithm. (b) Demonstration of classification rule process on dataset employee.arff using j48 algorithm.	L3, L4, L5	2
11. Demonstration of classification rule process on dataset employee.arff using naïve bayes algorithm	L3, L4, L5	4

MLE6807	DATA WAREHOUSING AND MULTIDIMENSIONS MODELLING LAB	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	0	0	2	1
Pre-requisites/Exposure	Basic Knowledge of Database				
Co-requisites	NIL				

Catalog Description

In this Lab course Data warehousing and Multidimensional modeling programs are implemented and demonstrated using a SQL Server and ETL Tools. The Concepts that are covered would enable them to analyze the working of ETL tools and enable them to understand the following topics namely SQL Statements, SQL Built-in Functions, PL/SQL Cursors , Exception handling, Procedure, Functions, Trigger and concurrency control. Programs will be related to concepts of understanding the working of ETL tools on multidimensional data.

Course Objectives

The objective of this course is to

1. Make the students apply knowledge of Database by analyzing the different database concepts in SQL Server.
2. Provide a demonstration of ETL tools to organize the data sets.

Course Outcomes

On completion of this course, the students will be able to

CO1: Apply the knowledge of transaction processing to gain analysis on different data sets through concurrency control mechanism.

CO2: Demonstrate the use of SQL Built-in Functions, PL/SQL Cursors, Exception handling and Procedures.

CO3: To implement the different warehousing concepts on the given ETL tools.

CO4: Demonstrate the working of basic SQL statements and triggers.

Modules/Topics Covered**	Blooms level*	Number of hours
1. To understand the basic of SQL statements (g) Perform the following SQL statements on the table that perform the following query on the database <ul style="list-style-type: none"> • Create, update ,alter and delete a record • Joins and constraints on the table. • Wild card operators. 	L1,L3,L4	4
2. Sample Programs to execute the concept of Procedures (g) Preliminary introduction of Procedures their Syntax and usage (h) Write a procedural program to find out minimum of two numbers. (i) Write a program to print the reverse of a number using looping construct in PL/SQL Procedures. (j) Write a procedural program to find out the factorial of number.	L3, L4,L5	4
3. Sample Programs to implement the concept of Triggers (a) Preliminary introduction of Triggers their Syntax and usage (b) Create a Trigger on Employee record that automatically updates the salary of an Employee after each financial year. (c) Create a Trigger for the following events:	L3, L4,L5	4

<ul style="list-style-type: none"> • Deletion of a record • Updating of a record • Insertion of a new record. 		
4. Sample Programs to implement the concept of Cursors and Exception Handling. (a) Write a program to demonstrate the concept of Cursors in PL/SQL (b) Write a program that handles an exception that incurred in the given program.	L3,L4, L5	6
5. To perform demonstration to understand the working of ETL tools (c) Preliminary introduction of ETL Tools their features and importance. (d) Perform validation on the data set by applying the ETL tools. (e) Perform the following operations using ETL tools <ul style="list-style-type: none"> • Source to target mapping • Data checks on source data • Packages and schema validation • Data verification in the target system • Data integrity and quality checks in the target system 	L4,L5,L6	6

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

*** Sample Programs provided are not limited to these only, can include others as desired.*

AIE6935	SUMMER INTERNSHIP EVALUATION-III	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	0	0	0	6
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

The objective of this course is to provide practical training on some live projects that will increase capability to work on actual problem in industry. This training may undergo in an industrial environment or may be an in-house training on some latest software which is in high demand in market. This training will be designed such that it will useful for their future employment in industry.

Course Objectives

The objective of this course is to

1. Provide practical training on live projects
2. Increase technical capabilities on solving real life problems in company environment

Course Outcomes

On completion of this summer internship, the students will be able to:

CO1: Develop communication, interpersonal and other critical skills in the job interview process.

CO2: Design and develop software and hardware projects

CO3: Assess interests and abilities in their field of study.

CO4: Demonstrate excellent technical and communication skills to acquire employment contacts leading directly to a full-time job following graduation from college.

Version 2020.1	Date of Approval: JULY 2020	0	0	0	5
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

The objective of this course is to provide practical training on some live/demo projects that will increase capability to work on actual problem in industry. It will be an in house training on some latest software which is in high demand in market. This training will be designed such that it will be useful for their future employment in industry.

Course Objectives

The objective of this course is to

1. Provide practical training on live projects
2. Increase technical capabilities on solving real life problems in company environment

Course Outcomes

On completion of this summer internship, the students will be able to:

CO1: Demonstrate a sound technical knowledge of their selected project topic.

CO2: Design and develop engineering solutions to complex problems utilising a systems approach.

CO3: Analyse various approaches for solving a complex engineering problem using different tools and techniques

CO4: Demonstrate the knowledge, skills and attitudes of a professional engineer.

CO5: Apply technical skills and knowledge in completing the project.

RBE6901	AUTOMATION IN MANUFACTURING SYSTEMS	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Production system, Manufacturing System				
Co-requisites	Automation in production and manufacturing system				

Catalog Description:

In this course the concepts and procedure for Automation of Manufacturing systems and the technology behind the automation of a manufacturing system and concepts of computer aided manufacturing are discussed in detail. The concepts of computer aided process planning (CAPP), Hardware components for automation, group technology (GT), cellular manufacturing, automated guided vehicle system, flexible manufacturing system (FMS), Automated inspection and just in time are also discussed in detail.

Course Objectives:

The overall objective of this course is

1. To equip the students with basic and essential concepts of Automation in manufacturing system to usually increases production rate and labor productivity.
2. To provide high caliber engineering students with an in-depth understanding of cellular manufacturing, flexible manufacturing system (FMS) and computer aided process planning.

Course Outcomes (COs):

At the end of the course, the student shall be able to:

- CO1 - Define and describe the basic fundamentals of Automation in manufacturing system, computer aided manufacturing and computer integrated manufacturing.
- CO2 – State, explain and demonstrate computer aided process planning, automated production lines and assembly systems.
- CO3 – Outline, interpret and apply concepts of group technology and cellular manufacturing.
- CO4 – Define, explain and apply knowledge of flexible manufacturing systems and industrial robotics in industries.

Modules	Blooms level*	Number of hours
Module I Over view of Manufacturing and Automation: Production systems, Automation in production systems, Automation principles and strategies, Manufacturing operations, production facilities. Basic elements of an automated system, levels of automation; Hardware components for automation and process control, programmable logic controllers and personal computers.	L1 and L2	7
Module II Material Handling And Identification Technologies: Material handling, equipment, Analysis. Storage systems, performance and location strategies, Automated storage systems, AS/RS, types. Automatic identification methods, Barcode technology, RFID	L1, L2, and L3	6
Module III Manufacturing Systems And Automated Production Lines: Manufacturing systems: components of a manufacturing system, Single station manufacturing cells; Manual Assembly lines, line balancing Algorithms, Mixed model Assembly lines, Alternative Assembly systems.	L1, L2 and L3	8

RBE6902	ROBOTIC SENSORS, VISIONS AND HARDWARE IMPLEMENTATION	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Knowledge of basics of Artificial Intelligence concepts, Sensors and basic Robotics hardware required.				
Co-requisites	Nil				

Catalog Description

Robotics sensors find many applications in the areas of robotics, visions, Artificial Intelligence, pattern recognition, controls etc. Robotics sensors offer fundamentally different types of high capable sensors. Many image processing techniques are learnt. These robotics hardware design, architecture, mapping and localization can be applied to many complicated problems of Artificial Intelligence and other applications in Real World Computing. This course provides a comprehensive treatment of robotics sensors, visions and robotics hardware required.

Course Objectives:

The objective of this course is to

1. Introduces the basics of Robot visions and image processing sensors.
2. It deals with actual hardware implementation of robots

Course Outcomes:

On completion of this course, the students will be able to

CO1: Understand the principles of smart sensors and transducers, need and usage of sensors.

CO2: comparison various visions in robotics robotic functions, robotic views and robotic parts in simulations.

CO3: Understand concept of image processing techniques which can be applied to robotic perception, robotic movements, dynamics and controls of robotic movement, with which they can be able to apply the conceptual things to the robotic software architecture and applications.

CO4: Get thorough knowledge in robotics orientation and feature extraction.

CO5: Design multicontrolled sensors robot assembly.

Modules	Blooms level*	Number of hours
MODULE 1: SENSORS IN ROBOTICS An Introduction to sensors and Transducers, History and definitions, Smart Sensing, AI sensing, Need of sensors in Robotics. Position sensors – optical, non-optical, Velocity sensors, Accelerometers, Proximity Sensors – Contact, non-contact, Range Sensing, touch and Slip Sensors, Force and Torque Sensors. Different sensing variables – smell, Heat or Temperature, Humidity, Light, Speech or Voice recognition Systems, Tele-presence and related technologies.	L1, L2	4
MODULE 2: VISIONS IN ROBOTICS The Nature of Vision- Robot vision – Need, Applications - image acquisition –illumination techniques- Point sensor, line sensor, planar sensor, camera transfer characteristic, Raster scan, Image capture time, volume sensors, Image representation, picture coding techniques. Robot Control through Vision sensors, Robot vision locating position, Robot guidance with vision system, End effector camera Sensor.	L1, L2, L3 and L4	10
MODULE 3: ELEMENTS OF IMAGE PROCESSING TECHNIQUES	L1, L3,	5

Discretization, Neighbours of a pixel-connectivity- Distance measures - pre-processing Neighbourhood averaging, Median filtering. Smoothing of binary Images- Image Enhancement- Histogram Equalization-Histogram Specification –Local Enhancement-Edge detection- Gradient operator-Laplace operators-Thresholding-Morphological image processing.	L4 and L5	
MODULE 4:OBJECT ORIENTATION AND FEATURE EXTRACTION Image segmentation- Edge linking-Boundary detection-Region growing-Region splitting and merging- Boundary Descriptors-Freeman chain code-Regional Descriptors- recognition-structural methods- Recognition procedure, mahalanobic procedure.	L1, L2, L3, and L4	7
MODULE 5:COLLISIONS FRONTS ALGORITHM Introduction, skeleton of objects. Gradients, propagation, Definitions, propagation algorithm, Thinning Algorithm, Skeleton lengths of Top most objects.	L2, L3, L4 and L5	5
MODULE 6:MULTISENSORS CONTROLLED ROBOT ASSEMBLY Control Computer, Vision Sensor modules, Software Structure, Vision Sensor software, Robot programming, Handling, Gripper and Gripping methods, accuracy – A Case study.	L2, L3, L4 and L5	5

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation

RBE6903	PATTERN RECOGNITION & IMAGE PROCESSING	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Basics of Digital Image Processing				
Co-requisites	NIL				

Catalog Description

This course gives students an insight into the basics of Image Processing along with Pattern Recognition. Concepts covered would enable students to define and differentiate among various types of image refinement. Further they would be able to gain insights about various Image restoration and modification technique.

Course Objectives

This course covers the theory and methods for learning from data, with an emphasis on pattern classification. Digital Image Processing is designed to give professionals and students a powerful collection of fundamental and advanced image processing tools on the desktop.

Course Outcomes

On completion of this course, the students will be able to

CO1: Define and explain introductory part of Pattern recognition Concepts & Bayesian decision theory

CO2: List out the Univariate and Multivariate density

CO3: Explain concepts of Un-supervised learning and clustering

CO4: Describe the Image Fundamentals and Transforms

CO5: Explain the basics of Image Segmentation and Edge Detection

Modules	Blooms level*	Number of hours
MODULE 1: Introduction of Pattern recognition and Bayesian Decision Theory Machine perception, pattern recognition example, pattern recognition systems, the design cycle, learning and adaptation Introduction, continuous features – two categories classifications, minimum error-rate classification- zero-one loss function, classifiers, discriminant functions, and decision surfaces	L1 and L2	8
MODULE 2: Normal density Univariate and multivariate density, discriminant functions for the normal density-different cases, Bayes decision theory – discrete features, compound Bayesian decision theory and context	L2 and L3	8
MODULE 3: Un-supervised learning and clustering Introduction, mixture densities and Identifiability, maximum likelihood estimates, application to normal mixtures, K-means clustering. Data description and clustering, similarity measures, criteria function for clustering	L1 and L2	10
MODULE 4: Image Fundamentals and Transforms Elements of visual perception – Image sampling and quantization, Basic relationship between pixels, Some basic grayscale transformations, Introduction to Fourier Transform and DFT, Properties of 2D Fourier	L2 and L3	12

Prof. (Dr.) Anil Kumar

RBE6905	PATTERN RECOGNITION AND IMAGE PROCESSING LAB	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	0	0	1	1
Pre-requisites/Exposure	Basics of MATLAB				
Co-requisites	NIL				

Catalog Description

In this Lab course first student should learn about advanced level of software used for easy calculation and toolbox used for software like MATLAB.

Course Objectives

The objective of this course is to

- Make the students apply knowledge of various Image processing & pattern recognition required for solving complex problems.
- Provide a demonstration of different types of image processing techniques through MATLAB toolbox.

Course Outcomes

On completion of this course, the students will be able to

CO1: Acquiring knowledge of Basics of High-end calculation software and need in Computer Science & engineering

CO2: Demonstrate the All preliminary functions in MATLAB

CO3: Apply the knowledge of all the basics function and toolbox knowledge of MATLAB

CO4: Demonstrate the Use of MATLAB in image Processing

CO5: Demonstrate usage of applications involving with Image processing & Recognition Its Toolbox used by MATLAB

Modules/Topics Covered**	Blooms level*	Number of hours
6. Introduction of MATLAB (h) Basic Variable declaration & its operation (i) Function use & its application	L3, L5	4
7. Sample Programs in MATLAB (k) Basic use of Matrix and Graph Plotting (l) Different type of graph plotting with use of different -2 type of data	L3, L5	6
8. Sample Programs using MATLAB functions (o) Create a basic program MATLAB using functions (p) Use of basic function Image processing (q) Practice on Basic function of Image processing tool box.	L3, L5	6
9. Sample programs of ANN functions (e) Practice on Pattern Recognition functions in MATLAB (f) Write a program for training a small network in MATLAB	L3, L5	6
10. Sample Programs using ANN toolbox & Image processing toolbox (f) Demonstrate the use of ANN tool box & Image processing toolbox and write a program after combining it.	L3, L5	2

*Bloom's Level:

CO1: Understand the principles of smart sensors and transducers, need and usage of sensors.

CO2: comparison various visions in robotics robotic functions, robotic views and robotic parts in simulations.

CO3: Understand concept of image processing techniques which can be applied to robotic perception, robotic movements, dynamics and controls of robotic movement, with which they can be able to apply the conceptual things to the robotic software architecture and applications.

CO4: Get thorough knowledge in robotics orientation and feature extraction.

Modules	Blooms level*	Number of hours
Lab Session 1:Generation in robot languages Learning of robot language structure, on line and offline programming	L3 and L4	2
Lab Session 2:Cartesian Trajectories Study of Joint space planning, Cartesian trajectories, path primitives, coordinate systems used to determine the positions of TCP and direction of tools	L3 and L4	4
Lab Session 3:Basic Syntax Learning of RAPID i.e. data objects, expression, function. WAIT, SIGNAL AND DELAY command.	L3 and L4	6
Lab Session 4:Routine and subroutine Write subroutine, task module, input-output interrupts, priority interrupts, and task modules. Study of built-in subroutines in RAPID.	L1, L2, and L3	2
Lab Session 5:optical sensors To study Photodiodes, phototransistors and photo resistors based sensors, light-to-light detectors, Infrared sensors (thermal, PIR, AFIR, thermopiles).	L1, L2, and L3	4
Lab Session 6: Magnetic and Electromagnetic Sensors and Actuators Study on Motors as actuators (linear, rotational, stepping motors), magnetic	L3 and L4	2

valves, inductive sensors (eddy current, LVDT, RVDT, Proximity, switches), Hall Effect sensors, Magneto resistive sensors.		
Lab Session 7: Mechanical Sensors Accelerometers, Force sensors (strain gauges, tactile sensors), Pressure sensors (semiconductor, piezo resistive, capacitive, VRP).	L3 and L4	2
Lab Session 8: Industrial Networks and Fields Bus Types of bus – DN, PB, ProfiNet, Eth/IP Interfacing to Controller: Connecting sensors to controller directly or through fieldbus. Configuration of digital, group, and analog IO. Use of instructions and logic. Strobing and handshaking with PLC as master, Encoder and Resolvers.	L1, L2, and L3	2
Lab Session 9: PLC Various hardware types of PLC (CPU and I/O modules). Centralized configuration of PLC. On-line with PLC (using serial port). Various languages and its over-view. Sample program down-load, Task configuration. Configuration of IP address & sample program download. Decentralized configuration of PLC (Profibus protocol). Configuration I/O modules on Profibus protocol. Mod-bus configuration (Master & Slave configuration). Mod-bus RTU (Remote Telemetry Unit) and Mod-bus TCP/IP communication with PC based software.	L2, L3, and L4	2

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation

RBE6905	PATTERN RECOGNITION AND IMAGE PROCESSING LAB	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	0	0	1	1
Pre-requisites/Exposure	Basics of MATLAB				
Co-requisites	NIL				

Catalog Description

In this Lab course first student should learn about advanced level of software used for easy calculation and toolbox used for software like MATLAB.

Course Objectives

The objective of this course is to

1. Make the students apply knowledge of various Image processing & pattern recognition required for solving complex problems.
2. Provide a demonstration of different types of image processing techniques through MATLAB toolbox.

Course Outcomes

On completion of this course, the students will be able to

CO1: Acquiring knowledge of Basics of High-end calculation software and need in Computer Science & engineering

CO2: Demonstrate the All preliminary functions in MATLAB

CO3: Apply the knowledge of all the basics function and toolbox knowledge of MATLAB

CO4: Demonstrate the Use of MATLAB in image Processing

CO5: Demonstrate usage of applications involving with Image processing & Recognition Its Toolbox used by MATLAB

Modules/Topics Covered**	Blooms level*	Number of hours
11. Introduction of MATLAB (j) Basic Variable declaration & its operation (k) Function use & its application	L3, L5	4
12. Sample Programs in MATLAB (m) Basic use of Matrix and Graph Plotting (n) Different type of graph plotting with use of different -2 type of data	L3, L5	6
13. Sample Programs using MATLAB functions (r) Create a basic program MATLAB using functions (s) Use of basic function Image processing (t) Practice on Basic function of Image processing tool box.	L3, L5	6
14. Sample programs of ANN functions (g) Practice on Pattern Recognition functions in MATLAB (h) Write a program for training a small network in MATLAB	L3, L5	6
15. Sample Programs using ANN toolbox & Image processing toolbox (g) Demonstrate the use of ANN tool box & Image processing toolbox and write a program after combining it.	L3, L5	2

*Bloom's Level:

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

** Sample Programs provided are not limited to these only, can include others as desired.

RBE6906	OPTIMIZATION TECHNIQUES	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

The purpose of this course is to develop a knowledge in the field of optimization techniques their basic concepts, principles. linear programming and queuing theory.

Course Objectives

After successful completion of the course, student will be able to understand importance of optimization of industrial process management, apply basic concepts of mathematics to formulate an optimization problem, analyse and appreciate variety of performance measures for various optimization problems.

Course Outcomes

On completion of this course, the students will be able to

CO1: Understand importance of optimization of industrial process management.

CO2: Apply basic concepts of mathematics to formulate an optimization problem

CO3: Analyse and appreciate variety of performance measures for various optimization problems

CO4: Use classical optimization techniques and numerical methods of optimization

CO5: Apply knowledge of optimization to formulate and solve engineering problems

Modules	Blooms level*	Number of hours
MODULE 1: INTRODUCTION Introduction to optimization – adequate and optimum design – principles of optimization – statement of an optimization problem – classification – formulation of objective function, design constraints.	L1, L2	4
MODULE 2: CLASSICAL OPTIMIZATION TECHNIQUES Single variable optimization –multivariable optimization with no constraints – exhaustive search, Fibonacci method, golden selection, Random, pattern and gradient search methods – Interpolation methods: quadratic and cubic, direct root method.	L1, L2, L3 and L5, L6	12
MODULE 3: MULTIVARIABLE – UNCONSTRAINED AND CONSTRAINED OPTIMIZATION Direct search methods – descent methods – conjugate gradient method. Indirect methods – Transformation techniques, penalty function method	L1, L3 and L4	8
MODULE 4: NON – TRADITIONAL OPTIMIZATION TECHNIQUES Genetic Algorithms -steady state algorithm, fitness scaling, inversion. Genetic programming:- Genetic Algorithm in problem solving, Implementing a Genetic Algorithm:- computer implementation, operator (reproduction, crossover and Mutation, Fitness Scaling, Coding, Discretization). Knowledge based techniques in Genetic Algorithm. Advanced operators and techniques in genetic search:-Dominance, Diploidy and Abeyance. Inversion and other reordering operators, Niche and speciation and Tabu search methods.	L1, L3, and L4	10
MODULE 5: OPTIMUM DESIGN OF MACHINE Desirable and undesirable effects – functional requirement – material and geometrical parameters – Design of simple axial, transverse loaded members	L3 and L4	2

for minimum cost and minimum weight.

RBE6908	NEURAL NETWORK AND FUZZY LOGIC	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Linear algebra, advanced calculus, discrete mathematics, Boolean algebra or equivalent.				
Co-requisites	Nil				

Catalog Description

Fuzzy sets and fuzzy logic find many applications in the areas of stability theory, pattern recognition, controls etc. Neural Networks offer fundamentally alternative approaches to procedural programming. These systems proved their applicability to the problems where there are missing data or information or the problems which could not be defined in an algorithm. The integration of fuzzy systems and neural networks gives a tremendous potential which can be applied to many complicated problems of Artificial Intelligence and other applications in Real World Computing. This course provides a comprehensive treatment of neural network architectures and learning algorithms, with an in-depth look at problems in data mining and in knowledge discovery.

Course Objectives

The objective of this course is to

1. Introduces the basics of Neural Networks and essentials of Artificial Neural Networks with Single Layer and Multilayer Feed Forward Networks.
2. It deals with Associate Memories and introduces Fuzzy sets and Fuzzy Logic system component

Course Outcomes

On completion of this course, the students will be able to

CO1: Understand the principles of neural networks and fuzzy Logic fundamentals.

CO2: compare analysis between human and computer, Artificial Neural Networks models, characteristics of ANN's learning strategies, learning rules and basics of fuzzy logic.

CO3: Understand concept of classical and fuzzy sets, fuzzification and defuzzification, with which they can be able to apply the conceptual things to the real world electrical and electronics problems and applications.

CO4: Get thorough knowledge in biological neuron and artificial neurons.

CO5: Design the required and related systems

Modules	Blooms level*	Number of hours
MODULE 1: Basic neural computation models: Network and node properties. Inference and learning algorithms. Unsupervised learning: Signal hebbian learning and competitive learning. Supervised learning: Back propagation algorithms.	L1, L2	4
MODULE 2: Self organizing networks: Kohonen algorithm, bi-directional associative memories. Hopfield Networks: Hopfield network algorithm. Adaptive resonance theory: Network and learning rules. Neural network applications.	L1, L2, L3 and L4	10
MODULE 3: Fuzzy Sets: Operations and properties. Fuzzy Relations: Cardinality, Operations and properties.	L1, L3, L4 and L5	6

Prof. (Dr.) Anil Kumar

Value Assignments: Cosine amplitude and max-min method. Fuzzy classification: Cluster analysis and validity, Fuzzy e-means clustering, hardening the Fuzzy e-partition.		
MODULE 4: Fuzzification, Membership value assignments: Inference, rank ordering and angular Fuzzy sets, defuzzification methods, fuzzy logic, approximate reasoning. Fuzzy –based systems: Canonical rule forms, decomposition of compound rules, likelihood and truth qualification, aggregation of Fuzzy rules, graphical techniques of inference.	L1, L2, L3, and L4	9
MODULE 5: OPTIMUM DESIGN OF MACHINE Non linear simulation using Fuzzy rule-based systems, Fuzzy associative memories. Decision making under Fuzzy states and Fuzzy actions. Fuzzy grammar and syntactic recognition. General Fuzzy logic controllers, special forms of Fuzzy logic control system models, examples of Fuzzy control system design and control problems, industrial applications.	L2, L3, L4 and L5	7

Catalog Description

Neural Networks offer fundamentally alternative approaches to procedural programming. Fuzzy sets and fuzzy logic find many applications in the areas of stability theory, pattern recognition, controls etc. These systems proved their applicability to the problems where there are missing data or information or the problems which could not be defined in an algorithm.

Course Objectives

The objective of this course is to

1. To become familiar with neural networks learning algorithms from available examples and give design methodologies for artificial neural networks.
2. Understand and analyse concepts of fuzzy set and use fuzzy set operations to implement current computing techniques used in fuzzy computing.

Course Outcomes

On completion of this course, the students will be able to

CO1: Understand the difference between learning and programming and explore practical applications of Neural Networks (NN).

CO2: To analyse and appreciate the applications which can use fuzzy logic.

CO3: Understand the efficiency of a hybrid system and how Neural Network and fuzzy logic can be hybridized to form a Neuro-fuzzy network and its various applications and they will be able to design inference systems

Modules	Blooms level*	Number of hours
Lab Session 1: Write a program to implement single layer perception algorithm.	L3 and L4	2
Lab Session 2: Write a program to implement back propagation learning algorithm	L3 and L4	4
Lab Session 3: Design multilayer feed forward network using back-propagation algorithm	L3 and L4	6
Lab Session 4 Study of fuzzy inference system	L1, L2, and L3	2
Lab Session 5 To study fuzzy logic controller using fuzzy logic toolbox	L1, L2, and L3	4
Lab Session 6 Write a program to implement SDPTA	L3 and L4	2
Lab Session 7 Write a program to implement RDPTA	L3 and L4	2
Lab Session 8 To Study various defuzziification techniques	L1, L2, and L3	2
Lab Session 9 Write a program to implement of fuzzy set operation	L2, L3, and L4	2

RBE6910	DECISION MAKING SYSTEM	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Basic Networking Concepts				
Co-requisites	Nil				

Catalog Description

To develop semantic-based and context-aware systems to acquire, organize process, share and use the knowledge embedded in multimedia content. Research will aim to maximize automation of the complete knowledge lifecycle and achieve semantic interoperability between Web resources and services. The field of Robotics is a multi disciplinary as robots are amazingly complex system comprising mechanical, electrical, electronic H/W and S/W and issues germane to all these.

Course Objectives

The objective of this course is to

1. To provide an overview of problem solving skills methods using decision making systems .
2. To serve as a foundation for the study of programming languages that is used to develop an Intelligence System

Course Outcomes

On completion of this course, the students will be able to

CO1. Understand the concept of artificial intelligence.

CO2. Differentiate between linear and non-linear problems and Learn various problem solving techniques using neural networks

CO3. Understand the concept of fuzzy logic and apply to various problems

CO4. Able to learn concepts of genetic algorithm

Modules	Blooms level*	Number of hours
Module I: Soft Computing Introduction of soft computing, soft computing vs. hard computing, various types of soft computing techniques, applications of soft computing. Artificial Intelligence : Introduction, Various types of production systems, characteristics of production systems, breadth first search, depth first search techniques, other Search Techniques like hill Climbing, Best first Search, A* algorithm, AO* Algorithms and various types of control strategies. Knowledge representation issues, Propositional and predicate logic, monotonic and non monotonic reasoning, forward Reasoning, backward reasoning, Weak & Strong Slot & filler structures, NLP.	L1, L2	12
Module II: Neural Network Structure and Function of a single neuron: Biological neuron, artificial neuron, definition of ANN, Taxonomy of neural net, Difference between ANN and human brain, characteristics and applications of ANN, single layer network, Perceptron training algorithm, Linear separability, Widrow & Hebb's learning rule/Delta rule, ADALINE, MADALINE, AI v/s ANN. Introduction of MLP, different activation functions, Error back propagation algorithm, derivation of BBPA, momentum, limitation, characteristics and application of EBPA	L2, L3 and L4	10
Module III	L2, L3	8

Counter propagation network, architecture, functioning & characteristics of counter Propagation network, Hopfield/ Recurrent network, configuration, stability constraints, associative memory, and characteristics, limitations and applications. Hopfield v/s Boltzman machine. Adaptive Resonance Theory: Architecture, classifications, Implementation and training. Associative Memory.	and L4	
Module IV: Fuzzy Logic Fuzzy set theory, Fuzzy set versus crisp set, Crisp relation & fuzzy relations, Fuzzy systems: crisp logic, fuzzy logic, introduction & features of membership functions, Fuzzy rule base system : fuzzy propositions, formation, decomposition & aggregation of fuzzy rules, fuzzy reasoning, fuzzy inference systems, fuzzy decision making & Applications of fuzzy logic.	L2, L3 and L4	7
Module V: Genetic algorithm Fundamentals, basic concepts, working principle, encoding, fitness function, reproduction, Genetic modeling: Inheritance operator, cross over, inversion & deletion, mutation operator, Bitwise operator, Generational Cycle, Convergence of GA, Applications & advances in GA, Differences & similarities between GA & other traditional methods.	L2, L4	3

Version 2020.1	Date of Approval: JULY2020	0	0	2	1
Pre-requisites/Exposure	C/C++/MATLAB				
Co-requisites	Nil				

Catalog Description

This lab course covers development and designing of implementing basic neural networks, fuzzy systems, and optimization algorithms concepts and their relations. It aims to develop the concepts and techniques and foster the students' abilities in designing and implementing soft computing based solutions for real-world and engineering problems.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of Soft Computing which includes Neural networks, Fuzzy logic and genetic algorithms.
2. Provide knowledge to develop Soft computing programs in Matlab.

Course Outcomes

On completion of this course, the students will be able to

CO1: Implement various neural networks using MATLAB.

CO2: Illustrate use of fuzzy in real applications.

CO3: Apply genetic algorithm to basic problems.

Modules	Blooms level*	Number of hours
Lab Session 1: Study of Biological Neural Network	L1 , L2 and L3	2
Lab Session 2: Study of Artificial Neural Network	L1, L2 and L3	1
Lab Session 3: Write a program of Perceptron Training Algorithm.	L3 and L4	2
Lab Session 4 Write a program to implement Hebb's Rule	L3, and L4	2
Lab Session 5 Write a program to implement of Delta Rule.	L3, and L3	2
Lab Session 6 Write a program to implement back propagation learning algorithm.	L3 and L4	2
Lab Session 7 Study of fuzzy inference system	L1, L2 and L3	1
Lab Session 8 To study fuzzy logic controller using fuzzy logic toolbox	L1, L2, L3 and L4	2
Lab Session 9 Write a program to implement SDPTA	L3 and L4	2

Lab Session 10 Write a program to implement RDPTA	L3 and L4	2
Lab Session 11 To Study various defuzziification techniques	L1, L2, L3 and L4	1
Lab Session 12 Write a program to implement of fuzzy set operation	L3 and L4	2
Lab Session 13 Study of genetic algorithm	L1, L2, L3 and L4	1
Lab Session 14 Study of Genetic programming and solve a real life problem	L1, L2, L3, and L4	2

MLE6901	PATTERN RECOGNITION & IMAGE PROCESSING	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Basics of Digital Image Processing				
Co-requisites	NIL				

Catalog Description

This course gives students an insight into the basics of Image Processing along with Pattern Recognition. Concepts covered would enable students to define and differentiate among various types of image refinement. Further they would be able to gain insights about various Image restoration and modification technique.

Course Objectives

This course covers the theory and methods for learning from data, with an emphasis on pattern classification. Digital Image Processing is designed to give professionals and students a powerful collection of fundamental and advanced image processing tools on the desktop.

Course Outcomes

On completion of this course, the students will be able to

CO1: Define and explain introductory part of Pattern recognition Concepts & Bayesian decision theory

CO2: List out the Univariate and Multivariate density

CO3: Explain concepts of Un-supervised learning and clustering

CO4: Describe the Image Fundamentals and Transforms

CO5: Explain the basics of Image Segmentation and Edge Detection

Modules	Blooms level*	Number of hours
MODULE 1: Introduction of Pattern recognition and Bayesian Decision Theory Machine perception, pattern recognition example, pattern recognition systems, the design cycle, learning and adaptation Introduction, continuous features – two categories classifications, minimum error-rate classification- zero-one loss function, classifiers, discriminant functions, and decision surfaces	L1 and L2	8
MODULE 2: Normal density Univariate and multivariate density, discriminant functions for the normal density-different cases, Bayes decision theory – discrete features, compound Bayesian decision theory and context	L2 and L3	8
MODULE 3: Un-supervised learning and clustering Introduction, mixture densities and Identifiability, maximum likelihood estimates, application to normal mixtures, K-means clustering. Data description and clustering, similarity measures, criteria function for clustering	L1 and L2	10
MODULE 4: Image Fundamentals and Transforms Elements of visual perception – Image sampling and quantization, Basic relationship between pixels, Some basic grayscale transformations, Introduction to Fourier Transform and DFT, Properties of 2D Fourier	L2 and L3	12

Transform, FFT, Separable Image Transforms, Walsh, Hadamard, Discrete Cosine Transform, Haar, Slant, Karhunen, Loeve transforms.		
MODULE 5: Image Segmentation and Edge Detection Region Operations, Crack Edge Detection, Edge Following, Gradient operators, Compass and laplace operators. Threshold detection methods, optimal thresholding, multispectral thresholding, thresholding in hierarchical data structures; edge based image segmentation- edge image thresholding, edge relaxation, border tracing, border detection,	L2 and L3	10

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

MLE6904	PATTERN RECOGNITION AND IMAGE PROCESSING LAB	L	T	P	C
Version 2019.1	Date of Approval: 15 May 2019	0	0	1	1
Pre-requisites/Exposure	Basics of MATLAB				
Co-requisites	NIL				

Catalog Description

In this Lab course first student should learn about advanced level of software used for easy calculation and toolbox used for software like MATLAB.

Course Objectives

The objective of this course is to

1. Make the students apply knowledge of various Image processing & pattern recognition required for solving complex problems.
2. Provide a demonstration of different types of image processing techniques through MATLAB toolbox.

Course Outcomes

On completion of this course, the students will be able to

CO1: Acquiring knowledge of Basics of High-end calculation software and need in Computer Science & engineering

CO2: Demonstrate the All preliminary functions in MATLAB

CO3: Apply the knowledge of all the basics function and toolbox knowledge of MATLAB

CO4: Demonstrate the Use of MATLAB in image Processing

CO5: Demonstrate usage of applications involving with Image processing & Recognition Its Toolbox used by MATLAB

Modules/Topics Covered**	Blooms level*	Number of hours
16. Introduction of MATLAB (l) Basic Variable declaration & its operation (m) Function use & its application	L3, L5	4
17. Sample Programs in MATLAB (o) Basic use of Matrix and Graph Plotting (p) Different type of graph plotting with use of different -2 type of data	L3, L5	6
18. Sample Programs using MATLAB functions (u) Create a basic program MATLAB using functions (v) Use of basic function Image processing (w) Practice on Basic function of Image processing tool box.	L3, L5	6
19. Sample programs of ANN functions (i) Practice on Pattern Recognition functions in MATLAB (j) Write a program for training a small network in MATLAB	L3, L5	6
20. Sample Programs using ANN toolbox & Image processing toolbox (h) Demonstrate the use of ANN tool box & Image processing toolbox and write a program after combining it.	L3, L5	2

*Bloom's Level:

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

** Sample Programs provided are not limited to these only, can include others as desired.

MLE6902	NEURAL NETWORK AND FUZZY LOGIC	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Linear algebra, advanced calculus, discrete mathematics, Boolean algebra or equivalent.				
Co-requisites	Nil				

Catalog Description

Fuzzy sets and fuzzy logic find many applications in the areas of stability theory, pattern recognition, controls etc. Neural Networks offer fundamentally alternative approaches to procedural programming. These systems proved their applicability to the problems where there are missing data or information or the problems which could not be defined in an algorithm. The integration of fuzzy systems and neural networks gives a tremendous potential which can be applied to many complicated problems of Artificial Intelligence and other applications in Real World Computing. This course provides a comprehensive treatment of neural network architectures and learning algorithms, with an in-depth look at problems in data mining and in knowledge discovery.

Course Objectives

The objective of this course is to

1. Introduces the basics of Neural Networks and essentials of Artificial Neural Networks with Single Layer and Multilayer Feed Forward Networks.
2. It deals with Associate Memories and introduces Fuzzy sets and Fuzzy Logic system component

Course Outcomes

On completion of this course, the students will be able to

CO1: Understand the principles of neural networks and fuzzy Logic fundamentals.

CO2: compare analysis between human and computer, Artificial Neural Networks models, characteristics of ANN's learning strategies, learning rules and basics of fuzzy logic.

CO3: Understand concept of classical and fuzzy sets, fuzzification and defuzzification, with which they can be able to apply the conceptual things to the real world electrical and electronics problems and applications.

CO4: Get thorough knowledge in biological neuron and artificial neurons.

CO5: Design the required and related systems

Modules	Blooms level*	Number of hours
MODULE 1: Basic neural computation models: Network and node properties. Inference and learning algorithms. Unsupervised learning: Signal hebbian learning and competitive learning. Supervised learning: Back propagation algorithms.	L1, L2	4
MODULE 2: Self organizing networks: Kohonen algorithm, bi-directional associative memories. Hopfield Networks: Hopfield network algorithm. Adaptive resonance theory: Network and learning rules. Neural network applications.	L1, L2, L3 and L4	10
MODULE 3: Fuzzy Sets: Operations and properties. Fuzzy Relations: Cardinality, Operations and properties. Value Assignments: Cosine amplitude and max-min method.	L1, L3, L4 and L5	6

Prof. (Dr.) Anil Kumar
Deputy Dean Academics

Fuzzy classification: Cluster analysis and validity, Fuzzy e-means clustering, hardening the Fuzzy e-partition.		
MODULE 4: Fuzzification, Membership value assignments: Inference, rank ordering and angular Fuzzy sets, defuzzification methods, fuzzy logic, approximate reasoning. Fuzzy –based systems: Canonical rule forms, decomposition of compound rules, likelihood and truth qualification, aggregation of Fuzzy rules, graphical techniques of inference.	L1, L2, L3, and L4	9
MODULE 5: OPTIMUM DESIGN OF MACHINE Non linear simulation using Fuzzy rule-based systems, Fuzzy associative memories. Decision making under Fuzzy states and Fuzzy actions. Fuzzy grammar and syntactic recognition. General Fuzzy logic controllers, special forms of Fuzzy logic control system models, examples of Fuzzy control system design and control problems, industrial applications.	L2, L3, L4 and L5	7

MLE6905	NEURAL NETWORK AND FUZZY LOGIC LAB	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	0	0	2	1
Pre-requisites/Exposure	C/C++/MATLAB				
Co-requisites	Nil				

Catalog Description

Neural Networks offer fundamentally alternative approaches to procedural programming. Fuzzy sets and fuzzy logic find many applications in the areas of stability theory, pattern recognition, controls etc. These systems proved their applicability to the problems where there are missing data or information or the problems which could not be defined in an algorithm.

Course Objectives

The objective of this course is to

1. To become familiar with neural networks learning algorithms from available examples and give design methodologies for artificial neural networks.
2. Understand and analyse concepts of fuzzy set and use fuzzy set operations to implement current computing techniques used in fuzzy computing.

Course Outcomes

On completion of this course, the students will be able to

CO1: Understand the difference between learning and programming and explore practical applications of Neural Networks (NN).

CO2: To analyse and appreciate the applications which can use fuzzy logic.

CO3: Understand the efficiency of a hybrid system and how Neural Network and fuzzy logic can be hybridized to form a Neuro-fuzzy network and its various applications and they will be able to design inference systems

Modules	Blooms level*	Number of hours
Lab Session 1: Write a program to implement single layer perception algorithm.	L3 and L4	2
Lab Session 2: Write a program to implement back propagation learning algorithm	L3 and L4	4
Lab Session 3: Design multilayer feed forward network using back-propagation algorithm	L3 and L4	6
Lab Session 4 Study of fuzzy inference system	L1, L2, and L3	2
Lab Session 5 To study fuzzy logic controller using fuzzy logic toolbox	L1, L2, and L3	4
Lab Session 6 Write a program to implement SDPTA	L3 and L4	2
Lab Session 7 Write a program to implement RDPTA	L3 and L4	2
Lab Session 8 To Study various defuzziification techniques	L1, L2, and L3	2
Lab Session 9 Write a program to implement of fuzzy set operation	L2, L3, and L4	2

MLE6903	NATURAL LANGUAGE PROCESSING	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Basics of Python				
Co-requisites	Nil				

Catalog Description

In this course general introduction including the use of state automata for language processing and syntax including a basic parse for natural language processing are discussed in detail. Basic features like regular expressions, Text Normalization, Edit Distance, n-gram model and advanced feature like feature structures and realistic parsing methodologies, part of speech tagging will be introduced. The concepts learnt in the studies of natural language processing will be applied in jupyter notebook using python for developing small to medium level applications.

Course Objectives

The objective of this course is to

- Equip the students with concepts of natural language processing through problem solving and practical approach.
- Provide an overview of various tools in the field of natural language processing to gain practical understanding of the concepts.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain, knowledge in speech recognition, models and algorithms; Explain regular expressions and solve related problems; Explain and solve problems related to lemmatization and stemming, minimum edit distance.

CO2: Explain language models and compare their performance on datasets; Solve some problems on naïve bayes algorithm.

CO3: Explain logistic regression, similarity, language modelling and solve problems based on them.

CO4: Describe ANN and Part of speech tagging; Solve problems based on them.

CO5: Describe RNN models and distinguish between simple ANN and RNN;

Modules	Blooms level*	Number of hours
MODULE 1: Knowledge in Speech and Language Processing ,Ambiguity ,Models and Algorithms Language, Thought, and Understanding ,The State of the Art and The Near-Term Future Some Brief History, Regular Expressions, Words ,Corpora,Text Normalization ,Minimum Edit Distance	L1, L2 ,L3	7

Prof. (Dr.) Anil Kumar

MODULE 2: Evaluating Language Models, Generalization and Zeros, Smoothing, Kneser-Ney Smoothing, The Web and Stupid Backoff, Advanced: Perplexity's Relation to Entropy, Naive Bayes Classifiers, Training the Naive Bayes Classifier, Worked example, Optimizing for Sentiment Analysis, Naive Bayes for other text classification tasks, Naive Bayes as a Language Model, Evaluation: Precision, Recall, F-measure, Test sets and Cross-validation, Statistical Significance Testing Advanced: Feature Selection.	L1,L2, L3	8
MODULE 3: Classification: the sigmoid, Learning in Logistic Regression, The cross-entropy loss function, Gradient Descent, Regularization, Multinomial logistic regression, Interpreting models, Advanced: Deriving the Gradient Equation, Lexical Semantics, Vector Semantics, Words and Vectors, Cosine for measuring similarity, TF-IDF: Weighing terms in the vector, Applications of the tf-idf vector model, Optional: Pointwise Mutual Information (PMI), Word2vec, Visualizing Embeddings, Semantic properties of embeddings, Bias and Embeddings, Evaluating Vector Models.	L1,L2, L3	8
MODULE 4: Units, The XOR problem, Feed-Forward Neural Networks, Training Neural Nets, Neural Language Models, (Mostly) English Word Classes, The Penn Treebank Part-of-Speech Tagset, Part-of-Speech Tagging, HMM Part-of-Speech Tagging, Maximum Entropy Markov Models, Bidirectionality, Part-of-Speech Tagging for Other Languages.	L1, L2 and L3	6
MODULE 5: Simple Recurrent Networks, Applications of RNNs, Deep Networks: Stacked and Bidirectional RNNs, Managing Context in RNNs: LSTMs and GRUs, Words, Characters and Byte-Pairs.	L1, L2,L3	7

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

MLE6906	HADOOP LAB	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	0	0	4	2
Pre-requisites/Exposure	Basic Concepts of DBMS				
Co-requisites	Relational Algebra and Relational Calculus				

Catalog Description

This course brings together several key big data technologies used for storage, analysis and manipulation of data. It also introduces the students the key concepts of Hadoop framework, MapReduce, Pig, Hive, and No-SQL. Students will learn to work on Hadoop platform. The concepts learnt will make students capable of working on big data projects easier.

Course Objectives

The objective of this course is

- To make students familiar with big data technologies.
- Provide an overview of Hadoop architecture and its working with other open source technologies.

Course Outcomes

On completion of this course, the students will be able to

CO1. Install and configure Hadoop and various tools like Pig, Hive etc.

CO2. Explain concepts of files and directories in HDFS and apply them in real database applications.

CO3. Design and implement mapreduce programs for a given problem.

CO4. Solve queries using concepts of Hive and Pig.

CO5. Perform operations using HBase.

Modules	Blooms level*	Number of hours
Lab Session 1 1. Installation & Configuration steps of Hadoop	L1 and L2	2
Lab Session 2-3 1. Working with HDFS commands :mkdir, rmdir, rm, mv, ls, du, put, rm-r, cat, tail etc 2. Working with vi editor	L1and L3	4
Lab Session 4-5 Working with Java Map Reduce : Map Class, Reduce Class, Drier Class, map side joins, reduce side joins	L1 and L3	4
Lab Session 6-8 1. Working with Hive : Queries for Hive : Create table, describe database, describe table, describe extended table, describe formatted table, drop table, drop database, display table, where clause 2. Commands : Load Files on table : Load from HDFS, load from local 3. Command :CTAS Create table as select 4. Queries to create external tables 5. Working with commands like : Order by, group by, like, upper, lower, max, min	L1 and L3	6

Lab Session 9-10 1. Working with PIG : Order by, group by, co group, like, upper, lower, Joins, Union, Cartesian, Product, Pig Scripts	L1 and L3	4
Lab Session 11-12 Working with HBase : Start the hbase, data insert, modify, multiple version insertion, describe, delete truncate, drop etc. Working with Foreign Key and Check Constraint.	L1 and L3	6

MLE6907	DESCRIPTIVE ANALYSIS	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure					
Co-requisites	Nil				

Catalog Description

This course introduces some elementary statistical methods of analysis of data and compute various measurements of central tendency, dispersion, skewness and kurtosis. Also discusses computation of the correlation coefficient from ungrouped bivariate data and interpret them and analyse data pertaining to attributes and to interpret results.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of descriptive statistics through problem solving and practical approach.
2. Provide an overview of various tools in the field of statistics to gain practical understanding of the concepts.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain data sampling and solve related problems; Explain and solve problems related to discrete frequency distribution and continuous frequency distribution.

CO2: Explain data samples and compare their performance on datasets

CO3: Explain regression modelling and solve problems based on them.

CO4: Describe Concept of central tendency of statistical data and solve problems based on them.

CO5: Describe Concept of dispersion and distinguish between concepts of central tendency of statistical data

Modules	Blooms level*	Number of hours
MODULE 1: Definitions: Webster's and Secrist's definition of Statistics, Importance of Statistics, Scope of Statistics: In the field of Industry, Biological Sciences, Medical Sciences, Economics Sciences, Social, Sciences, Management Sciences, Agriculture, Insurance, Actuarial Science, Education and Psychology.	L1, L2, L3	4
MODULE 2: Types of characteristics: Attributes: Nominal scale, ordinal scale. Variables: Interval scale, ratio scale, discrete and continuous variables, Types of data: Primary data, Secondary data, Notion of a statistical population: Finite population, infinite population, homogeneous population and heterogeneous population. Notion of sample, random sample and non-random sample, Methods of sampling: Simple random sampling with and without replacement (SRSWR and SRWOR) stratified random sampling, systematic sampling, cluster sampling and two-stage sampling.	L1, L2, L3	6
MODULE 3: Classification: Raw data and its classification, Discrete frequency distribution, Sturge's rule, continuous frequency distribution, inclusive and exclusive methods of classification, Open end classes, cumulative frequency	L1, L2, L3	6

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

distribution and relative frequency distribution, Graphical Presentation of Data: Histogram, frequency curve, frequency polygon, ogive curves, stem and leaf chart, Check sheet, Parato diagram, Examples and Problems.		
MODULE 4: Concept of central tendency of statistical data, Arithmetic Mean (A.M.), combined mean of a number of groups, merits and demerits, Geometric Mean (G.M.), Harmonic Mean (H.M.), Weighted Mean, Weighted A.M., G.M. and H.M. , Mode, Median, Empirical relation between mean, median and mode, Order relation between arithmetic mean, geometric mean, harmonic mean.	L1, L2 and L3	6
MODULE 5: Concept of dispersion, characteristics of good measure of dispersion, Range, Mean deviation, Mean square definition, Variance and standard deviation, Combined variance, Combined standard deviation, generalization for n groups, Measures of dispersion for comparison: coefficient of range, coefficient of quartile deviation and coefficient of mean deviation, coefficient of variation.	L1, L2,L3	6
MODULE 6: Concept of skewness of frequency distribution, positive skewness, negative skewness, symmetric frequency distribution, Bowley's coefficient of skewness, interpretation using Box plot, Karl Pearson's coefficient of skewness, Measures of skewness based on moments (β_1, γ_1), Concepts of kurtosis, leptokurtic, mesokurtic and platykurtic frequency distributions, Measures of kurtosis based on moments, (β_2, γ_2).	L1, L2 ,L3	4
MODULE 7: Bivariate data, bivariate frequency distribution, Concept of correlation between two variables, positive correlation, negative correlation, Scatter diagram, conclusion about the type of correlation from scatter diagram, Covariance between two variables, Karl Pearson's coefficient of correlation, Spearman's rank correlation coefficient, In case of ties, compute Karl Pearson's correlation coefficient between ranks. Regression: lines of regression, fitting of lines of regression by the least squares method, interpretation of slope and intercept. 9.2 Regression coefficient (byx, bxy), Effect of change of origin and scale, Angle between the two lines of regression, Mean residual sum of squares , Residual plot and its interpretation.	L1, L2 ,L3	4

MLE6908	OPTIMIZATION TECHNIQUES	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

The purpose of this course is to develop a knowledge in the field of optimization techniques their basic concepts, principles. linear programming and queuing theory.

Course Objectives

After successful completion of the course, student will be able to understand importance of optimization of industrial process management, apply basic concepts of mathematics to formulate an optimization problem, analyse and appreciate variety of performance measures for various optimization problems.

Course Outcomes

On completion of this course, the students will be able to

CO1: Understand importance of optimization of industrial process management.

CO2: Apply basic concepts of mathematics to formulate an optimization problem

CO3: Analyse and appreciate variety of performance measures for various optimization problems

CO4: Use classical optimization techniques and numerical methods of optimization

CO5: Apply knowledge of optimization to formulate and solve engineering problems

Modules	Blooms level*	Number of hours
MODULE 1: INTRODUCTION Introduction to optimization – adequate and optimum design – principles of optimization – statement of an optimization problem – classification – formulation of objective function, design constraints.	L1, L2	4
MODULE 2: CLASSICAL OPTIMIZATION TECHNIQUES Single variable optimization –multivariable optimization with no constraints – exhaustive search, Fibonacci method, golden selection, Random, pattern and gradient search methods – Interpolation methods: quadratic and cubic, direct root method.	L1, L2, L3 and L5, L6	12
MODULE 3: MULTIVARIABLE – UNCONSTRAINED AND CONSTRAINED OPTIMIZATION Direct search methods – descent methods – conjugate gradient method. Indirect methods – Transformation techniques, penalty function method	L1, L3 and L4	8
MODULE 4: NON – TRADITIONAL OPTIMIZATION TECHNIQUES Genetic Algorithms -steady state algorithm, fitness scaling, inversion. Genetic programming:- Genetic Algorithm in problem solving, Implementing a Genetic Algorithm:- computer implementation, operator (reproduction, crossover and Mutation, Fitness Scaling, Coding, Discretization). Knowledge based techniques in Genetic Algorithm. Advanced operators and techniques in genetic search:-Dominance, Diploidy and Abeyance. Inversion and other reordering operators, Niche and speciation and Tabu search methods.	L1, L3, and L4	10
MODULE 5: OPTIMUM DESIGN OF MACHINE Desirable and undesirable effects – functional requirement – material and geometrical parameters – Design of simple axial, transverse loaded members	L3 and L4	2

for minimum cost and minimum weight.

MLE6909	SOCIAL NETWORK DATA ANALYTICS	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Basis of Database and Networking				
Co-requisites					

Catalog Description

This course gives an introduction to social network analysis, with a focus on modelling. It provides an overview of research questions connected to social networks, and of descriptive measures, models, and methods of analysis that can be used to analyze empirical social network data. It helps to understand the online interactive demonstrations and hands-on analysis of real-world data sets.

Course Objectives

The objective of this course is to

- To provide students effective data-driven intelligence to improve their decisions making and systematically estimate the expected impact on relevant performance objectives
- To equip the students with data-driven intelligence tools, the basics of data mining techniques and develop a data-analytical approach to problem-solving with their application

Course Outcomes

On completion of this course, the students will be able to

CO1. Know the basic notation and terminology used in network science

CO2. Be able to visualize, summarize and compare networks.

CO3. Learn the basic principles behind network analysis algorithms

CO4. Develop practical skills of network analysis in R programming language

CO5: Be capable of analysing real work networks

Course Content

Modules	Bloom's level	Number of Hours
Module I Introduction Overview: Social network data-Formal methods- Paths and Connectivity- Graphs to represent social relations-Working with network data- Network Datasets-Strong and weak ties - Closure, Structural Holes, and Social Capital.	L1, L2	6
Module II Community Discovery in Social Networks: Applications, Methods and Engineering Trends Introduction, Communities in Context, Core Methods, Quality Functions, The Kernighan-Lin (KL) Algorithm, Agglomerative/Divisive Algorithms, Spectral Algorithms, Multi-Level Graph Portioning, Markov Clustering. Other Approaches, Emerging Fields and Problems, Community Discovery in Dynamic Networks, Community Discovery in Heterogeneous Networks, Community Discovery in Directed Networks, Coupling Content and Relationship Information for Community Discovery,	L1, L2, L3	7

Module III Information Networks and the World Wide Web The Structure of the Web- World Wide Web- Information Networks, Hypertext, and Associative Memory- Web as a Directed Graph, Bow-Tie Structure of the Web- Link Analysis and Web Search, Searching the Web: Ranking, Link Analysis using Hubs and Authorities- Page Rank- Link Analysis in Modern Web Search, Applications, Spectral Analysis, Random Walks, and Web Search.	L1, L2, L3	5
Module IV Node Classifications in Social Networks Introduction, Problem Formulation, Representing Data As A Graph, The Node Classification Problem, Methods Using Local Classifiers, Iterative Classification Method, Random Walk Based Methods, Label Propagation, Graph Regularization, Adsorption, Applying Node Classification To Large Social Networks, Basic Approaches, Second-Order Methods, Implementation Within Map-Reduce, Inference Using Graphical Models, Metric Labelling, Spectral Partitioning, Graph Clustering, Variations on Node Classification	L1, L2, L3	6
Module V Data and Text Mining in Social Media Data Mining In Nutshell, Social Media, Motivations For Data Mining In Social Media, Data Mining Methods For Social Media, Data Representation, Data Mining- A Process, Social Networking Sites: Illustrative Examples, Related Efforts, Ethnography And Netnography, Event Maps, Text Mining: Keyword Search, Query Semantics And Answer Ranking, Keyword Search over Xml and Relational Data, Keyword Search Over Graph Data, Classification Algorithms, Clustering Algorithms, Transfer Learning in Heterogeneous Networks.	L1, L3, L4	6
Module VI Overview of Social Tagging Introduction, Problems With Metadata Generation and Fixed Taxonomies, Tags: Why And What?, Different User Tagging Motivations, Kinds Of Tags, Linguistic Classifications Of Tags, Game-Based Tagging, Tag Generation Models, Tagging System Design, Tag Analysis, Tagging Distributions, Identifying Tag Semantics, Tags Versus Keywords, Visualization Of Tags, Tag Clouds For Browsing/Search, Tag Selection For Tag Clouds, Tag Hierarchy Generation, Tag Cloud Display Formats, Tag Evolution Visualization.	L1, L2	6

MLE6910	AGENT BASED INTELLIGENT SYSTEMS	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	3	0	0	3
Pre-requisites/Exposure	Basics of Python				
Co-requisites	Nil				

Catalog Description

This course provides students basic knowledge of employing intelligent agents in solving complex problems and gives the awareness of the building blocks of agents and working of different types of agents. It also analyses the reasons for uncertainty and ability to design agents to handle them.

Course Objectives

The objective of this course is to

1. Equip the students with the knowledge of intelligent agents in solving complex problems.
2. Provide an overview of Building Agents, Knowledge Based Agents, Planning Agents and Higher Level Agents.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain the concept of knowledge intelligent agents and use in solving complex problems.

CO2: Describe the concept of Concepts for Building Agents and Knowledge Based Agents.

CO3: Explain the concept of Planning Agents and Higher Level Agents.

CO4: Describe the concept of Agents and Uncertainty and Higher Level Agents.

Modules	Blooms level*	Number of hours
MODULE 1: Definitions – History – Hybrid Intelligent Agents – Agents vs Multi Agent Systems– Structure – Environment – Basic Problem Solving Agents – Complex Problem Solving Agents – Formulating Search Strategies – Intelligent Search.	L1, L2, L3	7
MODULE 2: Situated Agents: Actions and Percepts - Proactive and Reactive Agents: Goals and Events- Challenging Agent Environments: Plans and Beliefs - Social Agents - Agent Execution Cycle.	L1,L2, L3	8
MODULE 3: Knowledge Representation – Logic – First Order Logic – Reflex Agent – Building a Knowledge Base – General Ontology – Interference – Logical Recovery.	L1,L2, L3	7
MODULE 4: Situational Calculus – Representation of Planning – Partial Order Planning – Practical Planners– Conditional Planning - Preplanning Agents.	L1, L2 and L3	5
MODULE 5: Acting under uncertainty – Probability – Baye's Rule – Belief Networks – Utility Theory - Decision Network- Value of Information – Decision Theoretic Agent Design.	L1, L2,L3	5

AIE6037	PROJECT DISSERTATION-II	L	T	P	C
Version 2020.1	Date of Approval: JULY 2020	0	0	0	15
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

The objective of this course is to provide practical training on some live/demo projects that will increase capability to work on actual problem in industry. It will be an in house training on some latest software which is in high demand in market. This training will be designed such that it will be useful for their future employment in industry.

Course Objectives

The objective of this course is to

1. Provide practical training on live projects
2. Increase technical capabilities on solving real life problems in company environment

Course Outcomes

On completion of this summer internship, the students will be able to:

CO1: Demonstrate a sound technical knowledge of their selected project topic.

CO2: Design and develop engineering solutions to complex problems utilising a systems approach.

CO3: Analyse various approaches for solving a complex engineering problem using different tools and techniques

CO4: Demonstrate the knowledge, skills and attitudes of a professional engineer.

CO5: Apply technical skills and knowledge in completing the project.

INTRODUCTION TO COMPUTERS AND PROGRAMMING IN C

Course Code: DSE6104

Credit Units: 03

Course Objective:

The objective of this course module is to acquaint the students with the basics of computers system, its components, data representation inside computer and to get them familiar with various important features of procedure oriented programming language i.e. C.

Course Contents:

Module I: Introduction

Introduction to computer, history, von-Neumann architecture, memory system (hierarchy, characteristics and types), H/W concepts (I/O Devices), S/W concepts (System S/W & Application S/W, utilities). Data Representation: Number systems, character representation codes, Binary, octal, hexadecimal and their interconversions. Binary arithmetic, floating point arithmetic, signed and unsigned numbers, Memory storage unit.

Module II: Programming in C

History of C, Introduction of C, Basic structure of C program, Concept of variables, constants and data types in C, Operators and expressions: Introduction, arithmetic, relational, Logical, Assignment, Increment and decrement operator, Conditional, bitwise operators, Expressions, Operator precedence and associativity. Managing Input and output Operation, formatting I/O.

Module III: Fundamental Features in C

C Statements, conditional executing using if, else, nesting of if, switch and break Concepts of loops, example of loops in C using for, while and do-while, continue and break. Storage types (automatic, register etc.), predefined processor, Command Line Argument.

Module IV: Arrays and Functions

One dimensional arrays and example of iterative programs using arrays, 2-D arrays Use in matrix computations.

Concept of Sub-programming, functions Example of user defined functions. Function prototype, Return values and their types, calling function, function argument, function with variable number of argument, recursion.

Module V: Advanced features in C

Pointers, relationship between arrays and pointers Argument passing using pointers, Array of pointers. Passing arrays as arguments.

Strings and C string library.

Structure and Union. Defining C structures, Giving values to members, Array of structure, Nested structure, passing strings as arguments.

File Handling.

Examination Scheme:

PROGRAMMING IN C LAB

Course Code: DSE6106

Credit Units: 01

Software Required: Turbo C

Course Contents:

- C program involving problems like finding the nth value of cosine series, Fibonacci series. Etc.
- C programs including user defined function calls
- C programs involving pointers, and solving various problems with the help of those.
- File handling

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V

ENGINEERING GRAPHICS LAB

Course Code: DSE6211

Credit Units: 01

Course Objective:

This course will provide students concepts on the drawings of different curves like straight line, parabola, ellipse etc. After completion of this course, students will be able to draw different figures manually and will be capable of using various instruments involved in drawings.

Course Contents:

Module I: General

Importance, Significance and scope of engineering drawing, Lettering, Dimensioning, Scales, Sense of proportioning, Different types of projections, Orthographic Projection, B.I.S. Specifications.

Module II: Projections of Point and Lines

Introduction of planes of projection, Reference and auxiliary planes, projections of points and Lines in different quadrants, traces, inclinations, and true lengths of the lines, projections on Auxiliary planes, shortest distance, intersecting and non-intersecting lines.

Module III: Planes other than the Reference Planes

Introduction of other planes (perpendicular and oblique), their traces, inclinations etc., Projections of points and lines lying in the planes, conversion of oblique plane into auxiliary Plane and solution of related problems.

Module IV: Projections of Plane Figures

Different cases of plane figures (of different shapes) making different angles with one or both reference planes and lines lying in the plane figures making different given angles (with one of both reference planes). Obtaining true shape of the plane figure by projection.

Module V: Projection of Solids

Simple cases when solid is placed in different positions, Axis faces and lines lying in the faces of the solid making given angles.

Module VI: Development of Surface

Development of simple objects with and without sectioning. Isometric Projection

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

OBJECT ORIENTED PROGRAMMING USING C++

Course Code: DSE6204

Credit Units: 03

Course Objective:

The objective of this module is to introduce object oriented programming. To explore and implement the various features of OOP such as inheritance, polymorphism, Exceptional handling using programming language C++. After completing this course student can easily identify the basic difference between the programming approaches like procedural and object oriented.

Course Contents:

Module I: Introduction

Review of C, Difference between C and C++, Procedure Oriented and Object Oriented Approach. Basic Concepts: Objects, classes, Principals like Abstraction, Encapsulation, Inheritance and Polymorphism. Dynamic Binding, Message Passing. Characteristics of Object-Oriented Languages. Introduction to Object-Oriented Modeling techniques (Object, Functional and Dynamic Modeling).

Module II: Classes and Objects

Abstract data types, Object & classes, attributes, methods, C++ class declaration, Local Class and Global Class, State identity and behaviour of an object, Local Object and Global Object, Scope resolution operator, Friend Functions, Inline functions, Constructors and destructors, instantiation of objects, Types of Constructors, Static Class Data, Array of Objects, Constant member functions and Objects, Memory management Operators.

Module III: Inheritance

Inheritance, Types of Inheritance, access modes – public, private & protected, Abstract Classes, Ambiguity resolution using scope resolution operator and Virtual base class, Aggregation, composition vs classification hierarchies, Overriding inheritance methods, Constructors in derived classes, Nesting of Classes.

Module IV: Polymorphism

Polymorphism, Type of Polymorphism – Compile time and runtime, Function Overloading, Operator Overloading (Unary and Binary) Polymorphism by parameter, Pointer to objects, this pointer, Virtual Functions, pure virtual functions.

Module V: Strings, Files and Exception Handling

Manipulating strings, Streams and files handling, formatted and Unformatted Input output. Exception handling, Generic Programming – function template, class Template Standard Template Library: Standard Template Library, Overview of Standard Template Library, Containers, Algorithms, Iterators, Other STL Elements, The Container Classes, General Theory of Operation, Vectors.

OBJECT ORIENTED PROGRAMMING USING C++ LAB

Course Code: DSE6208

Credit Units: 01

Software Required: Turbo C++

Course Contents:

- Creation of objects in programs and solving problems through them.
- Different use of private, public member variables and functions and friend functions.
- Use of constructors and destructors.
- Operator overloading
- Use of inheritance in and accessing objects of different derived classes.
- Polymorphism and virtual functions (using pointers).
- File handling.

BASICS OF ELECTRICAL & ELECTRONICS ENGINEERING LAB

Course Code: DSE6213

Credit Units: 01

List of Experiments:

1. To verify KVL & KCL in the given network.
2. To verify Superposition Theorem.
3. To verify Maximum Power Transfer Theorem.
4. To verify Reciprocity Theorem.
5. To determine and verify R_{Th} , V_{Th} , R_N , I_N in a given network.
6. To perform open circuit & short circuit test on a single-phase transformer.
7. To study transient response of a given RLC Circuit.
8. To perform regulation, ratio & polarity test on a single-phase transformer.
9. To measure power & power factor in a three phase circuit by two wattmeter method.
10. To measure power & power factor in a three phase load using three ammeter & three voltmeter method.

Examination Scheme:

DATABASE MANAGEMENT SYSTEMS

Course Code: DSE6302

Credit Units: 04

Course Objective:

The objective of this course is to get students familiar with Databases and their use. They can identify different types of available database model, concurrency techniques and new applications of the DBMS.

Course Contents:

Module I: Introduction

Concept and goals of DBMS, DBMS Architecture, Database Languages, Database Users, Database Abstraction.

Basic Concepts of ER Model: Entity Type, Entity Set, Relationship type, Relationship sets, Constraints: Cardinality Ratio and Participation Constraint, Keys, Mapping, Design of ER Model

Module II: Hierarchical model & Network Model

Concepts, Data definition, Data manipulation and implementation.

Network Data Model, DBTG Set Constructs, and Implementation

Module III: Relational Model

Relational database, Relational Algebra, Relational Calculus, Tuple Calculus.

Module IV: Relational Database Design and Query Language

SQL, QUEL, QBE, Normalization using Functional Dependency, 1NF, 2NF, 3NF, BCNF, Multivalued dependency and Join dependency.

Module V: Concurrency Control and New Applications

Transaction basics: ACID property, Lifecycle of Transaction, Why Concurrency Control, Schedule, Serializability, Lock Based Protocols, Time Stamped Based Protocols, Deadlock Handling, Crash Recovery. Distributed Database, Objective Oriented Database, Multimedia Database, Data Mining, Digital Libraries.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;
Att: Attendance

OPERATING SYSTEMS

Course Code: DSE6303

Credit Units: 03

Course Objective:

Operating Systems serve as one of the most important courses for undergraduate students, since it provides the students with a new sight to envision every computerized systems especially general purpose computers. Therefore, the students are supposed to study, practice and discuss on the major fields discussed in the course to ensure the success of the education process. The outcome of this course implicitly and explicitly affects the abilities the students to understand, analyze and overcome the challenges they face with in the other courses and the real world.

Course Contents:

Module I: Introduction to operating system

Operating system and function, Evolution of operating system, Batch, Interactive, multiprogramming, Time Sharing and Real Time System, multiprocessor system, Distributed system, System protection. Operating System structure, Operating System Services, System Program and calls.

Module II: Process Management

Process concept, State model, process scheduling, job and process synchronization, structure of process management, Threads, Inter-process Communication and Synchronization: Principle of Concurrency, Producer Consumer Problem, Critical Section problem, Semaphores, Hardware Synchronization, Critical Regions, Conditional critical region, Monitor, Inter Process Communication.

CPU Scheduling: Job scheduling functions, Process scheduling, Scheduling Algorithms, Non Preemptive and preemptive Strategies, Algorithm Evaluation, Multiprocessor Scheduling.

Deadlock: System Deadlock Model, Deadlock Characterization, Methods for handling deadlock, Prevention strategies, Avoidance and Detection, Recovery from deadlock combined approach.

Module III: Memory Management

Single Contiguous Allocation: H/W support, S/W support, Advantages and disadvantages, Fragmentation, Paging, Segmentation, Virtual memory concept, Demand paging, Performance, Paged replaced algorithm, Allocation of frames, Thrashing, Cache memory, Swapping, Overlays

Module IV: Device management

Principles of I/O hardware, Device controller, Device Drivers, Memory mapped I/O, Direct Access Memory, Interrupts, Interrupt Handlers, Application I/O interface, I/O Scheduling, Buffering, Caching, Spooling,

Disk organization, Disk space management, Disk allocation Method, Disk Scheduling, Disk storage.

Module V: File System and Protection and security

File Concept, File Organization and Access Mechanism, File Directories, Basic file system, File Sharing, Allocation method, Free space management.

Policy Mechanism, Authentication, Internal excess Authorization.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

DATA STRUCTURES USING C

Course Code: DSE6304

Credit Units: 04

Course Objective:

Data structure deals with organizing large amount of data in order to reduce space complexity and time requirement. This course gives knowledge of algorithms, different types of data structures and the estimation space and time complexity.

Course Contents:

Module I: Introduction to Data structures

Data structures: Definition, Types. Algorithm design, Complexity, Time-Space Trade- offs. Use of pointers in data structures. Array Definition and Analysis, Representation of Linear Arrays in Memory, Traversing of Linear Arrays, Insertion And Deletion, Single Dimensional Arrays, Two Dimensional Arrays, Multidimensional Arrays, Function Associated with Arrays, Character String in C, Character String Operations, Arrays as parameters, Implementing One Dimensional Array, Sparse matrix.

Module II: Introduction to Stacks and queue

Stack: Definition, Array representation of stacks, Operations Associated with Stacks- Push & Pop, Polish expressions, Conversion of infix to postfix, infix to prefix (and vice versa), Application of stacks recursion, polish expression and their compilation, conversion of infix expression to prefix and postfix expression, Tower of Hanoi problem.

Queue: Definition, Representation of Queues, Operations of queues- QInsert, QDelete, Priority Queues, Circular Queue, Deque.

Module III: Dynamic Data Structure

Linked list: Introduction to Singly linked lists: Representation of linked lists in memory, Traversing, Searching, Insertion into, Deletion from linked list, doubly linked list, circular linked list, generalized list. Applications of Linked List-Polynomial representation using linked list and basic operation. Stack and queue implementation using linked list.

Module IV: Trees and Graphs

Trees: Basic Terminology, Binary Trees and their representation, expression evaluation, Complete Binary trees, extended binary trees, Traversing binary trees, Searching, Insertion and Deletion in binary search trees, General trees, AVL trees, Threaded trees, B trees.

Graphs: Terminology and Representations, Graphs & Multigraphs, Directed Graphs, Sequential representation of graphs, Adjacency matrices, Transversal Connected Component and Spanning trees.

Module V: Sorting and Searching and file structures

Sorting: Insertion Sort, Bubble sort, Selection sort, Quick sort, two-way Merge sort, Heap sort, Partition exchange sort, Shell sort, Sorting on different keys, External sorting.

Searching: Linear search, Binary search, File structures: Physical storage media, File Organization, Linked organization of file, Inverted file, Organization records into blocks, Sequential blocks, Hash function, Indexing & Hashing, Multilevel indexing, Tree Index, Random file, Primary Indices, Secondary Indices, B tree index files.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;

DATA COMMUNICATION AND COMPUTER NETWORKS LAB

Course Code: DSE6415

Credit Units: 01

Equipments Required:

Switch Network Cables, Patch Chord- Fiber optical and twisted pair cable, LAN cards, RJ-45 connectors etc.

Platforms required: Linux Server

Course Contents:

- Introduction and Installation of Linux
- Administrating Linux
- Setting up a Local Area Network
- Connecting to the Internet
- Setting up Print Server
- Setting up File Server
- Setting up Mail Server
- Setting up FTP Server
- Setting up Web Server
- Setting up MySQL Database Server

DATABASE MANAGEMENT SYSTEMS LAB

Course Code: DSE6307

Credit Units: 01

Software Required: Oracle 9i

Topics covered in lab will include:

- Database Design
- Data Definition (SQL)
- Data Retrieval (SQL)
- Data Modification (SQL)
- Views
- Triggers and Procedures
- PL\SQL

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V

E-COMMERCE AND ERP

Course Code: DSE6310

Credit Units: 03

Course Objective:

This course examines the evolution of enterprise resource planning (ERP) systems - from internally focused client/server systems to externally focused e-business. This class studies the types of issues that managers will need to consider in implementing cross-functional integrated ERP systems. The objective of this course is to make students aware of the potential and limitations of ERP systems. This objective will be reached through hands-on experience, case studies, lectures, guest speakers and a group project. The course would equip students with the basics of E-Commerce, technologies involved with it and various issues associated with.

Course Contents:

Module I: Introduction E-commerce and ERP

E-commerce and its types, EDI and its basics, Digital payment systems, Enterprise-An Overview, Benefits of ERP, ERP and Related Technologies-Business Process Reengineering (BPR), Data Warehousing, Data Mining, On-line Analytical Processing (OLAP), Supply Chain Management, Management Information systems (MIS), Decision support system (DSS), Executive Information systems (EIS). ERP – A Manufacturing Perspective Materials Requirement Planning (MRP), Bill of Material (Bom), Distribution Requirements Planning (DRP), JIT & Kanban, CAD/CAM, Product Data Management (PDM), Benefits of PDM, MTO, MTS, ATO, ETO, CTO.

Module II: ERP Modules

Business Modules in an ERP Packag- Finance, Manufacturing (Production), Human Resources, Plant Maintenance, Materials Management, Quality Management, Sales and Distribution.

Module III: Benefits of ERP

Time Reduction, On time shipment, Improved Resource Utilization, Performance, Customer Satisfaction, Flexibility, information accuracy and decision making capability, reduction in quality costs, Accuracy.

Module IV: ERP Implementation

ERP Implementation Lifecycle, Implementation Methodology, In-house implementation-Pros and cons, Vendors, Consultants and Users and their roles, Project Management and Monitoring after ERP Implementation.

Module V: The ERP Market and Future Directions

ERP Market Place- SAP AG, PeopleSoft, Baan Company, JD Edwards World Solutions Company, Oracle Corporation, QAD, System Software Associates, Inc. (SSA).Future directions in ERP.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE

ELECTRONIC DEVICES & CIRCUITS

Course Code: DSE6311

Credit Units: 02

Course Objective:

This course builds from basic knowledge of Semiconductor Physics to an understanding of basic devices and their models. This course builds a foundation for courses on VLSI design and analog CMOS IC Design.

Course Contents:

Module I: Semiconductor physics: Mobility & conductivity, Charge densities in a semiconductor, Fermi dirac distribution, carrier concentration and Fermi levels in semiconductor, generation and recombination of charges, diffuse and continuity equations, Hall effect.

Module II: Semiconductor Diode and Diode Circuits

Junction diode, Diode as circuit element, Different types of diodes: Zener, Schottky, LED. Zener as voltage regulator, Diffusion capacitance, Drift capacitance, the load line concept, half wave, full wave rectifiers, clipping and clamping circuits.

Module III: Bipolar Junction Transistor

Bipolar junction transistor: Introduction, Transistor, construction, transistor operations, BJT characteristics, load line, operating point, leakage currents, saturation and cut off mode of operations. Bias stabilization: Need for stabilization, fixed Bias, emitter bias, self bias, bias stability with respect to variations in I_{CO} , V_{BE} & β , Stabilization factors, thermal stability.

Module IV: Small signal Analysis of transistor and Multistage Amplifier

Hybrid model for transistors at low frequencies, Analysis of transistor amplifier using h parameters, emitter follower, Miller's theorem, THE CE amplifier with an emitter resistance, Hybrid π model, Hybrid π Conductances and Capacitances, CE short circuit current gain, CE short circuit current gain with R_L Multistage amplifier: Cascading of Amplifiers, Coupling schemes (RC coupling and Transformer coupling)

Module V: Field Effect Transistors

Field effect transistor (JFET, MOSFET): volt-ampere characteristics, small signal model –common drain, common source, common gate, operating point, MOSFET, enhancement and -depletion mode, Common source amplifier, Source follower

Module VI: Feedback Amplifiers

Feedback concept, Classification of Feedback amplifiers, Properties of negative Feedback amplifiers, Impedance considerations in different Configurations, Examples of analysis of feedback Amplifiers.

Module VII: Power Amplifiers

Power dissipation in transistors, difference with voltage amplifiers, Amplifier classification (Class A, Class B, Class C, Class AB) class AB push pull amplifier, collector efficiency of each, cross over distortion.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE

DIGITAL ELECTRONICS

Course Code: DSE6313

Credit Units: 02

Course Objective:

This course is an introduction to the basic principles of digital electronics. At the conclusion of this course, the student will be able to quantitatively identify the fundamentals of computers, including number systems, logic gates, logic and arithmetic subsystems, and integrated circuits. They will gain the practical skills necessary to work with digital circuits through problem solving and hands on laboratory experience with logic gates, encoders, flip-flops, counters, shift registers, adders, etc. The student will be able to analyze and design simple logic circuits using tools such as Boolean Algebra and Karnaugh Mapping, and will be able to draw logic diagrams.

Course Contents:

Module I: Boolean Functions

Analog & digital signals, AND, OR, NOT, NAND, NOR & XOR gates, Boolean algebra, Standard representation of logical functions, K-map representation and simplification of logical function, don't care conditions, XOR & XNOR simplifications of K-maps, Tabulation method.

Module II: Combinational Circuits

Adders, Subtractors, Multiplexer, de-multiplexer, decoder & encoder, code converters, Comparators, decoder / driver for display devices, Implementation of logic functions using multiplexer / de-multiplexer,.

Module III: Sequential Circuits

Flip-flops: SR, JK, D & T flip flops – Truth table, Excitation table, Conversion of flip-flops, race around condition, Master Slave flip flop, Shift registers: SIPO, PISO, PIPO, SIPO, Bi-directional; Counters: ripple & synchronous counters – up / down; Synchronous Sequential circuit: design procedure.

Module IV: Logic families

Logic families: RTL, DTL, TTL, ECL

Module V: Data Converters

Data converters: ADC – successive approximation, linear ramp, dual slope; DAC – Binary Weighted, R-2R ladder type

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

ARTIFICIAL INTELLIGENCE

Course Code: DSE6404

Credit Units: 03

Course Objective:

To develop semantic-based and context-aware systems to acquire, organize process, share and use the knowledge embedded in multimedia content. Research will aim to maximize automation of the complete knowledge lifecycle and achieve semantic interoperability between Web resources and services. The field of Robotics is a multi disciplinary as robots are amazingly complex system comprising mechanical, electrical, electronic H/W and S/W and issues germane to all these.

Course Contents:

Module I: Problem solving and Scope of AI

Introduction to Artificial Intelligence. Applications- Games, theorem proving, natural language processing, vision and speech processing, robotics, expert systems. AI techniques- search knowledge, abstraction.

Problem Solving

State space search; Production systems, search space control: depth-first, breadth-first search. Heuristic search - Hill climbing, best-first search, branch and bound. Problem Reduction, Constraint Satisfaction End, Means-End Analysis. LA* Algorithm, L(AO*) Algorithm.

Module II: Knowledge Representation

Knowledge Representation issues, first order predicate calculus, Horn Clauses, Resolution, Semantic Nets, Frames, Partitioned Nets, Procedural Vs Declarative knowledge, Forward Vs Backward Reasoning.

Module III: Understanding Natural Languages

Introduction to NLP, Basics of Syntactic Processing, Basics of Semantic Analysis, Basics of Parsing techniques, context free and transformational grammars, transition nets, augmented transition nets, Shanks Conceptual Dependency, Scripts ,Basics of grammar free analyzers, Basics of sentence generation, and Basics of translation..

Module IV

Expert System: Need and justification for expert systems, knowledge acquisition, Case studies: MYCIN, R1

Learning: Concept of learning, learning automation, genetic algorithm, learning by inductions, neural nets. **Programming Language:** Introduction to programming Language, LISP and PROLOG.

Handling Uncertainties: Non-monotonic reasoning, Probabilistic reasoning, use of certainty factors, Fuzzy logic.

Module V: Introduction to Robotics

Fundamentals of Robotics, Robot Kinematics: Position Analysis, Dynamic Analysis and Forces, Robot Programming languages & systems: Introduction, the three levels of robot programming, requirements of a robot programming language, problems peculiar to robot programming languages.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE

DIGITAL ELECTRONICS LAB

Course Code: DSE6314

Credit Units: 01

List of Experiments:

1. To verify the truth tables of OR, AND, NOR, NAND, EX-OR, EX-NOR gates.
2. To obtain half adder, full adder and subtractor using gates and verify their truth tables.
3. To verify the truth tables of RS, JK and D flip- flops.
4. To design and study a binary counter.
5. To design and study synchronous counter.
6. To design and study ripple counter.
7. To convert BCD number into excess 3 form
8. To design and study a decade counter.
9. To design and study a sequence detector.
10. To implement control circuit using multiplexer.

COMMUNICATION SYSTEMS

Course Code: DSE6407

Credit Units: 02

Course Objective:

The purpose of this course is to provide a thorough introduction to analog and digital communications with an in depth study of various modulation techniques, Random processes are discussed, and information theory is introduced.

Course Contents:

Module I: Introduction

Communication Process, Source of Information, Communication channels, base-band and pass-band signals, Review of Fourier transforms, Random variables, different types of PDF, need of modulation process, primary communication resources, analog versus digital communications

Module II: Amplitude modulation

Amplitude modulation with full carrier, suppressed carrier systems, single side band transmission, switching modulators, synchronous detection, envelope detection, effect of frequency and phase errors in synchronous detection, comparison of various AM systems, vestigial side band transmission.

Module III: Angle Modulation

Narrow and wide band FM, BW calculations using Carlson rule, Direct & Indirect FM generations, phase modulation, Demodulation of FM signals, noise reduction using pre & de-emphasis.

Module IV: Pulse Modulation

Pulse amplitude, width & position modulation, generation & detection of PAM, PWM & PPM, Comparison of frequency division and time division multiplexed systems, Basics of digital communications: ASK, PSK, FSK, QPSK basics & waveform with brief mathematical introduction

Module V: Noise

Different types of noise, noise calculations, equivalent noise band width, noise figures, effective noise temperature, noise figure.

Module VI: Introduction to Information Theory

Measurement of Information, mutual, Shannon's theorem, Source coding, channel coding and channel capacity theorem, Huffman code

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

COMMUNICATION SYSTEMS LAB

Course Code: DSE6408

Credit Units: 01

List of Experiments:

- To study the sampling and reconstruction of a given signal.
- To study amplitude modulation and demodulation.
- To study frequency modulation and demodulation.
- To study time division multiplexing.
- To study pulse amplitude modulation.
- To study delta and adaptive delta modulation and demodulation.
- To study carrier modulation techniques using amplitude shift keying and Frequency shift keying.
- To study carrier modulation techniques using binary phase shift keying and differential shift keying.
- To study pulse code modulation & differential pulse code modulation as well as relevant demodulations.
- To study quadrature phase shift keying & quadrature amplitude modulation.

OPEN SOURCE TECHNOLOGIES

Course Code: DSE6617

Credit Units: 02

Course Objective:

This course is aimed to provide a fundamental understanding of dynamic web site creation. PHP is the language used for development of most common web sites. Syllabus includes basic and advanced features of PHP which includes detailed introduction of PHP and MYSQL, Arrays, Loops and variables etc. It also gives an overview open source framework like JOOMLA, ZEND etc.

Course Contents:

Module I: Introduction to Open Source and PHP programming

Introduction to Open Sources Technologies, Introduction to PHP, installation and configuration, Advantages and Disadvantages of PHP, Client Side Scripting, Server Side Scripting, Variables, data types, various types of function, creating your own function, Strings in PHP, String Functions.

Module II: Operator, Loops, Array, Exception and Error Handling

Operators, Conditions, Loops, Using for each, Creating and Using Arrays, Multidimensional Array, Associative Array.

Error Handling in PHP, Errors and Exceptions, Exception class, try/catch block, throwing an exception, defining your own Exception subclass.

Module III: Classes, File system, Passing Information between pages

Object oriented programming with PHP, Working with Datetime, code re-use, require (), include(), and the include_path; Understanding PHP file permissions, File reading and writing functions, File system functions, File uploads, Sending mail & use of email server.

HTTP, GET arguments, POST arguments, Using Session in PHP, cookies, The setcookie() function, Deleting Cookies and Reading Cookies.

Module IV: Working with database

HTML Tables and Database tables, Database manipulation (Select, Insert, Update, Delete), validating User Input using Javascript.

MYSQL, Introducing MySQL; database design concepts; the Structured Query Language (SQL); communicating with a MySQL backend via the PHP, MySQL API Building Database Applications, Developing PHP scripts for dynamic web page like feedback form, online admission form and online test.

Module V: Working with Frameworks

Working with Mambo, Working with Joomla, Working with framework. Working with wordpress, Working with drupal, Use of Joomla in rapid development of website. Developing of simple website using Joomla.

Examination Scheme:

Components	CT1	A/C/Q	ATTD.	EE
Weightage (%)	15	10	5	70

OPEN SOURCE TECHNOLOGIES LAB

Course Code: DSE6618

Credit Units: 01

Course Contents:

1. Write the process of installation of web server.
2. Write programs to print all details of your php server. Use phpinfo().
3. Write a program to give demo of ECHO and PRINT command.
4. Write a program to implement the string functions.
5. Write a program to print Fibonacci series upto a given number using recursion.
6. Write a menu driven program to implement a calculator which performs only addition, subtraction, multiplication and division. The operation should happen based on user choice.
7. Write a program sort ten number by using array.
8. Write a program to demonstrate the concept of associative array.
9. Write a program to demonstrate the concept of multidimensional array.
10. Write a program to demonstrate the concept of Classes & objects.
11. Create a login form with two text fields called "login" and "password". When user enters "Amity" as a user name and "university" as a password it should be redirected to a Welcome.HTML page or to Sorry.HTML in case of wrong username/password.
12. How to work with sessions in PHP?
13. Introduction to Mysql creating databases, tables, using command line and gui interface, phpmyadmin
14. How to connect to MySQL using PHP ? Write programs for insertion, deletion updates and other sql queries. Design front end using html, css and write php scripts for processing of data. Try all different methods of connecting from php to MySQL
15. Make a small project with mysql and php to perform CRUD operations. Use Session also.
16. Create a form with a text box asking to enter your favorite city with a submit button when the user enters the city and clicks the submit button another php page should be opened displaying "Welcometo the city".
17. Write a program to design login form in which find the greatest number amongst three numbers.
18. WAP for Marksheet generation.
19. Design a webpage for entering the student details with all the validations applied on it.
20. Write a php script to print current date and time.
21. Write a pp script to use include and require functions.
22. Write a php script including all the file handling functions.
23. Design a website using Wordpress /Joomla/Drupal
24. Introduction to Laravel frame work and one simple project.

ARTIFICIAL NEURAL NETWORK

Course Code: DSE6411

Credit Units: 02

Course Objective:

Aim of this course is to introduce the students fundamentals concepts of Neural network and its various application in computer science.

Module I:-

Artificial Neural Networks (ANN) and biological neural networks, supervised and unsupervised learning rules, neural network applications.

Module II:-

Unsupervised learning:- Hebbian learning and competitive learning. Supervised learning:- Back propagation algorithms,

Learning rule:-

Delta learning rule, Widrow-Hoff learning rule, Winner-Take-All learning rule.

Module III:-

Feed forward neural network, feed backward neural network, Perceptron and its learning law, single-layer perceptron, multi-layer perceptron.

Module IV:-

Self organizing networks: Kohonen algorithm, Hopfield Networks: Hopfield network algorithm, Adaptive resonance theory: Network and learning rules.

Module V:-

Associative memory, auto-associative memory, bi-directional associative memory.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;
Att: Attendance

Text Book:

ARTIFICIAL NEURAL NETWORK LAB

Course Code: DSE6412

Credit Units: 01

Course Objective

The aim of this lab to gain the practical knowledge of basic neuron models and learning algorithms.

Lab Assignment

To study some basic neuron models and learning algorithms by using Matlab's neural network toolbox

Examination Scheme

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

SOFTWARE ENGINEERING

Course Code: DSE6614

Credit Units: 03

Course Objective:

The basic objective of Software Engineering is to develop methods and procedures for software development that can scale up for large systems and that can be used to consistently produce high-quality software at low cost and with a small cycle time. Software Engineering is the systematic approach to the development, operation, maintenance, and retirement of software. The course provides a thorough introduction to the fundamentals principles of software engineering. The organization broadly be based on the classical analysis-design-implementation framework.

Course Contents:

Module I: Introduction

Software life cycle models: Waterfall, Prototype, Evolutionary and Spiral models, Overview of Quality Standards like ISO 9001, SEI-CMM

Module II: Software Metrics and Project Planning

Size Metrics like LOC, Token Count, Function Count, Design Metrics, Data Structure Metrics, Information Flow Metrics. Cost estimation, static, Single and multivariate models, COCOMO model, Putnam Resource Allocation Model, Risk management.

Module III: Software Requirement Analysis, design and coding

Problem Analysis, Software Requirement and Specifications, Behavioural and non-behavioural requirements, Software Prototyping Cohesion & Coupling, Classification of Cohesiveness & Coupling, Function Oriented Design, Object Oriented Design, User Interface Design Top-down and bottom-up Structured programming, Information hiding,

Module IV: Software Reliability, Testing and Maintenance

Failure and Faults, Reliability Models: Basic Model, Logarithmic Poisson Model, Software process, Functional testing: Boundary value analysis, Equivalence class testing, Structural testing: path testing, Data flow and mutation testing, unit testing, integration and system testing, Debugging, Testing Tools, & Standards. Management of maintenance, Maintenance Process, Maintenance Models, Reverse Engineering, Software RE-engineering

Module V: UML

Introduction to UML, Use Case Diagrams, Class Diagram: State Diagram in UML Activity Diagram in UML Sequence Diagram in UML Collaboration Diagram in UML, Domain, Component Diagram and Deployment Diagram

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;
Att: Attendance

COMPUTER ARCHITECTURE

Course Code: DSE6502

Credit Units: 04

Course Objective:

This course deals with computer architecture as well as computer organization and design. Computer architecture is concerned with the structure and behaviour of the various functional modules of the computer and how they interact to provide the processing needs of the user. Computer organization is concerned with the way the hardware components are connected together to form a computer system. Computer design is concerned with the development of the hardware for the computer taking into consideration a given set of specifications.

Course Contents:

Module I: Register Transfer Language

Register Transfer, Bus and Memory Transfers, Arithmetic Micro-operations, Logic Micro-operations, Shift Micro-operations, Arithmetic Logic shift Unit.

Module II: Basic Computer Organizations and Design

Instruction Codes, Computer Registers, Computer Instructions, Timing and Control, Instruction Cycle, Memory-Reference Instructions, Input-Output and Interrupt, Design of Accumulator Logic. Hardwired and Microprogrammed control: Control Memory, Address Sequencing, Design of Control Unit

Module III: Central Processing Unit

Introduction, General Register Organization, Stack Organization, Instruction representation, Instruction Formats, Instruction type, Addressing Modes, Data Transfer and Manipulation, Program Control, Reduced Instruction Set Computer RISC and CISC. Computer Arithmetic: Introduction, Addition and Subtraction Algorithm, Multiplication Algorithms, Booth Multiplication, Division Algorithms, Floating-Point Arithmetic Operations

Module IV: Memory and Intrasystem Communication and Input output organisation

Memory: Memory types and organization Memory Hierarchy, Main Memory, Auxiliary Memory, Associative Memory, Cache Memory with mapping techniques, Virtual Memory, Memory Management Hardware, **Intrasystem communication and I/O:** Peripheral Devices, Input-Output, Controller and I/O driver, IDE for hard disk, I/O port and Bus concept, Bus cycle, Synchronous and asynchronous transfer, Modes of Transfer, DMA, DMA Transfer, DMA Controller, I/O Processor, CPU-IOP Communication

Module V: Introduction to Pipelining and Multi-Processor

Parallel Processing, Pipelining, Arithmetic Pipeline, Instruction Pipeline, RISC Pipeline, Multiprocessors: Characteristics of Multiprocessors

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

JAVA PROGRAMMING

Course Code: DSE6503

Credit Units: 03

Course Objective:

The objective is to impart programming skills used in this object oriented language java. The course explores all the basic concepts of core java programming. The students are expected to learn it enough so that they can develop the web solutions like creating applets etc.

Course Contents:

Module I: Java Basics

Concepts of OOP, Features of Java, How Java is different from C++, Environmental setup, Basic syntax, Objects and classes, Basic Data Types, Variable Types, Modifier Types, Basic operators, Loop Control, Decision Making, Strings and Arrays, Methods, I/O.

Module II: Java Object Oriented

Inheritance, Overriding, Polymorphism, Abstraction, Encapsulation, Interfaces, Packages, Exploring java.util package.

Module III: Exception Handling and Threading

Exception Hierarchy, Exception Methods, Catching Exceptions, Multiple catch Clauses, Uncaught Exceptions Java's Built-in Exception.

Creating, Implementing and Extending thread, thread priorities, synchronization suspending, resuming and stopping Threads, Multi-threading.

Module IV : Event Handling And AWT

Event handling Mechanism, Event Model, Event Classes, Sources of Events, Event Listener Interfaces, AWT: Working with Windows, AWT Controls, Layout Managers

Module V: Java Advanced

AppletClass, Architecture, Skeleton, Display Methods., Swings: Japplet, Icons, labels, Text Fields, Buttons, Combo Boxes., Socket Programming: Socket methods, Server Socket methods, Socket Client and Socket Server examples.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;
Att: Attendance

SOFTWARE ENGINEERING LAB

Course Code: DSE6616

Credit Units: 01

Software Required: Rational Rose

Assignments will be provided for the following:

- Use of Rational Rose for visual modeling.
- Creating various UML diagrams such as use case, sequence, collaboration, activity, state diagram, and class diagrams.

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

JAVA PROGRAMMING LAB

Course Code: DSE6507

Credit Units: 01

Software Required: JDK1.3

Assignments will be provided for the following:

- Java programs using classes & objects and various control constructs such as loops etc, and data structures such as arrays, structures and functions
- Java programs for creating Applets for display of images and texts.
- Programs related to Interfaces & Packages.
- Input/Output and random files programs in Java.
- Java programs using Event driven concept.
- Programs related to network programming.

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

ADVANCE DATA STRUCTURES AND ALGORITHM LAB

Course Code: DSE6509

Credit Units: 01

Programs based on Implementation of Graphs using Adjacency Matrix, Linked List , implementation of graph algorithms like BFS,DFS, Minimum Spanning Tree, Binary Search Tree, Knapsack Problem using Greedy Algorithm, Dynamic Programming, Shortest Path Algo (Dijkstra's), Implementing B-Tree,AVL Tree ,Red Black Tree. Implementing Sets, Dictionaries, Priority Queue using Heap.

Recommended Software: Java/C++/C/Python

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

PYTHON PROGRAMMING LAB

Course Code: DSE6508

Credit Units: 01

Course Contents:

- Setting up python on Windows/Linux/Mac
- First program in python
- Programs related to basic input/output.
- Programs related to variables, strings, numbers
- Programs related to Lists and Tuples
- Programs related to Functions
- Programs related to If Statements
- Programs related to While Loops and Input
- Programs related to Basic Terminal Apps
- Programs related to Dictionaries
- Programs related to Classes
- Programs related to Exceptions
- Programs related to GUI programming
- Using Word, Excel, PDF files in python.
- Web programming in python,
- Case study of application areas of python.

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

SUMMER INTERNSHIP EVALUATION-I

Course Code: DSE6535

Credit Units: 03

Course Objective:

The objective of this course is to provide practical training on some live projects that will increase capability to work on actual problem in industry. This training may undergo in an industrial environment or may be an in house training on some latest software which is in high demand in market. This training will be designed such that it will useful for their future employment in industry.

Examination Scheme:

Feedback from industry/work place	20
Training Report	40
Viva	15
Presentation	25
Total	100

VHDL PROGRAMMING

Course Code: DSE6512

Credit Units: 02

Course Objective:

VHDL is commonly used as a design-entry language for field-programmable gate arrays and application-specific integrated circuits in electronic design automation of digital circuits. The course aims to discuss the syntax of the language to model a digital system.

Course Contents:

Module I

Fundamental VHDL Units, LIBRARY Declarations, ENTITY, ARCHITECTURE, Introductory Examples, Specification of combinational systems using VHDL, Introduction to VHDL, Basic language element of VHDL, Behavioural Modeling, Data flow modeling, Structural modeling, Subprograms and overloading, VHDL description of gates.

Module II

Data Types; Pre-Defined Data Types, User-Defined Data Types, Subtypes, Arrays, Port Array, Records, Signed and Unsigned Data Types, Data Conversion

Module III: Sequential codes

PROCESS: Signals and Variables, IF, WAIT, CASE, LOOP, CASE versus IF, CASE versus WHEN, Bad Clocking, Using Sequential Code to Design Combinational Circuits
Description and design of sequential circuits using VHDL,

Module IV

Standard combinational modules, Design of a Serial Adder with Accumulator, State Graph for Control Network, design of a Binary Multiplier, Multiplication of a Signed Binary Number, Design of a Binary Divider.

Module V

Micro programmed Controller, Structure of a micro programmed controller, Basic component of a micro system, memory subsystem. Overview of PAL, PLA, FPGA, CPLD.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;

VHDL PROGRAMMING LAB

Course Code: DSE6513

Credit Units: 01

Software Required: Mentor Graphics

Topics covered in lab will include:

- Designing Basic Gates.
- Designing Combinational circuits like adder, multiplexer, PLA
- Designing Sequential Circuits like flip-flops, counters, registers.

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

MICROPROCESSOR

Course Code: DSE6515

Credit Units: 03

Course Objective:

This course deals with the systematic study of the Architecture and programming issues of 8085-microprocessor family. The aim of this course is to give the students basic knowledge of the above microprocessor needed to develop the systems using it.

Course Contents:

Module I: Introduction to Microcomputer Systems

Introduction to Microprocessors and microcomputers, Study of 8 bit Microprocessor, 8085 pin configuration, Internal Architecture and operations, interrupts, Stacks and subroutines, various data transfer schemes.

Module II: ALP and timing diagrams

Introduction to 8085 instruction set, advance 8085 programming, Addressing modes, Counters and time Delays, Instruction cycle, machine cycle, T-states, timing diagram for 8085 instruction.

Module III: Memory System Design & I/O Interfacing

Interfacing with 8085. Interfacing with input/output devices (memory mapped, peripheral I/O), Cache memory system. Study of following peripheral devices 8255, 8253, 8257, 8255, 8251.

Module IV: Architecture of 16-Bit Microprocessor

Difference between 8085 and 8086, Block diagram and architecture of 8086 family, pin configuration of 8086, Minimum mode & Maximum mode Operation. Internal architecture of 8086, Bus Interface Unit, Register Organization, Instruction Pointer, Stack & Stack pointer, merits of memory segmentation, Execution Unit, Register Organization.

Module V: Pentium Processors

Internal architecture of 8087, Operational overview of 8087, Introduction to 80186, 80286, 80386 & 80486 processors, Pentium processor.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;
Att: Attendance

SYSTEM PROGRAMMING AND COMPILER CONSTRUCTION

Course Code: DSE6714

Credit Units: 03

Course Objective:

This course provides knowledge to design various system programs.

Course Contents:

Module I: Introduction

Definition, Evolution, Components, Editors: Introduction to system Programming Line editor, Full screen editor and multi window editor. Case study MS-Word, DOS Editor and vi editor.

Module II: Assemblers

First pass and second pass of assembler and their algorithms. Assemblers for CISC Machines: case study x85 & x86 machines.

Module III: Compilers & Macro Processor

Introduction to various translators. Various phases of compiler. Bootstrapping for compilers, Introduction to. Design of a compiler in C++ as Prototype. Basic Macro Processor functions- Macro definition & expansion – Macro Processor Algorithm & Data Structures, conditional – Macro Expansion, Keyword Macro Parameters, Macro with in Macro Implementation, case study MASM and ANSI C Macro language.

Module IV: Debuggers, Loaders and Linkers

Introduction to various debugging techniques. Case study:- Debugging in Turbo C++ IDE. Linkers and Loaders Concept of linking. Case study of Linker in x86 machines. Loading of various loading schemes.

Module V: Operating System

Booting techniques and sub-routines. Design of kernel and various management for OS. Design of Shell and other utilities, (Overview of Unix OS, Difference Between Unix and Linux, Commands in Unix.)-changes made

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

ADVANCED JAVA PROGRAMMING

Course Code: DSE6603

Credit Units: 03

Course Objective:

The objective is to equip the students with the advanced feature of contemporary java which would enable them to handle complex programs relating to managing data and processes over the network. The major objective of this course is to provide a sound foundation to the students on the concepts, precepts and practices, in a field that is of immense concern to the industry and business.

Course Contents:

Module I: Distributed Computing

Introduction to Java RMI, RMI services, RMI client, Running client and server, Introduction of Swing, Swing Components, Look and Feel for Swing Components, Introduction to Multimedia Programming.

Module II: Database Connectivity

ODBC and JDBC Drivers, Connecting to Database with the java.sql Package, Using JDBC Terminology, JDBC with mysql, postgresql.

Module III: Servlet Programming

Introduction to Servlets, Servlet Life Cycle, Servlet based Applications, Servlet and HTML.Filters, jdbc with servlets, session Management techniques in detail.

Module IV: JSP Programming

JSP: Introduction to JSP, JSP implicit objects, JSP based Applications, Java. Net. Login & Logout Example, jdbc with jsp.

Module V: JEE Web Application

The Model-View-Controller Architecture What is Struts, Struts Tags, Creating Beans, Other Bean Tags, Bean Output, Creating HTML Forms, The Action Form class The Action class, Simple Struts: a simple Struts application; Introduction to EJB.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

ADVANCE DATABASE MANAGEMENT SYSTEM

Course Code: DSE6604

Credit Units: 03

Course Objective:

The objective of this course is to expose the students to the implementation techniques of database system. This course explains techniques for query processing and optimization with transaction and concurrency control techniques

Course Contents:

Module I: Relational Databases

Integrity Constraints revisited, Extended ER diagram, Relational Algebra & Calculus, Functional, Multivalued and Join Dependency, Normal Forms, Rules about functional dependencies.

Module II: Query Processing and Optimization

Valuation of Relational Operations, Transformation of Relational Expressions, Indexing and Query Optimization, Limitations of Relational Data Model, Null Values and Partial Information.

Object Oriented and Object Relational Databases

Modeling Complex Data Semantics, Specialization, Generalization, Aggregation and Association, Objects, Object Identity, Equality and Object Reference, Architecture of Object Oriented and Object Relational Databases

Module III: Parallel and Distributed Databases

Distributed Data Storage – Fragmentation & Replication, Location and Fragment

Transparency Distributed Query Processing and Optimization, Distributed Transaction Modeling and concurrency Control, Distributed Deadlock, Commit Protocols, Design of Parallel Databases, Parallel Query Evaluation.

Advanced Transaction Processing

Nested and Multilevel Transactions, Compensating Transactions and Saga, Long Duration Transactions, Weak Levels of Consistency, Transaction Work Flows, Transaction Processing Monitors.

Module IV

Multimedia databases, Databases on the Web and Semi-Structured Data

Case Study: Oracle Xi

Examination Scheme:

DIGITAL COMPUTER ORGANIZATION

Course Code: DSE6605

Credit Units: 03

Course Objective:

The Objective of this course is to expose the students to the fundamentals and the concepts of Digital & Computer Organization and Representation of Information and Basic Building Blocks, Basic Organization, Memory Organization, Input-Output Organization, Processor Organization etc. This course is designed to understand the concepts of Computer Organization for Research & Development as well as for application.

Course Contents:

Module I: Representation of Information and Basic Building Blocks

Number Systems, Binary, Octal, Hexadecimal, Character Codes (BCD, ASCII, EBCDIC), Logic gates, Boolean algebra, K-map Simplification, Half adder, Full adder, Decoders, Multiplexes, Binary Counters, Flip/Flops: SR FF, JK FF, Master Slave FF, T and D FF, Registers: Parallel and Serial Registers, Counters (Synchronous & Asynchronous), ALU, Micro-Operation, ALU-chip.

Module II: Basic Organization

Von Neumann Machine (IAS Computer), Operational flow chart (Fetch, Execute), Instruction Cycle, Organization of Central Processing Unit, Hardwired and Micro programmed control unit, Single Organization, General Register Organization, Stack Organization, Addressing Modes, Instruction Formats, Data transfer & Manipulation, I/O organization, Bus Architecture, Programming Registers.

Module III: Memory Organization

Memory hierarchy, Main Memory (RAM/ROM chips) with mapping, Auxiliary memory, Associative memory and its mapping, Virtual memory, Cache memory with mapping techniques, Memory management hardware.

Module IV: Input-Output organization

Peripheral devices, I/O interface, Direct memory access, Modes of transfer, Priority Interrupt, I/O Processors, Serial Communication, Asynchronous data transfer, Strobe Control, Handshaking, I/O Controllers, CPU-IOP Communication.

Module V: Processor Organization

Introductory Concept of pipeline, Flynn's Classification, Parallel processing. RISC and CISC characteristics, arithmetic pipeline with example.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

MICROPROCESSOR LAB

Course Code: DSE6517

Credit Units: 01

Course Contents:

- To load the numbers 49H and 53H in the memory location 9510 and 9511 respectively and add the contents of memory location 9601
- To write assembly language programming for 8 bit addition with and without carry.
- To write assembly language programming for 8 bit subtraction with and without borrow.
- To write assembly language programming for 8 bit multiplication and division.
- To write assembly language programming for sorting an array of numbers in ascending and descending order.
- To write assembly language programming with additional instructions.
- To write and execute a program using stacks.
- To study and program the programmable peripheral interface (8255) board.
- To study and program the programmable interval timer (8253) board.
- To study and program the programmable DMA controller (8257) board.
- To study and program the programmable interrupt controller (8259) board.

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

SYSTEM PROGRAMMING AND COMPILER CONSTRUCTION LAB

Course Code: DSE6716

Credit Units: 01

Software Required: Turbo C++

Assignment will be provided for following:

- WAP to determine the length of the machine instructions.
- WAP to differentiate between symbols, literals and tokens.
- WAP to implement Symbol table.
- WAP to implement base table.
- WAP to find the relative addresses.
- Design a macro to perform add operation.
- On the basis of above program display the values of PC, LC and IR.
- Perform programming on loader based programme.
- Perform programming on linker based programme.
- Perform Programming on editor based programme.

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

Manesar Gurgaon-122413

ADVANCED JAVA PROGRAMMING LAB

Course Code: DSE6608

Credit Units: 01

Programming Language: Java

1. WAP to display label on a frame with the help of JFrame
2. WAP to display six buttons on a panel using JFrame.
3. WAP. To display an image and a string in a label on the JFrame.
4. WAP that implement a JApplet that display a simple label
5. WAP that implement a JApplet and display the following frame
 - a. Customer name
 - b. Customer number
 - c. Age
 - d. Address
6. WAP to access a table Product Master from MS-Access using Java code.
7. WAP that implement a simple servlet program.
8. WAP for authentication, which validate the login-id and password by the servlet code.
9. WAP to connecting a database using user-id and password.
10. WAP to insert data into the database using the prepared statement.
11. WAP to read data from the database using the ResultSet.
12. WAP to read data send by the client (HTML page) using servlet.
13. WAP to include a HTML page into a JSP page.
14. WAP to handle the JSPEException.
15. WAP to read data send by a client (HTML page) using JSP.

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

ADVANCE DATABASE MANAGEMENT SYSTEM LAB

Course Code: DSE6609

Credit Units: 01

Programs should be based on following topics:

Quick Review of Simple SQL Statements, SQL Built-in Functions, Primary Key, Foreign Key, Normalization, Joins View, Union. **Emphasis** on PL/SQL, Cursors 8. Exception handling, Procedure, Functions, Trigger, concurrency control, transaction processing. Introduction to SQLite. Recommended Software: PostgreSQL, MySQL, Oracle.

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

CRYPTOGRAPHY AND NETWORK SECURITY

Course Code: DSE6713

Credit Units: 03

Course Objective:

The objective here is to acquaint the students with the application of networking. Detail description of the various TCP/IP protocols and the working of ATM and its performance, Network security and authentication, and various algorithms related to it has been dealt, to get a practical approach.

Course Contents:

Module I: Advanced TCP/IP

TCP Services, TCP format and connection management, Encapsulation in IP, UDP Services, Format and Encapsulation in IP, IP Services, Header format and addressing, Fragmentation and reassembly, Migration to IPv6, Protocols: BOOTP, DHCP, ICMP, IGMP; Internet Routing Protocols: OSPF, RIP, EIGRP, BGP.

Module II: High Speed Networks

Packet Switching Networks; Frame Relay Networks; Asynchronous Transfer Mode (ATM); ATM protocol Architecture; ATM logical connections; ATM cells; ATM Service categories; ATM Adaptation Layer; QoS in ATM and Frame Relay

Module III: High Speed LANs

LAN Ethernet, fast Ethernet, gigabit Ethernet, FDDI, DSL, ADSL

Module IV: Wireless communication

Wireless networks, wireless channels, channel access, network architecture, IEEE 802.11, Bluetooth, Satellite Networks.

Module V: Network Security and Management

Principles of cryptography, Authentication, integrity, key distribution and certification, Access control and Firewalls, attacks and counter measures, security in many layers. Infrastructure for network management, The internet standard management framework, SMI, MIB, SNMP, Security and administration.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

VLSI DESIGN

Course Code: DSE6612

Credit Units: 02

Course Objective:

In the recent years, IC manufacturing technology has gone through dramatic evolution and changes, continuously scaling to ever smaller dimensions. This scaling has a double impact on the design of ICs. First, the complexity of the designs that can be put on a single die has increased dramatically which led to new design methodologies. At the same time, this plunge into deep submicron space causes devices to behave differently and brings challenging issues to forefront. This course along with the course of Digital Circuits and Systems II and Analog CMOS IC design will give you many of the basic essentials to work in the area of Circuit Design. Since this course takes the latest trends in the industry into account, you will find yourself at a definite edge.

Course Contents:

Module I: Devices and the wire

Diode, dynamic and transient behaviour-diffusion capacitance, SPICE diode model.

MOSFET STATIC BEHAVIOUR: Threshold voltage and its dependence on V_{SB} MOSFET Operation in resistive and saturation region, channel length modulation, Velocity saturation and its impact on sub micron devices, sub threshold conduction, Model for manual analysis, Equivalent resistance for MOSFET in (velocity) saturated region, comparison of equations for PMOS and NMOS, depletion and enhancement device

DYNAMIC BEHAVIOUR: Channel capacitance in different regions of operation, junction capacitance, Level 1 SPICE MODELS for MOS transistors

The Wire: Interconnect parameters: resistance, capacitance and Inductance, Lumped RC model, Elmore Delay

Module II: CMOS Inverter

VTC of an ideal inverter, Switching Model of the CMOS inverter: nMOS /pMOS discharge and charge, VTC of CMOS inverter: PMOS AND NMOS operation in various regions including velocity saturation, Switching threshold, $(W/L)_p/(W/L)_n$ ratio for setting desired V_M with and without velocity saturation, Noise Margins, buffer

Ratioed logic: Pseudo NMOS inverter and PMOS to NMOS ratio for performance, tristate inverter, Resistive load inverter.

Load Capacitance calculations: fan out capacitance, self capacitance calculations: Miller effect, wire capacitance; Improving delay calculation with input slope, Propagation delay: first order analysis, analysis from a design perspective, sizing a chain of inverters for minimum delay, choosing optimum number of stages

Power, Energy and Energy Delay: Dynamic power consumption, Static power, Glitches and power dissipation due to direct path currents, power and delay trade off, Transistor sizing for energy minimization

Module III: Combinational circuits

CMOS LOGIC: Good 0 and poor 0, Good 1 and poor 1, series and parallel N and P switches, 2 and Higher input NAND and NOR gates, Functions of the type $(AB+C(D+E))$ and their complements, XOR and XNOR gates, 2 input Multiplexer, Full Adder; Transistor sizing in CMOS logic for optimal delay,

Pseudo NMOS NAND NOR and other gates and the transistor sizing, Introduction to DSVCL logic, CPL AND/NAND, OR/NOR, XOR/XNOR gates

Logical effort, Electrical Effort, Branching effort, Examples of sizing Combinational logic chains for minimum delay. Pass-transistor logic, pass gate configurations for nmos and pmos, 2 input and 4 input MUX, XOR, XNOR and implementation of general functions like $AB+AB^*C+A^*C^*$, Robust and Efficient PTL Design, Delay of Transmission Gate chain

Dynamic CMOS design: Precharge and Evaluation, charge leakage, bootstrapping, charge sharing, Cascading Dynamic Gates, DOMINO Logic, Optimization of Domino Logic Gates, simple example circuit implementations of DOMINO logic

Module IV: Sequential Logic circuits

Principle of Bistability, NAND and NOR based SR latch, and clocked SR Latch, JK latch, example of master slave flip flop, CMOS D latch, MUX based Latches, master slave edge triggered register, non ideal clocks, clock overlap, C2MOS register, TSPCR Register, Schmitt Trigger, Pipelining and NORA CMOS

Module V: Layout Design Rules

Introduction to CMOS Process technology, Layout of CMOS inverter, CMOS NAND and NOR gates, Concept of Euler path, and stick diagrams for functions like $(AB+E+CD)^*$

Examination Scheme:

VLSI DESIGN LAB

Course Code: DSE6613

Credit Units: 01

Course Contents:

- Using Design architect and simulate V vs time for CMOS inverter using same W/L ratio for PMOS and NMOS.
- Design and simulate again by Sizing PMOS to NMOS appropriately and repeat experiment 1
- Design and simulate V vs t for 2 input NAND and Nor gates.
- Design and Simulation for general CMOS functions
- One bit full adder simulation
- 2:1 MUX using pass transistor logic
- Other functions using pass transistor logic
- Layout of CMOS inverter
- Layout of NAND and NOR gates
- Design and Simulation SR latch using NAND and NOR representations
- Design and simulate D flip flop

DATA MINING

Course Code: DSE6619

Credit Units: 03

Course Objective:

The objective of this course is to introduce students to Data Warehousing & Data mining technologies that will help To Inspect, Control and Secure Information through Databases.

Course Contents:

Module I: Introduction to Data Warehousing

The need for data ware housing, Operational & Informational Data Stores, Data Warehouse definition & Characteristics, Data Warehouse role & Structure, The cost of warehousing data, Foundation & Roots of Data,

Module II: Data Warehousing Components& Architecture:

Stores, warehouses and marts, Data warehouse database, Sourcing, acquisition, clean up & transformation tools, meta data, Access tools, Data ware house administration & management,. operational & External Database layer, Information access layer, data access layer, metadata layer, process management layer, Application messaging layer, Physical DW layer, Data staging layer.

Module III: Building a Data Warehouse:

Business, Design, Technical & Implementation Considerations, DW project plan. Overview of Mapping the DW to Multiprocessor Architecture, & DBMS Schemas for Decision Support.

Module IV: Metadata and OLAP:

METADATA: Definition, repository, management & trends.

OLAP: Need, guidelines, Multi Relational & Multi-Dimensional: MOLAP, ROLAP, OLAP Tools.

Module V: Data Mining & Visualization:

Techniques to mine the data, Market Basket analysis, Measuring data mining effectiveness, embedding data mining to business process, current limitations and challenges in DM.

Introduction to EIS, The future of Data Mining, Warehousing & Virtualization, Applications: PowerBuilder, Forte. Technical Exposure to Data Mining

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

COMPUTER GRAPHICS

Course Code: DSE6702

Credit Units: 03

Course Objective:

The objective of the course is to provide the understanding of the fundamental graphical operations and the implementation on computer, the mathematics behind computer graphics, including the use of spline curves and surfaces. It gives the glimpse of recent advances in computer graphics, user interface issues that make the computer easy, for the novice to use.

Course Contents:

Module I: Introduction to Graphics and Graphics Hardware System

Application of computer graphics, Video Display Devices, Raster Scan Display, Random Scan Display, Input Devices, Graphic Software and graphics standards, Numerical based on Raster and Random scan display, Frame buffer, Display processor.

Module II: Output Primitives and Clipping operations

Algorithms for drawing 2D Primitives lines (DDA and Bresenham's line algorithm), circles (Bresenham's and midpoint circle algorithm), Antialiasing and filtering techniques. Line clipping (cohen-sutherland algorithm), Curve clipping algorithm, and polygon clipping with Sutherland Hodgeman algorithm, Area fill algorithms for various graphics primitives: Scanline fill algorithm, boundary fill algorithm, flood fill algorithm, Polygon representation, various method of Polygon Inside test: Even-Odd method, winding number method, Character generation techniques.

Module III: 2D Geometric transformation

2D Transformation: Basic transformation, Translation, Rotation, Rotation relative to an arbitrary point, scaling, Matrix Representations and Homogeneous coordinates, window to viewport transformation.

Module IV: 3D Geometric transformation

3D Concepts: Parallel projection and Perspective projection, 3D Transformations, composite 3D transformation, co-ordinate transformation, Inverse transformation

Module V: Object modeling and Visible Surface detection

fractal geometry methods, fractal dimensions, Geometric construction of deterministic self-similar fractals, Iterated function system to generate fractals. Bezier curves and Bezier surfaces, Bspline curves and surfaces, Visible surface detection method: Basic illumination, diffuse reflection, specular reflection, shadows. Ray tracing method, Depth-buffer method, A-buffer method, Depth-sorting method (painter's algorithm), Binary search partition method, Scan line method,

Module VI: Introduction to multimedia

Design of animation sequences, Computer Animation languages, Elementary filtering techniques and elementary Image Processing techniques, graphics library functions used in animation design

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

ADVANCED COMPUTER NETWORKS

Course Code: DSE6704

Credit Units: 03

Course Objective:

The objective of the course is to provide thorough understanding & in-depth knowledge of concepts in computer networks Such as Internet protocols and routing, local area networks, wireless communications and networking, performance analysis, congestion control, TCP, network address translation, multimedia over IP, switching and routing, mobile IP, multicasting, IPv6. Peer-to-peer networking, network security, and other current research topics. A focus will be placed on wireless networking, reflecting rapid advances in this area. This course motivates the students to explore current research areas in the same field.

Course Contents:

Module I : Introduction to Networks

Networking introduction, Reference Models, TCP/IP, OSI, Addressing, Protocol Layering, Transmission impairment, performance, Switching, Transmission Media, Introduction to MAC, Channel allocation, MAC protocol classification for LAN's, MAN's, MAC protocols for Adhoc N/ws, MAC Protocol for WLAN's(adhoc and sensor n/ws), Introduction to Ethernet protocol (Fast, Gigabit and standard Ethernet).

Module II: Network Layer

Network Layer Design Issues, Routing Algorithms, Congestion Control Algorithms, Quality of Service, Internet Working, Network Layer in Internet.

IPv6 basic protocol, extensions and options, support for QoS, security, etc., Changes to other protocols, Application Programming Interface for IPv6.

Module III : Mobile IP

Mobile IP, IP Multicasting. Multicast routing protocols, address assignments, session discovery, etc.

Module IV : Transport Layer and Application Layer

The Transport Protocol: The Transport Service, Elements of transport protocol, a simple Transport Protocol, Internet Transport Protocols UDP, Internet Transport Protocols TCP, TCP extensions for high-speed networks, transaction-oriented applications Performance Issues.

The Application Layer: DNS-(Domain Name System), Electronic Mail, World Wide Web Multimedia.

Module V : Network Security

Overview of network security, Secure-HTTP, SSL, ESP, Key distribution protocols. Digital signatures, digital certificates-mail Security, Web security, Social Issues.

Examination Scheme:

Components	A	CT	H	V/S/O	EE
Weightage (%)	5	10	7	8	70

SUMMER INTERNSHIP EVALUATION-II

Course Code: DSE6735

Credit Units: 03

Guidelines:

There are certain phases of every Intern's professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship program can best be described as an attempt to institutionalize efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal classroom situations. These attributes are intellectual ability, professional judgment and decision-making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility etc.

In order to achieve these objectives, each student will maintain a file (**Internship File**). The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development.

The File will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

The **layout guidelines** for the Project & Seminar Report:

1. File should be in the following specification:

A4 size paper

Font: Arial (10 points) or Times New Roman (12 points)

Line spacing: 1.5

Top & bottom margins: 1 inch/ 2.5 cm

Left & right margins: 1.25 inches/ 3 cm

2. Report Layout: The report should contain the following components:

Front Page

Table of Content

Acknowledgement

Student Certificate

Company Profile (optional)

Introduction

Main Body

References / Bibliography

The File will include **five sections** in the order described below. The content and comprehensiveness of the main body and appendices of the report should include the following:

1. **The Title Page**--Title - An Internship Experience Report For (Your Name), name of internship organization, name of the Supervisor/Guide and his/her designation, date started and completed, and number of credits for which the report is submitted.

2. **Table of Content**--an outline of the contents by topics and subtopics with the page number and location of each section.

3. **Introduction**--short, but should include how and why you obtained the internship experience position and the relationship it has to your professional and career goals.

4. **Main Body**--should include but not be limited to daily tasks performed. Major projects contributed to, dates, hours on task, observations and feelings, meetings attended and their purposes, listing of

tools and materials and their suppliers, and photographs if possible of projects, buildings and co-workers.

5. References / Bibliography --This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system

ASSESSMENT OF THE INTERNSHIP FILE

The student will be provided with the Student Assessment Record (SAR) to be placed in front of the Internship File. Each item in the SAR is ticked off when it is completed successfully. The faculty will also assess each item as it is completed. The SAR will be signed by the student and by the faculty to indicate that the File is the student's own work. It will also ensure regularity and meeting the deadlines.

STUDENT ASSESSMENT RECORD (SAR)

1. Range of Research Methods used to obtain information

2. Execution of Research

3. Data Analysis

- Analyse Quantitative/ Qualitative information
- Control Quality

4. Draw Conclusions

Examination Scheme:

MOBILE COMPUTING

Course Code: DSE6710

Credit Units: 03

Course Objective:

The objective of this consortium is to shape and expand a full-scale and sound mobile computing system market. To achieve this, cooperation is required of interests related to communication (network), computer hardware/software, system integrators (including service providers), and the media.

Course Contents:

Module I: Introduction to Personal Communications Services (PCS)

PCS Architecture, Mobility management, Networks signaling.

Global System for Mobile Communication (GSM) system overview: GSM Architecture, Mobility management, Network signaling.

Module II: General Packet Radio Services (GPRS) & Wireless Application Protocol (WAP)

GPRS Architecture, GPRS Network Nodes.

Mobile Data Communication: WLANs (Wireless LANs) IEEE 802.11 standard, Mobile IP.

Wireless Application Protocol (WAP): The Mobile Internet standard, WAP Gateway and Protocols, wireless mark up Languages (WML).

Module III: Third Generation (3G) Mobile Services

Introduction to International Mobile Telecommunications 2000 (IMT 2000) vision, Wideband Code Division Multiple Access (W-CDMA), and CDMA 2000, Quality of services in 3G.

Wireless Local Loop(WLL): Introduction to WLL Architecture, wireless Local Loop Technologies.

Module IV: Global Mobile Satellite Systems

Global Mobile Satellite Systems; case studies of the IRIDIUM and GLOBALSTAR systems.

Module V: Enterprise Networks

Introduction to Virtual Networks, Blue tooth technology, Blue tooth Protocols. Advanced techniques in mobile computing.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

DATA MINING AND PREDICTIVE ANALYTICS

Course Code: DSE6802

Credit Units: 03

Course Objective: This course introduces the topics of Data Mining, and Data Analytics by providing a basic, practical foundation that allows the students to participate in Data Analytics projects. The course incorporates an introduction to the Data Analytics lifecycle, Machine Learning (ML), Data Mining algorithms and computational paradigms that allow computers to find patterns and regularities in databases, perform prediction and forecasting, and generally improve their performance through interaction with data.

Course Contents:

Module I: Data Preparation

An introduction to data mining and predictive analytics, Data Pre-processing Exploratory Data Analysis, Dimension- Reduction Methods.

Module II: Classification

k- Nearest Neighbour Algorithm, Decision Trees, Model Evaluation Technique, Cost –Benefit Analysis Using Data Driven Cost.

Module III: Clustering

Hierarchical and k- Means Clustering, Kohonen Networks, Birch Clustering, Measuring Cluster Goodness.

Module IV: Association Rules

Affinity Analysis and Market Basket Analysis, Data Representation for Market Basket Analysis, Support, Confidence, Frequent Item sets, and the a Priori Property, How Does a Priori Algorithm Work ? Generating Frequent Item sets, Generating Association Rules, Extension from Flag Data to General Categorical Data, Information-Theoretic Approach: Generalized Rule Induction Method, *J*-Measure, Association Rules are Easy to do Badly, How can we Measure the Usefulness of Association Rules? Do Association Rules Represent Supervised or Unsupervised Learning?

Module V: Case Study: Predicting Response to Direct Mail Marketing

Business Understanding, Data Preparation, and Eda, Clustering and Principal Components Analysis, Modelling and Evaluation for Performance and Interpretability, Modelling and Evaluation for High Performance.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

DATA WAREHOUSING AND MULTIDIMENSIONS MODELLING

Course Code: DSE6803

Credit Units: 03

Course Objective:

This course focuses on the fundamentals of data warehousing and multidimensional Modelling. Data warehouse development life cycle, Data warehouse analysis, CUBE, ROLL UP and STAR queries, Data Warehouse Design - Massive de-normalisation, STAR schema design, Data ware house Architecture, OLAP, ROLAP and MOLAP, concepts of Fact and dimension table are the major areas of coverage of this course. This course also deals with the issues while implementing the multidimensional models

Course Contents:

Module I: Introduction

Multidimensional Data Management, Multidimensional History, Related Terminology,

Module II: Fundamental Concepts

Cubes ,Dimensions, Facts, Measures, Relational Representations, Star Schemas, Snowflake Schemas, Data Warehouses And Data Marts, Multidimensional Modelling Process, Analysis And Querying ,Roll Up, Drill Down, Drill Out, Slicing And Dicing, Drill Across, Pivot Tables, Ranking, Multi-Dimensional Querying in MDX and SQL, Graphical Querying and Visualizations .

Module III: Advance Concepts

Slowly Changing Dimensions, The Problem, Solutions, Other Special Kinds Of Dimensions, Mini dimensions, Outriggers, Degenerate Dimensions, Junk Dimensions, Time Dimensions, Data Quality Dimensions, Advanced Hierarchies, Parent-Child Hierarchies, Unbalanced Hierarchies, Non Covering Hierarchies , Non –Strict Hierarchies, Multiple Hierarchies And Parallel Hierarchies.

Module IV: Implementation Issues

Materialized Views, Indexing, Indexing Overview, Bitmap Indices, Join Indices, Query Processing, OLAP Implementations, Extract-Transform-Load.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;
Att: Attendance

DATABASE AND KNOWLEDGE BASE SYSTEM

Course Code: DSE6804

Credit Units: 03

Course Objective:

This course discusses design methodology for databases to verify their structural correctness and implements databases. It also provides applications software primarily in the relational model using querying languages, primarily SQL, and other database supporting software applying the theory behind various database models and query languages implementing security and integrity policies relating to databases and preparation for data analytics working in group settings to design and implementing database projects.

Course Contents:

Module I: Introduction

Database Languages, Object-Base Systems, Knowledge-base Systems, History and Perspective, Data Models for Database Systems: Data Models, The Entity-relationship Model, The Relational Data Model, Operations in the Relational Data Model, The Network Data Model, The Hierarchical Data Model, An Object-Oriented Model, Logic as a Data Model: The Datalog Data Model, Evaluating Non- recursive Rules, Computing the Meaning of Recursive Rules, Incremental Evaluation of Least Fixed Points, Negations in Rule Bodies, Relational Algebra and Logic, Relational Calculus, Tuple Relational Calculus.

Module II: Relational Query and Object-Oriented Database Language

ISBL: A “Pure” Relational Algebra Language, QUEL: A Tuple Relational Calculus Language, Query-by-Example: A DRC Language, Data Definition in QBE, The Query Language SQL, Data Definition in SQL, The DBTG Data Definition language, The DBTG Query Language, The DBTG Database Modification Commands, Data Definition in IMS, A Hierarchical Data Manipulation Language, Data Definition in OPAL, Data Manipulation in OPAL

Module III: Physical Data Organization and Design of Relational Databases

The Physical Data Model, The Heap Organization, Hashed Files, Indexed Files, B-trees, Files with a Dense Index, Secondary Indices, Data Structures in DBTG Databases, Data Structures for Hierarchies, Data Structures for Relations, A Search Tree Structure, Functional Dependencies, Lossless-Join Decomposition, Normalization, Generalized Dependencies.

Module IV: Transaction Management

Basic Concepts, A Simple Transaction Model, The Two-phase Locking Protocol, a Model with Read and write-Locks, Lock Modes, A Read-Only, Write-Only Model, Concurrency for Hierarchically Structured Items, Handling Transaction Failures, Aggressive and Conservative Protocols, Recovery From Crashes, Timestamp-based Concurrency Control.

Module V: Distributed Database Management

Distributed Databases, Distributed Locking, Distributed Two-phase Locking, Distributed Commitment, A Nonblocking Commit Protocol, Timestamp-based, Distributed Concurrency, Recovery of Nodes, Distributed Deadlocks.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

BIG DATA TECHNOLOGIES

Course Code: DSE6805

Credit Units: 03

Course Objective:

This course brings together several key big data technologies used for storage, analysis and manipulation of data. It also introduces the students the key concepts of Hadoop framework, MapReduce, Pig, Hive, and No-SQL. Students will prepare a sample project in Hadoop.

Course Contents:

Module I: Introduction to Big Data

Big Data and its Importance – Four V's of Big Data – Drivers for Big Data – Introduction to Big Data Analytics – Big Data Analytics applications.

Module II: Big Data Technologies

Hadoop's Parallel World – Data discovery – Open source technology for Big Data Analytics – cloud and Big Data – Predictive Analytics – Mobile Business Intelligence and Big Data – Crowd Sourcing Analytics – Inter- and Trans-Firewall Analytics - Information Management.

Module III: Processing Big Data

Integrating disparate data stores - Mapping data to the programming framework - Connecting and extracting data from storage - Transforming data for processing - Subdividing data in preparation for Hadoop Map Reduce.

Module IV: Hadoop Map Reduce

Employing Hadoop Map Reduce - Creating the components of Hadoop Map Reduce jobs - Distributing data processing across server farms –Executing Hadoop Map Reduce jobs - Monitoring the progress of job flows - The Building Blocks of Hadoop Map Reduce - Distinguishing Hadoop daemons - Investigating the Hadoop Distributed File System Selecting appropriate execution modes: local, pseudo-distributed, fully distributed.

Module V: Big Data Tools and Techniques

Installing and Running Pig – Comparison with Databases – Pig Latin – User- Define Functions – Data Processing Operators – Installing and Running Hive – Hive QL – Tables – Querying Data – User-Defined Functions – Oracle Big Data.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

RESEARCH METHODOLOGY AND TECHNICAL REPORT WRITING

Course Code: DSE6809

Credit Units: 02

Course Objectives:

The course will enhance scientific, technical and research writing skills and impart knowledge about various stages of research process, statistical analysis, statistical tests and their applications in statistical decision making.

Course Contents:

Module I: Introduction to research: Definition, motivation, need, objectives, significance and characteristics of research; types of research; steps in research process; planning a research proposal; literature review, web searching.

Module II: Population and sample, parameter and statistic, sampling and data collection, sampling design: steps, types, sample size, sampling methods, large and small samples, primary and secondary data, data processing and analysis. Sample surveys and questionnaire designing, scaling techniques.

Module III: Dependent and independent variables, univariate, bivariate and multivariate analysis, means-arithmetic, geometric and harmonic; measure of dispersion of data, standard deviation, variance, coefficient of variation and degree of freedom. Hypothesis testing: null hypothesis and alternate hypothesis, errors in hypothesis testing, significance and confidence levels, parametric tests and non-parametric tests, one-tailed and two-tailed tests, analysis of variance. Regression analysis and curve fitting, method of least-squares, explained and unexplained variations, coefficient of correlation, coefficient of determination.

Module IV: Technical/scientific/research report writing: structure and components of scientific reports, formats of dissertations, research report, report writing skills, report preparation, referencing, bibliography and footnotes. Making presentation-use of visual aids and PPTs. Publication of research papers, citations,. Intellectual property rights and copy rights, plagiarism, patents and patent laws, commercialization and ethical issues.

Examination Scheme:

Attendance	Assignment/Library consultation / Thesis writing	Class test	Final Exam	Total
5	15	10	70	100

APPLIED STATISTICAL ANALYSIS LAB

Course Code: DSE6806

Credit Units: 01

Programs should be based on following topics:

Quick Review of interpretation of mathematical models such as formulas, graphs, tables, and schematics, and draw inferences from them;

Representation of mathematical information symbolically, visually, numerically, and verbally;

Use of arithmetic, algebraic, geometric, and statistical methods to solve problems;

Estimation and check answers to mathematical problems in order to determine reasonableness,

Identification of alternatives, and select optimal results; and recognize the limitations of mathematical and statistical models.

Recommended Software: SPSS (IBM).

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

DATA MINING AND PREDICTIVE ANALYTICS LAB

Course Code: DSE6807

Credit Units: 01

Course Objective:

- To analyse the data using statistical methods.
- To understand and demonstrate data mining using any open source data mining tool.

Recommended Software: ORANGE, Rapid Miner

List of Experiments

1. Data Analysis- Getting to know the Data (Using ORANGE, Rapid Miner)
 - Parametric - Means, T-Test, Correlation
 - Prediction for numerical outcomes - Linear regression
 - Correlation analysis
 - Preparing data for analysis
 - Pre-processing techniques
2. Data Mining (Using ORANGE, Rapid Miner or any open source data mining tool)
 - Implement clustering algorithm
 - Implement classification using
 - Decision tree
 - Back propagation
 - Visualization methods.

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

DATA WAREHOUSING AND MULTIDIMENSIONS MODELLING LAB

Course Code: DSE6808

Credit Units: 01

Programs should be based on following topics:

Quick Review SQL Statements, SQL Built-in Functions, **Emphasis** on PL/SQL, Cursors 8. Exception handling, Procedure, Functions, Trigger, concurrency control, transaction processing. Introduction to ETL Tools: Talend Open Source Data Integrator, Scriptella, KETL
Pentaho Data Integrator - Kettle, Jaspersoft ETL, GeoKettle, CloverETL, HPCC Systems

Recommended Software: SQL Server, ETL Tools (Open Source)

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

MAJOR PROJECT

Course Code: DSE6837

Credit Units: 08

GUIDELINES FOR PROJECT FILE

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critiqued by the faculty guide and corrected by the student at each stage.

The File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation.

In general, the File should be comprehensive and include

A short account of the activities that were undertaken as part of the project;

A statement about the extent to which the project has achieved its stated goals.

A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;

Any activities planned but not yet completed as part of the project, or as a future initiative directly resulting from the project;

Any problems that have arisen that may be useful to document for future reference.

➤ **Report Layout**

The report should contain the following components:

➤ **Title or Cover Page**

The title page should contain the following information: Project Title; Student's Name; Course; Year; Supervisor's Name.

➤ **Acknowledgements**(optional)

Acknowledgment to any advisory or financial assistance received in the course of work may be given.

➤ **Abstract**

A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project

➤ **Table of Contents**

Titles and subtitles are to correspond exactly with those in the text.

➤ **Introduction**

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

➤ **Materials and Methods**

This section should aim at experimental designs, materials used. Methodology should be mentioned in details including modifications if any.

➤ **Results and Discussion**

Present results, discuss and compare these with those from other workers, etc. In writing these section emphasis should be given on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in

contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary never write in “point” form.

➤ **Conclusion**

A conclusion should be the final section in which the outcome of the work is mentioned briefly.

➤ **Future prospects**

➤ **Appendices**

The Appendix contains material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

➤ **References / Bibliography**

This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

Examples

For research article

Voravuthikunchai SP, Lortheeranuwat A, Ninprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichia coli* O157: H7. *Clin Microbiol Infect*, **8** (suppl 1): 116–117.

For book

Kowalski, M. (1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), **7**: 63-67

ASSESSMENT OF THE PROJECT FILE

Essentially, marking will be based on the following criteria: the quality of the report, the technical merit of the project and the project execution.

Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project.

Project execution is concerned with assessing how much work has been put in.

The File should fulfill the following *assessment objectives*:

Range of Research Methods used to obtain information

Execution of Research

Data Analysis

Analyse Quantitative/ Qualitative information

Control Quality

Draw Conclusions

Examination Scheme:

Dissertation	50
Viva Voce	50
Total	100

DESCRIPTIVE ANALYSIS

Course Code: DSE6901

Credit Units: 03

Course Objective:

This course introduces some elementary statistical methods of analysis of data and compute various measurements of central tendency, dispersion, skewness and kurtosis. Also discusses computation of the correlation coefficient from ungrouped bivariate data and interpret them and analyse data pertaining to attributes and to interpret results.

Course Contents:

Module I: Introduction to Statistics:

Definitions: Webster's and Secrist's definition of Statistics, Importance of Statistics, Scope of Statistics: In the field of Industry, Biological Sciences, Medical Sciences, Economics Sciences, Social, Sciences, Management Sciences, Agriculture, Insurance, Actuarial Science, Education and Psychology.

Module II: Population and Sample

Types of characteristics: Attributes: Nominal scale, ordinal scale. Variables: Interval scale, ratio scale, discrete and continuous variables, Types of data: Primary data, Secondary data, Notion of a statistical population: Finite population, infinite population, homogeneous population and heterogeneous population. Notion of sample, random sample and non-random sample, Methods of sampling: Simple random sampling with and without replacement (SRSWR and SRWOR) stratified random sampling, systematic sampling, cluster sampling and two-stage sampling.

Module III: Presentation of Data

Classification: Raw data and its classification, Discrete frequency distribution, Sturge's rule, continuous frequency distribution, inclusive and exclusive methods of classification, Open end classes, cumulative frequency distribution and relative frequency distribution, Graphical Presentation of Data: Histogram, frequency curve, frequency polygon, ogive curves, stem and leaf chart, Check sheet, Parato diagram, Examples and Problems.

Module IV: Measures of Central Tendency

Concept of central tendency of statistical data, Arithmetic Mean (A.M.), combined mean of a number of groups, merits and demerits, Geometric Mean (G.M.), Harmonic Mean (H.M.), Weighted Mean, Weighted A.M., G.M. and H.M. , Mode, Median, Empirical relation between mean, median and mode, Order relation between arithmetic mean, geometric mean, harmonic mean.

Module V: Measures of Dispersion

Concept of dispersion, characteristics of good measure of dispersion, Range, Mean deviation, Mean square definition, Variance and standard deviation, Combined variance, Combined standard deviation, generalization for n groups, Measures of dispersion for comparison: coefficient of range, coefficient of quartile deviation and coefficient of mean deviation, coefficient of variation.

Module VI: Skewness and Kurtosis

Concept of skewness of frequency distribution, positive skewness, negative skewness, symmetric frequency distribution, Bowley's coefficient of skewness, interpretation using Box plot, Karl Pearson's coefficient of skewness, Measures of skewness based on moments (β_1 , γ_1), Concepts of kurtosis, leptokurtic, mesokurtic and platykurtic frequency distributions, Measures of kurtosis based on moments, (β_2 , γ_2).

Module VII: Correlation & Regression

Bivariate data, bivariate frequency distribution, Concept of correlation between two variables, positive correlation, negative correlation, Scatter diagram, conclusion about the type of correlation from scatter diagram, Covariance between two variables, Karl Pearson's coefficient of correlation,

Spearman's rank correlation coefficient, In case of ties, compute Karl Pearson's correlation coefficient between ranks. Regression: lines of regression, fitting of lines of regression by the least squares method, interpretation of slope and intercept. 9.2 Regression coefficient (byx, bxy), Effect of change of origin and scale, Angle between the two lines of regression, Mean residual sum of squares, Residual plot and its interpretation.

Examination Scheme:

LEARNING AND REASONING WITH BAYESIAN NETWORKS

Course Code: DSE6902

Credit Units: 04

Course Objective:

This course provides an in-depth exposition of knowledge representation, reasoning, and machine learning under uncertainty using the framework of Bayesian networks. Both theoretical underpinnings and practical considerations will be covered, with a special emphasis on constructing and learning graphical models, and on various exact and approximate inference algorithms.

Course Contents:

Module I: Introduction

Reasoning about beliefs using Logic and Probability Propositional Logic, Probability Calculus and Bayesian Reasoning, Bayesian Networks, Syntax and Semantics, Building Bayesian Networks.

Module II: Bayesian Networks Inference

Inference by variable elimination, Inference by Factor Elimination (Jointree), Compiling Bayesian Networks, Complexity of probabilistic inference, compiling bayesian networks.

Module III: Approximate Inference

Inference by Belief Propagation: Algorithm, Iterative belief propagation, semantics of IBP, Join graphs, edge-detection semantics, Approximate Inference by Stochastic Sampling: Simulating a Bayesian network, direct sampling, expectations, estimating a conditional probability, Markov chain simulation.

Module IV: Learning: The Maximum Likelihood Approach

Introduction, estimating parameters from complete data, estimating parameters from incomplete data, learning network structure, searching for network structure.

Module V: Learning: The Bayesian Approach

Introduction, Meta Networks, Learning with Discrete Parameter Sets, Learning with Continuous Parameter Sets, Learning Network Structure

Examination Scheme:

SOCIAL NETWORK DATA ANALYTICS

Course Code: DSE6903

Credit Units: 03

Course Objective:

This course gives an introduction to social network analysis, with a focus on modelling. It provides an overview of research questions connected to social networks, and of descriptive measures, models, and methods of analysis that can be used to analyse empirical social network data. It helps to understand the online interactive demonstrations and hands-on analysis of real-world data sets

Course Contents:

Module I: Introduction

Overview: Social network data-Formal methods- Paths and Connectivity-Graphs to represent social relations-Working with network data- Network Datasets-Strong and weak ties - Closure, Structural Holes, and Social Capital.

Module II: Community Discovery in Social Networks: Applications, Methods and Engineering Trends

Introduction, Communities In Context, Core Methods, Quality Functions, The Kernighan-Lin (KL) Algorithm, Agglomerative/Divisive Algorithms, Spectral Algorithms, Multi-Level Graph Portioning, Markov Clustering. Other Approaches, Emerging Fields and Problems, Community Discovery in Dynamic Networks, Community Discovery in Heterogeneous Networks, Community Discovery in Directed Networks, Coupling Content and Relationship Information for Community Discovery,

Module III: Information Networks and the World Wide Web

The Structure of the Web- World Wide Web- Information Networks, Hypertext, and Associative Memory- Web as a Directed Graph, Bow-Tie Structure of the Web- Link Analysis and Web Search, Searching the Web: Ranking, Link Analysis using Hubs and Authorities- Page Rank- Link Analysis in Modern Web Search, Applications, Spectral Analysis, Random Walks, and Web Search. Module IV

Module IV: Node Classifications in Social Networks

Introduction, Problem Formulation, Representing Data As A Graph, The Node Classification Problem, Methods Using Local Classifiers, Iterative Classification Method, Random Walk Based Methods, Label Propagation, Graph Regularization, Adsorption, Applying Node Classification To Large Social Networks, Basic Approaches, Second-Order Methods, Implementation Within Map-Reduce, Inference Using Graphical Models, Metric Labelling, Spectral Partitioning, Graph Clustering, Variations on Node Classification.

Module V: Data and Text Mining In Social Media

Data Mining In Nutshell, Social Media, Motivations For Data Mining In Social Media, Data Mining Methods For Social Media, Data Representation, Data Mining- A Process, Social Networking Sites: Illustrative Examples, Related Efforts, Ethnography And Netnography, Event Maps, Text Mining: Keyword Search, Query Semantics And Answer Ranking, Keyword Search over Xml and Relational Data, Keyword Search Over Graph Data, Classification Algorithms, Clustering Algorithms, Transfer Learning in Heterogeneous Networks.

Module VI: Overview of Social Tagging

Introduction, Problems With Metadata Generation and Fixed Taxonomies, Tags: Why And What?, Different User Tagging Motivations, Kinds Of Tags, Linguistic Classifications Of Tags, Game-Based Tagging, Tag Generation Models, Tagging System Design, Tag Analysis, Tagging Distributions, Identifying Tag Semantics, Tags Versus Keywords, Visualization Of Tags, Tag Clouds For Browsing/Search, Tag Selection For Tag Clouds, Tag Hierarchy Generation, Tag Cloud Display Formats, Tag Evolution Visualization.

Examination Scheme:

R PROGRAMMING LAB

Course Code: DSE6904

Credit Units: 01

Course Objective:

This lab will provide a basic introduction to the R programming Language and the use of R to perform basic statistics and programming tasks. The main objectives of this lab is to impart the students with the knowledge of R Programming, Machine Learning using R Mining from streaming Data, Mining from Distributed Data.

R Programming Objective

- Master the use of the R interactive environment
- Expand R by installing R packages
- Explore and understand how to use the R documentation
- Read Structured Data into R from various sources
- Understand the different data types in R
- Understand the different data structures in R
- Understand how to use dates in R
- Use R for mathematical operations
- Use of vectorised calculations
- Write user-defined R functions
- Use control statements
- Write Loop constructs in R
- Use Apply to iterate functions across data
- Reshape data to support different analyses
- Understand split-apply-combine (group-wise operations) in R
- Deal with missing data
- Manipulate strings in R
- Understand basic regular expressions in R
- Understand base R graphics
- Focus on GGplot2 graphics for R
- Be familiar with trellis (lattice) graphics
- Use R for descriptive statistics
- Use R for inferential statistics
- Write multivariate models in R
- Understand confounding and adjustment in multivariate models
- Understand interaction in multivariate models
- Predict/Score new data using models
- Understand basic non-linear functions in models
- Understand how to link data, statistical methods, and actionable questions

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

HADOOP LAB

Course Code: DSE6905

Credit Units: 02

Course Objective:

- To provide an overview of several key technologies used in manipulating, storing, and analysing big data.
- To understand the fundamentals of Hadoop.
- To apply the learning specific problems in various domains.

Recommended Tools

Big Data Tools and Technology [Learning and Demonstration of Big Data Ecosystem]

- Hadoop
- HBase
- NoSQL
- Hive
- Pig

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

WEB TECHNOLOGY

Course Code: DSE6906

Credit Units: 03

Course Objectives:

This course provides knowledge on Core technologies that are needed for the web like HTML and XML and facilitate how to build XML applications with DTD and style sheets that span multiple domains ranging from finance to vector graphics to genealogy for use with legacy browsers.

Course Contents:

MODULE I: Introduction

HTML Common tags, Cascading Style sheets - Introduction to Java Scripts - Objects in Java Script - Dynamic HTML with Java Script.

MODULE II: Vbscript Language Elements

Constants - Variables and Data Types - Mathematical Operations – Logical Operators - Looping and Decision Structures - VBScript Functions and Objects: Data Conversion Functions - Mathematical Functions - Data Formatting Functions - Text Manipulation Functions - Data and Time Functions - Built-in Objects.

MODULE III: ASP Fundamentals

Using Server – Side Includes- Learning the SSI Directives – Creating Modular ASP Code -Using the Request Object: Using Form Information - Using QueryString Information – Using Server Variables - Using the Response Object: Create Output – Managing Output – Managing the Connection.

MODULE IV: Using Cookies

Introduction to Cookies: Cookies and Your Browser – Creating a Cookie – Modifying and removing Cookies – Tracking Preferences with Cookies Using the Application, Session and Server Objects: The application Object – The Session Object – The Server Object – Using the global .asa file - Active Data Objects Essentials: Microsoft's Universal Data Access Strategy – The Connection Object – The Record set and Field Objects – The Command and Parameter Objects – Using the Errors Collection.

MODULE V: Introducing XML

XML: The Life of an XML documents - Related technologies- First XML Document: Hello XML – Exploring the Simple XML Document – Assigning Meaning to XML Tags – Writing a Style Sheet for an XML Document – Attaching a Style Sheet to an XML Document – Style Languages: CSS Style Sheets, CSS Layouts, CSS Text Styles.

MODULE VI: Attributes, Empty Tags & XSL

Attributes – Attributes versus Elements – Empty Elements and Empty Element Tags – XSL-DTDs and Validity: Document Type Definitions – Element Declarations – DTD Files – Document Type Declarations – Validating Against a DTD-Element Declaration - Entity Declarations: What Is an Entity – Internal General Entities – External General Entities – Internal Parameter Entities – External Parameter Entities – Building a Document from Places-Attribute Declaration: What is an Attribute – Declaring Attributes in DTDs – Declaring Multiple Attributes – Specifying Default Values for Attributes – Attribute Types – Predefined Attributes – A DTD for Attribute- Based Baseball Statistics.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

Text & References:

SERVICE ORIENTED ARCHITECTURE

Course Code: DSE6907

Credit Units: 03

Course Objective:

The subject gives an introduction to the fundamentals and issues relating to Service Oriented Architecture and bring out the importance of service orientation and web services. It also teaches appropriate tools as technique on how to build the Service Oriented Architecture with web services.

Course Contents:

Module I: Introduction

Basic definition - Fundamentals of SOA - Characteristics and misperceptions about SOA-Benefits and pitfalls of SOA.

Module II: Evolution of SOA

The evolution of SOA - Web service and primitive SOA - The extension of SOA - Web service extension.

Module III: Web Service and Contemporary SOA

Message Exchange Pattern- Service Activity- Coordination- Atomic Transaction- Business Activity-Orchestration – Choreography- Addressing- Reliable Messaging- Correlation and Policies- Meta data Exchange- Security- Notification and Eventing.

Module IV: Principles of Service Orientation

Principles of service orientation -Building SOA-Planning and Analysis- SOA delivery strategies - Service Oriented Analysis Introduction -Service Modelling of Service Oriented Analysis.

Module V: Service Oriented Design

Introduction to service oriented design - WSDL related XML Schema language Basics - WSDL Language Basics - SOAP Language Basics - Service interface design tools - Steps to composing SOA - Consideration for choosing service layers, positioning core SOA standards and choosing SOA extension – Service design and business process design.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

- Shankar Kambhampaty, “Service Oriented Architecture for Enterprise Architecture for Enterprise Application”, 1st Edition, Wiley Publication, 2008.

NATURAL LANGUAGE PROCESSING

Course Code: DSE6908

Credit Units: 03

Course Objective:

This course provides a general introduction including the use of state automata for language processing and syntax including a basic parse. It explains advanced feature like feature structures and realistic parsing methodologies. It also gives concepts of remotes processing and detail information about a typical natural language processing applications.

Course Contents:

Module-I: Introduction

Introduction: Knowledge in speech and language processing - Ambiguity - Models and Algorithms - Language, Thought and Understanding- Regular Expressions and automata: Regular expressions - Finite-State automata. Morphology and Finite-State Transducers: Survey of English morphology - Finite-State Morphological parsing - Combining FST lexicon and rules - Lexicon- Free FSTs: The porter stammer - Human morphological processing.

Module-II: Syntax Analysis

Word classes and part-of-speech tagging: English word classes - Tagsets for English - Part-of-speech tagging - Rule-based part-of-speech tagging - Stochastic part-of-speech tagging - Transformation-based tagging – Other issues - Context-Free Grammars for English: Constituency - Context-Free rules and trees - Sentence-level constructions - The noun phrase - Coordination - Agreement - The verb phrase and sub categorization – Auxiliaries - Spoken language syntax - Grammars equivalence and normal form - Finite- State and Context-Free grammars - Grammars and human processing. Parsing with Context-Free Grammars: Parsing as search - A Basic Top-Down parser - Problems with the basic Top-Down parser - The early algorithm - Finite-State parsing methods.

MODULE-III: Advanced Features and Syntax

Features and Unification: Feature structures - Unification of feature structures
- Features structures in the grammar - Implementing unification - Parsing with unification constraints
- Types and Inheritance. Lexicalized and Probabilistic
Parsing: Probabilistic context-free grammar - Problems with PCFGs -
Probabilistic lexicalized CFGs - Dependency Grammars - Human parsing.

MODULE-IV: Semantic

Representing Meaning: Computational desiderata for representations – Meaning structure of language
- First order predicate calculus - Some linguistically relevant concepts - Related representational approaches – Alternative approaches to meaning. Semantic Analysis: Syntax-Driven semantic analysis - Attachments for a fragment of English - Integrating semantic analysis into the early parser - Idioms and compositionality - Robust semantic analysis. Lexical semantics: relational among lexemes and their senses - WordNet: A database of lexical relations - The Internal structure of words - Creativity and the lexicon.

MODULE-V: Natural Language Generation

Introduction to language generation - Architecture for generation – Surface realization - Discourse planning - Other issues- Machine Translation: Language similarities and differences - The transfer metaphor - The interlingua idea: Using meaning - Direct translation - Using statistical techniques – Usability and system development.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;

AGENT BASED INTELLIGENT SYSTEMS

Course Code: DSE6909

Credit Units: 03

Course Objective:

This course provides students basic knowledge of employing intelligent agents in solving complex problems and gives the awareness of the building blocks of agents and working of different types of agents. It also analyses the reasons for uncertainty and ability to design agents to handle them.

Course Contents:

Module I: Introduction

Definitions – History – Hybrid Intelligent Agents – Agents vs Multi Agent Systems– Structure – Environment – Basic Problem Solving Agents – Complex Problem Solving Agents – Formulating Search Strategies – Intelligent Search.

Module II: Concepts for Building Agents

Situated Agents: Actions and Percepts - Proactive and Reactive Agents: Goals and Events- Challenging Agent Environments: Plans and Beliefs - Social Agents - Agent Execution Cycle.

Module III: Knowledge Based Agents

Knowledge Representation – Logic – First Order Logic – Reflex Agent – Building a Knowledge Base – General Ontology – Inference – Logical Recovery.

Module IV: Planning Agents

Situational Calculus – Representation of Planning – Partial Order Planning – Practical Planners– Conditional Planning - Preplanning Agents.

Module V: Agents and Uncertainty

Acting under uncertainty – Probability – Baye's Rule – Belief Networks – Utility Theory - Decision Network- Value of Information – Decision Theoretic Agent Design.

Module VI: Higher Level Agents

Learning Agents – General Model – Inductive Learning – Learning Decision Tree – Reinforcement Learning – Knowledge in Learning – Communicative Agents – Types of Communicative Agents – Future of AI.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;
Att: Attendance

SUMMER INTERNSHIP EVALUATION-III

Course Code: DSE6935

Credit Units: 06

Guidelines:

There are certain phases of every Intern's professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship program can best be described as an attempt to institutionalize efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal classroom situations. These attributes are intellectual ability, professional judgment and decision-making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility etc.

In order to achieve these objectives, each student will maintain a file (**Internship File**). The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development.

The File will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

The **layout guidelines** for the Project & Seminar Report:

1. File should be in the following specification:

A4 size paper

Font: Arial (10 points) or Times New Roman (12 points)

Line spacing: 1.5

Top & bottom margins: 1 inch/ 2.5 cm

Left & right margins: 1.25 inches/ 3 cm

2. Report Layout: The report should contain the following components:

Front Page

Table of Content

Acknowledgement

Student Certificate

Company Profile (optional)

Introduction

Main Body

References / Bibliography

The File will include **five sections** in the order described below. The content and comprehensiveness of the main body and appendices of the report should include the following:

1. **The Title Page**--Title - An Internship Experience Report For (Your Name), name of internship organization, name of the Supervisor/Guide and his/her designation, date started and completed, and number of credits for which the report is submitted.

2. **Table of Content**--an outline of the contents by topics and subtopics with the page number and location of each section.

3. **Introduction**--short, but should include how and why you obtained the internship experience position and the relationship it has to your professional and career goals.

4. **Main Body**--should include but not be limited to daily tasks performed. Major projects contributed to, dates, hours on task, observations and feelings, meetings attended and their purposes, listing of

tools and materials and their suppliers, and photographs if possible of projects, buildings and co-workers.

5. References / Bibliography --This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system

ASSESSMENT OF THE INTERNSHIP FILE

The student will be provided with the Student Assessment Record (SAR) to be placed in front of the Internship File. Each item in the SAR is ticked off when it is completed successfully. The faculty will also assess each item as it is completed. The SAR will be signed by the student and by the faculty to indicate that the File is the student's own work. It will also ensure regularity and meeting the deadlines.

STUDENT ASSESSMENT RECORD (SAR)

5. Range of Research Methods used to obtain information

6. Execution of Research

7. Data Analysis

- Analyse Quantitative/ Qualitative information
- Control Quality

8. Draw Conclusions

Examination Scheme:

Components	V	S	R	FP
Weightage (%)	20	20	20	40

V – Viva, S – Synopsis, FP – Final Presentation, R - Report

PROJECT-DISSERTATION-II

Course Code: DSE6037

Credit Units: 15

GUIDELINES FOR DISSERTATION

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critiqued by the faculty guide and corrected by the student at each stage.

The File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation.

In general, the File should be comprehensive and include

A short account of the activities that were undertaken as part of the project;

A statement about the extent to which the project has achieved its stated goals.

A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;

Any activities planned but not yet completed as part of the DISSERTATION, or as a future initiative directly resulting from the project;

Any problems that have arisen that may be useful to document for future reference.

➤ Report Layout

The report should contain the following components:

➤ **Title or Cover Page**

The title page should contain the following information: Project Title; Student's Name; Course; Year; Supervisor's Name.

➤ **Acknowledgements** (optional)

Acknowledgment to any advisory or financial assistance received in the course of work may be given.

➤ **Abstract**

A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project

➤ **Table of Contents**

Titles and subtitles are to correspond exactly with those in the text.

➤ **Introduction**

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

➤ **Materials and Methods**

This section should aim at experimental designs, materials used. Methodology should be mentioned in details including modifications if any.

➤ **Results and Discussion**

Present results, discuss and compare these with those from other workers, etc. In writing these section emphasis should be given on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in

contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary never write in “point” form.

➤ **Conclusion**

A conclusion should be the final section in which the outcome of the work is mentioned briefly.

➤ **Future prospects**

➤ **Appendices**

The Appendix contains material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

➤ **References / Bibliography**

This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

Examples

For research article

Voravuthikunchai SP, Lortheeranuwat A, Ninprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichia coli* O157: H7. *Clin Microbiol Infect*, **8** (suppl 1): 116–117.

For book

Kowalski, M. (1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), **7**: 63-67

ASSESSMENT OF THE DISSERTATION FILE

Essentially, marking will be based on the following criteria: the quality of the report, the technical merit of the project and the project execution.

Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project.

Project execution is concerned with assessing how much work has been put in.

The File should fulfill the following *assessment objectives*:

Range of Research Methods used to obtain information

Execution of Research

Data Analysis

Analyse Quantitative/ Qualitative information

Control Quality

Draw Conclusions

Examination Scheme:

Dissertation	50
Viva Voce	50
Total	100

data, leading to production of a structured report.

Selecting the Dissertation Topic

It is usual to give you some discretion in the choice of topic for the dissertation and the approach to be adopted. You will need to ensure that your dissertation is related to your field of specialization.

Deciding this is often the most difficult part of the dissertation process, and perhaps, you have been thinking of a topic for some time.

It is important to distinguish here between 'dissertation topic' and 'dissertation title'. The topic is the specific area that you wish to investigate. The title may not be decided until the dissertation has been written so as to reflect its content properly.

Few restrictions are placed on the choice of the topic. Normally we would expect it to be:

- relevant to business, defined broadly;
- related to one or more of the subjects or areas of study within the core program and specialisation stream;
- clearly focused so as to facilitate an in-depth approach, subject to the availability of adequate sources of information and to your own knowledge;
- of value and interest to you and your personal and professional development.

Planning the Dissertation

This will entail following:

- Selecting a topic for investigation.
- Establishing the precise focus of your study by deciding on the aims and objectives of the dissertation, or formulating questions to be investigated. Consider very carefully what is worth investigating and its feasibility.
- Drawing up initial dissertation outlines considering the aims and objectives of the dissertation. Workout various stages of dissertation
- Devising a timetable to ensure that all stages of dissertation are completed in time. The timetable should include writing of the dissertation and regular meetings with your dissertation guide.

The Dissertation plan or outline

It is recommended that you should have a dissertation plan to guide you right from the outset. Essentially, the dissertation plan is an outline of what you intend to do, chapter wise and therefore should reflect the aims and objectives of your dissertation.

There are several reasons for having a dissertation plan

- It provides a focus to your thoughts.
- It provides your faculty-guide with an opportunity, at an early stage of your work, to make constructive comments and help guide the direction of your research.
- The writing of a plan is the first formal stage of the writing process, and therefore helps build up your confidence.
- In many ways, the plan encourages you to come to terms with the reading, thinking and writing in a systematic and integrated way, with plenty of time left for changes.
- Finally, the dissertation plan generally provides a revision point in the development of your dissertation report in order to allow appropriate changes in the scope and even direction of your work as it progresses.

Keeping records

This includes the following:

- Making a note of everything you read; including those discarded.
- Ensuring that when recording sources, author's name and initials, date of publication, title, place of publication and publisher are included. (You may consider starting a card index or database from the outset). Making an accurate note of all quotations at the time you read them.
- Make clear what is a direct quotation and what is your paraphrase.

Dissertation format

All students must follow the following rules in submitting their dissertation.

- Front page should provide title, author, Name of degree/diploma and the date of submission.
- Second page should be the table of contents giving page references for each chapter and section.
- The next page should be the table of appendices, graphs and tables giving titles and page references.
- Next to follow should be a synopsis or abstract of the dissertation (approximately 500 words)
- Next is the 'acknowledgements'.
- Chapter I should be a general introduction, giving the background to the dissertation, the objectives of the dissertation, the rationale for the dissertation, the plan, methodological issues and problems. The limitations of the dissertation should also be hinted in this chapter.
- Other chapters will constitute the body of the dissertation. The number of chapters and their sequence will usually vary depending on, among others, on a critical review of the previous relevant work relating to your major findings, a discussion of their implications, and conclusions, possibly with a suggestion of the direction of future research on the area.
- After this concluding chapter, you should give a list of all the references you have used. These should be cross - references with your text. For articles from journals, the following details are required e.g.

Draper P and Pandyal K. 1991, The Investment Trust Discount Revisited, Journal of Business Finance and Accounting, Vol18, No6, Nov, pp 791-832.

For books, the following details are required:

Levi, M. 1996, International Financial Management, Prentice Hall, New York, 3rd Ed, 1996

- Finally, you should give any appendices. These should only include relevant statistical data or material that cannot be fitted into the above categories.

The Layout Guidelines for the Dissertation

- A4 size Paper
- Font: Arial (10 points) or Times New Roman (12 points)
- Line spacing: 1.5
- Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

Guidelines for the assessment of the Dissertation

While evaluating the dissertation, faculty guide will consider the following aspects:

1. Has the student made a clear statement of the objective or objective(s).
2. If there is more than one objective, do these constitute parts of a whole?
3. Has the student developed an appropriate analytical framework for addressing the problem at hand.
4. Is this based on up-to-date developments in the topic area?
5. Has the student collected information / data suitable to the frameworks?
6. Are the techniques employed by the student to analyse the data / information appropriate and relevant?
7. Has the student succeeded in drawing conclusion form the analysis?
8. Do the conclusions relate well to the objectives of the project?
9. Has the student been regular in his work?
10. Layout of the written report.

Assessment Scheme:

Continuous Evaluation:

40%

(Based on Abstract, Regularity, Adherence to initial plan, Records etc.)

Final Evaluation: Based on,

60%

Contents & Layout of the Report,

20

Conceptual Framework,

05

Objectives & Methodology and	05
Implications & Conclusions	10
Viva & Presentation	20

BME2104	INTRODUCTION TO COMPUTERS AND PROGRAMMING IN C	L	T	P	C
Version: 2019.1	Date of Approval: May 21, 2019	2	1	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

The objective of this course module is to acquaint the students with the basics of computers system, its components, data representation inside computer and to get them familiar with various important features of procedure-oriented programming language i.e. C.

Course Objectives

The objective of this course is to

- Equip the students with concepts of Programming through C Language
- Provide an overview of advanced programming concepts like Structure, Union and File Handling

Course Outcomes

On completion of this course, the students will be able to

After the completion of course, the students will be able to,

- CO 1: Define the purpose and structure of C Program for programming; identify and distinguish various data types and operators; conditional and control statement; Apply if-else, Switch and loops to rewrite basic C program for problem solving.
- CO 2: Compare and contrast various Array types, its declaration and implementation; differentiate between Call by Value and Reference if Functions; apply the concepts to rewrite C Programs
- CO 3: Differentiate between various String Handling Functions; describe the concept of Pointers in C Language
- CO 4: Explain the concept of Structure and Union; apply the concept of File Handling to provide data storage support to the programs.
- CO 5: Apply the concept of Computer Graphics using C programming concepts for implementing line drawing, circle drawing algorithms.

Modules	Blooms level*	Number of hours
Module I: Introduction Introduction to computer, history, von-Neumann architecture, memory system (hierarchy, characteristics and types), H/W concepts (I/O Devices), S/W concepts (System S/W & Application S/W, utilities). Data Representation: Number systems, character representation codes, Binary, octal, hexadecimal and their interconversions. Binary arithmetic, floating point arithmetic, signed and unsigned numbers, Memory storage unit.	L1, L2 and L3	7
Module II: Programming in C History of C, Introduction of C, Basic structure of C program, Concept of variables, constants and data types in C, Operators and expressions: Introduction, arithmetic, relational, Logical, Assignment, Increment and decrement operator, Conditional, bitwise operators, Expressions, Operator precedence and associativity. Managing Input and output Operation, formatting I/O.	L2, L3 and L4	7
Module III: Fundamental Features in C	L2, L3	7

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

C Statements, conditional executing using if, else, nesting of if, switch and break Concepts of loops, example of loops in C using for, while and do-while, continue and break. Storage types (automatic, register etc.), predefined processor, Command Line Argument.	and L4	
Module IV: Arrays and Functions One dimensional arrays and example of iterative programs using arrays, 2-D arrays Use in matrix computations. Concept of Sub-programming, functions Example of user defined functions. Function prototype, Return values and their types, calling function, function argument, function with variable number of argument, recursion.	L2 and L3	7
Module V: Advanced features in C Pointers, relationship between arrays and pointers Argument passing using pointers, Array of pointers. Passing arrays as arguments. Strings and C string library. Structure and Union. Defining C structures, Giving values to members, Array of structure, Nested structure, passing strings as arguments. File Handling.	L2, L3 and L4	8

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6:Evaluation

BME2109	PROGRAMMING IN C LAB	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	0	0	2	1
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

The primary objective of this course is to understand all the components of C, including the C language, the C Preprocessor, and the C Standard Library. An understanding of some advanced practical issues, including memory management, testing and debugging, complex declarations and expression evaluation, building and using libraries, and evaluating tradeoffs, such as size vs. speed and speed vs. complexity. The ability to write C code and create and manipulate logical programs.

Course Objectives

The objective of this course is to

- Equip the students with concepts of Programming through C Language
- Provide an overview of advanced programming concepts like Structure, Union and File Handling.

Course Outcomes

After the completion of course, the students will be able to,

CO 1: Demonstrate the use of various data types and operators in C programs; Solve various problems using conditional control statements (if-else, Switch case).

CO 2: Construct C programs related to problems involving the usage of loops, arrays and functions.

CO 3: Apply the concept of Pointers for efficient memory management and construct C programs using string handling functions.

CO 4: Demonstrate the use of Structure, Union and concept of File Handling to provide data storage support to the programs.

Modules	Blooms level*	Number of hours
LABORATORY SESSSION 1 OPERATORS, EXPRESSIONS and DECISION MAKING <ol style="list-style-type: none"> 1. Write a program to calculate simple interest and amount. 2. Write a program to swap two numbers using third variable. 3. Write a program to demonstrate Greatest of 3 nos and to print the given no in ascending order. 4. Write a program to check if the number is even or odd. 5. Write a program to perform arithmetic operations using Switch Case statement. 6. Write a program to calculate area of circle, rectangle, square and triangle using Switch Case statement. 	L3	5
LABORATORY SESSSION 2 LOOPING <ol style="list-style-type: none"> 1. Write a program to find factorial of given no using do while statement. 2. Write a program to print prime numbers up to 'n'. 3. Write a program to sum of n natural no. 4. Write a program to print Fibonacci series. 5. Write a program to reverse a number. 	L3	6

BME2111	ELEMENTS OF MECHANICAL ENGINEERING LAB	L	T	P	C
Version 2019.1	Date of Approval: May 16, 2019	0	0	2	1
Pre-requisites/Exposure					
Co-requisites					

Pre –Requisite: Elements of Mechanical Engineering

Catalog Description

In this course the concepts of various prime movers like I C Engine, Gas Turbine, Steam Turbine, and Hydraulic Turbine are discussed in detail. Concept of power absorbing devices and power transmission devices are discussed in detail. Elementary concept of mechanics of material and machine tool also discussed in detail. The aim of this course is to make the students familiar with the basic mechanical engineering.

Course Objectives:

The objective of this course is to

1. Equip the students with practical concepts of Boiler, Turbine, IC Engine and Machine tools.
2. Understand the elements of mechanical engineering by working models and experiments.

Course Outcomes (COs): After studying this course the students will be able to:

CO 1- Define the basics of working of boilers, Steam turbines.

CO 2- Explain the principle and working of two strokes and four strokes internal combustion engines.

CO 3- Explain the working of Pelton wheel Turbine, Francis Turbine and Kaplan Turbine.

CO 4 - Describe the tensile test and power transmission drives.

CO 5- Identify and demonstrate the machine tools and lathe operation.

List of Experiments	Blooms level*	Number of hours
• To Study the Cochran and Babcock & Wilcox boilers.	L1, L2 and L3	2
• To study the working of impulse and reaction steam turbines	L1, L2 and L3	2
• To study Two-Stroke & Four-Stroke Diesel Engines.	L1, L2 and L3	2
• To Study Two-Stroke & Four-Stroke Petrol Engines.	L1, L2 and L3	2
• To study the constructional features and working of Pelton wheel Turbine, Francis Turbine and Kaplan Turbine.	L1, L2 and L3	2
• To perform tensile test, plot the stress-strain diagram and evaluate the tensile properties of a given metallic specimen.	L1, L2 and L3	2
• To Study the different power transmission drives.	L1, L2 and L3	2
• To Study different types of machine tools (lathe, milling, drilling & shaper).	L1, L2 and L3	2
• To perform the metal cutting operation on Lathe machine.	L1, L2 and L3	2

BME2205	OBJECT ORIENTED PROGRAMMING USING C++	L	T	P	C
Version 2019.1	Date of Approval: May 16, 2019	2	1	0	3
Pre-requisites/Exposure	Hands on knowledge of C Programming				
Co-requisites	Basic concepts of C Programming				

Catalog Description

The objective of this course is to introduce object-oriented programming. To explore and implement the various features of OOP such as inheritance, polymorphism, Exceptional handling using programming language C++. After completing this course student can easily identify the basic difference between the programming approaches like procedural and object oriented.

Course Objectives

The objective of this course is

1. Equip the students with the basic features of C++ supporting object-oriented programming. Perform object oriented programming to develop solutions to problems demonstrating usage of control structures, modularity, I/O. and other standard language constructs.
2. Provide the overview of major object-oriented concepts to implement object oriented programs in C++ like encapsulation, inheritance and polymorphism, stream I/O, templates and operator overloading

Course Outcomes

On completion of this course, the students will be able to

- CO 1: Explain the basic principles of object-oriented programming approach; Differentiate it with procedural programming approach and also discuss difference between C and C++.
- CO 2: Illustrate the different ways to define a member function inline and explain how the private members of a class can be accessed. Explain how the objects can be instantiated and destroyed with static data member?
- CO 3: Explain the concept of inheritance, types and implementation with suitable examples; find out ambiguity problem in inheritance; use the concept of overriding and constructors in inheritance.
- CO 4: Explain polymorphism in detail and implement the concept of overloading in functions as well as in operators. Write the programs for virtual function and pointer with objects.
- CO 5: Explain the exception handling mechanism. Design the programs for class and function Template. Compare and contrast various formatted and unformatted i/o function in file handling.

Modules	Blooms level*	Number of hours
MODULE 1: INTRODUCTION Review of C, Difference between C and C++, Procedure Oriented and Object Oriented Approach. Basic Concepts: Objects, classes, Principals like Abstraction, Encapsulation, Inheritance and Polymorphism. Dynamic Binding, Message Passing. Characteristics of Object-Oriented Languages. Introduction to Object-Oriented Modeling techniques (Object, Functional and Dynamic Modeling).	L1 and L2	5
MODULE 2: CLASSES AND OBJECTS Abstract data types, Object & classes, attributes, methods, C++ class declaration, Local Class and Global Class, State identity and behaviour of an object, Local Object and Global Object, Scope resolution operator, Friend Functions, Inline functions, Constructors and destructors, instantiation of objects, Types of Constructors, Static Class Data, Array of Objects, Constant member functions and Objects, Memory management Operators.	L1, L2 and L3	7

MODULE 3: INHERITANCE Inheritance, Types of Inheritance, access modes – public, private & protected, Abstract Classes, Ambiguity resolution using scope resolution operator and Virtual base class, Aggregation, composition vs classification hierarchies, Overriding inheritance methods, Constructors in derived classes, Nesting of Classes	L2, L3 and L4	8
MODULE 4: POLYMORPHISM Polymorphism, Type of Polymorphism – Compile time and runtime, Function Overloading, Operator Overloading (Unary and Binary) Polymorphism by parameter, Pointer to objects, this pointer, Virtual Functions, pure virtual functions.	L2, L3 and L4	8
MODULE 5: STRINGS, FILES AND EXCEPTION HANDLING Manipulating strings, Streams and files handling, formatted and Unformatted Input output. Exception handling, Generic Programming – function template, class Template Standard Template Library: Standard Template Library, Overview of Standard Template Library, Containers, Algorithms, Iterators, Other STL Elements, The Container Classes, General Theory of Operation, Vectors.	L2, L3 and L4	8

Course Code: BME2208	ENGINEERING GRAPHICS LAB	L	T	P	C
Version 2019.1	Date of Approval: May 16, 2019	0	0	4	2
Pre-requisites/Exposure	Concepts Mathematics (especially Trigonometry and Geometry)				
Co-requisites	Machine Drawing & CAD				

Catalog Description:

A freshman level course which provides the undergraduate engineering students with a background in descriptive geometry, orthographic projection, engineering drawing standards and annotation, computer-aided engineering graphics. The concepts of point, line and plane relationships in projection, multi-view engineering drawings, auxiliary and section views, basic dimensioning and annotation, engineering applications of drawings are also discussed.

Course Objective:

The objective of this course is to

- Equip the students with the in-depth knowledge of drawings of points, straight line, planes, cylinders, prisms, pyramids, parabola, ellipse etc.
- Draw different figures manually and will be capable of using various instruments involved in drawings.

Course Outcomes (COs):

At the end of the course, the student shall be able to:

CO 1 - Define and explain basic principles of projections of points and lines.

CO 2 - Define, describe and construct the different orientations and projections of planes.

CO 3 - Explain and construct the projections of solids and sectioning of solids in different orientations.

CO 4 - State and draw the concepts of development of surfaces and introduction to auto CAD.

CO 5 - Define and construct orthographic and isometric view of an object.

Modules	Blooms level*	Number of hours
Module I: Introduction Importance, significance and scope of engineering drawing, drawing instruments and their use, lettering, dimensioning, scales, sense of proportioning, different types of projections, B.I.S. Specifications.	L1 and L2	8

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Module II: Projection of points, lines and plane surface Principal planes, principles of orthographic projections, Projection of points in all quadrants, Projection methods - First angle & third angle projection, Projections of straight lines (first angle projection) inclined to both the planes, true lengths and traces, projection of planes, projection of planes in simple position and inclined to both the principal planes, auxiliary planes and views	L1, L2 and L3	12
Module III: Projection of solids & section of solids Projection of simple solids like prisms, pyramids, cylinder, cone and truncated solids when the axis is inclined to both of the principal planes, Sectioning of above solids in simple vertical position when the cutting plane is inclined to the one of the principal planes and perpendicular to the other, obtaining true shape of section	L1, L2 and L3	12
Module IV: Development of surfaces & Isometric projections Development of surfaces of simple and sectioned solids – Prisms, pyramids cylinders and cones, Principles of isometric projection, isometric scale, Isometric projections of simple solids and truncated solids, Prisms, pyramids, cylinders, cones, Conversion of Orthographic Views to Isometric Views and Vice-versa.	L1, L2 and L3	8
Module V: Introduction to CAD Introduction to CAD and use of its commands, practice of some 2D figures using CAD.	L1, L2 and L3	8

BME2209	OBJECT ORIENTED PROGRAMMING USING C++ LAB	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	0	0	2	1
Pre-requisites/Exposure	Turbo C++				
Co-requisites	NIL				

Catalog Description

The objective of this course is to introduce object-oriented programming. To explore and implement the various features of OOP such as inheritance, polymorphism, Exceptional handling using programming language C++. After completing this course student can easily identify the basic difference between the programming approaches like procedural and object oriented.

Course Objectives

The objective of this course is

1. Perform object-oriented programming to develop solutions to problems demonstrating usage of control structures, modularity, I/O. and other standard language constructs.
2. Demonstrate adeptness of object-oriented programming in developing solutions to problems demonstrating usage of data abstraction, encapsulation, and inheritance.
3. Demonstrate ability to implement one or more patterns involving realization of an abstract interface and utilization of polymorphism in the solution of problems which can take advantage of dynamic dispatching, syntax, features of, and how to utilize the Standard Template Library.

Course Outcomes

On completion of this course, the students will be able to

- CO 1: Define and identify the basic principles of object-oriented programming approach; Differentiate it with procedural programming approach.
- CO 2: Determine the different ways to define a member function inline and explain how the private members of a class can be accessed. Solve how the objects can be instantiated and destroyed with static data member?
- CO 3: Apply the concept of inheritance, types and implementation with suitable examples; find out ambiguity problem in inheritance; use the concept of overriding and constructors in inheritance.
- CO 4: Relate the concept polymorphism with overloading in detail and implement the concept of overloading in functions as well as in operators. Write the programs for virtual function and pointer with objects.
- CO 5: Determine the exception handling mechanism. Design the programs for class and function Template. Compare and contrast various formatted and unformatted i/o function in filehandling.

Modules/Topics Covered**	Blooms level*	Number of hours
1. Sample Programs using objects and classes (a) Write a program to illustrate the concept of one class with two objects by taking student data. (b) Write a program to show the relationship of class and object to display roll no., grade and fee paid by student.	L1, L3, L5	4
2. Sample Programs for different use of private, public member variables and functions and friend functions (a) Write a program to define the member function outside and inside the class. (b) Write a program to read and display the information of N persons to illustrate the concept of array of objects. (c) Write a program to add two numbers to illustrate the use of friend function.	L1, L3, L5	4
3. Sample Programs using constructors and destructors	L1, L3,	4

Prof. Dr. Anil Kumar

BME2302	ANALOG ELECTRONICS I	L	T	P	C
Version: 2019.1	Date of Approval: May 21, 2019	3	0	0	3
Pre-requisites/Exposure	Elementary Resistive Circuit, Theorems and Analysis Techniques: KCL, KVL, Nodal & Mesh Analysis, Thevenin & Norton Equivalents, Maximum Power Transfer.				
Co-requisites	Semiconductor Physics				

Catalog Description

This is the first course in Electronics and Communication Engineering, to educate and explain the methods used for biasing circuits in a graphical analysis of non linear electronic circuits and also includes small signal transistor models, parameters and their frequency responses. Following this, analyzing different types of feedback amplifiers, and power amplifiers using transistor and designing of different electronic circuits are included in the course. This course also considers the mathematical modelling of active solid state devices their analysis and design of single state circuits. Topics covered include the study of device characteristics and applications of p-n-junction diodes, bipolar junction transistors, and field effect transistors.

Course Objectives

The objective of this course is to

1. build from basic knowledge of Semiconductor Physics to an understanding of basic devices and their models
2. familiarize the student with the analysis and design of basic transistor amplifier circuits, feedback amplifiers and wave shaping circuits
3. build a foundation for Analog Electronics-II, Digital Circuits and Systems I & II, VLSI de-sign and analog CMOS IC Design

Course Outcomes

On completion of this course, the students will be able to

- CO1. explain different types of diodes and demonstrate wave shaping circuits
- CO2. explain operating principal of Bipolar Junction Transistor, its properties, biasing techniques and stability
- CO3. describe low and high frequency transistor amplifiers along with single and multi-stage amplifier
- CO4. explain operating principal of JFET, MOSFET, its properties, and biasing techniques
- CO5. solve and analyse different negative feedback amplifiers configurations
- CO6. describe and outline power amplifiers and their application.

Modules	Blooms level*	Number of hours
Module I: Semiconductor Diode and Diode Circuits Different types of diodes: Zener, Schottky, LED. Zener as voltage regulator, Diffusion capacitance, Drift capacitance, the load line concept, half wave, full wave rectifiers, clipping and clamping circuits.	L1 L2 & L3	6
Module II: Bipolar Junction Transistor Bipolar junction transistor: Introduction, Transistor, construction, transistor operations, BJT characteristics, load line, operating point, leakage currents, saturation and cut off mode of operations. Bias stabilization: Need for stabilization, fixed Bias, emitter bias, self bias, bias stability with respect to variations in I_{CO} , V_{BE} & β , Stabilization factors, thermal stability.	L1 L2 & L3	9
Module III: Small signal Analysis of transistor and Multistage Amplifier Hybrid model for transistors at low frequencies, Analysis of transistor amplifier using h parameters, emitter follower, Miller's theorem, THE CE amplifier with an emitter resistance, Hybrid π model, Hybrid π Conductances and Capacitances, CE short circuit current gain, CE short circuit current gain with R_L Multistage amplifier: Cascading of Amplifiers, Coupling schemes(RC coupling and Transformer coupling)	L2 & L3	6
Module IV: Field Effect Transistors Field effect transistor (JFET, MOSFET): volt-ampere characteristics, small signal model –common drain, common source, common gate, operating point, MOSFET, enhancement and -depletion mode, Common source amplifier, Source follower	L1, L2 & L3	5
Module V: Feedback Amplifiers Feedback concept, Classification of Feedback amplifiers, Properties of negative Feedback amplifiers, Impedance considerations in different Configurations, Examples of analysis of feedback Amplifiers.	L1, L2, L3 & L4	6
Module VI: Power amplifiers Power dissipation in transistors, difference with voltage amplifiers, Amplifier classification (Class A, Class B, Class C, Class AB) class AB push pull amplifier, collector efficiency of each, cross over distortion.	L1 & L2	4

BME2303	CIRCUITS AND SYSTEMS	L	T	P	C
Version 2019.1	Date of Approval: May 16, 2019	2	1	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

In this course the concepts of circuits analysis based on Resistance, Inductance and Capacitance are discussed in detail. voltage- current relationship of basic circuit elements – resistors, inductors, capacitors, dependent and independent voltage and current sources; apply Kirchhoff's current and voltage laws to circuits in order to determine voltage, current and power in branches of any circuits excited by DC voltages and current sources will be discussed. Concept learnt in the studies will be applied to solve DC circuit problems using basic circuit theorems and structured methods like node voltage and mesh current analysis.

Course Objectives

The objective of this course is to

1. Equip the students with concepts basic network analysis of electrical circuits using KVL and KCL.
2. Provide an overview of one port and two port network analysis in time and frequency domain.

Course Outcomes

On completion of this course, the students will be able to

CO1: Expiation of graph theory for solving complex electrical circuits.

CO2: Analysis of RL, RC and RLC circuits using time domain approach.

CO3: Apply Laplace transform to solve RL, RC and RLC circuits in frequency domain.

CO4: Explanation and application of various network theorems to solve the given circuit.

CO5: Synthesis of RL, RC and RLC electrical circuits and explanation of two port network parameters.

Modules	Blooms level*	Number of hours
Module 1: Graph Theory and Network equations Graph of a network, Trees, Co-trees and loops, cut set matrix, Tie set matrix, number of possible trees of a graph, duality, Loop Analysis and Node Analysis.	L1 and L2	8
Module 2: Analysis of circuits using classical Method Time and Frequency domain analysis of RL, RC and RLC circuits, Linear constant coefficient differential equation.	L2 and L3	10
Module 3: Signals and Laplace Transforms Unit step signal, Ramp signal, impulse signal, Laplace transformations and its properties, Gate function, Inverse Laplace transformations, Application of Laplace Transforms in circuit analysis.	L3 and L4	10
Module 4: Network Theorems Reciprocity theorem, Superposition theorem, Thevenin's and Norton's theorems, Millman's theorem, Maximum power transfer theorem, Compensation theorem, Tellegan's theorem.	L2 and L3	10
Module 5: Two port Network & Network Functions Introduction, two port z-, y-, T-, h-parameters, Inter-relations among parameters, Condition for reciprocity and symmetry, Interconnections of two port networks, Driving point and transfer functions, Poles, Zeros and necessary condition for driving point and transfer function.	L1, L3	10
Module 6: Network Synthesis Hurwitz polynomial, Positive real functions, synthesis of LC, RC, RL immittance functions.	L1 and L5

BME2314	MEDICAL IMAGING TECHNIQUES-I	L	T	P	C
Version 1.1	Date of Approval: May 16, 2019	3	0	0	3
Pre-requisites/Exposure	Basic Electronic, Biology for Engineers, Physics				
Co-requisites	General Science				

Catalog Description

This course helps the students to understand various diagnostic imaging modalities used in medical profession e.g. X-Rays, CT scan, MRI, Ultrasound, and PET, Optical imaging, Near-Infra-red Imaging etc. etc. The content of the course will also speak about the artefacts and other problems related to the machines. The course also stresses the importance of radiation safety, ethics and legal considerations as well as professionalism.

Course Objectives

The objective of this course is to

The objective of this course is to

1. To provide an overview of medical imaging principles and machine.
2. To serve as a foundation for clinical significance of medical images.

Course Outcomes

On completion of this course, the students develop capabilities of:

- CO1. *Identify* various component of Ultrasound and Doppler machine and *explain* the working principle of ultrasound and its different operating modes.
- CO2. *Describe* the principle of production of X-Rays and *identify* function of various component of X-Ray machine.
- CO3. *List* various component of CT-Scan, *explain* principle of CT-Scan imaging.
- CO4. *List* the MRI hardware components, *explain* principles of MRI imaging, and *determine* the cause of artefact by observing the MRI images.
- CO5. *Explain* the principles of PET, Optical imaging and Infrared Imaging and *determine* application of each for various pathological situation.

Course Content

Modules	Blooms level*	Number of hours
MODULE I: Ultrasonic and Doppler Imaging Basic of Imaging techniques and Clinical Application Introduction to Ultrasonic and Doppler Medical imaging modalities, Physics of ultrasound, Principles of image formation, Capture and display, Principles of A-Mode, B-Mode, M-Mode, Scan converters Frame grabbers, Single line and multi-line monitoring of ultrasound displays. Various Application of Ultrasound and Doppler imaging.	L1 and L2	8
MODULE II: X-Ray and Angiography Imaging Principles and production of soft and hard X- rays, Photon Interaction and K-shell, Details of radiographic and fluoroscopic images in X-Ray systems. Screen-film and image intensifier systems, Different generation of x-rays, X-Ray machine, Clinical significance of X-ray images, Digital Subtraction Angiography and its application.	L1 and L2	7

MODULE III: CT-Scanner Principle of CT-Scan, Evolution of CT Machines, CT image formation, Conversion of X-Ray data into scan image, Mathematical details of various algorithms, Spiral CT, Transverse Tomography, CT Angiography.	L1 and L2	5
MODULE IV: Magnetic Resonance Imaging MRI Hardware, Principle of MRI, Larmor Frequency, Mathematical Equation Governing MRI, Bloch equation, Time of Echo (TE) and Repetition Time (TR) and its significance, Image acquisition in magnetic resonance imaging, T1, T2, proton density weighted images, , Artifacts in imaging, Various Application of T1, T2 and PD weighted images, NMR spectroscopy	L2 and L3	10
MODULE V: Other Advance Imaging techniques Principles and Application of PET, Infrared Imaging, Optical Imaging.	L1 L2 and L3	6

BME2351	HUMAN ANATOMY AND PHYSIOLOGY	L	T	P	C
Version 1.1	Date of Approval: 16,MAY,2019	3	0	0	3
Pre-requisites/Exposure	Biology for Engineers				
Co-requisites	General Science				

Catalog Description

This course provides students a basic understanding of the human body structure and functioning. Students will be able to relate basic human body systems and life processes, name the major body systems and their functions, understand the anatomy of various body systems, including musculo-skeletal System, nervous system, cardiovascular system, Renal system, etc.. This course covers the basic anatomy and physiology topics for better understanding of the human body. This is the first part of this course which is continued in the next semester.

Course Objectives

The objective of this course is to

1. To provide the student with an in-depth study of anatomy and physiology (structure and function) of the human body.
2. To explain and identify biological levels of organization: i.e. cells to tissues, tissues to organs.
3. To identify and develop understanding of major organ systems, list the organs found in each, and their primary functions.
4. To identify the basic structural and functional principles of human organ systems including repair systems.

Course Outcomes

On completion of this course, the students develop capabilities of:

- CO6. *Outline* cell organization and *describe* the physiology of various cell functioning.
- CO7. *List* various muscles, bone and joint and *distinguish* between joint functioning & Structure.
- CO8. *List and Describe* various structure and functioning of blood component and functioning of heart. *Apply* Einthoven's triangle to heart functioning to obtain ECG.
- CO9. *Explain* the physiology of respiratory and digestive system and *determine* respiratory clinical parameters.
- CO10. *Outline and describe* anatomy and physiology of nervous and renal system in interaction with endocrine gland.

Course Content

Modules	Blooms level*	Number of hours
MODULE I: Basic Cell Structure and physiology Basic cell structure, various cell organelles and their functions, Cell, cell membrane, polarization and repolarisation, resting membrane potential, Nernst equation, Donnan's equilibrium, Goldman equation, action potential and its propagation, synaptic transmission. Tissues- their types, structure and function, structure and function of skin.	L1 and L2	6
MODULE II: Musculo-Skeletal System and Its Physiology Different types of muscles and their function, General description of bones, their structure and function, types of joints and their structure and function. 1. Functional aspect of bones and joints 2. Shoulder joint, Elbow joint 3.	L1 and L2	7

Radioulnar and wrist joint 4. Joints of hand 5. Hip joint 6. Knee joint 7. Ankle and foot		
MODULE III: Cardiovascular System and its Physiology Blood, Lymph and circulation: blood composition, properties and function. Structure and functions of RBCs, WBCs and platelets, Blood types, Homeostasis, Immune mechanisms, Lymph, Heart position, structure and functions, Heartbeat, electrical excitation, Einthoven's triangle, Cardiac and peripheral regulation, blood pressure and its regulation, blood flow and its regulation	L1, L2 and L3	7
MODULE IV: Respiratory System and Digestive System Respiratory System: position and functions. Mechanics of respiration, Lung volumes and capacities, Gas exchange between lungs and tissues, regulation of respiration. Digestive system: Different parts of digestive system, functions of each organ, digestion of proteins, carbohydrates, fats, vitamins and minerals.	L2 and L3	8
MODULE V: Nervous System, Renal System and endocrine system Nervous system: Basic functions and structure of CNS, ventricles, and CSF, ANS. Organs of vision, hearing, taste, and smell. Mechanism of sight, colored vision, hearing, reflex action and reflex arc. Renal system: parts of the renal system, its structure and function, formation and composition of urine. Endocrine System and Reproductive system: basic knowledge of endocrine glands, functions of male and female reproductive parts and contraception.	L1 and L2	8

BME2306	ANALOG ELECTRONICS - I LAB	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	0	0	2	1
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

This course provides the practical implementation and verification of the theoretical facts studied in theory course. It includes studying the characteristics of diodes, rectifiers, transistors and amplifiers.

Course Objectives

The objective of this course is to

1. Provide a demonstration of various analog components like diodes, rectifiers etc.
2. Equip with understanding of different circuits like BJT, JFET, MOSFET and amplifiers.

Course Outcomes

On completion of this course, the students will be able to

CO 1: Demonstrate the characteristics of pn junction and zener diode.

CO 2: Obtain and analyze the output of clipper-clamper circuit and rectifiers with various filters.

CO 3: Plot the characteristics of BJT, JFET and MOSFET.

CO 4: Obtain the gain and demonstrate the frequency response of single stage and double stage amplifiers.

Modules/Topics Covered**	Blooms level*	Number of hours
Lab Session-I 1. To study and plot the characteristics of a junction diode. 2. To study Zener diode I-V characteristics.	L3, L5	2
Lab Session-II 3. To study diode based clipping and clamping circuits. 4. To study half wave, full wave and bridge rectifier with filters.	L3, L5	2
Lab Session-III 5. To study the input and output characteristics of a transistor in its various configurations (CE and CB). 6. To study various types of Bias Stabilization for a transistor. 7. To study and plot the characteristics of a MOSFET in its various configurations. 8. To study and plot the characteristics of a JFET in its various configurations	L3, L5	6
Lab Session-IV 9. To study the gain and plot the frequency response of a single stage transistor amplifier. 10. To measure gain and plot the frequency response of double stage RC	L3, L5	2

coupled amplifier.

COMPUTER AIDED GRAPHIC DESIGN LAB

Course Code: BME2315

Credit Units : 01

Course Contents:

1. To study and introduction to 3-D CAD Software to develop 3-D CAD model of Rectangular beam
2. To develop a 3-D CAD model of Hollow shaft.
3. To develop a 3-D CAD model of Nut & Bolt.
4. To develop a 3-D CAD model of Blood Vessels.
5. To develop a 3-D CAD model of Ball & Socket Joint.
6. To develop a 3-D CAD model of Knuckle Joint.
7. To develop a 3-D CAD model of Cotter Joint.
8. To study 3D rendering and develop 3D model from 2D stack of DICOM images.
9. Introduction to finishing tools for medical 3D rendered model.
10. To analyse wall-thickness, curvature analysis and part comparison.

BME2316	MEASUREMENT AND MEASURING INSTRUMENTS	L	T	P	C
Version 2017.1	Date of Approval: 16 May ,2019	3	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

This course provides a brief knowledge of measurements and measuring instruments related to engineering. It introduces measuring elements of instruments, characteristics of measuring instruments, error analysis, transducers and its classification, measurement of resistance, capacitance and inductance, principles of analog and digital meters and different display techniques.

Course Objectives

The objective of this course is to

- Equip the students with concepts of measurement, measuring elements and challenges in measurement.
- Provide in depth knowledge of each element of measurement system.

Course Outcomes

On completion of this course, the students will be able to

CO1. Explain measuring elements and characteristics of measurement system and solve problems related with measurement errors.

CO2. Classify different types of transducers and solve problems related with transducers.

CO3. Solve problems of resistance, capacitance and inductance measurement.

CO4: Explain and solve problems on different types of analog and digital meters suitable for voltage and current measurement.

CO5: Explain display devices used in measurement system and analyze the signals on CRO.

Course Content

Modules	Blooms level*	Number of hours
Module 1: BasicsofMeasurementSystems Elements of Generalized Measurement System; Static & Dynamic Characteristics of Instruments; Errorsin Measurements–Sources and Types of Errors; Statistical Treatment of Data–Mean, Measures of Dispersion, Rejection of database don confidence interval	L1, L2 and L3	5
Module 2: Transducers Classification; Selection of Transducers; Resistive Transducers – Potentiometer, Strain gauge, Rosettes, Thermistors and RTD; Capacitive Transducers– Measurementof Liquid level by change invariation of dielectric constant; Variable Inductance Transducers–self-generating type and passive type; Piezoelectric Transducers; Photoelectric Transducers; Digital Transducer	L1, L2, L3 and L4	9
Module 3: Measurement of Resistance, Inductance and Capacitance	L1, L2, and L3	8

D.C.Bridges: Wheatstone's bridge, Sensitivity & Limitations; Carey Foster Bridge; Kelvin double bridge; Megaohm bridge. A.C.Bridges: Maxwell's Inductance Capacitance Bridge; Anderson's Bridge; DeSauty's Bridge; Schering Bridge.		
Module 4: Analog and Digital Meters Analog meters: PMMC meters-construction, torque equation, ammeters shunts, multi-range ammeter, voltmeter multiplier, sensitivity, ohmmeters, multimeters; Construction & general equation of moving iron, electro dynamometer, hot wire instruments. Digital meters: Digital voltmeter-ramp type, integrating type, potentiometer type, Applications	L1, L2, and L3	8
Module 5: Display Devices and Recorders LED, LCD, Cold Cathode displays, Incandescent Displays, Fluorescent Displays, LVD, VDU Cathode Ray Oscilloscope: Basic functioning, Measurement of Voltage, Current, Phase and Frequency.	L1, L2, L3	6

**Bloom's Level:*

BME2317	MEASUREMENT AND MEASURING INSTRUMENTS LAB	L	T	P	C
Version 2019.1	Date of Approval: May 16, 2019	0	0	2	1
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Course Contents:

1. To Study various Temperature Measuring Instruments and to Estimate their Response times.
2. To study the working of Bourdon Pressure Gauge and to check the calibration of the gauge in a dead-weight pressure gauge calibration set up
3. To study a Linear Variable Differential Transformer (LVDT) and use it in a simple Experimental set up to measure a small displacement.
4. To measure load (tensile/compressive) using load cell on a tutor.
5. To measure torque of a rotating shaft using torsion meter/strain gauge torque transducer.
6. To measure the speed of a motor shaft with the help of non-contact type pickups (magnetic or photoelectric).
7. Measurement of distance using capacitive pick up
8. Measurement of temperature using RTD.
9. Measurement of pressure using piezoelectric pick up.

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

BME2318	VIRTUAL INSTRUMENTATION	L	T	P	C
Version 2019.1	Date of Approval: May 16, 2019	2	0	0	2
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

This Course introduces virtual instrumentation and its comparison over conventional instrumentation. In this course, LabVIEW has been adopted as the platform of virtual instrumentation programming. System hardware and its interfacing techniques are introduced. Applications of virtual instrumentation are explained in various field e.g. Aviation, Automotive Defence, Medical etc.

Course Objectives

The objective of this course is to

1. To provide the core knowledge of Virtual Instruments used in research and industry.
2. To provide a LabVIEW platform on which low cost virtual instruments can be designed in very short time.

Course Outcomes

On completion of this course, the students will be able to

CO1. Explain virtual instrumentation and compare it with tradition instruments.

CO2. Explain components of LabVIEW, apply programming concept and design basic virtual instruments using LabVIEW software.

CO3. Explain the concepts of LabVIEW system hardware including input, output and interfacing devices.

CO4: Explain applications of virtual instrumentation in industries.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Introduction to Virtual Instrumentation Introduction, Historical perspective, advantages, block diagram and architecture of a virtual instrument, conventional vs. virtual instrumentation.	L1, L2 and L4	4
Module 2: Introduction to Software Introduction to Lab VIEW, Front panel, back panel representations, Block diagram, Menus, Palettes, VI and Sub VI, Editing and Debugging VI, Structures, Arrays, Clusters, Charts and Graphs, Data acquisition, Instrument Control, Signal Generation and Signal Processing Examples	L1, L2, L3, L4 and L5	9
Module 3: Introduction to systems hardware ADC, DAC, D/O, counters and timer, PC hardware structure, timing, interrupts, DMA, software and hardware installation, Configuring data acquisition hardware using the drives in application software, use of DAQ library functions for different analog and digital input/output operations. Input/output devices & functions like data gloves, joysticks, CRT etc.	L1 and L2	6

BME2319	VIRTUAL INSTRUMENTATION LAB	L	T	P	C
Version 2019.1	Date of Approval: 16 May 2019	0	0	2	1
Pre-requisites/Exposure	Signal and System				
Co-requisites					

List of Experiments:

1. To open, and explore the components of LabView.
2. To build a simple VI that converts a Celsius temperature reading to Fahrenheit.
3. (a) To create an icon and a connector pane so you can use a VI as a subVI.
(b) To build a VI and create its icon and connector pane so you can use it as a subVI.
4. To build a VI to generate 4*5 two dimensional array of random numbers (between 1 to2).
5. To Build a VI that generate Fibonacci series starting from '0'.
6. To build a VI which finds roots of quadratic equation using formula node.
7. To build a VI that reverses the contents of an array.
8. To build a VI that can be used for sorting of numeric array i.e. in ascending or descending order.
9. To build a VI for 4*1 multiplexer operation.
10. To build a VI for 3*8 Decoder operation.

BME2408	DIGITAL ELECTRONICS	L	T	P	C
Version 2019.1	Date of Approval: May 16, 2019	2	1	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

This course explores the theory and operation of the basic building blocks of digital electronics which includes combinational and sequential circuits. This course also explains the logic families and data convertors. The concepts learnt in the studies of sequential circuits will be applied in the design and analysis of Melay and Moore machines.

Course Objectives

The objective of this course is to

1. Provide the basic knowledge of digital logic levels and application of combinational and sequential circuits.
2. Equip with the understanding of logic family and data convertors.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain the various logic gates, Boolean algebra and solve the k-map & tabulation method to simplify the logical function.

CO2: Explain the adder & subtractor; Apply and analyze multiplexer, decoder & encoder to design Boolean function.

CO3: Describe flip flops, shift registers & Design counters and synchronous sequential circuits.

CO4: Explain & compare different logic families and explain data convertors.

Modules	Blooms level*	Number of hours
MODULE 1: BOOLEAN FUNCTIONS Analog & digital signals, AND, OR, NOT, NAND, NOR , XOR & XNOR gates, Boolean algebra, DeMorgan's theorems, Implementation of logical function using only NAND/NOR gates, 1's complement and 2's complement, BCD to Gray and Gray to BCD code conversion, Standard representation of logical functions (SOP and POS forms), K-map representation and simplification of logical function up to five variables, don't care conditions, XOR & XNOR simplifications of K-maps, Tabulation method	L1,L2 and L3	6

MODULE 2: COMBINATIONAL CIRCUITS Adders, Subtractors, Implementation of full adder using half adder, full subtractor using half subtractor, Multiplexer, de-multiplexer, decoder & encoder, code converters, 1 & 2 bit comparators, BCD to seven segment decoder/encoder, Implementation of logic functions using multiplexer/de-multiplexer and decoder, Implementation of 16×1 MUX using 4×1 MUX, 4×16 decoder using 3×8 decoder etc., logic implementations using PROM, PLA & PAL.	L1, L2,L3 and L4	6
---	------------------	---

MODULE 3: SEQUENTIAL CIRCUITS Difference between combinational and sequential circuits, Latch, Flip-flops: SR, JK, D & T flip flops – Truth table, Excitation table, Conversion of flip-flops, set up and hold time, race around condition, Master Slave flip flop, Shift registers: SIPO, PISO, PIPO, SIPO, Bi-directional, 4-bit universal shift register; Counters: Asynchronous/ripple & synchronous counters – up/down, Ring counter, sequence detector.	L2,L3, L4 and L5	7
---	------------------	---

MODULE 4: LOGIC FAMILIES & DATA CONVERTERS Logic families: Special characteristics (Fan out, Power dissipation, propagation delay, noise margin), working of RTL, DTL, TTL, ECL and CMOS families; Data converters: Special characteristics, ADC – successive approximation, linear ramp, dual slope; DAC – Binary Weighted, R-2R ladder	L1, L2,L3 and L4	5
--	------------------	---

der type.

BME2412	BIOMATERIALS	L	T	P	C
Version 1.1	Date of Approval: MAY 16,2019	3	0	0	0
Pre-requisites/Exposure	Anatomy & physiology, Engineering Physics, Element of Mechanical Engineering, Engineering Mechanics				
Co-requisites	General Science				

Catalog Description

The course is about the biomaterials used in biomedical implants. It includes the concept of biocompatibility and toxicity test. Various biomaterial used in specific applications are content of course. It consist of metallic, polymer, ceramics and biological tissues. Course also provide understanding with material testing and sterilisation techniques.

Course Objectives

After successfully completing this course, students will be able to:

1. Understand the fundamental principals in biomedical engineering, material science and chemistry, and how they contribute to biomaterial development and performance.
2. Apply the math, science, and engineering knowledge gained in the course to biomaterial selection and design.
3. Critically review papers from the scientific literature and identify areas of research opportunities

Course Outcomes

On completion of this course, the students develop capabilities of:

- CO11. *Define* the biomaterials and its requirements. *Explain* the metallic implant properties. .
- CO12. *Define* the polymer and ceramic biomaterial and *describe* their application in various implants.
- CO13. *Describe* methodology to enhance biomaterial properties for better compatibility with biological tissues. *Setup* test for Biocompatibility and toxicological aspect of material.
- CO14. *Explain*sterilization techniques and *determine* mechanical testing setup for biomaterials for various application.

Course Content

Modules	Blooms level*	Number of hours
MODULE I: Introduction Definition of biomaterials, requirements of biomaterials, classification of biomaterials, Comparison of properties of some common biomaterials. Effects of physiological fluid on the properties of biomaterials, Surface properties, physical properties and mechanical properties of materials. Host tissue reactions to biomaterials Metallic implant materials: Stainless steel, Co-based alloys, Ti and Ti-based alloys. Importance of stress-corrosion cracking, corrosion behavior and the importance of passive films for tissue adhesion. Hard tissue replacement implant: Orthopedic implants and Dental implants. Soft tissue replacement implants: Percutaneous, skin implants and vascular implants,	L1 and L2	9
MODULE II: Polymeric implant materials Classification of polymers according to thermosets, thermoplastics and elastomers : Polyolefins, polyamides, acrylic polymers, fluorocarbon polymers, silicon rubbers, acetals. Physiochemical characteristics of biopolymers. Biodegradable polymers for medical purposes, Biopolymers in controlled release	L1 and L2	9

systems, Synthetic polymeric membranes and their biological applications. Ceramic implant materials: Definition of bioceramics. Common types of bioceramics: Aluminium oxides, Glass ceramics, Carbons. Bioresorbable and bioactive ceramics		
MODULE III: Composite implant materials: Mechanics of improvement of properties by incorporating different elements. Composite theory of fiber reinforcement (short and long fibers, fibers pull out). Polymers filled with osteogenic fillers (e.g. hydroxyapatite). Host tissue reactions to composite materials.. Biocompatibility & toxicological screening of biomaterials: Definition of biocompatibility, blood compatibility and tissue compatibility. Toxicity tests: acute and chronic toxicity studies (in situ implantation, tissue culture, haemolysis, thrombogenic potential tests, systemic toxicity, intracutaneous irritation test), sensitization, carcinogenicity, mutagenicity and special tests.	L1, L2 and L3	9
MODULE IV: Sterilisation Techniques: Definition of sterilization, Types of sterilization: autoclaving, ETO and gamma radiation. Effects of sterilization on the properties of materials. Testing of biomaterials/Implants: In vitro testing (Mechanical testing): tensile, compression, wears, fatigue, corrosion studies and fracture toughness. In-vivo testing (animals studies): biological performance of implants. Ex-vivo testing: in vitro testing simulating the in vivo conditions. Standards of implant materials.	L2 and L3	9

BME2413	SIGNALS AND SYSTEMS	L	T	P	C
Version 2019.1	Date of Approval: May 16, 2019	2	1	0	3
Pre-requisites/Exposure	Differentiation & Integration concepts				
Co-requisites					

Catalog Description

This course deals in Digital signal processing with significant skills in advance methods for modification, analysis, classification & sampling of signals. It provides the broad knowledge of design, and realization of digital signal processing systems. The problems based on transformation of domains and filter design will be focused on.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of signals and systems.
2. Provide in-depth knowledge of representation of signals in frequency & z-domain.

Course Outcomes

On completion of this course, the students will be able to

CO1: Represent, analyze & categorize discrete-time signals and systems in time domain with an emphasis on linear time invariant systems.

CO2: Apply the fourier series expansion to signals and obtain its constituent frequencies.

CO3: Convert the signals from time domain to frequency domain using fourier transform.

CO4: Apply the z- transform on discrete signals to solve the problems related to computational complexity.

Modules	Blooms level*	Number of hours
Module 1: Signals And Systems Introduction of signals and systems; classification of signal, continuous time and discrete time signals, operations performed on them, even and odd signals, periodic and non periodic signals, deterministic and random signals, energy signals, power signals, elementary signals: impulse, step, ramp and exponentials, classification of systems.	L1,L2 and L4	8
Module 2: LTI System Response of LTI system for continuous and discrete time systems, Impulse response, Step response, properties of continuous LTI and discrete LTI systems, LTI systems described by differential and difference equation, analysis of LTI Systems, interconnection of systems.	L1,L2 and L4	6
Module 3: Fourier Series Representation of continuous time periodic signal, properties of continuous time Fourier series, representation of discrete time periodic signals, convergence of the Fourier series, properties of discrete time Fourier series, Fourier series and LTI systems.	L2,L3	7
Module 4: Fourier Transform Continuous time Fourier transform, properties of continuous time Fourier transform, discrete time Fourier transform, properties of discrete time Fourier transform; applications; Bandwidth determination of signals and systems.	L2,L3	7
Module 4: z-Transform Definition of z-transform, region of convergence, properties of z-transform, first order system, second order system, inverse z-transform, analysis of LTI system using z-transform.	L2,L3	8

BME2451	BIO-INSTRUMENTATION	L	T	P	C
Version 1.1	Date of Approval: 16, May 2017	3	0	0	3
Pre-requisites/Exposure	Anatomy & Physiology and Electronic Circuit				
Co-requisites	General Science				

Catalog Description

Bio-instruments comprise of all equipment use in healthcare system for diagnosis and therapy. This course is consist of diagnosis equipment using various physiological parameters. Course inculcate an understanding of the measurement principles of medical instrumentation, including biochemical sensors, bio-potential amplifiers, bioelectrical signals (ECG, EEG), measurement of respiratory function, cardiac variables, blood pressure, blood flow as well as medical devices.

Course Objectives

The objective of this course is to

- To provide an overview of bio-instrumentation principles and constraint.
- To serve as a foundation for design and use of medical instruments.

Course Outcomes

On completion of this course, the students develop capabilities of:

- CO15. *Identify* appropriate transducer and electrode to *estimate* specific physiological parameter.
- CO16. *List* electro-physiological signal (ECG, EEG, EMG) specification and *construct* device to analysis signal characteristics.
- CO17. *List* various respiratory parameter and *demonstrate* the use of electrical impedance tomography for plethysmography.
- CO18. *Explain* the principle of oximetry and *construct* oximeter device.
- CO19. *Explain and demonstrate* the principle of non-invasive blood pressure measurement.

Course Content

Modules	Blooms level*	Number of hours
MODULE I: Introduction to Bio-Instrumentation Transducers and Reference electrodes: classification of transducers, temperature transducers, displacement transducer, pressure transducer. Magnetic induction transducer, photoelectric transducer, piezoelectric transducer, magnetic induction. Electrode theory, biopotential electrodes, microelectrodes, skin surface electrodes, needle electrodes.	L1 and L2	10
MODULE II: Electrophysiological Signals and Measurement Devices ECG: electrodes and conversion of ionic potentials to electric potential, ECG instrumentation amplifiers, driven right leg circuitry. Introduction and characteristics of bio signals (EEG, ECG, EMG), removal of artifacts, event detection and correlation analysis of ECG signals.	L1, L2 and L3	8
MODULE III: Respiratory System and Measurement Devices Respiratory System: position and functions. Methods to measure residual volumes, Introduction to respiration measurement using electrical impedance plethysmography, Electrical impedance changes during breathing, 2 and 4 electrode measurement, 4 electrode technique.	L1, L2 and L3	6
MODULE IV: Oximetry and Measurement devices	L2 and L3	6

Introduction to Oxygen saturation using pulse oximetry, optical characteristics of oxygenated and deoxygenated blood, amplifiers. Principles of pulse oximetry, circuits of pulse oximetry, constant current source, current – voltage converter		
MODULE V: Blood Pressure measurement techniques Theories of Non-invasive blood pressure measurement, Korotkoff sounds and circuitry for method based on oscillometry. Finot-sphygmomanometer principles and limitation.	L2 and L3	6

BME2403	BIO-INSTRUMENTATION LAB	L	T	P	C
Version 2019.1	Date of Approval: 16, May 2019	0	0	2	1
Pre-requisites/Exposure	Anatomy & Physiology and Electronic Circuit				
Co-requisites	General Science				

Course Objectives

The objective of this course is to

- To provide hands-on practice with medical signal analysis.
- To serve as a foundation for design of medical device.

Course Outcomes

On completion of this course, the students will be able to

CO20. Designing of medical device component as amplifier, sensors, power supplies, filters etc.

CO21. Design and measure the physiological signal in real time.

Catalog Description

This course helps the students to do hands-on practice with various medical equipment as pulse oximeter, ECG, EMG etc. Course also help student to build capacity to design components for medical devices as, electronic filter, power supplies, amplifiers, etc. with desire output. Course included the basic demonstration of transducer and sensors use for measurement. It consists of signal analysis and visual presentation of analyzed result.

Course Content

Laboratory Session 1: 2 hours

1. Study of pulmonary function analyzer using spirogram.

Laboratory Session 2: 2 hours

2. To study finger-tip oximeter.

Laboratory Session 3: 2 hours

3. Designing of instrumentation amplifier.

Laboratory Session 4: 2 hours

4. Designing of notch filter.

Laboratory Session 5: 2 hours

5. To study voltage regulator IC 7805, 7809, 7812 series.

Laboratory Session 6: 2 hours

6. To determine Bradycardia and Tachycardia using ECG Training Kit.

Laboratory Session 7: 2 hours

7. To determine heart rate using ECG simulator Kit.

Laboratory Session 8: 2 hours

8. Circuitry explanation for patient leakage current.

Laboratory Session 9: 2 hours

9. To determine balancing condition for thermistor using wheat stone bridge.

Laboratory Session 10: 2 hours

10. Study of pressure changes using strain gauge.

BME2409	DIGITAL ELECTRONICS LAB	L	T	P	C
Version 2019.1	Date of Approval: 16, May 2019	0	0	2	1
Pre-requisites/Exposure	Signal and System				
Co-requisites	Nil				

List of Experiments:

1. To verify the truth tables of NOT, OR, AND, NOR, NAND, XOR, XNOR gates.
2. To obtain half adder, full adder using gates and verify their truth tables.
3. To obtain half subtractor, full subtractor using gates and verify their truth tables.
4. To implement control circuit using multiplexer.
5. To convert BCD code into excess 3 code and verify the truth table.
6. To verify the truth tables of RS, D, JK and T flip- flops.
7. To implement and verify 3-bit bi-directional shift register.
8. To design and study asynchronous/ripple counter.
9. To design and study synchronous counter.
10. To design and study a sequence detector.

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

BME2414	SIGNALS & SYSTEMS LAB	L	T	P	C
Version 1.1	Date of Approval: 16, May 2019	0	0	2	1
Pre-requisites/Exposure	Basic knowledge of Matlab				
Co-requisites					

Course Objectives

The objective of this course is to

1. To equip the students with the signal processing tool of Matlab through practical exposure.
2. To provide sound foundation of the basic signal generation and its various operations in Matlab.

Course Outcomes

On completion of this course, the students will be able to

CO1. Understand the concepts of basic signals and write matlab code to generate them.

CO2. Write programs related to various operations performed between two signals like correlation & convolution.

CO3. Write programs for transforming the signal from time domain to frequency domain & z-domain.

CO4. Use Matlab as a computation and visualization tool in the study of signals and systems.

Catalog Description

This lab exercises provide opportunities for applying & implementing basic signal and system concepts. Topics include signal generation, convolution, correlation, discrete Fourier Transforms and z transforms with an emphasis on using computer software (Matlab) for analysis and simulation.

Course Content

Laboratory Session 1: 4 hours

1. To Study auto correlation of two signals.
2. To study cross correlation of two sequences.

Laboratory Session2: 2 hours

3. To study convolution of two sequences.
4. To study impulse response.

Laboratory Session 3: 4 hours

5. To study z transform of a) sinusoidal signal, b) step function.
6. To compare fourier and z transform of a signal.

Laboratory Session 4: 2 hours

7. To study convolution theorem in time and frequency domain

BME2407	ANALOG ELECTRONICS- II	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	3	0	0	3
Pre-requisites/Exposure	Basic Electronics and Circuitual Analysis				
Co-requisites	Nil				

Catalog Description

This course introduces the application of semiconductor devices in linear analog circuits. The course stresses on circuit designs using the operational amplifier, active filters and oscillators. The course also provides the overview on the

Course Objectives

The objective of this course is to

1. Provide the fundamental knowledge of linear analog circuits.
2. Provide the knowledge about practical circuit designs using OP Amp.

Course Outcomes

On completion of this course, the students will be able to

CO1. Describe the circuits having BJT and Operational Amplifiers.

CO2. Solve the Linear and Non-linear circuits and analyze them in terms of their parameters and applications.

CO3. Categorize the waveform generation circuits and apply them in laboratory projects.

CO4. Analyze the circuitual knowledge to Linear ICs and filters and apply them for industry problem.

Course Content

Modules	Blooms level*	Number of hours
MODULE I: Building Blocks of Analog ICs 6 lecture hours Differential amplifier, Op-amp Model, op-amp DC & AC parameters, virtual ground, Current mirrors, Active loads, Level shifters and output stages.	L1 and L2	6
MODULE II: Operational amplifiers Introduction, open loop and closed loop configuration, op-amp parameters (input offset current, output offset current, i/p bias current, CMRR, PSRR, null adjustment range, etc,)	L1 and L2	5

 Prof. (Dr.) Anil Kumar

Inverting and non-inverting configuration, voltage gain of inverting and non inverting configurations.		
MODULE III: Linear & Non Linear Wave shaping Adders, Voltage to current, current to voltage Converter, Integrators, Differentiators, Voltage follower (voltage buffer), summer, subtractor, Comparators, log/antilog circuits using Op-amps, precision rectifiers.	L2, L3 and L4	6
MODULE IV: Waveform Generations Damped and undamped oscillations, Barkhausen criterion for sustained oscillation. Tank circuit generator Astable multi Vibrators, OTA-C Oscillators, Crystal oscillator. Types of oscillators: LC-Hartley and Colpitts, RC-RC phase shift and Wien bridge oscillator, Basics of tuned Amplifiers, Voltage Controlled Oscillator.	L2 L3 and L4	7
MODULE V: Active RC Filters & Applications of Linear Circuits Idealistic & Realistic response of filters (LP, BP, and HP), Butter worth & Chebyshev approximation filter functions, LP,BP,HP and All pass, Notch Filter, Operational transconductance amplifier (OTA)-C filters.	L2, L3 and L4	6
MODULE VI: Applications of IC Analog Multiplier & Timer IC phase locked loops, 555 Timer, IC voltage regulators-(fixed, variable) 78xx, 79xx series and adjustable.	L3 and L4	6

BME2417	ANALOG ELECTRONICS-II LAB	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	0	0	2	1
Pre-requisites/Exposure	Circuit Theory				
Co-requisites	Nil				

Catalog Description

In this course the concepts of Analog Electronics are discussed. Design and analysis of efficient circuits using op-amp like adder, subtractor, filters and oscillators.

Course Objectives

The objective of this course is to

1. To provide the basic skills required to understand, develop, and design of various engineering applications involving Analog Electronic & Circuits.
2. To provide basic laboratory exposures for Analog Circuits and applications.

Course Outcomes

On completion of this course, the students will be able to

CO1: Construct adder, subtractor, an inverting and non-inverting amplifier.

CO2: Design transistor-based RC oscillator (Wien bridge and RC phase shift oscillator) circuit.

CO3: Construct astable and mono-stable mode timer circuit using IC 555.

CO4: Design of Integrator, differentiator and low pass & high pass active filter circuit using Op-Amp (I.C-741)

List of Experiments:

Modules	Blooms level*	Number of hours
1. To study the op amp as an inverting and non inverting amplifier. 2. To use the op amp as an adder, subtractor, integrator and differentiator. 3. To design a ramp and a square wave generator. 4. To study the IC-555 timer as stable and bistable multivibrator.	L1, L2	8
5. To design low pass, high pass and band pass filters using op- amp. and plot their frequency response. 6. To design and study class A power amplifier. 7. To design and study a class B push pull amplifier.	L3 and L4	10
8. To study various feedbacks such as voltage series feedback.	L2, L4	10

BME2416	MEDICAL IMAGING TECHNIQUES-II	L	T	P	C
Version 1.1	Date of Approval: 16 May, 2019	3	1	0	3
Pre-requisites/Exposure	Basic Electronic, Biology for Engineers, Physics				
Co-requisites	General Science				

Catalog Description

This course helps the students to understand various advance techniques imaging modalities used in medical profession e.g. MRI, MRI Pulse Sequences, Diffusion, Perfusion, Contrast imaging, etc. The content of the course will also speak about the artefacts and other problems related to the machines. The course also stresses the importance of radiation safety, ethics and legal considerations as well as professionalism.

Course Objectives

The objective of this course is to

1. To provide an overview of advance medical imaging principles and machine.
2. To serve as a foundation for research in field of medical imaging.

Course Outcomes

On completion of this course, the students develop capabilities of:

- CO22. *Explain* basic component of Pulse sequence and *design* and *stimulate* Echoes.
CO23. *Describe* advance techniques of pulse sequences, and able to *differentiate* between them
CO24. *Describe* various contrast imaging principles and *analyses* clinical parameters.
CO25. *Illustrate* MRS and MRE and *compile* processed data.
CO26. *Describe* application of MRI in field of clinical research and diagnosis.

Course Content

Modules	Blooms level*	Number of hours
MODULE I: Basic of Magnetic Resonance Pulse Sequences Basic Classification, Response to a single RF Pulse: Saturation and inverse recovery, Spin Echo, Spin-echo equation, General Response of two or more RF pulses: Stimulated Echoes.	L2, L3, and L4	8
MODULE II: Advance Techniques of Pulse Sequences Review of the main classes of imaging pulse sequence, Gradient Echo-Pulse sequence(GRE), Rapid-GRE, Echo-planar and spiral imaging, Interleaved and hybrid sequence, Multislice vs 'True-3D' sequence for volume imaging, Acquisition Strategies in k-space, Gating, Parallel imaging. Other imaging Methods with Historical Interest: Points Methods and Line Scanning Methods	L2 and L3	10
MODULE III: Image contrast Mechanism and Quantitative Imaging General Principles of Quantitative Imaging(QI), Relaxation Times and Dynamic contrast enhance MRI, Flow, Diffusion and Perfusion, Susceptibility and functional MRI, Ultra-Short TE imaging, Magnetic transfer and polarisation Transfer, Chemical shift Imaging, Current-Density Imaging,	L2, L3 and L4	15

Imaging of nuclei other than Hydrogen		
MODULE IV: MR Spectroscopy and MR elastography Introduction to MRS, Chemical –Shifted Spectroscopy, 1D Spectroscopy data processing, Introduction to MRE and its typical application.	L2 and L3	8
MODULE V: Application of MR in Medicine Cancer, Neurology, Cardiology, Interventional Procedures and Monitoring of Therapy, Other Medical Applications, Molecular and Cellular Imaging, Genetic Phenotyping for Pre-Clinical Imaging	L1 and L2	7

BME2418	ARTIFICIAL NEURAL NETWORK	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	2	0	0	2
Pre-requisites/Exposure	Basic Knowledge of Brain functioning				
Co-requisites	Nil				

Catalog Description

The course provides introduction to neural network and a deep insight into the basics of brain & its functioning basics of various neural models & neural schema used for learning. With this course students would be able to know the basics of each introductory feature of human brain and its features which would prove to be very helpful throughout their degree and would prove helpful in understanding other related subjects also.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of learning of brain problem solving techniques and develop proficiency in creating neural structures using the MATLAB.
2. Provide an overview of various control statements, data structures, packages related to image addition, graphics, different types of neural models.

Course Outcome

On completion of this course, the students will be able to

CO 1: Define Artificial Neural Network & its similarity to biological neural network and explain its application in our day to day life.

CO 2: Analyze ANN learning, Error correction learning, Hebbian learning, Competitive learning and Boltzman Learning.

CO 3: Implement simple perceptron, Perceptron Learning rule, modified perceptron learning rule, feed forward neural network & feedback Neural Network.

CO 4: Explain self-organizing Map, Hopfield network, Adaptive resonance theory and its various learning rules.

CO 5: Analyze memory-based learning, Associative learning, Bi-directional learning and Auto associative learning.

Modules	Blooms level*	Number of hours
Module-I Artificial Neural Networks (ANN) and biological neural networks, supervised and unsupervised learning rules, neural network applications	L1, L2 and L3	6
Module-II Unsupervised learning:- Hebbian learning and competitive learning. Supervised learning:- Back propagation algorithms, Learning rule:- Delta learning rule, Widrow-Hoff learning rule, Winner-Take-All learning rule	L1, L2 and L3	6
Module-III Feed forward neural network, feed backward neural network, Perceptron and its learning law, single-layer perceptron, multi-layer perceptron.	L2, L3 and L4	6
Module-IV Self organizing networks: Kohonen algorithm, Hopfield Networks: Hopfield	L2, L3 and L4	6

BME2419	ARTIFICIAL NEURAL NETWORK LAB	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	0	0	2	1
Pre-requisites/Exposure	Basics of MATLAB				
Co-requisites	NIL				

Catalog Description

In this Lab course first student should learn about advanced level of software used for easy calculation and toolbox used for software like MATLAB.

Course Objectives

The objective of this course is to

- Make the students apply knowledge of various neural models required for solving complex problems.
- Provide a demonstration of different types of image processing techniques through MATAB toolbox.

Course Outcomes

On completion of this course, the students will be able to

CO1: Acquiring knowledge of Basics of High-end calculation software and need in Computer Science & engineering

CO2: Demonstrate the All preliminary functions in MATLAB

CO3: Apply the knowledge of all the basics function and toolbox knowledge of MATLAB

CO4: Demonstrate the Neural Network model in MATLAB

CO5: Demonstrate usage of applications involving with Image processing & Its Toolbox used by MATLAB

Modules/Topics Covered**	Blooms level*	Number of hours
7. Introduction of MATLAB (a) Basic Variable deceleration & its operation (b) Function use & its application	L3, L5	4
8. Sample Programs in MATLAB (a) Basic use of Matrix and Graph Plotting (b) Different type of graph plotting with use of different -2 type of data	L3, L5	6
9. Sample Programs using MATLAB functions (a) Create a basic program MATLAB using functions (b) Use of basic function Image processing (c) Practice on Basic function of Image processing tool box.	L3, L5	6
10. Sample programs of ANN functions (a) Practice on ANN toolbox function in MATLAB (b) Write a program for training a small network in MATLAB	L3, L5	6
11. Sample Programs using ANN tool box & Image processing toolboix (a) Demonstrate the use of ANN tool box & Image processing toolbox and write a program after combining it.	L3, L5	2

*Bloom's Level:

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

BME2501	MICROPROCESSOR SYSTEMS	L	T	P	C
Version: 2019.1	Date of Approval: May 21, 2019	3	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

This course deals with the systematic study of the Architecture and programming issues of microprocessor family and its applications. The aim of this course is

1. To introduce students with the architecture and operation of typical microprocessors.
2. To familiarize the students with the programming and interfacing of microprocessors
3. To provide the basic knowledge of the microprocessor needed to develop the embedded system based products as a solution to real time problems.

Course Outcomes

On completion of this course, the students will be able to

CO1. Explain the architecture, pin configuration, addressing modes, control words, timing diagram, instruction set of 8085 microprocessors and Interfacing ICs

CO2. Explain the architecture, pin configuration, addressing modes, control words of 8086, 8087 and other 16 bit microprocessors and Interfacing ICs

CO3. Develop the assembly language program using 8085 using stacks & subroutines.

CO4. Design circuitry to the Microprocessor I/O ports in order to interface the processor to external devices so as to provide solutions real-world control problems

Modules	Blooms level*	Number of hours
Module I: Introduction to Microcomputer Systems Introduction to Microprocessors and microcomputers, Study of 8 bit Microprocessor, 8085 pin configuration, Internal Architecture and operations, interrupts, Stacks and subroutines, various data transfer schemes.	L1, L2, L3, L4	6
Module II: ALP and timing diagrams Introduction to 8085 instruction set, advance 8085 programming, Addressing modes, Counters and time Delays, Instruction cycle, machine cycle, T-states, timing diagram for 8085 instruction.	L4, L5, L6	8
Module III: Memory System Design & I/O Interfacing Memory interfacing with 8085. Interfacing with input/output devices (memory mapped, peripheral I/O), Cache memory system. Study of following peripheral devices 8255, 8253, 8257, 8259, 8251.	L3, L4, L5, L6	9
Module IV: Architecture of 16-Bit Microprocessor Difference between 8085 and 8086, Block diagram and architecture of 8086 family, pin configuration of 8086, minimum mode & maximum mode Operation, Bus Interface Unit, Register Organization, Instruction Pointer, Stack & Stack pointer, merits of memory segmentation, Execution Unit, Register Organization.	L2, L3, L4	7

BME2513	MEDICAL IMAGE PROCESSING	L	T	P	C
Version 1.1	Date of Approval: 21 May, 2019	3	0	0	3
Pre-requisites/Exposure	Engineering Mathematics				
Co-requisites	General Science				

Catalog Description

Course give introduction to digital image processing and its application with clinical image. Course consists of image enhancement, denoise, filtering in spatial and frequency domain etc. techniques. Its include image segmentation and feature extraction methods. Besides, course gives the insight in the process of registration and its application. Course provide the foundation for medical image constriction, to develop complex algorithm and application of machine learning. Furthermore, course develop a life long learning capabilities in the students.

Course Objectives

The objective of this course is to

- To provide an overview of medical image processing and its constraint.
- To serve as a foundation for design and develop complex medical image processing algorithms.

Course Outcomes

On completion of this course, the students develop capabilities of:

- CO27. *Identify* the relation between pixels in an image, and coccots of quantization, resolution inn images.
- CO28. *Apply* intensity transformation and spatial filter for various application of Image Processing.
- CO29. *Develop and Apply* various frequency domain operation on an image for filtering, and analyzing.
- CO30. *Deploy* the programming skill of segmentation of RoI using various algorithm.
- CO31. *Deploy* the programming skill of Registration of images using various algorithm

Course Content

Modules	Blooms level*	Number of hours
MODULE I: Introduction to Medical Imaging Digital image processing, fundamental steps in digital image processing, Component of Image processing. Simple Image Formation Model, Image Sampling and Quantization, Representing Digital Images, Spatial and Intensity Resolution, Image Interpolation, Some Basic Relationships between Pixels, An Introduction to the Mathematical Tools Used in Digital Image Processing, Medical Imaging History, Various Projection or View of Medical Imaging, Fundamental Principles of Medical imaging, DICOM images format.	L1 and L2	10
MODULE II: Intensity Transformations and Spatial Filtering The Basics of Intensity Transformations and Spatial Filtering, Some Basic Intensity Transformation Functions, Histogram Processing, Fundamentals of Spatial Filtering, Smoothing Spatial Filters, Sharpening Spatial Filters, Noise model and noise filtering, Application	L1, L2 and L3	8
MODULE III: Filtering in the Frequency Domain Filtering in the Frequency Domain	L1, L2 and L3	6

The brief Introduction to Fourier Series and Transform, The Basics of Filtering in the Frequency Domain Image Smoothing Using Frequency Domain Filters , Image Sharpening Using Frequency Domain Filters, Noise filtering in frequency domain, Application.		
MODULE IV: Segmentation Morphological Image Processing: Erosion and Dilation, Opening and Closing and its segmentation application. Point, Line, and Edge Detection, Thresholding Region-Based Segmentation; Region Growing, Hough Transformation.	L2 and L3	6
MODULE V: Registration Geometric Transformation, Intensity interpolation, Similarity measure, Sum of Square difference, Correlation coefficient, Mutual Information, Structural Similarity Index, Feature based registration, Least Square Fit.	L2 and L3	6

*Bloom's Level:

L1: Knowledge; L2: Comprehension; L3: Application; L4: Analysis; L5: Synthesis, L6: Evaluation

BME2514	MACHINE LEARNING	L	T	P	C
Version 1.1	Date of Approval: 16, May 2020	3	0	0	3
Pre-requisites/Exposure	Engineering Mathematics				
Co-requisites	General Science				

Catalog Description

Machine learning is the science of getting computers to act without being explicitly programmed. In the past decade, machine learning has given us self-driving cars, practical speech recognition, effective web search, and a vastly improved understanding of the human genome. Machine learning is so pervasive today that you probably use it dozens of times a day without knowing it. Many researchers also think it is the best way to make progress towards human-level AI. In this class, you will learn about the most effective machine learning techniques, and gain practice implementing them and getting them to work for yourself. More importantly, student will learn about not only the theoretical underpinnings of learning, but also gain the practical know-how needed to quickly and powerfully apply these techniques to new problems. Finally, student will learn about some of Silicon Valley's best practices in innovation as it pertains to machine learning and AI.

This course provides a broad introduction to machine learning, datamining, and statistical pattern recognition. Topics include: (i) Supervised learning (parametric/non-parametric algorithms, support vector machines, kernels, neural networks). (ii) Unsupervised learning (clustering, dimensionality reduction, recommender systems, deep learning). (iii) Best practices in machine learning (bias/variance theory; innovation process in machine learning and AI). The course will also draw from numerous case studies and applications, so that you'll also learn how to apply learning algorithms to building smart robots (perception, control), text understanding (web search, anti-spam), computer vision, medical informatics, audio, database mining, and other areas.

Course Objectives

The objective of this course is to

- To provide an overview of Machine Learning and its constraint.
- To serve as a foundation for design and develop complex ML algorithms.

Course Outcomes

On completion of this course, the students develop capabilities of:

- CO32. *Identify* the constrain of ML, *differentiate* between supervised and unsupervised learning; *develop* function for regression and cost function.
- CO33. *Apply* the concept of ML and *deploy* gradient descent algorithm for logistic regression.
- CO34. *Apply* the regularization parameters to optimize the ML algorithm.
- CO35. *Develop* the Algorithm using Neural network principle.
- CO36. *Deploy* the principle of ML for Optimization and rectification of output error.

BME2504	MICROPROCESSOR SYSTEMS LAB	L	T	P	C
Version: 2019.1	Date of Approval: May 21, 2019	0	0	2	1
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

This course focuses on the systematic study of the Architecture and programming of microprocessor family and its applications. The objectives of this course are:

1. To introduce students with the architecture operation and instruction set of 8085 and 8086 microprocessors.
2. To familiarize the students with the programming and interfacing of 8085 and 8086 microprocessors.
3. To provide the basic knowledge of the microprocessor needed to develop the embedded system based products as a solution to real time problems.

Course Outcomes

On completion of this course, the students will be able to

CO1. Set up programming strategies and select proper mnemonics and run their program on the training boards

CO2. Develop assembly language programs for various problems keeping in mind technical issues and evaluate possible causes of discrepancy in practical experimental observations in comparison.

CO3. Understand the concepts related to I/O and memory interfacing and design interfacing circuits with 8085 by making use of different peripheral devices.

Modules	Blooms level*	Number of hours
Lab Session 1: ALP using 8085: <ol style="list-style-type: none"> 1. Write at least three different programs for addition of two 8 bit numbers assuming carry may or may not be generated. 2. Write at least three different programs for subtraction of two 8 bit numbers assuming borrow may or may not be generated. 3. Write two different programs for 16 bit addition, one using instruction DAD and another without using instruction DAD. 4. Write assembly language program for 8 bit multiplication and division. 	L2, L3,L4	4
Lab Session II: To study, understand, interface and two peripheral devices with 8085.	L4,L5,L6	2
Lab session III: Any three programs using 8085 based on block of data.	L4	1
Lab session IV: ALP using 8086: <ol style="list-style-type: none"> 1. Write an ALP to add list of 10 given numbers. 2. Write an ALP to sum the numbers from 1-100. 3. Write an ALP to count negative numbers from a given list of 10 numbers. 4. Write an ALP to check number of vowels in a given string. 	L2, L3, L4	5

*Bloom's Level:

BME2515	MACHINE LEARNING LAB	L	T	P	C
Version 1.1	Date of Approval: 21 May 2019	0	0	2	1
Pre-requisites/Exposure	Matlab, Engineering Mathematics				
Co-requisites					

Pre –Requisite: Matlab Programming

Catalog Description

This course helps the students to do hands-on practice with various machine learning techniques. Machine Learning is known to be future electricity and a key need in medical data processing. Course built the foundation for develop software program for medical data processing. It also lay down the foundation for deep Learning and Artificial intelligence for life-long learning.

The objective of this course is to

- To provide hands-on practice with machine learning.
- To serve as a foundation for develop critical thinking for developing software program for medical data processing.

Course Outcomes

On completion of this course, the students will be able to

- CO1. *Develop* machine learning programming program for data classification, using linear regression and logistic regression.
- CO2. *Optimization* of machine learning program using regularization techniques.
- CO3. *Develop* Neural Network program for identification and multi level classification.
- CO4. *Analysis* of error and rectify algorithm for accurate classification using machine learning concept.

Version 1.1	Date of Approval: 21 May 2019	0	0	2	1
Pre-requisites/Exposure					
Co-requisites					

Pre –Requisite: Matlab Programming

Catalog Description

This course helps the students to do hands-on practice with various medical image processing techniques. Medical imaging and post processing is a key need for diagnostic techniques. Course built the foundation for develop software program for medical image enhancement, denoising, segmentation and registration. It also includes the use of MatLab image processing toolbox use for medical images post processing.

The objective of this course is to

- To provide hands-on practice with medical images.
- To serve as a foundation for develop critical thinking for developing software program for medical imaging.

Course Outcomes

On completion of this course, the students will be able to

- CO5. Develop program to enhance, denoise and better visualization in medical image (Region of Interest) ROI.
- CO6. Develop program for image segmentation and registration for selection of ROI and using MatLab Image Processing Toolbox.

List of Experiments	Blooms level*	Number of hours
• Write program to read and display digital image using MATLAB.	L1, L2 and L3	2
• Write a program to perform convolution operation for 1D and 2D data in MATLAB	L1, L2 and L3	2
• To write and execute programs for image arithmetic operations • To write and execute programs for image logical operations	L1, L2 and L3	2
• To write and execute program for geometric transformation of image	L1, L2 and L3	2
• To understand various image noise models and to write programs for image restoration	L1, L2 and L3	2
• Write and execute programs to remove noise using spatial filters	L1, L2 and L3	2
• Write and execute programs for image frequency domain filtering	L1, L2 and L3	2
• Write a program in MATLAB for edge detection using quick mask	L1, L2 and L3	2
• Write a program in MATLAB for histogram calculation and equalization. • Write and execute programs of image manipulation Zoom and Shrink	L1, L2 and L3	2
• To process image using image processing toolbox	L1, L2 and L3	2

BME2535	SUMMER INTERNSHIP EVALUATION I	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	0	0	0	3
Pre-requisites/Exposure	Basic Concepts of Programming Language and Electronics				
Co-requisites	Nil				

Catalog Description

There are certain phases of every Intern's professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship program can best be described as an attempt to institutionalize efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal classroom situations. These attributes are intellectual ability, professional judgment and decision-making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility etc. In order to achieve these objectives, each student will maintain a file (**Internship File**). The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development. The report will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of new technologies and practical exposure
2. Provide an overview of presentation and preparation of report.

Course Outcomes

On completion of this course, the students will be able to

CO1: Study the literature and *identify* the problem statement

CO2: Work on a real world problem and *solve* it using latest technology

CO3: *Prepare* a detailed report of the project

CO4: *Prepare* a brief presentation of their project

CO5: Present and *explain* the project for evaluation

Text Books

As per topic of summer internship project is chosen and discussion with guide.

BME2503	CONTROL SYSTEMS	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	2	1	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

This course provides the students the core knowledge of control systems. This introduces the methods of mathematical modeling of control systems with time & frequency domain analysis along with concepts of stability.

Course Objectives

The objective of this course is to

- Equip the students with concepts of Control System.
- Provide the students in depth knowledge of time domain, frequency domain and concepts of stability.

Course Outcomes

On completion of this course, the students will be able to

CO1. Understand and compare between types of control system and find mathematical model of control system.

CO2. Understand, explain and solve problems on time domain analysis.

CO3. Understand, explain and solve problems on frequency domain analysis.

CO4: Analysis of control system stability

Modules	Blooms level*	Number of hours
Module 1: Input / Output Relationship Introduction of open loop and closed loop control systems, mathematical modeling and representation of physical systems (Electrical Mechanical and Thermal), derivation of transfer function for different types of systems, block diagram & signal flow graph, Reduction Technique, Mason's Gain Formula.	L1, L2, L3 and L4	9
Module 2: Time – Domain Analysis Time domain performance criteria, transient response of first, second & higher order systems, steady state errors and static error constants in unity feedback control systems, error criteria, generalized error constants, performance indices, response with P, PI and PID Controllers.	L1, L2 and L3	9
Module 3: Frequency Domain Analysis Polar and inverse polar plots, frequency domain specifications, Logarithmic plots (Bode Plots), gain and phase margins, relative stability, Correlation with time domain, constant close loop frequency responses, from open loop response, Nyquist Plot.	L1, L2 and L3	9
Module 4: Concept of Stability	L1, L2, L3 and	9

Asymptotic stability and conditional stability, Routh – Hurwitz criterion, Root Locus plots and their applications. Compensation Techniques: Concept of compensation, Lag, Lead and Lag-Lead networks, design of closed loop systems using compensation techniques. P, PI, PID controllers.	L4	
---	----	--

BME2512	CONTROL SYSTEM LAB	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	0	0	2	1
Pre-requisites/Exposure	MATLAB Basics				
Co-requisites	Nil				

Catalog Description

Control System has become an important field for research and development in science and engineering. This course provides the students the core knowledge of control systems. This course introduces the Practical of control system with time & frequency domain analysis along with stability of control systems on kits and MATLAB.

Course Objectives

The objective of this course is to

Perform experiments of control system.

Time & frequency domain analysis along with stability of control systems on kits and MATLAB

Course Outcomes

On completion of this course, the students will be able to

CO1. Perform and analyse experiments on time domain of control system.

CO2. Perform and analyse experiments on frequency domain of control system.

CO3. Perform and analyse experiments for stability of control system.

Modules	Blooms level*	Number of hours
Lab Session 1 1. Study and draw a) Step response of open Loop system (linear 1 st order, 2 nd order) b) Step response of closed loop systems (1 st order) 2. Study and draw temperature control system the open loop response and closed loop response with different values of gains	L2, L3 and L5	3
Lab Session 2 1. Study of operations and characteristics of a stepper motor 2. To Study a D.C. motor speed control system.	L2, L3 and L5	3
Lab Session 3 1. Performance evaluation and design of PID controller. 2. To design a suitable cascade compensator for the given system and verify the resulting improvement.	L2, L3 and L5	3
Lab Session 4 1. Note: three experiments in MATLAB have to be performed in the slot of MATLAB.	L2, L3 and L5	3

Using MATLAB obtain the unit-step response and unit impulse response of the following system: $\frac{C(s)}{R(s)} = \frac{16}{s^2 + 1.6s + 16}$ 2. For a 2 nd order transfer function using MATLAB a) Bode Plot b) Root locus plot c) Nyquist plot.

BME2507	DIGITAL CIRCUITS & SYSTEMS	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	3	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

This course explores the theory and operation of the basic building blocks of digital electronics which includes combinational and sequential circuits. This course also explains the logic families and data convertors. The concepts learnt in the studies of sequential circuits will be applied in the design and analysis of Melay and Moore machines.

Course Objectives

The objective of this course is to

1. Provide the basic knowledge of digital logic levels and application of combinational and sequential circuits.
2. Equip with the understanding of logic family and data convertors.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain the various logic gates, Boolean algebra and solve the k-map & tabulation method to simplify the logical function.

CO2: Explain the adder & subtractor; Apply and analyze multiplexer, decoder & encoder to design Boolean function.

CO3: Describe flip flops, shift registers & Design counters and synchronous sequential circuits.

CO4: Explain & compare different logic families and explain data convertors.

Modules	Blooms level*	Number of hours
MODULE 1: BOOLEAN FUNCTIONS Analog & digital signals, AND, OR, NOT, NAND, NOR , XOR & XNOR gates, Boolean algebra, DeMorgan's theorems, Implementation of logical function using only NAND/NOR gates, 1's complement and 2's complement, BCD to Gray and Gray to BCD code conversion, Standard representation of logical functions (SOP and POS forms), K-map representation and simplification of logical function up to five variables, don't care conditions, XOR & XNOR simplifications of K-maps, Tabulation method.	L1,L2 and L3	6
MODULE 2: COMBINATIONAL CIRCUITS Adders, Subtractors, Implementation of full adder using half adder, full subtractor using half subtractor, Multiplexer, de-multiplexer, decoder & encoder, code converters, 1 & 2 bit comparators, BCD to seven segment decoder/encoder, Implementation of logic functions using multiplexer/de-multiplexer and decoder, Implementation of 16×1 MUX using 4×1 MUX, 4×16 decoder using 3×8 decoder etc., logic implementations using PROM, PLA & PAL.	L1, L2,L3 and L4	6
MODULE 3: SEQUENTIAL CIRCUITS	L2,L3, L4 and L5	7

Prof. (Dr.) Anil Kumar
 Deputy Dean Academics

BME2509	DIGITAL CIRCUITS AND SYSTEMS LAB	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	0	0	2	1
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

In this Lab course the combination and sequential circuits are designed and their functionality is verified using truth table. Concepts covered would enable them to create complex circuits related to digital design. The objective of this course is to explore and implement the various features of digital logic using basic logic gates.

Course Objectives

The objective of this course is to

1. Provide a basic knowledge of digital logic levels and application of knowledge to understand digital electronics circuits.
2. Equip with understanding of different combinational and sequential circuits.

Course Outcomes

On completion of this course, the students will be able to

CO 1: Demonstrate the basic concept of logic gates;

CO 2: Illustrate the adder and subtractors.

CO 3: Demonstrate the code convertors.

CO 4: Demonstrate the combinational and sequential circuits.

Modules/Topics Covered**	Blooms level*	Number of hours
1. To verify the truth tables of NOT, OR, AND, NOR, NAND, XOR, XNOR gates.	L3, L5	2
2. To obtain half adder, full adder using gates and verify their truth tables.	L3, L5	2
3. To obtain half subtractor, full subtractor using gates and verify their truth tables.	L3, L5	2
4. To implement control circuit using multiplexer.	L3, L5	2
5. To convert BCD code into excess 3 code and verify the truth table.	L3, L5	2
6. To verify the truth tables of RS, D, JK and T flip- flops.	L3, L5	2
7. To implement and verify 3-bit bi-directional shift register.	L3, L5	2
8. To design and study asynchronous/ripple counter.	L3, L5	2
9. To design and study synchronous counter.	L3, L5	2
10. To design and study a sequence detector.	L3, L5	2

BME2517	DATA STRUCTURES WITH C ++	L	T	P	C
Version:2017.1	Date of Approval: 2020	3	1	2	5
Pre-requisites/Exposure	Basic Knowledge of C++ Programming				
Co-requisites	Nil				

Catalog Description

This course covers the design, analysis, and implementation of data structures and algorithms to solve engineering problems using C++ programming language. Topics include elementary data structures, (including arrays, stacks, queues, and lists), advanced data structures (including trees and graphs), the algorithms used to manipulate these structures, and their application to solving practical engineering problems. At the end of this course student will gain knowledge about different kinds of file structures and their related operations.

Course Objectives

The objective of this course is to

1. Equip the students with knowledge of algorithms, different types of data structures and analysis of space and time complexity.
2. Provide an overview of various algorithms of data structures like stack and queues and related operations and implementation.
3. Provide an overview of dynamic Data Structure like linked list and its related operations, algorithms and programs. Demonstrate practical use of dynamic data structure to solve engineering problems.
4. Equip the students with knowledge of algorithms and operations related to tree and graph data structures and their practical applications.
5. Provide an overview of Sorting, Searching and file structures and its related algorithms and techniques.

Course Outcomes

On completion of this course, the students will be able to

- CO 1: Identify operations on array, multidimensional, string and their implementation and analyze space and time complexity of algorithms.
- CO 2: Explain various algorithms and operations of data structures like stack and queues and analyze complexity of each operation.
- CO 3: Explain dynamic data structures and various algorithms and operations of data structures like linked list and their applications in computer science.
- CO 4: Illustrate the algorithms and operations related to tree and graph data structures, their practical applications and analyze complexity of algorithm associated with each operations.
- CO5: Explain Sorting, Searching and file organization and its related techniques.

Modules	Blooms level*	Number of hours
Module I: Introduction to Data structures Data structures: Definition, Types. Algorithm design, Complexity, Time-Space Tradeoffs. Use of pointers in data structures. Array Definition and Analysis, Representation of Linear Arrays in Memory, Traversing of Linear Arrays, Insertion and Deletion, Single Dimensional Arrays, Two Dimensional Arrays, Multidimensional Arrays, Function Associated with Arrays, Character String in C++, Character String Operations, Arrays as parameters, Implementing One Dimensional Array, Sparse matrix.	L1, L2	7
Module II: Introduction to Stacks and queue Stack: Definition, Array representation of stacks, Operations Associated with	L1, L2, L3, L4	8

Prof. (Dr.) Anil Kumar

Stacks- Push & Pop, Polish expressions, Conversion of infix to postfix, infix to prefix (and vice versa), Application of stacks recursion, polish expression and their compilation, conversion of infix expression to prefix and postfix expression, Tower of Hanoi problem. Queue: Definition, Representation of Queues, Operations of queues- QInsert, QDelete, Priority Queues, Circular Queue, Deque.		
Module III: Dynamic Data Structure Linked list: Introduction to Singly linked lists: Representation of linked lists in memory, Traversing, Searching, Insertion into, Deletion from linked list, doubly linked list, circular linked list, generalized list. Applications of Linked List-Polynomial representation using linked list and basic operation. Stack and queue implementation using linked list.	L1, L3 and L4	7
Module IV: Trees and Graphs Trees: Basic Terminology, Binary Trees and their representation, expression evaluation, Complete Binary trees, extended binary trees, Traversing binary trees, Searching, Insertion and Deletion in binary search trees, General trees, AVL trees, Threaded trees, B trees. Graphs: Terminology and Representations, Graphs & Multigraphs, Directed Graphs, Sequential representation of graphs, Adjacency matrices, Transversal Connected Component and Spanning trees.	L1, L3 and L5	7
Module V: Sorting and Searching and file structures Sorting: Insertion Sort, Bubble sort, Selection sort, Quick sort, two-way Merge sort, Heap sort, Partition exchange sort, Shell sort, Sorting on different keys, External sorting. Searching: Linear search, Binary search File structures: Physical storage media, File Organization, Linked organization of file, Inverted file, Organization records into blocks, Sequential blocks, Hash function, Indexing & Hashing, Multilevel indexing, Tree Index, Random file, Primary Indices, Secondary Indices, B tree index files.	L1, L4, L5	7

BME2519	FUZZY LOGIC & GENETIC ALGORITHM	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	3	0	0	3
Pre-requisites/Exposure	Basic Computer Concepts				
Co-requisites	Nil				

Catalog Description

In this course the concepts of fuzzy logic and genetic algorithm are discussed in detail. This course will provide an understanding of fuzzy logic and genetic algorithm and an outlook on the applications of these techniques to solve real world problems. It also provides an understanding of fuzzy-genetic based machine learning.

Course Objectives

The objective of this course is to

1. Provide the student with the basic understanding of genetic algorithm and fuzzy logic fundamentals, program and design the related systems.
2. Equip the students with concepts of fuzzy logic based solutions.
3. Provide an overview of performance of genetic algorithm, simulated annealing and tabu search.

Course Outcomes

On completion of this course, the students will be able to

CO1: Develop the skills to gain a basic understanding of genetic algorithm and fuzzy logic theory.

CO2: Appreciate the learning and adaptation capability of neural and fuzzy systems.

CO3: Apply various operators to optimize. Perform mathematical calculation of the GA

CO4: Able to identify the present application areas of fuzzy logic and GA

CO5: Explain the working principle and compare the performance with other methods –Simulated annealing and Tabu search.

Modules	Blooms level*	Number of hours
MODULE 1: Crisp sets: Overview, Fuzzy sets : Basic types and concepts, Characteristics and significance of paradigm shift, Fuzzy sets vs Crisp sets, Representation of fuzzy sets	L1, L2 and L3	8
MODULE 2: Types of operations, Fuzzy complements, Fuzzy intersection: t-norms, Fuzzy union: t-conorms, Combination of operations, Aggregation operation, Fuzzy numbers , Linguistic variables, Arithmetic operations on intervals, Arithmetic operations on Fuzzy numbers, Lattice of Fuzzy numbers, Fuzzy equation.	L2, L3 and L6	10
MODULE 3: General discussion, Fuzzy controller: Overview and example, Fuzzy systems and neural networks, Fuzzy neural network, Fuzzy automata. Pattern recognition in fuzzy logic, Database and information retrieval in fuzzy logic, decision making in fuzzy logic, engineering applications and fuzzy logic, Fuzzy logic in Medicine and Economics	L1, L3 and L4	10
MODULE 4: Fundamentals of genetic algorithm: A brief history of evolutionary computation, biological terminology, search space encoding, reproduction elements of genetic algorithm genetic modelling, comparison of GA and	L1, L3 and L4	10

traditional search methods. The Fundamental Theorem, Schema Processing at work, Two-armed and k-armed Bandit problem, The Building block hypothesis.		
MODULE 5: Genetic technology:- steady state algorithm, fitness scaling, inversion. Genetic programming:- Genetic Algorithm in problem solving, Implementing a Genetic Algorithm:- computer implementation, operator (reproduction, crossover and Mutation, Fitness Scaling, Coding, Discretization). Knowledge based techniques in Genetic Algorithm. Advanced operators and techniques in genetic search:-Dominance, Diploidy and Abeyance. Inversion and other reordering operators, Niche and speciation.	L3, L4 and L6	10
MODULE 5: Genetic Algorithm in engineering and optimization-natural evolution – Simulated annealing and Tabu search -Genetic Algorithm in scientific models and theoretical foundations. Applications of Genetic based machine learning- Genetic Algorithm and parallel processors- composite laminates- constraint optimization- multilevel optimization- real life problem.	L3,L4,L6	05

BME2601	MICROCONTROLLER AND ITS BIOMEDICAL APPLICATIONS	L	T	P	C
Version 2017.1	Date of Approval: July 2017	3	1	0	4
Pre-requisites/Exposure	Digital Electronics, Microprocessor				
Co-requisites	Nil				

Catalog Description

In this course the 8051 microcontroller is discussed in detail. Assembly language programming concepts are introduced to program 8051 as a timer and to provide serial communication. Further, the use of microcontroller in biomedical engineering has been described. The concepts learnt in the assembly language programming has been applied in the studies and interfacing of ADC, DAC and 8255. The overall educational objective is to provide hands-on experiences of how an embedded system could be used to solve biomedical application based problems.

Course Objectives

The objective of this course is to

- Provide the knowledge of 8051 microcontroller and with a basic understanding of instruction sets & assembly language programming.
- Inculcate a working knowledge of the necessary steps and methods used to interface a microcontroller system to devices such as DAC, sensors, ADC etc.
- Provide the general knowledge of the microcontroller architecture in biomedical applications.

Course Outcomes

On completion of this course, the students will be able to

- CO1: List the main features of 8051 microcontroller; Distinguish between microprocessor and microcontroller; Describe the block and pin diagram of 8051.
- CO2: Explain the various addressing modes of 8051; Describe the instruction set; Apply the branching instruction to generate delay.
- CO3: Describe the timer modes; Apply timers to generate square wave; Calculation of delay; Explain the concept of interrupt and apply concept of interrupt in serial interface.
- CO4: Explain the memory interfacing; Demonstrate a working knowledge of the necessary steps and methods used to interface a microcontroller system to devices such as DAC, LCD, ADC and 8255.
- CO5: List the use of microcontroller in biomedical application; Explain the use of computer in biomedical engineering; apply the general knowledge of microcontroller in biomedical applications

Modules	Blooms level*	Number of hours
MODULE 1: INTRODUCTION 8051, Comparison with microprocessor, pin diagram explanation, internal diagram 8051.	L1 and L2	10
MODULE 2: INSTRUCTION SET Addressing mode, data transfer instruction, logical, arithmetic instruction, bit instruction, branching instruction.	L1, L2 and L3	10

BME2651	BIOMECHANICS	L	T	P	C
Version 1.1	Date of Approval: 16, May 2019	3	0	0	3
Pre-requisites/Exposure	Medical Imaging Techniques, Medical Image Processing				
Co-requisites	Engineering Mathematics, General Science				

Catalogue Description

This course is intended for engineering students to make them understand the various components of biomechanics which deals with the application of mechanics to biology. Mechanics is a branch of applied mathematics that deals with movement and tendency to movement.. it entails the study of the action of external and internal forces on the living body, especially on the skeletal system. A biomechanist is often interested in the physiology underlying movement (muscle physiology, nervous control, for example) and also the biological role of the movement) and ergonomics that is the analysis of a human performing for a given task and the design of appropriate tools. One part of this analysis is to understand the mechanics of the person and any interactions with surroundings.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of the basics of bone movement , gait analysis and mechanics of bone and muscles
2. To provide the overview of Structure and composition of bone , microstructure of bone, muscle. Joint motions and various forces implied, basic mechanical models , injuries and factors affecting biomechanical properties of human body

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain the human body joints, axes of planes and motions, degree of freedom and related matrix calculations.

CO2: Derive equations and solve problems related to Inverse Dynamics to calculate resultant force and momentum

CO3: Analyze gait cycle, angular kinematics of hip, knee and ankle

CO4: Describe microstructure of bone, skeletal muscle, mechanism of muscle, viscoelasticity and other related issues

Modules	Blooms level*	Number of hours
Module I: Joint motion: relative position of two bones meeting at a joint , description of a rigid body , degrees of freedom , euler angles , rotation matrices, rotation angle anatomical directions , anatomical planes ,	L-1, L-2, L-3	12
Module II : Inverse Dynamics to calculate resultant force and momentum within the body link segment models , intersegmental force and moment ,	L-1, L-2, L-3	12
Module III : Human Gait analysis , gait cycle , angular kinematics of hip , knee and ankle , force plates and ground reaction force , gait abnormalities .	L-1, L-2, L-3	12

BME2609	CLINICAL NEED ASSESSMENT AND MINI PROJECT	L	T	P	C
Version 1.1	Date of Approval:2020	2	0	0	2
Pre-requisites/Exposure	Anatomy & Physiology, Biomedical Instrumentation				
Co-requisites	General Science				

Catalog Description

This course helps the students to understand various requirements of hospital and healthcare systems including all stakeholders of hospital system. Various department of hospital get exposed by student to understand needs and its drive students to find solutions for them. The content of the course will also give opportunities to interact with end user of medical equipment to find out their concern and what difficulties they face. The course also familiar students with working culture of hospital including safety standards, ethical and legal considerations as well as professionalism.

Students will learn techniques for improving the flexibility and originality of their thinking and will explore approaches used by managers and organizations to create and sustain high levels of innovation. Topics include: personal thinking preferences, everyday creativity and eliminating mental blocks, creative thinking techniques, idea selection approaches, teaming techniques for creativity, conditions that promote creativity, design for interaction, disruptive technologies, and intellectual property. The course uses fun and hands-on activities to stimulate innovation.

Course Objectives

The objective of this course is to

- To provide an overview of hospital equipment and requirements.
- To serve as a foundation for innovation in healthcare by understanding the difficulties of hospital system.

Course Outcomes

On completion of this course, the students will be able to

CO37. Identify and explain the requirements and difficulties of hospital system.

CO38. Provide the innovative solution for healthcare system with understanding of present need.

CO39. Demonstrate the capability of critical thinking, brainstorming, presentation and team building process.

Course Content

Modules	Blooms level*	Number of hours
MODULE I: Introduction to Innovation Introduction Making a case for creativity, Creative thinking as a skill, Valuing diversity in thinking, Thinking preferences, Creativity styles, Recognizing and avoiding mental blocks, Avoiding mindsets, Risk taking, Paradigm shift and paradigm paralysis, Individual and teamwork	L2, L3 and L4	4
MODULE II: Creativity and Problem Solving Creativity in problem solving, Problem Definition, Understanding, Representing, Pattern Breaking, Thinking differently, Changing your point of view, Watching for paradigm shift, Challenging conventional wisdom, Lateral thinking, provocation (escape, random word), Mind stimulation: games, brain-twisters and puzzles	L2, L3 and L4	4
MODULE III: Ideation and Solution Decision and Evaluation, Focused thinking framework, Six thinking hats,	L2, L3 and L4	4

PMI, Ethical considerations, Design for Interaction, Introduction to design for interaction,		
MODULE III: Project and Peer Review Each student must spend 3 hours per week or 6 hours every two weeks observing and shadowing a doctor in a hospital environment. The visits will be organized by ASET. Students will be exposed to practical implementation of biomedical engineering. Students will be required to identify some key clinical needs in the hospitals and come up with a biomedical engineering solution for the same. Students will have to present their findings and solutions in the form of a presentation at the end of the term	L2, L3 and L4	12

BME2610	MEDICAL IMAGING AND RECONSTRUCTION ALGORITHM LAB	L	T	P	C
Version 1.1	Date of Approval: 16 May 2019	0	0	2	1
Pre-requisites/Exposure	Matlab, Engineering Mathematics, Medical Image Processing				
Co-requisites					

Pre –Requisite: MatLab Programming

Catalog Description

Fundamentals and applications of medical image reconstruction and processing. Reconstruction from non-uniformly sampled data, projection data, regularly/randomly undersampled data. Parallel imaging and compressed sensing for medical imaging. Improving image quality, denoising, deconvolution, off-resonance correction. Post-processing of images, image registration, image segmentation. Examples from magnetic resonance imaging (MRI), X-ray computed tomography (CT), and magnetic particle imaging (MPI)..

The objective of this course is to

- To provide hands-on practice with Image Reconstruction Algorithm specific with Ct and MRI.
- To serve as a foundation for to develop an advanced medical image reconstruction or processing technique.

Course Outcomes

On completion of this course, the students will be able to

CO7. Develop various reconstruction algorithm for CT-Scan raw images.

CO8. Develop various restructuring algorithm for quantitative data extraction from MRI images.

CO9. Develop Neural Network program for reconstruction of images.

CO10. Develop 3D rendering algorithm for medical image stack.

List of Experiments	Blooms level*	Number of hours
• Write program of basic Fourier transformation.	L1, L2 and L3	2
• Write a program for Radon Transformation to reconstruct images.	L1, L2 and L3	2
• To write Function for 3D rendering of stack of imaging • To writes function to compute T2 Mapping.	L1, L2 and L3	2
1. To writes function to compute T1 Mapping.	L1, L2 and L3	2
2. To writes function to compute T1-Values.	L1, L2 and L3	2
3. To writes function to compute T2-Values.	L1, L2 and L3	2
4. To writes function to compute PD weighted-Values.	L1, L2 and L3	2
5. To write and execute program for Neural style Learning (Using Deep Learning Concept)	L1, L2 and L3	2
6. Advance Deep Learning Programming for reconstruct T1 weighted Images from PD-Weighted	L1, L2 and L3	2

BME2607	HOSPITAL MANAGEMENT SYSTEM	L	T	P	C
Version 1.1	Date of Approval: 16 May, 2019	3	0	0	3
Pre-requisites/Exposure	NIL				
Co-requisites					

Catalog Description

This course provides students a basic understanding of the working, regulations and management of a hospital environment.

Course Objectives

The objective of this course is

- To develop the basic awareness of management functions and various dimensions of organizational life.
- To make the students aware of the various functional aspects of management.
- To develop the understanding of the functioning and management of the hospital in general and also aware about the critical issues related to managing a hospital.
- To make the student understand the health environment in India and also the regulatory mechanisms involved in promoting the health programs.

Course Outcomes

On completion of this course, the students will be able to

CO1. Identify the working and management of a hospital environment.

CO2. Identify the role of the manager in healthcare and how organizations and people work within the healthcare system.

CO3. Evaluate and use measurement tools for quality and safety.

CO4. List the various departments in hospital.

Course Content

Modules	Blooms level*	Number of hours
MODULE I: Introduction to Hospital Architecture Classification of hospital & architecture: General hospital, specialized hospital, primary health care –their role and functions. Aspects of hospital services: inpatient, outpatient and emergency, location and environment of hospital, hierarchy of medical and paramedical staff & their functions and responsibilities. Modern Hospital Architecture- space in a hospital building, design of ward, intensive care units, air conditioning, plumbing & sanitation, gas supply, waste disposal, cleaning, dietary, sterilizing, laundry, storage and operation theatre systems, Radiology, Central labs, Blood banks, OPD, Casualty, etc	L1 and L2	14
MODULE II: Hospital Air and Gas Supply Air conditioning & gas supply systems: Air conditioning and refrigeration systems for small and large areas, Air changes, filtering, and sterility, Deodorization, disinfection, dehumidification, cryogenic systems, Centralized supply of air, oxygen, nitrous oxide & vacuum, Principle of production of liquid oxygen. Management lifts fire fighting equipments	L1 and L2	8
MODULE III: Hospital engineering & Management: Definition of biomedical Engineering, clinical engineering & hospital	L1 and L2	7

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar

engineering. Importance of BME department – servicing and maintenance, testing, acceptance & maintenance protocols, computerized preventive maintenance planning, MROs, Training of men for medical equipments preventive and periodical maintenance procedures. Preparation of estimates, specifications, tender details etc. Importance of ISO 9000 Certificates: Obtaining ISO certificates in hospitals, proposed protocols. Necessity for standardization, FDA, AERB, Joint Commission on Accreditation of hospitals, ICRP and other standard organization, methods to monitor the standards.		
MODULE IV: Hospital Information system: Role of database in HIS, Need of networking in HIS, overview of Networking, topologies and its configuration, structuring medical records to carry out functions like admissions, discharges, treatment history etc. , Computerization in pharmacy & billing, automated clinical laboratory systems & radiology information system. Need for evolving health policy, health organization in state, health financing system, health education, health insurance, health legislation.	L1 and L2	7

BME2611	THREPUETIC AND SURGICAL EQUIPMENT	L	T	P	C
Version 1.1	Date of Approval: 16 May 2019	3	0	0	3
Pre-requisites/Exposure	Bio-instrumentation				
Co-requisites	Engineering Mathematics, General Science				

Catalog Description

Therapeutic medical instruments are widely used in the field of biomedical engineering. The students studying the subject are supposed to learn the therapy for any disease after diagnosing it. The course in addition, will provide knowledge of principle and constructional features of various therapeutic medical equipments. The course will also deal with different advance Therapeutic Technology..

Course Objectives

The objective of this course is to

- To provide an overview of Threpuetic and Surgical Equipments.
- To serve as a foundation for design and develop a new insight in Medical Equipment use in Surgrey.

Course Outcomes

On completion of this course, the students develop capabilities of:

- CO40. *Identify* appropriate design aspects of defibrillator and Pacemaker.
- CO41. *Identify* various electro-Surgical equipment and its application.
- CO42. *Identify* various monitor and control parameters of ventilator and *design* aspects custom built ventilator.
- CO43. *Explain* the principle of Hemodialysis machine and its component.
- CO44. *Explain* and *demonstrate* the principle of physiotherapy machine.

Course Content

Modules	Blooms level*	Number of hours
MODULE I: Pacemaker and Defibrillator Need of Pacemaker, External and Implantable Pacemaker, Various type of pacemaker as per clinical need, Recent Advancement in Pacemaker; Need of Defibrillator, Type as of Defibrillator, Mono-phasic and Bi-Phasic Defibrillator, Physiological mechanism of therapy	L1 and L2	10
MODULE II: Surgical Equipment Principle of Surgical Diathermy, Surgical Diathermy Machine, Safety aspects in Electro-Surgical Units	L1 and L2	7
MODULE III: Ventilator Introduction to Ventilator, Basic therapeutic mechanism of ventilators; Types of Ventilators, Ventilator monitoring and Control Parameters, Ventilator design and machine,	L1, L2 and L3	7
MODULE IV: Hemodialysis Machine Functioning of Kidney, Artificial Kidney, Dialyzers, Membrane of Hemodialysis, dialysis machine	L1 and L2	5
MODULE IV: Physiotherapy and Electrotherapy Equipment High Frequency Heat Therapy, Short-wave Diathermy, Microwave	L1 and L2	7

BME2612	DATA MINING	L	T	P	C
Version 2019.1	Date of Approval: 15 May 2019	3	0	0	3
Pre-requisites/Exposure	Concept of Database and Data Mining				
Co-requisites	Nil				

Catalog Description

Data Mining serve as one of the most important courses for postgraduate students, since it builds computational abilities, inferential thinking, and practical skills for tackling core data scientific challenges. The students will get a comprehensive understanding of different data mining techniques that can be used for prediction and for discovering patterns, be prepared to select the right technique for a given data problem and will be able to create a general-purpose analytic process.

Course Objectives

The objective of this course is to

- Provide students with an in-depth knowledge of data mining. To introduce students to basic applications, concepts, and techniques of data mining.
- Develop skills for using recent data mining software to solve practical problems and prediction in a variety of disciplines and
- Gain experience doing independent study and research.

Course Outcomes

On completion of this course, the students will be able to

CO 1: Explain concepts of Data mining, predictive analytics and analyses architecture of data mining. Differentiate between supervised and unsupervised methods

CO 2: Apply classification techniques on different data sets and solve cost –benefit analysis numerical. Analyze decision tree methods.

CO 3: Implement various clustering algorithm on different data sets and describe these algorithms.

CO 4: Prepare data representation for market basket analysis and determine the usefulness of association rules. Interpret supervised and unsupervised learning methods.

CO 5: Predict market trends and outline different factors associated mail marketing.

Course Content

Modules	Bloom's level	Number of Hours
Module I Data Preparation An introduction to data mining and predictive analytics, Data Pre-processing Exploratory Data Analysis, Dimension- Reduction Methods.	L1, L2	8
Module II Classification k- Nearest Neighbour Algorithm, Decision Trees, Model Evaluation Technique, Cost –Benefit Analysis Using Data Driven Cost.	L1, L2, L3	7
Module III Clustering Hierarchical and k- Means Clustering, Kohonen Networks, Birch Clustering, Measuring Cluster Goodness.	L1, L2, L3, L4	8
Module IV Association Rules Affinity Analysis and Market Basket Analysis, Data Representation for Market	L1, L2, L3, L6	9

BME2710	EMBEDDED SYSTEM WITH RECENT TECHNOLOGY	L	T	P	C
Version: 2019.1	Date of Approval: May 16, 2019	2	0	0	2
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

This practical course is designed to quickly take students from beginner to basic functional knowledge of the Arduino microcontroller in three weekend 5-hour sessions. You can expect to learn a) how to write and upload simple code for the Arduino to perform basic logic functions like reading a switch to change a motors direction, b) how to integrate a variety of physical inputs including knobs, distance sensors, and light sensors, c) how to integrate a variety of physical outputs such as motors, lights, and speakers, and d) how to put all of these together to build simple self-contained low-cost low-power systems.

Course Objectives

The objective of this course is to

- Provide an overview of embedded system and real time operating system.
- Equip the students with concepts of Arduino microcontroller and its interfacing with external devices.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain and analyse the architecture of Arduino microcontroller, Debugging and programming techniques.

CO2: Explain and classify embedded systems and its applications.

CO3: Explain hardware and software design concepts of embedded system.

CO4: Explain real time operating system for embedded system.

Modules	Blooms level*	Number of hours
Module 1 Introduction to Arduino The Arduino Platform, Block diagram, Architecture, Pin functions, overview of main features such as I/O Ports, Timers, interrupts serial port, PWM, ADC, etc. Introduction to Arduino IDE, writing, saving, compiling and uploading sketches.	L1, L2, L3 and L4	8
Module2 Introduction to Arduino IDE Introduction to Arduino IDE, writing, saving, compiling and uploading sketches.		8
Module3 Arduino and Interfaces Interfacing discrete LEDs, Binary counter, Seven Segment LEDs. Interfacing LCD, switch Interface. Interfacing with different type of sensors and communication modules	L1, L2 and L4	8

BME2711	ARTIFICIAL ORGANS AND REHABILITATION ENGINEERING	L	T	P	C
Version	Date of Approval: 16 May 2019	3	0	-	3
Pre-requisites/Exposure					
Co-requisites					

Catalog Description

This course is intended for Biomedical engineering students to make them understand the various techniques developed to restore the functionalities of malfunctioning organs/organ system. It entails information of different health parameters by restoring the biochemical/ biophysical and physiological processing which might have undergone deterioration due to some disease or accidental injuries. The subject is designed to introduce the initial level of details about various artificial engineering instruments or devices which are used to maintain vital functions such as blood circulation, renal activities, breathing supporting measure, & Wheeled and seated mobility devices.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of Artificial organs, prosthetics and engineering solution for various impairments
2. Provide an over view of Artificial Heart, artificial kidney, Artificial heart lung machine, Wheeled and seated mobility devices (WSMDs), Audimetric devices & associated assisting devices

Course Outcomes

On completion of this course, the students will be able to

- CO1: Explain concepts of modern artificial organs, Biomaterials, Rheological properties of blood
CO2: Explain functioning and design of Artificial heart lung machine, artificial artificial heart lung devices, Oxygenators, artificial pancreas, blood and skin.
CO3: Describe Audiometry :Wheeled and seated mobility devices (WSMDs) & ergonomics of wheelchair propulsion, power wheelchair electrical systems.
CO4: Explain the concepts of Impairments, disabilities and handicaps, engineering concepts in sensory and motor rehabilitation

Modules	Blooms level*	Number of hours
Module I: Introduction to artificial organs, biomaterials, inflammation, rejection, correction. Rheological properties of blood, blood viscosity, effect of shear rate, haematocrit, temperature and protein contents. Casson equation, flow of blood through blood vessels, problems of extracorporeal blood flow.	L-1, L-2, L-3	8
Module II: Artificial heart lung machine: brief explanation of gas exchange, artificial heart lung devices, Oxygenators: bubble, film oxygenators and membrane oxygenator. Liver	L-1, L-2, L-3	10

BME2712	CLINICAL ELECTRICAL SAFETY HAZARDS	L	T	P	C
Version 1.1	Date of Approval: 16, May 2020	2	0	0	2
Pre-requisites/Exposure	Anatomy & Physiology				
Co-requisites	Electronic Circuit				

Catalog Description

The objective of the course is to provide a brief knowledge of Clinical Electrical Hazards, safety standards and Safety procedures. Curriculum introduce students with safety testing method and equipment.

Course Objectives

The objective of this course is to

- To provide an overview of clinical electrical hazards and safety.
- To introduces and overview of various safety standard and organization

Course Outcomes

On completion of this course, the students develop capabilities of:

On completion of this course, the students will be able to

CO45. Differentiate various electrical hazards with effect of level of currents.

CO46. Deploy various safety techniques with knowledge of various medical standard, in designing of medical equipment.

CO47. Conduct various test to confirm safety standards for medical device and clinical setup.

Course Content

Modules	Blooms level*	Number of hours
MODULE I: Clinical Electrical Hazard Introduction to electrical safety; Various effect of current flowing from one contact point to another: Sensitivity Limits, Let-go current, Muscles Contraction, Suffocation, Cardiac fibrillation, Burn; Difference between Macro-shocks and Micro-shocks	L1 and L2	4
MODULE II: Electrical Safety Physical Test, electrical Safety Analyzer Setup, Ground Wire Resistance, Insulation Test, Equipment Leakage Current (Direct, Differential, Alternative), Patient Applied part leakage current, Leads Isolation Test/Mains applied part Leakage.	L1, L2 and L3	4
MODULE III: Type of Test Physical Test, electrical Safety Analyzer Setup, Ground Wire Resistance, Insulation Test, Equipment Leakage Current (Direct, Differential, Alternative), Patient Applied part leakage current, Leads Isolation Test/Mains applied part Leakage.	L1, L2 and L3	4

BME2713	BIOMECHANICS SIMULATION LAB	L	T	P	C
Version 1.1	Date of Approval: 16 May, 2019	0	0	2	1
Pre-requisites/Exposure	Engineering Mathematics, Medical Image Processing,				
Co-requisites					

Pre –Requisite: Matlab Programming

Catalog Description

This course helps the students to do hands-on practice with various simulation techniques use for Biomechanics. Biomechanics simulations study are known to be one of efficient techniques for various application of healthcare. Course built the foundation for develop software program for medical data processing.

The objective of this course is to

- To provide hands-on practice with 3D Modelling Tools.
- To provide hands-on practice with FEA Modelling.

Course Outcomes

On completion of this course, the students will be able to

CO11. Develop an efficient 3D model of human body part from 3D stacks of images.

CO12. Develop a FEA Model for solve an approximate solution on Medical Data.

List of Experiments	Blooms level*	Number of hours
• To Develop a Bone3D modeling using 3D rendering Software.	L1, L2 and L3	2
• To operate smoothening function on 3D model using 3D rendering Software.	L1, L2 and L3	2
• To operate wrapping function on 3D model using 3D rendering Software.	L1, L2 and L3	2
7. To operate error analysis and rectification on 3D model using 3D rendering Software.	L1, L2 and L3	2
8. To operate 3D analysis Tool on 3D model using 3D rendering Software.	L1, L2 and L3	2
9. To develop assembly of 3D bone.	L1, L2 and L3	2
10. To Assign material properties to each component of 3D model.	L1, L2 and L3	2
11. To develop meshed 3D model.	L1, L2 and L3	2
12. To apply boundary condition and force component on 3D surfaces.	L1, L2 and L3	2
13. To simulate for FEA modelling.	L1, L2 and L3	2

BME2735	SUMMER INTERNSHIP EVALUATION-II	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	0	0	0	3
Pre-requisites/Exposure	NA				
Co-requisites	Nil				

Catalog Description

There are certain phases of every Intern's professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship program can best be described as an attempt to institutionalize efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal classroom situations. These attributes are intellectual ability, professional judgment and decision-making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility etc. In order to achieve these objectives, each student will maintain a file (**Internship File**). The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development. The report will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of new technologies and practical exposure
2. Provide an overview of presentation and preparation of report.

Course Outcomes

On completion of this course, the students will be able to

CO1: Study the literature and identify the problem statement

CO2: Work on a real world problem and solve it using latest technology

CO3: Prepare a detailed report of the project

CO4: Prepare a brief presentation of their project

CO5: Present and explain the project for evaluation

Text Books

As per topic of summer internship project is chosen and discussion with guide.

BME2715	CLINICAL SCIENCES	L	T	P	C
Version 1.1	Date of Approval:16, May, 2019	3	0	0	3
Pre-requisites/Exposure	Anatomy & Physiology				
Co-requisites					

Catalog Description

The objective of the course is to provide a brief knowledge of Clinical Science. It is to provide the students of biomedical, a clinical aspects of Nephrology, General Surgery and Gastroenterology and cardiology. Engineering student able to understand clinical related issue and develop foundation to built futuristic solution for them.

Course Objectives

The objective of this course is to

- To provide an overview of clinical science.
- To develop the foundation to provide solution with understanding of clinical aspects of problems.

Course Outcomes

On completion of this course, the students develop capabilities of:

On completion of this course, the students will be able to

CO48. Identify various clinical aspects and issue related to Nephrology.

CO49. Identify various clinical aspects and issue related to general surgery.

CO50. Identify various clinical aspects and issue related to Cardiology.

Course Content

Modules	Blooms level*	Number of hours
MODULE I: Nephrology-I Diseases in Nephrology, Principles of dialysis, Haemodialysis, Acetate dialysis, Bicarbonate dialysis. Peritoneal dialysis, Chronic ambulatory peritonealdialysis, Haemoperfusion, Sequential ultra-filtration. Haemofiltration, Adequacy of dialysis, Clearance, dialysance, Components of dialysing system, Dialysate, composition of dialysate, Types of dialysers, controls and monitoring devices for dialysers. Clinical significance. Renal transplantation: Basic principles.	L1 and L2	9
MODULE II: Nephrology-II Diseases of nervous system, Electroencephalography, Pneumoencephalography, neuromuscular stimulation, Electromyography, Clinical applications. Motor neuron disorders, the electrical study of reflexes, the silent period. The F response, The H reflex, the axon reflexes, Disorders of neuromuscular transmission	L1 and L2	9
MODULE III: General Surgery and Gastroenterology Pre-operative preparation for surgical patient, Study and operation of surgical equipment, safety aspects in electro-surgical units, Anatomy and physiology of G.I.T. Nutritional support and parenteral therapy, Height and weight	L1 and L2	9

BME2716	NEURAL NETWORK AND FUZZY LOGIC	L	T	P	C
Version 1.1	Date of Approval:16, May, 2019	3	0	0	3
Pre-requisites/Exposure	Machine Learning				
Co-requisites					

Catalog Description

Course has been divided in to two parts: Neural Networks and Fuzzy Logic. Neural networks part aims at introducing the fundamental theory and concepts of biological and artificial neural network and their applications in the area of machine intelligence. This part also offers knowledge of learning rules and architecture of various neural nets. The second part covers fuzzy logic: Fuzzy logic is a tool that can be applied to ambiguous problems, which cannot easily solved by classical techniques. Course discusses the fundamental of fuzzy set theory and fuzzy logic. In addition, this course also introduces applications of fuzzy logic in several areas such as fuzzy control and fuzzy decision making.

Course Objectives

The objective of this course is to

1. To cater the knowledge of Neural Networks and Fuzzy Logic Control and use these for controlling real time systems.

Course Outcomes

On completion of this course, the students will be able to

- CO51. Demonstrate the concepts of feed forward neural networks
- CO52. Demonstrate adequate knowledge about feedback networks.
- CO53. Apply the concept of fuzziness involved in various systems.
- CO54. Demonstrate adequate knowledge about fuzzy set theory
- CO55. Apply fuzzy logic control to real time systems.

Course Content

Modules	Blooms level*	Number of hours
MODULE I: Architecture Introduction –Biological neuron-Artificial neuron-Neuron modeling Learning rules-Single layer-Multi layer feed forward network-Back propagation-Learning factors.	L1 and L2	7
MODULE II: Neural Network for Control Feedback networks-Discrete time hop field networks-Schemes of neuro – control, identification and control of dynamical systems-case studies (Inverted Pendulum, Articulation Control).	L1 and L2	7
MODULE III: Fuzzy System Classical sets-Fuzzy sets-Fuzzy relations-Fuzzification – Defuzzification-Fuzzy rules.	L1 and L2	7
MODULE IV: Fuzzy Logic Control Membership function – Knowledge base-Decision –making logic – Optimizations of membership function using neural networks-Adaptive fuzzy	L1 and L2	8

BME2717	VIRTUAL REALITY	L	T	P	C
Version: 2019.1	Date of Approval: 16 May 2019	3	-	-	3
Pre-requisites/Exposure	Basic Knowledge of C++ Programming				
Co-requisites	Nil				

Catalog Description

This course covers understanding of software and hardware related to computer graphics systems. Topics include an introduction to the basic concepts, 2-D and 3-D modeling and transformations, viewing transformations, clipping, color filling, projections, rendering techniques, visible surface detection and elimination algorithms, graphical software packages and graphics systems. Students will use a standard computer graphics API to reinforce concepts and study fundamental computer graphics algorithms. Last module covers elementary image processing techniques and various library function in C to build animations.

Course Objectives

The objective of this course is to

1. Equip the students with fundamental concepts of graphics system and standards.
2. Equip the students with mathematical concepts of graphics algorithms to draw objects using C language.
3. Provide an overview of various 2D & 3D transformation, clipping operations, algorithms related to hidden surface detection and elimination and their implementation.
4. Provide an overview of various elementary image processing techniques and basic library function in C to create animation sequence.

Course Outcomes

On completion of this course, the students will be able to

CO 1: Explain applications of computer graphics and define various standards and components in development of computer graphics.

CO 2: Explain generation of graphics primitives and analyze their problems and solutions. Demonstrate solid filling algorithms. Demonstrate polygon clipping and line clipping algorithm and analyze their problems and solutions.

CO 3: Apply 2D geometric transformations on 2D graphics objects with their practical implementation. Illustrate use of window to viewport transformation in computer graphics.

CO4: Apply 3D geometric transformations on 3D objects with their practical implementation.

CO 5: Illustrate the use of 3D object modeling, Visible Surface detection and elimination algorithm and analyze their problems and solutions.

Modules	Blooms level*	Number of hours
Module I: Introduction to Graphics and Graphics Hardware System Application of computer graphics, Video Display Devices, Raster Scan Display, Random Scan Display, Input Devices, Graphic Software and graphics standards, Numerical based on Raster and Random scan display, Frame buffer, Display processor.	L1, L2	5
Module II: Output Primitives and Clipping operations Algorithms for drawing 2D Primitives lines (DDA and Bresenham's line	L2, L3, L4	6

algorithm), circles (Bresenham's and midpoint circle algorithm), ellipses (midpoint ellipse algorithm), Antialiasing and filtering techniques. Line clipping (cohen-sutherland algorithm), Curve clipping algorithm, and polygon clipping with Sutherland Hodgeman algorithm, Area fill algorithms for various graphics primitives: Scanline fill algorithm, boundary fill algorithm, flood fill algorithm, Polygon representation, various method of Polygon Inside test: Even-Odd method, winding number method, Character generation techniques.		
Module III: 2D Geometric transformation 2D Transformation: Basic transformation, Translation, Rotation, Rotation relative to an arbitrary point, scaling, Matrix Representations and Homogeneous coordinates, window to viewport transformation.	L3 and L4	6
Module IV: 3D Geometric transformation 3D Concepts: Parallel projection and Perspective projection, 3D Transformations, composite 3D transformation, co-ordinate transformation, Inverse transformation	L3 and L5	7
Module V: object modelling and Visible Surface detection fractal geometry methods, fractal dimensions, Geometric construction of deterministic self-similar fractals, Iterated function system to generate fractals. Bezier curves and Bezier surfaces, Bspline curves and surfaces, Visible surface detection method: Basic illumination, diffuse reflection, specular reflection, shadows. Ray tracing method, Depth-buffer method, A-buffer method, Depth-sorting method (painter's algorithm), Binary search partition method, Scan line method,	L4, L5	7
Module VI: Introduction to multimedia Design of animation sequences, Computer Animation languages, Elementary filtering techniques and elementary Image Processing techniques, graphics library functions used in animation design	L2, L3, L5	5

BME2718	ROBOTIC PROCESS AUTOMATION DESIGN & DEVELOPMENT	L	T	P	C
Version 2019.1	Date of Approval: 16May, 2019	3	0	0	3
Pre-requisites/Exposure	Basic Networking Concepts				
Co-requisites	Nil				

Catalog Description

This course aims at providing knowledge of basic concepts of Robotic Process Automation to University students. It further builds on these concepts and introduces key RPA Design and Development strategies and methodologies specifically in context of UiPath products. The student undergoing the course shall develop the competence to design and develop a robot for a defined process.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of robotic process automation
2. Provide an overview of designing with uipath software.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain key terms and trends around the robotic process automation along with its physical and logical design

CO2: Understand the potential and value of the robotic process automation .

CO3: Describe the technologies used for the robotic process automation and mobile devices, including (passive and active) sensors, the physical communications layer, communications protocols, programming frameworks,.

CO4: Design programs and have hands on experience on uipath software

CO5: Develop RPA programs of moderate complexity for a well-used robotic automation process using uipath.

Modules	Bloom s level*	Numbe r of hours
Module 1: Programming Basic and Recap Programming Concepts Basics I - Understanding the application, Basic Web Concepts, Protocols, Email Clients, Data Structures, Data Tables, Algorithms, Software Processes, Software Design, SDLC. Programming Concepts Basics 2- Scripting, Net Framework, Net Fundamentals, XML, Control structures and functions, XML, HTML, CSS, Variables & Arguments.	L1, L2	8
Module II: RPA Concepts RPA Basics - History of Automation, what is RPA, RPA vs Automation, Processes & Flowcharts, Programming Constructs in RPA, What Processes can be Automated, Types of Bots, Workloads which can be automated. RPA Advanced Concepts - Standardization of processes, RPA Development methodologies, Difference from SDLC, Robotic control flow architecture, RPA business case, RPA Team, Process Design Document/Solution Design Document, Industries best suited for RPA, Risks & Challenges with RPA, RPA and emerging ecosystem	L2, L3 and L4	8

BME2803	MEDICAL INFORMATICS	L	T	P	C
Version 1.1	Date of Approval: 16, May 2019	3	0	0	3
Pre-requisites/Exposure	Engineering Physics, Biomedical Instrumentation				
Co-requisites	Anatomy and Physiology				

Catalog Description

Collecting, storing and using information has always been an integral part of the practice of medicine. It has, however, become more complex and technology-based thereby creating an increasing need for biomedical graduates to be competent in information handling skills ranging from simple record-keeping to accessing and using computer-based data. As well as having the technical skills to undertake such tasks it is important that graduates appreciate the role of informatics in the day-to-day care of medical equipment and the advancement of medical science in general.

Course Objectives

The objective of course is to

- To provide an overview of computers and multimedia applications in medical field to develop educational / training packages.
- To serve as a foundation for the study of components of virtual reality and virtual reality applications in medicine.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Identify and Explain requirements of the implementation of medical database.
- CO2. Outline and explain the visual basic tools for medical information system.
- CO3. Identify and explain various requirement of Computer, multimedia systems and its algorithm for Medical informatics.
- CO4. Explain the role of Computer in Medical research.

Course Content

Modules	Blooms level*	Number of hours
MODULE I: Medical Database Implementation Medical data acquisition and database systems: PC based multichannel data acquisition system; storage, analysis and retrieval techniques	L1 and L2	6
MODULE II: Visual Basic Visual programming concepts; visual Basic environment, tools and controls; Dynamic data exchange; VB based Medical Information System	L1 and L2	6
MODULE III: Computers in system design Hospital Information System its design and functional characteristics; Principles and application of Artificial Intelligence, Pattern Recognition, Neural Network and Fuzzy Logic in Medicine	L1 and L2	6
MODULE IV: Multimedia and virtual reality applied to medicine Basic concepts of Multimedia; Design of Multimedia information systems; Components of virtual reality; Virtual reality applications in medicine	L1 and L2	8

BME2804	RECENT ADVANCEMENT IN BIOMEDICAL MODALITIES	L	T	P	C
Version 1.1	Date of Approval: May 16, 2019	3	0	0	3
Pre-requisites/Exposure	Engineering Physics, Biomedical Instrumentation				
Co-requisites	Anatomy and Physiology				

Catalog Description

This course provide insight in the recent development in the field of Biomedical Equipment. It is a open ended course for final semester students where recent on going research and newly adapt technologies in market would be discuss. Course largely help student to develop carrier path and a lifelong learning opportunities.

Course Objectives

The objective of course is to

- To provide an insight in recent development in field of Biomedical.
- To serve as a foundation for life-long learning in field of biomedical.

Course Outcomes

On completion of this course, the students will be able to

- CO5. Identify the new development in field of MRI.
- CO6. Identify the new development in field of CT-Scan.
- CO7. Identify the new development in field of Artificial Intelligence in Medicine.
- CO8. Identify the new development in field of robotic surgery.

Course Content

Modules	Blooms level*	Number of hours
MODULE I: Recent Advancements in Field of MRI Medical data acquisition and database systems: PC based multichannel data acquisition system; storage, analysis and retrieval techniques	L1 and L2	9
MODULE II: Recent Advancement in Field of CT-Scan Visual programming concepts; visual Basic environment, tools and controls; Dynamic data exchange; VB based Medical Information System	L1 and L2	9
MODULE III: Recent Advancement in aspect of Artificial Intelligence in Medical Equipments Hospital Information System its design and functional characteristics; Principles and application of Artificial Intelligence, Pattern Recognition, Neural Network and Fuzzy Logic in Medicine	L1 and L2	9
MODULE IV: Robotic Surgery and its technolgy Basic concepts of Multimedia; Design of Multimedia information systems; Components of virtual reality; Virtual reality applications in medicine	L1 and L2	9

BME2805	ADVANCED ROBOTIC PROCESS AUTOMATION DESIGN & DEVELOPMENT	L	T	P	C
Version 2019.1	Date of Approval: 16May 2019	3	0	0	3
Pre-requisites/Exposure	Basic Networking Concepts				
Co-requisites	Nil				

Catalog Description

This course aims at providing knowledge of basic concepts of Robotic Process Automation to University students. It further builds on these concepts and introduces key RPA Design and Development strategies and methodologies specifically in context of UiPath products. The student undergoing the course shall develop the competence to design and develop a robot for a defined process.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of robotic process automation
2. Provide an overview of designing with uipath software.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain key terms and trends around the robotic process automation along with its physical and logical design

CO2: Understand the potential and value of the robotic process automation .

CO3: Describe the technologies used for the robotic process automation and mobile devices, including (passive and active) sensors, the physical communications layer, communications protocols, programming frameworks,.

CO4: Design programs and have hands on experience on uipath software

CO5: Develop RPA programs of moderate complexity for a well-used robotic automation process using uipath.

Modules	Blooms level*	Number of hours
Module 1: Exception handling and Best Practices Debugging and Exception Handling- Debugging Tools, Strategies for solving issues, Catching errors. Project Organization- Concept of project organization, Best practices, Avoiding pitfalls, Invoke Activity.	L1, L2	8
Module II: Introduction to Orchestrator Orchestrator, Tenants, Authentication, Users, Roles, Robots, Environments, Queues & Transactions, Schedules.	L2, L3 and L4	8
Module III: merging and Future Trends in IT Artificial Intelligence, Machine Learning, Agent awareness, Natural Language Processing Computer Vision	L2, L3 and L4	8
Module IV: Capstone Project Real life case studies which can be used to apply the concepts learnt during the course. The projects shall test student's skills right from process transformation and documentation to the design and development of the actual robot	L2, L3 and L4	12

ECE2105	INTRODUCTION TO COMPUTERS AND PROGRAMMING IN C	L	T	P	C
Version: 2019.1	Date of Approval: May 21, 2019	2	1	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

The objective of this course module is to acquaint the students with the basics of computers system, its components, data representation inside computer and to get them familiar with various important features of procedure-oriented programming language i.e. C.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of Programming through C Language
2. Provide an overview of advanced programming concepts like Structure, Union and File Handling

Course Outcomes

On completion of this course, the students will be able to

After the completion of course, the students will be able to,

- CO 1: Define the purpose and structure of C Program for programming; identify and distinguish various data types and operators; conditional and control statement; Apply if-else, Switch and loops to rewrite basic C program for problem solving.
- CO 2: Compare and contrast various Array types, its declaration and implementation; differentiate between Call by Value and Reference if Functions; apply the concepts to rewrite C Programs
- CO 3: Differentiate between various String Handling Functions; describe the concept of Pointers in C Language
- CO 4: Explain the concept of Structure and Union; apply the concept of File Handling to provide data storage support to the programs.
- CO 5: Apply the concept of Computer Graphics using C programming concepts for implementing line drawing, circle drawing algorithms.

Modules	Blooms level*	Number of hours
Module I: Introduction Introduction to computer, history, von-Neumann architecture, memory system (hierarchy, characteristics and types), H/W concepts (I/O Devices), S/W concepts (System S/W & Application S/W, utilities). Data Representation: Number systems, character representation codes, Binary, octal, hexadecimal and their interconversions. Binary arithmetic, floating point arithmetic, signed and unsigned numbers, Memory storage unit.	L1, L2 and L3	7
Module II: Programming in C History of C, Introduction of C, Basic structure of C program, Concept of variables, constants and data types in C, Operators and expressions: Introduction, arithmetic, relational, Logical, Assignment, Increment and decrement operator, Conditional, bitwise operators, Expressions, Operator precedence and associativity. Managing Input and output Operation, formatting I/O.	L2, L3 and L4	7

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Module III: Fundamental Features in C C Statements, conditional executing using if, else, nesting of if, switch and break Concepts of loops, example of loops in C using for, while and do-while, continue and break. Storage types (automatic, register etc.), predefined processor, Command Line Argument.	L2, L3 and L4	7
Module IV: Arrays and Functions One dimensional arrays and example of iterative programs using arrays, 2-D arrays Use in matrix computations. Concept of Sub-programming, functions Example of user defined functions. Function prototype, Return values and their types, calling function, function argument, function with variable number of argument, recursion.	L2 and L3	7
Module V: Advanced features in C Pointers, relationship between arrays and pointers Argument passing using pointers, Array of pointers. Passing arrays as arguments. Strings and C string library. Structure and Union. Defining C structures, Giving values to members, Array of structure, Nested structure, passing strings as arguments. File Handling.	L2, L3 and L4	8

ECE2110	PROGRAMMING IN C LAB	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	0	0	2	1
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

The primary objective of this course is to understand all the components of C, including the C language, the C Preprocessor, and the C Standard Library. An understanding of some advanced practical issues, including memory management, testing and debugging, complex declarations and expression evaluation, building and using libraries, and evaluating tradeoffs, such as size vs. speed and speed vs. complexity. The ability to write C code and create and manipulate logical programs.

Course Objectives

The objective of this course is to

- Equip the students with concepts of Programming through C Language
- Provide an overview of advanced programming concepts like Structure, Union and File Handling.

Course Outcomes

After the completion of course, the students will be able to,

CO 1: Demonstrate the use of various data types and operators in C programs; Solve various problems using conditional control statements (if-else, Switch case).

CO 2: Construct C programs related to problems involving the usage of loops, arrays and functions.

CO 3: Apply the concept of Pointers for efficient memory management and construct C programs using string handling functions.

CO 4: Demonstrate the use of Structure, Union and concept of File Handling to provide data storage support to the programs.

Modules	Blooms level*	Number of hours
LABORATORY SESSSION 1 OPERATORS, EXPRESSIONS and DECISION MAKING <ol style="list-style-type: none"> 1. Write a program to calculate simple interest and amount. 2. Write a program to swap two numbers using third variable. 3. Write a program to demonstrate Greatest of 3 nos and to print the given no in ascending order. 4. Write a program to check if the number is even or odd. 5. Write a program to perform arithmetic operations using Switch Case statement. 6. Write a program to calculate area of circle, rectangle, square and triangle using Switch Case statement. 	L3	5
LABORATORY SESSSION 2 LOOPING <ol style="list-style-type: none"> 1. Write a program to find factorial of given no using do while statement. 2. Write a program to print prime numbers up to 'n'. 3. Write a program to sum of n natural no. 	L3	6

4. Write a program to print Fibonacci series. 5. Write a program to reverse a number. 6. Write a program to print the following pattern using for loop 1 2 2 3 3 3 4 4 4 4 7. Write a program to print the following pattern using for loop A A B A B C A B C D		
LABORATORY SESSSION 3 ARRAYS and FUNCTIONS 1. Write a program to read n num of students and 5 subjects marks. 2. Write a program to swap two numbers using call by value. 3. Write a program to convert all lower case to uppercase characters 4. Write a program to find the factorial of a number using recursion. 5. Write a program to print the add/product of two matrices of any order.	L3	5
LABORATORY SESSSION 4 POINTERS AND STRING 1. Write a program to perform operations on strings using string handling in-built functions (concatenation, reversal, copy etc.) 2. Write a program to swap two numbers using call by reference. 3. Write a program to perform dynamic memory allocation and de-allocation. 4. Write a program to print elements of array using pointers.	L3	4
LABORATORY SESSSION 5 STRUCTURE, UNION & FILE HANDLING 1. WAP program to display student information by initializing structures. 2. WAP program to find the total salary of employee and employee details using structure. 3. Write a program to store and display information using Union. 4. Program to write data into file and read data from file.	L3	4

ECE2109	ELEMENTS OF MECHANICAL ENGINEERING LAB	L	T	P	C
Version 2019.1	Date of Approval: July 14, 2019	0	0	2	1
Pre-requisites/Exposure					
Co-requisites					

Pre –Requisite: Elements of Mechanical Engineering

Catalog Description

In this course the concepts of various prime movers like I C Engine, Gas Turbine, Steam Turbine, and Hydraulic Turbine are discussed in detail. Concept of power absorbing devices and power transmission devices are discussed in detail. Elementary concept of mechanics of material and machine tool also discussed in detail. The aim of this course is to make the students familiar with the basic mechanical engineering.

Course Objectives:

The objective of this course is to

- Equip the students with practical concepts of Boiler, Turbine, IC Engine and Machine tools.
- Understand the elements of mechanical engineering by working models and experiments.

Course Outcomes (COs): After studying this course the students will be able to:

CO 1- Define the basics of working of boilers, Steam turbines.

CO 2- Explain the principle and working of two strokes and four strokes internal combustion engines.

CO 3- Explain the working of Pelton wheel Turbine, Francis Turbine and Kaplan Turbine.

CO 4 - Describe the tensile test and power transmission derives.

CO 5- Identify and demonstrate the machine tools and lathe operation.

List of Experiments	Blooms level*	Number of hours
1. To Study the Cochran and Babcock & Wilcox boilers.	L1, L2 and L3	2
2. To study the working of impulse and reaction steam turbines	L1, L2 and L3	2
3. To study Two-Stroke & Four-Stroke Diesel Engines.	L1, L2 and L3	2
4. To Study Two-Stroke & Four-Stroke Petrol Engines.	L1, L2 and L3	2
5. To study the constructional features and working of Pelton wheel Turbine, Francis Turbine and Kaplan Turbine.	L1, L2 and L3	2
6. To perform tensile test, plot the stress-strain diagram and evaluate the tensile properties of a given metallic specimen.	L1, L2 and L3	2
7. To Study the different power transmission drives.	L1, L2 and L3	2
8. To Study different types of machine tools (lathe, milling, drilling & shaper).	L1, L2 and L3	2
9. To perform the metal cutting operation on Lathe machine.	L1, L2 and L3	2

ECE2118	BASIC ELECTRICAL AND ELECTRONICS ENGINEERING LAB	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	0	0	2	1
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

In this course, students will become familiar with basic electrical circuits. The students will learn practical aspects and implementation of theorems related to electrical circuits, law's related to flow of current, voltages, transformer and transistors.

Course Objectives

The objective of this course is to:

- Provide the overview of concept of flow of current/voltage of electrical circuits.
- Provide the basic knowledge about the concepts of electrical circuits and BJTs.

Course Outcomes

On completion of this course, the students will be able to:

- CO1. Explain the fundamental theorems and laws related to the electrical circuits and experimentally verify the basic circuit theorems
- CO2. Explain the working principle and estimate the performance of single phase transformers.
- CO3. Understand 3 phase balanced and unbalanced, star and delta connected supply and load and to measure power in 3 phase circuits
- CO4. Able to design circuit with Bipolar Junction Transistor in CB, CE & CC configurations

Modules	Blooms level*	Number of hours
Lab Session 1: Network Analysis Techniques & Theorems <ol style="list-style-type: none"> 1. To verify KVL & KCL in the given network. 2. To verify Superposition Theorem. 3. To verify Maximum Power Transfer Theorem. 4. To verify Reciprocity Theorem. 5. To determine and verify R_{Th}, V_{Th}, R_N, I_N in a given network. 	L1, L2 and L3	6
Lab session II: Transformers and transistors <ol style="list-style-type: none"> 1. To perform open circuit & short circuit test on a single-phase transformer. 2. To perform regulation, ratio & polarity test on a single-phase transformer. 3. To obtain the characteristics of a transistor under common base (CB) and common emitter (CE) configuration. 	L1, L2 and L3	3
Lab session III: Alternating Current Circuits <ol style="list-style-type: none"> 1. To study transient response of a given RLC Circuit. 2. To measure power & power factor in a three phase circuit by two wattmeter method. 3. To measure power & power factor in a three phase load using three ammeter & three voltmeter method. 	L1, L2 and L3	3

ECE2203	OBJECT ORIENTED PROGRAMMING USING C++	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	2	1	0	3
Pre-requisites/Exposure	Hands on knowledge of C Programming				
Co-requisites	Basic concepts of C Programming				

Catalog Description

The objective of this course is to introduce object-oriented programming. To explore and implement the various features of OOP such as inheritance, polymorphism, Exceptional handling using programming language C++. After completing this course student can easily identify the basic difference between the programming approaches like procedural and object oriented.

Course Objectives

The objective of this course is

- Equip the students with the basic features of C++ supporting object-oriented programming. Perform object oriented programming to develop solutions to problems demonstrating usage of control structures, modularity, I/O. and other standard language constructs.
- Provide the overview of major object-oriented concepts to implement object oriented programs in C++ like encapsulation, inheritance and polymorphism, stream I/O, templates and operator overloading

Course Outcomes

On completion of this course, the students will be able to

- CO 1: Explain the basic principles of object-oriented programming approach; Differentiate it with procedural programming approach and also discuss difference between C and C++.
- CO 2: Illustrate the different ways to define a member function inline and explain how the private members of a class can be accessed. Explain how the objects can be instantiated and destroyed with static data member?
- CO 3: Explain the concept of inheritance, types and implementation with suitable examples; find out ambiguity problem in inheritance; use the concept of overriding and constructors in inheritance.
- CO 4: Explain polymorphism in detail and implement the concept of overloading in functions as well as in operators. Write the programs for virtual function and pointer with objects.
- CO 5: Explain the exception handling mechanism. Design the programs for class and function Template. Compare and contrast various formatted and unformatted i/o function in file handling.

Modules	Blooms level*	Number of hours
MODULE 1: INTRODUCTION Review of C, Difference between C and C++, Procedure Oriented and Object Oriented Approach. Basic Concepts: Objects, classes, Principals like Abstraction, Encapsulation, Inheritance and Polymorphism. Dynamic Binding, Message Passing. Characteristics of Object-Oriented Languages. Introduction to Object-Oriented Modeling techniques (Object, Functional and Dynamic Modeling).	L1 and L2	5
MODULE 2: CLASSES AND OBJECTS Abstract data types, Object & classes, attributes, methods, C++ class declaration, Local Class and Global Class, State identity and behaviour of an object, Local Object and Global Object, Scope resolution operator, Friend Functions, Inline functions, Constructors and destructors, instantiation of objects, Types of Constructors, Static Class Data, Array of Objects, Constant	L1, L2 and L3	7

member functions and Objects, Memory management Operators.		
MODULE 3: INHERITANCE Inheritance, Types of Inheritance, access modes – public, private & protected, Abstract Classes, Ambiguity resolution using scope resolution operator and Virtual base class, Aggregation, composition vs classification hierarchies, Overriding inheritance methods, Constructors in derived classes, Nesting of Classes	L2, L3 and L4	8
MODULE 4: POLYMORPHISM Polymorphism, Type of Polymorphism – Compile time and runtime, Function Overloading, Operator Overloading (Unary and Binary) Polymorphism by parameter, Pointer to objects, this pointer, Virtual Functions, pure virtual functions.	L2, L3 and L4	8
MODULE 5: STRINGS, FILES AND EXCEPTION HANDLING Manipulating strings, Streams and files handling, formatted and Unformatted Input output. Exception handling, Generic Programming – function template, class Template Standard Template Library: Standard Template Library, Overview of Standard Template Library, Containers, Algorithms, Iterators, Other STL Elements, The Container Classes, General Theory of Operation, Vectors.	L2, L3 and L4	8

**Bloom's Level:*

ECE2206	OBJECT ORIENTED PROGRAMMING USING C++ LAB	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	0	0	2	1
Pre-requisites/Exposure	Turbo C++				
Co-requisites	NIL				

Catalog Description

The objective of this course is to introduce object-oriented programming. To explore and implement the various features of OOP such as inheritance, polymorphism, Exceptional handling using programming language C++. After completing this course student can easily identify the basic difference between the programming approaches like procedural and object oriented.

Course Objectives

The objective of this course is

- Perform object-oriented programming to develop solutions to problems demonstrating usage of control structures, modularity, I/O. and other standard language constructs.
- Demonstrate adeptness of object-oriented programming in developing solutions to problems demonstrating usage of data abstraction, encapsulation, and inheritance.
- Demonstrate ability to implement one or more patterns involving realization of an abstract interface and utilization of polymorphism in the solution of problems which can take advantage of dynamic dispatching, syntax, features of, and how to utilize the Standard Template Library.

Course Outcomes

On completion of this course, the students will be able to

- CO 1: Define and identify the basic principles of object-oriented programming approach; Differentiate it with procedural programming approach.
- CO 2: Determine the different ways to define a member function inline and explain how the private members of a class can be accessed. Solve how the objects can be instantiated and destroyed with static data member?
- CO 3: Apply the concept of inheritance, types and implementation with suitable examples; find out ambiguity problem in inheritance; use the concept of overriding and constructors in inheritance.
- CO 4: Relate the concept polymorphism with overloading in detail and implement the concept of overloading in functions as well as in operators. Write the programs for virtual function and pointer with objects.
- CO 5: Determine the exception handling mechanism. Design the programs for class and function Template. Compare and contrast various formatted and unformatted i/o function in filehandling.

Modules/Topics Covered**	Blooms level*	Number of hours
1. Sample Programs using objects and classes (a) Write a program to illustrate the concept of one class with two objects by taking student data. (b) Write a program to show the relationship of class and object to display roll no., grade and fee paid by student.	L1, L3, L5	4
2. Sample Programs for different use of private, public member variables and functions and friend functions (a) Write a program to define the member function outside and inside the class. (b) Write a program to read and display the information of N persons to illustrate the concept of array of objects. (c) Write a program to add two numbers to illustrate the use of friend	L1, L3, L5	4

Prof. Dr. Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar

function.		
3. Sample Programs using constructors and destructors (a) Write a program to assign and copy values to illustrate the concept of parametrized and copy constructor. (b) Write a program to show the order of constructor and destructor.	L1, L3, L5	4
4. Sample Programs using operator overloading (a) Write a program to add two numbers using binary operator overloading. (b) Write a program to illustrate the assignment operator overloading.	L1, L3, L5	4
5. Sample Programs using inheritance in and accessing objects of different derived classes (a) Write a program to compute the marks explaining the concept of multiple inheritance. (b) Write a program to find the factorial of a number using inheritance.	L1, L3, L5	4
6. Sample Programs using polymorphism and virtual functions (using pointers) and File Handling (a) Write a program to find the volume of cylinder and cuboid using function overloading. (b) Write a program to reverse a string using pointers. (c) Write a program to explain the relationship of inheritance and virtual function. (d) Write a program to read the student name and fee paid using read() function from the file.	L1, L3, L4, L5	4

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

Course Code: ECE2208	ENGINEERING GRAPHICS LAB	L	T	P	C
Version 2019.1	Date of Approval: July 14, 2019	0	0	4	2
Pre-requisites/Exposure	Concepts Mathematics (especially Trigonometry and Geometry)				
Co-requisites	Machine Drawing & CAD				

Catalog Description:

A freshman level course which provides the undergraduate engineering students with a background in descriptive geometry, orthographic projection, engineering drawing standards and annotation, computer-aided engineering graphics. The concepts of point, line and plane relationships in projection, multi-view engineering drawings, auxiliary and section views, basic dimensioning and annotation, engineering applications of drawings are also discussed.

Course Objective:

The objective of this course is to

- Equip the students with the in-depth knowledge of drawings of points, straight line, planes, cylinders, prisms, pyramids, parabola, ellipse etc.
- Draw different figures manually and will be capable of using various instruments involved in drawings.

Course Outcomes (COs):

At the end of the course, the student shall be able to:

CO 1 - Define and explain basic principles of projections of points and lines.

CO 2 - Define, describe and construct the different orientations and projections of planes.

CO 3 – Explain and construct the projections of solids and sectioning of solids in different orientations.

CO 4 - State and draw the concepts of development of surfaces and introduction to auto CAD.

CO 5 – Define and construct orthographic and isometric view of an object.

Modules	Blooms level*	Number of hours
Module I: Introduction Importance, significance and scope of engineering drawing, drawing instruments and their use, lettering, dimensioning, scales, sense of proportioning, different types of projections, B.I.S. Specifications.	L1 and L2	8

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Module II: Projection of points, lines and plane surface Principal planes, principles of orthographic projections, Projection of points in all quadrants, Projection methods - First angle & third angle projection, Projections of straight lines (first angle projection) inclined to both the planes, true lengths and traces, projection of planes, projection of planes in simple position and inclined to both the principal planes, auxiliary planes and views	L1, L2 and L3	12
Module III: Projection of solids & section of solids Projection of simple solids like prisms, pyramids, cylinder, cone and truncated solids when the axis is inclined to both of the principal planes, Sectioning of above solids in simple vertical position when the cutting plane is inclined to the one of the principal planes and perpendicular to the other, obtaining true shape of section	L1, L2 and L3	12
Module IV: Development of surfaces & Isometric projections Development of surfaces of simple and sectioned solids – Prisms, pyramids cylinders and cones, Principles of isometric projection, isometric scale, Isometric projections of simple solids and truncated solids, Prisms, pyramids, cylinders, cones, Conversion of Orthographic Views to Isometric Views and Vice-versa.	L1, L2 and L3	8
Module V: Introduction to CAD Introduction to CAD and use of its commands, practice of some 2D figures using CAD.	L1, L2 and L3	8

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

ECE2302	ANALOG ELECTRONICS-I	L	T	P	C
Version: 2019.1	Date of Approval: May 21, 2019	3	0	0	3
Pre-requisites/Exposure	Elementary Resistive Circuit, Theorems and Analysis Techniques: KCL, KVL, Nodal & Mesh Analysis, Thevenin & Norton Equivalents, Maximum Power Transfer.				
Co-requisites	Semiconductor Physics				

Catalog Description

This is the first course in Electronics and Communication Engineering, to educate and explain the methods used for biasing circuits in a graphical analysis of non linear electronic circuits and also includes small signal transistor models, parameters and their frequency responses. Following this, analyzing different types of feedback amplifiers, and power amplifiers using transistor and designing of different electronic circuits are included in the course. This course also considers the mathematical modelling of active solid state devices their analysis and design of single state circuits. Topics covered include the study of device characteristics and applications of p-n-junction diodes, bipolar junction transistors, and field effect transistors.

Course Objectives

The objective of this course is to

- build from basic knowledge of Semiconductor Physics to an understanding of basic devices and their models
- familiarize the student with the analysis and design of basic transistor amplifier circuits, feedback amplifiers and wave shaping circuits
- build a foundation for Analog Electronics-II, Digital Circuits and Systems I & II, VLSI de-sign and analog CMOS IC Design

Course Outcomes

On completion of this course, the students will be able to

CO1. explain different types of diodes and demonstrate wave shaping circuits

CO2. explain operating principal of Bipolar Junction Transistor, its properties, biasing techniques and stability

CO3. describe low and high frequency transistor amplifiers along with single and multi-stage am-plifier

CO4. explain operating principal of JFET, MOSFET, its properties, and biasing techniques

CO5. solve and analyse different negative feedback amplifiers configurations

CO6. describe and outline power amplifiers and their application.

Modules	Blooms level*	Number of hours
Module I: Semiconductor Diode and Diode Circuits Different types of diodes: Zener, Schottky, LED. Zener as voltage regulator, Diffusion capacitance, Drift capacitance, the load line concept, half wave, full wave rectifiers, clipping and clamping circuits.	L1 L2 & L3	6
Module II: Bipolar Junction Transistor Bipolar junction transistor: Introduction, Transistor, construction, transistor operations, BJT characteristics, load line, operating point, leakage currents, saturation and cut off mode of operations. Bias stabilization: Need for stabilization, fixed Bias, emitter bias, self bias, bias stability with respect to variations in I_{CO} , V_{BE} & β , Stabilization factors, thermal stability.	L1 L2 & L3	9
Module III: Small signal Analysis of transistor and Multistage Amplifier Hybrid model for transistors at low frequencies, Analysis of transistor amplifier using h parameters, emitter follower, Miller's theorem, THE CE amplifier with an emitter resistance, Hybrid π model, Hybrid π Conductances and Capacitances, CE short circuit current gain, CE short circuit current gain with R_L Multistage amplifier: Cascading of Amplifiers, Coupling schemes(RC coupling and Transformer coupling)	L2 & L3	6
Module IV: Field Effect Transistors Field effect transistor (JFET, MOSFET): volt-ampere characteristics, small signal model –common drain, common source, common gate, operating point, MOSFET, enhancement and -depletion mode, Common source amplifier, Source follower	L1, L2 & L3	5
Module V: Feedback Amplifiers Feedback concept, Classification of Feedback amplifiers, Properties of negative Feedback amplifiers, Impedance considerations in different Configurations, Examples of analysis of feedback Amplifiers.	L1, L2, L3 & L4	6
Module VI: Power amplifiers Power dissipation in transistors, difference with voltage amplifiers, Amplifier classification (Class A, Class B, Class C, Class AB) class AB push pull amplifier, collector efficiency of each, cross over distortion.	L1 & L2	4

ECE2303	CIRCUITS AND SYSTEMS	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	2	1	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

In this course the concepts of circuits analysis based on Resistance, Inductance and Capacitance are discussed in detail. voltage- current relationship of basic circuit elements – resistors, inductors, capacitors, dependent and independent voltage and current sources; apply Kirchhoff's current and voltage laws to circuits in order to determine voltage, current and power in branches of any circuits excited by DC voltages and current sources will be discussed. Concept learnt in the studies will be applied to solve DC circuit problems using basic circuit theorems and structured methods like node voltage and mesh current analysis.

Course Objectives

The objective of this course is to

- Equip the students with concepts basic network analysis of electrical circuits using KVL and KCL.
- Provide an overview of one port and two port network analysis in time and frequency domain.

Course Outcomes

On completion of this course, the students will be able to

CO1: Expiation of graph theory for solving complex electrical circuits.

CO2: Analysis of RL, RC and RLC circuits using time domain approach.

CO3: Apply Laplace transform to solve RL, RC and RLC circuits in frequency domain.

CO4: Explanation and application of various network theorems to solve the given circuit.

CO5: Synthesis of RL, RC and RLC electrical circuits and explanation of two port network parameters.

ECE2311	DATA STRUCTURES USING C	L	T	P	C
Version: 2019.1	Date of Approval: May 21, 2019	3	0	0	3
Pre-requisites/Exposure	Basic Knowledge of C++ Programming				
Co-requisites	Nil				

Catalog Description

This course covers the design, analysis, and implementation of data structures and algorithms to solve engineering problems using C programming language. Topics include elementary data structures, (including arrays, stacks, queues, and lists), advanced data structures (including trees and graphs), the algorithms used to manipulate these structures, and their application to solving practical engineering problems. At the end of this course student will gain knowledge about different kinds of file structures and their related operations.

Course Objectives

The objective of this course is to

1. Equip the students with knowledge of algorithms, different types of data structures and analysis of space and time complexity.
2. Provide an overview of various algorithms of data structures like stack and queues and related operations and implementation.
3. Provide an overview of dynamic Data Structure like linked list and its related operations, algorithms and programs. Demonstrate practical use of dynamic data structure to solve engineering problems.
4. Equip the students with knowledge of algorithms and operations related to tree and graph data structures and their practical applications.
5. Provide an overview of Sorting, Searching and file structures and its related algorithms and techniques.

Course Outcomes

On completion of this course, the students will be able to

- CO 1: Identify operations on array, multidimensional, string and their implementation and analyze space and time complexity of algorithms.
- CO 2: Explain various algorithms and operations of data structures like stack and queues and analyze complexity of each operation.
- CO 3: Explain dynamic data structures and various algorithms and operations of data structures like linked list and their applications in computer science.
- CO 4: Illustrate the algorithms and operations related to tree and graph data structures, their practical applications and analyze complexity of algorithm associated with each operations.
- CO5: Explain Sorting, Searching and file organization and its related techniques.

Modules	Blooms level*	Number of hours
Module I: Introduction to Data structures Data structures: Definition, Types. Algorithm design, Complexity, Time-Space Tradeoffs. Use of pointers in data structures. Array Definition and Analysis, Representation of Linear Arrays in Memory, Traversing of Linear Arrays, Insertion and Deletion, Single Dimensional Arrays, Two Dimensional Arrays, Multidimensional Arrays, Function Associated with Arrays, Character String in C, Character String Operations, Arrays as parameters, Implementing One Dimensional Array, Sparse matrix.	L1, L2	7
Module II: Introduction to Stacks and queue Stack: Definition, Array representation of stacks, Operations Associated with Stacks- Push & Pop, Polish expressions, Conversion of infix to postfix, infix to prefix (and vice versa), Application of stacks recursion, polish expression and their compilation, conversion of infix expression to prefix and postfix expression, Tower of Hanoi problem. Queue: Definition, Representation of Queues, Operations of queues- QInsert, QDelete, Priority Queues, Circular Queue, Deque.	L1, L2, L3, L4	8
Module III: Dynamic Data Structure Linked list: Introduction to Singly linked lists: Representation of linked lists in memory, Traversing, Searching, Insertion into, Deletion from linked list, doubly linked list, circular linked list, generalized list. Applications of Linked List-Polynomial representation using linked list and basic operation. Stack and queue implementation using linked list.	L1, L3 and L4	7
Module IV: Trees and Graphs Trees: Basic Terminology, Binary Trees and their representation, expression evaluation, Complete Binary trees, extended binary trees, Traversing binary trees, Searching, Insertion and Deletion in binary search trees, General trees, AVL trees, Threaded trees, B trees. Graphs: Terminology and Representations, Graphs & Multigraphs, Directed Graphs, Sequential representation of graphs, Adjacency matrices, Transversal Connected Component and Spanning trees.	L1, L3 and L5	7
Module V: Sorting and Searching and file structures Sorting: Insertion Sort, Bubble sort, Selection sort, Quick sort, two-way Merge sort, Heap sort, Partition exchange sort, Shell sort, Sorting on different keys, External sorting. Searching: Linear search, Binary search File structures: Physical storage media, File Organization, Linked organization of file, Inverted file, Organization records into blocks, Sequential blocks, Hash function, Indexing & Hashing, Multilevel indexing, Tree Index, Random file, Primary Indices, Secondary Indices, B tree index files.	L1, L4, L5	7

ECE2305	ANALOG ELECTRONICS - I LAB	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	0	0	2	1
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

This course provides the practical implementation and verification of the theoretical facts studied in theory course. It includes studying the characteristics of diodes, rectifiers, transistors and amplifiers.

Course Objectives

The objective of this course is to

1. Provide a demonstration of various analog components like diodes, rectifiers etc.
2. Equip with understanding of different circuits like BJT, JFET, MOSFET and amplifiers.

Course Outcomes

On completion of this course, the students will be able to

CO 1: Demonstrate the characteristics of pn junction and zener diode.

CO 2: Obtain and analyze the output of clipper-clamper circuit and rectifiers with various filters.

CO 3: Plot the characteristics of BJT, JFET and MOSFET.

CO 4: Obtain the gain and demonstrate the frequency response of single stage and double stage amplifiers.

Modules/Topics Covered**	Blooms level*	Number of hours
Lab Session-I 1. To study and plot the characteristics of a junction diode. 2. To study Zener diode I-V characteristics.	L3, L5	2
Lab Session-II 3. To study diode based clipping and clamping circuits. 4. To study half wave, full wave and bridge rectifier with filters.	L3, L5	2
Lab Session-III 5. To study the input and output characteristics of a transistor in its various configurations (CE and CB). 6. To study various types of Bias Stabilization for a transistor. 7. To study and plot the characteristics of a MOSFET in its various configurations. 8. To study and plot the characteristics of a JFET in its various configurations	L3, L5	6
Lab Session-IV 9. To study the gain and plot the frequency response of a single stage transistor amplifier.	L3, L5	2

10. To measure gain and plot the frequency response of double stage RC coupled amplifier.

ECE2306	CIRCUITS AND SYSTEMS LAB	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	0	0	2	1
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

This course is intended for solving and synthesis of electrical circuits. A knowledge of grade school mathematics and physics is necessary. This course will give you a better understanding on how to solve various circuits using graph theory, nodal and mesh analysis and theorems in both time and Laplace domain.

Course Objectives

The objective of this course is to

- Provide the capability to analyze the circuits.
- Synthesize the circuits with given transfer function.

Course Outcomes

On completion of this course, the students will be able to

CO1. Analyze the circuits by various methods like graph, theorems.

CO2. Understand the various parameters to design electrical circuits.

CO3. Understand the realizability of the circuits by driving point and transfer function.

Course Content

Modules	Blooms level*	Number of hours
LABORATORY SESSSION 1 1. To verify Thevenin's theorem in a given network. 2. To verify reciprocity theorem in each network.	L1 L2 and L3	2
LABORATORY SESSSION 2 3. To verify maximum power transfer theorem in a given network. 4. To verify Tellegen's theorem in a given network.	L1 and L3	2
LABORATORY SESSSION 3 5. To determine the Z- and Y- parameters of a resistive two-port network. 6. To determine the T- (ABCD) parameters of a resistive two-port network. 7. To determine the h- parameters of a resistive two-port network.	L1 and L3	4
LABORATORY SESSSION 4 8. To design series-series connection of 2 two-port networks and determine its Z- parameters. 9. To design parallel-parallel connection of 2 two-port networks and	L2 and L3	4

determine its Y- parameters.		
10. To design a cascade connection of 2 two-port networks and determine its T- (ABCD) parameters.

ECE2312	DATA STRUCTURES USING C LAB	L	T	P	C
Version: 2019.1	Date of Approval: May 21, 2019	0	0	2	1
Pre-requisites/Exposure	Basic Knowledge of C Programming				
Co-requisites	Nil				

Catalog Description

This course covers the design, analysis, and implementation of data structures and algorithms to solve engineering problems using C programming language. Topics include elementary data structures, (including arrays, stacks, queues, and lists), advanced data structures (including trees and graphs), the algorithms used to manipulate these structures, and their application to solving practical engineering problems. At the end of this course student will gain knowledge about different kinds of file structures and their related operations.

Course Objectives

The objective of this course is to

- Equip the students with knowledge of algorithms, different types of data structures and analysis of space and time complexity.
- Provide an overview of various algorithms of data structures like stack and queues and related operations and implementation.
- Provide an overview of dynamic Data Structure like linked list and its related operations, algorithms and programs. Demonstrate practical use of dynamic data structure to solve engineering problems.
- Equip the students with knowledge of algorithms and operations related to tree and graph data structures and their practical applications.
- Provide an overview of Sorting, Searching and file structures and its related algorithms and techniques.

Course Outcomes

On completion of this course, the students will be able to

CO 1: Identify operations and their implementation on array and multidimensional, string and estimation space and time complexity.

CO 2: Explain various algorithm and operations of data structures like stack and queues and analyze complexity of each operation.

CO 3: Explain dynamic data structures and various algorithms and operations of data structures likelinked list and their applications in computer science.

CO 4: Illustrate the algorithms and operations related to tree and graph data structures, their practical applications and analyze complexity of algorithm associated with each operations.

CO5: Explain Sorting, Searching and file organization and its related techniques.

ECE2315	MEASUREMENT AND MEASURING INSTRUMENTS	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	2	0	0	2
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

This course provides a brief knowledge of measurements and measuring instruments related to engineering. It introduces measuring elements of instruments, characteristics of measuring instruments, error analysis, transducers and its classification, measurement of resistance, capacitance and inductance, principles of analog and digital meters and different display techniques.

Course Objectives

The objective of this course is to

- Equip the students with concepts of measurement, measuring elements and challenges in measurement.
- Provide in depth knowledge of each element of measurement system.

Course Outcomes

On completion of this course, the students will be able to

CO1. Explain measuring elements and characteristics of measurement system and solve problems related with measurement errors.

CO2. Classify different types of transducers and solve problems related with transducers.

CO3. Solve problems of resistance, capacitance and inductance measurement.

CO4: Explain and solve problems on different types of analog and digital meters suitable for voltage and current measurement.

CO5: Explain display devices used in measurement system and analyze the signals on CRO.

ECE2313	VIRTUAL INSTRUMENTATION	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	2	0	0	2
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

This Course introduces virtual instrumentation and its comparison over conventional instrumentation. In this course, LabVIEW has been adopted as the platform of virtual instrumentation programming. System hardware and its interfacing techniques are introduced. Applications of virtual instrumentation are explained in various field e.g. Aviation, Automotive Defence, Medical etc.

Course Objectives

The objective of this course is to

1. To provide the core knowledge of Virtual Instruments used in research and industry.
2. To provide a LabVIEW platform on which low cost virtual instruments can be designed in very short time.

Course Outcomes

On completion of this course, the students will be able to

CO1. Explain virtual instrumentation and compare it with tradition instruments.

CO2. Explain components of LabVIEW, apply programming concept and design basic virtual instruments using LabVIEW software.

CO3. Explain the concepts of LabVIEW system hardware including input, output and interfacing devices.

CO4: Explain applications of virtual instrumentation in industries.

Modules	Blooms level*	Number of hours
Module 1: Introduction to Virtual Instrumentation Introduction, Historical perspective, advantages, block diagram and architecture of a virtual instrument, conventional vs. virtual instrumentation.	L1, L2 and L4	4
Module 2: Introduction to Software Introduction to Lab VIEW, Front panel, back panel representations, Block diagram, Menus, Palettes, VI and Sub VI, Editing and Debugging VI, Structures, Arrays, Clusters, Charts and Graphs, Data acquisition, Instrument Control, Signal Generation and Signal Processing Examples	L1, L2, L3, L4 and L5	9
Module 3: Introduction to systems hardware ADC, DAC, D/O, counters and timer, PC hardware structure, timing, interrupts, DMA, software and hardware installation, Configuring data acquisition hardware using the drives in application software, use of DAQ library functions for different analog and digital input/output operations. Input/output devices & functions like data gloves, joysticks, CRT etc.	L1 and L2	6
Module 4: Application of Virtual Instrumentation in various fields Aviation, Automotive, High Voltage, Defense, Chemical, Industrial, Marine, Medical, Mining, Nuclear Energy, Virtual landscapes.	L1 and L2	5

ECE2314	VIRTUAL INSTRUMENTATION LAB	L	T	P	C
Version 2019.1	Date of Approval: 14 July 2019	0	0	2	1
Pre-requisites/Exposure	Signal and System				
Co-requisites					

Catalog Description

This Course introduces virtual instrumentation. In this course, LabVIEW has been adopted as the platform of virtual instrumentation programming. Experiments are introduced to create virtual instrument based on various logics. Experiments are based on graphical programming.

Course Objectives

The objective of this course is to

Introduce LabVIEW software to design virtual instrument.

Design various logic in form virtual instrument using graphical programming.

Course Outcomes

On completion of this course, the students will be able to

CO1. Explain and use various functions available in LabVIEW.

CO2. Explain and create sub VIs which can be used as functions in complex VIs.

CO3. Analyse and create virtual instrument using graphical programming of various logics.

Modules	Blooms level*	Number of hours
Lab Session 1 1. To open, and explore the components of LabView. 2. To build a simple VI that converts a Celsius temperature reading to Fahrenheit.	L2, L3, L4 and L5	3
Lab Session 2 1. (a) To create an icon and a connector pane so you can use a VI as a subVI. (b) To build a VI and create its icon and connector pane so you can use it as a subVI. 2. To build a VI to generate 4*5 two dimensional array of random numbers (between 1 to 2).	L2, L3, L4 and L5	3
Lab Session 3 1. To Build a VI that generate Fibonacci series starting from '0'. 2. To build a VI which finds roots of quadratic equation using formula node. 3. To build a VI that reverses the contents of an array.	L2, L3, L4 and L5	3
Lab Session 4 1. To build a VI that can be used for sorting of numeric array i.e. in ascending or descending order.	L2, L3, L4 and L5	3

2. To build a VI for 4*1 multiplexer operation.		
3. To build a VI for 3*8 Decoder operation.

ECE2402	COMMUNICATION SYSTEM	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	3	0	0	3
Pre-requisites/Exposure	Signal and System				
Co-requisites					

Catalog Description

The purpose of this course is to introduce students to the basic principles of the design and analysis of modern communication systems. It will provide a thorough study of both analog and digital modulation and demodulation schemes. The performance analysis of various techniques based on requirements of noise and bandwidth will also be explained. It also introduces the students to the information theory and coding for basic understanding of mobile communication system.

Course Objectives

The objective of this course is to

- Provide a thorough introduction to analog and digital communications
- Provide in depth study of various modulation and demodulation techniques.
- Introduce students to basics of information theory and coding for applications in mobile communication.

Course Outcomes

On completion of this course, the students will be able to

CO1. Define and distinguish analog and digital communication systems.

CO2. Differentiate modulation and demodulation techniques of AM and FM systems and compare them in terms of Bandwidth and noise.

CO3. Distinguish and categorize various digital modulation techniques.

CO4. Describe Information theory and coding for applications in mobile communication system by solving different encoding problems.

ECE2403	ANALOG ELECTRONICS- II	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	3	0	0	3
Pre-requisites/Exposure	Basic Electronics and Circuitual Analysis				
Co-requisites	Nil				

Catalog Description

This course introduces the application of semiconductor devices in linear analog circuits. The course stresses on circuit designs using the operational amplifier, active filters and oscillators. The course also provides the overview on the

Course Objectives

The objective of this course is to

- Provide the fundamental knowledge of linear analog circuits.
- Provide the knowledge about practical circuit designs using OP Amp.

Course Outcomes

On completion of this course, the students will be able to

CO1. Describe the circuits having BJT and Operational Amplifiers.

CO2. Solve the Linear and Non-linear circuits and analyze them in terms of their parameters and applications.

CO3. Categorize the waveform generation circuits and apply them in laboratory projects.

CO4. Analyze the circuitual knowledge to Linear ICs and filters and apply them for industry problem.

Course Content

Modules	Blooms level*	Number of hours
MODULE I: Building Blocks of Analog ICs 6 lecture hours Differential amplifier, Op-amp Model, op-amp DC & AC parameters, virtual ground, Current mirrors, Active loads, Level shifters and output stages.	L1 and L2	6
MODULE II: Operational amplifiers Introduction, open loop and closed loop configuration, op-amp parameters (input offset current, output offset current, i/p bias current, CMRR, PSRR, null adjustment range, etc.)	L1 and L2	5

 Prof. (Dr.) Anil Kumar

Inverting and non-inverting configuration, voltage gain of inverting and non inverting configurations.		
MODULE III: Linear & Non Linear Wave shaping Adders, Voltage to current, current to voltage Converter, Integrators, Differentiators, Voltage follower (voltage buffer), summer, subtractor, Comparators, log/antilog circuits using Op-amps, precision rectifiers.	L2, L3 and L4	6
MODULE IV: Waveform Generations Damped and undamped oscillations, Barkhausen criterion for sustained oscillation. Tank circuit generator Astable multi Vibrators, OTA-C Oscillators, Crystal oscillator. Types of oscillators: LC-Hartley and Colpitts, RC-RC phase shift and Wien bridge oscillator, Basics of tuned Amplifiers, Voltage Controlled Oscillator.	L2 L3 and L4	7
MODULE V: Active RC Filters & Applications of Linear Circuits Idealistic & Realistic response of filters (LP, BP, and HP), Butter worth & Chebyshev approximation filter functions, LP,BP,HP and All pass, Notch Filter, Operational transconductance amplifier (OTA)-C filters.	L2, L3 and L4	6
MODULE VI: Applications of IC Analog Multiplier & Timer IC phase locked loops, 555 Timer, IC voltage regulators-(fixed, variable) 78xx, 79xx series and adjustable.	L3 and L4	6

ECE2404	ELECTROMAGNETIC FIELD THEORY	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	3	0	0	0
Pre-requisites/Exposure	Mathematical Basics				
Co-requisites	Wave phenomena				

Catalog Description

Electromagnetic field theory is the most fundamental subject in the curriculum of electronics and electrical engineering education. Electromagnetics explains universal concepts in three-dimension real world, i.e., electro-magnetic wave propagation in free-space. This course provides a general introduction to the important physical concepts and mathematical methods used in treating all types of wave phenomena and electromagnetic signal propagation. This course provides essential back-ground and basic preparation for more advanced work in device physics, microwave and ultra-fast circuitry, transmission lines, electro dynamic wave propagation. Antenna design, and optoelectronics.

Course Objectives

The objective of this course is to

- Equip the students with the fundamental understanding of electro-magnetic wave system.
- To lay the foundations of mathematical Maxwell equations, electrodynamic wave propagation and transmission lines.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain and apply vector calculus to static and time varying electric-magnetic fields in different engineering situations.

CO2: Explain and able to solve Electromagnetic Relation using Maxwell Formulae

CO3: Examine the phenomena of electrodynamic wave propagation in unbounded media and its interfaces.

CO4: Analyze and generalized the concepts of guided structures like transmission lines and their characteristics.

Modules	Blooms level*	Number of hours
MODULE 1: Mathematical Basics and Electrostatics Coordinate Systems: Spherical and Cylindrical coordinates, Dirac delta function, Coulomb's law, Gauss's law, Poisson's Equation, Laplace's Equation, Electrostatic Boundary conditions, Work and Energy in Electro-	L1, L2 and L3	8

ECE2411	DIGITAL ELECTRONICS	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	2	1	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

This course explores the theory and operation of the basic building blocks of digital electronics which includes combinational and sequential circuits. This course also explains the logic families and data convertors. The concepts learnt in the studies of sequential circuits will be applied in the design and analysis of Melay and Moore machines.

Course Objectives

The objective of this course is to

1. Provide the basic knowledge of digital logic levels and application of combinational and se-quential circuits.
2. Equip with the understanding of logic family and data convertors.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain the various logic gates, Boolean algebra and solve the k-map & tabulation method to simplify the logical function.

CO2: Explain the adder & subtractor; Apply and analyze multiplexer, decoder & encoder to design Boolean function.

CO3: Describe flip flops, shift registers & Design counters and synchronous sequential circuits.

CO4: Explain & compare different logic families and explain data convertors.

Modules	Blooms level*	Number of hours
MODULE 1: BOOLEAN FUNCTIONS Analog & digital signals, AND, OR, NOT, NAND, NOR , XOR & XNOR gates, Boolean algebra, DeMorgan's theorems, Implementation of logical function using only NAND/NOR gates, 1's complement and 2's complement, BCD to Gray and Gray to BCD code conversion, Standard representation of logical functions (SOP and POS forms), K-map representation and simplification of logical function up to five variables, don't care conditions, XOR & XNOR simplifications of K-maps, Tabulation method	L1,L2 and L3	6

MODULE 2:

COMBINATIONAL CIRCUITS

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Adders, Subtractors, Implementation of full adder using half adder, full subtractor using half subtractor, Multiplexer, de-multiplexer, decoder & encoder, code converters, 1 & 2 bit comparators, BCD to seven segment decoder/encoder, Implementation of logic functions using multiplexer/de-multiplexer and decoder, Implementation of 16×1 MUX using 4×1 MUX, 4×16 decoder using 3×8 decoder etc., logic implementations using PROM, PLA & PAL.	L1, L2,L3 and L4	6
MODULE 3: SEQUENTIAL CIRCUITS Difference between combinational and sequential circuits, Latch, Flip-flops: SR, JK, D & T flip flops – Truth table, Excitation table, Conversion of flip-flops, set up and hold time, race around condition, Master Slave flip flop, Shift registers: SIPO, PISO, PIPO, SIPO, Bi-directional, 4-bit universal shift register; Counters: Asynchronous/ripple & synchronous counters – up/down, Ring counter, sequence detector.	L2,L3, L4 and L5	7
MODULE 4: LOGIC FAMILIES & DATA CONVERTERS Logic families: Special characteristics (Fan out, Power dissipation, propagation delay, noise margin), working of RTL, DTL, TTL, ECL and CMOS families; Data converters: Special characteristics, ADC – successive approximation, linear ramp, dual slope; DAC – Binary Weighted, R-2R ladder type.	L1, L2,L3 and L4	5

ECE2417	SIGNALS AND SYSTEMS	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	2	1	0	3
Pre-requisites/Exposure	Differentiation & Integration concepts				
Co-requisites					

Catalog Description

This course deals in Digital signal processing with significant skills in advance methods for modification, analysis, classification & sampling of signals. It provides the broad knowledge of design, and realization of digital signal processing systems. The problems based on transformation of do-mains and filter design will be focused on.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of signals and systems.
2. Provide in-depth knowledge of representation of signals in frequency & z-domain.

Course Outcomes

On completion of this course, the students will be able to

- CO1: Represent, analyze & categorize discrete-time signals and systems in time domain with an emphasis on linear time invariant systems.
- CO2: Apply the fourier series expansion to signals and obtain its constituent frequencies.
- CO3: Convert the signals from time domain to frequency domain using fourier transform.
- CO4: Apply the z- transform on discrete signals to solve the problems related to computational complexity.

Modules	Blooms level*	Number of hours
Module 1: Signals And Systems Introduction of signals and systems; classification of signal, continuous time and discrete time signals, operations performed on them, even and odd signals, periodic and non periodic signals, deterministic and random signals, energy signals, power signals, elementary signals: impulse, step, ramp and exponentials, classification of systems.	L1,L2 and L4	8
Module 2: LTI System Response of LTI system for continuous and discrete time systems, Impulse response, Step response, properties of continuous LTI and discrete LTI systems, LTI systems described by differential and difference equation, analysis of LTI Systems, interconnection of systems.	L1,L2 and L4	6
Module 3: Fourier Series Representation of continuous time periodic signal, properties of continuous time Fourier series, representation of discrete time periodic signals, convergence of the Fourier series, properties of discrete time Fourier series, Fourier series and LTI systems.	L2,L3	7
Module 4: Fourier Transform Continuous time Fourier transform, properties of continuous time Fourier transform, discrete time Fourier transform, properties of discrete time Fourier transform; applications; Bandwidth determination of signals and systems.	L2,L3	7
Module 4: z-Transform Definition of z-transform, region of convergence, properties of z-transform, first order system, second order system, inverse z-transform, analysis of LTI system using z-transform.	L2,L3	8

ECE2406	COMMUNICATION SYSTEMS LAB	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	0	0	2	1
Pre-requisites/Exposure	Signal and System				
Co-requisites	Nil				

Catalog Description

To impart knowledge on Amplitude Modulation and Angle modulation principles, generation, and its types. Also, to understand the basic concepts of pulse modulation techniques like PCM and PSK.

Course Objectives

The objective of this course is to

- To provide the basic skills required to understand, develop, and design of various engineering applications involving analog communication theory. To provide basic laboratory exposures for communication principles and applications.

Course Outcomes

On completion of this course, the students will be able to

CO1: Study the carrier modulation techniques like AM and FM modulation.

CO2: Study digital carrier modulation techniques using amplitude shift keying and Frequency shift keying.

CO3: Demonstrate various pulse modulation techniques (PCM), DM, ASK, DPSK and QPSK.

List of Experiments:

Modules	Blooms level*	Number of hours
1. To study the sampling and reconstruction of a given signal. 2. To study amplitude modulation and demodulation. 3. To study frequency modulation and demodulation. 4. To study time division multiplexing.	L1, L2	8
5. To study pulse amplitude modulation. 6. To study delta and adaptive delta modulation and demodulation. 7. To study carrier modulation techniques using amplitude shift keying and Frequency shift keying.	L3 and L4	10
8. To study carrier modulation techniques using binary phase shift keying and differential shift keying.	L2, L4	10

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

9. To study pulse code modulation & differential pulse code modulation as well as relevant demodulations.		
10. To study quadrature phase shift keying & quadrature amplitude modulation.

ECE2407	ANALOG ELECTRONICS – II LAB	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	0	0	2	1
Pre-requisites/Exposure	Circuit Theory				
Co-requisites	Nil				

Catalog Description

In this course the concepts of Analog Electronics are discussed. Design and analysis of efficient circuits using op-amp like adder, subtractor, filters and oscillators.

Course Objectives

The objective of this course is to

- To provide the basic skills required to understand, develop, and design of various engineering applications involving Analog Electronic & Circuits.
- To provide basic laboratory exposures for Analog Circuits and applications.

Course Outcomes

On completion of this course, the students will be able to

CO1: Construct adder, subtractor, an inverting and non-inverting amplifier.

CO2: Design transistor-based RC oscillator (Wien bridge and RC phase shift oscillator) circuit.

CO3: Construct astable and mono-stable mode timer circuit using IC 555.

CO4: Design of Integrator, differentiator and low pass & high pass active filter circuit using Op-Amp (I.C-741)

List of Experiments:

Modules	Blooms level*	Number of hours
1. To study the op amp as an inverting and non inverting amplifier. 2. To use the op amp as an adder, subtractor, integrator and differentiator. 3. To design a ramp and a square wave generator. 4. To study the IC-555 timer as stable and bistable multivibrator.	L1, L2	8
5. To design low pass, high pass and band pass filters using op- amp. and plot their frequency response. 6. To design and study class A power amplifier. 7. To design and study a class B push pull amplifier.	L3 and L4	10
8. To study various feedbacks such as voltage series feedback. 9. To design RC phase shift and Wein bridge oscillators using op amplifier. 10. To design and study Colpitt and Hartley oscillators.	L2, L4	10

ECE2412	DIGITAL ELECTRONICS LAB	L	T	P	C
Version 2019.1	Date of Approval: 14 July, 2019	0	0	2	1
Pre-requisites/Exposure	Signal and System				
Co-requisites					

Catalog Description

In this Lab course the combination and sequential circuits are designed and their functionality is verified using truth table. Concepts covered would enable them to create complex circuits related to digital design. The objective of this course is to explore and implement the various features of digital logic using basic logic gates.

Course Objectives

The objective of this course is to

- Provide a basic knowledge of digital logic levels and application of knowledge to understand digital electronics circuits.
- Equip with understanding of different combinational and sequential circuits.

Course Outcomes

On completion of this course, the students will be able to

CO 1: Demonstrate the basic concept of logic gates;

CO 2: Illustrate the adder and subtractors.

CO 3: Demonstrate the code convertors.

CO 4: Demonstrate the combinational and sequential circuits.

Modules/Topics Covered**	Blooms level*	Number of hours
1. To verify the truth tables of NOT, OR, AND, NOR, NAND, XOR, XNOR gates.	L3, L5	2
2. To obtain half adder, full adder using gates and verify their truth tables.	L3, L5	2
3. To obtain half subtractor, full subtractor using gates and verify their truth tables.	L3, L5	2
4. To implement control circuit using multiplexer.	L3, L5	2
5. To convert BCD code into excess 3 code and verify the truth table.	L3, L5	2
6. To verify the truth tables of RS, D, JK and T flip- flops.	L3, L5	2
7. To implement and verify 3-bit bi-directional shift register.	L3, L5	2
8. To design and study asynchronous/ripple counter.	L3, L5	2
9. To design and study synchronous counter.	L3, L5	2
10. To design and study a sequence detector.	L3, L5	2

ECE2418	ELECTRONIC WORKSHOP & PCB LAB	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	0	0	2	1
Pre-requisites/Exposure	NIL				
Co-requisites					

Catalog Description

The students will be able to understand the contribution of electronics to some extent. PCB's have definitely contributed in a significant manner as a means of interconnection of various electronic components. The field of PCB designing is a mutual contribution of wide range of various other fields.

Course Objectives

The objective of this course is to

1. To identify basic electronic components and understand operation of electrical devices.
2. To implement mini projects based on concept of electronics circuit concepts.

Course Outcomes

On completion of this course, the students will be able to

CO1. Measure voltage, frequency and phase of any waveform using CRO. Generate sine, square and triangular waveforms with required frequency and amplitude using function generator.

CO2. Analyse the characteristics of different electronic devices such as diodes, transistors etc., and simple circuits like rectifiers, amplifiers etc.

CO3. Obtain the PCB for a simple circuit.

Course Content

Experiments	Blooms level*	Number of hours
1. Study of CRO, DMM & Function Generator 2. Identification of Active & Passive Components	L1 and L2	2
1. Winding shop: Step down transformer winding of less than 5VA. 2. Soldering shop: Fabrication of DC regulated power supply	L1 and L2	2
1. PCB Lab: (a) Artwork & printing of a simple PCB. (b) Etching & drilling of PCB.	L1 and L2	3
1. Wiring & fitting shop: Fitting of power supply along with a meter in cabinet. 2. Testing of regulated power supply fabricated.	L1 and L2	2

ECE2414	PCB FABRICATIONS	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	2	0	0	2
Pre-requisites/Exposure	Basic Electronics				
Co-requisites					

Catalog Description

This course will introduce students to the process of fabrication of PCB and various design and analysis concepts for the techniques used. The role of environment will also be discussed. The assembly of components on PCB and testing for quality assurance will also be discussed.

Course Objectives

The objective of this concentration elective is

- To allow students to have insight knowledge of PCB Fabrication.
- To enhance their knowledge domain beyond main subjects for application in working on various projects.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Explain the design flow of PCB Fabrication.
CO2. Distinguish and Explain the techniques used and design considerations.
CO3. Apply the knowledge of computer for automation in PCB fabrication.
CO4. Prepare PCB for simple circuits in lab for projects.

Modules	Blooms level*	Number of hours
MODULE I: INTRODUCTION TO THE PCB Definition and Evolution of the Printed Circuit Board (PCB), Purposes of a PCB, Applications, Market Drivers, Typical Development Flow for a PCB, Printed Circuit Technology, Basic Electronic Components, Resistors, Capacitors, Inductors, Diodes, Transistors, Relays, Connectors, Integrated Circuits: How a silicon wafer becomes an IC, Printed Circuit Board Characteristics, PCB Materials, Fillers, resins, laminates, base material characteristics, Dielectric, conductors, Engineering References	L1 and L2	5

ECE2421	ARTIFICIAL NEURAL NETWORK	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	2	0	0	2
Pre-requisites/Exposure	Basic Knowledge of Brain functioning				
Co-requisites	Nil				

Catalog Description

The course provides introduction to neural network and a deep insight into the basics of brain & its functioning basics of various neural models & neural schema used for learning. With this course students would be able to know the basics of each introductory feature of human brain and its features which would prove to be very helpful throughout their degree and would prove helpful in understanding other related subjects also.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of learning of brain problem solving techniques and develop proficiency in creating neural structures using the MATLAB.
2. Provide an overview of various control statements, data structures, packages related to image addition, graphics, different types of neural models.

Course Outcome

On completion of this course, the students will be able to

CO 1: Define Artificial Neural Network & its similarity to biological neural network and explain its application in our day to day life.

CO 2: Analyze ANN learning, Error correction learning, Hebbian learning, Competitive learning and Boltzman Learning.

CO 3: Implement simple perceptron, Perceptron Learning rule, modified perceptron learning rule, feed forward neural network & feedback Neural Network.

CO 4: Explain self-organizing Map, Hopfield network, Adaptive resonance theory and its various learning rules.

CO 5: Analyze memory-based learning, Associative learning, Bi-directional learning and Auto associative learning.

Modules	Blooms level*	Number of hours
Module-I Artificial Neural Networks (ANN) and biological neural networks, supervised and unsupervised learning rules, neural network applications	L1, L2 and L3	6
Module-II Unsupervised learning:- Hebbian learning and competitive learning. Supervised learning:- Back propagation algorithms, Learning rule:- Delta learning rule, Widrow-Hoff learning rule, Winner-Take-All learning rule	L1, L2 and L3	6
Module-III Feed forward neural network, feed backward neural network, Perceptron and its learning law, single-layer perceptron, multi-layer perceptron.	L2, L3 and L4	6
Module-IV Self organizing networks: Kohonen algorithm, Hopfield Networks: Hopfield	L2, L3 and L4	6

ECE2422	ARTIFICIAL NEURAL NETWORK LAB	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	0	0	2	1
Pre-requisites/Exposure	Basics of MATLAB				
Co-requisites	NIL				

Catalog Description

In this Lab course first student should learn about advanced level of software used for easy calculation and toolbox used for software like MATLAB.

Course Objectives

The objective of this course is to

- Make the students apply knowledge of various neural models required for solving complex problems.
- Provide a demonstration of different types of image processing techniques through MATLAB toolbox.

Course Outcomes

On completion of this course, the students will be able to

CO1: Acquiring knowledge of Basics of High-end calculation software and need in Computer Science & engineering

CO2: Demonstrate the All preliminary functions in MATLAB

CO3: Apply the knowledge of all the basics function and toolbox knowledge of MATLAB

CO4: Demonstrate the Neural Network model in MATLAB

CO5: Demonstrate usage of applications involving with Image processing & Its Toolbox used by MATLAB

Modules/Topics Covered**	Blooms level*	Number of hours
Introduction of MATLAB (a) Basic Variable declaration & its operation (b) Function use & its application	L3, L5	4
Sample Programs in MATLAB (a) Basic use of Matrix and Graph Plotting (b) Different type of graph plotting with use of different -2 type of data	L3, L5	6
Sample Programs using MATLAB functions (a) Create a basic program MATLAB using functions (b) Use of basic function Image processing (c) Practice on Basic function of Image processing tool box.	L3, L5	6
Sample programs of ANN functions (a) Practice on ANN toolbox function in MATLAB	L3, L5	6

(b) Write a program for training a small network in MATLAB		
Sample Programs using ANN tool box & Image processing toolbox (a) Demonstrate the use of ANN tool box & Image processing toolbox and write a program after combining it.	L3, L5	2

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

ECE2419	JAVA PROGRAMMING	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	2	0	0	2
Pre-requisites/Exposure	Basics of Programming				
Co-requisites	NIL				

Catalog Description

The objective is to impart programming skills used in this object-oriented language java. The course explores all the basic concepts of core java programming like object, classes, data types, features, operators, control structures, interfaces, packages, applets, awt, swings and socket programming. The students are expected to learn it enough so that they can develop the basic applications as well as web solutions like creating applets etc.

Course Objectives

The objective of this course is to

- Equip the students with the basic feature of contemporary java required in solving complex problems.
- Provide a practical knowhow and implementation of java programming concepts like classes, objects, packages, swings, socket programming.

Course Outcomes

On completion of this course, the students will be able to

- CO1: Define and explain concept of byte code and platform independence, demonstrate basic java-based application development using operators, if-else, loops and arrays.
- CO2: Distinguish between various types of inheritances, polymorphisms and other concepts and able to solve complex programming problems involving class objects, inheritances, and packages.
- CO3: Describe hierarchy of exception classes and thread life cycle along with demonstrate and design solutions for some simple and complex applications using exception and multithreading concepts.
- CO4: Explain event delegation model and describe AWT class hierarchy; Apply knowledge of event handling and AWT controls create some new dynamic graphical applications.
- CO5: Explain the architecture of applet and concept of swing package. Demonstrate applications based on java applets and swings.

Modules	Blooms level*	Number of hours
Module I: Java Basics Concepts of OOP, Features of Java, How Java is different from C++, Environmental setup, Basic syntax, Objects and classes, Basic Data Types, Variable Types, Modifier Types, Basic operators, Loop Control, Decision Making, Strings and Arrays, Methods, I/O.	L1, L2 and L3	6
Module II: Java Object Oriented Inheritance, Overriding, Polymorphism, Abstraction, Encapsulation, Interfaces, Packages, Exploring java.util package.	L2 and L3	7
Module III: Exception Handling and Threading Exception Hierarchy, Exception Methods, Catching Exceptions, Multiple catch Clauses, Uncaught Exceptions Java's Built-in Exception. Creating, Implementing and Extending thread, thread priorities,	L2, L3 and L5	8

ECE2420	JAVA PROGRAMMING LAB	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	0	0	2	1
Pre-requisites/Exposure	Basics of Programming				
Co-requisites	NIL				

Catalog Description

In this Lab course the basic features of contemporary java are implemented and demonstrated. Problems or programs will be related to concepts of classes, objects, threads, packages, exception handling, applets, AWT control, swings and socket programming. Concepts covered would enable them to create basic and complex console and graphical based applications for desktop and Internet

Course Objectives

The objective of this course is to

- Equip the students to apply knowledge of various basic java features required in solving basic and complex problems.
- Provide a demonstration of basic java programming concepts like classes, objects, threads, packages, exception handling, applets, AWT control, swings and socket programming

Course Outcomes

On completion of this course, the students will be able to

CO1: Apply the concepts learned of operators, if-else, loops and arrays to javabased application development.

CO2: Demonstrate the use of various types of inheritances, polymorphisms, class objects, inheritances, packages and other concepts to basic and complex java programming problems.

CO3: Apply the knowledge of exception handling and multithreading concepts for some simple and complex applications.

CO4: Apply knowledge of event handling and AWT controls to create some new dynamic graphical applications.

CO5: Demonstrate graphical applications based on java applets, swings and event handling.

Modules/Topics Covered**	Blooms level*	Number of hours
1. Sample Programs using Objects and classes, Variable Types, Modifier Types, operators, Loops Decision Making, Strings and Arrays, (a) WAP to display "Hello, it's a first program in java". (b) WAP to find sum of two integers taken as input from user at runtime. (c) WAP to find sum of two float numbers taken as command line arguments (d) WAP to find changed case of entered character. (e) WAP to find maximum of 3 integer numbers taken as input from user at runtime. (f) WAP in java to find out the greatest out of ten numbers stored using arrays. (g) WAP to create class with "name" as String and "age" as integer data members. The class should have two methods to take input from user and display the data.	L3, L5	6

(h) WAP to find factorial of a number using class and object.		
<p>2. Sample Programs using Inheritance, Overriding, Polymorphism, Interfaces, Packages</p> <p>a. WAP in java to illustrate the concept of interfaces.</p> <p>b. WAP to create a package as MyPack having a class with three methods: max, fact and show. Use it in other folder with setting classpath and without setting class path.</p> <p>c. Write a program in java to showcase uses of super keyword</p>	L3, L5	4
<p>1. Sample Programs using exception handling and threads</p> <p>a) Write a program to demonstrate the use of nesting of try-catch block</p> <p>b) WAP in java to illustrate the concept of using multiple catch clauses to handle different types of exceptions.</p> <p>c) WAP in java to create a user defined Exception and throw it explicitly.</p> <p>d) Demonstrate thread using Thread class and Runnable interface</p> <p>e) Demonstrate various thread methods using a program</p>	L3, L5	6
<p>(a) Sample Programs using event handling and AWT controls</p> <p>(b) Write a program to display “hello” in different color where user clicks left mouse button and “world” where right mouse button is clicked. Use black background.</p> <p>(c) WAP in java to create a Frame and handle window-closing event implementing the WindowListener interface.</p> <p>(d) WAP to create an Applet having various different buttons, recognizing them using action command string method and handling click event generated by them.</p> <p>(e) WAP to create a frame and illustrate the concept of using an adapter class in place of interfaces for handling various mouse events generated over frame window.</p> <p>(f) WAP in java to create a frame with AWT controls (like label, push buttons, Checkbox, Checkbox Group) and handle various events generated by them.</p> <p>(g) WAP in java to create a frame with various AWT controls (like choice, list, TextField and Buttons) and handle the events thrown by them.</p>	L3, L5	6
<p>5. Sample Programs using applets, swings and stream socket</p> <p>a) . Write an applet which will display “HAPPY” and “DEEPAVALI” as: The word “HAPPY” will roll from top to bottom and “DEEPAVLI” from bottom to “top” . Both will run at the same speed and stop simultaneously at the center of the applet.</p> <p>b) Write an applet to display last 32 shades of red, green and blue in equal sized square grid accompanied by appropriate labels like” Last 32 shades of Red/Green/Blue color”. Make use of BorderFactory to apply border for each individual shade.</p> <p>c) Create an applet with one single button with caption “Click”. On clicking the button will open a new Frame with title “Factorial”. The frame will have two three controls :TextField, Label and button. On clicking button calculate the factorial entered in TextField control.</p> <p>d) Create Java programs to demonstrate day time client and server</p> <p>e) Create java programs to create echo client and server</p>	L3, L5	2

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

** Sample Programs provided are not limited to these only, can include others as desired.

ECE2415	DATABASE MANAGEMENT SYSTEMS	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	2	0	0	2
Pre-requisites/Exposure	Computer Fundamentals and Mathematics Set Theory				
Co-requisites	Nil				

Catalog Description

This course is design to get students familiar with the fundamentals & basic concepts in Data Base Management Systems and their use. This course discusses architecture of Database Systems with concept of different types of available database model, concurrency techniques and new applications of the DBMS. The techniques for database design, normalization, database recovery and protection will enable students to work easily and efficiently on real databases.

Course Objectives

The objective of this course is

- To make students familiar with the fundamental and necessary concepts of DBMS.
- Provide an overview of normalization, concurrency techniques and database recovery with examples.

Course Outcomes

On completion of this course, the students will be able to

CO1. Differentiate between traditional data processing system and database management system and understand characteristics and applications of DBMS in real world.

CO2. Explain and use different data models such as Entity Relationship Model, Network, and Relational Model etc.

CO3. Solve queries using relational algebra, relational calculus and SQL.

CO4. Illustrate normalization concepts and apply them in real database applications.

CO5. Explain database concurrency techniques and recovery mechanisms.

Modules	Blooms level*	Number of hours
Module I: Introduction Concept and goals of DBMS, Database Languages, Database Users, Database Abstraction. Basic Concepts of ER Model, Relationship sets, Keys, Mapping, Design of ER Model.	L1, L2 and L6	9
Module II: Hierarchical model & Network Model Concepts, Data definition, Data manipulation and implementation. Network Data Model, DBTG Set Constructs, and Implementation	L1 and L2	9
Module III: Relational Model Relational database, Relational Algebra, Relational & Tuple Calculus.	L1 and L3	10
Module IV: Relational Database Design and Query Language SQL, QUEL, QBE, Normalization using Functional Dependency, Multivalued dependency and Join dependency.	L2, L3 and L4	10

ECE2416	DATABASE MANAGEMENT SYSTEMS LAB	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	0	0	2	1
Pre-requisites/Exposure	Basic Concepts of DBMS				
Co-requisites	Relational Algebra and Relational Calculus				

Catalog Description

This course is designed to get students familiar with the basic concepts of SQL including DDL, DML and DCL statements. The course also explains the basic concepts of PL/SQL. Students will learn practical on Oracle software and hence can work on any RDBMS software in future.

Course Objectives

The objective of this course is

- To make students familiar with the concepts and working of SQL.
- Provide an overview of PL/SQL.

Course Outcomes

On completion of this course, the students will be able to

CO1. Illustrate SQL basic concepts like languages DDL, DML etc., data types and working.

CO2. Explain concepts of database creation, manipulation of data and data retrieval and apply them in real database applications.

CO3. Design and implement various data constraints on a database for a given problem.

CO4. Solve queries using concepts like joins, subqueries, aggregate functions, triggers etc.

CO5. Prepare PL/SQL blocks.

Modules	Blooms level*	Number of hours
Lab Session 1 Introduction of RDBMS, Oracle, SQL and data types.	L1 and L2	2
Lab Session 2 Basic concept of database creation and manipulation of data.	L1 and L3	2
Lab Session 3 Working with SELECT query.	L1 and L3	2
Lab Session 4 To apply data constraints on a table-Primary Key, Not Null, Unique.	L1 and L3	2
Lab Session 5 Working with Foreign Key and Check Constraint.	L1 and L3	2
Lab Session 6 To implement the basic concept of Aggregate and Grouping Functions.	L1 and L3	2
Lab Session 7 To apply various set operators on data.	L1 and L3	2
Lab Session 8 Concept of Nested queries in database and its application in database.	L1 and L3	2
Lab Session 9	L1 and	2

Implementation different types of JOINS in database.	L3	
Lab Session 10 Basic concepts of Triggers and Procedures and related queries.	L1 and L3	2
Lab Session 11 Introduction to PL/SQL and basic syntax.	L1 and L3	2
Lab Session 12 Write programs in PL/SQL Using Control Structures.	L3	2

ECE2501	DIGITAL CIRCUITS & SYSTEMS	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	3	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

This course explores the theory and operation of the basic building blocks of digital electronics which includes combinational and sequential circuits. This course also explains the logic families and data convertors. The concepts learnt in the studies of sequential circuits will be applied in the design and analysis of Melay and Moore machines.

Course Objectives

The objective of this course is to

- Provide the basic knowledge of digital logic levels and application of combinational and sequential circuits.
- Equip with the understanding of logic family and data convertors.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain the various logic gates, Boolean algebra and solve the k-map & tabulation method to simplify the logical function.

CO2: Explain the adder & subtractor; Apply and analyze multiplexer, decoder & encoder to design Boolean function.

CO3: Describe flip flops, shift registers & Design counters and synchronous sequential circuits.

CO4: Explain & compare different logic families and explain data convertors.

Modules	Blooms level*	Number of hours
MODULE 1: BOOLEAN FUNCTIONS Analog & digital signals, AND, OR, NOT, NAND, NOR , XOR & XNOR gates, Boolean algebra, DeMorgan's theorems, Implementation of logical function using only NAND/NOR gates, 1's complement and 2's complement, BCD to Gray and Gray to BCD code conversion, Standard representation of logical functions (SOP and POS forms), K-map representation and simplification of logical function up to five variables, don't care conditions, XOR & XNOR simplifications of K-maps, Tabulation method.	L1,L2 and L3	6
MODULE 2: COMBINATIONAL CIRCUITS Adders, Subtractors, Implementation of full adder using half adder, full subtractor using half subtractor, Multiplexer, de-multiplexer, decoder & encoder, code converters, 1 & 2 bit comparators, BCD to seven segment decoder/encoder, Implementation of logic functions using multiplexer/de-multiplexer and decoder, Implementation of 16×1 MUX using 4×1 MUX, 4×16 decoder using 3×8 decoder etc., logic implementations using PROM, PLA & PAL.	L1, L2,L3 and L4	6
MODULE 3:	L2,L3, L4	7

ECE2502	DIGITAL COMMUNICATION	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	2	0	0	2
Pre-requisites/Exposure	Signal and System				
Co-requisites					

Catalog Description

The purpose of this course is to introduce students to the basic principles of the design and analysis of digital communication systems. It will provide a thorough study of digital modulation techniques and receiver design.

Course Objectives

The objective of this course is to

- Provide a thorough introduction to digital communications
- Provide in depth study of various analog and digital modulation techniques.
- Introduce students to basics of multiplexing in digital signals.

Course Outcomes

On completion of this course, the students will be able to

CO1. Define and distinguish analog and digital communication systems.

CO2. Compare different analog and digital modulation techniques and their receiver design.

CO3. Explain the concepts of digital multiplexing.

Modules	Blooms level*	Number of hours
MODULE I: DIGITAL COMMUNICATION SYSTEM BASICS Basic building blocks of Digital communications, analog versus digital communication, Advantages disadvantages of digital communications.	L1 and L2	4
MODULE II: DIGITAL BASEBAND TRANSMISSION Pulse code modulation, Signal to quantization ratio, non-uniform quantization companding, BW calculations.	L1, L2, and L4	8
MODULE III: TRANSMISSION OF ANALOG SAMPLES Delta Modulation, Adaptive delta-modulation, DPCM, ADCM, ADPCM, Matched Filter Receiver, Derivation of Its Impulse Response and Peak Pulse Signal to Noise Ratio. Correlator receiver, Decision Threshold and Error Probability For, Unipolar (ON-OFF) Signaling, ISI, Nyquist Criterion For Zero ISI & Raised Cosine Spectrum	L1, L2 and L4	9
MODULE IV: DIGITAL MODULATION TECHNIQUES Gram-Schmidt Orthogonalization Procedure, Types of Digital Modulation, Wave forms for Amplitude, Frequency and Phase Shift Keying, Method of Generation and Detection of Coherent & Non-Coherent Binary ASK, FSK & PSK Differential Phase Shift Keying, Quadrature Modulation Techniques QPSK, Probability of Error and Comparison of Various Digital Modulation Techniques.	L1, L2 and L4	6

MODULE V: DIGITAL MULTIPLEXING Fundamentals of Time Division Multiplexing, Electronic Commutator, Bit, Byte Interleaving T1 Carrier System, Synchronization and Signaling of T1, TDM, PCM Hierarchy, T1 to T4 PCM TDM System (DS1 to DS4 Signals)	L1 and L2	4

ECE2503	CONTROL SYSTEM	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	2	1	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

This course provides the students the core knowledge of control systems. This introduces the methods of mathematical modeling of control systems with time & frequency domain analysis along with concepts of stability.

Course Objectives

The objective of this course is to

- Equip the students with concepts of Control System.
- Provide the students in depth knowledge of time domain, frequency domain and concepts of stability.

Course Outcomes

On completion of this course, the students will be able to

CO1. Understand and compare between types of control system and find mathematical model of control system.

CO2. Understand, explain and solve problems on time domain analysis.

CO3. Understand, explain and solve problems on frequency domain analysis.

CO4: Analysis of control system stability

Modules	Blooms level*	Number of hours
Module 1: Input / Output Relationship Introduction of open loop and closed loop control systems, mathematical modeling and representation of physical systems (Electrical Mechanical and Thermal), derivation of transfer function for different types of systems, block diagram & signal flow graph, Reduction Technique, Mason's Gain Formula.	L1, L2, L3 and L4	12
Module 2: Time – Domain Analysis Time domain performance criteria, transient response of first, second & higher order systems, steady state errors and static error constants in unity feedback control systems, error criteria, generalized error constants, performance indices, response with P, PI and PID Controllers.	L1, L2 and L3	12
Module 3: Frequency Domain Analysis Polar and inverse polar plots, frequency domain specifications, Logarithmic plots (Bode Plots), gain and phase margins, relative stability, Correlation with time domain, constant close loop frequency responses, from open loop response, Nyquist Plot.	L1, L2 and L3	12
Module 4: Concept of Stability Asymptotic stability and conditional stability, Routh – Hurwitz criterion, Root	L1, L2, L3 and L4	12

Locus plots and their applications. Compensation Techniques: Concept of compensation, Lag, Lead and Lag-Lead networks, design of closed loop systems using compensation techniques. P, PI, PID controllers.

ECE2509	MICROPROCESSOR SYSTEMS	L	T	P	C
Version: 2019.1	Date of Approval: May 21, 2019	3	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

This course deals with the systematic study of the Architecture and programming issues of microprocessor family and its applications. The aim of this course is

- To introduce students with the architecture and operation of typical microprocessors.
- To familiarize the students with the programming and interfacing of microprocessors
- To provide the basic knowledge of the microprocessor needed to develop the embedded system based products as a solution to real time problems.

Course Outcomes

On completion of this course, the students will be able to

CO1. Explain the architecture, pin configuration, addressing modes, control words, timing diagram, instruction set of 8085 microprocessors and Interfacing ICs

CO2. Explain the architecture, pin configuration, addressing modes, control words of 8086, 8087 and other 16 bit microprocessors and Interfacing ICs

CO3. Develop the assembly language program using 8085 using stacks & subroutines.

CO4. Design circuitry to the Microprocessor I/O ports in order to interface the processor to external devices so as to provide solutions real-world control problems

Modules	Blooms level*	Number of hours
Module I: Introduction to Microcomputer Systems Introduction to Microprocessors and microcomputers, Study of 8 bit Microprocessor, 8085 pin configuration, Internal Architecture and operations, interrupts, Stacks and subroutines, various data transfer schemes.	L1, L2, L3, L4	6
Module II: ALP and timing diagrams Introduction to 8085 instruction set, advance 8085 programming, Addressing modes, Counters and time Delays, Instruction cycle, machine cycle, T-states, timing diagram for 8085 instruction.	L4, L5, L6	8
Module III: Memory System Design & I/O Interfacing Memory interfacing with 8085. Interfacing with input/output devices (memory mapped, peripheral I/O), Cache memory system. Study of following peripheral devices 8255, 8253, 8257, 8259, 8251.	L3, L4, L5, L6	9
Module IV: Architecture of 16-Bit Microprocessor Difference between 8085 and 8086, Block diagram and architecture of 8086 family, pin configuration of 8086, minimum mode & maximum mode Operation, Bus Interface Unit, Register Organization, Instruction Pointer, Stack & Stack pointer, merits of memory segmentation, Execution Unit, Register Organization.	L2, L3, L4	7
Module V: Pentium Processors	L1, L2	6

ECE2504	DIGITAL CIRCUITS AND SYSTEMS LAB	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	0	0	2	1
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

In this Lab course the combination and sequential circuits are designed and their functionality is verified using truth table. Concepts covered would enable them to create complex circuits related to digital design. The objective of this course is to explore and implement the various features of digital logic using basic logic gates.

Course Objectives

The objective of this course is to

- Provide a basic knowledge of digital logic levels and application of knowledge to understand digital electronics circuits.
- Equip with understanding of different combinational and sequential circuits.

Course Outcomes

On completion of this course, the students will be able to

CO 1: Demonstrate the basic concept of logic gates;

CO 2: Illustrate the adder and subtractors.

CO 3: Demonstrate the code convertors.

CO 4: Demonstrate the combinational and sequential circuits.

Modules/Topics Covered**	Blooms level*	Number of hours
1. To verify the truth tables of NOT, OR, AND, NOR, NAND, XOR, XNOR gates.	L3, L5	2
2. To obtain half adder, full adder using gates and verify their truth tables.	L3, L5	2
3. To obtain half subtractor, full subtractor using gates and verify their truth tables.	L3, L5	2
4. To implement control circuit using multiplexer.	L3, L5	2
5. To convert BCD code into excess 3 code and verify the truth table.	L3, L5	2
6. To verify the truth tables of RS, D, JK and T flip- flops.	L3, L5	2
7. To implement and verify 3-bit bi-directional shift register.	L3, L5	2
8. To design and study asynchronous/ripple counter.	L3, L5	2
9. To design and study synchronous counter.	L3, L5	2
10. To design and study a sequence detector.	L3, L5	2

ECE2505	MICROPROCESSOR SYSTEMS LAB	L	T	P	C
Version: 2019.1	Date of Approval: May 21, 2019	0	0	2	1
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

This course focuses on the systematic study of the Architecture and programming of microprocessor family and its applications. The objectives of this course are:

- To introduce students with the architecture operation and instruction set of 8085 and 8086 microprocessors.
- To familiarize the students with the programming and interfacing of 8085 and 8086 microprocessors.
- To provide the basic knowledge of the microprocessor needed to develop the embedded system based products as a solution to real time problems.

Course Outcomes

On completion of this course, the students will be able to

CO1. Set up programming strategies and select proper mnemonics and run their program on the training boards

CO2. Develop assembly language programs for various problems keeping in mind technical issues and evaluate possible causes of discrepancy in practical experimental observations in comparison.

CO3. Understand the concepts related to I/O and memory interfacing and design interfacing circuits with 8085 by making use of different peripheral devices.

Modules	Blooms level*	Number of hours
Lab Session 1: ALP using 8085: <ol style="list-style-type: none"> 1. Write at least three different programs for addition of two 8 bit numbers assuming carry may or may not be generated. 2. Write at least three different programs for subtraction of two 8 bit numbers assuming borrow may or may not be generated. 3. Write two different programs for 16 bit addition, one using instruction DAD and another without using instruction DAD. 4. Write assembly language program for 8 bit multiplication and division. 	L2, L3, L4	4
Lab Session II: To study, understand, interface and two peripheral devices with 8085.	L4, L5, L6	2
Lab session III: Any three programs using 8085 based on block of data.	L4	1
Lab session IV: ALP using 8086: <ol style="list-style-type: none"> 1. Write an ALP to add list of 10 given numbers. 2. Write an ALP to sum the numbers from 1-100. 3. Write an ALP to count negative numbers from a given list of 10 numbers. 4. Write an ALP to check number of vowels in a given string. 	L2, L3, L4	5

ECE2506	CONTROL SYSTEM LAB	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	0	0	2	1
Pre-requisites/Exposure	MATLAB Basics				
Co-requisites	Nil				

Catalog Description

Control System has become an important field for research and development in science and engineering. This course provides the students the core knowledge of control systems. This course introduces the Practical of control system with time & frequency domain analysis along with stability of control systems on kits and MATLAB.

Course Objectives

The objective of this course is to

Perform experiments of control system.

Time & frequency domain analysis along with stability of control systems on kits and MATLAB

Course Outcomes

On completion of this course, the students will be able to

CO1. Perform and analyse experiments on time domain of control system.

CO2. Perform and analyse experiments on frequency domain of control system.

CO3. Perform and analyse experiments for stability of control system.

Modules	Blooms level*	Number of hours
Lab Session 1 1. Study and draw a) Step response of open Loop system (linear 1 st order, 2 nd order) b) Step response of closed loop systems (1 st order) 2. Study and draw temperature control system the open loop response and closed loop response with different values of gains	L2, L3 and L5	3
Lab Session 2 1. Study of operations and characteristics of a stepper motor 2. To Study a D.C. motor speed control system.	L2, L3 and L5	3
Lab Session 3 1. Performance evaluation and design of PID controller. 2. To design a suitable cascade compensator for the given system and verify the resulting improvement.	L2, L3 and L5	3
Lab Session 4 1. Note: three experiments in MATLAB have to be performed in the slot of	L2, L3 and L5	3

ECE2535	SUMMER INTERNSHIP EVALUATION I	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	0	0	0	3
Pre-requisites/Exposure	Basic Concepts of Programming Language and Electronics				
Co-requisites	Nil				

Catalog Description

There are certain phases of every Intern's professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship program can best be described as an attempt to institutionalize efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal classroom situations. These attributes are intellectual ability, professional judgment and decision-making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility etc. In order to achieve these objectives, each student will maintain a file (**Internship File**). The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development. The report will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

Course Objectives

The objective of this course is to

- Equip the students with concepts of new technologies and practical exposure
- Provide an overview of presentation and preparation of report.

Course Outcomes

On completion of this course, the students will be able to

CO1: Study the literature and identify the problem statement

CO2: Work on a real world problem and solve it using latest technology

CO3: Prepare a detailed report of the project

CO4: Prepare a brief presentation of their project

CO5: Present and explain the project for evaluation

Modes of Evaluation: Quiz/Assignment/ Seminar/Written Examination

Examination Scheme:

ECE2507	OPERATING SYSTEMS	L	T	P	C
Version: 2019.1	Date of Approval: May 21, 2019	3	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

In this course Operating System, its generic types, characteristics and functions are discussed in detail. Concepts covered would enable students to identify various categories of operating systems, with details about concepts of process management and scheduling. Contents will be helpful in identifying deadlocks in the system and designated approaches used to prevent, handle or recover from them. Further it covers the concepts of managing memory, devices and mechanisms for providing security to system and files using operating system.

Course Objectives

The objective of this course is to

- Equip the students with the knowledge about categories of operating systems and their functions.
- Provide detailed knowhow about functions of operating system like process, memory and device management along with file system security and protection.

Course Outcomes

On completion of this course, the students will be able to

- CO1: Define and explain operating systems and their evolution, also differentiate among its various types.
- CO2: Explain concepts of process and inter-process communication and synchronization. Identify solutions to detect, prevent and handle deadlocks occurring in the operating systems. Solve synchronization and CPU scheduling problems related to processes.
- CO3: Define and explain concepts of memory management like fragmentation, paging and segmentation. Solve problems related to memory management using page replacement algorithms.
- CO4: Describe the concepts of device management and list various disk allocation methods. Determine solutions for disk scheduling problems using available disk scheduling algorithms.
- CO5: State the concept of file and file system security, also distinguish among various file allocation methods.

Modules	Blooms level*	Number of hours
MODULE 1: INTRODUCTION TO OPERATING SYSTEM Operating system and function, Evolution of operating system, Batch, Interactive, multiprogramming, Time Sharing and Real Time System, multiprocessor system, Distributed system, System protection. Operating System structure, Operating System Services, System Program and calls	L1, L2 and L4	6
MODULE 2: PROCESS MANAGEMENT Process concept, State model, process scheduling, job and process synchronization, structure of process management, Threads Interprocess Communication and Synchronization: Principle of Concurrency,	L1, L2 and L3	12

ECE2513	COMPUTER NETWORKS	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	3	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

The course provides a unified and fundamental view of the broad field of computer networks. The objective is to acquaint the students with the basics of networking. The world of computer networking is introduced in a top down Approach. A structured approach to explain how networks work from the inside out is being covered. In-depth application coverage includes email, the domain name system; the World Wide Web (both client- and server-side); and multimedia (including voice over IP).

Course Objectives

The objective of this course is to

- To provide an overview of data transmission and computer networks.
- To familiarize with the basic taxonomy and terminology of computer networking area.
- To equip with the knowledge of different protocols and different layers of computer networks.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Explain different concepts of data transmission and apply the knowledge of encoding techniques.
- CO2. Illustrate the concepts and applications of different data communication methods.
- CO3. Explain different concepts of computer networks and its layers.
- CO4: Compare and contrast different layers and protocols used at different layers.

Modules	Blooms level*	Number of hours
Module 1: Data Transmission Analog and Digital transmission, transmission media, line configuration, data communications codes, error detection and correlation methods. Data encoding methods: analog to digital, digital to analog etc.	L1,L2 and L3	6
Module 2: Data Communication Methods Data communication interface, line control unit, UART, USRT, Serial interface, terminal types. SDLC, HDLC, Addressing Switched networks, circuit switching, packet switching, broadcast networks. IEEE 802 LAN Standards, framing, error control, flow control.	L1, L2, L3	7
Module 3: Introduction to Computer Networking Internet, Circuit switching vs Packet switching, Network Access and Physical Media, ISPs, Delay and Loss in Packet Switched Networks, Five Layer concept and their PDUs	L1, L2, L3	5
Module 4:	L2, L3	7

Application layer and Transport layer Application Layer Protocols: Web and HTTP, FTP, SMTP, DNS, brief overview of socket Programming with TCP and UDP Multiplexing and Demultiplexing, UDP, Reliable Data Transfer, UDP segment structure, Reliable Data Transfer, TCP, TCP segment Structure, Basics of Congestion Control	and L4	
Module 5: Network Layer Datagram and virtual circuit, link state routing, distance vector routing, Hierarchical Routing, IP, IPv4 Addressing, IPv6	L2, L3 and L4	4
Module VI: Link Layer and Physical Layer Services Provided, Error Detection and Correction, Multiple Access Protocols, TDM, FDM and CDMA, ALOHA, CSMA, LANs, Ethernet, Hubs, Bridges and Switches, Introduction to PPP The physical layer: Theoretical basis for data communication, transmission media, wireless transmission, telecom infrastructure, PSTN, communication satellites, mobile telephone system	L2, L3 and L4	7

ECE2508	COMPUTER ARCHITECTURE	L	T	P	C
Version: 2019.1	Date of Approval: May 21, 2019	3	0	0	3
Pre-requisites/Exposure	Logic Gates				
Co-requisites	nil				

Catalog Description

Computer architecture is concerned with the structure and behavior of the various functional modules of the computer and how they interact to provide the processing needs of the user. It includes basic register transfer language and computer organization and design. Complete insight on the working of CPU, Memory and I/O communication will be provided. Pipelining and related topics will also be discussed.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of computer architectures and their modules.
2. Provide an overview of various algorithms used and hardware implementation computer.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Explain about Register transfer language and various micro operations of arithmetic logic unit.
CO2. Explain about the organization of computer modules and their details.
CO3. Explain in details of central processing unit like general purpose register, accumulator etc. and computer arithmetic.
CO4. Explain memory organization of computer and their interconnections. Details of direct memory access.
CO5. Explain parallel processing and pipeline techniques.

Modules	Blooms level*	Number of hours
Module I: Register Transfer Language Register Transfer, Bus and Memory Transfers, Arithmetic Micro-operations, Logic Micro-operations, Shift Micro-operations, Arithmetic Logic shift Unit.	L1, L2 and L3	10
Module II: Basic Computer Organizations and Design Instruction Codes, Computer Registers, Computer Instructions, Timing and Control, Instruction Cycle, Memory-Reference Instructions, Input-Output and Interrupt, Design of Accumulator Logic. Hardwired and Microprogrammed control: Control Memory, Address Sequencing, Design of Control Unit	L1,L2	9
Module III: Central Processing Unit Introduction, General Register Organization, Stack Organization, Instruction representation, Instruction Formats, Instruction type, Addressing Modes, Data Transfer and Manipulation, Program Control, Reduced Instruction Set Computer RISC and CISC Computer Arithmetic: Introduction, Addition and Subtraction Algorithm, Multiplication Algorithms, Booth Multiplication, Division Algorithms, Floating-Point Arithmetic Operations	L1,L2, L3	10

Module IV: Memory and Intersystem Communication and Input output organisation Memory: Memory types and organization Memory Hierarchy, Main Memory, Auxiliary Memory, Associative Memory, Cache Memory with mapping techniques, Virtual Memory, Memory Management Hardware Intrasystem communication and I/O: Peripheral Devices, Input-Output Controller and I/O driver, IDE for hard disk, I/O port and Bus concept, Bus cycle, Synchronous and asynchronous transfer, Modes of Transfer, DMA, DMA Transfer, DMA Controller, I/O Processor, CPU-IOP Communication	L1, L2, L3.	10
Module V: Pipelining, Vector Processing and Multiprocessors Parallel Processing, Pipelining, Arithmetic Pipeline, Instruction Pipeline, RISC Pipeline Multiprocessors: Characteristics of Multiprocessors	L1 and L2	9

ECE2601	VLSI DESIGN	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	3	0	0	0
Pre-requisites/Exposure	Basics of semiconductor and analog electronics				
Co-requisites	Nil				

Catalog Description

This course deals with basic theories and techniques of digital VLSI design in CMOS technology. It covers the fundamental concepts and structures of designing digital VLSI systems which include CMOS devices and circuits, standard CMOS fabrication processes, CMOS design rules, static and dynamic logic structures, CMOS chip layout, simulation and testing, low power techniques, design tools and methodologies and Stick Diagrams.

Course Objectives

The objective of this course is to

- Provide a deep understanding of the concepts, techniques and design of complex digital VLSI circuits.
- Apply mathematical methods and circuit analysis models to analyse CMOS digital circuits, and their logic components.

Course Outcomes

On completion of this course, the students will be able to

CO1.Explain the characteristics of Basic VLSI components.

CO2. Apply the knowledge of various CMOS inverters to compare their performance.

CO3. To design and realize basic combinational and sequential functions using CMOS logic.

CO4. Design circuit Layout and Stick diagrams of CMOS logics.

Modules	Blooms level*	Number of hours
Module I: Devices and the wire Dynamic and transient behavior of Diode, Diffusion capacitance, SPICE Diode model, MOSFET basic, depletion and enhancement device. MOSFET static behavior, Threshold voltage and its dependence on V_{SB} MOSFET Operation in resistive and saturation region, channel length modulation, Velocity saturation and its impact on sub micron devices, sub threshold conduction, Model for manual analysis, Equivalent resistance for MOSFET in (velocity) saturated region, comparison of equations for PMOS and NMOS. Dynamic behavior, Channel capacitance in different regions of operation, junction capacitance, Level 1 SPICE models for MOS transistors. The Wire, Interconnect parameters: resistance, capacitance and Inductance, Lumped RC model, Elmore Delay.	L1, L2	8
Module II: CMOS Inverter VTC of an ideal inverter, Switching Model of the CMOS inverter: NMOS /PMOS discharge and charge, VTC of CMOS inverter : PMOS and NMOS operation in various regions including velocity saturation, Switching threshold, $(W/L)_p/(W/L)_n$ ratio for setting desired V_M with and without velocity saturation, Noise Margins, buffer.	L3, L4	8

ECE2602	DIGITAL SIGNAL PROCESSING	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	2	1	0	3
Pre-requisites/Exposure	Hands on knowledge of MATLAB Programming				
Co-requisites	Basic signals & Systems				

Catalog Description

This course deals in Digital signal processing with significant skills in advance methods for modification, analysis, classification & sampling of signals. It provides the broad knowledge of design, and realization of digital signal processing systems. The problems based on transformation of domains and filter design will be focused on.

Course Objectives

The objective of this course is to

- Equip the students with concepts of signals and systems.
- Provide in-depth knowledge of various transformations and filtering concepts.

Course Outcomes

On completion of this course, the students will be able to

CO1: Represent, analyze & categorize discrete-time signals and systems in time domain.

CO2: Apply the transformations to solve the problems related to computational complexity.

CO3: Explain the technique for conversion of real life signals to processing ready signals.

CO4: Design a digital filter with desired response and specifications.

Modules	Blooms level*	Number of hours
Module 1: Discrete Time Signals And Systems In Time Domain Classification of signal, signal processing operations, classification of systems, discrete time systems, examples of types of signal, sampling process, time domain characterization of LTI discrete- time systems, state space representation of LTI discrete time systems.	L1,L2 and L4	10
Module 2: Discrete Time Signals In Transform Domain DTFT, properties, applications, inverse DTFT, DFT, properties, applications, inverse DFT, Z-transform, properties, applications, inverse Z-transform, frequency response, transfer function, Fast Fourier transform algorithms: DIT algorithm, DIF algorithm.	L2,L3	16
Module 3: Discrete Time Processing Of Continuous Time Signals Discrete time processing of continuous time signal sampling, analog filter design, anti-aliasing filter design	L2,L4 and L5	10
Module 4: Discrete Time Processing Of Discrete- Time Signals Digital filters: Digital filter structure: FIR filter structure, IIR filter structure Digital filter design: Impulse invariance method, bilinear transform method of IIR filter design, FIR filter design.	L2,L3 and L5	12

ECE2615	ANTENNA AND MICROWAVE ENGINEERING	L	T	P	C
Version 2022.1	Date of Approval: May 20, 2022	3	0	0	3
Pre-requisites/Exposure	Basic Electronics and Electromagnetic Theory				
Co-requisites	Nil				

Catalog Description

The basic objective of this course is to provide the core knowledge of antenna and wave propagation. The course also focuses on measurements of the antenna parameters. Microwaves are important when we are going to the high frequency regime. By studying this course students will be able to know about the microwave components and devices, microwave generators and their characteristics, microwave applications and measurement. Also, they will be familiar about the rectangular and circular waveguides, their equations and the modes existing in these waveguides.

Course Objectives

The objective of this course is to

1. Provide the basic knowledge of antenna fundamentals and Equip with the understanding various antenna types and measurements of antenna parameters .
2. Provide the fundamental knowledge of microwave frequencies, behavior of circuits at high frequencies and waveguides.
3. Provide the knowledge about microwave components and tubes.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain the antenna working principle, its parameters and use of arrays for improving them.

CO2: Describe the design equations of the practical antennas and their applications and Explain measurement methods of the antenna parameters.

CO3: Describe the microwave frequencies and behavior of circuits at high frequencies and waveguides.

CO4: Describe and analysis of rectangular and circular waveguides and Categorize various microwave components and describe them on basis of their parameters.

Modules	Blooms level*	Number of hours
MODULE I: ANTENNA Antenna Principles: Radiation from Monopole & Half Wave Dipole, power radiated by current element, radiation resistance. Directional Properties of Dipole Antenna. Antenna parameters: Radiation intensity, Radiation pattern, beam area, beam efficiency Antenna Gain, Directivity, Effective Area, Antenna Efficiency, Antenna Terminal Impedance, Antenna Temperature and Signal to Noise Ratio.	L1 and L2	9
MODULE II: PRACTICAL ANTENNAS & MEASUREMENTS Antennas Arrays: Two Element Array, Radiation Patterns in Broadside Arrays & Linear Arrays, Multiplication of patterns, Practical Antenna, their principle, geometrical equations, parameters & applications : Loop Antennas, Yagi-Uda array: Parabolic Reflectors, Horn	L1,L2 and L3	10

Catalog Description

Antennas are used to transmit electromagnetic energy and Microwaves are important when we are going to the high frequency regime. By studying this course students will be able to understand antenna design parameters and know about the microwave components and devices, microwave generators and their characteristics, microwave applications and measurement.

Course Objectives

The objective of this course is to

- Provide knowledge about Radiation phenomena and pattern and characteristics of different types of antennas.
- Provide the fundamental knowledge of microwave frequencies and components of microwave bench.
- Provide the knowledge about microwave components, tunes and oscillators.

Course Outcomes

On completion of this course, the students will be able to

CO1: Analyze the radiation mechanisms of antennas and Demonstrate knowledge of antennas in communication systems.

CO2: Describe the characteristics of microwave oscillators and Explain and study the working of the various microwave tees.

CO3: Analyse microwave frequency signal and Categorize various microwave components and study their operations.

Course Content

Experiments	Blooms level*	Number of hours
1. To study and design dipole antenna, horn antenna and yadi uda antenna in Simulation software like ANSYS HFSS. 2. To design a rectangular microstrip patch antenna in Simulation software and draw its hardware on LPKF Protomat PCB machine.	L1 L2 and L3	4
1. To measure frequency and guided wavelength of a microwave signal. 2. To measure the impedance of a given load. 3. To measure various parameters of a directional coupler.	L1 L2 and L3	3
1. To study the characteristic and functions of an isolator. 2. To study and simulate the characteristic and functions of a circulator. 3. To study and simulate the characteristic and functions of various tees.	L1 L2 and L3	3

ECE2605	VLSI DESIGN LAB	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	0	0	2	1
Pre-requisites/Exposure	Hands on knowledge of analog electronics				
Co-requisites	Basic concepts of Digital electronics				

Catalog Description

In this Lab course the designing of VLSI circuits using Mentor Graphics software are implemented and demonstrated. Concepts covered would enable them to create complex applications related to VLSI design. The objective of this course is to explore and implement the various features of VLSI design and analyze the dc and transient analysis.

Course Objectives

The objective of this course is to

Provide a deep understanding of CMOS logic using Mentor Graphics tool.

Analyze, design concepts of different combinational and sequential circuits and their simulation.

Course Outcomes

On completion of this course, the students will be able to

CO 1: Demonstrate the basic concept of MOSFET;

CO 2: Illustrate the static and switching characteristics of inverters using CMOS with varying capacitance, width and channel Length of CMOS using Mentor Graphics tool.

CO 3: Demonstrate and create models of moderately sized CMOS circuits that realize specified digital functions using Mentor graphics Tool.

CO 4: Demonstrate the layout and stick diagrams using Mentor graphics Tool.

CO 5: Demonstrate the power consumption during transient analysis.

Modules/Topics Covered**	Blooms level*	Number of hours
1. MOSFET characteristics with varying VGS for both pmos and nmos.	L3, L5	2
2. Effect on VTC of CMOS inverter with variation of W and L.	L3, L5	2
3. Transient analysis of CMOS inverter with varying capacitive load, W and L. Rise time, fall time power dissipation, propagation delay calculation of CMOS inverter with the variation of capacitive load, W and L.	L3, L5	4
4. NOR and NAND gate - Transient analysis	L3, L5	2
5. XOR/XNOR gate - Transient analysis	L3, L5	2
6. 2:1 MUX and XOR gate with P.T.L.- Transient analysis	L3, L5	2
7. D type latch and flip flop - Transient analysis	L3, L5	2
8. 3 input NAND gate implementation with DOMINO (precharge and evaluation).	L3, L5	2
9. 4 inverter chain to derive capacitive load.	L3, L5	2

ECE2609	DIGITAL SIGNAL PROCESSING LAB	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	0	0	2	1
Pre-requisites/Exposure	Basics of MATLAB				
Co-requisites					

Catalog Description

Signal processing has become an important tool for research and investigation in many areas of science and engineering. This course is designed to provide the students an understanding of the basic concepts of digital signal processing and various techniques used in it. Students will perform practical on MATLAB to demonstrate the theoretical concepts of the subject.

Course Objectives

The objective of this course is to

- Make students demonstrate the basic concepts of digital signal processing.
- Design filters and determine its coefficients.

Course Outcomes

On completion of this course, the students will be able to

CO1. Practically apply the theoretical concepts of digital signal processing.

CO2. Design analog and digital filters using different techniques.

CO3. Verify FFT algorithm in decimation in time and decimation in frequency domain.

Modules	Blooms level*	Number of hours
Lab Session 1 1. To generate unit step sequence, exponential sequence and sinusoidal sequence. 2. To determine convolution of two given sequences. 3. To compute DFT and IDFT of a given sequence. 4. To determine the circular convolution of two given sequences. 5. To determine z and inverse z transform of a given sequence	L3	4
Lab Session 2 6. To design various analog filters. 7. To design FIR filter using Hamming window. 8. To convert Analog filter into Digital Filter using bilinear transformation. 9. To plot the frequency response of an FIR system	L3 and L4	4
Lab Session 3 10. To verify 8 points FFT algorithm in decimation in time (DIT) & decimation in frequency (DIF). 11. To determine the filter coefficient using Ramez exchange algorithm. 12. To design an IIR digital filter and its parallel realization.	L3 and L4	4

ECE2637	MINOR PROJECT	L	T	P	C
Version : 2019.1	Date of Approval: May 21, 2019	0	0	4	2
Pre-requisites/Exposure	Basics of Electronics and Communication				
Co-requisites	Nil				

Catalog Description

Minor Project is a professional problem-solving activity included in the curriculum. It provides exposure to research methodology, practical skill enhancement and an opportunity to work closely with latest technology for development of solution of real-world problems. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation. This course develops attributes like intellectual ability, professional judgment and decision-making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility.

Course Objectives

The objective of this course is to

- Equip the students with concepts of new technologies and practical exposure
- Provide an overview of presentation and preparation of report

Course Outcomes

On completion of this course, the students will be able to

CO1: Study the literature and identify the problem statement

CO2: Work on a real world problem and solve it using latest technology

CO3: Prepare a brief report of the project

CO4: Present and explain the project for evaluation

Modes of Evaluation: Quiz/Assignment/ Seminar/Written Examination

Examination Scheme:

ECE2607	ADVANCED JAVA PROGRAMMING	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	2	0	0	2
Pre-requisites/Exposure	Basics of Java Programming				
Co-requisites	NIL				

Catalog Description

In this course the advanced features of contemporary java are discussed in detail. Concepts covered would enable them to handle complex programs relating to managing data and processes over the network. Discussion will be on relating to concepts of remote method invocation to working with swings architecture. Further practical implementation of database connectivity and using them in servlet and jsp based applications will be made.

Course Objectives

The objective of this course is to

- Equip the students with the advanced feature of contemporary java required in solving complex problems.
- Provide a practical knowhow and implementation of advanced java programming concepts like database programming with servlets and jsp.

Course Outcomes

On completion of this course, the students will be able to

- CO1: Define and explain concept of an Remote method invocation application, demonstrate swing based application developed using concepts of remote method invocation
- CO2: Distinguish between various java and open database connectivity drivers and able to solve complex programming problems involving database interaction.
- CO3: Describe servlet and its lifecycle, along with demonstrate and design solutions for some complex dynamic web applications using servlets.
- CO4: Explain jsp scripting and Differentiate between processing of servlets and jsp scripting pages. Apply knowledge of servlets and jsp scripting to create some new dynamic web applications.
- CO5: Explain the architecture of Model View Controller and struts. Demonstrate applications based on java beans and struts.

Modules	Blooms level*	Number of hours
MODULE 1: DISTRIBUTED COMPUTING Introduction to Java RMI, RMI services, RMI client, Running client and server, Introduction of Swing, Swing Components, Look and Feel for Swing Components, Introduction to Multimedia Programming.	L1, L2 and L3	6
MODULE 2: DATABASE CONNECTIVITY ODBC and JDBC Drivers, Connecting to Database with the java.sql Package, Using JDBC Terminology, JDBC with mysql, postgresql.	L2 and L3	7
MODULE 3: SERVLET PROGRAMMING Introduction to Servlets, Servlet Life Cycle, Servlet based Applications, Servlet and HTML.Filters, jdbc with servelets, session Management techniques in detail.	L2, L3 and L5	8

ECE2610	ADVANCED JAVA PROGRAMMING LAB	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	0	0	2	1
Pre-requisites/Exposure	Basics of Java and Advanced Java Programming				
Co-requisites	NIL				

Catalog Description

In this Lab course the advanced features of contemporary java are implemented and demonstrated. Concepts covered would enable them to create complex applications related to data management. Problems or programs will be related to concepts of remote method invocation, swings, servlets, jsp and java beans.

Course Objectives

The objective of this course is to

- Make the students apply knowledge of various advanced java features required in solving complex problems.
- Provide a demonstration of advanced java programming concepts like database programming with servlets, jsp and creating java beans.

Course Outcomes

On completion of this course, the students will be able to

- CO1: Apply the knowledge of swings architecture and remote method invocation used to provide solution to distributed computing problems
- CO2: Demonstrate the use of JDBC connectivity along with swings based architecture, thereby handling data management.
- CO3: Apply the knowledge of servlets and server programming to construct dynamic web applications using web servers.
- CO4: Demonstrate the differences between creating and deploying dynamic web applications using jsp concepts and servlets.
- CO5: Demonstrate usage of applications involving java beans and jdbc programming to handle data management.

Modules/Topics Covered**	Blooms level*	Number of hours
1. Sample Programs using swings architecture and remote method invocation (a) Write a program using swings creating tabbed panes and menu over a frame and handle their associated events (b) Write a program using swings List control containing list of cities, allowing the user to choose any one of them and display using event handing. (c) Demonstrate an application showcasing the use of remote method invocation(RMI) for designing a distributed application. (d) Create an application using concepts of RMI to depict a client server based interaction.	L3, L5	6
2. Sample Programs using JDBC and swings (a) Create an application demonstrating the use of swings, having a menu over a frame and jdbc programming to perform insert and select operations by handling menu related events. (b) Create an application using swings, having a design providing features	L3, L5	4

for iterating over a dataset performing operations like forward, backward, start and end with help of jdbc programming.		
(c) Sample Programs using servlets with jdbc, html and swings 1. Create an application using servlets to perform redirection based on validating user data entered through a web form. 2. Design an application to fetch data from database using servlets and display it using its post method. 3. Demonstrate the process of writing cookies using a servlet and display a message after writing. 4. Write a program to create a session object for the username fetched from user using a servlet, further access that session value on another servlet invoked by redirection.	L3, L5	6
5. Sample Programs using JSP with jdbc, html and swings (a) Write a program using jsp to demonstrate the features of jsp elements used to declare, define and display sum of two integers. (b) Create an application using jsp to calculate and display the greatest out of two integers using if else statements. Integer numbers should be entered using a web form. (c) Demonstrate with a jsp program mechanism to retrieve checkbox data accessed using multiple value parameters fetching approach. (d) Write a program to demonstrate the use of jsp forward action tag used with parameters and processed using another jsp page.	L3, L5	6
6. Sample Programs using jsp, java beans and swings (a) Demonstrate the use of jsp include action tag for including an html and another jsp page in initial jsp resource. (b) Write a program creating Java bean class and setting its properties using required jsp action tags. Output should also display the retrieved property values.	L3, L5	2

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

*** Sample Programs provided are not limited to these only, can include others as desired.*

ECE2617	IOT & WIRELESS SENSOR NETWORKS	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	3	0	0	3
Pre-requisites/Exposure	Circuit Theory				
Co-requisites	Nil				

Catalog Description

This course covers the fundamentals of IoT systems with emphasis on translating theoretical bases into practical network design and technologies. It covers the bigger picture of IoT systems with a focus on wireless IoT technologies, network design, system architecture, Overview of Wireless Sensor Networks and Communication Protocols.

Course Objective:

The objective of this course is to

Introduction and description of core concepts of IoT, role and scope of smart sensors for insuring convergence of Technologies and multidisciplinary engineering practices, Machine Intelligence Quotient.

Course Outcomes

On completion of this course, the students will be able to

CO1: Introduction and description of core concepts of IoT, role and scope.

CO2: Architecture and Design Principles of internet network for IoT based system applications.

CO3: Introduction to physical devices used in IoT based systems.

CO4: Recognize upcoming challenges in Sensor Networks.

CO5: To identify communication protocols employed in WSNs.

Course Contents:

Modules	Blooms level*	Number of hours
Module 1 Overview of Internet of Things IoT Conceptual Framework, IoT Architectural View, Technology Behind IoT, Sources of IoT, M2M communication, Examples of IoT. Modified OSI Model for the IoT/M2M Systems, data enrichment, data consolidation and device management at IoT/M2M Gateway, web communication protocols used by connected IoT/M2M devices, Message communication protocols (CoAP-SMS, CoAP-MQ, MQTT, XMPP) for IoT/M2M devices.	L1 and L2	8
Module-2 Architecture and Design Principles for IoT Internet connectivity, Internet-based communication, IPv4, IPv6, 6LoWPAN protocol, IP Addressing in the IoT, Application layer protocols: HTTP, HTTPS, FTP, TELNET and ports Data Collection, Storage and Computing using a Cloud Platform: Introduction, Cloud computing paradigm for data collection, storage and computing, Cloud service models, IoT Cloud- based data collection, storage and computing services using Nimbits.	L2 and L3	10
Module-3: IoT Physical Devices and Endpoints Arduino UNO: Introduction to Arduino, Arduino UNO, Installing the Software, Fundamentals of Arduino Programming. IoT Physical Devices and Endpoints RaspberryPi: Introduction to RaspberryPi, About the RaspberryPi Board:	L2 and L4	10

ECE2618	DATA MINING	L	T	P	C
Version 2019.1	Date of Approval: 14 July 2019	3	0	0	3
Pre-requisites/Exposure	Concept of Database and Data Mining				
Co-requisites	Nil				

Catalog Description

Data Mining serve as one of the most important courses for postgraduate students, since it builds computational abilities, inferential thinking, and practical skills for tackling core data scientific challenges. The students will get a comprehensive understanding of different data mining techniques that can be used for prediction and for discovering patterns, be prepared to select the right technique for a given data problem and will be able to create a general-purpose analytic process.

Course Objectives

The objective of this course is to

- Provide students with an in-depth knowledge of data mining. To introduce students to basic applications, concepts, and techniques of data mining.
- Develop skills for using recent data mining software to solve practical problems and prediction in a variety of disciplines and
- Gain experience doing independent study and research.

Course Outcomes

On completion of this course, the students will be able to

CO 1: Explain concepts of Data mining, predictive analytics and analyses architecture of data mining. Differentiate between supervised and unsupervised methods

CO 2: Apply classification techniques on different data sets and solve cost –benefit analysis numerical. Analyze decision tree methods.

CO 3: Implement various clustering algorithm on different data sets and describe these algorithms.

CO 4: Prepare data representation for market basket analysis and determine the usefulness of association rules. Interpret supervised and unsupervised learning methods.

CO 5: Predict market trends and outline different factors associated mail marketing.

Course Content

Modules	Bloom's level	Number of Hours
Module I Data Preparation An introduction to data mining and predictive analytics, Data Pre-processing Exploratory Data Analysis, Dimension- Reduction Methods.	L1, L2	8
Module II Classification k- Nearest Neighbour Algorithm, Decision Trees, Model Evaluation Technique, Cost –Benefit Analysis Using Data Driven Cost.	L1, L2, L3	7
Module III Clustering Hierarchical and k- Means Clustering, Kohonen Networks, Birch Clustering, Measuring Cluster Goodness.	L1, L2, L3, L4	8
Module IV Association Rules Affinity Analysis and Market Basket Analysis, Data Representation for Market Basket Analysis, Support, Confidence, Frequent Item sets, and the a Priori Property,	L1, L2, L3, L6	9

ECE2613	EMBEDDED SYSTEM	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	2	0	0	2
Pre-requisites/Exposure	Hands on knowledge of Microcontrollers, their interfacing, and programing, and Embedded Systems				
Co-requisites					

Course Description:

The syllabus is divided into two parts, the first one deals with 8051 architecture and its interfacing with other devices. Second part of the syllabus deals with the basic embedded system and it's design. This course will provide an introduction of the basic concepts of embedded systems design, RTOSs, various types of microcontrollers, communication with 8051 microcontroller, RS 232, analog-digital interface, and A/D and D/A conversions. This course also provides the knowledge of C-language programing for microcontrollers. The syllabus makes student perfect in assembly language programming, addressing modes etc. apart from it input-output programming is discussed in detail. In the second part Embedded systems and it's application is discussed. Real Time Operating System is also explained at length. 8051 C programming is also incorporated in the syllabus.

Course Objectives:

The objective of this course is to;

- Provide the basic knowledge of introduction to an embedded systems design and RTOS, OS Services, I/O Subsystems, Interrupt Routines in RTOS Environment, RTOS Task Scheduling model.
- Equip with the understanding of various types of microcontrollers, arithmetic instructions and programs, and several application based programing.
- Equip with the understanding of basics of communication, overview of RS-232, I2C Bus, UART, USB, IEEE 488 (GPIB), and analog-digital interfacing.
- Provide the basic knowledge of 8051 C, 8051 memory constitution, Data interface, and A/D and D/A conversions.
- Provide the knowledge of advance microcontrollers, PIC microcontrollers, AVR microcontrollers, and ARM microcontrollers.

Course Outcomes:

On completion of this course, the students will be able to:

CO1: Explain the design of embedded systems and RTOS, and RTOS Task Scheduling model.

CO2: Describe the fundamentals of various types of microcontrollers, and their several applications based programing.

CO3: Describe fundamentals of communication of 8051 microcontroller, RS-232, I2C Bus, 8051 C, 8051, analog-digital interfacing, and A/D and D/A conversions.

CO4: Explain the fundamentals of advance microcontrollers, PIC microcontrollers, AVR microcontrollers, and ARM microcontrollers.

Modules	Blooms level*	Number of hours
Module1: Introduction to an embedded systems design & RTOS Introduction to Embedded system, Processor in the System, Microcontroller, Memory Devices, Embedded System Project Management, ESD and Co-design issues in System development Process, Design cycle in the development phase for an embedded system, Use of target system or its emulator and In-circuit emulator, Use of software tools for development of an ES. Inter-process Communication and Synchronization of Processes, Tasks and Threads, Problem of Sharing Data by Multiple Tasks, Real Time Operating Systems: OS Services, I/O Subsystems, Interrupt Routines in RTOS Environment, RTOS Task Scheduling model, Interrupt Latency and Response times of the tasks.	L1, L2, L3, and L4	8
Module 2: Overview of Microcontroller Microcontroller and Embedded Processors, Overview of 8051 Microcontroller family: Architecture, basic assembly language programming concepts, The program Counter and ROM Spaces in the 8051, Data types, 8051 Flag Bits and PSW Register, 8051 Register Banks and Stack Instruction set, Loop and Jump Instructions, Call Instructions, Time delay generations and calculations, I/O port programming Addressing Modes, accessing memory using various addressing modes, Arithmetic instructions and programs, Logical instructions, BCD and ASCII application programs, Single-bit instruction programming, Reading input pins vs. port Latch, Programming of 8051 Timers, Counter Programming.	L1, L2, L3, and L4	8
Module 3: Communication with 8051 Basics of Communication, Overview of RS-232, I2C Bus, UART, USB, IEEE 488 (GPIB). Parallel input output applications. (Stepper motor Sequencer program, Strobed input/output). Interrupt driven applications (real time clock, serial input/output with interrupt). Analog-digital interfacing (Pulse width modulator, 8-bit ADC).	L1, L2, L3, and L5	7
Module 4: 8051 C Programming Introduction to 8051 C, 8051 memory constitution, Constants, variables and data types. Arrays structures and unions, pointers, Loops and decisions, Functions, Modules and programs, Data interface, Timer control, Interrupt operations, Digital operations, A/D and D/A conversions.	L1, L2 L3, and L5	7
Module 5: Introduction to Advance Microcontrollers Introduction to PIC microcontrollers, Introduction to AVR Microcontrollers, Introduction to ARM microcontrollers.	L1, L2 L3, and L4	6

ECE2614	EMBEDDED SYSTEM LAB	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	0	0	2	1
Pre-requisites/Exposure	Basics of Microcontroller (8051), its programing and interfacing				
Co-requisites					

Course Description:

This course will provide the practical introduction of microcontroller 8051, its interfacing and programming for various applications, and also designing of microcontrollers.

Course Objectives:

The objective of this course is to;

- Provide the practical knowledge of microcontrollers (specially 8051), and its interfacing and programming.
- Equip with the understanding of designing of a model of microcontroller.
- Equip with understanding of parallel data communication, interfacing microcontroller with a LCD.

Course Outcomes:

On completion of this laboratory course work, the students will be able to:

CO1: Explain the interfacing of microcontroller 8051, and its programming for several applications.

CO2: Describe the fundamentals of design of microcontroller model, and their several applications based programing.

CO3: Describe fundamentals of parallel data communication by interfacing microcontroller (8051) with a LCD.

Modules	Blooms level*	Number of hours
Lab Session 1 13. Write a program to add two 8-bit numbers using microcontroller 8051. 14. Write a program to multiply two 8-bit numbers using microcontroller 8051.	L1 and L3	2
Lab Session 2 15. Write a program to divide two 8-bit numbers using microcontroller 8051. 16. Write a program to subtract two 8-bit numbers using microcontroller 8051.	L1, L3, and L4	2

Lab Session 3 17. Write a program to generate a geometric progression using microcontroller 8051. 18. Write a program to generate a square wave using microcontroller 8051.	L1, L3, and L4	4
Lab Session 4 19. Write a program to generate a delay of 5 ms using microcontroller 8051. 20. Study and implement serial communication by interfacing microcontroller with a computer.	L1, L3, and L4	2
Lab Session 5 9. Study and implement parallel data communication by interfacing microcontroller with a LCD. 10. Study of temperature measurement.	L1, L3, and L4	2
Lab Session 5 *Student has to submit working model based on 8051 and its interfaces.	L1, L3, and L4	2

ECE2719	RADAR AND SATELLITE COMMUNICATION	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	3	0	0	3
Pre-requisites/Exposure	Basic Electronics and Communication systems				
Co-requisites	Nil				

Catalog Description

This course builds basic knowledge of different types of Radar systems and satellite communication along with link designing & application. It also covers different modulation schemes & channels used.

Course Objectives

The objective of this course is to

- Provide the fundamental knowledge of Radar and its types.
- Provide the knowledge about satellite communication and its components.

Course Outcomes

On completion of this course, the students will be able to

CO1. Describe the working of Radar and its equation.

CO2. Describe the various types of radars and their applications.

CO3. Explain the satellite communications and the components used in this communication.

CO4. Explain the various access techniques used in communication and the satellite link budget.

Course Content

Modules	Blooms level*	Number of hours
MODULE I: Introduction to Radar Principle of detection and ranging, Radar frequencies and bands. Applications, Radar block diagram and operation. Radar Range Equation: Range prediction, Minimum detectable signal, Receiver noise SNR, Integration of radar pulses, Radar cross section of targets, Transmitter Power, PRF and system losses & Propagation effects.	L1 and L2	6
MODULE II: CW FM Radar Doppler effect, CW Radar, Frequency-modulated CW Radar, Multiple-frequency CW Radar. MTI and Pulse Doppler Radar: MTI delay lines, Delay line Cancellers, Coherent and Non-Coherent MTI, Pulse Doppler Radar.	L1 and L2	7
MODULE III: Introduction to Satellite Communication satellites, Orbiting satellites, Frequencies and bands, Satellite multiple access formats. Satellite Channel: Power flow, Polarization, Atmospheric losses, Receiver noise, CNR, Satellite link analysis for uplinks and downlinks. Overview of Coaxial cable system and optical Network (SONET); Overview of WLL (Wireless loop)	L1 and L2	8
MODULE IV: Satellite Transponder Transponder model, Satellite signal processing RF-RF translation, IF demodulation.	L2 L3 and L4	7
Module V: Multiple-Access FDMA; amplification with multiple FDMA carriers, AM/FM Conversion with FDMA, Switched FDMA, Synchronization, SS-TDMA; CDMA; DS CDMA, Frequency-hopped, CDMA. Carrier recovery & bit timing. Satellite link	L2 L3 and L4	8

budget analysis

ECE2720	ADVANCED MOBILE COMMUNICATION	L	T	P	C
Version: 2019.1	Date of Approval: May 21, 2019	2	0	0	2
Pre-requisites/Exposure	Communication systems, Digital Communication				
Co-requisites	NIL				

Catalog Description

This course introduces fundamental concepts of mobile communications and global system for mobile. This course enables the student to understand the technical functionality of a mobile network. This course also gives mathematical formulations to calculate losses using different propagation models.

Course Objectives

The objective of this course is to

- Make students familiar with fundamentals of mobile communication systems
- Understand different multiple access systems like TDMA, FDMA, CDMA with respect to complexity, installation cost, speed of transmission, channel properties etc.

Course Outcomes

On completion of this course, the students will be able to

CO1: Define and explain the concepts of mobile communications.

CO2: Explain and compare different multiple access techniques

CO3: Obtain propagation losses for a given transmission system.

CO4: Explain fundamentals of GSM system.

Modules	Blooms level*	Number of hours
MODULE 1: Introduction to Wireless Communication System Evolution of mobile radio communication, Mobile radiotelephony in U.S., Mobile radio system around the world, second generation (2G) cellular network, evolution to 2.5G wireless network, evolution for 2.5G TDMA standards, third generation (3G) and forth generation wireless networks.	L1 and L2	4
MODULE 2: The Cellular Concept System design fundamentals, frequency reuse channel assignment strategies, Hand off strategies, Interference and system capacity, improving coverage and capacity in cellular system.	L2 and L3	10
MODULE 3: Propagation Model and Spread Spectrum Modulation Techniques Longley rice model, okumara model, hata model, pcs extension to hata model, wolfish and bertoni model, Pseudo Noise (PN) sequence, Direct sequence spread spectrum (DSSS), frequency hopped spread spectrum (FHSS).	L2 and L4	12

ECE2721	EMBEDDED SYSTEM WITH ARM PROCESSORS	L	T	P	C
Version: 2019.1	Date of Approval: May 21, 2019	2	0	0	2
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

This course introduces the concept of architecture and programming of advanced embedded microcontrollers i.e, ARM family of microcontrollers that are widely used in design of real time sophisticated embedded systems like tablets, hand held devices, automation and industrial control systems.

Course Objectives

The objective of this course is to

- Provide an overview of embedded system and real time operating system.
- Equip the students with concepts of ARM microcontroller and its interfacing with external devices.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain and analyse the architecture of ARM microcontroller, Debugging and programming techniques.

CO2: Explain and classify embedded systems and its applications.

CO3: Explain hardware and software design concepts of embedded system.

CO4: Explain real time operating system for embedded system.

Modules	Blooms level*	Number of hours
Module 1 ARM Microcontroller A brief history of ARM evolution, ARM-32 bit Microcontroller: Thumb-2 technology and applications of ARM, Architecture of ARM Cortex M3, Various Units in the architecture, Debugging support, General Purpose Registers, Special Registers, exceptions, interrupts, stack operation, reset sequence ARM Cortex M3 Instruction Sets and Programming: Assembly basics, Instruction list and description, Useful instructions, Memory mapping, Bit-band operations and CMSIS, Assembly and C language Programming	L1, L2, L3 and L4	9
Module2 Embedded System Components Embedded Vs General computing system, Classification of Embedded systems, Major applications and purpose of ES. Core of an Embedded System including all types of processor/controller, Memory, Sensors, Actuators, LED, 7 segment LED display, Optocoupler, Relay, Piezo buzzer, Push button switch, Communication Interface (onboard and external types), Embedded firmware, Other system components. ECE2722	RADAR AND SATELLITE COMMUNICATIONS LAB	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	0	0	2	1
Pre-requisites/Exposure	Basic Electronics and Communication systems				
Co-requisites	Nil				

Catalog Description

This course builds basic knowledge and practical skills for different types of Radar systems and satellite communication along with link designing & application. It also covers different modulation schemes & channels used.

Course Objectives

The objective of this course is to

1. Provide the fundamental knowledge of Radar and its types.
2. Provide the knowledge about modulation techniques.

Course Outcomes

On completion of this course, the students will be able to

CO1. Describe the working of AM transmitter and receiver.

CO2. Describe the working of FM transmitter and receiver.

CO3. Explain the satellite communications and the components used in this communication.

CO4. Explain the various access techniques used in communication.

Course Content

Modules	Blooms level*	Number of hours
1. To study AM transmitter and receiver.	L1 and L2	1
2. To study FM transmitter and receiver.	L1 and L2	1
3. To implement the following circuits. <ul style="list-style-type: none"> - AM Transmitter - FM Transmitter - AM Receiver - FM Receiver - Remote Control - Wireless Mic System 	L1 and L2	3
4. To study RF portion of satellite receiver. <ul style="list-style-type: none"> - Study of dish antenna and section N.B section - Study of tuner - Study of R.F modulator section 	L2 L3 and L4	3
5. To study the base-band portion of satellite receiver <ul style="list-style-type: none"> - study of video section - study of sound section - study of signal indicator - study of power supply section 	L2 L3 and L4	4

ECE2723	PYTHON LAB	L	T	P	C
Version : 2019.1	Date of Approval: May 21, 2019	0	0	2	1
Pre-requisites/Exposure	Python programming platform basics				
Co-requisites	Nil				

Catalog Description

Python has become an important programming tool for research and development in science and engineering. It can be used for programming very easily using various already available packages. This course provides the students the knowledge of python programming. This course introduces the experiments related to logic design using python.

Course Objectives

The objective of this course is

- Demonstration of python tool for programming.
- Practice of logic development using python.

Course Outcomes

On completion of this course, the students will be able to

CO1. Use python platform for programming purpose.

CO2. Perform experiments and analyze output for various logics.

CO3. Simulate and analyze real problems using python.

Modules	Blooms level*	Number of hours
Lab Session 1 <ul style="list-style-type: none"> • Compute the GCD of two numbers. • Find the square root of a number (Newton's method) • Exponentiation (power of a number) 	L2, L3,L4 and L5	3
Lab Session 2 <ul style="list-style-type: none"> • Find the maximum of a list of numbers • Linear search and Binary search • Selection sort, Insertion sort 	L2, L3,L4 and L5	3
Lab Session 3 <ul style="list-style-type: none"> • Merge sort • First n prime numbers • Multiply matrices • Programs that take command line arguments (word count) 	L2, L3,L4 and L5	3
Lab Session 4 <ul style="list-style-type: none"> • Find the most frequent words in a text read from a file • Simulate elliptical orbits in Pygame • Simulate bouncing ball using Pygame 	L2, L3,L4 and L5	3

ECE2735	SUMMER INTERNSHIP EVALUATION-II	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	0	0	0	3
Pre-requisites/Exposure	NA				
Co-requisites	Nil				

Catalog Description

There are certain phases of every Intern's professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship program can best be described as an attempt to institutionalize efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal classroom situations. These attributes are intellectual ability, professional judgment and decision-making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility etc. In order to achieve these objectives, each student will maintain a file (**Internship File**). The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development. The report will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

Course Objectives

The objective of this course is to

- Equip the students with concepts of new technologies and practical exposure
- Provide an overview of presentation and preparation of report.

Course Outcomes

On completion of this course, the students will be able to

CO1: Study the literature and identify the problem statement

CO2: Work on a real world problem and solve it using latest technology

CO3: Prepare a detailed report of the project

CO4: Prepare a brief presentation of their project

CO5: Present and explain the project for evaluation

Modes of Evaluation: Quiz/Assignment/ Seminar/Written Examination

Examination Scheme:

ECE2706	OPTICAL COMMUNICATION	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	2	0	0	2
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

This course deals with the study of fundamentals of optical communication. This includes the properties of optical fibers and how they are used to establish optical links for communication systems. The aim of this course is

- To introduce students with the basics of optical communication system through the wave propagation principles in optical fiber, different sources and detectors used for formation of optical links.
- To familiarize the students with the different degradation factors for quality of transmission.
- To give exposure of advanced Communication use in present optical communication networks through advanced multiplexing technologies, networking and system set up.

Course Outcomes

On completion of this course, the students will be able to

CO1: Demonstrate basics of optical fiber communication link, structure, propagation and transmission properties of an optical fiber.

CO2: Describe the principles of optical sources and detectors and power launching-coupling methods.

CO3: Estimate the losses and analyze the propagation characteristics of an optical signal in different types of fibers

CO4: Identify the applications of optical fiber communication links in various fields.

Modules	Blooms level*	Number of hours
Module I: Fundamentals of Fiber Optics Different generations of optical fiber communication systems, Optical fiber structure, light propagation- total internal reflection, acceptance angle and numerical aperture, signal attenuation and dispersion. Modes in an optical fiber, Optical fibers: step-index, Graded-index, Single and Multimode, other types of fibers.	L1, L2, L3, L4	5
Module II: Optical Sources LED-spontaneous emission- material used in LED, LED efficiency, surface emitting LED, edge emitters, stimulated emission, spontaneous emission, Structure of various LED's, LASER: stimulated emission, double heterostructure LASER, LASER tuning and degradation, driver for LED and LASER.	L2, L3	4
Module III: Photo Detectors Characteristics of photo detector, direct and indirect band gap semiconductors, homo junction and hetero junction photodiodes, p-i-n photodiode, avalanche photodiode, phototransistor, optocouplers	L2, L3	4
Module IV: Fiber Properties Fiber end preparation, fiber splicing, fiber connectors, connection losses, fiber couplers, fiber materials, fiber fabrication, mechanical properties of fibers, different fiber cables.	L2	3
Module V: Fiber Optic Communication System Basic communication components, coupling to and from the fiber, multiplexing and coding, repeaters, bandwidth and rise time budgets,	L3, L4, L5	5

noise, bit error rate and eye pattern.		
Module VI: Application of Fiber Optics Long haul communication, LAN, medical application, undersea communication, military application, coherent optical communication, Fiber optic sensors- Intensity modulated sensor, Phase sensor, Diffraction Grating sensors.	L3, L4	3

ECE2716	OPTICAL COMMUNICATIONS LAB	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	0	0	2	1
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

This course deals with the practical aspects of fundamentals of optical communication. This includes the properties of optical fibers and how they are used to establish optical links for communication systems. The aim of this course is

- To introduce students with the basics of optical communication system through the basics of optical waveguides, their parameters and link set up using different type of fibers.
- To familiarize the students with the different degradation factors for quality of transmission.
- To give exposure of multiplexing techniques, coding, coupling techniques used in present optical communication networks

Course Outcomes

On completion of this course, the students will be able to

CO1: Analyze different types of optical waveguides for their properties like Numerical Aperture, basic properties, coupling and transmission characteristic of optical fibres.

CO2: Identify and estimate the losses in optical fiber that affect the performance of transmission systems.

CO3: Design the basic optical links through digital and analog links, different modulation and coding techniques.

Modules	Blooms level*	Number of hours
Lab Session 1: To measure the Numerical Aperture of a multimode fiber	L1,L2	1
Lab Session II: To measure attenuation by cut Back technique.	L4	1
Lab session III: To study the model properties of a multimode fiber.	L1,L2	1
Lab session IV: To couple the light into a single mode fiber & measure the far-field power distribution	L2, L3, L4	1
Lab session V: To measure various fiber alignment losses.	L3,L4	1
Lab session VI: To estimate the power budget for a fiber optic system.	L3,L4	1
Lab session VII: To set up a fiber optic analog link.	L3	1
Lab session VIII: To set up a fiber optic digital link.	L3	1
Lab session IX: To study Time Division Multiplexing of signals.	L3	1
Lab session X: To study Manchester Coding.	L3	1
Lab session XI: To study voice digitization	L3	1
Lab session XII: To simulate optical fiber wave guide.	L4, L5	1

ECE2712	DIGITAL IMAGE PROCESSING	L	T	P	C
Version: 2019.1	Date of Approval: May 21, 2019	2	0	0	2
Pre-requisites/Exposure	Basics of Signal Processing				
Co-requisites	NIL				

Catalog Description

Image processing has become an important tool for research and investigation in many areas of science and engineering. It takes full advantage of the computational technology of Mathematics and utilization of various tools. This course gives a detailed insight of Image Processing with different techniques used for different purposes.

Course Objectives

The objective of this course is to

- Equip the students with concepts of digital image processing.
- Provide in-depth knowledge of various techniques used at different steps of image processing.

Course Outcomes

On completion of this course, the students will be able to

CO1: Define and explain the fundamentals of image and its histogram.

CO2: Explain different techniques of image restoration and enhancement.

CO3: Apply coding techniques to remove different types of redundancies in image.

CO4: Represent and recognize the image.

Modules	Blooms level*	Number of hours
MODULE 1: Introduction to Digital Image Fundamentals The origins of Digital Image Processing, Examples of Fields that Use Digital Image Processing, Fundamentals Steps in Image Processing, Elements of Digital Image Processing Systems, Image Sampling and Quantization, Some basic relationships like Neighbors, Connectivity, Distance Measures between pixels, Linear and Non Linear Operations. Image Enhancement in the Spatial Domain: Some basic Gray Level Transformations, Histogram Processing, Enhancement Using Arithmetic and Logic operations, Basics of Spatial Filters, Smoothing and Sharpening Spatial Filters, Combining Spatial Enhancement Methods.	L1 and L2	7
MODULE 2: Image Enhancement in Frequency Domain Introduction to Fourier Transform and the frequency Domain, Smoothing and Sharpening Frequency Domain Filters, Homomorphic Filtering. Image Restoration: A model of The Image Degradation / Restoration Process, Noise Models, Restoration in the presence of Noise Only Spatial Filtering, Periodic Noise Reduction by Frequency Domain Filtering, Linear Position-Invariant Degradations, Estimation of Degradation Function, Inverse filtering, Wiener filtering, Constrained Least Square Filtering, Geometric Mean Filter, Geometric Transformations.	L2 and L3	13
MODULE 3:	L1 and	12

Version 2019.1	Date of Approval: May 21, 2019	0	0	2	1
Pre-requisites/Exposure	Basics of MATLAB				
Co-requisites					

Catalog Description

Image processing has become an important tool for research and investigation in many areas of science and engineering. This course is designed to provide the students an understanding of the basic concepts of digital image processing and various techniques used in it. Students will perform practical on hardware kit as well as on software.

Course Objectives

The objective of this course is to

1. Make students demonstrate the concepts of image processing.
2. Apply the different techniques to process image.

Course Outcomes

On completion of this course, the students will be able to

CO1. Explain the basic image processing tools and commands.

CO2. Apply the filters to remove noise in spatial & frequency domain.

CO3. Apply image processing techniques for compression, segmentation and restoration.

Modules	Blooms level*	Number of hours
Lab Session 1 1. To study about the basic image processing tools. 2. Write program for histogram processing.	L3	3
Lab Session 2 3. Write program for filtering in frequency domain. 4. Write program for filtering in spatial domain.	L3 and L4	3
Lab Session 3 5. Write programs for different compression schemes. 6. Write program image restoration.	L3 and L4	3
Lab Session 4 7. Write program for performing different morphological operations. 8. Write program for image segmentation.	L3 and L4	3

ECE2724	ROBOTIC PROCESS AUTOMATION DESIGN & DEVELOPMENT	L	T	P	C
Version 2019.1	Date of Approval: 14 July 2019	3	0	0	3
Pre-requisites/Exposure	Basic Networking Concepts				
Co-requisites	Nil				

Catalog Description

This course aims at providing knowledge of basic concepts of Robotic Process Automation to University students. It further builds on these concepts and introduces key RPA Design and Development strategies and methodologies specifically in context of UiPath products. The student undergoing the course shall develop the competence to design and develop a robot for a defined process.

Course Objectives

The objective of this course is to

- Equip the students with concepts of robotic process automation
- Provide an overview of designing with uipath software.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain key terms and trends around the robotic process automation along with its physical and logical design

CO2: Understand the potential and value of the robotic process automation .

CO3: Describe the technologies used for the robotic process automation and mobile devices, including (passive and active) sensors, the physical communications layer, communications protocols, programming frameworks,.

CO4: Design programs and have hands on experience on uipath software

CO5: Develop RPA programs of moderate complexity for a well-used robotic automation process using uipath.

Modules	Blooms level*	Number of hours
Module I: Programming Basic and Recap Programming Concepts Basics I - Understanding the application, Basic Web Concepts, Protocols, Email Clients, Data Structures, Data Tables, Algorithms, Software Processes, Software Design, SDLC. Programming Concepts Basics 2- Scripting, Net Framework, Net Fundamentals, XML, Control structures and functions, XML, HTML, CSS, Variables & Arguments.	L1, L2	8
Module II: RPA Concepts RPA Basics - History of Automation, what is RPA, RPA vs Automation, Processes & Flowcharts, Programming Constructs in RPA, What Processes can be Automated, Types of Bots, Workloads which can be automated. RPA Advanced Concepts - Standardization of processes, RPA Development methodologies, Difference from SDLC, Robotic control flow architecture, RPA business case, RPA Team, Process Design Document/Solution Design	L2, L3 and L4	8

ECE2731	TERM PAPER	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	0	0	0	2
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

Term paper evaluation course requires the students to study about the current technology topic in detail. The students have to read research papers, books and other study sources and finalize the topics for their presentation. Then the student has to prepare it in detail and write a detailed research paper mentioning all the content related to the topic. The evaluation is later done and a presentation is also to be prepared.

Course Objectives

The objective of this course is to

- To increase the knowledge and the understanding of a particular topic.
- To introduce the students about how to write technical papers/research papers.

It trains the students to make use of research tools and material available both in print and digital formats.

Course Outcomes

On completion of this course, the students will be able to

CO1: Study the literature and identify the current technical topic

CO2: Study the identified topic in detail

CO3: Prepare a detailed report including the introduction, architecture, advantages, disadvantages etc

CO4: Prepare a brief presentation of the concerned topic

CO5: Present and explain the topic for evaluation

Modes of Evaluation: Quiz/Assignment/ Seminar/Written Examination

Examination Scheme:

ECE2732	PROJECT (WITH PRESENTATION & EVALUATION)	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	0	0	0	2
Pre-requisites/Exposure	Basics of Electrical & Electronics				
Co-requisites	Nil				

Catalog Description

Project/Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology, practical skill enhancement and an opportunity to work closely with a industry external guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation. Students require professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship program can best be described as an attempt to institutionalize efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal classroom situations. These attributes are intellectual ability, professional judgment and decision-making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility

Course Objectives

The objective of this course is to

- Equip the students with concepts of new technologies and practical exposure
- Provide an overview of presentation and preparation of report

Course Outcomes

On completion of this course, the students will be able to

- CO1: Study the literature and identify the problem statement
CO2: Work on a real world problem and solve it using latest technology
CO3: Prepare a detailed report of the project
CO4: Prepare a brief presentation of their project
CO5: Present and explain the project for evaluation

Modes of Evaluation: Quiz/Assignment/ Seminar/Written Examination

Examination Scheme:

Components	V	PPT	R	IM	EM
Weightage (%)	10	10	10	30	70

V – Viva, PPT-Power Point Presentation, R – Report, IP-Internal Marks, EM-External Marks

ECE2815	INFORMATION THEORY AND CODING	L	T	P	C
Version 2019.1	Date of Approval: 14 July 2019	3	0	0	3
Pre-requisites/Exposure	Communication System				
Co-requisites					

Catalog Description

The purpose of this course is to introduce students to the basics of coding used in communication system. The course aims to discuss the different entropies, channel capacity and purpose of encoding

Course Objectives

The objective of this course is to

- Provide a thorough introduction to coding used in communication system.
- Provide in depth study of entropies, channel capacity and purpose of encoding.

Course Outcomes

On completion of this course, the students will be able to

CO1. Measure entropy in terms of probability and mutual information.

CO2 Explain shannon fano and Huffman coding.

CO3. Prepare linear and cyclic codes for communication system.

CO4 Synthesize different BCH and convolutional codes for information source.

Modules	Blooms level*	Number of hours
MODULE I: Basic Concepts of Information Theory A measure of Uncertainty, Binary Sources, Measure of Information for two – dimensional discrete finite probability Scheme, Noise characteristics of channel, Basic relationship among different entropies, Measure of mutual information channel capacity, Capacity of channel with symmetric noise structure BSC and BEC.	L1 and L2	7
MODULE II: Element of Encoding Propose of encoding separable binary codes, Shannon Fano encoding , Noiseless coding Theorem of decidability, Mc Millen's Theorem, Average length of encoding message, Shannon's Binary encoding, Fundamental Theorem of discrete Noiseless coding, Huffman's Minimum Redundancy codes. Coding for Reliable Digital Transmission & Storage Introduction, types of codes, Modulation and Demodulation, Maximum likelihood decoding, types of error, error control strategies.	L1 and L2	9
MODULE III: Introduction to Algebra Groups, Fields Binary field Arithmetic, Construction of Galois field GF (2m), Basic Properties of Galois Field GF (2m), Vector Space, Matrices. Linear Block Codes: Introduction to Linear Block codes, Syndrome and Error detection, Minimum distance of block code, error detecting and Error correcting capability a block code Hamming Code. Cyclic Codes: Description of Cyclic codes, Generator and parity check	L1, L2, L3 and L4	10

matrices of cyclic codes, encoding of cyclic codes syndrome computation & error detection decoding of cyclic codes, Error trapping decoding of cyclic codes, Goley Codes.		
MODULE IV: BCH Codes Description of codes, Decoding of BCH codes, Implementation of Galoes Field Arithmetic, Implementation of error connection, Convolution Codes: Encoding of convolution codes, structural properties of Convolution codes, distance properties of Convolution codes, Distance Properties of convolution codes, Maximum likelihood decoding of convolution codes. Automatic Repeat Request Strategies Stop and wait, Go back and selective repeat ARQ strategies, Hybrid ARQ Schemes.	L1, L2, L3 and L4	10

**Bloom's Level:*

ECE2805	RTOS PROGRAMMING	L	T	P	C
Version 2019.1	Date of Approval: 14, July 2019	3	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

The syllabus introduces real time operating systems and resource analysis. It introduces the concepts of Processing, I/O Resources, Memory, Multi-resource, Soft Real-Time Services, Embedded System components, Debugging Components, Performance Tuning, High availability and Reliability Design.

Course Objectives

The objective of this course is to

- Provide an overview of real time operating system.
- Equip the students with concepts of Resources ,debugging techniques, performance tuning and reliability analysis.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain history of real time operating system and the concepts of resource analysis.

CO2: Explain the concepts of processing and I/O resources.

CO3: Explain the concept of memory, multi-resource and soft real-time services.

CO4: Explain embedded system components and apply debugging techniques.

CO5: Explain performance tuning, high availability and the concepts of reliability design.

Modules	Blooms level*	Number of hours
Module-1 Introduction to Real-Time Embedded Systems: Brief history of Real Time Systems, A brief history of Embedded Systems, System Resources: Resource Analysis, Real-Time Service Utility, Scheduling Classes, The Cyclic Executive, Scheduler Concepts, Preemptive Fixed Priority Scheduling Policies, Real-Time OS, Thread Safe Reentrant Functions.	L1 and L2	7
Module-2 Processing and I/O Resources: Preemptive Fixed-Priority Policy, Feasibility, Rate Monotonic least upper bound, Necessary and Sufficient feasibility, Deadline – Monotonic Policy, Dynamic priority policies, I/O Resources: Worst-case Execution time, Intermediate I/O, Execution efficiency, I/O Architecture.	L1 and L2	8
Module-3 Memory, Multi-resource and Soft Real-Time Services: Physical hierarchy, Capacity and allocation, Shared Memory, ECC Memory, Flash file systems, Multi-resource Services: Blocking, Deadlock and livelock, Critical sections to protect shared resources, priority inversion, Soft Real-Time Services: Missed Deadlines, QoS, Alternatives to rate monotonic policy, Mixed hard and soft real-time services.	L1 and L2	8
Module-4	L1, L2	7

ECE2806	VERILOG PROGRAMMING	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	2	0	0	2
Pre-requisites/Exposure	Basic Digital Electronics				
Co-requisites	Nil				

Catalog Description

This course discusses fundamental Verilog concepts of today's most advanced digital design techniques. It offers broad coverage of Verilog HDL from a practical design perspective. Introduces students to gate, dataflow (RTL), behavioural, and switch level modeling, describes leading logic synthesis methodologies; explains timing and delay simulation; and introduces many other essential techniques for creating tomorrow's complex digital designs.

Course Objectives

The objective of this course is to

- Provide the fundamental knowledge of Verilog HDL for practical designs.
- Introduces the knowledge logic synthesis and design methodologies.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Describe the basic concepts of Verilog HDL.
CO2. Design and solve the Gate level and dataflow modeling of various circuits.
CO3. Solve the circuits using Behavioural modeling.
CO4. Utilize the circuit knowledge on advanced Verilog topics.

Course Content

Modules	Blooms level*	Number of hours
MODULE I : Introduction to Verilog HDL and Basic Concepts Emergence of HDL, typical design flow, trends in HDL, Modeling concept Design methodologies, modules, instances, simulation, design block and stimulus block Lexical conventions, Data Types. System Tasks and Compiler Directives, Modules and Ports	L1 and L2	6
MODULE II: Gate-Level Modeling and Dataflow Modeling Gate Types. Gate Delays, Continuous Assignments. Delays. Expressions, Operators, and Operands. Operator Types. Examples for combinational and sequential circuit using Gate level and Data-flow modeling.	L1 and L2	5
MODULE III: Behavioural Modeling Structured Procedures. Procedural Assignments. Timing Controls. Conditional Statements. Multiway Branching. Loops. Sequential and Parallel Blocks. Generate Blocks. Examples	L1 and L2	6
MODULE IV: Tasks and Functions and Useful Modeling Techniques Difference between Tasks and Functions. Tasks. Functions. Procedural Continuous Assignments. Overriding Parameters. Conditional Compilation and Execution. Time Scales. Useful System Tasks	L1 and L2	7
MODULE V: Advanced Verilog Topics Timing and Delays. Switch Level Modeling, User-Defined Primitives, Logic Synthesis with Verilog HDL, Advanced Verification Techniques.	L2, L3 and L5	6

Catalog Description

This course discusses fundamental Verilog concepts of today's most advanced digital design techniques. It offers broad coverage of Verilog HDL from a practical design perspective. Introduces students to gate, dataflow (RTL), behavioral, and switch level modeling, describes leading logic synthesis methodologies; explains timing and delay simulation; and introduces many other essential techniques for creating tomorrow's complex digital designs.

Course Objectives

The objective of this course is to

- Provide the fundamental knowledge of designing digital circuits in Verilog HDL.
- Provide the knowledge of logic synthesis methodologies of digital circuits.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Describe the codes for various combinational circuits.
CO2. Write the codes for various sequential circuits.
CO3. Model circuits using behavioral and dataflow methods.
CO4. Synthesize the circuits using various methodologies.

Course Content

Experiments	Blooms level*	Number of hours
1. Write a Verilog code to realize all the logic gates. 2. Write a Verilog code to implement Half Adders, Full adders and Subtractors using Gates.	L1 and L2	2
3. Write a Verilog code to describe the function of Multiplexer and Demultiplexer using different modelling styles. 4. Write a Verilog code to realize D Flip-Flop and D Latch.	L1 and L2	2
5. Write a Verilog code to implement 2:1 Mux and D Latch using Switches. 6. Write a Verilog code to implement Encoders and Decoders Using if-else Statement and case Statement.	L1 and L2	2
7. Write a Verilog code to implement SR Flip Flop using UDP (User Defined Program). 8. Write the Verilog code for a JK Flip-flop, and its test bench. Use all possible combinations of inputs to test its working.	L1 and L2	3
9. Write the hardware description of a 8-bit register with parallel load, shift left and shift right modes of operation and test its operation. 10. Write a Verilog code to realize Up/Down Counter and Divide by 4.5 Counter. Write a Verilog code to describe the function of Synchronous FIFO. 11. Write a Verilog code using FSM to realize a sequence detector (101101).	L1 and L2	3

ECE2818	WIRELESS COMMUNICATION	L	T	P	C
Version : 2019.1	Date of Approval: May 21, 2019	3	0	0	3
Pre-requisites/Exposure	Communication System				
Co-requisites	Nil				

Course Objective:

The objective of the course is to provide an overview of Wireless Communication networks area and its applications in communication engineering. The contribution of Wireless Communication networks to overall technological growth and the various terminology, principles, devices, schemes, concepts, algorithms and different methodologies used in Wireless Communication Networks are described.

Course Objectives

The objective of this course is to

- To introduce advanced wireless communication systems.
- To learn the wireless channel characteristics and models.

Course Outcomes

On completion of this course, the students will be able to

CO1: Evolution of mobile radio communications and comparative study of 2G, 3G.

CO2: Explain cellular concepts, fading, wireless networks and Wireless standards.

CO3: Apply the TDMA, FDMA and CDMA techniques for a given network application.

CO4: Comparison based on various parameters of wireless, telephone and ISDN networks.

CO5: Study the advanced concepts of Intelligent cell concept and application.

Course Contents:

Modules	Blooms level*	Number of hours
Module 1 Introduction to Wireless Communication Systems Evolution of mobile radio communications, examples of wireless comm. systems, paging systems, Cordless telephone systems, comparison of various wireless systems. Modern Wireless Communication Systems: Second generation cellular networks, third generation wireless networks, wireless in local loop, wireless local area networks, Blue tooth and Personal Area networks.	L1 and L2	8
Module 2 Introduction to Cellular Mobile Systems Spectrum Allocation, basic Cellular Systems, performance Criteria, Operation of cellular systems, analog cellular systems, digital Cellular Systems. Ellular System Design Fundamentals: Frequency Reuse, channel assignment strategies, handoff Strategies, Interference and system capacity, tracking and grade off service, improving coverage and capacity.	L2 and L3	10
Module 3 Multiple Access Techniques For Wireless Communication Introduction to Multiple Access, FDMA, TDMA, Spread Spectrum multiple Access, space division multiple access, packet ratio, capacity of a cellular systems.	L2 and L4	10
Module 4 Wireless Networking Difference between wireless and fixed telephone networks, development of	L3 and L4	10

ECE2816	ADVANCED ROBOTIC PROCESS AUTOMATION DESIGN & DEVELOPMENT	L	T	P	C
Version 2019.1	Date of Approval: 14 July 2019	3	0	0	3
Pre-requisites/Exposure	Basic Networking Concepts				
Co-requisites	Nil				

Catalog Description

This course aims at providing knowledge of basic concepts of Robotic Process Automation to University students. It further builds on these concepts and introduces key RPA Design and Development strategies and methodologies specifically in context of UiPath products. The student undergoing the course shall develop the competence to design and develop a robot for a defined process.

Course Objectives

The objective of this course is to

- Equip the students with concepts of robotic process automation
- Provide an overview of designing with uipath software.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain key terms and trends around the robotic process automation along with its physical and logical design

CO2: Understand the potential and value of the robotic process automation .

CO3: Describe the technologies used for the robotic process automation and mobile devices, including (passive and active) sensors, the physical communications layer, communications protocols, programming frameworks,.

CO4: Design programs and have hands on experience on uipath software

CO5: Develop RPA programs of moderate complexity for a well-used robotic automation process using uipath.

Modules	Blooms level*	Number of hours
Module 1: Exception handling and Best Practices Debugging and Exception Handling- Debugging Tools, Strategies for solving issues, Catching errors. Project Organization- Concept of project organization, Best practices, Avoiding pitfalls, Invoke Activity.	L1, L2	8
Module II: Introduction to Orchestrator Orchestrator, Tenants, Authentication, Users, Roles, Robots, Environments, Queues & Transactions, Schedules.	L2, L3 and L4	8
Module III: merging and Future Trends in IT Artificial Intelligence, Machine Learning, Agent awareness, Natural Language Processing Computer Vision	L2, L3 and L4	8
Module IV: Capstone Project Real life case studies which can be used to apply the concepts learnt during the course. The projects shall test student's skills right from process transformation and documentation to the design and development of the actual robot	L2, L3 and L4	12

ECE2812	ADVANCED VLSI DESIGN	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	3	0	0	3
Pre-requisites/Exposure	VLSI Design				
Co-requisites	Nil				

Catalog Description

This course explores the theory and operation of the basic building blocks of VLSI design which includes current mirror and Op-amp. This course also explains the designing of OTA and their types. The concepts learnt in the studies of OTA will be applied in the design and analysis of filters and oscillators.

Course Objectives

The objective of this course is to

- Provide the advanced knowledge of VLSI design with building blocks and designing of OTA.
- Equip with the understanding various types of OTA with their noise analysis.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain the basic operation of MOS transistor, cascade transistors and noise performances.

CO2: Explain the CMOS inverter with DC characteristics, active load and current mirrors.

CO3: Describe gain margin and phase margin; Design and analysis of OTA and explanation on CMRR, offset and PSRR.

CO4: Explain & design cascade and folded OTA.

Modules	Blooms level*	Number of hours
MODULE 1: Review of Elementary Transistor Stages MOST single transistor amplifying phase, BJT single transistor, Source and emitter follower and their noise performance, Cascade transistors and noise performance.	L1 and L2	8
MODULE 2: Inverter stage and Building Blocks CMOS inverter, DC analysis, low frequency gain, bandwidth, current capacity, slew rate, amplifying phase, BJT inverter stage and Noise performance, Cascade and its Bandwidth, active load, differential stages, current mirrors and their noise output.	L1, L2 and L3	10
MODULE 3: Op amp Design: Introduction Design of single transistor OTA: GBW and phase margin, Miller CMOS OTA: GBW and phase margin, Full Dc analysis: Common mode input voltage range versus current supply, output range versus supply voltage, maximum output current, source and sink, Noise analysis of OTAs.	L2, L3, L4 and L5	10
MODULE 4: Op amp Design: Matching specifications Transistor mismatch, Offset voltage definition, Mismatch definition, differential stage with active load, Offset drift, CMRR, Offset and CMRR of	L1, L2, L3 and L4	10

Miller OTA, Offset in BJT and JFET, Power Supply rejection ratio of simple and Miller OTA.		
MODULE 5: Design of OTAs and design Options Symmetrical, Cascade OTA, Folded Cascade OTA, Operational Current Amplifier, design for optimum GBW and SR, CMOS Configurations, Bipolar op amp configurations.	L1, L2,L3 and L4	10

**Bloom's Level:*

ECE2814	POWER ELECTRONICS	L	T	P	C
Version 2019.1	Date of Approval: May 21, 2019	3	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

This course introduces students to the theory of Power Electronics. It includes basics of Thyristor family devices with its firing circuits. It includes the design concepts of Converter, Inverter, Chopper, AC voltage controller, cycloconverter along with some basic application based on power electronics.

Course Objectives

The objective of this course is to

- Equip the students with concepts of Power Electronics Devices.
- Provide in depth knowledge so that they can design applications based on Power Electronic concepts.

Course Outcomes

On completion of this course, the students will be able to

CO1. Explain concept of various triggering elements.

CO2. Explain and solve problems on thyristor, its rating, protection and firing circuits as well as compare and design firing circuits of thyristor.

CO3. Analyze and solve the problems of Converter, Inverter, Chopper, AC voltage controller and Cycloconverter for different types of load.

CO4: Explain design concept of power electronic applications.

Modules	Blooms level*	Number of hours
Module 1: Triggering Devices Triggering devices, Unijunction Transistor, Characteristics and applications of UJT, Programmable Unijunction Transistor, DIAC, Silicon Controlled Switch, Silicon Unilateral Switch, silicon Silicon bilateral Switch, Shockley diode.	L1 and L2	6
Module 2: Thyristor Firing Circuits, Turn on systems Two transistor model of Thyristor, Method of Triggering a thyristor, Thyristor Types, Requirement for triggering circuits, Thyristor Firing Circuits, Fullwave control of Ac with one thyristor, Light activated SCRs (LASCR), Control Circuit, dv/dt and di/dt protection of Thyristor, Pulse Transformer triggering, Firing SCR by UJT, TRIAC firing circuit, Phase control of SCR by pedestal and Ramp.	L1, L2, L3, L4 and L5	9
Module 3: Controlled Rectifiers Types of Converters, effect of inductive load, Commutating diode or free wheeling diode, controlled rectifiers, Bi phase half wave, single phase full wave phase controlled converter using bridge principle, harmonics.	L1, L2, L3 and L4	8

COMPUTER FUNDAMENTALS

Course Code: IFT2111

Credit Units: 03

Course Objective:

This course is aimed to provide a fundamental understanding of computer science for the students in their early stages of academic career. Various computer nomenclatures regarding to hardware and software will be introduced for students to develop an in-depth realization of several subjects and their significant roles in the field. After this course, you will be able to understand fundamental concepts of computer.

Course Contents:

Module I Computer and its characteristics, application of computers, digital and analog computer, Generation of computers, Storage devices: primary storage devices (RAM,ROM,PROM,EPROM,EEPROM) , secondary storage devices(Floppy disk, Hard disk, optical disk, magnetic tapes), Input and output devices (keyboard, mouse, light pen, joystick, scanner, monitor, printers etc.)

Module II Software and its types (System Software, Application Software, Firmware Softwares) Computer Languages and its types (Machine Language, Assembly Language, High Level Language: advantages and disadvantages of computer languages),Translators :Compiler, Linker, Interpreter . Number system and its types, conversion from one base to another and vice versa.

Module III Word Processor and its features, Editing of Text, Find and Replace, Bullets and Numbering, Spell Checker, Grammar Checker, Auto Correct, Auto Complete, Auto Text, Header and footer, tables, mail merge, border and shading, page setup, printing.

Module IV Spread sheet and its features, Entering Information in Worksheet, Editing Cell Entry, Moving and Copying Data, deleting or Inserting Cells, Rows and Columns, Custom Numeric Formats, Using Formulas and functions, Creating charts.

Module V Presentation Software and its uses, steps for creating PowerPoint Presentation, PowerPoint Views, Assigning Slide Transitions, Using Preset Animations, Hiding Slides, Slide Show, Controlling the Slide Show with a Keyboard, Setting Slide Show Timings.

Examination Scheme:

Components	CT1	A/C/Q	Attd	EE
Weightage (%)	15	10	5	70

DIGITAL ELECTRONICS

Course Code: IFT2112

Credit Units: 03

Course Objective:

An entry level course in digital electronics covering number systems, binary mathematics, digital codes, logic gates, Boolean algebra, Karnaugh maps, and combinational logic. Emphasis will be on circuit logic analysis and design of digital circuits. The student will explain the operation of digital logic gates and use Boolean algebra and Karnaugh mapping to express logic operations and minimize logic circuits in design. The student will construct, analyze combinational logic circuits & sequential circuits; create a truth table for standard digital logic gates; and add, subtract, multiply and divide using the binary numbering system. Student will also be able to understand about digital to analog conversion and vice versa.

Course Contents:

Module I: Number System

Decimal, Binary, Octal, Hexadecimal Number Systems and Conversion of the bases, Complements: r's complement, (r-1)'s complement, Binary codes: Grey code, BCD Code, Excess-3 code

Introduction to logic systems

Positive and negative logic, Logic functions - NOT, AND, OR, NOR, EX-OR, EX NOR

Truth tables Boolean algebra, De Morgan's theorems Standard forms for Logical Expressions - Sum of Products, Product of Sums Specification of Logical functions in terms of Minterms and Maxterms, Karnaugh Maps, Simplification of Logical functions, Introduction of "don't care" states.

Module II: Combinational Building Blocks

Multiplexers, De-multiplexers, Decoders, Encoders

Arithmetic circuits

Half Adders and Full Adders, Half Subtractor and Full Subtractor

Module III: Flip-flops

The RS latch, the clocked RS flip-flop, JK Flip Flop, the Master-Slave JK flip-flop, Delay and Toggle flip-flops

Flip-flops in counter circuits

Asynchronous (ripple) Counters (UP/DOWN), Synchronous Counter design (UP/DOWN), Non Sequential Counting

Module IV: Shift Registers

Shift registers in general, Ring Counters, Johnson Counter

Introduction to Memory

Primary: RAM, Static RAM, Dynamic RAM, ROM, PROM, EAPROM, Secondary: Floppy Disk, Hard Disk, CDROM

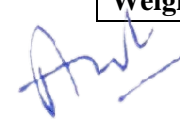

Module V: Introduction to Logic Families, DACs and ADCs

Introduction to logic families-TTL, RTL,ECL,CMOS,DTL,IIL

Binary weighted resistor DAC, Resolution, linearity and settling time of DACs, Successive approximation ADC

Examination Scheme:

COMPUTER PROGRAMMING WITH C LANGUAGE

Course Code: IFT2116

Credit Units: 03

Course Objective:

The primary objective of this course is to understand all the components of C, including the C language, the C Preprocessor, and the C Standard Library. An understanding of some advanced practical issues, including memory management, testing and debugging, complex declarations and expression evaluation, building and using libraries, and evaluating tradeoffs, such as size vs. speed and speed vs. complexity. The ability to write C code and create and manipulate linked lists.

Course Contents:

Module I: Introduction to 'C' Language

History of C, Introduction of C, Basic structure of C program, Concept of variables, constants and data types in C, Operators and expressions: Introduction, arithmetic, relational, Logical, Assignment, Increment and decrement operator, Conditional, bitwise operators, Expressions, Operator precedence and associativity. Managing Input and output Operation, formatting I/O.

Module II: Decision making and looping

Decision making in program, Relational Logical operators example, if statements, if -else, nested if-else statements, Switch, case loop, Do-While, While, for loop and nesting of loop, continue and break , Storage types , predefined processor.

Module III: Arrays and Functions

One Dimensional Arrays, Arrays Manipulation, Sorting, Searching, Function declaration, example & calling a function. Passing Arguments, call by value and call by references, Recursive function, .Recursion.

Module IV: Pointers and String

Pointers: Declaration, Pointer assignments, initialization, Pointers and Dynamic Memory Allocation, Array of Pointers, strings, string handler functions.

Module V: Structure Union & file handling

Structure definition, Declaration, structure Assignments, Arrays in structure, Structure Arrays, Pointer Structure, Nested Structure, Arrays of Structure, Union declaration, assignments & example programs, Difference between structure & union, file handling and the related functions.

Examination Scheme:

Components	CT1	A/C/Q	Attd	EE
Weightage (%)	15	10	5	70

COMPUTER FUNDAMENTALS LAB

Course Code: IFT2117

Credit Units: 01

1. Create a new folder and do the following:
 1. Make a word document in it.
 2. Make an Excel document in it.
 3. Make a new folder in it
 4. Rename the initial folder
 5. Move the initial folder
 6. Copy the initial folder.
 7. Delete the initial folder
2. Implement the various well known features of Windows operating system such as Notepad, WordPad, Paint, System tools, Entertainment etc. enclosed in Start→Programs→Accessories.
3. Implement various display properties by right clicking on the Windows Desktop.
4. Explore the taskbar of Windows.
5. Set the wall paper and screen saver.
6. Set the date/time.

MS-Word

1. Create a document and
 - a. Put Bullets and Numbers
 - b. Apply various Font parameters.
 - c. Apply Left, Right, and Centre alignments.
 - d. Apply hyperlinks
 - e. Insert pictures
 - f. Insert ClipArt
 - g. Show the use of WordArt
 - h. Add Borders and Shading
 - i. Show the use of Find and Replace.
 - j. Apply header/footers
2. Create any document and show the use of File→versions.
3. Create any document and show the difference between paste and paste special.
4. Create a document to show the use of Washout/Watermark.
5. Implement the concept of mail merge.
6. Implement the concept of macros.
7. Implement the concept of importing a file/document.
8. Implement the concept of merging the documents.
9. Create a student table and do the following:
 - a. Insert new row and fill data
 - b. Delete any existing row
 - c. Resize rows and columns
 - d. Apply border and shading
 - e. Apply merging/splitting of cells
 - f. Apply sort
 - g. Apply various arithmetic and logical formulas.
10. Create your resume using General Templates.

COMPUTER PROGRAMMING WITH C LANGUAGE Lab

Course Code: IFT2118

Credit Units: 01

1. Write a program to swap 2 no
2. Write a program to demonstrate Greatest of 3 nos and to print the given no in ascending order.
3. Write a program to perform the arithmetic expression using switch statement.
4. Write a program to find factorial of given no using do while statement.
5. Write a program to print prime up to n no.
6. Write a program to sum of n natural no.
7. Write a program to print the product of two matrices of any order.
8. Write a program to print Fibonacci series.
9. Write a program to print the following pattern using for loop
1
2 2
3 3 3
4 4 4 4
10. Write a program to read n num of students and 5 subjects marks.
11. Write a program to find factorial of a num using 3 types of functions.
12. Write a program to convert all lower case to uppercase characters
13. Write a program to find the factorial of a number using recursion
14. WAP program to print the element of array using pointers.
15. WAP program to implement call by reference.
16. WAP program to find greatest of 'n' num using function.
17. WAP to Create , initialize and access the elements of a structure.
18. WAP program to print the elements of a structure using pointers
19. WAP program to display student information by initializing structures
20. WAP program to find total number of marks.
21. WAP program to find the total salary of employee and employee details using structure.
22. Program to write data into file and read data from file.

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

WEB TECHNOLOGIES

Course Code: IFT2217

Credit Units: 03

Course Objective:

This course is aimed to provide a fundamental understanding of web site creation. HTML is the language used for designing most basic web pages. Syllabus includes basic and advanced features of HTML. It also give an overview of XML and CSS.

Course Contents:

Module I: Introduction to HTML

History of HTML, Structure of HTML, HTML Basic: Elements, Tags and Attributes. Adding Comments, Adding Title, HTML Background: using plain color, using image, Formatting Text : Paragraph, inserting line break, Heading Style, Bold text, Italicized text, Underlined text, Teletype text, Strikeout, Superscript, Subscript, Important text, Emphasized text, Inserted text, Deleted text, Larger text, Smaller text. Working with Text: Changing font Sizes and Colors.

Creating List: Ordered List, Unordered List, Definition List, Nested List. Inserting image, Creating Hyper Text Links, Creating Image Links, Horizontal Rules, Marquee Tag. Address Tag.

Module II: Table & Frames

Tables: Creating Tables, Table Element, Adding Border, Adding Column Headings, Cellspacing and Cellpadding, Adding a Caption, Setting the table Width and Height, Add Row Headings, Aligning Cell contents, Setting Column Width, Centering a Table, Inserting Image, Rowspan, Colspan, Assigning Background Colors.

Frames: Frameset Element, Frame Element, Noframes Element, Specifying Target, Inline Frames.

Module III: Forms and validation

Forms: Introduction to Forms, Form Elements, Text Field, Password Field, Label, Check Box, Radio Button, Selection List, Text Area, Button.

Front level validations using JavaScript: Checking a Non-empty Text/Password Field, Restricting Length of Text/Password Field.

Module IV: Cascading Style Sheets

Overview of style sheets, Advantages, Different ways to use style sheet: External style sheet, Internal style sheet, Inline style sheet.

Selectors: Element selector, Id selector, Class selector, Grouping selector. Adding style to a Document, Adding Comments in CSS.

Module V: XML

Introduction to XML, XML Basics, XML Structure, XML Tags, XML Elements, XML Attributes, Adding Comments, XML Document Type Declaration: Internal DTD and External DTD. Well formed XML Documents and Valid XML Documents.

Examination Scheme:

Components	CT	A/C/Q	ATTD.	EE
Weightage	15	10	5	70

DATA & FILE STRUCTURES USING 'C' LANGUAGE

Course Code: IFT2211

Credit Units: 03

Course Objective:

This course is an introduction to the use, design, and analysis of data structures in computer programs. The very commonly used data structures like arrays, stacks, queues, lists, trees, and graphs will be discussed in detail. Sorting and hashing are important topics in the study of algorithms. They are also closely related to the design of data structures. Several algorithms to implement these techniques are included in the syllabus.

Course Contents:

Module I: Basic concepts and Array

Definition Accessing the address of a variable, Declaring and initializing pointers. Accessing a variable through its pointer. Meaning of static and dynamic memory allocation. Memory allocation functions : malloc, calloc, free and realloc.

Representation of arrays single and multi dimensional arrays. Address calculation using column and rows major ordering. Various operations on arrays, Application of arrays: matrix multi multiplication.

Module II: Stacks and Queues

Definition, Array representation of stack. Operations on stack: Infix, prefix and postfix notations. Conversion of an arithmetic expression from Infix to postfix. Evaluation of postfix expression using stacks.

Definition, Array representation of Queue. Types of queue: Simple queue, circular queue, double ended queue (deque), priority queue, operations on all types of Queues.

Module III: Linked List

Definition, Components of linked list, Representation of linked list, Advantages and Disadvantages of linked list. Types of linked list : Singly linked list, Doubly linked list, Circular linked list and circular doubly linked list. Operations on singly linked list : creation, insertion, deletion, search and display (based on the different position as specified by the user). Linked representation of Stacks & Queues.

Module IV: Trees

Definition : Tree, Binary tree, Complete binary tree, Binary search tree, Heap Tree terminology : Root, Node, Degree of a node and tree, Terminal nodes, Non terminal nodes, Siblings, Level, Edge, Path, depth, Parent node, ancestors of a node. Binary tree : Array representation of tree, Creation of binary tree. Traversal of Binary Tree: Preorder, Inorder and post order. Representation of trees and its application, Binary search tree: Insertion & deletion in BST. Height balanced (AVL) tree

Module V: Searching, sorting and complexity

Searching: Sequential and binary search, Comparison between linear and binary search. Sorting: insertion, selection, bubble, quick, merge, heap sort.

Module VI: Graphs

Graph representation: adjacency list, adjacency matrix. Types of Graphs: Directed & Undirected Graph. Traversal scheme: Depth first search, Breadth first search. Spanning tree: definition, minimal spanning tree algorithms.

Examination Scheme:

DATABASE MANAGEMENT SYSTEMS

Course Code: IFT2218

Credit Units: 03

Course Objective:

The objective of this course is to expose the students to the fundamentals & basic concepts in Data Base Management Systems. This course discusses architecture of Database Systems with concept of relational model & ER model. This course explains techniques for database design, Normalization and database recovery and protection.

Course Contents:

Module I: Introduction to DBMS

Definition of DBMS, Characteristics and Application of Database, Data Independence, DBMS Architecture, Levels, Database Administrator, File System Approach Vs DBMS Approach, Advantages of Using a DBMS, Data Models, Schemas, and Instances, Classification of DBMS.

Module II: Relational Database & ER Model

Relational System, Codd's Rule, Relational Model, Optimization, Tables and Views, Entity, Types of Entity, Weak Entity Attributes, Entity sets, Entity – Relationship Diagrams, Overview of Enhanced-Entity Relationship (EER) Model.

Module III: Relational Model Objects

Domains and Relations, Relations and predicates, Relational Data Integrity; Primary Key, Candidate Key, Foreign Key and their rules; Relational operators, Relational Algebra, Relational Calculus, SQL Language: Schema Definition, Constraints, Queries and Views.

Module IV: Database Design

Definition of Functional Dependencies, Process Of Normalization, First Normal Form, Second Normal Form, Third Normal Form, Boyce Codd Normal Form, Fourth Normal Form, Fifth Normal Form, Database design and implementation process.

Module V: Data Recovery & Protection

Introduction to Transaction Processing, Types of Failure, Database Recovery techniques: Based on Deferred Update, based on Immediate Update, Shadow Paging. Concurrency Control Techniques: Two-Phase Locking technique, Timestamp Ordering, Multiversion Technique.

Introduction to Database Security, Data Security Requirements, Protecting data within database.

Examination Scheme:

COMPUTER ORGANISATION AND ARCHITECTURE

Course Code: IFT2219

Credit Units: 03

Course Objective:

The student will develop an understanding of the underlying operation of a modern digital computer, identify and understand the various "building blocks" from which a modern computer is constructed. The student will learn to develop simple assembly language programs and understand the underlying operations of more complex programs using Intel's 8085 Microprocessor.

Course Contents:

Module I: General Computer Architecture

Block Diagram of typical Computer, Memory Section, Input/Output Section, CPU, Registers, Arithmetic Unit, Instruction handling Areas, Stacks

Register Transfer Language and Micro operations: Register Transfer, Bus and Memory Transfer, Arithmetic Micro operations(Binary Adder, Binary Adder-subtractor, Binary incrementer, Arithmetic Circuit), Logic Micro operations, Shift Micro operations, Arithmetic Logic Shift Unit

Module II: Basic Computer Organization and Design

Instruction Codes, stored program organization computer registers, common bus system, Timing and Control, Instruction Cycle, Memory Reference Instructions, Input Output Instructions and Interrupts

Module III: Central Processing Unit

General Register Organization, Stack Organization, Instruction Formats, Addressing Modes, RISC, CISC
Pipelining and Vector Processing: Parallel Processing, Pipelining(General considerations), Arithmetic Pipeline, Instruction Pipeline, Vector Processing, Array Processors

Module IV: Input Output Organization

I/O Interface, Asynchronous Data Transfer, Modes of Transfer, Priority Interrupt, DMA, IOP, Serial Communication

Memory Organization: Associative Memory(Hardware organization, Match logic), Cache Memory(associative mapping, Direct Mapping, Set Associative Mapping), Virtual Memory

Module V: Introduction to Microprocessor

Machine Language, Assembly Language, Assembler, High Level Language, Compiler, Interpreter, Internal Architecture 8085.

Examination Scheme:

Components	CT1	A/C/Q	Attd	EE
Weightage (%)	15	10	5	70

DATA & FILE STRUCTURES USING 'C' LANGUAGE LAB

Course Code: IFT2216

Credit Units: 01

Course Contents:

1. Write a program to perform the following operations on two given matrices: Addition and Multiplication
2. Write a program to insert & delete an element from the k^{th} element of an array
3. Write a program to search an element in a given array using linear search.
4. Write a program to search an element in a given array using binary search.
5. Write a program to sort the elements of an array using Bubble Sort.
6. Write a program to sort the elements of an array using Selection Sort.
7. Write a program to sort the elements of an array using Insertion Sort.
8. Write a program using the concept of iteration and recursion to sort the elements of an array using Quick Sort.
9. Write a program to implement a Stack, show overflow and underflow while performing push and pop operations respectively.
10. Write a program to implement a queue and show the following: insertion and deletion
11. Write a program to implement Linear Linked List and show the following operations: creation, display, insertion, deletion and searching.
12. Write a program to implement Doubly Linked List and show the following operations: creation, display, insertion, deletion and searching.
13. Write a program to construct a Binary Search tree and perform the following operations: Insertion and Deletion of a node.
14. Write a program to implement Depth First Search using linked representation of graph.
15. Write a program to implement Breadth First Search using linked representation of graph.

Examination Scheme:

WEB TECHNOLOGIES LAB

Course Code: IFT2220

Credit Units: 01

Course Contents:

Design a webpage to show a basic structure of html document using tags like head, title and body.
Design a webpage to show various tags used for formatting text.
Design a webpage to show usage of various heading tags, font tag and background color.
Design a webpage to insert image in the background.
Design a webpage to insert image with alignment.
Design a webpage to show the use of link(Text & Image).
Design a webpage to show scrolling text and scrolling image using marquee tag.
Design a webpage to show usage of ordered list.
Design a webpage to show usage of unordered list.
Design a webpage to show usage of definition list.
Design a webpage to show usage of nested list.
Design a table with 5 rows and 5 columns.
Design a table using rowspan, colspan, cell padding and cell spacing.
Divide a webpage into 3 blocks using frame tag(row wise) .
Divide a webpage into 3 blocks using frame tag(column wise) .
Design a log-in form to show various elements of form.

Examination Scheme:

Examination Scheme:

DATABASE MANAGEMENT SYSTEM LAB

Course Code: IFT2221

Credit Units: 01

1. Given the table STUDENT:

Student No.	Class	Name	GAME	Grade1	SUPW	Grade2
10	7	Sameer	Cricket	B	Photography	A
11	8	Sujit	Tennis	A	Gardening	C
12	7	Kamal	Swimming	B	Photography	B
13	7	Veena	Tennis	C	Cooking	A
14	9	Archana	Basket Ball	A	Literature	A
15	10	Arpit	Cricket	A	Gardening	C

- (i) Display the names of the students who are getting a grade C in either GAME or SUPW.
- (ii) Display the number of students getting grade A in cricket.
- (iii) Display the different games offered in the school.
- (iv) Display the SUPW taken by the students, whose name starts with 'A'.
- (v) Add a new column named 'Marks'.
- (vi) Assign a value 200 for Marks for all those who are getting grade B or above in GAME.
- (vii) Arrange the whole table in the alphabetical order to SUPW.

2. Given the table SPORTS:

Student No.	Class	Name	GAME1	Grade1	GAME2	Grade2
10	7	Sameer	Cricket	B	Swimming	A
11	8	Sujit	Tennis	A	Skating	C
12	7	Kamal	Swimming	B	Football	B
13	7	Veena	Tennis	C	Tennis	A
14	9	Archana	Basket Ball	A	Cricket	A
15	10	Arpit	Cricket	A	Athletics	C

- (i) Display the names of the students who are getting a grade C in either GAME1 or GAME2.
- (ii) Display the number of students getting grade A in cricket.
- (iii) Display the names of the students who have same game for both GAME1 and GAME2.
- (iv) Display the games taken by the students, whose name starts with 'A'.
- (v) Add a new column named 'Marks'.
- (vi) Assign a value 200 for Marks for all those who are getting grade B or above in GAME.
- (vii) Arrange the whole table in the alphabetical order of Name.

3. Given the table STUDENT:

Student No.	Name	Stipend	Stream	AvgMarks	Grade	Class
1	Karan	400.00	Medical	78.5	B	12B
2	Divakar	450.00	Commerce	89.2	A	11C
3	Divya	300.00	Commerce	68.6	C	12C
4	Arun	350.00	Humanities	73.1	B	12C
5	Sabina	500.00	Nonmedical	90.6	A	11A
6	John	400.00	Medical	75.4	B	12B
7	Robert	250.00	Humaities	64.4	C	11A
8	Rubina	450.00	Nonmedical	88.5	A	12A
9	Vikas	500.00	Nonmedical	92.0	A	12A
10	Mohan	300.00	Commerce	67.5	C	12C

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- (i) Select all the Nonmedical stream students from STUDENT.
- (ii) List the names of those students who are in class 12 sorted by Stipend.
- (iii) List all students sorted by AvgMarks in descending order.
- (iv) Display a report listing Name, Stipend, Stream, and amount of Stipend received in a year assuming that the stipend is paid every month.
- (v) Count the number of students with Grade 'A'.
- (vi) Insert a new student in the STUDENT table and fill all the columns with some values.
- (vii) Give the output of the following SQL statements:
 - (a) Select MIN(AvgMarks) from STUDENT where AvgMarks > 75;
 - (b) Select SUM(Stipend) from STUDENT where Grade = 'B';
 - (c) Select AVG(Stipend) from STUDENT where Class = '12A';
 - (d) Select COUNT(DISTINCT);

4. Write SQL statement to create EMPLOYEE relation which contain EmpNo, Name, Skill, PayRate.

5. Create a table with the under-mentioned structure (Table name is Emp)

EmpNo	NUMBER(4)
DeptNo	NUMBER(2)
EmpName	CHAR(10)
Job	CHAR(10)
Manager	NUMBER(4)
HireDate	DATE
Salary	NUMBER(7, 2)
Commission	NUMBER (7, 2)

6. Find out the number of employees having manager as job.

7. Display only the jobs with maximum salary greater than or equal to 3000.

8. Find all those employees whose job does not start with 'M'.

9. List the minimum and maximum salary of each job type.

10. Find all the employees who have no manager.

11. Create a table with the under-mentioned structure (Table name is Dept)

DeptNo	NUMBER(2)
DeptName	CHAR(12)
Location	CHAR(12)

12. Create a table with the under-mentioned structure (Table name is PROJECT)

ProjId	NUMBER(4)
ProjDesig	CHAR(20)
ProjStartDT	DATE
ProjEndDT	DATE
BudgetAmount	NUMBER(7)
MaxNoStaff	NUMBER(2)

13. Create a table with the under-mentioned structure (Table name is SalGrade)

LowSal	NUMBER(7, 2)
HighSal	NUMBER(7, 2)
Grade	NUMBER(2)

Where LowSal is the lowest salary limit in the grade and HighSal is the highest salary limit in the grade

14. Write SQL statements to list all employees in the following format:

```
EMPLOYEE WORKS IN DEPARTMENT Dept. No
SMITH WORKS IN DEPARTMENT          20
SUDHIR WORKS IN DEPARTMENT          20
RAJWORKS IN DEPARTMENT              10
SMITHS WORKS IN DEPARTMENT          30
SANTOSH WORKS IN DEPARTMENT         30
```

15. Given the table MOV:

No.	Title	Type	Rating	Stars	Qty	Price
1	Gone with the Wind	Drama	G	Gable	4	39.95
2	Friday the 13 th	Horror	R	Jason	2	69.95
3	Top Gun	Drama	PG	Cruise	7	49.95
4	Splash	Comedy	PG13	Hanks	3	29.95
5	Independence Day	Drama	R	Turner	3	19.95
6	Risky Business	Comedy	R	Cruise	2	44.95
7	Cocoon	Scifi	PG	Ameche	2	31.95
8	Crocodile Dundee	Comedy	PG13	Harris	2	69.95
9	101 Dalmations	Comedy	G		3	59.95
10	Tootsie	Comedy	PG	Hoffman	1	29.95

Find the total value of the movie cassettes available in the library.

Display a list of all movies with Price over 20 and sorted by Price.

Display all the movies sorted by Qty in descending order.

Display a report listing a movie number, current value and replacement value for each movie in the above table. Calculate the replacement value for all movies as Qty * Price * 1.15.

Count the number of movies where rating is not 'G'.

Insert a new movie in the MOV table. Fill all the columns with some values.

Give the output of the following SQL statements:

Select AVG (Price) from MOV where Price < 30;

Select MAX (Price) from MOV where Price > 30;

Select SUM (Price * Qty) from MOV where Qty < 4;

Select COUNT (DISTINCT);

16. Write a PL/SQL program for:

- Printing the Fibonacci series from 1 to 50.
- Printing the smallest number among any three numbers.
- Printing the table of any specific number entered.

17. Create a trigger named "Client_Master" which keeps track of records deleted or updated when such operations are carried out. Records in this table are inserted into table "Audit" when database trigger fires due to an update or delete statement fired on this table "Client".

Table: Client

DISCRETE MATHEMATICAL STRUCTURES WITH APPLICATIONS TO CS

Course Code: IFT2317

Credit Units: 03

Course Objective:

The Objective of this course is to provide the fundamentals and the concepts of Discrete Mathematical Structures with Applications to Computer Sciences including Mathematical Logic, Boolean Algebra and its Applications, Switching circuit & Logic Gates, Graphs and Trees. Important theorems with constructive proofs, real life problems & graph theoretic algorithms to be covered with an aim of helping the students to understand the computational and algorithmic aspects of Mathematical Logic, Boolean Algebra, Graphs and Trees in the field of Computer sciences and its applications.

Course Contents:

Module I: Introduction

Permutation and Combination : Counting Techniques.

Relation: Type and compositions of relations, Pictorial representation of relations, closures of relations, Composite Relations, Equivalence relations.

Function: Types, Composition of function, Mathematical Induction, Discrete Numeric Function and Generating Functions

Module II: Mathematical Logic

Proposition, Propositional Calculus- Propositional Variables and Compound Propositions, Basic Logical Operations: -Conjunction, Disjunction, Negation, Conditional, Bi conditional. Compound Statements, Equivalence, Duality, Algebra of Statements, Valid and Invalid, Arguments, Tautologies, Contradiction, Contingency , Boolean Functions – Disjunctive Normal Form, Conjunctive Normal Form.

Duality Principle.

Module III: Graphs

Basic Terminology of Graphs , Handshaking Lemma , Sub graphs, and Union of Graphs , Connected graph, Disconnected graph, Null graph, Incidence matrix, Adjacency matrix, Degree of a graph, Directed Graph, Walk, Path, Circuit, Wheel, Eulerian graph, Hamiltonian graph, Planar graph , Kuratowski's graphs-I and II , Coloring , Bipartite Graph , Cyclic Graph.

Module IV: Trees

Tree, Properties of Tree, Spanning Tree, Fundamental Circuit, Cut-Set, Cut-Vertices. Binary Tree , Rooted Trees, Path length, Minimum Spanning Trees, Huffman Encoding.

Examination Scheme:

Components	CT1	A/C/Q	Attd	EE
Weightage (%)	15	10	5	70

MANAGEMENT INFORMATION SYSTEM

Course Code: IFT2318

Credit Units: 03

Course Objective:

This course will provide the students with an understanding of the principles of information systems technology and its impact on the strategic goals and direction of the organization. They will learn how MIS concepts are applied in business and how information systems can provide solutions to the entire organization.

Course Contents:

Module I: Introduction to MIS and Fundamentals of Information

Background, meaning, nature, characteristics, myths, requirements, problems and solutions, benefits, limitations, significance and role of management information system, Concept of information, characteristics of information, value of information, source of information, type of information, process of management.

Module II: Conceptual Framework of Information System

Concept of system, definition of system, characteristics of system, system stake holder, types of system, evolution of information system, approaches to management information system, A framework for MIS architecture, components of MIS, classification of information system.

Module III: Concept of Decision Making and MIS

Introduction, Decision Making and managers, Classification of managerial decision, Model for decision making process, MIS and Decision Making, Concept of balance, efficiency and effectiveness.

Module IV: Development, Implementation, Evaluation and Maintenance of MIS

Principles for information system development, MIS development process, methods of implementing of MIS, evaluation of MIS, structure for evaluation of MIS, maintenance, problems related to maintenance and measure to overcome these problems.

Module V: Control and Security Issues in MIS

Meaning of control, need of control, types of control, security hazards, goal of security control against hazards, security techniques.

Examination Scheme:

Components	CT1	A/C/Q	Attd	EE
Weightage (%)	15	10	5	70

OBJECT ORIENTED PROGRAMMING WITH C++

Course Code: IFT2312

Credit Units: 03

Course Objective:

C++ is one of the most widely used programming languages for solving problems. The objective of this course is to provide object oriented programming fundamentals using C++. Topics to be covered include fundamentals of syntax & semantics of C++, loops & decisions, functions, classes and structures and features of classes such as overloading and inheritance, files, streams, pointers etc.

Course Contents:

Module I: Overview of C++

What is Object Oriented Programming, Characteristics of OOP, Difference between C and C++. Basics:- Input/Output in C++ using cin/cout, Preprocessor Directives, Data Types-Integer, Float, character, Enumerations, library functions, comments, storage classes, manipulators, operators in C++, scope resolution operator, memory management operator. arrays and strings.

Module II: Classes and objects

Functions: Simple functions, passing arguments to functions, returning values from functions, reference arguments, returning by reference, Overloaded functions, Inline functions, friend function, Structures and class.

Classes and objects: A simple class, C++ objects as physical objects, objects as function arguments, returning objects from functions, static class data, array as class data member, array of objects.

Module III: Inheritance

Inheritance, Types of Inheritance, access modes – public, private & protected, Abstract Classes, Ambiguity resolution using scope resolution operator and Virtual base class, Constructors, Types of constructors, Destructors.

Module IV: Polymorphism

Polymorphism, Type of Polymorphism – Compile time and runtime, Function Overloading, Operator Overloading (Unary and Binary) Polymorphism by parameter, Pointer to objects, this pointer, Virtual Functions, pure virtual functions.

Module V: Files and Exception Handling and I/O

Files and Streams: streams, string I/O, character I/O, file pointer, error handling, command line arguments.

formatted and Unformatted Input output, Introduction of Exception handling, Try Catch block, Rethrowing an Exception.

Examination Scheme:

Components	CT1	A/C/Q	Attd	EE
Weightage (%)	15	10	5	70

OPERATING SYSTEMS

Course Code: IFT2314

Credit Units: 03

Course Objective:

To study and apply concepts relating to operating systems, such as concurrency and control of asynchronous processes, deadlocks, memory management, processor and disk scheduling, parallel processing, and file system organization and Demonstrate an understanding of the differences between processes and threads, the different process or thread synchronization methods and the, the different memory management techniques used in Operating Systems, the different I/O management techniques used in Operating Systems, the tradeoffs in design and implementation concepts used in the development of Operating Systems.

Course Contents:

Module I :Introduction and System Structure

What is an operating system, History of OS, OS concepts, Types of OS, OS Structure, OS Operations. System calls, Types of System Calls, System Programs, OS Structure, Virtual Machines, System Boot

Module II:Process Management

Process Concept, Process Scheduling, Scheduling Criteria, Scheduling Algorithms, Overview of Thread Scheduling and Multiprocessor scheduling, Operations on Processes, Interprocess communication with example. Client-server Communication, Overview of Multithreaded programming models

Module III:Process Coordination

Overview of Process Synchronization, Critical Section Problem, Semaphores, Classic problems. Deadlock- Prevention, Avoidance, Detection, Recovery, Algorithms

Module IV:Memory Management

Memory Management Strategies-Introduction, Swapping, Contiguous Memory Allocation, Paging, Segmentation, Virtual Memory Management- Demand Paging, Thrashing, Page Replacement

Module V :Storage Management

Overview of File System, Access Methods, Directory and Disk Structures, File Sharing, Protection, Disk Scheduling, Disk Management, I/O hardware

Module VI:Protection and Security

Goals and Principles of Protection, Access Matrix, Security Problem, Program Threats, System and Network Threats, Overview of Cryptography, Overview of User Authentication and Security Defense.

FUNDAMENTALS OF SOFTWARE ENGINEERING

Course Code: IFT2319

Credit Units : 03

Course Objective:

The purpose of this course is to acquaint students with the concepts and methods available for software development in industrial environments. Students will be exposed to a variety of topics such as design notations, costing techniques, and testing methods, as well as to the tools which are available to support software specification, design, testing, and maintenance.

Course Contents:

Module I: Software Development Life Cycle

Evolution of Software Engineering, Software Problems, Issues Involved in Software Engineering, Fundamental Qualities of a Software Product, Approaches to Software Engineering, Planning the development Process, Development/Product Life-Cycle Model, Kinds of Software Life-Cycle Model.

Module II: Project Management

Project Management Concepts, Project Management Activities, Size Metrics. Software Requirement analysis and Specification, Cost Models.

Module III: System Design

Design Objectives, Design Principles, Effective Modular Design (Functional Independence, Coupling, and Cohesion), Design Tools and Techniques, Prototyping, Structured Programming.

Module IV: Coding

Programming Practices, Verification, Monitoring and Control.

Module V: Software Testing

Testing Fundamentals, Test case design, Functional Testing, Structural Testing, Test Plan, Activities during testing, Unit System, Integration Testing, Software Maintenance.

Module VI: Software Reliability

Concept of Software Reliability, Software Repair and Availability, Software Errors, Failure and Faults.

Examination Scheme:

Components	CT1	A/C/Q	Attd	EE
Weightage (%)	15	10	5	70

OBJECT ORIENTED PROGRAMMING WITH C++ LAB

Course Code: IFT2315

Credit Units: 01

Course Contents:

1. WAP to calculate factorial of a given number n.
2. WAP to do the following:
 - a. Generate the following menu:
 1. Add two numbers.
 2. Subtract two numbers.
 3. Multiply two numbers.
 4. Divide two numbers.
 5. Exit.
 - b. Ask the user to input two integers and then input a choice from the menu. Perform all the arithmetic operations which have been offered by the menu. Checks for errors caused due to inappropriate entry by user and output a statement accordingly.
3. WAP to read a set of numbers in an array & to find the largest of them.
4. WAP to exchange contents of two variables using call by value.
5. WAP to exchange contents of two variables using call by reference.
6. Calculate area of different geometrical figures (circle, rectangle, square, triangle) using function overloading.
7. WAP to add two complex numbers using friend function.
8. WAP to maintain the student record which contains Roll number, Name, Marks1, Marks2, Marks3 as data member and getdata(), display() and setdata() as member functions.
9. WAP to increment the employee salaries on the basis of there designation (Manager-5000, General Manager-10000, CEO-20000, worker-2000). Use employee name, id, designation and salary as data member and inc_sal as member function (Use array of object).
10. Write a class bank, containing data member: Name of Depositor, A/c type, Type of A/c, Balance amount. Member function: To assign initial value, To deposit an amount, to withdraw an amount after checking the balance (which should be greater than Rs. 500) , To display name & balance.
11. WAP to define nested class 'student_info' which contains data members such as name, roll number and sex and also consists of one more class 'date' ,whose data members are day, month and year. The data is to be read from the keyboard & displayed on the screen.
12. WAP to generate a series of Fibonacci numbers using copy constructor, where it is defined outside the class using scope resolution operator.
13. Write a class string to compare two strings, overload (==) operator.
14. Write a class to concatenate two strings, overload (+) operator.
15. Create a class item, having two data members x & y, overload '-' (unary operator) to change the sign of x and y.
16. Create a class Employee. Derive 3 classes from this class namely, Programmer, Analyst & Project Leader. Take attributes and operations on your own. WAP to implement this with array of pointers.
17. Create two classes namely Employee and Qualification. Using multiple inheritance derive two classes Scientist and Manager. Take suitable attributes & operations. WAP to implement this class hierarchy.
18. WAP to read data from keyboard & write it to the file. After writing is completed, the file is closed. The program again opens the same file and reads it.
19. WAP to creat a class student containing Name & class as parameters, create another class marks which inherit student class taking own data members as mark1 & mark2 & show result.

OPERATING SYSTEM LAB

Course Code: IFT2320

Credit Units: 01

Unix Programmes

1. Write a Shell Script that takes a search string and filename from the terminal & displays the results.
2. Write a Shell Script that takes pattern and filename as command line arguments and displays the results appropriately i.e. pattern found/pattern not found.
3. Write a Shell Script that accepts only three arguments from the command line. The first argument is the pattern string, the second argument is the filename in which the pattern is to be searched and the third argument is the filename in which the result is to be stored.
4. Write a Shell Script which creates the following menu and prompts for choice from user and runs the chosen command.

Today's date
Process of user
List of files
Quit to UNIX

5. Write a Shell Script that computes the factorial of a given number
6. Write a Shell Script that changes the extension of a group of files from txt to doc
7. Write a Shell Script that accepts both filename and a set of patterns as positional parameters to a script.
8. Write a Shell Script which will redirect the output of the date command without the time into a file.
9. Write a Shell Script (using while loop) to execute endlessly (until terminated by user) a loop which displays contents of current directory, disk space status, sleep for 30 seconds and display the users currently logged in on the screen.
10. Write a Shell Script that receives two filenames as arguments. It should check whether content of the two files is same or not. If they are same, second file should be deleted.
11. If a number is input through the keyboard, WASS to calculate sum of its digits.
12. Write a Shell Script which takes a command line argument of Kms and by default converts that number into meters. Also provide options to convert km to dm and km to cm.
13. Write a Shell Script using for loop, which displays the message "Welcome to the UNIX System"
14. Write a Shell Script to change the filename of all files in a directory from lower-case to upper-case.
15. Write a Shell Script that examines each file in the current directory. Files whose names end in **old** are moved to a directory named **old files** and files whose names end in **.c** are moved to directory named **cprograms**.
16. Write a Shell Script which searches all files in the given directory (to be taken as command line argument) for the file having the title (to be taken as command line argument), as the first line in the file.
 - a) Display the contents of the searched file.
 - b) In the end, print the file is ###, where
is small-sized if total no. of lines is <50
is medium-sized if total no. of lines between 50&100
is large-sized.
17. Write a shell script which reports names and sizes of all files in a directory (directory would be supplied as an argument to the shell script) whose size is exceeding 1000 bytes. The filenames should be printed in descending order of their sizes. The total number of such files should also be reported.
18. Write a shell script to calculate and print the first **m** Fibonacci numbers.
19. Write a shell script to compute the **GCD** and **LCM** of two numbers.
20. Write a shell script to generate all combinations of 1, 2 and 3 using **for loop**.

SUMMER INTERNSHIP EVALUATION-I

Course Code: IFT2335

Credit Units: 03

Objective:

There are certain phases of every Intern's professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship program can best be described as an attempt to institutionalize efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal classroom situations. These attributes are intellectual ability, professional judgment and decision-making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility etc.

Guidelines

In order to achieve these objectives:

- **Each student will be allotted a supervisor** for proper guidance.
- **Student will first submit details of company, external guide, project title to coordinator/supervisor as per given schedule.**
- For internal assessment purpose, students will submit an industry feedback and a progress report.
- Student will maintain a file (**Internship File/Project Report**) which he/she will submit after completion of internship. **Further, coordinator will provide NTCC project guidelines and sample to help in preparation of file.** The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development. The File will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

The **layout guidelines** for the Project Report

1. File should be in the following specification

- A4 size paper
- Spiral Binding
- **Font**

For normal text Font Type and Size must be- Times New Roman, 12 pt. The minimum font size of materials within a table or a figure can be 10 point.

- **Margins**

A margin of 3.75 cm (1½ inch) is to be given on the binding edge while on the other sides it is to be 2.5 cm (1 inch). The text of the report, including headings, figures, tables, and notes, but excluding page numbers, must be accommodated within the page area.

- **Line Spacing**

The line spacing in the main text must be between one-and-a-half (1.5). Single line spacing should be given for figure captions, table titles, figure legends, and footnotes. Equations, tables, figures, and quotations should be set off from the main text with adequate space (not less than the normal line spacing adopted for the main text). Two consecutive paragraphs should be separated by a spacing which must be larger than the line spacing adopted for the text.

Prof. (Dr.) Anshu
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Each sketch, drawing, graph and photograph should have a figure number and title below the figure etc. Numbering should be sequential, chapter wise. For instance, if there are 24 figures chapter 3 spread over all of its sections the figure numbers run from Figure 3.1 through Figure 3.24. In figures experimental data should typically be represented by centered symbols, and theoretical data by continuous curves.

Each table should have a table number and caption above the table. Numbering should be sequential, chapter wise, as in the case of Figure numbers. For instance, if there are 18 tables in chapter 3 the table numbers run from Figure 3.1 through Figure 3.18.

Make sure that figures and tables are complete in other respects such as legends, references (if any) and coordinate labels with units. Each figure and table must be explicitly referred to in the text and located where its first reference occurs, preferably after the reference.

- **Drawings**

All engineering drawings must conform to relevant Standards and should include a title block. If drawings are large they should be included at the back of the report in a separate pocket. In case drawings are made using CAD packages, a CD ROM should be included which contains all the files and details of the packages used.

- **Equations**

The numbering of equations should be sequential, chapter wise. Numbered equations must be explicitly referred to in the text.

2. Report Size: The maximum number of pages of the Report should be preferably between 50-80 pages.

3. Report Layout: The report should contain the following components

Front Page
Declaration
Student Certificate (University)
Certificate (Company)
Acknowledgement
Abstract
Contents
List of Figures
List of Tables
Company Profile (optional)
Chapters
Appendices(optional)
References / Bibliography

The above components are described below:

1. **The Title Page**-- Format will be given by coordinator/supervisor.

2. **Declaration by the Students**--This is page number (i), the beginning of the small case Roman numeral page numbers. The student has to give a declaration to the effect that the data used for the work, the work depicted in the report, and the written material contained in the report are not copied from others and that due permission has been taken from, and due credit has been given to, the sources whenever they are used.

3. **Certificate**--This is page number (ii). It is given by the Institute. The certificate will be signed by the Faculty Supervisor(s) before the viva-voce after verifying the format and by the Head of the Department after review with the Supervisor(s).

4. **Company Certificate**: This is a certificate, which the company gives to the students.

5. **Contents**--This is page number (iii). The table of Contents should be titled just Contents (not Table of Contents). Try to fit it into one or two pages.

6. **Acknowledgement**--This is page number (iv). Keep this brief and avoid using informal language. This page must be signed by the candidate.

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

7. Abstract and Keywords-This is page number (v). The abstract (preferably one page) should contain the context/relevance of the problem at hand, a description of what was done and a gist of the significant observations/results.

The keywords (maximum 6) are a hint that what is contained in the report.

8. Company Profile: A Company Profile corresponds to a file with company-specific data. Company data can be stored there and included in a booking when needed.

9. Chapters—Introduction, Literature Review/Background Study etc. as given by coordinator/supervisor.

10. References / Bibliography --This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

ASSESSMENT OF THE INTERNSHIP FILE

Continuous Internal Assessment consists of topic relevance, progress report and industry feedback on company letterhead. Final Assessment includes viva, presentation, execution and report marks.

Examination Scheme:

Components	IF	PR	R	E	V	FP
Weightage (%)	20	20	15	15	15	15

V – Viva, IF – Industry Feedback, FP – Final Presentation, R – Report, PR-Progress Report, E-Execution

MULTIMEDIA AND ITS APPLICATIONS

Course Code: IFT2424

Credit Units: 04

Course Objective:

The objective of the course is to give an overview of different multimedia technologies like audio and video including multimedia devices. The course also includes some practical sessions on these technologies.

Course Contents:

Module I: Introduction

Introduction: Objectives – History of Multimedia – Its market – Content copyright – Resources for multimedia developers – Types of produces – Evaluation – Hardware Architecture – OS and Software – Multimedia Architecture – Software library – Drivers.

Module II: Digital Audio Representation and Processing

Uses of audio in computer applications, digital representation of sound, transmission of digital sound, digital audio signal processing, digital audio and the computer.

Module III: Video Technology

Raster scanning principles, sensors for T.V. cameras, color fundamentals, color video, video equipment, worldwide television standards.

Module IV: Digital Video and Image Compression

Evaluating a compression system, redundancy and visibility, video compression techniques, the JPEG image compression standards, the MPEG motion video compression standard, DVI technologies, Time Based Media Representation and Delivery.

Module V: Multimedia Devices, Presentation Services and the User Interface

Introduction .Multimedia services and Window systems, client control of continuous media, device control, temporal co ordination and composition, hyper application.

Module VI: Application of Multimedia

Intelligent multimedia system, desktop virtual reality, multimedia conferencing.

Examination Scheme:

Components	CT1	PR.	ATTD.	EE
Weightage (%)	10	15	5	70

COMPUTER NETWORKS

Course Code: IFT2418

Credit Units: 03

Course Objective:

The objective of the course is to provide introductory concepts in Data Communications such as Signaling, Encoding, Modulation, Error Detection & Correction. The course is also aimed at providing basic understanding of Computer networks starting with OSI Reference Model, Protocols at different layers with special emphasis on IP, TCP & UDP and Routing algorithms.

Course Contents:

Module I

Introduction to Data Communication, Networks-protocols, advantages, disadvantages & applications, Line Configuration, topology, Transmission mode, Classification of networks. OSI Model, functionality of layers in OSI model, Protocols at each layer, encapsulation, peer-to-peer communication.

Module II:

Parallel & Serial Transmissions, Analog & Digital Signals, Periodic & Aperiodic Signals, Data encoding techniques-Digital data-digital signals, Digital data-Analog signals, Analog data- Digital signals, Analog data- Analog signals, Multiplexing.

Module III

Transmission Media-Twisted Pair Cable, Coaxial Cable, Fiber-Optics Cable, Radio frequency Allocation, Terrestrial Microwave, Infrared rays, Satellite Communication, Cellular Telephony. Introduction to ISDN.

Module IV

Framing, Switching, Types of Errors, Error Detection & Correction (VRC, LRC, CRC, Checksum, Hamming Code), Flow Control (Stop-and-wait & Sliding Window), Error Control (Stop & Wait ARQ, Sliding Window ARQ using Go-back n method and Selective-Reject), IEEE Standards-802.3, Token Bus (802.4), Token Ring (802.5), FDDI.

Module IV

Routing process, Routing Algorithms-Shortest Path Routing, Flooding, Distance Vector Routing, Link State Routing, Addressing-IPv4, IPv6, Internetworking, Connection-oriented Vs Connectionless protocols- TCP,UDP.

Examination Scheme:

PRINCIPLES OF MANAGEMENT

Course Code: IFT2419

Credit Units : 03

Course Objective:

- To provide a basis of understanding to the students with reference to working of Business Organizations through the process of Management.
- To inculcate the managerial skills of planning, organizing, and controlling and to teach how it can be executed in a variety of circumstances and apply concepts of strategic and tactical organizational planning.
- On completion of the syllabi the student will understand the basic principles of management - will acquaint himself with management process, functions and principles. Student will also get the idea about new developments in management.

Course Contents:

Module I: NATURE OF MANAGEMENT

Meaning, Definition, its nature purpose, importance & Functions, Management as Art, Science & Profession- Management as social System Concepts of management-Administration-Organization, Levels of Management - Concept, Significance, Role & Skills, Concepts of PODSCORB, Managerial Grid.

Evolution of Management thoughts : Contribution of F.W Taylor, Henry Fayol and Contingency Approach.

Module II: PLANNING AND DECISION MAKING

Planning : Meaning, Importance, Elements, Process, Types and levels, Limitations

Decision Making: Meaning, Importance, Process, Techniques of Decision Making

Module III: ORGANISING

Organizing: Concepts, Structure (Formal & Informal, Line & Staff and Matrix), Meaning, Advantages and Limitations. Departmentation: Meaning, Basis and Significance, Span of Control: Meaning, Graicunas Theory, Factors affecting span of Control, Centralization vs Decentralization, Delegation: Authority & Responsibility relationship

Module IV: DIRECTING , LEADERSHIP, CO-ORDINATION AND CONTROLLING

Directing: Meaning and Process,

Leadership: Meaning, Styles and Qualities of Good Leader, Co-Ordination as an Essence of Management,

Controlling: Meaning, Process and Techniques

Module V: Recent Trends

Challenges in recent Trends : Green Management, CSR, Increasing Concern for the Environment, Greater Personalization and Customization, Faster Pace of Innovation, Increasing Complexity, Increasing Competition for Talent

Solution Trends : Becoming More Connected, Becoming More Global, Becoming More Mobile Rise of the Creative Class, Increasing Collaboration

Examination Scheme:

Components	CT1	A/C/Q	Attd	EE

COMPUTER NETWORKS LAB

Course Code: IFT2420

Credit Units: 01

Course Objective:

The course familiarizes with the equipment applications and protocols installed in enterprise networks, with a focus on switched networks, IP Telephony requirements, and security. It also introduces advanced routing protocols such as Enhanced Interior Gateway Routing Protocol (EIGRP) and Open Shortest Path First (OSPF) Protocol. Hands-on exercises include configuration, installation, and troubleshooting.

Course Contents:

1. Drawing an Enterprise Network for Amity University showing its different campuses across the country.
2. Configuring all the devices (PCs, Servers, Switches) to create a LAN within campuses of the Enterprise Network.
3. Configuring Virtual LANs (VLANs) in an Enterprise Network.
4. Configuring Trunking and Inter-VLAN Routing in an Enterprise Network.
5. Implementing RIP (Routing Information Protocol) to enable communication between different LANs.
6. Implementing OSPF (Open Shortest Path First) to enable communication between different LANs.
7. Implement EIGRP (Interior Routing Protocol) to establish connectivity within domestic campuses of the Enterprise Network.
8. Implement BGP (Border Gateway Protocol) and Redistribution to establish connectivity between different campuses of the Enterprise Network.
9. Configuring WAN connectivity using protocols-HDLC and PPP.
10. Implementing Frame-Relay to configure WAN service provider cloud.
11. Configuring Standard and Extended ACLs on a Router.
12. Troubleshooting Switching, Routing and ACL issues.

ACCOUNTING AND FINANCIAL MANAGEMENT

Course Code: IFT2518

Credit Units : 03

Course Objective:

The objective of this course is to provide to students of IFT and IMCA with an introduction to fundamentals, concepts and principles / practices of Accounting and Financial Management. The topics covered including basic accounting, preparation of Trial Balance, Profit and Loss Account and Balance Sheet Account as applied to Banking including Bank Reconciliation Statement, Definition and Principles of Working Capital Management, Capital Budgeting and Analysis of Financial Statements.

Course Contents:

Module I: Accounting

Definition of Accounting, Its Objectives, Advantages and Limitation. Principles, Concepts and Conventions of Accounting, Double entry system, Recording of Transactions in subsidiary Books – Journal, Cash Book, sales Book, Purchase Book and Return Book. Posting into Ledger accounts.

Module II: Final Accounts

Preparation of Trial balance, Final Accounts including adjustments Trading account, Profit and Loss account, Balance Sheet.

Module III: Banking

Opening of different types of Banks Accounts, Cheque Book, Pass Book, Deposit slips, Bank Reconciliation Statements.

Module IV: Working Capital Management

Definition of working Capital, Types of Working Capital, Determinants of working Capital, Cash Management and Receivables Management.

Capital Budgeting: Principles and Techniques.

Module V: Analysis of Financial statements

Ratio Analysis: Meaning, Advantages, limitations, types of ratios and their usefulness Statements of charges in the Financial Position on Cash basis.

CORE JAVA PROGRAMMING

Course Code: IFT2510

Credit Units: 03

Course Objective:

The objective of this course is to give proficiency in developing applications and applets in Java, in-depth knowledge of object oriented concepts, developing GUI applications in Java, creation of packages, Event Handling, Layout Manager, SWING and String handling in Java

Course Contents:

Module I: Introduction to Java Programming

Concepts of OOP, Features of Java, How Java is different from C++, Data types, Control Statements, identifiers, arrays, operators. Variables, Applications and Applets, Classes and methods, Constructor, method overloading, Inheritance: method overriding, Abstract classes, Final classes, String classess

Module II: Java Packages and interfaces

Package creation, Packages deployment, using packages, Interfaces, Exception Handling and Multithreading

Module III: AWT and Event Handling

Introduction to AWT, Layout Manager, Event handling Mechanism, Event Model, Event Classes, Sources of Events, Event Listener Interfaces, AWT: Working with Windows, AWT Controls, Html basic tags, Applet Classes,

Module IV: Java Swings

Swing classes & controls. Advantages of Swing over AWT, event handling

BASICS OF COMPUTER GRAPHICS

Course Code: IFT2519

Credit Units: 03

Course Objective:

The objective of this course is to present the basic principles for the design, use and understanding of computer graphics systems. Both hardware and software components of graphics systems are discussed here. This course also teaches the students about different algorithms for creating and manipulating graphics displays. Varieties of mathematical methods are used in various computer graphics algorithm.

Course Contents:

Module I: Introduction of Graphics

Development of Computer Graphics, Basic Graphics System and Standards.

Graphics Devices:

Raster and Random Scan Devices, Continual Refresh and Storage Displays, Display Processor, Color Display Techniques, Frame Buffer, Concepts in Raster Graphics and color generation.

Module II: Graphics Primitives

Points, Pixels, Scan Conversion, Line Drawing Algorithms, Circle Drawing Algorithms, Anti-aliasing Technique, Methods of Character generator.

Polygon

Polygon representation, Polygon Filling algorithm, Inside/Outside Testing

Module III: Transformation

Scaling, Translation, Rotation, Composite Transformation, Fix point scaling, Rotation about arbitrary point, Reflection, Shears, Composite Transformation, Modeling and Coordinate Transformation

Viewing: Interactive Picture Construction Techniques, Interactive Input/Output Devices,

Module IV: Segment

Segment Table, Creating Deleting and Renaming a Segment, Visibility and Image Transformation

Windowing and Clipping: Window, View-port, Line clipping, polygon clipping, Window to viewport transformation, polygon clipping using Sutherland Hodgman Algorithm.

Module V: 3-D Transformation and Visible surface detection

3-D Transformation : shearing, scaling, translation, rotation, Homogeneous coordinates.

Visible surface detection: Z - buffer algorithm, Scanline Visible surface detection algorithm, painter's algorithm, fractal and its properties, Basic Illumination, diffuse reflection, specular reflection.

Examination Scheme:

Components	CT1	A/C/Q	Attd	EE
Weightage (%)	15	10	5	70

CORE JAVA PROGRAMMING LAB

Course Code: IFT2511

Credit Units: 01

Course Contents:

1. Create a "Hello, World" program that simply prints out that statement.
2. Write a program that prints three arguments taken from the command line.
3. Write a program that prints values from 1 to 100.
4. Create a class with a default constructor (one that takes no arguments) that prints a message. Create an object of this class.
5. Write Java assignment statements to evaluate the following equations:
 - (i) $\text{Energy} = \text{mass}(\text{acceleration} * \text{height} + (\text{velocity})^2 / 2)$
 - (ii) $\text{Torque} = 2m_1m_2 / m_1 + m_2 * g$
6. Design and write a Java program to define a class called Rectangle that contains members for representing its length and breadth. Provide members to get and set these attributes.
7. Design a class to represent a bank account. Include the following members:

Data members:
Name of the depositor
Account number
Type of account
Balance amount in the account

Methods:
To assign initial values
To deposit an amount
To withdraw an amount after checking balance
To display the name and balance
8. Write simple program to calculate the sum of digits of any number.
9. Write a simple program to display a "*" I triangle shape.
Output will be like this

```
      *
     * * *
    * * * * *
```
10. Write a simple program to call a method called simple from a main function. The method simple should accept an integer as an argument and calculate the square of the number in the method simple.
11. Write a Java program to add two integers and two float numbers. When no arguments are supplied, give a default value to calculate the sum. Use method overloading to achieve this.
12. Write a program to perform mathematical operations. Create a class called AddSub with methods to add and subtract. Create another class called MultDiv that extends from AddSub class to use the member data of the superclass. MultDiv should have methods to multiply and divide. A main method should access the method and perform the mathematical operations.
13. Write an interface with a method called display. Implement this method in a class to display two names.
14. Write an interface that has two methods called push and pop of a stack. Write a class to implement the two methods for a fixed size stack creation.
15. Write a small program to catch Negative Array Size Exception. This exception is caused when the array is initialized to negative values.
16. Write a program to handle Null Pointer Exception and use the finally clause to display a message to the user.
17. Write a Java program that takes a string and converts it into uppercase and lowercase letters.
18. Write a Java program to find the volume of a sphere and a cone.

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

19. Write a Java program to convert rupees to dollars.
20. Write a Java program to find x to the power y. Use overloading for different cases when x and y are combinations of integer and floating point numbers.
21. Create an abstract class called Figure that has an abstract method called draw (). Make the subclasses called Filled_Rectangle, Filled_Arc and override the draw method in which you would print the message regarding the current object.
22. Write a Java program that has integer variables a, b, c and result as float. Store some values in them and apply the formula $result = a/(b-c)$. Catch the probable exception.
23. Write applets to draw the following shapes:
 - (i) Cone
 - (ii) Cylinder
 - (iii) Cube
 - (iv) Square inside a circle
 - (v) Circle inside a square
24. Write an applet to display the following figure:

25. Write an swings to display five buttons and five labels.
26. Write a Java program to create 5 threads by extending Thread class.
27. Write a Java program to create 5 threads by implementing Runnable interface.

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

BASICS OF COMPUTER GRAPHICS LAB

Course Code: IFT2520

Credit Units: 01

- 1) Write a program to change the working mode from text to graphics and plot a pixel.
- 2) Write a program to draw a line of same dimension in three different graphics mode.
- 3) Write a program to display line, rectangle, circle and polyline using graphics command.
- 4) Write a program to draw a line of slope between 0 and 1 using DDA algorithm.
- 5) Write a program to draw a line of slope between 1 and ∞ using DDA algorithm.
- 6) Write a program to draw a line of slope between 0 and 1 using midpoint algorithm.
- 7) Write a program to draw a line of slope between 1 and ∞ using midpoint algorithm.
- 8) Write a program to draw a dashed line of slope 1 using any line algorithm.
- 9) Write a program to draw a dotted line of slope 1 using DDA algorithm.
- 10) Write a program to draw a line of slope between 0 and -1 using midpoint algorithm.
- 11) Write a program to draw a line of slope between -1 and $-\infty$ using midpoint algorithm.
- 12) Write a program to draw an octant of a circle with its center at point (0,0) using midpoint circle drawing.
- 13) Write a program to draw a circle with its center at point (0, 0) and radius r using midpoint circle drawing.
- 14) Write a program to draw an octant of a circle with its center at point (a, b) and radius r using midpoint circle drawing.
- 15) Write a program to draw a circle with its center at point (a, b) and radius r using midpoint circle drawing.
- 16) Write a program to fill a polygon using flood-fill method.
- 17) Write a program to fill a polygon using boundary-fill method.
- 18) Write a program to reflect a point in X and Y-axis both.
- 19) Write a program to rotate a point (100, 50) about origin in anti-clock wise direction.
- 20) Write a program to rotate a point (100,150) about point (30, 40) in clock wise direction..

SUMMER INTERNSHIP EVALUATION-II

Course Code: IFT2535

Credit Units: 06

Objective:

There are certain phases of every Intern's professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship program can best be described as an attempt to institutionalize efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal classroom situations. These attributes are intellectual ability, professional judgment and decision-making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility etc.

Guidelines

In order to achieve these objectives:

- **Each student will be allotted a supervisor** for proper guidance.
- **Student will first submit details of company, external guide, project title to coordinator/supervisor as per given schedule.**
- For internal assessment purpose, students will submit an industry feedback and a progress report.
- Student will maintain a file (**Internship File/Project Report**) which he/she will submit after completion of internship. **Further, coordinator will provide NTCC project guidelines and sample to help in preparation of file.** The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development. The File will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

The **layout guidelines** for the Project Report

1. File should be in the following specification

- A4 size paper
- Spiral Binding
- **Font**

For normal text Font Type and Size must be- Times New Roman, 12 pt. The minimum font size of materials within a table or a figure can be 10 point.

- **Margins**

A margin of 3.75 cm (1½ inch) is to be given on the binding edge while on the other sides it is to be 2.5 cm (1 inch). The text of the report, including headings, figures, tables, and notes, but excluding page numbers, must be accommodated within the page area.

- **Line Spacing**

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

The line spacing in the main text must be between one-and-a-half (1.5). Single line spacing should be given for figure captions, table titles, figure legends, and footnotes. Equations, tables, figures, and quotations should be set off from the main text with adequate space (not less than the normal line spacing adopted for the main text). Two consecutive paragraphs should be separated by a spacing which must be larger than the line spacing adopted for the text.

- **Tables and Figures**

Each sketch, drawing, graph and photograph should have a figure number and title below the figure etc. Numbering should be sequential, chapter wise. For instance, if there are 24 figures chapter 3 spread over all of its sections the figure numbers run from Figure 3.1 through Figure 3.24. In figures experimental data should typically be represented by centered symbols, and theoretical data by continuous curves.

Each table should have a table number and caption above the table. Numbering should be sequential, chapter wise, as in the case of Figure numbers. For instance, if there are 18 tables in chapter 3 the table numbers run from Figure 3.1 through Figure 3.18.

Make sure that figures and tables are complete in other respects such as legends, references (if any) and coordinate labels with units. Each figure and table must be explicitly referred to in the text and located where its first reference occurs, preferably after the reference.

- **Drawings**

All engineering drawings must conform to relevant Standards and should include a title block. If drawings are large they should be included at the back of the report in a separate pocket. In case drawings are made using CAD packages, a CD ROM should be included which contains all the files and details of the packages used.

- **Equations**

The numbering of equations should be sequential, chapter wise. Numbered equations must be explicitly referred to in the text.

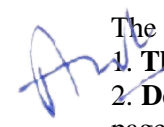

2. Report Size: The maximum number of pages of the Report should be preferably between 50-80 pages.

3. Report Layout: The report should contain the following components

Front Page
Declaration
Student Certificate (University)
Certificate (Company)
Acknowledgement
Abstract
Contents
List of Figures
List of Tables
Company Profile (optional)
Chapters
Appendices(optional)
References / Bibliography

The above components are described below:

1. **The Title Page**-- Format will be given by coordinator/supervisor.
2. **Declaration by the Students**-- This is page number (i), the beginning of the small case Roman numeral page numbers. The student has to give a declaration to the effect that the data used for the work, the work

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

depicted in the report, and the written material contained in the report are not copied from others and that due permission has been taken from, and due credit has been given to, the sources whenever they are used.

3. Certificate-This is page number (ii). It is given by the Institute. The certificate will be signed by the Faculty Supervisor(s) before the viva-voce after verifying the format and by the Head of the Department after review with the Supervisor(s).

4. Company Certificate: This is a certificate, which the company gives to the students.

5. Contents-This is page number (iii). The table of Contents should be titled just Contents (not Table of Contents). Try to fit it into one or two pages.

6. Acknowledgement-This is page number (iv). Keep this brief and avoid using informal language. This page must be signed by the candidate.

7. Abstract and Keywords-This is page number (v). The abstract (preferably one page) should contain the context/relevance of the problem at hand, a description of what was done and a gist of the significant observations/results.

The keywords (maximum 6) are a hint that what is contained in the report.

8. Company Profile: A Company Profile corresponds to a file with company-specific data. Company data can be stored there and included in a booking when needed.

9. Chapters—Introduction, Literature Review/Background Study etc. as given by coordinator/supervisor.

10. References / Bibliography --This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

ASSESSMENT OF THE INTERNSHIP FILE

Continuous Internal Assessment consists of topic relevance, progress report and industry feedback on company letterhead. Final Assessment includes viva, presentation, execution and report marks.

Examination Scheme:

Components	IF	PR	R	E	V	FP
Weightage (%)	20	20	15	15	15	15

V – Viva, IF – Industry Feedback, FP – Final Presentation, R – Report, PR-Progress Report, E-Execution

COMPUTER ORIENTED STATISTICAL & OPTIMIZATION METHODS

Course Code: IFT2616

Credit Units : 03

Course Objective:

The objective of this course is to expose students to the fundamentals and concepts of statistical and optimization methods, in particular, with reference to frequency distribution and measures of central tendency, measures of dispersion, skewness and kurtosis, theory of probability, linear programming problems, transportation, assignment and game problems. This course is designed with an aim of helping the students to understand important theorems, different formulae and practical applications of these statistical and optimization methods in the field of Computer Sciences and Applications.

Course Contents:

Module I

Collection of Data, Sampling and Sampling Designs, Classification and Tabulation of Data, Graphical representation of Data, Measures of Central Value, Measures of Dispersion. Moments, Skewness, Kurtosis, Correlation and Regression.

Module II: Probability

Classical Definition of Probability, Algebra of Events, Probability Axioms, Conditional Probability.

Probability Distributions: Discrete and Continuous Distributions, Binomial Distribution, Poisson distribution, Normal Distribution.

Module III: Linear Programming

Mathematical Formulation of Linear Programming models and its Graphical Solutions, Simplex Method, Charne's Big M method, Two Phase Method.

Module IV: Transportation Problem

General Transportation model, Starting basic Solutions:-North west Corner Method, Least Cost Method, Vogel's Approximation Method, Test of optimality, unbalanced Problem. Assignment Problems

Module V: Game Theory

Two-Person Zero Sum Games, Maximin-Minimax Principal, Pure Strategies, Mixed Strategies, Expected Pay off, Concept of Dominance, Graphical Solution of $m \times 2$ and $2 \times n$ Games.

Examination Scheme:

Components	CT1	A/C/Q	Attd	EE
Weightage (%)	15	10	5	70

INTERNET OF THINGS

Course Code: IFT2622

Credit Units : 04

Course Objective:

The Internet is evolving to connect people to physical things and also physical things to other physical things all in real time. It's becoming the Internet of Things (IoT). The course enables student to understand the basics of Internet of things and protocols. It introduces some of the application areas where Internet of Things can be applied. Students will learn about the working of Internet of Things.

Course Contents:

Module I: INTRODUCTION TO IOT

Introduction to IoT, its importance, Elements of an IoT ecosystem, Characteristics of IoT, Physical design of IoT: Things in IoT, Logical design of IoT- IoT functional blocks, IoT communication models, IoT communication API's

Module II: IoT ENABLING TECHNOLOGIES & IOT LEVELS

Wireless Sensor Networks, cloud computing, big data analytics, communication protocols, embedded systems, IOT components, IoT levels: Level 1, Level 2, Level 3, Level 4, Level 5 and level 6.

Module III: IOT AND M2M

Introduction to M2M, difference between IoT and M2M, Software Defined Networking(SDN) for IoT: its architecture, key elements and its layers, Network Function Virtualization(NFV) -its architecture and key elements

Module IV: IoT SYSTEM MANGEMENT:

Need for IoT system management, SNMP and its limitations, Network Operator Requirements, NETCONF(Network Configuration Protocol) :its protocol layers, YANG

Module V: IOT DESIGN METHODOLOGY & APPLICATIONS

Steps in designing IoT device, Smart Applications, Introduction to Python and Raspberry Pi

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

INTRODUCTION TO OPEN SOURCE TECHNOLOGIES (PHP, MySql)

Course Code: IFT2618

Credit Units: 03

Course Objective:

This course is aimed to provide a fundamental understanding of dynamic web site creation. PHP is the language used for development of most common web sites. Syllabus includes basic and advanced features of PHP which includes detailed introduction of PHP and MYSQL, Arrays, Loops and variables etc. It also gives an overview open source framework like JOOMLA, ZEND etc...

Course Contents:

Module I: Introduction to Open Source and PHP programming

Introduction to Open Sources Technologies, Introduction to PHP, installation and configuration, Advantages and Disadvantages of PHP, Client Side Scripting, Server Side Scripting, Variables, data types, various types of function, creating your own function, Strings in PHP, String Functions.

Module II: Operator, Loops, Array, Exception and Error Handling

Operators, Conditions, Loops, Using for each, Creating and Using Arrays, Multidimensional Array, Associative array.

Error Handling in PHP, Errors and Exceptions, Exception class, try/catch block, throwing an exception, defining your own Exception subclass.

Module III: Classes, File system, Passing Information between pages

Object oriented programming with Php, Working with Datetime, code re-use, require (), include(), and the include_path; Understanding PHP file permissions, File reading and writing functions, File system functions, File uploads, Sending mail & use of email server.

HTTP, GET arguments, POST arguments, Using Session in PHP, cookies, The setcookie() function, Deleting Cookies and Reading Cookies.

Module IV: Working with database

HTML Tables and Database tables, Database manipulation(Select, Insert, Update, Delete), validating User Input using Javascript.

MYSQL, Introducing MySQL; database design concepts; the Structured Query, Language (SQL); communicating with a MySQL backend via the PHP, MySQL API Building Database Applications,

Module V: Working with Frameworks

Working with Mambo, Working with Joomla, Working with framework. Use of Joomla in rapid development of website. Developing of simple website using joomla.

Examination Scheme:

Components	CT1	PR.	ATTD.	EE
Weightage (%)	15	10	5	70

INTRODUCTION TO OPEN SOURCE TECHNOLOGIES (PHP, MySql) LAB

Course Code: IFT2620

Credit Units: 01

Course Contents:

1. Write the process of installation of web server.
2. Write programs to print all details of your php server. Use phpinfo().
3. Write a program to give demo of ECHO and PRINT command.
4. Write a program to implement the string functions.
5. Write a program to print Fibonacci series upto a given number.
6. Write a menu driven program to implement a calculator which performs only addition, subtraction, multiplication and division. The operation should happen based on user choice.
7. Write a program sort ten number by using array.
8. Write a program to demonstrate the concept of associative array.
9. Write a program to demonstrate the concept of multidimensional array.
10. Write a program to demonstrate the concept of Classes & objects.
11. Create a login form with two text fields called “login” and “password”. When user enters “Amity” as a user name and “university” as a password it should be redirected to a Welcome.HTML page or to Sorry.HTML in case of wrong username/password.
12. Create a database in MySql and connect that database from PHP.
13. Write a program to Update, insert and delete the values of table in database.
14. Create a form with a text box asking to enter your favorite city with a submit button when the user enters the city and clicks the submit button another php page should be opened displaying “Welcome to the city”.
15. Write a program to design login form in which find the greatest number amongst three numbers.
16. WAP for Marksheet generation.
17. Design a webpage for entering the student details with all the validations applied on it.
18. Write a php script to print current date and time.
19. Write a php script to use include and require functions.
20. Write a php script including all the file handling functions.

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

MOBILE COMPUTING

Course Code: IFT2611

Credit Units: 03

Course Objective:

The course objectives are to make the student understand the concept of mobile computing paradigm, Its novel applications and limitations, to understand the typical mobile networking Infrastructure through 2G technologies (GSM, GPRS, EDGE), 3G technologies (WCDMA, UMTS, HSPA), to understand the issues and solutions of various layers of mobile networks, WLANs and Mobile IP, to understand the Global Mobile Satellite Systems, to understand the advanced techniques and current trends (4G and 5G networks)

Course Contents:

Module I: Introduction

Introduction to cellular engineering, Frequency Re-use, Channel Assignment Strategies, Fixed and Dynamic Channel Assignment Strategies, Handoff Process, Factors affecting Handoff Process, Handoff detection Strategies, Few practical cases of Handoff Scenario, Interference and System Capacity, Cell Splitting, Sectoring, History of Mobile phone generations, 1G technology

Module II: Second Generation (2G) Mobile Technologies

PCS Architecture, Mobility management in PCS, GSM, Architecture, GSM addresses and identifiers, Protocol Stack, GSM security, Mobility Management in GSM, GPRS (2.5G), GPRS Architecture, GPRS Network Nodes, Protocol Stack.

Module III: Mobile Data Communication

Bluetooth: Architecture, Network and Protocol stack.

WLANs (Wireless LANs), Modes of operation of WLANs, IEEE 802.11 standard, System Architecture, Protocol stack, Wireless Multiple Access techniques: SDMA, FDMA, TDMA, CDMA.

Mobile IP, Motivation, Problems, Data Transfer, Encapsulation and tunneling.

Wireless Application Protocol (WAP): The Mobile Internet standard, WAP Gateway and Protocols, Wireless Markup Languages (WML).

Module IV: Third Generation (3G) Mobile Technologies

Introduction to International Mobile Telecommunications 2000 (IMT 2000) vision, 3GPP, UMTS, Wideband Code Division Multiple Access (W-CDMA), CDMA 2000, HSPA, Wireless Local Loop (WLL): Introduction to WLL Architecture, wireless Local Loop Technologies.

Module V: Global Mobile Satellite Systems

Global Mobile Satellite Systems, Global History, Applications, Classical Satellite System, Terminologies, Geostationary and Geosynchronous Satellites, Types of Orbits based upon distance from Earth (LEO, MEO, GEO, HEO), Based upon Eccentricity (Circular and Elliptical), Routing, Localization and Handover in satellite systems, case studies on IRIDIUM and GLOBALSTAR LEO satellite systems.

Module VI: Fourth Generation (4G) Mobile Technologies and Current Trends

4G standard: IMT Advanced requirement, Long Term Evolution, architecture, Mobile IPV6 (MIPv6), WiMax standard IEEE 802.16, VoIP, VoLTE, Presence Aware Technology, Pervasive Networks, NFC (Near Field Communication), Overview into 5G technology, NGMNA and IoT.

CRYPTOGRAPHY & NETWORK SECURITY

Course Code: IFT2621

Credit Units: 03

Course Objective:

Network Security was always important, but has gained significance with the increase of application of Internet associated e-commerce. Threat and compromise /Breach potentially increased with the introduction of the end user involvement, communication and networking. Thus the course is introduced to make the student acquainted with the concepts and practices to make the network environment secure.

Module 1:

Integer arithmetic, modular arithmetic, matrices, Linear Congruence: Definition – Basic properties of congruence, Divisibility - Greatest common divisor, equivalence classes, residue classes. Chinese remainder theorem, Euclid and Extended Euclid, modular inverse, exponentiation and logarithm. Algebraic structures: groups, fields, rings, Modulo groups - Primitive roots - Discrete logarithms.

Module 2:

Introduction to security attacks, services and mechanism, Classical encryption techniques, substitution cipher: ceaser cipher, playfair cipher, mono/polyalphabetic cipher, hill cipher, affine cipher. Transposition techniques: columnar cipher, rail fence cipher up to two round.

Module 3:

Stream and block ciphers. Modern Block Ciphers: Block ciphers principles, Shannon's theory of confusion and diffusion, feistel structure, Data encryption standard (DES), Strength of DES.

Module 4

Principals of public key crypto systems, RSA algorithm, security of RSA. Message Digest: Authentication requirements, authentication functions, hash function and SHA-1, message authentication code. Concept of Digital Signature. Diffie-Hellman Key Exchange.

Module 5:

IP Security: Architecture, Authentication header, Encapsulating security payloads, HTTPS, Viruses, Worms, Malware, Botnets, Firewall and its types.

Examination Scheme:

E-COMMERCE

Course Code: IFT2619

Credit Units : 03

Course Objective:

This course is aimed at incorporating the fundamentals of E-Commerce which involves study of Network Infrastructure, Mobile Commerce, Web Security, encryption, etc. which are essential components of Managing e-transactions making life even simpler and getting rid of various time consuming and tedious activities.

Course Contents:

Module I: Introduction

Traditional commerce – an overview, What is E-commerce?, Comparison between Traditional and Electronic commerce, Issues associated with electronic commerce. Types of E-Commerce: Inter Organizational E- commerce, Intra Organizational E-Commerce, Architectural frame work of E-Commerce, Benefits, Advantages and Disadvantages of E- Commerce.

Module II: Web Security

Firewalls, Types of Firewalls, Transaction Security, Cryptography: Secret Key Encryption, Public key Encryption, Implementation & management issues, Virtual Private Networks, Client Server Network Security.

Module III: Electronic Payment Scheme

Limitations of Traditional Payment system, Cyber Cash, First Virtual payment schemes, Online credit card system: SET, Smart card, Electronic cheques, Digital Cash, Debit card.

Module IV: Electronic Data Interchange (EDI)

Definition of EDI, EDI in action, Types of EDI, Benefits of EDI.

Module V: E-Commerce and Market

SCM, marketing issues, Advertising and online publishing, Copyright and its protection methods

Examination Scheme:

Components	CT1	A/C/Q	Attd	EE
Weightage (%)	15	10	5	70

DATA WAREHOUSING AND DATA MINING

Course Code: IFT2604

Credit Units: 03

Course Objective:

This course is divided into two parts: one on Data Warehousing and one on Data Mining. Both data warehousing and data mining are advanced recent developments in database technology which aim to address the problem of extracting information from the overwhelmingly large amounts of data which modern societies are capable of amassing. Data warehousing focuses on supporting the analysis of data in a multidimensional way. Data mining focuses on inducing compressed representations of data in the form of descriptive and predictive models. Course gives an in-depth knowledge of both the concepts.

Course Contents:

Module I: Introduction to Data Warehousing

Data Warehouse definition & Characteristics, The need for data ware housing, Operational and Informational Data Stores, Difference between Data warehouse and DBMS, Benefits of Data warehousing, Data mart, Meta Data, Conceptual Modeling of Data Warehouses: star schemas, Snowflake, Fact Constellations with example each.

Module II: Data Warehousing Components & Architecture

Data Warehouse Architecture, Components of Data Warehouse Architecture, Data Warehousing Topologies, Meta Data, Components of Meta data, Mapping Meta Data. Challenges with Data Warehousing.

Module III: On Line Analytical Processing (OLAP)

Definition: OLAP, Difference between OLTP and OLAP, OLAP Server Architecture, OLAP Operations, Multi Relational & Multi Dimensional: MOLAP, ROLAP, OLAP Tools, Metadata Repository, Data Warehouse Back-End Tools and Utilities.

Module IV: Data Mining : Association Rules , Classification and Clustering

Introduction to Data Mining, Applications, Limitations, Techniques, Association Rules: Apriori Algorithm, Classification: Decision Tree
Cluster Analysis: Features, Types of Cluster Analysis Methods: Partitional, Hierarchical, Density Based, Grid based Methods, , Web Data Mining, Search Engine, Case Study, Limitations.

Examination Scheme:

Components	CT1	A/C/Q	Attd	EE
Weightage (%)	15	10	5	70

MAJOR PROJECT/ DISSERTATION

Course Code: IFT2637

Credit Units: 30

Objective:

Major Project/Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology, practical skill enhancement and an opportunity to work closely with a industry external guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation. Students require professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship program can best be described as an attempt to institutionalize efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal classroom situations. These attributes are intellectual ability, professional judgment and decision-making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility etc.

In order to achieve these objectives:

- **Each student will be allotted a supervisor** for proper guidance.
- **Student will first submit details of company, external guide, project title to coordinator/supervisor as per given schedule.**
- After project approval student will submit synopsis as per given guidelines.
- Student will maintain a file (**Internship File/Project Report**) which he/she will submit after completion of internship. **Further, coordinator will provide NTCC project guidelines and sample to help in preparation of file.** The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development. The File will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

In general, the Project Report File should be comprehensive and include

- A short account of the activities that were undertaken as part of the project;
- A statement about the extent to which the project has achieved its stated goals.
- A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;
- Any activities planned but not yet completed as part of the project, or as a future initiative directly resulting from the project;
- Any problems that have arisen that may be useful to document for future reference.

The **layout guidelines** for the Project Report

1. File should be in the following specification

- A4 size paper
- Hard Bound- Dark Green Colour

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- **Font**

For normal text Font Type and Size must be- Times New Roman, 12 pt. The minimum font size of materials within a table or a figure can be 10 point.

- **Margins**

A margin of 3.75 cm (1½ inch) is to be given on the binding edge while on the other sides it is to be 2.5 cm (1 inch). The text of the report, including headings, figures, tables, and notes, but excluding page numbers, must be accommodated within the page area.

- **Line Spacing**

The line spacing in the main text must be between one-and-a-half (1.5). Single line spacing should be given for figure captions, table titles, figure legends, and footnotes. Equations, tables, figures, and quotations should be set off from the main text with adequate space (not less than the normal line spacing adopted for the main text). Two consecutive paragraphs should be separated by a spacing which must be larger than the line spacing adopted for the text.

- **Tables and Figures**

Each sketch, drawing, graph and photograph should have a figure number and title below the figure etc. Numbering should be sequential, chapter wise. For instance, if there are 24 figures chapter 3 spread over all of its sections the figure numbers run from Figure 3.1 through Figure 3.24. In figures experimental data should typically be represented by centered symbols, and theoretical data by continuous curves.

Each table should have a table number and caption above the table. Numbering should be sequential, chapter wise, as in the case of Figure numbers. For instance, if there are 18 tables in chapter 3 the table numbers run from Figure 3.1 through Figure 3.18.

Make sure that figures and tables are complete in other respects such as legends, references (if any) and coordinate labels with units. Each figure and table must be explicitly referred to in the text and located where its first reference occurs, preferably after the reference.

- **Drawings**

All engineering drawings must conform to relevant Standards and should include a title block. If drawings are large they should be included at the back of the report in a separate pocket. In case drawings are made using CAD packages, a CD ROM should be included which contains all the files and details of the packages used.

- **Equations**

The numbering of equations should be sequential, chapter wise. Numbered equations must be explicitly referred to in the text.

2. Report Size: The maximum number of pages of the Report should be preferably between 50-80 pages.

3. Report Layout: The report should contain the following components

Front Page

Declaration

Student Certificate (University)

Certificate (Company)

Acknowledgement

Abstract

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Contents
List of Figures
List of Tables
Company Profile (optional)
Chapters
Appendices(optional)
References / Bibliography

The above given components are described below:

1. **The Title Page**-- Format will be given by coordinator/supervisor.
2. **Declaration by the Students**-This is page number (i), the beginning of the small case Roman numeral page numbers. The student has to give a declaration to the effect that the data used for the work, the work depicted in the report, and the written material contained in the report are not copied from others and that due permission has been taken from, and due credit has been given to, the sources whenever they are used.
3. **Certificate**-This is page number (ii). It is given by the Institute. The certificate will be signed by the Faculty Supervisor(s) before the viva-voce after verifying the format and by the Head of the Department after review with the Supervisor(s).
4. **Company Certificate**: This is a certificate, which the company gives to the students.
5. **Contents**-This is page number (iii). The table of Contents should be titled just Contents (not Table of Contents). Try to fit it into one or two pages.
6. **Acknowledgement**-This is page number (iv). Keep this brief and avoid using informal language. This page must be signed by the candidate.
7. **Abstract and Keywords**-This is page number (v). The abstract (preferably one page) should contain the context/relevance of the problem at hand, a description of what was done and a gist of the significant observations/results.
The keywords (maximum 6) are a hint that what is contained in the report.
8. **Company Profile**: A Company Profile corresponds to a file with company-specific data. Company data can be stored there and included in a booking when needed.
9. **Chapters**—Introduction, Literature Review/Background Study etc. as given by coordinator/supervisor.
10. **References / Bibliography** --This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

ASSESSMENT OF THE INTERNSHIP FILE

Continuous Internal Assessment
50 Marks

Final Assessment
rks

Continuous Internal Assessment consists of topic relevance, synopsis, progress report and draft report. Final Assessment includes viva, presentation, report and execution marks.

Examination Scheme:

Components	S	PR1	PR2	PR3	V	E	R	FP
Weightage (%)	20	10	10	10	10	10	15	15

S-Synopsis, PR1-Progress Report-1, PR2- Progress Report-2, PR3- Progress Report-3, V – Viva, FP – Final Presentation, R – Report, E-Execution

BIOMEDICAL

Syllabus

HUMAN ANATOMY AND PHYSIOLOGY-I

Course Code: BME2351

Credit Units: 03

Course Objective:

To provide students a basic understanding of the human body structure and functioning. Students will be able to relate basic human body systems and life processes, name the major body systems and their functions , understand the anatomy of various body systems .

Course Contents:

Module I:

Basic cell structure , various cell organelles and their functions , Tissue- their types , structure and function , structure and function of skin , Different types of muscles and their function , General description of bones , their structure and function , types of joints and their structure and function .

Module II:

Cell , cell membrane , polarisation and repolarisation , resting membrane potential , Nernst equation , Donnan's equilibrium , Goldman equation action potential and its propagation , synaptic transmission ,

Module III

Blood , Lymph and circulation : blood composition , properties and function . Structure and functions of RBCs, WBCs and platelets , Blood types , Homeostasis , Immune mechanisms , Lymph., Heart position , structure and functions , Heartbeat , electrical excitation , Einthoven's triangle , Cardiac and peripheral regulation , blood pressure and its regulation , blood flow and its regulation.

Module IV

Respiratory System : position and functions . Mechanics of respiration , Lung volumes and capacities , Gas exchange between lungs and tissues , regulation of respiration . Digestive system : Different parts of digestive system , functions of each organ , digestion of proteins , carbohydrates , fats , vitamins and minerals.

Module V

Osteology , Bone , brief introduction to different bones in skull , vertebral column , upper extremity , hands , lower extremity , foot .

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

BIOINSTRUMENTATION

Course Code : BME2451

Credit Units: 03

Course Objective:

To enable the student to understand the working and construction of various equipments used in the medical field.

Course Contents:

Module I:

Transducers and Reference electrodes: classification of transducers, temperature transducers , displacement transducer , pressure transducer , catheter transducer , photoelectric transducer , piezoelectric transducer . po2 electrodes , membrane electrodes , blood gas analysis , Ion specific electrodes .

Module II :

ECG : electrodes and conversion of ionic potentials to electric potential , ECG instrumentation amplifiers, driven right leg circuitry. Introduction and characteristics of bio signals (EEG , ECG , EMG) . , removal of artefacts , event detection and correlation analysis of ECG signals .

Module III :

Respiration measurement using electrical impedance plethysmography : electrical impedance changes during breathing , 2 and 4 electrode measurement , 4 electrode technique .

Module IV :

Oxygen saturation using pulse oximetry : optical characteristics of oxygenated and deoxygenated blood , principles of pulse oximetry , circuits of pulse oximetry , constant current source , current – voltage converter , amplifiers .

Module V :

Non invasive blood pressure measurement : theory and circuitry of method using Korotkoff sounds and method based on oscillometry .

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

TISSUE ENGINEERING

Course Code: BME2551

Credit Units: 03

Course Objective:

To enable students to understand the principles of tissue engineering and learn the basics of cell culture , tissue culture ,scaffolding , types of bioreactors and mass transfer reactions .

Course Contents:

Module I:

Cell culture: Different cell types, progenitor cells and cell differentiations, different kind of matrix, cell-cell interaction. Aspect of cell culture: cell expansion, cell transfer, cell storage and cell characterization, Bioreactors.

Module II :

Molecular biology aspects: Cell signaling molecules, growth factors, hormone and growth factor signaling, growth factor delivery in tissue engineering, cell attachment: differential cell adhesion, receptor-ligand binding, and Cell surface markers.

Module III :

Scaffold and transplant: Engineering biomaterials for tissue engineering, Degradable materials (collagen, silk and polylactic acid), porosity, mechanical strength, 3-D architecture and cell incorporation. Engineering tissues for replacing bone, cartilage, tendons, ligaments, skin and liver. Basic transplant immunology, stems cells: introduction, hepatopoiesis.

Module IV :

Cryopreservation of cells and tissues, Transport in biological system, Mass transport through cell membranes, Mathematical modelling of mass transfer in engineered tissues

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

BIOMECHANICS

Course Code: BME2651

Credit Units: 03

Course Objective:

To enable students to understand the basics of bone movement , gait analysis and mechanics of bone and muscles

Course Contents:

Module I:

Joint motion: relative position of two bones meeting at a joint , description of a rigid body , degrees of freedom , euler angles , rotation matrices, rotation angle anatomical directions , anatomical planes ,

Module II :

Inverse Dynamics to calculate resultant force and momentum within the body link segment models , intersegmental force and moment ,

Module III :

Human Gait analysis , gait cycle , angular kinematics of hip , knee and ankle , force plates and ground reaction force , gait abnormalities .

Module IV :

Structure and composition of bone , microstructure of bone , skeletal muscle , mechanism of muscle contraction , force length and force velocity relationships , basic muscle models , tendons and ligaments , their basic mechanical models , injuries and factors affecting biomechanical properties , Cartilage , viscoelasticity and viscoelastic models .

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

MEDICAL IMAGE PROCESSING

Course Code: BME2751

Credit Units: 03

Course Objective:

To enable students to understand techniques used in imaging in the medical profession , the artefacts and other problems experience in doing so .

Course Contents:

Module I:

Digital image fundamental :Elements of digital image processing systems, Elements of Visual perception, Image sampling and quantization,– Some Basic relationships between pixels, Matrix and Singular Value representation of discrete images

Module II :

Image transforms 1DDFT, 2D DFT, Cosine, Sine Hadamard, Haar, Slant, KL transform and their properties

Module III :

Image enhancement :Histogram – Modification and specification techniques, Enhancement by point processing Image smoothening, Image sharpening, generation of spatial masks from frequency domain specification, Homomorphic filtering, and color image processing.

Module IV :

Image segmentation : spatial feature extraction , transforms features , segmentation techniques , analysis techniques, application of matlab for digital image processing .

Module V

Run length, Huffman coding, arithmetic coding, Pixel coding, transform coding, JPEG Standard, predictive techniques, Application of image processing techniques in thermography, SPECT, PET images.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CLOUD COMPUTING

Syllabus

COMPUTER NETWORKS

Course Code: CSE2353

Credit Units: 03

Course Objective:

The course provides a unified and fundamental view of the broad field of computer networks. Furthermore, the easy to understand and extremely relevant world of Computer Net working is introduced in a top down Approach. Introduction to intranets and intranet servers and browsers, networks and network servers, LANs/WANs, internetworking technologies, the OSI reference model for networking protocols, CSMA/CD, TCP/IP implementation

Course Contents:

Module I: Introduction

Introduction to computer networks, evolution of computer networks and its uses, Advantages and Disadvantages of Computer Network, reference models: OSI reference Models, TCP/IP Protocol Suit Networking fundamentals: Internet, Circuit switching vs Packet switching, ISPs, Delay and Loss in Packet Switched Networks

Module II: Local Area Network

LAN Architecture, LAN topologies- Bus/ Tree LAN, Ring LAN, Star LAN, Wireless LAN, Ethernet and Fast Ethernet, Token Ring

Module III: Application layer and data link layer

Application Layer Protocols: HTTP, FTP, SMTP, DNS

Data link layer design issues, Flow Control- Stop and Wait, Error Detection, Error Control, error detection and correction, data link layer protocols, sliding window protocols, example of data link protocol- HDLC

Module IV: Medium access layer

Channel allocation problem, multiple access protocols, Introduction to ALOHA, CSMA/CD, CSMA/CA

Module V: The network layer

Introduction, Routers, Network layer concepts, shortest path routing, flooding, distance vector routing, link state routing (without algorithms), congestion control and quality of service, internetworking, IP, Ipv4 Addressing vs Ipv6

Module VI: The transport layer

The transport layer services, elements of transport protocols, TCP and UDP, Brief introduction to presentation and session layer, E-mail

Examination Scheme:

DISTRIBUTED SYSTEM

Course Code: CSE2453

Credit Unit: 03

Course Objective:

It serves as one of the important courses in terms of having an understanding about the basic concepts about distributed systems, their types or categories with some concepts about basic networking and various different directions in which it is useful and applicable. The outcome of the course implicitly and explicitly affects the abilities of students to have a good understanding of the upcoming other related courses.

Course Contents:

Module 1: Introduction to Distributed System

Introduction, Goals of Distributed System Examples of distributed systems , Trends in distributed systems , Resource sharing in distributed system, Challenges faced, System Models basics, types of System Models, Physical models , Architectural models , Fundamental models.

Module 2: Networking and Internetworking

Introduction to networking, Networking issues for distributed systems, Types of network (LAN, MAN, WAN, WLAN, WMAN, WWAN, internetworks), Network principles, Internet protocols, Basics of Inter-Process communication, Multicast Communication, Network virtualization: overlay networks, Remote invocation, Remote Procedure Call, Remote method invocation.

Module 3: Operating System Support, Web Services and Security

Introduction , Operating System layer, Operating System Architecture, Virtualization at Operating System level, Introduction to web services, Service descriptions and IDL for web services, Applications of web services, Overview of Security Techniques, Cryptographic algorithms , Digital signatures, Needham–Schroeder, Kerberos techniques.

Module 4: Distributed File Systems and Distributed Transactions

Introduction (URI, URL's) , Name services and the Domain Name System(NameSpace, Name Resolution, DNS), Directory services, Transactions , Nested transactions , Locks , Optimistic concurrency control, Flat and nested distributed transactions , Atomic commit protocols , Concurrency control in distributed transactions , Distributed deadlocks.

Module 5: Distributed Multimedia System and Distributed Algorithms

Characteristics of multimedia data, Quality of service management, Resource management, Stream adaptation, Introduction to communication protocols, Balanced sliding window protocol, Routing algorithms, Destination based routing, APP problem, Deadlock free Packet switching.

HIGH PERFORMANCE COMPUTING

Course Code: CSE2553

Credit Units: 03

Course Objective:

This course gives an insight about Cluster and Grid computing. The major objective of this course is to provide a sound foundation to the students on the concepts, percepts and practices in a field that is of immense concern to the industry and business. This would be helpful to students for understanding a subject related to but a bit higher in its hierarchy.

Course Contents:

Module 1: Parallel and Distributed Programming Models

Introduction to high performance computing, basic definitions: cluster, grid, meta-computing, middleware etc., examples of representative applications. Programming models: shared memory, message passing, peer-to-peer. Development of parallel and distributed applications, Design phases, Common parallel patterns, Performance metrics and profiling.

Module 2: Overview of Cluster Computing

The Role of Clusters, Definition and Taxonomy, Distributed Computing, Limitations, Architecture of cluster-based systems, Design Decisions, Network Hardware, Network Software, Protocols Distributed File Systems, Virtualization technologies, Issues in cluster design: performance, single-system-image, fault tolerance, manageability, programmability, load balancing, security, storage.

Module 3: Introduction of Grid Computing

Introduction, Evolution of the Grid, Definitions of Grid Computing, Infrastructure of hardware and software, Grid models, Applications, Examples of usage, Research possibilities / scope in Grid Computing, HPC and Grids, Scheduling HPC applications in Grids, Grid Monitoring Architecture (GMA) – An Overview of Grid Monitoring Systems.

Module 4: Integrating task parallelism with data parallelism

Introduction and motivation, A model for integrating task parallelism into data parallel programming platforms, Integration of the model into ARC, Design and implementation applications, performance analysis, guidelines for composing user programs, related work.

Anonymous remote computing and communication model: Introduction, Location in dependent inter task communication with DP, DP model of iterative grid computations, Design and implementation of distributed pipes.

INFORMATION STORAGE MANAGEMENT

Course Code: CSE2653

Credit Units: 03

Course Objective:

The course provides detailed knowledge, practical training and insight into the implementation and management of various storage technologies with a focus towards applying these technologies in an information lifecycle paradigm. This course focuses on evolution of storage and implementation models, Storage devices principles, Storage classes (SAN, NAS, CAS) and Backup, Business Continuity, and Disaster Recovery principles

Course Contents:

Module 1: Introduction to Storage Technology

Information Storage - Data, Types of Data, Information, Storage, Evolution of Storage Technology and Architecture, Data Center Infrastructure, Key Challenges in Managing Information, Information Lifecycle -Information Lifecycle Management, ILM Implementation, ILM Benefits.

Module 2: Data Protection & Intelligent Storage System

Components of a Storage System Environment, RAID -Implementation of RAID, RAID Array Components, RAID levels, RAID Impact on Disk Performance, Components of an Intelligent Storage System, Intelligent Storage Array-High-end Storage Systems, Midrange Storage System

Module 3: Storage Networking Technologies & Virtualization

Direct-Attached Storage and Introduction to SCSI- Types of DAS, DAS Benefits and Limitations, Disk Drive Interfaces, Introduction to Parallel SCSI, Storage Area Networks- Fibre Channel: Overview, SAN and its evolution, Components of SAN, Network-Attached Storage- General Purpose Servers vs. NAS Devices, Benefits of NAS, Components of NAS.

Module 4: CAS and Business Continuity

CAS: Fixed Content and Archives, Types of Archives, Features and Benefits of CAS, CAS Architecture, Object Storage and Retrieval in CAS.

Introduction to Business Continuity: Information Availability, BC Terminology, BC Planning Lifecycle, Failure Analysis.

Module 5: Backup, Recovery & Replication

Backup and Recovery : Backup Purpose, Backup Considerations, Backup Granularity, Recovery Considerations, Backup Methods, Backup Process, Backup and Restore Operations, Backup Topologies, Backup Technologies.

Replication: Local Replication- Uses of Local Replicas, Data Consistency, Local Replication Technologies, Remote Replication- Modes of Remote Replication, Remote Replication Technologies.

INTERFACING WITH VIRTUALIZATION

Course Code: CSE2753

Credit Units: 03

Course Objective:

This course gives students an insight into the basics of cloud computing along with virtualization, cloud computing is one of the fastest growing domain from a while now. It will provide the students basic understanding about cloud and virtualization along with it how one can migrate over it.

Course Contents:

Module-I: Introduction to Virtualization

Virtualization and cloud computing - Need of virtualization – cost, administration, fast deployment, reduce infrastructure cost – limitations

Types of hardware virtualization: Full virtualization - partial virtualization - para virtualization

Desktop virtualization: Software virtualization – Memory virtualization - Storage virtualization – Data virtualization – Network virtualization

Module-II: Hypervisors and Virtual machines

Server Virtualization: Understanding Server Virtualization, types of server virtualization, Virtual machine basics, types of virtual machines, hypervisor concepts and types

Module-III: Virtualization Solutions

Understanding Microsoft's Virtualization solutions: Microsoft's Infrastructure Optimization Model, Virtualization and the Infrastructure Optimization Model, Benefits of Virtualization, Achieving the Benefits of Datacenter Virtualization, Achieving the Benefits of Client Virtualization, Achieving the Benefits of Cloud Virtualization

Module-IV: Migrating into a Cloud

Introduction, Challenges while migrating to Cloud, Broad approaches to migrating into the cloud-why migrate -deciding on cloud migration, the Seven-step model of migration into a cloud, Migration Risks and Mitigation, Enterprise cloud computing paradigm, relevant Deployment Models for Enterprise Cloud Computing, Adoption and Consumption Strategies, issues for enterprise applications on the cloud

Examination Scheme:

CLOUD COMPUTING TOOLS AND TECHNIQUES

Course Code: CSE2853

Credit Units: 03

Course Objective:

This course gives students an insight into the basics of cloud computing along with virtualization, cloud computing is one of the fastest growing domain from a while now. It will provide the students basic understanding about cloud and virtualization along with it how one can migrate over it.

Course Contents:

Module-I: Cloud Computing Overview

Origins of Cloud computing – Cloud components - Essential characteristics – On-demand self-service, Broad network access, Location independent resource pooling ,Rapid elasticity , Measured service, Comparing cloud providers with traditional IT service providers, Roots of cloud computing.

Module-II: Cloud Insights

Architectural influences – High-performance computing, Utility and Enterprise grid computing, Cloud scenarios – Benefits: scalability ,simplicity ,vendors ,security, Limitations – Sensitive information - Application development- security level of third party - security benefits, Regularity issues: Government policies.

Module-III: Cloud Architecture- Layers and Models

Layers in cloud architecture, Software as a Service (SaaS), features of SaaS and benefits, Platform as a Service (PaaS), features of PaaS and benefits, Infrastructure as a Service (IaaS), features of IaaS and benefits, Service providers, challenges and risks in cloud adoption.

Cloud deployment model: Public clouds – Private clouds – Community clouds - Hybrid clouds - Advantages of Cloud computing.

Module-IV: Cloud Simulators- CloudSim and GreenCloud

Introduction to Simulator, understanding CloudSim simulator, CloudSim Architecture(User code, CloudSim, GridSim, SimJava) Understanding Working platform for CloudSim, Introduction to GreenCloud

Module-V: Introduction to VMWare Simulator

Basics of VMWare, advantages of VMware virtualization, using VMware workstation, creating virtual machines-understanding virtual machines, create a new virtual machine on local host, cloning virtual machines, virtualize a physical machine, starting and stopping a virtual machine.

EMBEDDED SYSTEM

Syllabus

INTRODUCTION TO MICROPROCESSOR SYSTEMS

Course Code: ECE2352

Credit Units: 03

Course Objective:

This course deals with the systematic study of the Architecture and programming issues of 8085-microprocessor family. The aim of this course is to give the students basic knowledge of the above microprocessor needed to develop the systems using it.

Course Contents:

Module I: Introduction to Microcomputer Systems

Introduction to Microprocessors and microcomputers, Study of 8 bit Microprocessor, 8085 pin configuration, Internal Architecture and operations, interrupts, Stacks and subroutines, various data transfer schemes.

Module II: ALP and timing diagrams

Introduction to 8085 instruction set, advance 8085 programming, Addressing modes, Counters and time Delays, Instruction cycle, machine cycle, T-states, timing diagram for 8085 instruction.

Module III: Memory System Design & I/O Interfacing

Memory interfacing with 8085. Interfacing with input/output devices (memory mapped, peripheral I/O), Cache memory system. Study of following peripheral devices 8255, 8253, 8257, 8259, 8251.

Module IV: Architecture of 16-Bit Microprocessor

Difference between 8085 and 8086, Block diagram and architecture of 8086 family, pin configuration of 8086, minimum mode & maximum mode Operation, Bus Interface Unit, Register Organization, Instruction Pointer, Stack & Stack pointer, merits of memory segmentation, Execution Unit, Register Organization.

Module V: Pentium Processors

.Internal architecture of 8087, Operational overview of 8087, Introduction to 80186, 80286, 80386 & 80486 processors, Pentium processor (P-II, P-III, P-IV).

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

MICROCONTROLLER

Course Code: ECE2452

Credit Units: 03

Course Objective:

The syllabus deals with 8051 architecture and its interfacing with other devices. A microcontroller is an integrated circuit that is programmable. The syllabus makes student perfect in assembly language programming, addressing modes etc apart from it input-output programming is discussed in detail. In the second part Embedded systems and it's application is discussed. 8051 C programming is also incorporated in the syllabus.

Course Contents:

Module I: Overview of Microcontroller

Microcontroller and Embedded Processors, Overview of 8051 Microcontroller family: Architecture, basic assembly language programming concepts, The program Counter and ROM Spaces in the 8051, Data types, 8051 Flag Bits and PSW Register, 8051 Register Banks and Stack Instruction set, Loop and Jump Instructions, Call Instructions, Time delay generations and calculations, I/O port programming Addressing Modes, accessing memory using various addressing modes, Arithmetic instructions and programs, Logical instructions, BCD and ASCII application programs, Single-bit instruction programming, Reading input pins vs. port Latch, Programming of 8051 Timers, Counter Programming.

Module II: Communication with 8051

Basics of Communication, Overview of RS-232, I2C Bus, UART, USB, IEEE 488 (GPIB). Parallel input output applications. (Stepper motor Sequencer program, Strobed input/output). Interrupt driven applications (real time clock, serial input/output with interrupt). Analog-digital interfacing (Pulse width modulator, 8-bit ADC).

Module III: Basics of 8051 C Programming

Introduction to 8051 C, 8051 memory constitution, Constants, variables and data types. Arrays structures and unions, pointers, Loops and decisions, Functions, Modules and programs.

Module IV: 8051 C Programming

Data interface, Timer control, Interrupt operations, Digital operations, A/D and D/A conversions, Common control problem examples (Centronics parallel interface, Printer interface, Memory access, Key matrix scanning, Stepper motor control and digital clock.).

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

PCB FABRICATION

Course Code: ECE2552

Credit Units: 03

Aim: To equip the students with the knowledge of PCB design and fabrication processes.

Objective:

- To make familiar with PCB design and various processes involved.
- To provide in-depth core knowledge in design, performance analysis and fabrication of Printed Circuit Boards.
- To provide the knowledge in PCB fabrication process and factors affecting PCB performance.

Module I: Introduction to the PCB

Definition and Evolution of the Printed Circuit Board (PCB), Purposes of a PCB, Applications, Market Drivers, Typical Development Flow for a PCB, Printed Circuit Technology, Basic Electronic Components, Resistors, Capacitors, Inductors, Diodes, Transistors, Relays, Connectors, Integrated Circuits: How a silicon wafer becomes an IC, Printed Circuit Board Characteristics, PCB Materials, Fillers, resins, laminates, base material characteristics, Dielectric, conductors, Engineering References

Module II: Design and Analyses

Design and Environmental Requirements: Functional, Thermal, Vibration, Shock, EMI/EMC; Electrical Engineering: Analog and digital signals, Signal integrity, Grounding concepts, Current carrying capacity, CAD, Schematics, Layout rules of thumb; Mechanical Engineering: Panels, Standard board sizes, Packaging, Thermal Design, Heat transfer basics, Convection, Conduction, PCB Thermal Design Features, Thermal modeling, Cycling and fatigue, Component Vibration Fatigue, Vibration Models and Terminology, Combined Thermal and Structural Fatigue

Module III: Contamination Control/Environmental Control

Contamination Control, Conformal Coatings, Polluting Agents, Safety Controls, Pollution Controls, Recycling, Standards; Manufacturing: PCB Manufacturing Information, PCB Layout and Artwork; Fabrication: Machining Operations, Blanking, Cutting, Punching, Drilling, Laminating Techniques, Plating, Etching, Surface Finishing, Conformal Coatings, Inspection and Checkout, Specifications and Standards

Module IV: Assembly

PCB Assembly Drawing Examples, Component Considerations, Component mounting and support, Mechanical Devices, Soldering Technology, Nonsolder Connections, Cleaning, Parts Staking, Conformal Coating Removal, Repair and Rework, Safety Considerations, ESD protection, Specifications and Standards

Module V: Testing & Quality Assurance

Common PCB Production Faults, Bare Board Testing, Electrical Performance Testing, Assembled PCB Testing, Quality Assurance in Design, FMEA – Failure Mode and Effects Analysis, Software Tools, Quality Assurance in Manufacturing and in Assembly, Specifications and Standards

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

ROBOTICS AND AUTOMATION

Course Code: ECE2652

Credit Units: 03

Aim: To equip the students with the knowledge of Robotics, Automation and their applications.

Objective:

- To make students familiar with the field of robotics.
- To provide in-depth core knowledge in design and performance analysis of bots.
- To provide the knowledge in sensors, actuators, motion planning and kinematics & dynamics of robots.

Module-I: Introduction to Robotics

History, Robots, Robot Usage, Robot Subsystems, Robot Classification by Application, Robot Classification by Coordinate System, Robot Classification by Actuation System, Robot Classification by Control Method, Robot Classification by Programming Method

Module-II: Actuators and Sensors

Pneumatic Actuators, Hydraulic Actuators, Electric Actuators, Selection of Motors, Sensor Classification, Internal Sensors, External Sensors, Vision System, Sensor Selection,

Module-III: Transformations and Kinematics

Robot Architecture, Pose of a Rigid Body, Coordinate Transformation, Denavit and Hartenberg (DH) Parameters,, Forward Position Analysis, Inverse Position Analysis, Velocity Analysis: The Jacobian Matrix, Link Velocities 133 , Jacobian Computation, Jacobian Using the DeNOC, Singularity, Acceleration Analysis,

Module-IV: Statics and Dynamics

Forces and Moment Balance, Recursive Calculation, Equivalent Joint Torques, Role of Jacobian in Statics, Force Ellipsoid, Inertia Properties, Euler–Lagrange Formulation, Newton—Euler Formulation, Recursive Newton–Euler Algorithm, Dynamics Algorithms

Module-V: Recursive Robot Dynamics and Control

Dynamic Modelling, Analytical Expressions, Recursive Inverse Dynamics using RIDIM, Recursive Forward Dynamics and Simulation, Control Techniques, Second-Order Linear Systems, Feedback Control, Performance of Feedback Control Systems, A Robotic Joint, Joint Controller, Non-linear Trajectory Control, State-space Representation and Control, Stability, Cartesian and Force Controls

Module-VI: Motion Planning

Joint Space Planning, Cartesian Space Planning, Position and Orientation Trajectories, Point-to-Point Planning, Continuous Path Generation

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

SIMULATION & MODELLING LAB

Course Code: ECE2752

Credit Units: 03

Course Contents:

List of Experiments:

1. Layout & Simulation of CMOS Inverter using CAD Tools.
2. Layout & Simulation of NAND & NOR Gates with Optimal Aspect Ratio.
3. Design & Simulation of SR Latch using NAND & NOR Representations.
4. Design & Simulation of JK Flip Flop using SR Latch.
5. Design & Simulation of Master Slave JK Flip Flop.
6. Design & Simulation of R2R Ladder DAC.
7. Design & Simulation of ADC using DAC.

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

GEOTECHNICAL ENGINEERING

Syllabus

ENGINEERING GEOLOGY

Course Code: CIV2351

Credit Units: 03

Course Objective:

The student is given an introduction to basics of Geology genesis and characteristic of rocks: Geological structure and other effects of civil engineering structures. Geology of India is introduced.

Course Contents:

Module I: Branches and scope of geology

Physical geology

Geological agents and their action, weathering, volcanism, earthquake and plate tectonics

Module II: Elements of crystallography and mineralogy

Petrology

Types of rocks, genesis and physical and chemical characters, Building stones

Module III: Structural geology

Types of structures and classification and their effect on civil engineering projects and Geological mapping

Hydrogeology

Groundwater and occurrence, investigations, quality, artificial recharge

Module IV: Geology in Civil Engineering

Tunnels, dams, reservoirs, bridges, Runways, Roads and Buildings.

Slope failures and landslides. Investigations, Remote sensing and GIS applications

Geology of India

Types, age and occurrence of rock formations and economic importance

Examination Scheme:

GEOINFORMATICS

Course Code: CIV2451

Credit Units: 03

Course Objective:

Geoinformatics is an important data system for all civil engineering activities including construction of structures, dams, water systems etc. Correct and reliable information and geographical data are a requirement today. The course thus addresses this issue.

Course Contents:

Module I

Triangulation - principle - reconnaissance - selection of site for base line - selection of stations - orders of triangulation - triangulation figures - scaffolds and signals - marking of stations - intervisibility and heights of stations - satellite stations - base line measurement - equipment and corrections - adjustment of observations.

Module II

Survey adjustments and theory of errors – introduction – laws of accidental errors – probability curve – principle of least squares – laws of weights – probable error – normal equation – most probable value – method of correlates – angle adjustment – station adjustment – figure adjustment – adjustment of triangles – adjustment of a geodetic quadrilateral.

Module III

Curves - types of curves - elements of a curve - simple curves - different methods of setting out – introduction to compound curves - reverse curves, transition curves, vertical curves - hydrographic survey - scope - shoreline survey - river survey - soundings – sounding equipment - methods - ranges - locating sounding - plotting - three point problem.

Module IV

Photogrammetry – terrestrial and aerial photogrammetry – heights and distances from Photographs – flight planning – elements of stereoscopy – photo mosaic – photo interpretation – applications of photogrammetry. GNSS – GPS – differential GPS.

Examination Scheme:

GEOTECHNICAL ENGINEERING-I

Course Code: CIV2551

Credit Units: 04

Course Objective:

Soil mechanics and related topics are important areas in Civil Engineering and the first part of Geotechnical Engineering deals with soils and their characteristics.

Course contents:

Module I: Nature of soil and functional relationships

Soil type -Concepts of single grained, honey combed and flocculent structure and their effects on the basic soil properties - 3 phase system - void ratio - specific gravity - dry density - porosity - water content - saturated unit weight - submerged unit weight - degree of saturation. Laboratory and field identification of soils: Determination of water content by oven drying -Specific gravity using pycnometer and specific gravity bottle - Grain size analysis by sieve analysis, hydrometer analysis and pipette analysis - Atterberg limits and indices – Visual identification by simple field tests - Field density by core cutter, sand replacement and wax coating methods. Classification of soils: Necessity -Principles of classification - I.S. classification – Plasticity charts - Group index.

Module II: Soil Water, Permeability and Stress Distribution

Soil water: Types - Effective stress - Total stress - Pore pressure - Pressure diagrams. Permeability: Definition - Darcy's law - Factors affecting permeability – Laboratory determination - Stratified soils: average permeability. Stress distribution: Boussinesq's equations for vertical pressure due to point loads- Assumptions and limitations - pressure bulb – Influence diagram - Vertical pressure due to uniformly distributed loads, line loads and strip loads - Newmark charts and their use - Westergaard's solution.

Module III: Consolidation and Compaction

Consolidation: Definition - Concepts of coefficient of compressibility - Coefficient of volume change and compression index - e-log p curves - Terzaghi's theory of one dimensional consolidation – Determination of coefficient of consolidation- pre-consolidation pressure difference between consolidation and compaction. Compaction: Definition and objectives of compaction - Proctor test and modified proctor test - Concept of OMC and maximum dry density - Zero air voids line -Factors influencing compaction.- Effect of compaction on soil properties - Field compaction methods - Proctor needle for field control.

Module IV: Shear Strength and Stability of Slopes

Shear Strength: Definition - Mohr's strength and stress circles - origin of planes - Mohr's envelope - Mohr-Coulomb strength theory -Direct, triaxial and UCC tests - Drainage conditions - Measurement of pore pressure - Vane shear tests -Total and effective stress -strength parameters – Stress path, Liquefaction of sand - Choice of test conditions for field problems. Stability of slopes: Slope failure, base failure and toe failure - Swedish circle method - $\phi=0$ analysis and $c=0$ analysis - Friction circle method - Taylor's stability number -Stability charts - Sliding block analysis.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

GEOTECHNICAL ENGINEERING-II

Course Code: CIV2651

Credit Units: 04

Course Objective:

Advanced topics of soil mechanics and the design of foundations are covered in this course.

Course Contents:

Module I: Earth pressure

Earth pressure at rest. Active and passive earth pressure for cohesionless and cohesive soils. Coulomb's and Rankine's theories. Point of application of earth pressure for cases of with and without surcharge in cohesionless and cohesive soils. Culmann's and Rebhan's graphical construction for active earth pressure. Friction circle method for active earth pressure. Site investigation and soil exploration: Objectives. Planning. Reconnaissance. Depth of exploration. Methods of subsurface exploration. Test pits. Auger borings. Wash boring. Rotary drilling. Percussion drilling. Core drilling. Sampling. Types of soil samples. Splitspoon sampler. Thin walled sampler. Piston sampler. Denison sampler. Hand cut samples. Location of water table. S.P.T. Field vane shear test. Introduction to geophysical methods. Boring log. Soil profile.

Module II: Bearing capacity

Ultimate and allowable bearing capacity. Terzaghi's equation for bearing capacity for continuous circular and square footings. Types of shear failures. Bearing capacity factors and charts. Effect of water table on bearing capacity. Meyerhoff's bearing capacity theory. Skempton's formulae. Bearing capacity from field tests. Bearing capacity from building codes. Net bearing pressure. Methods of improvement of soil bearing capacity: vibro flotation and sand drains.

Settlement analysis: Distribution of contact pressure. Immediate and consolidation settlement. Estimation of initial and final settlement under building loads. Limitations in settlement computation. Causes of . Permissible, total and differential settlements. Cracks and effects of settlement.

Module III: Foundations

General considerations: Functions of foundations. Requisites of satisfactory foundations. Different types of foundations. Definition of shallow and deep foundation. Selection of type of foundation. Advantages and limitations of various types of foundations. Design considerations . Footings subjected to eccentric loading. Conventional procedure for proportioning footings for equal settlements.

Open excavation: Open foundation excavations with unsupported slopes. Supports for shallow and deep excavations. Stress distribution in sheeting and bracing of shallow and deep excavations. Stability of bottom of excavations. Raft foundations: Bearing capacity equations. Design considerations. Conventional design procedure for rigid mat. Uplift pressures. Methods of resisting uplift. Floating foundations.

Module IV: Pile foundations

Uses of piles. Classification of piles based on purpose and material. Determination of type and length of piles. Determination of bearing capacity of axially loaded. Single vertical pile. Static and dynamic formulae. Determination of bearing capacity by penetration tests and pile load tests (IS methods). Negative skin friction. Group action and pile spacing. Analysis of pile groups. Load distribution by Culmann's method. Caissons and piers: Open (well) caissons. Box (floating) caissons. Pneumatic caissons. Construction details and design considerations of well foundations. Drilled piers and their construction details.

PROJECT (Geotechnical Engineering)

Course Code: CIV2751

Credit Units: 03

Methodology

The topic for the project work can be a design/experimental/field / analytical/simulation project in any topic of Geotechnical Engineering area. The work can be done individually or by a group of students under the guidance of a faculty of the Department. On completion of the project, the students are to present a report covering various aspects learnt by them and give a presentation on same.

Examination Scheme:

Literature study/ Fabrication/ Experimentation	40
Written Report	20
Viva	15
Presentation	25
Total	100

SEMINAR (GEOTECHNICAL ENGINEERING)

Course Code: CIV2851

Credit Units: 03

Objectives:

To enable the students to acquire knowledge for searching compilation and to
Develop skills for presentation in the form of the seminar

Contents:

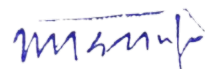

The seminar comprises the selection of an appropriate research proposal and developing research proposals. The student is required to organize and analyze the data/ information collected and write a complete document and presenting the document in the form of seminar.

Text Book:

Relevant technical/ professional material and references in Geotechnical Engineering courses and journals.

INSTRUMENTATION ENGINEERING

Syllabus

BASIC INSTRUMENTATION

Course Code: ECE2351

Credit Units: 03

Introduction

Review of measurement and measuring systems. Functional elements of a measuring system. Input-output configuration of instrumentation systems. Methods of correction for interfering and modifying inputs. Errors and uncertainty in measurements, Statistical analysis of errors. Loading effects, Generalised impedance and stiffness.

Generalized Performance Characteristics

Static and Dynamic performance characteristics, Characteristic of periodic and transient inputs and the response of measuring system to these inputs. Response of measuring system to random inputs, Frequency spectra, auto correlation, cross correlation spectral density, Experimental determination of system parameters, requirement of instrument transfer function to ensure accurate measurement.

Measurement System

Introduction, principle, design of various active and passive transducers. Introduction to semiconductor sensors and its applications, design of signal conditioning circuits for various Resistive, Capacitive and Inductive transducers and piezoelectric transducer, Analog to Digital and Digital to Analog converters, modulation – types, filters – active, passive, digital, Data transmission and telemetry-classification, Recorders – Types of recorders, XY-Plotters, Ultraviolet, magnetic and digital recording.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

LABORATORY/FIELD EXPERIENCES

1. Experimental determination of system parameters.
2. Study and verification of transducer characteristics.
3. Study of signal conditioning techniques.
4. Verification of dynamic performance characteristics of a given system.
5. Case study of a real life measuring system in an industry.
6. Various data acquisition software.

BOOKS RECOMMENDED

- Measurement System, Applications, and Design, E.O. Doebelin. McGraw-Hill International.
- Introduction to Instrumentation & Control, A.K Ghosh, Prentice Hall of India.

VIRTUAL INSTRUMENTATION

Course Code: ECE2451

Credit Units: 03

Course Contents:

Introduction to Virtual Instrumentation: Introduction, Historical perspective, advantages, block diagram and architecture of a virtual instrument, conventional vs. virtual instrumentation.

Introduction to Software : Introduction to Lab VIEW, Front panel, back panel representations, Block diagram, Menus, Palettes, VI and Sub VI, Editing and Debugging VI, Structures, Arrays, Clusters, Charts and Graphs, Data acquisition, Instrument Control, Signal Generation and Signal Processing Examples

Introduction to systems hardware: ADC, DAC, D/O, counters and timer, PC hardware structure, timing, interrupts, DMA, software and hardware installation, Configuring data acquisition hardware using the drives in application software, use of DAQ library functions for different analog and digital input/output operations. Input/output devices & functions like data gloves, joysticks, CRT etc.

Application of Virtual Instrumentation in various fields: Aviation, Automotive, High Voltage, Defense, Chemical, Industrial, Marine, Medical, Mining, Nuclear Energy, Virtual landscapes.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

LABORATORY / FIELD EXPERIENCES

1. Geographical programming using Lab VIEW
2. Applications of Lab VIEW

BOOKS RECOMMENDED

- Learning with LabVIEW 7 Express – R.H. Bishop, Pearson Education, Delhi.
- LabVIEW Basic 1 Course Manual, National Instruments
- Virtual Instrumentation Using LabVIEW- Sanjay Gupta & Joseph John, TMG; 2005.
- LabVIEW for everyone -Wells Lisa K and Travis Jeffrey, Prentice Hall.

BIOMEDICAL INSTRUMENTATION

Course Code: ECE2551

Credit Units: 03

Course Contents:

Sensors and Transducers for biological applications

Types, properties, characteristics and selection of transducers for biological instrumentation.

Measurement of electrical parameters

Leads and electrodes, electrocardiography, electrical activity of the heart, equivalent cardiac generator. Einthoven lead system, standardization of recording and display of ECT (Electrocardiogram), EEG (Electroencephalogram), EMG (Electromyogram), EOG (Electrooculogram), ERG (Electroretinogram), EGG (Electrogastogram).

Measurement of non-electrical parameters

Blood flow, drop recorder, electromagnetic flow meter, measurement of systolic and diastolic pressures, blood pressure instruments, intraocular pressure, lung air pressure, Audiometers. Measurement of body temperature, thermography. Cardiac tachometer, respiration rate phonocardiogram, heart sounds electrical stethoscope pulmonary function analysers. CO₂ - O₂ - Concentration in exhaled air, blood and lungs, pH value of blood, impedance plethysmography blood gas analysers, blood cell counters.

Medical Imaging Systems

Medical display systems, medical thermography X-Ray, diathermy equipment. Ultrasonics in biomedical application for diagnostic and therapeutic, CAT, MRI, Laser applications in biomedical field.

Patient safety

Electrical Safety of Medical Equipments, Shock Hazards from Electrical Equipment, Methods of Accident Prevention, Test Instruments for checking Safety parameters of biomedical equipments.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

BOOKS RECOMMENDED

- Biomedical Instrumentation and Measurements; L.C. Cronwell F.J. Weibell. E.A. Pfeiffer, PHI.
- Principles of applied instrumentation: Gaddes and Baker, John Wiley & Sons.
- Handbook of Bio-medical Instrumentation; R.S. Khandpur, McGraw Hill
- Medical Instrumentation – Application & Design, John G. Webster, Editor, John Wiley & Sons.

ANALYTICAL INSTRUMENTATION

Course Code: ECE2651

Credit Units: 03

Course Contents:

Analytical Methods of Measurements

Physical methods of chemical analysis, special methods of analysis, basic techniques, terminologies, units, Interaction of electromagnetic radiations with matter, emission, absorption and scattering techniques. Instrumentation related to X-Ray, Ultraviolet and Infrared techniques.

Special Analysis

Various light sources, spectrometer, detectors and data processing, comparison of various spectral analytical techniques, refractometry, nuclear magnetic resonance spectrometry. Analytical techniques based on separation method: Basics of chromatography liquid, gas and HPLC Mass Spectrometry and related instrumentation.

Electrometric Methods of Analysis

Techniques and related instrumentations for pH and selective potentiometry, Voltammetry, Colometry and Conductometry, Analytical data presentation. Error analysis, Design considerations of an analytical laboratory, automated analysis, Atomic absorption, spectrometry, polarimetry, Turbidimetry, Nephelometry.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

BOOKS RECOMMENDED

- Instrumental Methods of Chemical analysis; Galen W. Ewing, McGraw-Hill, Koga Kusha Ltd.
- Instrumental Methods of Analysis: HW Willard, Lynnel Merrikt. Jr John A. Dean, F.A. Settle, Jr. Wadsworth Publishing Co. U.S.A.
- Introduction to Instrumentation Analysis: Robert D. Braun McGraw Hill Co. International Ed.

INDUSTRIAL PROCESS CONTROL

Course Code: ECE2751

Credit Units: 03

Course Contents:

Process Characteristics: Process, Process variable, mathematical modeling of liquid, gas, thermal, mechanical and chemical system. Linearizing techniques, liquid level control in a tank. Dynamics of manometer, response of non-interacting and interacting first order elements in series.

Controller characteristics: Characteristics of on-off, proportional, integral, derivative modes and their combinations.

Automatic control: Single and combined modes in closed loop, static error, velocity error. Dynamic behavior of feedback control processes for different modes. IAE, ISE, IATE criteria. Tuning of controllers.

Controllers: Electronics, pneumatic, hydraulic controllers implementing. Single and composite mode of controllers. Latest trends in industrial controllers employing PLCs & other logic devices such as fuzzy logic control DCS & Computer based systems etc.

Final control elements:

Types & function of Control valves. Electrical, Pneumatic, hydraulic actuators.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

LASER SYSTEM

Syllabus

BASICS OF LASERS

Course Code: LOE2351

Credit Units: 3

Course Objective:

The basic aim of this Course is to make students (with Physics & Maths background up to 12th standard) appreciate the fundamentals of lasers and their diversified applications. The approach will stress more on the concepts & fundamentals with very simple or sometimes no mathematical equations. The outcome of this Course will make the students/trainees more excited to more about lasers and their applications in specific fields of their interest.

- **Overview of Lasers** :History, Types and Applications of Lasers
- **Nature of Light**: Corpuscular Theory, Wave Theory, Electromagnetic Spectrum, Quantum nature of light, Dual nature of nature, De Broglie's hypothesis, wavelength associated with particle, momentum of photon, Energy-mass relation, Momentum of photon. Mass of photon.
- **Matter**: Structure of Atoms & Molecules. Energy Levels, Electronic, Vibrational and Rotational Energy Levels with Examples. Two-level representation.
- **Interaction of Radiation with Matter**: Absorption, Spontaneous Emission, Stimulated Emission, Einstein's A & B Coefficients of Transitions, Maxwell Boltzmann Distribution, Planck's law of blackbody radiation.
- **Principle of Laser action**: Population inversion, metastable states, gain medium, Pumping mechanisms, feedback mechanism, threshold condition for laser beam generation.
- **Optical Resonators** :Types of Resonators, Stability Criteria, g-parameters.
- **Characteristics of Laser Beams**: Monochromaticity, Directionality, Brightness, Coherence: temporal & spatial, Focusability, Ultra-short pulse generation.
- **Types of Lasers**: Three-level and Four-level Lasers, Solid, Liquid and Gas Lasers. Brief description of Ruby, He-Ne, Nd:YAG, Carbon Dioxide Lasers, Semiconductor Lasers. X-Ray Lasers, Free-electron Lasers. Fiber Lasers.
- **Longitudinal & Transverse Modes** : Temporal modes, Spatial Modes & characteristics.
- **Application of Lasers**: General Applications of Lasers, Laser Applications in Industry, Defence, Medicine, Entertainment etc.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

LASER TECHNOLOGY & APPLICATIONS

Course Code: LOE2451

Credit Units: 3

Course Objective: The aim of this Course is to make students/trainees understand the fundamentals of lasers, laser systems, their characteristics and diversified applications including industry, medicine & Defence. The approach will be to stress more on the fundamentals with the help of very simple mathematical equations. The outcome of this Course will prepare the students/trainees to use this knowledge for applications of lasers in specific fields of their interest.

Module I: INTERACTION OF LIGHT WITH MATTER Einstein coefficients, Relation between these coefficients, Lifetime of excited state, Line Broadening mechanisms, Population inversion, Threshold condition for Laser, Laser-Rate equations for three-level and four-level systems, Conditions for CW and pulsed laser action.

Module II: DIFFERENT POPULATION INVERSION TECHNIQUES WITH EXAMPLES

Optically pumped lasers, solid state lasers, dye lasers, electrical-discharge pumped lasers, gas lasers, chemical lasers, gas dynamic lasers, semiconductor lasers, free-electron lasers, gamma ray lasers, fiber lasers (only introductory description of these lasers).

Module III: OPTICAL RESONATORS

General considerations, Laser resonators, General conditions of stability, Plane and spherical mirror cavities, Modes and optical resonators, Gaussian beam propagation, Theory of Q-switching and experimental methods - Theory of Mode locking and experimental methods. Frequency stabilization of laser beams. Multimode oscillation.

Module-IV: CHARACTERISTICS OF LASER BEAMS AND APPLICATIONS

Monochromaticity, Spatial & temporal coherence, temporal coherence & monochromaticity relation, connection between spatial coherence and directionality, rightness, Focusability, ultra-short pulse generation. Peak Power, Average Power, Duty Cycle in Pulsed Lasers.

Module V: TYPES OF LASERS

Solid, Liquid and Gas Lasers. Brief description of Ruby, He-Ne, Nd:YAG, Nd:glass, Er:glass, Er:YAG, Carbon Dioxide Lasers, Nitrogen Lasers, Semiconductor Lasers. X-Ray Lasers, Free-electron Lasers. Fiber Lasers, Femtosecond lasers, Raman Lasers.

Module VI: APPLICATION OF LASERS

General Applications of Lasers including Industry, Defence, Medicine, Entertainment etc.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

LASER SYSTEMS & DEVICES

Course Code: LOE2551

Credit Units: 3

Course Objective: This course describes in details the principles, energy level diagrams, block diagrams and operation of various types of laser systems: solid, semiconductor, liquid and gas lasers. These laser systems are further classified according to the pumping schemes employed and systems output characteristics of each laser system are then explained. This course will make the students understand the actual functioning of various laser systems.

Module I: OPTICAL MATERIALS

Optical materials for IR to UV wavelengths

Module II: LASER COMPONENTS

- (a) MLD Components: metal coated, multilayer dielectric coated, AR coated, thin film polarizers, narrow-band filters.
- (b) Optical Components: Polarizers, beam splitters, beam expanders and collimators, gratings, graticules.
- (c) Arc/Flash Lamps: Electrical and spectral characteristics of arc/flash lamps, pulse forming networks for flash lamps.

Module III: LASER POWER SUPPLIES

Simple DC high-voltage power supplies, switch-mode power supply (SMPS), constant current power supply. High-voltage fast switches: spark gaps, SCR, thyatrons, krytrons, saturable magnetic core, avalanche transistors. Pulsed power supplies for lasers: Marx generators for CO₂ lasers, pulsed circuits for nitrogen, copper, excimer and semiconductor lasers,

Module IV: DESIGN OF OPTICALLY-PUMPED LASERS

- (a) Optically Pumped Lasers: Ruby, Nd:YAG, Er:glass, Dye lasers, FIR lasers, Raman shifted lasers
- (b) Electrical Discharged Lasers: He-Ne, Nitrogen, Various types of CW and Pulsed Carbodioxide lasers, argon-ion, copper and copper compound lasers, Excimer lasers.
- (c) Brief Description of Other Lasers: Chemical Lasers, Semiconductor Lasers, Free electron laser, X-ray laser, Fiber Lasers.

Module V: LASER PARAMETRS MEASUREMENTS

Types of detectors (for UV, IR and visible wavelengths) and their characteristics, Measurement laser average power, peak power, energy, wavelength, frequency, linewidth, pulse duration, pulse repetition rate, beam quality, divergence, beam diameter etc. Choppers, Monocromators, Lock-in Amplifiers, Box-car averagers, Spectroradiometers, Spectrophotometers, spectrum analyzers, wavemeters, densitometers.

Module VI: LASER HAZARDS AND SAFETY MEASURES

Types of hazards, hazards to eyes and skin, Maximum Permissible Exposure (MPE), Classification of lasers, from the point of view of hazards, safety measures, NOHD, buffer zone, laser safety measures.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

LASERS IN DEFENSE APPLICATIONS

Course Code: LOE2651

Credit Units: 3

Course Objective: This course describes various applications of lasers Defence.

Module I: LASER BEAM PROPAGATION THROUGH ATMOSPHERE

Atmospheric absorption and scattering by molecules and aerosols, Atmospheric transmission, Beer's law, atmospheric windows. Absorption of laser radiation by carbon dioxide, ozone and water molecules. Scattering of laser radiation by air molecules, haze particles, fog droplets, cloud droplets and rain drops. Types of atmospheric scattering : Rayleigh, Mie scattering, diffraction theory. Atmospheric attenuation coefficient. Visibility of the atmosphere. Atmospheric turbulence and turbidity. Refractive-index structure coefficient. Nonlinear effects in the atmosphere: thermal blooming, beam bending, kinetic cooling, bleaching, self-induced transparency, Air breakdown.

Module II: LASER RANGE FINDERS

Solid-state (Nd:glass, Nd:YAG and Er:glass) laser rangefinders (LRFs), Waveguide carbondioxide LRFs, Semiconductor LRFs. Discussion in each about the laser transmitter, receiver, signal processing unit, optical arrangement. Laser range equation, maximum and minimum ranges, range accuracy, range blocking, first echo/last echo logic, field of view, boresighting. Eye safe laser rangefinders. Optoelectronic proximity fuze, Satellite to Submarine Laser Range Finders.

Module III: LASER TARGET DESIGNATORS AND LASER-GUIDED WEAPONS

Laser Guidance, Laser target designators, laser guided missiles, laser guided bomb. Laser beam riding of missiles. Laser & electro-optic surveillance systems. IR guidance.

Module IV: LASER WEAPONS : Laser blinding gun, gas dynamic laser-baser weapon, COIL-based laser weapon, HF/DF laser based weapon.

Module V: LASER GYROSCOPES & SENSORS: Laser ring gyro, optical fiber gyro, optical sensors (including fiber-optic sensors) in tanks, ships, aircraft etc.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

LASERS IN INDUSTRIAL APPLICATIONS

Course Code: LOE2751

Credit Units: 3

Course Objective: To endow the students with knowledge about industrial laser systems and interaction of laser radiation with matter and applications of lasers in various materials processing like cutting, welding, surface treatment etc.

MODULE I INDUSTRIAL LASER SYSTEMS

High power laser systems - Focusing optics - Steering optics - Mechanisms - Overview of industrial lasers - CW & pulsed - Q-switched and Mode locked.

MODULE II THERMAL PROCESSES IN INTERACTION ZONE

Depth of penetration with respect to laser energy density - Reflectivity of Metals with respect to wavelength - Rate of heating and cooling - Maximum temperature rise and depth of hardened layer - Different gases used during laser materials processing - Operational parameters in laser materials processing - Key hole effect.

MODULE III SURFACE TREATMENT

Surface modification:- surface cladding - surface alloying - Hard facing - Shock hardening - laser parameters for surface alloying - process variables - Beam profiles - Different methods to obtain desired penetration depths - Experimental set-up.

MODULE IV LASER WELDING

Different modes of laser beam welding - Comparison between laser beam and electron beam welding - Influence of different parameters - Absorptivity - Welding speed - Focussing conditions - Advantages and limitations of laser welding - Laser welding of industrial materials - Recent developments in laser welding techniques

MODULE V LASER CUTTING AND DRILLING

Laser energy density for cutting and drilling - Melt flashing mechanism - Various assisting gases and their importance - Advantages of laser cutting - Laser instrumentation for cutting and drilling - Factors affecting cutting rates - Effect of laser pulse energy on diameter and depth of drilled hole.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

LASERS IN ATMOSPHERIC STUDIES

Course Code: LOE2851

Credit Units: 3

Course Objective:

This course aims to train the students on the basics of applications of lasers and various laser-based techniques to remotely detect and measure the concentration and size etc. of various constituents of the atmosphere including aerosols, pollutants and other toxic agents.

MODULE I: Introduction and Overview of Laser-Based Remote Sensing Techniques

Why Lasers for Remote Sensing of Environment. Aerosols, Pollutants, CBW Agents, Toxicity Levels, Non-Laser based Detection Techniques.

MODULE II: Lidar Techniques

Aerosol Lidar Differential Absorption Lidar (DIAL), Heterodyne Lidar, Micro-Pulse Lidar, LIF-Based Lidar, Raman Lidar, Doppler Lidar, Space Borne Lidar

MODULE III: Laser Sources for Remote Detection

Nd: YAG Laser, Carbondioxide Laser, UV Lasers, Tunable Lasers, Semiconductor Lasers

MODULE IV: Detectors and Telescopes and Data Processing:

Various Types of Detectors and their characteristics for different wavelengths and applications, Telescopes, Data acquisition and processing systems

MODULE V: Laser Based Techniques for Standoff Detection of Explosive Materials

Laser Induced Breakdown Spectroscopy (LIBS). Laser Induced Fluorescence (LIF). Raman Techniques, Hybrid (Integrated) Sensors.

Examination Scheme:

Components	A	MP	EE
Weightage (%)	5	25	70

MP: Mini Project, EE: End Semester Examination; A: Attendance

ADVANCED DATABASE MANAGEMENT SYSTEMS

Course Code: DSE4102

Credit Units: 03

Course Objective:

The objective of this course is to expose the students to the implementation techniques of database system. This course explains techniques for query processing and optimization with transaction and concurrency control techniques

Course Contents:

Module I: Relational Databases

Integrity Constraints revisited, Extended ER diagram, Relational Algebra & Calculus, Functional, Multivalued and Join Dependency, Normal Forms, Rules about functional dependencies.

Module II: Query Processing and Optimization

Valuation of Relational Operations, Transformation of Relational Expressions, Indexing and Query Optimization, Limitations of Relational Data Model, Null Values and Partial Information.

Object Oriented and Object Relational Databases

Modeling Complex Data Semantics, Specialization, Generalization, Aggregation and Association, Objects, Object Identity, Equality and Object Reference, Architecture of Object Oriented and Object Relational Databases

Module III: Parallel and Distributed Databases

Distributed Data Storage – Fragmentation & Replication, Location and Fragment

Transparency Distributed Query Processing and Optimization, Distributed Transaction Modeling and concurrency Control, Distributed Deadlock, Commit Protocols, Design of Parallel Databases, Parallel Query Evaluation.

Advanced Transaction Processing

Nested and Multilevel Transactions, Compensating Transactions and Saga, Long Duration Transactions, Weak Levels of Consistency, Transaction Work Flows, Transaction Processing Monitors.

Module IV

Multimedia databases, Databases on the Web and Semi-Structured Data. Case Study: Oracle Xi

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

ADVANCED COMPUTER NETWORKS

Course Code: DSE4104

Credit Units: 03

Course Objective:

The objective of the course is to provide thorough understanding & in-depth knowledge of concepts in computer networks Such as Internet protocols and routing, local area networks, wireless communications and networking, performance analysis, congestion control, TCP, network address translation, multimedia over IP, switching and routing, mobile IP, multicasting, IPv6. Peer-to-peer networking, network security, and other current research topics. A focus will be placed on wireless networking, reflecting rapid advances in this area. This course motivates the students to explore current research areas in the same field.

Course Contents:

Module I

Uses computer networks, Reference Models, TCP/IP suite of protocols, MAC protocols for high-speed LANS, MANs, and wireless LANs. (For example, FDDI, DQDB, HIPPI, Gigabit Ethernet, Wireless Ethernet, etc.)Fast access technologies. (For example, ADSL, Cable Modem, etc.)

Module II

Network Layer Design Issues, Routing Algorithms, Congestion Control Algorithms, Quality of Service, Internet Working, Network Layer in Internet.

IPv6 basic protocol, extensions and options, support for QoS, security, etc., Changes to other protocols, Application Programming Interface for IPv6.

Module III

Mobile IP, IP Multicasting. Multicast routing protocols, address assignments, session discovery, etc.

Module IV

The Transport Protocol: The Transport Service, Elements of transport protocol, a simple Transport Protocol, Internet Transport Protocols UDP, Internet Transport Protocols TCP, TCP extensions for high-speed networks, transaction-oriented applications Performance Issues.

The Application Layer: DNS-(Domain Name System), Electronic Mail, World Wide Web Multimedia.

Module V

Overview of network security, Secure-HTTP, SSL, ESP, Key distribution protocols. Digital signatures, digital certificates-mail Security, Web security, Social Issues.

Examination Scheme:

Components	A	CT	H	V/S/O	EE
Weightage (%)	5	10	7	8	70

DIGITAL COMPUTER ORGANIZATION

Course Code: DSE4103

Credit Units: 03

Course Objective:

With increase in availability of system resources, concept of parallel architecture has obtained immense popularity. This course provides a comprehensive study of scalable and parallel computer architectures for achieving a proportional increase in performance with increasing system resources. In this course we have discussed the theory, technology, architecture (hardware) and software aspects of parallel computer and Vector computers.

Course Contents:

Module I: Parallel computer models

The state of computing, Multiprocessors and multicomputers, Multivector and SIMD computers, Architectural development tracks

Program and network properties: Conditions of parallelism, Data and resource dependences, Hardware and software parallelism, Program partitioning and scheduling, Grain size and latency, Program flow mechanisms, Control flow versus data flow, Data flow architecture, Demand driven mechanisms, Comparisons of flow mechanisms

Module II: System Interconnect Architectures

Network properties and routing, Static interconnection networks, Dynamic interconnection Networks, Multiprocessor system interconnects, Hierarchical bus systems, Crossbar switch and multiport memory, Multistage and combining network.

Module III: Processors and Memory Hierarchy

Advanced processor technology, Instruction-set Architectures, CISC Scalar Processors, RISC Scalar Processors, Superscalar Processors, VLIW Architectures, Vector and Symbolic processors

Memory Technology: Hierarchical memory technology, Inclusion, Coherence and Locality, Memory capacity planning, Virtual Memory Technology

Module IV: Backplane Bus System

Backplane bus specification, Addressing and timing protocols, Arbitration transaction and interrupt, Pipelining: Linear pipeline processor, Nonlinear pipeline processor, Instruction pipeline design, Mechanisms for instruction pipelining, Dynamic instruction scheduling, Branch handling techniques, Arithmetic Pipeline Design, Computer arithmetic principles.

Module V: Vector Processing Principles

Vector instruction types, Vector-access memory schemes.

Synchronous Parallel Processing: SIMD Architecture and Programming Principles, SIMD Parallel Algorithms

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;
Att: Attendance

ADVANCED DATABASE MANAGEMENT SYSTEM LAB

Course Code: DSE4106

Credit Units: 01

Programs should be based on following topics:

Quick Review of Simple SQL Statements, SQL Built-in Functions, Primary Key, Foreign Key, Normalization, Joins View, Union. **Emphasis** on PL/SQL, Cursors 8. Exception handling, Procedure, Functions, Trigger, concurrency control, transaction processing. Introduction to SQLite.

Recommended Software: PostgreSQL, MySQL, Oracle.

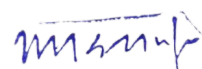

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

ADVANCED COMPUTER NETWORK LAB

Course Code: DSE4107

Credit Units: 01

Course Contents:

1. Study of different types of networking cables, and implement cross and straight cable using clamping tool
2. Implementation of Stop and Wait Protocol and Sliding Window Protocol.
3. Study of Socket Programming and Client
4. Write a code simulating ARP /RARP protocols.
5. Write a code simulating PING and TRACEROUTE commands
6. Create a socket for HTTP for web page upload and download.
7. Write a program to implement RPC (Remote Procedure Call)
8. Implementation of Subnetting
9. Applications using TCP Sockets like Echo client and echo server, Chat Server, File Transfer, Applications using TCP and UDP Sockets ,DNS,SNMP
10. Study of Network simulator (NS).and Simulation of Congestion Control Algorithms using NS.
11. Perform a case study about the different routing algorithms to select the network path with its optimum and economical during data transfer Link State routing, Flooding, Distance vector.

Recommend Software:C/C++ on Linux/Unix, NS, Packet Tracer

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

MATLAB PROGRAMMING

Course Code: DSE4108

Credit Units: 02

Understanding The MATLAB Environment, Using the Help System in MATLAB, MATLAB Basics, Linear Algebra; Vectors and Matrices and various operations on them, M files; Scripts and User-defined functions, Plotting, Flow Control and Loops; For and While Loops, If and Case statements, structures, writing basic programs using the above, study of various toolboxes available in matlab and case study of any one tool box.

Recommended Software: MATLAB/Octave

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

PYTHON PROGRAMMING LAB

Course Code: DSE4109

Credit Units: 01

Course Contents:

1. Setting up python on Windows/Linux/Mac
2. First program in python
3. Programs related to basic input/output.
4. Programs related to variables, strings, numbers
5. Programs related to Lists and Tuples
6. Programs related to Functions
7. Programs related to If Statements
8. Programs related to While Loops and Input
9. Programs related to Basic Terminal Apps
10. Programs related to Dictionaries
11. Programs related to Classes
12. Programs related to Exceptions
13. Programs related to GUI programming
14. Using Word, Excel, PDF files in python.
15. Web programming in python,
16. Case study of application areas of python.

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

DATA MINING AND PREDICTIVE ANALYTICS

Course Code: DSE4202

Credit Units: 03

Course Objective: This course introduces the topics of Data Mining, and Data Analytics by providing a basic, practical foundation that allows the students to participate in Data Analytics projects. The course incorporates an introduction to the Data Analytics lifecycle, Machine Learning (ML), Data Mining algorithms and computational paradigms that allow computers to find patterns and regularities in databases, perform prediction and forecasting, and generally improve their performance through interaction with data.

Course Contents:

Module-I: Data Preparation

An introduction to data mining and predictive analytics, Data Pre-processing Exploratory Data Analysis, Dimension- Reduction Methods.

Module-II: Classification

k- Nearest Neighbour Algorithm, Decision Trees, Model Evaluation Technique, Cost –Benefit Analysis Using Data Driven Cost.

Module-III: Clustering

Hierarchical and k- Means Clustering, Kohonen Networks, Birch Clustering, Measuring Cluster Goodness.

Module-IV: Association Rules

Affinity Analysis and Market Basket Analysis, Data Representation for Market Basket Analysis, Support, Confidence, Frequent Item sets, and the a Priori Property, How Does a Priori Algorithm Work ? Generating Frequent Item sets, Generating Association Rules, Extension from Flag Data to General Categorical Data, Information-Theoretic Approach: Generalized Rule Induction Method, J -Measure, Association Rules are Easy to do Badly, How can we Measure the Usefulness of Association Rules? Do Association Rules Represent Supervised or Unsupervised Learning?

Module-V: Case Study: Predicting Response to Direct Mail Marketing

Business Understanding, Data Preparation, and Eda, Clustering and Principal Components Analysis, Modelling and Evaluation for Performance and Interpretability, Modelling and Evaluation for High Performance.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

DATA WAREHOUSING AND MULTIDIMENSIONS MODELLING

Course Code: DSE4203

Credit Units: 03

Course Objective: This course focuses on the fundamentals of data warehousing and multidimensional Modelling. Data warehouse development life cycle, Data warehouse analysis, CUBE, ROLL UP and STAR queries, Data Warehouse Design - Massive de-normalisation, STAR schema design, Data ware house Architecture, OLAP, ROLAP and MOLAP, concepts of Fact and dimension table are the major areas of coverage of this course. This course also deals with the issues while implementing the multidimensional models

Course Contents:

Module I Introduction

Multidimensional Data Management, Multidimensional History, Related Terminology,

Module II Fundamental Concepts

Cubes ,Dimensions, Facts, Measures, Relational Representations, Star Schemas, Snowflake Schemas, Data Warehouses And Data Marts, Multidimensional Modelling Process, Analysis And Querying ,Roll Up, Drill Down, Drill Out, Slicing And Dicing, Drill Across, Pivot Tables, Ranking, Multi-Dimensional Querying in MDX and SQL, Graphical Querying and Visualizations .

Module III Advance Concepts

Slowly Changing Dimensions, The Problem, Solutions, Other Special Kinds Of Dimensions, Mini dimensions, Outriggers, Degenerate Dimensions, Junk Dimensions, Time Dimensions, Data Quality Dimensions, Advanced Hierarchies, Parent-Child Hierarchies, Unbalanced Hierarchies, Non Covering Hierarchies , Non –Strict Hierarchies, Multiple Hierarchies And Parallel Hierarchies.

Module IV Implementation Issues

Materialized Views, Indexing, Indexing Overview, Bitmap Indices, Join Indices, Query Processing, OLAP Implementations, Extract-Transform-Load.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;
Att: Attendance

DATABASE AND KNOWLEDGE BASE SYSTEMS

Course Code: DSE4204

Credit Units: 03

Course Objective: This course discusses design methodology for databases to verify their structural correctness and implements databases. It also provides applications software primarily in the relational model using querying languages, primarily SQL, and other database supporting software applying the theory behind various database models and query languages implementing security and integrity policies relating to databases and preparation for data analytics working in group settings to design and implementing database projects.

Course Contents:

Module-I: Introduction

Database Languages, Object-Base Systems, Knowledge-base Systems, History and Perspective, Data Models for Database Systems: Data Models, The Entity-relationship Model, The Relational Data Model, Operations in the Relational Data Model, The Network Data Model, The Hierarchical Data Model, An Object-Oriented Model, Logic as a Data Model: The Datalog Data Model, Evaluating Non- recursive Rules, Computing the Meaning of Recursive Rules, Incremental Evaluation of Least Fixed Points, Negations in Rule Bodies, Relational Algebra and Logic, Relational Calculus, Tuple Relational Calculus.

Module-II: Relational Query and Object-Oriented Database Language

ISBL: A "Pure" Relational Algebra Language, QUEL: A Tuple Relational Calculus Language, Query-by-Example: A DRC Language, Data Definition in QBE, The Query Language SQL, Data Definition in SQL, The DBTG Data Definition language, The DBTG Query Language, The DBTG Database Modification Commands, Data Definition in IMS, A Hierarchical Data Manipulation Language, Data Definition in OPAL, Data Manipulation in OPAL

Module-III: Physical Data Organization and Design of Relational Databases

The Physical Data Model, The Heap Organization, Hashed Files, Indexed Files, B-trees, Files with a Dense Index, Secondary Indices, Data Structures in DBTG Databases, Data Structures for Hierarchies, Data Structures for Relations, A Search Tree Structure, Functional Dependencies, Lossless-Join Decomposition, Normalization, Generalized Dependencies.

Module-IV: Transaction Management

Basic Concepts, A Simple Transaction Model, The Two-phase Locking Protocol, a Model with Read and write-Locks, Lock Modes, A Read-Only, Write-Only Model, Concurrency for Hierarchically Structured Items, Handling Transaction Failures, Aggressive and Conservative Protocols, Recovery From Crashes, Timestamp-based Concurrency Control.

Module-V: Distributed Database Management

Distributed Databases, Distributed Locking, Distributed Two-phase Locking, Distributed Commitment, A Nonblocking Commit Protocol, Timestamp-based, Distributed Concurrency, Recovery of Nodes, Distributed Deadlocks.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

BIG DATA TECHNOLOGIES

Course Code: DSE4205

Credit Units: 03

Course Objective:

This course brings together several key big data technologies used for storage, analysis and manipulation of data. It also introduces the students the key concepts of Hadoop framework, MapReduce, Pig, Hive, and No-SQL. Students will prepare a sample project in Hadoop.

Course Contents:

Module I: Introduction to Big Data

Big Data and its Importance – Four V's of Big Data – Drivers for Big Data – Introduction to Big Data Analytics – Big Data Analytics applications.

Module II: Big Data Technologies

Hadoop's Parallel World – Data discovery – Open source technology for Big Data Analytics – cloud and Big Data – Predictive Analytics – Mobile Business Intelligence and Big Data – Crowd Sourcing Analytics – Inter- and Trans-Firewall Analytics - Information Management.

Module III: Processing Big Data

Integrating disparate data stores - Mapping data to the programming framework - Connecting and extracting data from storage - Transforming data for processing - Subdividing data in preparation for Hadoop Map Reduce.

Module IV: Hadoop Map Reduce

Employing Hadoop Map Reduce - Creating the components of Hadoop Map Reduce jobs - Distributing data processing across server farms –Executing Hadoop Map Reduce jobs - Monitoring the progress of job flows - The Building Blocks of Hadoop Map Reduce - Distinguishing Hadoop daemons - Investigating the Hadoop Distributed File System Selecting appropriate execution modes: local, pseudo-distributed, fully distributed.

Module V: Big Data Tools and Techniques

Installing and Running Pig – Comparison with Databases – Pig Latin – User- Define Functions – Data Processing Operators – Installing and Running Hive – Hive QL – Tables – Querying Data – User-Defined Functions – Oracle Big Data.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

RESEARCH METHODOLOGY AND TECHNICAL REPORT WRITING

Course Code: DSE4206

Credit Units: 02

Course Objectives: The course will enhance scientific, technical and research writing skills and impart knowledge about various stages of research process, statistical analysis, statistical tests and their applications in statistical decision making.

Course Contents:

Module I: Introduction to research: Definition, motivation, need, objectives, significance and characteristics of research; types of research; steps in research process; planning a research proposal; literature review, web searching.

Module II: Population and sample, parameter and statistic, sampling and data collection, sampling design: steps, types, sample size, sampling methods, large and small samples, primary and secondary data, data processing and analysis. Sample surveys and questionnaire designing, scaling techniques.

Module III: Dependent and independent variables, univariate, bivariate and multivariate analysis, means-arithmetic, geometric and harmonic; measure of dispersion of data, standard deviation, variance, coefficient of variation and degree of freedom. Hypothesis testing: null hypothesis and alternate hypothesis, errors in hypothesis testing, significance and confidence levels, parametric tests and non-parametric tests, one-tailed and two-tailed tests, analysis of variance. Regression analysis and curve fitting, method of least-squares, explained and unexplained variations, coefficient of correlation, coefficient of determination.

Module IV: Technical/scientific/research report writing: structure and components of scientific reports, formats of dissertations, research report, report writing skills, report preparation, referencing, bibliography and footnotes. Making presentation-use of visual aids and PPTs. Publication of research papers, citations, Intellectual property rights and copy rights, plagiarism, patents and patent laws, commercialization and ethical issues.

Examination Scheme:

DATA MINING AND PREDICTIVE ANALYTICS LAB

Course Code: DSE4208

Credit Units: 01

Course Objective:

- To analyse the data using statistical methods.
- To understand and demonstrate data mining using any open source data mining tool.

Recommended Software: ORANGE, Rapid Miner

List of Experiments

1. Data Analysis- Getting to know the Data (Using ORANGE, Rapid Miner)
 - Parametric - Means, T-Test, Correlation
 - Prediction for numerical outcomes - Linear regression
 - Correlation analysis
 - Preparing data for analysis
 - Pre-processing techniques
2. Data Mining (Using ORANGE, Rapid Miner or any open source data mining tool)
 - Implement clustering algorithm
 - Implement classification using
 - Decision tree
 - Back propagation
 - Visualization methods.

Examination Scheme:

DATA WAREHOUSING AND MULTIDIMENSIONAL MODELLING LAB

Course Code: DSE4209

Credit Units: 01

Programs should be based on following topics:

Quick Review SQL Statements, SQL Built-in Functions, **Emphasis** on PL/SQL, Cursors 8. Exception handling, Procedure, Functions, Trigger, concurrency control, transaction processing. Introduction to ETL Tools: Talend Open Source Data Integrator, Scriptella, KETL
Pentaho Data Integrator - Kettle, JasperSoft ETL, GeoKettle, CloverETL, HPCC Systems

Recommended Software: SQL Server, ETL Tools (Open Source)

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

INFORMATION MANAGEMENT SYSTEM

Course Code: DSE4210

Credit Units: 03

Course Objective:

This course exposes students with the basics of managing the information and explores the various aspects of database design and modelling. It examines the basic issues in information governance and information integration and also helps to understand the information architecture

Course Contents:

Module-I: Database Modelling, Management and Development

Database design and modelling – Business Rules and Relationship; Java database Connectivity (JDBC), Database connection Manager, Stored Procedures. Trends in Big Data systems including NoSQL – Hadoop HDFS, MapReduce, Hive, and enhancements.

Module-II: Data Security and Privacy

Program Security, Malicious code and controls against threats; OS level protection; Security – Firewalls, Network Security Intrusion detection systems. Data Privacy principles. Data Privacy Laws and compliance.

Module-III: Information Governance

Master Data Management (MDM) – Overview, Need for MDM, Privacy, regulatory requirements and compliance. Data Governance – Synchronization and data quality management.

Module-IV: Information Architecture

Principles of Information architecture and framework, Organizing information, Navigation systems and Labelling systems, Conceptual design, Granularity of Content.

Module-V: Information Lifecycle Management

Data retention policies; Confidential and Sensitive data handling, lifecycle management costs. Archive data using Hadoop; Testing and delivering big data applications for performance and functionality; Challenges with data administration;

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE

INFORMATION SYSTEM SECURITY

Course Code: DSE4211

Credit Units: 03

Course Objective:

This course provides a deep and comprehensive study of the security principles and practices of information systems. Topics include basic information security concepts, common attacking techniques, common security policies, basic cryptographic tools, authentication, access control, software security, operating system security, and legal and ethical issues in information systems security

Course Contents:

Module-I: Introduction

Computer Security Concepts, Threats, Attacks, and Assets Security Functional Requirements A Security Architecture for Open Systems Computer Security Trends.

Module-II: COMPUTER SECURITY TECHNOLOGY AND PRINCIPLES

Cryptographic Tools, User Authentication, Access Control, Database Security, Malicious Software, Denial-of-Service Attacks.

Module-III: SOFTWARE SECURITY

Buffer Overflow: Stack Overflows, Defending Against Buffer Overflows, Other Forms of Overflow Attacks, Software Security: Software Security Issues, Handling Program Input, Writing Safe Program Code, Interacting with the Operating System and Other Programs, Handling Program Output

Module-IV: TRUSTED SYSTEMS SECURITY

Operating System Security: Introduction to Operating System Security, System Security Planning, Operating Systems Hardening, Application Security, Security Maintenance, Linux/Unix Security, Windows Security, Virtualization Security. Trusted Computing and Multilevel Security: Bell-LaPadula Model for Computer Security, Other Formal Models for Computer Security, Concept of Trusted Systems, Application of Multilevel Security, Trusted Computing and the Trusted Platform Module, Common Criteria for Information Technology Security Evaluation, Assurance and Evaluation

Module-V: MANAGEMENT ISSUES

IT Security Management and Risk Assessment, IT Security Controls, Plans, and Procedures, Physical and Infrastructure Security, Human Resources Security, Security Auditing, Legal and Ethical Aspects

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

DESCRIPTIVE ANALYSIS

Course Code: DSE4301

Credit Units: 03

Course Objective:

This course introduces some elementary statistical methods of analysis of data and compute various measurements of central tendency, dispersion, skewness and kurtosis. Also discusses computation of the correlation coefficient from ungrouped bivariate data and interpret them and analyse data pertaining to attributes and to interpret results.

Course Contents:

Module-I: Introduction to Statistics

Definitions: Webster's and Secrist's definition of Statistics, Importance of Statistics, Scope of Statistics: In the field of Industry, Biological Sciences, Medical Sciences, Economics Sciences, Social, Sciences, Management Sciences, Agriculture, Insurance, Actuarial Science, Education and Psychology.

Module-II: Population and Sample

Types of characteristics: Attributes: Nominal scale, ordinal scale. Variables: Interval scale, ratio scale, discrete and continuous variables, Types of data: Primary data, Secondary data, Notion of a statistical population: Finite population, infinite population, homogeneous population and heterogeneous population. Notion of sample, random sample and non-random sample, Methods of sampling: Simple random sampling with and without replacement (SRSWR and SRWOR) stratified random sampling, systematic sampling, cluster sampling and two-stage sampling.

Module-III: Presentation of Data

Classification: Raw data and its classification, Discrete frequency distribution, Sturge's rule, continuous frequency distribution, inclusive and exclusive methods of classification, Open end classes, cumulative frequency distribution and relative frequency distribution, Graphical Presentation of Data: Histogram, frequency curve, frequency polygon, ogive curves, stem and leaf chart, Check sheet, Parato diagram, Examples and Problems.

Module-IV: Measures of Central Tendency

Concept of central tendency of statistical data, Arithmetic Mean (A.M.), combined mean of a number of groups, merits and demerits, Geometric Mean (G.M.), Harmonic Mean (H.M.), Weighted Mean, Weighted A.M., G.M. and H.M. , Mode, Median, Empirical relation between mean, median and mode, Order relation between arithmetic mean, geometric mean, harmonic mean.

Module-V: Measures of Dispersion

Concept of dispersion, characteristics of good measure of dispersion, Range, Mean deviation, Mean square definition, Variance and standard deviation, Combined variance, Combined standard deviation, generalization for n groups, Measures of dispersion for comparison: coefficient of range, coefficient of quartile deviation and coefficient of mean deviation, coefficient of variation.

Module-VI: Skewness and Kurtosis

Concept of skewness of frequency distribution, positive skewness, negative skewness, symmetric frequency distribution, Bowley's coefficient of skewness, interpretation using Box plot, Karl Pearson's coefficient of skewness, Measures of skewness based on moments (β_1 , γ_1), Concepts of kurtosis, leptokurtic, mesokurtic and platykurtic frequency distributions, Measures of kurtosis based on moments, (β_2 , γ_2).

Module-VII: Correlation & Regression

Bivariate data, bivariate frequency distribution, Concept of correlation between two variables, positive correlation, negative correlation, Scatter diagram, conclusion about the type of correlation from scatter diagram, Covariance between two variables, Karl Pearson's coefficient of correlation, Spearman's rank correlation coefficient, In case of ties, compute Karl Pearson's correlation coefficient between ranks. Regression: lines of regression, fitting of lines of regression by the least

squares method, interpretation of slope and intercept. 9.2 Regression coefficient (b_{yx} , b_{xy}), Effect of change of origin and scale, Angle between the two lines of regression, Mean residual sum of squares, Residual plot and its interpretation.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE

LEARNING AND REASONING WITH BAYESIAN NETWORKS

Course Code: DSE4302

Credit Units: 04

Course Objective:

This course provides an in-depth exposition of knowledge representation, reasoning, and machine learning under uncertainty using the framework of Bayesian networks. Both theoretical underpinnings and practical considerations will be covered, with a special emphasis on constructing and learning graphical models, and on various exact and approximate inference algorithms.

Course Contents:

Module-I: Introduction

Reasoning about beliefs using Logic and Probability Propositional Logic, Probability Calculus and Bayesian Reasoning, Bayesian Networks, Syntax and Semantics, Building Bayesian Networks.

Module-II: Bayesian Networks Inference

Inference by variable elimination, Inference by Factor Elimination (Jointree), Compiling Bayesian Networks, Complexity of probabilistic inference, compiling bayesian networks.

Module-III: Approximate Inference

Inference by Belief Propagation: Algorithm, Iterative belief propagation, semantics of IBP, Join graphs, edge-detection semantics, Approximate Inference by Stochastic Sampling: Simulating a Bayesian network, direct sampling, expectations, estimating a conditional probability, Markov chain simulation.

Module-IV: Learning: The Maximum Likelihood Approach

Introduction, estimating parameters from complete data, estimating parameters from incomplete data, learning network structure, searching for network structure.

Module-V: Learning: The Bayesian Approach

Introduction, Meta Networks, Learning with Discrete Parameter Sets, Learning with Continuous Parameter Sets, Learning Network Structure

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;
Att: Attendance

SOCIAL NETWORK DATA ANALYTICS

Course Code: DSE4303

Credit Units: 03

Course Objective:

This course gives an introduction to social network analysis, with a focus on modelling. It provides an overview of research questions connected to social networks, and of descriptive measures, models, and methods of analysis that can be used to analyse empirical social network data. It helps to understand the online interactive demonstrations and hands-on analysis of real-world data sets

Course Contents:

Module-I: Introduction

Overview: Social network data-Formal methods- Paths and Connectivity-Graphs to represent social relations-Working with network data- Network Datasets-Strong and weak ties - Closure, Structural Holes, and Social Capital.

Module-II: Community Discovery in Social Networks: Applications, Methods and Engineering Trends

Introduction, Communities In Context, Core Methods, Quality Functions, The Kernighan-Lin (KL) Algorithm, Agglomerative/Divisive Algorithms, Spectral Algorithms, Multi-Level Graph Portioning, Markov Clustering. Other Approaches, Emerging Fields and Problems, Community Discovery in Dynamic Networks, Community Discovery in Heterogeneous Networks, Community Discovery in Directed Networks, Coupling Content and Relationship Information for Community Discovery,

Module-III: Information Networks and the World Wide Web

The Structure of the Web- World Wide Web- Information Networks, Hypertext, and Associative Memory- Web as a Directed Graph, Bow-Tie Structure of the Web- Link Analysis and Web Search, Searching the Web: Ranking, Link Analysis using Hubs and Authorities- Page Rank- Link Analysis in Modern Web Search, Applications, Spectral Analysis, Random Walks, and Web Search. Module IV

Module-IV: Node Classifications in Social Networks

Introduction, Problem Formulation, Representing Data As A Graph, The Node Classification Problem, Methods Using Local Classifiers, Iterative Classification Method, Random Walk Based Methods, Label Propagation, Graph Regularization, Adsorption, Applying Node Classification To Large Social Networks, Basic Approaches, Second-Order Methods, Implementation Within Map-Reduce, Inference Using Graphical Models, Metric Labelling, Spectral Partitioning, Graph Clustering, Variations on Node Classification.

Module-V: Data and Text Mining In Social Media

Data Mining In Nutshell, Social Media, Motivations For Data Mining In Social Media, Data Mining Methods For Social Media, Data Representation, Data Mining- A Process, Social Networking Sites: Illustrative Examples, Related Efforts, Ethnography And Netnography, Event Maps, Text Mining: Keyword Search, Query Semantics And Answer Ranking, Keyword Search over Xml and Relational Data, Keyword Search Over Graph Data, Classification Algorithms, Clustering Algorithms, Transfer Learning in Heterogeneous Networks.

Module-VI: Overview of Social Tagging

Introduction, Problems With Metadata Generation and Fixed Taxonomies, Tags: Why And What?, Different User Tagging Motivations, Kinds Of Tags, Linguistic Classifications Of Tags, Game-Based Tagging, Tag Generation Models, Tagging System Design, Tag Analysis, Tagging Distributions, Identifying Tag Semantics, Tags Versus Keywords, Visualization Of Tags, Tag Clouds For Browsing/Search, Tag Selection For Tag Clouds, Tag Hierarchy Generation, Tag Cloud Display Formats, Tag Evolution Visualization.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

R PROGRAMMING LAB

Course Code: DSE4304

Credit Units: 01

Course Objective:

This lab will provide a basic introduction to the R programming Language and the use of R to perform basic statistics and programming tasks. The main objectives of this lab is to impart the students with the knowledge of R Programming, Machine Learning using R Mining from streaming Data, Mining from Distributed Data.

R Programming Objective

- Master the use of the R interactive environment
- Expand R by installing R packages
- Explore and understand how to use the R documentation
- Read Structured Data into R from various sources
- Understand the different data types in R
- Understand the different data structures in R
- Understand how to use dates in R
- Use R for mathematical operations
- Use of vectorised calculations
- Write user-defined R functions
- Use control statements
- Write Loop constructs in R
- Use Apply to iterate functions across data
- Reshape data to support different analyses
- Understand split-apply-combine (group-wise operations) in R
- Deal with missing data
- Manipulate strings in R
- Understand basic regular expressions in R
- Understand base R graphics
- Focus on GGplot2 graphics for R
- Be familiar with trellis (lattice) graphics
- Use R for descriptive statistics
- Use R for inferential statistics
- Write multivariate models in R
- Understand confounding and adjustment in multivariate models
- Understand interaction in multivariate models
- Predict/Score new data using models
- Understand basic non-linear functions in models
- Understand how to link data, statistical methods, and actionable questions

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

HADOOP LAB

Course Code: DSE4305

Credit Units: 02

Course Objective:

- To provide an overview of several key technologies used in manipulating, storing, and analysing big data.
- To understand the fundamentals of Hadoop.
- To apply the learning specific problems in various domains.

Recommended Tools

Big Data Tools and Technology [Learning and Demonstration of Big Data Ecosystem]

- Hadoop
- HBase
- NoSQL
- Hive
- Pig

Examination Scheme:

IA				EE	
A	PR	LR	V	PR	V
5	10	10	5	35	35

Note: IA –Internal Assessment, EE- External Exam, PR- Performance, LR – Lab Record, V – Viva.

SUMMER INTERNSHIP EVALUATION

Course Code: DSE4335

Credit Units: 06

Guidelines:

There are certain phases of every Intern's professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship program can best be described as an attempt to institutionalize efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal classroom situations. These attributes are intellectual ability, professional judgment and decision-making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility etc.

In order to achieve these objectives:

- **Each student will be allotted a supervisor** for proper guidance.
- **Student will first submit synopsis in the format given by coordinator/supervisor.**
- Student will maintain a file (**Internship File/Project Report**). **Further, coordinator will provide NTCC project guidelines and sample to help in preparation of file.** The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development. The File will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

The **layout guidelines** for the Project Report

1. File should be in the following specification

- A4 size paper
- **Font**

For normal text Font Type and Size must be- Times New Roman, 12 pt. The minimum font size of materials within a table or a figure can be 10 point.

- **Margins**

A margin of 3.75 cm (1½ inch) is to be given on the binding edge while on the other sides it is to be 2.5 cm (1 inch). The text of the report, including headings, figures, tables, and notes, but excluding page numbers, must be accommodated within the page area.

- **Line Spacing**

The line spacing in the main text must be between one-and-a-half (1.5). Single line spacing should be given for figure captions, table titles, figure legends, and footnotes. Equations, tables, figures, and quotations should be set off from the main text with adequate space (not less than the normal line spacing adopted for the main text). Two consecutive paragraphs should be separated by a spacing which must be larger than the line spacing adopted for the text.

- **Tables and Figures**

Each sketch, drawing, graph and photograph should have a figure number and title below the figure etc. Numbering should be sequential, chapter wise. For instance, if there are 24 figures chapter 3 spread over all of its sections the figure numbers run from Figure 3.1 through Figure 3.24. In figures experimental data should typically be represented by centered symbols, and theoretical data by continuous curves.

Each table should have a table number and caption above the table. Numbering should be sequential, chapter wise, as in the case of Figure numbers. For instance, if there are 18 tables in chapter 3 the table numbers run from Figure 3.1 through Figure 3.18.

Make sure that figures and tables are complete in other respects such as legends, references (if any) and coordinate labels with units. Each figure and table must be explicitly referred to in the text and located where its first reference occurs, preferably after the reference.

- **Drawings**

All engineering drawings must conform to relevant Standards and should include a title block. If drawings are large they should be included at the back of the report in a separate pocket. In case drawings are made using CAD packages, a CD ROM should be included which contains all the files and details of the packages used.

- **Equations**

The numbering of equations should be sequential, chapter wise. Numbered equations must be explicitly referred to in the text.

2. Report Size: The maximum number of pages of the Report should be preferably between 50-80 pages.

3. Report Layout: The report should contain the following components

Front Page

Table of Content

Acknowledgement

Student Certificate

Company Profile (optional)

Introduction

Main Body

References / Bibliography

The File will include *five sections* in the order described below. The content and comprehensiveness of the main body and appendices of the report should include the following:

1. **The Title Page**--Title - An Internship Experience Report For (Your Name), name of internship organization, name of the Supervisor/Guide and his/her designation, date started and completed, and number of credits for which the report is submitted.

2. **Declaration by the Students**--This is page number (i), the beginning of the small case Roman numeral page numbers. The student has to give a declaration to the effect that the data used for the work, the work depicted in the report, and the written material contained in the report are not copied from others and that due permission has been taken from, and due credit has been given to, the sources whenever they are used.

3. **Certificate**--This is page number (ii). The certificate will be signed by the Faculty Supervisor(s) before the viva-voce after verifying the format and by the Head of the Department after review with the Supervisor(s).

4. **Acknowledgements**--This is page number (iii). Keep this brief and avoid using informal language. This page must be signed by the candidate.

5. **Abstract and Keywords**--This is page number (iv). The abstract (preferably one page) should contain the context/relevance of the problem at hand, a description of what was done and a gist of the significant observations/results.

The keywords (maximum 6) are a hint that what is contained in the report.

7. **Contents**--This is page number (v). The table of Contents should be titled just *Contents* (not Table of Contents). Try to fit it into one or two pages.

8. **Introduction**--short, but should include how and why you obtained the internship experience position and the relationship it has to your professional and career goals.

9. **Main Body**--should include but not be limited to daily tasks performed. Major projects contributed to, dates, hours on task, observations and feelings, meetings attended and their purposes, listing of tools and materials and their suppliers, and photographs if possible of projects, buildings and co-workers.

10. **References / Bibliography** --This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

ASSESSMENT OF THE INTERNSHIP FILE

Continuous Internal Assessment

40 Marks

Final Assessment

60 Marks

Continuous Internal Assessment consists of topic relevance, progress report and synopsis marks. Final Assessment includes viva, presentation and report marks.

Examination Scheme:

Components	V	S	R	PR	FP
Weightage (%)	20	20	20	20	20

V – Viva, S – Synopsis, FP – Final Presentation, R – Report, PR-Progress Report

PROJECT-DISSERTATION-I

Course Code: DSE4337

Credit Units: 05

GUIDELINES FOR DISSERTATION

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critiqued by the faculty guide and corrected by the student at each stage.

The File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation.

In general, the File should be comprehensive and include

A short account of the activities that were undertaken as part of the project;

A statement about the extent to which the project has achieved its stated goals.

A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;

Any activities planned but not yet completed as part of the DISSERTATION, or as a future initiative directly resulting from the project;

Any problems that have arisen that may be useful to document for future reference.

➤ Report Layout

The report should contain the following components:

➤ Title or Cover Page

The title page should contain the following information: Project Title; Student's Name; Course; Year; Supervisor's Name.

➤ Acknowledgements (optional)

Acknowledgment to any advisory or financial assistance received in the course of work may be given.

➤ Abstract

A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project

➤ Table of Contents

Titles and subtitles are to correspond exactly with those in the text.

➤ Introduction

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

➤ Materials and Methods

This section should aim at experimental designs, materials used. Methodology should be mentioned in details including modifications if any.

➤ Results and Discussion

Present results, discuss and compare these with those from other workers, etc. In writing these section, emphasis should be given on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary never write in “point” form.

➤ **Conclusion**

A conclusion should be the final section in which the outcome of the work is mentioned briefly.

➤ **Future prospects**

➤ **Appendices**

The Appendix contains material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

➤ **References / Bibliography**

This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

Examples

For research article

Voravuthikunchai SP, Lortheeranuwat A, Ninrprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichia coli* O157: H7. *Clin Microbiol Infect*, **8** (suppl 1): 116–117.

For book

Kowalski, M. (1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), **7**: 63-67

ASSESSMENT OF THE DISSERTATION FILE

Essentially, marking will be based on the following criteria: the quality of the report, the technical merit of the project and the project execution.

Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project.

Project execution is concerned with assessing how much work has been put in.

The File should fulfill the following *assessment objectives*:

Range of Research Methods used to obtain information

Execution of Research

Data Analysis

Analyse Quantitative/ Qualitative information

Control Quality

Draw Conclusions

Examination Scheme:

Dissertation 50

Viva Voce 50

Total 100

ata, leading to production of a structured report.

Selecting the Dissertation Topic

It is usual to give you some discretion in the choice of topic for the dissertation and the approach to be adopted. You will need to ensure that your dissertation is related to your field of specialization.

Deciding this is often the most difficult part of the dissertation process, and perhaps, you have been thinking of a topic for some time.

It is important to distinguish here between ‘dissertation topic’ and ‘dissertation title’. The topic is the specific area that you wish to investigate. The title may not be decided until the dissertation has been written so as to reflect its content properly.

Few restrictions are placed on the choice of the topic. Normally we would expect it to be:

- relevant to business, defined broadly;
- related to one or more of the subjects or areas of study within the core program and specialisation stream;
- clearly focused so as to facilitate an in-depth approach, subject to the availability of adequate sources of information and to your own knowledge;
- of value and interest to you and your personal and professional development.

Planning the Dissertation

This will entail following:

- Selecting a topic for investigation.
- Establishing the precise focus of your study by deciding on the aims and objectives of the dissertation, or formulating questions to be investigated. Consider very carefully what is worth investigating and its feasibility.
- Drawing up initial dissertation outlines considering the aims and objectives of the dissertation. Workout various stages of dissertation
- Devising a timetable to ensure that all stages of dissertation are completed in time. The timetable should include writing of the dissertation and regular meetings with your dissertation guide.

The Dissertation plan or outline

It is recommended that you should have a dissertation plan to guide you right from the outset. Essentially, the dissertation plan is an outline of what you intend to do, chapter wise and therefore should reflect the aims and objectives of your dissertation.

There are several reasons for having a dissertation plan

- It provides a focus to your thoughts.
- It provides your faculty-guide with an opportunity, at an early stage of your work, to make constructive comments and help guide the direction of your research.
- The writing of a plan is the first formal stage of the writing process, and therefore helps build up your confidence.
- In many ways, the plan encourages you to come to terms with the reading, thinking and writing in a systematic and integrated way, with plenty of time left for changes.
- Finally, the dissertation plan generally provides a revision point in the development of your dissertation report in order to allow appropriate changes in the scope and even direction of your work as it progresses.

Keeping records

This includes the following:

- Making a note of everything you read; including those discarded.
- Ensuring that when recording sources, author’s name and initials, date of publication, title, place of publication and publisher are included. (You may consider starting a card index or database from the outset). Making an accurate note of all quotations at the time you read them.
- Make clear what is a direct quotation and what is your paraphrase.

Dissertation format

All students must follow the following rules in submitting their dissertation.

- Front page should provide title, author, Name of degree/diploma and the date of submission.
- Second page should be the table of contents giving page references for each chapter and section.
- The next page should be the table of appendices, graphs and tables giving titles and page references.
- Next to follow should be a synopsis or abstract of the dissertation (approximately 500 words)
- Next is the ‘acknowledgements’.

- Chapter I should be a general introduction, giving the background to the dissertation, the objectives of the dissertation, the rationale for the dissertation, the plan, methodological issues and problems. The limitations of the dissertation should also be hinted in this chapter.
- Other chapters will constitute the body of the dissertation. The number of chapters and their sequence will usually vary depending on, among others, on a critical review of the previous relevant work relating to your major findings, a discussion of their implications, and conclusions, possibly with a suggestion of the direction of future research on the area.
- After this concluding chapter, you should give a list of all the references you have used. These should be cross - references with your text. For articles from journals, the following details are required e.g.

Draper P and Pandyal K. 1991, The Investment Trust Discount Revisited, Journal of Business Finance and Accounting, Vol18, No6, Nov, pp 791-832.

For books, the following details are required:

Levi, M. 1996, International Financial Management, Prentice Hall, New York, 3rd Ed, 1996

- Finally, you should give any appendices. These should only include relevant statistical data or material that cannot be fitted into the above categories.

The Layout Guidelines for the Dissertation

- A4 size Paper
- Font: Arial (10 points) or Times New Roman (12 points)
- Line spacing: 1.5
- Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

Guidelines for the assessment of the Dissertation

While evaluating the dissertation, faculty guide will consider the following aspects:

1. Has the student made a clear statement of the objective or objective(s).
2. If there is more than one objective, do these constitute parts of a whole?
3. Has the student developed an appropriate analytical framework for addressing the problem at hand.
4. Is this based on up-to-date developments in the topic area?
5. Has the student collected information / data suitable to the frameworks?
6. Are the techniques employed by the student to analyse the data / information appropriate and relevant?
7. Has the student succeeded in drawing conclusion form the analysis?
8. Do the conclusions relate well to the objectives of the project?
9. Has the student been regular in his work?
10. Layout of the written report.

Assessment Scheme:

Continuous Evaluation:

40%

(Based on Abstract, Regularity, Adherence to initial plan, Records etc.)

Final Evaluation: Based on,

60%

Contents & Layout of the Report,	20
Conceptual Framework,	05

WEB TECHNOLOGY

Course Code: DSE4306

Credit Units: 03

Course Objectives:

This course provides knowledge on Core technologies that are needed for the web like HTML and XML and facilitate how to build XML applications with DTD and style sheets that span multiple domains ranging from finance to vector graphics to genealogy for use with legacy browsers.

Course Contents:

MODULE-I: Introduction

HTML Common tags, Cascading Style sheets - Introduction to Java Scripts - Objects in Java Script - Dynamic HTML with Java Script.

MODULE-II: Vbscript Language Elements

Constants - Variables and Data Types - Mathematical Operations – Logical Operators - Looping and Decision Structures - VBScript Functions and Objects: Data Conversion Functions - Mathematical Functions - Data Formatting Functions - Text Manipulation Functions - Data and Time Functions - Built-in Objects.

MODULE-III: ASP Fundamentals

Using Server – Side Includes- Learning the SSI Directives – Creating Modular ASP Code -Using the Request Object: Using Form Information - Using QueryString Information – Using Server Variables - Using the Response Object: Create Output – Managing Output – Managing the Connection.

MODULE-IV: Using Cookies

Introduction to Cookies: Cookies and Your Browser – Creating a Cookie – Modifying and removing Cookies – Tracking Preferences with Cookies Using the Application, Session and Server Objects: The application Object – The Session Object – The Server Object – Using the global .asa file - Active Data Objects Essentials: Microsoft's Universal Data Access Strategy – The Connection Object – The Record set and Field Objects – The Command and Parameter Objects – Using the Errors Collection.

MODULE-V: Introducing XML

XML: The Life of an XML documents - Related technologies- First XML Document: Hello XML – Exploring the Simple XML Document – Assigning Meaning to XML Tags – Writing a Style Sheet for an XML Document – Attaching a Style Sheet to an XML Document – Style Languages: CSS Style Sheets, CSS Layouts, CSS Text Styles.

MODULE-VI: Attributes, Empty Tags & XSL

Attributes – Attributes versus Elements – Empty Elements and Empty Element Tags – XSL-DTDs and Validity: Document Type Definitions – Element Declarations – DTD Files – Document Type Declarations – Validating Against a DTD-Element Declaration - Entity Declarations: What Is an Entity – Internal General Entities – External General Entities – Internal Parameter Entities – External Parameter Entities – Building a Document from Places-Attribute Declaration: What is an Attribute – Declaring Attributes in DTDs – Declaring Multiple Attributes – Specifying Default Values for Attributes – Attribute Types – Predefined Attributes – A DTD for Attribute- Based Baseball Statistics.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;

SERVICE ORIENTED ARCHITECTURE

Course Code: DSE4307

Credit Units: 03

Course Objective:

The subject gives an introduction to the fundamentals and issues relating to Service Oriented Architecture and bring out the importance of service orientation and web services. It also teaches appropriate tools as technique on how to build the Service Oriented Architecture with web services.

Course Contents:

Module I: Introduction

Basic definition - Fundamentals of SOA - Characteristics and misperceptions about SOA-Benefits and pitfalls of SOA.

Module II: Evolution of SOA

The evolution of SOA - Web service and primitive SOA - The extension of SOA - Web service extension.

Module III: Web Service and Contemporary SOA

Message Exchange Pattern- Service Activity- Coordination- Atomic Transaction- Business Activity- Orchestration – Choreography- Addressing- Reliable Messaging- Correlation and Policies- Meta data Exchange- Security- Notification and Eventing.

Module IV: Principles of Service Orientation

Principles of service orientation -Building SOA-Planning and Analysis- SOA delivery strategies - Service Oriented Analysis Introduction -Service Modelling of Service Oriented Analysis.

Module V: Service Oriented Design

Introduction to service oriented design - WSDL related XML Schema language Basics - WSDL Language Basics - SOAP Language Basics - Service interface design tools - Steps to composing SOA - Consideration for choosing service layers, positioning core SOA standards and choosing SOA extension – Service design and business process design.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;
Att: Attendance

NATURAL LANGUAGE PROCESSING

Course Code: DSE4308

Credit Units: 03

Course Objective:

This course provides a general introduction including the use of state automata for language processing and syntax including a basic parse. It explains advanced feature like feature structures and realistic parsing methodologies. It also gives concepts of remotes processing and detail information about a typical natural language processing applications.

Course Contents:

Module-I: Introduction

Introduction: Knowledge in speech and language processing - Ambiguity - Models and Algorithms - Language, Thought and Understanding- Regular Expressions and automata: Regular expressions - Finite-State automata. Morphology and Finite-State Transducers: Survey of English morphology - Finite-State Morphological parsing - Combining FST lexicon and rules - Lexicon- Free FSTs: The porter stammer - Human morphological processing.

Module-II: Syntax Analysis

Word classes and part-of-speech tagging: English word classes - Tagsets for English - Part-of-speech tagging - Rule-based part-of-speech tagging - Stochastic part-of-speech tagging - Transformation-based tagging – Other issues - Context-Free Grammars for English: Constituency - Context-Free rules and trees - Sentence-level constructions - The noun phrase - Coordination - Agreement - The verb phrase and sub categorization – Auxiliaries - Spoken language syntax - Grammars equivalence and normal form - Finite- State and Context-Free grammars - Grammars and human processing. Parsing with Context-Free Grammars: Parsing as search - A Basic Top-Down parser - Problems with the basic Top-Down parser - The early algorithm - Finite-State parsing methods.

MODULE-III: Advanced Features and Syntax

Features and Unification: Feature structures - Unification of feature structures
- Features structures in the grammar - Implementing unification - Parsing with unification constraints
- Types and Inheritance. Lexicalized and Probabilistic
Parsing: Probabilistic context-free grammar - Problems with PCFGs -
Probabilistic lexicalized CFGs - Dependency Grammars - Human parsing.

MODULE-IV: Semantic

Representing Meaning: Computational desiderata for representations – Meaning structure of language
- First order predicate calculus - Some linguistically relevant concepts - Related representational approaches – Alternative approaches to meaning. Semantic Analysis: Syntax-Driven semantic analysis - Attachments for a fragment of English - Integrating semantic analysis into the early parser - Idioms and compositionality - Robust semantic analysis. Lexical semantics: relational among lexemes and their senses - WordNet: A database of lexical relations - The Internal structure of words - Creativity and the lexicon.

MODULE-V: Natural Language Generation

Introduction to language generation - Architecture for generation – Surface realization - Discourse planning - Other issues- Machine Translation: Language similarities and differences - The transfer metaphor - The interlingua idea: Using meaning - Direct translation - Using statistical techniques – Usability and system development.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;

AGENT BASED INTELLIGENT SYSTEMS

Course Code: DSE4309

Credit Units: 03

Course Objective:

This course provides students basic knowledge of employing intelligent agents in solving complex problems and gives the awareness of the building blocks of agents and working of different types of agents. It also analyses the reasons for uncertainty and ability to design agents to handle them.

Course Contents:

Module-I: Introduction

Definitions – History – Hybrid Intelligent Agents – Agents vs Multi Agent Systems– Structure – Environment – Basic Problem Solving Agents – Complex Problem Solving Agents – Formulating Search Strategies – Intelligent Search.

Module-II: Concepts for Building Agents

Situated Agents: Actions and Percepts - Proactive and Reactive Agents: Goals and Events- Challenging Agent Environments: Plans and Beliefs - Social Agents - Agent Execution Cycle.

Module-III: Knowledge Based Agents

Knowledge Representation – Logic – First Order Logic – Reflex Agent – Building a Knowledge Base – General Ontology – Inference – Logical Recovery.

Module-IV: Planning Agents

Situational Calculus – Representation of Planning – Partial Order Planning – Practical Planners– Conditional Planning - Preplanning Agents.

Module-V: Agents and Uncertainty

Acting under uncertainty – Probability – Baye's Rule – Belief Networks – Utility Theory - Decision Network- Value of Information – Decision Theoretic Agent Design.

Module-VI: Higher Level Agents

Learning Agents – General Model – Inductive Learning – Learning Decision Tree – Reinforcement Learning – Knowledge in Learning – Communicative Agents – Types of Communicative Agents – Future of AI.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE

PROJECT-DISSERTATION-II

Course Code: DSE4437

Credit Units: 15

GUIDELINES FOR DISSERTATION

Research experience is as close to a professional problem-solving activity as anything in the curriculum. It provides exposure to research methodology and an opportunity to work closely with a faculty guide. It usually requires the use of advanced concepts, a variety of experimental techniques, and state-of-the-art instrumentation.

Research is genuine exploration of the unknown that leads to new knowledge which often warrants publication. But whether or not the results of a research project are publishable, the project should be communicated in the form of a research report written by the student.

Sufficient time should be allowed for satisfactory completion of reports, taking into account that initial drafts should be critiqued by the faculty guide and corrected by the student at each stage.

The File is the principal means by which the work carried out will be assessed and therefore great care should be taken in its preparation.

In general, the File should be comprehensive and include

A short account of the activities that were undertaken as part of the project;

A statement about the extent to which the project has achieved its stated goals.

A statement about the outcomes of the evaluation and dissemination processes engaged in as part of the project;

Any activities planned but not yet completed as part of the DISSERTATION, or as a future initiative directly resulting from the project;

Any problems that have arisen that may be useful to document for future reference.

➤ Report Layout

The report should contain the following components:

➤ Title or Cover Page

The title page should contain the following information: Project Title; Student's Name; Course; Year; Supervisor's Name.

➤ Acknowledgements (optional)

Acknowledgment to any advisory or financial assistance received in the course of work may be given.

➤ Abstract

A good "Abstract" should be straight to the point; not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project, but rather a concise summary of the scope and results of the project

➤ Table of Contents

Titles and subtitles are to correspond exactly with those in the text.

➤ Introduction

Here a brief introduction to the problem that is central to the project and an outline of the structure of the rest of the report should be provided. The introduction should aim to catch the imagination of the reader, so excessive details should be avoided.

➤ Materials and Methods

This section should aim at experimental designs, materials used. Methodology should be mentioned in details including modifications if any.

➤ Results and Discussion

Present results, discuss and compare these with those from other workers, etc. In writing these section, emphasis should be given on what has been performed and achieved in the course of the work, rather than discuss in detail what is readily available in text books. Avoid abrupt changes in

contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow.

Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should also be numbered and unless it is really necessary never write in “point” form.

➤ **Conclusion**

A conclusion should be the final section in which the outcome of the work is mentioned briefly.

➤ **Future prospects**

➤ **Appendices**

The Appendix contains material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.

➤ **References / Bibliography**

This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

Examples

For research article

Voravuthikunchai SP, Lortheeranuwat A, Ninrprom T, Popaya W, Pongpaichit S, Supawita T. (2002) Antibacterial activity of Thai medicinal plants against enterohaemorrhagic *Escherichia coli* O157: H7. *Clin Microbiol Infect*, **8** (suppl 1): 116–117.

For book

Kowalski, M. (1976) Transduction of effectiveness in *Rhizobium meliloti*. SYMBIOTIC NITROGEN FIXATION PLANTS (editor P.S. Nutman IBP), **7**: 63-67

ASSESSMENT OF THE DISSERTATION FILE

Essentially, marking will be based on the following criteria: the quality of the report, the technical merit of the project and the project execution.

Technical merit attempts to assess the quality and depth of the intellectual efforts put into the project.

Project execution is concerned with assessing how much work has been put in.

The File should fulfill the following **assessment objectives**:

Range of Research Methods used to obtain information

Execution of Research

Data Analysis

Analyse Quantitative/ Qualitative information

Control Quality

Draw Conclusions

Examination Scheme:

Dissertation	50
Viva Voce	50
Total	100

Selecting the Dissertation Topic

It is usual to give you some discretion in the choice of topic for the dissertation and the approach to be adopted. You will need to ensure that your dissertation is related to your field of specialization.

Deciding this is often the most difficult part of the dissertation process, and perhaps, you have been thinking of a topic for some time.

It is important to distinguish here between 'dissertation topic' and 'dissertation title'. The topic is the specific area that you wish to investigate. The title may not be decided until the dissertation has been written so as to reflect its content properly.

Few restrictions are placed on the choice of the topic. Normally we would expect it to be:

- relevant to business, defined broadly;
- related to one or more of the subjects or areas of study within the core program and specialisation stream;
- clearly focused so as to facilitate an in-depth approach, subject to the availability of adequate sources of information and to your own knowledge;
- of value and interest to you and your personal and professional development.

Planning the Dissertation

This will entail following:

- Selecting a topic for investigation.
- Establishing the precise focus of your study by deciding on the aims and objectives of the dissertation, or formulating questions to be investigated. Consider very carefully what is worth investigating and its feasibility.
- Drawing up initial dissertation outlines considering the aims and objectives of the dissertation. Workout various stages of dissertation
- Devising a timetable to ensure that all stages of dissertation are completed in time. The timetable should include writing of the dissertation and regular meetings with your dissertation guide.

The Dissertation plan or outline

It is recommended that you should have a dissertation plan to guide you right from the outset. Essentially, the dissertation plan is an outline of what you intend to do, chapter wise and therefore should reflect the aims and objectives of your dissertation.

There are several reasons for having a dissertation plan

- It provides a focus to your thoughts.
- It provides your faculty-guide with an opportunity, at an early stage of your work, to make constructive comments and help guide the direction of your research.
- The writing of a plan is the first formal stage of the writing process, and therefore helps build up your confidence.
- In many ways, the plan encourages you to come to terms with the reading, thinking and writing in a systematic and integrated way, with plenty of time left for changes.
- Finally, the dissertation plan generally provides a revision point in the development of your dissertation report in order to allow appropriate changes in the scope and even direction of your work as it progresses.

Keeping records

This includes the following:

- Making a note of everything you read; including those discarded.
- Ensuring that when recording sources, author's name and initials, date of publication, title, place of publication and publisher are included. (You may consider starting a card index or database from the outset). Making an accurate note of all quotations at the time you read them.
- Make clear what is a direct a direct quotation and what is your paraphrase.

Dissertation format

All students must follow the following rules in submitting their dissertation.

- Front page should provide title, author, Name of degree/diploma and the date of submission.
- Second page should be the table of contents giving page references for each chapter and section.
- The next page should be the table of appendices, graphs and tables giving titles and page references.
- Next to follow should be a synopsis or abstract of the dissertation (approximately 500 words)
- Next is the 'acknowledgements'.
- Chapter I should be a general introduction, giving the background to the dissertation, the objectives of the dissertation, the rationale for the dissertation, the plan, methodological issues and problems. The limitations of the dissertation should also be hinted in this chapter.
- Other chapters will constitute the body of the dissertation. The number of chapters and their sequence will usually vary depending on, among others, on a critical review of the previous relevant work relating to your major findings, a discussion of their implications, and conclusions, possibly with a suggestion of the direction of future research on the area.
- After this concluding chapter, you should give a list of all the references you have used. These should be cross - references with your text. For articles from journals, the following details are required e.g.

Draper P and Pandyal K. 1991, The Investment Trust Discount Revisited, Journal of Business Finance and Accounting, Vol18, No6, Nov, pp 791-832.

For books, the following details are required:

Levi, M. 1996, International Financial Management, Prentice Hall, New York, 3rd Ed, 1996

- Finally, you should give any appendices. These should only include relevant statistical data or material that cannot be fitted into the above categories.

The Layout Guidelines for the Dissertation

- A4 size Paper
- Font: Arial (10 points) or Times New Roman (12 points)
- Line spacing: 1.5
- Top and bottom margins: 1 inch/ 2.5 cm; left and right margins: 1.25 inches/ 3 cm

Guidelines for the assessment of the Dissertation

While evaluating the dissertation, faculty guide will consider the following aspects:

- Has the student made a clear statement of the objective or objective(s).
- If there is more than one objective, do these constitute parts of a whole?
- Has the student developed an appropriate analytical framework for addressing the problem at hand.
- Is this based on up-to-date developments in the topic area?
- Has the student collected information / data suitable to the frameworks?
- Are the techniques employed by the student to analyse the data / information appropriate and relevant?
- Has the student succeeded in drawing conclusion form the analysis?
- Do the conclusions relate well to the objectives of the project?
- Has the student been regular in his work?
- Layout of the written report.

RWE4101	RENEWABLE ENERGY CONVERSION SYSTEMS	L	T	P	C
Version 1.1	Date of Approval: Date, Aug 2014	3	0	0	3
Pre-requisites/Exposure	NIL				
Co-requisites	NIL				

Course Objectives

The objective of the course is to provide introduction to different Renewable energy sources and Analyze the full coverage of Renewable energy supplies needed for modern economies. Course covers scientific aspects of power generation from Sun, wind, and biomass & ocean thermal routes.

Course Outcomes

On completion of this course, the students will be able to:

CO1: Describe the various renewable energy sources and the possible conversion paths to a useful form of energy.

CO2: Describe the aerodynamics of wind turbines and calculate their power, energy production, output and their environmental impact.

CO3: Explain how geothermal is currently used as a source of energy, its future potential both in providing energy and in producing alternative fuels.

CO4: Explain the physical principles of solar energy and photovoltaic energy conversion route.

CO5: Explain how OTEC & Nuclear energy is currently used as a source of energy, its future potential both in providing energy and in producing alternative fuels.

Catalog Description

This course aims to make the students understand the importance renewable energy conversion systems and also explains the significance of energy supply from renewables as an essential component of every nation's strategy, especially when there is responsibility for the environment and for sustainability.

Course Content

Modules	Blooms level*	Number of hours
Module I: Introduction to Renewable Energy Renewable and Non-Renewable Energy, World energy scenario; Fossil fuel resources - estimates and duration; India's energy scenario; Synergy between energy and environment, global environment issues, greenhouse gas emission, global warming, green energy solutions, technical and social implications of renewable energy	L1, L2	7
Module II: Solar Concepts Introduction, Sun as the source of radiation, Earth and Solar constant, Extra-terrestrial solar radiation, components of radiation, effects of earth's atmosphere, Introduction to solar PV, Introduction to solar Thermal.	L1, L2	8
Module III: Biofuels, Wind Energy Biofuels- Definition, generations and types; Wind-Characteristics, Sources of wind, components of wind turbines, advantages and environmental aspects of wind energy	L1, L2	7
Module IV: Hydro Energy, Tidal Energy	L1, L2	7

RWE4102	INTRODUCTION TO SOLAR PHOTOVOLTAICS	L	T	P	C
Version 1.1	Date of Approval: 25 July, 2016	3	1	0	4
Pre-requisites/Exposure					
Co-requisites					

Course Objectives

The objective of this course are as follows

1. This course covers the design and engineering of solar cells along with their different material aspects, electrical, thermal & optical characteristics for better efficiency.
2. To understand the role of solar energy in the context of regional and global energy system, its economic, social and environmental connotations, and the impact of technology on a local and global context.
3. To understand the physical principles of the photovoltaic (PV) solar cell and what are its sources of losses.
4. To understand and apply the basic concepts of solar radiation necessary for dimensioning (sizing) PV systems installation.

Course Outcomes

On completion of this course, the students will be able to

CO1. To know some practical applications that use solar photovoltaic systems and be able to do specify, analyze and design.

CO2. To know and be able to analyze the behavior of a self-consumption demand and the measurement of network management.

CO3. To carry out a basic engineering project related to energy supply using solar photovoltaic technology.

CO4. To know the main lines of research in the field of photovoltaic technology and solar energy and to bring innovative ideas in the field of solar photovoltaic energy.

Catalog Description

This course covers the concepts of basic engineering project related to energy supply using solar photovoltaic technology. Also, to make students understand the practical applications that use solar photovoltaic systems and be able to do specify, analyze and design.

Course Content

Modules	Blooms level*	Number of hours
Module I: Thin film solar cell technologies Generic advantages of thin film technologies, material in thin film technologies, thin film deposition techniques, Amorphous Si solar cell technology, CdTe solar cell technology, CIGS solar cell technology, thin film epitaxial Si solar cell technology.	L1, L2	7
Module II: Concentrating PV Cells and systems Light concentration, concentration ratio, series resistance optimization, optics for concentrator PV, tracking requirement of CPV, cooling requirements, high concentration solar cells	L1, L2	8
Module III: Emerging Solar Cells technologies and concepts Organic solar cells, Dye-sensitized solar cells, GaAs solar cells, Thermo-photovoltaic, approaches to overcome single junction efficiency limits, Solar photovoltaic modules, spectrum modification approaches, hot carrier solar cells.	L2, L3	7

Module IV: Solar PV Modules Solar PV modules from solar cells, mismatch in series connection, mismatch in parallel connections, design and structure of PV modules, PV module power output and factors affecting its performance.	L3, L4	7
Module V: Balance of Solar PV systems Battery for energy storage in solar PV system, factors affecting battery performance, DC-DC converters, charge controllers, Dc-AC converters, Maximum Power Point Tracking, stand alone SPV system, design methodology of PV systems, wire sizing , hybrid PV, grid connected PV, life cycle costing.	L5, L6	7

RWE4103	INTRODUCTION TO SOLAR THERMAL TECHNOLOGY	L	T	P	C
Version 1.1	Date of Approval: Date, Aug 2016	3	1	0	4
Pre-requisites/Exposure					
Co-requisites					

Course Objectives

The objective of this course is to introduce materials relevant to the engineering of solar thermal systems. Students will develop the skills to analysis the thermal performance of solar thermal systems. Many of these calculations will be based on solar applications in different area. Finally the concepts of engineering economics applied to solar energy will also be introduced.

Course Outcomes

On completion of this course, the students will be able to
CO1. Conduct the thermal Analysis of a solar thermal devices.
CO2. Explain working mechanism of solar thermal collectors
CO3. Design a solar thermal system based on the requirement.

Catalog Description

In this course, the various modes of heat transfer shall be discussed. The different types of errors, accuracy of the numerical methods are also discussed in detail. Students will taught to calculate the amount of incident solar flux on horizontal and tilted surfaces. Thermal analysis of flat plate collector and concentrating collectors will be taught. The energy storage systems and the different components of solar systems will be discussed. The various water heating, air heating systems and its application to space heating and cooling and other solar devices will be discussed. Solar thermal power generation will be taught in this course.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Introduction Solar spectrum, Sun-Earth angles, Solar time, measurement of solar radiations (pyrheliometers, pyranometers), solar radiation on horizontal surface (estimation of average solar radiation, estimation of clear sky radiation).	L1, L2	7
Module 2: Flat plate collector Liquid flat plate collectors, Materials (glazing material, collector plates), classification (evacuated tubular collectors, Types of FPCs), Performance Analysis, efficiency of collectors and Testing of FPC, Effects of various parameters on performance, Analysis of Unconventional FPCs, air heating collectors.	L1, L2	8
Module 3: Solar Concentrator Characteristic parameters, classification of concentrators, tracking concentrator and non-tracking concentrators, cylindrical parabolic collector, compound parabolic collector, paraboloid dish collector, central receiver collector	L2, L3	7
Module 4: Solar Water Heating Introduction, Swimming pool heating, types (built-in-storage type, separate storage type), Performance predictions.	L3, L4	7

RWE4104	BIOMASS	L	T	P	C
Version 1.1	Date of Approval: 25 July, 2016	2	0	0	4
Pre-requisites/Exposure					
Co-requisites					

Course Objectives

The objective of this course are as follows:

- To understands the various renewable feedstocks, their availability and attributes for biofuel production
- To describe the biomass conversion processes and devices
- To examine different biomass energy conversion technologies in the energy Sector and develop to select appropriate methodologies from the range of different biomass energy technologies
- To understands and describe the capital costs, and cost effectiveness of Biomass energy compared with traditional sources.

Course Outcomes

On completion of this course, the students will be able to

- CO1. To know some practical applications that conceptualizes the framework necessary to understand above thermochemical energy processes (combustion, gasification, pyrolysis, reforming), mechanical and chemical processes (oil extraction and trans-esterification), finally biochemical processes (fermentation and anaerobic digestion)
- CO2. To carry out a basic engineering project related to financial evaluation of renewable energy systems.
- CO3. To understand the basic principles of the designing of a bio-energy thermo-chemical conversion process.
- CO4. This course covers the various aspects of Biofuel, biomethanation and their production technologies.

Catalog Description

At the end of the course the students should be able to understand some practical applications that conceptualizes the framework necessary to understand above thermochemical energy processes (combustion, gasification, pyrolysis, reforming), mechanical and chemical processes (oil extraction and trans-esterification), finally biochemical processes (fermentation and anaerobic digestion).

Course Content

Modules	Blooms level*	Number of hours
Module I- Bio Fuels & Bio Reactors Enzymatic conversion of biomass, Enzyme kinetics, Biochemistry and process parameters of biomethanation; Biogas digester types; Digester design and biogas utilization; Economics of biogas plant with their environmental and social impacts; Bioconversion of substrates into alcohol: Methanol & ethanol Production, organic acids, solvents, amino acids, antibiotics etc. Batch, plug low reactor (PFR), continuous stirred rank reactors (CSTR), fluidized bed reactor bubble column, fixed film reactors, air lift fermentor etc. concept of ideal and non-ideal reactor	L1, L2	10

RWE4106	FIELD WORK I/ SEMINAR I	L	T	P	C
Version 1.1	Date of Approval: 14 July 2016	0	0	0	1
Pre-requisites/ Exposure	Solar PV lab				
Co-requisites	Solar thermal lab				

Course Objectives

The objective of this course is to

- To understand the various aspects of various instruments viz. solar dryer, solar concentrator, solar water heater by carrying out the experiment on latest technological equipments in the area of interest of the students.
- To describe the basics of operation of solar radiation measurement, wind speed and solar energy absorption and collecting devices.
- To understand and describe the applications of various experimental studies in practical life to analyze the various parameters of environment.

Course Outcomes

On completion of this course, the students will be able to

- CO1. To describe the basics of operation of solar radiation measurement, wind speed and solar energy absorption and collecting devices.
- CO2. To examine different areas viz. variation of various pollutants and contaminants present in the atmosphere and the effect of solar radiations on their concentration.
- CO3. To understand the component of solar radiation responsible for the working of solar thermal technology and investigate the efficiency/performance parameters of all equipments.

Catalog Description

In today's competitive environment an understanding is required which will facilitate the implementation of basic principles, tools and techniques used in the field of solar photovoltaic engineering. This course is designed for the students who want to understand the basics of solar PV and thermal energy conversion engineering. A student is supposed to have a basic knowledge of mathematical modeling and tools. The subject will further enhance the knowledge regarding the various methods and techniques used for solving various problems related to practical designing of solar power systems.

RWE4107	SOLAR RADIATION MEASUREMENT AND ANALYSIS LAB	L	T	P	C
Version 1.1	Date of Approval: 26 June,2020	0	0	4	2
Pre-requisites/ Exposure	Solar PV lab				
Co-requisites	Solar thermal lab				

Course Objectives

The objective of this course is to

- To understand the various aspects of various instruments viz. Lux meter, AC/DC clamp meter, multi-meter, Anemometer, potentiometer etc. by carrying out the experiment on latest technological equipments in the area of interest of the students.
- To describe the basics of operation of solar radiation measurement, wind speed and solar energy absorption and collecting devices.
- To understand and describe the applications of various experimental studies in practical life to analyze the various parameters in the field of solar photovoltaic energy conversion.

Course Outcomes

On completion of this course, the students will be able to

- CO1. To describe the basics of operation of solar radiation measurement, wind speed and solar energy absorption and collecting devices.
- CO2. To examine different areas viz. variation of various pollutants and contaminants present in the atmosphere and the effect of solar radiations falling on various solar photovoltaic energy conversion systems.
- CO3. To understand the component of solar radiation responsible for the working of solar PV technology and investigate the efficiency/performance parameters of all equipments.

Catalog Description

In today's competitive environment an understanding is required which will facilitate the implementation of basic principles, tools and techniques used in the field of solar photovoltaic engineering. This course is designed for the students who want to understand the basics of solar PV and thermal energy conversion engineering. A student is supposed to have a basic knowledge of mathematical modeling and tools. The subject will further enhance the knowledge regarding the various methods and techniques used for solving various problems related to practical designing of solar power systems.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Solar radiation measurement 1.To measure solar radiation on horizontal surface and estimation 2.To measure solar radiation on tilted surface and estimation 3.To measure earth's albedo. 4.To investigate how different surfaces of the Earth reflect and absorb heat.	L1, L2	7
Module 2: Sun Earth Angles 5.Find the declination angle for all the days of the year. Find the variation of declination angle over the year. 6.Find solar altitude angle and zenith angle for a location at a given time. 7.Find sunset hour angle and number of daylight hours for a given location. Study the variation of length of daylight on summer and winter solstices and equinoxes for different latitudes.	L1, L2	8
Module 3: Extraterrestrial Radiation Estimation	L2, L3	7

8. Find the extraterrestrial radiation on a plane normal to the direction of radiation on nth day of the year.		
9. Find the yearly variation of extraterrestrial radiation.		

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation

Course Content

Modules	Blooms level*	Number of hours
Module 1 : Solar PV Systems 1. To demonstrate the I-V characteristics of PV module with varying radiation and temperature level. 2. To demonstration the I-V characteristics of series and parallel combination of PV module. 3. To demonstrate the effect of varying tilt angles or solar angle of incidences on solar PV module output in PVSYST software.	L1, L2	7
Module 2 : Solar Thermal Systems 1. To study the performance analysis of an Evacuated Tube Collector 2. To find the overall loss coefficient of a liquid storage tank 3. To determine the Performance (UL, FR, η) of the Parabolic Trough collector with varying Solar Radiation with water as heat removal medium (Forced mode)	L2, L3	8
Module 3: Solar thermal Systems 4. To determine the Performance (UL, FR, η) of the Parabolic Trough collector with water as heat removal medium (Forced mode) with fixed input parameters different flow rates 5. To determine the Performance (UL, FR, η) of the Parabolic Trough collector for different flow rates and Solar Radiation. 6. To determine the Performance (UL, FR, η) of the Parabolic Trough collector with different inlet water temperature (Forced mode)	L3, L4	7
7. Estimate hourly beam, diffuse and global radiation on a horizontal surface.	L1, L4, L6	1
8. Estimate solar radiation on a tilted surface	L1, L4, L6	1
9. Determine thermal efficiency, $F_R U_L$ and $F_R \tau \alpha$ for a given flat plate collector.	L1, L4, L6	2

RWE4205	FINANCIAL EVALUATION OF RENEWABLE ENERGY SYSTEMS	L	T	P	C
Version 1.1	Date of Approval: 25 July, 2013	4	0	0	4
Pre-requisites/Exposure					
Co-requisites					

Course Objectives

The objectives of this course are as follows:

- The objective of this course is to provide you with the conceptual framework necessary to understand above financial issues and the techniques to manage them efficiently and effectively. Whether you choose a career in manufacturing companies, non-governmental or service sector, investment banks or management consultancy, or want to be an entrepreneur, a thorough learning of the art of corporate finance is a must. The topics covered are time value of money, capital budgeting, depreciation and cash flow formation.
- Evaluate the time value of money of a particular financial decision.
- Calculate maturity amount and present investment amount.
- Identification and application of different depreciation methods.
- Apply capital budgeting tools and techniques to evaluate a project.

Course Outcomes

On completion of this course, the students will be able to

- **CO1.** To know some practical applications that conceptualizes the framework necessary to understand above financial issues and the techniques to manage them efficiently and effectively.
- **CO2.** To carry out a basic engineering project related to financial evaluation of renewable energy systems.
- **CO3.** To understand the basic principles of the payback period, impact assessment of solar photovoltaic conversion system, solar thermal systems and other renewable energy systems .
- **CO4.** This course covers the various aspects of depreciation methods, straight line depreciation, declining balance method, sum of the year digits method of depreciation.

Catalog Description

At the end of the course the students should be able to understand the factors that influence the use of various depreciation methods, straight line depreciation, declining balance method, sum of the year digits method of depreciation. The outcome will be measured by the performance of students in various class tests/assignments in addition to the End Semester Examination (ESE) that contains significant number of questions on problems related to the financial Mathematics- cash flow diagrams, interest formula relating present & future worth of single amount, uniform series compound amount factor, uniform series sinking fund factor, uniform series present worth factor, uniform series capital recovery factor, interest formulae with continuous compounding.

Course Content

Modules	Blooms level*	Number of hours
Module I: Introduction, Economic efficiency, time value of money, interest, inflation	L1, L2	5
Module II: Basic formulae of financial Mathematics- cash flow diagrams, interest formula relating present & future worth of single amount, uniform series compound amount factor, uniform series sinking fund factor, uniform series present worth factor, uniform series capital recovery factor, interest formulae with continuous compounding. Interest formulae for uniform or arithmetic gradient of cash flows.	L1, L2	9

Module III: Indicators of Financial Performance- Simple & discounted payback periods, net present value (NPV), equivalent uniform annual worth, benefit cost ratio method, interest rate of return (IRR), computation of IRR, multiple values of IRR.	L1, L2, L3	8
Module IV: Incremental Analysis of Investment Projects- incremental analysis, incremental analysis in Net Present Value Method, incremental analysis in Equivalent Uniform Annual Worth method, incremental analysis in Benefit Cost Ratio method, incremental analysis in Internal Rate of return method	L5, L6	10
Module V: Depreciation & Depreciation Accounting- Definitions, Depreciation methods, straight line Depreciation, declining balance method, sum of the year digits method of Depreciation	L3, L4, L6	8
Module VI: Case studies of financial evaluation of renewable energy technologies- solar distillation, domestic solar water heating, solar PV lanterns	L3, L4, L6	8

**Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation*

RWE4207	ENERGY ACCESS AND PLANNING	L	T	P	C
Version 1.1	Date of Approval: 25 July, 2016	3	1	0	4
Pre-requisites/Exposure					
Co-requisites					

Course Objectives

The objective of this course are as follows

- The objective of this Course is to provide you with the conceptual framework necessary to understand above energy access issues and the techniques to manage them efficiently and effectively. Whether you choose a career in manufacturing companies, non-governmental or service sector, investment banks or management consultancy, or want to be an entrepreneur, a thorough learning of the art of corporate finance is a must. The topics covered are time value of money, capital budgeting, depreciation and cash flow formation.
- Evaluate the traditional planning for energy demands, grid and off grid energy generation issues.
- Calculate factors like high quality, wide reach and productive activities in various areas of renewable energy.
- Identification and application of different depreciation methods.
- Apply capital budgeting tools and techniques to evaluate a project.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Evaluate the traditional planning for energy demands, grid and off grid energy generation issues.
- CO2. To calculate factors like high quality, wide reach and productive activities in various areas of renewable energy.
- CO3. Identification and application of different depreciation methods.
- CO4. The objective of this Course is to provide you with the conceptual framework necessary to understand above energy access issues and the techniques to manage them efficiently and effectively. Whether you choose a career in manufacturing companies, non-governmental or service sector, investment banks or management consultancy, or want to be an entrepreneur, a thorough learning of the art of corporate finance is a must.

Catalog Description

Energy access planning is aimed at developing a socially inclusive energy supply system that gives both the poor and the rich sustainable access to at least the minimum amount of energy for their basic needs. This type of planning is also done to identify environmentally sound and climate-friendly technologies and resource options for providing energy access, and the associated investment opportunities.

Course Content

Modules	Blooms level*	Number of hours
Module I: Sustainable Energy Access Planning Framework Background, Objectives of this Study, Elements of Sustainable Energy Access Planning, Key Steps in Sustainable Energy Access Planning and Linkages between Assessments	L1, L2	7
Module II: Energy Poverty Assessment	L2, L3	8

Introduction, Energy Poverty Defined, Approaches to Energy Poverty Assessment , Energy Poverty Assessment Approaches for Use in Sustainable Energy Access Planning , Data Requirements		
Module III: Demand & Resource Assessment Introduction, Approaches to Assessing Energy Demand, Demand Assessment Methodology for Sustainable Energy Access Planning, Dimensions of Resource Assessment , Approaches to Resource Assessment, Data Requirements	L3, L4	7
Module IV: Cost & Benefit Assessment Introduction, Review of Cost Assessment Models, Proposed Sustainable Energy Access Planning Methodology, Incremental Cost of Energy Access, Applications of the Incremental Energy Access Cost, with Case Studies, Potential Benefits of an Energy Access Program, Approaches to Benefit Assessment, Data Requirements	L4, L5	7
Module V: Sustainability & Affordability Assessment Introduction, Approaches to Sustainability Assessment, Methodologies for Sustainability Assessment, Different Forms of the Affordability Problem, Approaches to Affordability Assessment, Assessment of Support Programs to Make Energy Services Affordable, Data Requirements	L5, L6	7

RWE4208	WIND ENERGY	L	T	P	C
Version 1.1	Date of Approval: 25 July, 2013	4	0	0	4
Pre-requisites/Exposure	SAE 4101				
Co-requisites					

Course Objectives

The objectives of this course are as follows:

- The objective of this Course is to provide you with the conceptual framework necessary to understand above challenges in wind energy conversion systems installation and the techniques to manage them efficiently and effectively.
- describe how wind energy is harnessed to create electricity
- state the major pros and cons of using wind energy
- demonstrate how wind energy can be utilized to create work

Course Outcomes

On completion of this course, the students will be able to

- **CO1.** Understand the fundamentals of the conventional power generation, transmission and distribution systems. Understand the importance and roles of wind energy in this modern age, how to maximise the natural resources and convert them into renewable energy
- **CO2.** Understand the components of wind power generations, create understanding of the factors affecting wind energy generation
- **CO3.** Appreciation the benefits of harvesting wind energy, Understand its characteristics and operations
- **CO4.** Explore the suitability of introducing wind energy generation to for a specific site

Catalog Description

At the end of the course the students should be able to understand some practical applications that conceptualize the framework necessary to understand the insight into the context and importance of wind energy sources and their potential, present status, fundamental principles, applications and environmental aspects.

Course Content

Modules	Blooms level*	Number of hours
Module I: Wind characteristics: Sources of wind, wind classification in flat terrain, sitting in non-flat terrain, ecological indicators of site suitability, site resource assessment: anemometer, met towers, wind map, wind rose	L1, L2	5
Module II: Wind energy system: Bernoulli's equation and significance; Euler's energy equation for turbomachines, energy and power in wind, different types of rotors: horizontal and vertical; wind turbine components, electric power generation, Fixed and variable speed; and storage.	L1, L2	9
Module III: Applied aerodynamics: Airfoil structure, aerodynamics of airfoil: lift, drag and stall; lift based wind turbines, drag machines, pitch concept, yaw concept, slip coefficient, Betz law, axial momentum theory, tip speed ratio, forces and moments due to vertical wind gradient. Role of dynamics in wind power- cross wind axis machines, wind axis machines- general momentum theory- vortex strip theory, forces and moments due to vertical wind gradient, control mechanism.	L1, L2, L3	8
Module IV: Towers and systems installation:	L4, L5, L6	10

Specific types of towers, tower height, tower and system raising, wiring, lightening protection, installation, maintenance of other equipments.		
Module V: Wind energy conversion systems: Specification and characteristics of commercial water-pumping wind mills, electricity producing wind energy, conversion systems, selection of system case study, Environment aspects.	L3, L4, L6	8

**Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation*

RWE4209	RISK MANAGEMENT IN RENEWABLE ENERGY PROJECTS	L	T	P	C
Version 1.1	Date of Approval: Date, Aug 2016	3	1	0	4
Pre-requisites/Exposure					
Co-requisites					

Course Objectives

This module will help participants to understand the risks involved in the project and the loan application evaluation process to be followed.

Course Outcomes

On completion of this course, the students will be able to

CO1. Define project parameters, project scope, stakeholders, project phases, Time & Resource requirements and limitations

CO2. Identify risks associated with the project viz Social, environmental, economic, political, technological risks to name a few

CO3. Plan the strategy for risk mitigation

CO4: Measure the impact of the risks associated with the project

Catalog Description

The course is designed for the students to prepare them for the working in various renewable energy projects right from conceptualization to delivery of project. Students will discover the renewable energy project life cycle and learn how to build a successful project from pre implementation to completion. It will introduce project management topics such as resources, costs, time constraints and project scopes. The students will learn about the various risks associated with RE projects. Identify them and decide suitable measures for risk mitigation.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Conventional energy projects and related uncertainties Introduction, the study, challenges in RE projects, risk associated with conventional energy projects, risk management approach in energy policies	L1, L2	7
Module II: Uncertainties in RES projects RES project characteristics, Risk associated with specific RES technologies. Risk: Definition and types, Risk analysis, Risk Identification, Risk impact assessment, Risk prioritization, Risk tracking, Risk mitigation planning, implementation and progress monitoring, tools for risk mitigation, Case study for managing risks in industries.	L2, L3	8
Module III: Recommended Risk Management methodology Project definition & requirement, risk identification, risk evaluation, risk control, risk follow up, risk feedback, risk management implementation in RES investment lifecycle	L3, L4	7
Module IV: Support measures Measures to address political risk, Measures to address economic risks, Measures to address technical risks, Measures to address social risks, generic interventions, Conclusions & recommendation	L4, L5	7

RWE4305	SOLAR POWER GENERATION LAB	L	T	P	C
Version 1.1	Date of Approval: 26 June,2020	0	0	4	2
Pre-requisites/ Exposure	Solar PV lab				
Co-requisites	Solar thermal lab				

Course Objectives

The objective of this course is to

- To understand the various aspects of various instruments viz. Lux meter, AC/DC clamp meter, multi-meter, Anemometer, potentiometer etc. by carrying out the experiment on latest technological equipments in the area of interest of the students.
- To describe the basics of operation of solar radiation measurement, wind speed and solar energy absorption and collecting devices.
- To understand and describe the applications of various experimental studies in practical life to analyze the various parameters in the field of solar photovoltaic energy conversion.

Course Outcomes

On completion of this course, the students will be able to

- CO1. To describe the basics of operation of solar radiation measurement, wind speed and solar energy absorption and collecting devices.
- CO2. To examine different areas viz. variation of various pollutants and contaminants present in the atmosphere and the effect of solar radiations falling on various solar photovoltaic energy conversion systems.
- CO3. To understand the component of solar radiation responsible for the working of solar PV technology and investigate the efficiency/performance parameters of all equipments.

Catalog Description

In today's competitive environment an understanding is required which will facilitate the implementation of basic principles, tools and techniques used in the field of solar photovoltaic engineering. This course is designed for the students who want to understand the basics of solar PV and thermal energy conversion engineering. A student is supposed to have a basic knowledge of mathematical modeling and tools. The subject will further enhance the knowledge regarding the various methods and techniques used for solving various problems related to practical designing of solar power system

Course Content

Modules	Blooms level*	Number of hours
Module 1 : Maximum Power Point Tracking 1. Finding MPP by varying the resistive load across the PV panel. 2. Finding MPP by varying the duty cycle of DC-DC converter. 3. Using MPPT algorithm find the V_{max} , I_{max} and P_{max} and duty cycle at which MPP occurs. 4. Perform the experiment (3) with different values of perturbation (ΔD) Observe the response of P_{max} with the P_{max} observed in exp -3. 5. Perform the experiment no 1 to no 4, with battery in the circuit.	L1, L2	10
Module II: 6. To study performance analysis of off grid Solar PV Power Plant 7. To study performance of a solar thermal power plant	L2, L3	12
Module III 1. To demonstrate and generate the I-V and P-V Characteristics of PV Module with varying solar radiation level in MATLAB software. 2. To demonstrate and generate the I-V and P-V Characteristics of PV Module with varying temperature level in MATLAB software. 3. To demonstrate and generate the I-V and P-V Characteristics of PV Module with varying tilt angles or solar angle of incidences in PVSYS software. 4. To realize the model of a solar module in MATLAB software and generate its I-V characteristics using single diode model. 5. To realize the model of a solar module in MATLAB software and generate its P-V characteristics using single diode model.	L2, L3	5

RWE4306	Field Work II/ Seminar II	L	T	P	C
Version 1.1	Date of Approval: 14 July 2016	0	0	0	1
Pre-requisites/ Exposure	Solar PV lab				
Co-requisites	Solar thermal lab				

Course Objectives

The objective of this course is to

- To understand the various aspects of various instruments viz. solar dryer, solar concentrator, solar water heater by carrying out the experiment on latest technological equipments in the area of interest of the students.
- To describe the basics of operation of solar radiation measurement, wind speed and solar energy absorption and collecting devices.
- To understand and describe the applications of various experimental studies in practical life to analyze the various parameters of environment.

Course Outcomes

On completion of this course, the students will be able to

- CO1. To describe the basics of operation of solar radiation measurement, wind speed and solar energy absorption and collecting devices.
- CO2. To examine different areas viz. variation of various pollutants and contaminants present in the atmosphere and the effect of solar radiations on their concentration.
- CO3. To understand the component of solar radiation responsible for the working of solar thermal technology and investigate the efficiency/performance parameters of all equipments.

Catalog Description

In today's competitive environment an understanding is required which will facilitate the implementation of basic principles, tools and techniques used in the field of solar photovoltaic engineering. This course is designed for the students who want to understand the basics of solar PV and thermal energy conversion engineering. A student is supposed to have a basic knowledge of mathematical modeling and tools. The subject will further enhance the knowledge regarding the various methods and techniques used for solving various problems related to practical designing of solar power systems.

Modes of Evaluation: Quiz/Assignment/ Seminar/Written Examination

RWE4335	SUMMER INTERNSHIP EVALUATION	L	T	P	C
Version 1.1	Date of Approval: 14 July 2016	0	0	0	6
Pre-requisites/ Exposure					
Co-requisites					

Course Objectives

The objective of this course is to

- To emphasize on the importance of practical experience in life is integral part of learning of the various concepts of power generation related to renewable energy systems.
- To describe the basics of designing and innovative idea reproduction ethics.
- To examine different industrial areas viz. biomass energy conversion technologies, green building aspects in the energy sector, solar power plants and develop to select appropriate methodologies from the range of different technologies
- To understand and describe the capital costs, and cost effectiveness of renewable energy compared with traditional sources.
- To start a step stone in the direction of make students think like entrepreneurs and energy auditors/managers.

The students pursue six week training industries dealing in the area of renewable energy and present their comprehensive learning for evaluation.

Course Outcomes

On completion of this course, the students will be able to

- CO1. To examine different industrial areas viz. biomass energy conversion technologies, green building aspects in the energy sector, solar power plants and develop to select appropriate methodologies from the range of different technologies
- CO2. To emphasize on the importance of practical experience in life is integral part of learning of the various concepts of power generation related to renewable energy systems.
- CO3. To understand and describe the capital costs, and cost effectiveness of renewable energy compared with traditional sources.

RWE4307	DESIGNING OF SOLAR PROJECTS	L	T	P	C
Version 1.1	Date of Approval: 25 July, 2013	3	1	0	4
Pre-requisites/Exposure					
Co-requisites					

Course Objectives

The objective of this course are as follows:

- This course covers the design and engineering of solar power system along with their different material aspects, electrical, thermal & optical characteristics for better efficiency.
- To understand the role of solar energy in the context of regional and global energy system, it's economic, social and environmental connotations, and the impact of technology on a local and global context.
- To understand the physical principles of the photovoltaic (PV) solar cell and what are its sources of losses.
- To understand and apply the basic concepts of solar radiation necessary for dimensioning (sizing) PV systems installation.

Course Outcomes

On completion of this course, the students will be able to

- CO1. To know some practical applications that use solar photovoltaic systems and be able to do specify, analyze and designing of real time systems.
- CO2. To know and be able to analyze the behavior of a self-consumption demand and the measurement of network management.
- CO3. To carry out a basic engineering project related to energy supply using solar photovoltaic technology.
- CO4. To know the main lines of research in the field of photovoltaic technology and solar energy. To bring innovative ideas in the field of solar photovoltaic energy.

Catalog Description

At the end of the course the students should be able to understand some practical applications that conceptualize the framework necessary to design and engineering of solar power system along with their different material aspects, electrical, thermal & optical characteristics for better efficiency.

Course Content

Modules	Blooms level*	Number of hours
Module I: Applications of Solar Energy Solar Photovoltaic applications -Solar home lighting systems, Solar water pumping systems, Solar power plants; Solar Thermal applications-Solar water heating systems. Factors to be considered in Solar System Design: Solar Radiation, Atmospheric effect on Solar Radiation, Daily and Seasonal Temperature Variations, Physical parameters, Availability of Land foundation needs, Orientation and Obstructions, Proximity of power Evacuation, Water availability, Any industries of pollution nearby, Power supply for construction. Typical Site Evaluation Methodology	L1, L2	10

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Module II: System Design of Solar Photovoltaic Systems Load Analysis- Accurate sizing, Peak current loads, Worst case scenarios, Plan for future, Compatibility issues, Determining design margins. Solar Array Design- Collector size, Selection of most appropriate module, Dust and Other contaminating effects, Orientation and Tilt issues, Design of Balance of Systems (BOS). Battery Design- Physical and Performance Requirement, Reserve Capacity, temperature and Ageing duration, Regulation and Charge control.	L2, L3	12
Module III: Designing Solar Home Lighting Systems (Case study) Case description, Assessment of load profile, Typical System Design, Assumptions in System Design, Battery Design, PV Array Design, Inverter Capacity, Charge Controller, Overall System Design, Request for Quotation, Evaluation of Quotations, Negotiation with the Parties, Finalization of Order, Inspection of goods Received, Parameters to be checked during Installation	L3, L4	14
Module IV: Designing Solar PV Water pumping system (Case study) System Design Methodology, Typical System Design, Case Description, Assumptions in System Design, Insolation Availability, Pumping Flow Requirement, Pumping Head Requirement (Static), Pumping Head Requirement (Dynamic), Pumping Energy Requirement, Pump Selection PV Array Design, Request for Quotation, Evaluation of Quotations, Negotiation with the Parties Finalization of Order, Inspection of goods Received, Parameters to be checked during Installation	L4, L5	12
Module V: Designing Solar Thermal Water Heating System (Case study) Case Description Typical System Design, Assumptions in System Design, Energy required for heating water, Collector Area Required, Request for Quotation, Evaluation of Quotations, Negotiation with the Parties, Finalization of Order, inspection of goods Received, Parameters to be checked during Installation.	L5, L6	12
Module VI:- Introduction To Smart Grids Concept of smart grid, smart grid control, Communications and Sensing in a Smart Grid, Hardware Architecture, Software architecture, Protocol detail, Discrete control and Analog control, application & benefits, PLCs Vs RTUs, IED's, RTU Block diagram, PMU communication interface, Future trends.	L5, L6	8
Module VI: Designing of various applications using MATLAB and PVSYST software Introduction to MATLAB, arithmetic operations on MATLAB, designing of solar photovoltaic power system on MATLAB, load estimation, Introduction to PVSYST, locational aspects of solar PV power point installation, designing of SPV power plant using PVSYST.	L3, L4	8

RWE4310	SMART GRIDS AND RENEWABLES	L	T	P	C
Version 1.1	Date of Approval: 25 July, 2016	3	1	0	4
Pre-requisites/Exposure					
Co-requisites					

Course Objectives

The objective of this course are as follows

- To discuss the current status of smart grid technology and its implementation aspects in India and World.
- To discuss the technical solutions for integrating more large capacity renewable energy in current energy generation scenario.
- To discuss role of Smart Grid in electricity grid connection..
- To identify factors affecting grid integration of renewable energy viz. net-metering, energy costing, automation of energy generation monitoring/control of energy generation by various renewable energy sources.

Course Outcomes

On completion of this course, the students will be able to

CO1. To identify factors affecting grid integration of renewable energy viz. net-metering, energy costing, automation of energy generation monitoring/control of energy generation by various renewable energy sources.

CO2. To know and be able to analyze the behavior of a self-consumption demand and the measurement of network management.

CO3. To carry out a basic engineering project related to energy supply using smart grid and SCADA technology.

CO4. To know the main lines of research in the field of photovoltaic technology and solar energy and to bring innovative ideas in the field of solar photovoltaic energy in smart grid systems.

Catalog Description

This course provides an introduction to how in developed countries, smart grid technologies can be used to upgrade, modernize or extend old grid systems, while at the same time providing opportunities for new, innovative solutions to be implemented.

Course Content

Modules	Blooms level*	Number of hours
Module I: Introduction: Smart Grids and Renewables Making the Transition to a Smarter Grid, Start with Pilot and Demonstration, Projects, Specific Technology Recommendations, Costs and Benefits: Making the Business Case for Smart Grid Technologies, Recognise and Respond to Technological conservatism, Leverage the Need for Private Sector, Investment, Recognise the Continual Nature of Technological Change, Regulation	L1, L2	10
Module II: How Smart Grids Enable Renewables Smart Grids and Variability, Smart Grids and Distributed Generation, Smart Grids and Capital Intensity, Improved Consumer Information, Control, and Choice, Improved Transmission and Distribution System Monitoring and Control, Integration of New Resources,	L2, L3	12

RWE4403	GREEN BUILDINGS	L	T	P	C
Version 1.1	Date of Approval: 25 July, 2016	3	0	0	3
Pre-requisites/Exposure					
Co-requisites					

Course Objectives

The objective of this course is to

1. To make students understand about the various designing aspects of green buildings .
2. To covers the challenges, technology and application of protocols and standards of designing the green buildings using passive sources for heating and cooling.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Understand the policies, protocols and rating agencies of green buildings.
CO2. Learn about certification guidelines of LEED, GRIHA, IGBC and BEE in the area of green buildings.
CO3. Various factors that affect the designing parameters, economical aspects and socio-economical constraints of design, operation and maintenance of green buildings.
CO4. To introduce the policy and protocols for certification of green buildings in real world.

Catalog Description

This course covers the challenges, technology and application of green buildings covering designing parameters, economical aspects and socio-economical constraints of design, operation and maintenance in longer term.

Course Content

Modules	Blooms level*	Number of hours
Module I: Climate Introduction, Climate & its Component, Factor Affecting Climate, Climatic Zones and their characteristics, Urban Climate, Microclimate.	L1, L2	12
Module II: Energy and Welfare Economics Evaluation of policy instruments, Energy return on investment, Concept of welf Module II: Green Building- Concepts, Design and Performance. Building, Implications of climate on building design, Green Buildings, Objective & Essential Characteristics of Green Buildings (i.e. Building Envelope, Passive Heating, Passive Cooling, Day lighting, Building Materials, Heat Transfer, Solar Radiation, Simplified Method for Performance Estimation), solar rooftop, solar water heating are economics, Energy goods and energy services, Renewable Energy in Developing Countries, World Energy Council Action Plan.	L2, L3	12
Module III: Green Building Rating System Various green building rating National and International stage, USGBC, IGBC, GRIHA, BREAM, STAR RATING.	L3, L4	12

RWP4101	RENEWABLE ENERGY CONVERSION SYSTEMS	L	T	P	C
Version 1.1	Date of Approval: Date, Aug 2016	2	0	0	3
Pre-requisites/Exposure					
Co-requisites					

Course Objectives

The objective of the course is to provide introduction to different Renewable energy sources and Analyze the full coverage of Renewable energy supplies needed for modern economies. Course covers scientific aspects of power generation from Sun, wind, and biomass & ocean thermal routes.

Course Outcomes

On completion of this course, the students will be able to:

CO1: Describe the various renewable energy sources and the possible conversion paths to a useful form of energy.

CO2: Describe the aerodynamics of wind turbines and calculate their power, energy production, output and their environmental impact.

CO3: Explain how geothermal is currently used as a source of energy, its future potential both in providing energy and in producing alternative fuels.

CO4: Explain the physical principles of Solar energy and photovoltaic energy conversion route.

Catalog Description

This course aims to make the students understand the importance renewable energy conversion systems and also explains the significance of energy supply from renewables as an essential component of every nation's strategy, especially when there is responsibility for the environment and for sustainability.

Course Content

Modules	Blooms level*	Number of hours
Module I: Introduction to Renewable Energy Renewable and Non-Renewable Energy, World energy scenario; Fossil fuel resources - estimates and duration; India's energy scenario; Synergy between energy and environment, global environment issues, greenhouse gas emission, global warming, green energy solutions, technical and social implications of renewable energy	L1, L2	7
Module II: Solar Concepts Introduction, Sun as the source of radiation, Earth and Solar constant, Extra-terrestrial solar radiation, components of radiation, effects of earth's atmosphere, Introduction to solar PV, Introduction to solar Thermal.	L1, L2	8
Module III: Biofuels, Wind Energy Biofuels- Definition, generations and types; Wind-Characteristics, Sources of wind, components of wind turbines, advantages and environmental aspects of wind energy	L1, L2	7
Module IV: Hydro Energy, Tidal Energy Hydro- Principles, hydro-turbines, social and environmental aspects. Tidal- The nature of the resource, physics, power generation,	L1, L2	7

technical factors, environmental factors, tidal energy potential, tidal barrage, tidal stream, tidal current turbines.		
Module V: Geothermal, OTEC, Nuclear Energy Geothermal- Principles, suitable sites and criteria, Advantages and disadvantages; OTEC- Principles, Open and closed systems, Nuclear fusion, fission, various types of nuclear fuels and nuclear reactors.	L1, L2	7

RWP4102	INTRODUCTION TO SOLAR PHOTOVOLTAICS	L	T	P	C
Version 1.1	Date of Approval: 25 July, 2016	2	0	0	4
Pre-requisites/Exposure					
Co-requisites					

Course Objectives

The objective of this course are as follows

1. This course covers the design and engineering of solar cells along with their different material aspects, electrical, thermal & optical characteristics for better efficiency.
2. To understand the role of solar energy in the context of regional and global energy system, its economic, social and environmental connotations, and the impact of technology on a local and global context.
3. To understand the physical principles of the photovoltaic (PV) solar cell and what are its sources of losses.
4. To understand and apply the basic concepts of solar radiation necessary for dimensioning (sizing) PV systems installation.

Course Outcomes

On completion of this course, the students will be able to

CO1. To know some practical applications that use solar photovoltaic systems and be able to do specify, analyze and design.

CO2. To know and be able to analyze the behavior of a self-consumption demand and the measurement of network management.

CO3. To carry out a basic engineering project related to energy supply using solar photovoltaic technology.

CO4. To know the main lines of research in the field of photovoltaic technology and solar energy and to bring innovative ideas in the field of solar photovoltaic energy.

Catalog Description

This course covers the concepts of basic engineering project related to energy supply using solar photovoltaic technology. Also, to make students understand the practical applications that use solar photovoltaic systems and be able to do specify, analyze and design.

Course Content

Modules	Blooms level*	Number of hours
Module I: Thin film solar cell technologies Generic advantages of thin film technologies, material in thin film technologies, thin film deposition techniques, Amorphous Si solar cell technology, CdTe solar cell technology, CIGS solar cell technology, thin film epitaxial Si solar cell technology.	L1, L2	7
Module II: Concentrating PV Cells and systems Light concentration, concentration ratio, series resistance optimization, optics for concentrator PV, tracking requirement of CPV, cooling requirements, high concentration solar cells	L1, L2	8
Module III: Emerging Solar Cells technologies and concepts Organic solar cells, Dye-sensitized solar cells, GaAs solar cells, Thermo-photovoltaic, approaches to overcome single junction efficiency limits, Solar photovoltaic modules, spectrum modification approaches, hot carrier solar cells.	L2, L3	7

RWP4103	INTRODUCTION TO SOLAR THERMAL TECHNOLOGY	L	T	P	C
Version 1.1	Date of Approval: Date, Aug 2016	2	0	0	4
Pre-requisites/Exposure					
Co-requisites					

Course Objectives

The objective of this course is to introduce materials relevant to the engineering of solar thermal systems. Students will develop the skills to analysis the thermal performance of solar thermal systems. Many of these calculations will be based on solar applications in different area. Finally the concepts of engineering economics applied to solar energy will also be introduced.

Course Outcomes

On completion of this course, the students will be able to
CO1. Conduct the thermal Analysis of a solar thermal devices.
CO2. Explain working mechanism of solar thermal collectors
CO3. Design a solar thermal system based on the requirement.

Catalog Description

In this course, the various modes of heat transfer shall be discussed. The different types of errors, accuracy of the numerical methods are also discussed in detail. Students will taught to calculate the amount of incident solar flux on horizontal and tilted surfaces. Thermal analysis of flat plate collector and concentrating collectors will be taught. The energy storage systems and the different components of solar systems will be discussed. The various water heating, air heating systems and its application to space heating and cooling and other solar devices will be discussed. Solar thermal power generation will be taught in this course.

Course Content

Modules	Blooms level*	Number of hours
Module 1:Introduction Solar spectrum, Sun-Earth angles, Solar time, measurement of solar radiations (pyrheliometers, pyranometers), solar radiation on horizontal surface (estimation of average solar radiation, estimation of clear sky radiation).	L1, L2	7
Module 2: Flat plate collector Liquid flat plate collectors, Materials (glazing material, collector plates), classification (evacuated tubular collectors, Types of FPCs), Performance Analysis, efficiency of collectors and Testing of FPC, Effects of various parameters on performance, Analysis of Unconventional FPCs, air heating collectors.	L1, L2	8
Module 3: Solar Concentrator Characteristic parameters, classification of concentrators, tracking concentrator and non-tracking concentrators, cylindrical parabolic collector, compound parabolic collector, paraboloid dish collector, central receiver collector	L2, L3	7
Module 4: Solar Water Heating Introduction, Swimming pool heating, types (built-in-storage type, separate storage type), Performance predictions.	L3, L4	7

RWP4105	Field Work I/ Seminar I	L	T	P	C
Version 1.1	Date of Approval: 14 July 2016	0	0	0	1
Pre-requisites/ Exposure	Solar PV lab				
Co-requisites	Solar thermal lab				

Course Objectives

The objective of this course is to

- To understand the various aspects of various instruments viz. solar dryer, solar concentrator, solar water heater by carrying out the experiment on latest technological equipments in the area of interest of the students.
- To describe the basics of operation of solar radiation measurement, wind speed and solar energy absorption and collecting devices.
- To understand and describe the applications of various experimental studies in practical life to analyze the various parameters of environment.

Course Outcomes

On completion of this course, the students will be able to

- CO1. To describe the basics of operation of solar radiation measurement, wind speed and solar energy absorption and collecting devices.
- CO2. To examine different areas viz. variation of various pollutants and contaminants present in the atmosphere and the effect of solar radiations on their concentration.
- CO3. To understand the component of solar radiation responsible for the working of solar thermal technology and investigate the efficiency/performance parameters of all equipments.

Catalog Description

In today's competitive environment an understanding is required which will facilitate the implementation of basic principles, tools and techniques used in the field of solar photovoltaic engineering. This course is designed for the students who want to understand the basics of solar PV and thermal energy conversion engineering. A student is supposed to have a basic knowledge of mathematical modeling and tools. The subject will further enhance the knowledge regarding the various methods and techniques used for solving various problems related to practical designing of solar power systems.

Modes of Evaluation: Quiz/Assignment/ Seminar/Written Examination

RWP4204	ENERGY STORAGE	L	T	P	C
Version 1.1	Date of Approval: 25 July, 2016	2	0	0	4
Pre-requisites/Exposure					
Co-requisites					

Course Objectives

The objective of this course is to

1. This course covers the various options of energy storage ranging from conventional batteries to super-capacitors. These storage systems are applicable for solar PV, Solar thermal and wind energy systems
2. To understand the role of various energy storage systems in the context of regional and global energy system, its economic, social and environmental connotations, and the impact of technology on a local and global context.
3. To understand the basic principles of the battery storage, capacitor storage and various electric and magnetic energy storage systems.
4. To understand and apply the basic concepts of application areas of solar energy storage systems along with sizing of an autonomous battery banks and super-capacitor systems.

Course Outcomes

On completion of this course, the students will be able to

- CO1. To know some practical applications that use solar photovoltaic systems and be able to do specify, analyze and design
- CO2. To carry out a basic engineering project related to energy supply using solar photovoltaic storage technology.
- CO3. To understand the basic principles of the battery storage, capacitor storage and various electric and magnetic energy storage systems.
- CO4. This course covers the various options of energy storage ranging from conventional batteries to super-capacitors. These storage systems are applicable for solar PV, Solar thermal and wind energy systems.

Catalog Description

At the end of the course the students should be able to understand the factors that influence the use of solar radiation as an energy source; know the various active and passive technologies that are available for collecting solar energy, have the ability to apply design principles to selection of an appropriate solar energy installation to meet requirements.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Energy Storage Need of energy storage; Different modes of Energy Storage. Potential energy: Pumped hydro storage; KE and Compressed gas system: Flywheel storage, compressed air energy storage; Electrical and magnetic energy storage: Capacitors, electromagnets	L1, L2	7
Module 2: Electrochemical Energy Storage Systems Batteries: Primary, Secondary, Lithium, Solid-state and molten solvent batteries; Lead acid batteries; Nickel Cadmium Batteries; Advanced Batteries	L2, L3	8
Module 3: Magnetic and Electric Energy Storage Systems	L3, L4	7

Superconducting Magnet Energy Storage (SMES) systems; Capacitor and Batteries: Comparison and application; Super capacitor: Electrochemical Double Layer Capacitor (EDLC), principle of working, structure		
Module 4: Sensible Heat Storage SHS mediums; Stratified storage systems; Rock-bed storage systems; Thermal storage in buildings; Earth storage; Energy storage in aquifers.	L4, L5	7
Module 5: Hydrogen Energy storage and Fuel cells Modes of hydrogen storage, safety aspects of hydrogen energy storage, fuel cells and types of fuel cells, Basic Fuel cell design and its characterization, Nano materials engineering for electrode preparation in biobatteries	L5, L6	7

RWP4206	RISK MANAGEMENT IN RENEWABLE ENERGY PROJECTS	L	T	P	C
Version 1.1	Date of Approval: Date, Aug 2016	2	0	0	4
Pre-requisites/Exposure					
Co-requisites					

Course Objectives

This module will help participants to understand the risks involved in the project and the loan application evaluation process to be followed.

Course Outcomes

On completion of this course, the students will be able to

CO1. Define project parameters, project scope, stakeholders, project phases, Time & Resource requirements and limitations

CO2. Identify risks associated with the project viz Social, environmental, economic, political, technological risks to name a few

CO3. Plan the strategy for risk mitigation

CO4: Measure the impact of the risks associated with the project

Catalog Description

The course is designed for the students to prepare them for the working in various renewable energy projects right from conceptualization to delivery of project. Students will discover the renewable energy project life cycle and learn how to build a successful project from pre implementation to completion. It will introduce project management topics such as resources, costs, time constraints and project scopes. The students will learn about the various risks associated with RE projects. Identify them and decide suitable measures for risk mitigation.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Conventional energy projects and related uncertainties Introduction, the study, challenges in RE projects, risk associated with conventional energy projects, risk management approach in energy policies	L1, L2	7
Module II: Uncertainties in RES projects RES project characteristics, Risk associated with specific RES technologies. Risk: Definition and types, Risk analysis, Risk Identification, Risk impact assessment, Risk prioritization, Risk tracking, Risk mitigation planning, implementation and progress monitoring, tools for risk mitigation, Case study for managing risks in industries.	L2, L3	8
Module III: Recommended Risk Management methodology Project definition & requirement, risk identification, risk evaluation, risk control, risk follow up, risk feedback, risk management implementation in RES investment lifecycle	L3, L4	7
Module IV: Support measures Measures to address political risk, Measures to address economic risks, Measures to address technical risks, Measures to address social risks, generic interventions, Conclusions & recommendation	L4, L5	7

RWP4303	BIOMASS	L	T	P	C
Version 1.1	Date of Approval: 25 July, 2016	2	0	0	4
Pre-requisites/Exposure					
Co-requisites					

Course Objectives

The objective of this course are as follows:

- To understands the various renewable feedstocks, their availability and attributes for biofuel production
- To describe the biomass conversion processes and devices
- To examine different biomass energy conversion technologies in the energy Sector and develop to select appropriate methodologies from the range of different biomass energy technologies
- To understands and describe the capital costs, and cost effectiveness of Biomass energy compared with traditional sources.

Course Outcomes

On completion of this course, the students will be able to

- CO1. To know some practical applications that conceptualizes the framework necessary to understand above thermochemical energy processes (combustion, gasification, pyrolysis, reforming), mechanical and chemical processes (oil extraction and trans-esterification), finally biochemical processes (fermentation and anaerobic digestion)
- CO2. To carry out a basic engineering project related to financial evaluation of renewable energy systems.
- CO3. To understand the basic principles of the designing of a bio-energy thermo-chemical conversion process.
- CO4. This course covers the various aspects of Biofuel, biomethanation and their production technologies.

Catalog Description

At the end of the course the students should be able to understand some practical applications that conceptualizes the framework necessary to understand above thermochemical energy processes (combustion, gasification, pyrolysis, reforming), mechanical and chemical processes (oil extraction and trans-esterification), finally biochemical processes (fermentation and anaerobic digestion).

Course Content

Modules	Blooms level*	Number of hours
Module I - : Introduction Introduction, Properties of biomass, sources of biomass, broad classification of biomass, agro and forestry residues; Techniques of biomass assessment, biomass estimation, Biodegradation and biodegradability of substrate	L1, L2	10
Module II- Biochemistry of biomass Introduction of bio-molecules: carbohydrates, proteins, Amino ac-ids, lipids and Nucleic acid. Enzymes: Definition with examples of holoenzyme, apoenzyme, coenzymes, cofactors, activators, inhib-itors, active site, units of enzyme activity,	L2, L3	12

RWP4305	DESIGNING OF SOLAR PROJECTS	L	T	P	C
Version 1.1	Date of Approval: 25 July, 2016	2	0	0	4
Pre-requisites/Exposure					
Co-requisites					

Course Objectives

The objective of this course are as follows:

- This course covers the design and engineering of solar power system along with their different material aspects, electrical, thermal & optical characteristics for better efficiency.
- To understand the role of solar energy in the context of regional and global energy system, it's economic, social and environmental connotations, and the impact of technology on a local and global context.
- To understand the physical principles of the photovoltaic (PV) solar cell and what are its sources of losses.
- To understand and apply the basic concepts of solar radiation necessary for dimensioning (sizing) PV systems installation.

Course Outcomes

On completion of this course, the students will be able to

- CO1. To know some practical applications that use solar photovoltaic systems and be able to do specify, analyze and designing of real time systems.
- CO2. To know and be able to analyze the behavior of a self-consumption demand and the measurement of network management.
- CO3. To carry out a basic engineering project related to energy supply using solar photovoltaic technology.
- CO4. To know the main lines of research in the field of photovoltaic technology and solar energy. To bring innovative ideas in the field of solar photovoltaic energy.

Catalog Description

At the end of the course the students should be able to understand some practical applications that conceptualize the framework necessary to design and engineering of solar power system along with their different material aspects, electrical, thermal & optical characteristics for better efficiency.

Course Content

Modules	Blooms level*	Number of hours
Module I: Applications of Solar Energy Solar Photovoltaic applications -Solar home lighting systems, Solar water pumping systems, Solar power plants; Solar Thermal applications-Solar water heating systems. Factors to be considered in Solar System Design: Solar Radiation, Atmospheric effect on Solar Radiation, Daily and Seasonal Temperature Variations, Physical parameters, Availability of Land foundation needs, Orientation and Obstructions, Proximity of power Evacuation, Water availability, Any industries of pollution nearby, Power supply for construction. Typical Site Evaluation Methodology	L1, L2	10
Module II: System Design of Solar Photovoltaic Systems	L2, L3	12

Prof. (Dr.) Amit Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Load Analysis- Accurate sizing, Peak current loads, Worst case scenarios, Plan for future, Compatibility issues, Determining design margins. Solar Array Design- Collector size, Selection of most appropriate module, Dust and Other contaminating effects, Orientation and Tilt issues, Design of Balance of Systems (BOS). Battery Design- Physical and Performance Requirement, Reserve Capacity, temperature and Ageing duration, Regulation and Charge control.		
Module III: Designing Solar Home Lighting Systems (Case study) Case description, Assessment of load profile, Typical System Design, Assumptions in System Design, Battery Design, PV Array Design, Inverter Capacity, Charge Controller, Overall System Design, Request for Quotation, Evaluation of Quotations, Negotiation with the Parties, Finalization of Order, Inspection of goods Received, Parameters to be checked during Installation	L3, L4	14
Module IV: Designing Solar PV Water pumping system (Case study) System Design Methodology, Typical System Design, Case Description, Assumptions in System Design, Insolation Availability, Pumping Flow Requirement, Pumping Head Requirement (Static), Pumping Head Requirement (Dynamic), Pumping Energy Requirement, Pump Selection PV Array Design, Request for Quotation, Evaluation of Quotations, Negotiation with the Parties Finalization of Order, Inspection of goods Received, Parameters to be checked during Installation	L4, L5	12
Module V: Designing Solar Thermal Water Heating System (Case study) Case Description Typical System Design, Assumptions in System Design, Energy required for heating water, Collector Area Required, Request for Quotation, Evaluation of Quotations, Negotiation with the Parties, Finalization of Order, inspection of goods Received, Parameters to be checked during Installation.	L5, L6	12
Module VI:- Introduction To Smart Grids Concept of smart grid, smart grid control, Communications and Sensing in a Smart Grid, Hardware Architecture, Software architecture, Protocol detail, Discrete control and Analog control, application & benefits, PLCs Vs RTUs, IED's, RTU Block diagram, PMU communication interface, Future trends.	L5, L6	8
Module VI: Designing of various applications using MATLAB and PVSYST software Introduction to MATLAB, arithmetic operations on MATLAB, designing of solar photovoltaic power system on MATLAB, load estimation, Introduction to PVSYST, locational aspects of solar PV power point installation, designing of SPV power plant using PVSYST.	L3, L4	8

RWP4306	LARGE SCALE GRID INTEGRATION OF RE-NEWABLE ENERGY SOURCES	L	T	P	C
Version 1.1	Date of Approval: 25 July, 2018	2	0	0	4
Pre-requisites/Exposure					
Co-requisites					

Course Objectives

The objective of this course is to

1. To aware students about the present situation of Grid Integration.
2. To covers the challenges, technology and application of large scale grid integration of renewable energy sources.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Understand the drivers behind the grid integration.
CO2. Learn about RE generation Technology, Transmission technology.
CO3. To Future technical solutions for integrating more large-capacity RE.
CO4. To introduce Smart Grids.

Catalog Description

This course covers the challenges, technology and application of large scale grid integration of renewable energy sources. This also gives the introduction to Smart Grids

Course Content

Modules	Blooms level*	Number of hours
Module I: Introduction: Smart Grids and Renewables Making the Transition to a Smarter Grid, Start with Pilot and Demonstration, Projects, Specific Technology Recommendations, Costs and Benefits: Making the Business Case for Smart Grid Technologies, Recognise and Respond to Technological conservatism, Leverage the Need for Private Sector, Investment, Recognise the Continual Nature of Technological Change, Regulation	L1, L2	10
Module II:How Smart Grids Enable Renewables Smart Grids and Variability, Smart Grids and Distributed Generation, Smart Grids and Capital Intensity, Improved Consumer Information, Control, and Choice, Improved Transmission and Distribution System Monitoring and Control, Integration of New Resources,	L2, L3	12
Module III: Nontechnical Barriers to Smart Grids Data Ownership and Privacy, Grid Security, Control of Distributed Resources, The Role of New Private Sector Grid Players, The Need for Standards	L3, L4	14
Module IV:Smart Grid Technologies	L4, L5	12

Advanced Metering Infrastructure, Advanced Electricity Pricing, Demand Response, Distribution Automation, Renewable Resource Forecasting, Smart Inverters, Distributed Storage, Microgrids and Virtual Power Plants, Bulk Power Technologies

RWP4403	GREEN BUILDINGS	L	T	P	C
Version 1.1	Date of Approval: 25 July, 2016	2	0	0	4
Pre-requisites/Exposure					
Co-requisites					

Course Objectives

The objective of this course is to

- To make students understand about the various designing aspects of green buildings .
- To covers the challenges, technology and application of protocols and standards of designing the green buildings using passive sources for heating and cooling.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Understand the policies, protocols and rating agencies of green buildings.
CO2. Learn about certification guidelines of LEED, GRIHA, IGBC and BEE in the area of green buildings.
CO3. Various factors that affect the designing parameters, economical aspects and socio-economical constraints of design, operation and maintenance of green buildings.
CO4. To introduce the policy and protocols for certification of green buildings in real world.

Catalog Description

This course covers the challenges, technology and application of green buildings covering designing parameters, economical aspects and socio-economical constraints of design, operation and maintenance in longer term.

Course Content

Modules	Blooms level*	Number of hours
Module I: Climate Introduction, Climate & its Component, Factor Affecting Climate, Climatic Zones and their characteristics, Urban Climate, Microclimate.	L1, L2	12
Module II: Energy and Welfare Economics Evaluation of policy instruments, Energy return on investment, Concept of welf Module II: Green Building- Concepts, Design and Performance. Building, Implications of climate on building design, Green Buildings, Objective & Essential Characteristics of Green Buildings (i.e. Building Envelope, Passive Heating, Passive Cooling, Day lighting, Building Materials, Heat Transfer, Solar Radiation, Simplified Method for Performance Estimation), solar rooftop, solar water heating are economics, Energy goods and energy services, Renewable Energy in Developing Countries, World Energy Council Action Plan.	L2, L3	12
Module III: Green Building Rating System Various green building rating National and International stage, USGBC, IGBC, GRIHA, BREAM, STAR RATING.	L3, L4	12
Module IV: Policies & Examples Different policies (National & International), Energy Conservation Act 2005, ECBC, BEE Different example at National and International stage	L4, L5	12

RWP4404	Field Work II/ Minor Project /Seminar II	L	T	P	C
Version 1.1	Date of Approval: 14 July 2016	0	0	0	2
Pre-requisites/ Exposure	Solar PV lab				
Co-requisites	Solar thermal lab				

Course Objectives

The objective of this course is to

- To understand the various aspects of various instruments viz. solar dryer, solar concentrator, solar water heater by carrying out the experiment on latest technological equipments in the area of interest of the students.
- To describe the basics of operation of solar radiation measurement, wind speed and solar energy absorption and collecting devices.
- To understand and describe the applications of various experimental studies in practical life to analyze the various parameters of environment.

Course Outcomes

On completion of this course, the students will be able to

- CO1. To describe the basics of operation of solar radiation measurement, wind speed and solar energy absorption and collecting devices.
- CO2. To examine different areas viz. variation of various pollutants and contaminants present in the atmosphere and the effect of solar radiations on their concentration.
- CO3. To understand the component of solar radiation responsible for the working of solar thermal technology and investigate the efficiency/performance parameters of all equipments.

Catalog Description

In today's competitive environment an understanding is required which will facilitate the implementation of basic principles, tools and techniques used in the field of solar photovoltaic engineering. This course is designed for the students who want to understand the basics of solar PV and thermal energy conversion engineering. A student is supposed to have a basic knowledge of mathematical modeling and tools. The subject will further enhance the knowledge regarding the various methods and techniques used for solving various problems related to practical designing of solar power systems.

Modes of Evaluation: Quiz/Assignment/ Seminar/Written Examination

RWP4406	THERMOELECTRIC SYSTEMS AND DEVICES	L	T	P	C
Version 1.1	Date of Approval: 25 July, 2016	2	0	0	4
Pre-requisites/Exposure					
Co-requisites					

Course Objectives

The objective of this course are as follows

- To discuss the current status of usage of thermoelectric generator, cooler and a heat pump in day to day life along with their respective advantages and disadvantages.
- To understand the technical implications of thermoelectric generator, heat pump and cooler for practical applications.
- To discuss the technical solutions for integrating thermoelectric devices with other energy sources like solar PV and solar thermal.
- To discuss role of performance analysis and evaluation of thermoelectric systems.
- To identify factors affecting grid integration of renewable energy viz netmetering, energy costing, automation of energy generation monitoring/control of energy generation by various renewable energy sources.

Course Outcomes

On completion of this course, the students will be able to

- CO1. To discuss the technical solutions for integrating thermoelectric devices with other energy sources like solar PV and solar thermal.
- CO2. To understand the technical implications of thermoelectric generator, heat pump and cooler for practical applications.
- CO3. To understand the technical implications of thermoelectric generator, heat pump and cooler for practical applications.
- CO4. To discuss the current status of usage of thermoelectric generator, cooler and a heat pump in day to day life along with their respective advantages and disadvantages.

Catalog Description

This course To understand the fundamentals of thermoelectric generators , coolers and heat pump; to apply to the optimum design problems in order to experience state-of-the-art technologies in the fields.

Course Content

Version 1.1	Date of Approval: 26 June,2020	0	0	4	2
Pre-requisites/ Exposure	Solar PV lab				
Co-requisites	Solar thermal lab				

Course Objectives

The objective of this course is to

- To understand the various aspects of various instruments viz. Lux meter, AC/DC clamp meter, multi-meter, Anemometer, potentiometer etc. by carrying out the experiment on latest technological equipments in the area of interest of the students.
- To describe the basics of operation of solar radiation measurement, wind speed and solar energy absorption and collecting devices.
- To understand and describe the applications of various experimental studies in practical life to analyze the various parameters in the field of solar photovoltaic energy conversion with the help of MATLAB and PVSYS software.

Course Outcomes

On completion of this course, the students will be able to

- CO1. To describe the basics of operation of solar radiation measurement, wind speed and solar energy absorption and collecting devices.
- CO2. To examine different areas viz. variation of various pollutants and contaminants present in the atmosphere and the effect of solar radiations falling on various solar photovoltaic energy conversion systems.
- CO3. To understand the component of solar radiation responsible for the working of solar PV technology and investigate the efficiency/performance parameters of all equipments.

Course Objectives

The objective of this course is to

- To emphasize on the importance of practical experience in life is integral part of learning of the various concepts of set up of renewable energy systems.
- To describe the basics of designing and innovative idea reproduction ethics.
- To examine different industrial areas viz. biomass energy conversion technologies, green building aspects in the energy sector, solar power plants and develop to select appropriate methodologies from the range of different technologies
- To understands and describe the payback period, investment cost and cost effectiveness of renewable energy compared with traditional sources.
- To start a step stone in the direction of make students think like entrepreneurs and energy auditors/managers.
- The students pursue three months industrial training dealing in the area of renewable energy and present their comprehensive learning for evaluation.

Course Outcomes

On completion of this course, the students will be able to

- CO1. To examine different industrial areas viz. biomass energy conversion technologies, green building aspects in the energy sector, solar power plants and develop to select appropriate methodologies from the range of different technologies
- CO2. To emphasize on the importance of practical experience in life is integral part of learning of the various concepts of set up of renewable energy systems.

Course Code: AIE4102	ADVANCED DATABASE MANAGEMENT SYSTEMS	L	T	P	C
Version 2020.1	Date of Approval: 19 July 2020	3	0	0	3
Pre-requisites/Exposure	Basic knowledge of DBMS				
Co-requisites	NIL				

Catalog Description

The objective of this course is to expose the students to the implementation techniques of database system. This course explains techniques for query processing and optimization with transaction and concurrency control techniques.

Course Objectives

The objective of this course is to

1. To understand the basic concepts and terminology related to DBMS and Relational Database Design
2. To design and understand Distributed, parallel and object oriented Databases.
3. To understand advanced DBMS techniques to handle and optimize queries in database.

Course Outcomes

On completion of this course, the students will be able to

CO1. Understand the basics of database management system and implementation of relational database.

CO2. Knowhow of the file organization, Query Optimization, Transaction management, and database administration techniques.

CO3. Understand and design Distributed, parallel and object oriented Databases models and possible methods of proving them.

Modules	Blooms level*	Number of hours
MODULE 1: Relational Database Integrity Constraints revisited, Extended ER diagram, Relational Algebra & Calculus, Functional, Multivalued and Join Dependency, Normal Forms, Rules about functional dependencies.	L1, L2 and L3	8
MODULE 2: Query Processing and Optimization Valuation of Relational Operations, Transformation of Relational Expressions, Indexing and Query Optimization, Limitations of Relational Data Model, Null Values and Partial Information. Objected Oriented and Object Relational Databases Modeling Complex Data Semantics, Specialization, Generalization, Aggregation and Association, Objects, Object Identity, Equality and Object Reference, Architecture of Object Oriented and Object Relational Databases	L1,L2,l3	9

MODULE 3: Parallel and Distributed Databases Distributed Data Storage – Fragmentation & Replication, Location and Fragment Transparency Distributed Query Processing and Optimization, Distributed Transaction Modeling and concurrency Control, Distributed Deadlock, Commit Protocols, Design of Parallel Databases, and Parallel Query Evaluation. Advanced Transaction Processing Nested and Multilevel Transactions, Compensating Transactions and Saga, Long Duration Transactions, Weak Levels of Consistency, Transaction Work Flows, Transaction Processing Monitors.	L1, L2 and L3	10
MODULE 4: Multimedia databases, Databases on the Web and Semi-Structured Data , Case Study: Oracle Xi	L1, L2	9

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

Course Code: AIE4103	DIGITAL COMPUTER ORGANIZATION	L	T	P	C
Version 2020.1	Date of Approval: 19 July 2020	3	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

The Objective of this course is to expose the students to the fundamentals and the concepts of Digital & Computer Organization and Representation of Information and Basic Building Blocks, Basic Organization, Memory Organization, Input-Output Organization, Processor Organization etc. This course is designed to understand the concepts of Computer Organization for Research & Development as well as for application.

Course Objectives

The objective of this course is to

An understanding of a machine's instruction set architecture (ISA) including basic instruction fetch and execute cycles, instruction formats, control flow, and operand addressing modes.

Course Outcomes

On completion of this course, the students will be able to

CO1. Understand and Interpret the functional architecture of computing systems.

CO2. Identify, compare and assess issues related to ISA, memory, control and I/O functions.

CO3. Understand the general concepts in digital logic design, including logic elements, and their use in combinational and sequential logic circuit design.

CO4. Design and analyze solutions in the area of computer architecture.

Modules	Blooms level*	Number of hours
MODULE 1: Parallel computer models The state of computing, Multiprocessors and multicomputers, Multivector and SIMD computers, Architectural development tracks Program and network properties: Conditions of parallelism, Data and resource dependences, Hardware and software parallelism, Program partitioning and scheduling, Grain size and latency, Program flow mechanisms, Control flow versus data flow, Data flow architecture, Demand driven mechanisms, Comparisons of flow mechanisms	L1, L2 and L3	7
MODULE 2: System Interconnect Architectures Network properties and routing, Static interconnection networks, Dynamic interconnection Networks, Multiprocessor system interconnects, Hierarchical bus systems, Crossbar switch and multiport memory, Multistage and combining network.	L1,L2,L3	8
MODULE 3: Processors and Memory Hierarchy Advanced processor technology, Instruction-set Architectures, CISC Scalar Processors, RISC Scalar Processors, Superscalar Processors, VLIW Architectures, Vector and Symbolic processors Memory Technology: Hierarchical memory technology, Inclusion, Coherence and Locality, Memory capacity planning, Virtual Memory	L1, L2 and L3	8

Technology		
MODULE 4: Backplane Bus System Backplane bus specification, Addressing and timing protocols, Arbitration transaction and interrupt, Cache addressing models, Direct mapping and associative caches. Pipelining: Linear pipeline processor, Nonlinear pipeline processor, Instruction pipeline design, Mechanisms for instruction pipelining, Dynamic instruction scheduling, Branch handling techniques, Arithmetic Pipeline Design, Computer arithmetic principles, Static arithmetic pipeline, Multifunctional arithmetic pipelines	L1, L2	7
MODULE 5: Vector Processing Principles Vector instruction types, Vector-access memory schemes. Synchronous Parallel Processing: SIMD Architecture and Programming Principles, SIMD Parallel Algorithms, SIMD Computers and Performance Enhancement	L2,L4	6

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

Pre-requisites/Exposure	Basics of Computer Network				
Co-requisites	Nil				

Catalog Description

Advanced Computer Networks provides the knowledge of computer networks and related current research topics. This course illustrates the OSI and TCP-IP layers, services, devices, cables, protocols, network security, network performance parameters etc. This course focuses on advanced computer network concepts in theory as well as in real life applications in networking.

Course Objectives

The objective of this course is to

- Equip the students with the advanced networking concepts.
- Explain the different techniques of error detection and correction methods used at various layers.
- Provide an overview of various algorithms involved in advanced computer networks at OSI and TCP-IP Layers.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain the concept of reference model, wireless Ethernet standards, protocols and applications of networks.

CO2: Describe network Layer design issues, routing algorithms, IP addressing.

CO3: State Multicasting issues and multicast routing protocol. Describe mobile IP and its use in Multicasting.

CO4: State transport and application layers and explain services, protocols, performance parameters in these layers. Also describe DNS, Email and www with applications of each in computer network.

CO5: State network security and describe various types of computer network security, the digital signature, security algorithms. Explain the social issues related to network security and web security.

Modules	Blooms level*	Number of hours
MODULE 1: Uses computer networks, Reference Models, TCP/IP suite of protocols, MAC protocols for high-speed LANS, MANs, and wireless LANs. (For example, FDDI, DQDB, HIPPI, Gigabit Ethernet, Wireless Ethernet, etc.)Fast access technologies. (For example, ADSL, Cable Modem, etc.)	L1, L2	6
MODULE 2: Network Layer Design Issues, Routing Algorithms, Congestion Control Algorithms, Quality of Service, Internet Working, Network Layer in Internet. IPv6 basic protocol, extensions and options, support for QoS, security, etc., Changes to other protocols, Application Programming Interface for IPv6.	L2, L3	8
MODULE 3: Mobile IP, IP Multicasting. Multicast routing protocols, address assignments, session discovery, etc.	L1, L2	8
MODULE 4: The Transport Protocol: The Transport Service, Elements of transport	L1, L2, and L3	8

protocol, a simple Transport Protocol, Internet Transport Protocols UDP, Internet Transport Protocols TCP, TCP extensions for high-speed networks, transaction-oriented applications Performance Issues. The Application Layer: DNS-(Domain Name System), Electronic Mail, World Wide Web Multimedia.		
MODULE 5: Overview of network security, Secure-HTTP, SSL, ESP, Key distribution protocols. Digital signatures, digital certificates-mail Security, Web security, Social Issues..	L1, L2	6

Course Code: AIE4106	ADVANCED DATABASE MANAGEMENT SYSTEM LAB	L	T	P	C
Version 2020.1	Date of Approval: 19 July 2020	0	0	2	1
Pre-requisites/Exposure	Basic knowledge of DBMS				
Co-requisites	Nil				

Catalog Description

The objective of this course is to expose the students to the implementation techniques of database system. This course explains techniques for query processing and optimization with transaction and concurrency control techniques.

Course Objectives

The objective of this course is

1. Equip the students with the different issues involved in the design and implementation of a database system.
2. Provide a practical knowledge of implementation/demonstration of data manipulation language to query, update, and manage a database.

Course Outcomes

On completion of this course, the students will be able to

CO1. Demonstrate and analyze and apply common SQL statements including DDL, DML and DCL statements to perform different operations.

CO2. Demonstrate and Apply different types of constraints on the database.

CO3. Design different views of tables for different users and to apply embedded and nested queries.

CO4. Design and implement a database for a given problem according to well known design principles that balance data retrieval performance with data consistency.

Modules	Blooms level*	Number of hours
Module 1: 1. Introduction to SQL and understand basic commands 2. Understand various DDL and DML commands. 3. To understand joins in SQL.	L1, L2 and L3	4
Module 2: 1. To understand constraints SQL 2. Wild cards and aggregate functions in SQL 3. To understand and execute procedures and views in SQL	L2 and L3	6
Module 3: 1. To understand and execute triggers in SQL 2. To develop a database application to demonstrate the representation of multi valued attributes and use of nested tables to represent complex objects. Write suitable queries	L2, L3, L4 and L5	4
Module 4: 1. To understand and execute Indexes in SQL	L2, L3 and L4	4
Module 5:		1

1. To understand the concept of Exception handling in SQL	L2, L3 and L4	
2. Query Evaluation Plans		
3. Concurrency and Transactions

Course Code: AIE4107	ADVANCED COMPUTER NETWORKS LAB	L	T	P	C
Version 2020.1	Date of Approval: 19 July 2020	0	0	2	1
Pre-requisites/Exposure	Basics of Computer Networks				
Co-requisites	Nil				

Catalog Description

Advanced Computer Networks Lab provides the knowledge of various installations & connections of LAN, WAN, etc, study of Cisco Packet Tracer Tool and its implementations, simulation of flow-control protocols such as Sliding Window, Stop & Wait with help of programming languages. This course focuses on real-life applications in networking and its software implementation in the laboratory.

Course Objectives

The objective of this course is to

- Equip the students with the advanced networking concepts.
- Explain the different techniques of error detection and correction methods used at various layers.
- Provide an overview of various algorithms involved in advanced computer networks at OSI and TCP-IP Layers.

Course Outcomes

On completion of this course, the students will be able to

CO1: Understand fundamental underlying principles of computer networking

CO2: Understand details and functionality of CISCO router

CO3: Demonstrate and configure details and functionality of DHCP server

CO4: Analyze performance of various communication protocols.

CO5: Compare routing algorithms

Modules	Blooms level*	Number of hours
MODULE 1: 1. Configuration and logging to a CISCO Router and introduction to the basic user Interfaces. Introduction to the basic router configuration and basic commands. 2. Configuration of IP addressing for a given scenario for a given set of topologies.	L1, L2	2
MODULE 2: 1. Configure a DHCP Server to serve contiguous IP addresses to a pool of four IP devices with a default gateway and a default DNS address. Integrate the DHCP server with a BOOTP demon to automatically serve Windows and Linux OS Binaries based on client MAC address	L2, L3	2
MODULE 3: 1. Configure, implement and debug the following: Use open source tools for debugging and diagnostics. a. ARP/RARP protocols b. RIP routing protocols	L1, L2	3

c. BGP routing d. OSPF routing protocols e. Static routes (check using netstat)		
MODULE 4: <ol style="list-style-type: none"> 1. Configure DNS: Make a caching DNS client, and a DNS Proxy; implement reverse DNS and forward DNS, using TCP dump/Wireshark characterise traffic when the DNS server is up and when it is down. 2. Configure FTP Server on a Linux/Windows machine using a FTP client/SFTP client characterise file transfer rate for a cluster of small files 100k each and a video file of 700mb. Use a TFTP client and repeat the experiment 	L1, L2, and L3	3
MODULE 5: <ol style="list-style-type: none"> 1. Configure a mail server for IMAP/POP protocols and write a simple SMTP client in C/C++/Java client to send and receive mails. 2. Implement Open NMS+ SNMPD for checking Device status of devices in community MIB of a linux PC. Using yellow pages and NIS/NFS protocols implement Network Attached Storage Controller (NAS). Extend this to serve a windows client using SMB. Characterise the NAS traffic using wireshark. 	L1, L2	3

**Bloom's Level:*

Version 2020.1	Date of Approval: 19 July 2020	0	0	4	2
Pre-requisites/Exposure	C Programming				
Co-requisites	Basic knowledge of Programming				

Catalog Description

The objective of this course is to expose the students to the implementation techniques of Mat Lab Programming.

Course Objectives

The objective of this course is to

- To understand the basic concepts and terminology related to Mat Lab.
- Application of Mat Lab in field of Signal Processing and Control systems.

Course Outcomes

On completion of this course, the students will be able to

CO1. Understand the basics of Matlab programming environment.

CO2. Analysis of given LTI System and verifying its physical reliability and stability properties.

CO3. Waveform synthesis using Laplace Transforms and z-transform of a given signal and system.

Modules	Blooms level*	Number of hours
<ol style="list-style-type: none"> To write a MATLAB program to perform some basic operation on matrices such as addition, subtraction, multiplication. To write a "MATLAB" Program to generate various signals and sequences, such as unit impulse, unit step, unit ramp, sinusoidal, square, saw tooth, triangular, sinc signals. To performs operations on signals and sequences such as addition, multiplication, scaling, shifting, folding, computation of energy and average power. Write a program for finding even and odd parts of sequences Using MATLAB Software& program for finding real and imaginary parts of sequences Using MATLAB Software. 	L1, L2 and L3	8
<ol style="list-style-type: none"> Write a program to find the out put with linear convolution operation Using MATLAB Software Write a program to compute auto correlation and cross correlation between signals and Sequences. Write a program to compute linearity and time invariance properties of a given continuous /discrete System. 	L1,L2,L3	6
<ol style="list-style-type: none"> Write a program to Unit Step And Sinusoidal Response Of The Given LTI System And Verifying Its physical reliability and stability properties. Write a program to demonstrate Gibbs Phenomenon using MATLAB. Write a program to obtain Fourier Transform and Inverse Fourier Transform of a given signal / sequence and to plot its Magnitude and Phase Spectra 	L1, L2 and L3	8

11. Write a program to perform waveform synthesis using Laplace Transforms of a given signal.		
12. Write a program to locating the zeros and poles and plotting the pole zero maps in s-plane and z-plane 13. for the given transfer function. 14. Write a program to Generate Gaussian Noise and to Compute its Mean, M.S. Values, Skew, kurtosis, 15. PS and PDF 16. Write a program to demonstrate Sampling Theorem and aliasing effect using MATLAB. 17. Write a program for removal of noise by auto correlation/cross correlation.	L1, L4	12

Course Code: AIE4109	PYTHON PROGRAMMING LAB	L	T	P	C
Version 2020.1	Date of Approval: 19 July 2020	0	0	2	1
Pre-requisites/Exposure	Hands on knowledge of C and C++ Programming				
Co-requisites	Basic concepts of OOP Programming				

Catalog Description

The course is designed to provide an introduction to the Python programming language. The focus of the course is to provide students with an introduction to programming, I/O, and visualization using the Python programming language.

Course Objectives

The objective of this course is

- Equip the students with the basic feature of python required in solving complex problems and build GUI applications
- Provide a practical knowledge of implementation/demonstration of python programming concepts like of lists, tuples, dictionaries, Object Oriented Programming concepts in Python, Strings and Files in Python.

Course Outcomes

On completion of this course, the students will be able to

- CO 1: Demonstrate the basics of python programming using if-else, loops and List, Dictionary, tuples.
- CO 2: Demonstrate the concept of inheritances, polymorphisms and other concepts and able to solve complex programming problems involving class objects.
- CO 3: Demonstrate the ability to write database applications in Python
- CO 4: Demonstrate Files Handling in Python.
- CO 5: Demonstrate database operation and GUI applications in python.

Modules	Blooms level*	Number of hours
Write a program which will find all such numbers which are divisible by 7 but are not a multiple of 5, between 2000 and 3200 (both included). The numbers obtained should be printed in a comma-separated sequence on a single line. Create a program that asks the user to enter their name and their age. Print out a message addressed to them that tells them the year that they will turn 100 years old. Define a function max() that takes two numbers as arguments and returns the largest of them. Use the if-then-else construct available in Python. (It is true that Python has the max() function built in, but writing it yourself is nevertheless a good exercise.) Define a function max_of_three() that takes three numbers as arguments and returns the largest of them.	L1, L2 and L3	4
Define a function that computes the length of a given list or string. (It is true that Python has the len() function built in, but writing it yourself is nevertheless a good exercise.) Write a function that takes a character (i.e. a string of length 1) and returns True if it is a vowel, False otherwise. Write a function translate() that will translate a text into "rövarspråket" (Swedish for "robber's language"). That is, double	L2 and L3	6

<p>every consonant and place an occurrence of "o" in between. For example, translate("this is fun") should return the string "tothohisosisofunon".</p> <p>Define a function sum() and a function multiply() that sums and multiplies (respectively) all the numbers in a list of numbers. For example, sum([1, 2, 3, 4]) should return 10, and multiply([1, 2, 3, 4]) should return 24.</p> <p>Define a function reverse() that computes the reversal of a string. For example, reverse("I am testing") should return the string "gnitset ma I".</p>		
<p>Ask the user for a number. Depending on whether the number is even or odd, print out an appropriate message to the user</p> <p>Take a list, say for example this one:</p> <pre>a = [1, 1, 2, 3, 5, 8, 13, 21, 34, 55, 89]</pre> <p>and write a program that prints out all the elements of the list that are less than 5.</p> <p>Create a program that asks the user for a number and then prints out a list of all the divisors of that number. (If you don't know what a divisor is, it is a number that divides evenly into another number. For example, 13 is a divisor of 26 because 26 / 13 has no remainder.)</p> <p>Take two lists, say for example these two:</p> <pre>a = [1, 1, 2, 3, 5, 8, 13, 21, 34, 55, 89]</pre> <pre>b = [1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13]</pre> <p>and write a program that returns a list that contains only the elements that are common between the lists (without duplicates). Make sure your program works on two lists of different sizes.</p>	L2, L3, L4 and L5	4
<p>Ask the user for a string and print out whether this string is a palindrome or not. (A palindrome is a string that reads the same forwards and backwards.)</p> <p>Let's say I give you a list saved in a variable: a = [1, 4, 9, 16, 25, 36, 49, 64, 81, 100]. Write one line of Python that takes this list a and makes a new list that has only the even elements of this list in it.</p> <p>Make a two-player Rock-Paper-Scissors game. (Hint: Ask for player plays (using input), compare them, print out a message of congratulations to the winner, and ask if the players want to start a new game)</p> <p>Remember the rules:</p> <pre>Rock beats scissors Scissors beats paper</pre> <ul style="list-style-type: none"> Paper beats rock 	L2, L3 and L4	4
<p>Write a program that asks the user how many Fibonnaci numbers to generate and then generates them. Take this opportunity to think about how you can use functions. Make sure to ask the user to enter the number of numbers in the sequence to generate.(Hint: The Fibonnacisequence is a sequence of numbers where the next number in the sequence is the sum of the previous two numbers in the sequence. The sequence looks like this: 1, 1, 2, 3, 5, 8, 13, ...)</p> <p>Write a program (function!) that takes a list and returns a new list that contains all the elements of the first list minus all the duplicates.</p> <p>Write a function that takes an ordered list of numbers (a list where the elements are in order from smallest to largest) and another number. The function decides whether or not the given number is inside the list and returns (then prints) an appropriate boolean.</p>	L2, L3 and L4	1

Course Code: AIE4206	RESEARCH METHODOLOGY AND TECHNICAL REPORT WRITING	L	T	P	C
Version 2019.1	Date of Approval: 19 July 2020	2	0	0	2
Pre-requisites/Exposure	NIL				
Co-requisites	NIL				

Catalogue Description

This course deals with types of research, significance and characteristics and planning a research proposal, population and sample, parameter and statistic, sampling and data collection, sampling design: steps, types, sample size, sampling methods. It deals with univariate, bivariate and multivariate analysis, measure of dispersion of data, standard deviation, variance, coefficient of variation and degree of freedom. Hypothesis testing: parametric tests and non-parametric tests, regression analysis and curve fitting, method of least-squares, explained and unexplained variations, coefficient of correlation of determination. The course also deals with technical/scientific/research report writing: referencing and bibliography and footnotes. Publication of research papers, citations, intellectual property rights and copy rights, plagiarism, patent and patent laws, commercialization and ethical issues.

Course Objectives

The objective of this course is to:

- Deals with types of research, significance and characteristics and planning a research proposal and to enhance scientific and technical writing and research skills.
- Impart knowledge about various stages of research process, statistical analysis and tools & their applications in decision making by hypothesis testing and regression analysis.
- It also deals with intellectual property rights and copy rights, plagiarism, patent and patent laws, commercialization and ethical issues.

Course Outcomes

On completion of this course, the students will be able to:

- CO1. Classify different research types, explain steps in research process and planning research proposal.
- CO2. Describe sampling methods, sampling steps and design, carry out data processing and analysis.
- CO3. Explain hypothesis testing, parametric and non-parametric tests, carry out regression analysis, curve fitting.
- CO4. Demonstrate technical and scientific report writing skills, describe plagiarism, patent laws and intellectual property rights.

Course Content

Modules	Blooms level*	Number of hours
Module I: Introduction and Research Planning		
Introduction to research: Definition, motivation, need, objectives, significance and characteristics of research; types of research; steps in research process; planning a research proposal; literature review, web searching.	L1, L2	4
Module II: Sampling Methods		
Measurement scales, population and sample, parameter and	L1, L2, L3	5

statistic, sampling and data collection, sampling design: steps, types, sample size, sampling methods, data processing and analysis. Sampling surveys and questionnaire designing, primary and secondary data.		
Module III: Hypothesis Testing and Regression Analysis Univariate, bivariate and multivariate analysis, means-arithmetic, geometric and harmonic; measure of dispersion of data, standard deviation, variance, coefficient of variation and degree of freedom. Hypothesis testing: kinds errors in hypothesis testing, significance and confidence levels, parametric tests and non-parametric tests, one-tailed and two-tailed tests, analysis of variance. Regression analysis and curve fitting, method of least-squares, explained and unexplained variations, coefficient of correlation of determination.	L1, L3, L4	10
Module IV: Technical Report Writing and Plagiarism Technical/scientific/research report writing: structure and components of scientific reports, formats of dissertations, research report, report writing skills, report preparation, referencing and bibliography and footnotes. Publication of research papers, citations, making presentation-use of visual aids and PPTs. Intellectual property rights and copy rights, plagiarism, patent and patent laws, commercialization and ethical issues.	L1, L3, L4	5

Course Code: RBE4201	FUNDAMENTALS OF ROBOTIC SYSTEM AND ROBOT PROGRAMMING	L	T	P	C
Version 2020.1	Date of Approval: 19 July 2020	3	0	0	3
Pre-requisites/Exposure	Basic knowledge of control system and programming				
Co-requisites	Nil				

Catalog Description

Enlighten the students about the fundamentals of robotic systems make them to understand the basics of robot, robot transformations and sensors, micro/nano robotic systems and to program them for functioning.

Course Objectives

The objective of this course is to

- Equip the students with the basic knowledge and designing of robotics.
- Implement their concept in robotics and design robot for various applications of engineering.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain and Understand the design and functionality of robots

CO2: Describe the control system with the help of sensor and robot transformations.

CO3: Understand and robot cell design and implement in micro/nano robotics system

CO4: Explain and Understand the robotic programming language and use in design of robot.

Modules	Blooms level*	Number of hours
MODULE 1: INTRODUCTION Robot anatomy-Definition, law of robotics, History and Terminology of Robotics-Accuracy and repeatability of Robotics-Simple problems-Specifications of Robot-Speed of Robot-Robot joints and links-Robot classifications-Architecture of robotic systems-Robot Drive systems-Hydraulic, Pneumatic and Electric system.	L1 and L2	5
MODULE 2: END EFFECTORS AND ROBOT CONTROLS Mechanical grippers-Slider crank mechanism, Screw type, Rotary actuators, cam type-Magnetic grippers-Vacuum grippers-Air operated grippers-Gripper force analysis-Gripper design-Simple problems-Robot controls-Point to point control, Continuous path control, Intelligent robot-Control system for robot joint-Control actions-Feedback devices-Encoder, Resolver, LVDT-Motion Interpolations-Adaptive control.	L1, L2 and L3	7
MODULE 3: ROBOT TRANSFORMATIONS AND SENSORS Robot kinematics-Types- 2D, 3D Transformation-Scaling, Rotation, Translation- Homogeneous coordinates, multiple transformation-Simple problems. Sensors in robot – Touch sensors-Tactile sensor – Proximity and range sensors – Robotic vision sensor-Force sensor-Light sensors, Pressure sensors.	L1 and L2	5
MODULE 4: ROBOT CELL DESIGN AND MICRO/NANO ROBOTICS SYSTEM	L1, L2, L3, L4 and L5	8

Robot work cell design and control-Sequence control, Operator interface, Safety monitoring devices in Robot-Mobile robot working principle, actuation using MATLAB, NXT Software Introductions-Robot applications- Material handling, Machine loading and unloading, assembly, Inspection, Welding, Spray painting and undersea robot. Micro/Nanorobotics system overview-Scaling effect-Top down and bottom up approach- Actuators of Micro/Nano robotics system-Nanorobot communication techniques-Fabrication of micro/nano grippers-Wall climbing micro robot working principles-Biomimetic robot-Swarm robot-Nanorobot in targeted drug delivery system.		
MODULE 5: BASICS OF ROBOT PROGRAMMING Robot programming-Introduction-Types- Flex Pendant- Lead through programming, Coordinate systems of Robot, Robot controller- major components, functions-Wrist Mechanism-Interpolation-Interlock commands-Operating mode of robot, Jogging-Types, Robot specifications- Motion commands, end effectors and sensors commands.	L1, L2 and L3	5
MODULE 6: VAL, VAL-II, RAPID AND AML LANGUAGE Robot Languages-Classifications, Structures- VAL- language commands motion control, hand control, program control, pick and place applications, palletizing applications using VAL, Robot welding application using VAL program-WAIT, SIGNAL and DELAY command for communications using simple applications. RAPID- language basic commands- Motion Instructions-Pick and place operation using Industrial robot- manual mode, automatic mode, subroutine command based programming. Move-master command language- Introduction, syntax, simple problems. VAL-II programming-basic commands, applications- Simple problem using conditional statements-Simple pick and place applications-Production rate calculations using robot. AML Language-General description, elements and functions, Statements, constants and variables-Program control statements-Operating systems, Motion, Sensor commands-Data processing.	L1, L2 and L3	6

Course Code: RBE4202	ADVANCED CONTROL SYSTEMS DRIVERS FOR ROBOTS	L	T	P	C
Version 2020.1	Date of Approval: 19 July 2020	3	0	0	3
Pre-requisites/Exposure	Basic concepts of control system				
Co-requisites					

Catalog Description

This course provides comprehensive and insight knowledge of Digital control systems. Objective of the course is to provide the students the core knowledge of Stability theory of Digital systems and State Variable analysis of Digital System

Course Objectives

The objective of this course is to

- Equip the students with concepts of basic control system and its stability.
- Provide a thorough understanding of control system model by considering standard examples.
- Give an insight of state variable methods for control systems.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain the fundamentals of a digital control system.

CO2: Apply the standard methods to check the stability of a control system.

CO3: Design model for digital control system for an application with given requirements.

CO4: Analyze the analog and digital control systems using state variable method.

Modules	Blooms level*	Number of hours
Module 1: Introduction Configuration of the basic Digital Control Systems, types of sampling operations, Sample and Hold operations, Sampling theorem, Basic discrete time signals.	L1,L2,L4	12
Module 2: Stability Methods Mapping between s-plane and z-plane, stability methods: Modified Routh Criterion, Jury's method, modified Schur-Cohn criterion.	L3	6
Module 3: Models Of Digital Control Systems Digital temperature control System, Digital position control system, stepping motors and their control. Design of Digital compensator using frequency response plots.	L5	6
Module 4: Control Systems Analysis Using State Variable Methods State variable representation, conversion of state variable models to transfer function and vice-versa, Eigen values and eigen vectors, Solution of state equations, Concepts of controllability and observability.	L3	6
Module 5: State Variable Analysis Of Digital Control Systems State variable description of digital control systems, conversion of state variable models to pulse transfer function and vice versa, solution of state difference equations, controllability and observability.	L3	6

Course Code: RBE4203	MICROPROCESSOR AND INTERFACING	L	T	P	C
Version 2020.1	Date of Approval: 19 July 2020	3	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

This course deals with the systematic study of the Architecture and programming issues of microprocessor family and its applications. The aim of this course is

1. To introduce students with the architecture and operation of typical microprocessors.
2. To familiarize the students with the programming and interfacing of microprocessors
3. To provide expertise in designing the embedded system based products as a solution to real time problems.

Course Outcomes

On completion of this course, the students will be able to

CO1. Explain the architecture, pin configuration, addressing modes, control words of various microprocessors and Interfacing ICs

CO2. Develop the assembly language program using 8085 and 8086 using stacks & subroutines, procedures, segments, interrupts and interfacing.

CO3. Analyze assembly language programs; select appropriate assemble into machine across assembler utility of a microprocessor and solve various automation based problems of power system.

CO4. Design circuitry to the Microprocessor I/O ports in order to interface the processor to external devices so as to provide solutions real-world control problems

Modules	Blooms level*	Number of hours
Module I: Microprocessor Intel 8085 - Introduction, register structure, memory Addressing, Addressing Modes, Instruction Set, Timing Methods, CPU Pins and Associated Signals, Instruction timing and execution. programming I/O. Interrupt System, DMA, SID & SOD lines, Instruction set, 8085 based system design.	L1, L2, L3, L4	8
Module II: Intel 8086 Introduction, Architecture, Addressing modes, instruction set, memory management, assembler dependent instructions, Input/Output, system design using 8086.	L2, L3, L4	7
Module III: Pentium Processors Internal Architecture of 8087, operational overview of 8087, Introduction to 80186, 80286, 80386 & 80486 processors and Pentium Processors.	L2, L3	6
Module IV: Peripheral Interfacing Parallel versus serial transmission, synchronous and asynchronous serial data transmission. Interfacing of hexadecimal keyboard and display unit, interfacing of cassette recorders and parallel, serial interface standards. Study of Peripheral Devices 8255, 8253, 8257, 8251, 8259	L3, L4, L5, L6	7
Module V: Microprocessor applications to Power Engineering Protective Relaying: over-current, impedance, MHO, reactance, bi-directional relays.	L4, L5, L6	8

Measurements: Frequency, power angle & power factor, Voltage and Current, KVA, KW, & KVAR, maximum demand. Resistance, Reactance, Temperature Controls.

Course Code: RBE4204	KINEMATICS AND DYNAMICS OF ROBOTS	L	T	P	C
Version 2020.1	Date of Approval: 19 July 2020	3	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

This course deals with the systematic study of the Architecture and programming issues of robotic moments and design. The aim of this course is

1. To introduce students with the architecture and operation of robots.
2. To familiarize the students with the programming and interfacing of Robots
3. To provide expertise in designing the embedded system and kinematics of a robot based on real time problems.

Course Outcomes

On completion of this course, the students will be able to

CO1. Explain the architecture, kinematic analysis for axis in Robot Design.

CO2. Understand the Workspace, Analysis And trajectory planning

CO3. Understand the Dynamic Moments and Mathematical modeling of various forces in Moments of robotic machine

CO4. Design a robot with understanding of dynamic kinematics.

Modules	Blooms level*	Number of hours
Module I: Introduction Introduction, position and orientation of objects, objects coordinate frame Rotation matrix, Euler angles Roll, pitch and yaw angles coordinate Transformations, Joint variables and position of end effectors, Dot and cross products, coordinate frames, Rotations, Homogeneous coordinates	L1, L2, L3, L4	7
Module II: Direct Kinematics Link coordinates D-H Representation, The ARM equation. Direct kinematic analysis for Four axis, SCARA Robot and three, five and six axis Articulated Robots.	L2, L3, L4	6
Module III: Inverse Kinematics The inverse kinematics problem, General properties of solutions. Tool configuration, Inverse kinematics of four axis SCARA robot and three and five axis, Articulated robot.	L2, L3	6
Module IV: Workspace Analysis And Trajectory Planning Workspace Analysis, work envelope of a Four axis SCARA robot and five axis articulated robot workspace fixtures, the pick and place operations, Joint space technique - continuous path motion, Interpolated motion, straight line motion and Cartesian space technique in trajectory planning.	L3, L4, L5, L6	8
Module V: Manipulator Dynamics Introduction, Lagrange's equation kinetic and potential energy. Link inertia Tensor, link Jacobian Manipulator inertia tensor. Gravity, Generalized forces, Lagrange-Euler Dynamic model, Dynamic model of a Two-axis planar robot, Newton Euler formulation, Lagrange - Euler formulation, problems.	L4, L5, L6	9

Catalog Description

The objective of this course is to enlighten the students about the fundamentals of robotic systems. To understand the basics of robot, Robot Transformations and Sensors, Micro/Nano robotic systems and to program them for functioning.

Course Objectives

The objective of this course is to

1. Equip the students with the basic knowledge and designing of robotics.
2. Implement their concept in robotics and design robot for various applications of engineering.

Course Outcomes

On completion of this course, the students will be able to

CO1: Understand and be able to apply a variety of techniques to solve problems in areas such as robot control and navigation

CO2: program a robot to perform a specified task (e.g obstacle avoidance or wall following) in a target environment.

CO3: Understand how simulations of robots work, where they can be useful and where they can break down.

Modules	Blooms level*	Number of hours
Lab Session 1: Study of different types of robots based on configuration and application.	L1, L2 and L3	4
Lab Session 2: Study of different type of links and joints used in robots	L1, L2, L3 and L4	4
Lab Session 3: Study of components of robots with drive system and end effectors.	L1, L2, L3 and L4	4
Lab Session 4 Determination of maximum and minimum position of links.	L3 and L4	2
Lab Session 5 Verification of transformation (Position and orientation) with respect to gripper and world coordinate system	L3 and L4	4
Lab Session 6 Estimation of accuracy, repeatability and resolution.	L3 and L4	2
Lab Session 7 Robot programming exercises	L1, L2, L3 and L4	4

Version 2020.1	Date of Approval: 19 July 2020	0	0	2	1
Pre-requisites/Exposure	Basic Concepts of Control Systems				
Co-requisites					

Catalog Description

This course is designed to get students an understanding of the basic concepts of control systems and its major applications. The course also includes some interdisciplinary applications like digital electronics and mechanical devices. Students will perform practical on hardware kit as well as on software.

Course Objectives

The objective of this course is to

1. Make students demonstrate the concepts of control systems.
2. Apply the concepts of control systems in various applications.

Course Outcomes

On completion of this course, the students will be able to

CO1. Practically verify the theoretical concepts of control systems.

CO2. Design various digital logic gates using programmable logic controller.

CO3. Analyse and explain the response of Process Control Simulator, Magnetic amplifier, Synchros, Servomotor and compensators.

Modules	Blooms level*	Number of hours
Lab Session 1 Determination of Transfer functions of an Electrical System	L3	1
Lab Session 2 Time Response Characteristics of a Second order System (Typical RLC network).	L3 and L4	1
Lab Session 3 Characteristics of Synchros: (a) Synchro transmitter characteristics. (b) Implementation of error detector using synchro pair	L3 and L4	2
Lab Session 4 Determination of Magnetic Amplifier Characteristics with different possible connections.	L3 and L4	2
Lab Session 5 Process Control Simulator: (a) To determine the time constant and transfer function of first order process. (b) To determine the time response of closed loop second order process with Proportional Control. (c) To determine the time response of closed loop second order process with Proportional Integral Control. (d) To determine the time response of closed loop second order process with Proportional Integral-Derivative Control. (e) To determine the effect of disturbances on a process.	L3 and L4	6

Lab Session 6 To study the compensation of the second order process by using: (a) Lead Compensator. (b) Lag Compensator. (c) Lead- Lag Compensator	L3 and L4	2
Lab Session 7 Realization of AND, OR, NOT gates, other derived gates and ladder logic on Programmable Logic Controller with computer interfacing.	L3 and L5	2
Lab Session 8 To determination of AC servomotor Characteristics	L3 and L4	2
Lab Session 9 To study the position control of DC servomotor with P, PI control actions.	L3	2
Lab Session 10 Analog Computer: (a) To examine the operation of potentiometer and adder. (b) To examine the operation of integrator	L3	2
Lab Session 11 To solve a second order differential equation.	L3	2

Course Code: RBE4208	MICROPROCESSOR & INTERFACING LAB	L	T	P	C
Version 2020.1	Date of Approval: 19 July 2020	0	0	2	1
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

This course deals with the systematic study of the Architecture and programming issues of microprocessor family and its applications. The aim of this course is to give the students detailed knowledge of the above microprocessor needed to develop the systems using.

Course Objectives

The objective of this course is to

1. To expose students to the operation of typical microprocessor trainer kit.
2. Learn the design aspects of I/O and Memory Interfacing circuits.
3. To provide solid foundation on interfacing the external devices to the processor according to the user requirements to create novel products and solutions for the real time problems

Course Outcomes

On completion of this course, the students will be able to

CO1: Developing of assembly level programs and providing the basics of the processors

CO2: write programs like ASCII conversion, searching and sorting elements, reverse given string and compute nCr .

CO3: Understand the concepts related to I/O and memory interfacing

Modules	Blooms level*	Number of hours
Lab Session 1: To load the numbers 49H and 53H ion memory location 9510 & 9511.	L3 and L4	2
Lab Session 2: Respectively and add the contents of memory location 9601.	L3 and L4	2
Lab Session 3: To write the Assembly Language Programming for 8 bit addition with and without carry.	L3 and L4	2
Lab Session 4 To write the Assembly Language Programming for 8 bit subtraction with and without borrow.	L1, L2, and L3	2
Lab Session 5 To write the Assembly Language Programming for 8 bit Multiplication and Division.	L1, L2, and L3	2
Lab Session 6 To write the Assembly Language Programming for sorting an array of numbers in Ascending & Decending order.	L3 and L4	2
Lab Session 7 To write the Assembly Language Programming with Additional Instructions.	L3 and L4	2
Lab Session 8 To write and execute a program using Stacks.	L3 and L4	2

Lab Session 9 To study and program the programmable Peripheral interface (8255 board).	L1, L2 and L3	2
Lab Session 10 To study and program the programmable interval timer (8253 board).	L1, L2, L3 and L4	2
Lab Session 11 To study and program the programmable DMA Controller (8257 board).	L1, L2, L3 and L4	2
Lab Session 12 i) To study and program the programmable Interrupt Controller (8259 board). ii) To study of programmable Serial Communication interface (8251 board).	L1, L2, L3 and L4	2

Version 2020.1	Date of Approval: 19 July 2020	3	0	0	3
Pre-requisites/Exposure	Basic knowledge of computer system				
Co-requisites	Nil				

Catalog Description

Expose the students to the fundamentals of AI and expert systems and its application in Robotics and familiarize to the students with the Fundamental concept of AI and expert system.

Course Objectives

The objective of this course is to

- Equip the students with the artificial technique concepts used in robotics.
- Provide an overview of various technique and design the expert system with the help of these technique.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain and Understand artificial intelligence techniques and their limitation.

CO2: Describe the various searching techniques to solve the problem of different field.

CO3: Implement artificial intelligence based program in various application using basic AI language.

CO4: Understand and design the expert system for inter-dispersary engineering system.

Modules	Blooms level*	Number of hours
MODULE 1: INTRODUCTION :- Introduction – History, Definition of AI, Emulation of human cognitive process, Intelligent agents – The concept of rationality, the nature of environments, the structure of agents.	L1 and L2	6
MODULE 2: SEARCH METHODS :- Problem – Solving Agents : Problem Definitions, Formulating Problems, Searching for solutions – Measuring Problem – Solving Performance with examples. Search Strategies : Uninformed search strategies – Breadth – first Search, Uniform – Cost Search, depth –first search, depth – limited search, Iterative deepening depth – first search, bidirectional search, comparing uniformed search strategies. Informed search strategies – Heuristic information, Hill climbing methods, best – first search, branch – and – bound search, optimal search and A* and Iterative deepening A*.	L1, L2 and L3	9
MODULE 3: PROGRAMMING AND LOGICS IN ARTIFICIAL INTELLIGENCE :- LISP and other programming languages – Introduction to LISP, Syntax and numerical function, LISP and PROLOG distinction, input, output and local variables, interaction and recursion, property list and arrays alternative languages, formalized symbolic logics – properties of WERS, non-deductive inference methods.	L1, L2 and L3	11
MODULE 4:	L1, L2,	10

<p>EXPERT SYSTEM :-</p> <p>Expert system – Introduction, difference between expert system and conventional programs, basic activities of expert system – Interpretation, Prediction, Diagnosis, Design, Planning, Monitoring, Debugging, Repair, Instruction, Control. Basic aspects of expert system – Acquisition module, Knowledge base – Production rules, semantic net, frames. Inference engine – Backward chaining and forward chaining. Explanatory interface.</p>	L3,L4 and L5	
---	-----------------	--

Course Code: RBE4210	ROBOTICS SIMULATIONS AND SIMULTANEOUS LOCALIZATION MAPPING	L	T	P	C
Version 2020.1	Date of Approval: 19 July 2020	3	0	0	3
Pre-requisites/Exposure	Knowledge of basics of Artificial Intelligence concepts, Robotics and simulations required.				
Co-requisites	Nil				

Catalog Description

Robotics Simulations find many applications in the areas of Artificial Intelligence, pattern recognition, controls etc. Robotics Simulations offer fundamentally alternative approaches to simulation. These robotics design, architecture, mapping and localization can be applied to many complicated problems of Artificial Intelligence and other applications in Real World Computing. This course provides a comprehensive treatment of robotics, location mapping, simulation techniques, robotic motion, robotic parts etc.

Course Objectives

The objective of this course is to

- Introduces the basics of Robotics and Artificial Intelligence.
- 2. It deals with essentials of techniques of simulations for robot design and location mapping.

Course Outcomes

On completion of this course, the students will be able to

CO1: Understand the principles of robotics and robotics movements, robotics simulations and robotics design.

CO2: comparison robotic functions, robotic views and robotic parts in simulations.

CO3: Understand concept of robotic perception, robotic movements, dynamics and controls of robotic movement, with which they can be able to apply the conceptual things to the robotic software architecture and applications.

CO4: Get thorough knowledge in robotics packages and robotic linkages.

CO5: Design the required and related systems

Modules	Blooms level*	Number of hours
MODULE 1: INTRODUCTIONS Robotics systems, robot movements, quality of simulation, types of simulation, robotics applications, robotics simulation displays. Simulation notation, Auto lisp functions, Features, Command syntax, writing design functions.	L1, L2	4
MODULE 2: ROBOTIC PRINCIPLES Straight lines, Angles and optimal moves circular interpolation, Robotic functions Geometrical commands, Edit commands. Selecting robot views, standard Robot part, using the parts in a simulation.	L1, L2, L3 and L4	10
MODULE 3: LOCALIZATION AND MAPPINGS Introduction, Robotic perception – localization, mappings planning to move – configuration space, cell decomposition methods, skeletonization methods, Planning uncertain movements – Robust methods. Moring –dynamics and control, Potential Field control, reactive control, Robotics software architecture, Applications.	L1, L3, L4 and L5	5
MODULE 4: ROBOTIC SIMULATION Simulation packages, Loading the simulation, Simulation editors, delay,	L1, L2, L3, and	7

Resume commands. Slide commands, program flow control. Robot motion control, Analysis of robot elements, Robotic linkages.	L4	
MODULE 5:ROBOTIC MOTION Solids construction, Solid animation. Types of motion, velocity and acceleration, Types of simulation motion Harmonic motion, parabolic motion, and uniform motion velocity and acceleration analysis for robots.	L2, L3, L4 and L5	5
MODULE 6:ROBOT DESIGN Linkages, Types, Transmission elements Flexible connectors, pulley-and-Belt drives, variable speed transmission. Design of Robot for particular applications – A case study.	L2, L3, L4 and L5	5

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation

Course Code : MLE4202	DATA MINING AND PREDICTIVE ANALYTICS	L	T	P	C
Version 2020.1	Date of Approval: 19 July 2020	3	0	0	3
Pre-requisites/Exposure	Concept of Database and Data Mining				
Co-requisites					

Course Objectives

The objective of this course is to

- Provide students with an in-depth knowledge of data mining. To introduce students to basic applications, concepts, and techniques of data mining.
- Develop skills for using recent data mining software to solve practical problems and prediction in a variety of disciplines and
- Gain experience doing independent study and research.

Course Outcomes

On completion of this course, the students will be able to

CO 1: Explain concepts of Data mining, predictive analytics and analyses architecture of data mining.

Differentiate between supervised and unsupervised methods

CO 2: Apply classification techniques on different data sets and solve cost –benefit analysis numerical. Analyze decision tree methods.

CO 3: Implement various clustering algorithm on different data sets and describe these algorithms.

CO 4: Prepare data representation for market basket analysis and determine the usefulness of association rules. Interpret supervised and unsupervised learning methods.

CO 5: Predict market trends and outline different factors associated mail marketing.

Catalog Description

Data Mining and Predictive analytics serve as one of the most important courses for postgraduate students, since it builds computational abilities, inferential thinking, and practical skills for tackling core data scientific challenges. The students will get a comprehensive understanding of different data mining techniques that can be used for prediction and for discovering patterns, be prepared to select the right technique for a given data problem and will be able to create a general-purpose analytic process.

Course Content

Modules	Bloom's level	Number of Hours
Module I Data Preparation An introduction to data mining and predictive analytics, Data Pre-processing Exploratory Data Analysis, Dimension- Reduction Methods.	L1, L2	8
Module II Classification k- Nearest Neighbour Algorithm, Decision Trees, Model Evaluation Technique, Cost –Benefit Analysis Using Data Driven Cost.	L1, L2, L3	7
Module III Clustering Hierarchical and k- Means Clustering, Kohonen Networks, Birch Clustering, Measuring Cluster Goodness.	L1, L2, L3	8

Module IV Association Rules Affinity Analysis and Market Basket Analysis, Data Representation for Market Basket Analysis, Support, Confidence, Frequent Item sets, and the a Priori Property, How Does a Priori Algorithm Work? Generating Frequent Item sets, Generating Association Rules, Extension from Flag Data to General Categorical Data, Information-Theoretic Approach: Generalized Rule Induction Method, J-Measure, Association Rules are Easy to do Badly, how can we Measure the Usefulness of Association Rules? Do Association Rules Represent Supervised or Unsupervised Learning?	L1, L2, L3	9
Module IV Case Study: Predicting Response to Direct Mail Marketing Business Understanding, Data Preparation, and Eda, Clustering and Principal Components Analysis, Modelling and Evaluation for Performance and Interpretability, Modelling and Evaluation for High Performance.	L2, L3, L4, L5	8

Course Code: MIE4203	DATA WAREHOUSING AND MULTIDIMENSIONAL MODELING	L	T	P	C
Version 2020.1	Date of Approval: 19 July 2020	3	0	0	3
Pre-requisites/Exposure	Basic Knowledge of Database				
Co-requisites	Nil				

Catalog Description

In this course the concepts of basic concepts of Multi-dimensional database are discussed in detail. As a precursor to the study of the course it provide an in depth understanding of basic concepts of data warehouse which includes its architecture, data warehouse operations, data marts, metadata. The concept further enhances the understanding of advance concepts that cover the slowly and rapidly changing dimensions, indexes in OLAP and concept hierarchies. It also include the different application of data warehouse

Course Objectives

The objective of this course is to

- Equip the students with concepts of Multi-dimensional database, its need and various applications.
- It provides an overview of some basic concepts in data warehouse such as its architecture, OLAP applications, and metadata. It also includes some advance concepts such as OLAP hierarchies, OLAP changing dimensions.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain the concept of Multi-dimensional database and its importance.

CO2: Analyse the fundamental concept of data warehouse which include OLAP operations, architecture.

CO 3: Explain the different types of dimensions that exist in data warehouse.

CO4: Explain the advance concepts of data warehouse which include OLAP indexing.

Modules	Blooms level*	Number of hours
MODULE 1: Introduction: Multidimensional Data Management, Multidimensional History, Related Terminology	L1 and L2	8
MODULE 2: Fundamental Concepts : Cubes ,Dimensions, Facts, Measures, Relational Representations, Star Schemas, Snowflake Schemas, Data Warehouses And Data Marts, Multidimensional Modelling Process, Analysis And Querying ,Roll Up, Drill Down, Drill Out, Slicing And Dicing, Drill Across, Pivot Tables, Ranking, Multi-Dimensional Querying in MDX and SQL, Graphical Querying and Visualizations .	L1, L2 and L3	8
MODULE 3: Advance Concepts Slowly Changing Dimensions, The Problem, Solutions, Other Special Kinds Of Dimensions, Mini dimensions, Outriggers, Degenerate Dimensions, Junk Dimensions, Time Dimensions, Data Quality Dimensions, Advanced Hierarchies, Parent-Child Hierarchies, Unbalanced Hierarchies, Non Covering Hierarchies , Non –Strict Hierarchies, Multiple Hierarchies And	L2, L3 and L4	10

Parallel Hierarchies.		
MODULE 4: Module IV: Implementation Issues Materialized Views, Indexing, Indexing Overview, Bitmap Indices, Join Indices, Query Processing, OLAP Implementations, Extract-Transform-Load.	L3, L4 and L5	10

Course Code:- MLE4204	BIG DATA TECHNOLOGIES	L	T	P	C
Version 2020.1	Date of Approval: 19 July 2020	3	0	0	3
Pre-requisites/Exposure	Basics of DBMS and SQL				
Co-requisites	Nil				

Catalog Description

This course brings together several key big data technologies used for storage, analysis and manipulation of data. It also introduces the students the key concepts of Hadoop framework, MapReduce, Pig, Hive, and No-SQL. Students will learn to work on Hadoop platform. The concepts learnt will make students capable of working on big data projects easier.

Course Objectives

The objective of this course is

1. To make students familiar with big data technologies.
2. Provide an overview of Hadoop architecture and its working with other open source technologies.

Course Outcomes

On completion of this course, the students will be able to

CO1. Explain importance and applications of Big Data Analytics.

CO2. Differentiate among analytics technologies.

CO3. Demonstrate architecture of Hadoop and Mapreduce framework.

CO4. Illustrate Hadoop installation process and commands.

CO5. Introduce concepts of Hive and Pig.

Modules	Blooms level*	Number of hours
Module I: Introduction to Big Data Big Data and its Importance – Four V's of Big Data – Drivers for Big Data – Introduction to Big Data Analytics – Big Data Analytics applications.	L1 and L2	5
Module II: Big Data Technologies Hadoop's Parallel World – Data discovery – Open source technology for Big Data Analytics – cloud and Big Data – Predictive Analytics – Mobile Business Intelligence and Big Data – Crowd Sourcing Analytics – Inter- and Trans-Firewall Analytics - Information Management.	L2 and L5	4
Module III: Processing Big Data Integrating disparate data stores - Mapping data to the programming framework - Connecting and extracting data from storage - Transforming data for processing - Subdividing data in preparation for Hadoop Map Reduce.	L1 and L3	8
Module IV: Hadoop Map Reduce Employing Hadoop Map Reduce - Creating the components of Hadoop Map Reduce jobs - Distributing data processing across server farms –Executing Hadoop Map Reduce jobs - Monitoring the progress of job flows - The Building Blocks of Hadoop Map Reduce - Distinguishing Hadoop daemons - Investigating the Hadoop Distributed File System Selecting appropriate execution modes: local, pseudo-distributed, fully distributed.	L2, L3 and L4	9
Module V Big Data Tools and Techniques	L2 and	10

Installing and Running Pig – Comparison with Databases – Pig Latin – User-Define Functions – Data Processing Operators – Installing and Running Hive – Hive QL – Tables – Querying Data – User- Defined Functions – Oracle Big Data.	L3	
--	----	--

Course Code: MLE4206	DATA MINING AND PREDICTIVE ANALYSIS LAB	L	T	P	C
Version 2020.1	Date of Approval: 19 July, 2020	0	0	2	1
Pre-requisites/Exposure	Basic knowledge of Database				
Co-requisites	NIL				

Catalog Description

Data Mining and Predictive analytics serve as one of the most important courses for postgraduate students, since it builds computational abilities, inferential thinking, and practical skills for tackling core data scientific challenges. The students will get a comprehensive understanding of different data mining techniques that can be used for prediction and for discovering patterns, be prepared to select the right technique for a given data problem and will be able to create a general-purpose analytic process.

Course Objectives

The objective of this course is to

- Provide students with an in-depth knowledge of data mining. To introduce students to basic applications, concepts, and techniques of data mining.
- Develop skills for using recent data mining software to solve practical problems and prediction in a variety of disciplines and
- Gain experience doing independent study and research.

Course Outcomes

On completion of this course, the students will be able to

CO 1: Explain concepts of Data mining, predictive analytics and analyses architecture of data mining. Differentiate between supervised and unsupervised methods

CO 2: Apply classification techniques on different data sets and solve cost –benefit analysis numerical. Analyze decision tree methods.

CO 3: Implement various clustering algorithm on different data sets and describe these algorithms.

CO 4: Prepare data representation for market basket analysis and determine the usefulness of association rules. Interpret supervised and unsupervised learning methods.

CO 5: Predict market trends and outline different factors associated mail marketing.

Modules/Topics Covered**	Blooms level*	Number of hours
1. To understand the basic features of Data Warehousing.	L1, L2	2
2. Explore WEKA Data Mining/Machine Learning Toolkit (a) Downloading and/or installation of WEKA data mining toolkit. (b) Understand the features of WEKA tool kit such as Explorer, Knowledge flow interface, Experimenter, command-line interface. (c) Navigate the options available in the WEKA (deselect attributes panel, preprocess panel, classify panel, cluster panel, associate panel and visualize). (d) Study the ARFF file format.	L2, L3, L5	2
3. To understand the working of datasets in WEKA & to perform demonstration of preprocessing on dataset weather.arff .	L3, L4, L5	2
4. To apply Numeric Transform (data preprocessing step) on Iris Dataset.	L3, L4, L5	2

5. To understand the importance of CSV data and then load student academic record (CSV format) in Weka.	L3, L4, L5	2
6. To understand the concept of discretization and to perform discretization on the dataset airline.arff.	L3, L4, L5	2
7. To create Training, Validation and Test dataset for iris.arff.	L3, L4, L5	2
8. To perform decision tree classification using J48 algorithm on weather.arff	L3, L4, L5	2
9. To apply Apriori technique on the dataset and to generate association rules.	L3, L4, L5	2
10. (a) Demonstration of classification rule process on dataset student.arff using j48 algorithm. (b) Demonstration of classification rule process on dataset employee.arff using j48 algorithm.	L3, L4, L5	2
11. Demonstration of classification rule process on dataset employee.arff using naïve bayes algorithm	L3, L4, L5	4

***Bloom's Level:** L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation.

Course Code : MLE4207	DATA WAREHOUSING AND MULTIDIMENSIONS MODELLING LAB	L	T	P	C
Version 2020.1	Date of Approval: 19 July 2020	0	0	4	2
Pre-requisites/Exposure	Basic Knowledge of Database				
Co-requisites	NIL				

Catalog Description

In this Lab course Data warehousing and Multidimensional modeling programs are implemented and demonstrated using a SQL Server and ETL Tools. The Concepts that are covered would enable them to analyze the working of ETL tools and enable them to understand the following topics namely SQL Statements, SQL Built-in Functions, PL/SQL Cursors , Exception handling, Procedure, Functions, Trigger and concurrency control. Programs will be related to concepts of understanding the working of ETL tools on multidimensional data.

Course Objectives

The objective of this course is to

- Make the students apply knowledge of Database by analyzing the different database concepts in SQL Server.
- Provide a demonstration of ETL tools to organize the data sets.

Course Outcomes

On completion of this course, the students will be able to

CO1: Apply the knowledge of transaction processing to gain analysis on different data sets through concurrency control mechanism.

CO2: Demonstrate the use of SQL Built-in Functions, PL/SQL Cursors, Exception handling and Procedures.

CO3: To implement the different warehousing concepts on the given ETL tools.

CO4: Demonstrate the working of basic SQL statements and triggers.

Modules/Topics Covered**	Blooms level*	Number of hours
1. To understand the basic of SQL statements (a) Perform the following SQL statements on the table that perform the following query on the database <ul style="list-style-type: none"> • Create, update ,alter and delete a record • Joins and constraints on the table. • Wild card operators. 	L1,L3,L4	4
2. Sample Programs to execute the concept of Procedures (a) Preliminary introduction of Procedures their Syntax and usage (b) Write a procedural program to find out minimum of two numbers. (c) Write a program to print the reverse of a number using looping construct in PL/SQL Procedures. (d) Write a procedural program to find out the factorial of number.	L3, L4,L5	4
3. Sample Programs to implement the concept of Triggers (a) Preliminary introduction of Triggers their Syntax and usage (b) Create a Trigger on Employee record that automatically updates the salary of an Employee after each financial year.	L3, L4,L5	4

(c) Create a Trigger for the following events: <ul style="list-style-type: none"> • Deletion of a record • Updating of a record • Insertion of a new record. 		
4. Sample Programs to implement the concept of Cursors and Exception Handling. (a) Write a program to demonstrate the concept of Cursors in PL/SQL (b) Write a program that handles an exception that incurred in the given program.	L3,L4, L5	6
5. To perform demonstration to understand the working of ETL tools (a) Preliminary introduction of ETL Tools their features and importance. (b) Perform validation on the data set by applying the ETL tools. (c) Perform the following operations using ETL tools <ul style="list-style-type: none"> • Source to target mapping • Data checks on source data • Packages and schema validation • Data verification in the target system • Data integrity and quality checks in the target system 	L4,L5,L6	6

**Bloom's Level:*

MLE4208	R PROGRAMMING LAB	L	T	P	C
Version 2020.1	Date of Approval: 19 July 2020	0	0	4	2
Pre-requisites/Exposure	Knowledge of statistics				
Co-requisites	Nil				

Catalog Description

This lab will provide a basic introduction to the R programming Language and the use of R to perform basic statistics and programming tasks. The main objectives of this lab is to impart the students with the knowledge of R Programming, Machine Learning using R Mining from streaming Data, Mining from Distributed Data.

Course Objectives

The objective of this course is

- To make students familiar with R Programming Language and its concepts.
- Equip the students with knowledge of R Programming, Machine Learning using R Mining from streaming Data, Mining from Distributed Data.

Course Outcomes

On completion of this course, the students will be able to

CO1. Install and configure R Studio and R packages.

CO2. Explain concepts of Structured Data, data types, data structures and Use R for mathematical operations

CO3. Describe the use of R functions, control statements, Loop constructs and apply to iterate functions across data.

CO4. Understand basic regular expressions graphics. Use of R for descriptive statistics and inferential statistics

CO5. Predict/Score new data using models, understand basic non-linear functions in models and how to link data, statistical methods.

Modules	Blooms level*	Number of hours
Lab Session 1 <ul style="list-style-type: none"> • Installation & Configuration steps of R Studio. • use of the R interactive environment • Expand R by installing R packages • Explore and understand how to use the R documentation. 	L1 and L2	2
Lab Session 2-3 <ul style="list-style-type: none"> • Read Structured Data into R from various sources • Understand the different data types in R • Understand the different data structures in R • Understand how to use dates in R • Use R for mathematical operations 	L1 and L3	4
Lab Session 4-5 <ul style="list-style-type: none"> • Use of vectorised calculations • Write user-defined R functions 	L1 and L3	4

<ul style="list-style-type: none"> • Use control statements • Write Loop constructs in R • Use Apply to iterate functions across data 		
Lab Session 6-8 <ul style="list-style-type: none"> • Reshape data to support different analyses • Understand split-apply-combine (group-wise operations) in R • Deal with missing data • Manipulate strings in R • Understand basic regular expressions in R • Understand base R graphics 	L1 and L3	6
Lab Session 9-10 <ul style="list-style-type: none"> • Focus on GGplot2 graphics for R • Be familiar with trellis (lattice) graphics • Use R for descriptive statistics • Use R for inferential statistics • Write multivariate models in R 	L1 and L3	4
Lab Session 11-12 <ul style="list-style-type: none"> • Understand confounding and adjustment in multivariate models • Understand interaction in multivariate models • Predict/Score new data using models • Understand basic non-linear functions in models • Understand how to link data, statistical methods, and actionable questions 	L1 and L3	6

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

Course Code : MLE4209	DATABASE AND KNOWLEDGE BASE SYSTEMS	L	T	P	C
Version 2020.1	Date of Approval: 19 July 2020	3	0	0	0
Pre-requisites/Exposure	Basic Knowledge of Database AND AI				
Co-requisites	NIL				

Catalog Description

This course discusses design methodology for databases to verify their structural correctness and implements databases. It also provides applications software primarily in the relational model using querying languages, primarily SQL, and other database supporting software applying the theory behind various database models and query languages implementing security and integrity policies relating to databases and preparation for data analytics working in group settings to design and implementing database projects.

Course Objectives

The objective of this course is to

- To understand the basic concepts and terminology related to DBKBS and Relational Database Design.
- To design and implement Distributed Databases and Knowledge base.

Course Outcomes

CO1: Write complex queries including full outer joins self-join, sub queries, and set theoretic queries and do their optimization.

CO2: Know how Optimization, Transaction management, Query and database administration is done in distributed databases.

CO3: Learning various types of deadlines in real-time database.

CO4: Familiarizing with the present applications of knowledge base.

CO5: Understand the concepts of multilevel transactions in databases.

Modules	Blooms level*	Number of hours
MODULE 1: Database Languages, Object-Base Systems, Knowledge-base Systems, History and Perspective, Data Models for Database Systems: Data Models, The Entity-relationship Model, The Relational Data Model, Operations in the Relational Data Model, The Network Data Model, The Hierarchical Data Model, An Object-Oriented Model, Logic as a Data Model: The Datalog Data Model, Evaluating Non- recursive Rules, Computing the Meaning of Recursive Rules, Incremental Evaluation of Least Fixed Points, Negations in Rule Bodies, Relational Algebra and Logic, Relational Calculus, Tuple Relational Calculus.	L1, L2 and L3	8
MODULE 2: ISBL: A "Pure" Relational Algebra Language, QUEL: A Tuple Relational Calculus Language, Query-by-Example: A DRC Language, Data Definition in QBE, The Query Language SQL, Data Definition in SQL, The DBTG Data Definition language, The DBTG Query Language, The DBTG Database Modification Commands, Data Definition in IMS, A Hierarchical Data	L2, L3 and L6	10

Manipulation Language, Data Definition in OPAL, Data Manipulation in OPAL.		
MODULE 3: The Physical Data Model, The Heap Organization, Hashed Files, Indexed Files, B-trees, Files with a Dense Index, Secondary Indices, Data Structures in DBTG Databases, Data Structures for Hierarchies, Data Structures for Relations, A Search Tree Structure, Functional Dependencies, Lossless-Join Decomposition, Normalization, Generalized Dependencies.	L1, L3 and L4	10
MODULE 4: Basic Concepts, A Simple Transaction Model, The Two-phase Locking Protocol, a Model with Read and write-Locks, Lock Modes, A Read-Only, Write-Only Model, Concurrency for Hierarchically Structured Items, Handling Transaction Failures, Aggressive and Conservative Protocols, Recovery From Crashes, Timestamp-based Concurrency Control.	L1, L3 and L4	10
MODULE 5: Distributed Databases, Distributed Locking, Distributed Two-phase Locking, Distributed Commitment, A Nonblocking Commit Protocol, Timestamp-based, Distributed Concurrency, Recovery of Nodes, Distributed Deadlocks.	L3, L4 and L6	10

Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

Information management systems includes basics of managing the information and explores the various aspects of database design and modelling. It examines the basic issues in information governance and information integration and also helps to understand the information architecture.

Course Objectives

The objective of this course is to

1. Understand the basic principles and working of information technology.
2. Provide the role of information technology and information system in business.
3. To contrast and compare how internet and other information technologies support business systems.

Course Outcomes

On completion of this course, the students will be able to

CO1: State and explain the fundamental concepts of information management systems.

CO2: Develop the knowledge about management of information systems.

CO3: Interpret and recommend the use of information technology to solve business problems.

CO4: Apply a framework and process for aligning organizations IT objective with business strategies.

Modules	Blooms level*	Number of hours
Module I: Database Modelling, Management and Development Database design and modelling – Business Rules and Relationship; Java database Connectivity (JDBC), Database connection Manager, Stored Procedures. Trends in Big Data systems including NoSQL – Hadoop HDFS, MapReduce, Hive, and enhancements.	L1 and L2	6
MODULE II: Data Security and Privacy Program Security, Malicious code and controls against threats; OS level protection; Security – Firewalls, Network Security Intrusion detection systems. Data Privacy principles. Data Privacy Laws and compliance.	L1, L2, and L3	8
MODULE III: Information Governance Master Data Management (MDM) – Overview, Need for MDM, Privacy, regulatory requirements and compliance. Data Governance – Synchronization and data quality management.	L1, L2 and L3	7
MODULE IV: Information Architecture Principles of Information architecture and framework, Organizing information, Navigation systems and Labelling systems, Conceptual design, Granularity of Content.	L1, L2, and L3	8
Module V: Information Lifecycle Management		7

Data retention policies; Confidential and Sensitive data handling, lifecycle management costs. Archive data using Hadoop; Testing and delivering big data applications for performance and functionality; Challenges with data administration;	L1 and L2

Course Code: MLE4211	FUNDAMENTALS OF ARTIFICIAL INTELLIGENCE	L	T	P	C
Version 2020.1	Date of Approval: 19 July 2020	3	0	0	3
Pre-requisites/Exposure	Basic knowledge of computer system				
Co-requisites	Nil				

Catalog Description

Expose the students to the fundamentals of AI and expert systems and its application in Robotics and familiarize to the students with the Fundamental concept of AI and expert system.

Course Objectives

The objective of this course is to

- Equip the students with the artificial technique concepts used in robotics.
- Provide an overview of various technique and design the expert system with the help of these technique.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain and Understand artificial intelligence techniques and their limitation.

CO2: Describe the various searching techniques to solve the problem of different field.

CO3: Implement artificial intelligence based program in various application using basic AI language.

CO4: Understand and design the expert system for inter-dispersary engineering system.

Modules	Blooms level*	Number of hours
MODULE 1: INTRODUCTION :- Introduction – History, Definition of AI, Emulation of human cognitive process, Intelligent agents – The concept of rationality, the nature of environments, the structure of agents.	L1 and L2	6
MODULE 2: SEARCH METHODS :- Problem – Solving Agents : Problem Definitions, Formulating Problems, Searching for solutions – Measuring Problem – Solving Performance with examples. Search Strategies : Uninformed search strategies – Breadth – first Search, Uniform – Cost Search, depth –first search, depth – limited search, Iterative deepening depth – first search, bidirectional search, comparing uniformed search strategies. Informed search strategies – Heuristic information, Hill climbing methods, best – first search, branch – and – bound search, optimal search and A* and Iterative deepening A*.	L1, L2 and L3	9
MODULE 3: PROGRAMMING AND LOGICS IN ARTIFICIAL INTELLIGENCE :- LISP and other programming languages – Introduction to LISP, Syntax and numerical function, LISP and PROLOG distinction, input, output and local variables, interaction and recursion, property list and arrays alternative languages, formalized symbolic logics – properties of WERS, non-deductive inference methods.	L1, L2 and L3	11

MODULE 4: EXPERT SYSTEM :- Expert system – Introduction, difference between expert system and conventional programs, basic activities of expert system – Interpretation, Prediction, Diagnosis, Design, Planning, Monitoring, Debugging, Repair, Instruction, Control. Basic aspects of expert system – Acquisition module, Knowledge base – Production rules, semantic net, frames. Inference engine – Backward chaining and forward chaining. Explanatory interface.	L1, L2, L3,L4 and L5	10

Catalog Description

The objective of this course is to provide practical training on some live projects that will increase capability to work on actual problem in industry. This training may undergo in an industrial environment or may be an in-house training on some latest software which is in high demand in market. This training will be designed such that it will useful for their future employment in industry.

Course Objectives

The objective of this course is to

1. Provide practical training on live projects
2. Increase technical capabilities on solving real life problems in company environment

Course Outcomes

On completion of this summer internship, the students will be able to:

CO1: Develop communication, interpersonal and other critical skills in the job interview process.

CO2: Design and develop software and hardware projects

CO3: Assess interests and abilities in their field of study.

CO4: Demonstrate excellent technical and communication skills to acquire employment contacts leading directly to a full-time job following graduation from college.

Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

The objective of this course is to provide practical training on some live/demo projects that will increase capability to work on actual problem in industry. It will be an in house training on some latest software which is in high demand in market. This training will be designed such that it will be useful for their future employment in industry.

Course Objectives

The objective of this course is to

1. Provide practical training on live projects
2. Increase technical capabilities on solving real life problems in company environment

Course Outcomes

On completion of this summer internship, the students will be able to:

CO1: Demonstrate a sound technical knowledge of their selected project topic.

CO2: Design and develop engineering solutions to complex problems utilising a systems approach.

CO3: Analyse various approaches for solving a complex engineering problem using different tools and techniques

CO4: Demonstrate the knowledge, skills and attitudes of a professional engineer.

CO5: Apply technical skills and knowledge in completing the project.

Course Code: RBE4301	AUTOMATION IN MANUFACTURING SYSTEMS	L	T	P	C
Version 2020.1	Date of Approval: 19 July 2020	3	0	0	3
Pre-requisites/Exposure	Production system, Manufacturing System				
Co-requisites	Automation in production and manufacturing system				

Catalog Description:

In this course the concepts and procedure for Automation of Manufacturing systems and the technology behind the automation of a manufacturing system and concepts of computer aided manufacturing are discussed in detail. The concepts of computer aided process planning (CAPP), Hardware components for automation, group technology (GT), cellular manufacturing, automated guided vehicle system, flexible manufacturing system (FMS), Automated inspection and just in time are also discussed in detail.

Course Objectives:

The overall objective of this course is

1. To equip the students with basic and essential concepts of Automation in manufacturing system to usually increase production rate and labor productivity.
2. To provide high caliber engineering students with an in-depth understanding of cellular manufacturing, flexible manufacturing system (FMS) and computer aided process planning.

Course Outcomes (COs):

At the end of the course, the student shall be able to:

- CO1 - Define and describe the basic fundamentals of Automation in manufacturing system, computer aided manufacturing and computer integrated manufacturing.
- CO2 – State, explain and demonstrate computer aided process planning, automated production lines and assembly systems.
- CO3 – Outline, interpret and apply concepts of group technology and cellular manufacturing.
- CO4 – Define, explain and apply knowledge of flexible manufacturing systems and industrial robotics in industries.

Modules	Blooms level*	Number of hours
Module I Over view of Manufacturing and Automation: Production systems, Automation in production systems, Automation principles and strategies, Manufacturing operations, production facilities. Basic elements of an automated system, levels of automation; Hardware components for automation and process control, programmable logic controllers and personal computers.	L1 and L2	7
Module II Material Handling And Identification Technologies: Material handling, equipment, Analysis. Storage systems, performance and location strategies, Automated storage systems, AS/RS, types. Automatic identification methods, Barcode technology, RFID	L1, L2, and L3	6
Module III Manufacturing Systems And Automated Production Lines:	L1, L2 and L3	8

Manufacturing systems: components of a manufacturing system, Single station manufacturing cells; Manual Assembly lines, line balancing Algorithms, Mixed model Assembly lines, Alternative Assembly systems. Automated production lines, Applications, Analysis of transfer lines		
Module IV Automated Assembly Systems: Fundamentals, Analysis of Assembly systems. Cellular manufacturing, part families, cooling, production flow analysis. Group Technology and flexible Manufacturing systems, Quantitative Analysis.	L1, L2 and L3	9
Module V Quality Control And Support Systems: Quality in Design and manufacturing, inspection principles and strategies, Automated inspection, contact Vs non contact, CMM. Manufacturing support systems. Quality function deployment, computer aided process planning, concurrent engineering, shop floor control, just in time and lean production.	L1, L2 and L3	6

Course Code: RBE4302	ROBOTIC SENSORS, VISIONS AND HARDWARE IMPLEMENTATION	L	T	P	C
Version 2020.1	Date of Approval: 19 July 2020	3	0	0	3
Pre-requisites/Exposure	Knowledge of basics of Artificial Intelligence concepts, Sensors and basic Robotics hardware required.				
Co-requisites	Nil				

Catalog Description

Robotics sensors find many applications in the areas of robotics, visions, Artificial Intelligence, pattern recognition, controls etc. Robotics sensors offer fundamentally different types of high capable sensors. Many image processing techniques are learnt. These robotics hardware design, architecture, mapping and localization can be applied to many complicated problems of Artificial Intelligence and other applications in Real World Computing. This course provides a comprehensive treatment of robotics sensors, visions and robotics hardware required.

Course Objectives:

The objective of this course is to

- Introduces the basics of Robot visions and image processing sensors.
- It deals with actual hardware implementation of robots

Course Outcomes:

On completion of this course, the students will be able to

CO1: Understand the principles of smart sensors and transducers, need and usage of sensors.

CO2: comparison various visions in robotics robotic functions, robotic views and robotic parts in simulations.

CO3: Understand concept of image processing techniques which can be applied to robotic perception, robotic movements, dynamics and controls of robotic movement, with which they can be able to apply the conceptual things to the robotic software architecture and applications.

CO4: Get thorough knowledge in robotics orientation and feature extraction.

CO5: Design multicontrolled sensors robot assembly.

Modules	Blooms level*	Number of hours
MODULE 1: SENSORS IN ROBOTICS An Introduction to sensors and Transducers, History and definitions, Smart Sensing, AI sensing, Need of sensors in Robotics. Position sensors – optical, non-optical, Velocity sensors, Accelerometers, Proximity Sensors – Contact, non-contact, Range Sensing, touch and Slip Sensors, Force and Torque Sensors. Different sensing variables – smell, Heat or Temperature, Humidity, Light, Speech or Voice recognition Systems, Tele-presence and related technologies.	L1, L2	4
MODULE 2: VISIONS IN ROBOTICS The Nature of Vision- Robot vision – Need, Applications - image acquisition –illumination techniques- Point sensor, line sensor, planar sensor, camera transfer characteristic, Raster scan, Image capture time, volume sensors, Image representation, picture coding techniques. Robot Control through Vision sensors, Robot vision locating position, Robot guidance with vision system, End effector camera Sensor.	L1, L2, L3 and L4	10
MODULE 3: ELEMENTS OF IMAGE PROCESSING TECHNIQUES Discretization, Neighbours of a pixel-connectivity- Distance measures - pre-	L1, L3, L4 and	5

processing Neighbourhood averaging, Median filtering. Smoothing of binary Images- Image Enhancement- Histogram Equalization-Histogram Specification –Local Enhancement-Edge detection- Gradient operator-Laplace operators-Thresholding-Morphological image processing.	L5	
MODULE 4:OBJECT ORIENTATION AND FEATURE EXTRACTION Image segmentation- Edge linking-Boundary detection-Region growing-Region splitting and merging- Boundary Descriptors-Freeman chain code-Regional Descriptors- recognition-structural methods- Recognition procedure, mahalanobic procedure.	L1, L2, L3, and L4	7
MODULE 5:COLLISIONS FRONTS ALGORITHM Introduction, skeleton of objects. Gradients, propagation, Definitions, propagation algorithm, Thinning Algorithm, Skeleton lengths of Top most objects.	L2, L3, L4 and L5	5
MODULE 6:MULTISENSORS CONTROLLED ROBOT ASSEMBLY Control Computer, Vision Sensor modules, Software Structure, Vision Sensor software, Robot programming, Handling, Gripper and Gripping methods, accuracy – A Case study.	L2, L3, L4 and L5	5

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation

Course Code: RBE4303	PATTERN RECOGNITION & IMAGE PROCESSING	L	T	P	C
Version 2020.1	Date of Approval: 19 July 2020	3	0	0	3
Pre-requisites/Exposure	Basics of Digital Image Processing				
Co-requisites	NIL				

Catalog Description

This course gives students an insight into the basics of Image Processing along with Pattern Recognition. Concepts covered would enable students to define and differentiate among various types of image refinement. Further they would be able to gain insights about various Image restoration and modification technique.

Course Objectives

This course covers the theory and methods for learning from data, with an emphasis on pattern classification. Digital Image Processing is designed to give professionals and students a powerful collection of fundamental and advanced image processing tools on the desktop.

Course Outcomes

On completion of this course, the students will be able to

CO1: Define and explain introductory part of Pattern recognition Concepts & Bayesian decision theory

CO2: List out the Univariate and Multivariate density

CO3: Explain concepts of Un-supervised learning and clustering

CO4: Describe the Image Fundamentals and Transforms

CO5: Explain the basics of Image Segmentation and Edge Detection

Modules	Blooms level*	Number of hours
MODULE 1: Introduction of Pattern recognition and Bayesian Decision Theory Machine perception, pattern recognition example, pattern recognition systems, the design cycle, learning and adaptation Introduction, continuous features – two categories classifications, minimum error-rate classification- zero-one loss function, classifiers, discriminant functions, and decision surfaces	L1 and L2	8
MODULE 2: Normal density Univariate and multivariate density, discriminant functions for the normal density-different cases, Bayes decision theory – discrete features, compound Bayesian decision theory and context	L2 and L3	8
MODULE 3: Un-supervised learning and clustering Introduction, mixture densities and Identifiability, maximum likelihood estimates, application to normal mixtures, K-means clustering. Data description and clustering, similarity measures, criteria function for clustering	L1 and L2	10
MODULE 4: Image Fundamentals and Transforms Elements of visual perception – Image sampling and quantization, Basic relationship between pixels, Some basic grayscale transformations, Introduction to Fourier Transform and DFT, Properties of 2D Fourier	L2 and L3	12

Transform, FFT, Separable Image Transforms, Walsh, Hadamard, Discrete Cosine Transform, Haar, Slant, Karhunen, Loeve transforms.		
MODULE 5: Image Segmentation and Edge Detection Region Operations, Crack Edge Detection, Edge Following, Gradient operators, Compass and laplace operators. Threshold detection methods, optimal thresholding, multispectral thresholding, thresholding in hierarchical data structures; edge based image segmentation- edge image thresholding, edge relaxation, border tracing, border detection,	L2 and L3	10

**Bloom's Level:*

Course Objectives

The objective of this course is to

1. To become familiar with basics of robot visions, image processing sensors.
2. Understand and analyse concepts of hardware implementations in robotics.

Course Outcomes

On completion of this course, the students will be able to

CO1: Understand the principles of smart sensors and transducers, need and usage of sensors.

CO2: comparison various visions in robotics robotic functions, robotic views and robotic parts in simulations.

CO3: Understand concept of image processing techniques which can be applied to robotic perception, robotic movements, dynamics and controls of robotic movement, with which they can be able to apply the conceptual things to the robotic software architecture and applications.

CO4: Get thorough knowledge in robotics orientation and feature extraction.

Modules	Blooms level*	Number of hours
Lab Session 1: Generation in robot languages Learning of robot language structure, on line and offline programming	L3 and L4	2
Lab Session 2: Cartesian Trajectories Study of Joint space planning, Cartesian trajectories, path primitives, coordinate systems used to determine the positions of TCP and direction of tools	L3 and L4	4
Lab Session 3: Basic Syntax Learning of RAPID i.e. data objects, expression, function. WAIT, SIGNAL AND DELAY command.	L3 and L4	6
Lab Session 4: Routine and subroutine Write subroutine, task module, input-output interrupts, priority interrupts, and task modules. Study of built-in subroutines in RAPID.	L1, L2, and L3	2
Lab Session 5: optical sensors To study Photodiodes, phototransistors and photo resistors based sensors, light-to-light detectors, Infrared sensors (thermal, PIR, AFIR, thermopiles).	L1, L2, and L3	4
Lab Session 6: Magnetic and Electromagnetic Sensors and Actuators	L3 and	2

Study on Motors as actuators (linear, rotational, stepping motors), magnetic valves, inductive sensors (eddy current, LVDT, RVDT, Proximity, switches), Hall Effect sensors, Magneto resistive sensors.	L4	
Lab Session 7: Mechanical Sensors Accelerometers, Force sensors (strain gauges, tactile sensors), Pressure sensors (semiconductor, piezo resistive, capacitive, VRP).	L3 and L4	2
Lab Session 8: Industrial Networks and Fields Bus Types of bus – DN, PB, ProfiNet, Eth/IP Interfacing to Controller: Connecting sensors to controller directly or through fieldbus. Configuration of digital, group, and analog IO. Use of instructions and logic. Strobing and handshaking with PLC as master, Encoder and Resolvers.	L1, L2, and L3	2
Lab Session 9: PLC Various hardware types of PLC (CPU and I/O modules). Centralized configuration of PLC. On-line with PLC (using serial port). Various languages and its over-view. Sample program down-load, Task configuration. Configuration of IP address & sample program download. Decentralized configuration of PLC (Profibus protocol). Configuration I/O modules on Profibus protocol. Mod-bus configuration (Master & Slave configuration). Mod-bus RTU (Remote Telemetry Unit) and Mod-bus TCP/IP communication with PC based software.	L2, L3, and L4	2

Co-requisites	NIL				

Catalog Description

In this Lab course first student should learn about advanced level of software used for easy calculation and toolbox used for software like MATLAB.

Course Objectives

The objective of this course is to

- Make the students apply knowledge of various Image processing & pattern recognition required for solving complex problems.
- Provide a demonstration of different types of image processing techniques through MATLAB toolbox.

Course Outcomes

On completion of this course, the students will be able to

CO1: Acquiring knowledge of Basics of High-end calculation software and need in Computer Science & engineering

CO2: Demonstrate the All preliminary functions in MATLAB

CO3: Apply the knowledge of all the basics function and toolbox knowledge of MATLAB

CO4: Demonstrate the Use of MATLAB in image Processing

CO5: Demonstrate usage of applications involving with Image processing & Recognition Its Toolbox used by MATLAB

Modules/Topics Covered**	Blooms level*	Number of hours
1. Introduction of MATLAB (b) Basic Variable declaration & its operation (c) Function use & its application	L3, L5	4
2. Sample Programs in MATLAB (e) Basic use of Matrix and Graph Plotting (f) Different type of graph plotting with use of different -2 type of data	L3, L5	6
3. Sample Programs using MATLAB functions (a) Create a basic program MATLAB using functions (b) Use of basic function Image processing (c) Practice on Basic function of Image processing tool box.	L3, L5	6
4. Sample programs of ANN functions (a) Practice on Pattern Recognition functions in MATLAB (b) Write a program for training a small network in MATLAB	L3, L5	6
5. Sample Programs using ANN toolbox & Image processing toolbox (d) Demonstrate the use of ANN tool box & Image processing toolbox and write a program after combining it.	L3, L5	2

*Bloom's Level:

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

The purpose of this course is to develop a knowledge in the field of optimization techniques their basic concepts, ,principles. linear programming and queuing theory.

Course Objectives

After successful completion of the course, student will be able to understand importance of optimization of industrial process management , apply basic concepts of mathematics to formulate an optimization problem , analyse and appreciate variety of performance measures for various optimization problems.

Course Outcomes

On completion of this course, the students will be able to

CO1: Understand importance of optimization of industrial process management.

CO2: Apply basic concepts of mathematics to formulate an optimization problem

CO3: Analyse and appreciate variety of performance measures for various optimization problems

CO4: Use classical optimization techniques and numerical methods of optimization

CO5: Apply knowledge of optimization to formulate and solve engineering problems

Modules	Blooms level*	Number of hours
MODULE 1: INTRODUCTION Introduction to optimization – adequate and optimum design – principles of optimization – statement of an optimization problem – classification – formulation of objective function, design constraints.	L1, L2	4
MODULE 2: CLASSICAL OPTIMIZATION TECHNIQUES Single variable optimization –multivariable optimization with no constraints – exhaustive search, Fibonacci method, golden selection, Random, pattern and gradient search methods – Interpolation methods: quadratic and cubic, direct root method.	L1, L2, L3 and L5 , L6	12
MODULE 3:MULTIVARIABLE – UNCONSTRAINED AND CONSTRAINED OPTIMIZATION Direct search methods – descent methods – conjugate gradient method. Indirect methods – Transformation techniques, penalty function method	L1, L3 and L4	8
MODULE 4:NON – TRADITIONAL OPTIMIZATION TECHNIQUES Genetic Algorithms -steady state algorithm, fitness scaling, inversion. Genetic programming:- Genetic Algorithm in problem solving, Implementing a Genetic Algorithm:- computer implementation, operator (reproduction, crossover and Mutation, Fitness Scaling, Coding, Discretization). Knowledge based techniques in Genetic Algorithm. Advanced operators and techniques in genetic search:-Dominance, Diploidy and Abeyance. Inversion and other reordering operators, Niche and speciation and Tabu search methods.	L1, L3, and L4	10
MODULE 5:OPTIMUM DESIGN OF MACHINE Desirable and undesirable effects – functional requirement – material and	L3 and L4	2

geometrical parameters – Design of simple axial, transverse loaded members for minimum cost and minimum weight.		
---	--	--

COMPUTER NUMERICAL CONTROL (CNC) MACHINES AND ADAPTIVE CONTROL

Course Code: RBE4307

Credit Units: 03

Course Objective:

This course objective is to understand NC, CNC and DNC manufacturing and generate manual part program for CNC machining. Concept of adaptive control and its various applications

Module-I

Concepts of NC, CNC, DNC. Classification of CNC machines, Machine configurations, Types of control, CNC controllers characteristics, Interpolators. Cutting tool materials, carbide inserts classification, qualified, semi qualified and preset tooling, tooling system for Machining centre and Turning centre, work holding devices, of CNC Machines.

Module-II

Programming CNC machines, Part print analysis and Process planning, Advanced Programming features, Canned cycles, Subroutines, Macros, special cycles etc. APT part programming using CAD/CAM, Parametric Programming. Manual part programming for CNC turning, milling and machining center. Computer assisted part programming techniques, Conversational and Graphics based software, Solids based part programming. Freeform surface machining. Simulation and Verification of CNC programs.

Module-III

Robot anatomy, robot configuration, motions joint notation work volume, robot drive system, control system and dynamic performance, precision of movement. Robot activation and feedback components. MOTION ANALYSIS AND CONTROL: Manipulator kinematics, position representation forward transformation, homogeneous transformation, manipulator path control, robot dynamics, configuration of robot controller.

Module-IV

END EFFECTORS: Grippers-types, operation, mechanism, force analysis, tools as end effectors consideration in gripper selection and design. SENSORS: Desirable features, tactile, proximity and range sensors, uses sensors in robotics. Positions sensors, velocity sensors, actuators sensors, power transmission system.

MACHINE VISION: Functions, Sensing and Digitizing-imaging, Devices, Lighting techniques, Analog to digital single conversion, image storage, Image processing and Analysis-image

Module-V

Review of Lyapunov analysis, model Reference Adaptive Control, Composite Adaptation, Parameter Convergence: Persistency of Excitation /Uniform Complete Observe-ability, Adaptive Control in the Presence of Input Constraints, Direct MRAC for Nonlinear systems with Matched Structured Nonlinearities, Robustness of MRAC: Parameter Drift, Adaptive Control in the Presence of Uniformly Bounded Residual Nonlinearity, Disturbance Rejection, Input-to-State Stability, fast adaptation.

Pre-requisites/Exposure	Linear algebra, advanced calculus, discrete mathematics, Boolean algebra or equivalent.				
Co-requisites	Nil				

Catalog Description

Fuzzy sets and fuzzy logic find many applications in the areas of stability theory, pattern recognition, controls etc. Neural Networks offer fundamentally alternative approaches to procedural programming. These systems proved their applicability to the problems where there are missing data or information or the problems which could not be defined in an algorithm. The integration of fuzzy systems and neural networks gives a tremendous potential which can be applied to many complicated problems of Artificial Intelligence and other applications in Real World Computing. This course provides a comprehensive treatment of neural network architectures and learning algorithms, with an in-depth look at problems in data mining and in knowledge discovery.

Course Objectives

The objective of this course is to

1. Introduces the basics of Neural Networks and essentials of Artificial Neural Networks with Single Layer and Multilayer Feed Forward Networks.
2. It deals with Associate Memories and introduces Fuzzy sets and Fuzzy Logic system component

Course Outcomes

On completion of this course, the students will be able to

CO1: Understand the principles of neural networks and fuzzy Logic fundamentals.

CO2: compare analysis between human and computer, Artificial Neural Networks models, characteristics of ANN's learning strategies, learning rules and basics of fuzzy logic.

CO3: Understand concept of classical and fuzzy sets, fuzzification and defuzzification, with which they can be able to apply the conceptual things to the real world electrical and electronics problems and applications.

CO4: Get thorough knowledge in biological neuron and artificial neurons.

CO5: Design the required and related systems

Modules	Blooms level*	Number of hours
MODULE 1: Basic neural computation models: Network and node properties. Inference and learning algorithms. Unsupervised learning: Signal hebbian learning and competitive learning. Supervised learning: Back propagation algorithms.	L1, L2	4
MODULE 2: Self organizing networks: Kohonen algorithm, bi-directional associative memories. Hopfield Networks: Hopfield network algorithm. Adaptive resonance theory: Network and learning rules. Neural network applications.	L1, L2, L3 and L4	10
MODULE 3: Fuzzy Sets: Operations and properties. Fuzzy Relations: Cardinality, Operations and properties.	L1, L3, L4 and L5	6

Value Assignments: Cosine amplitude and max-min method. Fuzzy classification: Cluster analysis and validity, Fuzzy e-means clustering, hardening the Fuzzy e-partition.		
MODULE 4: Fuzzification, Membership value assignments: Inference, rank ordering and angular Fuzzy sets, defuzzification methods, fuzzy logic, approximate reasoning. Fuzzy –based systems: Canonical rule forms, decomposition of compound rules, likelihood and truth qualification, aggregation of Fuzzy rules, graphical techniques of inference.	L1, L2, L3, and L4	9
MODULE 5: OPTIMUM DESIGN OF MACHINE Non linear simulation using Fuzzy rule-based systems, Fuzzy associative memories. Decision making under Fuzzy states and Fuzzy actions. Fuzzy grammar and syntactic recognition. General Fuzzy logic controllers, special forms of Fuzzy logic control system models, examples of Fuzzy control system design and control problems, industrial applications.	L2, L3, L4 and L5	7

Catalog Description

Neural Networks offer fundamentally alternative approaches to procedural programming. Fuzzy sets and fuzzy logic find many applications in the areas of stability theory, pattern recognition, controls etc. These systems proved their applicability to the problems where there are missing data or information or the problems which could not be defined in an algorithm.

Course Objectives

The objective of this course is to

To become familiar with neural networks learning algorithms from available examples and give design methodologies for artificial neural networks.

2. Understand and analyse concepts of fuzzy set and use fuzzy set operations to implement current computing techniques used in fuzzy computing.

Course Outcomes

On completion of this course, the students will be able to

CO1: Understand the difference between learning and programming and explore practical applications of Neural Networks (NN).

CO2: To analyse and appreciate the applications which can use fuzzy logic.

CO3: Understand the efficiency of a hybrid system and how Neural Network and fuzzy logic can be hybridized to form a Neuro-fuzzy network and its various applications and they will be able to design inference systems

Modules	Blooms level*	Number of hours
Lab Session 1: Write a program to implement single layer perception algorithm.	L3 and L4	2
Lab Session 2: Write a program to implement back propagation learning algorithm	L3 and L4	4
Lab Session 3: Design multilayer feed forward network using back-propagation algorithm	L3 and L4	6
Lab Session 4 Study of fuzzy inference system	L1, L2, and L3	2
Lab Session 5 To study fuzzy logic controller using fuzzy logic toolbox	L1, L2, and L3	4
Lab Session 6 Write a program to implement SDPTA	L3 and L4	2
Lab Session 7 Write a program to implement RDPTA	L3 and L4	2
Lab Session 8 To Study various defuzzification techniques	L1, L2, and L3	2
Lab Session 9 Write a program to implement of fuzzy set operation	L2, L3, and L4	2

Co-requisites	Nil				

Catalog Description

To develop semantic-based and context-aware systems to acquire, organize process, share and use the knowledge embedded in multimedia content. Research will aim to maximize automation of the complete knowledge lifecycle and achieve semantic interoperability between Web resources and services. The field of Robotics is a multi disciplinary as robots are amazingly complex system comprising mechanical, electrical, electronic H/W and S/W and issues germane to all these.

Course Objectives

The objective of this course is to

1. To provide an overview of problem solving skills methods using decision making systems .
2. To serve as a foundation for the study of programming languages that is used to develop an Intelligence System

Course Outcomes

On completion of this course, the students will be able to

CO1. Understand the concept of artificial intelligence.

CO2. Differentiate between linear and non-linear problems and Learn various problem solving techniques using neural networks

CO3. Understand the concept of fuzzy logic and apply to various problems

CO4. Able to learn concepts of genetic algorithm

Modules	Blooms level*	Number of hours
Module I: Soft Computing Introduction of soft computing, soft computing vs. hard computing, various types of soft computing techniques, applications of soft computing. Artificial Intelligence : Introduction, Various types of production systems, characteristics of production systems, breadth first search, depth first search techniques, other Search Techniques like hill Climbing, Best first Search, A* algorithm, AO* Algorithms and various types of control strategies. Knowledge representation issues, Prepositional and predicate logic, monotonic and non monotonic reasoning, forward Reasoning, backward reasoning, Weak & Strong Slot & filler structures, NLP.	L1, L2	12
Module II: Neural Network Structure and Function of a single neuron: Biological neuron, artificial neuron, definition of ANN, Taxonomy of neural net, Difference between ANN and human brain, characteristics and applications of ANN, single layer network, Perceptron training algorithm, Linear separability, Widrow & Hebb's learning rule/Delta rule, ADALINE, MADALINE, AI v/s ANN. Introduction of MLP, different activation functions, Error back propagation algorithm, derivation of BBPA, momentum, limitation, characteristics and application of EBPA	L2, L3 and L4	10

Module III Counter propagation network, architecture, functioning & characteristics of counter Propagation network, Hopfield/ Recurrent network, configuration, stability constraints, associative memory, and characteristics, limitations and applications. Hopfield v/s Boltzman machine. Adaptive Resonance Theory: Architecture, classifications, Implementation and training. Associative Memory.	L2, L3 and L4	8
Module IV: Fuzzy Logic Fuzzy set theory, Fuzzy set versus crisp set, Crisp relation & fuzzy relations, Fuzzy systems: crisp logic, fuzzy logic, introduction & features of membership functions, Fuzzy rule base system : fuzzy propositions, formation, decomposition & aggregation of fuzzy rules, fuzzy reasoning, fuzzy inference systems, fuzzy decision making & Applications of fuzzy logic.	L2, L3 and L4	7
Module V: Genetic algorithm Fundamentals, basic concepts, working principle, encoding, fitness function, reproduction, Genetic modeling: Inheritance operator, cross over, inversion & deletion, mutation operator, Bitwise operator, Generational Cycle, Convergence of GA, Applications & advances in GA, Differences & similarities between GA & other traditional methods.	L2, L4	3

**Bloom's Level:*

Catalog Description

This lab course covers development and designing of implementing basic neural networks, fuzzy systems, and optimization algorithms concepts and their relations. It aims to develop the concepts and techniques and foster the students' abilities in designing and implementing soft computing based solutions for real-world and engineering problems.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of Soft Computing which includes Neural networks, Fuzzy logic and genetic algorithms.
2. Provide knowledge to develop Soft computing programs in Matlab.

Course Outcomes

On completion of this course, the students will be able to

CO1: Implement various neural networks using MATLAB.

CO2: Illustrate use of fuzzy in real applications.

CO3: Apply genetic algorithm to basic problems.

Modules	Blooms level*	Number of hours
Lab Session 1: Study of Biological Neural Network	L1 , L2 and L3	2
Lab Session 2: Study of Artificial Neural Network	L1, L2 and L3	1
Lab Session 3: Write a program of Perceptron Training Algorithm.	L3 and L4	2
Lab Session 4 Write a program to implement Hebb's Rule	L3, and L4	2
Lab Session 5 Write a program to implement of Delta Rule.	L3, and L3	2
Lab Session 6 Write a program to implement back propagation learning algorithm.	L3 and L4	2
Lab Session 7 Study of fuzzy inference system	L1, L2 and L3	1
Lab Session 8 To study fuzzy logic controller using fuzzy logic toolbox	L1, L2, L3 and L4	2
Lab Session 9 Write a program to implement SDPTA	L3 and L4	2

Lab Session 10 Write a program to implement RDPTA	L3 and L4	2
Lab Session 11 To Study various defuzziification techniques	L1, L2, L3 and L4	1
Lab Session 12 Write a program to implement of fuzzy set operation	L3 and L4	2
Lab Session 13 Study of genetic algorithm	L1, L2, L3 and L4	1
Lab Session 14 Study of Genetic programming and solve a real life problem	L1, L2, L3, and L4	2

Course Code: MLE4301	PATTERN RECOGNITION & IMAGE PROCESSING	L	T	P	C
Version 2020.1	Date of Approval: 19 July 2020	3	0	0	3
Pre-requisites/Exposure	Basics of Digital Image Processing				
Co-requisites	NIL				

Catalog Description

This course gives students an insight into the basics of Image Processing along with Pattern Recognition. Concepts covered would enable students to define and differentiate among various types of image refinement. Further they would be able to gain insights about various Image restoration and modification technique.

Course Objectives

This course covers the theory and methods for learning from data, with an emphasis on pattern classification. Digital Image Processing is designed to give professionals and students a powerful collection of fundamental and advanced image processing tools on the desktop.

Course Outcomes

On completion of this course, the students will be able to

CO1: Define and explain introductory part of Pattern recognition Concepts & Bayesian decision theory

CO2: List out the Univariate and Multivariate density

CO3: Explain concepts of Un-supervised learning and clustering

CO4: Describe the Image Fundamentals and Transforms

CO5: Explain the basics of Image Segmentation and Edge Detection

Modules	Blooms level*	Number of hours
MODULE 1: Introduction of Pattern recognition and Bayesian Decision Theory Machine perception, pattern recognition example, pattern recognition systems, the design cycle, learning and adaptation Introduction, continuous features – two categories classifications, minimum error-rate classification- zero-one loss function, classifiers, discriminant functions, and decision surfaces	L1 and L2	8
MODULE 2: Normal density Univariate and multivariate density, discriminant functions for the normal density-different cases, Bayes decision theory – discrete features, compound Bayesian decision theory and context	L2 and L3	8
MODULE 3: Un-supervised learning and clustering Introduction, mixture densities and Identifiability, maximum likelihood estimates, application to normal mixtures, K-means clustering. Data description and clustering, similarity measures, criteria function for clustering	L1 and L2	10
MODULE 4: Image Fundamentals and Transforms Elements of visual perception – Image sampling and quantization, Basic relationship between pixels, Some basic grayscale transformations,	L2 and L3	12

Introduction to Fourier Transform and DFT, Properties of 2D Fourier Transform, FFT, Separable Image Transforms, Walsh, Hadamard, Discrete Cosine Transform, Haar, Slant, Karhunen, Loeve transforms.		
MODULE 5: Image Segmentation and Edge Detection Region Operations, Crack Edge Detection, Edge Following, Gradient operators, Compass and laplace operators. Threshold detection methods, optimal thresholding, multispectral thresholding, thresholding in hierarchical data structures; edge based image segmentation- edge image thresholding, edge relaxation, border tracing, border detection,	L2 and L3	10

Course Code: MLE4304	PATTERN RECOGNITION AND IMAGE PROCESSING LAB	L	T	P	C
Version 2020.1	Date of Approval: 19 July 2020	0	0	2	1
Pre-requisites/Exposure	Basics of MATLAB				
Co-requisites	NIL				

Catalog Description

In this Lab course first student should learn about advanced level of software used for easy calculation and toolbox used for software like MATLAB.

Course Objectives

The objective of this course is to

- Make the students apply knowledge of various Image processing & pattern recognition required for solving complex problems.
- Provide a demonstration of different types of image processing techniques through MATAB toolbox.

Course Outcomes

On completion of this course, the students will be able to

CO1: Acquiring knowledge of Basics of High-end calculation software and need in Computer Science & engineering

CO2: Demonstrate the All preliminary functions in MATLAB

CO3: Apply the knowledge of all the basics function and toolbox knowledge of MATLAB

CO4: Demonstrate the Use of MATLAB in image Processing

CO5: Demonstrate usage of applications involving with Image processing & Recognition Its Toolbox used by MATLAB

Modules/Topics Covered**	Blooms level*	Number of hours
6. Introduction of MATLAB (d) Basic Variable deceleration & its operation (e) Function use & its application	L3, L5	4
7. Sample Programs in MATLAB (g) Basic use of Matrix and Graph Plotting (h) Different type of graph plotting with use of different -2 type of data	L3, L5	6
8. Sample Programs using MATLAB functions (d) Create a basic program MATLAB using functions (e) Use of basic function Image processing (f) Practice on Basic function of Image processing tool box.	L3, L5	6
9. Sample programs of ANN functions (c) Practice on Pattern Recognition functions in MATLAB (d) Write a program for training a small network in MATLAB	L3, L5	6
10. Sample Programs using ANN toolbox & Image processing toolbox (e) Demonstrate the use of ANN tool box & Image processing toolbox and write a program after combining it.	L3, L5	2

*Bloom's Level:

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

** Sample Programs provided are not limited to these only, can include others as desired.

Course Code: MLE4305	NEURAL NETWORK AND FUZZY LOGIC LAB	L	T	P	C
Version 2020.1	Date of Approval: 20 July 2020	0	0	2	1
Pre-requisites/Exposure	C/C++/MATLAB				
Co-requisites	Nil				

Catalog Description

Neural Networks offer fundamentally alternative approaches to procedural programming. Fuzzy sets and fuzzy logic find many applications in the areas of stability theory, pattern recognition, controls etc. These systems proved their applicability to the problems where there are missing data or information or the problems which could not be defined in an algorithm.

Course Objectives

The objective of this course is to

- To become familiar with neural networks learning algorithms from available examples and give design methodologies for artificial neural networks.
- Understand and analyse concepts of fuzzy set and use fuzzy set operations to implement current computing techniques used in fuzzy computing.

Course Outcomes

On completion of this course, the students will be able to

CO1: Understand the difference between learning and programming and explore practical applications of Neural Networks (NN).

CO2: To analyse and appreciate the applications which can use fuzzy logic.

CO3: Understand the efficiency of a hybrid system and how Neural Network and fuzzy logic can be hybridized to form a Neuro-fuzzy network and its various applications and they will be able to design inference systems

Modules	Blooms level*	Number of hours
Lab Session 1: Write a program to implement single layer perception algorithm.	L3 and L4	2
Lab Session 2: Write a program to implement back propagation learning algorithm	L3 and L4	4
Lab Session 3: Design multilayer feed forward network using back-propagation algorithm	L3 and L4	6
Lab Session 4 Study of fuzzy inference system	L1, L2, and L3	2
Lab Session 5 To study fuzzy logic controller using fuzzy logic toolbox	L1, L2, and L3	4
Lab Session 6 Write a program to implement SDPTA	L3 and L4	2
Lab Session 7 Write a program to implement RDPTA	L3 and L4	2
Lab Session 8 To Study various defuzziification techniques	L1, L2, and L3	2
Lab Session 9 Write a program to implement of fuzzy set operation	L2, L3, and L4	2

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation

Course Code: MLE4306	HADOOP LAB	L	T	P	C
Version 2020.1	Date of Approval: 19 July 2020	0	0	4	2
Pre-requisites/Exposure	Basic Concepts of DBMS				
Co-requisites	Relational Algebra and Relational Calculus				

Catalog Description

This course brings together several key big data technologies used for storage, analysis and manipulation of data. It also introduces the students the key concepts of Hadoop framework, MapReduce, Pig, Hive, and No-SQL. Students will learn to work on Hadoop platform. The concepts learnt will make students capable of working on big data projects easier.

Course Objectives

The objective of this course is

- To make students familiar with big data technologies.
- Provide an overview of Hadoop architecture and its working with other open source technologies.

Course Outcomes

On completion of this course, the students will be able to

CO1. Install and configure Hadoop and various tools like Pig, Hive etc.

CO2. Explain concepts of files and directories in HDFS and apply them in real database applications.

CO3. Design and implement mapreduce programs for a given problem.

CO4. Solve queries using concepts of Hive and Pig.

CO5. Perform operations using HBase.

Modules	Blooms level*	Number of hours
Lab Session 1 1. Installation & Configuration steps of Hadoop	L1 and L2	2
Lab Session 2-3 1. Working with HDFS commands :mkdir, rmdir, rm, mv, ls, du, put, rm-r, cat, tail etc 2. Working with vi editor	L1and L3	4
Lab Session 4-5 Working with Java Map Reduce : Map Class, Reduce Class, Drier Class, map side joins, reduce side joins	L1 and L3	4
Lab Session 6-8 1. Working with Hive : Queries for Hive : Create table, describe database, describe table, describe extended table, describe formatted table, drop table, drop database, display table, where clause 2. Commands : Load Files on table : Load from HDFS, load from local 3. Command :CTAS Create table as select 4. Queries to create external tables 5. Working with commands like : Order by, group by, like, upper, lower, max, min	L1 and L3	6

Lab Session 9-10 1. Working with PIG : Order by, group by, co group, like, upper, lower, Joins, Union, Cartesian, Product, Pig Scripts	L1 and L3	4
Lab Session 11-12 Working with HBase : Start the hbase, data insert, modify, multiple version insertion, describe, delete truncate, drop etc. Working with Foreign Key and Check Constraint.	L1 and L3	6

**Bloom's Level:*

Course Code: MLE4308	OPTIMIZATION TECHNIQUES	L	T	P	C
Version 2020.1	Date of Approval: 19 July 2020	3	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

The purpose of this course is to develop a knowledge in the field of optimization techniques their basic concepts, ,principles. linear programming and queuing theory.

Course Objectives

After successful completion of the course, student will be able to understand importance of optimization of industrial process management , apply basic concepts of mathematics to formulate an optimization problem , analyse and appreciate variety of performance measures for various optimization problems.

Course Outcomes

On completion of this course, the students will be able to

CO1: Understand importance of optimization of industrial process management.

CO2: Apply basic concepts of mathematics to formulate an optimization problem

CO3: Analyse and appreciate variety of performance measures for various optimization problems

CO4: Use classical optimization techniques and numerical methods of optimization

CO5: Apply knowledge of optimization to formulate and solve engineering problems

Modules	Blooms level*	Number of hours
MODULE 1: INTRODUCTION Introduction to optimization – adequate and optimum design – principles of optimization – statement of an optimization problem – classification – formulation of objective function, design constraints.	L1, L2	4
MODULE 2: CLASSICAL OPTIMIZATION TECHNIQUES Single variable optimization –multivariable optimization with no constraints – exhaustive search, Fibonacci method, golden selection, Random, pattern and gradient search methods – Interpolation methods: quadratic and cubic, direct root method.	L1, L2, L3 and L5 , L6	12
MODULE 3:MULTIVARIABLE – UNCONSTRAINED AND CONSTRAINED OPTIMIZATION Direct search methods – descent methods – conjugate gradient method. Indirect methods – Transformation techniques, penalty function method	L1, L3 and L4	8
MODULE 4:NON – TRADITIONAL OPTIMIZATION TECHNIQUES Genetic Algorithms -steady state algorithm, fitness scaling, inversion. Genetic programming:- Genetic Algorithm in problem solving, Implementing a Genetic Algorithm:- computer implementation, operator (reproduction, crossover and Mutation, Fitness Scaling, Coding, Discretization). Knowledge based techniques in Genetic Algorithm. Advanced operators and techniques in genetic search:-Dominance, Diploidy and Abeyance. Inversion and other reordering operators, Niche and speciation and Tabu search methods.	L1, L3, and L4	10
MODULE 5:OPTIMUM DESIGN OF MACHINE	L3 and	2

Desirable and undesirable effects – functional requirement – material and geometrical parameters – Design of simple axial, transverse loaded members for minimum cost and minimum weight.	L4	
---	----	--

Course Code: MLE4309	SOCIAL NETWORK DATA ANALYTICS	L	T	P	C
Version 2020.1	Date of Approval: 19 th July 2020	3	0	0	3
Pre-requisites/Exposure	Basis of Database and Networking				
Co-requisites					

Catalog Description

This course gives an introduction to social network analysis, with a focus on modelling. It provides an overview of research questions connected to social networks, and of descriptive measures, models, and methods of analysis that can be used to analyze empirical social network data. It helps to understand the online interactive demonstrations and hands-on analysis of real-world data sets.

Course Objectives

The objective of this course is to

- To provide students effective data-driven intelligence to improve their decisions making and systematically estimate the expected impact on relevant performance objectives
- To equip the students with data-driven intelligence tools, the basics of data mining techniques and develop a data-analytical approach to problem-solving with their application

Course Outcomes

On completion of this course, the students will be able to

CO1. Know the basic notation and terminology used in network science

CO2. Be able to visualize, summarize and compare networks.

CO3. Learn the basic principles behind network analysis algorithms

CO4. Develop practical skills of network analysis in R programming language

CO5: Be capable of analyzing real work networks

Course Content

Modules	Bloom's level	Number of Hours
Module I Introduction Overview: Social network data-Formal methods- Paths and Connectivity-Graphs to represent social relations-Working with network data- Network Datasets-Strong and weak ties - Closure, Structural Holes, and Social Capital.	L1, L2	6
Module II Community Discovery in Social Networks: Applications, Methods and Engineering Trends Introduction, Communities in Context, Core Methods, Quality Functions, The Kernighan-Lin (KL) Algorithm, Agglomerative/Divisive Algorithms, Spectral Algorithms, Multi-Level Graph Portioning, Markov Clustering. Other Approaches, Emerging Fields and Problems, Community Discovery in Dynamic Networks, Community Discovery in Heterogeneous Networks, Community Discovery in Directed Networks, Coupling Content and Relationship Information for Community Discovery,	L1, L2, L3	7

Module III Information Networks and the World Wide Web The Structure of the Web- World Wide Web- Information Networks, Hypertext, and Associative Memory- Web as a Directed Graph, Bow-Tie Structure of the Web-Link Analysis and Web Search, Searching the Web: Ranking, Link Analysis using Hubs and Authorities- Page Rank- Link Analysis in Modern Web Search, Applications, Spectral Analysis, Random Walks, and Web Search.	L1, L2, L3	5
Module IV Node Classifications in Social Networks Introduction, Problem Formulation, Representing Data As A Graph, The Node Classification Problem, Methods Using Local Classifiers, Iterative Classification Method, Random Walk Based Methods, Label Propagation, Graph Regularization, Adsorption, Applying Node Classification To Large Social Networks, Basic Approaches, Second-Order Methods, Implementation Within Map-Reduce, Inference Using Graphical Models, Metric Labelling, Spectral Partitioning, Graph Clustering, Variations on Node Classification	L1, L2, L3	6
Module V Data and Text Mining in Social Media Data Mining In Nutshell, Social Media, Motivations For Data Mining In Social Media, Data Mining Methods For Social Media, Data Representation, Data Mining- A Process, Social Networking Sites: Illustrative Examples, Related Efforts, Ethnography And Netnography, Event Maps, Text Mining: Keyword Search, Query Semantics And Answer Ranking, Keyword Search over Xmland Relational Data, Keyword Search Over Graph Data, Classification Algorithms, Clustering Algorithms, Transfer Learning in Heterogeneous Networks.	L1, L3, L4	6
Module VI Overview of Social Tagging Introduction, Problems With Metadata Generation and Fixed Taxonomies, Tags: Why And What?, Different User Tagging Motivations, Kinds Of Tags, Linguistic Classifications Of Tags, Game-Based Tagging, Tag Generation Models, Tagging System Design, Tag Analysis, Tagging Distributions ,Identifying Tag Semantics, Tags Versus Keywords, Visualization Of Tags, Tag Clouds For Browsing/Search, Tag Selection For Tag Clouds, Tag Hierarchy Generation, Tag Cloud Display Formats, Tag Evolution Visualization.	LI, L2	6

Course Code: MLE4310	AGENT BASED INTELLIGENT SYSTEMS	L	T	P	C
Version 2020.1	Date of Approval: 19 th July,2020	3	0	0	3
Pre-requisites/Exposure	Basics of Python				
Co-requisites	Nil				

Catalog Description

This course provides students basic knowledge of employing intelligent agents in solving complex problems and gives the awareness of the building blocks of agents and working of different types of agents. It also analyses the reasons for uncertainty and ability to design agents to handle them.

Course Objectives

The objective of this course is to

1. Equip the students with the knowledge of intelligent agents in solving complex problems.
2. Provide an overview of Building Agents, Knowledge Based Agents, Planning Agents and Higher Level Agents.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain the concept of knowledge intelligent agents and use in solving complex problems.

CO2: Describe the concept of **Concepts for Building Agents and Knowledge Based Agents.**

CO3: Explain the concept of **Planning Agents and Higher Level Agents.**

CO4:..Describe the concept of **Agents and Uncertainty and Higher Level Agents.**

Modules	Blooms level*	Number of hours
MODULE 1: Definitions – History – Hybrid Intelligent Agents – Agents vs Multi Agent Systems– Structure – Environment – Basic Problem Solving Agents – Complex Problem Solving Agents – Formulating Search Strategies – Intelligent Search.	L1, L2 ,L3	7
MODULE 2: Situated Agents: Actions and Percepts - Proactive and Reactive Agents: Goals and Events- Challenging Agent Environments: Plans and Beliefs - Social Agents - Agent Execution Cycle.	L1,L2, L3	8
MODULE 3: Knowledge Representation – Logic – First Order Logic – Reflex Agent – Building a Knowledge Base – General Ontology – Interference – Logical Recovery.	L1,L2, L3	7
MODULE 4: Situational Calculus – Representation of Planning – Partial Order Planning – Practical Planners– Conditional Planning - Preplanning Agents.	L1, L2 and L3	5
MODULE 5: Acting under uncertainty – Probability – Baye's Rule – Belief Networks – Utility Theory - Decision Network- Value of Information – Decision Theoretic Agent Design.	L1, L2,L3	5

MODULE 6: Learning Agents – General Model – Inductive Learning – Learning Decision Tree – Reinforcement Learning – Knowledge in Learning – Communicative Agents – Types of Communicative Agents – Future of AI.	L1, L2 and L3	4

Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

The objective of this course is to provide practical training on some live/demo projects that will increase capability to work on actual problem in industry. It will be an in house training on some latest software which is in high demand in market. This training will be designed such that it will be useful for their future employment in industry.

Course Objectives

The objective of this course is to

1. Provide practical training on live projects
2. Increase technical capabilities on solving real life problems in company environment

Course Outcomes

On completion of this summer internship, the students will be able to:

CO1: Demonstrate a sound technical knowledge of their selected project topic.

CO2: Design and develop engineering solutions to complex problems utilising a systems approach.

CO3: Analyse various approaches for solving a complex engineering problem using different tools and techniques

CO4: Demonstrate the knowledge, skills and attitudes of a professional engineer.

CO5: Apply technical skills and knowledge in completing the project.

Course Code: NCE4102	ADVANCED DATABASE MANAGEMENT SYSTEMS	L	T	P	C
Version 2020.1	Date of Approval: 19 July 2020	3	0	0	3
Pre-requisites/Exposure	Basic knowledge of DBMS				
Co-requisites	NIL				

Catalog Description

The objective of this course is to expose the students to the implementation techniques of database system. This course explains techniques for query processing and optimization with transaction and concurrency control techniques.

Course Objectives

The objective of this course is to

1. To understand the basic concepts and terminology related to DBMS and Relational Database Design
2. To design and understand Distributed, parallel and object oriented Databases.
3. To understand advanced DBMS techniques to handle and optimize queries in database.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Understand the basics of database management system and implementation of relational database.
- CO2. Knowhow of the file organization, Query Optimization, Transaction management, and database administration techniques.
- CO3. Understand and design Distributed, parallel and object oriented Databases models and possible methods of proving them.

Modules	Blooms level*	Number of hours
MODULE 1: Relational Database Integrity Constraints revisited, Extended ER diagram, Relational Algebra & Calculus, Functional, Multivalued and Join Dependency, Normal Forms, Rules about functional dependencies.	L1, L2 and L3	8
MODULE 2: Query Processing and Optimization Valuation of Relational Operations, Transformation of Relational Expressions, Indexing and Query Optimization, Limitations of Relational Data Model, Null Values and Partial Information. Objected Oriented and Object Relational Databases Modeling Complex Data Semantics, Specialization, Generalization, Aggregation and Association, Objects, Object Identity, Equality and Object Reference, Architecture of Object Oriented and Object Relational Databases	L1,L2,l3	9
MODULE 3: Parallel and Distributed Databases Distributed Data Storage – Fragmentation & Replication, Location and Fragment Transparency Distributed Query Processing and Optimization,	L1, L2 and L3	10

Distributed Transaction Modeling and concurrency Control, Distributed Deadlock, Commit Protocols, Design of Parallel Databases, and Parallel Query Evaluation. Advanced Transaction Processing Nested and Multilevel Transactions, Compensating Transactions and Saga, Long Duration Transactions, Weak Levels of Consistency, Transaction Work Flows, Transaction Processing Monitors.		
MODULE 4: Multimedia databases, Databases on the Web and Semi-Structured Data , Case Study: Oracle Xi	L1, L2	9

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

Course Code: NCE4103	DIGITAL COMPUTER ORGANIZATION	L	T	P	C
Version 2020.1	Date of Approval: 19 July2020	3	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

The Objective of this course is to expose the students to the fundamentals and the concepts of Digital & Computer Organization and Representation of Information and Basic Building Blocks, Basic Organization, Memory Organization, Input-Output Organization, Processor Organization etc. This course is designed to understand the concepts of Computer Organization for Research & Development as well as for application.

Course Objectives

The objective of this course is to

An understanding of a machine's instruction set architecture (ISA) including basic instruction fetch and execute cycles, instruction formats, control flow, and operand addressing modes.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Understand and Interpret the functional architecture of computing systems.
- CO2. Identify, compare and assess issues related to ISA, memory, control and I/O functions.
- CO3. Understand the general concepts in digital logic design, including logic elements, and their use in combinational and sequential logic circuit design.
- CO4. Design and analyze solutions in the area of computer architecture.

Modules	Blooms level*	Number of hours
MODULE 1: Parallel computer models The state of computing, Multiprocessors and multicomputers, Multivector and SIMD computers, Architectural development tracks Program and network properties: Conditions of parallelism, Data and resource dependences, Hardware and software parallelism, Program partitioning and scheduling, Grain size and latency, Program flow mechanisms, Control flow versus data flow, Data flow architecture, Demand driven mechanisms, Comparisons of flow mechanisms	L1, L2 and L3	7
MODULE 2: System Interconnect Architectures Network properties and routing, Static interconnection networks, Dynamic interconnection Networks, Multiprocessor system interconnects, Hierarchical bus systems, Crossbar switch and multiport memory, Multistage and combining network.	L1,L2,L3	8
MODULE 3: Processors and Memory Hierarchy Advanced processor technology, Instruction-set Architectures, CISC Scalar Processors, RISC Scalar Processors, Superscalar Processors, VLIW Architectures, Vector and Symbolic processors Memory Technology: Hierarchical memory technology, Inclusion, Coherence and Locality, Memory capacity planning, Virtual Memory	L1, L2 and L3	8

Technology		
MODULE 4: Backplane Bus System Backplane bus specification, Addressing and timing protocols, Arbitration transaction and interrupt, Cache addressing models, Direct mapping and associative caches. Pipelining: Linear pipeline processor, Nonlinear pipeline processor, Instruction pipeline design, Mechanisms for instruction pipelining, Dynamic instruction scheduling, Branch handling techniques, Arithmetic Pipeline Design, Computer arithmetic principles, Static arithmetic pipeline, Multifunctional arithmetic pipelines	L1, L2	7
MODULE 5: Vector Processing Principles Vector instruction types, Vector-access memory schemes. Synchronous Parallel Processing: SIMD Architecture and Programming Principles, SIMD Parallel Algorithms, SIMD Computers and Performance Enhancement	L2,L4	6

Version 2020.1	Date of Approval: 19 July 2020	3	0	0	3
Pre-requisites/Exposure	Basics of Computer Network				
Co-requisites	Nil				

Catalog Description

Advanced Computer Networks provides the knowledge of computer networks and related current research topics. This course illustrates the OSI and TCP-IP layers, services, devices, cables, protocols, network security, network performance parameters etc. This course focuses on advanced computer network concepts in theory as well as in real life applications in networking.

Course Objectives

The objective of this course is to

- Equip the students with the advanced networking concepts.
- Explain the different techniques of error detection and correction methods used at various layers.
- Provide an overview of various algorithms involved in advanced computer networks at OSI and TCP-IP Layers.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain the concept of reference model, wireless Ethernet standards, protocols and applications of networks.

CO2: Describe network Layer design issues, routing algorithms, IP addressing.

CO3: State Multicasting issues and multicast routing protocol. Describe mobile IP and its use in Multicasting.

CO4: State transport and application layers and explain services, protocols, performance parameters in these layers. Also describe DNS, Email and www with applications of each in computer network.

CO5: State network security and describe various types of computer network security, the digital signature, security algorithms. Explain the social issues related to network security and web security.

Modules	Blooms level*	Number of hours
MODULE 1: Uses computer networks, Reference Models, TCP/IP suite of protocols, MAC protocols for high-speed LANS, MANs, and wireless LANs. (For example, FDDI, DQDB, HIPPI, Gigabit Ethernet, Wireless Ethernet, etc.) Fast access technologies. (For example, ADSL, Cable Modem, etc.)	L1, L2	6
MODULE 2: Network Layer Design Issues, Routing Algorithms, Congestion Control Algorithms, Quality of Service, Internet Working, Network Layer in Internet. IPv6 basic protocol, extensions and options, support for QoS, security, etc., Changes to other protocols, Application Programming Interface for IPv6.	L2, L3	8
MODULE 3: Mobile IP, IP Multicasting. Multicast routing protocols, address assignments, session discovery, etc.	L1, L2	8
MODULE 4: The Transport Protocol: The Transport Service, Elements of transport	L1, L2, and L3	8

protocol, a simple Transport Protocol, Internet Transport Protocols UDP, Internet Transport Protocols TCP, TCP extensions for high-speed networks, transaction-oriented applications Performance Issues. The Application Layer: DNS-(Domain Name System), Electronic Mail, World Wide Web Multimedia.		
MODULE 5: Overview of network security, Secure-HTTP, SSL, ESP, Key distribution protocols. Digital signatures, digital certificates-mail Security, Web security, Social Issues..	L1, L2	6

**Bloom's Level:*

Course Code: NCE4106	ADVANCED DATABASE MANAGEMENT SYSTEM LAB	L	T	P	C
Version 2020.1	Date of Approval: 19 July 2020	0	0	2	1
Pre-requisites/Exposure	Basic knowledge of DBMS				
Co-requisites	Nil				

Catalog Description

The objective of this course is to expose the students to the implementation techniques of database system. This course explains techniques for query processing and optimization with transaction and concurrency control techniques.

Course Objectives

The objective of this course is

1. Equip the students with the different issues involved in the design and implementation of a database system.
2. Provide a practical knowledge of implementation/demonstration of data manipulation language to query, update, and manage a database.

Course Outcomes

On completion of this course, the students will be able to

CO1. Demonstrate and analyze and apply common SQL statements including DDL, DML and DCL statements to perform different operations.

CO2. Demonstrate and Apply different types of constraints on the database.

CO3. Design different views of tables for different users and to apply embedded and nested queries.

CO4. Design and implement a database for a given problem according to well known design principles that balance data retrieval performance with data consistency.

Modules	Blooms level*	Number of hours
Module1: 1. Introduction to SQL and understand basic commands 2. Understand various DDL and DML commands. 3. To understand joins in SQL.	L1,L2 and L3	4
Module 2: 1. To understand constraints SQL 2. Wild cards and aggregate functions in SQL 3. To understand and execute procedures and views in SQL	L2 and L3	6
Module 3: 1. To understand and execute triggers in SQL 2. To develop a database application to demonstrate the representation of multi valued attributes and use of nested tables to represent complex objects. Write suitable queries	L2, L3, L4 and L5	4
Module 4: 1. To understand and execute Indexes in SQL	L2, L3 and L4	4
Module 5: 1. To understand the concept of Exception handling in SQL 2. Query Evaluation Plans 3. Concurrency and Transactions	L2, L3 and L4	1

Co-requisites	Nil				

Catalog Description

Advanced Computer Networks Lab provides the knowledge of various installations & connections of LAN, WAN, etc, study of Cisco Packet Tracer Tool and its implementations, simulation of flow-control protocols such as Sliding Window, Stop & Wait with help of programming languages. This course focuses on real-life applications in networking and its software implementation in the laboratory.

Course Objectives

The objective of this course is to

1. Equip the students with the advanced networking concepts.
2. Explain the different techniques of error detection and correction methods used at various layers.
3. Provide an overview of various algorithms involved in advanced computer networks at OSI and TCP-IP Layers.

Course Outcomes

On completion of this course, the students will be able to

- CO1: Understand fundamental underlying principles of computer networking
- CO2: Understand details and functionality of CISCO router
- CO3: Demonstrate and configure details and functionality of DHCP server
- CO4: Analyze performance of various communication protocols.
- CO5: Compare routing algorithms

Modules	Blooms level*	Number of hours
MODULE 1: 1. Configuration and logging to a CISCO Router and introduction to the basic user Interfaces. Introduction to the basic router configuration and basic commands. 2. Configuration of IP addressing for a given scenario for a given set of topologies.	L1, L2	2
MODULE 2: 1. Configure a DHCP Server to serve contiguous IP addresses to a pool of four IP devices with a default gateway and a default DNS address. Integrate the DHCP server with a BOOTP demon to automatically serve Windows and Linux OS Binaries based on client MAC address	L2, L3	2
MODULE 3: 1. Configure, implement and debug the following: Use open source tools for debugging and diagnostics. a. ARP/RARP protocols b. RIP routing protocols c. BGP routing d. OSPF routing protocols e. Static routes (check using netstat)	L1, L2	3
MODULE 4:	L1, L2,	3

<ol style="list-style-type: none"> 1. Configure DNS: Make a caching DNS client, and a DNS Proxy; implement reverse DNS and forward DNS, using TCP dump/Wireshark characterise traffic when the DNS server is up and when it is down. 2. Configure FTP Server on a Linux/Windows machine using a FTP client/SFTP client characterise file transfer rate for a cluster of small files 100k each and a video file of 700mb. Use a TFTP client and repeat the experiment 	and L3	
MODULE 5: <ol style="list-style-type: none"> 1. Configure a mail server for IMAP/POP protocols and write a simple SMTP client in C/C++/Java client to send and receive mails. 2. Implement Open NMS+ SNMPD for checking Device status of devices in community MIB of a linux PC. Using yellow pages and NIS/NFS protocols implement Network Attached Storage Controller (NAS). Extend this to serve a windows client using SMB. Characterise the NAS traffic using wireshark. 	L1, L2	3

Course Code: NCE4108	MATLAB PROGRAMMING	L	T	P	C
Version 2020.1	Date of Approval: 19 July 2020	0	0	4	2
Pre-requisites/Exposure	C Programming				
Co-requisites	Basic knowledge of Programming				

Catalog Description

The objective of this course is to expose the students to the implementation techniques of Mat Lab Programming.

Course Objectives

The objective of this course is to

- To understand the basic concepts and terminology related to Mat Lab.
- Application of Mat Lab in field of Signal Processing and Control systems.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Understand the basics of Matlab programming environment.
CO2. Analysis of given LTI System and verifying its physical reliability and stability properties.
CO3. Waveform synthesis using Laplace Transforms and z-transform of a given signal and system.

Modules	Blooms level*	Number of hours
1. To write a MATLAB program to perform some basic operation on matrices such as addition, subtraction, multiplication. 2. To write a "MATLAB" Program to generate various signals and sequences, such as unit impulse, unit step, unit ramp, sinusoidal, square, saw tooth, triangular, sinc signals. 3. To performs operations on signals and sequences such as addition, multiplication, scaling, shifting, folding, computation of energy and average power. 4. Write a program for finding even and odd parts of sequences Using MATLAB Software & program for finding real and imaginary parts of sequences Using MATLAB Software.	L1, L2 and L3	8
5. Write a program to find the out put with linear convolution operation Using MATLAB Software 6. Write a program to compute auto correlation and cross correlation between signals and Sequences. 7. Write a program to compute linearity and time invariance properties of a given continuous /discrete System.	L1,L2,L3	6
8. Write a program to Unit Step And Sinusoidal Response Of The Given LTI System And Verifying Its physical reliability and stability properties. 9. Write a program to demonstrate Gibbs Phenomenon using MATLAB. 10. Write a program to obtain Fourier Transform and Inverse Fourier Transform of a given signal / sequence and to plot its Magnitude and Phase Spectra 11. Write a program to perform waveform synthesis using Laplace	L1, L2 and L3	8

Transforms of a given signal.		
12. Write a program to locating the zeros and poles and plotting the pole zero maps in s-plane and z-plane 13. for the given transfer function. 14. Write a program to Generate Gaussian Noise and to Compute its Mean, M.S. Values, Skew, kurtosis, 15. PS and PDF 16. Write a program to demonstrate Sampling Theorem and aliasing effect using MATLAB. 17. Write a program for removal of noise by auto correlation/cross correlation.	L1, L4	12

Course Code: NCE4109	PYTHON PROGRAMMING LAB	L	T	P	C
Version 2020.1	Date of Approval: 19 July2020	0	0	2	1
Pre-requisites/Exposure	Hands on knowledge of C and C++ Programming				
Co-requisites	Basic concepts of OOP Programming				

Catalog Description

The course is designed to provide an introduction to the Python programming language. The focus of the course is to provide students with an introduction to programming, I/O, and visualization using the Python programming language.

Course Objectives

The objective of this course is

- Equip the students with the basic feature of python required in solving complex problems and build GUI applications
- Provide a practical knowledge of implementation/demonstration of python programming concepts like of lists, tuples, dictionaries, Object Oriented Programming concepts in Python, Strings and Files in Python.

Course Outcomes

On completion of this course, the students will be able to

- CO 1: Demonstrate the basics of python programming using if-else, loops and List, Dictionary, tuples.
- CO 2: Demonstrate the concept of inheritances, polymorphisms and other concepts and able to solve complex programming problems involving class objects.
- CO 3: Demonstrate the ability to write database applications in Python
- CO 4: Demonstrate Files Handling in Python.
- CO 5: Demonstrate database operation and GUI applications in python.

Modules	Blooms level*	Number of hours
4. Write a program which will find all such numbers which are divisible by 7 but are not a multiple of 5,between 2000 and 3200 (both included). The numbers obtained should be printed in a comma-separated sequence on a single line. 5. Create a program that asks the user to enter their name and their age. Print out a message addressed to them that tells them the year that they will turn 100 years old. 6. Define a function max() that takes two numbers as arguments and returns the largest of them. Use the if-then-else construct available in Python. (It is true that Python has the max() function built in, but writing it yourself is nevertheless a good exercise.) 7. Define a function max_of_three() that takes three numbers as arguments and returns the largest of them.	L1,L2 and L3	4
8. Define a function that computes the length of a given list or string. (It is true that Python has the len() function built in, but writing it yourself is nevertheless a good exercise.) 9. Write a function that takes a character (i.e. a string of length 1) and returns True if it is a vowel, False otherwise. 10. Write a function translate() that will translate a text into "rövarspråket" (Swedish for "robber's language"). That is, double	L2 and L3	6

<p>every consonant and place an occurrence of "o" in between. For example, translate("this is fun") should return the string "tothohisosisosfofunon".</p> <p>11. Define a function sum() and a function multiply() that sums and multiplies (respectively) all the numbers in a list of numbers. For example, sum([1, 2, 3, 4]) should return 10, and multiply([1, 2, 3, 4]) should return 24.</p> <p>12. Define a function reverse() that computes the reversal of a string. For example, reverse("I am testing") should return the string "gnitset ma I".</p>		
<p>13. Ask the user for a number. Depending on whether the number is even or odd, print out an appropriate message to the user</p> <p>14. Take a list, say for example this one: a = [1, 1, 2, 3, 5, 8, 13, 21, 34, 55, 89] and write a program that prints out all the elements of the list that are less than 5.</p> <p>15. Create a program that asks the user for a number and then prints out a list of all the divisors of that number. (If you don't know what a divisor is, it is a number that divides evenly into another number. For example, 13 is a divisor of 26 because 26 / 13 has no remainder.)</p> <p>16. Take two lists, say for example these two: a = [1, 1, 2, 3, 5, 8, 13, 21, 34, 55, 89] b = [1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13] and write a program that returns a list that contains only the elements that are common between the lists (without duplicates). Make sure your program works on two lists of different sizes.</p>	L2, L3, L4 and L5	4
<p>17. Ask the user for a string and print out whether this string is a palindrome or not. (A palindrome is a string that reads the same forwards and backwards.)</p> <p>18. Let's say I give you a list saved in a variable: a = [1, 4, 9, 16, 25, 36, 49, 64, 81, 100]. Write one line of Python that takes this list a and makes a new list that has only the even elements of this list in it.</p> <p>19. Make a two-player Rock-Paper-Scissors game. (Hint: Ask for player plays (using input), compare them, print out a message of congratulations to the winner, and ask if the players want to start a new game)</p> <p>Remember the rules:</p> <ul style="list-style-type: none"> • Rock beats scissors • Scissors beats paper • Paper beats rock 	L2, L3 and L4	4
<p>20. Write a program that asks the user how many Fibonnaci numbers to generate and then generates them. Take this opportunity to think about how you can use functions. Make sure to ask the user to enter the number of numbers in the sequence to generate.(Hint: The Fibonnacisequence is a sequence of numbers where the next number in the sequence is the sum of the previous two numbers in the sequence. The sequence looks like this: 1, 1, 2, 3, 5, 8, 13, ...)</p> <p>21. Write a program (function!) that takes a list and returns a new list that contains all the elements of the first list minus all the duplicates.</p> <p>22. Write a function that takes an ordered list of numbers (a list where the elements are in order from smallest to largest) and another number. The function decides whether or not the given number is inside the list and returns (then prints) an appropriate boolean.</p>	L2, L3 and L4	1

Course Code: NCE4202	NETWORK AND WIRELESS SECURITY	L	T	P	C
Version 2020.1	Date of Approval: 19, July 2020	3	0	0	3
Pre-requisites/Exposure	Basics of Network				
Co-requisites	Nil				

Catalog Description

In this course the concepts of network and wireless security are discussed in detail. The wireless technologies, techniques and methodologies will be introduced. The studies will be made on impact of the thoughtfulness and longevity of implementations. The concepts learnt in the studies of wireless application protocols and other protocols will be applied in the studies and analysis of security issues in wireless networks.

Course Objectives

The objective of this course is to

- Equip the students with concepts of network wireless security.
- Provide an overview of spread spectrum, cellular network, WLAN, WAP, WTLS, SSH, Bluetooth security.

Course Outcomes

On completion of this course, the students will be able to

- CO1: Explain wireless security issues and its recent trends in wireless networks, cellular networks and all generations of wireless technologies.
- CO2: Describe wireless transmission media, spread spectrum and its techniques, wireless standards and various threats and countermeasures in network security. Write the steps of authentication techniques.
- CO3: Demonstrate the working of WAP Model and comparison with TCP/IP, OSI models; state the terminologies: viruses, authorization, non repudiation, secure sessions, security products; Construct WAP security architecture and elaborate its fields; determine issues related to marginal security.
- CO4: Describe secure socket layer and transport layer security; Design SSL in OSI reference model. Draw authentication header format and describe each field of AH; Distinguish SSL/TLS; Explain WTLS and fix vulnerabilities of WTLS; Discuss LEAP with reference to WTLS.
- CO5: Design and configure Bluetooth security technology; Designing its security architecture; determine security functions of the service discovery protocol. Discuss issues related encryption with ciphers. Compare threats to Bluetooth security. Write Bluetooth holes in Bluetooth technology.

Modules	Blooms level*	Number of hours
MODULE 1: Network concepts – Threats in networks – Network security controls – Importance of security – Threat models – Security concepts – Common mitigation methods Why is Wireless Different? Introduction ,Protecting the Means Of Communication Protecting Privacy, Promoting Safety ,The Personal and the Public ,Shaking Up the Status Quo ,Understanding Wireless Forecasts ,Reasonable Degrees of Security, Regulatory Environments and Issues, Security-Related Regulations ,Security Related Market Factors, Guidelines for Security Measures, Cellular Networks and Bearer	L1, L2 and L3	6

Technologies ,First-Generation Wireless (1G), Second-Generation Wireless (2G), Spread Spectrum, Code Division Multiple Access (CDMA) ,Time Division Multiple Sccess (TDMA) , Global System for Mobile Communications (GSM) ,Third-Generation Wireless (3G) ,Short Message Service (SMS) ,Fourth-Generation Wireless (4G)		
MODULE 2: The Wireless Local Area Network (WLAN) Wireless Transmission Media, Infrared Systems ,Narrowband Radio System, Wideband Radio Systems: Spread Spectrum, Frequency-Hopping Spread Spectrum (FHSS) ,Direct-Sequence Spread Spectrum (DSSS) ,WLAN Products and Standards—Today’s Leaders?,802.11 Security? IEEE 802.11b ,Securing WLANs ,Eavesdropping ,Unauthorized Access , Interference and Jamming ,Physical Threats ,Countermeasures, Frequency-Hopping Spread Spectrum (FHSS), Direct-Sequence Spread Spectrum (DSSS) ,Infrared (IR) ,Narrowband ,The Infamous WEP ,Encryption ,Authentication, Wired Equivalency Protocol Flaws Too Public , Other Authentication Techniques ,Physical Security	L1, L2 and L3	8
MODULE 3: Wireless Application Protocol(WAP) Comparison of the TCP/IP, OSI, and WAP Models, How WAP Works ,The Security Status of WAP , Viruses ,Authorization ,Non-repudiation ,Authentication, Secure Sessions ,Security Products ,Securant Technologies Clear Trust Control, WAP Security Architecture ,Marginal Security ,Wireless Access to the Internet, Wireless Middleware	L1, L2 and L3	8
MODULE 4: Wireless Transport Layer Security (WTLS) Secure Socket Layer, Record Protocol, SSL Handshake Protocol ,Transport Layer Security, Advantages and Disadvantages of SSL/TLS, Netscape ,Microsoft ,Entrust ,EAP-TLS ,Alternatives to SSL/TLS IP Security (IPSec) ,Authentication Header Protocol (AH) ,Encapsulating Security Payload (ESP) ,Transport and Tunnel Modes, Secure Shell (SSH) ,SSH Transport Layer Protocol ,SSH Versus TLS Implementations ,Light Extensible Authentication Protocol (LEAP) ,Wireless Transport Layer Security and WAP ,Understanding Wireless Transport Layer Security , WTLS Handshake Protocol ,WTLS Alert Protocol ,WTLS Change Cipher Protocol ,Pros and Cons of WTLS ,WTLS Vulnerabilities ,Implementations of WTLS	L2, L3 and L4	8
MODULE 5: Bluetooth Security Bluetooth Basic Specifications ,Bluetooth Technology, Bluetooth Specification Development ,Design Decisions ,Piconets ,Bluetooth Security Architecture ,Scatternets ,The Bluetooth stack, Security Functions at the Baseband Layer ,Security Functions of the Service Discovery Protocol ,Security Functions at the Link Layer, Frequency-Hopping , Channel Establishment ,Security Manager ,Authentication, Authentication with the SAFER1 Block Cipher ,Encryption ,Encryption Modes ,Key Length Negotiation ,Encryption With the E0 Stream Cipher ,Threats to Bluetooth Security ,Jamming ,Bluetooth holes.	L1, L2 and L3	6

Course Code: NCE4203	CYBER CRIME INVESTIGATIONS & IT LAW	L	T	P	C
Version 2020.1	Date of Approval: 19 July 2020	3	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

Level of security which is related to the safety of computer systems, data and network is very important in today era. If cyber-crime comes in the frame, how it detect, react and measure on our network and system. The police and law related to each cyber crime today. This course focuses on different types of attacks and its policies.

Course Objectives

The objective of this course is to

- Equip the students with the laws and its safety concepts used in cyber crime.
- Provide an overview of different attacks and prevention technique in a network.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain and Understand the Cyber Crime and its Investigations as a Profession.

CO2: Describe the different type of attacks and cyber crime.

CO3 : Conduct the computer investigations and implement the laws for its solution.

CO4: Processing cyber-crime in investigation according to the law.

CO5: Apply diverse viewpoints to ethical dilemmas in the information technology field and recommend appropriate actions.

Modules	Blooms level*	Number of hours
MODULE 1: POWER OF ARREST WITHOUT WARRANT UNDER THE IT ACT, 2000: A CRITIQUE Crimes of this Millennium, Section 80 of the IT Act, 2000 – A Weapon or a Farce, Forgetting the Line Between Cognizable and Non-Cognizable Offences, Necessity of Arrest without Warrant from Any Place, Public or Otherwise, Checks and Balances Against Arbitrary Arrests, Arrest for “About to Commit” an Offence Under the IT Act: A Tribute to Draco, Arrest, But No Punishment.	L1, L2 and L3	7
MODULE 2: CYBER CRIME AND CRIMINAL JUSTICE: PENALTIES, ADJUDICATION AND APPEALS UNDER THE IT ACT, 2000 Concept of ‘Cyber Crime’ and the IT Act, 2000, Hacking, Teenage Web vandals, Cyber Fraud and Cyber cheating, Virus on the Internet, Defamation, Harassment and E-mail Abuse, Cyber Pornography, Other IT Act Offences, Monetary Penalties, Adjudication and Appeals Under IT Act, 2000, Network Service Providers, Jurisdiction and cyber Crimes, Nature of Cyber Criminality, Strategies to Tackle Cyber Crime and Trends, Criminal Justice in India and Implications on Cyber Crime.	L1, L2 and L3	8
MODULE 3: JURISDICTION IN THE CYBER WORLD Questioning the Jurisdiction and Validity of the Present Law of Jurisdiction,	L1, L2 L3 and L4	9

Civil Law of Jurisdiction in India, Cause of Action, Jurisdiction and the Information Technology Act, 2000, Foreign Judgments in India, Place of Cause of Action in Contractual and IPR Disputes, Exclusion Clauses in Contracts, Abuse of Exclusion Clauses, Objection of Lack of Jurisdiction, Misuse of the Law of Jurisdiction, Legal Principles on Jurisdiction in the United States of America, Jurisdictional Disputes W.R.T. the Internet in the United States of America.		
MODULE 4: BATTLING CYBER SQUATTERS AND COPYRIGHT PROTECTION IN THE CYBER WORLD Concept of Domain Name and Reply to Cyber Squatters, Meta-Tagging, Legislative and Other Innovative Moves Against Cyber Squatting, The Battle Between Freedom and Control on the Internet, Works in Which Copyright Subsists and Meaning of Copyright, Copyright Ownership and Assignment, Licence of Copyright, Copyright Term and Respect for Foreign Works, Copyright Infringement, Remedies and Offences, Copyright Protection of Content on the Internet; Copyright Notice, Disclaimer and Acknowledgement, Downloading for Viewing Content on the Internet, Hyper-linking and Framing, Liability of ISPs for Copyright violations in the Cyber World: Legal Developments in the US, Napster and its Cousins: A Revolution on the Internet but a Crisis for Copyright Owners, Computer Software Piracy.	L1, L2, L3, L4, L5 and L6	7
MODULE 5: PROTECTION OF CYBER CONSUMERS IN INDIA Are Cyber consumers Covered Under the Consumer Protection Act, Goods and Services, Consumer Complaint, Defect in Goods and Deficiency in Services, Restrictive and Unfair Trade Practices, Instances of Unfair Trade Practices, Reliefs Under CPA, Beware Consumers, Consumer Foras, Jurisdiction and Implications on Cyber Consumers in India, Applicability of CPA to Manufacturers, Distributors, Retailers and Service Providers Based in Foreign Lands Whose Goods are Sold or Services Provided to a consumer in India	L1, L2, and L3	5

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation

Catalog Description

Level of security which is related to the safety of computer systems, data and network is very important in today era. If cyber crime come in the frame, how it detect, react and measure on our network and system. The police and law related to each cyber crime today. This course focuses on different type attack and investigation level, police comes under the parameter of cyber law on network which can be applied in designing secure network applications in the modern computing environment.

Course Objectives

The objective of this course is to

- Equip the students with the investigation concepts used in cyber crime.
- Provide an overview of different attacks and prevention technique in a network.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain and Understand the Computer Forensics and Investigations as a Profession.

CO2: Describe the different type of attacks and cyber crime.

CO3 : Conduct the computer investigations and implement data acquisition concept in investigation.

CO4: Processing cyber crime and incident scenes in investigation according to the law.

CO5: Use the different -2 computer forensics tools in modern era according to the type of crime

Modules	Blooms level*	Number of hours
MODULE 1: COMPUTER FORENSICS AND INVESTIGATIONS AS A PROFESSION, UNDERSTANDING Computer Forensics ,Computer Forensics Versus Other Related Disciplines ,A Brief History of Computer Forensics, Understanding Case Law ,Developing Computer Forensics Resources ,Preparing for Computer Investigations, Understanding Law Enforcement Agency Investigations, Following the Legal Processes, Understanding Corporate Investigations, Establishing Company Policies, Displaying Warning Banners ,Designating an Authorized Requester, Conducting Security Investigations, Distinguishing Personal and Company Property ,Maintaining Professional Conduct.	L1, L2 and L3	7
MODULE 2: UNDERSTANDING COMPUTER INVESTIGATIONS Preparing a Computer Investigation, An Overview of a Computer Crime ,An Overview of a Company Policy Violation ,Taking a Systematic Approach ,Assessing the Case ,Planning Your Investigation ,Securing Your Evidence ,Procedures for Corporate High-Tech Investigations, Employee Termination	L1, L2 and L3	8

Cases, Internet Abuse Investigations-mail Abuse Investigations, Attorney-Client Privilege Investigations, Media Leak Investigations, Industrial Espionage Investigations, Interviews and Interrogations in High-Tech Investigations ,Understanding Data Recovery Workstations and Software, Setting Up Your Workstation for Computer Forensics ,Conducting an Investigation, Gathering the Evidence ,Understanding Bit-stream Copies ,Acquiring an Image of Evidence Media, Using Pro-Discovers Basic to Acquire a USB Drive ,Analyzing Your Digital Evidence, Completing the Case, Critiquing the Case		
<p>MODULE 3:</p> <p>DATA ACQUISITION</p> <p>Understanding Storage Formats for Digital Evidence, Raw Format, Proprietary Formats,Advanced Forensic Format ,Determining the Best Acquisition Method, Contingency Planning for Image Acquisitions ,Using Acquisition Tools ,Windows XP Write-Protection with USB Devices, Acquiring Data with a Linux Boot CD, Capturing an Image with Pro-Discovers Basic ,Capturing an Image with Access Data FTK Imager ,Validating Data Acquisitions ,Linux Validation Methods, Windows Validation Methods ,Performing RAID Data Acquisitions ,Understanding RAID ,Acquiring RAID Disks ,Using Remote Network Acquisition Tools ,Remote Acquisition with Pro Discover, Remote Acquisition with EnCase Enterprise , Remote Acquisition with R-Tools R-Studio ,Remote Acquisition with WetStone Livewire, Remote Acquisition with F-Response ,Remote Acquisition with Runtime Software ,Using Other Forensics Acquisition Tools, SnapBackDataArrest ,NTI Safe Back,DIBS USA RAID ,Look Investigator I imager ,ASR Data SMART ,Australian Department of DefencePyFlag,</p>	L1, L2 L3 and L4	9
<p>MODULE 4:</p> <p>PROCESSING CRIME AND INCIDENT SCENES</p> <p>Identifying Digital Evidence, Understanding Rules of Evidence ,Collecting Evidence in Private-Sector Incident Scenes, Processing Law Enforcement Crime Scenes ,Understanding Concepts and Terms Used in Warrants ,Preparing for a Search ,Identifying the Nature of the Case, Identifying the Type of Computing System, Determining Whether You Can Seize a Computer, Obtaining a Detailed Description of the Location, Determining Who Is in Charge, Using Additional Technical Expertise ,Determining the Tools You Need ,Preparing the Investigation Team, Securing a Computer Incident or Crime Scene ,Seizing Digital Evidence at the Scene ,Preparing to Acquire Digital Evidence, Processing an Incident or Crime Scene ,Processing Data Centers with RAID Systems ,Using a Technical Advisor, Documenting Evidence in the Lab, Processing and Handling Digital Evidence ,Storing Digital Evidence, Evidence Retention and Media Storage Needs, Documenting Evidence ,Obtaining a Digital Hash, Reviewing a Case ,Sample Civil Investigation ,Sample Criminal Investigation ,Reviewing Background Information for a Case ,Identifying the Case Requirements, Planning the Investigation ,Conducting the Investigation: Acquiring Evidence with AccessData FTK</p>	L1, L2, L3,L4,L5 and L6	7
<p>MODULE 5:</p> <p>CURRENT COMPUTER FORENSICS TOOLS</p>	L1, L2, and L3	5

Evaluating Computer Forensics Tool Needs ,Types of Computer Forensics Tools ,Tasks Performed by Computer Forensics Tools, Tool Comparisons ,Other Considerations for Tools ,Computer Forensics Software Tools, Command-Line Forensics Tools, UNIX/Linux Forensics Tools ,Other GUI Forensics Tools, Computer Forensics Hardware Tools, Forensic Workstations, Using a Write-Blocker, Recommendations for a Forensic Workstation,Validating and Testing Forensics Software ,Using National Institute of Standards and Technology (NIST) Tools ,Using Validation Protocols

Course Code: NCE4205	INTRUSION DETECTION AND PREVENTION SYSTEM	L	T	P	C
Version 2020.1	Date of Approval: 19 July 2020	3	0	0	3
Pre-requisites/Exposure	Basic Networking				
Co-requisites	Nil				

Catalog Description

Intrusion Detection System (IDS) is a rapidly growing field that deals with detecting and responding to malicious network traffic and computer misuse. Intrusion detection is the process of identifying and (possibly) responding to malicious activities targeted at computing and network resources. Any hardware or software automation that monitors, detects or responds to events occurring in a network or on a host computer is considered relevant to the intrusion detection approach. This course introduces various network malicious activities, detection techniques and evaluation criteria.

Course Objectives

The objective of this course is to

- Equip the students with various network attacks and their examples.
- Provide knowledge of various approaches to develop IDS and also to evaluate them.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain the network attacks and their possible reasons.

CO2: Compare currently available detection approaches to detect intrusion and anomalous activities.

CO3: Understand strengths and weaknesses of machine learning and data mining approached to choose the best approach to design and develop IDS.

CO4: Apply number of approaches to evaluate IDS using various evaluation criteria.

Modules	Blooms level*	Number of hours
MODULE 1: NETWORK ATTACKS Attack Taxonomies, Probes: IPSweep and PortSweep, NMap ,MScan, SAINT , Satan, Privilege Escalation Attacks: Buffer Overflow Attacks, Misconfiguration Attacks , Race-condition Attacks , Man-in-the-Middle Attacks. Social Engineering Attacks. Denial of Service (DoS) and Distributed Denial of Service (DDoS) Attacks: Detection Approaches for DoS and DDoS Attacks, Prevention and Response for DoS and DDoS Attacks, Examples of DoS and DDoS Attacks. Worms Attacks: Modeling and Analysis of Worm Behaviors, Detection and Monitoring of Worm Attacks, Worms Containment, Examples of Well Known Worm Attacks. Routing Attacks: OSPF Attacks, BGP Attacks.	L1 and L2	6
MODULE 2: DETECTION APPROACHES Misuse Detection: Pattern Matching, Rule-based Techniques, State-based Techniques, Techniques based on Data Mining Anomaly Detection: Advanced Statistical Models, Rule based Techniques, Biological Models, Learning Models Specification-based Detection, Hybrid Detection	L1 and L2	8
MODULE 3: THEORETICAL FOUNDATION OF DETECTION Taxonomy of Anomaly Detection Systems, Fuzzy Logic,	L1, L2 and L3	10

Bayes Theory, Artificial Neural Networks, Support Vector Machine (SVM), Evolutionary Computation, Association Rules, Clustering, Signal Processing Techniques Based Models, Comparative Study of Anomaly Detection Techniques		
MODULE 4: ARCHITECTURE AND IMPLEMENTATION Centralized, Distributed, Cooperative Intrusion Detection, Alert Management and Correlation: Data Fusion, Alert Correlation, Cooperative Intrusion Detection	L1 and L2	4
MODULE 5: EVALUATION CRITERIA & INTRUSION RESPONSE Accuracy, Performance, Completeness, Timely Response, Adaptation and Cost-Sensitivity, Intrusion Tolerance and Attack Resistance, Test, Evaluation and Data Sets. Response Type, Response Approach, Survivability and Intrusion Tolerance, Case study of any commercial IDS.	L2 and L4	4

Course Code: NCE4206	RESEARCH METHODOLOGY AND TECHNICAL REPORT WRITING	L	T	P	C
Version 2020.1	Date of Approval: 19 July 2020	2	0	0	2
Pre-requisites/Exposure	NIL				
Co-requisites	NIL				

Catalogue Description

This course deals with types of research, significance and characteristics and planning a research proposal, population and sample, parameter and statistic, sampling and data collection, sampling design: steps, types, sample size, sampling methods. It deals with univariate, bivariate and multivariate analysis, measure of dispersion of data, standard deviation, variance, coefficient of variation and degree of freedom. Hypothesis testing: parametric tests and non-parametric tests, regression analysis and curve fitting, method of least-squares, explained and unexplained variations, coefficient of correlation of determination. The course also deals with technical/scientific/research report writing: referencing and bibliography and footnotes. Publication of research papers, citations, intellectual property rights and copy rights, plagiarism, patent and patent laws, commercialization and ethical issues.

Course Objectives

The objective of this course is to:

- Deals with types of research, significance and characteristics and planning a research proposal and to enhance scientific and technical writing and research skills.
- Impart knowledge about various stages of research process, statistical analysis and tools & their applications in decision making by hypothesis testing and regression analysis.
- It also deals with intellectual property rights and copy rights, plagiarism, patent and patent laws, commercialization and ethical issues.

Course Outcomes

On completion of this course, the students will be able to:

- CO1. Classify different research types, explain steps in research process and planning research proposal.
- CO2. Describe sampling methods, sampling steps and design, carry out data processing and analysis.
- CO3. Explain hypothesis testing, parametric and non-parametric tests, carry out regression analysis, curve fitting.
- CO4. Demonstrate technical and scientific report writing skills, describe plagiarism, patent laws and intellectual property rights.

Course Content

Modules	Blooms level*	Number of hours
Module I: Introduction and Research Planning		
Introduction to research: Definition, motivation, need, objectives, significance and characteristics of research; types of research; steps in research process; planning a research proposal; literature review, web searching.	L1, L2	4
Module II: Sampling Methods	L1, L2, L3	5

Measurement scales, population and sample, parameter and statistic, sampling and data collection, sampling design: steps, types, sample size, sampling methods, data processing and analysis. Sampling surveys and questionnaire designing, primary and secondary data.		
Module III: Hypothesis Testing and Regression Analysis Univariate, bivariate and multivariate analysis, means-arithmetic, geometric and harmonic; measure of dispersion of data, standard deviation, variance, coefficient of variation and degree of freedom. Hypothesis testing: kinds errors in hypothesis testing, significance and confidence levels, parametric tests and non-parametric tests, one-tailed and two-tailed tests, analysis of variance. Regression analysis and curve fitting, method of least-squares, explained and unexplained variations, coefficient of correlation of determination.	L1, L3, L4	10
Module IV: Technical Report Writing and Plagiarism Technical/scientific/research report writing: structure and components of scientific reports, formats of dissertations, research report, report writing skills, report preparation, referencing and bibliography and footnotes. Publication of research papers, citations, making presentation-use of visual aids and PPTs. Intellectual property rights and copy rights, plagiarism, patent and patent laws, commercialization and ethical issues.	L1, L3, L4	5

Catalog Description

Modern cryptography applies theory from mathematics and computer science to design and implement strong encryption methods which are so important to the safety of computer systems today. This course focuses on building strong mathematical foundations which can be applied in designing secure cryptographic applications in the modern computing environment.

Course Objectives

The objective of this course is to

- Equip the students with the mathematical concepts used in cryptography.
- Provide an overview of different mathematical structures used in designing cryptographic algorithms.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain and apply the concept of modular arithmetic in cryptographic applications.

CO2: State and apply the algorithms for primality testing and quadratic congruence.

CO3: Describe the different algebraic structures and apply them in cryptographic applications.

CO4: State the Shannon's Theory and explain its applications in cryptography.

CO5: Describe the concept of pseudorandom number generation and apply it in designing pseudorandom number generators.

Modules	Blooms level*	Number of hours
MODULE 1: 1. Program to implement division theorem 2. checking number is prime or composite using simple logic 3. Implement Miller Rabin Primality Algorithm	L1, L2 and L3	3
MODULE 2: 4. Implement Euclid and Extended Algorithm. 5. Implement Chinese Remainder Theorem 6. Implement Baby Step Giant Step Algorithm.	L1, L2, L3 and L4	3
MODULE 3: 7. Implement at least 2 algorithms for random number generation. One is Blum BlumShub. 8. Implement Modular Exponentiation Algorithm 9. Implement algorithm for modular linear equation solver.	L1, L2 and L3	3
10. Implement Fermat's and Euler's theorem. 11. Implement Fermat's Factorization method. 12. Few programs based on Probability Theory and theorems	L1, L2, and L3	3

Catalog Description

Web security is an important component of computer science. The objective of this course is to make students aware of various techniques and simulations used to understand building blocks of Web security.

Course Objectives

The objective of this course is to

- Equip the students with the practical aspects of concepts of web security.
- Provide an understanding of different techniques used in web security.
- Equip the students with the working knowledge of different tools and simulators used in web security.

Course Outcomes

On completion of this course, the students will be able to

CO1: State, explain, and apply SQL injection, XSS attacks.

CO2: State, explain, and write java script files for XSS attacks..

CO3: State, explain, and perform URL Interpretation, Input validation, Buffer overflow attacks.

CO4: Perform password based attacks.

CO5: Apply DoS and hijacking.

Modules	Blooms level*	Number of hours
MODULE 1: <ul style="list-style-type: none"> • Exercises related to SQL injection attacks, • XSS attacks 	L1, L2, and L3	3
MODULE 2: writing java script files <ul style="list-style-type: none"> • for launching and preventing XSS attacks • Stored and Reflected XSS Attacks, 	L1, L2, and L3	5
MODULE 3: <ul style="list-style-type: none"> • Perform URL Interpretation attack, • Perform input validation attack, • buffer overflow attacks 	L1, L2, and L3	6
MODULE 4: <ul style="list-style-type: none"> • Perform impersonation attacks • Perform password-based attacks 	L1, L2, and L3	6
MODULE 5: <ul style="list-style-type: none"> • Perform an experiment for denial of service attacks • Perform an experiment for session hijacking 	L1, L2, and L3	6

Course Code: NCE4210	BIG DATA SYSTEMS	L	T	P	C
Version 2020.1	Date of Approval: 19, July 2020	3	0	0	3
Pre-requisites/Exposure	Data Base				
Co-requisites	Nil				

Catalog Description

This course brings together several key big data technologies used for storage, analysis and manipulation of data. It also introduces the students the key concepts of Hadoop framework, MapReduce, Pig, Hive, and No-SQL. Students will learn to work on Hadoop platform. The concepts learnt will make students capable of working on big data projects easier.

Course Objectives

The objective of this course is to:

- To make students familiar with big data technologies.
- Provide an overview of Hadoop architecture and its working with other open source technologies.

Course Outcomes

On completion of this course, the students will be able to:

CO1. Explain importance, applications and challenges of Big Data Analytics.

CO2. Different analytics technologies.

CO3. Demonstrate architecture of Hadoop and Mapreduce framework.

CO4. Illustrate Hadoop I/O commands.

CO5. Introduce concepts Distributed File systems.

Modules	Blooms level*	Number of hours
MODULE 1: A NEW PARADIGM FOR BIG DATA Scaling with a traditional database NoSQL is not a panacea, First principles, Desired properties of a Big Data system , The problems with fully incremental architectures, Lambda Architecture, Recent trends in technologyExample application: SuperWebAnalyticscom, data model for big data: , data model for big data: illustration	L1, L2 and L3	6
MODULE 2: Hadoop & MapReduce Data! ,Data Storage and Analysis ,Comparison with Other Systems ,RDBMS ,Grid Computing ,Volunteer Computing ,A Brief History of Hadoop ,Apache Hadoop and the Hadoop Ecosystem , Hadoop Releases ,A Weather Dataset, Data Format ,Analyzing the Data with Unix Tools , Analyzing the Data with Hadoop ,Map and Reduce ,Java MapReduce ,Scaling Out ,Data Flow , Combiner Functions ,Running a Distributed MapReduce Job , Hadoop Streaming ,Ruby ,Python, Hadoop Pipes ,Compiling and Running.	L1, L2 and L3	8
MODULE 3: The Hadoop Distributed Filesystem The Design of HDFS ,HDFS Concepts ,Blocks ,Namenodes and Datanodes	L1, L2 and L3	8

,HDFS Federation ,HDFS High-Availability ,The Command-Line Interface ,Basic Filesystem Operations ,HadoopFilesystems , Interfaces ,The Java Interface ,Reading Data from a Hadoop URL ,Reading Data Using the FileSystem API ,Writing Data ,Directories ,Querying the Filesystem ,Deleting Data ,Data Flow ,Anatomy of a File Read ,Anatomy of a File Write ,Coherency Model ,Parallel Copying with distcp ,Keeping an HDFS Cluster Balanced ,Hadoop Archives ,Using Hadoop Archives ,Limitations.		
MODULE 4: Hadoop I/O Data Integrity ,Data Integrity in HDFS ,Local Filesystem ,Checksum Filesystem ,Compression,Codecs ,Compression and Input Splits ,Using Compression in MapReduce, Serialization ,The Writable Interface ,Writable Classes ,Implementing a Custom Writable ,Serialization Frameworks ,Avro ,File-Based Data Structures ,Sequence File ,Map File.	L2, L3 and L4	8
MODULE 5: Developing a MapReduce Application The Configuration API ,Combining Resources ,Variable Expansion ,Configuring the Development Environment ,Managing Configuration ,GenericOptionsParser, Tool, and ToolRunner ,Writing a Unit Test ,Mapper ,Reducer ,Running Locally on Test Data ,Running a Job in a Local Job Runner , Testing the Driver ,Running on a Cluster ,Packaging ,Launching a Job ,The MapReduce Web UI ,Retrieving the Results ,Debugging a Job ,Hadoop Logs ,Remote Debugging ,Tuning a Job ,Profiling Tasks ,MapReduce Workflows ,Decomposing a Problem into MapReduce Jobs ,JobControl ,Apache Oozie.	L1, L2 and L3	6

Course Code: NCE4211	DISTRIBUTED SYSTEMS SECURITY	L	T	P	C
Version 2020.1	Date of Approval: 19 July 2020	3	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

Distributed Systems Security serve as one of the most important courses for postgraduate students, since it provides an in-depth coverage of security threats and issues across the 4 tiers-Host, Application, Infrastructure, Service layers. Therefore, the students are supposed to study, practice and discuss on the major fields discussed in the course to ensure the success of the education process. The outcome of this course implicitly and explicitly affects the abilities the students to understand and analyze design and working of distributed systems security.

Course Objective

The objective of this course is to:

1. equip the students to identify the security issues and techniques to cope up with the threats.
2. provide the overview of various threats and vulnerabilities, also solutions to handle those threats.

Course Outcomes

After completing the course, the students will be able to,

CO 1: describe the distributed system security issues and techniques and build a secure system using security development lifecycle.

CO 2: apply the knowledge by doing practical work for the host and network level threats like worms, virus.

CO 3: explain the use cryptographic techniques. Also describe the application level threats such as cross site scripting, error handling.

CO 4: conclude the ways to handle host, network level threats with the help of sandboxing, resource management, etc.

CO 5: Design solutions after having knowledge of standards and policies for security. And also go through the case studies like cloud computing, IBE.

Modules	Blooms level*	Number of hours
MODULE 1: Introduction Distributed Systems, Distributed Systems Security. Security in Engineering: Secure Development Lifecycle Processes - A Typical Security Engineering Process – Security Engineering Guidelines and Resources. Common Security Issues and Technologies: Security Issues, Common Security Techniques	L1 and L2	5
MODULE 2: Host-level Threats and Vulnerabilities Transient code Vulnerabilities - Resident Code Vulnerabilities - Malware: Trojan Horse – Spyware - Worms/Viruses – Eavesdropping – Job Faults. Infrastructure-Level Threats and Vulnerabilities: Network-Level Threats and Vulnerabilities - Grid Computing Threats and Vulnerabilities – Storage Threats and Vulnerabilities – Overview of Infrastructure Threats and Vulnerabilities.	L1, L2, L3 and L6	7
MODULE 3:	L1, L2,	9

Application-Level Threats and Vulnerabilities Application-Layer Vulnerabilities –Injection Vulnerabilities - Cross-Site Scripting (XSS) - Improper Session Management - Improper Error Handling - Improper Use of Cryptography - Insecure Configuration Issues - Denial of Service - Canonical Representation Flaws - Overflow Issues. Service-Level Threats and Vulnerabilities: SOA and Role of Standards - Service-Level Security Requirements - Service-Level Threats and Vulnerabilities - Service-Level Attacks – Services Threat Profile	L3, L4 and L6	
MODULE 4: Host-Level Solutions Sandboxing – Virtualization - Resource Management - Proof-Carrying Code - Memory Firewall – Antimalware. Infrastructure-Level Solutions: Network-Level Solutions - Grid-Level Solutions - Storage-Level Solutions. Application-Level Solutions: Application-Level Security Solutions.	L2, L3, L5	7
MODULE 5: Service-Level Solutions Services Security Policy - SOA Security Standards Stack – Standards in Dept - Deployment Architectures for SOA Security - Managing Service-Level Threats - Compliance in Financial Services - SOX Compliance - SOX Security Solutions – Multilevel Policy-Driven Solution Architecture - Case Study: Grid - The Financial Application – Security Requirements Analysis. Future Directions – Cloud Computing Security – Security Appliances - Usercentric Identity Management - Identity-Based Encryption (IBE) - Virtualization in Host Security.	L3, L5 and L6	8

Version 2020.1	Date of Approval: 19 July 2020	3	0	0	3
Pre-requisites/Exposure	Basic Networking and Data Structure Concepts				
Co-requisites	Nil				

Catalog Description

Blockchain is an emerging technology platform for developing decentralized applications and data storage, over and beyond its role as the technology underlying the cryptocurrencies. The basic tenet of this platform is that it allows one to create a distributed and replicated ledger of events, transactions, and data generated through various IT processes with strong cryptographic guarantees of tamper resistance, immutability, and verifiability. This course will enable the graduate students to gain the knowledge of this emerging technology and will update them with the required employability skills.

Course Objectives

The objective of this course is to:

- Familiarise the functional/operational aspects of blockchain and cryptocurrency.
- Understand emerging abstract models for Blockchain Technology.
- Identify major research challenges and technical gaps existing between theory and practice in cryptocurrency domain.

Course Outcomes

On completion of this course, the students will be able to:

CO1. Understand and explain the mechanism of Blockchain Technology.

CO2. Identify and describe the cryptographic techniques used in blockchain technology.

CO3. Understand and explain the bitcoin blockchain.

CO4. Understand and apply the different models of blockchain.

CO5. Understand and explain the concept of Ethereum and Hyperledger.

Modules	Blooms level*	Number of hours
MODULE 1: INTRODUCTION Basic ideas behind blockchain, how it is changing the landscape of digitalization, peer-to-peer network, Blockchain Mechanism, Blockchain vs Distributed Systems, introduction to cryptographic concepts required, Hashing, public key cryptosystems, private vs public blockchain and use cases, Hash Puzzles, Introduction to Bitcoin Blockchain, Centralization vs. Decentralization, Security of Blockchain	L1, L2	8
MODULE 2: CRYPTOGRAPHIC BASICS FOR CRYPTOCURRENCY A short overview of Hashing, SHA 256, signature schemes, encryption schemes, Elliptic Curve Mathematics, Point Addition, Point Doubling, Elliptic Curve Cryptography, Security of Elliptic Curve Cryptography	L1, L2	7

MODULE 3: BITCOIN BLOCKCHAIN Distributed consensus, Consensus without identity using a block chain, Incentives and proof of work, Mining, Mechanics of Bitcoin, Bitcoin and blocks, Bitcoin Mining, Bitcoin and Anonymity, Bitcoin - Wallet - Blocks - Merkle Tree - hardness of mining - transaction verifiability - anonymity - forks - double spending - mathematical analysis of properties of Bitcoin.	L1, L2	8
MODULE 4: BLOCKCHAIN MODELS Abstract Models for BLOCKCHAIN - GARAY model - RLA Model - Proof of Work (PoW) as random oracle - formal treatment of consistency, liveness and fairness - Proof of Stake (PoS) based Chains - Hybrid models (PoW + PoS)	L1, L2, L3	7
MODULE 5: ETHEREUM AND HYPERLEDGER Ethereum - Ethereum Virtual Machine (EVM) - Wallets for Ethereum - Solidity - Smart Contracts - some attacks on smart contracts, Hyperledger, Zero Knowledge proofs and protocols in Blockchain	L1,L2	6

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

Version 2020.1	Date of Approval: 19 July 2020	3	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

Biometric systems and biometric image processing aims at designing and implementing algorithms which are so important for the secure source of authentication today. This course focuses on building strong mathematical foundations which can be applied in designing a vast range of applications like broadcast monitoring, copy control.

Course Objectives

The objective of this course is to

1. Enable the students with the technical and non-technical concepts used in Biometric systems and biometric image processing
2. Provide an overview of different case studies used in designing biometrics.

Course Outcomes

On completion of this course, the students will be able to

CO1: Grasp the nontechnical but very important basics of Biometric systems and biometric image processing which will make their foundation for application creation.

CO2: Elaborate and apply the algorithms, by studying different examples of biometric systems.

CO3: Learn about essentials of image processing and the application areas of image processing

CO4: Build and study the models of fingerprint biometrics and learn all the concepts for building finger print based authentication system.

CO5: Build and study the models of iris biometrics and learn all the concepts for building iris based authentication system.

Modules	Blooms level*	Number of hours
MODULE 1: Introduction: Biometric fundamentals – Biometric technologies – Biometrics Vs traditional techniques – Characteristics of a good biometric system – Benefits of biometrics – Key biometric processes: verification, identification and biometric matching – Performance measures in biometric systems, FAR, FRR, FTE rate, EER and ATV rate, Applications of Biometric Systems, Security and Privacy Issues. Physiological Biometrics : Leading technologies : Finger-scan – Facial-scan – Iris-scan – Voice-scan – components, working principles, competing technologies, strengths and weaknesses – Other physiological biometrics : Hand-scan, Retina-scan – components, working principles, competing technologies, strengths and weaknesses – Automated fingerprint identification systems.	L1, L2 AND L3	8
MODULE 2: Behavioral Biometrics: Leading technologies: Signature-scan – Keystroke	L1, L2, L3	8

scan – components, working principles, strengths and weaknesses. Privacy and Standards in Biometrics: Assessing the Privacy Risks of Biometrics – Designing Privacy-Sympathetic Biometric Systems – Need for standards – different biometric standards.		
MODULE 3: Fundamentals of Image Processing: Digital Image representation - Fundamental steps in Image Processing Image Enhancement: The Spatial Domain Methods, The Frequency Domain Methods –Image Segmentation: Pixel Classification by Thresholding, Histogram Techniques, Smoothing and Thresholding- Gradient Based Segmentation: Gradient Image, Boundary Tracking, Laplacian Edge Detection.	L1, L2 and L3	8
MODULE 4: Fingerprint Biometrics: Fingerprint Patterns, Fingerprint Features, Fingerprint Image, width between two ridges - Fingerprint Image Processing - Minutiae Determination - Fingerprint Matching: Fingerprint Classification, Matching policies.	L1, L2, and L3	4
MODULE 5: Iris Biometrics: Iris System Architecture, Definitions and Notations - Iris Recognition: Iris location, Doubly Dimensionless Projection, Iris code, Comparison - Coordinate System: Head Tilting Problem, Basic Eye Model, Searching Algorithm, Texture Energy Feature.	L1, L2, and L3	4

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation

Version 2020.1	Date of Approval: 19 July2020	3	1	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

This course focuses on the foundations of software security and considers important software vulnerabilities and attacks that exploit them such as buffer overflows, SQL injection, and session hijacking. This course helps to prevent or mitigate these attacks, including advanced testing and program analysis techniques.

Course Objectives

The purpose of this course is to provide understanding of the main issues related to security in modern software security systems. In addition, this course will present different domains of code exploitation and how they can be used together to test the security of an application.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain the concept of software security, goals of software security and management of software security risk.

CO2: Describe the principles of software security and methods of security violation in software system.

CO3: State and apply the knowledge of different types of overflow attack and access control in different operating system.

CO4: Explain the basic knowledge of network layers and various types of hijacking, flooding attacks.

CO5: Implement the concept of shell code.

Modules	Blooms level*	Number of hours
MODULE 1: Introduction to Software Security It's All about the Software, Dealing with Widespread Security Failures, Bugtraq, CERT Advisories, RISKS Digest, Technical Trends Affecting Software Security, The ilities, What is Security?, Isn't That Just Reliability?, Penetrate and Patch Is Bad, On Art and Engineering, Security Goals, Prevention, Traceability and Auditing, Monitoring, Privacy and Confidentiality, Multilevel Security, Anonymity, Authentication, Integrity, Know Your Enemy: Common Software Security Pitfalls, Software Project Goals, Conclusion. Managing Software Security Risk: An Overview of Software Risk Management for Security, The Role of Security Personnel, Software Security Personnel in the Life Cycle, Deriving Requirements, Risk Assessment, Design for Security, Implementation, Security Testing, A dose of Reality, Getting People to Think about Security, Software Risk management in Practice, When Development Goes Astray, When Security Analysis Goes Astray, The Common Criteria.	L1, L2 and L3	12
MODULE 2: On Open Source and Closed Source	L1, L2, L3 and	10

Security by Obscurity, Reverse Engineering, Code Obfuscation, Security for Shrink-Wrapped Software, Security by Obscurity Is No Panacea, The Flip Side: Open- Source Software, Is the “Many-Eyeballs Phenomenon” Real? Why Vulnerability Detection Is Hard, Other Worries, On Publishing Cryptographic Algorithms, Two More Open-Source Fallacies, The Microsoft Fallacy, The Java Fallacy, An Example: GNU Mailman Security, More Evidence: Trojan Horses, To Open Source or Not to Open Source, Another Security Lesson from Buffer Overflows, Beating the Drum. Guiding Principles for Software Security: Principle1: Secure the Weakest Link, Principle 2: Practice Defence in Depth, Principle 3: Fail Securely, Principle 4: Follow the Principle of Least Privilege, Principle 5: Compartmentalize, Principle 6: Keep It Simple, Principle 7: Promote Privacy, Principle 8: Remember That Hiding Secrets is Hard, Principle 9: Be Reluctant to Trust, Principle 10: Use Your Community Resources Conclusion.	L4	
MODULE 3: Buffer Overflows & Access Control What Is a Buffer Overflow?, Why Are Buffer Overflows a Security Problem?, Defending against Buffer Overflow, Major Gotchas, Internal Buffer Overflows, More Input Overflows, Other Risks, Tools That Can Help, Smashing Heaps and Stacks, Heap Overflows, Stack Overflows, Decoding the Stack, To Infinity ... and Beyond!, Attack Code, A UNIX Exploit, What About Windows?The UNIX Access Control Model, How UNIX Permissions Work, Modifying File Attributes, Modifying Ownership, The unask, The Programmatic Interface, Setuid Programming, Access Control in Windows NT, Compartmentalization, Fine-Grained Privileges.	L1, L3 and L4	8
MODULE 4: NETWORKING OSI Model, Sockets, Socket Functions, Socket Addresses, Network Byte Order, Internet Address Conversion, A Simple Server Example, A Web Client Example, A Tinyweb Server, Peeling Back the Lower Layers, Data-Link Layer, Network Layer, Transport Layer , Network Sniffing, Raw Socket Sniffer, libpcap Sniffer, Decoding the Layers, Active Sniffing, Denial of Service, SYN Flooding, The Ping of Death, Teardrop, Ping Flooding, Amplification Attacks, Distributed DoS Flooding, TCP/IP Hijacking, RST Hijacking, Continued Hijacking, Port Scanning, Stealth SYN Scan, FIN, X-mas, and Null Scans, Spoofing Decoys, Idle Scanning, Proactive Defense (shroud), Reach Out and Hack Someone, Analysis with GDB, Almost Only Counts with Hand Grenades, Port-Binding Shellcode.	L1, L3, and L4	10
MODULE 5: SHELLCODE Assembly vs. C, Linux System Calls in Assembly, The Path to Shellcode, Assembly Instructions Using the Stack, Investigating with GDB, Removing Null Bytes, Shell-Spawning Shellcode, A Matter of Privilege, And Smaller Still, Port-Binding Shellcode, Duplicating Standard File Descriptors, Branching Control Structures, Connect-Back Shellcode.	L1, L2, and L3	8

Version 2020.1	Date of Approval: 19 July2020	3	0	3	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

In this course the concepts of cryptography and network security are discussed in detail. Substitution and transposition techniques, symmetric and asymmetric cryptographic algorithms, their applications, differences will be introduced. As a precursor to the study of cryptography studies will be made on impact of various network and web security protocols. The concepts learnt in the studies of cryptography & network security will be applied in the studies and analysis of authentication, integrity and security related protocols.

Course Objectives

The objective of this course is to

- Equip the students with concepts of cryptography & network security through problem solving and analytical approach.
- Provide an overview of various network attacks and related security mechanism , various algorithms for modular arithmetic, symmetric and asymmetric cryptography and web and network security

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain, describe and distinguish various security attacks; Describe and solve block and stream ciphers and its applications in cryptography; Solve problems based on substitution and transposition ciphers.

CO2: Explain the basic mathematics of cryptography; Solve problems of groups, modular arithmetic, gcd and inverse algorithm, chinese remainder theorem and its application in cryptography; Applying algorithms for solving problems in cryptography

CO3: Describing the concept of public key cryptosystems and its related algorithm; Explain and solve problems related to hash functions, digital signature and its applications in cryptography; Compare symmetric and asymmetric key cryptography.

CO4: Explain management, distribution, secure exchange of keys and authentication certificate and its applications in real life. Explain, compare various authentication protocols used in cryptography and network security, also solve problems based on these protocols.

CO5: Explain various security protocols :IPSec, SSL,TLS,SET; Describing malicious softwares and illustrating various design approaches to Firewall

Modules	Blooms level*	Number of hours
MODULE 1: Introduction to security attacks, services and mechanism, Classical encryption techniques: substitution ciphers and transposition ciphers, cryptanalysis, steganography, Stream and block ciphers. Modern Block Ciphers: Block ciphers principles, Shannon's theory of confusion and diffusion, fiestal structure, Data encryption standard (DES), Strength of DES, Idea of differential cryptanalysis, block cipher modes of operations, Triple DES	L1, L2 AND L3	8

MODULE 2: Advanced Encryption Standard (AES) encryption and decryption, Analysis, Principals of public key crypto systems, RSA algorithm, security of RSA. Rabin cryptosystem, Elgamal cryptosystem, Elliptical Curve cryptography,	L1, L2, L3	8
MODULE 3: Message Authentication Codes: Authentication requirements, authentication functions, message authentication code, Random Oracle Model , hash functions, birthday attacks, security of hash functions, Secure hash algorithm (SHA),SHA-512, Whirlpool, Digital Signatures: Digital Signatures, Elgamal Digital Signature Techniques, Digital signature standards (DSS).	L1, L2 and L3	8
MODULE 4: Key Management and distribution: Symmetric key distribution, Diffie-Hellman Key Exchange, Public key distribution, X.509 Certificates, Public key Infrastructure. Entity authentication, Authentication Applications: Kerberos,	L1, L2, and L3	4
MODULE 5: IP Security: Architecture, Authentication header, Encapsulating security payloads, combining security associations, key management. Introduction to Secure Socket Layer, Secure electronic transaction (SET).	L1, L2, and L3	4

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation

NCE4304	BIOMETRIC IMAGE PROCESSING LAB	L	T	P	C
Version 2020.1	Date of Approval: 19 July 2020	0	0	2	1
Pre-requisites/Exposure	Basics of MATLAB				
Co-requisites					

Catalog Description

Biometric Image processing has become an important tool for research and investigation in many areas of science and engineering. This course is designed to provide the students an understanding of the basic concepts of digital image processing and various techniques used in it. Students will perform practical on hardware kit as well as on software. Students will do basic exercises on image loading, manipulation, edge finding, features extraction, face recognition, segmentation, fingerprint, iris, signature recognition.

Course Objectives

The objective of this course is to

1. Make students demonstrate the concepts of image processing.
2. Apply the different techniques to process image.

Course Outcomes

On completion of this course, the students will be able to

CO1. Explain the basic image processing tools and commands.

CO2. Apply the filters to remove noise in spatial & frequency domain.

CO3. Apply image processing techniques for compression, segmentation and restoration.

Modules	Blooms level*	Number of hours
Lab Session 1		
1. To study about the basic image processing tools.	L3	3
2. Write program for histogram processing.		
Lab Session 2		
3. Write program for filtering in frequency domain.	L3 and L4	3
4. Write program for filtering in spatial domain.		
Lab Session 3		
5. Write programs for different compression schemes.	L3 and L4	3
6. Write program image restoration.		
Lab Session 4		
7. Write program for performing different morphological operations.	L3 and L4	3

8. Write program for image segmentation.

Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

The objective of this course is to provide practical training on some live projects that will increase capability to work on actual problem in industry. This training may undergo in an industrial environment or may be an in-house training on some latest software which is in high demand in market. This training will be designed such that it will useful for their future employment in industry.

Course Objectives

The objective of this course is to

1. Provide practical training on live projects
2. Increase technical capabilities on solving real life problems in company environment

Course Outcomes

On completion of this summer internship, the students will be able to:

CO1: Develop communication, interpersonal and other critical skills in the job interview process.

CO2: Design and develop software and hardware projects

CO3: Assess interests and abilities in their field of study.

CO4: Demonstrate excellent technical and communication skills to acquire employment contacts leading directly to a full-time job following graduation from college.

The objective of this course is to provide practical training on some live/demo projects that will increase capability to work on actual problem in industry. It will be an in house training on some latest software which is in high demand in market. This training will be designed such that it will be useful for their future employment in industry.

Course Objectives

The objective of this course is to

1. Provide practical training on live projects
2. Increase technical capabilities on solving real life problems in company environment

Course Outcomes

On completion of this summer internship, the students will be able to:

CO1: Demonstrate a sound technical knowledge of their selected project topic.

CO2: Design and develop engineering solutions to complex problems utilising a systems approach.

CO3: Analyse various approaches for solving a complex engineering problem using different tools and techniques

CO4: Demonstrate the knowledge, skills and attitudes of a professional engineer.

CO5: Apply technical skills and knowledge in completing the project.

Version 2020.1	Date of Approval: 19 July 2020	3	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

The Web Application and Penetration Testing course provides all the advanced skills necessary to carry out a thorough and professional penetration test against modern web applications.

Course Objectives

The objective of this course is to

1. help students move beyond push-button scanning to professional, thorough, high-value web application penetration testing.
2. enable students to assess a web application's security posture and convincingly demonstrate the impact of inadequate security that plagues most organizations

Course Outcomes

On completion of this course, the students will be able to

CO1: Grasp the nontechnical but very important basics of web application and penetration testing which will make their foundation for application creation.

CO2: Elaborate and apply the attacks, by studying different techniques of hacking.

CO3: Learn about essentials of web application structure, Apache, authentication mechanisms.

CO4: Learn IIS authentication, and various attacks and security issues.

CO5: Study the models input validation checks and associated case studies.

Modules	Blooms level*	Number of hours
MODULE 1: Introduction to Web Applications and Security The Web Application Architecture ,A Brief Word about HTML ,Transport: HTTP ,The Web Client ,The Web Server,The Web Application ,The Database ,Complications and Intermediaries ,The New Model: Web Services ,Potential Weak Spots ,The Methodology of Web Hacking ,Profile the Infrastructure ,Attack Web Servers ,Survey the Application,Attack the Authentication Mechanism ,Attack the Authorization Schemes , Perform a Functional Analysis,Exploit the Data Connectivity,Attack the Management Interfaces,Attack the Client,Launch a Denial-of-Service Attack Profiling: Server Discovery,Intuition ,Internet Footprinting, DNS Interrogation Ping,Discovery Using Port Scanning , Dealing with Virtual Servers, Service Discovery , Server Identification,Dealing with SSL.	L1, L2 AND L3	8
MODULE 2: Hacking Web Servers Common Vulnerabilities by Platform ,Apache,Microsoft Internet Information Server (IIS), Attacks Against IIS Components, Attacks Against IIS,	L1, L2, L3	8

Escalating Privileges on IIS, Netscape Enterprise Server , Other Web Server Vulnerabilities , Miscellaneous Web Server Hacking Techniques , Automated Vulnerability Scanning Software ,Whisker, Nikto , twwwwscan/arirang , Stealth HTTP Scanner, Typhon , WebInspect , AppScan, FoundScan Web Module , Denial of Service Against Web Servers,		
MODULE 3: Documenting Application Structure , Manually Inspecting the Application , Statically and Dynamically Generated Pages, Directory Structure , Helper Files , Java Classes and Applets , HTML Comments and Content ,Forms, Query Strings , Back-End Connectivity , Tools to Automate the Survey, lynx , Wget,TeleportPro,Black Widow, WebSleuth, Common Countermeasures , A Cautionary Note, Protecting Directories,Protecting Include Files, Miscellaneous Tips. Authentication: Authentication Mechanisms, HTTP Authentication: Basic and Digest, Forms-Based Authentication, Microsoft Passport, Attacking Web Authentication,Password Guessing, Session ID Prediction and Brute Forcing, Subverting Cookies,Bypassing SQL-Backed Login Forms,Bypassing Authentication.	L1, L2 and L3	8
MODULE 4: The Attacks, Role Matrix, The Methodology , Query String, POST Data , Hidden Tags, URI,HTTP Headers,Cookies, Final Notes,Case Study: Using Curl to Map Permissions, Apache Authorization, IIS AuthorizationAttacking Session State Management:Client-Side Techniques, Hidden Fields, The URL,HTTP Headers and Cookies, Server-Side Techniques, Server-Generated Session IDs, Session Database, SessionID Analysis, Content Analysis, Time Windows.	L1, L2, and L3	4
MODULE 5: Input Validation Attacks Expecting the Unexpected, Input Validation EndGame, Where to Find Potential Targets,Bypassing Client-Side Validation Routines , Common Input Validation Attacks , Buffer Overflow, Canonicalization (dot-dot-slash),Script Attacks , Boundary Checking, Manipulating the Application , SQL Injection and DatastoreAttacks,Command Execution, Common Side Effects,Common Countermeasures. Attacking Web Datastores: A SQL Primer,SQL Injection, Common Countermeasures. Web Client Hacking :The Problem of Client-Side Security,Attack Methodologies ,Active Content Attacks ,Java and JavaScript ,ActiveX,Cross-Site Scripting,Cookie Hijacking ,Case Study #: From the URL to the Command Line and Back,Case Study #: The Cross-Site Scripting Calendar	L1, L2, and L3	4

Course Code: NCE4307	MALWARE ANALYSIS IN NETWORK SECURITY	L	T	P	C
Version 2020.1	Date of Approval: 19 July2020	3	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

Malware Analysis in Network Security lays the Groundwork for the course by presenting the key tools and techniques malware analyst use to examine malicious programs. Students will learn how to save time by Exploring malware in two phases. Behavioral analysis focuses on the Specimen's interaction with its Environment such as Registry, Network, the File system. Code Analysis focuses on the specimen's code and make use of a disassembler and a debugger.

Course Objectives

The objective of this course is to

1. Enable the students how to extract host- and network-based indicators from a malicious program using dynamic and static analysis techniques.
2. Learn the basics of finding the functionality of a program by analyzing disassembly and by watching how it modifies a system as it runs in a debugger.

Course Outcomes

On completion of this course, the students will be able to

CO1: Grasp the nontechnical but very important basics of Malware analysis like antivirus scanning etc.

CO2: Elaborate virtual machines & dynamic analysis; study the structure of a virtual machine.

CO3: Recognizing C Code Constructs in Assembly and understanding function conventions

CO4: Study and Analyzing Malicious Windows Program, handling file systems.

CO5: Study Malware behavior & covert malware launching in network

Modules	Blooms level*	Number of hours
MODULE 1: BASIC STATIC TECHNIQUES Antivirus Scanning: A Useful First Step, Hashing: A Fingerprint for Malware, Finding Strings, Packed and Obfuscated Malware, Packing Files, Detecting Packers with PEiD, Portable Executable File Format, Linked Libraries and Functions, Static, Runtime, and Dynamic Linking, Exploring Dynamically Linked Functions with Dependency Walker, Imported Functions, Exported Functions, Static Analysis in Practice, Potential Keylogger.exe: An Unpacked Executable, PackedProgram.exe: A Dead End, The PE File Headers and Sections, Examining PE Files with PEview, Viewing the Resource Section with Resource Hacker, Using Other PE File Tools, PE Header Summary	L1, L2 AND L3	8
MODULE 2: VIRTUAL MACHINES & DYNAMIC ANALYSIS The Structure of a Virtual Machine, Creating Your Malware Analysis Machine, Configuring VMware, Using Your Malware Analysis Machine, Connecting Malware to the Internet, Connecting and Disconnecting Peripheral Devices, Taking Snapshots, Transferring Files from a Virtual Machine, The Risks of Using VMware for Malware Analysis, Record/Replay: Running Your Computer in Reverse,	L1, L2, L3	8

Sandboxes: The Quick-and-Dirty Approach Using a Malware Sandbox , Sandbox Drawbacks, Running Malware, Monitoring with Process Monitor, The Procmon Display, Filtering in Procmon, Viewing Processes with Process Explorer, The Process Explorer Display, Using the Verify Option, Comparing Strings, Using Dependency Walker, Analyzing Malicious Documents, Comparing Registry Snapshots with Regshot, Faking a Network, Using ApatDNS, Monitoring with Netcat, Packet Sniffing with Wireshark, Using INetSim, Basic Dynamic Tools in Practice		
MODULE 3:RECOGNIZING C CODE CONSTRUCTS IN ASSEMBLY Overview of working with IDA Pro, Global vs Local Variables, Disassembling Arithmetic Operations, Recognizing if Statements, Analyzing Functions Graphically with IDA Pro, Recognizing Nested if Statements, Recognizing Loops, Finding for Loops, Finding while Loops, Understanding Function Call Conventions, Cdecl, Stdcall, fastcall , Push vs Move ,Analyzing switch Statements ,If Style ,Jump Table ,Disassembling Arrays ,Identifying Strcuts ,Analyzing Linked List Traversal ,	L1, L2 and L3	8
MODULE 4:ANALYZING MALICIOUS WINDOWS PROGRAMS The Windows API, Types and Hungarian Notation, Handles, File System Functions, Special Files, The Windows Registry, Registry Root Keys, Regedit , Programs that Run Automatically, Common Registry Functions, Analyzing Registry Code in Practice, Registry Scripting with reg Files , Networking APIs , Berkeley Compatible Sockets, The Server and Client Sides of Networking, The WinINet API , Following Running Malware, DLLs , Processes, Threads ,Interprocess Coordination with Mutexes , Services , The Component Object Model , Exceptions: When Things Go Wrong ,Kernel vs User Mode , The Native API	L1, L2, and L3	4
MODULE 5:: MALWARE BEHAVIOR & COVERT MALWARE LAUNCHING Downloaders and Launchers, Backdoors, Reverse Shell, RATs, Botnets, RATs and Botnets Compared, Credential Stealers, GINA Interception, Hash Dumping, Keystroke Logging, Persistence Mechanisms, The Windows Registry, Trojanized System Binaries, DLL Load-Order Hijacking, Privilege Escalation, Using SeDebugPrivilege, Covering Its Tracks—User-Mode Rootkits, IAT Hooking, Inline Hooking, Launchers, Process Injection, DLL Injection, Direct Injection, Process Replacement, Hook Injection , Local and Remote Hooks, Keyloggers Using Hooks, Using SetWindowsHookEx, Thread Targeting, Detours, APC Injection, APC Injection from User Space, APC Injection from Kernel Space .	L1, L2, and L3	4

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation

Recommended Books:

1. "Practical Malware Analysis" by Michael Sikorski and Andrew Honig
2. "The Rootkit Arsenal: Escape and Evasion in the Dark Corners of the System" Second Edition by Reverend Bill Blunden
3. "Rootkits: Subverting the Windows Kernel" by Jamie Butler and Greg Hoglund
4. "Practical Reverse Engineering" by Dang, Gazet, Bachaalany

Course Code: NCE4308	WEB SECURITY	L	T	P	C
Version 2020.1	Date of Approval: 19 July 2020	3	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

Modern cryptography applies theory from mathematics and computer science to design and implement strong encryption methods which are so important to the safety of computer systems today. This course focuses on introducing students to the issues of WEB security, especially in terms of business systems' dependence on communication. Acquisition of knowledge about dangers that threaten the Internet and how to protect oneself from them. Introduction to practical methods, measures and resources that can be applied in the construction and development of WWW security system

Course Objectives

The objective of this course is to

1. Identify domain space and security challenges of the web and information systems based on web technologies, classify threats and ways to deal with them for individuals and information systems.
2. Propose ways for technical and legal protection of systems based on web technologies.

Course Outcomes

On completion of this course, the students will be able to

CO1: Analyse and apply legal regulations in the field of electronic business, electronic trade, digital signature, protection of personal data, etc

CO2: Determine the most suitable security protocol to protect web applications

CO3: Identify domain space and security challenges of the web.

CO4: Explain the operating principles of web information systems.

CO5: Understand the technicalities of mails i.e. junk or spam mails.

Modules	Blooms level *	Number of hours
MODULE 1: The E-Commerce Playground Web Languages: The Babylon of the 21st Century, Languages of the Web, HTML, Dynamic HTML (DHTML).XML,XHTML,Perl,PHP,ColdFusion,Active Server Pages,CGI,Java. Web and Database Servers: Web Servers,Apache,Microsoft's Internet Information Server (IIS),Database Servers,Microsoft SQL Server,Oracle.	L1, L2 and L3	8
MODULE 2: Shopping Carts and Payment Gateways Evolution of the Storefront,Electronic Shopping,Shopping Cart Systems,Scope and Lifetime of an Electronic Shopping Cart,Collecting, Analyzing, and Comparing Selected Components,Keeping Track of the Total Cost,Change of Mind,Processing the Purchase,Implementation of a Shopping Cart Application,Product Catalog,Session Management,Database Interfacing,Integration with the Payment Gateway,Examples of Poorly Implemented Shopping Carts,Careello Shopping Cart,DCShop Shopping	L1, L2, L3 and L4	8

Cart,Hassan Consulting's Shopping Cart,Cart32 and Several Other Shopping Carts,ProcessingPayments,Finalizing the Order,Method of Payment,Verification and Fraud Protection,OrderFulfillment and Receipt Generation,Overview of the Payment Processing System,Innovative Ways to Combat Credit Card Fraud,Order Confirmation Page,Payment Gateway Interface,Transaction Database Interface,Interfacing with a Payment GatewayAnExample,PaymentSystemImplementationIssues,Integration,TemporaryInf ormation,SSL,Storing User Profiles,Vulnerabilities Caused by Poor Integration of Shopping Cart and Payment Gateway,PayPal—Enabling Individuals to Accept Electronic Payments,		
MODULE 3: HTTP and HTTPS: The Hacking Protocols,Protocols of the Web,HTTP,HTTPS (HTTP over SSL). URL: The Web Hacker's Sword: URL Structure,Web Hacker Psychology,URLs and Parameter Passing. URL Encoding, Meta-Characters,Specifying Special Characters on the URL String.,Meta-Characters and Input Validation,UnicodeEncoding,The Acme Art, Inc. Hack,Abusing URL Encoding,Unicode Encoding and Code Red's Shell Code,UnicodeVulnerability,The Double-Decode or Superfluous Decode Vulnerability,HTMLForms,Anatomy of an HTML Form,InputElements,Parameter Passing Via GET and POST,Case Study: Reconnaissance Leaks Corporate Assets.	L1, L2 and L3	8
MODULE 4: Web: Under (the) Cover. The Components of a Web Application,The Front-End Web Server,The Web Application ExecutioEnvironment. The Database Server,Wiring the Components,The Native Application Processing Environment.,Web Server APIs and Plug-Ins,URL Mapping and Internal Proxying,Proxying with a Back-End Application Server.Examples. Connecting with the Database,The Craftiest Hack of Them All,Using Native Database APIs.Examples.UsingODBC,UsingJDBC,Specialized Web Application Servers,Identifying Web Application Components from URLs,The Basics of Technology Identification,Examples,MoreExamples,Advanced Techniques for Technology Identification,Examples,Identifying Database Servers,Countermeasures, Rule 1: Minimize Information Leaked from the HTTP Header,Rule 2: Prevent Error Information from Being Sent to the Browser.	L1, L2, and L3	4
MODULE 5: Reading Between the Lines. Information Leakage Through HTML,What the Browsers Don't Show You,Netscape Navigator—View Page Source,Internet Explorer—View Source,Clues to Look For,HTMLComments,RevisionHistory,Developer or Author Details,Cross-References to Other Areas of the Web Application,Reminders and Placeholders, Comments Inserted by Web Application Servers,Old “Commented-Out” Code,Internal and External Hyperlinks,E-mail Addresses and Usernames,UBE, UCE, Junk Mail, and Spam,Keywords and Meta Tags,HiddenFields,Client-Side Scripts,Automated Source Sifting Techniques,Usingwget,Usinggrep,Sam Spade, Black Widow, and Teleport Pro.	L1, L2, and L3	4

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation

Course Code: NCE4309	DIGITAL WATERMARKING & STAGENOGRAPHY	L	T	P	C
Version 2020.1	Date of Approval: 19 July2020	3	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

Modern Digital watermarking and steganography apply theory from mathematics, digital signal processing, image processing and computer science to design and implement algorithms which are so important for the secure communication today. This course focuses on building strong mathematical foundations which can be applied in designing a vast range of applications like broadcast monitoring, copy control.

Course Objectives

The objective of this course is to

- Enable the students with the technical and non-technical concepts used in Digital Watermarking and Steganography.
- Provide an overview of different mathematical structures used in designing digital watermarking and steganographic algorithms.

Course Outcomes

On completion of this course, the students will be able to

CO1: grasp the nontechnical but very important basics of Digital Watermarking and Steganography which will make their foundation for application creation.

CO2: Elaborate and apply the algorithms, by studying different models of watermarking systems.

CO3: Learn about one of the main tools Dirty Paper Codes that are needed for optimal watermarking of Gaussian signals they will study about the different security techniques need and used in Watermarking systems.

CO4: Build and study the models of Steganography and how to optimize the use of embedding techniques.

CO5: Describe the concept of steganalysis, and applying steganographic algorithms to design the required application.

Modules	Blooms level*	Number of hours
MODULE 1: Introduction Applications and Properties Information Hiding, Steganography, and Watermarking , History of Watermarking , History of Steganography , Importance of Digital Watermarking , Importance of Steganography , Applications of Watermarking , Applications of Steganography Steganography for Dissidents, Steganography for Criminals, Properties of Watermarking Systems , Evaluating Watermarking Systems , Properties of Steganographic and Steganalysis Systems , Evaluating and Testing Steganographic Systems	L1, L2 AND L3	8
MODULE 2: MODELS OF WATERMARKING Notation, Communications , Communication-Based Models of Watermarking , Geometric Models of Watermarking , Modeling Watermark Detection by Correlation	L1, L2, L3	8

Watermarking with side information: Informed Embedding, Watermarking Using Side Information, Dirty-Paper Codes		
MODULE 3: PRACTICAL DIRTY-PAPER CODES Practical Considerations for Dirty-Paper Codes , Broad Approaches to Dirty-Paper Code Design	L1, L2 and L3	8
MODULE 4: STEGANOGRAPHYSteganographic Communication , The Channel , The Building Blocks , Notation and Terminology,Information-Theoretic Foundations of Steganography , Cachin's Definition of Steganographic Security , Practical Steganographic Methods , Statistics Preserving Steganography , Model-Based Steganography , Masking Embedding as Natural Processing , Minimizing the Embedding Impact , Matrix Embedding , Nonshared Selection Rule ,	L1, L2, and L3	4
MODULE 5: STEGANALYSIS Steganalysis Scenarios , Detection , Forensic Steganalysis , The Influence of the Cover Work on Steganalysis , Some Significant Steganalysis Algorithms , LSB Embedding and the Histogram Attack , Sample Pairs Analysis , Blind Steganalysis of JPEG Images Using Calibration , Blind Steganalysis in the Spatial Domain.	L1, L2, and L3	4

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation

Co-requisites	Nil				

Catalog Description

The objective of this course is to provide practical training on some live/demo projects that will increase capability to work on actual problem in industry. It will be an in house training on some latest software which is in high demand in market. This training will be designed such that it will be useful for their future employment in industry.

Course Objectives

The objective of this course is to

1. Provide practical training on live projects
2. Increase technical capabilities on solving real life problems in company environment

Course Outcomes

On completion of this summer internship, the students will be able to:

CO1: Demonstrate a sound technical knowledge of their selected project topic.

CO2: Design and develop engineering solutions to complex problems utilising a systems approach.

CO3: Analyse various approaches for solving a complex engineering problem using different tools and techniques

CO4: Demonstrate the knowledge, skills and attitudes of a professional engineer.

CO5: Apply technical skills and knowledge in completing the project.

CIV4101	APPLIED NUMERICAL METHODS	L	T	P	C
Version 2020.1	Date of Approval: 3 rd June, 2020	4	0	0	4
Pre-requisites/ Exposure	Nil				
Co-requisites	Nil				

Catalogue Description

The purpose of this course is to provide students with the skill, knowledge and attitude required to determine approximate numerical solutions to mathematical problems which cannot always be solved by conventional analytical technique, and to demonstrate the importance of selecting the right numerical technique for a particular application, and carefully analyzing and interpreting the results obtained.

Course Objectives

The objective of this course is to:

1. Demonstrate understanding of common numerical methods and how they are used to obtain approximate solutions to otherwise intractable mathematical problems.
2. Apply numerical methods to obtain approximate solutions to mathematical problems.
3. Derive numerical methods for various mathematical operations and tasks, such as interpolation, differentiation, integration, the solution of linear and nonlinear equations, and the solution of differential equations.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Define and describe the Algebraic and Transcendental Equation and solve the problems using appropriate Numerical methods.
- CO2. Describe the interpolation methods to find intermediate values in given graphical or tabulated data.
- CO3. Describe and Define the sets of linear simultaneous equations and solve the problems using Cholesky's (Crout's) method, Gauss-Seidel iteration and relaxation methods.
- CO4. Describe and apply Trapezoidal and Simpson's Rule to solve given integration problems.
- CO5. Define and describe Runge-Kutta method and Euler's Method to solve differential equations

Course Content

Modules	Blooms level*	Number of hours
Module I: Solution of Algebraic & Transcendental Equations Newton-Raphson method including method of complex roots, Graeffe's root square method (Computer based algorithm and program for these methods)	L1, L2, L3	10
Module II: Interpolation & Approximation Lagrange's and Newton-divided difference formula, Newton interpolation formula for finite differences, Gauss's forward and backward interpolation formulae, Bessel's and Laplace-Everett's formulae, Cubic spline, least squares approximation using Chebyshev polynomial. Solution of partial differential equations of linear and non-linear nature with finite difference scheme and iteration techniques	L1, L2, L3	10
Module III: Solution of Linear Simultaneous Equations	L1, L2,	10

Cholesky's (Crout's) method, Gauss-Seidel iteration and relaxation methods, Solution of Eigen Value problems; Smallest, largest and intermediate Eigen values (Computer based algorithm and Programme for these methods)	L3	
Module IV: Numerical Differentiation & Integration Numerical differentiation using difference operators, Simpson's 1/3 and 3/8 rules, Boole's rule, Weddle's rule.	L1, L2, L3	8
Module V: Solution of Differential Equations Modified Euler's method, Runge-Kutta method of 2nd, 3rd and 4th orders, Predictor- Corrector method, Stability of Ordinary differential equation, Solution of Laplace's and Poisson's equations by Liebman's method, Relaxation method.	L1, L2, L3	10

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation

CIV4102	SUSTAINABLE CONSTRUCTIONS	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	4	0	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalogue Description

This course includes the concept of Sustainably, Sustainable construction materials and methodologies related to commercial construction, including LEED/Green certifications. It also includes the life cycle assessment with case studies.

Course Objectives:

The objective of this course is to:

1. Demonstrate an ability to evaluate and design whole or parts of projects, taking into account not only the financial and economic issues but also the social and environmental impacts affecting the sustainability of infrastructure.
2. Future challenges in sustainable development based on possible scenarios considering the level of success of current mitigation and adaptation measures.
3. Learn social sustainability in construction and development of built assets, and the roles of construction processes, outputs and outcomes on people and society.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Describe the basic concepts of sustainability, sustainable development and sustainable construction, understand rating systems and compares key features such as cost, ease of use, and building Performance.
- CO2. Define and Differentiate rating systems in detail, including its evolution, objectives, criteria, levels of certification benefits, and shortcomings.
- CO3. Demonstrate a functional knowledge of formulating and specifying practical measures for environmental sustainability that can be implemented in design and construction.
- CO4. Explain the quality control monitoring in the project, project safety management and construction project information.

Course content

Modules	Blooms level*	Number of hours
Module I: Introduction and Sustainable Site Planning Principles of sustainability: Introduction to Course, Definition of sustainability, Major Environmental Challenges, Global Warming, Introduction to Green Buildings; LEED, Sustainable Urban Development, Sustainable Sites - LEED Credits., Case study	L1, L2, L3	12
Module II: Energy Conservation Energy Conservation in Buildings, HVAC Systems, Energy and Atmosphere - LEED Credits, Fossil Fuels vs. Renewable Energy, Case study	L2, L3	12
Module III: Water Conservation and Indoor Environment Quality	L2, L3	12

Prof. (Dr.) Anil Kumar

CIV4103	DISASTER MITIGATION AND MANAGEMENT	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	3	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalogue Description:

This course is intended to provide fundamental understanding of different aspects of Disaster Management. It will expose the students to the concept and functions of Disaster Management and to build competencies of Disaster Management professionals and development practitioners for effective supporting environment as put by the government in legislative manner. It would also provide basic knowledge, skills pertaining to Planning, Organizing and Decision-making process for Disaster Risk Reduction.

Course Objectives:

The objective of this course is to:

1. Ensure that students begin to understand the relationship between vulnerability, disasters, disaster prevention, risk reduction and the basic understanding of the research methodology for risk reduction measures.
2. Equipped with knowledge, concepts, and principles, skills pertaining to Planning, Organizing, Decision-making and problem solving methods for Disaster Management.
3. Develop rudimentary ability to respond to their surroundings with potential disaster response in areas where they live, with due sensitivity.

Course Outcomes:

On completion of this course, the students will be able to

CO1: Increase the knowledge and understanding of the disaster phenomenon and, its factors.

CO2: Understand the relationship of hazard, risk and vulnerability

CO3: Obtain the skills in role of education and training in disaster prevention.

CO4: Ensure skills in post disaster management activities

CO5: Get the knowledge in understanding various prone zones in India

Course Content

Modules	Blooms level*	Number of hours
Module I: UNDERSTANDING DISASTER Introduction – Types of Disaster (Rapid disaster – Natural, manmade disaster and slow disaster – Natural, manmade disaster) – Factors of Disaster, Geology and topography, Weather and climate, Ecosystems, Human factors, Earthquake: epicentres and scale of earthquake.	L1, L2 and L3	8
Module II HAZARD, RISK AND VULNERABILITY Hazard classification and assessment - Hazard evaluation and hazard control - Concept And Elements of disaster risk - Techniques of Risk Assessment - Vulnerability Concept and Parameters, Risk and Vulnerability Relationship, Observation and Perception Of Vulnerability, Vulnerability Identification, Socio-Economic Factors of Vulnerability, Vulnerability Analysis.	L2 and L3	9
Module III PRE-DISASTER MANAGEMENT ACTIVITIES Introduction - Institutional arrangements - Vulnerability and capacity assessment - Prevention and mitigation - Structural Mitigation And Non-	L2, L3 and L4	7

CIV4104	ENVIRONMENT IMPACT ASSESSMENT FOR CIVIL ENGINEERS	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalogue Description:

This course introduces the methodology of environmental impact assessment (EIA) as a vital tool for sound environmental management and decision-making. The course provides an overview of the concepts, methods, issues and various forms and stages of the EIA process.

Course Objectives:

The objective of this course is to:

1. Explain the major principles of environmental impact assessment.
2. Understand the different steps within environmental impact assessment.
3. Different levels and systems of EIA are examined to highlight the diversity of approach and impact of the EIA process.

Course Outcomes:

On completion of this course, the students will be able to

CO1: Carry out scoping and screening of developmental projects for environmental and social assessments.

CO2: Explain different methodologies for environmental impact prediction and assessment.

CO3: Plan environmental impact assessments and environmental management plans.

CO4: Evaluate environmental impact assessment reports.

CO5: Able to access different case studies/examples of EIA in practice

Course Content

Modules	Blooms level*	Number of hours
Module I INTRODUCTION Impact of development projects under Civil Engineering on environment – Environmental Impact Assessment (EIA) - Environmental Impact Statement (EIS) – EIA capability and limitations – Legal provisions on EIA.	L1, L2 and L3	10
Module II METHODOLOGIES Methods of EIA – Check lists – Matrices – Networks – Cost-benefit analysis – Analysis of alternatives – Case studies.	L2 and L3	10
Module III PREDICTION AND ASSESSMENT Assessment of Impact on land, water and air, noise, social, cultural flora and fauna; Mathematical models; public participation – Rapid EIA.	L2, L3 and L4	10
Module IV ENVIRONMENTAL MANAGEMENT PLAN Plan for mitigation of adverse impact on environment – options for mitigation of impact on water, air and land, flora and fauna; Addressing the issues related to the Project Affected People – ISO 14000	L2, L3 and L4	10
Module V CASE STUDIES EIA for infrastructure projects – Bridges – Stadium – Highways – Dams – Multi-storey Buildings – Water Supply and Drainage Projects	L2 and L3	8

CIV4105	OPTIMIZATION AND QUANTITATIVE METHODS IN CIVIL ENGINEERING	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	4	0	0	4
Pre-requisites/Exposure					
Co-requisites					

Catalogue Description

This course discusses about the basics of optimization, formulation of design problem and classification of optimization problems. It deals with various optimization techniques i.e. penalty function, Lagrange multipliers unconstrained minimization etc. and their applications in civil engineering. The different linear and Non-Linear programming techniques and their applications in civil engineering are also discussed.

Course Objectives

The objective of this course is to

1. Deal with different optimization methods Optimization to minimize the effort required or to maximize the desired benefit in design, construction and maintenance in civil engineering system.
2. Impart knowledge of Linear Programming, Non-Linear Programming and Dynamic Programming techniques with number of applications in civil engineering.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Explain the concept of optimization and formulation of design problem.
CO2. Describe various optimization techniques and their application in civil engineering.
CO3. Analyze the problems related to Linear Programming and Algorithms.
CO4. Apply different Linear Programming applications in transportation, water resources, and structural and other optimization problems.

Course Content

Modules	Blooms level*	Number of hours
Module I: Introduction Introduction: Engineering application of Optimization, Formulation of design problems as mathematical programming problems, classification of optimization problems	L1, L2	10
Module II: Optimization Techniques Classical optimization, multivariable with no constraints, unconstrained minimization techniques, penalty function techniques, Lagrange multipliers and feasibility techniques. Linear Programming: Graphical method, Simplex method, Duality in linear programming (LP), Sensitivity analysis Applications in civil engineering;	L1, L2, L3	14
Module III: Non-Linear Programming Techniques/Method Unconstrained optimization, one dimensional minimization, golden section, elimination, quadratic and cubic, Fibonacci, interpolation, Direct search, Descent, Constrained optimization, Direct and indirect, Optimization with calculus, Khun-Tucker conditions.	L1, L2, L3, L4	14

Module IV: Applications Application of optimization techniques in Civil Engineering:	L1, L2, L3	10

CIV4106	ADVANCED CIVIL ENGINEERING LAB	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	0	0	2	1
Pre-requisites/Exposure					
Co-requisites					

Catalogue Description

In this lab course the various tests are conducted on different types of basic construction materials such as aggregate, sand, cement, admixtures. It also includes the tests on concrete design mix, different tests related to fresh and hardened state concrete with both destructive and non-destructive tests.

Course Objective

The objective of the course is to

1. Assure the quality and properties of materials that are to be used for the construction such as; sand, aggregates, cements, admixtures.
2. Strengthen the knowledge on construction materials, their utilization and related tests for concrete structure quality improvement, evaluation and its maintenance.

Course Outcomes

On the completion of this course, the student will be able to:

CO1. Perform the tests on various construction materials such as cement, aggregates, etc. to apply the results in the practical life.

CO2. Perform different tests on soil for knowing its properties & application construction for the quality assurance.

CO3. Convince on different tests required from environmental point of view.

CO4. Perform the various tests on which are non- destructive in nature.

Course Content

List of Experiments	Blooms level*	Number of hours
Module I: Specific gravity, Grain Size analysis, Crushing and Impact factor test	L1, L2, L3, L5, L6	6
Module II: Core cutter test and CBR	L1, L2, L3, L5, L6	6
Module III: Determination of pH value, conductivity, solids	L1, L2, L3, L5, L6	6
Module IV: Non -Destructive Testing of Concrete, Rebound Hammer, UPV Test, Rebar Locator	L1, L2, L3, L5, L6	6

CIV4201	RESEARCH METHODOLOGY AND TECHNICAL REPORT WRITING	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	2	0	0	2
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalogue Description

This course deals with types of research, significance and characteristics and planning a research proposal, population and sample, parameter and statistic, sampling and data collection, sampling design: steps, types, sample size, sampling methods. It deals with univariate, bivariate and multivariate analysis, measure of dispersion of data, standard deviation, variance, coefficient of variation and degree of freedom. Hypothesis testing: parametric tests and non-parametric tests, regression analysis and curve fitting, method of least-squares, explained and unexplained variations, coefficient of correlation of determination. The course also deals with technical/scientific/research report writing referencing and bibliography and footnotes. Publication of research papers, citations, intellectual property rights and copy rights, plagiarism, patent and patent laws, commercialization and ethical issues.

Course Objectives

The objective of this course is to:

1. Deals with types of research, significance and characteristics and planning a research proposal and to enhance scientific and technical writing and research skills.
2. Impart knowledge about various stages of research process, statistical analysis and tools & their applications in decision making by hypothesis testing and regression analysis.
3. Deals with intellectual property rights and copy rights, plagiarism, patent and patent laws, commercialization and ethical issues.

Course Outcomes

On completion of this course, the students will be able to:

- CO1: Classify different research types; explain steps in research process and planning research proposal.
CO2: Describe sampling methods, sampling steps and design, carry out data processing and analysis.
CO3: Explain hypothesis testing, parametric and non-parametric tests, carry out regression analysis, curve fitting.
CO4: Demonstrate technical and scientific report writing skills, describe, plagiarism, patent laws and intellectual property rights.

Course Content

Modules	Blooms level*	Number of hours
Module I: Introduction and Research Planning Introduction to research: Definition, motivation, need, objectives, significance and characteristics of research; types of research; steps in research process; planning a research proposal; literature review, web searching.	L1, L2	4
Module II: Sampling Methods Measurement scales, population and sample, parameter and statistic, sampling and data collection, sampling design: steps, types, sample size, sampling methods, data processing and analysis. Sampling surveys and questionnaire designing, primary and secondary data.	L1, L2, L3	5
Module III: Hypothesis Testing and Regression Analysis Univariate, bivariate and multivariate analysis, means-arithmetic, geometric	L1, L3, L4	10

and harmonic; measure of dispersion of data, standard deviation, variance, coefficient of variation and degree of freedom. Hypothesis testing: kinds errors in hypothesis testing, significance and confidence levels, parametric tests and non-parametric tests, one-tailed and two-tailed tests, analysis of variance. Regression analysis and curve fitting, method of least-squares, explained and unexplained variations, coefficient of correlation of determination.		
Module IV: Technical Report Writing and Plagiarism Technical/scientific/research report writing: structure and components of scientific reports, formats of dissertations, research report, report writing skills, report preparation, referencing and bibliography and footnotes. Publication of research papers, citations, making presentation-use of visual aids and PPTs. Intellectual property rights and copy rights, plagiarism, patent and patent laws, commercialization and ethical issues.	L1, L3, L4	5

STE4201	STRUCTURAL DYNAMICS	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalogue Description

Earthquake disaster is increasingly becoming global concern as it threatens the world's population, economy, and sustainable development. It is the responsibility of civil engineers to design and build earthquake resistant structures in order to minimize the risk due to earthquake. By reducing the losses of lives and properties, socio-economical sustainability can be easily achieved. This course offers the fundamental knowledge of the basic science of earthquakes and its effects on the natural and built environment. Concept and techniques of seismic analysis with respect to the various elements of the building would be discussed in detail along with the design principles and concept. The Indian code provisions will be kept in mind while considering the design aspects. To take all the above into consideration, the structural dynamics plays a very important role. Without understanding the dynamics of a structure, one cannot move further in designing for earthquake resistant structures.

Course Objectives

The objective of this course is to:

1. Analysis of structural members and systems subject to dynamic loads
2. Introduce the students with the deeper understanding of the dynamics of structures taking into consideration the single and multi-degree freedoms.
3. Understand and apply the knowledge of analysis on the basis of earthquake forces, wind forces and blast loading.

Course Outcomes

After completing the course, the students will be able to:

- CO1. Acquire the ability to analyze single and multi-degrees of freedom system of structures.
- CO2. Demonstrate in-depth knowledge of the discipline and build capability to apply that knowledge to structural dynamics
- CO3. Orient the students to high value research on structural dynamics and earthquake engineering so that they get impetus to pursue lifelong learning.
- CO4. Analyze earthquake generated forced on structures and evaluate their dynamical responses to earthquake.
- CO5. Comprehend and apply technical knowledge and leadership skills to structural dynamics related to building dynamics, wind loads, blast loads research and consultancy problems

Course Content

Modules	Blooms level*	Number of hours
Module I: Single Degree of Freedom Systems Differential equation of motion - D' Alembert's principle - Free vibration and forced vibration response - damped and undamped - evaluation of damping constants - vibration of machine foundation - vibration isolation - vibration measuring instruments. Response to general loading - pulse excitation - Duhamel Integral - Numerical methods - Newmark method.	L1, L2, L3, L4, L5	15
Module II: Multi-Degree of Freedom and Continuous Systems Two- and three-degree systems - solution of eigen value problem - Stodola's method - orthogonality conditions - Modal superposition method. Vibration analysis of continuous systems - simply supported	L1, L2, L3, L4, L5	9

beams - Effect of shear and rotary inertia - Timoshenko beam - Effect of axial loads.		
Module III: Analysis for Seismic Forces Concept of response spectrum - estimation of design forces of multistory buildings using Bureau of Indian Standards (BIS) codes - earthquake analysis of base isolated buildings.	L1, L2, L3, L4, L5	9
Module IV: Analysis for Wind Forces Wind effects on structures - static and dynamic - analysis for wind loads using BIS codes - quasi static method and gust factor method.	L1, L3, L4, L5	8
Module V: Blast Loading Blast loading - over ground and underground structures - design parameters - relevant BIS codes, case study.	L1, L2, L3	7

STE4202	ADVANCED STEEL DESIGN	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	4	0	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

Advanced Steel Design includes the design of steel members and their connections. Different methods of design will be briefly described before introducing the limit states of collapse and serviceability. It also includes the fundamentals of the integrated systems of steel bridges, bunkers, silos. The design will be done as per IS 800:2007.

Course Objectives

The objectives of the course are

1. Provide design concept for steel as a structural member using Limit state Design.
2. Impart knowledge about connections of the steel members.

Course Outcomes

After completing the course, the students will be able to:

CO1: Explain the various types of connections and calculate the strength of connections.

CO2: Describe the different types of connections (shear and moment).

CO3: Explain different types of loads on roof trusses and design the roof supporting members.

CO4: Design for various components of truss bridges.

CO5: Explain the design of bunkers and silos.

Course Content

Modules	Blooms level*	Number of hours
Module I: Connections Riveted connections, Bolted Connections, Load Transfer Mechanism, Failure of Bolted Joints, Specifications for Bolted Joints, Bearing ,Type Connections, Tensile Strength of Plate ,Strength and Efficiency of the Joint, Combined Shear and Tension, Slip ,Critical Connections, Praying Action, Design of Groove welds, Design of Fillet Welds, Design of Intermittent fillet welds, Failure of Welds.	L1, L2, L3	10
Module II: Beam-Column Connections Introduction, Beams-Column Connections, Connections Subjected to Eccentric Shear, Bolted Framed Connections, Bolted Seat Connections, Bolted Bracket Connections. Bolted Moment Connections, Welded Framed Connections, Welded Bracket Connections, Moment Resistant Connections.	L1, L2, L3	10
Module III: Loads on Roof Structure. Dead loads, live loads and wind loads on roofs. Design wind speed and pressure, wind pressure on roofs; wind effect on cladding and louvers; Design of angular roof truss, tubular truss, truss for a railway platform. Design of purlins for roofs, design of built up purlins, Design of bracings.	L1, L2, L3	10
Module IV: Design of Truss Bridge Types of truss bridges, component parts of a truss bridge, economic proportions of trusses, self-weight of truss girders, design of bridge compression members, tension members; wind load on truss girder	L1, L2	10

STE4204	DESIGN OF INDUSTRIAL STRUCTURES	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

The course includes the analysis & design industrial structures. The special types of designs such as silos, bunkers, cooling towers, large span roofs, etc. are also part of this course.

Course Objectives

The objectives of this course to:

1. Provide concept for planning of industrial structures and types of loads acting on the industrial structures.
2. Impart knowledge of the design concepts applied for industrial building design.

Course Outcomes

After completing the course, the students will be able to:

CO1: Explain the planning of industrial structures & carry out plastic design of structural elements.

CO2: Explain the analysis and design concepts of industrial buildings and storage structures.

CO3: Analyze and design of space structures

CO4: Analyse earthquake and wind generated forces on Aluminium Structures and evaluate their responses.

Course Content

Modules	Blooms level*	Number of hours
Module I: Planning of Industrial Structures Review of Plastic Design: Concept of minimum weight design. Design of Industrial Building Planning of industrial structures. Crane girders & columns, Analysis of trussed bents, Design of industrial frame.	L1, L2, L3	12
Module II: Design of Storage Structures Bunkers and silos. Pressure vessels and chimneys.	L1, L2, L3	10
Module III: Design of Space Structures Transmission towers, Steel domes, Pre-cast building components. Design using Light Gauge Sections: Structural use of pressed sections and light gauge sections, Aluminum as a material of construction for industrial structures and design of such structures, Tubular structures and Sandwich plate construction.	L1, L2, L3	13
Module IV: Aluminum Structures Introduction, Permissible stresses, Tension members, Compression members, Design of beams, Local buckling of compression elements, Riveted and bolted construction, Design of chimneys, Load analysis, Design of steel supporting chimney, Chimney foundation. Construction Practices: Shop practice in steel construction, Fabrication erection and production, Case study based. Structural aspects of machine foundations.	L1, L2, L3	13

STE4212	ADVANCED STRUCTURAL ANALYSIS	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

Course extends the basic stiffness method of analysis developed in the pre-requisite courses. Fundamental principles of the stiffness method of analysis, with automatic assembly of the stiffness matrix for rigid jointed plane frames and space structures, are presented in some detail. Elastic instability of frames and the design of continuous steel beams and portal frames using plastic methods will be undertaken.

Course Objectives

The objective of this course is to:

1. Equip students with fundamental principles of the stiffness method of analysis
2. Impart knowledge of matrix methods to analysis grids, trusses and frames.

Course Outcomes

After completing the course, the students will be able to:

- CO1. Explain the basic concepts of matrix methods
- CO2. Describe the concept of stiffness matrix and their application to beams.
- CO3. Explain the analytical procedure for rigid frames using matrix methods.
- CO4. Determine the displacements in the grids using matrix methods.
- CO5. Explain the application of matrix approach on trusses.

Course Content

Modules	Blooms level*	Number of hours
Module I: Introduction to Matrix Method Introduction: Matrix Methods of Analysis of Structures, Degrees of freedom, Analysis of indeterminate structures: Force methods and Displacement Methods. Matrix concepts and Matrix analysis of structures: matrix, vectors, displacement and force transformation matrices, Element and structure flexibility matrices; equivalent joint loads; stiffness and flexibility approaches.	L1, L2, L3,	12
Module II: Stiffness Matrix The Matrix Displacement Approach: Beams- Introduction. Stiffness Matrix of a Bar Element subjected to Axial Force. Co-ordinate Transformations. Global Stiffness Matrix. Application to Pin-Jointed Frames. Stiffness Matrix of a Beam Element. Beam element stiffness. Application to Continuous Beams.	L1, L2, L3	10
Module III: Rigid Frames Matrix Analysis of Rigid Frames: Matrix displacement method vs slope deflection method, analysis of rigid frames with and without side sway, analysis of rigid framed for yielding of supports.	L1, L2, L3	8

Module IV: Grids Matrix Analysis of grillage or grid: Introduction, torsional stiffness of grid element and advantage of torsion release, Matrix Displacement Analysis of Grillage or Grid. Co-ordinate Transformations. Element Stiffness Matrix & its Application	L1, L2,	10
Module V: Trusses Matrix Analysis of Space Trusses & Frames: Co-ordinate Transformations. Application to Space Trusses & Space Frames, Analysis by conventional stiffness method (four degree of freedom per element) and reduced element stiffness method (single degree of freedom), Analysis by flexibility method	L1, L2, L3	8

STE4208	ADVANCED BRIDGE DESIGN	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalogue Description

Bridges are a very important part of a nation's transportation infrastructure. Proper planning, design and construction, as well maintenance, are of utmost importance. In general, engineers will benefit from exposure to sophisticated bridge typologies and construction practices, as well as the assessment of the existing bridges. This course will extend the concepts and methodologies given in bridge engineering courses to cover the design of medium- and long-span road bridges, which can be optimized in terms of load-carrying capacity, durability, and ease of construction and maintenance.

Course Objectives

The objective of this course is to:

1. Acquire knowledge about the purpose and design of the various kinds of bridges which are used in day-to-day life.
2. Study the loads, forces on bridges and design of several types of bridges.
3. Develop an understanding of and appreciation for basic concepts in proportioning and design of bridges in terms of aesthetics, geographical location and functionality, sizing of bridge elements, i.e. develop a clear understanding of conceptual design.
4. Exposure to the state-of-the-art practices in the international level expected to challenge the students to think beyond conventional design and implement optimized solutions that can compare with the best bridges in the world.

Course Outcomes

After completing the course, the students will be able to:

- CO1: Apply knowledge of mathematics, science and engineering to understand the various types of bridges and its loadings and forces.
- CO2: Design the bridges to meet desired needs such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability.
- CO3: Design different types of RCC bridges, steel bridges, riveted and welded plate girder bridges and pre-stressed concrete bridges with the bearings and substructures.
- CO4: Design and analysis of slab culverts, T-beam and slab bridges
- CO5: Design and analysis of continuous, box girder and cantilever bridges

Course Content

Modules	Blooms level*	Number of hours
Module I: Concrete Bridges Introduction-types of Bridges-economic span length-Types of loading-Dead load live load-Impact Effect-Centrifugal force-wind loads-Lateral Loads-Longitudinal Forces-Seismic loads- Frictional resistance of expansion bearings-Secondary Stresses-Temperature Effect-Erection Forces and effects-Width of roadway and footway-General Design Requirements.	L1, L2, L3	10
Module II: Analysis and Design of Bridges Load distribution theories, analysis and design of slab culverts, tee beam and slab bridges.	L2, L3, L4, L5	9

Module III: Design of Continuous, Box Girder and Cantilever bridges Design principles of continuous bridges, box girder bridges, balanced cantilever bridges.	L2, L3, L4, L5, L6	9
Module IV: Design of Pre-Stressed Bridges: Flexural and torsional parameters – Courbon's theory – Distribution coefficient by exact analysis – Design of girder section – maximum and minimum pre-stressing forces – Eccentricity – Live load and dead load shear forces – Cable Zone in girder – check for stresses at various sections – check for diagonal tension – Diaphragms – End block – short term and long term deflections.	L1, L2, L3, L4	10
Module V: Design and Analysis of Plate Girder Bridges and Their Foundation Design of riveted and welded plate girder bridges for highway and railway loading – wind effects – main section, splicing, curtailment, stiffeners – Different types of bearings – Design of bearings – Design of masonry and concrete piers and abutments – Types of bridge foundations – Design of foundations.	L1, L2, L3, L4, L5, L6	10

STE4211	ADVANCED CONCRETE DESIGN	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	4	0	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalogue Description

The course advanced concrete design is to introduce engineering students to the advanced methods used for concrete structural design in designing the large complex structural elements. With this the students will be able to design and analyse the various components/ members of the reinforced concrete structure. The principle is based on the development of student's ability to analyse and design involve in the construction of reinforced concrete structural members. This course involves the fundamentals of mathematics, physics, engineering mechanics and strengthen the basics of RCC structure design course also, so that to help in experiencing complex structural elements in the real construction field.

Course Objectives

The objective of this course is to:

1. Comprehend the knowledge in advanced concept of reinforced concrete structural design of different complex RCC structure.
2. Develop analytical and design skill in the field of design large RCC members construction projects.

Course Outcomes

On completion of this course, the students will be able to

CO1: Analyse and design the high-grade moment resisting complex structural RCC elements.

CO2: Apply various principal criteria, assumptions and design procedure followed in the concrete complex flat slab structural elements, their effect due to shear and moment distribution with columns.

CO3: Comprehend, Apply and Inculcate in dimensioning and designing of different types of load carrying sub-structure, their designing criteria and principles related to structural stability.

CO4: Develop the idea regarding the analysis and design of compression carrying member in different types of loading conditions which are mostly encountered in natural real scale construction.

CO5: Define the concept of yield-line theory of shear and moment carrying structural element which are mostly encountered in natural real situation regarding the behavior after yielding using different post-failure theories.

Course content

Modules	Blooms level*	Number of hours
Module I: Design of Deep Beams and Corbels Steps of Designing Deep Beams, Design by IS 456, Checking for Local Failures, Detailing of Deep Beams, Analysis of Forces in a Corbels, Design of Procedure of Corbels	L1, L2, L3, L4, L5, L6	9
Module II: Design of Flat Slabs Flat slabs: Direct design method – Distribution of moments in column strips and middle strip-moment and shear transfer from slabs to columns – Shear in Flat Slabs-Check for one way and two-way shears - Introduction to Equivalent frame method. Limitations of Direct design method, Distribution of moments in column strips and middle strip	L1, L2, L3, L4, L5, L6	10
Module III: Design of Foundations Basic philosophy of foundation design, raft foundations, pile foundations & well foundation, combined footings.	L1, L2, L3, L4, L5, L6	9

Module IV: Design of Compression Members and Shear Walls Estimation of effective length of a column-Code requirement on Slenderness Limits, Design of Short Columns under Axial Compression, Design of Short Columns with Uniaxial Bending, Design of Short Columns under Biaxial Bending, Design of Slender Columns. Design of shear walls and reinforcement in walls.	L1, L2, L3, L4, L5, L6	10
Module V: Yield Line Theory Introduction, assumptions, location of yield lines, method of analysis, analysis of one way and two-way slabs, effect of top corner steel in a square slab, examples.	L1, L2, L3, L4, L5, L6	10

STE4213	FINITE ELEMENT METHOD	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure					
Co-requisites					

Catalogue Description

The Finite Element Method (FEM) is widely used in industry for analyzing and modelling structures and continua, whose physical behaviour is described by ordinary and partial differential equations. The FEM is particularly useful for engineering problems that are too complicated to be solved by classical analytical methods. The main objective of this course is to introduce the mathematical concepts of the FEM for obtaining an approximate solution of ordinary and partial differential equations.

Course Objectives

The objective of this course is to:

1. Deal real world problem and try to describe it with partial differential equations which might not have an exact solution.
2. Comprehend a complex problem to break down the problem into smaller elements (discretization) and apply over these smaller finite domains.
3. Formulated into matrix form, collected together and solved for unknown values using boundary conditions. The unknown values are then further used to approximate other quantities.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Define the various complex areas of complex engineering problems and different constitutive relation.
- CO2. Comprehend the energy relationship and finding numerical techniques by dividing the continuum in to elements to find the stress-strain relationship in elemental stiffness matrix. Realize the concept of nodes and elements.
- CO3. Comprehend and the problems of two dimensional isoperimetric elements four noded quadrilateral elements. Enlighten the fundamental ideas of FEM for such elements.
- CO4. Develop the finite element model concept for structures in assemblage of elements through direct stiffness method and special characteristics of stiffness matrix.
- CO5. Comprehend and define the concept for the analysis of framed structures, 2D truss element, 2D beam element, plate bending elements.

Course Contents

Modules	Blooms level*	Number of hours
Module I: Introduction to FEM Basic idea of FEM. Applications and importance of FEM. Differential equilibrium equations - strain displacement relation - linear constitutive relation - special cases- Principle of stationary potential energy - application to finite element methods. Some numerical techniques in finite element analysis	L1, L2	9
Module II: Displacement Models Displacement models - convergence requirements. Natural coordinate systems – Shape function. Interpolation function- Linear and quadratic elements - Lagrange & Serendipity elements- Strain displacement matrix -	L1, L2, L4	9

element stiffness matrix and nodal load vector		
Module III: 2-D analysis and modeling Two dimensional isoparametric elements - Four noded quadrilateral elements – triangular elements- Computation of stiffness matrix for isoparametric elements - numerical integration (Gauss quadrature) - Convergence criteria for isoparametric elements.	L1, L2, L4	10
Module IV: Different methods in FEM Assemblage of elements –Direct stiffness method - Special characteristics of stiffness matrix - Boundary condition & reaction - Gauss elimination and LDLT decomposition- Basic steps in finite element analysis.	L1, L2, L3, L4, L5	10
Module V: Analysis of framed structures Analysis of framed Structures- 2D truss element - 2D beam element. Analysis of plate bending: Basic theory of plate bending - displacement functions - plate bending Elements. Plane stress and plane strain analysis: Triangular elements - Rectangular elements	L1, L2, L3, L4, L5, L6	10

CME4201	ADVANCES IN CONSTRUCTION PRACTICES AND MACHINERY	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalogue Description

The course covers selection of equipment, factors affecting selection of equipment and methods technical and economic; Construction engineering fundamentals; Methods and equipment for Earthmoving, Pile driving and dewatering. This course would help to use new and improved technology in construction and therefore be economically benefiting the builders and contractors.

Course Objectives

The objective of this course is to:

1. Comprehend the proper selection of construction equipment used in the field of Civil engineering construction sectors.
2. Development of ideas regarding construction methods and equipment used in Civil engineering.

Course Outcomes

On completion of this course, the students will be able to:

- CO1: Develop the knowledge based on selection of appropriate construction equipment as per their construction activity.
- CO2: Describe the process of manufacturing of basic construction equipment.
- CO3: Explain the concept of pile driving and dewatering system.
- CO4: Comprehend the selection of construction equipment for the tunnel.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Selection of Equipment Selection of equipment-factors affecting- relative advantages and disadvantages-technical and economic aspects.	L1, L2, L3	12
Module II: Construction Engineering Fundamentals Analysis of production outputs and costs. Characteristics and performance of various equipment used in construction practices. Uses, advantages and disadvantages of various construction equipment	L1, L2, L3	12
Module III: Erection and Material Transport Equipment Erection and material transport equipment's- their performance advantages-pile driving-dewatering.Low Strain Dynamic Pile Testing/ Pile Integrity Testing (PIT),High Strain Dynamic Pile Testing (HSDT) / Pile Driving Monitoring	L1, L2, L3	12
Module IV: Performance of Equipment Study of performance of equipment used for concrete construction including batching and mixing units-equipment used for tunneling.	L1, L2, L3	12

CME4203	BUILDING SERVICES & MAINTENANCE MANAGEMENT	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalogue Description

This course discusses about components of urban forms and their planning, Functional planning of buildings, optimization of space: Spatial Synthesis graphical techniques. Engineering services in a building as a system are also the part of this course.

Course Objectives

The objective of this course is to:

1. Impart knowledge about the various components of the urban planning, the services related to the buildings such as MEP.
2. Provide the understanding of the building maintenance and its management.

Course Outcomes

After completing the course, the students will be able to:

- CO1: Explain the various steps for planning of residential building.
CO2: Describe the applications of engineering services.
CO3: Explain the concept members of prefabrication systems in buildings.
CO4: Describe the maintenance processes for residential buildings economically.

Course Content

Modules	Blooms level*	Number of hours
Module I: Planning of Residential Building Components of urban forms and their planning. Concepts of neighborhood unit. Street system and layout in a neighborhood. Functional planning of buildings, optimization of space: Spatial Synthesis graphical techniques, heuristic procedures, formulation of linear and non-linear optimization problem. Space requirements and relationships for typical buildings, like residential offices, hospitals, etc.	L1, L2, L3	10
Module II: Engineering Services Standard fire, fire list, fire resistance, classification of buildings, means of escape, alarms, etc. Lightning protection of buildings, Engineering services in a building as a system. Lifts, escalators, cold and hot water systems, wastewater systems, and electrical systems	L1, L2	10
Module II: Prefabrication Prefabrication systems in residential buildings: Planning and modules and sizes of components in prefabrication, Earthquake resistant structures - Air-conditioning and heating - Acoustics and Sound insulation.	L1, L2, L3	8
Module IV: Maintenance Building Maintenance: Scheduled and contingency maintenance planning. M.I.S. for building maintenance. Maintenance standards. Economic maintenance decisions.	L1, L2	8

CME4204	SYSTEMS DESIGN AND VALUE ANALYSIS	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

This course introduces the students to the concepts and skills of system analysis and design. It includes expanded coverage of data flow diagrams, data dictionary, and process specifications.

Course Objectives

The objective of this course is to:

1. To impart the knowledge about the system design procedure and the value savings during the construction.
2. Provide a solid foundation of systems principles and an understanding of how business function, while heightening students to the issue's analysts face daily.
3. Help the students in management of various resources.

Course Outcomes

After completing the course, the students will be able to:

- CO1: Explain the principles and tools of systems analysis and design.
- CO2: Solve a wide range of problems related to the analysis, design and construction of information systems, value analysis and job plans.
- CO3: Explain the professional and ethical responsibilities of practicing the value management and valuation by understanding the need for quality.
- CO4: Plan and undertake a major individual project, prepare and deliver coherent and structured verbal and written technical valuation reports.

Course Content

Modules	Blooms level*	Number of hours
Module I: Analysis and Appraisal Analysis synthesis, Appraisal, System design procedure, objectives and constraints, application to buildings.	L1, L2, L3	12
Module II: Introduction to Value Analysis 10 Commandments of value analysis; value analysis team; principles of value analysis, elements of a job plan viz. orientation, Information, presentation. Implementation follow up action, benefits of value analysis, various applications; assessing effectiveness of value analysis, function analysis, Life cycle costing: Life cycle costing – Forecasting of capital as well as operating & maintenance costs, time value, present worth analysis, DCF methods, ROR analysis, sensitivity analysis. Different methods of performing value engineering.	L1, L2, L3, L4, L5	12
Module III: Value Management and Valuation Job plan. Value savings during construction. Value management. Valuation: Types of value, purposes of valuation factors affecting value. Different methods of valuation for different types of assets such as land and building, horticulture, historical places.	L1, L2, L3, L4	12
Module IV: Valuation Report Valuation Report, contents, standard formats, Case study of any one Report.	L1, L2, L5, L6	12

CME4207	RELIABILITY ANALYSIS IN CONSTRUCTION MANAGEMENT	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalogue Description

This course is mainly focused to explain the theories and applications of reliability analysis of structural systems having uncertainty and/or exposed to random environment. The course introduces basic concepts of probability theory at the beginning which is followed by the Level-2 reliability methods. With these knowledges of reliability analysis in hand, the course then aims to explain the applications of these methods for code calibrations and reliability analysis under multiple failure modes (i.e. system reliability). Even the reliability-based design and structural detailing is discussed in this course.

Course Objectives

The objective of this course is to:

1. Ability to understand and learn the probability theories, the resistance distribution parameters and the reliability methods which can be put to use in construction engineering and management.
2. Explain the applications of various reliability methods for code calibrations and reliability analysis under multiple failure modes (i.e. system reliability).
3. Develop the skills of the students to take this subject for further research.
4. Help the practicing engineers to use the advanced design concepts in their profession, as major emphasis is given to the applications in this course.

Course Outcomes

After completing the course, the students will be able to:

CO1: Apply the statistical methods in construction and technology field.

CO2: Acquire knowledge about the concept of reliability, its methods and reliability-based design.

CO3: Use the mathematical models based on probabilistic and statistical methods, simulation in risk identification, analysis and mitigation of project risks.

CO4: Imbibe the knowledge and understanding of the system reliability, modeling of structural systems as well as the application of reliability analysis for R.C.C. and steel frames.

Course Content

Modules	Blooms level*	Number of hours
Module I: Probability Theory Mutually exclusive events, set theory, sample points and sample space, laws of probability, total probability theorem, Baye's rule, random variables-discrete and continuous, jointly distributed discrete variables, marginal distribution, conditional distribution, jointly distribution continuous variables, functions of random variables, moments and expectations, common probability distribution normal. Lognormal, Gamma and Beta distribution, external distribution	L1.L2, L3, L4	12
Module II: Resistance Distribution and Parameters Statistics of properties of concrete and steel, Statistics of strength of bricks and mortar, Characterization of variables, allowable stresses based on specified reliability. Monte Carlo Study of Reliability: Monte Carlo Method Inverse transformation technique. Application to columns beams and frames.	L2, L3, L4, L5	12
Module III: Reliability Methods	L2, L3,	12

CME4212	PRE -ENGINEERED CONSTRUCTION TECHNOLOGY	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalogue Description

This course discusses about basics of pre-engineered building, their necessity and applications. The design of Pre-Engineered Buildings (PEB), design cycle are also part of this course. The course also includes design software and its uses in design of pre-engineered buildings.

Course Objectives

The objective of this course is to:

1. Impart knowledge about modular construction and design of the prefabricated elements
2. Provide the understanding of dimensioning and detailing of Pre-engineered construction.

Course Outcomes

After completing the course, the students will be able to:

CO1: Define pre-engineered buildings & differentiate it with conventional building.

CO2: Describe the design process of pre-engineered buildings.

CO3: Explain the concept of dimensioning and detailing in buildings.

CO4: Describe the maintenance processes for pre-engineered buildings economically.

Course Content

Modules	Blooms level*	Number of hours
Module I: Introduction Introduction, definition of pre-engineered builds, need of prefabrication and pre engineering, advantages, applications, Concept of prefabrication, Pre-Engineered Buildings Vs Conventional Steel Buildings.	L1, L2, L3	12
Module II: PEB Introduction, advantages, Pre Engineered Buildings Vs. Conventional Steel Buildings, Design considerations, Design of Pre-Engineered Buildings (PEB), design cycle, frame geometry, frame loading, design codes.	L1, L2	12
Module II: Design Design criterion, dimensioning and detailing, design process, production, Case study based design.	L1, L2, L3	12
Module IV: Maintenance Planning and control (PPC), maintenance. Design software and its uses in design of pre-engineered buildings, Case study	L1, L2,	12

CME4213	CONSTRUCTION PLANNING AND MANAGEMENT	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalogue Description

The course revolves around the various activities encountered during the life cycle of a civil engineering project. It introduces the basic learning requirements for the civil engineer project manager and makes the appreciation for the qualitative nature of the construction project management. The philosophy of the course is more on system approach contrary to majority of mechanics-based subjects. Also, the need for the construction industry has been emphasized. Construction today is an all-embracing term, covering all the activities from conception to physical realization of a project. For the project to be completed on time and with correct measures, it is important to use various planning and management techniques in the construction industry. This course will help the students understand the CPM/PERT, construction methods and other estimations required in a construction project. Apart from this the students will also learn about the contracts. Now-a-day building information modeling (BIM), plays a very important role in integration of the information for various stakeholders at the same platform, reducing the time and cost of completion of a project and increasing the efficiency and productivity of the project. Building Information Modeling (BIM) proposes a relatively new approach of designing, documenting, constructing and even maintaining buildings. It has a significant impact on most business processes taking place in building firms. This course will introduce the students with the BIM concepts and theory behind the same.

Course Objectives

The objective of this course is to

1. Study and understand the concept of planning, scheduling, cost and quality control, safety during construction, organization and use of project information necessary for construction projects.
2. Comprehend and apply the various tools of project planning and management software.
3. Train the students with the latest and the best in the rapidly changing fields of Construction Engineering, Technology and Management.
4. Continually work with industry to enhance the program's effectiveness and the opportunities for innovation in the construction industry.
5. Introduce and familiarize the students with the upcoming technology in the construction industry i.e. building information modeling or management (BIM)

Course Outcomes

After completing the course, the students will be able to:

- CO1: Analyze and apply theoretical and practical aspects of project management techniques, contracts as well as estimation and costing to achieve project goals.
- CO2: Comprehend and apply organizational and leadership capabilities for effective management of construction projects.
- CO3: Apply knowledge and skills of modern construction practices and techniques.
- CO4: Apply relevant software packages for planning, scheduling, executing and controlling of construction projects.
- CO5: Comprehend, define and understand the building information modeling (BIM) or management concept.

Module I: Introduction to Construction Planning Introduction Construction as industry and its challenges, Role of construction management, Methods of construction managements, Basic requirements of construction management: Learning structures. Construction planning-Processes of project planning, Construction facilities, Schedules, Layout of Plant utilities, Examples of real projects and its learning requirements.	L1, L2, L3, L4	10
Module II: Project Scheduling and Monitoring Project Scheduling: Processes of project scheduling, Network Scheduling Techniques, CPM/PERT, Introduction to network based project management techniques: Defining activities and their interdependence, drawing of network, time and resource estimations, use of network as scheduling techniques, use of network as control techniques i.e. project monitoring, Use of computer based models, progress control – project planning and scheduling techniques.	L1, L2, L3, L4	10
Module III: Resource Management, Disputes and Claims Management Principles of Project management, Resource Management and Inventory, Implementation of Project Planning Management, Analysis and design of planning and control system, Dispute and claims management.	L1, L2, L4, L5	10
Module IV: Contracts and Estimation & Costing Stages of awarding contract, types of contract, contract documents, arbitration and settlement of disputes, contract laws and handling of contracts, commissioning of projects. Principles of estimation and analysis of rate.	L1, L2, L3, L4	10
Module V: Introduction to Building Information Modeling Introduction to BIM, Components of BIM, brief history, BIM software platforms and interfaces, Challenges of Building Industry and the necessity of BIM utilization, BIM Standards and BIM Implementation plans, BIM Capability Maturity Model, Different dimensions in BIM. BIM Compatible software- Revit.	L1, L2, L3, L4	8

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation

TRE4201	TRANSPORTATION PLANNING	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure					
Co-requisites					

Catalogue Description

The course contains basic principle approach towards analysis of travel behavior of household\individual. It deals with planning the future transportation need and expansion of existing services. It also contains different land use transportation models.

Course Objectives

The objective of this course is to

- Explain terminologies of transportation planning and analyse the practical problems related to traffic.
- Develop the methodology of travel demand behaviour for transportation system.

Course Outcomes

On completion of this course, the students will be able to

CO1: Describe the relation between travel demand and urbanization.

CO2: Comprehend and apply the different methods for deciding mode choices in different regions.

CO3: Explain and apply various methods to solve traffic problems.

CO4: Interpret different land use transportation models and apply solutions for transport problems.

Course Content

Modules	Blooms level*	Number of hours
Module I: Urban morphology Urbanization and travel demand – Urban activity systems and travel patterns – Systems approach – Trip based, and Activity based approach	L1, L2	10
Module II: Urban Transportation Planning Goals, Objectives and Constraints - Inventory, Model building, Forecasting and Evaluation - Study area delineation – Zoning - UTP survey Trip generation models – Trip classification - productions and attractions – Trip rate analysis - Multiple regression models - Category analysis - Trip distribution models – Growth factor models, Gravity model and Opportunity modes. Modal split models – Mode choice behavior – Trip end and trip interchange models - Probabilistic models - Utility functions - Logit models - Two stage model	L1, L2, L3	15
Module III: Traffic assignment Transportation networks – Minimum Path Algorithms - Assignment methods – All or Nothing assignment, Capacity restrained assignment and Multi path assignment - Route-choice behavior.	L1, L2, L3	10
Module IV: Landuse transportation models Urban forms and structures - Location models - Accessibility – Landuse models - Lowry derivative models - Quick response techniques - Non-Transport solutions for transport problems. Preparation of alternative plans - Evaluation techniques - Plan implementation - Monitoring - Financing of Project – urban development planning policy - Case studies.	L1, L2, L3	13

TRE4214	ACCIDENTS ANALYSIS & PREVENTION	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	4	0	0	4
Pre-requisites/Exposure					
Co-requisites					

Catalogue Description

This course discusses about the basics of road safety, factors affecting and causes of accidents involving drivers & pedestrians. It deals with the 4 E's of prevention of accidents and basic concepts of vehicle safety, risk evaluation and human error control. Importance of guard rail and barrier along with the crashworthiness is also discussed.

Course Objectives

The objective of this course is to

1. Acquire knowledge and understanding of the road environment.
2. Identify the reasons for road accidents and scientific investigation.

Course Outcomes

On completion of this course, the students will be able to

- CO1: Explain the factors improving road safety and different motor vehicle acts.
CO2: Describe the relation between speed & fuel conservation and driver training program.
CO3: Explain the parameters affecting road and vehicle safety.
CO4: Define TREM & warning symbols and design the tanker Lorries.

Course Content

Modules	Blooms level*	Number of hours
Module I: Introduction Road Transport: factors for improving safety on roads – causes of accidents due to drivers and pedestrians-design, selection, operation and maintenance of motor trucks-preventive maintenance-check lists-motor vehicles act – motor vehicle insurance and surveys.	L1, L2	10
Module II: Driver and Safety Driver safety programme – selection of drivers – driver training tachograph-driving test driver's responsibility-accident reporting and investigation procedures-fleet accident frequency-safe driving incentives-slogans in driver cabin motor vehicle transport workers act-road transport act and rules – driver relaxation and rest pauses – speed and fuel conservation – emergency planning.	L1, L2	12
Module III: Road & Vehicle Safety Traffic control lines and guide posts-guard rails and barriers – street lighting and illumination-overloading-concentration of driver. E's of Accidents Prevention: 1. Engineering – by altering the environment 2. Enforcement - by imposing laws 3. Encouragement - by the use of publicity campaigns 4. Education - by gaining and using knowledge. Introduction to vehicle safety, Basic concepts of vehicle safety, Risk evaluation, Human error control, Risk communication, Universal design, Crash testing, Crashworthiness, Design of Vehicle Structures for Crash Energy Management, Accident Reconstruction, Future vehicle safety.	L1, L2, L3	14

Module IV: Transportation of Hazardous Goods: Transport emergency card (TREM) – driver training-parking of tankers on the highways speed of the vehicle – warning symbols – design of the tanker lorries – earth chains-static electricity-responsibilities of driver – inspection and maintenance of vehicles-check list – decanting procedures – communication. Transport precautions-safety on manual mechanical handling equipment operations-safe driving-movement of cranes conveyors etc.	L1, L2, L3	12

TRE4216	PAVEMENT MATERIALS & CONSTRUCTION	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	3	0	0	3
Pre-requisites/Exposure					
Co-requisites					

Catalogue Description

The course deals with the origin, classification, requirements, properties and tests on fine aggregates, coarse aggregates and bitumen. It includes weathering and durability of bituminous materials & mixes and its mix design. It also includes joint filler and sealer materials used in the requirement for CC pavement construction and design mix for CC pavement.

Course Objectives

The objective of this course is to

1. Explain the characteristics, properties and testing procedures of highway materials such as soil, aggregate and bitumen.
2. Design the bituminous mix and the mix for cement concrete pavement.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Explain the classification, requirements, properties and tests on fine and coarse aggregates used in road construction.
- CO2. Define properties, preparation, uses and tests on bituminous binders and figure out the dynamic modulus and fatigue behaviour of bituminous mixes.
- CO3. Explain weathering and durability of bituminous mixes and design the bituminous mix for flexible pavement & rigid pavement.
- CO4. Explain different construction methods of roads & identify different failures.

Course Content

Modules	Blooms level*	Number of hours
Module I: Subgrade Soil Soil composition and structure - Soil classification for engineering purposes - Origin, Classification, requirements, properties and tests on road aggregates.	L1, L2	8
Module II: Bitumen Origin, preparation, properties and tests, constitution of bituminous road binders, requirements - Bituminous Emulsions and Cutbacks Preparation, characteristics, uses and tests Bituminous Mixes Mechanical properties - Resilient modulus, dynamic modulus and fatigue characteristics of bituminous mixes.	L1, L2, L4	10
Module III: Design Mix of Bitumen & Cement Concrete Weathering and Durability of Bituminous Materials and Mixes - Performance based Bitumen Specifications - Superpave mix design method. Cement Concrete for Pavement Construction Requirements, design of mix for CC pavement, joint filler and sealer materials.	L1, L2, L3	10
Module IV: Pavement Construction and Maintenance Construction of earth roads, WBM roads, stabilized roads, bituminous pavements, cement concrete roads and joints in cement concrete roads - Types and causes of failures in flexible & rigid pavements.	L1, L2	8

TRE4217	PAVEMENT MATERIALS & CONSTRUCTION LAB	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	0	0	2	1
Pre-requisites/Exposure	Pavement Materials & Construction				
Co-requisites					

Catalogue description

In this Lab course the various tests are there for different types of pavement materials such as Soil, Aggregate and Bitumen. It also includes the tests which are conducted for the pavement evaluation and their maintenance.

Course Objective

The objective of the course is to

1. Assure the quality of the materials that are to be used for the construction of pavements such as Soil, aggregates and Bitumen.
2. Strengthen the pavement by conducting different tests for pavement evaluation and its maintenance.

Course Outcomes

On the completion of this course, the student will be able to:

- CO1: Perform the tests on various type soils and apply the results in the practical life.
- CO2: Perform different tests on Aggregates that are to be used in the construction of highways and assure the quality of aggregates.
- CO3: Perform different tests on Bitumen that are to be used in the construction of highways and assure the quality of Bitumen.

Course Content

Modules	Blooms level*	Number of hours
Module I: Tests on Soil <ol style="list-style-type: none"> 1. Determination of Optimum Moisture Content (OMC) and Maximum Dry Density. 2. Determination of California Bearing Ratio (CBR) value for Subgrade. 	L3, L4	4
Module II: Tests on Aggregates <ol style="list-style-type: none"> 1. Impact Test and Abrasion Test of aggregates. 2. Elongation and Flakiness Index of aggregates. 3. Water Absorption Test of aggregates. 	L3, L4	6
Module III: Tests on Bitumen and Bituminous Mixes <ol style="list-style-type: none"> 1. Determination of Penetration value. 2. Determination of softening point value. 3. Determination of ductility. 4. Determination of viscosity. 5. Flash and Fire point Test. 6. Marshall Method of Mix Design 	L3, L4	10

TRE4218	GEOMETRIC DESIGN OF HIGHWAYS	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	3	0	0	3
Pre-requisites/Exposure					
Co-requisites					

Catalogue Description

The course discusses about the geometric design of highways along with their elements. It deals with the design of vertical and horizontal alignment of the highways. It includes various interchanges and intersections along with their design features. The case studies on hill roads & snow bound roads are also discussed.

Course Objectives

The objective of this course is to

1. Explain the basic principles and techniques of geometric design of highways.
2. Design the alignment & intersections and evaluate earthwork requirements & safety considerations.

Course Outcomes

On completion of this course, the students will be able to

- CO1: Explain and design various elements of geometric design of the highways.
- CO2: Explain the factors affecting route layout and calculate the different sight distances.
- CO3: Design summit & valley curve along with cross sectional elements.
- CO4: Explain the design principles of interchanges & intersections along with case studies on hill & snow bound roads.

Course Content

Modules	Blooms level*	Number of hours
Module I: Introduction Importance of geometric design and roadway function, Design controls: vehicles and drivers, speed, volume and access, carriage way, traffic separators, kerb, road margin.	L1, L2, L3,	8
Module II: Route & Sight Distance Route layout, environmental considerations, and context sensitive solutions; Sight distance, horizontal alignment, sight distance at intersection.	L1, L2, L3	9
Module III: Alignment Vertical alignment – grades, crest and sag curves. Highway cross – sectional elements and their design for rural highways, Urban streets and hill roads	L1, L2, L3	8
Module IV: Intersection At grade intersections – principles of design, Channelization, mini round – about, layout of round – about, inter – Changes – major and minor interchanges, entrance and exit ramps, acceleration and deceleration lanes Earthwork, Safety assessment tools Case studies on hill roads and snow bound roads.	L1, L2, L3, L4	11

TRE4211	PAVEMENT ANALYSIS AND DESIGN	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure					
Co-requisites					

Catalogue Description

The course is focused on design of different pavement types along with the pavement management. It contains components of pavements, factors affecting design and performance. It includes empirical, semi-empirical and theoretical approaches for design and comparison between IRC & AASHTO method.

Course Objectives

The objective of this course is to

1. Explain various pavement types, factors affecting design, components and their failure.
2. Design the pavement for highway & Runway using different approaches and softwares.

Course Outcomes

On completion of this course, the students will be able to

- CO1: Define factors affecting the design of highway pavements and runway.
CO2: Explain different components of pavement and design both the surface and sub surface drainage systems for a highway.
CO3: Design flexible pavement for a highway by different methods like empirical, IRC and AASHTO methods.
CO4: Design rigid pavement for a highway by different methods like IRC and AASHTO methods.
CO5: Evaluate the condition of pavement both structurally and functionally.

Course Content

Modules	Blooms level*	Number of hours
Module I: Introduction Types and component parts of pavements, Factors affecting design and performance of pavements. Highway and airport pavements, functions of pavement components	L1, L2	7
Module II: Pavement Design Factors Design wheel load, strength characteristics of pavement materials, climatic variations, traffic - load equivalence factors and equivalent wheel loads, aircraft loading, gear configuration and tyre pressure. Drainage – Estimation of flow, surface drainage, sub-surface drainage systems, design of sub-surface drainage structures	L1, L2, L3	10
Module III: Flexible Pavement Design Empirical, semi-empirical and theoretical approaches, design of highway and airport pavements by IRC, AASHTO Methods, applications of pavement design software	L1, L2, L3 and L4	12
Module IV: Rigid Pavement Design: Types of joints and their functions, joint spacing; design of CC pavement for roads, highways and airports as per IRC, AASHTO, design of joints. Design of continuously reinforced concrete pavements. Reliability; Use of software for rigid pavement design	L1, L2, L3, L4	12

Module V: Pavement Management & Maintenance Pavement failures, maintenance of highways, structural and functional condition evaluation of pavements: Characteristic Deflection by Benkelman Beam method, Unevenness by Bump Integrator method, pavement management system.	L1, L2, L6	7
--	------------	---

EVE4201	ENVIRONMENTAL POLICIES AND LEGISLATION	L	T	P	C
Version 2020.1	Month, Year of approval:	3	1	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalogue Description

This course is designed to acquaint the student with numerous ethical issues and perspectives confronting society and environmental scientists and their influence on the development of environmental policy and regulation. Existing and proposed policies and regulations are examined as to their ethical background.

Course Objective:

The objective of this course is to

1. Acquaint the students with the environmental issues, pollution and control and the measures taken for its protection along with the norms prevailing at international and national level.

Course Outcomes

On completion of this course, the students will be able to

CO1: Deal with the legal provisions of the water pollution act

CO2: Deal with the legal provisions of the air pollution act

CO3: Impart knowledge on of environment, pollution and various principles

CO4: Explain the concept of Hazardous Wastes act

Modules	Blooms level*	Number of hours
Module I : Water Pollution Act The water (prevention and control of pollution) Act-Definitions, Constitution of central and state boards, Constitution and composition of joint boards, functions, prevention and control of water pollution, Penalties, Central and state water laboratory, power of supersession, power to make rules. The water (P&CP) rules - power and duties of the chairman and member- secretary, Temporary association of persons with central board, Consulting engineer, Annual report, Report of central board analyst, central water lab,	L1, L2, L3	12
Module II: Air Pollution Act The Air (prevention and control of pollution) Act- Definition, powers and functions of boards, prevention and control of pollution, Penalties and procedure, Miscellaneous. The Air (P&CP) Rules- procedure of transaction of business of the board and its committees, Temporary Association of the board and its committees, Temporary association of the persons with the Central board, Annual Report of Central Board, persons with central boards.	L1, L2 L3	12
Module III: Environmental Act The Environmental (Protection) Act- Definition, General powers of the Central Govt., Prevention, Control and abatement of environmental pollution, miscellaneous. The E(P) Rules- recipient system, standards for emission or discharge of environmental pollutants, Prohibition and restriction on location of industries, Procedure for taking samples, notice and submission for analysis, functions of Env. Lab., furnishing information to authorities and	L2 and L3	12

agencies, prohibition and restriction on handling hazardous substances.		
Module IV: Hazardous Wastes Hazardous Wastes (Management and handling) Rules- Definition, esp, hazardous wastes, hazardous waste site. Transboundary movement, Responsibility of the occupier, grant of authorization, power to respond or cancel, packaging, labeling, transport, disposal or import, Accident reporting, appeal. Manufacture, storage and important of hazardous chemicals rules- Definitions- Mitigation of the major accident, safety reports.	L2, L3 and L4	12

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; Att: Attendance

Text Books & References:

EVE4208	SOLID AND HAZARDOUS WASTE MANAGEMENT	L	T	P	C
Version 2020.1	Month, Year of approval:	3	1	0	4
Pre-requisites/Exposure	NIL				
Co-requisites	NIL				

Catalogue Description

This course is designed to provide students with an understanding of technical issues and the management of solid wastes. This module includes solid waste policy, both domestic and international, and then examines appropriate methods of storage, collection, transfer, treatment and disposal appropriate for industrialized and developing countries. The module also provides the opportunity to visit recycling facilities and disposal sites to better understand links between theory and practice.

Course Objectives

The objective of this course is to:

1. To impart knowledge and skills in the collection, storage, transport, treatment, disposal and recycling options for solid wastes including the related engineering principles, design criteria, methods and equipment's.

Course Outcomes

On completion of this course, the students will be able to:

CO1: Understand the characteristics of different types of solid and hazardous wastes and the factors affecting variation

CO2: Define and explain important concepts in the field of solid waste management and suggest suitable technical solutions for treatment of municipal and industrial waste

CO3: Understand the role legislation and policy drivers play in stakeholders' response to the waste and apply the basic scientific principles for solving practical waste management challenges.

CO4: Design the different elements of waste management systems.

Course Contents

Modules	Blooms level*	Number of hours
Module I: Waste Management Scenario Legal and Organizational foundation: Definition of solid waste-waste generation in a technological society- major legislation, monitoring responsibilities, sources and types of solid waste- sampling and characterization- Determination of composition of MSW- storage and handling of solid waste- Future changes in waste composition. Collection and transport of solid waste: Collection of Solid waste: type of waste collection systems, analysis of collection system- alternative techniques for collection system.	L1, L2, L3	12
Module II: Collection & Transportation of wastes Separation and Processing and Transformation of Solid Waste: unit operations used for separation and processing, Materials Recovery facilities, Waste transformation through combustion and anaerobic composting, anaerobic methods for materials recovery and treatment- Recycling of plastic materials and metals. Energy recovery – Incinerators. Transfer and Transport: need for transfer operation, transport means and methods, transfer station types and design requirements. Landfills: Site selection, design and operation, drainage	L1, L2 L3	12

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

and leachate collection systems – requirements and technical solutions, designated waste landfill remediation – Integrated waste management facilities.		
Module III: Hazardous waste management Hazardous waste management: Definition and identification of hazardous wastes- sources and characteristics- hazardous wastes in Municipal Waste- Hazardous waste regulations – minimization of Hazardous Waste – compatibility, handling and storage of hazardous waste- collection and transport.	L1, L2, L3	12
Module IV: Hazardous waste treatment Hazardous waste treatment and design: Hazardous waste treatment technologies – Design and operation of facilities for physical, chemical and thermal treatment of hazardous waste –Biomedical waste disposal. Solidification, chemical fixation and encapsulation, incineration. Hazardous waste landfills: Site selection, design and operation – remediation of hazardous waste disposal sites.	L1, L2, L3	12

*Bloom's Level:

EVE4211	WATER TREATMENT PLANT DESIGN AND OPERATION	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure					
Co-requisites					

Catalog Description:

This course introduces the students to know about the various water treatment processes, the design for their plants and how do they operate so that there is more availability of clean water which can be put to various uses. At the end of the course, students should have a thorough wastewater treatment processes treatment and disposal. They would be able to design various facilities for physical and chemical treatment of wastewater treatment system.

Course Objectives:

The objective of the course is to,

1. Become familiar with conventional and advanced physical and chemical processes used to purify water, wastewater and air emissions.
2. Understand the basic principles of design and operation of a variety of treatment processes;
3. Able to calculate basic process parameters such as needed disinfection contact times, sizing of sedimentation basins, filter flow rates, number of membrane modules needed for treatment of a given feed flow rate, etc.

Course Outcomes:

On completion of this course, the students will be able to

CO1: Describe various wastewater treatment unit operations.

CO2: Explain the working principle and design of wastewater treatment units.

CO3: Comprehend the importance of guidelines based on Indian Standard code of practice for the design of wastewater treatment units for different industries.

CO4: Apply the waste management process used in various industries.

CO5: Apply the waste disposal and management process in treatment system.

Course Contents

Modules	Blooms level*	Number of hours
Module I INTRODUCTION Pollutants in water and wastewater – characteristics, Standards for performance. Significance of physico-chemical treatment – Selection criteria-types of reactor- reactor selection-batch-continuous type-kinetics	L1, L2 and L3	8
Module II UNIT OPERATIONS Principles of Screening – Mixing, Equalization – Sedimentation – Filtration – Modeling back washing – Evaporation – Incineration – gas transfer – mass transfer coefficient. Adsorption – Isotherms – Principles, kinetics, regeneration membrane separation, Reverse Osmosis, nano filtration, ultra-filtration and hyper filtration electrodialysis, distillation – stripping and crystallization – Recent Advances.	L2 and L3	10
Module III TREATMENT SYSTEM Principles of Chemical treatment – Coagulation flocculation – Precipitation – flotation solidification and stabilization – Disinfection, Ion exchange, Electrolytic methods, Solvent extraction – advanced oxidation /reduction – Recent Trends	L2, L3 and L4	10

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Module IV DESIGN OF TREATMENT SYSTEM Selection of Treatment – Design of municipal water treatment plant units – Aerators – chemical feeding – Flocculation – clarifies – tube settling – filters – Rapid sand filters slow sand filter, pressure filter, Dual media inlets Displacement and gaseous type. Design of Industrial Water Treatment Units- Selection of process – Design of softeners – Demineralisers –Reverse osmosis plants –flow charts – Layouts – Hydraulic Profile PID, construction and O&M aspects – case studies, Residue and rejects management – Upgradation of existing plants – Recent Trends – Software application.	L2, L3 and L4	10
Module V ADVANCED TREATMENT SYSTEM Design of municipal wastewater treatment units-screens-detritors-grit chamber-settling tanks-sludge thickening-sludge dewatering systems-sludge drying beds - Design of Industrial Wastewater Treatment Units-Equalization- Neutralization-Chemical Feeding Devices-mixers-floatation units-oil skimmer- flow charts – Layouts –Hydraulic Profile PID construction and O&M aspects – case studies, Residue management – Upgradation of existing plants – Recent Trends – Software application.	L2, L3 and L4	10

EVE4212	AIR POLLUTION AND CONTROL	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure					
Co-requisites					

Catalog Description:

This course designed to improve the understanding of the different air pollution: monitoring, modelling and control strategies and the skills of application of remediation techniques to combat pollution in three environmental compartments.

Course Objectives:

The objective of the course is to,

1. Impart knowledge on the principles and design of control of particulate and gaseous air pollutant and its emerging trends.
2. Introduce the fundamentals of mathematical models for water and air quality prediction and the importance of model building.

Course Outcomes:

On completion of this course, the students will be able to

CO1: Define general air pollution problems, meteorological definitions, air transport equations and pollution control matters and devices.

CO2: Explain the regulations pertinent to air pollutions (both indoor and outdoor environment).

CO3: Describe major problems in indoor air pollution control and regulations.

CO4: Apply the ability to learn from the mistakes ethically and increase the quality of design.

Course Contents

Modules	Blooms level*	Number of hours
Module I INTRODUCTION TO AIR POLLUTION Structure and composition of Atmosphere – Sources and classification of air pollutants - Effects of air pollutants on human health, vegetation & animals, Materials & Structures – Effects of air Pollutants on the atmosphere, Soil & Water bodies – Long- term effects on the planet – Global Climate Change, Ozone Holes – Ambient Air Quality and Emission Standards – Air Pollution Indices – Emission Inventories.	L1, L2 and L3	12
Module II AIR QUALITY MONITORING Ambient and Stack Sampling and Analysis of Particulate and Gaseous Pollutants -Effects of meteorology on Air Pollution - Fundamentals, Atmospheric stability, Inversion, Wind profiles and stack plume patterns-Transport & Dispersion of Air Pollutants	L2 and L3	12
Module III MODELLING Air Quality Modeling. Necessity, application and limitation of air quality modelling. Dispersion Modeling, Photochemical Modeling and Receptor Modeling. Different air quality Dispersion models and their limitations.	L2, L3 and L4	12
Module IV CONTROL OF AIR POLLUTANTS Primary considerations in designing effective control strategy: Environmental, Engineering and Economic Factor - Factors to be considered while selecting control equipment's - Various mechanisms to	L2, L3 and L4	12

control gaseous pollutants and particulate matter. Control Equipment design for particulate matter: Gravity chamber, Cyclone separator, Electrostatic precipitator, fabric filter, bag filter, Wet scrubber, Venturi-scrubber and absorption towers. Control Equipment design for gaseous pollutants: Absorption, Adsorption, Condensation and Incineration.

EVE4205	OPTIMIZATION OF WATER RESOURCES SYSTEM	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalogue Description:

The course aims to introduce fundamentals and need for optimization techniques in engineering problems. Various techniques such as Linear Programming, Geometric Programming, Dynamic Programming and Non-Linear Programming are taught to students to solve various environmental engineering problems for optimal solutions.

Course Objectives:

The objective of the course is to,

1. Become familiar with conventional and advanced physical and chemical processes used to purify water, wastewater and air emissions.
2. Understand the basic principles of design and operation of a variety of treatment processes;
3. Able to calculate basic process parameters such as needed disinfection contact times, sizing of sedimentation basins, filter flow rates, number of membrane modules needed for treatment of a given feed flow rate, etc.

Course Outcomes:

On completion of this course, the students will be able to

CO1. Define the distribution system.

CO2. Able to design simple water treatment units.

CO3. Get thorough idea about functions of water supply systems.

CO4. Get complete understanding of water quality standards.

Course Contents

Modules	Blooms level*	Number of hours
Module I INTRODUCTION Engineering Applications of Optimization, Statement of an Optimization Problem, Design Constraints, Constraint Surface, Objective Function, Optimization Techniques, Single-Variable Optimization, Multivariable Optimization with no Constraints, Multivariable Optimization with Equality Constraints, Multivariable Optimization with Inequality Constraints, Convex Programming Problem.	L1, L2 and L3	12
Module II OPTIMIZATION OF WATER RESOURCE SYSTEM Principles of Screening – Mixing, Equalization – Sedimentation – Filtration – Modeling back washing – Evaporation – Incineration – gas transfer – mass transfer coefficient. Adsorption – Isotherms – Principles, kinetics, regeneration membrane separation, Reverse Osmosis, nano filtration, ultra-filtration and hyper filtration electrodialysis, distillation – stripping and crystallization – Recent Advances.	L2 and L3	12

EVE4213	ENVIRONMENTAL CHEMISTRY	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalogue Description:

This course emphasizes the method of protection of groundwater which is polluted by soil, dust, and the waste particles. It is useful for the protection of surface water from the contaminants through the process of sedimentation, bacteriological, and radiation.

Course Objectives:

The objective of the course is to,

1. Bring into focus those aspects of chemistry that are particularly valuable for solving environmental problems like water and wastewater analysis.

Course Outcomes:

On completion of this course, the students will be able to

CO1: Gain a broad theoretical understanding of Environmental Chemistry and microbiology.

CO2: Get accustomed with the measurement and analysis of various water characteristics.

CO3: To knowledge about the biological characteristics of drinking water and determination of the same.

CO4: Contemporary issues and developments.

CO5: Gain a broad theoretical understanding of atmospheric chemistry and analytical principles.

Course Contents

Modules	Blooms level*	Number of hours
Module I PRINCIPLES OF PHYSICAL CHEMISTRY Reversible reactions, equilibrium constant, Le-Chatelier principle. Reaction rate Order and molecularity, kinetic equations of different orders, reversible and consecutive reactions. Catalysis-type, characteristics, activation energy, mechanism of catalyst action, acid base catalysts. Photo catalysis. Adsorption-classification, adsorption of gases on solids, adsorption from solutions, ion exchange adsorption, applications, Longmuir theory	L1, L2 and L3	10
Module II PRINCIPLES OF AQUATIC CHEMISTRY AND BIOCHEMSITRY Water resources, sea water- composition, Ph of sea water. Humic substances. Aquatic chemical reactions- microbial redox reaction, iron and manganese bacteria, nitrogen transformation bacteria. Enzymes-mechanism and factors influencing enzyme action. Biodegradation-biodegradation of carbohydrates, proteins, fats and oils and detergents. Colloidal state- stability, kinetic, optical and electrical properties	L2 and L3	10
Module III ENVIRONMENTAL CHEMICALS Chemical speciation – speciation of lead, mercury, arsenic and chromium. Structure and property- activity relationship, fate of organics in the environment – transformation reactions hydrolysis, elimination, oxidation, reduction and photochemical transformation. Risk evaluation of environmental chemicals, Toxic chemicals in the environment, impact	L2, L3 and L4	10

on enzymes. Biochemical effects of arsenic, lead, mercury and pesticides		
Module IV ATMOSPHERIC CHEMISTRY		
Structure of atmosphere, chemical and photochemical reactions in the atmosphere. Ozone chemistry- formation and depletion of ozone layer, oxides of nitrogen and sulphur. Acid rain mechanism of formation and effects. Photochemical smog, and sulfurous smog. Greenhouse effect/global warming, greenhouse gases, effects	L2 and L3	10
MODULE V FUNDAMENTALS OF ANALYTICAL PRINCIPLES		
Analysis of water and water quality parameters -concept of pH, measurement of acidity, alkalinity, hardness, residual chlorine, chlorides, DO, BOD, COD, fluoride and nitrogen. Introduction to spectral analysis, colorimetry, fluorimetry, nephelometry, turbidimetry, absorption and emission spectral methods.		8

EVE4214	ENVIRONMENTAL ENGINEERING LAB	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	0	0	2	1
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalogue Description:

Application of basic chemistry and chemical evaluations to measure physical, chemical, and bacteriological parameters of water and wastewater. Laboratory methods and interpretation of results with regard to environmental engineering applications such as design and operation of water and wastewater treatment processes, and to the control of the quality of natural water.

Course Objectives:

1. Understand the common environmental problems and its determination principles relating to water and wastewater quality are performed.
2. This course will help students know which tests are appropriate for given environmental problems, statistically interpret laboratorial results and write technical reports, and apply the laboratorial results to problem identification, quantification, and basic environmental design and technical solutions to real-world.

Course Outcomes:

On completion of this course, the students will be able to

CO1: Describe the knowledge in mathematics, science and engineering.

CO2: Design and conduct experiments, interpret and analyze data, and report results.

CO3: Analyze the ability to design of Civil Engineering systems or a process that meets desired specifications and requirements related to all fields of Civil Engineering.

CO4: Explain the ability to function on engineering and science laboratory teams, as well as on multidisciplinary design teams.

CO5: Explain to identify, formulate and solve environmental engineering problems.

Course Contents

Modules	Blooms level*	Number of hours
1. Introduction to Environmental Engineering laboratory	L1	1
2. Determination of pH of water	L1, L3 and L4	2
3. Determination of alkalinity	L1, L3 and L4	1
4. Determination of turbidity and the optimum coagulant dose	L1, L3 and L4	1
5. Determination of the optimum coagulant dose	L1, L3 and L4	1
6. Determination of hardness in water	L1, L3 and L4	1
7. Determination of chlorides in water	L1, L3 and L4	1
8. Determination of solids (total, dissolved, organic, inorganic and settleable) in water	L1, L3 and L4	1

EVE4215	GIS AND REMOTE SENSING FOR LAND AND WATER MANAGEMENT	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalogue Description

This course covers the remote sensing; Electromagnetic spectrum; Physics of remote sensing; Effects of atmosphere; Atmospheric windows, etc. Develop skills to use remote sensing for land cover classification, estimating evapotranspiration, water productivity, irrigation performance assessment & irrigation water accounting.

Objective:

The objective of the course is to,

1. Make the students understand the basics of emerging fields -remote sensing principles and Geographic Information System- so that they can utilize it for environmental system modeling

Course Outcomes

On completion of this course, the students will be able to:

CO1. Explain RS theory, technology, and typical applications of earth observation data

CO2. Understanding the basic principles of digital image processing & filtering

CO3. Determining the Geographic Information system

CO4. Understand the various techniques used for Data input and data editing-Input methods of GPS

Course Content

Modules	Blooms level*	Number of hours
Module I: Introduction to remote sensing – Electromagnetic spectrum – Physics of remote sensing – Effects of atmosphere – Atmospheric windows – Interaction of earth surface features with EMR – Spectral characteristics of vegetation, water, soil, etc. – Various types of platforms– Airborne and space-based platforms - Different types of aircraft – Manned and unmanned spacecraft used for data acquisition – Characteristics of different types of platforms – Characteristics of Remote Sensors –Multi spectral sensors – Multi Spectral Scanners – Microwave remote sensing- Factors affecting Microwave Measurement-Radar wave bands- SLAR and SAR.	L1, L2, L3	12
Module II: Sensors- Satellite system parameters- sensor parameters-spatial, spectral and radiometric resolution – False colour composite (FCC) – Multi spectral photographs – Thermal and microwave imaging system-Earth Resources satellite and Meteorological satellites Different types of data products and their characteristics – Image Interpretation - Basic principles of visual interpretation – Elements of image interpretation - Equipment for visual interpretation – Activities of image interpretation – Ground truth - Basic principles of digital image processing – filtering	L1, L2, L3	12
Module III : Geographic Information system – History and development of GIS – GIS definitions and Terminology -Architecture– System concepts – Coordinate	L1, L3, L4, L5	12

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram

STE4308	DESIGN OF TALL BUILDINGS	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure					
Co-requisites					

Catalogue Description

The main aim is to learn and develop *design* criteria and guidance for the seismic *design* and review of tall buildings. The design philosophies and the factors affecting the height and structural form of tall buildings is discussed elaborately in this course.

Course Objectives

The objective of this course is to:

1. Impart knowledge about the tall structures and the elements associated with the same.
2. Gain knowledge about the different loading conditions, loads applied and techniques involved in the design of tall structures.

Course Outcomes

On completion of this course, the students will be able to

CO1: Define and describe the design philosophies, loadings and performance of various types of concretes used in tall buildings.

CO2: Define and describe the factors affecting the growth, height and structural form in high rise construction along with the various systems involved.

CO3: Model the various structural elements related to the tall structures.

CO4: Define and analyse the various movement of tall buildings and the effect on the same related to creep, shrinkage, prestressing, etc.

CO5: Evaluate different methods of analysis of frames in tall buildings.

Course Content

Modules	Blooms level*	Number of hours
Module I: Design philosophy, Loading, sequential loading, materials - high performance, concrete - Fibre reinforced Concrete - Light weight concrete - design mixes. Gravity loading Wind loading Earthquake loading .	L1, L2, L3, L4	9
Module II: Factors affecting growth, Height and Structural form. High rise behaviour, Rigid frames, braced frames, Infilled frames, shear walls, coupled shear walls, wall-frames, tubulars, cores, futrigger - braced and hybrid mega systems.	L1, L2, L3, L4	9
Module III: Modelling for approximate analysis, Accurate analysis and reduction techniques, Analysis of buildings as total structural system considering overall integrity and major subsystem interaction, Analysis for member forces, drift and twist, computerized general three dimensional analysis.	L1, L2, L3, L4, L5, L6	10

Module IV: Sectional shapes, properties and resisting capacity, design, deflection, cracking, prestressing, shear flow, Design for differential movement, creep and shrinkage effects, temperature effects and fire resistance, durability aspect of structures	L1, L2, L3, L4, L5, L6	10
Module V: Overall buckling analysis of frames, wall-frames, Approximate methods, second order effects of gravity of loading, P-Delta analysis, simultaneous first-order and PDelta analysis, Translational, Torsional instability, out of plumb effects, stiffness of member in stability, effect of foundation rotation.	L1, L2, L3, L4	10

STE4312	OFFSHORE STRUCTURES	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	4	0	0	4
Pre-requisites/Exposure					
Co-requisites					

Catalogue Description

The Recent development and technological Advancement are moving into Offshore Structure. Unlike Ground Conditions, the Offshore Construction is Extreme. The course will give the introduction to the Offshore Structure and its components with major Loads acting on the Platform. How the Installation Process is carried out. The Introduction to Floating Structures gives the Idea about the construction in offshore industry.

Course Objectives

The objective of this course is to:

1. Define and comprehend offshore Structures, dedicated to the design, installation, management and maintenance of offshore and maritime structures
2. Evaluate the systems for the exploitation of fabrication techniques, structures assembling, conventional and renewable energies. In addition to the assessment and management of environmental.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Define the concept on Simple Deck configurations for Lift and float-over installations.
- CO2. Comprehend importance of fixed and floating structures;
- CO3. Discuss different loads on offshore structure and their effect in environment
- CO4. Evaluate and estimate the hydrostatic Stability-Elastic plate theory; plated structures; stiffened plates-Buckling of plates.

Course content

Modules	Blooms level*	Number of hours
Module I Jacket concepts, redundant framing arrangement; Launch and Lift jackets; Simple Deck configurations for Lift and float-over installations; In-service and Pre-service Loads and analysis Jackup Rigs: Configuration and operation of jackups; Simplified analysis; Spud can penetration and extraction; Spud can – pile interaction.	L1, L2, L4	10
Module II Fixed and floating structures; Spars and TLP's; Modular topsides and integrated topsides; deck levels and jacket configurations; Spar and TLP hull arrangements; Load out: Fabrication yard, grillage and foundation conditions; Fabrication sequence of Launch jacket, lift jackets, topsides and modules; Weighing and weight control; Skidded, Trailer and lifted Load out methods Lifting and launch schemes for jackets, upending and setting, on bottom stability; Float-over installations; Dynamics of barge – cargo system.	L1, L2, L3, L4	14
Module III Loads on offshore Structure, Environmental Loads, Marine Growth, Force	L1, L2, L5, L6	12

On Large Dia. members. Accidental Loads, durability aspect of offshore structures and design life of structures		
Module IV Semi-submersible, TLPs, FPSOs, Spars and others-General concepts on estimation of loads and Hydrostatic Stability-Elastic plate theory; plated structures; stiffened plates-Buckling of plates; Semi-submersible; column.	L1, L4, L6 L2, L5,	12

STE4314	PRESTRESSED CONCRETE DESIGN	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalogue Description

The course prestress concrete provides the knowledge of advanced concrete structure design in the Civil Engineering constructions. This subject pave the path in developing advanced science, mathematics, engineering solutions and technological advancement in a broader perspective leading to produce quality engineers and researchers in various ways. This programme based on concepts, analysis and design of prestressed concrete structural members and their behavior in the application of loadings. This unique combination paves the path to embroil students in modern high-grade structural engineering advancement in long term infrastructural growth in a sustainable manner in different Civil engineering project.

Course Objectives

The objective of this course is to:

1. Apply the advanced concept of structural concrete design that has come over the time to overcome the possibility of excessive cracks and deformation compare to normal RCC Structure.
2. Explain in skill gaining in the design of field of pre-stressed concrete members, behavior in adverse loading and their utility in large construction projects.

Course Outcomes

On completion of this course, the students will be able to

- CO1.Explain the basic requirements of pre-stressed structural design by understanding its principles and methods adopted in structural elements to overcome the weakness of concrete behavior.
- CO2.Develop the idea of pre-stressing to analysis of pre-stressed concrete sections, its behavior in case of external loadings and also to understand the pre-stressing loading effects in members with time and different losses associated to this.
- CO3.Describe the important behavior of pre-stressing structural units towards external loading and its effect on shear and torsion.
- CO4.Analyze and design of pre-stressed structural members to estimate its execution in large span structural systems.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Materials for Pre-stressed Concrete and Pre-stressing Systems High strength concrete and high tensile steel – tensioning devices – pre-tensioning systems – post tensioning systems	L1, L2	12
Module II: Analysis of Pre-stress and Bending Stresses Analysis of pre-stress – resultant stresses at a sector – pressure line or thrust line and internal resisting couple – concept of load balancing – losses of pre-stress – deflection of beams.	L1, L2, L3, L4	12
Module III: Strength of Pre-stressed Concrete Sections in Flexure, Shear and Torsion Types of flexural failure – strain compatibility method – IS code procedure – design for limit state of shear and torsion, Design problems.	L1, L3, L4, L6	12

STE4302	ADVANCED CONCRETE TECHNOLOGY	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalogue Description

The course will define the concrete making material materials, their significance, uses, and their properties in different situations and design based on standard specifications. This will also enable the students to understand the manufacturing process of concrete and the precautions, various properties of concrete and different types of concrete and their application. This course illustrates about the use of different industrial wastes for the production of sustainable concrete also gives the description for the high strength concrete production.

Course Objectives

The objective of this course is to

1. Comprehend the proper selection of construction materials used in the field of Civil engineering construction sectors by knowing the material's properties, availability, strength and durability.
2. Research development in the field of advancement construction materials and their proper selection as per need and performance requirements on different situations.

Course Outcomes

On completion of this course, the students will be able to

- CO1: Judge the appropriate construction materials as per the construction activities concerned, knowing its performance, properties and criteria through different standardized tests.
- CO2: Quantifying, processing and Performance of concrete works for its quality assurance as per the standard guidelines.
- CO3: Describe the concrete behavior in fresh state and its behavior in different environmental condition and towards external loading agencies.
- CO4: Comprehend the selection of advanced concrete material for sustainable constructional applications and incorporating repair and rehabilitation process of concrete material.
- CO5: Selection and requirement of Form Work their importance in the field of construction.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Materials Concrete Making Materials: Cement- Bogue compounds – Hydration Process– Types of cement – Aggregates – Gradation Charts – Combined Aggregate-Alkali Silica Reaction -Admixtures – Chemical and Mineral admixtures.	L1, L2	10
Module II: Fresh and Hardened Concrete Fresh Concrete - workability tests on Concrete Setting times of Fresh Concrete - Segregation and bleeding. Hardened Concrete: Abram's law- Gel space ratios, Maturity Concept – Stress Behaviour – Creep and Shrinkage – Durability tests on concrete – Non-destructive testing of concrete.	L1, L2	10
Module III: High Strength and High Performance Concrete High Strength Concrete – Micro structure – Manufacturing and Properties- Design of HSC Using Erintroy Shaklok Method- Ultra High Strength Concrete. High Performance Concrete- Requirements and properties of	L1, L2, L3, L4	9

STE4307	SOIL STRUCTURE INTERACTION	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure					
Co-requisites					

Catalogue Description

To impart knowledge about the critical study of the foundation design , its nature in accordance with the soil structure interaction and applying the techniques to analyze it.

Course Objectives

The objective of this course is to:

1. Impart knowledge about the importance and usage of soil structure interaction.
2. Understand the various methods and parameters involved in SSI.
3. Impart knowledge about the behavior of soil under various circumstances related to the changes in structural behavior.

Course Outcomes

On completion of this course, the students will be able to

CO1: Define and describe soil structure interaction, understand its importance and evaluate soil structure interaction problems.

CO2: Define, describe and evaluate the various parameters and methods related to soil structure interaction.

CO3: Analyse the responses and behavior of soil in different conditions.

CO4: Evaluate and analyse the soil structure interaction in retaining structures.

Course Content

Modules	Blooms level*	Number of hours
Module I: Introduction, Importance and Applications of Soil Structure Interaction (SSI) Introduction to SSI, Importance of SSI, Applications and examples of SSI for structural engineer, Effects of structure roughness/smoothness on soil behaviour. General soil-structure interaction problems – Shallow Foundations, Sheet piles, Mat/Raft foundations etc., Contact pressures and soil-structure interaction for shallow Foundations, Fixed/Flexible Base.	L1, L2, L3, L4	12
Module II: Soil Structure Interaction Parameters Concept of sub grade modulus, effects/parameters influencing sub grade modulus, Flexible and Rigid Foundations – Rigidity calculations, Static and Dynamic Spring Constants – Winkler Model, Estimation of soil spring constants/stiffness for foundations design. SSI Models - Elastic Continuum, Winkler Model, Multi-Parameter Models, Hybrid Model. Structure Contact Interface.	L1, L2, L3, L4, L5, L6	12
Module III: Soil Behavior Arching in soils. Elastic and plastic analysis of stress distribution on yielding bases. Analysis of conduits/pipes in soils. Beams on elastic foundation concept, introduction to the solution of beam problems. Seismic Soil-Structure Interaction - Dynamic response of soil, strain-compatibility, and damping characteristics of soil-structure. Shake-	L1, L2, L3, L4	12

table tests.		
Module IV: SSI in Retaining Structures Curved failure surfaces, their utility and analytical/graphical predictions from Mohr-Coulomb envelope and circle of stresses. Earth pressure computations by friction circle method. Earth pressure distribution on walls with limited/restrained deformations, Dubravo's analysis. Earth pressures on sheet piles, braced excavations. Design of supporting system for excavations. Soil-Pile Behaviour: Introduction, axial and laterally loaded piles, load-displacement behaviour, Modified Ramberg Osgood Model, pile group, interaction effect in pile group, soil-pile modelling in FEM, Elastic continuum and elasto-plastic analysis of piles and pile groups. Non-linear load-deflection response.	L1, L2, L3, L4	12

STE4304	ADVANCED CONSTRUCTION MATERIALS	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure					
Co-requisites					

Catalogue Description

The course will define the concrete making material materials, their significance, uses, and their properties in different situations and design based on standard specifications. This will also enable the students to understand the manufacturing process of concrete and the precautions, various properties of concrete and different types of concrete and their application. This course illustrates the use of different industrial wastes for the production of sustainable concrete also gives the description for the high strength concrete production. The course will also give an insight into forensic civil engineering and its importance.

Course Objectives

The objective of the course is to

1. Impart knowledge about the various construction materials that can be used in construction work ranging from the cement, aggregates, admixtures and other waste materials that can be put to use in construction.
2. Impart knowledge about the Forensic Structural Engineering

Course outcomes

After completing the course, the students will be able to:

CO1: Define, describe and evaluate the fresh concrete properties and other tests on concrete along with the analysis of mix design of concrete.

CO2: Comprehend the various industrial waste materials in concrete, their influence on the properties of concrete along with the understanding of the high strength concrete in detail.

CO3: Define, describe and evaluate the various foams, fibres and light-weight materials used in concrete making. Also, describe the properties and usage of fibre reinforced concrete and geopolymer concrete.

CO4: Defining and comprehending various materials such as bearings, adhesives, sealants, polymer concrete composites, etc.

CO5: Comprehend, describe and evaluate the importance and use of forensic engineering in the construction industry.

Course Content

Modules	Blooms level*	Number of hours
Module I: Properties of Concrete Fresh concrete and its rheology. Mechanical, deformational behavior and microstructure of hardened concrete. Creep and shrinkage. Testing of concrete. mix design and properties of concrete; High strength concrete; High density and lightweight concretes; admixtures.	L1, L2, L3, L4	10
Module II: Industrial Waste Materials Industrial waste materials in concrete, their influence on physical and mechanical properties and durability of concrete, Concreting under extreme weather conditions, High strength concrete. Changes in	L1, L2, L3, L4	9

STE4305	ADVANCED CONSTRUCTION MATERIALS LAB	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	0	0	2	1
Pre-requisites/Exposure					
Co-requisites					

Catalog Description

In this lab course the various tests are conducted on different types of basic construction materials such as aggregate, sand, cement, admixtures. It also includes the tests on concrete design mix, different tests related to fresh and hardened state concrete with both destructive and non-destructive tests.

Course Objective

The objective of the course is to

1. Assure the quality and properties of materials that are to be used for the construction such as; sand, aggregates, cements, admixtures.
2. Strengthen the knowledge on construction materials, their utilization and related tests for concrete structure quality improvement, evaluation and its maintenance.

Course Outcomes

On the completion of this course, the student will be able to:

CO1. Perform the tests on various construction materials such as cement, aggregates, etc. to apply the results in the practical life.

CO2. Perform different tests such as workability and hardened concrete tests used in the construction for the quality assurance.

CO3. Convince on different tests required on concrete, its non-destructive test in its harden states.

CO4. Perform the various tests on lightweight materials used in concrete.

Course Content

List of Experiments	Blooms level*	Number of hours
Module I: Tests on cement - Consistency, Setting times, Soundness, Compressive Strength; Tests on aggregates: Gradation Charts of Aggregates, Bulking of fine Aggregate, Aggregate Crushing and Impact value	L1, L2, L3, L5, L6	6
Module II: Workability Tests on Fresh self compacting concrete; Test the compressive strength of concrete cubes by adding the industrial waste products in replacement of cement/ aggregates, permeability and durability tests on concrete	L1, L2, L3, L5, L6	8
Module III: Non Destructive Testing of Concrete: Rebound hammer test, Pull out test, Ultrasonic pulse velocity test.	L1, L2, L3, L5, L6	4
Module IV: Use of light weight materials in concrete, fibre reinforced concrete design, design of mixes for SCC (self compacting concrete)	L1, L2, L3, L5, L6	6

STE4309	ADVANCED STEEL AND CONCRETE COMPOSITE STRUCTURES	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure					
Co-requisites					

Catalogue Description

To impart knowledge and carry out the analysis and design of steel and concrete composite structural components. Steel and concrete composite structures are a structurally efficient, fast-to-erect and economically competitive solution for buildings. In this course, the general modelling principles and design criteria for these structures are discussed.

Course Objectives

The objective of this course is to:

1. Design composite beams, columns, trusses and box-girder bridges including the related connections.
2. Expose the students on case studies related to steel-concrete constructions of buildings

Course Outcomes

On completion of this course, the students will be able to

CO1: Define and describe the fibre reinforced composites and their allied materials.

CO2: Evaluate the behaviour of unidirectional lamina and transformation of stress strain and other parameters.

CO3: Evaluate and analyze the elastic behaviour of multidirectional laminates.

CO4: Evaluate and analyze the bending of laminated composite plates

Course Content

Modules	Blooms level*	Number of hours
Module I: Introduction: definition and characteristics, fibres, matrices, fibre reinforced composites, advantages and limitations, basic concepts and characteristics: isotropy, orthotropy, classification, lamina and laminate, micromechanics and macromechanics, constituent materials and properties.	L1, L2, L3, L5	12
Module II: Elastic behaviour of unidirectional lamina: specially orthotropic and transversely isotropic material, relation between mathematical and engineering constants, stress strain relations for thin lamina, transformation of stress and strain, transformation of elastic parameters, transformation of stress-strain relations in terms of engineering constants.	L1, L2, L3	12
Module III: Elastic behaviour of multidirectional laminates, symmetric and balanced laminates, design considerations, computational procedure for finding engineering elastic properties, stress and failure analysis of multidirectional laminates.	L1, L2, L3,	12
Module IV: Bending of laminated composite plates, thin laminated plate theory, deflection of all edges simply supported rectangular symmetric cross-ply laminate, two opposite edges simply supported.	L1, L2, L3, L4	12

STE4310	ADVANCED STRUCTURAL ENGINEERING LAB	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	0	0	4	2
Pre-requisites/Exposure					
Co-requisites					

Catalog Description

This course contains the basic and advanced testing procedures for the different materials in construction such as sand, aggregates, cement, concrete, etc. and analysis of building using software. The tests which are practically used at site in the construction field will be discussed in details in this course.

Course Objectives

The objective of the course is to

1. Assure the quality and properties of materials that are to be used for the construction such as; sand, aggregates, cements, admixtures.
2. Strengthen the knowledge on construction materials, their utilization and related tests for concrete structure quality improvement, evaluation and its maintenance & Analysis of Buildings.

Course Outcomes

On the completion of this course, the student will be able to:

CO1. Perform different tests on cement, sand, aggregates used in the construction for the quality assurance.

CO2. Carry out the mix design for high strength concrete and evaluate the use of admixtures in concrete.

CO3. Convince on different tests required on concrete, its destructive and non-destructive test in its harden states.

CO4. Analyse and Design a building using Software.

Course Content

Modules	Blooms level*	Number of hours

CME4307	GIS IN CONSTRUCTION ENGINEERING	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalogue Description

This course will help the students to understand and introduce the elements of GIS as applied to construction management and achieve an awareness on application techniques.

Course Objectives

The objective of the course is to

1. Comprehend the various types of data, data analysis methods and data quality requirements.
2. Develop the means of getting suitable data output and to use the data output for construction management using GIS tools.

Course Outcomes

On completion of this course, the students will be able to

CO1: Define and describe the basic concepts of GIS, its components and types of maps.

CO2: Evaluate the different data in the GIS software.

CO3: Study and comprehend the topology related factors, modelling and other data interpretation.

CO4: Apply the knowledge of GIS into the field application.

Course Content

Modules	Blooms level*	Number of hours
Module I: GIS Basic Concepts Definition - Components of GIS -Maps - Definition - Types of Maps - Characteristics of Maps -Map Projections -- Hardware, Software and Organizational Context.	L1, L2, L3	12
Module II: GIS software. Data Types - Spatial and Non-Spatial - Spatial Data - Points, Lines and areas- Non-spatial data - Nominal, Ordinal, Interval and Ratio - Digitizer - Scanner - Editing and Cleaning - Geo reference data. Raster and Vector Data Structure - Raster data storage - Run length, Chain and Block Coding - Vector Data Storage	L1, L2, L3	12
Module III: Topology – Topological Models - Arc Node Structure - Surface Data - DEM - Grid DEM and TIN structure- Applications of DEM. Reclassification - Measurement - Buffering - Overlaying - SQL for Queries - Neighborhood and zonal operations - Data Quality - Components of data quality - Sources of errors in GIS - Meta data. Output - Maps, Graphs, Charts, Plots, Reports - Printers – Plotters.	L1, L2, L3	12
Module IV: Fields of application - Natural Resource Management, construction management-Parcel based, AM/FM applications examples	L1, L2, L3, L4	12

CME4310	CONSTRUCTION QUALITY & SAFETY MANAGEMENT	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure	-				
Co-requisites	-				

Catalogue Description

The course covers the construction quality management aspect related to Total quality management (TOC), various concepts of quality, etc. This course will help the students to understand the importance of quality in construction industry and the aspects of completing the projects on time. This will also impart knowledge about the safety measures required during construction work and the management of the same.

Course Objectives

The objective of this course is to:

1. Comprehend the importance of quality in construction industry related to various aspects of quality.
2. Development of idea related to specification, standardization, bid, environmental safety and management.

Course Outcomes

On completion of this course, the students will be able to:

- CO1: Define and describe the quality policy in Indian construction industry and their effect on economy.
CO2: Evaluate and comprehend the concept of quality and apply the procedure in the practical use.
CO3: Comprehend the quality assurance and control programmes to be utilized in practical applications.
CO4: Define and describe the various aspects of quality and various modes of analysis of the same.
CO5: Comprehend the ideas related to specification, standardization, bid, environmental safety and management.

Course Content

Modules	Blooms level*	Number of hours
Module I: Quality policy in construction industry-Consumer satisfaction-Ergonomics-Time of completion, Statistical tolerance.	L1, L2 and L3	10
Module II: Taguchi's concept of quality-contract and construction programming-inspection procedures.	L1, L2 and L3	10
Module III: Quality assurance/Quality control Programme and cost implication.	L1, L2, and L3	8
Module IV: Different aspects of quality-appraisals-failure mode analysis-stability methods and tools-Influence of drawings-detailing.	L1, L2 and L3	8
Module V: Specifications- standardization- Bid preparation-construction activity-Environmental safety-social and environmental factors.Basic construction safety: Hazards, human factors in construction safety, introduction to occupational health and safety, problem areas in construction safety, elements of an effective safety program, job-site safety assessment, safety planning, safety audit	L1, L2 and L3	12

CME4308	OPERATIONS STRATEGY	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	4	0	0	4
Pre-requisites/ Exposure					
Co-requisites					

Catalogue Description

In this course the concepts of planning, strategizing the management tools and techniques are discussed. A clear understanding of various practical aspects of operations strategy, selection of process and infrastructure development will be explained. The aim of this course is to make the students familiar with the changes required in the operational strategy with rapidly changing environment in workplace and to adapt oneself according the changes.

Course Objectives

The objective of this course is to:

1. Equip the students with concepts of developing and implementing the operation strategy.
2. Provide an outline for implementing the operation strategy and to calculate the various financial and accounting perspectives in restructuring any organization.

Course Outcomes

On completion of this course, the students will be able to

CO1: Define, describe the role and importance of operation strategy, its dynamics and its implications on manufacturing industry.

CO2: Identify the principles and concepts of developing the operation strategy and its implications in infrastructure development.

CO3: Identifying the principles and concepts of Focused Manufacturing demonstrating the importance of human aspects and categorizing the advantages and disadvantages of technology in use.

CO4: Calculating and describing the various financial and accounting perspectives in improving, redefining and restructuring any organization.

Course Content

Modules	Blooms level*	Number of hours
Module I: Introduction Introduction, Role and Objectives of Operations Strategy, Incorporating Operations Strategy in the Corporate Strategy, Dynamics of process-product life cycles, Defining a Operations Strategy in Overall Environment, Manufacturing Implications of Corporate Marketing Decisions.	L1, L2	12
Module II: Developing Operations Strategy Principles and Concepts of Developing a Operations Strategy, Process of Operations Strategy Formulation, Methodology of Developing Operations Strategy, Business Implication of Process Choice, Product Profiling, Manufacturing Audit Approach, Manufacturing Restructuring, Infrastructure Development.	L1, L2	12
Module III: Implementation Of Operations Strategy Principles and Concepts of Focused Manufacturing, Involvement of Human Aspects, Effect of Technology Advancement and Technology Management, Integration of Operations Strategy Planning and Technology Planning, Pre-requisites of Organized and Focused Manufacturing Strategy & Unit.	L1, L2, L3	12

CME4315	ADVANCED CONCRETE TECHNOLOGY	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalogue Description

The course will define the concrete making material materials, their significance, uses, and their properties in different situations and design based on standard specifications. This will also enable the students to understand the manufacturing process of concrete and the precautions, various properties of concrete and different types of concrete and their application. This course illustrates about the use of different industrial wastes for the production of sustainable concrete also gives the description for the high strength concrete production.

Course Objectives

The objective of this course is to

1. Comprehend the proper selection of construction materials used in the field of Civil engineering construction sectors by knowing the material's properties, availability, strength and durability.
2. Research development in the field of advancement construction materials and their proper selection as per need and performance requirements on different situations.

Course Outcomes

On completion of this course, the students will be able to

CO1 Judge the appropriate construction materials as per the construction activities concerned, knowing its performance, properties and criteria through different standardized tests.

CO2 Quantifying, processing and Performance of concrete works for its quality assurance as per the standard guidelines.

CO3. Describe the concrete behavior in fresh state and its behavior in different environmental condition and towards external loading agencies.

CO4. Comprehend the selection of advanced concrete material for sustainable constructional applications and incorporating repair and rehabilitation process of concrete material.

CO5 Selection and requirement of Form Work their importance in the field of construction.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Materials Concrete Making Materials: Cement- Bogue compounds – Hydration Process– Types of cement – Aggregates – Gradation Charts – Combined Aggregate-Alkali Silica Reaction -Admixtures – Chemical and Mineral admixtures.	L1, L2	10
Module II: Fresh and Hardened Concrete Fresh Concrete - workability tests on Concrete Setting times of Fresh Concrete - Segregation and bleeding. Hardened Concrete: Abram's law- Gel space ratios, Maturity Concept – Stress Behaviour – Creep and Shrinkage – Durability tests on concrete – Non-destructive testing of concrete.	L1, L2	10
Module III: High Strength and High Performance Concrete High Strength Concrete – Micro structure – Manufacturing and Properties- Design of HSC Using Erintroy Shaklok Method- Ultra High Strength Concrete. High Performance Concrete- Requirements and properties of	L1, L2, L3, L4	9

CME4302	HIGHWAY CONSTRUCTION AND MAINTENANCE	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure					
Co-requisites					

Catalog Description

This course deals with the advanced knowledge of the transportation engineering. The aspects related to highway construction such as embankment construction, bituminous construction, rigid pavement construction (concrete road), hill road construction, etc. are dealt with in this course. The maintenance management related to highways have also been discussed elaborately in this course.

Course Objectives

The objectives of this course are:

1. Impart knowledge about the highway construction techniques related to embankment, flexible and rigid pavements as well as hill roads.
2. Understanding the maintenance management related to road construction.

Course outcomes

After completing the course, the students will be able to:

CO1: Define, describe and evaluate the construction of embankments along with their maintenance management.

CO2: Describe and analyze the bituminous construction techniques along with their maintenance management.

CO3: Describe and analyze the concrete road construction techniques along with their maintenance management.

CO4: Describe and analyze the hill road construction techniques along with their maintenance management.

Course Content

Modules	Blooms level*	Number of hours
Module I: Embankment Construction: Formation cutting in Soil and hard rock, Preparation of Subgrade, Ground improvement, Retaining and Breast walls on hill roads, Granular and Stabilized, Sub – bases / bases, Water Bound Macadam (WBM), Wet Mix Macadam (WMM), Cement treated bases, Dry Lean Concrete (DLC). Maintenance of each of the Bituminous construction.	L1, L2, L3, L4	12
Module II: Bituminous Constructions: Types of Bituminous Constructions, Interface Treatments, Bituminous Surfacing and wearing Courses for roads and bridge deck slabs and their maintenance , Selection of wearing Course under different Climatic and Traffic conditions, IRC specifications, Construction techniques and Quality Control.	L1, L2, L3, L4	12
Module III: Concrete road construction: Test on Concrete mixes, Construction equipment, Method of construction of joints in concrete pavements, Quality Control in Construction of Concrete pavements, Construction of Continuously reinforced, Prestressed, Steel Fibre Reinforced	L1, L2, L3, L4	12

CME4303	HIGHWAY CONSTRUCTION AND MAINTENANCE LAB	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	0	0	2	1
Pre-requisites/Exposure					
Co-requisites					

Catalog description

In this lab course the various tests are conducted on different types of basic construction materials such as aggregate, sand, cement, admixtures. It also includes the tests on bituminous design mix, different tests related to fresh and hardened state concrete with both destructive and non-destructive tests.

Course Objective:

The objective of the course is to

1. Assure the quality and properties of materials that are to be used for the construction such as; sand, aggregates, cements, admixtures.
2. Strengthen the knowledge on construction materials especially used in construction of roads and pavements, their utilization and related tests for concrete structure quality improvement, evaluation and its maintenance.

Course Outcomes:

On the completion of this course, the student will be able to:

CO1. Perform the tests on various construction materials to apply the results in the practical life.

CO2. Perform different tests on cement, sand, aggregates, bitumen and bituminous mixes used in the construction for the quality assurance.

CO3. Carry out the bituminous mix design

CO4. Evaluate and maintain the quality of materials based constructions and perform the tests to evaluate the pavements.

Course Content

List of Experiments	Blooms level*	Number of hours
Module I: Laboratory tests on soils 1. Moisture Content Test 2. Proctor Test 3. CBR Test	L1, L2, L3, L5, L6	6
Module II: Tests on aggregate; Tests on bitumen 1. Crushing Value Test 2. Impact Value Test 3. Los Angeles Abrasion Test 4. Shape Test 5. Specific Gravity & Water Absorption Test 6. Penetration Test 7. Softening Point Test 8. Flash & Fire Test 9. Ductility Test 10. Viscosity Test	L1, L2, L3, L5, L6	6
Module III: Bituminous mix design 1. Marshall Method of Mix Design	L1, L2, L3, L5, L6	6
Module IV: Pavement evaluation tests 1. Bump Integrator Test 2. Benkelman Beam Test	L1, L2, L3, L5, L6	6

CME4304	GEOTECHNICS IN CONSTRUCTION	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/ Exposure					
Co-requisites					

Catalogue Description

This course deals with the advanced knowledge of the geotechnical engineering. The aspects related to the various constructions required in geotechnical engineering ranging from the foundations to various grouting processes and earth reinforcement.

Course Objectives

The objectives of this course are:

1. Impart knowledge about the geotechnical construction techniques.
2. Impart knowledge about the various constructions required in geotechnical engineering ranging from the foundations to various grouting processes and earth reinforcement.

Course outcomes

After completing the course, the students will be able to:

CO1: Define and describe the shallow foundation and the analysis of the same for practical use.

CO2: Evaluate and analyze the deep foundation especially the pile and pile cap design.

CO3: Define earth reinforcement techniques and comprehend the principals behind it for practical applications.

CO4: Apply the knowledge of grouting and other stabilizing techniques for practical applications.

Course Content

Modules	Blooms level*	Number of hours
Module I: Shallow Foundation: need of foundation engineering, shallow foundation, construction methods in shallow foundation , analysis of foundation, Foundation design in relation to ground movements - Foundation on recent refuse fills - Design of Foundation for seismic forces – Codal recommendations - Introduction to theory of vibration - Design of Block foundation – Codal Recommendations.	L1, L2, L3, L4	12
Module II: Deep foundation: design of pile foundation, pile cap analysis, pile – raft system basic interactive analysis – pile and pile groups subjected to vibrations – fundamental solutions. design of caissons.	L1, L2, L3, L4	12
Module III: Earth reinforcement – Principles and basis mechanism of reinforced earth-reinforced soil retaining structures-simple design, Synthetic and natural fibre based Geotextiles and their applications. Filtration, drainage, separation, erosion control – case studies.	L1, L2, L3, L4	12
Module IV: Grouting techniques – Types of grout – Suspension and solution grouts – Basic requirements of grout. Grouting equipment – principle of injection-injection methods – properties of treated ground-application of jet grouting-grout monitoring – Electro – chemical stabilization – Stabilization with cement, lime etc. –	L1, L2, L3, L4	12

Stabilization of expansive clays.

Version 2020.1	Date of Approval: 3rd June, 2020	0	0	2	1
Pre-requisites/Exposure					
Co-requisites					

Catalogue Description

In this lab course the various tests are conducted on the soil and its engineering properties. The various tests related with the soil will be conducted such as CBR, direct shear, triaxial, pile load test, SPT, etc.

Course Objectives

The objective of the course is to

1. Assure the quality and properties of materials that are to be used for the construction such as; sand, aggregates, cements, admixtures.
2. Strengthen the knowledge on construction materials especially used in construction of roads and pavements, their utilization and related tests for concrete structure quality improvement, evaluation and its maintenance.

Course Outcomes

On the completion of this course, the student will be able to:

CO1. Perform the tests on soils to apply the results in the practical life.

CO2. Perform different tests such as triaxial test, direct shear test, CBR test, SPT test, etc. for the quality assurance.

CO3. Carry out the various consolidated and unconsolidated tests.

CO4. Evaluate and maintain the quality of materials-based constructions and perform the tests to evaluate the geotechnical aspects.

Course Content

List of Experiments	Blooms level*	Number of hours
Module I: Review of index and engineering properties of soil	L1, L2, L3, L5, L6	6
Module II: CBR Test; Direct Shear Test - Drained direct shear test on Cohesionless Soil	L1, L2, L3, L5, L6	6
Module III: Triaxial Compression Test - Unconsolidated - Undrained Tests, Consolidated Undrained Tests with Pore pressure measurement, Consolidated Drained Tests	L1, L2, L3, L5, L6	6
Module IV: Standard Penetration Test, Plate load Test, Pile Load Test and Large Direct Shear Test.	L1, L2, L3, L5, L6	6

CME4316	SOFT COMPUTING TECHNIQUES IN CIVIL ENGINEERING	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalogue Description

Soft computing is the foundation of conceptual intelligence in machines. Unlike hard computing, soft computing is tolerant of imprecision, uncertainty, partial truth, and approximation. Soft computing algorithms are becoming important classes of efficient tools for developing intelligent systems and providing solutions to complicated civil engineering problems. Domains of applications include structural engineering, design, diagnostics, and health monitoring, hydraulic engineering, geotechnical engineering, transportation engineering, environmental engineering, coastal and ocean engineering and construction management. The course gives basic knowledge about the key algorithms and theory that form the foundation of machine learning and computational intelligence and a practical knowledge of machine learning algorithms and methods in civil engineering.

Course Objectives

The objective of this course is to:

1. Introduce the concept of soft computing in Civil Engineering.
2. Identify and select a suitable soft computing technique to solve the problem, construct a solution and implement a soft computing solution.

Course Outcomes

On completion of this course, the students will be able to

CO1: Comprehend the soft computing techniques and their application in civil engineering

CO2: Analyse various neural networks architectures and their practical applications.

CO3: Define the fuzzy logic modelling technique and its application.

CO4: Comprehend and Understand the genetic algorithm concepts and their applications in civil engineering.

CO5: Identify and select a suitable soft computing technique to solve the problem, construct a solution and implement a soft computing solution.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Introduction to Soft Computing Introduction, soft computing vs hard computing, requirement of soft computing, major areas of soft computing, applications of soft computing	L1, L2	4
Module II: Artificial Neural Networks(ANN) Biological neurons, basic models of ANN, learning, activation function, perceptron, learning rule, training and testing, back propagation, research paper study related to civil engineering.	L1, L2, L3, L4	11
Module III: Fuzzy Logic(FL) Fuzzy sets, properties, operations on Fuzzy sets, fuzzy relations, fuzzy membership functions, inference, methods of member value assignment, rank ordering, defuzzification, fuzzy inference systems, research paper study related to civil engineering.	L1, L2, L3, L4	11
Module IV: Genetic Algorithm (GA) Introduction to GA, operators in GA, coding, selection, cross over, mutation, stopping condition, Convergence of GA, Bit wise operation in	L1, L2, L3, L4	11

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

GA, Multi-level Optimization, research paper study related to civil engineering.		
Module V: Application of the techniques in Civil Engineering Collection of data, input of data, Weka software for ANN technique – basics theory related to software use and techniques.	L1, L2, L3, L4	11

Soft computing is the foundation of conceptual intelligence in machines. Unlike hard computing, soft computing is tolerant of imprecision, uncertainty, partial truth, and approximation. Soft computing algorithms are becoming important classes of efficient tools for developing intelligent systems and providing solutions to complicated civil engineering problems. Domains of applications include structural engineering, design, diagnostics, and health monitoring, hydraulic engineering, geotechnical engineering, transportation engineering, environmental engineering, coastal and ocean engineering and construction management. The course gives basic knowledge about the key algorithms and theory that form the foundation of machine learning and computational intelligence and a practical knowledge of machine learning algorithms and methods in civil engineering.

Course Objectives

The objective of this course is to:

1. Introduce the concept of soft computing in Civil Engineering by learning the softwares Weka and MATLAB.
2. Identify and select a suitable soft computing technique to solve the problem, construct a solution and implement a soft computing solution.

Course Outcomes

On completion of this course, the students will be able to

CO1: Comprehend ANN technique and creating a programme for the same related with the applications in civil engineering

CO2: Apply the ANN technique and analyse a model using the software.

CO3: Apply a suitable problem statement and solve the problem, construct a solution and implement a fuzzy logic toolbox.

CO4: Evaluate the utilization of MATLAB software for fuzzy logic analysis.

Course Content

List of Experiments	Blooms level*	Number of hours
Module I: Create a perceptron with appropriate no. of inputs and outputs. Train it using fixed increment learning algorithm until no change in weights is required. Output the final weights.	L1, L2, L3, L4, L5, L6	6
Module II: Create a model using back propagation method using Weka	L1, L2, L3, L4, L5, L6	6
Module III: Creating a small programme using MATLAB Fuzzy logic toolbox.	L1, L2, L3, L4, L5, L6	6
Module IV: Implementing MATLAB Fuzzy logic toolbox for a problem related to the application in the area of civil engineering	L1, L2, L3, L4, L5, L6	6

TRE4305	TRANSPORTATION INFRASTRUCTURE DESIGN	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	4	0	0	4
Pre-requisites/Exposure					
Co-requisites					

Catalogue Description

The course deals with the geometric design provisions for various transportation facilities as per IRC guidelines. It includes design of different intersections and interchanges of expressways and high-speed corridors. It also includes the design of runways and taxiways as per the airport design standards along with design of surface and sub surface drainage facilities.

Course Objectives

The objective of this course is to

1. Explain the principles of geometric design for various transportation facilities.
2. Design the At-Grade and Grade separated intersections along with the design of drainage facilities.

Course Outcomes

On completion of this course, the students will be able to

- CO1: Design the expressway/high speed corridors along with their alignment.
CO2: Explain the principles of traffic operations along with the design of intersections.
CO3: Explain the different interchanges and geometric design for non-motorized traffic.
CO4: Design runways and taxiways along with the design of drainage facilities.

Course Content

Modules	Blooms level*	Number of hours
Module I Introduction : Geometric design provision for various transportation facilities as per IRC guidelines, geometric design of horizontal and vertical alignment, design of expressways/ high speed corridors	L1, L2, L3	10
Module II Design of at grade intersections : Principles of design, channelization, roundabouts, staggered intersections	L1, L2, L3	10
Module III Design of interchanges: Major and minor interchanges, entrance and exit ramps, acceleration and deceleration lanes Geometric design of facilities for non motorized traffic: Bicycles and pedestrian facility design, slow carriageways	L1, L2, L3	14
Module IV Introduction to Geometric design of air fields: Airport design standards, runways, taxiways Design of drainage facilities: Importance, Principles, drainage of various geometric elements, surface and subsurface drainage	L1, L2, L3	14

TRE4306	AIRPORT INFRASTRUCTURE, PLANNING AND DESIGN	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	4	0	0	4
Pre-requisites/Exposure					
Co-requisites					

Catalogue Description

The course deals with the airport planning and geometric design for runways and taxiways. It includes airport visibility such as day time markings and lightings for night time. It also includes mathematical models for airside capacity and delay and the importance of air traffic control. It includes the design of runways and taxiways as per the airport design standards along with design of surface and sub surface drainage facilities.

Course Objectives

The objective of this course is to

1. Familiarize various techniques related to airport planning and design.
2. Design run off, surface and sub surface drainage facilities.

Course Outcomes

On completion of this course, the students will be able to

- CO1: Analyze the air traffic demand and design the geometrical features of runways, taxiways and exit taxiways.
- CO2: Design the airport pavements and analyze different markings and lightings for the terminal areas.
- CO3: Design the mathematical models for airside capacity & delay and understands the concept of air traffic control.
- CO4: Design runways along with the design of drainage facilities.

Course Content

Modules	Blooms level*	Number of hours
Module I Airport Planning: Airport master plan, aircraft characteristics related to airport planning, air traffic demand analysis, planning surveys, airport zoning. Geometric Design: Airport classification, runway and taxiway geometric standards, exit taxiways, separation and clearances.	L1, L2, L3	15
Module II Terminal Areas: Facilities, space requirement, number and size of gate positions, aircraft parking system. Visual Aids : Airport day time markings, airport lighting, visibility, visual aids Structural design of airport pavements: Design Factors, Design of flexible and rigid Pavements	L1, L2, L3	14
Module III Airside capacity and delay: mathematical models for capacity and delay, space time concept, models for mixed traffic. Air Traffic Control: Importance of flight rules, navigational aids, air traffic controls, obstruction and clearance requirements	L1, L2, L3	11
Module IV Airport Drainage : Design run-off, inlet size and location design, surface and subsurface design	L1, L2, L3	8

TRE4303	PUBLIC TRANSPORTATION SYSTEMS	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure					
Co-requisites					

Catalogue Description

The course discuss the evolution and role of urban public transportation modes, systems and services, focusing on bus and rail. It includes various topics including current practice and new methods for data collection and analysis, performance monitoring, road design, frequency determination, effect of pricing policy and service quality on ridership.

Course Objectives

The objective of this course is to

1. Provide knowledge regarding public transportation systems, their operation, planning and economics.
2. Familiarize with the problems of transit routing, scheduling, infrastructure facilities, fare structures and management.

Course Outcomes

On completion of this course, the students will be able to

- CO1: Describes the important concepts about public transportation systems.
CO2: Collect data about travel behaviour and analyzing the data for use in transport planning.
CO3: Explain and describes the various parameters of rapid transit systems.
CO4: Apply optimization technique for transport planning and pricing.

Course Content

Modules	Blooms level*	Number of hours
Module I: Modes of public transportation and application of each to urban travel needs.	L1, L2, L3	7
Module II: Transit system operations, para-transit systems, street transit systems, rapid transit systems, estimation of transit demand. Route development, properties of a good route set, determination of a good route set, stop location and stopping policy, schedule development, properties of a good schedule, determination of a good schedule.	L1, L2	16
Module III: Capacity of rapid transit systems, line capacity of RTS, capacity of street transit systems. Transit corridor, identification and planning, mass transport management measures, integration of public transportation modes. Public transport infrastructure, case studies, multi mode transportation system.	L1, L2	16
Module IV: Planning for public transport, fares and subsidies. Intermediate public transport in Indian cities, types of IPT vehicles. Characteristics of IPT modes.	L1, L2, L3	9

TRE4307	INTELLIGENT TRANSPORTATION SYSTEMS	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure					
Co-requisites					

Catalogue Description

Intelligent transportation systems represent the major transition in transportation in many dimensions. This course considers ITS as a lens through which one can view many transportation and societal issues. This course is intended to improve the effectiveness and efficiency of surface transportation systems through advanced technology in information system, communications and sensors.

Course Objectives

The objective of this course is to

1. Familiarize ITS conceptually as a macro traffic management systems.
2. Explain the enabling role of technology i.e. vehicular technology, infrastructure, information and communication technology and data processing.

Course Outcomes

On completion of this course, the students will be able to

- CO1: Discuss the fundamentals of traffic flow theory in the management and operations of road traffic.
- CO2: Describe the range of technology involved in the delivery of traveller information system.
- CO3: Assess the range of options available for the management of freeway and arterial traffic.
- CO4: Investigate and analyze current application and trend in developed and developing countries.
- CO5: Investigate the contemporary issues in the application of advanced technology in transport.

Course Content

Modules	Blooms level*	Number of hours
Module I Introduction to ITS: History of ITS, ITS Legislation and Financing, User Services, Roles and Responsibilities ITS Components : Advanced Traveler Information Systems (ATIS), Advanced Transportation Management Systems (ATMS), including network operations, incident detection; congestion pricing, tolling, Fleet-oriented ITS services,	L1, L2, L3	15
Module II Advanced Public Transportation Systems (APTS); BRT; Commercial Vehicle Operations (CVO); Intermodal Freight, including International Operations and Supply Chains; Automated Highway Systems (AHS), Sensors, Electronic Toll Collection (ETC), Dedicated Short Range Communication; Standards.	L1, L2, L3	14
Module III Communication and Related Techniques: Radio Propagation and Antennas for Wireless Communications; Technologies and Applications of Communication Principles for Transportation. Information & Related Technologies : Intelligent Control Theory, Transportation Information; Vehicle Monitoring & Dispatching System; Advanced Web Pages Programming, Transportation Safety	L1, L2, L3	11

Module IV Traffic Control & Chip Design : Traffic Control; Traffic Control System Design on Chip. Regionally –scaled ITS deployment, including regional architecture; organization and institutional issues; standards; developed vs. developing countries; ITS and strategic regional transportation planning; integrating infrastructure and operations planning.	L1, L2, L3	8
MODULE V Critical ITS issues, including (as time permits) ITS and security; safety; human factors; privacy; sustainability; funding (as contrasted with conventional infrastructure); technology deployment/R&D/policy; other institutional issues Conclusion, including regional ITS planning and architecture presentation; the future of ITS

TRE4308	RAILWAY INFRASTRUCTURE, PLANNING AND DESIGN	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure					
Co-requisites					

Catalogue Description

The course deals with the geometric design provisions for railway engineering which includes horizontal & vertical alignment, track elements and turnouts & crossing. It includes track management system, and planning of railway activities and project management for railways. It also includes the computation of various costs related to railways and disaster management for the accidents in the railways.

Course Objectives

The objective of this course is to

1. Enhance the knowledge of Railway Engineering in the context of regional mass transportation systems.
2. Familiarize the techniques of planning, modelling and designing the transportation systems along with infrastructures required for Railways.

Course Outcomes

On completion of this course, the students will be able to

- CO1: Design the geometrics of railway and explain the different rail operations along with their management.
- CO2: Explain the track maintenance management and social and economic effect on environment.
- CO3: Understand the concept of high speed & magnetic levitation and different track characteristics.
- CO4: Compute the different costs associated with the rail transport services such as construction & maintenance cost, fixed & variable cost etc..
- CO5: Analyse the railway accidents & disaster management and understands the parameters affecting the rail demand.

Course Content

Modules	Blooms level*	Number of hours
Module I Railway Geometric Design: Alignment and Surveys, Geometry of Track, Horizontal & Vertical curves, Track elements, Turnouts & Crossings. Rail Operations Management: Crowd control Passenger Flow management; Timetabling & Inter-running, Managing a Heavy Capacity Light Rail system, Productivity Management, Outsourcing & contractor Management.	L1, L2, L3	10
Module II Track Maintenance Management: Items of track maintenance, Packing & Overhauling of racks, Maintenance Planning, Mechanical Track Maintenance, directed maintenance of track, Modern Track Management System. Planning, Financial Management & Investment : Railways Social & Economic environment, competition & Impact on Railway Management, Feasibility Studies & method of Financing, Planning the railway activity, Project Management for Railways, Human Resources & their revalorization, Privatization of Railways.	L1, L2	12
Module III High Speed & Magnetic Levitation: High Speed trains: Application of high-speed, Impact of high-speed on reduction of rail travel time, Track	L1, L2, L3	8

Prof. (Dr.) Anil Kumar

Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Characteristics, Rollingstock for high speeds, Power supply at high-speeds, Tilting trains, Aero trains, Magnetic Levitation.		
Module IV Costing and Pricing of Rail Transport Services: Construction & Maintenance Cost, Fixed & Variable cost, Marginal Cost, Generalized cost, Cost of Operation of Railway company, Ratifications of infrastructure: Principles, Objectives, Financial consequences, commercial applications, of infrastructure Pricing, Infrastructure pricing models in some countries.	L1, L2, L3	8
Module V Railway Accidents and Disaster Management Suburban Railways Dedicated Freight Corridor – Construction parameters & Track Structure Forecast of Rail demand: Purposes, Needs, Methods for forecasting, Parameter affecting, Various categories of rail demand, Qualitative methods, Statistical Projections, Econometric models, Gravity models, Fuzzy models, Time-Series models.	L1, L2, L3	10

TRE4301	GIS & ITS APPLICATION IN TRANSPORTATION ENGINEERING	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	4	0	0	4
Pre-requisites/Exposure					
Co-requisites					

Catalogue Description

The course contains basic geographic perspectives on accessibility and transportation, topics covered in the course includes is GIS based visualization of transport network and flow, network data set construction and different methods for network analysis for transportation planning.

Course Objectives

The objective of this course is to

1. Discuss the elementary concept of GIS such as definitions, benefits and urban application of GIS.
2. Familiarize the practical application of GIS in transportation field through case studies.

Course Outcomes

On completion of this course, the students will be able to

CO1: Define and describe the basic concepts and terminologies of GIS.

CO2: Acquire, manipulate and save the data IN GIS.

CO3: Demonstrate the concept of transport geography into practice by means of network analysis in GIS.

CO4: Identify an appropriate GIS work flow for analyzing transport flows between demand point locations and supply facilities.

Course Content

Modules	Blooms level*	Number of hours
Module I: Introduction: Definition and components of GIS, Types of data, Mapping process, Coordinate systems, Transformations, Map projections, Geo-referencing, Standard GIS packages.	L1, L2, L3	10
Module II: Data Acquisition: Scanners, Digitizers, Digital representation of data, Data structure-Raster and vector data, Data storage. Data Processing: Format conversion, Data Compression and reduction techniques run length coding, block coding, quadtree, Spatial and non- spatial data, Topology creation.	L1, L2	12
Module III: Data Management: Database Structure-Hierarchical, Network, Relational, Database Management Systems. Data Manipulation & Analysis: Reclassification and Aggregation, Analysis of spatial and non spatial data, Modelling in GIS.	L1, L2	10
Module IV: Implementing in Transportation: Database in terms of link, nodes, point of interest; GIS database design for transport planning, Traffic Analysis Zone (TAZ), Integration of field data with GIS data. GIS Applications (A) Transportation Systems: Accidents and safety analysis, Traffic & Transport analysis, Traffic monitoring systems, Transport infrastructures, environmental impact assessment, congestion management, In-vehicle navigation.	L1, L2, L3	16

EVE4302	INDUSTRIAL WASTEWATER TREATMENT AND DESIGN	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalogue Description:

Industrial Waste Engineering curriculum will provide the principles of industrial wastewater treatment, disposal and reuse in order to minimize pollution in a sustainable manner. The subject focuses on the principles and mechanisms of pollutant removal, the processes and design of conventional (primary, secondary and tertiary) and advanced (post-treatment) technologies applied in the treatment of industrial effluents.

Course Objectives:

The objective of the course is to,

1. Provide the knowledge on the wastewater characteristics from industries.
2. Define the principles of pollution prevention and mechanism of industrial processes, and suggest the suitable technologies for the treatment of wastewater from various industries.

Course Outcomes:

On completion of this course, the students will be able to

CO1: Describe various industrial wastewater treatment unit operations.

CO2: Explain the working principle and design of industrial wastewater treatment units.

CO3: Comprehend the importance of guidelines based on Indian Standard code of practice for the design of wastewater treatment units for different industries.

CO4: Apply the waste management process used in various industries.

CO5: Analyze unit operations and estimation of environmental impact assessment due to industrial pollutions in sustainable manner.

Modules	Blooms level*	Number of hours
Module I INTRODUCTION Industrial activity and Environment – Sources and types of industrial wastewater – Industrial wastewater and environmental impacts – Industrial waste survey – Industrial wastewater generation rates, characterization and variables – Population equivalent – Toxicity of industrial effluents and Bioassay tests.	L1, L2 and L3	9
Module II INDUSTRIAL POLLUTION PREVENTION Prevention vs Control of Industrial Pollution – Benefits and Barriers – Source reduction techniques – Waste Audit – Evaluation of Pollution prevention options – Environmental statement as a tool for pollution prevention – Waste minimization.	L2 and L3	10
Module III INDUSTRIAL WASTEWATER TREATMENT Equalization - Neutralization – Oil separation – Flotation – Precipitation – Aerobic and anaerobic biological treatment – Wet Air Oxidation – Evaporation – Ion Exchange – Membrane Technologies.	L2, L3 and L4	10

EVE4303	WATER RESOURCE PLANNING AND MANAGEMENT	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalogue Description

This course covers the reservoir planning; dams designs; draught analysis; linear programming, etc. The overall aim of the course is to develop the skills of the students to know how to plan, develop and manage water resources

Objective:

The objective of the course is to,

1. Comprehend how to develop suitable plans for water resource development and management.
2. Develop how to estimate sustainable yield of the water resources and how to determine the needed storage of water reservoirs.
3. Understand the principles of integrated water resources management.
4. Learn the optimization techniques in water resources planning and management

Course Outcomes

On completion of this course, the students will be able to:

CO1. Able to start developing master and strategic water resources planning.

CO2. Understanding the basic principles of dam design

CO3. Determining the direct and indirect losses of water resources

CO4. Understand the Monte Carlo simulation.

Course Contents

Modules	Blooms level*	Number of hours
Module I: Reservoir planning Reservoir planning, Management, Multi reservoir systems, Real time operation, River basin planning, water logging, soil salinity, salinity control	L1, L2, L3	12
Module II: Dams Design Design of Dams, Non gravity dams, Weirs and Barrages, Conjunctive use of Irrigation water, Quality of Irrigation water, Contaminants and their effects on various crops Rainwater Harvesting and Management – Different Types and Methods of Harvesting in urban and agricultural areas.	L1, L2, L3	12
Module III : Draught analysis Draught analysis, NCA classification, Direct and Indirect losses, Drought severity assessment, Drought Monitoring, Drought Management	L1, L3, L4, L5	12
Module IV: Programming Introduction to systems approach, Linear programming, Problem formulation, Solution by simplex method, Application to design and operation of reservoir, Non Linear Programming, Sensitivity analysis, Monte Carlo simulation.	L1, L3, L4, L5	12

*Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5:Synthesis, L6:Evaluation

EVE4309	BIOLOGICAL PROCESS OF WASTE WATER TREATMENT	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	3	1	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description:

This course introduces the students to the principles of biochemical processes in wastewater treatment and pollution control, with particular emphasis on municipal wastewater treatment. At the end of the course, students should have a thorough understanding of wastewater treatment processes as well as biosolids handling, treatment and disposal. They would be able to design various facilities for biological treatment of wastewater.

Course Objectives:

The objective of the course is to,

1. Provide the knowledge on the advances wastewater treatment.
2. Define the principles and design criteria of wastewater pollution and mechanism of industrial processes, and suggest the suitable technologies for the treatment of wastewater from various industries.

Course Outcomes:

On completion of this course, the students will be able to

CO1: Describe various wastewater treatment unit operations.

CO2: Explain the working principle and design of wastewater treatment units.

CO3: Comprehend the importance of guidelines based on Indian Standard code of practice for the design of wastewater treatment units for different industries.

CO4: Apply the waste management process used in various industries.

Course Contents

Modules	Blooms level*	Number of hours
Module I INTRODUCTION Objectives of biological treatment – Role of microorganisms in waste water treatment – Types of biological processes for waste water treatment – Different microbial metabolisms – Bacterial growth patterns – Microbiological treatment kinetics and flow regimes – Michaelis-Menten and Monod models – Rate of biomass growth with soluble substrates – Kinetic coefficients – Effect of temperature – Oxygen requirements – Biomass yield – Observed yield – Kinetic constants evaluation of biological treatment.	L1, L2 and L3	12
Module II WASTEWATER PROCESS DESIGN Aerobic biological treatment – Attached growth and suspended growth treatment systems – Modeling suspended growth treatment process – Activated sludge process – Description – Various types – Methods of aeration – Microbiology – Process analysis – Process design considerations – Operational difficulties – Modifications. Sequencing Batch Reactor – Process description and operation. Trickling filter – Filter classifications – Microbiology – Process design considerations – Design of physical facilities – Recirculation – NRC Equation – Operational difficulties.	L2 and L3	12

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Module III DESIGN OF TREATMENT SYSTEM Aerated lagoons – Types – Process design considerations. Stabilisation ponds – Classification – Design considerations. Sludge treatment and disposal – Characteristics of sludge – Sludge processing – Preliminary operations – Thickening – Stabilization – Aerobic digestion – Anaerobic digestion – Composting – Conditioning – Dewatering – Heat drying – Incineration- Wet air oxidation – Land application	L2, L3 and L4	12
Module IV CASE STUDIES Advanced biological treatment processes – Nitrogen removal – Nitrification and Denitrification -Stoichiometry – Process analysis – Operational and environmental variables. Economics of biological treatment – Constructional cost, capital cost, operational cost – Total cost.	L2, L3 and L4	12

EVE4310	TRANSPORT PHENOMENON OF WASTE WATER	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	4	0	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalogue Description:

This course introduces the students to the principles of transport processes in wastewater treatment and pollution control, with particular emphasis on municipal wastewater treatment. At the end of the course, students should have a thorough understanding of wastewater treatment processes as well as treatment and disposal. They would be able to design various facilities for biological treatment of wastewater.

Course Objectives:

The objective of the course is to,

1. To educate the students in detailed design concepts related to water transmission mains, water distribution system, sewer networks and storm water drain and computer application on design.

Course Outcomes:

On completion of this course, the students will be able to

CO1: Be able to select various pipe materials for water supply main, distribution network and sewer.

CO2: Be able to design water supply main, distribution network and sewer for various field conditions.

CO3: Troubleshooting in water and sewage transmission be able to use various computer software for the design of water and sewage network.

CO4: Comprehend the importance of guidelines based on Indian Standard code of practice for the design of wastewater treatment units for different industries.

CO5: Apply the waste management process used in various industries.

Modules	Blooms level*	Number of hours
Module I GENERAL HYDRAULICS AND FLOW MEASUREMENT Fluid properties; fluid flow – continuity principle, energy principle and momentum principle; frictional head loss in free and pressure flow, minor heads losses, Carrying Capacity–Flow measurement.	L1, L2 and L3	8
Module II WATER TRANSMISSION AND DISTRIBUTION Need for Transport of water and wastewater-Planning of Water System – Selection of pipe materials, Water transmission main design- gravity and pumping main; Selection of Pumps- characteristics- economics; Specials, Jointing, laying and maintenance, water hammer analysis; water distribution pipe networks Design, analysis and optimization – appurtenances – corrosion prevention – minimization of water losses – leak detection Storage reservoirs.	L2 and L3	12
Module III WASTEWATER COLLECTION AND CONVEYANCE Planning factors – Design of sanitary sewer; partial flow in sewers, economics of sewer design; Wastewater pumps and pumping stations-sewer appurtenances; material, construction, inspection and maintenance	L2, L3 and L4	10

EVE4311	WATER RECLAMATION AND REUSE	L	T	P	C
Version 2020.1	Month, Year of approval:	4	0	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalogue Description

This course has emphasized on the use of treated wastewater for beneficial purposes including irrigation, industrial uses, and drinking water augmentation could significantly increase the nation's total available water resources.

Course Objective:

The objective of the course is to,

1. Impart knowledge about the potential reuse applications and sources of water for reuse.
2. Determining the feasibility and planning of water reuse systems as well as the management structure of reuse projects.

Course Outcomes:

On completion of this course, the students will be able to:

CO1: Explain the concept and principles of water reclamation

CO2: Describe various factors affecting water reclamation

CO3: Determining the feasibility and planning of water reuse systems as well as the Management structure of reuse projects

CO4: Understand the various techniques for water reclamation

Course Contents

Modules	Blooms level*	Number of hours
Module I: Water reclamation Introduction: definitions of terms related to water reclamation and reuse; potential uses of reclaimed water; benefits of water reuse; reasons for the growing use of reclaimed water; examples of water reuse in different parts of the world.	L1, L2, L3	12
Module II: Reuse Criteria Water Reclamation and Reuse Criteria: factors affecting the development of water reclamation and reuse criteria; elements/components of water reclamation and reuse criteria / guidelines; water reclamation and reuse criteria in different countries and assessment.	L1, L2, L3	12
Module III : Irrigation Agricultural and Landscape Irrigation, Industrial Water Reuse, Groundwater Recharge with Reclaimed Water, Recreational/Environmental Enhancement, Water Reclamation Inside Buildings.	L1, L3, L4, L5	12
Module IV: Treatment Treatment Requirements for Water Reuse: constituents of municipal and industrial wastewater; health assessment of water reuse; treatment and reclamation technologies, Reuse and Disposal of Wastewater Sludges and Biosolids: characteristics and composition of wastewater sludge/biosolids; sludge/biosolids processing; reuse and disposal of	L1, L3, L4, L5	12

EVE4312	AIR AND WATER QUALITY MODELLING	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	4	0	2	5
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalogue Description:

This course designed to improve the understanding of the different pollution control strategies and the skills of application of remediation techniques to combat pollution in three environmental compartments i.e. air, water and soil.

Course Objectives:

The objective of the course is to,

1. Impart knowledge on the principles and design of control of particulate and gaseous air pollutant and its emerging trends.
2. Introduce the fundamentals of mathematical models for water and air quality prediction and the importance of model building.

Course Outcomes:

On completion of this course, the students will be able to

CO1: Define general air pollution problems, meteorological definitions, air transport equations and pollution control matters and devices.

CO2: Explain the regulations pertinent to air pollutions (both indoor and outdoor environment).

CO3: Describe major problems in indoor air pollution control and regulations.

CO4: Analyze the results of pollution data as a report and its observations.

Course contents

Modules	Blooms level*	Number of hours
Module I INTRODUCTION TO AIR POLLUTION Structure and composition of Atmosphere – Sources and classification of air pollutants - Effects of air pollutants on human health, vegetation & animals, Materials & Structures – Effects of air Pollutants on the atmosphere, Soil & Water bodies – Long- term effects on the planet – Global Climate Change, Ozone Holes – Ambient Air Quality and Emission Standards – Air Pollution Indices – Emission Inventories.	L1, L2 and L3	12
Module II AIR QUALITY MONITORING AND MODELLING Ambient and Stack Sampling and Analysis of Particulate and Gaseous Pollutants -Effects of meteorology on Air Pollution - Fundamentals, Atmospheric stability, Inversion, Wind profiles and stack plume patterns-Transport & Dispersion of Air Pollutants -Air Quality Modeling. Necessity, application and limitation of air quality modelling. Dispersion Modeling, Photochemical Modeling and Receptor Modeling. Different air quality Dispersion models and their limitations.	L2 and L3	12
Module III CONTROL OF AIR POLLUTANTS Primary considerations in designing effective control strategy:	L2, L3 and L4	12

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Environmental, Engineering and Economic Factor - Factors to be considered while selecting control equipment's - Various mechanisms to control gaseous pollutants and particulate matter. Control Equipment design for particulate matter: Gravity chamber, Cyclone separator, Electrostatic precipitator, fabric filter, bag filter, Wet scrubber, Venturi-scrubber and absorption towers. Control Equipment design for gaseous pollutants: Absorption, Adsorption, Condensation and Incineration.		
Module IV SURFACE AND SUB-SURFACE WATER QUALITY MODELLING Water quality modeling of Streams, Lakes and impoundments and Estuaries – Water quality– model sensitivity – assessing model performance; Models for dissolved oxygen, pathogens and BOD-Streeter Phelps model for point and distributed sources - Modified Streeter Phelps equations -Toxicant modeling in flowing water - Groundwater flow and mass transport of solutes, Degradation of organic compounds, application of concepts to predict groundwater contaminant movement, seawater intrusion – basic concepts and modeling.	L2 and L3	12

EVE4314	ADVANCED WASTEWATER ENGINEERING	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	4	0	2	5
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalogue Description:

This course introduces the students to the principles of biochemical processes in wastewater treatment and pollution control, with particular emphasis on municipal wastewater treatment. At the end of the course, students should have a thorough understanding of wastewater treatment processes as well as biosolids handling, treatment and disposal. They would be able to design various facilities for biological treatment of wastewater.

Course Objectives:

The objective of the course is to,

1. Provide the knowledge on the wastewater characteristics.
2. Define the principles and design criteria of wastewater pollution and mechanism of industrial processes, and suggest the suitable technologies for the treatment of wastewater from various industries.

Course Outcomes:

On completion of this course, the students will be able to

CO1: Describe various wastewater treatment unit operations.

CO2: Explain the working principle and design of wastewater treatment units.

CO3: Comprehend the importance of guidelines based on Indian Standard code of practice for the design of wastewater treatment units for different industries.

CO4: Apply the waste management process used in various industries.

Modules	Blooms level*	Number of hours
Module I INTRODUCTION Anaerobic treatment- Fundamental concepts, Applications	L1, L2 and L3	10
Module II WASTEWATER PROCESS DESIGN Process Monitoring and Control, Anaerobic treatment of wastewaters in suspended growth and fixed film processes, Process design.	L2 and L3	12
Module III DESIGN OF TREATMENT SYSTEM UASB Process design for various types of wastewaters	L2, L3 and L4	14
Module IV CASE STUDIES Anaerobic sludge digestion, Selected case studies	L2, L3 and L4	12

EVE4315	ADVANCED WASTEWATER ENGINEERING LAB	L	T	P	C
Version 2020.1	Date of Approval: 3rd June, 2020	1	0	2	1
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalogue Description:

Application of basic chemistry and chemical evaluations to measure physical, chemical, and bacteriological parameters of wastewater. Laboratory methods and interpretation of results with regard to environmental engineering applications such as design and operation of wastewater treatment processes, and to the control of the quality of natural water.

Course Objectives:

1. Understand the common environmental problems and its determination principles relating to water and wastewater quality are performed.
2. This course will help students know which tests are appropriate for given environmental problems, statistically interpret laboratorial results and write technical reports, and apply the laboratorial results to problem identification, quantification, and basic environmental design and technical solutions to real-world.

Course Outcomes:

On completion of this course, the students will be able to

CO1: Describe the knowledge in mathematics, science and engineering.

CO2: Design and conduct experiments, interpret and analyze data, and report results.

CO3: Analyze the ability to design of Civil Engineering systems or a process that meets desired specifications and requirements related to all fields of Civil Engineering.

CO4: Explain the ability to function on engineering and science laboratory teams, as well as on multidisciplinary design teams.

CO5: Explain to identify, formulate and solve environmental engineering problems.

Modules	Blooms level*	Number of hours
1. Introduction to Advanced Wastewater Engineering laboratory	L1	1
2. Determination of D.O of wastewater	L1, L3 and L4	2
3. Determination of B.O.D of wastewater	L1, L3 and L4	1
4. Determination of C.O.D of wastewater	L1, L3 and L4	1
5. Jar Test	L1, L3 and L4	1
6. Determination of iron and fluoride	L1, L3 and L4	1
7. Determination of sulphates and sulphides in water	L1, L3 and L4	1
8. Determination of Residual Chlorine	L1, L3 and L4	1

9. Determination of Optimum Coagulant Dosage	L1, L3 and L4	1
10. Determination of Sludge Volume Index	L1, L3 and L4	1
11. Determination of Ammonia Nitrogen and Sulphates	L1, L3 and L4	1

MAE4101	ADVANCED SOLID MECHANICS	L	T	P	C
Version 2017.1	Date of Approval: 26 June,2020	3	1	0	4
Pre-requisites/Exposure	Simple stress, strain, beam, column, bending				
Co-requisites	Perform advanced analysis of solid components and understanding of the behavior of solids under two or three dimensional stress fields				

Catalog Description

In this course the concepts of stress and strain, Mohr's circle for 3-D state of stress, Mohr's stress plane of maximum shear, rectangular strain component are discussed in detail. The Advanced Solid Mechanics deals with unsymmetrical bending, shear center, torsion of circular, elliptical, equilateral triangular, rectangular bar, contact stresses and beams.

Course Objectives

The objective of this course is to

1. Equip the student with fundamental knowledge of transformation of stresses and strains in 3D.
2. Acquaint with the solution of advanced bending problems.
3. Develop understanding of torsion in bars of different cross-sectional areas.
4. Solve for stresses and deflections of beams under unsymmetrical loading and to locate the shear center of thin wall beams;

Course Outcomes

On completion of this course, the students will be able to

- CO1. State Mohr's circle for 3-D state of stress.
CO2. Determination of principle axis and deflection of beams due to unsymmetrical bending
CO3. Explain torsion in bars of different area of cross-section
CO4. Explain contact stresses in spherical, cylindrical and curved surfaces in contact
CO5. Explain Beams and columns under various loading conditions

Modules	Blooms level*	Number of hours
MODULE 1: Analysis of stress and strain Principal stresses, stress invariant, Mohr's circle for 3-D state of stress, Mohr's stress plane of maximum shear, rectangular strain component, principle axis of strain and principle strain, theory of failure.	L1, L2, L3, L4	10
MODULE 2: Unsymmetrical Bending and Shear centre Principle axis, parallel axis theorem for product of inertia, determination of principle axis, shear due to unsymmetrical bending, deflection of beams due to unsymmetrical bending, calculation of shear centre.	L1, L2, L3 and L4	10
MODULE 3: Torsion Torsion of general prismatic bar solid section, torsion of circular and elliptical bar, torsion of equilateral triangular bar, torsion of rectangular bar, torsion of thin walled tube, torsion of bar with thin rectangular section.	L1, L2, L3 and L4	10
MODULE 4: Contact Stresses Contact stresses due to spherical surfaces in contact, due to two parallel cylindrical rollers in contact, due to two curved surfaces of different radius.	L1, L3 and L4	8
MODULE 5: Beams and Columns Euler buckling load, beam column equations, beam column with a concentrated load, beam column with several concentrated load, continuous lateral load, beam	L1, L3 and L4	10

couple with end couple.

MAE4104	ADVANCED MACHINING PROCESSES	L	T	P	C
Version 1.1	Date of Approval: 26 June,2020	3	1	0	4
Pre-requisites/Exposure	Basics of manufacturing Engineering				
Co-requisites	-				

Catalog Description

In this course the concepts of advanced machining processes are discussed in detail. The main objective of this course is to learn about various unconventional machining processes, the various process parameters and their influence on performance and their applications. It also aims to learn the various non destructive testing (NDT) techniques and working procedures of various Non Destructive Testing (NDT) techniques.

Course Objectives

The objective of this course is

1. To familiarize the students with unconventional modern machine tools and manufacturing processes.
2. To prepare the students understand various non-conventional machining processes.
3. To prepare the students understand nondestructive testing (NDT) techniques and learn working procedures of various Non Destructive Testing (NDT) techniques.

Course Outcomes

On completion of this course, the students will be able to

CO1: Illustrate the fundamentals of various non-conventional machining processes, capabilities with their application areas.

CO2: Demonstrate the knowledge of mechanical metal removal processes.

CO3: Illustrate the concepts of various advances thermal machining processes.

CO4: Demonstrate the basic knowledge of chemical and electro-chemical metal removal processes

CO5: Demonstrate the basic knowledge of non-destructive testing with their applications.

Modules	Blooms level*	Number of hours
Module 1: Introduction Concept of advanced machining processes, Sources of metal removal Classification on the basis of energy sources -Parameters influencing selection of process, Limitations of Conventional machining processes, Comparison of conventional and non-conventional machining, Need of advanced machining processes.	L1, L2 and L3	10
Module 2: Mechanical Type Metal Removal Processes Ultrasonic machining; Elements of the process, Tool design and economic considerations, Applications and limitations, Abrasive jet and Abrasive water jet machining principles; Mechanics of metal removal; Design of nozzles, applications, Abrasive finishing process, Magnetic abrasive finishing process	L1, L2 and L3	10
Module 3: Advanced Thermal Machining Processes Classification, General principles and applications of Electro discharge, Plasma arc, Ion beam, Laser beam, Electron beam machining, Mechanics of metal removal in EDM, selection of EDM pulse generator, machining accuracy, surface finish and surface damage in EDM, Generation and control of electron beam for machining applications, advantages and limitations	L1, L2 and L3	10

Module 4: Electro Chemical Metal Removal Processes Working principle, advantages, disadvantages and applications of Electrochemical, Chemical machining, Economy aspects of ECM, Electro-chemical deburring and honing, Hybrid Unconventional Machining Processes: Introduction to ECDM, ECAM and abrasive EDM etc.	L1, L2 and L3	9
Module 5: Non Destructive Testing Overview of the Non Destructive Testing Methods for the detection of manufacturing defects as well as material characterization. Relative merits and limitations, Liquid Penetrate Testing – Principles, types and properties of liquid penetrates, developers, advantages and limitations of various methods, Testing Procedure. Magnetic Particle Testing- Theory of magnetism, inspection materials Magnetization methods, Ultrasonic Testing and radiography.	L1, L2 and L3	9

**Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation*

MAE4105	COMPUTER INTEGRATED MANUFACTURING	L	T	P	C
Version X.X	Date of Approval: 26 June,2020	3	1	0	4
Pre-requisites/Exposure					
Co-requisites					

Catalog Description:

In this course the concepts of computer aided design, computer aided manufacturing and computer integrated manufacturing are discussed in detail. The concepts of computer aided process planning (CAPP), inventory control, manufacturing resource planning-II (MRP-II) & enterprise resource planning (ERP), group technology (GT), cellular manufacturing, automated guided vehicle system, flexible manufacturing system (FMS) and industrial robotics are also discussed in detail.

Course Objectives:

The overall objective of this course is

1. To equip the students with basic and essential concepts of computer aided design, computer aided manufacturing and computer integrated manufacturing.
2. To provide high caliber engineering students with an in-depth understanding of cellular manufacturing, flexible manufacturing system (FMS) and industrial robotics.

Course Outcomes (COs):

At the end of the course, the student shall be able to:

- CO1 - Define and describe the basic fundamentals of computer aided designing, computer aided manufacturing and computer integrated manufacturing.
- CO2 – State, explain and demonstrate computer aided process planning, manufacturing resource planning and enterprise resource planning.
- CO3 – Outline, interpret and apply concepts of group technology and cellular manufacturing.
- CO4 – Define, explain and apply knowledge of flexible manufacturing systems and industrial robotics in industries.

Modules	Blooms level*	Number of hours
Module I Introduction Brief introduction to CAD and CAM, Manufacturing Planning, Manufacturing control, Concurrent Engineering, CIM concepts, elements of CIM system, Basic Elements of an Automated system , Levels of Automation, Lean Production and Just-In Time Production.	L1 and L2	9
Module II Computer Aided Process Planning: Process planning, Computer Aided Process Planning (CAPP), Logical steps in Computer Aided Process Planning, Aggregate Production Planning and the Master Production Schedule, Material Requirement planning, Capacity Planning, Control Systems, Shop Floor Control, Inventory Control, Brief on Manufacturing Resource Planning-II (MRP-II) & Enterprise Resource Planning (ERP).	L1, L2, and L3	8
Module III Cellular Manufacturing: Group Technology (GT), Part Families, Parts Classification and coding, Simple Problems in Part Coding system, Production flow Analysis, Cellular Manufacturing, Composite part concept, Machine cell design and layout, Quantitative analysis in Cellular Manufacturing, Rank Order Clustering Method, Arranging of Machines in a GT cell , Hollier Method.	L1, L2 and L3	10
Module IV Flexible manufacturing system (FMS): Types of Flexibility, FMS, FMS	L1, L2 and L3	12

Components, FMS Application & Benefits, FMS Planning and Control, Quantitative analysis in FMS, Automated Guided Vehicle System (AGVS), AGVS Application, Vehicle Guidance technology, Vehicle Management & Safety.		
Module V Industrial Robotics: Robot Anatomy and Related Attributes, Classification of Robots, Robot Control systems, End Effectors, Sensors in Robotics, Robot Accuracy and Repeatability, Industrial Robot Applications.	L1, L2 and L3	9

**Bloom's Level:*

MAE4107	ADVANCED MACHINING PROCESSES LAB	L	T	P	C
Version 2017.1	Date of Approval: 26 June,2020	0	0	2	1
Pre-requisites/Exposure					
Co-requisites					

Catalog Description:

The main objective of the advanced machining processes lab is to demonstrate the basic principles in the area of advance manufacturing to the postgraduate students through a series of experiments. The students will learn about the laboratory methods and interpretation of results with regard to metal removal processes such as USM, WJM, EDM etc. and to give final shape and size to components. Students also learn about the various non destructive evaluation and testing methods.

Course Objectives:

- To understand the working of advanced machining processes and various non-destructive evaluation and testing methods.
- To make the students understand the different types of non-conventional manufacturing processes. This course will help students know which operations are appropriate for given specimen.

Course Outcomes:

On completion of this course, the students will be able to

CO1: Apply the knowledge to calculate parameters involved in various non destructive testing methods.

CO2: Measure the cutting forces in turning, drilling and grinding operations.

CO3: Demonstrate the principle of various non destructive evaluation and testing methods.

CO4: Perform magnetic particle inspection test and liquid (dye) penetrate test on a given specimen.

CO5: Demonstrate the various ultrasonic machining processes.

CO6: Demonstrate the working of advanced manufacturing system.

Modules	Blooms level*	Number of hours
1. To study the working of EDM.	L1, L2 and L3	1
2. To determine the effects of process variables of EDM on surface finish of parts.	L1, L2 and L3	2
3. To determine the effects of process variables on dimensional accuracy of parts in EDM process.	L1, L2 and L3	2
4. To measure the cutting forces in turning operation on lathe machine tool.	L1, L2 and L3	2
5. To measure the cutting forces in drilling operation on radial drilling machine tool.	L1, L2 and L3	2
6. To measure the cutting forces in grinding operation on surface grinding machine tool.	L1, L2 and L3	3
7. To study the working of Ultrasonic machining process.	L1, L2 and L3	1
8. To study the working of Advanced Manufacturing System.	L1, L2 and L3	1

9. To study and understand the various Non Destructive Evaluation and Testing methods.	L1, L2 and L3	2
10. To perform Magnetic Particle Inspection test on a given specimen.	L1, L2 and L3	2
11. To perform Liquid (Dye) Penetrate test on a given specimen.	L1, L2 and L3	2
12. To study Ultrasonic Inspection test on a given specimen.	L1, L2 and L3	2

MAE4108	COMPUTER INTEGRATED MANUFACTURING LAB	L	T	P	C
Version X.X	Date of Approval: 26 June,2020	0	0	2	1
Pre-requisites/Exposure					
Co-requisites					

Catalog Description

In this course the concepts of numerical control machines, computer numerical control machines axis designation, kinematic diagrams and automatic tool changers are discussed in detail. The concepts of machine control unit, G&M codes, manual part programming, interpolation cycles, simulation and machining operations on CNC's are also discussed in detail.

Course Objectives

The overall objective of this course is

1. To equip the students with basic and essential concepts of computer aided manufacturing (CAM) and computer numerical control (CNC) machines.
2. To provide high caliber engineering students with an in-depth understanding of G&M codes to write CNC programs, simulate and machining on CNC machines.

Course Outcomes:

At the end of course the students will be able to:

- CO1 - Define and describe the CNC lathe kinematic diagram, major assemblies, sub assemblies, machine control system and axes designation.
- CO2 - Define and describe the CNC milling machine kinematic diagram, major assemblies, sub assemblies, machine control system and axes designation.
- CO3 - State and explain work holding and tool holding devices for the CNC lathe and CNC milling machine.
- CO4 - Describe and apply G&M codes in manual part programming on CNC lathe.
- CO5 - Describe and apply G&M codes in manual part programming on CNC milling machine.

Modules	Blooms level*	Number of hours	
1. Make a sketch of CNC lathe showing major assemblies and indicate the CNC axes with designations. Make a sketch of the conventional lathe and if it is considered as a CNC lathe, show the axes with designations.	L1 and L2	2	
2. Make a Kinematics diagram of CNC Lathe showing all machine sub-assemblies. Indicate bearing arrangements, ball screw arrangements with sizes, wherever available.	L1 and L2	2	
3. Make a sketch of CNC machining centre showing major assemblies and indicate the CNC axes with designations. Make a sketch of the conventional machining centre and, if it is considered as a CNC machining centre, show the axes with designations.	L1 and L2	2	
4. Make a Kinematics diagram of CNC machining centre showing all machine sub-assemblies. Indicate bearing arrangements, ball screw arrangements with sizes wherever available.	L1 and L2	2	
5. Study the CNC lathe. Prepare a block diagram of controls. Identify location and type of transducers and indicate on an outline of the machine. Describe how they function.	L1 and L2	2	
6. Study the CNC machining centre. Prepare a block diagram of controls. Identify location and type of transducers and indicate on an outline of the machine. Describe how they function.	L1 and L2	2	
7. Study the work holding and tool holding devices in the CNC	L1 and	2	

lathe and draw up their specifications and capacities.	L2		
8. Study the work holding and tool holding devices in the CNC machining centre and draw up their specifications and capacities.	L1 and L2	2	
9. Prepare part programs for two specified components for CNC lathe by manual part programming. First write the machining technology in full; then prepare part program and then enter in the machine. Test the program in dry run and by tool path graphic simulation. Machine the component.	L2 and L3	2	
10. Prepare part programs for two specified components for CNC machining centre by manual part programming. First write the machining technology in full; then prepare part program and then enter in the machine. Test the program in dry run and by tool path graphic simulation. Machine the component.	L2 and L3	2	
11. To study 3D printing machine tool and its application in modern manufacturing industries	L1 and L2	1

MAE4201	OPTIMIZATION TECHNIQUES	L	T	P	C
Version 1.1	Date of Approval: 26 June,2020	3	1	0	4
Pre-requisites/Exposure					
Co-requisites	-				

Catalog Description

In this course the concepts of optimization techniques are discussed in detail. The main objective of this course is to provide the basic concepts of optimization techniques and to educate them on the advancements in optimization techniques. It also provides knowledge of multi-Objective Programming and Genetic algorithms.

Course Objectives

The objective of this course is

1. To familiarize the students with various tools of optimization for management of various resources.
2. To acquaint the students with various advance techniques of optimization like multi-Objective Programming and Genetic algorithms etc.

Course Outcomes

On completion of this course, the students will be able to

CO1: Define optimization technique and explain its various techniques.

CO2: Apply the concept of classical optimization techniques for solving problems on single-variable and multi-variable optimization.

CO3: Apply non-linear programming and solve problems on one-dimensional optimization methods, unconstrained and constrained optimization techniques.

CO4: demonstrate the concept of other optimization techniques like geometric programming, dynamic programming, integer programming, stochastic programming, and solving problems.

CO5: Illustrate different types of advance topics in optimization

Modules	Blooms level*	Number of hours
Module 1: Introduction Need of Optimization and Historical Development, Engineering Applications, Classification and Formulation of Optimization Problem	L1, L2 and L3	6
Module 2: Classical Optimization Techniques Single-Variable and Multi-Variable Optimization, With and Without Constraints, Kuhn-Tucker Conditions.	L1, L2 and L3	10
Module 3: Non-Linear Programming Introduction, One-Dimensional Optimization Methods, Unconstrained and Constrained Optimization Techniques; Elimination Methods, Exhaustive Search, Interval Halving, Fibonacci, Golden Section Methods; Random Search Methods, Hooke and Jeeves Method, Powell's Method; Indirect Search Methods: Steepest Descent, Fletcher-Reeves, Newton's Method, DFP, BFGS Method; Internal and External Penalty Approach.	L1, L2 and L3	12
Module 4: Other Optimization Techniques Introduction and Basic Concepts of Geometric Programming, Dynamic Programming, Integer Programming, Stochastic Programming, Their Applications	L1, L2 and L3	10
Module 5: Advance Topics in Optimization		10

Multi-Objective Programming, Introduction to Genetic Algorithms, Simulated Annealing and ANN Based Optimization.	L1, L2 and L3	
--	---------------	--

**Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation*

MAE4202	DESIGN OF EXPERIMENTS	L	T	P	C
Version 2017.1	Date of Approval: 26 June,2020	3	1	0	4
Pre-requisites/Exposure	Probability, Engineering statics, data analysis, hypothesis testing and ANOVA				
Co-requisites	Apply basic principles in the design of simple experiments.				

Catalog Description

In this course the concepts of experimental design, steps of experimental design, types of experimental design and six sigma are discussed in details. The design of experiments includes completely randomized design, latin square design, factorial design, full factorial design, fractional factorial design, robust design and Taguchi's approach for experimental design.

Course Objectives

The objective of this course is to

1. Explain the issues and principles of Design of Experiments (DOE),
2. Providing an understanding of interactions among causative factors
3. Determining the levels at which to set the controllable factors.
4. Minimizing experimental error (noise) and improving the robustness of the design or process to variation.

Course Outcomes

On completion of this course, the students will be able to

CO1. Learn how to plan, design and conduct experiments efficiently and effectively, and analyze the resulting data to obtain objective conclusions..

CO2. Given a description of an experiment, determine whether it is a factorial experiment, a fractional factorial experiment, or neither

CO3. Determine whether the design appropriately deals with extraneous variables via controlling, blocking, randomization or replication.

CO4. Explain robust design and taguchi's approach for design of experiments.

Modules	Blooms level*	Number of hours
MODULE 1: Introduction A brief history of statistical design, Objectives for experimental designs. Basic design concepts. Steps and guidelines for the design of experiments, Some typical applications of experimental design, Types of experimental designs, Analysis of means, Experimental designs and six sigma, Problems	L1, L2 and L3	10
MODULE 2: Completely Randomized Design Model for a completely randomized design with a single factor. ANOM for a completely randomized design, ANOM with unequal variances, randomized block design, incomplete block designs, latin square design, Graeco – Latin square design.	L1, L2, L3 and L4	12
MODULE 3: Full Factorial and Fractional Factorial Designs with Two Levels Nature of factorial designs, deleterious effects of interactions, effect estimates the 2^3 Design, built-in –replication, role of expected mean squares in experimental design, $2k-1$ Designs. Effect estimates and regression coefficients, $2k-2$ Designs. basic concepts; design efficiency, John's $3/4$ designs	L1, L2, L3 and L4	14
MODULE 4: Robust Design DOE and Taguchi approach; experimental design using orthogonal arrays; experimental design with two-level factors only; experimental designs with	L1, L3 and L4	12

three and four level factors; ANOVA ; analysis using signal- to- noise ratios.

MAE4203	RESEARCH METHODOLOGY AND TECHNICAL REPORT WRITING	L	T	P	C
Version 2019.1	Date of Approval: 26 June,2020	2	0	0	2
Pre-requisites/Exposure	NIL				
Co-requisites	NIL				

Catalogue Description

This course deals with types of research, significance and characteristics and planning a research proposal, population and sample, parameter and statistic, sampling and data collection, sampling design: steps, types, sample size, sampling methods. It deals with univariate, bivariate and multivariate analysis, measure of dispersion of data, standard deviation, variance, coefficient of variation and degree of freedom. Hypothesis testing: parametric tests and non-parametric tests, regression analysis and curve fitting, method of least-squares, explained and unexplained variations, coefficient of correlation of determination. The course also deals with technical/scientific/research report writing: referencing and bibliography and footnotes. Publication of research papers, citations, intellectual property rights and copy rights, plagiarism, patent and patent laws, commercialization and ethical issues.

Course Objectives

The objective of this course is to:

- Deals with types of research, significance and characteristics and planning a research proposal and to enhance scientific and technical writing and research skills.
- Impart knowledge about various stages of research process, statistical analysis and tools & their applications in decision making by hypothesis testing and regression analysis.
- It also deals with intellectual property rights and copy rights, plagiarism, patent and patent laws, commercialization and ethical issues.

Course Outcomes

On completion of this course, the students will be able to:

CO1: Classify different research types; explain steps in research process and planning research proposal.

CO2: Describe sampling methods, sampling steps and design, carry out data processing and analysis.

CO3: Explain hypothesis testing, parametric and non-parametric tests, carry out regression analysis, curve fitting.

CO4: Demonstrate technical and scientific report writing skills; describe plagiarism, patent laws and intellectual property rights.

Modules	Blooms level*	Number of hours
Module I: Introduction and Research Planning Introduction to research: Definition, motivation, need, objectives, significance and characteristics of research; types of research; steps in research process; planning a research proposal; literature review, web searching.	L1, L2	4
Module II: Sampling Methods Measurement scales, population and sample, parameter and statistic, sampling and data collection, sampling design: steps, types, sample size, sampling methods, data processing and analysis. Sampling surveys and questionnaire designing, primary and secondary data.	L1, L2, L3	5
Module III: Hypothesis Testing and Regression Analysis Univariate, bivariate and multivariate analysis, means-arithmetic, geometric and	L1, L3, L4	10

harmonic; measure of dispersion of data, standard deviation, variance, coefficient of variation and degree of freedom. Hypothesis testing: kinds errors in hypothesis testing, significance and confidence levels, parametric tests and non-parametric tests, one-tailed and two-tailed tests, analysis of variance. Regression analysis and curve fitting, method of least-squares, explained and unexplained variations, coefficient of correlation of determination.		
Module IV: Technical Report Writing and Plagiarism Technical/scientific/research report writing: structure and components of scientific reports, formats of dissertations, research report, report writing skills, report preparation, referencing and bibliography and footnotes. Publication of research papers, citations, making presentation-use of visual aids and PPTs. Intellectual property rights and copy rights, plagiarism, patent and patent laws, commercialization and ethical issues.	L1, L3, L4	5

THE4211	CONCEPTS OF COMBUSTION	L	T	P	C
VERSION	Date of Approval: 26 June,2020	3	1	0	4
Pre-requisites/ Exposure	Internal combustion engines				
Co-requisites					

Catalog Description

In this course the concept of combustion, its physical and chemical kinetics will be discussed in detail. The pre-mixed and diffusion flames will be studied in detail with the effects of emissions in the environment.

Course Objectives

The objective of this course is to:

1. Equip the students with physical and chemical kinetics of the combustion and its pre-mixed and diffused flame.
2. Provide an outline for the techniques to be used for controlling the harmful emissions from the combustion of fuel and its harmful effects.

Course Outcomes

On completion of this course, the students will be able to

CO1: Define and describe the basic laws of physics, chemistry and thermodynamics and derive the various equations to support the combustion processes.

CO2: Define and describe the principles of pre-mixed flame and outline their characteristics. Applying the effects of physics and chemistry on the variables of flame.

CO3: Define and describe the principles of diffusional flame and outline their characteristics. Describe the combustion of carbon sphere.

CO4: Outline the harmful emissions from the combustion of fuel and its harmful effects.

Modules	Blooms level*	Number of hours
MODULE 1: Physics and Chemistry of Combustion Combustion, modes of combustion, Laws of thermodynamics, stoichiometry, Hess's law, adiabatic flame temperature, laws of transport phenomena, conservation, energy transport equation; Basic reaction kinetics: collision theory; elementary reactions: first, second, third and reverse order reactions, QSSA and PEA method.	L1, L2 and L3	14
MODULE 2: Premixed flame One-Dimensional combustion wave, laminar premixed flame, propagation method, stationary flame method, effects of chemistry and physics variables on burning velocity, flame quenching, flammability limits, flame stabilization, turbulent pre-mixed flame.	L1, L2, L3	13
MODULE 3: Diffusion flame Gaseous jet flame, liquid fuel combustion: droplet burning time, spray combustion model; Solid fuel combustion: diffusional theory for a single coal particle combustion, combustion of carbon sphere with CO burning gas phase.	L1, L2	12
MODULE 4: Combustion and Environment Atmosphere, chemicals from combustion: emissions of CO, CO ₂ , O ₂ , H ₂ O, NO _x , N ₂ O, H-C, volatile organic, SO ₂ , sulphate aerosols, soot particles, emission control methods.	L1, L2	9

THE4212	ENERGY MANAGEMENT & AUDITING	L	T	P	C
VERSION	Date of Approval: 26 June,2020	3	1	0	4
Pre-requisites/ Exposure					
Co-requisites					

Catalog Description:

In this course the current energy scenario, energy conservation, audit and management is discussed. To calculate the energy efficiency and identify the areas deserving strict control to save energy.

Course Objectives:

The objective of this course is to

1. Equip the students with the in-depth knowledge of the functioning of energy management techniques and processes.
2. To provide basic calculations and methods for harnessing energy and also to identify the energy auditing methods adopted in many industries.

Course Outcomes

On completion of this course, the students will be able to

CO1: Describe, define and identify the energy management and energy conservation terminologies like supply, demand, economic analysis terminologies.

CO2: Define; describe the energy performance, energy acts and duties of auditors.

CO3: Explain, prepare and apply energy balance diagrams and energy action plans in an organization.

CO4: Identify and describe the ways in which energy is conserved in electrical and thermal equipment.

Modules	Blooms level*	Number of hours
MODULE 1: Energy Management Concept of energy management, energy demand and supply, economic analysis; Duties and responsibilities of energy managers. Energy Conservation: Basic concept, energy conservation in Household, Transportation, Agricultural, service and Industrial sectors, Lighting, HAVC.	L1, L2	8
MODULE 2: Energy Audit Definition, need and types of energy audit; Energy management (Audit) approach: energy cost, bench marking, energy performance, matching energy use to requirement, maximizing system efficiencies, optimizing the input energy requirement; Fuel & energy substitution; Energy audit instruments; Energy conservation Act; Duties and responsibilities of energy manager and auditors	L1, L2	10
MODULE 3: Material energy balance Facility as an energy system; Method for preparing process flow; material and energy balance diagrams. Energy Action Planning: Key elements, force field analysis; Energy policy purpose, perspective, content, formulation, rectification.	L2, L3, L4	10
MODULE 4: Monitoring and Targeting Definition monitoring & targeting; Data and information analysis. Electrical Energy Management: energy conservation in motors, pumps and	L1, L2	9

fan systems; energy efficient motors.		
MODULE 5: Thermal energy management Energy conservation in boilers, steam turbine and industrial heating system; Application of FBC; Cogeneration and waste heat recovery; Thermal insulation; Heat exchangers and heat pump; Power plant's Renovation and modernization– Reactive power management and energy management, Building Energy Management and its ISO standards.	L1, L2	11

THE4213	REFRIGERATION AND AIRCONDITIONING	L	T	P	C
Version1.1	DateofApproval:July14,2017	3	0	0	3
Pre-requisites/Exposure	Basics of Thermodynamics				
Co-requisites	-				

Catalog Description

The aim of this course is to provide the students with the understanding of the basic principles of Refrigeration and Air Conditioning such that they could build simple mathematical models representing the conditioned space and its components used to control environmental conditions. The application of thermodynamics, heat transfer, and fluid mechanics includes an understanding of refrigerants and refrigeration systems, psychometrics, human comfort and air quality, calculation of heating and cooling loads, and heat and mass transfer processes and associated R&AC components and systems.

Course Objectives

The objective of this course is to

Equip the students with concepts of air refrigeration, vapour compression refrigeration, different types of refrigerants, vapour absorption and steam jet refrigeration system.

Provide an overview of Psychrometry, HVAC systems and different expansion and control devices.

Course Outcomes

After completing the course, the students will be able to

CO1. Explain air refrigeration, vapour compression refrigeration, different types of refrigerants, vapour absorption and steam jet refrigeration system.

CO2. Describe the working of Refrigerant in multistage, cascade refrigeration.

CO3. Apply the knowledge of psychrometry to various psychrometric processes.

CO4. Evaluate cooling and heating load and design of HVAC system.

CO5. Develop and design RAC system and evaluate different expansion and control devices.

Modules	Bloom level*	Number of hours
MODULE-1: Analysis of refrigeration cycles Analysis of vapour compression refrigeration cycle Subcooled liquid and superheated vapour refrigeration cycles, their effect on performance. Compound compression Multi vapour-Cascade system, Vapour Absorption System: Simple vapour Absorption system- Actual vapour absorption cycle representation on enthalpy concentration h-c diagram, Enthalpy Concentration Diagram, Aircraft Refrigeration: Thermodynamic Cycle-Different systems-Analysis- Comparison UnConventional Refrigeration, Industrial Refrigeration: Chemical and process industries, Dairy plants, Petroleum Refineries.	L1, L2 and L3	8

MODULE-2: Refrigerants Primary and secondary refrigerants. Designation of refrigerants, Desirable properties of refrigerants such as solubility in water and lubricating oil. Material compatibility, Toxicity, Flammability, Thermodynamic properties of refrigerants, Inorganic, Halocarbon refrigerants. Secondary refrigerants. Refrigerant mixtures, Need for Alternate refrigerants–Retrofitting aspects.	L1, L2, and L3	8
MODULE-3: Applied Psychrometry Psychrometric processes in air conditioning equipment, Mixing, Bypass factor, Heating and dehumidifying coils, Air washers. Cooling by dry and wet coils, Use of hygroscopic solution in air washers, Adiabatic dehumidifiers. Humidifiers, Water injection. Steam injection.	L2 and L3	7
MODULE 4: Comfort Air Conditioning and Cooling Load Calculations: Sensible and Latent Heat Loads—sensible heat factor. Use of Effective and grand sensible heat factor, Relationship between ESHF, ADP and BF. Representation of All Fresh Air, Recirculated air, Bypassed Air and High Latent Heat Load systems on Psychrometric Chart, Air Conditioning Systems: Summer, winter, Hot and dry outdoor conditions.	L2, L3 and L4	7
MODULE 5: Selection of outside and inside design conditions: Thermodynamics of human body. Body regulation process against heat and cold. Comfort & Comfort chart, Effective temperature, Factors governing optimum effective temperature, Design considerations. Air conditioning control systems: Basic elements of the control system, Temperature, Humidity & Pressure controls, Refrigeration, Room thermostat.	L2, L3 and L4	6

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis; L6:Evaluation

THE4214	REFRIGERATION & AIRCONDITIONING LAB	L	T	P	C
Version 1.1	Date of Approval: 08 May, 2019	0	0	2	1
Pre-requisites/Exposure	Thermodynamics				
Co-requisites	Nil				

Catalog Description

In this course study will be made on the practical aspects of refrigeration & air conditioning. Experiments will be performed in the laboratory to find the COP of heat pump and refrigeration system. This course is intended to provide an overview of practical aspects of vapour compression refrigeration systems and compressors.

Course Objectives

The objective of this course is to

Equip the students with practical concepts of refrigeration & air conditioning.

To provide students with the necessary skills to conduct experiments on heat pump and air refrigeration system; collect data, perform analysis and interpret results to draw valid conclusions through standard test procedures.

Demonstrate the concepts discussed in the Refrigeration & Air conditioning course.

Experimentally determine COP of Vapour absorption refrigeration system.

Course Outcomes

On completion of this course, the students will be able to

CO1: Determine COP of Refrigeration system, heat pump and vapour compression refrigeration system.

CO2: Demonstrate and explain hermetically sealed compressor, effect of superheating.

CO3: Determine efficiency of compressor.

CO4: Determine total Heat Load for Air-Conditioning unit.

Modules	Blooms level *	Number of hours
Module 1 Study and Performance of Vapor Compression Refrigeration Cycle To find Performance of refrigeration test rig by using different expansion devices To find performance Parameters of cooling Towers	L1, L2, L3	6
Module 2 To find performance parameters of an Ice Plant To find performance parameters of Vapor Absorption Refrigeration system Performance analysis of Vortex tube Apparatus Performance analysis of Mechanical heat pump	L1, L2, L3	6

Module3 Performance analysis of air conditioning law limit Study of pull down characteristics of domestic refrigerator.	L1,L2,L3	6
Module4: Study of performance parameters using ventilation trainer.	L1,L2 and L3	6

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis; L6-Evaluation

MDE4204	ADVANCED TRIBOLOGY	L	T	P	C
VERSION	Date of Approval: 26 June,2020	3	1	0	4
Pre-requisites/ Exposure	Physics				
Co-requisites					

Catalog Description

Advanced Tribology is a cross-disciplinary course based on the basic principles of the science and engineering. The course focuses on theories of friction, wear, lubrication, basic model approaches of tribological elements/systems, and methods to simulate tribological processes.

Course Objectives

The objective of this course is to:

1. Introduce students with the field of Tribology i.e. friction, wear and lubrication.
2. Enhance students' awareness of Tribological issues in the design of machine components, such as rolling element bearing, journal bearing, thrust bearings, seals and braking system.

Course Outcomes

On completion of this course, the students will be able to

CO1: State and explain different types of engineering surfaces, their properties and measurement methods.

CO2: Describe and explain different contact between surfaces, Hertzian and Non-Hertzian contact. Explain different methods of measurement.

CO3: Define wear, lubrication and their type and will be able to explain different wear mechanism and lubrication regime.

CO4: Define, describe and analyze Hydrodynamic Journal Bearing, thrust bearing and air lubricated journal bearing.

CO5: Explain and describe the Nanotribology and its measurement methods.

Modules	Blooms level*	Number of hours
MODULE 1: INTRODUCTION Introduction to Tribology and its historical background Industrial importance, Factors Influencing Tribological phenomena ENGINEERING SURFACES, PROPERTIES AND MEASUREMENT Engineering surfaces -surface characterization computation of surface parameters. Surface measurement techniques. Apparent and real area of contact, Contact of engineering surfaces.	L1, L2 and L3	8
MODULE 2: SURFACE CONTACT Hertzian and Non-Hertzian contact. Contact pressure and deformation in non-conformal contacts. SURFACE CONTACT Genesis of friction, friction in contacting rough surfaces, sliding and rolling friction, Various laws and theory of friction. Stick slip friction behavior, frictional heating and temperature rise. Friction Measurement techniques.	L1, L2, L3	8
MODULE 3: WEAR Wear and Wear types. Mechanisms of wear -Adhesive, abrasive, corrosive, erosion, fatigue, fretting, etc., wear of metals and non-metals. Wear models – asperity contact, constant and variable wear rate, geometrical influence in wear models, wear damage. Wear in various mechanical components, wear controlling techniques.	L1, L2, L3	8
MODULE 4: LUBRICATION	L1, L2,	7

Introduction to Lubrication, Lubrication regimes, Lubricants and their properties. Solid Lubricants.	L3	
MODULE 5: HYDRODYNAMIC BEARING Mechanism of pressure development, Classification, Idealized Journal Bearing, Pressure Distribution. ANTIFRICTION BEARING Ball and Roller Bearing, Geometry of ball bearing, Stresses and Deformation, Lubrication of ball bearing. GAS LUBRICATED BEARING Introduction, Governing Equation, Finite Journal Bearings.	L1, L2, L3, L4	10
MODULE 6: NANOTRIBOLOGY Introduction to micro and NanoTribology. Measurement tools used in Nanotribology: SFA, STM, AFM Micro scale and Nanoscale Wear Nanofabrication/NanomachiningNanohydrodynamicsNanolubricationTribological issues in MEMS.	L1, L2, L3	7

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation

MDE4205	INDUSTRIAL ROBOTICS	L	T	P	C
Version X.X	Date of Approval: 26 June,2020	3	1	0	4
Pre-requisites/Exposure	Kinematics of Machines				
Co-requisites	Nil				

Catalog Description

This subject covers the fundamental concept of Robotics used in industrial application including motors, controllers, and sensors etc. This course includes Robot anatomy, coordinate frames, manipulator control, Robot sensors, language, applications, kinematics and dynamic modeling etc.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of Robotics, coordinate frames, mapping, Robot language sensors and applications.
2. Provide an overview of manipulator control, kinematic and dynamic modeling of different types of robot.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Describe evolution, history and progressive advancement in Robotics and explain fundamental of coordinate frame, mapping and transforms.
- CO2. Explain the kinematic model and inverse kinematics of robot arm configuration.
- CO3. Describe the manipulator differential motion and explain dynamic behavior of manipulator.
- CO4. Explain the manipulators control and various sensors used in robot.
- CO5. Explain various robot applications and methods of robot programming.

Modules	Blooms level*	Number of hours
MODULE 1: INTRODUCTION TO ROBOTICS Evolution of Robots and Robotics, Laws of Robotics, Progressive advancement in Robots Robot anatomy, Human Arm Characteristics, Design and Control issue, Manipulation and Control, Programming Robots.	L1, L2 and L3	8
COORDINATE FRAMES, MAPPING AND TRANSFORMS Coordinate Frames, Description of objects in space, Transformation of Vectors, Inverting a Homogeneous Transform, Fundamental Rotation matrix.		
MODULE 2: DIRECT KINEMATIC MODEL Mechanical structure and notations Kinematic modeling of the manipulate or Denavit Hardenbergs Notation Manipulator Transformation Matrix	L2 and L3	10
THE INVERSE KINEMATICS Manipulator workspace, solvability of Inverse kinematics model, solution techniques, closed form solution.		
MODULE 3: MANIPULATOR DIFFERENTIAL MOTION AND STATICS Linear and angular velocity of a rigid body, relationship between transformation	L1, L2	10

matrix and angular velocity, manipulator Jacobian, Jacobian Inverse, Jacobian Singularities, Static Analysis. DYNAMIC MODELING Lagrangian Mechanics, Two Degree of Freedom manipulator-Dynamic Model, Lagrange-Euler formulation Newton-Euler formulation, Inverse Dynamics.	and L3	
MODULE 4: CONTROL OF MANIPULATORS Open and Close loop control, linear control schemes, linear second order SISO model of a manipulator joint. Joint Actuators, Computed Torque Control, force control of Robotics, Manipulators, Hybrid position/force control, Impedance Force/Torque Control. ROBOTIC SENSORS Sensors in Robotics, classification of Robotic sensors, kinds of sensors used in robotics-Acoustic sensors optic, Pneumatic, force/Torque sensors.	L2 and L3	10
MODULE 5: ROBOT APPLICATIONS Industrial Applications-Material Handling, Processing Applications, Assembly applications, inspection application, Principles for Robot application and application planning, Robot safety, Non-Industrial Application. ROBOT LANGUAGES AND PROGRAMMING The Textual Robot Languages, Generations of Robot Programming Languages, Methods of Robot Programming.	L1, L2 and L3	8

MDE4213	EXPERIMENTAL STRESS ANALYSIS	L	T	P	C
VERSION	Date of Approval: 26 June,2020	3	1	0	4
Pre-requisites/ Exposure	Strength of Materials				
Co-requisites					

Catalog Description

The course introduces the physical principle used by various experimental techniques and also provides a guideline to select an experimental technique for a given application. The role of analytical, numerical, experimental methods in solving a problem in solid mechanics and different types of non-destructive methods are discussed.

Course Objectives

The objective of this course is to:

1. Recognize the various techniques available to measure the stress and Strains using different sources.
2. Realize the working of recording instruments and data logging methods
3. Distinguish the principles of photo elasticity in two dimensional stress analyses.

Course Outcomes

On completion of this course, the students will be able to

CO1: Define, describe and analyze the measurements techniques, accuracy of measurement and error analysis.

CO2: Explain and describe the theory Mechanical Strain Gauges, Optical Strain Gauges, Electrical Strain Gauge and Acoustical Strain Gauge.

CO3: Acquire the knowledge on Brittle and Bi-Refrigerant coatings and analyze the working of strain gauges.

CO4: Describe and explain the overall concepts of stress/strain analysis by experimental means.

CO5: Explain and analyze the theory and practice of common experimental stress analysis Methods including Moir methods, non destructive testing.

Modules	Blooms level*	Number of hours
MODULE 1: MEASUREMENTS Principles of measurements, Range and Accuracy of measurements, Sensitivity of Measurements, Error Analysis	L1, L2 and L4	9
MODULE 2: EXTENSOMETERS Mechanical Strain Gauges, Optical Strain Gauges, Electrical Strain Gauge, Acoustical Strain Gauge.	L1, L2, L3	10
MODULE 3: ELECTRICAL RESISTANCE STRAIN GAUGES Principle of Operation and Requirements, Types and their uses, Materials for strain gage, Calibration and Temperature Compensation, Cross Sensitivity, Circuits for Static and Dynamic Strain Measurements, Strain Indicators , Rosette Analysis	L1, L2, L3, L4	11
MODULE 4: PHOTOELASTICITY Concepts of light, Photoelastic effects, stress optic law, Interpretation of fringe pattern, Compensation and Separation Techniques, Photoelastic materials	L1, L2, L3	8
MODULE 5: NON-DESTRUCTIVE TESTING Fundamental of NDT, Radiography, Magnetic Particle Inspection, Ultrasonic Testing, Fluorescent Penetrate Technique, Eddy Current Testing,	L1, L2, L3, L4	10

Acoustic Emission Technique, Thermography , Fundamentals of brittle coating methods, Introduction to Moir Techniques, Holography.

MDE4211	ADVANCED COMPUTER AIDED DESIGN	L	T	P	C
Version X.X	Date of Approval: 26 June,2020	3	0	0	3
Pre-requisites/Exposure	CAD Modeling, Solid works				
Co-requisites	Nil				

Catalog Description

In this course the concepts of solid modeling in computer aided design are discussed in detail. This course includes transformation of point, line and projection of an object. Introduction to the principles of curve, surface and solid representations; mathematical representations of curves, surfaces, solids and application to mechanical design problems are discussed in details.

Course Objectives

The objective of this course is to

1. Learn about the geometric issues concerned solid modeling, geometric transformation and projection of object.
2. Impart the parametric fundamentals to create and manipulate geometric models using curves, surfaces and solids.

Course Outcomes

On completion of this course, the students will be able to

CO 1: Describe the concept of solid modeling and explain the parametric equation in CAD

CO 2: Solve the problem on 2 D transformation and 3 D in CAD and explain the orthographic, axonometric, oblique and perspective projections

CO 3: Explain the topology of geometry and determine the equation of Hermit curve, Bezier curves and B-spline curves.

CO 4: Explain the geometric form of surface, blending function and determine the equation of bi-cubic surface, bezier surface and B-spline surfaces

CO 5: Describe the solid representation scheme and demonstrate the constructive solid geometry, sweep representation and cell decomposition in solids.

CO 6: Summaries the analytical properties of curve and surface.

Modules	Blooms level*	Number of hours
MODULE 1:INTRODUCTION Introduction, Review of vectors & Matrices, Basics of geometric and solid modeling, explicit, implicit, intrinsic and parametric equations, coordinate systems	L1, L2 and L3	4
MODULE 2:TRANSFORMATIONS Introduction, transformation of points and line, 2-D translation, shearing, rotation, reflection, scaling and combined transformation, homogeneous coordinates, 3-D scaling, shearing, rotation, reflection and translation, combined transformations, orthographic, axonometric, oblique and perspective projections.	L1, L2 and L3	6
MODULE 3:CURVES Geometry and topology, algebraic and geometric forms of straight lines, circles, conics, cubic splines, Ferguson curve, Hermit curve, Bezier curves and B-spline curves, NURBS, composite curves, tangents and normal, blending functions, reparametrization.	L1, L2 and L3	8

MODULE 4: SURFACES Algebraic and geometric forms, tangents and twist vectors, normal, blending functions, reparametrization. Plane surface, sixteen point form, four curve form, ruled surface, surface of revolution, tabulated cylinder, lofted surface, bi-cubic surface, bezier surface, B-spline surfaces, Coons' patch, blending surface, offset surface, rational surface.	L1, L2 and L3	8
MODULE 5: SOLIDS Solid models and representation schemes, their properties, boundary representation, constructive solid geometry, sweep representation, cell decomposition, octree encoding, spatial occupancy enumeration.	L1, L2 and L3	7
MODULE 6: ANALYTICAL PROPERTIES Analytical properties (Intersection & development) of curves and surfaces	L1, L2 and L3	5

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4-Analysis; L5-Synthesis, L6-Evaluation

MDE4212	ADVANCED COMPUTER AIDED DESIGN LAB	L	T	P	C
Version X.X	Date of Approval: 26 June,2020	-	-	2	1
Pre-requisites/Exposure	CAD Modeling, Solid works				
Co-requisites	Nil				

Catalog Description

In this course the concepts of solid modeling in computer aided design are discussed in detail. This course includes the different types of features in part modeling, assembly of parts and projection of an object. Moreover the syllabus also covers the principles of curve, surface and solid representations; surfaces, solids and application to mechanical design problems.

Course Objectives

The objective of this course is to

1. Learn about the geometric issues concerned solid modeling and projection of object.
2. Impart the parametric fundamentals to create and manipulate geometric models using curves, surfaces and solids.

Course Outcomes

On completion of this course, the students will be able to

CO 1: Demonstrate the fundamentals of modeling software features and capabilities. Prepare the sketch of simple mechanical components. Explain different types of features in part modeling & assembly of parts.

CO 2: Identify the mass properties & sectional properties of part & assembly and validate the assembly with interference detection.

CO 3: Construct machine elements in sketcher, part and assembly mode such as crankshaft, connecting rod, piston etc.

CO 4: Develop codes for analytical and synthetic curves.

CO 5: Construct the model using surface modeling tool.

List of Experiment	Blooms level*	Number of hours
1) Drawing sketches in the sketcher workbench, Constraints sketches and creating base features, Reference elements and sketch-based features.	L1, L2	2
2) Creating dress-up, hole features and Editing features.	L1, L2	2
3) To draw the detail view of the flange coupling and assemble the parts by using the CAD software and obtain its respective views.	L1, L2	2
4) To draw the detail view of the – crankshaft and assemble the parts by using the CAD software and obtain its respective views.	L1, L2 and L3	2
5) To draw the detail view of the connecting rod and assemble the parts by using the CAD software and obtain its respective views.	L1, L2 and L3	2
6) To draw the detail view of the piston and assemble the parts by using the CAD software and obtain its respective views.	L1, L2 and L3	2
7) Develop the computer program to generate the Bezier curve	L1, L2 and L3	2
8) Develop the computer program to generate the B-spline curve	L1, L2 and L3	2
9) Working with wireframe and surface design workbench.	L1, L2	2

10) To develop the mouse model by surface modeling using CAD software.	L1,L2 and L3	3
11) To develop the spoon model by surface modeling using CAD software.	L1,L2 and L3	3

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

Version	Date of Approval: 26 th June 2020	3	0	0	3
Pre-requisites/Exposure	Industrial Engineering, CAD				
Co-requisites					

Catalog Description:

In this course the concepts of numerical control machines, programmed automation, axis designation and automatic tool changers are discussed in detail. The concepts of machine control unit, G&M codes, manual part programming, processes planning, interpolation cycles, computer aided part programming, computer aided process planning, computer integrated manufacturing and artificial intelligence in manufacturing are also discussed in detail.

Course Objectives

The overall objective of this course is

- 1) To equip with various concepts and practices of computer aided manufacturing (CAM) and computer numerical control (CNC) machines.
- 2) To provide high calibre engineering students with an in-depth understanding of manual part programming and simulation on CNC machines.

Course Outcomes (COs):

At the end of the course, the student shall be able to:

CO1 - Define and describe the basic concepts of numerical control machines and systems.

CO2 – Explain and demonstrate about the computer numerical control, direct numerical control and adaptive control systems

CO3 – Outline, interpret and apply the manual part programming of various operations on CNC's.

CO4 – State and explain the manual process planning versus computer aided process planning.

CO5 –Outline and describe the computer integrated manufacturing and artificial intelligence in manufacturing.

Modules	Blooms level*	Number of hours
Module I Introduction: Introduction to Automation, Need and future of NC Systems and CAM, Advantages and Disadvantages, Open and Closed loop systems, Historical developments and future trends. Future of NC Machines, Difference between ordinary and NC Machine tools, Methods for improving accuracy and productivity.	L1 and L2	5
Module II Control of NC Systems: Types of CNC Machine Tools systems devices, e.g. encoders and interpolators, Features of CNC Systems, Direct Numerical Control (DNC), Standard Controllers and General Programming features available in CNC Systems, Computer Process monitoring and Control. Adaptive control systems.	L2 and L3	6
Module III NC Part Programming: Manual Programming for simple parts, e.g., turning, milling, drilling, etc., Computer aided NC Programming in APT language, use of canned cycles, Generation of NC Programmer through CAD/CAM systems, Design and implementation of post processors.	L1, L2 and L3	7
Module IV Computer Aided Process Planning: Introduction, Manual process planning vs. Computer aided process planning; Basics of variant and generative process are planning methods, Examples of	L1 and L2	7

automated process planning systems.		
Module V Computer Integrated Manufacturing: Introduction, features and applications of CIM, key elements, advantages and disadvantages of CIM.	L1 and L2	6
Module VI Artificial Intelligence in Manufacturing: Introduction, Elements of Expert Systems, Introduction to Neural Networks, Expert Systems application in manufacturing, Case studies.	L1 and L2	5

Catalog Description:

In this course the concepts of numerical control machines, computer numerical control machines, automatic tool changers, axis designation and CAM software are discussed in detail. The concepts of machine control unit, G&M codes, manual part programming, interpolation cycles, computer aided part programming using CAM software, simulation, dry run and machining operations on CNC's are also discussed in detail.

Course Objectives:

The overall objective of this course is

1. To equip the students with basic and essential concepts of computer aided manufacturing (CAM) and computer numerical control (CNC) machines.
2. To provide high caliber engineering students with an in-depth understanding of G&M codes to write CNC programs, part programming using CAM software, simulation and machining on CNC machines.

Course Outcomes:

At the end of course the students will be able to:

- CO1 – State and explain the CNC lathe and CNC milling machine with their major assemblies, sub assemblies, machine control system and axes designation.
- CO2 - Describe and apply G&M codes in manual part programming on CNC lathe and CNC milling machine.
- CO3- Explain and apply computer aided programming for different turning operations with the help of CAM software on CNC lathe machine.
- CO4 – Explain and apply computer aided programming for milling and drilling operations with the help of CAM software on CNC milling machine.

Modules	Blooms level*	Number of hours
1. Practice programming on manual part programming.	L1, L2 and L3	2
2. To write the CNC programme for the given operation.	L2 and L3	2
3. To perform step-turning operation using CAM software on CNC lathe.	L2 and L3	2
4. To perform plain turning operation using CAM software on CNC lathe.	L2 and L3	2
5. To perform the side milling, face milling operation using CAM software on CNC milling machine.	L2 and L3	2
6. Simulation of manufacturing system using CAM Software	L2 and L3	2
7. Practice in APT based NC programming.	L2 and L3	2
8. To perform the drilling operation using CAM software on CNC milling machine.	L2 and L3	2

Catalog Description:

In this course the concepts of measurement systems, control systems, microprocessor, micro controller and mechatronics system are discussed in detail. The concepts of sensors and transducers, signal conditioning, multiplexers, pneumatic actuation systems, hydraulic actuation systems, mechanical actuation systems and electrical actuation systems are also discussed in detail.

Course Objectives:

The overall objective of this course is

1. To equip the students with mix skills of mechanical engineering, electronics engineering and computer engineering.
2. To provide high caliber engineering students with an in-depth understanding of pneumatic actuation systems, hydraulic actuation systems, mechanical actuation systems and electrical actuation systems.

Course Outcome (COs)

At the end of the course, the student shall be able to:

CO1 - Define and describe key elements of mechatronics systems and measurement systems.

CO2 – State, explain and apply sensors, sensors terminology and transducers.

CO3 –Outline, interpret and apply the concept of signal processing and interfacing systems.

CO4 –Define, describe and demonstrate pneumatic actuation systems and hydraulic actuation systems.

CO5 -Define, describe and demonstrate mechanical actuation systems and electrical actuation systems.

Modules	Blooms level*	Number of hours
Module I Introduction: Definitions, mechatronics system, measurement systems, control systems, microprocessor / micro controller based controllers, response of systems, mechatronics approach, applications: robot, CNC machine.	L1 and L2	6
Module II Sensor Technology: Sensor and transducers, terminology, displacement, position, proximity – encoders, velocity sensors – tacho-generators, force - strain gauges, pressure gauge, temperature – thermocouples, RTDs, thermistors, light sensors – photoelectric sensors, IR sensors, sensors selection.	L1, L2, and L3	6
Module III Signal Conditioning: Introduction, operational amplifier, protection, filtering, Wheatstone bridge, digital signals, multiplexers, data acquisition, digital signal processing, pulse – modulation, problems.	L1, L2 and L3	6
Module IV Pneumatic & Hydraulic Actuation Systems: Actuation systems, Pneumatic actuation systems, electro-pneumatic actuation systems, hydraulic actuation systems, electro-hydraulic actuation systems, directional control valves, pressure control valves, process control valves, rotary actuators, problems.	L1, L2 and L3	6
Module V Mechanical Actuation Systems: Mechanical systems, types of motion, kinematics chains, cams, gear trains, belt and chain drives, bearings, mechanical	L1, L2 and L3	6

aspects of motor selection, problems.		
Module VI Electrical Actuation Systems: Electrical systems, mechanical switches, solid state switches, solenoids, D.C. motor, A.C. motors, stepper motors, problems.	L1, L2 and L3	6

Catalog Description

In this course the concepts of sensors and transducers, signal conditioning, pneumatic actuation systems, hydraulic actuation systems, mechanical actuation systems and electrical actuation systems are also discussed in detail. The aim of this course is to make the students familiar with the basic of mechatronics.

Course Objectives:

1. Equip the students with practical concepts of pneumatic actuation systems and hydraulic actuation systems.
2. Understand the application of PLC by working models and experiments.

Course Outcomes (COs): After studying this course the students will be able to:

CO 1- Define the key elements of mechatronics system and measurement systems.

CO 2- Explain and demonstrate the pneumatic actuation systems.

CO 3- Explain and demonstrate the hydraulic actuation systems.

CO 4 – Show the uses of PLC.

List of Experiments	Blooms level*	Number of hours
1. To extend and retract a double acting cylinder using 5/3 hand lever valve or 5/2 Two way Solenoid valve.	L1, L2 and L3	2
2. To study the sequencing of two double acting cylinders (Pneumatic).	L1, L2 and L3	2
3. To study the movement of double acting cylinder using the hand lever valve or solenoid operated valve.	L1, L2 and L3	2
4. To study the sequencing of two double acting cylinders (Hydraulic).	L1, L2 and L3	2
5. To study the movement of piston of cylinder using solenoid operated valve or programmable logic controller.	L1, L2 and L3	2
6. Mini Project	L2, L3 and L4	14

IPE4205	WELDING AND AIDED PROCESSES	L	T	P	C
Version 1.1	Date of Approval: 26 June,2020	3	1	0	4
Pre-requisites/Exposure					
Co-requisites					

Catalog Description

To study essential concepts for welding parameters and welding processes. To study various types of defect, advance welding processes. To study the various techniques of welding automation and Non destructive testing of welds.

Course Objectives:

The objective of this course is to

1. Equip the students with concept of welding processes, types of defect, advance welding processes and welding automation.
2. Provide an overview of Non destructive testing of welds.

Course Outcomes:

At the end of the course, students will demonstrate their ability to:

1. Define the welding processes, weld ability and welding defects.
2. Analyze methods of advanced welding processes like Ultrasonic welding.
3. Develop concept and techniques of welding automation.
4. Analyze the soldering and brazing process.
5. Define the Non destructive testing of welds.

Modules	Blooms level*	Number of hours
MODULE 1: Welding Metallurgy Introduction: Classification of welding processes, Review of welding processes like gas, arc and resistance welding. Weld bead geometry and shape factors, Weld dilution. Heat affected zone and its characteristics; Effects of alloying elements on weld ability, Weld ability of steels, stainless steel, cast iron, and aluminium.	L1, L2, and L3	08
MODULE 2: Weld Design & Quality Control: Principles of sound weld design, Welding joint design, Welding defects; Testing of weldment, Material joining characteristics, Welding positions, Allowable strength of welds under steady loads, Weld throat thickness; Weld quality, Discontinuities in welds, their causes and remedies and quality conflicts. Numerical.	L1, L2, and L3	10
MODULE 3: Advanced welding processes: Introduction, main features and applications of Microwave welding, Friction welding, Electron beam welding, Plasma arc welding, Laser welding and Explosive welding.	L1, L2, and L3	08
MODULE 4: Automation in Welding: Introduction, Manual Welding, Semi-Automatic Welding, Automatic Welding, Welding Mechanization, Flexible Automated Welding, Robotic Welding, Types of Welding Robots, Robot Selection Mechanics, Joint tracking system,	L1, L2, and L3	08
MODULE 5:		06

Soldering: Techniques of soldering, solders, phase diagram, composition, applications. Brazing: Wetting and spreading characteristics, surface tension and contact angle concepts, brazing fillers, role of flux and characteristics, atmospheres for brazing, adhesive bonding.	L1, L2, and L3	
MODULE 6: Non Destructive Testing of Welds: Non Destructive Tests: their Advantages and Limitations, Comparison with Destructive Tests, Visual Examination, Dye Penetrate Inspection, Magnetic Particle Inspection, X-Rays and Gamma Rays Inspection and Ultrasonic Inspection of Welds. ASME Standards/ codes for welding.	L1, L2, and L3	08

IPE4214	QUALITY AND RELIABILITY MANAGEMENT	L	T	P	C
Version	Date of Approval: 26 th June 2020	3	1	0	4
Pre-requisites/Exposure	Quality Control				
Co-requisites	-				

Catalog Description

In this course approaches and techniques to assess and improve process and product quality, Reliability are discussed in detail. The basic concepts and techniques of modern reliability Engineering tools will be introduced. The concepts learnt will be applied to design methods Failure analysis and system safety.

Course Objectives

The objective of this course is to

1. Equip the students with problem oriented in depth knowledge of Quality and Reliability Engineering
2. Provide an overview of concepts, methods and application of Quality and Reliability Engineering.

Course Outcomes

On completion of this course, the students will be able to

CO1: Describe Quality Control, Quality Assurance and Quality Management.

CO2: Explain Tools and Techniques of quality management.

CO3: Explain reliability function and conditional reliability.

CO4: Describe system structure functions and reliability specification and system measurements.

Modules	Blooms level*	Number of hours
MODULE 1: Quality – Concept, Different Definitions and Dimensions, Inspection, Quality Control, Quality Assurance and Quality Management, Quality as Wining Strategy, Views of different Quality Gurus.	L1and L2	6
MODULE 2: Introduction, Definitions and Principles of Operation, Tools and Techniques, such as, Quality Circles, 5 S Practice, Total Quality Control (TQC), Total Employee Involvement (TEI), Problem Solving Process, Quality Function Deployment (QFD), Failure Mode and Effect analysis (FMEA), Fault Tree Analysis (FTA), Kizen, Poka-Yoke, QC Tools, PDCA Cycle, Quality Improvement Tools, TQM Implementation and Limitations.	L1and L2	8
MODULE 3: Definition of reliability – reliability vs. quality, the failure distribution, the reliability function, mean time to failure, Hazard rate function, bathtub curve, conditional reliability - constant failure rate model - time-dependent failure models - exponential and normal distribution.	L1 and L2	10
MODULE 4: Serial configuration, parallel configuration, combined series parallel systems, system structure function, minimal cuts and minimal paths – load sharing systems – standby systems – degraded systems, three state devices – physical	L1and L2	14

reliability models - covariate models, static models , dynamic models, physics of failure models.		
MODULE 5: Reliability specification and system measurements - reliability allocation - design methods failure analysis – system safety and fault tree analysis – analysis of down time – the repair time distribution, reliability under preventive maintenance, maintenance requirements.	L1and L2	10

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

Version 1.1	Date of Approval: 26 June,2020	3	1	0	4
Pre-requisites/Exposure					
Co-requisites	-				

Catalog Description

In this course the concepts of quality improvement in manufacturing are discussed in detail. Various quality management tools, improvement cycles, quality circles and audit procedures will be introduced. The concepts learnt will be applied to improve quality in manufacturing.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of quality improvement in manufacturing.
2. Provide an overview of quality management tools, improvement cycles, quality circles and audit procedures.

Course Outcomes

On completion of this course, the students will be able to

CO1: Define components of quality, innovation, design and explain Product quality characteristics and dimensions.

CO2: Explain various key aspects of the quality system standards.

CO3: Describe total quality management tools, improvement cycle and quality organization.

CO4: Define quality assurance, inspection, quality circles and explain quality audits.

Modules	Blooms level*	Number of hours
MODULE 1: The Foundations of Total Quality Management: Components of quality, The total quality management approach, Innovation, design and improvement, Product quality characteristics and service quality characteristics, Quality parameters and specific dimensions of quality.	L1 and L2	8
MODULE 2: Key Aspects of the Quality System: Planning for quality, Flowcharting, Detailed flow process charts and flow diagrams, planning for just-in-time (JIT) management, System design and contents, System documentation, implementation and assessment.	L1 and L2	8
MODULE 3: TQM Tools and the Improvement Cycle: Measurement of quality, Costs of quality, Tools and techniques for quality improvement, Statistical process control, Quality improvement techniques in service industries, Specific techniques for design, reliability, maintenance and process improvement.	L1 and L2	10
MODULE 4: The Quality Organization Within an Organization: People and the organizational structure, Responsibilities and performance management, The relationship between the quality organization and top management, Culture change through teamwork for quality improvement, Implementing teamwork for quality improvement: the DRIVE model.	L1 and L2	10
MODULE 5: Internal Quality Audits: Scope of requirements and audit procedures, the audit programme and planning of quality audits, Verifying compliance with planned arrangements, determining the effectiveness of the system, reporting the results of quality audits, Follow-up audits Quality and Business Process Re-engineering: Beyond tools to total quality management, Stages in the development of quality and related activities:	L1 and L2	12

inspection, quality assurance, company-wide quality control, total quality management, Quality circles.

THE4309	ADVANCED COMPUTATIONAL FLUID DYNAMICS	L	T	P	C
Version 1.1	Date of Approval: 26 June,2020	3	0	0	3
Pre-requisites/Exposure	Fluid Mechanics				
Co-requisites	Nil				

Catalog Description

Computational Fluid Dynamics (CFD) is a branch of fluid mechanics that uses algorithms to analyze and solve problems that involves fluid flow. This design tool has been developed over the years. The software simplifies complex simulations and can be applied in a varied range of transonic or turbulent flows, for biological, physical, chemical and medical applications. CFD is being increasingly employed by many industries either to reduce manufacturing design cycles or to provide an insight into existing technologies so that they may be analyzed and improved. Examples of such industries include power generation, aerospace, process industries, automotive, chemical engineering and construction.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of computational fluid dynamics and models of flow.
2. Provide an overview of continuity, momentum and energy equations and basic aspects of Discretization.

Course Outcomes

On completion of this course, the students will be able

CO1: To define and explain the concept of CFD and its applications; finite control volume; infinitesimal fluid element, substantial derivative, divergence of velocity.

CO2: To state and describe continuity, momentum and energy equations of fluid Dynamics.

CO3: To explain the classification of quasi linear partial differential equations and general behavior of the different classes of partial differential equations

CO4: To define and distinguish different aspects of Discretization and computational fluid Dynamics techniques.

CO5: To explain the concept of Pressure correction Technique & Incompressible Couette Flow

Modules	Blooms level*	Number of hours
Module 1 Introduction Introduction to CFD, CFD as a research tool, CFD as a design tool, applications of CFD: automobile and engine applications; industrial manufacturing applications; civil engineering applications; environmental engineering applications, models of flow: finite control volume; infinitesimal fluid element, substantial derivative, divergence of velocity: its physical meaning.	L1, L2	7
Module 2 Governing Equations of Fluid Dynamics The continuity equation: model of finite control volume fixed in space; model of finite control volume moving with the fluid; model of infinitesimally small element fixed in space, model of infinitesimally moving with the flow, momentum equation, energy equation, summary of the governing equations for fluid dynamics with comments: equations for viscous and non viscous flow, physical boundary conditions	L1, L2	7
Module 3 Mathematical Behavior of partial differential equations	L1, L2	7

Introduction, classification of quasi linear partial differential equations, a general method of determining the classification of partial differential equations: Eigen value method, general behavior of the different classes of partial differential equations: hyperbolic equations; steady in viscous supersonic flow; unsteady in viscous flow, parabolic equations: steady boundary layer flow, elliptic equations.		
Module 4 Discretization & CFD Techniques Introduction, Introduction to finite differences, difference equations, Explicit and implicit approaches, errors and stability analysis, some simple CFD Techniques: Introduction, Lax Wendroff technique and Maccormack's technique, some comments: viscous flows, conservative form, space marching, Relaxation technique, Alternating Direction implicit technique.	L1, L2	7
Module 5 Pressure correction Technique & Incompressible Couette Flow Introduction, some comments on the incompressible Navier – Stokes equations, need for a staggered grid, philosophy of pressure correction method, pressure correction formula, boundary conditions, some computer graphic techniques used in CFD: xy plots, contour plots, vector and streamline plots, scatter plots, mesh plots, composite plots, Incompressible Couette Flow: introduction, physical problem and its exact analytical solution, numerical approach. Introduction to Finite element method in Computational fluid Dynamics	L1, L2	8

Pre-requisites/Exposure	Fluid Mechanics, Computational Fluid Dynamics				
Co-requisites	Nil				

Catalog Description

In this course study will be made on the Numerical solution of laminar and turbulent pipe flow problem in ANSYS Fluent. This course is intended to carry out numerical simulation for Plate Boundary Layer and Flow in a nozzle problem in ANSYS Fluent. Numerical simulation will be carried out for conduction as well as Steady flow past a cylinder and sphere problems.

Course Objectives

The objective of this course is to

1. Provide students with the necessary skills to carry out numerical simulation.
2. Equip the students with basic concepts of Ansys to develop numerical simulation for different types of problems.

Course Outcomes

On completion of this course, the students will be able

CO1: To develop the numerical solution to a laminar and turbulent pipe flow problem in ANSYS Fluent.

CO2: To develop the numerical solution to a Flat Plate Boundary Layer and Flow in a nozzle problem.

CO3: To develop numerical simulation of the Steady flow past a cylinder and sphere in ANSYS Fluent.

CO4: To develop numerical simulation of the flow over an airfoil and heat conduction problem in ANSYS Fluent.

CO5: To develop numerical simulation of the heat conduction through a composite wall and cylinder in ANSYS Fluent.

Modules	Blooms level*	Number of hours
Module 1 To develop the numerical solution to a laminar pipe flow problem in ANSYS Fluent. To develop the numerical solution to a turbulent pipe flow problem in ANSYS Fluent.	L1, L2 and L6	5
Module 2 To develop the numerical solution to Flat Plate Boundary Layer problem in ANSYS Fluent. To develop the numerical solution to Flow in a nozzle problem in ANSYS Fluent.	L1, L2 and L6	5
Module 3 To develop the numerical solution to Steady flow past a cylinder problem in ANSYS Fluent. To develop the numerical solution to Steady flow past a sphere problem in ANSYS Fluent.	L1, L2 and L6	5
Module 4: To develop the numerical solution to flow over an airfoil problem in ANSYS Fluent.	L1, L2 and L6	5

To develop the numerical solution for heat conduction problem through a rectangular plate in ANSYS Fluent.		
Module 5 To develop the numerical solution for heat conduction problem through a composite wall in ANSYS Fluent. To develop the numerical solution for heat conduction problem through a cylinder in ANSYS Fluent	L1, L2 and L6	5

THE4311	MICRO FLUIDICS & NANO FLUIDIC	L	T	P	C
Version 1.1	Date of Approval: 26 June,2020	3	1	0	4
Pre-requisites/Exposure	Fluid Mechanics				
Co-requisites	Nil				

Catalog Description

In this course studies will be made on General properties of micro and nano scale flows, fluid statistics, kinematics of a fluid velocity fluid. This course is intended to provide an overview of Basic Principles of Micro fluidics and Governing Equations. This course will be helpful in understanding the concepts of unidirectional flow, hydraulic circuit analysis. Also the studies will be made on the basic concepts of nano fluidics.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of micro Fluidics and nano fluidics.
2. Provide an overview of governing equations, unidirectional flow and hydraulic circuit analysis.

Course Outcomes

On completion of this course, the students will be able

CO1: To define and explain the basic concepts of micro and nano scale flows and micro fluidics.

CO2: To describe basic principles of micro fluidics and governing equations.

CO3: To explain unidirectional flow and hydraulic circuit analysis

CO4: To summarize the basic concepts of nano fluidics.

CO5: To define and distinguish micro fluidics and nano fluidics.

Modules	Blooms level*	Number of hours
Module 1 Introduction and Micro fluidics Introduction: General properties of micro and nano scale flows, fluid statistics, kinematics of a fluid velocity fluid, important geometric definitions: streamline, streak line, path line, and material line, strain rate and rotation rate tensors. Micro fluidics: Definition, objectives of micro fluidic systems, components of micro fluidic device: micro scale fuel handling system, sample loading and injection device, Electro osmotic pumping system, small volume transport, variable pressure delivery chamber, applications.	L1, L2	13
Module 2 Basic Principles of Micro fluidics and Governing Equations Basic Principles: Introduction, basic principles: laminar flow, Peclet number, pressure driven flow, electro osmotic flow, micro pumps: mechanical, non mechanical micro pumps, electro kinetic pump, MHD pump, Micro mixers: active and passive micro mixers, applications. Governing Equations for incompressible flow : Conservation of mass and momentum equations, constitutive relations, non Newtonian fluids, interfacial energy, contact angle, velocity and stress boundary conditions at interfaces, kinematic boundary conditions for continuity of normal velocity, dynamic boundary conditions for continuity of tangential velocity, flow regimes, Navier slip boundary condition.	L1, L2	13
Module 3 Unidirectional Flow and Hydraulic circuit Analysis Unidirectional Flow: Introduction, steady pressure and boundary driven flow through long channels, coquette flow, physical interpretation, Reynolds number, Poiseuille flow, physical interpretation, startup and development of unidirectional	L1, L2	13

flow Hydraulic circuit Analysis: Introduction, hydraulic circuit analysis, hydraulic circuit equivalent for micro channels, introduction to potential fluid flow, introduction to stokes flow		
Module 4 Nano fluidics Introduction to nano fluidics, advantages of nano fluidics, comparison of micro fluidics and nano fluidics, nano scale forces, phenomena in nano fluidics, applications of nano fluidics, lab on chip, gene expression studies	L1, L2	9

THE4312	TURBO MACHINES	L	T	P	C
VERSION	Date of Approval: 26 June,2020	3	1	0	4
Pre-requisites/ Exposure	Internal combustion engines				
Co-requisites					

Catalog Description

In this course the concept of Thermo-fluid dynamics aspects of fluid flow, Kinematic relations and efficiencies of turbomachines, axial Turbines Centrifugal, Compressors and Fans, Radial Flow Turbines, and preliminary design fundamentals of turbo machines will be discussed in detail. It will focus on applications in power generation, transport, refrigeration and the built environment.

Course Objectives

The objective of this course is to:

1. Equip the students with different types of turbomachines and their applications.
2. Provide an outline for the derivations to be used for finding out work done and efficiencies of various turbomachines.

Course Outcomes

On completion of this course, the students will be able to

CO1: Define; describe turbo machines and its components. Categorize them on the basis of their working and outcome.

CO2: Derive turbine equations, construct velocity triangles and list the effect of blade discharge angle of performance parameters of turbo machines.

CO3: Define and describe and categorize the impulse and reaction turbines. Derive conditions for maximum utilization factor.

CO4: Classify the hydraulic turbines, derive and analyze its design parameters for maximum efficiency.

CO4: Categorize different types of pumps and compressors. Derive an expression for pressure ratio, work done and efficiency.

Modules	Blooms level*	Number of hours
MODULE 1: INTRODUCTION Introduction: Definition of turbo machine, parts of turbo machines, Comparison with positive displacement machines, Classification, Application of first and second law of thermodynamics to turbo machines, Efficiencies of turbo machines, Static and Stagnation states, overall isentropic efficiency, stage efficiency, Reheat factor for expansion process	L1, L2 and L4	8
MODULE 2: ENERGY EXCHANGE IN TURBO MACHINES Euler's turbine equation, Alternate form of Euler's turbine equation, Velocity triangles for different values of degree of reaction, Components of energy transfer, Degree of Reaction, utilization factor, Relation between degree of reaction and Utilization factor, Problems. Radial flow compressors and pumps – general analysis, Expression for degree of reaction, velocity triangles, Effect of blade discharge angle on energy transfer and degree of reaction, Effect of blade discharge angle on performance, degree of reaction, velocity triangles, Problems.	L1 and L3	10
MODULE 3: STEAM TURBINES AND REACTION TURBINES Classification, Single stage impulse turbine, condition for maximum blade efficiency, stage efficiency, Need and methods of compounding, Multi-stage impulse turbine, expression for maximum utilization factor. Reaction turbine – Parsons's turbine, condition for maximum utilization	L1, L2, L3 and L4	10

factor, reaction staging. Problems.		
MODULE 4:HYDRAULIC TURBINES Classification, various efficiencies. Pelton turbine – velocity triangles, design parameters, Maximum efficiency. Francis turbine - velocity triangles, design parameters, Kaplan and Propeller turbines – velocity triangles, design parameters. Problems.AnsysTurboGrid.	L2, L3 and L4	12
MODULE 5: PUMPS AND COMPRESSORS Classification and parts of centrifugal pump, different heads and efficiencies of centrifugal pump, Minimum speed for starting the flow, Cavitation, Need for priming. Problems Centrifugal Compressors: Stage velocity triangles, slip factor, power input factor, Stage work, Pressure developed, efficiency and problems. Axial flow Compressors: Expression for pressure ratio developed in a stage, work done factor, efficiencies. Problems.	L2 and L3	8

**Bloom's Level:*

MDE4302	ADVANCED MECHANICAL VIBRATIONS	L	T	P	C
Version 1.1	Date of Approval: 26 June,2020	3	0	0	3
Pre-requisites/Exposure	Physics, Engineering Mathematics				
Co-requisites					

Catalog Description

This subject will cover the fundamental concepts on the vibration of mechanical systems one degree of freedom, Lagrange's equations of motion and multiple degree of freedom systems. This course includes introduction to matrix methods, influence coefficient, forced vibration, principle mode of vibration, Rayleigh method, measuring instruments, isolation, torsional systems and balancing of machines.

Course Objectives

The objective of this course is to

1. Provide adequate knowledge to analyse one-degree and multi-degree of freedom systems of vibrations using different methods.
2. Find out natural frequencies and amplitude responses of different systems.

Course Outcomes

On completion of this course, the students will be able to

- CO 1: Explain and determine the equation of motion for free vibration and forced vibration for damped and undamped conditions
- CO 2: Explain and determine the equation of motion continuous system i.e. rod, cable and beam.
- CO3: Determine the equation of motion in reciprocating and rotary balancing of machine and explain the vibration isolation.
- CO4: Explain vibration measuring instruments and its application and determine the equation of motion for vibration exciter.
- CO 5: Describe and determine the equation of motion for non linear vibration by exact and approximate method.

Modules	Blooms level*	Number of hours
MODULE 1:Introduction to vibrations Brief introduction to vibrations, its causes, advantages and disadvantages, classification: un-damped and damped vibrations, single and two degree of freedom models. Introduction to lateral, torsional and bending vibrations. Harmonic and harmonic analysis. Free and harmonically excited vibrations. Vibrations under general forcing conditions.	L1, L2 and L3	7
MODULE 2:Vibrations of continuous system Transverse vibrations of a cable, longitudinal and torsional vibrations of a rod, lateral vibrations of a beam, vibrations of membranes. Rayleigh's method,	L1, L2 and L3	7

Rayleigh-Ritz method.		
MODULE 3:Vibration Control Introduction, vibration nomograph and vibration criteria, reduction of vibration at the source, balancing of rotating machines, whirling of rotating shafts, balancing of reciprocating engines, control of vibrations, control of natural frequencies, vibration isolation, vibration absorbers.	L1, L2 and L3	8
MODULE 4:Vibration measurement and applications Introduction, transducers, vibration pickups, frequency measuring instruments, vibration exciters, signal analysis, dynamic test of machines an structures, experimental modal analysis, machine condition monitoring and diagnosis.	L1, L2 and L3	7
MODULE 5:Non linear vibration Introduction, examples of non-linear vibration problems, exact methods, approximate analysis methods, subharmonic and superharmonic oscillations, systems with time-dependent coefficients (Mathieu equations), graphical methods, stability of equilibrium states, limit cycles, chaos.	L1, L2 and L3	7

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

MDE4307	ADVANCED MECHANICAL VIBRATIONS LAB	L	T	P	C
Version 1.1	Date of Approval: 26 June,2020	0	0	2	1
Pre-requisites/Exposure	Physics, Engineering Mathematics				
Co-requisites	Nil				

Catalog Description

The vibration engineering lab will cover the fundamental concepts on the vibration of mechanical systems of free vibration for simple, compound pendulum and torsional vibration of rotor. An Interpretation of results is to find out the natural frequency of different mechanical systems.

Course Objectives

The objective of this course is to

1. Provide adequate knowledge to analyze one-degree and multi-degree of freedom systems of vibrations using different methods.
2. Find out natural frequencies and amplitude responses of different systems.

Course outcomes

On completion of this course, the students will be able to

CO 1: Explain and determine the natural frequency of torsional vibration and damping coefficient of free vibration.

CO 2: Explain the equation of motion of longitudinal vibration and determine the natural frequency of spring mass system.

CO3: Explain the Dunkerley,s rule and determine the natural frequency of beam.

CO4: Explain and determine the natural frequency of forced vibration of the system with its magnification factor

CO 5: Describe the beat motion analysis and determine the harmonic component of compressor and also measure the characteristics of coupled drive apparatus.

Experiment	Blooms level*	Number of hours
1. To study the Torsional vibration (undamped) of single rotor shaft system	L2,L3	1
2. To study the damped Torsional oscillations and determine the damping coefficient	L2,L3	1
3. To study the longitudinal vibration of spring and to determine the frequency theoretically and actually by experiment	L2,L3	1
4. To study the undamped free vibration of equivalent spring mass system.	L2,L3	1
5. To verify the Dunkerley,s rule on simply supported beam and compare it with actually by experiment .	L2,L3	1
6. To study the free vibrations of the system for different damper settings. Draw the decay Curve and determine the log decrement and damping factor. For also the natural frequency.	L2,L3	1
7. To determine analytically the natural frequency of the main system (fixed- fixed beam with motor fixed at its centre) and verity it by observation.	L2,L3	1
8. To study the forced vibrations of the system with damping. Plot	L2,L3	1

magnification factor us frequency and phase angle us. Frequency curves. Also determine the damping factor.		
9. Find the natural frequencies and modes of vibration of three-rotor system analytically and compare the same experimentally.	L2,L3	1
10. Investigation of the node and anti-node position for the cantilever beam.	L2,L3	1
11. To find the natural frequencies of the box supported on four experimentally and verify the same and analytically.	L2,L3	1
12. Find the period of beat motion analytically and check the same observation.	L2,L3	1
13. To determine harmonic components of Vibrations of a compressor bed.	L2,L3	1
14. Measurement of system characteristics of coupled drive apparatus in open loop-mode.	L2,L3	1

MDE4303	FINITE ELEMENTS METHOD	L	T	P	C
Version X.X	Date of Approval: 26 June,2020	3	0	0	3
Pre-requisites/Exposure	Applied Numerical Methods				
Co-requisites	Nil				

Catalog Description

In this course, the concepts of finite element method and solutions to structural, heat transfer and fluid flow problems are discussed in details. To master this course, students should have a background in basic knowledge of applied numerical methods.

Course Objectives

The objective of this course is to

1. Equip the students with the concepts of theory and characteristics of finite elements methods.
2. Provide an overview to learn and apply finite element solutions to structural, heat transfer and fluid flow problems.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Describe history, applications and comparison of FEM with other methods.
CO2. List and explain the methods to solve the boundary value problems and partial differential equations.
CO3. State and explain various finite element techniques to carry out finite element solution.
CO4. Explain and apply application of FEM to solid and structural mechanics problems.
CO5. Demonstrate and analyze application of FEM to heat transfer and fluid flow problems.

Modules	Blooms level*	Number of hours
MODULE 1:Introduction to Finite Element Method: Basic Concept, Historical background, Engineering applications, general description Comparison with other methods	L2	6
MODULE 2:Integral Formulations And Variation Methods: Need for weighted-integral forms, relevant mathematical concepts and formulae, weak formulation of boundary value problems, variation methods, Rayleigh-Ritz method, and weighted residual approach.	L1 and L2	6
MODULE 3:Finite Element Techniques: Model boundary value problem, finite element discretization, element shapes, sizes and node locations, interpolation functions, derivation of element equations, connectivity, boundary conditions, FEM solution, post-processing, compatibility and completeness requirements, convergence criteria, higher order and isoparametric elements, natural coordinates, Langrange and Hermit polynomials.	L1 and L2	8

MODULE 4: Applications To Solid and Structural Mechanics Problems: External and internal equilibrium equations, one-dimensional stress-strain relations, plane stress and strain problems, axis-symmetric and three dimensional stress-strain problems, strain displacement relations, boundary conditions, compatibility equations, Analysis of trusses and frames	L2 and L3	8
MODULE 5: Applications To Heat Transfer and Fluid flow Problems: Applications in heat transfer: Finite element solution of one-dimensional, two-dimensional and three-dimensional steady state heat conduction problems by using Galerkin approach. Applications in fluid mechanics: Finite element solution of incompressible and compressible fluid film lubrication problems by using Galerkin approach.	L3 and L4	8

Course Objectives

The objective of this course is to

1. Equip the students with the concepts of theory and characteristics of finite elements methods.
2. Provide an overview to learn and apply finite element solutions to structural, heat transfer and fluid flow problems.

Course Outcomes

On completion of this course, the students will be able to

- CO1. Predict the stresses in cantilever beam and stepped bar by applying FEA software.
CO2. Calculate the stresses in connecting rod, piston and crankshaft using FEA software.
CO3. Determine the mode shape using FEA software.
CO4. Solve and analyze the heat transfer problem through fin and composite wall.
CO5. Construct and analyze the fluid flow problem through pipe and nozzle.

Modules	Blooms level*	Number of hours
1. Stress analysis of a cantilever beam using FEA software.	L1,L2 and L3	1
2. Stress analysis of a stepped bar using FEA software.	L2 and L3	1
3. Stress analysis of connecting rod using FEA software.	L2 and L3	1
4. Stress analysis of piston using FEA software.	L2 and L3	1
5. Stress analysis of crankshaft using FEA software.	L2 and L3	1
6. To determine different mode shape in a structural member by modal analysis using FEA software.	L2 and L3	1
7. To develop numerical simulation for the heat conduction problem in a fin using FEA software.	L2 and L3	1
8. To develop numerical simulation for the heat conduction problem in a composite wall using FEA software.	L2 and L3	1
9. To develop numerical simulation for laminar/turbulent flow in a pipe using FEA software.	L2 and L3	1
10. To develop numerical simulation for laminar/turbulent flow in a nozzle using FEA software.	L2 and L3	1

MDE4309	PRODUCT DESIGN AND DEVELOPMENT	L	T	P	C
Version X.X	Date of Approval: 26 June,2020	3	1	0	4
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

Product Design and Development is a project-based course that covers modern tools and methods for product design and development. Topics include identifying customer needs, concept generation, product architecture, industrial design, and design-for-manufacturing.

Course Objectives:

The objective of this course is to:

1. Equip the students with the basic concepts of product design and development process.
2. Provide an overview of applicability of product design and development in industrial applications

Course Outcomes:

On completion of this course, the students will be able to

CO1: Define and describe appropriate product lifecycle, product design, modern product development process and Morphology of design.

CO2: Describe and explain conceptual design and the design of manufacturing assemble.

CO3: Define and explain Value engineering and Value analysis.

CO4: Describe the application of ergonomics and explain the concurrent engineering and rapid prototyping.

Modules	Blooms level*	Number of hours
MODULE 1: Introduction: Classification/Specifications of Products, Product lifecycle, Product mix, Introduction to product design, Modern product development process, Innovative thinking Morphology of design	L1, L2 and L3	6
MODULE 2: Conceptual Design: Generation, selection& embodiment of concept, Product architecture, Industrial design: process, need, Robust Design: Taguchi Designs & DOE Design Optimization.	L1, L2, L3 and L4	6
MODULE 3: Design for Manufacturing Assembly: Methods of designing for Manufacturing and assembly, Designs for Maintainability, Designs for Environment, Product costing, legal factors and social issues, Engineering ethics and issues of society related to design of products.	L2 and L3	6
MODULE 4: Value Engineering and Value Analysis. : Definition. Methodology, Case studies, Economic analysis: Qualitative & Quantitative.	L1, L2 and L3	6
MODULE 5: Ergonomics/ Aesthetics: Gross human autonomy, Anthropometry, Man-Machine interaction. Concepts of size and texture color, Comfort criteria, Psychological and Physiological considerations Creativity Techniques: Creative thinking, conceptualization, brainstorming, primary design, drawing, simulation, detail design.	L1, L2 and L3	6
MODULE 6: Concurrent Engineering, Rapid prototyping, Tools for product design– Drafting/ Modeling software. CAM Interface, Patents and IP Acts. Overview, Disclosure	L2 and L3	6

preparation.

MDE4310	ADVANCED MECHANICAL DESIGN	L	T	P	C
Version 1.1	Date of Approval: 26 June,2020	3	1	0	4
Pre-requisites/Exposure	Machine Design				
Co-requisites					

Catalog Description

This subject will cover the fundamental concepts of the design of mechanical systems and different types of failures present in the mechanical component. This course includes material selection, fundamental concepts, fracture, fatigue, creep and design for failure prevention required for the design of mechanical system.

Course Objectives

The objective of this course is to

- 1) Equip the students with concepts of mechanical design and behavior of mechanical components under fatigue and creep
- 2) Provide an overview of various failures present in mechanical system caused by different loading conditions

Course Outcomes

On completion of this course, the students will be able to

CO 1: Design the mechanical components by selecting a suitable material

CO 2: Describe the concept of static, impact and cyclic loading on mechanical system.

CO 3: Evaluate the fatigue life of mechanical components for ductile and brittle materials

CO4: Analyze and predict the fracture strength of mechanical components under different Fracture modes.

CO5: Design the mechanical components involving contacts avoiding the surface failures.

Modules	Blooms level*	Number of hours
Module 1 Material selection for design: Engineering Design process and the role of materials; materials classification and their properties; Materials Selection, Examples of material selection for typical applications, Elasticity, Plasticity, Bauschinger effect.	L1, L2 and L3	9
Module 2 Review of fundamental concepts: Overview of mechanical design, Free body diagram, Load analysis - 2D and 3D static load analysis, Case studies of static load analysis – Bicycle hand brake lever, Bicycle with pedal arm, Plier-wrench, Cyclic loading, Impact loading, Beam loading, Understanding of static failure for ductile and brittle materials, Comparison of experimental data with failure theories, Significance of the theories of failure, importance of factor of safety in design, Design case studies - Bracket, Bicycle hand brake lever, Bicycle with pedal arm, Plier-wrench.	L1, L2 and L3	9
Module 3 Fatigue Failure theories: Introduction to fatigue, Fatigue failure models, Fatigue life, Estimation of theoretical fatigue strength, Correction factors to the theoretical fatigue strength, stress concentration, Cumulative damage and life exhaustion, effect of mean stress, Designing for fully reversed uniaxial stresses, Designing for	L1, L2 and L3	11

fluctuating uniaxial stresses, Designing for multi-axial stresses in fatigue.		
Module 4 Introduction to Fracture and Creep: Fundamentals of Fracture mechanics, Mechanism of fracture - Cleavage fracture, Ductile fracture and Inter-granular fracture, Griffiths theory, Orowan theory, theoretical fracture strength, Irwin's fracture analysis, Linear Elastic Fracture Mechanics (LEFM) - Crack propagation with plasticity, Fracture toughness, hypothesis of LEFM, stress field in an isotropic material in the vicinity of crack tip, Elasto Plastic Fracture Mechanics (EPFM) - Crack opening displacement, J-Integral, Creep mechanisms, temperature dependence of creep.	L1, L2 and L3	10
Module 5 Design for failure prevention: Fracture mechanics in Design, Design case studies – Bicycle with pedal arm, Plier-wrench. Surface failures - Adhesive wear, Abrasive wear, Corrosion wear, Surface fatigue wear, Contacts - Spherical contact, Cylindrical contact and General contact, Failure modes and effects analysis (FMEA).	L1, L2 and L3	9

Course Code: IPE4302	COMPUTER AIDED METROLOGY AND INSPECTION	L	T	P	C
Version 1.1	Date of Approval: 26 June,2020	3	0	0	3
Pre-requisites/Exposure	Mechanical Measurements				
Co-requisites	-				

Catalog Description

In this course the concepts of errors in measurement, surface characteristics, measurement standards and gauging assembly are discussed in detail. Comparators, soft metrology and image processing techniques will be introduced. The concepts learnt will be applied to make mechanical measurements.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of metrology, comparators and measurement standards.
2. Provide an overview of tools and techniques used for measurement and coordinate measuring machine.

Course Outcomes

On completion of this course, the students will be able to

CO1: Define concept of metrology and explain methods of improving accuracy in measurements.

CO2: Explain various standards of measurements and gauges.

CO3: Explain working of comparators.

CO4: Describe computer aided metrology and coordinate measuring machine.

Modules	Blooms level*	Number of hours
MODULE 1: Principles of measurement Metrological concepts -Definition, objectives and concept of metrology, Concept of accuracy and precision, Inaccuracy due to thermal aspects, Detailed surface roughness concept, Surface and form metrology , flatness, roughness, waviness, Methods of improving accuracy & surface finish, Influence of vibrations on accuracy.	L1 and L2	6
MODULE 2: Standards for Measurement- Line standards, End standards, wavelength standards, Subdivision of standards, Errors in measurement, Linear and angular measurement, Use of sine bar and bevel protractor for angular measurements, System of Limits, Fits and Tolerance, Principle of interchangeability, Gauging assembly, Classification of gauges, brief concept of design of gauges (Taylor's principles), Wear allowance on gauges, Types of gauges-plain plug gauge, ring gauge, snap gauge, limit gauge.	L1 and L2	7
MODULE 3: Comparators -Definition, Functions of Comparator, Classification of comparator, working of various mechanical comparators- Dial Indicator, Reed type Mechanical Comparator, Sigma Comparator, Advantages and disadvantages of mechanical comparators, Optical comparator.	L1 and L2	8
MODULE 4: Computer Aided Metrology Computer Aided Metrology - Principles and interfacing, soft metrology - Application of lasers in Precision measurements- laser interface, laser scanners,	L1 and L2	7

Image processing. Acoustical measurements, Digital techniques in mechanical measurements.		
MODULE 5: Coordinate measurement machine (CMM) Type of CMM & applications, non-contact CMM, contact CMM, Electro optical sensors for dimension, surface finish measurements. Tool maker's microscope-working and its applications. Profile projector- working and its applications.	L1 and L2	8

**Bloom's Level:*

Course Code : IPE4307	COMPUTER AIDED METROLOGY AND INSPECTION LAB	L	T	P	C
Version 2017.1	Date of Approval: 26 June,2020	0	0	2	1
Pre-requisites/Exposure					
Co-requisites					

Catalog Description:

The main objective of computer aided metrology and inspection lab is to demonstrate the basic concepts in the area of measurement to the postgraduate students through a series of experiments. Students learn about laboratory methods and interpretation of results with regard to errors in measurement, surface characteristics, measurement standards and gauging assembly.

The concepts learnt will be applied to make mechanical measurements.

Course Objectives:

1. Equip the students with concepts of metrology, comparators and measurement standards.
2. Provide an overview of tools and techniques used for measurement and coordinate measuring machine.

Course Outcomes:

On completion of this course, the students will be able to

CO1: Apply the knowledge of mathematics and manufacturing science to calculate angle of inclination and roundness using sine bar and dial gauge.

CO2: Determine surface irregularities and inclination angle of given specimen.

CO3: Describe and measure the geometry of a screw and roughness characteristics.

CO4: Measure inner diameter of hole by using bore indicator and explain use of contact sensors for surface finish measurements

CO5: Demonstrate the coordinate measurement machine and screw thread parameters.

CO6: Determine the screw thread parameters of a given specimen using Profile projector and diameter of the holes drilled in a plate.

Modules	Blooms level*	Number of hours
1. To check the roundness of a circular bar with the help of dial gauge.	L1, L2 and L3	1
2. To check angle of inclined surface by using sine bar in combination with slip gauges.	L1, L2 and L3	1
3. To measure the surface irregularities of lathe guide ways by using dial indicator.	L1, L2 and L3	1
4. To measure the inclination angle by using different set of slip gauges and height gauges.	L1, L2 and L3	1
5. To study and measure the geometry of a screw using profile projector.	L1, L2 and L3	1
6. To machine a given surface on milling machine tool and study its roughness characteristics.	L1, L2 and L3	1
7. To measure inner diameter of hole by using bore indicator.	L1, L2 and L3	1

8. To study the contact sensors for surface finish measurements.	L1, L2 and L3	1
9. To study the coordinate measurement machine.	L1, L2 and L3	1
10. To measure the screw thread parameters of a given specimen using Tool Maker's Microscope.	L1, L2 and L3	1
11. To measure the screw thread parameters of a given specimen using Profile projector.	L1, L2 and L3	1
12. To determine the diameter of the holes drilled in a plate and to measure the center distance between them.	L1, L2 and L3	1

Course Code: IPE4303	METAL CUTTING AND TOOL DESIGN	L	T	P	C
Version 1.1	Date of Approval: 26 June,2020	3	0	0	3
Pre-requisites/Exposure					
Co-requisites	-				

Catalog Description

In this course to study the essential concepts of metal cutting and tool design. To study concept and applications of modern machining processes. To study jig fixtures and economic analysis of Jigs and fixtures. To provide knowledge to the students on the principles that guides production of cutting tool materials and processes.

Course Objectives

The objective of this course is

1. To familiarize the students with shapes of machining tools and chip formation.
2. To prepare the students understand various machine tool design.
3. To prepare the students understand the concept of jig and fixture.

Course Outcomes

On completion of this course, the students will be able to

CO1: Illustrate the fundamentals of basic shapes of machining tools and explain different types of chip formation.

CO2: Explain the design of single point and multi point cutting tools, analyze economics of metal machining.

CO3: Analyze parameters of grinding wheel

CO4: Explain and describe the design of press tools.

CO5: Develop the applications of jig and fixture for enhancing productivity.

Modules	Blooms level*	Number of hours
Module 1: Basic shapes of machining tools: Wedge action, function of different angles of cutting tools, tool geometry and Nomenclatures-ASA, ORS, NRS systems. Geometry of twist drill & slab milling cutter, Mechanism of chip formation, modes of failure under stress, fracture & yielding mechanism, types of chips, factors involved in chip formation, shear plane, effect of cutting variables on chip reduction coefficient, chip formation in drilling and milling	L1, L2 and L3	5
Module 2: Design of single point and multi point cutting tools: Design of flat and circular form tools and tool holding devices. Design of multi point cutting tools: Milling cutter; Major types, design and manufacturing of peripheral, end and face milling cutters. Forces and power estimation. Grinding of milling cutters. Broaches: Pull and Push types. Internal and External broaches, geometry and design and manufacturing of Pull type and push type broaches.	L1, L2 and L3	8
Module 3: Parameters of Grinding wheel: Types of Grinding, Shapes and Size of a Grinding Wheel, Various Elements of	L1, L2 and L3	8

a Grinding Wheel, Parameters of Grinding Operation, Grinding Fluids, Defects and Remedies in Grinding, Balancing of Grinding Wheel, Grinding of single point cutting tool, Tool materials, Vibration & chatter in machining. Economics of metal machining.		
Module 4: Design of Press tools: Die set elements. Design of Die Set for simple components in blanking, Piercing, bending, drawing, forging and spinning. Plastic Tools: Plastic Dies for simple components.	L1, L2 and L3	7
Module 5: Jigs & Fixtures: Design principles and construction features. Type of locating pins. Requirements and choice of locating systems, Setting blocks, types of clamping devices and their basic elements. Quick action clamps and nuts, Hydraulic, magnetic, electrical and vacuum clamping. Types of drill jigs and their classification. Types of jig bushes, jig feet, Design of Fixtures for Turning, grinding, welding and milling. Economic analysis of Jigs and Fixtures.	L1, L2 and L3	8

**Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation*

Co-requisites					

Catalog Description:

The main objective of the metal cutting and tool design Laboratory is to demonstrate the basic principles in the area of metal cutting and tool design to the post graduate students through a series of experiments. The student will learn about the laboratory methods and interpretation of results with regard to metal removal processes and to give final shape and size to components students also learn about the jig & fixture and their applications.

Course Objectives:

1. To understand the working of metal cutting and tool design.
2. To prepare the students understand the concept of jig and fixture.
3. To provide knowledge to the students on the principles that guides production of cutting tool materials and processes.

Course Outcomes:

On completion of this course, the students will be able to

CO1: Explain and define various cutting tool materials and their applications

CO2: Demonstrate on angles and parameters of various single point and multipoint cutting tools.

CO3: Analyze the formation of chip under different cutting conditions.

CO4: Demonstrate on the nomenclature of single point tool and twist drill geometry.

CO5: Demonstrate on resultant force act on the tool during turning operation.

Modules	Blooms level*	Number of hours
1. To study various cutting tool materials and their applications	L1, L2 and L3	1
2. To identify various angles and parameters of various single point cutting tools.	L1, L2 and L3	2
3. To identify various angles and parameters of various multipoint cutting tools.	L1, L2 and L3	2
4. Measurement of cutting forces in oblique cutting	L1, L2 and L3	1
5. To analyse the formation of chip under different cutting conditions.	L1, L2, L3 and L4	2
6. To perform blanking, Piercing, bending, and drawing operation on a given sheet metal specimen.	L1, L2 and L3	2
7. To study twist drill geometry.	L1, L2 and L3	1
8. To determine the resultant force act on the tool during turning operation and also estimate the force and thrust required to perform drilling operation.	L1, L2 and L3	1
9. Study of surface conditions during grinding process	L1, L2 and L3	1

10. Calculation of tool life during machining process	L1, L2 and L3	1
11. To study single point tool nomenclature using tool maker's microscope	L1, L2 and L3	1

Course Code IPE4304	PRODUCTION PLANNING AND CONTROL	L	T	P	C
Version 1.1	Date of Approval: 26 June,2020	3	1	0	4
Pre-requisites/Exposure	Basics of Industrial Engineering				
Co-requisites	-				

Catalog Description

In this course the concepts of production planning and control are discussed in detail. The main objective of this course is to understand the various components and functions of production planning and control such as, product planning, process planning, production scheduling, Inventory Control. To know the recent techniques of Production Planning Techniques like JIT, Kaizen, Kanban and pull system Kaizen and Six Sigma etc.

Course Objectives

The objective of this course is

1. To understanding the role of production and operations management in the overall business strategy of the firm.
2. To get familiarize the students with the application of production planning and control tools and techniques to the service sector as well as manufacturing firms.

Course Outcomes

On completion of this course, the students will be able to

CO1: Define production planning and control, explain objectives and functions of production planning and control.

CO2: Explain various production related activities.

CO3: Illustrate various inventory management procedures with the tools employed there in.

CO4: Explain the new techniques for evaluation of material and processes and various production related activities.

CO5: Demonstrate the role of routing, loading and scheduling in manufacturing and service.

CO6: Demonstrate role of JIT, Kaizen, and PDCA with their contribution towards production and planning and control.

Modules	Blooms level*	Number of hours
Module 1: Introduction Objectives and benefits of planning and control, Functions of production planning and control, preplanning, Steps in production planning and control, plant layout, Types of production-job- batch and continuous-Product development.	L1, L2 and L3	4
Module 2: Product Development and Design Effect of competition on design, Long-range Planning, Company policy, product analysis, marketing aspects, the product characteristics, functional aspect, operational aspect, durability and dependability, Economic analysis, Profit and competitiveness, The three S's:- Standardization, Simplification and Specialization. Break Even Analysis.	L1, L2 and L3	7
Module 3: Inventory Control Definition, classification, objectives of inventory control, functions, economic order quantity various inventory models. Numerical on inventory control.	L1, L2 and L3	7

Inventory carrying costs, factors affecting inventory costs. V.E.D. analysis, S-D-E analysis, F-S-N analysis H-M-L analysis and ABC analysis. Safety stocks, their objectives safety stocks and service levels.		
Module 4: Evaluation of Material and Processes Introduction, value analysis, consideration of new techniques and materials, value analysis tests, material utilization of a product or assembly. Numerical problems on material utilization of a product. Value engineering job plan and various phases of job plan in systematic value engineering approach	L1, L2 and L3	6
Module 5: Routing, Loading and Scheduling Introduction, Scheduling Procedure, Master Schedule, its objectives, Order scheduling, Loading by scheduled period, Dispatching, Job card, Job order. Commercial Loading & Scheduling Devices.	L1, L2 and L3	6
Module 6: Advance Production Planning Techniques Just in time in production system, Pull system vs Push system, Kanban and pull system, Benefits of JIT, Requirements for implementing JIT, Evaluation of JIT production. Introduction to Kaizen, Main Aspects of Kaizen, Kaizen and Six Sigma, Element and Factors of Kaizen, Hierarchy of Kaizen, The Plan-Do-Check-Act (PDCA) Cycle, Kaizen Implementation, Kaizen Tools and Standards – 7 Quality Control Tools.	L1, L2 and L3	6

**Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation*

IPE4309	MATERIAL MANAGEMENT	L	T	P	C
Version	Date of Approval: 26 th June 2020	3	1	0	4
Pre-requisites/Exposure					
Co-requisites					

Catalog Description

In this course basic concept of materials management like productivity, techniques of materials management, purchasing in production process and cost reduction techniques. Illustrate the material requirement planning process like JIT, production planning, economic analysis and break even analysis.

Course Objectives:

The objective of this course is to

1. Equip the students with concept of material management, material planning, purchasing, and cost reduction.
2. Provide an overview of order quantities.

Course Outcomes: At the end of the course, students will demonstrate their ability to:

1. Identify materials management techniques for productivity improvement.
2. Apply the concept of materials planning with the theoretical concepts like break even analysis, JIT etc.
3. Apply different concepts of Purchasing while purchasing a material for the company.
4. Demonstrate mathematical model the cost reduction techniques for reducing the cost & enhancing the profits of an organization.
5. Apply inventory management techniques like EOQ for the efficient Inventory management of production plant.

Modules	Blooms level*	Number of hours
MODULE 1: Introduction: Introduction to material management and productivity, functions of material management, organization structures in material management, role of material management techniques in improved material productivity.	L1, L2 and L3	7
MODULE 2: Material planning: objectives, material requirement planning, manufacturing resource planning, JIT production planning, strategic material planning, material control: acceptance, sampling, inspection, make or buy decision, simple cost analysis, economic analysis, break even analysis, break-even point theory, whether to add or drop a product line store management and warehousing, product explosion.	L1, L2 and L3	7
MODULE 3: Purchasing: Importance of good purchasing system, organization of purchasing functions, purchase policy and procedures, responsibility and limitations, purchasing decisions, purchasing role in new product development, role of purchasing in cost reduction, negotiations and purchase, purchasing research: identification of right sources of supply, vendor rating, standardization, vendor certification plans, vendor and supply reliability, developing new source of supply.	L1, L2 and L3	7

MODULE 4: Cost reduction: cost control v/s cost reduction, price analysis, material cost reduction techniques, variety reduction, cost reduction and value improvement, techniques of cost control, standard costing, cost effectiveness, cost analysis for material management, material flow cost control.	L1, L2 and L3	7
MODULE 5: Order Quantities: Introduction, types of inventory, inventory control, inventory build –up, EOQ, various inventory models, inventory models with quantity discount, exchange curve concept, coverage analysis, optimal stocking and issuing policies, inventory management of perishable commodities, ABC – VED analysis, design of inventory distribution systems, surplus management, information system for inventory management, case studies.	L1, L2 and L3	8

IFT4101	DATA COMMUNICATION AND COMPUTER NETWORKS	L	T	P	C
Version: 2020.1	Date of Approval: 19, July 2020	3	0	0	3
Pre-requisites/Exposure	Basics of Computer Network				
Co-requisites	Nil				

Catalog Description

In this course the concepts of basic data communication and networking concepts are discussed in details. The concepts related to routing/switching hardware, security, distributed client/server applications and architecture, intranets and intranet servers and browsers, networks and network servers, LANs/WANs, internetworking technologies will be introduced. The studies will be made on impact of the OSI reference model for networking protocols, CSMA/CD, TCP/IP implementation, frame relay, FDDI, X-25, ISDN services. This course will assist in developing the skills in basics of computer networks. The outcome of this course implicitly and explicitly affects the abilities to understand and analyze the networking concepts.

Course Objectives

The objective of this course is to

- Equip the students with concepts of data communication and computer network.
- Provide an overview of networking OSI, TCP/IP models, devices, media, protocols and layer concepts.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain OSI model, Layers in OSI model and TCP/IP protocol suit. Describe topologies with their advantages and disadvantages and transmission media.

CO2: Describe data transmission and data encoding schemes. Elaborate multiplexing and types of spread spectrum.

CO3: Demonstrate various switching techniques. Also explain Frame Relay, ATM, Error Detection Correction techniques, Flow Control- Stop and Wait mechanisms..

CO4: Describe the meaning of routers and issues in designing Routing Algorithms; Discuss logical addressing, Ipv4 and IPv6.

CO5: Describe Transport Services, TCP, UDP, SCTP. Explain Congestion control and Quality of Service.

Modules	Blooms level*	Number of hours
MODULE 1: Introduction Computer Network, Advantages and Disadvantages of Computer Network, Communication system, Classification of networks, Network models- OSI model, Layers in OSI model, TCP/IP protocol suite, Transmission mode, LAN Architecture, LAN topologies-Bus, Tree, Ring, Star, Mesh, Wireless LAN, Transmission Media- Twisted pair cable, Coaxial cable, Optical Fiber, Wireless transmission media.	L1 and L2	6

Prof. (Dr.) Anil Kumar
 Deputy Dean Academics
 Amity University Haryana
 Manesar, Gurugram
 Haryana-122413

Registrar
 Amity University Haryana
 Manesar Gurgaon-122413

MODULE 2: Data Transmission: Analog and Digital Signals, Periodic and Aperiodic Signals, Transmission impairments, Data rate limits-noiseless channel and noisy channel, Performance characteristics. Data Encoding: Digital data-digital signals, Digital data-Analog signals, Analog data- Digital signals, Analog data- Analog signals. Multiplexing: Frequency Division Multiplexing, Wavelength Division Multiplexing, Synchronous Time Division Multiplexing, Statistical Time Division Multiplexing. Spread Spectrum: Frequency Hopping Spread Spectrum (FHSS), Direct Sequence Spread Spectrum (DSSS).	L1, L2	8
MODULE 3: Data Link Layer Switching- Circuit switching Vs Packet Switching, Virtual Circuits- Permanent Virtual Circuit Vs Switched Virtual Circuit, Frame Relay, ATM, Error Detection and Correction, Flow Control- Stop and Wait, Sliding Window, Error Detection, Error Control, HDLC, PPP	L1, L2	8
MODULE 4: Network Layer Routers, Routing Algorithms-Unicast routing algorithms-Distance vector routing, Link state routing, Path vector routing, multicast routing algorithms, Logical addressing- IPv4, IPv6, transition from IPv4 to IPv6, Address mapping, ICMP, IGMP.	L1, L2	8
Module V: Transport layer Transport Services, TCP, UDP, SCTP, Congestion control, Quality of Service (QoS).	L1, L2	6

IFT4105	DATA COMMUNICATION AND COMPUTER NETWORKS LAB	L	T	P	C
Version: 2020.1	Date of Approval : 19, July 2020	0	0	2	1
Pre-requisites/Exposure	Basics of CISCO router				
Co-requisites	NIL				

Catalog Description

The course familiarizes with the equipment applications and protocols installed in enterprise networks, with a focus on switched networks, IP Telephony requirements, and security. It also introduces advanced routing protocols such as Enhanced Interior Gateway Routing Protocol (EIGRP) and Open Shortest Path First (OSPF) Protocol. Hands-on exercises include configuration, installation, and troubleshooting.

Course Objectives

The objective of this course is to

1. Make the students understand configuration of routing protocols.
2. Provide a demonstration of troubleshooting of different protocols.

Course Outcomes

On completion of this course, the students will be able to

CO1. Apply the knowledge of CISCO router to understand its basic configuration, Enterprise network and implement inter-VLAN routing.

CO2. Demonstrate the configuration of OSPF and RIP protocol.

CO3. Demonstrate the configuration of EIGRP and BGP protocol.

CO4. Apply the knowledge of basic WAN connections using HDLC and PPP protocol.

CO5. Demonstrate the standard and extended ACL on router.

Modules	Blooms level*	Number of hours
1. Drawing an Enterprise Network for Amity University showing its different campuses across the country. 2. Configuring all the devices (PCs, Servers, Switches) to create a LAN within campuses of the Enterprise Network. 3. Configuring Virtual LANs (VLANs) in an Enterprise Network. 4. Configuring Trunking and Inter-VLAN Routing in an Enterprise Network.	L3, L5	4
5. Implementing RIP (Routing Information Protocol) to enable communication between different LANs. 6. Implementing OSPF (Open Shortest Path First) to enable communication between different LANs.	L3, L5	2
7. Implement EIGRP (Interior Routing Protocol) to establish connectivity within domestic campuses of the Enterprise Network. 8. Implement BGP (Border Gateway Protocol) and Redistribution to establish connectivity between different campuses of the Enterprise Network.	L3, L5	2

IFT4103	SOFTWARE ENGINEERING	L	T	P	C
Version: 2020.1	Date of Approval: 19, July 2020	3	-	-	3
Pre-requisites/Exposure	Basic Knowledge of software development				
Co-requisites	Nil				

Catalog Description

In this course the concepts of Software development are discussed in detail. Various models of SDLC are introduced along with its application. Students will be able to apply these concepts in real time software project development.

Course Objectives

The objective of this course is to

- Gain the knowledge of how Analysis, Design, Implementation, Testing and Maintenance processes are conducted in a software project.
- Apply their foundations in software engineering to adapt to readily changing environments using the appropriate theory, principles and processes

Course Outcomes

On completion of this course, the students will be able to

CO1: Apply current theories, models, and techniques that provide a basis for the software Lifecycle.

CO2: Enable the students to apply a systematic application of scientific knowledge in creating and building cost effective software solutions to business and other types of problems.

CO3: Be able to elicit, analyze and specify software requirements through a productive Working relationship with various stakeholders of a software development

CO4: Be able to evaluate the impact of potential solutions to software engineering problems in a global society, using the knowledge of contemporary issues and emerging software engineering trends, models, tools, and techniques.

CO5: Work as an individual and as part of a multidisciplinary team to design, develop and deliver quality software

Modules	Blooms level*	Number of hours
MODULE 1: Introduction Software life cycle models: Waterfall, Prototype, Evolutionary and Spiral models, Overview of Quality Standards like ISO 9001, SEI-CMM	L1, L2 and L4	5
MODULE 2: Software Metrics and Project Planning Size Metrics like LOC, Token Count, Function Count, Design Metrics, Data Structure Metrics, Information Flow Metrics. Cost estimation, static, Single and multivariate models, COCOMO model, Putnam Resource Allocation Model, Risk management	L2, L3 and L6	7
MODULE 3: Software Requirement Analysis, design and coding Problem Analysis, Software Requirement and Specifications, Behavioural and non-behavioural requirements, Software Prototyping Cohesion & Coupling, Classification of Cohesiveness &	L2, L3 and L5	8

IFT4104	COMPUTER GRAPHICS & MULTIMEDIA SYSTEMS	L	T	P	C
Version: 2020.1	Date of Approval: 19, July 2020	3	-	-	3
Pre-requisites/Exposure	Basic Knowledge of C Programming				
Co-requisites	NIL				

Catalog Description

This course presents basic principles for the design, use and understanding of computer graphics systems. This course includes various algorithms and their complexity to draw graphics objects. This course also teaches the students about different algorithms for 2D /3D transformation, clipping operations on objects, hidden surface removal and detection. This course is intended to describe technical characteristics and performance of multimedia system and terminals.

Course Objectives

The objective of this course is to

- Equip the students with mathematical concepts of graphics algorithm and their implementation to draw objects using C language.
- Provide an overview of various color filling algorithms, 2D & 3D transformation, clipping operations, algorithms related to hidden surface detection and elimination and their implementation.
- Provide an overview of different multimedia technologies like audio and video including multimedia devices. The course also includes some practical sessions on these technologies.

Course Outcomes

On completion of this course, the students will be able to

CO1: Define various standards and components in development of computer graphics.

CO2: Explain generation of graphics primitives and analyse their problems and solutions.

CO3: Demonstrate solid filling using polygon fill algorithm with interior region testing methods.

CO4: Apply 2D geometric transformations on 2D graphics objects with their practical implementation.

CO5: Illustrate use of coordinate mapping and their transformation and analyse use of line and polygon clipping algorithms.

CO6: Apply 3D geometric transformations on 3D objects with their practical implementation and assess logic behind visible surface detection algorithms with practical implementation of 3D transformations.

CO7: Describe basic principles of multimedia systems, animation and graphics library functions used in animation design.

Modules/Topics Covered**	Blooms level*	Number of hours
Module I: Overview of Graphics System Application of computer graphics, Video Display Devices, Raster Scan Display, Random Scan Display, Input Devices, Graphic Software and graphics standards, Numerical based on Raster and Random scan display, Frame buffer, Display processor, picture construction technique in interactive computer graphics.	L1, L2 and L3	5
Module II: Output Primitives Scan-conversion, Points and Lines, Line-Drawing Algorithm, Circle Generation Algorithms, Ellipse Generation Algorithm, Area fill algorithms for various graphics primitives: Scan line fill algorithm, boundary fill algorithm, flood fill	L1, L2 and L3	5

Prof. (Dr.) Anil Kumar

Manesar Gurgaon-122413

algorithm, Polygon representation, various method of Polygon Inside test: Even-Odd method, winding number method, Various techniques for character generation.		
Module III: Two Dimensional Geometric Transformations Basic Transformations, Composite Transformation, Translation, Rotation, Scaling, General Pivot-Point Rotation, General Fixed Point Scaling, General Scaling Directions, Reflection, Shear, Raster Methods for Transformations.	L2, L3 and L4	5
Module IV: Two-Dimensional Viewing Window to view Port Co-ordinate Transformation, Anti aliasing and filtering techniques, Clipping Operations, Cohen Sutherland Line Clipping algorithm, Sutherland Hodgeman Polygon Clipping algorithm, fractal geometry methods, fractal dimensions, Geometric construction of deterministic self-similar fractals, Iterated function system to generate fractals.	L2, L3 and L4	6
Module V: Three Dimensional Geometric and Modeling Transformations 3D viewing: 3 dimensional viewing parameters, Homogeneous coordinate representation, Advantages and disadvantages of homogeneous coordinate system, Translation, Rotation, Scaling, Other 3DTransformations, Composite Transformation, and Projections: Parallel projections, perspective projections, and oblique projection.	L2, L3 and L4	6
Module VI: Visible- Surface Detection Methods Bezier curves and Bezier surfaces, B-spline curves and surfaces, Overview of Visible Surface Detection Algorithm, Concept of light source, specular and diffuse reflection, Illumination through light source, Shadow and its types, Depth-Buffer Method, A Buffer Method, Scan-Line Method, Binary search partition method, painter's algorithm or depth sorting method.	L2, L3 and L4	6
Module VII: Introduction to multimedia Elementary image processing techniques, Introduction to Animation, software used in animation, Design of animation sequence, graphics library functions used in animation design.	L1, L2 and L3	3

IFT4201	MOBILE COMPUTING	L	T	P	C
Version: 2020.1	Date of Approval: 19, July 2020	3	0	0	3
Pre-requisites/Exposure	Basic knowledge of Computer Networks				
Co-requisites	Nil				

Catalog Description

The objective of this consortium is to shape and expand a full-scale and sound mobile computing system market. To achieve this, cooperation is required of interests related to communication (network), computer hardware/software, system integrators (including service providers), and the media.

Course Objectives

The objective of this course is to

- Give a general overview of the cellular technology and the associated terms and discuss the generations of the mobile technologies starting from 1G to 3G techniques.
- Illustrate the GPRS and WAP model for 2G internet connectivity in detail.
- Elaborate the third-generation mobile services
- Describe the Global Mobile Satellite Systems in detail and basic architecture of Bluetooth technology and advanced topics in mobile computing.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain the basic concepts mobile technology, computing and basic architecture of PCS and GSM.

CO2: Describe the mobile networking Infrastructure through 2G technologies (GSM, GPRS, WAP).

CO3: Explain the basic concepts of 3G technologies (WCDMA, CDMA 2000) and WLL.

CO4: Discuss the working of mobile satellite systems like IRIDIUM and GLOBALSTAR.

CO5: Explain the concepts of Bluetooth technology, its working and protocols, virtual networks and enterprise networks.

Modules	Blooms level*	Number of hours
Module I: Introduction to Personal Communications Services (PCS) PCS Architecture, Mobility management, Networks signaling. Global System for Mobile Communication (GSM) system overview: GSM Architecture, Mobility management, Network signaling.	L1, L2 and L3	8
Module II: General Packet Radio Services (GPRS) & Wireless Application Protocol (WAP) GPRS Architecture, GPRS Network Nodes. Mobile Data Communication: WLANs (Wireless LANs) IEEE 802.11 standard, Mobile IP. Wireless Application Protocol (WAP): The Mobile Internet standard, WAP Gateway and Protocols, wireless mark up Languages (WML).	L1 and L2	10
Module III: Third Generation (3G) Mobile Services Introduction to International Mobile Telecommunications 2000 (IMT 2000) vision, Wideband Code Division Multiple Access (W-CDMA), and CDMA 2000, Quality of services in 3G. Wireless Local Loop(WLL): Introduction to WLL Architecture, wireless Local	L1 and L2	7

IFT4202	PROGRAMMING WITH JAVA	L	T	P	C
Version: 2020.1	Date of Approval: 19, July 2020	3	0	-	3
Pre-requisites/Exposure	Hands on Knowledge of C Programming				
Co-requisites	Basic concepts of C Programming				

Catalog Description

The objective is to impart programming skills used in this object oriented language java. The course explores all the basic concepts of core java programming like object, classes, data types, features, operators, control structures, interfaces, packages, applets, awt, swings and socket programming. The students are expected to learn it enough so that they can develop the basic applications as well as web solutions like creating applets etc.

Course Objectives

The objective of this course is to

1. Equip the students with the basic feature of contemporary java required in solving complex problems.
2. Provide a practical knowhow and implementation of java programming concepts like classes, objects, packages, swings.

Course Outcomes

On completion of this course, the students will be able to

CO1: Define and explain concept of byte code and platform independence, demonstrate basic java based application development using operators, if-else, loops and arrays. Distinguish between various types of inheritances, polymorphisms and other concepts and able to solve complex programming problems involving class objects, inheritances, and packages.

CO2: Explain event delegation model and describe AWT class hierarchy; Apply knowledge of event handling and AWT controls create some new dynamic graphical applications.

CO3: Describe hierarchy of exception classes and thread life cycle along with demonstrate and design solutions for some simple and complex applications using exception and multithreading concepts.

CO4: Explain the JDBC architecture, ODBC and JDBC Drivers, Connecting to Database with the java.sql Package, Using JDBC Terminology.

CO5: Explain the steps of user defined packages; Explain the concept of swings, swing package. Demonstrate applications based on java applets and swings. Describe Servlets, Servlet Life Cycle, Servlet based Applications, jdbc with servlets.

Modules/Topics Covered**	Blooms level*	Number of hours
Module I: Overview of Java Introduction to Java, Java features, An Overview of Java, Data Types, Variables, Arrays, Operators, and Control Statements, Introducing Classes, A Closer look at Methods and Classes, Inheritance, Packages and Interfaces, Exception Handling, Multithreaded Programming, I/O, and Applets, Creating threads, implementing threads, threads priorities, suspending, stopping & resuming threads, String Handling.	L1, L2 and L3	7

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Module II: Java AWT and Swings Introducing the AWT: AWT Controls, Working with Windows, Layout Managers, and working with Swing, Event Handling Mechanism, Events, classes, sources of events, Networking, and Event Handling.	L1, L2 and L3	7
Module III: Collections and Generics What are Generics? A Generic Class with Two Type Parameters, The General Form of a Generic Class, Bounded Types, Creating a Generic Method, Generic Constructors, Generic Interfaces, Generic Class Hierarchies, Collections Overview, The Collection Interfaces, The Collection Classes, Accessing a Collection via an Iterator, The Random access Interface.	L2, L3 and L4	8
Module IV: JDBC Overview of JDBC architecture, ODBC and JDBC Drivers, Connecting to Database with the java.sql Package, Using JDBC Terminology.	L2, L3 and L4	7
Module V: JSP and servlets Introduction to Servlets, Servlet Life Cycle, Servlet based Applications, jdbc with servlets, session Management techniques in detail, JSP: Introduction to JSP, JSP implicit objects, JSP based Applications, Java. Net. Login & Logout Example, jdbc with jsp.	L2, L3 and L4	7

**Bloom's Level:*

IFT4205	PROGRAMMING WITH JAVA LAB	L	T	P	C
2017.1	—	0	-	4	2
Pre-requisites/Exposure	Hands on knowledge of C and C++ Programming				
Co-requisites	Basic concepts of OOP Programming				

Catalog Description

The objective is to impart programming skills used in this object oriented language java. The course explores all the basic concepts of core java programming like object, classes, data types, features, operators, control structures, interfaces, packages, applets, awt, swings and socket programming. The students are expected to learn it enough so that they can develop the basic applications as well as web solutions like creating applets etc.

Course Objectives

The objective of this course is to

- Equip the students with the basic feature of contemporary java required in solving complex problems.
- Provide a practical knowledge of implementation/demonstration of java programming concepts like classes, objects, packages, swings.

Course Outcomes

On completion of this course, the students will be able to

- CO1: Demonstrate the basic java based application development using operators, if-else, loops and arrays.
- CO2: Demonstrate the concept of inheritances, polymorphisms and other concepts and able to solve complex programming problems involving class objects.
- CO3: Apply knowledge of event handling and AWT controls create some new dynamic graphical applications.
- CO4: Demonstrate and design solutions for some simple and complex applications using exception and multithreading concepts, Database connectivity.
- CO 5: Apply the knowledge of swing, io packages to implement various application programs. Demonstrate applications based on java applets and swings.

Modules	Blooms level*	Number of hours
1. Sample programs of basic java a) Write a program & execute to display “hello java” in java. b) Write a program & execute to demonstrate command line arguments in java. c) Write a program & execute to find maximum of command line arguments in java. d) Write a program & execute to find sum of two numbers in java, take input from user.	L1, L2 and L3	4

Prof. (Dr.) Anil Kumar
Deputy Dean Academics

Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

2. Sample programs of Inheritance, String classes, abstract function and interface a) Write a program & execute in java to perform area and volume calculations in java using concept of inheritance. b) Write a program & execute in java to demonstrate abstract class in java c) Write a program & execute in java to perform complex number arithmetic using class and object. d) Write a program & execute to make use of interface in java Write a program & execute in java to sort an array of strings using string class functions.	L2, L3 and L4	4
3. Sample programs of AWT and event handling a) Write your first applet in java b) Write a program & execute to find maximum of two numbers in java using applet. c) Write a program & execute to draw basic shapes in java using graphics d) Write a program & execute to handle various mouse events	L2, L3, L4 and L5	4
4. Sample programs of exception handling, multithreading and JDBC Connectivity a) Write a program & execute to demonstrate threads in java b) Write a program & execute to demonstrate synchronization in threads in java. c) Write a program & execute to create your own exception and use it in java d) WAP to connecting a database using user-id and password. c) WAP to insert data into the database using the prepared statement	L2, L3 and L4	6
5. Sample programs on java packages and Servlets a) Create your own package to create two simple functions in different/same classes and access them in and outside the package. b) Write a program to create servlets based applications. c) WAP for authentication, which validate the login-id and password by the servlet code d) WAP to include a HTML page into a JSP page, WAP to handle the JSPEException	L2, L3 and L4	6

IFT4203	SOFTWARE PROJECT MANAGEMENT	L	T	P	C
Version: 2020.1	Date of Approval: 19, July 2020	3	0	0	3
Pre-requisites/Exposure	Software Engineering Concepts				
Co-requisites	Nil				

Catalog Description

This course introduces the concepts to understand the fundamental principles of Software Project management & provides a good knowledge of responsibilities of project manager and how to handle these. It also discusses the different methods and techniques/tools used for project management.

Course Objectives

The objective of this course is to

- To understand the working and functioning of the process of the software development so that the project can be managed accordingly.
- To understand the engineering activities in the project life cycle
- To implement the management tools and quality standards

Course Outcomes

On completion of this course, the students will be able to

CO1: Describe fundamental principles of Software project management

CO2: Identify the key activities in managing a software project

CO3: evaluate and relate different software processes, system models

CO4: Plan software projects, including risk and quality management

CO5: Utilize technology tools for communication, collaboration, information management, and decision support.

CO6: Apply software quality practices in software project.

Modules	Blooms level*	Number of hours
MODULE 1: INTRODUCTION TO SOFTWARE PROJECT MANAGEMENT Definition of a Software Project (SP), SP Vs. other types of projects activities covered by SPM, categorizing SPs, project as a system, management control, requirement specification, information and control in organization.	L1, L2	6
MODULE 2: STEPWISE PROJECT PLANNING Introduction, selecting a project, identifying project scope and objectives, identifying project infrastructure, analyzing project characteristics, identifying project products and activities, estimate efforts each activity, identifying activity risk, allocate resources, review/ publicize plan.	L1, L2 and L3	8
MODULE 3: PROJECT EVALUATION & ESTIMATION	L3, L4, and	9

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana

Cost benefit analysis, cash flow forecasting, cost benefit evaluation techniques, risk evaluation. Selection of an appropriate project report; Choosing technologies, choice of process model, structured methods, rapid application development, water fall-, V-process-, spiral- models, Prototyping, delivery. Albrecht function point analysis.	L6	
MODULE 4: ACTIVITY PLANNING & RISK MANAGEMENT Objectives of activity planning, project schedule, projects and activities, sequencing and scheduling activities, network planning model, representation of lagged activities, adding the time dimension, backward and forward pass, identifying critical path, activity throat, shortening project , precedence networks. Risk Management: Introduction, the nature of risk, managing risk, risk identification, risk analysis, reducing the risks, evaluating risks to the schedule, calculating the z values.	L2, L3 and L5	10
MODULE 5: RESOURCE ALLOCATION & MONITORING THE CONTROL Introduction, the nature of resources, identifying resource requirements, scheduling resources creating critical paths, counting the cost, being specific, publishing the resource schedule, cost schedules, the scheduling sequence. Monitoring the control: Introduction, creating the frame work, collecting the data, visualizing progress, cost monitoring, earned value, prioritizing monitoring, getting the project back to target, and change control.	L2, L3 and L5	10
MODULE 6: SOFTWARE QUALITY Introduction, the place of software quality in project planning, the importance of software quality, defining software quality, ISO 9126, Practical software quality measures, product versus process quality management, external standards, techniques to help enhance software quality.	L2,L3 and L6	5

IFT4206	SOFTWARE PROJECT MANAGEMENT LAB	L	T	P	C
Version: 2020.1	Date of Approval: 19, July 2020	0	0	2	1
Pre-requisites/Exposure	Software Engineering Concepts				
Co-requisites	NIL				

Catalog Description

Study practical approaches for managing, planning, organizing and implementing Information Systems projects using modern management techniques. Complete hands-on projects requiring management of project resources, scope, time-line, cost, scheduling, human and other resources. Use Microsoft Project and other project monitoring tools. In this Lab course MS Project tool is used

Course Objectives

The objective of this course is to

- Demonstrate students to Manage the phases and infrastructure of IT projects
- Use project management software to control the design, implementation, closure, and evaluation of IT projects
- Estimate, plan, calculate, and adjust project variables

Course Outcomes

On completion of this course, the students will be able to

CO1: Create plans at the level of detail that is appropriate for software project

CO2: Create and manage tasks, costs, work, and resources in a software project

CO3: Track and monitor project performance throughout its life-cycle

CO4: Explain quality management and process improvement in the context of software development projects.

Modules/Topics Covered**	Blooms level*	Number of hours
1. Introduction of tool including creating project (a) Set file properties and calendar settings (b) Create Gantt Chart for SDLC process. (c) Create Pert chart for SDLC process	L3, L4	8
2. Key activities of software Project Management (a) Create a Gantt chart of wedding planning event management which includes minimum of 12 activities.. (b) In the same Gantt chart split the tasks,copy ,move and paste tasks.	L3, L4	4
3. Checkpoints , milestones and Critical path concepts (a) Create Gantt Chart of all testing activities which includes checkpoints and milestones (b) In the same project review critical path.	L3, L4,L5	4
4. Work Breakdown Structure (a) Create Gantt chart of Agile approaches, also create work breakdown structure of same	L3, L5,L6	8

Prof. (Dr.) Anil Kumar
Deputy Dean Academics

IFT4204	ARTIFICIAL INTELLIGENCE	L	T	P	C
Version: 2020.1	Date of Approval: 19, July 2020	3	0	0	3
Pre-requisites/Exposure	Basic Knowledge of Searching Techniques				
Co-requisites	Nil				

Catalog Description

In this course the concepts of basic principles, techniques, and applications of Artificial Intelligence are discussed in detail. As a precursor to the study of the course it provide an in depth understanding of basic areas of artificial intelligence, search techniques, knowledge representation, learning and their applications in design and implementation of intelligent agents for a variety of task. The concepts further enhances the understanding of key components of intelligent agents of moderate complexity in Prolog and evaluate their performance.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of Artificial Intelligence, its application, importance and characteristics.
2. It Provide an overview of different concepts such as searching, knowledge, Learning, Robotics, Expert System and Prolog

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain the concept of Artificial Intelligence, its application, importance of Artificial Intelligence.

CO2: Analyze the different searching technique and understanding their applications.

CO 3: Explain the concept of knowledge representation, the different techniques, handling uncertainty in knowledge and making different types of decisions.

CO4: Explain the concept of Expert System and its application areas.

CO5: Explain the concept of NLP and the functionality of Robots

Modules	Blooms level*	Number of hours
MODULE 1: Problem solving and Scope of AI: Introduction to Artificial Intelligence. AI-Applications- Games, theorem proving, natural language processing (NLP), vision and speech processing, robotics, expert systems. Solving Problems by Searching, beyond classical search, adversarial Search, constraint satisfaction problems	L1 and L2	8
MODULE 2: Knowledge and Representation: Logical Agents, First-Order Logic, Inference in First-Order Logic, Classical Planning, Planning and Acting in the Real World, Knowledge Representation. Uncertain Knowledge and Reasoning- Quantifying Uncertainty, Probabilistic Reasoning , Probabilistic Reasoning over Time , Making Simple Decisions, Making Complex Decisions.	L2, L3 and L4	14

IFT4207	ARTIFICIAL INTELLIGENCE LAB	L	T	P	C
Version: 2020.1	Date of Approval: 19, July 2020	0	0	2	1
Pre-requisites/Exposure	Basics of C Concepts				
Co-requisites	NIL				

Catalog Description

In this Lab course Prolog programs are implemented and demonstrated. The Concepts that are covered would enable them to achieve the desired goal by creating facts and rules. Programs will be related to concepts of creating facts, facts with argument, backtracking, arithmetic operations in prolog, nesting condition, looping condition and List handling.

Course Objectives

The objective of this course is to

1. Make the students apply knowledge of Prolog to attain goal by creating and matching rules and facts developed in the knowledge base.
2. Provide a demonstration of Prolog programming concepts like facts with arguments, Backtracking

Course Outcomes

On completion of this course, the students will be able to

CO1: Apply the knowledge of Prolog programming to provide solution to the given AI problem.

CO2: Demonstrate the use of List handling in Prolog by performing various functions which are based on finding the element, replacing an element and appending the two lists.

CO3: Apply the knowledge of Facts and Rules in Prolog to reach a particular goal by implementing different concepts such as facts with arguments, backtracking, and looping conditions.

Modules/Topics Covered**	Blooms level*	Number of hours
5. Sample Programs using Basic of Prolog Programming (d) Write a program to understand the basic structure of Prolog programming. (e) Write a program to create simple facts using prolog. (f) Demonstrate an application of facts with arguments by showcasing the use of facts to reach a particular goal.	L1, L3, L5	4
6. Sample Programs using Rules based Programming in Prolog (c) Create an rule based programs in Prolog (d) Write a program to implement the concept of backtracking which matches each rules with a query	L3, L5	4
7. Sample Programs to implement the concept of input/output operation in Prolog (c) Create a Prolog program which accept a user input and display back the result. (d) Design an application to fetch data in the form of numeric data and display the given result (e) Demonstrate the process of arithmetic operations in Prolog Programming. (f) Demonstrate the working of menu driven calculator to perform different	L3, L5	6

IFT4238	SEMINAR	L	T	P	C
Version: 2020.1	Date of Approval: 19, July 2020	0	0	0	3
Pre-requisites/Exposure	Basics of Networks				
Co-requisites	Nil				

Catalog Description

The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal classroom situations. These attributes are intellectual ability, professional judgment and decision-making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility etc. In this course the concepts of different new ideas will be explored by the seminar presentation.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of new technologies.
2. Equip students with Report writing and Presentation skills.

Course Outcomes

On completion of this course, the students will be able to

CO1: Make a report on relevant topic by the study of literatures.

CO2: Demonstrate the topic of seminar by use of power presentation.

CO3: Demonstrate the challenges and applications of the topic of the seminar.

Text Books

As per topic of seminar.

Reference Books

As per topic of seminar.

Modes of Evaluation: Quiz/Assignment/ Seminar/Written Examination

Examination Scheme:

Components	V	PPT	R	IM
Weightage (%)	20	20	30	30

V – Viva, PPT-Power Point Presentation, R – Report, IM-Internal Marks

IFT4301	DATA WAREHOUSING AND DATA MINING	L	T	P	C
Version: 2020.1	Date of Approval: 19, July 2020	3	0	0	3
Pre-requisites/Exposure	Basic Knowledge on Database				
Co-requisites	Nil				

Catalog Description

In this course the concepts of Data warehouse and Data Mining are discussed in detail. The different data mining techniques such as clustering, classification, association are introduced. As a precursor to the study of data warehouse its architecture, types of OLAP Servers, and usage of OLAP are studied in detail. The concepts further enhances the concept of different attributes supported by data mining process, application of data mining in marketing, banking, retail sector and other areas are analyzed. .

Course Objectives

The objective of this course is to

- Equip the students with concepts of data mining techniques namely classification, clustering and association.
- Provide an overview of data warehouse which include the usage of OLAP, its characteristics, OLAP architecture.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain the concept of Datawarehouse, its characteristics, Metadata concepts and its importance, The schemas of Data warehouse with their application areas.

CO2: Explain the architectural components of data warehouse and the challenges the data warehousing is facing.

CO3: Explain the indexing of OLAP, the different OLAP operations performed on the data cube.

CO4: Explain the concept of different data mining techniques like association, clustering and classification and analyze these techniques on the different data sets.

CO5: Explain the concept of Web Mining and understanding the features of different types of database.

Modules	Blooms level*	Number of hours
MODULE 1: Data Warehousing: Data Warehouse definition & Characteristics, The need for data ware housing, Operational and Informational Data Stores, Difference between Data warehouse and DBMS, Benefits of Data warehousing, Data mart, Meta Data, Conceptual Modeling of Data Warehouses: star schemas, Snowflake, Fact Constellations with example each.	L1, L2 and L3	8
MODULE 2: On Line Analytical Processing (OLAP) Definition: OLAP, Difference between OLTP and OLAP, OLAP Server Architecture, OLAP Operations, Multi Relational & Multi Dimensional: MOLAP, ROLAP, OLAP Tools, Metadata Repository, Data Warehouse Back-End Tools and Utilities.	L2, L3 and L4	10

Prof. (Dr.) Anil Kumar
 Deputy Dean Academics
 Amity University Haryana
 Manesar, Gurugram
 Haryana-122413

Registrar
 Amity University Haryana
 Manesar Gurgaon-122413

MODULE 3: Data Mining Introduction to Data Mining, Applications, Limitations, Techniques, Association Rules: Priori Algorithm, Direct Hashing and Pruning (DHP), Classification: Decision Tree, Split Algorithm based on Information Theory, Bayes Method.	L2, L3 and L4	10
Module 4: Cluster Analysis: Concepts and Methods Cluster Analysis: Features, Types of Cluster Analysis Methods: Partitional, Hierarchical, Density Based, Grid based Methods, , Web Data Mining, Search Engine, Case Study, Limitations.		8
Module 5: Web Mining Introduction, Classifying Web pages, extracting knowledge from the web. Multidimensional Analysis and Descriptive Mining of Complex Data Objects, Spatial Databases, Multimedia Databases, Time Series and Sequence Data, Text Databases, World Wide Web, Applications and Trends in Data Mining		6

**Bloom's Level:*

IFT4305	DATA WAREHOUSING & DATA MINING LAB	L	T	P	C
Version: 2020.1	Date of Approval: 19, July 2020	0	0	2	1
Pre-requisites/Exposure	Basics of Statistics Concepts				
Co-requisites	NIL				

Catalog Description

In this Lab course Data Mining programs are implemented and demonstrated using a Weka Tool. The Concepts that are covered would enable them to analyze the working of different data mining techniques namely clustering, association, regression. Programs will be related to concepts of understanding the architecture of data warehouse ,creating a knowledge base in Weka and apply preprocessing on the dataset, developing programs to specify the different types of attributes supported by Weka tool, Performing the implementation of clustering, association techniques.

Course Objectives

The objective of this course is to

- Make the students apply knowledge of Data Mining by analyzing the different data mining techniques.
- Provide a demonstration of Preprocessing technique on the data set by removing noisy data

Course Outcomes

On completion of this course, the students will be able to

CO1: Apply the knowledge of Data Mining to gain analysis on different data sets and their related attributes.

CO2: Demonstrate the use of Data preprocessing technique by handling the data efficiently by removing noise and outliers from the given data sets.

CO3: To implement the different data mining concepts namely binning, histogram analysis, numeric transform and discretization.

CO4: Demonstrate the working of different data mining techniques namely clustering, association analysis, regression, classification techniques.

Modules/Topics Covered**	Blooms level*	Number of hours
1. To understand the basic feature of Data warehouse and Introduction to Weka Tool a) Understanding the concept of importance of data warehouse and its characteristics b) Applications of Data warehouse and 3-tier Architecture of Data warehouse c) Weka tool installation and basic introduction	L1,L2	4
2.Sample Programs to apply Pre-Processing technique on the data set a) Apply a pre-processing technique on the weather.arff dataset b) Create a student data set into arff format and then apply pre-processing on the data set.	L3, L4,L5	4
3. Sample Programs to implement the concept of Numeric transform and Discretization (a) Create a Weka program to apply a numeric transform on Iris dataset. (b) Design an application program to apply a feature selection method for game	L3, L4,L5	6

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

playing. arff dataset. (c) Write a program to implement the concept of Equal frequency and Equal width binning for the given dataset.		
4. Sample Programs to implement the concept of Training and Validating the dataset (a) Write a prolog program to demonstrate the concept of validation in Weka dataset. (b) Design an CSV dataset using Weka.	L3,L4, L5	6
5. Sample Programs to analyze the different data mining techniques a) Write a program to implement the concept of clustering in Weka. b) Write a program to apply Apriori technique on the dataset and to generate association rules. c) Write a program to apply classification technique on the given dataset.	L3, L4,L5	4

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

**** Sample Programs provided are not limited to these only, can include others as desired.**

IFT4302	PROGRAMMING WITH DOT NET FRAMEWORK	L	T	P	C
Version: 2020.1	Date of Approval: 19, July 2020	4	0	0	4
Pre-requisites/Exposure	Basic Programming, HTML and CSS				
Co-requisites	Nil				

Catalog Description

.NET framework is most commonly used framework for developing various applications and it supports many languages. C#.NET is one of the most commonly used languages in the software industries. Students in this course will study to develop; Console and GUI based applications using C#.NET. The course also provides knowledge regarding Creating Dynamic Web Pages with the help of ASP.NET framework. Various topics included in this course impart the knowledge of ASP.NET framework concepts at implementation level. The major topic covered includes theme, state management, web controls, AJAX, database connectivity using ADO.NET, web services and deploying web applications.

Course Objectives

The objective of this course is to

- Equip the students with .NET framework and its programming constructs.
- Provide knowledge to develop to console based and GUI based applications using C#.NET language.
- Equip the students with concepts of ASP.NET web applications including State management, Web Controls and ADO.NET.
- Provide knowledge to develop, configure and deploy secure ASP.NET web applications using C#.NET programming language.

Course Outcomes

On completion of this course, the students will be able to

CO1: Understand the components of .NET framework.

CO2: Use object-oriented concepts to write programs using C#.NET programming language.

CO3: Develop GUI based applications.

CO4: Use various standard and advance web controls for developing ASP.NET dynamic web pages and also create custom controls.

CO5: Establish database connectivity and perform various operations on database through ASP.NET web pages.

Modules	Blooms level*	Number of hours
MODULE I: NET FRAMEWORK: Overview of .NET and .NET Framework, .NET Compliant Languages, Common Language Specification (CLS), Common Type System (CTS), Framework Class Library (FCL), Base Class Library (BCL), Common Language Runtime (CLR) Visual Studio IDE, Microsoft Intermediate Language (MSIL), Understanding CLR and Execution of .NET Application, Components of CLR. C#.NET BASICS C# Programming Language Features, Hello World Program, General Structure	L1, L2	4

of a C# Program, Conceptual Overview of C#.Net, Data Types, Modifiers (Access Modifiers), Casting and Type Conversion, Boxing and Unboxing Modifiers, Selection Statements, Looping Statement, Array- Single Dimensional and Multi-Dimensional, Declaring Arrays, Initializing Arrays, Accessing Array Members, Arrays are Objects, Using for each with Arrays, Jagged Arrays		
MODULE II: OOP: Class, Interfaces: Defining and Implementing Single & Multiple Interfaces, Abstract Class, Delegates, Exception Handling, Reflection, Assembly, Types of Assemblies, Components of Assemblies. COLLECTIONS: Non-Generic Collection: Array List, Stack, Queue, Hash Table. Generic Collection: List, Dictionary, Queue, Stack.	L2 and L3	14
Module III: WINDOWS FORMS Create and populate Windows Forms, controls in a Windows Forms application, Menus in a Windows Forms application, Multiple Document Interface (MDI) applications, User input validation in a Windows Forms application ASP.NET FRAMEWORK & WEB FORMS Introduction to Microsoft ASP.NET, ASP.NET execution model, Themes, Creating an ASP.NET Web application user interface, Implementing event handlers by using code-behind files, Client-side and Server-side controls, events, Using Controls, Validating Data, Navigating Between Forms, Custom and User Controls, Implementing Master Pages	L2 and L3	7
MODULE IV: AJAX: Introduction to AJAX, AJAX Toolkit, Partial page update using AJAX, Extending an ASP.NET Web Forms Application by Using the Ajax Control Toolkit. STATE MANAGEMENT: The Various Means to Manage State, Request object, Application object, Cache object, Session object, Server-side state management, using session for server-side and client-side state management. XML WEB SERVICES: Need of XML Web services, Understanding the Web Service Model, Creating an ASP.NET Web Service, Creating & Consuming Web Services with Visual Studio .NET.	L2 and L3	2
MODULE V: ADO.NET Architecture of ADO.NET: Connected, Disconnected, Sql Connection class, SqlCommand class, Data Reader class, Sql Data Adapter class, Data Set class, Data grid view with DML Operations like sorting, paging etc.	L2, L3 and L4	5

**Bloom's Level:*

 Manesar, Gurugram
 Haryana-122413

Registrar
 Amity University Haryana
 Manesar Gurgaon-122413

d) Program to Search an element from an Array. e) Program to find the frequency of alphabet in a string.		
Module-II: Class & Properties, Overloading Sample Programs a) Define a class student with MarksofCS, MarksofJava, MarksofDBMS, name as its data member. Enter the marks, find average and percentage for that. Use appropriate properties. b) Define a class 'Number' and define overloaded method add () with one, two and three arguments to implement method overloading. c) Define a class with two datamembers: num1 as constant and num2 as readonly. Display the values of both on the console and state the difference between them. Constructor, Garbage Collector, Static Members Sample Programs a) Create a class distance have km and m as its data members and create various constructors to initialize the data members. b) Program to demonstrate static data members. Operator Overloading , Delegates Sample Programs a) Create a class ComplexNumber with two data members real and imaginary. Overload +,-,>,<,>=,<= and == operators for it. b) Program to implement delegate. Inheritance, Interface, Abstract class Dynamic Polymorphism Sample Programs a) Create a class Student and inherit two classes UgStudent and Pgstudent from it to illustrate the concept of inheritance. Use appropriate data members, constructors, methods and properties. b) Write a program to implement the concept of dynamic binding using appropriate classes. Exception Handling, Custom Exceptions Sample Programs a) Write a program to find out square root of number. Handel all exceptions that may occur in this program. b) Create a 'NegativeValueException' that should be raised when a function received negative value in parameter. Generic Class, Collections (Non Generic & Generic) Sample Programs a) Create a generic class with an array of n elements. Write the method to find out greatest and average of elements of array. b) Write a program to store the City name and its temperature. Access the temperature using city name. Use appropriate collection. Assembly, Reflection Sample Programs a) Program to create and use private and shared assembly. b) Program to display methods of a class at runtime.	L2, L3 and L4	6
Module-III: Developing GUI Applications & Controls Sample Programs a) Design a calculator and implement its operations. b) Program to move the contents of a list box to another list box. Also write code to add and delete elements from any list box. c) To display message box for confirmation while closing a form. ASP.NET Forms Sample Programs a) Design a Login Page, which displays a Welcome Page on successful Login and an error message in case of invalid Id/Password. b) Design a form and apply themes (design time and dynamically). c) Design any web form and apply various validation controls. d) Create a web form which can work in Hindi and English language both.	L2, L3 and L4	6

e) Design a web form to upload an image to server. f) Design a custom control, Numeric Textbox, which should accept only integer value for a particular range. The range should be customizable.		
Module-IV: a) Implement state management for Login page which move to welcome page when credentials are correct. The welcome page displays a welcome message along with the user Id. b) Implement various state management methods using a suitable web form. c) Create a web service and demonstrate its use in any web application. d) Design a Web form and implement partial refreshing using AJAX.	L2, L3 and L4	4
Module-V: a) Create a database table and design appropriate form for it. Implement basic operations like insert, delete and update using ADO.NET. b) Implement various methods of execution of SQL command. c) Display data in a Grid and perform basic database operations. d) Develop any web application to illustrate SQL Injection attack and redesign it to prevent the attack. e) Develop a web application to illustrate XSS attack and redesign it to prevent the attack	L2, L3 and L4	4

IFT4303	NETWORK SECURITY & CRYPTOGRAPHY	L	T	P	C
Version: 2020.1	Date of Approval: 19, July 2020	3	1	0	4
Pre-requisites/Exposure	Basic Mathematics				
Co-requisites	Nil				

Catalog Description

In this course the concepts of cryptography and network security are discussed in detail. Substitution and transposition techniques, symmetric and asymmetric cryptographic algorithms, their applications, differences will be introduced. As a precursor to the study of cryptography studies will be made on impact of various network and web security protocols. The concepts learnt in the studies of cryptography & network security will be applied in the studies and analysis of authentication, integrity and security related protocols.

Course Objectives

The objective of this course is to

- Equip the students with concepts of cryptography & network security through problem solving and analytical approach.
- Provide an overview of various network attacks and related security mechanism, various algorithms for modular arithmetic, symmetric and asymmetric cryptography and web and network security

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain, describe and distinguish various security attacks; Describe and solve block and stream ciphers and its applications in cryptography; Solve problems based on substitution and transposition ciphers.

CO2: Explain the basic mathematics of cryptography; Solve problems of groups, modular arithmetic, gcd and inverse algorithm, chinese remainder theorem and its application in cryptography; Applying algorithms for solving problems in cryptography

CO3: Describing the concept of public key cryptosystems and its related algorithm; Explain and solve problems related to hash functions, digital signature and its applications in cryptography; Compare symmetric and asymmetric key cryptography.

CO4: Explain management, distribution, secure exchange of keys and authentication certificate and its applications in real life. Explain, compare various authentication protocols used in cryptography and network security, also solve problems based on these protocols.

CO5: Explain various security protocols: IPSec, SSL, TLS, SET; Describing malicious softwares and illustrating various design approaches to Firewall

Modules	Blooms level*	Number of hours
MODULE 1: Introduction to security attacks, services and mechanism, Classical encryption techniques: substitution ciphers and transposition ciphers, cryptanalysis, steganography, Stream and block ciphers. Modern Block Ciphers: Block ciphers principles, Shannon's theory of confusion and diffusion, feistel structure, Data encryption standard (DES), Strength of DES, Idea of differential cryptanalysis,	L1, L2 and L3	9

block cipher modes of operations, Triple DES		
MODULE 2: Introduction to group, field, finite field of the form $GF(p)$, modular arithmetic, prime and relative prime numbers, Extended Euclidean Algorithm, Advanced Encryption Standard (AES) encryption and decryption, Fermat's and Euler's theorem, Primality testing, Chinese Remainder theorem, Discrete Logarithmic Problem, Principles of public key crypto systems, RSA algorithm, security of RSA, ECC	L1, L2, L3	9
MODULE 3: Message Authentication Codes: Authentication requirements, authentication functions, message authentication code, hash functions, birthday attacks, security of hash functions, Secure hash algorithm (SHA) Digital Signatures: Digital Signatures, Elgamal Digital Signature Techniques, Digital signature standards (DSS).	L1, L2, L3 and L5	9
MODULE 4: Key Management and distribution: Symmetric key distribution, Diffie-Hellman Key Exchange, Public key distribution, X.509 Certificates, Public key Infrastructure. Authentication Applications: Kerberos, Needham Schroeder protocol	L1, L2 and L3	9
MODULE 5: IP Security: Architecture, Authentication header, Encapsulating security payloads, SSL, HTTPS, SET, 3-D Secure, Viruses, Worms, Malware, Botnets, Firewall and its types.	L1, L2	12

IFT4304	SOFT COMPUTING	L	T	P	C
Version: 2020.1	Date of Approval: 19, July 2020	3	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

To develop semantic-based and context-aware systems to acquire, organize process, share and use the knowledge embedded in multimedia content. Research will aim to maximize automation of the complete knowledge lifecycle and achieve semantic interoperability between Web resources and services. The field of Robotics is a multi disciplinary as robots are amazingly complex system comprising mechanical, electrical, electronic H/W and S/W and issues germane to all these

Course Objectives

The objective of this course is to

1. To provide an overview of problem solving skills methods using Soft Computing.
2. To serve as a foundation for the study of programming languages that is used to develop an Intelligence System

Course Outcomes

On completion of this course, the students will be able to

CO1. Understand the concept of artificial intelligence.

CO2. Differentiate between linear and non-linear problems and Learn various problem solving techniques using neural networks

CO3. Understand the concept of fuzzy logic and apply to various problems

CO4. Illustrate concepts of genetic algorithm

Modules	Blooms level*	Number of hours
Module I: Soft Computing Introduction of soft computing, soft computing vs. hard computing, various types of soft computing techniques, applications of soft computing. Artificial Intelligence : Introduction, Various types of production systems, characteristics of production systems, breadth first search, depth first search techniques, other Search Techniques like hill Climbing, Best first Search, A* algorithm, AO* Algorithms and various types of control strategies. Knowledge representation issues, Propositional and predicate logic, monotonic and non monotonic reasoning, forward Reasoning, backward reasoning, Weak & Strong Slot & filler structures, NLP.	L1, L2	12
Module II: Neural Network Structure and Function of a single neuron: Biological neuron, artificial neuron, definition of ANN, Taxonomy of neural net, Difference between ANN and human brain, characteristics and applications of ANN, single layer network, Perceptron training algorithm, Linear separability, Widrow & Hebb's learning rule/Delta rule, ADALINE, MADALINE, AI v/s ANN. Introduction of MLP, different activation functions, Error back propagation algorithm, derivation of BBPA, momentum, limitation, characteristics and application of EBPA	L2, L3 and L4	10

Prof. (Dr.) Anil Kumar
 Deputy Dean Academics
 Amity University Haryana
 Manesar, Gurugram

 Manesar Gurgaon-122413

Module III Counter propagation network, architecture, functioning & characteristics of counter Propagation network, Hopfield/ Recurrent network, configuration, stability constraints, associative memory, and characteristics, limitations and applications. Hopfield v/s Boltzman machine. Adaptive Resonance Theory: Architecture, classifications, Implementation and training. Associative Memory.	L2, L3 and L4	8
Module IV: Fuzzy Logic Fuzzy set theory, Fuzzy set versus crisp set, Crisp relation & fuzzy relations, Fuzzy systems: crisp logic, fuzzy logic, introduction & features of membership functions, Fuzzy rule base system : fuzzy propositions, formation, decomposition & aggregation of fuzzy rules, fuzzy reasoning, fuzzy inference systems, fuzzy decision making & Applications of fuzzy logic.	L2, L3 and L4	7
Module V: Genetic algorithm Fundamentals, basic concepts, working principle, encoding, fitness function, reproduction, Genetic modeling: Inheritance operator, cross over, inversion & deletion, mutation operator, Bitwise operator, Generational Cycle, Convergence of GA, Applications & advances in GA, Differences & similarities between GA & other traditional methods.	L2, L4	3

IFT4307	SOFT COMPUTING LAB	L	T	P	C
Version: 2020.1	Date of Approval: 19, July 2020	0	0	2	1
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

This lab course covers development and designing of implementing basic neural networks, fuzzy systems, and optimization algorithms concepts and their relations. It aims to develop the concepts and techniques and foster the students' abilities in designing and implementing soft computing based solutions for real-world and engineering problems.

Course Objectives

The objective of this course is to

- Equip the students with concepts of Soft Computing which includes Neural networks, Fuzzy logic and genetic algorithms.
- Provide knowledge to develop Soft computing programs in Matlab.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain and apply concepts of MATLAB.

CO2: Implement various neural networks using MATLAB.

CO3: Illustrate use of fuzzy in real applications.

CO4: Apply genetic algorithm to basic problems.

Modules	Blooms level*	Number of hours
Fuzzy Logic a) Write a program in MATLAB to perform Union, Intersection and Complement operations. b) Write a program in MATLAB to implement De-Morgan's Law. c) Write a program in MATLAB to plot various membership functions. d) Generate XOR function using McCulloch-Pitts neural net by MATLAB program.	L1, L2,L3	4
Neural Network a) Write a MATLAB program for Hebb Net to classify two dimensional input patterns in bipolar with targets. b) Generate ANDNOT function using McCulloch-Pitts neural net by MATLAB program. c) Write a MATLAB program for Perceptron net for an AND function with bipolar inputs and targets. d) Write a M-file to calculate the weights for the following patterns using hetero-associative neural net for mapping e) Write an M-file to store the vector, find the weight matrix with no self-connection. Test this using a discrete Hopfield net.	L2,L3and L4	2
Genetic Algorithm	L2, L3	6

Prof. (Dr.) Anil Kumar
 Deputy Dean Academics

IFT4335	SUMMER INTERNSHIP EVALUATION	L	T	P	C
Version: 2020.1	Date of Approval: 19, July 2020	0	0	0	5
Pre-requisites/Exposure	Basics of Networks				
Co-requisites	Nil				

Catalog Description

There are certain phases of every Intern's professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship program can best be described as an attempt to institutionalize efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal classroom situations. These attributes are intellectual ability, professional judgment and decision-making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility etc. In order to achieve these objectives, each student will maintain a file (**Internship File**). The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development. The report will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

Course Objectives

The objective of this course is to

1. Equip the students with concepts of new technologies.
2. Provide project management and presentation skills.

Course Outcomes

On completion of this course, the students will be able to

CO1: Make a report on relevant topic by the study of literatures.

CO2: Demonstrate the topic of summer project topic by use of power presentation.

CO3: Demonstrate the aim, challenges, applications, literatures, result and analysis of the topic of project report

CO4: Explain the meaning of references/Bibliography.

Text Books

As per topic of summer internship project.

IFT4308	ANDROID PROGRAMMING	L	T	P	C
Version: 2020.1	Date of Approval: 19, July 2020	3	0	0	3
Pre-requisites/Exposure	Java Programming				
Co-requisites	Database concepts				

Catalog Description

This course introduces mobile application development for the Android platform. Android is a software stack for mobile devices that includes an operating system, middleware and key applications. The Android SDK provides the tools and APIs necessary to begin developing applications on the Android platform using the Java programming language. Students will learn skills for creating and deploying Android applications.

Course Objectives

The objective of this course is to

1. To introduce Android platform and its architecture.
2. Provide the knowledge of mobile apps development.

Course Outcomes

On completion of this course, the students will be able to

CO1: Describe Android platform, Architecture and features.

CO2: Design User Interface and develop activity for Android App.

CO3: Design and implement Database Application and Content providers.

CO4: Use Intent, Broadcast receivers and Internet services in Android App.

CO5: Use Internet, multimedia, camera and Location based, SMS services etc, in Android App.

CO6: Manage, Develop and Implement Mobile app project.

Modules	Blooms Level	Number of hours
<u>MODULE 1: Introduction to Android</u> Introduction to Android Platform, Android Stack Android Versions and Installing Android SDK and updating SDK components, Eclipse, IDEs and ADT plug-in Using the Emulator, Android vs. Other mobile platforms Your First Android Application: Application Life Cycle, Application Components, Activity life cycle, Manifest File, Layout XML Code Strings, The R File, Java Source Code, Java based layout vs. xml based layout Eclipse Visual Layout Editor, Logging.	L1 and L2	4
<u>MODULE 2: UI Design for Android</u> Using different layouts – LinearLayout, TableLayout and others, Drawable Resources Resolution and density independence, Working with common widgets, Working with ListView and Adapters, Creating and using option menu, Working with preferences Working with Dialogs and Toasts, Working with Graphics and Animation, Intents ,Intent filters, Invoking activities by class name and URI, Sharing data using Extras Bundle and URI parameters,Working with Tabs and Fragments,	L1,L2and L3	8
<u>MODULE 3: Files, Database & Working in Background</u> Using File System, Introducing SQLite on Android, Database Connectivity, Cursors and content values, Using ContentProvider to share data,Understanding Security model, Introducing Service and its life cycle,Creating and starting a service, Types of services, Working with multi-threading and AsyncTask,Broadcast receivers,Triggering receivers with intents,Responding to system events using Broadcast receivers,Using Alarm.	L1, L2 and L3	8
<u>MODULE 4: Using System Services and Web Services</u> Using Location based Services,Telephony and SMS services,Bluetooth, Network and WiFi, Multimedia and Camera,Accessing Internet and Web Services from Android Applications.	L1, L2 and L3	6
<u>MODULE 5: Project</u> Understanding the requirement, Designing the interface and architecture, Best practices regarding application design and development, Writing code and testing it, Preparing application for Publishing, Publishing to Play Store and Physical device.	L3, L4 and L5	6

IFT4310	DIGITAL IMAGE PROCESSING	L	T	P	C
Version: 2020.1	Date of Approval: 19, July 2020	3	0	0	3
Pre-requisites/Exposure	Basics of Computer Graphics				
Co-requisites	NIL				

Catalog Description

This course gives students an insight into the basics of Image Processing along with visualization of real concept of Image processing. Concepts covered would enable students to define and differentiate among various types of image refinement. Further they would be able to gain insights about various Image restoration and modification technique.

Course Objectives

The objective of this course is to

Give provide knowledge of powerful collection of fundamental and advanced image processing tools on the desktop by taking advantage of the computational technology of Mathematics.

Course Outcomes

On completion of this course, the students will be able to

CO1: Define and explain Digital Image Processing.

CO2: Apply Image Enhancement techniques in the Spatial Domain.

CO3: Use the concepts of Image Enhancement in the Frequency Domain.

CO4: Understand the architecture Image Compression.

CO5: Apply algorithms of Image Representation and Description and Object Recognition.

Modules	Blooms level*	Number of hours
MODULE 1: Introduction and Digital Image Fundamentals The origins of Digital Image Processing, Examples of Fields that Use Digital Image Processing, Fundamentals Steps in Image Processing, Elements of Digital Image Processing Systems, Image Sampling and Quantization, Some basic relationships like Neighbors, Connectivity, Distance Measures between pixels, Linear and Non Linear Operations.	L1 and L2	4
MODULE 2: Image Enhancement in the Spatial Domain Some basic Gray Level Transformations, Histogram Processing, Enhancement Using Arithmetic and Logic operations, Basics of Spatial Filters, Smoothing and Sharpening Spatial Filters, Combining Spatial Enhancement Methods.	L2 and L3	6
MODULE 3: Image Enhancement in the Frequency Domain Introduction to Fourier Transform and the frequency Domain, Smoothing and Sharpening Frequency Domain Filters, Homomorphism Filtering.	L1 and L2	8
MODULE 4:	L2 and	10

IFT4311	DIGITAL IMAGE PROCESSING LAB	L	T	P	C
Version 2020.1	Date of Approval: 19, July 2020	0	0	2	1
Pre-requisites/Exposure	Basics of MATLAB				
Co-requisites	NIL				

Catalog Description

This course gives students an insight into the basics of Image Processing along with visualization of real concept of Image processing. In this Lab course student will learn practicals of image processing using MATLAB programming.

Course Objectives

The objective of this course is to

1. Make the students apply knowledge of various Image processing techniques & pattern recognition required for solving complex problems.
2. Provide demonstration of different types of image processing techniques through MATAB toolbox.

Course Outcomes

On completion of this course, the students will be able to

CO1: Acquiring knowledge of Basics of High-end calculation software and need in Computer Science & engineering

CO2: Demonstrate the All preliminary functions in MATLAB

CO3: Apply the knowledge of all the basics function and toolbox knowledge of MATLAB

CO4: Demonstrate the Use of MATLAB in image Processing

Modules/Topics Covered**	Blooms level*	Number of hours
Introduction of MATLAB (g) Basic Variable deceleration & its operation (h) Function use & its application	L3, L5	4
Sample Programs in MATLAB a) Basic use of Matrix and Graph Plotting b) Different type of graph plotting with use of different -2 type of data	L3, L5	6
Sample Programs using MATLAB functions a) Create a basic program MATLAB using functions b) Use of basic function Image processing c) Practice on Basic function of Image processing tool box.	L3, L5	6
Programs of ANN functions a) Practice on Pattern Recognition functions in MATLAB b) Write a program for training a small network in MATLAB	L3, L5	6
Programs using ANN toolbox& Image processing toolbox a) Demonstrate the useof ANN tool box& Image processing toolbox and write a program after combining it.	L3, L5	2

IFT4312	BIG DATA	L	T	P	C
Version: 2020.1	Date of Approval: 19, July 2020	3	0	0	3
Pre-requisites/Exposure	Basics of DBMS				
Co-requisites	SQL				

Catalog Description

This course brings together several key big data technologies used for storage, analysis and manipulation of data. It also introduces the students the key concepts of Hadoop framework, MapReduce, Pig, Hive, and No-SQL. Students will learn to work on Hadoop platform. The concepts learnt will make students capable of working on big data projects easier.

Course Objectives

The objective of this course is

- To make students familiar with big data technologies.
- Provide an overview of Hadoop architecture and its working with other open source technologies.

Course Outcomes

On completion of this course, the students will be able to

CO1. Explain importance, applications and challenges of Big Data Analytics.

CO2. Differentiate among various analytics technologies.

CO3. Demonstrate architecture of Hadoop and MapReduce framework.

CO4. Illustrate Hadoop commands.

CO5. Introduce concepts of Hive, HBase and Pig.

Modules	Blooms level*	Number of hours
Module I: Introduction to Big Data Big Data : Definition, Sources, Importance & Applications, 5 V's of Big Data, Complexity of Big Data, Big data processing architecture, Big Data Analytics, Big data problems & challenges.	L1 and L2	5
Module II: Working with Hadoop Hadoop concepts : History, comparison with other systems : RDBMS, Grid computing, Cluster Computing, Cloud Computing, Hadoop Architecture, Hadoop Distributed file system : Data node, Name node, job tracker, task tracker, Moving data in and out of Hadoop, Common Hadoop shell commands.	L2and L5	4
Module III: Working with Map Reduce Map Reduce framework, Working of MapReduce: Job Scheduling, Shuffle and Sort, Task Execution, MapReduce Types, Formats and Features.	L1 and L3	8
Module IV: Working with Hive, HBase, PIG Working with Pig: Pig Latin, User Defined Functions and Operators Hive: Architecture, Comparison with traditional database, Hive QL- querying data, sorting & aggregation, joins & subqueries HBase : Fundamentals of HBase, HBase Versus RDBMS, Schema design	L2and L3	9

IFT4313	BIG DATA LAB	L	T	P	C
Version: 2020.1	Date of Approval: 19, July 2020	0	0	2	1
Pre-requisites/Exposure	Basic Concepts of DBMS				
Co-requisites	Relational Algebra and Relational Calculus				

Catalog Description

This course brings together several key big data technologies used for storage, analysis and manipulation of data. It also introduces the students the key concepts of Hadoop framework, MapReduce, Pig, Hive, and No-SQL. Students will learn to work on Hadoop platform. The concepts learnt will make students capable of working on big data projects easier.

Course Objectives

The objective of this course is

- To make students familiar with big data technologies.
- Provide an overview of Hadoop architecture and its working with other open source technologies.

Course Outcomes

On completion of this course, the students will be able to

CO1. Install and configure Hadoop and various tools like Pig, Hive etc.

CO2. Explain concepts of files and directories in HDFS and apply them in real database applications.

CO3. Design and implement mapreduce programs for a given problem.

CO4. Solve queries using concepts of Hive and Pig.

CO5. Perform operations using HBase.

Modules	Blooms level*	Number of hours
Lab Session 1 1. Installation & Configuration steps of Hadoop	L1 and L2	2
Lab Session 2-3 1. Working with HDFS commands :mkdir, rmdir, rm, mv, ls, du, put, rm-r, cat, tail etc 2. Working with vi editor	L1 and L3	4
Lab Session 4-5 1. Working with Java Map Reduce : Map Class, Reduce Class, Driver Class, map side joins, reduce side joins	L1 and L3	4
Lab Session 6-8 Working with Hive : Queries for Hive : Create table, describe database, describe table, describe extended table, describe formatted table, drop table, drop database, display table, where clause 1. Commands : Load Files on table : Load from HDFS, load from local 2. Command :CTAS Create table as select 3. Queries to create external tables 4. Working with commands like : Order by, group by, like, upper, lower, max, min	L1 and L3	4

IFT4331	TERM PAPER	L	T	P	C
Version: 2020.1	Date of Approval: 19, July 2020	0	0	0	3
Pre-requisites/Exposure	Nil				
Co-requisites	Nil				

Catalog Description

Term paper evaluation course requires the students to study about the current technology topic in detail. The students have to read research papers, books and other study sources and finalize the topics for their presentation. Student has to prepare it in detail research paper mentioning all the content related to the topic. The evaluation is later done and a presentation is also to be prepared.

Course Objectives

The objective of this course is to

1. To increase the knowledge and the understanding of a particular phenomenon/topic.
2. To introduce student about how to write technical papers/research papers.

Course Outcomes

On completion of this course, the students will be able to

CO1: Study the literature and identify the current technical topic

CO2: Study the identified topic in detail

CO3: Prepare a detailed report including the introduction, architecture, advantages, disadvantages etc

CO4: Prepare a brief presentation of the concerned topic

Text Books

IFT4401	MACHINE LEARNING USING PYTHON	L	T	P	C
Version: 2020.1	Date of Approval: 19, July 2020	3	-	-	3
Pre-requisites/Exposure	Basic Knowledge of Programming				
Co-requisites	Nil				

Catalog Description

Python is a general-purpose high level programming language that is being increasingly used in data science and in designing machine learning algorithms. This course provides an introduction to Python and its libraries like numpy, pandas, matplotlib and explains how it can be applied to develop machine learning algorithms that solve real world problems.

This course starts with Python language followed by machine learning and covers concepts of python and all important concepts such as exploratory data analysis, data preprocessing, data visualization and clustering, classification, regression and model performance evaluation etc. This course covers all three types of machine learning algorithms including Supervise, Unsupervised and Reinforcement learning.

Course Objectives

The objective of this course is to

- Equip the students with concepts of programming and problem solving and develop proficiency in creating applications using the Python Programming Language.
- Provide knowledge of various types of machine learning models, its algorithms and development of the models using Python programming language.

Course Outcomes

On completion of this course, the students will be able to

CO1: Develop programs in Python to develop algorithmic solutions to computational problems.

CO2: Manage data in python using available data structures such as string, list, and dictionary and file handling operations.

CO3: Apply functions to decompose python program and develop modules and packages.

CO4: Preprocess and analyze data before applying suitable machine learning models.

CO5: Understand basic concepts and techniques of Machine Learning and apply machine learning algorithms to develop machine learning models for solving real word problems.

Modules	Blooms level*	Number of hours
Module-I Python basis: Installing Python; basic syntax, interactive shell, editing, saving, and running a script. The concept of data types; variables, assignments; immutable variables; numerical types; arithmetic operators and expressions; comments in the program; understanding error messages Conditions, boolean logic, logical operators; ranges; Control statements: if-else, loops (for, while); short-circuit (lazy) evaluation Data handling: String, Lists, tuples, and dictionaries; basic list operators, replacing, inserting, removing an element; searching and sorting lists; dictionary literals, adding and removing keys, accessing and replacing values; traversing dictionaries.	L1, L2 and L3	6

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Module-II Files Handling: manipulating files and directories, os and sys modules; text files: reading/writing text and numbers from/to a file; creating and reading a formatted file (csv or tab-separated). Design with functions: hiding redundancy, complexity; arguments and return values; formal vs actual arguments, named arguments. Program structure and design. Recursive functions. Python Modules and Packages: designing modules and package, Different ways to import Packages. OOP: classes, objects, attributes and methods, persistent storage of objects , constructor, inheritance, polymorphism, operator overloading (_eq_, _str_, etc); abstract classes, exception handling	L1, L2 and L3	7
Module-III Arrays and Matrices: The NumPy Module, Creating Arrays and Matrices, Copying, Arithmetic Operations, Cross product & Dot product , Saving and Restoring, Matrix inversion, Vectorized Functions Data Visualization: The Matplotlib Module, Histograms, Bar charts Density Plots, Box Plots, Scatter Plots, Heat Maps etc. DataFrames: Pandas , Loading data from different sources, Concept of DataFrames, Working with Dataframes such as selecting, filtering, grouping, joining etc. Dealing with missing values	L2, L3 and L4	6
Module-IV Introduction to Machine Learning: Introduction, Applications, Framework for developing machine learning models Supervised Learning: Linear regression, Multiple linear regression, logistic regression, classification and regression trees, Support Vector Machines, K-nearest neighbors Preprocessing and Scaling , Different Kinds of Preprocessing ,Applying Data Transformations Overfitting, underfitting, bias-variance tradeoff.	L2, L3 and L4	7
Module-V Unsupervised Learning: Introduction to Clustering, k-means clustering Hierarchical clustering, Dimensionality Reduction, Feature Selection, PCA, factor analysis, manifold learning. Reinforcement Learning: Value iteration; policy iteration; TD learning; Q learning; actor-critic	L2, L3 and L4	6

IFT4403	MACHINE LEARNING USING PYTHON LAB	L	T	P	C
Version: 2020.1	Date of Approval: 19, July 2020	0	-	4	2
Pre-requisites/Exposure	Basic Knowledge of Programming				
Co-requisites	Nil				

Catalog Description

Python is a language with a simple syntax, and a powerful set of libraries. It is an interpreted language, with a rich programming environment, including a robust debugger and profiler. While it is easy for beginners to learn, it is widely used in many scientific areas for data exploration. This course is an introduction to the Python programming language for students without prior programming experience. We cover data types, control flow, object-oriented programming, and graphical user interface-driven applications. The examples and problems used in this course are drawn from diverse areas such as text processing, simple graphics creation and image manipulation, HTML and web programming.

Course Objectives

The objective of this course is to

- Equip the students with concepts of programming and problem solving and develop proficiency in creating applications using the Python Programming Language.
- Provide an overview of various control statements, data structures, object oriented programming, packages related to image processing, graphics, event driven programming, socket applications.

Course Outcomes

On completion of this course, the students will be able to

CO1: Explain various operators and control structures in python and their uses to develop algorithmic solutions to simple computational problems.

CO2: Describe string, python packages and related functions for various file handling operations.

CO3: Apply functions to decompose python program and represent compound data using Python lists, tuples, and dictionaries.

CO4: Analyze graphics, image processing and object oriented programming concept to create applications and analyze exceptions during program execution.

CO5: Create GUI based applications using python packages and network client/server programming.

Modules	Blooms level*	Number of hours
Module-I <ol style="list-style-type: none"> 1. Write a program to read and store the name of three different cities in three different variables and print all the contents of variables on the console. 2. Write a program to read the radius of a circle and print the area of circle. 3. Write a program to calculate the distance between two points using distance formula. 4. Write a program to reverse a four digit number using % and // operators. 5. Apply control statements of python to create following pattern. 	L3,L5	4

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram

Manesar Gurgaon-122413

1 2
1 2 3
1 2 3 4
1 2 3 4 5

6. Apply control statement in python to construct a program to prompt a user to read the marks of five different subjects. Calculate the total marks and percentage of the marks and display the message according to the range of percentage given table.

Percentage	Message
Per>=90	Distinction
Per>=80 && per<90	First Class
Per>=70 && per<80	Second Class
Per>=60 && per<70	Third Class
Per<60	Fail

Module-II

1. Write the function replacevowels(word) which removes all the vowels ('a','e','i','o','u') in a word and returns the remaining letters in the word.
2. Write a function Eliminate_Letter (Word, Letter) which takes a word and a letter as arguments and removes all the occurrence of that particular letter from the word. The function will return the remaining letters in the word.
3. Write a program to count number of characters from a file.
4. Generate 50 random numbers within a range 500 to 1000 and write them to file using function.
5. Write a program to insert a string like "1, 2, 3, 4" and print sum of all the numbers of the list using split function.
6. Write a program to write in excel file in following format using python.

L3,L5

6

	A	B	C	D	E	F
1		ISBT DEHRADUN	SHASTRADHARA	CLEMEN TOWN	RAJPUR ROAD	CLOCK TOWER
2	ISBT DEHRADUN					
3	SHASTRADHARA					
4	CLEMEN TOWN					
5	RAJPUR ROAD					
6	CLOCK TOWER					
7						
8						
9						
10						
11						
12						
13						
14						
15						

Module-III

1. Creating 1-D, 2-D , 3-D numpy arrays and performing arithmetic on them.
2. Program on Boolean arrays and conditional selecting items from array.
3. Stacking and reshaping array

L3,L5

6

4. Selecting common items between two arrays 5. Plotting simple plots in matplotlib: line, scatter, boxplot, bar, 6. Working with various parameters available in plot function 7. Using magic commands in jupyter notebook 8. Working with series and data frames in pandas 9. Reading and writing CSV and excel files 10. Conditional selection and indexing in DataFrame 11. Adding and removing columns in DataFrame 12. Cleaning data columns using regular expressions		
Module-IV 1. Write python program for following image processing operations <ul style="list-style-type: none"> ➤ Convert image in to grayscale image ➤ Display size of image ➤ Rotate an image ➤ Paste one image on another image. ➤ Crop an image. 2. Implement logistic regression and knn classification on iris dataset using scikit-learn 3. Perform linear regression and multiple feature linear regression on any dataset using scikit-learn 4. Implement gradient descent algorithm to optimize linear regression and logistic regression algorithm 5. Apply various evaluation metrics on breast cancer data set from scikit learn after performing logistic regression. 6. In exercise 5 plot decision boundary using matplotlib 7. Implement RandomForest and Decision tree algorithms on external and internal data sets 8. Show use of Scalars techniques available in scikit-learn	L3,L5	4
Module V 1. Implement feature scaling in scikit learn 2. Implement PCA on breast cancer dataset using scikit learn 3. Draw two-dimensional scatter plot of the Breast Cancer dataset using the first twoprincipal components as done in exercise 2. 4. Apply TSNE algorithm to mnist dataset (manifold learning) 5. Implement MDP and Q-learning in python.	L3,L5	4

IFT4402	CLOUD COMPUTING	L	T	P	C
Version: 2020.1	Date of Approval: 19, July 2020	3	0	0	3
Pre-requisites/Exposure	Basics of Distributed Computing				
Co-requisites	NIL				

Catalog Description

This course gives students an insight into the basics of cloud computing along with virtualization. Concepts covered would enable students to define and differentiate among various distributed computing platforms. Further they would be able to gain insights about various cloud simulators like CloudSim, Green Cloud and VMWare for simulating cloud and virtualization based environments.

Course Objectives

The objective of this course is to

- Equip the students with the features and concepts of Virtualization and Cloud Computing.
- Provide basic knowhow about cloud implementation, deployment models or layers and about cloud simulators like CloudSim, GreenCloud and VMWare.

Course Outcomes

On completion of this course, the students will be able to

CO1: Define and explain Cloud Computing with its characteristics, benefits and limitations.

CO2: List and distinguish among various cloud deployment models along with service delivery layers.

CO3: Explain concepts of Virtualization with its need and limitations, distinguish between types of hardware virtualization and list types of desktop virtualization.

CO4: Describe the architecture and demonstrate working mechanism for CloudSim and Green Cloud simulators.

CO5: Explain the basics of VMWare Simulator and demonstrate implementation of Virtual machines.

Modules	Blooms level*	Number of hours
MODULE 1: CLOUD COMPUTING OVERVIEW Origins of Cloud computing – Cloud components - Essential characteristics – On-demand self-service, Broad network access, Location independent resource pooling, Rapid elasticity, measured service, Roots of cloud computing, Architectural influences – High-performance computing, Utility and Enterprise grid computing, Cloud scenarios – Benefits: scalability, simplicity, vendors, security, Limitations	L1 and L2	8
MODULE 2: CLOUD ARCHITECTURE- LAYERS AND MODELS The cloud reference model: Architecture, Software as a Service (SaaS), features of SaaS and benefits, Platform as a Service (PaaS), features of PaaS and benefits, Infrastructure as a Service (IaaS), features and benefits of IaaS, Service providers, challenges and risks in cloud adoption, Cloud deployment model: Public clouds – Private clouds – Community clouds - Hybrid clouds - Advantages of Cloud computing .	L1 and L2	8
MODULE 3: VIRTUALIZATION Virtualization and cloud computing - Need of virtualization – cost,	L1 and L2	10

Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

administration, fast deployment, reduce infrastructure cost – limitations, Characteristics of virtualized environments Types of hardware virtualization: Full virtualization - partial virtualization - para virtualization. Desktop virtualization: Software virtualization – Memory virtualization – Storage virtualization – Data virtualization – Network virtualization		
MODULE 4: CLOUD SIMULATORS- CLOUDSIM AND GREENCLOUD Introduction to Simulator, understanding CloudSim simulator, CloudSim Architecture(User code, CloudSim, GridSim, SimJava) Understanding Working platform for CloudSim, Introduction to GreenCloud.	L2 and L3	12
MODULE 5: INTRODUCTION TO VMWARE SIMULATOR Basics of VMWare, advantages of VMware virtualization, using Vmware workstation, creating virtualmachines-understanding virtual machines, create a new virtual machine on local host, cloning virtual machines, virtualize a physical machine, starting and stopping a virtual machine.	L2 and L3	10

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4:Analysis; L5:Synthesis, L6:Evaluation

IFT4437	MAJOR PROJECT/ DISSERTATION	L	T	P	C
Version: 2020.1	Date of Approval: 19, July 2020	0	0	0	30
Pre-requisites/Exposure	Programming/Networking/Testing etc.				
Co-requisites	Nil				

Catalog Description

There are certain phases of every Intern's professional development that cannot be effectively taught in the academic environment. These facets can only be learned through direct, on-the-job experience working with successful professionals and experts in the field. The internship program can best be described as an attempt to institutionalize efforts to bridge the gap between the professional world and the academic institutions. Entire effort in internship is in terms of extending the program of education and evaluation beyond the classroom of a university or institution. The educational process in the internship course seeks out and focuses attention on many latent attributes, which do not surface in the normal classroom situations. These attributes are intellectual ability, professional judgment and decision-making ability, inter-disciplinary approach, skills for data handling, ability in written and oral presentation, sense of responsibility etc. In order to achieve these objectives, each student will maintain a file . The Report aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development. The report will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

Course Objectives

The objective of this course is to

1. Equip the students with new technologies and industrial requirements.
2. Equip students with Project Management, Documentation and Presentation skills.

Course Outcomes

On completion of this course, the students will be able to

CO1: Demonstrate skill and knowledge of current information and technological tools and techniques specific to the field of study.

CO2: Identify, analyze, and solve problems creatively through sustained critical investigation.

CO3: Use effectively oral, written and visual communication.

CO4: Understand Project management and team work skills.

MECHANICAL ENGINEERING

Syllabus

THERMODYNAMICS

Course Code: MAE2352

Credit Units: 03

Course Objective:

Objective of this course is to impart in depth understanding of the principles of thermodynamics and heat transfer. This course also helps students understand the application of basic fluid mechanics, thermodynamic, and heat transfer principles and techniques, including the use of empirical data, to the analysis of representative fluid and thermal energy components and systems encountered in the practice of electrical, electronic, industrial, and related disciplines of engineering.

Course Contents:

Module I: Basic concepts

Thermodynamic system, intensive and extensive properties, cyclic process, Zeroth Law of Thermodynamics, Work and heat, Flow work

Module II: First Law of Thermodynamics

Mechanical equivalent of heat, internal energy, Analysis of non-flow system, flow process and control volume, steady flow, energy equation, flow processes

Module III: Second Law of Thermodynamics and Entropy

Heat Engine, heat pump, Kelvin Planck and Clausius statement of Second Law of Thermodynamics, Perpetual motion machine, Reversible cycle- Carnot Cycle, Clausius inequality, entropy, Principle of entropy increase, concepts of availability, irreversibility.

Module IV: Air-Cycles

Carnot cycle, Otto cycle, Diesel cycle, Dual cycle, Stirling cycle, Ericsson cycle, Brayton cycle; Reversed Carnot cycle.

Module V: Properties of Steam

Use of steam tables, wet steam, superheat steam, different processes of vapour, Mollier Diagram.

Module VI: Reciprocating Air compressors

Single stage compressor, Isothermal efficiency, adiabatic efficiency, clearance volume, volumetric efficiency, and multi-stage compression with intercooling.

Examination Scheme:

FLUID POWER SYSTEMS

Course Code: MAE2452

Credit Units: 03

Course Objective:

Fluid power systems cover generation, transmission, and control applications of power by using pressurized fluids. This course imparts the knowledge of different fluid power systems (pneumatic and hydraulic) which are used in industries and hydropower plants.

Course Contents:

Module I: Introduction

Euler's equations for turbo machines; impulse and reaction forces due to fluid systems on stationary and moving system of vanes; jet propulsion.

Module II: Water Turbines

Classification: Pelton, Francis, Propeller and Kaplan turbines; velocity triangles; efficiency; draft tubes, governing.

Module III: Pumps

Centrifugal pumps, velocity triangles, efficiency, turbine pumps, axial and mixed flow pumps.

Module IV: Performance of Fluid Machines

Similarity laws applied to rotodynamic machines; specific speed, unit quantities; characteristic curves; use of models; cavitations and attendant problems in turbo machines; selection of turbines hydroelectric plants.

Module V: Hydraulic Power Transmission

Transmission of hydraulic power through pipe lines; water hammer; precautions against water hammer in turbine and pump installations: hydraulic ram.

Module VI: Power Hydraulics

Positive pumps: gear, vane, screw, pump, variable delivery valves: flow control, pressure control, direction control, solenoid operated valve, hydraulic circuits, fluid coupling and torque converter. Pneumatic Power: Basic principles, comparison of pneumatic and hydraulic Systems.

Examination Scheme:

BASICS OF KINEMATICS OF MACHINE

Course Code: MAE2552

Credit Units: 04

Module-I

Introduction

Links-types, Kinematics pairs-classification, Constraints-types, Degrees of freedom of planar mechanism, Grubler's equation, linkage mechanisms, inversions of four bar chain, slider crank chain and double slider crank chain

Velocity in Mechanisms

Velocity of point in mechanism, relative velocity method, Velocities in four bar mechanism, slider crank mechanism and quick return motion mechanism, Rubbing velocity at a pin joint, Instantaneous center method, Types & location of instantaneous centers, Kennedy's theorem, Velocities in four bar mechanism & slider crank mechanism

Module-II

Acceleration in Mechanisms

Acceleration of a point on a link, Acceleration diagram, Coriolis component of acceleration, Crank and slotted lever mechanism, Klein's construction for Slider Crank mechanism and Four Bar mechanism, Analytical method for slider crank mechanism

Mechanisms with Lower Pairs

Pantograph, Exact straight line motion mechanisms-Peaucellier's, Hart and Scott Russell mechanisms, Approximate straight line motion mechanisms-Grass-Hopper, Watt and Tchebicheff mechanisms, Analysis of Hooke's joint, Davis and Ackermann steering gear mechanisms.

Module-III

FRICTION

Laws of friction, Friction on inclined plane, Efficiency on inclined plane, Friction in journal bearing-friction circle, Pivots and collar friction-uniform pressure and uniform wear, Belt and pulley drive, Length of open and cross belt drive, Ratio of driving tensions for flat belt drive, centrifugal tension, condition for maximum power transmission, V belt drive

Brakes & Dynamometers

Shoe brake, Band brake, Band and Block brake, Absorption and transmission type dynamometers

Module-IV

CAMS

Cams and Followers - Classification & terminology, Cam profile by graphical methods with knife edge and radial roller follower for uniform velocity, simple harmonic and parabolic motion of followers, Analytical methods of cam design – tangent cam with roller follower and circular cams with flat faced follower

Module-V

Gears & Gear Trains

Classification & terminology, law of gearing, tooth forms & comparisons, Systems of gear teeth, Length of path of contact, contact ratio, interference & under cutting in involute gear teeth, minimum number of teeth on gear and pinion to avoid interference, simple, compound, reverted and planetary gear trains, Sun and planet gear.

BASICS OF DYNAMICS OF MACHINES

Course Code: MAE2652

Credit Units: 04

Module 1.

Static Force Analysis: Static force analysis of planer mechanisms, Free body diagrams, dynamic force analysis including inertia and frictional forces of planer mechanisms

Inertia forces: D'Alembert's Principle, Velocity and acceleration of piston, Torque exerted on the crank shaft when friction and inertia of moving parts are neglected, Forces on the reciprocating parts of an engine considering friction and inertia of moving parts, Turning moment on crank shaft, Dynamically equivalent system, Torque exerted on the crank shaft, considering the weight of the connecting rod.

Module 2.

Balancing of rotating masses: Balancing of single rotating mass, Balancing of several masses rotating in the same plane, Balancing of several masses rotating in different planes.

Balancing of reciprocating masses: Balancing of reciprocating engine, Partial balancing of primary force, Partial balancing of locomotives, Variation of tractive force, swaying couple, hammer blow, coupled locomotive, primary balance of multi-cylinder inline engine, Secondary balance of multi-cylinder in line engines, Method of direct and reverse cranks, V-engines balancing.

Module 3.

Governors: Types of Governor, Watt Governor, Porter governor, Proell Governor, Hartnell Governor, Wilson-Hartnell governor, Sensitivity, Stability, Isochronism, Hunting, Governor Effort and Power, controlling force

Module 4.

Gyroscopic effect and Gyroscope: Spinning and precession, gyroscopic couple, Effect of gyroscopic couple on the stability of automotive vehicles: Stability of four wheelers, Stability of two wheelers, Gyroscopic effects on ships and aero planes.

Module 5.

Vibration: Vibration analysis of SDOF systems, natural, damped, forced vibrations, base-excited vibrations, transmissibility ratio

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

METEOROLOGY

Course Code: MAE2752

Credit Units: 03

Course Objective:

The main objective of this course is to give the student: a basic understanding of the physical loss governing metrology and tolerance design. Gain and appreciation for the capabilities and applications of metrology through hands own experiences.

Course Contents:

Module I: Principles of measurement

Definition of Metrology, difference between precision and accuracy. Sources of errors: Controllable and Random Errors, Effects of Environment and Temperature, Effects of support, alignment errors.

Length Standards: Line standards, end standards and wavelength standards, transfer from line standards to end standards. Numerical based on line standards. Slip gauges – its use and care, methods of building different heights using different sets of slip gauges.

Limits, fits and tolerances: Various definitions, different types of fits and methods to provide these fits. Numerical to calculate the limits, fits and tolerances, ISO system of limits and fits; Gauges and its types, limit gauges – plug and ring gauges. Gauge Design – Taylor's Principle, wear allowance on gauges.

Module II: Comparators

Principles and working of Mechanical, Electrical, Optical and Pneumatic Comparators.

Angular Measurement: Sine Bar – different types of sine bars, use of sine bars in conjunction with slip gauges, Use of angle gauges, spirit level, errors in use of sine bars. Numericals. Principle and working of autocollimator.

Module III: Straightness and flatness

Definition of Straightness and Flatness error. Numericals based on determination of straightness error of straight edge with the help of spirit level and auto collimator

Screw Thread Measurement: Errors in threads, Measurement of elements of screw threads –major diameter, minor diameter, pitch, flank angle and effective diameter (Two and three wire methods). Effect of errors in pitch and flank angles

Gear Measurement: Measurement of tooth thickness – Gear tooth vernier caliper, Constant chord method, base tangent method and derivation of mathematical formulae for each method. Parkinson Gear Tester.

Module IV

Machine Tool Alignment: Machine tool tests and alignment tests on lathe. Alignment tests on milling machine. Alignment tests on a radial drilling machine, Interferometry.

Surface texture: Introduction, types of irregularities, Elements of surface Texture, Measurement of surface finish, Examination of surface Roughness.

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage (%)	5	10	8	7	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination;

NANOTECHNOLOGY

Syllabus - Semester First

BASICS OF NANOSCIENCE

Course Code: NAT2152

Credit Units: 03

Course Objective:

To enable the students to understand the science of nanomaterials.

Module I: Introduction to Quantum Mechanics & Crystal structure

De-Broglie hypothesis, Uncertainty Principle, Schrödinger Equation, Operator, Particle in a 1D box, Particle in a 3D box (qualitative), Crystal structure, Crystal orientation, Crystal planes, Bravais lattice, Miller Indices, Atomic Packing Density, crystal symmetry, ZnS, Diamond and NaCl crystal structure, Melting point, Coordination number, Atomic Bonding.

Module II: Introduction to Nanoscience

Emergence of Nanoscience with special reference to Feynman and Drexler, Role of particle size, Spatial and temporal scale, Exciton, Concept of confinement, strong and weak confinement with suitable examples, Development of quantum structures, Basic concept of quantum well, quantum wire and quantum dot. Density of states of 1D, 2D & 3D structure, surface effect,

Module III: Types of Nanomaterials

Nanoclusters, Solid solutions, Thin film, Nanocomposites (Metal Oxide and Polymer based), Core Shell Nanostructure, Buckyballs, Carbon nano tubes and, Zeolites minerals, Dendrimers, Micelles, Liposomes, Block Copolymers, Porous Materials, Metal Nanocrystals, Semiconductor nanomaterials, Hydrogels

Syllabus - Semester Second

PROPERTIES OF NANOMATERIALS

Course Code: NAT2251

Credit Units: 03

Course Objective:

To enable students to understand properties of bulk and nanomaterials

Course Contents:

Module I: Electronic & Magnetic

Classification of materials: Metal, Semiconductor, Insulator, B and structures, Brillouin zones, Mobility, resistivity, relaxation time, and recombination centers, Hall effect Quantum Hall effect. Quantum Tunneling, Coulomb Blockade, single electron transistor. Origin of magnetic Moment in materials, Revisit to Different kind of magnetism in nature: Dia, para, ferro magnetic, Domain structure, antiferro, ferri & super paramagnetism, nanomagnetic materials: Fe, Fe₃O₄, Ferrites, Ferro-fluids

Module II: Optical & Thermal

Photo-conductivity, Photovoltaic effect, optical absorption & transmission, photoluminescence, fluorescence, phosphorescence, electroluminescence, LED, Concept of phonon, thermal conductivity, specific heat, exothermic & endothermic heat, Thermoelectric effect, Thermoelectric material (TEM) properties.

Module III: Mechanical

Stress- Strain curve, True Stress True strain, Hardness, compressive & tensile strengths, Fracture toughness Fatigue, Creep and other lastic properties of materials, Deformation behavior of Nanomaterials

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage(%)	5	10	8	7	70

Syllabus - Semester Third

SYNTHESIS OF NANOMATERIALS

Course Code: NAT2353

Credit Units: 03

Course Objective:

To enable students to understand the different methods of synthesis of nonmaterial

Course Contents:

Module I: Physical Methods:

Physical Vapour Deposition (PVD), Inertgascondensation, Arcdischarge, DCsputtering, Ionsputtering, RF & Magnetron sputtering , Pulse Laser Deposition (PLD), Ball Milling, Molecular beamepitaxy, Electrodeposition, Fundamentals of film growth. Physical vapour Deposition (PVD): Evaporation molecular beamepitaxy (MBE), Sputtering, Comparison of Evaporation and sputtering. Chemical Vapour Deposition (CVD) : Typical chemical reactions, Reaction kinetics, transport phenomena, CVD methods, diamond films by CVD

Module II: Chemical Methods:

Metal nanocrystals by reduction, Sol-gel, Solvothermal synthesis, Photochemical synthesis, Electrochemical synthesis, Nanocrystals of semiconductors and other materials by arrested precipitation, Thermolysis routes, Liquid-liquid interface.

Module III: Features of nanoscale growth

Specific Features of Nanoscale Growth – Introduction - Thermodynamics of Phase Transitions Dynamics of Phase Transitions - Thermodynamics of Spinodal Decomposition Thermodynamics of Nucleation – Growth - Size Control - Triggering the Phase Transition- Application to Solid Nanoparticles - Controlling Nucleation - Controlling Growth - Controlling Aggregation. Stability of Colloidal Dispersions - Breaking Matter into Pieces.

Syllabus - Semester Fourth

CHARACTERIZATION TECHNIQUES

Course Code: NAT2453

Credit Units: 03

Course Objective:

To enable students to understand the instrumental techniques for characterization of nanomaterials

Course Contents:

Module I: Structural characterization techniques

X-ray diffraction (XRD) technique, particle size determination using XRD, Applications of XRD, Electron diffraction and its application, neutron diffraction and its applications

Module II: Optical and Electron Microscopy

Introduction to Optical microscopy, Scanning Electron Microscopy, Transmission Electron Microscopy, Scanning Tunneling Microscopy, Atomic Force Microscopy, Confocal Microscopy, SPR

Module III: Spectroscopic Techniques

UV visible spectroscopy, Infrared Spectroscopy and Fourier Transform Infrared Spectroscopy, Raman Spectroscopy, Photoluminescence (PL), Photoelectron Spectroscopy (X-Ray Photoelectron Spectroscopy, Auger Electron Spectroscopy & Ultra Violet Photoelectron Spectroscopy)

Examination Scheme:

Components	CT	HA	A	S/V/Q	EE
Weightage(%)	15	5	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

Syllabus - Semester Fifth

VACUUM SCIENCE AND CLEAN ROOM TECHNOLOGY

Course Code: NAT2553

Credit Units: 03

Course Objective:

To enable students to understand vacuum science, their production, measurement, about clean room technology

Course Contents:

Module I: Vacuum Science and Technology

Vacuum and its different units, Kinetic Theory of Gases, Gas flow in vacuum systems, Physical Parameters at low pressure, classification of vacuum ranges, Application of Vacuum technology, Through put & pumping speed, flow rate & conductance in vacuum system

Module II: Production & Measurement of Vacuum

Types of Vacuum Pumps (Rotary, diffusion, Turbo, Cryo & Ion) - Basic Principles and applications, Production of low, medium high and ultrahigh vacuum, Vacuum gauges, Leak detection techniques

Module III: Clean Room Technology

Clean rooms: Introduction, needs and Types, Basics of clean room standards, design of clean room & clean air devices, High efficiency air filtration, Clean room disciplines, Cleaning of clean room, Quality control, Industrial and Scientific application of clean room

Examination Scheme:

Components	CT	HA	A	S/V/Q	EE
Weightage(%)	15	5	5	5	70

CT: Class Test, HA: Home Assignment, S/V/Q: Seminar/Viva/Quiz, EE: End Semester Examination; A: Attendance

Syllabus - Semester Sixth

INDUSTRIAL APPLICATION OF NANOMATERIALS

Course Code: NAT2652

Credit Units: 03

Course Objective:

To enable students to understand the applications of nano materials and associated technology in industrial sector

Course Contents:

Module I: Nano-Electronic Technologies

Nanolithography, Data storage, Nano-photonics, Nano electronic and Magnetic devices, Spintronic, Carbon based materials: Carbon Nano-tube (CNC), Graphene. Sensors & Nano-sensors, NEMS.

Module II: Sustainable energy technologies

Solar energy, Hydrogen energy and Nano-materials, Carbon nanotube fuel cells, Hydrogen storage, Thermoelectricity, Re-chargeable batteries, Energy savings, Nano-lubricants, Nano-composites and Nano-catalysts. power semiconductor chips, fuel cells, superconductors, solar cells, energy storage and other alternative power sources. Solar cells, Thin film Si solar cells, Chemical semiconductor solar cells, Dye sensitized solar cells, Polymer solar cells, Nano quantum dot solar cells, Hybrid nano-polymer solar Cells

Module III: Applications of Nanotechnology in industrial, environmental and medical

Nano-biosensors in food and agriculture Industry, biological and environmental applications, drug delivery

Examination Scheme:

Components	A	CT	S/V/Q	HA	EE
Weightage(%)	5	15	5	5	70

Overview

India's growing energy needs mixed with world's order for reducing environmental emissions by fossil energy sources require the use of environmentally friendly new and renewable energy sources having no environmental emissions. The thrust given by the Govt. of India under National Climate Plan and Jawahar Lal Nehru National Solar Mission has suddenly created the need to train large human resource in the field of new and renewable energy especially with expertise in solar energy.

Renewable Energy open track is designed to equip under graduates and working professionals in understanding of energy flow from Solar and biomass and the ways to harness the renewable forms of energy and its optimal usage. The curriculum gives an overall knowledge of solar PV fundamentals, battery, inverters, cables, solar PV designing, energy from wastes and waste management, environmental impact and energy audit and management. The course is especially designed to enhance the skills of the students and make them industry ready.

Programme Objectives (PO's)

The students will

- PO1. Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- PO2. Problem analysis:** Identify, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- PO3. Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- PO4. Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- PO5. Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- PO6. The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- PO7. Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- PO8. Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- PO9. Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- PO10. Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- PO11. Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

- PO12. Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change.

Programme Specific Outcomes (PSOs)

On completion of the Renewable Energy Track, the student will be able to:

PSO1: Apply knowledge and understanding of the electrical engineering in dealing with the renewable energy systems. The students will learn to relate the electrical engineering concepts to design a solar PV system.

PSO2: Understand the working of solar PV cells, modules, battery, inverters and cables. They will be able to design and install an off grid solar PV power plant for meeting the demands of a household.

PSO3: Ability to understand the energy generation in a solar thermal system and its application in industry. They will also learn the role of these systems for sustainable energy development. They will also learn the techniques to manage the solid wastes and how energy can be generated from solid wastes and the associated challenges.

PSO4: Understanding the need of high level professional, management techniques including project management which can be used in technological and management practices in construction following the ethical code of conduct as well as understanding the impact of engineering practices on societal, global, commercial and economic scenario.

RENEWABLE ENERGY

Syllabus

SAE2152	FUNDAMENTAL OF SOLAR PHOTOVOLTAIC, BATTERY & INVERTER	L	T	P	C
Version 1.1	Date of Approval:	2	0	2	3
Pre-requisites/Exposure					
Co-requisites					

Course Description

This course covers the concepts of basic engineering project related to energy supply using solar photovoltaic technology. Also, to make students understand the practical applications that use solar photovoltaic systems and be able to do specify, analyze and design.

Course Objectives

The objective of this course are as follows

- This course covers the fundamental concepts of electrical engineering that is required for solar PV system designing.
- To understand the physical principles of the photovoltaic (PV) solar cell and modules. The parameters used to measure the performance of solar PV cells and modules. The course also covers the sources of losses.
- To understand the different types of batteries and inverters used for solar applications and the working of these systems.

Course Outcomes

On completion of this course, the students will be able to

CO1. To compute the current, voltage and power in a circuit. Have understanding about resistance, power and energy.

CO2. To do the IV characteristic of solar PV cells and PV modules. They will be able to connect modules in series and parallel.

CO3. Identify the different types of batteries and inverters available in the market. They will be able to judge the performance of the battery and inverters based on their specifications.

Course Content:

Modules	Blooms level*	Number of hours
Module I: Basics of Electricity Introduction to Electricity, current, voltage, danger with high voltage and current levels, resistance, power and energy.	L1, L2	12

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

Module II: Basics of Solar Photovoltaics Cells Solar Cells, types of solar cells, electricity generation from solar cells, parameters of solar cells, factors affecting electricity generation from solar cells.	L1, L2	12
Module III: Solar PV Modules Solar PV module, Standard PV module parameters, factors affecting electricity generation from solar PV modules, measuring module parameters, series and parallel connection.	L1, L2	12
Module IV: Batteries & Inverters Basics about batteries, charging and discharging of batteries, components of battery, types of battery, parameters of batteries. Inverters, types of inverters, Inverter specifications, working principle.	L1, L2, L3	12

**Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation*

Text Books

- Solar Photovoltaics (Fundamentals, Technologies and Application) by Chetan Singh Solanki; 3rd edition 2015.

Lab Syllabus

List of Experiments	Blooms level*	Number of hours
1. Measure the V-I characteristics of a Photovoltaic cell	L1, L2	1
2. To study the illumination characteristics, power load characteristics, areal characteristics of a solar cell.	L1, L2	1
3. Measure the V-I characteristics of a Photovoltaic Panel subjected to variable load.	L1, L2	1
4. To study the effect of angle of the panel on V-I characteristic of a Photovoltaic Panel.	L1, L2	1
5. Measure the V-I characteristics of a Photovoltaic Panels connected in series and parallel without load.	L1, L2	1
6. Measure the V-I characteristics of a Photovoltaic Panels connected in series and parallel with load.	L1, L2	1
7. To understand the Safety norms and its importance, PPEs, Safety Signs, Safety Slogans, Safety Rules, Fire Extinguishers	L1, L2	1
8. Charging and discharging of battery	L1, L2	1

SAE2252	SOLAR PV INSTALLATION	L	T	P	C
Version 1.1	Date of Approval:	2	0	2	3
Pre-requisites/Exposure					
Co-requisites					

Catalog Description

This course covers the concepts of basic concepts of installation of standalone solar PV systems. The students will be able to learn and understand the requirement of charge controllers, MPPT and different cables, structures in designing and installation of standalone PV system.

Course Objectives

The objective of this course are as follows

- To understand and apply the basic concepts of solar radiation necessary for sizing solar PV systems installation.
- To learn the different types of solar PV systems and their characteristics.
- To learn the need of balance of systems, charge controllers and MPPT in solar PV systems.
- To learn the different types of wires and cables used in solar PV installation and the losses through these cables.
- To learn to design and installation of standalone PV system based on the energy requirement.

Course Outcomes

On completion of this course, the students will be able to

CO1. To know some practical applications that use solar photovoltaic systems and be able to do specify, analyze and design.

CO2. To know and be able to analyze the behavior of a self-consumption demand and the measurement of network management.

CO3. To carry out a basic engineering project related to energy supply using solar photovoltaic technology.

Course Content:

Modules	Blooms level*	Number of hours
Module I:- Solar Radiation & solar PV systems Solar radiation, Peak sun hours, sun earth angles, site survey, shading, Types of Solar PV systems, standalone systems, grid connected systems, hybrid systems.	L1, L2	12
Module I-I: Charge controller, MPPT & Inverters Need of Balance of System, charge controllers, working of charge controllers, features of charge controllers, it's specifications. Power output from PV module, need of MPPT, MPPT chargecontroller, specifications.	L1, L2	12

Module III: Wires Importance of choice of wires, Ohm's law, resistance & resistivity, types of wire, wire sizing	L1, L2	12
Module IV: Fundamentals of solar PV design and Installation of standalone system- case study System description under study, energy flow diagram, load estimation, sizing and choice of electronics components. Structures used for installation, site requirements, installation of the system.	L1, L2, L3	12

**Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation*

Lab Syllabus

List of Experiment	Blooms level*	Number of hours
Sun Earth Angles 1.Find the declination angle for all the days of the year. Find the variation of declination angle over the year. 2. Find solar altitude angle, azimuth angle and zenith angle for a location at a given time.	L2, L3	2
3. Conduct Site survey	L1, L2, L3	2
Maximum Power Point Tracking 4. Finding MPP by varying the resistive load across the PV panel. 5.Finding MPP by varying the duty cycle of DC-DC converter.	L1, L2, L3	4
6. Cable sizing for standalone PV system	L1, L2, L3	2
7. Demonstration of installation of standalone PV system	L1, L2	2

SAE2352	SOLAR PHOTOVOLTAIC DESIGN	L	T	P	C
Version 1.1	Date of Approval:	2	0	2	3
Pre-requisites/Exposure					
Co-requisites					

Course Objectives

The objective of the course is to demonstrate an understanding of how solar photovoltaic system designing can be effectively carried out with PVSYST software

Course Outcomes

On completion of this course, the students will be able to:

CO1: Illustrate the effective application of PVSYST software in capability design of practical SPV plants.

CO2: Demonstrate an understanding of how PVSYST software can impact on the development of practical SPV plants along with all the aspects of design analysis.

CO3. To carry out a basic practical solar photovoltaic power plant designing projects using PVSYST software.

Catalog Description

This course aims to make the students understand the importance of solar photovoltaic power plant designing with the help of PVSYST software.

Course Content:

Modules	Blooms level*	Number of hours
Module I: Introduction to PVSYST software Creating a new site, Understanding the design flow, generation of PV installation site report, Basics of designing aspects	L1, L2	7
Module II: Understanding of losses in the PV system Definition, calculation, and application of all losses, engineering logic behind thumb rules, understanding the loss diagram.	L1, L2	8
Module III: Performing a Site Assessment Prerequisites of a site visit, studying obstructions & electrical diagrams, creating rough sketches of the site and SLD, and unforeseen scenarios.	L1, L2	7
Module IV: Understanding Sub-Arrays and Report Analysis Definition of sub-arrays, designing a detailed sub-array system, and report analysis.	L1, L2	7

SAE2452	SOLID WASTE MANAGEMENT AND POWER GENERATION	L	T	P	C
Version 1.1	Date of Approval:	3	0	0	3
Pre-requisites/Exposure					
Co-requisites					

Catalog Description

The objective of the course is to provide insights into waste management options by reducing the waste destined for disposal and encouraging the use of waste as a resource for alternate energy production. This course is designed to provide an understanding of the various aspects of Waste to Energy. The various sources of waste generation is analysed with a focus on its potential for energy production. The need for characterization of wastes will be discussed along with the existing norms for waste utilization for alternate energy source. Various Technological options available for the production of energy from waste will delineated along with economics of using alternate sources.

Course Objectives

- To enable students to understand of the concept of Waste to Energy.
- To link legal, technical and management principles for production of energy from waste.
- To learn about the best available technologies for waste to energy.

Course Outcomes

On successful completion of this course the students will be able to:

CO1: Apply the knowledge about the operations of Waste to Energy Plants.

CO2: Analyse the various aspects of Waste to Energy Management Systems.

CO3: Learn the various methods for harnessing energy from waste.

Course Content:

Modules	Blooms level*	Number of hours
Module I: Introduction The Principles of Waste Management and Waste Utilization. Waste Management Hierarchy and 3R Principle of Reduce, Reuse and Recycle. Waste as a Resource and Alternate Energy source. Rules for solid waste management in India.	L1, L2	7
Module II: Waste Sources & Characterization Waste production in different sectors such as domestic, industrial, agriculture, postconsumer, waste etc. Classification of waste – agro based, forest residues, domestic waste, industrial waste (hazardous and non-hazardous). Characterization of waste for energy utilization. Waste Selection criteria.	L1, L2	8

Module III: Technologies for Waste to Energy Biochemical Conversion – Energy production from organic waste through anaerobic digestion and fermentation. Thermo-chemical Conversion – Combustion, Incineration and heat recovery, Pyrolysis, Gasification	L1, L2	7
Module IV: Waste to Energy Options Landfill gas, collection and recovery. Refuse Derived Fuel (RDF) – fluff, briquettes, pellets. Alternate Fuel Resource (AFR) – production and use in Cement plants, Thermal power plants and Industrial boilers. Conversion of wastes to fuel resources for other useful energy applications, Hydrogen production from wastes, algae as a source of energy	L1, L2	7

**Bloom's Level:*

L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation

SAE2552	SOLAR THERMAL SYSTEMS	L	T	P	C
Version 1.1	Date of Approval:	3	0	0	3
Pre-requisites/Exposure					
Co-requisites					

Course Objectives

The objective of this course is to introduce materials relevant to the engineering of solar thermal systems. Students will develop the skills to analysis the thermal performance of solar thermal systems. Many of these calculations will be based on solar applications in different area. Finally the concepts of engineering economics applied to solar energy will also be introduced.

Course Outcomes

On completion of this course, the students will be able to

CO1. Conduct thermal Analysis of solar thermal collectors (FPC & CPCs).

CO2. Explain working mechanism of solar thermal collectors

CO3. To understand the working mechanism of solar air heater, solar crop drying, solar distillation, solar house, solar water heating systems, swimming pool heating by solar.

Catalog Description

In this course, the various modes of heat transfer shall be discussed. The different types of errors, accuracy of the numerical methods are also discussed in detail. Students will taught to calculate the amount of incident solar flux on horizontal and tilted surfaces. Thermal analysis of flat plate collector and concentrating collectors will be taught. The energy storage systems and the different components of solar systems will be discussed. The various water heating, air heating systems and its application to space heating and cooling and other solar devices will be discussed. Solar thermal power generation will be taught in this course.

Course Content:

Modules	Blooms level*	Number of hours
Module I: Introduction: Solar spectrum, solar radiation, instruments (pyrheliometers, pyranometers), solar radiation on horizontal surface, solar thermal energy conversion.	L1, L2	7
Module II: Flat plate collector Flat plate collector (FPC) (glazing material, collector plates), classification (evacuated tubular collectors, Types of FPCs), testing of collectors, heat losses, thermal analysis of FPC.	L1, L2	9
Module III: Solar Concentrator Concentrating Collector Designs: Classification, design and performance parameters; Tracking systems; Compound parabolic concentrators; Parabolic trough concentrators; Concentrators with point focus; Heliostats; Comparison of various designs: Central receiver systems, parabolic trough systems, Solar power plant;	L1, L2	9

SAE2651	ENERGY AUDIT AND ENERGY MANAGEMENT	L	T	P	C
Version 1.1	Date of Approval: 2014	3	0	0	3
Pre-requisites/Exposure					
Co-requisites					

Course Objectives

The objective of this course is to

- To develop the knowledge and understanding of renewable energy economics both rural and urban including energy management, auditing and policies.
- To demonstrate a comprehensive knowledge and understanding of the Economic Benefits of Solar Energy, cost effectiveness including concepts of solar panels, solar cooling etc. To understand the concept of Solar Industrial Economics and as an alternative source of future energy including integration with industrial process as well as with grid, storage of energy, economics.
- To develop the knowledge and understanding of Planning of Energy Efficient Building with the concept of solar heating systems.

Course Outcomes

On completion of this course, the students will be able to

CO1. Demonstrate a critical understanding of Energy economics including both rural and urban, environmental and energy policies.

CO2. Address the desirable features of Energy management and auditing (energy audit instruments, energy audit report writing).

CO3. Demonstrate the ability to investigate critically the knowledge about economic Benefits of Solar Energy and cost effectiveness as well as to understand the concept of Solar Industrial Economics

CO4. To develop the concept of Planning of Energy Efficient Building and its design with the understanding of both active and passive solar heating systems.

Catalog Description

This course covers the basic principles of energy management, economics of solar energy and design of energy efficient building.

Course Content:

Modules	Blooms level*	Number of hours
Module I:- Renewable Energy Economics Energy scenario, environmental policies, energy policies, economics of energy infrastructure, rural renewable energy economics.	L1, L2	5
Module II: Energy Management Energy management: objectives, necessary steps and general principles of energy management, Energy Manager: functions, qualities, duties and guidelines.	L1, L2	9

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar

Manesar Gurgaon-122413

Module III: Energy Auditing Energy Auditing: Surveying, Audit: Purpose, Definition and Objectives, types of energy audit-preliminary and detailed; questionnaire, energy audit instruments, energy audit report writing. Energy conservation schemes, energy index, cost index, pie charts, Sankey diagrams, load profiles (histograms)	L1, L2	11
Module IV: Energy Audit of Building- Case study Electrical Energy Management: Methods to minimize supply demand gap; renovation and modernization of power plants, reactive power management, HVDC and FACTS; Conservation in motors, pumps and fan systems; energy efficient motors Thermal Energy Management: Energy conservation in boilers, steam turbines and industrial heating systems; Application of FBC; Cogeneration and waste heat recovery; thermal insulation; heat exchangers and heatpumps; building energy management.	L1, L2, L3	11

**Bloom's Level: L1-Knowledge; L2-Comprehension; L3-Application; L4: Analysis; L5: Synthesis, L6: Evaluation*

Prerequisites

- The course is offered to both engineering and non-engineering students. Knowledge of Intermediate (Class 12) level science is a prerequisite to comprehend the contents of this course.
- The course can be taken up by the students of B. Tech. (Aerospace Engineering) as it will increase their knowledge and employability in this domain.

S. No.	Course	Course Prerequisites
1	Introduction to UAVs and Applications	Basic Physics, Mathematics
2	Principles of UAV's Flight	Basic Physics, Mathematics, Introduction to UAVs and Applications
3	Aerial Imagery: Hardware and Software	Basic Physics, Mathematics
4	Embedded Systems for UAVs	Basic Physics, Mathematics, Basics of Computer Languages
5	Research Project 1- Drone Development	Courses of Semester 1-4
6	Research Project 2- Drone Troubleshooting, Testing and Deployment	Courses of Semester 1-5

ASE2352	Introduction to UAVs and Applications	L	T	P	C
Version 2021-1	Date of Approval: June 2021	2	1	0	3
Pre-requisites/ Exposure	Basic Physics, Mathematics				
Co-requisites					

Course Catalog

This course provides basic knowledge and understanding of various kinds of UAVs and their classifications based on various aspects. Knowledge of basic physics is crucial to comprehend the contents of this course. This course also provides introductory knowledge to the students about various components and systems of UAVs which serve as a foundation for better understanding of the advanced course.

Course Objectives

The objective of this course is to

- Provide introductory knowledge to the students regarding the basic science and principles as applicable to UAVs and their structure.
- Provide education to the students about the construction, payload, and safe operations of UAVs.

Course Outcomes

On completion of this course, the students will be able to

- CO1.** List, explain, and categorize amongst various kinds of UAVs, their classifications and application areas.
- CO2.** List, explain, and describe basics of flight, structure, and control of UAVs.
- CO3.** List, explain, categorize, and apply the basic concepts of payloads and payload controls of UAVs.
- CO4.** List, explain, and apply the fundamental concepts of safe operation of UAVs.
- CO5.** Explain and apply the engineering fundamentals and principles to practical design and testing UAVs.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Introduction to UAVs Overview of UAVs and their Systems; Examples of UAV Systems; Nano UAVs; Micro UAVs, Small UAVs; Medium UAVs; Large UAVs; Different types of drones and their applications.	L1, L2, L4	6
Module 2: Concepts of Flight and UAV Construction and Control Basics of flight: lift, drag, thrust and weight balance. Basic structure and loads; construction materials; propulsion systems for UAVs; modes of control; UAV piloting; remote piloting; autopilot-assisted control; complete autonomous flights.	L1, L2, L3	6
Module 3: Payloads and Payload Control Types of payloads; payload capacity and control, imaging sensors; target detection, recognition, and identification; atmospheric, radiological, and	L1, L2, L4	6

Course Catalog

This course provides basic knowledge and understanding of aerodynamics, propulsion, stability and control of the UAVs. Knowledge of basic physics and engineering mechanics is crucial to comprehend the contents of this course. This course also provides essential knowledge to the students about the efficient and stable flight of the UAVs.

Course Objectives

The objective of this course is to

- Provide fundamental knowledge to the students regarding the aerodynamics and propulsion systems of the UAVs.
- Provide education to the students about the stability and control of UAVs.

Course Outcomes

On completion of this course, the students will be able to

- CO1.** List, explain, and apply the governing equations to the operation of UAVs.
- CO2.** List, explain, and describe basics of UAVs aerodynamics.
- CO3.** List, explain, and apply the basic concepts of propulsion and propulsion systems to UAVs.
- CO4.** List, explain, and apply the fundamental concepts of stability and control of UAVs.
- CO5.** Explain and apply the engineering fundamentals and principles to design and test UAVs.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Introduction Introduction to incompressible flow, Continuity, momentum, energy and other governing equations; pitot-static tube, pressure coefficient, Mach number their significance.	L1, L2, L4	6
Module 2: UAV Aerodynamics Symmetric and cambered airfoils; Airfoil nomenclature and characteristics; aerodynamic forces and moments; calculations for airfoil lift and drag; center of pressure; aerodynamic center; Modern low-speed airfoils; characteristics of low speed airfoils; Finite and infinite wings; Flow Separation; Stall.	L1, L2, L3	6
Module 3: Propulsion Systems Propulsive thrust; nomenclature and geometry; thrust to weight ratio; types and classifications; propeller and basic principles; different type of propellers; propeller safety; propeller lift and angle of attack; propeller pitch; fixed pitch propellers; propeller materials; propeller installations and operation; battery of a drone; motors; different types of engines; fuel, hybrid, fuel cells; solar powered UAVs.	L1, L2, L4	6
Module 4: Stability and Control Overview of standard atmosphere; static and dynamic stability; principal axes and rotation of aerial systems; equilibrium; flight control and control surfaces;	L1, L2, L3	6

Pre-requisites/ Exposure	Basic Physics, Basic Electronics				
Co-requisites					

Course Catalog

This course provides basic knowledge and understanding of aerial imagery, remote sensing and AI using UAVs. Knowledge of basic physics and basic electronics is crucial to comprehend the contents of this course. This course also provides essential knowledge to the students about the efficient and effective aerial imagery and remote observations using UAVs and image processing using software.

Course Objectives

The objective of this course is to

- Provide fundamental knowledge to the students regarding the basics of imagery and remote sensing using UAVs.
- Provide education and practice to the students about image processing, AI and global positioning.

Course Outcomes

On completion of this course, the students will be able to

- CO1.** List, explain, and apply the basics of aerial imagery using UAVs.
- CO2.** List, explain, and apply the basics of image processing using fundamental principles and relevant software.
- CO3.** List, explain, and apply the basic concepts of remote sensing, GIS and GPs in operation of UAVs.
- CO4.** List, explain, and apply the fundamental concepts of image enhancement and AI.
- CO5.** Explain and apply the engineering fundamentals and principles to practical applications of remote sensing using UAVs.

Course Content

Modules	Blooms level*	Number of hours
Module 1: Basics of Aerial Imagery Introduction to aerial image acquisition; types of cameras; payload weight; consumption of battery with different payloads; manual and autonomous capture of pictures and videos by UAVs; limitation with aerial photography; image distortion; FOV; lighting; understanding of aerial views and flight planning.	L1, L2, L4	5
Module 2: Introduction to Image Processing Various steps involved in image processing; concepts of digital image; some basic relationships like neighborhoods; connectivity; distance measure between pixels; histogram: definition; decision of contrast based on histogram; operations based on histograms like image stretching.	L1, L2, L3	5
Module 3: Remote Sensing, GIS and GPS Introduction to remote sensing technology; satellite vs drone imagery; Geographical Information System; Global Positioning System; Introduction to measurement and measuring systems; functional elements of a measuring system; errors and uncertainty in measurements; methods of minimization of the errors.	L1, L2, L4	5
Module 4: Image Enhancement, Morphology and Segmentation	L1, L2,	5

Course Catalog

This course provides basic knowledge and understanding of digital electronics and embedded systems in application in UAVs. Knowledge of computer fundamentals and basic electronics is crucial to comprehend the contents of this course. This course also provides essential knowledge to the students about the involvement of sensors and actuators and IOT in the application of UAVs.

Course Objectives

The objective of this course is to

- Provide fundamental knowledge to the students regarding the basics of digital electronics and control boards for UAV applications.
- Provide education and practice to the students about Sensors, actuators and IoT as applicable in UAV operations.

Course Outcomes

On completion of this course, the students will be able to

- CO1.** List, explain, and apply the basics of digital electronics in UAV applications.
- CO2.** List, explain, and apply the basics of embedded systems and programming of control boards.
- CO3.** List, explain, and apply the basic concepts of sensors and actuators interfacing in UAVs.
- CO4.** List, explain, and apply the fundamental concepts of using IoT in UAV applications.
- CO5.** Explain and apply the engineering fundamentals and principles to practical applications of embedded systems in UAVs.

Course Content

Modules	Blooms level*	Number of hours
Module1: Basics of Digital Electronics Introduction to digital electronics; logic gates; basic laws and theorems of Boolean algebra; introduction to combinational circuits; concept of memory cell and introduction to Flip-flops.	L1, L2, L4	6
Module 2: Introduction to Arduino, Raspberry Pi Introduction to embedded systems; introduction to various Arduino boards; introduction to Arduino IDE; 3DR PixHawk; introduction to Python programming language; introduction to Raspberry Pi development boards.	L1, L2, L3	6
Module 3: Interfacing with Sensors and Actuators Interfacing of temperature sensor; LIDAR; pressure sensors; humidity sensor; vision sensor with Arduino/Raspberry Pi; Interfacing of various actuators like DC motor; servo motor; stepper motor; ESC programming.	L1, L2, L4	6
Module 4: Introduction to IOT IoT definition; characteristics; IoT functional blocks; physical design of IoT; implementation of IoT with Arduino and Raspberry Pi; cloud computing; fog computing; surveillance applications; other IoT applications.	L1, L2, L3	6

Pre-requisites/ Exposure					
Co-requisites					

Course Catalog

The minor project provides the student with an opportunity to apply knowledge and skills learned in the classroom in carrying out a project. The research project 1 is an in-house training on real-time project or on latest software. The experience and skills that come with carrying out research project 1 build a foundation and aptitude in students to conduct meaningful research towards a practical outcome. The research project 1 aims to impart necessary training to the students that is a value addition for their employability.

Course Objectives

The objective of this course is to

- Provide practical training on small-scale projects that will increase the capability of the students to work individually or in teams on actual problems in industry.
- Provide students with capabilities to design systems, analyze results, write technical reports and engage in life-long learning practices.

Course Outcomes

On completion of this course, the students will be able to

- CO1.** Relate and apply the acquired classroom knowledge with technical and real-time environment.
- CO2.** Relate and demonstrate capabilities to create and review technological solutions to complex engineering problems of relevant domains.
- CO3.** Apply the acquired knowledge to demonstrate the skills to create and compile technical reports pertaining to a given project.
- CO4.** Demonstrate the skills to work ethically and professionally in a team and engage in life-long learning.

Course Content

Guidelines

In order to achieve the objectives:

- Each student will be allotted a supervisor for proper guidance.
- Student will first submit details of company, external guide, project title to coordinator/supervisor as per given schedule.
- For internal assessment purpose, students will submit an industry feedback and a progress report.
- Student will maintain a file (Internship File/Project Report) which he/she will submit after completion of internship. Further, coordinator will provide Non-Teaching Credit Course project guidelines and sample to help in preparation of file. The Internship File aims to encourage students to keep a personal record of their learning and achievement throughout the Programme. It can be used as the basis for lifelong learning and for job applications. Items can be drawn from activities completed in the course modules and from the workplace to demonstrate learning and personal development. The file will assess the student's analytical skills and ability to present supportive evidence, whilst demonstrating understanding of their organization, its needs and their own personal contribution to the organization.

The layout guidelines for the Project Report

1. File should be in the following specification

Prof. (Dr.) Anil Kumar
Deputy Dean Academics
Amity University Haryana
Manesar, Gurugram
Haryana-122413

Registrar
Amity University Haryana
Manesar Gurgaon-122413

- A4 size paper
- Spiral Binding

- **Font**

For normal text Font Type and Size must be- Times New Roman, 12 pt. The minimum font size of materials within a table or a figure can be 10 point.

- **Margins**

A margin of 3.75 cm (1½ inch) is to be given on the binding edge while on the other sides it is to be 2.5 cm (1 inch). The text of the report, including headings, figures, tables, and notes, but excluding page numbers, must be accommodated within the page area.

- **Line Spacing**

The line spacing in the main text must be between one-and-a-half (1.5). Single line spacing should be given for figure captions, table titles, figure legends, and footnotes. Equations, tables, figures, and quotations should be set off from the main text with adequate space (not less than the normal line spacing adopted for the main text). Two consecutive paragraphs should be separated by a spacing which must be larger than the line spacing adopted for the text.

- **Tables and Figures**

Each sketch, drawing, graph and photograph should have a figure number and title below the figure etc. Numbering should be sequential, chapter wise. For instance, if there are 24 figures chapter 3 spread over all of its sections the figure numbers run from Figure 3.1 through Figure 3.24. In figures experimental data should typically be represented by centered symbols, and theoretical data by continuous curves.

Each table should have a table number and caption above the table. Numbering should be sequential, chapter wise, as in the case of Figure numbers. For instance, if there are 18 tables in chapter 3 the table numbers run from Figure 3.1 through Figure 3.18.

Make sure that figures and tables are complete in other respects such as legends, references (if any) and coordinate labels with units. Each figure and table must be explicitly referred to in the text and located where its first reference occurs, preferably after the reference.

- **Drawings**

All engineering drawings must conform to relevant Standards and should include a title block. If drawings are large they should be included at the back of the report in a separate pocket. In case drawings are made using CAD packages, a CD ROM should be included which contains all the files and details of the packages used.

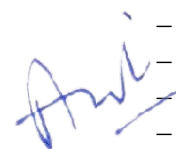

- **Equations**

The numbering of equations should be sequential, chapter wise. Numbered equations must be explicitly referred to in the text.

2. Report Size: The maximum number of pages of the Report should be preferably between 40-70 pages.

3. Report Layout: The report should contain the following components

- Front Page
- Declaration
- Student Certificate (University)
- Certificate(Company)
- Acknowledgement
- Abstract
- Contents
- List of Figures
- List of Tables
- Company Profile (optional)
- Chapters
- Appendices(optional)
- References / Bibliography

 Prof. (Dr.) Anil Kumar
 Deputy Dean Academics
 Amity University Haryana
 Manesar, Gurugram
 Haryana-122413

 Registrar
 Amity University Haryana
 Manesar Gurgaon-122413

The above components are described below:

- **Title Page** - Format will be given by coordinator/supervisor.
- **Declaration by the Students** - This is page number (i), the beginning of the small case Roman numeral page numbers. The student has to give a declaration to the effect that the data used for the work, the work depicted in the report, and the written material contained in the report are not copied from others and that due permission has been taken from, and due credit has been given to, the sources whenever they are used.
- **Certificate** - This is page number (ii). It is given by the Institute. The certificate will be signed by the Faculty Supervisor(s) before the viva-voce after verifying the format and by the Head of the Department after review with the Supervisor(s).
- **Company Certificate** - This is a certificate, which the company gives to the students.
- **Contents** - This is page number (iii). The table of Contents should be titled just *Contents* (not Table of Contents). Try to fit it into one or two pages.
- **Acknowledgement** - This is page number (iv). Keep this brief and avoid using informal language. This page must be signed by the candidate.
- **Abstract and Keywords** - This is page number (v). The abstract (preferably one page) should contain the context/relevance of the problem at hand, a description of what was done and a gist of the significant observations/results.
- The keywords (maximum 6) are a hint that what is contained in the report.
- **Company Profile** - A Company Profile corresponds to a file with company-specific data. Company data can be stored there and included in a booking when needed.
- **Chapters**- Introduction, Literature Review/Background Study etc. as given by coordinator/supervisor.
- **References / Bibliography** - This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognised system.

Course Catalog

The minor project provides the student with an opportunity to apply knowledge and skills learned in the classroom in carrying out a project. The research project 1 is an in-house training on real-time project or on latest software. The experience and skills that come with carrying out research project 1 build a foundation and aptitude in students to conduct meaningful research towards a practical outcome. The research project 1 aims to impart necessary training to the students that is a value addition for their employability.

Course Objectives

The objective of this course is to

- Provide practical training on small-scale projects that will increase the capability of the students to work individually or in teams on actual problems in industry.
- Provide students with capabilities to design systems, analyze results, write technical reports and engage in life-long learning practices.

Course Outcomes

On completion of this course, the students will be able to

- CO5.** Relate and apply the acquired classroom knowledge with technical and real-time environment.
- CO6.** Relate and demonstrate capabilities to create and review technological solutions to complex engineering problems of relevant domains.
- CO7.** Apply the acquired knowledge to demonstrate the skills to create and compile technical reports pertaining to a given project.
- CO8.** Demonstrate the skills to work ethically and professionally in a team and engage in life-long learning.
